Various demarcations of acceptable risk have been established by regulatory agencies. The National Oil and Hazardous Substances Pollution Contingency Plan (NCP; 40 CFR 300) indicates that lifetime incremental cancer risks posed by a site should not exceed a range of one-in-one million to one-in-one-hundred thousand and non-carcinogenic chemicals should not be present at levels expected to cause adverse health effects (Hazard Index greater than 1). The U.S. EPA states that sites posing a cumulative cancer risk of less than 1E-04 and non-cancer indices less than 1 are generally not considered to pose a significant risk warranting remediation. The California Hazardous Substances Act (HSAA) incorporates the NCP by reference and thus also incorporates the acceptable risk range set forth in the NCP. In California, the Safe Drinking Water, and Toxic Enforcement Act of 1986 (Proposition 65) regulates chemical exposures to the general public and is based on an acceptable risk of 1E-05. The CRWQCB and DTSC consider a risk of 1E-06 as the

generally accepted point of departure for unrestricted land use. For worker exposures, a 1E-05 risk level is commonly used on sites in California.

For multiple chemical or mixture exposures, the cumulative, total CR was estimated by summing the CRs for all COPCs for each exposure route. CRs for multiple pathways are the sums for individual or multi-chemicals for all quantified pathways.

For potential non-cancer hazards, the hazard quotient (HQ) for individual compounds and the hazard index (HI) representing the sum of all HQs is compared to a threshold or target of one. If the HQ or HI is greater than one, meaning the exposure level exceeds the threshold RfC, a potential for adverse non-carcinogenic health effects may exist. If the HQ or HI is equal to or less than one, exposures to the COPCs are not expected to result in an adverse health effect.

It should be noted that HQs and HIs are not statistical probabilities, and the level of concern does not increase linearly as the RfC is approached or exceeded. For regulatory purposes, an HI of one or less is considered an exposure that is unlikely to be of concern for members of the general population (USEPA, 1992). If the pathway specific or cumulative exposure HI is greater than one, it does not necessarily mean that adverse health effects will occur, but does indicate that further evaluation may be appropriate.

5.5.1 Vapor Intrusion Risk Characterization

Cancer Risk

In accordance with USEPA RAGS Part F (USEPA 2009) cancer risk (CR) was estimated using the following equation:

CR = EC * IUR

Where:

EC = Exposure Concentration = $((C_{indoor} \times ET \times EF \times ED))/AT_{cancer\ \&\ non\text{-}cancer}$
C_{indoor} = Modeled Indoor air concentration (µg/m³)
ET = Exposure Time (hours/day), 24-resident, 8-commercial worker
EF = Exposure Frequency (days/year), 350-resident, 250-commercial worker
ED = Exposure Duration (years), 26-resident, 25-commercial worker
AT = (ED in years) (days/year) (hours/day)
Source: Cal-EPA 2014

IUR = Inhalation Unit Risk factor (risk per µg/m³ or $(µg/m^3)^{-1}$) is the toxicity criterion defining the potency of a carcinogenic chemical when inhaled.

Non-Cancer Hazards

The equation used to calculate the Hazard Quotient (HQ) for non-cancer toxic effects from a VOC inhalation exposure is:

$HQ = EC_{nc} / (RfC*1000)$

Where:

EC_{nc} = exposure concentration for assessing hazard (µg/m³) defined above,

RfC = reference concentration, (mg/m³). An RfC for a chemical is derived from the threshold concentration at which no adverse non-carcinogenic health effects were observed in the critical study.

1000 = conversion factor-mg to µg

5.5.2 Soil Exposure Risk Characterization

Cancer Risk

Cancer risks from ingestion and dermal absorption of COPCs in soil were calculated using the following equation (USEPA, 1989):

$$CR = Intake \times SF$$

Where:

CR = Increased lifetime excess cancer risk;
Intake = Lifetime average daily dose, averaged over a lifetime of 70 years, in mg/kg-day;
SF = Slope factor, in $(mg/kg\text{-}day)^{-1}$.

Cancer risks from inhalation of VOCs or particulates released to ambient air from soil by the wind or mechanical disturbance were calculated using the following equation (USEPA, 2009):

$$CR = EC \times IUR$$

Where:

CR = Increased lifetime excess cancer risk;
EC = Chemical-specific exposure concentration, in µg/m³;
IUR = Inhalation unit risk, in unit of risk per µg/m³ or $(µg/m^3)^{-1}$.

Non-Cancer Hazard

Non-cancer hazards from ingestion and dermal absorption of COPCs in soil were calculated using the following equation (USEPA, 1989):

$$HQ = ADD / RfD \qquad \text{Eq. 14}$$

Where:

HQ = Hazard Quotient;

ADD = Average daily dose, in mg/kg-day;
RfD = Chronic inhalation reference dose, in mg/kg-day.

Non-cancer hazards from inhalation of VOCs or particulates released from soils by the wind or mechanical disturbance were calculated using the following equation (USEPA, 2009):

HQ = EC / (RfC x 1,000 µg/mg) Eq.15

Where:

HQ = Hazard Quotient
EC = Chemical-specific exposure concentration, in µg/m^3;
RfC = Inhalation reference concentration, in mg/m^3.

5.5.3 Exposure to Lead

The HHRA used the Leadspread 8 model to estimate a concentration in soil that would lead to an incremental increase in blood lead (PbB) of up to 1 microgram per deciliter (µg/dL), in people exposed to that soil.

Appendix G1 spreadsheet (DTSC PB8 [child]) evaluates a source-specific exposure to lead in soil assuming the following exposure routes: ingestion, dermal contact, and dust inhalation under residential land use scenarios. Appendix G2 spreadsheet calculates the concentration of lead in exterior soil and interior dust that will result in a 90th percentile estimate of blood lead equal to 1 ug/dl (PRG-90). Appendix G2 spreadsheet (Modified USEPA ALM [adult]) is a modified version of USEPA's Adult Lead Model (ALM) (USEPA 2009, 2016) which incorporates DTSC recommendations for evaluating industrial worker exposures to lead in soil. The Modified USEPA ALM calculates the 90th percentile probability that fetal blood lead will exceed the 1 µg/dL benchmark. Variable defaults used to calculate the PRG-90 and the probability that fetal blood lead will exceed the benchmark of 1 µg/dL are shown on Tables 10 and 11 (Appendix G1).

5.5.4 Risk Characterization Results

This section presents the results of the risk characterization which integrates the results of the toxicity and exposure assessments to estimate potential cancer risk (CR) and non-cancer hazard index (HI) associated with exposure to COPCs at the Site.

5.5.4.1 Vapor Intrusion

For vapor intrusion, Cal-EPA guidance (Cal-EPA 2014a and b) indicates that cumulative cancer risks between 1E-06 and 1E-04 fall within a risk management range where further evaluation, remediation and/or mitigation may be considered. A cancer risk greater than 1E-04 indicates that mitigation and/or remediation is needed. For residential exposure to vapors in indoor air, an estimated cancer risk of 1E-06 or higher is the Point of Departure where further investigation and/or mitigation must be considered.

Vapor intrusion risk was estimated for both hypothetical future on-site residents and for current and future commercial/industrial workers exposed to VOCs in indoor air using two methods to estimate the EPCs for COPCs in soil gas as described in Section 5.3.2.1. Total estimated cancer risks and non-cancer hazards for vapor intrusion risks are summarized in the table below.

Summary of Cancer Risks and Non-Cancer Hazards – Vapor Intrusion			
Receptor	**EPC Method**	**Cancer Risk[1]**	**Non-Cancer Hazard[2]**
Hypothetical Future On-Site Resident	Site-Wide 95%UCL	**3E-05**	**2.9E+00**
	Site-Wide Maximum Concentration	**3E-04**	**2.4E+01**
Current and Future Commercial/Industrial Worker	Site-Wide 95%UCL	4E-06	3.5E-01
	Site-Wide Maximum Concentration	**3E-05**	**2.9E+00**
Risk estimates that exceed the point of departure are shown in bold.			

1. Largest contributor to cancer risk is PCE.
2. Largest contributor to non-cancer hazard is TCE.

It is noted here that indoor air sampling was conducted to in Buildings 4, 6 and 10 to further evaluate risks associated with vapor intrusion. The results showed no unacceptable risk to current commercial/industrial receptors (Section 3.10.1).

All soil gas risk characterization results for selected receptors potentially exposed via indoor air inhalation are provided in Table 7.

For both the hypothetical on-Site future resident and the on-Site commercial/industrial risk the largest contributor to cancer risk is PCE. For both receptor groups the largest contributor to non-cancer hazard is TCE.

5.5.4.2 Exposure to Soil

Total estimated cancer risks and non-cancer hazards for direct contact with COPCs in soil are summarized below. For commercial/industrial workers exposed to COPCs in soil the DTSC target risk levels are a cancer risk of 1E-05 and a non-cancer HI of <1. For residents exposed to COPCs in soil the DTSC target risk levels are a cancer risk of 1E-06 and an HI of <1. Risks above target levels are bolded in the summary table. Note: Because the calculation of inhalation risk due to vapor intrusion is based on a modeled EPC with different exposure conditions, vapor intrusion risk was not summed with risk do to exposure to soil.

Summary of Cancer Risks and Non-Cancer Hazards – Exposure to Soil		
Receptor	**Cancer Risk[1]**	**Non-Cancer Hazard[2]**
Commercial Industrial Worker	1.5E-06	2.9E-01
Adult Resident	7.1E-07	3.6E-01
Child Resident	**8.3E-06**	9.8E-01
Risk estimates that exceed the point of departure are shown in bold.		

A detailed summary of cancer risks and non-cancer hazards is provided in Table 8.

5.5.4.3 Exposure to Lead

The DTSC lead risk assessment Spreadsheet 8 for residential exposures is included as Appendix G1. The PRG 90 for residential is 77 mg/kg and 318 for commercial. Site EPC for lead is 12.91 mg/kg. Based on the site EPC the 99th percentile blood lead for a child is 0.3 µg/dL, well below the 1 µg/dL benchmark. A DTSC-modified version of USEPA Adult Lead Model for Commercial/Industrial Exposures is included as Appendix G2. Appendix G2 calculates a 0% probability that fetal blood lead will exceed the target blood concentration, assuming lognormal distribution.

5.5.5 Site-specific Uncertainty Evaluation

Quantifying uncertainty is an essential element of the RA process. According to USEPA's Guidance on Risk Characterization for Risk Managers and Risk Assessors, the point estimates of risk that are generated in a deterministic RA such as that completed for the Site "do not fully convey the range of information considered and used in developing the assessment" (USEPA, 1992). All reasonable steps were taken to limit uncertainties in the RA. However, risk assessment is an inherently uncertain process due to its predictive nature and reliance on assumptions. In general, these uncertainties are driven by variability in:

- Chemical monitoring data and assumptions used in the fate and transport models with which concentrations at receptor locations are estimated;
- Receptor exposure assumptions; and
- The accuracy of toxicity values used to characterize risks and hazards.

Key uncertainties associated with the HHRA for this site are summarized below.

<u>Data Collection and Evaluation</u>

- It was conservatively assumed in this HHRA that soil, and soil gas concentrations do not attenuate over time. Natural attenuation processes such as biodegradation and

volatilization tend to decrease organic chemical concentrations in the subsurface over time. Also, an infinite mass of material was assumed present in the subsurface. In reality, mass would likely be depleted over the 30-year exposure period assumed for residents, further lowering exposure estimates.

- Use of maximum detected concentrations for COPCs in soil gas combined into one hypothetical sample as EPCs, compounded with the deterministic sampling strategy used at Site and other conservative assumptions regarding chemical concentrations, is likely to result in an overestimation of exposure and subsequent estimation of non-cancer hazards and cancer risks. These assumptions are associated with an overestimate of risks and hazards.

Fate and Transport Models

- Fate and Transport Models. The models that were used in this assessment have been developed or accepted by regulatory agencies. This generally means that these models overestimate actual exposures. For instance, the J&E model used to estimate vapor flux from soil gas is an "infinite source" model that assumes no loss of chemical mass over time. It is also a one-compartment model that assumes one direction for vapor chemical migration. The models used are designed to overestimate exposure and contribute to conservatism in the risk assessment.

- Selection of the appropriate depth of soil gas samples for evaluation of potential vapor intrusion risk is a source of uncertainty; use of data for shallow soil gas alone may ignore the contaminant mass available at greater depth, contributing to possible underestimates of risk. However, for this assessment, vertical soil gas profiling was conducted to 20 feet bgs and the highest concentration depth interval selected for risk characterization thereby reducing possible uncertainty.

- The evaluation of COPCs was based on analytical results collected by multiple consultants across several years, which is an uncertainty factor associated with the identification of COPCs. Other factors that contribute to the uncertainties associated with the evaluation of COPCs include sample collection methods, the selection of sample locations, adequate sample quantities, temporal variability of groundwater and soil vapor concentrations, laboratory analyses, and QA/QC measures.

