City of Pittsburg
Community and Economic Development Department – Planning Division
65 Civic Avenue, Pittsburg, CA 94565 | Tel: (925) 252-4920 | Fax: (925) 252-4814

NOTICE OF PREPARATION

To: State Clearinghouse
1400 Tenth Street
Sacramento, California 95814

From: City of Pittsburg, Community & Economic Development Department, Planning Division
65 Civic Avenue
Pittsburg, California 94565

To: Interested Parties; Responsible & Trustee Agencies

Subject: Notice of Preparation of a Draft Environmental Impact Report for the Proposed Harbor View Project

The City of Pittsburg is the lead agency for the preparation of an Environmental Impact Report (EIR) for the Harbor View Project (proposed project). The scope of the EIR has been proposed based upon a determination by the City. The City has directed the preparation of this EIR in compliance with the California Environmental Quality Act (CEQA).

Once a decision is made to prepare an EIR, the lead agency must prepare a Notice of Preparation (NOP) to inform all responsible and trustee agencies that an EIR will be prepared (CEQA Guidelines Section 15082). The purpose of the NOP is to provide agencies with sufficient information describing both the proposed project and the potential environmental effects to enable the agencies to make a meaningful response as to the scope and content of the information to be included in the EIR. The City is also soliciting comments on the scope of the EIR from interested persons.

Project Title: Harbor View Project

Project Applicant: The Harbor View Owner LPV, LLC

Date _____ Signature _____

Title Assistant Planner

Telephone (925) 252-4824

Reference: California Code of Regulations, Title 14, (California Environmental Quality Act Guidelines) Sections 15082(a), 15103, 15375.

PUBLIC SCOPING MEETING AND COMMENT SUBMITTAL

A scoping meeting open to the public will be held to receive public comments and suggestions on the scope of the EIR. At this meeting, staff will give a brief presentation of the EIR process and will take public comment on the scope of the proposed EIR and alternatives. The scoping meeting will be open to the public and held online using the following Zoom Information:

Date: August 23, 2022
Time: 9:00 AM to 10:00 AM Pacific Time
Zoom Link: https://us02web.zoom.us/j/83857381642?pwd=WXpQOHFBZzZkWVNiSkNwZ11 1bStKQT09
Meeting ID: 838 5738 1642
Passcode: 372198

The purpose of the EIR is to provide information about potential significant physical environmental impacts of the proposed project, to identify possible ways to minimize those significant impacts, and to describe and analyze possible alternatives to the proposed project if potential significant impacts are identified. Preparation of an NOP or EIR does not indicate a decision by the City to approve or disapprove the project. However, prior to making any such decision, the City Council must review and consider the information contained in the EIR.

Written comments on the scope of the EIR are encouraged. **Please submit comments by 5:00 PM on September 12, 2022**. Written comments should be sent to Kelsey Gunter, Assistant Planner, at 65 Civic Avenue, Pittsburg, California 94565, or via email at kgunter@pittsburgca.gov.

Questions concerning the environmental review of the proposed project should be directed to Kelsey Gunter at (925) 252-4824; however, please note that comments on the scope of the Draft EIR cannot be accepted over the phone. To be considered during preparation of the EIR, comments must be received in writing by the deadline identified above.

PROJECT LOCATION AND SETTING:

The project site is located at 420 East 3rd Street, southwest of the intersection of East 3rd Street and Harbor Street, approximately one mile north of State Route (SR) 4 in the City of Pittsburg, California (see Figure 1 and Figure 2). The 20.5-acre site is identified by Assessor's Parcel Number 073-050-001. Currently, the project site consists primarily of ruderal grasses and is absent of structures. A 3.46-acre berm area extends north-to-south along the eastern boundary of the project site. Scattered trees are located along the west and south boundaries of the project site. The City of Pittsburg General Plan designates the site as Downtown Commercial and Downtown Medium Density Residential. The site is zoned Pedestrian Commercial (CP) and Downtown Medium Residential – Limited Overlay District (RMD-O).

A portion of the 8th Street Greenbelt, a ten-block linear park, and a tot lot are located directly south of the project site. Single-family residences are located further south, across East 8th Street, and immediately west of the project site. The Railroad Avenue commercial corridor is located further west, approximately 1,200 feet from the project site. Undeveloped land is located north of the project site, across East 3rd Street, and the New York Slough is located further north. Industrial uses, including a glass shop, auto body shop, and the Los Medanos Energy Center, are located east of the project site, across Harbor Street.

Figure 1
Regional Location Map

Figure 2
Project Location and Adjacent Uses

*Project Site boundaries are approximate.

PROJECT COMPONENTS

The proposed project would include the subdivision of the project site and subsequent construction of 227 residential units, as well as associated internal roadways, bioretention facilities, and open space/landscaping (see Figure 3). The project would require approval of a Rezone, Vesting Tentative Map, and Design Review. The aforementioned project components are discussed in further detail below.

Rezone

The proposed project would include a Zoning Overlay Amendment of the project site to modify the existing Limited Overlay of the project site's RMD zoning designation in order to allow for smaller lot sizes, while keeping the average lot size no less than 2,200 sf. The RMD District is intended to provide opportunities for residential development with increased land coverages for attached or detached single-family residences and multifamily residences such as townhouses, apartment complexes with 16 or more units, and condominiums. The RMD District allows for a maximum density of a 2,500-sf lot area per unit.

Vesting Tentative Map

The Vesting Tentative Map would subdivide the project site into 227 residential lots, an internal circulation network, bioretention facilities, and open space/landscaping.

The 20 northernmost lots, which generally front East 3rd Street, would be developed with mixed-use live/work duplexes at a density of 26 to 27 dwelling units per acre (du/ac). The ground floor or each unit would provide approximately 420 square feet (sf) of commercial space and/or private work space, ultimately up to the discretion of the property owner.

Immediately south of the proposed live/work units would be 101 generally 36-foot by 55-foot single-family lots. The residential units would generally be designed with three bedrooms and three or 3.5 bathrooms, and the development density would be 15 to 16 du/ac. The southern half of the project site would consist of 106 generally 42-foot by 55-foot single-family lots. The units would generally be designed with three or four bedrooms and 3.5 bathrooms, and the development density would be 11 to 13 du/ac.

A 2,329-sf neighborhood park lot is proposed west of the driveway entrance from Harbor Street, with a water detention basin extending westward from the park's western edge. Two additional detention basins are proposed to the north and south of the driveway entrance. The northern basin would extend from East 3rd Street along the berm area to the driveway entrance, while the other basin would extend south along the berm area from the driveway entrance to the southernmost residential unit.

Access and Circulation

Site access would be provided by one new 46-foot driveway located off of East 3rd Street from the north, and one new approximately 56-foot driveway located off of Harbor Street from the east. All internal lanes and drive aisles would meet the minimum width that can accommodate an emergency vehicle. The project site would include 83 on-street parking stalls, and each home would include a two-car garage. As a whole, the project site would accommodate 454 parking spaces. Development of the proposed project would also include new curb, gutter, sidewalk, and landscaping along Harbor Street and East 3rd Street.

Figure 3
Project Site Plan

Site Summary

Total acreage:	20.5
Berm/Slope area acreage:	3.46
Development envelope:	17.04
Total unit count:	226
Du/ac (includes water quality):	13.26
Zoning:	RMD - O

Product No.	Net du/ac	Arch product	Plan	Bed/bath	Notes	SF	Unit count
1	15-16	36' x 55'	Plan 1	3/3		1,792	33
			Plan 2	3/3.5		1,829	33
			Plan 3	3/3		1,891	33
			Plan 1-LW	3/3		1,792	2
						Total:	**101**
2	11-13	42' x 55'	Plan 1	3/3.5		1,980	35
			Plan 2	4/3.5		2,060	35
			Plan 3	4/3.5		2,120	35
						Total:	**105**
3	26-27	Live/Work	Plan 1	1/1		1,270	20
						Total:	**20**
						Grand Total:	**226**

Landscaping

As part of the proposed project, each residence, with the exception of the live/work duplexes, would include a private yard space. Trees would be planted along each internal roadway, as well as along the eastern site border along Harbor Street. As detailed above, a new park would be constructed at the Harbor Street entrance and landscape pockets would line the internal loop road. A protected 3.46-acre berm which contains contaminated soils runs along the eastern boundary of the project site, and will be managed and maintained as required by previously approved permits. Bioretention treatment and landscape features are proposed along the eastern boundary of the project site between the site and the berm.

Utilities

Water supply for the proposed project would be provided by the City of Pittsburg through the Contra Costa Water District (CCWD). The City operates a water treatment plant and associated infrastructure facilities, which primarily serve customers within the City limits. The proposed project would include construction of new on-site water lines, which would connect to the existing 16-inch water lines located within Harbor Street and East 3rd Street.

Sewer service for the proposed project would be provided by Delta Diablo, the City's wastewater provider. Existing 16-inch and 18-inch sanitary sewer lines are located within Harbor Street and East 3rd Street, respectively. A new network of sanitary sewer lines would be constructed on-site and would convey approximately 65 percent of the wastewater generated from the site to the existing 18-inch sewer line in East 3rd Street and approximately 35 percent of the wastewater generated from the site to the existing 16-inch sewer line in Harbor Street.

An existing 48-inch storm drain line is located in Harbor Street with two existing 24-inch stubs to the site. A new storm drain system would be constructed on-site and would collect the stormwater from the residential lots, streets, and open space areas and convey the stormwater to bioretention areas located between the residential lots and the berm area. The stormwater would be treated at the on-site bioretention areas prior to being discharged into the existing system in Harbor Street.

Solid waste pickup and disposal for the City is provided by Mt. Diablo Resource Recovery. Residential and commercial solid waste is disposed of at Potrero Hills Landfill, located east of Suisun City, while non-recyclable industrial waste is transported to Keller Canyon Landfill, located southeast of the city limits.

The proposed project would connect to the electricity, natural gas, and telecommunication infrastructure that exists in the project vicinity. Existing overhead utility lines on East 3rd Street would be removed and replaced underground as part of the project.

Design Review

Section 18.36.110 of the City's Municipal Code requires that a project that would subdivide more than five lots is subject to Design Review by the City. As such, the proposed project would be subject to a Design Review, the standards of which are delineated in Section 18.36.220 of the City's Municipal Code. Such review is intended to ensure that new development within the City generally contributes to the character and image of the City, conforms with the nature of the neighborhood, and is in harmony with existing developments in the general area.

Discretionary Actions

The proposed project would require the following discretionary actions by the City of Pittsburg:

- Certification of the EIR;
- Rezone of the project site to modify the existing overlay;
- Vesting Tentative Map; and
- Design Review.

DISCUSSION OF POTENTIAL IMPACTS

An Initial Study was prepared for the proposed project (see Attachment 1), which determined that the content of the EIR shall focus on the following areas of potential impacts: Greenhouse Gas Emissions and Transportation. In addition, statutorily required sections and discussion of project alternatives will be included. Some refinement to the aforementioned issues may be required based on comments received during the NOP scoping process. The following section describes each of the technical chapters of the EIR in further detail.

Information will be drawn from the City of Pittsburg General Plan and General Plan EIR, technical studies prepared, and any other information pertinent to the project area. Consistent with CEQA and the requirements of the City of Pittsburg, each environmental chapter will include an introduction, existing environmental setting, regulatory context, and impacts and mitigation measures.

Greenhouse Gas Emissions

The Greenhouse Gas (GHG) Emissions chapter of the EIR will include a discussion of the existing regulatory setting and context related to GHG Emissions, including Assembly Bill (AB) 32 and Senate Bill (SB) 32, and an impacts and mitigation section with quantitative data showing the project's contribution to the generation of GHG emissions during the construction and operational phases of the project, as well as a qualitative discussion of project consistency with the design features required by the Air District. The significance of impacts will be determined in comparison to the recommended Bay Area Air Quality Management District significance thresholds. Feasible and appropriate mitigation measures to avoid or reduce adverse impacts will be identified, as needed.

Transportation

The Transportation chapter of the EIR will be based on a Transportation Impact Study (TIS) prepared specifically for the proposed project. Impact determination for CEQA purposes will be based on vehicle miles traveled (VMT), consistent with CEQA Guidelines Section 15064.3, which became effective statewide on July 1, 2020. The VMT analysis will be quantitative in nature and will be prepared consistent with Contra Costa County's current guidance regarding analysis of VMT.

The proposed project's impacts to alternative modes of transportation, such as pedestrian, bicycle and transit facilities, will be assessed based on their significance criteria contained in the adopted Contra Costa County guidelines. The EIR chapter will also include an analysis of the proposed project's potential impacts related to conflicting with applicable programs, policies, and ordinances addressing the circulation system,

vehicle safety hazards, and emergency access. Feasible and appropriate mitigation measures to avoid or reduce adverse impacts will be identified, as needed.

Statutorily Required Sections

The Statutorily Required Sections chapter of the EIR will summarize potentially significant, unavoidable, significant irreversible, growth-inducing, and cumulative impacts of the proposed project. The chapter will summarize the cumulative impacts that will be contained in each technical chapter and will be qualitative in nature.

Alternatives to the Proposed Project

In accordance with Section 15126.6(a) of the CEQA Guidelines, the EIR will include an Alternatives analysis. The alternatives chapter will evaluate, at a minimum, three alternatives, including the No Project Alternative. Alternatives will be selected when more information related to project impacts is available so the alternatives can be designed to reduce significant project impacts. Any additional alternatives will be developed during preparation of the EIR to respond to identified significant impacts. The Alternatives chapter will describe the alternatives and identify the environmentally superior alternative. The alternatives will be analyzed at a level of detail less than that of the proposed project; however, the analyses will include sufficient detail to allow a meaningful comparison of the impacts. The Alternatives chapter will also include a section of alternatives considered but dismissed. A matrix comparing the impacts of the proposed project to the three alternatives will also be included.

INITIAL STUDY
AUGUST 2022

A. PROJECT SUMMARY

1. Project Title: Harbor View Project

2. Lead Agency Name and Address: City of Pittsburg
Community and Economic Development Department
Planning Division
65 Civic Avenue
Pittsburg, CA 94565

3. Contact Person and Phone Number: Kelsey Gunter
Assistant Planner
(925) 252-4824

4. Project Location: 420 East 3rd Street
Pittsburg, CA 94565
Accessor's Parcel Number (APN): 073-050-001

5. Project Sponsor's Name and Address: Kevin Fryer
500 La Gonda Way
Danville, CA 94526
(925) 899-5065

6. General Plan Designation: Downtown Commercial and
Downtown Medium Density Residential

7. Existing Zoning Designation: Pedestrian Commercial (CP) and
Downtown Medium Residential – Limited Overlay (RMD-O)

8. Proposed Zoning Designation: Downtown Medium Density Residential (RMD-O) and
Pedestrian Commercial (CP)

9. Required Approvals from Other Public Agencies: Department of Toxic Substances Control

10. Surrounding Land Uses and Setting:

The 20.5-acre project site is identified by APN 073-050-001, and is located at 420 East 3rd Street in the City of Pittsburg, California. The project site is undeveloped and relatively flat, with the exception of a 3.46-acre berm area along the eastern boundary of the project site. Scattered trees are present along the western and southern boundaries of the site. The project site is generally bound by Harbor Street to the east, East 8th Street/the East 8th Street Greenbelt to the south, and East 3rd Street to the north. Surrounding existing land uses include industrial uses to the east, across Harbor Street; single-family residences to the west and to the south, across East 8th Street; a portion of the 8th Street Greenbelt and a tot lot to the south; and undeveloped land to the north, across East 3rd

Street, beyond which is the New York Slough. The City of Pittsburg General Plan designates the site as Downtown Commercial and Downtown Medium Density Residential. The site is zoned Pedestrian Commercial (CP) and Downtown Medium Residential – Limited Overlay District (RMD-O).

11. Project Description Summary:

    The Harbor View Project (proposed project) would include subdivision of the project site and subsequent development of 227 residential units. The 20 northernmost units would be live/work duplexes with 420 square feet of ground floor commercial space and/or private work space. Primary site access would be provided by one new driveway off of Harbor Street and one new driveway off of East 3rd Street. Landscaping and trees would be provided throughout the site. A central park is proposed at the Harbor Street entrance. A bioretention area and landscape features are proposed on the western edge of the berm. In addition, existing overhead utility lines along the project frontage on East 3rd Street would be removed and replace underground. The project would require approval of a Rezone; Vesting Tentative Map; and Design Review.

12. Status of Native American Consultation Pursuant to Public Resources Code Section 21080.3.1.

    In compliance with Assembly Bill (AB) 52 (Public Resources Code [PRC] Section 21080.3.1), project notification letters were distributed to the Amah Mutsun Tribal Band of Mission San Juan Bautista, the Chicken Ranch Rancheria of Me-Wuk Indians, the Guidiville Indian Rancheria, the Indian Canyon Mutsun Band of Costanoan, the Muwekma Ohlone Indian Tribe of the San Francisco Bay Area, the Nashville Enterprise Miwok-Maidu-Nishinam Tribe, the North Valley Yokuts Tribe, the Ohlone Indian Tribe, and the Wilton Rancheria. The letters were distributed on April 14, 2022 and requests to consult were not received within the required response period.

C. ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant" or as indicated by the checklist on the following pages.

☐ **Aesthetics**	☐ **Agriculture and Forest Resources**	☐ **Air Quality**
☐ **Biological Resources**	☐ **Cultural Resources**	☐ **Energy**
☐ **Geology and Soils**	☒ **Greenhouse Gas Emissions**	☐ **Hazards and Hazardous Materials**
☐ **Hydrology and Water Quality**	☒ **Land Use and Planning**	☐ **Mineral Resources**
☐ **Noise**	☐ **Population and Housing**	☐ **Public Services**
☐ **Recreation**	☒ **Transportation**	☐ **Tribal Cultural Resources**
☐ **Utilities and Service Systems**	☐ **Wildfire**	☐ **Mandatory Findings of Significance**

D. DETERMINATION

On the basis of this initial study:

☐ I find that the Proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the Proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the applicant. A MITIGATED NEGATIVE DECLARATION will be prepared.

☒ I find that the Proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Kelsey Gunter, Assistant Planner	City of Pittsburg, Planning Division

E. BACKGROUND AND INTRODUCTION

This Initial Study identifies and analyzes the potential environmental impacts of the Harbor View Project (proposed project). The information and analysis presented in this document is organized in accordance with the order of the California Environmental Quality Act (CEQA) checklist in Appendix G of the CEQA Guidelines.

Where the analysis provided in this document identifies potentially significant environmental effects of the project that can be mitigated to a less-than-significant level, mitigation measures are prescribed. Where the analysis provided in this document identifies potentially significant environmental effects of the project that require additional analysis, further evaluation of such effects will be provided in the Environmental Impact Report (EIR) to be prepared for the project.

In January of 2001, the City of Pittsburg adopted a comprehensive update to the City's General Plan[1] and certified an associated EIR.[2] The City's current General Plan set forth a policy framework to guide the City's long-term growth and development through the year 2020. The City is currently in the process of updating the General Plan so the document can continue to provide critical guidance for development in the City through the year 2040; however, the General Plan Update has not yet been completed. Thus, the current General Plan, adopted in 2001, is still considered the relevant document for the purposes of the analysis included in this Initial Study. Applicable portions of the General Plan and General Plan EIR are incorporated by reference, as necessary, as part of this Initial Study. The General Plan EIR is a program EIR, prepared pursuant to Section 15168 of the CEQA Guidelines (Title 14, California Code of Regulations [CCR], Sections 15000 et seq.). The General Plan EIR analyzed full implementation of the General Plan and identified measures to mitigate the significant adverse impacts associated with the General Plan.

Project-specific technical reports have been prepared for the proposed project and form the basis of several technical sections of this Initial Study. All technical reports used in the preparation of this Initial Study are attached as appendices, and/or available upon request at the City of Pittsburg Community and Economic Development Department, Planning Division.

The mitigation measures prescribed for environmental effects described in this Initial Study would be implemented in conjunction with the project, as required by CEQA, and the mitigation measures would be incorporated into the project. In addition, findings and a project Mitigation Monitoring and Reporting Program (MMRP) would be adopted in conjunction with approval of the project.

F. PROJECT DESCRIPTION

The following section provides a comprehensive description of the proposed project in accordance with CEQA Guidelines, including project location and setting, project site history, and project components.

Project Location and Setting

The project site is located at 420 East 3rd Street, southwest of the intersection of East 3rd Street and Harbor Street, approximately one mile north of State Route (SR) 4 in the City of Pittsburg, California (see Figure 1 and Figure 2). The 20.5-acre site is identified by APN 073-050-001. Currently, the project site consists primarily of ruderal grasses and is absent of structures.

Figure 1
Regional Project Location

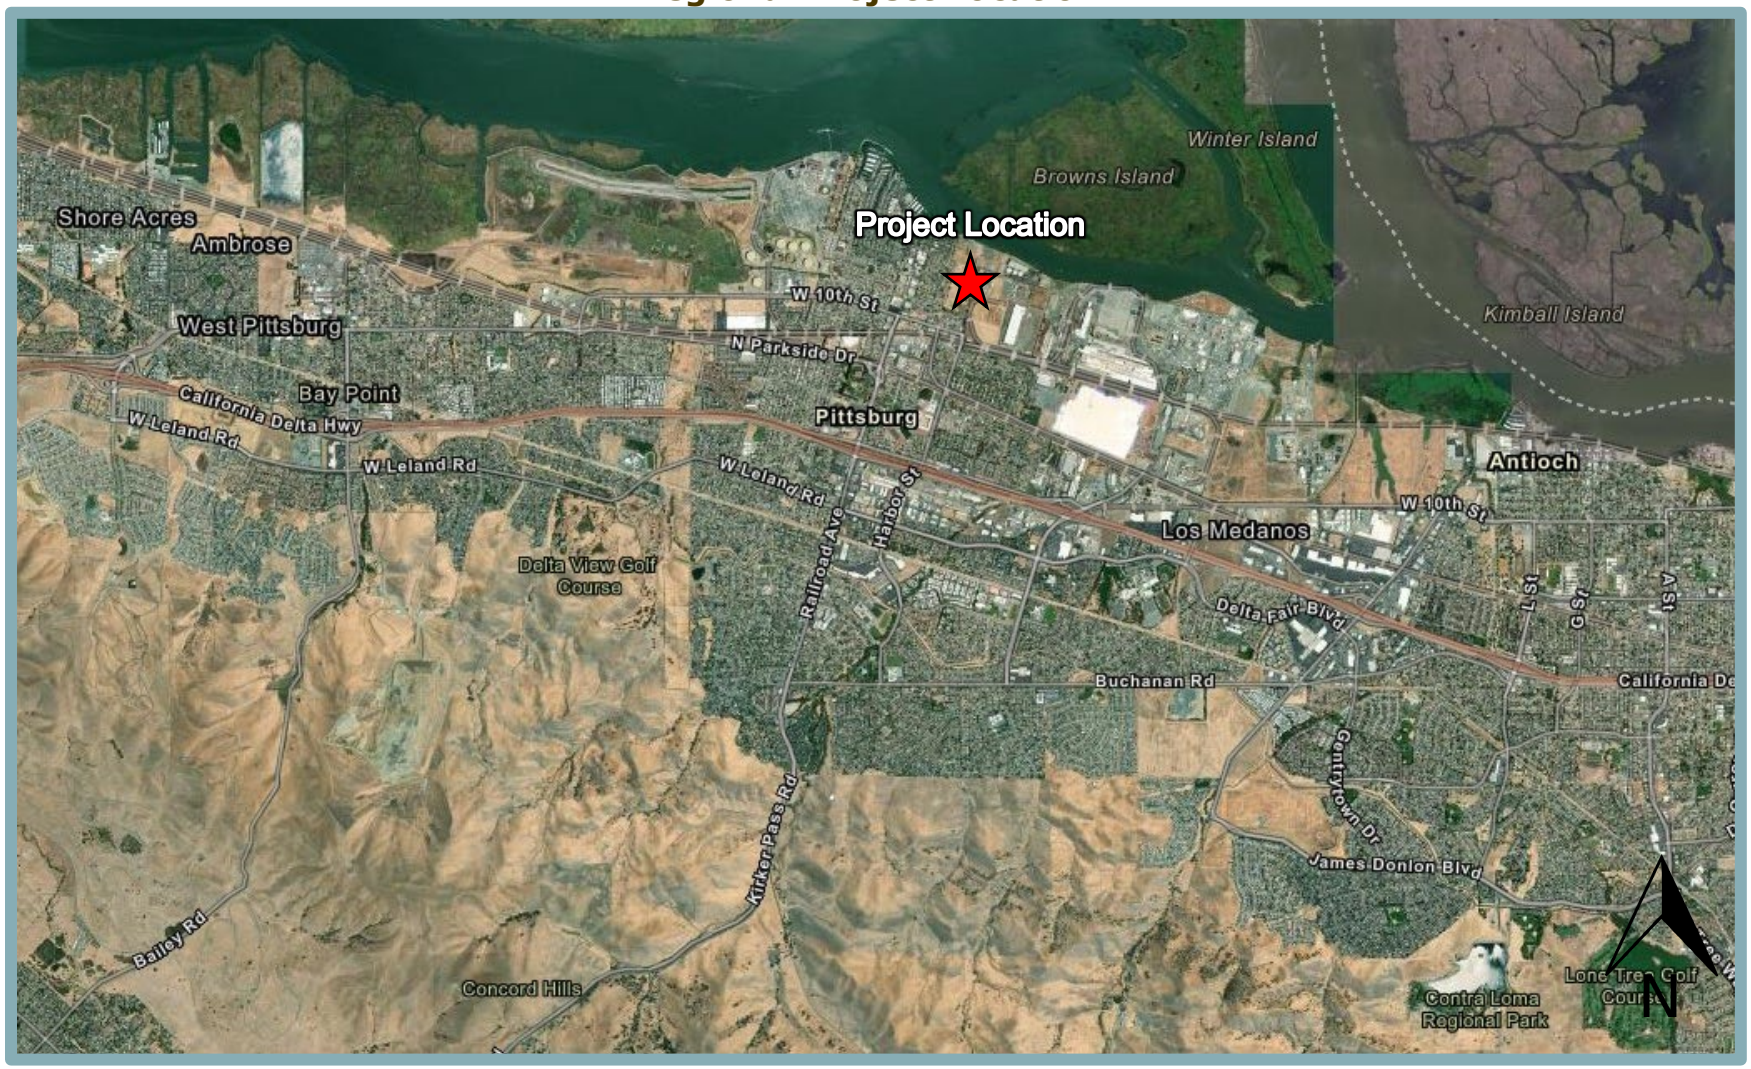

Figure 2
Project Site Boundaries

Project Site boundaries are approximate.

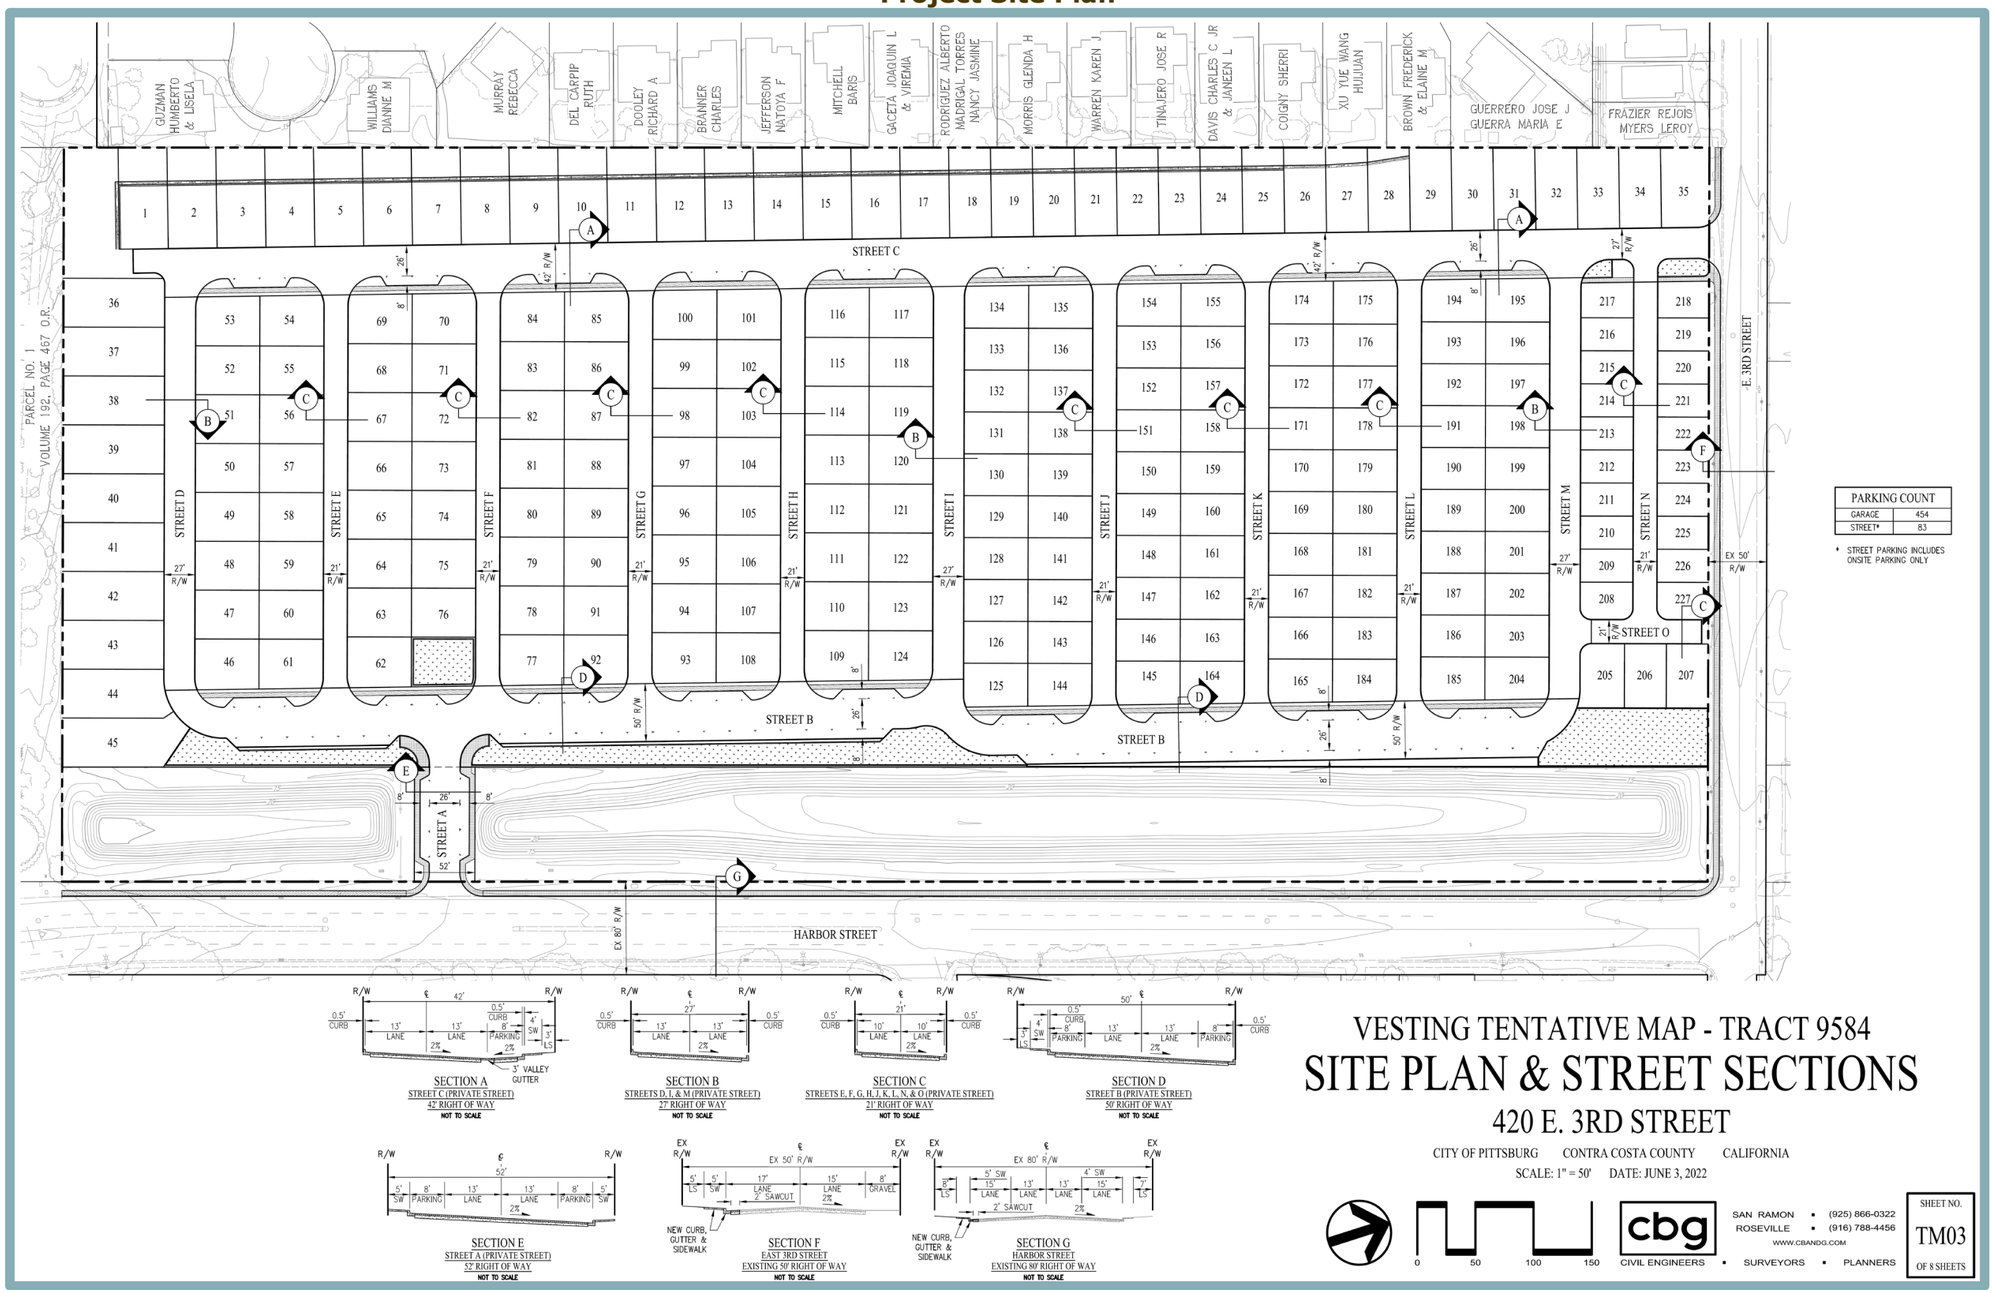
A 3.46-acre berm area runs north-to-south along the eastern boundary of the project site. Scattered trees are located along the west and south boundaries of the project site.

A portion of the 8th Street Greenbelt, a ten-block linear park, and a tot lot are located directly south of the project site. Single-family residences are located further south, across East 8th Street, and immediately west of the project site. The Railroad Avenue commercial corridor is located further west, approximately 1,200 feet from the project site. Undeveloped land is located north of the project site, across East 3rd Street, and the New York Slough is located further north. Industrial uses, including a glass shop, auto body shop, and the Los Medanos Energy Center are located east of the project site, across Harbor Street. The project site is designated Downtown Commercial and Downtown Medium Density Residential by the General Plan land use map and the site is zoned CP and RMD-O.

Project Site History

Historically, the project site was occupied since the mid-1920s by a manufacturing plant that produced asbestos-cement products, asphalt roofing materials, and asbestos-containing pipe covering. Manufacture of asbestos-containing materials ceased in 1980 and commercial-grade roofing materials were manufactured at the plant until 2003, when operations terminated. Several environmental investigations were conducted at the former manufacturing site, beginning in 1986 and continuing through 2005, and areas of potential concern associated with asbestos-containing materials were identified.

The selected remedy for the environmental concerns at the project site was the removal of asbestos-containing materials and petroleum hydrocarbon-affected soil from the site and placement in engineered containment berms along the eastern boundary of the project site. Asbestos-impacted material and debris were placed into a trench excavated to 10 feet below ground surface (bgs) along the eastern boundary of the site, which was then capped by hydrocarbon-impacted soil. An engineered textile and two feet of clean, low-permeability soil was then added to the top of the materials to create the capped, vegetated berms. An automated irrigation system exists to maintain the vegetation. The berms consist of two distinct segments referred to below as the "northern" and "southern" berms. Drainage swales were installed adjacent to the berm and graded such that stormwater runs off toward catch basins on the eastern site boundary. All remedial actions have been completed and approved by the Department of Toxic Substances Control (DTSC);[3] however, ongoing maintenance and monitoring is required. The remediation system is required to be operated and maintained as described in the Site Operation and Maintenance Plan[4] until the DTSC authorizes its modification or discontinuation. The remediation system is also evaluated every five years to determine if human health and the environment are being adequately protected.



Project Components

The proposed project would include the subdivision of the project site and subsequent construction of 227 residential units, as well as associated internal roadways, bioretention facilities, and open space/landscaping (see Figure 3). The project would require approval of a Rezone, Vesting Tentative Map, and Design Review. The aforementioned project components are discussed in further detail below.

---

3 GSI Environmental Inc. *Site Investigation Report: 420 E. 3rd Street, Pittsburg, California.* June 2021.
4 *Ibid.*

Figure 3
Project Site Plan

Rezone

The proposed project would include a Rezone of the project site to modify the existing Limited Overlay of the project site's RMD zoning designation. The Rezone proposes to modify the existing Limited Overlay, which applies only to the RMD portion of the site, to reduce the minimum residential lot size within the Limited Overlay area from 2,200 square feet to 1,980 square feet but require that the average lot size be no less than 2,200 square feet. The RMD District is intended to provide opportunities for residential development with increased land coverages for attached or detached single-family residences and multifamily residences such as townhouses, apartment complexes with 16 or more units, and condominiums. The RMD District allows for a maximum density of a 2,500-sf lot area per unit.

Vesting Tentative Map

The Vesting Tentative Map would subdivide the project site into 227 residential lots, an internal circulation network, bioretention facilities, and open space/landscaping.

The 20 northernmost lots, which generally front East 3rd Street, would be developed with mixed-use live/work duplexes. The ground floor of each unit would provide approximately 420 square feet (sf) of commercial space and/or private work space, ultimately up to the discretion of the property owner. Immediately south of the proposed live/work units would be 101 generally 36-foot by 55-foot single-family lots. The residential units would generally be designed with three bedrooms and three or 3.5 bathrooms. The southern half of the project site would consist of 106 generally 42-foot by 55-foot single-family lots. The units would generally be designed with three or four bedrooms and 3.5 bathrooms. The development density of all on-site residential units would be 13.32 dwelling units per acre (du/ac).

A 2,329-sf neighborhood park lot is proposed west of the driveway entrance from Harbor Street, with a stormwater detention basin extending westward from the park's western edge. Two additional detention basins are proposed to the north and south of the driveway entrance. The northern basin would extend from East 3rd Street along the berm area to the driveway entrance, while the other basin would extend south along the berm area from the driveway entrance to the southernmost residential unit.

Access and Circulation

Site access would be provided by one new 27-foot driveway located off of East 3rd Street from the north, and one new approximately 26-foot driveway located off of Harbor Street from the east. All internal lanes and drive aisles would meet the minimum width that can accommodate an emergency vehicle. The project site would include 83 on-street parking stalls, and each home would include a two-car garage. As a whole, the project site would accommodate 454 parking spaces. Development of the proposed project would also include new curb, gutter, sidewalk, and landscaping along Harbor Street and East 3rd Street.

Landscaping

As part of the proposed project, each residence, with the exception of the live/work duplexes, would include a private yard space. Trees would be planted along each internal roadway, as well as along the eastern site border along Harbor Street. As detailed above, a new park would be constructed at the Harbor Street entrance and landscape pockets would line the internal loop road. As noted previously, a protected 3.46-acre berm extends along the eastern boundary of the project site, which will be managed and maintained as required by previously approved permits. Bioretention areas and landscape features are proposed along the eastern boundary of the project site between the site and the berm.

Utilities

Water supply for the proposed project would be provided by the City of Pittsburg through the Contra Costa Water District (CCWD). The City operates a water treatment plant and associated infrastructure facilities, which primarily serve customers within the City limits. The proposed project would include construction of new on-site water lines, which would connect to the existing 16-inch water lines located within Harbor Street and East 3rd Street.

Sewer service for the proposed project would be provided by Delta Diablo, the City's wastewater provider. Existing 16-inch and 18-inch sanitary sewer lines are located within Harbor Street and East 3rd Street, respectively. A new network of sanitary sewer lines would be constructed on-site and would convey approximately 65 percent of the wastewater generated from the site to the existing 18-inch sewer line in East 3rd Street and approximately 35 percent of the wastewater generated from the site to the existing 16-inch sewer line in Harbor Street.

An existing 48-inch storm drain line is located in Harbor Street with two existing 24-inch stubs to the site. A new storm drain system would be constructed on-site and would collect the stormwater from the residential lots, streets, and open space areas and convey the stormwater to bioretention areas proposed between the residential lots and the berm area. The stormwater would be treated at the on-site bioretention areas prior to being discharged into the existing system in Harbor Street.

Solid waste pickup and disposal for the City is provided by Mt. Diablo Resource Recovery. Residential and commercial solid waste is disposed of at Potrero Hills Landfill, located east of Suisun City.

The proposed project would connect to the electricity, natural gas, and telecommunication infrastructure that exists in the project vicinity. Existing overhead utility lines on East 3rd Street would be removed and replaced underground as part of the project.

Design Review

Section 18.36.110 of the City's Municipal Code requires that a project that would subdivide more than five lots is subject to Design Review by the City. As such, the proposed project would be subject to a Design Review, the standards of which are delineated in Section 18.36.220 of the City's Municipal Code. Such review is intended to ensure that new development within the City generally contributes to the character and image of the City, conforms with the nature of the neighborhood, and is in harmony with existing developments in the general area.

Discretionary Actions

The proposed project would require the following discretionary actions by the City of Pittsburg:

- Certification of the EIR;
- Rezone of the project site to modify the existing overlay;
- Vesting Tentative Map; and
- Design Review.

G. ENVIRONMENTAL CHECKLIST

The following Checklist contains the environmental checklist form presented in Appendix G of the CEQA Guidelines. The checklist form is used to describe the impacts of the proposed project. A discussion follows each environmental issue identified in the checklist. For this checklist, the following designations are used:

Potentially Significant Impact: An impact that could be significant, and for which no mitigation has been identified. If any potentially significant impacts are identified, an EIR must be prepared.

Less Than Significant with Mitigation Incorporated: An impact that requires mitigation to reduce the impact to a less-than-significant level.

Less-Than-Significant Impact: Any impact that would not be considered significant under CEQA relative to existing standards.

No Impact: The project would not have any impact.

I. AESTHETICS. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Have a substantial adverse effect on a scenic vista?	☐	☐	✖	☐
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway?	☐	☐	✖	☐
c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	✖	☐
d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	✖	☐

Discussion

a,b. Examples of typical scenic vistas include mountain ranges, ridgelines, or bodies of water as viewed from a highway, public space, or other area designated for the express purpose of viewing and sightseeing. In general, a project's impact to a scenic vista would occur if development of the project would substantially change or remove a scenic vista. The City's General Plan states the most identifying features lending the City a sense of character are the rolling, grassy hills to the south of the City and Suisun Bay/Sacramento River Delta to the north. Partial views of the Delta are available from East 3rd Street; however, the project would not obstruct or change the existing views of the Delta from the area surrounding the site. In addition, existing trees and structures north of the project site, across East 3rd Street, obstruct the existing views across the site. Therefore, the proposed project would not further impair existing views of the Delta in the project area, and, thus, the project would not affect a scenic vista.

According to the California Scenic Highway Mapping System, the proposed project site is located approximately 0.9-mile from SR 4, which has been designated as Eligible for State Scenic Highway listing; however, the project site would not be visible from SR 4.[5] Thus, the proposed project would not alter the views along of SR 4. In addition, SR 4's Eligible status does not qualify the highway as on officially designated State Scenic Highway.

Based on the above, development of the proposed project would not have a substantial adverse effect on a scenic vista and would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State Scenic Highway. Thus, a ***less-than-significant*** impact would occur.

c. The project site is located within an urbanized area of the City. Residential development exists to the west and south, and industrial uses exist to the east of the project site, across Harbor Street. Therefore, the relevant threshold would be whether the proposed project would conflict with applicable zoning and other regulations governing scenic quality.

[5] California Department of Transportation. *California Scenic Highway Mapping System*. Available at: https://caltrans.maps.arcgis.com/apps/webappviewer/index.html?id=465dfd3d807c46cc8e8057116f1aacaa. Accessed February 2022.

The project would require a Rezone. However, the height, bulk, pattern, scale and character of the proposed project would not conflict with the visual character of the existing surrounding development. For example, the proposed project would include landscaping and street improvements along the project frontage, which would ensure that the proposed project is partially screened from the surrounding existing development. The City's Municipal Code would require attached and detached residential units to have a maximum height of 35 feet for 75 percent of interior lots and a maximum height of 28 feet for all lots with frontage on more than one public or private street, and no fewer than 25 percent of all interior lots. Finally, it is noted that the project site was previously developed with an industrial facility. Buildout of the proposed project would be more visually consistent with the nearby residential units than the previous use.

