Reclamation:	Not reported
POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

GOOGLE - 1400 NORTH SHORELINE BOULEVARD (Continued) **S116741943**

Case Worker: RWP
Local Agency: Not reported
RB Case Number: 43S1172
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Dichloroethene (DCE), Trichloroethylene (TCE), Vinyl chloride
Site History: The project is a redevelopment property within the Teledyne-Spectraphysics (T-S) plume with underlying groundwater probably impacted by the upgradient T-S source properties. The developer plans to construct the building wiht a vapor intrusion mitigation system (VIMS) and water barrier. Indoor air testing will be conducted to verify that the VIMS is working as designed.

Case Worker: Not reported
Local Agency: Not reported
RB Case Number: Not reported
File Location: Not reported
Potential Media Affected: Not reported
Potential Contaminants of Concern: Dichloroethene (DCE), Trichloroethylene (TCE)
Site History: The site formerly was used as the Santa Clara County vector control maintenance yard. Soil, soil vapor, and groundwater sampling showed contamination by petroleum hydrocarbons and/or VOCs. Under DTSC oversight, the County conducted several investigations and a soil removal. The City purchased the property and conducted additional investigation (soil, soil vapor, and groundwater) to evaluate on-site sources and extent of VOCs in 2013. Following completion of this work, the City installed site monitoring wells. The U.S. Environmental Protection Agency (EPA) determined groundwater contamination at this site is part of the MEW Superfund Study Area; lead regulatory agency oversight transitioned to EPA in February 2015.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 12/28/2007
Comments: Site characterization completed. VOC groundwater contamination was determined to be form an offsite source. Remediation of the groundwater contamination will not be included as part of the Removal Action Workplan (RAW). The RAW will focus on the mitigation of residual soil VOC and TPH contamination associated with the Catch Basin. The results of the Site groundwater investigation indicates that the source(s) of the VOC groundwater contamination is from off-site and conveyed through the utility corridor.

Comments:	DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require

SANMINA CORP. - MT VIEW (Continued) **S104574296**

DTSC to pursue corrective actions. Arrowhead Development Company operated an amusement park equipment manufacturing facility from 1960 through 1980 on and 8-acre project that included the site. TCE was reportedly used at the facility for vapor degreasing. There were subsequent changes in the site ownership. Sanmina purchased the property in 1999 and operated four hazardous waste treatment units under permit-by-rule, including two Memtek wastewater treatment units, a batch treatment unit, and ion-exchange unit. The site is part of the Plymouth Street Site where the Regional Water Quality Control Board has been overseeing the investigation and remediation.

Case Type: Cleanup Program Site
Case Worker: RWP
Local Agency: SANTA CLARA VALLEY WATER DISTRICT
RB Case Number: 43S0217
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: The Montwood plume is within a much larger plume extending from the Teledyne/Spectra-Physics Superfund site. Groundwater extraction reduced on-property and nearby chlorinated VOCs (CVOCs) in groundwater to asymptotic levels. However, the CVOC plume extends off-property through and beyond the downgradient site at 1600 Plymouth Street,- presently owned by Peery/Arrillaga (P/A). The off-property charcacterizaion of the groundwater-CVOC plume has been completed with grab groundwater samples and additional wells. Off-property groundwater-CVOC extent has attenuated with natural attenuation. Responding to persistent Regional Water Board suggestions to re-characterize the site with high-resolution technology, the Responsible Party (UP) used MIP data plus three other data layers to successfully locate on-site CVOC source areas. Based on the data, the consultant selected enhanced reductive dechlorination (ERD) as the final remedy that is now in process at the on-property area. ERD has significantly decreased the on-property

SANMINA CORP. - MT VIEW (Continued) **S104574296**

groundwater-CVOC levels with TCE now below MCLs. UP is about to conduct the first off-property ERD remedial task after extended access negotiations with Google. The off-property vapor intrusion evaluation may be incomplete.

Comments: DTSC completed a Site Inspection Re-Assessment for the U.S. Environmental Protection Agency. As the lead regulatory agency for the Site, DTSC had approved a Removal Action Workplan for the Site on

CALWEST PROPERTIES (SIERRA VISTA) (Continued) **S106568332**

October 30, 1998. It was noted in the Site Inspection Re-Assessment that implementation of the Removal Action Workplan had been significantly delayed due to the City of Mountain View's building permit process and the Site owner's funding problem for construction of the multifamily residential buildings. Based on the Site Inspection Re-Assesment it was determined the Site did not qualify for further remedial site assessment under the Comprehensive Environmental Response, Compensation, and Liability Act.

Completed Date: 10/02/2020
Comments: The Department of Toxic Substance Control (DTSC) has reviewed the Cal West Properties (Sierra Vista) Inspection Report (Report). The Report documented that a cap inspection was performed on July 2, 2020. The property was found to be in compliance with the restrictions and requirements of the Land Use Covenant (LUC) and that the cap is in good condition. Therefore, DTSC approves the report. In order to return to the schedule previously established for annual inspections, the next inspection report is due February 3, 2021. -EC, 10/2/2020

Completed Document Type: Site Screening
Completed Date: 04/11/2001
Comments: DTSC completed a Site Inspection Re-Assessment for the U.S. Environmental Protection Agency. As the lead regulatory agency for the Site, DTSC had approved a Removal Action Workplan for the Site on October 30, 1998. It was noted in the Site Inspection Re-Assessment that implementation of the Removal Action Workplan had been significantly delayed due to the City of Mountain View's building permit process and the Site owner's funding problem for construction of the multifamily residential buildings. Based on the Site Inspection Re-Assesment it was determined the Site did not qualify for further remedial site assessment under the Comprehensive Environmental Response, Compensation, and Liability Act.

Completed Date: 10/02/2020
Comments: The Department of Toxic Substance Control (DTSC) has reviewed the Cal West Properties (Sierra Vista) Inspection Report (Report). The Report documented that a cap inspection was performed on July 2, 2020. The property was found to be in compliance with the restrictions and requirements of the Land Use Covenant (LUC) and that the cap is in good condition. Therefore, DTSC approves the report. In order to return to the schedule previously established for annual inspections, the next inspection report is due February 3, 2021. -EC, 10/2/2020

Background Info: Facility size is approx. 7.06 acres. Sites include a grease rack and vehicle wash rack. A draft PA was completed in February 1999 and a final SI work plan was prepared in August 2000. The greas e rack was constructed in the early 1950s and is no longer used. The Army considers the wash rack to be a compliance (RCRA) issue for funding purposes. Minimal shallow soil sampling was conducte d in 1997 around the grease rack. Contaminants of concern are pr imarily grease oil, fuels, and solvents. Groundwater is shallow, approx 15 ft below ground furfact. Impacts to groundwater are u nknown, but will be determine by the August 2000 SI field work.

Case Type: Cleanup Program Site
Case Worker: MBR
Local Agency: Not reported
RB Case Number: 43S0241
File Location: Regional Board
Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Trichloroethylene (TCE)
Site History: In 1983, Union Bank of California took over ownership of the site when Innerconn Technologies, the owner and operator of the site at the time, went bankrupt and defaulted on their loan. Trichloroethylene (or TCE) was discovered in the groundwater at about this time. TCE was a common solvent used and stored by the electronics manufacturing industry. Union Bank conducted a site investigation shortly after inheriting the site. The Board issued Site Cleanup Requirements in 1989 naming Union Bank and Innerconn Technologies as responsible parties. In 1989, the former manufacturing building was razed and a strip mall was built in approximately the same footprint. The strip mall continues to operate today. In 1992, Union Bank installed a pump and treat system to reduce TCE levels and to control off-site migration. In 2001, we allowed Union Bank to turn off the pump and treat system because TCE concentrations had declined and operating the system was no longer

INNERCONN TECH & UNION BK (Continued) **S101542366**

necessary. We expect that TCE concentrations will continue to decline over time due to natural degradation processes. While TCE concentrations are still above the drinking water cleanup goals, the residual contamination does not present an immediate threat to human health or the environment because the concentrations are relatively low, the groundwater plume is not migrating, and the shallow groundwater aquifer in this area is not currently used for any purpose.

CA BOND EXP. PLAN:
Reponsible Party: RWQCB REFERRAL SITE
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported

CTS PRINTEX CORPORATION (Continued) **S100833462**

Project Revenue Source Desc: This site is proposed for the National Priority List. The RWQCB will continue to have lead responsibility for monitoring the RP's remedial activities. Until such time as the RWQCB refers the site to DHS for follow-up using Bond funds, no money will be budgeted from the fund for this site.

Site Description: CTS Printex Corporation (Printex) is located on 5.6 acres of land at 1950 Colony Street in Mountain View, California. Currently, the site is inactive. From 1966 to 1985 Printex operated a printed circuit board manufacturing facility onsite.

Hazardous Waste Desc: Soil under the site contains elevated levels of copper, lead, trichloroethylene (TCE) and 1,1,1-trichloroethane (TCA). Contaminants in the ground water include TCA, TCE and 1,1-dichloroethylene (DCE).

Threat To Public Health & Env: Roughly 188,000 people in Mountain View depend on ground water drawn from the aquifer of concern for their drinking water. The nearest municipal well drawing from the aquifer, Mountain View #10, is 1.1 mile from the site. The alternative surface drinking water sources appear to be inadequate to supply the large population currently relying on local ground water.

Site Activity Status: Site investigation and remediation activities at the Printex facility were started in December, 1984. Organic chemical contamination appears to have resulted from the wet floor operation. Approximately 255 cubic yards of soil from the wet floor areawere excavated for offsite disposal. A quarterly monitoring program has been in implementation for all existing wells. The down gradient spread of chemicals has tentatively been established at approximately 600 feet beyond the property boundary. Ground water extraction facilities have been designed and wells constructed in order to contain the spread of contaminants in ground water. The Regional Water Quality Control Board issued a cleanup and abatement order in March, 1987.

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 05/19/2015
Comments: The 2014 Annual Operations and Maintenance Report presents the groundwater sampling results and elevation data from Area of Investigation 4 for calendar year 2014 and summarizes the operation and maintenance activities that were completed during the calendar

NASA-AMES AOI 4 (Continued) **S100186296**

year. The report proposes installation of two additional groundwater monitoring wells at the down-gradient plume boundary to supplement the existing monitoring network and to define the extent of the petroleum hydrocarbon plume.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 03/30/2016
Comments: The report summarized the soil and groundwater data that were collected for calendar year 2015. The results indicated soil contamination remains in the vicinity of the former Tank 1 area and in the courtyard. The report recommends continuing with groundwater monitoring program.

Completed Area Name: PROJECT WIDE

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 11/19/2018
Comments: The report summarizes the soil and groundwater data that were collected for calendar year 2017. The results indicated soil contamination remains in the vicinity of the former Tank 1 area and in the courtyard, however that the plume is stable and progressively less contamination is being encountered down-gradient. The Report recommends decreasing the groundwater sampling frequency from quarterly to semi-annually, with sampling events in June and December for all eight monitoring wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 06/12/2019
Comments: The report summarizes the soil and groundwater data that were collected for calendar year 2018. The results indicated soil contamination remains in the vicinity of the former Tank 1 area and in the courtyard, however that the plume is stable and progressively less contamination is being encountered down-gradient. The Report indicates that NASA will continue groundwater sampling until the low-threat case closure evaluation can be completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 03/30/2006
Comments: DTSC and NASA Ames have executed a land use control document which will be included in the NASA Ames Master Plan.

NASA-AMES AOI 4 (Continued) **S100186296**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 11/03/1995
Comments: Signed VCA for AOI 4. The VCA includes the National Full Scale Aerodynamics Complex, a large wind tunnel for testing the aerodynamic characteristics of large-scale models. Twelve underground storage tanks were originally located within AOI 4; leaking tanks were removed. Subsequent sampling events identified four primary locations, Tank 1, Tank 5, and SB4-6, located in the drum storage area. Soil and groundwater samples from these areas detected petroleum hydrocarbons and trichloroethylene (TCE).

Completed Date: 11/22/2010
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Plan
Completed Date: 03/03/2004
Comments: Approved O&M Plan. Groundwater is currently being monitored and will continue to be monitored on a quarterly basis until the TPH concentrations are below established groundwater action levels (700 microgram per liter for TPH-diesel and 50 micrograms per liter for TPH-gasoline) for four consecutive quarters.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 10/03/2000
Comments: Completed Removal Action. Skimming pumps were planned to be installed in two monitoring wells (one existing well and one new well) to extract free product floating on the water table. Additional sampling data conducted in 1999 indicated that there is no longer free product in the shallow aquifer near Tank 1 and Tank 5. Based on this information skimming pumps were not required and proposed new groundwater monitoring well was not installed. Both Tank 1 and 5 were removed. Dissolved petroleum hydrocarbons in the groundwater will be monitored quarterly until such time that four consecutive quarters of data are analyzed indicating that the TPH concentrations are below cleanup levels and stable. A source point for the TCE concentrations detected in the groundwater was not discovered during the remedial investigation phase of the project. Therefore, it is believed that the source of the TCE detected in the groundwater is from an off-site source. Groundwater TCE contamination will be investigated separately from the AOI 4 project. Petroleum hydrocarbon contaminated soils exceeding the identified remediation levels (400 mg/kg) were planned to be excavated. Excavated soil with concentrations under 1,000 mg/kg

NASA-AMES AOI 4 (Continued) **S100186296**

was to be bioremediated and reused. Soil exceeding 1,000 mg/kg was to be disposed of offsite. Additional soil sampling conducted in 1999 indicated that the level of petroleum hydrocarbons in the soil and groundwater were lower than originally identified; they were below or close to the established cleanup goals. The sampling was repeated and the results confirmed; the soil excavation proposed in the RAW was not implemented.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 06/16/1998
Comments: Approved RAW specifying the following actions: 1) removal of free product hydrocarbons from the groundwater using skimming pumps; 2) excavation and on-site bioremediation of petroleum contaminated soil; 3) off site disposal of soil not meeting cleanup levels; and 4) on-going groundwater monitoring for contaminants of concern.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/10/1994
Comments: Completed PEA. A PEA equivalent report was completed by NASA Ames for 12 Areas of Investigation (AOIs).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported

Completed Date: 12/14/1989
Comments: Not reported

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 03/06/2006
Comments: DTSC, reviewed the 2005 Annual Operations and Maintenance Summary Report. Review has found that the report meeting the Operation and Maintenance requirements for 2005.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 03/28/2005
Comments: Groundwater TPH concentrations are observed to be decreasing over time. Groundwater monitoring will continue for at least two more quarters to determine if TPH concentrations will rebound. If concentrations remain low NASA proposes to request ending groundwater monitoring for qualified wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Plan Amendment
Completed Date: 11/17/2005
Comments: A select group of monitoring well in the AOI 4 have meet the groundwater monitoring requirement of TPH concentration detections below the clean up goals for four consecutive quarters. Groundwater monitoring at these wells will be discontinued.

NASA-AMES AOI 4 (Continued) **S100186296**

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 07/17/2000
Comments: During the course of site investigations of AOI4, trichloroethene (TCE) and 1,2-dichloroethene (DCE) were detected in the groundwater. No connection with an on-site source of these chemicals could be found. Further investigations on the Orion Park housing area, upgradient of A014, revealed elevated concentrations of TCE and DCE in the groundwater. Soil samples from the Orion Park area also revealed the presence of TCE and DCE. Based on this data NASA has concluded that the TCE and DCE contamination found in the A0I 4 groundwater is from a source upgradient of the NASA property. The source could be either the Orion Park housing area or the Middlefield-Ellis-Whisman (MEW) plume. The groundwater investigation has been refered to the RWQCB.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Plan
Completed Date: 03/03/2004
Comments: The Operation and Maintenance Plan cover groundwater monitoring requirements.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Other Report
Completed Date: 04/10/2006
Comments: DTSC announces the certification of the AOI 4 hazardous substances cleanup at the NASA Ames Research Center. DTSC certification of AOI 4 signifies that all environmental cleanup activities mandated by the Removal Action Workplan are now complete.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 03/01/2000
Comments: The Sampling Report indicates that the cleanup goals for contaminant petroleum hydrocarbons defined in the RAW have already been achieved by natural means. The report concludes that the soil excavation and skimming of contaminated groundwater to remove free floating product is not required.

Completed Area Name: PROJECT WIDE

NASA-AMES AOI 4 (Continued) **S100186296**

Comments: Signed VCA. DTSC is providing oversight for the AOI 5 which is not under the oversight of the U.S. EPA. The VCA outlined the oversight duties of DTSC, including additional investigations and remediation of the site. AOI 5 includes six buildings used as biosciences laboratories, the biomedical research facility and two electrical substations. AOI 5 also includes a drum storage area and one underground storage tank that were previously located within the site boundaries. The drum storage area was closed in the middle 1980s and the tank was removed in 1990. Analyses of soil and groundwater samples detected petroleum hydrocarbons, PCBs, and VOCs. Investigations conducted in 1998 and 1999 indicated two separate groundwater plumes. The western plume contains PCE up to 72 micrograms per liter (ug/l). The eastern plume contains primarily TCE up to 80 ug/l. NASA is currently evaluating some in-situ remedial methods as an alternative to pump and treat for any groundwater contamination found.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 03/09/2007
Comments: During the fieldwork is was discovered that the oil pipeline is connected to a AST. Before oil pipeline can be removed the AST must be closed. NASA will pursue the tank closure with Santa Clara County. Sampling event was completed as planned. No discolored soil or strong odors were observed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 07/09/2007
Comments: The additional sampling conducted indicates that the remaining TPH contamination has attenuated to below the Site specific cleanup levels at the Site and therefore no further action is required.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Workplan
Completed Date: 02/20/2007
Comments: DTSC and NASA staff discussed draft Sampling Analysis Plan (SAP). Based on review of the plan, DTSC identified some organizational changes and edits to the text that are necessary. NASA agreed with the recommendations and will revise the SAP.

Completed Document Type: Standard Voluntary Agreement
Completed Date: 08/16/1995
Comments: Signed VCA for AOI 8. AOI 8 is located at the northwest corner of the NASA Ames Research Center, adjacent to the wetlands and formerly known as Mavarro Farms. AOI 8 is used for recycling and storage of excess vehicles and equipment. The site contains one building, and a bioremediation pad. Soils contaminated with total petroleum hydrocarbons (TPH) as diesel and oil and grease have been identified at the site. An above ground diesel tank was formerly located on the site and spilled 100 gallons of fuel in 1987. Soil samples detected TPH-diesel at 10,000 milligrams per kilogram (mg/kg) and TPH-oil and grease was 16,000 mg/kg. Other chemicals such as pesticides and VOCs have been detected at the site, but the concentrations have been low and not considered significant. Elevated levels of TPH concentrations in the groundwater have been detected during sampling events in the past, but have not been elevated for the past five years. Groundwater is being monitored by wells both up gradient (two wells) and down gradient (one well).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Notice of Exemption
Completed Date: 08/24/2000
Comments: The cleanup activities for this project are confined within the fenced perimeter of two electrical substations. The contaminated soil will be excavated, disposed of off site, and backfilled. The project has no possibility of significant effect on the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 04/08/1996
Comments: Signed VCA for AOI 10. AOI 10 consists of three electrical substations; N227 Unitary Substation, N238 Arc Jet Substation, and N221C substation located in the central part of the NASA Ames Research Center. The substations are fenced and access is limited to operation and maintenance personnel. There is no vehicular traffic through these areas. Concrete pads in each of the substations support transformers and other equipment. The ground surface surrounding the concrete pads is covered with two to six inches of gravel. The primary objectives of the work proposed for AOI 10 is to investigate the soil within the electrical substations for the presence of PCBs and extractable hydrocarbons (TEPHs). Transformer oil containing PCBs was historically used in many of the transformers at NASA Ames. The N227 Unitary Substation was constructed in the mid 1950s to supply power to three wind tunnels. TEPHs were detected in concentrations above cleanup levels (400 mg/kg) in areas directly east and west of one of the transformer pads. The concentrations are the highest nearest the surface and are below cleanup levels at depths of five feet below. In identifying the extent of contamination, soil samples were collected near the substation. Concentrations of TEPHs were detected as high as 1200 mg/kg and the median was 83 mg/kg. Of those samples, only one detected PCB concentrations that exceeded the residential cleanup levels (1 mg/kg) at 2.1 mg/kg. No PCBs were detected at N238 Arc Jet Substation more than 0.2 mg/kg. TEPH was detected in soil samples collected at this location from 72 mg.kg to 160 mg/kg, which are all below the cleanup level. Only trace concentrations of TEPH were detected (maximum of 6.8 mg/kg) in the area of N221C. PCBs were found in one sampling location, measuring 310 mg/kg at 1.5 feet below the ground surface (bgs) down to 7.4 mg/kg at 5.5 feet. Two additional sampling events were conducted in January and February, 2001 to further evaluate the extent of the PCBs contamination. During the February sampling event, PCB concentrations of 330 mg/kg at 3 feet and 520 mg/kg at 4 feet were detected.

Completed Document Type: Removal Action Workplan
Completed Date: 08/24/2000
Comments: Approved RAW requiring the excavation and disposal of soil contaminated with PCBs. After excavation, concrete will be used to backfill the hole. The remedial goal for PCB contamination is 50 mg/kg, for restricted areas, in accordance with 40 CFR regulations pursuant to TSCA. For soil contaminated with petroleum, biological nutrients will be injected 2 to 4 feet into the ground to promote bioremediation. Bioremediation will continue until the petroleum concentrations are below 400 mg/kg in the soil. Access to the site is restricted and appropriate signage will be posted. Due to the need to have the substations de-energized during the remediation, the tasks of cleaning up substations N221C and N227D were divided.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/10/1994
Comments: Completed PEA. A PEA equivalent report was completed by NASA Ames for 12 Area of Investigation (AOIs).

Completed Area Name: PROJECT WIDE

Completed Document Type: Site Screening
Completed Date: 12/14/1989
Comments: Not reported

Completed Area Name: N227D Unitary Substation
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 01/27/2006
Comments: The PCB and TPH contamination soil removal action at N227D Unitary Substation has been completed. Approximately 36 cubic yards of contaminated soil has been excavated and disposed of. Confirmation sampling indicates at the remaining TPH and PCB soil concentration are below the site specific cleanup goals, established in the approved RAW.

Completed Area Name: N227D Unitary Substation
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/07/2005
Comments: N227D Removal Action was implemented and completed without proper notification to DTSC

Completed Area Name: N221C Substation
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 09/24/2004
Comments: Approved RA for the N221C area. The PCB contaminated soil was excavated to the depth of seven feet below the ground surface. Verification sampling indicated PCB concentrations were reduced to less than 1 mg/kg (0.61 mg/kg). Concrete was used to backfill the excavation. The completion of the N221C Substation remedial activities do not complete the remedial action for AOI 10 as described in the approved Final RAW (January 2001). The shut down of the N227D Substation and remediation of the total petroleum

NASA-AMES AOI 4 (Continued) **S100186296**

hydrocarbon (TPH) and polychlorinated biphenyls (PCBs), remain to be implemented.

Completed Area Name: N227D Unitary Substation
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 08/08/2005
Comments: NASA requests the change to the selected alternative to assist in the overall reduction in non-source point PCB contaminated storm runoff at the Ames Research Center. The implementation of Alternative 2 would allow NASA to forego the bioremediation technology at the N227D substation of AOI 10 and excavate the TPH contaminated soil along with the PCB contaminated soil. DTSC has determined that the request is an insignificant change and will not have a significant impact on the scope, performance, or cost of the remedy.

Completed Date: 08/13/1996
Comments: NASA entered into a VCA for AOI 11, for DTSC oversight. AOI 11 encompasses 11 underground storage tanks, which were investigated to determine if a release of hazardous substances could be determined and if remedial action would be required. Soil and groundwater around these tanks were sampled and analyzed. After the samples were analyzed, two tanks required further remedial action, Tank U14 and Tank 7. The area surrounding U14 is an undeveloped gravel lot that stretches east from the PG&E substation West N-225A to Parsons Avenue. In this area, groundwater can be found at eight feet below ground surface. Trichloroethylene (TCE) was not detected in the soil samples around Tank U14. Groundwater samples near the tank detected concentrations of TCE and dichloroethylene (DCE), above the California Maximum Contaminant Levels (MCLs) in drinking water. The highest concentrations were found in the monitoring wells up gradient from the site, 270 micrograms per liter (ug/l) of TCE and 120 ug/l of DCE. The sampling data suggests that the source of the contamination may be the Orion Park area, under Navy investigation or the MEW plume, under the oversight of the US EPA. Tank 7 is used to store jet fuel. The current tank replaced a tank, which was leaking. Remediation of the released hydrocarbons identified as TPH-JP5, has already occurred, but a fuel spill in the area occurred in 1995. Soil and groundwater contamination was investigated in 1999, identifying that both soil and groundwater are impacted with petroleum hydrocarbon concentrations above the cleanup levels. NASA is currently developing a workplan that focuses on the source(s).

Comments: The report summarizes the soil and groundwater data that were collected for calendar year 2017. The results indicated soil

NASA-AMES AOI 4 (Continued) **S100186296**

contamination remains in the vicinity of the former Tank 1 area and in the courtyard, however that the plume is stable and progressively less contamination is being encountered down-gradient. The Report recommends decreasing the groundwater sampling frequency from quarterly to semi-annually, with sampling events in June and December for all eight monitoring wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Monitoring Report
Completed Date: 06/12/2019
Comments: The report summarizes the soil and groundwater data that were collected for calendar year 2018. The results indicated soil contamination remains in the vicinity of the former Tank 1 area and in the courtyard, however that the plume is stable and progressively less contamination is being encountered down-gradient. The Report indicates that NASA will continue groundwater sampling until the low-threat case closure evaluation can be completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Land Use Restriction
Completed Date: 03/30/2006
Comments: DTSC and NASA Ames have executed a land use control document which will be included in the NASA Ames Master Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 11/03/1995
Comments: Signed VCA for AOI 4. The VCA includes the National Full Scale Aerodynamics Complex, a large wind tunnel for testing the aerodynamic characteristics of large-scale models. Twelve underground storage tanks were originally located within AOI 4; leaking tanks were removed. Subsequent sampling events identified four primary locations, Tank 1, Tank 5, and SB4-6, located in the drum storage area. Soil and groundwater samples from these areas detected petroleum hydrocarbons and trichloroethylene (TCE).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Plan
Completed Date: 03/03/2004
Comments: Approved O&M Plan. Groundwater is currently being monitored and will continue to be monitored on a quarterly basis until the TPH

NASA-AMES AOI 4 (Continued) **S100186296**

concentrations are below established groundwater action levels (700 microgram per liter for TPH-diesel and 50 micrograms per liter for TPH-gasoline) for four consecutive quarters.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 10/03/2000
Comments: Completed Removal Action. Skimming pumps were planned to be installed in two monitoring wells (one existing well and one new well) to extract free product floating on the water table. Additional sampling data conducted in 1999 indicated that there is no longer free product in the shallow aquifer near Tank 1 and Tank 5. Based on this information skimming pumps were not required and proposed new groundwater monitoring well was not installed. Both Tank 1 and 5 were removed. Dissolved petroleum hydrocarbons in the groundwater will be monitored quarterly until such time that four consecutive quarters of data are analyzed indicating that the TPH concentrations are below cleanup levels and stable. A source point for the TCE concentrations detected in the groundwater was not discovered during the remedial investigation phase of the project. Therefore, it is believed that the source of the TCE detected in the groundwater is from an off-site source. Groundwater TCE contamination will be investigated separately from the AOI 4 project. Petroleum hydrocarbon contaminated soils exceeding the identified remediation levels (400 mg/kg) were planned to be excavated. Excavated soil with concentrations under 1,000 mg/kg was to be bioremediated and reused. Soil exceeding 1,000 mg/kg was to be disposed of offsite. Additional soil sampling conducted in 1999 indicated that the level of petroleum hydrocarbons in the soil and groundwater were lower than originally identified; they were below or close to the established cleanup goals. The sampling was repeated and the results confirmed; the soil excavation proposed in the RAW was not implemented.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 06/16/1998
Comments: Approved RAW specifying the following actions: 1) removal of free product hydrocarbons from the groundwater using skimming pumps; 2) excavation and on-site bioremediation of petroleum contaminated soil; 3) off site disposal of soil not meeting cleanup levels; and 4) on-going groundwater monitoring for contaminants of concern.

Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Report
Completed Date: 03/06/2006
Comments: DTSC, reviewed the 2005 Annual Operations and Maintenance Summary Report. Review has found that the report meeting the Operation and Maintenance requirements for 2005.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: 5 Year Review Reports
Completed Date: 03/28/2005
Comments: Groundwater TPH concentrations are observed to be decreasing over time. Groundwater monitoring will continue for at least two more quarters to determine if TPH concentrations will rebound. If concentrations remain low NASA proposes to request ending groundwater monitoring for qualified wells.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Operations and Maintenance Plan Amendment
Completed Date: 11/17/2005
Comments: A select group of monitoring well in the AOI 4 have meet the groundwater monitoring requirement of TPH concentration detections below the clean up goals for four consecutive quarters. Groundwater monitoring at these wells will be discontinued.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 07/17/2000
Comments: During the course of site investigations of AOI4, trichloroethene (TCE) and 1,2-dichloroethene (DCE) were detected in the groundwater. No connection with an on-site source of these chemicals could be found. Further investigations on the Orion Park housing area, upgradient of A014, revealed elevated concentrations of TCE and DCE in the groundwater. Soil samples from the Orion Park area also revealed the presence of TCE and DCE. Based on this data NASA has concluded that the TCE and DCE contamination found in the A0I 4 groundwater is from a source upgradient of the NASA property. The source could be either the Orion Park housing area or the Middlefield-Ellis-Whisman (MEW) plume. The groundwater investigation has been refered to the RWQCB.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 03/08/1996
Comments: Signed VCA. DTSC is providing oversight for the AOI 5 which is not under the oversight of the U.S. EPA. The VCA outlined the oversight duties of DTSC, including additional investigations and remediation of the site. AOI 5 includes six buildings used as biosciences laboratories, the biomedical research facility and two electrical substations. AOI 5 also includes a drum storage area and one underground storage tank that were previously located within the site boundaries. The drum storage area was closed in the middle 1980s and the tank was removed in 1990. Analyses of soil and groundwater samples detected petroleum hydrocarbons, PCBs, and VOCs. Investigations conducted in 1998 and 1999 indicated two separate groundwater plumes. The western plume contains PCE up to 72 micrograms per liter (ug/l). The eastern plume contains primarily TCE up to 80 ug/l. NASA is currently evaluating some in-situ remedial methods as an alternative to pump and treat for any groundwater contamination found.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 03/09/2007
Comments: During the fieldwork is was discovered that the oil pipeline is connected to a AST. Before oil pipeline can be removed the AST must be closed. NASA will pursue the tank closure with Santa Clara County. Sampling event was completed as planned. No discolored soil or strong odors were observed.

Completed Document Type: Standard Voluntary Agreement
Completed Date: 08/16/1995
Comments: Signed VCA for AOI 8. AOI 8 is located at the northwest corner of the NASA Ames Research Center, adjacent to the wetlands and formerly known as Mavarro Farms. AOI 8 is used for recycling and storage of excess vehicles and equipment. The site contains one building, and a bioremediation pad. Soils contaminated with total petroleum hydrocarbons (TPH) as diesel and oil and grease have been identified at the site. An above ground diesel tank was formerly located on the site and spilled 100 gallons of fuel in 1987. Soil samples detected TPH-diesel at 10,000 milligrams per kilogram (mg/kg) and TPH-oil and grease was 16,000 mg/kg. Other chemicals such as pesticides and VOCs have been detected at the site, but the concentrations have been low and not considered significant. Elevated levels of TPH concentrations in the groundwater have been detected during sampling events in the past, but have not been elevated for the past five years. Groundwater is being monitored by wells both up gradient (two wells) and down gradient (one well).

Completed Info:
Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: CEQA - Notice of Exemption
Completed Date: 08/24/2000
Comments: The cleanup activities for this project are confined within the fenced perimeter of two electrical substations. The contaminated soil will be excavated, disposed of off site, and backfilled. The project has no possibility of significant effect on the environment.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Standard Voluntary Agreement
Completed Date: 04/08/1996
Comments: Signed VCA for AOI 10. AOI 10 consists of three electrical substations; N227 Unitary Substation, N238 Arc Jet Substation, and N221C substation located in the central part of the NASA Ames Research Center. The substations are fenced and access is limited to operation and maintenance personnel. There is no vehicular traffic through these areas. Concrete pads in each of the substations support transformers and other equipment. The ground surface surrounding the concrete pads is covered with two to six inches of gravel. The primary objectives of the work proposed for AOI 10 is to investigate the soil within the electrical substations for the presence of PCBs and extractable hydrocarbons (TEPHs). Transformer oil containing PCBs

NASA-AMES AOI 4 (Continued) **S100186296**

was historically used in many of the transformers at NASA Ames. The N227 Unitary Substation was constructed in the mid 1950s to supply power to three wind tunnels. TEPHs were detected in concentrations above cleanup levels (400 mg/kg) in areas directly east and west of one of the transformer pads. The concentrations are the highest nearest the surface and are below cleanup levels at depths of five feet below. In identifying the extent of contamination, soil samples were collected near the substation. Concentrations of TEPHs were detected as high as 1200 mg/kg and the median was 83 mg/kg. Of those samples, only one detected PCB concentrations that exceeded the residential cleanup levels (1 mg/kg) at 2.1 mg/kg. No PCBs were detected at N238 Arc Jet Substation more than 0.2 mg/kg. TEPH was detected in soil samples collected at this location from 72 mg.kg to 160 mg/kg, which are all below the cleanup level. Only trace concentrations of TEPH were detected (maximum of 6.8 mg/kg) in the area of N221C. PCBs were found in one sampling location, measuring 310 mg/kg at 1.5 feet below the ground surface (bgs) down to 7.4 mg/kg at 5.5 feet. Two additional sampling events were conducted in January and February, 2001 to further evaluate the extent of the PCBs contamination. During the February sampling event, PCB concentrations of 330 mg/kg at 3 feet and 520 mg/kg at 4 feet were detected.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 08/24/2000
Comments: Approved RAW requiring the excavation and disposal of soil contaminated with PCBs. After excavation, concrete will be used to backfill the hole. The remedial goal for PCB contamination is 50 mg/kg, for restricted areas, in accordance with 40 CFR regulations pursuant to TSCA. For soil contaminated with petroleum, biological nutrients will be injected 2 to 4 feet into the ground to promote bioremediation. Bioremediation will continue until the petroleum concentrations are below 400 mg/kg in the soil. Access to the site is restricted and appropriate signage will be posted. Due to the need to have the substations de-energized during the remediation, the tasks of cleaning up substations N221C and N227D were divided.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Preliminary Endangerment Assessment Report
Completed Date: 06/10/1994
Comments: Completed PEA. A PEA equivalent report was completed by NASA Ames for 12 Area of Investigation (AOIs).

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 12/14/1989
Comments: Not reported

Completed Area Name: N227D Unitary Substation
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 01/27/2006
Comments: The PCB and TPH contamination soil removal action at N227D Unitary Substation has been completed. Approximately 36 cubic yards of

NASA-AMES AOI 4 (Continued) **S100186296**

contaminated soil has been excavated and disposed of. Confirmation sampling indicates at the remaining TPH and PCB soil concentration are below the site specific cleanup goals, established in the approved RAW.

Completed Area Name: N227D Unitary Substation
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/07/2005
Comments: N227D Removal Action was implemented and completed without proper notification to DTSC

Completed Area Name: N221C Substation
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Action Completion Report
Completed Date: 09/24/2004
Comments: Approved RA for the N221C area. The PCB contaminated soil was excavated to the depth of seven feet below the ground surface. Verification sampling indicated PCB concentrations were reduced to less than 1 mg/kg (0.61 mg/kg). Concrete was used to backfill the excavation. The completion of the N221C Substation remedial activities do not complete the remedial action for AOI 10 as described in the approved Final RAW (January 2001). The shut down of the N227D Substation and remediation of the total petroleum hydrocarbon (TPH) and polychlorinated biphenyls (PCBs), remain to be implemented.

