1.0 INTRODUCTION

1.1 STATUTORY AUTHORITY AND REQUIREMENTS

This Initial Study has been conducted in accordance with the California Environmental Quality Act (CEQA) (California Public Resources Code [PRC] §21000 et seq.) and the State CEQA Guidelines (California Code of Regulations [CCR], Title 14, §15000 et seq.). Pursuant to State CEQA Guidelines §15063, this Initial Study has been conducted to determine if the proposed Artesia Place Project ("Project") would have a significant effect on the environment. The Project site consists of an approximately 3.3-acre parcel located at 11709 Artesia Boulevard and an approximately 0.23-acre parcel located at 17212 Alburtis Avenue, in the City of Artesia ("City"), California. The Project proposes to construct up to 8,650 square feet (SF) of commercial uses and 80 dwelling units (DU), at a density of approximately 23.2 dwelling units per acre (DU/ac). The Project includes approximately 40,265 SF of open space, a 462-SF pool building, 218 vehicle parking spaces, and 40 bicycle parking spaces. The requested approvals include: a General Plan Amendment; a Zoning Code Text Amendment to amend the ABCSP to permit residential uses, establish a maximum allowable development within the Project site, and amend the ABCSP's Design Standards and Guidelines (among other chapters); Design Review; Development Agreement; Vesting Tentative Tract Map No. 83834; and the CEQA EIR certification.

State CEQA Guidelines §15063(b) states that if the Lead Agency determines that there is substantial evidence that any aspect of a project, either individually or cumulatively, may cause a significant effect on the environment, the Lead Agency shall prepare an Environmental Impact Report (EIR), use a previously prepared EIR, or determine, which of a project's effects were adequately examined by an earlier EIR or Negative Declaration (ND). Conversely, the Lead Agency shall prepare a ND if there is no substantial evidence that the project or any of its aspects may cause a significant effect on the environment.

Pursuant to State CEQA Guidelines §15063(c), the purposes of an Initial Study are to:

- Provide the Lead Agency with information to use as the basis for deciding whether to prepare an EIR or a ND;
- Enable an applicant or Lead Agency to modify a project, mitigating adverse impacts before an EIR is prepared, thereby enabling the project to qualify for a ND;
- Assist in the preparation of an EIR, if one is required;
- Facilitate environmental assessment early in the design of a project;
- Provide documentation of the factual basis for the finding in a ND that a project will not have a significant effect on the environment;
- Eliminate unnecessary EIRs; and
- Determine whether a previously prepared EIR could be used with the project.

This Initial Study is intended to be used as a decision-making tool for the Lead Agency and responsible agencies in considering and acting on the proposed Project. Responsible agencies would comply with CEQA by considering this environmental analysis for discretionary actions associated with Project implementation, if any.

State CEQA Guidelines §15063(g) specifies that as soon as a Lead Agency has determined that an Initial Study will be required for a project, the Lead Agency shall consult informally with all Responsible Agencies and all Trustee Agencies responsible for resources affected by the project to obtain their recommendations as to whether an EIR, Mitigated Negative Declaration (MND), or ND should be prepared.

1.2 SUMMARY OF FINDINGS

Pursuant to State CEQA Guidelines §15367, the City, as the Lead Agency, has the authority for environmental review and adoption of the environmental documentation, in accordance with CEQA. This Initial Study evaluated the environmental issues outlined in **Section 3.1: Environmental Factors Potentially Affected**. It provides decision-makers and the public with information concerning the Project's potential environmental effects.

Based on the Environmental Checklist Form and supporting environmental analysis, the Project would have no impact or a less than significant impact concerning all environmental issue areas, except the following, for which the Project would have a potentially significant impact:

- Air Quality
- Cultural Resources
- Energy
- Geology and Soils
- Greenhouse Gas Emissions
- Land Use and Planning
- Noise
- Population and Housing
- Public Services
- Recreation
- Transportation
- Tribal Cultural Resources
- Utilities and Service Systems
- Mandatory Findings of Significance

As set forth in State CEQA Guidelines §15081, the decision to prepare an EIR will be made either during preliminary review under State CEQA Guidelines §15060 or at the conclusion of an Initial Study after applying the standards described in State CEQA Guidelines §15064. On the basis of this initial evaluation, the Lead Agency has found that the proposed Project may have a significant effect on the environment and an EIR will be prepared to evaluate the Project's potentially significant impacts concerning the resource areas identified above.

1.3 INITIAL STUDY PUBLIC REVIEW PROCESS

In accordance with State CEQA Guidelines §15375, the City distributed a Notice of Preparation (NOP) to notify the responsible agencies, the Office of Planning and Research (OPR), and involved federal agencies that the City (i.e., Lead Agency) plans to prepare an EIR for the Project. The

NOP's purpose is to solicit guidance from those agencies as to the scope and content of the environmental information to be included in the EIR.

Within 30 days after receiving the NOP, each responsible agency and OPR are required to provide the Lead Agency with specific details about the scope and content of the environmental information related to the responsible or trustee agency's area of statutory responsibility that must be included in the Draft EIR. During the 30-day public review period, the NOP/Initial Study were made available for review on the City of Artesia website, at https://cityofartesia.us/336/Community-Development, and by request at the Community Development Department – please contact Okina Dor, Community Development Director, at 562.865.6262 Ext 227 or via email at Planning@cityofartesia.us. Written responses to the NOP/comments on this Initial Study may be sent to:

Okina Dor, Community Development Director
City of Artesia, Community Development Department
18747 Clarkdale Avenue
Artesia, California 90701
Email: Planning@cityofartesia.us

Please include in the subject matter line "Artesia Place Project (ABCSP Amendment) NOP/IS Comment." Additionally, please note that email is the preferred method.

1.4 REPORT ORGANIZATION

This document has been organized into the following sections:

Section 1.0 – Introduction. This section provides a Project introduction and overview, cites the CEQA Statute and Guidelines provisions to which the proposed Project is subject, and summarizes the Initial Study's conclusions.

Section 2.0 – Project Description. This section identifies the Project site location, environmental setting, characteristics, discretionary actions, construction program, phasing, agreements, and required permits and approvals. This Section also identifies the Initial Study's intended uses, including a list of anticipated permits and other approvals.

Section 3.0 – Initial Study Checklist. The Environmental Checklist Form provides an overview of the potential impacts that may or may not result from Project implementation.

Section 4.0 – Environmental Analysis. This section contains an analysis of environmental impacts identified in the environmental checklist.

Section 5.0 – References. This section identifies resources used to prepare the Initial Study.

2.0 PROJECT DESCRIPTION

2.1 PROJECT LOCATION

The Project site is in the City of Artesia, approximately 14 miles southeast of downtown Los Angeles; see **Figure 2-1: Regional Vicinity Map**. The Project site consists of two parcels: Assessor Parcel Number (APN) 7035-016-064 is 3.3 acres in size and located at 11709 Artesia Boulevard; and APN 7035-020-056 is 0.23 acre in size and located at 17212 Alburtis Avenue; see **Figure 2-2: Site Vicinity Map**. The Project site is generally bound by industrial uses on the north, Artesia Boulevard on the south, Alburtis Avenue and an active concrete batch plant on the east, and Flallon Avenue on the west.

The Project site is at the northeast portion of the 21-acre ABCSP area, which extends along Artesia Boulevard, generally between Corby Avenue on the east and Gridley Road on the west. As shown in **Figure 2-3: Project Site Boundary Within ABCSP**, the Project site is at the eastern extent of ABCSP's Quadrant 2, which is comprised of approximately 6.0 acres located north of Artesia Boulevard between Alburtis Avenue on the east and Roseton Avenue on the west. Two major freeways provide regional access to the Project site: Artesia Freeway (SR-91) to the north; and Interstate 605 (I-605) to the west. From SR-91, access to the Project site is provided via Pioneer Boulevard, which is east of the Project site. From I-605, local access to the Project site is provided via Artesia Boulevard, which bisects the ABCSP area. Artesia Boulevard is a four-lane divided arterial roadway oriented east-west through the ABCSP area. Local access is also provided via Pioneer Boulevard, which is a four-lane arterial oriented north-south to the west of the Project site.

2.2 ENVIRONMENTAL SETTING

The City encompasses approximately 1.6 square miles in southeast Los Angeles County. The City is a suburban jurisdiction with a mix of residential densities, although low-density residential uses predominate. The City also contains a mix of retail commercial, office, and industrial uses.

The ABCSP area is designated Gateway Community Commercial, except two parcels southeast of the Roseton Avenue at Artesia Boulevard intersection (within ABCSP's Quadrant 4), which are designated Low Density Residential.[1] The Gateway Community Commercial designation provides for a complementary mix of job-creating industrial, manufacturing uses, and local/regional-serving commercial retail and office uses.[2] The Low Density Residential designation, which is the City's predominant land use designation, is characterized by single-family, detached units.[3]

This page intentionally left blank.

As noted above, the Project site is in ABCSP Quadrant 2. Quadrant 2 is comprised of five parcels with four unique landowners. Quadrant 2 supports a variety of commercial, retail, and industrial uses. Existing uses include a Public Storage complex, a small industrial building, and a retail center that was redeveloped in 2004. The Project site comprises the eastern portion of Quadrant 2.

2.2.1 Existing General Plan and Zoning

The Project site is designated Gateway Community Commercial.[4] As noted above, Gateway Community Commercial designation provides for a complimentary mix of job-creating industrial and manufacturing uses, and local/regional-serving commercial retail and office uses.

The City's Zoning Map classifies the Project site as Artesia Boulevard Corridor Specific Plan (ABCSP).[5] The ABCSP establishes the City's vision for a 21-acre area along Artesia Boulevard, between Gridley Road and Pioneer Boulevard. For Quadrant 2, the City's primary goal is to establish a retail, commercial, and industrial center.

2.2.2 Onsite Land Uses

The Project site is currently vacant. California Dairies, Inc., a dairy manufacturing plant totaling approximately 27,290 gross SF, occupied the Project site until it was demolished in 2022. All existing onsite utility connections remain capped and abandoned onsite.

2.2.3 Surrounding Land Uses

The Project site is generally surrounded by residential, business park, commercial, and light industrial land uses, as well as an active concrete batch plant. Land uses and corresponding zoning districts bordering the Project site are summarized in **Table 2-1: Onsite and Surrounding Land Uses and Zoning**.

4 City of Artesia. (2010). *City of Artesia General Plan 2030*. Exhibit LU-3: General Plan 2030 Land Use. http://www.cityofartesia.us/DocumentCenter/View/226/Artesia-General-Plan?bidId=.

2. California Dairies, Inc. (2020). *California Dairies, Inc Announces Closure of its Artesia Manufacturing Facility*. https://www.californiadairies.com/news/california-dairies-inc-announces-closure-its-artesia-manufacturing-facility.

2.3 BACKGROUND AND HISTORY

The Project site was formerly developed with a circa 1958 dairy manufacturing plant (California Dairies, Inc.) totaling approximately 27,290 gross SF and associated surface parking lot. The plant, which has been closed since approximately June 2020, was demolished in 2022.

As discussed above, the Project site comprises the eastern portion of ABCSP's Quadrant 2. As stated in the ABCSP, the City's primary goal for Quadrant 2 is to establish a retail, commercial, and industrial center. This mix of business uses is intended to allow for flexibility while maintaining compatibility with the existing commercial and industrial uses located to the north and east. To facilitate the incorporation of commercial, retail, and industrial businesses in Quadrant 2, no residential uses shall be permitted within Quadrant 2.[6]

On June 15, 2022, the Project Applicant submitted their Design Review and Vesting Tentative Tract Map Application to the City's Community Development Department Planning Division for a mixed-use development comprised of 80 DU and approximately 8,650 SF of commercial uses on the Project site. The City deemed the application complete on June 21, 2022. Upon initial Project review, the City confirmed the proposed development's residential component was not permitted in Quadrant 2. The ABCSP specifies the following concerning permitted land uses in Quadrant 2: "For Quadrant 2 the City's primary goal is to establish a retail, commercial, and industrial center…no residential uses shall be permitted within this quadrant."[7] The ABCSP specifies that land use changes constitute a Major Modification, thus, require an amendment to the ABCSP.

[6] City of Artesia. (2011). *Artesia Boulevard Corridor Specific Plan*. Page 42.

[7] City of Artesia. (2011). *Artesia Boulevard Corridor Specific Plan*. Page 42.

That ABCSP Amendment and the proposed development, among other elements, are collectively referred to as the "Project" subject of this Initial Study and the forthcoming EIR.

2.4 PROJECT CHARACTERISTICS

2.4.1 Project Overview

The Project proposes the construction and operation of a mixed-use development comprised of 80 DU and approximately 8,650 SF of commercial uses, as described below. To allow the proposed development, the Applicant proposes to amend the ABCSP. The proposed Zoning Code Text Amendment would amend the ABCSP to permit residential uses on the Project site, establish a maximum allowable development within the Project site, and amend the ABCSP's Design Standards and Guidelines (among other chapters). In addition to the Zoning Code Text Amendment, the Project seeks approval of the following entitlements: General Plan Amendment; Design Review; Development Agreement; Vesting Tentative Tract Map No. 83834; and CEQA EIR certification. These requested approvals, which are collectively referred to as the "Project," are further described below.

2.4.2 Conceptual Site Plan

The Project would construct a mixed-use development generally comprised of two portions – a commercial portion and a residential portion – connected by pedestrian walkways. **Figure 2-4: Conceptual Site Plan**, depicts the proposed land plan. In total, the Project proposes approximately 8,650 SF of commercial uses and 80 DU, including the components described below. The proposed land uses would be developed at a density of 23.2 DU/ac.

- One building with approximately 2,700 SF of commercial uses;
- One mixed-use building with approximately 3,450 SF of commercial uses on the ground level with 4 carriage-type townhome units above;
- Eight shopkeeper units – commercial condominiums totaling 2,500 SF on the ground level with townhomes above;
- 9 live/work townhome units; and
- 59 three-story townhome units.

The Project is designed to be a mixed-use, pedestrian-oriented placemaking development with various commercial opportunities. The buildings are linked by a central pedestrian walkway through a series of landscaped courtyards. The Project site is divided into two portions: the northern portion is bisected by the central pedestrian walkway, pool, and pool building and consists of traditional paseo Rowtown residential clustering around a recreation area; and the southern portion fronting Artesia Boulevard consists of the urban commercial mixed-use buildings.

This page intentionally left blank.

FIGURE 2-4: CONCEPTUAL SITE PLAN

Artesia Place Project (Artesia Boulevard Corridor Specific Plan Amendment)

NOT TO SCALE

Kimley»Horn

This page intentionally left blank.

The Project proposes a total of 40,265 SF of open space and a 462-SF pool building; see **Table 2-2: Open Spaces and Amenities**.

TABLE 2-2: OPEN SPACES AND AMENITIES	
Open Space	**Amount (SF)**
Common Residential: Common Green	6,679
Common Residential: Paseos	12,428
Private Residential: Decks	5,160
Live/work Mall Terrace	4,288
Retail Plaza and Courts	11,248
Pool Building	462
Total	***40,265***

2.4.3 Architecture

As noted above, the Project site is divided into the traditional paseo Rowtown residential clustering around a recreation area at the site's northern portion and the urban commercial mixed-use buildings at the site's southern portion fronting onto Artesia Boulevard. The Project is designed for a gradual transition of building types. The single-story "Main Street" style sidewalk retail shops are backed by a California-style courtyard with storefronts and newsstand kiosks. The shopkeeper units gradually transition to smaller shops.

The architecture contains a blend of modern styles. Midcentury detailing is consistent with shades of neutral colors and enriched material selections, including linear "wood" sidings, stone veneers, light color plaster, and dark window frames. The commercial, shopkeeper, and live/work units have a "weathered" antique white brick veneer to differentiate from the modern elements of the residential units. The white brick, dark window frames, and accent-colored front doors mimic modernized, repurposed, and renovated historic buildings.

2.4.4 Parking, Access, Circulation

PARKING

Onsite Parking. Pursuant to Artesia Municipal Code (AMC) §9-2.1103: Parking Spaces Required, the Project would require 214 vehicle parking spaces to meet the parking demand generated by the proposed land uses. The Project proposes 216 vehicle parking spaces, as follows: for the residential uses, two spaces per garage for a total of 160 spaces and 20 guest spaces; and 36 parking spaces for the commercial uses (i.e., the livework/shopkeeper units and retail uses).

Offsite (Onstreet) Parking. The Project would also provide 20 offsite onstreet parking spaces (parallel and perpendicular) along Flallon Avenue and Alburtis Avenue. These offsite onstreet spaces are not proposed to meet the Project's parking demand (as described), but are instead proposed by the Applicant as a community benefit.

Offsite (Vehicle Storage). The fully improved, existing 0.2-acre parking lot located at 17212 Alburtis Avenue would be made available to one of the eight proposed shopkeeper units for vehicle storage purposes. The Project does not propose to improve or modify this existing lot. The Specific Plan will detail the land uses permitted on this lot.

Rideshare Parking. An approximately three-space rideshare pickup/drop-off (e.g., Lyft or Uber) location is proposed at the Project site's southern portion, along Artesia Boulevard.

ACCESS

The Project site would be accessed via a left-turn pocket on eastbound Artesia Boulevard onto Alburtis Avenue. The Project Site would also be accessed via westbound Artesia Boulevard onto Alburtis Avenue and Flallon Avenue.

CIRCULATION

The Project would provide pedestrian-oriented accessible walkways to all of its components. A central pedestrian walkway is provided between the uses and also down the center of the Project site. The walkway leads through landscaped courtyards towards a recreational area and the pool. Sidewalks would be provided on all Project site frontages and boundaries. The residential units that front the adjacent streets would include lockable gate access to the walkways that connect with the surrounding streets.

2.4.5 Specific Plan Amendment

The ABCSP includes six chapters to provide information and guidelines for development and implementation of land uses within the ABCSP area's boundaries.

INTRODUCTION

ABCSP Section 1: Introduction provides the concept for the ABCSP area and defines the corridor goals, objectives, vision, history, project setting, regulations, and existing conditions. The proposed Project will include updated zoning districts and Project Entitlement History to document the amendment to the ABCSP. It will define the amendment changes and highlight document revisions.

LAND USE PLAN

ABCSP Section 2: Land Use Plan introduces the proposed development approach for the ABCSP area, provides a vision for the ABCSP area quadrants, and incorporates an updated Land Use Map and Table of Permitted Uses. Key elements include Quadrant 2a and 2b vision, conceptual development scenario, and proposed and permitted land uses. The Project proposes to amend the ABCSP Land Use Plan to include Quadrant 2a as Multiple Business Use and 2b (the Project site) as Mixed-Use to permit residential and other uses.

URBAN DESIGN STANDARDS AND GUIDELINES

ABCSP Section 3: Urban Design Standards and Guidelines provides specific standards for how buildings in the ABCSP area can be developed (e.g., setbacks, parking requirements, etc., and provides guidelines to enhance the architectural style of buildings. This section also provides guidelines for design features (e.g., streetscapes, signage, lighting, rooflines, building materials) and other design elements. The Project proposes to amend the design guidelines and standards to include amended Quadrants 2a and 2b and specific related design standards and guidelines.

MOBILITY PLAN

ABCSP Section 4: Mobility Plan identifies established and planned roadway conditions within the ABCSP, including through contextual exhibits and conceptual street sections. This section also addresses options for alternative transportation modes within the corridor (e.g., bicycles, buses, and walking). The Project proposes to amend the ABCSP Mobility Plan to include updated access points for ingress/egress at the Project site, address onsite and offsite parking, and trip generation to include the amended quadrants.

INFRASTRUCTURE PLAN

ABCSP Section 5: Infrastructure Plan addresses key utilities and public services including water, sewer, energy, police, fire, and other services necessary for the ABCSP area's development. The Project's proposed utilities and infrastructure are potable and reclaimed water, sewer, stormwater drainage and water treatment, electricity, natural gas, and telecommunications. The ABCSP area already includes the distribution, location, extent of major components of public and private utilities and infrastructure, and other essential facilities needed to support the proposed Project. The Project does not propose to amend the ABCSP Infrastructure Plan.

ADMINISTRATION AND IMPLEMENTATION

ABCSP Section 6: Administration and Implementation identifies strategies to execute the ABCSP's recommendations, and specifies the steps needed to implement and modify the ABCSP. The Project does not propose to amend the ABCSP Administration and Implementation Section.

GENERAL PLAN CONSISTENCY

ABCSP Appendix A: The General Plan Consistency ties the ABCSP to the Citywide General Plan. The ABCSP Amendment will ensure omission of the former site operations and will be updated to include pertinent information on the amended Quadrant 2 into Quadrant 2a and 2b.

2.4.6 Construction and Phasing

The Project construction is anticipated to occur as three phases, but would be continuous with no pauses; see **Figure 2-5, Construction Phasing Plan**.

- Phase I:
    1. Grading, site work, and base paving for all alleys, streets, and underground utilities;

2. Construction of all commercial buildings;
3. Construction of a mix of units (including model homes) fronting Flallon Avenue.

- Phases II and III would consist solely of vertical construction of the buildings.

Phased occupancy of the proposed Project would be permitted. A Temporary Certificate of Occupancy may be issued pending clearance of certain final Project conditions of approval, subject to City approval.

Project construction is anticipated to occur over approximately 24 months, beginning September 2023 and ending August 2025. For purposes of this environmental analysis, opening year is assumed to be 2025.

Grading for the Project would require cut and fill, which would be balanced onsite. The Project site would be graded to mimic the existing grading and drainage patterns. The overall site grading and drainage pattern would be southerly to confluence with street flows to the Artesia Boulevard at Flallon Avenue intersection.

2.5 AGREEMENTS, PERMITS, AND APPROVALS

The City, as Lead Agency for the Project, has discretionary authority over the Project. In order to implement the Project, the Applicant would need to obtain, at a minimum, the following discretionary permits/approvals:

Case No. 2022-13, consisting of the following components:

- General Plan Amendment to permit integrated, mixed-use commercial and residential development to be considered and regulated with the adoption of specific plans;
- Zoning Code Text Amendment to amend the ABCSP to permit residential uses, establish a maximum allowable development within the Project site, and to amend the ABCSP's Design Standards and Guidelines (among other chapters);
- Design Review to review and approve the development's proposed physical design;
- Vesting Tentative Tract Map No. 83834 to subdivide and accommodate 80 Units for condominium purposes;
- Development Agreement; and
- Environmental Impact Report (EIR) certification.

3.0 INITIAL STUDY CHECKLIST

1. **Project title:**

   Artesia Place Project (Artesia Boulevard Corridor Specific Plan Amendment)

2. **Lead agency name and address:**

   City of Artesia
   18747 Clarkdale Avenue
   Artesia, California 90701

3. **Contact person and phone number:**

   Okina Dor, Community Development Manager
   Tel: 562-865-6262 Ext: 227
   Planning@cityofartesia.us

4. **Project location:**

   11709 Artesia Boulevard
   Artesia, California 90701

5. **Project sponsor's name and address:**

   G3 Urban
   15235 South Western Avenue
   Gardena, California 90249

6. **General plan designation:**

   Gateway Community Commercial

7. **Zoning:**

   Artesia Boulevard Corridor Specific Plan

8. **Description of project: (Describe the whole action involved, including but not limited to later phases of the project, and any secondary, support, or off-site features necessary for its implementation. Attach additional sheets if necessary.)**

   See **Section 2.4: Project Characteristics**

9. **Surrounding land uses and setting: Briefly describe the project's surroundings:**

   See **Section 2.2.3: Surrounding Land Uses**

10. **Other public agencies whose approval is required (e.g., permits, financing approval, or participation agreement.)**

    To be determined, as part of EIR preparation.

11. **Have California Native American tribes traditionally and culturally affiliated with the project area requested consultation pursuant to Public Resources Code §21080.3.1? If so, is there a**

plan for consultation that includes, for example, the determination of significance of impacts to tribal cultural resources, procedures regarding confidentiality, etc.?

The City prepared letters addressed to each Native American tribe listed on the May 20, 2021 Los Angeles County Native American Heritage Commission (NAHC) Tribal Consultation List. Outreach letters were sent to Tribal representatives on June 14, 2022, initiating consultation with tribes pursuant to Assembly Bill 52 (AB 52) and Senate Bill 18 (SB 18); see also **Section 4.18: Tribal Cultural Resources**.

3.1 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ Aesthetics	☐ Agriculture / Forestry Resources	☒ Air Quality
☐ Biological Resources	☒ Cultural Resources	☒ Energy
☒ Geology/Soils	☒ Greenhouse Gas Emissions	☐ Hazards & Hazardous Materials
☐ Hydrology / Water Quality	☒ Land Use / Planning	☐ Mineral Resources
☒ Noise	☒ Population / Housing	☒ Public Services
☒ Recreation	☒ Transportation	☒ Tribal Cultural Resources
☒ Utilities / Service Systems	☐ Wildfire	☒ Mandatory Findings of Significance

DETERMINATION:

On the basis of this initial evaluation (check one):

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☒ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

CERTIFICATION:

Signature _____ Date 8/8/22

4.0 ENVIRONMENTAL ANALYSIS

4.1 AESTHETICS

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
1. AESTHETICS. Except as provided in Public Resources Code §21099, would the project:				
a) Have a substantial adverse effect on a scenic vista?				X
b) Substantially damage scenic resources, including but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway?				X
c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?				X
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			X	

IMPACT ANALYSIS

1a) Have a substantial adverse effect on a scenic vista?

No Impact. Under CEQA, a scenic vista is defined as a viewpoint that provides expansive views of a highly-valued landscape for the public's benefit. No scenic vistas or other scenic resources have been identified within the City of Artesia.[8] Therefore, the Project would not have an adverse effect

[8] City of Artesia (2010). *City of Artesia General Plan 2030 EIR*. Page 5.3-3.

on a scenic vista, and no impact would occur in this regard. This issue will not be further analyzed in the EIR.

1b) Substantially damage scenic resources, including but not limited to trees, rock outcroppings, and historic buildings within a state scenic highway?

No Impact. No scenic resources have been identified within the City.[9] The California Department of Transportation (Caltrans) does not list any highways within the City as officially designated State Scenic Highways.[10] Therefore, the Project would not damage scenic resources within a State Scenic Highway, and no impact would occur in this regard. This issue will not be further analyzed in the EIR.

1c) In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

No Impact. The Project site is in an urbanized area and is surrounded by urban uses. As noted in Response 1a, no scenic vistas or other scenic resources exist in the City. The Project site is zoned ABCSP. ABCSP Section 2: Land Use Plan, and ABCSP Section 3: Urban Design Standards and Guidelines include regulations and guidelines that influence visual quality. However, the ABCSP does not include regulations or guidelines that govern scenic quality. Therefore, the Project would not conflict with applicable zoning or other regulations governing scenic quality. This issue will not be further analyzed in the EIR.

The Project does propose to amend ABCSP Sections 2 and 3. ABCSP Section 2 provides a Land Use Map and list of permitted uses. ABCSP Section 3 provides specific standards for how buildings in the ABCSP area can be developed (e.g., setbacks, parking requirements, etc.), and provides guidelines to enhance the architectural style of buildings. ABCSPA Section 3 also provides guidelines for design features (e.g., streetscapes, signage, lighting, rooflines, building materials) and other design elements. The Project is designed to be a mixed-use, pedestrian-oriented, and placemaking development with various commercial opportunities. ABCSP Section 3.2.9: Mixed Use Buildings provides overarching elements that should be considered in the design of mixed-use buildings, including "allow[ing] both vertical and horizontal integration of uses in mixed use development, with an emphasis on tying the uses together with appropriate pedestrian linkages." The Project would provide various mixed-use buildings consisting of ground level commercial uses with townhome units above. The Project's various buildings would be linked by a central pedestrian walkway through a series of landscaped courtyards. As such, the Project would incorporate elements as listed in ABCSP Section 3 to ensure quality and well-planned development occurs as it relates to mixed-use buildings. Further, while the Project's proposed

[9] City of Artesia (2010). *City of Artesia General Plan 2030 EIR*. Page 5.3-3.
10 California Department of Transportation. (2019). *California State Scenic Highway System Map*. https://caltrans.maps.arcgis.com/apps/webappviewer/index.html?id=465dfd3d807c46cc8e8057116f1aacaa.

amendments to ABCSP Sections 2 and 3 would allow for residential uses on the Project site, they would be consistent with the regulations and guidelines concerning Quadrants 2 and 4, which would allow for the additions of new retail, and live/work shopkeeper development along with residential uses. Therefore, the proposed amendments to ABCSP would not degrade the area's visual quality. This issue will not be further analyzed in the EIR.

1d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Less than Significant Impact. The proposed Project would generate lighting from two primary sources: lighting from building interiors that would pass through windows and lighting from exterior sources (e.g., street lighting, parking lighting, building illumination, security lighting, and landscape lighting). The proposed Project would adhere to the ABCSP's comprehensive development standards for lighting, including a requirement that spotlighting or glare from any site lighting from adjacent properties, and direct lighting at a specific object or target area is shielded. Project implementation would require review by designated review authorities to enforce these standards, as outlined in ABCSP Section 6.3: Administration. Therefore, the Project would not create a new source of substantial light or glare that would adversely affect the area's day or nighttime views, and impacts would be less than significant. This issue will not be further analyzed in the EIR.

4.2 AGRICULTURE AND FORESTRY RESOURCES

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
2. AGRICULTURE AND FORESTRY RESOURCES. In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state's inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?				X
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?				X
c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code §12220(g)), timberland (as defined by Public Resources Code §4526), or timberland zoned Timberland Production (as defined by Government Code §51104(g))?				X
d) Result in the loss of forest land or conversion of forest land to non-forest use?				X
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of				X

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
Farmland, to non-agricultural use or conversion of forest land to non-forest use?				

IMPACT ANALYSIS

2a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

2b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?

2c) Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code §12220(g)), timberland (as defined by Public Resources Code §4526), or timberland zoned Timberland Production (as defined by Government Code §51104(g))?

2d) Result in the loss of forest land or conversion of forest land to non-forest use?

