RB Case Number:	1138B
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern:	Benzene, Tetrachloroethylene (PCE), Toluene, Trichloroethylene (TCE), Xylene
Site History:	A natural gas processing plant was located within the southwest portion of the study area and was demolished around 1960 when the area was commercially redeveloped. Environmental assessment and remediation activities, focusing on the former natural gas processing plant were overseen by the County of Los Angeles initially, then later by the City of Santa Fe Springs (SFS) beginning in 2000. By mutual agreement, the SFS had a lead oversight role for the purpose of soil cleanup and closure while the Regional Water Quality Control Board (Regional Board) oversaw site activities with regard to groundwater protection. Four entities agreed in 2002 to participate in a consortium to address environmental issues in what came to be called the Mini-Regional Study Area in the City of Santa Fe Springs. The entities are: the City of Santa Fe Springs (Little Lake Village senior housing project, Consolidated Graphics, Kimmerle Brothers, Inc., and Bemshaw Group (Western Allied Property). The Study Area is bound to the west by Fulton Wells Road, to the east by Koontz Avenue, to the north by Florence Avenue, and extending 610 to 1,240 feet southward from Florence toward Lakeland Road as shown on the attached Figure. Site assessment Soil borings were advanced in February 1988, after it was determined that elevated levels of hydrocarbons were present (currently this comprised the northern half of LLV) based on a soil vapor survey conducted on the John Alexander & Associates property in December 1987/January 1988. The County of Los Angeles Fire Department and Department of Health Services, oversaw site investigation and remediation activities until 2000. As part of the acquisition of the LLV property, the City of Santa Fe Springs (SFS) retained Alaska Petroleum Environmental Engineering, Inc. (Alaska Petroleum) to perform a Phase I Environmental Site Assessment, Phase II Site Characterization (Phase II), a methane gas survey, and oversee a Human Health Risk Assessment (HHRA), and a hydrocarbon fate-and-transport (FAT) study. The latter two reports were prepared by Enviro-Tox Services, Inc. using Phase II analytical data collected by Alaska Petroleum. The June 2002 HHRA and FAT reports determined

CITY OF SANTA FE SPRINGS - LITTLE LAKE VILLAGE HOUSING REDEV (Continued) **S118504515**

that: 1) The installation of subsurface passive venting and/or vapor barriers could result in the reduction of estimated cancer risks to levels below the one-in-a-million cancer health risk, and 2) It will take between 78 and 1,000 years for the petroleum hydrocarbon constituents to reach groundwater, and due to the soil moisture the concentrations, would either most likely fall below current USEPA MCLs and drinking water standards or not reach groundwater at all. The SFS Fire Department reviewed the draft HRA to determine if there would be any requirements pertaining to further investigation, future monitoring or proposed mitigating measures that applied to the City property development. City Fire concluded that no further action was required at this time other than the installation of a subsurface, passive methane venting system (e.g., a vapor barrier) under all residential buildings. However, City Fire also stated that this does not preclude any other requirements imposed by other regulatory agencies such as the Regional Water Board. SFS had no further requirements for the Little Lake Village housing project but continued assessment was required on three adjacent properties (Consolidated Graphics, Kimmerle Brothers and Western Allied) in order to delineate hydrocarbons in the subsurface. Alaska Petroleum subsequently submitted a Phase II workplan for the Mini-Regional study area in January 2004. Site investigation continued through September 2005. The final Mini-Regional Study report was submitted in May 2006. In 2007, soil vapor surveys were implemented on the three remaining properties, after which Consolidated Graphics and Kimmerle Brothers were granted a NFA (soil only) by the City of Santa Fe Springs. Further assessment has been required the City of Santa Fe Springs for either an Indoor Air Quality Study or HHRA at the Western Allied property. Some of the soil vapor and soil matrix samples contained chemicals of concern in concentrations above some of the guidance screening levels. These samples were a small percentage of the total collected and were delineated with no detectable concentrations. As required by the Regional Board, three groundwater monitoring wells were installed. Quarterly sampling was performed on September 10, 2007 and November 21, 2007. The sampling results indicated the primary chemicals of concern in the overlying soil (ex. benzene, ethylbenzene, toluene, and xylenes) were generally not detected in the groundwater or present in concentrations below MCLs. Chlorinated hydrocarbons (TCE, PCE) detected above MCLs in the groundwater were generally not detected in the overlying soil, above the capillary zone. The highest chlorinated hydrocarbon concentrations were detected in the most upgradient well, along the property boundary. The foregoing information indicates the source of the chlorinated hydrocarbons is off-site. The Regional Board has information regarding several sites in the upgradient direction that have documented chlorinated hydrocarbon impacts to groundwater. Remediation Soil impacted with total petroleum hydrocarbons was removed from the former location of the natural gas processing plant to depths between 10 and 30 feet. A contoured excavation diagram can be used to estimate that approximately 35 tons of soil were removed and treated via bioremediation under the oversight of the County of Los Angeles. Closure Closure is pending for the Consolidated Graphics and Kimmerle Brothers properties