Completed Area Name: N227D Unitary Substation
Completed Sub Area Name: Not reported
Completed Document Type: Technical Workplan
Completed Date: 08/08/2005
Comments: NASA requests the change to the selected alternative to assist in the overall reduction in non-source point PCB contaminated storm runoff at the Ames Research Center. The implementation of Alternative 2 would allow NASA to forego the bioremediation technology at the N227D substation of AOI 10 and excavate the TPH contaminated soil along with the PCB contaminated soil. DTSC has determined that the request is an insignificant change and will not have a significant impact on the scope, performance, or cost of the remedy.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Newsletter
Completed Date: 04/10/2006
Comments: DTSC announces the certification of the AOI 10 hazardous substances cleanup at the NASA Ames Research Center. DTSC certification of AOI 10 signifies that all environmental cleanup activities mandated by the Removal Action Workplan are now complete.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Certification
Completed Date: 02/08/2006
Comments: Cleanup Actions at the three electrical substations making up NASA Ames Research Center's Area of Investigation 10 (AOI 10) has been completed. No Operation and Maintenance is required for this Site.

Comments: NASA entered into a VCA for AOI 11, for DTSC oversight. AOI 11 encompasses 11 underground storage tanks, which were investigated to determine if a release of hazardous substances could be determined and if remedial action would be required. Soil and groundwater around these tanks were sampled and analyzed. After the samples were

NASA-AMES AOI 4 (Continued) **S100186296**

analyzed, two tanks required further remedial action, Tank U14 and Tank 7. The area surrounding U14 is an undeveloped gravel lot that stretches east from the PG&E substation West N-225A to Parsons Avenue. In this area, groundwater can be found at eight feet below ground surface. Trichloroethylene (TCE) was not detected in the soil samples around Tank U14. Groundwater samples near the tank detected concentrations of TCE and dichloroethylene (DCE), above the California Maximum Contaminant Levels (MCLs) in drinking water. The highest concentrations were found in the monitoring wells up gradient from the site, 270 micrograms per liter (ug/l) of TCE and 120 ug/l of DCE. The sampling data suggests that the source of the contamination may be the Orion Park area, under Navy investigation or the MEW plume, under the oversight of the US EPA. Tank 7 is used to store jet fuel. The current tank replaced a tank, which was leaking. Remediation of the released hydrocarbons identified as TPH-JP5, has already occurred, but a fuel spill in the area occurred in 1995. Soil and groundwater contamination was investigated in 1999, identifying that both soil and groundwater are impacted with petroleum hydrocarbon concentrations above the cleanup levels. NASA is currently developing a workplan that focuses on the source(s).

Completed Sub Area Name: Not reported
Completed Document Type: Financial Assurance Documentation
Completed Date: 09/03/2020
Comments: FA cost estimate approved by Branch chief.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Soils Management Plan
Completed Date: 07/11/2019
Comments: The Tenant Improvement Soil Management Plan provides guidelines for appropriate health and safety precautions during tenant improvement construction activities for on-site construction workers who may encounter soil that could contain residual chemicals, provides procedures during construction activities for management of residual chemicals present in soil and soil vapor at the Site, and provide procedures for management of unknown conditions including subsurface structures, if encountered.

Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork

TIED HOUSE BREWING SITE (Continued) **S117038684**

Completed Date: 04/28/2017
Comments: Field work completed according to the DTSC-approved Site Investigation Work Plan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 03/23/2018
Comments: The purpose of the Phase II site characterization was to assess halogenated volatile organic compounds previously detected in soil, groundwater, and soil vapor in support of the proposed redevelopment. Sampling results indicated that PCE is the primary constituent of concern detected in soil, groundwater, and soil vapor detected at concentrations exceeding human health risk-based screening levels for a commercial/industrial scenario.

CA BOND EXP. PLAN:
Reponsible Party: NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: This site has been proposed for listing on the NPL. It is expected that the RP will remediate this site with oversight by EPA. DHS will perform a limited role of oversight and monitoring of the remedial activities at this site. DHS has budgeted $50,000 for oversight and monitoring costs. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project.
Site Description: The Jasco Chemical Corporation has formulated chemical products at this 2.05-acre site in Mountain View since 1976. The site is bordered on the northeast by the Central Expressway and Southern Pacific Railroad, and on the remaining sides by residential units. The facility handles and stores numerous chemicals onsite in underground tanks and 55 gallon drums.
Hazardous Waste Desc: The contaminants detected in the soil and ground water onsite include trichloroethane (TCA), dichloroethane (DCA), dichloroethylene (DCE), phenol and methylene chloride (MCL).
Threat To Public Health & Env: Within a 3-mile radius of the site there are approximately 199,000 people who depend on ground water as a source of drinking water. Contaminants have migrated at least 10 feet beyond the property boundary, as evidenced by the detection of DCA and TCA in an offsite well. Mountain View wells #17 and #10 are located within 1,500 feet and 3,100 feet of the site, respectively.
Site Activity Status: Investigations at the site were initiated in 1984. Both soil and ground water contamination has been detected onsite. Discharges of surface runoff from the rear of the facility appear to be a major source of contaminants. Up to 11,000 parts per million (ppm) paint thinner was detected in soil samples taken near a runoff outfall. Jasco Chemical has been extracting contaminated ground water from one well since February, 1987.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing
A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System
SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

USGS TOPOGRAPHIC MAP

Target Property Map:	5641106 MOUNTAIN VIEW, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

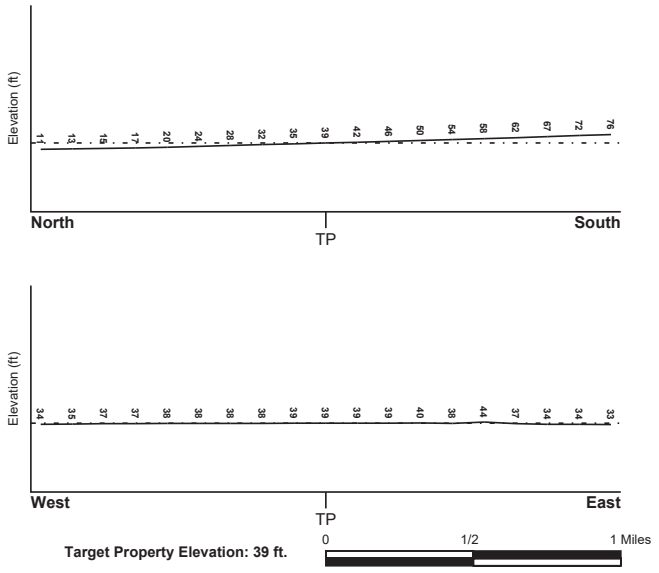
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06085C0037H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	0 - 1/8 Mile ENE
Site Name:	JASCO CHEMICAL CO
Site EPA ID Number:	CAD981677107
Groundwater Flow Direction:	North-Northeast
Measured Depth to Water:	13.5 to 15 feet, 20 to 23.5 feet, and 26 to 29 feet in three discrete perched zones at the site.
Hydraulic Connection:	The upper perched aquifers and lower aquifer at the site are separated by a dense blue clay aquitard, although aquifer interconnections exist in the site vicinity.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information

	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations

EXPLANATION OF PHASE I ENVIRONMENTAL SITE ASSESSMENT TERMINOLOGY

(source: ASTM Standard E 1527-13)

'REC' - *Recognized Environmental Condition*: the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

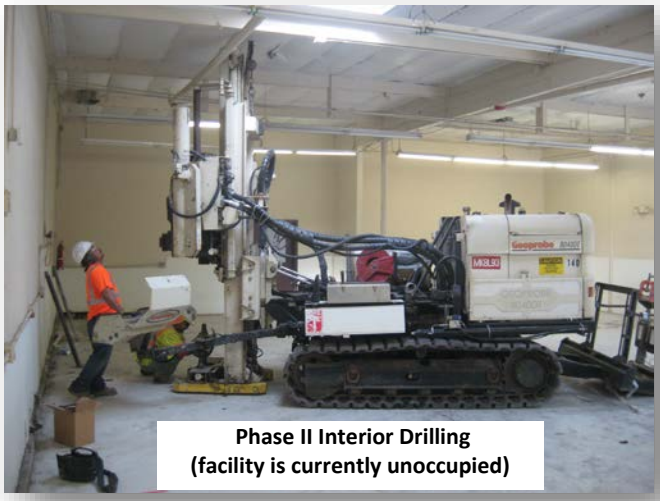
'CREC' – *Controlled Recognized Environmental Condition*: a *recognized environmental condition* resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a *controlled recognized environmental condition* shall be listed in the findings section of the Phase I Environmental Site Assessment report, and as a recognized environmental condition in the conclusions section of the Phase I Environmental Site Assessment report.

'HREC' - *Historical Recognized Environmental Condition*: a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Phase I Environmental Site Assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition.

***De minimis Condition*:** a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions.

EXPLANATION OF PHASE II REGULATORY SCREENING / ACTION LEVELS

Maximum Contaminant Levels (MCLs)*:* These are the drinking water standards established in Title 22 of the California Code of Regulations.



Water Quality Goals (WQGs): These are the maximum groundwater concentration levels allowed by the CCRWQCB for a site to be considered a low risk to groundwater resources.

Environmental Screening Levels (ESLs): from *Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater (Interim Final, December 2013).* The ESLs are intended to provide quantitative guidance on whether remediation of contamination is warranted. The ESLs used for in this table default to groundwater as a potential drinking water resource.

Regional Screening Levels (RSLs): from the *USEPA Region 9 RSL Tables, Hazard Quotient = 0.1 (updated January 2015)*, and the User's Guide (November 2014). The RSLs are risk-based screening levels used for screening sites, calculating risk factors and potentially as cleanup goals once a site has been characterized.

1.0 EXECUTIVE SUMMARY

Phase II Interior Drilling (facility is currently unoccupied)

This report presents the results of a *Phase I & II Environmental Site Assessment (Phase I/II ESA)*, which has been conducted to assess potential environmental liabilities for a property located at 1155 Terra Bella Ave in Mountain View, California (herein referred to as the subject "Site"). This assessment includes historical research, a review of regulatory records pertaining to the Site and vicinity properties, site reconnaissance, and interviews with persons knowledgeable about the Site. Following the initial review of research of available documents, a subsurface sampling program was implemented to evaluate whether *Recognized Environmental Conditions* (RECs) identified by the Phase I research have negatively impacted soil, soil vapor, or groundwater beneath the Site. A summary of this Phase I research and Phase II fieldwork and testing results are presented in this *Executive Summary*.

The 36,810-ft^2 subject Site is situated in a mixed commercial and residential area of Mountain View. The earliest available records (an aerial image dating back to 1939) show the subject Site was largely undeveloped through at least 1950. Agricultural land use (i.e., orchards) was first observed in 1956, and continued until sometime before 1968. The existing site structure and property layout was first observed in 1968, and the layout has remained unchanged through the current day.

Adjoining and vicinity land-use was predominantly agricultural until 1968, after which the area became increasingly developed for industrial and residential uses (copies of historical aerials are included in Appendix B). Many of the industrial businesses in the area are documented to manufacture electronic components including silicone chip manufacturing, which often utilize bulk solvent chemicals such as Trichloroethylene (TCE) and Tetrachloroethylene (PCE) (see the *Aerial Vicinity Map*, Figure 2).

The subject Site and vicinity are generally flat lying with a mild slope towards the San Francisco Bay (i.e., northward, see *Topographic Location Map,* Figure 1). Shallow groundwater beneath the Site is under semi-confined to confined conditions; wet soils are initially encountered within vertically thin wet lenses between depths 15 and 26 feet below ground surface (bgs), and deeper at 42 feet. Both confined water-

bearing zones stabilize at a depth of less than 10 feet bgs. The on-site lithology is comparable with well-monitored, water bearing zones found at nearby chemical release sites where groundwater generally flows in a northerly direction[1] (see detailed drilling logs, Appendix E).

1.1 SUMMARY OF PHASE I RESEARCH

Phase I ESAs provide limited assurances of risk, since they rely on current Site conditions (Site inspections), cooperative and candid interviews/questionnaires, and a limited database of regulatory and historical documentation. The Site inspections, interviews, and review of regulatory and historic documents are designed to identify potential environmental liabilities of concern. Potential liabilities have been categorized by the *American Society for Testing and Materials (ASTM)* into the following four conditions based on decreasing levels environmental risk: (1) ***recognized environmental conditions (REC)***, (2) ***controlled recognized environmental conditions (CREC),*** (3) ***historical recognized environmental conditions (HREC),*** and (4) ***de minimis conditions.*** Explanation of these terms are provided on the page v (see: *Explanation of Environmental Assessment Terminology*).

1.1.1 On-Site Findings

Our Site inspection, review of local, state and federal regulatory records, and communications with persons knowledgeable about the Site identified two (2) on-site, ***Recognized Environmental Conditions,*** which are summarized below.

- Reported Presence of Former Underground Chemical Storage Tank (UST): Interviews with two separate parties have independently confirmed knowledge of an underground chemical storage tank (UST), that was removed sometime during the previous decade, specifically:

    1. A former property manager who managed the most recent manufacturing operations that operated on the Site for 30-plus years (i.e., Telewave, a radio antenna manufacturer which operated in the 1980s-2010s); as well as,
    2. Persons familiar with Site operations (see *User Questionnaire,* Appendix A, and Section 6.4 for additional details).

    These interviews indicated a previous chipboard manufacturer operated at the site that may have used the UST to store solvents, however there is no record of tank installation, specific

[1]: USEPA and Regional Water Quality Control Board, Solvent Release Case, Teledyne Semiconductor (SL721281224, 1300 Terra Bella Ave), and the Spectra Physics Lasers Property (SL721201221, 1250 West Middlefield Road), Mountain View:
- http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL721281224
- http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL721201221

tank use, or closure. The Local permitting agency (City of Mountain View) retains files for only 5 years.

Opinion: Given the business history of the Site, which included manufacturing operations that may have included a circuit board manufacturer, it is likely that the suspected underground chemical storage tank was used to store chemicals such as virgin/waste solvents, as suggested in the User Questionnaire. Should a leak have been the reason for its unpermitted removal, there is a strong potential for it to negatively impact the quality of soils and/or groundwater beneath the Site. This is considered a *Recognized Environmental Condition,* particularly due to the lack of agency documentation regarding use and closure.

- Long-Term Manufacturing: The facility maintained manufacturing operations for over 40 years that reportedly include the manufacture of radio equipment (Telewave) and some sort of computer chip/circuit board fabrication (Circo, Inc). Due to the lack of reviewable records regarding chemical use, storage and disposal, it is not clear how chemicals and wastes were maintained. This lack of permitting documentation is considered a *Recognized Environmental Condition.*

In addition, one *de minimis* condition was also identified at the Site.

- Historical Agricultural Land Use (Orchards): Historic aerial photos indicate the property was used for agriculture purposes during the 1950s and early 1960s.

Opinion: Historical agricultural operations in California are documented to include the use of persistent pesticides, which can persist in the environment and create an unacceptable health risk for certain land use scenarios (e.g., residential). However, because land use for the subject Site is intended to stay as commercial and encapsulated with paved surfaces, potential ingestion/inhalation impacts are considered a *de minimis* condition. Should land use transition to residential, pesticides screening in shallow soils would be recommended.

1.1.2 Vicinity Findings

Our review of local, state and federal regulatory records **identified one (1) Recognized Environmental Condition** near the Site, which is described below**.**

- Potential Offsite Contaminant Migration onto the Subject Site: Building records obtained from the City of Mountain View for the adjoining, upgradient property showed that a manufacturing sump was removed from that property in 1986.[2] The sump was part of the

[2]: Harris Corp, *Underground Tank Removal Permit Application*, 960 Linda Vista Drive, Mountain View, dated 4/1/1986.

facility's Hazardous Materials storage shed that was located on the fence line immediately adjacent to the Site. Apparently, due to the nature of the sump, two closure soil samples were required and analyzed for metals and solvent compounds. The results contained detections of both PCE and TCE indicating some leakage into underlying-soils. However, no further actions were documented.

In addition, there are two other significant and well-defined chlorinated solvent releases (TCE and PCE) that are being actively remediated 2 blocks west of the subject Site (Teledyne and Spectra-Physics plumes). The subject Site is not situated within the lateral limits of the well-defined, groundwater plumes of those two releases. However, two closer properties (located northwest of the subject Site) detected soil vapor contaminants (TCE and PCE) that are attributed, in part, to the Teledyne solvent release, despite not being in direct path of that release plume (see section 5.1 for further discussion of soil vapor detections).

Note: The Teledyne and Spectra-Physics plumes have fiscally sound, responsible parties that are actively cleaning up the release in conjunction with the overseeing regulatory agency (i.e., Regional Water Quality Control Board). On-going work tasks include characterization studies on the lateral limits of the release, remedial pilot tests and remedial actions.

Opinion: The upgradient release of solvents along the adjoining southern property line (upgradient), as documented in 1986 sump closure sampling documents, has the potential to migrate into shallow groundwater beneath the Site, and is considered a ***Recognized Environmental Condition.***

In addition, a *Vapor Encroachment Condition* (VEC) review (Section 5.3), indicates there is some potential for vapor encroachment from both: 1) the documented release at the upgradient, property line sump; and 2) the vicinity solvent releases at the Teledyne/Spectra-Physics properties. This potential for vapor (soil gas) encroachment is considered ***Recognized Environmental Condition***.

1.2 EXECUTIVE SUMMARY: PHASE I CONCLUSIONS

We have performed a standard of care, *Phase I Environmental Site Assessment* in conformance with protocols established in ASTM Practice E1527-13, for the subject property at 1155 Terra Bella Ave in Mountain View. There were no exceptions to, or deletions from, this practice (i.e. data gaps), as described in Section 9.0 of this report.

As noted above and as detailed in Section 10 of this report, this assessment identified four (4) *recognized environmental conditions (RECs)* in connection with the subject property, which include:

1) Former undocumented Underground Chemical Storage Tank (see *Site Map*, Figure 3)

2) On-site manufacturing operations using bulk chemicals with limited permitting regarding permitted storage, processing and waste disposal.

3) Potential contaminant migration onto the subject Site, from two potential off-site locations (see *Vicinity Map,* Figure 4):

    3a. Upgradient release of solvents just beyond the adjoining southern property line, as documented in 1986 sump closure.

    3b. Vicinity solvent releases at the Teledyne/Spectra-Physics properties that are being actively remediated 2 blocks west of the subject Site.

In addition, one *de minimis* condition was identified that was related to the historical agricultural land use that may have used persistent pesticides. This *de minimis* condition not considered a REC due to the continued commercial use planned for this Site.

Based on the Phase I research findings, we recommended (and completed) a Phase II soil and groundwater assessment in order to confirm the environmental quality of soil, soil vapor, and groundwater beneath the Site. A summary of the Phase II sampling and testing is discussed in the following section

1.3 SUMMARY OF PHASE II SOIL AND GROUNDWATER SAMPLING

A completed soil, soil vapor and groundwater sampling and laboratory-testing program was designed to address the *Recognized Environmental Conditions* identified as an outcome of the collected Phase I research described above. The soil, soil vapor and groundwater sampling program targeted areas of concern (infrastructure, chemical storage, etc.). Fieldwork and results are discussed in detail in Section 8.0, and are summarized below:

- **Shallow Groundwater Sampling** (see Figure 6, Table 2): First encountered groundwater samples were collected from across the property as a preliminary gauge of site wide, environmental quality. Groundwater sampling is desired for site screening as contaminant detections in groundwater: 1) provide excellent insight regarding whether there has been a significant, nearby chemical release, and 2) can help pinpoint potential source locations. Initially, we collected and laboratory-tested, first encountered groundwater samples from eight (8) boring locations that extended to depths of 32 to 36 feet bgs, including:

    - Three (3) upgradient soil core locations (GW-5, -7, and -8), to confirm the quality of groundwater flowing onto the Site from potential upgradient chemical sources;

    - Three (3) mid-property locations (GW-3, -4, and -6), to provide water quality data at and just downgradient of the reported, former UST location to evaluate whether or not a significant release has occurred at that location; and

- Two (2) downgradient property line locations (GW-1, and -2), to determine whether or not potential contaminant concentrations are migrating off-site.

All grab groundwater samples were submitted to a State-certified laboratory and analyzed for the following:

- *Volatile Organic Solvent Compounds* (VOCs, full list, by EPA Method 8260B);
- *Fuel Fingerprint* (includes diesel, gasoline, motor oil), by LUFT/8015B for two locations (GW-1 & GW-4 only).

Results of groundwater analysis confirmed that there is a source of solvent (TCE) contamination centered beneath the suspected, historic UST location. Specifically, a relatively high solvent concentration of TCE (6,600 ug/L, or parts per billion) was detected in first encountered groundwater beneath the tank (GW-4), while concentrations dropped off by two orders of magnitude within 80-ft from the source (GW-6 TCE @ 36 ug/L). An isocontour concentration map of the TCE in the shallow groundwater zone is presented as Figure 6. Additional details of observed during the shallow groundwater investigation include:

- Continuously-cored soil sampling showed damp-to-moist, low-permeability clays, silts and clayey sand, having vertically thin (1-to-1.5-foot-thick), water-bearing zones observed between the depths of 15 and 24 feet below ground surface (bgs). The shallow wet-zones stabilized at depths of 6-to-9 feet bgs, indicating confined conditions (see detailed drilling logs and field notes, included in Appendix E). The on-site lithology is comparable with well-monitored, water bearing zones found at nearby chemical release sites where groundwater generally flows in a northerly direction.

Soil Cores
(low permeability soils encountered at shallow depths)

- Non-native fill sand was observed to a depth of approximately 4.5 feet bgs in exploratory boring GW-4, which was drilled at the suspected UST location. Although shallow soils appeared to be contaminant free based on lab testing and field observations, strong solvent odors were detected in the deeper soil core collected from approximately 28 to 32 feet bgs. The replacement fill observed at shallow depths and the deeper

contamination in soil and groundwater at this location appears to corroborate that this was a location of a former (removed) UST.

- The solvent compound TCE was detected in all eight samples at concentrations exceeding its drinking water *Maximum Contaminant Levels* (MCL), and TCE's degradation compound (cis-1,2-DCE), was detected in all but upgradient samples GW-5 and GW-8 at concentrations exceeded its MCL. The most significant impacts were detected at and just downgradient of the reported UST location (i.e., GW-4 and GW-3, respectively). Additional solvent compounds detected at the tank borings GW-3 and GW-4 included PCE, trans-1,2-DCE, and vinyl chloride (see Table 2 and Figure 6).
- Total Petroleum Hydrocarbon (TPH) fuels were not detected in groundwater samples collected at GW-1 or GW-4.

- **<u>Deeper Groundwater Sampling</u> (see Figure 7, Table 2):** Due to the impacts in the shallow water bearing zone (discussed above), a follow-up drilling mobilization was completed in order to evaluate potential impacts to the next (deeper) water-bearing zone, documented to be encountered at approximately depths of 40 feet bgs at nearby chemical release investigation sites[3]. Five (5), deeper groundwater sample (DGW) locations were positioned at upgradient, mid-property, and downgradient locations and grab groundwater samples were collected and submitted to a State-certified laboratory for VOC solvent analysis, specifically:
  - One at the upgradient property line (DGW-5), to confirm the quality of groundwater flowing onto the Site from potential upgradient chemical sources;
  - Three exploratory borings at mid-property locations: one positioned approximately 20 feet upgradient (DGW-4), one positioned immediately downgradient of the reported UST location (DGW-3), and one positioned approximately 60 feet downgradient (DGW-2); and
  - One borings at the downgradient property line (DGW-1).

  Results of deeper groundwater analysis confirm that concentrations of solvent VOCs significantly decrease with depth (see Figure 7 and Table 2). As shown on the isocontour map of TCE concentrations in the deeper water bearing zone (Figure 7):
  - The maximum TCE concentrations were again detected beneath the suspected UST source (360 ug/L, at DGW-3), which is more than and order of magnitude drop relative

[3]: See footnote 1.

to the max concentrations detected in the shallow zone (i.e., 6,600 ug/L in shallow grab sample GW-4; and

- The dissolved TCE plume appears limited laterally to approximately 110-ft from the source location (the UST).
- However, cis-1,2-DCE, a degradation "daughter product" of TCE, has elevated concentrations at the downgradient sample location (48 ug/L, DGW-1) that exceed its MCL of 6 ug/L. This elevated detection of cis-1,2-DCE likely indicates natural attenuation of the plume is occurring and the release is limited.

- **Soil Sampling (see Figure 5, Table 3):** Twelve (12) soil samples were collected from depths of approximately 4 to 32 feet bgs at continuously-cored borings DP-3 and DP-4 and submitted for laboratory analysis in order to vertically profile the soils in the vicinity of the former UST. In addition, and as per soil vapor sampling protocols, additional soil samples obtained from a depth of 5 feet bgs at two soil vapor sample locations (SV-1 and SV-2), where vapor sampling was not possible due to low-permeability soils (i.e., high vacuum conditions). The soil samples were submitted to a State-certified laboratory and analyzed for the following:
  - *Volatile Organic (solvent) Compounds* (VOCs) by EPA Method 8260B [all samples]
  - *Fuel Fingerprint* by LUFT/8015B (includes diesel, gasoline, motor oil) [DP-4 only at depths 24, 27 and 31 feet]
  - *Metals* by EPA Method 6010B [DP-4 at 4.5-feet]

  The laboratory results confirmed field observations: elevated concentrations of TCE, and to a much lesser extent cis, 1-2 DCE, were limited to soils beneath the suspected source location (i.e., DP-4), where strong solvent odors were observed in the soil core at depths of 31 feet bgs. Contaminant solvent concentration in all other soil samples contained concentrations below risk-based agency thresholds (*Environmental Screening Levels,* ESLs)[4].

  TPH was not detected in soil samples collected at boring DP-4, with the exception of a trace concentration of TPH-diesel detected at 24 feet bgs.

[4]: **Environmental Screening Levels** (ESLs): from *User's Guide: Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater,* set by the San Francisco Bay Regional Water Quality Control Board (updated May 2016). The ESLs are intended to provide quantitative risk-based guidance on whether further assessment or remediation of contamination is warranted.

- http://www.waterboards.ca.gov/sanfranciscobay/water_issues/programs/ESL/ESL%20Workbook_ESLs_Interim%20Final_22Feb16_Rev3_PDF.pdf >

Vertical soil profiling during the second deeper coring mobilization included the collection of soil samples from continuously cored boring DGW-4, situated approximately 20 feet upgradient of the reported UST. Field observations did not note any obvious soil impacts in this boring which was confirmed by laboratory analysis that revealed a single, relatively low-level concentration of cis-1,2-DCE at 32 feet bgs (water bearing soil zone) that marginally exceeded its commercial ESL.

- **Soil Vapor Sampling (see Figure 5, Table 1):** We installed three (3) temporary, soil vapor-sampling points inside the building that were positioned at the suspected UST location (SV-3), and at two locations along the sanitary sewer lateral (SV-1 and SV-2) where facility process waters were historically discharged. The soil vapor sampling points were installed at 5 feet below the ground surface and soil gas samples were collected using Summa canisters under vacuum. Appendix E includes drill logs that show construction details and soil types encountered. As noted above SV-3 was installed in permeable backfill material at the reported UST location and a soil gas sample was easily obtainable. Native soils at the two other soil vapor points (SV-1 and SV-2) consisted of low-permeability silts and clays where *no flow conditions* were encountered during sampling (i.e., high vacuum in the low permeability silts/clays where "stripping" could potentially create a biased high result). As per State DTSC sampling protocols, since soil gas samples could not be obtained due to no flow conditions, a soil sample from the intended soil vapor sample depth (i.e., 5 feet bgs) was laboratory tested to evaluate for the potential presence of solvent VOCs in the low permeability soils.

  Backfill vapor sample SV-3, the only soil gas sample obtained due to native soil no-flow conditions, was submitted to a State-certified laboratory and analyzed for *Volatile Organic Compounds* (VOCs) by EPA Method TO-15. Results of laboratory analysis showed there is an elevated concentration **of TCE vapor in the preamble backfill material (25,000 ug/m^3) that exceeds its commercial ESL threshold of 3,000 ug/m^3. In addition, there is an elevated detection of TPH-gasoline but no detections of gasoline's volatile constituent compounds, which suggests "aged-gas".** This may suggest the former UST contained gasoline at one time.

  The soil vapor sampling results, including the no flow conditions in native soils, suggests that soil vapor intrusion concerns could be limited to the tank backfill footprint.

1.4 PHASE II CONCLUSIONS AND RECOMMENDATIONS (EXECUTIVE SUMMARY)

In order to address the four RECs identified from Phase I research (as described in Section 1.1, above) and determine whether a significant environmental liability resulting from chemical releases exists, we completed a Phase II soil, soil vapor and groundwater-sampling investigation. Results of the Phase II assessment confirm:

1. **Soil, shallow soil vapor and groundwater beneath the site have been impacted by a chemical release of volatile organic solvent compounds above regulatory threshold limits (specifically, TCE and associated degradation "daughter" products). Collected data indicates that the**

primary source of the release originated from a former underground chemical storage tank (UST) that was reportedly situated within the southeast portion of the site building (Figure 6). Collected groundwater data also indicates:

- A portion of the dissolved solvent plume present in the shallow, first water bearing zone (encountered at 15-30 ft bgs) is migrating off-site beneath Terra Bella Avenue (northward),
- Dissolved solvent concentrations in the deeper water-bearing zone (at 40-50 ft bgs) are limited to a relatively small footprint that is confined beneath the Site itself (see isocontour maps, Figures 6 & 7).
- **There also appears to be a lower magnitude, secondary source migrating onto the subject Site from an upgradient, off-site location.** An upgradient release of some solvent compounds to shallow soils is documented from a hazardous waste shed sump that was closed in 1986 at the adjoining property (southern property line). Solvent concentrations in borings drilled near the upgradient property line (GW-5, -7 and -8, Figure 6) suggests that a relatively low-concentration plume of TCE is migrating onto the subject Site from the neighboring property.

These preliminary Phase I/II findings indicate the following potential environmental liability exists:

- The soil vapor sampling data collected at the location of the reported UST suggests that there is a potential for a vapor intrusion concern, specifically with regard TCE, which has a very low indoor air threshold concentration. However, the low permeability silts and clays that are encountered beneath the site can act as a remedial barrier to vapor intrusion as long as the source is removed. Expanded evaluation of soil vapor and indoor air is recommended to confirm site conditions. The results of the expanded evaluation will determine whether migration measures are warranted for either current site use (i.e., passive depressurization system), or future development (i.e., foundation vapor barriers).
- Downgradient property line borings GW-1 and 2 confirm that concentrations of solvent VOCs in first encountered groundwater exceeding *Maximum Contaminant Levels* and have migrated off-site beneath Terra Bella Avenue. Standard agency requirements will include delineation of the downgradient extent of the dissolved solvent plume.

Based on the results of the preliminary soil, soil vapor and groundwater analytical data, we recommend the following:

1. Because elevated concentrations of chemicals have been detected above regulatory screening thresholds, we recommend that the property owner submit a copy of sampling report to the overseeing regulatory agency for their review and comment (i.e., San Francisco Bay Regional Water Quality Control Board). Alternatively, the property owner can petition the Santa Clara

County Department of Environmental Health (SCC-DEH) to into their *Voluntary Cleanup Program*, which allows SCC-DEH to take lead oversight of the contaminant release and investigation.

2. Completing indoor air sampling to determine whether or not indoor air quality has become impacted. This data will help determine whether or not corrective actions for indoor air quality will be required for future occupancy. In addition, further soil vapor assessment should be conducted to confirm the preliminary results presented in this Phase II study (i.e., complete additional vapor sampling to confirm relatively uniform no flow conditions exist across the site).
3. Conduct off-site, downgradient groundwater sampling within the first water bearing zone to confirm: 1) the lateral continuity of the water bearing zone, and 2) the extent of off-site impacts.

This concludes the *Executive Summary*.

2.0 PURPOSE AND SCOPE

This report contains results of a *Phase I Environmental Site Assessment* (ESA) that has been conducted to review environmental liabilities resulting from historic or existing environmental risks for the subject properties. Completed work tasks conformed to the recommended guidelines established by the American Society for Testing and Materials (ASTM). *Limitations and Exceptions of Assessment* are listed at the end of this report.

The purpose of this ESA is to provide a professional opinion regarding *recognized environmental conditions* at the Site, including potential impacts from known environmental problems in the surrounding area. The term "*recognized environmental conditions*", is defined as "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions" (ASTM Standard E 1527-13). A short list of the essential Phase I ESA terminology is presented after the *Assessment Findings Summary* in the Table of Contents.

2.1 DEFINED SCOPE AND METHODOLOGY

The scope of services completed for this Phase I ESA, included the following tasks:

- Historical Review: We reviewed historical maps, and aerial photographs, available geologic, topographic and groundwater data of the Site and vicinity (Sections 3.3 and 4 of this report).
- Inspection: We completed a visual inspection of the Site, to check for indicators that might suggest a potential source of contamination such as current hazardous materials storage or use, unusually stained ground surfaces (soils, slabs), stressed vegetation, sumps/drains/tanks, and discarded

hazardous material containers (Section 7 of this report). A copy of our Site Inspection Checklist, which includes Site photos, is included in Appendix A.

- Report User Questionnaire & Interviews: We reviewed a *User Questionnaire* and completed interviews with parties who have specialized knowledge about the subject Site (Section 6, copy of completed questionnaire provided in Appendix A).

- Agency-Regulated Sites Review: We contracted with EDR, an information research firm specializing in environmental data collection, to conduct a regulatory list search of sites with underground fuel storage tanks (UST's), contaminated sites, hazardous waste generation or treatment-storage-and disposal facilities, and landfills located within ASTM survey radius. We evaluated the locations of all identified sites in relation to the Site (see Section 5, *Figure 4 – Surrounding Site Regulatory Review,* and Appendix C for EDR's Radius Report, which compiles and locates regulatory records from numerous local, state and federal agencies).

  We also reviewed reasonably ascertainable online records of hazardous materials storage and documented releases from public right-to-know Local and State regulatory databases such as the State of California GeoTracker and EnviroStor databases, and local environmental health and/or building/planning department archives (see Section 5; Appendix D contains copies of pertinent/referenced documents).

- Evaluation and Findings: We evaluated the collected information and prepared this summary report.

3.0 SITE SETTING & BACKGROUND

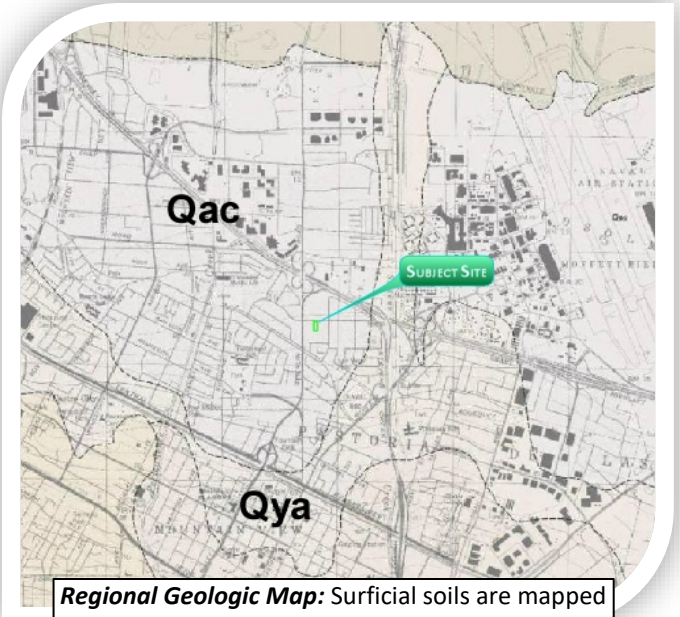
3.1 SITE DESCRIPTION AND BACKGROUND

The subject property (the "Site") consists of a single, parcel at 1155 Terra Bella Ave, in Mountain View, California. The current Site layout has been the same since at least the mid-1960s.