2e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

No Impact. No Prime Farmland, Unique Farmland, or Farmland of Statewide or Local Importance is mapped in the City.[11] Further, the Project site is not the subject of a Williamson Act Contract.[12] No agricultural, forest land, or timberland zoning exists in the City. According to the California Department of Forestry and Fire Land Cover Mapping and Monitoring Program, the Project site is not designated as forest or Timberland.[13] Therefore, the Project would result in no impact concerning mapped farmlands, Williamson Act contracts, agricultural, forest, or timber land zoning, or the conversion or loss of Farmland, forest land or timberland. These issues will not be further analyzed in the EIR.

4.3 AIR QUALITY

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
3. AIR QUALITY. Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	X			
b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	X			
c) Expose sensitive receptors to substantial pollutant concentrations?	X			
d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?			X	

The Project site is within the South Coast Air Basin (SCAB), which is under the South Coast Air Quality Management District's (South Coast AQMD) jurisdiction. The South Coast AQMD significance criteria may be relied upon to make the above determinations. According to the South Coast AQMD, an air quality impact is considered significant if a proposed project would violate any ambient air quality standard, contribute substantially to an existing or projected air quality violation, or expose sensitive receptors to substantial pollutant concentrations. The South Coast AQMD has established thresholds of significance for air quality during Project construction and operations.

The proposed Project would also be subject to ambient air quality standards. These are addressed through an analysis of localized CO impacts.

In addition to the CO hotspot analysis, the South Coast AQMD developed Local Significance Thresholds ("LSTs") for emissions of NO_2, CO, PM10, and PM2.5 generated at new development sites. LST analysis for construction is applicable for all projects that disturb 5.0 acres or less on a single day.

IMPACT ANALYSIS

3a) Conflict with or obstruct implementation of the applicable air quality plan?

3b) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?

3c) Expose sensitive receptors to substantial pollutant concentrations?

Potentially Significant Impact. The South Coast AQMD is required, pursuant to the Federal Clean Air Act (FCAA), to reduce criteria pollutant emissions for which SCAB is in non-attainment. The Project proposes to construct up to 8,650 SF of commercial uses and 80 DUs on the Project site, generating construction traffic for material and construction worker trips. Project construction activities would generate short-term criteria air pollutant emissions. During operations, the proposed land uses would generate vehicle trips and there would be intermittent deliveries. The Project's operational emissions would be associated with area sources, energy sources, and mobile sources. Project construction and operations could result in the release of air contaminants. Therefore, the EIR will further evaluate these potential impacts.

3d) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people?

Less than Significant Impact. During construction-related activities, some odors (not substantial pollutant concentrations) that the public may detect are those typical of construction vehicles (e.g., diesel exhaust from grading and construction equipment). These odors are a temporary short-term impact, which are typical of construction projects and disperse rapidly.

The South Coast AQMD CEQA Air Quality Handbook (South Coast AQMD, 1993) identifies certain land uses as sources of odors. These land uses include agriculture, wastewater treatment plant, food-processing plants, chemical plants, composting, refineries, landfills, dairies, and fiberglass molding. The proposed Project is a mixed-use development and does not propose to include any odor-inducing uses on the site. Therefore, the Project would result in a less than significant impact related to other emissions leading to odors adversely affecting a substantial number of people. This issue will not be further analyzed in the EIR.

4.4 BIOLOGICAL RESOURCES

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
4. BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?				X
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?				X
c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological				X
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?				X
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?				X
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other				X

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
approved local, regional, or state habitat conservation plan?				

IMPACT ANALYSIS

4a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?

4b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?

4c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological?

No Impact. The Project site is currently vacant, but was formerly occupied by an industrial use. No natural habitats are present onsite. The Project site is bounded by industrial uses to the north; residential and commercial uses to the south; residential, commercial, and an active concrete batch plant to the east; and industrial uses to the west. No natural habitats are present on these adjacent areas, and only landscaping (i.e., ornamental vegetation) is present. Based on review of the existing and adjacent site conditions, no candidate, sensitive, or special-status plant or wildlife species, riparian habitat or other sensitive natural community, or wetlands are present on or adjacent to the Project site. Therefore, the Project would not have an adverse effect on any candidate, sensitive, or special-status plant or wildlife species, riparian habitat or other sensitive natural community, or wetlands. No impact would occur, and these issues will not be further analyzed in the EIR.

4d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

No Impact. Corridors are linear linkages between two or more habitat patches, which provide for wildlife movement and dispersal. The Project site has been previously disturbed and developed, and no natural habitats are present onsite. The Project site is surrounded by uses. No natural habitats are present in adjacent areas, and only landscaping (i.e., ornamental vegetation) is present. The Project would provide trees in the landscaped courtyards, walkways, and Project site perimeter. Although unlikely, these trees could potentially provide nesting sites for migratory birds. However, the Project would comply with the Migratory Bird Treaty Act (MBTA), which regulates

vegetation removal during the nesting season to ensure that significant impacts to migratory birds would not occur. In accordance with the MBTA, any tree removal activities associated with the Project would take place outside of the nesting season (February 1 – August 31), to the extent feasible. Should vegetation removal activities occur during the nesting season, a biological monitor would be present during the removal activities to ensure that no active nests would be impacted. If active nests are found, a buffer would be established until the fledglings have left the nest. With compliance with the MBTA, the Project would not interfere with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites, and no impact would occur. This issue will not be further analyzed in the EIR.

4e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

4f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

No Impact. The City does not have a tree preservation policy or ordinance, or any other local policies or ordinances protecting biological resources The Project site is not located within the boundaries of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan. Therefore, the Project would not conflict with such policies, ordinances, or plans. No impact would occur in this regard. These issues will not be further analyzed in the EIR.

4.5 CULTURAL RESOURCES

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
5. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource pursuant to in §15064.5?				X
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	X			
c) Disturb any human remains, including those interred outside of dedicated cemeteries?			X	

IMPACT ANALYSIS

5a) Cause a substantial adverse change in the significance of a historical resource pursuant to in §15064.5?

No Impact. The Project site is vacant. There are no potentially significant historic resources present onsite. Therefore, the Project would not cause an adverse change in the significance of a historical resource. No impact would occur in this regard. This issue will not be further analyzed in the EIR.

5b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?

Potentially Significant Impact. Past development has previously disturbed the Project site, thus, the Project site is considered to have low archeological sensitivity. Given the extent of onsite ground disturbances from previous development and the area's urbanized nature, there is low potential for the Project's ground-disturbing activities to encounter an archaeological resource. Notwithstanding, although unlikely, the potential exists for accidental discovery of archaeological resources during ground-disturbing activities. The EIR will further evaluate this potential impact.

5c) Disturb any human remains, including those interred outside of dedicated cemeteries?

Less than Significant Impact. No dedicated cemeteries or other places of human interment are on or adjacent to the Project site. The Project site has been previously graded and developed. As such, the upper levels of sediment and fill are not likely to contain any human remains. In the unlikely event that human remains are unearthed during Project construction, State Health and Safety Code §7050.5 requires that no further disturbance shall occur until the County Coroner has

made the necessary findings as to origin and disposition pursuant to California PRC §5097.98. If human remains of Native American origin are discovered during Project construction, compliance with State laws, which fall within the jurisdiction of the Native American Heritage Commission (NAHC) (PRC §5097), relating to the disposition of Native American burials will be adhered to. Therefore, following compliance with the established regulatory framework described above, the Project's potential impacts concerning disturbance to human remains would be less than significant. This issue will not be further analyzed in the EIR.

4.6 ENERGY

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
6. ENERGY. Would the project:				
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	X			
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	X			

IMPACT ANALYSIS

6a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

6b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?

Potentially Significant Impact. Southern California Edison (SCE) provides electricity to the Project area.[14] Southern California Gas Company (SoCalGas) provides natural gas service to the Project area.[15] During Project construction, transportation fuel use would depend on the type and number of trips, vehicle miles traveled (VMT), fuel efficiency of vehicles, and travel mode. During Project operations, residential and commercial energy fuel consumption would be associated with vehicle trips, delivery truck trips, and maintenance and repair crew trips. Additionally, the Project's electrical and natural gas usage would depend on the forecast population growth and the characteristics of the permitted non-residential uses.

The Project's energy demand is expected to be served by the existing utilities described above. The Project's construction and operational electrical, gas, and fuel demand, as well as consistency with State and local plans for renewable energy and energy efficiency, will be evaluated in the EIR.

[15] City of Artesia. *Utility Providers*. https://www.cityofartesia.us/190/Utility-Providers.

4.7 GEOLOGY AND SOILS

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
7. GEOLOGY AND SOILS. Would the project:				
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.				X
ii) Strong seismic ground shaking?			X	
iii) Seismic-related ground failure, including liquefaction?			X	
iv) Landslides?				X
b) Result in substantial soil erosion or the loss of topsoil?			X	
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			X	
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?			X	
e) Have soils incapable of adequately supporting the use of septic tanks or				X

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
alternative waste water disposal systems where sewers are not available for the disposal of waste water?				
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	X			

A Preliminary Geotechnical Investigation was prepared for the Project site by Albus & Associates, Inc. in December 2021, and an updated letter was prepared for the Project site by Albus & Associates, Inc. in July 2022; see **Appendix A: Preliminary Geotechnical Investigation**.

IMPACT ANALYSIS

7a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

7a.i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.

No Impact. The Alquist-Priolo Earthquake Fault Zoning Act was passed in 1972 to mitigate the hazard of surface faulting to structures for human occupancy. The Alquist-Priolo Earthquake Fault Zoning Act's main purpose is to prevent the construction of buildings used for human occupancy on the surface trace of active faults. The Alquist-Priolo Earthquake Fault Zoning Act requires the State Geologist to establish regulatory zones, known as "Alquist-Priolo (AP) Earthquake Fault Zones," around the surface traces of active faults and to issue appropriate maps. If an active fault is found, a structure for human occupancy cannot be placed over the trace of the fault and must be set back from the fault (typically 50 feet). The Project site is not located within an Alquist-Priolo Earthquake Fault Zone.[16] Additionally, no evidence exists of a known fault within or adjacent to the Project site. The closest known seismically active fault to the Project site is the Puente Hills (Coyote Hills) fault located approximately 2.7 miles to the northeast.[17] The Project would not expose people or structures to adverse effects involving rupture of a known earthquake fault. Therefore, no impact would occur in this regard. This issue will not be further analyzed in the EIR.

[16] California Department of Conservation. (2015). Earthquake Zones of Required Investigation Inglewood Quadrangle. http://gmw.consrv.ca.gov/SHP/EZRIM/Maps/INGLEWOOD_EZRIM.pdf.

[17] Albus & Associates, Inc. (2021). *Preliminary Geotechnical Investigation, Proposed Industrial Development, 11709 Artesia Blvd. Artesia, California.* Page 7.

7a.ii) Strong seismic ground shaking?

Less than Significant Impact. The Project site is in an area of high regional seismicity. Ground shaking originating from earthquakes along active faults in the region is expected to induce lower horizontal accelerations due to smaller anticipated earthquakes and/or greater distances to other faults. The closest known seismically active fault to the Project site is the Puente Hills (Coyote Hills) fault located approximately 2.7 miles to the northeast.[18] Based on the Project's location within the seismically active Southern California region, Project implementation could expose people and structures to potential adverse effects involving strong seismic ground shaking. The intensity of ground shaking on the Project site would depend upon the earthquake's magnitude, distance to the epicenter, and geology of the area between the Project site and epicenter. Regulatory controls to address potential seismic hazards would be imposed on the Project through the permitting process. The Project would be subject to compliance with AMC Title 8, Chapter 1: Building Code, building standards, including specific provisions for seismic design of structures. Moreover, the City's Building and Safety Department would review the Project's construction plans to verify compliance with standard engineering practices, the City's Building Code, and the California Building Code (CBC). Following compliance with standard engineering practices and the established regulatory framework (i.e., the City's Building Code and the CBC), the Project's potential impacts concerning exposure of people or structures to potential adverse effects involving strong seismic ground shaking would be less than significant. This issue will not be further analyzed in the EIR.

7a.iii) Seismic-related ground failure, including liquefaction?

Less than Significant Impact. Liquefaction is a phenomenon where earthquake-induced ground vibrations increase the pore pressure in saturated, granular soils until it is equal to the confining, overburden pressure. When this occurs, the soil can completely lose its shear strength and enter a liquefied state. For liquefaction to occur, three criteria must be met:

- A source of ground shaking, such as an earthquake, capable of generating soil mass distortions.
- A relatively loose silty and/or sandy soil.
- A relative shallow groundwater table (within approximately 50 feet below ground surface) or completely saturated soil conditions that will allow positive pore pressure generation.

The Project site is located within a State-designated zone of potentially liquefiable soils.[19] As part of the Geotechnical Investigation, a site-specific liquefaction analysis was performed for the Project site. The liquefaction susceptibility of the onsite soils was evaluated by analyzing the potential concurrent occurrence of the above-mentioned three basic factors under the guidance the State of California Special Publication (SP) 117A, Guidelines for Evaluating and Mitigating Seismic Hazards in California. The liquefaction analysis indicated that liquefaction could

18 Albus & Associates, Inc. (2021). *Preliminary Geotechnical Investigation, Proposed Industrial Development, 11709 Artesia Blvd. Artesia, California*. Page 7.
19 Albus & Associates, Inc. (2021). Preliminary Geotechnical Investigation, Proposed Industrial Development, 11709 Artesia Blvd. Artesia, California. Pages 6-7.

occur in soils located below a depth of 10 feet if groundwater were to rise to shallowest historic levels concurrent with a strong ground motion. Design-based recommendations, such as well-reinforced foundations, post-tensioned slabs, grade beams with structural slabs, or mat foundations, would reduce the potential risks of liquefaction. Specific recommendations to ensure the Project would not cause potential substantial adverse effects associated with liquefaction are provided in the Geotechnical Investigation. The City contracts with the Los Angeles County Department of Public Works (LACDPW) Building and Safety Department, which would review the Project's grading and construction plans to verify compliance with standard engineering practices, the City's Building Code, and the Geotechnical Investigation's recommendations. Specifically, the Project would be required to comply with the City's Standard Condition of Approval requiring that all development activities conducted on the Project site incorporate the professional recommendations contained in the Geotechnical Investigation and all recommendations set forth in a site-specific, design-level geologic and geotechnical investigation(s) approved by the City Engineer or their designee, provided such recommendations meet and/or surpass relevant State and City laws, ordinances, and Code requirements, including California Geological Survey's Special Publication 117A and the City's Building Code. Following compliance with standard engineering practices, the City's Building Code, the CBC, and the Geotechnical Investigation's recommendations, the Project's potential impacts involving adverse effects associated with seismic-related ground failure, including liquefaction, would be less than significant. This issue will not be further analyzed in the EIR.

7a.iv) Landslides?

No Impact. Landslides are mass movements of the ground that include rock falls, relatively shallow slumping and sliding of soil, and deeper rotational or transitional movement of soil or rock. The Project site is relatively flat[20] and is not located in an area mapped as an earthquake-induced landslide hazard area.[21] Therefore, the Project would not cause potential substantial adverse effects involving landslides. There would be no impact in this regard. This issue will not be further analyzed in the EIR.

7b) Result in substantial soil erosion or the loss of topsoil?

Less than Significant Impact. Grading and earthwork activities during construction would expose soils to potential short-term erosion by wind and water. During construction, the Project would be subject to compliance with AMC Title 6 Chapter 7: Storm Water Management and Discharge Control, which requires compliance with the National Pollutant Discharge Elimination System (NPDES) General Permit for Stormwater Discharges Associated with Construction Activities (Construction General Permit). The Construction General Permit requires development and implementation of a Stormwater Pollution Prevention Plan (SWPPP) and monitoring plan, which must include erosion-control and sediment-control Best Management Practices (BMPs) that would meet or exceed measures required by the Construction General Permit to control potential construction-related erosion. Following compliance with the established regulatory framework

[20] Albus & Associates, Inc. (2021). *Preliminary Geotechnical Investigation, Proposed Industrial Development, 11709 Artesia Blvd. Artesia, California*. Page 8.

[21] California Department of Conservation. (2022). *Earthquake Zones of Required Investigation.* https://maps.conservation.ca.gov/cgs/EQZApp/.

(i.e., the AMC and Construction General Permit), the Project's potential impacts concerning soil erosion and loss of topsoil would be less than significant. This issue will not be further analyzed in the EIR.

7c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Less than Significant Impact. The conditions favorable for hazards associated with unstable geologic unit or soil (landslide (see Threshold 4.7a.iv) or subsidence/collapse) are not present in the City; however, the Project site is located within a State-designated zone of potentially liquefiable soils (see Threshold 4.7a.iii). The Geological Investigation concluded that lateral spreading is not a significant risk at the Project site in consideration of the relatively flat site topography and lack of a nearby channel face or slope.[22]

Subsidence occurs when the withdrawal of groundwater, oil, or natural gas vertically displaces a large portion of land. Soils that are particularly subject to subsidence include those with high silt or clay content. Soil materials encountered at the Project site consisted of approximately 2.0 feet of artificial fill over alluvial soils. The artificial fill is predominately comprised of grayish brown sandy silt and silty sand. Underlying the artificial fills are native soils consisting of young alluvial fan deposits (Qyfa). The alluvial fan deposit materials were encountered to the maximum depth explored of 51.5 feet and are comprised of grayish brown to light gray, interlayered silty sand and sand that are damp to wet and loose to very dense. Occasional lenses and layers of sandy silt are also present that are generally very moist to wet and firm to very stiff.[23] No large-scale extraction of groundwater, gas, oil, or geothermal energy is occurring, or planned, at the Project site or in the general Project site vicinity. The Geological Investigation concluded that near surface soils will shrink about 5 to 10 percent when removed and replaced as compacted fill. Subsidence due to reprocessing of removal bottoms is anticipated to be about 0.05 feet.[24]

The Geotechnical Investigation makes recommendations concerning design parameters, foundations, slabs, and general earthwork and grading, among other factors. The City contracts with the LACDPW Building and Safety Department, which would review the Project's grading and construction plans to verify compliance with standard engineering practices, the City's Building Code, the CBC, and the Geotechnical Investigation's recommendations, including those concerning landslides, lateral spreading, subsidence, liquefaction, and collapse. Specifically, the Project would be required to comply with the City's Standard Condition of Approval requiring that all development activities conducted on the Project site incorporate the professional recommendations contained in the Preliminary Geotechnical Investigation and all

[23] Albus & *Associates*, Inc. (2021). *Preliminary Geotechnical Investigation, Proposed Industrial Development, 11709 Artesia Blvd. Artesia, California*. Pages 3-4.

[24] Albus & Associates, Inc. (2021). *Preliminary Geotechnical Investigation, Proposed Industrial Development, 11709 Artesia Blvd. Artesia, California*. Page 8.

recommendations set forth in a site-specific, design-level geologic and geotechnical investigation(s) approved by the City Engineer or their designee, provided such recommendations meet and/or surpass relevant State and City laws, ordinances, and Code requirements, including California Geological Survey's Special Publication 117A and the City's Building Code. Following compliance with standard engineering practices, the established regulatory framework (i.e., the City's Building Code and CBC), and the Geotechnical Investigation's recommendations, the Project would not result in onsite or offsite landslide, lateral spreading, subsidence, liquefaction, or collapse. Therefore, impacts would be less than significant in this regard. These issues will not be further analyzed in the EIR.

7d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Less than Significant Impact. The Geotechnical Investigation concluded the Project site's near-surface soils are generally anticipated to possess a low expansion potential. The City contracts with the LACDPW Building and Safety Department, which would review the Project's grading and construction plans to verify compliance with standard engineering practices, the City's Building Code, the CBC, and the Geotechnical Investigation's recommendations, including those concerning expansive soils. Specifically, the Project would be required to comply with the City's Standard Condition of Approval requiring that all development activities conducted on the Project site incorporate the professional recommendations contained in the Preliminary Geotechnical Investigation and all recommendations set forth in a site-specific, design-level geologic and geotechnical investigation(s) approved by the City Engineer or their designee, provided such recommendations meet and/or surpass relevant State and City laws, ordinances, and Code requirements, including California Geological Survey's Special Publication 117A and the City's Building Code. Following compliance with standard engineering practices, the City's Building Code, and the Geotechnical Investigation's recommendations, the Project would not create substantial direct or indirect risks to life or property concerning expansive soils. Therefore, impacts would be less than significant in this regard. This issue will not be further analyzed in the EIR.

7e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?

No Impact. The Project would connect to the City's sewer system and would not include use of septic tanks or alternative wastewater disposal systems. Therefore, there would be no impact in this regard. This issue will not be further analyzed in the EIR.

7f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Potentially Significant Impact. Paleontological resources are the fossilized remains of organisms from prehistoric environments found in geologic strata. These resources are valued for the information they yield about the Earth's history and its past ecological settings. The potential for

fossil occurrence depends on the rock type exposed at the surface in a given area. Previous construction-related excavation on the Project site has disturbed sediments beyond depths at which buried prehistoric cultural resources are likely. Notwithstanding, the potential exists for accidental discovery of paleontological resources during ground-disturbing activities. The EIR will further evaluate these potential impacts.

4.8 GREENHOUSE GAS EMISSIONS

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
8. GREENHOUSE GAS EMISSIONS. Would the project:				
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	X			
b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?	X			

IMPACT ANALYSIS

8a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Potentially Significant Impact. The proposed Project would generate greenhouse gas (GHG) emissions directly from construction-related activities. Construction GHG emissions are typically summed and amortized over the Project's lifetime (assumed to be 30 years), then added to the operational emissions.[25] Operational or long-term emissions would occur over the proposed Project's life. The Project's operational GHG emissions would result from direct emissions such as Project-generated vehicular traffic, onsite combustion of natural gas, and operation of any landscaping equipment. Operational GHG emissions would also result from indirect sources, such as off-site generation of electrical power, the energy required to convey water to the Project site and wastewater from the Project site, the emissions associated with solid waste generated from the Project site, and any fugitive refrigerants from air conditioning or refrigerators. Project construction and operations could generate GHG emissions that may have a significant impact on the environment. Therefore, the EIR will further evaluate these potential impacts.

8b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Potentially Significant Impact. The City does not currently have an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. As such, the EIR will evaluate the Project's potential to conflict with any other applicable plan, policy, or regulation of an agency adopted to reduce GHG emissions, including, but not limited to, the 2017 Scoping

[25] The Project lifetime is based on South Coast AQMD's standard 30-year assumption (South Coast Air Quality Management District, Minutes for the GHG CEQA Significance Threshold Stakeholder Working Group #13, August 26, 2009).

Plan, the Southern California Association of Governments (SCAG) Connect SoCal Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS), Title 24, AB 32, and SB 32.

4.9 HAZARDS AND HAZARDOUS MATERIALS

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
9. HAZARDS AND HAZARDOUS MATERIALS. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			X	
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?			X	
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?				X
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code §65962.5 and, as a result, would it create a significant hazard to the public or the environment?			X	
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?				X
f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			X	

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?				X

This analysis was based on the following studies prepared for the Project:

- Phase I Environmental Site Assessment (ESA) and Phase II Subsurface Investigation (Ramboll, December 2021); see **Appendix B: Phase I Environmental Site Assessment and Phase II Subsurface Investigation**
- Human Health Risk Evaluation (Ramboll, June 2022); see **Appendix C: Human Health Risk Evaluation**.

IMPACT ANALYSIS

9a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Less than Significant Impact. Project construction and operation would involve the transport, storage, use and/or disposal of limited quantities of hazardous materials, such as fuels, solvents, degreasers and paints. Examples of such activities include fueling and servicing construction equipment, and applying paints and other coatings. The Project proposes residential and commercial development, which are not anticipated to involve the routine transport, use, or disposal of quantities of hazardous materials that may create a significant hazard to the public or environment. The maintenance materials would be stored, handled, and disposed of in accordance with applicable regulations and the City's programs to control and safely dispose of hazardous materials and wastes. Specifically, the City's Hazardous Materials Release Response Plans and Inventory Program requires the owner or operator of any business that handles or stores hazardous materials equal to or above the reportable quantities to submit a Hazardous Materials Inventory and Contingency Plan. Compliance with these regulations would ensure that all hazardous wastes would be properly handled, recycled, treated, stored, and disposed. Following implementation of standard City practices and compliance with federal, State, and local regulations that address the routine transport, use, or disposal of hazardous materials, a less than significant impact would occur in this regard. This issue will not be further analyzed in the EIR.

9b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Less than Significant Impact. A Phase I ESA and a Phase II Subsurface Investigation was completed for the Project site; see **Appendix B**. The Phase I ESA concluded there are no Recognized Environmental Conditions (RECs) in connection with the Project site. Soil and soil vapor samples were collected in areas including former employee and truck parking areas, the former

underground storage tank (UST) area, the former truck wash area, former chemical storage area, former main plant chemical storage area, former boiler area storage, and former sump pump area. Soil samples were analyzed for total petroleum hydrocarbons (TPH) and pH, while soil vapor was analyzed for volatile organic compounds (VOCs). TPH were not detected in soil above applicable screening criteria, and the soil pH was generally consistent with normal background conditions.

The Phase II Subsurface Investigation concluded that benzene, tetrachloroethane (PCE), and chloroform were the only VOCs detected in the soil vapor above applicable Department of Toxic Substance Control (DTSC)/United States Environmental Protection Agency (USEPA) residential and commercial screening levels (SLs) using 0.03 as an attenuation factor (AF). Chloroform was the only VOC detected above applicable DTSC/USEPA residential screening levels (RSLs) using 0.001 as an AF. No VOCs in soil vapor were detected above applicable DTSC/USEPA commercial screening levels using 0.001 as an AF.

A screening human health risk assessment (HHRA) was completed to assess the potential health risks to future onsite commercial employees and residents based on the results of the Phase II Subsurface Investigation.[26] All detected soil concentrations were screened using commercial/industrial and residential California Environmental Protection Agency (Cal/EPA) DTSC-modified SLs. If no SLs were available, the commercial/industrial and residential RSLs from USEPA were used. TPH soil data were compared to the California Regional Water Quality Control Board (RWQCB) – San Francisco Bay Region's Environmental Screening Levels (ESLs). These SLs were used in combination with a default future commercial buildings AF of 0.0005 and a default future residential AF of 0.001. The SLs were calculated to correspond to a target cancer risk (CR) of one in a million (1E-06) and a target non-cancer hazard quotient (HQ) of one. According to the National Contingency Plan, which is commonly cited as a basis for target risk and hazard levels, lifetime incremental CR posed by a site should not exceed 1E-06 to one hundred in a million (1E-04), and non-carcinogenic chemicals would not be present at levels expected to cause adverse health effects.

As concluded in the HHRA, all chemicals detected in the soil are well below their SLs and cumulatively would not exceed an excess lifetime CR above 1E-06 or an HQ above one. Based on the HHRA results, no significant health risks associated with exposures to soils at the Project site are expected to occur for the potential future onsite residents and employees, and no vapor mitigation systems are required or warranted.

Therefore, the Project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment, and impacts would be less than significant. This issue will not be further analyzed in the EIR.

[26] Ramboll US Consulting Inc. (2022). *Human Health Risk Evaluation for 11709 Artesia Boulevard, 17208 and 17212 Alburtis Avenue, Artesia, California.*

9c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

No Impact. The school nearest the Project site, Gahr High School, located at 11111 Artesia Boulevard in City of Cerritos, is approximately 0.5 mile west of the Project site. Because the Project site would be located more than one-quarter mile from this school, any emissions and hazardous materials handling at the site, during construction and operations, would not pose a significant health risk to the school.

AMC §4-4.301: Established [Truck Routes], specifies that Artesia Boulevard, Pioneer Boulevard, and South Street are designated truck routes. Construction trucks leaving the Project site are anticipated to travel eastbound on Artesia Boulevard and north on Pioneer Boulevard to access SR-91 and connect with I-605. Based on these established truck routes, it is not anticipated that construction trucks would pass near Gahr High School. Thus, no impacts would occur in this regard. This issue will not be further analyzed in the EIR.

9d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code §65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Less than Significant Impact. Government Code §65962.5 refers to the Hazardous Waste and Substances Site List, commonly known as the Cortese List, maintained by the DTSC. The Cortese list contains hazardous waste and substance sites including public drinking water wells with detectable levels of contamination, sites with known underground storage tanks (USTs) having a reportable release, solid waste disposal facilities from which there is a known migration, hazardous substance sites selected for remedial action, historic Cortese sites, and sites with known toxic material identified through the abandoned site assessment program.

The Project site is listed on several environmental databases, as determined by the regulatory agency database search conducted as part of the Phase I ESA. However, the Phase I ESA concluded that the listings in the environmental database report are unlikely to represent an environmental concern to the site given that the listings associated with the site were properly closed, removed, and documented and recommends no further investigation regarding this issue.[27] Therefore, although the Project site is listed, the Project would not create a significant hazard to the public or the environment. Impacts would be less than significant in this regard. This issue will not be further analyzed in the EIR.

[27] Ramboll US Consulting Inc. (2021). *Phase I Environmental Site Assessment and Phase II Subsurface Investigation*. Page 18.

9e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

No Impact. There are no public airports or public use airports located within two miles of the Project site. Therefore, the Project would not result in an airport-related safety hazard or excessive noise for people residing or working on the Project site. No impact would occur in this regard. This issue will not be further analyzed in the EIR.

9f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Less than Significant Impact. The Project Site is located in an unurbanized area where adequate circulation and access is provided to facilitate emergency response. The Artesia Emergency Operations Plan outlines emergency response actions in the event of a large-scale disaster, such as a hazardous materials emergency. Further, Project construction would not require the complete closure of any public or private streets during construction. Temporary construction activities would not impede use of the streets for emergencies or access for emergency response vehicles. The Project would be subject to compliance with General Plan Policy Action SAF 5.1.2, which requires that the City and associated public services departments (e.g., Police Department and Fire Department) review development proposals for potential impacts to the provision of emergency services. Therefore, the Project's potential impacts concerning impairing implementation of or physically interfering with an emergency response plan or related policies would be less than significant. This issue will not be further analyzed in the EIR.

9g) Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

No Impact. The Project site is in a fully urbanized area and is not adjacent to any wildland. Additionally, the Project site is not within a very high fire severity zone (VHFSZ); see **Section 4.20: Wildfire**. Therefore, the Project would not expose people or structures to risk involving wildland fires. No impact would occur in this regard. This issue will not be further analyzed in the EIR.

