RISK SCENARIO SETTINGS

Receptor Type: Resident
Scenario: All
Calculation Method: Derived

****
EXPOSURE DURATION PARAMETERS FOR CANCER

Start Age: -0.25
Total Exposure Duration: 2

Exposure Duration Bin Distribution
3rd Trimester Bin: 0.25
0<2 Years Bin: 2
2<9 Years Bin: 0
2<16 Years Bin: 0
16<30 Years Bin: 0
16 to 70 Years Bin: 0

****
PATHWAYS ENABLED

NOTE: Inhalation is always enabled and used for all assessments. The remaining pathways are only used for cancer and noncancer chronic assessments.

Inhalation: True
Soil: False
Dermal: False
Mother's milk: False
Water: False
Fish: False
Homegrown crops: False
Beef: False
Dairy: False
Pig: False
Chicken: False
Egg: False

****
INHALATION

Daily breathing rate: LongTerm24HR

Worker Adjustment Factors
Worker adjustment factors enabled: NO

Fraction at time at home
3rd Trimester to 16 years: OFF
16 years to 70 years: ON

****
TIER 2 SETTINGS

Tier2 adjustments were used in this assessment. Please see the input file for details.
Tier2 - What was changed: ED or start age changed
Calculating cancer risk
Cancer risk saved to: C:\Lakes\AERMOD View\Artesia Boulevard Corridor\RAST\Construction\Mit_construct_revisedCancerRisk.csv
Calculating chronic risk
Chronic risk saved to: C:\Lakes\AERMOD View\Artesia Boulevard Corridor\RAST\Construction\Mit_construct_revisedNCChronicRisk.csv
Calculating acute risk
Acute risk saved to: C:\Lakes\AERMOD View\Artesia Boulevard Corridor\RAST\Construction\Mit_construct_revisedNCAcuteRisk.csv
HRA ran successfully

Traffic Volumes

	AADT	Percent Trucks	Truck ADT	Other Vehicle ADT
SR-91	261,000	5.65%	14,747	246,254

Source: Caltrans, Traffic Census Program, 2020 Annual Average Daily Truck Traffic Volumes, https://dot.ca.gov/programs/traffic-operations/census

Source	Speed (mph)	Trips (veh/day)	Length (mi)
EB Truck Traffic	55	7,374	1.08
WB Truck Traffic	55	7,374	1.08

- - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for   284 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =   9861224.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay.
        6. Urban Roughness Length of 1.0 Meter Assumed.

 **Other Options Specified:
        ADJ_U*   - Use ADJ_U* option for SBL in AERMET
        CCVR_Sub - Meteorological data includes CCVR substitutions
```

```
         TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_10

 **Model Calculates  2 Short Term Average(s) of:   1-HR   8-HR
     and Calculates PERIOD Averages

 **This Run Includes:    284 Source(s);       1 Source Group(s); and     478
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    284 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    29.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.7 MB of RAM.

