June 23, 2021

Project No.: 21-10965

Anna Choudhuri, Contract Planner City of Norwalk 12700 Norwalk Boulevard Norwalk, California 90650

Via email: annac@csgengr.com

Subject: Phase I Environmental Site Assessment

California Youth Authority

Norwalk, California

Dear Ms. Choudhuri:

This report presents the findings of a Phase I Environmental Site Assessment (ESA) completed by Rincon Consultants, Inc. (Rincon) for the California Youth Authority property located in Norwalk, California. The Phase I ESA was performed in accordance with our proposal dated March 17, 2021 and contract dated March 25, 2021.

The accompanying report presents our findings and provides an opinion regarding the presence of recognized environmental conditions in connection with the subject property. Our work program for this project, as referenced in our contract, is intended to meet the guidelines outlined in the American Society for Testing and Materials (ASTM), Standard Practice for Environmental Site Assessments: *Phase I Environmental Site Assessment Process* (ASTM Standard E1527-13). Our scope of services, pursuant to ASTM practice, did not include any inquiries with respect to asbestos, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, vapor intrusion or other indoor air quality, mold, or high-voltage power lines.

Thank you for selecting Rincon for this project. If you have any questions, or if we can be of any future assistance, please contact us.

Sincerely,

Rincon Consultants, Inc.

Sarah Larese

Executive Summary

This report presents the findings of a Phase I Environmental Site Assessment (ESA) for the property identified as the California Youth Authority located in Norwalk, California (subject property – Figure 1, Vicinity Map). The Phase I ESA was performed for the City of Norwalk by Rincon Consultants, Inc. (Rincon). The City of Norwalk has requested this assessment and will use the information for the purpose of redeveloping the subject property. The subject property is currently developed with a former juvenile correctional facility that is currently used as a COVID-19 quarantine facility for mental health patients prior to entering treatment facilities.

The subject property is located in an area that is primarily composed of residential and commercial/light industrial land uses. Properties in the vicinity of the subject property include single-family residences, multi-family residences, a park, a church, schools, medical facilities, and commercial/light industrial properties.

Rincon performed a reconnaissance of the subject property on March 8, 2021. The purpose of the reconnaissance was to observe existing conditions and to obtain information indicating the presence of recognized environmental conditions (RECs) in connection with the subject property. A majority of the property is vacant structures. During the site reconnaissance, a former automotive repair area was observed in the northwestern portion of the subject property; however, due to time constraints, this area was not accessed or fully observed. One of the site representatives indicated that there is a strong hydrocarbon odor in the structure(s) in the former automotive repair area.

One potential aboveground storage tank (AST)/dispenser, one diesel AST marked "empty/inert – November 2013," and one drum of unknown contents were observed near the former automotive repair area. One diesel AST marked "empty/inert – November 2013" and one empty drum were observed north of the grounds storage building in the northwestern portion of the subject property. One drum with solidified contents was observed outside the vacant kitchen area, and one drum marked "Food Grade Gear Oil" was observed inside the vacant kitchen area. Rincon did not observe indications of releases from the ASTs or drums on the subject property.

During the site reconnaissance, the site representative informed Rincon that pesticides were formerly stored in the grounds storage building and the former automotive repair area on the subject property. Pesticides were not observed during the site reconnaissance. There is the potential for releases to have occurred in the areas of former pesticide storage onsite. Additionally, paint containers, batteries, and containers of automotive fluids were observed in the grounds storage building.

Four pole-mounted electrical transformers located in a field on the eastern portion of the subject property were reported by the site representatives to contain polychlorinated biphenyls (PCBs). The transformers appeared to be older and possibly rusted, but no indication of release on the ground beneath the transformers was observed. Additionally, there are reportedly nine electrical switches throughout the subject property, containing a total of approximately 800 gallons of PCB oils. Rincon observed one of the switches; melted tar was noted on the bottom of the switch, in addition to dark-stained asphalt in the vicinity of the switch.

A regulatory database search was conducted by Environmental Data Resources (EDR) for sites that generate, store, treat, or dispose of hazardous materials or sites for which a release or incident has occurred. The search was conducted for the subject property and included data from surrounding

sites within a specified radius of the property. The subject property was listed in various databases. These listings indicate that the CDCR – Southern Youth Authority Correctional Reception Center and Clinic facility was a youth correctional institution that was active at the subject property from at least 1954 to 2013. The facility stored and used hazardous materials, generated hazardous waste, and reportedly had two petroleum underground storage tanks (USTs) from at least 1954 to 1988. Additionally, a release of diesel to soil was discovered at the facility in 1996 during the removal of a 1,000-gallon UST. Remediation via excavation and offsite disposal occurred in 1996 and the case was closed by the Los Angeles Regional Water Quality Control Board (RWQCB) in 1997. The subject property was listed on the Department of Toxic Substances Control's (DTSC's) online EnviroStor database as a hazardous waste facility with an "undergoing closure status" that was issued a permit to temporarily store PCB waste generated during removal of electrical equipment containing PCBs from 1985 to 1990. Additionally, the subject property was listed on the Los Angeles County Fire Department's online list of inactive Certified Unified Program Agency facilities.

Eight adjacent properties were listed in databases searched. Based on the research conducted, none of these adjacent properties has the potential to impact the subject property.

Three unauthorized release sites were identified within one-eighth mile of the subject property and two sites have the potential to impact the subject property:

- City of Norwalk Maintenance Yard 12735-12737 Civic Center Drive: This property is located approximately 780 feet north of the subject property. The listings indicate that the facility had petroleum USTs, a release of gasoline to groundwater occurred from a UST in 1990, and the case was closed in 1996. Based on the lack of information currently available online for the release of gasoline to groundwater from a UST on the facility, and hydrologically upgradient location of the facility relative to the subject property (based on groundwater flow direction to the southwest), this release has the potential to have adversely impacted the subject property.
- Kalico #2, Neville Chemical 12924 East Imperial Highway: This property is located approximately 300 feet northeast of the subject property. The listings indicate that an unpermitted hazardous waste landfill operated from 1956 to 1964, was closed, and is currently commercial/industrial land use. The case associated with the site was closed by the RWQCB in 2016. Case documents available on GeoTracker indicate that the landfill was a "cut and cover" facility. According to the case documents, there are no records that landfill liners, covers, gas control, or other engineered features were in place at the facility (no state laws were reportedly in place requiring these features during the time that the landfill was in operation), and when the landfill was closed, it was covered with a two-foot soil cap. A 2000 summary letter of "recent Phase II investigation results" indicates that petroleum hydrocarbons, metals, pesticides, and PCBs were detected in soil, lead and volatile organic compounds (VOCs) were detected in the Artesia groundwater zone underlying the shallower water-bearing zone in the region between 82 and 101 feet below ground surface (bgs) and flowing toward the northeast. In addition, VOCs and methane were detected in soil vapor at the landfill site during a 1999 investigation. Based on the lack of information currently available and proximity to the subject property, the Kalico landfill has the potential to have adversely impacted the subject property.

Historical sources reviewed as part of the Phase I ESA include aerial photographs and topographic maps. The photos and maps reviewed indicate that the subject property was likely used for agricultural purposes from at least 1928 to 1947, with possible row crops in the 1947 aerial photograph. Agricultural land use, with the exception of dry farming, is typically associated with the use of pesticides and arsenic. Based on the duration that row crops may have been present onsite

(less than 15 years) and the length of time since the subject property was developed with the existing structures (over 65 years), the former agricultural use of the subject property is considered de minimis.

Based on the findings of this Phase I ESA, it is our opinion that there are seven RECs and one Notable Finding in connection with the subject property.

Recognized Environmental Conditions

- 1. Two petroleum USTs on the subject property and a known release of diesel from a UST
- 2. Former automotive repair area on the subject property
- 3. ASTs and drums observed on the subject property during the site reconnaissance
- 4. Reported former pesticide storage on the subject property
- 5. PCBs on the subject property
- 6. Nearby former landfill located 300 feet from the subject property with known impacts to soil, soil vapor, and groundwater
- 7. Nearby City of Norwalk Maintenance Yard release site

Notable Findings

1. Asbestos-containing materials (ACM) and lead-based paint (LBP)

To evaluate the potential subject property impact associated with the USTs and associated known release, former automotive repair area, ASTs and drums, reported former pesticide storage, nearby former landfill with a known release, and nearby City of Norwalk maintenance yard with a known release, Rincon recommends conducting additional research (e.g., additional interviews with site representatives and reviewing regulatory records, if available) and conducting a subsurface investigation at the subject property.

Based on the potential presence of PCBs at the subject property, Rincon recommends conducting a PCB survey at the subject property, proper removal and offsite disposal of PCBs and PCB-containing materials/equipment, and conducting a subsurface investigation in the areas of former PCB use/storage at the subject property.

Based on the age of the onsite structures (constructed as early as 1953), ACM and LBP may be present on the subject property. Rincon recommends conducting an ACM and LBP survey prior to demolition of the onsite structures.

Introduction

This report presents the findings of a Phase I Environmental Site Assessment (ESA) conducted for the property identified as the California Youth Authority located in Norwalk, California (subject property – Figure 1, Vicinity Map). The Phase I ESA was performed by Rincon Consultants, Inc. (Rincon) for the City of Norwalk (Client) in general conformance with American Society for Testing and Materials (ASTM) E1527-13, our proposal dated March 17, 2021, and our contract dated March 25, 2021. The following sections present our findings and provide our opinion as to the presence of recognized environmental conditions (RECs) on the subject property.

Purpose and Definitions

The City of Norwalk has requested this assessment and will use the information for the purpose of redeveloping the subject property. The purpose of this Phase I ESA was to determine if there are RECs on the subject property, taking into account commonly and reasonably ascertainable information and to qualify for Landowner Liability Protections under the Brownfields Amendments to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

Recognized Environmental Condition (REC)

A REC is defined pursuant to ASTM E1527-13 as,

"the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; 3) under conditions that pose a material threat of a future release to the environment".

Controlled REC

A Controlled REC is defined pursuant to ASTM E1527-13 as,

"a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Phase I Environmental Site Assessment report".

Historical REC

A Historical REC is defined pursuant to ASTM E1527-13 as,

"a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by regulatory authority,

without subjecting the property to any required controls (for example, use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP [Environmental Professional] considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition".

De minimis

A de minimis condition is defined pursuant to ASTM E1527-13 as,

"a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions".

Notable Finding

Although not defined by ASTM E1527-13, Rincon utilizes the term *Notable Finding* for potential environmental concerns present at or possibly present at a property that do not specifically fit one of the above ASTM-defined situations, yet may impact current or future use of the subject property.

Scope of Services

The scope of services conducted during this study is outlined below:

- Performed a reconnaissance of the subject property to identify obvious indicators of the existence of hazardous materials.
- Observed adjacent or nearby properties from public thoroughfares in an attempt to see if such properties are likely to use, store, generate, or dispose of hazardous materials.
- Obtained and reviewed an environmental records database search to obtain information about the potential for hazardous materials to exist at the subject property or at properties located in the vicinity of the subject property.
- Reviewed files for the subject property and immediately adjacent properties as identified in the database report, as applicable.
- Reviewed the current United States Geological Survey (USGS) topographic map to obtain information about the subject property and regional topography and uses of the subject property and surrounding sites.
- Reviewed additional pertinent record sources (e.g., California Geologic Energy Management Division [CalGEM] records, online databases of hazardous substance release sites), as necessary, to identify the presence of RECs at the subject property.
- Reviewed the California State Water Resources Control Board (SWRCB) 2019 Statewide Per- and Polyfluoroalkyl Substances (PFAS) Investigation online Public Map Viewer regarding current PFAS orders issued to facilities located in the vicinity of the subject property.

- Reviewed reasonably ascertainable historical resources (e.g., aerial photographs, topographic maps, fire insurance maps, city directories) to assess the historical land use of the subject property and adjacent properties.
- Provided a user interview questionnaire to a representative of the client, the user of the Phase I FSA.
- Provided a property owner interview questionnaire to the property owner or a designated subject property representative identified to Rincon by the client.
- Conducted interviews with other property representatives (e.g., key site manager, occupants), as applicable.
- Reviewed available Client-provided information (e.g., previous environmental reports, title documentation).

Significant Assumptions, Limitations, Deviations, Exceptions, Special Terms, and Conditions

This work is intended to adhere to good commercial, customary, and generally accepted environmental investigation practices for similar investigations conducted at this time and in this geographic area. No guarantee or warranties, expressed or implied, are provided. The findings and opinions conveyed in this report are based on findings derived from a site reconnaissance, review of an environmental database report, specified regulatory records and historical sources, and comments made by interviewees. This report is not intended as a comprehensive site characterization and should not be construed as such. Standard data sources relied upon during the completion of Phase I ESAs may vary with regard to accuracy and completeness. Although Rincon believes the data sources are reasonably reliable, Rincon cannot and does not guarantee the authenticity or reliability of the data sources it has used. Additionally, pursuant to our contract, the data sources reviewed included only those that are practically reviewable without the need for extraordinary research.

Rincon has identified evidence that suggests that hazardous materials or petroleum products exist at the subject property. Additional research, including surface or subsurface sampling and analysis, can reduce the City of Norwalk's risks, but no techniques commonly employed can eliminate these risks altogether.

In addition, pursuant to ASTM E1527-13 practice, our scope of services did not include any inquiries with respect to asbestos-containing building materials, biological agents, cultural and historic resources, ecological resources, endangered species, health and safety, indoor air quality unrelated to release of hazardous substances or petroleum products into the environment, industrial hygiene, lead-based paint, lead in drinking water, mold, radon, regulatory compliance, wetlands, or high-voltage power lines.

User Reliance

The City of Norwalk has requested this assessment and will use the information for the purpose of redeveloping the subject property. This Phase I ESA was prepared for use solely and exclusively by the City of Norwalk and Lewis Group of Companies. No other use or disclosure is intended or authorized by Rincon. Also, this report is issued with the understanding that it is to be used only in

its entirety. It is intended for use only by Client, and no other person or entity may rely upon the report without the express written consent of Rincon.

Site Description

Location

The subject property is a 32-acre parcel located east of Bloomfield Avenue, south of Civic Center Drive, and north of Foster Road in Norwalk, California (Figure 2, Site Map). The property is identified as Assessor's Parcel Number (APN) 8045008902.

Subject Property and Vicinity General Characteristics

The subject property is developed with a former juvenile correctional facility that is currently used as a COVID-19 quarantine facility for mental health patients prior to entering treatment facilities.

The subject property is located in an area that is primarily composed of residential and commercial/light industrial land uses. Properties in the vicinity of the subject property include single-family residences, multi-family residences, a park, a church, schools, medical facilities, and commercial/light industrial properties. The current adjacent land uses are described in Table 1 and depicted on Figure 3.

Table 1 Current Uses of Adjacent Properties

Area	Use
Northern Properties	Multi-family residences and a parking lot
Eastern Properties	A park followed by railroad tracks
Southern Properties	Single-family residences, a senior living community, and Norwalk Community Hospital
Western Properties	Bloomfield Avenue followed by single-family residences

Descriptions of Structures, Roads, and Other Improvements on the Subject Property

During the site reconnaissance, multiple one-story commercial structures formerly used as a juvenile correctional facility, including holding rooms, administrative residences, offices, a kitchen, a gymnasium, and maintenance structures were observed on the subject property.

A chain-link fence was noted around the perimeter of the subject property. Access to the subject property is available from a driveway on Bloomfield Avenue.

The following utility providers service the subject property:

- Electrical Service Southern California Edison
- Natural Gas Service Southern California Gas Company
- Water Service Golden State Water Company
- Sewer Service City of Norwalk
- Solid Waste Service Athens Services

User-Provided Information

As described in ASTM E1527-13 Section 6, a User Questionnaire as provided by ASTM E1527-13 Appendix X3 was provided to the City of Norwalk. The purpose of the User Questionnaire is for the User of the Phase I ESA to provide actual knowledge pertaining to the subject property to help identify RECs. As of the date of this report, a completed User Questionnaire has not been returned to Rincon.

Records Review

Physical Setting Sources

Topography

The current USGS topographic map (Whittier Quadrangle, 2018) indicates that the subject property is situated at an elevation of approximately 95 feet above mean sea level with topography sloping down to the south. The adjacent topography consists of relatively flat land.

Geology and Hydrogeology

According to the California Geological Survey (CGS), *California Geomorphic Provinces*, *Note 36*¹, the subject property is located within the Peninsular Ranges Geomorphic Province. The Peninsular Ranges are a series of ranges separated by northwest trending valleys, subparallel to faults branching from the San Andreas Fault. The trend of topography is similar to the Coast Ranges, but the geology is more similar to the Sierra Nevada, with granitic rock intruding the older metamorphic rocks. The Peninsular Ranges extend into lower California and are bounded on the east by the Colorado Desert. The Los Angeles Basin and the island group (Santa Catalina, Santa Barbara, and the distinctly terraced San Clemente and San Nicolas islands), together with the surrounding continental shelf (cut by deep submarine fault troughs), are included in this province.

Site Geology

According to the current USGS Geologic Map (Saucedo, et al., 2016), the subject property is underlain by young alluvium, Unit 2, which is described as clay, silt, sand, gravel, or similar unconsolidated detrital material deposited by current or past flowing water.

Regional Groundwater Occurrence and Quality

The subject property is located within the Coastal Plain of Los Angeles groundwater basin and Central subbasin (California Department of Water Resources, 2003).