Exposure Assessment

The exposure assessment assumed that concentrations of chemicals in soil would remain constant into the future. This assumption does not consider attenuation or potential changes in soil should pavement and building foundations be removed allowing for direct contact. Future land use EPCs are a source of uncertainty for the HHRA.

5.6 SUMMARY

Based on the results of this HHRA, Stantec makes the following conclusions:

Estimated Cancer Risk and Non-Cancer Hazards from Vapor Intrusion

- Use of either the 95% UCL or maximum soil gas concentrations for each COPC as EPCs, results in cancer risk and non-cancer hazard estimates requiring further evaluation or mitigation prior to use of the property for residential purposes.

- For current and future on-Site commercial indoor workers, no unacceptable vapor intrusion cancer risk or non-cancer hazards were identified using the 95% UCL Site-wide concentrations as EPCs.

- For current and future on-Site commercial indoor workers, use of the maximum concentrations of COPCs in soil gas as EPCs extrapolated across the entire Site results in modeled cancer risk above the point-of-departure (1E-06) but just above a risk of 1E-05 typically used for commercial/industrial properties. The estimated HI; however, is above the target HI of 1 indicating further evaluation is warranted.

  As described 3.10.1 within the Closure Report, to further evaluate the estimated potential risk at buildings nearest the highest soil gas concentrations, on December 10, 2014, Stantec collected indoor air samples from Buildings 4, 6, and, 10 where the highest soil gas concentrations were reported. Three ambient (outdoor) air samples were collected to the southeast of Building 4; to the west of Building 10; and, to the north of Building 10.

  Except for benzene which was detected at similar concentrations in all samples including ambient air, only one sample collected within Building 6 contained tetrachloroethene (PCE) at a concentration (2.3 µg/m^3) just above its commercial/industrial screening level (2.1 µg/m^3) which corresponds to an estimated cancer risk of 1.1E-6 [(concentration ÷ SL) × (1E-06)]. None of the other samples were reported with concentrations above commercial/industrial screening levels for 1,1-dichloroethene, tetrachloroethene, trichloroethene and vinyl chloride (not detected in soil gas samples). Based on the results obtained in 2014, there is no unacceptable potential risk to commercial/industrial workers occupying the sampled buildings.

Estimated Cancer Risks and Non-Cancer Hazards from Exposure to Soil

- Use of the site-wide 95%UCL as the EPC for each COPC in soil results in estimated cancer risks and non-cancer hazards below regulatory target levels for commercial use of the property. This suggests no need for further evaluation or mitigation for continued commercial use even without impervious soil cover.

- Use of the site-wide 95%UCL as the EPC for each COPC in soil results in estimated cancer risk above the regulatory target level for a future child resident. This suggests that further evaluation or mitigation should be conducted prior to property redevelopment for residential use. Alternately, deed restrictions could be instituted to limit future land use to commercial/industrial land use.

- Hexavalent chromium is the principal contributor to estimated cancer risks for both residential and commercial/industrial receptors from direct contact with soil.

6.0 UPDATED CONCEPTUAL SITE MODEL (CSM)

The purpose of the CSM is to provide a conceptual understanding of the physical, chemical and biological processes that control the transport, migration and potential impacts of COCs in the various media (e.g., soil, groundwater, surface water, soil vapor, ambient air, etc.) to human and/or ecological. The factors and elements that influence the CSM include:

- Site history and use
- Future Site usage
- Adjacent property usage
- Topography
- Geology
- Hydrogeology
- Climatology
- Potential COCs
- Distribution and extent of COCs in surface and subsurface media
- Exposure pathways
- Receptors
- Potential for Exposure

The following subsections describe the elements of the CSM.

6.1 SITE HISTORY AND USE

Prior to operations by PRC and its predecessors (beginning in the mid-1940s), the north portion of the Site was occupied by a winery and subsequently an aluminum window and door fabricator. The south portion of the Site was occupied by a lumber yard and soft drink bottling warehouse. Development of the facility by PRC began in approximately 1946 to 1947 in Building 1 where metal products, gaskets, and sealants were manufactured for use in the aerospace industry utilizing lead dioxide curing technology (non-aqueous). Dichromate technology (involving polysulfide resins and aqueous dichromate curing agent) was introduced in the 1950s. Manufacturing activities included lead curing compounds (lead dioxide) and storage of chromic acid (Cr[VI]). The facility expanded to 15 buildings to support storage of automotive coatings, repackaging of aerospace adhesives, coatings, and sealants.

The manufacture of aerospace sealants was terminated in the late 1990s and plastic injection molding of aerospace and electronic packaging was terminated in 2006. PRC's activities on the Site were terminated in late 2008. The Site is currently used for the storage and calibration of video and sound equipment used in the entertainment business.

Additional history information is provided in Section 2.0 and is not presented here for brevity.

6.2 FUTURE SITE USAGE

The Site is zoned for commercial/industrial use. There are no plans to change land use. PRC plans to file a deed notice that will limit site use to commercial/industrial land use.

6.3 ADJACENT SITE USAGE

Properties adjacent to the Site are generally occupied by commercial/industrial to the north and west and mixed residential to the east and south.

The Site is bounded on the north by Milford Street followed by:

- Public Storage, formerly occupied by Collision Auto Salvage (5500 San Fernando Road)
- Fabric Flameproofing Company (835 Milford Street)
- Glendale Small Animal Hospital (831 Milford Street)
- Vacant (former plating and metal working) [823 Milford Street]
- Prime/Solid Wood Closets (Former plating and metal working) [815 Milford Street]
- Auto Collision (811 Milford Street)
- Notron Manufacturing (801 Milford Street)
- Pinnacle Technology (500 State Street)
- Word of Life Church (747 Milford Street)
- International Desserts (743 Milford Street)
- Multifamily apartments and single family residential housing are located northeast of the Site along Concord Street

The Site is bounded on the west by San Fernando Road, railroad tracks followed by commercial/industrial properties.

The Site is bounded on the south by:

- Sofa Interiors (5406 San Fernando Road)
- Advanced LED (5404 San Fernando Road)
- Milla Party Rentals (773 W. California Avenue)

- Elegant Body Shop (769 W. California Avenue)
- Buchak Generator and Starter (765 West California Avenue)
- MEJ Auto Body and Repair (774 West California, Avenue)
- Various small commercial/light industrial operations
- Multi- and single-family housing

The Site is bounded on the east by multi- and single family residences.

6.4 TOPOGRAPHY

The Site topography is relatively flat with an average elevation of approximately 470 feet amsl. Facility drainage is primarily to the west towards San Fernando Road (SECOR, 2006).

Regional site topography slopes generally southward from the San Fernando Valley to the Los Angeles Basin. In the Site vicinity, the topography is to the south and west toward the Los Angeles River.

6.5 GEOLOGY

The PRC-DeSoto facility and surrounding vicinity are located near the southeastern edge of the Los Angeles River Narrows just south of the mouth of the San Fernando Basin. Published geologic maps show that Quaternary Age non-marine alluvial deposits comprised primarily of sands and gravelly sands, with occasional silts and clay, underlie the Site and surrounding vicinity.

The north-to-south trending channel of the Los Angeles River is located approximately 1,500 feet west of the site. No active seismic faults have been mapped within a one-half mile radius of the subject property.

Sedimentation was influenced by the historic migration and meandering of the Lost Angeles River southward to the Los Angeles Basin. The Narrows is considered a high energy hydrologic and hydrogeologic environment. As a result, sediments are generally coarse grained and exhibit high conductivity to fluid flow. Geologic stratigraphy is generally diverse and heterogeneous as a result of the complex meandering and the cyclic seasonal erosion and sedimentation processes that characterized this region.

Subsurface stratigraphic information obtained from subsurface investigations show that underlying sediments consist primarily of sands (silty sands to gravelly sands) with occasional silt and clay interbeds to the maximum depth explored (approximately 85 feet bgs). Figures 9 through 15 show geologic cross sections based on groundwater monitoring well boring logs. Cross sections A-A' through C-C' show east to west cross sections through the injection well lines on the north and south of Building 1. Cross sections D-D' to F-F' shows stratigraphy through offsite upgradient and

cross-gradient wells. Based on the cross sections it is evident that subsurface stratigraphy consists predominantly of coarse-grained sediments with occasional silt and clayey silt interbeds that often characterize cross-bedded paleochannels.

Encountered soils are generally characterized as dense to very dense in consistency and dry to slightly moist within the vadose zone (SECOR, 2004).

6.6 HYDROGEOLOGY

The Site is located in the Los Angeles River narrows. Surface and subsurface water from the San Fernando basin drain through these narrows. The Site is located in the southeast portion of the Bull Canyon Hydrologic Subarea (405.21) of the San Fernando Hydrologic Area (405.20) of the Los Angeles-San Gabriel Hydrologic Unit (405.00). The RWQCB has created these hydrologic units for management based on hydrogeologic boundaries.

Typically, groundwater is encountered at depths of approximately 45 to 60 feet bgs at the Site. Depth to decreases with proximity to the Los Angeles River.

Regional groundwater flow in the Glendale area is influenced by the Los Angeles River and migrates in a south southeasterly direction following the Los Angeles River drainage system. Groundwater in the area of the Site is unconfined and migrates at estimated velocities of 20 to 200 feet per year. Locally, groundwater is influenced by a groundwater mound north of the Site along Commercial Street (MW-5 and MW-6). Figure 3 shows Site groundwater contours as interpreted from well soundings in the first quarter of 2017. Groundwater elevations are typically six to seven feet higher in upgradient well MW-5 and MW-6. The source of the mound is unknown.

The Site is located in the northern portion of the Glendale South Operable Unit (GSOU) of the San Fernando Valley Ground Water Superfund Site. The Site is situated on the eastern edge of a regional groundwater plume consisting of predominantly of PCE, TCE, 1,4 Dioxane, Cr, Cr(VI), and nickel.

Groundwater pumping to control migration of contaminants through the Glendale area was initiated in 2000 from containment extraction wells associated with the GNOU and GSOU Interim Remedies. The location of extraction wells with respect to the Site is described below.

- GNOU Extraction Wells—Four extraction wells, GN-1 to GN-4, were installed along Grandview Avenue west of San Fernando Road approximately 0.8 miles northwest of the Site. The purpose of these wells is to prevent contaminants (primarily VOCs) from migrating from the Burbank and GNOU into the GSOU. Full capture of contaminant migration has not been achieved. In recent years, pumping has been curtailed due to increasing Cr and Cr(VI) concentrations in GN-3.

- GSOU Extraction Wells—Four extraction wells, GS-1 to GS-4, were initially installed along Goodwin Avenue west of San Fernando Road approximately 0.9 miles south of the Site.

More recently, a fifth extraction well, GS-5, was constructed, to improve capture in the GSOU.

The purpose of these wells is to reduce mass and limit migration of contaminants through the Los Angeles narrows. Recent remedy enhancements, that include chromium treatment in the GNOU, an additional extraction well in the GSOU (GS-5), and increased pumping will serve to increase capture of the regional plume and reduce the impact of regional sources on groundwater below the Site.

6.7 CLIMATOLOGY

The climate of the Glendale area is characterized as Mediterranean with an annual average rainfall of approximately 17 inches. Most of the precipitation falls during the winter months. Spring and early summer are generally characterized by morning fog with no measurable precipitation. The average yearly temperature ranges from 56 degrees Fahrenheit (°F) in January to 76°F in August.

Prevailing winds through the spring, summer, and early autumn are from the west. During the winter months, prevailing winds are from the northeast. Average wind speeds are generally low. However, warm northeasterly winds (known as "Santa Ana winds") from the interior may reach average speeds of 35 to 50 miles per hour.

6.8 EXPOSURE PATHWAYS AND COPCS

As described in Section 3.0, extensive investigations were performed at the Site to evaluate the location, extent, and distribution of potential COPCs in subsurface media. Remedial actions were conducted to reduce potential health risks to acceptable levels. Potential exposure pathways identified for COPCs include ingestion, dermal contact, and inhalation (Figure 8). An evaluation of COPCs and potential exposure pathways was presented in the HHRA in Section 5. The following subsections summarize the findings of the HHRA.

6.8.1 Soil

The primary COPCs identified in the RAP for soil were Cr, Cr(VI), 1,4-Dioxane, PCE and TCE. Critical pathways of exposure included, dermal contact and ingestion. Post remediation soil sampling results for Cr, Cr(VI), 1,4-Dioxane, PCE and TCE are presented in Table 9 with the 95 percent UCL for each of these COPCs presented in Table 1. Active remediation was conducted for VOCs by soil vapor extraction and excavation, and for Cr(VI) by excavation and insitu reduction. Cr(VI) was the primary driver for remedial actions. The attached Figures 16 shows the distribution of Cr and Cr(VI) in confirmation samples in the Cr(VI) source area of Building 1, while Figures 17 through 19 show the pre- and post-remediation concentrations of Cr and Cr(VI) on cross sections in the source area. Although these were the primary drivers for Site investigation and remediation, the Site-wide HHRA considered all potential COPCs based on laboratory detections. The results of the HHRA are summarized below.

