		<p>activities which incidentally generate urban runoff, such as the hosing of sidewalks, shall be excluded from this prohibition;</p> <p>7. To the maximum extent practicable, discharges to the MS4 from washing impervious surfaces in industrial/commercial areas which results in a discharge of untreated runoff to the MS4, unless specifically required by state law, or the city's municipal code, or Los Angeles County's Health and Safety Codes, or permitted under a separate NPDES permit;</p> <p>8. Discharges from the washing out of concrete trucks into the MS4;</p> <p>9. Discharges to the MS4 of any pesticide, fungicide or herbicide, banned by the USEPA or the California Department of Pesticide Regulation; or</p> <p>10. The disposal of hazardous wastes into trash containers used for municipal trash disposal where such disposal causes or threatens to cause a direct or indirect discharge to the MS4.</p> <p>Section 8.44.100 (Requirements for industrial/commercial and construction activities) determines the following:</p> <p>A. Industrial/Commercial and Construction-Related Dischargers Generally. Each discharger associated with industrial/commercial activity or construction activity, or other discharger described in any general NPDES permit addressing such discharges, as may be issued by the U.S. Environmental Protection Agency, the State Water Resources Control Board, or the Regional Board shall comply with all requirements of such NPDES permit and the city's development construction program. Each discharger identified in an individual NPDES permit shall comply with and undertake all activities required by such permit. Proof of compliance with any such NPDES permit and the city's development construction program may be required in a form acceptable to the director prior to the issuance of any grading, building or occupancy permits, or any other type of permit or license issued by the city.</p> <p>B. Non-stormwater discharges to the MS4 from industrial, commercial or construction are prohibited.</p> <p>C. Source Control BMPs for Industrial/Commercial Facilities. Industrial/commercial facilities shall implement the effective source control BMPs listed in Table 10 of Part VI.D.6.f. of the municipal NPDES permit, unless a particular pollutant generating activity does not occur on a facility's site.</p> <p>(Ord. 1182 §1, 2014)</p> <p>Chapter 15.14 (Fire Code) Section 15.14.010 (Los Angeles County Code, Title 32, Fire Code adopted)</p> <p>Los Angeles County Fire Code, Title 32, the Los Angeles County Fire Code, as amended and in effect on or before January 1, 2023, adopting the 2022 California Fire Code, is hereby adopted by reference pursuant to the provisions of Sections 50022.1 through 50022.10 of the Government Code of the State of California as though fully set forth herein, and made a part of the South El Monte Municipal Code with the same force and effect as though set out herein in full, including all of the regulations, revisions, conditions and terms contained therein.</p> <p>Not less than one copy of said Title 32 of the Los Angeles County Fire Code together with any and all amendments thereto proposed by the city of South El Monte, has been and is now filed in the office of the community development department and shall be remain on file with building official, and shall collectively be known as the "City of South El Monte Fire Code" and may be cited as Chapter 15.14 of the South El Monte Municipal Code.</p> <p>(Ord. 1261 §2, 2022)</p>

(b) The limits referred to in Section 3804.2 of the adopted Fire Codes in which bulk storage of liquid petroleum gas is restricted are hereby established as follows: The entire area of this city.</p> <p>(Ord. No. 1903, § 3, 6-16-92; Ord. No. 1960, § 2, 11-21-95; Ord. No. 2166, § 2, 12-4-07; Ord. No. 2212, § 2, 12-21-10)</p> <p>Applicable Amendments include:</p> <p>A new subsection 304.1.2(a) - High Fire Hazard Designation - shall be added and shall read as follows:</p> <p>The City of West Covina hereby adopts the most recent County of Los Angeles High Fire Hazard Zone Map to identify and designate high fire hazard areas within city limits.</p>	

3.9.3 Impact Assessment

3.9.3.1 Significance Criteria

Appendix G of the State CEQA Guidelines was reviewed to determine whether the Plan would result in significant impacts related to hazards and hazardous materials. These guidelines serve as the threshold of significance for determining impacts related to hazards and hazardous materials and consider if the Plan would:

- 9(a) *Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?*
- 9(b) *Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?*
- 9(c) *Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?*
- 9(d) *Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?*
- 9(e) *For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?*
- 9(f) *Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?*
- 9(g) *Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?*

3.9.3.2 Methodology

Impacts associated with the Plan related to hazards and hazardous materials are evaluated qualitatively based on a literature review of potential hazards in the Plan Area in comparison to the proposed construction and operation activities.

3.9.3.3 Plan Impacts

- 3.9.3.3.1 9(a). Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?
- 3.9.3.3.1.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant. As greenway paths, greenway amenities, pocket parks, greenspaces, safe crossings, and stormwater management facilities require similar types of construction, the following

discussion applies to all of these project elements. Construction of project elements would involve the routine transport, use, and disposal of minimal amounts of hazardous materials that are typically used in construction projects, such as solvents, paints, oils, and grease and materials. The transport, use, and disposal of these materials would be compliant with applicable regulations such as those under RCRA, OSHA, DOT, California Labor Code, and the CCR. The regulations mentioned cover hazardous materials related topics such as proper personal protective equipment, transport, handling, and disposal.

Although solvents, paints, oils, grease, fuel, and other materials would be transported, used, and disposed of during construction of projects implemented under the Plan, these materials are typically used in construction projects and would not represent the transport, use, and disposal of acutely hazardous materials. These hazardous materials are also generally used in small amounts and any potential construction-related hazardous releases or emissions would be from such commonly used materials as paints and solvents and oils/fuels and would not include substances listed in 40 CFR 355 Appendix A: Extremely Hazardous Substances and Their Threshold Planning Quantities. Releases of common construction hazardous materials would be small and localized. Spills that could occur would be contained and cleaned according to the SDS as appropriate. Hazardous materials SDS would include accidental release cleanup measures such as appropriate neutralization techniques, decontamination protocols, cleaning or vacuuming guidance, and examples of adsorbent materials.

Any stormwater discharges during construction would be covered under the applicable building code, LID, and other ordinances of the jurisdiction, County, or city within which the project is located (as per the MS4 permit described above in Section 3.9.2, Regulatory Framework). This MS4 permit subjects the Los Angeles County Flood Control District, County of Los Angeles, 85 incorporated cities within the coastal watersheds of Los Angeles County, Ventura County Watershed Protection District, County of Ventura, and 10 incorporated cities within Ventura County to WDRs for their MS4 discharges originating from within their jurisdictional boundaries composed of stormwater and non-stormwater. The MS4 permit also requires permittees to implement construction requirements for implementation related to minimum construction site BMPs for erosion, sediment, non-stormwater management, and waste management on all construction sites that are less than one acre.

Projects containing any combination of greenway paths, greenway amenities, pocket parks, greenspaces, safe crossings, and stormwater management facilities could result in greater than one acre of soil disturbance. Construction projects that disturb one acre of land or more are required to obtain coverage under the NPDES General Permit for Stormwater Discharges Associated with Construction and Land Disturbance Activities (Construction General Permit), Order No. 2022-0057-DWQ (as discussed in Section 3.7, Geology and Soils). The project proponent would be required to prepare a SWPPP in compliance with Section 402 of the Federal CWA and would file a Notice of Intent with the LARWQCB to obtain coverage under the NPDES Construction General Permit. The SWPPP would include spill prevention measures to avoid and, if necessary, clean up accidental releases of hazardous materials. Compliance with all NPDES Construction General Permit requirements including the preparation and implementation of a SWPPP and associated BMPs would minimize the potential for mishandling and/or the release of hazardous materials. All hazardous materials brought to the construction site would be disposed in accordance with applicable regulations (see question 9(b) for discussion of potential impacts from release of hazardous materials to the environment in the event the individual project site contains contaminated soils). Therefore, construction of greenway paths, greenway amenities, pocket parks,

greenspaces, safe crossings, and stormwater management facilities is not expected to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous waste materials. Impacts would be less than significant.

Operations

Less than Significant. Operations of the greenway paths, greenway amenities, pocket parks, greenspaces, safe crossings, and stormwater management facilities would attract visitors to the Plan Area. Recreational uses (such as those associated with pedestrian, bike, and multi-use trails) and related amenities (e.g., fencing, benches, landscaping, restrooms.) and maintenance of those recreational uses would occur. The transport, use, and disposal of hazardous materials would consist of solvents, paints, fuels for equipment commonly associated with maintenance of public spaces. Their use would be minimal and localized, and spills that may occur would be contained and cleaned as they occur consistent with applicable rules and regulations. In some cases, maintenance could involve the use of pesticides and/or herbicides. However, these materials would be used in small amounts, intermittently, and with proper care as dictated by their accompanying SDS, and only County-approved substances would be used under the Plan. Thus, the potential for release of hazardous materials would be minimal. Therefore, operation of greenway paths, greenway amenities, pocket parks, greenspaces, safe crossings, and stormwater management facilities is not expected to create a significant hazard for the public or the environment through the routine transport, use, or disposal of hazardous materials. Impacts would be less than significant.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Construction and operation impacts would be less than significant. No mitigation is required.

3.9.3.3.2 9(b). Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

3.9.3.3.2.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant with Mitigation. Hazardous materials sites with a potential for contaminated onsite soil and/or groundwater exist within the Plan area as shown in Figure 3.9-1. In addition, as described in Section 3.12, Mineral Resources, oil wells are present in the vicinity of the Plan Area. These could be encountered during construction of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities as these plan components could be constructed anywhere within the Plan Area. The larger the proposed project footprint under the Plan (e.g., maximum size park development, maximum length greenway segment), the more soil disturbance and thus the greater the risk of exposure to contaminated media. Smaller footprints or installation of prefabricated structures (e.g., greenway amenities such as benches, shade structures, drinking fountains, etc.) would require little ground disturbance and would therefore present a smaller risk of

exposure to potentially contaminated media. Construction in previously disturbed areas, such as installing safe crossings at existing roads, would likewise result in a smaller risk of encountering contaminated media because previous excavations would have already occurred there. Contaminated sites would be remediated or addressed in coordination with the appropriate federal, state, or local agency. These could include USEPA, SWRCB, DTSC, or local environmental health or fire department.