The proposed project would also be required to adhere to the City's Design Review guidelines. The design of the buildings would include visually pleasing architectural features and landscaping designs which are consistent with the scenic nature of the project area. The buildings would be designed to include natural colors and glazing that would comply with Title 24 of the California Building Standards Code (CBSC). Given that the project would be consistent with the urbanized nature of the area and comply with the City's Design Review guidelines, the project would not conflict with applicable zoning and other regulations governing scenic quality and a ***less-than-significant*** impact would occur

d. Due to the largely undeveloped nature of the project site, sources of light and glare do not currently exist within the site. It is noted, however, that the previous industrial use included typical sources of light on the project site. Streetlights exist along the northern side of the project site on East 3rd Avenue, and along the eastern side on Harbor Street. In addition, the surrounding developments within the project vicinity feature outdoor and indoor lighting fixtures.

Development of the project site with live/work duplexes and single-family residential units would introduce sources of light and glare associated with interior light spilling through windows, exterior lighting on the proposed structures, and light reflected off windows. Lighting associated with the project would be required to adhere to Section 18.78.050(f) of the City's Municipal Code, which prohibits the use of any light source that would cause any direct illumination on an adjacent street or lot with residential development.[6]

In addition, per Section 18.82.030 of the City's Municipal Code, outdoor lighting must be shielded or directed away from any residential uses in proximity of the project site. Compliance with Section 18.82.030 would be confirmed during Design Review for the proposed project.

Throughout construction of the proposed project, sources of light and glare would be increased as well. Construction activities at nighttime could include the use of lighting fixtures and vehicles producing light on the property. As a result, light and glare may intrude on surrounding properties and roadways during project construction.

Because the project would be required to conform to the City's lighting standards, impacts related to increased lighting and glare on surrounding residential developments during construction and operation of the proposed project would not occur. Thus, implementation of the project would result in a ***less-than-significant*** impact with respect to creating a

[6] City of Pittsburg. *Pittsburg Municipal Code.* May 16, 2022.

new source of substantial light or glare which would adversely affect day or nighttime views in the area.

II. AGRICULTURE AND FOREST RESOURCES. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	✖
b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	✖
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	✖
d. Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	✖
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	✖

Discussion

a,e. The project site is currently designated as "Urban and Built-Up Land" per the California Department of Conservation Farmland Mapping and Monitoring Program.[7] In addition, the project site is not used for agricultural purposes. Therefore, development of the proposed project would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to a non-agricultural use, or otherwise result in the loss of Farmland to non-agricultural use. Therefore, ***no impact*** would occur.

b. Currently, the project site is designated Downtown Commercial and Downtown Medium Density Residential per the City's General Plan and zoned as RMD-O and CP. The project includes a Rezone to decrease the minimum lot size, as required by City Council Ordinance 07-1284, from 2,200 sf to 1,980 sf while keeping the average lot size at 2,200 sf. The site is not under a Williamson Act contract[8] and is not zoned for agricultural uses. Therefore, buildout of the proposed project would not conflict with existing zoning for agricultural use or a Williamson Act contract, and ***no impact*** would occur.

c,d. The project area is not considered forest land (as defined in PRC Section 12220[g]), timberland (as defined by PRC Section 4526), and is not zoned Timberland Production (as defined by Government Code Section 51104[g]). Therefore, the proposed project would have ***no impact*** with regard to conversion of forest land or any potential conflict with forest land, timberland, or Timberland Production zoning.

III. AIR QUALITY. *Would the project:*	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Conflict with or obstruct implementation of the applicable air quality plan?	☐	☐	✖	☐
b. Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	☐	✖	☐
c. Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	✖	☐
d. Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	✖	☐

Discussion

a,b. The City of Pittsburg is located at the northerly border of the San Francisco Bay Area Air Basin (SFBAAB), which is under the jurisdiction of the Bay Area Air Quality Management District (BAAQMD). The SFBAAB area is currently designated as a nonattainment area for the State and federal ozone, State and federal fine particulate matter 2.5 microns in diameter ($PM_{2.5}$), and State respirable particulate matter 10 microns in diameter (PM_{10}) ambient air quality standards (AAQS). The SFBAAB is designated attainment or unclassified for all other AAQS. It should be noted that on January 9, 2013, the U.S. Environmental Protection Agency (USEPA) issued a final rule to determine that the Bay Area has attained the 24-hour $PM_{2.5}$ federal AAQS. Nonetheless, the Bay Area must continue to be designated as nonattainment for the federal $PM_{2.5}$ AAQS until such time as the BAAQMD submits a redesignation request and a maintenance plan to the USEPA, and the USEPA approves the proposed redesignation.

In compliance with regulations, due to the nonattainment designations of the area, the BAAQMD periodically prepares and updates air quality plans that provide emission reduction strategies to achieve attainment of the AAQS, including control strategies to reduce air pollutant emissions through regulations, incentive programs, public education, and partnerships with other agencies. The current air quality plans are prepared in cooperation with the Metropolitan Transportation Commission (MTC) and the Association of Bay Area Governments (ABAG).

The most recent federal ozone plan is the 2001 Ozone Attainment Plan, which was adopted on October 24, 2001 and approved by the California Air Resources Board (CARB) on November 1, 2001. The plan was submitted to the USEPA on November 30, 2001 for review and approval. The most recent State ozone plan is the 2017 Clean Air Plan, adopted on April 19, 2017. The 2017 Clean Air Plan was developed as a multi-pollutant plan that provides an integrated control strategy to reduce ozone, PM, toxic air contaminants (TACs), and greenhouse gases (GHGs). Although a plan for achieving the State PM_{10} standard is not required, the BAAQMD has prioritized measures to reduce PM in developing the control strategy for the 2017 Clean Air Plan. The control strategy serves as the backbone of the BAAQMD's current PM control program.

The aforementioned air quality plans contain mobile source controls, stationary source controls, and transportation control measures to be implemented in the region to attain the State and federal AAQS within the SFBAAB. Adopted BAAQMD rules and regulations, as well as the thresholds of significance, have been developed with the intent to ensure

continued attainment of AAQS, or to work towards attainment of AAQS for which the area is currently designated nonattainment, consistent with applicable air quality plans. The BAAQMD's established significance thresholds associated with development projects for emissions of the ozone precursors reactive organic gases (ROG) and oxides of nitrogen (NO_x), as well as for PM_{10}, and $PM_{2.5}$, expressed in pounds per day (lbs/day) and tons per year (tons/yr), are listed in Table 1. Thus, by exceeding the BAAQMD's mass emission thresholds for operational emissions of ROG, NO_X, PM_{10}, or PM_{25} a project would be considered to conflict with or obstruct implementation of the BAAQMD's air quality planning efforts.

Table 1
BAAQMD Thresholds of Significance

Pollutant	Construction	Operational	
	Average Daily Emissions (lbs/day)	Average Daily Emissions (lbs/day)	Maximum Annual Emissions (tons/year)
ROG	54	54	10
NO_x	54	54	10
PM_{10} (exhaust)	82	82	15
$PM_{2.5}$ (exhaust)	54	54	10

Source: BAAQMD, CEQA Guidelines, May 2017.

The proposed project's construction and operational emissions were quantified using the California Emissions Estimator Model (CalEEMod) software version 2020.4.0 – a statewide model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify air quality emissions, including GHG emissions, from land use projects. The model applies inherent default values for various land uses, including construction data, trip generation rates, vehicle mix, trip length, average speed, compliance with the CBSC, etc. Where project-specific information is available, such information should be applied in the model. Accordingly, the proposed project's modeling assumes the following project and/or site-specific information:

- Construction would occur over an approximately four-year period;
- The project would include export of 1,000 cubic yards (CY) of material during site preparation;
- Trip generation data was adjusted based on project-specific traffic information provided by Fehr & Peers;
- The project would include natural gas hearths; and
- The project would comply with all relevant provisions of the CBSC and the Model Water Efficient Landscape Ordinance (MWELO).

The proposed project's estimated emissions associated with construction and operations are presented and discussed in further detail below. A discussion of the proposed project's contribution to cumulative air quality conditions is provided below as well. All CalEEMod results are included as Appendix A to this Initial Study.

Construction Emissions

According to the CalEEMod results, the proposed project would result in maximum unmitigated construction criteria air pollutant emissions as shown in Table 2. As shown in the table, the proposed project's construction emissions would be below the applicable thresholds of significance for all criteria pollutants.

Table 2
Maximum Unmitigated Construction Emissions (lbs/day)

Pollutant	Proposed Project Emissions	Threshold of Significance	Exceeds Threshold?
ROG	8.65	54	**NO**
NO_X	34.55	54	**NO**
PM_{10}*	1.42	82	**NO**
$PM_{2.5}$*	1.31	54	**NO**

* Emissions from exhaust only. BAAQMD has not yet adopted thresholds for fugitive PM emissions.

Source: CalEEMod, June 2022.

All projects under the jurisdiction of the BAAQMD are required to implement all of the BAAQMD's Basic Construction Mitigation Measures, which include the following:

1. All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
2. All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
3. All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
4. All vehicle speeds on unpaved roads shall be limited to 15 mph.
5. All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.
6. Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California airborne toxics control measure Title 13, Section 2485 of CCR). Clear signage shall be provided for construction workers at all access points.
7. All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified visible emissions evaluator.
8. Post a publicly visible sign with the telephone number and person to contact at the lead agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Air District's phone number shall also be visible to ensure compliance with applicable regulations.

The proposed project's required implementation of the BAAQMD's Basic Construction Mitigation Measures listed above would help to further minimize construction-related emissions. In particular, implementation of the foregoing measures would reduce fugitive dust emissions resulting from project construction.

Based on the above, construction of the proposed project would result in emissions of criteria pollutants below the BAAQMD's thresholds of significance. Consequently, the proposed project would not conflict with air quality plans during project construction.

Operational Emissions

According to the CalEEMod results, the proposed project would result in maximum unmitigated operational criteria air pollutant emissions as shown in Table 3. As shown in the table, the proposed project's operational emissions would be below the applicable

thresholds of significance. As such, the proposed project would not result in a significant air quality impact during operations.

Table 3
Maximum Unmitigated Operational Emissions

Pollutant	Proposed Project Emissions		Threshold of Significance		Exceeds Threshold?
	lbs/day	tons/yr	lbs/day	tons/yr	
ROG	15.92	2.7	54	10	**NO**
NO_X	9.42	1.15	54	10	**NO**
PM_{10}*	0.51	0.04	82	15	**NO**
$PM_{2.5}$*	0.51	0.04	54	10	**NO**

* Emissions from exhaust only. BAAQMD has not yet adopted thresholds for fugitive PM emissions.

Source: CalEEMod, June 2022.

Cumulative Emissions

Past, present, and future development projects contribute to the region's adverse air quality impacts on a cumulative basis. By nature, air pollution is largely a cumulative impact. A single project is generally not sufficient in size to, by itself, result in nonattainment of AAQS. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project's contribution to the cumulative impact is considerable, then the project's impact on air quality would be considered significant. In developing thresholds of significance for air pollutants, BAAQMD considered the emission levels for which a project's individual emissions would be cumulatively considerable. The thresholds of significance presented in Table 1 represent the levels at which a project's individual emissions of criteria air pollutants or precursors would result in a cumulatively considerable contribution to the SFBAAB's existing air quality conditions. If a project exceeds the significance thresholds presented in Table 1, the proposed project's emissions would be cumulatively considerable, resulting in significant adverse cumulative air quality impacts to the region's existing air quality conditions. As presented above, the proposed project would be below all applicable thresholds for criteria pollutants during construction and operation. Thus, the project would not result in a cumulatively considerable contribution to the region's existing air quality conditions.

Conclusion

As stated previously, the applicable regional air quality plans include the 2001 Ozone Attainment Plan and the 2017 Clean Air Plan. The proposed project would result in operational emissions below all applicable thresholds of significance. In addition, the project would not result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or State AAQS. Therefore, the proposed project would not conflict with the applicable regional air quality plan, and a ***less-than-significant*** impact would occur.

c. Some land uses are considered more sensitive to air pollution than others, due to the types of population groups or activities involved. Heightened sensitivity may be caused by health problems, proximity to the emissions source, and/or duration of exposure to air pollutants. Children, pregnant women, the elderly, and those with existing health problems are especially vulnerable to the effects of air pollution. Sensitive receptors are typically defined as facilities where sensitive receptor population groups (i.e., children, the elderly,

the acutely ill, and the chronically ill) are likely to be located. Accordingly, land uses that are typically considered to be sensitive receptors include residences, schools, playgrounds, childcare centers, retirement homes, convalescent homes, hospitals, and medical clinics. In the vicinity of the project site, the nearest existing sensitive land uses include the single-family residences to the west of the project site, with the closest located approximately 50 feet away.

The major pollutant concentrations of concern are localized carbon monoxide (CO) emissions, TAC emissions, and criteria pollutants, which are addressed in further detail below.

Localized CO Emissions

Localized concentrations of CO are related to the levels of traffic and congestion along streets and at intersections. High levels of localized CO concentrations are only expected where background levels are high, and traffic volumes and congestion levels are high. Emissions of CO are of potential concern, as the pollutant is a toxic gas that results from the incomplete combustion of carbon-containing fuels such as gasoline or wood.

In order to provide a conservative indication of whether a project would result in localized CO emissions that would exceed the applicable threshold of significance, the BAAQMD has established screening criteria for localized CO emissions. According to BAAQMD, a proposed project would result in a less-than-significant impact related to localized CO emission concentrations if all of the following conditions are true for the project:

- The project is consistent with an applicable congestion management program established by the county congestion management agency for designated roads or highways, regional transportation plan, and local congestion management agency plans;
- The project traffic would not increase traffic volumes at affected intersections to more than 44,000 vehicles per hour; and
- The project traffic would not increase traffic volumes at affected intersections to more than 24,000 vehicles per hour where vertical and/or horizontal mixing is substantially limited (e.g., tunnel, parking garage, underpass, etc.).[9]

The City's General Plan serves to provide traffic forecasts to the Contra Costa Transportation Authority (CCTA). While the proposed project would include a General Plan Amendment and Rezone, the traffic associated with the proposed project would be substantially similar to traffic associated with buildout of the site under the existing land use and zoning designations. As such, traffic associated with development of the site has generally been anticipated, and the project would be consistent with the applicable congestion management plan (CMP), regional transportation plan, and local congestion management agency plans.

According to the City of Pittsburg General Plan Update Existing Conditions Report, the nearest roadway segment to the project site, East 3rd Street, east of Railroad Avenue, experienced approximately 2,500 average daily trips.[10] Other roadway segments in the project vicinity, including Railroad Avenue north of Buchanan Road and East 10th Street east of Railroad Avenue, experienced approximately 15,130 average daily trips and 8,670

[9] Fehr & Peers. *Draft Transportation Impact Assessment – Pittsburg Harbor View.* June 2022.
[10] City of Pittsburg. *City of Pittsburg General Plan Update Existing Conditions Report* [Table 2.2-7]. November 2019.

average daily trips, respectively. Given the size of the proposed project in comparison to the existing development throughout the City, the addition of project-generated vehicle trips would not increase traffic volumes at any intersections within the project vicinity to more than 44,000 vehicles per hour. Furthermore, intersections where vertical and/or horizontal mixing is limited are not located in the project vicinity. Nonetheless, local traffic volumes would remain far below 24,000 vehicles per hour, and the addition of project-generated vehicle trips would not exceed the BAAQMD screening criteria. As such, the proposed project would not be expected to result in substantial levels of localized CO at surrounding intersections.

TAC Emissions

Another category of environmental concern is TACs. Health risks associated with TACs are a function of both the concentration of emissions and the duration of exposure, where the higher the concentration and/or the longer the period of time that a sensitive receptor is exposed to pollutant concentrations would correlate to a higher health risk. As noted above, the nearest sensitive receptors to the project site are the single-family homes to the west of the project site. The CARB's *Air Quality and Land Use Handbook: A Community Health Perspective* (Handbook) provides recommended setback distances for sensitive land uses from major sources of TACs, including, but not limited to, freeways and high traffic roads, distribution centers, gas dispensing facilities, and rail yards. The CARB has identified diesel particulate matter (DPM) from diesel-fueled engines as a TAC; thus, high volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic are identified as having the highest associated health risks from DPM.

The proposed project would not include any operations that would be considered a substantial source of TACs. Accordingly, operations of the proposed project would not expose sensitive receptors to excess concentrations of TACs.

Short-term, construction-related activities could result in the generation of TACs, specifically DPM, from on-road haul trucks and off-road equipment exhaust emissions. Construction is temporary and occurs over a relatively short duration in comparison to the operational lifetime of the proposed project. Health risks are typically associated with exposure to high concentrations of TACs over extended periods of time (e.g., 30 years or greater), whereas the construction period associated with the proposed project would likely be limited to approximately four years. All construction equipment and operation thereof would be regulated per the CARB In-Use Off-Road Diesel Vehicle Regulation, which is intended to help reduce emissions associated with off-road diesel vehicles and equipment, including DPM. Project construction would also be required to comply with all applicable BAAQMD rules and regulations, particularly associated with permitting of air pollutant sources. In addition, construction equipment would operate intermittently throughout the day and only on portions of the site at a time. Because construction equipment on-site would not operate for long periods of time and would be used at varying locations within the site, associated emissions of DPM would not occur at the same location (or be evenly spread throughout the entire project site) for long periods of time. In addition, the prevailing wind direction in Pittsburg is from the west.[11] Therefore, emissions of DPM from the use of construction equipment would be blown towards the eastward direction and away from the nearest sensitive receptors.

[11] Weather Spark. *Average Weather in Pittsburg* Available at: https://weatherspark.com/y/1150/Average-Weather-in-Pittsburg-California-United-States-Year-Round. Accessed June 2022.

Due to the temporary nature of construction and the relatively short duration of potential exposure to associated emissions, the potential for any one sensitive receptor in the area to be exposed to concentrations of pollutants for a substantially extended period of time would be low. Therefore, construction associated with the proposed project would not be expected to expose sensitive receptors to substantial pollutant concentrations.

Asbestos

Asbestos is a known carcinogen and, thus, is considered a TAC. Asbestos is strictly regulated due to the serious adverse health effects resulting from exposure, including asbestosis and lung cancer, and based on the natural widespread occurrence of asbestos and the use of asbestos as a building material.

As discussed above, the project site was historically occupied by a manufacturing plant that produced asbestos-cement products, asphalt roofing materials, and asbestos-containing pipe covering. However, the site has undergone extensive remediation to address the asbestos-containing materials located on-site. The remediation activities included removal of asbestos-containing materials and petroleum hydrocarbon-affected soil from the site and placement in engineered containment berms along the eastern boundary of the project site. Asbestos-impacted material and debris were placed into a trench excavated to 10 feet bgs along the eastern boundary of the site, which was then capped by hydrocarbon-impacted soil. An engineered textile and two feet of clean, low-permeability soil was then added to the top of the materials to create the capped, vegetated berms.

All remedial actions have been completed and approved by the DTSC,[12] and the site regularly undergoes maintenance and monitoring as required by a Site Operation and Maintenance Plan prepared for the project site. The remediation system is also evaluated every five years to determine if human health and the environment are being adequately protected. Development of the proposed project would not alter the berms in which the asbestos-containing materials are located. As such, the proposed project would not result in exposure to asbestos-containing materials.

Criteria Pollutants

The BAAQMD thresholds of significance were established with consideration given to the health-based air quality standards established by the National AAQS (NAAQS) and California AAQS (CAAQS), and are designed to aid the District in achieving attainment of the NAAQS and CAAQS.[13] Although the BAAQMD's thresholds of significance are intended to aid achievement of the NAAQS and CAAQS for which the SFBAAB is in nonattainment, the thresholds of significance do not represent a level above which individual project-level emissions would directly result in public health impacts. Nevertheless, a project's compliance with BAAQMD's thresholds of significance provides an indication that criteria pollutants released as a result of project implementation would not inhibit attainment of the health-based regional NAAQS and CAAQS. Because project-related emissions would not exceed the BAAQMD's thresholds, and, thus, would not inhibit attainment of regional NAAQS and CAAQS, the criteria pollutants emitted during project implementation would not be anticipated to result in measurable health impacts to

[12] GSI Environmental Inc. *Site Investigation Report: 420 E. 3rd Street, Pittsburg, California.* June 2021.
[13] Bay Area Air Quality Management District. *California Environmental Quality Act Air Quality Guidelines*. May 2017.

sensitive receptors. Accordingly, the proposed project would not expose sensitive receptors to excess concentrations of criteria pollutants.

Conclusion

Based on the above discussion, the proposed project would not expose nearby sensitive receptors to substantial concentrations of localized CO, TACs, or criteria pollutants during construction and operations of the project. Consequently, the proposed project would result in a ***less-than-significant*** impact related to the exposure of sensitive receptors to substantial pollutant concentrations.

d. Pollutants of principal concern include emissions leading to odors, emission of dust, or emissions considered to constitute air pollutants. Air pollutants have been discussed in section "a" through "c" above. Therefore, the following discussion focuses on emissions of odors and dust.

Per the BAAQMD CEQA Guidelines, odors are generally regarded as an annoyance rather than a health hazard.[14] Manifestations of a person's reaction to odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting, and headache). The presence of an odor impact is dependent on a number of variables including: the nature of the odor source; the frequency of odor generation; the intensity of odor; the distance of odor source to sensitive receptors; wind direction; and sensitivity of the receptor. Typical odor-generating land uses include, but are not limited to, wastewater treatment plants, landfills, and composting facilities. The proposed project would not introduce any such land uses.

Construction activities often include diesel-fueled equipment and heavy-duty trucks, which could create odors associated with diesel fumes that may be considered objectionable. However, construction activities would be temporary, and hours of operation for construction equipment would be restricted to the hours of 8:00 AM and 5:00 PM Monday through Friday per Section 18.82.040 of the City of Pittsburg Municipal Code. Project construction would also be required to comply with all applicable BAAQMD rules and regulations, particularly associated with permitting of air pollutant sources. The aforementioned regulations would help to minimize emissions, including emissions leading to odors. Accordingly, substantial objectionable odors would not be expected to occur during construction activities.

Furthermore, the BAAQMD regulates objectionable odors through Regulation 7, Odorous Substances, which does not become applicable until the Air Pollution Control Officer (APCO) receives odor complaints from ten or more complainants within a 90-day period. Once effective, Regulation 7 places general limitations on odorous substances and specific emission limitations on certain odorous compounds, which remain effective until such time that citizen complaints have not been received by the APCO for one year. The limits of Regulation 7 become applicable again when the APCO receives odor complaints from five or more complainants within a 90-day period. Thus, although not anticipated, if odor complaints are made after the proposed project is developed, the BAAQMD would ensure that such odors are addressed, and any potential odor effects are minimized or eliminated.

[14] Bay Area Air Quality Management District. *California Environmental Quality Act Air Quality Guidelines* [pg. 7-1]. May 2017.

As noted previously, all projects under the jurisdiction of BAAQMD are required to implement the BAAQMD's Basic Construction Mitigation Measures. Such measures would act to reduce construction-related dust by ensuring that haul trucks with loose material are covered, reducing vehicle dirt track-out, and limiting vehicle speeds within project site, among other methods, which would ensure that construction of the proposed project does not result in substantial emissions of dust. Following project construction, vehicles operating within the project site would be limited to paved areas of the site, and non-paved areas would be landscaped. Thus, project operations would not include sources of dust that could adversely affect a substantial number of people.

For the aforementioned reasons, construction and operation of the proposed project would not result in emissions, such as those leading to odors, adversely affecting a substantial number of people, and a ***less-than-significant*** impact would result.

IV. BIOLOGICAL RESOURCES. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	☐	✖	☐
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	☐	☐	✖	☐

Discussion

a,f. The Federal Endangered Species Act (FESA) of 1973 declares that all federal departments and agencies shall utilize their authority to conserve endangered and threatened plant and animal species. The California Endangered Species Act (CESA) of 1984 parallels the policies of FESA and pertains to native California species.

For the purposes of this Initial Study, special-status species are those that fall into one or more of the following categories, including those:

- listed as endangered or threatened under the Federal Endangered Species Act (FESA; including candidates and species proposed for listing);
- listed as endangered or threatened under the California Endangered Species Act (CESA; including candidates and species proposed for listing);
- designated as rare, protected, or fully protected pursuant to California Fish and Game Code;
- designated a Species of Special Concern (SSC) by the California Department of Fish and Wildlife (CDFW);
- considered by CDFW to be a Watch List species with potential to become an SSC;

- defined as rare or endangered under Section 15380 of the California Environmental Quality Act (CEQA); or
- Having a California Rare Plant Rank (CRPR) of 1A, 1B, 2A, 2B, or 3.

In addition to regulations for special-status species, most birds in the U.S., including non-status species, are protected by the Migratory Bird Treaty Act (MBTA) of 1918. Under the MBTA, destroying active nests, eggs, and young is illegal.

For the purpose of the analysis of biological resources in this Initial Study, a Biological and Wetland Constraints Letter Report (Biological Report) was prepared by Helix Environmental Planning Inc. on March 12, 2021 (Appendix B).[15] As part of the Biological Report, a reconnaissance survey was conducted on March 5, 2021. In addition, the California Natural Diversity Database (CNDDB) was used to determine what special-status species are known to have occurred within a five-mile radius of the project site. The CNDDB query returned several plant and animal species that have the potential to occur in the project area. The habitat requirements of all the identified species were subsequently compared to the habitat on the project site to determine the likelihood of each special-status species occurring at the project site.

It should be noted that the project site is within the boundaries of the East Contra Costa County Habitat Conservation Plan/Natural Community Conservation Plan (ECCC HCP/NCCP). The ECCC HCP/NCCP went into effect on June 30, 2000, and the City of Pittsburg approved the implementing ordinance on April 16, 2007. The purpose of the ECCC HCP/NCCP is to preserve high quality habitat for species of concern throughout the plan area. The ECCC HCP/NCCP accomplishes habitat protection through the establishment of preserves and the collection of development fees. Fees are collected based on established fee zones and land cover types, with developments placed in higher quality habitat land cover types incurring higher development fee rates, and developments placed in low quality habitats or urban areas incurring lower development fees or no development fees. Fee zones and land cover types are presented in the *East Contra Costa County HCP/NCCP Development Fee Zones* figure.[16] Figure 9-1 places the project site in Fee Zone 1. Fee Zone 1 requires a payment of $11,919 per acre. Thus, the project applicant would be required to pay $244,339.50 for Zone 1 fees, or otherwise execute an "in-lieu-of fee" agreement with the East Contra Costa Habitat Conservancy, to mitigate the potential effects of the proposed project. Therefore, the proposed project would not be in conflict with the provisions of an adopted HCP/NCCP, or other approved local, regional or state habitat conservation plan, and would result in a less-than-significant impact.

According to Figure 3-3: *Landcover in the Inventory Area* of the ECCC HCP/NCCP, the project site is characterized as urban, although the project site is currently dominated by vegetation. The Physical and Biological Resources Chapter of the ECCC HCP/NCCP defines urban sites as areas where the native vegetation has been cleared for residential, commercial, industrial, transportation, or recreational structures.[17] Despite the

16 East Contra Costa County Conservancy. *Figure 9-1: Development Fee Zones*. Accessible at: https://www.cocohcp.org/DocumentCenter/View/955/High-Resolution-Development-Fee-Zone-Map-PDF. Accessed July 2022.

17 East Contra Costa County Conservancy. *Final East Contra Costa County Habitat Conservation Plan/Natural Community Conservation Plan, Chapter 3 Physical and Biological Resources* [pg. 3-25]. Updated December 19, 2006.

characterization as an urban site, the project site is dominated by ruderal vegetation. Areas surrounding the project site are also considered urban, but some similarly consist primarily of ruderal grasslands, while others are developed with residential and industrial uses.

In February 2015, the East Contra Costa County Habitat Conservancy prepared an ECCC HCP/NCCP Assessment of Plan Effects on CEQA Species.[18] The purpose of the assessment was to provide a programmatic, cumulative CEQA effects analysis for CEQA species not covered by the ECCC HCP/NCCP. The 2015 ECCC HCP/NCCP Assessment of Plan Effects on CEQA Species concluded that mitigation measures required in the ECCC HCP/NCCP also provide mitigation for non-covered species; therefore, projects consistent with the ECCC HCP/NCCP would have a less-than-significant impact on other potential special-status species.

According to the 2015 ECCC HCP/NCCP Assessment of Plan Effects on CEQA Species, for all but two of the potential special-status species addressed (Lime Ridge navarretia [*Navarretia gowenii*] and the Lime Ridge eriastrum [*Eriastrum ertterae]*), impacts would be less than significant under CEQA. Because of uncertainty regarding the distribution of the Lime Ridge navarretia and the Lime Ridge eriastrum, the 2015 ECCC HCP/NCCP Assessment of Plan Effects on CEQA Species concluded that a potentially significant impact could occur related to the two aforementioned species. The project specific search of the CNDDB and did not identify any known occurrences of Lime Ridge navarretia or Lime Ridge eriastrum within the project site or immediate vicinity and, therefore, implementation of the proposed project would not impact the species. Based on the conclusions of the 2015 ECCC HCP/NCCP Assessment of Plan Effects on CEQA Species and the absence of the Lime Ridge navarretia and Lime Ridge eriatrum in the vicinity of the project site, the proposed project would have a less-than-significant impact on any potential special-status wildlife species and potential special-status plant species not covered by the ECCC HCP/NCCP that could occur within the vicinity of the project site because the proposed project would be required to comply with the ECCC HCP/NCCP.

Special-Status Plants

According to the Biological Report prepared for this Initial Study, one reported occurrence of a special-status plant (big tarplant*; Blepharizonia plumosa*) overlaps the site. Other occurrences of special-status plants have not been reported on or adjacent to the site, but several records have occurred within a five-mile radius. The reconnaissance survey conducted for the Biological Report did not observe any special-status plants on the site. Due to the history of site disturbance and lack of suitable habitat present on the site currently, no special-status plant species are expected to occur on the site or be impacted by any future site development. Because special-status plants are not anticipated to occur within the project site, implementation of the proposed project would not result in adverse effects to special-status plants.

Special-Status Wildlife

Numerous regionally-occurring special-status wildlife species were identified in the course of the Biological Report, including the song sparrow. However, suitable habitat for the song sparrow does not occur on-site. The only regionally-occurring special-status species that was identified as having potential habitat or the potential to occur on the site is

[18] H.T. Harvey & Associates. *East Contra Costa County Habitat Conservation Plan – Assessment of Plan Effects on CEQA Species.* February 17, 2015.

burrowing owl, which is covered under the ECCC HCP/NCCP. The ECCC HCP/NCCP Planning Survey Report Form categorically considers certain species to have the potential to occur within specific land use types regardless of existing conditions within the particular site. For instance, any grassland, oak savannah, agricultural land, or ruderal area is assumed to provide habitat to burrowing owl. The burrowing owl is a subterranean nester which is dependent upon other burrowing mammals. The development fees of Zone 1 would require the applicant to pay a per acre fee and apply avoidance measures to ensure the species are not disturbed. All other covered species under the ECCC HCP/NCCP were dismissed due to the specific habitat type of the species.

Burrowing Owl

The nearest reported occurrence of burrowing owl in the CNDDB is approximately 2.5 miles southeast of the project site, in the City of Antioch. This reported occurrence is from 2008 and is listed as possibly extirpated. A few other occurrences of burrowing owl have been reported within a five-mile radius of the project site, including records approximately 4.5 miles southwest of the site. The ruderal grasslands within and adjacent to the project site may provide marginal foraging habitat for the species. One fairly large subterranean burrow was observed in the berm along the western boundary of the site during the reconnaissance survey. The burrow was of a suitable size and depth to provide good habitat for the burrowing owl, but indications of the species presence was not found. Furthermore, the site is mapped as suitable habitat for burrowing owl as modeled in the ECCC HCP/NCCP, and the species is assumed to be present. Although the project site is regularly disturbed and largely surrounded by urban development, if burrowing owls were to utilize the ruderal lot for foraging and/or breeding, construction of the proposed project could cause a substantial adverse effect on the species.

Nesting Raptors and Migratory Birds

Shrubs, trees, and ruderal grasslands on the project site and along the project frontages may be used by other raptors and migratory birds protected by the MBTA. As such, the project site provides suitable habitat for nesting migratory birds, such as mourning dove (*Zenaida macroura*), black phoebe (*Sayornis nigricans*), and killdeer (*Charadrius vociferus*). Nests were not observed during surveys. However, construction activities that adversely affect the nesting success of raptors and migratory birds (i.e., lead to the abandonment of active nests) or result in mortality of individual birds constitute a violation of State and federal laws. Thus, project-related activities that would occur during the breeding season (generally February 1 through August 31) could result in an adverse effect to species protected under the MBTA, should such species be present.

Conclusion

Based on the above, burrowing owl has the potential to occur on-site. However, the project would be required to comply with ECCC HCP/NCCP requirements, including pre-construction surveys. Additionally, although the site and surrounding area contains suitable nest trees for nesting raptors and migratory birds protected by the MBTA, the project would be required to comply with the ECCC HCP/NCCP's Applicable Avoidance and Minimization Measures for nesting and migratory birds. The proposed project would comply with all applicable ECCC HCP/NCCP requirements, which would be ensured as a City condition of approval. Thus, the proposed project would not have an adverse effect, either directly or through habitat modifications, on species identified as special-status species in local or regional plans, policies, or regulations, or by the CDFW or the U.S. Fish and Wildlife Service (USFWS), and a ***less-than-significant*** impact would result.

b,c. The project site consists primarily of ruderal vegetation, and does not support any riparian vegetation or protected wetlands.

According to the Biological Report, waters of the U.S. and waters of the State are not believed to occur on-site. Therefore, the proposed project would not have an adverse effect on riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations, as well as on state or federally protected wetlands. Thus, a ***less-than-significant*** impact could occur.

d. The project site is located in an urbanized area and is bordered by existing roadways to the north and east, residential developments to the west and south, as well as industrial uses to the east. Thus, the developed portions of the surrounding area do not support any substantial wildlife movement corridors. The project site does not include any aquatic features that could be used as a movement corridor by aquatic species. Additionally, the proposed project would mitigate for any impacts to special-status species habitats through site-specific pre-construction surveys, avoidance measures, and payment of applicable mitigation fees. As such, the project would not interfere substantially with the movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors, or impede the use of wildlife nursery sites. Thus, a ***less-than-significant*** impact would occur.

e. Although the project site is vacant and consists primarily of ruderal grasses, an estimated 50 to 60 trees, all of which are non-native, are present on the site and would be removed. Prior to site development, as a condition of approval an arborist inventory would need to be conducted at the project site to identify the presence of any protected trees. Chapter 18.84, Article XIX, Tree Preservation and Protection, of the City's Municipal Code defines protected trees and establishes the requirements governing the removal and preservation of such trees. Pursuant to Section 18.84.845 of the City's Municipal Code, a protected tree may only be removed upon approval of a tree removal permit issued by the City. The information required when submitting a Tree Removal Permit application, includes, but is not limited to, the following:

- The precise number, species, size and location of the tree or trees to be cut down, destroyed or removed and a brief statement of the reason for removal;
- The signature of the property owner authorizing such removal and the signature of the person performing the work, if different than the property owner and if known at the time of the application;
- An arborist report including a tree survey plan specifying the precise location and drip line of all existing trees on or in the vicinity of the project site. The tree survey plan shall also indicate the precise location of existing and proposed buildings and easements within 25 feet of the drip line of the trees, and the plan shall include existing and proposed grades adjacent to the trees along with underground utility services, sub-drains, water, sewer, irrigation and lighting. The arborist report shall also include a table that identifies each tree by number along with the size, and species of each tree (including a statement as to whether or not it is a California native species), as well as a statement indicating whether the tree is proposed to be saved or removed;
- The time and manner in which the removed tree(s) would be replaced, subject to the requirements of Chapter 18.84, Article XIX, of the City's Municipal Code; and

- A biological report or statement for any trees that may serve as potential habitat for any candidate, sensitive or special status species identified in any local or regional plans, policies or regulations, or by CDFW or the USFWS.

In addition, the City would impose tree replacement standards or in-lieu fees pursuant to Section 18.84.855 of the Municipal Code for any protected trees proposed for removal. Replacement options include, but are not limited to:

- Replacement of the removed tree(s) at a four-to-one ratio with 24-inch box trees;
- Replacement of the tree(s) at a 12-to-one ratio with 15-gallon trees;
- Payment of in-lieu fees equal to the replacement trees' value, installation costs and one year of maintenance costs, as calculated with a 12-to-one ratio of 15-gallon trees; or
- A combination of replacement and payment of in-lieu fees.

Many of the trees on-site are too small to meet the criteria to be a protected tree; however, several trees on the site are large enough to be considered protected trees including a line of Peruvian pepper trees (*Schinus molle*) along the southern and western boundaries.[19] Any removal of trees as part of the proposed project would first require the preparation of an arborist report, and then be required to comply with all regulations established in Chapter 18.84 Article XIX of the City's Municipal Code. Thus, the proposed project would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation ordinance, and a ***less-than-significant*** impact would occur.

[19] Helix Environmental Planning, Inc. *Biological and Wetland Constraints Letter Report for the Harbor View Project, City of Pittsburg, Contra Costa County, CA*. March 12, 2021.

V. CULTURAL RESOURCES. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	☐	✖	☐	☐
b. Cause a substantial adverse change in the significance of a unique archaeological resource pursuant to Section 15064.5?	☐	✖	☐	☐
c. Disturb any human remains, including those interred outside of dedicated cemeteries.	☐	✖	☐	☐

Discussion

a,b,c. Historical resources are features that are associated with the lives of historically important persons and/or historically significant events, that embody the distinctive characteristics of a type, period, region or method of construction, or that have yielded, or may be likely to yield, information important to the pre-history or history of the local area, California, or the nation. Examples of typical historical resources include, but are not limited to, buildings, farmsteads, rail lines, bridges, and trash scatters containing objects such as colored glass and ceramics.

The General Plan EIR indicates that the City of Pittsburg contains multiple historic sites relevant to the history of Pittsburg, including historical resources from the coal and steel eras. As one of the earliest industrial centers in Contra Costa County, the City's historical resources encompass a broad range of activities. Resources include buildings associated with industry including Black Diamond Mines, early railroads along Railroad Avenue, military facility Camp Stoneman, and places of entertainment such as the Black Diamond Theater, the Palace Theater, and Vogue Theater.

A records search of the California Historic Resources Information System (CHRIS) was performed by the Northwest Information Center (NWIC) for cultural resource site records and survey reports within the proposed project area.[20] The CHRIS search found that a previous cultural resource study covered the entirety of the project site, and determined that known archeological resources do not exist on the project site. The State Office of Historic Preservation Built Environment Resources Directory does not list any recorded buildings on structures on or near the project site. In addition, a records search by the Native American Heritage Commission (NAHC) of the Sacred Lands File resulted in negative findings of cultural resources on the project site.[21]

Nonetheless, given the historical occupation of the project area by Native American tribes, the potential exists that unknown archaeological resources, including human remains, and/or historic resources could occur on-site. Should ground-disturbing activity related to project construction encounter such resources, an adverse effect could occur. Therefore, the proposed project could cause a substantial adverse change in the significance of a historic or archaeological resource pursuant to CEQA Guidelines Section 15064.5 and/or

[20] Northwest Information Center. *Records Search Results for the Proposed 420 East 3rd Street Project*. December 6, 2021.

[21] Native American Heritage Commission. *Letter RE: 420 E. 3rd Street Project, Contra Costa County*. February 14, 2022.

disturb human remains, including those interred outside of formal cemeteries during construction. Thus, impacts could be considered ***potentially significant***.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above impact to a *less-than-significant* level.

V-1. *Prior to approval of Improvement Plans, plans shall be reviewed by the Pittsburg Community and Economic Development Department, Planning Division, to ensure the following note is included:*

If any prehistoric or historic artifacts, or other indications of cultural deposits are found once ground disturbing activities are underway, all work within the vicinity of the find(s) shall cease, the Community and Economic Development Department, Planning Division, shall be notified, and the find(s) shall be immediately evaluated by a qualified archaeologist. If the find is determined to be a historical or unique paleontological or archaeological resource, contingency funding and a time allotment to allow for implementation of avoidance measures or appropriate mitigation shall be made available (CEQA Guidelines Section 15064.5). Work may continue on other parts of the project site while historical or unique archaeological resource mitigation takes place (PRC Sections 21083 and 21087).

V-2. *Prior to approval of Improvement Plans, plans shall be reviewed by the Pittsburg Community and Economic Development Department, Planning Division, to ensure the following note is included:*

In the event of the accidental discovery or recognition of any human remains, further excavation or disturbance of the find or any nearby area reasonably suspected to overlie adjacent human remains shall not occur until compliance with the provisions of CEQA Guidelines Section 15064.5(e)(1) and (2) has occurred. The Guidelines specify that in the event of the discovery of human remains other than in a dedicated cemetery, no further excavation at the site or any nearby area suspected to contain human remains shall occur until the County Coroner has been notified to determine if an investigation into the cause of death is required. If the coroner determines that the remains are Native American, then, within 24 hours, the Coroner must notify the Native American Heritage Commission, which in turn will notify the most likely descendants who may recommend treatment of the remains and any grave goods. If the Native American Heritage Commission is unable to identify a most likely descendant or most likely descendant fails to make a recommendation within 48 hours after notification by the Native American Heritage Commission, or the landowner or his authorized agent rejects the recommendation by the most likely descendant and mediation by the Native American Heritage Commission fails to provide a measure acceptable to the landowner, then the landowner or his authorized representative shall rebury the human remains and grave goods with appropriate dignity at a location on the property not subject to further disturbances. Should human remains be encountered, a copy of the

resulting County Coroner report noting any written consultation with the Native American Heritage Commission shall be submitted as proof of compliance to the City's Community and Economic Development Department, Planning Division.

VI. ENERGY. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	✖	☐
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	✖	☐

Discussion

a,b. The main forms of available energy supply are electricity and oil. A description of the 2019 California Green Building Standards Code (CALGreen Code) and the Building Energy Efficiency Standards, with which the proposed project would be required to comply, as well as discussions regarding the proposed project's potential effects related to energy demand during construction and operations are provided below.

California Green Building Standards Code

The 2019 California Green Building Standards Code, otherwise known as the CALGreen Code (CCR Title 24, Part 11) is a portion of the CBSC, which became effective on January 1, 2020.[22] The purpose of the CALGreen Code is to improve public health, safety, and general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices. The CALGreen standards regulate the method of use, properties, performance, types of materials used in construction, alteration repair, improvement and rehabilitation of a structure or improvement to property. The provisions of the code apply to the planning, design, operation, construction, use, and occupancy of every newly constructed building or structure throughout California. Requirements of the CALGreen Code include, but are not limited to, the following measures:

- Compliance with relevant regulations related to future installation of electric vehicle charging infrastructure in residential and non-residential structures;
- Indoor water use consumption is reduced through the establishment of maximum fixture water use rates;
- Outdoor landscaping must comply with the California Department of Water Resources' MWELO, or a local ordinance, whichever is more stringent, to reduce outdoor water use;
- Diversion of 65 percent of construction and demolition waste from landfills; and
- Mandatory use of low-pollutant emitting interior finish materials such as paints, carpet, vinyl flooring, and particle board.

Building Energy Efficiency Standards

The 2019 Building Energy Efficiency Standards is a portion of the CBSC, which expands upon energy efficiency measures from the 2016 Building Energy Efficiency Standards. The 2019 Building Energy Efficiency Standards are in effect for building permit applications submitted after January 1, 2020.

[22] California Building Standards Commission. *California Green Building Standards Code*. Available at: https://www.dgs.ca.gov/BSC/CALGreen. Accessed June 2022.

Energy reductions relative to previous Building Energy Efficiency Standards are achieved through various regulations, including requirements for the use of high-efficacy lighting, improved water heating system efficiency, and high-performance attics and walls. For nonresidential buildings, hotels, motels, and high-rise residential buildings, the most significant changes in compliance with the 2019 standards are in lighting design.[23] Other changes in compliance include alterations to a development's envelope, mechanical systems, and covered processes.

Construction Energy Use

Construction of the proposed project would involve on-site energy demand and consumption related to use of oil in the form of gasoline and diesel fuel for construction worker vehicle trips, hauling and materials delivery truck trips, and operation of off-road construction equipment. In addition, diesel-fueled portable generators may be necessary to provide additional electricity demands for temporary on-site lighting, welding, and for supplying energy to areas of the site where energy supply cannot be met via a hookup to the existing electricity grid. Project construction would not involve the use of natural gas appliances or equipment.

Even during the most intense period of construction, due to the different types of construction activities (e.g., site preparation, grading, building construction), only portions of the project site would be disturbed at a time, with operation of construction equipment occurring at different locations on the project site, rather than a single location. In addition, all construction equipment and operation thereof would be regulated per the CARB In-Use Off-Road Diesel Vehicle Regulation, which is intended to reduce emissions from in-use, off-road, heavy-duty diesel vehicles in California by imposing limits on idling, requiring all vehicles to be reported to CARB, restricting the addition of older vehicles into fleets, and requiring fleets to reduce emissions by retiring, replacing, or repowering older engines, or installing exhaust retrofits. The In-Use Off-Road Diesel Vehicle Regulation would subsequently help to improve fuel efficiency and reduce GHG emissions. Technological innovations and more stringent standards are being researched, such as multi-function equipment, hybrid equipment, or other design changes, which could help to reduce demand on oil and limit emissions associated with construction.