During the preparation of this Phase I ESA, we reviewed the California SWRCB's online GeoTracker database to determine groundwater flow direction in the vicinity of the subject property. According to the Semi-Annual Groundwater Monitoring and Sampling Report (July-December 2020), Former Refinery, 13539 Foster Road, Santa Fe Springs, California prepared by The Source Group, Inc. and dated December 2020, two shallow groundwater zones are reported to be present beneath the former refinery property, with the uppermost water-bearing zone, the Semi-Perched zone, found locally between 20 and 45 feet below ground surface (bgs) and flows toward the southwest. The underlying Artesia groundwater zone is found between approximately 65 to 165 feet bgs and generally flows toward the east-northeast. This property is located approximately 0.75 mile to the east-southeast of the subject property.

Additionally, according to Semi-Annual Groundwater Monitoring Report, July to December 2019, Former Neville Chemical Company Site, 12800 East Imperial Highway, Santa Fe Springs, California prepared by Arcadis U.S., Inc. and dated June 2020, groundwater is reported to be between 80 and

¹ https://www.conservation.ca.gov/cgs/Documents/Publications/CGS-Notes/CGS-Note-36.pdf

Rincon Consultants, Inc.

130 feet bgs and generally flows toward the southeast. This property is located approximately 600 feet to the northeast of the subject property.

Standard Environmental Record Sources

Rincon outsourced with a regulatory database search contractor to obtain a public database search of sites that generate, store, treat, or dispose of hazardous materials and sites for which a hazardous material release incident has occurred. The regulatory database search was conducted for the subject property and included data from surrounding sites within specified radii of the property. A copy of the database report, which specifies the ASTM E1527-13 search distance for each public list, is included as Appendix B. As shown on the attached database report, federal, state, and county lists were reviewed as part of the research effort. Please refer to Appendix B for a complete listing of sites reported by Environmental Database Resources (EDR) and a description of the databases reviewed.

The Map Findings Summary, included in the database report, provides a summary of the databases searched, the number of reported facilities within the search radii, and whether the facility is located onsite or adjacent to the subject property. The following information is based on our review of the Map Findings Summary and the information contained in the database report.

Subject Property

The subject property was listed on the following databases:

 RGA LUST, LUST, Cortese, CERS, PADS, HAZNET, HWTS, FINDS, ECHO, Los Angeles Co. HMS, FTTS, HIST FTTS, SWEEPS UST, HIST UST, HWP, and RCRA NonGen/NLR databases as CDCR – Southern Youth Authority Correctional Reception Center and Clinic at 13200 South Bloomfield Avenue

Regulatory agency files reviewed for the subject property are discussed in the Additional Environmental Record Sources section of this report.

Offsite Properties

Offsite properties listed in the database report fall under two general categories of databases: those reporting unauthorized releases of hazardous substances (e.g., Leaking Underground Storage Tank [LUST], National Priority List [a.k.a. Superfund sites], and corrective action facilities), and databases of businesses permitted to use hazardous materials or generate hazardous wastes, for which an unauthorized release has not been reported to a regulatory agency.

Rincon reviewed the database maps and select detailed listings to evaluate their potential to impact the subject property, based on the following factors:

- Reported distance of the facility from the subject property;
- The nature of the database on which the facility is listed, and/or whether the facility was listed
 on a database reporting unauthorized releases of hazardous materials, petroleum products, or
 hazardous wastes;
- Reported case type (e.g., soil only, failed underground storage tank [UST] test only);
- Reported substance released (e.g., chlorinated solvents, gasoline, metals);
- Reported regulatory agency status (e.g., case closed, "no further action"); and,

 Location of the facility with respect to the reported groundwater flow direction (discussed in the Geology and Hydrogeology section of this report)

Facilities/properties that were interpreted by Rincon to be of potential environmental concern to the subject property, based on one or more of the factors listed above, are summarized in Table 2. In accordance with ASTM E1527-13, contamination migration pathways in soil, groundwater, and soil vapor were considered in our analysis of offsite properties of potential environmental concern.

Califomia Youth Authority, Norwalk, California Phase I Environmental Site Assessment

Table 2 Database Listing Summary of the Subject Property and Select Sites Within One-Eighth Mile of the Subject Property

	,		,		
;	Database	;	Distance from	Database	
Site Name	Site ID	Site Address	Subject Property	Reference	Comments
Subject Property					
CDCR – Southern	A1-A19	13200 South	Subject Property	RGA LUST,	A release of diesel to soil was discovered at the facility in 1996 during the removal of a 1,000-gallon UST, remediation via excavation and disposal
Youth Authority		Bloomfield		LUST, Cortese, CFRS	occurred in 1996, and the case was closed in 1997. Soil contamination was reported to be localized. The facility is listed as a LUST Cleanup Site.
Reception Center and Clinic				PADS	The facility is listed in the polychlorinated biphenyls (PCBs) activity database system, which identifies generators, transporters, commercial storers and/or brokers, and disposers of PCBs.
				HAZNET	The facility generated onsite and disposed offsite of various quantities of hazardous waste, including waste oil, mixed oil, asbestos-containing waste, photo processing waste, pharmaceutical waste, laboratory waste chemicals, paint sludge, liquids with metals and mercury, solvent mixeuse, budges and metals and mercury, solvent
				HWTS	The facility is classified as a correctional institution, was active from 1985 to 1996, and has an active status as of 2020.
				FINDS, ECHO	The facility is enrolled in a State-managed hazardous materials/waste program.
				Los Angeles Co. HMS	The facility is enrolled in a County-managed hazardous materials/waste program.
				FTTS, HIST FTTS	A State-conducted PCB inspection of the facility occurred in 1990. A violation was issued for failure to maintain PCB records at the facility in 1991.
				SWEEPS UST, HIST UST	One 1,500-gallon diesel UST and one 1,000-gallon gasoline UST were installed at the facility in 1954 and were reportedly present in 1988.
				HWP	A case associated with the facility has a cleanup status of "undergoing closure" and the facility type is listed as "historical – non-operating" for PCB storage. An operating permit for PCB storage was issued in 1985 and expired in 1990.
				CERS	The facility is classified as a hazardous waste generator.
				RCRA NonGen/NLR	The facility did not generate hazardous waste in 1996 and no violations are reported.
	EnviroStor Database			EnviroStor	The facility is a hazardous waste facility with an "undergoing closure status" that was issued a permit to temporarily store PCB waste generated during removal of electrical equipment containing PCBs from 1985 to 1990.
Adjacent Properties					
Emilio Franco	B20	12520 Dace Street	Adjacent – West	RCRA NonGen/NLR	The facility did not generate hazardous waste in 2019 and no violations are reported.
Norwalk Community	C21-C23	13222	Adjacent - South	RCRA-SQG	The facility was a small-quantity generator of hazardous waste in 1992 and no violations are reported.
Hospital		Bloomfield		FINDS, ECHO	The facility is enrolled in a State-managed hazardous materials/waste program.
		Avenue		CERS HAZ	The facility is classified as a hazardous waste generator and a chemical storage facility with at least one petroleum AST. Two violations were
				WASTE, CERS TANKS, CERS	incurred during the most recent compliance evaluation inspection (2020), pertaining to administration, for which the facility subsequently returned to compliance. A "brand new emergency generator with a diesel fuel capacity of 1,700 gallons was installed in November 2019 and is
					currently undergoing technical inspections/approvals and permitting." Previous violations incurred were also corrected.
				HAZNET	The facility generated onsite and disposed offsite of various quantities of hazardous waste, including latex waste, pharmaceutical waste, and organics in 2017 and 2018.
				Los Angeles Co. HMS	The facility is enrolled in a County-managed hazardous materials/waste program.
				HWTS	The facility is classified as a general medical and surgical hospital and has an active status as of 2006.

PLAN, CERS, US FIN ASSUR, PRP, HIST					The site type is "historical" and the case has a "no further action" status as of 1994. Past uses of concern are listed as maintenance/cleaning, potential contaminants of concern (COCs) listed include halogenated organic compounds and pesticides, and potential media affected is listed as soil. A site screening was conducted in 1993 for the "chemical storage yard" at the facility, a Preliminary Endangement Assessment (PEA) Report was completed in 1994 with "no further action" recommended, and a Removal Action Completion Report was completed in 1994, which consisted of the excavation of approximately 15 cubic yards of Lindane (an agricultural insecticide)-contaminated soil from an area within the chemical storage shed at the facility and offsite disposal. Portions of block wall and concrete located adjacent to the excavation were also chipped to remove contamination.
	N66, N67		op Feet North	VSE, STOR, CA EXP. CERS, ASSUR, ST	Neville Chemical Company is a former chemical manufacturing and sales facility that ceased operations in 1987. The 6.28-acre site type is "State Response" and the case has a "certified/operations and maintenance" status as of 2006. Dichlorobenzenes, dibenzodioxins, and dibenzodurans are the primary contaminants detected in soil at the site; other contaminants are chlorinated paraffins, carbon tetrachloride, and metals in soil, and dichlorobenzenes have been detected in groundwater beneath the site. Numerous activities and reports were conducted for the site from 1981 to 2019, including five-year review reports. A Deed Restriction was recorded for the site in 1997, restricting land use and ground disturbance. Neville Chemical Company was identified as the potentially responsible party and the cleanup was funded by a trust fund. The City of Santa Fe Springs Transportation Facility Auxiliary Lot held a construction storm water discharge permit in 2017.

*Bold listings indicate a release database
Regulatory agency information reviewed for the listings in the table above are summarized in the Additional Environmental Record Sources section of this report.

Orphan Listings

The database report identified six orphan or unmapped site listings, which were unable to be plotted due to insufficient address information. Based on Rincon's review of the limited address information or site descriptions for the orphan listings, none of the listings are expected to impact the subject property.

Additional Environmental Record Sources

Review of Agency Files

As a follow-up to the database search, Rincon reviewed regulatory information for the subject property and facilities within the specified search radii that were interpreted to have the potential to impact the subject property, based on one or more factors previously discussed (e.g., distance, open case status, upgradient location, soil vapor migration).

The following is a summary of our review of regulatory information obtained from review of online sources (e.g., SWRCB GeoTracker database, Department of Toxic Substances Control [DTSC] EnviroStor database, local fire department) and/or files requested from the applicable regulatory agency, as described below. Copies of selected documents reviewed are included in Appendix C.

Subject Property

The subject property was listed in various databases. These listings indicate that the CDCR -Southern Youth Authority Correctional Reception Center and Clinic facility was a youth correctional institution that was active from at least 1954 to 2013, stored and used hazardous materials, generated hazardous waste, and had one 1,500-gallon diesel UST and one 1,000-gallon gasoline UST from at least 1954 to 1988. Additionally, a release of diesel to soil was discovered at the facility in 1996 during the removal of a 1,000-gallon UST, remediation via excavation and offsite disposal occurred in 1996, and the case was closed by the Los Angeles Regional Water Quality Control Board (RWQCB) in 1997. No additional information or case documents were available on the SWRCB's online GeoTracker database. The subject property was listed on the DTSC's online EnviroStor database as a hazardous waste facility with an "undergoing closure status" that was issued a permit to temporarily store PCB waste generated during removal of electrical equipment containing PCBs from 1985 to 1990. Additionally, the subject property was listed on the Los Angeles County Fire Department's (LACFD's) online list of inactive Certified Unified Program Agency (CUPA) facilities. The subject property was also listed on the Los Angeles County Department of Public Works (DPW) online file review database. Records for the subject property were requested from the DPW on April 26, 2021; the records have not been provided as of the date of this report.

Records for the subject property were requested from the RWQCB on April 9, 2021, from the LACFD on April 14, 2021, and from the DTSC on April 15, 2021. The RWQCB indicated on April 19, 2021 that no records are available. The DTSC indicated on April 20, 2021 that no records other than those available online are available. The LACFD provided records on April 23, 2021.

The LACFD records consist of facility inspection reports from 2013, which indicate that the former prison ceased operation in 2012 and that locations at the facility previously identified as having hazardous materials and/or waste were the boiler room, commissary warehouse, hazardous materials shed in the southeastern yard, maintenance warehouse, paint shop, and weld shop. The facility was reported to be in the process of cleaning and removing hazardous material; the

commissary, maintenance warehouse, hazardous materials shed, boiler room, paint shop, and weld shop were reported to be "clear." A 1,000-gallon diesel storage tank built into an emergency generator and a 1,000-gallon gasoline aboveground storage tank (AST) for fueling vehicles were reported to be in the process of being cleaned, and associated plumbing was planned to be capped/plugged. Small quantities of hazardous materials were reported to remain in the maintenance building.

Adjacent Properties

Eight adjacent properties were listed in databases searched. None of these properties has the potential to impact the subject property.

Upgradient Release Sites

Three unauthorized release sites which are hydrologically upgradient to the subject property (based on the groundwater flow direction to the southwest) were identified within one-eighth mile of the subject property and have the potential to impact the subject property:

■ City of Norwalk Maintenance Yard – 12735-12737 Civic Center Drive: This property is located approximately 780 feet north of the subject property. The listings indicate that the facility had petroleum USTs, a release of gasoline to groundwater occurred from a UST in 1990, and the case was closed in 1996. No additional information or case documents are available on GeoTracker. Records for this property were requested from the RWQCB on April 15, 2021 and on April 26, 2021 the RWQCB indicated that records for this case are available for review in person. Records available on the DPW online file review database consist of improvement site plans and an application for an industrial waste disposal permit (to dispose of vehicle wash water); no information pertaining to USTs is included in the records. Based on the lack of information currently available online for the release of gasoline to groundwater from a UST on the facility, and hydrologically upgradient location of the facility relative to the subject property (based on groundwater flow direction to the southwest), this release has the potential to have adversely impacted the subject property.

Additionally, the ENVIROSTOR listing indicates that operations at the facility included maintenance and cleaning, with halogenated organic compounds and pesticides among the listed potential COCs to soil. Remedial action completed at the facility consisted of the excavation of approximately 15 cubic yards of Lindane (an agricultural insecticide)-contaminated soil from an area within the chemical storage shed at the facility and offsite disposal. Portions of block wall and concrete located adjacent to the excavation were also chipped to remove contamination. Because the ENVIROSTOR listing pertains to a soil-only release, this release is not expected to have adversely impacted the subject property.

Neville Chemical Company – 12800 East Imperial Highway: This property is located approximately 600 feet north of the subject property. The listings indicate that the facility was a former chemical manufacturing and sales facility from at least 1980 to 1987 and is associated with soil and groundwater contamination, primarily dichlorobenzenes, dibenzodioxins, and dibenzofurans in soil and dichlorobenzenes in groundwater beneath the facility. The facility is under DTSC oversight and the case has a "certified/operations and maintenance" status as of 2006. Remedial action was completed at the facility in 1996 and the final selected remedy was capping of the site after demolition of the plant and all structures was completed, operation of a groundwater treatment system, and a deed restriction. An operations and maintenance plan was approved in 1997. According to the most recent groundwater monitoring report (June

2020) available on EnviroStor, the groundwater extraction and treatment system has been operating since 1995, groundwater generally flows toward the southeast at the site, and the two nearest groundwater monitoring wells to the subject property (located less than 600 feet to the north and northeast of the subject property) did not contain detectable concentrations of volatile organic compounds (VOCs) during at least the two most recent groundwater monitoring events (2018 and 2019). Based on this information, this Neville Chemical Company site is not expected to have adversely impacted the subject property.

Kalico #2, Neville Chemical – 12924 East Imperial Highway: This property is located approximately 300 feet northeast of the subject property. The listings indicate that the 25-acre facility consisted of an 18-acre, unpermitted hazardous waste landfill that operated from 1956 to 1964, was closed, and is currently commercial/industrial land use. The landfill accepted hazardous waste, liquid, mixed municipal, and residential waste and was permitted to bury waste up to 45 feet bgs. The case associated with the site was closed by the RWQCB in 2016. Case documents available on GeoTracker indicate that the landfill was a "cut and cover" facility. According to the case documents, there are no records that landfill liners, covers, gas control, or other engineered features were in place at the facility (no state laws were reportedly in place requiring these features during the time that the landfill was in operation), and when the landfill was closed, it was covered with a two-foot soil cap. A 2000 summary letter of "recent Phase II investigation results" indicates that petroleum hydrocarbons, metals, pesticides, and PCBs were detected in soil, lead and VOCs were detected in groundwater (which was reported to be 82 to 101 feet bgs and flows toward the northeast [this is the Artesia groundwater zone underlying the shallower water-bearing zone in the region]), and VOCs and methane were detected in soil vapor at the landfill site during a 1999 investigation. No additional pertinent information or case documents are available on GeoTracker. Records for this property were requested from the RWQCB on April 15, 2021 and on April 26, 2021 the RWQCB indicated that no files other than the ones on GeoTracker are available for the case.

The Kalico #2 facility was listed on the California Department of Resources, Recycling, and Recovery (CalRecycle) Solid Waste Information System (SWIS) online database. Documents available on SWIS consist of facility inspections from 2007, 2008, 2009, and email correspondence. The facility inspection reports indicate that the closed landfill facility was paved with asphalt, in use for trailer storage, no evidence of subsidence or surface cracking was observed, and "random surface gas monitor readings" collected indicated that no methane gas was detected at the time of the inspections. The email correspondence consists of an approval of a scope of work to install light poles and a guard shack at the truck storage yard on a portion of the former landfill facility; the email indicated that a passive methane venting system was planned for installation at the facility.

Based on the lack of information currently available online and proximity to the subject property, the Kalico landfill has the potential to have adversely impacted the subject property.