- *Santa Clara County Assessor's Parcel Number (APN):* 153-160-12)
- The property spans a total area of approximately 36,810-ft^2.
- There is a large, commercial warehouse structure on-site along with a smaller storage shed

As shown in the clip (right), the bulk of the Site is covered with industrial warehouse and parking areas. The most recent manufacturing operations included the fabrication of radio equipment (Telewave) from

the early 1980s through 2008, when operations were moved to a new facility in San Jose. Manufacturing operations included working of raw metals using acid etching, painting, assembly and shipping. Since 2008, the Site was used for storage and a portion of the building leased to a dog day-care business (Doggie-Ville). The lease was recently given up and the facility is currently unoccupied, aside from some limited storage by Telewave.



The adjoining parcels are commercial-industrial and the surrounding areas contain a mixture of commercial and residential land use (see *Vicinity Aerial Map,* Figure 2). Many of the industrial businesses that operate in this area of Mountain View are involved in the production of electronic and computer components, which often involves the bulk chemical storage and use. Historical land-use maps and records are discussed in detail in Section 4, and copies of corresponding records (Sanborn Maps, historical aerial photographs and telephone directories) are presented in Appendix B.

3.1.1 Utilities, Wells and Storage Tanks

Utilities: The subject Site is connected to the City of Mountain View water and sewer systems and is serviced by PG&E for gas and electricity.

Wells/Sumps: A review of Santa Clara Valley Water District showed no record of an active or destroyed water supply well or monitoring wells for the Site. No wells or sumps were observed during inspection of the site.

Storage Tanks: There are currently no documented on-site underground or aboveground storage tanks (USTs/ASTs) to store hazardous materials. However, an underground tank was reportedly removed from the building in the 1980s according interviews that are documented in Section 6.0.

Regional Geologic Map: Surficial soils are mapped as unconsolidated alluvial deposits (Qac) that consist primarily of silty clay, and clays.

3.2 GEOLOGICAL & HYDROGEOLOGICAL CONDITIONS

Regional geologic maps and reports indicate that surface soils underlying Site and the vicinity area generally consist of Holocene-aged surficial sediments consisting of silty clay and organic clay ('Qac', see *Regional Geologic Map*[5], right). This formation generally represents intra-fan areas. To the south and east of the Site, there are other

[5] *Geologic Map of Santa Clara County, California*, Dibble T.W., dated 2007.

surficial sediment formations that consist of alluvial sand, fine-grained silt, and clay (Qya) and area typically associated with the outer edges of depositional fans.

Groundwater depth and flow data was gathered from a nearby monitoring network of twelve (12) wells. A quarterly groundwater monitoring report[6] for this nearby Leaking Underground Storage Tank site (a Texaco gas station on Shoreline Blvd) indicated shallow groundwater flows in a northernly direction and has a depth to groundwater of around 17 to 24 feet below ground surface (bgs).

4.0 HISTORICAL REVIEW

Historical maps, telephone directories, and aerial photographs can be a valuable resource for determining obvious past uses of the property. These records can provide evidence of notable land use changes to the property and potential clues of hazardous material storage (copies of these historical records are included in Appendix B). Land-use observations of these historical records are summarized below.

4.1 CITY TELEPHONE DIRECTORIES

Historical City Telephone Directories from 1962 through 2013 were available from a combination historical directory listing services. Copies of the reviewed listings are provided in Appendix B, under 'EDR City Directory'. This records review identified the occupants of the subject Site as follows (land-uses of potential concern are highlighted in **boldface**):

TARGET PROPERTY OCCUPANTS/BUSINESSES		
Site Address	***Year***	***Occupants*** .
1155 Terra Bella Ave	***2013***	***Telewave, Inc.,*** *Doggie Ville*
	1991	***Telewave, Inc.***
	1986	***Telewave, Inc.***
	1985	*Action Building Maintenance, Dependable Sewer & Drain (unit B)*
	1982	***Telewave, Inc.***
	1968	***Circo, Inc.***

Vicinity records: This record check listed the occupants of the adjoining/vicinity parcels as follows. Commercial/industrial land-uses that could be a potential source of concern are highlighted in **boldface**. Upgradient, sidegradient and downgradient refer to the hydraulic position of the nearby property in relation to the subject Site.

In summary, reverse-telephone records show that Telewave, a radio equipment manufacturer, has been associated with the property, since at least 1982. Circo, Inc., possibly a chip manufacturer, operated at the site prior to 1982. Of the nearby and adjoining property land-uses, most have been industrial in nature since record keeping began. This has included multiple companies, like CB Electronics to the immediate southeast that are involved in the making of electronic components. The production of electronic components usually requires the use of bulk chemicals including solvents that have been detected in soil and groundwater at various vicinity locations. Though there are no known releases, there is potential that undocumented releases of these chemicals have occurred.

4.2 SANBORN FIRE INSURANCE MAPS

Sanborn fire insurance maps provide detailed snapshots of historical land-use within generally urban locations where an insurance company provided coverage. The archive Sanborn Maps were reviewed but the database firm indicated there was no coverage for this area.

4.3 AERIAL PHOTOGRAPHS

Fifteen (15) historical aerial photographs ranging from 1939 through 2012 were acquired from the EDR database archive. These aerial photographs provide snapshots of historical land-usage over the last 73 years. Copies of these same aerial photos are included in Appendix B, which show more detail on the surrounding area than can be described in the summary descriptions below. The aerial photographs generally have approximate scales of 1-in = 500-ft. The following table summarizes land-use observations from the available aerial photographs.

YEAR	*ON-SITE* AERIAL PHOTO OBSERVATIONS	*OFF-SITE* AERIAL PHOTO OBSERVATIONS
1939	The Site is undeveloped and appears to be pasturelands. There appear to be several large trees on the Site.	The surrounding area is mostly undeveloped pasturelands and rural residences, but there are small orchards present all around the Site. There are also much larger orchards to the west and northeast of the Site.
1943	The Site is much the same as the previous image.	The surrounding area is much the same as the previous image.
1948	The Site appears much the same as the previous image although the resolution is better and there are some access roads and possibly a structure present (residential).	The nearby roadways have become more defined and more housing is present on the adjacent parcels. The parcel to the east of the Site appears to have orchards
1950	The Site remains rural with open space but contains some new structures on the northwestern corner of the lot (the poor image quality makes details difficult to determine).	The orchard to the east of the Site is gone and has been replaced with a single residence. The surrounding area is much the same as the previous image.
1956	The site now appears to have an orchard on it. The structure on the northwest corner is still present (potentially a farmhouse or residence).	To the west and east of the Site, there appears to be a large warehouse structure. The parcels seem to have been split up into smaller units. The rest of the surrounding area is much the same as the previous image.
1968	The site layout (warehouse/parking areas) appears in its current day form. All traces of previous agricultural land use are gone.	The surrounding area has changed drastically from the previous image. The area is now more industrial with multiple warehouses surrounding the Site. There are also residential homes to the south. Highway 101 has been built and the roads leading to it have been expanded. The land across the highway still has active agricultural land.

YEAR	***ON-SITE*** AERIAL PHOTO OBSERVATIONS	***OFF-SITE*** AERIAL PHOTO OBSERVATIONS
1974	The Site layout remains much the same as the previous image	The more of the vacant parcels surrounding the Site have been developed into industrial warehouses and residential housing.
1982	The Site layout remains much the same as the previous image	The more of the vacant parcels surrounding the Site have been developed into industrial warehouses and residential housing. There is no agricultural activity remaining in the image.
1991	The Site layout remains much the same as the previous image	The surrounding area is much the same as the previous image
1998	The Site layout remains much the same as the previous image	The surrounding area is much the same as the previous image
2005	The Site layout remains much the same as the previous image	The surrounding area is much the same as the previous image. There is a large new office complex to the northeast of the Site.
2006	The Site layout remains much the same as the previous image	The surrounding area is much the same as the previous image
2009	The Site layout remains much the same as the previous image	The surrounding area is much the same as the previous image
2010	The Site layout remains much the same as the previous image	The surrounding area is much the same as the previous image
2012	The Site layout remains much the same as the previous image	The surrounding area is much the same as the previous image

Historical aerial photographs taken between 1939 and 1950 appear to show that the subject Site was largely undeveloped with possibly trees and/or a small structure in the northwest corner of the lot. The 1956 photo show that the site land transitioned from apparent pastureland to an orchard (agricultural), which continued until sometime before the next land use historical snapshot when the commercial-industrial facility was in place (i.e., 1968). Orchards during this time-period commonly used persistent organochlorine pesticides, which degrade very slowly and can persevere in shallow soils. Should the Site land use transition to ground floor residential (with garden areas), the potential presence of persistent pesticides would be considered a *recognized environmental condition.* However, continued commercial use means historical orchard land use is considered a *de minimis* condition. As noted, the Site layout

(property encapsulated by the existing warehouse structure and parking areas), has not changed since at least 1968.

Adjoining and nearby land-uses were predominantly agricultural up until 1968 when the general vicinity became more industrial and residential.

4.4 TOPOGRAPHIC MAPS

Historical topographic maps, which include the subject property and surrounding sites, were obtained and reviewed (see Appendix B). There is no evidence from these topographic maps of significant geophysical or hydrogeological changes at the Site or surrounding area that would indicate the potential for negative impacts to Site soil or groundwater conditions.

4.5 SUMMARY OF HISTORICAL REVIEW

In summary, the subject Site was undeveloped grazing land until sometime before 1956 when it transitioned to orchards (agricultural land use). The orchards were active until sometime before 1968, during a period known to have commonly used persistent organochlorine pesticides, which could still be present in the underlying soils due to the persistent nature of these chemicals. Continued commercial use of the encapsulated property indicates risk from potential residual pesticides in shallow soils is a ***de minimis*** condition. Should the Site land use transition to ground floor residential (with garden areas), the *potential* presence of persistent pesticides would be considered a *recognized environmental condition.* The Site layout (property encapsulated by the existing warehouse structure and parking areas), has not changed since at least 1968.

Adjoining and vicinity land-use has been predominantly agricultural up until 1968 when the area became more industrial and residential. Of the industrial entities in the area, many are involved in the production of electronic components, which often utilize bulk chemicals including solvents (i.e., TCE and PCE). If an undocumented leak of these chemicals occurred at one of these facilities, particularly one upgradient of the Site, groundwater, soil and soil vapor could be affected beneath the Site.

5.0 REGULATORY AGENCY INFORMATION

5.1 DATABASE SEARCH OF FEDERAL AND STATE ENVIRONMENTAL RECORDS

Records of hazardous material, petroleum products and waste storage, as well as unauthorized releases of said materials into the environment, are required by law to be maintained by regulatory agencies overseeing these environmental conditions. An information research firm specializing in environmental data collection, *Environmental Data Resources (EDR)*, generated a Radius Map Report for the Site (included in Appendix C). The *Radius Map Report* identifies sites listed in the selected regulatory databases, presents location maps and details on identified sites, provides a description of the Federal and State agency data reviewed, and limitations to the search. The search specifically documents sites having registered underground fuel storage tanks (UST's), hazardous waste generation, hazardous waste treatment-storage-disposal, and subsurface contamination. Search distances are per ASTM's E-1527 13 standard (see Appendix C for a list of all sites and full descriptions of all regulatory databases). The

NR = Not reviewed, as per the search distances established in ASTM 1527-13. This table was excerpted from the EDR Radius Report, provided in Appendix C. A full list of the databases reviewed is provided on page GR-1 of EDR's report. EDR updates many of these listings on a quarterly or semi-annual basis.

database search identified the following information for the target property and surrounding sites.

SUBJECT PROPERTY: The subject property ("*Target property" in EDR Radius Report*) ***was listed*** in one (1) regulatory database. The database referred to air emissions from the Site and not to any spill or leak incidents. A summary of the database review finding is provided in the table below.

FACILITY / LOCATION [& DATABASE SOURCE(S)]	DETAILS
TELEWAVE, INC **1155 Terra Bella Ave** Databases Listed: CA EMI	**HAZNET:** This business was registered with California Emissions from 1987 to 2000 and did not produce any hazardous emissions during that time.

SURROUNDING SITES: Our review of the *EDR Radius Report* revealed the following notable business operations / properties in the Site vicinity that have notable records of hazardous materials and/or petroleum hydrocarbon releases, waste generators and other notable regulated activities. A comprehensive radius map documenting nearby release sites, hazardous materials and waste management sites, UST/AST storage and other significant regulated environmental conditions, is presented on Figure 4.

- Federal Chemical/Fuel Release Sites: The records search **identified six (6) sites** located within a 1-mile radius from the subject Site that was listed on the USEPA National Priority List (NPL) or Superfund. Two (2) of the six sites were located within ¼-mile of the Site and are described below:

FACILITY / LOCATION [DATABASE SOURCE(S)]	DETAILS
TELEDYNE SEMICONDUCTORS **1300 Terra Bella** (1300-ft NW) Databases Listed: NPL, SEMS, CORRACTS, RCRA Non-Gen	**NATIONAL PRIORITIES LIST (NPL):** Teledyne reported to the California Regional Water Quality Control Board CRWQCB) that soil and ground water near an underground storage tank were contaminated with solvents, including trichloroethylene. An investigation in June 1984 revealed that the contaminants had migrated to the north and affected approximately 50 private domestic wells. Local agencies and the company have provided alternative sources of drinking water for the affected residences.
SPECTRA-PHYSICS, INC **1250 W Middlefield** (1300-ft W) Databases Listed: NPL, SEMS, CORRACTS, RCRA Non-Gen	**NATIONAL PRIORITIES LIST (NPL):** In an inspection conducted in 1981, the California Regional Water Quality Control Board CRWQCB) found that areas where hazardous wastes were stored had no dikes or systems to collect leachate; rusty barrels were also found on-site. Ground water investigations began at the SP facility in September 1984 after tests at Teledyne Semiconductor adjacent and downgradient of SP) indicated possible upgradient sources of contamination. Soil and ground water collected at SP contained TCE, TCA, and 1,2-dichloroethylene. SP s plume of contaminated ground water has merged with Teledyne s and migrated off-site.

- State Chemical/Fuel Release Sites: The records search **identified twelve (12) sites located within a ¼-mile radius** of the Site as having a record of a chemical release of petroleum or other chemical contaminant into soil or groundwater. Agency records include Leaking Underground Storage Tanks (LUST), Cortese, Spills Leaks Investigations and Cleanup (SLIC), Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) and Voluntary Cleanup Priority Listing (VCP). **Six (6) of these sites are located within ⅛-mile radius** from the subject Site, while the remainder are situated between ⅛- and ¼-mile radius from the subject site. See *Figure 4* for relative locations of these active and completed release investigations.
    - Only four (4) of the release sites have not obtained case closure from the applicable regulatory overseeing agencies and none are upgradient of the Site.
    - Four (4) cases are upgradient from or immediately adjacent to the site but all have obtained case closure.

Locations are shown on Figure 4 and a brief synopsis of these cases are presented in the table below.

FACILITY / LOCATION [DATABASE SOURCE(S)]	DETAILS
CALVANO DEVELOPMENT **1001 N Shoreline** (700-ft NW) Databases Listed: CA SLIC, CA NPDES	**SPILLS AND LEASK INVESTIGATION AND CLEANUP (SLIC): OPEN** Due to the proximity to the Teledyne-Spectrum Physics release, soil vapor was analyzed for; Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride, Benzene, Ethylbenzene, MTBE / TBA / Other Fuel Oxygenates, Toluene, Total Petroleum Hydrocarbons (TPH), & Xylene. Only Benzene and PCE had detections in soil vapor that exceeded residential ESLs and none exceeded commercial ESLs.
CSI MOUNTAIN VIEW **1066-1080 Terra Bella** (600-ft N) Databases Listed: CA SLIC	**SPILLS AND LEASK INVESTIGATION AND CLEANUP (SLIC): OPEN** Both historic on-site and off-site sources of VOCs, specifically PCE and TCE, and petroleum products were considered likely to have affected the Site soils. To address potential vapor intrusion concerns, a sampling plan of indoor air, soil and soil vapor was utilized. That sampling found detections for TCE and PCE in soils above commercial ESLs. In addition, the possible presence of OCPs and metals was noted in the sampling report
SHIPPEN PROPERTY **1175 Terra Bella** (Adjacent W) Databases Listed: CA LUST	**LEAKING UNDERGROUND STORAGE TANK (LUST): CLOSED** A 500-gallon gasoline tank was removed from the northeast corner of the site in August 1998. During removal, numerous holes were discovered in the bottom of the tank, which prompted soil sampling at the bottom of the pit. TPH Gasoline was detected at 1900ppm, prompting groundwater sampling which found TPH gasoline detections of 42,000ppb. Contaminated soils were excavated from the pit and groundwater monitoring continued. After a year, most detections had dissipated prompting case closure in July 2001.

FACILITY / LOCATION [DATABASE SOURCE(S)]	DETAILS
TEXACO STATION **975 Shoreline Blvd** (100-ft W) Databases Listed: CA LUST	**LEAKING UNDERGROUND STORAGE TANK (LUST): CLOSED** Former station features include one 6,000-gallon gasoline underground storage tank (UST), four 4,000-gallon gasoline USTs, and one waste oil UST. In 1992, the six USTs, associated product piping, and dispensers were removed, and the Site. During removal, contamination was discovered from TPH Gas, Diesel, BTEX and MTBE, prompting the installation of groundwater monitoring wells. Monitoring continued until July 1st, 2011 when levels had reduced enough to warrant case closure.
CHEVRON STATION **808 N Shoreline Blvd** (500-ft SW) Databases Listed: CA LUST, RCRA-SQG, FINDS	**LEAKING UNDERGROUND STORAGE TANK (LUST): CLOSED** In April 1988, four USTs were removed (two 5,000-gallon gasoline, one 2,000-gallon gasoline and one 550-gallon waste oil tank) and contamination was discovered. Soil samples should contamination of 11,000ppm TPH gasoline and 71ppm benzene. Groundwater monitoring was initiated and the final testing in 2004 showed 6,800ppb Gasoline in groundwater beneath the Site. Those values were low enough to warrant case closure in May 2005.
SHELL STATION **807 Shoreline Blvd** (600-ft SW) Databases Listed: CA LUST, RCRA-SQG, FINDS	**LEAKING UNDERGROUND STORAGE TANK (LUST): CLOSED** In August 1988, a gasoline contamination from the Sites USTs was discovered that had affected groundwater. Groundwater monitoring and remediation was under taken using extraction techniques until only minor detections of MTBE were detected in 2005. At this point, the monitoring network was decommissioned and the case was closed on August 8, 2008.
ARCO STATION **790 Shoreline Blvd** (900-ft SW) Databases Listed: CA LUST, RCRA-SQG, FINDS	**LEAKING UNDERGROUND STORAGE TANK (LUST): CLOSED** In July 1986, leaks were detected in the USTs (four 6,000-gallon gasoline, one 12,000-gallon gasoline, and one 550-gallon waste oil tank) and the associated piping. These were removed in May 1988 along with over 1,000-yds^3 of impacted soils from the excavation area. Soil samples should contamination of 7,800ppm TPH and 21-ppm toluene. Groundwater monitoring was initiated and the final testing in 2003 showed TPH had dissipated from 47,000 to 3,800ppb. Those values were indicated that the source had been removed and the case was closed in July 2004.

- Underground Storage Tanks (USTs): The database search of generally historical regulatory records **identified ten (10) sites** located within a ¼-mile radius having a current or historical record of permitted UST's (UST, HIST UST, SWEEPS UST, Cal FID UST and/or Indian UST). Additionally, **one above ground storage tank (AST) was identified** within a ¼-mile radius.

- Hazardous Waste: The records search **identified twelve (12) sites** located within a ¼-mile radius as having records showing generation and proper disposal of hazardous waste, typically a waste oil or oily waste (RCRA-SQG, RCRA-LQG, RCRA-NonGen, FINDS, Notify 65, EDR Proprietary Records). Of

these nearby hazardous waste generator sites, two (2) are located in a hydraulically upgradient position from the subject Site.

- Dry Cleaners: The records **did not identify any sites** operating as dry cleaners within ¼-mile radius.
- Orphan Sites: The EDR report lists **seven (7)** unmapped site ("***orphans***") obtained from the list of databases, for which EDR was not able to determine an exact location. Upon further review, these listings do not pertain to conditions of concern on properties that are hydraulically upgradient or adjoining to the subject Site.

5.2 GEOTRACKER / ENVIROSTOR FILE REVIEW

Records of hazardous materials storage and releases can also be found in state regulatory agency databases, such as the California *State Water Resources Control Board* Geotracker® database and *Department of Toxic Substances Control* EnviroStor® database. A review was conducted for records on the subject Site, vicinity properties, and additional sites identified in the Federal and State environmental database review detailed in Section 5.1.

- Our review of the California State GeoTracker database, conducted in July 2016, **did not reveal any additional sites** within a ¼-mile radius of the subject Site as having a record of a release of contamination to soil or groundwater (see Figure 4 – 'Surrounding Site Regulatory Review').

5.3 VAPOR ENCROACHMENT CONDITIONS (VEC) REVIEW

In accordance with current standards for assessing vapor encroachment (ASTM E2600-10), we evaluated the Site and its vicinity for vapor encroachment conditions, or conditions that may indicate that sources and pathways for hazardous volatized chemicals to enter current or future on-site buildings that are present at the Site and/or Site vicinity. ASTM E 2600-10 defines the following minimum search distances for the *Area of Concern* for vapor encroachment:

- ***1/3-mile*** *is the ASTM vapor encroachment distance requirement for documenting known or suspected volatile/semi-volatile chemical contaminated sites (e.g., a dry cleaners site with a PCE release)*

  We reviewed the nearby *solvent / volatile organic compound (VOC) release sites* discussed in Section 5.1-5.3 and assessed them for vapor encroachment potential (copy of radius report included in Appendix C). Both the Teledyne and Spectra-Physics volatile organic compound (solvent) releases are located within a 1/3-mile radius of the subject Site and by definition, have some potential to encroach on the subject Site.

  Note: The Teledyne Semiconductor and the Spectra Physics Lasers solvent release sites have fiscally sound, responsible parties that are actively characterizing and cleaning up the solvent releases in conjunction with the overseeing regulatory agency (Region 3, Regional

Water Quality Control Board). Current characterization and *Remedial Action Plan* documents are archived on the Water Board's website for these properties:

http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL721281224
http://geotracker.waterboards.ca.gov/profile_report.asp?global_id=SL721201221

- ***1/10-mile*** *is the ASTM vapor encroachment distance requirement for documenting known or suspected petroleum hydrocarbon contaminated sites (e.g., a gasoline release from a fueling station)*

  We reviewed the nearby petroleum hydrocarbon release sites discussed in Section 5.1 for vapor encroachment potential. We did not identify any sites within a 1/10-mile radius of the subject Site as having a documented VOC-containing plume that would appear to have preferential pathways for VOCs in vapor phase that would encroach on the subject Site.

In summary, the vapor encroachment conditions review identified two sites (the Teledyne and the Spectra-Physics solvent release sites), are located within the applicable search distances as having the potential to pose the risk of vapor encroachment on the subject Site.

5.4 Local Oversight Agency File Reviews

We submitted a file review requests for the subject Site address to *Santa Clara County Environmental Health Services (SCC-EHS)* and the Mountain View City Clerk's office, which handles records request for the City government. SCC-EHS files contained no record of spills or leaks for the site. The City records search produced a single document, a *Hazardous Materials Facility Closure Report* that was filed for Telewave on October 1, 2001 when Teledyne Inc. operations were relocated to a facility in San Jose. That report noted that all hazardous materials had been removed from the Site and that no observable contamination was present (copy included in Appendix D). The City of Mountain View staff reported there were no additional Site records, including Haz-Mat permits, staff inspections, or sewer discharge monitoring because their internal policy is to purge records that are over five years old. This lack of historical record of chemical storage and waste disposal is considered a data gap.

In addition to the subject site, we also requested Local agency records for the adjoining, upgradient (southern) manufacturing property based on the documented groundwater flow direction. For some reason, a City of Mountain View archived record dated 1986, was not purged. The record documented the closure and sampling of a process water clarifier (sump) located along the property line adjoining the subject Site (a copy of the record is included in Appendix D). The sump was inactive for 2.5 years and therefore required to be closed. Due to the Haz-Mat nature of the clarifier/sump and the printed circuit board manufacturing, two closure soil samples were collected from a depth of 6 feet and tested for contaminants of concern. The results contained solvent detections including TCE at 0.46 mg/kg, and PCE at 0.38 mg/kg, indicating some chemical leakage into underlying soils. No further actions were taken and it is unknown whether chemical releases at this clarifier were significant enough to impacted

underlying groundwater and/or migrated onto the subject Site. **This property line release is considered a *Recognized Environmental Condition*.**

5.5 SUMMARY OF REGULATORY REVIEW

In summary, our review of regulatory databases and Local/State agency record repositories revealed several records of potential concern pertaining to hazardous materials and/or petroleum hydrocarbon releases, waste generators or other notable regulated activities. Development and property assessment investigation at several nearby properties have detected solvent concentrations (PCE and TCE) in soil, soil vapor and/or groundwater that some have at least partially attributed to two large chemical solvent releases located two blocks west of the subject Site (i.e., the Teledyne and the Spectra Physics Lasers solvent release sites). These two releases are located sidegradient to the subject site and therefore have little potential to impact groundwater beneath the site but they do have some potential for soil vapor encroachment.

In addition, the manufacturing property immediately upgradient (south) of the subject Site had solvent concentration (TCE and PCE) detections in closure soil samples collected during the removal of a process water clarifier/sump. While the 1987 closure soil samples had only relatively minor concentrations, the detections of solvents beneath a property line clarifier indicate there is a potential impacts t groundwater.

These conditions are considered a ***Recognized Environmental Condition.*** An integrated summary and assessment all Phase I ESA findings is presented in *Section 10.0 – Findings & Opinions*.

6.0 USER QUESTIONNAIRE & INTERVIEWS

6.1 USER QUESTIONNAIRE

A *User Questionnaire* was completed by Roberta Boward, manager for RL Collins Properties, LLC (the User), dated July 8, 2016.

USER QUESTIONNAIRE SUMMARY	
Reason for Performing ESA?	Inheriting the property
Environmental Liens?	No
Land-Use Limitations?	No
Any Specialized Knowledge of the Subject Site or Adjoining Properties?	No, but was a tenant 30 years ago and remember there being a TCE storage tank near the center of the building near the handicapped bathroom.
Discounted Price Relative to Fair Market Value?	No sale price involved (inheritance)

USER QUESTIONNAIRE SUMMARY	
Current or Historical Chemical/ Hazardous Materials Usage?	Circuit board manufacturer that used TCE. Did have a leak in TCE tank at one point. Would have to take soil samples to determine if contamination remains.
Environmental and Title Reports	Yes, research ingredients for a Phase I assessment were gathered but a formal report was never completed).

The User indicated that the *Phase I ESA* is being completed as due diligence as an inheritor.

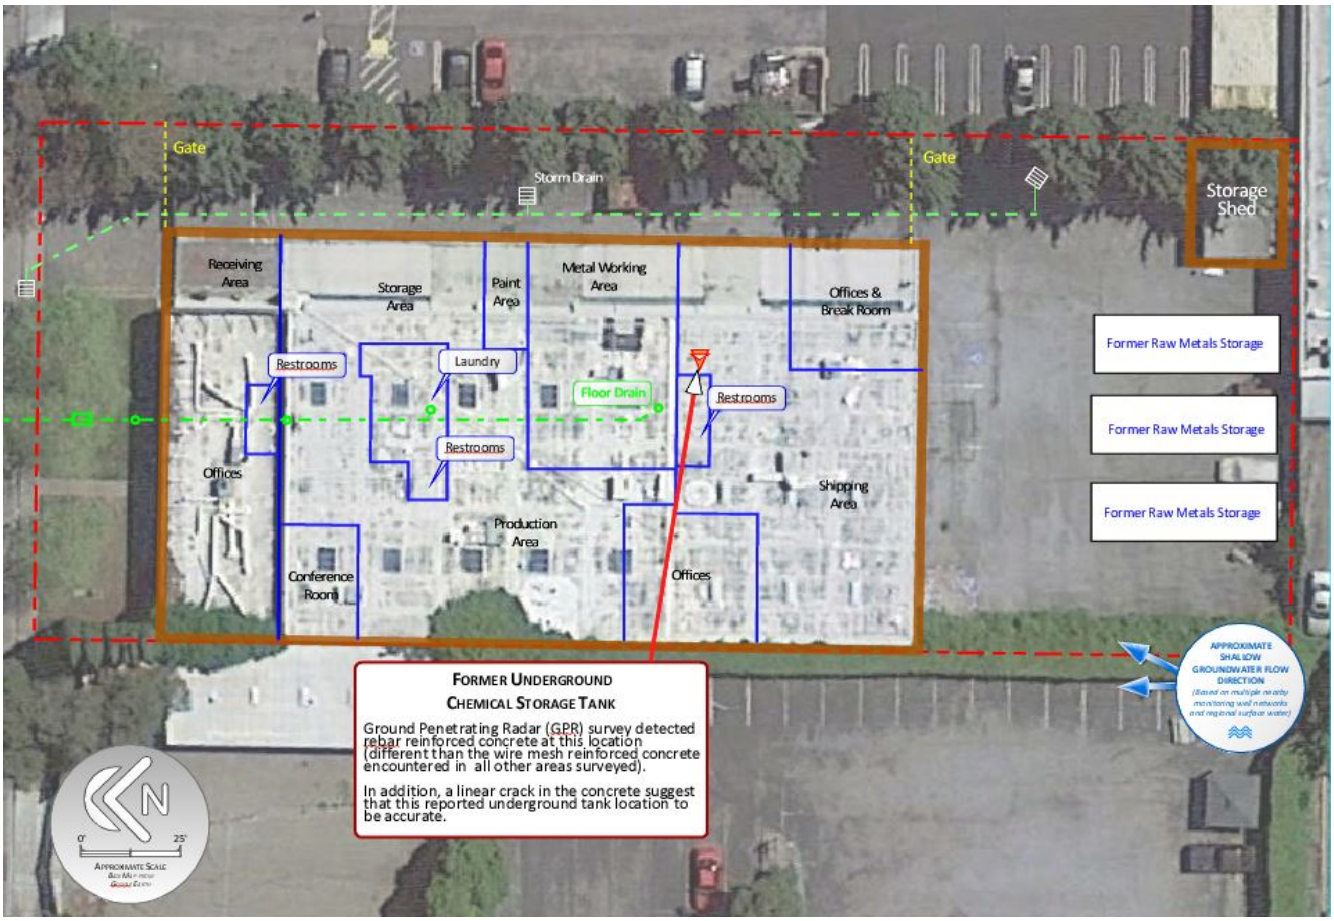
6.2 ADDITIONAL USER PROVIDED DOCUMENTATION

The User did not provide any additional information pertaining to hazardous materials or environmental conditions at the Site.

6.3 INTERVIEWS

We interviewed the Facility Manager, Frank Peek, and asked the following questions

INTERVIEWEE	DATE	SUMMARY
Frank Peek Property Manager *Telewave*	July 14, 2016 (In Person)	***Question*:** what hazardous materials been used or stored onsite? *Answer*: The Telewave operation involved using an acid etch for aluminum working called Allodyne (Clear & Gold) , in addition to typical acyclic paints. In the 1990s and earlier, polyurethane paints were used. These were stored in 15-gallon drums inside the main facility. ***Question:*** Have there been any underground storage tanks on the Site? *Answer:* There was an underground storage tank at one point near the restrooms in the shipping area; however, that was removed many years ago. No other tanks on the property ***Question:*** Are there any floor drains in the facility? *Answer:* Yes. Process waters were discharged to the sanitary sewer under permit after adjusting pH. Additionally, the Site has drains from sinks and toilets.



6.4 SUMMARY OF QUESTIONNAIRE/INTERVIEW REVIEW

The *User Questionnaire* and *interviews* are intended to identify previous or current land-uses that may indicate environmental impacts, or provide further details regarding previously identified environmental impacts and regulatory release investigation cases. The *User Questionnaire* identified the location of the former UST under the building, which apparently was used to store solvents. The tank was apparently removed without permits and no closure documentation exists. Our interview with the former facility manager (Frank Peek) identified no additional potential environmental conditions and no other parties were available for interview. Copies of interviewing documentation are included in Appendix A.

7.0 SITE INSPECTION

7.1 OVERVIEW

A Site inspection was conducted on July 14, 2016, to note potential sources of contamination associated with on-site activities. A copy of the completed *Site Inspection Checklist*, which contains detailed documentation of the Site survey including a photographic record of the inspection, is presented in Appendix A.

See Figure 3 for a blowup of this Site map.

SITE INSPECTION OBSERVATIONS	
Subject Property Observations:	
Current Use of Property	The Site is a single large facility (180-ft x 80-ft) on a rectangular parcel. The building was home to "Telewave, Inc" for many decades, which manufactured radio equipment. Process tasks included metalworking and acid etching to produce the parts used in radio equipment and painting. More recently, these activities have ceased and the space was instead used as an indoor dog day-care service. The main building was built in the 1960s and there is an additional small storage shed in the southeast corner of the lot that was used for storage of misc. household goods and a forklift.
Potable Water Source	City Water
Interior Drains? Where to?	A single floor drain in the Metal Working Area as well as drains to sinks & toilets.
Sewage Disposal Source	Municipal sanitary sewer
Pools of Liquid / Odors?	None observed
Hydraulic equipment?	None observed, however, there was forklifts were used for transporting pallets of materials when manufacturing operations was active.
Storage tanks?	There was no apparent evidence of aboveground or underground storage tanks (ASTs/USTs) observed. However, historically there was reported there was previously a storage tank underneath the main building that was removed in the 1980s (marked on map above).
Exterior Observations:	
Pits, Ponds, Lagoons?	None observed
Stained soil or pavement?	No signs of significant spillage were observed.
Storm water discharge?	Four storm drain inlets drain the asphalt covered areas outside the main building
Wells or Water Towers?	None observed
Sumps?	None observed
Electrical Infrastructure?	None Observed
Hazardous Materials or Petroleum Products?	None Observed; however, when radio production was actively occurring, paints and metal etching acid were stored and used on the Site. Metal etching acid were disposed of into the sanitary sewer after being neutralized.
Neighborhood Observations:	

SITE INSPECTION OBSERVATIONS	
Topography of property and vicinity	Very level at roughly 85-ft above sea level
Current uses of adjoining properties	**West:** Former industrial building **South:** industrial building **East:** Industrial building **North:** Office building currently in development

7.2 SUMMARY OF SITE INSPECTION

In summary, the site inspection showed that the Site is currently unoccupied but has recently been used as a dog day-care center, and before that was home to Telewave, which was producing radios. There was also a period in which it produced chipboards earlier in its history. That facility did handle potentially hazardous wastes, such as paints and acids, that could have impacted the site. Specifically, the discharge of metal etching acids to the sanitary sewer, if not completely neutralized could have impacted the groundwater and soils near the sewer lateral if there were any leaks in the pipe.

8.0 PHASE II SOIL, SOIL VAPOR AND GROUNDWATER INVESTIGATION

Phase I research identified the following potential *Recognized Environmental Conditions (RECs)* that were addressed by completing a limited Phase II soil and groundwater-sampling program. The following potential areas of concern that were addressed included:

- Former UST: Interviews with the Site contact Frank Peek, and the current property owner, indicated that the property once contained a UST that was removed many years ago. The owner believed that the tank contained TCE, however there is no record of the tank closure. This is potentially a source of TCE to the sub-surface that could affect soils, groundwater and indoor air quality if there is a sizable contamination.
- Surrounding PCE and TCE Contaminations: A review of nearby site contaminations indicates that the area may be affected by TCE and PCE contamination from nearby sites. Two properties immediately north of the Site had contamination from TCE and PCE that was attributed to the nearby Teledyne release. This could indicate that soil and groundwater beneath the Site are impacted by TCE and PCE as well. In addition, a sump was removed just upgradient of the Site that had TCE and PCE detection in shallow soils, which could also affect groundwater below the Site.

