Explanation of
Phase I Environmental Site Assessment Terminology

(source: ASTM Standard E 1527-13)

'REC' - *Recognized Environmental Condition*: the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not *recognized environmental conditions*.

'CREC' – *Controlled Recognized Environmental Condition*: a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a *controlled recognized environmental condition* shall be listed in the findings section of the *Phase I Environmental Site Assessment* report, and as a *Recognized Environmental Condition* in the conclusions section of the *Phase I Environmental Site Assessment* report.

'HREC' - *Historical Recognized Environmental Condition*: a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a *historical recognized environmental condition*, the environmental professional must determine whether the past release is a recognized environmental condition at the time the *Phase I Environmental Site Assessment* is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a *recognized environmental condition* at the time the *Phase I ESA* is conducted, the condition shall be included in the conclusions section of the report as a *recognized environmental condition*.

***De minimis Condition*:** a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not *recognized environmental conditions* nor *controlled recognized environmental conditions*.

1.0 EXECUTIVE SUMMARY

This report contains results of a *Phase I & Phase II Environmental Site Assessment (ESA)*, which has been conducted, to evaluate the potential for environmental liabilities for a two-parcel property located at 1155, 1175, and 1185 Terra Bella Avenue in Mountain View, CA (referred to as the subject "Site", see *Topographic Location Map*, Figure 1). This two-parcel, commercial property has recently been cleared of all structures and Site improvements down to fill / native soil.

This evaluation includes standard Phase I Environmental Site Assessment in accordance with ASTM international's standard practice for Environmental Site Assessments: Phase I Environmental Site Assessment process E1527-13, that include historical land use research, a review of regulatory records pertaining to the Site and vicinity properties, Site reconnaissance, and interviews with persons knowledgeable of the Site as well as Phase II drilling and sampling. A synopsis of this research and fieldwork is presented in this *Executive Summary*.

The subject Site is approximately 1.4-acres in size and is relatively flat. The Site is in a mixed commercial industrial area of Mountain View and is bordered by commercial land use (see *Vicinity Aerial Map*, Figure 2). Historical aerial photographs indicate that the subject Site has been developed since at least 1939. Early developments included two farmhouses and associated farming structures. The 1155 parcel appeared to be utilized partially for growing orchards. Sometime between 1956 and 1963 the Site was

The subject Site (outlined in blue) is comprised of two parcels, showing the former Site layout prior to demolition, and Phase II sample locations.

redeveloped with two primary commercial structures and associated asphalt parking lots. The Site mostly remained unchanged until at least 2016. Sometime between 2016 and 2021, all structures and improvements were removed from the Site (historical aerial photographs included in Appendix B). On-site drilling during the current Phase II investigation included coring at six (6) locations across the Site (1175/1185 parcel only) to depths ranging from approximately 6.5 ft to 8 ft below the ground surface (bgs). First encountered groundwater has been documented to be under semi-confined conditions at depths of approximately 10-15 feet bgs with groundwater stabilizing at depths of approximately 5 feet bgs in established, on-Site monitoring wells. Groundwater is documented to flow in northerly direction.

1.1 Executive Summary of Phase I Research

Phase I ESAs provide limited assurances of risk, since they rely on current Site conditions (i.e., a Site inspection), cooperative and candid interviews/questionnaires, and a limited database of regulatory and historical documentation. The Site inspections, interviews, and review of regulatory and historic documents are designed to identify real and potential environmental liabilities of concern. Potential liabilities have been categorized by the *American Society for Testing and Materials (ASTM)* into the following four conditions based on decreasing levels environmental risk: (1) ***recognized environmental conditions (REC)***, (2) ***controlled recognized environmental conditions (CREC),*** (3) ***historical recognized environmental conditions (HREC),*** and (4) ***de minimis conditions.*** Definitions of these terms is provided in an *Explanation of Environmental Assessment Terminology,* provided on page iv of this report.

1.1.1 On-Site Findings

Historic Review: Historical aerial photographs indicate that the subject Site has been developed since at least 1939. Early developments included two (2) dwellings and associated outbuildings. The 1155 parcel appeared to be utilized partially for growing orchards. Sometime between 1956 and 1963 the Site was redeveloped with two primary commercial structures and associated asphalt parking lots. Site mostly remained unchanged until at least 2016. Sometime between 2016 and 2021, all structures and improvements were removed from the Site (historical aerial photographs included in Appendix B).

UST Investigation/Closure: Two gasoline UST's (one at 1185 Terra Bella (TB), and one at 1175 Terra Bella) were removed under permit with Mountain View fire department in 1998. The UST removed from the 1185 TB area did not contain reportable levels of gas compounds. However, holes were noted in the UST removed from 1175 TB area. TPH odors were noted in field. Groundwater within the tank pit was sampled and contained elevated levels of gasoline (42,000 µg/L) and benzene (1,400 µg/L). Twenty (20) cubic yards of impacted soils were over excavated in 1998 and properly disposed of. Follow up soil and groundwater investigation conducted in November 2000, consisted of advancing four (4) exploratory borings (1 offsite, 3 onsite). Groundwater samples collected at 7 ft bgs revealed trace to non-detect levels of benzene, and moderate levels of TPH gas (up to 2,600 µg/L). It was determined that the extent of the groundwater and soil impacts were defined and limited to a small area. The leaking UST case was closed in July 2001 by the overseeing agency based on low levels of residual contamination that had attenuated below levels of regulatory concern.

Existing, on Site groundwater monitoring well MW-3A (located in close proximity to the former 1175 Terra Bella Avenue UST location) revealed no detections of any fuel-related constituents (i.e., Benzene, Toluene, Ethylbenzene, and Xylenes) during the most recent groundwater monitoring event completed in September 2020.

Subsurface Investigations: Ongoing subsurface investigations are being conducted on Site related to a historic release of trichloroethylene (TCE) at 1155 Terra Bella Avenue (State GeoTracker Database Link). Impacts to soil, soil vapor, and groundwater are being assessed. The property owner has entered into the Santa Clara County Department of Environmental Health's *Voluntary Cleanup Program* to oversee the investigation and subsequent corrective actions.

Site Inspection: The Site inspection confirmed that all Site improvements and surface coverings have been completely removed. The Site currently contains a network of groundwater and soil vapor monitoring wells, which have been installed to assess the TCE release associated with 1155 Terra Bella Avenue. The Site is fenced off at its perimeter to prevent public access. No operations are currently conducted on Site other than the ongoing investigation and subsurface assessment of the Site.

On-site Conclusion: Review of historical aerial photos indicates the potential for the historical use and/or storage of synthetic pesticides as the properties were situated within the footprint of agricultural land use (i.e., orchards) in the 1940s and 1950s, which can be considered a **Recognized Environmental Condition (REC).** The open solvent (i.e., TCE) release investigation **is also considered a REC.** Additionally, the 2001 closure of the UST release investigation on the 1175 Terra Bella portion of the Site **is considered a Controlled Recognized Environmental Condition (CREC)**.

1.1.2 Vicinity Findings

Agency records research indicate there are numerous documented chemical release sites within a quarter mile radius of the Site, however all but four (4) have obtained case closure from overseeing regulatory agencies. None of the four (4) open chemical release sites are situated upgradient from the Site and therefore pose no risk of encroachment to the Site (see Section 5 for details on these nearby sites).

Based on the review of historical agency records and documented groundwater flow direction (generally to the north), we identified one former fuel release site (975 North Shoreline Blvd.) that adjoins the Site to the east. The case was closed by the Santa Clara County Department of Environmental Health in July 2011, with documented, residual soil and groundwater contamination remaining at both on- and off-site locations[1]. The close proximity of residual subsurface impacts may pose a potential vapor encroachment threat to the Site. Based on the close proximity of this regulatory closed, UST release site with

[1] Stantec, Additional Assessment Report, Former Texaco Service Station, 975 North Shoreline Blvd., Mountain View, December 16, 2010

Case Closure Documentation

documentation of residual contamination remaining in the subsurface, this is considered a **Controlled Recognized Environmental Condition (CREC)**.

1.2 Executive Summary of Phase II Assessment

Weber, Hayes and Associates (WHA) was retained to implement a limited *Phase II Shallow Soil & Soil Vapor Investigation* to evaluate the Site for *potential* contamination resulting from: 1) potential pesticides / regulated metals (primarily lead and arsenic) associated with historic agricultural land use, and 2) the likely presence of elevated solvent-based soil vapor contamination from the documented release at 1155 Terra Bella Avenue (i.e., primarily TCE and TCE breakdown compounds) and potential presence of fuel related VOC soil vapor contamination associated with the historic on-site UST release and potential fuel related VOC contamination encroachment beneath the Site from an adjacent fuel release site. We note that no sampling was conducted at 1155 Terra Bella Avenue as ongoing subsurface investigations are being completed for this portion of the Site under the direction of the Santa Clara County Department of Environmental Health.

On April 15, 2021, six (6) soil borings were advanced to depths ranging from 6.5 to 8 feet bgs at 1175/1185 Terra Bella Avenue (B-1/SV-1 through B-6/SV-6; see Figure 5). The continuously cored soil borings were field screened by a trained environmental professional from WHA and a log was maintained of each boring (see Appendix E). No evidence of solvent or fuel related impacts were observed at any of the boring locations. Shallow soil samples were collected from first encountered native soils for laboratory analysis. Each boring was converted into a temporary soil vapor well and subsequently sampled by WHA field staff in accordance with our *Field Methodology for Active Soil Gas Sampling* (see Appendix E). The sample intake of each temporary soil vapor well was set at 6 feet bgs (except for SV-6 set at 4 feet bgs), and at least 2 hours of sample point equilibration time was allowed following probe construction, prior to sample collection (see geologic logs and construction diagrams in Appendix E).

Low permeability clay was encountered from near the ground surface to the total depths explored, and we were not able to obtain soil vapor samples from any of the sample locations due to “no flow” conditions. As a backup, representative soil samples were collected from three (3) of the borings (B-1, B-3 and B-5; see Figure 5) from the depth of the soil vapor intake for VOC analysis.

All surface samples (i.e., first encountered native soils) were submitted to a state certified laboratory for the following analysis:

- CAM 17 Metals by EPA Method 6010 / 7471
- Persistent Pesticides by EPA Method 8081

Deeper soil samples obtained from a depth of 5 feet bgs at borings B-1, B-3 and B-5 were analyzed for the following:

- VOCs (full suite) by EPA Method 8260

The laboratory results have been tabulated along with agency, risk-based threshold limits for comparison of detected concentrations (see Tables 1, 2 & 3). Results are summarized below:

The State-Certified laboratory results for soil testing indicated there were no elevated concentrations of any chemicals of potential concern, with the exception of arsenic at one surface sample location. Specifically:

- **Regulated Metals:** (Table 1) Concentrations of arsenic ranged from **2.15 mg/kg** to **4.62 mg/kg** at five of the six sample locations (**B-1** to **B-5**), which is below the accepted Bay Area background concentration of **11 mg/kg**. Sample **B-6** yielded a concentration of arsenic at **15.4 mg/kg,** which slightly exceeds the accepted background threshold. Therefore, we had the laboratory run a deeper sample at **B-6** (0.5 feet below the surface sample depth) to determine whether slightly elevated arsenic priests below the surface. Laboratory results of this deeper sample yielded no detection of arsenic above the laboratory reporting limit (i.e., <2.42 mg/kg). All other metals were either not detected or were detected at concentrations below established, unrestricted land use screening thresholds.
- **Persistent Pesticides:** (Table 2) Two (2) of the six (6) surface samples analyzed for persistent pesticides contained trace concentrations of 4-4 DDE, which were well below established, unrestricted land use screening thresholds. There were no other detectable concentrations of persistent pesticides in any of the samples.
- **Volatile Organic Compounds**: (Table 3) Only trace to non-detectable concentrations of VOCs were detected well below the established, unrestricted land use screening thresholds.

Conclusions of these results are presented in Section 1.3, below.

1.3 Executive Summary Conclusions

We have performed a standard of care, *Phase I & II Environmental Site Assessment* in conformance with protocols established in ASTM Practice E1527-13, for the property at 1155/1175/1185 Terra Bella Avenue in Mountain View (the Site). There were no exceptions to, or deletions from, this practice (i.e., data gaps), as described in Section 9.0 of this report. In conclusion,

The *Phase I ESA* research, inspection, and interviews concluded the following:

- **On-Site Conditions*:*** Review of historical aerial photos indicates the potential for the historical use and/or storage of synthetic pesticides as the properties were situated within the footprint of agricultural land use (i.e., orchards) in the 1940s and 1950s, which can be considered a **Recognized Environmental Condition (REC).** The open solvent (i.e., TCE) release investigation **is also considered a REC.** Additionally, the 2001 closure of the UST release investigation on the 1175 Terra Bella portion of the Site **is considered a Controlled Recognized Environmental Condition (CREC)**.