Because the exact location and design of projects that would be implemented under the Plan have not yet been determined, future projects could be located on sites with contaminated soil and/or groundwater and ground-disturbing (grading or excavation) activities conducted during construction could encounter contaminated soil or groundwater. Implementation of **MM HAZ-1: Pre-construction Hazardous Site Records Search** would identify if the project site is located on or near a hazardous materials site. If the site is located on or near a hazardous site and is determined to present a potential risk, then additional engineering controls and **MM HAZ-2: Phase I/II Environmental Site Assessment** and **MM HAZ-3: Soil and Groundwater Management Plan** should be incorporated as necessary. Implementation of **MM HAZ-2: Phase I/II Environmental Site Assessment**, which consists of a Phase I Environmental Site Assessment, would provide recommendations for further assessment or mitigation measures to assess or mitigate potential environmental impacts under the oversight of the applicable regulatory agency, as necessary. Implementation of **MM HAZ-3: Soil and Groundwater Management Plan** would further ensure that any contaminated soils are properly identified, excavated, and disposed of off-site.

With the implementation of **MM HAZ-1: Pre-construction Hazardous Site Records Search**, **MM HAZ-2: Phase I/II Environmental Site Assessment**, and **MM HAZ-3: Soil and Groundwater Management Plan**, and coordination with the appropriate oversight agency (as necessary), the potential upset and accident conditions involving the release of hazardous materials into the environment associated with construction activities would be less than significant.

Operations

Less than Significant. Hazardous materials used during operations of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities would be minimal, primarily for maintenance, and consist of commonly used hazardous materials such as solvents, paints, fuels for equipment, and approved herbicides or pesticides. Spills involving these materials would be contained and cleaned as they occur in accordance with SDSs. The amount would be small and localized, and spills would be contained and cleaned as they occur, consistent with applicable regulations. Thus, the potential for release of hazardous materials would be minimal. Therefore, operation of greenway paths and greenway amenities would not be expected to create a significant hazard for the public or the environment through the reasonably foreseeable upset and accident conditions involving the release of hazardous materials, and impacts would be less than significant.

Mitigation Measures

MM HAZ-1: Pre-construction Hazardous Site Records Search. Prior to ground disturbance at each proposed project site, a database search pursuant to California Government Code Section 65962.5 shall be conducted to identify if the project site is located on or near a hazardous materials site and to determine the applicability of any regulatory requirements or hazardous material risks associated with the construction site or the adjacent sites. If the site is not located on or adjacent to a hazardous

materials site or is determined not to present a risk to the public or environment, no further action would be necessary. If the site is located on or near a hazardous site and is determined to present a potential risk, then additional engineering controls may be necessary, including **MM HAZ-2: Phase I/II Environmental Site Assessment** and **MM HAZ-3: Soil and Groundwater Management Plan** as appropriate.

MM HAZ-2: Phase I/II Environmental Site Assessment. Prior to ground disturbance, a Phase I Environmental Site Assessment shall be conducted in conformance with industry-accepted practices, American Society of Testing Materials (ASTM) Designation E1527-05, and the USEPA All Appropriate Inquiry Rule (40 CFR Section 312). Based on the Phase I Environmental Site Assessment findings, recommendations for further assessment (i.e., Phase II Environmental Site Assessment) or mitigation measures shall be recommended, as appropriate.

MM HAZ-3: Soil and Groundwater Management Plan. Should the assessments required under MM HAZ-2 above reveal chemicals of concern above applicable clean-up goals, or should unanticipated contamination be found during site excavation, a Soil and Groundwater Management Plan shall be prepared. The Soil and Groundwater Management Plan shall be implemented prior to, during, and after excavation and grading activities on the Project Site to ensure that any contaminated soils are properly identified (type and extent), excavated, and disposed of off-site. The sampling program shall include the following:

- Health and safety plan that specifies pre-field activities (e.g., marking of boring locations, obtaining utility clearance) and field activities (e.g., sampling procedures, health and safety measures, soil stockpile management, etc.)
- Necessary permits for well installation and/or boring advancement
- A soil sampling and analysis plan, including chemical testing methods, and quality assurance/quality control procedures. Laboratory analyses to be conducted by a State-certified laboratory
- Hazardous material handling and disposal processes, including appropriate certified hazardous material hauling (transport) and disposal/recycling facilities

Significance After Mitigation

For construction, implementation of mitigation measures **MM HAZ-1: Pre-construction Hazardous Site Records Search**, **MM HAZ-2: Phase I/II Environmental Site Assessment**, and **MM HAZ-3: Soil and Groundwater Management Plan** would ensure that impacts due to reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment are less than significant with mitigation.

For operation, impacts would be less than significant, and no mitigation is required.

3.9.3.3.3 9(c). Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

3.9.3.3.3.1 Greenway Paths + Greenway Amenities, Greenway Paths + Pocket Parks and Greenspaces, Greenway Paths + Safe Crossings, Greenway Paths + Stormwater Management

Construction

Less than Significant with Mitigation. As described in the Section 3.3.1.5, Sensitive Receptors, there are numerous schools within and in vicinity of the Plan Area (See Table 3.3-4. School Districts within the Plan Area). Construction of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities would involve routine transport, use, and disposal of hazardous materials such as solvents, paints, oils, and grease and materials that are typically used in construction projects and would not include substances listed in 40 CFR 355 Appendix A: Extremely Hazardous Substances and Their Threshold Planning Quantities. Releases would be small and localized and would be contained and cleaned according to the material's SDSs, as applicable. Such transport, use, and disposal would be compliant with applicable regulations such as those under RCRA, OSHA, DOT, California Labor Code, and the CCR.

Since the location and design of future projects are currently unknown, individual projects implemented under the Plan could be constructed on or immediately adjacent to a hazardous materials site that are within 0.25 mile of a school. Depending on the contaminant characteristics of the hazardous materials site and extent of contamination, soil disturbing activities could encounter contaminated soil and/or groundwater. Therefore, potentially significant impacts could occur due to handling affected media within 0.25 mile of an existing or proposed school.

To avoid exposure at nearby schools once a future project location site is identified, project proponents shall implement **MM HAZ-1: Pre-construction Hazardous Site Records Search** to identify if the project site is located on or near a hazardous materials site. If the site is located on or near a hazardous site and it is determined that ground disturbance could pose a risk of emission of hazardous materials, then the project proponent shall implement **MM HAZ-2: Phase I/II Environmental Site Assessment**, which consists of a Phase 1 Environmental Assessment (and subsequently, a Phase II as necessary) and implement **MM HAZ-3: Soil and Groundwater Management Plan** to further ensure that any contaminated soils are properly identified, excavated, and disposed of off-site. Impacts would be less than significant with mitigation.

Operations

Less than Significant. Operations of the greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities would be associated with recreational uses (such as those associated with pedestrian, bike, and multi-use trails) and maintenance of the project components. Transport, use, and disposal of hazardous materials used in operations would be those associated with maintenance of the greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities. Their use would be minimal, and they would consist of commonly used hazardous materials, such as solvents, paints, fuels for equipment, and approved herbicides and pesticides. The amount would be small and localized, and spills that may occur would be contained and cleaned as they occur consistent with applicable regulations.

Thus, the potential for release of hazardous materials would be minimal. Therefore, operation of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities would not be expected to emit or require handling of hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school, and impacts would be less than significant.

Mitigation Measures

MM HAZ-1: Pre-construction Hazardous Site Records Search.

MM HAZ-2: Phase I/II Environmental Site Assessment.

MM HAZ-3: Soil and Groundwater Management Plan.

Significance After Mitigation

For construction, implementation of included mitigation measures **MM HAZ-1: Pre-construction Hazardous Site Records Search, MM HAZ-2: Phase I/II Environmental Site Assessment, and MM HAZ-3: Soil and Groundwater Management Plan** would ensure that any potential soil or groundwater contamination at a project site is identified and handled in a manner so as not to be a source of exposure and risk to nearby schools.

For operation, impacts would be less than significant. No mitigation is required.

3.9.3.3.4 9(d). Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

3.9.3.3.4.1 Greenway Paths and Greenway Amenities + Pockets Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant with Mitigation. Because the location and design of future projects are currently unknown, the construction of the greenway component with any combination of subcomponents (i.e., greenway paths + greenway amenities, greenway paths + pocket parks and greenspaces, greenway paths + safe crossings, or greenway paths + stormwater management) has the potential to occur on hazardous materials sites compiled pursuant to Government Code Section 65962.5. The beneficial project elements of subcomponents (pocket parks and greenspaces, safe crossings, and stormwater management) would be larger in size than greenway amenities, but once an individual project site is known and if it is located on or near a hazardous materials site, ground-disturbing activities during construction could encounter contaminated materials (groundwater and/or soil) regardless of the size of the project. Exposure of workers and the public to contaminated media is considered a potentially significant impact. To avoid exposure and risk to workers, the public, and the environment, a desktop review of the project-site shall be conducted to identify the proximity of hazardous locations to the site (**MM HAZ-1: Pre-construction Hazardous Site Records Search**). If the site is located on or adjacent to a hazardous site and it is determined that ground disturbance could pose a risk of exposure of workers or the public to contaminated media, then the project proponent shall conduct a Phase I Environmental Site Assessment and subsequently Phase II Environmental Site Assessment (**MM HAZ-2: Phase I/II**

Environmental Site Assessment), as necessary, and prepare and draft a Soil and Groundwater Management Plan (**MM HAZ-3: Soil and Groundwater Management Plan**). With the implementation of these measures, impacts would be reduced to less than significant levels.

Operations

Less than Significant. If a future project to be implemented under the Plan is located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5, the operations and maintenance of the greenway and associated beneficial project elements could encounter contaminated media (soil and/or groundwater) during regular maintenance activities. Operations would not require additional substantial soil or groundwater disturbance. Therefore, operations activities would not contribute to a significant hazard to the public or environment conditions associated with the project being located on a Cortese List site, and impacts would be less than significant.

Mitigation Measures

MM HAZ-1: Pre-construction Hazardous Site Records Search.

MM HAZ-2: Phase I/II Environmental Site Assessment.

MM HAZ-3: Soil and Groundwater Management Plan.

Significance After Mitigation

For construction, implementation of mitigation measures **MM HAZ-1: Pre-construction Hazardous Site Records Search, MM HAZ-2: Phase I/II Environmental Site Assessment, and MM HAZ-3: Soil and Groundwater Management Plan** would ensure that a site which is included on a list of compiled pursuant to Government Code Section 65962.5 is properly identified and any potential hazardous materials are handled appropriately and will not present a significant hazard to the public or the environment. Construction impacts would be less than significant with mitigation.