- Use of the site-wide 95%UCL as the EPC for each COPC in soil results in estimated cancer risks and non-cancer hazards below regulatory target levels for commercial use of the property. This suggests no need for further evaluation or mitigation for continued commercial use even without impervious soil cover.

- Use of the site-wide 95%UCL as the EPC for each COPC in soil results in estimated cancer risk above the regulatory target level for a future child resident. This suggests that further evaluation or mitigation should be conducted prior to property redevelopment for residential use. Alternately, proprietary limit in the form of deed restrictions could be instituted to limit future land use to commercial/industrial land use.

- Hexavalent chromium is the principal contributor to estimated cancer risks for both residential and commercial/industrial receptors direct contact with soil.

6.8.2 Soil Vapor

The primary drivers for vapor intrusion were found to be PCE and TCE. On-Site indoor air sampling and off-Site crawl space sampling show no unacceptable excess risk to the current commercial/industrial user or the off-Site resident. However, additional investigations and mitigation may be required for the future Site user as summarized in the HHRA findings below.

- Use of either the 95% UCL or maximum soil gas concentrations for each COPC as EPCs, results in cancer risk and non-cancer hazard estimates requiring further evaluation or mitigation prior to use of the property for residential purposes.

- For current and future on-Site commercial indoor workers, no unacceptable vapor intrusion cancer risk or non-cancer hazards were identified using the 95% UCL Site-wide concentrations as EPCs.

- For current and future on-Site commercial indoor workers, use of the maximum concentrations of COPCs in soil gas as EPCs extrapolated across the entire Site results in modeled cancer risk above the point-of-departure (1E-06) but at a risk of 1E-05 typically used for commercial/industrial properties. The estimated HI; however, is above the target HI of 1.

  As described 3.10.1 within the Closure Report, to further evaluate the estimated potential risk at buildings nearest the highest soil gas concentrations, on December 10, 2014, Stantec collected indoor air samples from Buildings 4, 6, and, 10 where the highest soil gas concentrations were reported. Three ambient (outdoor) air samples were collected to the southeast of Building 4; to the west of Building 10; and, to the north of Building 10.

  Except for benzene which was detected at similar concentrations in all samples including ambient air, only one sample collected within Building 6 contained tetrachloroethene (PCE) at a concentration (2.3 µg/m^3) just above its commercial/industrial screening level

(2.1 µg/m^3) which corresponds to an estimated cancer risk of 1.1E-6 [(concentration ÷ SL) × (1E-06)]. None of the other samples were reported with concentrations above commercial/industrial screening levels for 1,1-dichloroethene, tetrachloroethene, trichloroethene and vinyl chloride (not detected in soil gas samples). Based on the results obtained in 2014, there is no unacceptable potential risk to commercial/industrial workers occupying the sampled buildings.

6.8.3 Groundwater

COPCs identified in the RAP for groundwater included Cr, Cr(VI), 1,4-Dioxane, PCE and TCE. Remedial actions have resulted in a reduction in the concentrations of each COPC. The reported Cr and CrVI concentrations are generally below MCLs or below the concentrations reported in upgradient monitoring wells. Post-remediation monitoring for the past seven years has shown no appreciable rebound (Section 4.0). Trend analysis also shows that 1,4-Dioxane, PCE and TCE concentrations are stable, decreasing or are below MCLs. Although not a COC, arsenic concentrations, which temporarily increased as a result of in-situ chromium reduction, have returned to concentrations below the MCL.

VOC concentrations on-Site are sporadic, very low, and only slightly over the MCLs in scattered wells. The reported concentrations are below those reported in regional groundwater monitoring wells (Figure 20).

Groundwater below the Site is not extracted for drinking water. Therefore, the exposure pathway from residual concentrations, whether from the Site or contributed by the regional plume, is incomplete. This potential exposure resulting from future site use will be controlled administratively by recorded deed notice.

7.0 CLOSURE

Site Investigations coupled with post-remediation confirmation soil sampling, on- and off-Site vapor intrusion studies, groundwater monitoring, and HHRA have demonstrated that remedial goals have been largely achieved and that no adverse excess human health risks exist for current on-Site and off-Site receptors, based on current property usage and documented residual COPC concentrations in environmental media. To assure that potential future receptors are not adversely exposed to COPCs 1) a deed notification will be recorded for the property that will restrict property usage to commercial/industrial use until such time that investigation/mitigation demonstrate that potential health risks have been reduced to acceptable levels , 2) require the preservation of the GCL cap over residual Cr(VI) impacted soil buried six feet bgs on the east side of the former Building 1 footprint, and 3) restrict groundwater extraction at the Site for drinking water purposes without adequate treatment and permitting by the RWQCB. With these conditions, potential excess health risks to future receptors will be mitigated to insignificant levels.

In consideration of the findings of site investigations, post remediation sampling and monitoring, human health risk evaluations, and the planned filing of a deed notification, remedial actions are complete and the Site qualifies for a NFA Status.

8.0 CERTIFICATION STATEMENT

I Barry Gillespie certify under penalty of law that this document and all attachments were prepared by me, or under my direction or supervision, in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violation.

Notes:
all results in µg/L

1. = More protective of USEPA RSL (June 2017) or DTSC HERO Note 3 Indoor Air Screening Level (June 2017) ÷ DTSC default attenuation factor (0.001 existing commercial buildings)
1. = More protective of USEPA RSL (June 2017) or DTSC HERO Note 3 Indoor Air Screening Level (June 2017) ÷ DTSC default attenuation factor (0.001 existing residential buildings)

TABLE 4
Johnson and Ettinger Soil Gas Modeling Parameters
Former PRC-DeSoto International Inc.
5430 San Fernando Road, Glendale, California

Modeling Parameters	Symbol	Units	RME	Source
Inhalation of VOCs in Indoor Air				
Chemical concentration in soil gas	C_g	mg/m^3		
Depth below grade to bottom of enclosed space floor	L_f	cm	15.2	Default, J&E Model
Soil gas sampling depth below grade (5-foot soil gas)	L_s	cm	304.8	Site-specific, 10 feet
Average soil temperature	T_s	^oC	19.4	Site-specific,Southern CA (US EPA 2004b)
Thickness of soil stratum A (10-feet soil gas)	h_A	cm	304.8	Site-specific, 10 feet
Average soil stratum A SCS soil type (for soil vapor permeability) for 5-foot soil gas			S	J&E Model VLookUP (Sand)
Stratum A soil dry bulk density	r_b^A	g/cm^3	1.66	Default, J&E Model, DTSC, 2014
Stratum A soil total porosity	n^A	cm^3/cm^3	0.375	Default, J&E Model, DTSC, 2014
Stratum A soil water-filled porosity Default	q_w^A	cm^3/cm^3	0.054	Default, J&E Model, DTSC, 2014
Enclosed space floor thickness	L_{crack}	cm	10	Default, J&E Model, DTSC, 2014
Soil-building pressure differential	DP	$g/cm\text{-}s^2$	40	Default, J&E Model, DTSC, 2014
Area of Enclosed space below grade	A_B	cm^2	1,000,000	Default, J&E Model, DTSC, 2014
Enclosed space height	H_B	cm	304.8	Default, J&E Model, DTSC, 2014
Floor-wall seam crack width	w	cm	0.1	Default, J&E Model, DTSC, 2014
Average vapor flow rate into building -Building Specific	Q_{soil}	L/m	5	Default, J&E Model, DTSC, 2014
RECEPTOR - Residential				
Indoor air exchange rate - Building Specific	ER	1/h	0.5	Default, J&E Model, DTSC, 2014
Averaging time (Carcinogenic)	AT_C	yrs	70	Cal-EPA, 2011b
Averaging time (Noncarcinogenic)	AT_{NC}	yrs	26	DTSC 2014 (HERO Note1); USEPA 2014
Exposure duration	ED	yrs	26	Cal-EPA, 2011b, USEPA, 1990b
Exposure frequency	EF	days/yr	350	Cal-EPA, 2011b
Exposure Time	EF	hours/day	24	DTSC 2014 (HERO Note1); USEPA 2014
RECEPTOR - Commercial				
Indoor air exchange rate - Building Specific	ER	1/h	1	Default, J&E Model, DTSC, 2014
Averaging time (Carcinogenic)	AT_C	yrs	70	Cal-EPA, 2011b
Averaging time (Noncarcinogenic)	AT_{NC}	yrs	25	DTSC 2014 (HERO Note1); USEPA 2014
Exposure duration	ED	yrs	25	Cal-EPA, 2011b, USEPA, 1990b
Exposure frequency	EF	days/yr	250	Cal-EPA, 2011b
Exposure Time	EF	hours/day	8	DTSC 2014 (HERO Note1); USEPA 2014

Notes:
RME = Reasonable Maximum Exposure (USEPA, 1989)

TABLE 5
Receptors and Exposure Variables Values
Former PRC-DeSoto International Inc.,
5430 San Fernando Road, Glendale, California

Exposure Assumption	Assumption Abbreviation	Unit(s)	Values - Baseline Scenario			Rationale/Reference	
			Commercial Worker	Adult Resident	Child Resident		
Exposure Assumption Specific to Dermal Pathway							
Dermally Absorbed Dose	DAD	mg/kg-day	Calculated			USEPA 2004	DAD = [CS x ABS x SA x CF x AF x EF x ED] / [BW x AT c or nc]
Soil to Skin Adherence Factor	AF	mg/cm^2	0.2	0.07	0.2	Cal-EPA DTSC, 2000	
Absorption Factor	ABS	unitless	Chemical Specific			USEPA 2017	
Skin Surface Area Available for Contact	SA	cm^2/day	6,032	6,032	2,900	USEPA 2014; Cal-EPA DTSC, 2000	
Exposure Assumption Specific to Ingestion Pathway							
Chronic Daily Intake	CDI	mg/kg-day	Calculated			USEPA 1989	CDI = [CS x IR-S x FI x EF x ED x CF] / [BW x $AT_{c\ or\ nc}$]
Ingestion Rate - Soil	IR-S	mg/day	100	100	200	USEPA 1991, USEPA 2011	USEPA, 1989; USEPA, 2004
Fraction Ingested from source	FI	unitless	1			-	All ingested soil comes from the contaminated source.
Gastrointestinal Absorption Factor	GIABS	unitless	Chemical Specific			USEPA 2017	Fraction of contaminant in soil matrix absorbed through gastrointestinal tract.
Exposure Assumption Specific to Inhalation Pathway							
Exposure Concentration	EC	mg/kg	Calculated			USEPA 2002	EC = [CA x (ET / 24 hours/day) x EF x ED] / [$AT_{c\ or\ nc}$]
Chemical Concentration in Air	CA	mg/m^3	Calculated			USEPA 2002	Default particulate emission factor (PEFs) and chemical specific volatilization factor (VFs)
Particulate Emission Factor	PEF	m^3/kg	1.36E+09	1.36E+09	1.36E+09	USEPA 2002: USEPA 2017	USEPA RSL Calculator: https://epa-prgs.ornl.gov/cgi-bin/chemicals/csl_search
Volatilization Factor	VF	m^3/kg	Chemical Specific			USEPA 2002: USEPA 2017	USEPA RSL Calculator: https://epa-prgs.ornl.gov/cgi-bin/chemicals/csl_search
Exposure Time	ET	hours/day	8	24	24	USEPA 1991	USEPA, 2009
Exposure Assumptions Specific to All Pathways							
Chemical Concentration in Soil	CS	mg/kg	Calculated 95% UCL or Maximum detected value			USEPA 2015	Calculated EPC - 95% UCL (ProUCL 5.1.1), Maximum detected value was used as EPC if: 1)fewer than five detects for an analyte or 2) calculated EPC was greater than maximum detected value.
Exposure Frequency	EF	days/years	250	350	350	EPA, 1991	
Exposure Duration	ED	years	25	20	6	EPA 1991, USEPA 2014	
Averaging Time (Cancer)	AT-C	days	25,550			EPA, 1989: USEPA, 2004	Calculated: [Lifetime -70 (years)] x [365 (days/year)]
Averaging Time (Non-Cancer)	AT-N	days	9,125	7,300	2,190	EPA, 1989: USEPA, 2004	Calculated: [Exposure Duration (years)] x [365 (days/year)]
Body Weight	BW	kg	80	80	15	USEPA 2014	
Conversion Factor	CF	kg/mg	1E-06			--	
Age Dependent Adjustment Factor (ADAF)	ADAF	Unitless	NA if > 16 years old	NA if > 16 years old	Child 0 to 6	USEPA 2005	$ADAF_{0-6}$ for Child (0-6 years old) calculated using a weighted average of adjustment factors: $ADAF_{0-6}$ = (($ADAF_{0-2}$ x 2 years) + ($ADAF_{2-6}$ x 4 years)/6 years = 5.33 5.33 = ((10*2 years) + (3*4 years))/6 years
Child 0-2 - ADAF=10					0 - 2 yo - ADAF = 10		
Child 2-16 - ADAF=3					2 -16 yo - ADAF = 3		
>16 years - ADAF=1					>16 yo - ADAF = 1		
Calculated adjustment Factor					Calculated 0-6 = 5.33

LEGEND

	Exposure pathway is complete or potentially complete. Pathway will be quantitatively evaluated.
	Exposure pathway is incomplete. Pathway will not be evaluated.
	Exposure pathway is potentially complete but contributes little to risk. Evaluation of the direct contact pathways is adequately protective.