 **Input Runstream File:          aermod.inp
```

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for     1 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =   9861224.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
         1. Stack-tip Downwash.
         2. Model Accounts for ELEVated Terrain Effects.
         3. Use Calms Processing Routine.
         4. Use Missing Data Processing Routine.
         5. No Exponential Decay.
         6. Urban Roughness Length of 1.0 Meter Assumed.

 **Other Options Specified:
         ADJ_U*   - Use ADJ_U* option for SBL in AERMET
         CCVR_Sub - Meteorological data includes CCVR substitutions
         TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.
```

```
 **The User Specified a Pollutant Type of:  PM_10

 **Model Calculates  2 Short Term Average(s) of:   1-HR   8-HR
     and Calculates PERIOD Averages

 **This Run Includes:      1 Source(s);       1 Source Group(s); and      36
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:      1 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and

MANAGEMENT SUMMARY

BCR Consulting LLC (BCR Consulting) is under contract to Kimley-Horn to complete a Cultural Resources Assessment of the proposed Artesia Place Project (Artesia Boulevard Corridor Specific Plan Amendment) (Project) in the City of Artesia (City), Los Angeles County, California. The Project site is generally bound by roadways, with Artesia Boulevard on the south, Alburtis Avenue on the east, and Flallon Avenue on the west. A cultural resources records search, additional research, intensive-level pedestrian field survey, Sacred Lands File (SLF) Search with the Native American Heritage Commission (NAHC), and paleontological overview were completed for the Project pursuant to the California Environmental Quality Act (CEQA).

The records search revealed that five previous cultural resources studies have taken place, and one cultural resource has been recorded within one half-mile of the project site. None of the previous studies has assessed the Project site, and no cultural resources have been previously recorded within its boundaries. Additional research revealed that a dairy product processing, storage, and distribution facility was formerly located at the Project site. During the field survey, BCR Consulting personnel identified no cultural resources of any kind within the Project site boundaries. Based on these results, proposed Project activities are not likely to result in impacts to any potential “historical resources” under CEQA. Furthermore, activities associated with construction and subsequent demolition of the former commercial and industrial building complex has disturbed sediments beyond depths at which buried prehistoric cultural resources are likely. Based on these results, BCR Consulting recommends that no additional cultural resources work or monitoring is necessary for any proposed Project activities. However, if previously undocumented cultural resources are identified during earthmoving activities, a qualified archaeologist shall be contacted to assess the nature and significance of the find, diverting construction excavation if necessary.

If human remains are encountered during the undertaking, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner will notify the NAHC, which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC.

INTRODUCTION

BCR Consulting LLC (BCR Consulting) is under contract to Kimley-Horn to complete a Cultural Resources Assessment of the proposed Artesia Place Project (Artesia Boulevard Corridor Specific Plan Amendment) (Project) in the City of Artesia (City), Los Angeles County, California. A cultural resources records search, additional research, intensive-level pedestrian field survey, Sacred Lands File (SLF) search with the Native American Heritage Commission (NAHC), and paleontological overview were completed in partial fulfillment of the California Environmental Quality Act (CEQA). The Project occupies approximately 3.33 acres and is bounded by Flallon Avenue on the west, Artesia Boulevard on the south, Alburtis Avenue on the east, and a commercial property to the north. An additional existing, offsite, approximately 0.21-acre ancillary parking lot located immediately east of the Project site would be made available to one of the proposed shopkeeper units, but the Project would not improve or modify the existing, fully-improved parking lot. The Project site is located in a non-sectioned portion of Township 3 South, Range 12 West, San Bernardino Baseline and Meridian. It is depicted on the □nited States Geological Survey (□SGS) *Los Alamitos, California* (1981) 7.5-minute topographic quadrangle (Figure 1).

NATURAL SETTING

The local geologic region coincides with the physiographic area known as the Los Angeles Basin. It is characterized as a transverse-oriented lowland basin and coastal plain approximately 50 miles long and 20 miles wide. The basin originated as a deep marine trough during the Pliocene (7-2 million years ago) that eventually filled with shallow water fossil bearing sediments. By the beginning of the Pleistocene (after 2 million years ago) uplifting created the series of plains and mesas along the coast that now characterize the area (Lambert 1994, Mendenhall 1905, Woodford et al. 1954). Local rainfall ranges from 5 to 15 inches annually (Jaeger and Smith 1971:36-37). Local vegetation communities are naturally dominated by coastal sage scrub and riparian vegetation, although urbanization prevents its proliferation in much of the Project region (Williams et al. 2008:117, 122). See Bean and Saubel (1972) for use of these biotic communities by prehistoric and historic inhabitants. Excavation for building construction on the Project site have disturbed sediments beyond depths at which buried cultural resources are likely.

CULTURAL SETTING

Prehistoric Context

The local prehistoric cultural setting has been organized into many chronological frameworks (see Warren and Crabtree 1986□Bettinger and Taylor 1974□Lanning 1963□Hunt 1960□ Wallace 1958, 1962, 1978□Campbell and Campbell 1935), although there is no definitive sequence for the region. The difficulties in establishing cultural chronologies for southern California are a function of its enormous size and the small amount of archaeological excavations. Moreover, throughout prehistory many groups have occupied the area and their territories often overlap spatially and chronologically resulting in mixed artifact deposits. Due to dry climate and capricious geological processes, these artifacts rarely become integrated in-situ. Lacking a milieu hospitable to the preservation of cultural midden, local chronologies

Kimley-Horn

have relied upon temporally diagnostic artifacts, such as projectile points, or upon the presence/absence of other temporal indicators, such as groundstone. Such methods are instructive, but can be limited by prehistoric occupants' concurrent use of different artifact styles, or by artifact re-use or re-sharpening, as well as researchers' mistaken diagnosis, and other factors (see Flenniken 1985 Flenniken and Raymond 1986 Flenniken and Wilke 1989). Recognizing the shortcomings of comparative temporal indicators, this study recommends review of Warren and Crabree (1986), who have drawn upon this method to produce a relatively comprehensive chronology.

Ethnography

The Gabrielino probably first encountered Europeans when Spanish explorers reached California s southern coast during the 15th and 16th centuries (Bean and Smith 1978 Kroeber 1925). The first documented encounter, however, occurred in 1769 when Gaspar de Portola s expedition crossed Gabrielino territory (Bean and Smith 1978). Other brief encounters took place over the years, and are documented in McCawley 1996 (citing numerous sources). The Gabrielino name has been attributed by association with the Spanish mission of San Gabriel, and refers to a subset of people sharing speech and customs with other Cupan speakers (such as the Juane o/Luise o/Ajachemem) from the greater Takic branch of the to-Aztecan language family (Bean and Smith 1978). Gabrielino villages occupied the watersheds of various rivers (locally including the Santa Ana) and intermittent streams. Chiefs were usually descended through the male line and often administered several villages. Gabrielino society was somewhat stratified and is thought to have contained three hierarchically ordered social classes which dictated ownership rights and social status and obligations (Bean and Smith 1978:540-546). Plants utilized for food were heavily relied upon and included acorn-producing oaks, as well as seed-producing grasses and sage. Animal protein was commonly derived from rabbits and deer in inland regions, while coastal populations supplemented their diets with fish, shellfish, and marine mammals (Boscana 1933, Heizer 1968, Johnston 1962, McCawley 1996). Dog, coyote, bear, tree squirrel, pigeon, dove, mud hen, eagle, buzzard, raven, lizards, frogs, and turtles were specifically not utilized as a food source (Kroeber 1925).

History

Historic-era California is generally divided into three periods: the Spanish or Mission Period (1769 to 1821), the Mexican or Rancho Period (1821 to 1848), and the American Period (1848 to present).

Spanish Period. The first European to pass through the area is thought to be a Spaniard called Father Francisco Garces. Having become familiar with the area, Garces acted as a guide to Juan Bautista de Anza, who had been commissioned to lead a group across the desert from a Spanish outpost in Arizona to set up quarters at the Mission San Gabriel in 1771 near what today is Pasadena (Beck and Haase 1974). Garces was followed by Alta California Governor Pedro Fages, who briefly explored the region in 1772. Searching for San Diego Presidio deserters, Fages had traveled through Riverside to San Bernardino, crossed over the mountains into the Mojave Desert, and then journeyed westward to the San Joaquin Valley (Beck and Haase 1974).

Mexican Period. In 1821, Mexico overthrew Spanish rule and the missions began to decline. By 1833, the Mexican government passed the Secularization Act, and the missions, reorganized as parish churches, lost their vast land holdings, and released their neophytes (Beattie and Beattie 1974).

American Period. The American Period, 1848–Present, began with the Treaty of Guadalupe Hidalgo. In 1850, California was accepted into the □nion of the □nited States primarily due to the population increase created by the Gold Rush of 1849. The cattle industry reached its greatest prosperity during the first years of the American Period. Mexican Period land grants had created large pastoral estates in California, and demand for beef during the Gold Rush led to a cattle boom that lasted from 1849–1855. However, beginning about 1855, the demand for beef began to decline due to imports of sheep from New Mexico and cattle from the Mississippi and Missouri Valleys. When the beef market collapsed, many California ranchers lost their ranchos through foreclosure. A series of disastrous floods in 1861–1862, followed by a significant drought further diminished the economic impact of local ranching. This decline combined with ubiquitous agricultural and real estate developments of the late 19th century, set the stage for diversified economic pursuits that continue to this day (Beattie and Beattie 1974□Cleland 1941).

PERSONNEL

David Brunzell, M.A., RPA acted as the Project Manager and Principal Investigator for the current study. Mr. Brunzell also conducted the records search and additional research, and authored the technical report. BCR Consulting Archaeological Field Director Joseph Orozco, M.A., RPA and Staff Archaeologist Douglas Kazmier performed the field assessment.

METHODS

This work was completed pursuant to CEQA, the Public Resources Code (PRC) Chapter 2.6, Section 21083.2, and California Code of Regulations (CCR) Title 14, Chapter 3, Article 5, Section 15064.5. The pedestrian cultural resources survey was intended to locate and document previously recorded or new cultural resources, including archaeological sites, features, isolates, and historic-period buildings that exceed 45 years in age within defined Project boundaries. The Project site was examined using 15-meter transect intervals, where accessible. This study is intended to determine whether cultural resources are located within the Project boundaries, whether any cultural resources are significant pursuant to the above-referenced regulations and standards, and to develop specific mitigation measures that will address potential impacts to existing or potential resources. Tasks pursued to achieve that end include:

- Cultural resources records search to review the results of any studies conducted within a one half-mile radius of the Project boundaries
- Additional research through various local and regional resources
- Systematic pedestrian survey of the entire accessible Project site
- Development of recommendations for cultural resources, following CEQA.

Research

Records Search. On May 19, 2022 a records search was conducted at the South Central Coastal Information Center (SCCIC) at California State University, Fullerton. This archival research reviewed the status of all recorded historic and prehistoric cultural resources, and survey and excavation reports completed within one half-mile of the current Project. Additional resources reviewed included the National Register, the California Register, and documents and inventories published by the California Office of Historic Preservation. These include the lists of California Historical Landmarks, California Points of Historical Interest, Listing of National Register Properties, and the Inventory of Historic Structures.

Additional Research. BCR Consulting performed additional research through records of the General Land Office Maintained by the Bureau of Land Management, the Los Angeles County Assessor, and through various Internet resources.

Field Survey

An intensive-level cultural resources field survey of the Project site was conducted on October 3, 2022. The survey was conducted by walking parallel transects spaced approximately 15 meters apart across the accessible Project site. Visible sediments were carefully inspected for evidence of cultural resources Digital photographs were taken at various points within the Project site.

RESULTS

Research

Records Search. Data from the SCCIC revealed that five previous cultural resources studies have taken place, and one cultural resource has been recorded within one half-mile of the Project site. None of the previous studies has assessed the Project site, and no cultural resources have been previously recorded within its boundaries. The records search results are summarized in Table A and a complete records search bibliography is provided in Appendix A.

Table A. Cultural Resources and Reports Within One Half-Mile of the Project Site

USGS 7.5 Min Quad	Cultural Resources Within 0.5 Mile of Project Site	Studies Within 0.5 Mile
Torrance (1981)*, Calif.*	P-19-192291: Historic Bldg. at 17501 Roseton Ave (1/4 Mile SW)	LA-4882, 6090, 6164, 10187, 13094

Additional Research. The Project site is located within Rancho Los Coyotes, a Mexican land grant that occupied nearly 50,000 acres (Wright 1898). Research has not revealed any evidence to suggest that the project site was ever developed during this era. Los Angeles County Assessor records indicate several industrial and commercial buildings within the Project site. These include two buildings utilized for industrial food processing (12,272 and 1,057 square feet respectively), one office building (7,147 square feet), one building used for industrial warehousing, distribution, and storage (6,814 square feet), and a parking lot (Los Angeles County Assessor Portal 2022). The site was occupied by the Superior Milk Product Association by the early 1950s. Also known as Superior Milk Producers Association, this

organization was a cooperative of 42 Dutch and Portuguese dairies from the Artesia and Chino Valley areas established in 1942. The cooperative standardized a quality control system and established a 4,000 square foot milk processing, and storage and distribution facility at the Project site in 1952. By 1967 the facility had expanded to construct and occupy the buildings described above. The group's original clients included military installations, milk distributors, and private labels, but by 1967 it had expanded into wholesale and retail markets and its products were available in grocery stores, liquor stores, catering services, restaurants, vending machines, schools, and hospitals in Los Angeles and Orange Counties. The facility produced and distributed a variety of milk products in addition to juices, fruit punch, and lemonade. Research did not indicate when operations ceased at the subject property, but the Superior Milk Producers Association corporation status was dissolved in 1979, at which time its address was 2670 Grand Avenue in the City of Covina (currently a residence). Although the assessor still lists buildings at the subject property, the facilities were demolished in 2022 (Los Angeles Times 22 May, 1967, page 89□Los Angeles Times 18 May 1967 page 119□ OpenGovus 2022□□nited States Department of Agriculture 2020).

Field Survey

During the field survey, BCR Consulting personnel carefully inspected the Project site for evidence of cultural resources. The former buildings, construction materials, and concrete had been removed. No vegetation was present. Sediment comprised silty sand with very few rocks. No cultural resources of any kind (including prehistoric or historic-period archaeological sites or historic-period buildings) were identified during the field survey.

RECOMMENDATIONS

No cultural resources (including prehistoric or historic-period archaeological sites or historic-period buildings) were identified within the Project site. Furthermore, activities associated with construction and subsequent demolition of the former commercial and industrial building complex has disturbed sediments beyond depths at which buried prehistoric cultural resources are likely. Therefore, no significant impacts related to archaeological or historical resources are anticipated, and no further investigations are recommended for the proposed Project unless:

- the proposed Project is changed to include areas not subject to this study□
- cultural materials are encountered during Project activities.

Although the current study has not indicated sensitivity for cultural resources within the Project boundaries, ground disturbing activities always have the potential to reveal buried deposits not observed on the surface during previous surveys. Prior to the initiation of ground-disturbing activities, field personnel should be alerted to the possibility of buried prehistoric or historic cultural deposits. In the event that field personnel encounter buried cultural materials, work in the immediate vicinity of the find should cease and a qualified archaeologist should be retained to assess the significance of the find. The qualified archaeologist would have the authority to stop or divert construction excavation as necessary. If the qualified archaeologist finds that any cultural resources present meet eligibility requirements for listing on the California Register or the National Register, plans for the treatment, evaluation, and mitigation

of impacts to the find will need to be developed. Prehistoric or historic cultural materials that may be encountered during ground-disturbing activities include:

- historic artifacts such as glass bottles and fragments, cans, nails, ceramic and pottery fragments, and other metal objects
- historic structural or building foundations, walkways, cisterns, pipes, privies, and other structural elements
- prehistoric flaked-stone artifacts and debitage (waste material), consisting of obsidian, basalt, and or cryptocrystalline silicates
- groundstone artifacts, including mortars, pestles, and grinding slabs
- dark, greasy soil that may be associated with charcoal, ash, bone, shell, flaked stone, groundstone, and fire affected rocks

If human remains are encountered during the undertaking, State Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County Coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. The County Coroner must be notified of the find immediately. If the remains are determined to be prehistoric, the Coroner will notify the NAHC, which will determine and notify a Most Likely Descendant (MLD). With the permission of the landowner or his/her authorized representative, the MLD may inspect the site of the discovery. The MLD shall complete the inspection within 48 hours of notification by the NAHC.

Re: 11709 Artesia Boulevard (KIM2210) Project, Los Angeles County

Dear Mr. Brunzell:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

APPENDIX D

PALEONTOLOGICAL OVERVIEW

WESTERN SCIENCE CENTER

May 26, 2022

BCR Consulting, LLC
Joseph Orozco
505 W. 8th St.
Claremont, CA 91711

Dear Mr. Orozco,

This letter presents the results of a record search conducted for the 11709 Artesia Blvd Project located in the City of Artesia, Los Angeles County, California. The project site is located north of Artesia Blvd and between Corby Avenue and Alburtis Avenue on 3 South, Range 12 West, Section 25 on the *Los Alamitos, CA* USGS 7.5 minute quadrangle.

The geologic units underlying this project are mapped as alluvial silt, sand and gravel from the Holocene period (Saucdeo, Greene, Kennedy and Bezore 2016; Dibblee and Ehrenspeck, 2001). Holocene alluvial units are considered to be of high preservation value, but material found is unlikely to be fossil material due to the relatively modern associated dates of the deposits. However, if development requires any substantial depth of disturbance, the likelihood of reaching Pleistocene alluvial sediments would increase. The Western Science Center does not have localities within the project area or within a 1 mile radius; however, this is likely due to the distance of the museum from the project area (approximately 65 linear miles).

While the presence of any fossil material is unlikely, if excavation activity disturbs deeper sediment dating to the earliest parts of the Holocene or Late Pleistocene periods, the material would be scientifically significant. Excavation activity associated with the development of the project area is unlikely to be paleontologically sensitive, but caution during development should be observed.

If you have any questions, or would like further information, please feel free to contact me at bstoneburg@westerncentermuseum.org.

Sincerely,

Brittney Elizabeth Stoneburg
Collections Technician

VdB	vibration velocity level

1 INTRODUCTION

This report documents the results of an Acoustical Assessment completed for the Artesia Place Project (Artesia Boulevard Corridor Specific Plan [ABCSP] Amendment Project) (Project). The purpose of this Acoustical Assessment is to evaluate the potential Project construction and operational noise and vibration levels and determine the level of impact the Project would have on the environment.

1.1 Project Location and Setting

The Project site is in the City of Artesia (City), approximately 14 miles southeast of downtown Los Angeles; see **Figure 1: Regional Vicinity Map**. The Project site consists of one approximately 3.3 acre parcel (Assessor Parcel Number [APN] 7035-016-064) located at 11709 Artesia Boulevard; see **Figure 2: Local Vicinity Map**. The Project site is generally bound by roadways, with Artesia Boulevard on the south, Alburtis Avenue on the east, and Flallon Avenue on the west.

The Project site is at the northeast portion of the 21-acre ABCSP area, which extends along Artesia Boulevard, generally between Corby Avenue on the east and Gridley Road on the west. As shown in **Figure 3: Project Site Boundary Within ABCSP**, the Project site is at the eastern extent of ABCSP's Quadrant 2, which is comprised of approximately 6.0 acres located north of Artesia Boulevard between Alburtis Avenue on the east and Roseton Avenue on the west. Two major freeways provide regional access to the Project site: Artesia Freeway (State Route 91 [SR-91]) to the north; and Interstate 605 (I-605) to the west. From SR-91, access to the Project site is provided via Pioneer Boulevard, which is east of the Project site. From I-605, access to the Project site is provided via Artesia Boulevard, which bisects the ABCSP area. Local access to the Project site is provided via Artesia Boulevard, which is a four-lane divided arterial roadway oriented east-west through the ABCSP area. Local access is also provided via Pioneer Boulevard, which is a four-lane arterial oriented north-south to the west of the Project site.

The City encompasses approximately 1.6 square miles in southeast Los Angeles County. The City is a suburban jurisdiction with a mix of residential densities, although low-density residential uses predominate. The City also contains a mix of retail commercial, office, and industrial uses.

The General Plan land use designation for the ABCSP area is Gateway Community Commercial, except for two parcels southeast of the Roseton Avenue at Artesia Boulevard intersection (within ABCSP's Quadrant 4), which are designated Low Density Residential.[1] The Gateway Community Commercial designation provides for a complementary mix of job-creating industrial, manufacturing uses, and local/regional-serving commercial retail and office uses.[2] The Low Density Residential designation, which is the City's predominant land use designation, is characterized by single-family, detached units.[3]

The Project site is in ABCSP Quadrant 2. Quadrant 2 is comprised of five parcels with four unique landowners. Quadrant 2 supports a variety of commercial, retail, and industrial uses. Existing uses include a Public Storage complex, a small industrial building, and a retail center that was redeveloped in 2004. The Project site comprises the eastern portion of Quadrant 2.

[3] City of Artesia. (2010). *City of Artesia General Plan 2030*. Land Use Sub-Element. Page LU-9. http://www.cityofartesia.us/DocumentCenter/View/226/Artesia-General-Plan?bidId=.

The Project site is currently vacant. California Dairies, Inc., a dairy manufacturing plant totaling approximately 27,290 gross square feet (SF) occupied the Project site until it was demolished in 2022. All existing onsite utility connections remain capped and abandoned. The Project site is generally surrounded by residential, business park, commercial, and light industrial land uses.

1.2 Project Description

The Project proposes construction and operation of a mixed-use development comprised of 80 dwelling units (DU) and approximately 11,257 GSF of non-residential (commercial and office) land uses, as described below. To allow the proposed development, the Applicant proposes to amend the ABCSP. The proposed Zoning Code Text Amendment (Specific Plan Amendment) would amend the ABCSP to permit residential uses on the Project site, establish a maximum allowable development within the Project site, and amend the ABCSP's Design Standards and Guidelines (among other chapters). In addition to the Zoning Code Text Amendment, the Project seeks approval of the following entitlements: a General Plan Amendment; Design Review; Development Agreement; Vesting Tentative Tract Map No. 83834; and CEQA EIR certification.

The Project would construct a mixed-use development generally comprised of two portions – a commercial portion and a residential portion – connected by pedestrian walkways. **Figure 4: Conceptual Site Plan**, depicts the proposed land plan. In total, the Project proposes 80 DU and approximately 11,257 GSF of non-residential (commercial and office) land uses, including the components summarized in **Table 1: Project Development Summary** below:

Table 1: Project Development Summary

Land Use	Residential (DU)	Non-Residential (GSF)			
		Office	Restaurant	Retail	Total
Townhomes	59				
Mixed-Use Carriage Townhomes (Commercial Ground Floor)	4		1,725	1,725	*3,450*
Shopkeeper Units (Commercial Condominiums with Townhomes above)	8		1,332	1,332	*2,664*
Commercial			1,350	1,350	*2,700*
Live/Work Townhomes	9	2,443			*2,443*
Total	***80***	***2,443***	***4,407***	***4,407***	***11,257***

DU = dwelling units; GSF = gross square feet

The following proposed land uses would be developed at a density of 23.2 dwelling units per acre (DU/AC) and floor area ratio (FAR) of 1.21:

- Townhomes: 10 buildings with 59 three-story townhome units.
- Mixed-Use Carriage Townhomes: One mixed-use building with approximately 3,450 GSF of commercial uses on the ground level and 4 carriage-type townhome units above;
- Shopkeeper Units: Two buildings with 8 commercial condominiums totaling approximately 2,664 GSF on the ground level and 8 townhome units above;
- Commercial: One building with approximately 2,700 GSF of commercial uses; and
- Live/Work Townhomes: Two buildings with approximately 2,443 GSF of office uses and 9 townhome units.

The Project is designed to be a mixed-use, pedestrian-oriented, and placemaking development with various commercial opportunities. The various buildings are linked by a central pedestrian walkway through a series of landscaped courtyards. The Project site is divided into two portions: the northern portion is bisected by the central pedestrian walkway, pool, and pool building and consists of traditional paseo rowtown-inspired residential clustering around a recreation area; and the southern portion fronting Artesia Boulevard consists of the urban commercial mixed-use buildings.

The Project site is designated Gateway Community Commercial.[4] As noted above, Gateway Community Commercial designation provides for a complimentary mix of job-creating industrial and manufacturing uses, and local/regional-serving commercial retail and office uses. The City's Zoning Map classifies the Project site as Artesia Boulevard Corridor Specific Plan (ABCSP).[5] The ABCSP establishes the City's vision for a 21-acre area along Artesia Boulevard, between Gridley Road and Pioneer Boulevard. For Quadrant 2 of the ABSCP area, the City's primary goal is to establish a retail, commercial, and industrial center.

2 ACOUSTIC FUNDAMENTALS

2.1 Sound and Environmental Noise

Acoustics is the science of sound. Sound can be described as the mechanical energy of a vibrating object transmitted by pressure waves through a medium (e.g., air) to human (or animal) ear. If the pressure variations occur frequently enough (at least 20 times per second), they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound and is expressed as cycles per second, or hertz (Hz).

Noise is defined as loud, unexpected, or annoying sound. In acoustics, the fundamental model consists of a noise source, a receptor, and the propagation path between the two. The loudness of the noise source, obstructions, or atmospheric factors affecting the propagation path, determine the perceived sound level and noise characteristics at the receptor. Acoustics deal primarily with the propagation and control of sound. A typical noise environment consists of a base of steady background noise that is the sum of many distant and indistinguishable noise sources. The sound from individual local sources is superimposed on this background noise. These sources can vary from an occasional aircraft or train passing by to continuous noise from traffic on a major highway. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a large range of numbers. To avoid this, the decibel (dB) scale was devised. The dB scale uses the hearing threshold of 20 micropascals (µPa) as a point of reference, defined as 0 dB. Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The dB scale allows a million-fold increase in pressure to be expressed as 120 dB, and changes in levels correspond closely to human perception of relative loudness. **Table 2: Typical Noise Levels** provides typical noise levels.

Table 2: Typical Noise Levels

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	– 110 –	Rock Band
Jet fly-over at 1,000 feet		
	– 100 –	
Gas lawnmower at 3 feet		
	– 90 –

Noise Descriptors

The dB scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Several rating scales have been developed to analyze the adverse effect of community noise on people. Because environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise, as well as the time of day when the noise occurs. The equivalent noise level (L_{eq}) represents the continuous sound pressure level over the measurement period, while the day-night noise level (L_{dn}) and Community Equivalent Noise Level (CNEL) are measures of energy average during a 24-hour period, with dB weighted sound levels from 7:00 p.m. to 7:00 a.m. Most commonly, environmental sounds are described in terms of L_{eq} that has the same acoustical energy as the summation of all the time-varying events. Each is applicable to this analysis and defined in **Table 3: Definitions of Acoustical Terms**.

Table 3: Definitions of Acoustical Terms

Term	Definitions
Decibel (dB)	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in µPa (or 20 micronewtons per square meter), where 1 pascals is the pressure resulting from a force of 1 newton exerted over an area of 1 square meter. The sound pressure level is expressed in dB as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g., 20 µPa). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency (Hz)	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level (dBA)	The sound pressure level in dB as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level (L_{eq})	The average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
Maximum Noise Level (L_{max}) Minimum Noise Level (L_{min})	The maximum and minimum dBA during the measurement period.
Exceeded Noise Levels (L_{01}, L_{10}, L_{50}, L_{90})	The dBA values that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day-Night Noise Level (L_{dn})	A 24-hour average L_{eq} with a 10 dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity at nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.4 dBA L_{dn}.
Community Noise Equivalent Level (CNEL)	A 24-hour average L_{eq} with a 5 dBA weighting during the hours of 7:00 a.m. to 10:00 a.m. and a 10 dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.7 dBA CNEL.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends on its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level.

The A-weighted decibel (dBA) sound level scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Because sound levels can vary markedly over a short period of time, a method for describing either the sound's average character or the variations' statistical behavior must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The predicted models' accuracy depends on the distance between the noise receptor and noise source.

A-Weighted Decibels

The perceived loudness of sounds is dependent on many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels, perception of loudness is relatively predictable and can be approximated by dBA values. There is a strong correlation between dBA and the way the human ear perceives sound. For this reason, the dBA has become the standard tool of environmental noise assessment. All noise levels reported in this document are in terms of dBA, but are expressed as dB, unless otherwise noted.

Addition of Decibels

The dB scale is logarithmic, not linear, and therefore sound levels cannot be added or subtracted through ordinary arithmetic. Two sound levels 10 dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic dB is A-weighted, an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound and twice as loud as a 60-dBA sound.[6] When two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be 3 dBA higher than one source under the same conditions.[7] Under the dB scale, three sources of equal loudness together would produce an increase of approximately 5 dBA.

Sound Propagation and Attenuation

Sound spreads (propagates) uniformly outward in a spherical pattern, and the sound level decreases (attenuates) at a rate of approximately 6 dB for each doubling of distance from a stationary or point source. Sound from a line source, such as a highway, propagates outward in a cylindrical pattern. Sound levels attenuate at a rate of approximately 3 dB for each doubling of distance from a line source, such as a roadway, depending on ground surface characteristics.[8] No excess attenuation is assumed for hard surfaces like a parking lot or a body of water. Soft surfaces, such as soft dirt or grass, can absorb sound, so an excess ground-attenuation value of 1.5 dB per doubling of distance is normally assumed.

Noise levels may also be reduced by intervening structures; generally, a single row of buildings between the noise receptor and noise source reduces the noise level by about 5 dBA, while a solid wall or berm

[6] *Noise Sources and Their Effects*. Available at: https://www.chem.purdue.edu/chemsafety/Training/PPETrain/dblevels.htm

[8] California Department of Transportation, *Technical Noise Supplement to the Traffic Noise Analysis Protocol*, Page 2-29, September 2013.

reduces noise levels by 5 to 10 dBA.[9] The way older homes in California were constructed generally provides a reduction of exterior-to-interior noise levels of about 20 to 25 dBA with closed windows. The exterior-to-interior reduction of newer residential units is generally 30 dBA or more.

Human Response to Noise

The human response to environmental noise is subjective and varies considerably from individual to individual. Noise in the community has often been cited as a health problem, not in terms of actual physiological damage, such as hearing impairment, but in terms of inhibiting general well-being and contributing to undue stress and annoyance. The health effects of noise in the community arise from interference with human activities, including sleep, speech, recreation, and tasks that demand concentration or coordination. Hearing loss can occur at the highest noise intensity levels.

Noise environments and consequences of human activities are usually well represented by median noise levels during the day or night or over a 24-hour period. Environmental noise levels are generally considered low when the CNEL is below 60 dBA, moderate in the 60 to 70 dBA range, and high above 70 dBA. Examples of low daytime levels are isolated, natural settings with noise levels as low as 20 dBA and quiet, suburban, residential streets with noise levels around 40 dBA.[10] Noise levels above 45 dBA at night can disrupt sleep. Examples of moderate-level noise environments are urban residential or semi-commercial areas (typically 55 to 60 dBA) and commercial locations (typically 60 dBA). People may consider louder environments adverse, but most will accept the higher levels associated with noisier urban residential or residential-commercial areas (60 to 75 dBA) or dense urban or industrial areas (65 to 80 dBA). Regarding increases in dBA, the following relationships should be noted[11]:

- Except in carefully controlled laboratory experiments, a 1-dBA change cannot be perceived by humans.
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference.
- A minimum 5-dBA change is required before any noticeable change in community response would be expected. A 5-dBA increase is typically considered substantial.
- A 10-dBA change is subjectively heard as an approximate doubling in loudness and would almost certainly cause an adverse change in community response.

Effects of Noise on People

Hearing Loss. While physical damage to the ear from an intense noise impulse is rare, a degradation of auditory acuity can occur even within a community noise environment. Hearing loss occurs mainly due to chronic exposure to excessive noise but may be due to a single event such as an explosion. Natural hearing loss associated with aging may also be accelerated from chronic exposure to loud noise. The Occupational Safety and Health Administration (OSHA) has a noise exposure standard that is set at the noise threshold where hearing loss may occur from long-term exposures. The maximum allowable level is 90 dBA

[10] Compiled from James P. Cowan, *Handbook of Environmental Acoustics,* 1994 and Cyril M. Harris, Handbook of Noise Control, 1979.
[11] Compiled from California Department of Transportation, *Technical Noise Supplement to the Traffic Noise Analysis Protocol*, September 2013, and FHWA, *Noise Fundamentals,* 2017.

averaged over 8 hours. If the noise is above 90 dBA, the allowable exposure time is correspondingly shorter.

Annoyance. Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The L_{dn} as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. A noise level of about 55 dBA L_{dn} is the threshold at which a substantial percentage of people begin to report annoyance.[12]

2.2 Groundborne Vibration

Sources of groundborne vibrations include natural phenomena (earthquakes, volcanic eruptions, sea waves, landslides, etc.) or man-made causes (explosions, machinery, traffic, trains, construction equipment, etc.). Vibration sources may be continuous (e.g., factory machinery) or transient (e.g., explosions or heavy equipment use during construction). Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One is the peak particle velocity (PPV); another is the root mean square (RMS) velocity. The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. The RMS velocity is defined as the average of the squared amplitude of the signal. The PPV and RMS vibration velocity amplitudes are used to evaluate human response to vibration.

Table 4: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibrations, displays the reactions of people and the effects on buildings produced by continuous vibration levels. The annoyance levels shown in the table should be interpreted with care since vibration may be found to be annoying at much lower levels than those listed, depending on the level of activity or the indivisual's sensitivity. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage. In high noise environments, which are more prevalent where groundborne vibration approaches perceptible levels, this rattling phenomenon may also be produced by loud airborne environmental noise causing induced vibration in exterior doors and windows.

Ground vibration can be a concern in instances where buildings shake, and substantial rumblings occur. However, it is unusual for vibration from typical urban sources such as buses and heavy trucks to be perceptible. Common sources for groundborne vibration are planes, trains, and construction activities such as earth-moving which requires the use of heavy-duty earth moving equipment. For the purposes of this analysis, a PPV descriptor with units of inches per second (in/sec) is used to evaluate construction-generated vibration for building damage and human complaints.

[12] Federal Interagency Committee on Noise, *Federal Agency Review of Selected Airport Noise Analysis Issues*, August 1992.

Table 4: Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibrations

Maximum PPV (in/sec)	Vibration Annoyance Potential Criteria	Vibration Damage Potential Threshold Criteria	FTA Vibration Damage Criteria
0.008	--	Extremely fragile historic buildings, ruins, ancient monuments	--
0.01	Barely Perceptible	--	--
0.04	Distinctly Perceptible	--	--
0.1	Strongly Perceptible	Fragile buildings	--
0.12	--	--	Buildings extremely susceptible to vibration damage
0.2	--	--	Non-engineered timber and masonry buildings
0.25	--	Historic and some old buildings	--
0.3	--	Older residential structures	Engineered concrete and masonry (no plaster)
0.4	Severe	--	--
0.5	--	New residential structures, Modern industrial/commercial buildings	Reinforced-concrete, steel or timber (no plaster)

PPV = peak particle velocity; in/sec = inches per second; FTA = Federal Transit Administration

3 REGULATORY SETTING

To limit population exposure to physically or psychologically damaging as well as intrusive noise levels, the Federal government, the State of California, various county governments, and most municipalities in the State have established standards and ordinances to control noise.

3.1 State of California

California Government Code

California Government Code Section 65302(f) mandates that the legislative body of each county and city adopt a noise element as part of its comprehensive general plan. The local noise element must recognize the land use compatibility guidelines established by the State Department of Health Services. The guidelines rank noise land use compatibility in terms of "normally acceptable", "conditionally acceptable", "normally unacceptable", and "clearly unacceptable" noise levels for various land use types. Single-family homes are "normally acceptable" in exterior noise environments up to 60 CNEL and "conditionally acceptable" up to 70 CNEL. Multiple-family residential uses are "normally acceptable" up to 65 CNEL and "conditionally acceptable" up to 70 CNEL. Schools, libraries, and churches are "normally acceptable" up to 70 CNEL, as are office buildings and business, commercial, and professional uses.

Title 24 – Building Code

The State's noise insulation standards are codified in the California Code of Regulations, Title 24: Part 1, Building Standards Administrative Code, and Part 2, California Building Code. These noise standards are applied to new construction in California for interior noise compatibility from exterior noise sources. The regulations specify that acoustical studies must be prepared when noise-sensitive structures, such as residential buildings, schools, hotel rooms, or hospitals, are located near major transportation noise sources, and where such noise sources create an exterior noise level of 65 dBA CNEL or higher. Acoustical studies that accompany building plans must demonstrate that the structure has been designed to limit interior noise in habitable rooms to acceptable noise levels. For new multi-family residential buildings and habitable rooms (including hotels), the acceptable interior noise limit for new construction is 45 dBA CNEL.

3.2 Local

City of Artesia General Plan

The *City of Artesia General Plan 2030* (Artesia General Plan) Noise Sub-Element has determined a number of policies that are directed at controlling or mitigating environmental noise effects. **Table 5: Noise and Land Use Compatibility Matrix** illustrates the California State guidelines established by the State Department of Health Services for acceptable noise levels for each county and city. These standards and criteria are incorporated into the City's land use planning process to reduce future noise and land use incompatibilities. **Table 5** is the primary tool that allows the City to ensure integrated planning for compatibility between land uses and outdoor noise.[13]

[13] City of Artesia, *City of Artesia General Plan 2030,* 2010.

Table 5: City of Artesia Noise and Land Use Compatibility Matrix				
Land Use Category	**Community Noise Exposure (CNEL dB)**			
	Normally Acceptable	**Conditionally Acceptable**	**Normally Unacceptable**	**Clearly Unacceptable**
Single Family, Duplex, Mobile Homes	50 - 60	55 - 70	70 - 75	75 - 85
Multi-Family Homes	50 - 65	60 - 70	70 - 75	70 - 85
Schools, Libraries, Churches, Hospitals, Nursing Homes	50 - 70	60 - 70	70 - 80	80 - 85
Transient Lodging - Motels, Hotels	50 - 65	60 - 70	70 - 80	80 - 85
Auditoriums, Concert Halls, Amphitheaters	-	50 - 70	-	65 - 85
Sports Arena, Outdoor Spectator Sports	-	50 - 75	-	70 - 85
Playgrounds, Neighborhood Parks	50 - 70	-	67.5 – 75	72.5 -85
Golf Courses, Riding Stables, Water Recreation, Cemeteries	50 - 70	-	70 - 80	80 - 85
Office Buildings, Business and Professional Commercial	50 - 70	67.5 – 77.5	75 - 85	-
Industrial, Manufacturing, Utilities, Agriculture	50 - 75	70 - 80	75 - 85	-
Notes: Normally Acceptable: Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction without any special noise insulation requirements. Conditionally Acceptable: New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design. Conventional construction, but with closed windows and fresh air supply systems or air conditioning will normally suffice. Normally Unacceptable: New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design. Clearly Unacceptable: New construction or development should generally not be undertaken.				
Source: City of Artesia, *City of Artesia General Plan 2030*, Noise Element, 2010				

The following goals and policies from the Noise Sub-Element are applicable to the Project:

Goal N 1: Land use planning decisions, including planning for new development, consider noise impacts.

Policy N 1.1 Permit only those new development or redevelopment projects that have incorporated appropriate mitigation measures, so that standards contained in the Noise Sub-Element or adopted ordinances are met.

Policy N 1.2 Consider noise impacts associated with the development of non-residential uses in the vicinity of residential uses.

Policy Action N 1.1.2 Require a noise impact evaluation for projects, if determined necessary through the environmental review process. If noise abatement is found

necessary, require implementation mitigation measures based on a technical study prepared by a qualified acoustical professional.

Policy Action N 1.1.3 Implement noise mitigation by placing conditions of approval on development projects and require a clear description of mitigation on subdivision maps, site plans, and building plans for inspection purposes.

Policy N 1.2 Consider noise impacts associated with the development of non-residential uses in the vicinity of residential uses.

Policy Action N 1.2.1 Require that any proposed development near existing residential land uses demonstrate compliance with the City's Noise Ordinance prior to the approval of the project.

Goal N 2: Noise impacts from transportation sources are minimized.

Goal N 4: Noise impacts to noise sensitive receptors are minimized, ensuring that City and State interior and exterior noise levels are not exceeded.

Policy N 1.1 Ensure Community Noise Equivalent Levels (CNEL) for noise sensitive land uses meet normally acceptable levels, as defined by State standards.

Policy Action N 4.1.1 Require buffers or appropriate mitigation of potential noise sources on noise sensitive areas.

City of Artesia Municipal Code

The City of Artesia has established citywide interior and exterior noise level standards in a comprehensive Noise Ordinance within the *Artesia Municipal Code* (AMC). The purpose of the Ordinance is to control loud, unnecessary, and unusual noises, sounds, or vibrations emanating from areas of the City. The Noise Ordinance (AMC Title 5, Chapter 2: Noise) establishes daytime and nighttime permissible sound limits or levels for all residentially zoned properties in the City as well as prohibited noises.[14]

Section 5-2.03 Permissible Exterior Sound Limits or Levels

A. The noise, sound or vibration limits or levels imposed by this section shall apply to all residentially zoned properties in the City.

B. Except as otherwise allowed in AMC Chapter 2 Noise, no person, from any location within the City, shall create or allow the creation of noise, sound or vibration on any property owned, leased, occupied, or other controlled by such person, which causes the noise level on any residential property to exceed the greater of either the actual measured ambient noise level, or the following ambient noise level for a cumulative period of more than thirty (30) minutes in any hour as measured at any property line:

[14] City of Artesia, *City of Artesia General Plan 2030 – Noise Sub-Element,* http://www.cityofartesia.us/DocumentCenter/View/226/Artesia-General-Plan?bidId=, accessed July 12, 2022.

Table 6: Permitted Exterior Noise Level	
Time Period	**Noise Level**
7:00 a.m. – 10:00 p.m.	55 dB(A)
10:00 p.m. – 7:00 a.m.	50 dB(A)

If the alleged offensive noise consists entirely of impact noise, simple tone noise, speech, music, or any combination thereof, the permissible noise level set forth above shall be reduced by five (5) dB(A).

C. If the intruding noise source is continuous and cannot be reasonably discontinued for sufficient time in which the ambient noise level can be determined, the presumed ambient noise level shall be used.

D. Increases in noise levels prescribed in this section are permitted in accordance with the following:

Table 7: Permitted Increase in Exterior Noise Level	
Increase in Noise Level	**Duration of Increase in Minutes Per Hour**
5 dB(A)	15
10 dB(A)	5
15 dB(A)	1
20 dB(A)	Less than one minute

Section 5-2.04 Permissible Interior Sound Limits or Levels

A. The noise, sound or vibration limits or levels imposed by this section shall apply to all interior spaces within buildings or structures on residentially zoned properties in the City.

B. Except as otherwise allowed in this chapter, no person, from any location within the City, shall create or allow the creation of noise, sound or vibration on any property owned, leased, occupied, or other controlled by such person, which causes the noise level on any residential property to exceed the greater of either the actual measured ambient noise level, or the following ambient noise level for a cumulative period of more than five (5) minutes in any hour:

Table 8: Permitted Interior Noise Level	
Time Period	**Noise Level**
7:00 a.m. – 10:00 p.m.	55 dB(A)
10:00 p.m. – 7:00 a.m.	45 dB(A)

If the alleged offensive noise consists entirely of impact noise, simple tone noise, speech, music, or any combination thereof, the permissible noise level set forth above shall be reduced by five (5) dB(A).

C. If the intruding noise source is continuous and cannot be reasonably discontinued for sufficient time in which the ambient noise level can be determined, the presumed ambient noise level shall be used.

D. Increases in noise levels prescribed in this section are permitted in accordance with the following:

Table 9: Permitted Increase in Interior Noise Level	
Increase in Noise Level	**Duration of Increase in Minutes Per Hour**
5 dB(A)	1
10 dB(A)	Less than one minute

Section 5-2.05 – Prohibited Noises—General Standard

Notwithstanding any other provision of this chapter, and in addition thereto, it is unlawful for any person to willfully make or continue, or cause to be made or continued, any loud, unnecessary, or unusual noise, sound or vibration which unreasonably disturbs the peace and quiet of any neighborhood or which causes discomfort or annoyance to any reasonable person of normal sensitiveness residing in the area. The factors which shall be considered in determining whether such noise violates the provisions of this section shall include, but not be limited to, the following:

a. The volume of the noise;
b. The intensity of the noise;
c. Whether the nature of the noise is usual or unusual;
d. Whether the origin of the noise is natural or unnatural;
e. The volume and intensity of the background noise, if any;
f. The proximity of the noise to residential sleeping facilities;
g. The nature and zoning of the area within which the noise emanates;
h. The density of the inhabitation of the area within which the noise emanates;
i. The time of the day or night the noise occurs;
j. The duration of the noise;
k. Whether the noise is recurrent, intermittent, or constant; and
l. Whether the noise is produced by a commercial or noncommercial activity. (Ord. 599, § 1)

Section 5-2.06 Prohibited Noises – Specific Violations

Except as set forth in Section 5-2.07 of AMC Chapter 2 Noise, the following act and the causing or permitting thereof, is specifically declared to be a violation of AMC Chapter 2:

A. *Radios, Phonographs, Etc.* The using, operating or permitting to be played used or operated between the hours of 10:00 p.m. and 7:00 a.m. of any radio, musical instrument, phonograph, television set, or instrument or device similar to those heretofore specifically mentioned (hereinafter "device") for the production or reproduction of sound in volume sufficiently loud as to be plainly audible at a distance of fifty (50) feet or more from the property line of the property from which the noise, sound or vibration is emanating, and the using, operating or permitting to be played, used or operated between the hours of 7:00 a.m. and 10:00 p.m. of any such device for the production or reproduction of sound in volume sufficiently loud as to be plainly audible at a distance of two hundred (200) feet or more from the property line of the property from which the noise, sound or vibration is emanating.

B. *Band or Orchestral Rehearsals.* The conducting of or carrying on, or allowing the conducting or carrying on of band or orchestral concerts or rehearsals or practice between the hours of 10:00 p.m. and 7:00 a.m. sufficiently loud as to be plainly audible at a distance of fifty (50) feet or more from the property line of the property where the concert, rehearsal or practice is occurring, and

the conducting of or carrying on, or allowing the conducting or carrying on of band or orchestral concerts or rehearsals or practice between the hours of 7:00 a.m. and 10:00 p.m. sufficiently loud as to be plainly audible at a distance of two hundred (200) feet or more from the property line of the property where the concert, rehearsal or practice is occurring.

C. *Engines, Motors and Mechanical Devices Near Residential District*. The sustained, continuous or repeated operation or use between the hours of 8:00 p.m. and 7:00 a.m. of any motor or engine or the repair, modification, reconstruction, testing or operation of any automobile, motorcycle, machine, contrivance, or mechanical device or other contrivance or facility unless such motor, engine, automobile, motorcycle, machine or mechanical device is enclosed within a sound insulated structure so as to prevent noise and sound from being plainly audible at: (1) a distance of fifty (50) feet or more from the property line of the property from which the noise, sound or vibration is emanating or (2) the exterior wall of any adjacent residence, whichever is less.

D. *Motor Vehicles*. Racing the engine of any motor vehicle or needlessly bringing to a sudden start or stop of any motor vehicle.

E. *Loading and Unloading*. Loading, unloading, opening, closing or other handling of boxes, crates, containers, building materials, garbage cans or similar objects between the hours of 8:00 p.m. and 7:00 a.m. in volume sufficiently loud as to be plainly audible at a distance of fifty (50) feet or more from the property line of the property where the activity is occurring.

F. *Construction*. Operating or causing the operation of any tools, equipment, impact devices, derricks or hoists used on construction, drilling, repair, alteration, demolition or earthwork, between the hours of 7:00 p.m. and 7:00 a.m. on weekdays or at any time on Sunday or Federal holiday.

G. *Nonemergency Signaling Devices*. Sounding or permitting the sounding of any bell, chime, siren, whistle or similar device, intended primarily for nonemergency purposes between the hours of 8:00 p.m. and 7:00 a.m. Sound sources included within this provision may be exempted by a variance issued by the Planning Commission

H. *Emergency Signaling Devices*

(1) The intentional sounding, or permitting the sounding, outdoors of any emergency signaling device including fire, burglar, civil defense alarm, siren, whistle or similar emergency signaling device, for testing, except as provided in Subsection 5-2.06(h)(2).

(2) Testing of an emergency signaling device shall not occur between the hours of 8:00 p.m. and 7:00 a.m. Any such testing shall use only the minimum cycle test time. In no case shall such test time exceed sixty (60) seconds. Testing of the emergency signaling system shall not occur more than once in each calendar month.

(3) Sounding or permitting the sounding of any exterior burglar or fire alarm unless such alarm is terminated within fifteen (15) minutes of activation.

(4) Sounding or permitting the sounding of any motor vehicle alarm unless such alarm is terminated within five (5) minutes of activation.

(5) Sounding or permitting the sounding of any motor vehicle alarm more than three (3) times of any duration in any twenty-four (24) hour period.

I. *Commercial Establishments Adjacent to Residential Property.* Continuous, repeated or sustained noise, sound or vibration from the premises of any commercial establishment, including any outdoor area that is a part or under the control of the establishment, which is licensed by the City and is adjacent to one or more residential dwelling units, between the hours of 10:00 p.m. and 7:00 a.m., that is plainly audible from the exterior wall of the adjacent residential dwelling unit

J. *Leaf Blowers.* The use or operation or allowing the use or operation of any leaf blower, as defined and regulated in Chapter 12 of Title 5 of this Code, between the hours of 8:00 p.m. and 8:00 a.m. of the next day. (Ord. 599, § 1)

Section 5-2.07 – Exemptions.

The following activities shall be exempted from the AMC Chapter 5.2 (Noise):

A) Outdoor events, such as gatherings, fairs, bazaars, festivals and similar events if and to the extent the events are conducted pursuant to a temporary use permit issued by the City.

B) The emission of sound for the purpose of alerting persons to the existence of an emergency or the emission of sound in the performance of emergency work. For the purposes of this section, "emergency" means a condition that constitutes an immediate threat to public safety, health or welfare or to property.

C) Noise sources associated with the maintenance of real property such as the operation of any mechanically powered saw, sander, drill, grinder, lawn or garden tool or similar tool, provided such activities take place between 7:00 a.m. and 7:00 p.m. on weekdays and the hours of 9:00 a.m. and 6:00 p.m. on weekends and holidays.

D) Any activity to the extent regulation thereof has been preempted by State or Federal law.

E) Activities of the Federal, State or local jurisdiction while performing governmental duties.

F) Warning devices necessary for the protection of public safety as for example, police, fire and ambulance sirens and train horns.

G) Activities conducted on public playgrounds, public or private school grounds including, but not limited to, school athletic and school entertainment events and band or orchestral rehearsals for school athletic or school entertainment events.

4 EXISTING CONDITIONS

4.1 Existing Noise Sources

The Project site and surrounding area are impacted by various mobile and stationary noise sources, as described below. Artesia Boulevard located to the south of the Project site and the concrete mixing plant located to the east are the primary noise sources in the Project vicinity.

Mobile Sources

Traffic along Artesia Boulevard to the south, Alburtis Avenue to the east, and Flallon Avenue to the west are the most common and prominent mobile noise sources in the Project area. Existing roadway noise levels were calculated for these roadway segments in the Project vicinity. These calculations were accomplished using the Federal Highway Administration (FHWA) Highway Traffic Noise Prediction Model (FHWA-RD-77-108) and traffic data from the Project's Traffic Impact Analysis (Kimley-Horn and Associates, August 2022). The noise prediction model calculates the average noise level at specific locations based on traffic volumes, average speeds, roadway geometry, and site environmental conditions. The average vehicle noise rates (also referred to as energy rates) used in the FHWA model have been modified to reflect average vehicle noise rates identified for California by the California Department of Transportation (Caltrans). The Caltrans data indicates that California automobile noise is 0.8 to 1.0 dBA higher than national levels and that medium and heavy truck noise is 0.3 to 3.0 dBA lower than national levels. The average daily noise levels along roadway segments near the Project site are included in **Table 10: Existing Traffic Noise Levels**. As shown in **Table 10**, existing traffic noise levels in the Project vicinity range between 50.2 dBA CNEL and 64.2 dBA CNEL.