8.1 FIELD INVESTIGATION

Pre-drilling/sampling field activities included the following:

- Prior to drilling activities, Underground Service Alert (USA) was contacted at least 48 hours in advance to identify the location of utilities that enter the property. In addition, a private utility locating firm was retained to examine the Site with geophysical tools to locate on-Site, privately owned utilities.

On August 9 & 10, 2016, Weber, Hayes and Associates contracted with Environmental Control Associates (ECA) of Cascade Drilling (a C-57 licensed drill operator) to complete a sampling program that included soil, soil vapor and groundwater. Results from this first sampling event warranted two additional sampling events on September 8 & 9 and September 16 & 17. Both events also contracted with Environmental Control Associates (ECA) of Cascade Drilling. The sampling plan was completed as follows:

- Shallow Groundwater Sampling (see Figure 6): Initially, we collected first encountered groundwater samples from eight (8) boring locations extending to depths of 32 to 36 feet bgs, including; three (3) upgradient (GW-5, 7, and 8), three (3) mid-property (GW-3, 4 and 6) at the location of, and just downgradient of the reported UST location, and two (2) downgradient property line locations (GW-1, and 2). Laboratory analyzed groundwater samples were intended to: 1) confirm the quality of groundwater flowing onto the Site from documented and potential upgradient chemical sources, 2) provide data at, and just downgradient of the reported UST location to evaluate whether or not a significant release has occurred as a result of the UST, and 3) provide data at the downgradient property line to determine whether or not a potential release may be migrating off-site All grab groundwater samples were submitted to a State-certified laboratory and analyzed for the following:
    - *Volatile Organic Compounds* (VOCs – full list) by EPA Method 8260B
    - *Fuel Fingerprint* by LUFT/8015B (includes diesel, gasoline, motor oil, etc.) [GW-1 & GW-4 only]
- **Deeper Groundwater Sampling (see Figure 7):** Based on results of the initial round of shallow (i.e., first encountered) groundwater sampling, a follow up groundwater sampling field investigation was completed in order to determine the magnitude and extent of potential impacts within the deeper regional water-bearing zone, which has been documented at depths below approximately 40 feet bgs at nearby chemical release investigation sites. Deeper groundwater sample locations were positioned at: 1) the upgradient property line (DGW-5), 2) approximately 20 feet upgradient of the reported UST location (DGW-4), 3) immediately downgradient of, and approximately 60 feet downgradient of the reported UST location (DGW-3 and DGW-2, respectively), and 3) at the downgradient property line (DGW-1). All grab groundwater samples were submitted to a State-certified laboratory for VOC analysis.

- Soil Sampling (see Figure 5): Soil samples collected from depths of approximately 4 to 32 feet bgs at continuously cored borings DP-3 and DP-4 were submitted for laboratory analysis. In addition, soil samples obtained from a depth of 5 feet bgs at soil vapor sample locations SV-1 and SV-2, which both encountered sample refusal (i.e., high vacuum conditions), were submitted for VOC analysis per sampling protocol. The soil samples were submitted to a State-certified laboratory and analyzed for the following:
    - *Volatile Organic Compounds* (VOCs) by EPA Method 8260B [all samples]
    - *Fuel Fingerprint* by LUFT/8015B (includes diesel, gasoline, motor oil, etc.) [DP-4 only at depths 24, 27 and 31 feet]
    - *Metals* by EPA Method 6010B [DP-4 at 4.5-feet]

  Deeper soil samples were also collected from the groundwater boring at DGW-4 and analyzed for VOCs.
- Soil Vapor Sampling (see Figure 5): We installed three (3) temporary soil vapor-sampling points inside the main building at locations corresponding to the reported UST location (SV-3) and at locations along the sanitary sewer lateral (SV-1 and SV-2). The soil vapor sampling points were installed at 5 feet below the ground surface and samples were collected using Summa canisters under vacuum. We were only able to obtain a sample from SV-3 (in permeable backfill material at the reported UST location) as the other two samples (SV-1 and SV-2) encountered *no flow conditions* (i.e., high vacuum in the low permeability silts/clays where "stripping" could potentially create a biased high result). As per protocol, a soil sample collected from the intended soil vapor sample depth (i.e., 5 feet bgs) from SV-1 and SV-2 locations were submitted for laboratory testing to evaluate for the presence of VOCs (see above). Sample SV-3 was submitted to a State-certified laboratory and analyzed for the following:
    - *Volatile Organic Compounds* (VOCs) by EPA Method TO-15

Drilling and sampling fieldwork was conducted in accordance with our *Field Methodology for Hydraulic Driven Probes* and our *Field Methodology for Active Soil Gas Sampling* (included in Appendix E). All boring locations were properly sealed with neat cement grout following sample collection in accordance with ACWD standards. Investigative waste generated during this drilling program (i.e., soil cuttings and decon water) were containerized in an appropriately labeled drum on-site. Proper disposal of these investigative wastes are currently being coordinated.

Boring locations are depicted on Figure 5. Field notes, photo documentation, and geologic logs are included in Appendix E.

8.2 Field Observations & Laboratory Analytical Results

8.3 Grab Groundwater Sampling

GW-1 through GW-8: During sampling, strong VOC odor was detected in GW-4 and faint odor was detected in GW-3. Tabulated results are provided in Table 2. The laboratory analysis found the following contaminates to be exceeding agency cleanup goals in at least one tested sample:

- **TCE** was detected in all samples at concentrations ranging from 29 to 6,600 ug/L, **all of which exceed the MCL of 5 ug/L.** The strongest detections were in GW-3 at 16-36 feet (1,100 ug/L) and GW-4 at 12-32 feet (6,600 ug/L)
- **cis 1,2-DCE** was detected in all samples at concentrations ranging from 2.0 to 1,400 ug/L. Samples **GW-1, GW-2, GW-3, GW-4, GW-6, and GW-7 exceeded the MCL of 6 ug/L.** The strongest detection was in GW-3 at 16-36 feet (1,400 ug/L).
- **trans 1,2-DCE** was detectable in 7 of the 8 samples at concentrations ranging from 0.19 to 280 ug/L. Samples **GW-3 and GW-4 exceeded the MCL of 10 ug/L.** The strongest detection was in GW-3 at 16-36 feet (280 ug/L).
- **Vinyl Chloride** was detectable in 3 of the 8 samples at concentrations ranging from 0.12 to 32 ug/L. Samples **GW-3 and GW-4 exceeded the MCL of 0.5 ug/L.** The strongest detection was in GW-3 at 16-36 feet (32 ug/L).
- **PCE** was detectable in 3 of the 8 samples at concentrations ranging from 0.29 to 26 ug/L. Sample **GW-4 exceeded the MCL of 5 ug/L,** with a detection of 26 ug/L.

A follow up, deeper, groundwater sampling was undertaken to determine whether concentrations dissipated at depth. While there were detectable levels of all the above contaminants spread among the deeper sampling points, only the following contaminants had detections above the regulatory MCL:

- **TCE** was detected in samples DGW-1 to 4 at concentrations ranging from 1.9 to 360 ug/L, with sample DGW-2 to 4 **exceeding the MCL of 5 ug/L.** The strongest detections were in GW-3 at 40-50 feet.
- **cis 1,2-DCE** was detected in all samples at concentrations ranging from 0.56 to 48 ug/L. Samples **DGW-1 to 3 and DGW-5 exceeded the MCL of 6 ug/L.** The strongest detection was in DGW-1 at 40-50 feet (1,400 ug/L).
- **Vinyl Chloride** was detectable in DGW-1 and 2 at concentrations ranging from 0.17 to 1.2 ug/L. Sample **DGW-1 exceeded the MCL of 0.5 ug/L.** The strongest detection was in GW-3 at 16-36 feet (32 ug/L)

Results of groundwater analysis confirmed that **there are significant VOC impacts in first encountered groundwater beneath the Site,** but also that it dissipates significantly at depth (see Figure 5 and Table 2).

Note: Boring GW-4 encountered non-native fill sand to a depth of approximately 4.5 feet below the ground surface (bgs), confirming the location of the removed UST. Very strong solvent odors were also observed at this location in the soil cores collected from approximately 28 to 32 feet bgs.

8.4 SOIL SAMPLING

DP-3, DP-4, DP-5, SV-1, and SV-2: Soil samples were submitted for lab analysis at multiple depths for the DP samples and at 5-ft bgs for the SV samples. Tabulated results are provided in Table 3 and 4. The laboratory analysis found the following contaminates to be exceeding agency cleanup goals in at least one tested sample:

- **TCE** was detected in all samples collected below 8-ft at concentrations ranging from 0.012 to 72 mg/Kg. Only sample **DP-4 at 31-ft exceeded the commercial Environmental Screening Level** (ESL)[7] **of 0.46 mg/Kg**, with a detection of 72 mg/Kg**.**
- **cis 1,2-DCE** was detected in all samples collected below 8-ft at concentrations ranging from 0.0013 to 0.4 mg/Kg. Only sample **DP-4 at 31-ft exceeded the commercial ESL of 0.19 mg/Kg**, with a detection of 0.4 mg/Kg**.**
- **Arsenic** was detected 5.7 mg/Kg in DP-4 at 4.5-ft, which exceeds the very low, risk-based thresholds of 0.31 mg/Kg. However, a recent study endorsed by the San Francisco Bay Regional Water Quality Control Board concludes that the naturally occurring background levels of Arsenic in the Bay Area is around 11 mg/kg[8]. Therefore, **the site has arsenic levels below the normal background levels**.

A follow up soil sampling was undertaken near upgradient of DP-4 to determine whether a source other than the former UST could have been the source of the contamination. Samples were collected at DGW-4 at 8, 16, 24, 28, and 32 feet bgs and the laboratory analysis found the following contaminates to be exceeding agency cleanup goals in at least one tested sample:

- **cis 1,2-DCE** was detected in all samples collected 16-ft and below at concentrations ranging from 0.0010 to 0.22 mg/Kg. Only the sample **at 32-ft exceeded the commercial ESL of 0.19 mg/Kg**, with a detection of 0.4 mg/Kg**.**

[7] Environmental Screening Levels (ESLs): From Screening for Environmental Concerns at Sites with Contaminated Soil and Groundwater (Interim Final, February 2016). California Regional Water Quality Control Board – San Francisco Bay Region. The ESLs are intended to provide guidance on whether remediation of detected contamination is warranted.

[8] The SF-RWQCB's Environmental Screening Levels (ESLs) website provides a reference document that calculated 11 mg/kg is the regional upper estimate for background arsenic (99th percentile) for undifferentiated urbanized flatland soils in the San Francisco Bay Region (source: Establishing Background Arsenic in Soil of the Urbanized San Francisco Bay Region, December 2011).

Results confirmed significant **concentrations of TCE, and to a much lesser extent cis, 1-2 DCE, that exceed commercial Environmental Screening Levels (ESLs)** in soils at a depth of 31 feet bgs in boring DP-4 where strong solvent odors were observed in the soil core. All other samples revealed concentrations of VOCs that were below ESLs. An additional sample, DGW-4, was collected upgradient sample from DP-4, which had No obvious soil impacts and revealed only a relatively low-level concentration **of cis, 1-2 DCE at 32 feet bgs that marginally exceeded commercial ESL**.

8.5 SOIL VAPOR SAMPLING

SV-3: Soil samples were submitted for lab analysis at 5-ft bgs for the SV samples. We attempted to sample soil vapor at three locations, however only sample, SV-3, had conditions that allowed for the collection of a soil vapor sample**.** Tabulated results are provided in Table 1.

- **TPH-Gasoline** range hydrocarbons were detected at 140,000 ug/m^3, which **exceed both the Residential and Commercial ESLs** set at 50,000 and 100,000 ug/m^3, respectively**.**
- **TCE** was detected at 25,000 ug/m^3, which **exceed both the Residential and Commercial ESLs** set at 240 and 3,000 ug/m^3, respectively**.**
- **PCE** had a concentration of 770 ug/m^3, which exceeded the Residential ESL set at 240 ug/m^3, but was **below commercial thresholds** of 2,100 ug/m^3**.**

Results of laboratory analysis confirmed elevated concentrations **of TCE and TPH Gasoline that exceed commercial ESLs** and concentrations of PCE that exceed residential ESLs.

All the associated laboratory reports and Chain-of Custody Documentation are included in Appendix F. Results are presented on Figures 5-7 and are tabulated on Tables 1-4.

This concludes our presentation of the analytical results from the Phase II soil-sampling program. Opinions regarding these results are presented in Section 10.3

9.0 DATA GAPS

One data gap was encountered during the course of this investigation. The policy of the City of Mountain View of not retaining records that are over five years old prevented the review of potentially important records, which is considered a data gap. The City maintained records pertaining to hazardous materials management at the facility, including a list of hazardous materials previously stored at the Site and whether those materials were properly handled.

10.0 FINDINGS & OPINIONS

These subsection(s) summarize the identified condition(s) and provide an opinion as to whether the condition is considered a *Recognized Environmental Condition (REC),* a *Controlled Recognized Environmental Condition (CREC),* a *Historical Recognized Environmental Condition (HREC)* or a *de minimis environmental condition*. Definitions for these terms are presented on page IV after the Table of Contents.

10.1 SUBJECT SITE

Our Site inspection, review of local, state and federal regulatory records, and communications with persons knowledgeable about the Site identified two (2) on-site, ***Recognized Environmental Conditions,*** which are summarized below.

- Reported Presence of Former Underground Chemical Storage Tank (UST): Interviews with two separate parties have independently confirmed knowledge of an underground chemical storage tank (UST), that was removed sometime during the previous decade, specifically:

    1. A former property manager who managed the most recent manufacturing operations that operated on the Site for 30-plus years (i.e., Telewave, a radio antenna manufacturer which operated in the 1980s-2010s); as well as,
    2. Persons familiar with Site operations (see *User Questionnaire,* Appendix A, and Section 6.4 for additional details).

    These interviews indicated a previous chipboard manufacturer operated at the site that may have used the UST to store solvents, however there is no record of tank installation, specific tank use, or closure. The Local permitting agency (City of Mountain View) retains files for only 5 years.

    Opinion: Given the business history of the Site, which included manufacturing operations that may have included a circuit board manufacturer, it is likely that the suspected underground chemical storage tank was used to store chemicals such as virgin/waste solvents, as suggested in the User Questionnaire. Should a leak have been the reason for its unpermitted removal, there is a strong potential for it to

negatively impact the quality of soils and/or groundwater beneath the Site. This is considered a *Recognized Environmental Condition,* particularly due to the lack of agency documentation regarding use and closure.

- Long-Term Manufacturing: The facility contained manufacturing operations for over 40 years that reportedly include the manufacture of radio equipment (Telewave) and some sort of computer chip/circuit board fabrication (Circo, Inc). Due to the lack of reviewable records regarding chemical use, storage and disposal, it is not clear how chemicals and wastes were maintained. This lack of permitting documentation is considered a *Recognized Environmental Condition.*

In addition, one *de minimis* condition was also identified at the Site.

- Historical Agricultural Land Use (Orchards): Historic aerial photos indicate the property was used for agriculture purposes during the 1950s and early 1960s.

Opinion: Historical agricultural operations in California are documented to include the use of persistent pesticides, which can persist in the environment and create an unacceptable health risk for certain land use scenarios (e.g., residential). However, because land use for the subject Site is intended to stay as commercial and encapsulated with paved surfaces, potential ingestion/inhalation impacts are considered a *de minimis* condition. Should land use transition to residential, pesticides screening in shallow soils would be recommended.

10.2 ADJOINING / SURROUNDING

Our review of local, state and federal regulatory records **identified one (1) Recognized Environmental Condition** near the Site, which is described below**.**

- Potential Offsite Contaminant Migration onto the Subject Site: Building records obtained from the City of Mountain View for the adjoining, upgradient property showed that a manufacturing sump was removed from that property in 1986.[9] The sump was part of the facility's Hazardous Materials storage shed that was located on the fence line immediately adjacent to the Site. Apparently, due to the nature of the sump, two closure soil samples were required and analyzed for metals and solvent compounds. The results contained detections of both PCE and TCE indicating some leakage into underlying-soils. However, no further actions were documented.

  In addition, there are two other significant and well-defined chlorinated solvent releases (TCE and PCE) that are being actively remediated 2 blocks west of the subject Site (Teledyne

[9]: Harris Corp, *Underground Tank Removal Permit Application*, 960 Linda Vista Drive, Mountain View, dated 4/1/1986.

and Spectra-Physics plumes). The subject Site is not situated within the lateral limits of the well-defined, groundwater plumes of those two releases. However, two closer properties (located northwest of the subject Site) detected soil vapor contaminants (TCE and PCE) that are attributed, in part, to the Teledyne solvent release, despite not being in direct path of that release plume (see section 5.1 for further discussion of soil vapor detections).

Note: The Teledyne and Spectra-Physics plumes have fiscally sound, responsible parties that are actively cleaning up the release in conjunction with the overseeing regulatory agency (i.e., Regional Water Quality Control Board). On-going work tasks include characterization studies on the lateral limits of the release, remedial pilot tests and remedial actions.

Opinion: The upgradient release of solvents along the adjoining southern property line (upgradient), as documented in 1986 sump closure sampling documents, has the potential to migrate into shallow groundwater beneath the Site, and is considered a ***Recognized Environmental Condition.***

In addition, a *Vapor Encroachment Condition* (VEC) review (Section 5.3), indicates there is some potential for vapor encroachment from both: 1) the documented release at the upgradient, property line sump; and 2) the vicinity solvent releases at the Teledyne/Spectra-Physics properties. This potential for vapor (soil gas) encroachment is considered ***Recognized Environmental Condition***.

11.0 CONCLUSIONS & RECOMMENDATIONS

11.1 PHASE I CONCLUSIONS

We have performed a standard of care, *Phase I Environmental Site Assessment* in conformance with protocols established in ASTM Practice E1527-13, for the subject property at 1155 Terra Bella Ave in Mountain View. There were no exceptions to, or deletions from, this practice (i.e. data gaps), as described in Section 9.0 of this report.

As noted above and as detailed in Section 10 of this report, this assessment identified four (4) *recognized environmental conditions (RECs)* in connection with the subject property, which include:

1) Former undocumented Underground Chemical Storage Tank (see *Site Map*, Figure 3)

2) On-site manufacturing operations using bulk chemicals with limited permitting regarding permitted storage, processing and waste disposal.

3) Potential contaminant migration onto the subject Site, from two potential off-site locations (see *Vicinity Map,* Figure 4):

   3a. Upgradient release of solvents just beyond the adjoining southern property line, as documented in 1986 sump closure.

3b. Vicinity solvent releases at the Teledyne/Spectra-Physics properties that are being actively remediated 2 blocks west of the subject Site.

In addition, one *de minimis* condition was identified that was related to the historical agricultural land use that may have used persistent pesticides. This *de minimis* condition not considered a REC due to the continued commercial use planned for this Site.

Based on the Phase I research findings, we recommended (and completed) a Phase II soil and groundwater assessment in order to confirm the environmental quality of soil, soil vapor, and groundwater beneath the Site. A summary of the Phase II sampling and testing is discussed in the following section

Phase II Assessment Conclusions

In order to address the four RECs identified from Phase I research (as described in Section 1.1, above) and determine whether a significant environmental liability resulting from chemical releases exists, we completed a Phase II soil, soil vapor and groundwater-sampling investigation. Results of the Phase II assessment confirm:

1. **Soil, shallow soil vapor and groundwater beneath the site have been impacted by a chemical release of volatile organic solvent compounds above regulatory threshold limits (specifically, TCE and associated degradation "daughter" products). Collected data indicates that the primary source of the release originated from a former underground chemical storage tank (UST) that was reportedly situated within the southeast portion of the site building (Figure 6).** Collected groundwater data also indicates:
   - A portion of the dissolved solvent plume present in the shallow, first water bearing zone (encountered at 15-30 ft bgs) is migrating off-site beneath Terra Bella Avenue (northward),
   - Dissolved solvent concentrations in the deeper water-bearing zone (at 40-50 ft bgs) are limited to a relatively small footprint that is confined beneath the Site itself (see isocontour maps, Figures 6 & 7).
   - **There also appears to be a lower magnitude, secondary source migrating onto the subject Site from an upgradient, off-site location.** An upgradient release of some solvent compounds to shallow soils is documented from a hazardous waste shed sump that was closed in 1986 at the adjoining property (southern property line). Solvent concentrations in borings drilled near the upgradient property line (GW-5, -7 and -8, Figure 6) suggests that a relatively low-concentration plume of TCE is migrating onto the subject Site from the neighboring property.

These preliminary Phase I/II findings indicate the following potential environmental liability exists:

- The soil vapor sampling data collected at the location of the reported UST suggests that there is a potential for a vapor intrusion concern, specifically with regard TCE, which has a very low

indoor air threshold concentration. However, the low permeability silts and clays that are encountered beneath the site can act as a remedial barrier to vapor intrusion as long as the source is removed. Expanded evaluation of soil vapor and indoor air is recommended to confirm site conditions. The results of the expanded evaluation will determine whether migration measures are warranted for either current site use (i.e., passive depressurization system), or future development (i.e., foundation vapor barriers).

- Downgradient property line borings GW-1 and 2 confirm that concentrations of solvent VOCs in first encountered groundwater exceeding *Maximum Contaminant Levels* and have migrated off-site beneath Terra Bella Avenue. Standard agency requirements will include delineation of the downgradient extent of the dissolved solvent plume.

Based on the results of the preliminary soil, soil vapor and groundwater analytical data, we recommend the following:

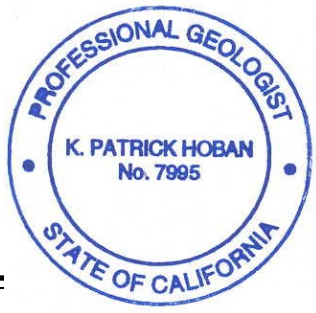
1. Because elevated concentrations of chemicals have been detected above regulatory screening thresholds, we recommend that the property owner submit a copy of sampling report to the overseeing regulatory agency for their review and comment (i.e., San Francisco Bay Regional Water Quality Control Board). Alternatively, the property owner can petition the Santa Clara County Department of Environmental Health (SCC-DEH) to into their *Voluntary Cleanup Program*, which allows SCC-DEH to take lead oversight of the contaminant release and investigation.
2. Completing indoor air sampling to determine whether or not indoor air quality has become impacted. This data will help determine whether or not corrective actions for indoor air quality will be required for future occupancy. In addition, further soil vapor assessment should be conducted to confirm the preliminary results presented in this Phase II study (i.e., complete additional vapor sampling to confirm relatively uniform no flow conditions exist across the site).
3. Conduct off-site, downgradient groundwater sampling within the first water bearing zone to confirm: 1) the lateral continuity of the water bearing zone, and 2) the extent of off-site impacts.

12.0 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT

This report and the associated work have been provided in accordance with the principles and practices generally employed by the local environmental consulting profession. This is in lieu of all other warranties, expressed or implied. This report has been prepared solely for our client. The assessment is provided so the client may make a more informed decision as to Site conditions. This report shall not be relied upon by or transferred to any other party or used for any other purpose. *Weber, Hayes and Associates* will not distribute this report to any regulatory agency without the consent by the User, unless required by law or court order.

This ESA is not a regulatory compliance audit or an evaluation of the efficiency of the use of any hazardous materials at the Site. Unless otherwise stated, no evaluation for the presence of asbestos-containing building materials, lead-based paint, urea-formaldehyde foam insulation, or other potentially hazardous building materials; methane; radon gas; lead in drinking water; or wetlands, is included in our assessment.

Our findings and opinions are based on information collected from regulatory agency files and lists, interviews, and Site conditions at the time of our Site reconnaissance. Note that our findings and opinions are based on information that we obtained on specific dates through records review, Site reconnaissance, and related activities. It is possible that other information exists or subsequently has become known, just as it is possible for conditions we observed to have changed after our observations.



The accuracy and thoroughness of any environmental assessment depend on a variety of factors and optimally will include soil and groundwater sampling. Weber, Hayes and Associates cannot and will not provide guarantees, certifications or warranties that the investigated property is or is not free of environmental impairment. Any person who is aware of any *recognized environmental conditions* of the Site or surrounding areas that are different from those described in the report should report them immediately to this office for evaluation as part of an additional scope of work.

Thank you for this opportunity to be of service. Should you have any questions or comments regarding this project, please contact us at our offices.

Respectfully submitted,

WEBER, HAYES AND ASSOCIATES

13.0 QUALIFICATION OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10[10] of this part.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

By _____

Pat Hoban
Senior Geologist

[10] ASTM Standard E 1527-13, X2.1.1 and Federal Register 40 CFR Part 312, §312.10:
Environmental Professional means:

(1) A person who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases…on, at, in, or to a property, sufficient to meet the objectives and performance factors...

(2) Such a person must:

(i) Hold a current Professional Engineer's or Professional Geologist's license or registration from a state, tribe, or U.S. territory (or the Commonwealth of Puerto Rico) and have the equivalent of three (3) years of full-time relevant experience; or

(ii) Be licensed or certified by the federal government, a state, tribe, or U.S. territory (or the Commonwealth of Puerto Rico) to perform environmental inquiries … and have the equivalent of three (3) years of full-time relevant experience; or

(iii) Have a Baccalaureate or higher degree from an accredited institution of higher education in a discipline of engineering or science and the equivalent of five (5) years of full-time relevant experience; or

(iv) Have the equivalent of ten (10) years of full-time relevant experience...

Reported Location of Former Underground Tank

GPR survey detected rebar reinforced concrete at this location, rather than wire mesh reinforced concrete which was detected in all other areas surveyed. This information coupled with our observation of a linear crack in the concrete suggest that this reported underground tank location is probably accurate.

Notes

1 = **Environmental Screening Levels (ESLs):** from *User's Guide: Screening for Environmental Concerns at Sites With Contaminated Soil and Groundwater*, set by the San Francisco Bay Regional Water Quality Control Board (Interim Final, Feb 2016) < http://www.waterboards.ca.gov/sanfranciscobay/water_issues/programs/ESL/ESL%20Workbook_ESLs_PDF_Rev2.pdf >. The ESLs are intended to provide quantitative risk-based guidance on whether further assessment or remediation of contamination is warranted. The ESLs used in this table were obtained from the above referenced document,"Tier 1 ESLs", based on shallow soils (<3m), groundwater is a current or potential source of drinking water.

2 = **US EPA Region 9 Indoor Air Regional Screening Levels (RSLs):** From *US EPA Regional Screening Levels for Indoor Air* (**https://www.epa.gov/risk/regional-screening-levels-rsls-generic-tables-november-2015,** revised Nov 2015) . The Indoor Air RSLs are divided by the US EPA's Recommended Vapor Attenuation Factor (from the US EPA's Recommended Vapor Attenuation Factor for Risk Based Screening of sub-slab soil gas [Table 6-1 in Final Guidance for Assessing and Mitigating the Vapor Intrusion Pathway From Subsurface Sources to Indoor Air, June 2015]) to calculate the Risk Level concentration appropriate for the specific sample collected (i.e., Sub-slab soil gas, "Near-source" exterior soil gas, Crawl space air, etc.).

3 = **CA DTSC Modified Air Screening Levels:** From the California Department of Toxic Substances Control (DTSC), Office of Human and Ecological Risk (HERO), *Human Health Risk Assessment (HHRA) Note Number 3, Table 3* , Jan 2016 < **https://www.dtsc.ca.gov/AssessingRisk/upload/HHRA-Note-3-2016-01.pdf** >. The Modified Air Screening Levels are divided by the DTSC's Recommended Vapor Attenuation Factor (0.05) to calculate the Risk Level concentration appropriate for the specific sample collected. Where Modified Air Screening Levels are not available, US EPA RSLs (see Note 2 above) are used with the DTSC attenuation factor.

ND = Analyte not detected above the laboratory Method Detection Limit (MDL).
NE = Not Established
-- = Sample was not analyzed for this constituent
PCE = Tetrachloroethene
TCE = Trichloroethene
TPH = Total Petroleum Hydrocarbons
cis- 1,2 DCE = cis-1,2 Dichloroethene
trans- 1,2 DCE = trans-1,2-Dichloroethene
< # = Compound not detected at or above the elevated detection limit, X.
BOLD = Analytical result above CA DTSC-Modified COMMERCIAL "Near Source" Threshold Limit.
^ = PQL and MDL are elevated due to sample dilution
BOLD = Analytical result above CA DTSC-Modified RESIDENTIAL "Near Source" Threshold Limit.
J = Value falls below the PQL and is therefore an estimated value

NOTES:

GW = Groundwater **DGW =** Deeper Groundwater Sample

1 = Water Quality Goals: Goals establised by the CRWQCB Central Coast Region based on State *Maximum Contaminant Levels* (Department of Health Services) or taste & odor threshold limits.

2 = Depths shown are not necessarily stabilized depth to groundwater. Boring logs show damp to moist, interbedded fine grained silts, clays and clayey sands to depths of 32 feet, with no saturated water bearing zones. Cased borings slowly porduce water.

3 = No MCL established for TPH as diesel or TPH as motor oil, instead, the ESL thresholds are listed in place of the MCLs.

BOLD = Indicates contaminant compound detected. **BOLD =** Indicates concentration exceeds Water Quality Goal.

J = Laboratory indicates a value between Method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative.

< # = Reporting limit elevated due to sample dilution and compound not detected at or above the Method Detection Limit (MDL),

ND = Not Detected **NE =** Not Established **bgs** = below ground surface

PCE = Tetrachloroethene **cis 1,2-DCE =** cis-1,2-Dichloroethene **1,1-DCE =** 1,1-Dichloroethene **1,1,1-TCA =** 1,1,1-Trichloroethane

TCE = Trichloroethene **trans 1,2-DCE =** trans 1,2-Dichloroethene **1,1-DCA =** 1,1-Dichloroethane

Notes

1 = **Environmental Screening Levels (ESLs):** from *User's Guide: Screening for Environmental Concerns at Sites With Contaminated Soil and Groundwater,* set by the San Francisco Bay Regional Water Quality Control Board (updated May 2016). **<http://www.waterboards.ca.gov/sanfranciscobay/water_issues/programs/ESL/ESL%20Workbook_ESLs_Interim%20Final_22Feb16_Rev3_PDF.pdf >** The ESLs are intended to provide quantitative risk-based guidance on whether further assessment or remediation of contamination is warranted. The ESLs used in this table were obtained from the above referenced document.

2= **CA DTSC Modified Soil Screening Levels:** From the California Department of Toxic Substances Control (DTSC), Office of Human and Ecological Risk (HERO), *Human Health Risk Assessment (HHRA) Note Number 3, Table 3* , Jan 2016 < **https://www.dtsc.ca.gov/AssessingRisk/upload/HHRA-Note-3-2016-01.pdf** >.

A = No established DTSC HERO Note 3 threshold value for the analyte. The Regional Screening Levels are referenced when no DTSC value is provided (see below for reference).
NOTE: The USEPA Regional Screening Levels (RSLs): from the *USEPA Region 9 RSL Tables* (updated November 2015) **<https://www.epa.gov/risk/regional-screening-levels-rsls-generic-tables-november-2015, revised Nov 2015>**. The RSLs are risk-based screening levels used for screening sites, calculating risk factors and potentially as cleanup goals once a site has been characterized.

<X or ND = Analyte not detected at or above the laboratory Method Detection Limit (MDL), X.

BOLD = Analytical result above Residential ESL or DTSC HERO Note 3 value.

BOLD = Analytical result above Commercial ESL or DTSC HERO Note 3 value.

*= Soil sample collected and anlyzed due to low flow vapor condtions (refusal) at this location originally targeted for soil vapor sampling.

NE = Not Established

J = Analyte Detected above Method Detection Limit (MDL) but below the PQL.

BOLD = Analyte Detected

Table 4

Soil Sample Analytical Results - Metals

1155 Terra Bella Avenue, Mountain View

All soil results are in milligrams per Kilogram (mg/Kg, parts per million)

Sample Information		Laboratory Results							
		Metals Analysis *Total Threshold Limit Concentration (TTLC) analysis by EPA Method 6010B*							
Sample ID	**Depth (feet below ground surface)**	**Arsenic [2]**	**Cadmium**	**Chromium[3]**	**Copper**	**Lead**	**Nickel**	**Zinc**	**Aluminum**
DP-4	4.5 ft	**5.7**	< 0.26 (MDL)	180	630	6.4	52	53	17,000
Laboratory's *Practical Quantitation Limit (PQL)*		1.0	0.5	0.5	1.0	2.5	0.5	2.5	5.0
Environmental Screening Levels [1] **Commercial-Industrial Land Use** (For Shallow Soils = < 10 ft)		***0.31***	***580***	***1,800,000***	***47,000***	***320***	***11,000***	***350,000***	***Not Established***

Notes

1 = **Environmental Screening Levels (ESLs):** from *User's Guide: Screening for Environmental Concerns at Sites With Contaminated Soil and Groundwater,* set by the San Francisco Bay Regional Water Quality Control Board (Final version, 2016). The ESLs are intended to provide quantitative risk-based guidance on whether further assessment or remediation of contamination is warranted.

2 = **Naturally Occuring Arsenic:** Note that Arsenic concentrations (and other metals) do occur naturally in the environment. Arsenic is a unique metal that can be present at naturally-occuring levels but still exceed the extremely low, agency thresholds for risk (threshold limit generated from toxicity studies). Naturally-occurring Arsenic concentrations in the Santa Cruz County generally range from 4-12 mg/kg.

3 = This ESL Screening threshold concentrations is based on detection of total Chromium III

ND = Analyte not detected above the laboratory Method Detection Limit (MDL).

- = Sample was not analyzed for this constituent

PCB = Polychlorinated biphenyl

MDL = Laboratory's mimimum detection level (lowest achievable concentration, based on high confidence level).

J = Laboratory reports that the detection value is between MDL and PQL, and should be considered to be an estimate with a high level of confidence.

BOLD =	Analytical result above Residential ESL.
BOLD =	Analytical result above Commercial ESL.

APPENDIX A

COLLECTED *PHASE I ESA* INFORMATION

- Site Inspection Checklist with Photo Sheets
- Land Use Questionnaire
- Interviewing Documentation

Weber, Hayes & Associates
Hydrogeology and Environmental Engineering
120 Westgate Drive, Watsonville, CA 95076

Phase I Environmental Site Assessment

Site Inspection Checklist

Objective: **To visually evaluate and document the extent of the target property(ies) for the likely presence of *recognized environmental conditions.* Photodocumentation gathered during the site inspection are appended at the end of this form.**

Site/Facility Name: Telewave

Site Address: 1155 Terra Bella Ave, Mountain View

Site Contact: John Clark, Heather, Frank

1. **Current Uses of the Property:** *To include (1) general description of the facility & commercial or industrial processes therein, (2) topography, (3) site improvements [# of buildings, size/age/condition], (4) occupants/vacancies and the nature of business operations, and (5) any indications of past site use.*

- The site is a single large building (180Ft x 80Ft) on a rectangular parcel in an industrial area of Mountain View, CA. There is also a small storage shed in the southeast corner of the lot that was used for misc storage.
- The company "Telewave" was a radio equipment production facility. Raw aluminum and other metals were etched, machined into specific parts and then assembled into radios. Etching was done using acids that were stored after use at one point (before 90's), but later were diluted and disposed of into sanitary sewer.
- Building was built in 1960's and is entirely paved except for a small grassy area in front of the building
- Very level site, currently unoccupied, but recently used as a doggie daycare
- neighbors are all industrial production buildings + offices.