- **Off-Site Conditions*:*** The Phase I research identified **one (1) off-site, *Controlled Recognized Environmental Condition (CREC)*** based on potential vapor encroachment from a former, regulatory closed, nearby Underground Storage Tank (UST) fuel release site located at 975 North Shoreline Blvd., which is adjoining the Site in the general side gradient direction of groundwater flow.

Phase II sample analytical results confirmed the following:

- The Site is underlain with low-permeability clay from near the surface to the total depth explored (i.e., 8 feet bgs). Attempted soil vapor sampling at six (6) locations was unsuccessful due to "no flow" conditions. Back-up soil samples obtained from a depth of 5 feet bgs at three (3) of these locations revealed trace to non-detectable concentrations of VOCs.
- With the exception of a slightly elevated, surface concentration of arsenic detected at boring B-6, the results confirm that the Site has not been impacted by historical agricultural land use. All other detected concentrations of regulated metals and pesticides are well below regulatory established, unrestricted land use (i.e., residential land use) screening thresholds. No additional on-Site REC's were identified based on the Phase II sampling.

This concludes the *Executive Summary*.

2.0 PURPOSE AND SCOPE

This report contains results of a *Phase I & Phase II Environmental Site Assessment* (ESA) that has been conducted to identify environmental liabilities resulting from historic or existing environmental risks for the subject properties. Completed work tasks conformed to the recommended guidelines established by the American Society for Testing and Materials (ASTM). *Limitations and Exceptions of Assessment* are listed at the end of this report.

The purpose of this ESA is to provide a professional opinion regarding *recognized environmental conditions* at the Site, including potential impacts from known environmental problems in the surrounding area. The term "*recognized environmental conditions*", is defined as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions" (ASTM Standard E 1527-13). A short list of the essential *Phase I ESA* terminology is presented after the *Assessment Findings Summary* in the Table of Contents.

2.1 Defined Scope and Methodology

The scope of services completed for this *Phase I Environmental Site Assessment & Phase II Soil Sampling Report* included the following tasks:

- We reviewed historical maps, and aerial photographs, available geologic, topographic and groundwater data of the Site and vicinity (Sections 3.3 and 4 of this report).

- We completed a visual inspection of the Site and adjoining properties on April 6, 2021 and April 15, 2021, to check for indicators that might suggest a potential source of contamination such as current hazardous materials storage or use, unusually stained ground surfaces (soils, slabs), stressed vegetation, sumps/drains/tanks, and discarded hazardous material containers (Section 6 of this report). A copy of our Site Inspection Checklist, which includes Site photos, is included in Appendix A.
- We reviewed a *User Questionnaire* (Section 7.1, copy of completed questionnaire provided in Appendix A).
- We completed interviews with parties who have specialized knowledge about the subject Site including the Site owner (Section 6.3, interviewing documentation provided in Appendix A).
- We contracted with EDR, an information research firm specializing in environmental data collection, to conduct a regulatory list search of sites with underground fuel storage tanks (UST's), contaminated sites, hazardous waste generation or treatment-storage-and disposal facilities, and landfills located within ASTM survey radius. In reviewing such radius report dated March 29, 2021 we evaluated the locations of all identified sites in relation to the Site (see Section 5.1, *Figure 4 – Surrounding Site Regulatory Review,* and Appendix C for EDR's Radius Report, which compiles and locates regulatory records from numerous local, state and federal agencies, and environmental cleanup liens).
- We reviewed reasonably ascertainable records of hazardous materials storage and documented releases from online, public right-to-know local, Federal, and State regulatory databases and physical archives, such as the State of California GeoTracker and EnviroStor databases, ECHO database, and local environmental health and/or building/planning department archives. Our review included a search for records pertaining to the subject Site and sites within the search distances established by ASTM E 1527-13 (see Section 5.1 through 5.4; Appendix D contains some referenced documents).
- We completed Phase II sampling and analysis of soil and attempted the collection of soil vapor samples. The details are presented in Section 8 of this report.
- We evaluated the collected information and prepared this summary report.

3.0 SITE SETTING & BACKGROUND

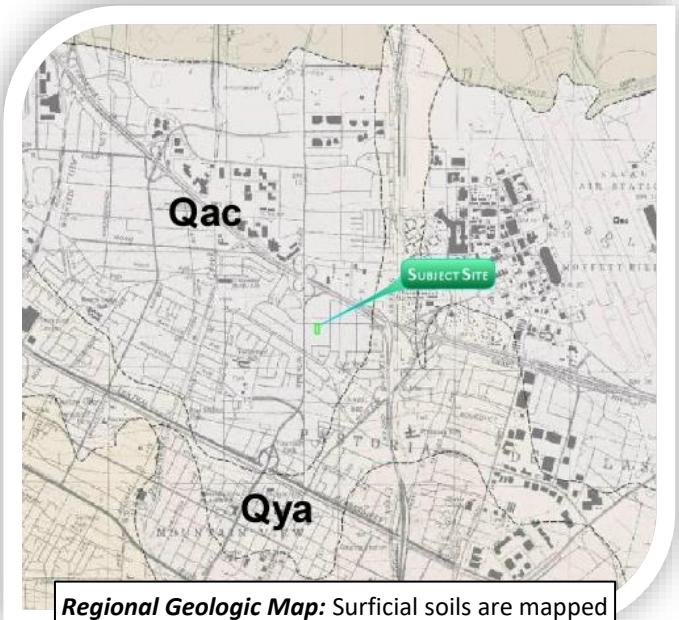
3.1 Site Description and Background

The subject property (the "Site") consists of two parcels located at 1175/1185 and 1155 Terra Bella Avenue in a predominantly commercial area of Mountain View, California. The Site has been developed since at least 1939. Early land use was agricultural in nature up until the late 1950s before being redeveloped into commercial land use sometime between 1956 and 1963.

Site boundaries highlighted in blue. This shows the former layout of the Site which mostly existed from 1960 to at least 2016. All buildings and improvements have been recently demolished.

- *Santa Clara County Assessor's Parcel Number (APNs):* 153-16-012, -011
- Subject Site is approximately 1.4 acres
- The Site has been recently demolished, and currently contains no structures or improvements.
- The vicinity land use is primarily commercial/industrial.

Historical land-use maps and records are discussed in Section 4 and the corresponding records (Sanborn Maps, historical aerial photographs and telephone directories) are presented in Appendix B.



3.1.1 Utilities, Wells, and Storage Tanks

Utilities: Currently no utilities

Wells/Sumps: Site contains multiple groundwater monitoring wells for the ongoing subsurface investigations currently being conducted on Site.

Storage Tanks: No storage tanks were identified.

3.2 Local Geological & Hydrogeological Conditions

Regional Geologic Map: Surficial soils are mapped as unconsolidated alluvial deposits (Qac) that consist primarily of silty clay, and clays.

Regional geologic maps and reports indicate that surface soils underlying site and the vicinity area generally consist of Holocene-aged surficial sediments consisting of silty clay and organic clay ('Qac', see regional geologic map, right). This formation generally represents intra-fan areas. To the south and east of the site, there are other

surficial sediment formations that consist of alluvial sand, fine-grained silt, and clay (Qya) and area typically associated with the outer edges of depositional fans.
First encountered groundwater has been documented to be under semi-confined conditions at depths of approximately 10-15 feet bgs with groundwater stabilizing at depths of approximately 5 feet bgs in established, on-Site monitoring wells. Groundwater is documented to flow in northerly direction.

4.0 HISTORICAL REVIEW

Historical maps, telephone directories, and aerial photographs can be a valuable resource for determining obvious past uses of the property. These records can provide evidence of notable land use changes to the property and potential clues of hazardous material storage (copies of these historical records are included in Appendix B). Land-use observations of these historical records are summarized below.

4.1 City Telephone Directories

Historical City Telephone Directories from 1968 through 2017 were available from a combination historical directory listing services. Copies of the reviewed listings are provided in Appendix B, under 'EDR City Directory'. This records review identified the occupants of the subject Site as follows (land-uses of potential concern are highlighted in **boldface**):

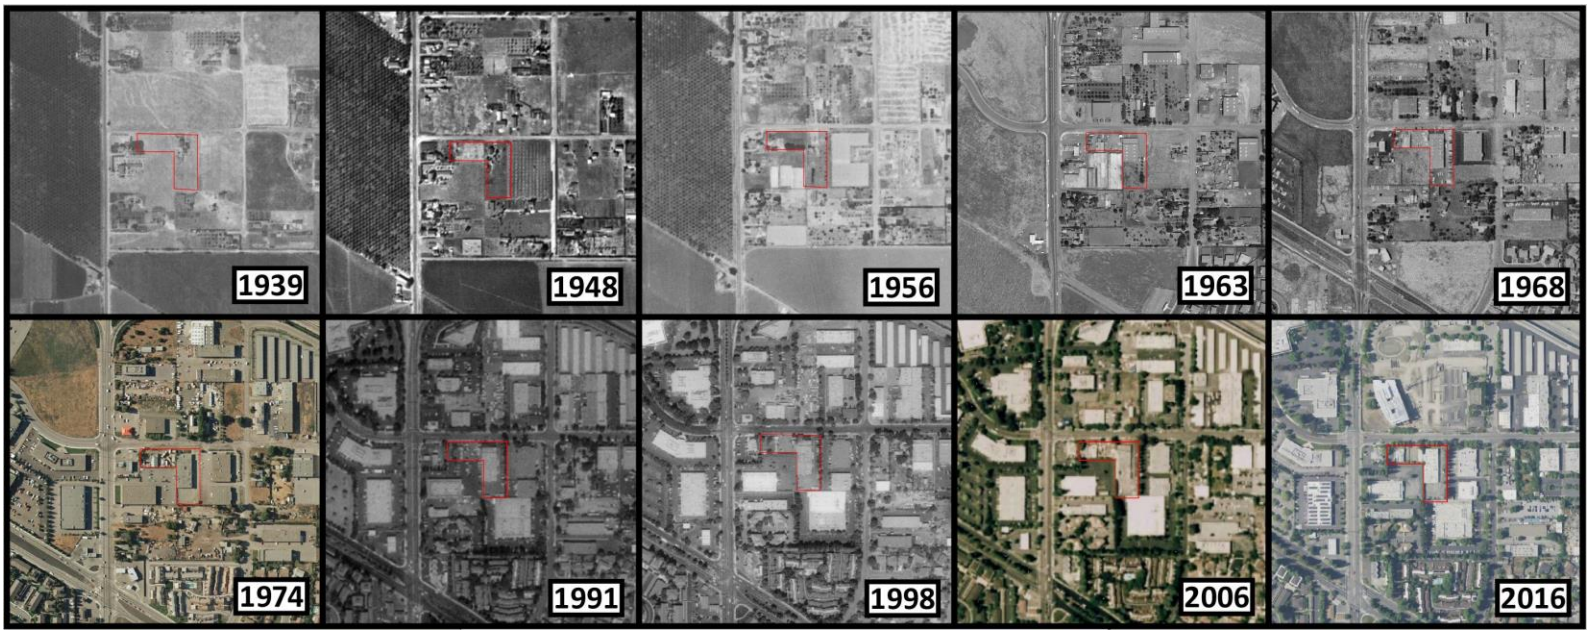
In summary, reverse phone directories show on-site historical land-use has been mostly commercial/industrial since at least 1968.



The adjoining and nearby property land-uses have been primarily commercial/industrial along Tera Bella and Linda Vista Avenue.

4.2 Sanborn Fire Insurance Maps

Sanborn fire insurance maps provide detailed snapshots of historical land-use within generally urban locations where an insurance company provided coverage. The Sanborn Map database was reviewed, and coverage was not available. A copy of EDR's Sanborn database review statement is provided in Appendix B.

4.3 Aerial Photographs

Fifteen (15) historical aerial photographs ranging from 1939 through 2016 were obtained from EDR's collection. These aerial photographs provide snapshots of historical land-usage over the last 75 years. Copies of these same aerial photos are provided in Appendix B, which show more detail on the surrounding area than can be described in the summary descriptions below. The aerial photographs generally have approximate scales of 1 inch = 500 feet. The following table summarizes land-use observations from the available aerial photographs.