The CARB has prepared the *2017 Climate Change Scoping Plan Update* (2017 Scoping Plan),[24] which builds upon previous efforts to reduce GHG emissions and is designed to continue to shift the California economy away from dependence on fossil fuels. Appendix B of the 2017 Scoping Plan includes examples of local actions (municipal code changes, zoning changes, policy directions, and mitigation measures) that would support the State's climate goals. The examples provided include, but are not limited to, enforcing idling time restrictions for construction vehicles, utilizing existing grid power for electric energy rather than operating temporary gasoline/diesel-powered generators, and increasing use of electric and renewable fuel-powered construction equipment. The In-Use Off-Road Diesel Vehicle Regulation, with which the proposed project must comply, would be consistent with the intention of the 2017 Scoping Plan and the recommended actions included in Appendix B of the 2017 Scoping Plan.

---

[23] California Energy Commission. *California Energy Commission 2019 Building Energy Efficiency Standards What's New for Nonresidential*. Available at: https://www.energy.ca.gov/media/3455. Accessed March 2022.

[24] California Air Resources Board. *The 2017 Climate Change Scoping Plan Update*. November 2017.

Based on the above, the temporary increase in energy use occurring during construction of the proposed project would not result in a significant increase in peak or base demands or require additional capacity from local or regional energy supplies. In addition, the proposed project would be required to comply with all applicable regulations related to energy conservation and fuel efficiency, which would help to reduce the temporary increase in demand.

Operational Energy Use

Following implementation of the proposed project, an energy utility in the project vicinity would provide electricity and natural gas to the project site. Energy use associated with operation of the proposed project would be typical of residential and commercial uses, requiring electricity for interior and exterior building lighting, heating, ventilation, and air conditioning (HVAC), electronic equipment, machinery, refrigeration, appliances, security systems, and more. Maintenance activities during operations, such as landscape maintenance, would involve the use of electric or gas-powered equipment. In addition to on-site energy use, the proposed project would result in transportation energy use associated with vehicle trips generated by the proposed development.

The proposed project would be subject to all relevant provisions of the most recent update of the CBSC, including the Building Energy Efficiency Standards. Adherence to the most recent CALGreen Code and the Building Energy Efficiency Standards would ensure that the proposed structures would consume energy efficiently through the incorporation of such features as efficient water heating systems, high performance attics and walls, and high efficacy lighting. Required compliance with the CBSC would ensure that the building energy use associated with the proposed project would not be wasteful, inefficient, or unnecessary. In addition, electricity supplied to the project by PG&E would comply with the State's Renewables Portfolio Standard, which requires investor-owned utilities, electric service providers, and community choice aggregators to increase procurement from eligible renewable energy resources to 33 percent of total procurement by 2020 and to 60 percent by 2030. Thus, a portion of the energy consumed during project operations would originate from renewable sources.

With regard to transportation energy use, the proposed project would comply with all applicable regulations associated with vehicle efficiency and fuel economy.

Conclusion

Based on the above, construction and operation of the proposed project would not result in wasteful, inefficient, or unnecessary consumption of energy resources or conflict with or obstruct a State or local plan for renewable energy or energy efficiency. Thus, a ***less-than-significant*** impact would occur.

VII. GEOLOGY AND SOILS. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:

ii. Strong seismic ground shaking?	☐	☐	✖	☐
iii. Seismic-related ground failure, including liquefaction?	☐	✖	☐	☐
iv. Landslides?	☐	✖	☐	☐
b. Result in substantial soil erosion or the loss of topsoil?	☐	☐	✖	☐
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	✖	☐	☐
d. Be located on expansive soil, as defined in Table 18-1B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	✖	☐	☐
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	✖
f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	✖	☐	☐

Discussion

ai,aii. According to the City's General Plan EIR, Eastern Contra Costa County, like the San Francisco Bay Area as a whole, is located in a seismically active region. Major earthquakes have occurred in the vicinity of Pittsburg in the past and can be expected to occur again in the near future. Historically active faults in the area include the Concord, Hayward, Calaveras, Green Valley, and Clayton-Marsh Creek-Greenville faults. In addition to the foregoing faults, the San Andreas Fault, located approximately 48 miles west of the project site, is the largest active fault in the region.

Although known fault systems exist within proximity to the project site, the project site is not underlain by any faults and fault rupture hazard is not a significant geologic hazard at the site.[25] Nonetheless, due to the site's proximity to nearby active faults, the project site

[25] U.S. Geological Survey. *U.S. Quaternary Faults.* Available at: https://usgs.maps.arcgis.com/apps/webappviewer/index.html?id=5a6038b3a1684561a9b0aadf88412fcf. Accessed February 2022.

could be subject to moderate to severe (design-level) earthquakes and associated seismic ground shaking. However, the proposed buildings would be properly engineered in accordance with the CBSC, which includes engineering standards appropriate for the seismic area in which the project site is located. Projects designed in accordance with the CBSC should be able to: 1) resist minor earthquakes without damage, 2) resist moderate earthquakes without structural damage but with some nonstructural damage, and 3) resist major earthquakes without collapse but with some structural as well as nonstructural damage. Conformance with the design standards is enforced through Building Plan Review and approval by the City of Pittsburg Building Division prior to the issuance of Building Permits. Proper engineering of the proposed project would ensure that seismic-related effects would not cause substantial impacts.

Therefore, a ***less-than-significant*** impact would occur related to directly or indirectly causing potential substantial adverse effects, including the risk of loss, injury, or death involving the rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault; or strong seismic ground shaking.

aiii,aiv, c,d. The potential effects resulting from implementation of the proposed project related to liquefaction, landslides, lateral spreading, subsidence/settlement, and expansive soils are discussed in detail below. The following discussion is based primarily on the Geotechnical Feasibility Evaluation (GFE) prepared by ENGEO Incorporated for the proposed project (Appendix C).[26]

Liquefaction

Soil liquefaction results from loss of strength during cyclic loading, such as that which is imposed by earthquake ground shaking. Soils most susceptible to liquefaction are clean, loose, saturated, uniformly graded, and fine-grained sediment. According to the GFE, the site is located within a mapped State of California Seismic Hazard Zone for areas that may be susceptible to liquefaction. The existing subsurface data does not provide sufficient information for performing a rigorous liquefaction hazard evaluation. However, an analysis of data from previous investigations indicates up to 5.5 inches of liquefaction-induced settlement in localized areas. Therefore, a potential impact related to liquefaction could occur.

Landslide

Seismically-induced landslides are triggered by earthquake ground shaking. The risk of landslide hazard is greatest in areas with steep, unstable slopes. The topography of the project site is generally flat, with the exception of the engineered and regularly-maintained berms. Therefore, the potential for landslides to adversely affect the proposed project is low, resulting in a less-than-significant impact.

Lateral Spreading

Lateral spreading is horizontal/lateral ground movement of relatively flat-lying soil deposits towards a free face such as an excavation, channel, or open body of water; typically, lateral spreading is associated with liquefaction of one or more subsurface layers near the bottom of the exposed slope. According to the GFE, based on the site location and

[26] ENGEO Incorporated. *420 East 3rd Street Development, Pittsburg, California, Geotechnical Feasibility Evaluation.* April 1, 2021.

distance from New York Slough, the risk for lateral spreading is low. Nevertheless, because the project site may be subject to liquefaction, lateral spreading could occur and further evaluation is required to ensure that adverse effects do not occur.

Subsidence/Settlement

Loose unsaturated sandy soils can settle during strong seismic shaking. Laboratory testing during previous investigations indicates soft clay in the southeastern portion of the project site. Thus, the compressible clay could experience moderate settlement under new fill loads if site grades are raised, with the magnitude of settlement depending on the building loads and height of fill. According to the GFE, settlement could occur at a rate of approximately 0.5-inch per foot of additional fill, and raising of site grades and construction of structures may result in several inches of settlement in areas underlain by compressible material. Therefore, subsidence/settlement have the potential to occur on-site, and further evaluation is required to ensure that impacts are reduced to a less-than-significant level.

Expansive Soil

According to the Natural Resource Conservation Service's Web Soil survey, soils at the project site consist of Clear Lake clay and Rincon clay loam. Rincon clay loam makes up a majority of the project site soils and is known to have high shrink-swell potential.[27] Expansive soils can undergo significant volume change with changes in moisture content. Specifically, such soils shrink and harden when dried and expand and soften when wetted. If structures are underlain by expansive soils, foundation systems must be capable of tolerating or resisting any potentially damaging soil movements, and building foundation areas must be properly drained. Design of the proposed structures without incorporation of such features could expose the proposed structures to potential risks due to expansive soils, should such soils exist within the project site.

Considering the above, without implementation of appropriate design measures, a potentially significant impact could occur related to the location of the project on potentially expansive soil, as defined in Table 18-1B of the Uniform Building Code, creating substantial direct or indirect risks to life or property.

Conclusion

Based on the above discussion, the project site may be susceptible to liquefaction, lateral spreading, subsidence/settlement, and expansive soils. Therefore, implementation of the proposed project could directly or indirectly cause potential substantial adverse effects involving seismic-related ground failure, including liquefaction, or landslides; could be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse; and could be located on expansive soil, as defined in Table 18-1B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property. Thus, a ***potentially significant*** impact would occur.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above impact to a *less-than-significant* level.

[27] United States Department of Agriculture, Natural Resources Conservation Service. *Web Soil Survey*. Available at: https://websoilsurvey.sc.egov.usda.gov/App/WebSoilSurvey.aspx. Accessed February 2022.

VII-1. *Prior to Grading Permit issuance, the applicant shall submit a final design-level geotechnical report of the project site that addresses soil stability including liquefaction, lateral spreading, subsidence, and soil expansion. The report shall identify any on-site geotechnical hazards and provide design recommendations for such conditions. The design-level geotechnical report shall be reviewed and approved by the Director of Public Works/City Engineer. A qualified Geotechnical Engineer shall ensure that all geotechnical recommendations specified in the design-level geotechnical report are properly incorporated in the project design.*

b. Issues related to erosion are discussed in Section X, Hydrology and Water Quality, of this Initial Study. As noted therein, the proposed project would not result in substantial soil erosion or the loss of topsoil. Thus, a ***less-than-significant*** impact would occur.

e. Sewer collection for the proposed project would be provided by construction of a new network of sewer lines that would connect to the existing 15-inch and 18-inch sewer lines located in Harbor Street and East 3rd Street, where the wastewater would be directed to the Delta Diablo wastewater treatment plant. The construction or operation of septic tanks or other alternative wastewater disposal systems is not included as part of the project. Therefore, ***no impact*** regarding the capability of soil to adequately support the use of septic tanks or alternative wastewater disposal systems would occur.

f. While archaeological resources have been discovered in the City, the Pittsburg General Plan does not list the City as being a potential site for paleontological resources. Although the potential for paleontological resources to exist on the project site is unknown, the possibility exists that paleontological resources could be discovered during grading, paving, and construction of the proposed project.

As noted in the City's General Plan, the City is underlain by alluvium, which consists mainly of unconsolidated gravel, sand, silt, and clay deposits. Such soil types are not considered unique geologic features and are common within the geographic area of the City. Furthermore, the City's General Plan does not note the existence of any unique geologic features within the City. Consequently, implementation of the proposed project would not be anticipated to have the potential to result in direct or indirect destruction of unique geologic features.

Although the proposed project would not have the potential to result in the destruction of unique geologic features, paleontological resources could exist within the project site. Should previously unknown paleontological resources exist within the project site, ground-disturbing activity, such as grading, trenching or excavating, associated with implementation of the proposed project would have the potential to disturb or destroy such features. Consequently, the proposed project could result in the direct or indirect destruction of a unique paleontological resource and a ***potentially significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above impact to a *less-than-significant* level.

VII-2. *Implement Mitigation Measure VII-1.*

VIII. GREENHOUSE GAS EMISSIONS. *Would the project:*	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	✖	☐	☐	☐
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gasses?	✖	☐	☐	☐

Discussion

a,b. Emissions of GHGs contributing to global climate change are attributable in large part to human activities associated with the industrial/manufacturing, utility, transportation, residential, and agricultural sectors. Therefore, the cumulative global emissions of GHGs contributing to global climate change can be attributed to every nation, region, and city, and virtually every individual on earth. An individual project's GHG emissions are at a micro-scale level relative to global emissions and effects to global climate change; however, an individual project could result in a cumulatively considerable incremental contribution to a significant cumulative macro-scale impact. As such, impacts related to emissions of GHG are inherently considered cumulative impacts.

Estimated GHG emissions attributable to future development would be primarily associated with increases of carbon dioxide (CO_2) and, to a lesser extent, other GHG pollutants, such as methane (CH_4) and nitrous oxide (N_2O) associated with area sources, mobile sources or vehicles, utilities (electricity and natural gas), water usage, wastewater generation, and the generation of solid waste. The primary source of GHG emissions for the project would be expected to be mobile source emissions. The common unit of measurement for GHG is expressed in terms of annual metric tons of CO_2 equivalents ($MTCO_2e$/yr).

Buildout of the proposed project would contribute to increases of GHG emissions that are associated with global climate change during construction and operations of the proposed project. As such, the proposed project would generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment, or conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHGs. Therefore, impacts related to GHG emissions and global climate change could be cumulatively considerable and considered ***potentially significant***.

Further analysis of the above impact will be included in the Greenhouse Gas Emissions chapter of the Harbor View Project EIR.

IX. HAZARDS AND HAZARDOUS MATERIALS. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	✖	☐
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment?	☐	☐	✖	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	✖
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	☐	✖	☐
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	☐	✖
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	✖	☐
g. Expose people or structures, either directly or indirectly, to the risk of loss, injury or death involving wildland fires?	☐	☐	✖	☐

Discussion

a. Residential land uses are not typically associated with the routine transport, use, disposal, or generation of substantial amounts of hazardous materials. Future residents may use common household cleaning products, fertilizers, and herbicides on-site, any of which could contain potentially hazardous chemicals; however, such products would be expected to be used in accordance with label instructions. Due to the regulations governing use of such products and the amount utilized on the site, routine use of such products would not represent a substantial risk to public health or the environment. Therefore, the project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials, and a ***less-than-significant*** impact would occur.

b. The following discussion is based primarily on a Phase I Environmental Site Assessment (ESA) prepared by GSI Environmental for the proposed project (Appendix D).[28] The Phase I ESA includes an analysis of hazardous and toxic materials that could be used on the

[28] GSI Environmental. *Phase I Environmental Site Assessment – Former Johns Manville Plant Site, 420 East 3rd Street.* April 9, 2021.

project site during construction activities, as well as existing hazardous materials known to be present on the site. The following potential areas of concern were identified in connection with the site.

Construction Activities

Construction activities associated with the proposed project would involve the use of heavy equipment, which would contain fuels and oils, and various other products such as concrete, paints, and adhesives. Small quantities of potentially toxic substances (e.g., petroleum and other chemicals used to operate and maintain construction equipment) would be used at the project site and transported to and from the site during construction. However, the project contractor would be required to comply with all California Health and Safety Codes and local City and County ordinances regulating the handling, storage, and transportation of hazardous and toxic materials. Compliance with such regulations would ensure that the proposed project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment during construction activities, particularly associated with construction equipment.

Existing On-Site Conditions

As previously stated in this document, the project site was occupied since the mid-1920s by a manufacturing plant that produced asbestos-cement products, asphalt roofing materials, and asbestos-containing pipe covering. Manufacture of asbestos-containing materials ceased in 1980 and commercial-grade roofing materials were manufactured at the plant until 2003, when operations terminated. Several environmental investigations were conducted at the former manufacturing site, beginning in 1986 and continuing through 2005, and areas of potential concern associated with asbestos-containing materials were identified.

The selected remedy for the environmental concerns at the project site was the removal of asbestos-containing materials and petroleum hydrocarbon-affected soil from the site and placement in engineered containment berms along the eastern boundary of the project site. Asbestos-containing materials (ACM) and debris were placed into a trench dug to 10 feet bgs along the eastern boundary of the site, which was then capped by hydrocarbon-impacted soil. An engineered textile and two feet of clean, low-permeability soil was then added to the top of the materials to create the capped, vegetated berms. An automated irrigation system exists to maintain the vegetation. The berms consist of two distinct segments referred to below as the “northern” and “southern” berms. Drainage swales were installed adjacent to the berm and graded such that stormwater runs off toward catch basins on the eastern site boundary. The existing drainage swales were installed in cooperation with DTSC-required remedial actions for the project site. The swales and other remediation systems are evaluated every five years by the DTSC. Therefore, an evaluation by the DTSC would confirm that the drainage swales are still operable. Additional remedial actions included the removal of 11 underground storage tanks (USTs), off-site disposal of approximately 10,500 CY of ACM, the off-site disposal of approximately 18,000 CY of petroleum hydrocarbon-impacted soil, and the placement of some impacted soil in the vicinity of the former evaporation pond, now referred to as the Soil Management Area (SMA). All remedial actions have been completed and approved by the DTSC; however, ongoing maintenance and monitoring is required. The remediation system is required to be operated and maintained as described in the Site Operation and Maintenance Plan until the DTSC authorizes its modification or

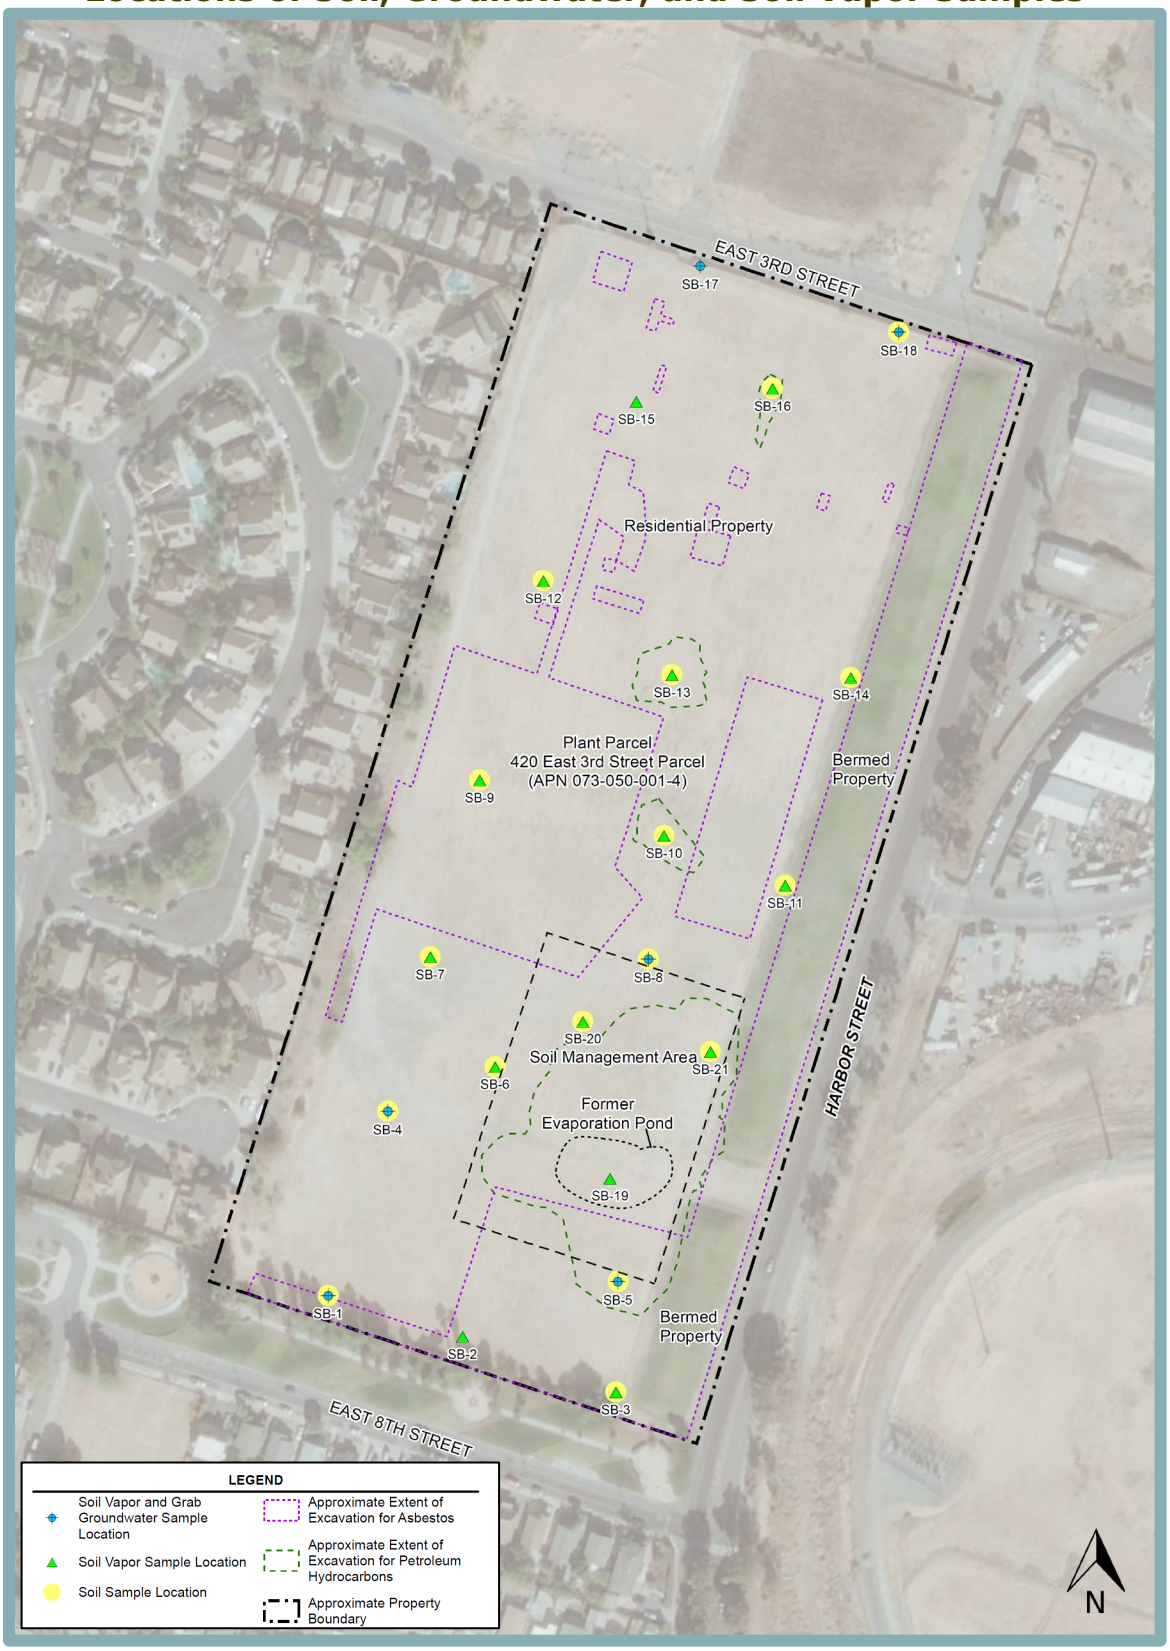
discontinuation. The remediation system is also evaluated every five years to determine if human health and the environment are being adequately protected.

In the course of preparing the Phase I ESA, groundwater and soil vapor beneath the project site was found to be impacted with volatile organic compounds (VOCs), and petroleum hydrocarbons. The presence of such compounds on the project site is identified as a recognized environmental concern (REC). As such, a Site Investigation Report (SIR) was prepared for the project by GSI Environmental Inc. in response to the findings of the Phase I ESA (Appendix E).[29] The SIR involved a sampling plan to assess the current subsurface conditions at the project site, the scope of which included soil vapor sampling at approximately five feet bgs in an approximate grid pattern across the site, with additional samples placed along the perimeter of the SMA; shallower vapor sampling within the SMA; groundwater sampling at the southwest boundary of the project site to assess impacts from the upgradient dry cleaner property; groundwater sampling around the perimeter of the SMA and at the downgradient property boundary to assess potential groundwater impacts resulting from previous site operations; and soil sampling to assess the quality of fill soil placed in the excavated areas and address areas where adequate sampling may not have been previously conducted (see Figure 4).

To provide context to the analytical results, the soil, groundwater, and soil vapor data was evaluated by comparison to screening criteria recommended by DTSC. Concentrations of pollutants below the respective screening criteria are not considered to pose a significant risk. Concentrations of pollutants above the respective screening levels do not necessarily indicate a risk is present, but rather suggest that additional evaluation is warranted.

VOCs in Soil Vapor and Groundwater

Soil vapor samples were collected at 21 locations throughout the project site and analyzed for VOCs. Of the locations sampled, three sampling areas contained VOC concentrations that exceeded the residential vapor intrusion Environmental Screening Level (ESL). As such, further evaluation was warranted. The VOC data in the three areas of the site that were evaluated in greater detail (upgradient southern boundary, downgradient northern boundary, and adjacent to the south of the SMA) are discussed below.



Upgradient Southern Boundary: SB-01

VOCs were detected in groundwater and soil vapor samples at SB-01 located at the southern boundary of the site. Because groundwater flows from the south to the north at the site, VOCs detected in groundwater and soil vapor at this location may be related to an upgradient, off-site source.

Tetrachloroethene (PCE) and trichloroethene (TCE) were detected in groundwater at low concentrations at SB-01. The groundwater sample result for PCE (but not TCE) exceeds the residential vapor intrusion ESL. PCE and TCE also were detected at low concentrations in the soil vapor sample collected at SB-01. The soil vapor results for PCE and TCE were below the DTSC screening levels. The PCE and TCE concentrations in soil vapor samples at SB-01 do not represent a long-term source to groundwater or a vapor intrusion concern for future site redevelopment. Given that SB-01 is at the upgradient portion of the site, it is likely that the PCE and TCE are associated with an off-site source.

[29] GSI Environmental Inc. *Site Investigation Report: 420 E. 3rd Street, Pittsburg, California*. June 2021.

Figure 4
Locations of Soil, Groundwater, and Soil Vapor Samples

Adjacent to the South of the SMA: SB-05

Groundwater and soil vapor samples were collected south of the Former Evaporation Pond and SMA at SB-05. Benzene was detected in the groundwater sample at a low concentration, which exceeds the residential vapor intrusion screening level. Benzene was also detected at a low concentration in the soil vapor sample collected at SB-05; the soil vapor result is below the DTSC screening level. Based on a comparison with DTSC screening levels, the soil vapor data is not indicative of the need of vapor intrusion mitigation at future residential buildings.[30]

Downgradient Northern Boundary: SB-18

Groundwater and soil vapor samples were collected at the downgradient northern boundary of the site at SB-18. In the groundwater sample collected at SB-18, PCE, TCE and vinyl chloride were detected at low concentrations that exceed the residential vapor intrusion screening levels. Thus, the groundwater data indicates additional evaluation of potential vapor intrusion concerns may be warranted at SB-18. In the soil vapor sample collected at SB-18, PCE, TCE, and vinyl chloride were not detected, and the detection limits were below the DTSC screening levels.[31] Thus, the data do not indicate the presence of PCE, TCE, or vinyl chloride in soil vapor, despite the detection of the compounds in underlying groundwater.

The soil vapor and groundwater data collected at SB-18 indicate the presence of low concentrations of PCE, TCE, and vinyl chloride in groundwater. Such VOCs were not detected in soil vapor, which indicate that PCE, TCE, and vinyl chloride in groundwater is limited in extent.

Conclusion

Based on the above, the SIR determined that VOCs were detected in both groundwater and soil vapor; however, the VOCs were detected at low concentrations and with an inconsistent spatial distribution. The magnitude and distribution of the VOC concentrations is not indicative of soil vapor conditions that warrant remediation or mitigation. In addition, VOC and TPH concentrations detected in groundwater samples are below the screening levels that are protective of off-site receptors. In addition, because the proposed project would be required to adhere to all relevant guidelines and ordinances regulating the handling, storage, and transportation of hazardous materials, the project would not create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment, and a ***less-than-significant*** impact would occur.

c. The nearest school to the project site is the Pittsburg High School, located approximately 0.80 mile south of the site. The project site is not located within a quarter mile of any existing or proposed schools. Therefore, the proposed project would have ***no impact*** related to hazardous emissions or the handling of hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.

d. The project site is included in the California Department of Toxic Substances Control EnviroStor Database.[32] The Envirostor Database includes information provided by the

[30] GSI Environmental Inc. *Site Investigation Report: 420 E. 3rd Street, Pittsburg, California.* June 2021.
[31] *Ibid.*
[32] California Department of Toxic Substances Control. *Hazardous Waste and Substances Site List*. Available at: https://www.envirostor.dtsc.ca.gov/public/. Accessed June 2022.

DTSC and included in the State's Hazardous Waste and Substances Sites (Cortese) List, which is compiled pursuant to Government Code section 65962.5. While the project site appears on the Cortese List, all remedial actions have been completed and approved by the DTSC. Ongoing maintenance and monitoring are still required. The remediation system is required to be operated and maintained as described in the Site Operation and Maintenance Plan until the DTSC authorizes its modification or discontinuation. The remediation system is also evaluated every five years to determine if human health and the environment are being adequately protected.

Consequently, given that the proposed project would comply with all requirements of the Site Operation and Maintenance Plan, the proposed project would have a ***less-than-significant*** impact related to being located on a site which is included on a list of hazardous materials sites that may create a significant hazard to the public.

e. The nearest airport to the site is the Buchanan Field airport, which is located approximately 12 miles southwest of the site. As such, the project site is not located within two miles of any public airports or private airstrips, and does not fall within an airport land use plan area. Therefore, ***no impact*** related to a safety hazard for people residing or working in the project area related to such would occur.

f. The City of Pittsburg adopted the *City of Pittsburg Emergency Operations Plan* in December 2018.[33] The plan provides a basis for future responses to a wide range of hazards and vulnerabilities. The plan outlines the general authority, organization, and response actions for City of Pittsburg staff when disasters occur. Implementation of the proposed project would not result in any substantial modifications to the existing roadway system already analyzed in the Emergency Operations Plan. Thus, the proposed project would not physically interfere with the Emergency Operations Plan. Additionally, the project would include lanes and drive aisles that would range from 21- to 56-feet wide, which would accommodate emergency vehicle access to the site. Because the project would not involve physical changes that would substantially alter the existing roadway network in a manner that would affect circulation, the proposed project would not interfere with emergency response or evacuation. Therefore, the proposed project would not interfere with an emergency evacuation or response plan, and a ***less-than-significant*** impact would occur.

g. The proposed project site is located in an area with residential development to the west and south, and industrial development to the east. The predominantly urbanized nature of the surrounding area presents a relatively low potential for wildfire. According to the California Department of Forestry and Fire Protection (CAL FIRE) Fire and Resource Assessment Program, the project site is not located within a Very High Fire Hazard Severity Zone.[34] It should be noted, however, that CAL FIRE Fire Hazard Severity Zones Maps are updated every 30 to 50 years. As such, because the project site was mapped in 2009, the potential exists for the Fire Hazard Severity Zone determination to be outdated. In addition, according to the City's General Plan Update Existing Conditions Report, the project site is located in a "High Threat" area for wildfires.[35] However, the proposed project would remove the ruderal weeds and grasses from the site to be replaced with structures.

---

33 City of Pittsburg. *Emergency Operations Plan.* December 2018.

34 California Department of Forestry and Fire Protection. *Contra Costa County, Very High Fire Hazard Severity Zones in LRA*. January 7, 2009.

35 City of Pittsburg. *Existing Conditions Report, City of Pittsburg General Plan Update* [Figure 4.4-2]. November 2019.

Thus, the project would not exacerbate the existing level of risk and, rather, would reduce wildland fire risk by removing on-site vegetative fuel. Development of the proposed project would include the installation of fire suppression systems (e.g., fire hydrants, fire sprinklers, smoke detectors) and would be designed in accordance with the latest requirements of the California Fire Code. Therefore, the proposed project would not expose people or structures to the risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands, and a ***less-than-significant*** impact would occur.

X. HYDROLOGY AND WATER QUALITY. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	✖	☐	☐
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	✖	☐
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i. Result in substantial erosion or siltation on- or off-site;	☐	✖	☐	☐
ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	✖	☐	☐
iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	✖	☐	☐
iv. Impede or redirect flood flows?	☐	☐	✖	☐
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	✖	☐
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	✖	☐

Discussion

a, ci-ciii. The following discussion provides a summary of the proposed project's potential to violate water quality standards/waste discharge requirement, alter the drainage pattern of the site resulting in erosion or siltation, increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site, contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or otherwise degrade water quality during construction and operation.

Construction

During the early stages of construction activities, topsoil would be exposed due to grading and excavation of the site. After grading and prior to overlaying the ground surface with impervious surfaces and structures, the potential exists for wind and water erosion to discharge sediment and/or urban pollutants into stormwater runoff, which could adversely affect water quality downstream.

The State Water Resources Control Board (SWRCB) regulates stormwater discharges associated with construction activities where clearing, grading, or excavation results in land disturbance of one or more acres. The City's National Pollutant Discharge Elimination

System (NPDES) permit requires applicants to show proof of coverage under the State's General Construction Permit prior to receipt of any construction permits. The State's General Construction Permit requires a Storm Water Pollution Prevention Plan (SWPPP) to be prepared for the site. A SWPPP describes Best Management Practices (BMPs) to control or minimize pollutants from entering stormwater and must address both grading/erosion impacts and non-point source pollution impacts of the development project. Because the proposed project would disturb greater than one acre of land, the proposed project would be subject to the requirements of the State's General Construction Permit and, with implementation of the required SWPPP and BMPs included therein, the proposed project would not result in a violation of water quality standards and/or degradation of water quality. Furthermore, the proposed project would be required to submit an erosion and sediment control plan with submittal of the grading permit application to ensure water quality is not degraded. The plan would include erosion and sediment control measures that would be implemented during grading and would be approved by the City Engineer.

Operation

Following completion of project buildout, the site would be largely covered with impervious surfaces and topsoil would no longer be exposed. As such, the potential for impacts to water quality due to topsoil erosion and siltation would be reduced. However, impervious surfaces on the project site could contribute incrementally to the degradation of downstream water quality through the release of pollutants during storm events. Typical urban pollutants that would likely be associated with the proposed project include sediment, pesticides, oil and grease, metals, and trash.

The City of Pittsburg has adopted the County C.3 Stormwater Standards, which require new development and redevelopment projects that create or alter 10,000 sf or more of impervious area to contain and treat all stormwater runoff from the project site. The proposed project would result in a total development envelope of 742,262 sf. Thus, the project would be subject to the requirements of the SWRCB and the RWQCB, including the C.3 Standards, which are included in the City's NPDES General Permit. In addition, the proposed project would adhere to Chapter 13.28 of the Municipal Code, which establishes standards for stormwater management and discharge.[36] Prior to issuance of a building permit, the applicant would submit a stormwater control plan that meets the criteria in the most recent version of the Contra Costa Clean Water Program Section C.3 Guidebook. Compliance with such requirements would ensure that impacts to water quality standards or waste discharge requirements would not occur during operation of the proposed project.

The on-site storm drain system would collect the stormwater from the lots, streets and open space areas and convey it to bioretention areas located adjacent to the western borders of the berm areas, where it would be treated prior to being discharged into the existing 16-inch water line located in Harbor Street and East 3rd Street.

Based on the above, the proposed project would be required to comply with the requirements of the SWRCB and RWQCB, and would meet C.3 Standards. Therefore, during operation, the proposed project would comply with all relevant water quality standards and waste discharge requirement, and would not degrade water quality.

[36] City of Pittsburg. *Pittsburg Municipal Code* [Section 13.28.050]. January 22, 2019.

Development of the proposed project would result in an increase in impervious surfaces on the project site, which would alter the existing drainage pattern of the site. However, as discussed above, the project is required to comply with the City's standards for runoff and stormwater control. Consistent with Chapter 13.28 of the Municipal Code, the project would include appropriate site design measures to control the stormwater runoff from the project site.

Conclusion

Based on the above, the proposed project would be required to comply with all applicable regulations during construction and operation, would not involve uses associated with the generation or discharge of polluted water, and would be designed to adequately treat stormwater runoff from the site prior to discharge. However, without the approval of a SWPPP and through the disturbance of the on-site soils during construction activities could result in a ***potentially significant*** impact with regard to violation of water quality standards and degradation of water quality should adequate BMPs not be incorporated during construction and operations in accordance with SWRCB regulations.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above impact to a *less-than-significant* level.

X-1. *Prior to issuance of grading permits, the applicant shall prepare a Storm Water Pollution Prevention Plan (SWPPP). The developer shall file the Notice of Intent (NOI) and associated fee to the SWRCB. The SWPPP shall serve as the framework for identification, assignment, and implementation of BMPs. The SWPPP shall be submitted to the Director of Public Works/City Engineer for review and approval and shall remain on the project site during all phases of construction. Following implementation of the SWPPP, the contractor shall subsequently demonstrate the SWPPP's effectiveness and provide for necessary and appropriate revisions, modifications, and improvements to reduce pollutants in stormwater discharges to the maximum extent practicable. The contractor shall implement BMPs to reduce pollutants in stormwater discharges to the maximum extent practicable.*

X-2. *In addition to a SWPPP, prior to issuance of grading permits, the project applicant shall create an interim and final erosion and sediment control plan which shall include a delineation and brief description of the measures to be undertaken to retain sediment on the site, including but not limited to, the design and specifications of berms and sediment detention basins and a schedule for maintenance. The plan shall also contain a delineation and brief description of the surface runoff and erosion control measures, including but not limited to, types and method of applying mulches, and designs and specifications for diverters, dikes, and drains. The plan shall be reviewed and approved by the City Community and Economic Development Department.*

X-3. *The project applicant shall submit a complete Stormwater Control Plan and Report compliant with the requirements set forth in the City's most current NPDES permit. The C.3 treatment facilities shall be adequately sized to treat the stormwater runoff from the associated drainage management areas. The grading and/or building plans shall include drawings and*

specifications necessary to implement all measures in the approved Stormwater Control Plan. Design features shall incorporate low impact development design standards as outlined in the most current edition of the Contra Costa Clean Water Program's C.3 Guidebook. All plans shall be reviewed and approved by the City Community and Economic Development Department.

b,e. Water supplies for the proposed project would be provided by the City of Pittsburg, which purchases raw water from the CCWD and extracts groundwater. According to the CCWD 2020 Urban Water Management Plan (UWMP),[37] the CCWD is primarily dependent on surface water supplies. Therefore, water demand associated with the proposed project would primarily be met by surface water, and the project would not substantially decrease groundwater supplies.

The City overlies the Pittsburg Plain Groundwater Basin and extracts groundwater using two wells. Approximately 1,353 to 1,480 acre-feet per year of the City's water supply consists of groundwater.[38] The Pittsburg Plain Groundwater Basin is characterized by the California Department of Water Resources as a basin of very low priority, and is not classified as being critically overdrafted.[39] Therefore, the preparation of a groundwater management plan is not required for the Pittsburg Plain Groundwater Basin.

Given that the proposed project would be consistent with the site's current General Plan land use and zoning designations, the project would not result in increased use of water supplies beyond what has been anticipated by the City and accounted for in the City's UWMP. In addition, even if the proposed project could increase water usage beyond what was anticipated, the project would not substantially deplete groundwater supplies, as the City does not primarily use groundwater as a supply source.

The proposed project would disturb approximately 17.04 acres of the 20.5-acre site, and the remainder of the site would consist of existing pervious surfaces, including the berms. Additionally, stormwater runoff from the site would be routed to two new bioretention facilities, located to the north and south of the eastern driveway entrance. The northern basin would extend from East 3rd Street along the berm area to the driveway entrance, while the other basin would extend south along the berm area from the driveway entrance to the southernmost residential unit. Consequently, the pervious areas of the site would allow for stormwater infiltration into underlying soils, and the proposed project would not result in substantial interference with groundwater recharge in the area.

Therefore, the proposed project would not substantially decrease groundwater supplies through excess water usage nor would the project interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management. In addition, the project would not conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan. Thus, a ***less-than-significant*** impact would occur.

civ. According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRM) for the project site, the project site is located within an Area of Minimal Flood

[37] Contra Costa Water District. *2020 Urban Water Management Plan*. June 2021.
[38] City of Pittsburg. *City of Pittsburg 2020 Urban Water Management Plan Final Draft*. July 2021.
[39] California Department of Water Resources. SGMA Data Viewer. Available at: https://sgma.water.ca.gov/webgis/?appid=SGMADataViewer#boundaries. Accessed June 2022.

Hazard (Zone X).[40] Thus, because the project site is not located in a special flood hazard zone, the project would not result in substantial adverse effects as it relates to impeding or redirecting floods. As such, the proposed project would have a ***less-than-significant*** impact regarding alteration of the existing drainage pattern of a site or area which would impede or redirect flood flows.

d. As discussed under question 'civ' above, the project site is not located in a special flood hazard zone. Tsunamis are defined as sea waves created by undersea fault movement, whereas a seiche is a long-wavelength, large-scale wave action set up in a closed body of water such as a lake or reservoir. While the project area is located in proximity to a coastline, the potential for the project to be affected by flooding risks associated with tsunamis is very low.[41] Seiches do not pose a risk to the proposed project, as the project site is not located adjacent to a large closed body of water. Based on the above, the proposed project would not pose a risk related to the release of pollutants from project inundation due to flooding, tsunami, or seiche, and a ***less-than-significant*** impact would occur.

[40] Federal Emergency Management Agency. *Flood Insurance Maps.* Available at: https://msc.fema.gov/portal/search?AddressQuery=420%20East%203rd%20Street%2C%20Pittsburg%2C%20CA#searchresultsanchor. Accessed February 2022.

[41] California Department of Conservation. *California Tsunami Maps and Data.* Available at: https://www.conservation.ca.gov/cgs/tsunami/maps. Accessed February 3, 2022.

XI. LAND USE AND PLANNING. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Physically divide an established community?	☐	☐	✖	☐
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	✖	☐	☐	☐

Discussion

a. A project risks dividing an established community if the project would introduce infrastructure or alter land use so as to change the land use conditions in the surrounding community, or isolate an existing land use. Currently, the project site is vacant and located near existing residential development, industrial uses, and vacant land. Given that the project site is currently vacant, the proposed project would not displace any residents or result in dividing an established community. Therefore, a ***less-than-significant*** impact would occur.

b. The project site is currently designated Downtown Commercial and Downtown Medium Density Residential in the City's General Plan and is zoned as RMD-O and CP. The project requires a Rezone to decrease the minimum lot size, as required by City Council Ordinance 07-1284, from 2,200 sf to 1,980 sf while keeping the average lot size at 2,200 sf.

Given that the project would require a Rezone, the project would not be entirely consistent with land use policies, plans, and regulations for the current designation. Although the project would not be consistent with the current land use and zoning designation, the project would be required to comply with all applicable development standards established by Title 18 of the City's Municipal Code. The development standards include maximum lot coverage, maximum building heights, and building setback requirements. In addition, following approval of the Rezone, the project would be consistent with all land use policies, plans, and regulations for the applicable zoning designation.

As discussed throughout this Initial Study, the proposed project would not conflict with City policies and regulations adopted for the purpose of avoiding or mitigating an environmental effect, including, but not limited to, the standards set forth in Section 18.82.040, Noise; Chapter 18, Article XIX Tree Preservation and Protection; and Chapter 15.88, Grading, Erosion, and Sediment Control, of the City's Municipal Code. For all CEQA issue areas, with the exception of GHG emissions and transportation, this Initial Study includes mitigation to reduce identified environmental impacts to less-than-significant levels. However, the proposed project could conflict with policies that were adopted for the purpose of avoiding or mitigation an environment effect related to GHG emissions and transportation. Therefore, the proposed project could conflict with a land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental impact, and a ***potentially significant*** impact could occur.

Further analysis of the above impact will be included in the Greenhouse Gas Emissions and Transportation chapters of the Harbor View Project EIR.

XII. MINERAL RESOURCES. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	☐	✖
b. Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	☐	✖

Discussion

a,b. Per the City's General Plan, the City contains one of the two places in the San Francisco Bay Area where coal was mined.[42] The discovery of coal in the 1850s led to construction of Black Diamond Mines. However, due to competition from other energy sources, the mine closed in 1949. Currently, the City does not contain any significant mineral deposits or active mining operations.[43] In addition, mining is not an allowed use in the proposed RMD-O or CP District. Thus, the proposed project would not result in the loss of availability of a known mineral resource or a locally important mineral resource recovery site, and ***no impact*** would occur.

[42] City of Pittsburg. *General Plan Pittsburg 2020: A Vision for the 21st Century* [pg. 9-2]. November 16, 2001.
[43] City of Pittsburg. *General Plan Pittsburg 2020: A Vision for the 21st Century* [pg. 9-4]. November 16, 2001.

XIII. NOISE. *Would the project result in:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	✖	☐
b. Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	✖	☐
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	✖

Discussion

a. The following discussion is based on an Environmental Noise Assessment prepared for the proposed project by Saxelby Acoustics (Appendix F).[44] The following sections present information regarding existing sensitive noise receptors in proximity to the project site, the existing noise environment, and the potential for the proposed project to result in impacts during project construction and operation. The following terms are referenced in the sections below:

- Decibel (dB): A unit of sound energy intensity. An A-weighted decibel (dBA) is a decibel corrected for the variation in frequency response to the typical human ear at commonly encountered noise levels. All references to dB in this discussion will be A-weighted unless noted otherwise.
- Maximum Sound Level (L_{max}): The maximum sound level over a given time-period.
- Day-Night Average Sound Level (DNL or L_{dn}): The average noise over a 24-hour period.
- Equivalent Sound Level (L_{eq}): The average sound level over a period of time.