4.10 HYDROLOGY AND WATER QUALITY

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
10. HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?			X	
b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?			X	
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i) Result in substantial erosion or siltation on- or off-site?			X	
ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?			X	
iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?			X	
iv) Impede or redirect flood flows?			X	
d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?			X	

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?			X	

The following studies were prepared for the Project site:

- Preliminary Hydrology Study (C&V Consulting, Inc., June 2022); see **Appendix D: Preliminary Hydrology Study**.
- Preliminary Low Impact Development (LID) Plan (C&V Consulting, Inc., June 2022); see **Appendix E: Preliminary LID Plan**.

IMPACT ANALYSIS

10a) Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?

Less than Significant Impact. The Project's construction-related activities would include excavation, grading, and trenching, which would displace soils and temporarily increase the potential for soils to violate water quality standards or waste discharge requirements. Construction activity would be subject to the National Pollutant Discharge Elimination System (NPDES) program's Construction General Permit. Construction activity subject to the Construction General Permit includes any construction or demolition activity, including, but not limited to, clearing, grading, grubbing, or excavation, or any other activity that results in a land disturbance of equal to or greater than 1.0 acres. To obtain coverage under the Construction General Permit, dischargers are required to file with the State Water Board the Permit Registration Documents, which include a Notice of Intent (NOI) and other compliance-related documents. The Construction General Permit requires development and implementation of a Stormwater Pollution Prevention Plan (SWPPP) and monitoring plan, which must include erosion-control and sediment-control Best Management Practices (BMPs) that would meet or exceed measures required by the Construction General Permit to control potential construction-related pollutants. Erosion-control BMPs are designed to prevent erosion, whereas sediment control BMPs are designed to trap sediment once it has been mobilized. The types of required BMPs would be based on the amount of soil disturbed, the types of pollutants used or stored at the Project site, and proximity to water bodies. The Project would also be required to comply with City regulations (AMC Title 6 Chapter 7: Storm Water Management and Discharge Control) and General Plan Policy Action CFI 3.1.4, which requires continued participation in the NPDES program, to control storm water runoff and prevent violations of regional water quality standards. Following regulatory compliance, the Project's construction-related activities would not violate any water quality standards or otherwise substantially degrade surface or groundwater quality.

As shown on Figure 2: BMP Exhibit of the Preliminary LID Plan, upon Project completion, the catch basin inlets and grated inlets that collect the Project site's generated runoff would be routed to an underground detention system that would feed into a bio-filtration system via a pump station for water quality treatment. The treated flow would be pumped to a parkway culvert and routed to the downstream system following the existing drainage pattern. When the underground detention is at full capacity, the confluence of the flows would be routed to the proposed overflow parkway culvert through the interconnected storm drain system. The Project would also implement site source control and treatment BMPs according to the Los Angeles County Department of Public Works Low Impact Development Standards Manual to ensure that water quality standards would not be violated.

Therefore, Project construction and operations would not violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality. A less than significant impact would occur. This issue will not be further analyzed in the EIR.

10b) Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Less than Significant Impact.

Groundwater Supplies. The Project site is in Golden State Water Company's (GSWC) service area. The entire Artesia system, which is operated by GSWC and considered potable, is supplied from two main sources: local groundwater and imported water purchased from the City of Cerritos and Central Basin Municipal Water District (CBMWD). As required by the Urban Water Management Planning Act, GSWC has coordinated with nearby agencies while developing the Urban Water Management Plan (UWMP) to ensure consistency with other related planning efforts such as Groundwater Sustainability Plan(s) (GSP).

The GSWC's Southwest System has a total normal year active well capacity of 10,865 gallons per minute (gpm) (17,525 acre-feet per year [AFY]), of which 8,715 gpm (14,057 AFY) is in the West Coast Basin and 2,150 gpm (3,468 AFY) is in the Central Basin. The Southwest System is supplied by two active GSWC-owned wells in the Central Basin and 12 active GSWC-owned wells in the West Coast Basin. GSWC monitors well capacity, status, and water quality.

The Central Basin's groundwater storage capacity is approximately 13.8 million acre-feet (AF). The Central Basin adjudication limit (total of the allowed pumping allocations [APA] of each party) for groundwater extraction across the entire basin is 217,467 acre-feet per year (AFY). GSWC maintains an APA of 16,439 AFY. GSWC's APA is shared between all their systems that extract groundwater from the Central Basin. The storage capacity of the West Coast Basin's primary water producing aquifer, the Silverado aquifer, is estimated to be 6.5 million AF. The West Coast Basin adjudication limit for groundwater extraction across the entire basin is 64,468 AFY. GSWC maintains legal rights to 7,502 AFY. Three agencies, LACDPW, Water Replenishment District of Southern California (WRDSC), and CBMWD, collaborate with the water producers to ensure that the APA is available to the Central Basin and West Coast Basin pumpers.

The current ABCSP assumed development of retail and commercial uses on the Project site, which are the underlying assumptions for the UWMP. The Project proposes development of 8,650 SF of commercial uses and 80 DU on the Project site, which are anticipated to generate greater water demand than the UWMP's underlying development assumptions (based on the existing ABCSP). However, because the Central Basin and West Coast Basin are adjudicated, and the LACDPW, WRDSC, and WBMWD would continue to collaborate to avoid overdraft and ensure the APA is available to the pumpers, and the Project would be subject to the applicable State and local regulations concerning water conservation, the Project would not substantially deplete groundwater supplies such that it would impede sustainable groundwater management of the basin.

Groundwater Recharge. Basin recharge occurs through percolation of precipitation and artificial recharge activities at spreading grounds, among other sources. The Project site was formerly developed with an industrial use (i.e., a dairy manufacturing plant). Remnants of the past development result in negligible pervious area; therefore, the site is assumed to be 100 percent impervious. Upon Project buildout, the Project site would be approximately 86 percent impervious.[28] The Project would decrease the onsite impervious area resulting in more onsite percolation of precipitation. Additionally, the Project site does not involve spreading grounds. Thus, the Project would not interfere substantially with groundwater recharge such that it would impede sustainable groundwater management of a basin.

Therefore, potential impacts associated with depleting groundwater supplies or interfering substantially with groundwater recharge would be less than significant. This issue will not be further analyzed in the EIR.

10c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:

10c.i) Result in substantial erosion or siltation on- or off-site?

10c.ii) Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite?

10c.iii) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?

10c.iv) Impede or redirect flood flows?

Less than Significant Impact. The existing drainage of the Project site generally surface flows southerly to confluence with the street flows to the existing catch basins at the public right of way adjacent to the Project site near the corner of Artesia Boulevard and Flallon Avenue. There is an

[28] C&V Consulting. (2022). *Preliminary Hydrology Report.* Page 2.

existing drainage inlet near the site's center that collects a portion of the site. As the portion of the site that collects flow is generally flat and the low point ponds to slope towards the Fallon Avenue, the site is analyzed as a single drainage area that is tributary to the downstream system.

The Project would decrease the site's impervious area, which could decrease the runoff volumes from the Project site. During Project operations, stormwater flows would be directed to storm drainage features, and not create an opportunity for erosion or siltation on- or off-site. As stated in Response 4.10a, upon Project completion, the catch basin inlets and grated inlets that collect the Project site's generated runoff would be routed to an underground detention system that feeds into a bio-filtration system via pump station for water quality treatment. The treated flow would be pumped to a parkway culvert and be routed to the downstream system following the existing drainage pattern. When the underground detention is at full capacity, the confluence of the flows would be routed to the proposed overflow parkway culvert through the interconnected storm drain system. No flooding is expected to occur on- or off-site due to Project implementation. As such, impacts would be less than significant. These issues will not be further analyzed in the EIR.

10d) In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Less than Significant Impact. The Project site is in an area of minimal flood hazard as depicted on the Federal Emergency Management Agency's (FEMA) flood map (06037C1980F) for the City of Artesia.[29] Tsunamis are sea waves that are generated in response to large-magnitude earthquakes. When these waves reach shorelines, they sometimes produce coastal flooding. Seiches are the oscillation of large bodies of standing water, such as lakes, that can occur in response to ground shaking. The Project site is approximately nine miles northeast of the Pacific Ocean, and there are no nearby bodies of standing water. Tsunamis and seiches do not pose hazards due to the Project site's inland location and lack of nearby bodies of standing water. The Project is not within a flood hazard, tsunami, or seiche zone and, thus, potential impacts associated with inundation by flood hazard, tsunami, or seiche would be less than significant. This issue will not be further analyzed in the EIR.

10e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?

Less than Significant Impact. In 2014, the California Sustainable Groundwater Management Act (SGMA) was passed, which provides authority for agencies to develop and implement groundwater sustainability plans (GSP) or alternative plans that demonstrate water basins are being managed sustainably.[30] The Project site is located in a very low priority basin.[31] Under the SGMA, the Central Basin and West Coast Basin are exempted from the requirement to form a

[29] Federal Emergency Management Agency. (2019). *FEMA Flood Map Service Center.* https://msc.fema.gov/portal/search#searchresultsanchor.

[30] State Water Resources Control Board. (2019). *Sustainable Groundwater Management Act (SGMA).* https://www.waterboards.ca.gov/water_issues/programs/gmp/sgma.html.

[31] California Department of Water Resources. (2020). *Basin Prioritization Dashboard*. https://gis.water.ca.gov/app/bp-dashboard/final/.

Groundwater Sustainability Agency, since they are adjudicated basins. Therefore, the Project would not conflict with or obstruct implementation of a sustainable groundwater management plan. Impacts would be less than significant in this regard. This issue will not be further analyzed in the EIR. See Response 10a concerning water quality.

4.11 LAND USE AND PLANNING

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
11. LAND USE AND PLANNING. Would the project:				
a) Physically divide an established community?				X
b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	X			

IMPACT ANALYSIS

11a) Physically divide an established community?

No Impact. Examples of projects that could physically divide an established community include a new freeway or highway that traverse an established neighborhood. The Project proposes residential and commercial development. The Project involves redevelopment of a previously developed site within the ABCSP and does not propose any new streets or other physical barriers, which could physically divide an established community. The ABCSP encourages infill development including a mix of commercial and retail uses, blended with residential and office units. The flexibility presented in the ABCSP allows Artesia Boulevard to grow into a pedestrian- and auto-friendly corridor, as it is designated in the General Plan. The ABCSP also takes into consideration the surrounding properties, including existing neighborhoods and other sensitive uses, and is intended to create buffers and transitional areas when necessary. Given its nature and scope, the Project would not physically divide an established community. Therefore, no impact would occur in this regard. This issue will not be further analyzed in the EIR.

11b) Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?

Potentially Significant Impact. The requested approvals include a General Plan Amendment; Zoning Code Text Amendment; Design Review; Development Agreement; Vesting Tentative Tract Map; and the CEQA EIR certification. While the Project would not be anticipated to conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect, an evaluation of the effects of the Project's requested approvals, as well as an evaluation of the Project's compliance with other applicable regional and local plans, policies, and regulations, will be further analyzed in the EIR.

4.12 MINERAL RESOURCES

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
12. MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				X
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				X

IMPACT ANALYSIS

12a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?

12b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?

No Impact. The Surface Mining and Reclamation Act of 1975 (SMARA) requires classification of land into mineral resource zones (MRZs) according to the area's known or inferred mineral potential.[32] The Project site is located in Mineral Resource Zone-1 (MRZ-1). Areas designated MRZ-1 are noted to have adequate information that no significant[33] mineral deposits are present or it is judged that little likelihood exists for their presence.[34] Therefore, the proposed Project would have no impact concerning mineral resources. These issues will not be further analyzed in the EIR.

[32] California Department of Conservation. (2018). *California Statutes and Regulations for the California Geological Survey*. Sacramento, CA: California Geological Survey.

[33] Note that use of the term "significant" in this context is used in the MRZ definitions of zones to describe economic value of mineral resources and does not refer to a level of impact under CEQA.

[34] California Department of Conservation. (2015). *CGS Information Warehouse: Regulatory Maps. Special Report 143, Plate 4-1.* http://maps.conservation.ca.gov/cgs/informationwarehouse/.

4.13 NOISE

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
13. NOISE. Would the project result in:				
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	X			
b) Generation of excessive groundborne vibration or groundborne noise levels?	X			
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				X

IMPACT ANALYSIS

13a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Potentially Significant Impact. Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earthmovers, material handlers, and portable generators, can reach high levels. Construction activities are anticipated to include site preparation, grading, building construction, paving, and architectural coating. Nearby noise-sensitive receptors could be exposed to elevated exterior noise levels during Project construction that exceed adopted standards. Construction activities could also cause increased noise along access routes to and from the Project site due to movement of equipment, materials, and workers. The EIR will further evaluate the potential for the Project's construction activities to result in a temporary increase in ambient noise levels in the Project's vicinity in excess of City standards.

The Project would introduce mobile and stationary source operational noise consistent with typical residential and commercial developments. The Project would also generate traffic volumes along nearby roadways, which could result in noise level increases along area roadways. The EIR will further evaluate the potential for Project operations to result in a temporary or permanent increases in ambient noise levels in the Project's vicinity in excess of City standards.

13b) Generation of excessive groundborne vibration or groundborne noise levels?

Potentially Significant Impact. Increases in groundborne vibration levels attributable to the Project would be primarily associated with short-term construction-related activities. Project construction could result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved. The Project proposes a residential development on a site that was previously developed with industrial uses, where groundborne vibration associated with onsite operations and truck movements occurred. The EIR will further evaluate the Project's potential to generate excessive groundborne vibration or groundborne noise levels.

13c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

No Impact. There are no public airports or public use airports located within two miles of the Project site Therefore, the Project would not expose people residing or working in the Project area to excessive noise levels on the Project site. No impact would occur in this regard. This issue will not be further analyzed in the EIR.

4.14 POPULATION AND HOUSING

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
14. POPULATION AND HOUSING. Would the project:				
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	X			
b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?				X

IMPACT ANALYSIS

14a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Potentially Significant Impact. The City's current population as of January 1, 2022 is approximately 16,226 persons.[35] The City's housing stock totaled 4,760 DU with approximately 3.38 persons per household. The Project proposes to develop mixed-use development comprised of 80 DUs and approximately 8,650 SF of commercial uses. Given, the Project proposes new homes and businesses, Project implementation could induce unplanned population growth in the City. The EIR will further evaluate whether the Project's forecast population growth is substantial or unplanned.

14b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

No Impact. The Project would not displace existing housing or require construction of replacement housing elsewhere, since no housing is located on site. Therefore, no impact would occur in this regard. This issue will not be further analyzed in the EIR.

[35] California Department of Finance. (2022). *E-5 Population and Housing Estimates for Cities, Counties, and the State,* January 2021-2022.

4.15 PUBLIC SERVICES

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
15. PUBLIC SERVICES. Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i) Fire protection?	X			
ii) Police protection?	X			
iii) Schools?	X			
iv) Parks?	X			
v) Other public facilities?	X			

IMPACT ANALYSIS

15a) Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:

15a.i) Fire protection?

Potentially Significant Impact. The City contracts with the Los Angeles County Fire Department (LACFD) to provide fire protection and emergency medical services (EMS) for the City. The City entered into an automatic response agreement with the cities of Norwalk and Cerritos to provide dispatch regardless of city boundaries. LACFD operates two fire stations that serve the City: Fire Station 30, located at 19030 Pioneer Boulevard, in the City of Cerritos, and Fire Station 115, located

at 11317 Alondra Boulevard, in the City of Norwalk.[36] The Project's forecast population growth would incrementally increase the demand for fire protection and EMS to the Project site. The EIR will further evaluate the Project's potential to result in substantial adverse physical impacts associated with the provision of new or physically altered fire protection facilities, the construction of which could cause significant environmental impacts.

15a.ii) Police protection?

Potentially Significant Impact. Police protection services to the City of Artesia are provided under contract with the Los Angeles County Sheriff's Department (LACSD). The City is served by the Lakewood Sheriff's Station located at 5130 Clark Avenue in the City of Lakewood. The Lakewood Station provides general and specialized community-oriented law enforcement services to over 270,000 residents in the contract cities of Artesia, Bellflower, Hawaiian Gardens, Lakewood, and Paramount.[37] The Project's forecast population growth would incrementally increase the demand for police protection services to the Project site. The EIR will further evaluate the Project's potential to result in substantial adverse physical impacts associated with the provision of new or physically altered police protection facilities, the construction of which could cause significant environmental impacts.

15a.iii) Schools?

Potentially Significant Impact. The Project site is within Los Angeles Unified School District (LAUSD) boundaries. The proposed Project is forecast to generate an increase in student population. The EIR will further evaluate the Project's potential to result in substantial adverse physical impacts associated with the provision of new or physically altered school facilities, the construction of which could cause significant environmental impacts.

15a.iv) Parks?

Potentially Significant Impact. See Response 4.16 below.

15a.v) Other public facilities?

Potentially Significant Impact. Los Angeles County Library operates 84 community-based library outlets, including four bookmobiles, in 51 of 88 cities and unincorporated areas. Los Angeles County Library is responsible for maintenance and library improvements to meet future library service's demands. The Project's forecast population growth would incrementally increase the demand for library services. The EIR will further evaluate the Project's potential to result in substantial adverse physical impacts associated with the provision of new or physically altered library facilities, the construction of which could cause significant environmental impacts.

---

[37] City of Artesia. (2010). *Artesia General Plan Update Public Review Draft Program EIR*. Page 5.11-7.

4.16 RECREATION

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
16. RECREATION.				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	X			
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	X			

IMPACT ANALYSIS

16a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

16b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Potentially Significant Impact. The Project's forecast population growth could incrementally increase the use of existing parks and/or recreational facilities. The EIR will further evaluate whether this incremental increase would be such that substantial physical deterioration of an existing recreational facility would occur or be accelerated. The EIR will also further evaluate the Project's potential to include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical impact on the environment.

4.17 TRANSPORTATION

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
17. TRANSPORTATION. Would the project:				
a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?	X			
b) Would the project conflict or be inconsistent with CEQA Guidelines §15064.3, subdivision (b)?	X			
c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	X			
d) Result in inadequate emergency access?			X	

IMPACT ANALYSIS

17a) Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Potentially Significant Impact. The Project would increase pedestrian, bicyclist, and vehicle traffic in the Project area. The EIR will further evaluate whether this increase would conflict with a program plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities.

17b) Would the project conflict or be inconsistent with [State] CEQA Guidelines §15064.3, subdivision (b)?

Potentially Significant Impact. The Project may increase the VMT over existing conditions. Therefore, the EIR will further evaluate the Project's VMT for consistency with State CEQA Guidelines §5064.3(b).

17c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Potentially Significant Impact. The Project would redevelopment a vacant property and construct new onsite circulation features, including new access driveways and curved travelways, which may increase hazards due to a geometric design feature. The EIR will further evaluate the Project's design features for hazards and evaluate the Project's use for incompatibility.

17d) Result in inadequate emergency access?

Less than Significant Impact. As stated in Response 9f, the Project Site is located in an unurbanized area where adequate circulation and access is provided to facilitate emergency response. The Artesia Emergency Operations Plan outlines emergency response actions in the event of a large-scale disaster, such as a hazardous materials emergency. Further, Project construction would not require the complete closure of any public or private streets during construction. Temporary construction activities would not impede use of the streets for emergencies or access for emergency response vehicles. The Project would be subject to compliance with General Plan Policy Action SAF 5.1.2, which requires that the City and associated public services departments (e.g., Police Department and Fire Department) review development proposals for potential impacts to the provision of emergency services. Therefore, the Project's potential impacts concerning resulting in inadequate emergency access would be less than significant. This issue will not be further analyzed in the EIR.

4.18 TRIBAL CULTURAL RESOURCES

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
18. TRIBAL CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code §21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: i) Listed or eligible for listing in the California				
i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code §5020.1(k)?	X			
ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code §5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code §5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?	X			

IMPACT ANALYSIS

18a) Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code §21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: i) Listed or eligible for listing in the California:

18a.i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code §5020.1(k)?

18a.ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code §5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code §5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

Potentially Significant Impact. Past development has previously disturbed the Project site. Given the extent of onsite ground disturbances from previous development and the area's urbanized nature, there is low potential for the Project's ground-disturbing activities to encounter tribal cultural resources. Notwithstanding, the potential exists for accidental discovery of tribal cultural resources during ground-disturbing activities. The EIR will further evaluate these potential impacts.

4.19 UTILITIES AND SERVICE SYSTEMS

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
19. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	X			
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?	X			
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	X			
d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	X			
e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	X			

IMPACT ANALYSIS

19a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

19b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

19c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

19d) Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

19e) Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?

Potentially Significant Impact. The Project would increase utility usage and demands within the Project site, potentially resulting in the need to relocate or construct new utility facilities, insufficient water supplies, a determination by the wastewater provider of insufficient capacity, or excessive waste. The EIR will further evaluate these potential impacts.

4.20 WILDFIRE

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
20. WILDFIRE. If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:				
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?				X
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?				X
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?				X
d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?				X

IMPACT ANALYSIS

20a) Substantially impair an adopted emergency response plan or emergency evacuation plan?

20b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?

20c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other

utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

20d) Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

No Impact. According to California Department of Forestry and Fire Protection (CAL FIRE) Fire Hazard Severity Zone Map for Los Angeles County, the Project Site is not within a State Responsibility Area. The Project site is in a Non-Very High Fire Hazard Severity Zone (Non-VHFHSZ) within a local responsibility area.[38] The Project site and surrounding vicinity are relatively flat. Project design and site access would adhere to LACFD regulations and designs. Further, Project construction would not require the complete closure of any public or private streets during construction. Temporary construction activities would not impede use of the streets for emergencies or access for emergency response vehicles. The Project would tie into existing infrastructure that currently serves the Project site. Project implementation would not result in the construction, installation, or maintenance of new infrastructure that would exacerbate fire risk. Additionally, there are no known landslides near the site nor is the site in the path of any known or potential landslides. Therefore, no impacts related to wildfire would occur. These issues will not be further analyzed in the EIR.

[38] CalFire. (2011). *Los Angeles County FHSZ Map.* https://osfm.fire.ca.gov/media/7280/losangelescounty.pdf.

4.21 MANDATORY FINDINGS OF SIGNIFICANCE

ENVIRONMENTAL IMPACTS Issues	Potentially Significant Impact	Less Than Significant With Mitigation Incorporated	Less Than Significant Impact	No Impact
21. MANDATORY FINDINGS OF SIGNIFICANCE. Does the project:				
a) Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	X			
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	X			
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	X			

IMPACT ANALYSIS

21a) Have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?

21b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?

21c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?

Potentially Significant Impact. The Project would redevelop the Project site with approximately 8,650 SF of commercial uses and 80 DU, which could degrade the quality of the environment, result in cumulatively considerable impacts, or adverse effects on human beings. The EIR will further evaluate these potential impacts.

Appendix A

Preliminary Geotechnical Investigation

July 19, 2022
J.N.: 3027.00

Mr. Mitchell Gardner
G3 Urban
15235 S. Western Avenue
Gardena, California 90249

Subject: **Update Letter, Proposed Industrial Development, 11709 Artesia Boulevard, Artesia, California.**

Reference: *Preliminary Geotechnical Investigation, Proposed Industrial Development, 11709 Artesia Blvd., Artesia, California*, prepared by Albus & Associates, Inc., dated December 7, 2021.

Preliminary Geotechnical Investigation for Proposed Water Quality Improvements, Proposed Industrial Development, 11709 Artesia Blvd., Artesia, California, prepared by Albus & Associates, Inc., dated May 5, 2022.

Dear Mr. Gardner,

Pursuant to your request, ***Albus & Associates, Inc***, is providing an update letter to our above-referenced reports. We understand the previous structures have been demolished and the site is now vacant.

This proposed development is generally the same as the proposed development discussed in our above-referenced reports. The conclusions and recommendations in the referenced reports remain valid and applicable to the current proposed project.

Per our referenced report dated May 5, 2022, infiltration of storm water is not feasible and the demolition of the previous structures has not altered that conclusion.

Additionally, the demolition of the previous structures has likely disturbed the upper 1 to 2 feet of the existing subsurface soils. Per our referenced report dated December 7, 2021, we have recommended the existing ground be prepared by removing and recompacting the existing artificial fill soils which extend to depths of 2 feet or more. Therefore, soils disturbed by demolition are anticipated to be included by this recommendation and no modifications to our recommendations are required. The exposed subgrade from demolition operations should conform the Site Clearing section (Section 6.1.3) of our referenced report dated December 7, 2021.

We appreciate this opportunity to be of service to you. If you should have any questions regarding the contents of this correspondence, please do not hesitate to call our office.

Sincerely,

ALBUS & ASSOCIATES, INC.

Paul Hyun Jin Kim
Associate Engineer
GE 3106

Subject: **Preliminary Geotechnical Investigation, Proposed Industrial Development, 11709 Artesia Blvd., Artesia, California**

Dear Mr. Gardner,

Pursuant to your request, ***Albus & Associates, Inc***. is pleased to present to you our preliminary geotechnical investigation report for the proposed development at the subject site. This report presents the results of our aerial photo and literature review, subsurface exploration, laboratory testing, and engineering analyses. Conclusions relevant to the feasibility of the proposed site development and recommendations for site development are also presented herein based on the findings of our work.

We appreciate this opportunity to be of service to you. If you should have any questions regarding the contents of this report, please do not hesitate to call.

Sincerely,

ALBUS & ASSOCIATES, INC.

David E. Albus
Principal Engineer

1.0 INTRODUCTION

1.1 PURPOSE AND SCOPE

The purposes of our preliminary geotechnical investigation were to evaluate geotechnical conditions within the project area and to provide conclusions and recommendations relevant to the design and construction of the proposed improvements at the subject site. The scope of this investigation included the following:

- Review of the historical aerial photographs;
- Review of published geologic and seismic data for the site and surrounding area;
- Exploratory drilling and soil sampling;
- Laboratory testing of selected soil samples;
- Engineering analyses of data obtained from our review, exploration, and laboratory testing;
- Evaluation of site seismicity, liquefaction potential, and settlement potential; and,
- Preparation of this report

1.2 SITE LOCATION AND DESCRIPTION

The site is located at the address of 11709 Artesia Boulevard within the city of Artesia, California. The site is bordered by Artesia Boulevard to the south, Fallon Avenue to the west, Alburtis Avenue to the east, and a commercial building and surface parking lots to the north. The location of the site and its relationship to the surrounding areas are shown in Figure 1, Site Location Map.

The site consists of approximately 3.33 acres of land with several industrial buildings, above-ground tanks, processing equipment, and above-ground piping. The remainder of the site consists of asphalt- and concrete-covered paving.

1.3 PROPOSED DEVELOPMENT

Based on the project brochure prepared by Colliers, we understand that the proposed development will likely consist of one or two new industrial buildings at-grade parking as well as associated interior driveways, parking, underground utilities, and decorative hardscape and landscape areas.

No grading or structural plans were available in preparing this report. However, we anticipate that minor rough grading of the site will be required to achieve future surface configuration. Structural loads are anticipated to typically consist of 250 kips for columns and 6 kips/ft for walls.

2.0 INVESTIGATION

2.1 RESEARCH

We have reviewed the referenced geologic publications and maps (see references). Data from these sources were utilized to develop some of the findings and conclusions presented herein.

We have also reviewed available historical aerial photographs. The aerial photos indicate that as early as 1967, the subject site was developed with industrial facilities. The site has remained relatively unchanged since 1967.

2.2 SUBSURFACE EXPLORATION

Subsurface exploration for this investigation was conducted on November 2, 2021 and consisted of drilling three (3) soil borings to depths ranging from approximately 11.5 to 51.5 feet below the existing ground surface (bgs) and advancing four (4) Cone Penetration Tests (CPTs) to a depth of 50 feet bgs. The borings were drilled using a truck-mounted, continuous flight, hollow-stem-auger drill rig. A representative of Albus & Associates, Inc. logged the exploratory borings. Visual and tactile identifications were made of the materials encountered, and their descriptions are presented in the Exploration Logs in Appendix A. The approximate locations of the exploratory excavations and CPT soundings completed by this firm are shown on the enclosed Geotechnical Map, Plate 1.

Bulk, relatively undisturbed, and Standard Penetration Test (SPT) samples were obtained at selected depths within the exploratory borings for subsequent laboratory testing. Relatively undisturbed samples were obtained using a 3-inch O.D., 2.5-inch I.D., California split-spoon soil sampler lined with brass rings. SPT samples were obtained from the boring using a standard, unlined SPT soil sampler. During each sampling interval, the sampler was driven 18 inches with successive drops of a 140-pound automatic hammer falling 30 inches. The number of blows required to advance the sampler was recorded for each six inches of advancement. The total blow count for the lower 12 inches of advancement per soil sample is recorded on the exploration log. Samples were placed in sealed containers or plastic bags and transported to our laboratory for analyses. The borings were backfilled with auger cuttings upon completion of sampling.

2.3 LABORATORY TESTING

Selected samples obtained from our subsurface exploration were tested in our soil laboratory. Tests consisted of maximum dry density and optimum moisture content, in-situ moisture content and dry density, expansion index, soluble sulfate content, direct shear, consolidation/collapse potential, grain-size distribution analysis, percent passing No. 200 sieve, direct shear strength, corrosivity testing (pH, chloride, and resistivity), and Atterberg limits. A description of laboratory test criteria and test results are presented in Appendix B.

3.0 SUBSURFACE CONDITIONS

3.1 SOIL CONDITIONS

Descriptions of the earth materials encountered during our investigation are summarized below and are presented in detail on the Exploration Logs presented in Appendix A.

Soil materials encountered at the subject site consisted of approximately 2 feet of artificial fill over alluvial soils. The artificial fill is predominately comprised of grayish brown sandy silt and silty sand. These fill materials typically were observed to be damp to moist and medium dense.

Underlying the artificial fills are native soils consisting of young alluvial fan deposits (Qyf_a). The alluvial fan deposit materials were encountered to the maximum depth explored of 51.5 feet and are comprised of grayish brown to light gray, interlayered silty sand and sand that are damp to wet and loose to very dense. Occasional lenses and layers of sandy silt are also present that are generally very moist to wet and firm to very stiff.