YEAR	ON-SITE AERIAL PHOTO OBSERVATIONS	OFF-SITE AERIAL PHOTO OBSERVATIONS
1939	Subject area appears to be developed as farmland with what appears to be at least two structures. Difficult to discern detail.	The surrounding area is predominantly rural farmland with a mixture of orchards and row crop style farming.
1943	Site appears mostly like the previous image.	The surrounding area appears mostly unchanged.
1948	Subject Site appears mostly unchanged.	The surrounding area appears mostly unchanged.
1950	Subject area appears mostly unchanged.	The surrounding area remains mostly unchanged.
1956	Subject area appears as a new residence or farm home has been added on the 1175/1185 parcel. Additionally, it appears as if orchards are being grown on the 1155	The surrounding area still appears to be mostly agricultural, however it does appear some residential homes have been added to the east. It appears some new developments in the north.

YEAR	***ON-SITE*** AERIAL PHOTO OBSERVATIONS	***OFF-SITE*** AERIAL PHOTO OBSERVATIONS
	parcel.	
1963	Subject area has undergone major changes. One large building added on the 1155 parcel, and an additional building added on the 1185 parcel. Operations appear to be commercial in nature.	The surrounding area has also undergone some significant development. Residential neighborhoods added to the southeast and northwest. Shoreline Road has been built just to the west, along with a large highway in the north. Commercial operations appear to be slowly populating in the general vicinity to the north and surrounding area.
1968	It appears as the 1155 building has been extended, and the southern portion of the 1155 parcel has been developed as a parking lot. 1175/1185 appears mostly unchanged, developed with a single building, parking lot, and storage shed.	The surrounding area continues to develop commercial operations. More residential homes added to the southwest. Commercial operations making up a lot of Terra Bella avenue. Agricultural operations in the area appear to be nonexistent at this point.
1974	Subject area appears mostly unchanged, operations on 1175 portion of the Site appears to be storage containers, and semi-truck trailers parking.	The surrounding area continues to develop with commercial operations in the near vicinity, especially along Terra Bella Avenue. Residential mostly making up the southeast and southwest.
1982	Subject area appears mostly unchanged.	Surrounding area is mostly filled in with no open lots. Commercial operations make up the majority of the near vicinity, with residential making up mostly the majority in the south.
1991	Subject area appears like it has undergone some change. It appears as if a small building has been added on the 1175 parcel. The remainder of the Site appears mostly unchanged.	The surrounding area remains mostly unchanged.
1998 To 2016	The Site appears mostly unchanged.	The surrounding area appears mostly unchanged.

Historical aerial photographs indicate that the subject Site has been developed since at least 1939. Early developments included two dwellings and associated farming structures. The 1155 parcel appeared to be utilized partially for growing orchards. Sometime between 1956 and 1963 the Site was redeveloped with two primary commercial structures and associated asphalt parking lots. Site mostly remained unchanged until at least 2016. Sometime between 2016 and 2021, when all structures and improvements were removed from the Site.

Adjoining land-use was predominantly agricultural and residential up until the late 1950's before commercial development began consuming the adjoining and surrounding area.

4.4 Topographic Maps

Historical topographic maps, which include the subject property and surrounding sites, were obtained and reviewed (see Appendix B). There is no evidence from these topographic maps of significant geophysical or hydrogeological changes at the Site or surrounding area that would indicate the potential for negative impacts to Site soil or groundwater conditions.

4.5 Summary of Historical Review

Historical aerial photographs indicate that the subject Site has been developed since at least 1939. Early developments included two farmhouses and associated farming structures. The 1155 parcel appeared to be utilized partially for growing orchards. Sometime between 1956 and 1963 the Site was redeveloped with two primary commercial structures and associated asphalt parking lots. Site mostly remained unchanged until at least 2016. Sometime between 2016 and 2021, when all structures and improvements were removed from the Site.

Adjoining land-use was predominantly agricultural and residential up until the late 1950's before commercial development began consuming the adjoining and surrounding area.

5.0 REGULATORY AGENCY INFORMATION

5.1 Database Search of Federal and State Environmental Records

Records of hazardous material, petroleum products and waste storage, as well as unauthorized releases of said materials into the environment, are required by law to be maintained by regulatory agencies overseeing these environmental conditions. An information research firm specializing in environmental data collection, *Environmental Data Resources (EDR)*, generated a Radius Map Report for the Site dated November 9, 2020 (included in Appendix C). The Radius Map Report identifies sites listed in the selected regulatory databases, presents location maps and details on identified sites, provides a description of the Federal and State agency data reviewed, and limitations to the search. The search specifically documents sites having registered underground fuel storage tanks (UST's), hazardous waste generation, hazardous waste treatment-storage-disposal, and subsurface contamination. Search distances are per ASTM's E-1527 13 standard (see Appendix C for a list of all sites and full descriptions of all regulatory databases). The database search identified the following information for the target property and surrounding sites.

MAP FINDINGS SUMMARY

NR = Not reviewed, as per the search distances established in ASTM 1527-13. This table was excerpted from the EDR Radius Report, provided in Appendix C. A full list of the databases reviewed is provided on page GR-1 of EDR's report. EDR updates many of these listings on a quarterly or semi-annual basis.

SUBJECT PROPERTY: 1155/1175/1185 Terra Bella ("*Target property" in EDR Radius Report*) ***was listed*** in a number of the regulatory reviewed databases.

FACILITY / LOCATION / DATABASE SOURCE(S)	DETAILS
TELEWAVE INC. **1155 Terra Bella Ave.** Databases Listed: CPS-SLIC, CERS, Cupa, ECHO, RCRA Non Gen, CERS	**CLEANUP PROGRAM SITE (CPS-SLIC): OPEN SITE ASSESSMENT** During a Phase I/II ESA conducted in 2016, knowledge of a historical chemical UST was discovered which was removed from the Site without permit. Testing of soil and groundwater confirmed elevated concentrations of chlorinated solvents (TCE and daughter products). Specifically, a relatively high concentration of TCE (6,600 µg/L, or parts per billion) was detected in first encountered groundwater beneath the former tank location, while concentrations dropped off by two orders of magnitude within 80 feet from the source (TCE @ 36 µg/L). Additionally, elevated concentrations of TCE were detected in a soil vapor well located at the former UST location. TCE in soil vapor was detected at 25,000

FACILITY / LOCATION / DATABASE SOURCE(S)	DETAILS
	µg/m^3. The site was entered into the Santa Clara County Department of Environmental Health (SCCDEH) Voluntary Cleanup Program (VCP) and the subsurface investigation is ongoing.
SHIPPEN PROPERTY **1175 Terra Bella Ave.** Databases Listed: HIST LUST, LUST, Cortese	**LEAKING UNDERGROUND STORAGE TANK (LUST): CLOSED** Two gasoline UST's (one at 1185 TB, and one at 1175 TB) were removed under permit with fire department in 1998. The UST removed from the 1185 TB area did not contain reportable levels of gas compounds. Holes were noted in the UST removed from 1175 TB area. TPH odors were noted in field. Groundwater within the tank pit was sampled and contained high levels of gasoline (42,000 µg/L) and benzene (1,400 µg/L). 20 cubic yards of impacted gas soils were over excavated in 1998 and disposed. Follow up soil and groundwater investigation conducted in November 2000, consisted of 4 exploratory borings (1 offsite, 3 onsite). GW samples were collected from each boring, GW samples collected on Site were collected at 7 ft bgs. GW sample results showed trace to non-detect levels of benzene, and moderate levels of TPH gas (up to 2,600 µg/L The leaking UST case was closed in July 2001 by the overseeing agency based on low levels of residual contamination that had attenuated below levels of regulatory concern.

SURROUNDING SITES: Our review of the EDR Radius Report revealed the following notable business operations / properties in the Site vicinity that have notable records of hazardous materials and/or petroleum hydrocarbon releases, waste generators and other notable regulated activities.

Federal Chemical/Fuel Release Sites: The records search **identified five (5) sites** located within a 1-mile radius from the subject Site that was listed on the USEPA National Priority List (NPL) or Superfund.

State Chemical/Fuel Release Sites: The records search **identified fifteen (15) sites located within a ¼-mile radius** of the Site as having a record of a petroleum or other chemical impact to soil or groundwater [i.e. Leaking Underground Storage Tanks (LUST), Cortese, Spills Leaks Investigations and Cleanup (SLIC), Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) and Voluntary Cleanup Priority Listing (VCP)]. **Eleven (11) sites are located within ⅛-mile radius** from the subject Site. See Figure 4 for relative locations of these release investigations.

FACILITY / LOCATION / DATABASE SOURCE(S)	DETAILS
BAILEY PROPERTY **975 Shoreline Blvd.** **Adjoining** **(side gradient)** Databases Listed: LUST,	**LEAKING UNDERGROUND STORAGE TANK (LUST): CLOSED** The Site is a former Texaco-branded service station located at the intersection of North Shoreline Boulevard and Terra Bella Avenue in Mountain View, California. Former station features include one 6,000-gallon gasoline underground storage tank (UST), four 4,000-gallon gasoline USTs, and one waste oil UST. In 1992, the six USTs, associated product piping, and dispensers were removed, and the Site

FACILITY / LOCATION / DATABASE SOURCE(S)	DETAILS
SWEEPS UST, Cortese, CERS, RCRA Non-Gen	was redeveloped as a restaurant. Twelve groundwater monitoring wells have been installed on or near the Site to-date. Eight groundwater monitoring wells (MW-22A, MW-22B, MW-22D, and MW-22L through MW-22P) were installed on-site, and four groundwater monitoring wells (MW-22E through MW-22H) were installed at off-site locations to assess the lateral extent of petroleum hydrocarbons in groundwater. Groundwater monitoring has been performed at the Site since 1988. Historically, groundwater flow at the Site has been towards the north. Remediation activities have included over excavation of soil, soil vapor extraction, chemical injection into groundwater wells. Residual contamination in soil and groundwater still remain that can pose a risk under certain site development activities. Free product was historically reported to be present in wells MW22A, MW22E, MW22H. Maximum concentrations of contaminants in groundwater were 420,000 ppb TPHg, 9,900 ppb Benzene, in well MW22E.Concentrations have reduced to 7,700 ppb TPHg and 58 ppb Benzene. This former release Site has been closed by the overseeing regulatory agency (Santa Clara County Department of Environmental Health), however residual contamination remains in place and therefore is considered a Controlled Recognized Environmental Condition (CREC).
SHELL **807 North Shoreline Blvd.** (542-ft SSW) **Up gradient,** Databases Listed: RCRA-SQG, LUST, UST, HIST LUST, CERS	**LEAKING UNDERGROUND STORAGE TANK (LUST): CLOSED** This upgradient site is an active gas station. In 1991, four USTs [(3) 10,000 gal. gas, (1) 10,000 gal. diesel] were removed from the site including product piping. Maximum concentrations in groundwater at the base of the excavation 360 ppm TPHg, 180 ppm TPHd. In 1994 soil vapor extraction was conducted for 6 months, with 80 pounds of TPHg removed and 0.8 pounds of benzene. In 1998 joint investigation was conducted with 23 exploratory borings and one monitoring well installed between the two neighboring release sites. In 1999, groundwater extraction and treatment was determined to be the best remedial alternative. In 2004, groundwater extraction and treatment was terminated. Dissolved fuel contaminant concentrations in groundwater in August 2004 were 88 ppb TPHg, 170 ppb TPHd, 21 ppb MTBE, 16 ppb TBA, and no benzene was detected. Based on the results of soil samples, residual petroleum hydrocarbon contamination exists in soil. Residual groundwater contamination also remains (910 ppb TPHg, 170 ppn TPHd, 21 ppb MTBE, 16 ppb TBA. The 910 ppb detection is approximately 400 feet downgradient of the site and may be partially attributed to a comingled Chevron source (808 North Shoreline Blvd.). The highest on site TPHg concentration at Shell is 88 ppb. Groundwater extraction has removed 385 pounds of MTBE, 6.3 pounds of TPHd, 4.25 pounds of TPHg, and 0.28 pounds of benzene. Site is an active fueling station. Based upon the residual concentrations of TPH in soil and groundwater, Santa Clara Valley Water District staff concluded that the site is no longer a threat to

FACILITY / LOCATION / DATABASE SOURCE(S)	DETAILS
	groundwater, human health, and the environment, and RWQCB objectives have not been compromised. Site was closed on August 6, 2008.

Underground Storage Tanks (USTs): The database search of generally historical regulatory records **identified twenty-five (25) sites** located within a ¼-mile radius having a current or historical record of permitted UST's (UST, HIST UST, SWEEPS UST, Cal FID UST and/or Indian UST).

Hazardous Waste: The records search **identified twenty-four (24)** located within a ¼-mile radius as having records showing generation and proper disposal of hazardous waste, typically a waste oil or oily waste (RCRA-SQG, RCRA-LQG, RCRA-NonGen, FINDS, Notify 65, EDR Proprietary Records).