180' x 80'

Project #: 2x620
Date: 7/14/2016
Inspector: Sean Abbey / Pat Hoban

API

2. **Site Infrastructure:**	Yes	No	Notes:
▪ Any wells, water tanks or water towers?	☐	☒	
▪ Boiler rooms?	☐	☒	
▪ Electrical transformers?	☐	☒	
▪ Septic System?	☐	☒	
▪ Drainage wells or dry wells?	☐	☒	

Note observations and data for heating sources, water supply source(s), solid waste disposal and electrical systems.

None observed

3. **Evidence of Hazardous Materials Storage & Use** *(check appropriate):*

	Yes	No
▪ Haz-mat storage area(s)? Location?	☒	☐
▪ Abandoned drums or containers?	☐	☒
▪ Aboveground Storage Tanks?	☐	☒
▪ Underground Storage Tanks?	☒	☐
▪ Fuel or Chemical Dispensing Equipment or vent piping?	☒	☐
▪ Pools of liquid? Characteristics?	☐	☒
▪ Sumps, oil/water separators and collection pits?	☐	☒
▪ Unusual Odors, staining or distressed vegetation?	☐	☒

- Hazardous materials, such as paints, acid for etching, and metals were stored on the site. According to Frank, only small, 15 gallon, containers were used at any one point.
- An underground tank was visible in the south portion of the facility interior, next to a pair of

restrooms. Potential a source of TCE.

HAZ-MAT CONTINUED:

- Venting equipment was present in the painting room to clear it of fumes

4. Exterior Observations:

	Yes	No
▪ Exterior surface coverings? *(describe condition, type, % native soils)*	☐	☐
▪ Paving patches/staining?	☐	☒
▪ Manholes/utility covers?	☒	☐
▪ Any stacks or HVAC units visible on roof?	☒	☐
▪ Mounds or depressions?	☐	☒
▪ Do surface water catch basins drain?	☐	☒
▪ Any ditches or drainages? *(If flow is present, identify the source)*	☒	☐

- About 95% of the facility is paved with either asphalt or concrete. Only exception is the small grassy area in front of the building on Terra Bella Ave.

~~- Interior of the Facility~~

- A metal cover went over an access point for sewer discharge. Several other utility related covers were present outside the facility (sewer, water, electricity, etc.)
- Concrete drain ditch in the parking lot for draining stormwater to storm drain grates

5. **Interior Observations:**

	Yes	No
▪ Maintenance Areas?	☒	☐
▪ Hydraulic equipment?	☐	☒
▪ Interior floor staining, cracking or patching?	☐	☒
▪ Interior floor drains? Outlet Sump?	☐	☒
▪ Interior floor integrity (good, satisfactory or poor)?	☐	☐

- Facility is split amongst many work areas for producing radio equipment. Part etching from raw materials, production and storage of equipment all occured indoors on solid, sealed, concrete floors.
- Floor appeared to be in excellent condition. No interior floor drains appeared to be present. Only outlets came from sinks that had been removed.

6. **Describe Adjoining Site Land Uses and Note Any Areas of Concern:**

- North: New building construction
- West: Vacant? Industrial production facility
- East: Industrial production facility + offices
- South: Industrial Production Facility + Offices

7. **Any inaccessible Areas of the Property:**

- None

ADDITIONAL INFORMATION OBTAINED & UTILIZED DURING SITE INSPECTION

	Yes	No
Photo Sheets	☒	☐
Hazardous Materials Management Plans (HMMP)	☐	☒ requested, but not yet received
Permits	☐	☒
Previous Reports/Inspections	☐	☒
Other	☐	☒

Phase I Environmental Site Assessment
User/Client Questionnaire

Overview: *Phase I Environmental Site Assessment (ESA)* standards[1] require that the party requesting this ESA (i.e., the **"user"**, or **client**), make a good faith effort to provide and/or obtain the following disclosure items, which are generally available during the property transaction escrow process:

- Reason for contracting this Phase I ESA
- Knowledge of any environmental leans or agency restrictions on the property
- Specialized knowledge of the property
- Any discounts to the property fair-market value associated with chemical spills or releases
- Commonly known ("reasonably ascertainable") information regarding chemical storage/use
- Available environmental reports

Please provide the following information to the best of your recollection/knowledge.

Site/Facility Name: Vacant, commercial property

Site Address: 1155 Terra Bella Avenue, Mountain View

Name/Title: _____

1. Reason for Performing this ESA *(check appropriate):*

O Lender: Property sale requirement for lender

O Buyer: Due diligence property screening by buyer.

O General Liability: "Landowner Liability Protections" (LLPs) as per Federal environmental laws

O Personal Comfort Level: Better understanding of land uses & potential environmental liabilities

O Other: INHERITANCE

2. Environmental Cleanup Liens *(check appropriate):*

Yes O **No** O Are you aware of any ***environmental liens*** placed on the property by a regulatory agency (Federal, State or Local)?

If yes, please provide details:

[1]: ASTM Standard E 1527-05 and EPA All Appropriate Inquiries (AAI) guidelines,

3. **Land-Use Limitations** (check appropriate):

Yes O No O Are you aware of any ***"Activity Land-Use Limitations"*** *(AULs)* placed upon the Site by Federal, State or Local regulatory agencies such as engineering or institutional controls?

If yes, please provide details:

4. **Specialized Knowledge of the User/Client** (check appropriate):

As the person or entity requesting this *Phase I ESA* ("user"), do you have any specialized knowledge or experience pertaining to the subject Site or nearby/adjoining property that would give you distinct knowledge of chemical usage and/or industrial processes at the subject Site?

Yes O No O Are you a current or former occupant of the Site?

Yes O No O Are you involved in the same type of business/industry, and are familiar with commercial/industrial processes or chemical storage

If yes, please provide details: PAST TENANT (30+ YEARS AGO)

HAD UNDERGROUND STORAGE TANK - TCE

5. **Comparison of Purchase Price to Fair Market Value** (check appropriate):

To the extent of your knowledge, does the requested purchase price of the subject Site reflect the fair market value of the property? If a discrepancy is present, have you considered whether the lower purchase price is due to environmental contamination believed to be or known to be present at the Site?

Yes O No O Does the property purchase price reflect a discounted value relative to fair market value?

Yes O No O If the property is being sold below fair market value, is the reason attributed to a known/perceived chemical release (i.e., contamination)

If yes, please provide details: N/A

6. "Reasonably Ascertainable Information" (brief description):

Are you aware of any ***commonly known*** or ***reasonably ascertainable information*** pertaining chemical storage/usage on the subject Site? Specifically:

a) Prior Land Use(s): Do you know previous land use(s) at the subject Site (land uses/businesses)?

CIRCUIT BOARD MANUFACTURER THAT USED TCE

b) Chemical Use or Storage: Do you know of any current or historical use/storage/generation of chemicals, fuels, or hazardous waste at the subject Site?

UNDER GROUND HOLDING TANK IN CENTER OF BUILDING NEAR HANDICAP BATHROOMS IN BACK SIDE

c) Chemical Releases: Are you aware of any reported or unreported chemical spills or releases that occurred at the subject Site? *[Current or Historical]*

UNDER GROUND TANK LEAKED

d) Environmental Clean-ups: Are you aware of any reported or unreported environmental cleanups that have occurred at the subject Site? *[Current or Historical]*

YES

7. Degree of Obviousness of Contamination:

Based on your knowledge of the property, are you aware of any obvious indicators that would suggest the presence (or likely presence) of contamination at the subject Site?

DRILL HOLES AROUND EDGE OF PROPERTY

8. **Helpful Documents:** Are you aware of existing reports (listed below) for the subject Site?

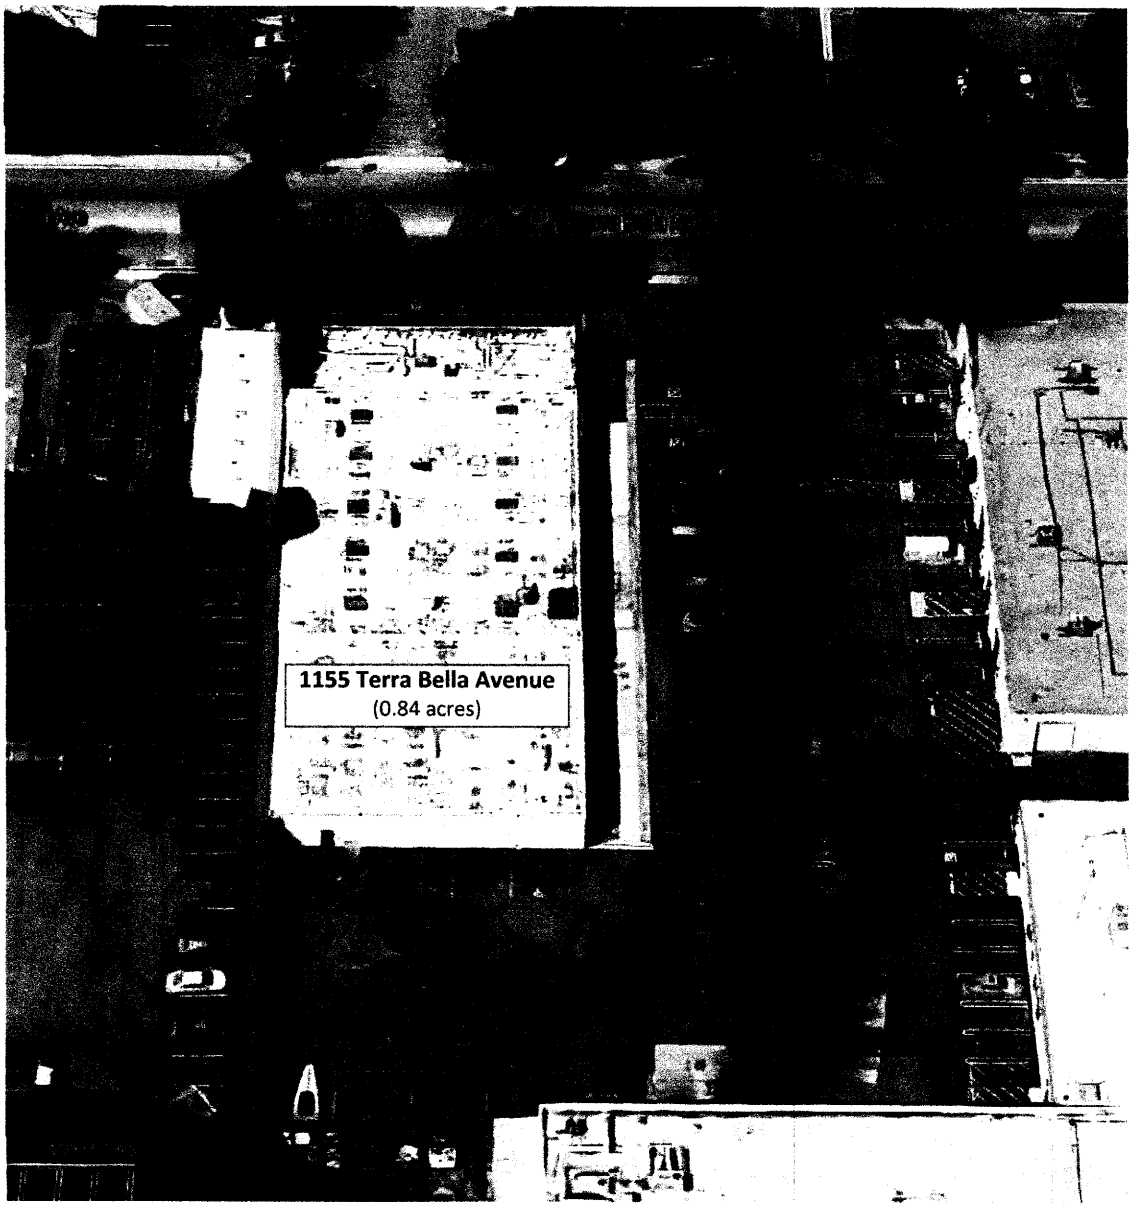
Yes	No	
X	o	Previous Phase I or Phase II ESAs YOU NOW HAVE
o	X	*Hazardous Materials Management Plans* (HMMPs) or Chemical Storage Inventories
o	X	Industrial Stormwater Monitoring Plans/Reports (SWPPPs or compliance reports)
o	X	Permitting or Documentation re: Aboveground or Underground Storage Tanks
o	X	Hazardous Waste Generator notices, disposal manifests, or compliance reports
o	X	Regulatory directives or *No Further Action (NFA) l*etters.

If yes to any of the above, please provide details (year, author/consultant if possible):

Additional Comments & Extra Space for Affirmative Answers?

CALL ALAN IF YOU HAVE QUESTIONS 408-921-0126

To the best of my knowledge I attest that the above information is true:



Signature: Roberta S. Bowman Date: 7/8/16

Title: Manager RL COLLINS PROPERTIES, LLC

Reference: Information & Definitions

As per **ASTM *Standard E 1527-05* and EPA *All Appropriate Inquiries* (AAI)**, the ***user*** (i.e. the party requesting this Phase I ESA), is required to provide a short list of items that are more readily available to the parties involved with the property transaction. This information is used to support the case for the *user* of the ESA to qualify for one of the *landowner liability protections* (LLPs) defenses under Federal environmental law.

> *"In order to qualify for one of the Landowner Liability Protections (LLPs[2]) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the 'Brownfields Amendments'), the user must provide the following information (if available) to the environmental professional [Weber, Hayes and Associates]. Failure to provide this information could result in the determination that 'all appropriate inquiry' is not complete."*

[2]: From ASTM E 1527-05: "*Landowner Liability Protections (LLPs)*, is the term used to describe the three types of potential defenses to Superfund liability in the EPA's *Interim Guidance Regarding Criteria Landowners Must Meet to Qualify for Bona Fide Prospective Purchaser, Contiguous Property or Innocent Landowner Limitations* under CERCLA Liability issued March 6, 2003."

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Environmental Remedial Testing were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

1155 TERRA BELLA AVE.
MOUNTAIN VIEW, CA 94043

COORDINATES

Latitude (North):	37.4079650 - 37° 24' 28.67''
Longitude (West):	122.0765630 - 122° 4' 35.62''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	581725.7
UTM Y (Meters):	4140326.8
Elevation:	40 ft. above sea level

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 03/07/2016 has revealed that there are 6 NPL sites within approximately 1 mile of the target property.

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 03/07/2016 has revealed that there are 3 SEMS sites within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/09/2015 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are 14 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal

Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 02/01/2016 has revealed that there are 17 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, and dated 03/14/2016 has revealed that there are 3 CA UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2015 has revealed that there are 2 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Summary Details:

Conditions at proposal April 10, 1985): Moffett Naval Air Station covers 8,700 acres in Sunnyvale, Santa Clara County, California. In the past, various solvents and sludges were disposed on-site into ponds and landfills

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

and onto the ground.As a result, soil and ground water on-site are contaminated. The major contaminants in ground water are volatile organic compounds. About 272,000 people depend on wells within 3 miles of the station as a source of drinking water. Moffett Naval Air Station is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. The Navy has completed Phase I records search) of the program and is beginning Phase II remedial investigation). Moffett Naval Air Station is in the South Bay Area of San Francisco. In October 1984, 19 non-Federal sites in the area were proposed for the NPL. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take site-specific action as necessary. Status July 22, 1987): In May 1985, the California Regional Water Quality Control Board adopted Waste Discharge Requirements for Moffett Naval Air Station.The requirements outline specific tasks and compliance dates Moffett must follow to define the full extent of contamination in soils and ground water. In April 1986, the Navy released the final report for the verification step of Phase II.Moffett is revising the quality assurance project plan and sample plan for the characteri ation step of Phase II. Within the boundaries of this Federal facility, including this specific site, there are no areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act. Therefore, this Federal facility site is being placed on the Federal section of the NPL.

Site Description: Moffett Field was continuously operated by the U.S. military after it was commissioned in 1933 to support the West Coast Dirigibles of the lighter than air (LTA) program until 1994. In 1939, a permit was granted to Ames Aeronautical Laboratory to use part of the station. In 1942, the station was returned to Navy control and was named Naval Air Station Moffett Field. In late 1942, the heavier than air (HTA) program was initiated and began to take precedence over the LTA program. In 1945, the HTA program was moved and Moffett Field was used as a major overhaul and repair base. In 1949, the station became home to the Military Air Transport Service Squadron. By 1950, Moffett Field was the largest naval air transport base on the West Coast, and in 1953 it became home to all Navy fixed-wing land-based antisubmarine efforts. A weapons department was formed on the base in 1954, and in February 1966 the base activated its high speed refueling facilities. During the station reorganization in 1973, it became the headquarters of the Commander Patrol Wings, US Pacific Fleet. During the 1980s and early 1990s, the mission of Moffett Field was to support antisubmarine warfare training and patrol squadrons, and it became the largest P-3 Orion patrol aircraft base in the world with nearly 100 aircraft. No heavy manufacturing or major aircraft maintenance was conducted, but a significant amount of unit and intermediate level maintenance occurred. In April 1991, Moffett Field was designated for closure, and on July 1, 1994, control of the base was transferred to National Aeronautics and Space Administration (NASA). Wastes have been generated at Moffett Field through maintenance operations, fuel management, and fire training since the early 1930s. Chemicals of potential concern include waste oils and jet fuels; solvents and cleaners; washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and PCBs. Wastes were disposed of in unlined landfills, drained through drainage ditches and unpaved areas, and stored temporarily in unlined wastewater ponds. In addition, some underground storage tanks (USTs) and sumps were found to have leaked petroleum hydrocarbons and fuels, and lesser amounts of waste oils and solvents. Environmental studies were initiated at Moffett Field in 1984. The Navy began conducting these environmental restoration activities as part of the Department of Defense Installation Restoration Program (IRP). The Navy conducted an initial assessment study (IAS) in 1984 to gather data on the past use and disposal of hazardous materials at the base. Nineteen sites were identified as potential sources of wastes, including nine

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

sites identified in the IAS and 10 sites added during subsequent investigations. Five additional sites were identified during field investigation in the early 1990s. The Environmental Protection Agency (EPA) proposed placing Moffett Field on the National Priorities List (NPL) in June 1986, and it was placed on the NPL in 1987. The Remedial Investigation and Feasibility Study (RI/FS) is coordinated through the August 1990 Federal Facility Agreement (FFA) with EPA and the State of California. The RI was implemented in two phases. The Phase I characterization was complete in August 1990. The Phase II investigations were initiated in 1990 to provide more detailed, site specific data. In October, 1992 EPA determined that the aquifers on the western side of Moffett Field were co-mingled with a regional volatile organic compound (VOC) plume emanating from the Middlefield-Ellis-Whisman (MEW) Superfund site south of Moffett Field. EPA determined that these aquifers were subject to the 1989 EPA Record of Decision (ROD) already written for the MEW site and would be remediated per the MEW ROD. Consequently, OU4 (West-side Aquifers) was deleted and OU5 (East-side aquifers) was modified to include all aquifers not part of the regional plume. In May 1989, the Navy developed a community relations plan (CRP). The OU5 RI report was released in August 1993. The OU5 FS report was released in August 1995 Moffett Field. The proposed plan for remediation of OU5 was released to the public in October, 1995. A public comment period was held from October 27, 1995 through November 30, 1995 with a public meeting on November 16, 1995. Moffett Field has been continuously operated by the U.S. military since it was commissioned in 1933. In 1945, Moffett Field was used as a major overhaul and repair base. In 1954, a weapons department was formed at the base, and then during the 1980s and early 1990s, the mission of Moffett Field was to support antisubmarine warfare training and patrol squadrons. No heavy manufacturing or major aircraft maintenance was conducted at Moffett Field, but a significant amount of unit- and intermediate-level maintenance occurred. In April 1991, Moffett Field was designated for closure as an active military base under the Department of Defense Base Realignment and Closure (BRAC) program. After closure, control of the base was transferred to the National Aeronautics and Space Administration (NASA), however, the Navy will continue with environmental restoration activities and remain responsible for remediating Navy contaminant sources. Wastes have been generated at Moffett Field through maintenance operations, fuel management, and fire training since the early 1930s. Chemicals of potential concern include waste oils and jet fuels; solvents and cleaners; washing compounds; and lesser amounts of gasoline, hydraulic fluids, asbestos, paints, pesticides, battery acid, and polychlorinated biphenyls (PCBs). Wastes were disposed of in unlined landfills, drained through drainage ditches and unpaved areas, and stored temporarily in unlined wastewater ponds. In addition, some underground storage tanks and sumps (many of them now removed) were found to have leaked petroleum hydrocarbons and fuels, and lesser amounts of waste oils and solvents. Environmental studies were initiated at Moffett Field in 1984 with an initial assessment of past use and disposal of hazardous materials. Nineteen sites were identified as potential waste sources. Remedial Investigation/Feasibility Study (RI/FS) work was coordinated through the August 1990 Federal Facility Agreement with EPA and the State. The Phase I RI characterization was completed in August 1990. The more detailed Phase II investigations identified the need to separate the site into six Operable Units (OUs). NAS Moffett Field is located in California, 35 miles south of San Francisco, 10 miles north of San Jose, and about 1 mile south of the southwestern edge of San Francisco Bay, in Santa Clara County, California. The facility encompasses 2,200 acres in Santa Clara County; the facility address is Moffett Field, California 94035. NAS Moffett Field is bounded by saltwater evaporation ponds to the north, Stevens Creek to the west, U.S. Highway 101

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

(Bayshore Freeway) to the south, and the Lockheed Martin Aerospace Center to the east. Several industrial facilities are located south of the Bayshore Freeway. In particular, a group of companies is located in a 0.5-square-mile area, bounded by U.S. Highway 101. Middlefield Road, Ellis Street, and Whisman Road (MEW). This area is known as the MEW Superfund study area and contains three Superfund sites. Moffett Field also borders the cities of Mountain View and Sunnyvale, California. The City of Sunnyvale is located south and east; the City of Mountain View borders Moffett Field on the south and west. The NASA Ames Research Center is located west and north of the runways. The U.S. military continuously operated NAS Moffett Fiefld as Naval Air NAS Sunnyvale from its date of commission in April 1933 until it was transferred to NASA on July 1, 1994. The Navy used the station as an air base until October 1935, when it was transferred to the Army Air Corps for use as a training base. During the Army's tenure, the National Advisory Committee for Aeronautics (NACA) established Ames Research Center in December 1939 on land adjacent to MFA. The base returned to Navy control and was renamed NAS Moffett Field in April 1942. By 1950, NAS Moffett Field was the largest naval air transport base on the West Coast and became the first all-weather air station. In 1958, NACA became NASA and Ames Research Center became the NASA Ames Research Center. Between 1973 and 1994, the mission of NAS Moffett Field involved support of antisubmarine warfare training and patrol squadrons. At one point, MFA was the largest P-3 base in the world, with nearly 100 P-3C Orion patrol aircraft. These aircraft were assigned to nine squadrons, supported by 5,500 military, 1,500 civilian, and 1,000 reservist personnel. No heavy manufacturing or major aircraft maintenance was conducted at NAS Moffett Field during the last mission; instead, mostly unit- and intermediate-level maintenance occurred. In April 1991, the station was designated for closure as an active military base under the U.S. Department of Defense (DoD) Base Realignment and Closure (BRAC) program. NASA assumed control of the base beginning in July 1994. Military housing units and associated facilities were transferred to Onizuka Air Force Base at the same time. Since the early 1980s, DoD has been identifying, evaluating, and controlling the spread of contaminants from historical hazardous waste sites as part of the Installation Restoration Program (IRP) at MFA. This work is coordinated through a Federal Facility Agreement with the U.S. Environmental Protection Agency (EPA) and the California Regional Water Quality Control Board, San Francisco Bay Region (RWQCB). The Navy is the lead agency for this work. The Navy and NASA signed a memorandum of understanding (MOU) on December 22, 1992, concerning environmental activities at the station. Under the MOU, the Navy will continue with environmental restoration and will remain responsible for remediating Navy contaminant sources. NASA is responsible for non-environmental operations and ongoing environmental compliance. NASA is planning to develop a world-class, shared-use educational and research and development campus at Moffett Field, California, in association with government entities, academia, industry, and nonprofit organizations. The NASA Ames Development Plan includes proposed development of four areas: -NASA Research Park: A 213-acre parcel located between Ames Research Center facilities, MFA, U.S. Highway 101, and the military housing area -Eastside/Airfield District: A 952-acre parcel that includes MFA and property located east of the airfield -Bay View District: A 95-acre parcel located north of the Ames Research Center facilities -Ames Research Center Facilities: A 240-acre parcel comprising the existing NASA Ames Research Center campus Surface water channels and ditches will be maintained for drainage purposes. Groundwater is not currently used at MFA. The only exception is water from a single well screened in the deep C aquifer (deeper than 155 feet below ground surface) used by NASA for fire fighting, composting, and agricultural purposes. This well is located in the northwestern corner of the Ames Research Center area. Public water is supplied to MFA from the Hetch Hetchy aqueduct

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

owned by the City of San Francisco. Groundwater is unlikely to be used as a water supply source in the future because of poor ambient quality and low formation yield to a well. NASA's draft Programmatic Environmental Impact Statement does not consider development of groundwater as a future water supply source. EPA proposed MFA as a National Priorities List (NPL) site in June 1986, and MFA was included on the NPL in July 1987. Inclusion on the NPL initiated the Remedial Investigation (RI) and Feasibility Study (FS) process, as required by the CERCLA. The Navy began environmental studies at MFA in 1984. Twenty sites were originally identified as IRP sites at MFA. Investigations during the station-wide RI identified six additional, potentially contaminated sites. Only three sites were assigned numbers (Sites 21 through 23), and none of the additional sites was designated as an operable unit (OU). The six additional sites, which were investigated under the CERCLA program, are: Site 21, Site 22, Site 23, the Weapons Storage Bunkers, the former Industrial Wastewater Flux Ponds, and an ephemeral wetland located at an improperly abandoned agricultural well. Later, the Navy defined four additional sites (Sites 25 through 28), originally included as parts of other sites under previously established OUs. These sites include Site 25, the Eastern Diked Marsh and stormwater retention pond (included in OU6); Site 26, the east side aquifers (included in OU5); Site 27, the Northern Channel (included in OU6); and Site 28, the west side aquifers. All of the sites identified were investigated under the CERCLA program. The current OU definitions and study areas are: OU1: Soils and groundwater at Sites 1 and 2 landfills OU2-East: Soils at Sites 3, 4, 6, 7, 10 (runways), 11, and 13 OU2-West: Soils at Sites 8, 10 (Chase Park), 14-North, 16, 17, and 18 OU5: Aquifers on the eastern side of MFA that are not part of the regional plume or OU1 (Site 26) OU6: Wetland areas, Sites 25 and 27 Petroleum Sites: Sites 5, 9, 12, 14-South, 15, 19, 20, and 24 Additional Sites: Sites 21, 22, 23, Weapons Storage Bunkers, upland soil areas, Human Health Risk Assessment (HHRA) Exposure Area 4158, former Industrial Wastewater Flux Ponds, and the abandoned former agricultural well. Human health and ecological risk assessments were conducted as part of the station-wide RI. As agreed upon by the Navy, EPA, and RWQCB, six sites were recommended for No Action (formally referred to as No Further Action) in the 2001 Final Addendum to the Revised Final Station-wide Feasibility Study Report and have been addressed separately from the IR program. These sites are: Site 23, Golf Course Fill Area 3; Weapons Storage Bunkers; Former Industrial Wastewater Flux Ponds; Former Abandoned Agricultural Well; Upland Soils (areas that support upland plant communities); Station-wide Remedial Investigation HHRA Exposure Areas 3782, 3785, 3974, 4090, and 4158. The addendum to the report provides additional documentation to support the No Action recommendations for these sites. Two of the sites, Industrial Wastewater Flux Ponds and Former Abandoned Agricultural Well, were closed with concurrences from EPA or Santa Clara Valley Water District; therefore, they were not considered further in the CERCLA process. Three of the HHRA exposure areas, 3782, 3785, and 3974, are being addressed as part of other remedial actions or maintenance programs. The remaining No Action Sites (Site 23-Golf Course Fill Area 3, Weapons Storage Bunkers, Upland Soils, HHRA Exposure Area 4090, and HHRA Exposure Area 4158) were included in the Proposed Plan. The Proposed Plan was made available to the public during a formal comment period from December 15, 2001 through January 28, 2002. A public meeting was held on January 10, 2002 and a responsiveness summary was issued on May 28, 2002. As the proposed plan and earlier versions of the ROD suggest, HHRA Exposure Area 4090 was listed as a No Action Site even though this area was included in the station-wide ecological assessment for wetland areas being addressed under a separate action (Site 27). Because there are potential risk issues associated with this site, the HHRA Exposure Area 4090 is no longer identified as a No Action Site in this ROD. Instead, this site will be addressed under the ongoing

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

Site 27 investigation. Site 23 Golf Course Fill Area: Site 23 is located on 2 acres, just south of the Northern Weapons Bunker area, in the western portion of the golf course. Golf Course Fill Area 3 is shown in aerial photographs taken in 1977 as one of several ponds on the golf course. Three of the ponds on the golf course were dry, and some debris was visible in the area of Golf Course Fill Area 3 in an aerial photograph taken in 1987. No information on the source of the material discarded in this area could be found. However, numerous small piles of soil, concrete, disaggregated asphalt, grass clippings, and mulch were identified during a site walk conducted in March 1994. In addition, some airplane parts, consisting of several pieces of aluminum (brought to Site 23 for disposal after a plane crashed at MFA), and some electronics equipment were found in the area. A magnetometer survey of this area was conducted in 1995. The results of the survey do not indicate that significant quantities of metallic materials were buried at the site. This evidence instead suggests that the area was never trenched and was used primarily for incidental disposal of excess soil and debris from the golf course. A No Further Action ROD was completed for Site 23 on August 19, 2002. Weapons Storage Bunkers: There are two groups of weapons storage bunkers: the Northern Weapons Storage Bunkers and the Southern Weapons Storage Bunkers. The weapons storage bunkers are located in two fenced areas in the northeastern portion of MFA, near the golf course. The Northern Weapons Storage Bunkers cover about 5 acres and include seven high-explosive magazines. The Southern Weapons Storage Bunkers cover about 10 acres and include nine high-explosive magazines. Each magazine consists of a heavy-gauge, corrugated steel arch that forms its roof and sides. The floors of the magazines are concrete, without drains. Each magazine is about 30 feet long, 20 feet wide, and 20 feet high. The magazines are covered with soil, forming long, earth-covered bunkers. Only one magazine in the Northern Weapons Storage Bunkers is still used and stores ammunition for the California Air National Guard. The Northern Weapons Storage Bunkers contained two diesel storage tanks. One of the tanks was removed in 1992, and the other tank was removed in 1994. No source for or evidence of contamination was identified in the Southern Weapons Storage Bunkers. A site inspection at the Northern Weapons Storage Bunkers in May 1994 found that the cement apron on the southern side was free of staining or significant cracking, and the buildings were released for unrestricted use. The high-explosive magazines at the Northern Weapons Storage Bunkers also were investigated for radioactive contamination; however, no radioactivity was found. An inventory revealed two diesel storage tanks in this area. Tank 22 was a 600-gallon underground storage tank that held diesel fuel and was removed in 1992; Tank 102, a 55-gallon aboveground storage tank that contained diesel fuel, was removed in April 1994. Tanks 22 and 102 are evaluated and closed separately from CERCLA sites under the policy and guidance of RWQCB. Closure of Tank 22 is documented in the Phase I petroleum sites closure report. Tank 102 is being investigated during the Phase III tank investigation. The Phase III investigation involves tanks that require further assessment for closure. This work may include document research, sampling, and geophysical surveys. The results of this work will be included in the Phase III petroleum sites closure report. No soil samples were collected at the Southern Weapons Storage Bunkers, because no source for, or evidence of, soil contamination was identified. Based on the Navy's stated historical use of the bunkers, the Southern Weapons Storage Bunkers were not tested for radioactive contamination before they were transferred to the California Air National Guard in 1994. There is no reason to suspect that these facilities were used for storage of radioactive materials. Groundwater in the area of the weapons storage bunkers is addressed separately as part of OU5. OU5 includes all aquifers that are not affected by the regional plume in groundwater. As part of the RI for OU5, data for groundwater samples from all wells on the eastern side

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

of the base, including monitoring wells near the weapons storage bunkers, were evaluated and are addressed in the OU5 ROD. A No Further Action ROD was completed for the Weapons Storage Bunkers August 19, 2002. Upland Soils: Upland soils are areas of MFA that support upland plant communities and include virtually all areas at the airfield that are not covered by ditches, marshes, or wetlands. Human activity has been significant in these areas. Certain areas of upland soils, such as open grassy areas and the edges of golf courses and recreational fields, are actively managed as burrowing owl habitat, but the majority of upland soils areas are either paved, landscaped, or have been altered substantially by land use during the last 100 years. A No Further Action ROD was completed for the Upland Soils area on August 19, 2002. Area 4158: HHRA Exposure Area 4158 is located slightly south, but almost adjacent to IRP Site 11 - Engine Test Stand Area. A No Further Action ROD was completed for the Human Health Risk Assessment Area 4158 on August 19, 2002. OU04 The Middlefield/Ellis/Whisman (MEW) Study Area is located in Santa Clara County in the city of Mountain View, California. The site is divided into a Local Study Area (LSA) and a Regional Study Area (RSA). The LSA consists of three National Priority List (NPL) sites (Fairchild, Intel and Raytheon), as well as several non-Superfund sites. The LSA encompasses about 1/2 square mile of the RSA and contains primarily light industrial and commercial areas, with some residential areas west of Whisman Road. The RSA encompasses approximately 8 square miles and includes Moffett Naval Air Station (an NPL site) and National Aeronautics and Space Administration (NASA) Ames Research Center, along with light industrial, commercial, agricultural, park, golf course, undeveloped land, residential, motel and school land uses. Various owners or occupants in the area around the intersections of Middlefield Road, Ellis Street, Whisman Road, and the Bayshore Freeway (U.S. Highway 101), are or were involved in the manufacture of semiconductors, metal finishing operations, parts cleaning, aircraft maintenance, and other activities requiring the use of a variety of chemicals. Site investigations at several of these facilities have revealed the presence of toxic chemicals in the subsurface soils and groundwater. To investigate the extent of groundwater contamination emanating from the LSA, and soil contamination at their respective facilities, Fairchild, Intel, and Raytheon performed a Remedial Investigation and a Feasibility Study of potential remedial alternatives under the direction of EPA. There are no natural surface drainage features within the Local Study Area. The nearest significant natural surface drainage features of the Regional Study Area are Stevens Creek to the west and Calabazas Creek to the east. Calabazas Creek is located approximately four miles east of the MEW Study Area. Stevens Creek forms the western boundary of the Regional Study Area. Both discharge into the San Francisco Bay. Surface water runoff from most of the RSA and all of the LSA south of the Bayshore Freeway is intercepted by a storm drain system and is discharged into Stevens Creek. To the north of the Bayshore Freeway, most of the runoff from Moffett Field Naval Air Station is collected by a storm drain system that ultimately discharges to Guadalupe Slough of San Francisco Bay. Runoff from the northwestern portion of Moffett Field discharges into Stevens Creek. The Local and Regional Study Areas are underlain by a thick sequence of unconsolidated sediments deposited into a structural depression. The sediments are comprised of alluvial fan, estuarine, and bay mud deposits. Repeated variations in sea levels resulted in a complex sedimentary sequence characterized by irregular interbedding and interfingering of coarse and fine grained deposits. Groundwater aquifers at the site are subdivided into shallow and deep aquifer systems, separated by a laterally extensive regional aquitard. The shallow aquifer system comprises aquifers and aquitards to a depth of approximately 160 feet below the surface. Within the shallow system four primary hydrogeologic aquiferzones have been identified based upon the occurrence of aquifer material and a similar depth below the