3.2 GROUNDWATER

Groundwater was encountered during this firm's subsurface exploration at a depth of 14 feet. The CDMG Special Report 019 suggests that historic high groundwater for the subject site is below 10 feet.

3.3 FAULTING

Based on our review of the referenced publications and seismic data, no active faults are known to project through or immediately adjacent to the subject sites and the site does not lie within an "Earthquake Fault Zone" as defined by the State of California in Earthquake Fault Zoning Act. Table 3.1 summarizes the known seismically active faults within 10 miles of the sites based on the 2008 USGS National Seismic Hazard Maps.

TABLE 3.1
Summary of Faults

4.0 ANALYSES

4.1 SEISMICITY

2019 CBC requires seismic parameters in accordance with ASCE 7-16. Unless noted otherwise, all section numbers cited in the following refer to the sections in ASCE 7-16.

Per Section 20.3 the project site was designated as Site Class D. We used the OSHPD seismic hazard tool to obtain the basic mapped acceleration parameters, including short periods (S_S) and 1-second period (S_1) MCE_R Spectral Response Accelerations. Section 11.4.8 requires site-specific ground hazard analysis for structures on Site Class E with S_S greater than or equal to 1.0 or Site Class D or E with S_1 greater than or equal to 0.2. Based on the mapped values of S_S and S_1 the project site falls within this category, requiring site-specific hazard analysis in accordance with Section 21.2.

However, "A ground motion hazard analysis is not required for structures where: Structures on Site Class D sites with S_1 greater than or equal to 0.2, provided the value of the seismic response coefficient Cs is determined by Eq. (12.8-2) for values of $T \leq 1.5T_s$ and taken as equal to 1.5 times the value computed in accordance with either Eq. (12.8-3) for $T_L \geq T > 1.5T_s$ or Eq. (12.8-4) for $T > T_L$." Assuming this exception is met for this project, a ground motion hazard analysis is not required and mapped seismic values can be used. Should this exception not be met, a ground motion hazard analysis is required to determine the Design response spectra for the proposed structures at this site. Both mapped and site-specific seismic design parameters are provided in this report, as presented in Section 6.2. Details of a ground motion hazard analysis are explained below.

According to Section 21.2.3 (Supplement 1), the site-specific Risk Targeted Maximum Considered Earthquake (MCER) spectral response acceleration at any period is the lesser of the probabilistic and the deterministic response accelerations, subject to the exception specified in the same section. The probabilistic response spectrum was developed using the computer program OpenSHA (Field et al., 2013), which implements Method 1 as described in Section 21.2.1.1. Fault Models 3.1 and 3.2 from the Third Uniform California Earthquake Rupture Forecast (UCERF3) were used as the earthquake rupture forecast models for the PSHA. In addition to known fault sources, background seismicity was also included in the PSHA. The ground motion Prediction Equations (GMPEs) selected for use in this analysis are those developed for the Pacific Earthquake Engineering Research Center (PEER) Next Generation Attenuation (NGA) West 2 project. Four GMPEs - Abrahamson et al. (2014), Boore et al. (2014), Campbell and Bozorgnia (2014), and Chiou and Youngs (2014) were used to perform the analysis.

In accordance with Section 21.2.2 (Supplement 1), the deterministic spectral response acceleration at each period was calculated as the 84th percentile, 5% damped response acceleration, using NGA-West2 GMPE Worksheet. For this, the information from at least three causative faults with the greatest contribution per deaggregation analysis were used and the larger acceleration spectrum among these was selected as the deterministic response spectrum. The deterministic spectrum was adjusted per requirements in Section 21.2.2 (Supplement 1) where applicable. Both probabilistic and deterministic spectra were subjected to the maximum direction scale factors specified in Section 21.2 to produce the maximum acceleration spectra.

Design response spectrum was developed by subjecting the site-specific MCE_R response spectrum to the provisions outlined in Section 21.3. This process included comparison with 80% code-based

design spectrum determined in accordance with Section 11.4.6. The short period and long period site coefficients (Fa and Fv, respectively) were determined per Section 21.3 in conjunction with Table 11.4-1. Site-specific design acceleration parameters (S_{MS}, S_{M1}, S_{DS}, and S_{D1}) were calculated according to Section 21.4.

Per Section 11.2 (definitions on Page 79 of ASCE7-16) for evaluation of liquefaction, lateral spreading, seismic settlements, and other soil-related issues, Maximum Considered Earthquake Geometric Mean (MCE_G) peak ground acceleration PGA_M shall be used. The site-specific PGA_M is calculated per Section 21.5.3, as the lesser of the probabilistic PGA_M (Section 21.5.1) and deterministic PGA_M (Section 21.5.2), but no less than 80% site modified peak ground acceleration, PGA_M, obtained from OSHPD seismic hazard tool. From our analyses, we obtain a PGA_M of 0.662g.

4.2 STATIC SETTLEMENT

Analyses were performed to estimate the maximum static settlement due to the anticipated maximum foundation loads. The analyses were based on the results of subsurface exploration and laboratory testing conducted at the site. Settlements were calculated based on the elastic method using the sampler blow counts to estimate the elastic property of the soils. Stresses induced by the footings were based on a Boussinesq distribution.

Settlement of the proposed buildings will depend on the magnitude of the structural loads. Assuming a column load of 250 kips, bearing pressure of 4,000 psf, and footing depth of 2 foot, total static settlement of a column footing is estimated to be 0.9 inches. A continuous footing that supports a load of 6 kips/ft, bearing pressure of 3,000 psf, 2 feet wide, and 2 feet deep is estimated to have a total static settlement of 0.5 inches.

4.3 LIQUEFACTION

Engineering research of soil liquefaction potential (Youd et al., 2001) indicates that generally three basic factors must exist concurrently in order for liquefaction to occur. These factors include:

- A source of ground shaking, such as an earthquake, capable of generating soil mass distortions.
- A relatively loose silty and/or sandy soil.
- A relative shallow groundwater table (within approximately 50 feet below ground surface) or completely saturated soil conditions that will allow positive pore pressure generation.

The site is located within a State-designated zone of potentially liquefiable soils. As a result, we conservatively have evaluated the potential for liquefaction.

The liquefaction susceptibility of the onsite soils was evaluated by analyzing the potential concurrent occurrence of the above-mentioned three basic factors. The liquefaction evaluation for the site was completed under the guidance of Special Publication 117A: Guidelines for Evaluating and Mitigating Seismic Hazards in California (CDMG, 2008).

Our liquefaction analyses were based on the field test data results from our CPT data. The liquefaction analyses were performed utilizing the CLiq software by GeoLogismiki. Among the methods available in this program for analysis of liquefaction potential, Robertson (NCEER 2001, 2009) was used for

the current project. The seismic event was defined by peak ground acceleration PGA of 0.73 and mean moment magnitude of 6.83. The historic-high groundwater level, which is used as the design level for evaluation of liquefaction potential, is taken at a depth of 10 feet below ground surface, as discussed in Section 3.2.

Based on our analyses, several sublayers below the assumed shallowest groundwater level of 10 feet have a factor of safety less than 1.3 and are therefore considered prone to liquefaction during the design earthquake event. Liquefaction analyses are provided in Appendix C.

4.4 SEISMIC-INDUCED SETTLEMENT

To quantify the consequences of liquefaction at the site, seismic-induced settlement has been evaluated using the four CPT soundings. Robertson (NCEER 2001 and 2009) method was used for this evaluation.

Analyses were performed to evaluate the potential for seismic settlement from saturated liquefied and unsaturated dry soils. The calculated seismic-induced settlements of saturated soil using various methods for CPT analysis are ranging from 3.7 to 5.3 inches. Liquefaction induced-settlement analyses are provided in Appendix C.

Seismic-induced settlement can occur both above and below the groundwater table during a strong seismic event. We have estimated the dry seismic settlement using the Robertson and Shao (2010) Method. The total seismic dry settlement we calculated ranges from 0 to 0.2 inches.

5.0 CONCLUSIONS

5.1 FEASIBILITY OF PROPOSED DEVELOPMENT

From a geotechnical point of view, the proposed site development is considered feasible provided the recommendations presented in this report are incorporated into the design and construction of the project. Furthermore, it is also our opinion that the proposed development will not adversely impact the stability of adjoining properties.

5.2 GEOLOGIC HAZARDS

5.2.1 Ground Rupture

No known active faults are known to project through the subject sites nor do the sites lie within the boundaries of an “Earthquake Fault Zone” as defined by the State of California in the Alquist-Priolo Earthquake Fault Zoning Act. The closest known active fault is the Puente Hills (Coyote Hills) fault located approximately 2.7 miles to the northeast. Therefore, potential for ground rupture due to an earthquake beneath the sites is considered low.

5.2.2 Ground Shaking

The site is situated in a seismically active area that has historically been affected by generally moderate to occasionally high levels of ground motion. The site lies in relatively close proximity to several seismically active faults; therefore, during the life of the proposed improvements, the property will

probably experience similar moderate to occasionally high ground shaking from these fault zones, as well as some background shaking from other seismically active areas of the Southern California region. Design and construction in accordance with the current California Building Code (CBC) requirements are anticipated to address the issues related to potential ground shaking.

5.2.3 Landsliding

Geologic hazards associated with landsliding are not anticipated at the site since the site is relatively level.

5.2.4 Liquefaction

Our analyses indicate liquefaction could in soils located below a depth of 10 feet if groundwater were to rise to shallowest historic levels concurrent with a strong ground motion. Liquefaction could lead to a total seismic settlement (saturated and dry) of the ground surface of up to 5.3 inches due to seismic consolidation during liquefaction. The differential settlement due to seismic settlement would likely be on the order of ½ of the total seismic settlement or approximately 2.7 inches over 30 feet. Lateral spreading is not a significant risk at the site in consideration of the relatively flat site topography and lack of an nearby channel face or slope.

Based on the State of California Special Publication (SP) 117A, the seismic-induced settlement at the site does not fall within the Level of Liquefaction Hazard of "Large-scale Displacements." "Large scale Displacements" are defined as those that ***exceed*** 1-3 feet horizontally and 4-6 inches vertically. Therefore, the Level of Liquefaction Hazard is classified as a "Localized Failure." One of the suitable mitigation alternatives presented in the SP 117A for Localized Failures is the use of reinforced shallow foundations and improved structural design to withstand predicted vertical and lateral ground displacements.

The SP 117A also stated that hazards from liquefaction should be mitigated to the extent required to reduce seismic risk to "acceptable levels." The acceptable level of risk means, "that level that provides reasonable protection of the public safety" [California Code of Regulations Title 14, Section 3721 (a)]. The use of well-reinforced foundations, such as post-tensioned slabs, grade beams with structural slabs, or mat foundations have been proven to adequately provide basal support for similar structures during comparable liquefaction events. Specific recommendations to mitigate risks associated with liquefaction are provided in Section 6.3.

5.3 STATIC SETTLEMENT

As discussed in Section 4.2, analyses were performed to evaluate potential for static settlement of the underlying alluvium. Provided site grading is performed in accordance with the recommendations provided herein and based on the anticipated foundation loads, total and differential static settlement is not anticipated to exceed 1 inch and ½-inch over 30 feet, respectively, for the proposed commercial buildings. The estimated magnitudes of static settlements are considered within tolerable limits for the proposed structure.

5.4 EXCAVATION AND MATERIAL CHARACTERISTICS

Onsite earth materials are anticipated to be relatively easy to excavate with conventional heavy earthmoving equipment. The site earth materials are generally considered suitable for reuse as fill provided, they are cleared on deleterious debris and oversized rocks (greater than 4 inches in greatest dimension). Site materials are generally near the optimum moisture content. As such, fill soils derived from onsite soils will likely require the addition of nominal amounts of water and mixing in preparation for reuse as compacted fill.

Temporary construction slopes will be required to complete removal of unsuitable soils and for construction of underground utilities. Such excavations will require laybacks where they are surcharged or where they exceed 4 feet in height. Specific recommendations are provided in Section 6.1.8.

If encountered, portions of concrete debris and asphalt can likely be reduced in size (4 inches minus) and incorporated within fill soils during earthwork operations.

If onsite disposal systems, clarifiers, and other underground improvements are present beneath the site, these improvements will require proper abandonment or removal per the City guidelines.

5.5 SHRINKAGE AND SUBSIDENCE

Volumetric changes in earth quantities will occur when excavated onsite soil materials are replaced as properly compacted fill. We estimate that the near surface soils will shrink about 5 to 10 percent when removed and replaced as compacted fill. Subsidence due to reprocessing of removal bottoms is anticipated to be about 0.05 feet. The estimates of shrinkage and subsidence are intended as an aid for project engineers in determining earthwork quantities. However, these estimates should be used with some caution since they are not absolute values. Contingencies should be made for balancing earthwork quantities based on actual shrinkage and subsidence that occurs during the grading process.

5.6 SOIL EXPANSION

Based on our laboratory test results and the USCS visual manual classification, the near-surface soils are generally anticipated to possess a **Low** expansion potential. Additional testing for soil expansion will be required prior to construction of foundations and other concrete work to confirm these conditions.

6.0 RECOMMENDATIONS

6.1 EARTHWORK

6.1.1 General Earthwork and Grading Specifications

All earthwork and grading should be performed in accordance with applicable requirements of Cal/OSHA, applicable specifications of the Grading Codes of the City of Artesia, California in addition to the recommendations presented herein.

6.1.2 Pre-Grade Meeting and Geotechnical Observation

Prior to commencement of grading, we recommend a meeting be held between the developer, City Inspector, grading contractor, civil engineer, and geotechnical consultant to discuss the proposed grading and construction logistics. We also recommend a geotechnical consultant be retained to provide soil engineering and engineering geologic services during site grading and foundation construction. This is to observe compliance with the design specifications and recommendations and to allow for design changes in the event that subsurface conditions differ from those anticipated. If conditions are encountered that appear to be different than those indicated in this report, the project geotechnical consultant should be notified immediately. Design and construction revisions may be required.

6.1.3 Site Clearing

Areas to be graded should be cleared of vegetation, existing asphalt and concrete, underground improvements to be abandoned and deleterious materials. Existing underground utility lines within the project area that will be protected in place and that fall within a 1 to 1 (H:V) plane projected down from the edges of footings may be subject to surcharge loads. Under such conditions, this office should be made aware of these conditions for evaluation of potential surcharging. Supplemental recommendations may be required to protect such improvements in place.

The project geotechnical consultant should be notified at the appropriate times to provide observation services during clearing operations to verify compliance with the above recommendations. Voids created by clearing and excavation should be left open for observation by the geotechnical consultant. Should any unusual soil conditions or subsurface structures be encountered during site clearing or grading that are not described or anticipated herein, these conditions should be brought to the immediate attention of the project geotechnical consultant for corrective recommendations as needed.

Temporary construction equipment (office trailers, power poles, etc.) should be positioned to allow adequate room for clearing and recommended ground preparation to be performed for proposed structures, pavements, and hardscapes.

6.1.4 Ground Preparation

In general, the artificial fill is considered unsuitable for support of the proposed development. Based on our exploratory borings, the depth of the artificial fill material is anticipated to be about 2 feet in depth. However, deeper fills are expected in the areas of the previous site improvements (i.e. utility lines) and where the current buildings and structures are located. All artificial fill soils should be removed to expose the underlying alluvial soils within the limits of the structures (buildings and site walls) and paving.

Removal of unsuitable materials should extend laterally beyond the limits of the proposed buildings a distance equal to the depth of removal (i.e. 1:1 projection) but not less than 5 feet. Removals within pavements and footings for site walls may be limited to the edge of foundations or pavement where lateral restrictions to removals are present such as property lines.

All removal and overexcavations should be evaluated by the geotechnical consultant during grading to confirm the exposed conditions are as anticipated and to provide supplemental recommendations if required.

6.1.5 Scarification

Prior to placement of compacted fill, the exposed ground should be scarified to a depth of 6 to 8 inches, moisture conditioned to at least 110 percent of the optimum moisture content, then compacted to at least 90 percent of the laboratory standard. The laboratory standard for maximum dry density and optimum moisture content for each soil type should be determined in accordance with ASTM D 1557.

6.1.6 Fill Placement

Materials excavated from the site may be reused as fill provided, they are free of deleterious materials and particles greater than 4 inches in maximum dimension (oversized materials). Asphaltic and concrete debris generated during site demolition or encountered within the existing fill can be incorporated within new fill soils during earthwork operations provided they are reduced to no more than 4 inches in maximum dimension. Such materials should be mixed thoroughly with fill soils to prevent nesting. All fill should be placed in lifts no greater than 8 inches in loose thickness, moisture conditioned to at least 110% of optimum moisture content, then compacted in place to at least 90 percent of the laboratory standard. Each lift should be treated in a similar manner. Subsequent lifts should not be placed until the project geotechnical consultant has approved the preceding lift.

6.1.7 Import Materials

If import materials are required to achieve the proposed finish grades, the proposed import soils should have an Expansion Index (EI, ASTM D 4829) less than 20 and possess negligible soluble sulfate concentrations. Import sources should be indicated to the geotechnical consultant prior to hauling the materials to the site so that appropriate testing and evaluation of the fill materials can be performed in advance.

6.1.8 Temporary Excavations

Temporary construction slopes in site materials that are not surcharged may be cut vertically up to a height of 4 feet. Temporary excavations greater than 4 feet but no greater than 10 feet in height that are not surcharged should be laid back at a maximum gradient of 1:1 (H:V) or properly shored.

Excavations should not be left open for prolonged periods of time. The project geotechnical consultant should observe all temporary cuts to confirm anticipated conditions and to provide alternate recommendations if conditions dictate. All excavations should conform to the requirements of Cal/OSHA. The current removal requirement is 12 inches below existing grade and not expected to undermine the existing foundations. However, if deeper removals are required during grading and where insufficient room exists for recommended lay back cuts, shoring or slot cutting methods may be required. Additional recommendations for such conditions can be provided at that time based on the observed materials and subsequent lab testing.

6.2 SEISMIC DESIGN PARAMETERS

6.2.1 Mapped Seismic Design Parameters

For design of the project in accordance with Chapter 16 of the 2019 CBC, the mapped seismic parameters may be taken as presented in the tables below.

TABLE 6.1
2019 CBC Mapped Seismic Design Parameters

Parameter	Value
Site Class	D
Mapped MCE_R Spectral Response Acceleration, short periods, S_S	1.552
Mapped MCE_R Spectral Response Acceleration, at 1-sec. period, S_1	0.552
Site Coefficient, F_a	1.0
Site Coefficient, F_v	1.7445*
Adjusted MCE_R Spectral Response Acceleration, short periods, S_{MS}	1.552
Adjusted MCE_R Spectral Response Acceleration, at 1-sec. period, S_{M1}	0.968
Design Spectral Response Acceleration, short periods, S_{DS}	1.034
Design Spectral Response Acceleration, at 1-sec. period, S_{D1}	0.645
Long-Period Transition Period, T_L (sec.)	8
Seismic Design Category for Risk Categories I-IV	II

MCE_R = Risk-Targeted Maximum Considered Earthquake

*According to Section 11.4.8 in ASCE 7-16, "a ground motion hazard analysis shall be performed in accordance with Section 21.2 for the following structures on Site Class D and E sites with S_1 greater than or equal to 0.2." However, "A ground motion hazard analysis is not required for structures where: Structures on Site Class D sites with S_1 greater than or equal to 0.2, provided the value of the seismic response coefficient C_s is determined by Eq. (12.8-2) for values of $T \leq 1.5T_s$ and taken as equal to 1.5 times the value computed in accordance with either Eq. (12.8-3) for $T_L \geq T > 1.5T_s$ or Eq. (12.8-4) for $T > T_L$." The F_v value of 1.7 above from Table 11.4-2 assumes that this exception is met and that a ground motion hazard analysis is not required. Should this exception not be met, the site-specific seismic design parameters provided in the next section should be used.

6.2.2 Site-Specific Seismic Design Parameters

In addition to the Code Spectra parameters presented in Table 6.1, we have performed a site-specific ground motion hazard analysis in accordance with Chapter 21 of ASCE 7-16 to obtain site-specific seismic design acceleration parameters, the risk-targeted maximum considered earthquake response spectrum, and the design earthquake response spectrum. The site-specific seismic design parameters are presented below.

TABLE 6.2
2019 CBC Site Specific Seismic Design Parameters

Parameter	Value
Site Class	D
Site Coefficient, F_a	1.0
Site Coefficient, F_v	2.5
Adjusted MCE Spectral Response Acceleration, short periods, S_{MS}	1.833
Adjusted MCE Spectral Response Acceleration, at 1-sec. period, S_{M1}	1.822
Design Spectral Response Acceleration, short periods, S_{DS}	1.222
Design Spectral Response Acceleration, at 1-sec. period, S_{D1}	1.214

MCE = Maximum Considered Earthquake

6.3 CONVENTIONAL FOUNDATION DESIGN

6.3.1 General

As discussed in Section 5.2.4, the site is prone to liquefaction. To mitigate this condition, we recommend structures be supported by a foundation system consisting of a mat, post-tensioned slab, or spread footings tied together with a structural slab with grade beams. For this project, we have assumed the foundation system will utilize spread footings tied together with a structural slab with grade beams. Specific recommendations for this system is provided in the following sections. Recommendations for other systems can be provided upon request.

The following design parameters are provided to assist the project structural engineer to design foundations for structures at the site. These design parameters are based on typical site materials encountered during subsurface exploration and are provided for preliminary design and estimating purposes. The project geotechnical consultant should provide final design parameters following observation and testing of site materials during grading. Depending on actual materials encountered during site grading, the design parameters presented herein may require modification.

6.3.2 Soil Expansion

The recommendations presented herein are based on soils with a **Low** expansion potential. Following site grading, additional testing of site soils should be performed by the project geotechnical consultant to confirm the basis of these recommendations. If site soils with higher expansion potentials are encountered or imported to the site, the recommendations contained herein may require modification.

6.3.3 Static and Seismic Settlement

Based on anticipated foundation loads and provided that the recommendations for ground preparation in this report are followed, total and differential static settlement are anticipated to be less than 1 inch and ½ inch over 30 feet, respectively. These values are considered within tolerable limits of proposed structures and site improvements. Design of the structures should consider these maximum anticipated settlements.

6.3.4 Allowable Bearing Value

Foundations may utilize a bearing value of 2,000 pounds per square foot (psf) for continuous and pad footings a minimum width of 12 inches and founded at a minimum depth of 12 inches below the lowest adjacent grade. This value may be increased by 260 psf and 700 psf for each additional foot in width and depth, respectively, up to a maximum value of 4,000 psf. Recommended allowable bearing values include both dead and live loads may be increased by one-third for wind and seismic forces.

6.3.5 Lateral Resistance

For foundations that are founded in the native alluvial soils or compacted fill, a passive earth pressure of 300 pounds per square foot per foot of depth (psf/ft) up to a maximum value of 1,500 pounds per square foot (psf) may be used to determine lateral bearing for footings. This value may be increased by one-third when designing for wind and seismic forces. A coefficient of friction of 0.33 times the dead load forces may also be used between concrete and the supporting soils to determine lateral sliding resistance. No increase in the coefficient of friction should be used when designing for wind and seismic forces.

The above values are based on footings placed directly against compacted fill or competent native soils. In the case where footing sides are formed, all backfill against the footings should be compacted to at least 90 percent of the laboratory standard.

6.3.6 Footing Dimensions and Reinforcement

Exterior and interior pad footings should be founded at a minimum depth of 12 inches below the lowest adjacent grade and have a minimum width of 12 inches. All continuous footings should have a minimum depth of 12 inches below lowest adjacent grade and a minimum width of 12 inches.

All continuous footings should be reinforced with a minimum of four No. 5 bars, two top and two bottom. The structural engineer may require different reinforcement and should dictate if greater than the recommendations provided herein.

All isolated pad footings should be tied in both directions with a concrete grade beam to the nearest foundation. Grade beams should be at least 12 inches wide by 12 inches deep and be reinforced with four No. 5 bars, two top and two bottom. Reinforcing for the grade beams should tie into the adjacent footings.

6.3.7 Slabs on Grade

Interior concrete slabs constructed on grade should be a minimum 6 inches thick and should be reinforced with No. 3 bars spaced 18 inches each way. Care should be taken to ensure the placement of reinforcement at mid-slab height. The structural engineer may recommend a greater slab thickness and reinforcement based on proposed use and loading conditions and such recommendations should govern if greater than the recommendations presented herein. No. 4 tie bars should be provided between the slab and connecting grade beams at a spacing of 18 inches.

For consideration of point loading that may occur on the slab, a subgrade of modulus, K_{V1}, of 100 pci may be used.

Concrete floor slabs in areas to receive carpet, tile, or other moisture sensitive coverings should be underlain with a moisture vapor barrier 10-mil Visqueen, or equal. The membrane should be properly lapped, sealed, and protected with at least 2 inches of sand having an SE of 30 or more. This vapor barrier system is anticipated to be suitable for most flooring finishes that can accommodate some vapor emissions. However, this system may emit more than 4 pounds of water per 1000 sq. ft. and therefore, may not be suitable for all flooring finishes. Additional steps should be taken if such vapor emission levels are too high for anticipated flooring finishes.

Special consideration should be given to slabs in areas to receive ceramic tile or other rigid, crack-sensitive floor coverings. Design and construction of such areas should mitigate hairline cracking as recommended by the structural engineer.

Block-outs should be provided around interior columns to permit relative movement and mitigate distress to the floor slabs due to differential settlement that will occur between column footings and adjacent floor subgrade soils as loads are applied.

Prior to placing concrete, subgrade soils below slab-on-grade areas should be thoroughly moistened to provide a moisture content that is equal to or greater than 110% of the optimum moisture content to a depth of 12 inches.

6.3.8 Foundation Observations

Foundation excavation should be observed by the project geotechnical consultant to verify that they have been excavated into competent bearing soils and to the minimum embedment recommended above. These observations should be performed prior to placement of forms or reinforcement. The excavations should be trimmed neat, level and square. Loose, sloughed or moisture-softened materials and debris should be removed prior to placing concrete.

6.4 RETAINING AND SCREENING WALLS

6.4.1 General

The following preliminary design and construction recommendations are provided for general retaining and screen walls supported by engineered compacted fill or competent native soils. Final wall designs specific to the site development should be provided for review once completed. The structural engineer and architect should provide appropriate recommendations for sealing at all joints and applying moisture-proofing material on the back of the walls.

6.4.2 Allowable Bearing Value and Lateral Resistance

Design of retaining and screen walls may utilize the bearing and lateral resistance values provided in Sections 6.3.4 and **Error! Reference source not found.**.

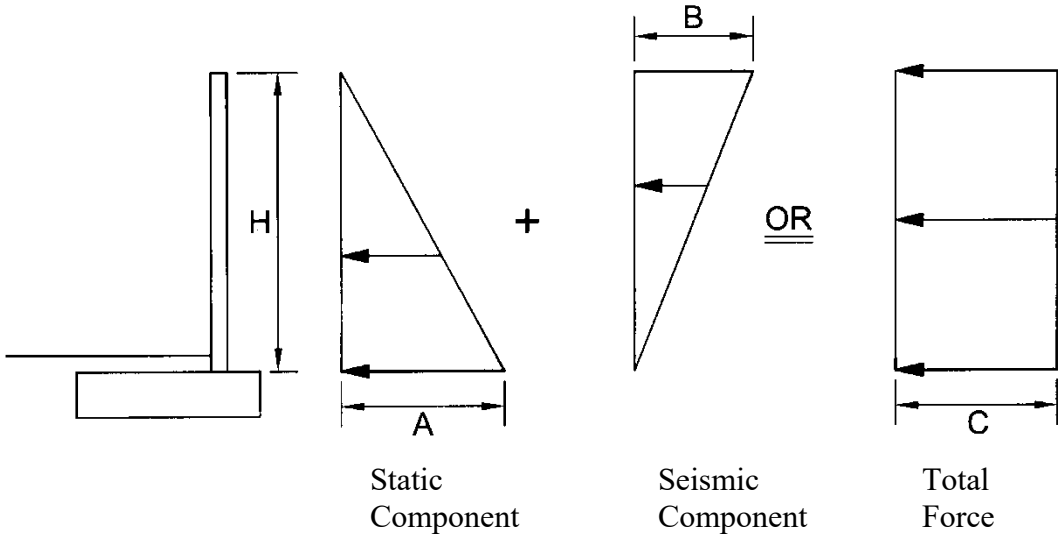
6.4.3 Active Earth Pressures

Static and seismic earth pressures for level and 2:1 (H:V) backfill conditions are provided in Table 6.3. Seismic earth pressures provided herein are based on the method provided by Seed & Whitman (1970) using a peak ground acceleration (PGA) of 0.42 g for 10% probability of exceedance in 50 years. As indicated in Section 1803.5.12 of the 2019 CBC, retaining walls supporting 10 feet of

backfill or less are not required to be designed for seismic earth pressures. The values provided in the following table do not consider hydrostatic pressure. Retaining walls should also be designed to support adjacent surcharge loads imposed by other nearby footings or traffic loads in addition to the earth pressure.

TABLE 6.3

SEISMIC EARTH PRESSURES
Pressure Diagram



Pressure Values
Walls Up To 10 Feet High

Value	Backfill Condition	
	Level	2H:1V Slope
A	33H	54H
B	12.5H	12.5H
C	23H	33.5H

Note:
H is in feet and resulting pressure is in psf. Design may utilize either the sum of the static component and the seismic component force diagrams or the total force diagram above. SEAOSC has suggested using a load factor of 1.7 for the static component and 1.0 for the seismic component. The actual load factors should be determined by the structural engineer.

6.4.4 Drainage and Moisture-Proofing

Retaining walls should be constructed with a perforated pipe and gravel subdrain to prevent entrapment of water in the backfill. The perforated pipe should consist of 4-inch-diameter, ABS SDR-

35 or PVC Schedule 40 with the perforations laid down. The pipe should be embedded in ¾- to 1½-inch open-graded gravel wrapped in filter fabric. The gravel should be at least one foot wide and extend at least one foot up the wall above the footing and drainage outlet. Drainage gravel and piping should not be placed below outlets and weepholes. Filter fabric should consist of Mirafi 140N, or equal. Outlet pipes should be directed to positive drainage devices.