Significance Criteria

The City of Pittsburg has not established a threshold for significant increases in traffic noise. However, the Federal Interagency Committee on Noise (FICON) has developed guidance for determining increases in traffic noise. Therefore, increases in the ambient noise environment due to the proposed project were evaluated using the criteria developed by FICON. Although the FICON guidelines were originally developed for aircraft noise impacts, the noise increase thresholds are generally considered appropriate for evaluation of noise increases at noise sensitive uses such as single-family residences. The significance criteria are provided in Table 4.

Section 18.82.040 of the City's Municipal Code limits the generation of loud noises on construction sites adjacent to existing development to normal business hours between 8:00 AM and 5:00 PM.

[44] Saxelby Acoustics. *Environmental Noise Assessment Harbor View Residential*. June 8, 2022.

Table 4
Significance of Changes in Noise Exposure (FICON)

Ambient Noise Level Without Project, L_{dn}	Increase Required for Significant Impact
<60 dB	+5.0 dB or more
60-65 dB	+3.0 dB or more
>65 dB	+1.5 dB or more

Source: Saxelby Acoustics, 2021.

In addition, as shown in Figure 5, exterior use areas associated with new single-family residences are considered conditionally acceptable if noise levels range from 55 to 70 dBA DNL, normally unacceptable if noise levels range from 70 to 75 dBA DNL, and clearly unacceptable if noise levels exceed 75 dBA DNL.

Sensitive Noise Receptors

Some land uses are considered more sensitive to noise than others, and, thus, are referred to as sensitive noise receptors. Land uses often associated with sensitive noise receptors generally include residences, schools, libraries, hospitals, and passive recreational areas. Noise sensitive land uses are typically given special attention in order to achieve protection from excessive noise. In the vicinity of the project site, the nearest existing noise sensitive land uses include the single-family residences located approximately 50 feet to the west of the project site.

Existing Noise Environment

The existing noise environment in the project area is primarily defined by traffic on East 3rd Street, Harbor Street, and East 8th Street. To quantify the existing ambient noise environment in the project vicinity, Saxelby Acoustics conducted a continuous noise level measurement at three locations on the project site. Noise measurement locations are shown on Figure 6.

Table 5
Summary of Existing Background Noise Measurement Data

			Daytime			Nighttime		
Site	Date	L_{dn}/CNEL	L_{eq}	L_{50}	L_{max}	L_{eq}	L_{50}	L_{max}
LT-1	10/20/21	67	64	53	83	59	51	78
LT-2	10/20/21	68	65	55	86	61	53	84

- All values shown in dBA
- Daytime hours: 7:00 AM to 10:00 PM.
- Nighttime Hours: 10:00 PM to 7:00 AM.

Source: Saxelby Acoustics, 2021.

Construction Noise

During construction of the proposed project, noise from construction activities would temporarily add to the noise environment in the project vicinity. According to Section 18.82.040 of the City's Municipal Code, no construction activity shall exceed 65 dB outside of the normal business hours stated in the Significance Criteria discussion above.

Figure 5
Land Use Compatibility Chart (Pittsburg General Plan Table 12-3)

INTERPRETATION

Normally Acceptable:
Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special noise insulation requirements

Conditionally Acceptable:
New construction or development should be undertaken only after a detailed analysis of the noise reduction requirements is made and needed noise insulation features included in the design.

Normally Unacceptable:
New construction or development should generally be discouraged. If new construction or development does proceed, a detailed analysis of the noise reduction requirements must be made and needed noise insulation features included in the design.

Clearly Unacceptable:
New construction or development clearly should not be undertaken.

Source: Office of Planning and Research, State of California General Plan Guidelines, Appendix A: Guidelines for the Preparation and Content of the Noise Element of the General Plan, 1998.

*Because hospitals are often designed and constructed with high noise insulation properties, it is possible for them to be satisfactorily located in noisier areas.

Figure 6
Noise Measurement Sites

As indicated in Table 6 below, activities involved in construction would generate maximum noise levels ranging from 76 to 90 dBA L_{max} at a distance of 50 feet. Heavy equipment would be used for grading, excavation, paving, and building construction, which would increase ambient noise levels when in use.

Table 6
Construction Equipment Noise

Type of Equipment	Maximum Level, dBA at 50 feet
Auger Drill Rig	84
Backhoe	78
Compactor	83
Compressor (air)	78
Concrete Saw	90
Dozer	82
Dump Truck	76
Excavator	81
Generator	81
Jackhammer	89
Pneumatic Tools	85
Source: Saxelby Acoustics, 2021.	

Noise levels would vary depending on the type of equipment used, how the equipment is operated, and how well the equipment is maintained. In addition, noise exposure at any single point outside the project site would vary depending on the proximity of construction activities to that point. Standard construction equipment, such as graders, backhoes, loaders, and trucks, would be used on-site.

As distance increases between equipment, or increases separation of areas with simultaneous construction activity, dispersion and distance attenuation reduce the effects of combining separate noise sources. Most of the building construction would occur at distances of 50 feet or greater from the nearest residences. Thus, noise levels experienced at the nearest residences would be reduced from the levels depicted in Table 6.

Construction activities would be temporary in nature and would be required to occur during normal daytime working hours. The City of Pittsburg General Plan Policy 12-P-9 limits generation of loud noises on construction sites adjacent to existing developments to normal business hours between 8:00 AM and 5:00 PM. Noise would also be generated during the construction phase by increased truck traffic on area roadways. A project-generated noise source would be truck traffic associated with transport of heavy materials and equipment to and from the construction site. Although construction activities are temporary in nature and would only occur during normal daytime working hours, construction-related noise could result in sleep interference at existing noise-sensitive land uses in the vicinity of the construction if construction activities were to occur outside the normal daytime hours. However, given the project's compliance with Section 18.82.040 of the City's Municipal Code, which restricts construction activities to daytime hours, impacts resulting from noise levels temporarily exceeding the threshold of significance due to construction would be less than significant.

Operational Noise

Given the residential nature of the proposed project, the primary source of operation noise is from traffic. To assess noise impacts due to project-related traffic increases on the local roadway network, traffic noise levels are predicted at sensitive receptors for existing and future, project and no-project conditions. Existing, Near-Term, and Cumulative noise levels due to traffic were calculated using the Federal Highway Administration Highway Traffic Noise Prediction Model (FHWA RD-77-108). Traffic noise levels were predicted at the sensitive receptors located at the closest typical setback distance along each project-area roadway segment. The FHWA model was developed to predict hourly L_{eq} values for free-flowing traffic conditions. To predict traffic noise levels in terms of L_{dn}, it is necessary to adjust the input volume to account for the day/night distribution of traffic.

As show in Table 7, the maximum increase in traffic noise resulting from the proposed project is predicted to be 1.8 dBA along Harbor Street near East 8th Street. The existing traffic noise level for the segment is 56.8 dBA L_{dn}. Based upon the FICON criteria, where traffic noise levels are less than 60 dBA L_{dn} at the outdoor activity areas of noise-sensitive uses, a traffic noise level increase of less than 5 dBA L_{dn} is not considered significant. Therefore, the 1.8 dBA increase along Harbor Street would be considered less than significant.

Where existing traffic noise levels are greater than 65 dBA L_{dn} at the outdoor activity areas of noise-sensitive uses, a 1.5 dBA L_{dn} increase in roadway noise levels would be considered significant. All other evaluated roadway segments are predicted to experience a less than 1.5 dBA L_{dn} increase in noise levels due to project-generated traffic. Therefore, impacts resulting from increased traffic noise would be considered less than significant.

Conclusion

Considering the above, the proposed project would not generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance. Therefore, impacts resulting from noise levels temporarily or permanently exceeding thresholds of significance would be ***less than significant***.

b. Similar to noise, vibration involves a source, a transmission path, and a receiver. However, noise is generally considered to be pressure waves transmitted through air, whereas vibration usually consists of the excitation of a structure or surface. As with noise, vibration consists of an amplitude and frequency. A person's perception to the vibration depends on their individual sensitivity to vibration, as well as the amplitude and frequency of the source and the response of the system which is vibrating.

Vibration is measured in terms of acceleration, velocity, or displacement. A common practice is to monitor vibration in terms of peak particle velocities (PPV) in inches per second (in/sec). Standards pertaining to perception as well as damage to structures have been developed for vibration levels defined in terms of PPV.

Human and structural response to different vibration levels is influenced by a number of factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. Table 8, which was developed by Caltrans, shows the vibration levels that would normally be required to result in damage to structures.

Table 7
Predicted Traffic Noise Level and Project-Related Traffic Noise Level Increases

Roadway	Segment	Existing			Near Term			Cumulative		
		No Project	Plus Project	Change	No Project	Plus Project	Change	No Project	Plus Project	Change

Table 8
Effects of Vibration on People and Buildings

PPV		Human Reaction	Effect on Buildings
in/sec	mm/sec		
0.15 to 0.30	0.006 to 0.019	Threshold of perception; possibility of intrusion	Vibrations unlikely to cause damage of any type
2.0	0.08	Vibrations readily perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
2.5	0.10	Level at which continuous vibrations begin to annoy people	Virtually no risk of "architectural" damage to normal buildings
5.0	0.20	Vibrations annoying to people in buildings (this agrees with the levels established for people standing on bridges and subjected to relative short periods of vibrations)	Threshold at which there is a risk of "architectural" damage to normal dwelling - houses with plastered walls and ceilings. Special types of finish such as lining of walls, flexible ceiling treatment, etc., would minimize "architectural" damage
10 to 15	0.4 to 0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause "architectural" damage and possibly minor structural damage

Source: Caltrans. Transportation Related Earthborne Vibrations. TAV-02-01-R9601. February 20, 2002.

As shown in the table, the threshold for architectural damage to structures is 0.20 in/sec PPV and continuous vibrations of 0.10 in/sec PPV, or greater, would likely cause annoyance to sensitive receptors.

The proposed project would only cause elevated vibration levels during construction, as the proposed project would not involve any uses or operations that would generate substantial groundborne vibration.

The primary vibration-generating activities associated with the proposed project would occur during grading, placement of utilities, and construction of foundations. Table 9 shows the typical vibration levels produced by construction equipment at various distances. The most substantial source of groundborne vibrations associated with project construction would be the use of vibratory compactors. The Table 9 data indicate that construction vibration levels anticipated for the project are less than the 0.2 in/sec threshold at distances of 26 feet. Sensitive receptors which could be impacted by construction related vibrations, especially vibratory compactors/rollers, are located approximately 26 feet, or further, from typical construction activities. At these distances, construction vibrations would not exceed acceptable levels. Additionally, construction activities would be temporary in nature and would only occur during normal daytime working hours. Therefore, the proposed project would not result in generation of excessive groundborne vibration or groundborne noise levels and a ***less-than-significant*** impact could occur.

Table 9
Vibration Levels for Various Construction Equipment

Type of Equipment	PPV at 25 feet (in/sec)	PPV at 50 feet (in/sec)	PPV at 100 feet (in/sec)
Large Bulldozer	0.089	0.031	0.011
Loaded Trucks	0.076	0.027	0.010
Small Bulldozer	0.003	0.001	0.000
Auger/drill Rigs	0.089	0.031	0.011
Jackhammer	0.035	0.012	0.004
Vibratory Hammer	0.070	0.025	0.009
Vibratory Compactor/roller	0.210	0.074	0.026

Source: Saxelby Acoustics, 2021.

c. The nearest airport to the proposed project site is the Buchanan Field Airport, located approximately 12 miles southwest of the site. The site is not included in an airport land use plan. Given that the project site is not located within two miles of a public airport or public use airport, the proposed project would not expose people residing or working in the project area to excessive noise levels associated with airports. Thus, ***no impact*** would occur.

XIV. POPULATION AND HOUSING. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (e.g., through projects in an undeveloped area or extension of major infrastructure)?	☐	☐	✖	☐
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	☐	✖

Discussion

a. The proposed project would include the development of 227 residential units. The average household size for the City in 2021 was 3.33 persons per household.[45] Thus, the proposed project would accommodate an estimated 756 additional residents (3.33 persons/unit X 227 dwelling units) in the City. Considering that the total population of the City was estimated to be approximately 76,416 in April 2020,[46] a potential increase of 756 residents would be considered negligible. Furthermore, under the existing land use designations, which allows up to 17 du/ac in the majority of the site, the project site could be built out with up to 341 residential units, which would accommodate approximately 1,138 residents. Therefore, even though the project includes a Rezone, the proposed project would not generate population growth in excess of what is already allowed to occur on the project site.

Furthermore, population growth itself does not constitute an environmental impact; rather, increased demands on the physical environment resulting from increases in population are considered environmental impacts. For example, increased demands on City services could require system upgrades, the construction of which could have environmental impacts. Physical environmental effects associated with development of the proposed project are evaluated throughout this Initial Study. As discussed in Section XV, Public Services, of this Initial Study, the project site is located in an urban area and is surrounded by existing development. Therefore, construction of new or expanded public services facilities would not be necessary to serve the project. Per Section XIX, Utilities and Service Systems, the project would not include construction of substantial new off-site utility infrastructure or expansion of existing utilities.

In addition, the proposed project would be developed in an urban area, surrounded by existing residential and industrial uses. The project would not involve extension of major infrastructure. Due to the fact that the project site is already zoned for residential use, the project would not indirectly result in substantial unplanned population growth in the project area.

While the project would result in population growth, such growth could be accommodated by existing public services and infrastructure and would not result in significant adverse environmental effects. Thus, a ***less-than-significant*** impact would occur related to

[45] United States Census Bureau. *QuickFacts Pittsburg City, California.* Available at: https://www.census.gov/quickfacts/pittsburgcitycalifornia. Accessed February 4, 2022.
[46] *Ibid*.

inducing substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (e.g., through projects in an undeveloped area or extension of major infrastructure).

b. The project site is currently vacant and does not include existing housing or other habitable structures. As such, implementation of the proposed project would not displace a substantial number of existing housing or people and would not necessitate the construction of replacement housing elsewhere. Therefore, ***no impact*** would occur.

XV. PUBLIC SERVICES. *Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Fire protection?	☐	☐	✖	☐
b. Police protection?	☐	☐	✖	☐
c. Schools?	☐	☐	✖	☐
d. Parks?	☐	☐	✖	☐
e. Other Public Facilities?	☐	☐	✖	☐

Discussion

a-c, e. The Contra Costa County Fire Protection District (CCCFPD) provides fire protection services to the City. The CCCFPD operates out of 26 fire stations located throughout the jurisdictional area.[47] The project site is located approximately 1.8 mile from the nearest fire station, located at 1903 Railroad Avenue. The proposed project would adhere to Chapter 15.20, the Fire Code, of the City's Municipal Code, which requires the proposed project to install a fire sprinkler system and adhere to all fire protection codes established by the CCCFPD. The foregoing features would reduce the risk of fire at the project site, and, thus, reduce potential for the project to increase demand for fire protection services. In addition, as prescribed in Section 17.32.090 of the City of Pittsburg Municipal Code, the proposed project would be required to dedicate land, pay fees, or both, for fire stations the project might necessitate. Payment of such impact fees would help avoid impacts related to increase in material or staffing needs resulting from buildout of the proposed project.

The proposed project would be serviced by the Pittsburg Police Department, located at 65 Civic Avenue. The General Plan includes a goal to maintain a ratio of 1.8 sworn officers per 1,000 residents.[48] As of 2019, the Pittsburg Police Department employed 85 sworn officers, meaning the City has a ratio of approximately 1.11 sworn officers per 1,000 residents.[49] Because the proposed project would result in a population increase of approximately 746 residents, the proposed project has the potential to reduce the City's existing ratio to 1.10 sworn officers per 1,000 residents. However, the change from 1.11 to 1.10 sworn officers per 1,000 residents is not considered substantial, and the proposed project would not warrant the construction of new police facilities. Furthermore, as stated above, compliance with Section 17.32.090 of the City's Code would require the proposed project to dedicate land, pay fees, or both, for public facilities, such as police stations, that the project may necessitate. Payment of such impact fees would help avoid impacts related to increase in material or staffing needs resulting from buildout of the proposed project.

The project site is located within the Pittsburg Unified School District. Development of the proposed project would generate additional students in the area. General Plan Policy 8-

[47] Contra Costa County Fire Protection District. *Station Address.* Available at: https://www.cccfpd.org/station-address. Accessed February 2022.
[48] City of Pittsburg. *General Plan Pittsburg 2020: A Vision for the 21st Century* [pg. 10-23]. November 16, 2001.
[49] Pittsburg Police Department. *Annual Report – Fiscal Year 2018-2019.* December 2019.

P-41 states "As part of development review for large residential subdivisions (greater than 100 units), evaluate the need for new school sites. If needed, encourage subdivision design to accommodate school facilities […]."[50] Although the proposed project would not include the development of school facilities, the City collects development impact fees to help pay for public services that include public schools. Thus, any increased demand for educational facilities resulting from the proposed project would be mitigated through payment of such fees. In addition, Proposition 1A/SB 50 prohibits local agencies from using the inadequacy of school facilities as a basis for denying or conditioning approvals of any "legislative or adjudicative act involving the planning, use, or development of real property." (Government Code 65996(b).) Satisfaction of the Proposition 1A/SB 50 statutory requirements by a developer is deemed to be "full and complete mitigation." Therefore, according to SB 50, the payment of the necessary school impact fees for the project would be full and satisfactory CEQA mitigation.

The City is served by the Contra Costa County Library, the Pittsburg branch of which is located at 80 Power Avenue, 1.5 miles southwest of the project site. Implementation of the proposed project would create an increased demand for public facilities, such as libraries. However, the small increase in demand resulting from buildout of the proposed project could be accommodated by the existing facilities.

Based on the above, the proposed project would have a ***less-than-significant*** impact related to the need for new or physically altered fire protection, police protection, school facilities, or other public facilities, the construction of which could cause significant environmental impacts.

d. Parks and recreation services within the City are provided by the City's Recreation Department. The Recreation Department plans and designs new parks; owns, operates, and maintains parks and community centers; manages rentals of community centers, picnic sites, and sports fields; and offers recreation programs. Further discussion of impacts upon parks and recreation services can be found in Section XVI, Recreation, of this Initial Study. As described therein, a ***less-than-significant*** impact would occur.

[50] City of Pittsburg. *General Plan Pittsburg 2020: A Vision for the 21st Century* [pg. 8-27]. November 16, 2001.

XVI. RECREATION. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	✖	☐
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	✖	☐

Discussion

a,b. The nearest park to the project site is Marina Walk Park, approximately 2,200 feet to the west. Marina Walk Park offers 1.7 acre of land and features picnic tables, a playground, and a half basketball court. The General Plan establishes a standard of five acres of community or neighborhood recreational or park facility per 1,000 residents to ensure adequate recreational open space for the enjoyment of the community. As such, the proposed project would be required to provide at least 3.4 acres of park land (756 residents x [1000/5]). The project itself would include on-site recreational amenities, in the form of a small park located near the southeastern driveway. Preliminarily, the determination can be made that the project would not provide sufficient park space to meet the City's requirements. Because the proposed project would not include park space sufficient to meet the total amount of park facilities required by the Municipal Code, the proposed project would be subject to fees in lieu of land dedication, consistent with the requirements set forth in Section 17.32.020 of the Municipal Code.

Revenues generated through impact fees on new development and in-lieu fees would pay for any new park and recreation facilities deemed necessary by the City. Park impact fees imposed by the City would generate revenue to acquire necessary land to develop new parks or rehabilitate existing neighborhood parks and recreation facilities reasonably related to serve the subdivision. Based on the above, a ***less-than-significant*** impact would occur with regard to recreational resources.

XVII.TRANSPORTATION. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	✖	☐	☐	☐
b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	✖	☐	☐	☐
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	✖	☐	☐	☐
d. Result in inadequate emergency access?	✖	☐	☐	☐

Discussion

a. The proposed project would include subdivision of the project site and subsequent development of 227 residential units, which would result in an increase in vehicle traffic on the street system surrounding the project area. In addition, the project has the potential to generate new bicycle and pedestrian traffic in the area. As noted below, determination of traffic impacts based solely on vehicle level of service (LOS) is no longer allowable based on CEQA Guidelines Section 15064.3. However, the potential remains for the proposed project to result in conflicts with General Plan policies related to transportation facilities, including transit, roadway, bicycle, and pedestrian facilities. Therefore, a ***potentially significant*** impact could occur.

Further analysis of the above impact will be discussed in the Transportation chapter of the Harbor View Project EIR.

b. Section 15064.3 of the CEQA Guidelines provides specific considerations for evaluating a project's transportation impacts. Pursuant to Section 15064.3, analysis of VMT attributable to a project is the most appropriate measure of transportation impacts. The City of Pittsburg has not yet established any standards or thresholds regarding VMT. However, pursuant to section 15064.3(3) of the CEQA Guidelines, a lead agency may analyze a project's VMT qualitatively based on the availability of transit, proximity to destinations, etc. While changes to driving conditions that increase intersection delay are an important consideration for traffic operations and management, the method of analysis does not fully describe environmental effects associated with fuel consumption, emissions, and public health. Section 15064.3(3) changes the focus of transportation impact analysis in CEQA from measuring impact to drivers to measuring the impact of driving.

Given that the proposed project would result in increased vehicle trip generation on local roadways, further analysis of VMT attributable to the project is required to ensure that the project would not conflict with Section 15064.3(b) of the CEQA Guidelines. Thus, a ***potentially significant*** impact could occur.

Further analysis of the above impact will be included in the Transportation chapter of the Harbor View Project EIR.

c,d. Site access would be provided by one new 27-foot driveway located off of East 3rd Street from the north, and one new approximately 26-foot driveway located off of Harbor Street

from the east. All internal lanes and drive aisles would meet the minimum width that can accommodate an emergency vehicle. Development of the proposed project would also include new curb, gutter, sidewalk, and landscaping along Harbor Street and East 3rd Street.

The City of Pittsburg approved an Emergency Operations Plan (EOP) in December 2018 designed to assist the City in responses to disasters, emergency incidents, and pre-planned events. The EOP provides an overview of the City's organization, policies, and approach to all phases of emergency preparedness. While the proposed access and circulation would be adequate for emergency services, the increase in development intensity could cause an increase in traffic related hazards or affect emergency access in the project area. Without further evaluation, the proposed project could result in a ***potentially significant*** impact related to an increase in hazards from design features or incompatible uses, or inadequate emergency access to the project.

Further analysis of the above impact will be included in the Transportation chapter of the Harbor View Project EIR.

XVIII. TRIBAL CULTURAL RESOURCES. *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k).	☐	✖	☐	☐
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	✖	☐	☐

Discussion

a,b. As discussed in Section V, Cultural Resources, of this Initial Study, the project site is currently vacant and undeveloped. The project site does not contain any structures which would be considered a historical resource by the City or State standards. A search of the NAHC Sacred Lands File did not yield any information regarding the presence of Tribal Cultural Resources within the project site or the immediate area.[51] Furthermore, a search of the CHRIS by the NWIC did not identify any known cultural resources or Native American resources within the project site.[52]

In compliance with AB 52 (PRC Section 21080.3.1), a project notification letter was distributed to tribes which submitted request for consultation to the City. The letter was distributed on April 15, 2022 and requests to consult were not been received within the 30-day consultation period.

Based on the location and lack of identified cultural resources at the site, known Tribal Cultural Resources do not exist within the proposed project site. Nevertheless, the possibility exists that construction of the proposed project could result in a substantial adverse change in the significance of a Tribal Cultural Resource if previously unknown cultural resources are uncovered during grading or other ground-disturbing activities. Thus, a ***potentially significant*** impact to tribal cultural resources could occur.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above impact to a *less-than-significant* level.

XVIII-1. Implement Mitigation Measures V-1 and V-2.

[51] Native American Heritage Commission. *RE: 420 E. 3rd Street Project, Contra Costa County*. February 14, 2022.
[52] Northwest Information Center. *Records Search Results for the Proposed 420 East 3rd Street Project*. December 6, 2021.

XIX. UTILITIES AND SERVICE SYSTEMS. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	✖	☐
b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	✖	☐
c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	✖	☐
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	✖	☐
e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	✖	☐

Discussion

a-c. Brief discussions of water, sewer service, stormwater drainage, electrical, natural gas, and telecommunications that would serve the proposed project are included below.

Water

Water supply for the project site would be provided by the CCWD through the Central Valley Project (CVP). The CCWD obtains water from the Sacramento-San Joaquin Delta and provides treated and raw water to approximately 500,000 people in Contra Costa County. Other water supply sources used within the service area include the San Joaquin River, Mallard Slough, recycled water, a minor amount of groundwater, and water transfers. Additionally, the City supplements CCWD water supplies with two wells, which yield approximately 1,500-acre feet per year (afy). The City also operates its own water treatment plant and associated infrastructure facilities. According to the Pittsburg 2020 UWMP, the City's water use for 2020 was 9,232 afy, more than ten percent lower than projected water use from the 2015 UWMP.

Per CCWD's UWMP, water supplies will meet demand and will be able to accommodate buildout of the City under normal year, single year, and multiple-dry year demand scenarios.[53] Although the project would require a Rezone, because the proposed zoning designation would be substantively similar to the existing zoning designation, the proposed project has generally been anticipated within the UWMP. In addition, as detailed in Section XIV, Population and Housing, of this IS/MND, the proposed project would

[53] Contra Costa Water District. *2020 Urban Water Management* [pg. 7-8]. June 2021.

include fewer dwelling units than what is currently allowed to occur on the project site. As such, the proposed project would be expected to consume less water than was anticipated for the site in the UWMP. Due to the anticipated surplus, the CCWD's existing supplies would be adequate to meet increased demand for the proposed project. In addition, the project would comply with the Section 18.84.310 of the City's Municipal Code, which contains the City's water-efficient landscape standards. Compliance with Section 18.84.310 of the City's Municipal Code would ensure that landscaping water demand from project operations would be minimized.

Furthermore, landscaping included in the proposed project would be subject to the water efficiency landscape standards within Section 18.84.310 of the City's Municipal Code. Consequently, the proposed landscaping for the project site has been designed to reduce irrigation water demands from project operation. Consistent with Section 18.84.305 of the City's Municipal Code, landscaping plans for projects creating or rehabilitating 2,500 sf or more are subject to review and approval by the City to ensure that proposed landscaping complies with all water efficiency requirements imposed by Chapter 18.84.300 of the City's Municipal Code. Compliance with the code would minimize outdoor water use to the extent feasible.

Based on the above, the proposed project would not require or result in the relocation of new water infrastructure, or result in insufficient water supplies to serve the project or future development.

Sewer Service

Within the City of Pittsburg, sewer service is provided by Delta Diablo. The City maintains and owns the local sewage collection system. The Delta Diablo Wastewater Treatment Plant (WWTP) has the capacity to treat approximately 19.5 million gallons of sewage per day.[54]

Delta Diablo created a Sewer System Management Plan in 2009, and updated the Management Plan in 2018. The Management Plan accounts for the Delta Diablo service population to reach 269,000 by 2040 and provides a five-year Capital Improvement Program (CIP) which would include capacity enhancement projects for sewage systems in the County.[55]

Existing 15-inch and 18-inch sanitary sewer lines are located in Harbor Street and East 3rd Street respectively. The on-site sewer system would convey approximately 65 percent of the sewage generated from the site to the existing 18-inch sewer in East 3rd Street and approximately 35 percent of the sewer generated from the site to the existing 15-inch sewer line in Harbor Street. Wastewater would be directed through the City's existing conveyance infrastructure to the WWTP. Based on the generation rate from the City of Pittsburg General Plan of 220 gallons per day (gpd) per single-family dwelling unit (du), the proposed project is anticipated to generate approximately 49,940 gpd (227 units X 220 gpd/du = 49,940 gpd) of wastewater flows.[56] The addition of 49,940 gpd of influent to the WWTP would not exceed the permitted capacity of the WWTP of 19.5 million gallons per day (MGD).

---

54 Delta Diablo Sanitation District. *Transforming Wastewater to Resources*. Available at: https:// https://www.deltadiablo.org/about-us. Accessed February 4, 2022.
55 Delta Diablo Sanitation District. *Sewer System Management Plan*. October 10, 2018.
56 City of Pittsburg. *General Plan Pittsburg 2020: A Vision for the 21st Century* [pg. 11-9]. November 16, 2001.

Based on the above, the proposed project would not require or result in the relocation or construction of new wastewater treatment infrastructure, and the wastewater treatment provider for the site would have adequate capacity to serve the proposed project.

Stormwater Systems

As discussed above in Section X, Hydrology and Water Quality, of this Initial Study, the proposed project would include an on-site storm drain system that would collect the stormwater from the lots, streets and open space areas and convey it to bioretention areas located adjacent to the western borders of the berm areas, where it would be treated prior to being discharged into the existing 16-inch water line located in Harbor Street and East 3rd Street. In addition, stormwater would infiltrate on-site soils and percolate into the groundwater table in areas that are not overlain with impervious surfaces. Implementation of Mitigation Measures X-1 through X-3 would ensure that on-site drainage systems comply with the City's SWPPP and erosion and sediment control plan, as well as the County C.3 standards. Furthermore, although the site was previously anticipated to be developed for commercial use, those uses would still include paved areas for parking pathways, or structures. As such, because the site has been anticipated for development by the City's General Plan, impacts to stormwater systems resulting from development of the site have been generally analyzed in the City's General Plan EIR.

Therefore, the proposed stormwater conveyance network and bioretention areas would be adequate to capture and treat the on-site runoff generated by the proposed project, and the project would not require or result in the relocation or construction of new or expanded storm water drainage facilities, the construction or relocation of which could cause significant environmental effects.

Other Utilities

Electricity, natural gas, and telecommunications utilities would be provided by way of connections to existing infrastructure located within the immediate project vicinity. PG&E would provide electricity and natural gas services to the project site. The proposed project would not require major upgrades to, or extension of, existing infrastructure. As part of the proposed project, the existing overhead utility lines on East 3rd Street would need to be placed underground. Thus, impacts to electricity, natural gas, and telecommunications infrastructure would be less than significant.

Conclusion

Given that the proposed project would include standard utility improvements, the existing utility infrastructure would meet increased demand associated with the proposed project. Therefore, the proposed project would result in a ***less-than-significant*** impact related to the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects.

d,e. Solid waste, recyclable materials, and compostable material collection within the City of Pittsburg is provided by Mt. Diablo Resource Recovery. Solid waste from the City is ultimately disposed of at the Potrero Hills Landfill, located in Solano County. The landfill has a maximum permitted throughput of 4,330 tons per day. According to the California Department of Resources Recycling and Recovery (CalRecycle), the Potrero Hills Landfill

has a remaining capacity of 13,872,000 CY out of a total permitted capacity of 83,100,000 CY, or 17 percent of the landfill's remaining capacity.[57]

Pittsburg currently participates in a voluntary recycling program operated by Mt. Diablo Resource Recovery. Recyclables are picked up once per week along with regular waste, and then processed at a facility owned by Mt. Diablo Resource Recovery. The City has been aggressive in implementing the programs outlined in the City's Source Reduction and Recycling Element to reach the mandated 50 percent diversion goal set by the California Integrated Waste Management Act of 1989.

Due to the substantial amount of available capacity remaining at Potrero Hills Landfill, sufficient capacity would be available to accommodate the project's solid waste disposal needs. Although the proposed project would require a Rezone, because the proposed zoning designation would be substantively similar to the existing zoning designation of the site, the site has generally been anticipated for residential development. As such, because the site has been anticipated for development by the City General Plan, impacts related to solid waste resulting from development of the site have been generally analyzed in the City's General Plan EIR. Therefore, a ***less-than-significant*** impact related to solid waste would occur as a result of the proposed project.

[57] California Department of Resources Recycling and Recovery (CalRecycle). *Facility/Site Summary: Potrero Hills Landfill (48-AA-0075)*. Available at: https://www2.calrecycle.ca.gov/SolidWaste/Site/Summary/3591. Accessed December 2021.

XX. WILDFIRE. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	✖	☐
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	✖	☐
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	✖	☐
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	✖	☐

Discussion

a-d. According to the California Department of Forestry and Fire Protection (CAL FIRE) Fire and Resource Assessment Program, the project site is not located within or near a Very High Fire Hazard Severity Zone.[58] It should be noted that according to the City's General Plan Update Existing Conditions Report, the project site is located in a "High Threat" area for wildfires.[59] However, the project site would remove the ruderal weeds and grasses from the site and be replaced with structures. Thus, the project would not exacerbate the existing level of risk and, rather, would reduce wildland fire risk by removing on-site vegetative fuel. Additionally, the predominantly urbanized nature of the surrounding area and proximity to the New York Slough would preclude the uncontrolled spread of wildfire. Therefore, the proposed project would not be subject to significant risks related to wildfires, and a ***less-than-significant*** impact would occur.

[58] California Department of Forestry and Fire Protection. *Contra Costa County, Very High Fire Hazard Severity Zones in LRA*. January 7, 2009.

[59] City of Pittsburg. *Existing Conditions Report, City of Pittsburg General Plan Update* [Figure 4.4-2]. November 2019.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE.	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	✖	☐	☐
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	✖	☐	☐	☐
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	✖	☐	☐

Discussion

a. As discussed in Section IV, Biological Resources, of this Initial Study, while the potential exists for burrowing owl and other migratory birds protected by the MBTA to occur on-site, compliance with ECCC HCP/NCCP requirements would ensure that impacts to special-status species would be less than significant. The project site is regularly maintained, has been previously disturbed, and does not contain any known historical resources. However, because unknown cultural resources have the potential to exist on-site, Mitigation Measures V-1 and V-2 would ensure that impacts to cultural resources would be less than significant.

Considering the above, the proposed project would not result in impacts associated with the following: 1) degrade the quality of the environment; 2) substantially reduce or impact the habitat of fish or wildlife species; 3) cause fish or wildlife populations to drop below self-sustaining levels; 4) threaten to eliminate a plant or animal community; 5) reduce the number or restrict the range of a rare or endangered plant or animal; or 6) eliminate important examples of the major periods of California history or prehistory. Therefore, with mitigation incorporated, a ***less-than-significant*** impact would occur.

b. The proposed project in conjunction with other development within the City of Pittsburg could incrementally contribute to cumulative impacts in the project area. However, as discussed in question “a,b” of Section III, Air Quality, of this Initial Study, impacts to Air Quality would not be cumulatively considerable. Similarly, cumulative impacts with regards to Noise are found to be less than significant. Nonetheless, cumulatively considerable impacts could occur with implementation of the proposed project related to GHG emissions and transportation. Thus, a ***potentially significant*** impact could occur.

Further analysis of the above impact will be included in the Greenhouse Gas Emissions and Transportation chapters of the Harbor View Project EIR.

c. As described in this Initial Study, the proposed project would comply with all applicable General Plan policies, Municipal Code standards, other applicable local and State regulations, in addition to the mitigation measures included herein. Additionally, as discussed in Section III, Air Quality, Section IX, Hazards and Hazardous Materials, and Section XIII, Noise, of this Initial Study, the proposed project would not cause substantial effects to human beings, including effects related to exposure to air pollutants, and hazardous materials. Therefore, with mitigation incorporated, the proposed project would result in a ***less-than-significant*** impact.

Bay Area AQMD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	8.40	1000sqft	0.00	8,400.00	0
Apartments Low Rise	20.00	Dwelling Unit	1.25	20,000.00	57
Single Family Housing	207.00	Dwelling Unit	19.25	372,600.00	592

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2027
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	203.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Lot acreage adjusted to be consistent with the total lot acreage shown on the site plan prepared for the proposed project. Commerical acreage zereoed out because it is part of the mixed-use residences, and included in the residential acreage.

Construction Phase - Construction phase timing based on applicant provided AQ Questionnaire

Trips and VMT - Based on applicant provided AQ Questionnaire.

Grading - Basedon applicant provided AQ questionnaire.

Vehicle Trips - Trip generation rates based on Transportation Impact Assessment prepared for the project by Fehr & Peers. Commerical trip generation zeroed out and represented in multi-family land use.

Area Mitigation - Based on AQ Questionnaire.

Water Mitigation - Compliant with MWELO.

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	8.40	1000sqft	0.00	8,400.00	0
Apartments Low Rise	20.00	Dwelling Unit	1.25	20,000.00	57
Single Family Housing	207.00	Dwelling Unit	19.25	372,600.00	592

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2027
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	203.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Lot acreage adjusted to be consistent with the total lot acreage shown on the site plan prepared for the proposed project. Commerical acreage zereoed out because it is part of the mixed-use residences, and included in the residential acreage.

Construction Phase - Construction phase timing based on applicant provided AQ Questionnaire

Trips and VMT - Based on applicant provided AQ Questionnaire.

Grading - Basedon applicant provided AQ questionnaire.

Vehicle Trips - Trip generation rates based on Transportation Impact Assessment prepared for the project by Fehr & Peers. Commerical trip generation zeroed out and represented in multi-family land use.

Area Mitigation - Based on AQ Questionnaire.

Water Mitigation - Compliant with MWELO.

Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	203.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Lot acreage adjusted to be consistent with the total lot acreage shown on the site plan prepared for the proposed project. Commerical acreage zereoed out because it is part of the mixed-use residences, and included in the residential acreage.

Construction Phase - Construction phase timing based on applicant provided AQ Questionnaire

Trips and VMT - Based on applicant provided AQ Questionnaire.

Grading - Basedon applicant provided AQ questionnaire.

Vehicle Trips - Trip generation rates based on Transportation Impact Assessment prepared for the project by Fehr & Peers. Commerical trip generation zeroed out and represented in multi-family land use.

Area Mitigation - Based on AQ Questionnaire.

Water Mitigation - Compliant with MWELO.

Subject: Biological and Wetland Constraints Letter Report for the Harbor View Project, City of Pittsburg, Contra Costa County, CA

Dear Mr. Fryer:

HELIX Environmental Planning, Inc. (HELIX) has prepared this biological and wetland constraints letter report for the proposed Harbor View Project. The purpose of our biological and wetland constraints study was to evaluate the potential for regionally-occurring special-status plant and animal species, wetlands or other waters of the U.S. or waters of the State, and/or other sensitive biological resources such as protected trees to occur in the project site and/or be impacted by site development. This memorandum describes the methods and results of our biological and wetland constraints analysis.

Project Location and Description

The approximately 20.5-acre proposed Harbor View Project (Project) is located at 420 East 3rd Street in the City of Pittsburg (City), Contra Costa County (County), California. The subject property consists of a single parcel, APN 073-050-001 (see Attachment A). The site is being considered for potential residential development.

Methods

Studies conducted in support of this report included a desktop special-status species evaluation, a desktop aquatic resources evaluation, and a biological and wetland reconnaissance survey.

Special-Status Species Evaluation

Regulations pertaining to the protection of biological resources at the project site are summarized in Attachment B. For the purposes of this report, special-status species are those that fall into one or more of the following categories, including those:

- listed as endangered or threatened under the Federal Endangered Species Act (FESA; including candidates and species proposed for listing);

- listed as endangered or threatened under the California Endangered Species Act (CESA; including candidates and species proposed for listing);
- designated as rare, protected, or fully protected pursuant to California Fish and Game Code;
- designated a Species of Special Concern (SSC) by the California Department of Fish and Wildlife (CDFW);
- considered by CDFW to be a Watch List species with potential to become an SSC;
- defined as rare or endangered under Section 15380 of the California Environmental Quality Act (CEQA); or
- Having a California Rare Plant Rank (CRPR) of 1A, 1B, 2A, 2B, or 3.

In order to evaluate special-status species and/or their habitats with the potential to occur in the project site and/or be impacted by proposed site development, HELIX obtained lists of special-status species known to occur and/or having the potential to occur in the proposed project site and vicinity from the U.S. Fish and Wildlife Service (USFWS; USFWS 2021), the California Native Plant Society (CNPS; CNPS 2021), and the California Natural Diversity Database (CNDDB; CDFW 2021). Attachment C includes these lists of special-status plant and animal species occurring in the project region.

Aquatic Resources Evaluation

The U.S. Fish and Wildlife Service's National Wetlands Inventory (NWI) online database[1] was reviewed to determine if there are any wetlands or other waters of the U.S. mapped by the USFWS on the property. The NWI provides reconnaissance level information on wetlands and deepwater habitats from analysis of high-altitude aerial imagery.

Historic aerial imagery from National Environmental Title Research (NETR)[2] was reviewed for information on past land uses and presence of aquatic features visible on aerial imagery. NETR provides aerial imagery covering the property at irregular intervals from 1959 to 2016, and USGS topographic maps at irregular intervals from 1908 to 2018.

Reconnaissance Survey

A biological and wetland reconnaissance survey was conducted on March 5, 2021 by HELIX Principal Biologist Stephen Stringer between 1200 and 1530 hours. The project site was assessed to identify the habitat type(s) present on-site and the potential to support special-status plant and wildlife species. The survey consisted of a pedestrian survey of the project site and the surrounding area. Meandering transects of the site were performed to obtain visual coverage of the site. An assessment of the site for the presence/absence of potential wetlands was also conducted by assessing the site for any areas with indicators of hydrophytic vegetation, hydric soils, and wetland hydrology according to the *Corps of*

[1] https://www.fws.gov/wetlands/Data/Mapper.html

Engineers Wetlands Delineation Manual (USACE 1987) and the *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Arid West Region* (Version 2.0; USACE 2008).

Results

Environmental Setting

The site is located within an industrial and residential area in the northern portion of the City of Pittsburg and is surrounded by industrial, commercial, and residential development. A currently vacant parcel that contained an industrial facility and boat dock until 2019 separates the project site from New York Slough, which lies along the southern side of Suisun Bay. The project site is approximately 800 feet south of the edge of New York Slough/Suisun Bay.

Site Conditions

The project site is the location of a former industrial asbestos facility, which occupied the site until early 2006 at which time demolition and removal of the facility and site remediation occurred based on aerial imagery. Currently, the interior of the site has been graded and leveled and is relatively flat. Soil mounds occur along the eastern boundary of the site adjacent to Harbor Street. The entire site is vegetated with ruderal herbaceous species with a variety of horticultural trees growing around the perimeter, primarily on the southern and western sides.

Habitat Types/Vegetation Communities

The only habitat type/vegetation community on the site is ruderal/disturbed habitat. Representative site photographs are included as Attachment D.

Ruderal/Disturbed

Ruderal/disturbed habitat occurs in areas that are heavily disturbed by past or ongoing human activities but retain a soil substrate. Ruderal/disturbed areas may be sparsely to densely vegetated, but do not support a recognizable community or species assemblage. Vegetative cover is usually herbaceous and dominated by a wide variety of weedy non-native species or a few ruderal native species.

Ruderal/disturbed habitat comprises the entire site. This habitat in the project site is vegetated with a low cover of non-native annual grasses and forbs as well as a variety of horticultural trees around the perimeter. Nearly all plant species observed during the site reconnaissance are non-natives associated with disturbance.

Special-Status Species Evaluation

Special-Status Plant Species

Numerous regionally-occurring special-status plant species were identified during the database searches and desktop review. Special-status plant species in the region occur in a variety of native habitats including chaparral, dunes, native grasslands, and freshwater and brackish wetlands. There is one reported occurrence of a CNPS Rank 1B.1 special-status plant (big tarplant; *Blepharizonia plumosa*) that overlaps the site. The reported occurrence is of a sighting of this species in 1937 somewhere in the

Pittsburg area (CDFW 2021). There are no other reported occurrences of special-status plants on or adjacent to the site but several records within a five mile radius.

Although the reconnaissance survey was conducted outside of the blooming season for many special-status plants, it is worth noting that no special-status plants were observed on the site during the reconnaissance survey. In addition, the site does not provide suitable habitat for special-status plants. Due to the history of site disturbance and lack of suitable habitat present on the site currently, no special-status plant species are expected to occur on the site or be impacted by any future site development.

Special-Status Wildlife Species

Numerous regionally-occurring special-status wildlife species were identified during the database searches and desktop review and there are numerous reported occurrences of special-status wildlife species in the region. There is one reported occurrence of a special-status animal species (Suisun song sparrow; *Melospiza melodia maxillaris*) that overlaps the site. The reported occurrence is of a sighting of this species in 1924 somewhere in the Pittsburg area (CDFW 2021) and is a non-specific polygon. Suisun song sparrow is a CDFW Species of Special Concern and a USFWS Bird Species of Conservation Concern. Suisun song sparrow occurs in brackish water marshes; therefore, there is no habitat for this species on or adjacent to the project site. There are two reported occurrences of special-status wildlife species adjacent to the site including one for Lange's metalmark butterfly (*Apodemia mormo langei*) and one for longfin smelt (*Spirinchus thaleichthys*). There is no habitat for either of these species on the project site. Lange's metalmark butterfly occurs in stabilized interior dunes such as are present in the Antioch Dunes and longfin smelt occurs in Suisun Bay. There are no other reported occurrences in CNDDB of special-status wildlife species on or adjacent to the site.

The majority of the regionally-occurring wildlife species in the region occur in fresh and saltwater wetlands and marshes, waters of the San Francisco Bay and its associated waterways, chaparral/woodland habitats, the Antioch Dunes, or other large open tracts of native or naturalized habitats. The only regionally-occurring special-status species that was identified as having potential habitat or the potential to occur on the site is burrowing owl. In addition, the site provides suitable habitat for other nesting migratory birds. These species are discussed briefly below. Species determined to have no potential to occur on the project site or be impacted by the proposed project are not discussed further in this report.