For operation, impacts would be less than significant. No mitigation is required.

3.9.3.3.5 9(e). For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

3.9.3.3.5.1 Greenway Paths and Greenway Amenities + Pockets Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction and Operations

Less than Significant. Since the location and design of future projects are currently unknown, the greenway with any combination of subcomponents (i.e., greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities) could be constructed and operated within two miles of a public airport or public use airport and within areas covered by an airport land use if near the SGV Airport or Brackett Field. If necessary, project proponents would notify the FAA of construction per 14 CFR Part 77 (as described in Section 3.9.2.1.5) for construction that might impact the airports to ensure compliance with FAA rules and regulations and avoid constructing any hazards to

airports and air traffic. However, notification is not likely required since greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities would not include or structures of significant height that could potentially obstruct airports or air traffic. Design would follow the *Design Guidelines and Standards* and greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities would not generate significant glare or distracting light. Additionally, construction in proximity to airports may result in temporary noise increases associated with normal construction, use of the greenway paths and amenities, and maintenance activities; however as detailed in Section 3.13, Noise, increases would not be excessive for people residing or working near the SGV Airport or Bracket Field area since the construction noise would be temporary and subject to the construction noise standards of the respective jurisdiction. Similarly, landscape and maintenance activities would also be subject to the noise standards of the respective jurisdiction and would be of short duration and intermittent throughout the year. Noise associated with visitors is expected to be below 65 decibels (dBA) community noise equivalent level (CNEL), which is defined in the Title 21 Airport Noise Standard as the threshold for noise-sensitive land use compatibility. Thus, visitors would not increase noise levels above the 65 dBA CNEL land use compatibility contour. As such, construction and operation activities associated with greenway paths, greenway amenities, pocket parks or greenspaces, safe crossings, and stormwater management facilities would not be excessive for people residing or working near an airport. Therefore, construction and operation impacts would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.9.3.3.6 9(f). Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

3.9.3.3.6.1 Greenway Paths and Greenway Amenities + Pockets Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant with Mitigation. Depending on individual project locations, construction activities for greenway paths and amenities, pocket parks and greenspaces, safe crossings, and stormwater management could occur near emergency service facilities (e.g., fire stations and hospitals) and along roadways used by emergency service providers and have the potential to temporarily restrict access for emergency vehicles traveling to and around future project sites. Temporary lane closures for vehicle, bike, or pedestrian traffic may be required. Construction would be consistent with any applicable general plan, hazard mitigation plan, emergency response plan and fire department or police department emergency response requirements, by providing adequate emergency access, minimizing temporary impacts on local evacuation routes, and not permanently affecting major arterials surrounding project sites. Construction managers and personnel would follow the Manual on Uniform Traffic Control Devices (Caltrans 2024) guidelines to ensure the safety of vehicle, pedestrian, and bicycle traffic during construction. However, construction, including temporary lane closures and construction-

related traffic causing delays or obstructing the movement of emergency vehicles, could impair emergency access in the Plan Area, resulting in potentially significant impacts to emergency response. Implementation of **MM WF-1: Construction Coordination with Emergency and Fire Services** would require that the relevant emergency response services are consulted prior to construction and are able to identify necessary measures to prevent the impairment of emergency response, thereby reducing the potential impacts during construction.

Operations

Less than Significant. Operations of the Plan components would increase vehicle, bike, and pedestrian traffic and the use of amenities at future project sites, which could impact emergency access and response. Greenway paths would be designed per the *Design Guidelines and Standards* to include a minimum of 12 feet of unobstructed drivable width to allow access by emergency and maintenance vehicles. Overall, the greenway segments would be located on a minimum 13-foot ROW width to accommodate the minimum 12 feet of unobstructed width for the path and its shoulders, plus the width necessary (one foot) to accommodate channel wall fencing and signposts or other auxiliary features outside of the shoulders. Additionally, there would be a vertical clearance of at least 10 feet to the bottom of overhead structures including lighting. Maintenance of the greenway paths and amenities would be temporary and would not require equipment that would block emergency access. There would be no permanent road closures or obstructions associated with operations. Signage would be used to alert users to rules and regulations within and along the Greenway Network to warn users of dangerous conditions, and/or inform bicyclists and drivers of regulations and upcoming conditions. Therefore, operations would not physically impair or otherwise interfere with emergency response or evacuation in the project vicinity, and impacts would be less than significant.

Mitigation Measures

Mitigation Measure WF-1: Construction Coordination with Emergency and Fire Services.

Significance After Mitigation

Implementation of **MM WF-1: Construction Coordination with Emergency and Fire Services** would require that the relevant emergency response services are consulted prior to construction and are able to identify necessary measures to prevent the impairment of emergency response, thereby reducing the potential impacts during construction to less than significant.

For operations, no mitigation is required and impacts would be less than significant.

3.9.3.3.7 9(g). Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

3.9.3.3.7.1 Greenway Paths and Greenway Amenities + Pockets Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Significant and Unavoidable. Wildfire risk is described in greater detail in Section 3.20.1 (Wildfire, Environmental Setting). The Plan Area contains primarily urbanized/developed areas which are outside of the designated VHFHSZ (CAL FIRE 2007, 2011); however, small portions of the Plan Area, primarily the

northern extent in the San Gabriel foothills region, are located within the VHFHSZ, and there are small areas designated as VHFHSZs along the edge of the Angeles National Forest.

Depending on individual project location, it can reasonably be assumed that staging areas and construction zones for greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities could occur on the District ROW and adjacent parcels where they fall within or near lands classified as VHFHSZ. Implementation of **MM WF-1: Construction Coordination with Emergency and Fire Services** would prepare local response agencies for responding to fires on project sites in the Plan Area.

Where the Plan Area intersects these designations, there is a potential for construction to occur in areas prone to hazards such as landslides or floods, which are exacerbated by wildfires. FHSZs in the Plan Area are shown in Figure 3.20-1 in Section 3.20, Wildfire. Fault and landslide-prone areas in the Plan Area are shown in Figures 3.7-2 and 3.7-3 in Section 3.7, Geology and Soils. Flood hazard areas in the Plan Area are shown in Figure 3.10-3 in Section 3.10, Hydrology and Water Quality.

Construction would comply with applicable construction standards, including a pre-fire plan, refueling protocols, and proper storage of combustible materials, as required by the California Building Code, California Fire Code and OSHA Safety and Health Regulations, which require the development of a fire protection program through all phases of construction and demolition work and addresses requirements for appropriate firefighting equipment, water sources, and sprinkler and alarm systems. Construction of projects under the Plan would be required to comply with all applicable California Building Code and California Fire Code requirements for development in a VHFHSZ (e.g., water supply, hydrant and standpipe spacing, signs, fire department access). Equipment used during construction may exacerbate wildfire risk due to sparks from construction equipment or vehicles and the use of flammable materials, such as oils and solvents, have the potential to ignite adjacent vegetation. The construction of and installation of overhead or underground electric utilities may temporarily increase the risk of ignition of materials due to the high fire risk of electricity. Electric utility construction would be conducted by qualified experts who would follow proper safety procedure required by CPUC and structures requiring electricity (primarily restrooms) would be required to be built in accordance with California Building Code requirements. To reduce the risk of fire during construction activity, project proponents shall implement **MM WF-2: Prepare a Construction Fire Protection Plan**.

Ultimately, wildfires could exacerbate conditions of slope instability or flood because wildfires destroy vegetation and change soil conditions, which could expose people or structures to post-fire hazards regardless of whether flood or geologic hazards are addressed during project design. Because locations of specific project sites are not known at this time, construction of projects located in VHFHSZs or that have recently involved wildfires combined with areas prone to landslides or slope instability could expose workers, structures, and property to significant risks related to post-fire conditions. **MM WF-2: Prepare a Construction Fire Protection Plan** would ensure that project proponents plan for these potentialities by implementing Post-Fire Risk Reduction measures. Nonetheless, construction associated with projects located in VHFHSZs would have the potential to exacerbate the existing wildfire risk which may expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. Therefore, impacts would be significant and unavoidable.

Operations

Significant and Unavoidable. Once operational, greenway paths and other plan components would be expected to result in increased numbers of daily users to project sites (e.g., increased vehicle, bike, and pedestrian traffic). If a project implemented under the Plan is within or adjacent to a VHFSZ, it could expose visitors and staff to hazardous conditions associated with the high risk of wildfire at the site who were not previously exposed to this risk. Approximately 80 percent of wildfires are estimated to have been ignited by humans (Balch et al. 2017). Increased presence of humans along newly constructed greenways and at amenities and pocket parks and greenspaces within VHFSZs could exacerbate existing wildfire risk by increasing the possibility of human-caused wildfires.

Operations would also include routine maintenance such as landscaping and repair of amenities, as needed. These activities would be conducted in accordance with California Fire Code, which mandates proper refueling protocols and storage of combustible materials, and OSHA Safety and Health Regulations, which requires appropriate firefighting equipment, water sources, and sprinkler and alarm systems. Projects would also operate in compliance with the State-mandated defensible space standards (PRC Section 4291, see Section 0). Although **MM WF-2: Prepare a Construction Fire Protection Plan** would be implemented to reduce the risk of fire during construction and compliance with local and State regulations would be further ensured via implementation of **MM WF-3: Operations Fire Prevention Measures**, because projects could be within or adjacent to VHFSZs, it cannot be guaranteed that the operation of greenway paths and other project components would not expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires. Therefore, impacts would be significant and unavoidable.

Mitigation Measures

Mitigation Measure WF-1: Construction Coordination with Emergency and Fire Services

Mitigation Measure WF-2: Prepare a Construction Fire Protection Plan.

Mitigation Measure WF-3: Operations Fire Prevention Measures.

Significance After Mitigation

The vast majority of projects that could be constructed under the Plan would not be within fire hazard zones; however, portions of the Plan Area present greater potential for exposure of people or structures to wildfire or post-wildfire conditions which could result in harm. In those areas, implementation of **MM WF-1: Construction Coordination with Emergency and Fire Services**, **MM WF-2: Prepare a Construction Fire Protection Plan**, **MM WF-3: Operations Fire Prevention Measures** would reduce the likelihood of adverse outcomes to the greatest extent feasible. However, even with careful planning, the existence of Plan projects in sensitive areas could expose people or structures to significant risks. Therefore, construction and operation impacts would remain significant and unavoidable.

