This Phase I Environmental Site Assessment Report and Limited Phase II Site Investigation Report for the property located at 12300 Lakeland Road in Santa Fe Springs, California, dated January 31, 2022, was prepared by Justin Rauzon and reviewed by Ken Lister.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. The resumes for the individuals below are included in **Appendix F**. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Project Geologist
SCS ENGINEERS

EXECUTIVE SUMMARY

SCS Engineers (SCS) was retained by Alere Property Group, LLC (the "User") to prepare a Phase I Environmental Site Assessment (Phase I ESA) of the property located at 12300 Lakeland Road, Santa Fe Springs, California (the "Property"). This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries (AAI), and in general conformance with ASTM E1527-13. Based on the Phase I ESA findings, SCS also conducted additional Phase II soil and soil vapor sampling.

The Property, which comprises 8.42 acres, is located at the southeastern corner of the intersection of Lakeland Road and Norwalk Boulevard. The majority of the Property is developed with the Coast Iron & Steel Company (Coast Iron) facilities, which consists of an office building (3,800 square feet), an approximately 50,000-square-foot steel fabrication building, and asphalt-paved parking and storage yard areas. For more than 40 years, Coast Iron has leased approximately one acre at the southwestern corner of the Property to the adjoining facility to the west (11120 Norwalk Boulevard), currently operated by UTC Aerospace Systems (UTC). The UTC portion of the Property is developed with two warehouse structures, each with an approximate area of 7,500 square feet. UTC also currently leases a gravel parking area at the northwestern portion of the Property (approximately 0.8 acres).

One small structure, likely a rural residence, was located on or near the northwestern portion of the Property as early as 1896. In 1923 and 1925, the small structure was no longer depicted, but three or four oil wells were present on the Property. Between 1928 and the early 1940s, a small structure was present on the north-central portion of the Property. That structure was most likely related to oil exploration activities on the Property and surrounding area. By 1947, a few additional small structures were added at the northwestern portion of the Property. Outdoor equipment storage was also present along the western boundary. In 1963, Coast Iron developed its steel fabrication building on the eastern side of the Property. In 1966, the office building was added at the northeastern corner of the Property. The two industrial buildings on the southwestern portion of the Property, associated with the adjoining facility to the west, were constructed in 1965 and 1967. Coast Iron installed two gasoline USTs (5,000 and 9,970 gallon capacities) in 1974. These USTs were subsequently removed in 1989. The small industrial buildings on the northwestern portion of the Property were demolished in the mid-2000s, leaving the graded gravel area subsequently leased to UTC.

Coast Iron is a steel fabricator that cuts, bends, assembles, and welds steel products. Offices are located at the northeastern portion of the Property. A mostly open-air building where steel fabrication work is conducted is located along the eastern side of the Property. Steel presses are located in the fabricator building area. All of the presses are situated at grade, not in subsurface concrete pits. *De minimis* oil staining was noted at a few locations around the base of presses, particularly on the eastern side of the building. Oxygen acetylene precision plasma cutting equipment is situated outside the northwestern side of the fabrication building. Coast Iron has never galvanized steel at the Property, but it performs touch-up galvanizing with aerosol spray cans south of the fabrication building. Coast Steel's temporary hazardous waste storage compound is located at the southwestern portion of the Property.

UTC manufactures pyrolytic graphite aircraft brake products at its main facilities west of the Property. At the time of the site inspection, the two 7,500-square-foot UTC buildings on the southwestern portion of the Property were primarily being used for warehousing, shipping, and receiving. A small receiving laboratory was located inside the southeastern corner of the southern building. The northern building had offices and part storage (vacuum pumps, valves, gauges, instruments, etc.

UTC's hazardous waste storage compound is located beneath a canopy roof east of the southern building. Long-term UTC (previously Goodrich) employees indicated that the two buildings on the Property were historically used for warehousing, storage, quality control inspections, and dry machining. QC work consisted of dye penetrant inspection of densified carbon brake products manufactured in the main buildings. No spills, staining, or other evidence of a hazardous substance release were observed at the UTC occupied portions of the Property. However, during the UTC facility inspection, SCS observed the storage of two 1-liter bottles of 1,2-dichloroethane (1,2-DCA), a chlorinated solvent. Given known chlorinated solvent impacts to regional groundwater from offsite, upgradient sources, SCS considered the storage of this chemical onsite an environmental condition that warranted additional investigation in the concurrent Phase II soil vapor investigation.

SCS reviewed Santa Fe Springs Fire Department (SFSFD) files as part of the Phase I ESA. The files contain paperwork issued by the SFSFD when the two gasoline USTs were installed at the Property in 1974. The USTs were removed in mid-1989. According to an Underground Storage Tank Removal report prepared by Vadose, Inc., soil samples from beneath the tanks and dispensers did not detect total petroleum hydrocarbons (TPH) or fuel-related volatile organic compounds (VOCs). On October 3, 1990, the SFSFD issued a No Further Action (NFA) letter for the USTs removed from the Property.

The SFSFD files also contained a Phase II Environmental Site Assessment Report prepared by Norcal Engineering. Site contacts indicated that this report was prepared when the owner's family bought out their partners. The Phase II investigation was conducted to evaluate areas of concern identified in a Phase I ESA, a copy of which was not in the SFSFD files and was otherwise unavailable. The areas of concern included the following:

- Two former sumps,
- Four former cesspools and one septic tank,
- A former concrete well and stand pipe,
- The former gasoline UST area,
- Two dry oil well areas,
- An elevated concrete block area (former use of area unknown), and
- A clarifier.

None of these features were observed at the Property during the current site inspection. The 1998 Phase II investigation included 13 soil borings to depths ranging from 15 to 40 feet below ground surface (bgs). Investigated areas were located on the Coast Steel facility and the northwestern portion of the Property (prior to the demolition of the former structures). Soil samples were selectively analyzed for TPH, VOCs, and Title 22 metals. Total recoverable petroleum hydrocarbons (TRPH) were detected in 12 of 40 analyzed samples at concentration ranging from 19 to 460 milligrams per kilogram (mg/kg), equivalent to parts per million (ppm). The maximum TRPH concentration was detected in the 5-foot samples from near the elevated concrete block area. TRPH was not detected in the 20-, 30-, or 40-foot soil sample collected from this same boring. All TRPH concentrations were detected at levels below their corresponding soil screening levels (SSLs). VOCs were not detected in any of the soil samples. Metals concentrations were consistent with typical background ranges in California soils. Based on the results of the Phase II investigation, Norcal recommended no further action.

Coast Iron appears in several environmental databases, related to its storage of hazardous materials, generation of hazardous waste, and the former USTs. The company has been cited for administrative violations related to its hazardous materials business plan (HMBP) and failing to store

hazardous waste in covered containers. Records reviewed, however, did not indicate past releases at the Coast Iron facility.

The environmental database report also maps the western two-thirds of the Property within the boundary of the Omega Chemical Superfund Site. The Omega Chemical site is physically located approximately three miles northeast of the Property. Omega Chemical and related parties are responsible for cleanup of a groundwater plume that extends approximately five miles, including beneath the Property. The primary contaminants of concern are VOCs, especially tetrachloroethene (PCE), trichloroethene (TCE), and 1,1-dichloroethene (1,1-DCE). A review of available Omega Chemical Superfund information, indicated that the Property was situated in an area of Operable Unit 2 (OU-2), in need of additional investigation. Based on groundwater plume maps, chlorinated VOCs are present in downgradient groundwater wells south of the Property at concentrations up to 130 micrograms per liter (µg/L), above their corresponding California Maximum Contaminant Levels (MCLs). Given the historical use and storage of 1,2-DCA (a known PCE breakdown product) by UTC and its predecessor companies, SCS recommended that Phase II soil vapor sampling be conducted at the Property to evaluate whether onsite releases might have contributed to the regional contamination and/or whether vapor migration to shallow soil vapor was occurring. No data reviewed suggests that the Property might be named a contributor to the Omega Chemical Superfund groundwater plume.

The environmental database report also contains information about the former Powerine (Cenco) refinery, historically located across the street to the northeast and east of the Property. The former Powerine facility is also known to have contaminated regional groundwater with TPH and fuel-related VOCs. The Powerine refinery groundwater plume extends beneath the eastern side of the Property and likely co-mingles with the Omega Chemical Superfund plume. The former Powerine refinery areas were redeveloped over the past 20 years, but remediation activities for deep soil vapor (below 10 feet) and in groundwater are ongoing. Remedial actions across the street to the northeast include soil vapor extraction (SVE), air injection, and air-sparge wells. The Powerine responsible parties attribute chlorinated VOCs at their sites to offsite, upgradient sources. SCS also recommended Phase II sampling to consider whether releases from the former Powerine facility were migrating to shallow soil vapor at the Property (vapor encroachment condition, VEC).

Regulatory database information identified other known and suspected contamination sites in the surrounding area, some of which may have contributed to either the Omega Chemical or the Powerine groundwater plumes.

Phase II soil and soil vapor sampling was conducted concurrently with this Phase I ESA. Soil vapor probes were installed at 22 locations across the Property. PCE and fuel-related VOCs (benzene, toluene, and xylenes) were detected in soil vapor at concentrations below their corresponding Department of Toxic Substances Control (DTSC) recommended screening levels (DTSC-Recommended SLs) for existing and future commercial/industrial land use scenarios.

Soil samples were collected in the vicinity of the former USTs, near the hazardous material/waste storage compounds, near former oil wells, at the location of a former clarifier, and near an area of stained concrete at the base of a hydraulic press. The soil sampling did not show evidence of a significant release of TPH, VOCs, or metals at the Property. The results of the 1998 Phase II soil investigation and the SCS Phase II investigation did not identify significant contaminant releases at the Property. The results also suggest that remedial actions being implemented at the former Powerine facility are controlling potential vapor migration of fuel-related VOCs to the Property. Based on the available information, SCS considers the regional contamination associated with the former

Omega Chemical Superfund Site and the former Powerine refinery facility to be Controlled Recognized Environmental Conditions (CRECs) with respect to the Property.

Available oil and gas well maps from the California Department of Conservation, Geologic Energy Management Division (CalGEM) were reviewed to identify oil and gas wells on the Property or in the nearby area. According to the CalGEM Well Finder online database, the property is located in the central-eastern portion of the Santa Fe Springs Oil and Gas Field. Three former oil wells were located on or immediately adjacent to the Property. One was located at the center of the gravel parking area on the northwestern portion of the Property, one along the north-central edge of the Property, and one at the northeastern edge of the Property (which was likely situated offsite to the east in the Getty Drive right-of-way). Methane issues constitute a business environmental risk (BER). SCS conducted methane sampling concurrently with the Phase II investigation. The results were submitted under separate cover.

Conclusions

In summary, SCS performed a Phase I ESA of property located at 12300 Lakeland Road in Santa Fe Springs, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-13. Any exceptions to, or deletions from, this practice are described in Section 5 of this report. Based on the findings of the Phase I ESA, SCS conducted Phase II soil and soil vapor sampling.

In the opinion of the Environmental Professionals, this assessment has revealed evidence of conditions indicative of a CRECs in connection with the Property, as discussed above. Based on the results of the Phase I ESA and Phase II investigation, additional investigation is not recommended or warranted at this time.

1 INTRODUCTION

SCS Engineers (SCS) was retained by Duke Realty Corporation (the "User") to prepare a Phase I Environmental Site Assessment (Phase I ESA) of the property located at 12300 Lakeland Road, Santa Fe Springs, California (the "Property"). A location map for the Property is presented as **Figure 1** in **Appendix A**. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries (AAI), and in general conformance with ASTM E1527-13. Based on the Phase I ESA findings, SCS also conducted Phase II soil and soil vapor sampling. The Phase II investigation results are Section 16 of this report.

2 PURPOSE

This Phase I ESA is intended to constitute appropriate inquiry into the previous ownership and uses of the Property, as required to support the assertion of the innocent landowner, contiguous property owner, and/or bona fide prospective purchaser defenses to liability (collectively the landowner liability protections, or LLPs) under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA a.k.a. Superfund), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA), and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

The purpose of this investigation was to identify conditions indicative of releases or threatened releases of hazardous substances as defined in CERCLA Section 101, and petroleum products, on, at, in, or to the Property.

If known or suspected contamination is identified, Users seeking to maintain LLPs have responsibilities in addition to completion of an AAI-compliant Phase I ESA. These "continuing obligations" include taking "appropriate care" and "reasonable steps" with respect to known or suspected releases of hazardous substances during the term of property ownership. In addition to these requirements under federal law, there are different requirements under state law with respect to liability protections. On request, SCS can provide support for clients with continuing obligations, as appropriate.

3 SCOPE OF SERVICES

This Phase I ESA is based on:

- Interviews with past and/or present owners, operators, and/or occupants of the Property.
- Reviews of federal, tribal, state, and local government records.
- Visual inspections of the Property and adjoining sites performed on October 12, 2021.
- Review of historical Property use information (topographic maps, aerial photographs, fire insurance maps, existing reports, etc.).
- Commonly known or reasonably ascertainable information about the Property (e.g., interviews with appropriate regulatory agency personnel and review of agency files review of available documents, interviews with other knowledgeable persons).
- Degree of obviousness of the presence or likely presence of contamination at the Property, and the ability to detect the contamination by appropriate investigation.
- Information provided as a result of the additional inquiries conducted by the User.

4 SPECIAL TERMS AND CONDITIONS

This Phase I ESA for the Property, located in Santa Fe Springs, California, has been prepared specifically for Duke Realty Corporation. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein.

No other party, known or unknown to SCS, is intended as a beneficiary of this work product, its content, or information embedded therein. Third parties use this report at their own risk. Third party reliance letters may be issued on request to SCS subject to approval of Duke Realty Corporation and payment to SCS of a fee for such letters.

5 LIMITATIONS AND ASSUMPTIONS

The investigation focuses on releases and threatened releases of hazardous substances or petroleum products that could be considered a recognized environmental condition (REC) and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by the federal or state government) or due to the potential for contaminant migration through exposure pathways (e.g., soil vapor migration or groundwater ingestion). Materials that may contain substances which are not currently deemed hazardous by the U.S. Environmental Protection Agency (EPA) or California Environmental Protection Agency (CalEPA) were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials, lead-based paints, fire safety, vapor intrusion, indoor air quality, mold, and similar matters were not part of this assessment. The Property was not evaluated for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, or radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt, etc.) is not considered to be of concern unless observations suggest that hazardous substances are likely to be present in significant concentrations.

Unless otherwise noted, sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Positive identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

SCS Engineers assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, such as regulatory agency listings. Unless obviously inaccurate or if information exists to the contrary, SCS Engineers assumes that information collected during this environmental site assessment is accurate and correct. Unless warranted, information collected has not been independently validated as part of this assessment.

The following information is the responsibility of the User (40 CFR 312.22) and is not included in this Phase I ESA:

- Specialized knowledge or experience of the User.

- The relationship of the purchase price to the fair market value of the Property. The purchaser of a Property is required to consider whether any differential between the purchase price and the fair market value of the Property is due to the presence of releases or potential releases of hazardous substances at the Property.

Certain other limitations could affect the accuracy and completeness of this report, as follows:

- Site Access Limitations – None.
- Physical Obstructions to Observations – None.
- Outstanding Information Requests – None.
- Historical Data Sources Failure – None.
- Other Limitations – None.

6 GENERAL SITE CHARACTERISTICS

SITE LOCATION

The Property is located at the southeastern corner of the intersection of Lakeland Road and Norwalk Boulevard. It has been assigned assessor parcel number (APN) 8025-002-026. An APN map is provided as **Figure 2** in **Appendix A**.

GENERAL SITE DESCRIPTION

The Property comprises 8.42 acres. The majority of the Property is developed with the Coast Iron & Steel Company (Coast Iron) facilities, which consists of an office building (approximately 4,000 square foot footprint), an approximately 50,000-square-foot steel fabrication building, and asphalt-paved parking and storage yard areas. For more than 40 years, Coast Iron has leased approximately one acre at the southwestern corner of the Property to the adjoining facility to the west (11120 Norwalk Boulevard), currently operated by UTC Aerospace Systems (UTC). The UTC portion of the Property is developed with two warehouse structures, each with an approximate area of 7,500 square feet. UTC also currently leases a gravel parking area at the northwestern portion of the Property (approximately 0.8 acres).

ADJOINING PROPERTY USE

- North – Lakeland Road adjoins the Property immediately to the north. Sonsray Machinery (10950 Norwalk Boulevard), a construction equipment dealer and distribution business, and Western Water Works Supply Company (12247 Lakeland Road) occupy industrial buildings across the street to the north of the western side of the Property. The Goodman Logistics Center Santa Fe (Goodman) is located across the street to the north-northeast of the Property (12345 Lakeland Road). McMaster-Carr Supply Company, a home goods distribution business, is the primary occupant of the Goodman building.
- South – Harbor Distributing, a beer distribution business, occupies an industrial warehouse buildings directly to the south at 11204 Norwalk Boulevard.
- East – Getty Drive adjoins the Property immediately to the east. Genesis Logistics and Crate & Barrel Warehouse occupy a multi-tenant warehouse/distribution center building across the street to the east (12330 and 12434 Lakeland Road).

- West – The rest of the UTC facility adjoins the Property immediately to the west. UTC is an aerospace business that manufactures airplane brake components. Norwalk Boulevard is situated to the west of the UTC facility and the gravel parking lot at the northwestern portion of the Property. Single-family residences are located across the street to the west.

7 PHYSICAL SETTING

PHYSIOGRAPHIC SETTING

According to the U.S. Geological Survey (USGS), Whittier (1965, photorevised 1981), California 7.5-minute topographic map, the Property is located within the Santa Fe Springs Plain Subgeomorphic Province of the Los Angeles Coastal Plain at an elevation of approximately 130 feet above mean sea level. This plain is a slightly rolling topographic feature sloping gently to the northeast in the vicinity of the Property, due to the northwest trending Santa Fe Springs–Coyote Hills anticlinal system. Prominent topographic features in the area include the Puente and Coyote Hills to the northeast, east, and southeast. The San Gabriel River is located approximately 1.75 miles west of the site and flows from north-northeast to south-southwest.

GEOLOGY AND SOILS

The Los Angeles Coastal Plain generally consists of alluvial materials deposited by the Los Angeles, San Gabriel, and Santa Ana Rivers. In the vicinity of the Property, the Santa Fe Springs Plain consists of the late Pleistocene alluvium of the Lakewood Formation. The Lakewood Formation overlies the lower Pleistocene San Pedro Formation and the Pliocene Pico Formation. The Lakewood Formation consists of interbedded clays, silts, silty sands, and sands representative of stream-type alluvial and floodplain deposits. During the Phase II soil sampling, SCS observed silty fine sand, clayey fine sand, and clay to 15 feet below ground surface (bgs). Previous subsurface investigations conducted at the Goodman facility across the street to the north-northeast identified nterbedded alluvial sediments ranging in texture from poorly graded sands through clays. A 1998 Phase II investigation at the Property identified silty sand to approximately 10 to 20 feet bgs, with sand beneath the silty sand to 40 feet bgs (Norcal, January 1998).

GROUNDWATER

The Property is located near the boundary of the Central Subbasin of the Coastal Plain of the Los Angeles Groundwater Basin and the Coastal Plain of the Orange County Groundwater Basin. Several regional water-bearing units have been identified within the older alluvial fan and valley deposits of the Lakewood Formation and underlying San Pedro Formation. In the area of the Property, the Lakewood Formation ranges from 100 to 180 feet thick, and is composed of three hydrostratigraphic units: 1) the Bellflower Aquiclude (upper unit), 2) the Exposition Aquifer, and 3) the Gage Aquifer. The Exposition and Gage aquifers consist predominantly of sands and fine gravels with discontinuous, thinly bedded silts and clays. The Exposition and Gage aquifers are underlain by the Hollydale, Lynwood, Silverado, and Sunnyside aquifers.

In the Property vicinity, the Bellflower Aquiclude consists of a heterogeneous mixture of clays, silty clays, silts, and extensive interbedded lenses of sandy or gravelly silts and clays and has an estimated thickness between 20 and 40 feet. The major water-bearing unit is the Exposition Aquifer (otherwise known as the Artesia Aquifer), the upper water bearing unit of the Lakewood Formation. The Exposition Aquifer is composed of coarse gravel, coarse to fine sand, and interbedded silts and

clays with a general southwesterly dip and thickness between 40 and 80 feet. The Exposition Aquifer is separated from the Gage Aquifer by an unnamed aquiclude.

Based on information for nearby groundwater wells reviewed on the State Water Resources Control Board (SWRCB) GeoTracker website, including those for the former Powerine refinery site located across the street the north-northeast (GeoTracker ID: SL372492442), first groundwater is approximately 85 to 95 feet bgs. The groundwater flow direction in the vicinity of the Property is generally to the south (Murex, July 1, 2012 and Ramboll, July 14, 2021). Regional groundwater is impacted with releases of chlorinated solvents associated with the Omega Chemical Superfund Site and the fuel-related volatile organic compounds (VOCs) associated with the former Powerine/Cenco Refinery.

RADON

According to the California Department of Public Health's February 2016 Radon Program report, screening in the area of the Property (90670 zip code) found no locations (out of four tested) where buildings had radon levels greater than or equal to 4 picocuries per liter (pCi/L), the EPA action level. The maximum radon result for the Property's zip code was 2.2 pCi/L. Note that elevated radon levels may also be attributed to other radon sources such as leaking natural gas or numerous building products such as drywall, cinderblock, concrete floors, brick, or stone products. Based on the available information, elevated radon gas is not expected in the area of the Property.

8 SITE INSPECTION

Justin Rauzon of SCS conducted an inspection of the Property and surrounding area on October 12 and 22, 2021. Photographs of the Property are provided in Appendix B.

Access to the Property was provided by Mr. Greg White, President of Coast Iron. Mr. Whites family purchased the Property in 1963 and has developed and run the business since that time. Coast Iron is a steel fabricator that cuts, bends, assembles, and welds steel products. Offices are located at the northeastern portion of the Property. The Property is largely paved with asphalt. A mostly open-air building where steel fabrication work is conducted is located along the eastern side of the Property. The building consists of a canopy roof over outdoor work stations built around a compressor room and tool storage areas. Steel presses are located in the fabricator building area. All of the presses are situated at grade, not in subsurface concrete pits. *De minimis* oil staining was noted at a few locations around the base of presses, particularly on the eastern side of the building. Oxygen acetylene precision plasma cutting equipment is situated outside the northwestern side of the fabrication building.

Raw materials are stored north and west of the fabrication building. Although Coast Iron has never galvanized steel at the Property, it does have a small, outdoor painting area where touch-up galvanizing is conducted using spray cans.

As noted above, Coast Iron leases two portions of the Property to UTC. Access to the UTC portion of the Property was arranged through Ms. Christine Poomi, an environmental coordinator. Mr. Jack Nercissian of UTC accompanied Mr. Rauzon during the SCS inspection of the UTC facilities on the Property. UTC manufactures pyrolytic graphite aircraft brake products, including for the U.S. military. Because of its national security work, the visit to the UTC facility required clearance to gain access. The company has a strict policy that photographic equipment is not allowed onsite, so photographs were not taken during the inspection of the UTC portion of the Property. During the inspection, SCS also interviewed Mr. Dary Zeigler, who had worked at the UTC facility since 1974 and was familiar

with the historical uses of the Property buildings. Mr. Zeigler indicated that UTC acquired the facility in 2011 from Goodrich Corporation (Goodrich). Ms. Poomi told SCS that UTC conducted environmental investigations, which included subsurface soil and soil vapor sampling. SCS requested access to copies of any reports relevant to sampling on the UTC areas on the Property, but she said they could not be provided.

At the time of the site inspection, the two 7,500-square-foot UTC buildings on the southwestern portion of the Property were primarily being used for warehousing, shipping, and receiving. A small receiving laboratory was located inside the southeastern corner of the southern building. The northern building had offices and part storage (vacuum pumps, valves, gauges, instruments, etc. UTC's hazardous waste storage compound is located beneath a canopy roof east of the southern building.

Mr. Zeigler recalled that the southern building was constructed in 1965 and the northern building in 1967. The southern building was historically used for quality control inspections and dry machining. QC work consisted of dye penetrant inspection of densified carbon brake products manufactured in the main buildings. He indicated that the northern building had always been used primarily for shipping, receiving, and storage. For a short period, the western portion of the building housed an operation to assemble tobacco pipe inserts that prevented the exterior of the pipe bowl from getting hot to the touch.

Since the mid-2000s, UTC has also leased the gravel lot at the northwestern portion of the Property for employee parking. No spills, staining, or other evidence of a hazardous substance release were observed at the UTC occupied portions of the Property.

HAZARDOUS SUBSTANCES

Coat Iron stores hydraulic oil, diesel fuel (one 55-gallon drum), zinc rich galvanizing compound spray paint cans, and welding gases (acetylene, oxygen, argon, carbon dioxide, etc.). Waste oil and empty spray paint cans are stored at a hazardous waste storage compound located on the southwestern portion of the Property (adjacent to the UTC-leased area). Other than the *de minimis* oil staining observed near the presses described above, no spills, staining, or other evidence of hazardous substance releases were noted at the Coast Iron portion of the Property.

SCS was primarily granted access only to inspect the UTC facilities that are part of the Property. UTC stores waste carbon/graphite to the east of the northern building. The hazardous material/waste storage compound east of the southern building housed new hydraulic oil, waste oil, vacuum pump fluid, empty paint cans, universal waste (fluorescent lamps, batteries, e-waste, etc.), and carbon dust shavings. Flammable materials cabinets inside the buildings stored small quantities (5 gallons or less) of glass cleaner, KB 88 penetrant, PVC primer, anti-seize spray, lubricants, pipe joint compound, Super 77, quad foam, cutting fluid, weed killer, anti-freeze, brake and power steering fluid, paint stripper, dry surface cement, transmission oil, silicone sealant, oven cleaner, disinfecting spray, Raid bug spray, and grease. A small flammable materials cabinet inside the receiving lab stored small containers (1 liter or less) of acetone, xylene, methanol, alcohol, toluene, isopropanol, mineral spirits, 1,2-dibromomethane, and 1,2-dichloroethane (1,2-DCA). An air-conditioned controlled room inside the central portion of the southern building stores phenolic resin.

Although only small quantities are maintained at the UTC site, the storage of 1,2-DCA was one environmental concern that motivated the Phase II soil vapor sampling. As discussed in Section 15, 1,2-DCA was not detected in soil vapor at the Property.

NATURAL DRAINAGE

Natural waterways are not currently located on the Property.

DISTURBED AREAS

Since the Property is entirely paved except for limited landscaping along the southern side, no obvious disturbed areas were noted.

No obvious disturbed areas were noted. There was no evidence of landfilled materials.

ELEVATORS AND OTHER HYDRAULIC EQUIPMENT

No elevators were observed on the Property. Coast Steel operates hydraulic presses used to cut and bend steel. Mr. White indicated that all of the presses are mounted above ground, not in pits. *De minimis* oil staining was observed around the base of some of the presses.

WELLS

No water supply or monitoring wells were observed on the Property. Five groundwater monitoring wells were observed in the Lakeland Road right-of-way north of the western side of the Property. SCS was unable to find any record of who installed these wells through publicly available websites. It is likely that they were installed to monitor the Omega Chemical Superfund groundwater plume. Several groundwater monitoring wells have been installed in the vicinity of the Property by the former Powerine refinery located to the northeast and east. One groundwater monitoring well is located in the Getty Drive right-of-way outside the southeastern corner of the Property (MW-503B). Another is located in the Getty Center Drive cul-de-sac to the southeast (MW-707). Several groundwater wells are also located across the street to the northeast of the Property, at the Goodman Logistics Center Santa Fe Springs. The nearest of these wells is MW-703. Groundwater issues are discussed more fully in Sections 11 and 12.

ELECTRICAL EQUIPMENT

Two pole-mounted Southern California Edison (SCE) electrical transformers were noted on the Property. SCE has stated that they have never specified the purchase of distribution transformers utilizing polychlorinated biphenyls (PCBs) as the insulating/cooling fluid. SCE transformers utilize mineral oil exclusively. In a statistically valid test of over 20,000 SCE distribution transformers, SCE determined that the concentrations of PCBs in the mineral oils was less than 50 parts per million (ppm) in over 96 percent of the units. Based on the available information, no significant environmental impact to the Property is anticipated from these transformers.

WASTEWATER

Industrial wastewater is not produced on the Property. Sanitary wastewater is currently directed to the municipal sanitary sewer. According to historical information reviewed, the Property historically had septic systems for sanitary wastewater.

DRINKING WATER

Drinking water is supplied to the Property by the Santa Fe Springs Water Utility Authority. All large public water suppliers in California have been required to test their water and comply with federal and state drinking water standards since the mid-1980s. Consequently, lead and other

contaminants of concern are not expected to be present above applicable primary and secondary drinking water standards.

STORAGE TANKS

No evidence (fill ports, vent lines, or dispensers) of underground storage tanks (USTs) was observed on the Property. According to Mr. White and records discussed further in Sections 11 and 12, two fuel USTs were previously located at the northeastern portion of the Property.

Two aboveground storage tanks (ASTs) were observed onsite during the site reconnaissance. Propane and oxygen gas tanks are located outside the northwestern portion of the Coast Iron fabrication building. Coast iron also stores many cylinders with welding gases. Tanks with liquid chemicals are not currently stored at the Property.

VISUAL INSPECTION OF ADJOINING SITES

The large number of groundwater wells in the area surrounding the Property are indicative of known groundwater plumes. The regional groundwater issues related to the Omega Chemical Superfund Site and the former Powerine oil refinery are discussed further in Section 12.

9 INTERVIEWS

As noted above, SCS interviewed Mr. White, Ms. Poomi, Mr. Nercissisan, and Mr. Zeigler during the site inspection. Relevant information obtained from interviews in included in the sections above.

10 SITE HISTORY

Site history was evaluated from the following sources:

- Historical USGS topographic maps provided by Environmental Data Resources (EDR) (September 29, 2021).
- Historical aerial photographs provided by EDR (September 29, 2021).
- A search was made of EDR-Sanborn collection and no maps of the Property were found (September 29, 2021).
- City of Santa Fe Springs Department of Building and Safety building permit information.
- A City Directory review report provided by EDR (September 30, 2021).

Copies of topographic maps, historical aerial photographs, city directories, selected building permit records, and Sanborn maps are included in **Appendix C**.

Year	Description	Source
1896 to 1902	The Property was largely undeveloped land situated at southeast of the intersection of two roads. One small structure, likely a rural residence, was situated on (or immediately outside) the northwestern portion of the Property. Roads were situated immediately to the north and west. The adjoining areas to the north, east, and south were undeveloped land. Small structures, also likely rural residences, were located to the west of the Property.	Topographic maps
1923 and 1925	The structures depicted on the earlier maps were no longer present. Oil wells were depicted on the Property and adjoining sites. The adjoining road to the west was labeled Norwalk and La Puente Hills Road. A dirt access road was depicted immediately to the south of the Property. A few small structures were depicted to the west, east, and south.	Topographic map
1928	The Property was largely undeveloped land covered with low vegetation. The aerial image is poor quality, but there appeared to be small structures on the north-central portion of the Property. Agricultural orchards were present across the street to the north. Industrial buildings were present to the west and east. The dirt access road, small structures, and undeveloped land were located to the south.	Aerial photo
1938	One square structure was situated on the northwestern portion of the Property, surrounded by dirt driveways. The rest of the Property was undeveloped land. The industrial structures immediately to the west and east in the 1928 aerial photo was no longer present; the areas were undeveloped. A few small structures were located across the road to the west. The area to the north was agricultural land with a few small structures along Lakeland Road. The small buildings previously located across the dirt access road to the south were also no longer present.	Aerial photo

Year	Description	Source
1942 and 1943	The Property was depicted with several oil wells on it. One small structure was depicted on the northeastern corner. Oil wells and small structures were also depicted on adjoining sites surrounding the Property.	Topographic maps
1947	No significant changes from the 1943 topographic map were depicted on the 1947 topographic map. The aerial photo showed a few additional small structures at the northwestern portion of the Property. Outdoor storage was present along the western side of the Property. One new industrial building and auxiliary structures were added immediately to the west of the Property (11120 Norwalk Boulevard). Oil field operations, including aboveground storage tanks, were present across the street to the northeast and to the east.	Aerial photo
1949 and 1951	Two small structures were depicted on the northwestern portion of the Property. An "Oil Refinery" and tank farm with more than a dozen ASTs was located across the street to the north-northeast (12345 Lakeland Road). Industrial structures were depicted to the west at 11120 Norwalk Boulevard. Small structures were depicted to the east of the northeastern corner of the Property. One small structure was present across a dirt access road to the south.	Topographic maps
1950	Lansco Oil was listed to the north at 12247 Lakeland Road.	City directories

Year	Description	Source
1953	Four structures were depicted on the northwestern portion of the Property, with outdoor storage along the western boundary. Dirt paths crossed the eastern side of the Property, which was otherwise undeveloped and covered with low vegetation. The industrial facilities to the west (11120 Norwalk Boulevard) expanded. Single-family residences were developed across the street to the west. The refinery to the northeast also expanded, with additional tanks and equipment. A structure was developed across the street to the north of the northwestern portion of the Property. An area to the north also appeared to be a parking lot, likely for refinery employees. No significant changes were noted to the east, which still had industrial structures and oil ASTs.	Aerial photo
1957	Self Serv Stations was listed to the north-northeast at 12345 Lakeland Road.	
1962	Powerine Oil Co. was listed to the north-northeast at 12345 Laekland Road (the refinery).	City directories
1963	Structures were present on the northwestern portion of the Property. One structure and the outdoor storage along the western Property boundary were removed. With the exception of an area at the southwestern corner, much of the rest of the Property was covered with vegetation. The southwestern corner was cleared of vegetation and graded. Coast Iron was issued a building permit for the construction of its main 18,000-square-foot steel fabrication building. The facilities to the west expanded further, with the addition of another building to the south of the main building. A drive-in movie theater was located immediately to the south. Two small structures were developed at the northeastern corner of Norwalk Boulevard and Lakeland Road, west of the refinery parking area. No significant changes from the 1953 aerial photo were noted to the east.	Aerial photo and Building permit

Year	Description	Source
1965	Three small industrial buildings were present on the northwestern portion of the Property. The rest of the Property was depicted as undeveloped land. The residential area to the west was depicted as part of the general Santa Fe Springs urban footprint. The Drive-in Theater was depicted to the south. Two small structures were added across the street to the north, at the northeastern corner of Norwalk Boulevard and Lakeland Road.	Topographic map
1966	Coast Iron was issued a building permit for its steel fabrication office building (3,200 square feet). Pacific Drive-in theaters was listed at 11204 Norwalk Boulevard.	Building permit and City directories
1971	Torco Oil Co. was listed to the north at 12247 Lakeland Road.	City directories
1972	The Coast Iron office and steel fabrication buildings were present on the eastern side of the Property. The two industrial buildings associated with the adjoining site to the west were developed on the leased southwestern portion of the Property. Three small industrial buildings were still present on the northwestern corner of the Property. The facilities to the west were expanded, with the addition of a rectangular building immediately west of the Property line. An additional industrial building was also developed near the parking area across the street to the north of the Property, west of the refinery and tank farm (12247 Lakeland Road). The two small structures added at the northeastern corner of Norwalk Boulevard and Lakeland Road in the 1965 aerial photo were removed.	Aerial photo and Topographic map
1974	Coast Iron was issued a permit to install two gasoline USTs (5,000 gallon and 9,970 gallon capacities).	Building permits
1977	No significant changes from the 1972 aerial photo were noted on the Property. Some of the industrial structures to the east of the Property were removed.	Aerial photo

Year	Description	Source
1981	No significant changes from the 1972 topographic map were noted on the Property. Coast Iron & Steel Co. was first listed in the city directory report at 12300 Lakeland Road. A building permit was issued for an addition to the existing Coast Iron office building. The map showed the expanded/reconfigured industrial facilities to the west.	Building permit, City directories, and Topographic map
1983	No significant changes from the 1977 aerial photo were noted on the Property. A new industrial building was added to the north (10950 Norwalk Boulevard).	Aerial photo
1986	USA Lubricants Company replaced Torco Oil Co. as the occupant at 12247 Lakeland Road to the north.	City directories
1989	No significant changes from the 1983 aerial photo were noted on the Property or adjoining sites. A building permit was issued for the removal of the two gasoline fuel USTs.	Aerial photo and Building permits
1994	No significant changes from the 1989 aerial photo were noted on the Property or adjoining sites. BF Goodrich Aerospace was listed to the west at 11120 Norwalk Boulevard. Devolls Rubber Products Inc. was listed at 11008 Norwalk Boulevard, likely a listing associated with the BF Goodrich facility. Norwalk Boulevard Drive-In Theater was listed to the south at 11204 Norwalk Boulevard.	Aerial photo and City directories
1999	Lakenor Auto Salvage was listed at 10950 Norwalk Boulevard, north of the Property. G&F Roof Supply was listed to the north at 12247 Lakeland Road.	City directories
2002	No significant changes from the 1994 aerial photo were noted on the Property. The area immediately east of the Property was redeveloped with Getty Drive and an industrial warehouse building (12330 and 12434 Lakeland Road). The former drive-in movie theater to the south was also redeveloped with an industrial warehouse building (11204 Norwalk Boulevard).	Aerial photo

Year	Description	Source
2004	Santa Fe Trucking, Staffmark, and Gale Triangle were listed to the south at 11204 Norwalk Boulevard. D3 Equipment was listed at 12247 Lakeland Road.	City directories
2005	No significant changes from the 2002 aerial photo were noted on the Property or adjoining sites.	Aerial photo
2006	Performance Freight Systems was listed to the south at 11204 Norwalk Boulevard.	City directories
2009	The small industrial buildings on the northwestern portion of the Property were demolished, leaving a graded dirt area. No changes were noted relative to the 2005 aerial photo elsewhere on the Property. Between 2005 and 2009, much of the refinery equipment to the northeast was removed, leaving just a tank farm. Triangle Northwest LLC, Performance Team Freight Systems, and Gale Triangle Inc. were listed to the south at 11204 Norwalk Boulevard. Goodrich Aircraft Wheels & Brakes was listed to the west at 11120 Norwalk Boulevard. LKQ of Southern California and Lakenor Auto & Truck Salvage were listed at 10950 Norwalk Boulevard.	Aerial photo and City directories
2012	The 2012 topographic map does not include site-specific details. No significant changes from the 1981 topographic map or 2009 aerial photo were noted on the Property or adjoining sites.	Aerial photo and Topographic map
2014	TK Services Inc. and Case Power & Equipment were listed to the north at 12247 Lakeland Road.	City directories
2015	A building permit was issued to repair the side of a building (likely the office building) damaged in a car accident, along with minor tenant improvements.	Building permit
2016	A building permit was issued for tenant improvements at the Coast Iron office building. The tank farm historically part of the refinery across the street to the northeast was in the process of being dismantled.	Aerial photo and Building permit
2018	The Goodman Logistics Center Santa Fe was developed at the former Powerine area across the street to the northeast of the Property.	Google Earth/Site Visit

HISTORICAL USE SUMMARY

One small structure, likely a rural residence, was located on or near the northwestern portion of the Property as early as 1896. In 1923 and 1925, the small structure was no longer depicted, but three or four oil wells were present on the Property. Between 1928 and the early 1940s, a small structure was present on the north-central portion of the Property. That structure was most likely related to oil exploration activities on the Property and surrounding area. By 1947, a few additional small structures were added at the northwestern portion of the Property. Outdoor equipment storage was also present along the western boundary. In 1963, Coast Iron developed its steel fabrication building on the eastern side of the Property. In 1966, the office building was added at the northeastern corner of the Property. The two industrial buildings on the southwestern portion of the Property, associated with the adjoining facility to the west, were constructed in 1965 and 1967. Coast Iron installed two gasoline USTs (5,000 and 9,970 gallon capacities) in 1974. These USTs were subsequently removed in 1989 (discussed further in Section 11). The small industrial buildings on the northwestern portion of the Property were demolished in the mid-2000s, leaving the graded gravel area subsequently leased to UTC.