The weeds were cut down and removed from the property by a licensed property by a licensed contractor.

Completed Document Type:	Removal Action Completion Report
Completed Date:	01/09/1996
Comments:	A Removal Action was conducted at the Walker Property site on December 5th and 6th, 1995. The soil of the 21 acre site is contaminated with PCBs, lead, waste oil, and diesel fuel. Weeds had overgrown the site and were causing a fire hazard. A fire on a site contaminated with PCB's has the potential to release highly toxic dioxins and furans into the atmosphere. The weeds were cut down and removed from the property by a licensed property by a licensed contractor.

Background Info:	The Walker Properties site was used by Getty Oil Company for the handling and storage of hydrocarbon products, during which time drilling fluids were disposed in onsite sumps. Lakewood Oil Service, Inc. used the northwestern portion of the property to store used crankcase oil and waste diesel fuel in tanks until it could be sold to a recycler. During the past, oil containing polychlorinated biphenyls (PCBs) and lead were disposed of in the area adjacent to Lakewood Oil's tanks. An underground tank was was removed from this area in April 1990. However, soils with extensive PCB and heavy metal contamination remain. A

hydrocarbon liquid, suspected to be JP-5 jet fuel, was stored on the southwest corner of the property. Soils in this area contain elevated levels of volatile contaminants. The pathways of concern are inhalation, soil ingestion, dermal contact and groundwater ingestion. The remaining area of the property has soil contaminated with petroleum hydrocarbons and some material containing asbestos. The RI/FS was approved in 1996. Only the PCB contamination in the Lakewood Section presented an unacceptable risk. A RAP approved in 1997 chose capping the PCB area as the remedial alternative. Cap installed. Site certified in 1998There is a deed restriction in place and an operation and maintenance (O & M) for the asphalt/concrete cap. DTSC recovered $11,000 in past costs from BC partners. The site was redeveloped in 2003.

Site History:	The Former ExxonMobil Jalk Fee Property (Site) at 10607 Norwalk Boulevard is approximately 9 acres in size and was an oil extraction

MOBIL - JALK FEE OIL PRODUCTION FACILITY (Continued) **S106386948**

and production facility from the 1920s to the 1990s. All oil field facilities were removed in the late 1990s. Initial investigations started in the early 1990s and soil impacted with volatile organic compounds (VOCs) and petroleum hydrocarbons was encountered. In 1998 and 2000, chlorinated and petroleum hydrocarbon impacted soil was excavated at the Site and transported to offsite facilities for treatment. In 2001, the Los Angeles Regional Water Quality Control Board (Regional Board) issued a no further action requirement for soil. In 2003, the Site was redeveloped as an industrial business park. Initial groundwater investigations started in 2000, with the installation of 3 shallow single-depth groundwater monitoring wells. VOCs, mostly tetrachloroethene (PCE) and trichloroethene (TCE) were detected in groundwater samples. To further assess groundwater conditions at the Site, three additional multi-depth wells were installed at the Site in April 2011. During this investigation, PCE was detected in soil at concentrations up to 6,600 micrograms per kilogram at approximately 15 feet below ground surface, in the southern portion of the Site. Groundwater samples from the newly installed wells are impacted with PCE at concentrations up to 1,800 micrograms per liter. Based on these results, the Regional Board directed ExxonMobil to conduct additional soil and groundwater investigations; therefore, the 2001 no further action determination for soil is no longer applicable to the Site. Additional investigations (soil vapor, soil, groundwater) were conducted in 2012 and 2014. Off-Site groundwater investigations were conducted in 2014 with the installation of multidepth groundwater monitoring wells. In 2017, indoor air investigations were conducted at two on-Site (10607 Norwalk Boulevard and 10629 Norwalk Boulevard) and one off-Site building (10701 Norwalk Boulevard). Indoor air sampling results were used to conduct evaluations of vapor intrusion into indoor air. Additional indoor air investigations were conducted at the off-Site building in May 2020. The California Office of Environmental Health Hazard Assessment (OEHHA) reviewed the indoor air investigations and the human health risk assessments conducted at each commercial building. OEHHA concurred with the assessment results that the cumulative risk under the commercial scenario on each of the investigated buildings is below 1xE-05. Additional on-Site and off-Site groundwater monitoring wells were installed in 2019 to further delineate the VOCs plume under the Site and immediate vicinity. On February 2020, a pilot test for soil vapor extraction and air sparge was conducted at several locations throughout the Site and at the adjacent Continental Heat Treating site. In 2021, to address groundwater impacts at the Site and the adjacent Continental Heat Treating site, chemical injection under waste discharge requirements (WDR) will be conducted, consisting on the injection of emulsified vegetable oil, sodium dithionote, sodium bicarbonate, and a bioaugmented culture at approximate depths ranging from 110 to 20 feet below ground surface.