3.9.3.4 Impacts of Conceptual Design Projects

This section discusses potential impacts from the 10 conceptual designs discussed in Section 2.4. If the impact analysis is different for the 10 conceptual designs, a table is provided below and addresses the CEQA framework question for each conceptual design. Any mitigation measures referenced below is discussed in the section above.

- 3.9.3.4.1 9(a). Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?

Construction and Operations

Less than Significant. The subcomponents and beneficial elements proposed for all 10 conceptual design projects are within the maximum extent limits described in Section 2.3.1, Components of the Plan and CEQA Organization. Construction and operation of the conceptual design projects would not result in additional impacts related to the routine transport, use, or disposal of hazardous materials not already addressed in Section 3.9.3.3.1 and no impacts of greater severity than described in Section 3.9.3.3.1.

- 3.9.3.4.2 9(b). Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

Construction

Less than Significant with Mitigation. Because a construction disturbance footprint has not been developed for any of the conceptual projects, these sites would all be subject to the same mitigation measures described under Section 3.9.3.3.2.1. With the implementation of **MM HAZ-1: Pre-construction Hazardous Site Records Search, MM HAZ-2: Phase I/II Environmental Site Assessment, and MM HAZ-3: Soil and Groundwater Management Plan** and coordination with the appropriate oversight agency (as necessary), the potential upset and accident conditions involving the release of hazardous materials into the environment associated with construction activities would be less than significant.

Operations

Less than Significant. The subcomponents and beneficial elements proposed for all 10 conceptual design projects are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization. Construction and operation of the conceptual design projects would not result in additional impacts related to creating a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials not already addressed in Section 3.9.3.3.2.1 and no impacts of greater severity than described in Section 3.9.3.3.2.1.

- 3.9.3.4.3 9(c). Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?

Construction

Many of the conceptual design projects are located within 0.25 mile of a school, as shown in Table 3.9-3. Brief descriptions providing greater details of this analysis for each example site are provided in the table below. As indicated in each of the descriptions, none of the conceptual design examples introduce any subcomponents and beneficial elements not previously considered within the Plan and therefore, would not result in any new impacts or more severe impacts than as described for the Plan.

Table 3.9-3. Analysis of Construction Impacts for Conceptual Design Examples within One-quarter Mile of a School

Conceptual Design Project	<i>9(c). Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?</i>
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	Less than Significant with Mitigation. McKinley Elementary is located approximately 0.21 miles away from the Project site, and the site is located in Area 3 of the SGV Superfund Site. To avoid exposure to nearby schools, a desktop review of the Project site shall be conducted to identify the proximity of hazardous locations to the site (MM HAZ-1: Pre-construction Hazardous Site Records Search). If the site is located on or adjacent to a hazardous site and it is determined that ground disturbance could pose a risk, then the project proponent shall implement MM HAZ-2: Phase I/II Environmental Site Assessment and prepare and draft a Soil and Groundwater Management Plan (MM HAZ-3: Soil and Groundwater Management Plan). Therefore, impacts would be less than significant with mitigation.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	Less than Significant with Mitigation. Central Elementary School is approximately 0.07 mile and Baldwin Park High School is approximately 0.18 mile away from the Project site, and the site is located in the Baldwin Park OU of the SGV Superfund Site. To avoid exposure to nearby schools, a desktop review of the Project site shall be conducted to identify the proximity of hazardous locations to the site (MM HAZ-1: Pre-construction Hazardous Site Records Search). If the site is located on or adjacent to a hazardous site and it is determined that ground disturbance could pose a risk, then the project proponent shall implement MM HAZ-2: Phase I/II Environmental Site Assessment and prepare and draft a Soil and Groundwater Management Plan (MM HAZ-3: Soil and Groundwater Management Plan). Therefore, impacts would be less than significant with mitigation.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	No Impact. Pasadena High School is approximately 0.04 miles and Focus Point Academy is approximately 0.06 mile away from the Project site. However, there are no hazardous waste sites within 0.25 mile of the Project site.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i>	Less than Significant with Mitigation. Willard Elementary School is approximately 0.23 mile away from the Project site, and there is a voluntary cleanup site located within 0.25 mile of the Project site. To avoid exposure to nearby schools, a desktop review of the Project-site shall be conducted to identify the proximity of hazardous locations to the site (MM-HAZ-1: Pre-construction Hazardous Site Records Search). If the site is located on or adjacent to a hazardous site and it is determined that ground disturbance could pose a risk, then the project proponent shall implement MM HAZ-2: Phase I/II Environmental Site Assessment and prepare and draft a Soil and Groundwater Management Plan (MM HAZ-3: Soil and Groundwater Management Plan). Therefore, impacts would be less than significant with mitigation.
San Dimas Wash at Arrow High School <i>City of Glendora</i>	No Impact. Sunrise Christian Preschool is located approximately 0.09 mile and Arrow High School & Oak Knoll Virtual Academy are approximately 0.18 mile away from the Project site. However, there are no hazardous waste sites within 0.25 mile of the Project site.
San Dimas Wash at Hollenbeck Park <i>City of Covina</i>	No Impact. Cyprus Elementary School is approximately 0.25 mile away from the Project site. However, there are no hazardous waste sites within 0.25 mile of the Project site.

Conceptual Design Project	9(c). Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i>	No Impact. There are no schools within 0.25 mile of the site.
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	No Impact. There are no schools within 0.25 mile of the site.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park and West Covina</i>	Less than Significant with Mitigation. Van Wig Elementary School is approximately 0.19 mile away and Florence Flanner Elementary School is approximately 0.20 mile from the Project site, and there are multiple Cleanup Program sites located in the vicinity of the Project Site. The site is also within the Baldwin OU of the SGV Superfund Site. To avoid exposure to nearby schools, a desktop review of the Project-site shall be conducted to identify the proximity of hazardous locations to the site (MM HAZ-1: Pre-construction Hazardous Site Records Search). If the site is located on or adjacent to a hazardous site and it is determined that ground disturbance could pose a risk, then the project proponent shall implement MM HAZ-2: Phase I/II Environmental Site Assessment and prepare and draft a Soil and Groundwater Management Plan (MM HAZ-3: Soil and Groundwater Management Plan). Therefore, impacts would be less than significant with mitigation.
Walnut Creek at Pocket Park <i>City of West Covina</i>	No Impact. Cameron Elementary School I is approximately 0.20 mile away and West Covina High School is approximately 0.25 mile from the Project site. However, there are no hazardous waste sites within 0.25 mile of the Project site.

Operations

Less than Significant. The subcomponents and beneficial elements proposed for all 10 conceptual designs are within the maximum extent limits as described for the Plan in Section 2. Operation of the conceptual design projects would not result in additional impacts related to hazardous emissions, materials, substances, or waste within one-quarter mile of an existing or proposed school that has not already been addressed in Section 3.9.3.3.3 and no impacts of greater severity than described in Section 3.9.3.3.3.

- 3.9.3.4.4 9(d). Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?

Construction

Construction of the 10 conceptual projects could result in impacts related to hazardous materials sites on a list compiled pursuant to Government Code Section 65962.5. Brief descriptions providing greater details of this analysis for each example site are provided in Table 3.9-4. As indicated in each of the descriptions, none of the conceptual design examples introduce any subcomponents or beneficial

elements not previously considered within the Plan and therefore, would not result in any new impacts or more severe impacts than as described for the Plan.

Table 3.9-4. Analysis of Construction Impacts of Conceptual Design Examples Located Near a Hazardous Materials Site

Conceptual Design Project	<i>9(d). Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?</i>
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	Less than Significant with Mitigation. The Project site is located in Area 3 of the SGV Superfund Site. To avoid exposure and risk to workers, the public, and the environment, a desktop review of the Project-site shall be conducted to identify the proximity of hazardous locations to the site (MM HAZ-1: Pre-construction Hazardous Site Records Search). If the site is located on or adjacent to a hazardous site and it is determined that ground disturbance could pose a risk, then the project proponent shall implement MM HAZ-2: Phase I/II Environmental Site Assessment and prepare and draft a Soil and Groundwater Management Plan (MM HAZ-3: Soil and Groundwater Management Plan). Therefore, impacts would be less than significant with mitigation.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	Less than Significant with Mitigation. The Project site is located in the Baldwin Park OU of the SGV Superfund Site. To avoid exposure and risk to workers, the public, and the environment, a desktop review of the Project-site shall be conducted to identify the proximity of hazardous locations to the site (MM HAZ-1: Pre-construction Hazardous Site Records Search). If the site is located on or adjacent to a hazardous site and it is determined that ground disturbance could pose a risk, then the project proponent shall implement MM HAZ-2: Phase I/II Environmental Site Assessment and prepare and draft a Soil and Groundwater Management Plan (MM HAZ-3: Soil and Groundwater Management Plan). Therefore, impacts would be less than significant with mitigation.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	No Impact. The Project site is not located on a hazardous materials site.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i>	No Impact. The Project site is not located on a hazardous materials site.
San Dimas Wash at Arrow High School <i>City of Glendora</i>	No Impact. The Project site is not located on a hazardous materials site.
San Dimas Wash at Hollenbeck Park <i>City of Covina</i>	No Impact. The Project site is not located on a hazardous materials site.
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i>	Less than Significant with Mitigation. The site is within the Puente Valley OU of the SGV Superfund Site. To avoid exposure and risk to workers, the public, and the environment, a desktop review of the Project-site shall be conducted, per MM HAZ-1: Pre-construction Hazardous Site Records Search , to identify the proximity of hazardous locations to the site (MM HAZ-1: Pre-construction hazardous site records search). If the site is located on or adjacent to a hazardous site and it is determined that ground disturbance could pose a risk, then the project proponent shall implement MM HAZ-2: Phase I/II Environmental Site Assessment and prepare and draft a Soil and

Conceptual Design Project	9(d). Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?
	Groundwater Management Plan (MM HAZ-3: Soil and Groundwater Management Plan). Therefore, impacts would be less than significant with mitigation.
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	No Impact. The Project site is not located on a hazardous materials site.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park West Covina</i>	Less than Significant with Mitigation. The site is within the Baldwin OU of the SGV Superfund Site. To avoid exposure and risk to workers, the public, and the environment, a desktop review of the Project-site shall be conducted to identify the proximity of hazardous locations to the site (MM HAZ-1: Pre-construction Hazardous Site Records Search). If the site is located on or adjacent to a hazardous site and it is determined that ground disturbance could pose a risk, then the project proponent shall implement MM HAZ-2: Phase I/II Environmental Site Assessment and prepare and draft a Soil and Groundwater Management Plan (MM HAZ-3: Soil and Groundwater Management Plan). Therefore, impacts would be less than significant with mitigation.
Walnut Creek at Pocket Park <i>City of West Covina</i>	No Impact. The Project site is not located on a hazardous materials site.