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

surface. The shallow aquifer system is comprised of the A-aquifer and the underlying B1-, B2- and B3- aquifers. The regional B-C aquitard separates the B3-aquifers from the C-aquifer and the deep aquifer system. Current groundwater flow in aquifer zones above the B-C aquitard is generally to the north, toward San Francisco Bay. During 1981 and 1982, preliminary investigations of facilities within the LSA indicated significant concentrations of contaminants in soil and groundwater. By 1984, the Fairchild, Intel and Raytheon sites, located within the LSA, were proposed for the NPL. By 1985, five companies within the LSA (Fairchild, Intel, Raytheon, NEC, and Siltec) initiated a joint investigation to document and characterize the distribution of chemicals emanating from their facilities. In April 1985, the California Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) adopted Waste Discharge Requirements (WDRs) for each of the five companies. The primary cause of the subsurface contamination was from leaking storage tanks and lines, and poor waste management practices. On August 15, 1985, Fairchild, Intel, and Raytheon entered into a Consent Order with the EPA, the RWQCB, and the California Department of Health Services (DHS). Since signing of the Consent Order, the three companies have carried out an extensive Remedial Investigation and Feasibility Study (RI/FS) of chemicals emanating from the LSA and soil contamination at their respective facilities. Work has been performed under the supervision of EPA, the RWQCB, DHS, and the Santa Clara Valley Water District (SCVWD). Prior to and during the site investigation, the companies have been conducting interim cleanup activities at the site. These interim remedial actions include tank removals, soil removal and treatment, well sealing, construction of slurry walls, and hydraulic control and treatment of local groundwater. NEC and Siltec declined to enter into the Consent Order and were placed under RWQCB enforcement authority. The three companies followed an approved Quality Assurance and Quality Control (QA/QC) Plan and approved Sampling Plans. In addition, split samples were collected by EPA from selected wells and these results were compared with the companies' sampling results. EPA determined that the companies' data quality was adequate for the purpose of the RI/FS. The MEW Remedial Investigation Report was concluded in July, 1988. The draft Feasibility Study and EPA's Proposed Plan were presented to the community for review and public comment in November, 1988. In May 1989, Special Notice letters for the Remedial Design/Remedial Action (RD/RA) Consent Decree were sent out to the five (5) original companies and twelve (12) other Potentially Responsible Parties (PRPs). The Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) was the lead agency until April 1985, when the Board referred the five companies to EPA for cleanup under Superfund. In May, 1985, EPA sent general notice letters, pursuant to Section 106 of CERCLA, to the five companies. NEC and Siltec chose not to participate in the RI/FS negotiations and were referred back to the RWQCB. In August 1985, Fairchild, Intel, and Raytheon signed an Administrative Order on Consent with EPA, to conduct an RI/FS of the MEW area. The RWQCB and California Department of Health Services were cosignees of the Consent Order. The Consent Order and Work Plan called for a comprehensive groundwater investigation of the MEW area and site specific (source) investigation at Fairchild, Intel, and Raytheon. The RWQCB issued Waste Discharge Requirements (WDRs) for NEC and Siltec which paralleled the Consent Order schedule and requirements. During the course of the RI/FS, EPA gathered new information and evaluated existing information concerning other Potentially Responsible Parties (PRPs). During December 1987 and January 1988, EPA issued twenty-four (24) RCRA 3007/CERCLA 104 information request letters to various other parties in the MEW area. In July 1988, EPA issued a RCRA 3013 Unilateral Order to GTE to begin an investigation of its property, to determine if the company had contributed to the MEW groundwater plume. After evaluating the 3007/104 response letters, EPA sent General Notice Letters to seventeen (17) PRPs in September 1988. An

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

initial PRP meeting was sponsored by EPA in October 1988, to explain the Superfund process to the noticed PRPs. EPA issued seven (7) additional General Notice and/or information request letters in March 1989. EPA subsequently issued Special Notice Letters for conducting the selected remedies in May 1989. A Record of Decision addressing OU04 of the Moffett Naval Air Station was completed in June 1989. Cleanup actions are being taken at the Site under the 1989 Record of Decision (ROD) to restore groundwater to its potential beneficial use, which is designated as drinking water. Note that the groundwater at the Site is not currently being used for drinking water or other domestic purposes. The MEW Site is not located in an environmentally sensitive area. Based on EPA's updated understanding of the way chemicals can potentially migrate from the subsurface soil and groundwater to the indoor air, EPA requested the Potentially Responsible Parties (PRPs) for the Middlefield-Ellis-Whisman (MEW) groundwater contamination - the MEW Companies, U.S. Navy, and National Aeronautics and Space Administration (NASA) - to evaluate the potential vapor intrusion pathway into buildings overlying shallow trichloroethylene (TCE) groundwater contamination at the MEW Site. During 2003 through 2008, the MEW Companies, NASA, U.S. Navy, and EPA collected over 3,000 air samples from 47 commercial buildings and 20 residences within the Vapor Intrusion Study Area. The indoor air vapor intrusion investigation included the following types of samples: indoor air, outdoor ambient air, pathway air, crawlspace air, and sub-slab soil gas. Indoor air samples were collected in the breathing zone (approximately 3 to 5 feet above floor level) in occupied or potentially occupied areas. Pathway samples were collected in areas where potential conduits (such as penetrations through slab, drains, utility lines or vaults) into the building were observed that might provide a direct route for volatile organic compound (VOC) vapor migration into the building. Outdoor ambient air samples were collected immediately outside the building, including near the air ventilation system air intake, for comparison to indoor air to evaluate the potential contribution of VOCs from outdoor air to indoor air. Additionally, EPA outdoor reference and MEW/NASA background outdoor air samples were collected at distances of 0.25 to 1.5 miles away from the MEW Site to assess background levels of VOCs in the general area. The indoor air results were compared to (1) short-term health-based screening levels; (2) long-term health-based screening levels, and (3) outdoor ambient air. During the Supplemental Remedial Investigation, EPA used an interim long-term TCE indoor air screening level of 2.7 micrograms per cubic meter (ug/m3) for commercial buildings and 1 ug/m3 for residential buildings. Subsequent to the Supplemental Remedial Investigation, EPA established interim TCE indoor air action levels (now TCE indoor air cleanup levels) of 5 ug/m3 for commercial buildings and 1 ug/m3 for residential buildings. EPA also assessed the vapor intrusion pathway using multiple lines of evidence. The types of information used include building surveys, chemical use, operations, historical facility and property information, site geology and hydrogeology, and subsurface and air sampling information and conditions (groundwater, soil gas, sub-slab soil gas, crawlspace, pathway samples), chemical ratios, and tracer compounds, to determine whether the indoor air concentrations were attributable to subsurface Site contamination and not other sources, such as consumer products or outdoor background air sources. The Supplemental Remedial Investigation results also support the following conclusions: Indoor air results indicate there are no immediate or short-term health concerns. All indoor air concentrations are below the screening criteria for acute and short-term health-based screening criteria (Agency for Toxic Substances Disease Registry [ATSDR] Minimal Risk Levels). Therefore, EPA's focus is whether trichloroethylene (TCE) and other Site chemicals of potential concern in indoor air pose an unacceptable risk of chronic health effects from long-term exposure (30 years for residential exposure and 25 years for non-residential exposure). TCE in indoor air was

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

detected above EPA's interim long-term TCE indoor air screening level in 17 commercial buildings and three residences within the Vapor Intrusion Study Area. Where discrete mitigation measures (e.g., sealing conduits, enhanced mechanical ventilation, air purifiers, sub-slab vapor control systems) were implemented, indoor TCE concentrations were reduced to below the interim screening level. Increasing air exchange rates generally resulted in decreasing indoor air TCE concentrations. Vapor intrusion resulting in concentrations above interim long-term indoor air screening levels appears more likely in commercial buildings when ventilation systems are not providing sufficient air exchanges with outside air in all or part of a building. Buildings overlying elevated groundwater concentrations appear to have a greater likelihood of indoor air TCE concentrations exceeding the TCE screening level, but actual indoor air concentrations are also dependent on other building factors such as air ventilation system operations, building configuration, and preferential pathways into the building. The highest TCE indoor air concentrations were found in a building with a basement, where there was direct contact with groundwater (644 National Avenue in the MEW Area). Elevated concentrations were also found in a NASA building, where the ventilation system introduced air from beneath the raised floor into the building (N210 in the Moffett Field Area). A Record of Decision Amendment addressing vapor intrusion at Operable Unit 04 of Naval Air Station Moffett Field was completed in August 2010. OU 6 - Site 25: Moffett Field is located in Santa Clara County, 1 mile south of San Francisco Bay, California's largest estuary, in the Santa Clara Valley Basin. Tidal wetlands in the southern portion of San Francisco Bay provide habitat to support a wide variety of birds, fish, and invertebrates, including several threatened and endangered species. Historically, tidal salt marshes and mud flats covered extensive areas of the southern portion of the bay, including the northern portion of Moffett Field. Most of these wetlands, however, have been eliminated or greatly altered. Site 25 is approximately 230 acres in size and is located in the northern portion of Moffett Field, adjacent to the southern arm of the bay. Levees constructed in the late 19th and early 20th centuries for commercial salt production currently prevent bay water from reaching Site 25. Site 25 is comprised of the eastern diked marsh, including the stormwater settling basin, and the stormwater retention pond. The stormwater retention pond is divided into the western portion (owned by Midpeninsula Regional Open Space District) and the central and northeastern basins (both managed by the National Aeronautics and Space Administration [NASA]). The eastern diked marsh and all portions of the stormwater retention pond are hydraulically connected. Site 25 has been part of the stormwater management system at Moffett Field since 1953. Stormwater previously flowed through the former Lindbergh Avenue ditch then discharged into the northeastern corner of the eastern diked marsh. The eastern diked marsh is a brackish marsh that is seasonally saturated, but rarely filled to capacity with standing water. Currently, stormwater in the western portion of Moffett Field is carried via underground conduits then drains to a settling basin at Site 25. Sediment suspended in the stormwater settles in the basin, where it is subsequently excavated. From the settling basin, the water flows overland northward through the eastern diked marsh to the stormwater retention pond. The eastern diked marsh is connected to the central basin of the stormwater retention pond by a culvert under North Perimeter Road. The central basin is, in turn, connected to the western and northeastern portions of the stormwater retention pond by breaches in the levees. The stormwater retention pond is seasonally flooded with 1 to 5 feet of standing water, but is mostly dry in the summer. A portion of the stormwater retention pond contains water year round because it receives treated groundwater from the West-Side Aquifers Treatment System. Stormwater from the western portion of Moffett Field previously flowed through the Lindbergh

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

Avenue ditch and then discharged into the northeastern corner of the eastern diked marsh. This stormwater management system is no longer in use. In 1991, NASA redesigned the stormwater management system to carry stormwater in underground conduits to a settling basin; after the sediment settles, the water discharges to the eastern diked marsh. Previous investigations determined that most of the contaminated sediment is located near the former outfall of the Lindbergh Avenue ditch and near the settling basin discharge in the eastern diked marsh. Sources of contamination identified for Site 25 included: the runway landfill (Site 1 - remedy selected in the Record of Decision [ROD] dated August 1997); the engine test stand area (Site 11 - remedy selected in ROD dated December 1994); a sump and oil and water separator (Site 15 - petroleum site); Hangar 1 (Site 29 - currently under investigation by Navy); horizontal conduits, including stormwater discharge lines that may have carried chemically contaminated groundwater; historical use of pesticides; and various soil areas contaminated with polychlorinated biphenyls (PCBs) (referred to as upland source areas to be addressed separately, not as part of this ROD). The eastern diked marsh and the stormwater retention pond are currently part of NASA's stormwater management system. Both are covered with surface water only part of the year, except for a small portion of the stormwater retention pond that holds water year round because treated groundwater from the West-Side Aquifers Treatment System (WATS) is discharged to this portion of the pond. The eastern diked marsh currently provides seasonal wetland habitat for a variety of wildlife, including threatened and endangered species. The potential future reuse could be somewhat different than the current use. The Midpeninsula Regional Open Space District is interested in restoring its portion of Site 25 to tidal marsh. NASA favors a plan to create a managed pond with its portion of Site 25. Under a managed pond scenario, one portion of the site would be a tidal marsh (providing salt marsh habitat); the central and northeastern basins would function as stormwater retention ponds that would be managed to contain water throughout the year (open water habitat); and the eastern diked marsh would continue to provide seasonal wetland habitat. Regardless of the selected future use, Site 25 will be remediated such that it will be available for unlimited use and unrestricted exposure, including use as a tidal marsh and managed pond, when the remedy selected in this ROD has been completed. A ROD for Operable Unit 06 (Site 25) was completed in December 2009. OU 7 The Site 22 Landfill is located in the northeastern corner of MFA. The Site 22 Landfill covers approximately 9.4 acres and contains an estimated total refuse (waste) volume of 92,000 cubic yards. The site was used as an active landfill from 1950 through 1967. The refuse is believed to consist primarily of domestic waste, as confirmed through exploratory trenching. Results of environmental investigations indicate that in some places, the waste is located beneath the groundwater table, while in others, waste is located near the surface (above the groundwater table). The Site 22 Landfill now underlies holes 6 and 7 of a golf course, which is operated by the United States Air Force. The fairway and putting greens for these holes are located on top of the landfill. The rough for holes 6 and 7, which contains trees, is on the sloped part of the landfill. Soil borings and trenching indicate that most of the landfill is covered with approximately 1.5 feet of soil; however, soil thickness in a few areas is less than 1 foot. The Site 22 Landfill was characterized in the Final Station-wide RI Report and the Additional Sites Investigation Phase II Draft Final Report. Because operating records do not exist for the Site 22 Landfill, the history of the landfill was researched by studying aerial photographs and historical maps of the area and interviewing base personnel. This review indicated that the landfill was active from 1950 to 1967. Base personnel reported that Site 22 was used as a municipal landfill after the landfill at Site 2 was closed. Visual characterization of waste excavated at Site 2 confirmed that Site 2 contained primarily domestic waste;

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

therefore, it was expected (and later confirmed) that the Site 22 Landfill also contained domestic waste. In 1973, the Site 22 Landfill was converted into holes 6 and 7 of the MFA golf course. In April 1998, an additional investigation was initiated to provide supplemental information about the Site 22 Landfill and its surrounding area. As part of this additional investigation, exploratory trenches were dug to further evaluate the vertical and horizontal extent of refuse within the landfill. The exploratory trenching uncovered municipal waste such as old tires, newspapers, vacuum tubes, and shampoo bottles. Based on the results of the trenching, the extent of the landfill was estimated to be approximately 9.4 acres, and the volume of refuse was estimated at approximately 92,000 cubic yards. The Air Force operates and maintains the golf course located in the northeast corner of the facility, which encompasses the Site 22 Landfill. The golf course has been maintained and operated for over 30 years, and there are no plans to change the land use of this area. It is therefore, likely that the Site 22 Landfill will remain part of the golf course. The selection and screening of remedial alternatives was thus conducted based on the premise that continued use as a golf course is the most likely future land use scenario, which has been confirmed with NASA personnel. A ROD addressing OU 7 was completed in June 2002. OU 8: Site 27 includes the Northern Channel, related ditches that drain into the Northern Channel, the berms along either side of the Northern Channel, and the debris pile near the Building 191 lift station. The Northern Channel is located near the northeastern boundary of the former NAS Moffett Field. Historically, the Northern Channel has received stormwater runoff from the former NAS Moffett Field and NASA Ames Research Center. Portions of the Northern Channel that are owned by Lockheed, Cargill Salt, and the Santa Clara Valley Water District extend eastward, approximately 5,500 feet beyond the boundary of the former NAS Moffett Field. The areas that make up Site 27 are summarized below: -Northern Channel and Berms: Nearly 2 miles long, the Northern Channel receives stormwater from the eastern portion of the former NAS Moffett Field. Water in the channel flows east, approximately 1 mile beyond the boundary of the former NAS Moffett Field into Lockheed Channel. The Northern Channel flows by gravity at this termination point through a pipe to the terminus of the Lockheed Channel, which runs parallel to the eastern end of the Northern Channel. The two channels are separated by a levee. Water from the terminus of Lockheed Channel is pumped into the Moffett Channel, which drains into Guadalupe Slough and eventually into San Francisco Bay. The Northern Channel provides brackish surface water habitat of moderate value to wildlife. The surface area of the channel is about 9 acres; its bottom substrate is sediment, and the banks are fill material. The width of the channel is 40 to 50 feet, but increases to 70 feet at the western end; the channel is about 10,000 feet long, and the bottom of the channel lies approximately 2.8 feet below mean sea level. The north levee is made of compacted hard clay and is approximately 5 feet high (above the water level in the channel), with flat surfaces and steep side slopes. The slopes of the bank are moderately eroded with loose surface material that supports a moderate amount of plants. The south levee is also made of compacted clays and supports a greater diversity of vegetation. Wildlife surveys have detected the presence of the western pond turtle, various plants, and a wide variety of shore birds and waterfowl in the area.
-Marriage Road Ditch: Located east of the runways, Marriage Road Ditch divides the golf course at the former NAS Moffett Field. The ditch extends about 2,300 feet, and the bottom of the ditch is 5 to 6 feet below mean sea level. Water flowing in Marriage Road Ditch is perennial and portions of the ditch are lined with concrete. Surface water from the east apron area and from the storm drains in and around Hangars 2 and 3 discharges into the ditch. Marriage Road Ditch receives additional runoff from the southern two-thirds of the runways and the golf course east and west of the ditch. Surface water from

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

Marriage Road Ditch drains into North Patrol Road Ditch. During the rainy season, surface water from Marriage Road Ditch is occasionally pumped directly into the Northern Channel to prevent flooding during storms. The probable source of contamination in Marriage Road Ditch is historical surface water runoff from storm drains. These storm drains collected runoff from the paved and unpaved areas around Hangars 2 and 3 and conveyed it to Marriage Road Ditch. The ditch provides habitat for insects, worms, snails, and the western pond turtle. Several species of plants grow in and along the sides of the ditch. -Patrol Road Ditch: Patrol Road Ditch (also known as the East Patrol Road Ditch) is a surface drainage feature that runs 2,100 feet along the eastern boundary of the former NAS Moffett Field; the bottom of the ditch is about 5 to 6 feet below mean sea level. The ditch is part of the storm drain system at the former NAS Moffett Field. Its flow in the southern end is intermittent and depends on rainfall. The northern end of the ditch receives regular runoff from irrigation of the golf course and contains water year round. Surface water from Patrol Road Ditch flows into North Patrol Road Ditch through a culvert during periods of high water; water from the ditch is occasionally pumped directly to the Northern Channel during winter rainstorms. The probable source of contamination is surface water runoff into the storm drains that feed into Patrol Road Ditch. During the wet season, the northern end of the ditch provides open water and emergent vegetation. During the dry season, the southern end consists of habitat similar to upland areas. Several species of birds have been identified in Patrol Road Ditch. -North Patrol Road Ditch: This ditch runs 4,300 feet along the North Patrol Road, parallel to and south of the Northern Channel. The western portion of the ditch is lined with concrete, lies about 5 to 6 feet below mean sea level, and generally contains water year-round. The North Patrol Road Ditch carries surface water from east to west toward the Building 191 lift station. The North Patrol Road Ditch is an integral part of the storm drain system at Moffett. North Patrol Road Ditch receives stormwater from Marriage Road Ditch, Patrol Road Ditch, and the golf course. Surface water flow through the North Patrol Road Ditch is intermittent and depends on rainfall. The banks of the ditch are defined and are made of fill material and emergent vegetation but represent poor wetland habitat. Species observed here include ducks, doves, burrowing owls, and squirrels. -Debris Pile: The debris pile is located north of the Building 191 lift station at the western end of the Northern Channel, between the north bank of the channel and south bank of the U.S. Fish and Wildlife Service Diked Ponds. The pile consists of about 10,000 cubic yards of dredged sediment from the Northern Channel and construction debris from the 1950s to 1990s.

Ownership of the Northern Channel and related areas within Site 27 is divided among NASA, Lockheed, U.S. Fish and Wildlife Service, Santa Clara Valley Water District, Cargill Salt, and the City of Sunnyvale. NASA owns the southern berm along the northern boundary of the former NAS Moffett Field and a portion of the property where the debris pile is located. In addition, NASA owns the Marriage Road Ditch, the Patrol Road Ditch, and the North Patrol Ditch. Lockheed owns the southern berm along the northern boundary of its property and a small portion of the Northern Channel. Cargill Salt owns the remainder of the berm, the Northern Channel, and the remainder of the area where the debris pile is located. U.S. Fish and Wildlife Service purchased the saltwater evaporation ponds adjacent to Site 27 from Cargill Salt in 2003. The City of Sunnyvale owns ponds and a publicly owned treatment works located near the eastern end of the Northern Channel. In addition, Sunnyvale leases a portion of the berms for hiking and biking trails. In April 1991, the Base Realignment and Closure Commission voted to (1) decommission the former NAS Moffett Field, (2) transfer naval operations from the former NAS Moffett Field to other naval facilities, and (3) transfer most of the former NAS Moffett Field property to the NASA Ames Research Center. The areas south and west

MOFFETT NAVAL AIR STATION (Continued) **1000228683**

of Site 27 are part of the former NAS Moffett Field. Current tenants include the U.S. Army, the U.S. Air Force, and the California Air National Guard. Current uses include airfield operations, military facilities, and NASA research facilities. The former NAS Moffett Field has a fully functional federal airport and maintains facilities for military personnel and their families, including housing, commissary, clinic, service station, tennis courts, and a golf course. The tidal salt marsh and mud flats north and northeast of the former NAS Moffett Field were diked more than 50 years ago and were formerly used as commercial saltwater evaporation ponds. Cargill Salt, the former owner, sold the ponds to the U.S. Fish and Wildlife Service in 2003.

Stormwater drainage is expected to be the future use of the Northern Channel and associated ditches, as it has been for the last 50 years. Remedial alternatives were selected and screened based on the premise that continued use for stormwater drainage is the most likely future land use scenario. Existing beneficial uses of groundwater, including municipal and domestic, industrial process, and industrial and agricultural water supply, are listed in the Basin Plan. Concentrations of total dissolved solids in groundwater in the area of Site 27 do not meet criteria in U.S. Environmental Protection Agency classification guidelines for a potential source of drinking water. According to the Basin Plan, the beneficial uses for surface water near the site are freshwater/estuarine habitat and wildlife habitat. A Record of Decision (ROD) addressing Operable Unit 08 at the NAS Moffett Field site was completed in July 2005.

Summary Details:
Conditions at proposal October 15, 1984): Intel Corp. manufactured semiconductors at a plant in Mountain View, Santa Clara County, California, between 1968 and 1981. At that time, the facility occupied 2 acres and was

INTEL CORPORATION (Continued) **1000203455**

surrounded by residential areas, office buildings, and other semiconductor-manufacturing plants. Monitoring wells on the site are contaminated with trichloroethylene, xylene, vinyl chloride, and 1,1- and trans-1,2-dichloroethylene, according to analyses conducted by a consultant to Intel. Contamination is believed to have resulted from leaking underground solvent tanks. About 270,000 people depend on wells within 3 miles of the site as a source of drinking water. Since early 1982, Intel hasbeen pumping ground water and treating it by carbon adsorption. The company intends to implement additional cleanup activities, including the installation of a system to pump and treat contaminated ground water and excavation of soil beneath the underground storage tanks, which were previously removed. The company is working with the California Regional Water Quality Control Board CRWQCB) to determine the full extent of the contamination. This is one of 19 sites in the SouthBay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status June 10, 1986): Intel has removed approximately 4,600 cubic yards of contaminated soil and has installed four wells to pump and treat contaminated ground water. CRWQCB has issued Waste Discharge Requirements to the company. The requirements are the board s legal mechanism for regulating activities at facilities under its jurisdiction. On August 15, 1985, EPA issued a CERCLA Administrative Order on Consent to Intel Corp. s Mountain View Plant, as well as to Fairchild Camera s and Raytheon Corp. s Mountain View Plants. The order calls for the three companies to conduct a joint remedial investigation/feasibilitystudy of the area to determine the type and extent of contamination and identify alternatives for remedial action.

Site Status Details:
- NPL Status: Final
- Proposed Date: 10/15/1984

CERCLIS Site Alias Name(s):

INTEL CORPORATION (Continued) **1000203455**

Alias ID: 101
Alias Name: INTEL CORPORATION
Alias Address: Not reported
CA
Alias ID: 102
Alias Name: INTEL CORP. (MOUNTAIN VIEW PLANT)
Alias Address: 365 E MIDDLEFIELD RD
MOUNTAIN VIEW, CA 94040
Alias Comments: Not reported
Site Description: The Middlefield/Ellis/Whisman (MEW) Study Area is located in Santa Clara County in the city of Mountain View, California. The site is divided into a Local Study Area (LSA) and a Regional Study Area (RSA). The LSA consists of three National Priority List (NPL) sites (Fairchild, Intel and Raytheon), as well as several non-Superfund sites. The LSA encompasses about 1/2 square mile of the RSA and contains primarily light industrial and commercial areas, with some residential areas west of Whisman Road. The RSA encompasses approximately 8 square miles and includes Moffett Naval Air Station (an NPL site) and National Aeronautics and Space Administration (NASA) Ames Research Center, along with light industrial, commercial, agricultural, park, golf course, undeveloped land, residential, motel and school land uses. Various owners or occupants in the area around the intersections of Middlefield Road, Ellis Street, Whisman Road, and the Bayshore Freeway (U.S. Highway 101), are or were involved in the manufacture of semiconductors, metal finishing operations, parts cleaning, aircraft maintenance, and other activities requiring the use of a variety of chemicals. Site investigations at several of these facilities have revealed the presence of toxic chemicals in the subsurface soils and groundwater. To investigate the extent of groundwater contamination emanating from the LSA, and soil contamination at their respective facilities, Fairchild, Intel, and Raytheon performed a Remedial Investigation and a Feasibility Study of potential remedial alternatives under the direction of EPA. There are no natural surface drainage features within the Local Study Area. The nearest significant natural surface drainage features of the Regional Study Area are Stevens Creek to the west and Calabazas Creek to the east. Calabazas Creek is located approximately four miles east of the MEW Study Area. Stevens Creek forms the western boundary of the Regional Study Area. Both discharge into the San Francisco Bay. Surface water runoff from most of the RSA and all of the LSA south of the Bayshore Freeway is intercepted by a storm drain system and is discharged into Stevens Creek. To the north of the Bayshore Freeway, most of the runoff from Moffett Field Naval Air Station is collected by a storm drain system that ultimately discharges to Guadalupe Slough of San Francisco Bay. Runoff from the northwestern portion of Moffett Field discharges into Stevens Creek. The Local and Regional Study Areas are underlain by a thick sequence of unconsolidated sediments deposited into a structural depression. The sediments are comprised of alluvial fan, estuarine, and bay mud deposits. Repeated variations in sea levels resulted in a complex sedimentary sequence characterized by irregular interbedding and interfingering of coarse and fine grained deposits. Groundwater aquifers at the site are subdivided into shallow and deep aquifer systems, separated by a laterally extensive regional aquitard. The shallow aquifer system comprises aquifers and aquitards to a depth of approximately 160 feet below the surface. Within the shallow system four primary hydrogeologic aquiferzones have been identified based upon the occurrence of aquifer material and a similar depth below the surface. The shallow aquifer system is comprised of the A-aquifer and the underlying B1-, B2- and B3- aquifers. The regional B-C aquitard separates the B3-aquifers from the C-aquifer and the deep aquifer system. Current groundwater flow in aquifer zones above the B-C aquitard is generally to the north, toward San Francisco Bay. During 1981 and 1982, preliminary investigations of facilities within

INTEL CORPORATION (Continued) **1000203455**

the LSA indicated significant concentrations of contaminants in soil and groundwater. By 1984, the Fairchild, Intel and Raytheon sites, located within the LSA, were proposed for the NPL. By 1985, five companies within the LSA (Fairchild, Intel, Raytheon, NEC, and Siltec) initiated a joint investigation to document and characterize the distribution of chemicals emanating from their facilities. In April 1985, the California Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) adopted Waste Discharge Requirements (WDRs) for each of the five companies. The primary cause of the subsurface contamination was from leaking storage tanks and lines, and poor waste management practices. On August 15, 1985, Fairchild, Intel, and Raytheon entered into a Consent Order with the EPA, the RWQCB, and the California Department of Health Services (DHS). Since signing of the Consent Order, the three companies have carried out an extensive Remedial Investigation and Feasibility Study (RI/FS) of chemicals emanating from the LSA and soil contamination at their respective facilities. Work has been performed under the supervision of EPA, the RWQCB, DHS, and the Santa Clara Valley Water District (SCVWD). Prior to and during the site investigation, the companies have been conducting interim cleanup activities at the site. These interim remedial actions include tank removals, soil removal and treatment, well sealing, construction of slurry walls, and hydraulic control and treatment of local groundwater. NEC and Siltec declined to enter into the Consent Order and were placed under RWQCB enforcement authority. The three companies followed an approved Quality Assurance and Quality Control (QA/QC) Plan and approved Sampling Plans. In addition, split samples were collected by EPA from selected wells and these results were compared with the companies' sampling results. EPA determined that the companies' data quality was adequate for the purpose of the RI/FS. The MEW Remedial Investigation Report was concluded in July, 1988. The draft Feasibility Study and EPA's Proposed Plan were presented to the community for review and public comment in November, 1988. In May 1989, Special Notice letters for the Remedial Design/Remedial Action (RD/RA) Consent Decree were sent out to the five (5) original companies and twelve (12) other Potentially Responsible Parties (PRPs). The Regional Water Quality Control Board - San Francisco Bay Region (RWQCB) was the lead agency until April 1985, when the Board referred the five companies to EPA for cleanup under Superfund. In May, 1985, EPA sent general notice letters, pursuant to Section 106 of CERCLA, to the five companies. NEC and Siltec chose not to participate in the RI/FS negotiations and were referred back to the RWQCB. In August 1985, Fairchild, Intel, and Raytheon signed an Administrative Order on Consent with EPA, to conduct an RI/FS of the MEW area. The RWQCB and California Department of Health Services were cosigners of the Consent Order. The Consent Order and Work Plan called for a comprehensive groundwater investigation of the MEW area and site specific (source) investigation at Fairchild, Intel, and Raytheon. The RWQCB issued Waste Discharge Requirements (WDRs) for NEC and Siltec which paralleled the Consent Order schedule and requirements. During the course of the RI/FS, EPA gathered new information and evaluated existing information concerning other Potentially Responsible Parties (PRPs). During December 1987 and January 1988, EPA issued twenty-four (24) RCRA 3007/CERCLA 104 information request letters to various other parties in the MEW area. In July 1988, EPA issued a RCRA 3013 Unilateral Order to GTE to begin an investigation of its property, to determine if the company had contributed to the MEW groundwater plume. After evaluating the 3007/104 response letters, EPA sent General Notice Letters to seventeen (17) PRPs in September 1988. An initial PRP meeting was sponsored by EPA in October 1988, to explain the Superfund process to the noticed PRPs. EPA issued seven (7) additional General Notice and/or information request letters in March 1989. EPA subsequently issued Special Notice Letters for conducting the selected remedies in May 1989. A Record of Decision addressing OU01 of the Intel Corp. Site was

INTEL CORPORATION (Continued) **1000203455**

completed in June 1989. EPA is now changing the June 9, 1989 ROD by specifying final cleanup standards rather than just goals. EPA is making this change because it has determined that there is insufficient information at this time to invoke a waiver to ARARs. However, EPA continues to recognize that it is always possible that the chosen remedy will be demonstrated to be unattainable. Therefore, EPA recognizes that if data are generated that demonstrate that the selected remedy cannot be achieved, EPA may need to reconsider its decision embodied in the ROD. An Explanation of Significant Differences addressing Operable Unit 01 of the Intel Corporation Site was completed in September, 1990. An Explanation of Significant Differences addressing Operable Unit 1 at the Intel Corp. (Mountain View Plant) site was completed in April 1996. Cleanup actions are being taken at the Site under the 1989 Record of Decision (ROD) to restore groundwater to its potential beneficial use, which is designated as drinking water. Note that the groundwater at the Site is not currently being used for drinking water or other domestic purposes. The MEW Site is not located in an environmentally sensitive area. Based on EPA's updated understanding of the way chemicals can potentially migrate from the subsurface soil and groundwater to the indoor air, EPA requested the Potentially Responsible Parties (PRPs) for the Middlefield-Ellis-Whisman (MEW) groundwater contamination - the MEW Companies, U.S. Navy, and National Aeronautics and Space Administration (NASA) - to evaluate the potential vapor intrusion pathway into buildings overlying shallow trichloroethylene (TCE) groundwater contamination at the MEW Site. During 2003 through 2008, the MEW Companies, NASA, U.S. Navy, and EPA collected over 3,000 air samples from 47 commercial buildings and 20 residences within the Vapor Intrusion Study Area. The indoor air vapor intrusion investigation included the following types of samples: indoor air, outdoor ambient air, pathway air, crawlspace air, and sub-slab soil gas. Indoor air samples were collected in the breathing zone (approximately 3 to 5 feet above floor level) in occupied or potentially occupied areas. Pathway samples were collected in areas where potential conduits (such as penetrations through slab, drains, utility lines or vaults) into the building were observed that might provide a direct route for volatile organic compound (VOC) vapor migration into the building. Outdoor ambient air samples were collected immediately outside the building, including near the air ventilation system air intake, for comparison to indoor air to evaluate the potential contribution of VOCs from outdoor air to indoor air. Additionally, EPA outdoor reference and MEW/NASA background outdoor air samples were collected at distances of 0.25 to 1.5 miles away from the MEW Site to assess background levels of VOCs in the general area. The indoor air results were compared to (1) short-term health-based screening levels; (2) long-term health-based screening levels, and (3) outdoor ambient air. During the Supplemental Remedial Investigation, EPA used an interim long-term TCE indoor air screening level of 2.7 micrograms per cubic meter (ug/m3) for commercial buildings and 1 ug/m3 for residential buildings. Subsequent to the Supplemental Remedial Investigation, EPA established interim TCE indoor air action levels (now TCE indoor air cleanup levels) of 5 ug/m3 for commercial buildings and 1 ug/m3 for residential buildings. EPA also assessed the vapor intrusion pathway using multiple lines of evidence. The types of information used include building surveys, chemical use, operations, historical facility and property information, site geology and hydrogeology, and subsurface and air sampling information and conditions (groundwater, soil gas, sub-slab soil gas, crawlspace, pathway samples), chemical ratios, and tracer compounds, to determine whether the indoor air concentrations were attributable to subsurface Site contamination and not other sources, such as consumer products or outdoor background air sources. The Supplemental Remedial Investigation results also support the following conclusions: Indoor air results indicate there are no immediate or short-term health concerns. All indoor air concentrations are

INTEL CORPORATION (Continued) **1000203455**

below the screening criteria for acute and short-term health-based screening criteria (Agency for Toxic Substances Disease Registry [ATSDR] Minimal Risk Levels). Therefore, EPA's focus is whether trichloroethylene (TCE) and other Site chemicals of potential concern in indoor air pose an unacceptable risk of chronic health effects from long-term exposure (30 years for residential exposure and 25 years for non-residential exposure). TCE in indoor air was detected above EPA's interim long-term TCE indoor air screening level in 17 commercial buildings and three residences within the Vapor Intrusion Study Area. Where discrete mitigation measures (e.g., sealing conduits, enhanced mechanical ventilation, air purifiers, sub-slab vapor control systems) were implemented, indoor TCE concentrations were reduced to below the interim screening level. Increasing air exchange rates generally resulted in decreasing indoor air TCE concentrations. Vapor intrusion resulting in concentrations above interim long-term indoor air screening levels appears more likely in commercial buildings when ventilation systems are not providing sufficient air exchanges with outside air in all or part of a building. Buildings overlying elevated groundwater concentrations appear to have a greater likelihood of indoor air TCE concentrations exceeding the TCE screening level, but actual indoor air concentrations are also dependent on other building factors such as air ventilation system operations, building configuration, and preferential pathways into the building. The highest TCE indoor air concentrations were found in a building with a basement, where there was direct contact with groundwater (644 National Avenue in the MEW Area). Elevated concentrations were also found in a NASA building, where the ventilation system introduced air from beneath the raised floor into the building (N210 in the Moffett Field Area). A Record of Decision Amendment addressing vapor intrusion at Operable Unit 01 of the Intel Corp. (Mountain View Plant) Site was completed in August 2010.