Burrowing Owl

Burrowing owls are year-round residents of most parts of California, though local seasonal movements are common and populations in northeastern California and high elevations may migrate to lower elevations during the winter. Burrowing owls inhabit underground burrows, especially those of California ground squirrels (*Otospermophilus beecheyi*), and artificial holes such as pipes, culverts, and crevices in debris piles. Suitable habitat is open and relatively flat, with short vegetation, low perches or mounds, and abundant rodent and insect prey. Common examples of suitable habitat include agricultural fields, pastures, grasslands, deserts, and disturbed places. The typical breeding season for burrowing owl is February through August (CDFW 2012).

No burrowing owls or sign were observed during the biological reconnaissance, which included a thorough search for this species. The nearest reported occurrence of burrowing owl in the CNDDB (CDFW 2021) is approximately 2.5 miles southeast in the City of Antioch. This reported occurrence is from 2008 and is listed as possibly extirpated. There are a few other reported occurrences of burrowing owl within a five-mile radius of the project site including records approximately 4.5 miles southwest of the site.

Ruderal/disturbed habitat in the project site, which consists largely of short annual grasses and forbs, provides suitable foraging habitat for burrowing owl and numerous ground squirrel burrows around the perimeter of the site provide suitable nesting habitat. One fairly large subterranean burrow was observed in the berm along the western boundary of the project site during the biological reconnaissance survey (see Attachment A). There was no sign of burrowing owl, but the burrow was of a suitable size and depth to provide good habitat for the burrowing owl. Poison bait stations (to eradicate ground squirrels) were observed along the soil mounds along the eastern boundary of the site, which renders the site less suitable by removing the animals that create suitable burrowing owl nesting habitat; however, numerous ground squirrel burrows were still present. Although the site is too small in size to support significant burrowing owl foraging and is surrounded by disturbed industrial and residential parcels, this species could potentially occupy the site.

If burrowing owls were residing in the project site or on adjacent properties at the time of proposed development, the project would have the potential for adverse effects to burrowing owl through injury or mortality, displacement, and loss of habitat. Injury or mortality to individual adults and young, or mortality of eggs and chicks due to forced nest abandonment by adults, would be a violation of the Fish and Game Code and a significant impact. Loss of occupied habitat including nesting burrows, satellite burrows, foraging habitat, dispersal habitat, wintering habitat, and linkages is considered a potentially significant impact to the local and regional populations of burrowing owl (CDFW 2012).

Migratory Birds and Raptors

As noted in Attachment B, migratory and non-game birds are protected during the nesting season by California Fish and Game Code. The project site and immediate vicinity provides nesting and foraging habitat for a variety of native birds common to urbanized areas, such as mourning dove (*Zenaida macroura*), black phoebe (*Sayornis nigricans*), and killdeer (*Charadrius vociferus*). Nests were not observed during surveys; however, a variety of migratory birds have the potential to nest in and adjacent to the site, in trees, shrubs and on the ground in vegetation.

Project activities such as clearing and grubbing during the avian breeding season (February 1 through August 31) could result in injury or mortality of eggs and chicks directly through destruction or indirectly through forced nest abandonment due to noise and other disturbance. Needless destruction of nests, eggs, and chicks would be a violation of the Fish and Game Code and a significant impact.

Aquatic Resources Evaluation

NWI mapping shows no aquatic features on the property. Historic aerial imagery shows a constructed basin in the southeast portion of the site that is present in 1939 (earliest date of the available imagery; Google Earth); industrial buildings are present in the northern half of the property at that time. The constructed basin had been replaced with structures by 1966 and no aquatic features are apparent in

1966 aerial imagery. In subsequent imagery, the site appears completely developed with either structures or paved/graveled parking areas through 2005, with no aquatic features present[3]. For a brief period in 2007, several basins likely associated with site remediation are present (Google Earth). By 2008 the basins are no longer present on aerial imagery, and no other aquatic features are evident on the site up to the present.

No wetlands were observed on the site during the reconnaissance survey and the site was completely dry with no surface water present. There is evidence that water ponds in some small areas on the site either in topographic depressions within low spots on the dirt access road around the perimeter and in some other small depressions on the pad left over from the remediation activities. Two small areas roughly 300 to 500 square feet in size each were noted where there was evidence of prior ponding in the form of surface soil cracks and biotic crust (see Attachment A). Neither of these areas appeared to exhibit a predominance of wetland vegetation and no hydric soil was observed in these two areas or elsewhere on the site in soil examinations using a small spade to turn over the surface soil layers.

The reconnaissance survey was conducted during a dry spell in an unseasonably dry year with very low rainfall in the project region. It is likely that water ponds in small areas throughout the site during wetter conditions. Due to the lack of observed hydric soil conditions, the lack of evidence of any natural wetlands occurring on the site for many decades, and the past soil disturbances at the site, areas meeting the USACE three-parameter test for wetlands are not expected to be present (due to a lack of hydric soil).

Even if wetlands are present that could not be detected due to the drought conditions and the lack of a formal wetland delineation being conducted, they would not likely qualify as waters of the U.S. per the Navigable Waters Protection Rule: Definition of "Waters of the United States" (NWPR) published by the Environmental Protection Agency (EPA) and USACE on April 21, 2020. Any such wetlands on the site would likely be considered isolated and lack connectivity to jurisdictional waters as there are no jurisdictional waters that have a surface hydrologic connection to the site or are adjacent to the site. Any such wetlands would also likely qualify as water-filled depressions incidental to mining or construction activity and be exempt from regulation per the NWPR. An argument could also be made that any small wetland areas on the site, if present, are not waters of the State because they resulted from historic human activity, are subject to ongoing operation and maintenance, and have not become a relatively permanent part of the natural landscape per the State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (Procedures) (SWRCB 2019).

Protected Trees

A tree inventory was outside of the scope of this report and was not conducted. However, the total number of trees on the site was estimated to be approximately 50 to 60 trees, all of which were non-native. Many of the trees are too small to meet the criteria to be a protected tree, however, several trees on the site are large enough to be considered protected trees include a line of Peruvian pepper trees (*Schinus molle*) along the southern and western boundaries.

[3] https://www.historicaerials.com

Summary of Potential Biological Site Constraints

Special-Status Species

The site provides potential habitat for burrowing owl. No burrowing owls or sign were observed on the site, but mammal burrows that provide potential nesting habitat for burrowing owls are present on the site and the site provides suitable foraging habitat. Prior to site development, surveys would need to be conducted according to CDFW guidelines (CDFW 2012) to determine presence/absence of burrowing owl on the site. If burrowing owl were present on the site, coordination with the City and CDFW would need to be conducted to determine the appropriate methods for avoidance or relocation of the owls. Typically, active burrowing owl burrows must be avoided during the non-nesting season (September 1 through January 31) by a 50-meter buffer and active burrows must be avoided during the nesting season (February 1 through August 31) by a 200-meter buffer. As an alternative to avoidance, burrowing owls may be passively excluded if approved by CDFW. Passive exclusion typically requires providing 6.5 acres of mitigation per pair or single owl relocated; this can vary based on the requirements of the CEQA lead agency.

Migratory Birds and Raptors

The project site provides suitable nesting habitat for native birds and large trees on and adjacent to the site provide potential nesting habitat for raptors. Pre-construction surveys should be conducted prior to project implementation during the typical bird nesting season (February to August) to determine if nesting birds are present on or adjacent to the site, so that measures could be implemented if needed to avoid harming nesting birds. Measures typically consist of establishment of a suitable buffer (e.g., 500 feet for raptors; 100 feet for passerines) around active nests and avoidance of construction activities within the buffer until a qualified biologist has determined that the nest is no longer active (i.e., the nestlings have fledged and are no longer reliant on the nest, or the nest has failed).

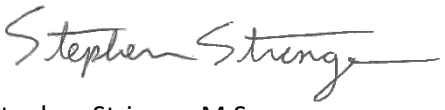
Aquatic Resources

No wetlands or other waters of the U.S. or waters of the State are believed to occur on the project site. However, the City may require a formal delineation of aquatic resources be conducted to verify that the site lacks potential waters of the U.S. and waters of the State. If so, a formal delineation of aquatic resources would need to be conducted and submitted to the USACE and the RWQCB for verification.

Protected Trees

Prior to site development, an arborist inventory would need to be conducted at the project site to identify protected trees present on the site. A permit would be required from the City for removal or destruction of any protected trees, along with mitigation for removal of protected trees according to the ratio below:

1. Replacement of the removed tree(s) at a four-to-one ratio with 24-inch box trees;



2. Replacement of the tree(s) at a 12-to-one ratio with 15-gallon trees;

3. Payment of in-lieu fees equal to the replacement trees' value, installation costs and one year of maintenance costs, as calculated with a 12-to-one ratio of 15-gallon trees; or

4. A combination of replacement and payment of in-lieu fees.

I appreciate the opportunity to assist you on this project. Feel free to contact me with any questions at (916) 365-8712.

Sincerely,

Stephen Stringer, M.S.
Principal Biologist/Biology Group Manager

Regulatory Context

Attachment B
Regulatory Setting

Policies, regulations, and plans pertaining to the protection of biological resources on the project site are summarized in the following sections.

Federal Regulations

Federal Endangered Species Act

The U.S. Fish and Wildlife Service (USFWS) enforces the provisions stipulated within the Federal Endangered Species Act of 1973 (FESA; 16 USC 1531 et seq.). Species identified as federally threatened or endangered (50 CFR 17.11, and 17.12) are protected from take, defined as direct or indirect harm, unless a Section 10 permit is granted to an entity other than a federal agency or a Biological Opinion with incidental take provisions is rendered to a federal lead agency via a Section 7 consultation. Pursuant to the requirements of FESA, an agency reviewing a proposed project within its jurisdiction must determine whether any federally-listed species may be present in the study area and determine whether the proposed project will jeopardize the continued existence of or result in the destruction or adverse modification of critical habitat of such species (16 USC 1536 (a)[3], [4]). Other federal agencies designate species of concern (species that have the potential to become listed), which are evaluated during environmental review under the National Environmental Protection Act (NEPA) or California Environmental Quality Act (CEQA) although they are not otherwise protected under FESA.

Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) of 1918 established federal responsibilities for the protection of nearly all species of birds, their eggs, and nests. The Migratory Bird Treaty Reform Act of 2004 further defined species protected under the act and excluded all non-native species. Section 16 U.S.C. 703–712 of the Act states “unless and except as permitted by regulations, it shall be unlawful at any time, by any means or in any manner, to pursue, hunt, take, capture, kill, attempt to take, capture, or kill” a migratory bird. A migratory bird is any species or family of birds that live, reproduce, or migrate within or across international borders at some point during their annual life cycle. Currently, there are 836 migratory birds protected nationwide by the Migratory Bird Treaty Act, of which 58 are legal to hunt. The U.S. Court of Appeals for the 9th Circuit (with jurisdiction over California) has ruled that the MBTA does not prohibit incidental take (952 F 2d 297 – Court of Appeals, 9th Circuit 1991).

State Jurisdiction

California Endangered Species Act

The California Endangered Species Act (CESA) (California Fish and Game Code Sections 2050 to 2097) is similar to the FESA. The California Fish and Wildlife Commission is responsible for maintaining lists of threatened and endangered species under CESA. CESA prohibits the take of listed and candidate (petitioned to be listed) species. “Take” under California law means to hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch capture, or kill (California Fish and Game Code, Section 86). The California Department of Fish and Wildlife (CDFW) can authorize take of a state-listed species under

Attachment B (cont.)
Regulatory Setting

Section 2081 of the California Fish and Game Code if the take is incidental to an otherwise lawful activity, the impacts are minimized and fully mitigated, funding is ensured to implement and monitor mitigation measures, and CDFW determines that issuance would not jeopardize the continued existence of the species. A CESA permit must be obtained if a project will result in the "take" of listed species, either during construction or over the life of the project. For species listed under both FESA and CESA requiring a Biological Opinion under Section 7 of the FESA, CDFW may also authorize impacts to CESA species by issuing a Consistency Determination under Section 2080.1 of the Fish and Game Code.

California Code of Regulations Title 14 and California Fish and Game Code

The official listing of endangered and threatened animals and plants is contained in the California Code of Regulations Title 14 §670.5. A state candidate species is one that the California Fish and Game Code has formally noticed as being under review by CDFW to include in the state list pursuant to Sections 2074.2 and 2075.5 of the California Fish and Game Code.

Legal protection is also provided for wildlife species in California that are identified as "fully protected animals." These species are protected under Sections 3511 (birds), 4700 (mammals), 5050 (reptiles and amphibians), and 5515 (fish) of the California Fish and Game Code. These statutes prohibit take or possession of fully protected species at any time. CDFW is unable to authorize incidental take of fully protected species unless any such take authorization is issued in conjunction with the approval of a Natural Community Conservation Plan that covers the fully protected species (California Fish and Game Code Section 2835).

California Environmental Quality Act

Under the California Environmental Quality Act of 1970 (CEQA; Public Resources Code Section 21000 et seq.), lead agencies analyze whether projects would have a substantial adverse effect on a candidate, sensitive, or special-status species (Public Resources Code Section 21001(c)). These "special-status" species generally include those listed under FESA and CESA, and species that are not currently protected by statute or regulation, but would be considered rare, threatened, or endangered under the criteria included CEQA Guidelines Section 15380. Therefore, species that are considered rare are addressed under CEQA regardless of whether they are afforded protection through any other statute or regulation. The California Native Plant Society (CNPS) inventories the native flora of California and ranks species according to rarity; plants ranked as 1A, 1B, 2A, 2B, and 3 are generally considered special-status species under CEQA.[1]

Although threatened and endangered species are protected by specific federal and state statutes, CEQA Guidelines Section 15380(d) provides that a species not listed on the federal or state list of protected species may be considered rare if it can be shown to meet certain specified criteria. These criteria have been modeled after the definition in FESA and the section of the California Fish and Game Code dealing with rare or endangered plants and animals. Section 15380(d) allows a public agency to undertake a review to determine if a significant effect on species that have not yet been listed by either the USFWS or CDFW (i.e., candidate species) would occur.

[1] The California Rare Plant Rank system can be found online at < http://www.cnps.org/cnps/rareplants/ranking.php>

Attachment B (cont.)
Regulatory Setting

Native Plant Protection Act

The California Native Plant Protection Act of 1977 (California Fish and Game Code Sections 1900-1913) empowers the Fish and Game Commission to list native plant species, subspecies, or varieties as endangered or rare following a public hearing. To the extent that the location of such plants is known, CDFW must notify property owners that a listed plant is known to occur on their property. Where a property owner has been so notified by CDFW, the owner must notify CDFW at least 10 days in advance of any change in land use (other than changing from one agricultural use to another), in order that CDFW may salvage listed plants that would otherwise be destroyed. Currently, 64 taxa of native plants have been listed as rare under the act.

Nesting Birds

California Fish and Game Code Subsections 3503 and 3800 prohibit the possession, take, or needless destruction of birds, their nests, and eggs, and the salvage of dead nongame birds. California Fish and Game Code Subsection 3503.5 protects all birds in the orders of Falconiformes and Strigiformes (birds of prey). Fish and Game Code Subsection 3513 states that it is unlawful to take or possess any migratory nongame bird as designated in the Migratory Bird Treaty Act or any part of such migratory nongame bird except as provided by rules and regulations adopted by the Secretary of the Interior under provisions of the Migratory Bird Treaty Act. The Attorney General of California has released an opinion that the Fish and Game Code prohibits incidental take.

Jurisdictional Waters

Federal Jurisdiction

Any person, firm, or agency planning to alter or work in "waters of the U.S.," including the discharge of dredged or fill material, must first obtain authorization from the U.S. Army Corps of Engineers (USACE) under Section 404 of the Clean Water Act (CWA; 33 USC 1344). Permits, licenses, variances, or similar authorization may also be required by other federal, state, and local statutes. Section 10 of the Rivers and Harbors Act prohibits the obstruction or alteration of navigable waters of the U.S. without a permit from USACE (33 USC 403).

On April 21, 2020, the Environmental Protection Agency (EPA) and USACE published the Navigable Waters Protection Rule to define "Waters of the United States" in the Federal Register. On June 22, 2020, the Navigable Waters Protection Rule: Definition of "Waters of the United States" (NWPR) became effective in 49 states, including California, and in all US territories.

The NWPR regulates traditional navigable waters and perennial or intermittent tributary systems, and defines four categories of regulated waters including:

- The territorial seas and traditional navigable waters;
- Perennial and intermittent tributaries to those waters;
- Certain lakes, ponds, and impoundments; and
- Wetlands adjacent to jurisdictional waters.

Attachment B (cont.)
Regulatory Setting

The NWPR also defines 12 categories of exempted aquatic resources:

- Waters not listed as WOTUS
- Groundwater
- Ephemeral features
- Diffuse stormwater run-off
- Ditches not identified as WOTUS
- Prior converted cropland (PCC)
- Artificially irrigated areas
- Artificial lakes and ponds
- Water-filled depressions incidental to mining or construction activity
- Stormwater control features
- Groundwater recharge, water reuse, and wastewater recycling structures
- Waste treatment systems

With non-tidal waters, in the absence of adjacent wetlands, the extent of USACE jurisdiction extends to the ordinary high water mark (OHWM) – the line on the shore established by fluctuations of water and indicated by a clear, natural line impressed on the bank, shelving, changes in soil character, destruction of terrestrial vegetation, or the presence of litter and debris. Wetlands are defined in 33 CFR Part 328 as:

> *"those areas that are inundated or saturated by surface or ground water at a frequency and duration to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions."*

Federal and state regulations pertaining to waters of the U.S., including wetlands, are discussed below.

Clean Water Act (33 USC 1251-1376). The CWA provides guidance for the restoration and maintenance of the chemical, physical, and biological integrity of the nation's waters.

Section 401 requires that an applicant for a federal license or permit that allows activities resulting in a discharge to waters of the U.S. must obtain a state certification that the discharge complies with other provisions of CWA. The Regional Water Quality Control Board (RWQCB) administers the certification program in California and may require State Water Quality Certification before other permits are issued.

Section 402 establishes a permitting system for the discharge of any pollutant (except dredged or fill material) into waters of the U.S.

Section 404 establishes a permit program administered by USACE that regulates the discharge of dredged or fill material into waters of the U.S. (including wetlands). Implementing regulations by USACE are found at 33 CFR Parts 320-332. The Section 404 (b)(1) Guidelines were developed by the USEPA in conjunction with USACE (40 CFR Part 230), allowing the discharge of dredged or fill material for non-water dependent uses into special aquatic sites only if there is no practicable alternative that would have less adverse impacts.

Attachment B (cont.)
Regulatory Setting

State Jurisdiction

Regional Water Quality Control Board

Any action requiring a CWA Section 404 permit, or a Rivers and Harbors Act Section 10 permit, must also obtain a CWA Section 401 Water Quality Certification. The State of California Water Quality Certification (WQC) Program was formally initiated by the State Water Resources Control Board (SWRCB) in 1990 under the requirements stipulated by Section 401 of the Federal CWA. Although the Clean Water Act is a Federal law, Section 401 of the CWA recognizes that states have the primary authority and responsibility for setting water quality standards. In California, under Section 401, the State and Regional Water Boards are the authorities that certify that issuance of a federal license or permit does not violate California's water quality standards (i.e., that they do not violate Porter-Cologne and the Water Code). The WQC Program currently issues the WQC for discharges requiring USACE's permits for fill and dredge discharges within Waters of the United States, and now also implements the State's wetland protection and hydromodification regulation program under the Porter Cologne Water Quality Control Act.

On April 2, 2019, the SWRCB adopted a State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State (Procedures), for inclusion in the forthcoming Water Quality Control Plan for Inland Surface Waters and Enclosed Bays and Estuaries and Ocean Waters of California. The Procedures consist of four major elements: 1) a wetland definition; 2) a framework for determining if a feature that meets the wetland definition is a water of the state; 3) wetland delineation procedures; and 4) procedures for the submittal, review, and approval of applications for Water Quality Certifications and Waste Discharge Requirements for dredge or fill activities. The Office of Administrative Law approved the Procedures on August 28, 2019, and the Procedures became effective May 28, 2020.

Under the Procedures and the State Water Code (Water Code §13050(e)), "Waters of the State" are defined as "any surface water or groundwater, including saline waters, within the boundaries of the state." Unless excluded by the Procedures, any activity that could result in discharge of dredged or fill material to Waters of the State, which includes Waters of the U.S. and non-federal Waters of the State, requires filing of an application under the Procedures.

The Porter-Cologne Water Quality Control Act (Porter-Cologne Act, Water Code Section 13000 et seq.) is California's statutory authority for the protection of water quality in conjunction with the federal CWA. The Porter-Cologne Act requires the SWRCB and RWQCBs under the CWA to adopt and periodically update water quality control plans, or basin plans. Basin plans are plans in which beneficial uses, water quality objectives, and implementation programs are established for each of the nine regions in California. The Porter-Cologne Act also requires dischargers of pollutants or dredged or fill material to notify the RWQCBs of such activities by filing Reports of Waste Discharge and authorizes the SWRCB and RWQCBs to issue and enforce waste discharge requirements, National Pollution Discharge Elimination System (NPDES) permits, Section 401 water quality certifications, or other approvals.

Attachment B (cont.)
Regulatory Setting

California Department of Fish and Wildlife

The CDFW is a trustee agency that has jurisdiction under Section 1600 et seq. of the California Fish and Game Code. Under Sections 1602 and 1603, a private party must notify CDFW if a proposed project will "substantially divert or obstruct the natural flow or substantially change the bed, channel, or bank of streambeds…except when the department has been notified pursuant to Section 1601." Additionally, CDFW asserts jurisdiction over native riparian habitat adjacent to aquatic features, including native trees over four inches in diameter at breast height (DBH). If an existing fish or wildlife resource may be substantially adversely affected by the activity, CDFW may propose reasonable measures that will allow protection of those resources. If these measures are agreeable to the parties involved, they may enter into an agreement with CDFW identifying the approved activities and associated mitigation measures. Generally, CDFW recommends submitting an application for a Streambed Alteration Agreement (SAA) for any work done within the lateral limit of water flow or the edge of riparian vegetation, whichever is greater.

Local Requirements

Protected Trees

Pittsburg Municipal Code Chapter 18.84, Article XIX, referred to as the Tree Preservation and Protection Ordinance, applies to the removal or relocation of any protected tree in all zoning districts on property other than city-owned property in the city of Pittsburg. This includes tree removal or relocation on undeveloped property in order to facilitate development, and removal or relocation on developed property to facilitate building construction, expansion, renovation, or other property improvements. The Ordinance defines "Protected tree" as any of the following:

1. A California native tree, as identified in the Calflora online database of wild California plants, that measures at least 50 inches in circumference (15.6 inches diameter) at four and one-half feet above grade, regardless of location or health; or

2. A tree of a species other than a California native that measures at least 50 inches in circumference at four and one-half feet above grade and is either on an undeveloped property, located on public property or within the right-of-way, or located on private property and is found to provide benefits to the subject property as well as neighboring properties, subject to determination by the city planner; or

3. A tree required to be planted, relocated, or preserved as a condition of approval of a tree removal permit or other discretionary permit, and/or as environmental mitigation for a discretionary permit.

Attachment B (cont.)
Regulatory Setting

A permit is required to remove any protected tree and any person desiring to remove a protected tree must file an application with the City Planner that includes, but is not limited to, an arborist report that identifies all protected trees on the site and rationale for removal. Removal of protected trees generally requires mitigation unless the tree is determined to be a hazard. Mitigation consists of the following:

1. Replacement of the removed tree(s) at a four-to-one ratio with 24-inch box trees;

2. Replacement of the tree(s) at a 12-to-one ratio with 15-gallon trees;

3. Payment of in-lieu fees equal to the replacement trees' value, installation costs and one year of maintenance costs, as calculated with a 12-to-one ratio of 15-gallon trees; or

4. A combination of replacement and payment of in-lieu fees.

East Contra Costa County HCP/NCCP

The East Contra Costa County Habitat Conservation Plan/Natural Community Conservation Plan (HCP/NCCP or Plan) is intended to provide regional conservation and development guidelines to protect natural resources while improving and streamlining the permit process for endangered species and wetland regulations. Under the HCP/NCCP, the U.S. Fish and Wildlife Service and the California Department of Fish and Game have provided regional permits to the Cities of Brentwood, Clayton, Oakley, and Pittsburg and Contra Costa County. These land use agencies may extend permit coverage to project applicants within their jurisdictions. Instead of seeking endangered species permits from the state and federal agencies, project proponents can acquire their endangered species approvals from their local land use planning agency.

The HCP/NCCP does not apply to projects located on land mapped entirely as "urban" habitat. Because the Harbor View project is located entirely on land mapped as "urban" by the HCP/NCCP, the HCP/NCCP does not apply.

Record Count: 110

IPaC **U.S. Fish & Wildlife Service**

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

NOT FOR CONSULTATION

Location

Contra Costa County, California

Local office

Sacramento Fish And Wildlife Office

(916) 414-6600
(916) 414-6713

Federal Building
2800 Cottage Way, Room W-2605
Sacramento, CA 95825-1846

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

NOT FOR CONSULTATION

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information. IPaC only shows species that are regulated by USFWS (see FAQ).
2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Mammals

NAME	STATUS

Salt Marsh Harvest Mouse Reithrodontomys raviventris — Endangered
Wherever found
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/613

Birds

NAME	STATUS

California Clapper Rail Rallus longirostris obsoletus — Endangered
Wherever found
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/4240

California Least Tern Sterna antillarum browni — Endangered
Wherever found
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/8104

Reptiles

NAME	STATUS

Alameda Whipsnake (=striped Racer) Masticophis lateralis euryxanthus — Threatened
Wherever found
There is **final** critical habitat for this species. The location of the critical habitat is not available.
https://ecos.fws.gov/ecp/species/5524

Giant Garter Snake Thamnophis gigas — Threatened
Wherever found
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/4482

Amphibians

NAME	STATUS

California Red-legged Frog Rana draytonii — Threatened
Wherever found
There is **final** critical habitat for this species. The location of the critical habitat is not available.
https://ecos.fws.gov/ecp/species/2891

California Tiger Salamander Ambystoma californiense — Threatened
There is **final** critical habitat for this species. The location of the critical habitat is not available.
https://ecos.fws.gov/ecp/species/2076

NOT FOR CONSULTATION

Fishes

NAME	STATUS
Delta Smelt Hypomesus transpacificus Wherever found There is **final** critical habitat for this species. Your location overlaps the critical habitat. https://ecos.fws.gov/ecp/species/321	Threatened

Insects

NAME	STATUS
Delta Green Ground Beetle Elaphrus viridis Wherever found There is **final** critical habitat for this species. The location of the critical habitat is not available. https://ecos.fws.gov/ecp/species/2319	Threatened
San Bruno Elfin Butterfly Callophrys mossii bayensis Wherever found There is **proposed** critical habitat for this species. The location of the critical habitat is not available. https://ecos.fws.gov/ecp/species/3394	Endangered
Valley Elderberry Longhorn Beetle Desmocerus californicus dimorphus Wherever found There is **final** critical habitat for this species. The location of the critical habitat is not available. https://ecos.fws.gov/ecp/species/7850	Threatened

Crustaceans

NAME	STATUS
Vernal Pool Fairy Shrimp Branchinecta lynchi Wherever found There is **final** critical habitat for this species. The location of the critical habitat is not available. https://ecos.fws.gov/ecp/species/498	Threatened
Vernal Pool Tadpole Shrimp Lepidurus packardi Wherever found There is **final** critical habitat for this species. The location of the critical habitat is not available. https://ecos.fws.gov/ecp/species/2246	Endangered

Flowering Plants

NOT FOR CONSULTATION

NAME	STATUS
Antioch Dunes Evening-primrose Oenothera deltoides ssp. howellii Wherever found There is **final** critical habitat for this species. The location of the critical habitat is not available. https://ecos.fws.gov/ecp/species/5970	Endangered
Soft Bird's-beak Cordylanthus mollis ssp. mollis Wherever found There is **final** critical habitat for this species. The location of the critical habitat is not available. https://ecos.fws.gov/ecp/species/8541	Endangered

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

This location overlaps the critical habitat for the following species:

NAME	TYPE
Delta Smelt Hypomesus transpacificus https://ecos.fws.gov/ecp/species/321#crithab	Final

NOT FOR CONSULTATION

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NOT FOR CONSULTATION

NAME	BREEDING SEASON (IF A BREEDING SEASON IS INDICATED FOR A BIRD ON YOUR LIST, THE BIRD MAY BREED IN YOUR PROJECT AREA SOMETIME WITHIN THE TIMEFRAME SPECIFIED, WHICH IS A VERY LIBERAL ESTIMATE OF THE DATES INSIDE WHICH THE BIRD BREEDS ACROSS ITS ENTIRE RANGE. "BREEDS ELSEWHERE" INDICATES THAT THE BIRD DOES NOT LIKELY BREED IN YOUR PROJECT AREA.)
Allen's Hummingbird Selasphorus sasin This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9637	Breeds Feb 1 to Jul 15
California Thrasher Toxostoma redivivum This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Jan 1 to Jul 31
Costa's Hummingbird Calypte costae This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9470	Breeds Jan 15 to Jun 10

Golden Eagle Aquila chrysaetos — Breeds Jan 1 to Aug 31
This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.
https://ecos.fws.gov/ecp/species/1680

Lawrence's Goldfinch Carduelis lawrencei — Breeds Mar 20 to Sep 20
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9464

Lewis's Woodpecker Melanerpes lewis — Breeds Apr 20 to Sep 30
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9408

Nuttall's Woodpecker Picoides nuttallii — Breeds Apr 1 to Jul 20
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/9410

Oak Titmouse Baeolophus inornatus — Breeds Mar 15 to Jul 15
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9656

Rufous Hummingbird selasphorus rufus — Breeds elsewhere
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/8002

Song Sparrow Melospiza melodia — Breeds Feb 20 to Sep 5
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA

Spotted Towhee Pipilo maculatus clementae — Breeds Apr 15 to Jul 20
This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/4243

Tricolored Blackbird Agelaius tricolor — Breeds Mar 15 to Aug 10
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/3910

NOT FOR CONSULTATION

Wrentit Chamaea fasciata — Breeds Mar 15 to Aug 10

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

NOT FOR CONSULTATION

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

NOT FOR CONSULTATION

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Facilities

NOT FOR CONSULTATION

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS AT THIS LOCATION.

Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

THERE ARE NO KNOWN WETLANDS AT THIS LOCATION.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

NOT FOR CONSULTATION

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

GEOTECHNICAL FEASIBILITY EVALUATION

Dear Mr. Fryer:

We are pleased to present this geotechnical feasibility evaluation of the 420 East 3rd Street site in Pittsburg, California. The accompanying report presents our findings and preliminary recommendations regarding the proposed development.

Based on the findings of our feasibility evaluation, we opine that the proposed development is feasible from a geotechnical standpoint, provided the preliminary recommendations provided in this report are implemented during project planning. The scope of this report was limited to an initial study. A design-level exploration including laboratory testing and detailed engineering analyses should be conducted to develop design recommendations once building types and loading conditions are available.

We are pleased to have been of service on this project and are prepared to consult further with you and your design team as the project progresses. If you have any questions or comments regarding this preliminary report, please call and we will be glad to discuss them with you.

Sincerely,

ENGEO Incorporated

1.0 INTRODUCTION

1.1 PURPOSE AND SCOPE

We prepared this report to evaluate the geotechnical feasibility of the proposed residential project at the site in Pittsburg, California. We were authorized to perform the following scope of services.

- Evaluation of suitability of the site for the proposed development.
- Preliminary assessment of geological hazards at the site and in the general project area.
- Discussion of potential geotechnical constraints such as loose/soft surface soil, existing fill, compressible soil, expansive soil, liquefiable soil, and lateral spreading, as necessary.
- Presentation of conceptual measures to mitigate hazards, geotechnical constraints, as appropriate.
- Discussion of anticipated foundation types and California Building Code (CBC) seismic design criteria.
- Preliminary pavement recommendations for hot mix asphalt and Portland cement concrete.

We were engaged to perform this evaluation based on existing data. No project-specific subsurface exploration was performed in support of this evaluation.

For our use in preparation of this report, we received the following:

1. Treadwell and Rollo; Preliminary Geotechnical Investigation, Proposed Harbor Bay Development, Pittsburg, California; October 17, 2005; Project No. 4245.01.
2. Treadwell & Rollo; Geotechnical Investigation, Proposed Harbor Park Development, Pittsburg, California; June 13, 2006; Project No. 4245.02.

We prepared this report for the exclusive use of IL Housing Solutions, LLC and its consultants for the project. This document may not be reproduced in whole or in part by any means whatsoever, nor may it be quoted or excerpted without our express written consent.

1.2 SITE LOCATION AND PROPOSED DEVELOPMENT

The property at 420 East 3rd Street encompasses approximately 20.5 acres, identified as Assessor's Parcel Number (APN) 073-050-001-4. The site is located on the southwest side of the intersection of Harbor Street and East 3rd Street. Harbor Street and East 3rd Street border the north and east edges of the site, respectively, while the south side of the site is bordered by a landscaped area and an existing residential development borders the site to the west. The project site area lies downslope of the adjacent residential and landscaped areas; the slope appears to reach a maximum height of approximately 20 feet with a gradient of approximately 1½:1 (horizontal:vertical). The developable site envelope is relatively level, with an approximately 10-to-14-foot-high soil berm along the eastern boundary of the site adjacent to Harbor Street.

Based on the preliminary site plan, we understand that the future development will include approximately 236 lots for residential use. We anticipate that the development will additionally incorporate paved drive aisles and parking, underground utilities, secondary slabs on grade such as sidewalks, ancillary structures, landscaping, and stormwater basins.

Structural loads and grading are yet to be determined; however, we assume that structural loads will be consistent with similar construction.

2.0 FINDINGS

2.1 AERIAL PHOTOGRAPH INTERPRETATION

We reviewed historic aerial photographs and topographic maps available on www.historicaerials.com. We understand that the site was developed for industrial use in the 1920s. Based on our review of historic photographs, structures and railway lines associated with this work occupy the majority of the site and remained relatively unchanged between 1959 and 2005. By 2009, the existing structures and railways appear to have been demolished and the berm has been constructed in the eastern portion of the site. Conditions appear relatively unchanged since then.

2.2 EXISTING SITE CONDITIONS

We performed a reconnaissance of the site on March 29, 2021, to observe current site conditions. The site is currently vacant and is secured by a perimeter fence on all sides. The site consists of relatively level, vegetated open space.

PHOTO 2.2-1: Northern Area of Site (facing South)

PHOTO 2.2-2: Southern Area of Site (facing North)

2.3 REGIONAL GEOLOGY AND SEISMIC SETTING

The site is situated in the Coast Ranges geomorphic province of California, which is characterized by a series of parallel, northwesterly trending, folded and faulted mountain ranges and valleys. The site was originally tidal marshland prior to the current development. According to published geologic maps, the majority of the site is covered by existing fill deposits of variable thickness placed over alluvial deposits (Bibblee, 2006).

The site is not located within a currently designated Alquist-Priolo Earthquake Fault Zone and no known surface expression of active faults is believed to exist within the site. An active fault is defined by the State Mining and Geology Board as one that has had surface displacement within Holocene time (about the last 11,000 years) (Bryant and Hart, 2007).

Because of the presence of nearby active faults, the Bay Area Region is considered seismically active. Numerous small earthquakes occur every year in the region, and large (greater than Moment Magnitude 7) earthquakes have been recorded and can be expected to occur in the future. Based on the United States Geological Survey's (USGS) 2008 National Seismic Hazard Maps, the closest active faults in the area are the Great Valley fault and Green Valley fault, which are approximately 1.3 miles northwest and 9.5 miles west of the site, respectively.

2.4 PREVIOUS FIELD EXPLORATIONS

The site was explored in 2005 and again in 2006 by Treadwell and Rollo (T&R) with a total of 61 cone penetration tests (CPTs) and 13 drilled borings throughout the site. Locations of the borings and CPTs locations are presented in Figure 2.

The previous borings ranged in depth between 19 and 51½ feet and the CPTs ranged in depth between 30 and 50 feet. The exploration logs and associated laboratory testing results from the 2005 and 2006 exploration are included in Appendix A.

2.5 SUBSURFACE CONDITIONS

The 2006 geotechnical investigation encountered approximately 2 to 15 feet of man-made fill consisting of loose to medium dense sand and gravel with variable silt and clay throughout the site. In the southeastern portion of the site, an approximately 3 to 43-foot-thick layer of soft to medium stiff compressible clay was encountered below the fill. The approximate lateral extent of the compressible material is shown on Figure 2. Below the compressible soil (where encountered), the previous exploration penetrated medium stiff to stiff sandy silt and clay, medium dense to very dense sand, and dense to very dense sand and gravelly sand.

2.6 GROUNDWATER CONDITIONS

Groundwater measurements during previous explorations at the site generally encountered groundwater 4½ to 15½ feet below ground surface (bgs).

The Seismic Hazard Zone Report for the Honker Bay Point 7.5 Minute Quadrangle (CGS, 2019) does not provide a map of historical high groundwater; the document states that depths to groundwater are typically between 0 to 10 feet. Fluctuations in the level of groundwater are expected to occur due to the proximity of the site to the New York Slough, as well as variations in rainfall, irrigation practice, and other factors not in evidence at the time of the subsurface exploration.

2.7 PREVIOUS GEOTECHNICAL WORK

In addition to the site investigations performed in 2005 and 2006, we understand that T&R provided supplemental recommendations regarding to remedial site grading, earthen embankment construction and repair, surcharging, and wick drain installation.

The 2008 T&R report summarizes geotechnical testing and observation of select fill locations within the site. This work appears to have been completed in November and December of 2007. The report indicates elevation and relative compaction of engineered backfill placed within local “pond” excavations within the southeastern and northern portions of the site. Based on the topographic survey included with this report, it appears the site has been further graded sometime between 2008 and 2021 to level the site and remove stockpiles within the site.

The 2008 report indicates that utilities located within the site were removed and backfilled with engineered fill under the observation of T&R in 2006. Observations performed by T&R during wick drain installation are contained in a separate 2008 letter. These reports were not available for our review.

3.0 GEOLOGIC AND GEOTECHNICAL HAZARDS

3.1 SEISMIC HAZARDS

Potential seismic hazards resulting from a nearby moderate to major earthquake can generally be classified as primary and secondary. The primary effect is ground rupture, also called surface faulting. The common secondary seismic hazards include ground shaking and liquefaction. The following sections present a discussion of these and other hazards as they apply to the site. Based on topographic and lithologic data, the risk of regional subsidence or uplift, lurching, or landslides, is low to negligible at the site.

3.1.1 Ground Rupture

As previously noted, the site is not located within a designated Alquist-Priolo Earthquake Fault Zone and no known surface expression of active faults is believed to exist within the site; as such, the risk of fault rupture through the site is considered low.

3.1.2 Ground Shaking

Seismic design provisions of current building codes generally prescribe minimum lateral forces, applied statically to the structure, combined with the gravity forces of dead and live loads. The code-prescribed lateral forces are generally considered to be substantially smaller than the actual forces that would be associated with a major earthquake. Therefore, structures should be able to: (1) resist minor earthquakes without damage, (2) resist moderate earthquakes without structural damage but with some nonstructural damage, and (3) resist major earthquakes without collapse, but with some structural as well as nonstructural damage. Conformance to the current building code recommendations does not constitute any kind of guarantee that significant structural damage would not occur in the event of a maximum magnitude earthquake; however, it is reasonable to expect that a well-designed and well-constructed structure will not collapse or cause loss of life in a major earthquake (SEAOC, 1996). California Building Code (CBC, 2019) seismic design parameters are presented later in this report.

3.1.3 Liquefaction / Cyclic Softening

The site is located within a mapped State of California Seismic Hazard Zone (CGS, 2019) for areas that may be susceptible to liquefaction.

Soil liquefaction results from loss of strength during cyclic loading, such as imposed by earthquakes. The soil considered most susceptible to liquefaction is clean, loose, saturated, uniformly graded fine sand below the groundwater table. Empirical evidence indicates that loose silty sand is also potentially liquefiable. When seismic ground shaking occurs, the soil is subjected to cyclic shear stresses that can cause excess hydrostatic pressures to develop. If excess hydrostatic pressures exceed the effective confining stress from the overlying soil, it is said to have liquefied. If the sand consolidates or vents to the surface during and following liquefaction, ground settlement and surface deformation may occur. In addition to liquefaction of sandy materials, clayey soil can also undergo “cyclic-softening” or strength loss as a result of cyclic loading.

Liquefaction hazard maps are created using a variety of information, including regional geologic mapping, regional groundwater level and observances of historic liquefaction. They should not be considered site-specific predictors of liquefaction hazard but instead areas where regional information indicates that the potential for liquefaction is higher.

The existing subsurface data does not provide sufficient information for performing a rigorous liquefaction hazard evaluation. Analysis of boring and CPT data included in the 2006 T&R and 2018 Rockridge investigations indicate up to 5½ inches of liquefaction-induced settlement in localized areas. Based on our review of the existing data using preliminary 2019 CBC seismic parameters, we anticipate that an updated estimate of liquefaction-induced settlement based on the requirements of the building code will be greater.

Liquefaction potential and settlement analyses should be performed during design-level exploration using updated site-specific seismic parameters in accordance with the 2019 CBC. The design-level assessment should focus on identifying the lateral and vertical extent of isolated layers of potentially liquefiable clayey sand and gravel that were encountered below groundwater elevation at some of exploration locations. The cyclic-softening hazard for fine-grained materials, if this type of soil is encountered, should be evaluated using the criteria presented by Bray and Sancio (2006). The liquefaction assessment during design-level study should also consider groundwater depth based on proposed site grades, when known.

3.1.4 Liquefaction-Induced Surface Rupture

In order for liquefaction-induced ground failure to occur, the pore water pressure generated within the liquefied strata must exert a force sufficient to break through the overlying soil and vent to the surface resulting in sand boils or fissures. Based on our review of the available exploration data, the sandy materials susceptible to liquefaction are generally interlayered with clay and silt that may not liquefy. Based on the current data, the potentially liquefiable soil are overlain by a non-liquefiable cap sufficient to prevent surface rupture, however, further study is necessary to determine if the clayey and silty interbedded soil will liquefy. If future evaluation shows an insufficient thickness of non-liquefiable soil cap, building pads may require construction with engineered fill and reinforcement such as geogrid to reduce the risk of surface rupture such as sand boils from occurring.

3.1.5 Lateral Spreading

Lateral spreading is a failure within a nearly horizontal soil zone (possibly due to liquefaction) that causes the overlying soil mass to move toward a free face or down a gentle slope. Based on the site location and distance from New York Slough, we anticipate that the risk for lateral spreading is low, however this risk should be further evaluated as part of future design-level study considering liquefaction potential.

3.2 NON-ENGINEERED FILL

As discussed, we identified that there is likely artificial fill approximately 2 to 15 feet deep throughout the site. The fill generally consists of loose to medium dense sand and gravel with variable silt and clay. Based on the 2006 and 2008 reports, we understand the majority of the fill throughout the site was placed following demolition of the on-site structures and improvements and was done so without geotechnical engineering controls. Based on conversations with you, we understand that drilling borings and digging test pits to determine the extents and thickness of the artificial fill is not feasible due to environmental constraints. We may recommend removal, processing and replacement of this existing non-engineered fill if not restricted by environmental constraints; all construction debris and any other unsuitable material should be removed from the fill during processing. After removal and recompaction of the fill underneath the building, shallow foundations can be used for structural support. If existing fill is left in place in portions of the site that are being developed with walkways or other improvements that are not sensitive to settlement, on-going maintenance should be anticipated. Areas receiving fill during site grading included in the 2008 T&R report may be excluded from a fill over excavation recommendation.

3.3 COMPRESSIBLE SOIL

The 2005 and 2006 investigations encountered an approximately 3 to 43-foot-thick layer of soft to medium stiff, compressible clay in the southeastern portion of the site and at isolated areas in

the northwestern portion of the site. Laboratory testing during previous exploration indicates soft clay in the southeastern portion of the site is normally to lightly overconsolidated. Structural loads and grading are yet to be determined; however, we anticipate that the compressible clay will experience moderate settlement under new fill loads if site grades are raised, with the magnitude of settlement depending on the building loads and height of fill.

Preliminarily, based on the previous laboratory testing and our experience on nearby projects, we anticipate settlement within the southwestern portion of the site approximately ½ inch per foot of additional fill may be possible; this settlement will primarily occur over up to 25 years after fill placement. Raising of site grades and construction of structures may result in several inches of settlement in areas underlain by compressible material. We recommend mitigating this settlement with a surcharge program with vertical wick drains and monitoring to confirm surcharge settlement is essentially complete before construction of the buildings.

Given the time passed since the construction of the earthen berm, we anticipate that the primary settlement of the underlying compressible material below the berm has been completed.

3.4 FLOODING

Federal Emergency Management Agency (FEMA) Flood Insurance Maps indicate that portions of the site are within a flood hazard area subject to inundation by the 0.2-percent-annual-chance flood event, or 1-percent-annual-chance flood event with average depth less than one foot or with drainage areas of less than one square mile. The Civil Engineer should review pertinent information relating to possible flood levels for the subject site based on final pad elevations and provide appropriate design measures for development of the project.

3.5 SOIL CORROSION POTENTIAL

One near-surface soil sample collected during the 2006 exploration was tested for corrosion potential. Based on the resistivity and chloride ion measurements, the soil samples are considered ‘highly corrosive’ with respect to corrosion of buried cast/ductile iron and steel structures according to the Caltrans Corrosion Guidelines (2018). Sulfate ion testing was not performed as a part of this investigation. We recommend performing additional testing during design-level study and retaining a corrosion consultant to provide specific long-term corrosion protection recommendations for buried metal and concrete pipes and foundations.