Operations

Less than Significant. The subcomponents and beneficial elements proposed for all 10 conceptual designs are within the maximum extent limits as described for the Plan. Operation of the conceptual design projects would not result in additional impacts related to the hazardous materials sites not already addressed in Section 3.9.3.3.4 and no impacts of greater severity than described in Section 3.9.3.3.4.

3.9.3.4.5 9(e). For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?

Construction and Operations

Less than Significant. The Thompson Creek at the Fairplex project is the only conceptual design located within two miles of an airport and within an airport land use plan (Brackett Field). There would be no impacts for the other nine conceptual design projects. The subcomponents and beneficial elements of the Thompson Creek at the Fairplex design are within the maximum extent limits as described for the Plan in Section 2. Therefore, construction and operation impacts of the conceptual design would not result in additional safety hazards or noise not already addressed in Section 3.9.3.3.5 and no impacts of greater severity than described in Section 3.9.3.3.5.

3.9.3.4.6 9(f). Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?

Construction

Less than Significant with Mitigation. The subcomponents and beneficial elements proposed for all 10 conceptual design projects are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization. Construction of the conceptual design projects would not result in additional impacts related to emergency response and plans not already addressed in Section 3.9.3.3.6 and no impacts of greater severity than described in Section 3.9.3.3.6. Implementation of **MM WF-1: Construction Coordination with Emergency and Fire Services** would require that the relevant emergency response services are consulted prior to construction and are able to identify necessary measures to prevent the impairment of emergency response, thereby reducing the potential impacts during construction to less than significant levels.

Operations

Less than Significant. The subcomponents and beneficial elements proposed for all 10 conceptual design projects are within the maximum extent limits described in Section 2.3.1, Components of the Plan and CEQA Organization. Construction of the conceptual design projects would not result in additional impacts related to emergency response and plans not already addressed in Section 3.9.3.3.6 and no impacts of greater severity than described in Section 3.9.3.3.6.

3.9.3.4.7 9(g). Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires?

Construction

Significant and Unavoidable. The San Jose Creek Pocket Park is the only conceptual design project that would be sited near a VHFSZ. Impacts from construction of that conceptual design project could be potentially significant and unavoidable. **MM WF-1: Construction Coordination with Emergency and Fire Services** would be implemented to reduce the risk that construction would impair an adopted emergency response plan or evacuation plan. However, the possibility remains that consulting emergency service agencies would not result in measures capable of reducing impacts to less than significant. Due to its location adjacent to steep slopes, wildfires could exacerbate conditions of slope instability or flood because wildfires destroy vegetation and change soil conditions, which could expose people or structures to post-fire hazards. **MM WF-2: Prepare a Construction Fire Prevention Plan** would ensure that project proponents plan for these potentialities by compiling a Post-Fire Risk Reduction Plan. However, risk still remains due to the location of the conceptual design project. Therefore, the San Jose Creek Pocket Park conceptual design project would result in significant and unavoidable impacts by exposing people or structures to significant risks posed by wildfires.

Operations

Significant and Unavoidable. Of the 10 conceptual design projects, only San Jose Creek Pocket Park is near a VHFSZ. Impacts from operation of that conceptual design project could be significant because it would attract visitors to the area which may be susceptible to risks from wildfire event. Implementation of **MM WF-2: Prepare a Construction Fire Prevention Plan** and **MM WF-3: Operations Fire Prevention**

Measures would allow project proponents to prepare for the possibility, however, impacts would remain significant and unavoidable.

3.10 Hydrology and Water Quality

This section evaluates the potential impacts of the Plan on surface and groundwater quality, and water supply, as well as potential impacts related to hazards such as floods, tsunamis, and seiche.

Table 3.10-1. Summary of Potential Impacts of the Plan on Hydrology and Water Quality.

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the Plan:			
10(a). Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction: No Mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant	Operations: No Mitigation
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	
10(b). Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction: No Mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant	Operations: No Mitigation
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	
10(c). Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would: i. result in substantial erosion or siltation on- or off-site; ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site; iii. create or contribute runoff water which would exceed the capacity of existing or			

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the Plan:			
planned stormwater drainage systems or provide substantial additional sources of polluted runoff; iv. impede or redirect flood flows?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction: No Mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant	Operations: No Mitigation

Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	
10(d). In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction: No Mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant	Operations: No Mitigation
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	

3.10.1 Environmental Setting

3.10.1.1 Surface Water

The San Gabriel River originates in the San Gabriel Mountains and flows 58 miles south until its confluence with the Pacific Ocean. The river receives drainage from 689 square miles in eastern Los Angeles County (LARWQCB 2000). Major tributaries to the San Gabriel River include Walnut Creek, Big and Little Dalton Wash, San Dimas Wash, San Jose Creek, Coyote Creek, and Fullerton Creek.

The upper reaches of the watershed contain woodland and riparian habitat and wilderness areas used for recreation. The Cogswell, San Gabriel, and Morris dams serve flood control and water conservation purposes in the upper watershed. The Santa Fe Dam and Reservoir, located four miles downstream from the mouth of the San Gabriel Canyon, provides flood protection to downstream communities and provides recreational opportunities. The District has operated and maintained the Santa Fe Reservoir Spreading Grounds since 1953 through an easement with the USACE. The spreading grounds recharge water to the Main San Gabriel Basin underlying the SGV.

The watershed is hydraulically connected to the Los Angeles River through the Whittier Narrows Reservoir (occurring mostly during high storm flows). The Whittier Narrows Dam collects runoff from upstream along with releases into the San Gabriel River from Santa Fe Dam and provides flood control. The area also serves as a park with recreational opportunities: an area located in the southeast area of the basin which was developed as mitigation for the established recreation facilities and serves water conservations purposes. Below the Whittier Dam are the San Gabriel Coastal Basin Spreading Grounds and the Rio Hondo Spreading Grounds, both owned and operated by the District, utilized for groundwater recharge. The 10-mile segment below Whittier Narrows is a concrete-lined channel and surrounded by high-density development and urban environments (LARWQCB 2000).

The individual washes in the Plan Area are described in detail in Section 2.2, Project Location and Setting. Additional information about the historic and present conditions of the San Gabriel River and its tributaries are provided in the Plan.

3.10.1.2 Water Quality

Beneficial uses are water quality milestones for water that need to be attained and maintained over time. Water may be a reservoir, lake, stream, river segment or estuary. The SWRCB has designated 21 “Beneficial Uses” for surface waters such as contact recreation or groundwater recharge. The Water Quality Control Plan: Los Angeles Region Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties (Basin Plan; LARWQCB 2014) specifies beneficial uses that apply to waterbodies with potential to be affected by the Plan (Table 3.10-2). The Basin Plan is designed to preserve and enhance water quality and protect the beneficial uses of all regional waters. Specifically, the Basin Plan: (i) designates beneficial uses for surface and ground waters, (ii) sets narrative and numerical objectives that must be attained or maintained to protect the designated beneficial uses and conform to the state's antidegradation policy, and (iii) describes implementation programs to protect all waters in the Region. In addition, the Basin Plan incorporates (by reference) all applicable State and Regional Board plans and policies and other pertinent water quality policies and regulations. The Basin Plan is amended regularly (LARWQCB 2024).

Key: GWR: Groundwater Recharge, WARM: Warm Freshwater Habitat, FRSH: Freshwater Replenishment, WET: Wetland Habitat, WILD: Wildlife Habitat, MUN: Municipal and Domestic Supply, RARE: Rare, Threatened, or Endangered Species; E: Existing Beneficial Use, P: Potential Beneficial Use, I: Intermittent Beneficial Use, * Asterisked MUN designations are designated under SB 88-63 and RB 89-03. Some designations may be considered for dedesignation at a later date.

CWA Section 303(d) requires states to identify “impaired waterbodies” (those not meeting established water quality standards), identify the pollutants causing the impairment, establish priority rankings for waters on the list, and develop a schedule for development of control plans (Total Maximum Daily Loads (TMDLs) to improve water quality). Waterbodies in the Plan Area that are listed as impaired under Section 303(d) are provided in Table 3.10-3 and shown in Figure 3.10-1.

Table 3.10-3. Impaired Waterbodies in the Plan Area

Waterbody	Impairment	TMDL
Alhambra Wash	Ammonia	None
Rio Hondo Reach 3 (above Spreading Grounds)	Iron, Oxygen, Dissolved, Indicator Bacteria	Indicator Bacteria
Rio Hondo Reach 2 (at Spreading Grounds)	Coliform Bacteria, Cyanide	Coliform Bacteria
Rio Hondo Reach 1 (Confl. LA River to Santa Ana Fwy)	pH, Toxicity, Lead, Trash, Copper, Zinc, Indicator Bacteria	pH; Lead; Trash; Copper; Zinc; Indicator Bacteria
Peck Road Park Lake	Trash, Odor, Organic Enrichment/Low Dissolved Oxygen, DDT (tissue), Chlordane (tissue)	Trash; Odor; Organic Enrichment/Low Dissolved Oxygen; DDT (tissue); Chlordane (tissue)
Legg Lake	Ammonia, Odor, pH, Trash, PCBs (Polychlorinated biphenyls), DDT	Ammonia; Odor; Trash
Sawpit Creek	Bis(2ethylhexyl)phthalate (DEHP), Indicator Bacteria	None
Santa Fe Dam Park Lake	PCBs (Polychlorinated biphenyls), pH	pH

Waterbody	Impairment	TMDL
San Gabriel River Reach 3 (Whittier Narrows to Ramona)	Indicator Bacteria	Indicator Bacteria
San Gabriel River Reach 2 (Firestone to Whittier Narrows Dam)	Lead, Cyanide, Temperature, water	Lead
Walnut Creek Wash (Drains from Puddingstone Res)	pH, Indicator Bacteria, Benthic Community Effects	None
Puente Creek	Indicator Bacteria, Selenium	None
San Jose Creek Reach 1 (SG Confluence to Temple St.)	Ammonia, pH, Total Dissolved Solids, Indicator Bacteria, Toxicity	Indicator Bacteria
San Jose Creek Reach 2 (Temple to I-10 at White Ave.)	Indicator Bacteria	Indicator Bacteria
Puddingstone Reservoir	Mercury, Organic Enrichment/Low Dissolved Oxygen, DDT, PCBs (Polychlorinated biphenyls), Chlordane	None
South San Jose Creek	Toxicity, pH, Ammonia	None
San Antonio Creek	pH	None

3.10.1.3 [Flooding](#)

Los Angeles County has experienced 12 federally declared flood disasters since 1975. These have primarily occurred under El Niño and La Niña conditions. Many of these resulted in significant flood damage to residential properties. Historically, flooding in Los Angeles County has occurred in Lancaster, Malibu Lake, Rowland Heights, and the San Gabriel and Santa Monica mountains. These areas are near steep hillsides where rainwater runs off quickly flooding areas along the hillside. Other flood-prone areas occur near streams or lakes where rainwater runs off quickly (LA County Department of Public Works 2024a).