HISTORICAL USE OF ADJOINING SITES

As early as 1896, dirt roads adjoined the Property to the north and west, with a few small structures located across the road to the west. By 1928, agricultural orchards were located across the street to the north and industrial buildings were present to the west and east. In the 1920s, oil wells were developed at the Property and adjoining sites, so these early buildings were likely associated with the oil field development. Also in 1928, a dirt access road and small structures adjoined the Property to the south. The structures present to the west and east in 1928 were no longer present in 1938, replaced with a few different, small structures were present across the road to the west. The small structures previously located across the dirt access road to the south were also no longer present. In the 1940s, oil wells were present on adjoining sites surrounding the Property.

In 1947, a new industrial building was developed immediately to the west (11120 Norwalk Boulevard). Since the late-1940s, this facility has expanded, but has consistently been an aerospace facility that manufactured aircraft wheel and brake systems (BF Goodrich and later Collins Aerospace/UTC). In the late-1940s and early-1950s, the Powerine oil refinery and tank farm were developed across Lakeland Road to the north-northeast (12345 Lakeland Road, sometimes referred to as 12354 Lakeland Road). The refinery equipment and some of the tanks were removed in the mid-2000s. Following the removal of all remaining petroleum storage tanks, the former Powerine refinery area was redeveloped with the Goodman Logistics Center Santa Fe buildings in 2018. A drive-in movie theater adjoined the Property to the south from the 1960s through the 1990s. An industrial warehouse/distribution center was constructed on the former theater land around 2002. Two industrial buildings across the street to the north of the northwestern portion of the Property have been home to oil industry businesses, auto/truck salvage, heavy equipment sales, and a roofing company, etc.

The former Powerine refinery site is located relatively upgradient of the Property and represents a known source of releases affecting regional groundwater. The Powerine facility is discussed in greater detail in Section 12 of this report.

11 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

In order to identify commonly known or reasonably ascertainable information about the Property, SCS attempted to review previous environmental reports and various regulatory agency files and interviewed regulatory agency personnel. The following information was identified.

PREVIOUS ENVIRONMENTAL REPORTS

No previous environmental reports were provided to SCS for review as part of this Phase I ESA. Ms. Christine Poomi, environmental manager with UTC, informed SCS that previous environmental investigations, including soil/soil vapor sampling, had been conducted at the adjoining site to the west (11120 Norwalk Boulevard). She said that they had likely included sampling in the area of the two leased buildings on the southwestern portion of the Property. She told SCS that the reports could not be shared, but that no significant contamination had been identified.

REGULATORY AGENCY RECORDS

Local regulatory agencies and other sources were contacted in an effort to identify any known or suspected contamination sites or incidents of hazardous waste storage or disposal which might have resulted in soil and/or groundwater contamination, or volatile organic compound (VOC) vapor migration to the Property. Generally, this includes records for the Property and adjacent parcels, although relevant information for other sites of possible interest in the area (up to one mile) may also be included. Within the City of Santa Fe Springs, the Santa Fe Springs Fire Department (SFSFD) generally acts as the lead enforcement agency for UST compliance. If a tank has leaked and groundwater contamination is suspected, the Los Angeles Regional Water Quality Control Board generally becomes the lead agency in supervising contaminant characterization and cleanup.

California Environmental Protection Agency Files

Coast Iron is listed on the California Environmental Protection Agency (CalEPA) Regulated Site Portal website as a Chemical and Hazardous Waste Storage site (**Appendix D**). Chemicals reported to be stored at the facility include refined oil waste, propane, oxygen, hydraulic oil, and argon/carbon dioxide mixture. During a November 7, 2017 inspection, Coast Iron was observed to be storing two 55-gallon drums of used oil and one 55-gallon drum of waste aerosol cans that were not properly covered. The facility returned to compliance on December 1, 2017.

Coast Iron is also listed on the Regulated Site Portal as an industrial storm water facility. The business was issued a notice to comply in April 2010 due to an exceedance of total suspended solids at a storm drain outlet on the southern side of the facility. A second notice to comply was issued in February 2020 following an inspection that observed oil staining at two locations with insufficient absorbent applied to them. The oil staining was resolved on March 6, 2020.

The adjoining site to the west (11120 Norwalk Boulevard), which includes the southwestern portion of the Property appears in the CalEPA Regulated Site Portal as Goodrich Corporation and Goodrich Aircraft Wheels & Brakes Goodrich Corporation. The facility is associated with the Toxic Release Inventory (TRIS) regulatory program, as an industrial stormwater facility, and as having air emissions permits. The facility is out of compliance with stormwater permitting requirements. Stormwater non-compliance at this facility is not expected to negatively affect the environmental condition of the Property.

Santa Ana Regional Water Quality Control Board Files

The Property does not appear in the SWRCB's GeoTracker website. Recent LARWQCB case files, if any, would be listed on this website (**Appendix D**).

Department of Toxic Substances Control Files

The Property does not appear in the California Department of Toxic Substances Control (DTSC) EnviroStor website. Recent DTSC case files, if any, would be listed on this website (**Appendix D**).

South Coast Air Quality Management District Files

Coast Steel is not listed on the South Coast Air Quality Management District (AQMD) online Facility INformation Detail (FIND) website.

Goodrich Corporation (Facility ID: 11998) is listed as an active facility at 11120 Norwalk Boulevard, which includes the buildings at the southwestern portion of the Property. The equipment list includes boilers, curing ovens, furnaces used for graphitization and carbonization, burn-off furnaces, a scrubber, spray booths and spray equipment, wastewater treatment, abrasive blasting, a solvent degreaser (>1 pound of VOCs per day), dust collectors, etc.

Santa Fe Springs Fire Department Files

SCS reviewed SFSFD files for the Property address 12300 Lakeland Road (**Appendix D**).

The SFSFD files also contain routine inspection reports and copies of the hazardous materials business plans (HMBPs). Coast Iron reported storing acetylene, a mixture of carbon dioxide and argon, hexane and aliphatic distillate, hydraulic oil, oxygen, propane, refined oil waste, Wayco 8740 petroleum hydrocarbons, waste oil and absorbent material, paints, and primers. Coast Iron was repeatedly issued notices of violation for failing to properly label and cover drums with waste oil and oily rags. After each violation, the facility returned to compliance.

A 2000 map included with one of the HMBPs shows that the three buildings on the northwestern corner of the Property were occupied by B.F. Goodrich "storage," an Erector Shop, and "DuVolls," the rubber business listed in city directories. A 2008 inspection report noted that Coast Steel performed engineering and fabrication of structural steel products. The report also noted some outdoor painting, conducted after wiping down the steel with flammable solvent.

A May 2021 inspection report did not identify any violations.

The SFSFD files also contain a Phase II Environmental Site Assessment Report prepared by Norcal Engineering (January 6, 1998). The report was prepared on behalf of Maness Corporation. Mr. White indicated that the report was prepared around the time that his family bought out business partners to become the sole owners of the Property. The Phase II investigation was conducted to evaluate areas of concern identified in a Phase I ESA, a copy of which was not in the SFSFD files and was otherwise unavailable. Mr. White indicated he did not have a copy. The areas of concern included the following:

- Two former sumps,
- Four former cesspools and one septic tank,
- A former concrete well and stand pipe,

- The former gasoline UST area,
- Two dry oil well areas,
- An elevated concrete block area (former use of area unknown), and
- A clarifier.

The Phase II investigation included 13 soil borings to depths ranging from 15 to 40 feet bgs. Investigated areas were located on the Coast Steel facility and the northwestern portion of the Property (prior to the demolition of the former structures). Soil samples were selectively analyzed for TPH (EPA Method 418.1), VOCs (EPA Method 8240), and Title 22 metals (Methods 6010 and 7471). Only a portion of the figure showing the boring locations was included in the report copy in the SFSFD file, likely because it was an 11x17 sheet copied onto an 8.5x11 sheet. Soil samples were field screened using a photoionization detector (PID). Total recoverable petroleum hydrocarbons (TRPH) were detected in 12 of 40 analyzed samples at concentration ranging from 19 to 460 milligrams per kilogram (mg/kg), equivalent to parts per million (ppm). The maximum TRPH concentration was detected in the 5-foot samples from near the elevated concrete block area. TRPH was not detected in the 20-, 30-, or 40-foot soil sample collected from this same boring. All TRPH concentrations were detected at levels below their corresponding soil screening levels (SSLs). VOCs were not detected in any of the soil samples. Metals concentrations were consistent with typical background ranges in California soils. Based on the results of the Phase II investigation, Norcal recommended no further action.

The files also contain paperwork issued by the SFSFD when the two gasoline USTs were installed at the Property in 1974. In June 1988, the Los Angeles County Department of Public Works issued a letter to Coast Iron noting that the two USTs at the Property were not properly permitted. Coast Iron obtained a temporary permit to continue operating the USTs through August 1989 to use up the remaining fuel stored in them. The SFSFD files contain the temporary UST permit information and tank tightness testing information. According to the UST removal permit issued in July 1989, the two gasoline USTs were located at the northeastern corner of the Property. The USTs were of single-walled steel construction and stored leaded gasoline. A figure in the SFSFD file indicated that the dispensers were situated directly above the tanks (no significant lateral piping). The UST removal permit required two soil samples approximately 2 to 4 feet below each of the tanks and one beneath the pump island.

The SFSFD file contains an Underground Storage Tank Removal report prepared by Vadose, Inc. (September 22, 1989). Samples were analyzed for total petroleum hydrocarbons (TPH) and the fuel-related VOCs benzene, toluene, ethylbenzene, and xylenes (BTEX) using EPA Methods 8020 and 8015. TPH and BTEX were not detected in any of the soil samples at concentrations above laboratory method detection limits. Vadose, Inc. also analyzed four samples of the excavated overburden soil to determine if it could be reused to backfill the UST excavations. TPH was not detected in any of the samples, so it was deemed suitable for reuse.

On October 3, 1990, the SFSFD issued a No Further Action (NFA) letter for the USTs removed from the Property.

12 REVIEW OF FEDERAL, STATE, TRIBAL, AND LOCAL GOVERNMENT DATABASES

A database search for sites listed on various federal, state, tribal, and local databases in the area around the Property was obtained from EDR (September 30, 2021). A description of each of the databases searched is included in the report, which is attached as **Appendix E**. Among the

databases included in the EDR report are NPL (federal, tribal, and state-equivalent), proposed and delisted NPL, CORRACTS (RCRA facilities subject to corrective actions), hazardous waste sites identified for investigation or remediation (SEMS [Superfund Enterprise Management System, formerly known as CERCLIS], State CERCLIS, VCP, Brownfields Calsites, etc.), LUST, sites with engineering controls, former CERCLIS (NFRAP), RCRA and state hazardous waste generators, ERNS, SWLF, USTs, and Toxic Pits.

Review of these records satisfies all requirements as set forth in 40 CFR Section 312.26 (b) and (c) with regard to the review of federal, tribal, and state government records of databases of such government records and local government records and databases of such records pertaining to both the Property and the nearby or adjoining properties. Further, the search distances for each particular database are as specified in 40 CFR 312.26 and ASTM E1527-13.

Any known or suspected contaminated sites included on these lists within 0.25 miles of the Property are discussed in the following text. As a general rule, sites beyond 0.25 miles are not anticipated to impact a site significantly. Any sites beyond 0.25 miles with a high potential to impact the Property are also discussed. (Please note: the distances and directions listed in this report have been field verified and might not always match those in the EDR report.)

Sites such as TSD facilities, hazardous waste generators, HAZNET, FINDS, SQGs, LQGs, USTs, HIST UST, RCRA violations, and TRIS facilities with toxic chemical releases (generally in accordance with permitting requirements - into the air, water, or land as reported under SARA Title III) use or store hazardous materials and thus may pose a potential problem in the event of a spill or leak. However, unless these sites also appear in an agency list of contaminated sites, there is no evidence of any problems at this time. Therefore, sites on these lists will not be discussed unless on or in close proximity to the Property.

Please refer to **Appendix E** for further information on these sites.

PROPERTY LISTINGS

Coast Iron is listed in the CA SWEEPS UST, CA HIST UST, RCRA-SQG, CA CERS HAZ WASTE, FINDS, ECHO, CA HAZNET, CA LOS ANGELES CO. HMS, CA NPDES, CA WDS, CA CIWQS, CA CERS, and CA HWTS databases. The CA SWEEPS UST and CA HIST UST database listings are related to the two gasolines USTs removed in 1989. Based on the UST closure report, the additional sampling conducted at the area in 1998, the NFA letter issued by the SFSFD, and sampling conducted during SCS' Phase II (discussed in Section 15), the former USTs do not represent a significant environmental concern.

Coast Steel has been listed as a small quantity hazardous waste generator since at least 1988. According to the HAZNET database, between 1989 and 2019, Coast Steel generated other organic solids; empty containers (30 gallons or more); off-specification, aged, or surplus organics; unspecified oil-containing waste; unspecified aqueous solution; waste oil and mixed oil; other inorganic solid waste; and latex waste.

The CA CERS listing contains summaries of the SFSFD inspection violations discussed in Section 11.

The EDR database report also maps the western two-thirds of the Property as part of the Omega Chemical Superfund Site (Omega Chemical Site PRP Organized Group, 12504-12512 East Whittier Boulevard, Whittier, California). This facility appears in the NPL, SEMS, CORRACTS, RCRA-LQG, US

ENG CONTROLS, US INST CONTROLS, CA SWEEPS UST, CA HIST UST, ROD, RAATS, PRP, and CA EMI databases.

The Omega Chemical Corporation operated from 1976 to 1991 at 12504 and 12512 East Whittier Boulevard in Whittier, California (approximately 3 miles northeast of the Property). Omega Chemical was a solvent and refrigerant recycler. Drums and bulk loads of waste solvents and other chemicals from various industrial activities were processed at Omega to produce commercial products. As a result of spills and leaks, groundwater beneath the Omega site became contaminated. The primary contaminants of concern are VOCs, especially tetrachloroethene (PCE), trichloroethene (TCE), and 1,1-dichloroethene (1,1-DCE). Before the on-site contamination could be identified and addressed, the contaminated groundwater plume had spread southeasterly approximately five miles. This plume of contaminated groundwater has been designated Operable Unit (OU) 2. According to a recent plume map, the OU-2 plume crosses beneath the western two-thirds of the Property.

In 2017, Geosyntec prepared a Leading Edge Investigation (LEI) Work Plan on behalf of the Settling Word Defendants (SWDs) for the Omega Chemical Superfund (Geosyntec, April 12, 2017). The LEI Work Plan mapped the Property within the proposed Cluster 2 area in need of additional investigation downgradient of the Continental Heat Treat and the Mobil Jalk Fee sites (approximately 0.35 miles north-northwest of the Property), and the western edge of the former Powerine site. The work plan noted that there were likely uncharacterized sources of chlorinated VOCs in this area. The Geosyntec 2017 Work Area Monitoring Report (March 19, 2018) including sampling data for MW27A and MJF-MW8A/MW8B, located approximately 0.5 and 0.35 miles north of the Property, respectively. MW27A had elevated concentrations of TCE (76 micrograms per liter [µg/L]), PCE (15 µg/L), and cis-1,2-dichloroethene (cis-1,2-DCE; 26 µg/L). MJF-MW8A/MW8B had concentrations of TCE (up to 92 µg/L), PCE (up to 0.45 µg/L), 1,1-DCE (up to 38 µg/L), and cis-1,2-DCE (up to 98 µg/L).

The nearest downgradient wells reported in the 2017 Geosyntec Monitoring Report were MW-707 (situated outside the southeastern corner of the Property at the southern end of Getty Drive) and MW-710 (situated approximately 0.2 miles to the south). These wells were installed to monitor groundwater contamination from the former Powerine refinery (Ramboll, July 14, 2021). When last sampled in September 2014, MW-707 reported gasoline-range TPH (TPH-g) at 13,000 µg/L, benzene at 2,100 µg/L, toluene at 280 µg/L, ethylbenzene at 410 µg/L, m,p-xylenes at 1,700 µg/L, and other fuel-related VOCs at lower concentrations. With the exception of cis-1,2-DCE (detected at 2.6 µg/L), the chlorinated VOCs typically found in the Omega Chemical Superfund groundwater plume (including TCE and PCE), were not detected at MW-707. In March 2018, well MW-710, which is more directly downgradient of the Property, had only low concentrations of TPH-g and fuel-related VOCs, but had elevated concentrations of TCE (130 µg/L), PCE (67 µg/L), 1,1-DCE (100 µg/L), and other chlorinated VOCs.

Based on a review of groundwater plume maps, PCE concentrations beneath the Property are estimated to be between 5 and 100 µg/L, exceeding the California Maximum Contaminant Level (MCL) for drinking water.

It is likely that groundwater beneath the western side of the Property is contaminated with chlorinated VOCs and groundwater beneath the eastern side of the Property is contaminated with TPH-g and fuel-related VOCs. SCS recommended the Phase II investigation discussed in Section 15 of this report to evaluate whether releases at the Property might have contributed to the regional contamination. The results of the 1998 Phase II soil investigation and the SCS Phase II investigation discussed in Section 15 did not identify significant contaminant releases at the Property. No data reviewed suggests that the Property might be named a contributor to the Omega Chemical

Superfund groundwater plume. Based on the available information, SCS considers the regional contamination associated with the Omega Chemical Superfund Site to be a controlled recognized environmental condition (CREC) with respect to the Property.

ADJACENT SITE LISTINGS

Goodrich Corporation/Nalco Company/BF Goodrich Aerospace, 11120 Norwalk Boulevard (adjacent to the west/partially onsite) – CA AST, CA ENVIROSTOR, CA HIST UST, CA CHMIRS, CA ENF, CA HAZNET, CA NPDES, CA WDS, CA CIWQS, CA CERS, CA HWTS, CERS HAZ WASTE, CA CERS TANKS, CA SWEEPS UST, RCRA-LQG, CA EMI, NY MANIFEST, CA WDS

These listings are all in reference to what is now the UTC facility. Although this business has long leased the southwestern portion of the Property, it is discussed as an adjacent site listing because the majority of its operations are offsite to the west. The CA AST listing describes 1,320 gallons of storage capacity (material stored not reported). The CA ENVIROSTOR database listing is for a tiered permit obtained on February 14, 2001. The Nalco Company (Nalco) HIST UST listing is for one "waste" UST installed in 1983. The EDR report contains no record of releases from the UST. According to the CA CHMIRS listings, in May 2010, cooling tower water was released to the storm drain system due to a power failure. In May 2011, cooling tower water was released to the street when an underground water line ruptured. The release, which was reported due to the potential for petroleum residue gathered as water ran across the road, was channelized into a containment sump and clarifier. In February 2015, wastewater with a pH lower than 6 was released to the sewer due to a pump failure at the scrubber. In April 2015, a 10-pound benzene release to the atmosphere occurred due to the pollution system being off-line. This facility received repeated violations and fines for issues related to stormwater discharges dating back to at least 2001.

The UTC/Goodrich facility is a large quantity hazardous waste generator. Since at least 2001, the facility has generated ignitable waste, corrosive waste, reactive waste, barium, cadmium, chromium, lead, mercury, silver, benzene, 1,4-dichlorobenzene, 1,2-DCE, methyl ethyl ketone (MEK), spent halogenated solvents, spent non-halogenated solvents, wastewater sludge from electroplating operations, acetone, 3,4-pyridazinedione, 1,2-dihydro-(or) maleic hydrazide, methanol, phenol, tetrahydrofuran, etc. According to the CA HAZNET database listings, since 1989, the hazardous waste generated has included: asbestos containing waste; off-specification, aged, or surplus inorganics; waste oil and mixed oil; PCBs and material containing PCBs; oil/water separation sludge; unspecified organic liquid mixture; other inorganic solid waste; other organic solids; unspecified solvent mixture; liquids with pH $\leq$ 2; liquids with lead $\geq$ 500 milligrams per liter (mg/L); laboratory waste chemicals; metal dust (alkaline solution from machining waste); tank bottom waste with halogenated organics; unspecified sludge waste; unspecified organic liquid mixture; oxygenated solvents; etc. The SFSFD has cited the facility for administrative violations related to its HMBP, its spill prevention control and countermeasure (SPCC) plan, employee training, risk management plan (RMP), etc.

Based on a review of the EDR database report and publicly available information on GeoTracker and EnviroStor, there is no indication that this facility has contributed to regional contamination. However, given the site's lengthy industrial history and known use of halogenated solvents (including small volume storage at one building on the Property, observed during the site inspection), SCS considered it prudent to conduct soil vapor sampling on the UTC-occupied portion of the Property. As shown in Section 15, the sampling did not identify evidence of a VOC release. Based on the available information, the UTC site has not negatively affected the environmental condition of the Property.

Genesis Logistics/Exel Genesis Logistics Santa Fe Springs, 12330 Lakeland Road (adjacent to the east) – CA HAZNET, CA NPDES, CA CERS, ECHO, RCRA NonGen/NLR, and CA HWTS – In 2012, Coaster Distribution manifested hydrocarbon solvent from this site. The CA CERS database information indicates that the facility has been cited for administrative violations such as failing to submit or update its HMBP. None of the violations were indicative of chemical releases.

Brown Oil Tools Co. Inc., 12232 Lakeland Road (adjacent to the west) – CA SWEEPS UST and CA LOS ANGELES CO. HMS – This facility appears in the CA SWEEPS UST database as having four USTs in 1989. The EDR database does not contain details about the size or contents of the tanks. There is no indication of releases from the USTs. The CA LOS ANGELES CO. HMS listing indicates that the business had permits for tanks and industrial waste. It contains no indications of violations. Based on the available information, this listing is not anticipated to negatively affect the environmental condition of the Property.

T&T Oil Co., 12326 Lakeland Road (adjacent to the east) – CA LOS ANGELES CO. HMS – This facility appears as a listed industrial hazardous materials/hazardous waste site. The database listing contains no information about chemical releases or violations. Based on the available information, this listing is not anticipated to negatively affect the environmental condition of the Property.

Rexford Industrial/Torco USA Lubricant/Sonsray Machinery LLC, 12247 Lakeland Road (adjacent to the north) – CA LUST, CA CPS-SLIC, CA HAZNET, CA HIST CORTESE, LA Co. Site Mitigation, CA CERS, RCRA NonGen/NLR, and CA HWTS – The CA LUST database listing indicates that a diesel release was discovered on August 9, 1990, during tank closure work by Torco USA Lubricants. The release was described as having "minor or no potential water resource impact." The case summary information noted that a final remediation report was due by September 24, 1995 and that it was actually an aboveground tank case. As a result, the case was transferred to the SLIC unit. According to GeoTracker (GeoTracker ID: SLT4L1961777), the case status is "Open – Inactive as of January 29, 2015." The GeoTracker case also notes that the contaminants of concern were petroleum fuels affecting soil. The CA HAZNET database listed asbestos containing waste generated in 2016, likely a result of a building renovation. The available information does not suggest this site has had releases likely to negatively affect the environmental condition of the Property. Sonsray Machinery is listed as a construction and mining equipment wholesaler that did not generate hazardous waste.

Lakeland Development Company/Powerine Oil Company/RAAB Vacuum Truck Service Inc./Powerine Oil – Administration Building/Powerine Oil Co./Coin-Op Gasoline Associates/Cenco Refining Co./Powerine Oil Refinery/Walker Property/Goodman Santa FE Springs SPE LLC/City of West Sacramento WTP/S.W.H.A.T. 12345 and 12354 Lakeland Road (adjacent to the north and east) – CA LUST, CA AST, CA HIST UST, CA Cortese, CA EMI, CA LOS ANGELES CO. HMS, CA Notify 65, CA CERS, FUELS PROGRAM, FINDS, CA ENVIROSTOR, CA CPS-SLIC, CA CHMIRS, CA HIST CORTESE, CA CERS, CA SWEEPS UST, CA WMUDS/SWAT, CA DEED, CA ICE, CA VCP, CA CIWQS, RCRA-LQG, and EDR Hist Auto – The Powerine refinery, also known as the Cenco refinery, was a gasoline, diesel, and ethanol producer and oxygenate blender. It was an oil refinery from the 1930s until July 1995. The refinery processed crude petroleum products into kerosene, leaded gasoline, aviation fuel, unleaded gasoline, diesel, fuel oil, and petroleum coke. The former refinery and associated offsite pipelines have had releases affecting soil, soil vapor, and groundwater.

There are multiple GeoTracker and EnviroStor case files for the former refinery. The CA HIST UST database indicated that the former Powerine refinery had at least five USTs. According to GeoTracker (GeoTracker ID: T0603704675), the Powerine Oil Co. CA LUST case status was "Completed – Case Closed as of February 1, 1996." The contaminant of concern was listed as aviation fuel that affected soil. The Former Powerine Oil Co. Refinery – Western Portion (GeoTracker

ID: T10000007505) case status is listed as "Open – Remediation as of February 13, 2017." Goodman Santa Fe Springs SPE LLC (Goodman) acquired the western 18 acres of the former refinery after having entered into a California Land Reuse and Revitalization Act (CLRRA) agreement with the LARWQCB. The contaminants of concern are listed as gasoline and fuel related VOCs, including fuel oxygenates that affected soil, soil vapor, and regional groundwater. Shallow soil at the western side of the former refinery (0 to 10 feet bgs) was remediated in 2015 and 2016, resulting in an NFA letter issued by the LARWQCB. As noted earlier, the western side of the former Powerine refinery site was redeveloped with the Goodman Logistics Center buildings in 2018.

According to the Third Quarter 2021 RAP Implementation Progress Report prepared by Ramboll (December 18, 2021), 81 nested soil vapor extraction wells, with 158 separate screened sections, have been installed to address deep soil contamination, defined as between 10 and 100 feet bgs. Due to the large amount of contaminant mass in deep soil, the remediation work is focused on high flow soil vapor extraction (SVE) with low-pressure air injection. In addition, 25 air-sparge wells were installed to depths of approximately 130 feet to address contamination in groundwater. On March 16, 2021, the contaminant concentrations in soil vapor at the nearest locations to the Property (W5-1A/C and W5-2A/B/C) including gasoline-range TPH (TPH-g) up to 360,000 µg/L, benzene up to 1,100 µg/L, toluene up to 170 µg/L, ethylbenzene up to 180 µg/L, xylenes up to 410 µg/L, and other fuel-related VOCs. Chlorinated VOCs are not typically detected above laboratory reporting limits at these probe locations.

According to the most recent groundwater monitoring report (Ramboll, July 14, 2021), benzene, cis-1,2-DCE, trans-1,2-dichloroethene (trans-1,2-DCE), vinyl chloride, TCE, and MTBE were detected in wells at concentrations above their corresponding MCLs for drinking water. The highest concentrations were detected in wells MW-701, MW-703, and MW-704R, the three closest wells to the Property. Benzene was detected at concentrations up to 3,300 µg/L, MTBE up to 49,000 µg/L, TPH-g up to 21,000 µg/L, and diesel-range TPH (TPH-d) up to 2,100 µg/L. The chlorinated VOCs are generally detected in upgradient wells at the former Powerine facility and are attributed to offsite, upgradient sources associated with the Omega Chemical Superfund Site.

Groundwater generally flows from the former Powerine refinery site towards and beneath the Property. Plume maps (included in **Appendix E**) show that releases from the former refinery have affected groundwater primarily beneath the eastern side of the Property. SCS recommended the Phase II investigation discussed in Section 15 of this report to evaluate potential vapor migration from the former Powerine refinery site and consider whether releases at the Property might have contributed to the regional contamination. The results of the 1998 Phase II soil investigation and the SCS Phase II investigation discussed in Section 15 did not identify significant contaminant releases at the Property. The results also suggest that remedial actions being implemented at the former Powerine facility are controlling potential vapor migration of fuel-related VOCs to the Property. Based on the available information, SCS also considers the regional contamination associated with the former Powerine refinery facility to be a CREC with respect to the Property.

Lakenor/Lakenor Auto Salvage/Sonsray Machinery, 10950 Norwalk Boulevard (adjacent to the north) – CA HIST UST, CA CERS HAZ WASTE, CA HAZNET, CA CERS, CA SWEEPS UST, RCRA NonGen/NLR, RCRA-SQG, CA FID UST, FINDS, ECHO, CA LOS ANGELES CO. HMS, CA WDS, and CA HWTS – This facility reportedly had one "waste" UST of unknown capacity installed in 1982. The CA HAZNET database information indicates that this facility generated unspecified aqueous solution, oil/water separation sludge, other organic solids, aqueous solution with total organic residues less than 10 percent, oxygenated solvents, unspecified organic liquid mixture, unspecified oil-containing waste, unspecified sludge waste, off-specification inorganics, and hydrocarbon solvents between 1993 and 2015. The SFSFD cited this facility for administrative violations related to its HMBP.

These EDR listings do not have information about violations or known releases likely to negatively affect the environmental condition of the Property.

McMaster-Carr Supply Company, 12319 Lakeland Road (adjacent to the north-northeast) – RCRA-SQG, CA CERS HAZ WASTE, and CA CERS – This tenant at the Goodman Logistics Center generates ignitable waste, corrosive waste, reactive waste, cadmium, and lead. The industrial supplies wholesale business has no reported violations.

JB Hunt, 12319 Lakeland Road (adjacent to the north-northeast) – RCRA NonGen/NLR – This tenant at the Goodman Logistics Center was verified not to generate hazardous waste on November 11, 2019 and has no reported violations.

Harbor Distributing, LLC, Santa Fe Springs/Esquer/Performance Team Freight Systems Inc., 11204 Norwalk Boulevard – RCRA LQG, CA CERS HAZ WASTE, CA HAZNET, CA CERS, CA HWTS, and RCRA NonGen/NLR – Harbor Distributing is listed as a large quantity generator of corrosive waste. No violations were reported. Between 2004 and 2016, Performance Team Freight Systems Inc. generated other organic solids, unspecified oil-containing waste, waste oil and mixed oil, and adhesive waste. In 2017 and 2018, Reyes Fleet Management, LLC generated asbestos containing waste, off-specification organics, liquids with pH $\leq$ 2, empty containers 30 gallons or more, and latex waste. Performance Team and Reyes Fleet were cited for administrative violations related to its HMBP and for storing waste in uncovered containers.

OTHER DATABASE SITES

The EDR report provides a summary table of regulatory database sites within specified distances of the Property, including standard environmental records, additional environmental records, high risk historical records, and recovered governmental records. This summary table is provided beginning on Page 4 of the EDR report (**Appendix F**).

Other sites located within 0.25 miles of the Property with known releases of hazardous substances such as CA LUST, CA Cortese, CA CPS-SLIC, LA Co. Site Mitigation, and CA CHMIRS are located cross- or downgradient, or based on case status and/or distance, are not anticipated to negatively affect the environmental condition of the Property. Several sites located within 0.25 miles appear in databases not typically associated with documented releases, such as EDR Hist Auto, CA HIST CORTESE, CA CERS, RCRA-SQG, FINDS, ECHO, RCRA NonGen/NLR, CA HIST UST, CA LOS ANGELES CO. HMS, CA HAZNET, CA HWTS, CA CERS HAZ WASTE, CA SWEEPS UST, CA EMI, CA CDL, CA UST, CA NPDES, CA CIWQS, CA AST, and CA CERS TANKS. Based on a review of the database information, none of these sites are known to have any contamination at this time; therefore, none are anticipated to have negatively affected the environmental condition of the Property.

At least one facility located beyond 0.25 miles, the Mobil Jalk Fee (0.3 miles north-northwest), is a suspected responsible party named in the Omega Chemical Superfund Site and may have contributed to regional groundwater contamination present beneath the western side of the Property. Other sites located beyond 0.25 miles are not anticipated to negatively affect the environmental condition of the Property.

UNMAPPABLE OR ORPHAN SITES

Seven unmappable sites were identified in the EDR report. Unmappable sites cannot be plotted due to inaccurate or incomplete addresses. Based on review of the provided data, including the estimated locations of the unmappable sites in relation to the Property, it appears unlikely that the

unmappable sites have adversely affected the environmental condition of the Property. One of the unmappable sites, So Cal Gas/Ontario MGP is further discussed in the adjacent sites section of this report.

LANDFILLS

According to the EDR-provided review of the California Department of Resources Recycling and Recovery (CalRecycle) Solid Waste Information System, no active or inactive landfills were identified within 0.5 miles of the Property. Based on the available information, it is unlikely that landfills have adversely affected the environmental condition of the Property.

OIL AND GAS WELLS

Available oil and gas well maps from the California Department of Conservation, Geologic Energy Management Division (CalGEM) were reviewed to identify oil and gas wells on the Property or in the nearby area. According to the CalGEM Well Finder online database, the Property is situated in the southwestern portion of the Santa Fe Springs oil field.

A map showing the location of the Property relative to nearby oil and gas wells is provided in **Appendix D**. Dozens of other wells are located in the surrounding area. Three oil and gas wells are depicted on the Property. CalGEM well information for these three wells is also included in **Appendix D**. Santa Fe Springs Oil Synd. No. 2 – Well No. 1 (API: 0403716095) is mapped near the central-southern portion of the gravel parking lot on the northwestern corner of the Property. This well was drilled to a depth of 5,069 feet in 1922 and was plugged in 1924. Well notes indicate that it never produced because it is located outside the proven territory, with no oil sands shown in the drilling logs.

Santa Fe Springs Oil Synd. No. 2 – Well No. 3 (API: 0403716096) is depicted at the north-central edge of the Property, immediately south of Lakeland Road. This well drilled in 1923 and was abandoned after drilling to a depth of only 1,559 feet. Well notes stated that it was not drilled deep enough to penetrate any producing oil- or gas-bearing formations.