Table 10: Existing Traffic Noise Levels

Roadway Segment	ADT	dBA CNEL[1]
Artesia Boulevard		
West of Flallon Ave	16,169	64.1
East of Flallon Ave &	16,295	64.2

Notes: 1. Traffic noise levels are at 100 feet from the roadway centerline.		
Source: Based on traffic data provided by Kimley-Horn and Associates, Inc., August 2022. Refer to **Appendix B: Noise Modeling Data** for traffic noise modeling results.		

Stationary Sources

The primary stationary noise sources near the Project site are from industrial uses, including the concrete mixing plant located to the east, parking lot activity (e.g., automobile related noise such as cars starting and doors slamming, engines starting), mechanical equipment (e.g., heating, ventilation, and air

conditioning [HVAC] units), and truck activity noise at nearby commercial and industrial properties, and other urban-related activities (e.g., idling cars/trucks, pedestrians, car radios and music playing, dogs barking, etc.). The noise associated with these sources may represent a single-event noise occurrence or short-term noise. In addition, existing stationary noise sources from the residential uses to the south and west of the Project site include mechanical equipment such as HVAC units and landscaping equipment. The noise associated with these sources may represent a single-event noise occurrence or short-term noise.

4.2 Noise Measurements

To quantify existing ambient noise levels in the Project area, Kimley-Horn conducted four short-term (10-minute) noise measurements on June 29, 2022, and one short-term noise measurement on March 8, 2023. In addition, one long-term noise measurement (24 hours) was conducted at the Project site starting on March 8, 2023 and ending on March 9, 2023; see **Appendix A: Existing Ambient Noise Measurements**. The noise measurement sites were representative of typical existing noise exposure within and immediately adjacent to the Project site. The average noise levels and noise sources measured at each location are listed in **Table 11: Existing Noise Measurements** and the noise measurement locations are shown on **Figure 5: Noise Measurement Locations**.

Table 11: Existing Noise Measurements[1]

Site ID[2]	Location	Time	Date	Duration	L_{min} (dBA)	L_{max} (dBA)	L_{eq} (dBA)	dBA CNEL
ST-1	On 175th Street in residential neighborhood, south of the Project site.	9:15 a.m.	06/29/22	10 Minutes	46.4	74.8	54.5	-
ST-2	West side of Flallon Avenue, directly west of the Project site.	9:38 a.m.	06/29/22	10 Minutes	51.7	71.1	57.4	-
ST-3	South of Alburtis Avenue, north of the Project site.	9:50 a.m.	06/29/22	10 Minutes	55.8	74.3	62.2	-
ST-4	Along Artesia Boulevard, southeast of the Project site near 11714 Artesia Boulevard.	10:13 a.m.	06/29/22	10 Minutes	53.4	82.6	68.3	-
ST-5	At Alburtis Avenue adjacent to the concrete mixing plant situated east of the Project site.	9:57 a.m.	03/08/23	10 Minutes	57.9	89.8	68.5	-
LT-1	At the Project site's eastern/Alburtis Avenue boundary, across from the concrete mixing plant situated east of the Project site.	9:45 a.m.	03/8/23 to 03/09/23	24 hours	43.0	91.6	67.8	71.2

4.3 Sensitive Receptors

Noise exposure standards and guidelines for various types of land uses reflect the varying noise sensitivities associated with each of these uses. Land uses considered sensitive receptors include residences, hospitals, schools, playgrounds, childcare facilities, long-term health care facilities, rehabilitation centers, convalescent centers, and retirement homes. **Table 12: Sensitive Receptors** lists the noise-sensitive receptors nearest the Project Site. As shown in **Table 12**, the nearest sensitive receptors are live-work units adjacent/west of the Project site.

Table 12: Sensitive Receptors

Receptor Description	Distance and Direction from the Project
Single-family Residences	300 feet to the south
Live-Work Units	Adjacent to the west, 62 feet
Single-family Residences	760 feet to the north
Luther Burbank Elementary School	1,010 feet to the southwest

Notes:
1. Distances have been measured from the nearest Project site boundary to the property line of each receptor.

Source: Google Earth, 2022.

5 SIGNIFICANCE CRITERIA AND METHODOLOGY

5.1 CEQA Thresholds

State CEQA Guidelines Appendix G contains analysis guidelines related to noise and vibration. These guidelines have been used by the City to develop thresholds of significance for this analysis. A project would create a significant environmental impact if it would:

- Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- Generate excessive groundborne vibration or groundborne noise levels; and
- For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, expose people residing or working in the Project area to excessive noise levels.

5.2 Methodology

Construction

Construction noise levels were based on typical noise levels generated by construction equipment published by the Federal Transit Administration (FTA) and the Federal Highway Administration (FHWA). Construction noise is assessed in dBA L_{eq}. This unit is appropriate because L_{eq} can be used to describe noise level from operation of each piece of equipment separately, and levels can be combined to represent the noise level from all equipment operating during a given period.

Construction noise modeling was conducting using the FHWA Roadway Construction Noise Model (RCNM). For modeling purposes, construction equipment has been distributed evenly between the center of the construction site and the nearest noise-sensitive receptor. Noise level estimates do not account for the presence of intervening structures or topography, which may reduce noise levels at receptor locations. Therefore, the noise levels presented herein represent a conservative, reasonable worst-case estimate of actual temporary construction noise. The City of Artesia does not establish quantitative construction noise standards. As such, this analysis uses the FTA's threshold of 80 dBA (8-hour L_{eq}) for residential uses, 85 dBA (8-hour L_{eq}) for commercial uses, and 90 dBA (8-hour L_{eq}) for industrial uses to evaluate construction noise impacts.

Operations

The analysis of the Without Project and With Project noise environments is based on noise prediction modeling and empirical observations. Reference noise level data are used to estimate Project operational noise levels from stationary sources. Noise levels are collected from field noise measurements and other published sources from similar types of activities are used to estimate noise levels expected with the Project's stationary sources. The reference noise levels are used to represent a worst-case noise environment as noise levels from stationary sources can vary throughout the day. Operational noise is evaluated based on the City's Noise Ordinance and General Plan standards. Traffic noise impacts were assessed using methodologies consistent with the FHWA.

Vibration

Groundborne vibration levels associated with Project construction-related activities were evaluated utilizing typical groundborne vibration levels associated with construction equipment, obtained from FTA published data for construction equipment. Potential groundborne vibration impacts related to building/structure damage and interference with sensitive existing operations were evaluated, considering the distance from construction activities to nearby land uses and typically applied criteria.

Building damage can be cosmetic or structural. Ordinary buildings that are not particularly fragile would not experience cosmetic damage (e.g., plaster cracks) at distances beyond 30 feet. This distance can vary substantially depending on soil composition and underground geological layer between vibration source and receiver. In addition, not all buildings respond similarly to vibration generated by construction equipment. For example, for a building that is constructed with reinforced concrete with no plaster, the FTA guidelines show that a vibration level of up to 0.20 in/sec is considered safe and would not result in any vibration damage. Human annoyance is evaluated in vibration decibels (VdB) (the vibration velocity level in decibel scale) and occurs when construction vibration rises significantly above the threshold of human perception for extended periods of time. The *Transit Noise and Vibration Impact Assessment Manual* (FTA, 2018) (FTA Noise and Vibration Manual) identifies 80 VdB as the threshold for buildings where people normally sleep.

6 POTENTIAL IMPACTS AND MITIGATION

6.1 Acoustical Impacts

Threshold 6.1 Would the Project generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Construction Noise Levels

Construction noise typically occurs intermittently and varies depending on the construction activity's nature or phase (e.g., land clearing, grading, excavation, paving). Noise generated by construction equipment, including earth movers, material handlers, and portable generators, can reach high levels. During construction, exterior noise levels could affect noise-sensitive receptors near the construction site. However, it is noted that construction activities would occur throughout the Project site and would not be concentrated at a single point near noise-sensitive receptors.

Project construction activities would include demolition, site preparation, grading, building construction, paving, and architectural coating. Such activities may require:

- Industrial saws, excavators, and dozers for demolition;
- Dozers and tractors during site preparation;
- Excavators, graders, dozers, and tractors during grading;
- Cranes, forklifts, generators, tractors, and welders during building construction;
- Pavers, rollers, mixers, and paving equipment during paving; and
- Air compressors during architectural coating.

Typical operating cycles for these types of construction equipment may involve one or two minutes of full power operation followed by three to four minutes at lower power settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts). Construction equipment noise, including earth movers, material handlers, and portable generators, can reach high levels. Typical noise levels associated with individual construction equipment are listed in **Table 13: Typical Construction Noise Levels**. It is noted that the noise levels shown in **Table 13** are maximum noise levels (i.e., the equipment engine at maximum speed). However, equipment used on construction sites typically operates under less than full power conditions, or part power.

Table 13: Typical Construction Noise Levels

Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, September 2018.		

Following the methodology for quantitative construction noise assessments in the FTA's *Transit Noise and Vibration Impact Assessment Manual* (September 2018) (FTA Noise and Vibration Manual), the FHWA RCNM model was used to predict construction noise at the nearest off-site receptors. RCNM is a computer program used to assess construction noise impacts and allows for user-defined construction equipment and user-defined noise limit criteria. Noise levels were calculated for each construction phase and are based on the equipment used, distance to the nearest property/receptor, and acoustical use factor for equipment.

Following FTA methodology, when calculating construction noise, all construction equipment is assumed to operate simultaneously at the Project site's center. Because in reality, equipment would be operating throughout the site and not all of the equipment would be operating at the point closest to the noise-sensitive receptors and considering the distance between the Project site's center and the sensitive receptors is a reasonable assumption. Therefore, the distances used in the RCNM model were approximately 175 feet to the nearest residential receptors to the west, 150 feet to the industrial uses to the east, and 255 feet to the commercial uses to the west of the center of the Project site; refer to **Appendix B: Noise Modeling Data** for RCNM modeling results. **Table 14: Project Construction Noise Levels**, show estimated exterior construction noise levels at the nearest receptors without accounting for attenuation from physical barriers or topography.

As shown in **Table 14**, construction activities would not exceed the applicable FTA noise standards at the nearest receptors in the Project vicinity. It is also noted that construction would occur during the City's allowable construction hours between 7:00 a.m. and 7:00 p.m. Monday through Saturday and would be prohibited on Sundays or Federal holidays. Therefore, construction related noise impacts would be less than significant.

Table 14: Project Construction Noise Levels

Construction Phase	Receptor Location			Modeled Exterior Noise Level (dBA L_{eq})[2]	FTA Noise Threshold (dBA $L_{eq\ (8\text{-}hour)}$)	Exceeded?
	Land Use	Direction	Distance (feet)[1]			
Demolition	Residential	West	175	75.6	80	No
	Commercial	West	255	72.3	85	No
	Industrial	East	150	76.9	90	No
Site Preparation	Residential	West	175	76.7	80	No
	Commercial	West	255	73.5	85	No
	Industrial	East	150	78.1	90	No
Grading	Residential	West	175	76.4	80	No
	Commercial	West	255	73.1	85	No
	Industrial	East	150	77.7	90	No
Building Construction	Residential	West	175	73.7	80	No
	Commercial	West	255	70.4	85	No
	Industrial	East	150	75.0	90	No
Paving	Residential	West	175	76.8	80	No
	Commercial	West	255	73.5	85	No
	Industrial	East	150	78.1	90	No
Architectural Coating	Residential	West	175	62.8	80	No
	Commercial	West	255	59.5	85	No
	Industrial	East	150	64.1	90	No

Notes:
1. Following FTA methodology, all equipment is assumed to operate at the center of the Project site because equipment would operate throughout the Project site and not at a fixed location for extended periods of time.
2. Modeled noise levels assume the simultaneous operation of all pieces of equipment.

Source: Federal Highway Administration, *Roadway Construction Noise Model,* 2006. Refer to **Appendix B: Noise Modeling Data** for noise modeling results.

Operations

Project implementation would create new sources of noise in the Project vicinity. The major noise sources that would potentially impact existing nearby sensitive receptors are stationary noise equipment (e.g., air conditioners, etc.); parking areas (i.e., car door slamming, car radios, engine start-up, and car pass-by); truck deliveries and trash/recycling pickups; landscape maintenance; and off-site traffic noise.

Mechanical Equipment

The nearest sensitive receptors to the Project site are the multi-family residences directly to the west of the Project site. Potential stationary noise sources related to long-term Project operation would include mechanical equipment (e.g., heating ventilation and air conditioning [HVAC] equipment), which typically generates noise levels of approximately 52 dBA at 50 feet.[15] As indicated in **Table 15: Stationary Source Noise Levels**, noise levels from the Project's proposed mechanical equipment at the nearest sensitive receptors would be below the City's noise standards. Therefore, the Project would result in a less than significant impact concerning mechanical equipment noise levels.

[15] Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, 2015.

Parking Lot Noise

The Project would provide 216 onsite parking spaces and 22 offsite parking spaces (along Flallon Avenue and Alburtis Avenue) (see Section 1.2, *Project Description*). Parking spaces would be a combination of ground-floor garage spaces for each residential unit, surface lot parking spaces in the southern portion of the site near the proposed commercial uses, and street parking along Flallon Avenue and Alburtis Avenue. Traffic associated with parking lots is typically not of sufficient volume to exceed community noise standards, which are based on a time-averaged scale such as the CNEL scale. The instantaneous maximum sound levels generated by a car door slamming, engine starting up, and car pass-bys range from 53 to 61 dBA[16] and may be an annoyance to nearby noise-sensitive receptors. As shown in **Table 15**, noise levels from the Project's proposed parking lot at the nearest noise-sensitive receptor would be below the City's noise standards which are in the $L_{eq\ (30\ min)}$ noise metric. A less than significant impact would occur in this regard.

Truck Deliveries and Trash/Recycling Collection

The proposed Project would involve occasional deliveries and weekly trash/recycling collection from slow-moving trucks during normal daytime hours. Low speed truck noise results from a combination of engine, exhaust, and tire noise as well as the intermittent sounds of back-up alarms and releases of compressed air associated with truck air-brakes. Medium-sized delivery trucks and trash collection trucks typically generate noise levels of 70 dBA at a distance of 50 feet.[17] The nearest noise-sensitive receptors (multi-family residences) would be located approximately 115 feet northwest of the closest trash/recycling/truck delivery area at the Project site. At this distance, noise levels from truck deliveries and trash/recycling collection trucks would be approximately 52.8 dBA and would not exceed the City's exterior or interior noise standards at the nearest residential uses; see **Table 15**. It is also noted that trash/recycling and truck delivery operations occur at the Project site under existing conditions and are considered part of standard operations in the area. Therefore, noise levels from truck deliveries and trash/recycling collection would result in a less than significant impact would occur in this regard.

Landscape Maintenance Activities

Operation of the Project would also include new landscaping that would require periodic maintenance. However, landscape maintenance activities would operate during daytime hours for brief periods of time and would be consistent with existing landscape maintenance activities at surrounding uses. In addition, landscape maintenance noise is exempt from the City's noise standards per AMC Section 5-2.07(c). Nonetheless, noise from landscape maintenance activities at the Project site would not exceed the City's exterior or interior noise standards at the nearest residential uses (see **Table 15**), and a less than significant impact would occur in this regard.

[16] Kariel, H. G., *Noise in Rural Recreational Environments*, Canadian Acoustics 19(5), 3-10, 1991.
[17] Urban Crossroads, *Lake Elsinore Walmart 2015 Noise Impact Analysis*, 2015.

Table 15: Stationary Source Noise Levels

Nearest Land Use	Direction	Distance (feet)	Reference Noise Level at 50 ft, dBA	Exterior Noise				Interior Noise

Residential	West	70	58.4[3]	52.5[6]	57.4	57.4	No	27.5	No
Combined Noise Level (Mechanical Equipment + Parking Area + Truck Deliveries and Trash/Recycling Collection + Landscape Maintenance)									
Residential	West	N/A[5]	70.8[9]	56.4[6]	57.4	57.4	No	31.4	No

Notes:

1. Ambient noise levels obtained by Kimley-Horn on June 29, 2022; see **Table 11**.
2. The applicable noise standard is the higher of the measured ambient noise level or the base ambient noise levels identified in AMC Section 5-2.03(b). As indicated in **Table 11**, the measured ambient noise levels obtained by Kimley-Horn on June 29, 2022, exceed the City's base ambient noise levels. Therefore, the measured ambient noise levels are used to analyze impacts from the Project in accordance with Artesia Municipal Code 5-2.03(b).
3. Elliott H. Berger, Rick Neitzel, and Cynthia A. Kladden, *Noise Navigator Sound Level Database with Over 1700 Measurement Values*, June 26, 2015.
4. Mechanical equipment is conservatively assumed to run in a continuous manner.
5. Includes a 5 dBA reduction from the rooftop parapet/screening walls at onsite buildings.
6. Noise level calculated using the Inverse Square Law of sound propagation and a maximum of 15 minutes of total operation within a 30-minute time period.
7. Urban Crossroads, *Lake Elsinore Walmart 2015 Noise Impact Analysis*, 2015.
8. Distances vary based on the location of the noise source, as identified above.
9. Calculated based on the logarithmic decibel scale and the reference noise levels for mechanical equipment, parking, truck deliveries and trash/recycling collection, and landscape maintenance noise levels identified above.
10. Interior noise levels were calculated assuming an exterior-interior sound reduction of 25 dBA from standard construction practices, per the United States Department of Housing and Urban Development *Noise Guidebook*, available at: https://www.hudexchange.info/resource/313/hud-noise-guidebook/ (2009).

Combined Noise Levels

Conservatively assuming a worst-case scenario where all noise sources identified above are simultaneously and continuously generating noise, the composite noise level at the nearest residential uses to the west would be approximately 56.4 dBA and would not exceed the City's exterior or interior noise standards; see **Table 15**. It is also noted that onsite mechanical equipment would be the primary noise source during the nighttime hours, which would generate noise levels up to 45.4 dBA at the nearest residences to the west (see **Table 15**) and would not exceed the City's nighttime exterior noise standard of 50 dBA. Therefore, noise levels from on-site Project operations would be less than significant.

Off-Site Traffic Noise

Project implementation would generate increased traffic volumes along nearby roadway segments. Based on the Traffic Impact Analysis Report, the proposed Project would result in approximately 2,585 daily trips. "2025 Opening Year Without Project" and "2025 Opening Year With Project" scenarios are compared in **Table 16: Opening Year Traffic Noise Levels**. As shown in **Table 16**, roadway noise levels without the Project would range from 50.3 dBA CNEL to 64.3 dBA CNEL and with the Project between 58.8 dBA CNEL and 64.7 dBA CNEL. Project generated traffic would result in substantial traffic noise increases[18] of 8.4 dBA along Flallon Avenue (north of Artesia Boulevard) and 7.7 dBA CNEL (north of Artesia Boulevard). However, as indicated in **Table 16**, the With Project noise levels at these roadway segments would not exceed the City's normally acceptable community noise exposure standards of 60 dBA CNEL for single-family residential and/or 65 dBA CNEL for multi-family residential uses. Therefore, the proposed Project would not result in a substantial permanent increase in traffic noise levels above the City's noise standards, and a less than significant impact would occur.

Table 16: Opening Year Traffic Noise Levels

Roadway Segment		2025 Opening Year Without Project		2025 Opening Year With Project		Change	Exceeds 3 dBA?[2]	Residential Land Use Compatibility Standard (SF/MF), dBA CNEL	Significant Impact[3]
		ADT	dBA CNEL[1]	ADT	dBA CNEL[1]				
Artesia Boulevard	West of Flallon Ave	16,660	64.3	18,212	64.7	0.4	No	60/65	No
	East of Flallon Ave	16,790	64.3	19,376	64.9	0.6	No	60/65	No
	West of Alburtis Ave	16,790	64.3	19,376	64.9	0.6	No	60/65	No
	East of Alburtis Ave	17,046	64.4	20,666	65.2	0.8	No	60/65	No[4]
Flallon Avenue	North Artesia Blvd	434	50.4	3,020	58.8	8.4	Yes	60/65	No
Alburtis Avenue	North Artesia Blvd	535	50.3	3,121	58.0	7.7	Yes	60/65	No

ADT = average daily traffic; dBA = A-weighted decibels; CNEL = community noise equivalent level; SF = single-family; MF = multiple-family.

Notes:
1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.
2. An increase of 3 dBA is barely perceptible. Therefore, an increase of 3 dBA or more is considered significant.
3. Potential impacts occur when the Project change exceeds 3 dBA and the land use compatibility standard is exceeded (i.e., both must occur).
4. Although the modeled traffic noise level exceeds the applicable land use compatibility standard(s) at 100 feet from the roadway centerline, the nearest residential uses along this segment are located over 350 feet from the roadway centerline. At 350 feet, traffic noise levels would attenuate to approximately 59.6 dBA CNEL and would be below the City's land use compatibility standards. In addition, the Project would result in a less than 3 dBA noise increase along this segment and would not be noticeable.

Source: Based on traffic data within the *Traffic Impact Analysis Report*, prepared by Kimley-Horn and Associates, Inc., August 2022. Refer to **Appendix B** for traffic noise modeling assumptions and results.

[18] Per the *Techniques for Reviewing Noise Analyses and Associated Noise Reports* (FHWA, 2018), the FHWA considers a noise increase over 3 dBA to be barely perceptible and would have an effect on the existing noise environment.

On-Site Noise Impacts[19]

As previously noted, the concrete mixing plant located east of the Project site along Alburtis Avenue and vehicular traffic along Artesia Boulevard located to the south are the primary noise sources in the Project vicinity. As depicted on **Figure 4: Conceptual Site Plan**, the Project proposes residential uses (i.e., townhomes and shopkeeper live/work units) along Alburtis Avenue, but commercial uses are proposed along Artesia Boulevard. Based on the noise measurement data obtained by Kimley-Horn for LT-1 (see **Table 11**), exterior noise levels at the proposed residences along Alburtis Avenue would be approximately 71.2 dBA CNEL, which is within the City's normally unacceptable land use compatibility noise standard of 70-75 dBA CNEL for multi-family residential uses (see **Table 5**). According to the General Plan Noise Element, a normally unacceptable noise level requires that noise insulation features be included in the design to ensure interior noise levels are below the California Building Code interior noise standard of 45 dBA CNEL. Therefore, the Project would be required to comply with Mitigation Measure NOI-1, which requires implementation of sound insulation to minimize interior noise levels at habitable rooms of residences along Alburtis Avenue to ensure the Project would be consistent with California Code of Regulations Title 24, Part 2, Section 1206.4 (Allowable Interior Noise Levels). With implementation of Mitigation Measure NOI-1, the interior noise levels would be reduced to below the California Building Code interior noise standard of 45 dBA CNEL and onsite noise impacts would be reduced to less than significant.

Mitigation Measures:

NOI-1 To comply with California Code of Regulations Title 24, Part 2, Section 1206.4 (Allowable Interior Noise Levels), the Project applicant shall install exterior building materials with sufficient Sound Transmission Class (STC) ratings to reduce interior noise levels at residential units to 45 CNEL or lower. To reduce potential noise impacts to future Project residents, habitable rooms[20] of residential units located within 30 feet of Alburtis Avenue shall incorporate design measures for windows, walls, and doors that achieve a composite STC rating of at least 27 and all exterior doors and windows shall be installed such that there are no air gaps or perforations. Both aforementioned STC rating standard requirements shall be incorporated into the building plans and submitted to the City of Artesia Building Department for review and approval prior to issuance of building permits. An acoustical analysis shall be performed prior to the issuance of an occupancy permit to demonstrate that noise levels in the interior livable spaces do not exceed the interior noise standard of 45 CNEL in any habitable room as set forth by the City and California Code of Regulations, Title 24, Section 1206.4.

Level of Significance: Less than significant with mitigation incorporated.

[19] The California Supreme Court in a December 2015 opinion (*California Building Industry Association v. Bay Area Air Quality Management District,* 62 Cal. 4th 369 [No. S 213478]) confirmed that CEQA, with several specific exceptions, is concerned with the impacts of a project on the environment, not the effects the existing environment may have on a project. Therefore, this section is not required under CEQA and is included for informational purposes only. The evaluation of the significance of project impacts in the following discussion is provided to ensure compliance with City and State Building Code noise standards.

[20] According to the California Building Code, a habitable room is "A space in a building for living, sleeping, eating or cooking. Bathrooms, toilet rooms, closets, halls, storage or utility spaces and similar areas are not considered habitable spaces."

Threshold 6.2 Would the Project generate excessive groundborne vibration or groundborne noise levels?

Construction Vibration

Construction can generate varying degrees of ground vibration, depending on the construction procedures and equipment. Operation of construction equipment generates vibrations that spread through the ground and diminish with distance from the source. Construction on the Project site would have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved.

Table 17: Typical Construction Equipment Vibration Levels, lists vibration levels at 25 feet for typical construction equipment. Vibration levels at 20 feet, the distance from the Project construction area to the nearest existing structure to the north are also included in **Table 17**. Groundborne vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance. As indicated in **Table 17**, based on FTA data, vibration velocities from typical heavy construction equipment operations that would be used during Project construction range from 0.003 to 0.089 in/sec PPV at 25 feet from the source of activity.

Table 17: Typical Construction Equipment Vibration Levels

Equipment	Peak Particle Velocity at 25 Feet (in/sec)	Peak Particle Velocity at 20 Feet (in/sec)[1]
Large Bulldozer	0.089	0.124
Caisson Drilling	0.089	0.124
Loaded Trucks	0.076	0.106
Jackhammer	0.035	0.049
Small Bulldozer/Tractors	0.003	0.004

Notes:
1. Calculated using the following formula: $PPV_{equip} = PPV_{ref} \times (25/D)^{1.5}$, where: PPV_{equip} = the peak particle velocity in in/sec of the equipment adjusted for the distance; PPV_{ref} = the reference vibration level in in/sec from Table 7-4 of the Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018; D = the distance from the equipment to the receiver.

Source: Federal Transit Administration, *Transit Noise and Vibration Impact Assessment Manual*, 2018.

The nearest structure to the Project construction area is located approximately 20 feet to the north. **Table 17** shows that at 20 feet, the maximum vibration velocities from construction equipment would be 0.124 in/sec PPV, which is below the FTA's 0.20 in/sec PPV threshold for building damage and Caltrans' 0.40 in/sec PPV threshold for human annoyance. It is also acknowledged that construction activities would occur throughout the Project site and would not be concentrated at the point closest to the nearest structure. Therefore, vibration impacts associated with Project construction would be less than significant.

Operational Vibration

Once operational, the Project would not be a significant source of ground-borne vibration. Ground-borne vibration surrounding the Project currently result from heavy-duty vehicular travel (e.g., trash/recycling trucks, heavy duty trucks, and delivery trucks, etc.) on the nearby local roadways. Due to the rapid drop-off rate of ground-borne vibration and the short duration of the associated events, vehicular traffic-induced ground-borne vibration is rarely perceptible beyond the roadway right-of-way, and rarely results

in vibration levels that cause damage to buildings in the vicinity. Therefore, vibration impacts from the Project would be less than significant.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

Threshold 6.3 For a Project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the Project expose people residing or working in the Project area to excessive noise levels?

The nearest airport to the Project site is the Long Beach Airport located approximately 4.8 miles to the southwest. The Project site is not within 2.0 miles of a public airport or within an airport land use plan. Additionally, there are no private airstrips located within the Project vicinity. Therefore, the Project would not expose people working in the Project area to excessive airport- or airstrip-related noise levels and no mitigation is required.

Mitigation Measures: No mitigation is required.

Level of Significance: Less than significant impact.

6.2 Cumulative Noise Impacts

For purposes of noise analysis, cumulative impacts are considered for cumulative development within the ABCSP and adjacent areas in the City. The City identified the related projects and other possible development in the area that have the potential to interact with the Project to the extent that a significant cumulative effect may occur.[21]

Cumulative Construction Noise

The Project's construction activities would not result in a substantial temporary increase in ambient noise levels. Construction noise would be periodic and temporary noise impacts that would cease upon completion of construction activities. The Project would contribute to other proximate construction project noise impacts if construction activities were conducted concurrently. The nearest cumulative development project is located approximately 0.11-mile to the west at 17172 Roseton (a 4,758 SF office/warehouse). However, based on distance attenuation and the presence of intervening structures and traffic noise along Artesia Boulevard, construction noise emanating from the Project site would not cumulatively contribute to construction noise generated at the nearest cumulative development project. All other cumulative development projects are located more than 0.20 miles from the Project site.

In addition, construction activities at other planned and approved projects near the Project site would be required to comply with applicable City rules related to noise and would take place during daytime hours on the days permitted by the AMC, and projects requiring discretionary City approvals would be required to evaluate construction noise impacts, comply with the City's standard conditions of approval, and implement mitigation, if necessary, to minimize noise impacts. Therefore, Project construction would not

[21] Email correspondence with Mel Lee, Contract Planner, on September 23, 2022.

result in a cumulatively considerable contribution to significant cumulative impacts, assuming such a cumulative impact existed, and impacts in this regard are not cumulatively considerable.

Cumulative Operational Noise

Cumulative Off-Site Traffic Noise

Cumulative noise impacts describe how much noise levels are projected to increase over existing conditions with the development of the proposed Project and other foreseeable projects. Cumulative noise impacts would occur primarily as a result of increased traffic on local roadways due to buildout of the proposed Project and other projects in the vicinity.

Cumulative increases in traffic noise levels were estimated by comparing the Existing and Opening Year Without Project scenarios to the Opening Year Plus Project scenario. The traffic analysis considers cumulative traffic from future growth assumed in the transportation model, as well as cumulative projects.

A project's contribution to a cumulative traffic noise increase would be considered significant when the combined effect exceeds the perception level (i.e., auditory level increase) threshold. The following criteria is used to evaluate the combined and incremental effects of the cumulative noise increase.

- *Combined Effect*. The cumulative with Project noise level ("Opening Year With Project") would cause a significant cumulative impact if a 3.0 dB increase over "Existing" conditions occurs and the resulting noise level exceeds the applicable exterior standard at a sensitive use. Although there may be a significant noise increase due to the proposed Project in combination with other related projects (combined effects), it must also be demonstrated that the Project has an incremental effect. In other words, a significant portion of the noise increase must be due to the proposed Project.

- *Incremental Effects*. The "Opening Year With Project" causes a 1.0 dBA increase in noise over the "Opening Year Without Project" noise level.

A significant impact would result only if both the combined and incremental effects criteria have been exceeded and the With Project noise levels exceed the acceptable noise levels on the land use compatibility matrix (refer to **Table 5**). Noise by definition is a localized phenomenon and reduces as distance from the source increases. Consequently, only the proposed Project and growth due to occur in the general area would contribute to cumulative noise impacts.

Table 18: Cumulative Off-Site Traffic Noise Levels identifies the traffic noise effects along roadway segments in the Project vicinity for "Existing," "Opening Year Without Project," and "Opening Year With Project," conditions, including incremental and net cumulative impacts. **Table 18** shows that although cumulative traffic noise levels would exceed the combined and incremental effects as a result of the Project, the Opening Year With Project noise levels would not exceed the City's land use compatibility standards at the nearest residential uses. Thus, cumulative operational noise impact from related projects, in conjunction with Project-specific noise impacts would not be cumulatively considerable and impacts would be less than significant.

Table 18: Cumulative Off-Site Traffic Noise Levels

Roadway Segment		Existing dBA CNEL[1]	Opening Year Without Project[1] dBA CNEL	Opening Year With Project[1] dBA CNEL	Combined Effects	Incremental Effects	Residential Land Use Compatibility Standard (SF/MF), dBA CNEL	Cumulatively Significant Impact?
					Difference In dBA Between Existing and Opening Year With Project	Difference In dBA Between Opening Year Without Project and Opening Year With Project		
Artesia Boulevard	West of Flallon Ave	64.1	64.3	64.7	0.6	0.4	60/65	No
	East of Flallon Ave	64.2	64.3	64.9	0.7	0.6	60/65	No
	West of Alburtis Ave	64.2	64.3	64.9	0.7	0.6	60/65	No
	East of Alburtis Ave	64.2	64.4	65.2	1.0	0.8	60/65	No[3]
Flallon Avenue	North Artesia Blvd	50.3	50.4	58.8	8.5	8.4	60/65	No
Alburtis Avenue	North Artesia Blvd	50.2	50.3	58.0	7.8	7.7	60/65	No

ADT = average daily traffic; dBA = A-weighted decibels; CNEL = community noise equivalent level.

Notes:
1. Traffic noise levels are at 100 feet from the roadway centerline. The actual sound level at any receptor location is dependent upon such factors as the source-to-receptor distance and the presence of intervening structures, barriers, and topography.
2. Potential cumulative impacts occur when the combined and incremental effects are exceeded, and the Opening Year Plus Project noise level exceeds the City's land use compatibility standard (i.e., all must occur).
3. Although the modeled traffic noise level exceeds the applicable land use compatibility standard(s), the nearest residential uses are located over 350 feet from the roadway centerline and noise levels would attenuate below land use compatibility standards.

Source: Based on traffic data within the *Traffic Impact Analysis Report*, prepared by Kimley-Horn and Associates, Inc., August 2022. Refer to **Appendix B: Noise Modeling Data** for traffic noise modeling assumptions and results.

Cumulative Stationary Noise

Stationary noise sources of the proposed Project would result in an incremental increase in non-transportation noise sources in the Project vicinity. However, as discussed above, operational noise caused by the proposed Project would be less than significant. Similar to the proposed Project, other planned and approved projects would be required to mitigate for stationary noise impacts at nearby sensitive receptors, if necessary. As stationary noise sources are generally localized, there is a limited potential for other projects to contribute to cumulative noise impacts.

No known past, present, or reasonably foreseeable projects would combine with the operational noise levels generated by the Project to increase noise levels above acceptable standards because each project must comply with applicable City regulations that limit operational noise. Therefore, the Project, together with other projects, would not create a significant cumulative impact, and even if there was such a significant cumulative impact, the Project would not make a cumulatively considerable contribution to significant cumulative operational noises.

Given that noise dissipates as it travels away from its source, operational noise impacts from on-site activities and other stationary sources would be limited to the Project site and vicinity. Thus, cumulative operational noise impacts from related projects, in conjunction with Project specific noise impacts, would not be cumulatively significant.

Noise Modeling Data

FHWA Highway Noise Prediction Model (FHWA-RD-77-108) with California Vehicle Noise (CALVENO) Emission Levels

Project Name: Artesia Boulevard Specific Plan Amendment
Project Number: 194468001
Scenario: Existing
Ldn/CNEL: CNEL

Assumed 24-Hour Traffic Distribution:	Day	Evening	Night
Total ADT Volumes	77.70%	12.70%	9.60%
Medium-Duty Trucks	87.43%	5.05%	7.52%
Heavy-Duty Trucks	89.10%	2.84%	8.06%

								Vehicle Mix		Distance from Centerline of Roadway			
				Median	ADT	Speed	Alpha	Medium	Heavy	CNEL at	Distance to Contour			
#	Roadway	Segment	Lanes	Width	Volume	(mph)	Factor	Trucks	Trucks	100 Feet	70 CNEL	65 CNEL	60 CNEL	55 CNEL
1	Artesia Boulevard	West of Flallon Ave	4	12	16169	40	0	2.0%	1.0%	64.1	-	82	259	820
2		East of Flallon Ave	4	12	16295	40	0	2.0%	1.0%	64.2	-	83	261	826
3		West of Alburtis Ave	4	12	16295	40	0	2.0%	1.0%	64.2	-	83	261	826
4		East of Alburtis Ave	4	12	16543	40	0	2.0%	1.0%	64.2	-	84	265	839
5	Flallon Avenue	North of Artesia Blvd	2	0	420	30	0	3.0%	5.0%	50.3	-	-	-	34
6	Alburtis Avenue	North of Artesia Blvd	2	0	518	25	0	3.0%	5.0%	50.2	-	-	-	33

[1] Distance is from the centerline of the roadway segment to the receptor location.
"-" = contour is located within the roadway right-of-way.

FHWA Highway Noise Prediction Model (FHWA-RD-77-108) with California Vehicle Noise (CALVENO) Emission Levels

Project Name: Artesia Boulevard Specific Plan Amendment
Project Number: 194468001
Scenario: Existing Plus Project
Ldn/CNEL: CNEL

Assumed 24-Hour Traffic Distribution:	Day	Evening	Night
Total ADT Volumes	77.70%	12.70%	9.60%
Medium-Duty Trucks	87.43%	5.05%	7.52%
Heavy-Duty Trucks	89.10%	2.84%	8.06%

								Vehicle Mix		Distance from Centerline of Roadway			
				Median	ADT	Speed	Alpha	Medium	Heavy	CNEL at	Distance to Contour

ENGINEER'S STATEMENT:

THIS TENTATIVE MAP WAS PREPARED BY ME, OR UNDER MY DIRECTION ON APRIL 29, 2024.

RYAN J. BITTNER, R.C.E. 68167

LEGAL DESCRIPTION:

SEE SHEET 2

SITE ADDRESS:

11709 ARTESIA BOULEVARD
ARTESIA, CA 90701

VESTED OWNER:

ARTESIA & FLALLON, LLC, A DELAWARE LIMITED LIABILITY COMPANY

BASIS OF BEARINGS:

THE BEARINGS SHOWN HEREON ARE BASED ON THE BEARING NORTH 04°26'27" EAST BETWEEN CALIFORNIA SPATIAL REFERENCE CENTER, CSRS, CONTINUOUSLY OPERATING REFERENCE STATIONS, CORS, "LBC1" AND "DYH2".

DATUM STATEMENT:

ALL COORDINATES SHOWN HEREON ARE GRID VALUES BASED ON THE CALIFORNIA COORDINATE SYSTEM OF 1983, CCS83, ZONE V, NORTH AMERICAN DATUM OF 1983, 2010.00 EPOCH, NAD83(2011), IN ACCORDANCE WITH THE CALIFORNIA PUBLIC RESOURCES CODE SECTIONS 8801-8819. ALL DISTANCES SHOWN HEREON ARE GROUND VALUES UNLESS OTHERWISE NOTED. A GENERALIZED COMBINATION SCALE FACTOR OF 1.00004 WAS USED FOR THIS PROJECT AT NORTHING 1776744.575, EASTING 6536079.555. TO OBTAIN GRID DISTANCES, MULTIPLY GROUND DISTANCES BY THE COMBINATION SCALE FACTOR.

BENCHMARK STATEMENT:

LA COUNTY PUBLIC WORKS BENCHMARK NO. 2Y12313
ELEV: 59.203 (NAVD88)
DESCRIBED AS: L&DPW IN E CB 300MM(1') N/O BCR @ SE COR PIONEER BL & ARTESIA BL

FLOOD NOTE:

THE SUBJECT PROPERTY FALLS WITHIN ZONE X "SHADED" PER FEMA MAP NO. 06037C1980F, A PRINTED PANEL, EFFECTIVE 9/26/2008 (TABLE A-3).

BY: DAVID ACOSTA

TITLE INFORMATION:

THE FOLLOWING TITLE INFORMATION WAS DERIVED FROM A PRELIMINARY TITLE REPORT ISSUED BY CHICAGO TITLE COMPANY, ORDER NO.: 00195905-994-LT2-JC DATED JUNE 27, 2023 AT 7:30 A.M.

1. A RESERVATION CONTAINED IN THE DEED FROM THE STEARNS RANCHOS COMPANY, RECORDED IN BOOK 746 PAGE 10 OF DEEDS, AND FROM EFFIE M. PATTERSON AND J.W. PATTERSON, RECORDED IN BOOK 1776 PAGE 312, OF DEEDS, AS FOLLOWS: RESERVING THEREFROM ROADS, RAILROADS AND DITCHES, AS STRIP OF LAND 30 FEET WIDE ALONG, ADJOINING, AND EACH SIDE OF THE TOWNSHIP AND SECTION LINES ALSO RESERVING THE USE AND CONTROL OF CIENEGAS AND NATURAL STREAMS OF WATER, IF ANY, NATURALLY UPON, FLOWING ACROSS, INTO OR BY SAID GRANTED TRACT, AND RESERVING AN EASEMENT FOR IRRIGATION OR DRAINAGE DITCHES THROUGH SAID TRACT TO IRRIGATE OR DRAIN THE ADJACENT LAND. RECORDED ON JUNE 10, 1918 IN BOOK 6678 PAGE 217 OF DEEDS, APPEARS THE RECORD OF A QUITCLAIM DEED WHEREIN THE STEARNS RANCHOS COMPANY, A CORPORATION PURPORTS TO CONVEY TO THE COUNTY OF LOS ANGELES ALL INTEREST IN SAID RESERVATIONS.

2. A RESERVATION FOR INGRESS, EGRESS, ROAD, PUBLIC STREET AND PUBLIC UTILITIES PER DOCUMENTS RECORDED NOVEMBER 22, 1923 IN BOOK 2980 PAGE 8, OCTOBER 19, 1926 IN BOOK 6084 PAGE 285, FEBRUARY 11, 1928 IN BOOK 7087 PAGE 183, DECEMBER 5, 1930 IN BOOK 10442 PAGE 303, APRIL 11, 1947 IN BOOK 24467 PAGE 202, SEPTEMBER 3, 1952 IN BOOK 39759 PAGE 391, FEBRUARY 16, 1956 IN BOOK 50338 PAGE 66, APRIL 11, 1956 IN BOOK 50850 PAGE 101, APRIL 12, 1956 IN BOOK 50863 PAGE 100, JANUARY 18, 1957 IN BOOK 53404 PAGE 138, AND SEPTEMBER 17, 1958 IN BOOK D-217 PAGE 805, ALL OF OFFICIAL RECORDS.

3. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: IN FAVOR OF: GUARANTEE TITLE COMPANY OF LONG BEACH, A CORPORATION PURPOSE: ROAD; RECORDING DATE: APRIL 9, 1925; RECORDING NO: IN BOOK 3967 PAGE 62, OF OFFICIAL RECORDS

4. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS RESERVED IN A DOCUMENT; PURPOSE: INGRESS, EGRESS, ROAD, PUBLIC STREET AND PUBLIC UTILITIES RECORDED: JANUARY 14, 1947 IN BOOK 24030 PAGE 392, MAY 12, 1947 IN BOOK 24577 PAGE 170, NOVEMBER 25, 1952 IN BOOK 40376 PAGE 81, JANUARY 18, 1954 IN BOOK 43609 PAGE 144, MAY 25, 1955 IN BOOK 47874 PAGE 324, AND APRIL 5, 1957 IN BOOK 54131 PAGE 140, ALL OF OFFICIAL RECORDS.

5. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: IN FAVOR OF: SOUTHERN CALIFORNIA EDISON COMPANY AND ASSOCIATED TELEPHONE COMPANY, LTD; PURPOSE: POLE LINES; RECORDING NO: IN BOOK 35142 PAGE 255, OF OFFICIAL RECORDS.

6. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: IN FAVOR OF: SOUTHERN CALIFORNIA GAS COMPANY, A CORPORATION; PURPOSE: PIPE LINES; RECORDING DATE: JUNE 15, 1951; RECORDING NO: IN BOOK 36545 PAGE 341, OF OFFICIAL RECORDS

7. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: IN FAVOR OF: SOUTHERN CALIFORNIA GAS COMPANY, A CORPORATION; PURPOSE: PIPE LINES; RECORDING DATE: MARCH 28, 1952; RECORDING NO: IN BOOK 38583 PAGE 416, OF OFFICIAL RECORDS

8. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: IN FAVOR OF: SOUTHERN CALIFORNIA GAS COMPANY, A CORPORATION; PURPOSE: PIPE LINES; RECORDING DATE: APRIL 25, 1952; RECORDING NO: IN BOOK 38795 PAGE 235, OF OFFICIAL RECORDS

9. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: IN FAVOR OF: SOUTHERN CALIFORNIA GAS COMPANY; PURPOSE: PIPE LINES; RECORDING NO: IN BOOK 39159 PAGE 325, OF OFFICIAL RECORDS

10. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: IN FAVOR OF: SOUTHERN CALIFORNIA EDISON COMPANY, A CORPORATION; PURPOSE: POLES; RECORDING DATE: JUNE 17, 1952; RECORDING NO: IN BOOK 39183 PAGE 23, OF OFFICIAL RECORDS.

11. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: IN FAVOR OF: BUILDERS AND PROPERTY DEVELOPERS, INC. PURPOSE: PUBLIC UTILITY AND ROADS RECORDING NO: IN BOOK 39759 PAGE 391, OF OFFICIAL RECORDS AFFECTS: THE WESTERLY 25 FEET OF PARCEL 4 AS DESCRIBED IN THE DOCUMENT ATTACHED HERETO.

13. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT:IN FAVOR OF: PACIFIC WATER COMPANY, A CORPORATION; PURPOSE: PIPE LINES; RECORDING DATE: FEBRUARY 17, 1955; RECORDING NO: IN BOOK 46947 PAGE 362, OF OFFICIAL RECORDS

14. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: IN FAVOR OF: BUILDERS AND PROPERTY DEVELOPERS, INC., A CORPORATION PURPOSE: INGRESS, EGRESS AND ROADS; RECORDING DATE: FEBRUARY 16, 1956; RECORDING NO: IN BOOK 50338 PAGE 66, OF OFFICIAL RECORDS

15. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: IN FAVOR OF: BUILDERS AND PROPERTY DEVELOPERS, INC., A CORPORATION; PURPOSE: ROAD AND UTILITY; RECORDING DATE: MARCH 13, 1956; RECORDING NO: IN BOOK 50585 PAGE 322, OF OFFICIAL RECORDS

17. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: IN FAVOR OF: THE COUNTY OF LOS ANGELES OR THE CITY OF ARTESIA; PURPOSE: PUBLIC ROAD AND HIGHWAY; RECORDING DATE: MAY 18, 1959; RECORDING NOS: IN BOOK D-470 PAGE 681 AND IN BOOK D-470 PAGE 679, BOTH OF OFFICIAL RECORDS

18. AN EASEMENT OVER THE WESTERLY 25 FEET OF PARCEL 1 FOR PUBLIC ROAD AND HIGHWAY PURPOSES AS GRANTED TO THE CITY OF ARTESIA IN DEEDS RECORDED AUGUST 1, 1960 IN BOOK D-929 PAGE 156, OFFICIAL RECORDS, AND RECORDED AUGUST 9, 1960 IN BOOK D-938 PAGE 942, OFFICIAL RECORDS, AND RECORDED AUGUST 9, 1960 IN BOOK D-938 PAGE 940, OFFICIAL RECORDS AND RECORDED SEPTEMBER 8, 1960 IN BOOK D-970 PAGE 78, OFFICIAL RECORDS, AND RECORDED NOVEMBER 30, 1960 IN BOOK D-1050 PAGE 441, OFFICIAL RECORDS.

19. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: IN FAVOR OF: CITY OF ARTESIA; PURPOSE: PUBLIC ROAD AND HIGHWAY; RECORDING DATE: MARCH 6, 1964; RECORDING NO: IN BOOK D-2385 PAGE 867, OF OFFICIAL RECORDS

20 (SAME AS ITEM 1)

21 (SAME AS ITEM 5)

22. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: PURPOSE: PIPELINES; RECORDING DATE: JULY 11, 1952; RECORDING NO: 3260, IN BOOK 39363 PAGE 156, OF OFFICIAL RECORDS

23. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: PURPOSE: ROAD AND UTILITIES; RECORDING DATE: SEPTEMBER 11, 1950; RECORDING NO: 168, IN BOOK 34254 PAGE 206, OF OFFICIAL RECORDS

24. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: PURPOSE: INGRESS, EGRESS AND UTILITIES; RECORDING DATE: OCTOBER 27, 1953; RECORDING NO: 862, IN BOOK 43020 PAGE 79, OF OFFICIAL RECORDS

25. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: PURPOSE: INGRESS AND EGRESS TO BE USED IN COMMON WITH OTHERS, UTILITY AND ROAD PURPOSES RECORDING DATE: JULY 17, 1953; RECORDING NO: 565, IN BOOK 42234 PAGE 357, OF OFFICIAL RECORDS

26. EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO AS SET FORTH IN A DOCUMENT: PURPOSE: ROAD PURPOSES; RECORDING DATE: SEPTEMBER 18, 1969; RECORDING NO: 2729, OF OFFICIAL RECORDS

THE FOLLOWING TITLE ITEMS ARE OUTSIDE OF AREA. THESE ITEMS WERE PURPOSEFULLY INCLUDED AS PART OF A STREET SEARCH TO DETERMINE WHICH PORTIONS WEST OF THE CENTERLINE OF FLALLON AVENUE ARE DEDICATED AS PUBLIC ROAD TO CORROBORATE THE RIGHT OF WAY AS SHOWN ON ASSESSOR'S PARCEL MAP BOOK 7035, PAGE 16. THESE ITEMS ARE NOT INDIVIDUALLY PLOTTED, BUT ARE NOTED HEREON FOR REFERENCE:

30 EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT: GRANTED TO: CITY OF ARTESIA PURPOSE: PUBLIC ROAD AND HIGHWAY RECORDING DATE: AUGUST 1, 1960 RECORDING NO: 3511, OF OFFICIAL RECORDS

35 EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT: GRANTED TO: CITY OF ARTESIA; PURPOSE: PUBLIC ROAD AND HIGHWAY; RECORDING DATE: AUGUST 9, 1960; RECORDING NO: 3164, OF OFFICIAL RECORDS

36 EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT: GRANTED TO: CITY OF ARTESIA; PURPOSE: PUBLIC ROAD AND HIGHWAY; RECORDING DATE: AUGUST 9, 1960; RECORDING NO: 3165, OF OFFICIAL RECORDS

37 EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT: GRANTED TO: CITY OF ARTESIA; PURPOSE: PUBLIC ROAD AND HIGHWAY; RECORDING DATE: AUGUST 9, 1960; RECORDING NO: 3168, OF OFFICIAL RECORDS

38 EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT: GRANTED TO: CITY OF ARTESIA; PURPOSE: PUBLIC ROAD AND HIGHWAY; RECORDING DATE: AUGUST 9, 1960; RECORDING NO: 3169, OF OFFICIAL RECORDS.

39 EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT: GRANTED TO: CITY OF ARTESIA; PURPOSE: PUBLIC ROAD AND HIGHWAY; RECORDING DATE: AUGUST 9, 1960; RECORDING NO: 3170, OF OFFICIAL RECORDS

40 EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT: GRANTED TO: CITY OF ARTESIA; PURPOSE: PUBLIC ROAD AND HIGHWAY; RECORDING DATE: AUGUST 9, 1960; RECORDING NO: 3171, OF OFFICIAL RECORDS

41 EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT: GRANTED TO: CITY OF ARTESIA; PURPOSE: PUBLIC ROAD AND HIGHWAY; RECORDING DATE: OCTOBER 6, 1960; RECORDING NO: 3312, OF OFFICIAL RECORDS; AND RE-RECORDED: DECEMBER 2, 1960; RECORDING NO.: 3479, OF OFFICIAL RECORDS.

42 EASEMENT(S) FOR THE PURPOSE(S) SHOWN BELOW AND RIGHTS INCIDENTAL THERETO, AS GRANTED IN A DOCUMENT: GRANTED TO: CITY OF ARTESIA; PURPOSE: PUBLIC ROAD AND HIGHWAY; RECORDING DATE: OCTOBER 27, 2004; RECORDING NO: 04-2768371, OF OFFICIAL RECORDS

LEGAL DESCRIPTION

THE LAND REFERRED TO HEREIN BELOW IS SITUATED IN THE CITY OF ARTESIA, IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AND IS DESCRIBED AS FOLLOWS

PARCEL A:

PARCEL 1:

THAT PORTION OF THE SOUTHWEST QUARTER OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 25, TOWNSHIP 3 SOUTH, RANGE 12 WEST, IN THE RANCHO LOS COYOTES, IN THE CITY OF ARTESIA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS SHOWN UPON A MAP RECORDED IN BOOK 41819 PAGES 141 ET SEQ., OF OFFICIAL RECORDS IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY DESCRIBED AS FOLLOWS: BEGINNING AT A POINT IN THE NORTH LINE OF SAID SOUTHWEST QUARTER DISTANT THEREON NORTH 89° 33' 05" EAST 520 FEET FROM THE NORTHWEST CORNER OF SAID SOUTHWEST QUARTER; THENCE PARALLEL WITH THE WEST LINE OF SAID SOUTHWEST QUARTER SOUTH 0° 35' 20" EAST 51.67 FEET TO THE TRUE POINT OF BEGINNING; THENCE CONTINUING PARALLEL WITH SAID WEST LINE SOUTH 0° 35' 20" EAST 620 FEET, MORE OR LESS, TO THE SOUTH LINE OF SAID SECTION; THENCE ALONG SAID SOUTH LINE NORTH 89° 30' 00" EAST 141.43 FEET, MORE OR LESS, TO THE EAST LINE OF SAID SOUTHWEST QUARTER; THENCE ALONG SAID EAST LINE NORTH 0° 34' 10" WEST 619.90 FEET, MORE OR LESS, TO A LINE PARALLEL WITH SAID SOUTH LINE WHICH PASSES THROUGH THE TRUE POINT OF BEGINNING; THENCE ALONG SAID PARALLEL LINE SOUTH 89° 30' 00" WEST 141.69 FEET, MORE OF LESS, TO THE TRUE POINT OF BEGINNING.

EXCEPT THAT PORTION OF SAID LAND DESCRIBED AS FOLLOWS: BEGINNING AT THE NORTHWEST CORNER OF SAID LAND; THENCE ALONG THE WEST LINE THEREOF, SOUTH 0° 35' 20" EAST 50 FEET, MORE OR LESS, TO THE NORTHWEST CORNER OF THE LAND CONVEYED TO MIKE FEINSTEIN ET UX, BY DEED RECORDED ON APRIL 9, 1925 AS DOCUMENT NO. 1462 IN BOOK 3967 PAGE 62 OF SAID OFFICIAL RECORDS AND THE TRUE POINT OF BEGINNING; THENCE CONTINUING ALONG SAID WEST LINE, SOUTH 0° 35' 20" EAST 30 FEET TO THE SOUTHWEST CORNER OF SAID LAND OF FEINSTEIN; THENCE ALONG THE SOUTH LINE OF SAID LAST MENTIONED LAND, NORTH 89° 30' 00" EAST 141.66 FEET, MORE OF LESS, TO THE SOUTHEAST CORNER THEREOF AND BEING IN THE EAST LINE OF SAID SOUTHWEST QUARTER; THENCE ALONG SAID EAST LINE, NORTH 0° 34' 10" WEST 30 FEET TO THE NORTHEAST CORNER OF SAID LAND OF FEINSTEIN; THENCE ALONG THE NORTH LINE OF SAID LAST MENTIONED LAND, SOUTH 89° 30' 00" WEST 141.67 FEET, MORE OR LESS, TO THE TRUE POINT OF BEGINNING.

ALSO EXCEPT THAT PORTION OF SAID LAND DESCRIBED AS FOLLOWS: BEGINNING AT THE NORTHWEST CORNER OF SAID LAND; THENCE ALONG THE WEST LINE THEREOF, SOUTH 0° 35' 20" EAST 170 FEET, MORE OR LESS, TO THE SOUTHWEST CORNER OF THE LAND DESCRIBED IN THE DEED TO ROY MCARTHUR ET UX, RECORDED IN BOOK 6064 PAGE 285 OF SAID OFFICIAL RECORDS; THENCE CONTINUING ALONG SAID WEST LINE, SOUTH 0° 35' 20" EAST 45 FEET TO THE TRUE POINT OF BEGINNING; THENCE CONTINUING ALONG SAID WEST LINE, SOUTH 0° 35' 20" EAST 45 FEET, MORE OR LESS, TO THE NORTHWEST CORNER OF THE LAND CONVEYED TO ALEX GRAHAM ET UX, BY DEED RECORDED ON FEBRUARY 11, 1928 IN BOOK 7087 PAGE 183 OF OFFICIAL RECORDS; THENCE EASTERLY ALONG THE NORTH LINE OF SAID LAST MENTIONED LAND, A DISTANCE OF 141.60 FEET, MORE OR LESS, TO THE EAST LINE OF SAID SOUTHWEST QUARTER; THENCE ALONG SAID EAST LINE, NORTH 0° 34' 10" WEST 45 FEET, MORE OR LESS, TO A LINE PARALLEL WITH THE SOUTH LINE OF SAID SECTION WHICH PASSES THROUGH THE TRUE POINT OF BEGINNING; THENCE ALONG SAID PARALLEL LINE, SOUTH 89° 30' 00" WEST 141.62 FEET, MORE OR LESS, TO SAID TRUE POINT OF BEGINNING.

PARCEL 2:

THAT PORTION OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 25, TOWNSHIP 3 SOUTH, RANGE 12 WEST, IN THE RANCHO LOS COYOTES, IN THE CITY OF ARTESIA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS SHOWN UPON A MAP RECORDED IN BOOK 41819 PAGE 141 ET SEQ., OF OFFICIAL RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS: BEGINNING AT THE NORTHWEST CORNER OF SAID QUARTER QUARTER QUARTER; THENCE ALONG THE NORTH LINE THEREOF, NORTH 89° 33' 05" EAST 135 FEET; THENCE PARALLEL WITH THE WEST LINE THEREOF, SOUTH 0° 34' 10" EAST 671.39 FEET, MORE OR LESS, TO THE SOUTH LINE OF SAID SECTION 25; THENCE ALONG SAID SOUTH LINE. SOUTH 89° 30' 00" WEST 135 FEET TO THE SOUTHWEST CORNER OF SAID QUARTER QUARTER QUARTER; THENCE ALONG THE WEST LINE THEREOF, NORTH 0° 34' 10" WEST 671.53 FEET, MORE OR LESS, TO THE POINT OF BEGINNING.

PARCEL 3:

THAT PORTION OF THE SOUTHWEST QUARTER OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 25, TOWNSHIP 3 SOUTH, RANGE 12 WEST, IN THE RANCHO LOS COYOTES, IN THE CITY OF ARTESIA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS SHOWN UPON A MAP RECORDED IN BOOK 41819 PAGE 141 ET SEQ., OF OFFICIAL RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS:

BEGINNING AT THE INTERSECTION OF A LINE PARALLEL WITH AND 520 FEET EASTERLY FROM THE WESTERLY LINE OF SAID SOUTHEAST QUARTER OF THE NORTHEAST QUARTER OF SECTION 25, WITH A LINE PARALLEL WITH AND 540 FEET NORTHERLY FROM THE SOUTHERLY LINE OF SAID SECTION 25; THENCE NORTHERLY PARALLEL WITH THE SAID WESTERLY LINE, A DISTANCE OF 30 FEET; THENCE EASTERLY PARALLEL WITH THE SAID SOUTHERLY LINE, A DISTANCE OF 141.60 FEET, MORE OR LESS, TO THE EASTERLY LINE OF THE SAID SOUTHWEST QUARTER OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 25; THENCE SOUTHERLY ALONG SAID EASTERLY LINE, A DISTANCE OF 30 FEET TO A LINE PARALLEL WITH THE SAID SOUTHERLY LINE AND WHICH PASSES THROUGH THE POINT OF BEGINNING; THENCE WESTERLY ALONG SAID LAST MENTIONED PARALLEL LINE, A DISTANCE OF 141.58 FEET, MORE OR LESS, TO THE POINT OF BEGINNING.

PARCEL 4:

THAT PORTION OF THE SOUTHWEST QUARTER OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 25, TOWNSHIP 3 SOUTH, RANGE 12 WEST, IN THE RANCHO LOS COYOTES, IN THE CITY OF ARTESIA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS SHOWN UPON MAP MADE BY CHARLES T. HEALEY UPON SURVEY BY HIM ABOUT 1870 FOR THE STEARNS RANCHOS COMPANY, DESCRIBED AS FOLLOWS: BEGINNING AT A POINT IN THE NORTH LINE OF SAID SOUTHWEST QUARTER DISTANT THEREON NORTH 89° 33' 05" EAST 520 FEET FROM THE NORTHWEST CORNER OF SAID SOUTHWEST QUARTER; THENCE PARALLEL WITH THE WEST LINE OF SAID SOUTHWEST QUARTER SOUTH 0° 35' 20" EAST 51.67 FEET; THENCE PARALLEL WITH THE SOUTH LINE OF SAID SOUTHWEST QUARTER NORTH 89° 30' 00" EAST 141.69 FEET, MORE OR LESS, TO THE EAST LINE OF SAID SOUTHWEST QUARTER; THENCE ALONG SAID EAST LINE NORTH 0° 34' 10" WEST 51.53 FEET TO THE NORTHEAST CORNER OF SAID SOUTHWEST QUARTER; THENCE ALONG SAID NORTH LINE SOUTH 89° 33' 05" WEST 141.70 FEET, MORE OR LESS, TO THE POINT OF BEGINNING.

PARCEL 5:

A NON-EXCLUSIVE EASEMENT FOR ROAD PURPOSES OVER THE EASTERLY 50 FEET OF THE WESTERLY 545 FEET OF THE SOUTHWEST QUARTER OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 25, TOWNSHIP 3 SOUTH, RANGE 12 WEST, SAN BERNARDINO MERIDIAN, IN THE RANCHO LOS COYOTES, IN THE CITY OF ARTESIA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA.
EXCEPT THE SOUTHERLY 30 FEET THEREOF.

PARCEL 6:

THAT PORTION OF THE SOUTHWEST QUARTER OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 25, TOWNSHIP 3 SOUTH, RANGE 12 WEST, IN RANCHO LOS COYOTES, IN THE CITY OF ARTESIA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS PER MAP RECORDED IN BOOK 41819 PAGE 141 ET SEQ., OF OFFICIAL RECORDS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, DESCRIBED AS FOLLOWS: BEGINNING AT A POINT IN THE NORTH LINE OF SAID SOUTHWEST QUARTER DISTANT THEREON NORTH 89° 33' 05" EAST, 520.00 FEET FROM THE NORTHWEST CORNER OF SAID SOUTHWEST QUARTER; THENCE PARALLEL WITH THE WEST LINE OF SAID SOUTHWEST QUARTER, SOUTH 0° 35' 20" EAST, 266.67 FEET, MORE OR LESS, TO A POINT ON SAID PARALLEL LINE, DISTANT SOUTHERLY THEREON 45.00 FEET FROM THE SOUTHWEST CORNER OF THE LAND CONVEYED TO ROY MCARTHUR, ET UX., BY DEED RECORDED IN BOOK 6064 PAGE 285, OFFICIAL RECORDS OF SAID COUNTY, SAID POINT BEING THE TRUE POINT OF BEGINNING; THENCE CONTINUING SOUTHERLY ALONG SAID PARALLEL LINE, 45.00 FEET, MORE OR LESS, TO THE NORTHWEST CORNER OF THE LAND CONVEYED TO ALEX GRAHAM, ET UX., BY DEED RECORDED FEBRUARY 11, 1928 IN BOOK 7087 PAGE 183, OFFICIAL RECORDS OF SAID COUNTY; THENCE ALONG THE NORTH LINE OF SAID LAND, NORTH 89° 30' 00" EAST, 141.60 FEET, MORE OR LESS, TO THE EAST LINE OF SAID SOUTHWEST QUARTER; THENCE ALONG SAID EAST LINE, NORTH 0° 34' 10" WEST, 45.00 FEET, MORE OR LESS, TO A LINE PARALLEL WITH THE SOUTH LINE OF SAID SOUTHWEST QUARTER WHICH PASSES THROUGH THE TRUE POINT OF BEGINNING; THENCE ALONG SAID PARALLEL LINE, SOUTH 89° 30' 00" WEST, 141.62 FEET, MORE OR LESS, TO THE TRUE POINT OF BEGINNING.

PARCEL B:

PARCEL 1:

THAT PORTION OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 25, TOWNSHIP 3 SOUTH, RANGE 12 WEST, IN THE RANCHO LOS COYOTES, CITY OF ARTESIA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS SHOWN UPON A COPY OF MAP MADE BY CHARLES T. HEALEY, RECORDED IN BOOK 41819, PAGE 141 ET SEQ., OF OFFICIAL RECORDS, DESCRIBED AS FOLLOWS: BEGINNING AT A POINT IN THE NORTH LINE OF SAID QUARTER, DISTANT NORTH 89° 33' 05" EAST 135.00 FEET THEREON FROM THE NORTHWEST CORNER OF SAID QUARTER; THENCE PARALLEL WITH THE WEST LINE OF SAID QUARTER, SOUTH 0° 34' 10" EAST 111.39 FEET TO THE TRUE POINT OF BEGINNING; THENCE CONTINUING SOUTHERLY ALONG SAID PARALLEL LINE, 50.00 FEET; THENCE PARALLEL WITH THE SOUTH LINE OF SAID QUARTER, NORTH 89° 30' 00" EAST 128.00 FEET; THENCE PARALLEL WITH SAID WEST LINE, NORTH 0° 34' 10" WEST 50.00 FEET; THENCE PARALLEL WITH SAID SOUTH LINE, SOUTH 89° 30' 00" WEST 128.00 FEET TO THE TRUE POINT OF BEGINNING.

PARCEL 2:

A NON-EXCLUSIVE EASEMENT FOR ROAD PURPOSES OVER THE EASTERLY 40 FEET OF THE WESTERLY 155 FEET OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 25, TOWNSHIP 3 SOUTH, RANGE 12 WEST, IN THE RANCHO LOS COYOTES, CITY OF ARTESIA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, AS SHOWN UPON A COPY OF MAP MADE BY CHARLES T. HEALEY, RECORDED IN BOOK 41819, PAGE 141, ET SEQ., OF OFFICIAL RECORDS. EXCEPT THE SOUTHERLY 30 FEET.

PARCEL C:

THAT PORTION OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 25, TOWNSHIP 3 SOUTH, RANGE 12 WEST, SAN BERNARDINO MERIDIAN, IN THE RANCHO LOS COYOTES, CITY OF ARTESIA, COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:
BEGINNING AT A POINT IN THE NORTH LINE OF SAID QUARTER, DISTANT NORTH 89° 33' 05" EAST 135.00 FEET THEREON FROM THE NORTHWEST CORNER OF SAID QUARTER; THENCE PARALLEL WITH THE WEST LINE OF SAID QUARTER, SOUTH 0° 34' 10" EAST 61.39 FEET TO THE TRUE POINT OF BEGINNING; THENCE CONTINUING SOUTHERLY ALONG SAID PARALLEL LINE 50.00 FEET; THENCE PARALLEL WITH THE SOUTH LINE OF SAID QUARTER, NORTH 89° 30' 00" EAST 128.00 FEET, MORE OR LESS, TO THE SOUTHERLY PROLONGATION OF THE WESTERLY LINE OF THE LAND SECONDLY DESCRIBED IN THE DEED TO JOHN NICHOLS, ET UX., RECORDED JANUARY 25, 1926, AS INSTRUMENT NO. 925 IN BOOK 5538, PAGE 291, OF OFFICIAL RECORDS OF SAID COUNTY; THENCE ALONG SAID PROLONGATION AND WEST LINE NORTH 0° 34' 10" WEST 50.00 FEET; THENCE PARALLEL WITH THE SAID SOUTH LINE SOUTH 89° 30' 00" WEST 128.00 FEET, MORE OR LESS, TO THE TRUE POINT OF BEGINNING, TOGETHER WITH A NON-EXCLUSIVE EASEMENT FOR ROAD PURPOSES, OVER THE EASTERLY 40 FEET OF THE WESTERLY 155 FEET OF THE SOUTHEAST QUARTER OF THE SOUTHEAST QUARTER OF THE SOUTHEASTERLY QUARTER OF SECTION 25, TOWNSHIP 3 SOUTH RANGE 12 WEST, SAN BERNARDINO MERIDIAN, IN THE RANCHO LOS COYOTES.