Historically, the SGV was dominated by a constantly shifting network of shallow streams and river channels which conveyed water across vast wetland areas to the ocean. These dynamic waterways were a result of the San Gabriel Mountains which rise steeply to the north of the SGV. Through the dynamic relationships of topography, geology, and climate the San Gabriel Mountains transport tremendous amounts of sediment and water into the SGV during major rain events, presenting both challenges and a significant source of the region's water supplies.

During large storms, the streams of the SGV would overflow and change course rapidly throughout the alluvial floodplain. Even the path of the San Gabriel River has shifted and changed directions throughout history, at times joining the Rio Hondo, Los Angeles River, or even east to the Santa Ana River and Coyote Creek (Stein et al. 2007). These rivers, creeks, and streams have also supported great concentrations and diversity of plant and animal life and have been central in the traditions and lives of people for generations.

The District is empowered to provide flood protection, water conservation and, under certain circumstances, recreation and aesthetic enhancement within its boundaries. Over the course of its 100+ years of existence, the District has been building and maintaining an extensive drainage and water conservation system throughout LA County to reduce the risk of flooding, improve local water supply reliability, and provide passive recreational opportunities. Most of the once natural tributaries of the Rio Hondo and the San Gabriel River were channelized using concrete to establish predictable flow paths. Additionally, urbanization has made existing land used for groundwater recharge irreplaceable and vital to the sustainability of regional drinking water supplies.

The District oversees drainage infrastructure within 86 incorporated cities as well as the unincorporated County areas. This includes major dams and reservoirs, open channels, spreading grounds, underground storm drains, pump plants, debris basins, sediment placement sites, seawater intrusion barriers, and catch basins (LA County Department of Public Works 2024b). Numerous dams and spreading grounds are located in or near the Plan Area (Figure 3.10-2).

The Plan Area is predominantly outside of the FEMA 1 percent storm event (100-year) floodplain (Figure 3.10-2). Some areas adjacent to the District channels are within moderate flood hazard areas between the limits of the FEMA 100- and 500-year floodplain (0.2 percent annual chance of flood), areas protected from a 1 percent storm event (100-year) flood by levees (Zone X, shaded [yellow] in Figure 3.10-3), or areas of minimal flood hazard beyond the 0.2 percent storm event (500-year) floodplain (Zone X, unshaded in Figure 3.10-3). Definitions of flood hazard zone codes are provided in Table 3.10-4.

Table 3.10-4. FEMA Flood Hazard Zones.

Zone	Flood Hazard
Special Flood Hazard Areas	
Zone A	Areas with a 1 percent annual chance of flooding and a 26 percent chance of flooding over the life of a 30-year mortgage. Because detailed analyses are not performed for such areas, no depths or base flood elevations are shown within these zones.
Zone AE	The base floodplain where base flood elevations are provided. AE Zones are now used on new format FIRMs instead of A1-A30 Zones.
Zone AH	Areas with a 1 percent annual chance of shallow flooding, usually in the form of a pond, with an average depth ranging from 1 to 3 feet. These areas have a 26 percent chance of flooding over the life of a 30-year mortgage. Base flood elevations derived from detailed analyses are shown at selected intervals within these zones.
Zone AO	River or stream flood hazard areas and areas with a 1 percent or greater chance of shallow flooding each year, usually in the form of sheet flow, with an average depth ranging from 1 to 3 feet. These areas have a 26 percent chance of flooding over the life of a 30-year mortgage. Average flood depths derived from detailed analyses are shown within these zones.
Other Flood Areas	
Zone B and X (shaded)	Area of moderate flood hazard, usually the area between the limits of the 100-year and 500-year floods. B Zones are also used to designate base floodplains of lesser hazards, such as areas

Zone	Flood Hazard
	protected by levees from the 100-year flood, or shallow flooding areas with average depths of less than 1 foot or drainage areas less than 1 square mile.
Zone C or X (unshaded)	Area of minimal flood hazard, usually depicted on FIRMs as above the 500-year flood level. Zone C may have ponding and local drainage problems that do not warrant a detailed study or designation as base floodplain. Zone X is the area determined to be outside the 500-year flood and protected by levee from 100-year flood.
Zone D	Areas with possible but undetermined flood risks.

3.10.1.4 Groundwater

The Plan Area overlies the SGV Groundwater Basin, which covers an area of approximately 167 square miles. It is bounded to the north by the Raymond Fault and San Gabriel Mountains; to the southwest and south by a crescent-shaped system of hills (Repetto, Merced, Puente, and San Jose Hills); and to the east by the Chino fault and the San Jose fault. The only significant break along this boundary falls between the Merced and Puente Hills at Whittier Narrows. As the lowest point in the SGV, Whittier Narrows is the only location where groundwater and surface water exit the Basin. The San Gabriel Basin aquifer is the primary source of drinking water for over one million residents in the SGV. Forty-five different water purveyors extract groundwater in the Basin for use as municipal water supply. Many additional commercial/industrial users also extract and use groundwater from the Basin (DWR 2004; DSTC 2022).

Principal water-bearing formations of the basin are unconsolidated and semi-consolidated sediments which range in size from coarse gravel to fine-grained sands. The major sources of natural recharge are infiltration of rainfall on the valley floor and percolation of runoff from the adjacent mountains. The basin also receives imported water and return flow from applied water.

The physical groundwater basin is divided into two main parts, the Main Basin and the Puente Subbasin. The SGV Basin was adjudicated in January 1973 as the “Main San Gabriel Basin”, which does not include the Puente Narrows portion of the basin. The Main San Gabriel Basin Watermaster administers the Basin's adjudicated water rights and provides a basin-wide governing body for management of water resources. The Puente Subbasin, lying in the southeast portion of the map above, is tributary to the Main Basin and hydraulically connected to it, with no barriers to groundwater movement. It is, however, not within the legal jurisdiction of Main San Gabriel Basin Watermaster, and is thus considered a separate entity for management purposes (Main San Gabriel Basin Watermaster 2022). The Puente Basin was adjudicated in 1986 (DWR 2004).

As described in more detail in Section 3.9, Hazards and Hazardous Materials, the Basin’s groundwater is contaminated from the disposal of volatile organic compounds, including trichloroethylene, perchloroethylene, used as solvents, as well as perchlorate, 1,2,3-trichloropropane, N-nitrosodimethylamine; 1,4 dioxane, and hexavalent chromium. This discovery led the USEPA to place four areas of the Basin on the NPL under authority of CERCLA (i.e., Superfund program). These areas are further divided into six active operable units: Baldwin Park, El Monte, South El Monte, Puente Valley, Area 3 and Whittier Narrows (see Figure 3.9-2). The USEPA has built 14 groundwater treatment systems throughout the operable units to clean up the groundwater (USEPA 2021).