Santa Fe Springs Oil Synd. No. 3 – Well No. 1 is depicted at the northeastern portion of the Property, southeast of the office building. Although depicted on the Property on the CalGEM website, Mr. White stated that he recalled this well being located offsite in the Getty Drive right-of-way east of the Property. The CalGEM record for this well indicates that it was drilled in 1923 to a depth of 4,730 feet (sidetracked at 4,445 feet) and abandoned in 1924, after the area where it was drilled "proved to be barren." It never operated and did not produce oil or gas. AllenCo re-abandoned the well in 1998. The reabandonment logs note that only the upper 95 feet were cemented, with CalGEM (then DOGGR) approval. Based on the information provided by Mr. White, it does appear likely that this well was located offsite.

NATIONAL PIPELINE MAPPING SYSTEM

SCS reviewed the National Pipeline Mapping System (NPMS) website for the Property and surrounding area to identify any hazardous materials pipelines. The NPMS is a geographic information system (GIS) created by the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration (PHMSA), and Office of Pipeline Safety (OPS) in cooperation with other federal and state governmental agencies and the pipeline industry. The NPMS consists of geospatial data, attribute data, public contact information, and metadata pertaining to the interstate and intrastate hazardous liquid trunklines and hazardous liquid low-stress lines as well as gas

transmission pipelines, liquefied natural gas (LNG) plants, and hazardous liquid breakout tanks (tanks that receive and store liquids transported by pipeline) jurisdictional to PHMSA. The nominal accuracy of geospatial data in the NPMS is +/-500 feet. The NPMS does not contain information on interconnects, pump and compressor stations, valves, direction of flow, capacity, throughput, or operating pressure. In addition, distribution and gathering pipelines are not included in the NPMS.

The NPMS is built from data submitted by pipeline, LNG plant, and breakout tank facility operators. Since 2002, transmission pipeline and LNG plant facility operators are required to submit mapping information to the NPMS and to update their submissions annually. Breakout tank operators are able to submit data to the NPMS on a voluntary basis.

Based on review of the NPMS website, two Crimson Pipeline L.P. crude oil pipelines are located in the Norwalk Boulevard right-of-way west of the Property. The website does not contain any information about releases from these pipelines. Based on the available information, no negative environmental affects to the Property are anticipated from these pipelines.

LOCAL ENVIRONMENTAL ISSUES

On April 8, 2004, the City of Santa Fe Springs passed Ordinance No. 955 amending Section 117.131 of the city code, which established certain conditions under which a soil gas investigation is required, the requirements for soil gas investigations, provided a map of "methane zones" within the city, and outlined minimum methane mitigation measures (where applicable). The methane zone area within the city encompasses all land within 1,000 feet of a landfill or within 250 feet of an existing or abandoned oil well. A soil gas investigation is also required on sites where the level of total petroleum hydrocarbon contamination in soil exceeds 20,000 parts per million. The SFSFD is the lead agency within the city providing oversight of soil gas investigations, monitoring programs, and mitigation measures.

A copy of the Methane Zone Map is included in **Appendix D**. As shown on the map, the Property is situated within the city-designated methane zone. Since the Property was developed prior to the implementation of Ordinance No. 955, the existing buildings are not subject to methane investigation or mitigation requirements. If the Property were to be redeveloped, soil gas investigation would be required. Methane issues constitute a business environmental risk (BER).

SCS conducted a methane investigation at the Property concurrently with the Phase II investigation. The methane investigation report is provided under separate cover.

13 USER PROVIDED INFORMATION

A User Questionnaire was not returned to SCS for inclusion in the report. Alere provided no information beyond what is discussed above.

TITLE RECORDS

No title report was provided to SCS for review.

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

No information regarding environmental liens or activity and use limitations was provided to SCS. No environmental liens or activity/use limitations were identified by SCS during the course of this assessment.

SPECIALIZED KNOWLEDGE

No specialized knowledge regarding the Property was provided to SCS by the User.

VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

No Property valuation information was provided to SCS.

14 DEGREE OF OBVIOUSNESS OF THE PRESENCE/LIKELY PRESENCE OF CONTAMINATION ON THE PROPERTY

As discussed above, environmental database reports map the western two-thirds of the Property within the boundary of the Omega Chemical Superfund Site. The Omega Chemical site is physically located approximately three miles northeast of the Property. Omega Chemical and related parties are responsible for cleanup of a groundwater plume that extends approximately five miles, including beneath the Property. A review of available Omega Chemical Superfund information, indicated that the Property was situated in an area of Operable Unit 2 (OU-2), in need of additional investigation. Based on groundwater plume maps, chlorinated VOCs are present in upgradient and downgradient groundwater wells. Given the historical use and storage of 1,2-DCA (a known PCE breakdown product) by UTC and its predecessor companies, SCS recommended that Phase II soil vapor sampling be conducted at the Property to evaluate whether onsite releases might have contributed to the regional contamination and/or whether vapor migration to shallow soil vapor was occurring. No data reviewed suggests that the Property might be named a contributor to the Omega Chemical Superfund groundwater plume.

The environmental database report also contains information about the former Powerine (Cenco) refinery, historically located across the street to the northeast and east of the Property. The former Powerine facility is also known to have contaminated regional groundwater with TPH and fuel-related VOCs. The Powerine refinery groundwater plume extends beneath the eastern side of the Property and likely co-mingles with the Omega Chemical Superfund plume. The former Powerine refinery areas were redeveloped over the past 20 years, but remediation activities for deep soil vapor (below 10 feet) and in groundwater are ongoing. Remedial actions across the street to the northeast include soil vapor extraction (SVE), air injection, and air-sparge wells. The Powerine responsible parties attribute chlorinated VOCs at their sites to offsite, upgradient sources. SCS also recommended Phase II sampling to consider whether releases from the former Powerine facility were migrating to shallow soil vapor at the Property (vapor encroachment condition, VEC).

The results of the 1998 Phase II soil investigation and the SCS Phase II investigation discussed in Section 15 did not identify significant contaminant releases at the Property. The results also suggest that remedial actions being implemented at the former Powerine facility are controlling potential vapor migration of fuel-related VOCs to the Property. Based on the available information, SCS considers the regional contamination associated with the Omega Chemical Superfund site and the former Powerine refinery facility to be CRECs with respect to the Property.

15 PHASE II SOIL AND SOIL VAPOR INVESTIGATION

To assess the potential for subsurface impacts from past on-site operations and/or vapor migration to the Property, SCS conducted limited subsurface soil and soil vapor investigation.

SUBSURFACE UTILITIES CLEARANCE

As required by law, SCS contacted Underground Service Alert prior to conducting any subsurface work (Dig Alert No. A212850109). In addition, Goldak, Inc. (Goldak) of Burbank, California cleared the boring locations of subsurface utilities and other potential obstructions prior to initiating field activities.

SOIL VAPOR SAMPLE COLLECTION

On November 10 and 11, 2021, under SCS' direction, H&P Mobile Geochemistry (H&P) of Carlsbad, California installed soil vapor probes at 22 locations (SV1 through SV22) throughout the Property. Soil vapor probe locations are shown on **Figure 3** in **Appendix A** and in **Appendix G**. Sampling points were selected to investigate specific areas of interest (former UST area, hazardous material/waste storage compound, etc.) and to provide general coverage of the Property.

Soil vapor probes were installed at a depth of 5 feet bgs using a truck-mounted, direct-push rig. At locations SV7, SV9, SV10, SV12, SV13, and SV19, high vacuum was encountered in probes initially set at the 5-foot depth, so additional temporary probes were installed at 3 feet bgs (after encountering similar conditions at 6 and 4 feet bgs). High vacuum was encountered at all shallow (3- to 5-foot probes set at location SV21). At locations SV1 through SV13, SV19, SV20, and SV21, a 15-foot soil vapor probe was also set. High vacuum conditions were not encountered in the 15-foot probes.

At each location, a stainless steel rod was advanced to the target depth. The steel rod was then retracted and new (clean) 1/8-inch diameter Nylaflow tubing, with a polypropylene filter placed on the bottom end, was inserted to the desired depth. Clean #2/12 Monterey sand was placed in a 6-inch vertical interval around each filter. A bentonite seal was placed above the sand pack for each probe. The remaining annular space was then backfilled with bentonite and hydrated.

Soil vapor sampling was conducted in general accordance with the Advisory – Active Soil Gas Investigations, published by the LARWQCB and DTSC in July 2015 (the "Guidance"). Following a minimum of 120 minutes after being set, the probes were purged to remove ambient air from the sampling system and ensure that the collected soil vapor sample was representative of soil conditions. A purge of three volumes of the system was used for all locations. In addition, prior to collecting samples, a leak-check compound (1,1-difluoroethane) was exposed at the surface.

A total of 39 soil vapor samples (including two replicate samples) were collected and analyzed for VOCs using Method H&P 8260SV, a modified version of EPA Method 8260B, in an on-site mobile laboratory provided by H&P. H&P is certified by the United States Department of Defense Environmental Laboratory Accreditation Program (DoD-ELAP) to conduct the specified analysis. Chain-of custody documentation was completed to track the samples from the point of collection through analysis.

After all samples had been collected and the soil vapor analyses completed, the temporary probes were removed. Probe locations were backfilled with bentonite. No soil cuttings requiring disposal were generated during the field activities.

SOIL VAPOR ANALYTICAL RESULTS

The H&P laboratory report, chain-of-custody documentation, and QA/QC data are included as **Appendix H.** A summary of the soil vapor analytical results is presented in **Table 1** in **Appendix H.**

Five VOCs were detected in one of more of the soil vapor samples analyzed at concentrations above laboratory reporting limits as follows:

- PCE was detected in two samples at concentrations of 0.082 and 0.25 µg/L.
- Benzene was detected in seven samples (including the two replicate samples) at concentrations between 0.093 and 0.29 µg/L.
- Toluene was detected in 16 samples at concentrations between 0.82 and 11 µg/L.
- m,p-Xylene was detected in six samples (including the two replicate samples) at concentrations between 0.40 and 1.3 µg/L.
- o-Xylene was detected in one sample at a concentration of0.47 µg/L.

The leak-check compound was not detected in any of the soil vapor samples collected.

The DTSC, Human and Ecological Risk Office (HERO) issued an updated Human Health Risk Assessment (HHRA) Note No. 3 in June 2020. In this Note, DTSC made recommendations regarding the methodology and use of the U.S. EPA Regional Screening Levels (RSLs) and DTSC-modified screening levels (jointly referred to herein and "DTSC-Recommended SLs") for soil vapor screening under residential and commercial/industrial land use scenarios. The DTSC-Recommended SLs for evaluating soil vapor intrusion are calculated using indoor air screening levels and recommended attenuation factors. The values calculated using Note No. 3 recommendations are very conservative. Chemical concentrations in excess of the calculated DTSC-Recommended SLs are not conclusive evidence of adverse risks to human health. Depending on VOC concentrations and their distribution, additional investigation – such as sub-slab sampling, indoor air assessments, site-specific health risk assessments, etc. – may be warranted to evaluate site-specific health risks.

In **Table 1**, the soil vapor results from this investigation are compared to the DTSC-Recommended SLs under existing and future commercial/industrial building land use scenarios using an attenuation factors of 0.001 and 0.0005. As shown, detected concentrations of VOCs were all below their respective DTSC-Recommended SLs. Based on this, the VOC concentrations detected do not represent a significant risk to human-health associated vapor intrusion into existing or future commercial/industrial buildings.

In the latest update to HERO Note No. 3, DTSC also recommended that screening assessments calculate soil vapor screening levels using the U.S. EPA recommended attenuation factor of 0.03 (based on June 2015 guidance) for sub-slab soil gas and "near-source" exterior soil gas. Use of this attenuation factor was also in the Public Draft Supplemental Guidance: Screening and Evaluating Vapor Intrusion released by DTSC and the California Water Resources Control Boards in February 2020. **Table 1** also includes DTSC-Recommended SLs for "near-source" exterior soil gas samples using an attenuation factor of 0.03. These attenuation factors result in extremely conservative screening levels.

As shown, using the 0.03 attenuation factor, the two PCE detections and the seven benzene detections exceed their corresponding DTSC-Recommend SLs calculated using the more conservative attenuation factor. Please note that the attenuation factor of 0.03 is based on limited studies, of primarily residential homes with degraded concrete/basements and are not necessarily applicable to commercial/industrial sites in California with slab-on-grade construction. However, it has been SCS' experience with similar sites that upon further investigation – such as sub-slab sampling, indoor air assessments, site-specific health risk assessments, and radon slab attenuation studies – there are no significant health risks from these sporadic and trace levels of VOCs.

Recent peer-reviewed, California-specific studies have also concluded that the previously established attenuation factors of 0.001/0.0005 for existing/future commercial/industrial buildings are more applicable to sites in California than those calculated using the more conservative 0.03 attenuation factor (Lahvis and Ettinger, April 2021). In summary, the low concentrations of VOCs detected in soil vapor during this investigation are not indicative of a significant vapor intrusion risk. Additional investigation of soil vapor is not recommended at this time.

SOIL SAMPLE COLLECTION

Also on November 10 and 11, 2021, under direction of SCS, H&P conducted soil sampling at the following locations shown on **Figure 3** in **Appendix A**:

- SB1 – Co-located with soil vapor boring SV1, this boring was located in the vicinity of the former USTs. Soil samples were collected at 10 and 15 feet bgs.
- SB2 – Co-located with soil vapor boring SV4. This location was selected because it was near one of the hydraulic presses with oil staining observed on the pavement at its base. Soil samples were collected at 5 and 10 feet bgs.
- SB3 – Co-located with soil vapor boring SV8. This boring was located immediately north of the Coast Steel hazardous waste storage compound and east of the UTC hazardous material/waste compound. Soil samples were collected at 5 and 10 feet bgs.
- SB4 – Co-located with soil vapor boring SV18. This boring was located in the approximate area of the former oil well shown on CalGEM maps in the gravel parking lot on the northwestern portion of the Property. Soil samples were collected at 5 and 10 feet bgs.
- SB5 – This soil boring was advanced in the northwestern portion of the Property, in the vicinity of the former clarifier shown in the 1998 Phase II report prepared by Norcal. Soil samples were collected at 5 and 10 feet bgs.
- SB6 – Co-located with soil vapor boring SV22. This boring was located in the approximate area of the former oil well shown on CalGEM maps near the north-central edge of the Property (in the current Coast Steel parking lot). Soil samples were collected at 5 and 10 feet bgs.

Soil samples were collected using the truck-mounted, direct-push drill rig. The drill rig was equipped with a hydraulic hammer and a 2-foot long, 1.75-inch diameter solid core sampler. A pointed steel tip was fixed to the head of the solid core sampler and driven to the desired depth on the steel rod. Soil matrix samples were collected by retracting the drive tip through the center of the sampler with an inner rod, and hydraulically hammering the sampler an additional 1.5 to 2 feet. Soil samples were recovered in 2-foot long, 1-inch diameter pre-cleaned acetate sleeves that have been placed inside the sampler. An approximately 6-inch section was cut from the sample sleeve and retained for submittal to the laboratory.

A portion of each soil sample intended for analysis of VOCs was preserved in the field using EPA Method 5035. This process includes the collection of three aliquots of soil from each soil sample using a plunger/sub-sampler provided by the laboratory. The aliquots of soil were immediately placed in 40 milliliter VOA (volatile organic analysis) vials as follows - two aliquots in VOAs with a sodium bisulfate preservative and one VOA with a methanol preservative.

Sample sleeves and 5035 kits were labeled with the sample number, date of collection, and time of collection. Immediately following labeling, samples were placed in a chilled cooler to be submitted to Performance Analytic Laboratory (PAL) of Signal Hill, California. PAL is certified by the California State Water Resource Control Board's Environmental Laboratory Accreditation Program (CA ELAP) to

perform the requested analyses. Samples were tracked from the point of collection through the laboratory using proper chain-of-custody protocol. Samples were collected using generally accepted regulatory procedures. Soil samples collected during this investigation were selectively analyzed for TPH with carbon chain breakdown using EPA Method 8015M, VOCs using EPA Method 8260B/5035, and Title 22 metals using EPA Methods 6010B and 7471A.

New nitrile gloves were used and frequently replaced in the handling of all soil samples to prevent cross-contamination. Samples were tracked from the point of collection through the laboratory using proper chain-of-custody protocol.

SOIL ANALYTICAL RESULTS

The PAL laboratory report, including chain-of-custody forms and QA/QC information are provided in **Appendix G**. A summary of analytical results for soils is presented in **Table 2** and **Table 3** in **Appendix G**.

Total Petroleum Hydrocarbons and Volatile Organic Compounds

There are no universal cleanup guidelines for TPH- and/or VOC-contaminated soils in California. Cleanup levels can vary based on a number of factors including the nature of the contamination, depth to groundwater, the beneficial uses of groundwater, soil type, human health risks (i.e., land use, residential vs. commercial/industrial scenarios), and regulatory oversight agency requirements. Actual cleanup goals are site-specific and based on applicable regulatory guidelines. Generally, regulatory guidelines that apply to the cleanup of specific chemical constituents in soil are related to one or more of the following issues:

- Potential impacts to groundwater
- Human health risks

As shown in **Table 2**, neither gasoline- nor diesel-range TPH were detected in any of the 12 samples analyzed. Oil-range TPH (TPH; C23-C32) was detected in two soil samples at concentrations of 30.4 and 32.9 mg/kg.

The LARWQCB established cleanup guidelines, also known as soil screening levels (SSLs), for hydrocarbon-impacted soils based on the potential for groundwater contamination (RWQCB, 1996). Groundwater is anticipated to occur at approximately 100 feet bgs at the Property. Based on this information, the SSLs for petroleum hydrocarbons are:

- TPH-G (C4-C12) – 500 mg/kg
- TPH-D (C13-C22) – 1,000 mg/kg
- TPH-O (C23-C32) – 10,000 mg/kg

These SSLs are also provided in **Table 2**. Oil-range TPH was detected well below its SSL. Based on the data from this and previous site investigations, TPH detected in soils does not represent a risk to groundwater.

For TPH-impacted soils, DTSC-Recommended SLs have been established for TPH in the medium aromatic range (C9 to C16) and in the high aromatic range (C17 to C32).

Human health risks from petroleum hydrocarbon-impacted soils in California are often evaluated using either of two methods:

- A comparison with the DTSC-Recommended SLs.
- Completion of a site-specific Health Risk Assessment (HRA).

For an industrial land use scenario, the high aromatic range DTSC-Recommended SL is 18,000 mg/kg. Although the carbon range for oil-range TPH is not directly comparable to the DTSC-Recommended SL value for high aromatic hydrocarbons, the concentrations detected in soils at the Property are well below the DTSC-Recommended SLs and do not represent a risk to human health.

A sites-specific HRA is typically conducted on larger, more complex projects where a variety of contaminants are present or the use of the site may be particularly sensitive (e.g., residential). An HRA is a more technically rigorous examination of all potential contaminants and exposure scenarios, and can be used in the development of appropriate cleanup goals and/or mitigation strategies. Based on the TPH concentrations detected during this investigation, development of an HRA is not warranted.

VOC concentrations detected in soil are summarized on **Table 3**. As shown, 2-butanone (methyl ethyl ketone, MEK) was detected in all of the soil samples at concentrations ranging from 15.7 to 23.6 µg/kg. MEK is a common laboratory cross contaminant. The uniform nature of the low detections in all samples strongly indicates that the MEK detections are the result of cross contamination. Regardless, the concentrations are far below their corresponding DTSC-Recommended SL of 190,000,000 µg/kg and do not represent a risk to groundwater or human health.

The only other VOC detected was toluene at 9.54 µg/kg in the 5-foot sample from SB2. This detection is also far below its corresponding SSL of 7,500 µg/kg and DTSC-Recommended SL of 5,300,000 µg/kg and does not represent a risk to groundwater or human health.

Metals

As shown on **Table 2**, all 12 samples contained detectable concentrations of one or more metals including arsenic, barium, chromium, cobalt, copper, lead, nickel, vanadium, and/or zinc.

Regulatory guidance for metals in soil is based on evaluation of both background and risk-based concentrations. The Kearney Foundation of Soil Science published a special report of background concentrations of trace and major elements in California soils (Bradford et al, 1996). Metals were generally detected at, or below, the concentrations typically found in California soils as related in this study.

In HERO Note No. 3, DTSC recommends the use of RSLs, except in cases where a DTSC-modified screening level differs by a factor or three-fold or more. As with the soil vapor screening levels described above, whether it is an RSL or DTSC-modified screening level, the applicable (most stringent) screening levels are described herein as the DTSC-Recommended SLs.

In **Table 2,** the metals results from this investigation are compared to the commercial/industrial DTSC-Recommended SLs. As shown, the only metal detected above the DTSC-Recommended SL is arsenic.

With regard to arsenic, the U.S. EPA has acknowledged that, in some cases, the predictive risk-based models generate screening levels that lie within or even below typical background concentrations. If

natural background concentrations are higher than the risk-based screening levels, an adjustment is probably needed. U.S. EPA uses naturally occurring arsenic in soils as an example. Further, the DTSC has acknowledged that the strict use of RSLs is impractical and has set acceptable levels of arsenic in soil in the range of 8 to 12 mg/kg for school sites in California.

Based on the available information, the arsenic concentrations in soil at the Property appear to be at background levels and naturally occurring.

16 DATA GAPS

No data gaps were identified during the preparation of this Phase I ESA.

17 FINDINGS AND OPINIONS

Based on the scope of work performed, SCS finds the following:

The Property, which comprises 8.42 acres, is located at the southeastern corner of the intersection of Lakeland Road and Norwalk Boulevard. The majority of the Property is developed with the Coast Iron & Steel Company (Coast Iron) facilities, which consists of an office building (3,800 square feet), an approximately 50,000-square-foot steel fabrication building, and asphalt-paved parking and storage yard areas. For more than 40 years, Coast Iron has leased approximately one acre at the southwestern corner of the Property to the adjoining facility to the west (11120 Norwalk Boulevard), currently operated by UTC Aerospace Systems (UTC). The UTC portion of the Property is developed with two warehouse structures, each with an approximate area of 7,500 square feet. UTC also currently leases a gravel parking area at the northwestern portion of the Property (approximately 0.8 acres).

One small structure, likely a rural residence, was located on or near the northwestern portion of the Property as early as 1896. In 1923 and 1925, the small structure was no longer depicted, but three or four oil wells were present on the Property. Between 1928 and the early 1940s, a small structure was present on the north-central portion of the Property. That structure was most likely related to oil exploration activities on the Property and surrounding area. By 1947, a few additional small structures were added at the northwestern portion of the Property. Outdoor equipment storage was also present along the western boundary. In 1963, Coast Iron developed its steel fabrication building on the eastern side of the Property. In 1966, the office building was added at the northeastern corner of the Property. The two industrial buildings on the southwestern portion of the Property, associated with the adjoining facility to the west, were constructed in 1965 and 1967. Coast Iron installed two gasoline USTs (5,000 and 9,970 gallon capacities) in 1974. These USTs were subsequently removed in 1989. The small industrial buildings on the northwestern portion of the Property were demolished in the mid-2000s, leaving the graded gravel area subsequently leased to UTC.

Coast Iron is a steel fabricator that cuts, bends, assembles, and welds steel products. Offices are located at the northeastern portion of the Property. A mostly open-air building where steel fabrication work is conducted is located along the eastern side of the Property. Steel presses are located in the fabricator building area. All of the presses are situated at grade, not in subsurface concrete pits. *De minimis* oil staining was noted at a few locations around the base of presses, particularly on the eastern side of the building. Oxygen acetylene precision plasma cutting equipment is situated outside the northwestern side of the fabrication building. Coast Iron has never galvanized steel at the Property, but it performs touch-up galvanizing with aerosol spray cans south

of the fabrication building. Coast Steel's temporary hazardous waste storage compound is located at the southwestern portion of the Property.

UTC manufactures pyrolytic graphite aircraft brake products at its main facilities west of the Property. At the time of the site inspection, the two 7,500-square-foot UTC buildings on the southwestern portion of the Property were primarily being used for warehousing, shipping, and receiving. A small receiving laboratory was located inside the southeastern corner of the southern building. The northern building had offices and part storage (vacuum pumps, valves, gauges, instruments, etc. UTC's hazardous waste storage compound is located beneath a canopy roof east of the southern building. Long-term UTC (previously Goodrich) employees indicated that the two buildings on the Property were historically used for warehousing, storage, quality control inspections, and dry machining. QC work consisted of dye penetrant inspection of densified carbon brake products manufactured in the main buildings. No spills, staining, or other evidence of a hazardous substance release were observed at the UTC occupied portions of the Property. However, during the UTC facility inspection, SCS observed the storage of two 1-liter bottles of 1,2-dichloroethane (1,2-DCA), a chlorinated solvent. Given known chlorinated solvent impacts to regional groundwater from offsite, upgradient sources, SCS considered the storage of this chemical onsite an environmental condition that warranted additional investigation in the concurrent Phase II soil vapor investigation.

SCS reviewed Santa Fe Springs Fire Department (SFSFD) files as part of the Phase I ESA. The files contain paperwork issued by the SFSFD when the two gasoline USTs were installed at the Property in 1974. The USTs were removed in mid-1989. According to an Underground Storage Tank Removal report prepared by Vadose, Inc., soil samples from beneath the tanks and dispensers did not detect total petroleum hydrocarbons (TPH) or fuel-related volatile organic compounds (VOCs). On October 3, 1990, the SFSFD issued a No Further Action (NFA) letter for the USTs removed from the Property.

The SFSFD files also contained a Phase II Environmental Site Assessment Report prepared by Norcal Engineering. Site contacts indicated that this report was prepared when the owner's family bought out their partners. The Phase II investigation was conducted to evaluate areas of concern identified in a Phase I ESA, a copy of which was not in the SFSFD files and was otherwise unavailable. The areas of concern included the following:

- Two former sumps,
- Four former cesspools and one septic tank,
- A former concrete well and stand pipe,
- The former gasoline UST area,
- Two dry oil well areas,
- An elevated concrete block area (former use of area unknown), and
- A clarifier.

None of these features were observed at the Property during the current site inspection. The 1998 Phase II investigation included 13 soil borings to depths ranging from 15 to 40 feet below ground surface (bgs). Investigated areas were located on the Coast Steel facility and the northwestern portion of the Property (prior to the demolition of the former structures). Soil samples were selectively analyzed for TPH, VOCs, and Title 22 metals. Total recoverable petroleum hydrocarbons (TRPH) were detected in 12 of 40 analyzed samples at concentration ranging from 19 to 460 milligrams per kilogram (mg/kg), equivalent to parts per million (ppm). The maximum TRPH concentration was detected in the 5-foot samples from near the elevated concrete block area. TRPH was not detected in the 20-, 30-, or 40-foot soil sample collected from this same boring. All TRPH concentrations were detected at levels below their corresponding soil screening levels (SSLs). VOCs

were not detected in any of the soil samples. Metals concentrations were consistent with typical background ranges in California soils. Based on the results of the Phase II investigation, Norcal recommended no further action.

Coast Iron appears in several environmental databases, related to its storage of hazardous materials, generation of hazardous waste, and the former USTs. The company has been cited for administrative violations related to its hazardous materials business plan (HMBP) and failing to store hazardous waste in covered containers. Records reviewed, however, did not indicate past releases at the Coast Iron facility.

The environmental database report also maps the western two-thirds of the Property within the boundary of the Omega Chemical Superfund Site. The Omega Chemical site is physically located approximately three miles northeast of the Property. Omega Chemical and related parties are responsible for cleanup of a groundwater plume that extends approximately five miles, including beneath the Property. The primary contaminants of concern are VOCs, especially tetrachloroethene (PCE), trichloroethene (TCE), and 1,1-dichloroethene (1,1-DCE). A review of available Omega Chemical Superfund information, indicated that the Property was situated in an area of Operable Unit 2 (OU-2), in need of additional investigation. Based on groundwater plume maps, chlorinated VOCs are present in downgradient groundwater wells south of the Property at concentrations up to 130 micrograms per liter (µg/L), above their corresponding California Maximum Contaminant Levels (MCLs). Given the historical use and storage of 1,2-DCA (a known PCE breakdown product) by UTC and its predecessor companies, SCS recommended that Phase II soil vapor sampling be conducted at the Property to evaluate whether onsite releases might have contributed to the regional contamination and/or whether vapor migration to shallow soil vapor was occurring. No data reviewed suggests that the Property might be named a contributor to the Omega Chemical Superfund groundwater plume.

The environmental database report also contains information about the former Powerine (Cenco) refinery, historically located across the street to the northeast and east of the Property. The former Powerine facility is also known to have contaminated regional groundwater with TPH and fuel-related VOCs. The Powerine refinery groundwater plume extends beneath the eastern side of the Property and likely co-mingles with the Omega Chemical Superfund plume. The former Powerine refinery areas were redeveloped over the past 20 years, but remediation activities for deep soil vapor (below 10 feet) and in groundwater are ongoing. Remedial actions across the street to the northeast include soil vapor extraction (SVE), air injection, and air-sparge wells. The Powerine responsible parties attribute chlorinated VOCs at their sites to offsite, upgradient sources. SCS also recommended Phase II sampling to consider whether releases from the former Powerine facility were migrating to shallow soil vapor at the Property (vapor encroachment condition, VEC).

Regulatory database information identified other known and suspected contamination sites in the surrounding area, some of which may have contributed to either the Omega Chemical or the Powerine groundwater plumes.

Phase II soil and soil vapor sampling was conducted concurrently with this Phase I ESA. Soil vapor probes were installed at 22 locations across the Property. PCE and fuel-related VOCs (benzene, toluene, and xylenes) were detected in soil vapor at concentrations below their corresponding Department of Toxic Substances Control (DTSC) recommended screening levels (DTSC-Recommended SLs) for existing and future commercial/industrial land use scenarios.

Soil samples were collected in the vicinity of the former USTs, near the hazardous material/waste storage compounds, near former oil wells, at the location of a former clarifier, and near an area of

stained concrete at the base of a hydraulic press. The soil sampling did not show evidence of a significant release of TPH, VOCs, or metals at the Property. The results of the 1998 Phase II soil investigation and the SCS Phase II investigation did not identify significant contaminant releases at the Property. The results also suggest that remedial actions being implemented at the former Powerine facility are controlling potential vapor migration of fuel-related VOCs to the Property. Based on the available information, SCS considers the regional contamination associated with the former Omega Chemical Superfund Site and the former Powerine refinery facility to be Controlled Recognized Environmental Conditions (CRECs) with respect to the Property.

Available oil and gas well maps from the California Department of Conservation, Geologic Energy Management Division (CalGEM) were reviewed to identify oil and gas wells on the Property or in the nearby area. According to the CalGEM Well Finder online database, the property is located in the central-eastern portion of the Santa Fe Springs Oil and Gas Field. Three former oil wells were located on or immediately adjacent to the Property. One was located at the center of the gravel parking area on the northwestern portion of the Property, one along the north-central edge of the Property, and one at the northeastern edge of the Property (which was likely situated offsite to the east in the Getty Drive right-of-way). Methane issues constitute a business environmental risk (BER). SCS conducted methane sampling concurrently with the Phase II investigation. The results were submitted under separate cover.

In summary, SCS performed a Phase I ESA of property located at 12300 Lakeland Road in Santa Fe Springs, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-13. Any exceptions to, or deletions from, this practice are described in Section 5 of this report. Based on the findings of the Phase I ESA, SCS conducted Phase II soil and soil vapor sampling.

In the opinion of the Environmental Professionals, this assessment has revealed evidence of conditions indicative of a CRECs in connection with the Property, as discussed above. Based on the results of the Phase I ESA and Phase II investigation, additional investigation is not recommended or warranted at this time.

19 GLOSSARY/DEFINITIONS

AAI -- All Appropriate Inquiry

AUL -- Activity and Use Limitations

BER – A business environmental risk is a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.

BTEX -- Benzene, toluene, ethylbenzene, and total xylenes

CERCLA -- Comprehensive, Environmental Response, Compensation, and Liability Act

CERCLIS -- Comprehensive Environmental Response, Compensation, and Liability Information System

CFR -- Code of Federal Regulations

CORRACTS -- Corrective Action Against Responsible Parties at a RCRA site

CREC -- Controlled Recognized Environmental Condition: A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (e.g., property use restrictions, AULs, or institutional or engineering controls).

DOGGR -- Department of Oil, Gas, and Geothermal Resources

De Minimis Condition -- A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis conditions* are not RECs or CRECs.

DTSC -- California EPA Department of Toxic Substances Control

EDR -- Environmental Data Resources, Inc.

EPA -- Environmental Protection Agency

ERNS -- Emergency Response Notification System

ESA -- Environmental Site Assessment

FINDS -- Facility Index System

HAZNET -- California EPA Hazardous Waste Facility and Manifest Data

HREC -- Historical Recognized Environmental Condition: A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls

LQG -- Large Quantity Hazardous Waste Generator

LUST -- Leaking Underground Storage Tank

MCL -- Maximum contaminant level

MTBE -- Methyl-tert-butyl-ether

NFA -- No Further Action determination

NFRAP -- No Further Remedial Action Planned

NPL -- National Priority List (Superfund)

PAHs -- Polynuclear aromatic hydrocarbons

PCBs -- Polychlorinated biphenyls

RCRA -- Resource Conservation and Recovery Act

RCRIS -- Resource Conservation and Recovery Information System

REC -- R*ecognized environmental condition* is defined by ASTM E 1527-13 as: "The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis conditions* are not *recognized environmental conditions*."