Notes

[a] The site is currently used for commercial operations. The site is almost entirely paved, however, this is not considered to be a permanent access restriction. Direct exposure to soil could occur in the future.

[b] The Site and surrounding area are serviced by municipal water.

[c] Nearest surface water feature is the Los Angelas River approximately 1/4 mile west of the Site.

Notes and summary data for this report.
J - Reported value is less than the detection limit.
U - Compound analyzed for but not detected. The reported value is the minimum attainable detection limit for the sample.

See page 1A for complete definitions of the data reporting qualifiers.

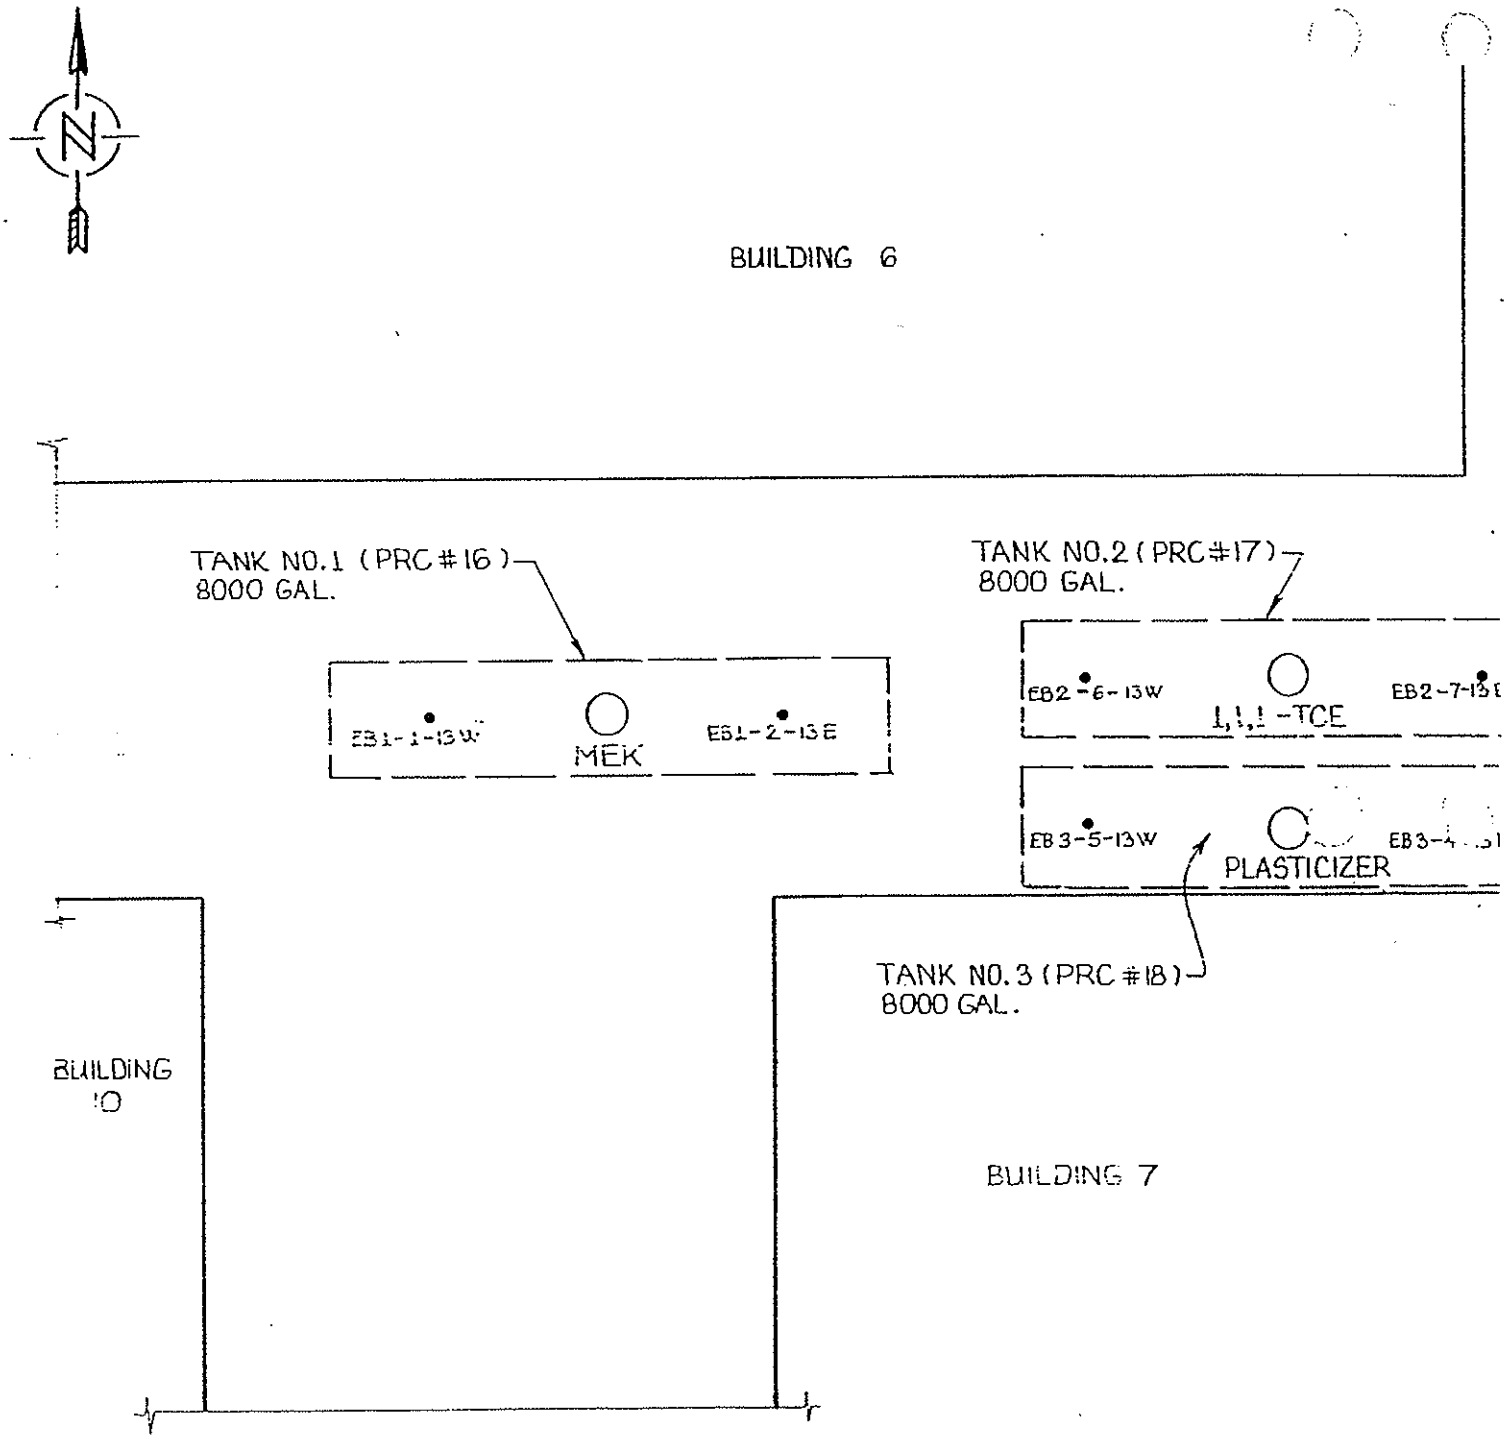
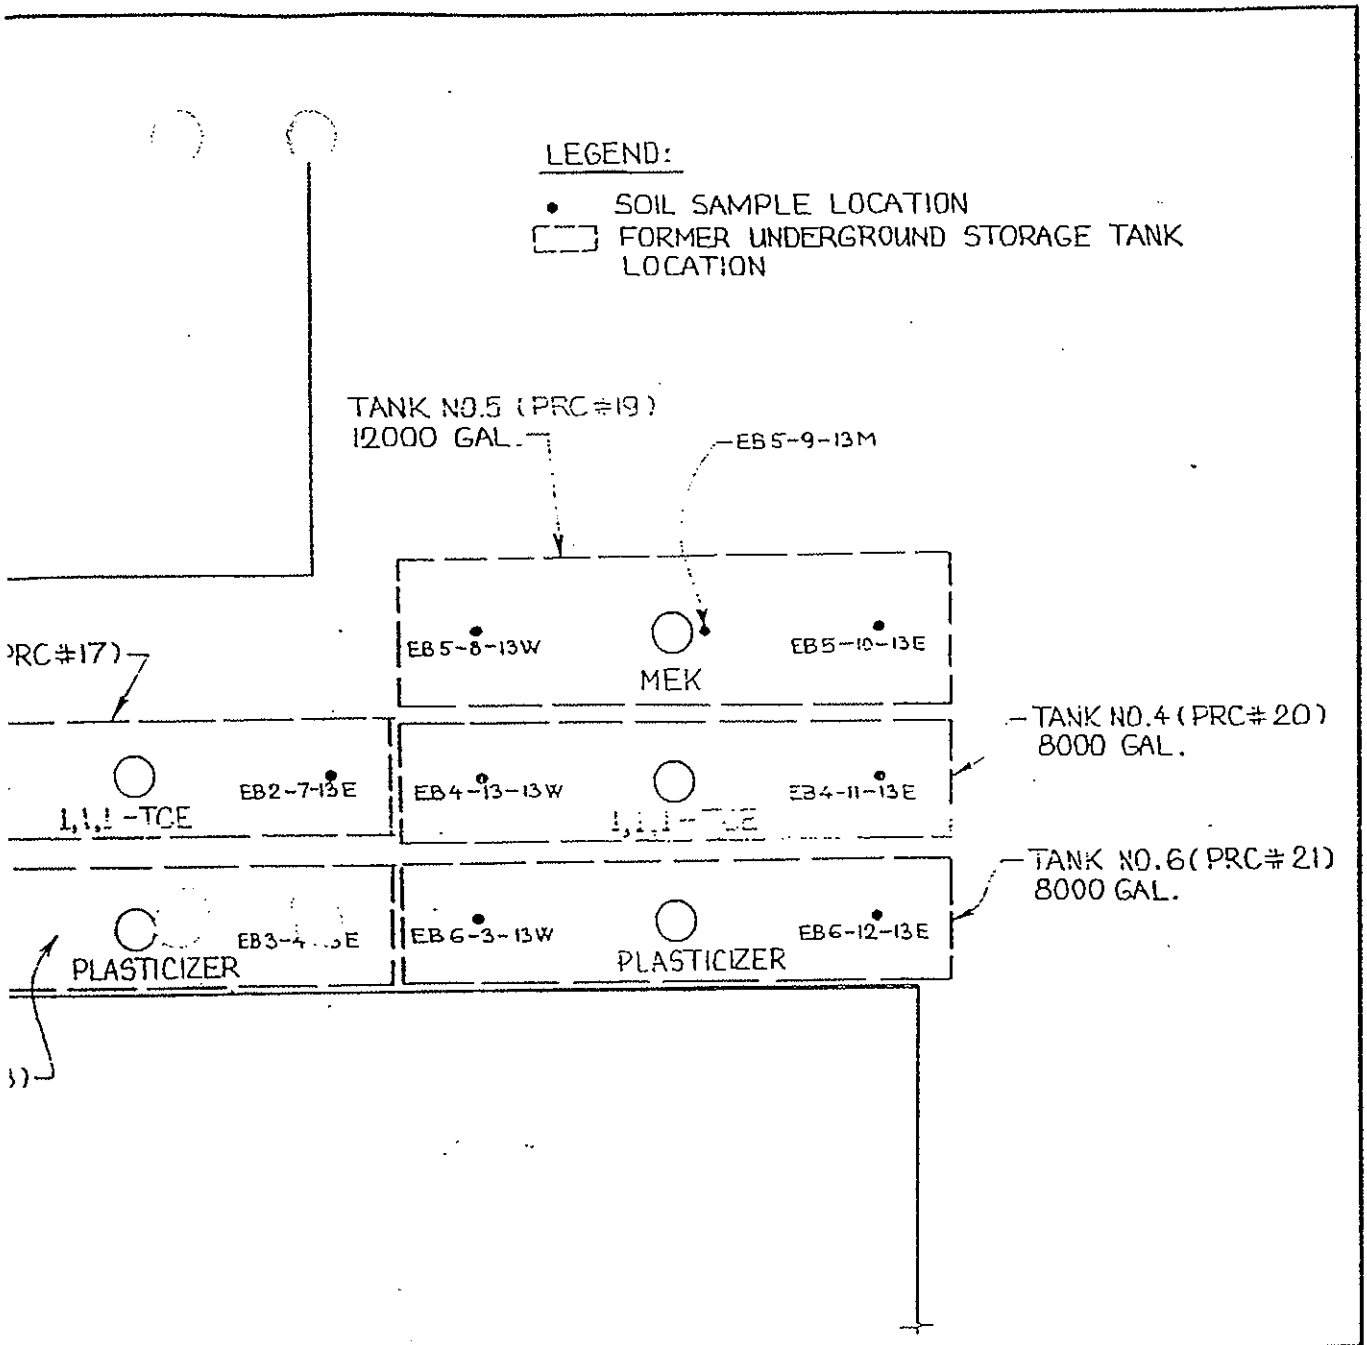
Attention: Inspector James J. Lytle