The use of weepholes may be considered in locations where aesthetic issues from potential nuisance water are not a concern. Weepholes should be 2 inches in diameter and provided at least every 6 feet on center. Where weepholes are used, perforated pipe may be omitted from the gravel subdrain.

Retaining walls supporting backfill should also be coated with a moisture-proofing compound or covered with such material to inhibit infiltration of moisture through the walls. Moisture-proofing material should cover any portion of the back of wall that will be in contact with soil and should lap over and onto the top of footing. A drainage panel should be provided between the soil backfill and water proofing. The panel should extend from the top of the backdrain gravel up to within 12 inches of finish grade. The top of footing should be finished smooth with a trowel where moisture proofing-materials are applied to inhibit the infiltration of water through the wall. The project structural engineer should provide specific recommendations for moisture-proofing, water stops, and joint details.

6.4.5 Footing Reinforcement and Wall Jointing

All continuous footings should be reinforced with a minimum of two No. 4 bars, one top and one bottom. Walls should be provided with cold joints spaced no more than 20 feet apart. Wall finishes and capping materials should not extend across the cold joint. The structural engineer may require different reinforcement or jointing and should dictate if greater than the recommendations provided herein. Where recommended removals are limited due to space restrictions, greater reinforcement and closer jointing may be recommended. Specific recommendations should be provided by the geotechnical consultant during grading based on as-built conditions exposed in the field.

6.4.6 Foundation Observations

Footing excavations should be observed by the project geotechnical consultant to verify that they have been excavated into competent bearing soils and to the minimum embedment recommended herein. These observations should be performed prior to placement of forms or reinforcement. The excavations should be trimmed neat, level and square. Loose, sloughed or moisture-softened materials and debris should be removed prior to placing concrete.

6.5 EXTERIOR FLATWORK

Exterior flatwork should be a minimum 4 inches thick. Cold joints or saw cuts should be provided at least every 7 feet in each direction. Flatwork having a minimum dimension more than 7 feet should be reinforced with No. 3 bars spaced 18 inches center to center each way or 6-inch by 6-inch, W4 by W4 welded wire mesh. Special jointing detail should be provided in areas of block-outs, notches, or other irregularities to avoid cracking at points of high stress. Subgrade soils below flatwork should be thoroughly moistened to at least 110 percent of the optimum moisture content to a depth of 12 inches. Moistening should be accomplished by lightly spraying the area over a period of a few days just prior to pouring concrete. The geotechnical consultant should observe and verify the density and moisture

content of subgrade soils prior to pouring concrete to ensure that the required compaction and pre-moistening recommendations have been met.

Drainage from flatwork areas should be directed to local area drains and/or other appropriate collection devices designed to carry runoff water to the street or other approved drainage structures. The concrete flatwork should also be sloped at a minimum gradient of 0.5 percent away from building foundations and retaining walls.

6.6 CONCRETE MIX DESIGN

Laboratory testing of near-surface soils for soluble sulfate content indicates soluble sulfate concentration of 0.002%. We recommend following the procedures provided in ACI 318, Section 19.3.1, Table 19.3.1.1 for **S0** sulfate exposure. Upon completion of rough grading, an evaluation of as-graded conditions and further laboratory testing should be completed for the site to confirm or modify the recommendations provided in this section.

6.7 CORROSION

Results of preliminary testing of soils for pH, chloride, and minimum resistivity indicate the site is potentially **Highly Corrosive** to metals that are in contact or close proximity to onsite soils. As such, specific recommendations should be obtained from a corrosion specialist if construction will include metals that will be near or in direct contact with site soils.

6.8 PRELIMINARY PAVEMENT DESIGN

6.8.1 Preliminary Pavement Structural Sections

Based on the soil conditions present at the site and an estimated traffic index, preliminary pavement sections are provided in the table below. A laboratory tested "R-value" of 33 was used for the near-surface soil in this preliminary pavement design. The sections provided below are for planning purposes only and should be re-evaluated subsequent to site grading. Final pavement sections should be based on actual R-value testing of in-place soils and analysis of anticipated traffic.

6.8.2 Subgrade Preparation

Prior to placement of paving elements, subgrade soils should be scarified 6 inches, moisture-conditioned to above the optimum moisture content then compacted to at least 90 percent of the maximum dry density determined in accordance with ASTM D1557. Areas observed to pump or yield under vehicle traffic should be removed and replaced with firm and unyielding engineered compacted soil or aggregate base materials.

6.8.3 Aggregate Base

Aggregate base materials should be Crushed Aggregate Base or Crushed Miscellaneous Base conforming to Section 200-2 of the Standard Specification for Public Works Construction (Greenbook) or Class 2 Aggregate Base conforming to the Caltrans' Standard Specifications. The materials should be moisture conditioned to slightly over the optimum moisture content then compacted to at least 95 percent of ASTM D 1557.

TABLE 6.4
PRELIMINARY PAVEMENT STRUCTURAL SECTIONS

Location	Traffic Index	AC (inches)	PCC (inches)	AB (inches)
Truck Drive Areas	7.5	4.0	--	11.0
		--	8.0	--
Parking Drives	5.0	3.0	--	5.0
		--	5.0	--
Parking Stalls	--	3.0	--	5.0

6.8.4 Asphaltic Concrete

Paving asphalt should be PG 64-10 conforming to the requirements of Section 203-1 of the Greenbook. Asphalt concrete materials should conform to Section 203-6 and construction should conform to Section 302 of the Greenbook.

6.8.5 Portland Cement Concrete

Portland cement concrete used to construct concrete paving should conform to Section 201 of the Greenbook and should have a minimum compressive strength of 3,250 pounds per square inch (psi) at 28 days. Reinforcement and jointing of concrete pavement sections should be designed according to the minimum recommendations provided by the Portland Cement Association (PCA). For rigid pavement, transverse and longitudinal contraction joints should be provided at spacing no greater than 15 feet. Score joints may be constructed by saw cutting to a depth of ¼ of the slab thickness. Expansion/cold joints may be used in lieu of score joints. Such joints should be properly sealed. Where traffic will traverse over cold joints without keyways or dowels or edges of concrete paving, the edges should be thickened by 20% of the design thickness toward the edge over a horizontal distance of 5 feet.

6.9 POST GRADING CONSIDERATIONS

6.9.1 Site Drainage and Irrigation

The ground immediately adjacent to foundations should be provided with positive drainage away from the structures in accordance with 2019 CBC, Section 1804.4. Based on soil and climatic conditions, the ground slope within 10 feet of the buildings may be reduced to 2%. No rain or excess water should be allowed to pond against structures such as walls, foundations, flatwork, etc.

Excessive irrigation water can be detrimental to the performance of the proposed site development. Water applied in excess of the needs of vegetation will tend to percolate into the ground. Such percolation can lead to nuisance seepage and shallow perched groundwater. Seepage can form on slope faces, on the faces of retaining walls, in streets, or other low-lying areas. These conditions could lead to adverse effects such as the formation of stagnant water that breeds insects, distress or damage of trees, surface erosion, slope instability, discoloration and salt buildup on wall faces, and premature

failure of pavement. Excessive watering can also lead to elevated vapor emissions within buildings that can damage flooring finishes or lead to mold growth inside the home.

Key factors that can help mitigate the potential for adverse effects of overwatering include the judicious use of water for irrigation, use of irrigation systems that are appropriate for the type of vegetation and geometric configuration of the planted area, the use of soil amendments to enhance moisture retention, use of low-water demand vegetation, regular use of appropriate fertilizers, and seasonal adjustments of irrigation systems to match the water requirements of vegetation. Specific recommendations should be provided by a landscape architect or other knowledgeable professional.

6.9.2 Utility Trenches

Trench excavations should be constructed in accordance with the recommendations contained in Section 6.1.8 of this report. Trench excavations must also conform to the requirements of Cal/OSHA.

Trench backfill materials and compaction criteria should conform to the requirements of the local municipalities. As a minimum, utility trench backfill should be compacted to at least 90 percent of the laboratory standard. Materials placed within the pipe zone (6 inches below and 12 inches above the pipe) should consist of particles no greater than ¾ inches and have a SE of at least 30. The materials within the pipe zone should be moisture-conditioned and compacted by hand-operated compaction equipment. Above the pipe zone (>1 foot above pipe), the backfill may consist of general fill materials. Trench backfill should be moisture-conditioned to slightly over the optimum moisture content, placed in lifts no greater than 12 inches in thickness, and then mechanically compacted with appropriate equipment to at least 90 percent of the laboratory standard. For trenches with sloped walls, backfill material should be placed in lifts no greater than 8 inches in loose thickness, and then compacted by rolling with a sheepsfoot roller or similar equipment. The project geotechnical consultant should perform density testing along with probing to verify that adequate compaction has been achieved.

Within shallow trenches (less than 18 inches deep) where pipes may be damaged by heavy compaction equipment, imported clean sand having a SE of 30 or greater may be utilized. The sand should be placed in the trench, thoroughly watered, and then compacted with a vibratory compactor. For utility trenches located below a 1:1 (H:V) plane projecting downward from the outside edge of the adjacent footing base or crossing footing trenches, concrete or slurry should be used as trench backfill.

6.10 PLAN REVIEW AND CONSTRUCTION SERVICES

We recommend ***Albus & Associates, Inc.*** be engaged to review any future development plans, including civil plans (grading plans), foundation plans, and proposed structural loads, prior to construction. This is to verify that the assumptions of this report are valid and that the preliminary conclusions and recommendations contained in this report have been properly interpreted and are incorporated into the project plans and specifications. If we are not provided the opportunity to review these documents, we take no responsibility for misinterpretation of our preliminary conclusions and recommendations.

We recommend that a geotechnical consultant be retained to provide soil engineering services during construction of the project. These services are to observe compliance with the design, specifications

or recommendations, and to allow design changes in the event that subsurface conditions differ from those anticipated prior to the start of construction.

If the project plans change significantly from the assumed development described herein, the project geotechnical consultant should review our preliminary design recommendations and their applicability to the revised construction. If conditions are encountered during construction that appear to be different than those indicated in this report or subsequent design reports, the project geotechnical consultant should be notified immediately. Design and construction revisions may be required.

7.0 LIMITATIONS

This report is based on the proposed development and geotechnical data as described herein. The materials encountered on the project site and utilized in our laboratory testing for this investigation are believed representative of the total project area, and the conclusions and recommendations contained in this report are presented on that basis. However, soil and bedrock materials can vary in characteristics between points of exploration, both laterally and vertically, and those variations could affect the conclusions and recommendations contained herein. As such, observation and testing by a geotechnical consultant during the grading and construction phases of the project are essential to confirming the basis of this report.

This report has been prepared consistent with that level of care being provided by other professionals providing similar services at the same locale and time period. The contents of this report are professional opinions and as such, are not to be considered a guaranty or warranty.

This report should be reviewed and updated after a period of one year or if the site ownership or project concept changes from that described herein.

This report has been prepared for the exclusive use of **G3 Urban Company** and their project consultants in the planning and design of the proposed development. This report has not been prepared for use by parties or projects other than those named or described herein. This report may not contain sufficient information for other parties or other purposes.

This report is subject to review by the controlling governmental agency.

Respectfully submitted,

SUMMARY

OF

CONE PENETRATION TEST DATA

1. INTRODUCTION

This report presents the results of a Cone Penetration Test (CPT) program carried out for the project located at 180 Flallon Avenue in Artesia, California. The work was performed by Kehoe Testing & Engineering (KTE) on November 2, 2021. The scope of work was performed as directed by Albus & Associates personnel.

2. SUMMARY OF FIELD WORK

The fieldwork consisted of performing CPT soundings at four locations to determine the soil lithology. A summary is provided in **TABLE 2.1**.

LOCATION	DEPTH OF CPT (ft)	COMMENTS/NOTES:
CPT-1	50	
CPT-2	50	
CPT-3	50	
CPT-4	50	

TABLE 2.1 - Summary of CPT Soundings

3. FIELD EQUIPMENT & PROCEDURES

The CPT soundings were carried out by **KTE** using an integrated electronic cone system manufactured by Vertek. The CPT soundings were performed in accordance with ASTM standards (D5778). The cone penetrometers were pushed using a 30-ton CPT rig. The cone used during the program was a 15 cm^2 cone with a cone net area ratio of 0.83. The following parameters were recorded at approximately 2.5 cm depth intervals:

- Cone Resistance (qc)
- Sleeve Friction (fs)
- Dynamic Pore Pressure (u)
- Inclination
- Penetration Speed

The above parameters were recorded and viewed in real time using a laptop computer. Data is stored at the KTE office for up to 2 years for future analysis and reference. A complete set of baseline readings was taken prior to each sounding to determine temperature shifts and any zero load offsets. Monitoring base line readings ensures that the cone electronics are operating properly.

4. CONE PENETRATION TEST DATA & INTERPRETATION

The Cone Penetration Test data is presented in graphical form in the attached Appendix. These plots were generated using the CPeT-IT program. Penetration depths are referenced to ground surface. The soil behavior type on the CPT plots is derived from the attached CPT SBT plot (Robertson, "Interpretation of Cone Penetration Test…", 2009) and presents major soil lithologic changes. The stratigraphic interpretation is based on relationships between cone resistance (qc), sleeve friction (fs), and penetration pore pressure (u). The friction ratio (Rf), which is sleeve friction divided by cone resistance, is a calculated parameter that is used along with cone resistance to infer soil behavior type. Generally, cohesive soils (clays) have high friction ratios, low cone resistance and generate excess pore water pressures. Cohesionless soils (sands) have lower friction ratios, high cone bearing and generate little (or negative) excess pore water pressures.

The CPT data files have also been provided. These files can be imported in CPeT-IT (software by GeoLogismiki) and other programs to calculate various geotechnical parameters.

It should be noted that it is not always possible to clearly identify a soil type based on qc, fs and u. In these situations, experience, judgement and an assessment of the pore pressure data should be used to infer the soil behavior type.

If you have any questions regarding this information, please do not hesitate to call our office at (714) 901-7270.

Sincerely,

KEHOE TESTING & ENGINEERING

Steven P. Kehoe

APPENDIX B

LABORATORY TEST RESULTS

LABORATORY TESTING PROGRAM

Soil Classification

Soils encountered within the exploratory borings were initially classified in the field in general accordance with the visual-manual procedures of the Unified Soil Classification System (ASTM D 2488). The samples were re-examined in the laboratory and classifications reviewed and then revised where appropriate. The assigned group symbols are presented on the Exploration Logs provided in Appendix A.

In-Situ Moisture Content and Dry Density

Moisture content and dry density of in-place soil materials were determined in representative strata. Test data are summarized on the Exploration Logs, Appendix A.

Atterberg Limits

Atterberg Limits (Liquid Limit, Plastic Limit, and Plasticity Index) were performed in accordance with Test Method ASTM D 4318. Pertinent test values are presented within Table B-1.

Maximum Dry Density and Optimum Moisture Content

Maximum dry density and optimum moisture content were performed on a representative sample of the site materials obtained from our field explorations. The test was performed in accordance with ASTM D 1557. Pertinent test values are given in Table B-1.

Expansion Potential

Expansion index testing was performed on a selected sample. The test was performed in accordance with ASTM D4829. The test result and expansion potential are presented in Table B-1.

Direct Shear

The Coulomb shear strength parameters, angle of internal friction and cohesion, were determined for a bulk sample and intact samples obtained from one our borings. The tests were performed in general conformance with Test Method ASTM D 3080. The bulk sample was remolded to 90 percent of maximum dry density and at the optimum moisture content. Three specimens were prepared for each test, artificially saturated, and then sheared under varied loads at an appropriate constant rate of strain. Results are graphically presented on Plate B-5.

Consolidation

Consolidation tests were performed for selected soil samples in general conformance with ASTM D 2435. Axial loads were applied in several increments to a laterally restrained 1-inch-high sample. Loads were applied in geometric progression by doubling the previous load, and the resulting deformations were recorded at selected time intervals. The specific test samples were inundated at selected loads to evaluate the effects of a sudden increase in moisture content (hydro-consolidation potential). Results of the tests are graphically presented on Plates B-1 to B-4.

Soluble Sulfate Content

A chemical analysis was performed on a selected sample to determine soluble sulfate content. This test was performed in our soil laboratory in accordance with California Test Method No 417. The test result is included on Table B-1.

Corrosion

Select samples were tested for minimum resistivity, chloride, pH in accordance with California Test Method 643. Results of these tests are provided in Table B-1.

R-Value

A sample of soil was tested for R-value in accordance with California Test Method (CTM) 301. The results are summarized in Plate B-6.

TABLE B-1
SUMMARY OF LABORATORY TEST RESULTS

Gardena, California 90249

Subject: **Revised Update Letter #2, Proposed Industrial Development, 11709 Artesia Boulevard, Artesia, California.**

References: *Preliminary Geotechnical Investigation, Proposed Industrial Development, 11709 Artesia Blvd., Artesia, California*, prepared by Albus & Associates, Inc., dated December 7, 2021.

Update Letter, Proposed Industrial Development, 11709 Artesia Boulevard, Artesia, California, prepared by Albus & Associates, Inc., dated November 2, 2023.

Angeleno Associates, Inc. (2024), *Site Plan, Artesia Development, Artesia, CA, sheet A0.1,* prepared by Angeleno Associates, Inc., dated October 21, 2024.

Dear Mr. Gardner,

Pursuant to your request, ***Albus & Associates, Inc***, is providing this update letter to our above-referenced report. We understand the parking lot east of Alburtis Avenue will no longer be a parking lot but will instead be developed with additional housing. Based on the referenced site plan, two additional buildings with 6 units each will be constructed. The additional proposed structures will be at grade and include a drive area, parking areas, and landscaping areas.

Although none of the site exploration conducted and summarized in our referenced report dated December 7 occurred within the parking lot area east of Alburtis Avenue, exploration of the main site west of Alburtis Ave. demonstrates relatively uniform soil conditions throughout the main site. Exploration indicated the site is underlain by alternating layers of sands, silty sands, and sandy silts. Blow counts and in-place densities indicate consistent characteristics of these materials in all three borings. Exploration also included a CPT sounding located directly across from the parking lot portion and is within about 125 feet of the center of the parking lot. This is a distance similar to the spacing of exploration on the main site.

We have also reviewed historical aerial photographs of the area. The parking lot area was first developed as single-family homes between 1952 and 1953. Conditions remained consistent until some time between 1988 and 1991 when the homes were demolished and the property converted to a parking lot. The site remained unchanged through to the present time. We did not identify any activities that appeared to involved significant excavation of earth within the limits of the parking lot area. As such, we anticipate this part of the property is likely underlain by up to 2 feet of artificial fills which are then underlain by alluvial soils consistent with those encountered across the street on the main section of the project.

Based on the updated site development concept, the conclusions and recommendations in our referenced Preliminary Geotechnical Report and Update Letter remain valid and applicable to the current proposed project.

We appreciate this opportunity to be of service to you. If you should have any questions regarding the contents of this correspondence, please do not hesitate to call our office.

Sincerely,

ALBUS & ASSOCIATES, INC.

1. SUMMARY OF CONCLUSIONS

Ramboll US Consulting Inc. (Ramboll) was retained by Artesia & Flallon, LLC and Borstein Enterprises (the Client) to perform a Phase I Environmental Site Assessment (ESA) and Phase II subsurface investigation of the vacant, former dairy product processing facility and associated parking lot located at 11709 Artesia Boulevard and 17208 and 17212 Alburtis Avenue in Artesia, California (herein referred to as the "facility" or the "site;" see Figures 1 and 2).

Ramboll's assessment was conducted in connection with a potential purchase of the site. The objective of the Phase I ESA, which was conducted in conformance with the scope and limitations of ASTM International's *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* E1527-13 (the "ASTM Standard"), and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312), was to identify Recognized Environmental Conditions (RECs), as defined in the ASTM Standard, and the scope of services identified in the August 2021 Master Environmental Consulting Services Agreement (MSA) between the Client and Ramboll, was to identify Recognized Environmental Conditions (RECs) as defined in the ASTM Standard (see Section 8).

1.1 Site Summary

California Dairies Inc. (formerly known as California Milk Producers) owns and maintains a vacant, former dairy product processing facility and associated parking lot in Artesia, California. The parcel located along Artesia Boulevard is approximately 3.33 acres and is currently improved as the former California Dairy manufacturing facility with five buildings totaling over 50,000 square feet. The buildings include a milk and milk product processing plant, two story office building, United States Department of Agriculture (USDA) certified testing laboratory, evaporating, drying and bagging building, a warehouse, and a parts storage building (former fleet garage).

The site was naturally vegetated land from the late 1800s through the early 1940s. By the mid-1950s, the southern and eastern portions of the site were constructed as a dairy processing facility. Residences occupied the northern and western portions of the site between the 1950s and the 1970s. The western portion of the site appears to be occupied by the present day diary manufacturing facility since at least the mid-1970s. The north-eastern portion of the site includes an employee parking lot. The eastern portion of the site was residential between the early 1940s through the 1980s when the parking lot was constructed. The Protected Milk Producers Association owned the site in the 1970s and merged with two other dairy cooperatives in 1974 to form the California Milk Producers. The California Milk Producers (merged to become known as California Dairies Inc. in 1999) has owned the site since 1974 and conducted milk manufacturing operations.

1.2 Recognized Environmental Conditions

Ramboll performed a Phase I ESA of the vacant, former dairy product processing facility and associated parking lot at 11709 Artesia Boulevard and 17208 and 17212 Alburtis Avenue in Artesia, California, in conformance with the scope and limitations of the ASTM Standard. Any exceptions to, or deletions from, this practice are described in Section 7.5 of this report. This assessment has revealed no RECs in connection with the site. Ramboll recommends no further investigation regarding the environmental condition of the site.

1.3 Other Findings

Although not considered to be RECs, Ramboll identified the following notable other findings. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Past Manufacturing Operations at the Site.** Since the early 1950s, the site has been used for milk manufacturing purposes. From the 1970s through at least the 1990s, a tanker truck fleet operated at (and was repaired at) the facility. Milk manufacturing activities may have included the use of petroleum products, acids, caustics, and other chemicals. Multiple subsurface investigations have been conducted at the site, including an August 2020 sampling event conducted by GHD Inc. The results of the GHD sampling indicated that limited concentrations of pesticides (e.g., 4,4'-Dichlorodiphenyldichloroethylene [DDE] at 12 micrograms per kilogram [µg/kg]) and volatile organic compounds (VOCs) are present in soil; however, none of the concentrations exceeded applicable San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (ESLs) for the site (i.e., industrial/commercial land use). Metals detected in soil which exceeded the applicable ESLs included arsenic, lead, and vanadium (maximum levels 197 milligrams per kilogram [mg/kg], 57.8 mg/kg, and 47.7 mg/kg respectively). No VOCs were detected in groundwater; metals detected in groundwater which exceeded California Maximum Contaminant Levels (MCLs) were limited to mercury (3.31 micrograms per liter [µg/L]). Ammonia and nitrate (maximum concentrations of 648 µg/L and, 94,00 µg/L, respectively) were also detected in the groundwater, and in some locations, nitrate exceeded Environmental Protection Agency (EPA) Maximum Contaminant Levels (MCLs).

  GHD indicated that lead in soils was likely associated with a former waste oil underground storage tank (UST) located in the same area. The mercury and pesticide detections were attributed to historical pesticide use in agricultural activities. Metal detections appeared to be insoluble forms and did not appear to present a risk. Ammonia appeared present at naturally occurring levels, however nitrate was observed at higher concentrations. GHD indicated that elevated nitrate levels were located in the northern portion of the site boundary and attributed the concentrations to an off-site source.

  Based on the results from the previous Phase II subsurface investigation, Ramboll conducted a subsequent subsurface investigation at the site that included collection of soil and soil vapor samples throughout the site. Samples were collected in areas including former employee and truck parking areas, the former underground storage tank (UST) area, the former truck wash area, former chemical storage area, former main plant chemical storage area, former boiler area storage, and former sump pump area. Soil samples were analyzed for total petroleum hydrocarbons (TPH) and pH, while soil vapor was analyzed for VOCs by United States Environmental Protection Agency's (USEPA) Method 8260. Results from the subsurface investigation indicated that total petroleum hydrocarbons (TPH) were not detected in soil above applicable screening criteria and the pH in soil generally appears to be consistent with normal background conditions. While the sampling results from this investigation did not identify chemicals in soil at concentrations above applicable screening criteria, and the issues described above do not rise to the level of being a Recognized Environmental Condition under ASTM E1527-13, as a precautionary measure Ramboll recommends that the soil be managed in accordance with applicable state and federal regulations during potential future soil disturbance activities.

  In soil vapor, benzene, tetrachloroethene (PCE) and chloroform were the only VOCs detected above applicable Department of Toxic Substances Control (DTSC)/USEPA residential and commercial screening levels using 0.03 as an attenuation factor (AF), which is used for screening purposes but which is neither an official nor controlling standard. Chloroform was the only VOC detected above applicable DTSC/USEPA residential screening levels using 0.001 as an AF (which is the official / adopted attenuation factor). No VOCs in soil vapor were detected above applicable DTSC/USEPA commercial screening levels using 0.001 as an attenuation factor.

- **Former Diesel Fuel and Gasoline USTs.** Two 10,000-diesel fuel, one 10,000-gallon gasoline, and one 500-gallon waste oil USTs were formerly located along the northern site boundary adjacent to the former truck wash area. According to the GeoTracker website, the site is listed on the Leaking Underground Storage Tank (LUST) database. A gasoline release was reported in August 1987 which impacted groundwater. The Los Angeles Regional Water Quality Control Board (RWQCB) closed the case in February 1997. No records were available regarding the cleanup and subsequent closure of the USTs. Site representatives reported that soil excavation activities were conducted, however, a copy of the report was not available for Ramboll's review. Records regarding the UST closure were requested from the Fire Department but have not yet been received. Therefore, Ramboll is unable to evaluate the adequacy of the UST closure. However, there is no apparent current regulatory requirement to evaluate the area, nor is there scrutiny of the site by regulatory officials. Furthermore, Ramboll's subsurface investigation did not indicate the presence of contamination in the vicinity of the UST – and, therefore, actual data shows the former USTs do not represent a Recognized Environmental Condition. Ramboll recommends no further investigation regarding this issue.

  A discussion of *de minimis* conditions and Non-Scope Considerations identified during this review is presented in Section 7.0 of this report.

2. INTRODUCTION

2.1 Scope of Work

Ramboll was retained by Artesia & Flallon, LLC and Borstein Enterprises to conduct a Phase I ESA of the vacant, former dairy product processing facility and associated parking lot in Artesia, California. The Phase I ESA relied upon the references noted below and included the following tasks consistent with the ASTM Standard and the scope of services identified in the Master Environmental Consulting Services Agreement (MSA) between the Artesia & Flallon, LLC and Borstein Enterprises and Ramboll:

- A visit to the site by Stephanie Eckelman and Kelly Chen of Ramboll on December 13, 2021 to observe the exterior and interior features of the site and to identify the uses and conditions specified in Sections 9.4.1 through 9.4.4.7 of the ASTM Standard. In addition, Ramboll observed the adjoining properties from the site or adjacent public thoroughfares. Photographs taken during the site visit are presented in Appendix A.
- An interview during the site visit with the following individual (year of initial hire at the site indicated in parentheses): Frank Noriega, assistant Plant Manager with California Dairies Inc. (1980). The aforementioned individual is referred to herein as "facility personnel." The facility personnel interviewed by Ramboll was identified by the Company as having good knowledge of the uses and physical characteristics of the site.
- A review of information contained in federal and state environmental databases, as obtained from the sources noted below:
  - A radius report prepared by EDR (see Appendix B), which presents the results of searches of federal and state databases for the site, as well as properties near the site. The radius searched for each database, as well as the databases themselves, was selected in accordance with the ASTM Standard.
  - The USEPA's Envirofacts database, which provides site information contained in multiple USEPA regulatory databases.
  - A review of GeoTracker, which provides information with respect to sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. GeoTracker contains records for sites that require cleanup, such as Leaking Underground Storage Tank (LUST) Sites, Department of Defense Sites, and Cleanup Program Sites. GeoTracker also contains records for various unregulated projects as well as permitted facilities including: Irrigated Lands, Oil and Gas production, operating Permitted USTs, and Land Disposal Sites.
  - A review of the California Department of Toxic Substances Control's (DTSC's) EnviroStor website (EnviroStor), which provides information cleanup, permitting, enforcement and investigation efforts at hazardous waste facilities and sites with known contamination or sites where there may be reasons to investigate further.
  - A review of the California Geologic Energy Management Division (CalGEM) website, which provides information regarding the locations of oil and gas wells.
  - A review of the California EPA Regulated Site Portal available online, which provides information regarding environmentally regulated sites and facilities in California.
  - A review of the National Pipeline Mapping System (NPMS) Public Viewer website, which provides information regarding the locations of hazardous liquid and gas pipelines on and in the vicinity of the Site.

- A review of standard historical sources (included as Appendix C) and local agency inquiries, as defined in the ASTM Standard. The following resources were reviewed:
  - Readily available historical sources (as identified in Section 4.2 of this report and included as Appendix C) to develop a history of the previous uses of the site and surrounding area.
  - Local building permit information for the site, as obtained via EDR's Lightbox application.
  - Historical and site-specific information obtained from the following local agency: County of Los Angeles Office of the Assessor (Assessor). Ramboll also requested information from the City of Artesia Building and Safety Department (Building Department), and the County of Los Angeles Fire Department (Fire Department); however, a response had not been received at the time this report was completed.
  - The Los Angeles County Public Health Inspector no longer maintains hazardous materials business plans/inventory, hazardous waste generator license, California accidental release prevention program as well as spill, and site remediation information. The files are maintained by the Los Angeles County Fire Department-Health Hazardous Materials Division.
- A review of documents obtained during the site visit, including building site plans. Facility personnel reported that underground storage tank excavations, asbestos containing materials, and lead based paint surveys have previously been conducted for the site, however Ramboll was not provided with a copy of the reports.
- A review of physical setting sources, as defined in the ASTM Standard, including:
  - The current United States Geological Survey (USGS) 7.5-minute topographic map that shows the area on which the site is located.
  - Geologic, hydrogeologic, and/or hydrologic sources as provided in the EDR database report and collected during Ramboll subsurface investigation.
- A review of any information provided by the User of this assessment, including information consistent with Appendix X3 of the ASTM Standard. Pertinent information, if any, is discussed in the appropriate sections of this report

This assessment was conducted in accordance with ASTM Standard E1527-13. The standard ASTM scope was expanded to include a limited review of asbestos-containing materials, lead-based paint, mold, and radon based solely on: (i) the ages of the buildings for the potential presence of asbestos and lead-based paint; (ii) information and answers provided on a water intrusion questionnaire completed during the site walk with site representatives for the potential presence of mold; and (iii) information provided in the EDR report relating to the potential presence of radon.