4.0 PLANNING CONSIDERATIONS

From a geotechnical engineering viewpoint, the site is suitable for the proposed development, provided the preliminary geotechnical considerations in this report are properly addressed in a design-level study. Based on our research and preliminary exploration, the main geotechnical concerns at the site include:

- Liquefaction potential and related secondary effects
- Shallow groundwater
- Compressible soil
- Existing fill
- Corrosive soil

In order to reduce the effects of the above geotechnical concerns, the foundations should be sufficiently stiff to move as a rigid units within tolerable differential movements. Foundation alternatives and combinations to be considered include structural mat foundation systems founded on ground improvement and deep foundation systems. We preliminarily discuss foundation considerations in the following sections.

4.1 2019 CBC SEISMIC DESIGN PARAMETERS

Based on the existing site data, we classified the site as Site Class E in accordance with the 2019 California Building Code (CBC). The 2019 CBC is based on the 2016 edition of the American Society of Civil Engineers document titled "Minimum Design Loads and Associated Criteria for Buildings and Other Structures" (ASCE 71-16).

We provide the 2019 CBC seismic design parameters in Table 4.1-1 below, which include design spectral response acceleration parameters based on the mapped Risk Targeted Maximum Considered Earthquake (MCE_R) spectral response acceleration parameters.

TABLE 4.1-1: 2019 CBC Seismic Design Parameters

PARAMETER	VALUE
Site Class	E
Mapped MCE_R Spectral Response Acceleration at Short Periods, S_S (g)	1.789
Mapped MCE_R Spectral Response Acceleration at 1-second Period, S_1 (g)	0.604

Long-period transition-period, T_L (sec)	8

*Requires site-specific ground motion hazard analysis
Latitude: 38.030244 degrees, **Longitude:** -121.878868 degrees

As noted in Table 4.1-1, a ground motion hazard analysis needs to be performed in accordance with Section 11.4.8 of ASCE 7-16, for structures on Site Class E.

Based on our experience with similar developments at nearby sites, performing a Non-Ergodic Site Response Analysis may result in a reduction of ground motions. The reduction in turn can result in significant project cost savings. Assessing the benefit of performing the non-ergodic site response analysis versus the baseline site-specific hazard analysis will require collaboration with the Structural Engineer once the design is further developed. The analysis can be conducted during or after the design-level study.

4.2 FOUNDATIONS

The primary hazards at the site with regard to foundation design include compressible soft clay, liquefaction potential, and existing non-engineered fill. Other considerations that should be further

assessed as to their impacts to foundations as part of the design-level study include shallow groundwater and corrosion potential.

Depending on the final site development concept and structural loads, we anticipate the proposed residential structures can be supported by a post-tensioned mat foundation; we recommend assuming building pads will comprise geogrid reinforced and engineered fill. Within areas of compressible soil deposits, we recommend surcharging to reduce the risk of static load settlement.

Preliminary recommendations based on the current concept plans are provided in the following sections.

4.2.1 Post-Tensioned Mat Foundation

We recommend that the proposed residential structures be supported on post-tensioned (PT) mat foundations bearing on competent soil or engineered fill. On a preliminary basis, we recommend assuming that PT mats are a minimum of 10 inches thick. The Structural Engineer should determine the actual PT mat thickness using geotechnical recommendations in a design-level geotechnical report.

PT mats are typically underlain by a moisture reduction system as recommended below. In addition, the building pad subgrade is typically moisture conditioned such that the subgrade soil is at a moisture content at least 3 to 5 percentage points above optimum immediately prior to foundation construction. The subgrade should not be allowed to dry prior to concrete placement.

Based on the results of liquefaction-induced settlement presented in the 2006 and 2018 investigation reports, PT slabs should be designed for up to 3 inches of post-liquefaction differential settlement. As discussed in Section 3.1.4, liquefaction-induced surface rupture will be further evaluated in future studies. For planning purposes, we recommend assuming mitigation of these hazards with construction of reinforced building pads comprising engineered fill and geogrid.

Future collaboration with the structural engineer is important to develop specific foundation recommendations once final structural details and loading are developed.

4.2.2 Slab Moisture Vapor Reduction

When buildings are constructed with a concrete slab-on-grade, including post-tensioned mats, water vapor from beneath the slab will migrate through the slab and into the building. This water vapor can be reduced but not stopped. Vapor transmission can negatively affect floor coverings and lead to increased moisture within a building. When water vapor migrating through the slab would be undesirable, we typically recommend a moisture retarder system to reduce, but not stop, water vapor transmission upward through the slab-on-grade. This generally involves installing a Class A vapor retarder membrane (ASTM E1745, latest edition). A layer of 4 inches of clean crushed rock may be provided below the concrete slab-on-grade floors. Lastly, we typically recommend a concrete water-cement ratio for slabs-on-grade of no more than 0.50, special inspections during concrete placement, and moist curing slabs for a minimum of 3 days (or other equivalent curing specified by the structural engineer).

4.2.3 Soft Soil Surcharge

Based on our understanding of the future structures on site, we estimate that buildings within the compressible soil deposits discussed in Section 3.3 may undergo several inches of static settlement following construction if not mitigated. To reduce the risk of static settlement within this area, we recommend installation of vertical wick drains through the compressible material and placement of a soil surcharge. For planning purposes, we estimate that wicks will be placed throughout the extents of the compressible soft clay deposits. We estimate a surcharge consisting of 5 feet fill above the final site grade will be sufficient to complete the primary settlement of underlying compressible soil. Based on our experience with similar projects, we anticipate the combination of wick drains spaced at 4 to 5 feet apart in addition to soil surcharge can reduce the time needed to complete primary settlement to approximately 4 to 6 months depending on thickness of compressible soil. Wick drain spacing, height of surcharge, and duration of settlement will be included in the design-level study.

5.0 PRELIMINARY PAVEMENT

5.1 FLEXIBLE PAVEMENT

Based on our experience with nearby developments, we assume an R-value of 5 for the site soil for preliminary pavement design. Using an assumed R-value of 5, and in accordance with the design methods contained in Topic 630 of Caltrans Highway Design Manual, we developed the preliminary flexible pavement sections presented in Table 5.1-1 below.

TABLE 5.1-1: Preliminary Pavement Sections

TRAFFIC INDEX	HOT MIX ASPHALT (inches)	CLASS 2 AGGREGATE BASE (inches)
5	3	10
6	3½	12½
7	4	15½

The above preliminary pavement sections are provided for estimating only. The Civil Engineer should determine the appropriate traffic indexes for parking areas, entry/exit drives, and fire/maintenance roads based on anticipated vehicle loading and frequencies.

5.2 RIGID PAVEMENT

Concrete pavement sections can be used to resist heavy loads and turning forces in areas such as fire lanes or trash enclosures. Final design of rigid pavement sections, and accompanying reinforcement, should be performed based on estimated traffic loads and frequencies. We recommend the following minimum design sections for rigid pavements.

- Use a minimum section of 6 inches of Portland Cement concrete over 6 inches of Caltrans Class 2 Aggregate Base.
- Concrete pavement should have a minimum 28-day compressive strength of 3,500 psi.
- Provide minimum control joint spacing in accordance with Portland Cement Association guidelines.

6.0 DESIGN-LEVEL GEOTECHNICAL REPORT

This report presents preliminary geotechnical findings, conclusions and recommendations intended for preliminary planning purposes only. A design-level geotechnical exploration and assessment should be performed when development plans are available. The design-level geotechnical report should further discuss topics presented in this report and address the following items.

- Additional field exploration and laboratory testing to support design-level recommendations
- Design-level analyses related to geologic and geotechnical hazards
- Site-specific seismic hazard analysis based on CBC 2019 (ASCE 7-16)
- Design recommendations for structural mat foundation systems and engineered building pads
- Design-level wick drain installation and soil surcharge recommendations
- Design-level earthwork and improvement design and construction recommendations

7.0 LIMITATIONS AND UNIFORMITY OF CONDITIONS

This report presents geotechnical recommendations for design of the improvements discussed in Section 1.2 for the 420 East 3rd Street project. If changes occur in the nature or design of the project, we should be allowed to review this report and provide additional recommendations, if any. It is the responsibility of the owner to transmit the information and recommendations of this report to the appropriate organizations or people involved in design of the project, including but not limited to developers, owners, buyers, architects, engineers, and designers. The conclusions and recommendations contained in this report are solely professional opinions and are valid for a period of no more than 2 years from the date of report issuance.

We strived to perform our professional services in accordance with generally accepted principles and practices currently employed in the area; no warranty is provided, either express or implied. There are risks of earth movement and property damages inherent in building on or with earth materials.

This report is based upon field and other conditions discovered at the time of report preparation. We developed this report with limited subsurface exploration data. No project-specific subsurface exploration was performed so actual subsurface conditions could vary from those assumed in this report. An exploration should be performed prior to site design. We recommend that the owner establish a contingency fund to cover such costs. If unexpected conditions are encountered, we must be notified immediately to review these conditions and provide additional and/or modified recommendations, as necessary.

Our services did not include excavation sloping or shoring, soil volume change factors, flood potential, or a geohazard exploration. In addition, our geotechnical exploration did not include work to determine the existence or extent of possible hazardous materials. If any hazardous materials are encountered during construction, the proper regulatory officials must be notified immediately.

This document must not be subject to unauthorized reuse, that is, reusing without our written authorization. Such authorization is essential because it requires us to evaluate the document's applicability given new circumstances, not the least of which is passage of time.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Former Johns Manville Plant Site
420 East 3rd Street
Pittsburg, California

FINDINGS AND OPINIONS

At the request of Integral Communities, GSI Environmental Inc. (GSI) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM International, Inc. (ASTM) Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Assessment Process* (ASTM Standard) for the property identified below and in Figures 1 and 2. Any exceptions to, or deletions from, this practice are described in Section 8.0 of this report.

SITE IDENTIFICATION	
Name:	Former Johns Manville Plant Site
Address:	420 East 3rd Street
City:	Pittsburg
County:	Contra Costa
State:	California
Assessor Parcel Number(s):	073-050-001-4

The purpose of the Phase I ESA was to identify Recognized Environmental Conditions (RECs) as defined in the ASTM Standard. It is our understanding that this Phase I ESA has been solicited as part of environmental due diligence activities in connection with the acquisition and redevelopment of the Site.

This report presents the results of the Phase I ESA and is based on the following:

- Review of the physical setting and Site reconnaissance;
- Review of historical information from Sanborn fire insurance maps, topographic maps, aerial photographs, and city directories;
- Review of prior Site reports provided to GSI;
- Information obtained from owner and/or user interviews;
- Review of available agency files, including the following;
    - City of Pittsburg Building Department (Community Development)
    - City of Pittsburg Public Works Department
    - Contra Costa County Environmental Health Department
    - Contra Costa County Fire Protection Department
    - Bay Area Air Quality Management District (BAAQMD)
    - Department of Toxic Substances Control (DTSC)
    - San Francisco Bay Regional Water Quality Control Board (Water Board)
    - CalFire, Office of the State Fire Marshal
    - State Water Resources Control Board (SWRCB) GeoTracker website

- DTSC EnviroStor website
- California Geologic Energy Management Division (CalGEM) website

The following summarizes the findings for the Site based on review of Site reconnaissance information, regulatory agency databases and files, historical information, physical setting information, and readily available documents.

- The Site located at 420 East 3rd Street in north Pittsburg, California is presently undeveloped and secured by a chain-link fence.
- No RECs were observed during the Site reconnaissance, only *de minimis* conditions were observed.
- A review of historical information indicates that the former Site occupant, Johns Manville Products Company, produced asbestos-cement products, asphalt roofing materials, and asbestos-containing pipe covering. In addition to numerous above-ground tanks and what appears to be materials stored outdoors, a surface impoundment (evaporation pond) is visible on aerial photographs of the Site. As a result of Site operations between 1927 and 2003, a significant amount of asbestos-containing material (ACM) was deposited onto the ground. Manufacture of ACM ceased in 1980 and commercial-grade roofing materials were manufactured at the plant until 2003, when all operations were discontinued.
- Areas of potential concern at the former Plant Site were a former evaporation pond and several additional areas of concern that were discovered while abatement and demolition activities were being conducted. Several environmental investigations were conducted at the Site, beginning in 1986 and continuing through 2005. The selected remedy for the former Plant Site was the removal of ACM- and petroleum hydrocarbon-affected soil from the Site and placement in engineered containment berms along the eastern boundary of the former Plant Site. ACM-impacted material and debris were placed into a trench dug to 10 feet bgs along the eastern boundary of the former Plant Site, which was then capped by hydrocarbon-impacted soil, as approved by the DTSC. An engineered textile and 2 feet of clean, low-permeability soil was then added to the top of the ACM and petroleum hydrocarbon-impacted materials to create the capped, vegetated berms. There is an automated irrigation system to maintain the vegetation. The berms consist of two distinct segments referred to below as the “northern” and “southern” berms. Drainage swales were installed adjacent to the berm and graded so that stormwater runs off toward catch basins on the eastern Site boundary. Ongoing maintenance and monitoring have been continuously performed in accordance with an Operations and Maintenance (O&M) Agreement for the Site.
- Post-remediation environmental samples indicate that groundwater contains volatile organic compounds (VOCs) and total petroleum hydrocarbons (TPH) quantified as diesel (TPH-d), oil (TPH-o), and gasoline (TPH-g), some of which exceed drinking water maximum contaminant levels (MCLs). Soil vapor contains VOCs, including tetrachloroethene (PCE), trichloroethene (TCE), and BTEX (volatile aromatic compounds benzene, toluene, ethylbenzene, and xylene, often associated with petroleum hydrocarbons). The most elevated petroleum hydrocarbon and BTEX concentrations were from samples collected in the vicinity of the former evaporation pond and the most elevated VOC concentrations were from samples collected in the southwestern quadrant of the Site. Soil contains asbestos below the 1% threshold to be considered a hazardous material or waste.

- O&M inspections at the Site report that the Plant Site and encapsulation berms are in good condition. Landscape maintenance, irrigation system repairs, rodent bait station inspections, and rodent burrow destruction occur on a regular basis.

This assessment has revealed no RECs, controlled RECs (CRECs), historical RECs (HRECs), or *de minimis* conditions in connection with the Site except for those described below.

Recognized Environmental Conditions (RECs)

RECs are defined in the ASTM Standard as "*the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*

This Phase I ESA has revealed no evidence of RECs in connection with the Site, with the following exception:

- Groundwater and soil vapor beneath the Site is impacted with VOCs and petroleum hydrocarbons. VOCs in groundwater may be originating from an off-site, upgradient source. This condition is identified as a REC.

Controlled Recognized Environmental Conditions (CRECs)

CRECs are defined in the ASTM Standard as *"a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. (for example, property use restrictions, or engineering controls)."*

This Phase I ESA has revealed no evidence of CRECs in connection with the Site, with the following exceptions:

- Two engineered encapsulation berms contain ACM-impacted soil and debris, and petroleum hydrocarbon-impacted soil that were excavated during Site remedial actions. The Bermed Property is subject to the Site Land Use Covenant (LUC). This condition is identified as a CREC.
- The Soil Management Area within the Residential Property has underlying soil impacted with VOCs and petroleum hydrocarbons below 4 feet above the National Geodetic Vertical Datum (NGVD). The Residential Property is subject to the Site LUC. This condition is identified as a CREC.

Historical Recognized Environmental Conditions (HRECs)

HRECs are defined in in the ASTM Standard as *"a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria*

established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, or engineering controls)." [1]

This Phase I ESA has revealed no evidence of HRECs in connection with the Site.

De Minimis **Conditions**

De minimis conditions are defined in in the ASTM Standard as *"a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions or controlled recognized environmental conditions."*

This Phase I ESA has revealed no evidence of de minimis conditions in connection with the Site, with the following exception:

- One unmarked, 55-gallon steel drum (with lid) exists in the northeast corner of the Site along the fence line. Two unmarked, 55-gallon steel drums (with lids) exist within the bermed area, specifically located at the southwest corner of the northernmost fenced-in berm area. The content of the drums should be characterized for waste disposal profiling and disposed at an appropriately licensed facility.

Recommendations

GSI has evaluated the information collected during the course of this Phase I ESA. Based on the Findings above, we recommend the following:

- Additional soil vapor investigation to assess potential vapor intrusion risks with respect to proposed future residential development; and
- Additional groundwater investigation to assess impacts from the upgradient dry cleaner property and previous Site operations.

[1] If the Site has received closure in the past, but a review of the closure information indicates that Site conditions do not meet unrestricted/residential land use standards, the Site is no longer considered an HREC, and must be identified as an REC.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Former Johns Manville Plant Site
420 East 3rd Street
Pittsburg, California

1.0 INTRODUCTION

This Phase I Environmental Site Assessment (ESA) was conducted to fulfill ASTM International, Inc. (ASTM) Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM Standard) and the U.S. Environmental Protection Agency (EPA) *Standards and Practices for All Appropriate Inquiries* (40 CFR Part 312) for the property identified below (the Site; Figures 1 and 2).

SITE IDENTIFICATION	
Name:	Former Johns Manville Plant Site
Address:	420 East 3rd Street
City:	Pittsburg
County:	Contra Costa
State:	California
Assessor Parcel Number(s):	073-050-001-4

1.1 Purpose of the ESA

The purpose of this ESA was to identify Recognized Environmental Conditions (RECs) as defined in the ASTM Standard. It is our understanding that this Phase I ESA has been solicited as part of environmental due diligence activities in connection with the acquisition and redevelopment of the Site.

1.2 Significant Assumptions or Data Gaps

Owner and User questionnaires were not returned for this ESA. However, numerous documents pertaining to Site environmental issues, investigations, and remediation were obtained by GSI for review. It is our opinion that no significant data gaps exist in the availability of documentation regarding Site environmental conditions.

1.3 Limitations

GSI has completed this Phase I ESA in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment. This Phase I ESA is not and should not be construed as a warranty or guarantee, expressed or implied, regarding the presence or absence of environmental contaminants that may affect the Site. All findings, opinions, and conclusions reported in this Phase I ESA are based on conditions and available information existing at the time of the assessment. No independent verification of the information provided to GSI was made. While GSI has no reason to doubt the accuracy of the information provided, this report is accurate and complete only to the extent that information provided to GSI was itself accurate and complete. Site conditions and regulations (local, state, tribal, and federal) can change over time. Therefore, changes in Site conditions, available information, and/or regulations may alter the findings, opinions, and conclusions of this Phase I ESA.

1.4 Non-Scope Considerations

Non-scope considerations include environmental issues or conditions that may warrant additional assessment but are outside the scope of the ASTM Standard. Environmental issues that are

considered non-scope considerations are summarized in the ASTM standard and include, but are not limited to, asbestos-containing materials (ACM), indoor air quality, lead-based paint, mold, and radon. GSI was not retained to evaluate non-scope considerations as part of this ESA.

1.5 User Reliance

This report and all related correspondence have been prepared exclusively for use by Integral Communities and may not be relied upon by any other person or entity without the express written permission of GSI and Integral Communities. Without express written permission of both GSI and Integral Communities, no third parties shall have any rights of recourse or recovery under course of action against GSI, its officers, employees, subcontractors, vendors, or successors.

2.0 SITE DESCRIPTION

GSI contracted with EDR to compile a physical setting report (Appendix A) that was used in combination with information obtained during Site reconnaissance, historical document review, interviews with the Site owner representatives, review of regulatory agency records, and review of prior Site reports provided to GSI to produce a description of the Site and its physical setting.

2.1 Current and Past Site Use

Historically, the Site was occupied by the Johns Manville Products Company, which from the mid-1920s until 1980 produced ACM products, such as asbestos-cement products, asphalt roofing materials, and asbestos-containing pipe covering. As a result of Site operations, a significant amount of ACM was deposited onto the ground. Manufacture of ACM ceased in 1980 and commercial-grade roofing materials were manufactured at the plant until 2003, when all operations were discontinued. Several environmental investigations were conducted at the Site, beginning in 1986 and continuing through 2005. Historical areas of concern included a former evaporation pond, a former asbestos product storage area, and groundwater impacted by the former evaporation pond.

The Johns Manville Products Company entered into a Voluntary Cleanup Agreement (VCA) with the Department of Toxic Substances (DTSC) in November 2000. Pittsburg River Park LLC purchased the Site in September 2004 and entered into a new VCA with the DTSC in November 2004. Asbestos abatement and demolition activities were initiated in late 2005 and continued throughout 2006 and again in late 2007 and early 2008. Remedial actions to excavate and encapsulate ACM- and petroleum hydrocarbon-impacted soil were conducted in parallel with Site demolition activities, resulting in the removal of 11 underground storage tanks (USTs), off-site disposal of approximately 10,500 cubic yards of ACM, off-site disposal of approximately 18,000 cubic yards of petroleum hydrocarbon-impacted soil, and the encapsulation of approximately 60,000 cubic yards of ACM-affected soil and debris and 4,000 cubic yards of petroleum hydrocarbon-impacted soil within the on-Site bermed area. All on-Site groundwater monitoring wells were abandoned prior to excavation activities. Two water supply wells that were discovered during demolition activities were also abandoned at that time. The Site has remained vacant since 2005 (LFR, 2008a). Since 2008, the bermed area has been inspected twice a year in accordance with the Site Operations and Maintenance (O&M) Plan (LFR, 2008b). No significant damage or issues have been reported. The most frequently reported maintenance issue is the presence of rodent burrows in the upper 2 feet of clean fill cover for the berms (PES, 2019).

2.2 Site Physical Description

The Site is approximately 20.5 acres and is currently undeveloped. The Site is separated into two sub-areas referred to as the “Bermed Property” and the “Residential Property.” The Bermed Property is approximately 3.2 acres along the length of the eastern Site boundary, where

asbestos- and petroleum hydrocarbon-impacted soil were stockpiled and covered (as described in Section 2.1). There are two sections of the berm separated by a road, approximately 58 feet wide, that provides access to Harbor Street. The north section of the berm is approximately 1,070 feet long and the south section of the berm is approximately 300 feet long. The berms are both approximately 85 feet wide and are roughly 10 feet high (LFR, 2008a). The Residential Property is the remainder of the Site, which has undergone remediation and has been approved by the DTSC for residential use (PES, 2017).

The Site is currently a flat, fenced-in vacant lot, primarily covered by grass. Trees and shrubbery exist along the southern fence-line and sporadically along the western fence-line. The Bermed Property abuts the eastern boundary of the Site and is isolated by fencing.

SITE DETAILS	
Physical Description:	Undeveloped parcel located at the southwest corner of the intersection at 3rd Street and Harbor Boulevard in north Pittsburg, California
Roads:	The property is bounded by E. 3rd Street to the north, by the City of Pittsburg's E. 8th Street Linear Park to the south, by Harbor Street to the east, and by a residential neighborhood to the west. There is a graded dirt road on the Site that extends south from E. 3rd Street and then east to Harbor Street.
Parking Facilities:	N/A
Site Zoning:	Most of the property is located in the Downtown Medium Density Residential Use District (DMDR) zoning designation. The northern part of the property is in a Downtown Commercial (DC) zoning district.[2]
Vicinity Zoning:	Residential, Commercial, and Industrial.
Site Size (acres):	20.5 acres
Current Property Use:	Undeveloped and vacant
Surface Drainage Direction:	Surface water from the Site drains into structures installed to capture runoff from the Residential Property. Runoff from the Bermed Property is collected in swales that flow to catch basins located on the eastern boundary of the Site that are connected to the city stormwater system.

BUILDING DESCRIPTION	
Number of Buildings:	None
Building Age:	N/A
Building Details	N/A
Basements:	N/A
Building Square footage:	N/A
Building Occupants:	N/A
Building Operations:	N/A
Building Interior Hazardous Substance Use or Presence:	N/A
Building Exterior Hazardous Substance Use or Presence:	N/A
Other:	Four buildings in the northern half of the Site were demolished in 2005-2006.

[2] http://www.ci.pittsburg.ca.us/index.aspx?page=228

SITE UTILITIES	
Sewage:	City provides sewer services in vicinity to the Site.
Electricity:	Pacific Gas and Electric (PG&E) services the area in vicinity to the Site.
Potable Water:	City provides water services. An above-ground irrigation system was installed at the Site to support vegetation.
Heating System:	N/A
Cooling System:	N/A
Gas:	PG&E services the area in vicinity to the Site.
Other:	Site stormwater catch basins, which collect runoff from the bermed area, are connected to the city stormwater system.

2.3 Surrounding Properties

SURROUNDING PROPERTIES	
Direction	**Address and Use**
North and Northeast:	Vacant land, Koch Carbon at 707 East 3rd Street
East and Southeast:	Several light-industrial businesses: Collision Repair at 598 East 3rd Street, Auto Truck & Marine Services at 601 Industry Road, US Glass & Aluminum, Inc. at 605 Industry Road, Calpine Power/Los Medanos Energy at 750 East 3rd Street
South and Southwest:	City park, Faultless Cleaners at 427 East 10th Street (permanently closed), Universal Auto Repair at 499 East 10th Street
West and Northwest:	Single-family residences

2.4 Geologic, Hydrogeologic, Hydrologic, and Topographic Conditions

The Site lies within the Coast Range geomorphic province and the Pittsburg Plain Groundwater Basin. Geology in the area is characterized by alluvial sediments from the Coast Range mountains and fluvial deposits from the Sacramento River Delta (ERM, 2006a). According to the EDR Radius Map Report (Appendix A), portions of the Site are within the 500-year flood zone. Up to 7 feet of fill material has been observed during previous Site investigations (URS, 2006). Native lithology underlying the Site and vicinity is composed of interlayered silt, sand, clay, and gravel. Groundwater flows to the north-northeast toward New York Slough, which is the closest surface water body to the Site. The San Joaquin River enters Suisun Bay through New York Slough. Previous reports have encountered groundwater at depths as shallow as 5 feet below ground surface (bgs) and as deep as 19 feet bgs (URS, 2006; LFR, 2008a). A recent geotechnical investigation reported groundwater at 3.3 to 7.9 feet bgs in the vicinity of the Site (Rockridge Geotechnical, 2018). Groundwater beneath the Site contains total petroleum hydrocarbons (TPH) identified as diesel (TPH-d), volatile organic compounds (VOCs), and semi-volatile organic compounds (SVOCs). An upgradient, off-site source may be a contributor to VOC impacts to groundwater (Arcadis, 2017).

According to recent topographic mapping, the surface elevation ranges from 12 to 13 feet above the North American Vertical Datum of 1988 (NAVD88) at the north end of the Site and 15 to 20 feet NAVD88 at the south end of the Site (Sandis, 2017). The berms on the east side of the Site are approximately 10 feet higher than the surrounding land.

SITE DATA	CURRENT AVAILABLE INFORMATION
Depth to Groundwater:	3.3 to 7.9 feet bgs (Rockridge Geotechnical, 2018)
Closest Surface Water:	New York Slough, approximately 1,000 feet north
Tidal Influence:	Likely in shallow water-bearing zone (ERM, 2006a)

3.0 SITE RECONNAISSANCE

Site reconnaissance was performed on 10 March 2021 to observe current Site conditions and identify and document potential notable environmental conditions. Kalin Howell of GSI conducted the Site reconnaissance. The table below summarizes observations during the Site visit. Photographs taken during Site reconnaissance are included in Appendix B.

Observations of Site conditions that may indicate the likelihood of an REC in connection with the Site are discussed in the following sections. If the observation is indicated with a "yes", additional information related to that item is included below the table and in Section 7.0 if relevant to Site RECs.

GENERAL OBSERVATIONS	YES	NO
Heating/Cooling System		X
Hazardous Substances and Petroleum Products in Connection with Identified Uses		X
Storage Tanks (current or removed)		X
Wells (dry, irrigation, injection, monitoring, abandoned, etc.)		X
Drains, Sumps, Clarifiers	X	
Odors		X
Pools of Liquid	X	
Drums	X	
Hazardous Substance and Petroleum Products Containers (Not Necessarily in Connection with Identified Uses)		X
Unidentified Substance Containers		X
Air Emissions		X
Equipment that may Contain PCBs		X
Soil Stockpiles		X
Pits, Ponds, or Lagoons (Site or adjoining)		X
Stained Soil or Pavement		X
Stressed Vegetation from Something other than Insufficient Water	X	
Solid Waste, Construction Debris, Trash Mounds	X	
Wastewater, Stormwater, Discharged Water		X
Septic Systems or Cesspools		X

Drains, Sumps, Clarifiers

Grated stormwater drains exist at the southeast and northeast corners of the Site along the fence-line.

Pools of Liquid

Various small (less than 4 feet in diameter) pools of water were observed across the Site, primarily on the north-south trending gravel path located along the western side of the Site. A rainfall event occurred the day prior to the Site reconnaissance.

Drums

One unmarked, 55-gallon steel drum (with lid) exists in the northeast corner of the Site along the fence line. Two unmarked, 55-gallon steel drums (with lids) exist within the bermed area, specifically located at the southwest corner of the northernmost fenced-in berm area.

Stressed Vegetation from Something other than Insufficient Water

A roughly 10-foot by 10-foot blackened area exists in the south-central area of the Site. The area appears to be a small burn site and contains pieces of charred wood, part of a charred rubber automobile tire, a charred microchip, and charred grasses.

Solid Waste, Construction Debris, Trash Mounds

Various trash debris exists throughout the Site, primarily collecting along the fences. Trash debris includes, but is not limited to, cardboard pieces, plastic jugs, beverage bottles, plastic wrappers, cigarette butts, and cylindrical wooden logs.

4.0 HISTORICAL INFORMATION

GSI contracted with EDR to compile historical documents for the Site and surrounding area to develop an understanding of the history of the Site. The following historical data sources were compiled and are included in the Appendices:

- Sanborn fire insurance maps (Appendix C);
- United States Geological Survey (USGS) topographic maps (Appendix D);
- Aerial photographs (Appendix E); and
- City directories (Appendix F).

Pertinent historical information is incorporated in the Summary of Findings (Section 7.0).

Historical Source	Available Dates
Sanborn Fire Insurance Maps	1927, 1949, 1958, 1966
USGS Topographic Maps	1907, 1908, 1918, 1953, 1968, 1973, 1978-1980, 1997, 2012
Aerial Photographs	1939, 1952, 1959, 1963, 1966, 1979, 1984, 1993, 1998, 2006, 2009, 2012, 2016
City Directories	1975, 1980, 1985, 1989, 1992, 1995, 2000, 2005, 2010, 2014, 2017

Subject Property

Documents reviewed for this Phase I ESA indicated that the Johns Manville Products Company produced asbestos-cement products, asphalt roofing materials, and asbestos-containing pipe covering. Initially, there were four buildings on the northern half of the Site, which are visible on the 1927 Sanborn Fire Insurance Map of the facility; two additional warehouse-like buildings appear in the southwest quadrant of the Site on later aerial photographs, the first in 1952 and the second (which appears to be an expansion of the first) in 1966. In addition to numerous above-ground tanks and what appears to be materials stored outdoors, a surface impoundment is visible on aerial photographs from 1939 through 1963. Four asphalt stills used to convert heavy oil to asphalt are depicted on the Sanborn Fire Insurance Maps (1949-1966) and are also visible on the aerial photographs (1939-1966). Vapors off-gassing from the stills were conveyed to a condenser, mixed with water, and the resultant oil-water slurry was piped to this surface impoundment, referred to as an evaporation pond. The evaporation pond was later filled with scrap and construction debris (ERM, 2006a; PES, 2017). On the 2006 aerial photograph, the on-Site structures are no longer present.

As a result of Site operations between 1927 and 2003, a significant amount of ACM was deposited onto the ground. Manufacture of ACM ceased in 1980 and commercial-grade roofing materials were manufactured at the plant until 2003, when all operations were discontinued. Areas of potential concern at the former Plant Site were a former evaporation pond and several additional

areas of concern that were discovered while abatement and demolition activities were being conducted. Several environmental investigations were conducted at the Site, beginning in 1986 and continuing through 2005. The selected remedy for the former Plant Site was the construction of engineered containment berms along the eastern boundary of the former Plant Site (ERM; 2006a, 2006b; LFR, 2007). ACM-impacted material and debris were placed into a trench dug to 10 feet bgs along the eastern boundary of the former Plant Site, which was then capped by hydrocarbon-impacted soil, as approved by the DTSC. An engineered textile and 2 feet of clean, low-permeability soil were then added to the top of the ACM- and petroleum hydrocarbon-impacted materials to create the capped, vegetated berms. There is an automated irrigation system to maintain the vegetation. The berms consist of two distinct segments referred to below as the "northern" and "southern" berms. Drainage swales were installed adjacent to the berm and graded so that stormwater runs off toward catch basins on the eastern Site boundary (Arcadis, 2016). The Bermed Area is visible on the 2009, 2012, and 2016 aerial photographs.

Ongoing maintenance and monitoring have been continuously performed in accordance with an O&M Agreement (DTSC 2009a).

Surrounding Properties

Two parcels associated with the Johns Manville Company are adjacent to the Site: the Access Parcel and the North Parcel. The Access Parcel has remained undeveloped since the early 1900s. The North Parcel was used for bulk asbestos fiber storage from approximately 1926 to the mid-1980s. Raw material was delivered to the property by barge from the New York Slough.

Property to the west and south appears to have been largely residential from the early 1900s through the present with a small number of commercial businesses interspersed at times (e.g., automobile painting and storage shown west of the Site on the 1927 and 1966 Sanborn maps, respectively). Rail lines were historically located to the south and east of the Site. The property east of the Site appears to have been agricultural, transitioning to industrial uses around the 1950s. The former Tesoro coke facility was located north of the Site. The former Tesoro property was first developed in the 1920s and was used by Tesoro to convey petroleum coke from easterly-adjacent coke piles onto barges that would berth at the adjacent wharf on New York Slough. The bulk coke piles and associated development on this property appear to have been removed in the 2012-2016 timeframe.

Historical review details are summarized in the table below.

Historical Summary			
Year	**Source**	**Site Description**	**Adjacent Site Description**
1907	USGS	No buildings indicated on the Site. There is a road on the northern portion of the Site that appears to connect the Site to the City of Pittsburg. A rail line enters the property from the southwest and splits into two mid-Site, with one line extending north to New York Slough and one line extending east to a developed area off-site.	Development is present west of the Site and in a smaller area east of the Site.
1908	USGS	No change.	No change.
1918	USGS	No change.	No change.
1927	Sanborn map	Four buildings present on the northern portion of the Site with the following labels: Pipe Covering Building, Shingle Building, and two unlabeled building footprints labeled "CONC FOUNDATIONS." Also	Adjacent properties to the south, east, and north are not shown. Residential lots are depicted to the west.

Historical Summary			
Year	**Source**	**Site Description**	**Adjacent Site Description**
		identified: Steel fuel oil "TK ON GRD" and boiler house. A rail spur that splits into three lines enters the southeast area of the site from a rail line running along present-day Harbor Street.	
1939	Aerial photo	Four buildings present on the northern portion of the Site. There are a number of ancillary structures, tanks, and/or material accumulations on the central eastern portion of the Site, just south of the easternmost three buildings. There is what appears to be a surface impoundment in the southeastern portion of the Site, indicated by a roughly circular dark spot. The rail spur is present, with the main line running parallel to Harbor Street, then a single spur crossing Harbor street in a northwest/southeast direction to enter/exit the property in the southeast portion of the Site, and the spur splitting into three spurs in the central portion of the Site.	There appear to be numerous small lots with presumably residential structures to the west and south of the property. The land immediately to the east of the Site is mostly undeveloped with a few roads and/or rail lines. East of this a large parcel with what appears to be numerous narrow rectangular plots of land (potentially agricultural) and some narrow structures that could be warehouses or greenhouses. The property to the north of the Site is mostly undeveloped with what appears to be one primary road and potentially a number of smaller roads. There may also be a structure or foundation on the eastern side of the site.
1949	Sanborn map	Four buildings present on the northern portion of the Site with the following labels: Pipe Covering Building, Shingle Building, Roofing Storage, and Rag Storage/Pulp Beater Building. Machine shop and woodworking uses, and paints and putty canning are also indicated on the building labeled Roofing Storage. Four recuperation tanks and a sand tank or bin are depicted in the Rag Storage Yard, in the southwestern portion of the Rag Storage/Pulp Beater Building. Coating and Saturator tanks, a transformer room, and a paper storage area are depicted in the southeastern portion of the Rag Storage/Pulp Beater Building. Four stills are shown south of the Rag Storage Yard. Process lines and fire (water) lines are depicted across the property. A number of large tanks are also depicted on the central portion of the property, the following of which were labeled: steel fuel oil (2,500 gal), steel "TK ON GRD" (100,000 gal), pump and separator tank, No. 1 (100,000 gal), No. 2 (100,000 gal), No. 3 (50,000 gal), and No. 4 (5,000 gal). The rail spur is also depicted on the map.	Adjacent properties to the south, east, and north are not shown. Residential lots are depicted to the west.
1952	Aerial photo	The Site is mostly unchanged from the 1939 aerial photograph, except for the appearance of a warehouse in the southwestern corner of the property and a number of small ancillary structures, tanks, or accumulations between the warehouse and the northwesternmost building.	The adjacent properties are mostly unchanged from the 1939 aerial photograph, except for some structures that appear on the northern portion of the property immediately to the east of the Site. The numerous narrow rectangular plots of land are no longer present on the property further to the east, but the narrow structures that could be warehouses or greenhouses are still present.

Historical Summary			
Year	**Source**	**Site Description**	**Adjacent Site Description**
1953	USGS	Four buildings present on the northern portion of the Site. One building is depicted in the southwest area of the Site. Three rail spurs enter the southeast area of the site from a rail line running along present-day Harbor Street. A water tower is identified on the Site.	Significant development is depicted in the City of Pittsburg and surrounding area. A steel mill is identified east of the Site.
1958	Sanborn map	The Site is mostly unchanged from the depiction shown on the 1949 map. A finished product warehouse is depicted in the southwestern area of the property. The area previously labeled as the Rag Storage Yard is occupied by a 100,000 gal. water tank, six recuperation tanks, a filler dust tank, and three sand bins.	Adjacent properties to the south, east, and north are not shown. Residential lots are depicted to the west.
1959	Aerial photo	The Site is mostly unchanged from the 1952 aerial photograph, except that there are a larger number of what appear to be small ancillary structures, tanks, or accumulations in the central portion of the Site. There appears to be some surface discoloration (much lighter in color) surrounding the supposed surface impoundment.	The adjacent properties are mostly unchanged from the 1952 aerial photograph, except for additional structures that appear on the property immediately to the east of the Site. There appears to be a grid-like structure on the property north of the Site.
1963	Aerial photo	The Site is mostly unchanged from the 1959 aerial photograph, although the 1963 image has much better resolution. The four buildings on the northern portion of the Site are clearly visible, along with some tanks in the area between the two easternmost buildings. There are numerous above-ground tanks present in the central portion of the Site, along with a water tower, rail cars, small structures. There are some small structures in the southeast quadrant of the Site, with what appear to be neatly organized material accumulations or bins. The surface impoundment is not as pronounced as was in early images.	The adjacent properties are mostly unchanged from the 1959 aerial photograph. The property immediately to the east of the Site has additional structures, cars parked alongside roadways and buildings, and what appears to be outdoor storage. The narrow structures that could have been either warehouses or greenhouses on the property further to the east are no longer present and the property appears to be roughly graded. The property north of the Site has been further developed into what appears to be a bulk materials processing and/or shipping yard (presumably coal or coke).
1966	Aerial photo	The Site is mostly unchanged from the 1963 aerial photograph. The surface impoundment is no longer present and there are a few small structures in its former location. The warehouse in the southwestern quadrant appears to have doubled in size.	The adjacent properties are mostly unchanged from the 1963 aerial photograph. The area of vacant land in the southern portion of the property to the east of the Site appears to have drainage features. The property to the north of the Site appears to have more bulk material on-site, and a barge or ship is present at the dock on New York Slough.
1966	Sanborn map	The Site is mostly unchanged from the depiction shown on the 1958 map.	Adjacent properties to the south, east, and north are not shown. Residential lots are depicted to the west.
1968	USGS	No change.	Additional development is depicted in the City of Pittsburg and surrounding area.
1973	USGS	The Site is mostly unchanged, with four smaller structures depicted in the middle of the property.	No change.

Historical Summary			
Year	**Source**	**Site Description**	**Adjacent Site Description**
1978-1980	USGS	The Site is mostly unchanged, with one smaller structure depicted in the eastern middle of the property.	Industrial waste ponds are depicted on the property east of the Site. Additional development is depicted.
1979	Aerial photo	No change from the 1966 aerial photograph.	No change from the 1966 aerial photograph.
1984	Aerial photo	No change.	No change.
1993	Aerial photo	The Site is mostly unchanged from the 1984 aerial photograph. There are fewer structures and accumulations in the southeastern quadrant of the Site.	The adjacent properties to the south, east, and north are mostly unchanged from the 1984 aerial photograph. There appears to be additional grading, delineation, and/or drainage features in the area identified as industrial waste ponds on the 1980 USGS topographic map. It appears that removal of some of the rail lines has occurred. The adjacent properties to the west have been razed and regraded. A new subdivision and associated streets have started to be developed.
1997	USGS	No change.	No change.
1998	Aerial photo	The Site is mostly unchanged from the 1993 aerial photograph.	The adjacent properties are mostly unchanged from the 1993 aerial photograph, except that the subdivision to the west of the Site has largely been completed except for the northernmost portion.
2006	Aerial photo	On-site structures are no longer present. There appear to be remnants of foundations in the southern portion of the Site, and potentially some discoloration (much lighter in color) in the central to southern central portion of the Site. Most of the Site appears to be bare soil.	The adjacent properties are mostly unchanged from the 1998 aerial photograph. What appears to be an industrial development is present east of the Site. A linear park appears south of the Site. And the subdivision to the west of the Site appears to be completely developed.
2009	Aerial photo	The Site appears vacant, with the appearance of mostly bare soil and potentially some minor vegetation. The bermed area is visible along the eastern Site boundary.	The adjacent properties are mostly unchanged from the 2006 aerial photograph, except for an additional industrial development southeast of the Site.
2012	Aerial photo	No change.	The adjacent properties are mostly unchanged from the 2009 aerial photograph, except that the bulk materials stored on the property north of the Site are no longer present.
2012	USGS	Site is vacant. No structures, roads, or rail spurs are depicted on the property.	No change.
2016	Aerial photo	No change.	The adjacent properties are mostly unchanged from the 2012 aerial photograph, except that the bulk materials facility north of the Site is no longer present.

City directory listings were provided by EDR. The only address that appeared to be associated with the Site in the directory listings was 600 East 3rd Street. Johns Manville-related business names were also listed without any specific address. The following listings are potentially associated with industrial activities or hazardous material use based on the business name.

Historical City Directory Summary		
Address	**Year**	**Directory Listing**
325 E. 3rd Street	1975	Browns Garage
389 E. 3rd Street	1980	Walnut Creek Roofing

5.0 OWNER/USER PROVIDED INFORMATION AND INTERVIEWS

The following owner and user provided documentation was reviewed for this Phase I ESA.

5.1 Documents

The documents summarized below were reviewed as part of this Phase I ESA.

Final Supplemental Soil Characterization (URS, 2006)

- This report documents Site characterization activities conducted in anticipation of constructing multi-family residential and mixed-use housing on the property. Soil was collected from 16 borings in November 2005 and analyzed for asbestos, VOCs, SVOCs, TPH, polychlorinated biphenyls (PCBs), and metals.

Final Remedial Action Plan (RAP), Harbor Park (Former Johns Manville Plant) (ERM, 2006a)

- The remedy selected for the Site was excavation and encapsulation of the ACM- and petroleum hydrocarbon-impacted soil in an engineered berm. The RAP established cleanup goals for Site contaminants of concern in soil. Monitored natural attenuation was selected as the remedy for groundwater with chemicals exceeding maximum contaminant levels (MCLs) for drinking water. The RAP also presents a work plan for and summarizes the results of a groundwater treatability study for petroleum hydrocarbons. From June to August 2005 approximately 14,000 gallons of groundwater were extracted from 20 to 25 feet bgs in the evaporation pond area to remove non-aqueous phase liquid (NAPL). Approximately 202 gallons of NAPL were removed, plus an additional 104 gallons of petroleum hydrocarbon-related contaminants dissolved in groundwater.

Draft Final Remedial Design and Implementation Plan, Harbor Park Development (Former Johns Manville Plant) (ERM, 2006b)

- This document presents the engineering plan for remedy implementation. It specifies the methods and safety and quality control practices to construct the remedy, outlines the well abandonment procedure (if additional wells are discovered during remedy construction), and defines the post-remediation confirmation sampling and general operations and maintenance plan.

Addendum to the Remedial Design and Implementation Plan, Harbor Park Development (Former Johns Manville) (LFR, 2007)

- This addendum to ERM, 2006b, revised and clarified portions of the remedial design based on conditions encountered in the field. It further specifies the collection of post-remediation soil and soil gas samples and documents that future excavations should not extend below the water table (defined as the upper boundary of the sediments that are within the seasonal limits of groundwater fluctuation, defined as 4 feet above the National Geodetic Vertical Datum (NGVD)[3] at the time).