Environmental Interest/Information System
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

INTEL CORPORATION (Continued) **1000203455**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Summary Details:

Conditions at proposal October 15, 1984): Teledyne Semiconductor has manufactured semiconductors on a 1-acre site in Mountain View, Santa Clara County, California, since 1962. In December l982, Teledyne reported to the California Regional Water Quality Control Board CRWQCB) that soil and ground

TELEDYNE SEMICONDUCTOR (Continued) **1000201854**

water near an underground storage tank were contaminated with solvents, including trichloroethylene. An investigation in June 1984 revealed that the contaminants had migrated to the northand affected approximately 50 private domestic wells. Local agencies and the company have provided alternative sources of drinking water for the affected residences. About 116,000 people depend on wells within 3 miles of the site as a source of drinking water. The company is working with CRWQCB to determine the extent of the contamination and to develop interim hydraulic controls to prevent further migration of the contaminants. The facility received Interim Status underSubtitle C of the Resource Conservation and Recovery Act RCRA) when the company filed Part A of a permit application. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxicchemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status February 1986): CRWQCB, in conjunction with EPA and the California Department of Health Services, is considering various response actions at the site. This site remains in proposed status until EPA implements the appropriate elements of its final policy for placing RCRA-related sites on the NPL and then applies the policy to this site. Status July 22, 1987): Subsequent investigation revealed that this site is not subject to the Subtitle C permitting requirements of RCRA. Its score on the Ha ard Ranking System, which EPA uses to evaluate sites for the NPL, is above the cutoff point of 28.50, and EPA received no information that prevents placing the site on the NPL. Therefore, it is being placed on the NPL. Teledyne is planning on pumping the contaminated ground water in the upper aquifer to the surface for subsequent treatment.

Alias ID: 101
Alias Name: TELEDYNE SEMICONDUCTOR
Alias Address: 1300 TERRA BELLA AVE
MOUNTAIN VIEW, CA 94043
Alias Comments: Not reported
Site Description: The Study Area has been divided into the following three areas based on the

TELEDYNE SEMICONDUCTOR (Continued) **1000201854**

sources of contamination, the extent of contamination in the ground water and geographic location: Teledyne Semiconductor, Inc. 1300 Terra Bella Avenue, Mountain View, California: Teledyne Semiconductor, Inc. (Teledyne) has owned and operated a semiconductor manufacturing facilit at 1300 Terra Bella Avenue since 1962, (Figure 2). The southern half of the facility was built in 1962 and the northern half of the building was added in 1966. Spectra-Physics, Inc., 1250 West Middlefield Road, Mountain View, California: Spectra-Physics is an active manufacturer of lasers and associated components which as operated two of its divisions, Laser Products and Optics, in the City of Mountain View since 1961. Seven of the nine buildings in Spectra-Physics' Mountain View facility are bounded by West Middlefield Road, Terra Bella Ave, and Shoreline Boulevard (formerly Stierlin Road) (Figure 2). The other two buildings are on the north side of Terra Bella Avenue. Teledyne/Spectra-Physics Combined Study Area: The Teledyne/Spectra-Physics Combined Study Area (the "Study Area") encompasses the full extent of the groundwater plume and is generally bounded by Permanente Creek to the west, the Cith of Mountain View dewatering trench to the north, Armand Avenue to the east, and Teledyne and Spectra-Physics facilities to thesouth (Figure 1). The Study Area is located in the Santa Clara Valley which is a gently-sloping alluvial plain, flanked by the Diablo Range to the east-southeast and the Santa Cruz Mountes to the west-southwest. The Study Area is located twoard the center of the valley. The Santa Cruz Mountains are located several miles southwest of the Study Area. The San Francisco Bay is located approximately 3 miles north of the Study Area. The Study Area consists of a mixture of commercial/industrial buildings (about 57 percent), residential land use (about 8 percent), and public buildings and land uses (about 35 percent). The Study Area contains a network of paved streets with sidewalks and landscaping. There are two open spaces within the Study Area: one is the play ground and softball field associated with the Crittenden Middle School immediately west of the on-site areas, and the other is the open space adjacent to the present City of Mountain View landfill and Shoreline Amphitheater. Ground water zones at the Study Area are divided into an Upper Aquifer Zone and a Deep Aquifer Zone (Figure 3). The Upper Aquifer Zone is divided into the Shallow Zone and the Intermediate Zone. The Shallow Zone is about 10 feet thick, and generally occurs between the depths of 10 to about 30 feet below ground surface. The Intermediate Zone is about 10 to 15 feet thick, generally occurring between the depths of 35 to 70 feet below ground surface. The Upper Aquifer Zone and the Deep Aquifer Zone are separated by a Confining Zone composed primarily of silt which varies in thickness from about 50 to 150 feet. The Deep Aquifer Zone is generally more than 150 feet below ground surface. Groundwater elevations in the Study Area indicate a northerly flow direction in the Upper Aquifer Zone. Elevations in the Shallow and Intermediate Zone sediments demonstrate an upward hydraulic gradient between the two zones. Groundwater elevations within the Study Area also show an upward hydraulic gradient from the Deep Aquifer to the Upper Aquifer. History of Site Activities Teledyne has operated a semiconductor manufacturing facility at its Mountain View facility since approximately 1963. Teledyne installed two 1400 gallon below-grade sumps at their site in 1962 and 1966, respectively. Prior to 1980, the sumps were used for acid neutralization and waste Trichloroethene (TCE) collection. Neither sump has contained TCE since 1980 and the two sumps are no longer in service. A 2,000 gallon underground waste flammable solvent tank (Tank A) was installed in 1975 and removed in 1982. It was used to store waste isopropyl alcohol, xylene and acetone. Teledyne also used Trichloroethane (TCA) and other Volatile Organic Compounds (VOCs) at the facility. All underground solvent handling activities were discontinued in 1980 and all chemicals are currently stored above-ground. Since approximately 1963, Spectra-Physics has manufactured lasers and associated components at its Mountain View facility. Spectra-Physics

TELEDYNE SEMICONDUCTOR (Continued) **1000201854**

previously used five underground sumps as part of its industrial wastewater disposal system. One 50 gallon and four 1000 gallon underground sumps were installed between 1968 and 1977. Rinsewaters were discharged through these sumps to the sanitary sewer for the primary purpose of pH and flow equalization. All but one of the sumps were removed in 1987. The remaining sump is primarily used for settlement of solids. Spectra-Physics used TCE, TCA, Freon-113 and other volatile organic compounds (VOCs) in its manufacturing processes. History of Site Investigations In 1982, Teledyne and Spectra-Physics submitted Facility Questionnaires to the California Regional Water Quality Control Board (RWQCB) staff describing their underground neutralization systems, sumps, and tanks. Based on these submittals, staff required the initiation of a remedial investigation (RI) at Teledyne in 1982 and Spectra-Physics in 1984. The RI has been ongoing for the last eight years. Teledyne and Spectra-Physics have jointly and separately implemented interim remedial actions since remedial investigations were initiated. History of Enforcement Actions Teledyne and Spectra-Physics are on the National Priorities List (NPL). The sites have been regulated by the RWQCB Orders since. 1986. The summary of enforcement history for each of the sites is as follows: Teledyne - February 1986 - Order No. 86-9, Waste Discharge Requirements - June 1986 - Teledyne Semiconductor site is added to the NPL - September 1986 - Cleanup and Abatement Order No. 86-011 - January 1987 - Cleanup and Abatement Order No. 87-002 - January 1989 - Order No. 89-019, Site Cleanup Requirements Spectra-Physics - February 1986 -Order No. 86-10, Waste Discharge Requirements - September 1986 - Cleanup and Abatement Order No. 86-012 - January 1987 - Cleanup and Abatement Order No. 87-003 - June 1988 - Spectra-Physics site proposed for NPL - January 1989 - Order No. 89-020, Site Cleanup Requirements A Record of Decision addressing OU1 of the Teledyne Semiconductor Site was completed in March, 1991.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE WASTE

. Waste code: D002
. Waste name: CORROSIVE WASTE

. Waste code: D007
. Waste name: CHROMIUM

. Waste code: D008
. Waste name: LEAD

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT

Corrective Action Summary:
Event date: 07/01/1984
Event: CA074HI

Event date: 07/01/1984
Event: CA029SF

Event date: 07/01/1984
Event: CA Prioritization, Facility or area was assigned a high corrective action priority.

Event date: 07/01/1984
Event: CA049PA

Event date: 08/01/1984
Event: RFA Completed

Event date: 08/01/1984
Event: CA049SI

Event date: 02/19/1986
Event: Stabilization Measures Implemented, Groundwater extraction and treatment (e.g., to achieve groundwater containment, to achieve MCL).

Event date: 02/19/1986
Event: RFI Imposition

Event date: 02/19/1986
Event: Stabilization Measures Implemented, Primary measure is source removal and/or treatment (e.g., soil or waste excavation, in-situ soil treatment, off-site treatment).

Event date: 02/19/1986
Event: CMS Imposition

TELEDYNE SEMICONDUCTOR (Continued) **1000201854**

Event date: 05/01/1989
Event: RFI Workplan Approved

Event date: 05/01/1989
Event: CMS Workplan Approved

Event date: 02/22/1991
Event: Date For Remedy Selection (CM Imposed)

Event date: 02/22/1991
Event: Date For Remedy Selection (CM Imposed)

Event date: 02/22/1991
Event: RFI Approved

Event date: 02/22/1991
Event: CMS Approved

Event date: 02/22/1991
Event: Stabilization Construction Completed

Event date: 04/01/1991
Event: CA550RC

Event date: 04/01/1991
Event: Certification Of Remedy Completion Or Construction Completion

Event date: 10/07/1994
Event: CA Responsibility Referred To A Non-RCRA Federal Authority, Corrective Action at the facility or area referred to CERCLA.

Event date: 10/07/1994
Event: CA Prioritization, Facility or area was assigned a medium corrective action priority.

Event date: 09/26/1997
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 09/26/1997
Event: CA Responsibility Referred To A Non-RCRA Federal Authority

Event date: 09/26/1997
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of

TELEDYNE SEMICONDUCTOR (Continued) **1000201854**

significant changes at the facility.

Event date: 09/26/1997
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event date: 12/28/2000
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Summary Details:

SPECTRA-PHYSICS INC (Continued) **1000181197**

Conditions at proposal June 24, 1988): Spectra-Physics, Inc. SP) has manufactured electronic equipment and gas lasers on Terra Bella Boulevard and Middlefield Roads in Mountain View, Santa Clara County, California, since 1961. The 11.5-acre site consists of nine buildings in a light industrial complex. SP uses a variety of cleansers, degreasers, and lubricants in its manufacturing processes, including isopropyl alcohol, acetone, methyl alcohol, trichloroethylene TCE), Freon, 1,1,1-trichloroethane TCA), and Solvasol Solvent 360. In an inspection conducted in 1981, the California Regional Water Quality Control Board CRWQCB) found that areas where ha ardous wastes were stored had no dikes or systems to collect leachate; rusty barrels were also found on-site. Ground water investigations began at the SP facility in September 1984 after tests at Teledyne Semiconductor adjacent and downgradient of SP) indicated possible upgradient sources of contamination. The Teledyne site was placed on the NPL in July 1987.) Soil and ground water collected at SP contained TCE, TCA, and 1,2-dichloroethylene. SP s plume of contaminated ground water has merged with Teledyne s and migrated off-site. More than 200 private drinking water wells had been drilled into the 1-square-mile plume. Most wells have been closed; 47 were found contaminated above State Action Levels. The owners now obtain water from municipal water supplies. An estimated 189,000 people obtain drinking water from public and private wells within 3 miles of the site.
Teledyne is operating two extraction wells on-site -- one in the shallow one and one in the intermediate one. The wells pump the water to the surface and discharge it to the sanitary sewer; the ground water is not treated before discharge. SP will evaluate the effectiveness of this system in preventing its on-site plume from migrating off-site. Both companies are jointly designing an off-site extraction system. San Francisco Bay 2.5 miles downstream of the site) is used for recreational activities. Permanente Creek is tidally influenced within 1 mile of the site. Several species of birds designated as endangered species by the U.S. Fish and Wildlife Service are found within the area of tidal influence. Status February 11, 1991):
In February 1990, SP installed a vapor extraction system to reduce concentrations of contaminants in soil. Underan order issued by CRWQCB, SP conducted a remedial investigation/feasibility study RI/FS) to determine the type and extent of contamination at the site and identify alternatives for remedial action. The RI/FS was completed in December 1990. In February 1991, CRWQCB will adopt a final cleanup and abatement order requiring SP to implement the best remedial alternative evaluated in the RI/FS. This alternative will include expanding the existing soil vapor extraction system and the ground water extraction system. In April 1991, EPA will complete a Record of Decision describing the selected remedy.

Site Description: The Study Area has been divided into the following three areas based on the sources of contamination, the extent of contamination in the ground water and geographic location: Teledyne Semiconductor, Inc. 1300 Terra Bella Avenue, Mountain View, California: Teledyne Semiconductor, Inc. (Teledyne) has owned and operated a semiconductor manufacturing facility at 1300 Terra Bella Avenue since 1962. The southern half of the facility was built in 1962 and the northern half of the building was added in 1966. Spectra-Physics, Inc., 1250 West Middlefield Road, Mountain View, California: Spectra-Physics is an active manufacturer of lasers and associated components which as operated two of its divisions, Laser Products and Optics, in the City of Mountain View since 1961. Seven of the nine buildings in Spectra-Physics' Mountain View facility are bounded by West Middlefield Road, Terra Bella Ave, and Shoreline Boulevard (formerly Stierlin Road). The other two buildings are on the north side of Terra Bella Avenue. Teledyne/Spectra-Physics Combined Study Area: The Teledyne/Spectra-Physics Combined Study Area (the "Study Area") encompasses the full extent of the groundwater plume and is generally bounded by Permanente Creek to the west, the City of Mountain View dewatering trench to the north, Armand Avenue to the east, and Teledyne and Spectra-Physics facilities to the south. The Study Area is located in the Santa Clara Valley which is a gently-sloping alluvial plain, flanked by the Diablo Range to the east-southeast and the Santa Cruz Mountains to the west-southwest. The Study Area is located toward the center of the valley. The Santa Cruz Mountains are located several miles southwest of the Study Area. The San Francisco Bay is located approximately 3 miles north of the Study Area. The Study Area consists of a mixture of commercial/industrial buildings (about 57 percent), residential land use (about 8 percent), and public buildings and land uses (about 35 percent). The Study Area contains a network of paved streets with sidewalks and landscaping. There are two open spaces within the Study Area: one is the play ground and softball field associated with the Crittenden Middle School immediately west of the on-site areas, and the other is the open space adjacent to the present City of Mountain View landfill and Shoreline Amphitheater. Ground water zones at the Study Area are divided into an Upper Aquifer Zone and a Deep Aquifer Zone (Figure 3). The Upper Aquifer Zone is divided into the Shallow Zone and the Intermediate Zone. The Shallow Zone is about 10 feet thick, and generally occurs between the depths of 10 to about 30 feet below ground surface. The Intermediate Zone is about 10 to 15 feet thick, generally occurring between the depths of 35 to 70 feet below ground surface. The Upper Aquifer Zone and the Deep Aquifer Zone are separated by a Confining Zone composed primarily of silt which varies in thickness from about 50 to 150 feet. The Deep Aquifer Zone is generally more than 150 feet below ground surface. Groundwater elevations in the Study Area indicate a northerly flow direction in the Upper Aquifer Zone. Elevations in the Shallow and

SPECTRA-PHYSICS INC (Continued) **1000181197**

Intermediate Zone sediments demonstrate an upward hydraulic gradient between the two zones. Groundwater elevations within the Study Area also show an upward hydraulic gradient from the Deep Aquifer to the Upper Aquifer. History of Site Activities Teledyne has operated a semiconductor manufacturing facility at its Mountain View facility since approximately 1963. Teledyne installed two 1400 gallon below-grade sumps at their site in 1962 and 1966, respectively. Prior to 1980, the sumps were used for acid neutralization and waste Trichloroethene (TCE) collection. Neither sump has contained TCE since 1980 and the two sumps are no longer in service. A 2,000 gallon underground waste flammable solvent tank (Tank A) was installed in 1975 and removed in 1982. It was used to store waste isopropyl alcohol, xylene and acetone. Teledyne also used Trichloroethane (TCA) and other Volatile Organic Compounds (VOCs) at the facility. All underground solvent handling activities were discontinued in 1980 and all chemicals are currently stored above-ground. Since approximately 1963, Spectra-Physics has manufactured lasers and associated components at its Mountain View facility. Spectra-Physics previously used five underground sumps as part of its industrial wastewater disposal system. One 50 gallon and four 1000 gallon underground sumps were installed between 1968 and 1977. Rinse waters were discharged through these sumps to the sanitary sewer for the primary purpose of pH and flow equalization. All but one of the sumps were removed in 1987. The remaining sump is primarily used for settlement of solids. Spectra-Physics used TCE, TCA, Freon-113 and other volatile organic compounds (VOCs) in its manufacturing processes. History of Site Investigations In 1982, Teledyne and Spectra-Physics submitted Facility Questionnaires to the California Regional Water Quality Control Board (RWQCB) staff describing their underground neutralization systems, sumps, and tanks. Based on these submittals, staff required the initiation of a remedial investigation (RI) at Teledyne in 1982 and Spectra-Physics in 1984. The RI has been ongoing for the last eight years. Teledyne and Spectra-Physics have jointly and separately implemented interim remedial actions since remedial investigations were initiated. History of Enforcement Actions Teledyne and Spectra-Physics are on the National Priorities List (NPL). The sites have been regulated by the RWQCB Orders since. 1986. The summary of enforcement history for each of the sites is as follows: Teledyne - February 1986 - Order No. 86-9, Waste Discharge Requirements - June 1986 - Teledyne Semiconductor site is added to the NPL - September 1986 - Cleanup and Abatement Order No. 86-011 - January 1987 - Cleanup and Abatement Order No. 87-002 - January 1989 - Order No. 89-019, Site Cleanup Requirements Spectra-Physics - February 1986 -Order No. 86-10, Waste Discharge Requirements - September 1986 - Cleanup and Abatement Order No. 86-012 - January 1987 - Cleanup and Abatement Order No. 87-003 - June 1988 - Spectra-Physics site proposed for NPL - January 1989 - Order No. 89-020, Site Cleanup Requirements A Record of Decision addressing the Spectra-Physics, Inc. Site OU01 was completed in March, 1991.

Summary Details:

Conditions at proposal June 24, 1988): Jasco Chemical Corp. has formulated chemical products on a 2.05-acre site in Mountain View, Santa Clara County, California, since 1976. The site is bordered on the northeast by the Central Expressway and the Southern Pacific Railroad, and on the remaining sides by residential neighborhoods. In January 1983, a citi en complained to the California Regional Water Quality Control Board CRWQCB) that the facility was dumping solvents at therear of the site on a daily basis. CRWQCB requested Jasco to install a monitoring well at the site to determine if ground water was contaminated. Both ground water and soil are contaminated at the site, according to analyses conducted byconsultants to Jasco. Methylene chloride concentrations are as high as 142,000 parts per million in ground water, and soil is highly contaminated with pentachlorophenol to depths of 20 feet. Contamination is believed to have resulted from anyof the following sources: an underground tank farm, two dry wells used for disposal of storm water run-off from the roof and paved portion of the site, and a drain that discharges surface run-off at the rear of the site. The company is working with CRWQCB to determine the extent of the contamination and to prevent further migration of the contaminants. In addition, the City of Mountain View closed nearby Municipal Well 17 in 1987, until the lateral and vertical extent of the pollution has been defined. About 333,000 people obtain drinking water from wells within 3 miles of the site. Status October 4, 1989): Jasco is pumping and treating ground water to remove contamination. In July 1988, Municipal Well 17was returned to service. In November 1988, Jasco excavated 550 cubic feet of contaminated soil and transported it to a ha ardous waste facility regulated under Subtitle C of the Resource Conservation and Recovery Act.

Site Description: The Jasco Chemical Company, (JASCO) repackaged and formulated chemical products on the 2.05 acre Villa Street site, located in the City of Mountain View (City), California, from 1976 until December 1995. The facility handled and stored numerous chemicals on site in underground storage tanks, 55-gallon drums, and other containers. Chemicals stored on site include methylene chloride, paint thinner, denatured alcohol, methanol, kerosene, lacquer thinner, and acetone. The City of Mountain View lies in a relatively flat portion of the Santa Clara Valley approximately 40 miles south of San Francisco. There are approximately 67,000 people within the city of Mountain View, with the closest residence located .about 50 feet west of the site. There are 4 elementary schools and 3 playgrounds within the 3 miles surrounding the site. The closest school is located within one mile of the site. This is a residential setting, dominated by single family homes to the south, and the Villa Mariposa apartment complex to the east. Single and multifamily dwellings located along Higdon Avenue border the Jasco site to the west. Villa Street is located south of the site and the Southern Pacific Railroad main line right-of-way borders the site to the north. The Jasco site is at an approximate elevation of 60 feet above mean sea level. The surrounding topography slopes gently toward the north -northeast. Surface water on the developed portion of the site drains generally toward the north-northeast. The only surface water near the site is Permanente Creek, which is about 600 feet northwest of the site. Permanente Creek is a perennial stream that flows north-northeast a distance of 3.5 miles before reaching the Mountain View Slough which drains into the San Francisco Bay. The creek itself is channelized, concrete- lined, and is primarily used for drainage and flood control. In the past, surface water from the Jasco site collected in the drainage swale area located in the rear of the facility. In addition, surface water was discharged to three on-site dry wells. The on-site dry wells were destroyed in April 1988. Surface water runoff is currently being collected in a 4,000 gallon tank before being discharged to the City of Mountain View sanitary sewer system. Historically, the 2.05 acre Jasco site has been zoned for industrial purposes. The Villa-Mariposa Area Precise Plan establishes land use within this portion of the city. The Jasco site is part of the Villa-Mariposa Area which includes a moderate-density residential neighborhood. This 23-acre area is bounded by the Southern Pacific Railroad, Shoreline Boulevard, Villa Street and the rear lot lines of residential properties fronting Higdon Avenue. Prior to 1970, the property was zoned MM (General Industrial) District. Eighty-five percent of the property was previously occupied by the Pacific

JASCO CHEMICAL CORP. (Continued) **1000175646**

Press Publishing Association, an industrial printing/publishing house for the Seventh Day Adventist Church. In 1983, the Press announced that it was going to close its Mountain View facility and sell its property. With the anticipated move of the Pacific Press operation, the city reconsidered basic land use provisions within this area. The Villa-Mariposa Area Precise plan provides for transition of this older industrial complex into a residential area. The Plan provided for the amortization of existing industrial uses and buildings. The property is currently zoned P (Planned Community). The plan sets other industrial/office uses as nonconforming if they do not follow the Master Development Plan. The Jasco facility was designated as "high-hazard occupancy", and as such its use at 1710 Villa Street was to be terminated by December 1993. All of the Precise Plan properties have been redeveloped, except for the Jasco property. In an Environmental Planning Commission meeting on July 15, 1992, Jasco applied for a two-year extension to their amortization. The commission approved the extension, which allows the facility to remain operating on the current site until December 1995. Several aquifer systems occur in the upper aquifer zone separated by aquitards which may be leaky or very tight. Groundwater contamination at the site occurs within the upper aquifer zone. The lower aquifer zone occurs beneath the practically impermeable regional aquitard. The deep aquifer is of drinking water quality in areas of Mountain View and beneath the site. The following groundwater wells are located within a three mile radius of the site: - View Municipal Well numbers 8, 9, 10, and 17 - City of Sunnyvale Losse Well - City of Palo Alto Emergency Wells: Fernando, Matadero, and Meadows The City of Palo Alto supplies all of its drinking water needs by using the Hetch Hetchy Reservoir. The Hetch Hetchy Aqueduct carries surface water from the Sierra Nevada Mountains about 120 miles to the east. There is no apparent route through which existing domestic water supply wells could be impacted by site contaminants because the groundwater flows to the north and Well #17 is west and Well #18 is east of the site. The total population served by groundwater within this 3 mile radius is as follows: Mountain View 67,000 people; Sunnyvale 212,000 people; Palo Alto Emergency Wells 56,000 people. In 1987 Mountain View identified Well MV-10 as an active well producing 800 gallons/minute from between 450 to 800 feet bgs. Well water supplied 10% of the drinking water for the City of Mountain View with Hetch Hetchy supplying 90% of the drinking water supply. The Jasco site appears to be within the zone of influence of Well #17 which connects directly into City transmission mains. Mountain View well #17 is located within 2,000 feet northwest of the Jasco site and is screened from the 236 to 560 feet bgs in the C aquifer producing 1/2 million gallons/day. The drilling logs for well #17 showed an aquitard that is significantly thinner than those seen in other areas of the city. Mountain View Well #17 was shut off on December 14, 1986. This action occurred so that city officials could determine whether or not contamination from the Jasco site was impacting this well. The well resumed pumping in 1988 after it was determined that the site was not impacting Well #17. The existing and potential beneficial uses of the groundwater underlying the site include industrial process water supply, industrial service water supply, municipal and domestic water supply, and agricultural water supply. On December 4, 1951 the property was acquired by Tom N. Tibbs Corporation. The property was leased to West Coast Door Corporation from 1954 through June 1974. West Coast Door Corporation manufactured and painted commercial and residential doors on the site. The site was vacant from June 1974 through November 1976. Harry M. Anthony, president and owner of Jasco, purchased the property during; September 1976. The deed was recorded on November 5, 1976, and Jasco started operations at the site during December 1976. Jasco’s production process involves repackaging of bulk chemicals into small containers and blending of chemicals to produce proprietary products such as degreasers and paint thinners. Bulk solvents are received in tankers

JASCO CHEMICAL CORP. (Continued) **1000175646**

and stored in the eight underground tanks. Filling of the tanks is done by gravity. Powdered solids are received in 55-lb bags and other solvents are received in 55 gallon drums. In October 1984 a putty mixer was added for a new line of products. The putty consists of 85% filler - pigment and small quantities of linseed or soy bean oil. The JASCO site came to the attention of regulators in 1983 after a private citizen complained about the dumping of materials at the site. In 1984, the San Francisco Bay Region, Regional Water Quality Control Board (RWQCB) ordered JASCO to install a monitoring well at the site to determine if the groundwater had been contaminated. Volatile organic compounds (VOCs) were found to be present in the groundwater. Since February 20, 1987, the company has been extracting contaminated groundwater from Well V-4. The extracted groundwater is discharged to the Mountain View sewer system under a permit from the city. On October 2, 1987, Jasco removed an underground diesel tank from the site. The tank was corroded with numerous small holes. Samples taken from directly beneath the tank contained diesel at concentrations of 360 parts per million (ppm), benzene at 3.0 ppm, toluene at 550 parts per billion (ppb), and xylenes at 9.6 ppm. During March of 1988 a tracer leak detection system was installed on the underground storage tank system. Tracer chemicals are periodically added to the tank contents. Soil gas samples are collected monthly from multiple probes located to a depth of 12 feet within and surrounding the tank farm. Each sample is analyzed for the tracer chemical to verify whether or not a release has occurred. In January 1990 the system detected tracer chemical coming from the paint thinner tank. This tank was decommissioned for a year even though the amount of the leak was below action levels. It was subsequently put back into service when testing showed that it was not leaking at action levels. The primary source of chemicals detected within the vadose zone can be found in the rear of the facility. The drainage swale receives surface water runoff from both the south side of the facility and points to the east. In the past surface runoff flowed into a drain on the south side of the facility and then entered an underground pipe. This pipe ran north under the building and then connected with an east-west underground pipe on the north side of the facility. The east-west underground pipe emptied into the drainage swale which is adjacent to the northwest corner of the site. The discharged water ponded, evaporated and/or percolated into the soil in this drainage swale area. During August 1988 Jasco submitted to the RWQCB a soils characterization report and runoff management plan. Soil contamination in the drainage swale included methylene chloride at 3,400,000 parts per billion (ppb); trichloroethylene at 490,000 ppb; toluene at 1,700,000 ppb; and acetone at 270,000 ppb. During October 1988, Jasco responded to the soil characterization report by excavating 572 cubic feet of soil from the drainage swale area. The excavation depth extended to the groundwater table (22-28 feet). The area was excavated by drilling with overlapping large diameter augers. The soil was disposed of at the Casmalia Resources Facility in Casmalia, California. A Surface Runoff Collection System was installed to prevent further surface water infiltration across the drainage swale area in early 1989. This system consists of a 10 millimeter thick polyethylene liner that prevents surface water percolation. The area is also graded such that surface runoff is angled toward a sump located in the drainage swale area. Water is pumped out of this area into the sanitary sewer line. Surface water in the front yard area is collected in a large dumpster for timed release into the sanitary sewer line. EPA evaluated the JASCO site under the Hazard Ranking System and proposed the site for inclusion on the National Priorities List (NPL) in June 1988. In December 1988, EPA ordered JASCO to complete a remedial investigation and feasibility study for the site. In 1989, the JASCO site was placed on the NPL. The Remedial Investigation (RI) was completed in 1991 and the Feasibility Study (FS) was completed in 1992. In 1995, the City approved JASCO's Facility Closure Plan and notified

JASCO CHEMICAL CORP. (Continued) **1000175646**

JASCO that its POTW discharge permit would not be renewed after May of 1997. JASCO subsequently negotiated extensions to the permit to allow discharge to the POTW until March of 1998. Due to the City's removal of the POTW discharge permit, wastewater is now discharged to surface waters (Permanente Creek) under a general National Pollution Discharge Elimination System (NPDES) permit administered by the RWQCB which requires treatment to achieve discharge concentrations consistent with State maximum contaminant levels (MCLs). Because these levels are more stringent than those required under the City permit for POTW discharge, the method of treatment for extracted groundwater had to be changed in order to lower effluent concentrations. OU 1: A Record of Decision was completed on September 30, 1992 that addressed contaminated soil and groundwater on the JASCO property. This ROD proscribed the following: groundwater extraction, treatment, and discharge to a POTW; groundwater monitoring; on-site ex-situ biological treatment of contaminated soils with a contingency for off-site disposal of highly contaminated soils; and institutional controls to prevent future use of groundwater as a drinking water source or exposures of future on-site workers to VOC vapors. On September 13, 2002, an Explanation of Significant Differences (ESD) was completed to reflect changes in treatment strategies. The ESD included provisions for using soil vapor extraction (SVE) to remove VOCs from soils in the drainage swale, the use of an air stripper with vapor-phase carbon adsorption to treat groundwater, modified institutional controls, and the discharge of treated groundwater to surface water under a NPDES permit.

Summary Details:

Conditions at proposal June 24, 1988): CTS Printex, Inc., manufactured printed circuit boards on 5.6 acres in Mountain View, Santa Clara County, California, during 1966-85. Printex was incorporated in 1966 and acquired by CTS Corp. in 1981.In the wet-floor building at 1911 Plymouth Street, acid waste water containing copper, lead, and organic wastes containing trichloroethylene TCE) and other solvents drained to the floor, collected in a sump where they were neutrali ed withammonia, and discharged to the Mountain View sanitary sewer. Early in 1985, a consultant to CTS Corp. found high levels of copper and lead in soil near the wet-floor building and high levels of TCE, 1,1,1-trichloroethane, and 1,1-dichloroethylene in monitoring wells downgradient of the site. An estimated 189,000 people obtain drinking water from municipal wells within 3 miles of the site. Permanente Creek borders the site. Surface water drainage eventually discharges to San Francisco Bay 2.5 miles to the north. Late in 1985, the company excavated the sump area and filled it in, decontaminated the building, and transported waste materials to a ha ardous waste facility regulated under Subtitle C of the Resource Conservation and Recovery Act RCRA). In October 1986, the California Department of Health Services certified closure of the facility. In an attempt to stop migration of contaminated ground water off-site, the company is pumping the water and discharging it to Mountain View s sanitary sewer system under a city permit. The company continues to monitor to define the plume of contaminated ground water. In March 1987, the California Regional Water Quality Control BoardCRWQCB) issued a Cleanup and Abatement Order requiring the company to be more expeditious and thorough in its cleanup and set a schedule for various on- and off-site tasks. Status February 21, 1990): CTS Printex is conducting a remedialinvestigation/feasibility study RI/FS) to determine the type and extent of contamination at the site and identify alternatives for remedial action. In November 1989, CRWQCB received the first draft of the RI/FS for review. The final draft isscheduled to be submitted in late 1990.