2.2 Significant Assumptions

In conducting this review, no significant assumptions were made, except for the following:

- Site-specific field measurements or other detailed hydrogeological information was not publicly available or reasonably ascertainable. In the absence of such data, Ramboll has assumed that the flow direction of shallow groundwater beneath the site and in the local vicinity generally reflects surface topography. Therefore, in evaluating potential on-site impacts from off-site sources, those off-site facilities not located adjacent to or within one-quarter mile upgradient of the site are not considered likely to represent an environmental concern to the site. This interpretation is based on the assumption that a hazardous material released to the subsurface generally does not migrate laterally within the unsaturated soil for a significant distance, although a hazardous material can

migrate in the groundwater in a generally downgradient direction. The lack of information discussed above does not represent a significant data gap.

2.3 Reliance and General Limitations

This report has been prepared for the exclusive use of Artesia & Flallon, LLC and Borstein Enterprises and may not be relied upon by any other person or entity without Ramboll's prior express written permission. In the event of any conflict between the terms and conditions of this report and the terms and conditions of the Master Services Agreement between Ramboll and the Client (the "MSA"), the MSA shall control.

This report is considered current only for a period of 180 days from the site inspection. The conclusions presented in this report represent Ramboll's professional judgment based upon the information available and conditions existing as of the date of this report. In performing its assignment, Ramboll relied upon publicly available information, information provided by the client, and information provided by third parties. Accordingly, Ramboll can neither warrant nor guarantee the extent to which the information provided to Ramboll was accurate and complete. This review is not intended as legal advice, nor is it an exhaustive review of site conditions or facility compliance. Ramboll makes no representations or warranties, expressed or implied, about the condition of the site.

The scope of work for this assignment that included collecting samples of environmental media is detailed in Section 6.0. As such, this review cannot rule out the existence of latent conditions including contamination not identified and defined by the data and information available for Ramboll's review; however, this report is intended, consistent with normal standards of practice and care, to assist the client in identifying the risks of such latent conditions – and, as noted, did in fact include sampling and analyzing soil and soil vapor in connection with the Phase II subsurface investigation.

The scope of work for this assessment did not include an asbestos survey or inspection. According to federal OSHA regulations (29 CFR §1910.1001) and the Model Accreditation Plan (MAP; 40 CFR Part 763, Subpart E, Appendix C), the inspection, testing, evaluation, and/or sampling of suspect asbestos-containing materials must be conducted by an accredited inspector; these activities were not performed as part of this environmental review. Comments in this report regarding the condition of building materials at the site, including presumed or suspect ACM, represent only Ramboll's observations at the time of the site visit and are not intended to be consistent with definitions regarding ACM condition in the Asbestos Hazard Emergency Response Act (AHERA) or in other federal or state asbestos regulations or industry standards.

Other issues considered outside the scope of the ASTM Standard and this review include regulatory compliance, lead in drinking water, wetlands, PCBs in building materials, cultural and historical resources, ecological resources, endangered species, fire safety, and high voltage power lines.

3. SITE DESCRIPTION

3.1 Site Setting

California Dairies Inc. (formerly known as California Milk Producers) owns and formerly operated a dairy product processing facility and associated parking lot located at 11709 Artesia Boulevard and 17208 and 17212 Alburtis Avenue in Artesia, Los Angeles County, California. The approximately 3.33-acre processing facility and 0.248-acre parking lot parcels that comprise the site are located approximately 20 miles southeast of the City of Los Angeles (Figure 1).

According to LA County Assessor Portal, the assessor identification number (AIN) for the processing facility located along Artesia Boulevard is 7035-016-064, and the AINs for the conjoined parking lot parcels located east of Alburtis Avenue are 7035-020-057 (northern parcel) and 7035-020-056 (southern parcel).

The main portion of the site is improved as the former California Dairies Inc. manufacturing facility. Structures include approximately five (5) buildings totaling over 50,000-square-feet. Operations conducted at the buildings include the following:

Table 1: Building Operations Descriptions

Building	Former Operations Conducted
Office and Dispatch	Accounting and dispatch operator office, and raw milk silo room
Main Plant	Offices, United States Department of Agriculture (USDA) Certified Laboratory, main milk product processing plant, evaporators, facility maintenance shop, ammonia and glycol chiller storage room, and small parts storage room
Dryer and Evaporator	Four-story powdered milk dryer and bagging room, evaporator, and wastewater Dissolved Air Flotation (D.A.F.) control room and treatment areas
Dry Storage	Warehouse storage for dry goods
Parts Room	Storage for equipment parts, former fleet garage and repair area

Additional features on the site include two truck parking areas, two employee parking areas, two truck scales, a chemical storage area, truck washing area, as well as multiple silos, aboveground chemical storage tanks, and a boiler area. The eastern portion of the property located along Alburtis Avenue is currently improved as a parking lot used for employee parking with approximately 28 parking spaces that is secured with motorized gates, lighting, and block walls.

The former tanker truck route included entrance off Alburtis Street along the northeastern portion of the site and exit along Artesia Boulevard. Additional tanker truck exit routes included an exit along Fallon Avenue. One small area of landscaping is located along the northwestern corner of the site along Fallon Avenue adjacent to the employee parking lot. There are no on-site surface water bodies.

Table 2 provides an overview of physical setting and utility information for the site.

Table 2: Physical Setting and Utility Information

Conditions	Source	Description
Topography		
Elevation (above mean sea level)	USGS topographic map; Google Earth	The perimeter of the site is approximately 55 to 56 feet, while the center of the site (near the drain inlet) is approximately 54 feet.
Topographic Gradient	USGS topographic map; visual observations; Google Earth	Relatively flat on-site with graded contours directing groundwater flow to the center of the site. Regional topography slopes gently downward to the south.
Local Land Use	Visual observations	The facility is located in a mixed residential and industrial/commercial land use area. North: Property owned by RMH Enterprise, LLC (occupied by Pro-Tech Knives), beyond which is Alburtis Avenue, followed by industrial/ commercial businesses including Pack-Aid (a packaging supply store) and ERS Industrial Cleaning Equipment (a truck/equipment dealer). East: Alburtis Ave, beyond which is an office building owned by Artesia City, the parking area associated with the subject site, and commercial/industrial businesses (including Socal Diesel Repair [truck repair shop], RC Body & Paint [auto body shop], and National Ready-Mix Concrete). South: Artesia Boulevard, beyond which are commercial businesses including an autobody shop, tax preparation service, sports medicine clinic. West: Fallon Avenue, beyond which are a number of commercial businesses (including London's Pub and Grill, Ree's Mask Shop, Cal Plate [printing equipment and supplies], A&Z Electric) and multi-family residences. Vicinity properties are further discussed in Section 7.
Nearest Residence	Visual observations	Adjacent to the west of the site across Fallon Avenue.
Hydrology		
Storm Water Runoff	Visual observations	The site maintains a storm water discharge permit. Storm water is directed from the rooftops and into to a main sewer system drain located within the center of the site. The channeled storm water is analyzed for certain substances (pH, total dissolved solids, etc.) prior to release into the sewer system. In the event of a large rainfall event, a storm water diverter system diverts excess storm water via sheet flow to Artesia Boulevard, where is it diverted into to the municipal storm sewer system.

Table 2: Physical Setting and Utility Information

Conditions	Source	Description
Nearest Surface Water Body to the Site	USGS topographic map; Visual observations	San Gabriel River located approximate 1.25 miles east of the site at its nearest point. The San Gabriel River ultimately discharges to the Pacific Ocean near Long Beach.
Flood Plain	FEMA*; Facility personnel	Facility personnel reported no known occurrences of flooding at the site. The site is located within a 500-year flood zone but outside of a 100-year flood zone.
Wetlands	NWI*; Visual observations	There are no federally-designated wetlands on-site. Ramboll did not identify any obvious suspected wetlands at the site during the site visit.
Geology and Hydrogeology		
Presumed Direction of Shallow Groundwater Flow	USGS topographic map; 2020 Phase II ESA, GeoTracker database	Based on topography and a review of environmental reports from nearby properties found in the California GeoTracker database, groundwater is anticipated to flow in a southwesterly direction.
Depth to Groundwater	2020 Phase II Environmental Site Assessment	During the 2020 Phase II ESA conducted by GHD Services Inc. (GHD), groundwater was encountered at depths ranging from 11 to 17 feet below ground surface (bgs). The 2020 Phase II ESA report also indicates that based on environmental reports from nearby properties found in the California GeoTracker database, groundwater was anticipated to be encountered at 10 to 20 feet bgs.
On-site Wells	Facility personnel; Visual observations	No production, monitoring, or oil or gas wells are located on the site.
Nearest Groundwater Supply Wells	Database report	Nine federally registered wells are present within one mile of the site. One is registered as a public supply well. Approximately 150 private or municipal wells that may be used for water supply are located within one mile in all directions from the site. The database report also identified three oil and gas wells located northwest (2,933 feet), east-northeast (3,401 feet), and northwest (4,904 feet) of the subject site.
Geologic Conditions	Ramboll 2021 Subsurface Sampling	During Ramboll's Phase II soil vapor investigation, on-site soils were described as primarily gravel, sand, sandy silt, and silty sand from the surface to 5 feet. Regional soils are well drained sandy loams with moderate infiltration rates.

Table 2: Physical Setting and Utility Information

Conditions	Source	Description
Site Utility Information		
Heating and Cooling Equipment	Facility personnel	The majority of the site is not heated. Office areas are heated by packaged units. The building is cooled with four cooling towers located in the central portion of the site as well as multiple packaged air conditioning units. A fifth cooling tower contains ammonia and is used in connection with the processing plant.
Natural Gas Service	Facility personnel	The site is provided with natural gas service.
Use of Fuel Oil for Building Heat	Facility personnel	No known current or former use of fuel oil for building heat.
Foam-based Fire Suppression System	Facility personnel	According to facility personnel, the site is not equipped with a built-in foam-based fire suppression system.
Water Supply	Facility personnel; City personnel	The facility receives drinking and process water from the City of Artesia.
Sanitary Sewer	Facility personnel	The facility discharges sanitary wastewater and treated process water to the municipal sanitary sewer system. See Section 3.2.3 for more information on the discharge of process wastewater.
Septic Systems	Facility personnel	No identified current or former septic systems.

Notes:

FEMA = Federal Emergency Management Agency; NCSS = National Cooperative Soil Survey; NWI = National Wetlands Inventory

* - Source was provided in the environmental database report.

During the site visit, Ramboll walked or drove by the borders of the properties that are adjacent to the site. Ramboll did not enter the neighboring properties.

3.2 Current Use of Site

3.2.1 Current Operations

California Dairies Inc. owns and formerly operated a dairy product processing facility and associated parking lot in Artesia, California. The parcel located along Artesia Boulevard is approximately 3.33-acres and is currently improved as the former California Dairies Inc. manufacturing facility with five buildings totaling over 50,000-square-feet. The buildings include the following: a main processing plant with a maintenance area, office and dispatch building, dryer, evaporator, bagging and dissolved air flotation (D.A.F.) treatment area, dry storage warehouse, and a parts room (former fleet garage). Additional features include tanker truck parking areas, employee parking areas, two truck scales, a

main chemical storage area, DAF control room, a number of silos (raw milk, cow water, finished product and wastewater), a 50,000-gallon wastewater holding tank, various aboveground chemical storage tanks, and a boiler room with a water treatment area. The site includes a 0.248-acre property located across Alburtis Avenue which was utilized as employee parking.

The site has been vacant since operations ceased in June 2020. Maintenance-related chemicals and janitorial supplies (e.g., bleach, hand soap, latex paint, hand sanitizer), were used in small quantities (containers of one gallon and smaller). Facility personnel knew of no use of chlorinated solvents by the facility and the use of such chemicals would not be expected based on the nature of current site operations. According to facility personnel, dairy product processing operations remained generally consistent since at least the 1980s until operations ceased in 2020. Since 2020, the site has remained vacant.

3.2.2 Waste Management

Hazardous wastes were not routinely generated at the site, other than the generation of limited amounts of universal wastes (e.g., fluorescent light bulbs, batteries) and waste oil from processing equipment. The site is registered as a small quantity generator (SQG) of hazardous waste (CAL000008617). Sharp's containers located in the USDA certified laboratory area were removed by a third-party medical waste disposal company. The majority of chemical use at the site included descaling and sanitization of equipment and an ammonia and glycol milk product cooling system. Empty/used chemical drums, totes and cylinders were returned to the manufacturer for reuse.

Nonhazardous waste generated at the site consisted of general trash (paper cardboard, office trash) and spent non-hazardous parts washer. Safety Kleen serviced the parts washer. General facility trash was collected in on-site uncovered dumpsters for removal by CR&R Environmental Services. The dumpsters were located on pavement near the point of generation around the site. One remaining dumpster was observed adjacent to the boiler area during the site visit.

3.2.3 Wastewater and Storm Water

Sanitary wastewater, which included wastewater from bathroom and kitchen areas, was discharged to the municipal sanitary sewer system without treatment.

Process wastewater formerly generated by the facility consisted primarily of milk water (*i.e.*, water generated when milk products are evaporated or concentrated), floor wash water, and silo wash water that was used to clean and sterilize the silos between use. Silo wash water was generated when the silo was emptied of liquid substance (e.g., raw milk, cow water, milk product) and the silo required cleaning and sterilization. Sump pumps are used throughout the site to transfer water from discharge area to a treatment area. A mixture of cow water, caustics and/or acids, and City of Artesia water was released into the silo to clean and disinfect the silo and associated piping before reuse. All wash water was reused or directed to either the DAF system or a 50,000-gallon holding tank located along the southwestern edge of the site. The DAF system treated the wash water using chemical coagulation and flocculation. Process wastewater was then pumped into a series of tanks where pH was adjusted prior to discharge to the City of Artesia sewer system. The effluent was monitored and sampled on a routine basis by the City of Artesia and Innovative Consultants Incorporated.

The site maintains a storm water discharge permit. Storm water is directed from the rooftops and into a main sewer system drain located within the center of the site through. The directed storm water is analyzed for certain substances (pH, total dissolved solids, etc.) prior to release into the sewer system. Additional stormwater discharge points are located on the southeastern and southwestern portions of the site.

In the event of a large rainfall event, a storm water diverter system diverts excess storm water from the discharge drain inlet in the center of the site to sheet flow to Artesia Boulevard, where it is diverted into the municipal storm sewer system.

The site was issued a Notice of Violation (NOV) for Waste Discharge System (WDS) effluent limitation violations associated with the discharge of biological oxygen demand (BOD) and chlorine containing wastewater in 2006. In 2008, the site terminated the WDS permit because the wastewater from the milk evaporators was directed to the sanitary sewer system after treatment instead of the stormwater system.

3.2.4 Air Emissions

Air emissions from the facility included combustion products resulting from the operation of the site's two natural gas-fired boilers, four evaporators, a four-story high dryer, as well as cyclones and scrubbers. Additional emissions included limited emissions from minor welding operations and dry goods bagging operations.

4. REVIEW OF PUBLIC RECORDS AND OTHER INFORMATION SOURCES

4.1 Environmental Regulatory Database Review

Ramboll contracted with EDR in December 2021 to prepare a summary of listings in federal and state agency databases for the site and facilities within applicable radii of the site, as specified by the ASTM standard.[1] A copy of the EDR database search report is presented in Appendix B.

4.1.1 Database Review for Site

Ramboll reviewed the results of the state and federal environmental database searches performed by the third-party database provider (see Appendix B) and searched the California GeoTracker and EnviroStor databases. The site is listed on several environmental databases, as discussed in Table 3.

Table 3: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
The site is listed on the GeoTracker database as a Leaking Underground Storage Tank (LUST) cleanup site. According to the listing, a gasoline leak was discovered on 7/30/1987 which potentially impacted groundwater. California Milk Producers is listed as the claimant under the LUST CUF Claim Status. The status for the incident is listed as completed – as closed as of 2/7/1997.	According to the previous Ph I prepared for the site, four historical USTs were removed from the site, however closure documentation was not available. The Ph I indicated all former USTs were removed from the site. The site received closure from the RWQCB on 2/7/1997. This matter is further discussed in Section 7.
California Milk Producers is also listed on the UST, Statewide Environmental Evaluation and Planning System (SWEEPS UST), Historical UST (HIST UST), HIST CORTESE, and CORTESE Hazardous Waste & Substances Sites List databases. The historical SWEEPS UST database lists seven tanks formerly located at the site. The contents listed vary from diesel to not reported. The HIST UST listing notes seven tanks including four 10,000-gallon tanks containing diesel (year installed not reported), two 10,000-gallon tanks containing diesel (installed in 1978, likely two of the same tanks listed previously), and a 500-gallon tank containing waste oil (installed in 1981). The CA Facility Inventory Database UST database (facility ID 19001558) listing status is listed as active. The HIST CORTESE database (registration ID I-01249), CORTESE, and California Environmental Reporting System (CERS) database listings pertain to the previously discussed LUST cleanup site with the cleanup status listed as completed – case closed (global ID T0603702769).	As noted above, at least four USTs were located and removed from the site. Although both the SWEEPS UST and HIST UST listings state seven historical USTs, it is likely multiple listings were issued for the same tank. Facility personnel indicated no remaining tanks were at the site.

[1] EDR uses the term "radii" to refer to the ASTM terminology "approximate minimum search distance" in the environmental database report.

Table 3: Summary of Environmental Database Listings for the Site

Summary of Information Contained in Database	Ramboll's Comments
California Milk Products is listed on the Enforcement (ENF), Waste Discharge System (WDS), and California Integrated Water Quality System (CIWQS) databases.	The site was listed on the ENF database associated with WDS effluent limitation violations in 2006. The site terminated its WDS permit that allowed for discharge of treated condensate water from milk evaporators to the storm drain because the wastewater was redirected to the sanitary sewer system following treatment. No other violations were associated with the CIWQS.
1x California Milk Producers Inc is listed in the HWTS and RCRA databases as a non-generator/no longer regulated (NonGen/NLR). The generator numbers noted on the HTWS database include EPA ID CAC000072629 (inactive date of 10/25/2000) and EPA ID CAC000857104 (inactive date of 10/25/2000). The NonGen/NLR (EPA ID: CAL000008617) was issued on 11/14/1989. Owner/operators include Thomas Williams and California Dairies, Inc.; California Dairies, Inc. is also listed as a historic generator (not a generator as of 11/14/1989). No violations or evaluations are listed.	The listing does not suggest a contamination concern to the site. Hazardous waste generation is further discussed in Section 3.2.2.

Notes:

* The site is also listed on the following databases related to regulatory compliance: Toxics Release Inventory System (TRIS), Enforcement and Compliance History Online (ECHO), Emissions Inventory (EMI), California Environmental Reporting System (CERS), Integrated Compliance Information System (ICIS), National Pollutant Discharge Elimination System (NPDES), hazardous facility and manifest system (HAZNET), and Facility Index System/Facility Registration System (FINDS). Listings on these databases, by themselves, are not necessarily indicative of contamination.

4.1.2 Database Review for Adjoining Properties

Based on a review of the environmental database search report, Ramboll identified the adjoining sites listed in Table 4 on databases indicative of a potential contamination concern.

Table 4: Contamination-Related Database Listings for Adjoining Properties [1]

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
JMC Truck Repair/SoCal Diesel Repair 17224 Alburtis St (Adjoining to the east across Alburtis Street, and adjacent to the south of the parking lot parcel)	JMC Truck Repair is listed in the CERS database (name includes SOCAL DIESEL REPAIR, LLC) with the CERS description listed as chemical storage facilities (CERS ID 10279633 and site ID 437836). The listing includes a number of violations which the facility has returned to compliance. JMC Truck Repair is also listed in the CERS HAZ WASTE database as a hazardous waste generator. Social Diesel Repair LLC is also listed in the RCRA NonGen/NLR database.	The listings do not suggest a contamination concern to the site. Ramboll recommends no further investigation regarding this issue.
National Ready Mixed Concrete 11725 Artesia Blvd (Adjoining to the east across Alburtis Street)	The property is listed in the CERS HAZ WASTE database as a hazardous waste generator. The property is also listed in the SWEEPS UST, CA Facility Inventory Database (FID) UST, LOS ANGELES CO. Industrial Waste and Underground Storage Tank (HMS) and CERS TANKS databases. The property is listed in the CERS database for maintaining and reporting storing hazardous waste and chemicals at the property. The listing includes a number of violations.	The property is not listed on databases indicative of an environmental release, thus these listings do not suggest a contamination concern to the site. Ramboll recommends no further investigation regarding this issue.

Table 4: Contamination-Related Database Listings for Adjoining Properties [1]

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
George Veroeven Feed Co 11735 E Artesia Blvd (Adjoining to the east across Alburtis Street)	The property is listed on the LUST, LOS ANGELS CO HMS, SWEEPS UST, HIST UST, CA FID UST, CORTESE, HIST CORTESE, and CERS databases. The property experienced a gasoline release which impacted groundwater in 1996. The property received closure from the RWQCB on December 12, 1996. No further information is available on the GeoTracker database.	Ramboll reviewed records available on the Geotracker database. Because the gasoline release to the groundwater was granted regulatory closure, it is reasonable to assume the matter was appropriately evaluated in accordance with regulations in place at the time, and that remaining contamination from the cross-gradient property, if any, is localized and unlikely to migrate at significant concentrations onto the site. Ramboll recommends no further investigation regarding this issue.
Cal Plate 17110 Jersey Ave (Adjoining to the northwest)	The property is listed in the HWTS, CERS, LOS ANGELES CO. HMS, CERS HAZ WASTE and RCRA-SQG database. The CERS listing includes a number of violations from 2014 2018 for which the facility appears to have returned to compliance. The property is listed as a RCRA-SQG of hazardous wastes (EPA ID: CAD983636242). No violations or evaluations re listed.	These listings do not suggest a contamination concern to the site. Ramboll recommends no further investigation regarding this issue.
Strongbox Industries 17203 Fallon Ave (Adjoining to the west across Fallon Avenue)	The property is listed in the LUST, CORTESE, HIST CORTESE, and SWEEPS UST databases. A leak was discovered from piping on 12/08/1988 during tank closure, and it was reported on 5/11/1989 (facility ID R-14475). The potential contaminant of concern is listed as gasoline with soil being listed as the potential media impacted. The status is listed as completed – case closed as of 10/01/1990 (old case # is listed as 102089-03.	Ramboll reviewed records available on the Geotracker database. Because the gasoline release to the soil was granted regulatory closure, it is reasonable to assume the matter was appropriately evaluated in accordance with regulations in place at the time, and that remaining contamination, if any, is localized and unlikely to migrate at significant concentrations onto the site. Ramboll recommends no further investigation regarding this issue.

Table 4: Contamination-Related Database Listings for Adjoining Properties [1]

Listing Name or Address and Location Relative to the Subject Site	Summary of Information Contained in Database	Ramboll's Comments
Elroy Painting Contractor 17220 Jersey (Adjoining to the west across Fallon Avenue)	The property is listed in the Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) (SLIC: 0135) as a cleanup program site related to VOCs (global ID SLT4307977) in 1965. Shallow soil contamination was noted in the no further action (NFA) letter. The facility status is listed as no further action required as of 6/16/1965. The property is also listed in the CERS database as a cleanup program site (site ID 188691 and CERS ID SLT4307977).	Based on the case closed status and the soil only impacts, it's unlikely that this cased closed property has adversely impacted the site. Ramboll recommends no further investigation regarding this issue.
O'Brien Cal Cogen Ltd 17306 Fallon Ave (Adjoining to the west) John Wynega 11645 Artesia Blvd (Adjoining to the west) Ms Claudia Covert 11655 Artesia Blvd (Adjoining to the west)	The three properties are listed on either the UST or SWEEPS UST databases only.	Based on the lack of listing on a database of environmental concern, these off-site properties are unlikely to pose a contamination concern to the site and is not discussed further herein. Ramboll recommends no further investigation regarding this issue.

Notes:

[1] Ramboll's analysis of adjoining sites was based on observations made during the site reconnaissance (as discussed in Table 2) and location information for off-site listings as presented in the database report. Also, for purposes of this analysis, Ramboll considers as "adjoining" properties that are adjacent, even if separated by a road or other physical barrier. Ramboll has not included a discussion of compliance-related databases in this table, as Ramboll considers it unlikely that off-site properties listed on compliance-related databases without indication of a release or chemical mishandling represent a potential risk for contamination to the subject site.

[2] The RGA databases are EDR proprietary databases that identify prior versions of the database in which a site was listed. Recovery Act (RCRA) database as a non-generator of hazardous waste.

4.1.3 Database Review for Other Surrounding Properties

There are several listings in the environmental database report for non-adjoining off-site facilities within applicable ASTM search radii; however, Ramboll has only identified one property that is likely to represent a potential contamination concern to the site.

PRL Glass Systems 177004 Alburtis Avenue is located approximately 364 feet north-northwest of the site. The property is listed on the CPS-SLIC database due to a release of VOCs (namely PCE and trichloroethene [TCE]) to soil and groundwater. The property is under active oversight of the RWQCB. According to documents reviewed on GeoTracker, the property is conducting groundwater and subsurface soil vapor monitoring activities. The area of concern appears to be limited to the northeast portion of the property. The extent of the groundwater contamination has not been delineated, however groundwater flow reported at the property is from the northeast to the southwest, away from the site. Based on the available information, there is no indication that contamination from the off-site property is migrating to the site. The contamination is being addressed with regulatory oversight. There were no poor or inadequate addresses ("orphan sites") listed on the EDR database. Ramboll concludes that this facility is unlikely to represent an environmental concern to the site and recommends no further investigation regarding this issue.

4.2 Historical Uses of the Site and Adjacent Properties

4.2.1 Past Uses of the Site

The site was either utilized for agriculture or naturally vegetated land from the late 1800s through the early 1940s. By 1947, the south-eastern portion of the site appears utilized for either warehousing or light industrial purposes. The southern and eastern portions of the dairy processing facility were first developed in the early 1950s, while the central and northern portions of the site appear utilized as residential land. The site appears to be occupied by the present day diary manufacturing facility since at least the mid-1970s. The parking lot property along the eastern portion of the site across from Alburtis Avenue appears as residential from at least the 1950s through the 1980s when it was converted into a parking lot.

A summary of Ramboll's key observations from the available historical sources is presented in Table 5.

Table 5: Summary of Key Observations from Historical Sources for the Site

Historical Source	Key Observations Regarding Site History
Aerial Photographs (1928, 1938, 1947, 1952, 1963, 1970, 1977, 1983, 1989, 1994, 2002, 2005, 2009, 2012 and 2016) Satellite Imagery [1] (1985 to 2021)	1709 Artesia Boulevard The 1928 and 1938 aerial photographs depict the parcel as either naturally vegetated or agricultural land. In 1947, a rectangular industrial or warehouse structure is depicted at the southeast corner of the parcel, and a dirt road appears present that extends from the northern parcel boundary. By 1952, the industrial or warehouse structure appears larger in configuration. Additional structures on the site appear to be approximately five residential dwellings located along the western and northern portions of the site. The 1963 and 1970 photographs depict the southern portion of the site as developed with commercial and/or industrial buildings while the central and northern portions of the site appear occupied by single and multi-family residences. The southwestern corner of the site appears utilized as a paved parking lot. Multiple tanker trucks appear along the eastern portion of the site adjacent to the industrial building. Silos first appear at the site in 1970. The 1977 photograph depicts the site with multiple structures similar to present day configuration, however a rectangular building appears in the northwestern portion of the site in the present day employee parking lot and the southwestern corner of the site remains a parking lot. Additional silos appear in the 1983 photograph. The 1989 and subsequent photographs depict the site similar to present day configuration. 17208 And 17212 Alburtis Avenue The 1928 and 1938 aerial photographs depict the present-day parcels as either naturally vegetated or agricultural land. By 1952, the parcels appear to be developed for residential use with two residential sized structures. The parcel appears to remain residential until 1989. In the 1989 aerial photograph, the parcels appear to be developed as a parking lot. The aerial photographs are limited in quality but appear to depict the parking lot with no structures through 2016. An approximately forty square foot area of staining appears visible in satellite imagery in September 2018. No staining is depicted in September 2019. No environmental concerns are noted.
Topographic Maps (1896 to 2018)	1709 Artesia Boulevard A residential sized structure is depicted at the western portion of the site from as early as 1896 through 1902. No development is depicted from 1923 to 1945. By 1947, a structure appears at the southern portion of the parcel. By 1949, one rectangular shaped structure is present at the southeast corner of the parcel. In the 1964 and subsequent maps, the site is depicted as located within a built up area and no structures are depicted at the site. 17208 And 17212 Alburtis Avenue A small residential sized structure appears at the parcel from 1896 through 1902. The 1923 through 1949 maps do not depict structures at the parcel. By 1950 the site is depicted as part of a developed area. No environmental concerns are noted.
City Directory Abstracts (1965, 1994, 1999, 2000, 2006, 2009, and 2004)	The occupants of the site are listed as: 171709 Artesia Boulevard. California Milk Producers (1994), California Milk Producers Main Plant (1999), CA Dairies Inc (2006), and California Milk Producers (2009), California Dairies Inc (2014) 11709 Artesia Boulevard East CA Milk Producers (2000)

Table 5: Summary of Key Observations from Historical Sources for the Site

Historical Source	Key Observations Regarding Site History
	17212 Alburtis Avenue: Mary L Castodio (1964) City directory information was not provided for 17208 Alburtis Venue.
Chicago Title Company	According to the preliminary report from the Chicago Title Company, the title to the property at Artesia Boulevard (APN 7035-016-064) and the property at Alburtis Avenue (APNs: 7035-020-056 and 7035-020-057) comprising the subject site is said to be vested in California Milk Producers, a California corporation.
Los Angeles County Assessor Portal	Los Angeles County Assessor records available online indicate that the AINs for the site are 7035-016-064 for the western parcel and 7035-020-057, and 7035-020-056 for the eastern parking lot parcels.