Subject: **UNDERGROUND TANK CLOSURE AT PRODUCTS RESEARCH & CHEMICAL CORPORATION, 5426 SAN FERNANDO ROAD, GLENDALE, CA 91203**



Dear Inspector Lytle:



On September 20, 1990, in accordance with Glendale Fire Department Permit No. 4459, Hekimian & Associates, Inc. removed the following underground tanks:

Tank 1 (PRC#16) - MEK - 8,000 gallon
Tank 2 (PRC#17) - 1,1,1-Trichloroethane waste 8,000 gallon
Tank 3 (PRC#18) - Monsanto Plasticizer - 8,000 gallon
Tank 4 (PRC#20) - 1,1,1-Trichloroethane - 8,000 gallon
Tank 5 (PRC#19) - MEK - 12,000 gallon
Tank 6 (PRC#21) - Monsanto Plasticizer - 8,000 gallon

In accordance with South Coast AQMD Rule 1166, during the excavation, monitoring of the excavated material was conducted by use of an Organic Vapor Analyzer (OVA), GASTECH Model 1314 instrument. The OVA readings, taken three inches from soil surface, were less than 50 ppm, thus an SCAQMD permit was not required. In accordance with South Coast AQMD Rule 1149, the underground tanks were degassed by A.M. Pumping prior to their removal.

In accordance with regulatory agency requirements, soil samples were taken from below the tank invert, as noted in Table 1. The samples were placed in pre-cleaned glass jars (completely filled without head space), capped with teflon-lined caps, sealed with tape and marked to identify the samples, then placed in an ice-filled chest and taken to a state certified testing laboratory for designated testing (laboratory reports and chain-of-custody form attached). Table 1 lists the soil samples laboratory test results.

Hydrological information obtained form L.A. County Flood Control District shows that water table depth at well No. 3934B, located approximately 0.25 mile northeast of the subject site, is 93.4 ft (measured on October 18, 1990). Base on the above data, it is indicated that groundwater table depth at the subject facility is about 90 ft.

Prior to removal, the tanks were triple-rinsed by A.M. Pumping and the rinsate transported under Manifest Nos. 90082642 and 90362927 (manifests attached) to an approved disposal site. The tanks were certified clean and safe for removal by Dan Napier & Associates Industrial Hygienist. After removal, the tanks were transported to D. W. Russell for disposal (tank disposal forms attached).

0				12" concrete at site. All depths below slab.			
				Sand (SW), light yellowish brown (10YR 6/4), well graded, fine to very coarse grained, composed of quartz and feldspar and minor dark lithics, moist.			B = 0.0 ppm, PID = 0.0 ppm 1 sleeve collected
5				Sand (SW), yellowish brown (10YR 5/3), well graded, cobbles start at 4' through 10', similar to above.			B = 0.0 ppm, PID = 0.0 ppm 1 sleeve collected
10				No sample recovery at 10'. Drill through rock to 10.5'. Sand (SW), dark brown (10YR 4/3), well graded, quartz and feldspar sand, fine to very coarse grained.			B = 0.0 ppm, PID = 0.0 ppm 1 sleeve collected
				Odor noted from cuttings - a "solvent" type odor.			
15				Sand (SW), brown (10YR 5/3), well graded, similar to above.			B = 0.0 ppm, PID = 0.0 ppm 1 sleeve collected
				Total depth 15 feet Boring backfilled with bentonite as per workplan due to the odor noted by samplers and PID readings at the cuttings

				Silty Sand (SM), dark grayish brown (10YR 4/2), very fine to fine grained, no coarse, silt 10-20%, cohesive, moist.			B = 4.9 ppm, PID = 4.9 ppm 1 sleeve collected
5				Silty Gravelly Sand (SM/SW), brown (10YR 4/3), well graded sand, fine to coarse grained, with 1/4 to 1/2" diameter gravel, slightly moist, slightly cohesive.			B = 4.2 ppm, PID = 1.4 ppm 1 sleeve collected
10				Silty Gravelly Sand (SM/SW), brown (10YR 4/3), well graded, similar to above, moist, cohesive.			B = 3.8 ppm, PID = 1.4 ppm 1 sleeve collected
				Encountered a large cobble or boulder at 12' below slab.			
				Total depth 12 feet due to obstruction (cobble) Boring backfilled with hydrated bentonite pellets			

NOTES

Ring Sampler

B = Background Ambient Reading

▽ = ft.

▼ = ft.

ASEA BROWN BOVERI

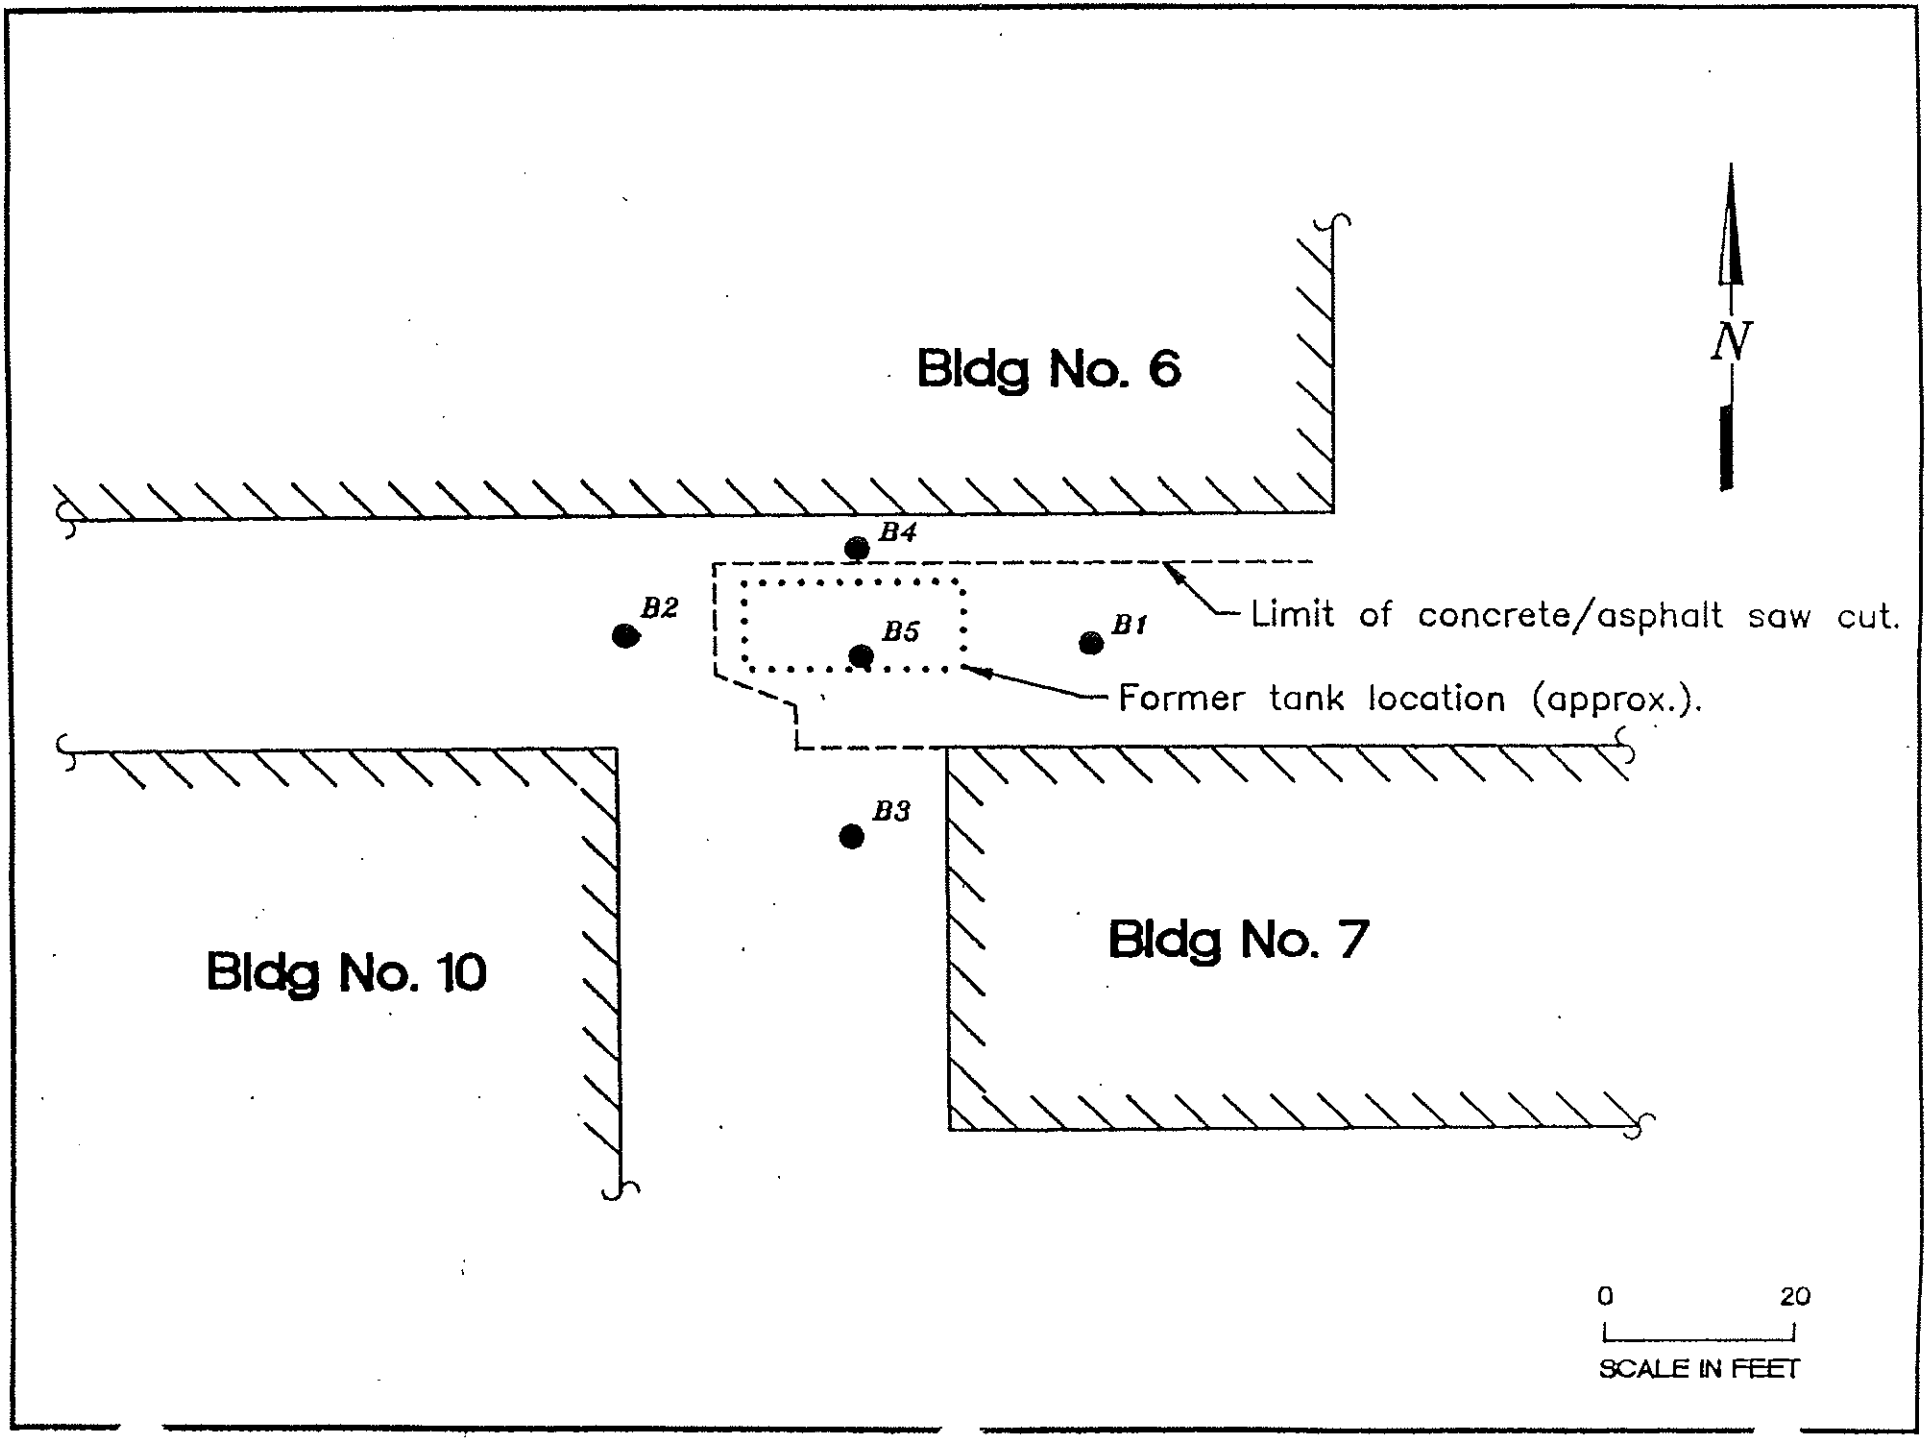

Figure 1 PRC site map showing location of soil borings

The sampling device was decontaminated between sample runs, using a trisodium phosphate soap solution and a deionized water rinse. Drill cuttings and rinsate were collected and sealed in 55-gallon DOT drums and stored temporarily on-site for proper disposal.