Review of State of California Geologic Energy Management Division (CalGEM) Records

A review of the State of California Geologic Energy Management Division (CalGEM) Online Mapping System² indicates that no oil wells are located on the subject property or adjacent properties. Two

² https://www.conservation.ca.gov/calgem/Pages/WellFinder.aspx

Rincon Consultants, Inc.

oil wells are located within one-quarter mile of the subject property: one plugged dry hole well and one idle oil and gas production well, both located approximately 0.25 mile north of the subject property.

Furthermore, according to the Los Angeles County Department of Public Works Solid Waste Information Management System³, the subject property is not located within 300 feet of an oil or gas well. However, the subject property is located within 1,000 feet of a methane-producing site: Kalico #2 – Neville Chemical, at 12924 East Imperial Highway, is approximately 300 feet northeast of the subject property.

Review of National Pipeline Mapping System Records

A review of the National Pipeline Mapping System (NPMS) online Public Map Viewer⁴ indicates that no natural gas transmission pipelines or hazardous liquid pipelines are located on the subject property or adjacent properties. One pipeline-related accident is reported within 1,000 feet of the subject property: a release of three barrels of "jet fuel – turbine" occurred due to excavation damage in 2003 approximately 780 feet east of the subject property, along the two nearby petroleum product pipelines (both active, filled non-highly volatile liquid [HVL] owned by SFPP, L.P.), also located approximately 780 feet east of the subject property.

Review of California Statewide PFAS Investigation

In 2019, the California SWRCB sent assessment requirements to property owners of sites that may be potential sources of PFAS. These sites currently include select landfills, airports, and chrome plating facilities. In August 2020, the SWRCB expanded the assessment requirements to include publicly owned treatment works facilities. According to the SWRCB, "PFAS are a large group of human-made substances that do not occur naturally in the environment and are resistant to heat, water, and oil" (SWRCB 2019).

Our April 8, 2021 review of the California 2019 Statewide PFAS Investigation online Public Map Viewer⁵ indicates that there are no current airport, landfill, or publicly owned treatment works PFAS orders at any facilities listed as located within one-half mile of the subject property. However, there is one current chrome plating PFAS order at a facility located approximately 0.5 mile north of the subject property: Precision Control Finishing at 12150 South Bloomfield Avenue. The online PFAS Investigation Map Viewer does not indicate whether this facility has been assessed for PFAS. The nearby Kalico #2 – Neville Chemical landfill site is not listed on the online PFAS Investigation Map Viewer.

Our April 8, 2021 review of the California 2019 Statewide Drinking Water System Quarterly Testing Results online Public Map Viewer indicates that perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) were detected in five of six drinking water wells located within two miles of the subject property and tested quarterly as part of a PFAS investigative order. One of these wells contains PFOA and PFOS at concentrations greater than their respective SWRCB notification and response levels. This well is located approximately 2.1 miles west-southwest of the subject property.

⁵ https://www.waterboards.ca.gov/pfas/

Rincon Consultants, Inc.

³ https://dpw.lacounty.gov/epd/swims/OnlineServices/search-methane-hazards-esri.aspx

⁴ https://www.npms.phmsa.dot.gov/PublicViewer/

Because groundwater beneath the subject property is not planned for use onsite, no further assessment of PFAS in groundwater is warranted at this time.

Known or Suspect Contaminated Release Sites with Potential Vapor Migration

The database report was reviewed to identify nearby known or suspect contaminated sites that have the potential for contaminated vapor originating from the nearby site to be migrating beneath the subject property. Based on the ASTM E2600-15, Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions, the following minimum search distances were initially used to determine if contaminated soil vapors from a nearby known or suspect contaminated site have the potential to be migrating beneath the subject property:

- 1/10 mile (528 feet) for petroleum hydrocarbons
- 1/3 mile (1,760 feet) for other contaminants of concern (COCs)

If known or suspect contaminated sites are located within the above referenced distances from the subject property, online resources are reviewed to determine the extent of the contaminated plume at those sites. The following describes search distances for contaminated plumes of petroleum hydrocarbons (30 feet from the subject property) and other COCs (100 feet from the subject property). Per ASTM E2600-15, vapors associated with impacted soil or groundwater present within these distances have the potential to migrate beneath the subject property.

Petroleum Hydrocarbons

Based on our review of the database report, known or suspect release sites identified within 1/10 mile of the subject property are as follows:

- One onsite known release case (CDCR Southern Youth Authority Correctional Reception Center and Clinic at 13200 South Bloomfield Avenue)
- Two upgradient known release sites (City of Norwalk Maintenance Yard 12735-12737 Civic Center Drive [LUST case]; Kalico #2, Neville Chemical 12924 East Imperial Highway)

Based on the lack of information currently available for these release cases and proximity to the subject property (one onsite case and two nearby sites located approximately 300 and 780 feet upgradient of the subject property), these known release sites present potential for petroleum hydrocarbon-impacted soil or groundwater plumes located onsite and/or within 30 feet of the subject property.

Other COCs

Based on our review of the database report, known or suspect release sites identified within 1/3 mile of the subject property are as follows:

Four upgradient known release sites (Stankovich II – 12601 Bloomfield Avenue; City of Norwalk Maintenance Yard – 12735-12737 Civic Center Drive [excluding the LUST case]; Neville Chemical Company – 12800 East Imperial Highway; and Kalico #2, Neville Chemical – 12924 East Imperial Highway)

Based on the nature of the releases (soil and/or soil vapor) and distance from the subject property, the Stankovich II site and the City of Norwalk Maintenance Yard site (not including the release associated with the petroleum UST) did not likely result in impacted soil or a groundwater plume located within 100 feet of the subject property.

Based on the available groundwater data for the Neville Chemical Company site, it is unlikely that operations at this site resulted in impacted soil or a groundwater plume located within 100 feet of the subject property.

However, based on the nature of the release (soil, soil vapor, and/or groundwater) and hydrologically upgradient location relative to the subject property, historical operations at the Kalico #2 site may have resulted in soil impacts or a groundwater plume located within 100 feet of the subject property.

Historical Use Information on the Property and the Adjoining Properties

The historical records review completed for this Phase I ESA includes aerial photographs, topographic maps, and city directories as detailed in the following sections. Copies of the historical resources reviewed are included in Appendix D. Table 3 provides a summary of the historical use information available for the subject property and adjacent properties.

Review of Aerial Photographs

Aerial photographs from EDR's aerial photograph collection were obtained. In addition, a current aerial photograph from Google Earth was reviewed. The aerial photographs were reviewed on April 8, 2021.

Review of Historical Topographic Maps

Historical topographic maps from EDR's map collection were obtained. The historical topographic maps were reviewed on April 8, 2021.

Review of City Directory Listings

EDR was contracted to provide copies of city directory listings for the subject property. The city directory listings were reviewed on April 16, 2021. As indicated in the attached report, no records were provided for the eastern or western adjacent properties.

Review of Fire Insurance Maps

EDR was contracted to provide copies of fire insurance maps (i.e., Sanborns [SM]) for the subject property. As indicated in the attached report, fire insurance maps were not available for the subject property or adjacent properties.

Review of City of Norwalk Building Permit Records

Building permit records for the subject property were searched on the City of Norwalk's website⁶. No building permit records are available for review online.

Additionally, building permit records for the subject property were searched on the Los Angeles County Department of Public Works online Building Permit Viewer database⁷. No building permit records are available for the subject property.

Other Historical Sources

Based on the sufficiency of historical information obtained for the purposes of this report, no additional historical sources were reviewed.

*Bold list	ings are comn	nercial/industrial uses with the p	otential to adversely impact the subject

Based on Table 3 above, the following historical uses of the subject property have the potential to impact the subject property:

■ Possible row crops: 1947

property

Gaps in Historical Sources

Several gaps of greater than five years were identified in the historical records reviewed, from 1902 to 1923, 1928 to 1938, and 1956 to 1963. These gaps are considered insignificant because the subject property use appears to be similar prior to and following the gaps.

Interviews

Rincon performed interviews regarding the subject property and surrounding areas. The purpose of the interviews was to discuss current and historical conditions and to obtain information indicating the presence of RECs in connection with the subject property.

Interview with Owner

An interview questionnaire was provided to the property owner, the State of California, prior to the site reconnaissance. A completed questionnaire has not been returned as of the date of this report.

Interview with Site Manager

A site manager was not identified to Rincon.

Interviews with Occupants

Because the subject property is currently in use as a COVID-19 quarantine facility for mental health patients, Ivan Mendez, Program Assistant with Department of Public Health, escorted Rincon throughout the subject property during the site reconnaissance. Mr. Mendez did not provide information pertaining to hazardous materials or wastes at the subject property.

Interviews with Local Government Officials

Rincon contacted the following agencies for records pertaining to the subject property and/or adjacent properties:

- **DTSC** Records for the subject property (13200 South Bloomfield Avenue) were requested from the DTSC on April 15, 2021. The DTSC indicated on April 20, 2021 that no records are available.
- LACFD Records for the subject property (13200 South Bloomfield Avenue) were requested from the LACFD on April 14, 2021 and the LACFD provided records on April 23, 2021, which are summarized in the Additional Environmental Record Sources section of this report.
- **DPW** Records for the subject property (13200 South Bloomfield Avenue) were requested from the DPW on April 26, 2021. Records have not been provided as of the date of this report.
- Los Angeles RWQCB Records for the subject property (13200 South Bloomfield Avenue), the nearby City of Norwalk Maintenance Yard site (12735-12737 Civic Center Drive), and the nearby Kalico #2 Neville Chemical site (12924 East Imperial Highway) were requested from the RWQCB on April 9 and April 15, 2021. The RWQCB indicated on April 19, 2021 that no records are available for the subject property. On April 26, 2021, the RWQCB indicated that records are available for the City of Norwalk Maintenance Yard site for review in person and that no records other than the records on GeoTracker are available for the Kalico #2 Neville Chemical site.

Interviews with Others

Rincon did not attempt to interview neighboring property owners or others as part of this Phase I ESA.

Site Reconnaissance

Rincon performed a reconnaissance of the subject property on March 8, 2021 accompanied by Ivan Mendez, Program Assistant with Department of Public Health, and Art Hatfield, in charge of grounds maintenance. The purpose of the reconnaissance was to observe existing subject property conditions and to obtain information indicating the presence of RECs in connection with the subject property.

Methodology and Limiting Conditions

The site reconnaissance was conducted by:

- 1. Observing the subject property from public thoroughfares,
- 2. Observing the adjacent properties from public thoroughfares,
- 3. Observing the interior of the onsite structures,
- 4. Observing the exterior of the structures,
- 5. Backtracking to correlate exterior features with interior features, as necessary, and
- 6. Observing the subject property from driveways, paved roads, and sidewalks.

Due to time constraints, the automotive repair area was not accessed or fully observed.

Current Use of the Property and Adjacent Properties

The subject property is currently in use as a COVID-19 quarantine facility for mental health patients prior to entering treatment facilities. A majority of the property is vacant structures. Adjacent properties are primarily residential, as well as a hospital, a retirement community, and a park.

Past Use of the Property and Adjacent Properties

Based on our site reconnaissance, the subject property was formerly a juvenile correctional center, as indicated by signage remaining throughout the property. Past uses at adjacent properties are not readily apparent based on the site reconnaissance.

Current or Past Uses in the Surrounding Areas

The subject property is surrounded by residential and commercial/light industrial land uses as detailed in the Site Description section of this report. Past uses of the surrounding area are not readily apparent based on the site reconnaissance.

Geologic, Hydrogeologic, Hydrologic, and Topographic Conditions

Geologic, hydrogeologic, hydrologic, and topographic information are as previously stated in the Physical Setting Sources section of this report.

General Description of Structures

The subject property is developed with multiple one-story structures, as detailed on Figure 2.

Roads

Bloomfield Avenue is located adjacent to the west of the property.

Potable Water Supply

Golden State Water Company currently supplies potable water to the subject property.

Sewage Disposal System

The subject property is connected to the City of Norwalk sewer system.

Interior and/or Exterior Observations

Table 4 provides details regarding the interior and/or exterior observations noted during the site reconnaissance. Photographs are included in Figures 4-7.

Table 4 Interior and/or Exterior Observations

Item	Observed	Photograph Number	Description
Hazardous Substances and Petroleum Products in Connection with Identified Uses	Yes	19	 Grounds storage building – Paint containers, batteries, containers of automotive fluids, and one compressed gas cylinder Former automotive repair area – Tires Rincon did not observe indications of releases
identified Uses			from these containers.
Aboveground or Underground Storage Tanks	Yes	7, 8	 Near the former automotive repair area – One potential AST/dispenser, and one diesel AST marked "empty/inert – November 2013" North of the grounds storage building – One diesel AST marked "empty/inert – November 2013"
Odors	No	Not Applicable (N/A)	Rincon did not observe the former automotive repair area; however, Mr. Hatfield indicated that there is a strong hydrocarbon odor in these structure(s).
Pools of Liquid	No	N/A	N/A
Drums	Yes	11, 12, 17	 Outside the former kitchen – One 55-gallon drum with solidified contents

Item	Observed	Photograph Number	Description
Hazardous Substances and Petroleum Products Containers Not in	No	N/A	 Inside the former kitchen – one 55-gallon drum marked "Food Grade Gear Oil" Near the AST to the north of the grounds storage building – One empty 55-gallon drum Near the former automotive repair area – one 55-gallon drum of unknown contents Rincon did not observe indications of releases from the drums on the subject property.
Connection with Identified Uses Unidentified Substance	No	N/A	N/A
Indications of Polychlorinated Biphenyls (PCBs)	Yes	14, 15	 Eastern Field – Four electrical transformers mounted on light poles were reported to contain PCBs. The transformers appeared to be older and possibly rusted, but no indication of release was observed on the ground beneath the transformers.
			■ Electrical Switches – There are reportedly nine electrical switches throughout the subject property, containing a total of approximately 800 gallons of PCB oils. Rincon observed one of the switches; melted tar was noted on the bottom of the switch, in addition to dark-stained asphalt in the vicinity of this one switch.
Heating/cooling systems	Yes	N/A	Rincon observed air conditioning units on and outside of the buildings.
Stains or corrosion	Yes	N/A	Stained pavement, likely from parked vehicles, and corrosion (rust) was observed throughout the subject property.
Drains, clarifiers, and sumps	Yes	N/A	What appeared to be a clarifier was observed in the former automotive repair area.
Degreasers/parts washers	No	N/A	N/A

Item	Observed	Photograph Number	Description
Pits, ponds, and lagoons	No	N/A	N/A
Stained soil or stained pavement	Yes	N/A	Stained pavement, likely from parked vehicles, was observed on the subject property.
Stressed vegetation	No	N/A	N/A
Solid waste/debris	Yes	N/A	A concrete pile was noted on the southeastern portion of the subject property.
Wastewater	No	N/A	N/A
Wells	No	N/A	N/A
Septic systems/ effluent disposal systems	No	N/A	N/A

Evaluation

Rincon has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 for the California Youth Authority located in Norwalk, California. Any exceptions to, or deletions from, this practice are described in the Deviations section of this report. This assessment has revealed evidence of RECs in connection with the subject property, as detailed below in Table 5 – Findings, Opinions, Conclusions, and Recommendations.