Dry Cleaners: The records **did not identify any sites** operating as dry cleaners within ¼-mile radius. None were identified that would pose a concern for the Site.

Orphan Sites: The EDR report lists **eleven (11)** unmapped site ("***orphans***") obtained from the list of databases, for which EDR was not able to determine an exact location. Based on the probable location of these listings, these Orphan sites do not pose a concern for the Site.

Combined *Regulated Hazardous Sites - ¼-Mile Radius Map* (Figure 8): A comprehensive radius map documenting nearby release sites, hazardous materials and waste management sites, UST/AST storage and other significant regulated environmental conditions, is presented on Figure 4.

5.2 Geotracker / EnviroStor File Review

Records of hazardous materials storage and releases can also be found in state regulatory agency databases, such as the California *State Water Resources Control Board* Geotracker® database and *Department of Toxic Substances Control* EnviroStor® database. A review was conducted for records on the subject Site, vicinity properties, and additional sites identified in the Federal and State environmental database review detailed in Section 5.1.

- Our review of the California State GeoTracker database, conducted in April 2021, **did not reveal any additional sites** within a ¼-mile radius of the subject Site as having a record of a release of contamination to soil or groundwater.

5.3 Local Oversight Agency File Reviews

Subject Site Records: Records request was submitted on March 31, 2021 with the City of Mountain View and was routed to all the appropriate departments including environmental health office and fire department. The provided records pertained to the two former gasoline USTs that were removed in

1998 from the 1175 and 1185 portion of the Site. All provided documentation is available for review on GeoTracker.

5.4 Vapor Encroachment Conditions (VEC) Review

In accordance with current standards for assessing vapor encroachment (ASTM E2600-10), we evaluated the Site and its vicinity for vapor encroachment conditions, or conditions that may indicate that sources and pathways for hazardous volatized chemicals to enter current or future on-site buildings that are present at the Site and/or Site vicinity. ASTM E 2600-10 defines the following minimum search distances for the *Area of Concern* for vapor encroachment:

- ***1/3-mile*** *for known or suspected volatile/semi-volatile chemical contaminated sites (e.g., a dry cleaner site with a PCE release).* We reviewed the nearby *solvent / volatile organic compound (VOC) release sites* discussed in Section 5.1-5.3 and assessed them for vapor encroachment potential (copy included in Appendix C). There was a total of four (4) open nearby solvent / volatile organic compound (solvent) release sites located within a 1/3-mile radius of the subject Site. However, based on the location of these sites in respect to the location of the Subject Site and the reported groundwater flow direction (North), it is unlikely that the releases from these Site will impact the subject Site. No further investigation is warranted.

- ***1/10-mile*** *for known or suspected petroleum hydrocarbon contaminated sites (e.g., a gasoline release from a fueling station)* We reviewed the nearby *petroleum hydrocarbon release sites* discussed in Section 5.1 for vapor encroachment potential. We identified one (1) site within a 1/10-mile radius of the subject Site as having a documented VOC-containing plume that could potentially have preferential pathways for VOCs in vapor phase that could potentially encroach on the subject Site. This former leaking underground storage tank (LUST) site is located at 975 North Shoreline Blvd. which adjoins the Site along the west. See section 5 above and GeoTracker[2] for details. This nearby former fuel release Site is considered **an off-site Controlled Recognized Environmental Condition** due to its potential to impact the subject Site.

6.0 USER QUESTIONNAIRE & INTERVIEWS

6.1 User Questionnaire

A *User Questionnaire* was completed by Devcor Partners II LLC (property owners) signed on March 31, 2021.

[2] https://geotracker.waterboards.ca.gov/profile_report.asp?global_id=T10000008303

USER QUESTIONNAIRE SUMMARY	
Reason for Performing ESA?	Conditional requirement for redevelopment
Environmental Liens?	No
Land-Use Limitations?	No
Any Specialized Knowledge of the Subject Site or Adjoining Properties?	Previous owner of the property at 1155 is believed to have stored TCE on Site. Most likely there is TCE released in the soil. According to GeoTracker 1175/1185 had previous LUST cleanup which was closed with NFA designation.
Discounted Price Relative to Fair Market Value?	No
Current or Historical Chemical/Hazardous Materials Usage?	TCE was used on Site in the past. Site is currently vacant with all previous structures removed.
Environmental and Title Reports	A Phase I ESA was created in 2016 by Property Solutions Inc. There is an existing investigation currently being conducted on the 1155 Terra Bella property with oversight from Santa Clara County Environmental Health.

The User indicated that the *Phase I/II ESA* is being completed to satisfy a conditional requirement for redevelopment.

6.2 Additional User Provided Documentation

The User provided documentation components of a Phase I ESA conducted at 1175/1185 Terra Bella.

6.3 Interviews

We interviewed the current Property Owner, Sean Corrigan representing Devcor Partners II, LLC, and asked the following questions:

INTERVIEWEE	DATE	SUMMARY
Sean Corrigan *Property Owner*	April 6th, 2021	***Question*:** Have hazardous materials been used or stored on the property? ***Answer***: Yes ***Question:*** Have there been any underground/aboveground storage tanks on the Site? ***Answer:*** Yes ***Question:*** Has there been any large-scale dumping of debris on the Site? ***Answer:*** No. **Question:** Have there ever been orchards present on the property during your ownership? ***Answer:*** No

6.4 Summary of Questionnaire/Interview Review

The *User Questionnaire* and *interviews* are intended to identify previous or current land-uses that may indicate environmental impacts, or provide further details regarding previously identified environmental impacts and regulatory release investigation cases. Our interview with Sean Corrigan did not identify any additional environmental conditions at the subject property.

Copies of interviewing documentation are included in Appendix A.

7.0 SITE INSPECTION

7.1 Overview

A Site inspection was conducted on April 6, 2021, to note potential sources of contamination associated with on-site activities. A copy of the completed *Site Inspection Checklist*, which contains detailed documentation of the Site survey including a photographic record of the inspection, is presented in Appendix A.

SITE INSPECTION OBSERVATIONS	
Subject Property Observations:	
Current Use of Property	Site is currently two vacant parcels. All structures and parking lot removed. Site consists of native earth and gravel. Site currently contains several groundwater monitoring wells dedicated to the current ongoing environmental investigation being conducted on the 1155 parcel.
Potable Water Source	Water is provided by the City of San Jose
Interior Drains? Where to?	Site does not contain any structures or drains.
Sewage Disposal Source	Sewage service provided by the City of Mountain View
Pools of Liquid / Odors?	None observed
Hydraulic equipment?	None observed
Storage tanks?	None observed
Exterior Observations:	
Pits, Ponds, Lagoons?	None observed
Stained soil or pavement?	None observed

SITE INSPECTION OBSERVATIONS	
Storm water discharge?	None observed.
Wells or Water Towers?	Site contains several groundwater monitoring wells for ongoing investigation.
Sumps?	None observed.
Electrical Infrastructure?	Some electrical infrastructures we left on Site from the recent demolition of the 1175/1185 parcel.
Hazardous Materials or Petroleum Products?	None observed
Neighborhood Observations:	
Topography of property and vicinity	Topography of the Site is generally flat
Current uses of adjoining properties	**West:** Commercial **South:** Commercial **East:** Commercial **North:** Commercial

7.2 Summary of Site Inspection

The Site inspection confirmed that the Site is currently vacant lots with no structures or Site improvements. Site contains several groundwater monitoring wells for the ongoing environmental investigation, monitoring Trichloroethylene (TCE) levels in groundwater.

8.0 PHASE II SAMPLING INVESTIGATION

Weber, Hayes and Associates (WHA) was retained to implement a limited *Phase II Shallow Soil & Soil Vapor Investigation* to evaluate the Site for *potential* contamination resulting from: 1) potential pesticides / regulated metals (primarily lead and arsenic) associated with historic agricultural land use, and 2) the likely presence of elevated solvent-based soil vapor contamination from the documented release at 1155 Terra Bella Avenue (i.e., primarily TCE and TCE breakdown compounds) and potential presence of fuel related VOC soil vapor contamination associated with the historic on-site UST release and potential fuel related VOC contamination encroachment beneath the Site from an adjacent fuel release site. We note that no sampling was conducted at 1155 Terra Bella Avenue as ongoing subsurface investigations are being completed for this portion of the Site under the direction of the Santa Clara County Department of Environmental Health.

8.1 Fieldwork

On April 15, 2021, under the supervision of WHA field personnel, Trinity Drilling (C-57 License #1010926) advanced six (6) soil borings to depths ranging from 6.5 to 8 feet bgs at 1175/1185 Terra Bella Avenue (B-1/SV-1 through B-6/SV-6; see Figure 5). Drilling and sampling procedures followed our *Field Methodology for Direct Push Sampling*, which is included in Appendix E. The continuously cored soil borings were field screened by a trained environmental professional from WHA and a log was maintained of each boring, specifically noting any evidence of contamination (i.e., odor, discoloration, or detections of VOCs via a hand-held photoionization meter). No evidence of solvent or fuel related impacts were observed at any of the boring locations. Shallow soil samples were collected from first encountered native soils for laboratory analysis. Each boring was converted into a temporary soil vapor well and subsequently sampled by WHA field staff in accordance with our *Field Methodology for Active Soil Gas Sampling* (see Appendix E). The sample intake of each temporary soil vapor well was set at 6 feet bgs (except for SV-6 set at 4 feet bgs), and at least 2 hours of sample point equilibration time was allowed following probe construction, prior to sample collection (see geologic logs and construction diagrams in Appendix E).

Low permeability clay was encountered from near the ground surface to the total depths explored, and we were not able to obtain soil vapor samples from any of the sample locations due to “no flow” conditions. As a backup, representative soil samples were collected from three (3) of the borings (B-1, B-3 and B-5; see Figure 5) from the depth of the soil vapor intake for VOC analysis.

Field observations, photo sheets, and field methodology for sample collection are documented in Appendix E.

8.2 Results of Phase II Sampling and Laboratory Analysis

All surface samples (i.e., first encountered native soils) were submitted to a state certified laboratory for the following analysis:

- CAM 17 Metals by EPA Method 6010 / 7471
- Persistent Pesticides by EPA Method 8081

Deeper soil samples obtained from a depth of 5 feet bgs at borings B-1, B-3 and B-5 were analyzed for the following:

- VOCs (full suite) by EPA Method 8260

Laboratory results and chain of custody documentation are included in Appendix F. The laboratory results have been tabulated along with agency, risk-based threshold limits for comparison of detected concentrations (see Tables 1, 2 & 3). Results are summarized below:

The State-Certified laboratory results for soil testing indicated there were no elevated concentrations of any chemicals of potential concern, with the exception of arsenic at one surface sample location. Specifically:

- **Regulated Metals:** (Table 1) Concentrations of arsenic ranged from **2.15 mg/kg** to **4.62 mg/kg** at five of the six sample locations (**B-1** to **B-5**), which is below the accepted Bay Area background concentration of **11 mg/kg**. Sample **B-6** yielded a concentration of arsenic at **15.4 mg/kg,** which slightly exceeds the accepted background threshold. Therefore, we had the laboratory run a deeper sample at **B-6** (0.5 feet below the surface sample depth) to determine whether slightly elevated arsenic priests below the surface. Laboratory results of this deeper sample yielded no detect of arsenic the laboratory reporting limit (i.e., <2.42 mg/kg). All other metals were either not detected or were detected at concentrations below established, unrestricted land use screening thresholds.
- **Persistent Pesticides:** (Table 2) Two (2) of the six (6) surface samples analyzed for persistent pesticides contained trace concentrations of 4-4 DDE, which were well below established, unrestricted land use screening thresholds. There were no other detectable concentrations of persistent pesticides in any of the samples.

Volatile Organic Compounds: (Table 3) Only trace to non-detectable concentrations of VOCs were detected well below the established, unrestricted land use screening thresholds.

9.0 DATA GAPS

No data gaps were discovered during this investigation.

10.0 FINDINGS & OPINIONS

10.1 Subject Site Land Use

Historic Review: Historical aerial photographs indicate that the subject Site has been developed since at least 1939. Early developments included two (2) dwellings and associated outbuildings. The 1155 parcel appeared to be utilized partially for growing orchards. Sometime between 1956 and 1963 the Site was

redeveloped with two primary commercial structures and associated asphalt parking lots. Site mostly remained unchanged until at least 2016. Sometime between 2016 and 2021, all structures and improvements were removed from the Site (historical aerial photographs included in Appendix B).