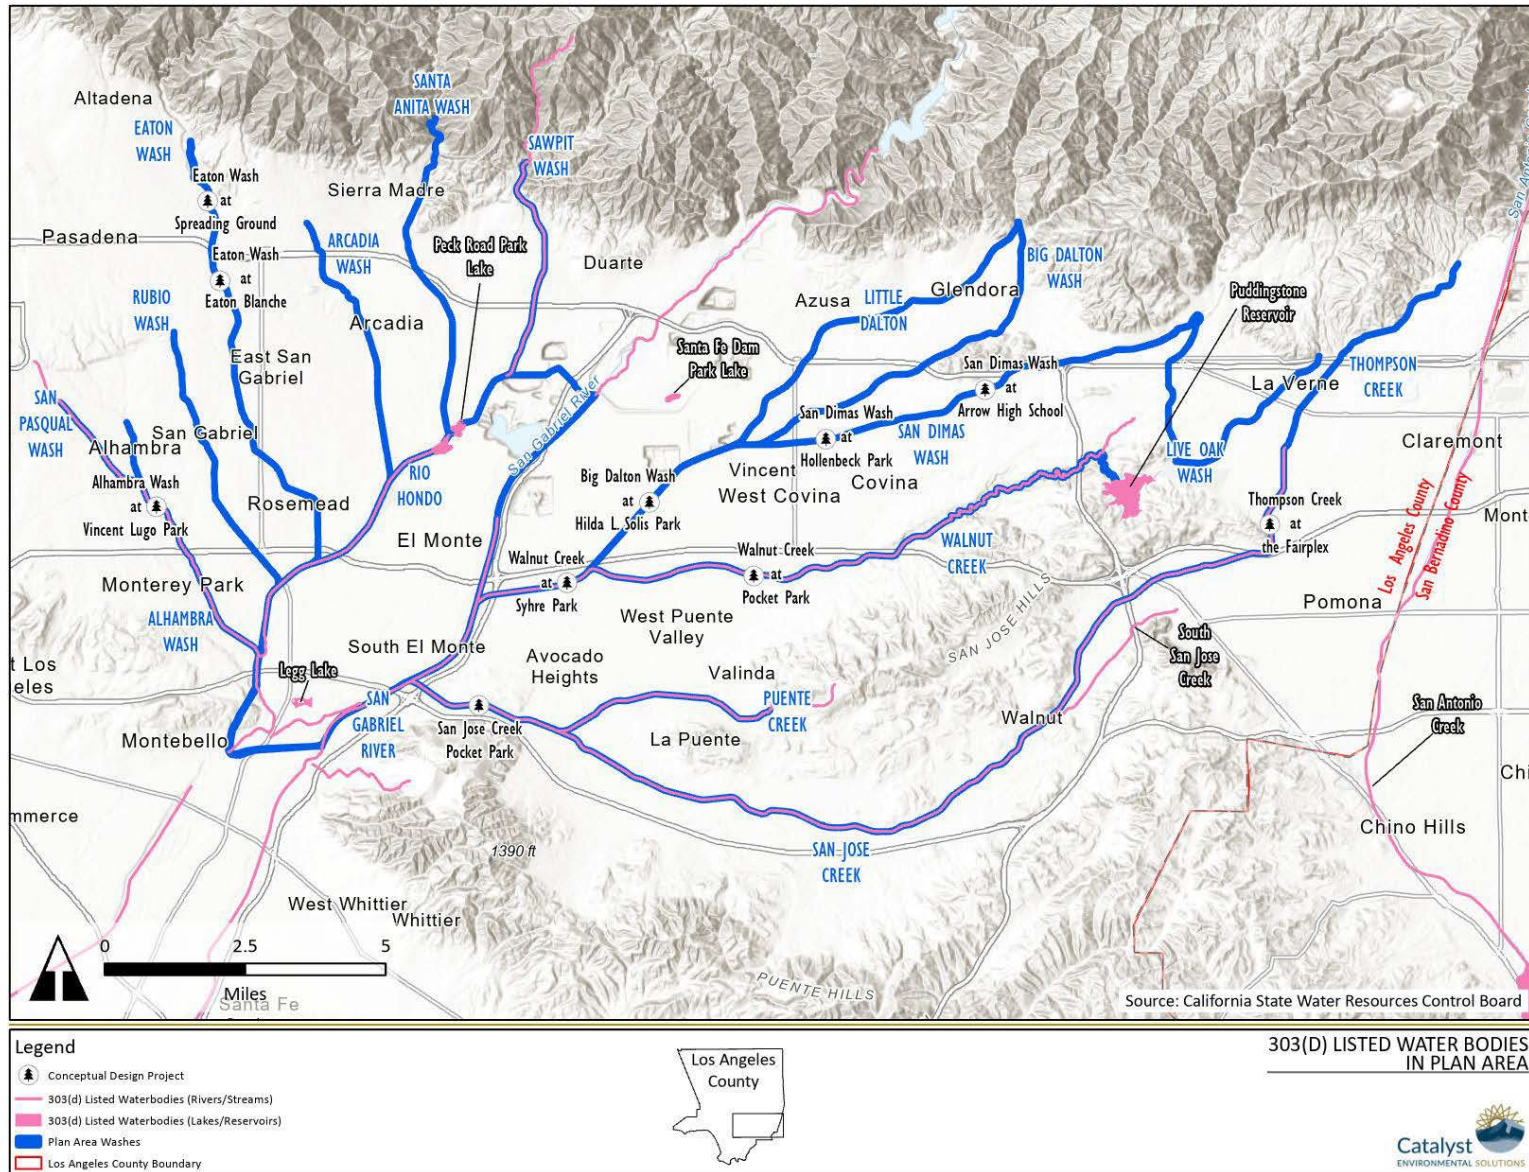

Figure 3.10-1. Impaired Waterbodies in the Plan Area.

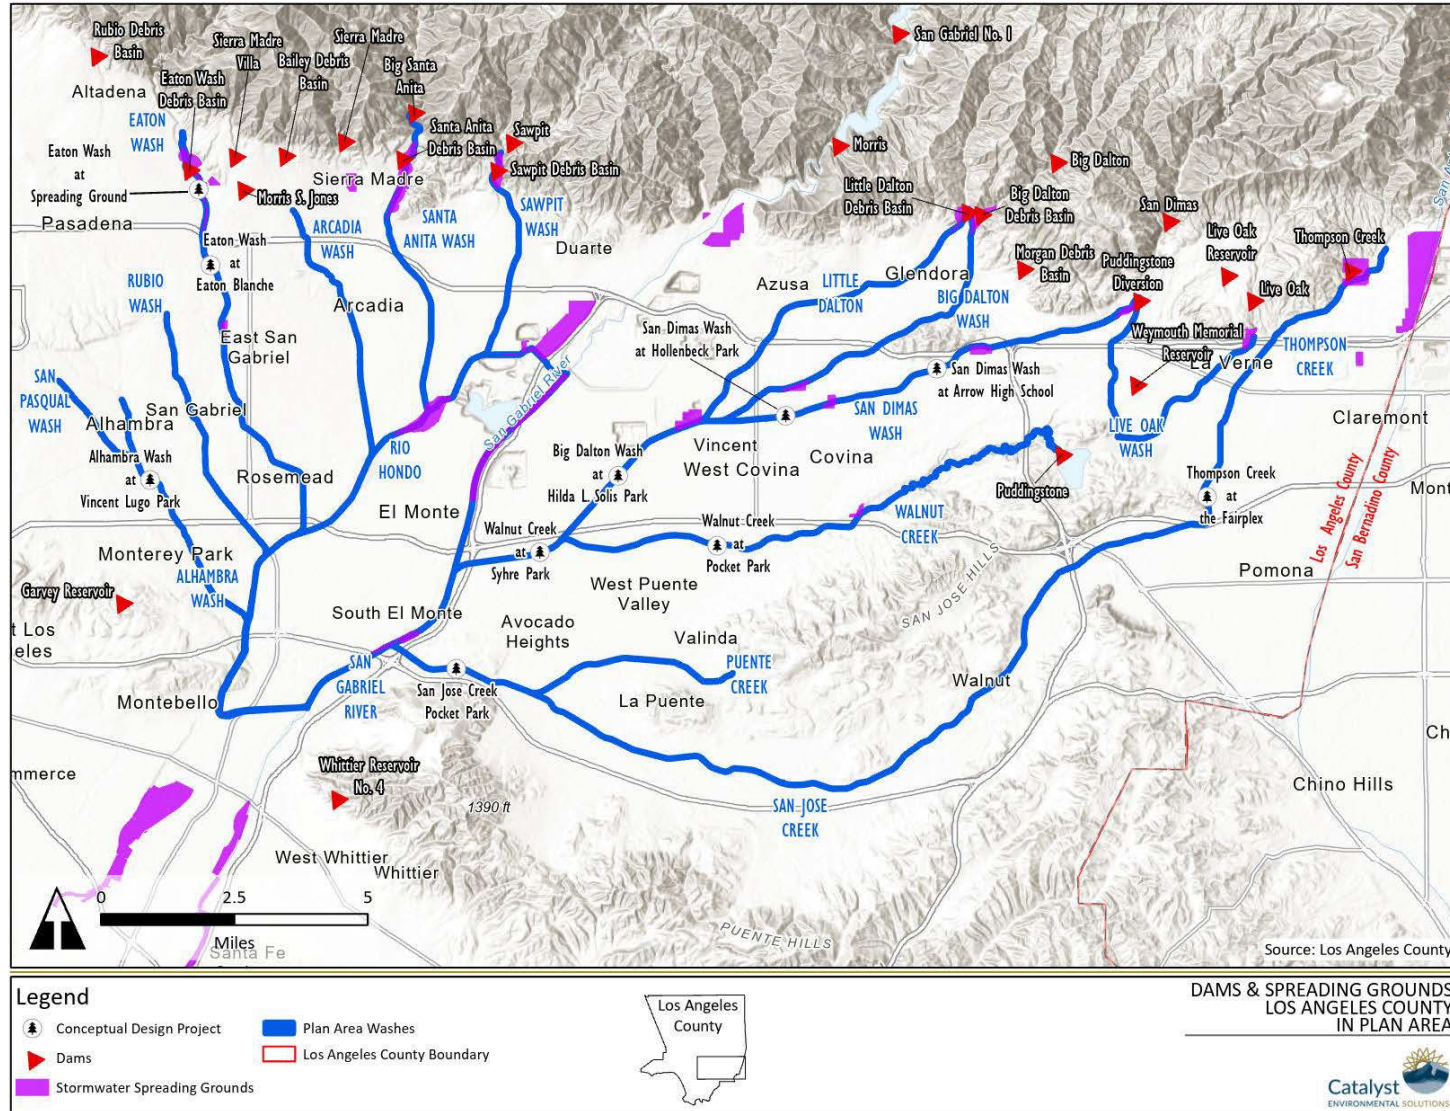

Figure 3.10-2. Dams and Spreading Grounds in and Near the Plan Area.