PROJECT GENERAL NOTES:

1. THIS PROJECT DOES NOT HAVE ANY FUEL MODIFICATION OR WILD LAND EXPOSURES AND IS NOT IN A VERY HIGH FIRE HAZARD ZONE.

2. THIS PROJECT IS DESIGNED IN CONFORMANCE WITH THE CBC, 2022 EDITION.

3. ALL FIRE ACCESS ROADS SHALL BE ALL WEATHER, MEET THE CRITERIA OF AN ALL WEATHER DRIVING SURFACE AND COMPLY WITH LACoFD GUIDELINE FOR FIRE APPARATUS ROADS.

4. LARGEST BUILDING SQ. FOOTAGE = 15,105 SQ. FT.

5. BUILDINGS ARE DESIGNATED TYPE-VB.

6. BUILDING OCCUPANCIES ARE R2 & R3.

7. THE BUILDING HEIGHTS ARE APPROXIMATELY 37 FEET MAX OVERALL AND ±37'-10½" MAX TO FASCIA ABOVE FINISH GRADE.

8. R-2 BUILDINGS ON THE SITE WILL BE SPRINKLERED PER **NFPA 13. R-3** BUILDINGS ON THE SITE WILL BE SPRINKLERED PER **NFPA 13D.**

9. BUILDING ADDRESS NUMBER SHALL BE PROVIDED AND MAINTAINED SO AS TO BE PLAINLY VISIBLE AND LEGIBLE FROM THE STREET FRONTING THE PROPERTY. THE NUMBERS SHALL BE A MINIMUM 3 INCHES HIGH, 1 INCH WIDE WITH A 3/8 INCH STROKE. FOR BUILDINGS SET BACK MORE THAN 150 FEET FROM THE STREET, THE NUMBERS SHALL BE A MINIMUM 5 INCHES HIGH, 2 INCHES WIDE WITH A 1/2 INCH STROKE. FIRE CODE 908.4.4.

10. LA COUNTY FIRE DEPARTMENT ACCESS GATE NOTES: GATES SECURING THE FIRE APPARATUS ACCESS ROADS SHALL COMPLY WITH ALL OF THE FOLLOWING CRITERIA:
   1.1. WHERE A SINGLE GATE IS PROVIDED, THE GATE WIDTH SHALL NOT BE LESS THAN 20 FEET, EXCEPT ON A FIRE APPARATUS ROADWAY APPROVED TO BE A LESSER WIDTH, IN WHICH CASE THE GATE SHALL NOT RESTRICT THAT WIDTH. WHERE A FIRE APPARATUS ROAD CONSISTS OF A DIVIDED ROADWAY, THE GATE WIDTH SHALL NOT BE LESS THAN 13 FEET FOR RESIDENTIAL USE AND 20 FEET FOR COMMERCIAL/INDUSTRIAL USES.
   1.2. GATES SHALL BE OF THE SWINGING OR SLIDING TYPE.
   1.3. CONSTRUCTION OF GATES SHALL BE OF MATERIALS THAT ALLOW MANUAL OPERATION BY ONE PERSON.
   1.4. GATE COMPONENTS SHALL BE MAINTAINED IN AN OPERATIVE CONDITION AT ALL TIMES AND REPLACED OR REPAIRED WHEN DEFECTIVE.
   1.5. ELECTRIC GATES SHALL BE EQUIPPED WITH A MEANS OF OPENING THE GATE BY FIRE DEPARTMENT PERSONNEL FOR EMERGENCY ACCESS. EMERGENCY OPENING DEVICES SHALL BE APPROVED BY THE FIRE CODE OFFICIAL.
   1.6. METHODS OF LOCKING SHALL BE SUBMITTED FOR APPROVAL BY THE FIRE CODE OFFICIAL.
   1.7. ELECTRIC GATE OPERATORS, WHERE PROVIDED, SHALL BE LISTED IN ACCORDANCE WITH UL 325.
   1.8. GATES INTENDED FOR AUTOMATIC OPERATION SHALL BE DESIGNED, CONSTRUCTED, AND INSTALLED TO COMPLY WITH THE REQUIREMENTS OF ASTM F2200

11. THE REQUIRED FIRE FLOW FOR PUBLIC FIRE HYDRANTS AT THIS LOCATION IS 1625 GALLONS PER MINUTE, AT 20 PSI RESIDUAL PRESSURE, FOR A DURATION OF 2 HOURS OVER AND ABOVE MAXIMUM DAILY DOMESTIC DEMAND. FIRE CODE 507.3 & APPENDIX B

12. THE REQUIRED FIRE FLOW FOR ON-SITE FIRE HYDRANTS AT THIS LOCATION IS 1625 GPM AT 20 PSI RESIDUAL PRESSURE. FIRE CODE 903.2 AND FIRE DEPARTMENT REGULATION 8.

13. ALL FIRE HYDRANTS SHALL MEASURE 6"X4"X2-1/12", BRASS OR BRONZE, CONFORMING TO AMERICAN WATER WORKS ASSOCIATION STANDARD C503, OR APPROVED EQUAL, AND SHALL BE INSTALLED IN COMPLIANCE WITH FIRE DEPARTMENT REGULATION 8. FIRE CODE 903.2.1

14. ALL ON-SITE FIRE HYDRANTS SHALL BE INSTALLED, TESTED AND APPROVED PRIOR TO BUILDING OCCUPANCY. FIRE CODE 1001.4

15. THE INSPECTION, HYDROSTATIC TEST AND FLUSHING OF THE UNDERGROUND FIRE PROTECTION PIPING SHALL BE WITNESSED BY AN AUTHORIZED FIRE DEPARTMENT REPRESENTATIVE AND NO UNDERGROUND PIPING OR THRUST BLOCKS SHALL BE COVERED WITH EARTH OR HIDDEN FROM VIEW UNTIL THE FIRE DEPARTMENT REPRESENTATIVE HAS BEEN NOTIFIED AND GIVEN NOT LESS THAN 48 HOURS IN WHICH TO INSPECT SUCH INSTALLATIONS. FIRE CODE 1001.4

Transportation Assessment for the Artesia Place Project

Gibson transportation consulting, inc.

MEMORANDUM

TO: Kerrie Nicholson and Seth Wulkan, CAJA Environmental Services, LLC

FROM: Sarah Drobis, P.E., and Emily Wong, P.E.

DATE: July 23, 2024
Revised February 25, 2025

RE: Transportation Analysis for the
Artesia Place Project
Artesia, California **Ref:** J2124

This memorandum presents the transportation analysis for the Artesia Place Project (Project) in the City of Artesia, California (City). The Project's site plan and development program has been refined since the publication of *Artesia Place Project (Artesia Boulevard Corridor Specific Plan Amendment Case No. 2022-13) Public Review Partially Recirculated Draft Environmental Impact Report (SCH No. 2022080202)* (Kimley-Horn and Associates, Inc., September 2023) (PR DEIR).

PROJECT LOCATION

As detailed in Figure 1, the Project Site is comprised of an approximately 3.30-acre parcel (Assessor Parcel Number [APN] 7035-016-064) located at 11709 Artesia Boulevard (Site 1) and an approximately 0.21-acre parcel (APN 7035-020-056) located at 17212 Alburtis Avenue (Site 2). Site 1 is generally bounded by industrial/warehouse uses to the north, Alburtis Avenue to the east, Artesia Boulevard to the south, and Flallon Avenue to the west. Site 2 is generally bounded by automotive uses to the north, east, and south and Alburtis Avenue to the west. The Project Site is currently vacant.

Regional access to the Project Site is generally provided by State Route 91 and Interstate 605. Local access to the Project Site is provided via Artesia Boulevard, a four-lane divided arterial roadway, and Pioneer Boulevard, a four-lane arterial roadway.

PR DEIR OVERVIEW

The PR DEIR analyzed a proposed mixed-use development comprised of 80 dwelling units and approximately 11,257 square feet (sf) of commercial and office uses:

- Townhomes: 10 buildings with 59 three-story townhome units
- Mixed-Use Carriage Townhomes: One mixed-use building with approximately 3,450 sf of commercial uses on the ground level and four carriage-type townhome units above

- Shopkeeper Units: Two buildings with eight commercial condominiums totaling approximately 2,664 sf on the ground level and eight townhome units above
- Commercial: One building with approximately 2,700 sf of commercial uses
- Live/Work Townhomes: Two buildings with approximately 2,443 sf of office use and nine townhome units

Vehicular access to Site 1 would be provided via five full access driveways along Flallon Avenue and five full access driveways along Alburtis Avenue, and vehicular access to Site 2 would be provided via one full access driveway along Alburtis Avenue.

Under California State Senate Bill 743 (Steinberg, 2013), made effective in January 2014, the focus of transportation analysis under California Environmental Quality Act (CEQA) guidelines shifted from vehicular delay (level of service [LOS]) to vehicle miles traveled (VMT), in order to reduce greenhouse gas (GHG) emissions, create multimodal networks, and promote mixed-use developments. The potential CEQA transportation impacts were evaluated and detailed in *Artesia Place Project – Vehicle Miles Traveled Analysis* (Kimley-Horn and Associates, Inc., October 2022), which is contained in Appendix 4,10-2 of the PR DEIR. A supplemental non-CEQA analysis was also conducted to evaluate the Project's effect on local circulation and is detailed in *Local Transportation Assessment for the Proposed Artesia Place Project in the City of Artesia* (Kimley-Horn and Associates, Inc., October 2022) (Local Transportation Assessment) and included in Appendix 4.10-2 of the PR DEIR.

CEQA Analysis

The City has not developed or established a methodology or significance threshold concerning VMT. Therefore, the Project was compared to the following screening criteria from the Office of Planning and Research's *Technical Advisory on Evaluating Transportation Impacts in CEQA* (December 2018) (OPR Technical Advisory) and *Los Angeles County Public Works Transportation Impact Analyss Guidelines* (Los Angeles County Department of Public Works, July 2020) (County TIA Guidelines) to determine if a less than significant VMT impact may be presumed:

- Non-Retail Project Trip Generation Screening: Does the development project generate a net increase of 110 or more daily vehicle trips?

- Retail Project Site Plan Screening: Does the project contain retail uses that exceed 50,000 sf of gross floor area?

- Proximity to Transit Based Screening: Is the project located near a major transit stop or high-quality transit corridor? If yes, does the project:
    - have a floor area ratio less than 0.75?
    - provide more parking than required by City code?
    - have inconsistencies with the Southern California Association of Governments (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS)?
    - replace residential units set aside for lower income households with a smaller number of market-rate residential units?

- Residential Land Use Based Screening: Does the project have 100% of the units, excluding manager's units, set aside for lower income households?

As detailed in the PR DEIR, the Project's retail component was considered local-serving (i.e., less than 50,000 sf) and the office component would generate fewer than 110 net new daily vehicles trips. Therefore, both the retail and office components were screened out from further VMT analysis and considered to have a less than significant retail and work VMT impact.

Further VMT analysis was conducted for the residential component of the Project, as it was estimated to generate 539 net new daily trips, which would exceed the 110 daily trip screening criterion. The VMT analysis was conducted using the SCAG RTP/SCS 2016 Travel Demand Forecasting (TDF) model.

As detailed in the PR DEIR, the Project was estimated to generate 3,042 home-based VMT after accounting for the reduction in VMT related to the live/work and shopkeeper units proposed. Assuming a total population of 270 for the Project's 80 residential units, the Project was estimated to generate 11.3 residential VMT per capita. Thus, the Project's residential VMT impact would fall below the residential VMT impact threshold, which was assumed as 16.8% below the City's average residential VMT per capita, and would be considered less than significant. Therefore, no mitigation measures were required for the Project.

Non-CEQA Local Transportation Analysis

The Local Transportation Assessment was conducted in accordance with the County TIA Guidelines.

Based on published trip generation rates from *Trip Generation Manual, 11th Edition* (Institute of Transportation Engineers, 2021), the Project was estimated to generate 2,585 net new daily trips, including 224 morning peak hour trips (121 inbound, 104 outbound) and 137 afternoon peak hour trips (73 inbound, 64 outbound).

Potential Project-related deficiencies were evaluated using the *Highway Capacity Manual, 6th Edition* (Transportation Research Board, 2016) methodologies at the following study locations:

1. Roseton Avenue & Artesia Boulevard (signalized)
2. Flallon Avenue & Artesia Boulevard (unsignalized)
3. Alburtis Avenue & Artesia Boulevard (unsignalized)
4. Pioneer Boulevard & Artesia Boulevard (signalized)

The Local Transportation Assessment identified Project-related deficiencies at the unsignalized intersections of Flallon Avenue & Artesia Boulevard (Intersection #2) and Alburtis Avenue & Artesia Boulevard (Intersection #3). Further traffic signal warrant analyses concluded that signalization of neither intersection would be recommended. However, it was noted that the adjacent signalized intersections provide sufficient gaps in traffic on the major street (Artesia Boulevard) that would allow for opportunities for vehicles on the minor streets (Flallon Avenue and Alburtis Avenue) to safely make turns onto Artesia Boulevard.

REVISED PROJECT

Since the publication of the PR DEIR, the Project site plan and development program has been revised (Revised Project). The Revised Project proposes a residential development generally comprised of 120 townhome dwelling units, which includes 24 lower income affordable units and eight live/work units, within 22 three-story buildings. The Revised Project does not include any non-residential (i.e., commercial and office) uses, as previously proposed in the PR DEIR. The conceptual site plan of the Revised Project is provided in Figure 2.

Site Access and Circulation

As shown in Figure 2, parking for each townhome unit would be provided within individual ground-level garages. The individual garages of each townhome unit would be connected via internal drive aisles that would connect to five full access driveways located along Alburtis Avenue and five full access driveways located along Flallon Avenue.

The Revised Project would provide pedestrian-oriented accessible walkways through Site 1 and across the Site 2 street frontage. A central pedestrian walkway connects all of the buildings on Site 1 with landscaped common open space.

CEQA Analysis of Transportation Impacts

The Revised Project was evaluated for potential significant CEQA impacts consistent with the methodologies presented in the PR DEIR.

VMT Analysis. As detailed above, the Revised Project proposes a residential development and does not include any office or retail uses. The "work" component of the live-work units was considered ancillary to the residential units for the purposes of the VMT analysis. Thus, the Revised Project would have no work or retail VMT impacts.

Consistent with the recommended methodology of in the OPR Technical Advisory, the residential VMT of the Revised Project was evaluated using the latest SCAG RTP/SCS TDF model (2020 TDF Model), which considers updated demographic information and socioeconomic data. As previously detailed, the Revised Project's residential VMT was compared to a significance threshold of 15% below the City's average residential VMT per capita to identify potential residential VMT impacts, as recommended in the OPR Technical Advisory, which recommends a significance threshold of 15% below the existing residential VMT per capita for a region or city. The Revised Project's residential VMT was also compared to a significance threshold of 16.8% below the City's average residential VMT per capita, consistent with the methodology of the PR DEIR. As detailed below, the Revised Project's residential component would be similar to the PR DEIR and, therefore, would have similar VMT impacts.

The 2020 TDF Model outputs are detailed in *Artesia Place VMT Analysis* (Iteris, Inc., February 2025), which is provided in the Attachment. Consistent with the methodology utilized in the PR DEIR, the 2020 TDF Model was coded with the Revised Project in the Project Site's Tier 1 traffic analysis zone (TAZ) 21822100 to determine the total Project-related increase in home-based VMT and population assumptions to determine the Project's residential VMT per capita.

The City's average residential VMT per capita was also derived from the 2020 TDF Model to identify the residential VMT significance threshold. The outputs from the TDF model are summarized in Table 1.

As detailed in Table 1, the City's average residential VMT per capita is 15.18. Therefore, the residential VMT per capita significance threshold equal to 15% the City's average would be 12.9 and the significance threshold equal to 16.8% below the City's average would be 12.6.

Based on the 2020 TDF Model's population rate for the Project TAZ of 4.12 persons per household, the Revised Project is estimated to have a total population of 494 persons. The TDF model also estimates that the Revised Project would result in a Project-related increase of 7,565 home-based VMT in the Project TAZ. Therefore, the Project would generate an average residential VMT per capita of 15.3. As previously detailed, the Revised Project would include eight live-work units, which would reduce the total home-based VMT as it could be assumed that at least one resident per unit would also work in the unit. Based on the Project TAZ's average home-based work VMT of 24.8 per employee, the Project's live-work units would result in a reduction of 198 home-based work VMT. Thus, the residential VMT per capita would be reduced to 14.9, which would exceed both the significance thresholds of 12.9 and 12.6. Therefore, the VMT analysis considered the Revised Project design-related transportation demand management (TDM) strategies that would promote transit and alternative transportation, support use of alternative fuel vehicles, or encourage land use planning practices that reduce vehicle trips and VMT.

The TDM-related VMT reductions were calculated based on the combined effectiveness of each individual measure, as detailed in *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity – Designed for Local Governments, Communities, and Project Developers* (California Air Pollution Control Officers Association, December 2021) (CAPCOA Handbook). The effectiveness of each individual measure identified below was quantified based on the GHG/VMT reduction formulas detailed in the CAPCOA Handbook, which consider Project-specific inputs and constants, assumptions, and defaults from readily available data sources. The following design-related measures were applied to the Revised Project VMT analysis and, as detailed in the CAPCOA Handbook, are considered appropriate for use at the "Project/Site" geographic level to reduce VMT at the scale of a development project:

- Increase Residential Density – Increased residential densities affect the travel distance and provide greater options for modes of travel, and results in shorter and fewer single occupancy vehicle trips. As detailed in the CAPCOA Handbook, when reductions are calculated from a specific baseline derived from a travel demand forecasting model, the residential density of the relevant TAZ should be used instead of the value for a typical development. Based on a comparison of the Revised Project's residential density (dwelling units per acre) with the average residential density of a typical development in the Project TAZ (7.3 du / acre[1]), a VMT reduction of up to 30% could be applied. However, for the purpose of providing a conservative VMT analysis, a 6% VMT reduction was applied.

[1] The residential uses within the Project TAZ are typically designated as low-density residential. Thus, the Project's proposed residential density was compared to the development standards for low-density residential zones identified in *2021-2029 Housing Element Draft* (City of Artesia, 2021).

- Integrate Affordable and Below Market Rate Housing – Below market rate housing provides greater opportunity for lower income families to live closer to job centers. Based on the Revised Project's proposal to provide up to 24 affordable housing units, a 6% VMT reduction was applied.

- Limit Residential Parking Supply – Limiting the amount of parking availability creates parking scarcity and inconvenience to private automobile trips, thus disincentivizing driving as a travel mode and reducing VMT. Each unit would include a one or two-car garage at the ground level, which would provide a total of 242 on-site parking spaces. The proposed parking supply would fall below the City's baseline requirements (without any allowable parking reductions applied) for multi-family residential developments of similar density as the Revised Project per Section 9-2.1103(a)(2) of the City's Municipal Code. Therefore, based on the comparison of the Revised Project's proposed parking supply and the City's baseline parking requirements, a 4% VMT reduction was applied.

- Provide Bicycle Parking – Providing short-term and long-term bicycle parking facilities to satisfy maximum demand and that is accessible to all supports safe and comfortable bicycle travel at destinations. The Revised Project would provide seven bicycle parking spaces. Therefore, a 0.625% VMT reduction[2] was applied.

To ensure that the effectiveness of the TDM measures was not overstated and to be mindful of potential interactions among different measures, a multiplicative dampening formula[3] was applied. Thus, the combined effectiveness of the above measures would result in a 15.7% VMT reduction. As such, with consideration of the design-related TDM measures described above, the Revised Project would generate a residential VMT per capita of 12.6, which would fall below both the residential VMT significance threshold below 15% and 16.8% below the City's average. Therefore, the Revised Project would not result in a significant VMT impact, and no mitigation would be required.

Thus, the VMT impact conclusions would be consistent with the PR DEIR.

It should be noted that the Revised Project would also incorporate other design-related features that would further reduce VMT, including electric vehicle parking. However, to provide a more conservative analysis, these measures were not applied or quantified in the VMT analysis detailed above.

[2] The CAPCOA Handbook recognizes that providing bicycle parking may result in VMT reductions. The percent reduction for the Project's inclusion of bicycle parking is based on *Transportation Demand Management Strategies in LA VMT Calculator* (Los Angeles Department of Transportation, November 2019).

[3] The CAPCOA Handbook recommends that measure reductions within a subsector be multiplied using the following equation: Reduction = 1 – [(1-A) X (1-B) X (1-C)], where A, B. and C are the individual measure reduction percentages to be combined in each subsector. The maximum allowable reduction for each subsector is detailed on page 64 of the CAPCOA Handbook. When combining measures across subsectors, the CAPCOA Handbook adopts 70% as the maximum combined VMT reduction from the Land Use, Neighborhood Design, Parking or Road Pricing Management, and Transit subsectors.

In addition, the Los Angeles County Metropolitan Transportation Authority (Metro) is currently undergoing the environmental review process for the Southeast Gateway Line project, which proposes a new light rail transit line that would connect from the City of Los Angeles / Florence-Firestone unincorporated area of Los Angeles County to the Pioneer Station in the City, where the southern terminus would be located approximately one mile south of the Project Site.

The Southeast Gateway Line would provide connections to the Metro A and C Lines. The Metro Southeast Gateway Line is forecasted to open in Year 2035. Once operational, the Metro Southeast Gateway Line would provide alternatives to driving and create more access to opportunity in the Project area, further reducing residential VMT generated by the Revised Project.

Local Transportation Analysis

Consistent with the PR DEIR, the trip generation estimates for the Revised Project were calculated using published *Trip Generation, 11th Edition* rates for multi-family housing (low-rise) and small office building uses. As detailed in Table 2, the Revised Project is anticipated to generate 846 net new daily trips, including 52 morning peak hour trips (15 inbound, 37 outbound) and 67 afternoon peak hour trips (40 inbound, 27 outbound). Therefore, the Revised Project would generate fewer trips than the Project evaluated in the Local Transportation Assessment, including 1,739 fewer daily trips, 173 fewer morning peak hour trips, and 70 fewer afternoon peak hour trips.

Thus, the operational constraints related to the Revised Project would be less than the Project analyzed in the Local Transportation Assessment.

Project Residential VMT per Capita (Adjusted) with TDM Reduction	**12.6**
Significance Threshold - 15% Below City Average [d]	*12.9*
Significant Impact	**NO**
Significance Threshold - 16.8% Below City Average [d]	*12.6*
Significant Impact	**NO**

Notes

[a] The total population is based on an average of 4.12 residents per household for the Project Tier 1 TAZ.

[b] The total unadjusted home-based VMT is based on the Project-related increase in home-based VMT in the Project Tier 1 TAZ of the 2020 SCAG RTP/SCS travel demand model, as detailed in *Artesia Place VMT Analysis* (Iteris, Inc., June 2024), provided in the Attachment.

[c] It was conservatively assumed that only one resident per live-work unit would work in the live-work space. Thus, the VMT reduction accounts for a total eight employees who would have traveled an average of 24.8 miles, the average home-based work VMT for the Project Tier 1 TAZ.

[d] Consistent with the guidance in OPR's Technical Advisory, the siginificance threshold represents 15% below the City's average residential VMT per capita of 15.18.

[e] The TDM measures considered in the analysis include Project-level design features that promote transit and alternative transportation, support use of alternatively fueled vehicles, or encourage land use planning practices that reduce vehicle trips and VMT, as detailed in *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity - Designed for Local Governments, Communities, and Project Developers* (California Air Pollution Control Officers Association, December 2021) (CAPCOA Handbook). As detailed in the CAPCOA Handbook, the percent reduction in VMT would be the same as the percent reduction in GHG emissions.

[f] As detailed in Chapter 3 of the CAPCOA Handbook, residential VMT can be reduced by up to 30% by providing a higher density of dwelling units compared to the average residential density for a typical development in the US. However, as detailed in the CAPCOA Handbook, when reductions are being calculated from a specific baseline derived from a travel demand forecasting model, the residential density of the relevant TAZ should be used. The Project would provide residential density of 36 du per acre, as compared to the typical low-density residential standard in the Project TAZ of 7.3 du per acre, as detailed in the City's General Plan Housing Element. Thus, the Project would qualify for a VMT reduction of up to to 30%. However, a conservative reduction of 6% was applied to the Project analysis.

[g] As detailed in Chapter 3 of the CAPCOA Handbook, residential VMT can be reduced by up to 28.6% by integrating affordable housing and below market rate units. The Project would include up to 24 affordable housing units.

[h] As detailed in Chapter 3 of the CAPCOA Handbook, residential VMT can be reduced by up to 13.7% by limiting the amount of parking available at a residential project. The Project would provide a total of 242 parking spaces within a one- or two-car garage at the ground level of each residential unit.

[i] It is recognized in the CAPCOA Handbook that providing bicycle parking may achieve VMT reductions. Thus, for the purposes of this analysis, the percent reduction for the Project's inclusion of bicycle parking per City code is based on *Transportation Demand Management Strategies in LA VMT Calculator* (Los Angeles Department of Transportation, November 2019).

[j] The effectiveness levels of multiple TDM measures are multipled to determine a combined effectiveness level.

TECHNICAL MEMORANDUM

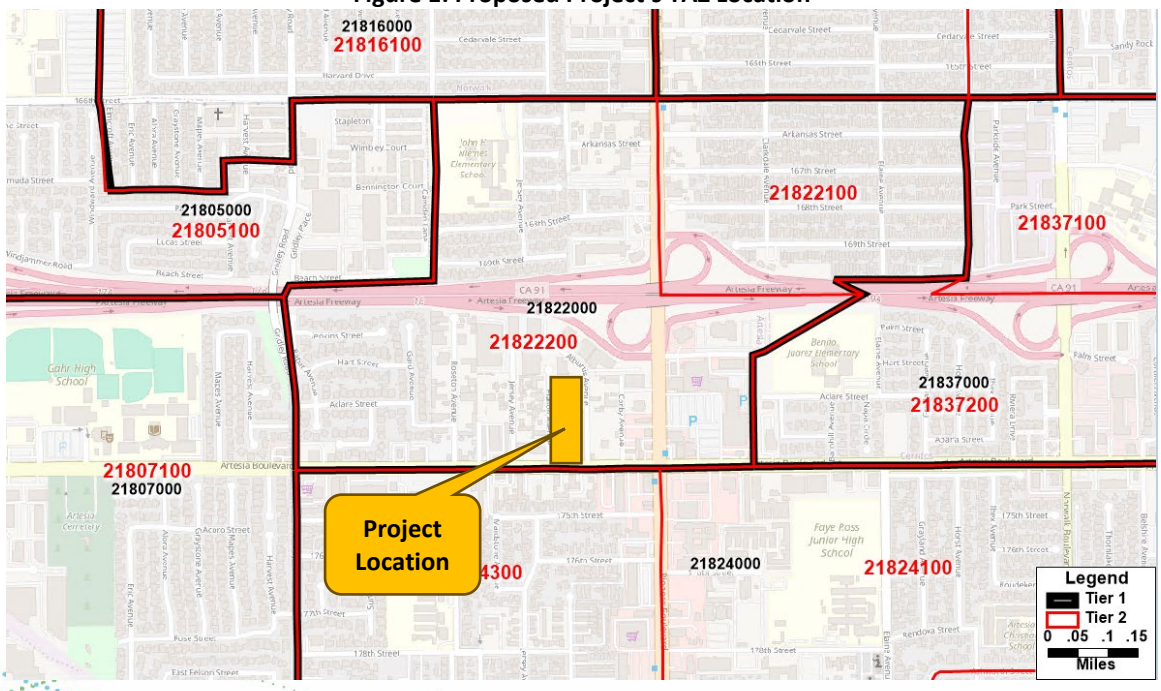
To:	Emily Wong Gibson Transportation Consulting	**From:**	Jennifer Emerson-Martin, PE Iteris, Inc. 1700 Carnegie Ave., Suite 100 Santa Ana, VA 92705
Date:	February 25, 2025		
RE:	Artesia Place VMT Analysis		

INTRODUCTION

This memorandum presents Iteris' transportation assessment of a residential development in the City of Artesia. The proposed project is located at 11709 Artesia Boulevard. The project site is bound by Artesia Boulevard on the south, Alburtis Avene on the east, and Fallon Avenue on the west. The project consists of 120 residential units, 8 of which are live-work units.

Figure 1 illustrates the location of the proposed project as part of the Southern California Association of Governments (SCAG) regional model. Within the model, the project is within Tier 1 Transportation Analysis Zone (TAZ) 21822000. The Tier 1 zone 21822000 is further disaggregated into two Tier 2 TAZs (21822100 and 21822200). The project is located in Tier 2 TAZ 21822200. As a note, this project is adjacent to the recently-analyzed Arkansas project, which is also located within the Tier 2 TAZ 21822200.

Figure 1: Proposed Project's TAZ Location



SENATE BILL 743 (SB 743)

At this point in time, the City has not yet adopted a methodology and significance threshold for use in CEQA compliance. Therefore, the VMT analysis for this Project was based on the Los Angeles County Transportation Impact Analysis Guidelines (TIA Guidelines) (July 23, 2020), which are based on the OPR Technical Advisory, and a recently conducted VMT analysis for a similar project, the Arkansas Project, in the City.

VMT SCREENING & SCREENING ANALYSIS

To identify when a project may be presumed to have a less than significant transportation impact concerning VMT without conducting a detailed study, the TIA Guidelines provide screening criteria for land development projects that meet one of the screening criteria below:

1. Non-Retail Project Trip Generation Screening: Does the development project generate a net increase of 110 or more daily vehicle trips?
   - The project consists of 120 residential units and generates 545 daily trips, which is more than the 100 daily trip screening criteria. **Therefore, the project does not screen out of a VMT analysis.**
2. Retail Project Site Plan Screening: Does the project contain retail uses that exceed 50,000 square feet of gross floor area?
   - The project does not contain a retail component, therefore this screening analysis does not apply.
3. Proximity to Transit Based Screening: Is the project located near a major transit stop or high-quality transit corridor? If yes, does the project:
   a. Have a floor area ratio less than 0.75;
   b. Provide more parking than required by the County Code;
   c. Have inconsistencies with the Southern California Association of Government (SCAG) Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS); and
   d. Replace residential units set aside for lower income households with a smaller number of market-rate residential units?
   - City of Cerritos, Orange County Transportation Authority (OCTA), Los Angeles County Metropolitan Transportation Authority (Metro), Norwalk Transit System, and Long Beach Transit are the transit providers serving the Project site. Bus stops located at Artesia Boulevard and Pioneer Boulevard serve the Project site with Metro Line 62 (from 4:20 AM to 11:00 PM) and Norwalk Transit Line 2 (from 6:00 AM to 7:33 PM). Both lines operate along Pioneer Boulevard within one-half mile of the Project site. These bus routes operate with headways varying from 1-hour to 1-hour 15-minute headways. Because these headways are not consistently 15 minutes or less during the peak commute periods, these routes do not meet the criteria to be considered a major transit stop or high-quality transit corridor. **Therefore, the Project does not screen out of a VMT analysis.**
4. Residential Land Use Based Screening: Does the project have 100 percent of the units, excluding manager's units, set aside for lower income households?
   - A land use project needs to meet only one of the above screening criteria to be presumed to have a less than significant impact on transportation and circulation, under CEQA and pursuant to SB 743. The Project would not be 100 percent affordable; therefore, that criteria is not further discussed. The remaining criteria are further discussed below.

In conclusion, a project only needs to meet one of the above screening thresholds to be presumed to result in not significant impact under CEQA pursuant to SB 743. In the case of the Artesia project, the

project does not meet screening criteria for non-retail project trip generation, and proximity to transit-based screening, **therefore, a VMT analysis was conducted for the project to further analyze the VMT impacts.**

VMT METHODOLOGY

The VMT analysis was conducted using the 2020 Southern California Association of Governments (SCAG) Regional Transportation Plan (RTP) for the base year of 2019 (the validated year in the model). The project development was coded into traffic analysis zone (TAZ) 21822200.

The City of Artesia residential VMT per Capita was calculated using the SCAG 2020 RTP/SCS travel demand model. As this is a residential-only project, the OD VMT methodology will be used, and the following VMT metrics were calculated:

- **Residential (Home-based) VMT per capita (automobile only):** All home-based auto vehicle trips are traced back to the residence of the trip-maker (non-home-based trips are excluded) and then divided by the population within the geographic area to get the efficiency metric of home-based VMT per capita (or per resident). The diagram below illustrates the home-based trips that are included in this VMT metric.

From the completed model run, Iteris calculated the total daily VMT statistics for the following geographies for each of the modeled scenarios:

- Project Zone VMT (Tier 1 Zone 21822000)
- Artesia Place (and Arkansas) Project Zone VMT (Tier 2 Zone 21822200)
- City-wide VMT (Artesia, CA)
- County of Los Angeles

Table 1 summarizes the demographics and VMT results for the No Project scenario. Table 2 summarizes the demographics and adjusted VMT results for the with project scenario. As mentioned in the introduction, there are 8 live-work units included in the project, therefore it is assumed that there will be a minimum of 8 home-based work trips which will be reduced.

Table 1: VMT Results (No Project)

Metric	No Project			
	County of LA	City of Artesia	Project Zone (Tier 1)	Artesia Place Project Zone (Tier 2)
Total Households	3,407,320	4,596	744	230
Total Population	10,329,190	16,954	3066	893
Household Size	3.03	3.69	4.12	3.88
Total Home-Based VMT	149,407,184	257,294	47,894	13,980
Total Home-Based VMT Per Capita	14.46	15.18	15.62	15.66
Total Home-Based-Work VMT	56,202,106	93,644	18,461	5,064
Total Home-Based-Work VMT Per Household	16.5	20.4	24.8	22.0

Table 2: VMT Results (With Project)

Metric	With Project			
	County of LA	City of Artesia	Project Zone (Tier 1)	Artesia Place Project Zone (Tier 2)
Added Households (Compared to No Build)	120	120	120	120
Total Households	3,407,440	4,716	864	350
Total Unadjusted Home-Based VMT	149,913,012	267,750	55,459	23,596
Total Unadjusted Home-Based Work VMT	56,560,527	100,365	22,025	9,372

Appendix F Signal Warrant Analysis Worksheets

LOCAL TRANSPORTATION ASSESSMENT
FOR THE PROPOSED ARTESIA PLACE PROJECT
IN THE CITY OF ARTESIA

EXECUTIVE SUMMARY

This Local Transportation Analysis (LTA) has been prepared to evaluate the traffic effects of the proposed Artesia Place Project (Artesia Boulevard Corridor Specific Plan Amendment) ("Project"). The Project site is located in the City of Artesia ("City") and consists of one approximately 3.3-acre parcel (Assessor Parcel Number [APN] 7035-016-064) located at 11709 Artesia Boulevard. The Project site is generally bound by roadways, with Artesia Boulevard on the south, Alburtis Avenue on the east, and Flallon Avenue on the west. The Project site is currently vacant. The Project proposes a mixed-use development comprised of 80 residential dwelling units (DUs), 4,407 Gross Square Feet (GSF) commercial, 4,407 GSF restaurant, and 2,443 GSF of live/work (office) uses. Construction is anticipated to occur in a single phase and fully-operational in 2025.

Vehicular access to the Project site would be provided at 9 locations: 4 full-access driveways and 1 full-access private street along Flallon Avenue, and 3 full-access driveways and 1 full-access private street along Alburtis Avenue. Consistent with the improvements proposed by Project, it is recommended that all 9 access locations are stop-controlled for the outbound approach. Other than these proposed stop controls, there are no further access recommendations. The Project would provide pedestrian-oriented accessible walkways to all of its uses. Sidewalks would be provided on all Project site frontages and boundaries.

The Project site is designated as Gateway Community Commercial and is zoned Artesia Boulevard Corridor Specific Plan. Hence, the Project requires a General Plan Amendment to permit integrated, mixed-use commercial and residential development to be considered and regulated with the adoption of specific plans and a Zoning Code Text Amendment (Artesia Boulevard Corridor Specific Plan Amendment) to allow the proposed mixed-use development with residential uses. The requested approvals also include a Design Review and Vesting Tentative Tact Map.

This LTA has been conducted in in accordance with the *Los Angeles County Public Works Transportation Impact Analysis Guidelines Plan*[1] (July 2020) (TIA Guidelines), and input from City staff during scoping of the Project's traffic analysis requirements.

The Project is expected to generate 74 PM commuter peak hour pass-by trips (37 inbound / 37 outbound). The Project is estimated to generate a net total of 2,585 daily trips, with 224 trips (121 inbound / 104 outbound) during the AM commuter peak hour and 137 trips (73 inbound / 64 outbound) during the PM commuter peak hour peak hour.

1 *Los Angeles County Public Works Transportation Impact Analysis Guidelines*, County of Los Angeles, July 2020.

The LTA will evaluate the intersection Level of Service (LOS) during the weekday AM and PM peak hours for the following conditions:

- Existing (2022) Conditions
- Existing (2022) Plus Project
- Opening Year (2025) Conditions
- Opening Year (2025) Plus Project

The traffic operation analysis shows that the Project would degrade the LOS operations at intersections of Flallon Avenue / Artesia Boulevard and Alburtis Avenue / Artesia Boulevard during the PM peak hours (LOS E for the stop-controlled, southbound approach) under Existing (2022) Plus Project Conditions and Opening Year (2025) Plus Project Conditions. These delays are related to outbound traffic making the southbound left-turn movement onto Artesia Boulevards since they are required to wait for "gaps" in traffic for both the eastbound and westbound approaches.

Traffic signal warrant analyses were conducted for the two deficient unsignalized intersections following the California Manual on Uniform Traffic Control Devices (CA MUTCD) guidelines. Neither intersection satisfies the signal warrants under the Opening Year (2025) Plus Project conditions. Therefore, it is not recommended to install traffic signal at either location.

LOCAL TRANSPORTATION ASSESSMENT
FOR THE PROPOSED ARTESIA PLACE PROJECT
IN THE CITY OF ARTESIA

INTRODUCTION

This Local Transportation Analysis (LTA) has been prepared to evaluate the traffic effects of the proposed Artesia Place Project (Artesia Boulevard Corridor Specific Plan Amendment) ("Project"). The Project site is located in the City of Artesia ("City") and consists of one approximately 3.3-acre parcel (Assessor Parcel Number [APN] 7035-016-064) located at 11709 Artesia Boulevard. The Project site is generally bound by roadways, with Artesia Boulevard on the south, Alburtis Avenue on the east, and Flallon Avenue on the west. **Figure 1** depicts the Project location in its regional setting.

The Project site is currently vacant. The Project proposes a mixed-use development comprised of residential, commercial, retail and live/work (office) uses; see **Table 1**.

Table 1 – Project Development Summary

Land Use	Residential (DU)	Non-residential (GSF)			
		Office	Restaurant	Retail	Total
Townhomes	59				
Mixed-Use Carriage Townhomes (Commercial ground floor)	4		1,725	1,725	*3,450*
Shopkeeper Units (Commercial Condominiums with Townhomes above)	8		1,332	1,332	*2,664*
Commercial			1,350	1,350	*2,700*
Live/Work Townhomes	9	2,443			*2,443*
Total	***80***	***2,443***	***4,407***	***4,407***	***11,257***
DU = dwelling unit; GSF = gross square feet					

Vehicular access to the Project site would be provided at 9 locations: 4 full-access driveways and 1 full-access private street along Flallon Avenue, and 3 full-access driveways and 1 full-access private street along Alburtis Avenue. No access to the Project site is proposed along Artesia Boulevard. Construction is anticipated to occur in a single phase and fully-operational in 2025. **Figure 2** shows the Conceptual Site Plan.

FIGURE 2 - Project Site Plan
Artesia Place Project

The Project site is designated as Gateway Community Commercial and is zoned Artesia Boulevard Corridor Specific Plan. Hence, the Project requires a General Plan Amendment to permit integrated, mixed-use commercial and residential development to be considered and regulated with the adoption of specific plans and a Zoning Code Text Amendment (Artesia Boulevard Corridor Specific Plan Amendment) to allow the proposed mixed-use development with residential uses. The requested approvals also include a Design Review and Vesting Tentative Tact Map.

LEVEL OF SERVICE METHODOLOGY

This LTA has been conducted in in accordance with the *Los Angeles County Public Works Transportation Impact Analysis Guidelines Plan*[2] (July 2020) (TIA Guidelines), and input from City staff during scoping of the Project's traffic analysis requirements. The study area and intersections were established in consultation with City staff through the Scoping Agreement process. A copy of the approved Scoping Agreement is provided in **Appendix A**.

Kimley-Horn will identify Project-related Level of Service (LOS) deficiencies based on criteria within the County's TIA Guidelines, and recommend improvements to alleviate deficiencies resulting from the Project, if necessary.

Analysis Scenarios

The Project will be evaluated for the following conditions:

- Existing (2022) Conditions
- Existing (2022) Plus Project
- Opening Year (2025) Conditions
- Opening Year (2025) Plus Project

Study Locations

The LOS analysis will be conducted at the following study intersections:

1. Roseton Avenue at Artesia Boulevard (Signalized)
2. Flallon Avenue at Artesia Boulevard (Unsignalized)
3. Alburtis Avenue at Artesia Boulevard (Unsignalized)
4. Pioneer Boulevard at Artesia Boulevard (Signalized)

It should be noted that the two signalized study area intersections (i.e., Roseton Avenue at Artesia Boulevard and Pioneer Boulevard at Artesia Boulevard) were evaluated as part of the *Artesia Boulevard Corridor Specific Plan*[3] and all study intersections are located within the City of Artesia's jurisdiction.

Analysis Methodology

Peak hour intersection operations at signalized and unsignalized intersections were evaluated using the *Highway Capacity Manual, 6th Edition* (HCM 6) methodology, consistent with City of Artesia and County of Los Angeles requirements. The TIA Guidelines require analysis of traffic operations to be based on the vehicular delay methodologies of the HCM (Transportation Research Board Special Report 209). The Project's intersection analysis has been accomplished using the Synchro 11 analysis

2 *Los Angeles County Public Works Transportation Impact Analysis Guidelines*, County of Los Angeles, July 2020.

3 *Artesia Boulevard Corridor Specific Plan*, City of Artesia, Adopted December 13, 2011.

software and using the specified input parameters outlined in the TIA Guidelines.

The HCM delay forecast translates to a LOS designation, ranging from LOS A to LOS F. A summary description of each LOS and the corresponding delay is provided in **Table 2**.

TABLE 2 - LEVEL OF SERVICE DESCRIPTIONS
HCM METHODOLOGY

LOS	Average Delay (sec / vehicle)		Description
	Signalized	Unsignalized	
A	< 10.0	< 10.0	LOS A represents free flow. Individual users are virtually unaffected by the presence of others in the traffic stream.
B	> 10.0 - 20.0	> 10.0 - 15.0	LOS B represents stable flow, but the presence of others in the traffic stream begins to be noticeable. Freedom to select desired speeds is relatively unaffected, but there is a slight decline in the freedom to maneuver.
C	> 20.0 - 35.0	> 15.0 - 25.0	LOS C is in the range of stable flow, but marks the beginning of operation in which individual users become affected by interaction with others in the traffic stream.
D	> 35.0 - 55.0	> 25.0 - 35.0	LOS D represents high-density, but stable flow. Speed and freedom to maneuver are restricted, and the driver experiences a generally poor level of comfort and convenience.
E	> 55.0 - 80.0	> 35.0 - 50.0	LOS E represents operating conditions at or near the capacity of the intersection. All speeds are reduced to a low, but relatively uniform level. Small increases in flow will cause breakdowns in traffic movement.
F	> 80.0	> 50.0	LOS F represents forced, or breakdown flow. This condition occurs when the amount of traffic approaching the intersection exceeds the volume which can pass through the intersection, resulting in queues and congestion.

For signalized intersections, the HCM methodology estimates the average delay (in average seconds per vehicle) for each of the movements through the intersection, taking into account a number of factors, including number of lanes, volume of traffic, cycle length, and signal timing and phasing. For unsignalized intersections, the HCM methodology analysis determines the average total delay for each vehicle making any movement from the stop-controlled minor street, as well as left turns from the major street. Delay values are calculated based on the relationship between traffic on the major street and the availability of acceptable gaps in the traffic stream through which conflicting traffic movements can be made. The delay and LOS reported is based on the worst movement with the highest delay.

The following assumptions were included in the analysis:

- Peak-hour factor (PHF) based on the existing traffic data was used for the Existing (2022) and Opening Year (2025) scenarios.

- Heavy Vehicle (HV) percentage assumed to be 2 percent, consistent with other traffic studies prepared in the area.

- Traffic signal timing at Roseton Avenue and Pioneer Boulevard was based on existing traffic signal timing plans provided by the City. Timing Plans are provided in **Appendix B**.

- Shared left/through/right-turn movements at Roseton Avenue, Flallon Avenue, and Alburtis Avenue were evaluated as a shared left-turn/through movement and separate right-turn pocket with 50-foot storage. This assumption is based on the wide approach lanes, red-curb painted on approach and the "sneak-by" loops existing at Roseton Avenue.

- 40 miles per hour (mph) speeds are assumed along Artesia Boulevard.

Performance Criteria

Criteria for LOS deficiencies are based on the policies adopted in the City of Artesia's General Plan[4], which states that LOS D or better is acceptable. A Project induced deficiency is assumed if the addition of Project traffic would cause a facility that is operating acceptably (LOS A, B, C, or D) to begin to operate unacceptably (LOS E or F). For facilities already operating unacceptably (LOS E or F) without project traffic, any added project traffic to the facility is considered a project deficiency and a fair-share calculation for cost of improvements is provided.

4 *Artesia General Plan Update*, City of Artesia, July 2010.

EXISTING (2022) CONDITIONS

Street System

Regional access to the Project site is provided by the San Gabriel River Freeway (I-605), located less than 0.50 mile west of the Project site, and the Artesia Freeway (SR-91), located less than 0.25 mile north of the Project site. The following describes the roadways providing access to the study area.

Artesia Boulevard is an east-west roadway that provides two vehicle travel lanes in each direction within the study area with a raised median separating traffic. The posted speed limit is 40 miles per hour (mph). A westbound bike lane is provided on the street's north side. On-street parking is prohibited on the street's north side (adjacent to the Project site) and generally permitted on the south side. The City of Artesia General Plan Circulation Element (Circulation Element) designates Artesia Boulevard as a Primary Arterial Highway.

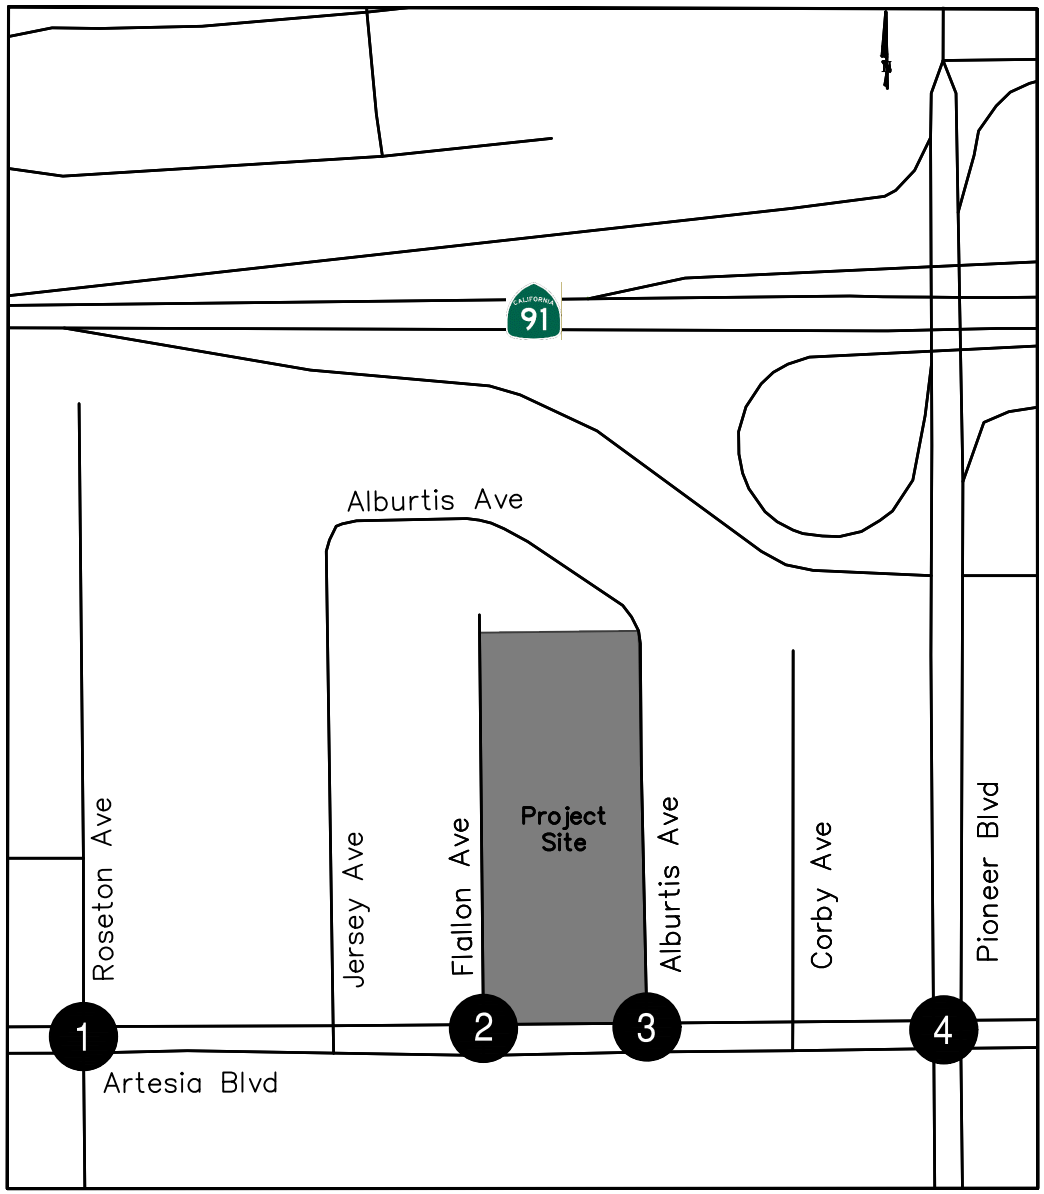
Roseton Avenue is a north-south roadway that provides one vehicle travel lane in each direction within the study area. The posted speed limit is 25 mph. On-street parking is generally permitted. The Circulation Element designates Roseton Avenue as a Local Street.

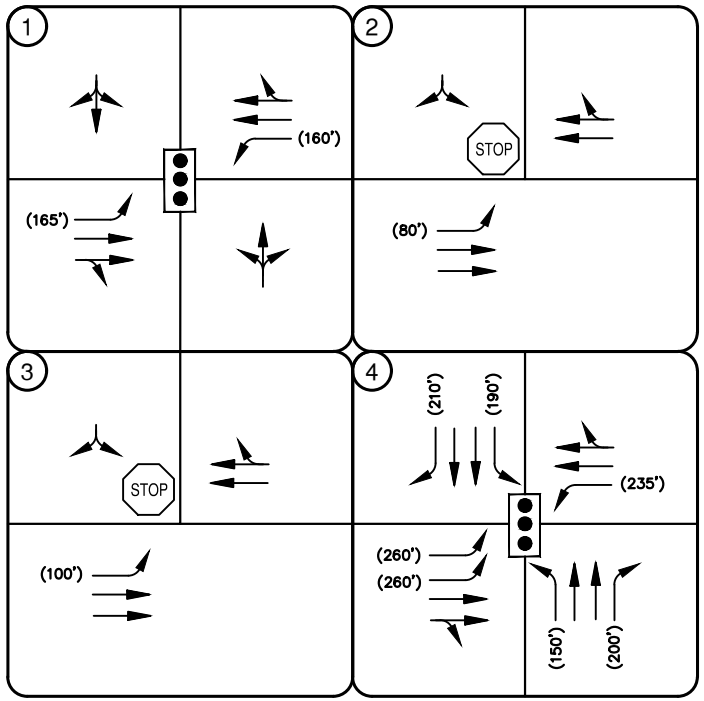
Flallon Avenue is a north-south roadway that provides one vehicle travel lane in each direction within the study area. There is no posted speed limit (25 mph is assumed). On-street parking is generally permitted. The Circulation Element designates Flallon Avenue as a Local Street.

Alburtis Avenue is a north-south roadway that provides one vehicle travel lane in each direction within the study area. There is no posted speed limit (25 mph is assumed). On-street parking is generally permitted. The Circulation Element designates Alburtis Avenue as a Local Street.

Pioneer Boulevard is a north-south roadway that provides two vehicle travel lanes in each direction within the study area with a raised median separating traffic. The posted speed limit is 35 mph. On-street parking is prohibited on both sides of the street. The Circulation Element designates Pioneer Boulevard as a Primary Arterial Highway.

The existing (as of June 2022) intersection lane configurations and traffic controls are illustrated in **Figure 3**.





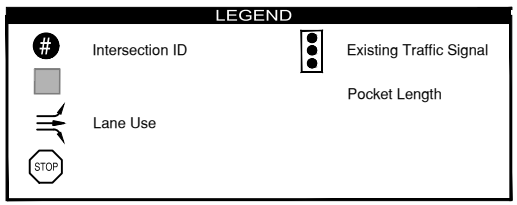


FIGURE 3: Existing Lane Configuration and Traffic Control

Artesia Place Project

\\kimley-horn.com\CA_ORA\ORA_PLAN\194468001 - Artesia Boulevard Corridor SP Amendment\6 CADD

Transit Service

Transit service to the study area is provided by the City of Cerritos, Orange County Transit Authority (OCTA), Los Angeles County Metropolitan Transportation Authority (Metro), and Long Beach Transit (LBT), which all serve the City of Artesia and surrounding area. The bus stops nearest the Project site are at the Pioneer Boulevard at Artesia Boulevard intersection. The bus routes serving the study area are described below.

City of Cerritos (Cerritos on Wheels) Route 1C (Cerritos to Artesia) operates between Cerritos College and Civic Center along Pioneer Boulevard, 183rd Street, Gridley Road, South Street, and Bloomfield Avenue. Route 1C operates Monday through Saturday from approximately 9:00 AM to 5:00 PM with approximately 1-hour headways.

OCTA Route 30 (Cerritos to Anaheim) operates between Los Cerritos Center and Anaheim along 183rd Street, Gridley Road, South Street, and Orangethorpe Avenue. Route 30 operates every day from approximately 7:00 AM to 7:45 PM with approximately 1-hour headways.

Metro Local Line 62 (Downtown Los Angeles to Hawaiian Gardens) operates between Downtown Los Angeles and Hawaiian Gardens along 6th Street, 7th Street, Olympic Boulevard, Telegraph Road, Norwalk Boulevard, Pioneer Boulevard, and Gridley Road. Route 62 operates on weekdays from approximately 4:15 AM to 11:00 PM with approximately 30-minute headways, and on weekends from approximately 4:30 AM to 11:00 PM with approximately 1-hour headways.

NTS Route 2 (Metro C [Green] Line Norwalk Station to Gridley to 183rd Street) operates in a loop between the Metro C Line Norwalk Station in Norwalk, south on Pioneer Boulevard to Artesia, west on 183rd Street, and back north to the Metro C Line Norwalk Station. Route 2 operates from 6:00 a.m. to 7:33 p.m. on weekdays with approximately 37-minute headways. Route 2 operates from 9:16 a.m. to 5:54 p.m. on weekends with approximately 1-hour 15 minute headways.

LBT Route 172 (Artesia to Long Beach) operates between Palo Verde Avenue and Downtown Long Beach along Long Beach Boulevard, Pacific Avenue, Pacific Coast Highway, Palo Verde Avenue, South Street, Studebaker Road, and 183rd Street. Route 172 operates weekdays from approximately 5:30 AM to 7:00 PM with approximately 30-minute headways. No bus service is provided on the weekends.

LBT Route 173 (Artesia to Long Beach) operates between Studebaker Road and Downtown Long Beach along 183rd Street, Gridley Road, Norwalk Boulevard, Carson Street, and Pacific Avenue. Route 173 operates weekdays from approximately 5:00 AM to 9:45 PM with approximately 30-minute headways, and on weekends from approximately 6:45 AM to 9:45 PM with approximately 1-hour headways.

LBT Route 192 (Artesia to Downtown Long Beach) operates between 183rd Street and Magnolia Avenue along 183rd Street, Gridley Road, South Street, Long Beach Boulevard, Santa Fe Avenue,

Anaheim Street, and Magnolia Avenue. Route 192 operates weekdays from approximately 5:00 AM to 10:00 PM with approximately 30-minute headways, and on weekends from approximately 5:30 AM to 9:00 PM with approximately 1-hour headways.

Traffic Volumes

On June 9, 2022, existing intersection turning movement volumes for the four study area intersections were collected during the typical 7-9 AM and 4-6 PM commuter peak periods. Additionally, 24-hour roadway directional volumes were collected at three locations along Artesia Boulevard and at one location along both Flallon Avenue and Alburtis Avenue in order to perform traffic signal warrant analyses for these unsignalized study intersections. Because the traffic volumes were collected when local schools were on summer break, a 10 percent growth factor was applied to existing traffic volumes collected. The adjusted existing peak hour turning movement volumes are shown in Figure 4. The raw traffic volume data sheets are provided in Appendix B.

Peak Hour Intersection Operations

Intersection LOS operations were evaluated at the study intersections under Existing (2022) Conditions using the analysis procedures and assumptions described above. Table 3 provides the results of the intersection analysis and indicates that all study intersections currently operate at LOS D or better during the AM and PM peak hours under Existing (2022) Conditions. Intersection analysis worksheets are provided in *Appendix C*.

FIGURE 4 Existing Intersection Traffic Volumes

TABLE 3
SUMMARY OF INTERSECTION OPERATIONS
EXISTING CONDITIONS

Int. #	Intersection	Traffic Control	AM Peak Hour		PM Peak Hour	
			Delay	LOS	Delay	LOS
1	Roseton Avenue at Artesia Boulevard	S	4.9	A	4.8	A
2	Flallon Avenue at Artesia Boulevard	U	15.4	C	19.8	C
3	Alburtis Avenue at Artesia Boulevard	U	17.3	C	26.2	D
4	Pioneer Boulevard at Artesia Boulevard	S	32.5	C	42.4	D

Notes:
- **Bold** values indicate intersections operating at an unacceptable Level of Service
- Delay values for unsignalized intersections represent the average vehicle delay on the worst (highest delay) intersection approach.

PROJECT TRAFFIC

Project Trip Generation

Trip generation estimates for the Project are based on the *Institute of Transportation Engineers Trip Generation Manual*, 11th Edition (ITE).[5] A trip is defined as a single, one-directional vehicle movement with either the origin or destination at the project site. In other words, a trip can be either "to" or "from" the site and therefore, a single visitor to a site is counted as two trips. Project trips are estimated for the total average daily, AM (7-9) and PM (4-6) commuter peak hours on a typical weekday. Project-generated trips were based on average rates for ITE Land Use 220 (Multifamily Housing – Low Rise) for the residential units, ITE Land Use 712 (Small Office Building) for the live/work townhomes SF proposed as office space, ITE Land Use 822 (Strip Retail Plaza - <40K) for the retail space, and ITE Lane Use 933 (Fast-Food Restaurant without Drive-Through) for the restaurant space.

Trip reductions were taken in account for internal capture and pass-by trips. With multi-use development, there is potential for interaction among onsite uses. These types of trips are considered internal to the site and are "captured" within the site. Typically, internal capture is derived by methodology and data within ITE *Trip Generation Handbook, 3rd Edition*. However, these percentages exceed the 5 percent maximum reduction that is accepted by Caltrans. Because SR-91 is just north of the study area (less than 0.25 mile north of the Project site), this analysis assumes an internal capture of 5 percent. Additionally, commercial uses such as ITE Land Uses 822 and 933 generate pass-by trips. These trips represent vehicles already on the road that stop as they pass by the site on their route to another destination. Pass-by trips would enter and exit the site at the Project driveways but are not new/added trips on the external street and roadway network. Pass-By trip reductions are based on available information from *ITE Trip Generation Manual, 11th Edition*.

The following is a summary of the pass-by reductions selected:

- Land Use 822
    - 0% AM / 29% PM reduction for Land Use 820 (Shopping Center > 150K)
    - 0% AM / 40% PM reduction for Land Use 821 (Shopping Plaza 40-150K)
- Land Use 933
    - 0% AM / 43% PM reduction for Land Use 932 (High-Turnover Sit-Down Restaurant)
    - 50% AM / 55% PM reduction for Land Use 934 (Fast-Food Restaurant with Drive-Through)

Based on the assessment of retail land uses, the 40% PM reduction was selected for the retail use (Land Use 822). This reduction is expected to be conservative since small shopping centers typically attract more pass-by trips than large centers. Based on the assessment of restaurant land uses, the 43% PM reduction was selected for the restaurant use (Land Use 933). This reduction was selected since it was the lower of the available rates and a more conservative assumption.

5 *Trip Generation Manual, 11th Edition*, Institute of Transportation Engineers, 2022.

Table 4 summarizes the Project's expected trip generation. **Appendix D** contains relevant ITE trip generation rate excerpts for trip rates, pass-by reductions, time of day distributions, and internal capture calculations. Based on these assumptions, 74 PM commuter peak hour pass-by trips (37 inbound / 37 outbound) are expected to be generated. The Project is estimated to generate a net total of 2,585 daily trips, with 224 trips (121 inbound / 104 outbound) during the AM commuter peak hour and 137 trips (73 inbound / 64 outbound) during the PM commuter peak hour peak hour.

Trip Distribution and Assignment

Project trip distribution assumptions were based on proximity to regional and local roadways and existing travel patterns. Trip distribution percentages at each study intersection were applied to Project trip generation to determine Project trips through each intersection. Project trip distribution and resulting peak hour trips to be added to the surrounding street system are shown on **Figure 5**.

TABLE 4
SUMMARY OF PROJECT TRIP GENERATION
Artesia Place Project

Land Use	ITE Code	Unit	Trip Generation Rates [1]						
			Daily	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
Multifamily Housing (Low-Rise)	220	DU	6.740	0.096	0.304	0.400	0.321	0.189	0.510
Small Office Building	712	KSF	14.390	1.369	0.301	1.670	0.734	1.426	2.160

Fast-Food Restaurant w/o Drive-thru	933	KSF	450.490	25.044	18.136	43.180	16.605	16.605	33.210

Land Use	Quantity	Unit	Trip Generation Estimates						
			Daily	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
Proposed Use									
Multifamily Housing (Low-Rise)	80.000	DU	539	8	24	32	26	15	41
Small Office Building	2.443	KSF	35	3	1	4	2	3	5
Strip Retail Plaza (<40k)	4.407	KSF	240	6	4	10	15	15	30
Pass-by Trips (0% AM, 40% PM) [1]			-12	0	0	0	-6	-6	-12
Fast-Food Restaurant w/o Drive-thru	4.407	KSF	1,985	110	80	190	73	73	146
Pass-by Trips (0% AM, 43% PM) [1]			-62	0	0	0	-31	-31	-62
Internal Capture (5%)			-140	-6	-5	-11	-6	-5	-11
Net Project Trips			**2,585**	**121**	**104**	**225**	**73**	**64**	**137**

[1] Source: Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition

[2] Note: The Trip Generation Manual does not provide pass-by rates for daily trip generation. The daily pass-by trips shown are the sum of the AM and the PM pass-by trips.

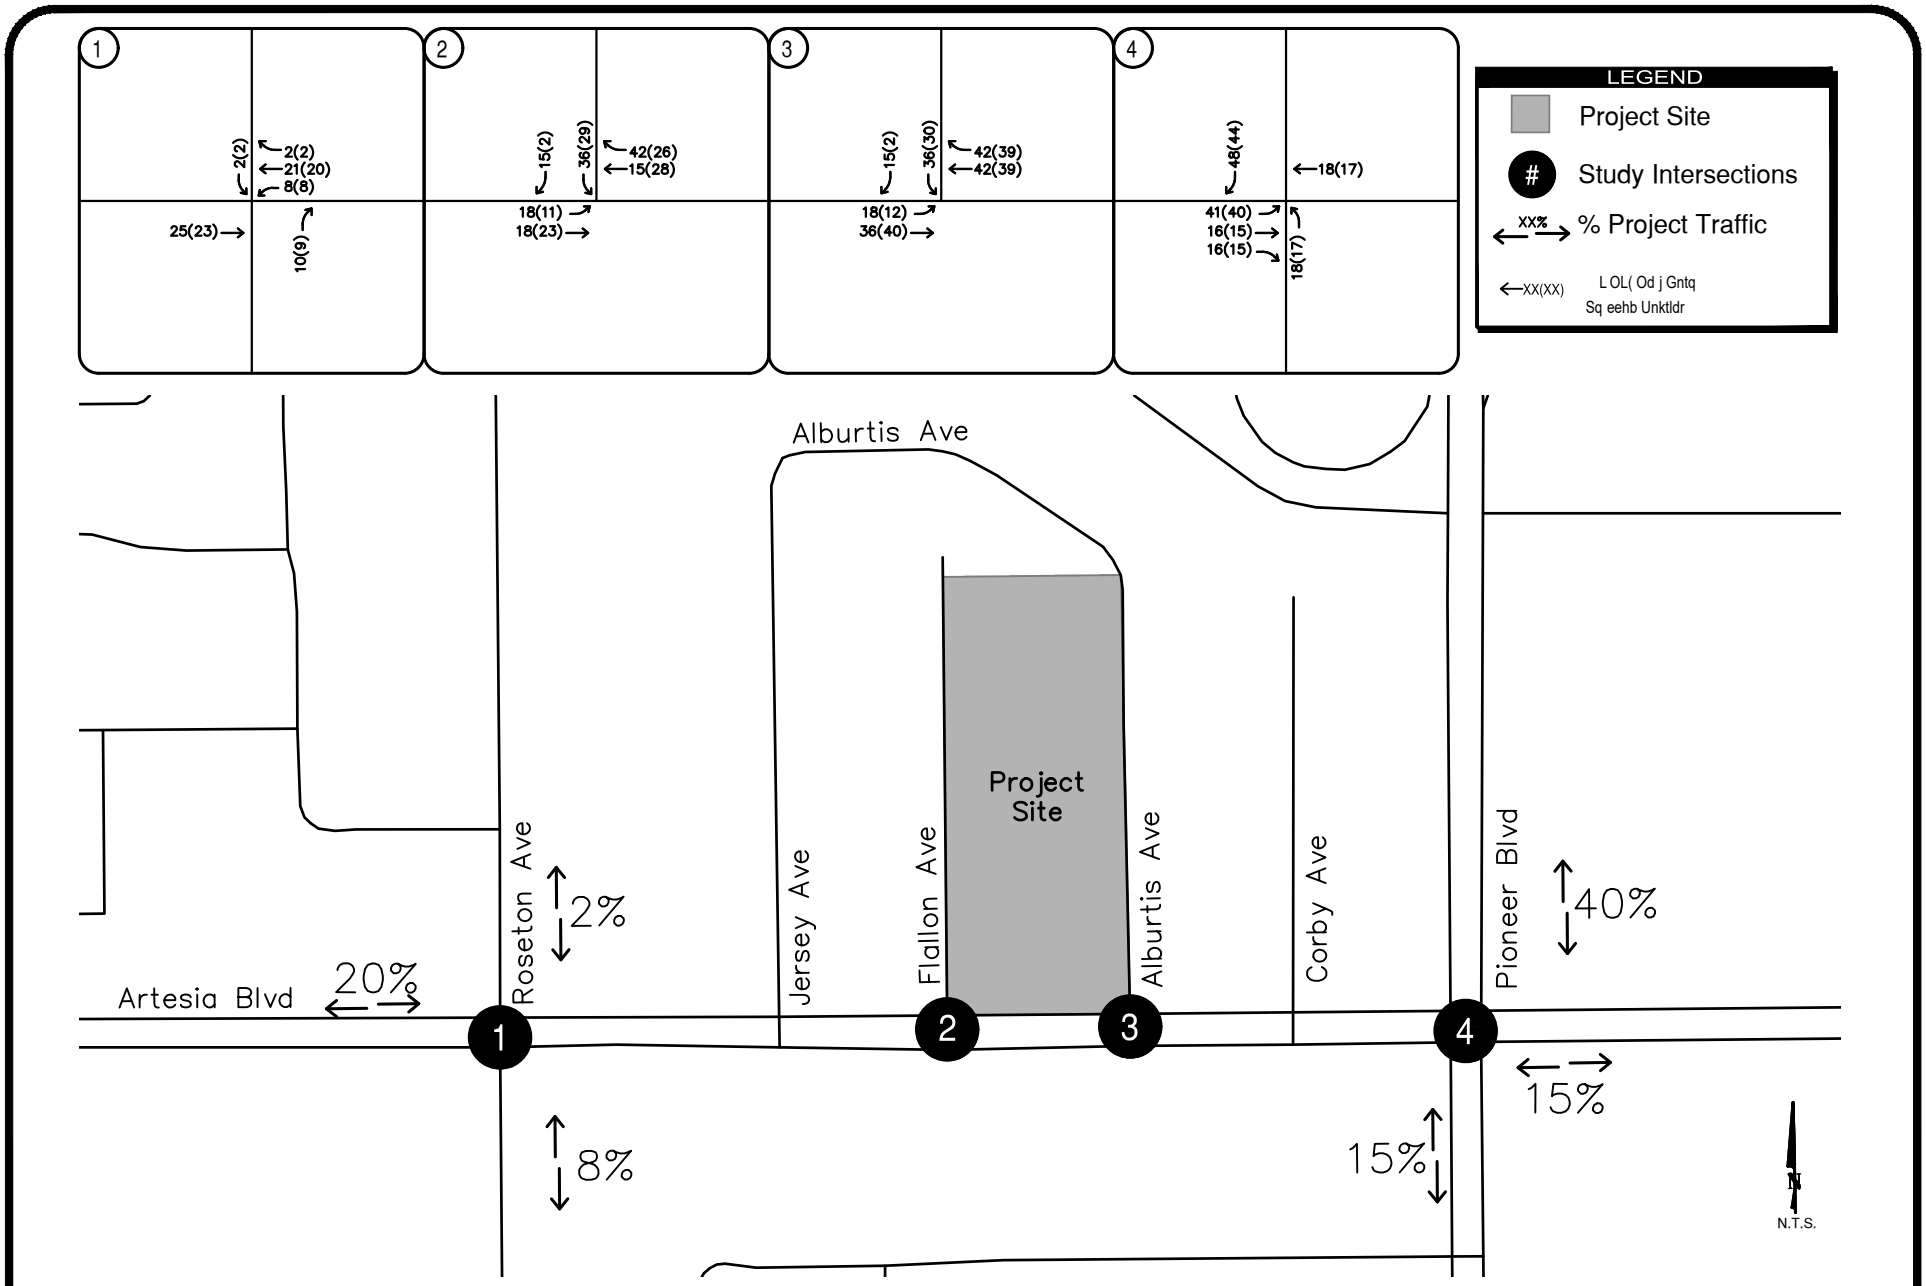

FIGURE 5 - Project Trip Distribution and Project-Related Intersection Traffic Volumes
Artesia Place Project

\\kimley-horn.com\CA_ORA\ORA_PLAN\194468001 - Artesia Boulevard Corridor SP Amendment\6 CADD

EXISTING (2022) PLUS PROJECT CONDITIONS

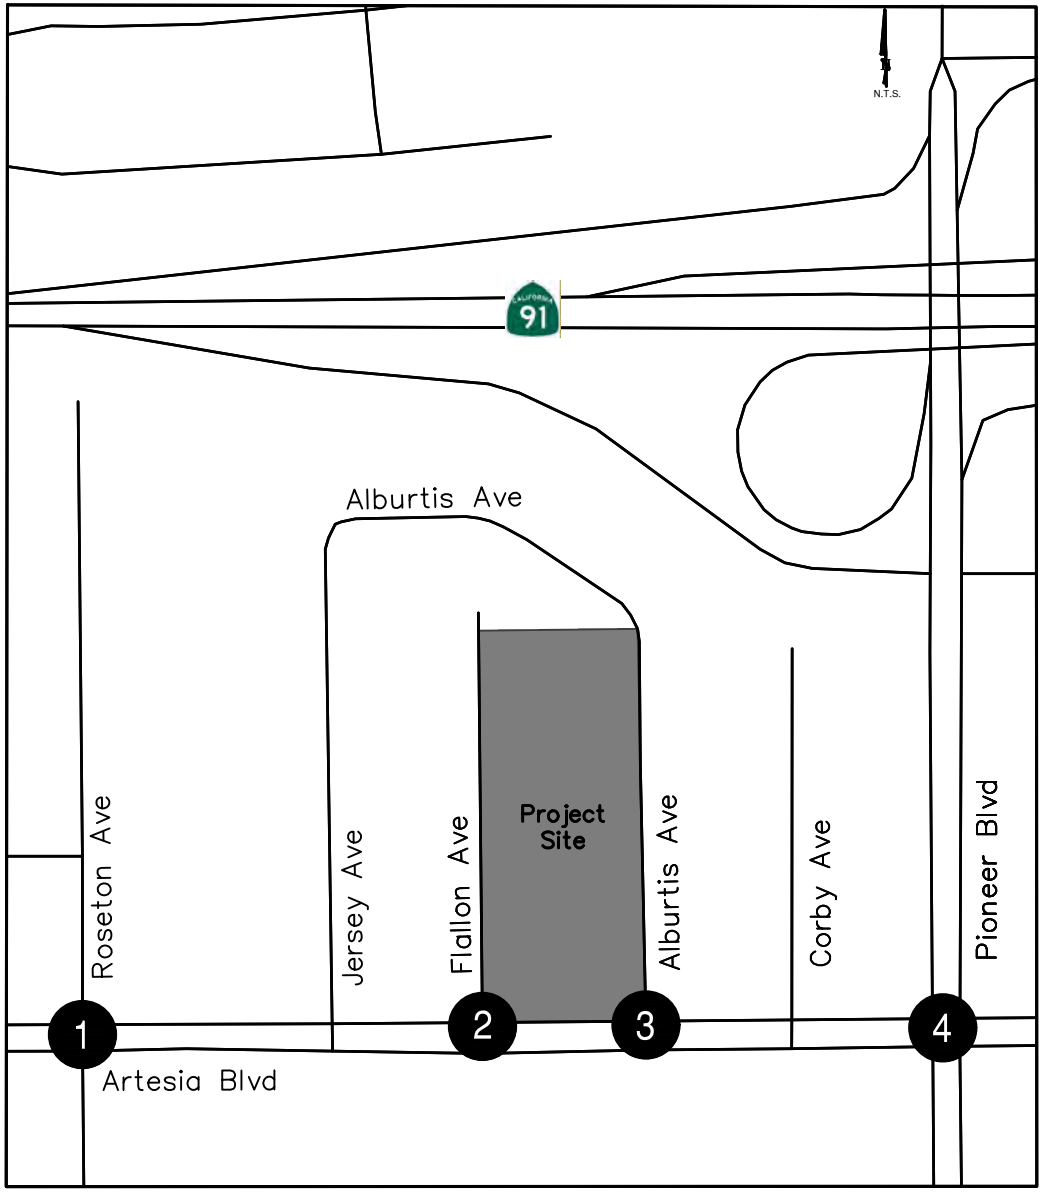
This section addresses the potential effects associated with adding Project-related trips to Existing (2022) Conditions traffic volumes. The Existing (2022) Plus Project Conditions scenario is a hypothetical scenario, which assumes that the Project would be fully implemented at the present time, with no other changes to area traffic volumes or to the street network serving the site. This analysis assumes Project development and full absorption of Project traffic on the circulation system at the present time. Because the Existing (2022) Plus Project Conditions scenario is only a hypothetical scenario, it is presented for informational purposes only, and is not used to assess Project effects or recommend improvements, if any.

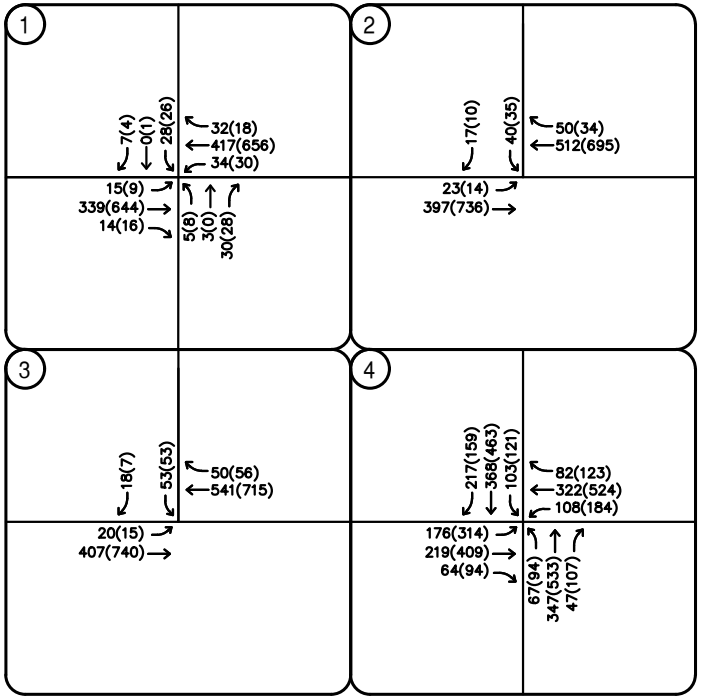
Peak Hour Intersection Operations

The peak hour traffic volumes under Existing (2022) Plus Project Conditions are shown on **Figure 6**. **Table 5** provides the results of the Existing (2022) Plus Project Conditions intersection analysis and indicates all study intersections would operate at an acceptable LOS (LOS D or better), except the following study intersections would operate at an unacceptable LOS (LOS E or worse) during the PM peak hour under Existing (2022) Plus Project Conditions:

- #2 – Flallon Avenue at Artesia Boulevard: PM – LOS E
- #3 – Alburtis Avenue at Artesia Boulevard: PM – LOS E

Traffic signal warrant analyses were conducted for the above mentioned deficient unsignalized intersections, as discussed in the *Traffic Signal Warrant Analysis* Section below. Intersection analysis worksheets are provided in ***Appendix C***.





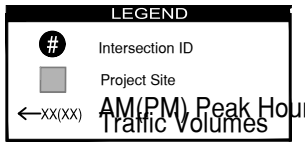


FIGURE 6 - Existing Plus Project Intersection Traffic Volumes
Artesia Place Project

Kimley»Horn

TABLE 5
SUMMARY OF INTERSECTION OPERATIONS
EXISTING PLUS PROJECT CONDITIONS

Int. #	Intersection	AM Peak Hour						PM Peak Hour					
		Without Project		With Project		Change Delay	Project-Related Effect?	Without Project		With Project		Change Delay	Project-Related Effect?
		Delay	LOS	Delay	LOS			Delay	LOS	Delay	LOS		
1	Roseton Avenue at Artesia Boulevard	4.9	A	5.6	A	0.7	No	4.8	A	5.6	A	0.8	No
2	Flallon Avenue at Artesia Boulevard	15.4	C	19.9	C	4.5	No	19.8	C	40.6	**E**	20.8	**Yes**
3	Alburtis Avenue at Artesia Boulevard	17.3	C	22.7	C	5.4	No	26.2	D	42.4	**E**	16.2	**Yes**
4	Pioneer Boulevard at Artesia Boulevard	32.5	C	33.9	C	1.4	No	42.4	D	44.6	D	2.2	No

Notes:
- **Bold** values indicate intersections operating at an unacceptable Level of Service
- Delay values for unsignalized intersections represent the average vehicle delay on the worst (highest delay) intersection approach.

OPENING YEAR (2025) CONDITIONS

Street System

For Opening Year (2025) Conditions, no changes or improvements to the roadway network were assumed. The intersection lane configurations and traffic controls shown in **Figure 3**, also apply to Opening Year (2025) Conditions assumptions.

Traffic Volumes

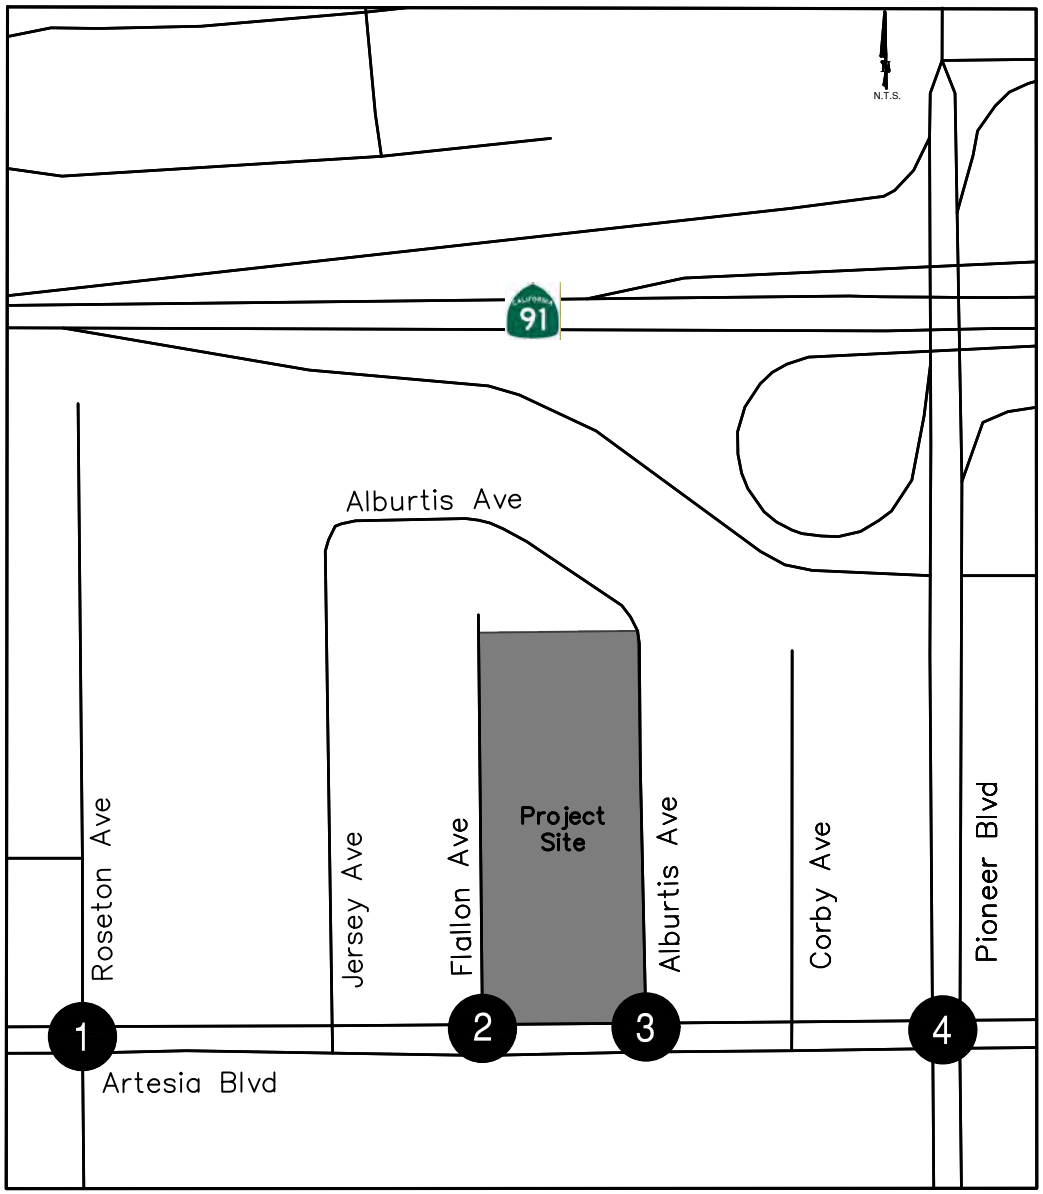
For Opening Year (2025) Conditions, an annual growth rate of 1% was applied to existing traffic volumes to account for background growth, consistent with other traffic studies performed within the City and Project vicinity. Additionally, information on cumulative projects being processed or constructed in the study area was obtained from City staff and assessed. Based on the locations and expected traffic generated within the study area by these projects, traffic volumes from the following projects were included in Opening Year (2025) Conditions:

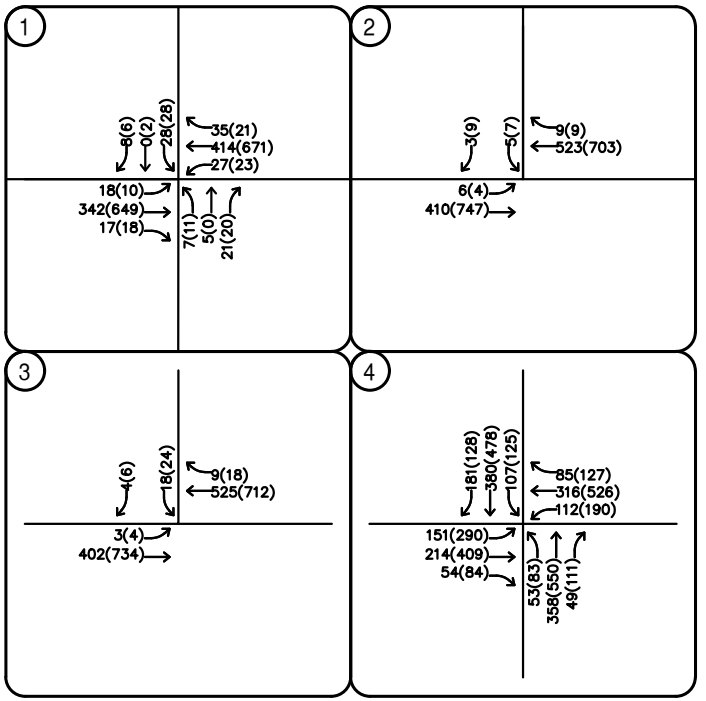
- 30-unit residential townhomes located at 11504 Artesia Boulevard
- 4,758 square foot office/warehouse building located at 17172 Roeston Avenue

The resulting Opening Year (2025) Conditions peak hour turning movement volumes are shown in **Figure 7**. Cumulative project information and assumed traffic volumes (trip generation / distribution) added to the roadway network are provided in **Appendix E.**