UST Investigation/Closure: Two gasoline UST's (one at 1185 Terra Bella (TB), and one at 1175 Terra Bella) were removed under permit with Mountain View fire department in 1998. The UST removed from the 1185 TB area did not contain reportable levels of gas compounds. However, holes were noted in the UST removed from 1175 TB area. TPH odors were noted in field. Groundwater within the tank pit was sampled and contained elevated levels of gasoline (42,000 µg/L) and benzene (1,400 µg/L). Twenty (20) cubic yards of impacted soils were over excavated in 1998 and properly disposed of. Follow up soil and groundwater investigation conducted in November 2000, consisted of advancing four (4) exploratory borings (1 offsite, 3 onsite). Groundwater samples collected at 7 ft bgs revealed trace to non-detect levels of benzene, and moderate levels of TPH gas (up to 2,600 µg/L). It was determined that the extent of the groundwater and soil impacts were defined and limited to a small area. The leaking UST case was closed in July 2001 by the overseeing agency based on low levels of residual contamination that had attenuated below levels of regulatory concern.

Existing, on Site groundwater monitoring well MW-3A (located in close proximity to the former 1175 Terra Bella Avenue UST location) revealed no detections of any fuel-related constituents (i.e., Benzene, Toluene, Ethylbenzene, and Xylenes) during the most recent groundwater monitoring event completed in September 2020.

Subsurface Investigations: Ongoing subsurface investigations are being conducted on Site related to a historic release of trichloroethylene (TCE) at 1155 Terra Bella Avenue (State GeoTracker Database Link). Impacts to soil, soil vapor, and groundwater are being assessed. The property owner has entered into the Santa Clara County Department of Environmental Health's *Voluntary Cleanup Program* to oversee the investigation and subsequent corrective actions.

Site Inspection: The Site inspection confirmed that all Site improvements and surface coverings have been completely removed. The Site currently contains a network of groundwater and soil vapor monitoring wells, which have been installed to assess the TCE release associated with 1155 Terra Bella Avenue. The Site is fenced off at its perimeter to prevent public access. No operations are currently conducted on Site other than the ongoing investigation and subsurface assessment of the Site.

On-site Conclusion: Review of historical aerial photos indicates the potential for the historical use and/or storage of synthetic pesticides as the properties were situated within the footprint of agricultural land use (i.e., orchards) in the 1940s and 1950s, which can be considered a **Recognized Environmental Condition (REC).** The open solvent (i.e., TCE) release investigation **is also considered a REC.** Additionally, the 2001 closure of the UST release investigation on the 1175 Terra Bella portion of the Site **is considered a Controlled Recognized Environmental Condition (CREC)**.

10.2 Adjoining / Surrounding Land Uses

Agency records research indicate there are numerous documented chemical release sites within a quarter mile radius of the Site, however all but four (4) have obtained case closure from overseeing regulatory agencies. None of the four (4) open chemical release sites are situated upgradient from the Site and therefore pose no risk of encroachment to the Site (see Section 5 for details on these nearby sites).

Based on the review of historical agency records and documented groundwater flow direction (generally to the north), we identified one former fuel release site (975 North Shoreline Blvd.) that adjoins the Site to the east. The case was closed by the Santa Clara County Department of Environmental Health in July 2011, with documented, residual soil and groundwater contamination remaining at both on- and off-site locations[3]. The close proximity of residual subsurface impacts may pose a potential vapor encroachment threat to the Site. Based on the close proximity of this regulatory closed, UST release site with documentation of residual contamination remaining in the subsurface, this is considered a **Controlled Recognized Environmental Condition (CREC)**.

11.0 CONCLUSIONS

We have performed a standard of care, *Phase I & II Environmental Site Assessment* in conformance with protocols established in ASTM Practice E1527-13, for the property at 1155/1175/1185 Terra Bella Avenue in Mountain View (the Site). There were no exceptions to, or deletions from, this practice (i.e., data gaps), as described in Section 9.0 of this report. In conclusion,

The *Phase I ESA* research, inspection, and interviews concluded the following:

- **On-Site Conditions*:*** Review of historical aerial photos indicates the potential for the historical use and/or storage of synthetic pesticides as the properties were situated within the footprint of agricultural land use (i.e., orchards) in the 1940s and 1950s, which can be considered a **Recognized Environmental Condition (REC).** The open solvent (i.e., TCE) release investigation **is also considered a REC.** Additionally, the 2001 closure of the UST release investigation on the 1175 Terra Bella portion of the Site **is considered a Controlled Recognized Environmental Condition (CREC)**.
- **Off-Site Conditions*:*** The Phase I research identified **one (1) off-site, *Controlled Recognized Environmental Condition (CREC)*** based on potential vapor encroachment from a former, regulatory closed, nearby Underground Storage Tank (UST) fuel release site located at 975

[3] Stantec, Additional Assessment Report, Former Texaco Service Station, 975 North Shoreline Blvd., Mountain View, December 16, 2010
Case Closure Documentation

North Shoreline Blvd., which is adjoining the Site in the general side gradient direction of groundwater flow.

Phase II sample analytical results confirmed the following:

- The Site is underlain with low-permeability clay from near the surface to the total depth explored (i.e., 8 feet bgs). Attempted soil vapor sampling at six (6) locations was unsuccessful due to "no flow" conditions. Back-up soil samples obtained from a depth of 5 feet bgs at three (3) of these locations revealed trace to non-detectable concentrations of VOCs.

With the exception of a slightly elevated, surface concentration of arsenic detected at boring B-6, the results confirm that the Site has not been impacted by historical agricultural land use. All other detected concentrations of regulated metals and pesticides are well below regulatory established, unrestricted land use (i.e., residential land use) screening thresholds. No additional on-Site REC's were identified based on the Phase II sampling.

12.0 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT

This report and the associated work have been provided in accordance with the principles and practices generally employed by the local environmental consulting profession. This is in lieu of all other warranties, expressed or implied. This report has been prepared solely for Park Delmas Investors, LLC, Sun Lakes Construction Company of California & Vesta Real Estate Company, Inc. The assessment is provided so the client may make a more informed decision as to Site conditions. This report shall not be relied upon by or transferred to any other party or used for any other purpose. *Weber, Hayes and Associates* will not distribute this report to any regulatory agency without the consent by the User, unless required by law or court order.

Under the ASTM standard, this report is current until May 30, 2021 (180 days from the interviews, radius search, and visual inspections). This ESA is not a regulatory compliance audit or an evaluation of the efficiency of the use of any hazardous materials at the Site, although is intended to identify RECs in conformance with the ASTM standard. Unless otherwise stated, no evaluation for the presence of asbestos-containing building materials, lead-based paint, urea-formaldehyde foam insulation, or other potentially hazardous building materials; methane; radon gas; lead in drinking water; or wetlands, is included in our assessment.

Our findings and opinions are based on information collected from regulatory agency files and lists, interviews, and Site conditions at the time of our Site reconnaissance. Note that our findings and opinions are based on information that we obtained on specific dates through records review, Site reconnaissance, and related activities. It is possible that other information exists or subsequently has become known, just as it is possible for conditions we observed to have changed after our observations.

The accuracy and thoroughness of any environmental assessment depend on a variety of factors and optimally will include soil and groundwater sampling. Weber, Hayes and Associates cannot and will not provide guarantees, certifications or warranties that the investigated property is or is not free of

environmental impairment. Any person who is aware of any *recognized environmental conditions* of the Site or surrounding areas that are different from those described in the report should report them immediately to this office for evaluation as part of an additional scope of work.

Thank you for this opportunity to be of service. Should you have any questions or comments regarding this project, please contact us at our offices.

Respectfully submitted,

WEBER, HAYES AND ASSOCIATES

13.0 QUALIFICATION OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10[4] of this part.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

By _____
Jered Chaney
Senior Geologist

[4] ASTM Standard E 1527-13, X2.1.1 and Federal Register 40 CFR Part 312, §312.10:

Environmental Professional means:

(1) A person who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases…on, at, in, or to a property, sufficient to meet the objectives and performance factors...

(2) Such a person must:

(i) Hold a current Professional Engineer's or Professional Geologist's license or registration from a state, tribe, or U.S. territory (or the Commonwealth of Puerto Rico) and have the equivalent of three (3) years of full-time relevant experience; or

(ii) Be licensed or certified by the federal government, a state, tribe, or U.S. territory (or the Commonwealth of Puerto Rico) to perform environmental inquiries … and have the equivalent of three (3) years of full-time relevant experience; or

(iii) Have a Baccalaureate or higher degree from an accredited institution of higher education in a discipline of engineering or science and the equivalent of five (5) years of full-time relevant experience; or

(iv) Have the equivalent of ten (10) years of full-time relevant experience...

2 = **Environmental Screening Levels (ESLs):** Regional Water Quality Control Board (San Francisco Bay Region) guideline document: *Screening for Environmental Concerns at Sites With Contaminated Soil and Groundwater* (Final version, 2019). The ESLs are intended to provide quantitative risk-based guidance on whether further assessment or remediation of contamination is warranted <https://www.waterboards.ca.gov/sanfranciscobay/water_issues/programs/ESL/new/ESL_Summary_Tables_24Jan19_Rev1.pdf >

3 = The " **Tier 1 ESL**" =The most conservative *Environmental Screening Level* (ESL) across all potential pathways including leaching (L), human health (HH, typically for a residential land use) & odor/nuisance (O)). Note: ecologic ("Terrestrial Habitat") is not included.

L = Indicates the lowest ESL is based on a **potential Leaching pathway** (for groundwater protection).
HH, resid = Indicates the lowest ESL is based on a **potential Human Health & Safety Pathway** for Residential Land Use (i.e., ingestion, inhalation, dermal).
O = Indicates the lowest ESL is based on a **potential "odor nuisance"** (i.e. 100 mg/kg for gasoline).

Bkg= **The background (bkg)** concentration of naturally-occurring Arsenic for the greater Bay Area is established as 11 mg/kg based on a 2011 study. The study determined background concentrations (99th percentile) of arsenic in the San Francisco Bay Region, including Santa Clara.
- Additional information at (http://www.waterboards.ca.gov/sanfranciscobay/water_issues/programs/ESL/2011_Arsenic_Background_Duverge.pdf)

Cr-total= Chromium's risk-based thresholds are based on Chromium III as there is no established threshold for Total Chromium. Total Chromium = Cr-III + Cr VI.

ND = Non Detection
NE = Not Established
'-- = Not Analyzed

< = A "less than" symbol indicates no detectable concentrations (i.e., the laboratory did not detect the contaminant at the concentration shown).
J6= The sample matrix interfered with the ability to make any accurate determination; spike value is low
J = Laboratory reports that the detection value is between MDL and RDL, and should be considered an estimate.

RDL = **Reported Detection Limit** = is the laboratory-determined value that is 2 to 5 times above the Method Detection Limit (MDL) that can be reproduced in a manner that results in a 99% confidence level and is both accurate and precise.

^= Method Detection Limit (MDL) used due to the RDL being above the coresponding established threshold

Phase I Environmental Site Assessment

Site Inspection Checklist

Objective: To visually evaluate and document the extent of the target property(ies) for the likely presence of *recognized environmental conditions*. Photodocumentation gathered during the site inspection are appended at the end of this form.

Site/Facility Name: _____

Site Address: 1175/1185 & 1155 Terra Bella Avenue, Mountain View

Site Contact: Sean Corrigan (Owner)

1. Current Uses of the Property: *To include (1) general description of the facility & commercial or industrial processes therein, (2) topography, (3) site improvements [# of buildings, size/age/condition], (4) occupants/vacancies and the nature of business operations, and (5) any indications of past site use.*

Site is currently vacant. All buildings and Site improvements have been removed. Site contains a number of groundwater monitoring wells installed for the ongoing investigation on the 1155 parcel. On the 1175/1185 parcel, a few of the utility infrastructure is still visible (former electrical panel box, sewer piping). Site is relatively flat and is adjoined by commercial/light industrial land use on all sides.

Project #: _____

Date: _____

Inspector: _____

2. Site Infrastructure:

	Yes	No	Notes:
▪ Any wells, water tanks or water towers?	X	☐	
▪ Boiler rooms?	☐	X	
▪ Electrical transformers?	☐	X	
▪ Septic System?	☐	X	
▪ Drainage wells or dry wells?	☐	X	

Note observations and data for heating sources, water supply source(s), solid waste disposal and electrical systems.

Site currently contains a number of groundwater monitoring wells, installed for the ongoing environmental investigation on the 1155 parcel. On the 1175/1185 parcel, a few of the utility infrastructure is still visible (former electrical panel box, sewer piping).