Remedial Action Completion Report, Former Johns Manville Facility (LFR, 2008a)

- Post-remediation groundwater samples contained TPH-d (maximum 500,000 micrograms per liter [μg/L]), TPH as motor oil (TPH-o) (maximum 540,000 μg/L), TPH as gasoline (TPH-g) (maximum 770 μg/L), and VOCs. BTEX (volatile aromatic compounds benzene, toluene, ethylbenzene, and xylene, often associated with petroleum hydrocarbons) compounds were detected in the sample collected at GGW-6, located in the former evaporation pond area. Tetrachloroethene (PCE) and trichloroethene (TCE) were

[3] The Addendum to the Remedial Design and Implementation Plan (LFR, 2008b) references the National Geodetic Vertical Datum of 1929 (known as the Sea Level Datum prior to 1973). The current vertical datum used for the United States is the North American Vertical Datum of 1988 (NAVD88).

detected in one sample (collected at sample location GGW-1, in the southwestern corner of the Site) at 72 μg/L and 7.9 μg/L, respectively, both above their 5 μg/L MCLs. Cis-1,2-dichloroethene (cis-1,2-DCE) and 1,1-DCE were also detected in the same groundwater sample above their respective MCLs. The only other solvent detection was cis-1,2-DCE (below its MCL) in the sample collected at GGW-6. No VOCs were detected in the groundwater samples collected from the northern—or downgradient—portion of the Site. Soil vapor samples contained VOCs, including PCE, TCE, 1,1-DCE, cis-1,2-DCE, trans-1,2-DCE, and BTEX. The most elevated petroleum hydrocarbon and BTEX concentrations were from samples collected in the vicinity of the former evaporation pond and the most elevated VOC concentrations were from samples collected in the southwestern quadrant of the Site.

Operation and Maintenance Plan for the Engineered Containment Berm on the Plant Site of the Former Johns Manville Facility (LFR, 2008b)

- This plan describes the protocols for operation, maintenance, and repair of the Site containment berm. It specifies monitoring and maintenance procedures, schedules, and objectives, as well as reporting requirements.

Limited Phase II Site Investigation Report, Tesoro Pittsburg Terminal (Secor, 2008)

- This report describes the results of an environmental investigation conducted at the former Tesoro Terminal that was located north of the Site. Analytical results showed that soil at this property was impacted with TPH-d and TPH-o, metals (including arsenic, nickel, vanadium, copper, and zinc), and SVOCs commonly associated with petroleum hydrocarbons. Groundwater samples contained TPH-d (maximum 2,800 μg/L), TPH-o (maximum 13,000 μg/L), TPH-g (maximum 640 μg/L), pentachlorophenol (maximum 91 μg/L), a SVOC, and VOCs. TCE was detected in four samples, ranging from 0.57 μg/L to 12 μg/L. Cis-1,2-DCE (maximum 3.7 μg/L), 1,1-DCE (maximum 4 μg/L), 1,1-dichloroethane (1,1-DCA) (maximum 17 μg/L), and 1,2,3-trichlorobenzene (maximum 1.9 μg/L) were also detected in groundwater samples collected during this investigation. Investigators distinguished two water-bearing zones at this site, one encountered around 12 to 15 feet bgs and a second zone encountered at 30 to 35 feet bgs (only one boring was advanced below 30 feet bgs, however). The report notes that fuel oil was historically used for dust suppression on this property. The report also notes that solvents were reported used at the property and the presence of VOCs in groundwater may be due to the on-site solvent use or possibly from an off-site source.

Additional Phase II Investigation Report, Tesoro Pittsburg Terminal (Stantec, 2008)

- This report describes the results of additional environmental samples collected at the former Tesoro Terminal. Analytical results confirmed the presence of TPH-d, TPH-o, metals, and SVOCs in soil, the metals and SVOCs most likely related to coke handling at the property and the TPH-d and TPH-o attributed to the historical use of fuel oil for dust suppression. The investigation also confirmed the presence of TPH-d (maximum 290 μg/L), TPH-g (maximum 1,300 μg/L), and VOCs in groundwater. TCE was detected in three samples, ranging from 0.77 μg/L to 1,000 μg/L. Cis-1,2-DCE (maximum 250 μg/L), trans-1,2-DCE (maximum 28 μg/L), and vinyl chloride (maximum 1.6 μg/L) were also detected in groundwater samples collected during this investigation. The report concluded that the TPH-g and VOCs in groundwater may be due the reported historical use of solvent at the site or possibly an off-site source, e.g., the Johns Manville site.

Covenant to Restrict Use of Property, Environmental Restriction, Re: Former Johns Manville Plant Site (DTSC, 2009a)

- This deed restriction identifies two sub-areas of the Site, the Bermed Property, and the Residential Property subject to administrative controls, and specifies that the portion of the Residential Property in the vicinity of the former evaporation pond is a "Soil Management Area". Section 6.2 of this Phase I ESA describes the Site limitations associated with this agreement.

Operations and Maintenance Agreement, Former Johns Manville Plant Site (DTSC, 2009b)

- This agreement authorizes the DTSC to oversee the investigation and/or remediation of the Site and the operation and maintenance of any remediation system installed at the Site. The remediation system is described as the "consolidation of asbestos containing materials and the soil containing total petroleum hydrocarbons in a containment berm constructed along the eastern boundary of the Site." The remediation system is required to be operated and maintained as described in the Site Operation and Maintenance Plan (LFR, 2008b) until the DTSC authorizes its modification or discontinuation. The remediation system is also required to be evaluated every five years to determine if human health and the environment are being adequately protected. The agreement has provisions for notifying the DTSC of field sampling activities and change of consultants or project managers.

Remedial Action Certification, Former Johns Manville Plant Site (DTSC, 2009c)

- This document certifies that all remedial actions have been completed, however, ongoing O&M is required. The document summarizes remediation completed at the Site, including the groundwater treatability study conducted in the evaporation pond area.

Revised Five-Year Review Report, Former Plant Site and North Parcel (Arcadis, 2016)

- This is the fourth 5-Year Review report prepared for the North Parcel and the first prepared for the Former Plant Site (subject Site). The report is required per the O&M Agreements for the Plant Site and the North Parcel. The report concluded that the engineered caps on both sites are in good condition and continue to function as intended. The O&M procedures in place at the time of the review were anticipated to be continued for the next 5-year period.

Phase I Environmental Site Assessment, Plant Parcel (PES, 2017)

- This Phase I ESA report was prepared on behalf of Third Street Pittsburg Campus Owner LLC and Making Waves Foundation to support an acquisition of the property.

Notification Memorandum: Environmental Due Diligence Investigation Results (Arcadis, 2017)

- This memorandum transmits the results of soil, soil gas, and groundwater sampling activities conducted between September 29 and October 11, 2017. VOC and TPH-g concentrations reported for soil gas samples were lower than San Francisco Bay Regional Water Quality Control Board (Water Board) environmental screening levels (ESLs). VOCs, SVOCs, and TPH-d concentrations in groundwater were "consistent with the results of historical site investigations." Soil samples that were collected for analysis of asbestos from areas where no historical asbestos data existed did not exceed the 1% threshold to be considered a hazardous material or waste (0.25% maximum on the Plant Site).

Topographic Survey (Sandis, 2017)

- A topographic survey conducted between 27 February and 1 March 2017 is presented as a detailed series of 1 inch = 20 feet topographic maps with a 1-foot contour interval.

Pipeline Safety Hazard Assessment, Pittsburg School Campus for Making Waves Foundation (Placeworks, 2018)

- This assessment concluded that there is one pipeline within 1,500 feet of the Site, a 24-inch natural gas transmission pipeline located approximately 875 feet east of the property.

Geotechnical Investigation, Proposed New Campus & Sports Complex (Rockridge Geotechnical, 2018)

- This report documented a geotechnical investigation conducted in anticipation of constructing a private charter school and a sports complex on the property and an adjacent parcel.

Semi-Annual Operation and Maintenance Report for the North Parcel and the Former Johns Manville Plant Site (Arcadis, 2018)

- This report documents O&M activities at the Site between July 1 and December 1, 2017. Activities included cap inspections at the former Plant Site and the North Parcel, landscape maintenance, irrigation system repairs, inspecting rodent bait stations, and filling gopher burrows. The Plant Site and encapsulation berms were in good condition at the time of the inspection.

Draft Remedial Action Plan Amendment and Implementation Plan, Former Johns Manville Site (PES, 2019)

- This document was prepared in anticipation of constructing a private charter school on the property. Due to the Site deed restrictions, remediation of the Bermed Property would be required in order to develop the Site for use as a school for persons under the age of 21 (described in Section 6.2). This plan proposed to excavate and off-haul the contaminated soil and materials encapsulated at the Bermed Property and eliminate the administrative controls (deed restriction) on the property.

Semi-Annual Operation and Maintenance Report, North Parcel and the Former Johns Manville Plant Site (PES, 2021)

- This report documents O&M activities at the Site between March 1 and August 31, 2020. Activities included cap inspections at the former Plant Site and the North Parcel, landscape maintenance, irrigation system repairs, inspecting rodent bait stations, and filling rodent burrows. The Plant Site and encapsulation berms were in good condition at the time of the inspection.

Owner/User-supplied documents are included in Appendix G[4] and have been incorporated in the Summary of Findings (Section 7.0).

[4] Due to file size, the Phase I ESA prepared by PES in 2017 is not included in Appendix G, but is available upon request.

5.2 Interviews/Questionnaires

User and Owner Questionnaires were provided to Integral Communities to obtain information to supplement documentation provided by Making Waves Foundation (Owner) to Integral Communities (User).

Mr. Kevin Fryer, a representative for Integral Communities, has no specialized knowledge of the Site or its history, and declined to complete a questionnaire. Mr. Fryer forwarded the documentation provided by Making Waves Foundation (Owner) for GSI's review.

Integral Communities forwarded the Owner Questionnaire to Making Waves Foundation. The Owner questionnaire was not returned to GSI prior to publication of this report.

6.0 RECORDS REVIEW

Environmental records were obtained by requesting records from state and local regulatory agencies and conducting a search of federal and state databases.

6.1 Regulatory Agency Records Review

Regulatory agency records were requested on 22 February 2021. Agency requests included a request for reasonably ascertainable records for the Site address and APN. All agency file review requests and documents subsequently supplied by the agencies are included in Appendix H. Significant available agency records are identified in the table below.

AGENCY	ANTICIPATED RECORD TYPES	RECORDS AVAILABLE?		
		YES	NO	OTHER
City and Local Agencies				
City of Pittsburg Building Department (Community Development)	Historical tenants, property use, permits.	X		
City of Pittsburg Public Works Department	Industrial waste discharge permits or violations.		X	
County Agencies				
Contra Costa County Environmental Health Department	Agency oversight information and documents, hazardous materials storage, accidents, spills, leaks, and site investigations and remedial actions.	X		
Contra Costa County Fire Protection Department	Hazardous materials/waste storage, accidents, spills, leaks.			1
State and Regional Agencies				
BAAQMD	Air emissions and permits.	X		
DTSC (see EnviroStor)	Agency oversight information and documents.	X		
Water Board (see GeoTracker)	Agency oversight information and documents.	X		
CalFire, Office of the State Fire Marshal	Hazardous materials/waste storage, oil/gas pipelines, USTs.		X	
Agency Websites				
SWRCB GeoTracker	Agency oversight information and documents.	X		
DTSC EnviroStor	Agency oversight information and documents.	X		
CalGEM	Oil and gas development, active oil wells, plugged wells, methane.			2

1 = Due to the Contra Costa Health Order, the Contra Costa County Fire Department is unable to process file review requests for an undetermined amount of time.
2 = No features or conditions of concern were returned within a 0.25-mile radius of the property address.

Information that GSI obtained from regulatory agency records is summarized below. Where significant relative to RECs, our findings are incorporated in Section 7.0.

City of Pittsburg, Community Development

- Records include numerous plumbing, electrical, building, and mechanical permits from the late 1970s to mid-1990s that appear to be related to typical facility tenant improvements. There are also dated and undated structural drawings and notes for bulk storage silo foundations and tanks, asphalt tanks, and various building alteration. A 28 June 2006 building permit references the intended demolition of six buildings.

Contra Costa County Environmental Health Department

- 9 May 1985 Hazardous Waste Generator Inspection and Compliance Report states that employee training plans, spill contingency plans, manifests, and material safety data sheet (MSDS) library were in place.
- November 1985, January 1986, and February 1986 letters from the Manville Building Materials Group indicate the intention to abandon-in-place a 7,500-gallon solvent storage tank that is located under a loading dock. The tank stored Chevron 350B Thinner, composed of naphthalenes and paraffins. Approval for the abandonment was provided by the Riverview Fire Protection District on 7 February 1986. A 24 April 1986 UST abandonment information form refers to the anticipated removal of a 7,500-gallon mineral spirits UST.
- 22 April 1986 UST abandonment information form refers to the anticipated removal of a 10,000-gallon and a 2,500-gallon diesel UST. An inspection log refers to the removal of these USTs on 28 April 1986. The log reports that the 10,000-gallon tank was in "very good condition w/ tank wrapping," and that the 2,500-gallon tank showed "breaks in the center weld seam at bottom." Soil samples were collected at the excavation bottom. Both tanks were off-hauled from the Site to other properties for fire protection water storage. Soil analytical results were reported to the Health Department on 28 May 1986. Diesel and naphthalenes were not detected above the 1 milligram per kilogram (mg/kg) reporting limit. Mineral spirits were detected in one sample at 75 mg/kg.
- 29 January 1987 letter from Manville Service Corporation and a 11 December 1986 letter from the DTSC references a remedial action to address asbestos at the Site, described as a 9-inch minimum soil cover over the Site (with a maintenance plan), followed by a deed restriction for the property.
- 11 January 1990 Hazardous Material Incident Information Sheet documents an explosion of an asphalt tank. The log notes that water was applied to the outside of the tank and that some asphalt leaked from "piping when roof blew off."
- 11 May 1990 unsigned notes and a 23 May 1990 follow-up letter from Manville refer to compliance issues such as a labeling violation related to the accumulation date for used motor oil, biennial reporting of hazardous waste, spill prevention plan, and training documentation. No violations were observed on a follow-up inspection on 5 June 1991.
- 5 January 1993 letter from Manville Roofing Systems refers to compliance issues such as open waste oil drums and labeling of accumulation dates on waste oil drums and tank. It notes that a site map will be updated with respect to the "100K tank." A letter dated 8 June

1993 proposes that the waste oil be reclassified as non-hazardous, and the accumulation container labeled “excluded recyclable material.”

- 28 June 1994 memorandum from City of Pittsburg Building Division references the planned replacement of “collapsed 50,000 gallon asphalt tank.”
- 14 March 1996[5] incident form documents the removal of two transformers and associated PCB leak.
- 17 May 1996 incident form documents that an employee was instructed to “pump water (oil on top) out of drain ditch to the railroad tracks.” A 29 May 1996 inspection form refers to compliance issues such as employee training and documentation, waste oil accumulation, and discharge of oily water to the ground and to the sanitary sewer.
- 22 March 1997 incident form documents an asphalt fire in the processing unit. Material was released to an unlined soil surface impoundment area.
- 16 October 1997 inspection report notes that no violations were observed.
- 9 April 1998 Incident, Notification, and Complaint Report Form refers to removing asbestos panels between 4:00 and 12:00, and that the complaint was referred to OSHA.
- 6 November 1998 Incident, Notification, and Complaint Report Form refers to a 3,000-gallon spill of asphalt flux, “1,000 gallons in storm drain.” It describes that the spill occurred during off-loading of a rail car at the Site. Also reported to the state Office of Emergency Services.
- 6 January 2004 letter from Johns Manville notified Health Services that operations at the Site had been discontinued and that it was in the process of removing operating equipment and materials. A 3 February 2005 letter further specifies that operations were discontinued in 2003 and that Johns Manville was no longer the owner or operator of the facility as of October 2004.

BAAQMD

- A permit report shows that ERM West, Inc. applied to operate a vacuum-enhanced recovery system at the property. The permit was approved on 11 May 2005.

GeoTracker

- Manville Sales Corp. (SLT2O208311)[6] is listed as an open but inactive cleanup program site. The profile for the Site reports that the plant was constructed from 1925 to 1928 and operated as an asbestos-cement products, asphalt roofing materials, and asbestos-containing pipe covering manufacturing facility. An evaporation pond was located in the southwest quadrant of the Site and received water and oil residuals. A series of four asphalt stills were used to convert heavy oil to asphalt. The stills were initially fired with fuel oil and later with natural gas. A series of four pipes routed off-gases to a condenser line where water cooled the vapor. The condenser line conveyed the resultant oil-water slurry to a condenser and then to the evaporation pond via an underground pipe. The residual oil on the pond was burned off approximately twice a year. The evaporation pond was in use by 1946 and remained relatively constant in size until sometime after 1959

[5] Year not listed on incident form. Inferred from placement in record file.
[6] https://geotracker.waterboards.ca.gov/profile_report?global_id=SLT2O208311

when it was filled with scrap and construction debris. The area was subsequently paved over with blacktop.

- The State Water Resources Control Board (SWRCB) also provided records pertaining to 2019 coverage under the General Permit to Discharge Storm Water Associated with Construction Activity.

EnviroStor

- Johns Manville (07390022)[7] is listed as a voluntary cleanup program site. Cleanup status is shown as "Certified" and under operations and maintenance as of 12 November 2009. The profile for the Site reports that an engineered containment berm was the selected remedy for the Former Plant Site. The containment berm is described as two distinct segments referred to as the "northern and southern" berms. A school was proposed for the Plant Parcel but is no longer planned. The Site has an ongoing O&M Plan, and the next 5 Year Review is due in 2021.
- There are 87 documents dating from 1999 to 2020 publicly available on EnviroStor. Document types include voluntary cleanup agreements, public notices, fact sheets, O&M plans, O&M agreements, O&M reports, regulatory oversight cost estimates and schedules, work plans, investigation reports, remedial action plans, remedial design reports, 5 Year Review reports, deed restrictions, and California Environmental Quality Act (CEQA) documentation. Some of these documents specifically pertain to the North Parcel. Relevant documents are summarized in Section 5.1.

California Geologic Energy Management Division (CalGEM)

The CalGEM[8] online Well Finder mapping application interfaces with the online Well Statewide Tracking and Reporting System (WellSTAR) database and is updated nightly. The Well Finder is used to find and locate oil and gas wells and other types of related facilities throughout the state. The Site is not within a mapped oil field and wells do not appear to be located within at least 0.25-mile of the Site.

6.2 Environmental Lien Search and Activity and Use Limitations

GSI was not retained to perform a search for environmental liens at the Site.[9] However, activity and use limitations (AULs) are enumerated in a land use covenant (LUC) that has been recorded for the property as a condition of the remedial activities performed at the Site. Pittsburg River Partners, LLC entered into a *Covenant to Restrict Use of Property* with the DTSC, which was recorded on 7 October 2009. The LUC specifically identified the two sub-areas of the Site, the Bermed Property and the Residential Property, and documents that the Residential Property has been approved for residential land use by the DTSC. The LUC specifies that the portion of the Residential Property in the vicinity of the former evaporation pond is a "Soil Management Area" due to the presence of residual VOCs and petroleum hydrocarbons in soil and groundwater below 4 feet NGVD, and that the Bermed Property is intended to be used as a landscaped buffer for

[7] https://www.envirostor.dtsc.ca.gov/public/profile_report?global_id=07390022
[8] https://www.conservation.ca.gov/calgem/Pages/WellFinder.aspx
[9] AULs are defined in the ASTM Standard as legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

residential uses at the Site. It also provides that DTSC and the party responsible for implementing O&M activities at the Site be provided access to the Site (DTSC, 2009).

The following AULs are specified in the LUC for the Bermed Property portion of the Site:

- Residential human habitation; use for a hospital, school, or day care; and raising food are prohibited;
- Drilling for water, oil or gas, or extraction of groundwater without written approval of DTSC are prohibited;
- Activities that may disturb the berms, except as authorized pursuant to the O&M Agreement or otherwise approved in writing by DTSC, are prohibited;
- A Soil Management Plan and Health and Safety Plan must be prepared and approved by DTSC prior to any activities that will disturb the berm; and
- DTSC must be notified regarding any disturbance or damage to the lowest 6 inches of the cover soil of the berms and provide permission for any removal of affected soil.

The following AULs are specified in the LUC for the Residential Property portion of the Site:

- Groundwater extraction for use as drinking water, irrigation, or any other purpose other than monitoring, treatment, or construction dewatering is prohibited; and
- Activities that may disturb the soil at or below an elevation of 4 feet NGVD or that would encounter groundwater if it occurs at a shallower depth are subject to a Soil Management Plan and DTSC approval.

A LUC with similar AULs has also been recorded for the North/Access Parcel, a related property located north of the Site (PES, 2017).

6.3 Regulatory Database Review

GSI contracted with EDR to compile a database report that summarizes the results of a search of federal, state, and tribal agency databases to assess whether the Site or nearby properties are under investigation for potential environmental issues or have been identified as conducting operations that could potentially impact the environment. The database report includes searches of regulatory databases of sites with environmental liens, deed restrictions, land use restrictions, engineering controls, and institutional controls.[10] Significant findings from the database report are summarized below and in Section 7.0. The database report is included as Appendix A.

6.3.1 Subject Site

The Site is listed on the databases summarized in the table below.

EDR Map ID	Site Name	Regulatory List / Database
A1	Pittsburg River Park	CA HAZNET CA HWTS
A2	Making Waves Academy	CA NPDES CA CIWQS

[10] In some cases, environmental databases are not updated by the specific regulatory agencies for periods of up to 1 year (depending on the database). The dates of updates are provided in in the Regulatory Database Search Report, included in Appendix H.

EDR Map ID	Site Name	Regulatory List / Database
A3	Johns Manville Site	FINDS
A4	Johns Manville	CA HAZNET CA HWTS
A5	Johns Manville	CA EnviroStor CA CPS-SLIC CA VCP CA DEED CA CERS
A6	Johns Manville Site	RCRA NonGen / NLR
A7	Former Johns Manville Site Remediation	CA HAZNET CA NPDES CA Contra Costa Co. Site List CA HWTS
A8	420 East 3rd Street	ERNS
A9	Manville Sales Corp.	FINDS
A10	Former Johns Manville Plant Site	CA CIWQS
A11	420 East 3rd Street	CA CHMIRS
B12	Johns-Manyille-Roofing (sic) Systems	CA HIST UST
B13	Johns-Manville Roofing	CA HIST UST CA EMI
B14	Manville Sales Corp.	CA CPS-SLIC

Abbreviations:
CERS = California Environmental Protection Agency (Cal/EPA) Regulated Site Portal database; combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs
CHMIRS = California Hazardous Material Incident Reporting System
CIWQS = California Integrated Water Quality System; tracks information about places of environmental interest, manage permits and other orders, track inspections, and manage violations and enforcement activities
Contra Costa Co. Site List = Sites from the underground tank, hazardous waste generator, and business plan/2185 programs
CPS-SLIC = State Water Resources Control Board's (SWRCB's) GeoTracker database of Cleanup Program Sites (also known as Site Cleanups and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites)
DEED = Deed Restriction listing (DTSC)
EMI = Emissions inventory data collected by the Air Resources Board and local air pollution agencies
EnviroStor = DTSC's Site Mitigation and Brownfields Reuse Program's EnviroStor database
ERNS = Emergency Response Notification System; records and stores information on reported releases of oil and hazardous substances
FINDS = Facility Index System; contains both facility information and 'pointers' to other sources that contain more detail
HAZNET = Facility and manifest data (Cal/EPA)
HIST UST = Hazardous Substance Storage Container Database; historical listing of UST sites
HWTS = Hazardous Waste Tracking System; manifest ID number information from the early 1980s and manifest data from 1993
NPDES = A listing of National Pollutant Discharge Elimination System (NPDES) permits, including stormwater
RCRA NonGen / NLR = Resource Conservation and Recovery Act (RCRA) Non-Generators / No Longer Regulated
VCP = Voluntary Cleanup Program properties (DTSC)

Review of the EDR report regarding the listings above included the following information:

- Listings for Pittsburg River Park span 2005-2006 and are related to Site remediation activities;
- Listings for Making Waves Academy are related to an NPDES General Permit for stormwater discharges associated with construction;
- The Johns Manville Corporation listings in HAZNET and HWTS contain facility and manifest information from 1996 through 2005 for the following waste codes: 331 (off-specification, aged, or surplus organics), 223 (unspecified oil-containing waste), 151 (asbestos-containing waste), 221 (waste oil and mixed oil), 551 (laboratory waste chemicals), 561 (detergent and soap), 741 (liquids with halogenated organic compounds >1,000 mg/L), 731 (liquids with polychlorinated biphenyls >50 mg/L), 222 (oil/water separation sludge), 792 (liquids with pH ≤2 with metals), and empty containers;
- The Johns Manville Corporation listings in the CERS, CPS-SLIC, DEED, EnviroStor, and VCP databases are related to the environmental investigation, remediation, and post-remediation O&M activities at the Site;
- An EnviroStor entry states that the Tesoro Pittsburg Terminal located at 595 East 3rd Street has contamination that may be coming from the Johns Manville Site;
- The VCP summary reports that the linear park south of the Site has been investigated for the presence of ACM, which was found in shallow soil in a localized area in the northeast corner of the park property;
- The Johns Manville Corporation RCRA NonGen/NLR listing summarizes biennial reporting data for the following hazardous waste codes: D001 (ignitable waste), D002 (corrosive waste), D005 (barium), D006 (cadmium), D008 (lead), D009 (mercury), D010 (selenium), D011 (silver), D018 (benzene), D026 (cresol), D039 (tetrachloroethene [PCE]), D040 (trichloroethene [TCE]), F002 (spent halogenated solvents), F003 (spent non-halogenated solvents), and F005 (spent non-halogenated solvents);
- The Former Johns Manville Site Remediation listings are related to Site remediation activities;
- The listings for 420 East 3rd Street in the ERNS and CHMIRS databases refer to an equipment failure on 6 November 1998 involving a rail tank car and an above-ground storage tank that resulted in a 6,000-gallon spill of asphalt flux that was released to soil and 1,000 gallons that entered the storm drain and reached surface water; and
- The HIST UST listing for Johns-Manville-Roofing Systems documents three USTs: (1) a 10,000-gallon diesel UST (construction date unknown); (2) a 2,400-gallon diesel UST (installation date unknown); and (3) a 7,500-gallon naphthalene UST installed in 1956.

6.3.2 Nearby Sites

For the purposes of the assessment of the potential impact to the Site from nearby facilities identified in the database report, the local groundwater gradient is assumed to be to the north to northeast. Below is a discussion of facilities in close proximity to the Site that potentially contain subsurface impacts.

EDR Map ID	Site Name & Address	Distance/Direction from the Site	Likely to Impact the Site
E33, G42, G48	**Pittsburg Plumbing, 441 East 10th Street**	**<1/8 mile south-southwest**	**No**
Limited information available for this property. The CA LUST database reports that a preliminary site assessment was initiated on 9 May 1994 due to a leak confirmed on 25 September 1986. The LUST database reports that the potential contaminants of concern were waste, motor, hydraulic, and lubricating oil. The site history is summarized as "Samples taken following over-excavation, yielded nondetectable levels of hydrocarbon contamination, therefore, the site generally meets the criteria for low risk closure." The Cortese database indicates that cleanup was completed, and the case closed. The site's GeoTracker ID is T0601300442. Based on the regulatory closure for the UST case, it is unlikely that past petroleum releases at this property would significantly affect the Site.			
G43, G44, G47	**Faultless Cleaners, 427 East 10th Street**	**<1/8 mile south-southwest**	**Yes**
The EDR Hist Cleaner database reports this property was operated as a dry cleaning business from 1969 to 2014. This property is reported as a RCRA Small Quantity Generator (SQG) in 1986. No notices of violation were reported by the RCRA-SQG database. The EMI database lists BAAQMD reports of emissions of total organic hydrocarbon gases between 1990 and 2010. The HAZNET listings contain facility and manifest information from 1993 through 1995 for the following waste codes: • 741 (liquids with halogenated organic compounds >1,000 milligrams per liter [mg/L]); and • 211 (halogenated solvents, including PCE). The CA LUST database lists a gasoline UST leak confirmed on 27 July 1994. A 'No Further Action' letter was issued on 26 January 1999. The Cortese database also indicates that cleanup was completed, and the case closed. Dry cleaners can represent a risk to soil, soil vapor, and groundwater. Based on the longevity of dry cleaning operations at this property and the likely use of PCE, it is possible that releases at this property could potentially affect the Site.			
G46	**Dulceria ARCO Iris, 409 East 10th Street**	**<1/8 mile south-southwest**	**No**
This gasoline service station is identified on the EDR HIST AUTO database from 2004 to 2012. No other information is provided. Based on the absence of reportable spills, leaks, investigation, or remediation, this property does not appear to be likely to significantly affect the Site.			
G54	**Las Palmas Auto Repair, 418 East 10th Street**	**1/8-1/4 mile south-southwest**	**No**
This site is listed as a hazardous waste generator in the CERS HAZ WASTE database. The CERS HAZ WASTE database reports 10 violations: 1. Violation of California Health and Safety Code Chapter 6.5 regarding the hazardous waste generator program and administration/documentation, dated 26 May 2015; 2. Violation of California Health and Safety Code Chapter 6.95 regarding the business plan program and administration/documentation, dated 9 May 2016; 3. Violation of California Health and Safety Code Chapter 6.95 regarding the business plan program and administration/documentation, dated 23 June 2016; 4. Violation of California Health and Safety Code Chapter 6.95 regarding the business plan program and administration/documentation, dated 14 April 2017; 5. Violation of California Health and Safety Code Chapter 6.5 regarding tiered permitting and administration/documentation, dated 14 April 2017;			

EDR Map ID	Site Name & Address	Distance/Direction from the Site	Likely to Impact the Site
6. Violation of California Health and Safety Code Chapter 6.95 regarding failure to submit a site map with all required content, dated 25 June 2018; 7. Violation of California Health and Safety Code Chapter 6.5 regarding failure to send hazardous waste off-site for treatment, storage, or disposal within the required number of days, dated 25 June 2018; 8. Violation of California Code of Regulations, Title 22, Chapter 12, Section 66262.40(a) regarding failure to keep a copy of signed manifests for at least three years, dated 25 June 2018; 9. Violation of California Health and Safety Code Chapter 6.95 regarding the business plan program and administration/documentation, dated 1 April 2019; and 10. Violation of California Health and Safety Code Chapter 6.11 regarding failure to electronically report program data, dated 1 April 2019. Based on the numerous inspections/evaluations performed by Contra Costa County Health Services Department, absence of reportable spills/leaks, and the administrative nature of the regulatory violations at this property, this property does not appear to be likely to significantly affect the Site.			
G55, G56	**West Coast Auto Body & Paint, 430 East 10th Street**	**1/8-1/4 mile south-southwest**	**No**
This site is listed as a hazardous waste generator in the CERS HAZ WASTE database and as a non-generator in the RCRA NonGen/NLR database. The CERS HAZ WASTE database reports seven violations: 1. Violation of California Health and Safety Code Chapter 6.67 regarding the hazardous waste generator program and administration/documentation, dated 24 June 2014; 2. Violation of California Health and Safety Code Chapter 6.5 regarding the hazardous waste generator program and administration/documentation, dated 1 May 2015; 3. Violation of California Health and Safety Code Chapter 6.5 regarding the hazardous waste generator program and administration/documentation, dated 26 May 2015; 4. Violation of California Health and Safety Code Chapter 6.5 regarding tiered permitting and administration/documentation, dated 9 May 2016; 5. Violation of California Health and Safety Code Chapter 6.5 tiered permitting and administration/documentation, dated 14 April 2017; 6. Violation of California Health and Safety Code Chapter 6.5 regarding the hazardous waste generator program and administration/documentation, dated 17 September 2017; and 7. Violation of California Code of Regulations, Title 22, Chapter 1, Section 265.173 regarding failure to meet container management requirements, dated 20 April 2018. Based on the numerous inspections/evaluations performed by Contra Costa County Health Services Department, absence of reportable spills/leaks, and the administrative nature of the regulatory violations at this property, this property does not appear likely to significantly affect the Site.			
H45	**Universal Auto Repair, 499 East 10th Street**	**<1/8 mile south**	**No**
This site is listed as a hazardous waste generator in the CERS HAZ WASTE database, but no other information is provided. The EMI database lists BAAQMD reports of emissions of total organic hydrocarbon gases and reactive organic gases between 2002 and 2018, which could be related to a spray paint booth. Contra Costa County Site List reports the business was registered under its CUPA program. The CERS database reports five violations: 1. Violation of California Health and Safety Code Chapter 6.95 regarding the business plan program and administration/documentation, dated 30 July 2013; 2. Violation of California Health and Safety Code Chapter 6.95 regarding the business plan program and administration/documentation, dated 9 May 2016;			

EDR Map ID	Site Name & Address	Distance/Direction from the Site	Likely to Impact the Site
3. Violation of California Health and Safety Code Chapter 6.95 regarding the business plan program and administration/documentation, dated 9 November 2016; 4. Violation of California Health and Safety Code Chapter 6.5 regarding the hazardous waste generator program and operations/maintenance, dated 9 November 2016; and 5. Violation of California Code of Regulations, Title 22, Chapter 12, Section 66262.12 regarding failure to obtain an identification number prior to treating, storing, disposing of, transporting, or offering for transportation any hazardous waste, dated 19 December 2019 (related to an inactive EPA ID No. CAL000419783). Based on the numerous inspections/evaluations performed by Contra Costa County Health Services Department, absence of reportable spills/leaks, and the administrative nature of the small number of regulatory violations at this property, it is unlikely that operations at this property would significantly affect the Site.			
H51	**Banister Electric, Inc., 498 East 10th Street**	**1/8-1/4 mile south**	**No**
See description below for Bay Saw & Tool Repair.			
H52	**Bay Saw & Tool Repair, 498 East 10th Street**	**1/8-1/4 mile south**	**No**
This site is listed as a hazardous waste generator in the CERS HAZ WASTE database and as a non-generator in the RCRA NonGen/NLR database. The CERS HAZ WASTE database reports seven violations: 1. Violation of California Health and Safety Code Chapter 6.67 regarding the hazardous waste generator program and administration/documentation, dated 24 June 2014; 2. Violation of California Health and Safety Code Chapter 6.5 regarding the hazardous waste generator program and administration/documentation, dated 2 December 2016; 3. Violation of California Health and Safety Code Chapter 6.5 regarding the hazardous waste generator program and operations/maintenance, dated 2 December 2016; 4. Violation of California Health and Safety Code Chapter 6.5 regarding the hazardous waste generator program and operations/maintenance, dated 11 January 2017; 5. Violation of California Health and Safety Code Chapter 6.5 regarding the hazardous waste generator program and administration/documentation, dated 11 January 2017; 6. Violation of California Health and Safety Code Chapter 6.5 regarding tiered permitting and administration/documentation, dated 14 April 2017; and 7. Violation of California Health and Safety Code Chapter 6.5 regarding the hazardous waste generator program and administration/documentation, dated 17 September 2017. Based on the numerous inspections/evaluations performed by Contra Costa County Health Services Department, absence of reportable spills/leaks, and the administrative nature of the regulatory violations at this property, this property does not appear to be likely to significantly affect the Site.			
H53	**My Generator Guy, 498 East 10th Street**	**1/8-1/4 mile south**	**No**
This site is listed as a non-generator in the RCRA NonGen/NLR database. No violations are listed for this property. Based on the absence of reportable spills/leaks and notices of violation, this property does not appear to be likely to significantly affect the Site.			
H57	**Electro Manufacturing Co., 494 East 10th Street**	**1/8-1/4 mile south**	**No**
This site is on the Contra Costa County Site List as a hazardous waste generator and under its CUPA program. No other information is provided. Based on the absence of reportable spills/leaks and notices of violation, this property does not appear to be likely to significantly affect the Site.			

EDR Map ID	Site Name & Address	Distance/Direction from the Site	Likely to Impact the Site
H67, H70	**JCS (JC's) Auto Body, 999 Harbor Street**	**1/8-1/4 mile south**	**No**
This site is listed as a hazardous waste generator in the CERS HAZ WASTE database and as a non-generator in the RCRA NonGen/NLR database. This site is also on the Contra Costa County Site List as a hazardous waste generator and under its CUPA program. No violations are listed for this property. Based on the absence of reportable spills/leaks and notices of violation, this property does not appear to be likely to significantly affect the Site.			
H68, H69, H71	**O'Brien's Auto Repair, 999 Harbor Street**	**1/8-1/4 mile south**	**No**
This site is listed as a hazardous waste generator in the CERS HAZ WASTE database and as a non-generator in the RCRA NonGen/NLR database. This site is also on the Contra Costa County Site List as a hazardous waste generator under its CUPA program and as a UST site. The CERS database reports 13 violations: 1. Violation of California Health and Safety Code Chapter 6.95 regarding the business plan program and administration/documentation, dated 15 April 2016; 2. Violation of California Health and Safety Code Chapter 6.5 regarding the hazardous waste generator program and administration/documentation, dated 15 April 2016; 3. Violation of California Health and Safety Code Chapter 6.95 regarding the business plan program and administration/documentation, dated 9 May 2016; 4. Violation of California Health and Safety Code Chapter 6.95 regarding the business plan program and administration/documentation, dated 23 June 2016; 5. Violation of California Code of Regulations, Title 22, Chapter 45, Section 67450.2(b)(2) regarding failure to submit the signature page for the onsite treatment notification, dated 14 April 2017; 6. Violation of California Health and Safety Code Chapter 6.95 regarding the business plan program and administration/documentation, dated 14 April 2017; 7. Violation of California Health and Safety Code Chapter 6.95 regarding the business plan program and administration/documentation, dated 26 May 2017; 8. Violation of California Code of Regulations, Title 22, Chapter 45, Section 67450.2(b)(2) regarding failure to submit the signature page for the onsite treatment notification, dated 26 May 2017; 9. Violation of California Health and Safety Code Chapter 6.95 regarding failure to complete and electronically submit a hazardous materials business plan, dated 27 March 2018; 10. Violation of California Health and Safety Code Chapter 6.95 regarding failure to complete and electronically submit a hazardous materials business plan, dated 1 April 2019; 11. Violation of California Health and Safety Code Chapter 6.11 regarding failure to report program data electronically, dated 1 April 2019; 12. Violation of California Code of Regulations, Title 22, Chapter 1, Section 265.173 regarding failure to meet container management requirements, dated 2 April 2019; and 13. Violation of California Health and Safety Code Chapter 6.5 regarding failure to comply with one or more of the required consolidated manifesting procedures and retain copies of receipts for three years, dated 2 April 2019. Based on the numerous inspections/evaluations performed by Contra Costa County Health Services Department, absence of reportable spills/leaks, and the administrative nature of the regulatory violations at this property, this property does not appear to be likely to significantly affect the Site.			

EDR Map ID	Site Name & Address	Distance/Direction from the Site	Likely to Impact the Site
I60, I61, I62	**Pittsburg Motor Parts, Inc., 360 East 10th Street**	**1/8-1/4 mile southwest**	**No**
This site is listed as a hazardous waste generator in the CERS HAZ WASTE database and as a non-generator in the RCRA NonGen/NLR database. This site is also on the Contra Costa County Site List as a hazardous waste generator and under its CUPA program. The CERS HAZ WASTE database reports one violation: 1. Violation of California Health and Safety Code Chapter 6.67 regarding the hazardous waste generator program and administration/documentation, dated 24 June 2014. Based on the inspections/evaluations performed by Contra Costa County Health Services Department, absence of reportable spills/leaks, and the administrative nature of the regulatory violation at this property, this property does not appear to be likely to significantly affect the Site.			
N78	**DeRosa Auto Body, 1090 Harbor Street**	**1/8-1/4 mile south**	**No**
This site is listed on the HAZNET and HWTS databases, as well as on the Contra Costa County Site List as a hazardous waste generator under its CUPA program. The HAZNET listing contains facility and manifest information from 2009 for waste code 214 (unspecified solvent mixture). The HWTS database indicates the site was active from 19 August 2009 through 30 June 2012. This property does not appear to be likely to significantly affect the Site.			
N81, N82	**California Expanded Metal Products Co.**	**1/8-1/4 mile south**	**No**
This site is listed as a hazardous waste generator in the CERS HAZ WASTE database and is on the Contra Costa County Site List as a hazardous waste generator under its CUPA program. The CERS database reports three violations: 1. Violation of California Health and Safety Code Chapter 6.95 regarding the business plan program and administration/documentation, dated 30 January 2013; 2. Violation of California Health and Safety Code Chapter 6.95 regarding the business plan program and administration/documentation, dated 14 March 2017; and 3. Violation of California Health and Safety Code Chapter 6.95 regarding the hazardous waste generator program and operations/maintenance, dated 14 March 2017. Based on the inspections/evaluations performed by Contra Costa County Health Services Department, absence of reportable spills/leaks, and the administrative nature of the regulatory violation at this property, this property does not appear to be likely to significantly affect the Site.			

Several other industrial facilities were listed within the applicable search radii north and east of the Site. Due to their relative cross- or downgradient location, and that the environmental issues listed at these facilities were generally constrained to the respective properties, these properties are not considered likely to impact the Site.

7.0 SUMMARY OF FINDINGS

The following sections summarize the complete results of findings for the Site based on review of Site reconnaissance information, regulatory agency databases and files, historical information, physical setting information, and readily available documents.

- The Site located at 420 East 3rd Street in north Pittsburg, California is presently undeveloped and secured by a chain-link fence.
- No RECs were observed during the Site reconnaissance, only *de minimis* conditions were observed.

- A review of historical information indicates that the Johns Manville Products Company formerly occupied the Site and produced asbestos-cement products, asphalt roofing materials, and asbestos-containing pipe covering. In addition to numerous above-ground tanks and what appears to be materials stored outdoors, a surface impoundment (evaporation pond) is visible on aerial photographs of the Site. As a result of Site operations between 1927 and 2003, a significant amount of ACM was deposited onto the ground. Manufacture of ACM ceased in 1980 and commercial-grade roofing materials were manufactured at the plant until 2003, when all operations were discontinued.
- Areas of potential concern at the former Plant Site included a former evaporation pond and several additional areas of concern that were discovered while abatement and demolition activities were being conducted. Several environmental investigations were conducted at the Site, beginning in 1986 and continuing through 2005. The selected remedy for the former Plant Site was removal of ACM- and petroleum hydrocarbon-affected soil from the Site and placement in engineered containment berms along the eastern boundary of the former Plant Site. ACM-impacted material and debris were placed into a trench dug to 10 feet bgs along the eastern boundary of the former Plant Site, which was then capped by hydrocarbon-impacted soil excavated from the Site, as approved by the DTSC. An engineered textile and 2 feet of clean, low-permeability soil were then added to the top of the ACM- and petroleum hydrocarbon-impacted materials to create the capped, vegetated berms. There is an automated irrigation system to maintain the vegetation. The berms consist of two distinct segments referred to below as the “northern” and “southern” berms. Drainage swales were installed adjacent to the berm and graded so that stormwater runs off toward catch basins on the eastern Site boundary. Ongoing maintenance and monitoring have been continuously performed in accordance with an O&M Agreement for the Site.
- Post-remediation environmental samples indicate that groundwater contains TPH-d, TPH-o, TPH-g, and VOCs, some of which exceed drinking water MCLs. Soil vapor contains VOCs, including PCE, TCE, and BTEX. The most elevated petroleum hydrocarbon and BTEX concentrations were from samples collected in the vicinity of the former evaporation pond, and the most elevated VOC concentrations were from samples collected in the southwestern quadrant of the Site. Soil contains asbestos below the 1% threshold to be considered a hazardous material or waste.
- O&M inspections at the Site report that the Plant Site and encapsulation berms are in good condition. Landscape maintenance, irrigation system repairs, rodent bait station inspections, and rodent burrow destruction occur on a regular basis.

GSI has evaluated the information collected during the course of this Phase I ESA. Based on the Findings summarized above, this assessment has revealed the following CRECs and RECs in connection with the Site:

- Two engineered encapsulation berms contain ACM-impacted soil and debris and petroleum hydrocarbon-impacted soil that was excavated during Site remedial actions. The Bermed Property is subject to the Site LUC. This condition is identified as a CREC.
- The Soil Management Area within the Residential Property has underlying soil impacted with VOCs and petroleum hydrocarbons below 4 feet NGVD. The Residential Property is subject to the Site LUC. This condition is identified as a CREC.

- Groundwater and soil vapor beneath the Site is impacted with VOCs and petroleum hydrocarbons. VOCs in groundwater may be originating from an off-site, upgradient source. This condition is identified as a REC.

8.0 DATA GAPS OR FAILURES

Standard ASTM E1237-13 defines a "data gap" as a lack of or inability to obtain information required by the Standard despite good faith efforts by the environmental professional to gather the information. Significant data gaps are identified as those which affected the ability to identify RECs. A "data failure" is a type of data gap and is considered a failure to achieve the historical research objectives even after reviewing reasonably ascertainable standard historical sources.

Owner and User questionnaires were not returned for this ESA. However, numerous documents pertaining to Site environmental issues, investigations, and remediation were obtained by GSI for review. It is our opinion that no significant data gaps exist in the availability of documentation regarding Site environmental conditions.

This Phase I ESA has revealed no significant data gaps or data failures.

9.0 DELETIONS OR DEVIATIONS FROM THE ASTM STANDARD

There were no deletions or deviations from ASTM Practice E1527-13 in conducting this Phase I ESA.