ROD -- Record of Decision

RBSLs -- Risk-based Screening Levels

RSLs – Regional Screening Levels

RWQCB -- Regional Water Quality Control Board

SARA -- Superfund Amendments and Reauthorization Act

SLIC -- Spills, Leaks, Investigations, and Cleanups database

SQG -- Small Quantity Hazardous Waste Generator

SWIS -- Solid Waste Information System

SWLF -- Solid Waste Facility/Landfills

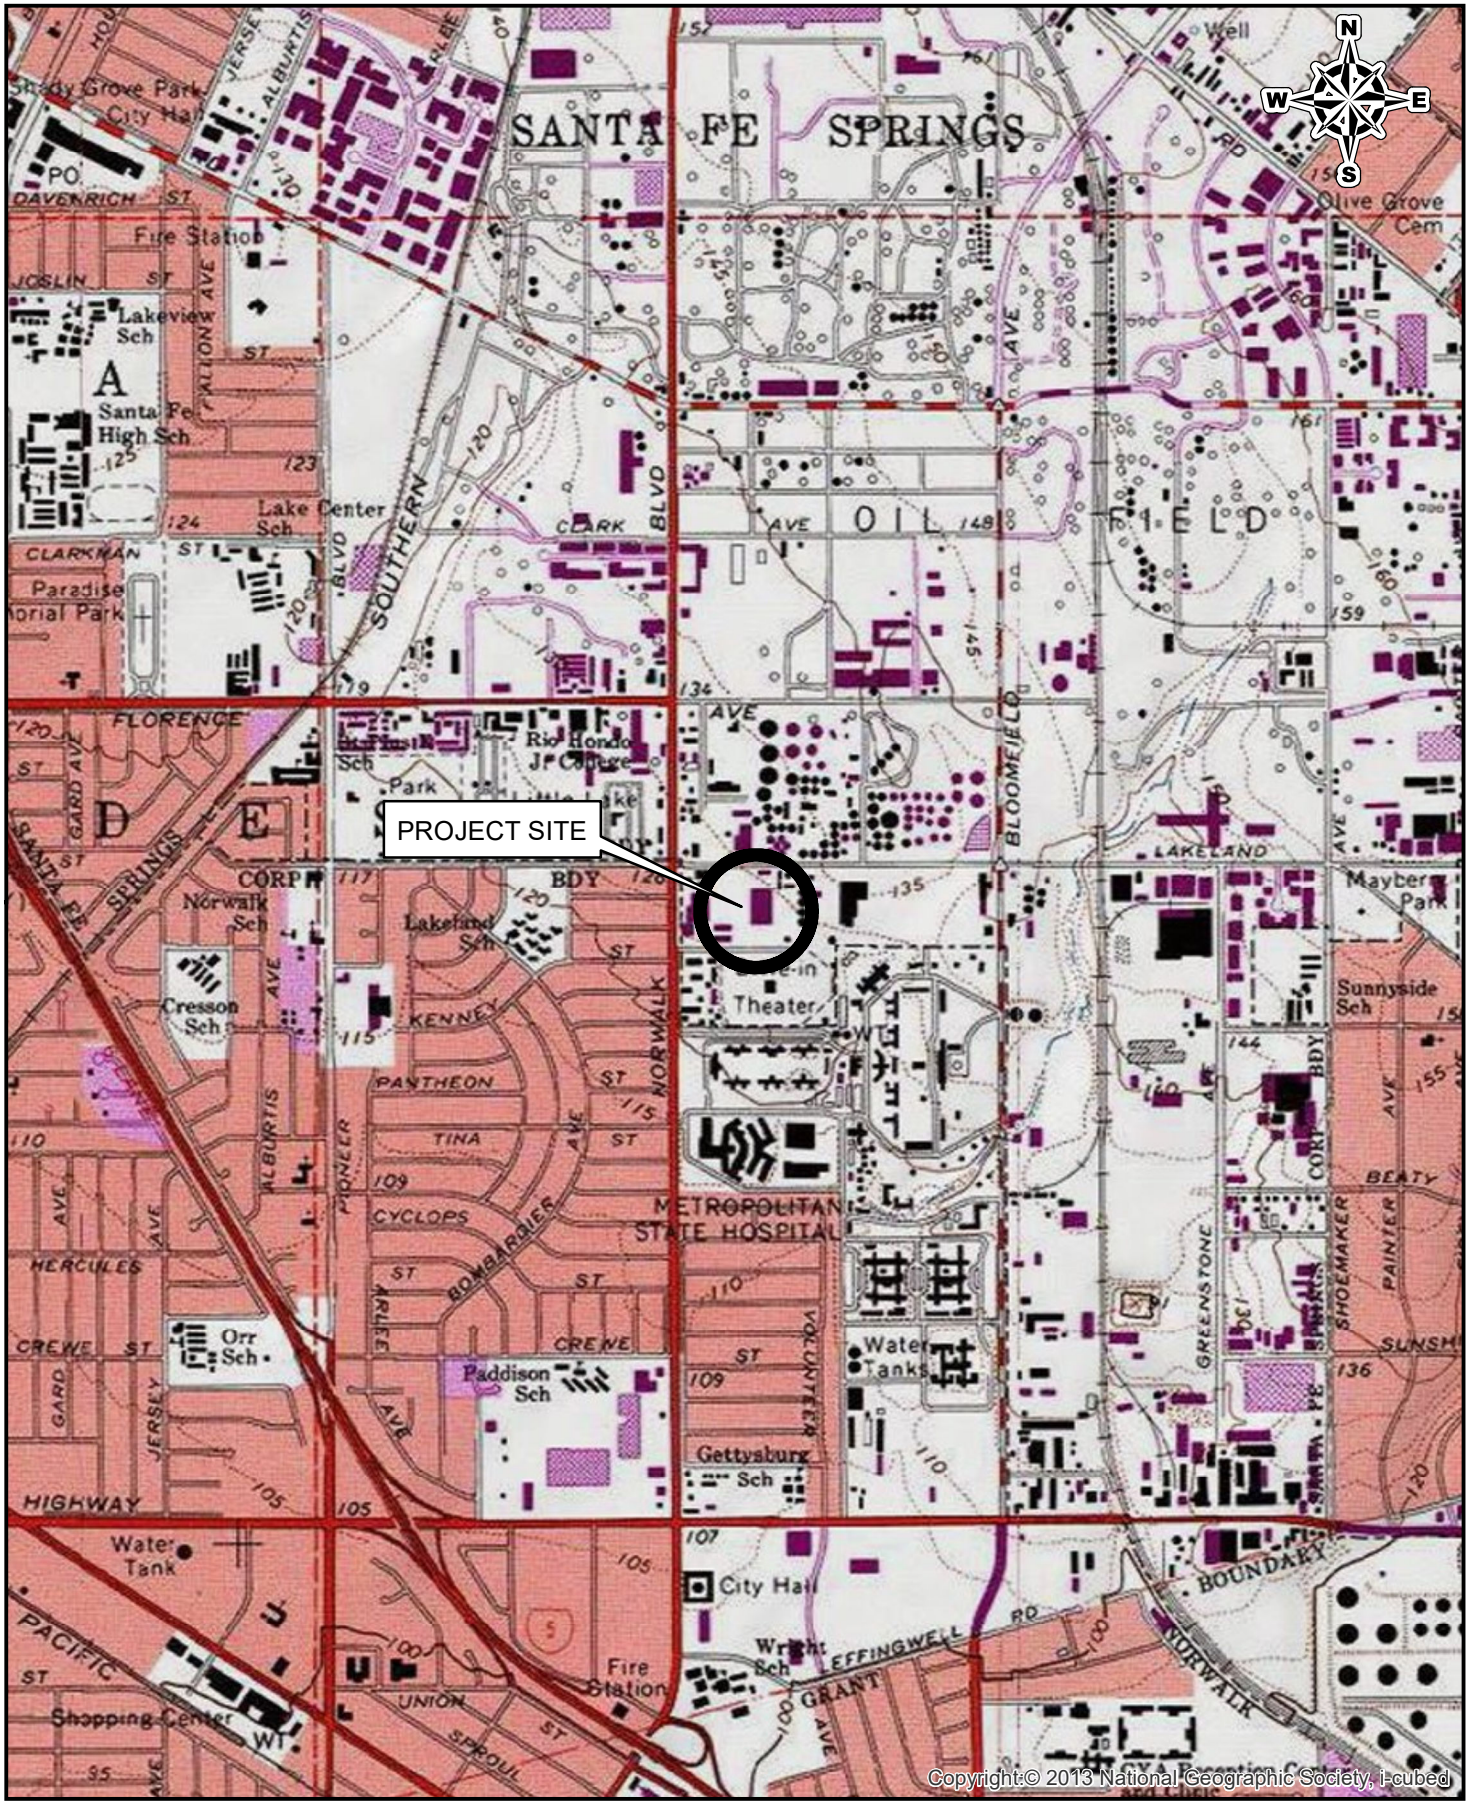
TPH -- Total Petroleum Hydrocarbons

TRIS -- Toxic Release Inventory System

TSD -- Treatment, Storage, and/or Disposal Facility

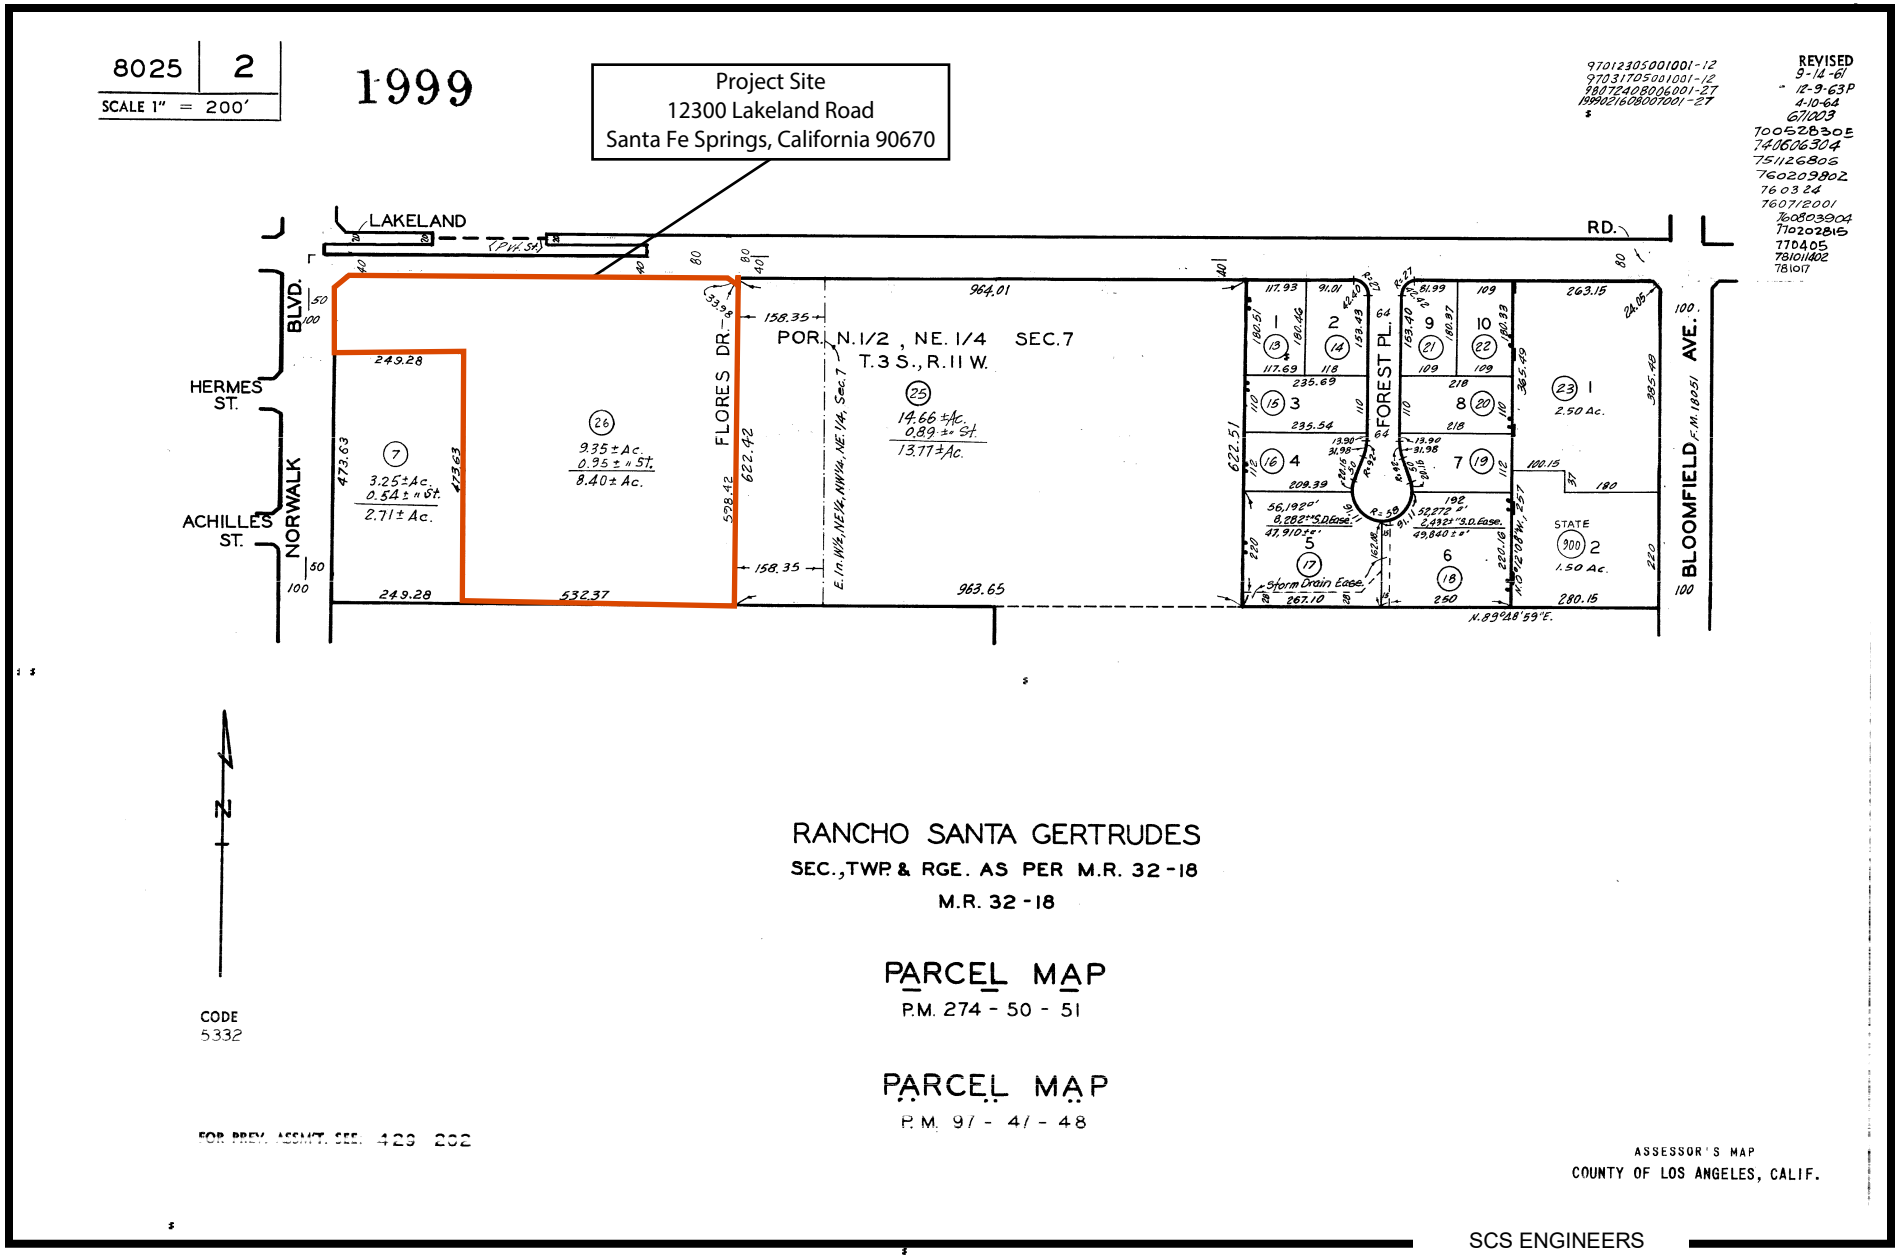
User -- The person or persons seeking to establish the innocent landowner defense, bona fide prospective purchaser liability protection, and/or contiguous property owner liability protection pursuant to CERCLA sections 101 and 107.

USGS -- United States Geologic Survey



UST -- Underground Storage Tank

VCP -- Voluntary Cleanup Program



VOCs -- Volatile organic compounds

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

3900 Kilroy Airport Way
Long Beach, CA 90806
Contact: Kim Braun

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA

Project: 012212236.00

Coordinates:

Latitude:	33.930799 33° 55' 51" North
Longitude:	-118.070955 -118° 4' 15" West
UTM Zone:	Zone 11 North
UTM X Meters:	401017.31
UTM Y Meters:	3754999.56
Elevation:	130.00' above sea level

WORKERS' COMPENSATION DECLARATION

I hereby affirm that I have a certificate of consent to self insure, or a certificate of Workers' Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.)

Policy No. 065949 6-89 Company STATE FUND

☐ Certified copy is hereby furnished. 5/8/90

☑ Certified copy is filed with the county building inspection department.

Date 10/17/89 Applicant _____

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

(This section need not be completed if the permit is for one hundred dollars ($100) or less.)

I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws.

Date 10/17/89 Applicant _____

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

LICENSED CONTRACTORS DECLARATION

I hereby affirm that I am licensed under provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

License Number 343468 Lic. Class C-21, C-61

Contractor MOINE BROS. Date 10/17/89

☐ I am exempt under Sec. _____

B.&P.C. for this reason _____

Date: _____

Signature _____

OWNER-BUILDER DECLARATION

I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Section 7031.5, Business and Professions Code):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work and the structure is not intended or offered for sale (Section 7044, Business and Professions Code.)

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Section 7044, Business and Professions Code.)

CONSTRUCTION LENDING AGENCY

I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name N/A

Lender's Address _____

I certify that I have read this application and state that the above information is correct. I agree to comply with all County ordinances and State laws relating to building construction, and hereby authorize representatives of this County to enter upon the above-mentioned property for inspection purposes.

LEAD HAZARD WARNING:
Due to the possible presence of lead-based paint, lead safe work practices are required for all repairs in pre-1978 buildings that disturb paint. Failure to do so could create lead hazards that violate California Health and Safety Code Section 17920.10 and 105256 and may be subject to a $1000/day fine or criminal prosecution. For more information call 1-800-LEAD-424.

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) (Section 7031.5, Business and Professions Code): Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

(_) I, as owner of the property, or my employees with wages as their sole compensation, will do (✓) all of or (_) portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that it was not built or improved for the purpose of sale.).

(_) I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law).

(_) I am exempt from licensure under the Contractors' State License Law for the following reason:

_____

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: http://www.leginfo.ca.gov/calaw.html.

Will the intended use of the building by the applicant or future building occupant require a permit for construction or modification from the South Coast Air Quality Management District (SCAQMD)? See permitting checklist for guidelines.

Yes ☐ No ☐

I have read the hazardous materials information guide and the SCAQMD permitting checklist, I understand my requirements under the Los Angeles County Code Title 2, Chapter 220 Sections 220.100 through 220.140 concerning hazardous material reporting and for obtaining a permit from the SCAQMD.

ASBESTOS NOTIFICATION

☐ Notification letter sent to AQMD and/or EPA

☐ I declare that notification of asbestos removal is not applicable to addressed project.

DECLARATION REGARDING CONSTRUCTION LENDING AGENCY

I hereby affirm under penalty of perjury that there is a Construction lending agency for the performance of the work for which this permit is issued (Section 3097, Civil Code).

OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the reason(s) indicated below by the checkmark(s) I have placed next to the applicable item(s) (Section 7031.5, Business and Professions Code): Any city or county that requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for the permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors' State License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt from licensure and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

(_) I, as owner of the property, or my employees with wages as their sole compensation, will do (✓) all of or (_) portions of the work, and the structure is not intended or offered for sale (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who, through employees' or personal effort, builds or improves the property, provided that the improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the Owner-Builder will have the burden of proving that it was not built or improved for the purpose of sale.).

(_) I, as owner of the property, am exclusively contracting with licensed Contractors to construct the project (Section 7044, Business and Professions Code: The Contractors' State License Law does not apply to an owner of property who builds or improves thereon, and who contracts for the projects with a licensed Contractor pursuant to the Contractors' State License Law).

(_) I am exempt from licensure under the Contractors' State License Law for the following reason:

_____

By my signature below I acknowledge that, except for my personal residence in which I must have resided for at least one year prior to completion of the improvements covered by this permit, I cannot legally sell a structure that I have built as an owner-builder if it has not been constructed in its entirety by licensed contractors. I understand that a copy of the applicable law, Section 7044 of the Business and Professions Code, is available upon request when this application is submitted or at the following Web site: http://www.leginfo.ca.gov/calaw.html.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by SCS Engineers were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

1126 Pacific Finance Bldg.

Los Angeles, Calif.
November 6, 1925.

Mr. W. O. Campbell,
900 L. A. Stock Exchange Bldg.
Los Angeles, California.

Superintendent for Santa Fe Springs Oil Synd. #2.

Dear Sir:

Your report of abandonment of well No. 1, Sec. 7, T. 3-S, R. 11-W, S. B. B. & M., Santa Fe Springs oil field, Los Angeles, County, dated October 9, 1924, and submitted to this department on our form 102, has been examined in conjunction with records filed in this office.

A review of the reports and records shows that the requirements of this department, which are based on all information filed with it, have now been fulfilled.

Yours truly,

R. D. Bush
State Oil & Gas Supervisor

CALIFORNIA STATE MINING BUREAU

DEPARTMENT OF PETROLEUM AND GAS

Report on Proposed Operations

No. P-1-11425

Los Angeles, Cal. August 21, 1925

Mr. W. O. Campbell

Los Angeles Cal.

Supt. ~~Agent~~ for SANTA FE SPRINGS OIL SYNDICATE #2 ~~Company~~

DEAR SIR:

Your proposal to abandon Well No. 1,

Section 7, T. 3 S., R. 11 W., S.B. B. & M., Santa Fe Springs Oil Field, Los Angeles County,

dated Sept. 8, 1924, received Aug. 17, 1925, has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

RECORDS: Total depth - 5069'
Casing: 12½" cemented 1973'
8¼" " 4455', W.H.S.O.
6¼" " 4900', N.T.
No production was obtained from this well.

} pulled?

THE NOTICE STATES:
"The present condition of the well is as follows:
The well is not being operated, and has never been on production; it is located outside the proven territory and the attached log shows it is not in any oil sand."

PROPOSAL:
"The proposed work is as follows:
To pull the casing and fill in the hole with heavy mud, according to your instructions."

RECOMMENDATION:
The proposal covering work already done in a manner satisfactory to this department is approved.

NOTE: Mr. W. O. Campbell, Supt.. stated that the original notice of Intention to Abandon this well was mailed to this office Sept. 10, 1924. This notice was apparently lost in the mail."

cc--A. A. Curtice

ATTENTION Mr. E. Huguenin, Deputy

Gentlemen:-

Complying with your request of August 7th, we hand you herewith your Form No. 102 and No. 108.

We cannot understand why these forms did not reach you in September, 1924, as the copies in our files show that they were mailed or supposed to be mailed. However, we trust this will relieve the situation and that we have complied fully with your requirements.

Yours very truly,

SANTA FE SPRINGS OIL SYNDICATE NO. 2

Santa Fe Springs Oil Syndicate No. 2,
Care of Parkford's Oil Syndicates,
658 Chamber of Commerce Building,
Los Angeles, California.

Gentlemen: Attention of W. O. Campbell, Supt.

In accordance with telephone conversation of this morning between Mr. Campbell and Engineer Dodd of this office, I am returning to you the following records of your well No. 1, Sec. 7, T. 3 S., R. 11 W., Santa Fe Springs field:

The notice of intention to abandon should be signed Santa Fe Springs Oil Syndicate No. 2, by yourself, or some official instead of by Mr. Parkford by yourself.

The final report of abandonment should also be filed in the name of the syndicate. The latter record should also state the exact amount of each size casing pulled from the well in the process of abandonment.

Please correct these records and file them with this office at once. Only one copy of the notice need be filed but the final report of abandonment must be filed in duplicate.

Yours truly,

E. H.

Deputy Supervisor

Gentlemen:-

Pursuant to our telephone conversation of yesterday, we are enclosing herewith two copies of your Form No. 108, which is Notice of Intention to Abandon Well No. 1, Syndicate No. 2 at Santa Fe Springs. Our files show that two copies of this Application were mailed to you on September 10th, 1924.

We have taken from this well 1848½ feet of 6¼" casing; 392 feet of 8¼" casing, filling the hole up with mud.

Yours very truly,

W. O. Campbell Supt

Date September 8th,1924 Title -

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of redrilling, together with the reasons for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "sidetracked" or left in the well, give its size and location. If the well has been dynamited, give date, size, position, and number of shots. If plugs or bridges were put in to test for water, state kind of material used, position, and results of pumping or bailing.

The drilling of this well was commenced September 17,1922; the well was drilled to a depth of 5069 feet; no casing was ever sidetracked; the territory in which this well was drilled proved to be barren.

CALIFORNIA STATE MINING BUREAU

DEPARTMENT OF PETROLEUM AND GAS

Report on Proposed Operations

No. P -1-5882.

Los Angeles, Cal. May 4, 1923.

Mr. John K. Porter,

Santa Fe Springs, Cal.

Agent for SANTA FE SPRINGS OIL SYNDICATE NO.2 ~~Company~~

DEAR SIR:

Your supplementary proposal to drill Well No. 1, Section 7, T. 3S., R. 11W., S.B. B. & M.

Santa Fe Springs Oil Field Los Angeles County, dated April 28, 1923,

has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

RECORDS:

The condition of the well is as stated in the notice quoted below.

THE NOTICE STATES:

"The new conditions are as follows:
The 8¼" casing was cemented at 4454' due to the fact that the hole was caving thru a hole in the 15½" casing at 600'. The W.S.O. was not approved on the 8¼" casing. Since then the hole has been drilled to a depth of 5069'. The well was cored almost continually between 4660' and 4895' and intermittently since then . Faint showings were found in the cores taken from around 4850'. A hard sand was encountered at 4902' which was too hard to core but which gave a fair showing on the ditch. This showing was the only one of any importance that was encountered during the drilling of the well. The 8¼" casing was worn thru at 600', requiring a cement job at that depth which was successfully performed. There has been no evidence of water below 4900'."

PROPOSAL:

"We now propose to cement a string of 6¼" 28# (new) c asing at 4900', using 300 sacks of ~~Recommendations~~ Santa Cruz cement and the Wigle Method.
To test out the showing at 4900' and, in case the re sults are not favorable, to drill ahead in search of a productive sand."

RECOMMENDATION:

There are no data available in this office to indicate whether or not the upper portion of the Meyer zone is productive at this location.

The proposal is approved with the following recommendations:

1. Effective mudding of the formations to be left back of the 6¼" casing shall be demonstrated by circulating mud fluid through the drill pipe, hanging just off bottom, after drilling and reaming to the cementing depth for this casing, until the loss is not more than 2 bbl. per hr.
2. The cementing of the 6¼" casing shall be concluded under pressure after closing in between the 8¼" and 6¼" casings.

Kindly notify this Department to witness:

1. Final mudding operations before cementing the 6¼" casing.
2. A bailing or production test of the 6¼" shut-off.

LOS ANGELES OFFICE

SUPPLEMENTARY NOTICE

Los Angeles, Cal. April 28, 1923

Mr. C.C. Thoms

Deputy State Oil and Gas Supervisor

Los Angeles, Cal.

Dear Sir:

Please be advised that our notice to you dated XXXXXX, 1923, stating our intention to Drill (Drill, deepen, redrill, test, abandon) well number 1 Section 7 T. 3S R. 11W, S.B. B. & M., Santa Fe Springs Oil Field, Los Angeles County, must be amended on account of changed or recently discovered conditions.

The new conditions are as follows:

The 8¼" casing was cemented at 4454' due to the fact that the hole was caving thru a hole in the 15½" casing at 600'. The W.S.O. was not approved on the 8¼" casing. Since then the hole has been drilled to a depth of 5069'. The well was cored almost continually between 4660' and 4895' and intermittently since then. Faint showings were found in the cores taken from around 4850'. A hard sand was encountered at 4902' which was too hard to core but which gave a fair showing on the ditch. This showing was the only one of any importance that was encountered during the drilling of the well. The 8¼" casing has worn thru at 600', requiring a cement job at that depth which was successfully performed. There has been no evidence of water below 4900'.

We now propose
To cement a string of 6¼" 28# (new) casing at 4900', using 300 sacks of Santa Cruz cement and the Wigle Method.
To test out the showing at 4900' and, in case the results are not favorable, to drill ahead in search of a productive sand.

Feb. 3, 1923.

Mr. M. H. Soyster,
Cal. State Mining Bureau,
Los Angeles, Calif.

Dear Sir:

Inclosed find notice of test water shut off, #1 Santa Fe Springs Oil Syndicate #2, Section 7, T 3 S, R 11W. You will note that in accordance with notice already filed the 8¼" was landed because of collapse in the 12½". This 8¼" was tested in the hope of gaining information as regards to the water below this point. We plan to land 6¼" casing on top of mire sand.

The well was tested Jan. 19, 1923, by your Mr. Musser. He reported as per #T-1-3526, that while standing 8¼ hours, the water rose 364' in the well. There are some additional facts which are of interest. After Mr. Musser left the well a drill pipe was run in and it was found that sand had heaved up into the pipe for a distance of 21 feet. Upon cleaning this out and drilling ahead two feet, i.e. to 4460, a heavy gas was encountered which caused the fluid in the hole to flow over the top of the 8¼" casing. A blowout preventer was immediately placed on the well and mud was pumped in for four hours before the gas was killed. In baiting the well for the test which Mr. Musser witnessed, the bailer had not been run to bottom and it seemed probable that this pulled

the gas in from the sand at 4460 and that the gas caused the rise of the water in the well.

We are now drilling ahead with the well and have cored water sand at 4590 feet.

Yours very truly,

Robt B. Moran

CALIFORNIA STATE MINING BUREAU

DEPARTMENT OF PETROLEUM AND GAS

Report on Test of Water Shut-off

(BAILING)

121

No. T-1-3526.

Los Angeles, Cal. January 26, 1923.

Mr. John K. Porter,

Santa Fe Springs, Cal.

Agent for SANTA FE SPRINGS OIL SYNDICATE NO. 2 Company

DEAR SIR:

Your well No. 1 Section 7, T. 3S., R. 11W., S.B. B. & M.,

Santa Fe Springs Oil Field, in Los Angeles County, was tested for shut-off of water on Jan. 19. (Time and date) 1923. Mr. R. H. Musser,

designated by the supervisor, was present as prescribed in Section 19, Chapter 718, Statutes 1915, as amended, and there were also present

Messrs. H. J. Bender, Superintendent, and S. A. Watts, Driller.

Location of water tested above 4455' and normal fluid level about 300'.

Depth and manner of water shut-off: { 4455 ft. of 8¼ in. 36 lb. / ft. of in. lb. } casing was { cemented / ? / landed } in shale (Formation)

at 4453 ft. with 400 sacks Santa Cruz cement by Wigle method; 12" rotary (Size and kind) tools

were used in landing water string.

Casing record of well: 12½" cemented 1985'; 8¼" as above.

Reported total depth of hole 4458 ft. Hole bridged from — ft. to — ft. Hole cleaned out to 4458 ft. for this test.

At time of test depth of hole measured 4440 ft. and bailer brought up sample of fine sand and pieces of cement.

At 9:00 p.m., January 18, 1923. (Time and date) oil bailed to — ft., water bailed to 2064 ft.

At 2:30 p.m., January 19, 1923. (Time and date) top of oil found at — ft., top of water found at 1700 ft.

Result of bailing test:

MR. BENDER REPORTED THE FOLLOWING:

1. No fluid entered the well when bailed to 2000' and allowed to stand 14 hr. for a casing test.
2. In drilling ahead for this test 230' of cement was found in the 8¼" casing.

THE INSPECTOR WITNESSED THE FOLLOWING:

1. While standing 18½ hr. for test 364' of water entered the well (equivalent to 28.3 bbl. per 24 hr.).

CONCLUSION:

The test indicates that water from above a depth of 4455' is not excluded from the well by the 8¼" casing cemented at that depth.

The shut-off is not approved.

Oral approval was given to continue drilling since no oil showing was yet encountered in the well.

NOTE: This test was not required by this Department but was witnessed to secure any information possible.

Kindly file a notice of test of water shut-off on our form No.106 covering the cementing of the 8¼" casing.

SAN FRANCISCO, Cal. January 3, 1923

Mr. R. B. Moran,

Los Angeles, Cal. 724 South Spring St.

(Title) Santa Fe Springs Oil Syn. No. 2. Company

STATE MINING BUREAU
RECEIVED
JAN 6 1923
LOS ANGELES OFFICE

DEAR SIR: According to the subjoined report of the deputy supervisor for District No. 1, your company has done certain work in the Santa Fe Springs field, Los Angeles County, without first filing a notice of such work with this department.

Section 17, Chapter 718, Statutes of 1915, amended 1917, 1919 and 1921, reads in part as follows:

"The owner or operator of any well referred to in this act shall, before commencing the work of drilling an oil or gas well, file with the supervisor or his local deputy, a written notice of intention to commence drilling."

R. E. Collom
State Oil and Gas Supervisor

Los Angeles, Cal. Dec. 29, 1922.

MR. R. E. COLLOM,
State Oil and Gas Supervisor,
San Francisco, Cal.

DEAR SIR:

This is to report that Syndicate No. 2 Santa Fe Springs Oil / XXXXX Company, operating at well No. 1, Section 7, T. 3S., R. 11W., S.B. B. & M., in Santa Fe Springs Oil Field, in Los Angeles County, failed to submit notice of intention to drill (Drill, redrill, plug, deepen, test, abandon, etc.), as required by Section 17, Chapter 718, Statutes 1915, as amended.

Our usual report on proposed operations is therefore omitted and approval of the following described work, which has been performed without filing notice, is withheld.

Work ~~being done~~ or completed without filing notice:

Drilled to 4455' and casing cemented as follows:
12½" at 1973'.
8¼" " 4455'.

M. W. Haystead
Deputy Supervisor, District No. 1.

Form 135 11991 6-21 500

CALIFORNIA STATE MINING BUREAU

DEPARTMENT OF PETROLEUM AND GAS

Report on Proposed Operations

No. P-1-4213.

Los Angeles, Cal. Dec. 29, 1922.

Mr. R. B. Moran,

Los Angeles, Cal.

Agent for SANTA FE SPRINGS OIL SYNDICATE NO. 2 ~~Company~~

DEAR SIR:

Your supplementary proposal to drill Well No. 1, Section 7 T. 3S. R. 11W., S.B. B. & M.

Santa Fe Springs Oil Field, Los Angeles County, dated Dec. 28, 1922,

has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES:

"The new conditions are as follows:
The 12½" 45# casing was cemented at 1973'. The hole was drilled to 4455' during which time considerable trouble was encountered thru loss of mud into a hole in the 12½" casing at 600' depth, where there was a crook in the pipe. Upon running an overshot to straighten out this crook, a complete collapsed joint of 12½" casing was brought to the surface thru the 12½" pipe. We then proceeded to cement 4455' of 8¼" 36# casing with 400 sx. of Santa Cruz cement under 500# pressure, using the Wigle method. The well is now standing cemented. The well is 130' S of the N line of Sec. 7, and 130' E of the center line of the Norwalk and Puente Mills road. The elevation is 140' above Sea level."

PROPOSAL:

"We now propose to drill ahead to about 4750', taking cores during the last hundred feet, and to set 6¼" casing on top of the Meyer sand which we expect to encounter at about 4750'."

Recommendation:

Data available at this office indicate that the Meyer sand should be encountered at this location at a depth of about 4750' as stated in the notice.

The proposal as quoted from the notice is therefore approved with the recommendation that this office be notified as follows:

1. When the first core showing oil is secured.
2. Before drilling below 4760'.
3. Before placing the 6¼" casing in the well.

Recommendations as to the exact cementing point for this casing will be made upon receipt of the above mentioned information.

Kindly notify this office to witness a bailing test of the 6¼" shut-off.
This office also suggests but will not require that a bailing test of the 8¼" shut-off be made.

SUPPLEMENTARY NOTICE

037-16095

Los Angeles Cal. Dec. 28 1922

Mr. M. H. Soyster

Deputy State Oil and Gas Supervisor

Los Angeles Cal.

Dear Sir:

Please be advised that our notice to you dated October 1, 1922, stating our intention

to Drill well number 1 Section 7 T. 3 S R. 11W, S. B. B. & M.,
(Drill, deepen, redrill, test, abandon)

Santa Fe Springs Oil Field, Los Angeles County,

must be amended on account of changed or recently discovered conditions.

The new conditions are as follows:

The 12½" 45# casing was cemented at 1973'. The Hole was drilled to 4455' during which time considerable trouble was encountered thru loss of mud into a hole in the 12½" casing at 600' depth, where there was a crook in the pipe. Upon running an overshot to straighten out this crook, a complete collapsed joint of 12½" casing was brought to the surface thru the 12½" pipe. We then proceeded to cement 4455' of 8¼" 36# casing with 400 sx. of Santa Cruz cement under 500# pressure, using the Wigle method. The well is now standing cemented.

The well is 130' S of the N line of Sec. 7, and 130' E of the center line of the Norwalk and Puente Mills road. The elevation is 140' above Sea level.

We now propose

To drill ahead to about 4750', taking cores during the last hundred feet, and to set 6¼" casing on top of the Meyer sand which we expect to encounter at about 4750'.

RB Morans says he is sure a notice was mailed to drill this well.

Sup to Drill

MEMORANDUM CLOSING RECORD

Well No. 3
SANTA FE SPRINGS OIL SYND. NO. 2 Sec.6, T.3S.,R.11W.
Santa Fe Springs field

History in this well record shows that the well was abandoned after drilling to a depth of only 1559'. Well was not drilled deep enough to penetrate any productive known oil or gas-bearing formations.

Therefore, the record is being closed and the well marked "abandoned" on the map and model.

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of redrilling, together with the reasons for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "sidetracked" or left in the well, give its size and location. If the well has been dynamited, give date, size, position, and number of shots. If plugs or bridges were put in to test for water, state kind of material used, position, and results of pumping or bailing.

The drilling of this well was commenced June 1st,1923; the well was drilled to a depth of 1559 feet; drilling operations were suspended at this point pending certain developments and subsequently the completion of the well was abandoned owing to adverse geological conditions.

DEPARTMENT OF PETROLEUM AND GAS

Report on Proposed Operations

No. P-1-6307

Los Angeles, Cal. June 19, 1923.

Mr. A. A. Curtice,

Los Angeles, Cal.

Agent for SANTA FE SPRINGS OIL SYNDICATE NO. 2 ~~Company~~

DEAR SIR:

Your proposal to drill Well No. 3, Section 6, T. 3S., R. 11W., S.B. B. & M.

Santa Fe Springs Oil Field Los Angeles County, dated June 12, 1923

has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES:

"The well is 46 feet S., and 465 feet E. from Int. center lines of Lakeland & Norwalk Puente Mills Rds. L.A.Co.
The elevation of the derrick floor above sea level is 132.61 feet.
We estimate that the first productive oil or gas sand should be encountered at a depth of about 4750 feet, more or less."

PROPOSAL:

"We propose to use the following strings of casing either cementing or landing them as here indicated:

Size of Casing	Weight per Foot	New or Second Hand	Depth	Landed or Cemented
15½	70	New	1100	Cem
8¼	43	New	4500	"
6¼	26	New	4750	"

It is understood that if changes in this plan become necessary we are to notify you before cementing or landing casing."

Recommendation:

Data available at this office indicate the following at this location:
Top of Meyer zone about 4715'.
The exact top of the Meyer zone should be located by careful coring below a depth of 4675'.

The proposal is approved with the following recommendation:
The 6¼" casing shall not be cemented below a depth of 4715' without the approval of this Department.

Kindly notify this Department:
1. Prior to cementing the 6¼" casing.
2. To witness a bailing test of the 6¼" shut-off.

The proposed finishing depth and size of oil string to be used have not been covered by this proposal. A supplementary notice should be filed prior to drilling below the 6¼" shut-off.