3. Evidence of Hazardous Materials Storage & Use *(check appropriate):*

	Yes	No
▪ Haz-mat storage area(s)? Location?	☐	☐
▪ Abandoned drums or containers?	☐	☐
▪ Aboveground Storage Tanks?	☐	☐
▪ Underground Storage Tanks?	☐	☐
▪ Fuel or Chemical Dispensing Equipment or vent piping?	☐	☐
▪ Pools of liquid? Characteristics?	☐	☐
▪ Sumps, oil/water separators and collection pits?	☐	☐
▪ Unusual Odors, staining or distressed vegetation?	☐	☐
	☐	☐
	☐	☐

No operations are currently conducted on Site. All structures and improvements have been removed. No current chemical storage. Site is currently being investigated for a solvent release to soil and groundwater.

HAZ-MAT CONTINUED:

4. Exterior Observations:

	Yes	No
▪ Exterior surface coverings? *(describe condition, type, % native soils)*	☐	☐
▪ Paving patches/staining?	☐	☐
▪ Manholes/utility covers?	☐	☐
▪ Any stacks or HVAC units visible on roof?	☐	☐
▪ Mounds or depressions?	☐	☐
▪ Do surface water catch basins drain?	☐	☐
▪ Any ditches or drainages? *(If flow is present, identify the source)*	☐	☐
	☐	☐
	☐	☐

Site is covered in dirt and gravel.

5. Interior Observations:

	Yes	No
▪ Maintenance Areas?	☐	☐
▪ Hydraulic equipment?	☐	☐
▪ Interior floor staining, cracking or patching?	☐	☐
▪ Interior floor drains? Outlet Sump?	☐	☐
▪ Interior floor integrity (good, satisfactory or poor)?	☐	☐

N/A

6. Describe Adjoining Site Land Uses and Note Any Areas of Concern:

North – Terra Bella Avenue/ Google complex & Parking lot

East – 1145 Terra Bella / Commercial

West – Taco Bell / Asphalt Parking lot

South – Asphalt Parking Lot / Commercial building

7. Any inaccessible Areas of the Property:

No

ADDITIONAL INFORMATION OBTAINED & UTILIZED DURING SITE INSPECTION

	Yes	No
Photo Sheets	☐	☐
Hazardous Materials Management Plans (HMMP)	X	☐
Permits	X	☐
Previous Reports/Inspections	☐	☐
Other	☐	☐
	☐	☐

Phase I Environmental Site Assessment
User/Client Questionnaire

Overview: *Phase I Environmental Site Assessment (ESA)* standards[1] require that the party requesting this ESA (i.e., the **"user",** or **client**), make a good faith effort to provide and/or obtain the following disclosure items, which are generally available during the property transaction escrow process:

- Reason for contracting this Phase I ESA
- Knowledge of any environmental leans or agency restrictions on the property
- Specialized knowledge of the property
- Any discounts to the property fair-market value associated with chemical spills or releases
- Commonly known ("reasonably ascertainable") information regarding chemical storage/use
- Available environmental reports

Please provide the following information to the best of your recollection/knowledge.

Site/Facility Name: 1155/1175/1185 Terra Bella Avenue

Site Address: 1155/1175/1185 Terra Bella Avenue, Mountain View, CA 94043

Name/Title: Devcor Partners II, LLC

1. Reason for Performing this ESA *(check appropriate):*

O Lender: Property sale requirement for lender

O Buyer: Due diligence property screening by buyer.

O General Liability: "Landowner Liability Protections" (LLPs) as per Federal environmental laws

O Personal Comfort Level: Better understanding of land uses & potential environmental liabilities

☒ Other: Conditional requirement for redevelopment

2. Environmental Cleanup Liens *(check appropriate):*

Yes O **No** ☒ Are you aware of any ***environmental liens*** placed on the property by a regulatory agency (Federal, State or Local)?

If yes, please provide details:

[1]: ASTM Standard E 1527-05 and EPA All Appropriate Inquiries (AAI) guidelines,

3. Land-Use Limitations (check appropriate):

Yes O **No** Ø Are you aware of any ***"Activity Land-Use Limitations"*** *(AULs)* placed upon the Site by Federal, State or Local regulatory agencies such as engineering or institutional controls?

If yes, please provide details: _____

_____

4. Specialized Knowledge of the User/Client (check appropriate):

As the person or entity requesting this *Phase I ESA* ("user"), do you have any specialized knowledge or experience pertaining to the subject Site or nearby/adjoining property that would give you distinct knowledge of chemical usage and/or industrial processes at the subject Site?

Yes O **No** Ø Are you a current or former occupant of the Site?

Yes O **No** Ø Are you involved in the same type of business/industry, and are familiar with commercial/industrial processes or chemical storage

If yes, please provide details: _____

_____

_____

_____

5. Comparison of Purchase Price to Fair Market Value (check appropriate):

To the extent of your knowledge, does the requested purchase price of the subject Site reflect the fair market value of the property? If a discrepancy is present, have you considered whether the lower purchase price is due to environmental contamination believed to be or known to be present at the Site?

NA **Yes** O **No** O Does the property purchase price reflect a discounted value relative to fair market value?

NA **Yes** O **No** O If the property is being sold below fair market value, is the reason attributed to a known/perceived chemical release (i.e., contamination)

If yes, please provide details: _____

_____

_____

_____

_____

_____

6. "Reasonably Ascertainable Information" (brief description):

Are you aware of any ***commonly known*** or ***reasonably ascertainable information*** pertaining chemical storage/usage on the subject Site? Specifically:

a) Prior Land Use(s): Do you know previous land use(s) at the subject Site (land uses/businesses)?

Ye

b) Chemical Use or Storage: Do you know of any current or historical use/storage/generation of chemicals, fuels, or hazardous waste at the subject Site?

There was a previous owner of the property at 1155 Terra Bella that is beleived to have stored a chemical onsite called trichloroethylene (TCE).

c) Chemical Releases: Are you aware of any reported or unreported chemical spills or releases that occurred at the subject Site? *[Current or Historical]*

Most likely there was trichloroethylene (TCE) released into the soil.

d) Environmental Clean-ups: Are you aware of any reported or unreported environmental cleanups that have occurred at the subject Site? *[Current or Historical]*

According to GEOTRACKER there was a previous contamination case on the 1175/1185 Terra Bella property which has since been closed and has a NFA designation

7. Degree of Obviousness of Contamination:

Based on your knowledge of the property, are you aware of any obvious indicators that would suggest the presence (or likely presence) of contamination at the subject Site?

Yes, preliminary indications suggest there is some presence of the chemical trichloroethylene (TCE)

8. **Helpful Documents:** Are you aware of existing reports (listed below) for the subject Site?

Yes	No	
☒	☐	Previous Phase I or Phase II ESAs
☐	☒	*Hazardous Materials Management Plans* (HMMPs) or Chemical Storage Inventories
☐	☒	Industrial Stormwater Monitoring Plans/Reports (SWPPPs or compliance reports)
☐	☒	Permitting or Documentation re: Aboveground or Underground Storage Tanks
☐	☒	Hazardous Waste Generator notices, disposal manifests, or compliance reports
☒	☐	Regulatory directives or *No Further Action (NFA) l*etters.

If yes to any of the above, please provide details (year, author/consultant if possible):

A Phase I Report was created in 2016 by Property Solutions, Inc.

There is an existing environmental investigation currently on the 1155 Terra Bella property with oversight from the Santa Clara County Department of Environmental Health

Additional Comments & Extra Space for Affirmative Answers?

To the best of my knowledge I attest that the above information is true:

Signature: _____ Date: 3/31/21

Title: Owner

Reference: Information & Definitions

As per **ASTM *Standard E 1527-05* and EPA *All Appropriate Inquiries* (AAI)**, the ***user*** (i.e. the party requesting this Phase I ESA), is required to provide a short list of items that are more readily available to the parties involved with the property transaction. This information is used to support the case for the *user* of the ESA to qualify for one of the *landowner liability protections* (LLPs) defenses under Federal environmental law.

> *"In order to qualify for one of the Landowner Liability Protections (LLPs[2]) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the 'Brownfields Amendments'), the user must provide the following information (if available) to the environmental professional [Weber, Hayes and Associates]. Failure to provide this information could result in the determination that 'all appropriate inquiry' is not complete."*

[2]: From ASTM E 1527-05: "*Landowner Liability Protections (LLPs)*, is the term used to describe the three types of potential defenses to Superfund liability in the EPA's *Interim Guidance Regarding Criteria Landowners Must Meet to Qualify for Bona Fide Prospective Purchaser, Contiguous Property or Innocent Landowner Limitations* under CERCLA Liability issued March 6, 2003."

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

Search Results:

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Weber, Hayes, & Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/30/2020 has revealed that there are 5 NPL sites within approximately 1 mile of the target property.

Federal Delisted NPL site list

Delisted NPL: The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may deleted from the NPL where no further response is appropriate.

A review of the Delisted NPL list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 Delisted NPL site within approximately 1 mile of the target property.

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/30/2020 has revealed that there are 3 SEMS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

EPA Id: CAN000906131

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity

generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 19 RCRA-SQG sites within approximately 0.25 miles of the target property.

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, has revealed that there are 2 CA RESPONSE sites within approximately 1 mile of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/26/2020 has revealed that there are 19 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 6 CA UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 28 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CA CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CA CUPA Listings list, as provided by EDR, has revealed that there are 50 CA CUPA Listings sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CA CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CA CERS list, as provided by EDR, and dated 10/19/2020 has revealed that there is 1 CA CERS site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
TRANS TECH 2000	973 LINDA VISTA AVE	ESE 0 - 1/8 (0.060 mi.)	C41	263
JERAIRS SHELL SERVIC	807 N SHORELINE BLVD	SSW 0 - 1/8 (0.103 mi.)	G66	298
BAILEYS CHEVRON STAT	808 N SHORELINE BIVD	SSW 0 - 1/8 (0.107 mi.)	G84	352

EDR RECOVERED GOVERNMENT ARCHIVES

Exclusive Recovered Govt. Archives

CA RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the CA RGA LUST list, as provided by EDR, has revealed that there is 1 CA RGA LUST site within approximately 0.001 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at proposal April 10, 1985): Moffett Naval Air Station covers 8,700 acres in Sunnyvale, Santa Clara County, California. In the past, various solvents and sludges were disposed on-site into ponds and landfills and onto the ground.As a result, soil and ground water on-site are contaminated. The major contaminants in ground water are volatile organic compounds. About 272,000 people depend on wells within 3 miles of the station as a source of drinking water. Moffett Naval Air Station is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. The Navy has completed Phase I records search) of the program and is beginning Phase II remedial investigation). Moffett Naval Air Station is in the South Bay Area of San Francisco. In October 1984, 19 non-Federal sites in the area were proposed for the NPL. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take site-specific action as necessary. Status July 22, 1987): In May 1985, the California Regional Water Quality Control Board adopted Waste Discharge Requirements for Moffett Naval Air Station.The requirements outline specific tasks and compliance dates Moffett must follow to define the full extent of contamination in soils and ground water. In April 1986, the Navy released the final report for the verification step of Phase II.Moffett is revising the quality assurance project plan and sample plan for the

MOFFETT FIELD NAVAL AIR STATION (Continued) **1000228683**

characteri ation step of Phase II. Within the boundaries of this Federal facility, including this specific site, there are no areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act. Therefore, this Federal facility site is being placed on the Federal section of the NPL.