Peak Hour Intersection Operations

Intersection LOS operations were evaluated at the study intersections under Opening Year (2025) Conditions using the analysis procedures and assumptions described above. **Table 6** provides the results of the Opening Year (2025) Conditions intersection analysis and indicates that all study intersections would operate at an acceptable LOS (LOS D or better) during the AM and PM peak hours. Intersection analysis worksheets are provided in ***Appendix C***.





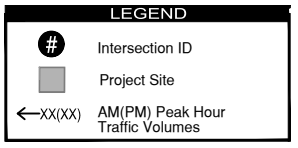


FIGURE 7 - Opening Year Intersection Traffic Volumes
Artesia Place Project

TABLE 6
SUMMARY OF INTERSECTION OPERATIONS
OPENING YEAR CONDITIONS

Int. #	Intersection	Traffic Control	AM Peak Hour		PM Peak Hour	
			Delay	LOS	Delay	LOS
1	Roseton Avenue at Artesia Boulevard	S	5.4	A	5.6	A
2	Flallon Avenue at Artesia Boulevard	U	16.0	C	21.7	C
3	Alburtis Avenue at Artesia Boulevard	U	18.1	C	28.5	D
4	Pioneer Boulevard at Artesia Boulevard	S	33.3	C	44.1	D

Note:
- **Bold** values indicate intersections operating at an unacceptable Level of Service
- Delay values for unsignalized intersections represent the average vehicle delay on the worst (highest delay) intersection approach.

OPENING YEAR (2025) PLUS PROJECT CONDITIONS

This section addresses the potential effects associated with adding Project-related trips to Opening Year (2025) Conditions traffic volumes.

Peak Hour Intersection Operations

Project-related trips were added to Opening Year (2025) Conditions traffic volumes to develop the volumes for the Opening Year (2025) Plus Project Conditions scenario. The resulting peak hour traffic volumes are shown on **Figure 8**. **Table 7** Provides the results of the Opening Year (2025) Plus Project Conditions intersection analysis and indicates all study intersections would operate at an acceptable LOS (LOS D), except the following study intersections would operate at an unacceptable LOS during the PM peak hour under Opening Year (2025) Plus Project Conditions:

- #2 – Flallon Avenue at Artesia Boulevard: PM – LOS E
- #3 – Alburtis Avenue at Artesia Boulevard: PM – LOS E

Traffic signal warrant analyses were conducted for the above mentioned deficient unsignalized intersections, as discussed in the *Traffic Signal Warrant Analysis* Section below. Intersection analysis worksheets are provided in ***Appendix C***.

Notes:
- **Bold** values indicate intersections operating at an unacceptable Level of Service
- Delay values for unsignalized intersections represent the average vehicle delay on the worst (highest delay) intersection approach.

ADDITIONAL ANALYSIS

Traffic Signal Warrant Analysis

Traffic signals may be justified when traffic operations fall below acceptable LOS standards and when one or more signal warrants are satisfied. Per the 2014 California Manual on Uniform Traffic Control Devices (CA MUTCD), expected traffic volumes for the Opening Year (2025) Plus Project conditions were evaluated for the following unsignalized intersections:

- #2 – Flallon Avenue at Artesia Boulevard: PM – LOS E
- #3 – Alburtis Avenue at Artesia Boulevard: PM – LOS E

The warrants were conducted by evaluating Warrant 1 (8-Hour Volume) and Warrant 2 (4-Hour Volume). Since the Project is not an unusual land use nor attracts/discharges large numbers of vehicles over a short time, Warrant 3 (Peak Hour Volume) does not apply. Given the proximity of the subject intersections from adjacent signalized intersections/pedestrian crossings, distance from nearest school, and lack of existing traffic and history of collisions, Warrants 4 through 8 were also not evaluated.

The future traffic volumes evaluate were developed existing 24-hour roadway counts, the Project's expected trip generation / distribution, and weighted average Time of Day (TOD) distribution based on ITE[6] information. The traffic signal warrant analysis worksheets and volume development calculations / assumptions are provided in ***Appendix F***. Based on CA MUTCD, for Warrants 1 and 2, neither intersection satisfies the signal warrants under the Opening Year (2025) Plus Project conditions. **Table 8** shows a summary of the traffic signal warrant evaluation for the two locations.

Parking Assessment

Onsite Parking. Pursuant to Artesia Municipal Code (AMC) §9-2.1103: Parking Spaces Required, the Project would require 214 vehicle parking spaces to meet the parking demand generated by the proposed land uses (see **Table 9**). The Project proposes 216 vehicle parking spaces, as follows: for the residential uses, two spaces per garage for a total of 160 spaces and 20 guest spaces; and 36 parking spaces for the commercial uses (i.e., the live-work/shopkeeper units and retail uses).

Offsite (On-street) Parking. The Project would also provide approximately 20 marked offsite on-street parallel parking spaces along Flallon Avenue and Alburtis Avenue. These offsite on-street spaces are not proposed to meet the Project's parking demand (as described above), but are proposed as a community benefit.

6 *Trip Generation Manual, 11th Edition*, Institute of Transportation Engineers, 2022.

TABLE 8
SIGNAL WARRANT SUMMARY
Artesia Place

1	NOT SATISFIED	NOT SATISFIED
2	NOT SATISFIED	NOT SATISFIED
3	N/A	N/A
4	N/A	N/A
5	N/A	N/A
6	N/A	N/A
7	N/A	N/A
8	N/A	N/A

Offsite (Vehicle Storage). The fully improved, existing 0.2-acre parking lot located at 17212 Alburtis Avenue would be made available to one of the eight proposed shopkeeper units for vehicle storage purposes. The Project does not propose to improve or modify this existing lot. The Specific Plan will detail the land uses permitted on this lot. Also, the spaces on this lot are not included in the Project's parking supply, as discussed above.

Rideshare Parking. An approximately three-space rideshare pickup/drop-off (e.g., Lyft or Uber) location is proposed at the Project site's southern portion, along Artesia Boulevard.

Bicycle Parking. The Project proposes 40 bicycle parking spaces.

Table 9 shows a breakdown of the parking spaces required and provided.

Site Access and Circulation

Vehicular access would be provided at 9 locations: 4 full-access driveways and 1 full-access private street along Flallon Avenue, and 3 full-access driveways and 1 full-access private street along Alburtis Avenue. No access to the site is proposed along Artesia Boulevard. The private streets are 20 feet wide, which has been approved by the Los Angeles County Fire Department. All nine access locations would be stop-controlled at outbound approach only. Parking for the residential units would be accessed directly via the four private alley driveways along Flallon Avenue and three private alley driveways along Alburtis Avenue. Parking for the commercial uses would be accessed via the two private streets along Flallon Avenue and Alburtis Avenue. Striped bulb-outs would be added to the driveways on Alburtis Avenue to facilitate line of sight for vehicles leaving the Project site.

The Project would provide pedestrian-oriented accessible walkways to all of its uses. A central pedestrian walkway is provided between the uses and also down the center of the Project site. The walkway leads through landscaped courtyards towards a recreational area and the pool. This pedestrian walkway, causing the private alleys terminate, thereby restricting traffic from "cutting-through" the Project site via the private alleys. The two private streets connect are separated by a drivable mountable raised "plaza". This feature is intended to enhance pedestrian safety, provide "traffic calming" and deter "cut-through" traffic. Sufficient space is provided on-site for vehicles to maneuver into and out of parking stalls and for the proposed internal circulation. Sidewalks would be provided on all Project site frontages and boundaries. The residential units that front the adjacent streets would include lockable gate access to the walkways that connect with the surrounding streets.

TABLE 9
Parking Summary
Artesia Place Project

Building / Use	Required Parking [1]	Proposed Parking
Residential (3-4 Bedroom = 76 DU; 2 Bedroom = 4 DU)		
Resident Spaces	158	160
Guest Spaces	26	20
Commercial (Total Retail SF = 8650 SF)	29	36
Total Parking Spaces	214	216

[1] Required Parking per G3Urban, Artesia Development, Conceptual Site Plan, dated July 18, 2022 (Figure 2) and based on City of Artesia Municipal Code, Section 9-2.1103

- Residential (3-4 Bedroom: 2 Parking Spaces / DU; 2 Bedroom: 1.5 Parking Spaces / DU; Guests: 0.33 Parking Spaces / DU)
- Commercial (1 Parking Space / 300 SF)

CONCLUSIONS AND RECOMMENDATIONS

Project Trip Generation

The Project is expected to generate 74 PM commuter peak hour pass-by trips (37 inbound / 37 outbound). The Project is estimated to generate a net total of 2,585 daily trips, with 224 trips (121 inbound / 104 outbound) during the AM commuter peak hour and 137 trips (73 inbound / 64 outbound) during the PM commuter peak hour peak hour.

Level Of Service Analysis Findings

The traffic operation analysis shows that the Project would degrade the LOS operations at intersections of Flallon Avenue / Artesia Boulevard and Alburtis Avenue / Artesia Boulevard during the PM peak hours (LOS E for the stop-controlled, southbound approach) under Existing (2022) Plus Project Conditions and Opening Year (2025) Plus Project Conditions. These delays are related to outbound traffic making the southbound left-turn movement onto Artesia Boulevards since they are required to wait for "gaps" in traffic for both the eastbound and westbound approaches.

Project Frontage and Access Recommendations

Vehicular access would be provided at 9 locations: 4 full-access driveways and 1 full-access private street along Flallon Avenue, and 3 full-access driveways and 1 full-access private street along Alburtis Avenue. All nine access locations would be stop-controlled at outbound approach only. Striped bulb-outs would be added to the driveways on Alburtis Avenue to facilitate line of sight for vehicles leaving the Project site. Consistent with the improvements proposed by Project, it is recommended that all 9 access locations are stop-controlled for the outbound approach. Other than these proposed stop controls, there are no further access recommendations.

The Project would provide pedestrian-oriented accessible walkways to all of its uses. Sidewalks would be provided on all Project site frontages and boundaries.

Offsite Recommendations

For the deficient intersections of Flallon Avenue / Artesia Boulevard and Alburtis Avenue / Artesia Boulevard, a traffic signal warrant analysis was conducted following CA MUTCD guidelines. Based on CA MUTCD, Warrants 1 and 2, neither intersection satisfies the signal warrants under the Opening Year (2025) Plus Project conditions. Therefore, it is not recommended to install traffic signal at either location.

The following are additional reasons supporting this recommendation:

- Both intersections are located within 700-feet of the adjacent signalized intersections. The Transportation Research Board (TRB)[7] recommends a minimum spacing of 0.25-mile (1,320-feet) between signalized intersection for general signal operations. Research indicates that when the spacing between signals falls below this threshold, the traffic flow along the route is more likely to be disrupted, traffic speeds/capacity decrease, and delays/queues generally increase for the network.
- The delay of the worst movement is only expected to be 46.4 (LOS E) at Flallon Avenue and 48.7 (LOS E) at Alburtis Avenue during the PM peak hour during Opening Year (2025) Plus Project Conditions, just above acceptable thresholds.
- The roadway volumes are generally low along Artesia Boulevard, allowing opportunities for vehicles to enter intersection, or "gaps" in traffic on the major street. SimTraffic Analysis indicates that sufficient "gaps" in traffic would regularly occur, allowing this movement to be made.
- The adjacent signalized intersections are expected to regulate the flow of traffic along Artesia Boulevard, providing larger "gaps" in traffic when the Artesia Boulevard approaches are stopped.
- SimTraffic queuing analysis indicates that the 95th percentile queue would be less than 50-feet during the PM peak hour, further indicating that turn maneuvers could be made.
- There are relatively low speeds along Artesia Boulevard due to the adjacent signalized intersections.
- Vehicles would have the ability to make a southbound right-turn, then make U-turns at the Roseton Avenue signalized intersection, in order to travel east of the site, if necessary.
- The intersections are expected to operate acceptably (LOS C) during the AM peak hour under Opening Year (2025) Plus Project Conditions.

Subject: Re: Artesia Boulevard Corridor Specific Plan Amendment - Intersections

Good morning,
To move the project forward, I recommend completing the warrant analysis for both "T" intersections and with capacity and delay impacts at the two signalized intersections based on the proposed development.
Let us know when we would expect the first draft of the study.
Thanks
Dbenash

TECHNICAL MEMORANDUM

To: Okina Dor, Community Development Manager, City of Artesia

From: Sowmya Chandrasekhar, PE, TE, PTOE, Transportation Manager
Rita Garcia, Project Manager

Copy: Mitch Gardner, G3 Urban

Date: July 15, 2022

Subject: Artesia Place Project (Artesia Boulevard Corridor Specific Plan Amendment)
Local Transportation Assessment – Scoping Agreement

INTRODUCTION

This document summarizes the scope of the Local Transportation Assessment (LTA) to be conducted by Kimley-Horn and Associates, Inc. ("Kimley-Horn") for the proposed Project.

PROJECT DESCRIPTION

The Project site consists of one approximately 3.3-acre parcel (APN 7035-016-064) located at 11709 Artesia Boulevard, in the City of Artesia (City). The Project site is generally bound by industrial uses to the north, Artesia Boulevard to the south, Alburtis Avenue to the east, and Flallon Avenue to the west.

The Project site is currently vacant. California Dairies, Inc., a dairy manufacturing plant previously occupied the Project site until it was demolished in 2022. The Project proposes a mixed-use development comprised of two portions- a commercial portion and a residential portion, connected by pedestrian walkways. The proposed development includes up to 8,650 square feet (SF) of commercial uses and 80 dwelling units (DU); **Attachment 1** illustrates the Conceptual Site Plan. The development would include the following components:

- One building with approximately 2,700 SF of commercial uses
- One mixed-use building with approximately 3,450 SF of commercial uses on the ground level with 4 carriage-type townhomes units above
- 8 shopkeeper units – commercial condominiums totaling 2,500 SF on the ground level with townhomes above
- 9 live/work townhome units
- 59 three-story townhome units

For the purpose of the LTA, it is anticipated that the 8,650 SF of commercial use would include 4,325 SF of retail and 4,325 SF of restaurant uses.

The Project proposes 216 vehicle parking spaces, as follows:

- Residential Uses, 180 parking spaces: two spaces per garage for a total of 160 spaces and 20 guest spaces.
- Commercial Uses, 36 parking spaces (i.e., for the livework/shopkeeper units and for the retail uses).

Additionally, 40 bicycle parking spaces are proposed.

The Project would also provide 20 offsite onstreet parking spaces (parallel) along Flallon Avenue and Alburtis Avenue. These offsite onstreet spaces are not proposed to meet the Project's parking demand, but are instead proposed as a community benefit.

Construction is anticipated to occur as three continuous phases, with the Project opening year in 2025, which is when the development would be fully operational.

The Project site is designated Gateway Community Commercial and is zoned Artesia Boulevard Corridor Specific Plan. Hence, the Project requires a Zoning Code Text Amendment (Artesia Boulevard Corridor Specific Plan Amendment) to allow the proposed mixed-use development with residential uses. The requested approvals also include a Design Review and Vesting Tentative Tact Map.

STUDY AREA

Based on review of the Project area, site, and access points, the following four study area intersections were identified for analysis of weekday peak-hour operations:

- Roseton Avenue and Artesia Boulevard – Signalized
- Pioneer Boulevard & Artesia Boulevard – Signalized
- Flallon Avenue & Artesia Boulevard – Unsignalized
- Alburtis Avenue & Artesia Boulevard – Unsignalized

It is noted that the two signalized intersections listed above were included as part of the Mobility and Circulation analysis for the Artesia Boulevard Corridor Specific Plan (2011). The two unsignalized intersections are minor road stop-controlled intersections. **Figure 1** illustrates the study area and Project site location in its regional setting. All study intersections are within the City of Artesia.

Peak periods (7 to 9 AM and 4 to 6 PM) turning movement counts were collected at the four study area intersections in June 2022. Twenty-four-hour bidirectional traffic volumes were also collected at each approach to the two unsignalized study intersections – at Flallon Avenue and Alburtis Avenue.

PROJECT TRAFFIC

TRIP GENERATION

Weekday daily, AM and PM peak hour trips were estimated for the Project using the trip generation rates from the Institute of Transportation Engineers (ITE) publication entitled *Trip Generation*, 11th Edition. The ITE Land Use Code, trip generation rates, and estimated trips that would be generated by the Project are presented in **Table 1** for the year 2025 Project trip generation when the site is fully operational. The AM and PM peak hours correspond to the peak hours of the adjacent street system.

Table 1: Total Project Trip Generation

ITE Code	Land Use	Size	Units	Daily Trips	AM Peak			PM Peak		
					Total	In	Out	Total	In	Out
Trip Generation Rates										
221	Multifamily Housing (Mid-Rise)	80	Dwelling Unit(s)	4.540	0.370	0.085	0.285	0.390	0.238	0.152

Source: 11th Edition ITE Trip Generation Manual.

TRIP REDUCTIONS

Since the Project would comprise a mix of multifamily housing, retail and restaurant, a trip reduction was applied to account for the internalization of trips between the Project's three land use components. Retail pass-by trip reductions was also applied to the net peak hour trip generation estimates for the proposed retail space. Pass-by trips are trips that would already be on the adjacent roadways (and so are already counted in the existing traffic) and will be shown (generally as negative) as turning into the site while passing-by. Pass-by trip reductions are typically applied to PM peak hour only.

NET PROJECT TRIPS

After applying the appropriate trip reductions to the ITE trip rates, the net Project trips are tabulated in **Table 2**.

Table 2: Net Project Trips

ITE Code	Land Use	Size	Units	Daily Trips	AM Peak			PM Peak		
					Total	In	Out	Total	In	Out
221	Multifamily Housing (Mid-Rise)	80	Dwelling Unit(s)	353	30	7	23	21	13	8
822	Strip Retail Plaza (<40k)	4.325	KSF	221	10	6	4	14	7	7
933	Fast-Food Restaurant w/o Drive-thru	4.325	KSF	1,900	186	108	78	96	48	48
Net Project Trips				**2,474**	**226**	**121**	**105**	**131**	**68**	**63**

TRIP DISTRIBUTION

Trip distribution assumptions for the Project trips were developed based on the existing roadway system and land uses in the Project vicinity. **Figure 2** shows the Project area, study intersections, and trip distribution estimates.

SIGNAL WARRANT ANALYSIS

The Project is proposed to have four driveways each along Flallon Avenue and Alburtis Avenue. Based on the Conceptual Site Plan and location of parking spaces, it is anticipated that Project trip distribution on Flallon Avenue and Alburtis Avenue would be nearly equal.

Flallon Avenue currently terminates approximately 675 feet north of its intersection with Artesia Boulevard. Alburtis Avenue loops north of Artesia Boulevard to intersect with Jersey Avenue, providing access to multiple industrial land uses. Based on 24-hour traffic counts collected on June 6, 2022, the daily traffic volumes on Flallon Avenue and Alburtis Avenue are 420 and 518, respectively. Based on City input,[1] signal warrant analysis will be conducted for the intersection of Alburtis Avenue and Artesia Boulevard.

[1] Discussed on July 12, 2022.

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

HCM 6th LOS	C

Notes

User approved pedestrian interval to be less than phase max green.

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

APPENDIX D

TRIP GENERATION EXERPTS

Land Use: 220
Multifamily Housing (Low-Rise)

Description

Low-rise multifamily housing includes apartments, townhouses, and condominiums located within the same building with at least three other dwelling units and that have two or three floors (levels). Various configurations fit this description, including walkup apartment, mansion apartment, and stacked townhouse.

- A walkup apartment typically is two or three floors in height with dwelling units that are accessed by a single or multiple entrances with stairways and hallways.

- A mansion apartment is a single structure that contains several apartments within what appears to be a single-family dwelling unit.

- A fourplex is a single two-story structure with two matching dwelling units on the ground and second floors. Access to the individual units is typically internal to the structure and provided through a central entry and stairway.

- A stacked townhouse is designed to match the external appearance of a townhouse. But, unlike a townhouse dwelling unit that only shares walls with an adjoining unit, the stacked townhouse units share both floors and walls. Access to the individual units is typically internal to the structure and provided through a central entry and stairway.

Multifamily housing (mid-rise) (Land Use 221), multifamily housing (high-rise) (Land Use 222), affordable housing (Land Use 223), and off-campus student apartment (low-rise) (Land Use 225) are related land uses.

Land Use Subcategory

Data are presented for two subcategories for this land use: (1) not close to rail transit and (2) close to rail transit. A site is considered close to rail transit if the walking distance between the residential site entrance and the closest rail transit station entrance is ½ mile or less.

Additional Data

For the three sites for which both the number of residents and the number of occupied dwelling units were available, there were an average of 2.72 residents per occupied dwelling unit.

For the two sites for which the numbers of both total dwelling units and occupied dwelling units were available, an average of 96.2 percent of the total dwelling units were occupied.

The technical appendices provide supporting information on time-of-day distributions for this land use. The appendices can be accessed through either the ITETripGen web app or the trip

generation resource page on the ITE website (https://www.ite.org/technical-resources/topics/trip-and-parking-generation/).

For the three sites for which data were provided for both occupied dwelling units and residents, there was an average of 2.72 residents per occupied dwelling unit.

It is expected that the number of bedrooms and number of residents are likely correlated to the trips generated by a residential site. To assist in future analysis, trip generation studies of all multifamily housing should attempt to obtain information on occupancy rate and on the mix of residential unit sizes (i.e., number of units by number of bedrooms at the site complex).

The sites were surveyed in the 1980s, the 1990s, the 2000s, the 2010s, and the 2020s in British Columbia (CAN), California, Delaware, Florida, Georgia, Illinois, Indiana, Maine, Maryland, Massachusetts, Minnesota, New Jersey, Ontario (CAN), Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Utah, and Washington.

Land Use: 712
Small Office Building

Description

A small office building is the same as a general office building (Land Use 710) but with less than or equal to 10,000 square feet of gross floor area. The building typically houses a single tenant. It is a location where affairs of a business, commercial or industrial organization, or professional person or firm are conducted. General office building (Land Use 710) is a related use.

Additional Data

Attorney office, mortgage company, financial advisor, insurance agency, home health care provider, and real estate company are examples of tenants included in the small office building database. The diversity of employer types results in a wide range in employee density in the database. Densities range from a high of 1,300 to a low of 240 square feet per employee with an overall average of nearly 600 square feet per employee (a value much larger than the average observed in a general office building study sites).

In addition to the significant difference in employee density, small office buildings tend to be dominated by a single tenant (or very few) that are more service-oriented than a typical general office building. The result is more frequent and regular visitors and higher trip generation rates.

The technical appendices provide supporting information on time-of-day distributions for this land use. The appendices can be accessed through either the ITETripGen web app or the trip generation resource page on the ITE website (https://www.ite.org/technical-resources/topics/trip-and-parking-generation/).

The sites were surveyed in the 1980s and the 2010s in Alberta (CAN), California, Texas, and Wisconsin.

Land Use: 822
Strip Retail Plaza (<40k)

Description

A strip retail plaza is an integrated group of commercial establishments that is planned, developed, owned, and managed as a unit. Each study site in this land use has less than 40,000 square feet of gross leasable area (GLA). Because a strip retail plaza is open-air, the GLA is the same as the gross floor area of the building.

The 40,000 square feet GFA threshold between strip retail plaza and shopping plaza (Land Use 821) was selected based on an examination of the overall shopping center/plaza database. No shopping plaza with a supermarket as its anchor is smaller than 40,000 square feet GLA.

Shopping center (>150k) (Land use 820), shopping plaza (40-150k) (Land Use 821), and factory outlet center (Land Use 823) are related uses.

Additional Data

The technical appendices provide supporting information on time-of-day distributions for this land use. The appendices can be accessed through either the ITETripGen web app or the trip generation resource page on the ITE website (https://www.ite.org/technical-resources/topics/trip-and-parking-generation/).

The sites were surveyed in the 1980s, the 1990s, the 2000s, and the 2010s in Alberta (CAN), California, Delaware, Florida, New Jersey, Ontario (CAN), South Dakota, Vermont, Washington, and Wisconsin.

Land Use: 933
Fast-Food Restaurant without Drive-Through Window

Description

This land use includes any fast-food restaurant without a drive-through window. This type of restaurant is characterized by a large carry-out clientele, long hours of service (some are open for breakfast, all are open for lunch and dinner, some are open late at night or 24 hours a day) and high turnover rates for eat-in customers. These limited-service eating establishments do not provide table service. A patron generally orders from a menu board and pays before receiving the meal. A typical duration of stay for an eat-in customer is less than 30 minutes. Fast casual restaurant (Land Use 930), high-turnover (sit-down) restaurant (Land Use 932), and fast-food restaurant with drive-through window (Land Use 934) are related uses.

Additional Data

If the restaurant has outdoor seating, its area is not included in the overall gross floor area. For a restaurant that has significant outdoor seating, the number of seats may be more reliable than GFA as an independent variable on which to establish a trip generation rate.

The technical appendices provide supporting information on time-of-day distributions for this land use. The appendices can be accessed through either the ITETripGen web app or the trip generation resource page on the ITE website (https://www.ite.org/technical-resources/topics/trip-and-parking-generation/).

The sites were surveyed in the 1980s and the 2010s in Alberta (CAN), California, Colorado, Connecticut, Maryland, Montana, Pennsylvania, and Texas.

Land Use: 220
Multifamily Housing (Low-Rise)

Description

Low-rise multifamily housing includes apartments, townhouses, and condominiums located within the same building with at least three other dwelling units and that have two or three floors (levels). Various configurations fit this description, including walkup apartment, mansion apartment, and stacked townhouse.

- A walkup apartment typically is two or three floors in height with dwelling units that are accessed by a single or multiple entrances with stairways and hallways.

- A mansion apartment is a single structure that contains several apartments within what appears to be a single-family dwelling unit.

- A fourplex is a single two-story structure with two matching dwelling units on the ground and second floors. Access to the individual units is typically internal to the structure and provided through a central entry and stairway.

- A stacked townhouse is designed to match the external appearance of a townhouse. But, unlike a townhouse dwelling unit that only shares walls with an adjoining unit, the stacked townhouse units share both floors and walls. Access to the individual units is typically internal to the structure and provided through a central entry and stairway.

Multifamily housing (mid-rise) (Land Use 221), multifamily housing (high-rise) (Land Use 222), affordable housing (Land Use 223), and off-campus student apartment (low-rise) (Land Use 225) are related land uses.

Land Use Subcategory

Data are presented for two subcategories for this land use: (1) not close to rail transit and (2) close to rail transit. A site is considered close to rail transit if the walking distance between the residential site entrance and the closest rail transit station entrance is ½ mile or less.

Additional Data

For the three sites for which both the number of residents and the number of occupied dwelling units were available, there were an average of 2.72 residents per occupied dwelling unit.

For the two sites for which the numbers of both total dwelling units and occupied dwelling units were available, an average of 96.2 percent of the total dwelling units were occupied.

The technical appendices provide supporting information on time-of-day distributions for this land use. The appendices can be accessed through either the ITETripGen web app or the trip

generation resource page on the ITE website (https://www.ite.org/technical-resources/topics/trip-and-parking-generation/).

For the three sites for which data were provided for both occupied dwelling units and residents, there was an average of 2.72 residents per occupied dwelling unit.

It is expected that the number of bedrooms and number of residents are likely correlated to the trips generated by a residential site. To assist in future analysis, trip generation studies of all multifamily housing should attempt to obtain information on occupancy rate and on the mix of residential unit sizes (i.e., number of units by number of bedrooms at the site complex).

The sites were surveyed in the 1980s, the 1990s, the 2000s, the 2010s, and the 2020s in British Columbia (CAN), California, Delaware, Florida, Georgia, Illinois, Indiana, Maine, Maryland, Massachusetts, Minnesota, New Jersey, Ontario (CAN), Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Texas, Utah, and Washington.

Land Use: 110
General Light Industrial

Description

A light industrial facility is a free-standing facility devoted to a single use. The facility has an emphasis on activities other than manufacturing and typically has minimal office space. Typical light industrial activities include printing, material testing, and assembly of data processing equipment. Industrial park (Land Use 130) and manufacturing (Land Use 140) are related uses.

Additional Data

The technical appendices provide supporting information on time-of-day distributions for this land use. The appendices can be accessed through either the ITETripGen web app or the trip generation resource page on the ITE website (https://www.ite.org/technical-resources/topics/trip-and-parking-generation/).

The sites were surveyed in the 1980s, the 2000s, and the 2010s in Colorado, Connecticut, Indiana, New Jersey, New York, Oregon, Pennsylvania, and Texas.

Vehicle Trip Ends vs: 1000 Sq. Ft. GFA
On a: Weekday,
Peak Hour of Adjacent Street Traffic,
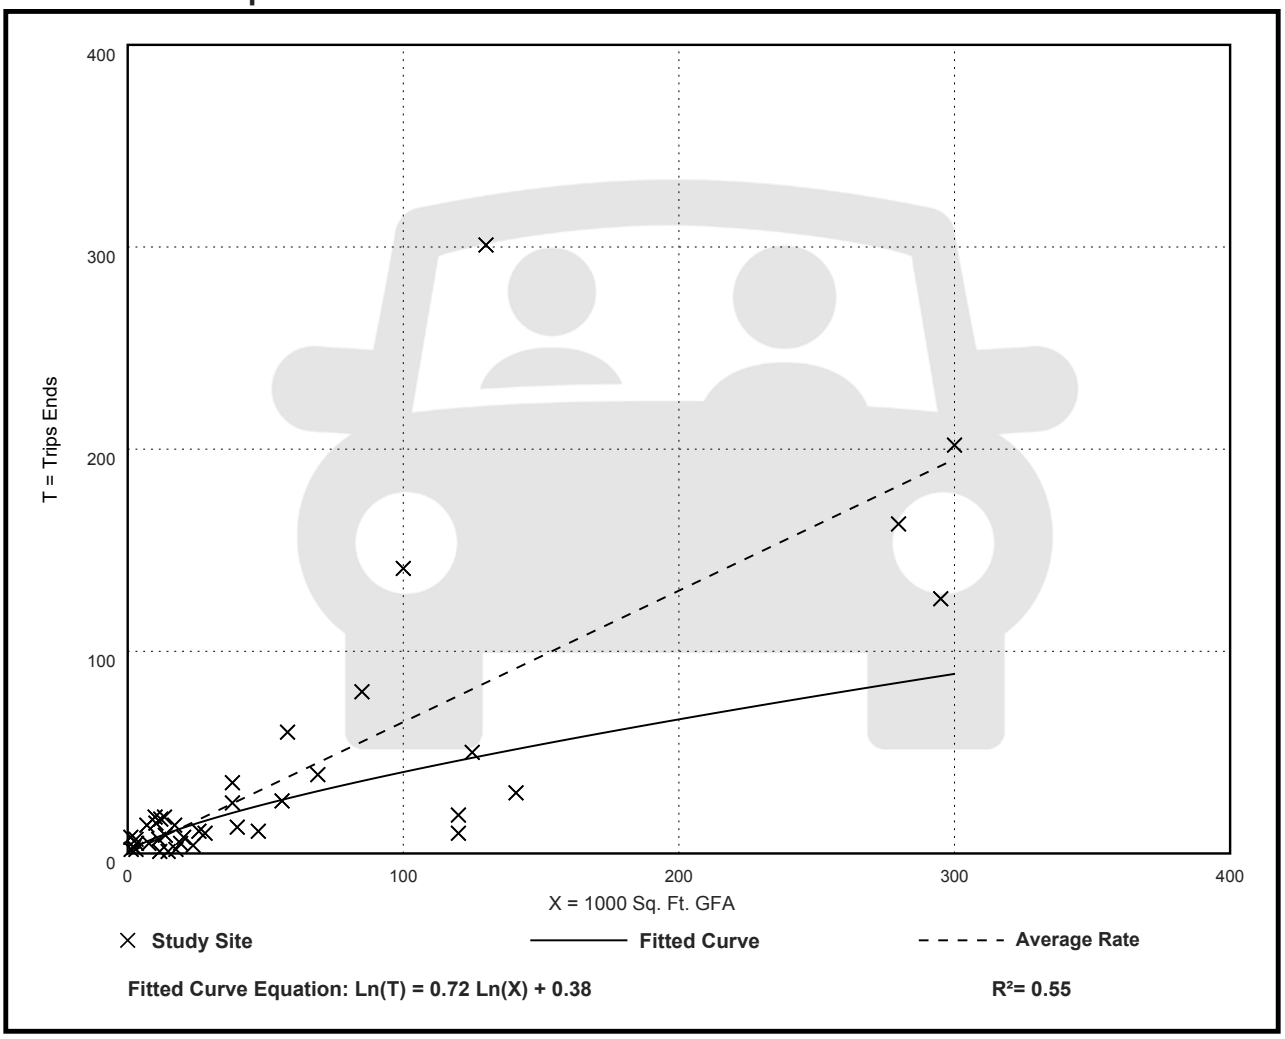
One Hour Between 4 and 6 p.m.
Setting/Location: General Urban/Suburban
Number of Studies: 40
Avg. 1000 Sq. Ft. GFA: 58
Directional Distribution: 14% entering, 86% exiting

Vehicle Trip Generation per 1000 Sq. Ft. GFA

Average Rate	Range of Rates	Standard Deviation
0.65	0.07 - 7.02	0.56

Data Plot and Equation



APPENDIX F

SIGNAL WARRANT ANALYSIS WORKSHEETS

Warrant	Title			Standard
1	Eight-Hour Volume			The need for a traffic control signal shall be considered if an engineering study finds that 1 of the following conditions exist for each of any 8 hours of an average day. In applying each condition the major-street and minor-street volumes shall be for the same 8 hours. On the minor street, the higher volume shall not be required to be on the same approach during each of these 8 hours.
-	Condition A	Part 1	Part 2	A. The vehicles per hour given in both of the 100%/80% columns of Condition A in Table 4C-1 exist on the major-street and the higher-volume minor-street approaches, respectively, to the intersection, or
-	Condition B	Part 1	Part 2	A. The vehicles per hour given in both of the 100%/80% columns of Condition B in Table 4C-1 exist on the major-street and the higher-volume minor-street approaches, respectively, to the intersection.
2	Four-Hour Volume			See Figure 4C-1 or 4C-2 in MUTCD.
3	Peak Hour Volume			This signal warrant shall be applied only in unusual cases, such as office complexes, manufacturing plants, industrial complexes, or high-occupancy vehicle facilities that attract or discharge large numbers of vehicles over a short time. The need for a traffic control signal shall be considered if an engineering study finds that the criteria in either of the following 2 categories are met: A. If all 3 of the following conditions exist for the same 1 hour of an average day: 1. The total stopped time delay experience by the traffic on 1 minor-street approach (1 direction only) controlled by a STOP sign equals or exceeds: 4 vehicle-hours for a 1-lane approach; or 5 vehicle-hours for a 2-lane approach, and 2. The volume on the same minor-street approach (1 direction only) equals or exceeds 100 vph for 1 moving lane of traffic or 150 vph for 2 moving lanes, and 3. The total entering volume serviced during the hour equals or exceeds 650 vph for intersections with 3 approaches or 800 vph for intersections with 4 or more approaches. B. See Figure 4C-3 or 4C-4 in MUTCD.
4	Pedestrian Volume			See Page 4C-5 in MUTCD
5	School Crossing			See Page 4C-5 in MUTCD
6	Coordinated Signal System			See Page 4C-6 in MUTCD
7	Crash Experience			The need for a traffic control signal shall be considered if an engineering study finds that all of the following criteria are met: A. Adequate trial of alternatives with satisfactory observance and enforcement has failed to reduce the crash frequency; and B. 5 or more reported crashes, of types susceptible to correction by a traffic control signal, have occurred within a 12-month period, each crash involving personal injury or property damage apparently exceeding the applicable requirements for a reportable crash; and C. For each of any 8 hours of an average day, the vph given in both the 80% columns of Condition A in Table 4C-1, or the vph in both of the 80% columns of Condition B in Table 4C-1 exists on the major-street and the higher-volume minor-street approach, respectively, to the intersection, or the volume of pedestrian traffic is not less than 80% of the requirements specified in the Pedestrian Volume warrant. These major-street and minor-street volumes shall be for the same 8 hours. On the minor street, the higher volume shall not be required to be on the same approach during each of the 8 hours.
8	Roadway Network			See page 4C-7 in MUTCD

Re: Artesia Boulevard Corridor Specific Plan Amendment Project, Los Angeles County

Dear Ms. Dor:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information you have submitted for the above referenced project. The results were negative. However, the absence of specific site information in the SLF does not indicate the absence of cultural resources in any project area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. I suggest you contact all of those indicated; if they cannot supply information, they might recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify me. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

West Hills, CA, 91307

Subject: ***Notification of the Proposed Artesia Boulevard Corridor Specific Plan Amendment Project Pursuant to Assembly Bill 52***

Dear Mr. Alvarez,

Pursuant to Assembly Bill [AB] 52 (California Public Resources Code Section 21080.3.1(b)), your tribe has submitted a request to the City of Artesia (City) for notification of preparation of an environmental impact report (EIR), negative declaration (ND), or mitigated negative declaration (MND) for projects that are within the geographic area traditionally and culturally affiliated with your tribe.

The City has initiated preparation of an EIR for the proposed Artesia Boulevard Corridor Specific Plan Amendment Project (Project). In compliance with AB 52 requirements, and as Lead Agency, the City hereby extends an invitation to consult on the proposed Project. This consultation is intended to assist with identifying and/or preserving and/or mitigating potential Project impacts to Native American cultural places.

The Project site consists of one approximately 3.29-acre property (Assessor's Parcel Number 7035-016-064) located at 11709 Artesia Boulevard in the City's Artesia Boulevard Corridor Specific Plan (ABCSP) area. The Project site is generally bound by Artesia Boulevard on the south, Alburtis Avenue on the east, and Flallon Avenue on the west. **Figure 1: Regional Vicinity Map** depicts the Project site in a regional context. **Figure 2: Local Vicinity Map** depicts the Project site in a local context. The Project site is currently vacant. The Project proposes to construct a mixed-use development generally comprised of two portions: a commercial portion and a residential portion, connected by pedestrian walkways. In total, the development proposes approximately 8,650 square feet of commercial uses and 80 dwelling units.

The Project would also include approximately 216 off-street surface parking spaces and 22 off-site street parking spaces, and landscaping and circulation improvements. It is preliminarily anticipated the Project will require a Specific Plan Amendment to allow the proposed mixed-use development.

If you desire to consult with the City on review of this Project regarding potential impacts to tribal cultural resources (as defined in Public Resources Code § 21074), please provide a written request for consultation to the address above or via email to odor@cityofartesia.us. My direct telephone number is 562.865.6262, Extension 227. Please respond in writing within 30 days of receipt of this letter should you wish to consult under AB 52. Please also include the name of a designated lead contact person and their contact information. Should the City not receive a response from your tribe within 30 days, it will be presumed that you have declined consultation. If you have any questions or need additional information, please contact Mel Lee, Contract Planner, at (562) 865-6262, Ext 243 or at Planning@cityofartesia.us.

The Project would also include approximately 216 off-street surface parking spaces and 22 off-site street parking spaces, and landscaping and circulation improvements. It is preliminarily anticipated the Project will require a Specific Plan Amendment to allow the proposed mixed-use development.

If you desire to consult with the City on review of this Project regarding potential impacts to tribal cultural resources (as defined in Public Resources Code § 21074), please provide a written request for consultation to the address above or via email to odor@cityofartesia.us. My direct telephone number is 562.865.6262, Extension 227. Please respond in writing within 30 days of receipt of this letter should you wish to consult under AB 52. Please also include the name of a designated lead contact person and their contact information. Should the City not receive a response from your tribe within 30 days, it will be presumed that you have declined consultation. If you have any questions or need additional information, please contact Mel Lee, Contract Planner, at (562) 865-6262, Ext 243 or at Planning@cityofartesia.us.

Sincerely, ML For

Christina Conley, Tribal Consultant and Administrator
PO Box 941078
Simi Valley, CA 93094

Subject: ***Notification of the Proposed Artesia Boulevard Corridor Specific Plan Amendment Project Pursuant to Assembly Bill 52***

Dear Christina:

Pursuant to Assembly Bill [AB] 52 (California Public Resources Code Section 21080.3.1(b)), your tribe has submitted a request to the City of Artesia (City) for notification of preparation of an environmental impact report (EIR), negative declaration (ND), or mitigated negative declaration (MND) for projects that are within the geographic area traditionally and culturally affiliated with your tribe.

The City has initiated preparation of an EIR for the proposed Artesia Boulevard Corridor Specific Plan Amendment Project (Project). In compliance with AB 52 requirements, and as Lead Agency, the City hereby extends an invitation to consult on the proposed Project. This consultation is intended to assist with identifying and/or preserving and/or mitigating potential Project impacts to Native American cultural places.

The Project site consists of one approximately 3.29-acre property (Assessor's Parcel Number 7035-016-064) located at 11709 Artesia Boulevard in the City's Artesia Boulevard Corridor Specific Plan (ABCSP) area. The Project site is generally bound by Artesia Boulevard on the south, Alburtis Avenue on the east, and Flallon Avenue on the west. **Figure 1: Regional Vicinity Map** depicts the Project site in a regional context. **Figure 2: Local Vicinity Map** depicts the Project site in a local context. The Project site is currently vacant. The Project proposes to construct a mixed-use development generally comprised of two portions: a commercial portion and a residential portion, connected by pedestrian walkways. In total, the development proposes approximately 8,650 square feet of commercial uses and 80 dwelling units.

The Project would also include approximately 216 off-street surface parking spaces and 22 off-site street parking spaces, and landscaping and circulation improvements. It is preliminarily anticipated the Project will require a Specific Plan Amendment to allow the proposed mixed-use development.

If you desire to consult with the City on review of this Project regarding potential impacts to tribal cultural resources (as defined in Public Resources Code § 21074), please provide a written request for consultation to the address above or via email to odor@cityofartesia.us. My direct telephone number is 562.865.6262, Extension 227. Please respond in writing within 30 days of receipt of this letter should you wish to consult under AB 52. Please also include the name of a designated hopelead contact person and their contact information. Should the City not receive a response from your tribe within 30 days, it will be presumed that you have declined consultation. If you have any questions or need additional information, please contact me at the previously noted telephone number and email.

Sincerely,

Okina Dor
Community Development Manager

Gabrielino Tongva Indians of California Tribal Council
Robert Dorame, Chairperson
P.O. Box 490 Bellflower, CA, 90707

Subject: ***Notification of the Proposed Artesia Boulevard Corridor Specific Plan Amendment Project Pursuant to SB 18***

Dear Mr. Dorame:

Senate Bill 18 (SB 18) requires that cities/counties consult with California Native American Tribes that are on the Tribal Consultation List maintained by the California Native American Heritage Commission (NAHC), before adopting or amending a General Plan or Specific Plan. In compliance with SB 18 requirements, and as Lead Agency, the City of Artesia hereby extends an invitation to consult on the proposed Artesia Boulevard Corridor Specific Plan Amendment Project (Project). This consultation is intended to assist with identifying and/or preserving and/or mitigating potential Project impacts to Native American cultural places. A record search of the NAHC Sacred Lands File has already been requested.

The Project site consists of one approximately 3.29-acre property (Assessor's Parcel Number 7035-016-064) located at 11709 Artesia Boulevard in the City's Artesia Boulevard Corridor Specific Plan (ABCSP) area. The Project site is generally bound by Artesia Boulevard on the south, Alburtis Avenue on the east, and Flallon Avenue on the west. **Figure 1: Regional Vicinity Map** depicts the Project site in a regional context. **Figure 2: Local Vicinity Map** depicts the Project site in a local context. The Project site is currently vacant. The Project proposes to construct a mixed-use development generally comprised of two portions: a commercial portion and a residential portion, connected by pedestrian walkways. In total, the development proposes approximately 8,650 square feet of commercial uses and 80 dwelling units.

The Project would also include approximately 216 off-street surface parking spaces and 22 off-site street parking spaces, and landscaping and circulation improvements. It is preliminarily anticipated the Project will require a Specific Plan Amendment to allow the proposed mixed-use development.

If you desire to consult with the City on review of this Project, please provide a written request for consultation to the address above or via email to email to odor@cityofartesia.us. My direct telephone number is 562.865.6262, Extension 227. Please respond in writing within 90 days of receipt of this letter should you wish to consult under SB 18. Should the City not receive a response from your tribe within 90 days, it will be presumed that you have declined consultation. If you have any questions or need further information, please contact Mel Lee, Contract Planner, at (562) 865-6262, Ext 243 or at Planning@cityofartesia.us.

Sincerely,

Okina Dor

Dry Utility Assessment and Cost Opinion

SOUTHERN CALIFORNIA
Utility Solutions

Dry Utility Assessment and Cost Opinion
Artesia Blvd & Flallon Ave
11709 Artesia Blvd, Artesia, CA 90701

Prepared For:

urban

By:
Southern California Utility Solutions, Inc.
39252 Winchester Road, Suite 107-315
Murrieta, CA 92563

May 3, 2022

SOUTHERN CALIFORNIA
Utility Solutions

Executive Summary

The following is a summary of our opinions and recommendations in relation to dry utilities for the project located at 11709 Artesia Blvd in the City of Artesia. This report was prepared based on information provided by G3 Urban (G3U) and a site visit.

The attached opinion of probable cost includes the SCE, Frontier, Charter/Spectrum, and SCG fees and dry utility trenching contractor costs. It is based on the C&V VTTM dated March 1st, 2022, that includes sixteen buildings consisting of a total of 80 multifamily dwelling units and two retail spaces.

Electric – Southern California Edison (SCE)

SCE Existing Utility Summary

Northern Property Line

Southern California Edison (SCE) is the incumbent electric utility provider in the area. Based on input provided from G3U all existing poles and overhead wires will not be conditioned by the city to be converted to underground. Recommend obtaining written verification from city.

There are overhead SCE distribution lines running east to west just inside the northernmost property line. After exiting the property, the pole line continues east across Alburtis Avenue and west across Flallon Avenue. There is an overhead service drop from a pole near the center of the northern property line to a commercial building at 17115 Alburtis Avenue. The pole and service drop are planned to be protected in place with no scope to relocate; no associated utility fees are included in the cost opinion.

Due to the proximity of the overhead wires to the property, it is our recommendation to review the state (G.O. 95), city, fire department, and utility minimum clearance requirements to confirm that proposed buildings can be constructed while maintaining the minimum requirements. A review of possible utility easements and access requirements to existing facilities within the project limits is recommended.

Additionally, there is an SCE distribution pole line that cuts from north to south through the center of the property. It begins near the northern property line and dead ends approximately 270 feet south of the starting point. There are three poles in total along with overhead equipment and services. There are also multiple padmounted structures on site. Recommend that the three poles, overhead equipment, padmounted transformers and services be removed on an idlefacilities work order. During site visit we met with Angel Cedano with ADEP Precision, the demolition contractor actively working at the site. He stated that he has already coordinated with Frontier and SCG to complete their removals of all facilities within the site. Angel stated that on 2/25/22 SCG completed their removal and Frontier completed theirs on 4/18/22. Angel has scheduled the SCE removal of all structures to be completed on 5/13/22. No associated costs included in the cost opinion.

Flallon Ave

SCE has a pole line running east/west that crosses Flallon Avenue perpendicularly near the northern portion of the cul-de-sac. The pole line contains a distribution circuit as well as communications, both telephone and cable TV. No conflict.

There is also a pole line on the east side of the street belonging to Frontier. However, four of the poles also have SCE low-voltage street light wire and street light mast arms attached to them. Two of these poles one of which has a streetlight attached conflict with proposed driveway locations. Costs were included to underground the lines and remove the two poles in conflict and replace one streetlight with one SCE LS-1 concrete cobrahead light. All other poles and streetlights are assumed to be protected in place. Recommend G3U verify with city street light requirements for all streets and update cost opinion if necessary.

Alburtis Ave

There is an SCE pole line running north/south along the eastern side of the street. No conflict.

Artesia Blvd

There are overhead SCE distribution lines running east to west along the north side of Artesia Boulevard within the public right-of-way. The poles are planned to be protected in place with no scope to relocate; no associated costs included in the cost opinion.

Due to the proximity of the overhead wires to the property, it is our recommendation to review the state (G.O. 95), city, fire department, and utility minimum clearance requirements to confirm that proposed buildings can be constructed while maintaining the minimum requirements. A review of possible utility easements and access requirements to existing facilities within the project limits is recommended.

SCE Onsite Assessment

In addition to the comments on the north property line, the parcel on the east side of Alburtis is within the scope of the project limits. The property has an overhead distribution system along the east and north property lines with a meter pole located within the property limits. TTM indicates that existing improvements are to remain. No scope to relocate and no associated costs are included in the cost opinion.

SCE New Service

Assumed point of connection is pole 2147865E, approximately 240’ north of the centerline of Artesia Boulevard, just behind curb on the east side of Alburtis Avenue. Assume 2-5” primary conduits to riser on pole heading west directly across the street to a new switch near the southeast corner of the project site. Assume that four transformer pads will be required. Conduit size and quantity for services at each respective building to be determined by the panel sizes.

SCE Streetlights

Alburtis Avenue has existing streetlights on the east side across from the project frontage, and Flallon Avenue has existing streetlights on the east side along the project frontage starting at Artesia Boulevard. All onsite streetlights assumed to be private with service coming from one of the building's house meters; no costs included for onsite streetlights or along the frontage of Alburtis or Flallon. Recommend review of streetlight and undergrounding requirements with City and update cost opinion, as necessary.

Frontier

Frontier is the incumbent telephone provider in the area.

Frontier Existing Utility Summary

Northern Property Line

Frontier has facilities attached to the poles along the northern property line with an overhead service drop to 17115 Alburtis Avenue. These are planned to be protected in place with no scope to relocate; no associated costs included in the cost opinion.

Flallon Ave

Frontier has a pole line running north/south on the east side of the street along the project frontage. Two of the poles conflict with proposed driveways; costs are included to either relocate the poles and replace the SCE pole mounted streetlight with a concrete cobrahead street light, with Frontier transferring their existing cable to the relocated poles (Option 1). Option 2 is to remove the two poles and underground the facilities.

Alburtis Ave

There are no Frontier facilities attached to the SCE pole line running north/south along the eastern side of Alburtis Avenue.

Artesia Blvd

There are Frontier overhead lines attached to the SCE poles that are running east to west along the north side of Artesia Boulevard within the public right-of-way. In addition there are underground facilities including a pedestal located along the project frontage. The poles, pedestal and all underground facilities are assumed to be protected in place with no scope to relocate; no associated costs included in the cost opinion.

Frontier Onsite Assessment

See SCE summary for Northern Property Line section for notes related to the demolition contractor who has coordinated the Frontier removal.

Frontier New Service

Assumed point of connection is a pole located approximately 670' north of the centerline of Artesia Boulevard on the east side of Alburtis Avenue. Assume 2-4" conduit to be extended into the site, with pull boxes, and 1-4" service conduit to each respective building's communication closet.

Included in the cost opinion are Frontier fees for Secondary Minimum Points of Entry (SMPOE) to each building. If Frontier can provide service off their fiber network these fees should not be applicable. However, if traditional copper terminals are the only service option available then the SMPOE fees would be applicable based on Frontier tariffs.

Spectrum/Charter (Charter)

Charter is the incumbent Cable TV provider in the area.

Charter Existing Utility Summary

Northern Property Line

Charter has facilities attached to the poles along the northern property line with an overhead service drop to 17115 Alburtis Avenue. These are planned to be protected in place with no scope to relocate; no associated costs included in the cost opinion.

Flallon Ave

There are no Charter facilities attached to the Frontier pole line running north/south along the eastern side of Flallon Avenue.

Alburtis Ave

There are no Charter facilities attached to the SCE pole line running north/south along the eastern side of Alburtis Avenue.

Artesia Blvd

There are Charter overhead lines attached to the SCE poles that are running east to west along the north side of Artesia Boulevard within the public right-of-way. The poles are planned to be protected in place with no scope to relocate; no associated costs included in the cost opinion.

Charter/Spectrum Onsite Assessment

See Charter/Spectrum Existing Utility Summary above. No active services or other conflicts found during our site investigation.

Charter/Spectrum will not to be installed onsite per previous direction from G3U.

SOUTHERN CALIFORNIA
Utility Solutions

SCG – Existing and New Service summary

Gas mark outs were observed running north/south on Alburtis Avenue on the east side of the street approximately 3’ from curb.

Gas mark outs were observed running north/south on Flallon Avenue on the east side of the street approximately 3’ from curb.

Gas mark outs were observed running east/west on Artesia Blvd south of the median.

See SCE summary for Northern Property Line section for notes related to the demolition contractor who has coordinated the SCG onsite removal.

All gas mains are assumed to be protected in place and no associated costs included in the cost opinion.

SCG will not to be installed onsite to residential units per previous direction from G3U. Cost opinion includes extension of gas stub to each of the two retail buildings.

Appendix 4.12-2

Golden State Water Company Will Serve Letter

Golden State
Water Company
A Subsidiary of American States Water Company

June 10, 2024

Mitch Gardner
15235 S Western
Gardena, CA 90249

Re: Will Serve Letter
11709 Artesia Blvd
Artesia, California

Dear Mr. Gardner:

This letter is to inform you that water service is available to the above referenced address from Golden State Water Company's (GSWC) Central District water system located in the city of Artesia. Service to the address can be provided from our existing water facilities within Artesia Blvd.

Upon completion and execution of a Water Service Agreement, that contains satisfactory financial arrangements and other provisions governing the extension of water service, Golden State Water Company (GSWC) will begin providing water service for the referenced address once all owner obligations have been satisfied. Analysis of more detailed development plans may require the owner to participate in the construction of special facilities prior to the Company providing water service.

GSWC is committed to providing water service to all customers within its service area, consistent with the company's obligations under rules, statutes and regulations of both the California Department of Public Health and the California Public Utilities Commission.

Unless modified or extended by GSWC, this Will Serve Letter shall terminate and be of no further force and effect one year from the date indicated above.

If you have any questions concerning the issues addressed in this letter, please let us know.

Sincerely,

Ray Burk, P.E.
Operations Engineer
Central District

I. Purpose

The purpose of this report is to provide quantitative information to verify the design of the storm drain infrastructure and hydrologic methodology of the project site. The values and statements within the confirm the subject site is designed and planned in accordance with the Los Angeles County Hydrology Manual and the City of Artesia drainage requirements.

II. Site Description

The project site consists of several existing lots that form rectangular shaped areas with a total gross area of 4.99 acres. The project proposes two development areas within the site, it is located at 11709 Artesia Boulevard and 17212 Alburtis Avenue, in the City of Artesia (APN:7035-016-064, 7035-020-056). The larger portion of the development is bounded by Flallon Avenue to the west, Alburtis Avenue to the east, Artesia Boulevard to the south, and an industrial building to the north. The other portion of the development is located across Alburtis Avenue.

Per Geotechnical Investigation, prepared by Albus & Associates, Inc. dated December 7, 2021, based on state-provided information, the historic-high groundwater is approximately 10 feet below the ground surface. From the geotechnical perspective, the findings indicate the site is not feasible for infiltration, therefore, bio-filtration BMPs are considered for the proposed site.

According to the federal Emergency Management Agency (FEMA) FIRM rate map number 06037C1980F, effective date September 26, 2008, the site is located within flood Zone X, area with reduced flood risk due to levee.

Refer to Appendix A for Vicinity Map of the project site.

Refer to Appendix F for additional information per FEMA flood map.

III. Existing Conditions

The existing conditions of the large development portion consist of a vacant commercial lot and the other portion with a parking lot area across Alburtis Avenue. The entire site is completely paved with no landscaping on site prior to any post-development construction per geospatial images which is assumed to have a negligible pervious area coverage.

The overall existing drainage of the project site generally surface flows southerly from adjacent right of way to confluence with the street flows to the existing catch basins at the public right of way near the corner of Artesia Boulevard and Flallon Avenue. There is an existing drainage inlet near the center of the site that collects a portion of the center of the site. The drainage collection point near the center that is generally flat, which spills over the right of way towards Alburtis Avenue and Flallon Avenue at the right-of-way and continues southerly towards the low point; therefore, the site is divided into multiple drainage areas that is tributary to the adjacent downstream system which confluence at the low point adjacent to the site.

Refer to Appendix A, Pre-Development Hydrology Map for additional information.

IV. Proposed Conditions

The project proposes the construction of 22 residential buildings with 112 attached condominiums with private garages, private drive aisles, sidewalks, and common landscaped areas. The development site will be accessible with entrances/ exits along Flallon Avenue and Alburtis Avenue.

The large development portion is delineated into nine (9) drainage management areas (DMAs) and smaller portion separated as its own DMA where each tributary area's runoff enters the proposed inlet near each entrance of the site. The proposed catch basin inlets and grated inlets collect the proposed site's generated runoff to be routed to an underground detention system that feeds into a bio-filtration system via pump station for water quality treatment. The treated flow will be pumped to a parkway culvert and be routed to the downstream system. Both development sites have their own detention and treatment system following its existing drainage pattern to confluence downstream at the same point.

When the underground detention is at full capacity, the confluence of the flows will be mitigated to the proposed overflow parkway culvert through the interconnected storm drain system. The public streets catch basin is to be relocated slightly south of the existing conditions as parking is proposed along the public right of way, which will not be a part of this hydrological analysis due to it characteristic to be remain in-kind to preserve the historical drainage pattern.

In cases of storm events exceeding the design storm drain capacity, the site is graded to outlet overflow at the entrances of the site towards Flallon Avenue and Alburtis Avenue. The runoff will then continue along the street flow downstream following existing conditions.

Refer to Appendix A, Post-Development Hydrology Map for additional information.