2.2 Field Sampling

During the sampling procedures, all soils were logged and described using the Unified Soil Classification System. No unusual odors were detected during the drilling and sampling, except for boring B5. Strong MEK odors were detected in soil samples collected from 10 and 15 feet bgs in this boring, which penetrated the former tank cavity (Figure 1).

After logging, one of the three 6-inch sample tubes from each sample interval was immediately sealed with plastic caps and electrical tape and placed in a cooler with ice for transmittal to ABB-ES's state-certified Camarillo laboratory.

Soil boring logs are included in Appendix A. In general, the subsurface soils at PRC consist of alluvial sand, with lesser amounts of silt and gravel. The sand is generally medium-brown in color, and varies in texture from fine- to coarse-grain.

Depth to consolidated bedrock is unknown, and groundwater was not encountered in any of the boreholes.

3.0 ANALYTICAL PROCEDURES AND RESULTS

Soil samples were submitted to ABB-ES's laboratory in Camarillo for analysis. However, because the laboratory could not process the samples in a timely fashion, the sample analyses were subcontracted to West Coast Analytical Services (WCAS) in Santa Fe Springs. WCAS analyzed all samples for volatile organic compounds, using EPA Method 624/8240. Sample results are summarized in Table 1, and analytical laboratory reports are included in Appendix B. Chain of custody record is attached as Appendix C.

Note: Typically, the "radius of influence" is described as the distance at which at least one-half inch of negative pressure (vacuum) is created in the soil pores. Soil vapors within the radius of influence are eventually drawn into the vapor extraction system for treatment and release into the atmosphere.

CLOSURE PLAN FOR IN-SITU TREATMENT OF SOIL AND GROUNDWATER IMPACTED BY HEXAVALENT CHROMIUM

Courtaulds Aerospace Facility
Glendale, California

Job No. 40049-001-17

May 30, 1997

VOLUME 1 OF 3

Prepared for:
Courtaulds Aerospace, Inc.
5430 San Fernando Road
Glendale, California 91203

Prepared by:
SECOR International Incorporated
25864-F Business Center Drive
Redlands, California 92374-4515

VOLUME 1 CONSISTS OF:

- Text
- Tables
- Figures
- Appendix A
- Appendix B

Table 1

Summary of Chromium Analysis
Vadose Zone Injection Wells IW-3 through IW-17
Soil Samples
(12/30/96 through 12/31/96)

Sample Identification	Sampling Depth (feet bgs[1])	Hexavalent Chromium (mg/kg)[2]	Total Chromium (mg/kg)

SECOR
International Incorporated

J.N. 40049-001-17

July 8, 1999

Mr. Christer B. Sorensson
Worldwide Health, Safety, and
Environmental Manager
PRC-DeSoto International, Inc.
5430 San Fernando Road
Glendale, California 91209

RESULTS OF HEXAVALENT CHROMIUM ASSESSMENT,
BUILDING 1 and BUILDING 11
PRC-DeSoto International, Inc.
5430 San Fernando Road
Glendale, California

Dear Mr. Sorensson:

As your request, SECOR International Incorporated (SECOR) has completed a limited assessment of hexavalent chromium impact to soils beneath the western and northern portions of Building 1 and the southeastern portions of Building 11. The following paragraphs summarize data collected from the referenced assessment.

During the time frame of June 11 through June 13, 1999, SECOR advanced two hand auger borings (AB-1 and AB-2) and ten geoprobe borings (AB-3 through AB-10) inside of Building 1 and Building 11 at the locations illustrated on attached Figure 1. The total depth of exploration for the ten borings ranged from approximately 15 feet below ground surface (bgs) to approximately 40 feet bgs.

Hexavalent chromium (Cr[VI]) was detected in varying concentrations in the soils samples collected and analyzed from each of the ten borings advanced except for AB-1 and AB-2. Reported Cr(VI) concentrations ranged from nondetect to a peak of 1.9 milligrams per kilogram (mg/kg, parts per million [ppm]) in boring AB-3 at approximately 30 feet bgs. Cr(IV) impact to soils was identified to the maximum depth of exploration of approximately 40 feet bgs, roughly five feet above the depth of first encountered groundwater. Reported Cr(VI) soils concentrations are summarized in attached Table 1.

Total chromium was detected in varying concentrations in the soils samples collected and analyzed from each of the ten borings advanced. Reported total chromium concentrations ranged from

ND - Not Detected, below the stated or standard laboratory reporting limit (RL) for hexavalent chromium by EPA Test Method 7196.
NS - Not Sampled, groundwater samples not obtained for chemical analysis from this well during this monitoring episode.
NYI - Not Yet Installed. Monitoring wells MW 7 and MW 8 were drilled on 11/30/94 and 12/01/94, respectively.

Table 13
Analytical Laboratory QA/QC Summary of Anomalies
PRC-DeSoto International, Inc.
5430 San Fernando Road
Glendale, CA 91203

Lab Report ID No.	QA/QC Anomaly	Discussion
23752 (Soil)	Unable to use the MS/MSD pair for copper, zinc, and mercury due to sample matrix.	LCS/LCSD pair was used to provide precision data for this analytical batch.
23758 (Soil)	1. Unable to use the MS/MSD pair for mercury due to sample matrix. 2. Reporting limit for silver in sample SB10@25' was raised to 2.5 mg/kg due to sample matrix effects. 3. MS/MSD pair were out of control high for silver.	1. LCS/LCSD pair was used to provide precision data for this analytical batch. 2. Reporting limit for silver in sample SB10@25' was raised to 2.5 mg/kg due to sample matrix effects. 3. No hits reported for silver. Since recovery was out high, data not affected.
23771A (Soil)	Surrogate spike compound was out of control high for BDPE.	Method blank surrogate spike compound was in control.
23775 (Groundwater)	MS/MSD pair and LCS were out of control high for silver.	No hits reported for silver. Since recovery was out high, data not affected.
23778 (Groundwater)	1. MS/MSD pair and LCS were out of control high for silver. 2. MS/MSD pair out of control high for calcium, magnesium, and sodium.	1. No hits reported for silver. Since recovery was out high, data not affected. 2. Control limits do not apply resulting from the sample concentration exceeding the spike concentration by a factor of four or greater.

Table 13
Analytical Laboratory QA/QC Summary of Anomalies
PRC-DeSoto International, Inc.
5430 San Fernando Road
Glendale, CA 91203

Lab Report ID No.	QA/QC Anomaly	Discussion
23787 (Groundwater)	1. LCS was out of control high for silver. 2. Surrogate spike compound out of control high for BDPE due to matrix interference. 3. MS/MSD pair out of control high for calcium, magnesium, and sodium.	1. No hits reported for silver. Since recovery was out high, data not affected. 2. Method blank surrogate spike compound was in control. 3. Control limits do not apply resulting from the sample concentration exceeding the spike concentration by a factor of four or greater.
23796 (Groundwater)	MS/MSD pair out of control high for calcium, magnesium, and sodium.	Control limits do not apply resulting from the sample concentration exceeding the spike concentration by a factor of four or greater.
23799A (Groundwater)	MS/MSD pair out of control high for calcium, magnesium, and sodium.	Control limits do not apply resulting from the sample concentration exceeding the spike concentration by a factor of four or greater.
23818A (Groundwater)	1. MS/MSD pair out of control high for calcium, iron, magnesium, sodium, and chromium. 2. Spike duplicate compound out of control high for total chromium due to matrix interference.	1. Control limits do not apply resulting from the sample concentration exceeding the spike concentration by a factor of four or greater. 2. LCS and/or LCSD were in control.
23823 (Groundwater)	MS/MSD pair out of control high for calcium and iron.	Control limits do not apply resulting from the sample concentration exceeding the spike concentration by a factor of four or greater.
23830A (Groundwater)	1. MS/MSD pair out of control high for calcium, magnesium, and total chromium. 2. MS/MSD pair out of control for sodium and total chromium due to matrix interference.	1. Control limits do not apply resulting from the sample concentration exceeding the spike concentration by a factor of four or greater. 2. LCS and/or LCSD were in control.

Table 13
Analytical Laboratory QA/QC Summary of Anomalies
PRC-DeSoto International, Inc.
5430 San Fernando Road
Glendale, CA 91203

Lab Report ID No.	QA/QC Anomaly	Discussion
23836 (Groundwater)	1. MS/MSD pair out of control high for calcium, magnesium, and total chromium. 2. MS/MSD pair out of control for sodium and total chromium due to matrix interference. 3. LCS/LCSD pair were out of control high for 1,4-dioxane.	1. Control limits do not apply resulting from the sample concentration exceeding the spike concentration by a factor of four or greater. 2. LCS and/or LCSD were in control. 3. There was no further discussion provided in the lab report.
23857 (Groundwater)	1. Unable to use the MS/MSD pair for silver due to sample matrix. 2. Surrogate spike compound was out of control low for 1,4-dioxane. 3. MS/MSD pair out of control high for calcium, magnesium, and sodium.	1. LCS/LCSD pair was used to provide precision data for this analytical batch. 2. There was no further discussion provided in the lab report. 3. Control limits do not apply resulting from the sample concentration exceeding the spike concentration by a factor of four or greater.
23859 (Groundwater)	MS/MSD pair out of control high for calcium, magnesium, and sodium.	Control limits do not apply resulting from the sample concentration exceeding the spike concentration by a factor of four or greater.
23866 (Groundwater)	1. Surrogate spike compound was out of control low for 1,4-dioxane. 2. MS/MSD pair out of control high for calcium, magnesium, and sodium. 3. Spike duplicate out of control high for total chromium.	1. There was no further discussion provided in the lab report. 2. Control limits do not apply resulting from the sample concentration exceeding the spike concentration by a factor of four or greater. 3. There was no further discussion provided in the lab report.

1,2,3-TCP - 1,2,3-Trichloropropane
BDPE - Bromodiphenyl Ethers
Cr - Chromium
Cr (VI) - Hexavalent Chromium
NDMA - N-Nitrosodimethylamine
TPH - Total Petroleum Hydrocarbons
VOCs - Volatile Organic Compounds

EBQC	9/14/2007	NA	NA	NA	< 0.47 [2]	< 1.0	< 0.30 [2]	NA	NA

Notes:
TDS - Total Dissolved Solids
NA - Not Applicable/Not Analyzed
MCL - Maximum Contaminant Limit from Title 22 California Code of Regulations
SMCL - Secondary Maximum Contaminant Limit from Title 22 California Code of Regulations (upper ranges used)
AL - California Department of Health Services Health Advisory Action Level
Results in blue are above regulatory criteria.
Yellow highlighted results indicate the latest groundwater monitoring event.
[1]Low recoveries in control spikes typically ranging from 40 to 50 percent.
NL - California Department of Health Services Drinking Water Notification Level
1,2,3-TCP - 1,2,3-Trichloropropane
Cr - Chromium
Cr (VI) - Hexavalent Chromium
NDMA - N-Nitrosodimethylamine
pH readings from field mulitmeter.
Bolded results indicate a detection greater than or equal to the reporting limit.
*Chromium was detected in the method blank near the reporting limit.
**Low recoveries in matrix spikes typically ranging from 10 to 30 percent.
[2]The analytical batch was validated by the laboratory control sample due to matrix interference, insufficient sample quantity, or an unavailable result. See laboratory analytical report for detail.
[3]Result exceeds normal dynamic range; reported as min. est.