Notes:

[1] In addition to aerial photographs provided by EDR, Ramboll viewed historical satellite imagery provided via Google Earth. Printed copies were not obtained, and imagery dates were not independently verified.

EDR reported that Sanborn fire insurance map coverage is not available for the site.

4.2.2 Past Uses of Adjacent Properties

The properties in the vicinity of the site have primarily been used for agricultural or residential purposes from the early 1920s through the 1950s. By 1952 the vicinity appears a mix of residential properties to the west and commercial or light industrial to the east. A concrete manufacturing plant appears east of the site by the 1960s. The vicinity appears largely a mix of light industrial (north and east), commercial (south) and residential (west) properties from the 1980s to present day.

4.3 Review of Local and State Agency Information

Ramboll visited or otherwise contacted local governmental agencies and regulatory bodies for information relating to the site. An overview of the findings of this review is presented in Table 6.

Table 6: Local Agency Information for the Site

Agency Contacted / Document Reviewed	Information Obtained
Los Angeles County Assessor Portal	Los Angeles County Assessor records available online indicate that the AINs for the site are 7035-016-064 for the western parcel and 7035-020-057, and 7035-020-056 for the eastern parking lot parcels. The western parcel's "use code" listed a one story beverage industrial food processing plant. Additional "use codes" include a commercial office building, a parking lot, and a warehouse. The initial 12,272 square foot processing plant was constructed in 1950. A 14,000-square foot parking lot was constructed at the site in 1958. The 6,814 square foot warehouse and additional 1,057 square foot industrial plant buildings were constructed in 1960. The 7,147 square foot commercial office building is listed as constructed in 1966 and renovated in 1976. The eastern parking lot parcels were constructed as a 10,800 square foot conjoined parking lot in 1989.

Table 6: Local Agency Information for the Site

Agency Contacted / Document Reviewed	Information Obtained
City of Cypress Building Department/City Clerk's Office	Ramboll requested information from the building department regarding building records including all building permits and certificates of occupancy. As of the date of this report, a response had not been received from the building department
Los Angeles County Fire Department-Health Hazardous Materials Division	Ramboll requested information from the fire department health hazardous materials division concerning the utilization, manufacture, storage and/or discharge of hazardous materials/waste, and any information concerning previous or on-going site investigations/remediations pertaining to hazardous materials/waste. As of the date of this report, a response had not been received from the fire department.

4.4 Previous Environmental Assessments and Activities

Based on a review of historical site documents and interviews with facility personnel, prior environmental assessment and UST removal activities have been conducted at the site, as summarized below. Pertinent historical and site-related information contained in the prior report has been incorporated into other sections of this report.

- **2020 Phase I ESA**. In July 2020, GHD, in association with investigating Business Environmental Risk (BER), conducted a Phase I ESA at the site. The Phase I ESA report did not identify the presence of any RECs at the site, however GHD did note five findings. The findings included historical on-site structures, historical site use, potential agricultural chemical impacts form historical operations, former on-site diesel and gasoline UST releases, and potential migration of impacts from an adjoining concrete manufacturing facility.
- **2021 Phase II Environmental Site Assessment (ESA)**. Based on information gathered during the prior Phase I ESA, GHD conducted a Phase II subsurface investigation at the property located at 11709 East Artesia Boulevard that included the drilling of six soil borings throughout the parcel which were advanced to 25 feet bgs; grab groundwater samples were collected from each boring. The soil samples were analyzed for VOCs, semi-volatile organic compounds (SVOCs), organochlorine pesticides, polychlorinated biphenyls (PCBs), herbicides, CAM 17 metals, and Total Petroleum Hydrocarbons (TPH). Groundwater samples were analyzed for ammonia, nitrates and nitrites, CAM 17 metals, TPH, VOCs, and SVOCs.

  GHD results indicated that limited amounts of pesticides (e.g., 4,4'-DDE maximum detection-12 µg/kg) and VOCs are present in soil; however, none of the concentrations exceed appropriate ESLs for the site (i.e., industrial/commercial land use). Metals detected in soils which exceeded the appropriate ESLs included arsenic, lead and vanadium (maximum detection-197,000 micrograms per kilogram [µg/kg], 57,800 µg/kg, and 47,700 µg/kg respectively). No VOCs were detected in groundwater; metals detected in groundwater which exceeded MCLs were limited to mercury (3.31 micrograms per liter [µg/L]). Ammonia and nitrate (maximum levels 648 µg/L, 94,00 µg/L) were also present in the groundwater, and in some locations, nitrate exceeded EPA MCLs.

4.5 Interviews

During the site inspection, an interview was conducted with personnel responsible for management of the site. Frank Noriega, the Assistant Plant Manager of California Dairies Inc. since 1980, indicated the site has been a diary processing facility since at least 1980.

4.6 User-Provided Information

Ramboll provided Artesia & Flallon, LLC and Borstein Enterprises with a User Questionnaire (consistent with Appendix X3 of the ASTM Standard) that requested information relating to environmental liens, activity use limitations (AULs), specialized knowledge of the site, property value diminution, chain-of-title, or any other commonly known or obvious indications of site contamination, that was not otherwise provided to Ramboll. The User did not provide any information that was not otherwise obtained and reviewed by Ramboll.

5. SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

Ramboll conducted a visit to the site on December 13, 2021. During the site visit, observations of both the interior of the buildings and exterior portions of the site were made to evaluate if any RECs, as defined in Chapter 7, are present. Ramboll did not observe the roofs of the buildings.

5.2 General Site Setting and Observations

Ramboll made observations concerning the interior and exterior issues specified in Sections 9.4.2 through 9.4.4 of the ASTM E1527-13 Standard. The presence or absence of each issue of environmental interest or concern is noted in Table 7. Additional information regarding observed and historical items is provided in the sections following the table.

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
Interior and Exterior Issues		
9.4.2.1	Current use(s) of the site	See Section 3.2
9.4.2.2	Past use(s) of the site	See Section 4.2
9.4.2.3	Hazardous substances and petroleum products used, treated, stored, disposed of, or generated on the property in connection with identified present or past uses	**Present/Formerly Present** (see Section 5.2.1)
9.4.2.4	Storage tanks: Underground storage tanks (fill ports, vent pipes, manholes) Aboveground storage tanks	(see Sections 5.2.2 and 5.2.3) **Formerly Present** **Present**
9.4.2.5	Odors (strong, pungent or noxious)	Absent
9.4.2.6	Pools of liquid, standing surface water or sumps	**Present** (see Section 5.2.4)
9.4.2.7	Drums of hazardous substances or petroleum products (five-gallon, 55-gallon or totes)	**Formerly Present** (see Section 5.2.1)
9.4.2.8	Hazardous substance and petroleum product containers (not necessarily in connection with identified uses)	**Present** (see Section 5.2.1)
9.4.2.9	Unidentified substance containers suspected of containing hazardous substances or petroleum products	Absent

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
9.4.2.10	Polychlorinated biphenyls (PCBs) Electrical equipment on-site (e.g., transformers, capacitors) Electrical equipment known or likely to contain PCBs Hydraulic equipment on-site (e.g., elevators, truck dock lifts) Hydraulic equipment known or likely to contain PCBs	(see Section 5.2.5) **Present** Unlikely **Present** Unlikely
Interior Issues		
9.4.3.1	Heating/cooling systems	**Present** (see Table 2)
9.4.3.2	Stains or corrosion on interior floors, walls or ceilings (except for staining from water)	**Present** (see Section 5.2.6)
9.4.3.3	Floor drains and interior sumps	**Present** (see Section 3.2.3)
Exterior Issues		
9.4.4.1	Pits, ponds or lagoons on property or adjacent sites	Absent
9.4.4.2	Stained soil or pavement	Absent
9.4.4.3	Stressed vegetation (from other than insufficient water)	Absent
9.4.4.4	On-site solid waste disposal; areas apparently filled or graded by non-natural causes; or mounds or depressions suggesting solid waste disposal	Absent
9.4.4.5	Wastewater or other liquid (including storm water) or any discharge into a drain, ditch, underground injection system or stream on or adjacent to the property	**Present** (see Section 3.2.3)
9.4.4.6	Wells (including dry wells, irrigation wells, injection wells, abandoned wells, or other wells)	Absent
9.4.4.7	Septic systems or cesspools	Absent
Non-Scope Considerations		
N/A	Asbestos Containing Materials	(see Section 5.2.7)
N/A	Lead-Based Paint	(see Section 5.2.8)
N/A	Water Intrusion	(see Section 5.2.9)

Table 7: Summary of Site Reconnaissance Observations

ASTM Section	Issue	Observation
N/A	Radon	(see Section 5.2.10)

Notes:

Observations noted in this table and discussed further below are based on information obtained during the site visit and from a review of the sources summarized in Section 4.

See the ASTM Standard for a detailed description of the issues included in each referenced ASTM section.

Per the ASTM Standard, fluorescent light ballasts likely to contain PCBs are not considered.

N/A – Not applicable.

5.2.1 Hazardous Substances and Petroleum Products

The majority of the hazardous wastes and chemicals present at the site were removed by Chemco after operations on the site were halted in June 2020. Limited amounts of retail-sized quantities of maintenance chemicals and janitorial chemicals remained in fire safety cabinets and within storage rooms at the site. Small quantities of propylene glycol remain in the cooling system at the site.

Historical hazardous materials and chemicals used at the site included the following: acetylene, propylene glycol, powdered floor treat, citric acid, phosphoric acid, Camco 717 HT, lubricant oil, acid sanitizer 6552, sodium bicarbonate, Chemco 51 (alcohols), surfactant, Flo-Quat, Subdue Plus (alcohols), Commence (benzyl sulfonic acid, sodium carbonate peroxyhydrate, trisodium orthophosphate), Adhere (sodium hydroxide mixture), Enerex 9900C (sodium hydroxide sulfite), Enerex 205L (potassium hydroxide), motor oil, argon, argon/CO2 mixture, oxygen, Tornado (soda ash, sodium hydroxide, pine oil), Chemquest 11596 (etidronic acid), salt crystals, aluminum chlorohydrate water, and ethoxylated alcohol (2020 Phase I).

At the time of the site visit, only empty containers which had previously stored chemicals were present. Pavement beneath all the chemical storage containers and ASTs appeared to be in good condition and no evidence of releases was apparent. Facility personnel indicated that no hazardous wastes are generated currently due to the dairy processing facility being closed (See Section 4.2.1 for previous site activities).

5.2.2 Underground Storage Tanks

A total of four USTs were formerly located at the site and were removed around 1997. Pertinent information regarding these USTs is provided in Table 8. The site is listed on the LUST database for a release which impacted groundwater. Further information regarding sampling and closure activities is included in Section 4.1.1.

Table 8: Underground Storage Tanks

Number and Size (gal.)	Contents	Location	Key Dates	Regulatory Closure Granted?	Notes
Decommissioned/Closed-in-Place/Removed					
2 x 10,000	Diesel fuel	North of Truck Bays	Year of installation unknown, removed by 1997	Yes	Provided fuel for trucks
1 x 10,000	Gasoline	North of Truck Bays	Year of installation unknown, removed by 1997	Yes	Provided fuel for trucks
1 x 500	Used Oil	North of Truck Bays	Installed 1981; removed by 1997	Yes	Non-vaulted, single-walled

5.2.3 Aboveground Storage Tanks

Several aboveground storage tanks (ASTs) were formerly maintained at the site, as summarized in the table below. Facility personnel knew of no leaks or spills relating to the tanks, and Ramboll observed no evidence of staining or past releases at the time of the site visit. Facility personnel indicated that all ASTs were decommissioned and emptied by Chemco when the facility ended all operations in June 2020.

Table 9: Aboveground Chemical and Petroleum Storage Tanks and Bulk Containers

Location	# of tanks	Contents	Sizes	Observations
Between Dry Storage and Silo Room	1	Sodium Hydroxide (Dominate)	6,000 gallons	Concrete beneath AST is in good condition and no evidence of spills or releases were observed.
Between Dry Storage and Silo Room	1	Nitric Acid/Phosphoric Acid (Dazzle)	5,000 gallons	Concrete beneath AST is in good condition and no evidence of spills or releases were observed.
In Main Plant	1	Hydrogen Peroxide/Acetic Acid/Peracetic Acid (Chemco PAA)	600 gallons	Tank is located in a bermed area, and the concrete is in good condition. No evidence of spills or releases were observed.

Table 9: Aboveground Chemical and Petroleum Storage Tanks and Bulk Containers

Location	# of tanks	Contents	Sizes	Observations
In Main Plant	1	Sodium Hypochlorite (Flo-Klor)	500 gallons	Tank is located in a bermed area, and the concrete is in good condition. No evidence of spills or releases were observed.
In Ammonia Room	1	Anhydrous Ammonia	2,400 gallons	Concrete beneath AST is in good condition and no evidence of spills or releases were observed.
In Receiving Bay	1	Potassium Hydroxide/Acrylic Acid Sodium Salt Polymer/Sodium Hypochlorite (Triumph NP)	1,000 gallons	Concrete beneath AST is in good condition and no evidence of spills or releases were observed.
In Main Plant	1	Sodium Hydroxide	1,100 gallons	Concrete beneath AST is in good condition and no evidence of spills or releases were observed.
In Main Plant	1	Sulfuric Acid	16,880 gallons	Concrete beneath AST is in good condition and no evidence of spills or releases were observed.
In Hazardous Waste and Chemical Storage area	1	Used oil	600 gallons	The tank is double-walled and is on top of secondary containment. No evidence or spills or releases were observed.
Cow Water Silos	7	Cow water (water removed from raw milk)	5,000-10,000 gallons	Concrete beneath ASTs is in good condition and no evidence of spills or releases were observed.
Around Silo Room	11	Raw milk	30,000-50,000 gallons	Concrete beneath ASTs is in good condition and no evidence of spills or releases were observed.
West of Silo Room	1	Wastewater	50,000 gallons	Concrete beneath ASTs is in good condition and no evidence of spills or releases were observed.

5.2.4 Pools of liquid, standing surface water or sumps

Multiple areas of shallow standing water were present within the silo room and bagging area. This water, which is present in a low-lying area within the pavement, was the result of either a precipitation event during the site visit or from historical equipment wash water. A visual evaluation of the water surface identified no oil sheen or loose debris.

5.2.5 Polychlorinated Biphenyls (PCBs)

Facility personnel knew of no on-site equipment that is known to contain polychlorinated biphenyls (PCBs). Four pad-mounted and four pole-mounted transformers are present on the site and are owned by Southern California Edison. The units are not labeled as to their PCB content. Because the installation dates of the units are unknown and may predate the 1979 federal ban on the manufacture of PCBs, it is possible that the transformer oils contain PCBs. However, manufacturing dates of two of the transformers located in the central portion of the site indicate a manufacturing date after 1979.

As noted above, one hydraulic elevator is located in the office area in the southwestern corner of the site. Given that the hydraulic oil for the elevator is expected to have been routinely replaced by the elevator service company, it is unlikely that the hydraulic oil contains PCBs. No evidence of staining or releases was observed near the hydraulic oil reservoirs. Facility personnel indicated that no spills or releases have occurred within the elevator room and the elevator is maintained by a third-party.

Because the buildings were constructed prior to the 1979 federal ban on the manufacture of PCBs, it is possible that hydraulic oils, or other types of electrical equipment, such as capacitors, contain PCBs. Ramboll observed no indication of leaks or releases from electrical equipment during the site visit.

5.2.6 Stains or Corrosion on Interior Floors, Walls or Ceilings

Ramboll observed evidence of minor pavement staining in the evaporator rooms, the hydraulic elevator room, the silo rooms, the maintenance shop, and the ammonia room. This staining appeared to be leaked milk products is likely not indicative of widespread releases or losses. Brick-paved and concrete floors in the vicinity of the observed staining appeared to be in good condition, with no visual evidence of cracking.

5.2.7 Asbestos-Containing Materials (ACMs)

Although an asbestos inspection and sampling of suspect building materials in conformance with established protocols (as outlined in 40 CFR §763), applicable state or local regulations, or industry standards, were beyond our scope of work, Ramboll made limited visual observations[2] of representative building materials in those areas accessed during the site tour to identify readily apparent PACM and suspect ACM. OSHA's definition of PACM is limited to thermal system insulation (TSI) and surfacing materials present in buildings constructed before 1981. Vinyl floor tiles are not considered PACM, but OSHA nonetheless requires that asphalt and vinyl floor tiles present in buildings constructed before 1981 be treated similarly to PACM. The term suspect ACM is not defined by OSHA but can include numerous building materials manufactured using asbestos currently or in the past (e.g., ceiling tiles, roofing materials, joint compound), as well as TSI, surfacing materials, and flooring materials installed after 1981. Facility personnel indicated a recent ACM survey was conducted at the site, however Ramboll was not provided with a copy of the report or the results of the survey.

Because the buildings at the site were constructed prior to 1981, TSI, surfacing materials and vinyl/asphalt flooring must be treated as PACM. During the site visit, PACM observed by Ramboll included vinyl floor tile in the office building and TSI associated with the piping. In addition, Ramboll observed other materials potentially considered suspect ACM (e.g., ceiling tile and building insulation). Also, based on the building age, the roofing materials may be considered suspect ACM. According to the EDR database, the site exported an unreported amount of asbestos containing waste in 1988.

[2] Ramboll did not observe all building materials or formally survey the facility to determine the presence and condition of PACM and suspect ACM.

There are no regulatory requirements to remove PACM, suspect ACM and known ACM or to confirm whether building materials contain asbestos, unless the materials are damaged and have the potential to release fibers or the materials have the potential to be disturbed during renovation or demolition activities. Ramboll observed certain building materials that were damaged or deteriorating, specifically including patches of deteriorating ceiling tile on the second story of the office building. OSHA requires building owners and employers to identify locations of PACM and confirmed ACM at the facility and comply with certain employee notification, training, labeling and recordkeeping requirements (29 CFR §1910.1001(j)) and housekeeping programs (1910.1001(k)).

5.2.8 Lead-Based Paint

Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of on-site buildings dating back to approximately 1950, it is possible that lead-based paint was used historically on facility structures. Facility personnel knew of no lead-based paint on structures at the facility. Ramboll observed the paint to be in good condition. According to facility personnel, a LBP survey was conducted at the site, however Ramboll was not provided with a copy of the report to review.

5.2.9 Water Intrusion

Ramboll did not perform a mold survey at the site; however, facility personnel provided information regarding past water intrusion events. According to facility personnel, only minor roof leaks have occurred, and roof leaks were addressed by third-party contractors. Facility personnel also indicated that there have not been any problems with mold in the past.

5.2.10 Radon

Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor radon levels between 2 and 4 picoCuries per liter (pCi/L). The United States Environmental Protection Agency's (USEPA's) continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, for 8 sites surveyed in the 90701 zip code, no sites had radon present at greater than 4.0 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first-floor room at one site was 0.000 pCi/L.

6. PHASE II SUBSURFACE INVESTIGATION

Ramboll conducted a subsurface investigation at the site that included collection of soil and soil vapor samples. The scope for the subsurface investigation focused on areas of concern identified through the course of conducting the Phase I ESA, as described further below.

6.1 Pre-field Activities

Prior to commencement of sampling activities, Ramboll contacted Underground Service Alert (USA) to mark the locations of all major utilities near the site boundaries. In addition to the services provided by USA, Ramboll contracted with Ground Penetrating Radar Systems, LLC (GPRS) of Toledo, Ohio, a private utility locating company, to conduct a geophysical survey in the immediate vicinity of the boring locations to identify subsurface structures or underground obstructions.

Ramboll also prepared a site-specific Health and Safety Plan (HASP), designed to minimize exposure of Ramboll field personnel to potentially hazardous materials and coronavirus disease (COVID-19). Field personnel involved in the project were required to implement the procedures presented in the HASP while conducting the fieldwork. All drilling activities were conducted under the direct supervision of a California-registered Professional Geologist. Field activities and sampling results are described below.

6.2 Advancement of Soil Borings and Soil Sample Results

On November 2, 2021, Ramboll collected soil samples from three borings (B1 through B3) as depicted on Figure 3. Soil samples were collected at approximately 2, 4, and 6 feet bgs at each of the boring locations. Soil samples were screened using visual and olfactory methods, and by using a photoionization detector (PID). Soil sample containers were labeled, sealed in zip-closure bags, stored on ice in an insulated container, and delivered to Eurofins Calscience of Irvine California, under chain-of-custody documentation. Soil samples were analyzed for total petroleum hydrocarbons (TPH) and pH. It is Ramboll's understanding the proposed use for the site is a mixed-use residential and commercial setting. Accordingly, soil sampling results were compared to both residential and commercial screening levels as presented in Table 10 in Appendix D. Laboratory reports are included in Appendix D. In summary:

- TPH concentrations were reported above laboratory reporting limits in several samples but at low concentrations. No TPH were detected in soil above applicable DTSC/USEPA commercial or residential screening levels.
- pH in soil ranged from 7.7 to 8.9. Soil in California generally ranges in pH from 5 to 8.5, but most are higher than 7. Based on the sampling results, the pH in soil generally appears to be consistent with normal background soil conditions.

6.3 Soil Vapor Probe Installation and Sampling Results

On December 1, 2021, ABC Liovin, under the oversight of Ramboll, installed nine (9) soil vapor probes (RSV-1 through RSV-5, and RSV-7 through RSV-10) at the locations depicted on Figure 3. Various attempts were made to install RSV-6, however due to thick concrete and multiple concrete layers, a vapor probe was not installed at location RSV-6. Vapor probes were installed at a depth of approximately 5 feet bgs. Soil vapor probes were installed and sampled in accordance with the "Advisory – Active Soil Gas Investigations", jointly developed by the California EPA (CAL EPA), DTSC, and LARWQCB/SFRWQCB, dated July 2015. On December 3, 2021, the soil vapor samples were collected and analyzed by A&R Laboratories under the supervision of Ramboll. The soil vapor samples

were analyzed for volatile organic compounds (VOCs) by USEPA Method 8260. The sampling results are summarized in Table 11 in Appendix D and depicted on Figure 4. Laboratory reports are included in Appendix D. Results were compared to the screening thresholds listed on Table 11. Ramboll compared the soil vapor sampling results to residential and commercial screening levels using the official attenuation factor (AF) of 0.001 and, for screening purposes, an attenuation factor of 0.03. Multiple VOCs were detected in soil vapor in samples RSV-3, RSV-5 and RSV-10 at low concentrations above their respective screening criteria (Figure 4). RSV-3 is located in the northwestern portion or the site, RSV-5 is located in the central portion of the site, and RSV-10 is located in the southern portion of the site. The sampling results are summarized below:

Commercial Scenario with Attenuation Factor 0.001

No VOCs in soil vapor were detected above applicable DTSC/USEPA commercial building screening levels using the official attenuation factor of 0.001.

Residential Scenario with Attenuation Factor 0.001

Chloroform was the only VOC detected in soil vapor above applicable DTSC/USEPA residential building screening levels using an attenuation factor of 0.001. Chloroform was detected in one soil vapor sample location (RSV-10) at a concentration of 0.27 micrograms per liter (µg/L), exceeding its residential screening threshold of 0.12 µg/L.

Commercial Scenario with Attenuation Factor 0.03

Benzene, PCE and chloroform were the only VOCs detected in soil vapor above applicable DTSC/USEPA commercial building screening levels using 0.03 as an attenuation factor for screening purposes. Benzene was detected in RSV-5 at a concentration of 0.030 µg/l, exceeding the screening level of 0.014 µg/l. PCE was detected in RSV-3 at a concentration of 0.13 µg/l, exceeding the screening level of 0.067 µg/l. Chloroform was detected in RSV-10 at a concentration of 0.27 µg/l, exceeding the screening level of 0.018 µg/l.

Residential Scenario with Attenuation Factor 0.03

Benzene, PCE, and chloroform were the only VOCs detected in soil vapor above applicable DTSC/USEPA residential building screening levels using an attenuation factor of 0.03. PCE was detected in two samples at concentrations of 0.13 µg/l in RSV-3 and 0.050 µg/l in RSV-5, exceeding the screening level of 0.015 µg/l. Benzene was detected in RSV-5 at a concentration of 0.030 µg/l, exceeding the screening level is 0.003 µg/l. Chloroform was detected in RSV-10 at a concentration of 0.27 µg/L, exceeding the screening level of 0.004 µg/L.

6.4 Lithology and Hydrogeology

The lithology encountered consisted of primarily sandy silt, silty sand and some gravel from the surface to 5 feet bgs. Groundwater was not encountered during this investigation. Boring logs are included in Appendix E.

6.5 Summary of Subsurface Investigation Findings

Based on the results of the limited soil and soil vapor sampling conducted as part of this subsurface investigation, Ramboll has made the following findings:

- TPH were not detected in soil above applicable screening criteria and the pH in soil generally appears to be consistent with normal background conditions. While the sampling results from this investigation did not identify chemicals in soil above applicable screening criteria, the soil should

be managed in accordance with applicable state and federal regulations during potential future soil disturbance activities.

- In soil vapor, benzene, PCE and chloroform were the only VOCs detected above applicable DTSC/USEPA residential and commercial screening levels using 0.03 as an AF. Chloroform was the only VOC detected above applicable DTSC/USEPA residential screening levels using 0.001 as an AF. No VOCs in soil vapor were detected above applicable DTSC/USEPA commercial screening levels using 0.001 as an attenuation factor. The presence of VOCs above screening levels indicate a potential vapor intrusion concern that should be further evaluated through the performance of a human health risk assessment.

7. FINDINGS, OPINION, AND CONCLUSIONS

Ramboll performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 and a Phase II subsurface investigation of the site located at 11709 Artesia Boulevard, 17208 and 17212 Alburtis Avenue in Artesia, California in December 2021. The objective of the ESA was to identify RECs, as defined in the ASTM Standard. A list of key definitions presented in the ASTM Standard is provided in Chapter 8 at the end of this report. Any exceptions to, or deletions from, this practice are described in Section 7.5.

7.1 Findings, Opinions, and Conclusions

7.1.1 Recognized Environmental Conditions

Ramboll has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527-13 of the dairy product processing facility located 11709 Artesia Boulevard, 17208 and 17212 Alburtis Avenue in Artesia, Los Angeles County. Any exceptions to, or deletions from, this practice are described in Section 7.5 of this report. This assessment has revealed no RECs in connection with the site.

7.2 Other Findings

Although not considered to be a REC, Ramboll identified the following notable other finding. The term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

- **Past Manufacturing Operations at the Site.** Since the early 1950s, the site has been used for milk manufacturing purposes. From the 1970s through at least the 1990s, a tanker truck fleet operated at (and was repaired at) the facility. Milk manufacturing activities may have included the use of petroleum products, acids, caustics, and other chemicals. Multiple subsurface investigations have been conducted at the site, including an August 2020 sampling event conducted by GHD Inc. The results of the GHD sampling indicated that limited concentrations of pesticides (e.g., 4,4'-Dichlorodiphenyldichloroethylene [DDE] at 12 micrograms per kilogram [µg/kg]) and volatile organic compounds (VOCs) are present in soil; however, none of the concentrations exceeded applicable San Francisco Bay Regional Water Quality Control Board Environmental Screening Levels (ESLs) for the site (i.e., industrial/commercial land use). Metals detected in soil which exceeded the applicable ESLs included arsenic, lead, and vanadium (maximum levels 197 milligrams per kilogram [mg/kg], 57.8 mg/kg, and 47.7 mg/kg respectively). No VOCs were detected in groundwater; metals detected in groundwater which exceeded California Maximum Contaminant Levels (MCLs) were limited to mercury (3.31 micrograms per liter [µg/L]). Ammonia and nitrate (maximum concentrations of 648 µg/L and, 94,00 µg/L, respectively) were also detected in the groundwater, and in some locations, nitrate exceeded Environmental Protection Agency (EPA) Maximum Contaminant Levels (MCLs).

  GHD indicated that lead in soils was likely associated with a former waste oil underground storage tank (UST) located in the same area. The mercury and pesticide detections were attributed to historical pesticide use in agricultural activities. Metal detections appeared to be insoluble forms and did not appear to present a risk. Ammonia appeared present at naturally occurring levels, however nitrate was observed at higher concentrations. GHD indicated that elevated nitrate levels were located in the northern portion of the site boundary and attributed the concentrations to an off-site source.

  Based on the results from the previous Phase II subsurface investigation, Ramboll conducted a subsequent subsurface investigation at the site that included collection of soil and soil vapor

samples throughout the site. Samples were collected in areas including former employee and truck parking areas, the former underground storage tank (UST) area, the former truck wash area, former chemical storage area, former main plant chemical storage area, former boiler area storage, and former sump pump area. Soil samples were analyzed for total petroleum hydrocarbons (TPH) and pH, while soil vapor was analyzed for VOCs by United States Environmental Protection Agency's (USEPA) Method 8260. Results from the subsurface investigation indicated that total petroleum hydrocarbons (TPH) were not detected in soil above applicable screening criteria and the pH in soil generally appears to be consistent with normal background conditions. While the sampling results from this investigation did not identify chemicals in soil at concentrations above applicable screening criteria, and the issues described above do not rise to the level of being a Recognized Environmental Condition under ASTM E1527-13, as a precautionary measure Ramboll recommends that the soil be managed in accordance with applicable state and federal regulations during potential future soil disturbance activities.

In soil vapor, benzene, tetrachloroethene (PCE) and chloroform were the only VOCs detected above applicable Department of Toxic Substances Control (DTSC)/USEPA residential and commercial screening levels using 0.03 as an attenuation factor (AF), which is used for screening purposes but which is neither an official nor controlling standard. Chloroform was the only VOC detected above applicable DTSC/USEPA residential screening levels using 0.001 as an AF (which is the official / adopted attenuation factor). No VOCs in soil vapor were detected above applicable DTSC/USEPA commercial screening levels using 0.001 as an attenuation factor.