INTEL CORP. (MOUNTAIN VIEW PLANT) (Continued) **1000203455**

Summary Details:

Conditions at proposal October 15, 1984): Intel Corp. manufactured semiconductors at a plant in Mountain View, Santa Clara County, California, between 1968 and 1981. At that time, the facility occupied 2 acres and was surrounded by residential areas, office buildings, and other semiconductor-manufacturing plants. Monitoring wells on the site are contaminated with trichloroethylene, xylene, vinyl chloride, and 1,1- and trans-1,2-dichloroethylene, according to analyses conducted by a consultant to Intel. Contamination is believed to have resulted from leaking underground solvent tanks. About 270,000 people depend on wells within 3 miles of the site as a source of drinking water. Since early 1982, Intel hasbeen pumping ground water and treating it by carbon adsorption. The company intends to implement additional cleanup activities, including the installation of a system to pump and treat contaminated ground water and excavation of soil beneath the underground storage tanks, which were previously removed. The company is working with the California Regional Water Quality Control Board CRWQCB) to determine the full extent of the contamination. This is one of 19 sites in the SouthBay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status June 10, 1986): Intel has removed approximately 4,600 cubic yards of contaminated soil and has installed four wells to pump and treat contaminated ground water. CRWQCB has issued Waste Discharge Requirements to the company. The requirements are the board s legal mechanism for regulating activities at facilities under its jurisdiction. On August 15, 1985, EPA issued a CERCLA Administrative Order on Consent to Intel Corp. s Mountain View Plant, as well as to Fairchild Camera s and Raytheon Corp. s Mountain View Plants. The order calls for the three companies to conduct a joint remedial investigation/feasibilitystudy of the area to determine the type and extent of contamination and identify alternatives for remedial action.

and School sites.
SUPERFUND NPL
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Substance: TRICHLOROETHYLENE (TCE)
Pathway: GROUND WATER PATHWAY
Scoring: 2

Summary Details:

Conditions at proposal October 15, 1984): Teledyne Semiconductor has manufactured semiconductors on a 1-acre site in Mountain View, Santa Clara County, California, since 1962. In December l982, Teledyne reported to the California Regional Water Quality Control Board CRWQCB) that soil and ground water near an underground storage tank were contaminated with solvents, including trichloroethylene. An investigation in June 1984 revealed that the contaminants had migrated to the northand affected approximately 50 private domestic wells. Local agencies and the company have provided alternative sources of drinking water for the affected residences. About 116,000 people depend on wells within 3 miles of the site as a source of drinking water.
The company is working with CRWQCB to determine the extent of the contamination and to develop interim hydraulic controls to prevent further migration of the contaminants. The facility received Interim Status underSubtitle C of the Resource Conservation and Recovery Act RCRA) when the company filed Part A of a permit application. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxicchemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status February 1986): CRWQCB, in conjunction with EPA and the California Department of Health Services, is considering various response actions at the site. This site remains in proposed status until EPA implements the appropriate elements of its final policy for placing RCRA-related sites on the NPL and then applies the policy to this site. Status July 22, 1987): Subsequent investigation revealed that this site is not subject to the Subtitle C permitting requirements of RCRA. Its score on the Ha ard Ranking System, which EPA uses to evaluate sites for the NPL, is above the cutoff point of 28.50, and EPA received no information that prevents placing the site on the NPL.
Therefore, it is being placed on the NPL. Teledyne is planning on pumping the contaminated ground water in the upper aquifer to the surface for subsequent treatment.

Summary Details:

Conditions at proposal June 24, 1988): Spectra-Physics, Inc. SP) has manufactured electronic equipment and gas lasers on Terra Bella Boulevard and Middlefield Roads in Mountain View, Santa Clara County, California, since 1961. The 11.5-acre site consists of nine buildings in a light industrial complex. SP uses a variety of cleansers, degreasers, and lubricants in its manufacturing processes, including isopropyl alcohol, acetone, methyl alcohol, trichloroethylene TCE), Freon, 1,1,1-trichloroethane TCA), and Solvasol Solvent 360. In an inspection conducted in 1981, the California Regional Water Quality Control Board CRWQCB) found that areas where ha ardous wastes were stored had no dikes or systems to collect leachate; rusty barrels were also found on-site. Ground water investigations began at the SP facility in September 1984 after tests at Teledyne Semiconductor adjacent and downgradient of SP) indicated possible upgradient sources of contamination. The Teledyne site was placed on the NPL in July 1987.) Soil and ground water collected at SP contained TCE, TCA, and 1,2-dichloroethylene. SP s plume of contaminated ground water has merged with Teledyne s and migrated off-site. More than 200 private drinking water wells had been drilled into the 1-square-mile plume. Most wells have been closed; 47 were found contaminated above State Action Levels. The owners now obtain water from municipal water supplies. An estimated 189,000 people obtain drinking water from public and private wells within 3 miles of the site. Teledyne is operating two extraction wells on-site -- one in the shallow one and one in the intermediate one. The wells pump the water to the surface and discharge it to the sanitary sewer; the ground water is not treated before discharge. SP will evaluate the effectiveness of this system in preventing its on-site plume from migrating off-site. Both companies are jointly designing an off-site extraction system. San Francisco Bay 2.5 miles downstream of the site) is used for recreational activities. Permanente Creek is tidally influenced within 1 mile of the site. Several species of birds designated as endangered species by the U.S. Fish and Wildlife Service are found within the area of tidal influence. Status February 11, 1991): In February 1990, SP installed a vapor extraction system to reduce concentrations of contaminants in soil. Underan order issued by CRWQCB, SP conducted a remedial investigation/feasibility study RI/FS) to determine the type and extent of contamination at the site and identify alternatives for remedial action. The RI/FS was completed in December 1990. In February 1991, CRWQCB will adopt a final cleanup and abatement order requiring SP to implement the best remedial alternative evaluated in the RI/FS. This alternative will include expanding the existing soil vapor extraction system and the ground water extraction system. In April 1991, EPA will complete a Record of Decision describing the selected remedy.

Summary Details:

Conditions at proposal June 24, 1988): CTS Printex, Inc., manufactured printed circuit boards on 5.6 acres in Mountain View, Santa Clara County, California, during 1966-85. Printex was incorporated in 1966 and acquired by CTS Corp. in 1981.In the wet-floor building at 1911 Plymouth Street, acid waste water containing copper, lead, and organic wastes containing trichloroethylene TCE) and other solvents drained to the floor, collected in a sump where they were neutrali ed withammonia, and discharged to the Mountain View sanitary sewer. Early in 1985, a consultant to CTS Corp. found high levels of copper and lead in soil near the wet-floor building and high levels of TCE, 1,1,1-trichloroethane, and 1,1-dichloroethylene in monitoring wells downgradient of the site. An estimated 189,000 people obtain drinking water from municipal wells within 3 miles of the site. Permanente Creek borders the site. Surface water drainage eventually discharges to San Francisco Bay 2.5 miles to the north. Late in 1985, the company excavated the sump area and filled it in, decontaminated the building, and transported waste materials to a ha ardous waste facility regulated under Subtitle C of the Resource Conservation and Recovery Act RCRA). In October 1986, the California Department of Health Services certified closure of the

CTS PRINTEX, INC. (Continued) **1000128432**

facility. In an attempt to stop migration of contaminated ground water off-site, the company is pumping the water and discharging it to Mountain View s sanitary sewer system under a city permit. The company continues to monitor to define the plume of contaminated ground water. In March 1987, the California Regional Water Quality Control BoardCRWQCB) issued a Cleanup and Abatement Order requiring the company to be more expeditious and thorough in its cleanup and set a schedule for various on- and off-site tasks. Status February 21, 1990): CTS Printex is conducting a remedialinvestigation/feasibility study RI/FS) to determine the type and extent of contamination at the site and identify alternatives for remedial action. In November 1989, CRWQCB received the first draft of the RI/FS for review. The final draft isscheduled to be submitted in late 1990.

Environmental Interest/Information System:
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
SUPERFUND NPL
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Status: Completed - Case Closed
Status Date: 07/01/2011
Case Worker: Not reported
RB Case Number: 20-017
Local Agency: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 06S2W15M02f
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: The Site is a former Texaco-branded service station located at the intersection of North Shoreline Boulevard and Terra Bella Avenue in Mountain View, California. Former station features include one 6,000-gallon gasoline underground storage tank (UST), four 4,000-gallon gasoline USTs, and one waste oil UST. In 1992, the six USTs, associated product piping, and dispensers were removed, and the Site was redeveloped as a restaurant. Twelve groundwater monitoring wells have been installed on or near the Site to-date. Eight groundwater monitoring wells (MW-22A, MW-22B, MW-22D, and MW-22L through MW-22P) were installed on-site, and four groundwater monitoring wells (MW-22E through MW-22H) were installed at off-site locations to assess the lateral extent of petroleum hydrocarbons in groundwater. Groundwater monitoring has been performed at the Site since 1988. Historically, groundwater flow at the Site has been towards the north.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Status Date: 05/16/2019
Global Id: T10000007375
Lead Agency: SANTA CLARA COUNTY LOP
Lead Agency Case Number: 06S2W15M04s
Latitude: 37.4092258670841
Longitude: -122.07734812164
Case Type: Cleanup Program Site
Case Worker: AC
Local Agency: SANTA CLARA COUNTY LOP
RB Case Number: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor, Under Investigation
Potential Contaminants of Concern: Acetone, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride, Benzene, Ethylbenzene, MTBE / TBA / Other Fuel Oxygenates, Toluene, Total Petroleum Hydrocarbons (TPH), Xylene
Site History: In approximately 2016/2017, Calvano developed the approximately 7.3-acre site with a commercial office building (30,000 square feet) and then sold the property. Soil vapor and groundwater contamination has been reported on the site and a vapor barrier (EPRO e.BASE 205, EPRO e.spray, and EPRO e.SHIELD 205) was installed beneath the new building foundation as a precautionary measure to help prevent vapor intrusion and protect future building occupants. The DEH requires ongoing soil vapor monitoring at the site in order to evaluate current and future vapor intrusion risk. Property Information: Former APNs (pre-development): <153-15-018>, <153-15-017>,<153-15-024>, <153-15-022>, <153-15-015>, <153-15-016>, <153-15-014>, <153-15-026> Current APN (post-development): <153-15-032> Current Property Owner (5/2019): LH Shoreline LP

Environmental Interest/Information System:
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

CHEVRON STATION NO 96377 (Continued) **1006804980**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violations:
Site ID: 98840
Site Name: Chevron Station# 96377
Violation Date: 01-16-2019
Citation: 23 CCR 16 2641(a) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(a)
Violation Description: Failure of leak detection equipment to be located such that equipment is capable of detecting a leak at the earliest possible opportunity.
Violation Notes: Returned to compliance on 03/01/2019. The 91 tank annular space is currently full of debris (See picture 1) and the annular space sensor cannot be returned to the lowest point in the tank. In addition the annular sensor is no longer functioning and must also be replaced. Clean out debris in annular space and install a new sensor ASAP.
Violation Division: Mountain View Fire Department
Violation Program: UST
Violation Source: CERS

Site ID: 98840
Site Name: Chevron Station# 96377
Violation Date: 01-16-2019
Citation: 23 CCR 16 2636(f)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2636(f)(2)
Violation Description: Failure of the functional line leak detector (LLD) monitoring pressurized piping to meet one or more of the following requirements: Monitored at least hourly with the capability of detecting a release of 3.0 gallons per hour leak at 10 pounds per square inch and restrict or shut off the flow of product through the piping when a leak is detected.
Violation Notes: Returned to compliance on 03/01/2019. The 91 Electronic line leak detector failed to catch a 3.0 gal/hr leak. Leak detector must be replaced.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.407804
Longitude: -122.079986
Case Type: Cleanup Program Site
Case Worker: RWP
Local Agency: SANTA CLARA VALLEY WATER DISTRICT
RB Case Number: 43S0120
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Trichloroethylene (TCE)
Site History: The former Spectraphysics property is part of a 2-property Federal Superfund site along with the adjacent Teledyne property. Within the last ten years, Responsible Parties (RPs) for the Teledyne/Spectra-Physics site completed a Monitored Natural Attenuation (MNA) study in the off-property area north of and downgradient of the site. The MNA study concluded that natural breakdown of the chlorinated volatile organic compounds of concern is occurring naturally and at the same rate as groundwater extraction. As a result, only a few of the off-property downgradient extraction wells are operating mainly to maintain hydraulic control of the plume. The RPs completed an extended pilot study to test the feasiblity of enhanced reductive dechlorination (ERD) and concluded that ERD is feasible with bioaugmentation of the Shallow Zone. Within the last several years, the RPs detected on-property groundwater-CVOCs and higher than expected levels but under 1,000 parts per billion and are about to impelment an on-property ERD treatability study with the same recirculation technology as the the neighboring Teledyne property. When sub-slab depressurizationv (SSD)

SPECTRA-PHYSICS LASERS (Continued) **S103980880**

systems have been installed under the potentially impacted buildings, the RPs will move forward on the ERD treatability study. Within the last seven years however, IA VI was evaluated in several of the on-property commercial buildings to find that IA-CVOCs were over ESLs. The RPs installed SSD systems at several of the buildings. The RPs also assertiively evaluated potential IA VI in the off-property commercial North Bayshore and residential Spring Street areas to conclude that IA VI is occurring in one of the off-property commercial area buildings and in several homes in the residential area. The RPs were in the process of installing a sub-slab depressurization system in the commercial building and offered the affected residents crawl space fans to address the issue.