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

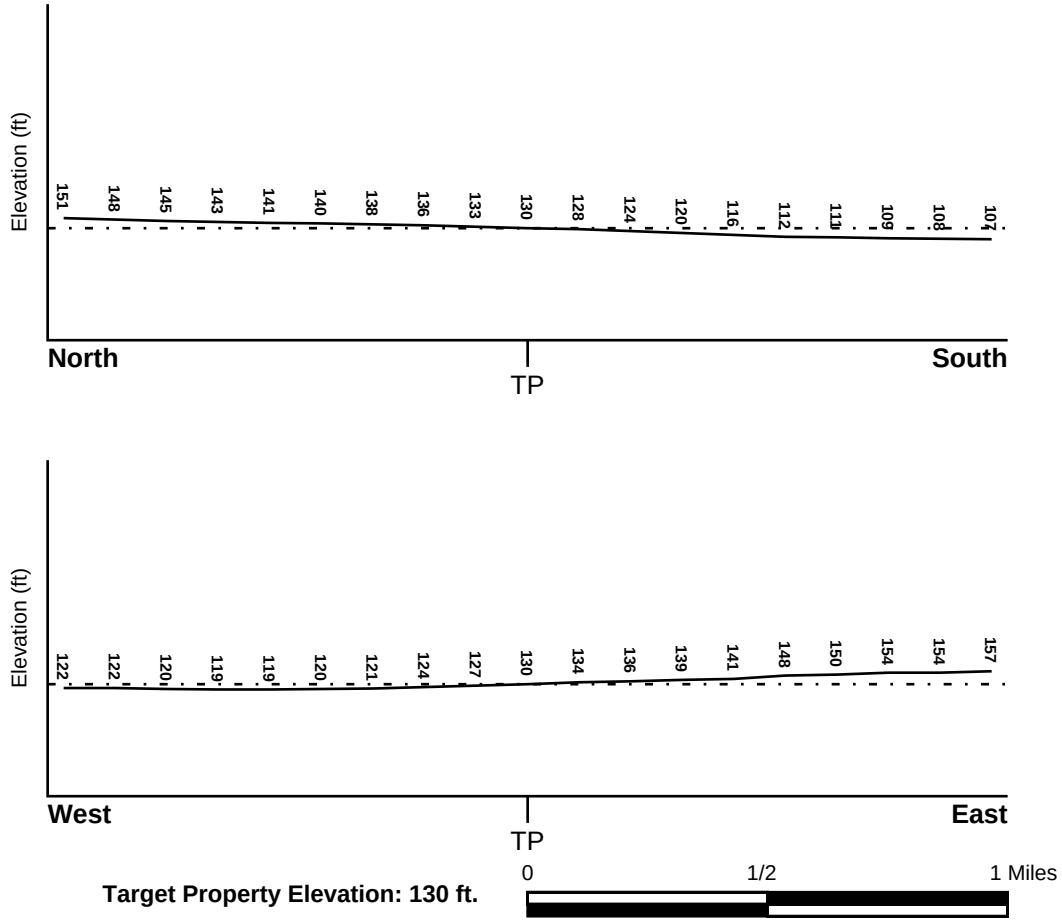
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