10.0 CERTIFICATION

The Site is defined as the following:

SITE IDENTIFICATION	
Name:	Former Johns Manville Plant Site
Address:	420 East 3rd Street
City:	Pittsburg
County:	Contra Costa
State:	California
Assessor Parcel Number(s):	073-050-001-4

This environmental review of the Site as defined above was conducted by GSI on behalf of Integral Communities. The review conducted by GSI meets or exceeds the requirements for a Phase I ESA specified in the ASTM Standard.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Jennifer Duffield, PE

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

RCRA-VSQG ---------- RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

EXECUTIVE SUMMARY

Federal institutional controls / engineering controls registries

LUCIS ---- Land Use Control Information System
US ENG CONTROLS ---- Engineering Controls Sites List
US INST CONTROLS ---- Institutional Controls Sites List

State and tribal landfill and/or solid waste disposal site lists

CA SWF/LF ---- Solid Waste Information System

State and tribal leaking storage tank lists

INDIAN LUST ---- Leaking Underground Storage Tanks on Indian Land

State and tribal registered storage tank lists

FEMA UST ---- Underground Storage Tank Listing
INDIAN UST ---- Underground Storage Tanks on Indian Land

State and tribal voluntary cleanup sites

INDIAN VCP ---- Voluntary Cleanup Priority Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Landfill / Solid Waste Disposal Sites

CA WMUDS/SWAT ---- Waste Management Unit Database
CA SWRCY ---- Recycler Database
CA HAULERS ---- Registered Waste Tire Haulers Listing
INDIAN ODI ---- Report on the Status of Open Dumps on Indian Lands
DEBRIS REGION 9 ---- Torres Martinez Reservation Illegal Dump Site Locations
ODI ---- Open Dump Inventory
IHS OPEN DUMPS ---- Open Dumps on Indian Land

Local Lists of Hazardous waste / Contaminated Sites

US HIST CDL ---- Delisted National Clandestine Laboratory Register
CA HIST Cal-Sites ---- Historical Calsites Database
CA CDL ---- Clandestine Drug Labs
US CDL ---- National Clandestine Laboratory Register
CA PFAS ---- PFAS Contamination Site Location Listing

Local Lists of Registered Storage Tanks

CA FID UST ---- Facility Inventory Database

Local Land Records

CA LIENS ---- Environmental Liens Listing
LIENS 2 ---- CERCLA Lien Information

Records of Emergency Release Reports

HMIRS ---- Hazardous Materials Information Reporting System

CA LDS ---- Land Disposal Sites Listing
CA MCS ---- Military Cleanup Sites Listing
CA SPILLS 90 ---- SPILLS 90 data from FirstSearch

Other Ascertainable Records

FUDS ---- Formerly Used Defense Sites
DOD ---- Department of Defense Sites
SCRD DRYCLEANERS ---- State Coalition for Remediation of Drycleaners Listing
EPA WATCH LIST ---- EPA WATCH LIST
TSCA ---- Toxic Substances Control Act
TRIS ---- Toxic Chemical Release Inventory System
SSTS ---- Section 7 Tracking Systems
ROD ---- Records Of Decision
RMP ---- Risk Management Plans
RAATS ---- RCRA Administrative Action Tracking System
PRP ---- Potentially Responsible Parties
PADS ---- PCB Activity Database System
ICIS ---- Integrated Compliance Information System
FTTS ---- FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
MLTS ---- Material Licensing Tracking System
COAL ASH DOE ---- Steam-Electric Plant Operation Data
COAL ASH EPA ---- Coal Combustion Residues Surface Impoundments List
PCB TRANSFORMER ---- PCB Transformer Registration Database
RADINFO ---- Radiation Information Database
HIST FTTS ---- FIFRA/TSCA Tracking System Administrative Case Listing
DOT OPS ---- Incident and Accident Data
CONSENT ---- Superfund (CERCLA) Consent Decrees
INDIAN RESERV ---- Indian Reservations
FUSRAP ---- Formerly Utilized Sites Remedial Action Program
UMTRA ---- Uranium Mill Tailings Sites
LEAD SMELTERS ---- Lead Smelter Sites
US AIRS ---- Aerometric Information Retrieval System Facility Subsystem
US MINES ---- Mines Master Index File
ABANDONED MINES ---- Abandoned Mines
DOCKET HWC ---- Hazardous Waste Compliance Docket Listing
UXO ---- Unexploded Ordnance Sites
FUELS PROGRAM ---- EPA Fuels Program Registered Listing
CA BOND EXP. PLAN ---- Bond Expenditure Plan
CA CUPA Listings ---- CUPA Resources List
CA DRYCLEANERS ---- Cleaner Facilities
CA HWT ---- Registered Hazardous Waste Transporter Database
CA MINES ---- Mines Site Location Listing
CA MWMP ---- Medical Waste Management Program Listing
CA PEST LIC ---- Pesticide Regulation Licenses Listing
CA PROC ---- Certified Processors Database
CA Notify 65 ---- Proposition 65 Records
CA UIC ---- UIC Listing
CA UIC GEO ---- UIC GEO (GEOTRACKER)
CA WASTEWATER PITS ---- Oil Wastewater Pits Listing
CA WIP ---- Well Investigation Program Case List
CA MILITARY PRIV SITES ---- MILITARY PRIV SITES (GEOTRACKER)
CA PROJECT ---- PROJECT (GEOTRACKER)
CA WDR ---- Waste Discharge Requirements Listing

CA NON-CASE INFO NON-CASE INFO (GEOTRACKER)
CA OTHER OIL GAS OTHER OIL & GAS (GEOTRACKER)

CA RGA LUST Recovered Government Archive Leaking Underground Storage Tank

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/30/2020 has revealed that there are 5 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 4

RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/26/2020 has revealed that there are 14 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 2 CA UST sites within approximately 0.25 miles of the target property.

Local Lists of Hazardous waste / Contaminated Sites

CA CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

A review of the CA CERS HAZ WASTE list, as provided by EDR, and dated 10/19/2020 has revealed that there are 15 CA CERS HAZ WASTE sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 3 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that

there are 15 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

PG AND E GAS PLANT P	APPROX 1/2 MILE E HA	ESE 1/2 - 1 (0.626 mi.)	122	681

EXECUTIVE SUMMARY

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
DULCERIA ARCO IRIS	409 E 10TH ST	SSW 0 - 1/8 (0.110 mi.)	G46	247

H & B SEASIDE	301 3RD ST	NNW 0 - 1/8 (0.084 mi.)	34	172

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

JOHNS MANVILLE (Continued) **S109443840**

Completed Date:	02/22/2013
Comments:	Semiannual Operation and Maintenance (O&M) Report is for the North and Berm Parcels. The inspection for the period from July 1 through December 31, 2012 was conducted on December 24, 2012. The North Parcel was in good condition. O&M was done on the irrigation system and there were few animal burrows. The Berm Parcel was in good condition. Burrows were filled in with soil, bare soil was hydro-seeded and the irrigation system was repaired.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operations and Maintenance Report
Completed Date:	09/25/2013
Comments:	The Report was approved, however, DTSC requests for a workplan for controlling and eradicating ground squirrels. DTSC also recommends maintaining a permanent irrigation system in good condition according to the O&M Plan.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operations and Maintenance Report
Completed Date:	05/23/2014
Comments:	DTSC recommends the following actions at the Berms: 1. Verification of soil cap thickness making sure that the original recommended thickness is maintained. 2. Restoration of plant species (Cape Plumbago, Purple Trailing Lantana and Bearberry Contoneaster) recommended in the Operations and Maintenance Plan.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operations and Maintenance Report
Completed Date:	09/29/2014
Comments:	Same
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operations and Maintenance Report
Completed Date:	06/01/2015
Comments:	The Semi-annual Operation and Maintenance Report is for the North and Berm Parcels for the period from July 1, 2014 through December 31, 2014. The North Parcel consists of a soil cap and the Berm Parcel consists of 2 two berms with a soil cover. In July 2014, a water line was installed within the footprint of the old road which lies adjacent to the North Parcel. No potentially impacted soil was disturbed during the installation. In the Fall of 2014, the Berm vegetation was assessed and barren areas were observed. On December 22, 2014, both the southern and northern berms were hydro-seeded with a mix of Native Ornamental Fine Fescue . The Berms are infested with ground squirrels and gophers (rodents). Baiting has shown to be an effective and long-term mitigation strategy against ground squirrels. Passive Exhaust Rodent Control treatment has been found effective in mitigating gophers. Rodent inspections continue on a quarterly basis and results will be reported in the semi-annual reports.
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Operations and Maintenance Report

JOHNS MANVILLE (Continued) **S109443840**

Completed Date: 09/04/2015
Comments: The Report includes inspections associated with the Rodent Mitigation Plan of 2013. All the required repairs and maintenance items completed on July 10, 2015, are included in the Report

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 02/10/2017
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 02/25/2016
Comments: The Report includes inspections associated with the Rodent Mitigation Plan of 2013. The North and the Berm Parcels were in good condition at the time of Inspection.

Completed Area Name: OU 1 -Plant Site
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 10/23/2013
Comments: The Draft Rodent Mitigation Plan and Response to Comments constitute RP Final document. Ground squirrels will be controlled using an Anticoagulant bait in T-Boxes. Effectiveness of this control method will be evaluated by observing numbers of active burrows.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Financial Assurance Documentation
Completed Date: 04/03/2014
Comments: On April 2, 2014, the California Environmental Protection Agency, Department of Toxic Substances Control, conducted a financial assurance review. No violations were discovered during the review.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Financial Assurance Documentation
Completed Date: 01/17/2014
Comments: This is a copy of the Cost Estimate that was initially submitted with the O&M Plan and was listed by the Financial Assurance Unit under of Pittsburg River Park LLC.

Completed Area Name: OU 1 -Plant Site
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 01/10/2014
Comments: This was the first report on results of inspections at the Berm Parcel after implementation of Baits as a Rodent Control Measure for ground squirrels. In general, rodents were not observed during the inspection that took place on December 13, 2014. The number of active burrows identified increased slightly relative to the inspection on November 29 because the mowing allowed for easier burrow identification. This report was for the period of 11/15 & 29/ 2013 & 12/13/ 2013.

Comments: Second Semi-Annual 2017 OM Report Approved via email

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Workplan
Completed Date: 02/25/2016
Comments: DTSC accepts the Work Plan on condition that the following recommendations are addressed: 1. The Five Year Review Report should include an updated cost estimate for Financial Assurance. 2. Section 3.1 Site Inspection & Cap Thickness Evaluation. The text in the second and third paragraphs states that field inspections will include cap thickness measurements. Consideration should be given to installing permanent monuments to help measure cap thickness at the same locations over time.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Inspections/Visit (Non LUR)
Completed Date: 12/30/2013
Comments: DTSC conducted a site inspection to look for signs of the Tensar Geogrid material in the soil that may have been brought to the surface by the ground squirrels. No Tensar Geogrid material was observed. DTSC recommends verification of soil cap thickness, planting plant species that were recommended in the O&M Plan, mitigation of the squirrels to prevent further damage to the cap, filling in burrows and properly maintaining the irrigation system.

Completed Area Name:	OU 3 - City of Pittsburg Linear Park Property
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	09/14/2009
Comments:	The Soil Investigation Report presents the results of a limited, shallow soil investigation that was performed to determine whether asbestos-containing materials (ACM) are present in Linear Park Property. Soil samples were collected from soil borings that were drilled at 16 locations to a depth of 10 feet or less. The samples were also analyzed for total petroleum hydrocarbons as diesel and motor oil, polynuclear aromatic compounds, and volatile organic compounds, although no significant concentrations of these analytes were detected. ACM was found to occur in shallow soil in a localized area around soil borings SB-3 and SB-5 at the northeast corner of the property
Completed Area Name:	OU 3 - City of Pittsburg Linear Park Property
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Workplan
Completed Date:	07/11/2008
Comments:	The Work Plan scope of work included drilling of up to 16 soil borings to investigate for the presence of asbestos-containing materials within 10 feet of the ground surface in the Linear Park Property. The Work Plan was prepared because asbestos-containing materials were observed to extend beyond the southern boundary of the former Johns Manville Plant Site when cleanup activities were conducted.

File Location:	Not reported
Potential Media Affected:	Soil
Potential Contaminants of Concern:	Asbestos Containing Materials (ACM), Other Petroleum
Site History:	Manville records indicate that the Roofing Materials Plant was constructed at the Site from 1925 through 1928. Asbestos-cement products, asphalt roofing materials, and asbestoscontaining pipe covering were the principal products manufactured at the Site prior to cessation of asbestos-containing product manufacturing by Manville. An evaporation pond was located in the southwest quadrant of the Site and received water and oil residuals produced during manufacture of roofing materials. Historic aerial photos and company records were reviewed to determine the operational history of the evaporation pond. A series of four asphalt stills were used to convert heavy oil (purchased in bulk from a number of refineries) to asphalt which was used in the manufacture of roofing products. The stills were initially fired with fuel oil and later with natural gas. Air was delivered to each still via a series of air lines. The addition of air to the heated heavy oil reduced the viscosity of the heavy oil. This process was referred to as "asphalt blowing". The off gases of the asphalt blowing process were collected in a series of 4 pipes which routed the gases to a condenser line. Water was delivered to the condenser line by a series of nozzles to cool the vapor. The condenser line conveyed the resultant oil water slurry to a condenser located to the south of the stills. The oil water mixture was transported from the condenser to the evaporation pond via an underground pipe. The residual oil on the pond was burned off periodically. It is estimated that this occurred approximately two times per year. Review of aerial photos indicates that the evaporation pond was in use by 1946 and remained relatively constant in size until sometime after 1959 when it was filled with scrap and construction debris. The area was subsequently paved over with blacktop.

Completed Document Type: Operations and Maintenance Report
Completed Date: 02/22/2013
Comments: Semiannual Operation and Maintenance (O&M) Report is for the North and Berm Parcels. The inspection for the period from July 1 through December 31, 2012 was conducted on December 24, 2012. The North Parcel was in good condition. O&M was done on the irrigation system and there were few animal burrows. The Berm Parcel was in good

JOHNS MANVILLE (Continued) **S109443840**

condition. Burrows were filled in with soil, bare soil was hydro-seeded and the irrigation system was repaired.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 09/25/2013
Comments: The Report was approved, however, DTSC requests for a workplan for controlling and eradicating ground squirrels. DTSC also recommends maintaining a permanent irrigation system in good condition according to the O&M Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 05/23/2014
Comments: DTSC recommends the following actions at the Berms: 1. Verification of soil cap thickness making sure that the original recommended thickness is maintained. 2. Restoration of plant species (Cape Plumbago, Purple Trailing Lantana and Bearberry Contoneaster) recommended in the Operations and Maintenance Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 06/01/2015
Comments: The Semi-annual Operation and Maintenance Report is for the North and Berm Parcels for the period from July 1, 2014 through December 31, 2014. The North Parcel consists of a soil cap and the Berm Parcel consists of 2 two berms with a soil cover. In July 2014, a water line was installed within the footprint of the old road which lies adjacent to the North Parcel. No potentially impacted soil was disturbed during the installation. In the Fall of 2014, the Berm vegetation was assessed and barren areas were observed. On December 22, 2014, both the southern and northern berms were hydro-seeded with a mix of Native Ornamental Fine Fescue . The Berms are infested with ground squirrels and gophers (rodents). Baiting has shown to be an effective and long-term mitigation strategy against ground squirrels. Passive Exhaust Rodent Control treatment has been found effective in mitigating gophers. Rodent inspections continue on a quarterly basis and results will be reported in the semi-annual reports.

Completed Document Type: Financial Assurance Documentation
Completed Date: 01/17/2014
Comments: This is a copy of the Cost Estimate that was initially submitted with the O&M Plan and was listed by the Financial Assurance Unit under of Pittsburg River Park LLC.

Completed Area Name: OU 1 -Plant Site
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 01/10/2014
Comments: This was the first report on results of inspections at the Berm Parcel after implementation of Baits as a Rodent Control Measure for ground squirrels. In general, rodents were not observed during the inspection that took place on December 13, 2014. The number of active burrows identified increased slightly relative to the inspection on November 29 because the mowing allowed for easier burrow identification. This report was for the period of 11/15 & 29/ 2013 & 12/13/ 2013.

Completed Document Type: Operation & Maintenance Order/Agreement
Completed Date: 09/25/2009
Comments: The Operation and Maintenance Agreement provides for ongoing inspection, reporting, maintenance, and repair of the engineered containment berm located on the east side of the Plant Site.

Completed Area Name: OU 1 -Plant Site
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Initial Study/ Neg. Declaration
Completed Date: 06/22/2006
Comments: Not reported

Completed Area Name: OU 2- North Parcel
Completed Sub Area Name: Not reported
Completed Document Type: Operation & Maintenance Order/Agreement
Completed Date: 09/25/2009
Comments: The Operation and Maintenance Agreement provides for ongoing inspection, reporting, maintenance, and repair of the soil cap that covers most of the North Parcel.

Completed Area Name: OU 1 -Plant Site
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction

JOHNS MANVILLE (Continued) **S109443840**

Completed Date:	10/07/2009
Comments:	The Land Use Covenant prohibits residential and other sensitive uses on the 3.2-acre Berm Property along the eastern boundary of the Plant Site. The Land Use Covenant identifies a 17.3-acre portion of the Plant Site as the Residential Property. Extraction of groundwater is restricted over the entire Plant Site and there are restrictions on disturbance of a localized area where there are residual petroleum hydrocarbons in groundwater.
Completed Area Name:	OU 1 -Plant Site
Completed Sub Area Name:	Not reported
Completed Document Type:	Certification
Completed Date:	11/12/2009
Comments:	DTSC certified completion of the remedial action at the Plant Site. An Operation and Maintenance Agreement and Land Use Covenant are in place and there will ongoing inspection and maintenance of the containment area.

Completed Sub Area Name: Not reported
Completed Document Type: Annual Oversight Cost Estimate
Completed Date: 09/24/2015
Comments: DTSC Final Cost Estimate for FY 2015/2016

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Inspections/Visit (Non LUR)
Completed Date: 12/30/2013
Comments: DTSC conducted a site inspection to look for signs of the Tensar Geogrid material in the soil that may have been brought to the surface by the ground squirrels. No Tensar Geogrid material was observed. DTSC recommends verification of soil cap thickness, planting plant species that were recommended in the O&M Plan, mitigation of the squirrels to prevent further damage to the cap, filling in burrows and properly maintaining the irrigation system.

Completed Sub Area Name:	Not reported
Completed Document Type:	Design/Implementation Workplan
Completed Date:	11/02/2007
Comments:	Grading plan approval from the city, approval letter for the RDIP addendum.
Completed Area Name:	OU 1 -Plant Site
Completed Sub Area Name:	Not reported
Completed Document Type:	Operations and Maintenance Plan
Completed Date:	10/09/2008
Comments:	The Operation and Maintenance Plan outlines the procedures for operating, maintaining, and repairing the berm where asbestos-cotaining materials and petroleum hydrocarbon-affected soil is contained on-site.
Completed Area Name:	OU 3 - City of Pittsburg Linear Park Property
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	09/14/2009
Comments:	The Soil Investigation Report presents the results of a limited, shallow soil investigation that was performed to determine whether asbestos-containing materials (ACM) are present in Linear Park Property. Soil samples were collected from soil borings that were drilled at 16 locations to a depth of 10 feet or less. The samples were also analyzed for total petroleum hydrocarbons as diesel and motor oil, polynuclear aromatic compounds, and volatile organic compounds, although no significant concentrations of these analytes were detected. ACM was found to occur in shallow soil in a localized area around soil borings SB-3 and SB-5 at the northeast corner of the property
Completed Area Name:	OU 3 - City of Pittsburg Linear Park Property
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Workplan
Completed Date:	07/11/2008
Comments:	The Work Plan scope of work included drilling of up to 16 soil borings to investigate for the presence of asbestos-containing materials within 10 feet of the ground surface in the Linear Park Property. The Work Plan was prepared because asbestos-containing materials were observed to extend beyond the southern boundary of the former Johns Manville Plant Site when cleanup activities were conducted.
Completed Area Name:	OU 2- North Parcel
Completed Sub Area Name:	Not reported
Completed Document Type:	Operations and Maintenance Report
Completed Date:	12/16/2009
Comments:	All repairs recomended appear approppriate and address of problems identified. The report is technically sound.

Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

TESORO PITTSBURG TERMINAL (Continued) **1004676949**

Waste Code: F004
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: CRESOLS, CRESYLIC ACID, AND NITROBENZENE; AND THE STILL BOTTOMS FROM THE RECOVERY OF THESE SOLVENTS; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F037
Waste Description: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

Waste Code: K050
Waste Description: HEAT EXCHANGER BUNDLE CLEANING SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K051
Waste Description: API SEPARATOR SLUDGE FROM THE PETROLEUM REFINING INDUSTRY.

Waste Code: K069
Waste Description: EMISSION CONTROL DUST/SLUDGE FROM SECONDARY LEAD SMELTING.

Waste Code: K170
Waste Description: K170

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

TESORO PITTSBURG TERMINAL (Continued) **1004676949**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Case Type:	Cleanup Program Site
Case Worker:	MYM
Local Agency:	Not reported
RB Case Number:	SL1822C630
File Location:	Not reported
Potential Media Affected:	Surface water
Potential Contaminants of Concern:	Not reported
Site History:	The site is located adjacent to water, it is frequently windy in this area, and coke is a granular material. This wind transport of coke is of concern to residents in the area as a nuisance, and is of concern to this Board because coke released from the terminal makes its way to the adjacent waters, either directly or by being carried in stormwater runoff from the neighborhood adjacent to the site. The best way to deal with the coke spread is a structural cover.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Consent Agreement
Completed Date:	04/09/2007
Comments:	The Consent Order supercedes the Enforcement Order and First Amended Enforcement Order.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Unilateral Order (I/SE, RAO, CAO, EPA AO)
Completed Date:	02/26/2007
Comments:	Not reported

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Unilateral Order (I/SE, RAO, CAO, EPA AO)
Completed Date:	10/03/2006
Comments:	Enforcement Order identifies hazardous waste management violations and actions required to correct them. Additionally, the Enforcement Order requires that a Preliminary Endangerment Assessment workplan be prepared, submitted to DTSC for review, and implemented. A PEA report with the results and findings of the PEA is also to be submitted to DTSC.

DELTA AUTO WRECKER (Continued) **1001491861**

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Inspections/Visit (Non LUR)
Completed Date:	08/15/2002
Comments:	Report documents concentration of lead and petroleum hydrocarbons in soils, debris and containers throughout the property. Hazardous Waste management activities identified include illegal disposal into adjacent property (POSCO), ilegal storage, open containers, unlabeled drums and containers, no contingency plan of any kind.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Source: CERS

Site ID: 57734
Site Name: West Coast Auto Body & Paint
Violation Date: 04-20-2018
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes: Returned to compliance on 01/18/2019. OBSERVATION: Hazardous waste Used thinner and paint gun sludge is kept in open plastic containers. Hazardous Waste shall be accumulated in a container that is closed, structurally sound and compatible with the contents and show no leakage, spillage, or damage that could cause leakage. CORRECTIVE ACTION: transfer to hazardous waste to compatible container and keep closed and labeled with hazardous waste label.

Geo Track: http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T0601382732
Global Id: T0601382732
Latitude: 38.0275259970001
Longitude: -121.884933756667
Status: Open - Eligible for Closure
Status Date: 07/10/2019
Case Worker: SGG
RB Case Number: 07-0832
Local Agency: CONTRA COSTA COUNTY
File Location: Regional Board
Local Case Number: Not reported
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: The subject property (Site) is located in the central portion of the city of Pittsburg, California, on the corner of Railroad Avenue and Tenth Street, in an area of commercial and light industrial land use. The site is presently occupied by a Redding Petroleum gasoline station consisting of a one-story structure housing a cashiers booth, one canopy-covered dispenser island with six fuel dispensers, and three 12,000-gallon underground storage tanks (USTs). Two USTs are used for gasoline and one is split as a 6,000-gallon diesel and 6,000-gallon gasoline UST. In August and September 1998, one 10,000-gallon and two 8,000-gallon gasoline USTs, one 6,000-gallon diesel UST, and one 2,000-gallon kerosene UST were removed from the site by Fahy Construction; in addition, a waste oil UST also may have been removed. The gasoline UST excavation site was utilized for the placement of new USTs to meet the December 1998 upgrade requirements;

REDDING PETROLEUM INC (Continued) **U001597893**

the piping and dispensers were also upgraded at this time. Environmental analysis detected total petroleum hydrocarbons quantified as gasoline (TPH-g) and volatile aromatic compounds benzene, toluene, ethylbenzene, and xylenes (BTEX) in soil samples collected from beneath the former gasoline USTs at maximum concentrations of 64 milligrams per kilogram (mg/kg) TPH-g, 17 mg/kg benzene, 87 mg/kg toluene, 61 mg/kg ethylbenzene, and 170 mg/kg xylenes; total petroleum hydrocarbons quantified as diesel (TPH-d) in the diesel and kerosene USTs were detected at a maximum concentration of 25 mg/kg; total petroleum hydrocarbons quantified as oil and grease (TPH-og) in the waste oil UST were detected at a concentration of 11 mg/kg. TPH-g, TPH-d, and BTEX were detected in one of the former piping trenches at maximum concentrations of 26 mg/kg TPH-g, 31 mg/kg TPH-d, 18 mg/kg benzene, 16 mg/kg toluene, 38 mg/kg ethylbenzene, and 79 mg/kg xylenes. Concentrations of TPH-g, TPH-d, and BTEX compounds were also detected in samples collected from the excavated (stockpiled) soil. Methyl tertiary-butyl ether (MTBE) was not found at or above detection limits in any of the samples analyzed.

Completed Area Name: PROJECT WIDE

BURLINGTON NORTHERN SANTA FE RAILWAY COMPANY (Continued) **S107735974**

Completed Sub Area Name: Not reported
Completed Document Type: Feasibility Study Workplan
Completed Date: 03/06/2006
Comments: RI/FS Workplan has been approved that covers activities necesssary to conduct an RI/FS of the Site. A soil vapor extraction (SVE) pilot test will be conducted as part of the workplan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 06/18/2007
Comments: Fieldwork complete.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 03/06/2007
Comments: no comments on the report.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 10/25/1999
Comments: Passive soil gas investigation found elevated levels of VOCs at the site. Highest concentration of Carbon Tetrachloride was found to be 438.07 ppb, Chloroform 97.23 ppb and trichloroethene 2.12 ppb.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 05/16/2003
Comments: Soil and groundwater sampling results showed elevated levels of VOCs at the site. The predominant VOCs are carbon tetrachloride, 1,2-dichloroethane and 1,1,2 trichloroethane.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 05/07/2004
Comments: Maximum detected concentration of carbon tetrachloride in Site soil exceeded both residential and commercial PRG. Maximum concentration of carbon tetrachlorideand in groundwater exceeded MCL.

BURLINGTON NORTHERN SANTA FE RAILWAY COMPANY (Continued) **S107735974**

Completed Document Type: Pilot/Treatability Study Report
Completed Date: 09/10/2012
Comments: Report indicates that pilot study is performing successfully

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Public Participation Plan / Community Relations Plan
Completed Date: 04/19/2013
Comments: PPS prepared for BNSF and USS-Posco's overlapping Sites. Includes results of community surveys

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Treatability Study Workplan
Completed Date: 05/01/2013
Comments: Workplan approved under conditions the RP imposed on himself. Work approved by phone.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan
Completed Date: 08/27/2013
Comments: Workplan and additional investigation required to address data becoming outdated and imminent release of contaminated groundwater into New York Slough

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 11/14/2013
Comments: Work completed without delay or unexpected incidents.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 02/24/2014
Comments: Report documents full extent of GW contamination. Revised RAP will reflect new findings

Completed Sub Area Name: Not reported
Completed Document Type: Public Participation Plan / Community Relations Plan
Completed Date: 05/11/2015
Comments: Survey and plan completed

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Treatability Study Workplan
Completed Date: 03/06/2006
Comments: Pilot Study removed most of the source contaminants present in soil

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 08/05/2002
Comments: Investigation discovers concentrations of VOCs above residential health standards

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 10/05/2001
Comments: Contaminants of Concern Identified include Carbon Tetrachloride, TCE, TCA, and degradation byproducts of these compounds including Chloroform, 1,2-DCA, etc.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 06/01/1997
Comments: Investigation conducted to ascertain source of groundwater contamination at UPI

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 06/30/1999
Comments: Activity consisted or installation and retrieval of Goresorber probes

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 05/16/2001
Comments: Investigation consisted of the drilling of a single hydropunch boring and the collection of soil and grab groundwater samples. Investigation also included minor trenching and the collection of localized field measurements.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Workplan

Region: STATE
Facility Status: **Open - Inactive**
Status Date: 06/02/2009
Global Id: SLT2O209312
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 38.0304993520502
Longitude: -121.87023951584
Case Type: Cleanup Program Site
Case Worker: UUU
Local Agency: Not reported
RB Case Number: 07S0053
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Sediments, Surface water
Potential Contaminants of Concern: Copper, Lead, Total Petroleum Hydrocarbons (TPH)
Site History: Soil samples contained the following metals at concentrations greater than their respective soluble threshold limit concentrations: mercury, selenium, lead, thallium, and copper. The source of the soil was reported to be associated with the upper 2 to 3 feet of soil that was determined to be "fill material". One shallow soil also contained elevated concentrations of total petroleum hydrocarbons as diesel. The soil was capped/encapsulated in place at the site with asphalt and/or concrete. Groundwater monitoring wells were installed and groundwater monitoring was to take place after the encapsulation but there is no record/documentation that this monitoring ever took place or that the groundwater monitoring wells were abandoned.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to

PITTSBURG VALERO (Continued) **S120629520**

product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. UST Overfill Prevention Equipment has not been tested and/or the inspection reports were not maintained and submitted to the CUPA. CORRECTIVE ACTION: Maintain overfill prevention system to comply with the deficiencies noted above. Submit verification.

Violation Date: 03-05-2019
Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 10/28/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. CORRECTIVE ACTION: Maintain overfill prevention system to comply with the deficiencies noted above. Submit verfiication.

Citation:	HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	OBSERVATION: All 3 drums are onsite from the Dec 12/29/2017 inspection and appear to contain the same contents by external inspection (weight/sound). Hazardous waste was far over adequate accumulation times in December 2017. CORRECTIVE ACTION: Have all hazardous waste hauled off site and provide manifest to CCHSHMP.

Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	OBSERVATION: All 3 drums are onsite from the Dec 12/29/2017 inspection and appear to contain the same contents by external inspection (weight/sound), labeling appears unchanged. From that inspection: Facility has 3-55 gal drums. 1 drum is about 1/10th full of a sludgey liquid and has no label. 1 drum is at least 1/3rd full of a sludgey liquid and has a hazardous waste label with the old owner’s name, an accum. date from 2015, and is missing information regarding contents. The last drum is labeled "Spill Kit", and is full of used absorbent pads (at least 1/2 full). Hazardous waste label has old owner’s information and is missing information regarding contents, and a 2015 accum start date. CORRECTIVE ACTION: Properly label al hazardous waste containers and send a photo to CCHSHMP OR send documentation to CCHSHMP that all waste has been properly disposed of.

Citation:	HSC 6.7 25284 - California Health and Safety Code, Chapter 6.7, Section(s) 25284
Violation Description:	Failure to obtain a valid permit to operate from the UPA including but not limited to unpaid permit fees.
Violation Notes:	Returned to compliance on 02/27/2020. Observation: As of September 6, 2019, the subject facility does not possess a current and valid CUPA Permit. Corrective Action: 1) Conduct tightness testing of secondary containment at least once every 36 months 1) Immediately Remit payment for all outstanding Certified Unified Program Agency permit fees to CCHS Finance Department (925) 957-5520. and/or 2) Immediately address and correct all outstanding Underground Storage Tank violations and/or any Class I violations in other CUPA programs. A list of outstanding violations is enclosed, if applicable.
Violation Division:	Contra Costa County Health Services Department

Site ID:	146449
Site Name:	Pittsburg Valero
Violation Date:	03-28-2019
Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow

PITTSBURG VALERO (Continued) **S120629520**

to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 10/28/2019. OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. 87-1, 87-2, and 91 were not able to be tested and Diesel failed failed by 2 inches. CORRECTIVE ACTION: Maintain overfill prevention system to comply with the deficiencies noted above. Submit verification.

Violation Date: 10-03-2017
Citation: HSC 6.95 Multiple - California Health and Safety Code, Chapter 6.95, Section(s) Multiple
Violation Description: Business Plan Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 10/12/2017. OBSERVATION: BP05 has been cited 12/22/2015, 9/6/2016, 12/20/16, & 7/10/17. No changes have been made in CERS to the site map since 8/16/2016 and there has been no CERS submittal since 4/17/17. Facility submitted an incomplete site map by email on 8/14/17 but site map was not submitted via CERS and does not meet the requirements of HSC 25505(a)(2). CORRECTIVE ACTION: Submit a map via CERS that meets the requirements of HSC 25505(a)(2).

Site ID: 146449
Site Name: Pittsburg Valero
Violation Date: 09-08-2020
Citation: 23 CCR 16 2636(f)(4) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(4)
Violation Description: Failure to meet one or more of the following monitoring requirements in lieu of the requirement to be tightness tested every 12 months: The monitoring system maintains all product piping outside the dispenser to be fail-safe and shut down the pump when a leak is detected. The monitoring system shuts down the pump or stops flow when a leak is detected in the under dispenser containment (UDC).
Violation Notes: OBSERVATION: Owner/Operator, in lieu of annual tightness testing, failed to maintain all product piping, outside the dispenser, to be fail-safe and capable of shutting down the pump when a leak is detected and a monitoring system capable of shutting down the pump or stops the flow (flow restriction) when a leak is detected in the under dispenser containment. 87 unleaded STP was not running during the AMC testing and fail safe shut down could not be tested. CORRECTIVE ACTION: Maintain all product piping outside the dispenser to be fail-safe and shut down the pump when a leak is detected and the monitoring system shuts down the pump or stops the flow (flow restriction) when a leak is detected in the under dispenser containment. Submit verification.

Status Date:	04/17/2018
Case Worker:	Not reported
RB Case Number:	07-0588
Local Agency:	CONTRA COSTA COUNTY
File Location:	Regional Board
Local Case Number:	70107
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	The Site is located in downtown Pittsburg, California and is bounded by 10th Street to the south, Railroad Avenue to the east, vacant unpaved lots (now part of the Marina School site) to the north, and the previous (prior to expansion) Marina School property boundary to the west. The Site had historically been used as a petroleum service station (All Star Gas) and Bell Gas operated the fuel station, mini-mart, and tire shop. The Site was acquired by the Pittsburg Unified School District (PUSD) through eminent domain in January 2008. Prior to acquisition by the PUSD, the Site was comprised of a single-story mini-mart (55 feet by 25 feet) and tire shop (20 feet by 25 feet) buildings, both located at the northwest portion. Two petroleum underground storage tanks (USTs) (one 10,000-gallon gasoline and one 10,000 gallon gasoline/diesel dual compartment tank) were located in the north central portion of the property. Former USTs were removed prior to 1987. The USTs were removed in July-Sept of 2008. The Site has a flat topography and the surface water drains gently toward the streets.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Technical Report
Completed Date: 02/18/2016
Comments: Groundwater & Environmental Services, Inc. (GES) conducted an annual inspection of the Site on November 23, 2015 and observed an uncovered stockpile of excavated soil estimated at 5 cubic yards. GES collected a soil sample for chemical analysis on December 21, 2015, by compositing soil from four locations within the stockpile. Laboratory results showed that concentrations of contaminants of concern were either non-detect or below Environmental Screening Levels. DTSC concurs with GES that the stockpiled excess soil, at the Site, is suitable for unrestricted reuse on the Site.

Completed Document Type: Land Use Restriction Monitoring Report
Completed Date: 02/13/2018
Comments: The report was prepared by Ground & Environments Services, Inc. (GES) on the behalf of Pittsburg Water View Properties LLC and documents the site inspection, which was conducted on December 21, 2017 to verify compliance with the restrictions and requirements of the Land Use Covenant. DTSC concurred with the report's conclusion that the remedial action continues to be protective of human health. The report recommended actions to correct conditions observed during the site inspection.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 12/23/1988
Comments: Site soils were characterized by 3 to 4 feet (ft) of fill, generally underlain by 6 to 8 ft of medium stiff clays. The lower 2 t0 3 ft of brown fill contained debris suchas sllag, bricks and pieces of metal. Also, there were layers of near-surface staining and slightly oily black sand at several trenches. The following metal contaminants of concern in the ranges set forth below: arsenic (43.8 - 326 parts per million ("ppm"), thallium (19.3 - 1410 ppm), vanadium (ND - 1270 ppm, lead (9.5 19,300 ppm), and antimony (ND 72.1). In addition, total petroleum hydrocarbons as motor oil (ND 4,940 ppm) and diesel (ND 13,500) were detected in the soils. Groundwater was also contaminated

GWF POWER SYSTEMS,LP (SITE 1) (Continued) **S105937979**

with metals such as Vanadium and molybdenum.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 01/30/1991
Comments: This report was submitted to DTSC in 2006. It presents results of air monitoring results activities conducted during site grading and construction of the Power Plant from May 1989 to December 1990. It also documents on-site capping of fill material excavated during plant construction. Based on the Air monitoring results, concentrations of 7 heavy metals in dust generated did not exceed OSHA s Permissible Exposure Limits with the exception of chromium found in 2 samples that slightly exceeded the standard to protect off site populations. The fill material excavated during construction was placed, compacted, and capped on site in accordance the recommendations in the November 1988 Remedial Investigation Report. In addition to the 2 Monitoring wells (MW2 and MW3), this Report recommended installation and quarterly sampling of 2 additional new Monitoring wells, one along the up-gradient (Third Street) side of the site and the 2nd one to be midway MW-2 and MW-3.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 11/22/2013
Comments: The Department of Toxic Substances Control recommends implementation of a Land Use Covenant as a remedial alternative for this this Site. The cap will remain undisturbed and the property restricted to only commercial/industrial uses to protect present or future human health and the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 12/27/2013
Comments: The Preliminary Endangerment Assessment Report and the Draft Land Use Covenant together constitute the Department’s decision document. The recommended remedy for this site is a Land Use Covenant. The PEA was approved by DTSC on 11/22/2013 and the PEA and a draft LUC were circulated for public comment. A public notice announcing a 30 day public comment period was published on 11/23/2013. No comments were received and the public comment period closed on 12/23/2013. The approved PEA and draft LUC circulated for public comment were approved as a final remedy decision on 12/27/2013.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction - Site Inspection/Visit
Completed Date: 02/24/2016
Comments: Groundwater & Environmental Services, Inc. conducted an annual inspection as required by the land use covenant to verify compliance with the restrictions. The site is used by Viking Industrial/ Pittsburg Water View Properties, LLC for vehicle and semi-truck/trailer parking and equipment storage. According to the inspection report, the majority of the asphalt/concrete cover (>92%) observed inside of the boundary fences, prevents exposure of storm water to the underlying contaminated debris. Site areas with exposed soil, gravel, or fill materials were observed during the site inspection. Trenching and installation of new subsurface utilities was observed during the inspection that did not comply with the land use covenant restrictions. The inspection report recommended actions to correct the observed conditions not in compliance with the land use covenant restrictions, including notifying DTSC within 10 days of non-compliant conditions, preparing a soil management plan for future activities that disturb the subsurface, and collect and analyze a

GWF POWER SYSTEMS,LP (SITE 1) (Continued) **S105937979**

sample to determine the appropriate way for handling a stockpile of trench spoils.

Property Description:	Before the Site was expanded to its current configuration, a portion of the Site included residential houses (from at least 1939 until approximately 1963), a roadway (from at least 1939 until 1979 when the new road, Marina Boulevard, was constructed), and part of a dock/wharf associated with boating and fishing activities. Land that eventually became the Site was part of the Marina View Redevelopment Project during the 1960s, when the Redevelopment Agency of the City of Pittsburg began purchasing waterfront parcels along the New York Slough. Between 1963 and 1969, the Redevelopment Agency acquired the land before transferring the property to Marina View Associates in a grant deed dated January 30, 1969. A grant deed dated March 24, 1969 then transferred the property from Marina View Associates to the City of Pittsburg, the current owner of the Site. Sanborn maps show: 1958-1966: The San Francisco International Fish Company previously

THE BERM (Continued) **1025442669**

located east of the Site is no longer in operation. The ?oils and storage? structure is still present in the northern corner of the Site and there is a ?gas and oil? label on the road in front of a grocery store in the southwestern portion of the Site.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

that field work was completed on 3/31/2008.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 03/05/2009
Comments: Implementation Report documents the removal of soil containing lead, PAHs and/or diesel and motor-oil range petroleum hydrocarbons above the Site's commercial/industrial cleanup goals. Approximately 1,195 cubic yards (1,673 tons) of California hazardous waste soils and 1,633 cubic yards (2,286 tons) of Class II non-hazardous soils were removed and disposed offsite.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 10/23/2007
Comments: Minor modification to Removal Action Workplan approved to allow tipping soil from truck containers into specialty railcars at a transfer facility at Pier 96 in San Francisco. DTSC had required revision of the draft RAW prior to issuance of the RAW for public comment to remove this option. A concurrent investigation by the Hazardous Waste Management Program and the Office of Legal Affairs to clarify whether the operations at the facility required a transfer facility permit. This investigation determined that the facility was already subject to federal hazardous waste management regulations as a federally certified railroad operation. Therefore, under the doctrine of federal preemption of state law, the facility did not require a transfer facility permit from DTSC to tip soil from truck containers into railcars.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 02/26/2016
Comments: The Report concluded that the remedy implemented at the Site was functioning as originally intended, the exposure assessments, toxicity data, cleanup levels and remedial action objectives used at the time of the remedy selection were still valid, and no information had come to light that could call into question the protectiveness of the remedy.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

Completed Document Type:	Removal Action Workplan
Completed Date:	10/23/2007
Comments:	Minor modification to Removal Action Workplan approved to allow tipping soil from truck containers into specialty railcars at a transfer facility at Pier 96 in San Francisco. DTSC had required revision of the draft RAW prior to issuance of the RAW for public comment to remove this option. A concurrent investigation by the Hazardous Waste Management Program and the Office of Legal Affairs to clarify whether the operations at the facility required a transfer facility permit. This investigation determined that the facility was already subject to federal hazardous waste management regulations as a federally certified railroad operation. Therefore, under the doctrine of federal preemption of state law, the facility did not require a transfer facility permit from DTSC to tip soil from truck containers into railcars.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	5 Year Review Reports
Completed Date:	02/26/2016
Comments:	The Report concluded that the remedy implemented at the Site was functioning as originally intended, the exposure assessments, toxicity data, cleanup levels and remedial action objectives used at the time of the remedy selection were still valid, and no information had come to light that could call into question the protectiveness of the remedy.

Completed Document Type: Risk Assessment Report
Completed Date: 07/16/2020
Comments: The Ecological Risk Assessment (ERA) did not identify any chemicals of ecological concerns for the soil or groundwater exposure pathways listed. The Site is recommended for no further evaluation for ecological exposures. However, the potential for erosion of surface soil and transport as sediment to surface water and aquatic receptors due to potential future sea level was not considered a pathway in the Revised ERA. This issue will be resolved via one or a combination of the following: tracking in 5-year reviews; Evaluation in future ERAs; Corrective Measure Implementation requirements; and Future Actions, Contingent Remedies, or other means in the forthcoming Statement of Basis.

Completed Document Type:	Technical Report
Completed Date:	06/06/2016
Comments:	Not reported
Completed Area Name:	PG&E Shell Pond Property
Completed Sub Area Name:	SWMU 4.18 Shell Pond
Completed Document Type:	Pilot Study/Treatability Workplan
Completed Date:	06/01/2016
Comments:	Not reported

NRG DELTA, LLC (Continued) **U001597931**

Completed Area Name:	PG&E Shell Pond Property
Completed Sub Area Name:	SWMUS 4.18 and 4.12
Completed Document Type:	Pilot/Treatability Study Report
Completed Date:	01/08/2018
Comments:	Not reported
Completed Area Name:	PG&E Shell Pond Property
Completed Sub Area Name:	SWMUS 4.18 and 4.12
Completed Document Type:	Pilot Study/Treatability Workplan
Completed Date:	06/23/2017
Comments:	Not reported
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Pilot Study/Treatability Workplan
Completed Date:	01/12/2017
Comments:	Not reported
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Technical Report
Completed Date:	02/22/2017
Comments:	Not reported
Completed Area Name:	Pittsburg Power Plant
Completed Sub Area Name:	Not reported
Completed Document Type:	RFI Workplan
Completed Date:	08/08/2017
Comments:	Not reported
Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Annual Oversight Cost Estimate
Completed Date:	10/19/2010
Comments:	Estimate prepared, reviewed by RP representative and mailed to RP.
Future Area Name:	PG&E Shell Pond Property
Future Sub Area Name:	SWMUS 4.18 and 4.12
Future Document Type:	Remedial Action Completion Report
Future Due Date:	2028
Future Area Name:	PG&E Shell Pond Property
Future Sub Area Name:	SWMUS 4.18 and 4.12
Future Document Type:	Land Use Restriction
Future Due Date:	2021
Future Area Name:	Pittsburg Power Plant
Future Sub Area Name:	Not reported
Future Document Type:	Land Use Restriction
Future Due Date:	2022
Future Area Name:	PROJECT WIDE
Future Sub Area Name:	Not reported
Future Document Type:	Remedy Construction Complete
Future Due Date:	2028
Future Area Name:	Pittsburg Power Plant
Future Sub Area Name:	Not reported
Future Document Type:	Remedy Selection and Statement of Basis
Future Due Date:	2021
Schedule Area Name:	Not reported