Click Here:

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for

DEEPCELL, INC. (Continued) **1004678334**

generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Eval Notes:	Onsite today for routine hazardous waste inspection, noted the following: -Met with facility manager Darin Clarke and Al Batakjih today, toured facility. -Labs perform soldering and work also with some solvents including toluene and MEK for process and production work of parts. -Each lab bench worker has an independent satellite container for hazardous waste solid debris, each has a completed hazardous waste label. -Emergency Procedures were updated today and posted in the facility. -Outside there are approximately 8 hazardous waste storage rooms for segregation of wastes for compatibility purposes; Chemical shed #1 had 1 x 55 gallon vapor degreaser drum, label accumulation start date was updated today (label was mis-labeled for 2014). -Discussed training details and universal waste handling;

TELEDYNE MICROWAVE (Continued) **S102806562**

the universal waste batteries, fluorescent tubes and aerosol cans were labeled and stored appropriately. -Manifests are maintained onsite and were reviewed today. No were [Truncated]

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 01/06/1984
Comments: In February of 1983, DHS directed LGM to remove the contaminated soil from on and off its property. Several months later, LGM declared bankruptcy and went out of business. In the latter part of 1983 and early 1984, chemicals and contaminated soil were removed from the LGM storage area and an adjacent condominium complex. Post-excavation confirmation samples were taken for fluoride and copper. Detected levels were below health-based risk goals considered safe for residential use.

Background Info: LGM Manufacturing (LGM) manufactured printed circuit boards from 1969 to 1983. Chemicals used at the Site included ammonia, etch acids, brighteners, fusing oil, trichloroethylene, copper with formaldehyde, and methylene chloride. Chemical wastes were stored in drums and containers in a yard behind the LGM warehouse.

Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Case Type: Cleanup Program Site
Case Worker: RWP
Local Agency: SANTA CLARA VALLEY WATER DISTRICT
RB Case Number: 43S0128
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride
Site History: The Teledyne property is part of a two-property Superfund site along with the adjacent Spectra-Physics property. The responsible parties (RPs) for the Teledyne/Spectra-Physics site completed a Monitored Natural Attenuation (MNA) study in the off-property area north of and downgradient of the site. The MNA study concluded that natural breakdown of the chlorinated volatile organic compounds of concern is occuring naturally and at the same rate as groundwater extraction. As a result, only a few of the off-property downgradient extraction wells were operating mainly to maintain hydraulic control of the plume. The RPs completed a pilot study to test the feasibility of enhanced reductive dechlorination (ERD) and concluded that ERD is feasible with bioaugmentation of the Shallow Zone. Within the last five years, the RPs detected elevated source areas at the Teledyne property using high resolution technology and continuously logged and screened ERD injection well boreholes. Implementing a full-scale ERD treatability study, they have been and are currently remediating the property with groundwater-CVOC levels dropping from as much as over 80,000 ug/l to low multiples of MCLs. Several rounds of ERD injections successfully cleaned up most of the Shallow Zone at the Teledyne property and the adjacent Spring Street residential area to drinking water standards and the treatability study was even more successful in the underlying Upper and Lower Intermediate Zones. An on-property IA VI evaluation at a SpectraPhysics property in 2004

TELEDYNE-1300 TERRA (Continued) **S100833421**

indicated no IA-CVOC contamination above the Regional Water Board's 2008 ESLs. More recently, the RPs also assertively evaluated potential IA VI in the off-property commercial North Bayshore and residential Spring Street areas to conclude that IA VI is not occurring in most of the commercial area and is occasionally occurring in several homes in the residential area. The RPs installed sub-slab depressurization systems in the impacted on-property commercial buildings and offered the affected residents crawl space fans to address the issue.

TELEDYNE-1300 TERRA (Continued) **S100833421**

Background Info: Teledyne Semiconductor has operated a semiconductor manufacturing facility at this one-acre site since 1962. Chemicals used in the manufacturing process and wastes generated by the process are handled and stored onsite.
In 1982, Teledyne notified the RWQCB that soil and groundwater near underground solvent storage tanks was contaminated. Further study revealed that a groundwater contaminant plume had migrated northward and contaminated forty private domestic wells. The contaminants identified in soil and groundwater include trichloroethylene (TCE), dichloroethylene (DCE), Freon-113, dichlorobenzene (DCB), perchloroethylene (PCE), and xylene.
About 270,000 people residing within three miles of the site depend on groundwater as a source of drinking water. The groundwater contamination represents a potential threat to municipal and other wells.

CA BOND EXP. PLAN:
Reponsible Party: NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: Teledyne, the responsible party, has been conducting remedial activities under and order issued by the RWQCB. DHS has budgeted $50,000 for development, review and approval of a RAP and will seek to recover all actual costs from the responsible parties.
Site Description: Teledyne Semiconductor has operated a semiconductor manufacturing facility at this one-acre site since 1962. Chemicals used in the manufacturing process and wastes generated by this process are handled and stored onsite.
Hazardous Waste Desc: In 1982, Teledyne notified the RWQCB that soil and ground water near underground solvent storage tanks was contaminated. Further study revealed that a ground water contaminant plume and migrated northward and contaminated 40 private domestic wells. The contaminants identified in soil and ground water are trichloroethylene (TCE), dichloroethylene (DCE), Freon-113, dichlorobenzene (DCB), perchloroethylene (PCE) and xylene.
Threat To Public Health & Env: About 270,000 people residing within 3 miles of the site depend on ground water as a source of drinking water. The ground water contamination represents a potential threat to municipal and other wells.
Site Activity Status: An investigation conducted in June, 1984, revealed that solvents had contaminated private wells to the north of the site. Contaminated wells were closed and an alternate drinking water supply was provided to affected residents. A ground water extraction system was installed onsite and began operating in October, 1986. Characterization of soil and ground water

Hazardous Waste Summary:
Waste Code: D002
Waste Description: CORROSIVE WASTE

CLONTECH LABORATORIES, INC (Continued) **1012175746**

Waste Code: D003
Waste Description: REACTIVE WASTE

Waste Code: D011
Waste Description: SILVER

Waste Code: D018
Waste Description: BENZENE

Waste Code: D022
Waste Description: CHLOROFORM

Waste Code: D038
Waste Description: PYRIDINE

Waste Code: F002
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: P098
Waste Description: POTASSIUM CYANIDE (OR) POTASSIUM CYANIDE K(CN)

Environmental Interest/Information System:
AIR EMISSIONS CLASSIFICATION UNKNOWN
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

CLONTECH LABORATORIES, INC (Continued) **1012175746**

corrective action activities required under RCRA.

TSD EPA ID: NMD002208627
CA Waste Code: 343 - Unspecified organic liquid mixture
Disposal Method: H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons: 0.13500

Year: 2018
Gepaid: CAR000203356
TSD EPA ID: NVT330010000
CA Waste Code: 135 - Unspecified aqueous solution
Disposal Method: H039 - Other Recovery Of Reclamation For Reuse Including Acid

TAKARA BIO USA, INC. (Continued) **1012176398**

Regeneration, Organics Recovery Ect
Tons: 0.38150

CERS:
Name: CLONTECH LABORATORIES
Address: 1290 TERRA BELLA AVE
City,State,Zip: MOUNTAIN VIEW, CA 94043
Site ID: 106873
CERS ID: 110038877374
CERS Description: US EPA Air Emission Inventory System (EIS)

Violations:
Site ID: 106873
Site Name: CLONTECH LABORATORIES

TAKARA BIO USA, INC. (Continued) **1012176398**

Violation Date: 12-05-2018
Citation: 40 CFR 1 265.174 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.174
Violation Description: Failure to inspect hazardous waste storage areas at least weekly and look for leaking and deteriorating containers.
Violation Notes: Returned to compliance on 01/04/2019. Observed approx. 33 containers in the Outdoor Hazardous Waste Storage Area ranging in 5-15 gal sizes labeled as hazardous waste that have not been inspected at least weekly as required.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 106873
Site Name: CLONTECH LABORATORIES
Violation Date: 11-15-2017
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 04/11/2018. Update waste, compressed gasses, add batteries, and full inventory.
Violation Division: Mountain View Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 106873
Site Name: CLONTECH LABORATORIES
Violation Date: 12-05-2018
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 01/04/2019. Hazardous waste markings throughout the labs are inconsistent and incomplete. Many labels were missing the generator information (Takara Bio USA, Inc. vs. Clontech Laboratories, Inc) and were marked with the accumulation start dates of "empty weekly." Additionally, the following hazardous waste containers were observed as unmarked: - 2 yard boxes in the outdoor storage areas - 3 glass containers of 10% bleach solution under the flowhoods in Tissue Culture 141 room
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 106873
Site Name: CLONTECH LABORATORIES
Violation Date: 12-05-2018
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 01/04/2019. Make a hazardous waste

TAKARA BIO USA, INC. (Continued) **1012176398**

determination on the following: - 27 x 5-gal buckets in the 3 flammable cabinets + 2 x 5-gal buckets labeled "CI-09" and "CI-10" + 2 x 5 gal buckets and 2 x 15 gal drums with misc. bottles and vials in the Outdoor Storage Area - 1 trash can with various non-empty vials and bottles in the Enzymology 210 room - 1 bottle of chromasolv labeled with expiration date of 10/31/2016 in the Tissue Culture 184 room If found to be hazardous, properly label and manage them as hazardous wastes within the next 30 days.

Violation Date: 12-05-2018
Citation: 40 CFR 1 265.177 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.177
Violation Description: Failure to separate incompatible wastes from the same container, nearby containers, or unwashed containers which previously contained incompatible waste or materials.
Violation Notes: Returned to compliance on 01/04/2019. Observed 3 x 30 gal drums of nitric/ phosphoric acid waste stored next to 1 x 55 gal drum of potassium hydroxide. Make arrangements to have these hazardous wastes separated.
Violation Division: Santa Clara County Environmental Health
Violation Program: HW
Violation Source: CERS

Site ID: 106873
Site Name: CLONTECH LABORATORIES
Violation Date: 12-05-2018
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 01/04/2019. Observed 1 x 55 gal drum of waste potassium hydroxide in the Outdoor Hazardous Waste Storage area with an accumulation start date of 5/1/2018. Make arrangements to have

Eval Type: Routine done by local agency
Eval Notes: On-site with Mickey Pierce of HMCD to perform a routine Hazardous Waste Generator inspection. Takara Bio USA, Inc., formerly known as Clontech Laboratories, Inc. is a biotech company that makes kits for genetic engineering. Inspection commenced on 12/4/2018 with a walk-through of the laboratories and hazardous waste storage areas with EH&S, Clifton Smith. Inspection concluded on 12/5/2018 after review of disposal records and delivery of the inspection report. The following hazardous waste streams were observed on 12/4/2018: R&D 142/143: - 2 step-cans for contaminated solid debris (in lab area) - 1 x 5 gal container of mixed combustible solvent wastes (in flowhood) PCR144: - no hazardous waste streams noted Photo Process 145: - no

TAKARA BIO USA, INC. (Continued) **1012176398**

hazardous waste containers observed however per Mr. Smith, silver developer waste is shipped off as hazardous waste Tissue Culture 141:
- 3 glass containers of 10% bleach solution under each flow hood-still "part of [Truncated]

Violation Date: 12-05-2018
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 01/04/2019. Hazardous waste markings throughout the labs are inconsistent and incomplete. Many labels were missing the generator information (Takara Bio USA, Inc. vs. Clontech Laboratories, Inc) and were marked with the accumulation start dates of "empty weekly." Additionally, the following hazardous waste containers were observed as unmarked: - 2 yard boxes in the outdoor storage areas - 3 glass containers of 10% bleach solution under the flowhoods in Tissue Culture 141 room

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 01/04/2019. Observed 1 x 55 gal drum of waste potassium hydroxide in the Outdoor Hazardous Waste Storage area with an accumulation start date of 5/1/2018. Make arrangements to have this picked up within the next 30 days.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Case Type: Cleanup Program Site
Case Worker: UUU
Local Agency: Not reported
RB Case Number: 43S0633
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: * Solvents
Site History: Digital Equipment Corporation (DEC) operated a manufacturing facility at the subject site between 1969 and 1983. The facility performed nickel and copper plating of discs. As part of this operation, DEC stored and used hazardous materials including TCA and acetone, and operated an acid neutralization tank whose effluent discharged to the sanitary sewer. After operations were discontinued, DEC removed the acid neutralization tank and received regulatory closure from the Mountain View Fire Department. The Department approved final facility closure for chemical storage in 1990. DEC was acquired by Compaq in 1998; Compaq in turn was acquired by Hewlett Packard in 2002. DEC voluntarily reported a possible release of chlorinated solvents in 1984. This report was based on onsite groundwater monitoring that appeared to show chlorinated solvents in groundwater above drinking water levels. DEC later concluded that these results were false positives, due to laboratory contamination, and that no release of chlorinated solvents to soil or groundwater had occurred. Terra Bella Office Partners, LLC, the landowner, performed a comprehensive soil, soil vapor, and groundwater investigation in 2010. VOCs were either non-detect or in a few cases detected below regulatory standards (e.g., MCLs). Metals were detected but at concentrations consistent with background conditions. Water Board staff concludes that no condition of pollution exists at the site and the case should be closed.