Table 5 Findings, Opinions, Conclusions, and Recommendations

No.	Finding	Opinion	Conclusion	Recommendations
Н	Former agricultural use of the subject property	According to the historical resources reviewed, the subject property appears to have been used for agricultural purposes from at least 1928 to 1947, with possible row crops in the 1947 aerial photograph. Agricultural land use, with the exception of dry farming, is typically associated with the use of pesticides and arsenic. Based on the duration that row crops may have been present onsite (less than 15 years) and the length of time since the subject property was developed with the existing structures (over 65 years), the former agricultural use of the subject property is considered de minimis.	De minimis	None
7	Two petroleum USTs on the subject property and a known release of diesel from a UST	According to the environmental database report, there was one 1,500-gallon diesel UST and one 1,000-gallon gasoline UST on the subject property from at least 1954 to 1988. It is unknown where these USTs were formerly/are currently located, if the USTs were both removed from the subject property, and if there are any USTs currently onsite. Additionally, a release of diesel to soil was discovered at the facility in 1996 during the removal of a 1,000-gallon UST, remediation via excavation and offsite disposal occurred in 1996, and the case was closed by the RWQCB in 1997. No additional information is currently available online regarding the release case, and the RWQCB, the oversight agency for the release case, has no records for the subject property. Based on the lack of information on the USTs and a petroleum release from a UST, the USTs and associated known release are considered a REC.	REC	Subsurface Investigation

No.	Finding	Opinion	Conclusion	Recommendations
m	Former automotive repair area on the subject property	During the site reconnaissance, a former automotive repair area was observed in the northwestern portion of the subject property; however, due to time constraints, this area was not accessed or fully observed. Based on our experience, automotive repair areas have the potential to be associated with the use and storage of hazardous materials, generation of hazardous waste, and releases of hazardous materials.	REC	Subsurface Investigation
4	ASTs and drums observed on the subject property during the site reconnaissance	During the site reconnaissance, ASTs and drums were observed on the subject property. Based on the potential for releases to have occurred, the AST and drums are considered a REC.	REC	Additional Research, Subsurface Investigation, Proper Removal and Offsite Disposal Prior to Redevelopment of the Subject Property
2	Reported former pesticide storage on the subject property	During the site reconnaissance, the site representative informed Rincon that pesticides were formerly stored in the grounds storage building and the former automotive repair area on the subject property. There is the potential for releases to have occurred in the areas of former pesticide storage onsite.	REC	Subsurface Investigation
Q	PCBs on the subject property	According to the environmental database report, the subject property was listed as a hazardous waste facility that was issued a permit to temporarily store PCB waste generated during removal of electrical equipment containing PCBs from 1985 to 1990. During the site reconnaissance, four pole-mounted electrical transformers located in a field on the eastern portion of the subject property were reported by the site representatives to contain PCBs. Additionally, there are reportedly nine electrical switches throughout the subject property, containing a total of approximately 800 gallons of PCB oils. Dark-stained asphalt was observed in the vicinity of this one switch.	REC	Survey, Proper Removal and Offsite Disposal Prior to Redevelopment of the Subject Property, Subsurface Investigation

No.	Finding	Opinion	Conclusion	Recommendations
7	Nearby railroad tracks to the east for over 120 years	According to the historical resources reviewed, railroad tracks have been located about 180 feet to the east of the subject property from at least 1896 to present day. Although hazardous chemicals (including, but not limited to, hydrocarbons, pesticides, and metals) are often associated with railroad use, based on the distance from the subject property, the nearby railroad tracks are considered de minimis.	De minimis	None
∞	Nearby petroleum pipelines and one pipeline-related release	According to the online NPMS database, one pipeline-related accident is reported within 1,000 feet of the subject property: a release of three barrels of "jet fuel – turbine" occurred due to excavation damage in 2003 approximately 780 feet east of the subject property, along the two nearby petroleum product pipelines (both active, filled non-highly volatile liquid [HVL] owned by SFPP, L.P.), also located approximately 780 feet east of the subject property. Based on the distance from the pipelines and the pipeline-related accident to the subject property, the pipelines and the accident are not expected to have adversely impacted the subject property.	De minimis	None
6	Nearby former landfill located 300 feet from the subject property with known impacts to soil, soil vapor, and groundwater	Based on the lack of information currently available online, it is unknown if additional sampling after 1999 and/or remediation occurred at the landfill site, and based on proximity to the subject property (approximately 300 feet away and hydrologically upgradient), there is the potential for impacted soil vapor and/or groundwater to migrate from the former landfill beneath the subject property.	REC	Subsurface Investigation
10	Adjacent properties listed on environmental databases	According to the environmental database report, eight adjacent properties were listed in databases searched. Based on the research conducted, none of these properties have the potential to impact the subject property.	De minimis	None
11	Nearby City of Norwalk Maintenance Yard release site	According to the environmental database report, the nearby City of Norwalk Maintenance Yard site is associated with two release cases: one of an agricultural insecticide to soil, which was remediated, and one of gasoline to groundwater that occurred from a UST at the facility in 1990.	REC	Additional Research, Subsurface Investigation

No. Finding

12

Finding	Opinion	Conclusion	Recommendations
	The case for the groundwater release was closed in 1996; however, based on the lack of information currently available for this release, there is the potential for the City of Norwalk Maintenance Yard site to have adversely impacted the subject property.		
Nearby Neville Chemical Company release site	According to the environmental database report, the nearby Neville Chemical Company site was a former chemical manufacturing and sales facility that is associated with soil and groundwater contamination and is capped and undergoing groundwater treatment. According to the most recent groundwater monitoring report (June 2020) available online, the two nearest groundwater monitoring wells to the subject property (located less than 600 feet to the north and northeast of the subject property) did not contain detectable concentrations of VOCs during at least the two most recent groundwater monitoring events (2018 and 2019). Based on this information, the Neville Chemical Company site is not expected to have adversely impacted the subject property.	De minimis	None
Asbestos-containing materials and lead- based paint	Based on the age of the onsite structures (constructed as early as 1953), asbestos-containing materials (ACM) and lead-based paint (LBP) may be present in the structures on the subject property.	Notable Finding	ACM and LBP Survey

Rincon Consultants, Inc.

Phase I Environmental Site Assessment

Deviations

Deviations from ASTM E1527-13 practice were encountered during the completion of this Phase I ESA. User and Owner Questionnaires were not returned as of the date of this report. In addition, a lien search was not completed as part of this assessment; however, one was requested from the user.

Signatures of Environmental Professionals

The qualified environmental professionals that are responsible for preparing the report include Ryan Thacher, Sarah Larese, and Savanna Vrevich. Their qualifications are summarized in the following section.

"We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 312.10 of 40 CFR 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Qualifications of Environmental Consultants

The environmental consultants responsible for conducting this Phase I ESA and preparing the report include Ryan Thacher, Sarah Larese, and Savanna Vrevich. Their qualifications are summarized below.

Environmental Professional Qualifications	X2.1.1 (2) (i) - Professional Engineer or Professional Geologist License or Registration, and 3 years of full-time relevant experience	X2.1.1 (2) (ii) - Licensed or certified by the Federal Government, State, Tribe, or U.S. Territory to perform environmental inquiries	X2.1.1 (2) (iii) – Baccalaureate or Higher Degree from and accredited institution of higher education in a discipline of engineering or science and the equivalent of 5 years of full-time relevant experience	X2.1.1 (2) (iii) – Equivalent of 10 years of full-time relevant experience
Ryan Thacher	PE		PhD Environmental Engineering	11 years
Sarah Larese			BA Environmental Studies	21 years
Savanna Vrevich			BS Environmental Studies	5 years

Ryan Thacher, PhD, PE is an environmental engineer with over 10 years of experience in developing strategic, creative solutions to complex environmental issues. He is frequently engaged in regulatory action and/or litigation-driven projects involving water quality and water resources. Dr. Thacher has extensive experience developing and executing technical studies to support clients, including chemical fate and transport investigations, and employing environmental forensics methods to determine anthropogenic and natural source contributions, identify potentially responsible parties, or determine timing of a release. As the Director of Site Assessment and Remediation, he provides technical oversight on Phase I and Phase II environmental site assessments, in addition to providing a variety of other consulting services to clients.

Sarah A. Larese is a Senior Environmental Scientist with Rincon Consultants. She holds a Bachelor of Science degree in environmental studies from the University of California, Santa Barbara, California. Ms. Larese has experience in development, implementation and project management of environmental assessment and remediation projects, especially relating to underground storage tanks. Ms. Larese's responsibilities at Rincon include implementation of Phase I and II Environmental Site Assessments as well as conducting site remediation field activities and preparation of environmental reports. She has 19 years of experience conducting research, assessment and remediation projects.

Savanna Vrevich is an Environmental Scientist with Rincon Consultants. She holds a Bachelor of Science degree in Environmental Studies with an outside concentration in Ecology, Evolution, and Marine Biology from the University of California, Santa Barbara. Ms. Vrevich has experience in

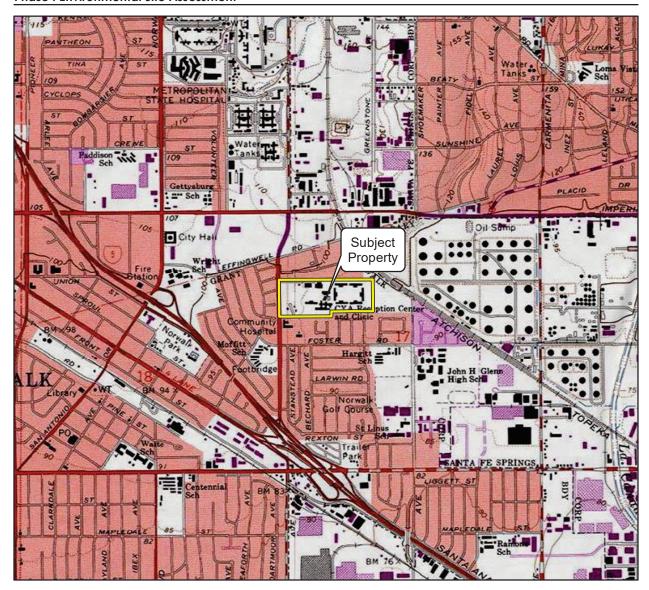

California Youth Authority, Norwalk, California

Phase I Environmental Site Assessment

working on large scale, multi-site projects for developers, banks, regulatory agencies, and other public and private clients. Ms. Vrevich's responsibilities at Rincon include implementation of Phase I Environmental Site Assessments and preparation of other environmental reports for a variety of commercial, rural, and industrial properties.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
OMEGA CHEMICAL CORPO Cerclis ID:: 903349	12504 AND 12512 E. W	NNW 1/2 - 1 (0.984 mi.)	0	84
EPA Id: CAD042245001				

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 SEMS

site within approximately 0.5 miles of the target property.

NEVILLE CHEM CO	12800 E IMPERIAL HWY	NNE 1/4 - 1/2 (0.256 mi.)	N67	307
Site ID: 0901081				

EPA Id: CAD008362758

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/30/2020 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/26/2020 has revealed that there are 17 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, has revealed that there are 5 SWF/LF sites within approximately 0.5 miles of the target property.

Cleanup Status: PROTECTIVE FILER

LOS ANGELES CO LF METHANE: This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

A review of the LOS ANGELES CO LF METHANE list, as provided by EDR, and dated 04/30/2012 has revealed that there is 1 LOS ANGELES CO LF METHANE site within approximately 0.5 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Summary Details:

Conditions at Proposal September 29, 1998): The Omega Chemical Corporation Omega) site is a former ha ardous waste treatment and storage facility that operated from 1976 to 1991 on a 40,000-square foot property in Whittier, Los Angeles County, California. Omega conducted solvent recovery using an on-site fractionation and distillation process and operated as a storage and transfer facility for various ha ardous waste classifications. Ha ardous wastes stored on site contained mainly chlorinated and aromatic solvents. In June 1995. before removal activities, the Omega site consisted of thousands of drums of ha ardous waste, two roll-off bins of hardened resin material, hundreds of empty but contaminated drums, numerous cylinders with capacities ranging from 15 to 20,000 pounds, and various other smaller containers of waste and/or ha ardous waste. Inside the on-site warehouse there were hundreds more 55-gallon drums that Omega claimed to be product and assorted smaller containers of ha ardous material. Since 1991, the California Department of Toxic Substances Control DTSC) and EPA s Ha ardous Waste Management Division have been actively trying to get the owner/operator to remove the wastes and clean up the site.In March 1995, the site owner/operator plead guilty to two felony counts of illegal storage and disposal of ha ardous wastes. On May 9, 1995, EPA issued CERCLA Administrative Order No. 95-15 to the owner of Omega and to generators of ha ardous waste that had shipped major quantities of material to Omega. During 1995, EPA s Superfund Emergency Response Office oversaw Phase I removal activities, during which contractors to a responsible party group removed all ha ardous materials and wastes from the site. Phase II site activities began in November 1995 and included collection and analyses of subsurface soil and ground water at the site. Analytical results indicated that subsurface soil samples were mainly contaminated with tetrachloroethene PCE), with lesser amounts of trichloroethene, dichloroethene and other chlorinated hydrocarbons, Freons and metals. PCE contamination was detected in soil at concentrations ranging from 1.9 milligrams per kilogram mg/kg) to 510 mg/kg. Ground water samples collected at the site contained PCE up to 86,000 micrograms per liter as well as significant concentrations of other chlorinated hydrocarbons and Freons. Phase II activities documented the presence of PCE in shallow ground water ina plume that extends almost 1 mile downgradient of the site. Although the ground water samples were collected in the shallow regional aguifer of the Lakewood Formation and most of the municipal drinking water wells draw water from the San Pedro Formation, California Department of Water Resources hydrogeologic cross-sections of the Lakewood and Upper San Pedro

Formations indicate that aquifers are interconnected within 2 miles of the site. Eight water purveyors draw ground water from 35 wells within 4 miles of the site to supply drinking water to approximately 284,270 people. The nearest well to the site is 1.3 miles to the west. This and nearly two-thirds of the wells within 4 miles draw water from the Lakewood and Upper San Pedro formation aquifers. The San Gabriel River is the nearest surface water body at approximately 2.5 miles from the site. The site is located in a mixed industrial and residential community, with residences located across Whittier Boulevard tothe northeast. Status January 1999): EPA is considering various alternatives for the site. The description of the site release) is based on information available at the time the site was scored. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Removal Action Completion Report

Completed Date: 06/14/1994

Comments: Approximately 15 cubic yards of soil contaminated with Lindane was

excavated from an area within the chemical storage shed. The cinder block and concrete adjacent to the excavation were also chipped to remove contamination. The contaminated soil and cement were disposed at Laidlaw Environmental's Imperial Valley facility and USPCI's Utah

facility.

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Preliminary Endangerment Assessment Report

Completed Date: 03/16/1994

Comments: The PEA phase completed with "No Further Action" recommend- ation.

The 16 x 5 x 5 feet block of cement and soil contaminated with

lindane was removed and backfilled upon completion of the PEA phase. Portions of block wall and concrete adjacent to excavation area were chipped to remove residual contamination. Trace level of lindane remaining in concerte wall below surface level does not constitute a

threat to human health or the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 06/24/1993

Comments: City of Norwalk reps submitted letter of intent to conduct a PEA at

the City of Norwalk Transportation yard. PEA is to cover solely the chemical storage yard. Analytical data indicates that a release Lindane has occurred within a 8x4x3 area. City intends to remdiate

prior to submittal of pea.

Environmental Interest/Information System:

California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Project Revenue Source Company: Not reported Not reported Project Revenue Source Addr: Project Revenue Source City, St, Zip: Not reported

Project Revenue Source Desc: The responsible parties are in compliance with an order issued by the

Department. DHS has budgeted \$100,000 for direct costs related to the project. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated

with the cleanup.

Site Description: Neville Chemical Company is a former chemical manufacturing and sales facility.

It is owned by Neville Chemical Company which is located on Neville Island,

Pittsburgh, PA.

Hazardous Waste Desc: Dichlorobenzenes (DCBs), dibenzodioxins (TCDD, PCDD), and dibenzofurans (TCDF,

> PCDF) are the primary contaminants detected in soils at the site. Other contaminants are chlorinated paraffins, carbon tetrachloride, and metals. Dichlorobenzenes have been detected in the ground water beneath the site. The site is approximately 100 yards from a residential area. Contaminant

Threat To Public Health & Env:

migration is possible via airborne emissions and ground water. The former is limited due to the facility ceasing operation in November, 1987 and as most site areas are paved. The upper aquifer is as shallow as 90 feet and is

contaminated; deeper aquifers are used for domestic water supply. There is no

known exposure at this time.

Site Activity Status: Neville initiated remedial investigation site activities in February, 1988. The

Phase I remedial investigation report was completed in December, 1988.

Background Info:

earthen trenches, burial of drums containing hazardous wastes, and significant leaks and product spills. The major contaminants include DCB, benzene, carbon tetrachloride, xylene, toluene, dioxin, furan, and HCI. These contaminants are found throughout the facility to depths of approximately 100 feet. The areas exhibiting the greatest contamination include former tank, still, and trench locations, and product loading areas. Possible exposure pathways include direct contact, groundwater, surface water, and air (although much of the site is capped). Possible receptors include onsite workers and visitors, groundwater users, and neighboring residents if contaminated soil is disturbed. Air has been monitored at the site and does not exhibit excessive emissions. Exposures from the other pathways are

not occurring at this time.

Six previous investigations were conducted prior to the

present RI. These investigations were conducted by EPA, Los Angeles County, DHS, and Cal OSHA. Cleanup activities to date (1985-1989) have included demolition of the facility and removal of all surface structures, tanks, and equipment. All sumps and trenches have been cleaned and filled with sand. Except for former tank and reactor locations, the facility is capped.

The RI/FS, including a Risk Assessment, was approved on

December 16, 1994.

The final RAP and CEQA docs were approved on May 8, 1995.

The selected remedy includes capping of the Neville facility, recontouring of the Neville leasehold, operation of the groundwater treatment system, and deed restriction. The Remedial Action Workplan/Design was approved on March 26,1996.

Remedial Action implementation pursuant to the RAP was completed on October 21, 1996.

The Engineer's Certification of Completion Report was completed on January 28, 1997. This certification is for the capping, grading and fencing of the Neville Site pursuant to the approved RAP.

The Operation and Maintenance Plan, for the remedies implemented pursuant to the approved Remedial Action Plan, was approved on August 12, 1997.

Not reported

The environmental deed restrictions were recorded on August 29, 1997.

Neville Chemical Company is a former chemical manufacturing facility which operated from the 1950s through 1988. The facility produced chlorinated paraffins, dichlorobenzene (DCB), and hydrochloric acids (HCL). The site is significantly contaminated with these products, raw materials, and

by-products.

Contamination is the result of past handling, storage, and illegal disposal practices. Such practices included open

> The Department received a notification from Mr. Michael L. Coates, Attorney representing Mr. Conrad Baker, the Receiver appointed by the Los Angeles Superior Court. The correspon- dence includes a Phase II Environmental Assessment Report and Additional Phase II Environmental Assessment and Subsurface Investigation Report. The soil and groundwater at the site are contaminated with several chemicals. The most prevalent compounds detected in the soil are methane, acetone, chlorobenzene, dichlorobenzenes (1,2-DCB, 1,3-DCB and 1,4-DCB) and ethylbenzene. Other compounds detected in the soil including some pesticides (4,4-DDD, 4,4-DDE and methoxychlor) and PCBs. TRPH in concentrations exceeding 1,000 mg/kg were also found in the soil. Hydrocarbon contaminants detected in the soil were also found in the groundwater. In addition, benzene, bis(2-ethylhexyl) phthlate, cis-1,2-dichloroethane and dimethyl-phthalate were also found in groundwater. The subject property is currently occupied by Polymer Concepts, a blow molding company which manufactruing plastic drums and trash containers and recycles 5-gallon plastic containers used for commercially bottled water. A Unocal oil pipeline runs east-west a few feet south of the build- ings. Former Neville Chemical Company (NCC), which used to manufacture chlorinated paraffins, lies west of the subject property. NCC is a California Superfund site in which various chemical contaminants related to previous operations have been detected in the soil and groundwater. Also, Kalico #2 landfill underlies the southern area of the subject site. Due to evidence of contamination at the site, staff recommends a PEA. The Department notified the Receiver that a PEA be conducted to determine whether conditions at the site present a threat to public health or the environ- ment.