Site Description: CTS Printex Corporation (CTS) manufactured printed circuit boards at its former facility in Mountain View from 1970 to 1985. The facility was located on Plymouth and Colony Streets east of Sierra Vista Avenue at 1904, 1940, and 1950 Colony Street and at 1905, 1911, 1921, and 1931 Plymouth Street. CTS leased this property from the owner, ADN Corporation. The Site is located on the northwest corner of the Santa Clara Valley between the south end of the San Francisco Bay and the Santa Cruz Mountains in the County of Santa Clara. The site is located 2.5 miles south of San Francisco Bay. The terrain at the Site is relatively flat except for surface drainage. The land surrounding the Site is zoned for light industrial/manufacturing, commercial, residential, and agricultural use. In general, the industrial land use is south and north-northwest of the facility, the commercial land use is north extending across from U.S. Highway 101, and the residential land use is west of the facility. In recent years, the surrounding area, especially north of U.S. Highway 101, has been progressively converted from a residential and agricultural area to a light industrial commercial area. Approximately 20 acres of land, north of the facility, is used for a commercial farming operation. Prior to the construction of the buildings at 1904, 1940, and 1950 Colony Street and at 1905, 1911, 1921, and 1931 Plymouth Street, the Site consisted of an open field. The existing buildings are the original structures constructed on the Site in 1970. The only industrial activity known to occur on this property was the manufacturing of circuit boards. Historical aerial photographs for adjacent Superfund sites show that historical land use near the Site was agricultural, dating back to 1937 and possibly further. The

PRINTEX CORPORATION (Continued) **1000128432**

surrounding area was developed as an industrial area during the period from 1961 to 1973. Companies historically located in the vicinity of the CTS site were involved in a wide range of manufacturing activities, including the manufacturing of amusement park equipment, laser devices, printed circuit boards, electrical test equipment, and semiconductors. Historical groundwater use in the area surrounding the Site includes private water-supply wells for homes and agriculture prior to the construction of public water connections and sewer connections in 1984. A review of data on active, abandoned and closed wells within the study area identified 72 wells in the area bounded by Permanente Creek, Rengstorff Avenue, Colony Street, and Charleston Road. Of the 72 wells, 48 were registered wells and 24 were unregistered wells. Of the 48 wells, 8 of the wells are active and only one well was considered to be a potential conduit. Of the 24 unregistered wells, documentation was obtained for only one well. Existing or potential beneficial uses of the South Bay and/or Permanente Creek are wildlife and estuarine habitat; fish spawning and migration; shellfish harvesting; ocean, commercial, sport fishing; and industrial service supply. Described in this section are the surface and subsurface structures at the Site. Surface and subsurface structures at the Site are as follows: -Flammable Materials Storage Area: This storage area consisted of a small shed constructed of metal on a concrete base. No drains or berms were associated with this structure. Materials stored in this structure included lubricating oil, hydraulic oil, fluxes, and isopropanol. -1940 and 1950 Colony Street: This building housed the Printex administrative offices as well as sales, engineering, accounting, and purchasing offices. In addition, some manufacturing operations occurred in this building. -1904 Colony Street: This building was used for data processing and laminate storage. No hazardous materials are believed to have been stored in this building or on the surrounding grounds. The floors in this building were concrete with no berms or trenches. -1911 Plymouth Street: This building was referred to as the "wet floor building," and was the main site of both wet and dry manufacturing processes employed by CTS. Chemicals used in this building included phosphoric acid, hydrofluoric acid, methyl ethyl ketone, tin, and lead. -1921/1931 Plymouth Street: This building was used for manufacturing processes which included etching and solder leveling. This building was predominantly a dry process area and no chemicals were stored at this location. -1905 Plymouth Street: This warehouse was the main material and waste storage area for CTS. All materials used at the CTS facility were stored in this warehouse. The floor of the warehouse was concrete. The tilt-up concrete walls were sealed to the floor with mastic, and a small trench existed across the doorway. -Industrial Wastewater Sump: This neutralization sump collected and neutralized all wastewater from the CTS facility before discharging to the sanitary sewer. The sump was installed in 1970 and was constructed of steel-reinforced concrete. The sump consisted of three discrete chambers with a total capacity of about 1,500 gallons. Printex was incorporated in 1966 and operated a printed circuit board manufacturing facility at their former facility in Mountain View from 1970 to 1981. In 1981, Printex was acquired by CTS Corporation and was renamed CTS Printex, Inc. CTS Printex manufactured printed circuit boards at its manufacturing facility located at 1904, 1940, and 1950 Colony Street and at 1905, 1911, and 1931 Plymouth Street from 1981 to 1985. Printed circuit board manufacturing processes which generated waste were primarily located within the buildings at 1911, 1921, and 1931 Plymouth Street. Site investigations were initiated by CTS in January 1985 prior to closing the facility. These investigations detected contamination, primarily metals and volatile organic compounds (VOC), in soil and groundwater. In 1987, the Regional Water Quality Control Board (RWQCB) ordered CTS Printex to conduct a remedial investigation at the facility. Following investigations initiated at the CTS site, CTS implemented

PRINTEX CORPORATION (Continued) **1000128432**

interim remedial actions. In December 1984, CTS Printex conducted a meeting with representatives from the Department of Health Services (DHS), the RWQCB, and the Mountain View Fire Department (MVFD) to plan their voluntary site assessment in anticipation of closing the facility. Enforcement actions to date are as follows: -October 1986: DHS Certified Closure of former CTS Facility -March 1987: RWQCB Issued Clean-up Abatement Order No. 87-05 -April 1989: RWQCB Issued Clean-up Abatement Order No. 89-63 -February 1990: EPA Placed CTS on the National Priorities List -November 1990: RWQCB Issued Clean-up Abatement Order No. 90-14 In November, 1986, CTS submitted an "Interim Remedial Plan" to the RWQCB proposing an immediate response action for mitigating downgradient, off-site migration of groundwater containing volatile organic compounds VOCs. The interim remedial response action included groundwater extraction and discharge under permit to the City of Mountain View sanitary sewer system. The remedy selected for the Site is to continue operation of the seven extraction wells until the cleanup levels are achieved. The capture zone created by the existing extraction wells is effectively containing and remediating the groundwater plume emanating from the CTS site. Extracted groundwater will continue to be discharged under permit to the City of Mountain View wastewater treatment plant. A ROD addressing Operable Unit 01, contaminated groundwater at the CTS Printex, Inc. site was completed in June 1991. OU01 ROD Amendment: This document is an amendment to the 1991 Record of Decision (1991 ROD) for the Site, located in Mountain View, California. The EPA Site Identification Number is CAD009212838. The former CTS Printex facility was located on property bounded by Colony Street on the South, Plymouth Street on the north, Sierra Vista Avenue on the west, and U.S. Highway 101 (Bayshore Freeway) on the east. The Site boundaries are defined by the extent of the underlying groundwater contamination. The land use includes commercial/light industrial and residential. EPA is the lead agency for this Site, having assumed that role from the California Regional Water Quality Control Board, San Francisco Bay Region (Water Board) in 2006. The Water Board is currently the State support agency. CTS Printex, and its corporate predecessor, operated a printed circuit board manufacturing facility on a portion of the Site between 1970 and 1985. Those operations involved use of various Volatile Organic Contaminants (VOCs), including trichloroethene (TCE), which impacted soils and groundwater on and off the property. In 1985, prior to shutting down operations at the facility, CTS Printex initiated a site investigation, in cooperation with the Water Board and other state and local agencies. When the investigation revealed soil and groundwater contamination, the Water Board pursued enforcement actions, requiring the potentially responsible parties to address the contamination. Over the next several years, the Water Board issued a number of Cleanup and Abatement Orders (CAOs) regarding the Site, culminating in 1990 with CAO 90-14, which required continued operation and maintenance of the already-operational groundwater extraction system. EPA placed the Site on the National Priorities List (NPL) in 1990, and then issued the 1991 ROD selecting the groundwater remedy, which included continued operation of groundwater extraction and sewer discharge until achievement of cleanup levels. Pursuant to a cooperative agreement with EPA, the Water Board continued the role of lead agency for enforcement of Comprehensive Environmental Response, Compensation, and Liability Act of 1980, as amended, 42 U.S.C. Section 9601-9675 (CERCLA). After nearly a decade of operation, the groundwater extraction system was shut down in 1996, based on the Water Board's determination that the system was no longer effective. Between 1987 and 1996, the system successfully removed approximately 100 pounds of TCE from 106 million gallons of groundwater and reduced the lateral extent of the TCE groundwater plume in the two shallowest groundwater aquifer zones, referred to as the "A and B zones." By 1996, however, the rate of TCE removal had dropped significantly. No CERCLA decision document was prepared at that

PRINTEX CORPORATION (Continued) **1000128432**

time. The second five-year review report for the Site was issued in 2005 and recommended that a ROD Amendment be prepared to include institutional controls prohibiting the use of contaminated shallow groundwater and to evaluate the potential vapor intrusion pathway. In 2006, EPA assumed the role of lead regulatory, and the Water Board is now the support agency. Annual groundwater monitoring continues at the Site. This Record of Decision (ROD) Amendment selects two remedies: a revised groundwater remedy and a new vapor intrusion remedy. The purpose of the selected groundwater response action is to address the remaining groundwater contamination and to achieve groundwater cleanup levels, i.e., drinking water standards. The purpose of the selected response actions for the vapor intrusion pathway is to minimize or eliminate human exposure to vapor intrusion associated with the remaining groundwater contamination. A ROD Amendment for Operable Unit 01 of the CTS Printex Site was completed in September 2011.

Environmental Interest/Information System
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Case Worker:	Not reported
Local Agency:	Not reported
RB Case Number:	20-017
LOC Case Number:	06S2W15M02f
File Location:	All Files are on GeoTracker or in the Local Agency Database
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History:	The Site is a former Texaco-branded service station located at the intersection of North Shoreline Boulevard and Terra Bella Avenue in Mountain View, California. Former station features include one 6,000-gallon gasoline underground storage tank (UST), four 4,000-gallon gasoline USTs, and one waste oil UST. In 1992, the six USTs, associated product piping, and dispensers were removed, and the Site was redeveloped as a restaurant. Twelve groundwater monitoring wells have been installed on or near the Site to-date. Eight groundwater monitoring wells (MW-22A, MW-22B, MW-22D, and MW-22L through MW-22P) were installed on-site, and four groundwater monitoring wells (MW-22E through MW-22H) were installed at off-site locations to assess the lateral extent of petroleum hydrocarbons in groundwater. Groundwater monitoring has been performed at the Site since 1988. Historically, groundwater flow at the Site has been towards the north.

Environmental Interest/Information System
STATE MASTER

Registry ID: 110009540791

Environmental Interest/Information System
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Trichloroethylene (TCE)
Site History: The former Spectraphysics property is a Federal Superfund site along with the adjacent Teledyne property. Within the last fives years, a more recent re-evaluation of former case management concluded that the 2004 IA VI evaluation was inadequate because it was not conducted at the source property at 1250 W Middlefield Road. The Regionial Water Board and USEPA who conducted IA testing and deteceted IA-TCE levels below USEPA's commercial RSL but above their residential RSL. So we directed the owner of the1250 W Middlefield Road to record a deed restrition on sensitive land uses. In cooperation with the RP for the former Teledyne property, the RPs also assertiively evaluated potential IA VI in the off-property commercial North Bayshore and residential Spring Street areas to conclude that IA VI is occurring iwith one of the commercial area buildings and in several homes in the residential area. The RPs are in the process of installing a sub-slab depressurization system in the commercial building and offered the affected residents crawl space fans to address the issue.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water: Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.
Complexity: Category B - Any facility having a physical, chemical, or biological waste treatment system (except for septic systems with subsurface disposal), or any Class II or III disposal site, or facilities without treatment systems that are complex, such as marinas with petroleum products, solid wastes, and sewage pump out facilities.

Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.4106132140258
Longitude: -122.080657482147
Case Type: Cleanup Program Site
Case Worker: RWP
Local Agency: SANTA CLARA VALLEY WATER DISTRICT
RB Case Number: 43S0128
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride
Site History: The Teledyne property is a co-Superfund site property along with the adjacent Spectra-Physics property. Within the last ten years, Responsible Parties (RPs) for the Teledyne/Spectra-Physics site completed an Monitored Natural Attenuation (MNA) study in the off-property area north of and downgradient of the site. The MNA study concluded that natural breakdown of trichloroethene (TCE) and other chlorinated volatile organic compounds of concern is occurring naturally and at the same rate as groundwater extraction. As a result, only a few of the off-property downgradient extraction wells are operating mainly to maintain hydraulic control of the plume. The RPs completed an extended pilot study to test the feasibility of enhanced reductive dechlorination (ERD) and concluded that ERD is feasible with bioaugmentation of the Shallow Zone. An on-property indoor air vapor intrusion evaluation indicated no vapor intrusion contamination above the Regional Water Board's 2008 ESLs. Within the last five years, the RPs detected elevated source areas of CVOCs at the Teledyne property using high resolution technology and continuously logged and screened ERD injection well boreholes. Implementing a full-scale ERD treatability study, they have been and are currently remediating the property and decreasing elevated levels

TELEDYNE SEMICONDUCTOR (Continued) **S100833421**

to low multiples of State and Federal Maximum Contaminant Levels for drinking water. The RPs also assertively evaluated potential indoor air vapor intrusion in the off-property commercial North Bayshore and residential Spring Street areas to conclude that vapor intrusion is not occurring in the commercial area and is occurring in several homes in the residential area. The RPs offered the affected residents crawl space fans to address the issue.

Background Info: Teledyne Semiconductor has operated a semiconductor manufacturing facility at this one-acre site since 1962. Chemicals used in the manufacturing process and wastes generated by the process are handled and stored onsite.
In 1982, Teledyne notified the RWQCB that soil and groundwater near underground solvent storage tanks was contaminated. Further study revealed that a groundwater contaminant plume had migrated northward and contaminated forty private domestic wells. The contaminants identified in soil and groundwater include trichloroethylene (TCE), dichloroethylene (DCE), Freon-113, dichlorobenzene (DCB), perchloroethylene (PCE), and xylene.
About 270,000 people residing within three miles of the site depend on groundwater as a source of drinking water. The groundwater contamination represents a potential threat to municipal and other wells.

CA BOND EXP. PLAN:
Reponsible Party: NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: Teledyne, the responsible party, has been conducting remedial activities under and order issued by the RWQCB. DHS has budgeted $50,000 for development, review and approval of a RAP and will seek to recover all actual costs from the responsible parties.
Site Description: Teledyne Semiconductor has operated a semiconductor manufacturing facility at this one-acre site since 1962. Chemicals used in the manufacturing process and wastes generated by this process are handled and stored onsite.
Hazardous Waste Desc: In 1982, Teledyne notified the RWQCB that soil and ground water near underground solvent storage tanks was contaminated. Further study revealed that a ground water contaminant plume and migrated northward and contaminated 40 private domestic wells. The contaminants identified in soil and ground water are trichloroethylene (TCE), dichloroethylene (DCE), Freon-113, dichlorobenzene (DCB), perchloroethylene (PCE) and xylene.
Threat To Public Health & Env: About 270,000 people residing within 3 miles of the site depend on ground water as a source of drinking water. The ground water contamination represents a potential threat to municipal and other wells.
Site Activity Status: An investigation conducted in June, 1984, revealed that solvents had contaminated private wells to the north of the site. Contaminated wells were closed and an alternate drinking water supply was provided to affected residents. A ground water extraction system was installed onsite and began operating in October, 1986. Characterization of soil and ground water contamination is continuing.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Removal Action Completion Report
Completed Date:	01/06/1984
Comments:	In February of 1983, DHS directed LGM to remove the contaminated soil from on and off its property. Several months later, LGM declared bankruptcy and went out of business. In the latter part of 1983 and early 1984, chemicals and contaminated soil were removed from the LGM storage area and an adjacent condominium complex. Post-excavation confirmation samples were taken for fluoride and copper. Detected levels were below health-based risk goals considered safe for residential use.

Background Info: LGM Manufacturing (LGM) manufactured printed circuit boards from 1969 to 1983. Chemicals used at the Site included ammonia, etch acids, brighteners, fusing oil, trichloroethylene, copper with formaldehyde, and methylene chloride. Chemical wastes were stored in drums and containers in a yard behind the LGM warehouse.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Worker: UUU
Local Agency: Not reported
RB Case Number: 43S0633
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: * Solvents
Site History: Digital Equipment Corporation (DEC) operated a manufacturing facility at the subject site between 1969 and 1983. The facility performed nickel and copper plating of discs. As part of this operation, DEC stored and used hazardous materials including TCA and acetone, and operated an acid neutralization tank whose effluent discharged to the sanitary sewer. After operations were discontinued, DEC removed the acid neutralization tank and received regulatory closure from the Mountain View Fire Department. The Department approved final facility closure for chemical storage in 1990. DEC was acquired by Compaq in 1998; Compaq in turn was acquired by Hewlett Packard in 2002. DEC voluntarily reported a possible release of chlorinated solvents in 1984. This report was based on onsite groundwater monitoring that appeared to show chlorinated solvents in groundwater above drinking water levels. DEC later concluded that these results were false positives, due to laboratory contamination, and that no release of chlorinated solvents to soil or groundwater had occurred. Terra Bella Office Partners, LLC, the landowner, performed a comprehensive soil, soil vapor, and groundwater investigation in 2010. VOCs were either non-detect or in a few cases detected below regulatory standards (e.g., MCLs). Metals were detected but at concentrations consistent with background conditions. Water Board staff concludes that no condition of pollution exists at the site and the case should be closed.

Longitude: -122.079075
Case Type: Cleanup Program Site
Case Worker: RWP
Local Agency: Not reported
RB Case Number: 43S1172
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Dichloroethene (DCE), Trichloroethylene (TCE), Vinyl chloride
Site History: The project is a redevelopment property within the Teledyne-Spectraphysics (T-S) plume with underlying groundwater probably impacted by the upgradient T-S source properties. The developer plans to construct the building wiht a vapor intrusion mitigation system (VIMS) and water barrier. Indoor air testing will be conducted to verify that the VIMS is working as designed.

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Characterization Report
Completed Date:	12/28/2007
Comments:	Site characterization completed. VOC groundwater contamination was determined to be form an offsite source. Remediation of the groundwater contamination will not be included as part of the Removal Action Workplan (RAW). The RAW will focus on the mitigation of residual soil VOC and TPH contamination associated with the Catch Basin. The results of the Site groundwater investigation indicates that the source(s) of the VOC groundwater contamination is from off-site and conveyed through the utility corridor.

SLIC:
Region: STATE
Facility Status: Completed - Case Closed
Status Date: 04/23/2013
Global Id: SL18212592
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.3977098903459
Longitude: -122.075593471527
Case Type: Cleanup Program Site
Case Worker: MBR
Local Agency: Not reported
RB Case Number: 43S0241
File Location: Regional Board
Potential Media Affected: Indoor Air, Other Groundwater (uses other than drinking water), Soil, Soil Vapor
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Trichloroethylene (TCE)
Site History: In 1983, Union Bank of California took over ownership of the site when Innerconn Technologies, the owner and operator of the site at the time, went bankrupt and defaulted on their loan. Trichloroethylene (or TCE) was discovered in the groundwater at about this time. TCE was a common solvent used and stored by the electronics manufacturing industry. Union Bank conducted a site investigation shortly after inheriting the site. The Board issued Site Cleanup Requirements in 1989 naming Union Bank and Innerconn

ICT (Continued) **S101542366**

Technologies as responsible parties. In 1989, the former manufacturing building was razed and a strip mall was built in approximately the same footprint. The strip mall continues to operate today. In 1992, Union Bank installed a pump and treat system to reduce TCE levels and to control off-site migration. In 2001, we allowed Union Bank to turn off the pump and treat system because TCE concentrations had declined and operating the system was no longer necessary. We expect that TCE concentrations will continue to decline over time due to natural degradation processes. While TCE concentrations are still above the drinking water cleanup goals, the residual contamination does not present an immediate threat to human health or the environment because the concentrations are relatively low, the groundwater plume is not migrating, and the shallow groundwater aquifer in this area is not currently used for any purpose.

Case Type: Cleanup Program Site
Case Worker: RWP
Local Agency: SANTA CLARA VALLEY WATER DISTRICT
RB Case Number: 43S0217
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)
Site History: The Montwood plume is within a much larger plume extending from the Teledyne/Spectra-Physics Superfund site. Groundwater extraction reduced on-site chlorinated VOCs (CVOCs) in groundwater to asymptotic levels. However, the CVOC plume extends off-site through and beyond the downgradient site at 1600 Plymouth Street,- presently owned by Peery/Arrillaga (P/A). The off-property charcacterizaion of the groundwater-CVOC plume has been completed with grab groundwater samples and additional wells. Off-property groundwater-CVOC extent has attenuated with natural attenuation. Responding to persistent Water Board suggestions to re-characterize the site with high-resolution technology, the Responsible Party (UP) contracted a new consultant. and used MIP data plus three other data layers to successfully locate on-site CVOC source areas. Baased on the data, the consultant selected enhanced reductive dechlorination (ERD) as the final remedy that is now in process at the on-property area. ERD has significantly decreased the on-property groundwater-CVOC levels.

Background Info: Facility size is approx. 7.06 acres. Sites include a grease rack and vehicle wash rack. A draft PA was completed in February 1999 and a final SI work plan was prepared in August 2000. The greas e rack was constructed in the early 1950s and is no longer used. The Army considers the wash rack to be a compliance (RCRA) issue for funding purposes. Minimal shallow soil sampling was conducte d in 1997 around the grease rack. Contaminants of concern are pr imarily grease oil, fuels, and solvents. Groundwater is shallow, approx 15 ft below ground furfact. Impacts to groundwater are u nknown, but will be determine by the August 2000 SI field work.

Project Revenue Source Desc: This site is proposed for the National Priority List. The RWQCB will continue to have lead responsibility for monitoring the RP's remedial activities. Until such time as the RWQCB refers the site to DHS for follow-up using Bond funds, no money will be budgeted from the fund for this site.
Site Description: CTS Printex Corporation (Printex) is located on 5.6 acres of land at 1950 Colony Street in Mountain View, California. Currently, the site is inactive. From 1966 to 1985 Printex operated a printed circuit board manufacturing facility onsite.
Hazardous Waste Desc: Soil under the site contains elevated levels of copper, lead, trichloroethylene (TCE) and 1,1,1-trichloroethane (TCA). Contaminants in the ground water include TCA, TCE and 1,1-dichloroethylene (DCE).

CTS PRINTEX CORPORATION (Continued) **S100833462**

Threat To Public Health & Env: Roughly 188,000 people in Mountain View depend on ground water drawn from the aquifer of concern for their drinking water. The nearest municipal well drawing from the aquifer, Mountain View #10, is 1.1 mile from the site. The alternative surface drinking water sources appear to be inadequate to supply the large population currently relying on local ground water.
Site Activity Status: Site investigation and remediation activities at the Printex facility were started in December, 1984. Organic chemical contamination appears to have resulted from the wet floor operation. Approximately 255 cubic yards of soil from the wet floor areawere excavated for offsite disposal. A quarterly monitoring program has been in implementation for all existing wells. The down gradient spread of chemicals has tentatively been established at approximately 600 feet beyond the property boundary. Ground water extraction facilities have been designed and wells constructed in order to contain the spread of contaminants in ground water. The Regional Water Quality Control Board issued a cleanup and abatement order in March, 1987.

Completed Date: 06/11/2015
Comments: The Results of Sub-Slab Soil Vapor Assessment report presents the findings of a sub-slab soil vapor assessment that was performed by the Site owner to determine whether former operations by Austin's Fremont Laundry impacted the Site. Sub-slab sampling of soil vapor was performed at six locations in the building that occupies the Site. Elevated concentrations of tetrachloroethene (PCE) were detected in the soil vapor samples. The highest PCE concentrations were detected on the eastern side of the building and were about an order of magnitude lower on the western side of the building.

Completed Document Type: PA/SI Reassessment

FREMONT LAUNDRY (Continued) **S110769675**

Completed Date: 01/26/2015
Comments: Reassessment conducted by DTSC on EPA's behalf to determine if the site should be considered for the National Priorities List. DTSC concluded that DTSC is the primary cleanup agency but EPA will periodically review the progress towards cleanup as DTSC and the property owner are negotiating an agreement to oversee environmental investigation and cleanup.

CA BOND EXP. PLAN:
Reponsible Party: NPL SITE CLEANUP WORKPLAN
Project Revenue Source Company: Not reported
Project Revenue Source Addr: Not reported
Project Revenue Source City,St,Zip: Not reported
Project Revenue Source Desc: This site has been proposed for listing on the NPL. It is expected that the RP will remediate this site with oversight by EPA. DHS will perform a limited role of oversight and monitoring of the remedial activities at this site. DHS has budgeted $50,000 for oversight and monitoring costs. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project.
Site Description: The Jasco Chemical Corporation has formulated chemical products at this 2.05-acre site in Mountain View since 1976. The site is bordered on the northeast by the Central Expressway and Southern Pacific Railroad, and on the remaining sides by residential units. The facility handles and stores numerous chemicals onsite in underground tanks and 55 gallon drums.
Hazardous Waste Desc: The contaminants detected in the soil and ground water onsite include trichloroethane (TCA), dichloroethane (DCA), dichloroethylene (DCE), phenol and methylene chloride (MCL).
Threat To Public Health & Env: Within a 3-mile radius of the site there are approximately 199,000 people who depend on ground water as a source of drinking water. Contaminants have migrated at least 10 feet beyond the property boundary, as evidenced by the detection of DCA and TCA in an offsite well. Mountain View wells #17 and #10 are located within 1,500 feet and 3,100 feet of the site, respectively.
Site Activity Status: Investigations at the site were initiated in 1984. Both soil and ground water contamination has been detected onsite. Discharges of surface runoff from the rear of the facility appear to be a major source of contaminants. Up to 11,000 parts per million (ppm) paint thinner was detected in soil samples taken near a runoff outfall. Jasco Chemical has been extracting contaminated ground water from one well since February, 1987.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 12/22/2015

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

HAZNET: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historic Dry Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

WEALTHPLAN
1155 TERRA BELLA AVE.
MOUNTAIN VIEW, CA 94043

TARGET PROPERTY COORDINATES

Latitude (North):	37.407965 - 37˚ 24' 28.67''
Longitude (West):	122.076563 - 122˚ 4' 35.63''
Universal Tranverse Mercator:	Zone 10
UTM X (Meters):	581725.7
UTM Y (Meters):	4140326.8
Elevation:	40 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5641106 MOUNTAIN VIEW, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

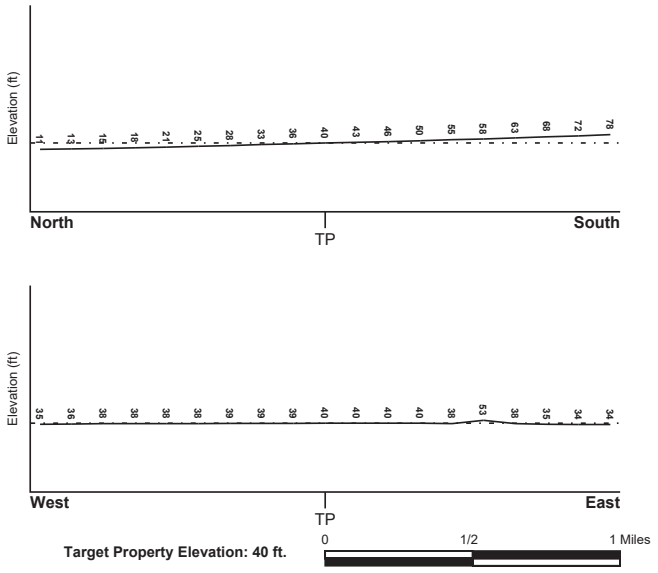
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
SANTA CLARA, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06085C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MOUNTAIN VIEW	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	0 - 1/8 Mile NE
Site Name:	JASCO CHEMICAL CO
Site EPA ID Number:	CAD981677107
Groundwater Flow Direction:	North-Northeast
Measured Depth to Water:	13.5 to 15 feet, 20 to 23.5 feet, and 26 to 29 feet in three discrete perched zones at the site.
Hydraulic Connection:	The upper perched aquifers and lower aquifer at the site are separated by a dense blue clay aquitard, although aquifer interconnections exist in the site vicinity.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Attachments: 1155 Terra Bella.pdf; 1155 Terra Bella Ave (Fire).pdf

Good Morning Sean Abbey,

This is a timely response to your Public Records Act request received by the City Clerk dated July 6, 2016.

Attached are the building permits (including inspections) in our system. Also the last fire inspection, they are current on their annual fire alarm testing.

This now concludes your request.
Thank you,

Margarita Herrera

No problem, Susanna. Thank you for taking the time to ask around.

I actually did a file review with the Fire Department already and they didn't have any records for the Site either. I just can't seem to figure out where the records for this Site are being kept, or if they even exist.

I will keep searching, but thank you for your help!

Cheers,
Sean

Hi Sean,
Sorry for the delay in responding to your email from Monday but I wanted to double check with the Program Manager. She suggested that you contact the City of Mountain View's Fire Department. They implement a local hazardous materials storage ordinance, and may have some additional information. Here's the info from Unidocs:

Hope this helps.

Subject: RE: RESPONSE TO RECORDS REQUEST #070616C

Hello Susanna,
This is Sean with Weber, Hayes and Associates and I submitted a records request for 1155 Terra Bella Avenue in Mountain View back in July 2016 (see below). The request came back with no results, but after having worked more at the Site and learning a bit more about its history, I became surprised that there were no records maintained by DEH.

The Site has been an active manufacturer for a while (started in the 1960's) and I was wondering if DEH has been the main record keeper during that entire period. If not, is there another source of information that might maintain HMMPs, Site Inspections, ext.

Thank you so much for your help!

Subject: RESPONSE TO RECORDS REQUEST #070616C

Good afternoon,

Thank you for your recent record request received on 7/6/16 for the following address in MOUNTAIN VIEW:

1155 TERRA BELLA AVENUE

We have no records for this location. However, additional electronic documents may be found on the following websites:
Local Oversight Program (LOP)
GEOTracker (GT)

Please be advised that in some cities, other participating agencies may be responsible for maintaining the type of files you requested. This link may be of assistance in determining who will have the documents you are looking for in the future: UNIDOCS – Who regulates what in Santa Clara County

re: Sump Removal - 960 Linda Vista, Mountain View
Final Closure

Gentlemen:

On 8/5/86, we received verbal authorization from the City of Mountain View Hazardous Materials Department - Ken Daley, Fire Marshal - to complete the closure of the underground sump located at 960 Linda Vista, Mountain View.

We are now in the process of repaving the area.

Sincerely,

Fred Stachel

Reference: Underground Tanks Removal Permit Application

Attached is a permit application for removal of an underground sump located at 960 Linda Vista Ave. Mountain View, Ca. This tank has been unused for the last 2-1/2 years.

Included is the test sample plan and disposal plan - the test samples will be made per your direction by Emcon Associates - the disposal will be made by I.T. Corporation. The construction work will be done by Halloway - Galloway Construction Company - our demolition permit number is #1825. We would like to initiate removal by May 30, 1986. Please contact Fred Stachel - Harris Broadcast Microwave at 969-9100 Ext. 247 for any additional information.

Fred Stachel
Sr. Manufacturing Engineer

UNDERGROUND TANKS
OUT OF SERVICE AND REMOVAL PERMIT

All underground tanks out of service for a period of one year shall be considered "abandoned" (not in use) and removed in accordance with Section 79.113, UFC and Section 24.11, MVMC.

PERMIT APPLICATION

Completed application must be approved by the Fire Prevention Bureau. Before tank removal, a Demolition Permit shall be obtained from the Building Inspection Division, 444 Castro Street, Mountain View. All questions regarding the Demolition Permit and/or fees should be directed to Building Inspection at (415) 966-6313.

Tank Location Address 960 LINDA VISTA MOUNTAIN VIEW CA.

Tank Location Business Name HARRIS BROADCAST MICROWAVE OPS.

Property Owner Name/Representative VANCE M BROWN & SONS INC.

Address _____ Phone No 415 321-8432

Responsible Contractor GALLAWAY-HOLLOWAY

Contractor Phone No 593-9898 License No * 408824

PERMIT CONDITIONS/PROCEDURES

I. SAFEGUARD PROCEDURES

1. Tank(s) shall be emptied of all liquid product.

2. Vent line(s) shall be opened and maintained as such.

3. All other tank(s) opening(s) shall be secured against tampering.

4. Tank(s) with existing monitoring capability shall continue to be monitored for detecting leakage from the primary container per the same requirements for tanks in service.

5. The Hazardous Materials Management Plan (Form HM-3) shall be amended prior to having the tank(s) placed back into service.

6. Tank(s) without secondary containment shall be provided with a monitoring well(s) prior to being placed back into service. A permit from the Santa Clara Valley Water District (SCVWD) is required for construction of the monitoring well(s).

7. Tank(s) not in use for a period of one year shall be removed.

II. REMOVAL PROCEDURES

1. An inspection must be completed by the Fire Prevention Bureau before the tank(s) may be removed from the excavation. Appointments must be made 48 hours in advance. Call (415) 966-6343 to arrange for an inspection appointment. The Demolition Permit must be displayed at the job site.

2. Arrange for a licensed commercial laboratory to analyze the required soil sample(s) and for sampling by a qualified independent third party.

3. Tank(s) shall be emptied of all liquid product.

4. Render tank(s) inert with a minimum 15 pounds of dry ice per each 1,000 gallons of tank volume. Tank oxygen level must be reduced to less than 10 percent. Keep the dry ice sales receipts available at the tank site for the Inspector to review.

5. Cap all tank(s) opening(s) except for vent pipe(s) and allow a minimum 12 hours for oxygen displacement. Excavation and pipe removal may proceed during this period, but the tank(s) CANNOT be removed from the excavation.

6. Begin excavation to expose tank and pipelines for removal.

7. Remove all pipelines at the tank and cap or plug each tank opening immediately after the pipeline is disconnected. Leave a 1/8" to 3/8" pressure relief hole at the top of the tank for carbon dioxide venting.

8. After the 12-hour period for oxygen displacement has passed, call (415) 966-6343 for an inspection by the Fire Prevention Bureau.

9. Remove the tank(s) from the excavation and load on a vehicle(s). Position the tank(s) so the pressure relief hole is close to the top of the tank.

10. Check tank(s) for leaks or holes, and if present, seal immediately.

11. Properly transport the tank(s) outside of the City limits to the designated location.

12. Have the soil sample(s) taken and analyzed as required below.

13. Backfill the tank excavation(s).

14. Have the monitoring well(s) destroyed as required. When an abandoned well is destroyed, a permit from SCVWD is required.

15. An additional $25 per inspection will be charged for each reinspection.

III. SOIL SAMPLING PROCEDURES

1. A minimum of 2 representative soil samples shall be taken from the area beneath the tank(s).

2. All soil sampling shall be completed by a qualified independent third party to include delivery of the samples to a licensed commercial laboratory.

3. Soil samples may be composited by the laboratory and analyzed together.

4. Testing of samples shall employ EPA standard procedures in all appropriate cases.

5. The applicant shall have a copy of all laboratory test results mailed DIRECTLY to the Mountain View Fire Department, Hazardous Materials Section, 1000 Villa Street, Mountain View, California 94041.

6. Laboratory test analysis shall test for:

X Applicable Method for Metal processing operations

____ GC/MS scan of all volatile organics (EPA Method 624)

____ Acid/base neutral extractables (EPA Method 625)

____ _____

____ GC of volatile organics (EPA Method 602)

7. Samples shall be taken by the modified California sampler technique.

When properly validated, this is an authorized permit subject to the conditions indicated above.

Re: Soil Sampling at Harris Broadcast Facility, 967 Stierlin Road, Mountain View, California

Gentlemen:

This letter report presents the results of sampling and analysis of soils from beneath a concrete sump removed from the Harris Broadcast Facility in Mountain View, California. This work was performed in accordance with the City of Mountain View's Hazardous Materials Storage Ordinance (Section 79.113 of the Uniform Fire Code and Section 24.11 of the Mountain View Municipal Code).

BACKGROUND

The Harris Broadcast Facility, located at 967 Stierlin Road in Mountain View, is in the process of renewing its Hazardous Materials Management Plan as required by the City of Mountain View. The City requires the removal of all underground tanks and sumps that have been out of service for a period of one year, or more. A concrete sump, no longer used by Harris Broadcast, was located in the alley behind Building 3. It was removed in accordance with all the requirements of the City of Mountain View Fire Department. The soil in the sump excavation was sampled on June 4, 1986 by an EMCON field engineer and the samples were taken to a state-licensed laboratory for analysis of selected parameters, as described below.

SOIL SAMPLING

Two soil samples were taken from the north and south ends of the concrete sump excavation. Both samples were taken at a depth of 6 feet (approximately 1.5 feet below the invert of the removed sump). Each sample was taken with a hand sampler driven into the exposed soil and extracted. The soil was collected in the sampler's 4-inch-long by 2-inch-diameter brass liner, capped and sealed with inert material, labeled, and placed on ice for transportation to the laboratory for analysis.

ANALYTICAL PARAMETERS

The soil samples from the sump excavation were analyzed for the following parameters:

- Copper, chromium, lead, silver, zinc, and nickel
- Purgeable halocarbons
- Purgeable aromatic halocarbons
- Cyanide and fluoride

All analyses were conducted in accordance with analytical methods approved by the U.S. Environmental Protection Agency (U.S. EPA).

FINDINGS

Table 1 summarizes the results of the laboratory analyses. Certified Analytical Reports (CAR) are also attached. Although no specific numerical standards exist for determining when cleanup (e.g., soil excavation) is required, a list of potential cleanup action levels is also presented in Table 1. It is EMCON's judgment that, for your site, constituent concentrations at or below these levels would not trigger the need for soil excavation. All the analytical results obtained indicate actual soil concentrations are below or very near these cleanup levels.

EMCON recommends that you forward the analytical results to the Mountain View Fire Department to document your conformance with local facility closure requirements.

If you have any questions regarding the content of this report, please do not hesitate to call.

Very truly yours,

EMCON Associates

San Jose, CA 95131

June 20, 1986

ATTN: Philip Murphy

Following are the results of analyses on the samples described below.

Project Number: 663-02.01

Lab Numbers: 40803, 40806
Number of Samples: 2
Sample Type: soil
Date Received: 6/4/86
Analyses Requested: Volatile Aromatics, Volatile Halocarbons

The method of analysis for volatile halocarbons in soils is taken from E.P.A. Methods 8010 and 5030. The samples are examined using the purge and trap technique. Final detection is by gas chromatography using a Hall electrolytic conductivity detector.

The method of analysis for volatile aromatics in soils is taken from E.P.A. Methods 8020 and 5030. The samples are examined using the purge and trap technique. Final detection is by gas chromatography using a photoionization detector as well as a flame ionization detector.

Prior to receipt of the samples by IT Santa Clara, the soils had been subsampled for metals.