PERMIT TO CONDUCT WELL OPERATIONS

Jay Allen
AllenCo
2109 Gundry Avenue
Signal Hill CA 90806

Cypress, California
April 30, 1998

Your **supplementary** proposal to **abandon** well **Santa Fe Springs Oil Syndicate No. 3/Well No. 1**, A.P.I. No. **037-16097**, Section 7, T. 3S, R. 11W, **S.B.** B. & M., **Santa Fe Springs** Field, **Onshore** area, -- pool, **Los Angeles** County, dated **4-27-98**, received **4-29-98** has been examined in conjunction with records filed in this office.

THE PROPOSAL IS APPROVED PROVIDED:

1. Blowout prevention equipment equivalent to this Division's Class **II2M** requirements, or better, shall be installed and maintained in operating condition.
2. All portions of the well not plugged with cement shall be filled with clay base mud having a minimum density of 72 lb/cu ft and a minimum gel-shear strength of 25 lb/100 sq ft.
3. The well shall be cleaned out to **4692'+/-.**
4. The well shall be plugged with cement from **4692' to 4358'.**
5. The **4-3/4" & 8-1/4"** casings shall be cut(not shot) and pulled from **2300'+/-.**
6. This Division shall be consulted and a Supplementary Notice may be required before making any changes in the proposed program.
7. **THIS DIVISION SHALL BE NOTIFIED TO:**
   a. Witness the placing, location and hardness of the cement plug at **4358'.**
   b. Witness the mudding of the hole.
   c. Witness the placing, location and hardness of the cement plug from **2100' to 2000'.**
   d. Witness the placing, location and hardness of the cement plugs at **1000' and at surface.**
   e. Inspect and approve the cleanup of the well site.

NOTE:

1. The proposed surface plug shall not contain rock or gravel.
2. The base of the freshwater sands is at **1100'±.**
3. This division does not pass upon your right to enter the property, but merely approves the proposal as conforming to our requirements.

SAFETY PRECAUTIONS AND UNSAFE EXCAVATIONS

CAUTION! Oil and gas wells may produce hydrogen sulfide gas, which is highly poisonous, and will accumulate and concentrate in low areas such as excavations. Before entering an excavation area, test to ensure that there is sufficient oxygen and that the flammable/toxic gas readings are within safe limits.

Report on Proposed Operations

No. P -1-9950

Los Angeles, Cal. Dec. 18, 1924

Mr. E. A. Parkford.

Los Angeles, Cal.

Agent for SANTA FE SPRINGS OIL SYNDICATE NO. 3 ~~Company~~

121

DEAR SIR:

Your proposal to abandon Well No. 1,

Section 7, T. 3S, R. 11W, S. B. B. & M., Santa Fe Springs Oil Field, Los Angeles County,

dated Dec. 13, 1924, received Dec. 17, 1924, has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

Total Depth - 4730'.
Casing Record:
15½" cemented 1110'.
8¼" " 4458', not tested.
6¼" " 4692', not tested.

Your log shows that oil sands were encountered from 4695' to 4699'.

THE NOTICE STATES:
"The present condition of the well is as follows:
The well is not being operated, and has never been on production."

PROPOSAL:
"The proposed work is as follows: To pull the casing and fill the hole with heavy mud according to your instructions."

RECOMMENDATION:
This well is located outside the producing area of the field.
The proposal is approved with the following recommendations:

1. Fill the hole with heavy mud.
2. Remove as much 6¼" casing as is desired.
3. Leave all the 8¼" casing in the well and cap at surface, or remove the 8¼" casing from some point not lower than 1050' and place a cement plug on top of the 8¼" stub inside the 15½" casing.
4. Leave all 15½" casing in the well.
5. Cap securely at surface.

KINDLY NOTIFY THIS DEPARTMENT TO WITNESS:
The location and hardness of the cement plug on top of the 8¼" casing stub in the event that the 6¼" casing is removed.

NOTE:
1. The casings should be removed by ripping or by using a very light shot.
2. Upon completion of the work please file a report of abandonment in duplicate on our form 102.

cc—Santa Fe. Springs Oil Synd. #3.

HISTORY OF OIL OR GAS WELL

FIELD Santa Fe Springs COMPANY Santa Fe Springs Oil Syndicate #3

Township 3 South, *Range* 11 W., *Section* 7, *Number of well* one, Synd. #3

Signed E. O. Fairbrawl
(*President, Secretary or Agent*)

Date December 13, 1924 Title President

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of redrilling, together with the reasons for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "sidetracked" or left in the well, give its size and location. If the well has been dynamited, give date, size, position, and number of shots. If plugs or bridges were put in to test for water, state kind of material used, position, and results of pumping or bailing.

The drilling of this well was commenced January 14, 1923; the well was drilled to a depth of 4730 feet; sidetracked at 4446 ft. one joint of D. Collar and bit; the territory in which this well was drilled proved to be barren.

M. H. SOYSTER, Deputy

PACIFIC FINANCE BUILDING
LOS ANGELES

August 18, 1923.

Mr. R.E.Collom,
State Oil and Gas Supervisor,
San Francisco, Calif.

Dear Sir:

The following report on operations at Santa Fe Springs was submitted by Mr. A.A.Curtice, geologist for Parkford's Oil Syndicates, in a letter dated June 20th, 1923:

"Santa Fe Springs Oil Syndicate No.3, Well No.1: on the 12th day of June 1923, the 8¼" casing was cemented at a depth of 4458'. This operation was done after completing the side-tracking of about 60 feet of fish consisting of three joints of 4" drill pipe and a couple of joints of 6" wash-over pipe".

Yours very truly,

C. C. Rowe
Deputy Supervisor.

Well File

August 18, 1923.

Mr. R.E.Collom,
State Oil and Gas Supervisor,
San Francisco, Calif.

Dear Sir:

The following report on operations at Santa Fe Springs was submitted by Mr. A.A.Curtice, geologist for Parkford's Oil Syndicates, in a letter dated June 20th, 1923:

"Santa Fe Springs Oil Syndicate No.3, Well No.1: on the 12th day of June 1923, the 8¼" casing was cemented at a depth of 4458'. This operation was done after completing the side-tracking of about 60 feet of fish consisting of three joints of 4" drill pipe and a couple of joints of 6" wash-over pipe".

Yours very truly,

Deputy Supervisor.

JBC:BB

CALIFORNIA STATE MINING BUREAU

DEPARTMENT OF PETROLEUM AND GAS

Report on Proposed Operations

No. P-1-5344.

Los Angeles, Cal. February 21, 1923.

Mr. John K. Porter,

Los Angeles, Cal.

Agent for SANTA FE SPRINGS OIL SYNDICATE NO. 3 ~~Company~~

DEAR SIR:

Your proposal to drill Well No. 1, Section 7, T. 3S., R. 11W., S.B. B. & M.

Santa Fe Springs Oil Field Los Angeles County, dated Jan. 8, 1923

Received Jan. 11, 1923.

has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES:

"The well is 123 feet S. and 125 feet W. from intersection of W boundary line Hamilton 4 lease and center line of road running E & W along the N boundary of the lease.
N.W.Cor. E ½ of NE¼ of NW¼ of NE¼ Sec. 7.
We estimate that the first productive oil or gas sand should be encountered at a depth of about 4700 feet, more or less."

PROPOSAL:

"We propose to use the following strings of casing either cementing or landing them as here indicated:

Size of Casing	Weight per Foot	New or Second Hand	Depth	Landed or Cemented
15½"	70	New	1050	Cemented
8¼"	36	New	4700	Cemented

It is understood that if changes in this plan become necessary we are to notify you before cementing or landing casing."

Recommendation:

Data available at this office indicate that the top of the Meyer zone should be found at a depth of about 4700' at this location.

The proposal to drill is therefore approved.

Kindly notify this office as follows:
1. Before drilling below 4700'.
2. To witness a bailing test of the 8¼" shut-off.

NOTE: This office seriously questions the advisability of setting 8¼" as a water string at 4700' and therefore suggests that you reconsider your proposed casing program.

This report was delayed pending the receipt of a definite description of the location of the well.

cc - R.B.Moran

CCT-v.

R. E. COLLOM
State Oil and Gas Supervisor

CALIFORNIA STATE MINING BUREAU

DEPARTMENT OF PETROLEUM AND GAS

Los Angeles Cal. January 13, 1923

Santa Fe Springs Oil Synd #3
900 Stock Exchange Bldg.,
Los Angeles, California

DEAR SIRS:

I am in receipt of your notice dated January 8, 1923, of

intention to drill Well No. 1

Section 7, T. 3S., R. 11W., S.B. B. & M.

Before report can be issued or recommendations made for the drilling of this well, it will be necessary for you to send us a more definite location for this well.

If possible, give us the location in distance from section corner or road intersection.

Your prompt attention in this matter will expedite the issuance of our report.

Location received by Gibson 2/20/23 am.

Will remain 1/31/23

c.c. Mr. R. E. Collom

Yours truly,

R. E. COLLOM,
State Oil and Gas Supervisor

Per M. A. Boynton
Deputy

Form 105. 22180 11-22 10M

STATE MINING BUREAU
RECEIVED
JAN 11 1923
LOS ANGELES OFFICE

CALIFORNIA STATE MINING BUREAU

Department of Petroleum and Gas

NOTICE OF INTENTION TO DRILL NEW WELL 037-16097

This notice must be given before drilling begins

Los Angeles Cal. Jan. 8 1923

Mr. M. H. Soyster

Deputy State Oil and Gas Supervisor

Los Angeles Cal.

DEAR SIR:

In compliance with Section 17, Chapter 718, Statutes of 1915, as amended, notice is hereby given that it is our intention to commence the work of drilling well number 1 Section 7 T. 3S R. 11W., S. B. B. & M., Santa Fe Springs Oil Field, Los Angeles County.

The well is 123' feet N. of S., and 125' feet E. of W. from intersection of W boundary line ~~Hamilton 4 lease and center~~ line of road running E&W along the N boundary of the lease.
(Give location in distance from section corners or other corners of legal subdivision)

The elevation of the derrick floor above sea level is 144 feet.

We propose to use the following strings of casing either cementing or landing them as here indicated: NW.Cor. E ½ of NE¼ of NW¼ of NE¼ Sec 7

Size of Casing, Inches	Weight, Lb. Per Foot	New or Second Hand	Depth	Landed or Cemented
15½"	70	New	1050	Cemented
8¼ "	36	New	4700	Cemented

It is understood that if changes in this plan become necessary we are to notify you before cementing or landing casing.

We estimate that the first productive oil or gas sand should be encountered at a depth of about 4700 feet, more or less.

Respectfully yours,

Address 900 L. A. Soock Exchange Bldg. Santa Fe Springs Oil Synd. #3
(Name of Company or Operator)

Telephone number Bdwy. 2230

EJSCREEN EJ Indexes

Eleven primary environmental justice (EJ) indexes of EJSCREEN, EPA's screening tool for EJ concerns. EPA uses these indexes to identify geographic areas that may warrant further consideration or analysis for potential EJ concerns. The index values below are for the Census block group in which the facility is located. Note that use of these indexes does not designate an area as an "EJ community" or "EJ facility." EJSCREEN provides screening level indicators, not a determination of the existence or absence of EJ concerns. For more information, see the EJSCREEN home page.

Census Block Group EJ Indexes (percentile)	
Particulate Matter (PM 2.5)	74.8
Ozone	71.5
NATA Diesel PM	76
NATA Air Toxics Cancer Risk	72.9
NATA Respiratory Hazard Index (HI)	73.4
Traffic Proximity	82.2
Lead Paint Indicator	62.8
National Priority List (NPL) Site Proximity	91.1
Risk Management Plan (RMP) Site Proximity	94.8
Hazardous Waste Proximity	95.3
Wastewater Discharge Proximity	94

Demographic Profile of Surrounding Area (3 Miles)

This section provides demographic information regarding the community surrounding the facility. ECHO compliance data alone are not sufficient to determine whether violations at a particular facility had negative impacts on public health or the environment. Statistics are based upon the 2010 U.S. Census and 2014 - 2018 American Community Survey (ACS) 5-year Summary and are accurate to the extent that the facility latitude and longitude listed below are correct. EPA's spatial

processing methodology considers the overlap between the selected radii and the census blocks (for U.S. Census demographics) and census block groups (for ACS demographics) in determining the demographics surrounding the facility. For more detail about this methodology, see the DFR Data Dictionary.

HAZARDOUS MATERIALS UNDERGROUND STORAGE
CLOSURE CERTIFICATION
FACILITY LOCATION: 12300 East Lake Land Road
CLOSURE PERMIT NUMBER: 5901B

This office has reviewed the final closure report submitted on October 3, 1989 required as a part of the subject closure permit. Based on the information submitted, we find that all closure requirements have been completed. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is our position that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at this site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings or site usage.

Any questions regarding this matter should be directed to Simin Agahi at (818) 458-3560.

Very truly yours,

T. A. TIDEMANSON
Director of Public Works

CLOSURE PERMIT SUPPLEMENT
HAZARDOUS MATERIALS UNDERGROUND STORAGE
LOS ANGELES COUNTY
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
900 S. FREMONT AVENUE
ALHAMBRA, CA 91803

Closure Permit No. 5901 B
File No. I- 14289 - 1H

To satisfy the permanent closure requirements for underground storage tanks previously storing hazardous materials, site integrity must be demonstrated by the analysis of soil samples and, if applicable, groundwater samples as outlined below. These requirements are in addition to the conditions listed on the Application for closure or contained in an approved Closure Plan.

1. Samples shall be obtained at the sampling points (SP) indicated on the attached plot plan.

2. For each SP, samples shall be obtained at the following depths:

SP	Depth(s)	Compounds	Analysis Method
1A, 1B, 2A, 2B	2-4' below tank invert	TPH + BTXE	8020 + 8015
under each dispenser	"	"	"
20' interval under pipeline	"	"	"

3. All soil samples obtained shall be undisturbed and unexposed prior to analysis. The method used to obtain the samples and the date of sampling shall be included in the final report.

4. If groundwater is encountered during sampling, a groundwater monitoring well shall be established at the most downgradient sampling point. The well shall be developed by removing a minimum of four well volumes and a groundwater sample shall be obtained and analyzed.

5. The analysis results for all soil samples shall be expressed in milligrams per kilogram (mg/kg). Analysis results for groundwater samples shall be expressed in parts per billion (ppb).

6. Analysis results shall be reported on laboratory letterhead and shall include the following information: a) The date the analysis was conducted; b) The method of extraction (if applicable); c) The method of analysis.

7. All soil/groundwater samples obtained shall be handled and transported to laboratory in strict accordance with applicable EPA regulations utilizing chain-of-custody procedures. Chain-of-custody documentation shall be included in the final report.

8. If the soil/groundwater analysis indicates undefined contamination at the facility, additional sampling shall be required to define the vertical and lateral extent present.

9. A final report that contains all of the above required information shall be submitted to the office above within one (1) month from the sampling date or 180 days from the date of this permit, whichever earlier.

DEPARTMENT OF PUBLIC WORKS
CLOSURE REPORT REQUIREMENTS

A closure report shall be submitted to the Los Angeles County Department of Public Works, Waste Management Division, P.O. Box 1460, Alhambra, CA 91802 containing:

1. File number of facility and closure permit number.
2. Plot plan to scale showing locations of tanks, sampling points, buildings, adjacent streets and north arrow.
3. Description of methods for obtaining, handling and transporting samples.
4. Time and date samples were obtained.
5. If borings were established, boring logs certified by a CA Registered Geologist, CA Certified Engineering Geologist or CA Registered Civil Engineer with sufficient experience in soils.
6. Chain-of-custody documentation initiated by person obtaining sample through person at State Department of Health Services certified laboratory.
7. Disposal destination of tanks and evidence of legal disposal.
8. Analysis results by a State certified laboratory submitted on laboratory letterhead showing analysis date, methods of extraction and methods of analysis.
9. Documentation as to depth of groundwater at facility.
10. Manifests to documentation hazardous waste disposal of any removed soil and rinseate.
11. Any observations of site contamination.
12. Remedial action plan to mitigate contamination.
13. Report to be signed by CA Registered Geologist, CA Certified Engineering Geologist or CA Registered Civil Engineer with sufficient experience in soils.

Subject: UNDERGROUND STORAGE TANK REMOVAL
Coast Iron & Steel Company
12300 East Lakeland Road
Santa Fe Springs, California 90670

Reference: "Final Compaction Report Underground Storage Tank Backfill, Coast Iron & Steel Company, 12300 Lakeland Road, Santa Fe Springs, California," by Vadose, Inc. dated September 8, 1989.

Dear Mr. Tigner:

This report presents a summary of the operations for removal of the underground storage tanks at 12300 East Lakeland Road in Santa Fe Springs, California. The scope of work included soil excavation, tank removals, chemical soil testing, soil recompaction and report preparation. A summary of compaction testing services is included as a separate report. Soil samples tested for contamination at the laboratory included four tests of the excavated soil, four tests in the base of the tank excavation and one test adjacent the pump island. The results did not reveal detectable levels of contamination.

5755 Oberlin Drive - Suite 304 - San Diego, CA 92121 (619) 552-1250

We appreciate the opportunity to be of service. If you have any questions concerning this report please do not hesitate to call. Upon completion of review, we would be happy to meet with you and discuss any questions you may have.

Sincerely,

1.0 INTRODUCTION

1.1 Purpose

The purpose of this report is to present the results of tank removal operations at 12300 E. Lakeland Road in Santa Fe Springs, California (Figure 1).

1.2 Site Description

This site is located at 12300 E. Lakeland Road in Santa Fe Springs, California. It is a roughly-rectangular shaped parcel occupied by Coast Iron and Steel Company offices and manufacturing facilities. It is located on the southside of Lakeland Road and has occupied the present site for approximately the past 25 years. It is bounded by Powerine Oil Company on the east and various industrial and manufacturing companies on the south and west. Powerine Oil Company is also located north of E. Lakeland Road.

1.3 Scope of Services

The proposed scope of services for tank removal and soil testing consisted of the following:

* Necessary regulatory permits for removal of the 5,000 and 10,000 gallon underground storage tanks were obtained.
* Obtain necessary permits for backfilling operations.
* Excavated and removed pavement over the existing tanks.
* Excavated the fill, above and around the tank to be removed.

QUADRANGLE

SCALE: 1" = 2000'

LOCATION MAP

VADOSE, INC.	F.N. 40033	SEPT 1989	Figure 1

* Registered geologist obtained four soil samples from the tank excavation and one soil sample adjacent the pump dispenser.

* Four soil samples were obtained from the stockpiled soil for the tank excavation. This was not included in the original proposal costs. The county indicated that in order to utilize the excavated soil as backfill material, it has to be shown the level of contamination was less than 100 ppm.

* Obtained laboratory analysis of soil samples.

* Tanks were triple rinsed and rinse water was disposed of in accordance with regulatory requirements (See Manifest-Appendix A).

* Tanks were inerted prior to removal.

* Tanks were transported off site in accordance with county regulations (See Manifest-Appendix A).

* The tank excavation was backfilled with existing and imported soil placed in a 6 to 8-inch lifts and compacted to at least 90% of maximum density. Compaction test results have been prepared as a separate report.

* Asphalt was removed per the client's instruction adjacent the tank excavation. This was not included in the original proposal costs.

* Fill in the tank backfill excavation was elevated to a subgrade elevation in order to receive base and asphalt.

* Environmental Analysis.

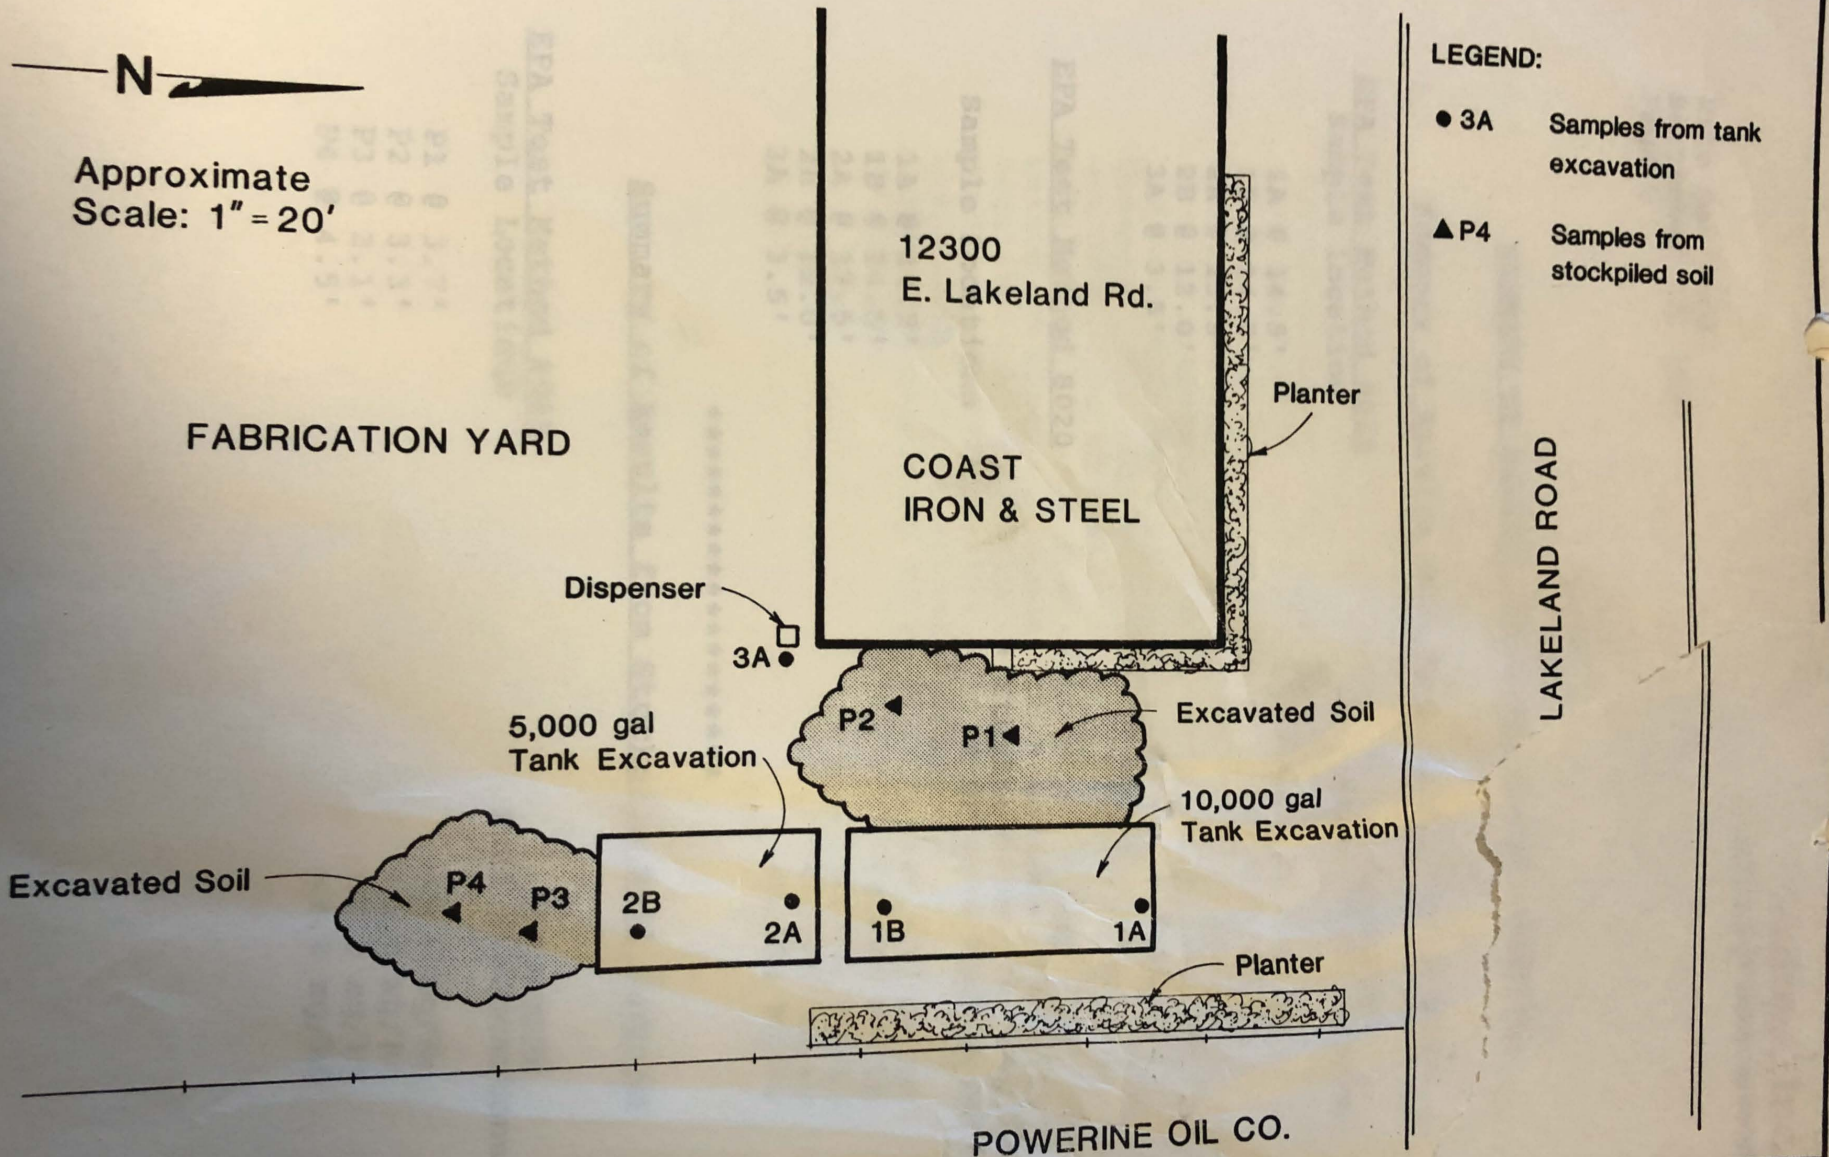
* Report Preparation.

2.0 TANK REMOVAL OPERATION

2.1 Fill Excavation

The fill was removed above and around the underground storage tanks with a 780B Case Backhoe and was stockpiled adjacent to the tank excavations. After the chemical soil testing was completed, the soil was utilized for backfill of the excavation.

2.2 Tank Removal



The tank was removed from the excavation utilizing a rubber tire mounted crane. The tanks were loaded onto a flat bed truck. The tanks were then inerted with dry ice. The identification tags were removed and given to the representative from the Santa Fe Springs Fire Department. The tanks were cleaned using non-sparking tools, and hauled to a permitted facility to be disposed of. A copy of the hazardous waste manifest is included.

3.0 CHEMICAL SOIL TESTING

3.1 General

As per the Los Angeles Department of Public Works requirements, four tests were obtained from the tank excavation, and one test from adjacent the pump dispenser. In addition, four tests were obtained from the stockpiled soil to determine levels of contaminant concentration and consequent suitability for utilization as backfill materials. See Figure 2 for Test Locations.

Tests from the excavation and adjacent the pump dispenser, were in accordance with the Los Angeles County Department of Public Works Waste Management Division, to satisfy the permanent closure requirements for underground storage tanks. EPA Test Method 8020 and 8015 were performed on the tests in the tank excavation. All tests indicated no detectable levels of contamination. Four EPA Method 8015 tests were performed on the stockpiled soils to determine suitability for backfill materials. These also indicated non-detectable levels of contamination. A summary of the test results is included as Table I.

SUMMARY OF RESULTS OF CHEMICAL SOIL SAMPLES

Summary of Results from Tank Excavation Samples

EPA Test Method 8015 Sample Location	Compounds Fuel Hydrocarbons
1A @ 14.5'	<5.0 mg/kg
1B @ 14.5'	<5.0 mg/kg
2A @ 13.5'	<5.0 mg/kg
2B @ 12.0'	<5.0 mg/kg
3A @ 3.5'	<5.0 mg/kg

EPA Test Method 8020 Sample Locations	Compounds * Benzene * Toluene * Ethylbenzene * Meta Xylene * Ortho & Para Xylene
1A @ 14.5'	<0.025 mg/kg
1B @ 14.5'	<0.025 mg/kg
2A @ 13.5'	<0.025 mg/kg
2B @ 12.0'	<0.025 mg/kg
3A @ 3.5'	<0.025 mg/kg

****

Summary of Results from Stockpile Soil Samples

EPA Test Method 8015 Sample Locations	Compounds Fuel Hydrocarbons
P1 @ 3.7'	<5.0 mg/kg
P2 @ 3.3'	<5.0 mg/kg
P3 @ 2.1'	<5.0 mg/kg
P4 @ 4.5'	<5.0 mg/kg

4.0 ENVIRONMENTAL CONSIDERATIONS

4.1 General

Testing and observation services performed by Vadose, Inc. do not indicate any detectable levels of contamination in the soil samples. Although testing from the tank excavation has effectively ruled out the pre-existing underground storage tanks as contaminant sources, it should be realized that there are other obvious sources of contamination surrounding the site. The most apparent, of course, is the Powerine Oil Company. The soil samples obtained only view one specific area of the site, and do not address the site as a whole. In order to determine if contamination exists on site, additional investigation would be required. At a minimum, a soil-gas survey with points conducted throughout the site would be recommended, and the possibility of installing monitor wells for the purpose of obtaining water quality samples should be considered.

5.0 REMARKS

5.1 General

Only a small portion of the subsurface conditions have been reviewed and evaluated. The conclusions and recommendations contained in this report are based upon the assumption that the subsurface conditions do not vary appreciable from what was uncovered during the investigation. No warranties, however, are made as to the quality or extent of the materials or contamination not discovered.

This report is intended for site analysis of the underground storage tank area only, and is not intended for overall environmental site evaluation.

The conclusions and information presented should be considered advice. Final decisions on matters presented are the responsibility of the client and/or governing agencies. A copy of this report along with the compaction report will be sent to AQMD Enforcement Division and one copy to the Engineering Division. No warranties in any respect are made as to the performance of the project.

Attention: James Glaze

On August 15, 1989, Analytical Technologies, Inc. received five soil samples for analyses. The samples were analyzed with EPA methodology or equivalent methods as specified in the attached analytical schedule. The symbol for "less than" indicates a value below the reportable detection limit. Please see the attached sheet for the sample cross reference.

The results of these analyses and the quality control data are enclosed.

DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION

Attention: Mr. John Huff

Reference: Interim Monitoring Permit

Gentlemen:

Per our telephone conversation on November 30, 1988, we are requesting an Interim Monitoring Permit to operate our two gasoline tanks until August 1, 1989. This additional time will enable us to use up the remaining five thousand gallons of gasoline before our two tanks are removed.

Enclosed is our last tank tightness tests, a copy of our June 10, 1988 letter requesting the Interim Monitoring Permit with a check for $218.00, and a copy of our applications for both tanks. At present, we are dispensing gasoline under our Provisional Permit No. 5609 which expires December 27. 1988. Your earliest response in issuing a Interim Monitoring Permit will be appreciated.

Very Truly Yours,

COAST IRON & STEEL CO.

Ronald E. White

PERMIT NO. 5604

EXPIRATION DATE DEC 27 1988

PROVISIONAL
HAZARDOUS MATERIALS UNDERG ND STORAGE PERMIT
COUNTY OF LOS ANGELES
DEPARTMENT OF PUBLIC WORKS
WASTE MANAGEMENT DIVISION
2250 ALCAZAR STREET
LOS ANGELES, CALIFORNIA 90033

PERMISSION IS HEREBY GRANTED UNDER LACC TITLE 11, DIVISION 4 TO:

014289-1H <<<<<<<<< FILE NUMBER
COAST IRON AND STEEL CO <<<<<<<<< PERMITTEE
P O BOX 2846
SANTA FE SPRINGS CA 90670

RE: 12300 E LAKELAND RD <<<<<<<<< FACILITY ADDRESS

TO STORE HAZARDOUS MATERIALS IN UNDERGROUND TANK(S) LOCATED AT THE FACILITY ABOVE.

NUMBER OF PERMITTED TANKS: 2

THIS PROVISIONAL PERMIT IS SUBJECT TO THE FOLLOWING REQUIREMENTS:

PART A — GENERAL CONDITIONS AND LIMITATIONS (ATTACHED).

PART B — AUTHORIZED HAZARDOUS MATERIAL STORAGE TANKS (ATTACHED).

PART C — SPECIFIC CONDITIONS AND LIMITATIONS:

1. THE PERMITTEE SHALL SUBMIT FOR APPROVAL AND IMPLEMENT A LEAK DETECTION PROGRAM (LDP) AND A TANK MONITORING PROGRAM (TMP) PREPARED IN ACCORDANCE WITH "UNDERGROUND STORAGE OF HAZARDOUS MATERIALS - GUIDELINES FOR EXISTING FACILITIES, OCTOBER 1986."

2. THE FOLLOWING TIME SCHEDULE SHALL APPLY TO SUBMITTALS REQUIRED BY THIS PROVISIONAL PERMIT:

   a. PERMIT FEE DUE BY (SEE INVOICE) TO BE BILLED

   b. TANK INTEGRITY TEST RESULTS DUE BY SEP 26 1988

   c. PROPOSALS FOR LDP AND TMP DUE BY SEP 26 1988

3. PERMIT EFFECTIVE DATE JUNE 10, 1988
   NOTE: THE EFFECTIVE DATE IS DETERMINED BY ORIGINAL DATE OF PERMIT APPLICATION.

PART D — SPECIAL CONDITIONS AND LIMITATIONS ATTACHED. YES [ ] NO [X]

This Provisional Permit is valid only for the continued operation of tanks providing suitable storage and expires six (6) months from the date of issue. Permittee has until the expiration date to complete an approved LDP and to install and be in compliance with an approved TMP. Upon full compliance with the approved LDP and TMP and all other conditions and limitations, this Provisional Permit will be replaced by a full term Operational Permit for the remainder of the unexpired five (5) year term from the effective date unless otherwise noted in Part D above.

T. A. TIDEMANSON
DIRECTOR OF PUBLIC WORKS

BY _____ JUN 24 1988

PART B — TANK DATA
HAZARDOUS MATERIALS UNDERGROUND STORAGE PERMIT NO. 5604

AUTHORIZED HAZARDOUS MATERIAL STORAGE TANKS

TANK NUMBER	CAPACITY (GALLONS)	CONTENTS
1	9,970	UNLEADED
2	5,000	REGULAR

HAZARDOUS MATERIALS UNDERGROUND STORA ERMIT

PART A — GENERAL CONDITIONS AND LIMITATIONS

TERM OF PERMIT

1. The combined provisional and full term operational permits shall be valid for a maximum period of five (5) years from the effective date. However, if the Department of Public Works (DPW) finds that the life expectancy of a facility is less than five (5) years, the DPW may adjust the term of the permit to reflect such a condition.

FEES

2. All fees shall be due and payable on the billing date established by the DPW. Fees not paid within 30 calendar days from the billing date shall be considered delinquent. Delinquent fees shall be subject to a 10 percent penalty fee for each 30 day period beyond the billing date that the fee is due. Permits for which the annual permit fee installment is delinquent for 90 days or more are subject to suspension.

REPORTS AND RECORDS

3. At least annually and due by the anniversary of the effective date of this permit, a written report must be submitted to the Department of Public Works, Waste Management Division, P.O. Box 4089 Terminal Annex, Los Angeles, CA 90051 detailing (but not limited to) the following:

   a. Any changes in the type of hazardous materials stored within the facility.

   b. Any changes in the uses of the underground facility.

   c. Changes or modifications to monitoring procedure.

   d. A detailed account of any unauthorized discharges, and the remedial measures employed.

   e. Any modifications to the facility except for routine required maintenance.

   In the event there has been no change of operation nor unauthorized release, a negative declaration to that effect may be submitted.

   The report or negative declaration shall be certified by the permittee or an authorized representative who is responsible for operations at the facility.

   This report is required by local agencies to satisfy Section 25286(c) of the State of California Health and Safety Code. A report form will be made available to owners and operators to comply with this requirement. The report shall be delinquent 30 days after its due date and as such may result in suspension or revocation of the permit.

4. Every permittee shall provide testing, monitoring (if applicable), and inspections in compliance with this permit and shall maintain records adequate to demonstrate compliance therewith.

5. All required records shall be maintained by the permittee and made available for inspection for a period of time not less than three (3) years from the date of the required annual report for the year during which the testing, monitoring or inspection was performed. Said records shall be made available to the DPW, County Health Officer or Forester and Fire Warden during normal working hours and at any time upon reasonable notice.

RENEWALS AND EXTENSIONS

6. If this is a provisional permit, it may be extended to a maximum of one (1) additional year upon written application stating the reasons for such a request and upon approval by the Director of Public Works.

7. Every application for the renewal of a operational permit or extension of a provisional permit shall be made at least 30 days prior to the expiration date of such permit. If a timely application for renewal has been submitted, the permit shall remain in effect until the DPW has made a decision and any administrative appeal has been exhausted.

APPEALS

8. Any person dissatisfied with the decision of the DPW may appeal the decision, in writing, to the Appeals Board, setting forth with particularity the ground or grounds for the appeal. Such appeal shall be submitted within 30 days after notice of the decision has been given.