Property History: The DoD constructed a refinery, known as Plancor 912, at this site to

produce aviation fuel. It contracted Wilshire Oil Company to operate the refinery in conjunction with Wilshire Oil's own refinery on adjacent property. Plancor ceased operation in 1945. The Air Force leased at least 18 acres of the site on 1 February 1949 and

subsequently purchased 11.7 acres of the 18 acres leased 2 February 1952 for use as an Air Force tank farm. Wilshire Oil purchased the residual Plancor 912 land, equipment, and improvements in 1951. The Air Force quitclaimed the 11.7 acres to Gulf Oil on 1 February 1968. The site was operated as a gasoline refinery by Gulf Oil and then by

Golden West Refining Company until 1992.

FUDS Detail as of Jan 2015:

Fiscal Year: 2013

CA9799FA487 Federal Facility ID: Not reported RAB: NPL Status: Not Listed Description:

The Department of Defense (DoD) acquired 20.7 acres in fee simple from Wilshire Oil Company on 21 September 1942 to establish a refinery known as Plancor 912. The U.S. Air Force leased at least 18-acres of Plancor 912 from the Reconstruction Finance Corporation (RFC) for use as a Tank Farm on 21 October 1948. On 2 February 1951, the U.S. Air Force purchased 11.7 -acres of the 18 acres subject to the 1948 lease and terminated the lease. The Wilshire Oil Company is located at 13539 Foster Road, Santa Fe Springs, California. Improvements included three 80,000-gal. storage tanks; a catalytic cracker; ethyl blending plant; isomerization, alkylation, and gas concentration units; and 25,000 sq ft of buildings, including a laboratory. Plancor 912 ceased operation in 1945. On 2 February 1951, the U.S. Air Force purchased 11.7 acres of 18-acres originally leased from the RFC on 21 October 1948 and terminated the lease. The 11.7-acre parcel was sold to Gulf Oil Company on 1 November 1968. The remaining 6.3 acres, including buildings and equipment, were purchased by Wilshire Oil Company on 2 January 1951. The site is currently owned by Golden West Refining

Company.

History: The DoD constructed a refinery, known as Plancor 912, at this site to

> produce aviation fuel. It contracted Wilshire Oil Company to operate the refinery in conjunction with Wilshire Oil's own refinery on adjacent property. Plancor ceased operation in 1945. The Air Force leased at least 18 acres of the site on 1 February 1949 and

subsequently purchased 11.7 acres of the 18 acres leased 2 February 1952 for use as an Air Force tank farm. Wilshire Oil purchased the residual Plancor 912 land, equipment, and improvements in 1951. The Air Force quitclaimed the 11.7 acres to Gulf Oil on 1 February 1968.

The site was operated as a gasoline refinery by Gulf Oil and then by

Golden West Refining Company until 1992.

Secondary Waste: Not reported Secondary Waste Type: Not reported

Design Flow: 0
Baseline Flow: 0

Reclamation: No reclamation requirements associated with this facility.

POTW: The facility is not a POTW.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as

cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

dairy waste ponds.

6.95, Section(s) 25508(a)(1)

Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site

at or above reportable quantities.

Violation Notes: Returned to compliance on 10/25/2016. Submittal into CERS.

Violation Division: Santa Fe Springs Fire-Rescue

Violation Program: HMRRP
Violation Source: CERS

Site ID: 410594

Site Name: Accuride International Inc.

Violation Date: 04-19-2017

Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22,

Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and

portable tanks with the following requirements: "Hazardous Waste",

name and address of the generator, physical and chemical

characteristics of the Hazardous Waste, and starting accumulation

date.

Violation Notes: Returned to compliance on 04/19/2017. One drum of waste oil on site -

no label - corrected during inspection

KELLY PIPE (Continued) 1001266794

Primary Waste Type: Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD,

Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

Secondary Waste: Not reported Secondary Waste Type: Not reported

Design Flow: 0 Baseline Flow: 0

Reclamation: No reclamation requirements associated with this facility.

POTW: The facility is not a POTW.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

> should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as

> cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

dairy waste ponds.

Primary Waste Type: Inert/Influent or Solid Wastes that do not contain soluble pollutants

or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils,

rubble and concrete are examples of this category.

Primary Waste: STORMS
Waste Type2: Not reported
Waste2: Stormwater Runoff

Primary Waste Type: Inert/Influent or Solid Wastes that do not contain soluble pollutants

or organic wastes and have little adverse impact on water quality. Such wastes could cause turbidity and siltation. Uncontaminated soils,

rubble and concrete are examples of this category.

Secondary Waste: Not reported Secondary Waste Type: Not reported

Design Flow: 0
Baseline Flow: 0

Reclamation: No reclamation requirements associated with this facility.

POTW: The POTW Does not have an approved pretreatment program. Some POTWs

may have local pretreatment programs that have not been approved by

the regional board and/or EPA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as

cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

dairy waste ponds.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Data Release Frequency: No Update Planned

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Elevation: 96 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 5633777 WHITTIER, CA

Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

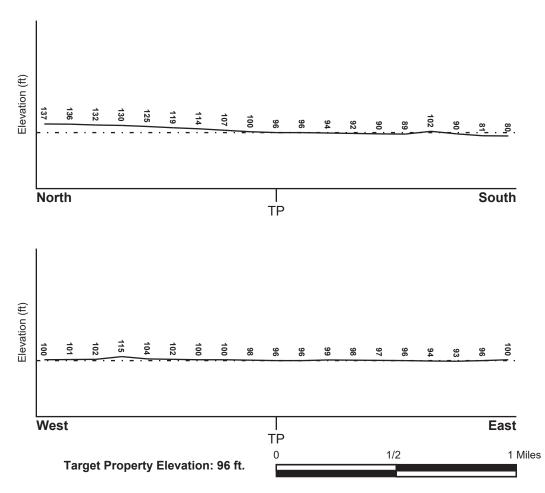

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles

Location Relative to TP: 1/4 - 1/2 Mile NNE
Site Name: Neville Chem Co
Site EPA ID Number: CAD008362758
Groundwater Flow Direction: South-Southeast
Measured Depth to Water: 100 feet to 140 feet.

Hydraulic Connection: Clay layers that may not be continuous separate the aquifers

underlying the site.

Sole Source Aquifer: No information about a sole source aquifer is available

Data Quality: Information based on site-specific subsurface investigations is

documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION

MAP ID FROM TP GROUNDWATER FLOW

Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOLOGIC AGE IDENTIFICATION

Era: Cenozoic Category: Stratifed Sequence

System: Quaternary Series: Quaternary

Code: Q (decoded above as Era, System & Series)

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

Soil Layer Information							
	Bour	ndary		Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: loam

clay silt loam loamy sand sandy loam fine sand clay loam

gravelly - sandy loam

coarse sand gravelly - sand

sand

Surficial Soil Types: loam

clay silt loam loamy sand sandy loam fine sand clay loam

gravelly - sandy loam coarse sand

gravelly - sand

sand

Shallow Soil Types: fine sandy loam

gravelly - loam

sand silty clay

Deeper Soil Types: stratified

clay loam silty clay loam gravelly - sandy loam

coarse sand

weathered bedrock very fine sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

Source: Dept of Conservation, Geologic Energy Management Division

Telephone: 916-323-1779

Oil and Gas well locations in the state.

California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558 Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at

private sources such as universities and research institutions.

EPA Radon Zones Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.

RE: LA County CUPA Inspection SYRCC

Good afternoon Eric,

The waste has been removed, the fuel storage tanks emptied, made inert and labeled. Copies of the manifest and bills of lading are at the facility for you unless you would like me to send you a copy. Would you like me to be there on the final walk through? Thank-you for your help in this matter.

Anthony Kolath Correctional Plant Manager I Heman G Stark Correctional Facility PH 909.606.5004 FX 909.606.5008

To: Kolath, Anthony@CDCR

Subject: LA County CUPA Inspection

Hi Anthony,

I looked up the procedures for this kind of situation, regarding the removal of all hazmat/hazwaste from your facility. To keep it simple:

- Contact me when all the waste from the outdoor visiting area has been removed and the petroleum product storage tanks have been cleaned and marked "EMPTY" with date.
- Provide all manifests for the cleanup and disposal.
- Have this completed by November 25, 2013 and I will perform a final walkthrough to close out the permit. If you need more time just let me know.

Thank you for your time today and please don't hesitate to contact me with any questions. Please email me back to confirm that you received this email.

Best Regards,

Eric Poomiwatracanont Hazardous Materials Specialist

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Ventura, CA 93003-0000

Contact: Savanna Vrevich

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Rincon were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # 31F8-4EF2-8607

PO# NA

Project 21-10965

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 31F8-4EF2-8607

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

Limited Permission To Make Copies

Rincon (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Rincon were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Phase II Environmental Site Assessment

California Youth Authority Norwalk, California

prepared for

City of Norwalk

prepared by

Rincon Consultants, Inc.

August 11, 2021

August 11, 2021 Project No.: 21-10965

Anna Choudhuri, Contract Planner City of Norwalk 12700 Norwalk Boulevard Norwalk, California 90650 Via email: annac@csgengr.com

Subject: Phase II Environmental Site Assessment

California Youth Authority, Norwalk, California

Dear Ms. Choudhuri:

We are pleased to submit this Phase II Environmental Site Assessment (ESA) report for the California Youth Authority property located in Norwalk, California (site). The Phase II ESA was performed in accordance with our proposal dated May 25, 2021. The objective of the Phase II ESA was to identify hazardous materials potentially present at the site as well as potentially impacted environmental media to evaluate the need for mitigation measures during demolition and construction activities to mitigate environmental and human health risks to construction workers and the neighboring residential communities, and determine if remediation or mitigation measures may be required to mitigate potential health risks to future occupants.

If you have any questions, or if we can be of any future assistance, please contact us.

Sincerely,

Rincon Consultants, Inc.

Sarah Larese Senior Environmental Scientist Ryan Thacher, PhD, PE Director of Site Assessment and Remediation

Introduction and Background

Rincon Consultants, Inc. (Rincon) performed a Phase II Environmental Site Assessment (ESA) for the California Youth Authority property located in Norwalk, California (site – Figure 1). The scope of work for this Phase II ESA was based on the draft Phase I ESA prepared for the site by Rincon and dated April 30, 2021 (Rincon 2021).

The 32-acre site is identified as Assessor's Parcel Number 8045008902 and the street address 13200 Bloomfield Avenue (Figure 2). The site is currently developed with a former juvenile correctional facility. The City of Norwalk is proposing a mixed-use development, including residential and commercial land uses, at the site. The proposed project will require demolition of all existing structures on the site and soil disturbance activities related to excavation and grading. No underground parking is planned at the site.

The draft Phase I ESA (Rincon 2021) identified the following Recognized Environmental Conditions (RECs) and Notable Finding at the site:

Recognized Environmental Conditions

- 1. Two petroleum underground storage tanks (USTs) on the subject property and a known release of gasoline from a UST
- 2. Former automotive repair area on the subject property
- 3. Aboveground storage tanks (ASTs) and drums observed on the subject property during the site reconnaissance
- 4. Reported former pesticide storage on the subject property
- 5. Polychlorinated biphenyls (PCBs) on the subject property
- 6. Nearby former landfill located 300 feet from the subject property with known impacts to soil, soil vapor, and groundwater
- 7. Nearby City of Norwalk Maintenance Yard release site

Notable Finding

1. Potential asbestos-containing materials (ACM) and lead-based paint (LBP) at the site

As part of the Phase I ESA, Rincon recommended conducting additional research, a PCB survey, and a subsurface assessment at the site to assess the potential for onsite impacts as a result of the aforementioned RECs. A PCB survey was not conducted as part of this Phase II ESA. The Notable Finding identified in the Phase I ESA was not assessed as part of this Phase II ESA.

Purpose and Scope

Purpose

Based on the findings of Rincon's draft Phase I ESA, historical uses of the site and current/historical uses of nearby sites may have impacted soil and soil vapor at the site. Therefore, Rincon performed a soil and soil vapor assessment to assess the potential for onsite impacts as a result of the RECs identified at the site.

Scope

The scope of work associated with the Phase II ESA at the site included the following:

- Reviewing copies of documents regarding the former onsite USTs, maintained by the County of Los Angeles Department of Public Works (LADPW)
- Obtaining a soil boring permit from Los Angeles County Department of Public Health for the two soil borings that were advanced to 25 feet below ground surface (bgs).
- Performing soil boring mark-outs and notifying Underground Service Alert (USA)
- Preparing a site-specific Health & Safety Plan (HASP)
- Overseeing a limited geophysical survey to clear the boring locations on the site and to evaluate
 the presence of any in-place USTs, any backfilled excavations, backfilled trenches, and other
 associated UST piping, if present, in areas at the site identified to potentially contain USTs
- Advancing 27 soil borings and 15 soil vapor borings on the site to depths as described below and shown on Figures 2 and 3:
 - Two soil borings (SB18 and SB19) to depths of 25 feet bgs and two soil vapor borings (SV18 and SV19) to depths of 15 feet bgs in suspected former UST locations
 - Three soil borings (SB1 through SB3) to depths of 10 feet bgs and two soil vapor borings (SV1 and SV2) to depths of 5 feet bgs in the westernmost building of the former automotive repair area
 - Three soil borings (SB4 through SB6) to depths of 10 feet bgs and one soil vapor boring (SV4) to a depth of 5 feet bgs at the chemical storage portion of the westernmost building of the former automotive repair area
 - Three soil borings (SB7 through SB9) to depths of 10 feet bgs and three soil vapor borings (SV7 through SV9) to depths of 5 feet bgs at the former automotive repair area in areas where discharge of contaminants of concern (COCs) may have occurred
 - Two soil borings (SB20 and SB21) to depths of 5 feet bgs and one soil vapor boring (SV20) to a depth of 5 feet bgs at the abandoned vehicle and equipment storage area west of the New Marshall Building where visibly stained areas were identified
 - One soil boring (SB10) to a depth of 5 feet bgs by a transformer stored on a pallet located between the automotive repair area and the grounds storage building
 - Seven soil borings (SB11 through SB17) to depths of 5 feet bgs and two soil vapor borings (SV16 and SV17) at the grounds storage building: one adjacent to an inert AST and a petroleum products storage cabinet, one adjacent to an active AST (labeled as inert), two in the former pesticide storage area, two in the paint room adjacent to the industrial spray paint booth, and one near evident floor staining in the welding area

Phase II Environmental Site Assessment

- Two soil borings (SB22 and SB23) to depths of 5 feet bgs in a potential former transformer storage area on the eastern portion of the site
- One soil boring (SB24) to a depth of 5 feet bgs next to the hazardous materials shed in a former unpaved parking lot
- Three soil borings (SB29 through SB31) to depths of 5 feet bgs adjacent to PCB-containing switches that are accessible and where environmental releases were evident or likely
- Two soil vapor borings (SV27 and SV28) to depths of 15 feet bgs in the northern and northeastern portions of the site, located downgradient of a nearby former landfill
- Two soil vapor borings (SV25 and SV26) to depths of 15 feet bgs in the northern and northwestern portions of the site, located downgradient of a nearby City of Norwalk maintenance yard release site
- Analyzing soil samples for the following COCs based on the location from which each was collected:
 - Total petroleum hydrocarbons (TPH)
 - Volatile organic compounds (VOCs)
 - Semi-volatile organic compounds (SVOCs)
 - Organochlorine pesticides (OCPs)
 - Polychlorinated biphenyls (PCBs)
 - California Code of Regulations Title 22 metals (Title 22 metals)
- Analyzing soil vapor samples for the following COCs based on the location from which each was collected:
 - TPH in the gasoline range (TPH-g)
 - VOCs
 - Methane
- Evaluating laboratory analytical results and comparing analyte concentrations to applicable
 Environmental Screening Levels (ESLs) and Regional Screening Levels (RSLs)¹
- Reporting findings of the Phase II ESA investigation

¹ Soil analytical results were compared to San Francisco Bay Regional Water Quality Control Board (SFB RWQCB) residential, commercial/industrial, and construction worker exposure ESLs, revised July 2019, as well as U.S. Environmental Protection Agency (EPA) Regional Screening Levels (RSLs) for residential and industrial soils, revised May 2021.