A separately prepared LID plan is prepared to address the Los Angeles County storm water quality requirements.

V. Methodology

The project site's drainage was analyzed per the Los Angeles County Hydrology Manual. The existing and proposed conditions of the site were analyzed for peak flow rate and time of concentration for the 25- and 100- storm events based on acreage and land cover per LACDPW HydroCalc program.

VI. Design Assumption

1. The LACDPW HydroCalc Calculator Program was used to determine Tc, Peak run-off flow rate, and run-off volume for subarea based on the longest flow path and elevation difference.
2. The Property is located in the "Los Alamitos" rainfall region per Figure 1.H1.6 of the Hydrology Manual. A depth of 5.5 inches of rainfall was determined from the 50-year storm 24-hour isohyet map.
3. The site is in the soil classification of "006" per Figure 1.H1.6 of the Hydrology Manual.
4. Existing conditions for the site are assumed to be a value of 100% impervious based on geospatial observation of google earth images.
5. Proposed conditions impervious are delineated per landscape plan and drainage management areas shown within the Post-Development Hydrology Exhibit.
6. Proposed onsite storm drain will be sized to convey the 25-year storm per urban flood requirement.
7. No direct connections to the public storm drain are proposed. Therefore, proposed peak flow mitigation will be governed by the existing peak flows.

VII. Hydrology Analysis

A summary of the pre- and post-development conditions peak runoff values generated from the project site has been provided below.

Hydrology Summary

Project site generated runoff peak flowrates per drainage areas are shown within the Hydrology Map. All flows ultimately confluence nearby downstream inlet adjacent to the site right of way.

Pre-Development Conditions	Area (ac)	Q_{25} (cfs)	Q_{100} (cfs)
DMA-XA-1	0.716	1.86	2.37
DMA-XA-2	0.228	0.59	0.76
DMA-XA-3	1.112	2.65	3.68
DMA-XA-4	1.248	3.24	4.14
Total	3.304	8.33	10.95

Pre-Development Conditions	Area (ac)	Q_{25} (cfs)	Q_{100} (cfs)
DMA-XB	0.248	0.64	0.82

Proposed conditions of the project site is designed and graded to replicate the existing conditions to preserve historical drainage patterns.

Post-Development Conditions	Area (ac)	Q_{25} (cfs)	Q_{100} (cfs)
DMA-A-1	0.412	1.05	1.36
DMA-A-2	0.313	0.80	1.03
DMA-A-3	0.384	0.98	1.27
DMA-A-4	0.297	0.76	0.98
DMA-A-5	0.278	0.71	0.92
DMA-A-6	0.359	0.92	1.18
DMA-A-7	0.282	0.72	0.93

DMA-A-8	0.368	0.94	1.21
DMA-A-9	0.611	1.43	2.01
Total	3.304	8.32	10.89

Post-Development Conditions	Area (ac)	Q_{25} (cfs)	Q_{100} (cfs)
DMA-B	0.248	0.63	0.82

Pre- vs Post- Drainage Management Area	Q_{25} Percent Difference	Q_{100} Percent Difference
DMA-A	-0.1%	-0.6%
DMA-B	-1.3%	-0.6%

Refer to Appendix B of this report for LACDPW HydroCalc output data.

Retention Sizing and Water Quality Treatment Summary

Hydrologic analysis determined that routed peak flow based on the proposed development for the 25-year storm event is lower than pre-development conditions. Therefore, hydrologic mitigation is not required as proposed development will preserve exiting condition peak flow. Moreover, the generated runoff volume is also lower, which will not impact downstream drainage capacity.

The addition of retention storage per water quality treatment volume requirement will further enhance the flow capacity during lower storm event where peak flow can be held within the retention system. Refer to summary of water quality sizing below:

	Area (ac)	Storm Water Quality Treatment Volume (cu-ft)	Proposed Underground Detention Volume (cu-ft)
Proposed Development Site DMA-A	3.304	8,154.4	12,712.8
Proposed Development Site DMA-B	0.248	612.1	1,005.3

Refer to Appendix C of this report and separately prepared LID for additional Water Quality Treatment Information.

VIII. Hydraulics Analysis

Grated Inlet Capacity Sizing

Grated inlet will be sized with a capacity to intercept the 25-year storm event peak flowrate during final engineering in conformance with precise grading plan.

Additional Analysis to be provided in Appendix D of this report.

Curb Inlet Capacity Sizing

Catch Basin inlet will be sized based on the 25-year storm event to conform with LACDPW Hydrology urban flood street capacity during final engineering in conformance with precise grading plan.

Additional Analysis to be provided in Appendix D of this report.

Pipe Sizing

Onsite storm drain piping will be sized for the 25-year storm event and will be analyzed based on open channel flow. Therefore, WSPG hydraulic pressure analysis is not warranted. Preliminary Pipe Sizing is provided in Appendix D.

*A Manning's Roughness Coefficient of 0.013 has been utilized to represent the roughness coefficient of PVC and/or HDPE piping.

Parkway Drain Sizing

Parkway drains are provided for the treated storm water and excess storm water when the underground storage and conveyance pipes are at full capacity. A parkway drain is provided for treated storm water leaves the site via pump station at a design steady rate while a separate overflow parkway is sized for the 100-year storm event for stormwater to bubble out from the lowest inlet of the site and continue downstream following historical drainage conditions.

Refer to Appendix D for Preliminary Parkway Drain Analysis.

100-Year Water Surface Elevation (WSE)

The elevation of the 100-year water surface is analyzed at localized low point of the site to ensure proper flood protection is provided for the proposed buildings. Building finished floors will be set at a minimum of at least 1 foot above the 100-year WSE. Private street grading provides proper overflow to downstream system to ensure flood protection for the proposed buildings.

Additional Analysis to be provided in Appendix D of this report.

IX. Conclusion

The result from this hydrology and hydraulics study demonstrates that the overall proposed development condition will generate a lower peak runoff flowrate for all the design storm event. The proposed condition runoff volume for all design storm events is also lower than the existing condition of the site due to the increase in pervious areas. Retention sizing analysis demonstrates that sufficient storage is provided for water quality treatment volume which will further improve the receiving stormwater system. When the underground storage is at full capacity, the confluence of the flows will be mitigated to the proposed overflow parkway culvert through the interconnected storm drain system and continue downstream following existing conditions.

In cases of storm events exceeding the design storm drain capacity, the site is graded to outlet overflow at the entrances of the site towards Flallon Avenue and Alburtis Avenue. The runoff will then continue along the street flow downstream following historical drainage pattern.

STORM WATER COLLECTION AND TREATMENT SYSTEM

11709 Artesia Blvd. City of Artesia, County of Los Angeles, CA

12,712.8 cu ft

SPECIFICATION FOR CISTERN SYSTEM

THIS DOCUMENT WILL GOVERN THE FURNISHING AND INSTALLATION OF ALUMINIZED CORRUGATED METAL PIPE CISTERNS FOR UNDERGROUND WATER STORAGE FOR NOMINAL DIAMETERS 12" (300MM) THROUGH 120" (3000MM).

THE MANUFACTURER OF THE CISTERN SYSTEM SHALL BE ONE THAT HAS REGULARLY BEEN ENGAGED IN THE ENGINEERING DESIGN AND PRODUCTION OF THESE SYSTEMS AND WHICH HAS A HISTORY OF SUCCESSFUL PRODUCTION, ACCEPTABLE TO THE ENGINEER OF RECORD (EOR). IN ACCORDANCE WITH THE DRAWINGS, THE CISTERN SYSTEM SHALL BE SUPPLIED BY: SANTA FE WATER SYSTEMS, 10244 FREEMAN AVE, SANTA FE SPRINGS, CA 90670.
TEL: 1-562-777-9724

SAMPLING, TESTING, AND INSPECTION OF MATERIALS USED FOR MANUFACTURING OF THE CISTERN SYSTEM SHALL BE IN ACCORDANCE WITH APPLICABLE ASTM SPECIFICATIONS. ALL FABRICATION OF THE PRODUCT SHALL OCCUR WITHIN THE UNITED STATES UNLESS OTHERWISE NOTED.

THE CISTERN SHALL BE CAPABLE OF INSTALLATION IN SOIL WITH A pH RANGE OF 5 TO 9. FOR SOIL pH OUTSIDE THE RANGE OF 5 TO 9, CONSULT WITH SPECIFYING ENGINEER PRIOR TO ORDERING TO DETERMINE IF ADDITIONAL CISTERN COATING SYSTEM NEED BE CONSIDERED.

THE HYDRAULIC SYSTEM SHALL BE PRE-ASSEMBLED AND TESTED AT FACTORY PRIOR TO SHIPMENT. INSPECTION AND TESTING PROTOCOLS SHALL BE DECIDED BY THE SPECIFYING ENGINEER ACCORDING TO SYSTEM REQUIREMENTS. A COPY OF THE TEST REPORT MUST BE PROVIDED TO THE ENGINEER OF RECORD IF REQUESTED.

UPON REQUEST, THE CISTERN SYSTEM INLETS SHALL BE EQUIPPED WITH AN INLET CALMING DEVICE TO ALLOW INTRODUCTION OF WATER TO THE TANK WITH LITTLE TO NO TURBULENCE.

THE CISTERN SYSTEM SHALL BE FITTED WITH A MIN. 4" OUTLET OR PERFORATED MANHOLE COVERS FOR VENTING, DEPENDANT UPON SITE CONDITIONS AND DIRECTION BY SPECIFYING ENGINEER. OVERFLOW PIPE SHALL BE PROVIDED UPON REQUEST BY SPECIFYING ENGINEER.

SYSTEM TO MEET AASHTO HS20/HS25 LIVE LOADING, PER AASHTO LRFD SECTION 12.

ACCESS COVERS SHALL BE A MINIMUM OF 24-INCH DIAMETER TO PROVIDE ADEQUATE INSPECTION AND MAINTENANCE WITHOUT RESTRICTIONS AND OBSTRUCTIONS TO ENTRY INTO INTERIOR OF THE CISTERN. COVERS SHALL BE WATERTIGHT, DO NOT SLIDE, ROTATE, OR FLIP OPEN AND ARE CAPABLE OF SUPPORTING DESIGN LOADS.

PRIOR TO SHIPMENT, CISTERN SYSTEM MAY BE INSPECTED AT FACTORY BY OWNER'S AUTHORIZED REPRESENTATIVE UPON REQUEST.

INSTALLATION

THE CONTRACTOR SHALL FOLLOW OCCUPATIONAL SAFETY AND HEALTH ASSOCIATION (OSHA) GUIDELINES FOR SAFE PRACTICES IN EXECUTING THE INSTALLATION PROCESS IN ACCORDANCE WITH THE MANUFACTURER/SUPPLIER INSTALLATION RECOMMENDATIONS.

A NON-WOVEN GEOTEXTILE FILTER FABRIC IS RECOMMENDED TO BE INSTALLED IN EXCAVATION, OR OTHER MEASURES SHOULD BE TAKEN, TO PREVENT NATIVE SOIL FROM MIGRATING INTO THE INITIAL BACKFILL MATERIAL, WHEN REQUIRED BY THE GEOTECHNICAL ENGINEER OR E.O.R.

TRENCH BOTTOM (FOUNDATION) WITH UNSTABLE OR UNYIELDING MATERIAL SHALL BE EXCAVATED TO A DEPTH DIRECTED BY THE ENGINEER AND REPLACED WITH SUITABLE MATERIAL. FOR UNSTABLE MATERIALS, GEOTEXTILE MAY BE USED TO STABILIZE THE TRENCH BOTTOM, IF DIRECTED BY THE ENGINEER.

SUITABLE BEDDING MATERIAL SHALL BE CLASS I OR II, AS SPECIFIED BY ASTM D2321.
MINIMUM BEDDING THICKNESS SHALL BE 4" (100 mm) AS MEASURED FROM OUTER PIPE DIAMETER.

INITIAL BACKFILL MATERIAL SHALL BE CLASS I OR II, AS SPECIFIED BY ASTM D2321. COMPACTION AND BACKFILL LIFTS SHALL BE IN ACCORDANCE WITH ASTM D2321. INITIAL BACKFILL SHALL EXTEND TO NOT LESS THAN 6" (150 mm) ABOVE THE TOP OF THE CISTERN.

MINIMUM COVER FOR UP TO H-25 TRAFFIC APPLICATIONS:
- 12" FOR PIPE DIAMETER UP TO 96" DIAMETER
- 18" FOR DIAMETER OVER 96".

MINIMUM COVER SHALL BE MEASURED FROM THE TOP OF THE PIPE TO BOTTOM OF FLEXIBLE PAVEMENT OR TO THE TOP OF RIGID PAVEMENT. ADDITIONAL COVER MAY BE REQUIRED FOR CONSTRUCTION LOADS, FOR VEHICLES OVER 75T (68 metric tons) OR TO PREVENT FLOATATION.

FINAL BACKFILL MATERIAL SHALL BE SUITABLE MATERIALS AS DIRECTED BY THE ENGINEER OR AS INDICATED BY MANUFACTURER. FOR AREAS SUBJECTED TO HEAVY TRAFFIC LOADING, A HIGHER DEGREE OF COMPACTION IS NECESSARY AND A SEPARATION LAYER OF NON-WOVEN GEOTEXTILE MAY BE REQUIRED. COMPACTION LEVELS AND/OR GEOTEXTILE MAY BE SPECIFIED AT THE DISCRETION OF THE DESIGN ENGINEER OR MANUFACTURER'S REPRESENTATIVE.

CONSULT THE INSTALLATION MANUAL FOR ADDITIONAL INFORMATION.

GENERAL NOTES

STORM WATER MANAGEMENT SYSTEM IN ITS ENTIRETY, AS SHOWN ON THESE SHEETS, SHALL BE DESIGNED BY A CALIFORNIA LICENSED PROFESSIONAL ENGINEER. ALL COMPONENTS OF THE STORM WATER MANAGEMENT SYSTEM SHALL BE DESIGNED AND SUPPLIED BY SANTA FE WATER SYSTEMS (SFWS), EXCEPT WHERE NOTED. ANY DEVIATION, OMISSION OR SUBSTITUTION SHALL VOID TWO-YEAR WARRANTY. TWO-YEAR WARRANTY SHALL COVER THE COMPLETE SYSTEM ACCORDING TO THE PERFORMANCE PARAMETERS INDICATED ON THE DRAWING SET AS ENGINEERED BY SFWS, WHEN INSTALLED IN ACCORDANCE WITH THE SFWS DESIGN. THE WARRANTY INCLUDES ALL PARTS AND LABOR OF SHOP ASSEMBLED ITEMS AND EXCLUDES INSTALLATION OF COMPONENTS BY CONTRACTOR UNLESS OTHERWISE NOTED ON PLANS. WARRANTY COVERAGE REQUIRES REGULAR DOCUMENTED MAINTENANCE OF THE FULL SYSTEM PERFORMED BY THE OWNER OR AUTHORIZED MAINTENANCE CONTRACTOR.

PRIOR TO COMMENCEMENT OF WORK, CONTRACTOR TO REVIEW MANUFACTURER'S INSTALLATION GUIDE. IT IS THE RESPONSIBILITY OF THE CONTRACTOR AND/OR PROJECT ENGINEER TO ENSURE THAT ALL QUESTIONS ABOUT INSTALLATION ARE ADDRESSED PRIOR TO APPROVAL OF SYSTEM. ALL DETAILS FOR INSTALLATION ARE LOCATED IN THIS DRAWING PACKAGE, OR UPON REQUEST TO PIPING MANUFACTURER. ANY QUESTIONS CONCERNING THESE STANDARD DETAILS CAN BE ADDRESSED BY THE CISTERN MANUFACTURER'S REPRESENTATIVE PRIOR TO APPROVAL.

ALL ELEVATIONS, DIMENSIONS AND LOCATIONS OF RISERS AND INLETS SHALL BE VERIFIED BY THE ENGINEER OF RECORD.

PRIOR TO INSTALLATION OF THE SYSTEM, A PRE-CONSTRUCTION MEETING SHALL BE CONDUCTED. THOSE REQUIRED TO ATTEND ARE THE SUPPLIER OF THE SYSTEM, THE GENERAL CONTRACTOR, SUB-CONTRACTORS AND THE ENGINEER.

CONTRACTOR(S) SHALL FURNISH ALL LABOR, MATERIALS, EQUIPMENT AND INCIDENTALS NECESSARY TO INSTALL THE CISTERN SYSTEM, APPURTENANCES AND INCIDENTALS IN ACCORDANCE WITH THE DRAWINGS AND AS SPECIFIED HEREIN.

A STORM WATER TREATMENT DEVICE UPSTREAM OF THE CISTERN SYSTEM IS RECOMMENDED AS THE APPROPRIATE MEANS OF PRETREATING TO EXTEND THE MAINTENANCE INTERVAL ON THE SYSTEM AND REDUCE LIFE CYCLE COSTS. BOTH ENGINEERED SOLUTIONS SHALL BE PROVIDED BY A SINGLE SUPPLIER/MANUFACTURER.

PRIOR TO SYSTEM START UP, ANY ACCUMULATED WATER AND DEBRIS SHALL BE REMOVED FROM THE CISTERN TANK(S) AND ANY ACCOMPANYING TREATMENT SYSTEMS AND PUMP VAULTS.

BELOW GRADE SYSTEM MARKING TAPE, IF REQUIRED BY LOCAL ORDINANCE, CAN BE SUPPLIED UPON REQUEST. CONTACT SFWS WITH REQUIREMENT DETAILS.

NOTES:

1. STORM WATER MANAGEMENT SYSTEM IN ITS ENTIRETY, AS SHOWN ON THESE SHEETS, SHALL BE DESIGNED BY A CALIFORNIA LICENSED PROFESSIONAL ENGINEER
2. ALL COMPONENTS OF THE STORM WATER MANAGEMENT SYSTEM SHALL BE DESIGNED AND SUPPLIED BY SANTA FE WATER SYSTEMS (SFWS), EXCEPT WHERE NOTED. ANY DEVIATION, OMISSION OR SUBSTITUTION SHALL VOID TWO-YEAR WARRANTY.
3. MODULAR WETLAND TO BE MODEL MWS-6-24-5-V, MANUFACTURED BY BIOCLEAN ENVIRONMENTAL SERVICES, INC. AND SUPPLIED BY SANTA FE WATER SYSTEMS.
4. STORAGE SYSTEM TO BE 96" ALUMINIZED CMP AS SUPPLIED BY SANTA FE WATER SYSTEMS.
5. SEE CIVIL SHEETS FOR UNIT LOCATIONS.
6. ALL DIMENSIONS AND ELEVATIONS SHOWN ARE NOMINAL DIMENSIONS. IT IS THE RESPONSIBILITY OF THE ON-SITE CONTRACTOR OR CUSTOMER TO VERIFY THE ACCURACY OF ANY CRITICAL DIMENSIONS OR ELEVATIONS PRIOR TO SETTING OR INSTALLING ANY EQUIPMENT.
7. ALL MATERIALS SHALL BE DELIVERED TO THE SITE AFTER EXCAVATIONS HAVE BEEN EXCAVATED AND SHORED. THE CONTRACTOR SHALL SUPPLY A CRANE OF SUFFICIENT SIZE TO LOWER ALL PIECES INTO THE HOLE SAFELY. THE CONTRACTOR SHALL INSTALL ALL ITEMS.
8. UPON ESTABLISHMENT OF PRIOR AGREEMENT, SANTA FE WATER SYSTEMS WILL PROVIDE A REPRESENTATIVE FOR TECHNICAL ASSISTANCE ON THE DAY OF INSTALLATION TO ANSWER ANY QUESTIONS THAT MAY ARISE.
9. THE CONTRACTOR IS RESPONSIBLE FOR ALL REINFORCED CONCRETE PADS AND COLLARS, PLUMBING AND ELECTRICAL CONNECTIONS AND INSTALLATION.
10. ALL COMPONENTS PROVIDED BY SANTA FE WATER SYSTEMS SHALL BE SUITABLE FOR USE WITH OPERATIONAL AND ENVIRONMENTAL CONDITIONS.
11. PROVIDE MINIMUM 12" COVER FROM TOP OF CISTERNS TO BOTTOM OF ASPHALT CEMENT TO ACHIEVE H-20/H-25 LOADING CAPACITY.
12. SEE DETAIL SHEETS FOR DETAILS OF MODULAR WETLAND AND PUMP STATIONS.

Storm Water Management System in its entirety, as shown on these sheets, shall be designed by a California Licensed Professional Engineer. All components of the Storm Water Management System shall be designed and supplied by Santa Fe Water Systems (SFWS), except where noted. Any deviation, omission or substitution shall void two-year warranty. Two-year warranty shall cover the complete system according to the performance parameters indicated on the drawing set as engineered by SFWS, when installed in accordance with the SFWS design. The Warranty includes all parts and labor of shop assembled items and excludes installation of components by Contractor unless otherwise noted on plans. Warranty coverage requires regular documented maintenance of the full system performed by the owner or authorized maintenance contractor.

- Effective LOMRs
- Area of Undetermined Flood Hazard *Zone D*

GENERAL STRUCTURES
- Channel, Culvert, or Storm Sewer
- Levee, Dike, or Floodwall

OTHER FEATURES
- 20.2 Cross Sections with 1% Annual Chance
- 17.5 Water Surface Elevation
- Coastal Transect
- 513 Base Flood Elevation Line (BFE)
- Limit of Study
- Jurisdiction Boundary
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature

MAP PANELS
- Digital Data Available
- No Digital Data Available
- Unmapped

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 6/9/2022 at 6:22 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

Project Owner's Certification of the Preliminary Low Impact Development (LID) Plan

Project Name: ***11709 Artesia Boulevard, Artesia***

Project Number: **Vesting Tentative Tract Map No. 83834**
APN 7035-016-064

Project Address: **11709 Artesia Boulevard**
Artesia CA 90701

This Preliminary Low Impact Development (LID) Plan for the ***VTTM 83834*** project has been prepared for G3 Urban by C&V Consulting, Inc. It is intended to comply with the requirements of the City of Artesia's Conditions of Approval.

The undersigned is authorized to approve implementation of provisions of this plan as appropriate and will strive to have the plan carried out by successors consistent with the County of Los Angeles LID Manual and the intent of the NPDES storm water requirements.

"I certify under penalty of law that this document and all attachments were prepared under my jurisdiction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathered the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Section 200

A. Contact Information/List of Responsible Parties

The property contact information is:

Mitchell Gardner
G3 Urban
15235 S. Western Avenue
Gardena, CA 90249
(925) 876-9985

The property owner shall have primary responsibility and significant authority for the implementation, maintenance, and inspection of the property BMPs. Duties of the Owner include but are not limited to:

- Implementing all elements of the LID, including but not limited to:
  - Implementation of prompt and effective erosion and sediment control measures
  - Implementing all non-storm water management, and materials and waste management activities, such as: monitoring, discharges, general site clean-up□vehicle and equipment cleaning, spill control□good construction housekeeping to ensure that no materials other than storm water are discharged which may have an adverse effect on receiving waters or storm drain systems, etc.
- Inspections and Maintenance.
- Routine inspections as described in the Low Impact Development Plan.
- Ensuring elimination of all unauthorized discharges
- The Owner shall be assigned authority to mobilize crews in order to make immediate repairs to the control measures.
- Coordinate all of the necessary corrections/repairs are made immediately, and that the project complies with the LID at all times.
- Managing and report any Illicit Connections or Illegal Discharges.

Section 300

A. References

The following documents are made a part of this LID by reference:

- County of Los Angeles Department of Public Works L.I.D. Standards Manual, February 2014

Section 400 – Body of LID

A. Objectives

This Low Impact Development (LID) Plan has the following main objectives:

1) Identify all pollutant sources, including sources of sediment that may affect the quality of storm water discharges associated with daily use / activity (storm water discharges) from the property site.
2) Identify, construct, implement and maintain Best Management Practices (BMPs) to reduce or eliminate pollutants in storm water discharges and authorized non-storm water discharges from the property site.
3) Develop a maintenance schedule for BMPs designed to reduce or eliminate pollutants.

B. Project Background and Description

The project site consists of several existing lots that form rectangular shaped areas with a total gross area of 4.99 acres. The project proposes two development areas within the site, it is located at 11709 Artesia Boulevard and 17212 Alburtis Avenue, in the City of Artesia (APN:7035-016-064, 7035-020-056). The larger portion of the development is bounded by Flallon Avenue to the west, Alburtis Avenue to the east, Artesia Boulevard to the south, and an industrial building to the north. The other portion of the development is located across Alburtis Avenue.

Refer to Figure 1 for Project Site Vicinity Map.

The existing conditions of the project site consist of a vacant lot. The entire site is completely paved with no landscaping on site per geospatial images which is assumed to be 100□ impervious as the site has a negligible pervious area coverage.

The project proposes the construction of 22 residential buildings with 112 attached condominiums with private garages, private drive aisles, sidewalks, and common landscaped areas. The development site will be accessible with entrances/ exits along Flallon Avenue and Alburtis Avenue. The public streets, which will not be a part of this hydrological analysis, are to be remain in-kind to preserve the perviousness of land usage and drainage pattern per existing conditions. Drive aisles and parking areas will be composed of asphalt concrete pavement. Proposed imperviousness is delineated and analyzed per LID exhibit to be 90□ impervious.

C. Existing Site Drainage Condition

Both existing sites generally sloped in the southerly direction with elevations ranging between approximately 60.0 and 57.3 feet above mean sea level. Drainage from the existing site is conveyed as sheet flow overland mainly in the westerly direction towards Flallon Avenue and partially in the easterly direction towards Alburtis Avenue. The Overall drainage of the project site generally surface flows southwesterly to confluence

with the street flows to the existing catch basins at the public right of way adjacent to site near the corner of Artesia Boulevard and Flallon Avenue. There is an existing drainage inlet near the center of the site that collects a portion of the center of the site. As the portion of the site that collects flow is generally flat and the low point ponds to slope towards the Fallon Avenue, both sites are analyzed as a single drainage area that is tributary to the downstream system. All flow ultimately discharges to the San Gabriel River which drains to the Pacific Ocean at San Pedro Bay. Water bodies downstream of the project site are listed on the most current 303(d) list as follows:

- San Gabriel River Rach 1 (Estuary to Firestone)
  - Coliform Bacteria
- San Gabriel River Estuary
  - Copper
  - Dioxin
  - Nickel
  - Oxygen, Dissolved
- San Pedro Bay
  - Chlordane
  - DDT (tissue & sediment)
  - PCBs (Polychlorinated biphenyls)
  - Sediment Toxicity

The MS4 facilities downstream of the project site are engineered, therefore the project is exempt from Hydromodification Control requirements per LACPW LID Manual as stated below:
“Projects that discharge directly or through a storm drain into concrete or otherwise engineered channel (i.e., channelized or armored with rip-rap, shotcrete), which, in turn, discharge into receiving water that is not susceptible to hydromodification impacts.”

D. Proposed Site Drainage Conditions

Both proposed development sites drainage comprise of a single on-site drainage management area for water quality as stormwater are collected with the proposed inlets located at each entrance to the site and routed to a single treatment system prior to be released offsite. The proposed catch basin inlets and grated inlets collect the proposed site’s generated runoff to be routed to an underground detention system that feeds into a bio-filtration system via pump station for water quality treatment. The treated flow will be pumped to a parkway culvert and be routed to the downstream system. Both development sites have their own detention and treatment system following its existing drainage pattern to confluence downstream at the same point.

When the underground detention is at full capacity, the confluence of the flows will be mitigated to the proposed overflow parkway culvert through the interconnected storm drain system. The public streets catch basin is to be relocated slightly south of the existing conditions as parking is proposed along the public right of way, which will not be a part of this hydrological analysis due to it characteristic to be remain in-kind to preserve the historical drainage pattern.

In cases of storm events exceeding the design storm drain capacity, the site is graded to outlet overflow at the entrances of the site towards Flallon Avenue and Alburtis Avenue. The runoff will then continue along the street flow downstream following historical drainage pattern.

Per Geotechnical Investigation, prepared by Albus & Associates, Inc. dated December 7, 2021, based on state-provided information, the historic-high groundwater is approximately 10 feet below the ground surface. From the geotechnical perspective, the findings indicate the site is not feasible for infiltration, therefore, bio-filtration BMPs are considered for the proposed site.

Refer to Figure 2, BMP Exhibit for additional information.

E. LID Project Types, Characteristics, & Activities

Per the California Regional Water Quality Control Board Los Angeles Region MS4 Order R2021-0105 Part VIII.F, the proposed project is classified as a “Priority Development Project”.

Par VIII.F.1.i.(a) of the 2021 LARWQCB MS4 NPDES Permit defines “Priority Development Projects”, requiring Low Impact Development (LID) planning, to include “Projects equal to 1 acre or greater of disturbed area and adding more than 10,000 square feet or more of impervious surface area (collectively over the entire project site).

F. Pollutant Source Identification

The following is a list of materials to be used in the daily construction activities at the project site, which will potentially contribute to pollutants, other than sediment, to storm water runoff. Control Practices for each activity are identified below:

- Vehicle fluids, including oil, grease, petroleum, and coolants from personal vehicles.
- Landscaping materials and wastes (topsoil, plant materials, herbicides, fertilizers, mulch, pesticides)
- General trash debris and litter
- Pet waste (bacteria/ fecal coliforms)

Project proponents shall implement Site Design concepts that achieve each of the following:

- Minimize □rban Runoff
- Minimize Impervious Footprint
- Conserve Natural Areas
- Minimize Directly Connected Impervious Areas (DCIAs)

The Best Management Practices (BMPs) that have been selected for implementation on this project are detailed in the following sections.

G. Non-Structural BMPs

Non-structural BMPs are generally managerial, educational, inspection and/ or maintenance oriented. These items consist of educating employees and occupants, developing, and implementing HOA guidelines, implementing BMPs and enforcing Code requirements.

Table-1: Non-Structural Source Control BMPs

BMP	TECHNIQUE	INCLUDED? YES	INCLUDED? NO	NOTES
N1	Education for Property Owners, Tenants and Occupants	X		HOA to comply
N2	Activity Restrictions	X		HOA to comply
N3	Common Area Landscape Management	X		HOA to comply
N4	BMP Maintenance	X		HOA to maintain
N5	Title 22 CCR Compliance (How development will comply)		X	HOA to comply
N6	Local Industrial Permit Compliance		X	Not Applicable
N7	Spill Contingency Plan		X	Not Applicable
N8	□nderground Storage Tank Compliance		X	Not Applicable
N9	Hazardous Materials Disclosure Compliance		X	Not Applicable
N10	□niform Fire Code Implementation		X	Not Applicable
N11	Common Area Litter Control	X		HOA to comply
N12	Employee Training	X		HOA to comply
N13	Housekeeping of Loading Docks		X	Not Applicable
N14	Common Area Catch Basin Inspection	X		HOA to comply
N15	Street Sweeping Private Streets and Parking Lots	X		HOA to comply
N16	Retail Gasoline Outlets		X	Not Applicable

Education for Employees and Occupants

Practical informational materials will be provided to homeowners, HOA and employees on general good housekeeping practices that contribute to protection of storm water

quality. Among other things, these materials will describe the use of chemicals (including household type) that should be limited to the property, with no discharge of specified wastes via hosing or other direct discharge to gutters, catch basins and storm drains. Initially, the Owner will provide these materials. Thereafter, such materials will be available through the HOA education program.

This program must be maintained, enforced, and updated periodically by the HOA. Educational materials including, but not limited to, the materials included in the Appendix E of this plan will be made available to the employees and contractors of the HOA.

Activity Restrictions

Activities on this site will be limited to activities related to residential living. The project's Conditions, Covenants, and Restrictions (CC&Rs) will outline the activities that are restricted on the property. Such activities related to the LID include car washing, car maintenance and disposal of used motor fluids, pet waste cleanup, and trash container areas.

Community Car Wash Racks

No community car wash rack or area will be provided, therefore, vehicle washing by residents on the property will not be allowed per the CC&Rs.

Self-Contained Washing

Self-contained washing of vehicles by residents or owners on the property will not be allowed per the CC&Rs.

Outdoor Material Storage Areas

Outdoor material storage areas refer to storage areas or storage facilities solely for the storage of materials. Improper storage of materials outdoors may provide an opportunity for toxic compounds, oil and grease, heavy metals, nutrients, suspended solids, and other pollutants to enter the storm water conveyance system. Outdoor Storage by residents or owners on the property will not be allowed per the CC&Rs.

Common Area Landscaped Management

Identify on-going landscape maintenance requirements that are consistent with those in the County Water Conservation Resolution (or city equivalent) that include fertilizer and/or pesticide usage consistent with Management Guidelines for □se of Fertilizers

Runoff-Minimizing Landscape Design

As part of the design of all common area landscape areas, similar planting material with similar water requirements will be used in order to reduce excess irrigation runoff and promote surface filtration. Such common areas will be maintained by the HOA.

BMP Maintenance
The HOA will implement maintenance of each non-structural BMP and scheduled cleaning and/or maintenance of all structural BMP facilities.

Common Area Litter Control
The HOA must implement trash management and litter control procedures in common areas aimed at reducing pollution of drainage water. The HOA may contract a landscape maintenance company to provide this service during regularly scheduled maintenance which will consist of litter patrol and noting trash disposal violations and reporting the violations to the HOA for investigation.

Employee Training
A training program will be established as it would apply to future employees, contractors, and homeowners of the HOA to inform and train in maintenance activities regarding the impact of dumping oil, paints, solvents, or other potentially harmful chemicals into storm drains the proper use of fertilizers and pesticides in landscaping maintenance practices and the impacts of littering and improper water disposal.

The HOA (or a hired firm) will conduct the training program which will include targeted training sessions with specific construction disciplines (landscaping, concrete finishers, painters, etc.). See Appendix E for examples of educational materials that will be provided to the Employees.

The project's CC&Rs will include provisions for future employee training programs conducted on a yearly basis prior to the rainy season.

Drainage Facility Inspection & Maintenance
The HOA will be responsible for implementing each of the BMPs detailed in this plan. The HOA will also be responsible for cleaning and maintaining the BMPs on a regular basis. Refer to Appendix F for the Operation and Maintenance Plan. Refer to Appendix C for site specific drainage BMP information.

Catch Basin Inspection
The HOA will maintain the drainage systems, including catch basins and culverts. The HOA is required to have catch basins inspected and, if necessary, cleaned prior to the storm season, no later than October 15th each year or prior to the first 24-hour storm event, whichever occurs first. These duties may be contracted out to the landscape maintenance firm hired by the HOA. Refer to Appendix D for EPA maintenance standard for guidance. Refer to Appendix F for the Operation and Maintenance Plan to be prepared during Final Engineering Phase.

Street Sweeping in Private Streets and Parking Lots
The HOA shall have all streets and parking lots swept on a weekly basis. This procedure will be intensified around October 15th of each year prior to and throughout rain storm period.

H. Structural BMPs

Table-2 and Table-3 identifies the structural source control BMPs for Design and how each is implemented to achieve each Site Design concept. BMP fact sheets are provided by the LACDPW *Low Impact Development Standards Manual* and the California Stormwater Quality Association.

Table-2: LACDPW Source Control BMPs

BMP	TECHNIQUE	INCLUDED?		NOTES
		YES	NO	
S-1	Storm Drain Message and Signage	X		Catch basins will be appropriately marked
S-2	Outdoor Material Storage Area		X	Not Applicable
S-3	Outdoor Trash Storage and Waste Handling Area		X	Not Applicable

SD-35	Outdoor Work Areas		X	Not Applicable
SD-36	Outdoor Processing Areas		X	Not Applicable

Storm Drain Stenciling/ Signage
Phrase "No Dumping – Drains to Ocean" or equally effective phrase to be stenciled on catch basins to alert the public to the destination of pollutants discharged into storm water. This stenciling will be inspected and re-stenciled on a periodic basis by the HOA. Refer to Table 4 for maintenance frequency. Refer to Appendix D for stenciling examples.

Landscape & Irrigation System Design
As part of the design of all common area landscape irrigation shall employ water conservation principles, including, but not limited to, such provisions as water sensors, programmable irrigation times (for short cycles), etc. will be used. Such common areas will be maintained by the HOA.

Efficient Landscape System & Landscape Maintenance
Management programs will be designed and established by the HOA, who will maintain the common areas within the project site. These programs will include how to mitigate the potential dangers of fertilizer and pesticide usage (refer to the Maintenance and Frequency Table). Ongoing maintenance will be consistent with the State of California Model- Water Efficient Landscape Ordinance. Fertilizer and pesticide usage shall be consistent with County Management Guidelines for use of Fertilizers and Pesticides.

Building Materials Selection
Material selection will minimize the use of copper, galvanized metals and other materials that could add significant amounts of harmful pollutants to stormwater runoff.

Street Sweeping and Vacuuming

The HOA shall have all streets and parking lots swept on a weekly basis. This procedure will be intensified around October 15th of each year prior to and throughout rain storm period.

I. LID and Treatment BMPs

Treatment BMPs shall be installed by the developer, through the construction and development of the project, for instance landscaping and irrigation systems shall be designed by licensed landscape architects and installed by qualified contractors to specifications and City standards. The structural BMPs used for this project are summarized below:

Expected pollutants associated with this development include vehicle discharge fluids, landscaping materials and waste, litter, and pet waste. To mitigate these pollutants, the structural best management practices are summarized below.

Table-4: Treatment BMPs

BMP	NAME	INCLUDED?		IF NOT APPLICABLE, STATE BRIEF REASON
		YES	NO	
VEG-5	Vegetated Filter Strip		X	Alternative BMP selected
VEG-4	Vegetated Swale		X	Space not available for BMP
MP-40	Media Filter		X	Alternative BMP selected
MP-52	Drain Inserts		X	Alternative BMP selected
T-3	Extended Detention Basin		X	Alternative BMP selected
T-4	Wet Pond		X	Alternative BMP selected
T-2	Constructed Wetland		X	Alternative BMP selected
T-1	Sand Filter		X	Alternative BMP selected
RET-5	Permeable Pavement without an nderdrain		X	Alternative BMP selected
RET-2	Infiltration Basin		X	Alternative BMP selected
RET-3	Infiltration Trench		X	Alternative BMP selected
TC-40	Media Filter		X	Alternative BMP selected
BIO-1	Biofiltration	X		Proposed WetlandMOD will be utilized in the proposed development for the entire SWQDV.

Biofiltration: WetlandMOD Biofiltration Treatment System

The unique treatment capabilities of the 'WetlandMod' System incorporates capture, screening, hydrodynamic separation, advanced media filtration, biofiltration to reduce and control water volume in a more efficient way compared to traditional downward flow bioretention system.

The Modular Wetlands System removes a range of pollutants associated with urban run-off. Suspended Solids, Heavy metals, Pathogens, Phosphorus, oil and grease pollutants are removed from storm water runoff at a high level of efficiency. The public Agency has found that this system is an acceptable solution to biological treatment of first flush storm water during the project Entitlement Phase of the project when infiltration is not an option for a site due to Geotechnical issues with underlying soils. The Modular Wetland System treats runoff by first intercepting flow through a pre-treatment chamber and pipe inlet from the area drain storm drains and storage pipe where it's screened through a filter where trash, litter, gross solids and sediment are captured. The second stage of treatment provides treatment through biofiltration media. The perimeter filter utilizing bio-media provides physical treatment by physically and chemically capturing fine total suspended solids, metals, nutrients, and bacteria. The final stage of treatment provides treatment in the wetland chamber through sub-surface flow by biological remediation through a combination of physical, chemical, and biological processes.

The Modular Wetland System is a horizontal flow-based BMP and is adjusted based on the Manufacturer's volume design calculations per Los Angeles County bio-filtration requirement for the device at the Treatment Design Volume provided in Appendix A for this project. Since the site is not providing infiltration, the design volume is conservatively sized with a treatment capacity of 1.5 times the Stormwater Quality Design Volume, while Storage chambers are provided upstream of the biofiltration system to ensure the entire SWQDV is captured and fed to the biofiltration system.

The WetlandMod Detail provided by the Manufacturer within Appendix C verifies that the proposed WetlandMod Biofiltration System will treat the required volume within target drawdown duration of 96 hours. The calculation is copies below for reference:

Drainage Management Area (DMA)	Size (ac)	SWQDV (cf)*	SWQDV x 1.5 (cf)	MWS Model	Treatment Capacity (cf)
A	3.304	8,154.4	12,231.5	WM-L-6-24	12,712.8
B	0.248	612.1	918.1	WM-L-4-6	1,230.55

Los Angeles County Department of Public Works (LACDPW) HydroCalc Software was utilized to calculate stormwater quality design volume (SWQDV). The governing flowrate for the 85th Percentile storm event was utilized for design as it was greater than the 0.75-inch storm event. Refer to Appendix A for HydroCalc outputs.

The WetlandMOD Biofiltration Systems provide a treatment capacity sized 1.5 times the SWQDV and therefore provide more than enough treatment for the proposed development. The WetlandMOD systems will address the pollutants of concern associated with the development type. Refer to Appendix C for more information on

WetlandMOD Biofiltration System. Treatment Volumes are to be verified with proposed perviousness per final site plan during Final Engineering.

Pipe Detention Systems

The WetlandMOD Bio-filtration system requires the design volume to be stored upstream to ensure the entire treatment volume is captured and fed to the biofiltration system. Detention and/or Retention Systems shall be installed in accordance with the latest edition of ASTM D2321. Refer to Appendix C for more information on Detention Storage System.

Proposed Condition Drainage Area	Area (ac)	Water Quality Treatment Volume (cu-ft)	Proposed Detention Volume (cu-ft)
DMA-A	3.30	8,154.4	12,712.8
DMA-B	0.25	612.1	1,005.3

J. BMP Maintenance, Inspection, and Repair

Inspections will be conducted as follows:

- Annually and prior to the start of the rainy season
- Every (1) month during rainy season
- At any other time(s) or intervals of time specified in the contract documents

Repairs and/ or maintenance procedures shall be carried out at the soonest possible time.

K. Inspection, Maintenance, and Responsibility for BMPs

Table-4 and Table-5 show the lists of the post-construction BMPs (routine non-structural and structural), the required ongoing maintenance, the inspection and maintenance frequency, the inspection criteria, and the entity or party responsible for implementation, maintenance, and/or inspection.

Table-5: Non-Structural BMP Maintenance Responsibility/Frequency Matrix

BMP	RESPONSIBILITY	FREQUENCY
Homeowner/ Business owner Education, Activity Restrictions	HOA will provide educational materials. Those materials and responsibilities must be passed onto subsequent property owners.	Continuous. CC&Rs to be provided to homeowners at the time they purchase the property and updates provided by the HOA as they occur.
Common Area Landscape Management	HOA will appoint a landscape maintenance contractor	Monthly during regular maintenance and use with management guidelines for use of fertilizers and pesticides.
Parking Areas and Drive Aisle Management	HOA	The Drives Aisles are to be swept on a routine scheduled basis to facilitate the pickup of trash and debris (plant or otherwise) and to remove excessive oil, grease and build-up. During sweeping, debris is to be removed from the parking areas and drives and then scrubbed and rinsed. This sweeping schedule will be at a minimum occurrence of once a week and as necessary to rid / reduce active pollutants from the pavement areas. This maintenance requirement will be listed in the Convent, Conditions and Restrictions (CC&Rs) of this project. These CC&Rs will be recorded to the property at the County Recorder's Office and be included on the final Title report of these properties.
Litter Control by Sweeping	HOA	Weekly inspection of trash receptacles to ensure that lids are closed and pick up any excess trash on the ground, noting trash disposal violations to the HOA for remediation.
Employee Training	HOA	Monthly for maintenance personnel and employees to include the educational materials contained in the approved LID.
Common Area Catch Basin Inspection & Cleaning	HOA will appoint a landscape maintenance contractor for common areas and storm drain facilities.	Inspect basins once a month. Clean debris and silt in bottom of catch basins as needed. Intensified on or about October 15th each year or prior to the first 24-hour storm event, whichever occurs first. Refer to Appendix D.

Table-6: Structural BMP Maintenance Responsibility/ Frequency Matrix

BMP	RESPONSIBILITY	FREQUENCY
Common Area Efficient Irrigation	HOA will appoint a landscape contractor after construction	Once a week, in conjunction with maintenance activities. Verify that runoff minimizing landscape design continues to function by checking that water sensors are functioning properly, that irrigation heads are adjusted properly to eliminate overspray to hardscape areas, and to verify that irrigation timing and cycle lengths are adjusted in accordance with water demands, given time of year, weather and day or night time temperatures.
Common Area Runoff Efficient Landscape Design	HOA will appoint a landscaping contractor	Once a week in conjunction with maintenance activities and prior to finalizing any replanting schemes. Verify that plants continue to be grouped according to similar water requirements in order to reduce excess irrigation runoff.
WetlandMOD Biofiltration Vaults	HOA	WetlandMOD Biofiltration Vaults maintenance will conform to manufacturer's specifications. Please see additional information in Appendix C
Pipe Detention System	HOA	Pipe Detention System maintenance will conform to manufacturer's specifications. Please see additional information in Appendix C

L. Operation/Maintenance Funding after Project Completion

The post-construction BMPs as described above will be funded and maintained by:

Mitchell Gardner
G3 Urban
15235 S. Western Avenue
Gardena, CA 90249
(925) 876-9985

Maintenance and requirements of the maintenance for the properties will be listed in the Convent, Conditions and Restrictions (CC&Rs) of this project and will be the responsibility of the property owner at all times. These CC&Rs will be recorded to the property at the County Recorder's Office and be included on the Title report of these properties.

Figure 1:

Appendix A:
Volume and Flowrate Calculations & Hydrologic Report

The proposed development was analyzed for the 85th Percentile storm event using the LACDPW HydroCalc software. The governing design storm event is determined to be 85th percentile as it is greater than the 0.75 in storm event in accordance with the LA County BMP Design Manual. Below is a summary of the HydroCalc outputs:

85th Percentile Storm Event
0.87 in

DMA	85th Percentile Storm Event		
	Flowrate (cfs)	Design Capture Volume (cf)	1.5x Biofiltration Volume (cf)□
A	0.722	8,154.4	12,231.5
B	0.070	612.1	918.1

**The biofiltration volume capacity is conservatively designed with 1.5 times of the Design Capture Volume.*

The design capture volume (DCV) is fully retained with an interconnected pipe storage system onsite feeding the bio-filtration system via pump station prior to any overflow from the project development sites.

DMA	Design Capture Volume (cf)	Static Storage Volume (cf)	1.5x Biofiltration Volume (cf)□	Biofiltration Capacity (cf)□
A	8,154.4	12,712.8	12,231.5	12,712.8 ✓
B	612.1	1,005.3	918.1	1,230.6 ✓

**The biofiltration volume capacity is conservatively designed with 1.5 times of the Design Capture Volume.*

Description and Purpose

Street sweeping and vacuuming includes use of self-propelled and walk-behind equipment to remove sediment from streets and roadways, and to clean paved surfaces in preparation for final paving. Sweeping and vacuuming prevents sediment from the project site from entering storm drains or receiving waters.

Suitable Applications

Sweeping and vacuuming are suitable anywhere sediment is tracked from the project site onto public or private paved streets and roads, typically at points of egress. Sweeping and vacuuming are also applicable during preparation of paved surfaces for final paving.

Limitations

Sweeping and vacuuming may not be effective when sediment is wet or when tracked soil is caked (caked soil may need to be scraped loose).

Implementation

- Controlling the number of points where vehicles can leave the site will allow sweeping and vacuuming efforts to be focused, and perhaps save money.
- Inspect potential sediment tracking locations daily.
- Visible sediment tracking should be swept or vacuumed on a daily basis.
- Do not use kick brooms or sweeper attachments. These tend to spread the dirt rather than remove it.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- If not mixed with debris or trash, consider incorporating the removed sediment back into the project

Costs

Rental rates for self-propelled sweepers vary depending on hopper size and duration of rental. Expect rental rates from $58/hour (3 yd^3 hopper) to $88/hour (9 yd^3 hopper), plus operator costs. Hourly production rates vary with the amount of area to be swept and amount of sediment. Match the hopper size to the area and expect sediment load to minimize time spent dumping.

Inspection and Maintenance

- Inspect BMPs prior to forecast rain, daily during extended rain events, after rain events, weekly during the rainy season, and at two-week intervals during the non-rainy season.
- When actively in use, points of ingress and egress must be inspected daily.
- When tracked or spilled sediment is observed outside the construction limits, it must be removed at least daily. More frequent removal, even continuous removal, may be required in some jurisdictions.
- Be careful not to sweep up any unknown substance or any object that may be potentially hazardous.
- Adjust brooms frequently; maximize efficiency of sweeping operations.
- After sweeping is finished, properly dispose of sweeper wastes at an approved dumpsite.

Site Design & Landscape Planning SD-10

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- ☑ Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Each project site possesses unique topographic, hydrologic, and vegetative features, some of which are more suitable for development than others. Integrating and incorporating appropriate landscape planning methodologies into the project design is the most effective action that can be done to minimize surface and groundwater contamination from stormwater.

Approach

Landscape planning should couple consideration of land suitability for urban uses with consideration of community goals and projected growth. Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Design requirements for site design and landscapes planning should conform to applicable standards and specifications of agencies with jurisdiction and be consistent with applicable General Plan and Local Area Plan policies.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

Designing New Installations

Begin the development of a plan for the landscape unit with attention to the following general principles:

- Formulate the plan on the basis of clearly articulated community goals. Carefully identify conflicts and choices between retaining and protecting desired resources and community growth.

- Map and assess land suitability for urban uses. Include the following landscape features in the assessment: wooded land, open unwooded land, steep slopes, erosion-prone soils, foundation suitability, soil suitability for waste disposal, aquifers, aquifer recharge areas, wetlands, floodplains, surface waters, agricultural lands, and various categories of urban land use. When appropriate, the assessment can highlight outstanding local or regional resources that the community determines should be protected (e.g., a scenic area, recreational area, threatened species habitat, farmland, fish run). Mapping and assessment should recognize not only these resources but also additional areas needed for their sustenance.

Project plan designs should conserve natural areas to the extent possible, maximize natural water storage and infiltration opportunities, and protect slopes and channels.

Conserve Natural Areas during Landscape Planning

If applicable, the following items are required and must be implemented in the site layout during the subdivision design and approval process, consistent with applicable General Plan and Local Area Plan policies:

- Cluster development on least-sensitive portions of a site while leaving the remaining land in a natural undisturbed condition.

- Limit clearing and grading of native vegetation at a site to the minimum amount needed to build lots, allow access, and provide fire protection.

- Maximize trees and other vegetation at each site by planting additional vegetation, clustering tree areas, and promoting the use of native and/or drought tolerant plants.

- Promote natural vegetation by using parking lot islands and other landscaped areas.

- Preserve riparian areas and wetlands.

Maximize Natural Water Storage and Infiltration Opportunities Within the Landscape Unit

- Promote the conservation of forest cover. Building on land that is already deforested affects basin hydrology to a lesser extent than converting forested land. Loss of forest cover reduces interception storage, detention in the organic forest floor layer, and water losses by evapotranspiration, resulting in large peak runoff increases and either their negative effects or the expense of countering them with structural solutions.

- Maintain natural storage reservoirs and drainage corridors, including depressions, areas of permeable soils, swales, and intermittent streams. Develop and implement policies and

regulations to discourage the clearing, filling, and channelization of these features. Utilize them in drainage networks in preference to pipes, culverts, and engineered ditches.

- Evaluating infiltration opportunities by referring to the stormwater management manual for the jurisdiction and pay particular attention to the selection criteria for avoiding groundwater contamination, poor soils, and hydrogeological conditions that cause these facilities to fail. If necessary, locate developments with large amounts of impervious surfaces or a potential to produce relatively contaminated runoff away from groundwater recharge areas.

Protection of Slopes and Channels during Landscape Design

- Convey runoff safely from the tops of slopes.
- Avoid disturbing steep or unstable slopes.
- Avoid disturbing natural channels.
- Stabilize disturbed slopes as quickly as possible.
- Vegetate slopes with native or drought tolerant vegetation.
- Control and treat flows in landscaping and/or other controls prior to reaching existing natural drainage systems.
- Stabilize temporary and permanent channel crossings as quickly as possible, and ensure that increases in run-off velocity and frequency caused by the project do not erode the channel.
- Install energy dissipaters, such as riprap, at the outlets of new storm drains, culverts, conduits, or channels that enter unlined channels in accordance with applicable specifications to minimize erosion. Energy dissipaters shall be installed in such a way as to minimize impacts to receiving waters.
- Line on-site conveyance channels where appropriate, to reduce erosion caused by increased flow velocity due to increases in tributary impervious area. The first choice for linings should be grass or some other vegetative surface, since these materials not only reduce runoff velocities, but also provide water quality benefits from filtration and infiltration. If velocities in the channel are high enough to erode grass or other vegetative linings, riprap, concrete, soil cement, or geo-grid stabilization are other alternatives.
- Consider other design principles that are comparable and equally effective.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define “redevelopment” in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of “ redevelopment” must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under “designing new installations” above should be followed.

Redevelopment may present significant opportunity to add features which had not previously been implemented. Examples include incorporation of depressions, areas of permeable soils, and swales in newly redeveloped areas. While some site constraints may exist due to the status of already existing infrastructure, opportunities should not be missed to maximize infiltration, slow runoff, reduce impervious areas, disconnect directly connected impervious areas.

Roof Runoff Controls SD-11

Rain Garden

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- ☑ Contain Pollutants
- Collect and Convey

Description

Various roof runoff controls are available to address stormwater that drains off rooftops. The objective is to reduce the total volume and rate of runoff from individual lots, and retain the pollutants on site that may be picked up from roofing materials and atmospheric deposition. Roof runoff controls consist of directing the roof runoff away from paved areas and mitigating flow to the storm drain system through one of several general approaches: cisterns or rain barrels; dry wells or infiltration trenches; pop-up emitters, and foundation planting. The first three approaches require the roof runoff to be contained in a gutter and downspout system. Foundation planting provides a vegetated strip under the drip line of the roof.

Approach

Design of individual lots for single-family homes as well as lots for higher density residential and commercial structures should consider site design provisions for containing and infiltrating roof runoff or directing roof runoff to vegetative swales or buffer areas. Retained water can be reused for watering gardens, lawns, and trees. Benefits to the environment include reduced demand for potable water used for irrigation, improved stormwater quality, increased groundwater recharge, decreased runoff volume and peak flows, and decreased flooding potential.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment.

Design Considerations

Designing New Installations

Cisterns or Rain Barrels

One method of addressing roof runoff is to direct roof downspouts to cisterns or rain barrels. A cistern is an above ground storage vessel with either a manually operated valve or a permanently open outlet. Roof runoff is temporarily stored and then released for irrigation or infiltration between storms. The number of rain

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

barrels needed is a function of the rooftop area. Some low impact developers recommend that every house have at least 2 rain barrels, with a minimum storage capacity of 1000 liters. Roof barrels serve several purposes including mitigating the first flush from the roof which has a high volume, amount of contaminants, and thermal load. Several types of rain barrels are commercially available. Consideration must be given to selecting rain barrels that are vector proof and childproof. In addition, some barrels are designed with a bypass valve that filters out grit and other contaminants and routes overflow to a soak-away pit or rain garden.

If the cistern has an operable valve, the valve can be closed to store stormwater for irrigation or infiltration between storms. This system requires continual monitoring by the resident or grounds crews, but provides greater flexibility in water storage and metering. If a cistern is provided with an operable valve and water is stored inside for long periods, the cistern must be covered to prevent mosquitoes from breeding.

A cistern system with a permanently open outlet can also provide for metering stormwater runoff. If the cistern outlet is significantly smaller than the size of the downspout inlet (say ¼ to ½ inch diameter), runoff will build up inside the cistern during storms, and will empty out slowly after peak intensities subside. This is a feasible way to mitigate the peak flow increases caused by rooftop impervious land coverage, especially for the frequent, small storms.

Dry wells and Infiltration Trenches

Roof downspouts can be directed to dry wells or infiltration trenches. A dry well is constructed by excavating a hole in the ground and filling it with an open graded aggregate, and allowing the water to fill the dry well and infiltrate after the storm event. An underground connection from the downspout conveys water into the dry well, allowing it to be stored in the voids. To minimize sedimentation from lateral soil movement, the sides and top of the stone storage matrix can be wrapped in a permeable filter fabric, though the bottom may remain open. A perforated observation pipe can be inserted vertically into the dry well to allow for inspection and maintenance.

In practice, dry wells receiving runoff from single roof downspouts have been successful over long periods because they contain very little sediment. They must be sized according to the amount of rooftop runoff received, but are typically 4 to 5 feet square, and 2 to 3 feet deep, with a minimum of 1-foot soil cover over the top (maximum depth of 10 feet).

To protect the foundation, dry wells must be set away from the building at least 10 feet. They must be installed in solids that accommodate infiltration. In poorly drained soils, dry wells have very limited feasibility.

Infiltration trenches function in a similar manner and would be particularly effective for larger roof areas. An infiltration trench is a long, narrow, rock-filled trench with no outlet that receives stormwater runoff. These are described under Treatment Controls.

Pop-up Drainage Emitter

Roof downspouts can be directed to an underground pipe that daylights some distance from the building foundation, releasing the roof runoff through a pop-up emitter. Similar to a pop-up irrigation head, the emitter only opens when there is flow from the roof. The emitter remains flush to the ground during dry periods, for ease of lawn or landscape maintenance.

Foundation Planting

Landscape planting can be provided around the base to allow increased opportunities for stormwater infiltration and protect the soil from erosion caused by concentrated sheet flow coming off the roof. Foundation plantings can reduce the physical impact of water on the soil and provide a subsurface matrix of roots that encourage infiltration. These plantings must be sturdy enough to tolerate the heavy runoff sheet flows, and periodic soil saturation.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Efficient Irrigation SD-12

Design Objectives

- ☑ Maximize Infiltration
- ☑ Provide Retention
- ☑ Slow Runoff
- Minimize Impervious Land Coverage
- Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Irrigation water provided to landscaped areas may result in excess irrigation water being conveyed into stormwater drainage systems.

Approach

Project plan designs for development and redevelopment should include application methods of irrigation water that minimize runoff of excess irrigation water into the stormwater conveyance system.

Suitable Applications

Appropriate applications include residential, commercial and industrial areas planned for development or redevelopment. (Detached residential single-family homes are typically excluded from this requirement.)

Design Considerations

Designing New Installations

The following methods to reduce excessive irrigation runoff should be considered, and incorporated and implemented where determined applicable and feasible by the Permittee:

- Employ rain-triggered shutoff devices to prevent irrigation after precipitation.
- Design irrigation systems to each landscape area's specific water requirements.
- Include design featuring flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines.
- Implement landscape plans consistent with County or City water conservation resolutions, which may include provision of water sensors, programmable irrigation times (for short cycles), etc.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Design timing and application methods of irrigation water to minimize the runoff of excess irrigation water into the storm water drainage system.
- Group plants with similar water requirements in order to reduce excess irrigation runoff and promote surface filtration. Choose plants with low irrigation requirements (for example, native or drought tolerant species). Consider design features such as:
  - Using mulches (such as wood chips or bar) in planter areas without ground cover to minimize sediment in runoff
  - Installing appropriate plant materials for the location, in accordance with amount of sunlight and climate, and use native plant materials where possible and/or as recommended by the landscape architect
  - Leaving a vegetative barrier along the property boundary and interior watercourses, to act as a pollutant filter, where appropriate and feasible
  - Choosing plants that minimize or eliminate the use of fertilizer or pesticides to sustain growth