ADDITIONAL APPROVALS AND REPAIRS

9. Additional approvals shall be required for any of the following actions:

   a. Tank repair.

   b. Modifications.

   c. Change or addition of hazardous materials stored.

   d. Change of approved monitoring system.

10. Procedures for an application for a permit shall also apply to an application for an additional approval. Each application for an additional approval shall be accompanied by the appropriate fee and supporting information.

11. Any substantial modification or repair of a facility other than minor repairs or emergency repairs shall be in accordance with plans to be submitted to the DPW as an additional approval.

12. Permittee shall carry out routine maintenance, ordinary upkeep and minor repairs in a careful and safe manner. No permit will be required for such maintenance, upkeep and repairs.

13. Permittee may make emergency repairs to a facility in advance of seeking an additional approval whenever an immediate repair is required to prevent or contain an unauthorized discharge or to protect the integrity of the containment. However, within five (5) working days after such emergency repairs have been started, permittee shall seek additional approval by submitting drawings or other information adequate to describe the repairs to the DPW.

CLOSURES, DECONTAMINATION AND NEW CONSTRUCTION

14. Replacement of tanks at an existing facility shall be considered a closure of the tanks to be replaced and a new installation of tanks, and all fees shall be assessed accordingly.

15. No tank shall be abandoned. Tanks which are temporarily out of service, and are intended to be returned to use, must continue to be monitored and inspected. Any tank which is not being monitored and inspected must be closed or removed in a manner approved by the DPW.

16. Prior to any permanent or temporary closures being initiated, an Application for Closure form, the appropriate fee and required supporting information shall be filed with the DPW.

17. Plans for the decontamination of a facility shall be submitted to the DPW for approval no later than 30 days before the commencement of such operations. Other agencies having jurisdiction shall also be notified. These agencies include the California Regional Water Quality Control Board, the Los Angeles County Department of Health Services and the South Coast Air Quality Management District.

18. The installation of a new tank shall require submittal to the DPW of an application for new construction, the appropriate new construction plan clearance fee and supporting information as required by the DPW.

TRANSFERS

19. A Hazardous Materials Underground Storage Permit may transferred to a new owner of the same facility provided

   a. The new owner accepts full responsibility for obligations under this permit at the time of transfer of the facility.

   b. The transfer shall be documented on a form provi by the DPW within 30 days of transfer of ownershi

   c. The appropriate fee is paid.

Attention: Mr. Martin Moreno,
Waste Management Division

Reference: Interim Monitoring Permit

Dear Martin,

Thank you for the information given to me over the telephone yesterday. We are requesting a "Interim Monitoring Permit" to operate our two (2) gasoline tanks. This additional time will enable us to compare the many different ways to comply with the county regulations.

Enclosed you will find the following:

A. Permit application supplement.
B. Application for permit to operate underground storage tank. One for our 9,970 gallon tank and one for our 5,000 gallon tank.
C. A check in the amount of $218.00.

If more information is required, or in the event new ways of monitoring tanks comes out, please feel free to call.

Very truly yours,

COAST IRON & STEEL CO.

Ronald E. White,
President

INSTRUCTIONS

HAZARDOUS MATERIALS UNDERGROUND STORAGE PERMIT (HMUSP)
APPLICATION SUPPLEMENT

DO NOT USE THIS FORM FOR CLOSURE, TRANSFER OR RENEWAL OF AN EXISTING HMUSP, A NEW CONSTRUCTION PLAN CHECK, OR AN ADDITIONAL APPROVAL.

A) Facility name, mailing address and facility address on new permit applications must correspond with information on Part II of the State Application for Permit to Operate Underground Storage Tank. Please correct mailing label information if affixed.

B) This application supplement is to be used for application to operate and maintain existing tanks located within the jurisdiction of the Department of Public Works. Facilities located within the corporate limits of the cities of Long Beach, Los Angeles, San Fernando, Santa Monica, Torrance, Vernon and Walnut should contact the respective local agencies directly for permit information. Specify the number of tanks at the facility.

C) Assessor parcel identification is required for new permit applications at existing facilities.

D) The information required in Part D is the minimum necessary to allow issuance of a Provisional HMUSP. When a Provisional HMUSP has been issued for a facility, the owner will be required to submit for review and approval a facility plot plan, a Leak Detection Program (LDP) and a Tank Monitoring Program (TMP) to be implemented in accordance with a timetable to be included within the Provisional HMUSP as conditions and limitations. A full term HMUSP will be issued after implementation of approved LDP and TMP.

E) The total fee accompanying this application represents the first annual installment of the five year HMUSP fee plus the State surcharge. On a five year permit basis, the annual installments total $445 for the first tank plus $85 for each additional tank. Future annual installments will be payable upon billing by the Department of Public Works.

Persons that have been notified to file for a HMUSP and do not store any hazardous materials underground should check the appropriate box and return this form to avoid any unnecessary follow-up mailings.

The storage of hazardous waste in an underground tank where the specific tank is named in a hazardous waste facility permit issued by the California Department of Health Services is not subject to the HMUSP requirements. Owners of such facilities must furnish the permit number for facilities where this exclusion is requested.

Final interceptors in industrial waste pretreatment systems, catch basins, refinery pipelines, lagoons, storm drains, oil field gathering lines, well cellars, aboveground storage tank spill containment, unlined pits or sumps, and piping not directly associated with a permitted facility are not subject to a HMUSP.

This HMUSP application supplement and each State Application for Permit to Operate Underground Storage Tank must be signed by:

) A principal executive officer at the level of vice-president or by an authorized representative. The representative must be responsible for the overall operation of the facility where the tank(s) are located.
) A general partner proprietor.
) A principal executive officer, ranking elected official or authorized representative of a public agency.

Gentlemen:

re - Our Job TPS4468
Coast Iron & Steel
12300 E. Lakeland Rd.
Santa Fe Springs

On Friday, February 06, 1987, we tested the 10,000 gallon Unleaded tank, and the 5,000 gallon Regular tank, using the "Petro Tite" systems method.

The Regular tank had a leak rate of +.030 gallons per hour; which is within the NFPA criteria of 0.05 gallons per hour; therefore, this tank and attached piping can be considered liquid tight at this time. The Unleaded tank would not hold a standpipe level, therefore, this tank cannot be declared liquid tight at this time.

The test results are attached.

Please call if you have any questions.

Very truly yours,

TAIT PETROLEUM SERVICES

Gentlemen:

re - Our Job TPS4768
Coast Iron & Steel
12300 E. Lakeland Rd.
Santa Fe Springs, Ca

On Thursday, April 9, 1987, we tested the 10,000 gallon Unleaded tank, using the "Petro Tite" systems method.

The tank had a leak rate of +.012 gallons per hour; which is within the NFPA criteria of 0.05 gallons per hour; therefore, this tank and attached piping can be considered liquid tight at this time.

The test results are attached.

Please call if you have any questions.

Very truly yours,

TRIPLE RINSE/RINSATE:

Contractor: GUNDERSON VACUUM TRUCK

Manifest No.: 883/2594 Volume: 400 GALLONS

Destination: PETROLEUM RECYCLING CORP SIGNAL HILL

TANKS:

Contractor: AMR

Destination: AMR IN ONTARIO

Geologist: JAMES GLAZE OF VADOSE INC.

L. A. Co. Inspector: DAVID CHU

S.F.S. INSPECTOR'S/TIME: NIKITIN 2 HRS

REMARKS: HOLES CUT INTO TANK- TOOK PICTURES ADVISED MAX MOINE (ON SITE) NEXT TIME WILL HAVE CITY ATTORNEY TAKE ACTION. POORLY ORGANIZED.

FIRE DEPARTMENT
CITY OF SANTA FE SPRINGS
PERMIT

For Keeping, Storage, Use, Manufacture, Handling, Transportation, or Other Disposition of Highly Inflammable, Combustible, or Explosive Materials, as stated below:

Obsolete See new permit #448

NO. 574 7-16-68 (Date)

TO WHOM IT MAY CONCERN:

By virtue of the provisions of the Fire Prevention Regulations of the City of Santa Fe Springs, California, Coast Iron & Steel (Name of Concern)

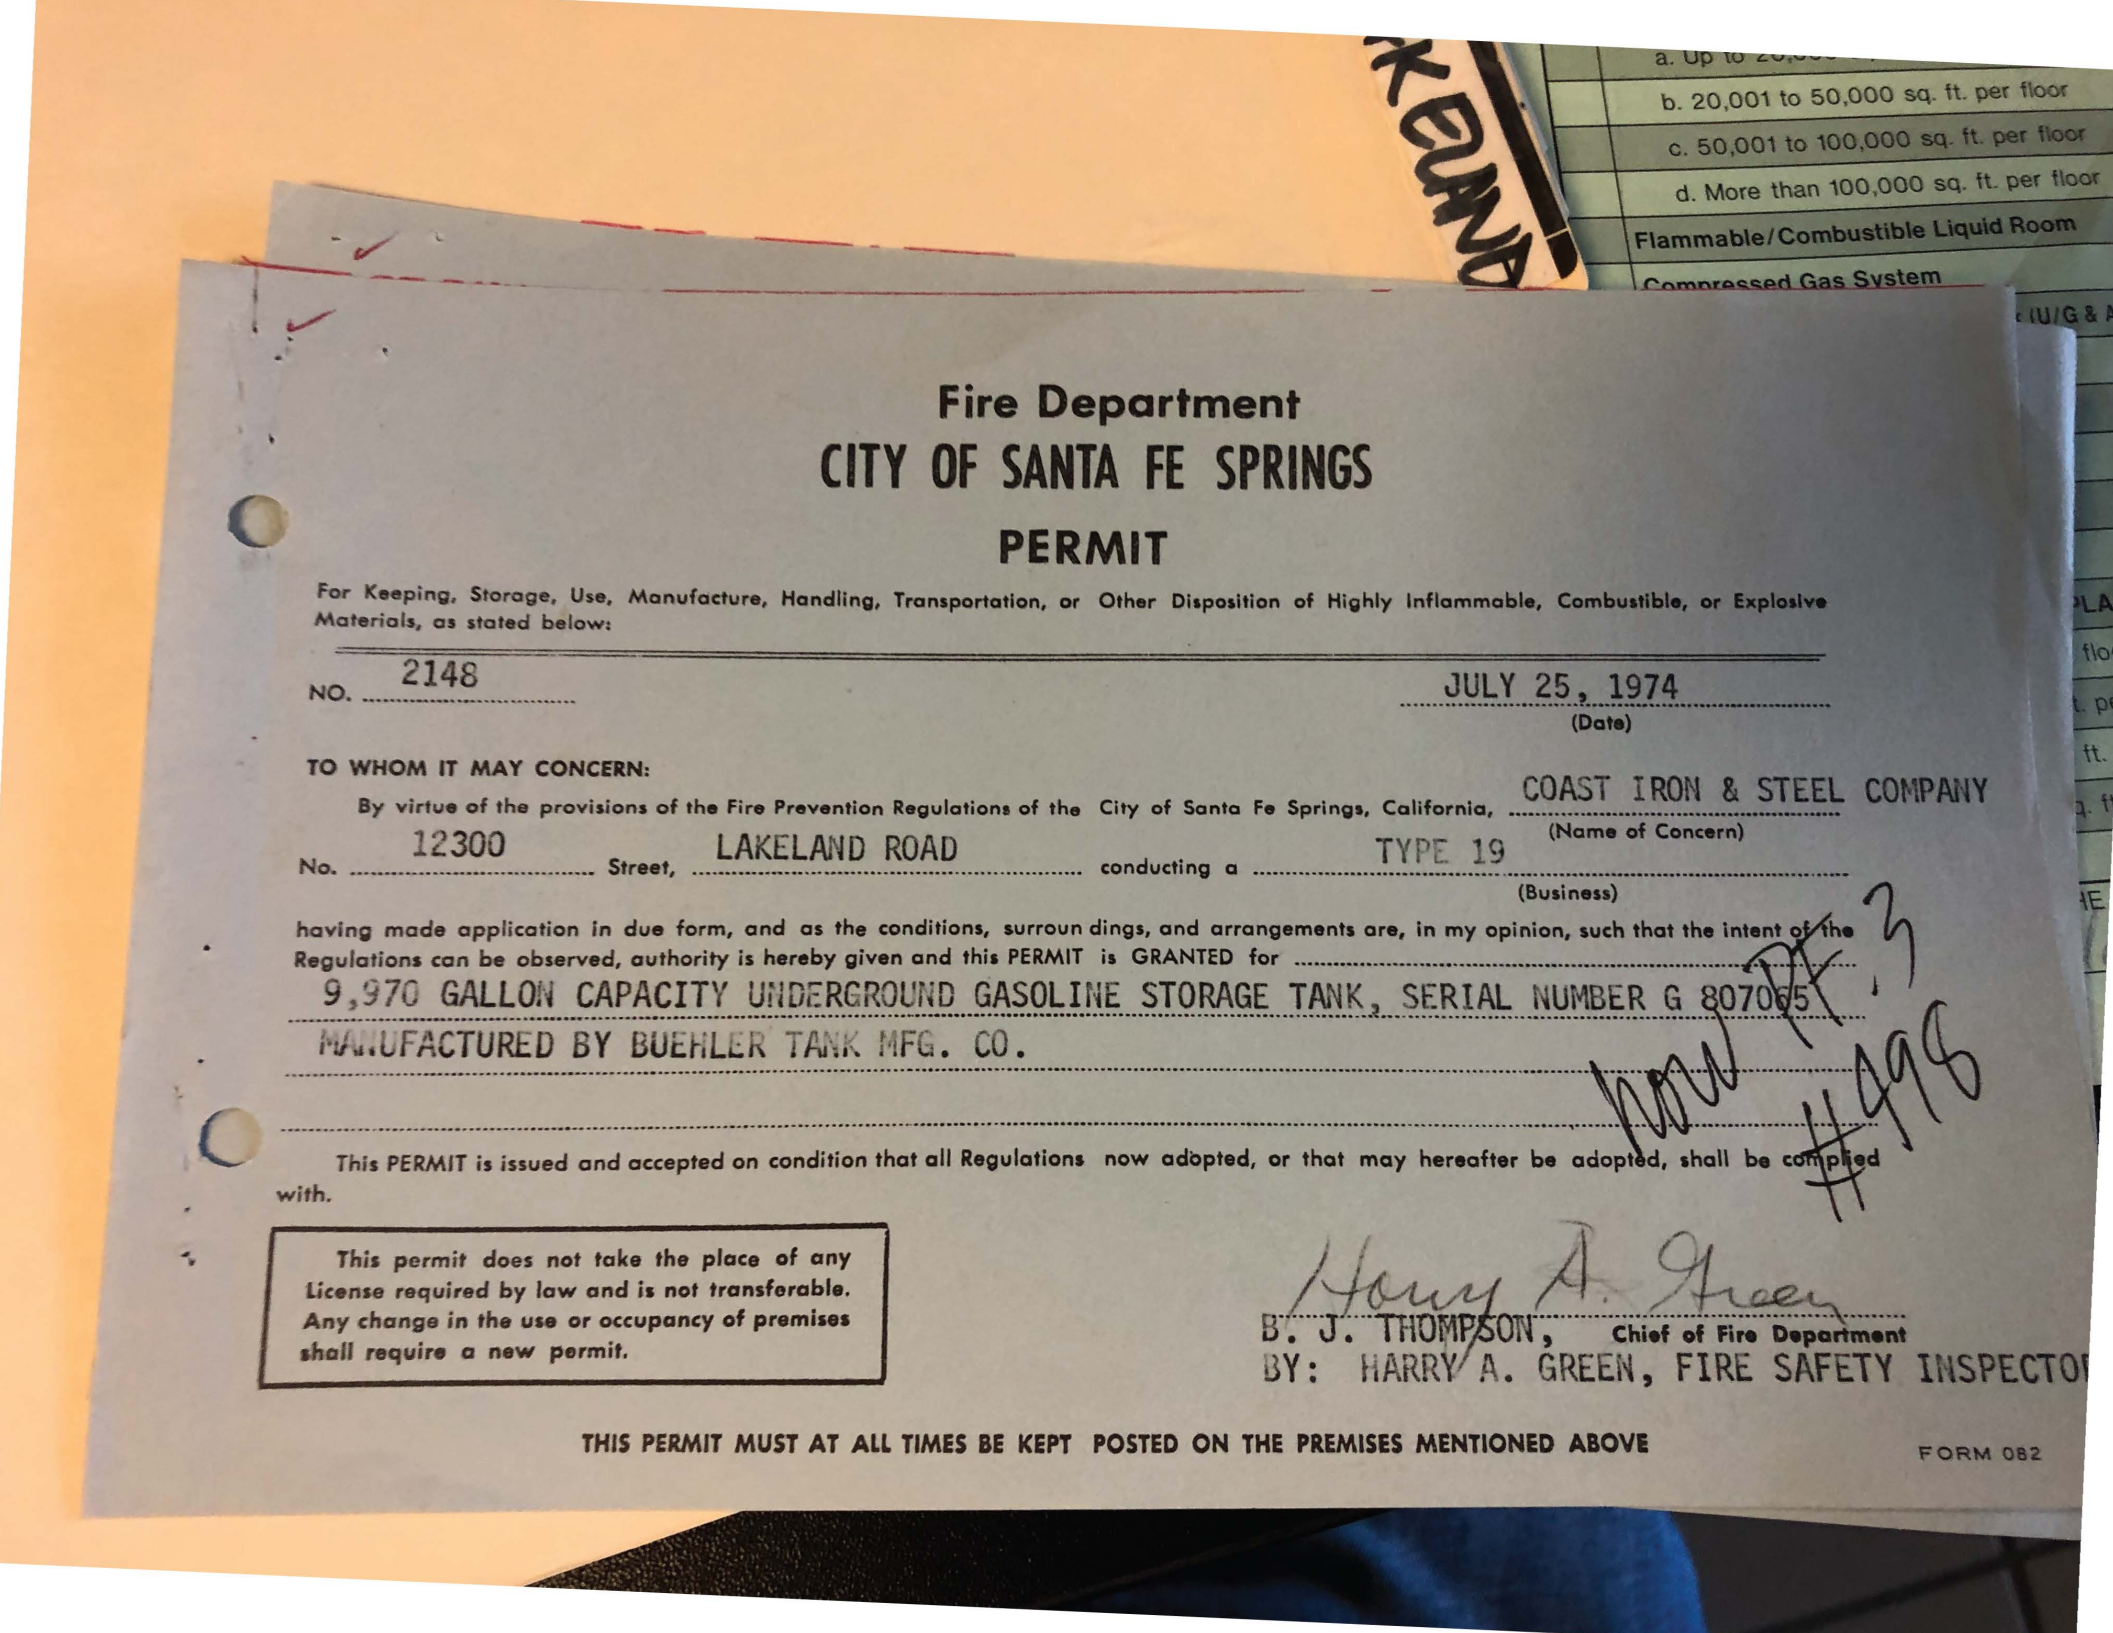
No. 12300 Street, Lakewood conducting a Steel Fabrication (Business)

having made application in due form, and as the conditions, surroun dings, and arrangements are, in my opinion, such that the intent of the Regulations can be observed, authority is hereby given and this PERMIT is GRANTED for Storage of Flammable liquids, storage of LPG Tank and storage of liquid oxygen. All flammable liquids to be dispensed by ~~Gravity~~ Pump ~~Flow~~ Rather than Gravity Flow.

This PERMIT is issued and accepted on condition that all Regulations now adopted, or that may hereafter be adopted, shall be complied with.

This permit does not take the place of any License required by law and is not transferable. Any change in the use or occupancy of premises shall require a new permit.

E C Slater



J W Stanfield

Chief of Fire Department

THIS PERMIT MUST AT ALL TIMES BE KEPT POSTED ON THE PREMISES MENTIONED ABOVE

Form 20 - 9 - 58

supplement. If a supplement is attached, please follow the format provided on this form.

Chapter 6.95 of the California Health and Safety Code requires immediate reporting of any release or threatened release of a hazardous material to 911, the Santa Fe Springs Fire Department and the Office of Emergency Services. State law provides that the failure to do so will result in substantial fines and penalties (up to $25,000 per day and one year imprisonment).

SECTION I

A. PREVENTION (prevent the hazard)

1. Describe the kinds of hazards associated with the hazardous materials present at your facility.

POTENTIAL HAZARD FROM NOMINAL AMOUNTS OF "COMBUSTIBLE" NEW AND WASTE OIL PRODUCTS. (COMBUSTION UNLIKELY DUE TO HIGH FLASH POINTS). POTENTIAL HAZARD FROM PROPANE (C3H8) STORAGE TANK GAS RELEASE AND POTENTIAL IGNITION. POTENTIAL HAZARD FROM OXYGEN RELEASE FROM 02 STORAGE TANK. POTENTIAL HAZARD FROM THINNER SOLVENT RELEASE. POTENTIAL HAZARD FROM AR, CO2 & ACETYLINE CYLINDERS.

2. What actions would your business take to prevent these hazards or a release from occurring? You may include a discussion of safety and storage procedures (e.g., containment, cylinders are chained, etc.).

PROCEDURES AND PROTOCOLS IN PLACE AT COAST IRON & STEEL TO PREVENT POTENTIAL HAZARDS ARE; DAILY INSPECTIONS, CONTAINMENT, PROPER STORAGE FACILITIES, PROPER STORAGE AND HANDLING PROCEDURES AND PROTOCOLS, MINIMUM INVENTORIES, SAFE WORK PRACTICES, CHAINED CYLINDERS AND EMPLOYEE TRAINING.

3. Describe procedures for self-inspection of hazardous waste storage areas (answer only if you are a hazardous waste generator)

THE HAZARDOUS WASTE STORAGE AREA IS INSPECTED BI-MONTHLY BY QUALIFIED EMPLOYEES. THE CHECK OFF LIST FORM CONSISTS OF VISUAL INSPECTION FOR LEAKS, POTENTIAL LEAKS, PROPER STORAGE AND DRUM LEAKS.

HAZARD ASSESSMENT, DETERMINE THE PROPER NOTIFICATIONS TO EMPLOYEES, AGENCIES AND NEIGHBORS AND ORGANIZE THE MITIGATION. IN THE EVENT OF OXYGEN OR PROPANE HAZARDS HE WILL SECURE THE NECESSARY VALVES AND LINES. FOR OILS OR SOLVENT HAZARD HE WILL SECURE AFFECTED DRUMS OR BARRELS.

C. ABATEMENT (remove the hazard)

1. Describe what you would do to stop, clean up and remove any released material at your facility.

WASTE OIL, SOLVENTS OR LUBRICANTS SPILLS WILL BE CONTAINED AND REMOVED WITH ABSORBANT AND PIG BARRIERS THEN PROPERLY DISPOSED. WASTE WILL BE STORED IN THE HAZARDOUS WASTE AREA AND REMOVED BY AN OUTSIDE CONTRACTOR.

2. Provide a list of all emergency and decontamination equipment located at the facility. Include a description of the equipment, location, and outline its capabilities. Include the name, address, and phone number(s) of your clean-up company.

EMERGENCY EQUIPMENT AT COAST IRON AND STEEL CONSIST OF PROPER PROTECTIVE EQUIPMENT, (GOGGLES, FACE SHIELDS, SAFETY GLOVES, PROTECTIVE APRONS, GLOVES AND RAIN SUITS) FIRE EXTINGUISHERS, OIL ABSORBANT, SHOVELS, PIG BARRIERS AND WASTE DRUMS. THE EMERGENCY EQUIPMENT WILL NOT REQUIRE DECONTAMINATION.

3. Provide procedures for cleaning, maintaining, and repairing emergency equipment listed in C.2 above.

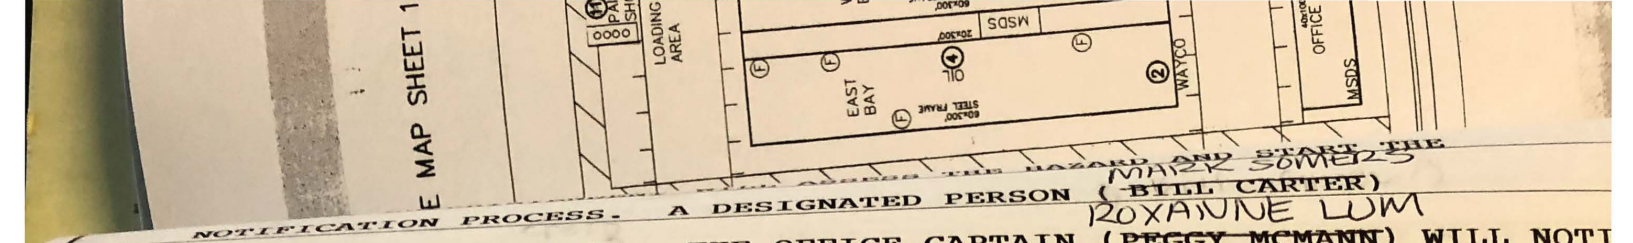
ALL EMERGENCY EQUIPMENT WILL NOT NEED DECONTAMINATION. THE EQUIPMENT WILL BE MAINTAINED, INSPECTED AND STORED IN CONVENIENT LOCATION. THE EQUIPMENT WILL BE MAINTAINED AND CLEANED RECYCLING ALL HAZARDOUS MATERIAL

G. **EMPLOYEE TRAINING PROGRAM**

1. A training program appropriate to the types and quantities of materials stored or used shall be conducted to prepare employees to safely handle hazardous materials and/or waste on a daily basis and during emergencies. The training program shall include, but not be limited to the following: new employee training, annual training, periodic refresher courses, and familiarization with Section I (A-F) above. Note: Facility personnel must successfully complete required training within six months after the date of their employment or assignment to a facility or to a new position at a facility. Until trained, employees cannot work without supervision. Facility personnel must take part in an annual review of their initial training. The emergency procedures taught in the original training must be reviewed to keep personnel up to date with any changes of facility processes or the contingency plan

ALL AFFECTED EMPLOYEES WILL RECEIVE NEW HIRE TRAINING, SAFETY ORIENTATIONS, HAZARD COMMUNICATIONS TRAINING, AND PROPER PROTECTIVE EQUIPMENT USAGE. ALL AFFECTED EMPLOYEES WILL HAVE WEEKLY SAFETY MEETINGS REVIEWING SAFETY TRAINING AND A REVIEW OF ORIENTATION TRAINING.

TRAINING FOR THE SHOPS SUPERVISIONS WILL CONSIST OF:



1. HAZ-COM TRAINING
2. HMBP TRAINING
3. EMERGENCY ACTION PLAN
4. FIRE EXTINGUISHER USE
5. P. P. E.
6. HAZARDS IDENTIFICATION
7. SAFE WORK PRACTICES
8. INSPECTION AND AUDITING

2. **Training Documentation** *for hazardous waste generators only.* In order to document employee training, the owner or operato must maintain the following documents and records *at the facility*. The following items will be asked for during routine inspections of your facility.

- [X] The job title for each position at the facility that is related to hazardous waste management, and the names of the employee(s) filling the position(s).
- [X] A written job description for each position listed above. This description must include the required skill, education, or other qualifications as well as duties of employees assigned to the position.
- [X] A written description of the type and amount of both introductory and continuing training that will be given to each pers filling a position on the list developed in the first box above.
- [X] Records that document that the requirements for training or job experience have been met.

Training records on current personnel must be kept until closure of the facility. Training records on former employees must be kept fo least three years from date the employee last worked at the facility. Personnel training records may accompany personnel transferred within the same company. These records must be kept at the facility for examination by the Department of Toxic Substances Control the Santa Fe Springs Fire Department upon request.

Note that the discussion of training in this section is not comprehensive. There are many other training requirements based on laws an regulations administered by other agencies such as Cal/OSHA and the Department of Transportation. This part only covers the basic requirements for *hazardous waste training.*

NOTIFICATION PROCESS. A DESIGNATED PERSON (~~BILL CARTER~~ MARK SOMERS / ROXANNE LUM) WILL NOTIFY THE SFSFD. THE OFFICE CAPTAIN (~~PEGGY MCMANN~~) WILL NOTI

THE OFFICE EMPLOYEES TO EVACUATION AND GO TO DESIGNATED AREAS PER

THE EVACUATION PROTOCOL. ALL SHOP EMPLOYEES WILL EVACUATE PER PROT

DESIGNATED AREAS

2. Describe facility alarms and/or communication procedures.

SENT VIA CERTIFIED MAIL

February 19, 2019

Pablo Gomez
Genesis Logistics
12330 Lakeland Rd.
Santa Fe Springs, CA 90670

ear Mr. Gomez:

SUBJECT: FAILURE TO COMPLY WITH VIOLATIONS AT 12330 LAKELAND RD.

his notification is provided to inform you that according to our records, Genesis Logistics remains in violation of e Hazardous Materials Business Plan, Hazardous Waste Generator, and/or California Fire Code Programs. The olations were documented on the Inspection Report and Notice of Violation form from the December 14, 2018 partment of Fire-Rescue inspection. A copy of this report is enclosed for your reference. Compliance with the umented violations was required by January 14, 2019. To date, Genesis Logistics is still not in compliance with of the items cited.

ure to return to compliance by March 21, 2019 may result in penalties, fines, and/or permit revocation as horized by California Health and Safety Code, Section 25404.1.1, the California Fire Code, Section 109.4, or the Santa Fe Springs Municipal Code. Your facility can return to compliance by complying with the umented violations, completing the "Certificate of Compliance" certificate provided during the original ction, and submitting it to the Department at the address listed in the letterhead. A copy of this form has also enclosed for your convenience.

d you have any questions regarding this matter, please contact Tiffany Shedrick, Fire and Environmental tor II, (562) 906-3814. It is essential that this matter be resolved to avoid legal action. We will be happy to you in any way possible. Thank you for your cooperation regarding this matter.

Sincerely,

Thomas Hall
Director of Environmental & Fire Prevention

Notes: Inspection of Coast Iron and Steel, generate used oil, coolant → saws, cutting machines, waste paint, waste paint spray cans. CERS re-submitted, no changes during inspection.

#5- Coast Iron and Steel shall label drums of used oil and used spray cans per CCR 66262.34(f). I observed 2-55 gal drums and 1-55 gal drum of used spray cans w/o a hazardous waste label.

#8- Coast Iron and Steel shall keep containers of used oil and spray cans closed when not actively pouring into or removing. I observed these two wastes w/o lids and/or bungs.

#44- Coast Iron and Steel shall secure (bolt down) liquid oxygen storage tank per CFC.

☐ **No hazardous waste violation(s) observed on date of inspection**

☒ **Notice to Comply: The violation(s) must be corrected by** December 8, 2017

☒ **Return attached "Certificate of Compliance"**

Attention: The item(s) checked is (are) in violation. All violations must be corrected. A re-inspection may occur at any time to verify compliance. Non-compliance could result in re-inspection fees, permit revocation, and/or administrative/civil/criminal penalties. Any time granted for correction of the violation(s) does not preclude any enforcement action by this Department or other agencies. The giving of this notice and recent inspection of your facility is not a representation by the City of Santa Fe Springs that no other violations exist on your premises.

Received by [signature] Print name Roxanne Lum Date 11-7-17

CERTIFICATE OF COMPLIANCE

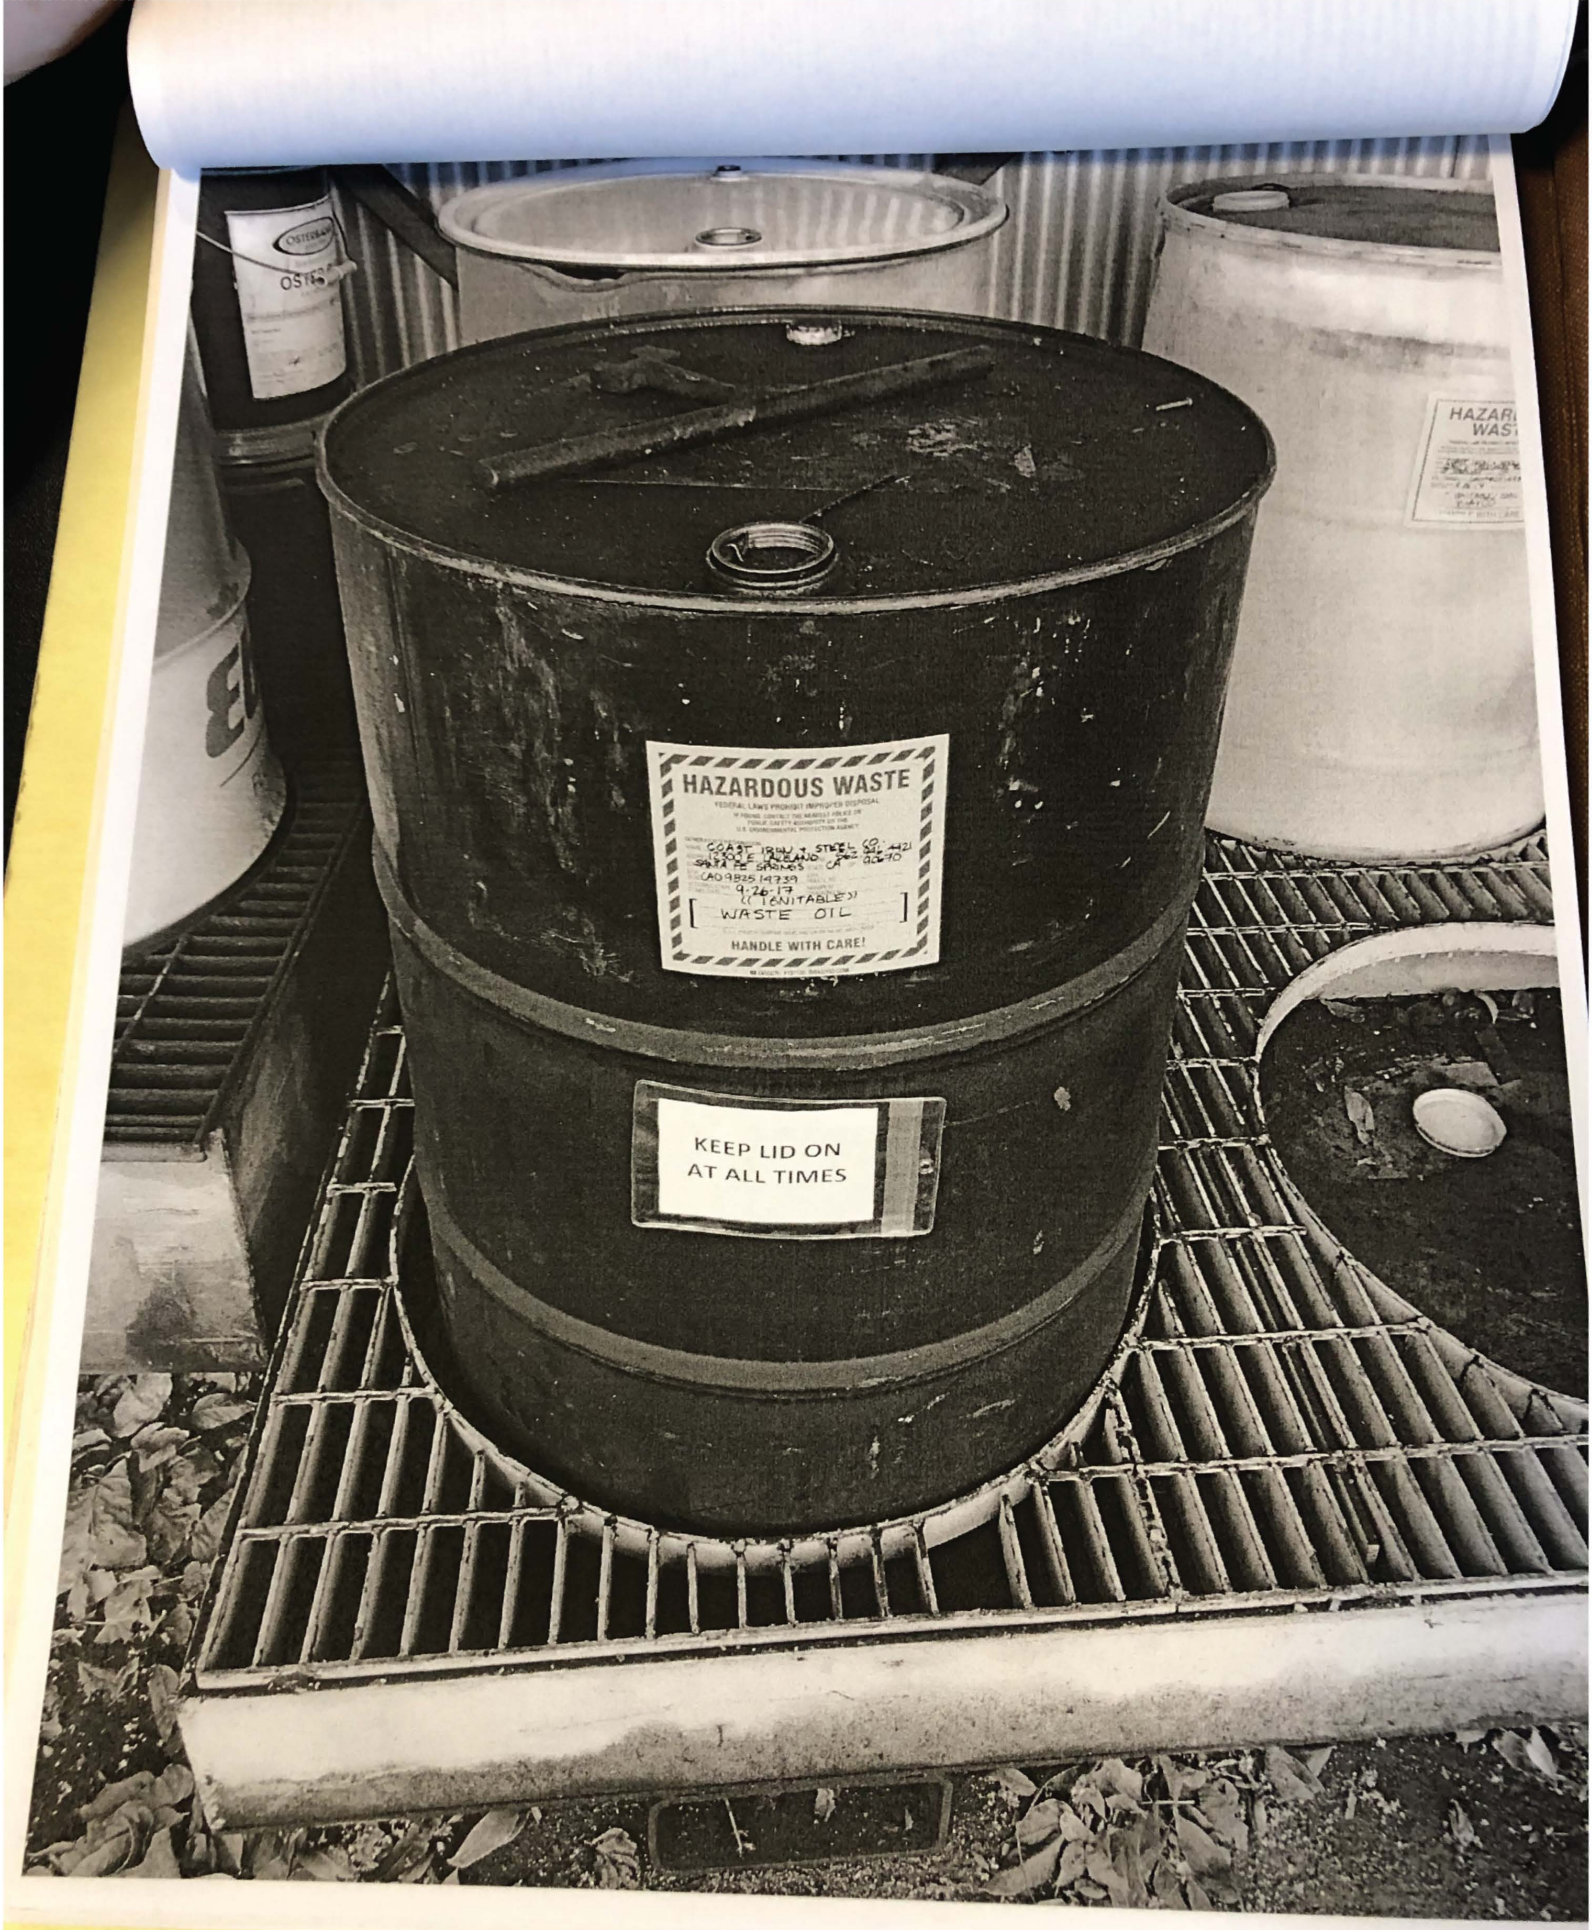
BUSINESS Coast Iron & Steel Co.	SITE ADDRESS 12300 E. Lakeland Rd
INSPECTOR Raul Diaz	DATE OF INSPECTION 11-7-2017

This form must be completed and returned to the issuing inspector within 30 days of your facility's inspection unless otherwise noted. Send this form and any supporting documentation to the address listed above. Failure to return this certification may result in a re-inspection of your facility and may require re-inspection fees pursuant to Santa Fe Springs City Code Section 97.300(D) and 97.500(I).