Site Assessment

LADPW Records Review

During the preparation of the Phase I ESA, Rincon requested copies of documents regarding the former onsite USTs, maintained by the LADPW. The LADPW provided records on May 18, 2021. A review of the records indicated that one 2,000-gallon gasoline UST and one 1,000-gallon diesel UST are currently or were formerly potentially located in four areas at the northwestern corners of the grounds storage building and/or the kitchen building on the site. The LADPW records indicated that two composite soil samples were collected from beneath (one boring was slant-drilled) and next to the gasoline UST located in the northwestern portion of the site, near the grounds storage building, as part of a leak detection assessment in 1989; TPH was detected at low concentrations in both samples (270 milligrams per kilogram [mg/kg] and 3 mg/kg). According to the LADPW records, the diesel UST was removed from the northwestern portion of the site, near the grounds storage building in 1989. Two soil samples collected from each end of the UST excavation contained total recoverable petroleum hydrocarbons at concentrations of 91.0 mg/kg and 11,400 mg/kg, indicating that the UST likely released petroleum hydrocarbons to adjacent soil. Additionally, the gasoline UST was removed in 1996, and soil samples collected from the UST excavation sidewalls and bottom also reflected petroleum hydrocarbon impacts, including TPH-g; "an attempt was made to excavate and remove the contaminated soils to a depth of 12 feet bgs; however, no further excavation was made beyond that depth and appeared to be not feasible due to the location of the excavation near the existing maintenance building. Such an excavation will endanger the structural integrity of the building." Based on the LADPW records reviewed, additional assessment was warranted in this area to determine the lateral and vertical extent of petroleum hydrocarbon contamination; however, the records do not indicate whether additional assessment was conducted prior to case closure by the Los Angeles Regional Water Quality Control Board in 1997.

The suspected former UST locations (two identified during the geophysical survey) are shown on Figure 3. During the current Phase II ESA, soil sampling was conducted in the vicinity of the suspected former UST locations. The findings of the assessment are described below.

Utility Notification

Prior to the commencement of sampling activities, Rincon pre-marked the proposed boring locations with white paint and notified USA utility marking service on June 9, 2021. California law requires this notification be completed at least two working days prior to commencement of fieldwork, and not including the date of notification. The utility marking service identified known utility locations in the public right-of-way.

Geophysical Survey

Rincon oversaw the completion of a geophysical survey at the site. The survey was conducted to clear the boring locations for subsurface utilities. The geophysical subcontractor used electromagnetic induction and ground penetrating radar (GPR) equipment to evaluate the presence of utility lines and other underground features, if present. No utility lines or other underground features were identified in these boring locations; therefore, the locations of these borings were not modified from the initially proposed locations.

Phase II Environmental Site Assessment

Additionally, a geophysical survey was completed in the former automotive repair area in the northwestern portion of the site, and in four other areas identified to be potential locations of former USTs (based on the LADPW records reviewed). The geophysical survey was conducted to evaluate the presence of any in-place USTs, any backfilled excavations, backfilled trenches, and other associated UST piping, if present.

The findings of the geophysical survey identified two anomalous features that were detected with the GPR equipment, both of which indicate the likely location of former UST locations; the findings suggest that USTs are not likely present. The Geophysical Survey report identifies both anomalous features as potential backfilled former UST locations (i.e., areas that appeared to be backfilled with disturbed soil):

- "Radar imagery shows subtle anomalous features of differing soil penetration levels within the boundaries of GPR Anomaly #1, and measure approximately 14 feet by 9 feet... Additionally, there was an unknown linear feature extending from the wall and terminating inside the boundaries of this anomaly. After further observation, a vent line was noticed jutting through the roof where this unknown line was heading. It is likely these lines are one in the same and was associated to this GPR Anomaly. Based on geophysical evidence along with site clues, the boundaries of GPR Anomaly #1 is likely the locale of a former underground storage tank."
- "GPR Anomaly #2, measuring approximately 24 feet by 12 feet, also did not possess any localized underground metallic objects suggestive of a UST... There was however a gas line running east-west through this anomaly. Radar imagery shows strong backfilled excavation-like characteristics, which suggests that excavating and removal activities previously occurred here... Based on these factors, this is the best candidate for a former tank hold within this second area."

The two suspected former UST locations identified during the geophysical survey are shown on Figure 3. Anomaly 1 is located north of the vacant kitchen building, in the vicinity of SB/SV19. Anomaly 2 is located west of the grounds storage building in the vicinity of SV/SB18. A copy of the Geophysical Survey Report is in Appendix A.

Soil Boring Permit

Prior to the commencement of sampling activities, Rincon obtained a soil boring permit from Los Angeles County Department of Public Health for the two soil borings (SB/SV18 and SB/SV19) that were advanced to 25 feet bgs in the vicinity of the two suspected former UST locations. A copy of the soil boring permit is in Appendix B.

Soil Sampling and Analysis

On June 21 and 22, 2021, 27 soil borings were advanced at the site to maximum depths of 25 feet bgs (SB1 through SB24 and SB29 through SB31).

Soil Borings

Soil borings were advanced using a track-mounted direct-push drill rig. Concrete coring was performed prior to drilling the interior borings. The total number of soil sampling locations, number of soil samples, sampling depths, and sampling method for the soil samples collected in each area are described in Table 1 and are shown in sampling maps (Figures 2 and 3).

Table 1 Soil Sampling Locations, Depths, and Analytes

Location	Boring ID	Sampling Area	Sample Depth (feet bgs)	Analytes
Automotive Repair Area	SB18, SB19	UST	5, 10, 15, 20, 25	TPH, VOCs, metals
	SB1-SB3	Westernmost building – staining, equipment storage (vehicle maintenance area)	5, 10	TPH, VOCs, metals
	SB4-SB6	Westernmost building – chemical storage area	5, 10*	TPH, VOCs, metals, OCPs
	SB7-SB9	Other potentially impacted areas	1, 5, 10	TPH, VOCs, metals, PCBs
Abandoned Vehicle and Equipment Storage Area	SB20, SB21	Vehicles and equipment	1, 5	TPH, VOCs, metals, PCBs
Transformer Located Between Automotive Repair Area and Grounds Storage Building	SB10	Transformer stored on a pallet	1, 5	TPH, VOCs, metals, PCBs
Grounds Storage Building	SB16	One existing inert AST and petroleum products storage cabinet	1, 5	TPH, VOCs, metals
	SB17	Active AST (labeled as inert)	1, 5	TPH, VOCs, metals
	SB11, SB12	Pesticide storage area	1, 5	OCPs, arsenic
	SB14, SB15	Paint room with spray paint booth	1, 5	SVOCs, metals
	SB13	Welding area with floor staining	1, 5	TPH, VOCs, metals
Eastern Storage Area/Parking Lot	SB22, SB23	Potential former transformer storage area	1, 5	TPH, VOCs, metals, PCBs
	SB24	Hazardous materials shed	1, 5	TPH, VOCs, metals
Potential PCB- Impacted areas	SB29- SB31	Switches	1, 5	TPH, VOCs, PCBs

^{*} During drilling at SB6, refusal was encountered at about 7 feet bgs. Therefore, a 10-foot sample was not collected from SB6.

Note that during drilling in one of the suspected former UST locations (SB19), refusal was encountered at about 8 feet bgs. Therefore, the boring location was moved and redrilled adjacent to, but not within, the suspected former UST location.

Soil Sampling

Soil samples were obtained using a direct-push drill rig and collected by advancing a sampling rod equipped with an acetate sleeve to the target depth at each boring location. A total of 63 soil samples were collected by cutting a 6-inch length sample liner from the 4-foot long acetate sleeves. Once collected, soil sample aliquots intended for VOC analysis were transferred to Terra Core™ samplers, hydrochloric acid-preserved Volatile Organic Analytes vials following United States Environmental Protection Agency (EPA) 5035 sampling protocol.

The sample liners were sealed with Teflon tape, capped, labeled, and stored in a cooler chilled to 4 degrees Celsius with the TerraCore preserved sample aliquots for transport, under chain-of-custody documentation, to a State of California certified analytical laboratory. All sample containers were labeled with a unique identifier which included the specific location and depth interval. The sample label included the date and time of the sample collection, the type of media sampled, the constituents to be analyzed, the project name, and the name of the sample collector.

Unretained soil recovered near the target sample locations was used to field screen the soil samples for VOCs and to classify the soils. A photoionization detector (PID) calibrated to an isobutylene standard was used to field screen the sample by placing a small soil volume into a zip-lock baggie and allowing at least 5 minutes for VOCs to volatilize. The baggie then was opened slightly, and the PID probe tip was placed within one-eighth inch of the soil.

Observations made in the field were recorded on the boring log created for each boring. The boring logs included classification of the soil per the Unified Soil Classification System, a description of any discoloration or odors noted in the soil, and any detection measured by the PID. The boring logs are included as Appendix C.

Upon completion of soil sampling, the soil borings were backfilled with hydrated bentonite or bentonite grout and finished to match pre-existing ground conditions.

In addition, 10 surface soil samples (X-1 through X-10) were collected from adjacent to select onsite structures at the locations shown on Figure 2. The soil samples were collected with hand tools and were collected into glass jars. Soil screening in the field using an X-ray fluorescence spectrometer (XRF) was performed on the samples for the purpose of determining lead-based paint impacts. Of the 10 surface soil samples collected and screened with the XRF, five exceeded the screening level of 50 mg/kg (the threshold to conduct solubility testing for California-hazardous waste characterization). The five surface soil samples were submitted to Enthalpy Analytical and were analyzed for total lead by EPA Methods 6010B.

Soil Analysis

Soil samples were transported under chain-of-custody documentation to Enthalpy Analytical, a State-certified analytical laboratory in Orange, California. Analytical methods for each COC are summarized in Table 2.

Table 2 Analytical Methods for Contaminants of Concern in Soil Samples

сос	Analytical Method
TPH	EPA Method 8015B
VOCs	EPA Method 8260B
SVOCs	EPA Method 8270C
OCPs	EPA Method 8081A
PCBs	EPA Method 8082
Title 22 Metals	EPA Method 6010B/7471A

Decontamination Processes

Non-disposable drilling and sampling equipment was decontaminated between uses by following a triple rinse method wherein equipment was washed with a phosphate-free detergent solution, rinsed with potable water, and rinsed again with deionized water. During sampling, decontamination water was containerized and removed by the drilling subcontractor upon sampling completion.

Soil Vapor Sampling and Analysis

On June 17 and 18, 2021, 15 soil vapor borings were advanced at the site to maximum depths of 15 feet bgs (SV1, SV2, SV4, SV7 through SV9, SV16 through SV20, and SV25 through SV28).

Soil Vapor Borings

Soil vapor borings were advanced at the site using a drill rig equipped with direct push technology (DPT) or using a limited access hand drill equipped with a 0.5-inch diameter probe. The total number of soil vapor sampling locations, number of soil vapor samples, sampling depths, and sampling method for the soil samples to be collected in each area are described in Table 3 and are shown in sampling maps (Figures 2 and 3).

Table 3 Soil Vapor Sampling Locations, Depths, and Analytes

Location	Boring ID	Sampling Area	Sample Depth (feet bgs)	Analytes
Automotive Repair Area	SV18, SV19	UST	5, 15	TPH, VOCs
	SV1, SV2	Westernmost building – staining, equipment storage (vehicle maintenance area)	5	TPH, VOCs
	SV4	Westernmost building – chemical storage area	5	TPH, VOCs
	SV7-SV9	Other potentially impacted areas	5	TPH, VOCs
Abandoned Vehicle and Equipment Storage Area	SV20	Vehicles and equipment	5	TPH, VOCs
Grounds Storage Building	SV16	One existing inert AST and petroleum products storage cabinet	5	TPH, VOCs
	SV17	Active AST (labeled as inert)	5	TPH, VOCs
Nearby Former Landfill (Located Northeast of the Site)	SV27, SV28	North and northeastern portions of the site	5, 15	TPH, VOCs, methane
Nearby City of Norwalk Maintenance Yard (Located North of the Site)	SV25, SV26	North and northwestern portions of the site	5, 15	TPH, VOCs

Soil Vapor Sampling and Analysis

Under the direct supervision of Rincon, Optimal Technology collected soil vapor samples from the soil vapor borings at the site. Prior to purging or sampling, a shut-in test was conducted to check for leaks in the above-ground sampling system. The system was evaluated to a minimum measured vacuum of approximately 100 inches of water using a purge pump. If there was any observable loss of vacuum, the fittings were adjusted until the vacuum in the sample train did not noticeably dissipate. After the shut-in test was validated, the sampling train was not altered.

A leak test was conducted by applying a tracer gas to the probes at each point of connection where ambient air could enter the sampling system. These points included the top of the sampling probe where the tubing meets the probe connection and the surface bentonite seals.

Soil vapor samples were collected using a vacuum pump set to draw 0.2 liters per minute of soil vapor at a maximum vacuum of 100 inches of water. The pump was attached to the probe and purged prior to sample collection. Vapor samples were obtained by drawing the sample through a luer-lock connection between the sampling probe and the vacuum pump or by puncturing tubing connecting the sampling probe and the vacuum pump. New tubing was used at each sampling point to prevent cross contamination.

Soil vapor samples were analyzed onsite using a mobile lab for TPH-g and VOCs by EPA Method 8260B modified for soil vapor and for methane by EPA Method 8015 modified for soil vapor.

Analytical Results

Soil Sample Analytical Results

Analytical results for soil samples were compared to residential, commercial/industrial, and construction worker exposure ESLs, or, if ESLs have not been established, to RSLs for residential and industrial soils. A copy of the laboratory analytical report is included in Appendix D. Summaries of the soil sample analytical data are included in Tables 12 through 14.

CCR Title 22 Metals

Metals were detected in each of the 56 soil samples analyzed (Table 12). Table 4 summarizes metals detections in the soil borings that exceed ESLs, RSLs, and/or background concentrations; metals not listed were either not detected above the method detection limits or not detected above ESLs, RSLs, and/or background concentrations during this sampling event.

Table 4 Summary of Detected Concentrations of Select Metals in Soil

Constituent	Number of Detections (Out of 56 Samples Analyzed)	Samples Exceeding ESL, RSL, and/or Background Concentration	Maximum Detected Concentration (mg/kg)	Residential ESL/RSL and/or Background Concentration Exceeded
Arsenic	56	SB3-5.0', SB6-5.0', SB11- 5.0' Exceeds Residential ESL/RSL and Background Concentration*	35 (SB3-5.0')	0.067 mg/kg (Residential ESL) 0.68 mg/kg (Residential RSL) 0.6-11 mg/kg Background Concentration
Cadmium	4	SB3-5.0' Exceeds Background Concentration	14 (SB3-5.0')	0.050-1.7 mg/kg Background Concentration
Chromium (Total)	52	N/A	81 (SB3-5.0')	N/A
Lead	53	SB3-5.0' and X-7 (surface sample) Exceeds Residential ESL	90 (X-7)	80 mg/kg (Residential ESL)
Thallium	3	SB14-5.0', SB16-5.0', SB21- 5.0' Exceeds Residential ESL and RSL and Meets or Exceeds Background Concentration	1.6 J (SB21-5.0')	0.78 mg/kg (Residential ESL and RSL) 0.17-1.1 mg/kg Background Concentration

J – Laboratory flag indicating estimated value (constituent detected at a concentration between method detection limit and reporting limit)

^{*} All 56 soil samples analyzed for metals exceed the Residential ESL and RSL for arsenic in soil. However, 53 of the soil samples were within background concentrations for arsenic in soil.

Phase II Environmental Site Assessment

The detected concentrations of arsenic in SB3 at 5.0 feet bgs, SB6 at 5.0 feet bgs, and SB11 at 1.0 foot bgs exceed the ESLs, RSLs, and the background concentration range for arsenic in California soil.

The detected concentration of cadmium in SB3 at 5.0 feet bgs exceeds the California hazardous waste characterization trigger level and the background concentration range for cadmium in California soil.

The detected concentration of total chromium in SB3 at 5.0 feet bgs exceeds the California hazardous waste characterization trigger level; however, is within the background concentration range for total chromium in California soil. ESLs and RSLs have not been established for total chromium.

The detected concentrations of lead in SB3 at 5.0 feet bgs, and the surface samples collected from X-3 and X-7, are within the background concentration range for lead in California soil; however, exceed the California hazardous waste characterization trigger level. The detected concentrations of lead in SB3 at 5.0 feet bgs and X-7 also exceed the residential ESL.

The detected concentrations of thallium in SB14 at 5.0 feet bgs, SB16 at 5.0 feet bgs, and SB21 at 5.0 feet bgs exceed the residential ESL, residential RSL, and meet or exceed the background concentration range for thallium in California soil.

Total Petroleum Hydrocarbons in Soil

Petroleum hydrocarbons were detected in 15 of the soil samples analyzed (Table 13). In addition, Table 5 below summarizes TPH detections in the soil borings; TPH-g (not listed below) was not detected above the laboratory reporting limits during this sampling event:

Table 5 Summary of Detected Concentrations of TPH in Soil

Constituent	Number of Detections (Out of 54 Samples Analyzed)	Samples Exceeding ESL or RSL	Maximum Detected Concentration (mg/kg)	Residential ESL/RSL Exceeded
TPH-d	1	N/A	16 (SB6-5.0')	No
TPH-o	15	N/A	730 (SB18-5.0')	No

None of the soil samples collected and analyzed for TPH exceeded their respective ESLs or RSLs for TPH in soil.