[5]The percent recovery for the LCS and/or LCS duplicate were above laboratory acceptance limits. Results may be biased high.
[6]The relative percent difference (RPD) exceeded the method control limit. However, percent recoveries were within limits.
[7]Sample too dilute to quantify surrogate.

EXPLANATION

Notes:

EPA-Region 9	EPA-Region 9 Regional Screening Table (Nov 2012)
[A]	EPA-Region 9 Regional Screening Levels - Industrial Site Usage
SSC	Site Specific Criteria
[B]	Bosnan, Chernoff and Oudiz, March 2008, *Determination of a Southern California Regional Background Arsenic Concentration in Soil*, California Department of Toxic Substance Control (DTSC)
6.5[A]	Concentration exceeds the indicated standard.
15.2	Concentration was detected but did not exceed applicable standards.
< 0.50	Laboratory estimated quantitation limit exceeded standard.
< 0.03	The analyte was not detected above the laboratory estimated quantitation limit.
n/v	No standard/guideline value.
-	Parameter not analyzed / not available.
c	Cancer
n	Noncancer
m	Concentration may exceed ceiling limit (See User Guide)
s	Concentration may exceed Csat (See User Guide)
B	Compound was found in the blank and sample
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value

Notes:

EPA-Region 9	EPA-Region 9 Regional Screening Table (Nov 2012)
A	EPA-Region 9 Regional Screening Levels - Industrial Site Usage
6.5[A]	Concentration exceeds the indicated standard.
15.2	Concentration was detected but did not exceed applicable standards.
< 0.50	Laboratory estimated quantitation limit exceeded standard.
< 0.03	The analyte was not detected above the laboratory estimated quantitation limit.
n/v	No standard/guideline value.
-	Parameter not analyzed / not available.
c	Cancer
*	* = where: n SL < 100X c SL
**	** = where n SL < 10X c SL
n	Noncancer
s	Concentration may exceed Csat (See User Guide)
U*	LCS or LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value

Reporting Limits and Screening Levels for Soil Vapor (2)	Reporting Limit µg/m^3		4.0	3.2	6.9	5.5	2.6
	Residential RSL µg/m^3		700	12.3	367	16	5.7
	Commercial RSL µg/m^3		2,933	55	1,570	100	93

Notes:

UJ - The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

B - The analyte was detected in the method, field and/or trip blank.

(1) - Sample collected via 50cc syringe - no purge volume

(2) - Residential and Commercial USEPA Region 9 Regional Screening Levels (RSL) using an Attenuation Factor of 0.03. (Cancer Risk of 1e-06 and a Hazard Quotient of 1) - (USEPA RSL Table January 2015)

Reported concentration exceeds Residential USEPA Regional Screening Levels (RSL) using an attenuation factor of 0.03. (Cancer Risk of 1e-06 and a Hazard Quotient of 1)

Reported concentration exceeds both Commercial and Residential USEPA Regional Screening Levels (RSL)

µg/m^3 = micrograms per cubic meter

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

Proposed NPL ---------- Proposed National Priority List Sites
NPL LIENS ---------- Federal Superfund Liens

Federal Delisted NPL site list

Delisted NPL ---------- National Priority List Deletions

Federal CERCLIS list

FEDERAL FACILITY ---------- Federal Facility Site Information listing

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF ---------- RCRA - Treatment, Storage and Disposal

Federal institutional controls / engineering controls registries

LUCIS ---------- Land Use Control Information System

Federal ERNS list

ERNS ---------- Emergency Response Notification System

State and tribal leaking storage tank lists

INDIAN LUST ---------- Leaking Underground Storage Tanks on Indian Land

State and tribal registered storage tank lists

FEMA UST ---------- Underground Storage Tank Listing
INDIAN UST ---------- Underground Storage Tanks on Indian Land

State and tribal voluntary cleanup sites

INDIAN VCP ---------- Voluntary Cleanup Priority Listing

State and tribal Brownfields sites

CA BROWNFIELDS ---------- Considered Brownfieds Sites Listing

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS ---------- A Listing of Brownfields Sites

EXECUTIVE SUMMARY

Local Lists of Landfill / Solid Waste Disposal Sites

CA WMUDS/SWAT ---- Waste Management Unit Database
INDIAN ODI ---- Report on the Status of Open Dumps on Indian Lands
DEBRIS REGION 9 ---- Torres Martinez Reservation Illegal Dump Site Locations
ODI ---- Open Dump Inventory
IHS OPEN DUMPS ---- Open Dumps on Indian Land

Local Lists of Hazardous waste / Contaminated Sites

CA AOCONCERN ---- Key Areas of Concerns in Los Angeles County
US HIST CDL ---- Delisted National Clandestine Laboratory Register
CA SCH ---- School Property Evaluation Program
CA CDL ---- Clandestine Drug Labs
CA Toxic Pits ---- Toxic Pits Cleanup Act Sites
US CDL ---- National Clandestine Laboratory Register
CA PFAS ---- PFAS Contamination Site Location Listing

Local Land Records

CA LIENS ---- Environmental Liens Listing
LIENS 2 ---- CERCLA Lien Information

Records of Emergency Release Reports

HMIRS ---- Hazardous Materials Information Reporting System
CA LDS ---- Land Disposal Sites Listing
CA MCS ---- Military Cleanup Sites Listing
CA SPILLS 90 ---- SPILLS 90 data from FirstSearch

Other Ascertainable Records

DOD ---- Department of Defense Sites
SCRD DRYCLEANERS ---- State Coalition for Remediation of Drycleaners Listing
US FIN ASSUR ---- Financial Assurance Information
EPA WATCH LIST ---- EPA WATCH LIST
2020 COR ACTION ---- 2020 Corrective Action Program List
SSTS ---- Section 7 Tracking Systems
RMP ---- Risk Management Plans
RAATS ---- RCRA Administrative Action Tracking System
FTTS ---- FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)
MLTS ---- Material Licensing Tracking System
COAL ASH DOE ---- Steam-Electric Plant Operation Data
COAL ASH EPA ---- Coal Combustion Residues Surface Impoundments List
PCB TRANSFORMER ---- PCB Transformer Registration Database
RADINFO ---- Radiation Information Database
HIST FTTS ---- FIFRA/TSCA Tracking System Administrative Case Listing
DOT OPS ---- Incident and Accident Data
INDIAN RESERV ---- Indian Reservations
FUSRAP ---- Formerly Utilized Sites Remedial Action Program
UMTRA ---- Uranium Mill Tailings Sites
US AIRS ---- Aerometric Information Retrieval System Facility Subsystem
US MINES ---- Mines Master Index File

EXECUTIVE SUMMARY

ABANDONED MINES - Abandoned Mines
DOCKET HWC - Hazardous Waste Compliance Docket Listing
UXO - Unexploded Ordnance Sites
FUELS PROGRAM - EPA Fuels Program Registered Listing
CA CUPA Listings - CUPA Resources List
CA Financial Assurance - Financial Assurance Information Listing
CA ICE - ICE
CA HWT - Registered Hazardous Waste Transporter Database
CA MINES - Mines Site Location Listing
CA MWMP - Medical Waste Management Program Listing
CA PEST LIC - Pesticide Regulation Licenses Listing
CA UIC - UIC Listing
CA UIC GEO - UIC GEO (GEOTRACKER)
CA WASTEWATER PITS - Oil Wastewater Pits Listing
CA MILITARY PRIV SITES - MILITARY PRIV SITES (GEOTRACKER)
CA PROJECT - PROJECT (GEOTRACKER)
CA NON-CASE INFO - NON-CASE INFO (GEOTRACKER)
CA OTHER OIL GAS - OTHER OIL & GAS (GEOTRACKER)
CA PROD WATER PONDS - PROD WATER PONDS (GEOTRACKER)
CA SAMPLING POINT - SAMPLING POINT (GEOTRACKER)

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/30/2020 has revealed that there are 4 SEMS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/30/2020 has revealed that there are 6 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 6 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 21 RCRA-SQG sites within approximately 0.25 miles of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 01/25/2021 has revealed that there are 16 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

CA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the CA SWF/LF list, as provided by EDR, has revealed that there are 7 CA SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 13 CA LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Facility Id: 109.0756

CA CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA CPS-SLIC list, as provided by EDR, has revealed that there are 20 CA CPS-SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 8 CA UST sites within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 18 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CA CERS TANKS: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs.

A review of the CA CERS TANKS list, as provided by EDR, and dated 01/20/2021 has revealed that there are 4 CA CERS TANKS sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 29 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

TSCA: The Toxic Substances Control Act identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site. The United States Environmental Protection Agency has no current plan to update and/or re-issue this database.

A review of the TSCA list, as provided by EDR, and dated 12/31/2016 has revealed that there is 1 TSCA site within approximately 0.001 miles of the target property.

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there are 3 CA HAZNET sites within approximately 0.001 miles of the target property.

CA WDR: In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

A review of the CA WDR list, as provided by EDR, and dated 03/09/2021 has revealed that there is 1 CA WDR site within approximately 0.001 miles of the target property.

EXECUTIVE SUMMARY

CA CIWQS: The California Integrated Water Quality System (CIWQS) is a computer system used by the State and Regional Water Quality Control Boards to track information about places of environmental interest, manage permits and other orders, track inspections, and manage violations and enforcement activities.

A review of the CA CIWQS list, as provided by EDR, and dated 11/30/2020 has revealed that there are 2 CA CIWQS sites within approximately 0.001 miles of the target property.

CA CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CA CERS list, as provided by EDR, and dated 01/20/2021 has revealed that there are 3 CA CERS sites within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 5 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

CA RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the CA RGA LUST list, as provided by EDR, has revealed that there is 1 CA RGA LUST site within approximately 0.001 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SAN FERNANDO VALLEY (AREA 1) (Continued) **1000709322**

Scoring: 2

Summary Details:

Conditions at proposal October 15, 1984): San Fernando Valley Area l) is an area of contaminated ground water in the vicinity of the North Hollywood section of the City of Los Angeles, Los Angeles County, California. This area is part of the San Fernando Valley Basin, a natural underground reservoir that represents an important source of drinking water for at least 3 million people in the Los Angeles metropolitan area. The contaminated ground water, which underlies an area of approximately 5,l56 acres, contains trichloroethylene TCE) and perchloroethylene PCE), and to a lesser extent, carbon tetrachloride and chloroform, according to analyses conducted by the California Department of Health Services, as well as numerous local government agencies. The State s recommended drinking water guideline for TCE and PCE 5 and 4 parts per billion respectively) are exceeded in a number of public wells in this area. To alleviate this contamination, wells are eithertaken out of service or blended with water from clean sources to ensure that the public receives water with TCE/PCE concentrations below the State s guidelines. Status June 10, 1986): EPA and the Los Angeles Department of Water and Power are entering into a cooperative agreement for a remedial investigation of the San Fernando Valley Basin and a feasibility study targeted at Area 1, the most contaminated area. The RI is scheduled to begin in early 1986.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 08/17/1998
Comments: A second 5-year review of remedial activities is conducted at the North Hollywood OU (NHOU) and covers operations from 1993 thru 1997. The purpose was to evaluate whether the NH Interim Remedy achieved the objectives specified in the ROD. The findings of the 5-year review are that the objectives of the ROD have been met.