- Employ other comparable, equally effective methods to reduce irrigation water runoff.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. The definition of " redevelopment" must be consulted to determine whether or not the requirements for new development apply to areas intended for redevelopment. If the definition applies, the steps outlined under "designing new installations" above should be followed.

Storm Drain Signage SD-13

Design Objectives

- Maximize Infiltration
- Provide Retention
- Slow Runoff
- Minimize Impervious Land Coverage
- ☑ Prohibit Dumping of Improper Materials
- Contain Pollutants
- Collect and Convey

Description

Waste materials dumped into storm drain inlets can have severe impacts on receiving and ground waters. Posting notices regarding discharge prohibitions at storm drain inlets can prevent waste dumping. Storm drain signs and stencils are highly visible source controls that are typically placed directly adjacent to storm drain inlets.

Approach

The stencil or affixed sign contains a brief statement that prohibits dumping of improper materials into the urban runoff conveyance system. Storm drain messages have become a popular method of alerting the public about the effects of and the prohibitions against waste disposal.

Suitable Applications

Stencils and signs alert the public to the destination of pollutants discharged to the storm drain. Signs are appropriate in residential, commercial, and industrial areas, as well as any other area where contributions or dumping to storm drains is likely.

Design Considerations

Storm drain message markers or placards are recommended at all storm drain inlets within the boundary of a development project. The marker should be placed in clear sight facing toward anyone approaching the inlet from either side. All storm drain inlet locations should be identified on the development site map.

Designing New Installations

The following methods should be considered for inclusion in the project design and show on project plans:

- Provide stenciling or labeling of all storm drain inlets and catch basins, constructed or modified, within the project area with prohibitive language. Examples include “NO DUMPING

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

– DRAINS TO OCEAN" and/or other graphical icons to discourage illegal dumping.

- Post signs with prohibitive language and/or graphical icons, which prohibit illegal dumping at public access points along channels and creeks within the project area.

Note - Some local agencies have approved specific signage and/or storm drain message placards for use. Consult local agency stormwater staff to determine specific requirements for placard types and methods of application.

Redeveloping Existing Installations

Various jurisdictional stormwater management and mitigation plans (SUSMP, WQMP, etc.) define "redevelopment" in terms of amounts of additional impervious area, increases in gross floor area and/or exterior construction, and land disturbing activities with structural or impervious surfaces. If the project meets the definition of "redevelopment", then the requirements stated under " designing new installations" above should be included in all project design plans.

Additional Information

Maintenance Considerations

- Legibility of markers and signs should be maintained. If required by the agency with jurisdiction over the project, the owner/operator or homeowner's association should enter into a maintenance agreement with the agency or record a deed restriction upon the property title to maintain the legibility of placards or signs.

Placement

- Signage on top of curbs tends to weather and fade.

- Signage on face of curbs tends to be worn by contact with vehicle tires and sweeper brooms.

Supplemental Information

Examples

- Most MS4 programs have storm drain signage programs. Some MS4 programs will provide stencils, or arrange for volunteers to stencil storm drains as part of their outreach program.

Ventura Countywide Technical Guidance Manual for Stormwater Quality Control Measures, July 2002.

BIO-1: Biofiltration

Definition

A biofiltration area is a vegetated shallow depression that is designed to receive and treat stormwater runoff from downspouts, piped inlets, or sheet flow from adjoining paved areas. A shallow ponding zone is provided above the vegetated surface for temporary storage of stormwater runoff. During storm events, stormwater runoff accumulates in the ponding zone and gradually infiltrates the surface and filters through the biofiltration soil media before being collected by an underdrain system.

Stormwater runoff treatment occurs through a variety of natural mechanisms as stormwater runoff filters through the vegetation root zone. In biofiltration areas, microbes and organic material in the biofiltration soil media help promote the adsorption of pollutants (e.g., dissolved metals and petroleum hydrocarbons) into the soil matrix. Plants utilize soil moisture and promote the drying of the soil through transpiration. Biofiltration areas are typically planted with native, drought-tolerant plant species that do not require fertilization and can withstand wet soils for at least 96 hours.

A schematic of a typical biofiltration area is presented in Figure E-7.

LID Ordinance Requirements

Biofiltration can be used as an alternative compliance measure.

Pollutant of Concern	Treated by Biofiltration?
Suspended solids	No
Total phosphorus	No
Total nitrogen	Yes
Total Kjeldahl nitrogen	Yes
Cadmium, total	No
Chromium, total	Yes
Copper, total	No
Lead, total	Yes
Zinc, total	No

Source: Treatment Best Management Practices Performance, Los Angeles Regional Water Quality Control Board, December 9, 2013.

Advantages

- Has a low cost for installation
- Enhances site aesthetics
- Requires little maintenance

Disadvantages

- May require individual owner/tenants to perform maintenance

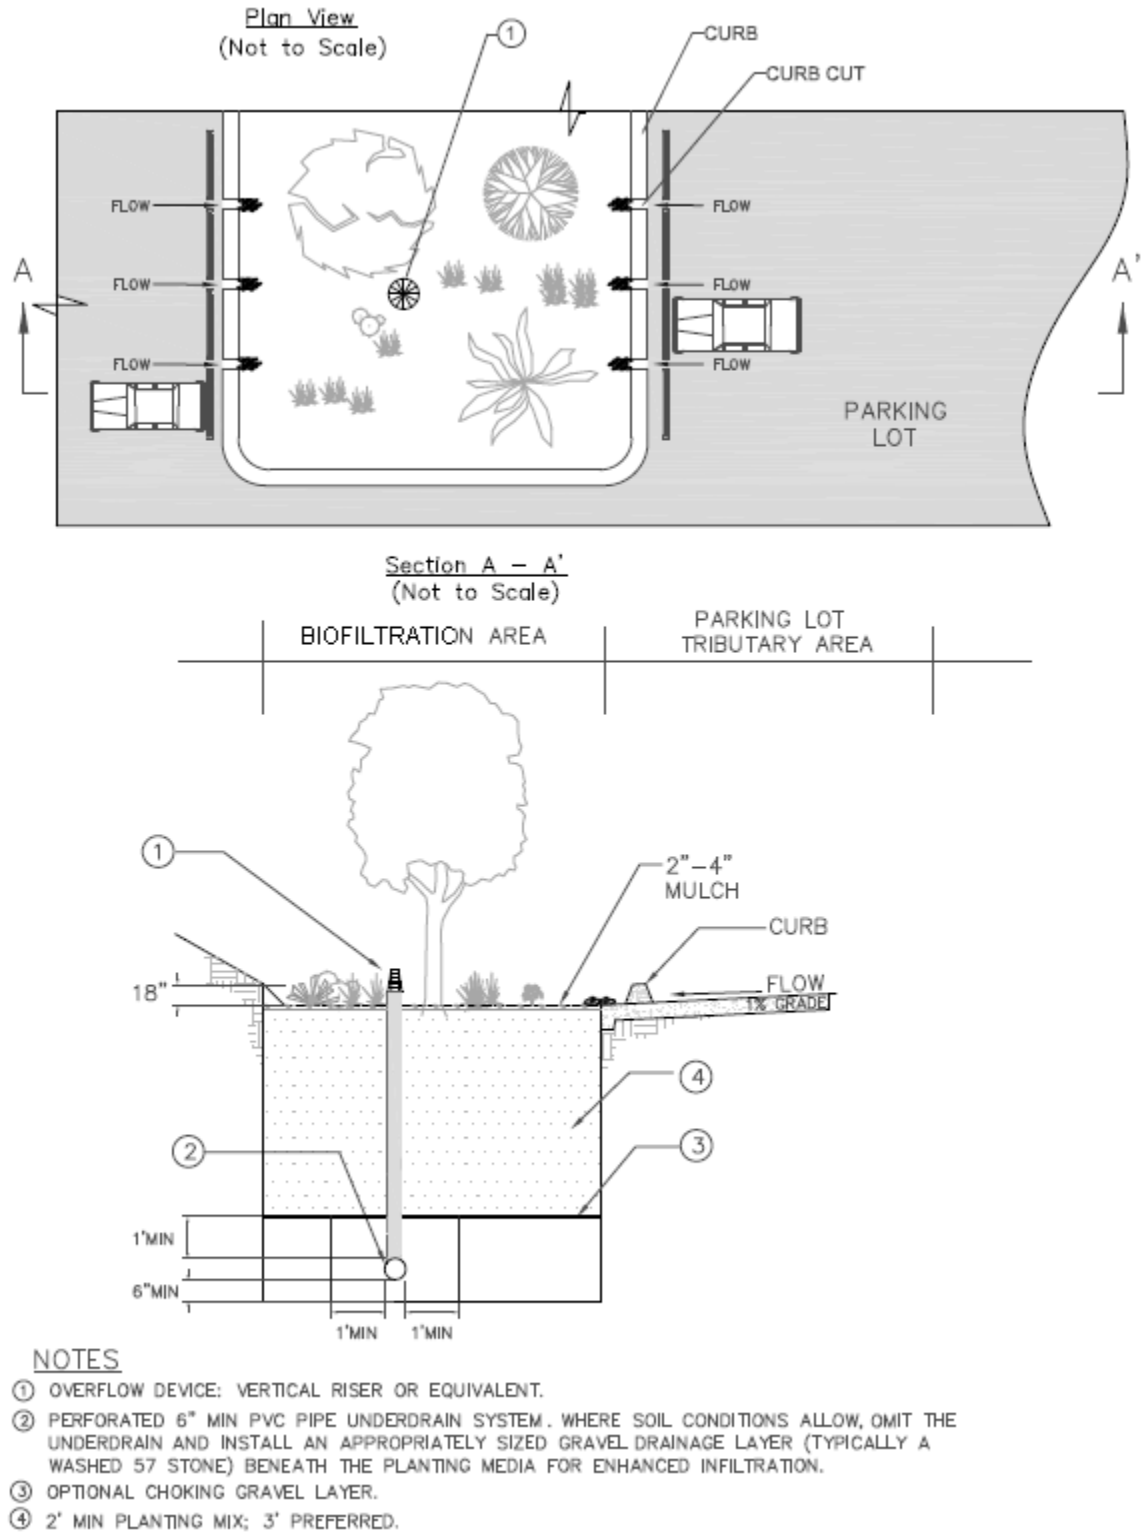

Figure E-7. Biofiltration Area Schematic

General Constraints and Implementation Considerations

- Biofiltration areas can be applied in various settings including, but not limited to:
  - Individual lots for rooftop, driveway, and other on-site impervious surface
  - Shared facilities located in common areas for individual lots
  - Areas within loop roads or cul-de-sacs
  - Landscaped parking lot islands
  - Within right-of-ways along roads
  - Common landscaped areas in apartment complexes or other multi-family housing designs
  - Parks and along open space perimeter
- If tire curbs are provided and parking stalls are shortened, cars are allowed to overhang the biofiltration area.
- Biofiltration areas must be located sufficiently far from structure foundations to avoid damage to structures (as determined by a certified structural or geotechnical engineer).
- Any parking areas bordering the biofiltration area must be monolithically poured concrete or deepended curb concrete to provide structural stability to the adjacent parking section.
- Geomembrane liners must be used in areas subject to spills or pollutant hot spots.
- During construction activities should avoid compaction of native soils below planting media layer or gravel zone.
- Stormwater runoff must be diverted around the biofiltration area during the period of vegetation establishment. If diversion is not feasible, the graded and seeded areas must be protected with suitable sediment controls (i.e., silt fences).All damaged areas should be repaired, seeded, or re-planted immediately.
- The general landscape irrigation system should incorporate the biofiltration area, as applicable.

Design Specifications

The following sections describe the design specifications for biofiltration areas.

Geotechnical

Due to the potential to contaminate groundwater, cause slope instability, impact surrounding structures, and potential for insufficient infiltration capacity, an extensive geotechnical site investigation must be conducted during the site planning process to verify site suitability for biofiltration. All geotechnical investigations must be performed according to the most recent GMED Policy GS 200.1. Soil infiltration rates and the

groundwater table depth must be evaluated to ensure that conditions are satisfactory for proper operation of a biofiltration area. The project applicant must demonstrate through infiltration testing, soil logs, and the written opinion of a licensed civil engineer that sufficiently permeable soils exist on-site to allow the construction of a properly functioning biofiltration system.

Biofiltration areas are appropriate for soils with a minimum corrected in-situ infiltration rate of 0.3 in/hr. The geotechnical report must determine if the proposed project site is suitable for a biofiltration area and must recommend a design infiltration rate (see "Design Infiltration Rate" under the "Sizing" section). The geotechnical investigation should be such that a good understanding is gained as to how the stormwater runoff will move through the soil (horizontally or vertically) and if there are any geological conditions that could inhibit the movement of water.

Pretreatment

Pretreatment refers to design features that provide settling of large particles before stormwater runoff enters a stormwater quality control measure in order to reduce the long-term maintenance burden. Pretreatment should be provided to reduce the sediment load entering a biofiltration area in order to maintain the infiltration rate of the biofiltration area. To ensure that biofiltration areas are effective, the project applicant must incorporate pretreatment devices that provide sediment removal (e.g., vegetated swales, vegetated filter strips, sedimentation manholes, and proprietary devices). The use of at least two pretreatment devices is highly recommended for biofiltration areas.

Geometry

- Biofiltration areas must be sized to capture and treat 1.5 times the SWQDv that is not reliably retained on the project site with an 18-inch maximum ponding depth.
- The planting soil depth must be a minimum of two feet, although three feet is preferred. The planting soil depth should provide a beneficial root zone for the chosen vegetation and adequate water storage for the stormwater runoff. A deeper planting soil depth will also provide a smaller surface area footprint.
- A gravel storage layer below the biofiltration area soil media is required to provide adequate temporary storage to retain 1.5 times the SWQDv that is not reliably retained on the project site and to promote infiltration.

Sizing

Biofiltration areas are sized using a simple sizing method where 1.5 times the SWQDv that is not reliably retained on the project site must be completely filtered within 96 hours. If the incoming stormwater runoff flow rate is lower than the long term filtration rate, above ground storage does not need to be provided. If the incoming stormwater runoff flow rate is higher than the long term filtration rate, above ground storage shall be provided (see steps below).

Step 1: Calculate the design volume

Biofiltration areas should be sized to capture and treat 1.5 times the portion of the SWQDv (see Section 6 for SWQDv calculation procedures) that is not reliability retained on the project site, as calculated by the equation below:

$$V_B = 1.5 \times (SWQDv - V_R)$$

Where:

V_B = Biofiltration volume [ft^3];
SWQDv = Stormwater quality design volume [ft^3]; and
V_R = Volume of stormwater runoff reliably retained on-site [ft^3].

Step 2: Calculate the design infiltration rate

Determine the corrected in-situ infiltration rate (f_{design}) of the native soil using the procedures described in the most recent GMED Policy GS 200.1.

Step 3: Calculate the surface area

Select a surface ponding depth (d) that satisfies the geometric criteria and meets the site constraints. Selecting a deeper ponding depth (up to 1.5 ft) generally yields a smaller footprint, however, it will require greater consideration for public safety, energy dissipation, and plant selection.

Calculate the time for the selected ponding depth to filter through the planting media using the following equation:

$$\mathrm{d} = t_p \times \frac{\mathrm{f_{design}}}{12}$$

Where:

d = Ponding depth (max 1.5 ft) [ft];
t_p = Required detention time for surface ponding (max 96 hr) [hr]; and
f_{design} = Design infiltration rate [in/hr].

If t_p exceeds 96 hours, reduce surface ponding depth (d). In nearly all cases, t_p should not approach 96 hours unless f_{design} is low.

Calculate the required infiltrating surface (filter bottom area) using the following equation:

$$A = \frac{V_B}{d}$$

Where:

A = Bottom surface area of biofiltration area [ft^2];
V_B = Biofiltration design volume [ft^3]; and
d = Ponding depth (max 1.5 ft) [ft].

Flow Entrance and Energy Dissipation

Maintain a minimum slope of 1 percent for pervious surfaces and 0.5 percent for impervious surfaces to the biofiltration area inlet. The following types of flow entrance can be used for biofiltration cells:

- Level spreaders (i.e., slotted curbs) can be used to facilitate sheet flow.
- Dispersed, low velocity flow across a landscape area. Dispersed flow may not be possible given space limitations or if the biofiltration area is controlling roadway or parking lot flows where curbs are mandatory.
- Dispersed flow across pavement or gravel and past wheel stops for parking areas.
- Flow spreading trench around perimeter of biofiltration area. May be filled with pea gravel or vegetated with 3:1 side slopes similar to a swale. A vertical-walled open trench may also be used at the discretion of LACDPW.
- Curb cuts for roadside or parking lot areas, if approved by LACDPW: curb cuts should include rock or other erosion controls in the channel entrance to dissipate energy. Flow entrance should drop two to three inches from curb line and provide an area for settling and periodic removal of sediment and coarse material before flow dissipates to the remainder of the biofiltration area.
- Piped entrances, such as roof downspouts, should include rock, splash blocks, or other erosion controls at the entrance to dissipate energy and disperse flows.
- Woody plants (trees, shrubs, etc.) can restrict or concentrate flows and can be damaged by erosion around the root ball and must not be placed directly in the entrance flow path.

Drainage

Biofiltration areas must be designed to drain below the planting soil in less than 96 hours. Soils must be allowed to dry out periodically in order to restore hydraulic capacity to receive stormwater runoff from subsequent storm events, maintain infiltration rates, maintain adequate soil oxygen levels for healthy soil biota and vegetation, and provide proper soil conditions for biodegradation and retention of pollutants.

Underdrain

Biofiltration areas require an underdrain to collect and discharge stormwater runoff that has been filtered through the soil media, but not infiltrated, to another stormwater quality control measure, storm drain system, or receiving water. The underdrain must have a mainline diameter of eight inches using slotted PVC SDR 26 or PVC C9000. Slotted PVC allows for pressure water cleaning and root cutting, if necessary. The slotted pipe

should have two to four rows of slots cut perpendicular to the axis of the pipe or at right angles to the pitch of corrugations. Slots should be 0.04 to 0.1 inches wide with a length of 1 to 1.25 inches. Slots should be longitudinally-spaced such that the pipe has a minimum of one square inch opening per lineal foot and should face down.

The underdrain should be placed in a gravel envelope (Class 2 Permeable Material per Caltrans Spec. 68-1.025) that measures three feet wide and six inches deep. The underdrain is elevated from the bottom of the biofiltration area by six inches within the gravel envelope to create a fluctuating anaerobic/aerobic zone below the underdrain to facilitate denitrification within the anaerobic/anoxic zone and reduce nutrient concentrations. The top and sides of the underdrain pipe should be covered with gravel to a minimum depth of 12 inches. The underdrain and gravel envelope should be covered with a geomembrane liner to prevent clogging. The following aggregate should be used for the gravel envelope:

Particle Size (ASTM D422)	% Passing by Weight
¾ inch	100%
¼ inch	30-60%
#8	20-50%
#50	3-12%
#200	0-1%

Underdrains should be sloped at a minimum of 0.5 percent and must drain freely to an approved discharge point.

Rigid non-perforated observation pipes with a diameter equal to the underdrain diameter should be connected to the underdrain to provide a clean-out port as well as an observation well to monitor drainage rates. The wells/clean-outs should be connected to the perforated underdrain with the appropriate manufactured connections. The wells/clean-outs should extend six inches above the top elevation of the biofiltration area mulch, and should be capped with a lockable screw cap. The ends of underdrain pipes not terminating in an observation well/clean-out should also be capped.

Hydraulic Restriction Layer

Lateral infiltration pathways may need to be restricted due to the close proximity of roads, foundations, or other infrastructure. A geomembrane liner, or other equivalent waterproofing, may be placed along the vertical walls to reduce lateral flows. This geomembrane liner must have a minimum thickness of 30 mils and meet the requirements of Table E-12. Generally, waterproof barriers should not be placed on the bottom of the biofiltration unit, as this would prevent incidental infiltration which is important to meeting the required pollutant load reduction.

Table E-12. Geomembrane Liner Specifications for Biofiltration Areas

Parameter	Test Method	Specifications
Material		Nonwoven geomembrane liner
Unit weight		8 oz/yd^3 (minimum)
Filtration rate		0.08 in/sec (minimum)
Puncture strength	ASTM D-751 (Modified)	125 lbs (minimum)
Mullen burst strength	ASTM D-751	400 lb/in^2 (minimum)
Tensile strength	AST D-1682	300 lbs (minimum)
Equiv. opening size	US Standard Sieve	No. 80 (minimum)

Planting/Storage Media

- The planting media placed in the biofiltration area should achieve a long-term, in-place infiltration rate of at least 5 in/hr. Higher infiltration rates of up to 12 in/hr are permissible. The biofiltration soil media must retain sufficient moisture to support vigorous plant growth.
- The planting media mix must consist of 60 to 80 percent sand and 20 to 40 percent compost.
- Sand should be free of wood, waste, coatings such as clay, stone dust, carbonate, or any other deleterious material. All aggregate passing the No. 200 sieve size should be non-plastic. Sand for biofiltration should be analyzed by an accredited laboratory using #200, #100, #40, #30, #16, #8, #4, and 3/8 sieves (ASTM D422 or as approved by the local permitting authority) and meet the following gradations (Note: all sand complying with ASTM C33 for fine aggregate comply with the gradation requirements listed below):

Particle Size (ASTM D422)	% Passing by Weight
3/8 inch	100%
#4	90-100%
#8	70-100%
#16	40-95%
#30	15-70%
#40	5-55%
#110	0-15%
#200	0-5%

Note: The gradation of the sand component of the biofiltration soil media is believed to be a major factor in the infiltration rate of the media mix. If the desired hydraulic conductivity of the biofiltration soil media cannot be achieved within the specified proportions of sand and compost (#2), then it may be necessary to utilize sand at the coarser end of the range specified minimum percent passing.

- Compost should be a well-decomposed, stable, weed-free organic matter source derived from waste materials including yard debris, wood wastes, or other organic material not including manure or biosolids meeting standards developed by the USCC. The product shall be certified through the USCC STA Program (a compost testing and information disclosure program). Compost quality shall be verified via a laboratory analysis to be:
    - Feedstock materials must be specified and include one or more of the following: landscape/yard trimmings, grass clippings, food scraps, and agricultural crop residues.
    - pH between 6.5 and 8.0 (may vary with plant palette)
    - Organic Matter: 35 to 75 percent dry weight basis
    - Carbon and Nitrogen Ratio: 15:1 < C:N < 25:1
    - Maturity/Stability: Compost must have a dark brown color and a soil-like odor. Compost exhibiting a sour or putrid smell, containing recognizable grass or leaves, or is hot (120°F) upon delivery or rewetting is not acceptable.
    - Toxicity: any one of the following measures is sufficient to indicate non-toxicity:
        - NH_4:NH_3 < 3
        - Ammonium < 500 ppm, dry weight basis
        - Seed germination > 80 percent of control
        - Plant trials > 80 percent of control
        - Solvita® > 5 index value
    - Nutrient content:
        - Total Nitrogen content ≥ 0.9 percent preferred
        - Total Boron should be < 80 ppm; soluble boron < 2.5 ppm
    - Salinity: < 6.0 mmhos/cm
    - Compost for biofiltration area should be analyzed by an accredited laboratory using #200, ¼-inch, ½-inch, and 1-inch sieves (ASTM D422) and meet the gradation requirements in the table below:

Particle Size (ASTM D422)	% Passing by Weight
1 inch	99-100
½ inch	90-100
¼ inch	40-90
#200	2-10

Tests should be sufficiently recent to represent the actual material that is anticipated to be delivered to the site. If processes or sources used by the supplier have changed significantly since the most recent testing, new tests should be requested.

The gradation of compost used in biofiltration soil media is believed to play an important role in the saturated infiltration rate of the media. To achieve a higher saturated infiltration rate, it may be necessary to utilize compost at the coarser end of the range (minimum percent passing). The percent passing the #200 sieve (fines) is believed to be the most important factor in hydraulic conductivity.

In addition, coarser compost mix provides more heterogeneity of the biofiltration soil media, which is believed to be advantageous for more rapid development of soil structure needed to support healthy biological processes. This may be an advantage for plant establishment with lower nutrient and water input.

- Biofiltration soil media not meeting the above criteria should be evaluated on a case-by-case basis. Alternative biofiltration soil media must meet the following specifications:

  "Soils for biofiltration facilities must be sufficiently permeable to infiltrate stormwater runoff at a minimum of rate of 5 in/hr during the life of the facility, and provide sufficient retention of moisture and nutrients to support healthy vegetation." The following steps shall be followed by LACDPW to verify that alternative biofiltration soil media mixes meet the specification:

  - Submittals – The applicant must submit to LACDPW for approval:
    - A sample of mixed biofiltration soil media.
    - Certification from the soil supplier or an accredited laboratory that the biofiltration soil media meets the requirements of this specification.
    - Certification from an accredited geotechnical testing laboratory that the biofiltration soil media has an infiltration rate between 5 and 12 in/hr.
    - Organic content test results of the biofiltration soil media. Organic content test shall be performed in accordance with the Testing Methods for the Examination of Compost and Composting (TMECC) 05.07A, "Loss-On-Ignition Organic Matter Method".
    - Organic grain size analysis results of mixed biofiltration soil media performed in accordance with ASTM D422, Standard Test Method for Particle Size Analysis of Soils.
    - A description of the equipment and methods used to mix the sand and compost to produce the biofiltration soil media.
  - The name of the testing laboratory(ies) and the following information:

- Contact person(s)
- Address(es)
- Phone contact(s)
- E-mail address(es)
- Qualifications of laboratory(ies) and personnel including date of current certification by STA, ASTM, or approved equal.

o Biofiltration soils shall be analyzed by an accredited laboratory using #200 and ½-inch sieves (ASTM D422 or as approved by LACDPW), and meet the gradation described in the table below:

Particle Size (ASTM D422)	% Passing by Weight
½ inch	97-100
#200	2-5

- Biofiltration soil media shall be analyzed by an accredited geotechnical laboratory for the following tests:
  - o Moisture – density relationships (compaction tests) must be conducted on biofiltration soil media. Biofiltration soil media for the permeability test shall be compacted to 85 to 90 percent of the maximum dry density (ASTM D1557).
  - o Constant head permeability testing in accordance with ASTM D2434 shall be conducted on a minimum of two samples with a 6-inch mold and vacuum saturation.
- Mulch is recommended for the purpose of retaining moisture, preventing erosion, and minimizing weed growth. Projects subject to the California Model Water Efficiency Landscaping Ordinance (or comparable local ordinance) will be required to provide at least 2 inches of mulch. Aged mulch, also called compost mulch, reduces the ability of weeds to establish, keeps soil moist, and replenishes soil nutrients. Biofiltration areas must be covered with two to four inches (average three inches) of mulch at the start and an annual placement (preferably in June after weeding) of one to two inches of mulch beneath plants.
- The planting media design height must be marked appropriately, such as a collar on the overflow device or with a stake inserted two feet into the planting media and notched, to show biofiltration surface level and ponding level.

Vegetation

Prior to installation, a licensed landscape architect must certify that all plants, unless otherwise specifically permitted, conform to the standards of the current edition of American Standard for Nursery Stock as approved by the American Standards Institute, Inc. All plant grades shall be those established in the current edition of American Standards for Nursery Stock.

- Shade trees must have a single main trunk. Trunks must be free of branches below the following heights:

CALIPER (in)	Height (ft)
1½-2½	5
3	6

- Plants must be tolerant of summer drought, ponding fluctuations, and saturated soil conditions for 96 hours.
- It is recommended that a minimum of three types of tree, shrubs, and/or herbaceous groundcover species be incorporated to protect against facility failure due to disease and insect infestations of a single species.
- Native plant species and/or hardy cultivars that are not invasive and do not require chemical inputs must be used to the maximum extent practicable.

The biofiltration area should be vegetated to resemble a terrestrial forest community ecosystem, which is dominated by understory trees, a shrub layer, and herbaceous ground cover. Select vegetation that:

- Is suited to well-drained soil;
- Will be dense and strong enough to stay upright, even in flowing water;
- Has minimum need for fertilizers;
- Is not prone to pests and is consistent with Integrated Pest Management practices; and
- Is consistent with local water conservation ordinance requirements.

Irrigation System

Provide an irrigation system to maintain viability of vegetation, if applicable. The irrigation system must be designed to local code or ordinance specifications.

Restricted Construction Materials

The use of pressure-treated wood or galvanized metal at or around a biofiltration area is prohibited.

Overflow Device

An overflow device is required at the 18-inch ponding depth. The following, or equivalent, should be provided:

- A vertical PVC pipe (SDR 26) to act as an overflow riser.
- The overflow riser(s) should be eight inches or greater in diameter, so it can be cleaned without damage to the pipe.

- The inlet to the riser should be at the ponding depth (18 inches for fenced biofiltration areas and 6 inches for areas that are not fenced), and be capped with a spider cap to exclude floating mulch and debris. Spider caps should be screwed in or glued (e.g., not removable). The overflow device should convey stormwater runoff in excess of 1.5 times the SWQDv that is not reliably retained on the project site to an approved discharge location (another stormwater quality control measure, storm drain system, or receiving water).

Maintenance Requirements

Maintenance and regular inspections are important for proper function of biofiltration areas. Biofiltration areas require annual plant, soil, and mulch layer maintenance to ensure optimal infiltration, storage, and pollutant removal capabilities. In general, biofiltration maintenance requirements are typical landscape care procedures and include:

- Irrigate plants as needed during prolonged dry periods. In general, plants should be selected to be drought-tolerant and not require irrigation after establishment (two to three years).
- Inspect flow entrances, ponding area, and surface overflow areas periodically, and replace soil, plant material, and/or mulch layer in areas if erosion has occurred. Properly-designed facilities with appropriate flow velocities should not cause erosion except potentially during in extreme events. If erosion occurs, the flow velocities and gradients within the biofiltration area and flow dissipation and erosion protection strategies in the pretreatment area and flow entrance should be reassessed. If sediment is deposited in the biofiltration area, identify the source of the sediment within the tributary area, stabilize the source, and remove excess surface deposits.
- Prune and remove dead plant material as needed. Replace all dead plants, and if specific plants have a high mortality rate, assess the cause and, if necessary, replace with more appropriate species.
- Remove weeds as needed until plants are established. Weed removal should become less frequent if the appropriate plant species are used and planting density is attained.
- Select the proper soil mix and plants for optimal fertility, plant establishment, and growth to preclude the use of nutrient and pesticide supplements. By design, biofiltration facilities are located in areas where phosphorous and nitrogen levels are often elevated such that these should not be limiting nutrients. Addition of nutrients and pesticides may contribute pollutant loads to receiving waters.
- In areas where heavy metals deposition is likely (i.e., tributary areas to industrial, vehicle dealerships/repair, parking lots, roads), replace mulch annually. In areas where metals deposition is less likely (i.e., residential lots), replace or add mulch as needed to maintain a two to three inch depth at least once every two years.

- Analyze soil for fertility and pollutant levels if necessary. Biofiltration soil media are designed to maintain long-term fertility and pollutant processing capability.
- Eliminate standing water to prevent vector breeding.
- Inspect overflow devices for obstructions or debris, which should be removed immediately. Repair or replace damaged pipes upon discovery.
- Inspect, and clean if necessary, the underdrain.

A summary of potential problems that need to be addressed by maintenance activities is presented in Table E-13.

The County requires execution of a maintenance agreement to be recorded by the property owner for the on-going maintenance of any privately-maintained stormwater quality control measures. The property owner is responsible for compliance with the maintenance agreement. A sample maintenance agreement is presented in Appendix H.

Table E-13. Biofiltration Troubleshooting Summary

Problem	Conditions When Maintenance Is Needed	Maintenance Required
Vegetation	Overgrown vegetation	Mow and prune vegetation as appropriate.
	Presence of invasive, poisonous, nuisance, or noxious vegetation or weeds	Remove this vegetation and plant native species as needed.
Trash and Debris	Trash, plant litter, and dead leaves present	Remove and properly dispose of trash and debris.
Irrigation (if applicable)	Not functioning correctly	Check irrigation system for clogs or broken lines and repair as needed.
Inlet/Overflow	Inlet/overflow areas clogged with sediment and/or debris	Remove material.
	Overflow pipe blocked or broken	Repair as needed.
Erosion/Sediment Accumulation	Splash pads or spreader incorrectly placed Presence of erosion or sediment accumulation	Check inlet structure to ensure proper function. Repair, or replace if necessary, the inlet device. Repair eroded areas with gravel as needed. Re-grade the biofiltration area as needed.
Contaminants and Pollution	Any evidence of oil, gasoline, contaminants, or other pollutants	Remove any evidence of visual contamination from floatables such as oil and grease.
Standing water	Standing water observed more than 96 hours after storm event	Inspect, and clean as needed, the underdrain to ensure proper function. Clear clogs as needed. Remove and replace planter media (sand, gravel, topsoil, mulch) and vegetation.

Project specific details and pre-treatment system detail to be provided prior to final approval.

CONTECH®
ENGINEERED SOLUTIONS

Modular Wetlands® Linear Stormwater Biofiltration

The experts you need to solve your stormwater challenges

Contech is the leader in stormwater solutions, helping engineers, contractors and owners with infrastructure and land development projects throughout North America.

With our responsive team of stormwater experts, local regulatory expertise and flexible solutions, Contech is the trusted partner you can count on for stormwater management solutions.

Your Contech Team

STORMWATER CONSULTANT

It's my job to recommend the best solution to meet permitting requirements.

STORMWATER DESIGN ENGINEER

I work with consultants to design the best approved solution to meet your project's needs.

REGULATORY MANAGER

I understand the local stormwater regulations and what solutions will be approved.

SALES ENGINEER

I make sure our solutions meet the needs of the contractor during construction.

Contech is your partner in stormwater management solutions

Restoring Nature's Presence in Urban Areas – Modular Wetlands® Linear

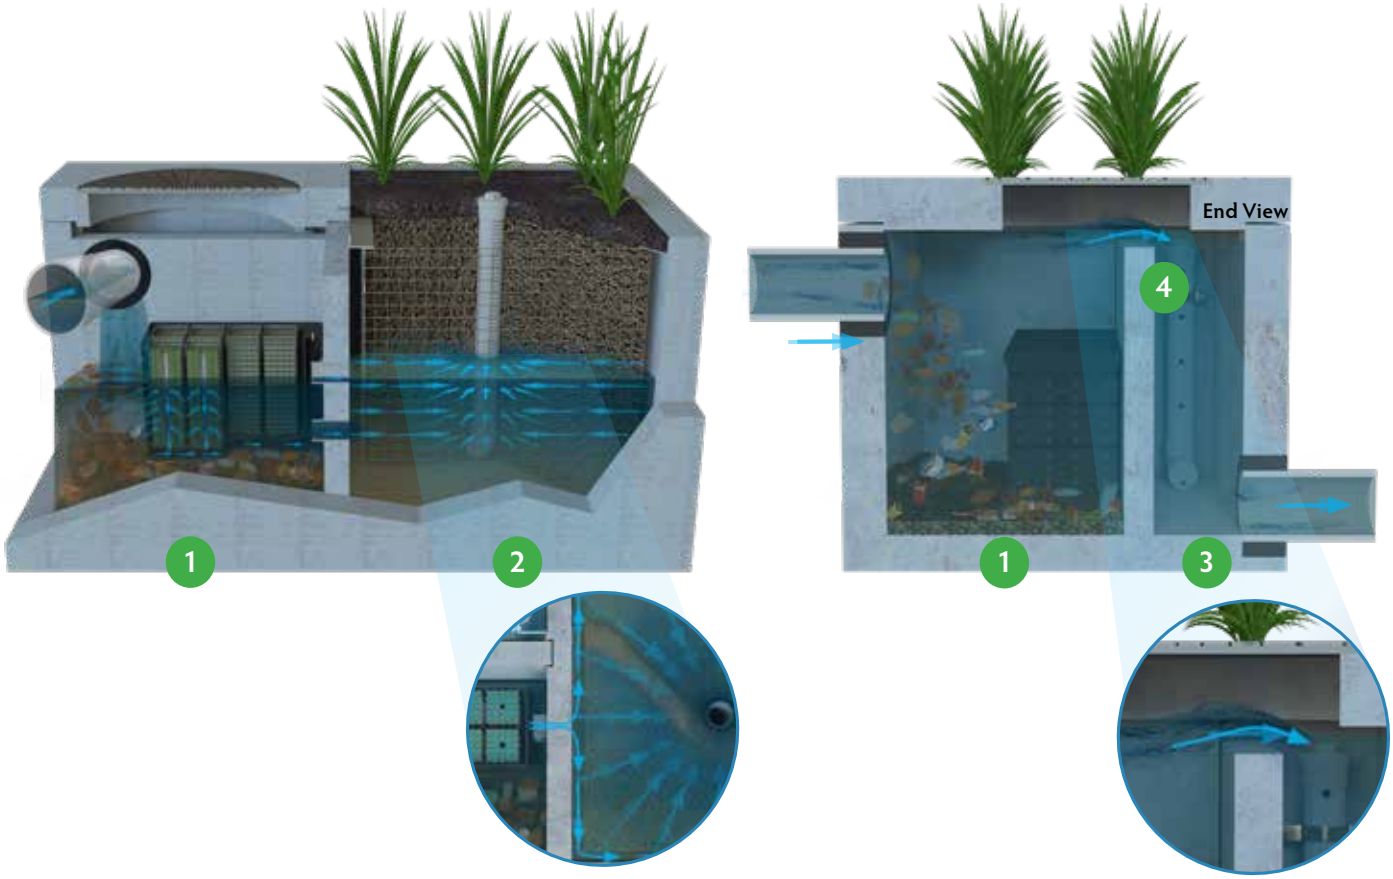
As cities grow, there is less space for natural solutions to treat stormwater. Contech understands this and is committed to providing compact, Low Impact Development (LID) solutions like the Modular Wetlands Linear to protect our nation's waterways.

The Modular Wetlands® Linear is the only biofiltration system to utilize patented horizontal flow, allowing for a small footprint, high treatment capacity, and design versatility. It is also the only biofiltration system that can be routinely installed downstream of storage for additional volume control and treatment.

With numerous regulatory approvals, the system's aesthetic appeal and superior pollutant removal make it the ideal solution for a wide range of stormwater applications, including urban development projects, commercial parking lots, residential streets, mixed-use developments, streetscapes, and more.

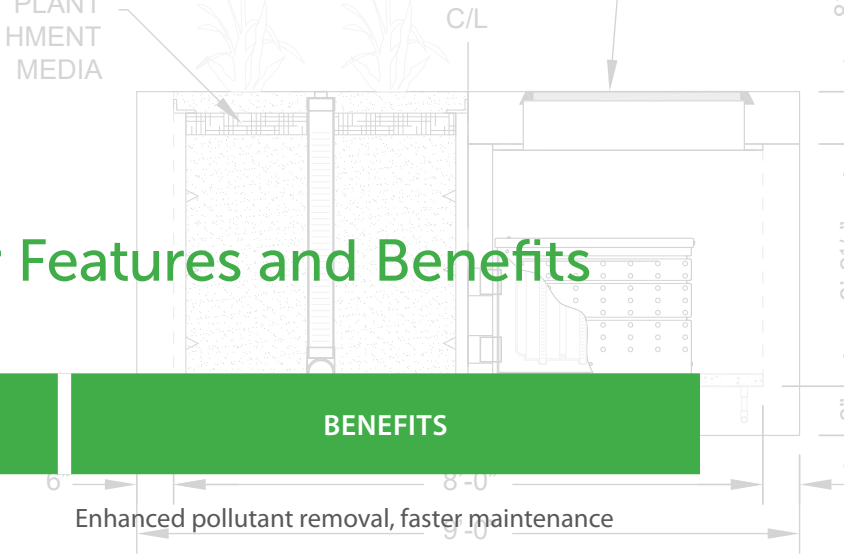
MODULAR WETLANDS®

How the Modular Wetlands® Linear Works



1. **PRETREATMENT** | Stormwater enters the pretreatment chamber where total suspended solids settle, and trash and debris are contained within the chamber. Stormwater then travels through the pretreatment filter boxes that provide additional treatment.
2. **BIOFILTRATION** | As water enters the biofiltration chamber, it fills the void space in the chamber's perimeter. Horizontal forces push the water inward through the biofiltration media, where nutrients and metals are captured. The water then enters the drain pipe to be discharged.
3. **DISCHARGE** | The specially designed vertical drain pipe and orifice control plate control the flow of water through the media to a level lower than the media's capacity, ensuring media effectiveness. The water then enters the horizontal drain pipe to be discharged.
4. **BYPASS** | During peak flows, an internal weir in the side-by-side configuration allows high flows to bypass treatment, eliminating flooding and the need for a separate bypass structure. Bypass is not provided in the end-to end configuration.

Using horizontal flow to improve performance



Modular Wetlands® Linear Features and Benefits

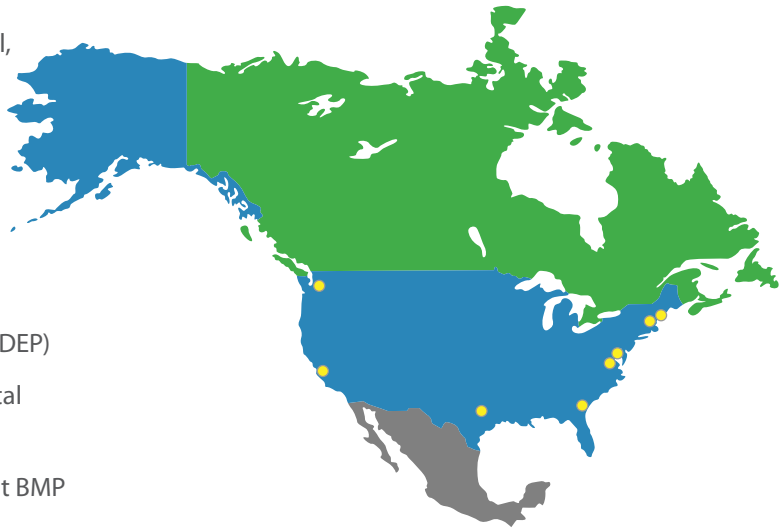
FEATURE	BENEFITS
Pretreatment chamber	Enhanced pollutant removal, faster maintenance
Horizontal flow biofiltration	Greater filter surface area
Performance verified by both the WA DOE and NJ DEP	Superior pollutant capture with confidence
Built-in high flow bypass	Eliminates flooding and the need for a separate bypass structure
Available in multiple configurations and sizes	Flexibility to meet site-specific needs

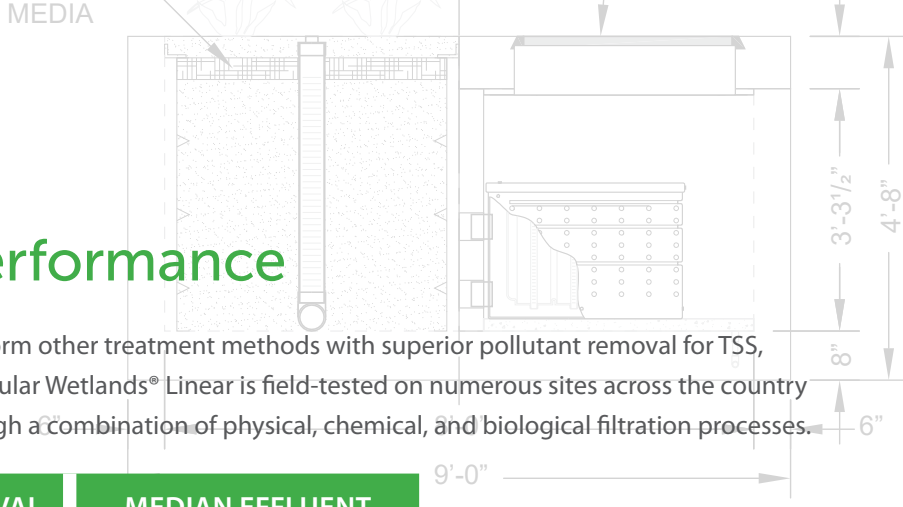
The Modular Wetlands system offers many different configurations.

Select Modular Wetlands® Linear Approvals

Modular Wetlands Linear is approved through numerous local, state and federal programs, including but not limited to:

- Washington State Department of Ecology TAPE
- California Water Resources Control Board, Full Capture Certification
- Virginia Department of Environmental Quality (VA DEQ)
- New Jersey Department of Environmental Protection (NJDEP)
- Maryland Department of the Environment - Environmental Site Design (ESD)
- Rhode Island Department of Environmental Management BMP
- Texas Commission on Environmental Quality (TCEQ)
- Atlanta Regional Commission Certification





Modular Wetlands® Performance

The Modular Wetlands® Linear continues to outperform other treatment methods with superior pollutant removal for TSS, heavy metals, nutrients, and hydrocarbons. The Modular Wetlands® Linear is field-tested on numerous sites across the country and is proven to effectively remove pollutants through a combination of physical, chemical, and biological filtration processes.

POLLUTANT OF CONCERN	MEDIAN REMOVAL EFFICIENCY	MEDIAN EFFLUENT CONCENTRATION (MG/L)
Total Suspended Solids (TSS)	89%	12
Total Phosphorus - TAPE (TP)	61%	0.041
Nitrogen (TN)	23%	1
Total Copper (TCu)	50%	0.006
Total Dissolved Copper	37%	0.006
Total Zinc (TZn)	66%	0.019
Dissolved Zinc	60%	0.0148
Motor Oil	79%	0.8

TAPE Field Study - 2012
TAPE Field Study - 2013

Note: Some jurisdictions recognize higher removal rates. Contact your Contech Stormwater Consultant for performance expectations.

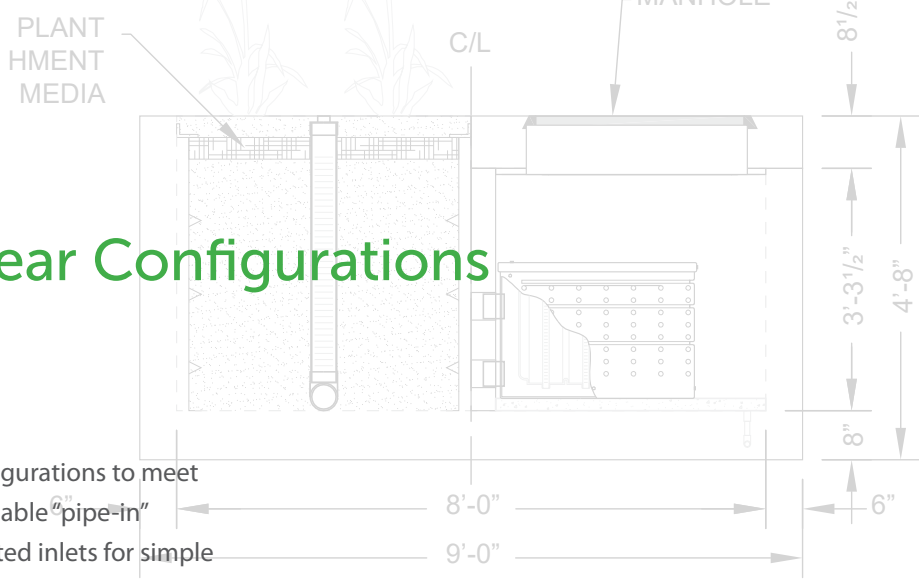
Modular Wetlands® Linear Maintenance

The Modular Wetlands® Linear is a self-contained treatment train. Maintenance requirements for the unit consist of five simple steps that can be completed using a vacuum truck. The system can also be cleaned by hand.

- Remove trash from the screening device
- Remove sediment from the separation chamber
- Periodically replace the pretreatment cartridge filter media
- Replace the drain down filter media
- Trim vegetation

Most Modular Wetland Linear systems can be cleaned in about thirty minutes.

Multiple configurations allow for easy site integration



Modular Wetlands® Linear Configurations

Multiple system configurations integrate with site hydraulic design and layout ...

The Modular Wetlands Linear is offered in multiple configurations to meet site specific needs. This highly versatile system has available "pipe-in" options on most models, along with built-in curb or grated inlets for simple integration into your storm drain design.

Curb Inlet

The Curb Inlet configuration accepts sheet flow through a curb opening and is commonly used along roadways and parking lots. It can be used in sump or flow-by conditions.

Vault

The Vault configuration can be used in end-of-the-line installations. Another benefit of the "pipe-in" design is the ability to install the system downstream of underground detention systems to meet water quality volume requirements, or for traffic-rated designs (no plants).

Downspout

The Downspout configuration is designed to accept a vertical downspout pipe from rooftop and podium areas. Some models have the option of utilizing an internal bypass, simplifying the overall design. The system can be installed as a raised planter, and the exterior can be stuccoed or covered with other finishes to match the look of adjacent buildings.

A partner you can rely on

STORMWATER SOLUTIONS

PIPE SOLUTIONS

STRUCTURES SOLUTIONS

Few companies offer the wide range of high-quality stormwater resources you can find with us — state-of-the-art products, decades of expertise, and all the maintenance support you need to operate your system cost-effectively.

THE CONTECH WAY

Contech® Engineered Solutions provides innovative, cost-effective site solutions to engineers, contractors, and developers on projects across North America. Our portfolio includes bridges, drainage, erosion control, retaining wall, sanitary sewer and stormwater management products.

STORM WATER COLLECTION AND TREATMENT SYSTEM

11709 Artesia Blvd. City of Artesia, County of Los Angeles, CA

12,712.8 cu ft

SPECIFICATION FOR CISTERN SYSTEM

THIS DOCUMENT WILL GOVERN THE FURNISHING AND INSTALLATION OF ALUMINIZED CORRUGATED METAL PIPE CISTERNS FOR UNDERGROUND WATER STORAGE FOR NOMINAL DIAMETERS 12" (300MM) THROUGH 120" (3000MM).

THE MANUFACTURER OF THE CISTERN SYSTEM SHALL BE ONE THAT HAS REGULARLY BEEN ENGAGED IN THE ENGINEERING DESIGN AND PRODUCTION OF THESE SYSTEMS AND WHICH HAS A HISTORY OF SUCCESSFUL PRODUCTION, ACCEPTABLE TO THE ENGINEER OF RECORD (EOR). IN ACCORDANCE WITH THE DRAWINGS, THE CISTERN SYSTEM SHALL BE SUPPLIED BY: SANTA FE WATER SYSTEMS, 10244 FREEMAN AVE, SANTA FE SPRINGS, CA 90670.
TEL: 1-562-777-9724

SAMPLING, TESTING, AND INSPECTION OF MATERIALS USED FOR MANUFACTURING OF THE CISTERN SYSTEM SHALL BE IN ACCORDANCE WITH APPLICABLE ASTM SPECIFICATIONS. ALL FABRICATION OF THE PRODUCT SHALL OCCUR WITHIN THE UNITED STATES UNLESS OTHERWISE NOTED.

THE CISTERN SHALL BE CAPABLE OF INSTALLATION IN SOIL WITH A pH RANGE OF 5 TO 9. FOR SOIL pH OUTSIDE THE RANGE OF 5 TO 9, CONSULT WITH SPECIFYING ENGINEER PRIOR TO ORDERING TO DETERMINE IF ADDITIONAL CISTERN COATING SYSTEM NEED BE CONSIDERED.

THE HYDRAULIC SYSTEM SHALL BE PRE-ASSEMBLED AND TESTED AT FACTORY PRIOR TO SHIPMENT. INSPECTION AND TESTING PROTOCOLS SHALL BE DECIDED BY THE SPECIFYING ENGINEER ACCORDING TO SYSTEM REQUIREMENTS. A COPY OF THE TEST REPORT MUST BE PROVIDED TO THE ENGINEER OF RECORD IF REQUESTED.

UPON REQUEST, THE CISTERN SYSTEM INLETS SHALL BE EQUIPPED WITH AN INLET CALMING DEVICE TO ALLOW INTRODUCTION OF WATER TO THE TANK WITH LITTLE TO NO TURBULENCE.

THE CISTERN SYSTEM SHALL BE FITTED WITH A MIN. 4" OUTLET OR PERFORATED MANHOLE COVERS FOR VENTING, DEPENDANT UPON SITE CONDITIONS AND DIRECTION BY SPECIFYING ENGINEER. OVERFLOW PIPE SHALL BE PROVIDED UPON REQUEST BY SPECIFYING ENGINEER.

SYSTEM TO MEET AASHTO HS20/HS25 LIVE LOADING, PER AASHTO LRFD SECTION 12.

ACCESS COVERS SHALL BE A MINIMUM OF 24-INCH DIAMETER TO PROVIDE ADEQUATE INSPECTION AND MAINTENANCE WITHOUT RESTRICTIONS AND OBSTRUCTIONS TO ENTRY INTO INTERIOR OF THE CISTERN. COVERS SHALL BE WATERTIGHT, DO NOT SLIDE, ROTATE, OR FLIP OPEN AND ARE CAPABLE OF SUPPORTING DESIGN LOADS.

PRIOR TO SHIPMENT, CISTERN SYSTEM MAY BE INSPECTED AT FACTORY BY OWNER'S AUTHORIZED REPRESENTATIVE UPON REQUEST.

INSTALLATION

THE CONTRACTOR SHALL FOLLOW OCCUPATIONAL SAFETY AND HEALTH ASSOCIATION (OSHA) GUIDELINES FOR SAFE PRACTICES IN EXECUTING THE INSTALLATION PROCESS IN ACCORDANCE WITH THE MANUFACTURER/SUPPLIER INSTALLATION RECOMMENDATIONS.

A NON-WOVEN GEOTEXTILE FILTER FABRIC IS RECOMMENDED TO BE INSTALLED IN EXCAVATION, OR OTHER MEASURES SHOULD BE TAKEN, TO PREVENT NATIVE SOIL FROM MIGRATING INTO THE INITIAL BACKFILL MATERIAL, WHEN REQUIRED BY THE GEOTECHNICAL ENGINEER OR E.O.R.

TRENCH BOTTOM (FOUNDATION) WITH UNSTABLE OR UNYIELDING MATERIAL SHALL BE EXCAVATED TO A DEPTH DIRECTED BY THE ENGINEER AND REPLACED WITH SUITABLE MATERIAL. FOR UNSTABLE MATERIALS, GEOTEXTILE MAY BE USED TO STABILIZE THE TRENCH BOTTOM, IF DIRECTED BY THE ENGINEER.

SUITABLE BEDDING MATERIAL SHALL BE CLASS I OR II, AS SPECIFIED BY ASTM D2321.
MINIMUM BEDDING THICKNESS SHALL BE 4" (100 mm) AS MEASURED FROM OUTER PIPE DIAMETER.

INITIAL BACKFILL MATERIAL SHALL BE CLASS I OR II, AS SPECIFIED BY ASTM D2321. COMPACTION AND BACKFILL LIFTS SHALL BE IN ACCORDANCE WITH ASTM D2321. INITIAL BACKFILL SHALL EXTEND TO NOT LESS THAN 6" (150 mm) ABOVE THE TOP OF THE CISTERN.

MINIMUM COVER FOR UP TO H-25 TRAFFIC APPLICATIONS:
- 12" FOR PIPE DIAMETER UP TO 96" DIAMETER
- 18" FOR DIAMETER OVER 96".

MINIMUM COVER SHALL BE MEASURED FROM THE TOP OF THE PIPE TO BOTTOM OF FLEXIBLE PAVEMENT OR TO THE TOP OF RIGID PAVEMENT. ADDITIONAL COVER MAY BE REQUIRED FOR CONSTRUCTION LOADS, FOR VEHICLES OVER 75T (68 metric tons) OR TO PREVENT FLOATATION.

FINAL BACKFILL MATERIAL SHALL BE SUITABLE MATERIALS AS DIRECTED BY THE ENGINEER OR AS INDICATED BY MANUFACTURER. FOR AREAS SUBJECTED TO HEAVY TRAFFIC LOADING, A HIGHER DEGREE OF COMPACTION IS NECESSARY AND A SEPARATION LAYER OF NON-WOVEN GEOTEXTILE MAY BE REQUIRED. COMPACTION LEVELS AND/OR GEOTEXTILE MAY BE SPECIFIED AT THE DISCRETION OF THE DESIGN ENGINEER OR MANUFACTURER'S REPRESENTATIVE.

CONSULT THE INSTALLATION MANUAL FOR ADDITIONAL INFORMATION.

GENERAL NOTES

STORM WATER MANAGEMENT SYSTEM IN ITS ENTIRETY, AS SHOWN ON THESE SHEETS, SHALL BE DESIGNED BY A CALIFORNIA LICENSED PROFESSIONAL ENGINEER. ALL COMPONENTS OF THE STORM WATER MANAGEMENT SYSTEM SHALL BE DESIGNED AND SUPPLIED BY SANTA FE WATER SYSTEMS (SFWS), EXCEPT WHERE NOTED. ANY DEVIATION, OMISSION OR SUBSTITUTION SHALL VOID TWO-YEAR WARRANTY. TWO-YEAR WARRANTY SHALL COVER THE COMPLETE SYSTEM ACCORDING TO THE PERFORMANCE PARAMETERS INDICATED ON THE DRAWING SET AS ENGINEERED BY SFWS, WHEN INSTALLED IN ACCORDANCE WITH THE SFWS DESIGN. THE WARRANTY INCLUDES ALL PARTS AND LABOR OF SHOP ASSEMBLED ITEMS AND EXCLUDES INSTALLATION OF COMPONENTS BY CONTRACTOR UNLESS OTHERWISE NOTED ON PLANS. WARRANTY COVERAGE REQUIRES REGULAR DOCUMENTED MAINTENANCE OF THE FULL SYSTEM PERFORMED BY THE OWNER OR AUTHORIZED MAINTENANCE CONTRACTOR.

PRIOR TO COMMENCEMENT OF WORK, CONTRACTOR TO REVIEW MANUFACTURER'S INSTALLATION GUIDE. IT IS THE RESPONSIBILITY OF THE CONTRACTOR AND/OR PROJECT ENGINEER TO ENSURE THAT ALL QUESTIONS ABOUT INSTALLATION ARE ADDRESSED PRIOR TO APPROVAL OF SYSTEM. ALL DETAILS FOR INSTALLATION ARE LOCATED IN THIS DRAWING PACKAGE, OR UPON REQUEST TO PIPING MANUFACTURER. ANY QUESTIONS CONCERNING THESE STANDARD DETAILS CAN BE ADDRESSED BY THE CISTERN MANUFACTURER'S REPRESENTATIVE PRIOR TO APPROVAL.

ALL ELEVATIONS, DIMENSIONS AND LOCATIONS OF RISERS AND INLETS SHALL BE VERIFIED BY THE ENGINEER OF RECORD.

PRIOR TO INSTALLATION OF THE SYSTEM, A PRE-CONSTRUCTION MEETING SHALL BE CONDUCTED. THOSE REQUIRED TO ATTEND ARE THE SUPPLIER OF THE SYSTEM, THE GENERAL CONTRACTOR, SUB-CONTRACTORS AND THE ENGINEER.

CONTRACTOR(S) SHALL FURNISH ALL LABOR, MATERIALS, EQUIPMENT AND INCIDENTALS NECESSARY TO INSTALL THE CISTERN SYSTEM, APPURTENANCES AND INCIDENTALS IN ACCORDANCE WITH THE DRAWINGS AND AS SPECIFIED HEREIN.

A STORM WATER TREATMENT DEVICE UPSTREAM OF THE CISTERN SYSTEM IS RECOMMENDED AS THE APPROPRIATE MEANS OF PRETREATING TO EXTEND THE MAINTENANCE INTERVAL ON THE SYSTEM AND REDUCE LIFE CYCLE COSTS. BOTH ENGINEERED SOLUTIONS SHALL BE PROVIDED BY A SINGLE SUPPLIER/MANUFACTURER.

PRIOR TO SYSTEM START UP, ANY ACCUMULATED WATER AND DEBRIS SHALL BE REMOVED FROM THE CISTERN TANK(S) AND ANY ACCOMPANYING TREATMENT SYSTEMS AND PUMP VAULTS.

BELOW GRADE SYSTEM MARKING TAPE, IF REQUIRED BY LOCAL ORDINANCE, CAN BE SUPPLIED UPON REQUEST. CONTACT SFWS WITH REQUIREMENT DETAILS.

2. ALL COMPONENTS OF THE STORM WATER MANAGEMENT SYSTEM SHALL BE DESIGNED AND SUPPLIED BY SANTA FE WATER SYSTEMS (SFWS), EXCEPT WHERE NOTED. ANY DEVIATION, OMISSION OR SUBSTITUTION SHALL VOID TWO-YEAR WARRANTY.
3. MODULAR WETLAND TO BE MODEL MWS-6-24-5-V, MANUFACTURED BY BIOCLEAN ENVIRONMENTAL SERVICES, INC. AND SUPPLIED BY SANTA FE WATER SYSTEMS.
4. STORAGE SYSTEM TO BE 96" ALUMINIZED CMP AS SUPPLIED BY SANTA FE WATER SYSTEMS.
5. SEE CIVIL SHEETS FOR UNIT LOCATIONS.
6. ALL DIMENSIONS AND ELEVATIONS SHOWN ARE NOMINAL DIMENSIONS. IT IS THE RESPONSIBILITY OF THE ON-SITE CONTRACTOR OR CUSTOMER TO VERIFY THE ACCURACY OF ANY CRITICAL DIMENSIONS OR ELEVATIONS PRIOR TO SETTING OR INSTALLING ANY EQUIPMENT.
7. ALL MATERIALS SHALL BE DELIVERED TO THE SITE AFTER EXCAVATIONS HAVE BEEN EXCAVATED AND SHORED. THE CONTRACTOR SHALL SUPPLY A CRANE OF SUFFICIENT SIZE TO LOWER ALL PIECES INTO THE HOLE SAFELY. THE CONTRACTOR SHALL INSTALL ALL ITEMS.
8. UPON ESTABLISHMENT OF PRIOR AGREEMENT, SANTA FE WATER SYSTEMS WILL PROVIDE A REPRESENTATIVE FOR TECHNICAL ASSISTANCE ON THE DAY OF INSTALLATION TO ANSWER ANY QUESTIONS THAT MAY ARISE.
9. THE CONTRACTOR IS RESPONSIBLE FOR ALL REINFORCED CONCRETE PADS AND COLLARS, PLUMBING AND ELECTRICAL CONNECTIONS AND INSTALLATION.
10. ALL COMPONENTS PROVIDED BY SANTA FE WATER SYSTEMS SHALL BE SUITABLE FOR USE WITH OPERATIONAL AND ENVIRONMENTAL CONDITIONS.
11. PROVIDE MINIMUM 12" COVER FROM TOP OF CISTERNS TO BOTTOM OF ASPHALT CEMENT TO ACHIEVE H-20/H-25 LOADING CAPACITY.
12. SEE DETAIL SHEETS FOR DETAILS OF MODULAR WETLAND AND PUMP STATIONS.

Storm Water Management System in its entirety, as shown on these sheets, shall be designed by a California Licensed Professional Engineer. All components of the Storm Water Management System shall be designed and supplied by Santa Fe Water Systems (SFWS), except where noted. Any deviation, omission or substitution shall void two-year warranty. Two-year warranty shall cover the complete system according to the performance parameters indicated on the drawing set as engineered by SFWS, when installed in accordance with the SFWS design. The Warranty includes all parts and labor of shop assembled items and excludes installation of components by Contractor unless otherwise noted on plans. Warranty coverage requires regular documented maintenance of the full system performed by the owner or authorized maintenance contractor.

INSTALLATION NOTES

1. CONTRACTOR TO PROVIDE ALL LABOR, EQUIPMENT, MATERIALS AND INCIDENTALS REQUIRED TO OFFLOAD AND INSTALL THE SYSTEM AND APPURTENANCES IN ACCORDANCE WITH THIS DRAWING AND THE MANUFACTURER'S SPECIFICATIONS, UNLESS OTHERWISE STATED IN MANUFACTURER'S CONTRACT.
2. UNIT MUST BE INSTALLED ON LEVEL BASE. MANUFACTURER RECOMMENDS A MINIMUM 6" LEVEL ROCK BASE UNLESS SPECIFIED BY THE PROJECT ENGINEER. CONTRACTOR IS RESPONSIBLE FOR VERIFYING PROJECT ENGINEER'S RECOMMENDED BASE SPECIFICATIONS.
3. ALL PIPES MUST BE FLUSH WITH INSIDE SURFACE OF CONCRETE. (PIPES CANNOT INTRUDE BEYOND FLUSH). INVERT OF OUTFLOW PIPE MUST BE FLUSH WITH DISCHARGE CHAMBER FLOOR. ALL GAPS AROUND PIPES SHALL BE SEALED WATER TIGHT WITH A NON–SHRINK GROUT PER MANUFACTURER'S STANDARD CONNECTION DETAIL AND SHALL MEET OR EXCEED REGIONAL PIPE CONNECTION STANDARDS.
4. CONTRACTOR TO SUPPLY AND INSTALL ALL EXTERNAL CONNECTING PIPES.
5. CONTRACTOR RESPONSIBLE FOR INSTALLATION OF ALL RISERS, MANHOLES, AND HATCHES. CONTRACTOR TO GROUT ALL MANHOLES AND HATCHES TO MATCH FINISHED SURFACE UNLESS SPECIFIED OTHERWISE.
6. DRIP OR SPRAY IRRIGATION REQUIRED ON ALL UNITS WITH VEGETATION.

GENERAL NOTES

1. MANUFACTURER TO PROVIDE ALL MATERIALS UNLESS OTHERWISE NOTED.
2. ALL DIMENSIONS, ELEVATIONS, SPECIFICATIONS AND CAPACITIES ARE SUBJECT TO CHANGE. FOR PROJECT SPECIFIC DRAWINGS DETAILING EXACT DIMENSIONS, WEIGHTS AND ACCESSORIES PLEASE CONTACT MANUFACTURER.

EPA

Storm Water O&M Fact Sheet Catch Basin Cleaning

DESCRIPTION

Catch basins are chambers or sumps, usually built at the curb line, which allow surface water runoff to enter the storm water conveyance system. Many catch basins have a low area below the invert of the outlet pipe intended to retain coarse sediment. By trapping sediment, the catch basin prevents solids from clogging the storm sewer and being washed into receiving waters. Catch basins must be cleaned periodically to maintain their ability to trap sediment, and consequently their ability to prevent flooding. The removal of sediment, decaying debris, and highly polluted water from catch basins has aesthetic and water quality benefits, including reducing foul odors, reducing suspended solids, and reducing the load of oxygen-demanding substances that reach receiving waters.

APPLICABILITY

Catch basin cleaning should be performed at any facility that has an on-site storm sewer system that includes catch basins and manholes.

Although catch basin cleaning is easily implemented, it is often overlooked in an overall storm water management plan. In addition, many of the catch basin cleaning programs that have been implemented focus only on removal of debris from grate openings; full implementation of the catch basin cleaning BMP should also include removal of debris from the catch basin itself.

ADVANTAGES AND DISADVANTAGES

Catch basin cleaning is an efficient and cost-effective method for preventing the transport of sediment and pollutants to receiving water bodies. This improves both the aesthetics and the quality of the receiving water body.

Limitations associated with cleaning catch basins include:

- Catch basin debris usually contains appreciable amounts of water and offensive organic material which must be properly disposed.
- Catch basins may be difficult to clean in areas with poor accessibility and in areas with traffic congestion and parking problems.
- Cleaning is difficult during the winter when snow and ice are present.

Sediment and debris removed from catch basins can potentially be classified as hazardous waste. As a result, the materials must be disposed in a proper manner to avoid negative environmental impacts.

PERFORMANCE

Based on current data, it is not possible to quantify the water quality benefits to receiving waters resulting from catch basin cleaning. The rate at which catch basins fill with debris, as well as the total amount of material which can be removed by different frequencies of cleaning, are highly variable and cannot be readily predicted. Past studies have estimated that typical catch basins retain up to 57 percent of coarse solids and 17 percent of equivalent biological oxygen demand (BOD).

In addition, data collected as part of a Nationwide Urban Runoff Program (NURP) project in Castro Valley Creek, California, indicated that catch basins, cleaned on an average of once every year and a half, contained approximately 60 pounds of material each at the time of the cleaning.

OPERATION AND MAINTENANCE

Catch basins should be inspected at least annually to determine if they need to be cleaned. Typically, a catch basin should be cleaned if the depth of deposits is greater than or equal to one-third the depth from the basin to the invert of the lowest pipe or opening into or out of the basin. If a catch basin significantly exceeds the one-third depth standard during the annual inspection, then it should be cleaned more frequently. If woody debris or trash accumulates in a catch basin, then it should be cleaned on at least a weekly basis.

Catch basins can be cleaned either manually or by specially designed equipment. This equipment may include bucket loaders and vacuum pumps. Material removed from catch basins is usually disposed in conventional landfills. Before any materials can be disposed, it is necessary to perform a detailed chemical analysis to determine if the materials meet the EPA criteria for hazardous waste. This will help determine how the materials should be stored, treated, and disposed.

COSTS

Catch basin cleaning costs will vary depending upon the method used, the required cleaning frequency, the amount of debris removed, and debris disposal costs.

Cleaning costs for catch basins were estimated in three NURP program studies (Midwest Research Institute, 1982). These estimates are summarized in Table 1.

In communities equipped with vacuum street sweepers, a cleaning cost of $8 per basin cleaned is recommended for budgetary purposes (Southeastern Wisconsin Regional Planning Commission, 1991.) Cleaning catch basins manually costs approximately twice as much as cleaning the basins with a vacuum attached to a sweeper. Therefore, a cost estimate of $16 per catch basin cleaned may be used for manual cleaning. It should be noted that costs vary depending on local market conditions.

TABLE 1 CLEANING COST PER CATCH BASIN

Location	Method	Cost
Castro Valley, CA	Vacuum attached to street sweeper	$7.70
Salt Lake County, UT	Vacuum attached to street sweeper	$10.30
Winston-Salem, NC	Vacuum attached to street sweeper	$6.30

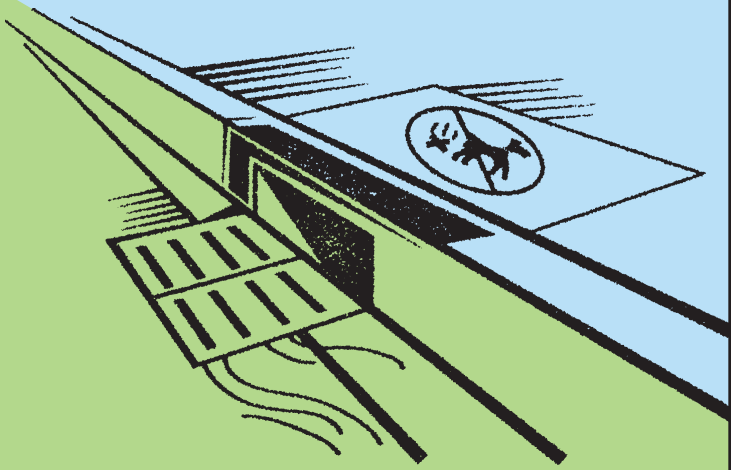
Pick Up After Your Pooch!



Storm drains are for rain…
they're not pooper scoopers.

L.A. County residents walk a dog without picking up the droppings more than **62,000** times per month.

Disease-causing dog waste washes from the ground and streets into storm drains and flows straight to the ocean — untreated.

Remember to bring a bag and clean up after your dog.

1 (888) CLEAN LA
www.888CleanLA.com

Tips for Dog Owners:

Dog owners can help solve the stormwater pollution problem by taking these easy steps…

- Clean up after your dog every single time.
- Take advantage of the complimentary waste bags offered in dispensers at local parks.
- Ensure you always have extra bags in your car so you are prepared when you travel with your dog.
- Carry extra bags when walking your dog and make them available to other pet owners who are without.
- Teach children how to properly clean up after a pet. Encourage them to throw the used bags in the nearest trash receptacle if they are away from home.
- Put a friendly message on the bulletin board at the local dog park to remind pet owners to clean up after their dogs.
- Tell friends and neighbors about the ill effects of animal waste on the environment. Encourage them to clean up after their pets as well.

PROJECT Pollution PREVENTION

Are You a Litter Bug and Don't Know It?

Take our quiz!

Have you ever...

- Dropped a cigarette butt or trash on the ground?
- Failed to pick up after your dog while out on a walk?
- Overwatered your lawn after applying fertilizers/pesticides?
- Disposed of used motor oil in the street, gutter or garbage?

If you answered **yes** to any of these actions, then **YOU ARE A LITTER BUG**!

Each of these behaviors contribute to stormwater pollution, which contaminates our ocean and waterways, kills marine life and causes beach closures.

You can become part of the solution!
To find out how, flip this card over.

For more information, call or visit:

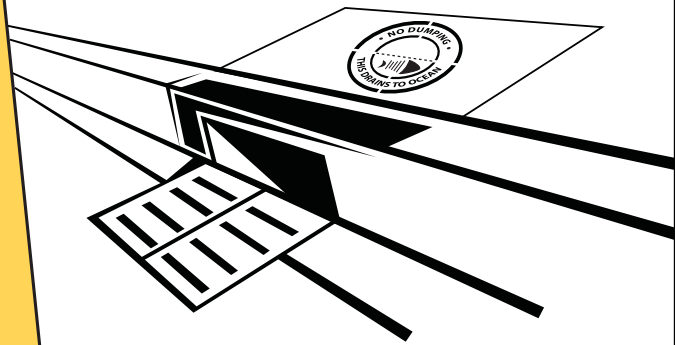
PROJECT Pollution PREVENTION

Follow these simple steps to prevent stormwater pollution:

- Put your garbage where it belongs — in the trash can.
- Pick up after your dog when out on a walk.
- Reduce pesticide and fertilizer use; don't overwater after application or apply if rain is forecast.
- Dispose of used motor oil at an oil recycling center or at a free Household Hazardous Waste/E-Waste collection event.



A message from the County of Los Angeles Department of Public Works.

Storm Drains are for Rain...

Stormdrains take runoff directly to creeks and the ocean without treatment. Pool chemicals can harm our natural creeks and waterways. Anything going into our stormdrains that isn't rainwater contributes to stormwater pollution, which contaminates our creeks and ocean, kills marine life and causes beach closures.

...not pool chemicals

LOS ANGELES COUNTY PUBLIC WORKS Public Service That Works

Swimming Pool Tips

Follow these simple steps to prevent stormwater pollution...

- Make sure all chemicals are dissipated before draining a pool or spa
- Do not drain pools within 5 days of adding chemicals
- Never backwash a filter into the street or stormdrain
- Cleanup chemical spills with absorbent, don't wash it down the drain
- Dispose of leftover chemicals and paints through a licensed hazardous waste disposal provider

PROJECT Pollution PREVENTION

Storm Drains are for Rain...

More than 50% of the automotive oil sold to do-it-yourself oil changers is not recycled. There are more than 600 State-certified used oil collection centers within Los Angeles County.

Never dispose of automotive fluids, recyclable products, or household hazardous wastes into the street or gutter. Take them to your local auto repair station, recycling center or a household hazardous waste roundup.

...they're not recycling centers.

1(888)CLEAN LA
www.888CleanLA.com

Recycling Tips:

You can help keep your community clean, protect our area waterways and make the beaches safe for ocean swimmers by putting recyclable materials where they belong — at a recycling center or household hazardous waste roundup. Never throw or pour anything into the streets or gutters...

- When changing vehicle fluids – transmission, hydraulic and motor oil, brake and radiator fluid – drain them into a drip pan to avoid spills. Do not combine these fluids. Do not dispose of them in the street, gutter or in the garbage. It is illegal.
- Recycle all used vehicle fluids. Call 1(888)CLEAN LA or visit www.888CleanLA.com for the location of a center that recycles these fluids, or for the location of a local household hazardous waste Roundup.
- Other materials that should be taken to a household hazardous waste Roundup are: paint and paint-related materials, household cleaners, batteries, pesticides and fertilizers, pool chemicals, and aerosol products.
- Aluminum, glass, plastic and newspapers should be placed in your curbside recycling bin or taken to a local recycling center.

PROJECT Pollution PREVENTION

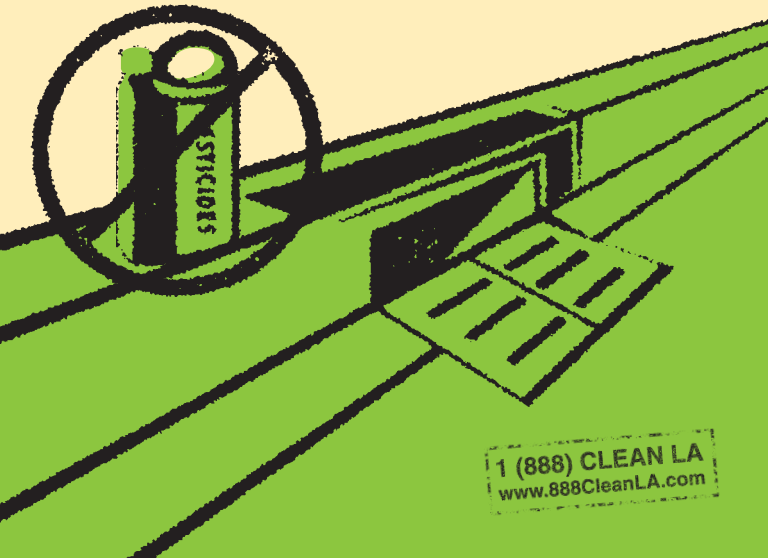
A Yard is a Terrible Thing to Waste!

Storm drains are for rain…**not yard waste.**

Residential yard waste represents about **13 percent** of the total waste generated in L.A. County.

Pesticides, fertilizer and yard waste such as leaves and mowed grass wash from the ground and streets into storm drains and flow straight to the ocean — **untreated**.

Remember to use pesticides and fertilizer wisely and pick-up yard waste.



Tips For Yard Care:

L.A. County residents can help solve the stormwater pollution problem by taking these easy steps…

- Do not over-fertilize and do not use fertilizer or pesticides near ditches, gutters or storm drains.
- Do not use fertilizer or pesticides before a rain.
- Follow the directions on the label carefully.
- Use pesticides sparingly — more is not better. "Spot" apply, rather than "blanket" apply.
- When watering your lawn, use the least amount of water possible so it doesn't run into the street carrying pesticides and other chemicals with it.
- Use non-toxic products for your garden and lawn whenever possible.
- If you must store pesticides or fertilizer, make sure they are in a sealed, water-proof container in a covered area to prevent runoff.
- Do not blow, sweep, hose or rake leaves or other yard trimmings into the street, gutter or storm drain.

Don't Paint the Town Red!

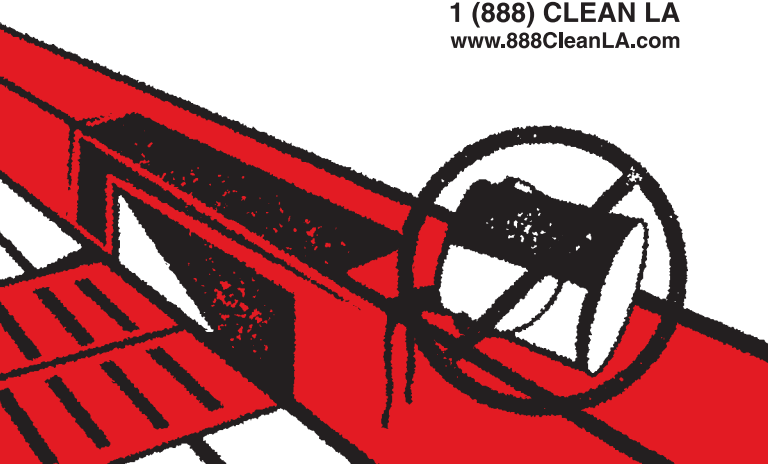
Storm drains are for rain…
they're not for paint disposal.

More than **197,000** times each month, L.A. County residents wash their dirty paint brushes under an outdoor faucet.

This dirty rinse water flows into the street, down the storm drain and straight to the ocean — **untreated**.

Remember to clean water-based paint brushes in the sink, rinse oil-based paint brushes with paint thinner, and take old paint and paint-related products to a Household Hazardous Waste/E-Waste collection event.

1 (888) CLEAN LA
www.888CleanLA.com



Tips for Paint Clean-Up:

L.A. County residents can help solve the stormwater pollution problem by taking these easy steps when working with paint and paint-related products…

- Never dispose of paint or paint-related products in the gutters or storm drains. This is called illegal dumping. Take them to a Household Hazardous Waste/E-Waste collection event. Call 1 (888) CLEAN LA or visit www.888CleanLA.com to locate an event near you.
- Buy only what you need. Reuse leftover paint for touch-ups or donate it to a local graffiti abatement program. Recycle or use excess paint.
- Clean water-based paint brushes in the sink.