Volatile Organic Compounds

Table 6 below summarizes VOC detections in the soil borings; VOCs not listed below were not detected above the method detection limits during this sampling event (Table 13):

Table 6 Summary of Detected Concentrations of VOCs in Soil

Constituent	Number of Detections (Out of 54 Samples Analyzed)	Samples Exceeding ESL or RSL	Maximum Detected Concentration (mg/kg)	Residential ESL/ RSL Exceeded
Tert-butyl Alcohol	1	N/A	0.011 (SB18-25.0')	N/A
Acetone	28	N/A	0.079 J (SB21-1.0')	No
Methylene Chloride	39	N/A	0.0084 B (SB5-10.0')	No
MTBE	2	N/A	0.110 (SB18-25.0')	No
2-Butanone	15	N/A	0.011 J (SB6-5.0'/SB23-1.0')	No
Benzene	33	N/A	0.030 (SB19-15.0')	No
Toluene	25	N/A	0.038 (SB19-15.0')	No
Ethylbenzene	2	N/A	0.0072 J (SB19-15.0')	No
1,2,4-Trimethylbenzene	1	N/A	0.0010 J (SB18-25.0')	No
Xylenes	2	N/A	0.022 J (SB23-1.0')	No

B – Laboratory flag indicating high response was observed during calibration verification; analyte not detected at or above the reporting limit in the associated sample

ESLs and RSLs have not been established for tert-butyl alcohol. None of the soil samples collected and analyzed for VOCs exceeded their respective ESLs or RSLs for VOCs in soil.

Organochlorine Pesticides

Table 7 summarizes OCP detections in the soil borings; OCPs not listed below were not detected above the method detection limits during this sampling event (Table 14).

Table 7 Summary of Detected Concentrations of OCPs in Soil

Constituent	Number of Detections (Out of 9 Samples Analyzed)	Samples Exceeding ESL or RSL	Maximum Detected Concentration (mg/kg)	Residential ESL/ RSL Exceeded
Heptachlor	1	N/A	0.030 (SB6-5.0')	No
Heptachlor epoxide	1	N/A	0.025 C (SB6-5.0')	No
Dieldrin	1	N/A	0.028 C (SB6-5.0')	No
4,4'-DDE	2	N/A	0.059 (SB6-5.0)	No
Endrin ketone	1	N/A	0.011 (SB6-5.0')	No
4,4'-DDT	1	N/A	0.065 (SB6-5.0')	No
Chlordane	1	SB6-5.0' Exceeds Residential ESL and RSL	11 (SB6-5.0')	0.48 mg/kg (Residential ESL) 1.7 mg/kg (Residential RSL)

C – Laboratory flag indicating that presence confirmed, but Relative Percent Difference between columns exceeds 40%

The detected concentration of chlordane exceeds the residential ESL, commercial/industrial ESL, residential RSL, and industrial RSL. The detected concentration of chlordane also exceeds the California and federal hazardous waste characterization trigger levels which are based on the Total Threshold Limit Concentration (TTLC) threshold for California hazardous waste of 2.5 mg/kg.

Several OCP results were flagged, indicating that the presence of the constituent was confirmed but the relative percent difference between primary and secondary values of the analytical method exceeds 40 percent; however, according to Enthalpy Analytical, the flagged data should be viewed as reliable and usable for the purposes of this assessment.

Polychlorinated Biphenyls

Table 8 below summarizes PCB detections in the soil borings; PCBs not listed below were not detected above the method detection limits during this sampling event (Table 14):

Table 8 Summary of Detected Concentrations of PCBs in Soil

Constituent	Number of Detections (Out of 25 Samples Analyzed)	Samples Exceeding ESL or RSL	Maximum Detected Concentration (mg/kg)	Residential ESL/ RSL Exceeded
Aroclor-1260	7	N/A	0.042 J (SB21-1.0')	No

None of the soil samples collected and analyzed for PCBs exceeded their respective ESLs or RSLs for PCBs in soil.

Semi-Volatile Organic Compounds

Table 9 below summarizes SVOC detections in the soil borings; SVOCs not listed below were not detected above the method detection limits during this sampling event (Table 14):

Table 9 Summary of Detected Concentrations of SVOCs in Soil

Constituent	Number of Detections (Out of 4 Samples Analyzed)	Samples Exceeding ESL or RSL	Maximum Detected Concentration (mg/kg)	Residential ESL/ RSL Exceeded
Phenol	1	N/A	0.062 J (SB14-5.0')	No

None of the soil samples collected and analyzed for SVOCs exceeded their respective ESLs or RSLs for SVOCs in soil.

Soil Vapor Sample Analytical Results

Analytical results for soil vapor samples were compared to residential and commercial/industrial exposure ESLs for subslab/soil gas vapor intrusion. A copy of the laboratory analytical report is included in Appendix D. A summary of the soil vapor sample analytical data is included in Table 15.

Total Petroleum Hydrocarbons – Gasoline Range

TPH-g was detected in SV19-5.0 and SV19-5.0 DUP (the sample duplicate) at concentrations of 42,153 and 42,140 micrograms per cubic meter ($\mu g/m^3$), respectively (Table 15). SV-19 is located adjacent to a former UST location. Both of these detections exceed the residential ESL (20,000 $\mu g/m^3$). TPH-g was not detected above laboratory reporting limits in any other soil vapor samples collected at the site.

Volatile Organic Compounds

VOCs were not detected in the soil vapor samples analyzed as part of this assessment (Table 15).

Methane

Methane was not detected in the soil vapor samples collected and analyzed from soil vapor borings SV27 and SV28 as part of this assessment (Table 15).

Conclusions

The concentrations of TPH, VOCs, PCBs, and SVOCs in soil samples analyzed were either not detected above the laboratory reporting limits or were detected at concentrations below their respective ESLs for residential, commercial/industrial, and construction worker exposure scenarios, or below RSLs for residential and industrial soil. VOCs and methane in soil vapor samples analyzed were not detected above the laboratory reporting limits.

The detected concentrations of arsenic in SB3 at 5.0 feet bgs (35 mg/kg), SB6 at 5.0 feet bgs (13 mg/kg), and SB11 at 1.0 foot bgs (34 mg/kg) exceed the ESLs, RSLs, and the background concentration range for arsenic in California soil. The samples were collected in suspected pesticide storage areas.

The detected concentration of cadmium in SB3 at 5.0 feet bgs (14 mg/kg) exceeds the California hazardous waste characterization trigger level and the background concentration range for cadmium in California soil.

The detected concentration of total chromium in SB3 at 5.0 feet bgs (81 mg/kg) exceeds the California hazardous waste characterization trigger level; however, is within the background concentration range for total chromium in California soil. ESLs and RSLs have not been established for total chromium.

The detected concentrations of lead in SB3 at 5.0 feet bgs (87 mg/kg), and the surface samples collected from X-3 (51 mg/kg) and X-7 (90 mg/kg) are within the background concentration range for lead in California soil; however, these concentrations exceed the California hazardous waste characterization trigger level. The detected concentrations of lead in X-7 and SB3 at 5.0 feet also exceed the residential ESL.

The detected concentrations of thallium in SB14 at 5.0 feet bgs (1.1 mg/kg), SB16 at 5.0 feet bgs (1.2 mg/kg), and SB21 at 5.0 feet bgs (1.6 mg/kg) exceed the residential ESL, residential RSL, and meet or exceed the background concentration range for thallium in California soil. However, because these elevated results are at depth (5.0 feet bgs, not surface samples) and have laboratory flags indicating that they are estimated values, these impacts are not likely a result of an anthropogenic source and do not currently pose a human health exposure risk. No further assessment is warranted for thallium.

Chlordane was detected in SB6 at 5.0 feet bgs at a concentration that exceeds the residential ESL, commercial/industrial ESL, residential RSL, industrial RSL, and the California and federal hazardous waste characterization trigger levels, and the TTLC threshold for California hazardous waste; as such, soil at SB6 at 5.0 feet bgs is characterized as California hazardous waste.

During drilling in one of the suspected former UST locations (SB19), refusal was encountered at about 8 feet bgs. Therefore, the boring location was moved and redrilled adjacent to, but not within, the suspected former UST pit. The depth at which refusal was encountered (about 8 feet bgs) was deeper than the depth the geophysical survey equipment was able to penetrate (5 feet bgs). Therefore, we were not able to determine the identity of the feature in the ground at 8 feet bgs (i.e., backfill debris or left-in-place UST). There is the potential that the feature is a UST that was left in place and not properly abandoned. In addition, the elevated concentrations of TPH-g detected in the soil vapor sample (and its duplicate sample) collected from SV19 (SV19-5.0 and SV19-5.0 DUP, 42,153 and 42,140 μ g/m³, respectively) exceed the residential ESL for TPH-g in soil vapor and indicate the presence of a TPG-g source.

California Youth Authority, Norwalk, California Phase II Environmental Site Assessment

Based on the results of the Phase II ESA, the following COCs in the following borings have been identified:

Table 10 Summary of Contaminants of Concern and Locations

Medium	COCs	Boring Location
Soil Matrix	Arsenic	SB11
	Arsenic, Chlordane	SB6
	Arsenic, Cadmium, Chromium, and Lead	SB3
	Lead	X-7
Soil Vapor	TPH-g	SV19

Recommendations

The following is recommended based on the findings of the assessment (as shown in Table 11 below):

- SB3 had elevated concentrations of arsenic, cadmium, chromium, and lead in the soil sample collected at 5 feet bgs. We recommend step-out soil sampling in the vicinity of SB3 to determine the lateral and vertical extent of elevated concentrations of arsenic, cadmium, chromium, and lead in this area. In addition, during redevelopment of the site, the soil from this area should be excavated, removed from the site, and disposed at an appropriate facility. Confirmation soil samples should be collected from the area to confirm that the soil with elevated concentrations of metals has been removed.
- SB6 had an elevated concentration of chlordane (11 mg/kg) and a slightly elevated concentration of arsenic (13 mg/kg) at 5 feet bgs. The detected chlordane exceeds the residential and commercial/industrial ESL, the residential and industrial RSL, and the TTLC for California hazardous waste. We recommend step-out soil sampling in the vicinity of SB6 to determine the lateral and vertical extent of elevated concentrations of chlordane and arsenic in this area. In addition, during redevelopment of the site, the soil from this area should be excavated, removed from the site, and disposed at an appropriate facility. Confirmation soil samples should be collected from the area to confirm that the soil with elevated concentrations of chlordane and arsenic has been removed.
- SB11 had an elevated concentration of arsenic (34 mg/kg) at 1 foot bgs. The detected concentration exceeds the background concentration (0.6-11 mg/kg). We recommend step -out soil sampling in the vicinity of SB11 to determine the lateral and vertical extent of elevated concentrations of arsenic in this area. In addition, during redevelopment of the site, the soil from this area should be excavated, removed from the site, and disposed at an appropriate facility. Confirmation soil samples should be collected from the area to confirm that the soil with elevated concentrations of arsenic has been removed.
- The surface soil sample collected from X-7 had a concentration of lead (90 mg/kg) that slightly exceeded the ESL of 80 mg/kg for lead in residential soil. There is the potential that lead-based paint has impacted other areas of the site adjacent to structures that were not assessed during the current assessment. We recommend step-out soil sampling in the vicinity of X-7 to determine the lateral and vertical extent of soil impacted by lead in exceedance of residential ESLs.
- Additional investigation in the area of SB19 and the suspected UST location is recommended. We recommend excavation (potholing) in this area to determine the identity of the feature that caused refusal during drilling in this area (i.e. backfill debris or in-place UST), as well as additional soil and soil vapor sampling to determine the extent of TPH-g impacts in soil vapor in this area.
- Prior to the start of construction activities, preparation of a Soil Management Plan that will
 detail the methods and protocols for the proper handling, storage, and disposal of impacted soil
 is recommended.
- The sampling performed in the vicinity of the likely former petroleum UST location (SB18) did not identify elevated levels of COCs in the soil matrix or soil vapor; however, based on historical records, there is potential for contamination as in this area as a result of historical releases.

Phase II Environmental Site Assessment

Rincon recommends this be considered should soil disturbance or excavation activities occur in this area.

Based on the results of the Phase II ESA, the following proposed Step-out Soil Sampling Program is recommended:

Table 11 Proposed Step-out Soil Sampling Program

Location	Area of Concern	Proposed Step-out Soil Borings (Depth Interval)	No. of Samples and Proposed Analysis
Suspected Former UST Location	SB/SV19	Soil Vapor: 4 borings – 5 and 15 feet bgs	Soil Vapor: 8 – TPH & VOCs
Automotive Repair	SB3	Soil: 4 borings – 2, 5, 10 feet bgs	Soil: 12 – Title 22 metals
Area – Westernmost Building	SB6	Soil: 4 borings – 2, 5, 10 feet bgs	Soil: 12 – OCPs and arsenic
Grounds Storage Building	SB11	Soil: 4 borings – 1, 2, 5 feet bgs	Soil: 12 – arsenic
Vacant Building	X-7	Soil: 4 borings – surface, 2, 5 feet bgs	Soil: 12 – lead
Total No. of Propose	d Borings/Samples:	16 soil borings	44 soil samples
		4 soil vapor borings	8 soil vapor samples

Limitations

This report has been prepared for and is intended for the exclusive use of the City of Norwalk. The contents of this report should not be relied upon by any other party without the written consent of Rincon.

Our conclusions regarding the site are based on observations of existing conditions at the site and the results of a limited subsurface sampling program. The results of this evaluation are qualified by the fact that only limited sampling and analytical testing was conducted during this assessment.

This scope was not intended to completely establish the quantities and distribution of contaminants present at the site. The concentrations of contaminants measured at any given location may not be representative of conditions at other locations. Furthermore, conditions may change at any particular location as a function of time in response to natural conditions, chemical reactions, and other events. Conclusions regarding the condition of the site do not represent a warranty that all areas within the site are similar to those sampled.

Subject: Geophysical Survey

13200 Bloomfield Ave Norwalk, California

This report is to present the results of our geophysical survey carried over portions of property located at 13200 Bloomfield Avenue in Norwalk, California (Figure 1), on June 15th and 16th, 2021. Purpose of the survey was to locate and identify, insofar as possible, the existence of any underground storage tanks (USTs), backfilled excavations, piping, conduit, and other buried features that may exist within two (2) specific areas designated by the client. The secondary purpose of the survey was to locate and identify, insofar as possible, piping, conduit, and other buried utilities that may exist within a single larger designated area as well as in the vicinity of thirty-two (32) specific locations spread over the remainder of the property for guidance in future drilling activities.

A combination of electromagnetic induction (EM), magnetometry, and ground penetrating radar (GPR) were applied to the search. A utility locator with line tracing capabilities was also brought to the field and used where risers exist onto which a signal could be impressed and traced.

<u>Survey Design</u> — The areas to be surveyed were indicated in the field by the client. One area measured approximately 100 feet by 180 feet, predominantly focused on utility locating for borehole clearing purposes. Two other areas, located near the northeastern corner of two building structures, were surveyed in attempts to locate and identify underground storage tanks or former tank pits. And finally, the specific borehole locations were positioned by the client within the aforementioned areas along with other areas spread throughout the entire facility.

The magnetic gradiometer, line tracer, EM61, M-Scope and GPR were traversed systematically in many directions over the survey area. Additional traverses were taken, access permitting, for detailing and confirmation where anomalous conditions were found. Multiple GPR profiles were also collected throughout the area and in specific areas for confirmation where other instruments detected anomalies. The line tracer was also used to trace out all detectable utilities in the area.

Hard copy of the EM data was not acquired, that is, discrete readings on the nodes of a grid were not recorded that could be put into a contoured map format. Rather, the instruments' meters were read continuously, and in real-time, during each traverse. This free-traversing method allowed for immediate detection of anomalous objects and facilitated the opportunity to investigate them further, without first having to download data in the office. The lack of hard copy for EM data sets does not degrade the quality of the survey in any way. Hard copy merely provides a basis for report documentation of these geophysical fields, if such documentation is needed.

Additionally, these instruments were traversed systematically over each borehole along the eight lines of the standard search pattern (Figure 2), wherein, there are two sets of three parallel lines, mutually orthogonal, and two diagonals, all centered on the marked drill location. Adjacent parallel lines are approximately 5 feet apart, and each line is approximately 20 feet long, access permitting. Other traverses were taken, access permitting, for detailing and confirmation where anomalous conditions were found.

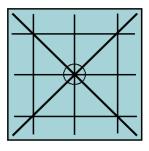

Figure 2: Standard search pattern around target

The line tracers were used to impress signals onto pipes, generally through accessible risers and tracer wires when present, to delineate the lines' locations and orientations. The instruments were also used in passive mode, configured to detect 60 Hz electrical signals and other common radio-frequency signals.

A Geonic's model EM61 and a Fischer M-Scope was used for the EM sampling. A Sensors and Software Noggin Ground Penetrating Radar unit with a 500 MHz antenna produced the radar images. The magnetic gradiometer was a Schonstedt GA-52, and a Metrotech 9890 and RIDGID SR-60 SeekTech utility locator rounded out the tools applied.

<u>Brief Description of the Geophysical Methods Applied</u> - The line locator is used to passively detect energized high voltage electric lines and electrical conduit (50-60 Hz), VLF signals (14-22 kHz), as well as to actively trace other utilities. Where risers are present, the utility locator transmitter can be connected directly to the

object, and a signal (9.8-82 kHz) is sent traveling along the conductor, pipe, conduit, etc. In the absence of a riser, the transmitter can be used to impress an input signal on the utility by induction. In either case, the receiver unit is tuned to the input signal, and is used to actively trace the signal along the pipe's surface projection.

The magnetic gradiometer has two flux gate magnetic fixed sensors that are passed closely to and over the ground. When not in close proximity to a magnetic object, that is, only in the earth's field, the instrument emits a sound signal at a low frequency. When the instrument passes over a buried iron or steel object, so that locally there is a high magnetic gradient, the frequency of the emitted sound increases. The frequency is a function of the gradient between the two sensors.