Background Info:	The San Fernando Valley Ground Water Basin (SFVGWB) is located within the Upper Los Angeles River Area, and consists of the eastern portion of the San Fernando Valley and the entire Verdugo Basin. The SFVGWB encompasses approximately 112,000 acres of alluvial valley fill deposits and provides enough water to serve approximately 600,000 residents. The Basin is bounded on the north and the northwest by the Santa Susana Mountains, on the northeast by the San Gabriel Mountains, on the west by the Simi Hills and on the south by the Santa Monica Mountains. The San Fernando Valley Study area includes four National Priorities List (NPL) sites. They are: Area #1 - North Hollywood NPL Site covers 9336 acres in the eastern part of the San Fernando Valley. The site has been divided into the North Hollywood Operable Unit(OU) and the Burbank OU. Area #2 - Crystal Springs NPL Site covers 3975 acres located southeast of the North Hollywood NPL site and is in the cities of Glendale and Los Angeles. Area #3 - Verdugo NPL Site covers 2673 acres in the eastern part of the SF Valley and is located in and adjacent to La Crescenta in the Verdugo Mountains. Area #4 - the Pollock NPL Site covers 1635 acres in the south-eastern part of the San Fernando Valley and is located in and adjacent to the cities of Los Angeles and Glendale. Groundwater contamination in the SFVGWB is linked to prewar, postwar, and current industrialization in the San Fernando Valley. The primary contaminants of concern are the volatile organic compounds (VOCs) trichloroethylene (TCE) and tetrachloroethylene (PCE). These compounds have been and/or are being used in many San Fernando Valley industries, such as aeronautical, automotive dry cleaning, and metal plating. These solvents have found their way to the groundwater basin as a result of both past and improper use, storage and disposal practices. The SFVGWB Superfund sites, added to the NPL in 1986, are areas where groundwater from wells have been found to contain VOCs above the state and federal drinking water standards. Groundwater

SAN FERNANDO VALLEY (AREA 1) (Continued) **1000709322**

contamination in numerous wells have been so severe with TCE and PCE that these wells have essentially been put out of commission. Exposure of receptors to contaminants can possibly occur through ingestion of contaminated drinking water, inhalation of VOC vapors released from the contaminated water as in taking showers, and dermal exposure as in washing or bathing. However, with the strict regulatory control over water quality by the State's Department of Health, Office of Drinking Water (ODW), the RWQCB, and other agencies, residents are assured that the water they consume is safe and that no one is drinking water which contains concentrations of contaminants above regulatory standards. Federal, state, and local agencies have been conducting investigations and cleanup of contaminated groundwater in the San Fernando Valley since contamination was discovered in 1979. These activities involve measuring the extent of contamination, developing and implementing cleanup remedies, and identifying responsible parties.
EPA provided oversight of the basinwide Remedial Investigation (RI) of groundwater contamination conducted by the Los Angeles Department of Water and Power (LADWP). The RI objectives were to collect lithological and water quality data and information regarding basin operations for the eastern SF and Verdugo basins; develop a regional characterization of geology, hydrology, hydrogeology and the nature and extent of groundwater contamination within the eastern and Verdugo basins; study fate and transport of compounds in the environment; identify Applicable or Relevant and Appropriate Requirements; (ARAR's) and evaluate the potential risk to human health and the environment. The Remedial Investigation of the SFVGWB was divided into two phases.
Phase I activities have included vertical profile borings and installation of monitoring wells to obtain preliminary contamination information. Monitoring wells have been installed as follows: 34 in North Hollywood (Area #1); 29 in Crystal Springs (Area #2); 7 in Verdugo (Area #3); and 17 in Pollock (Area #4).
Information obtained from Phase I investigation activities identified the need for several operable units. Operable Unit is a federal term which is similar to the State's definition of a removal action.
Phase II activities consist of a basinwide remedial investigation conducted by the LADWP.
Remedial Actions (RAs):
North Hollywood (Area #1) -- Two RAs were identified for Area #1, the North Hollywood OU and the Burbank OU.
A Record of Decision (ROD) for the North Hollywood RA was signed in September 1987, selecting groundwater extraction and treatment (air stripping) of 2,000 gallons per minute (gpm) of contaminated water as an interim remedy. This RA was constructed with funding from EPA and the State and has been treating contaminated groundwater since March 1989. This facility is located at 11845 Vose Street in the N. Hollywood section of Los Angeles.
A ROD for the Burbank OU was signed in June 1989, again selecting groundwater extraction and treatment of about 12,000 gpm of contaminated water. Phase I of the Burbank OU began operations in January 1996 treating groundwater at a rate

SAN FERNANDO VALLEY (AREA 1) (Continued) **1000709322**

of 6,000 gpm. Phase II began operations in May 1998 adding an additional 3,000 gpm to the Burbank OU's treatment capacity.
Crystal Springs (Area #2) -- LADWP has completed a focused RI/FS for this proposed RA. The Glendale OU has been separated into a North OU and a South OU based on the amount of contamination and the facilities contributing to the GW contamination. A ROD for each OU was signed on June 18, 1993 designating groundwater extraction and treatment as the interim remeday. The PRPs have formed a group and combined the RA efforts for each OU into one document. The selected alternative is GW extraction and treatment. The Glendale OU began operations in September 2000.
Verdugo and Pollock (Areas #3 and #4) --
Currently no RAs have been identified for Area #3 or for Area #4. In October 2003 US EPA proposed No Remedial Action for Verdugo Basin (Area #3).
Another contaminant of concern, hexavalent chromium, has been identified in the San Fernando Valley Groundwater Basin.
EPA and the RWQCB are currently dentifying potential sources of contamination and pursuing PRPs that may be responsible for contaminating groundwater. As these PRPs are identified, individual site investigations and mitigation activities will be pursued. Enforceable agreements and orders will be implemented at numerous specific potential source sites within the Basin by RWQCB and DTSC

Environmental Interest/Information System:
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information

SAN FERNANDO VALLEY (AREA 1) (Continued) **1000709322**

System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
SUPERFUND NPL
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

PRODUCTS RESEARCH & CHEM CO (Continued) **S104159997**

Potential Media Affected: Aquifer used for drinking water supply
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Chromium, Chromium VI, Nickel, Other Metal
Site History: Site Location: Site is located at 5430 San Fernando Road, Glendale, CA, which is within the USEPA Superfund Operable Unit for Glendale South. The San Fernando Valley was declared a Superfund Site in 1986 and placed on the National Priority List (NPL) for cleanup. The Regional Board coordinates assessment and cleanup activities with USEPA. Site Status: Presently, the site has no active operations and buildings have or are being demolished. The Site's offices were moved offsite in December of 2008. Under direction of Regional Board staff, the Site has conducted periodic phases of site investigation since 1992, which have documented the release of chemicals beneath the Site. These chemicals have included volatile organic compounds (VOCs) including methyl ethyl ketone (MEK), trichloroethylene (TCE), perchloroethylene (PCE) and heavy metals, primarily chromium (Cr) and hexavalent chromium (CrVI). Groundwater monitoring has been conducted at the Site since 1994 and chemicals including trichloroethane (1,1,1-TCA), dichloroethylene (DCE), TCE, PCE, Cr, CrVI, nickel (Ni), and 1,4-Dioxane have been detected. Due to the release of these chemicals, on August 22, 2002 the Regional Board issued a Cleanup and Abatement Order (CAO) No. R4-2002-0085. Under the CAO, the Site has completed several phases of onsite assessment for soil, soil vapor and groundwater and has been conducting quarterly groundwater monitoring of both onsite and offsite groundwater monitoring wells. Because the site assessment phases are nearly complete, additional assessment work may be required as the site's building footprints are removed. Since 2004 the focus of the Site has been on remediation and a Remedial Action Plan (RAP) was submitted to the Regional Board with the RAP being revised several times. To date, the Site has performed on-site remediation for soil cleanup of VOCs and heavy metals by the excavation and removal of contaminated soil and by the installation and operation of a soil vapor extraction (SVE) system. Additional SVE maybe warranted as building footprints are removed. To deal with onsite heavy metal contamination in the soil and groundwater, on February 5, 2009, the Regional Board issued a Waste Discharge Requirements (WDR) permit No. R4-2007-0019, Series No. 60, CI No. 9415 to the Site. The WDR permit allows the Site to inject a chemical substrate (Calcium Polysulfide, corn syrup, emulsified vegetable oil, etc.) to the soil and allow the chemical substrate to percolate through the soil to the groundwater and reduce CrVI to Cr. The chemical substrate injections are ongoing. The Site also intends to complete and submit a Human Health Risk Assessment to determine whether the site cleanup of soil, soil vapor and groundwater has been achieved (acceptable risk to Human Health and the environment and the threat to groundwater quality has been minimized).

Hazardous Waste Summary:
Waste Code: D000
Waste Description: Not Defined

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D006
Waste Description: CADMIUM

Waste Code: D007
Waste Description: CHROMIUM

Waste Code: D008
Waste Description: LEAD

Waste Code: D009
Waste Description: MERCURY

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D011
Waste Description: SILVER

Waste Code: D021
Waste Description: CHLOROBENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING:

PRC-DESOTO INTERNATIONAL (Continued) **1000193036**

TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: U070
Waste Description: BENZENE, 1,2-DICHLORO- (OR) O-DICHLOROBENZENE

Waste Code: U220
Waste Description: BENZENE, METHYL- (OR) TOLUENE

Waste Code: U239
Waste Description: BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)

Environmental Interest/Information System:
TSCA SUBMITTER
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
SUPERFUND (NON-NPL)
HAZARDOUS WASTE BIENNIAL REPORTER
STATE MASTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance

PRC-DESOTO INTERNATIONAL (Continued) **1000193036**

information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	IGNITABLE WASTE
Waste Code:	F003
Waste Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS

STAGE 16 PICTURE LLC ARGO (Continued) **1025881192**

CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:
Site ID: 2993
Site Name: ACTIVE SUPPLY PRODUCTS
Violation Date: 02-05-2020
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 05/05/2020. Review, update and resubmit the Hazardous Materials Inventory into CERS to include all hazardous material stored in a capacity greater than 55 gallons of liquid, 200 cubic feet of compressed gas or 500 pounds in weight of a solid. Please correct the following; ADD: ALUMINUM SHAVINGS 1000 LBS PROPANE 1400 CU FT A review of your inventory has determined that you still have the previous federal categories selected and/or have NOT selected any of the NEW federal hazard categories for your chemical inventory. Please review your hazardous material inventory and correct federal hazard categories for ALL inventory items. You may refer to Section 2 of a current Safety Data Sheets (SDS) (previously called an MSDS) to determine which of the new federal hazard categories apply.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

SIC Code:	2899
SIC Code 2:	Not reported
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Primary Waste:	STORMS
Waste Type2:	Not reported
Waste2:	Stormwater Runoff
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

SUNLAND CHEMICAL & RESEARCH CORP (Continued) **S112980486**

Activities. On May, 25 2016 I, Enrique Loera, met with Todd Hill (Manager). I requested to see the Storm Water Pollution Prevention Plan (SWPPP) and informed him I would need to inspect the site and take pictures. Mr. Hill gave consent to inspect the facility and take pictures. The SWPPP was missing a certification statement with signature, the pollution prevention team, and the site map was missing nearby water bodies. After the SWPPP was reviewed, the inspection of the yard began. Most of the activities on this facility are under cover. The site consists of an indoor blending area, an indoor chemical warehouse and an indoor maintenance workshop. There is outdoor storage of empty containers and drums. The site has trenches and drains that convey runoff and any spill by pumps into a sump with a 1,000 gallon capacity. Outdoor areas where empty drums are stored also drain into the sump. The waste water is then drained to the sanitary sewer. The only area where runoff does not drain into a sump is a small area near the trash can in the rear. The facility has no outstanding enforcement actions and has submitted all annual reports for the past five years. During the exit interview Mr. Hill was informed of the missing items in the SWPPP.

TITRA CALIFORNIA (Continued) **1000352410**

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to

UNK (Continued) **S101586974**

represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Baseline Flow:	0
Reclamation:	No reclamation requirements associated with this facility.
POTW:	The facility is not a POTW.
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically)within 30 days of the change.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date:	05-11-2020
Citation:	23 CCR 16 2638(d) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2638(d)
Violation Description:	Failure to submit the G Monitoring System Certification FormG to the UPA within 30 days of completion of the test.
Violation Notes:	Returned to compliance on 05/11/2020. OBSERVATION: Owner/Operator did not submit the Monitoring System Certification Form to the CUPA within 30 days of completion of the test. The test results that were submitted were completed incorrectly and need to be fixed in order to be accepted. CORRECTIVE ACTION: Immediately submit a copy of the Monitoring System Certification Form by email to the inspector issuing the violation. Please fix test results form that was submitted. I will include the test results form with highlighted area of what needs to be corrected. Thank you.

Eval Notes:	Inspector Kurt Corral LAFD, onsite this date to conduct routine inspection of underground storage tank. Consent to enter, inspect and take photographs was given on this date by Emma Miller. Monitoring system certification was not conducted at this time. Site was opened for inspection by Cal-Haz The UST monitoring panel showed all functions normal. The monitoring set up and alarm history were provided for review. The sumps and UDCs were opened for inspection and the sensors were observed positioned to detect a leak at the earliest opportunity. The spill buckets were also visually inspected. The Monitoring Plan was compared to the equipment onsite. The operation of the UST system was compared to the conditions of the operating permit. Ensure submittal of monitor certification test results within 30 days using one of the following options in preferred order: 1. Upload results in California Environmental Reporting System (CERS) https://cersbusiness.calepa.ca.gov [Truncated]

Eval General Type:	Compliance Evaluation Inspection
Eval Date:	06-07-2016
Violations Found:	Yes
Eval Type:	Routine done by local agency
Eval Notes:	On site for routine hazardous materials and business emergency plan inspection. Consent to enter and inspect was given by Phil cheng Observed the facility and inspected hazardous materials storage. Annual employee safety training records were not maintained. Facility has also not electronically disclosed the onsite hazardous materials inventory or submitted a business emergency plan in California Environmental Reporting System (CERS). Please go to https://cersbusiness2.calepa.ca.gov to complete a chemical inventory disclosure and business emergency plan. The facility is responsible for identifying all hazardous materials, to include hazardous wastes, which are above disclosure thresholds. If there is a change in the type or amount of chemicals that are maintained on site, please submit revised documents (electronically) within 30 days of the change.