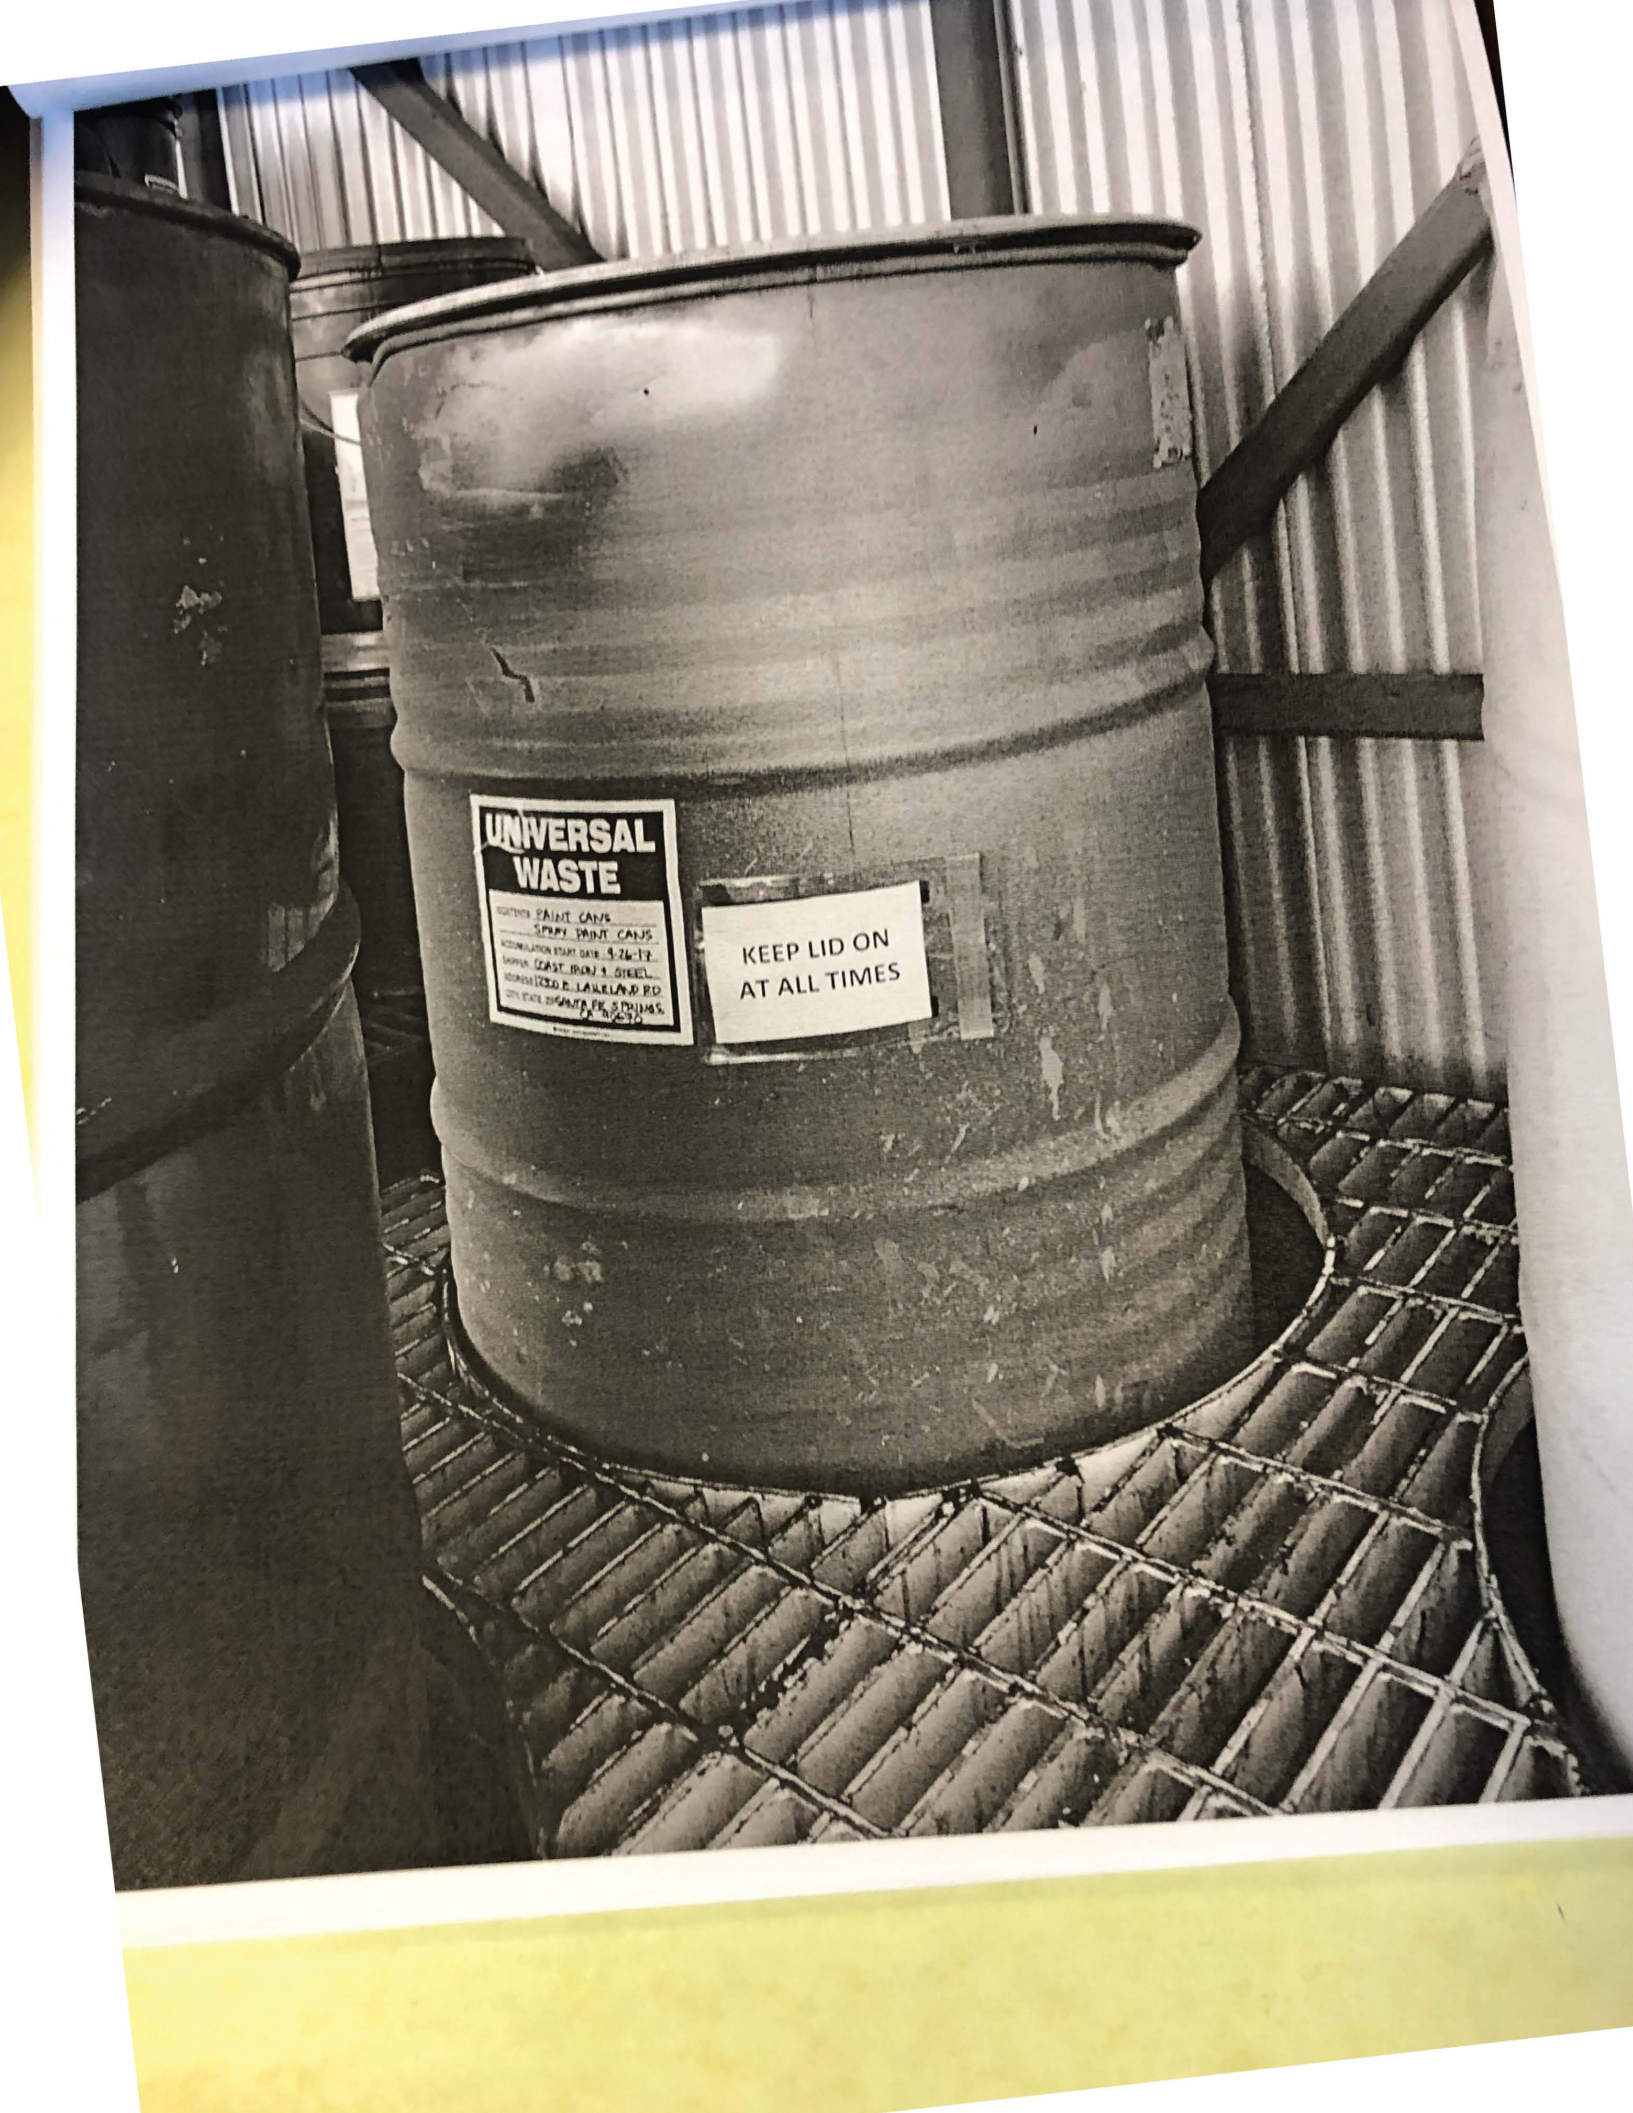
The violation(s) cited have been corrected by the following actions:

#5 - Hazardous Waste Labeling
All hazardous waste containers have been properly labeled.

#8 - Hazardous Waste Containers Closed
All Hazardous waste containers have closing plugs and/or lids. Containers have also been labeled "keep lid on at all times"



#44 - Secure liquid oxygen tank with bolts.
The liquid oxygen tank already has the secure bolts. The bolts are on the inside.



Please see attached photos confirming that all violations have been corrected.

- I certify that the violations cited on the Notice of Violation & Inspection Report have been corrected.
- I have personally examined any attached documentation submitted as proof of compliance and I believe the information to be true and accurate.
- Based on my examination of any attached documentation and inquiry of the individual(s) who prepared or obtained them, I believe the information to be true, accurate, and complete.
- I am authorized to file this certification on behalf of the responsible party.
- I am aware that there are significant penalties for submitting false information and/or for non-compliance and declare that the foregoing certification is true and correct.

FORM WITH CUPA PERMIT PAYMENT

City of Santa Fe Springs

Department of Fire-Rescue

11300 Greenstone Ave. • CA • 90670-4619 • (562) 944-9713 • Fax (562) 941-1817 • www.santafesprings.org

2013/2014 Annual Hazardous Material Business Plan Certification

*If you mark the box indicating "**No Changes to Current HMBP**", this form will serve as your 2013/2014 official update (Title 19, Section 2729 requirements allow a certification statement to be used if no changes have been made to the business' hazardous materials inventory). Chapter 6.95 of the California Health and Safety Code (H&SC) requires your Hazardous Materials Business Plan (HMBP) to be reviewed and updated annually.*

Please check ONE box below and return this form (and updated forms if necessary) with your CUPA permit payment.

☒ **NO CHANGES TO CURRENT HMBP (Requires signature below). There are no changes to the Hazardous Materials Business Plan (HMBP) most recently submitted to your agency and I certify that:**

- *The information contained in the most recently submitted Hazardous Materials Inventory Forms, Facility Map, Owner/Operator Identification and Business Activities Pages is complete, accurate, and up-to-date;* **and**
- *There has been no change in the quantity of hazardous materials reported in the most recently submitted Hazardous Materials Inventory Forms;* **and**
- *A Hazardous Materials Inventory Form has been submitted for all hazardous materials handled on-site which are subject to the inventory reporting requirements of H&SC §25503.5(a);* **and**
- *No substantial changes in operations have occurred which require revision to the training or emergency response/contingency plan section of the HMBP.*

OWNER/OPERATOR CERTIFICATION: I certify under penalty of law that our business has reviewed the current hazardous materials inventory on file with the Santa Fe Springs Department of Fire-Rescue. I have checked the box indicating "No Changes to Current HMBP" and all conditions associated with this section apply. I have also reviewed our Business Emergency Plan and certify that it is up to date and accurate.

***NOTE:** Businesses that use the HMBP to satisfy EPCRA reporting requirements **may not** use a certification statement – it is not recognized under federal law. These businesses **must** annually resubmit their inventory.*

COAST IRON & STEEL CO.	12300 E. LAKECANO RD. SFS CA. 9	
Business Name	***Business Address***	
R.G. WHITE		06-17-13
Owner/Operator (print or type):	***Signature of Owner/Operator***	***Date***

If you have made changes to your HMBP, please check that "**Changes Have Been Made**" and attach the updated forms. Forms a vailable on the City's website by clicking the "HMBP Forms" link at www.santafesprings.org/cityhall/fire_rescue. Copies can a e obtained by calling the Department of Fire-Rescue Environmental Protection Division at the number above.

☐ **CHANGES HAVE BEEN MADE (Requires submittal of updated forms). Revisions to all or part of the HM are necessary. Revisions have been implemented and updated forms (or a new HMBP) are included.**

Please see the reverse side for important information regarding the California Electronic Reporting System (CERS)

2012/2013 Annual Unified Program Certification

In addition to other notification and update requirements, Chapter 6.95 of the California Health and Safety Code requires your Hazardous Materials Business Plan (HMBP) to be reviewed and updated annually. If you mark the box that indicates no changes have been made, this form will serve as your 2012/2013 official update (Title 19, Section 2729 requirements allow a certification statement to be used if no changes have been made to the business' hazardous materials inventory [HMBP]).

If you have made changes to your HMBP, please check the applicable boxes below the "Changes Have Been Made" section and attach the updated forms. Forms to update your information are available on the City's website: www.santafesprings.org. Copies can also be obtained by calling the Department of Fire-Rescue – Environmental Protection Division.

CHECK THE APPROPRIATE BOX AND SIGN THE FORM BELOW

☒ **THE HAZARDOUS MATERIALS BUSINESS PLAN PREVIOUSLY PROVIDED AND THE INVENTORY REQUIRED PURSUANT TO SECTION 2729.2 AND 2729.3 HAS NOT CHANGED** (all items must be correct):

1) The information contained in the hazardous materials inventory most recently submitted to the CUPA is complete, accurate, and up to date.
2) There has been no change in the quantity of hazardous material as reported in the most recently submitted inventory.
3) All hazardous materials subject to inventory requirements have been included in the most recently submitted inventory.

CHANGES HAVE BEEN MADE (Check boxes where changes have been made & attach update forms):

☐ **Emergency Contacts** – These are the two main contacts and their emergency phone numbers that the Fire Department will use in the event of an emergency.

☐ **Chemical Inventory** – The types and/or quantities of chemicals, hazardous liquids, solids, compressed gases, or waste have been changed.

☐ **Facility Plot Plan** – This is the diagram of your facility, which indicates the storage and use location of all the hazardous materials listed in the inventory.

I certify under penalty of law that our business has reviewed the current hazardous materials inventory on file with the Santa Fe Springs Department of Fire-Rescue and certify the submitted information is true, accurate and complete. We have also reviewed our Business Emergency Plan and certify that it is up to date and accurate.

NOTE: Businesses that use the HMBP to satisfy EPCRA reporting requirements **may not** use a certification statement – it is n recognized under federal law. These businesses **must** annually resubmit their inventory.

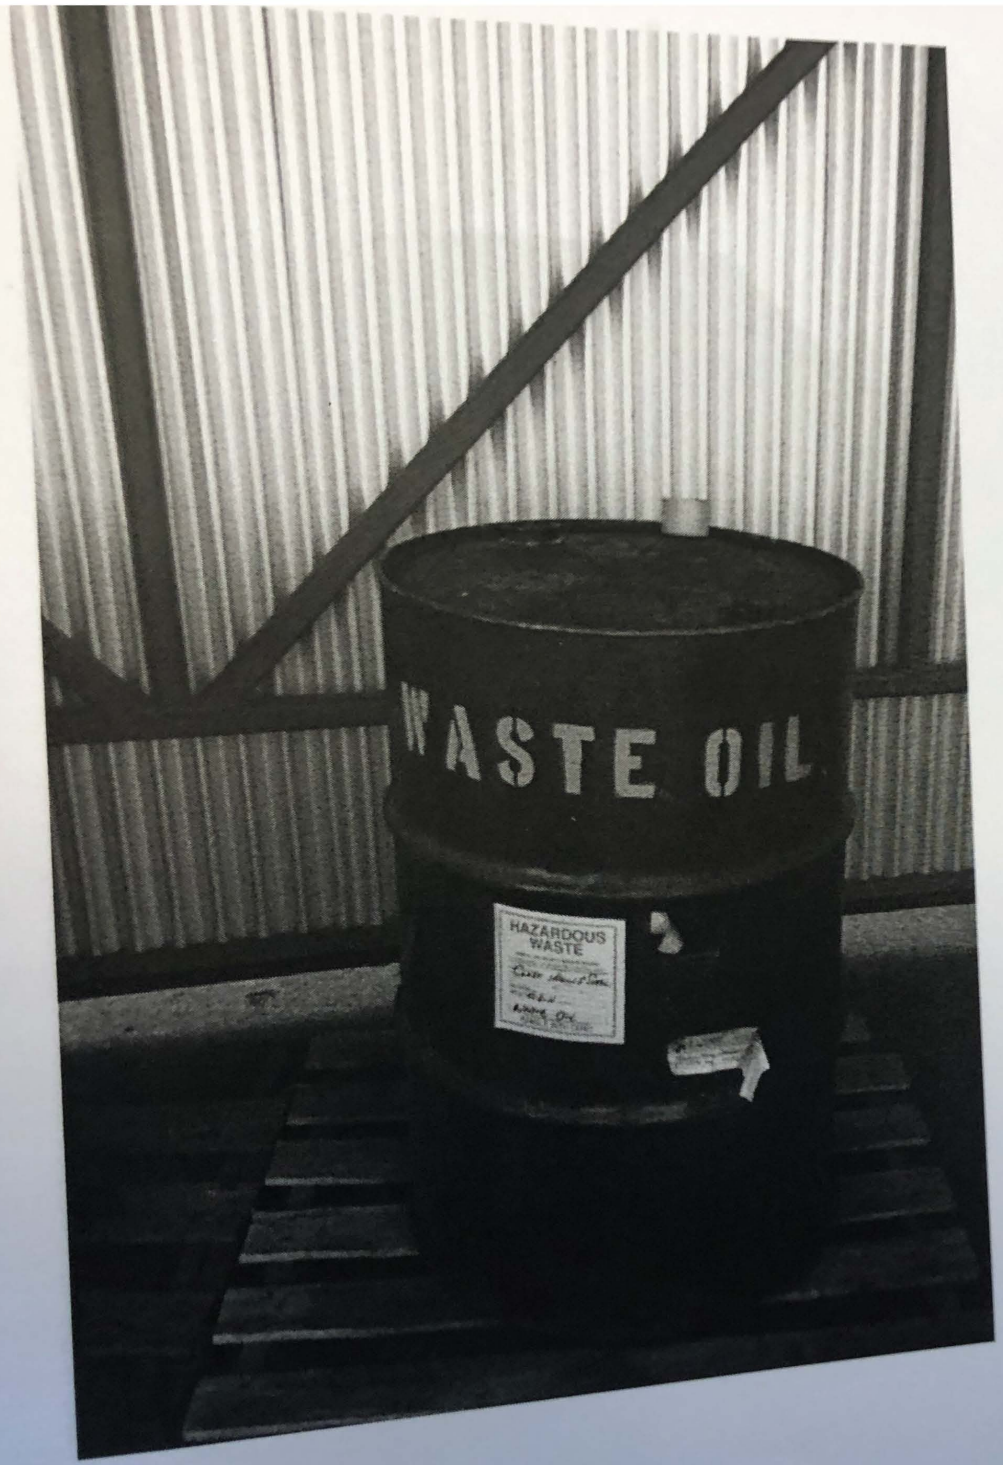
Notes: Inspection of Coast Iron and Steel, structural steel fabrication. Changes include location of used oil and paint storage areas. Provide plan for permanent location of hazardous waste.

#6 - violation of CCR 66262.34(f). Coast Iron must legally label all containers of used oil.

#9 - violation of CCR 66265.173(a). Coast Iron must keep all drums of hazardous waste closed.

#32 - violation of CCR 2729. Coast Iron must update HMBP, specifically site map - location of chemicals (paint, oil, used oil, etc.)

* Provide plan for permanent location of hazardous waste.



☐ **No hazardous waste violation(s) observed on date of inspection**

☒ **Notice to Comply: The violation(s) must be corrected by** November 13, 2011

☒ **Return attached "Certificate of Compliance"**

Attention: The item(s) checked (are) in violation. All violations must be corrected. A re-inspection may occur at any time to verify compliance. Non-compliance could result in re-inspection fees, permit revocation, and/or administrative/civil/criminal penalties. Any time granted for correction of the violation(s) does not preclude any enforcement action by this Department or other agencies. The giving of this notice and recent inspection of your facility is not a representation by the City of Santa Fe Springs that no other violations exist on your premises.

BUSINESS	SITE ADDRESS
INSPECTOR	DATE OF INSPECTION

This form must be completed and returned to the issuing inspector within 30 days of your facility's inspection unless otherwise noted. Send this form and any supporting documentation to the address listed above. Failure to return this certification may result in a re-inspection of your facility and may require re-inspection fees pursuant to City of Santa Fe Springs Municipal Code Section 97.104.

The violation(s) cited have been corrected by the following actions:

#6 "HAZARDOUS WASTE" LABELS APPLIED TO DRUMS CONTAINING WASTE OIL. (SEE PHOTOS)

#9 WASTE OIL DRUMS HAVE LIDS TO COVER TOPS.
* A PERMANENT STORAGE SHELTER WAS ERECTED TO COVER ALL DRUMS (SEE PHOTOS)

#31 SITE MAP IS UPDATED WITH NEW LOCATIONS FOR #11 "PAINT SHOP" AND #8, #9 "WASTE OIL", "ABSORBENT" (SEE PDF)

- I certify that the violations cited on the Notice of Violation & Inspection Report have been corrected.
- I have personally examined any attached documentation submitted as proof of compliance and I believe the information to be true and accurate.
- Based on my examination of any attached documentation and inquiry of the individual(s) who prepared or obtained them, I believe the information to be true, accurate, and complete.
- I am authorized to file this certification on behalf of the responsible party.
- I am aware that there are significant penalties for submitting false information and/or for non-compliance and declare that the foregoing certification is true and correct.

Raul,
See attached corrected actions and photos.
The waste oil drums have been labeled, lids have been fitted, and a new storage shed has been installed to house all of the the haz-waste drums. The site map has been updated with the new locations detailed for "Waste Oil" and "Paint Shop".

Thank You

Mark Somers

2011/2012 Annual Unified Program Certification

In addition to other notification and update requirements, Chapter 6.95 of the California Health and Safety Code requires your Hazardous Materials Business Plan (HMBP) to be reviewed and updated annually. If you have marked the box that indicates no changes have been made, this form will serve as your 2011/2012 official update (Title 19, Section 2729 requirements allow a certification statement to be used if no changes have been made to the business' hazardous materials inventory [HMBP]).

If you have made changes to your HMBP, please check the "Changes Have Been Made" box below. The Fire Department will send you all of the appropriate forms necessary to update your status.

CHECK THE APPROPRIATE BOX AND SIGN THE FORM BELOW

☒ **OUR BUSINESS HAS PREVIOUSLY FILED THE HAZARDOUS MATERIALS INVENTORY PURSUANT TO SECTION 2729.2 AND 2729.3 REQUIREMENTS AND NO CHANGES HAVE BEEN MADE** (all items must be correct):

1) The information contained in the hazardous materials inventory most recently submitted to the CUPA is complete, accurate, and up to date.
2) There has been no change in the quantity of hazardous material as reported in the most recently submitted inventory.
3) No hazardous materials subject to inventory requirements are being handled are not listed on the most recently submitted inventory.

☐ **CHANGES HAVE BEEN MADE**:

☐ **Emergency Contacts** – These are the two main contacts and their emergency phone numbers that the Fire Department will use in the event of an emergency.

☐ **Chemical Inventory** – The types and/or quantities of chemicals, hazardous liquids, solids, compressed gases, or waste have been changed.

☐ **Facility Plot Plan** – This is the diagram of your facility, which indicates the storage and use location of all the hazardous materials listed in the inventory.

I certify under penalty of law that our business has reviewed the current hazardous materials inventory on file with the Santa Fe Springs Fire Department and certify the submitted information is true, accurate and complete. We have also reviewed our Business Emergency Plan and certify that it is up to date and accurate.

NOTE: Businesses that use the HMBP to satisfy EPCRA reporting requirements **may not** use a certification statement – it is not recognized under federal law. These businesses **must** annually resubmit their inventory.

ANNUAL REPORT REVIEW – BENCHMARK VALUE EXCEEDANCE: NPDES GENERAL PERMIT (PERMIT) FOR STORM WATER DISCHARGES ASSOCIATED WITH INDUSTRIAL ACTIVITY (ORDER NO. 97-03 DWQ; NPDES NO. CAS000001), WDID# 4 19I008006

Dear Mr. Ronald White:

As the operator of an industrial facility (Coast Iron & Steel) located at 12300 Lakeland Rd. in the City of Santa Fe Springs, you are subject to requirements specified in a General Permit for *Storm Water Discharges Associated with Industrial Activities* (Permit). In order to certify your intent to comply with the Permit, you signed a Notice of Intent (NOI) that was processed on September 26, 1992. In signing the NOI, you certified to the State of California that you read the Permit and will comply with all requirements specified in the Permit.

As specified in the Permit, the Permittee is required to develop a Storm Water Pollution Prevention Plan (SWPPP) in which the Permittee must identify potential sources of pollution and describe specific best management practices (BMPs) that shall be implemented to eliminate or reduce storm water pollution from the facility.

On June 30, 2009, we received your 2008-09 Annual Report and our review of the report shows that the analytical result for the following constituent exceeds the benchmark level.

Please see the table below for your sampling summary.

Sample Date	Sample Location	Constituent	Unit	Benchmark	Result
1/23/09	Storm Drain Outlet Pipe South Side of Facility	Total Suspended Solids (TSS)	mg/L	100	110

Exceeding benchmark level in sampling result is mainly due to ineffective BMPs. Permit Section A.8 describes storm water BMPs and requires the permittee to develop and implement the BMPs to reduce or prevent pollutants in storm water discharges.

2009/2010 Annual Unified Program Certification

Dear Business Owner/Operator:

In addition to other notification and update requirements, Chapter 6.95 of the California Health and Safety Code requires your Hazardous Materials Business Plan (HMBP) to be reviewed and updated annually. If you have marked the box that indicates no changes have been made, this form will serve as your 2009/2010 official update (Title 19, Section 2729 requirements allow a certification statement to be used if no changes have been made to the business' hazardous materials inventory [HMBP]).

If you have made changes to your HMBP, please check the "Changes Have Been Made" box below. The Fire Department will send you all of the appropriate forms necessary to update your status. Forms are also available at http://www.santafesprings.org

CHECK THE APPROPRIATE BOX AND SIGN THE FORM BELOW

☒ **OUR BUSINESS HAS PREVIOUSLY FILED THE HAZARDOUS MATERIALS INVENTORY PURSUANT TO SECTION 2729.2 AND 2729.3 REQUIREMENTS AND NO CHANGES HAVE BEEN MADE** (all items must be correct):

1) The information contained in the hazardous materials inventory most recently submitted to the CUPA is complete, accurate, and up to date.
2) There has been no change in the quantity of hazardous material as reported in the most recently submitted inventory.
3) No hazardous materials subject to inventory requirements are being handled are not listed on the most recently submitted inventory.

☐ **CHANGES HAVE BEEN MADE**:

☐ **Emergency Contacts** – These are the two main contacts and their emergency phone numbers that the Fire Department will use in the event of an emergency.

☐ ***Chemical Inventory*** – The types and/or quantities of chemicals, hazardous liquids, solids, compressed gases, or waste have been changed.

☐ **Facility Plot Plan** – This is the diagram of your facility, which indicates the storage and use location of all the hazardous materials listed in the inventory.

I certify under penalty of law that our business has reviewed the current hazardous materials inventory on file with the Santa Fe Springs Fire Department and certify the submitted information is true, accurate and complete. We have also reviewed our Business Emergency Plan and certify that it is up to date and accurate.

OTE: Businesses that use the HMBP to satisfy EPCRA reporting requirements **may not** use a certification statement – it is not cognized under federal law. These businesses **must** annually resubmit their inventory.

2008/2009 Annual Unified Program Certification

Dear Business Owner/Operator:

In addition to other notification and update requirements, Chapter 6.95 of the California Health and Safety Code requires your Hazardous Materials Business Plan (HMBP) to be reviewed and updated annually. If you have marked the box that indicates no changes have been made, this form will serve as your 2008/2009 official update (Title 19, Section 2729 requirements allow a certification statement to be used if no changes have been made to the business' hazardous materials inventory [HMBP]).

If you have made changes to your HMBP, please check the "Changes Have Been Made" box below. The Fire Department will send you all of the appropriate forms necessary to update your status.

CHECK THE APPROPRIATE BOX AND SIGN THE FORM BELOW

☒ **OUR BUSINESS HAS PREVIOUSLY FILED THE HAZARDOUS MATERIALS INVENTORY PURSUANT TO SECTION 2729.2 AND 2729.3 REQUIREMENTS AND NO CHANGES HAVE BEEN MADE** (all items must be correct):

1) The information contained in the hazardous materials inventory most recently submitted to the CUPA is complete, accurate, and up to date.
2) There has been no change in the quantity of hazardous material as reported in the most recently submitted inventory.
3) No hazardous materials subject to inventory requirements are being handled are not listed on the most recently submitted inventory.

☐ **CHANGES HAVE BEEN MADE**:

☐ ***Emergency Contacts*** – These are the two main contacts and their emergency phone numbers that the Fire Department will use in the event of an emergency.

☐ ***Chemical Inventory*** – The types and/or quantities of chemicals, hazardous liquids, solids, compressed gases, or waste have been changed.

☐ ***Facility Plot Plan*** – This is the diagram of your facility, which indicates the storage and use location of all the hazardous materials listed in the inventory.

I certify under penalty of law that our business has reviewed the current hazardous materials inventory on file with the Santa Fe Springs Fire Department and certify the submitted information is true, accurate and complete. We have also reviewed our Business Emergency Plan and certify that it is up to date and accurate.

NOTE: Businesses that use the HMBP to satisfy EPCRA reporting requirements **may not** use a certification statement – it is not recognized under federal law. These businesses **must** annually resubmit their inventory.

CERTIFICATION OF COMPLIANCE

BUSINESS	Coast Iron & Steel	SITE ADDRESS	12300 E. Lakeland
INSPECTOR	Raul Diaz	DATE OF INSPECTION	9-21-05

This form must be completed and returned to the issuing inspector within 30 days of your facility's inspection unless otherwise noted. Send this form and any supporting documentation to the address listed above. Failure to return this certification may result in a re-inspection of your facility and may require re-inspection fees pursuant to City of Santa Fe Springs Municipal Code Section 97.104.