The EM61 instrument is a high resolution, time-domain device for detecting buried conductive objects. It consists of a powerful transmitter that generates a pulsed primary magnetic field when its coils are energized, which induces eddy currents in nearby conductive objects. The decay of the eddy currents, following the input pulse, is measured by the coils, which in turn serve as receiver coils. The decay rate is measured for two coils, mounted concentrically, one above the other. By making the measurements at a relatively long time interval (measured in milliseconds) after termination of the primary pulse, the response is nearly independent of the electrical conductivity of the ground. Thus, the instrument is a super-sensitive metal detector. Due to its unique coil arrangement, the response curve is a single well-defined positive peak directly over a buried conductive object. This facilitates quick and accurate location of targets.

The GPR instrument beams energy into the ground from its transducer/antenna, in the form of electromagnetic waves. A portion of this energy is reflected back to the antenna at a boundary in the subsurface across which there is an electrical contrast. The instrument produces a continuous record of the reflected energy as the antenna is traversed across the ground surface. The greater the electrical contrast, the higher the amplitude of the returned energy. The radar wave travels at a velocity unique to the material properties of the ground being investigated, and when these velocities are known, the two-way travel times can be converted to depth. The depth of penetration and image resolution produced are a function of ground electrical conductivity and dielectric constant.

The M-Scope device energizes the ground by producing an alternating primary magnetic field with AC current in a transmitting coil. If conducting materials are within the area of influence of the primary field, AC eddy currents are induced to flow in the conductors. A receiving coil senses the secondary magnetic field produced by these eddy currents, and outputs the response to a meter in the form of ground conductivity values for the M-Scope. The strength of the secondary field is a function of the conductivity of the object, say a pipe, tank or cluster of drums, its size, and its depth and position relative to the instrument's two coils. Conductive objects, to a depth of approximately 7 feet for the M-Scope are sensed. The devices are also somewhat focused; that is, they are more sensitive to conductors below the instrument than they are to conductors off to the side.

<u>Interpretation and Conclusions</u> - The interpretation took place in real time as the survey progressed, and accordingly, the findings of our investigation were marked on the ground cover with spray marking paint at the site and further documented with a partial site utility map (Figure 3), site photographs of the surveyed areas (Figures 4-34), and radar images (Figures 35-38).

Piping and utilities detected during the survey were marked with spray marking paint on the ground cover using green for sewer/storm drain, orange for communications, red for electric, blue for water, yellow for both gas and vent lines, white and pink were used to delineate lines of unknown utility type and orange dashed lines were used to delineate the boundaries of GPR Anomalies.

As indicated in the field by the client there were two suspect areas where underground storage tanks may have

been present in the past. A geophysical investigation was focused over these two areas and there were no localized underground metallic objects detected. There were however two anomalous features that were detected with the radar system.

Radar imagery shows subtle anomalous features of differing soil penetration levels (Figures 35 and 36), within the boundaries of GPR Anomaly #1, and measure approximately 14 feet by 9 feet (Figure 20). Additionally, there was an unknown linear feature extending from the wall and terminating inside the boundaries of this anomaly. After further observation, a vent line was noticed jutting through the roof where this unknown line was heading. It is likely these lines are one in the same and was associated to this GPR Anomaly. Based on geophysical evidence along with site clues, the boundaries of GPR Anomaly #1 is likely the locale of a former underground storage tank.

GPR Anomaly #2, measuring approximately 24 feet by 12 feet, also did not possess any localized underground metallic objects suggestive of a UST (Figure 21). There was however a gas line running east-west through this anomaly. Radar imagery shows strong backfilled excavation-like characteristics, which suggests that excavating and removal activities previously occurred here (Figures 37 and 38). Based on these factors, this is the best candidate for a former tank hold within this second area.

Additionally, once all detectable buried cultural objects were marked and accounted for and the USTs along with their associated piping were marked, our findings were discussed in the field with the client at the conclusion of the survey. Each borehole was then marked cleared by Subsurface Surveys and Associates with a white circle and a yellow "SSS". Please use the graphics along with the markings in the field for a better representation of our findings.

<u>Limitations and Further Recommendations</u> - It should be understood that limitations inherent in geophysical instruments and/or surveying techniques exist at all sites, and nearly all sites exhibit conditions under which instruments might not perform optimally. Consequently, the detection of buried objects in all circumstances **cannot be guaranteed**. Such limitations are numerous and include, but are not limited to, rebar-reinforced ground cover, abrupt changes in ground cover type, above-ground obstacles preventing full traverses or traverses in one direction only, above-ground conductive objects interfering with instrument signal, nearby powerlines or EM transmitters, highly conductive background soil conditions, limiting GPR penetration, non-metallic targets, shallower or larger objects shielding deeper or smaller targets, tracing signal jumping from one line to another, and inaccessible risers, cleanouts, valve boxes, and manholes. If one or more geophysical instrument is rendered ineffective and cannot be utilized, the quality of the survey can be somewhat degraded.

For the above reasons, and in the interest of maximum safety, we encourage our clients to take advantage of Underground Service Alert (USA), Dig Alert, or other similar services, when possible. Furthermore, we recommend hand-auguring and the use of a drilling method known as air knifing and vacuum extraction, when feasible or if applicable to this project. These methods may significantly limit damage to underground pipes, conduits, and utilities that might not have been detectable during the course of this survey. Please bear in mind, that geophysical surveying is only one of several levels of protection that is available to our clients.

SubSurface Surveys may include maps in some reports. While they are an accurate general representation of the site and our findings, they are not of engineering quality (i.e., measured and mapped by a licensed land surveyor).

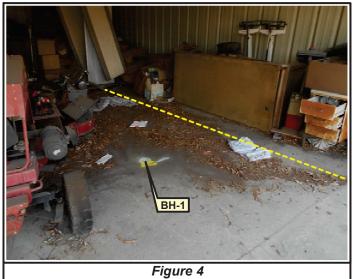

SubSurface Surveys and Associates makes no guarantee either expressed or implied regarding the accuracy of the findings and interpretations present. And, in no event will SubSurface Surveys and Associates be liable for any direct, indirect, special, incidental, or consequential damages resulting from interpretations and opinions

presented herewith.

All data acquired in these surveys are in confidential file in this office, and are available for review by your staff, or by us at your request, at any time. We appreciate the opportunity to participate in this project. Please call, if there are questions.

Work Plan Approval

WORK SITE ADDRESS	CITY	ZIP	EMAIL ADDRESS
Norwalk Transit Village Project	Norwalk	90650	Sarah Larese
13200 S. Bloomfield Ave / APN 8045-008-902	INOIWAIN	90030	SLarese@rinconconsultants.com

NOTICE:

- WORK PLAN APPROVALS ARE VALID FOR 180 DAYS. 30 DAY EXTENSIONS OF WORK PLAN APPROVALS ARE CONSIDERED ON AN INDIVIDUAL (CASE-BY-CASE) BASIS AND MAY BE SUBJECT TO ADDITIONAL PLAN REVIEW FEES (HOURLY RATE AS APPLICABLE).
- WORK PLAN MODIFICATIONS MAY BE REQUIRED IF WELL AND GEOLOGIC CONDITIONS ENCOUNTERED AT THE SITE INSPECTION ARE FOUND TO DIFFER
 FROM THE SCOPE OF WORK PRESENTED TO THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.
- WORK PLAN APPROVALS ARE LIMITED TO COMPLIANCE WITH THE CALIFORNIA WELL STANDARDS AND THE LOS ANGELES COUNTY CODE AND DOES NOT
 GRANT ANY RIGHTS TO CONSTRUCT, RENOVATE, OR DECOMMISSION ANY WELL. THE APPLICANT IS RESPONSIBLE FOR SECURING ALL OTHER
 NECESSARY PERMITS SUCH AS WATER RIGHTS, PROPERTY RIGHTS, COASTAL COMMISSION APPROVALS, USE COVENANTS, ENCROACHMENT
 PERMISSIONS, UTILITY LINE SETBACKS, CITY/COUNTY PUBLIC WORKS RIGHTS OF WAY, ETC.
- THIS PERMIT IS NOT COMPLETE UNTIL ALL OF THE FOLLOWING REQUIREMENTS ARE SIGNED BY THE DEPUTY HEALTH OFFICER. WORK SHALL NOT BE INITIATED WITHOUT A WORK PLAN APPROVAL STAMPED BY THE DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM.

TO BE COMPLETED BY DEPARTMENT OF PUBLIC HEALTH—DRINKING WATER PROGRAM:

X	WORK PLAN APPROVED FOR: 2 soil borings to ~ 25 feet bgs.	PERMIT NUMBER:	SR0258473	DATE:	June 17, 2021	Ī
---	--	-------------------	-----------	-------	---------------	---

ADDITIONAL APPROVAL CONDITIONS:

- 1) Work plan approval is issued for scope of work submitted to the Drinking Water Program. Any modifications to the scope of work will require additional work plan review.
- 2) Soil borings shall be sealed to terminal depth pursuant to Section 9 and Appendix B of *California Well Standards Bulletins 74-90 & Bulletins 74-81* respectively upon completion.
 - For Portland cement, it shall be mixed at a ratio of one 94-pound sack of Portland cement 5 to 6 gallons of 'clean' water.
 - Output 6% of bentonite may be added to the cement mixture at a ratio of two (2) pounds of bentonite one (1) gallon of 'clean' water, or in accordance with the manufacturer's specification.
 - The use of hydrated bentonite is not permitted.
- 3) Drill cuttings and wastewater shall be disposed of in accordance with all applicable federal, State, and local requirements.
- 4) Sealing materials shall meet *National Sanitation Foundation (NSF 61)* standard.
- 5) Provide temporary cover to the borehole opening whenever work is interrupted.
- 6) Soil boring or exploration holes must comply with all applicable requirements published in the California Well Standards (Bulletins 74-81 and 74-90 combined) and the Los Angeles County Code, Title 11.

Case Narrative

Rincon Consultants - Ventura 180 North Ashwood Ave. Ventura, CA 93003 Sarah Larese Lab Job Number: 446982

Location: Norwalk Transit Village

Date Received: 06/21/21

This data package contains sample and QC results for thirty three soil samples, requested for the above referenced project on 06/21/21. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B):

TPH (C6-C12) was detected above the RL in the method blank for batch 269175; this analyte was not detected in samples at or above the RL. A number of samples were diluted due to the dark color of the sample extracts. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

High response was observed for acetone in the CCV analyzed 06/22/21 20:18; this analyte was not detected at or above the RL in the associated sample, and affected data was qualified with "b". Benzene and methylene chloride were detected between the MDL and the RL in the method blank for batch 269184; these analytes were not detected in samples at or above the RL. Methylene chloride was detected between the MDL and the RL in the method blank for batch 269273; this analyte was not detected in samples at or above the RL. Methylene chloride was detected between the MDL and the RL in the method blank for batch 269439; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

PCBs (EPA 8082):

No analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):

High response was observed for silver in the CCV analyzed 06/23/21 15:40; affected data was qualified with "b". High response was observed for silver in the CCV analyzed 06/23/21 16:20; affected data was qualified with "b". High drift was observed for silver in the ICSAB analyzed 06/23/21 14:40; affected data was qualified with "b". Low recoveries were observed for antimony in the MS/MSD for batch 269304; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. Low recoveries were observed for antimony in the MS/MSD for batch 269306; the parent sample was not a project sample, the LCS was within limits, and the associated RPD was within limits. Low recoveries were observed for antimony in the MS/MSD of SB16-1 (lab # 446982-018); the LCS was within limits, and the associated RPD was within limits. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1				
Client: RINCON	Project: Nowware 772	DISIT	VICES	ଟେଙ
Date Received: 6/21/21	Sampler's Name Present:		No	
Section 2			-	
Sample(s) received in a cooler? Yes, How many?_	No (skin section 2)		e Temp (°C	
Sample Temp (°C), One from each cooler: #1:			(No Cooler) •
(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptance)			for sample	 es collected
the same day as sample receipt to have a higher tempe				
Shipping Information:				
Section 3				
Was the cooler packed with: Ice Ice Packs Paper None	Bubble Wrap Styro	foam		
Cooler Temp (°C): #1: <u>\$\sigma - 3</u> #2:	#3:	_#4:		
Section 4		YES	NO	N/A
Was a COC received?		/		
Are sample IDs present?		-		
Are sampling dates & times present?				Lar:
Is a relinquished signature present?				
Are the tests required clearly indicated on the COC?	100	/		
Are custody seals present?			/	
If custody seals are present, were they intact?				/
Are all samples sealed in plastic bags? (Recommended	for Microbiology samples)			/
Did all samples arrive intact? If no, indicate in Section	4 below.	/		IM
Did all bottle labels agree with COC? (ID, dates and tin	nes)	-		11.4
Were the samples collected in the correct containers f	or the required tests?			1 . i
Are the containers labeled with the correct prese	ervatives?			-
Is there headspace in the VOA vials greater than 5-6 m	ım in diameter?			/
Was a sufficient amount of sample submitted for the r	equested tests?	/		
Section 5 Explanations/Comments				
Section 6				
For discrepancies, how was the Project Manager notifi	ied? Werbal DM Initials	Data/Tima

SAMPLE ACCEPTANCE CHECKLIST

Section 1				
Client: Rincon	Project: Norwalk Transit Villa	age		
0/00/04		✓Yes	No	
Section 2				
Sample(s) received in a cooler? Yes, How many? 1	No (skip section 2)		e Temp (°C) (No Cooler)	- 1
Sample Temp (°C), One from each cooler: #1: 6.0		#4:	(NO COOLEI)	
(Acceptance range is < 6°C but not frozen (for Microbiology samples, acceptant	ce range is < 10°C but not frozen). It	is acceptable	for sample	- s collected
the same day as sample receipt to have a higher temperature	e as long as there is evidence that co	oling has begi	un.)	
Shipping Information:				
Section 3				
Was the cooler packed with: ✓ Ice ☐ Ice Packs ☐	Bubble Wrap Styro	foam		
Paper None	Other			
Cooler Temp (°C): #1: 2.1 #2:	#3:	#4:		
Section 4		YES	NO	N/A
Was a COC received?		125	140	
Are sample IDs present?		1		
Are sampling dates & times present?		1		
Is a relinquished signature present?		1		
Are the tests required clearly indicated on the COC?		1		
Are custody seals present?		+	1	Line alti 1971
If custody seals are present, were they intact?		 	•	/
Are all samples sealed in plastic bags? (Recommended for	Microbiology samples)	1		-
Did all samples arrive intact? If no, indicate in Section 4 be		1		
Did all bottle labels agree with COC? (ID, dates and times)	10111	1		
Were the samples collected in the correct containers for the	ne required tests?	1		
Are the containers labeled with the correct preservat		1		
Is there headspace in the VOA vials greater than 5-6 mm in		-		1
Was a sufficient amount of sample submitted for the requ		1		940
				muse skillediki
Section 5 Explanations/Comments				
Section 6				
For discrepancies, how was the Project Manager notified?	Verbal PM Initials:	Date/Time		
	Email (email sent to/			_
Project Manager's response:		,	-

Case Narrative

Rincon Consultants - Ventura 180 North Ashwood Ave. Ventura, CA 93003 Sarah Larese

Lab Job Number: 447111

Location: Norwalk Transit Village

Date Received: 06/23/21

This data package contains sample and QC results for seventeen soil samples, requested for the above referenced project on 06/23/21. The samples were received cold and intact.

TPH-Extractables by GC (EPA 8015B):

High surrogate recoveries were observed for n-triacontane in a number of samples. SB31-1 (lab # 447111-003) was diluted due to the dark color of the sample extract. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):

No analytical problems were encountered.

PCBs (EPA 8082):

No analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A):

Low recoveries were observed for antimony in the MS/MSD of SB14-1 (lab # 447035-012); the LCS was within limits, and the associated RPD was within limits. No other analytical problems were encountered.

SAMPLE ACCEPTANCE CHECKLIST

Section 1				
Client: Rincon Consultants	Project: Norwalk Transit			
Date Received: 6/23/21	Sampler's Name Present:	✓Yes	Πνό	
Section 2			•	
Sample(s) received in a cooler? Yes, How many? 1	No (skip section 2)		e Temp (°C (No Cooler	
Sample Temp (°C), One from each cooler: #1: 14.5			(140 COOLE)	,
(Acceptance range is < 6°C but not frozen (for Microbiology samples, accept	ance range is < 10°C but not frozen).	t is acceptable		 es collected
the same day as sample receipt to have a higher temperat	ture as long as there is evidence that c	ooling has begu	un.)	
Shipping Information:		•		
Section 3				
Was the cooler packed with: ☐ Ice ✓ Ice Packs	Bubble Wrap Styre	ofoam		
Paper None	Other			
Cooler Temp (°C): #1: 11.6 #2:	#3:	#4:		
Section 4		YES	NO	N/A
Was a COC received?		V		May John
Are sample IDs present?		-		
Are sampling dates & times present?		V		
Is a relinquished signature present?		~		7.7
Are the tests required clearly indicated on the COC?		~		
Are custody seals present?			~	
If custody seals are present, were they intact?				V
Are all samples sealed in plastic bags? (Recommended f	or Microbiology samples)			~
Did all samples arrive intact? If no, indicate in Section 4 l	oelow.	~		
Did all bottle labels agree with COC? (ID, dates and times		~		
Were the samples collected in the correct containers for		~		
Are the containers labeled with the correct preserv	 	~		
Is there headspace in the VOA vials greater than 5-6 mm				V
Was a sufficient amount of sample submitted for the rec	quested tests?	V		
Section 5 Explanations/Comments				
Section 6	10 Northal and the			
For discrepancies, how was the Project Manager notified				
Project Manager's response:	Email (email sent to	/on):	/