- Oil-based paints should be cleaned with paint thinner. Filter and reuse paint thinner. Set the used thinner aside in a closed jar to settle-out paint particles.
- Store paints and paint-related products in rigid, durable and watertight containers with tight-fitting covers.

Gardena, California 90249

Subject: **Preliminary Geotechnical Investigation, Proposed Industrial Development, 11709 Artesia Blvd., Artesia, California**

Dear Mr. Gardner,

Pursuant to your request, ***Albus & Associates, Inc***. is pleased to present to you our preliminary geotechnical investigation report for the proposed development at the subject site. This report presents the results of our aerial photo and literature review, subsurface exploration, laboratory testing, and engineering analyses. Conclusions relevant to the feasibility of the proposed site development and recommendations for site development are also presented herein based on the findings of our work.

We appreciate this opportunity to be of service to you. If you should have any questions regarding the contents of this report, please do not hesitate to call.

Sincerely,

ALBUS & ASSOCIATES, INC.

David E. Albus
Principal Engineer

1.0 INTRODUCTION

1.1 PURPOSE AND SCOPE

The purposes of our preliminary geotechnical investigation were to evaluate geotechnical conditions within the project area and to provide conclusions and recommendations relevant to the design and construction of the proposed improvements at the subject site. The scope of this investigation included the following:

- Review of the historical aerial photographs;
- Review of published geologic and seismic data for the site and surrounding area;
- Exploratory drilling and soil sampling;
- Laboratory testing of selected soil samples;
- Engineering analyses of data obtained from our review, exploration, and laboratory testing;
- Evaluation of site seismicity, liquefaction potential, and settlement potential; and,
- Preparation of this report

1.2 SITE LOCATION AND DESCRIPTION

The site is located at the address of 11709 Artesia Boulevard within the city of Artesia, California. The site is bordered by Artesia Boulevard to the south, Fallon Avenue to the west, Alburtis Avenue to the east, and a commercial building and surface parking lots to the north. The location of the site and its relationship to the surrounding areas are shown in Figure 1, Site Location Map.

The site consists of approximately 3.33 acres of land with several industrial buildings, above-ground tanks, processing equipment, and above-ground piping. The remainder of the site consists of asphalt- and concrete-covered paving.

1.3 PROPOSED DEVELOPMENT

Based on the project brochure prepared by Colliers, we understand that the proposed development will likely consist of one or two new industrial buildings at-grade parking as well as associated interior driveways, parking, underground utilities, and decorative hardscape and landscape areas.

No grading or structural plans were available in preparing this report. However, we anticipate that minor rough grading of the site will be required to achieve future surface configuration. Structural loads are anticipated to typically consist of 250 kips for columns and 6 kips/ft for walls.

FIGURE 1

2.0 INVESTIGATION

2.1 RESEARCH

We have reviewed the referenced geologic publications and maps (see references). Data from these sources were utilized to develop some of the findings and conclusions presented herein.

We have also reviewed available historical aerial photographs. The aerial photos indicate that as early as 1967, the subject site was developed with industrial facilities. The site has remained relatively unchanged since 1967.

2.2 SUBSURFACE EXPLORATION

Subsurface exploration for this investigation was conducted on November 2, 2021 and consisted of drilling three (3) soil borings to depths ranging from approximately 11.5 to 51.5 feet below the existing ground surface (bgs) and advancing four (4) Cone Penetration Tests (CPTs) to a depth of 50 feet bgs. The borings were drilled using a truck-mounted, continuous flight, hollow-stem-auger drill rig. A representative of Albus & Associates, Inc. logged the exploratory borings. Visual and tactile identifications were made of the materials encountered, and their descriptions are presented in the Exploration Logs in Appendix A. The approximate locations of the exploratory excavations and CPT soundings completed by this firm are shown on the enclosed Geotechnical Map, Plate 1.

Bulk, relatively undisturbed, and Standard Penetration Test (SPT) samples were obtained at selected depths within the exploratory borings for subsequent laboratory testing. Relatively undisturbed samples were obtained using a 3-inch O.D., 2.5-inch I.D., California split-spoon soil sampler lined with brass rings. SPT samples were obtained from the boring using a standard, unlined SPT soil sampler. During each sampling interval, the sampler was driven 18 inches with successive drops of a 140-pound automatic hammer falling 30 inches. The number of blows required to advance the sampler was recorded for each six inches of advancement. The total blow count for the lower 12 inches of advancement per soil sample is recorded on the exploration log. Samples were placed in sealed containers or plastic bags and transported to our laboratory for analyses. The borings were backfilled with auger cuttings upon completion of sampling.

2.3 LABORATORY TESTING

Selected samples obtained from our subsurface exploration were tested in our soil laboratory. Tests consisted of maximum dry density and optimum moisture content, in-situ moisture content and dry density, expansion index, soluble sulfate content, direct shear, consolidation/collapse potential, grain-size distribution analysis, percent passing No. 200 sieve, direct shear strength, corrosivity testing (pH, chloride, and resistivity), and Atterberg limits. A description of laboratory test criteria and test results are presented in Appendix B.

3.0 SUBSURFACE CONDITIONS

3.1 SOIL CONDITIONS

Descriptions of the earth materials encountered during our investigation are summarized below and are presented in detail on the Exploration Logs presented in Appendix A.

Soil materials encountered at the subject site consisted of approximately 2 feet of artificial fill over alluvial soils. The artificial fill is predominately comprised of grayish brown sandy silt and silty sand. These fill materials typically were observed to be damp to moist and medium dense.

Underlying the artificial fills are native soils consisting of young alluvial fan deposits (Qyf_a). The alluvial fan deposit materials were encountered to the maximum depth explored of 51.5 feet and are comprised of grayish brown to light gray, interlayered silty sand and sand that are damp to wet and loose to very dense. Occasional lenses and layers of sandy silt are also present that are generally very moist to wet and firm to very stiff.

3.2 GROUNDWATER

Groundwater was encountered during this firm's subsurface exploration at a depth of 14 feet. The CDMG Special Report 019 suggests that historic high groundwater for the subject site is below 10 feet.

3.3 FAULTING

Based on our review of the referenced publications and seismic data, no active faults are known to project through or immediately adjacent to the subject sites and the site does not lie within an "Earthquake Fault Zone" as defined by the State of California in Earthquake Fault Zoning Act. Table 3.1 summarizes the known seismically active faults within 10 miles of the sites based on the 2008 USGS National Seismic Hazard Maps.

TABLE 3.1
Summary of Faults

4.0 ANALYSES

4.1 SEISMICITY

2019 CBC requires seismic parameters in accordance with ASCE 7-16. Unless noted otherwise, all section numbers cited in the following refer to the sections in ASCE 7-16.

Per Section 20.3 the project site was designated as Site Class D. We used the OSHPD seismic hazard tool to obtain the basic mapped acceleration parameters, including short periods (S_S) and 1-second period (S_1) MCE_R Spectral Response Accelerations. Section 11.4.8 requires site-specific ground hazard analysis for structures on Site Class E with S_S greater than or equal to 1.0 or Site Class D or E with S_1 greater than or equal to 0.2. Based on the mapped values of S_S and S_1 the project site falls within this category, requiring site-specific hazard analysis in accordance with Section 21.2.

However, "A ground motion hazard analysis is not required for structures where: Structures on Site Class D sites with S_1 greater than or equal to 0.2, provided the value of the seismic response coefficient Cs is determined by Eq. (12.8-2) for values of $T \leq 1.5T_s$ and taken as equal to 1.5 times the value computed in accordance with either Eq. (12.8-3) for $T_L \geq T > 1.5T_s$ or Eq. (12.8-4) for $T > T_L$." Assuming this exception is met for this project, a ground motion hazard analysis is not required and mapped seismic values can be used. Should this exception not be met, a ground motion hazard analysis is required to determine the Design response spectra for the proposed structures at this site. Both mapped and site-specific seismic design parameters are provided in this report, as presented in Section 6.2. Details of a ground motion hazard analysis are explained below.

According to Section 21.2.3 (Supplement 1), the site-specific Risk Targeted Maximum Considered Earthquake (MCER) spectral response acceleration at any period is the lesser of the probabilistic and the deterministic response accelerations, subject to the exception specified in the same section. The probabilistic response spectrum was developed using the computer program OpenSHA (Field et al., 2013), which implements Method 1 as described in Section 21.2.1.1. Fault Models 3.1 and 3.2 from the Third Uniform California Earthquake Rupture Forecast (UCERF3) were used as the earthquake rupture forecast models for the PSHA. In addition to known fault sources, background seismicity was also included in the PSHA. The ground motion Prediction Equations (GMPEs) selected for use in this analysis are those developed for the Pacific Earthquake Engineering Research Center (PEER) Next Generation Attenuation (NGA) West 2 project. Four GMPEs - Abrahamson et al. (2014), Boore et al. (2014), Campbell and Bozorgnia (2014), and Chiou and Youngs (2014) were used to perform the analysis.

In accordance with Section 21.2.2 (Supplement 1), the deterministic spectral response acceleration at each period was calculated as the 84th percentile, 5% damped response acceleration, using NGA-West2 GMPE Worksheet. For this, the information from at least three causative faults with the greatest contribution per deaggregation analysis were used and the larger acceleration spectrum among these was selected as the deterministic response spectrum. The deterministic spectrum was adjusted per requirements in Section 21.2.2 (Supplement 1) where applicable. Both probabilistic and deterministic spectra were subjected to the maximum direction scale factors specified in Section 21.2 to produce the maximum acceleration spectra.

Design response spectrum was developed by subjecting the site-specific MCE_R response spectrum to the provisions outlined in Section 21.3. This process included comparison with 80% code-based

design spectrum determined in accordance with Section 11.4.6. The short period and long period site coefficients (Fa and Fv, respectively) were determined per Section 21.3 in conjunction with Table 11.4-1. Site-specific design acceleration parameters (S_{MS}, S_{M1}, S_{DS}, and S_{D1}) were calculated according to Section 21.4.

Per Section 11.2 (definitions on Page 79 of ASCE7-16) for evaluation of liquefaction, lateral spreading, seismic settlements, and other soil-related issues, Maximum Considered Earthquake Geometric Mean (MCE_G) peak ground acceleration PGA_M shall be used. The site-specific PGA_M is calculated per Section 21.5.3, as the lesser of the probabilistic PGA_M (Section 21.5.1) and deterministic PGA_M (Section 21.5.2), but no less than 80% site modified peak ground acceleration, PGA_M, obtained from OSHPD seismic hazard tool. From our analyses, we obtain a PGA_M of 0.662g.

4.2 STATIC SETTLEMENT

Analyses were performed to estimate the maximum static settlement due to the anticipated maximum foundation loads. The analyses were based on the results of subsurface exploration and laboratory testing conducted at the site. Settlements were calculated based on the elastic method using the sampler blow counts to estimate the elastic property of the soils. Stresses induced by the footings were based on a Boussinesq distribution.

Settlement of the proposed buildings will depend on the magnitude of the structural loads. Assuming a column load of 250 kips, bearing pressure of 4,000 psf, and footing depth of 2 foot, total static settlement of a column footing is estimated to be 0.9 inches. A continuous footing that supports a load of 6 kips/ft, bearing pressure of 3,000 psf, 2 feet wide, and 2 feet deep is estimated to have a total static settlement of 0.5 inches.

4.3 LIQUEFACTION

Engineering research of soil liquefaction potential (Youd et al., 2001) indicates that generally three basic factors must exist concurrently in order for liquefaction to occur. These factors include:

- A source of ground shaking, such as an earthquake, capable of generating soil mass distortions.
- A relatively loose silty and/or sandy soil.
- A relative shallow groundwater table (within approximately 50 feet below ground surface) or completely saturated soil conditions that will allow positive pore pressure generation.

The site is located within a State-designated zone of potentially liquefiable soils. As a result, we conservatively have evaluated the potential for liquefaction.

The liquefaction susceptibility of the onsite soils was evaluated by analyzing the potential concurrent occurrence of the above-mentioned three basic factors. The liquefaction evaluation for the site was completed under the guidance of Special Publication 117A: Guidelines for Evaluating and Mitigating Seismic Hazards in California (CDMG, 2008).

Our liquefaction analyses were based on the field test data results from our CPT data. The liquefaction analyses were performed utilizing the CLiq software by GeoLogismiki. Among the methods available in this program for analysis of liquefaction potential, Robertson (NCEER 2001, 2009) was used for

the current project. The seismic event was defined by peak ground acceleration PGA of 0.73 and mean moment magnitude of 6.83. The historic-high groundwater level, which is used as the design level for evaluation of liquefaction potential, is taken at a depth of 10 feet below ground surface, as discussed in Section 3.2.

Based on our analyses, several sublayers below the assumed shallowest groundwater level of 10 feet have a factor of safety less than 1.3 and are therefore considered prone to liquefaction during the design earthquake event. Liquefaction analyses are provided in Appendix C.

4.4 SEISMIC-INDUCED SETTLEMENT

To quantify the consequences of liquefaction at the site, seismic-induced settlement has been evaluated using the four CPT soundings. Robertson (NCEER 2001 and 2009) method was used for this evaluation.

Analyses were performed to evaluate the potential for seismic settlement from saturated liquefied and unsaturated dry soils. The calculated seismic-induced settlements of saturated soil using various methods for CPT analysis are ranging from 3.7 to 5.3 inches. Liquefaction induced-settlement analyses are provided in Appendix C.

Seismic-induced settlement can occur both above and below the groundwater table during a strong seismic event. We have estimated the dry seismic settlement using the Robertson and Shao (2010) Method. The total seismic dry settlement we calculated ranges from 0 to 0.2 inches.

5.0 CONCLUSIONS

5.1 FEASIBILITY OF PROPOSED DEVELOPMENT

From a geotechnical point of view, the proposed site development is considered feasible provided the recommendations presented in this report are incorporated into the design and construction of the project. Furthermore, it is also our opinion that the proposed development will not adversely impact the stability of adjoining properties.

5.2 GEOLOGIC HAZARDS

5.2.1 Ground Rupture

No known active faults are known to project through the subject sites nor do the sites lie within the boundaries of an “Earthquake Fault Zone” as defined by the State of California in the Alquist-Priolo Earthquake Fault Zoning Act. The closest known active fault is the Puente Hills (Coyote Hills) fault located approximately 2.7 miles to the northeast. Therefore, potential for ground rupture due to an earthquake beneath the sites is considered low.

5.2.2 Ground Shaking

The site is situated in a seismically active area that has historically been affected by generally moderate to occasionally high levels of ground motion. The site lies in relatively close proximity to several seismically active faults; therefore, during the life of the proposed improvements, the property will

probably experience similar moderate to occasionally high ground shaking from these fault zones, as well as some background shaking from other seismically active areas of the Southern California region. Design and construction in accordance with the current California Building Code (CBC) requirements are anticipated to address the issues related to potential ground shaking.

5.2.3 Landsliding

Geologic hazards associated with landsliding are not anticipated at the site since the site is relatively level.

5.2.4 Liquefaction

Our analyses indicate liquefaction could in soils located below a depth of 10 feet if groundwater were to rise to shallowest historic levels concurrent with a strong ground motion. Liquefaction could lead to a total seismic settlement (saturated and dry) of the ground surface of up to 5.3 inches due to seismic consolidation during liquefaction. The differential settlement due to seismic settlement would likely be on the order of ½ of the total seismic settlement or approximately 2.7 inches over 30 feet. Lateral spreading is not a significant risk at the site in consideration of the relatively flat site topography and lack of an nearby channel face or slope.

Based on the State of California Special Publication (SP) 117A, the seismic-induced settlement at the site does not fall within the Level of Liquefaction Hazard of "Large-scale Displacements." "Large scale Displacements" are defined as those that ***exceed*** 1-3 feet horizontally and 4-6 inches vertically. Therefore, the Level of Liquefaction Hazard is classified as a "Localized Failure." One of the suitable mitigation alternatives presented in the SP 117A for Localized Failures is the use of reinforced shallow foundations and improved structural design to withstand predicted vertical and lateral ground displacements.

The SP 117A also stated that hazards from liquefaction should be mitigated to the extent required to reduce seismic risk to "acceptable levels." The acceptable level of risk means, "that level that provides reasonable protection of the public safety" [California Code of Regulations Title 14, Section 3721 (a)]. The use of well-reinforced foundations, such as post-tensioned slabs, grade beams with structural slabs, or mat foundations have been proven to adequately provide basal support for similar structures during comparable liquefaction events. Specific recommendations to mitigate risks associated with liquefaction are provided in Section 6.3.

5.3 STATIC SETTLEMENT

As discussed in Section 4.2, analyses were performed to evaluate potential for static settlement of the underlying alluvium. Provided site grading is performed in accordance with the recommendations provided herein and based on the anticipated foundation loads, total and differential static settlement is not anticipated to exceed 1 inch and ½-inch over 30 feet, respectively, for the proposed commercial buildings. The estimated magnitudes of static settlements are considered within tolerable limits for the proposed structure.

5.4 EXCAVATION AND MATERIAL CHARACTERISTICS

Onsite earth materials are anticipated to be relatively easy to excavate with conventional heavy earthmoving equipment. The site earth materials are generally considered suitable for reuse as fill provided, they are cleared on deleterious debris and oversized rocks (greater than 4 inches in greatest dimension). Site materials are generally near the optimum moisture content. As such, fill soils derived from onsite soils will likely require the addition of nominal amounts of water and mixing in preparation for reuse as compacted fill.

Temporary construction slopes will be required to complete removal of unsuitable soils and for construction of underground utilities. Such excavations will require laybacks where they are surcharged or where they exceed 4 feet in height. Specific recommendations are provided in Section 6.1.8.

If encountered, portions of concrete debris and asphalt can likely be reduced in size (4 inches minus) and incorporated within fill soils during earthwork operations.

If onsite disposal systems, clarifiers, and other underground improvements are present beneath the site, these improvements will require proper abandonment or removal per the City guidelines.

5.5 SHRINKAGE AND SUBSIDENCE

Volumetric changes in earth quantities will occur when excavated onsite soil materials are replaced as properly compacted fill. We estimate that the near surface soils will shrink about 5 to 10 percent when removed and replaced as compacted fill. Subsidence due to reprocessing of removal bottoms is anticipated to be about 0.05 feet. The estimates of shrinkage and subsidence are intended as an aid for project engineers in determining earthwork quantities. However, these estimates should be used with some caution since they are not absolute values. Contingencies should be made for balancing earthwork quantities based on actual shrinkage and subsidence that occurs during the grading process.

5.6 SOIL EXPANSION

Based on our laboratory test results and the USCS visual manual classification, the near-surface soils are generally anticipated to possess a **Low** expansion potential. Additional testing for soil expansion will be required prior to construction of foundations and other concrete work to confirm these conditions.

6.0 RECOMMENDATIONS

6.1 EARTHWORK

6.1.1 General Earthwork and Grading Specifications

All earthwork and grading should be performed in accordance with applicable requirements of Cal/OSHA, applicable specifications of the Grading Codes of the City of Artesia, California in addition to the recommendations presented herein.

6.1.2 Pre-Grade Meeting and Geotechnical Observation

Prior to commencement of grading, we recommend a meeting be held between the developer, City Inspector, grading contractor, civil engineer, and geotechnical consultant to discuss the proposed grading and construction logistics. We also recommend a geotechnical consultant be retained to provide soil engineering and engineering geologic services during site grading and foundation construction. This is to observe compliance with the design specifications and recommendations and to allow for design changes in the event that subsurface conditions differ from those anticipated. If conditions are encountered that appear to be different than those indicated in this report, the project geotechnical consultant should be notified immediately. Design and construction revisions may be required.

6.1.3 Site Clearing

Areas to be graded should be cleared of vegetation, existing asphalt and concrete, underground improvements to be abandoned and deleterious materials. Existing underground utility lines within the project area that will be protected in place and that fall within a 1 to 1 (H:V) plane projected down from the edges of footings may be subject to surcharge loads. Under such conditions, this office should be made aware of these conditions for evaluation of potential surcharging. Supplemental recommendations may be required to protect such improvements in place.

The project geotechnical consultant should be notified at the appropriate times to provide observation services during clearing operations to verify compliance with the above recommendations. Voids created by clearing and excavation should be left open for observation by the geotechnical consultant. Should any unusual soil conditions or subsurface structures be encountered during site clearing or grading that are not described or anticipated herein, these conditions should be brought to the immediate attention of the project geotechnical consultant for corrective recommendations as needed.

Temporary construction equipment (office trailers, power poles, etc.) should be positioned to allow adequate room for clearing and recommended ground preparation to be performed for proposed structures, pavements, and hardscapes.

6.1.4 Ground Preparation

In general, the artificial fill is considered unsuitable for support of the proposed development. Based on our exploratory borings, the depth of the artificial fill material is anticipated to be about 2 feet in depth. However, deeper fills are expected in the areas of the previous site improvements (i.e. utility lines) and where the current buildings and structures are located. All artificial fill soils should be removed to expose the underlying alluvial soils within the limits of the structures (buildings and site walls) and paving.

Removal of unsuitable materials should extend laterally beyond the limits of the proposed buildings a distance equal to the depth of removal (i.e. 1:1 projection) but not less than 5 feet. Removals within pavements and footings for site walls may be limited to the edge of foundations or pavement where lateral restrictions to removals are present such as property lines.

All removal and overexcavations should be evaluated by the geotechnical consultant during grading to confirm the exposed conditions are as anticipated and to provide supplemental recommendations if required.

6.1.5 Scarification

Prior to placement of compacted fill, the exposed ground should be scarified to a depth of 6 to 8 inches, moisture conditioned to at least 110 percent of the optimum moisture content, then compacted to at least 90 percent of the laboratory standard. The laboratory standard for maximum dry density and optimum moisture content for each soil type should be determined in accordance with ASTM D 1557.

6.1.6 Fill Placement

Materials excavated from the site may be reused as fill provided, they are free of deleterious materials and particles greater than 4 inches in maximum dimension (oversized materials). Asphaltic and concrete debris generated during site demolition or encountered within the existing fill can be incorporated within new fill soils during earthwork operations provided they are reduced to no more than 4 inches in maximum dimension. Such materials should be mixed thoroughly with fill soils to prevent nesting. All fill should be placed in lifts no greater than 8 inches in loose thickness, moisture conditioned to at least 110% of optimum moisture content, then compacted in place to at least 90 percent of the laboratory standard. Each lift should be treated in a similar manner. Subsequent lifts should not be placed until the project geotechnical consultant has approved the preceding lift.

6.1.7 Import Materials

If import materials are required to achieve the proposed finish grades, the proposed import soils should have an Expansion Index (EI, ASTM D 4829) less than 20 and possess negligible soluble sulfate concentrations. Import sources should be indicated to the geotechnical consultant prior to hauling the materials to the site so that appropriate testing and evaluation of the fill materials can be performed in advance.

6.1.8 Temporary Excavations

Temporary construction slopes in site materials that are not surcharged may be cut vertically up to a height of 4 feet. Temporary excavations greater than 4 feet but no greater than 10 feet in height that are not surcharged should be laid back at a maximum gradient of 1:1 (H:V) or properly shored.

Excavations should not be left open for prolonged periods of time. The project geotechnical consultant should observe all temporary cuts to confirm anticipated conditions and to provide alternate recommendations if conditions dictate. All excavations should conform to the requirements of Cal/OSHA. The current removal requirement is 12 inches below existing grade and not expected to undermine the existing foundations. However, if deeper removals are required during grading and where insufficient room exists for recommended lay back cuts, shoring or slot cutting methods may be required. Additional recommendations for such conditions can be provided at that time based on the observed materials and subsequent lab testing.

6.2 SEISMIC DESIGN PARAMETERS

6.2.1 Mapped Seismic Design Parameters

For design of the project in accordance with Chapter 16 of the 2019 CBC, the mapped seismic parameters may be taken as presented in the tables below.

TABLE 6.1
2019 CBC Mapped Seismic Design Parameters

Parameter	Value
Site Class	D
Mapped MCE_R Spectral Response Acceleration, short periods, S_S	1.552
Mapped MCE_R Spectral Response Acceleration, at 1-sec. period, S_1	0.552
Site Coefficient, F_a	1.0
Site Coefficient, F_v	1.7445*
Adjusted MCE_R Spectral Response Acceleration, short periods, S_{MS}	1.552
Adjusted MCE_R Spectral Response Acceleration, at 1-sec. period, S_{M1}	0.968
Design Spectral Response Acceleration, short periods, S_{DS}	1.034
Design Spectral Response Acceleration, at 1-sec. period, S_{D1}	0.645
Long-Period Transition Period, T_L (sec.)	8
Seismic Design Category for Risk Categories I-IV	II

MCE_R = Risk-Targeted Maximum Considered Earthquake

*According to Section 11.4.8 in ASCE 7-16, "a ground motion hazard analysis shall be performed in accordance with Section 21.2 for the following structures on Site Class D and E sites with S_1 greater than or equal to 0.2." However, "A ground motion hazard analysis is not required for structures where: Structures on Site Class D sites with S_1 greater than or equal to 0.2, provided the value of the seismic response coefficient C_s is determined by Eq. (12.8-2) for values of $T \leq 1.5T_s$ and taken as equal to 1.5 times the value computed in accordance with either Eq. (12.8-3) for $T_L \geq T > 1.5T_s$ or Eq. (12.8-4) for $T > T_L$." The F_v value of 1.7 above from Table 11.4-2 assumes that this exception is met and that a ground motion hazard analysis is not required. Should this exception not be met, the site-specific seismic design parameters provided in the next section should be used.

6.2.2 Site-Specific Seismic Design Parameters

In addition to the Code Spectra parameters presented in Table 6.1, we have performed a site-specific ground motion hazard analysis in accordance with Chapter 21 of ASCE 7-16 to obtain site-specific seismic design acceleration parameters, the risk-targeted maximum considered earthquake response spectrum, and the design earthquake response spectrum. The site-specific seismic design parameters are presented below.

TABLE 6.2
2019 CBC Site Specific Seismic Design Parameters

Parameter	Value
Site Class	D
Site Coefficient, F_a	1.0
Site Coefficient, F_v	2.5
Adjusted MCE Spectral Response Acceleration, short periods, S_{MS}	1.833
Adjusted MCE Spectral Response Acceleration, at 1-sec. period, S_{M1}	1.822
Design Spectral Response Acceleration, short periods, S_{DS}	1.222
Design Spectral Response Acceleration, at 1-sec. period, S_{D1}	1.214

MCE = Maximum Considered Earthquake

6.3 CONVENTIONAL FOUNDATION DESIGN

6.3.1 General

As discussed in Section 5.2.4, the site is prone to liquefaction. To mitigate this condition, we recommend structures be supported by a foundation system consisting of a mat, post-tensioned slab, or spread footings tied together with a structural slab with grade beams. For this project, we have assumed the foundation system will utilize spread footings tied together with a structural slab with grade beams. Specific recommendations for this system is provided in the following sections. Recommendations for other systems can be provided upon request.

The following design parameters are provided to assist the project structural engineer to design foundations for structures at the site. These design parameters are based on typical site materials encountered during subsurface exploration and are provided for preliminary design and estimating purposes. The project geotechnical consultant should provide final design parameters following observation and testing of site materials during grading. Depending on actual materials encountered during site grading, the design parameters presented herein may require modification.

6.3.2 Soil Expansion

The recommendations presented herein are based on soils with a **Low** expansion potential. Following site grading, additional testing of site soils should be performed by the project geotechnical consultant to confirm the basis of these recommendations. If site soils with higher expansion potentials are encountered or imported to the site, the recommendations contained herein may require modification.

6.3.3 Static and Seismic Settlement

Based on anticipated foundation loads and provided that the recommendations for ground preparation in this report are followed, total and differential static settlement are anticipated to be less than 1 inch and ½ inch over 30 feet, respectively. These values are considered within tolerable limits of proposed structures and site improvements. Design of the structures should consider these maximum anticipated settlements.

6.3.4 Allowable Bearing Value

Foundations may utilize a bearing value of 2,000 pounds per square foot (psf) for continuous and pad footings a minimum width of 12 inches and founded at a minimum depth of 12 inches below the lowest adjacent grade. This value may be increased by 260 psf and 700 psf for each additional foot in width and depth, respectively, up to a maximum value of 4,000 psf. Recommended allowable bearing values include both dead and live loads may be increased by one-third for wind and seismic forces.

6.3.5 Lateral Resistance

For foundations that are founded in the native alluvial soils or compacted fill, a passive earth pressure of 300 pounds per square foot per foot of depth (psf/ft) up to a maximum value of 1,500 pounds per square foot (psf) may be used to determine lateral bearing for footings. This value may be increased by one-third when designing for wind and seismic forces. A coefficient of friction of 0.33 times the dead load forces may also be used between concrete and the supporting soils to determine lateral sliding resistance. No increase in the coefficient of friction should be used when designing for wind and seismic forces.

The above values are based on footings placed directly against compacted fill or competent native soils. In the case where footing sides are formed, all backfill against the footings should be compacted to at least 90 percent of the laboratory standard.

6.3.6 Footing Dimensions and Reinforcement

Exterior and interior pad footings should be founded at a minimum depth of 12 inches below the lowest adjacent grade and have a minimum width of 12 inches. All continuous footings should have a minimum depth of 12 inches below lowest adjacent grade and a minimum width of 12 inches.

All continuous footings should be reinforced with a minimum of four No. 5 bars, two top and two bottom. The structural engineer may require different reinforcement and should dictate if greater than the recommendations provided herein.

All isolated pad footings should be tied in both directions with a concrete grade beam to the nearest foundation. Grade beams should be at least 12 inches wide by 12 inches deep and be reinforced with four No. 5 bars, two top and two bottom. Reinforcing for the grade beams should tie into the adjacent footings.

6.3.7 Slabs on Grade

Interior concrete slabs constructed on grade should be a minimum 6 inches thick and should be reinforced with No. 3 bars spaced 18 inches each way. Care should be taken to ensure the placement of reinforcement at mid-slab height. The structural engineer may recommend a greater slab thickness and reinforcement based on proposed use and loading conditions and such recommendations should govern if greater than the recommendations presented herein. No. 4 tie bars should be provided between the slab and connecting grade beams at a spacing of 18 inches.

For consideration of point loading that may occur on the slab, a subgrade of modulus, K_{V1}, of 100 pci may be used.

Concrete floor slabs in areas to receive carpet, tile, or other moisture sensitive coverings should be underlain with a moisture vapor barrier 10-mil Visqueen, or equal. The membrane should be properly lapped, sealed, and protected with at least 2 inches of sand having an SE of 30 or more. This vapor barrier system is anticipated to be suitable for most flooring finishes that can accommodate some vapor emissions. However, this system may emit more than 4 pounds of water per 1000 sq. ft. and therefore, may not be suitable for all flooring finishes. Additional steps should be taken if such vapor emission levels are too high for anticipated flooring finishes.

Special consideration should be given to slabs in areas to receive ceramic tile or other rigid, crack-sensitive floor coverings. Design and construction of such areas should mitigate hairline cracking as recommended by the structural engineer.

Block-outs should be provided around interior columns to permit relative movement and mitigate distress to the floor slabs due to differential settlement that will occur between column footings and adjacent floor subgrade soils as loads are applied.

Prior to placing concrete, subgrade soils below slab-on-grade areas should be thoroughly moistened to provide a moisture content that is equal to or greater than 110% of the optimum moisture content to a depth of 12 inches.

6.3.8 Foundation Observations

Foundation excavation should be observed by the project geotechnical consultant to verify that they have been excavated into competent bearing soils and to the minimum embedment recommended above. These observations should be performed prior to placement of forms or reinforcement. The excavations should be trimmed neat, level and square. Loose, sloughed or moisture-softened materials and debris should be removed prior to placing concrete.

6.4 RETAINING AND SCREENING WALLS

6.4.1 General

The following preliminary design and construction recommendations are provided for general retaining and screen walls supported by engineered compacted fill or competent native soils. Final wall designs specific to the site development should be provided for review once completed. The structural engineer and architect should provide appropriate recommendations for sealing at all joints and applying moisture-proofing material on the back of the walls.

6.4.2 Allowable Bearing Value and Lateral Resistance

Design of retaining and screen walls may utilize the bearing and lateral resistance values provided in Sections 6.3.4 and **Error! Reference source not found.**.

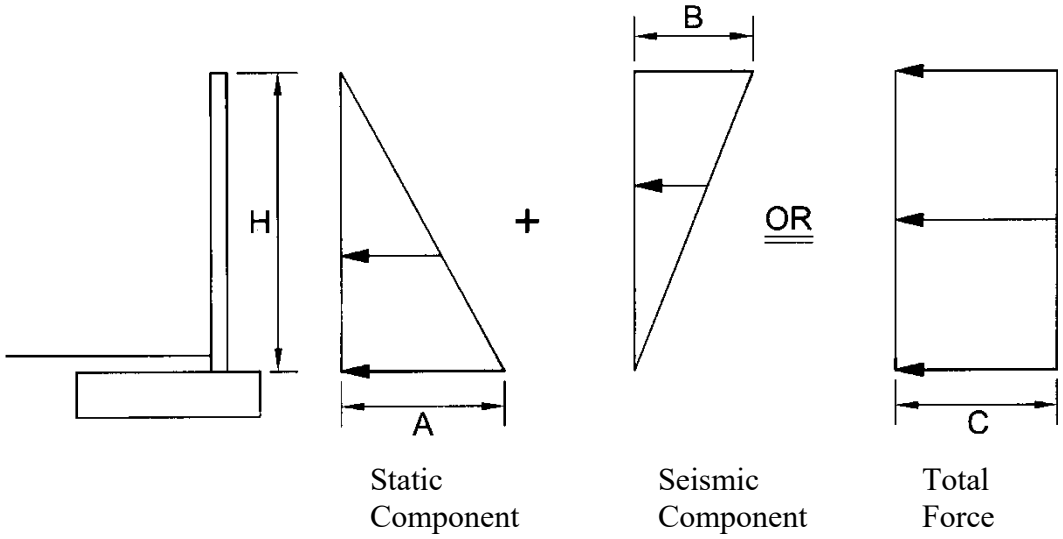
6.4.3 Active Earth Pressures

Static and seismic earth pressures for level and 2:1 (H:V) backfill conditions are provided in Table 6.3. Seismic earth pressures provided herein are based on the method provided by Seed & Whitman (1970) using a peak ground acceleration (PGA) of 0.42 g for 10% probability of exceedance in 50 years. As indicated in Section 1803.5.12 of the 2019 CBC, retaining walls supporting 10 feet of

backfill or less are not required to be designed for seismic earth pressures. The values provided in the following table do not consider hydrostatic pressure. Retaining walls should also be designed to support adjacent surcharge loads imposed by other nearby footings or traffic loads in addition to the earth pressure.

TABLE 6.3

SEISMIC EARTH PRESSURES
Pressure Diagram



Pressure Values
Walls Up To 10 Feet High

Value	Backfill Condition	
	Level	2H:1V Slope
A	33H	54H
B	12.5H	12.5H
C	23H	33.5H

Note:
H is in feet and resulting pressure is in psf. Design may utilize either the sum of the static component and the seismic component force diagrams or the total force diagram above. SEAOSC has suggested using a load factor of 1.7 for the static component and 1.0 for the seismic component. The actual load factors should be determined by the structural engineer.

6.4.4 Drainage and Moisture-Proofing

Retaining walls should be constructed with a perforated pipe and gravel subdrain to prevent entrapment of water in the backfill. The perforated pipe should consist of 4-inch-diameter, ABS SDR-

35 or PVC Schedule 40 with the perforations laid down. The pipe should be embedded in ¾- to 1½-inch open-graded gravel wrapped in filter fabric. The gravel should be at least one foot wide and extend at least one foot up the wall above the footing and drainage outlet. Drainage gravel and piping should not be placed below outlets and weepholes. Filter fabric should consist of Mirafi 140N, or equal. Outlet pipes should be directed to positive drainage devices.

The use of weepholes may be considered in locations where aesthetic issues from potential nuisance water are not a concern. Weepholes should be 2 inches in diameter and provided at least every 6 feet on center. Where weepholes are used, perforated pipe may be omitted from the gravel subdrain.

Retaining walls supporting backfill should also be coated with a moisture-proofing compound or covered with such material to inhibit infiltration of moisture through the walls. Moisture-proofing material should cover any portion of the back of wall that will be in contact with soil and should lap over and onto the top of footing. A drainage panel should be provided between the soil backfill and water proofing. The panel should extend from the top of the backdrain gravel up to within 12 inches of finish grade. The top of footing should be finished smooth with a trowel where moisture proofing-materials are applied to inhibit the infiltration of water through the wall. The project structural engineer should provide specific recommendations for moisture-proofing, water stops, and joint details.

6.4.5 Footing Reinforcement and Wall Jointing

All continuous footings should be reinforced with a minimum of two No. 4 bars, one top and one bottom. Walls should be provided with cold joints spaced no more than 20 feet apart. Wall finishes and capping materials should not extend across the cold joint. The structural engineer may require different reinforcement or jointing and should dictate if greater than the recommendations provided herein. Where recommended removals are limited due to space restrictions, greater reinforcement and closer jointing may be recommended. Specific recommendations should be provided by the geotechnical consultant during grading based on as-built conditions exposed in the field.

6.4.6 Foundation Observations

Footing excavations should be observed by the project geotechnical consultant to verify that they have been excavated into competent bearing soils and to the minimum embedment recommended herein. These observations should be performed prior to placement of forms or reinforcement. The excavations should be trimmed neat, level and square. Loose, sloughed or moisture-softened materials and debris should be removed prior to placing concrete.

6.5 EXTERIOR FLATWORK

Exterior flatwork should be a minimum 4 inches thick. Cold joints or saw cuts should be provided at least every 7 feet in each direction. Flatwork having a minimum dimension more than 7 feet should be reinforced with No. 3 bars spaced 18 inches center to center each way or 6-inch by 6-inch, W4 by W4 welded wire mesh. Special jointing detail should be provided in areas of block-outs, notches, or other irregularities to avoid cracking at points of high stress. Subgrade soils below flatwork should be thoroughly moistened to at least 110 percent of the optimum moisture content to a depth of 12 inches. Moistening should be accomplished by lightly spraying the area over a period of a few days just prior to pouring concrete. The geotechnical consultant should observe and verify the density and moisture

content of subgrade soils prior to pouring concrete to ensure that the required compaction and pre-moistening recommendations have been met.

Drainage from flatwork areas should be directed to local area drains and/or other appropriate collection devices designed to carry runoff water to the street or other approved drainage structures. The concrete flatwork should also be sloped at a minimum gradient of 0.5 percent away from building foundations and retaining walls.

6.6 CONCRETE MIX DESIGN

Laboratory testing of near-surface soils for soluble sulfate content indicates soluble sulfate concentration of 0.002%. We recommend following the procedures provided in ACI 318, Section 19.3.1, Table 19.3.1.1 for **S0** sulfate exposure. Upon completion of rough grading, an evaluation of as-graded conditions and further laboratory testing should be completed for the site to confirm or modify the recommendations provided in this section.

6.7 CORROSION

Results of preliminary testing of soils for pH, chloride, and minimum resistivity indicate the site is potentially **Highly Corrosive** to metals that are in contact or close proximity to onsite soils. As such, specific recommendations should be obtained from a corrosion specialist if construction will include metals that will be near or in direct contact with site soils.

6.8 PRELIMINARY PAVEMENT DESIGN

6.8.1 Preliminary Pavement Structural Sections

Based on the soil conditions present at the site and an estimated traffic index, preliminary pavement sections are provided in the table below. A laboratory tested "R-value" of 33 was used for the near-surface soil in this preliminary pavement design. The sections provided below are for planning purposes only and should be re-evaluated subsequent to site grading. Final pavement sections should be based on actual R-value testing of in-place soils and analysis of anticipated traffic.

6.8.2 Subgrade Preparation

Prior to placement of paving elements, subgrade soils should be scarified 6 inches, moisture-conditioned to above the optimum moisture content then compacted to at least 90 percent of the maximum dry density determined in accordance with ASTM D1557. Areas observed to pump or yield under vehicle traffic should be removed and replaced with firm and unyielding engineered compacted soil or aggregate base materials.

6.8.3 Aggregate Base

Aggregate base materials should be Crushed Aggregate Base or Crushed Miscellaneous Base conforming to Section 200-2 of the Standard Specification for Public Works Construction (Greenbook) or Class 2 Aggregate Base conforming to the Caltrans' Standard Specifications. The materials should be moisture conditioned to slightly over the optimum moisture content then compacted to at least 95 percent of ASTM D 1557.

TABLE 6.4
PRELIMINARY PAVEMENT STRUCTURAL SECTIONS

Location	Traffic Index	AC (inches)	PCC (inches)	AB (inches)
Truck Drive Areas	7.5	4.0	--	11.0
		--	8.0	--
Parking Drives	5.0	3.0	--	5.0
		--	5.0	--
Parking Stalls	--	3.0	--	5.0

6.8.4 Asphaltic Concrete

Paving asphalt should be PG 64-10 conforming to the requirements of Section 203-1 of the Greenbook. Asphalt concrete materials should conform to Section 203-6 and construction should conform to Section 302 of the Greenbook.

6.8.5 Portland Cement Concrete

Portland cement concrete used to construct concrete paving should conform to Section 201 of the Greenbook and should have a minimum compressive strength of 3,250 pounds per square inch (psi) at 28 days. Reinforcement and jointing of concrete pavement sections should be designed according to the minimum recommendations provided by the Portland Cement Association (PCA). For rigid pavement, transverse and longitudinal contraction joints should be provided at spacing no greater than 15 feet. Score joints may be constructed by saw cutting to a depth of ¼ of the slab thickness. Expansion/cold joints may be used in lieu of score joints. Such joints should be properly sealed. Where traffic will traverse over cold joints without keyways or dowels or edges of concrete paving, the edges should be thickened by 20% of the design thickness toward the edge over a horizontal distance of 5 feet.

6.9 POST GRADING CONSIDERATIONS

6.9.1 Site Drainage and Irrigation

The ground immediately adjacent to foundations should be provided with positive drainage away from the structures in accordance with 2019 CBC, Section 1804.4. Based on soil and climatic conditions, the ground slope within 10 feet of the buildings may be reduced to 2%. No rain or excess water should be allowed to pond against structures such as walls, foundations, flatwork, etc.

Excessive irrigation water can be detrimental to the performance of the proposed site development. Water applied in excess of the needs of vegetation will tend to percolate into the ground. Such percolation can lead to nuisance seepage and shallow perched groundwater. Seepage can form on slope faces, on the faces of retaining walls, in streets, or other low-lying areas. These conditions could lead to adverse effects such as the formation of stagnant water that breeds insects, distress or damage of trees, surface erosion, slope instability, discoloration and salt buildup on wall faces, and premature

failure of pavement. Excessive watering can also lead to elevated vapor emissions within buildings that can damage flooring finishes or lead to mold growth inside the home.

Key factors that can help mitigate the potential for adverse effects of overwatering include the judicious use of water for irrigation, use of irrigation systems that are appropriate for the type of vegetation and geometric configuration of the planted area, the use of soil amendments to enhance moisture retention, use of low-water demand vegetation, regular use of appropriate fertilizers, and seasonal adjustments of irrigation systems to match the water requirements of vegetation. Specific recommendations should be provided by a landscape architect or other knowledgeable professional.

6.9.2 Utility Trenches

Trench excavations should be constructed in accordance with the recommendations contained in Section 6.1.8 of this report. Trench excavations must also conform to the requirements of Cal/OSHA.

Trench backfill materials and compaction criteria should conform to the requirements of the local municipalities. As a minimum, utility trench backfill should be compacted to at least 90 percent of the laboratory standard. Materials placed within the pipe zone (6 inches below and 12 inches above the pipe) should consist of particles no greater than ¾ inches and have a SE of at least 30. The materials within the pipe zone should be moisture-conditioned and compacted by hand-operated compaction equipment. Above the pipe zone (>1 foot above pipe), the backfill may consist of general fill materials. Trench backfill should be moisture-conditioned to slightly over the optimum moisture content, placed in lifts no greater than 12 inches in thickness, and then mechanically compacted with appropriate equipment to at least 90 percent of the laboratory standard. For trenches with sloped walls, backfill material should be placed in lifts no greater than 8 inches in loose thickness, and then compacted by rolling with a sheepsfoot roller or similar equipment. The project geotechnical consultant should perform density testing along with probing to verify that adequate compaction has been achieved.

Within shallow trenches (less than 18 inches deep) where pipes may be damaged by heavy compaction equipment, imported clean sand having a SE of 30 or greater may be utilized. The sand should be placed in the trench, thoroughly watered, and then compacted with a vibratory compactor. For utility trenches located below a 1:1 (H:V) plane projecting downward from the outside edge of the adjacent footing base or crossing footing trenches, concrete or slurry should be used as trench backfill.

6.10 PLAN REVIEW AND CONSTRUCTION SERVICES

We recommend ***Albus & Associates, Inc.*** be engaged to review any future development plans, including civil plans (grading plans), foundation plans, and proposed structural loads, prior to construction. This is to verify that the assumptions of this report are valid and that the preliminary conclusions and recommendations contained in this report have been properly interpreted and are incorporated into the project plans and specifications. If we are not provided the opportunity to review these documents, we take no responsibility for misinterpretation of our preliminary conclusions and recommendations.

We recommend that a geotechnical consultant be retained to provide soil engineering services during construction of the project. These services are to observe compliance with the design, specifications

or recommendations, and to allow design changes in the event that subsurface conditions differ from those anticipated prior to the start of construction.

If the project plans change significantly from the assumed development described herein, the project geotechnical consultant should review our preliminary design recommendations and their applicability to the revised construction. If conditions are encountered during construction that appear to be different than those indicated in this report or subsequent design reports, the project geotechnical consultant should be notified immediately. Design and construction revisions may be required.

7.0 LIMITATIONS

This report is based on the proposed development and geotechnical data as described herein. The materials encountered on the project site and utilized in our laboratory testing for this investigation are believed representative of the total project area, and the conclusions and recommendations contained in this report are presented on that basis. However, soil and bedrock materials can vary in characteristics between points of exploration, both laterally and vertically, and those variations could affect the conclusions and recommendations contained herein. As such, observation and testing by a geotechnical consultant during the grading and construction phases of the project are essential to confirming the basis of this report.

This report has been prepared consistent with that level of care being provided by other professionals providing similar services at the same locale and time period. The contents of this report are professional opinions and as such, are not to be considered a guaranty or warranty.

This report should be reviewed and updated after a period of one year or if the site ownership or project concept changes from that described herein.

This report has been prepared for the exclusive use of **G3 Urban Company** and their project consultants in the planning and design of the proposed development. This report has not been prepared for use by parties or projects other than those named or described herein. This report may not contain sufficient information for other parties or other purposes.

This report is subject to review by the controlling governmental agency.

Respectfully submitted,

SUMMARY

OF

CONE PENETRATION TEST DATA

1. INTRODUCTION

This report presents the results of a Cone Penetration Test (CPT) program carried out for the project located at 180 Flallon Avenue in Artesia, California. The work was performed by Kehoe Testing & Engineering (KTE) on November 2, 2021. The scope of work was performed as directed by Albus & Associates personnel.

2. SUMMARY OF FIELD WORK

The fieldwork consisted of performing CPT soundings at four locations to determine the soil lithology. A summary is provided in **TABLE 2.1**.

LOCATION	DEPTH OF CPT (ft)	COMMENTS/NOTES:
CPT-1	50	
CPT-2	50	
CPT-3	50	
CPT-4	50	

TABLE 2.1 - Summary of CPT Soundings

3. FIELD EQUIPMENT & PROCEDURES

The CPT soundings were carried out by **KTE** using an integrated electronic cone system manufactured by Vertek. The CPT soundings were performed in accordance with ASTM standards (D5778). The cone penetrometers were pushed using a 30-ton CPT rig. The cone used during the program was a 15 cm^2 cone with a cone net area ratio of 0.83. The following parameters were recorded at approximately 2.5 cm depth intervals:

- Cone Resistance (qc)
- Sleeve Friction (fs)
- Dynamic Pore Pressure (u)
- Inclination
- Penetration Speed

The above parameters were recorded and viewed in real time using a laptop computer. Data is stored at the KTE office for up to 2 years for future analysis and reference. A complete set of baseline readings was taken prior to each sounding to determine temperature shifts and any zero load offsets. Monitoring base line readings ensures that the cone electronics are operating properly.

4. CONE PENETRATION TEST DATA & INTERPRETATION

The Cone Penetration Test data is presented in graphical form in the attached Appendix. These plots were generated using the CPeT-IT program. Penetration depths are referenced to ground surface. The soil behavior type on the CPT plots is derived from the attached CPT SBT plot (Robertson, "Interpretation of Cone Penetration Test…", 2009) and presents major soil lithologic changes. The stratigraphic interpretation is based on relationships between cone resistance (qc), sleeve friction (fs), and penetration pore pressure (u). The friction ratio (Rf), which is sleeve friction divided by cone resistance, is a calculated parameter that is used along with cone resistance to infer soil behavior type. Generally, cohesive soils (clays) have high friction ratios, low cone resistance and generate excess pore water pressures. Cohesionless soils (sands) have lower friction ratios, high cone bearing and generate little (or negative) excess pore water pressures.

The CPT data files have also been provided. These files can be imported in CPeT-IT (software by GeoLogismiki) and other programs to calculate various geotechnical parameters.

It should be noted that it is not always possible to clearly identify a soil type based on qc, fs and u. In these situations, experience, judgement and an assessment of the pore pressure data should be used to infer the soil behavior type.

If you have any questions regarding this information, please do not hesitate to call our office at (714) 901-7270.

Sincerely,

KEHOE TESTING & ENGINEERING

Steven P. Kehoe

APPENDIX B

LABORATORY TEST RESULTS

LABORATORY TESTING PROGRAM

Soil Classification

Soils encountered within the exploratory borings were initially classified in the field in general accordance with the visual-manual procedures of the Unified Soil Classification System (ASTM D 2488). The samples were re-examined in the laboratory and classifications reviewed and then revised where appropriate. The assigned group symbols are presented on the Exploration Logs provided in Appendix A.

In-Situ Moisture Content and Dry Density

Moisture content and dry density of in-place soil materials were determined in representative strata. Test data are summarized on the Exploration Logs, Appendix A.

Atterberg Limits

Atterberg Limits (Liquid Limit, Plastic Limit, and Plasticity Index) were performed in accordance with Test Method ASTM D 4318. Pertinent test values are presented within Table B-1.

Maximum Dry Density and Optimum Moisture Content

Maximum dry density and optimum moisture content were performed on a representative sample of the site materials obtained from our field explorations. The test was performed in accordance with ASTM D 1557. Pertinent test values are given in Table B-1.

Expansion Potential

Expansion index testing was performed on a selected sample. The test was performed in accordance with ASTM D4829. The test result and expansion potential are presented in Table B-1.

Direct Shear

The Coulomb shear strength parameters, angle of internal friction and cohesion, were determined for a bulk sample and intact samples obtained from one our borings. The tests were performed in general conformance with Test Method ASTM D 3080. The bulk sample was remolded to 90 percent of maximum dry density and at the optimum moisture content. Three specimens were prepared for each test, artificially saturated, and then sheared under varied loads at an appropriate constant rate of strain. Results are graphically presented on Plate B-5.

Consolidation

Consolidation tests were performed for selected soil samples in general conformance with ASTM D 2435. Axial loads were applied in several increments to a laterally restrained 1-inch-high sample. Loads were applied in geometric progression by doubling the previous load, and the resulting deformations were recorded at selected time intervals. The specific test samples were inundated at selected loads to evaluate the effects of a sudden increase in moisture content (hydro-consolidation potential). Results of the tests are graphically presented on Plates B-1 to B-4.

Soluble Sulfate Content

A chemical analysis was performed on a selected sample to determine soluble sulfate content. This test was performed in our soil laboratory in accordance with California Test Method No 417. The test result is included on Table B-1.

Corrosion

Select samples were tested for minimum resistivity, chloride, pH in accordance with California Test Method 643. Results of these tests are provided in Table B-1.

R-Value

A sample of soil was tested for R-value in accordance with California Test Method (CTM) 301. The results are summarized in Plate B-6.

TABLE B-1
SUMMARY OF LABORATORY TEST RESULTS

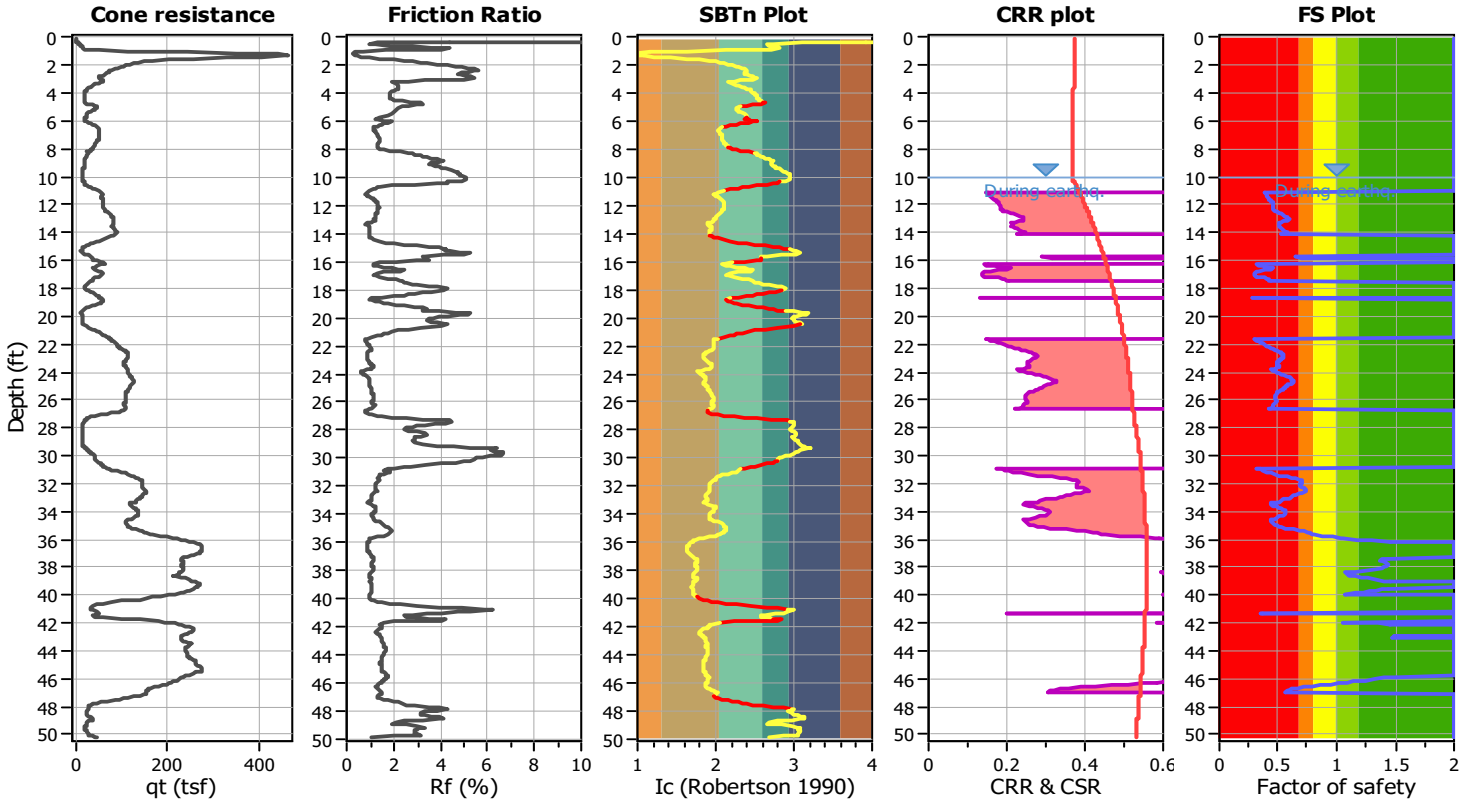
LIQUEFACTION ANALYSIS REPORT

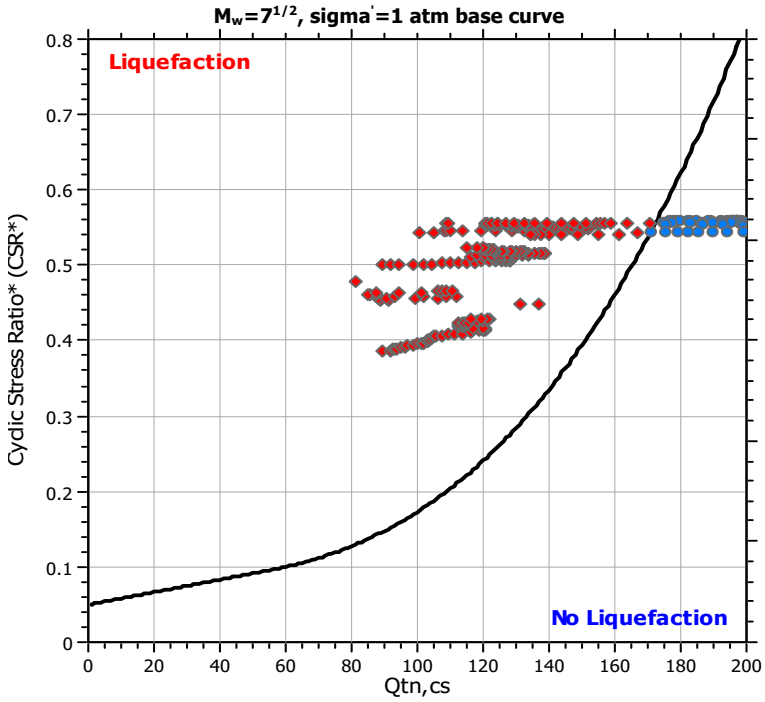
Project title : 3027.00 **Location : Artesia, CA**

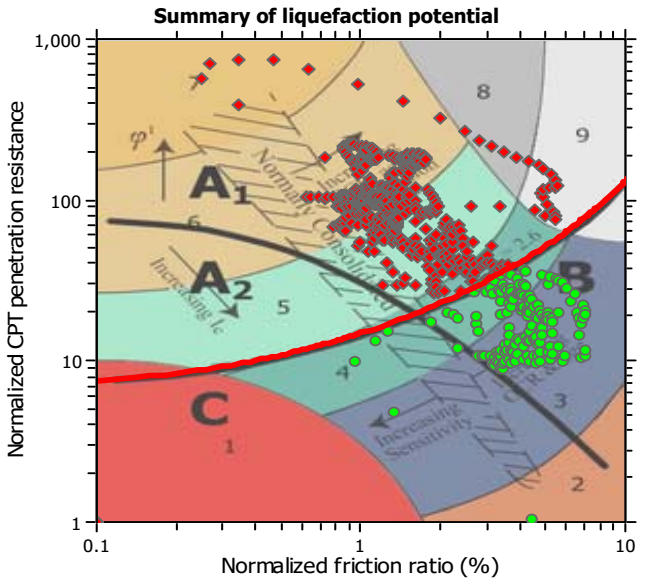
CPT file : CPT-1

Input parameters and analysis data

Analysis method:	NCEER (1998)	G.W.T. (in-situ):	14.00 ft	Use fill:	No	Clay like behavior applied:	Sands only
Fines correction method:	NCEER (1998)	G.W.T. (earthq.):	10.00 ft	Fill height:	N/A	Limit depth applied:	No
Points to test:	Based on Ic value	Average results interval:	3	Fill weight:	N/A	Limit depth:	N/A
Earthquake magnitude M_w:	6.83	Ic cut-off value:	2.60	Trans. detect. applied:	Yes	MSF method:	Method based
Peak ground acceleration:	0.73	Unit weight calculation:	Based on SBT	K_σ applied:	Yes		

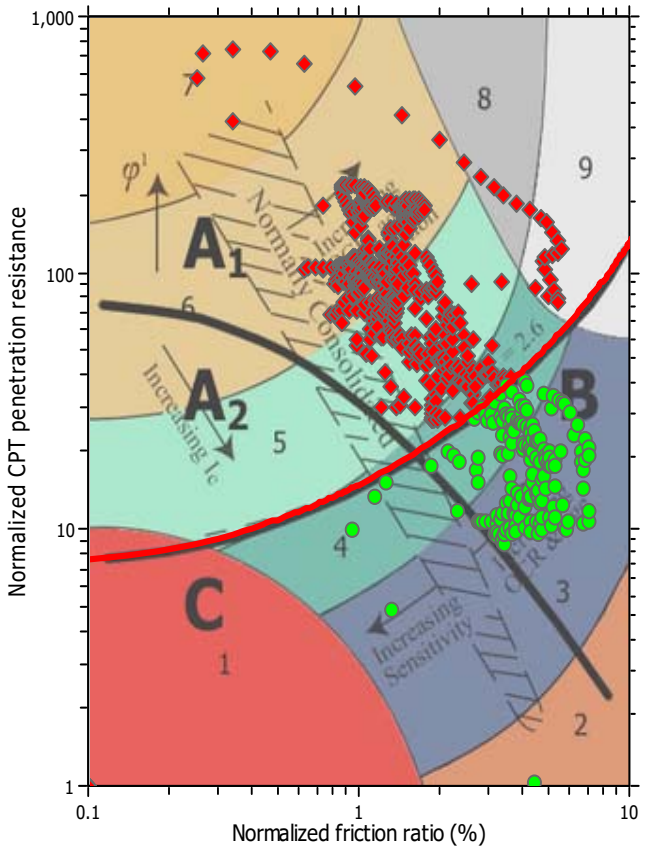


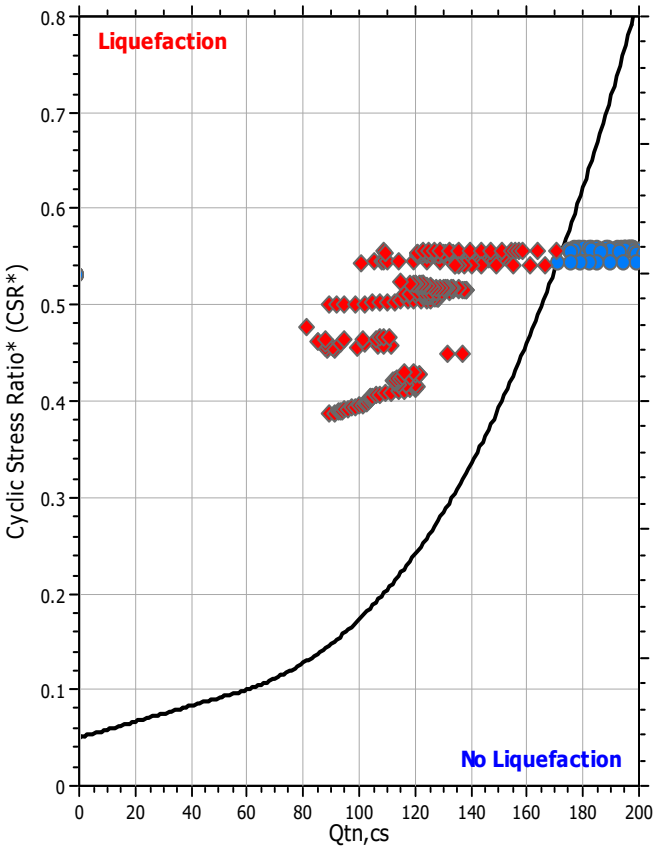


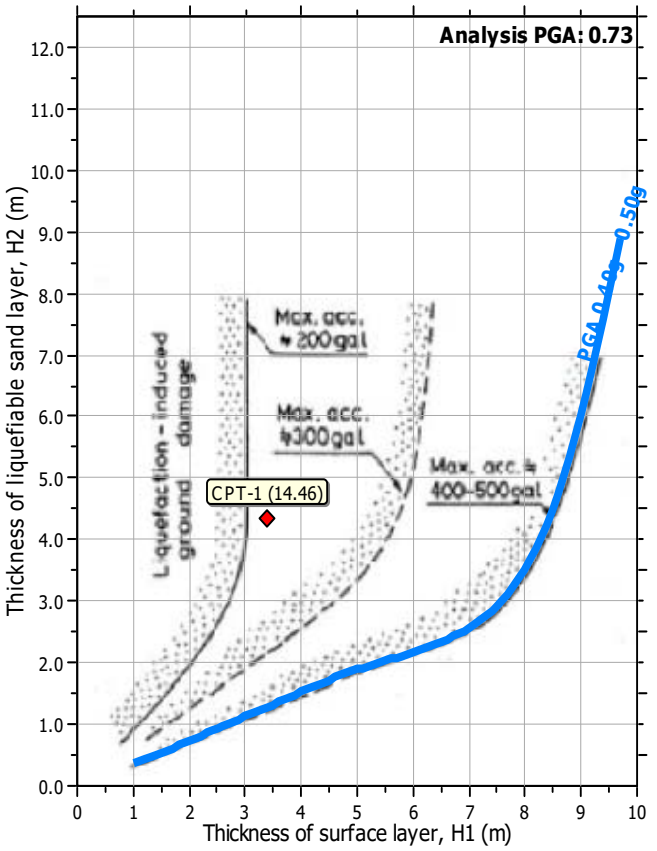


Zone A_1: Cyclic liquefaction likely depending on size and duration of cyclic loading
Zone A_2: Cyclic liquefaction and strength loss likely depending on loading and ground geometry
Zone B: Liquefaction and post-earthquake strength loss unlikely, check cyclic softening
Zone C: Cyclic liquefaction and strength loss possible depending on soil plasticity, brittleness/sensitivity, strain to peak undrained strength and ground geometry

Liquefaction analysis summary plots



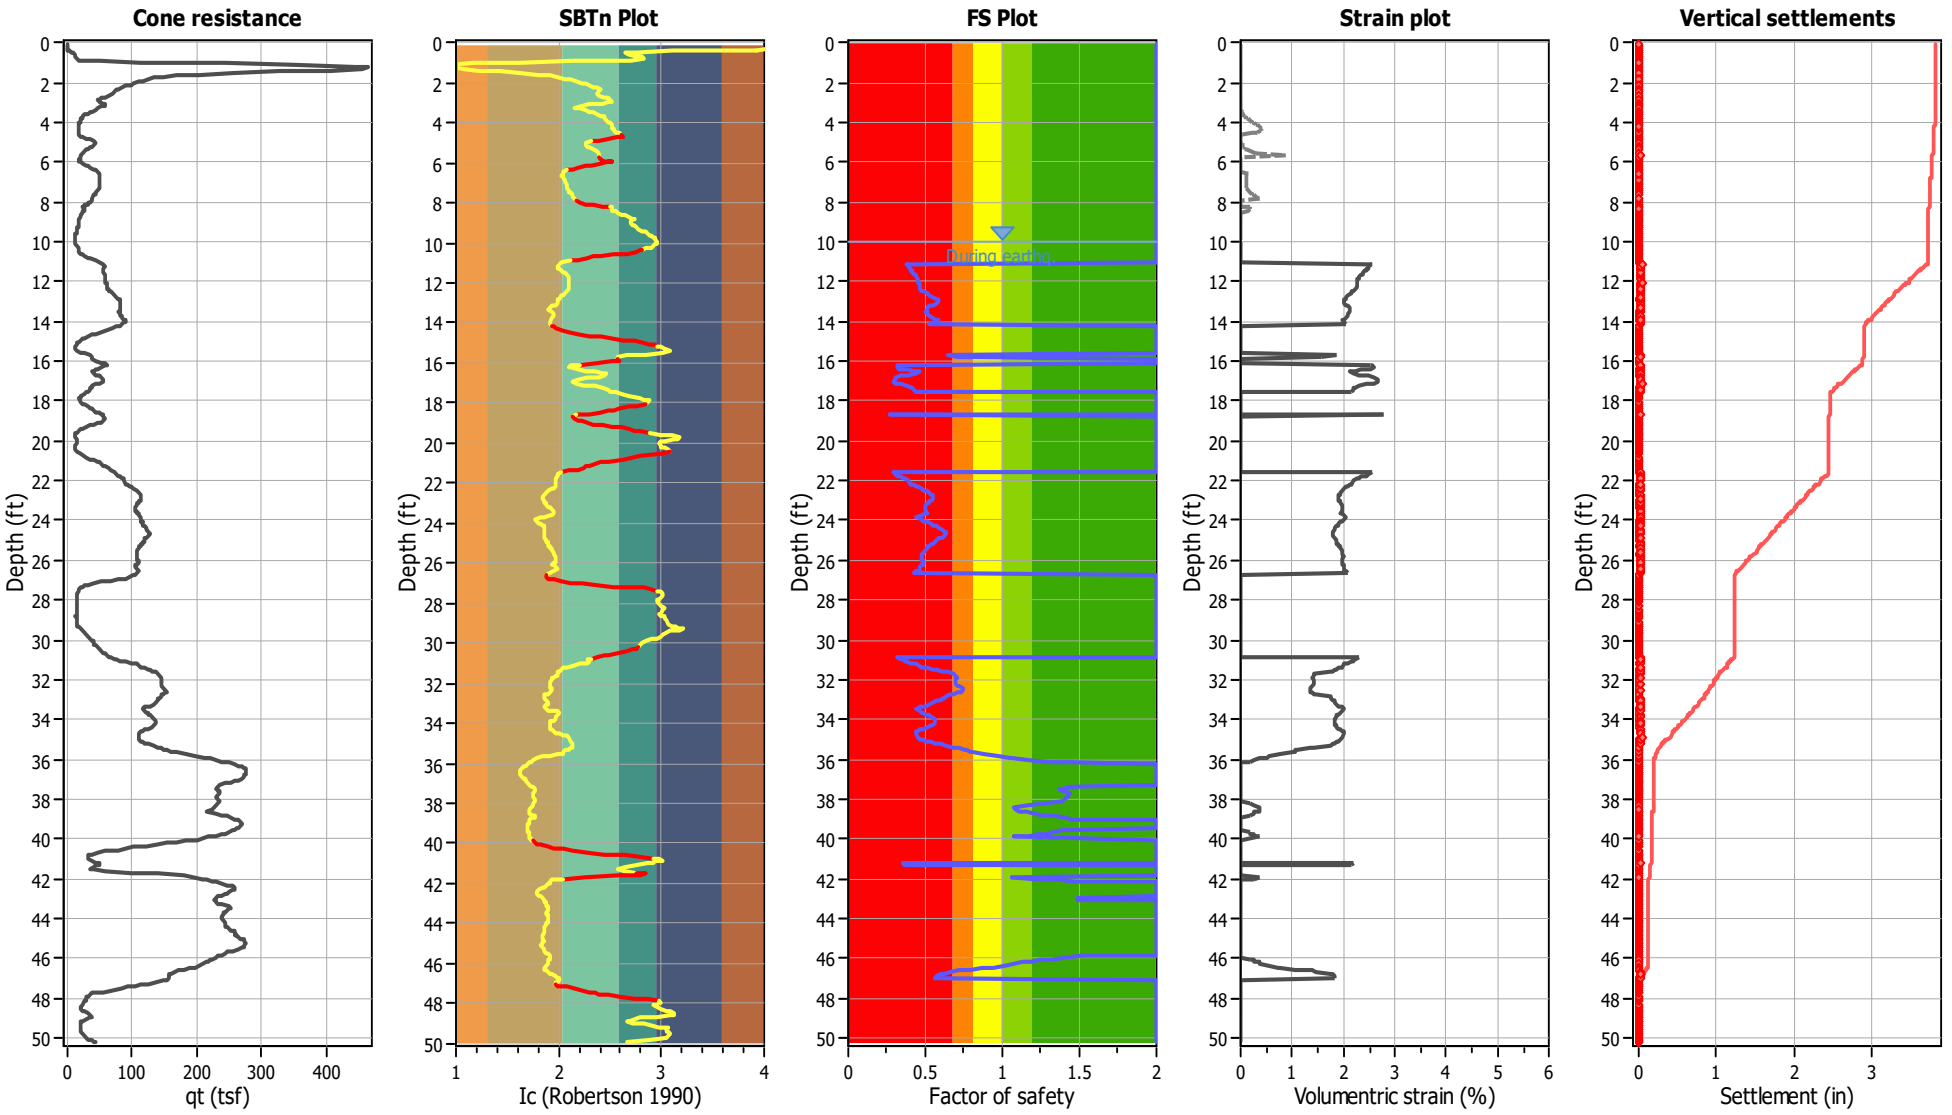




Input parameters and analysis data

Analysis method:	NCEER (1998)	Depth to water table (erthq.):	10.00 ft	Fill weight:	N/A
Fines correction method:	NCEER (1998)	Average results interval:	3	Transition detect. applied:	Yes
Points to test:	Based on Ic value	Ic cut-off value:	2.60	K_σ applied:	Yes
Earthquake magnitude M_w:	6.83	Unit weight calculation:	Based on SBT	Clay like behavior applied:	Sands only
Peak ground acceleration:	0.73	Use fill:	No	Limit depth applied:	No
Depth to water table (insitu):	14.00 ft	Fill height:	N/A	Limit depth:	N/A

Estimation of post-earthquake settlements



Abbreviations

q_t:	Total cone resistance (cone resistance q_c corrected for pore water effects)
I_c:	Soil Behaviour Type Index
FS:	Calculated Factor of Safety against liquefaction
Volumentric strain:	Post-liquefaction volumentric strain