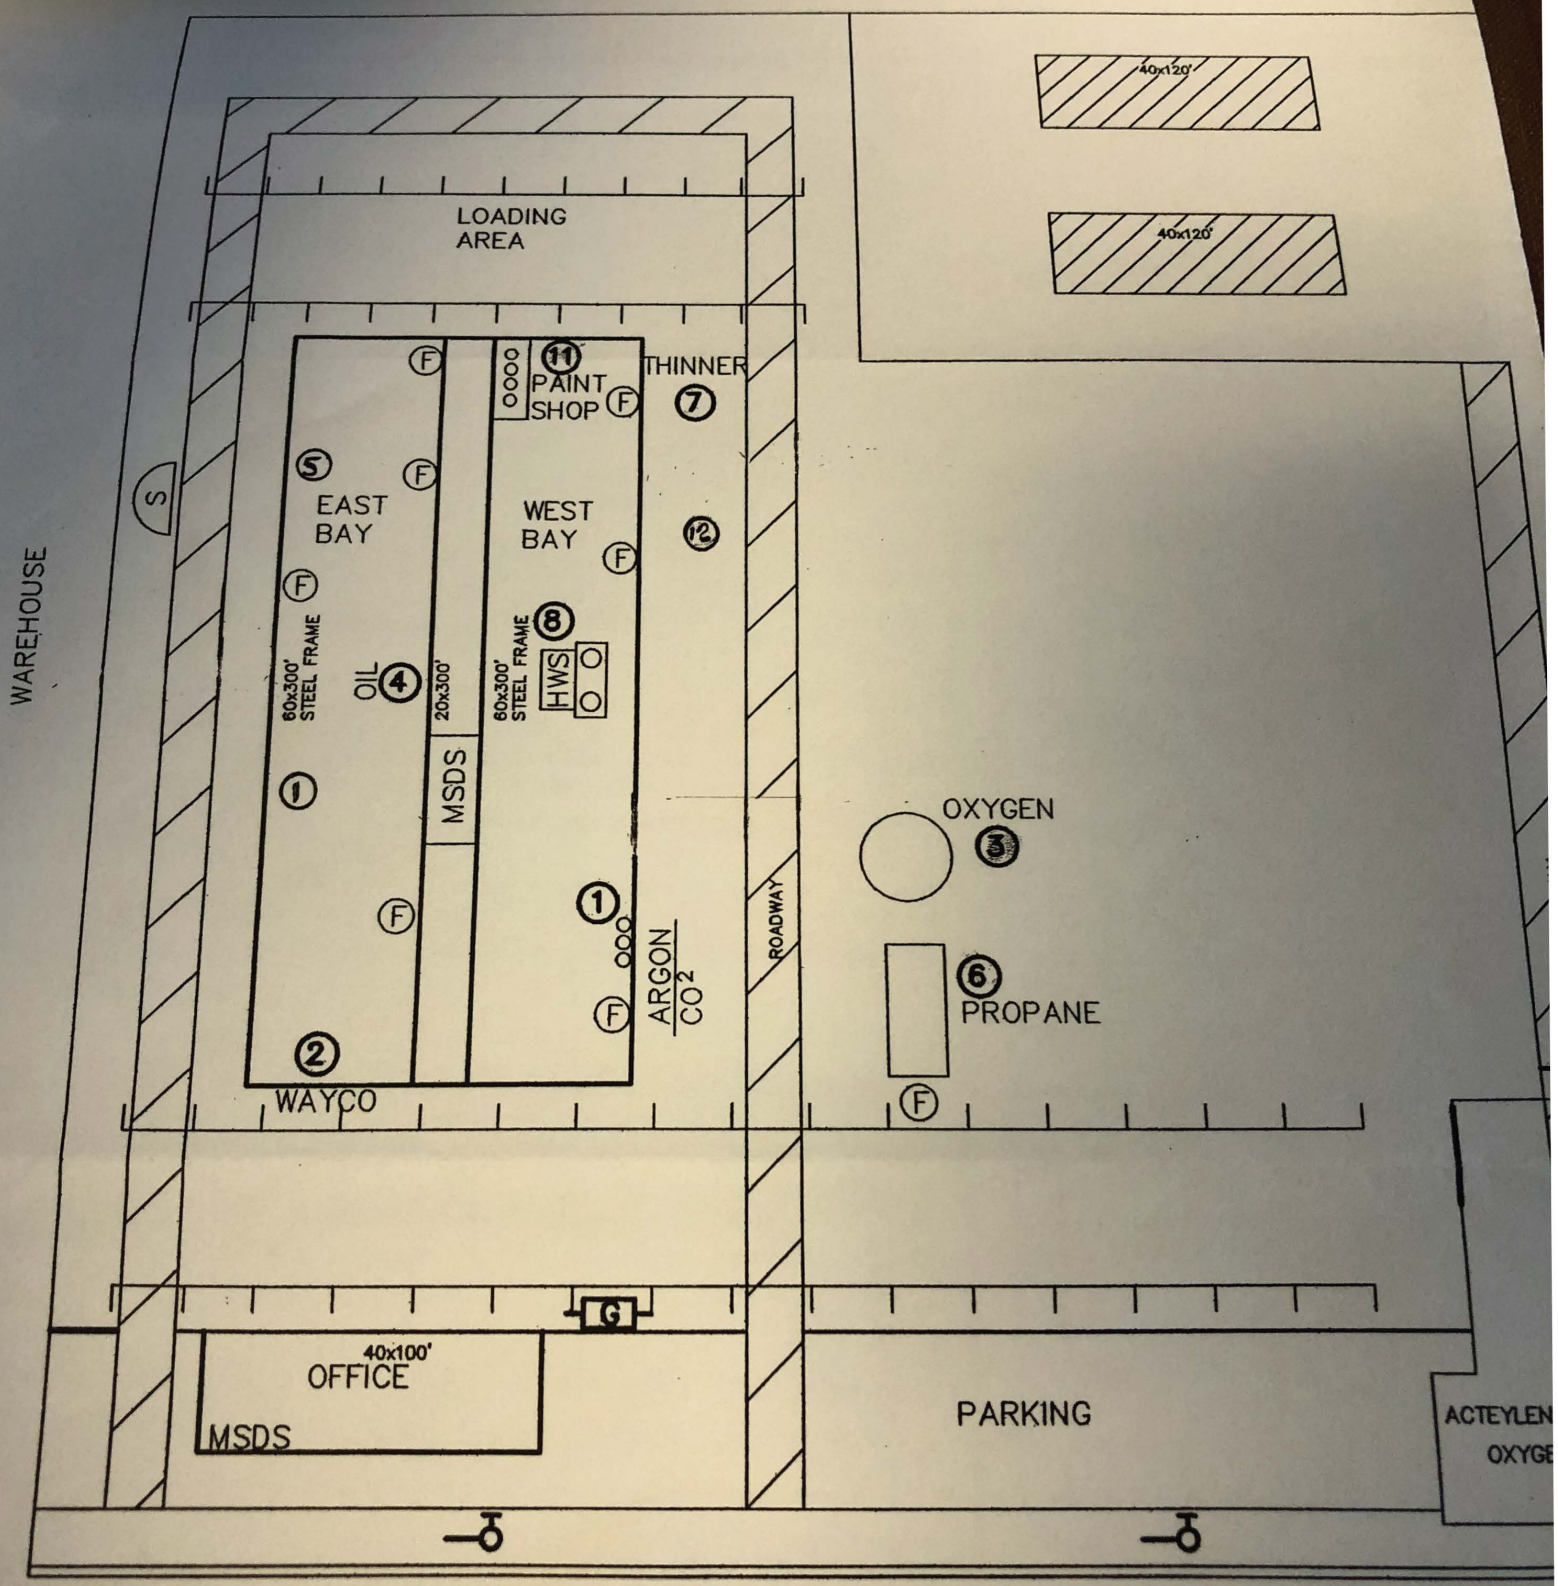
The violation(s) cited have been corrected by the following actions:

6. WASTE OIL DRUMS ARE PROPERLY LABLED AND STORED "WASTE OIL"

14. SPILL CONTAINMENT PALLET HAS BEEN MAINTAINED AND ANY RESIDUAL OIL AND WATER PROPERLY DISPOSED OF.

39. COAST IRON INVENTORY MAP HAS BEEN UPDATED WITH ADDED CHEMICALS AND STORAGE LOCATIONS.

Classes of violations: I = Class I violation, II = class II violation, M = Minor, and O – other violation



- **I certify that the violations cited on the Notice of Violation & Inspection Report have been corrected.**
- **I have personally examined any attached documentation submitted as proof of compliance and I believe the information to be true and accurate.**
- **Based on my examination of any attached documentation and inquiry of the individual(s) who prepared or obtained them, I believe the information to be true, accurate, and complete.**
- **I am authorized to file this certification on behalf of the responsible party.**
- **I am aware that there are significant penalties for submitting false information and/or for non-compliance and declare that the foregoing certification is true and correct.**

Notes: On 9-21-05 I inspected Coast Iron and Steel a structural steel fabricator. Coast Iron has a current SWPPP.

6. Coast Iron is in violation of CCR 66262.34(f) by not labeling waste oil drums. Coast Iron must label all waste drums.

14. Coast Iron is in violation of CHSC 25250.4 by not managing waste oil in spill containment "pallet". Coast Iron must remove oily water/waste and dispose of legally.

39. Coast Iron is in violation of HSC 25509 by not having an updated chemical inventory and site map. Coast Iron must update inventory and map.

I have read and understand the above stated violations. After these violations have been corrected, I will sign and return the "Certification of Compliance" form and submit any other required or requested information.

HAZARDOUS MATERIALS UNDERGROUND STORAGE
CLOSURE CERTIFICATION
FACILITY LOCATION: 12300 East Lake Land Road
CLOSURE PERMIT NUMBER: 5901B

This office has reviewed the final closure report submitted on October 3, 1989 required as a part of the subject closure permit. Based on the information submitted, we find that all closure requirements have been completed. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is our position that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present or future operations at this site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this agency of any changes in report content, future contamination findings or site usage.

Any questions regarding this matter should be directed to Simin Agahi at (818) 458- 3560 .

Very truly yours,

T. A. TIDEMANSON

Long Beach, California 90806

January 6, 1998

PROJECT NO.: 51308	DRAW BY: CYRIL
DATE: 03/26/97	CHECKED BY: GABRI
FILENAME: /NORCAL/FIG2.DS4	APPROVED BY: GARY

1.0 INTRODUCTION

This report summarizes a Phase II Environmental Site Assessment (ESA) recently completed at Coast Iron & Steel Co., 12300 East Lakeland Road in Santa Fe Springs, California (See ***Figure 1*** - Vicinity Map). NorCal Engineering engaged the services of Maness Corporation (Maness) to perform the Phase II ESA. The purpose of the assessment is to evaluate whether the areas of concern identified during performance of the Phase I ESA have adversely impacted soil underlying the site.

1.1 Scope of Work

The scope of work for this Phase II ESA included the following:

1. Perform a limited subsurface soil investigation at the subject site at the areas of concern identified during the Phase I ESA.

2. Completion of thirteen (13) soil borings ranging from 15 to 40 feet below grade (ft bg), collection and laboratory analysis of soil samples for the presence of petroleum hydrocarbons, Volatile Organic Compounds (VOCs) and CAM Metals, California Code of Regulations, Title 22 (See ***Figure 2*** - Site Plan with Soil Sample Locations).

3. Preparation of this written report summarizing the field activities, findings and conclusions and providing appropriate recommendations.

1.2 Background

In 1997, a Phase I ESA was performed by Maness to identify past and current areas of environmental concern at the subject property (refer to Maness's *Phase I - Environmental Site Assessment, Coast Iron & Steel Co., 12300 East Lakeland Road, Santa Fe Springs, California*, dated *March 27, 1997*). The Phase I ESA identified the following areas of concern:

- Two former sumps,
- Four former cesspools and one septic tank,
- Former concrete well and stand pipe,
- Former gasoline underground storage tank (UST) area,
- Two dry oil well areas,
- Elevated concrete block area (former use of area is unknown), and
- Current clarifier

2.0 FIELD ENGINEERING

2.1 Geoprobe Soil Borings

On October 13 and 14, 1997, Maness completed thirteen (13) Geoprobe soil borings to approximate depths of 15 to 40 feet below grade (ft bg) in the vicinity of the areas of concern. ***Table 1*** - Location of Geoprobe Borings. Soil samples were collected at 5 ft intervals in each boring. Refer to ***Appendix A*** - Geoprobe Soil Boring Logs.

TABLE 1
Geoprobe Borings Location
Drilling Dates – October 13 & 14, 1997

GEOPROBE BORING No.	ASSOCIATED AREA OF CONCERN
GP1 & GP2	Former Sumps
GP3	Current Clarifier
GP4, GP6 & GP13	Former Cesspols
GP5	Dry Oil Well – Santa Fe Springs Oil Syndicate No. 2 – Well #1
GP7	Former Septic Tank
GP8	Elevated Concrete Blocks
GP9	Former Concrete Well and Concrete Stand Pipe
GP10	Dry Oil Well – Exxon No. 3
GP11	Former Gasoline UST Area
GP12	Eastern Property Line

Soil samples from each of the borings were screened for organic vapors by placing them in a Ziplock bag and using a photo ionization detector (PID) to measure field concentration of VOCs. Relatively low concentrations (i.e. <10 ppm) of field VOCs were detected in the soil samples except in Geoprobe Soil Borings GP11 at 30 ft bg (26 ppm) and in GP12 at 30 ft bg (70 ppm). For vapor levels, refer to ***Appendix A*** - Geoprobe Soil Boring Logs.

2.2 Methodology of Soil Sample Collection

Maness collected all soil samples with our Model 5400 Geoprobe. The Geoprobe is a hydraulically powered, 4x4 truck mounted percussion/probing machine designed specifically for use in the environmental industry. The system utilizes a powerful percussion hammer attached to a hydraulic ram to advance small diameter sampling equipment into the ground.

The sampling equipment consists of a 24-inch by 1-inch stainless steel sample tube equipped with a cutting shoe on the bottom and a drive head on top. Once the brass sample liners (four 1 by 6-inch liners) have been placed in the sample tube, a steel piston

rod is placed through the center of the sampler with the piston tip protruding through the cutting shoe. When the piston rod is locked in place with a threaded stop-pin at the top, the sampler is completely sealed. The sampler is then attached to the probe rod and driven to the desired sample depth using the Geoprobe. Once the soil sample depth is reached, a small diameter control rod is lowered through the center of the probe rod. Utilizing this control rod, the operator is able to remove the stop pin that is holding the piston rod in place. Once the stop pin is removed, the sampler is driven an additional 24-inches in order to collect the soil sample. With the stop-pin removed, the piston rod and tip are free to retract into the sampler as the undisturbed soil sample is collected. The drill string and sampler are then pulled from the boring using the Geoprobe and the soil sample brass tubes are removed.

Maness used two 1" x 6" brass sample rings to collect all soil samples. A Maness geologist used the soil from the upper sample ring to describe lithology in accordance with the Unified Soil Classification System (USCS) and submitted the lower sample for chemical analysis. Before commencing, and between each sample, Maness thoroughly decontaminated all sampling equipment using Alconox soap followed by rinsing with tap water and then deionized water. Upon recovering the samples, Maness immediately sealed the samples with Teflon tape and plastic end caps. We then labeled the samples and quickly placed them in an ice chest until delivered to a state certified laboratory for analysis. Maness followed proper chain-of-custody procedures to ensure the integrity of all samples being submitted for testing. All borings were backfilled with hydrated Enviroplug No. 8 bentonite and the surface finished with concrete or asphalt.

3.0 LABORATORY TESTING

3.1 Methodology of Laboratory Analysis

Soil samples were collected, maintained, prepared and analyzed according to Test Methods for Evaluating Solid Waste, (SW-846), Third Edition, Update #2, November 1990. These methods, as prescribed by the Environmental Protection Agency (EPA), provide test procedures that determine whether the sample is a hazardous waste. The laboratory analyses were analyzed at Jones Environmental Laboratory that is certified by the State of California Department of Health Services.

The soil samples were analyzed for Total Recoverable Petroleum Hydrocarbons (TRPH) by EPA Method 418.1, for VOCs by EPA Method 8240 and for CAM Metals, California Code of Regulations, Title 22, Section 66261 using EPA Methods 6010 and 7471. Refer to ***Appendix B*** - Laboratory, Quality Assurance/Quality Control (QA/QC) and Chain-of-Custody Reports.

3.2 Results of Laboratory Analysis

A summary of the laboratory analysis are provided in ***Table 2*** – Summary of Laboratory TRPH and VOCs and in ***Table 3*** – Summary of Laboratory Metals Analytical Results.

The metal concentrations detected in the analyzed soil samples are consistent with metal levels generally found in soils. TRPH was detected in 12 of the 40 analyzed samples. Detected levels ranged from 19 to 460 ppm. The maximum TRPH concentration was detected in GP8 at 5 ft bg. This boring was drilled in the vicinity of the elevated concrete block area (former use of area is unknown). However, none of the measured TRPH concentrations exceeded the Maximum Soil Screening Levels (MSSLs) for groundwater up to 29 ft below the lowest level of detected contaminants according to the Los Angeles RWQCB, April 1996 (See ***Section 4.0*** - Geology and Hydrogeology for more information regarding depth to groundwater). The MSSLs for soil underlying the subject site, in this case, sand/silty sand are:

TRPH	500 ppm for gasoline range, 1,000 for diesel range
Benzene	0.011 ppm
Toluene	0.3 ppm
Ethylbenzene	0.7ppm
Total Xylenes	1.75 ppm

No VOCs were detected at or above the laboratory detection limits for all of the analyzed soil samples.

TABLE 2

Summary of Laboratory TRPH and VOC Results
Sample Dates - October 13 & 14, 1997

STLC= soluble threshold limit concentration (mg/L)
ppm= parts per million (mg/kg or mg/L)
ND= not detected at or above laboratory detection limits

4.0 GEOLOGY AND HYDROGEOLOGY

The subject site is located on the Downey Plain in the Los Angeles Basin. It is directly underlain by approximately 100 feet of recent alluvial deposits consisting of gravels, sands, silts, and clays (DWR 1961, Plates 2 and 3a). Unconsolidated and semi-consolidated sediments of the upper Pleistocene-age Lakewood Formation and the lower Pleistocene-age San Pedro Formation underlie the alluvial deposits at depths of approximately 100 feet and 150 feet, respectively (DWR 1961, Plate 6a, Section B-B').

Soils encountered during drilling activities are silty sand to depths approximately 10 to 20 ft bg and sand underlying the silty sand to depths drilled during this investigation.

The site is located in the southern portion of the Montebello Forebay Area of the Los Angeles Central Hydrogeologic Basin (DWR 1961, Plate 2). The uppermost water-bearing unit is the Gaspur Aquifer, which is located at a depth of approximately 50 to 100 feet beneath the site and consists of coarse sand and gravel (DWR 1961, Plate 6a, Section B-B'). The Gardena/Gage Aquifer is located within the Lakewood Formation at a depth of approximately 130 to 150 feet, and consists of coarse sand and gravel (DWR 1961, Plate 6a, Section B-B'). The water-bearing sediments of the Jefferson, Lynwood, Silverado, and Sunnyside Aquifers are located at depths of approximately 175 feet to 850 feet (DWR 1961, Plate 6a, Section B-B').

For additional information refer to California Department of Water Resources, Planned Utilization of the Ground Water Basins of the Coastal Plain of Los Angeles County, dated 1961.

According to the Los Angeles Department of Public Works, Hydrologic Records, the nearest well (1626L) is located at the northeast corner of Fulton Wells Ave. and Florence Ave. The depth to water in this well was 69.4 feet bg on March 20, 1996, and the surface elevation was 129 feet above mean sea level. The general direction of the groundwater flow is to the south-southeast according to Los Angeles County Flood Control District 1978, Groundwater Contour Map. No groundwater was encountered during the completion of the soil borings.

5.0 CONCLUSIONS AND RECOMMENDATIONS

NorCal Engineering engaged the services of Maness to perform this Phase II ESA. The purpose of the assessment is to evaluate whether the areas of potential environmental concern identified during performance of a Phase I ESA had adversely affected the subsurface soils.

On October 13 and 14, 1997, Maness completed thirteen (13) Geoprobe soil borings to approximate depths ranging between 15 and 40 ft bg in the vicinity of the areas of concern. Soil samples were collected at 5 ft intervals from each boring. Soil samples were field screened for organic vapors by placing them in a Ziplock bag and using a PID to measure concentration of volatilized organic compounds. Selected soil samples were sent to an analytical laboratory. These samples were analyzed for CAM Metals, TRPH and VOCs.

The metal concentrations detected in the analyzed soil samples are consistent with metal levels generally found in soils. VOCs were not detected in any of the analyzed samples. TPH was detected in 12 of the 40 analyzed soil samples. However, none of the measured TPH concentrations exceeded the MSSLs for groundwater up to 29 ft below the lowest level of detected contaminants according to the Los Angeles RWQCB, April 1996.

In accordance with the scope of work for the completion of this Phase II ESA, Maness has completed a limited soil investigation at the subject site. The results indicated that the investigated areas have not been adversely impacted by current or past site activities, at levels exceeding current regulatory guidelines.

Based on the conclusions reached in this report, Maness recommends that no further action is needed.

5.1 Limitations

Maness has performed the activities cited herein in conformance with the scope-of-work prescribed by the client. Maness conducted the work in an objective and unbiased manner, and in accordance with generally accepted professional practice for this type of work. Maness believes the analysis to be accurate and relevant but cannot accept responsibility for the accuracy or completeness of available documentation or possible withholding of information by the interviewees, agencies, or other private parties.

The findings from the soil investigation are based primarily upon analytical results provided by an independent laboratory. Interpretations of the subsurface conditions at the site, for the purpose of this investigation, are made from a limited number of available data points (example: soil samples) and subsurface conditions may be different in other locations.

This report is considered confidential and privileged information that Maness prepared for the sole and exclusive use and information of our client. Neither Maness nor our client makes any representations nor warranties to third-parties as to the accuracy or truth of any matters contained herein. It is also understood that these environmental findings, and the release thereof, is for informational purposes only and should not be relied upon by any lender, financial institution, or other entity except as specifically authorized by Maness or client.

Maness appreciates the opportunity to provide environmental management services for NorCal Engineering. Should you have any questions or require additional information, please feel free to call us at (562) 595-4555.

Sincerely,
Maness Corporation

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 07/29/2021 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

OMEGA CHEMICAL SITE Cerclis ID:: 903349 EPA Id: CAD042245001	***12504 - 12512 E. WHI***	***0 - 1/8 (0.000 mi.)***	***0***	***35***

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/29/2021 has revealed that there are 2 SEMS sites within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless

information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2021 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/22/2021 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 04/23/2021 has revealed that there are 24 CA ENVIROSTOR sites within approximately 1 mile of the target property.

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 17 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 2 CA UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 15 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Local Land Records

CA DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes .

A review of the CA DEED list, as provided by EDR, and dated 05/28/2021 has revealed that there are 2 CA DEED sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/22/2021 has revealed that there are 31 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there is 1 CA HAZNET site within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

CA LOS ANGELES CO LF METHANE: This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

A review of the CA LOS ANGELES CO LF METHANE list, as provided by EDR, and dated 02/04/2021 has revealed that there is 1 CA LOS ANGELES CO LF METHANE site within approximately 0.5 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits

COAST IRON & STEEL CO (Continued) **1000387258**

issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
OSHA ESTABLISHMENT

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

COAST IRON & STEEL CO (Continued) **1000387258**

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Date: 11-07-2017
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 12/01/2017. I observed 2-55 gallon drums of used oil and 1-55 gallon drum of aerosol cans that were not closed. Provide documentation indicating 2-55 gallon drums of used oil and 1-55 gallon drum of aerosol cans have been closed.

Summary Details:

Conditions at Proposal September 29, 1998): The Omega Chemical Corporation Omega) site is a former ha ardous waste treatment and storage facility that operated from 1976 to 1991 on a 40,000-square foot property in Whittier, Los Angeles County,California. Omega conducted solvent recovery using an on-site fractionation and distillation process and operated as a storage and transfer facility for various ha ardous waste classifications. Ha ardous wastes stored on site contained mainly chlorinated and aromatic solvents. In June 1995, before removal activities, the Omega site consisted of thousands of drums of ha ardous waste, two roll-off bins of hardened resin material, hundreds of empty but contaminated drums, numerous cylinders with capacities ranging from 15 to 20,000 pounds, and various other smaller containers of waste and/or ha ardous waste. Inside the on-site warehouse there were hundreds more 55-gallon drums that Omega claimed to be product and assorted smaller containers of ha ardous material. Since 1991, the California Department of Toxic Substances Control DTSC) and EPA s Ha ardous Waste Management Division have been actively trying to get the owner/operator to remove the wastes and clean up the site.In March 1995, the site owner/operator plead guilty to two felony counts of illegal storage and disposal of ha ardous wastes. On May 9, 1995, EPA issued CERCLA Administrative Order No. 95-15 to the owner of Omega and to generators of ha ardous waste that had shipped major quantities of material to Omega. During 1995, EPA s Superfund Emergency Response Office oversaw Phase I removal activities, during which contractors to a responsible party group removed all ha ardous materials and wastes from the site. Phase II site activities began in November 1995 and included collection and analyses of subsurface soil and ground water at the site. Analytical results indicated that subsurface soil samples were mainly contaminated with tetrachloroethene PCE), with lesser amounts of trichloroethene, dichloroethene and other chlorinated hydrocarbons, Freons and metals. PCE contamination was detected in soil at concentrations ranging from 1.9 milligrams per kilogram mg/kg) to 510 mg/kg. Ground water samples collected at the site contained PCE up to 86,000 micrograms per liter as well as significant concentrations of other chlorinated hydrocarbons and Freons. Phase II activities documented the presence of PCE in shallow ground water ina plume that extends almost 1 mile downgradient of the site. Although the ground water samples were collected in the shallow regional aquifer of the Lakewood Formation and most of the municipal drinking water wells draw water from the San Pedro Formation, California Department of Water Resources hydrogeologic cross-sections of the Lakewood and Upper San Pedro Formations indicate that aquifers are interconnected within 2 miles of the site. Eight water purveyors draw ground water from 35 wells within 4 miles of the site to supply drinking water to approximately 284,270 people. The nearest well to the site is 1.3 miles to the west. This and nearly two-thirds of the wells within 4 miles draw water from the Lakewood and Upper San Pedro formation aquifers. The San Gabriel River is the nearest surface water body at approximately 2.5 miles from the site. The site is located in a mixed industrial and residential community, with residences located across Whittier Boulevard tothe northeast. Status January 1999): EPA is considering various alternatives for the site. The description of the site release) is based on information available at the time the site was scored. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

RAAB VACUUM TRUCK SERVICE INC (Continued) **1000455497**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Year: 2015
Gepaid: CAD983604976
TSD EPA ID: CAD044429835
CA Waste Code: 213 - Hydrocarbon solvents (benzene, hexane, Stoddard, Etc.)
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.15

Year: 2015
Gepaid: CAD983604976
TSD EPA ID: CAD044429835
CA Waste Code: 223 - Unspecified oil-containing waste
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.2

Year: 2015
Gepaid: CAD983604976
TSD EPA ID: NED981723513
CA Waste Code: 212 - Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)
Disposal Method: H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons: 0.7

LAKENOR AUTO SALVAGE (Continued) **S113017938**

Year: 2014
Gepaid: CAD983604976
TSD EPA ID: NED981723513
CA Waste Code: 141 - Off-specification, aged or surplus inorganics
Disposal Method: H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons: 0.05

Year: 2014
Gepaid: CAD983604976
TSD EPA ID: CAD044429835
CA Waste Code: 223 - Unspecified oil-containing waste
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.875

Year: 2013
Gepaid: CAD983604976
TSD EPA ID: CAD044429835
CA Waste Code: 343 - Unspecified organic liquid mixture
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.465

Year: 2013
Gepaid: CAD983604976
TSD EPA ID: CAD044429835
CA Waste Code: 223 - Unspecified oil-containing waste
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.4

Year: 2013
Gepaid: CAD983604976
TSD EPA ID: CAD097030993
CA Waste Code: 491 - Unspecified sludge waste
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.64635

Year: 2013
Gepaid: CAD983604976
TSD EPA ID: CAD097030993
CA Waste Code: 352 - Other organic solids
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.775

Year: 2013
Gepaid: CAD983604976
TSD EPA ID: CAT080013352
CA Waste Code: 223 - Unspecified oil-containing waste
Disposal Method: H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons: 0.1251

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Citation:	22 CCR 15 66265.192(h) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(h)
Violation Description:	Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer stating the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed and that the tank system has sufficient structural strength, compatibility with the waste(s) to be transferred, stored or treated, and corrosion protection so that it will not collapse, rupture, or fail. This assessment shall be obtained prior to placing the tank system in service, and shall be kept on file at the facility. The tank assessment shall be good for five years. This assessment shall also include, at a minimum, the following information: (1) Design standard(s) according to which the tank(s) and ancillary equipment are or will be constructed; (2) Hazardous characteristics of the waste(s) to be handled; (3) For new tank systems or components in which the external shell of a metal tank or any external metal component of the tank system is or will be in contact with the soil or with water, a determination by a corrosion expert of: (A) Factors affecting the potential for corrosion, including but not limited to: 1. Soil moisture content; 2. Soil pH; 3. Soil sulfides level; 4. Soil resistivity; 5. Structure to soil potential; 6. Influence of nearby underground metal structures (e.g., piping); 7. Stray electric

GOODRICH CORPORATION (Continued) **S113459263**

current; and, 8. Existing corrosion-protection measures (e.g., coating, cathodic protection), and (B) The type and degree of external corrosion protection that are needed to ensure the integrity of the tank system during the use of the tank system or component, consisting of one or more of the following: 1. Corrosion-resistant materials of construction such as special alloys or fiberglass-reinforced plastic; 2. Corrosion-resistant coating (such as epoxy or f

Hazardous Waste Summary:
Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D005
Waste Description: BARIUM

Waste Code: D006
Waste Description: CADMIUM

Waste Code: D007
Waste Description: CHROMIUM

GOODRICH CORPORATION (Continued) **1001075499**

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D011
Waste Description: SILVER

Waste Code: D018
Waste Description: BENZENE

Waste Code: D027
Waste Description: 1,4-DICHLOROBENZENE

Waste Code: D028
Waste Description: 1,2-DICHLOROETHANE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F006
Waste Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS)

GOODRICH CORPORATION (Continued) **1001075499**

ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Waste Code: U002
Waste Description: 2-PROPANONE (I) (OR) ACETONE (I)

Waste Code: U148
Waste Description: 3,6-PYRIDAZINEDIONE, 1,2-DIHYDRO- (OR) MALEIC HYDRAZIDE

Waste Code: U151
Waste Description: MERCURY

Waste Code: U154
Waste Description: METHANOL (I) (OR) METHYL ALCOHOL (I)

Waste Code: U188
Waste Description: PHENOL

Waste Code: U213
Waste Description: FURAN, TETRAHYDRO-(I) (OR) TETRAHYDROFURAN (I)

Waste Code: U239
Waste Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

TSD EPA ID:	OHD048415665
CA Waste Code:	491 - Unspecified sludge waste
Disposal Method:	H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons:	9.11400
Year:	2019
Gepaid:	CAD981400559
TSD EPA ID:	CAT080013352
CA Waste Code:	221 - Waste oil and mixed oil
Disposal Method:	H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons:	0.00000
Year:	2019
Gepaid:	CAD981400559
TSD EPA ID:	CAT000646117
CA Waste Code:	151 - Asbestos containing waste
Disposal Method:	H132 - Landfill Or Surface Impoundment That Will Be Closed As Landfill(To Include On-Site Treatment And/Or Stabilization)
Tons:	16.79000
Year:	2019
Gepaid:	CAD981400559
TSD EPA ID:	AZD081705402
CA Waste Code:	352 - Other organic solids
Disposal Method:	H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons:	0.18200
Year:	2019
Gepaid:	CAD981400559
TSD EPA ID:	ARD981057870
CA Waste Code:	331 - Off-specification, aged or surplus organics
Disposal Method:	H061 - Fuel Blending Prior To Energy Recovery At Another Site
Tons:	1.01000

GOODRICH CORPORATION (Continued) **1001075499**

Year: 2019
Gepaid: CAD981400559
TSD EPA ID: ARD069748192
CA Waste Code: 491 - Unspecified sludge waste
Disposal Method: H040 - Incineration--Thermal Destruction Other Than Use As A Fuel
Tons: 7.65550

Year: 2019
Gepaid: CAD981400559
TSD EPA ID: CAT080013352
CA Waste Code: 133 - Aqueous solution with total organic residues 10 percent or more
Disposal Method: H039 - Other Recovery Of Reclamation For Reuse Including Acid Regeneration, Organics Recovery Ect
Tons: 0.02085

Year: 2019
Gepaid: CAD981400559
TSD EPA ID: AZD081705402
CA Waste Code: 181 - Other inorganic solid waste
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.00150

SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	MISCEL
Waste Type2:	Not reported
Waste2:	Miscellaneous (Includes wastes from dewatering, recreational lake overflow, swimming pool wastes, water ride wastewater, ground water seepage and other wastes of this type)
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Name: FORMER POWERINE OIL CO REFINERY - SUBSTATION
Address: 12345 LAKELAND ROAD
City,State,Zip: SANTA FE SPRINGS, CA 90670
Region: STATE
Facility Status: **Open - Site Assessment**
Status Date: 10/01/2015
Global Id: T10000007743
Lead Agency: LOS ANGELES RWQCB (REGION 4)
Lead Agency Case Number: Not reported
Latitude: 33.93478
Longitude: -118.0691
Case Type: Cleanup Program Site
Case Worker: EPL
Local Agency: Not reported
RB Case Number: 0318E
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Soil
Potential Contaminants of Concern: Arsenic, Total Petroleum Hydrocarbons (TPH)
Site History: The Site is a Southern California Edison Substation located on the Former Powerine Oil Co Refinery facility. The Substation area was leased by Edison to provide power for the refinery operations. Edison

CENCO REFINING CO. (Continued) **S103438792**

conducted a limited site assessment in its due diligence to return the leased property to the current owner. Levels of Arsenic and TPH were reported above the established cleanup goals for the Former Powerine Refinery facility.

POWERINE OIL REFINERY/WALKER PROPERTY (Continued) **S106386988**

Staff: PC

CPS-SLIC:

Name:	FORMER POWERINE OIL CO
Address:	12345 LAKELAND RD
City,State,Zip:	SANTA FE SPRINGS, CA
Region:	STATE
Facility Status:	**Open - Site Assessment**
Status Date:	05/26/2009
Global Id:	SL372492442
Lead Agency:	LOS ANGELES RWQCB (REGION 4)
Lead Agency Case Number:	Not reported
Latitude:	33.9339426600578
Longitude:	-118.068201541901
Case Type:	Cleanup Program Site
Case Worker:	EPL
Local Agency:	Not reported
RB Case Number:	0318A
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern:	Benzene, Crude Oil, Other Petroleum
Site History:	Oil production and refining activities began at the site in the 1930's and continued until 1995. Assessment of soil and groundwater conditions are ongoing and some above ground structures are being removed to facilitate this. Soil and groundwater are impacted with petroleum hydrocarbons including free phase hydrocarons and dissolved benzene. The impacted groundwater extends southward, beneath adjacent parcels.

Potential Media Affected:	Aquifer used for drinking water supply, Soil, Soil Vapor
Potential Contaminants of Concern:	Arsenic, Benzene, Ethylbenzene, Gasoline, MTBE / TBA / Other Fuel Oxygenates, Toluene, Total Petroleum Hydrocarbons (TPH), Xylene
Site History:	Goodman Santa Fe Springs SPE LLC (Goodman) acquired the eastern 36 acres of the property (referred to as the Site) and will conduct investigation and cleanup activities of soil and groundwater at and below the Site. Goodman has entered into an agreement with the Regional Board pursuant to the California Land Reuse and Revitalization Act of 2004 (CLRRA) (Health & Safety Code 25395.60 et seq.), which provides for specified immunities from liability to

POWERINE OIL REFINERY/WALKER PROPERTY (Continued) **S106386988**

qualified persons where the person completes investigation and response actions under the oversight of the Regional Board. Pursuant to that agreement, Goodman has agreed to clean up the Site and to pay the Regional Boards oversight costs. The remaining portions of the property and offsite areas affected by the activities of Powerine will be addressed by other parties.

Violation Date: 02-07-2018
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 03/05/2018. Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation that the violation has been corrected.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CITY OF SANTA FE SPRINGS - CENCO REFINERY REDEVELOPMENT (Continued) **S109850912**

Case Worker:	EPL
Local Agency:	Not reported
RB Case Number:	1138A
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply, Soil
Potential Contaminants of Concern:	Benzene, Crude Oil, Other Petroleum
Site History:	Oil production and refining activities began at the site in the 1930's and continued until 1995. Assessment of soil and groundwater conditions are ongoing and some above ground structures are being removed to facilitate this. Soil and groundwater are impacted with petroleum hydrocarbons including free phase hydrocarons and dissolved benzene. The impacted groundwater extends southward, beneath adjacent parcels.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