- **Former Diesel Fuel and Gasoline USTs.** Two 10,000-diesel fuel, one 10,000-gallon gasoline, and one 500-gallon waste oil USTs were formerly located along the northern site boundary adjacent to the former truck wash area. According to the GeoTracker website, the site is listed on the Leaking Underground Storage Tank (LUST) database. A gasoline release was reported in August 1987 which impacted groundwater. The Los Angeles Regional Water Quality Control Board (RWQCB) closed the case in February 1997. No records were available regarding the cleanup and subsequent closure of the USTs. Site representatives reported that soil excavation activities were conducted, however, a copy of the report was not available for Ramboll's review. Records regarding the UST closure were requested from the Fire Department but have not yet been received. Therefore, Ramboll is unable to evaluate the adequacy of the UST closure. However, there is no apparent current regulatory requirement to evaluate the area, nor is there scrutiny of the site by regulatory officials. Furthermore, Ramboll's subsurface investigation did not indicate the presence of contamination in the vicinity of the UST – and, therefore, actual data shows the former USTs do not represent a Recognized Environmental Condition. Ramboll recommends no further investigation regarding this issue.

7.3 *De Minimis* Conditions

De minimis conditions are those that do not represent a material risk of harm to public health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies. Ramboll identified no *de minimis* conditions related to the site.

7.4 Non-Scope Considerations

Ramboll identified the following findings that relate to non-scope considerations (as discussed in Section 2.2), as detailed below:

- **Asbestos-Containing Materials (ACMs).** Given the date of construction of the buildings at the site, it is possible that ACMs are present in building materials. A formal asbestos survey reportedly

has been conducted at the facility, however Ramboll was not provided with a copy of the report. Ramboll conducted visual observations of limited areas of the buildings at the site and noted PACMs (e.g., vinyl floor tile, pipe insulation) and other materials that may contain asbestos (e.g., ceiling tiles, roofing materials). The PACMs and suspect ACMs that were observed by Ramboll did not appear to be extensively damaged, broken, or deteriorated. Facility personnel indicated an ACM survey was recently conducted at the site, however Ramboll was not provided with a copy of the report.

- **Water Intrusion/Mold.** Ramboll did not perform a mold survey at the site; however, facility personnel provided information regarding past water intrusion events. According to facility personnel, only minor roof leaks have occurred, and roof leaks were addressed by third-party contractors. Facility personnel also indicated that there have not been any problems with mold in the past.
- **Lead-Based Paint.** Lead was a major ingredient in paint pigment prior to and through the 1940s. While other pigments were used in the 1950s, the use of lead in paint continued until the early 1970s. In 1978, the Consumer Products Safety Commission banned paint and other surfacing coating materials that are "lead-containing paint." Based on the construction date of on-site buildings dating back to approximately 1950, it is possible that lead-based paint was used historically on facility structures. Facility personnel knew of no lead-based paint on structures at the facility. Ramboll observed the paint to be in good condition. According to facility personnel, a LBP survey was conducted at the site (but no report was available at the time of this report).
- **Radon.** Based on information included in the environmental database report, the site is located in an area categorized as Zone 2, which has average indoor radon levels between 2 and 4 pCi/L. The USEPA's continuous exposure limit, which is the limit at which further testing or remedial action is suggested, is 4.0 pCi/L. This USEPA continuous exposure limit applies to residential, not commercial, properties. According to the California Radon database, for 8 sites surveyed in the 90701 zip code, no sites had radon present at greater than 4.0 pCi/L. A USEPA survey conducted in the same zip code as the site found that the average radon level of a first-floor room at one site was 0.000 pCi/L. Radon appears unlikely to represent an environmental concern to the site and Ramboll recommends no further investigation regarding this issue.

7.5 Analysis of Data Gaps

The ASTM Standard defines a data gap as "a lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information." A data gap is only significant if other information obtained during the ESA, or professional experience, raises reasonable concerns and affects the ability of the environmental professional to identify whether a given issue is a REC. The ASTM Standard requires that the ESA report identify and comment on significant data gaps.

Limiting conditions and deviations to the ASTM Standard for the assessment are discussed below.

- Facility personnel did not have current contact information for representatives of former site owners/occupants. Thus, Ramboll was unable to interview former owners/occupants about historical operations and site conditions. However, Ramboll conducted interviews with representatives of California Dairies Inc. with tenure at the site dating back to 1980 and reviewed other historical sources regarding former uses of the site.
- During the site visit, Ramboll did not observe the roofs of the buildings due to access and safety constraints.

- As it is a user requirement, Ramboll did not conduct a review of records to identify whether any environmental liens or AULs have been imposed on the site.
- Between 1987 and 1997 four USTs were removed from the site. During the removal, a subsurface release of gasoline was reported which impacted groundwater. The site received closure in 1997, however copies of these records have not yet been received by Ramboll from the Fire Department.
- Ramboll has requested site-related information, but not yet received a response, from the City of Artesia Building and Safety Department or the County of Los Angeles Fire Department.

None of the exceptions, deletions, deviations, or site reconnaissance limitations noted above are considered to represent significant data gaps. The previous LUST site investigation reports that were not available for Ramboll's review would have represented a significant data gap – but for the Phase II subsurface investigation data generated by Ramboll and discussed herein (therefore, based on the Phase II subsurface investigation data, the lack of LUST-related reports does not represent a significant data gap).

8. ASTM DEFINITIONS

The following definitions are presented in the ASTM Standard:

REC - Recognized Environmental Condition:

The presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to release to the environment; 2) under conditions indicative of a release to the environment; or 3) under conditions that pose a material threat of a future release to the environment.

CREC - Controlled Recognized Environmental Condition:

A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

HREC - Historical Recognized Environmental Condition:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

***De minimis* Condition:**

A condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Data Gap / Significant Data Gap:

A lack of or inability to obtain information required by the practice despite good faith efforts by the environmental professional to gather such information. A data gap is significant if other information and/or professional experience raises concerns involving the data gap.

Please note that the term "other finding" is not defined by ASTM; rather, Ramboll uses the term to connote areas of contingent risk that are not clearly defined by the ASTM Standard.

Photo 7: View of the wastewater tanks, truck scale, and portions of the former glycol system looking north.

Photo 8: View of the former glycol storage area in the Ammonia Room.

Photo 9: View of AST former chemical storage area used to treat the wastewater pH.

Photo 10: Photo of the hydraulic oil elevator room with minor staining.

Photo 11: One of two on-site natural gas boilers located in the boiler area.

Photo 12: View of the former hazardous waste and chemical storage area and waste oil AST looking southwest.

Photo 13: View of the former hazardous waste and chemical storage area looking northwest.

Photo 14: View of the site including truck wash area, the De Laval Dryer, and truck parking looking southwest.

Photo 15: View of the parking lot across Alburtis Street looking southeast.

Photo 16: View of the main sewer drain connection, product silos, cooling towers and the eastern portion of the site looking east.

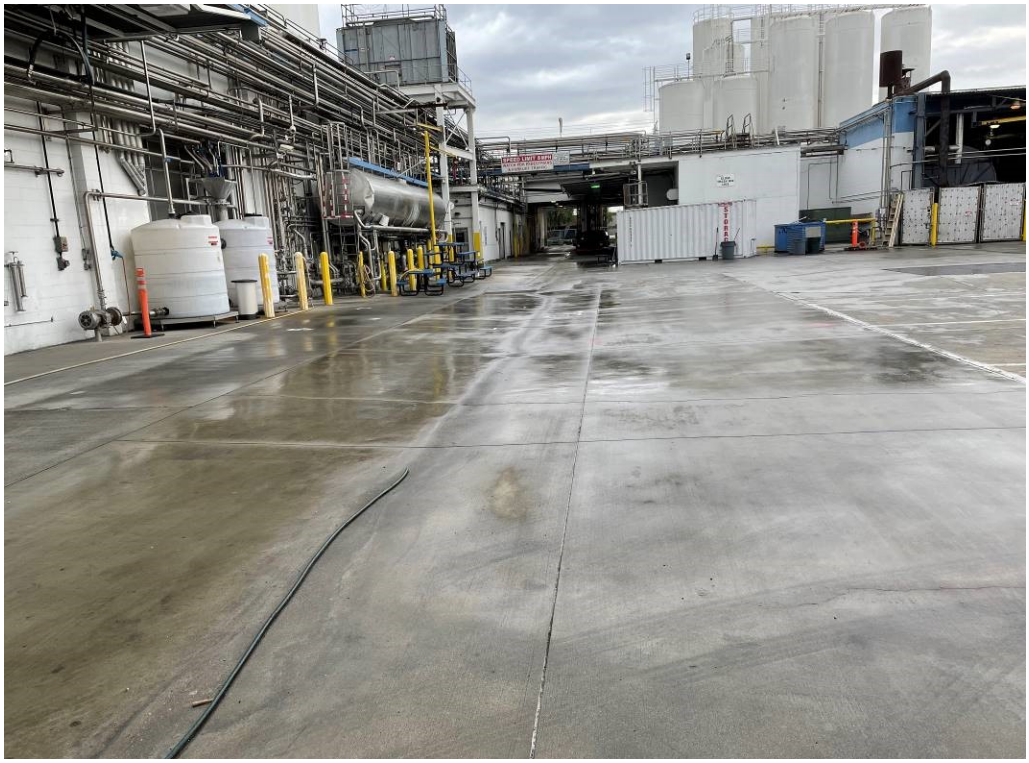

Photo 17: View of the center and southern portions of the site looking south including transformers, a portion of the boiler area, the raw-milk silos and the tanker truck exit.

Photo 18: View of empty water treatment chemicals formerly located in the boiler room.

APPENDIX B
ENVIRONMENTAL DATABASE REPORT

NOTES ON ENVIRONMENTAL DATABASE REPORT

EDR conducted its searches for the standard environmental record sources and the minimum search distances, as specified by the ASTM Standard. The ASTM Standard uses the terminology "approximate minimum search distance" to refer to the radii searched in the environmental database report.

EDR conducted the search of environmental databases in December 2021. Because the environmental databases themselves are sometimes not updated by the specific regulatory agencies for periods of up to one year or more (depending on the database and the state), the database search conducted herein will not necessarily list any facility or site for which an environmental investigation/listing has been initiated subsequent to the last update.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL ---- National Priority List
Proposed NPL ---- Proposed National Priority List Sites
NPL LIENS ---- Federal Superfund Liens

Lists of Federal Delisted NPL sites

Delisted NPL ---- National Priority List Deletions

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY ---- Federal Facility Site Information listing
SEMS ---- Superfund Enterprise Management System

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE ---- Superfund Enterprise Management System Archive

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS ---- Corrective Action Report

Lists of Federal RCRA TSD facilities

RCRA-TSDF ---- RCRA - Treatment, Storage and Disposal

Lists of Federal RCRA generators

RCRA-VSQG ---- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

Federal institutional controls / engineering controls registries

LUCIS ---- Land Use Control Information System
US ENG CONTROLS ---- Engineering Controls Sites List
US INST CONTROLS ---- Institutional Controls Sites List

Federal ERNS list

ERNS ---- Emergency Response Notification System

Lists of state- and tribal (Superfund) equivalent sites

RESPONSE ---- State Response Sites

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR ---- EnviroStor Database

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF ---- Solid Waste Information System

Lists of state and tribal leaking storage tanks

INDIAN LUST ---- Leaking Underground Storage Tanks on Indian Land

Lists of state and tribal registered storage tanks

FEMA UST ---- Underground Storage Tank Listing
AST ---- Aboveground Petroleum Storage Tank Facilities
INDIAN UST ---- Underground Storage Tanks on Indian Land

Lists of state and tribal voluntary cleanup sites

VCP ---- Voluntary Cleanup Program Properties
INDIAN VCP ---- Voluntary Cleanup Priority Listing

Lists of state and tribal brownfield sites

BROWNFIELDS ---- Considered Brownfieds Sites Listing

ADDITIONAL ENVIRONMENTAL RECORDS

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal RCRA generators

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2021 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

Lists of state and tribal leaking storage tanks

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 25 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 4 CPS-SLIC sites within approximately 0.5 miles of the target property.

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 16 UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 13 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2021 has revealed that there are 42 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 10 EDR Hist Auto sites within approximately 0.25 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.25 miles of the target property.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
STATE MASTER
US EPA RACT/BACT/LAER Clearinghouse (RBLC) database contains case-specific information on the "Best Available" air pollution technologies that have been required to reduce the emission of air pollutants from stationary sources (e.g., power plants, steel mills, chemical plants, etc.). RACT, or Reasonably Available Control Technology, is required on existing sources in areas that are not meeting national ambient air quality standards. BACT, or Best Available Control Technology, is required on major new or modified sources in clean areas. LAER, or Lowest Achievable Emission Rate, is required on major new or modified sources in non-attainment areas.

SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	MISCEL
Waste Type2:	D
Waste2:	Miscellaneous (Includes wastes from dewatering, recreational lake overflow, swimming pool wastes, water ride wastewater, ground water seepage and other wastes of this type)
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Process Waste (Waste produced as part of the industrial/manufacturing process)
Secondary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violations:

Site ID:	437836
Site Name:	SOCAL DIESEL REPAIR, LLC
Violation Date:	12-11-2020
Citation:	22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description:	Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes:	Returned to compliance on 12/23/2020. OBSERVATION: Current owner generates used motor oil, waste antifreeze, used oil and fuel filters in the facility and does not have an Environmental Protection Agency (EPA) Identification (ID) noted in the DTSC database. DTSC Form 1358 provided and emailed to owner/operator. CORRECTIVE ACTION: A hazardous waste generator shall not treat, store, dispose of, transport or offer

JMC TRUCK REPAIR (Continued) **S103972214**

for transportation, hazardous waste without an active EPA ID number. Submit the Certification of Compliance, attached to this report, and/or any supporting documentation/photo to CUPA by compliance date.

Violation Program: HW
Violation Source: CERS

Site ID: 437836
Site Name: SOCAL DIESEL REPAIR, LLC
Violation Date: 03-26-2019
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 05/30/2019. Observed a 30 gallon drum containing waste paint solvent with a blank hazardous waste label. CORRECTIVE ACTION: All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Fill in the required information on the label and affix to the drum. Provide photo to CUPA via email.

JMC TRUCK REPAIR (Continued) **S103972214**

Site ID:	437836
Site Name:	SOCAL DIESEL REPAIR, LLC
Violation Date:	03-26-2019
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 12/11/2020. OBSERVATION: Observed a 30 gallon drum containing waste paint solvent without an accumulation date. Operator did not have a copy of the most current manifest at the time of inspection. CORRECTIVE ACTION: Immediately label these containers and ensure that all containers are marked with all the required information. All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Since it cannot be determined how long the containers of waste paint solvent have been on site, immediately contact a licensed hazardous waste hauler to dispose of this waste and submit a copy of the manifest to the CUPA by 4/25/2019.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

CAL PLATE (Continued) **1000686351**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Violation Date: 06-21-2018
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 06/21/2018. OBSERVATION: All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Six 55 gallon drums containing waste heptyl acetate solids located across from the PRI machine was observed without labels. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the container listed above has been properly labeled. Operator, Juan, affixed the yellow Haz Waste labels at the time of inspection. This item was corrected on site.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 101471
Site Name: CAL PLATE INC
Violation Date: 06-21-2018
Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 06/05/2019. OBSERVATION: The business failed to establish and implement a business plan when handling hazardous materials at or above the reportable threshold quantities. CERS review revealed no submittal for the current and previous years. Observed the following at the time of inspection: 11 / ~200 CF cylinders of Nitrogen 1 / 55 gallon drum for waste solids 6 / 55 gallon drums containing waste solids (bentyl acetate solids) 7 / 55 gallon drums empty 8 / 55 gallon drums Cyrel Cylosol washout solution 4 / 55 gallon drums C-Component 2 / 55 gallon drums of Injection Oil 2 / 55 gallon

CAL PLATE (Continued) **1000686351**

drums of heat transfer fluid 4 / 5 gallon containers of Acetone
CORRECTIVE ACTION: Establish and implement a business plan for the facility. Submit documentation of correction to the unified program agency.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:

Site ID:	104297
Site Name:	CERRITOS AUTO BODY
Violation Date:	11-13-2017
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 11/13/2017. OBSERVATION: Observed one 55-gallon used oil and one 55-gallon waste antifreeze with faded and incomplete labels. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the container listed above has been properly labeled. Operator re-labeled the containers at the time of inspection.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS

Site ID:	104297
Site Name:	CERRITOS AUTO BODY
Violation Date:	10-21-2014
Citation:	HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
Violation Description:	Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 01/15/2015. OBSERVATION: A business plan has not been received by the CUPA. The facility was previously sent a notice/request from the CUPA for the submittal of a business plan by 11/20/2014]. CORRECTIVE ACTION: Submit the business plan electronically in the California Environmental Reporting System (CERS) and implement immediately.
Violation Division:	Los Angeles County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS

Site ID:	104297
Site Name:	CERRITOS AUTO BODY
Violation Date:	01-22-2021
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	OBSERVATION: Copies of hazardous waste disposal records (manifest/bill

CERRITOS AUTO BODY (Continued) **S123498664**

of lading/receipts, etc) were not available at the time of inspection for the following: - used oil - waste antifreeze - waste paint solvent - waste paint Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three (3) years and have them readily available for review. CORRECTIVE ACTION: Locate the copies of the hazardous waste disposal records (manifest/bill of lading/receipts, etc) for the last 3 years and send a copy via email to CUPA inspector. Complete then submit the Certification of Compliance via email to CUPA inspector on or before the compliance date

Violation Division: Los Angeles County Fire Department

Violation Date: 01-22-2021
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 02/19/2021. OBSERVATION: One 55-gallon metal drum containing used oil and one 55-gallon drum containing waste antifreeze stored inside a HW shed with faded HazWaste label, markings including the accumulation start date is unclear. CORRECTIVE ACTION: Immediately label these containers and ensure that all containers are marked with all the required information. All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. If the accumulation date can be determined, affix the required markings and submit a photo to CUPA demonstrating that the containers listed above have been properly labeled. However, if the accumulation date cannot be determined, properly dispose of the

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS Description: Chemical Storage Facilities

Violations:
Site ID: 572143
Site Name: ELITE CONSTRUCTION EQUIPMENT
Violation Date: 01-14-2021
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 02/15/2021. OBSERVATION: The following hazardous waste containers were missing the required markings: - Two 55 gallon drums used to store used motor oil - One 55 gallon drum used to store waste coolant CORRECTIVE ACTION: All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6)

ELITE CONSTRUCTION EQUIPMENT INC (Continued) **S124907339**

accumulation start date. If the accumulation date can be determined, affix the required markings and provide a photo to CUPA inspector via email demonstrating that the containers listed above have been properly labeled. However, if the accumulation date cannot be determined, properly dispose of the hazardous wastes listed above and provide a copy of the manifest via email to CUPA Inspector. Complete and electronically submit the Certification of Compliance to CUPA Inspector via email

Violation Division: Los Angeles County Fire Department

Site Name: ELITE CONSTRUCTION EQUIPMENT
Violation Date: 01-14-2021
Citation: HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description: Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 02/17/2021. OBSERVATION: An owner/operator is required to establish and implement a Hazardous Materials Business Plan (HMBP) for storing hazardous materials/wastes at or above the threshold quantities of 55 gallons of liquid/500 pound of solids/200 cubic feet of gas. The following were observed at the time of inspection: Two 55 gallon drums used to store used motor oil Three 55 gallon drums containing new motor oil One 55 gallon drum containing new coolant One 125 gallon (4,550 cubic feet) of propane CORRECTIVE ACTIONS: Establish and implement your HMBP; submit your HMBP via California Environmental Reporting System (CERS) http://cers.calepa.ca.gov/. Complete and submit the Certification of Compliance to CUPA inspector.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WDS:
Name: BIG PENNY CARWASH
Address: 17509 Pioneer Blvd
City: ARTESIA
Facility ID: Los Angeles River 197200012
Facility Type: Other - Does not fall into the category of Municipal/Domestic, Industrial, Agricultural or Solid Waste (Class I, II or III)
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
NPDES Number: Not reported
Subregion: 4
Facility Telephone: 5628605616

Primary Waste Type: Not reported
Secondary Waste: Not reported
Secondary Waste Type: Not reported
Design Flow: 0
Baseline Flow: 0
Reclamation: No reclamation requirements associated with this facility.
POTW: The facility is not a POTW.
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Site Name:	TRUK PROS INC
Violation Date:	12-18-2015
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to establish and electronically submit an adequate emergency response plan and procedures for a release or threatened release of a hazardous material.
Violation Notes:	Returned to compliance on 02/02/2016. OBSERVATION: An Emergency Response Plan and procedures has not been completed and submitted electronically to the CUPA. CORRECTIVE ACTION: Complete the emergency response plan and procedures to include all required content and submit electronically in the California Environmental Reporting System (CERS).
Violation Division:	Los Angeles County Fire Department
Violation Program:	HMRRP
Violation Source:	CERS

Site ID:	163678
Site Name:	TRUK PROS INC
Violation Date:	04-05-2019
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 04/30/2019. OBSERVATION: Uniform Hazardous Waste Manifests for used motor oil and waste antifreeze were not available at the time of inspection. CORRECTIVE ACTION: Locate a copy of all manifests for used motor oil and waste antifreeze. Submit the Certification of Compliance and/or any supporting documentation/photo to CUPA by 5/5/2019
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS

Site ID:	163678
Site Name:	TRUK PROS INC
Violation Date:	04-05-2019
Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 05/03/2019. OBSERVATION: Observed the following: a) 1 x 55 gallon drum containing used oil with accumulation date 11/13/2017 b) 1 x 55 gallon drum containing waste antifreeze with no accumulation date noted c) 1 x 55 gallon drum containing waste paint solvent with accumulation date 8/28/2018 CORRECTIVE ACTION:

A.N.J. RV-TRAILER SERV & REPAI (Continued) **S103996372**

	Immediately contact a licensed hazardous waste hauler to dispose of this waste and submit the Certification of Compliance and/or any supporting documentation/photo to CUPA by 5/5/2019
Violation Division:	Los Angeles County Fire Department
Violation Program:	HW
Violation Source:	CERS
Site ID:	163678

Violation Date:	04-05-2019
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 05/03/2019. OBSERVATION: Observed a poly drum with unknown contents without the required markings. CORRECTIVE ACTION: Immediately label the poly drum and ensure that all containers are marked with all the required information. All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Since it cannot be determined how long drum have been on site, immediately contact a licensed hazardous waste hauler to dispose of this waste and submit the Certification of Compliance and/or any supporting documentation/photo to CUPA by 5/5/2019

Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for three years.
Violation Notes:	Returned to compliance on 02/02/2016. OBSERVATION: Copies of hazardous waste disposal records for waste paint booth filters and waste coolant for 2015, 2014 and 2013 were not found on site. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three years and have them readily available for review. CORRECTIVE ACTION: Immediately locate a copy of all manifests and receipts for the last three years, maintain them on site, and submit copies to the CUPA by 1/17/16.

A.N.J. RV-TRAILER SERV & REPAI (Continued) **S103996372**

	Chapter 12, Section(s) 66262.34(d)
Violation Description:	Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.
Violation Notes:	Returned to compliance on 01/14/2016. OBSERVATION: Observed one each of 55-gallon used oil, waste coolant and waste paint solvent accumulating for more than 180 days . Facilities who generate less than 1000 kg of hazardous waste per month and do not exceed 6000 kg of waste stored on site at any time may store waste on site up to 180 days. CORRECTIVE ACTION: Immediately contact a licensed hazardous waste hauler to dispose of this waste under manifest and submit a copy of the manifest to the CUPA by 1/17/16.
Violation Division:	Los Angeles County Fire Department

Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes:	Returned to compliance on 04/05/2019. OBSERVATION: The business failed to electronically submit and certify that the business plan is complete, accurate, and in compliance with EPCRA on or before the annual due date. CERS review revealed last submittal dated 7/31/2018. CORRECTIVE ACTION: Electronically submit and certify that the business plan is complete, accurate, and in compliance with EPCRA on or before the annual due date. Owner submitted completed HMBP at the time of inspection. This item is corrected.

A.N.J. RV-TRAILER SERV & REPAI (Continued) **S103996372**

Violation Description: Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment..
Violation Notes: Returned to compliance on 01/14/2016. OBSERVATION: Observed the top of the used oil and waste coolant 55-gallon drums accumulated with used oil and waste antifreeze. Facilities shall be maintained and operated to minimize the possibility of a fire, explosion, or release of hazardous waste to air, soil, or surface water which could threaten human health or the environment. CORRECTIVE ACTION: Immediately clean the waste accumulation on top of the drums and manage according to Title 22 hazardous waste regulations. Submit a statement and supporting documentation explaining how this waste was managed by 1/17/16.

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violations:

Site ID:	93526
Site Name:	ARTESIA CENTER CLEANERS
Violation Date:	01-28-2021
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	OBSERVATION: Copies of hazardous waste disposal records (manifest/bill

BOULEVARD CLEANERS (Continued) **1000281901**

of lading/receipts, etc) for the waste hydrocarbon was not available at the time of facility visit. Hazardous waste generators shall retain copies of all manifests signed off by the disposal facility and all receipts used in a consolidated manifesting procedure on site for three (3) years and have them readily available for review. CORRECTIVE ACTION: Locate the copies of the hazardous waste disposal records (manifest/bill of lading/receipts, etc) for the last 3 years and send a copy via email to CUPA inspector. Complete then submit the Certification of Compliance via email to CUPA inspector on or before the compliance date

Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 93526
Site Name: ARTESIA CENTER CLEANERS
Violation Date: 10-21-2014
Citation: HSC 6.95 25508(d) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(d)
Violation Description: Failure to complete and/or electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 02/20/2016. OBSERVATION: A business plan has not been received by the CUPA. The facility was previously sent a notice/request from the CUPA for the submittal of a business plan by 11/21/2014 CORRECTIVE ACTION: Submit the business plan electronically in the California Environmental Reporting System (CERS) and implement immediately.
Violation Division: Los Angeles County Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 93526
Site Name: ARTESIA CENTER CLEANERS
Violation Date: 01-02-2018
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 02/02/2018. OBSERVATION: A 55 gallon blue drum indicating it contained waste hydrocarbons was observed without an accumulation start date and a manifest/receipt demonstrating disposal within the past 180 days was not available. The last documentated hazwaste disposal wasl dated 4/27/2016. CORRECTIVE ACTION: Since it cannot be determined how long the drum of waste hydrocarbon have been on site, immediately contact a licensed hazardous waste hauler to dispose of this waste and submit a copy of the manifest to the CUPA by 2/1/2018. Provide a copy of the manifest via email.

Violations:
Site ID: 153220
Site Name: SHIL PARK PAINT
Violation Date: 07-17-2018
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 08/14/2018. OBSERVATION: All hazardous waste containers shall be marked with the following information: 1) the words "Hazardous Waste"; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Observed more than ten 1-gallon containers, 5-gallon containers, and quart sized containers either without labels or unreadable label stored outside of the building on the north side of the property. Operator stated that most of the containers were dropped off at their location by public without them knowing about it, other containers appears to be empty. Three paint care bins were available on site. One of the three bins was not full. Operator will contact a licensed hazardous waste hauler to properly dispose of the containers. CORRECTIVE ACTION: Since it cannot be determined how long the containers have been on site, immediately contact a licensed hazardous waste hauler to dispose of this waste and submit a copy [Truncated]

Violation Date: 07-17-2018
Citation: 22 CCR 15 66265.171 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.171
Violation Description: Failure to accumulate hazardous waste in a container that is in good

SHIL PARK PAINT (Continued) **S123502217**

condition.
Violation Notes: Returned to compliance on 08/13/2018. OBSERVATION: A 55 gallon metal drum labeled as flammable waste solids (contained used paint rags) was observed with rust on the top/cover. CORRECTIVE ACTION: Submit photos to the CUPA via email demonstrating the waste listed above has been transferred into a container that is in good condition or submit a manifest/receipt via email demonstrating the waste has been properly disposed of by a licensed hazardous waste hauler.
Violation Division: Los Angeles County Fire Department
Violation Program: HW

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date:	11-06-2017
Citation:	HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description:	Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes:	Returned to compliance on 11/08/2017. OBSERVATION: The business failed to complete and electronically submit chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. Observed 1,336 cubic feet (552 lbs.) of R-404A refrigerant not included in the CERS inventory. The "max daily amount" reported for R-407C in CERS is incorrect. Observed 3,876 cubic feet of R-407C (325 lbs., 650 lbs., 625 lbs.). CORRECTIVE ACTION: Complete and electronically submit the chemical inventory information for all reportable hazardous materials on site at or above reportable quantities.

Violation Source: CERS

Site ID: 1868
Site Name: 99 Ranch Market #17
Violation Date: 04-01-2019
Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7
Violation Description: Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or re manufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or re-manufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.
Violation Notes: Returned to compliance on 04/16/2019. OBSERVATION: At the time of inspection, observed a 55 gallon empty drum inside the rear storage room. CORRECTIVE ACTION: A container larger than 5 gallons in capacity which previously held hazardous materials shall be marked empty and the date it has been emptied. Empty container shall be managed within one year of being emptied CCR 66261.7 Affix the labels to the empty containers and submit statement of compliance and/or a photo by 5/1/2019.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 1868
Site Name: 99 Ranch Market #17
Violation Date: 04-01-2019
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 04/16/2019. OBSERVATION: Uniform Hazardous Waste Manifests for Toxics & State Regulated Wastes, Aerosols, Flammables & Combustibles, Corrosive Bases, Oxidizers, Corrosive Acidic were not available at the time of inspection. CORRECTIVE

99 RANCH MARKET #17 (Continued) **S105696613**

ACTION: Locate a copy of all manifests for Toxics & State Regulated Wastes, Aerosols, Flammables & Combustibles, Corrosive Bases, Oxidizers, Corrosive Acidic and submit statement of compliance and/or a photo to the CUPA by 5/1/2019.

Violation Division: Los Angeles County Fire Department

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Perform the test of a secondary containment component within 30 days of a repair or discontinuing vacuum, pressure or hydrostatic monitoring. Use a procedure that demonstrates the system works as well as at installation. Use applicable manufacturer guidelines, industry codes, engineering standard, or professional engineer approval. Performed by a certified service technician. Maintain records of secondary containment testing for 36 months."