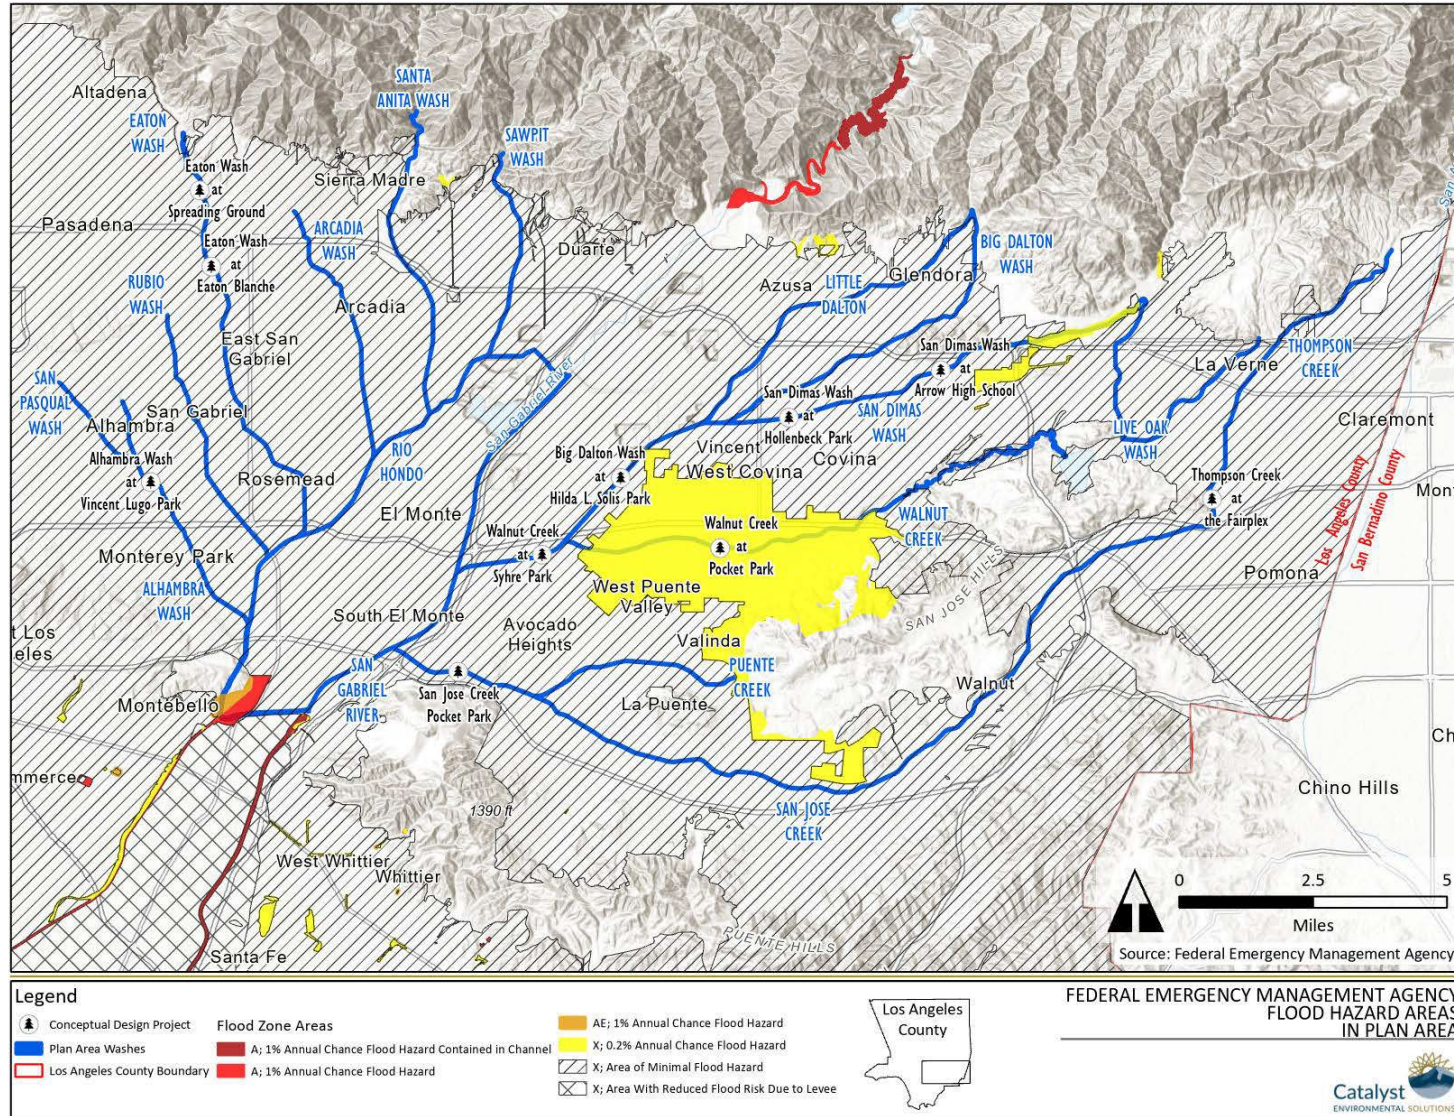

Figure 3.10-3. FEMA Flood Hazard Areas in the Plan Area.

The San Gabriel Basin Water Quality Authority, formed in 1992 by the legislature, plans for and coordinates with several agencies with authority affecting cleanup of the Basin to promote improvement of the groundwater quality in the Basin (SGBWQA 2022).

3.10.1.5 Tsunami or Seiche Zones

The Plan Area is not located in an area with tsunami hazards (Los Angeles County Department of Regional Planning 2022, CDOC 2022c). Therefore, tsunamis or seismic sea waves do not pose a hazard to the Plan Area. Seiches are large waves generated in enclosed bodies of water in response to seismic activity. Numerous reservoirs that could be subject to surface water oscillations following seismic activity are present in and near the Plan Area (Figure 3.10-2).

3.10.2 Regulatory Setting

3.10.2.1 Federal

3.10.2.1.1 Clean Water Act and Associated Programs

The CWA establishes the basic structure for regulating discharges of pollutants into the Waters of the United States and regulating quality standards for surface waters, including lakes, rivers, and coastal wetlands. The basis of the CWA was enacted in 1948 and was called the Federal Water Pollution Control Act, but the CWA was significantly reorganized and expanded in 1972. Under the CWA, USEPA has implemented pollution control programs and has developed national water quality criteria recommendations for pollutants in surface waters. In California, the SWRCB and its nine RWQCBs administer various sections of the CWA.

Section 401 – Water Quality Certification

Under Section 401 of the CWA, a federal agency may not issue a permit or license to conduct any activity that may result in any discharge into waters of the United States unless a state or authorized tribe where the discharge would originate issues a Section 401 water quality certification verifying compliance with existing water quality requirements or waives the certification requirement. Some of the major federal licenses and permits subject to Section 401 include Section 402 NPDES permits, Section 404 permits, and Rivers and Harbors Act Section 9 and 10 permits.

Section 402 – National Pollutant Discharge Elimination System

Section 402 of the CWA establishes the NPDES. Under Section 402, a permit is required for point source discharges of pollutants into navigable waters of the United States (other than dredge or fill material). Point sources are discrete conveyances such as pipes or man-made ditches. Individual homes that are connected to a municipal system, use a septic system, or do not have a surface discharge do not need an NPDES permit; however, industrial, municipal, and other facilities must obtain permits if their discharges go directly to surface waters. In California, the NPDES Permit program is administered by the SWRCB. Permits contain specific water quality-based limits and establish pollutant monitoring and reporting requirements. Discharge limits in NPDES Permits may be based on water quality criteria designed to protect designated uses of surface waters, such as recreation or supporting aquatic life. RWQCBs in California are responsible for implementing the NPDES permit program within their respective jurisdiction (see the discussion of state regulations below).

Section 303(d) – Impaired Waters and TMDLs

Section 303 of the CWA (as well as the State-level Porter-Cologne Water Quality Control Act [Porter-Cologne Act], discussed further below) requires that California adopt water quality standards. In addition, under CWA Section 303(d), states are required to identify “impaired waterbodies” (those not meeting established water quality standards), identify the pollutants causing the impairment, establish priority rankings for waters on the list, and develop a schedule for development of control plans to improve water quality. USEPA then approves the state’s recommended list of impaired waters or adds to and/or removes waterbodies from the list. Each RWQCB must update the Section 303(d) list every two years.

TMDLs are pollution control plans triggered by the CWA Section 303(d) list. The TMDL is a “pollution budget,” designed to restore the health of a polluted waterbody and provide protection for beneficial uses. The TMDL also contains the target reductions needed to meet water quality standards and allocates those reductions among the pollutant sources in the watershed (i.e., point sources, nonpoint sources, and natural sources) (40 CFR 130.2). A TMDL is unique to a specific waterbody and its surrounding pollutant sources.

The current effective USEPA-approved 303(d) list for waterbodies in California is the 2014–2016 list, approved on April 6, 2018. Activities that may result in discharge of a contaminant to waterbodies listed as impaired for that contaminant would be of particular concern, because of the lack of the waterbody’s assimilative capacity for that contaminant.

3.10.2.1.2 Rivers and Harbors Act Section 408

Through Section 14 of the Rivers and Harbors Appropriation Act of 1899, codified as 33 USC Section 408, USACE administers projects that may permanently or temporarily alter the use of any USACE Civil Works project. The intent of Section 408 is to ensure that proposed infrastructure projects do not harm public interest and do not affect the USACE’s project’s ability to meet its authorized purpose. Many of the washes within the Plan Area are concrete lined channels that serve as flood control facilities.

3.10.2.1.3 National Toxics Rule and California Toxics Rule

USEPA promulgated the National Toxics Rule (NTR), effective in 1993. The NTR establishes numeric criteria for specific priority toxic pollutants to bring the states into compliance with Section 303 of the CWA.

In 2000, USEPA promulgated the California Toxics Rule (CTR), containing additional numeric water quality criteria for priority toxic pollutants for waters in California. The criteria in the CTR supplements the criteria in the NTR (i.e., the CTR does not change or supersede any criteria previously promulgated for California in the NTR.) The CTR establishes acute (i.e., short-term) and chronic (i.e., long-term) standards for bodies of water, such as inland surface waters and enclosed bays and estuaries that are designated statewide as having beneficial uses.

3.10.2.1.4 Federal Anti-Degradation Policy

The federal anti-degradation policy includes minimum criteria to protect existing beneficial uses, ensure the level of water quality is offset to maintain existing uses, and prevent degradation of quality water.

This policy stipulates that states adopt at a minimum the following provisions and allows states to adopt even more stringent rules (40 CFR 131.12):

- (1) Existing instream water uses and the level of water quality necessary to protect the existing uses shall be maintained and protected.
- (2) Where the quality of waters exceed levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the water, that quality shall be maintained and protected unless the state finds, after full satisfaction of the intergovernmental coordination and public participation provisions of the state's continuing planning process, that allowing lower water quality is necessary to accommodate important economic or social development in the area in which the waters are located.
- (3) Where high quality waters constitute an outstanding National resource, such as waters of National and state parks, wildlife refuges, and waters of exceptional recreational or ecological significance, that water quality shall be maintained and protected.

3.10.2.2 State

3.10.2.2.1 Porter-Cologne Water Quality Control Act

The Porter-Cologne Act requires the RWQCBs to adopt water quality control plans (Basin Plans) for the protection of surface water and groundwater quality. The Act also authorizes the RWQCBs to issue WDRs, including NPDES Permits. Any activity, discharge, or proposed activity or discharge from a property or business that could affect California's surface, coastal, or groundwater will (in most cases) be subject to WDR. The California Water Code authorizes the SWRCB and the RWQCBs to conditionally waive WDRs if this is in the public interest. Discharges made by individual projects implemented under the Plan may be subject to WDR requirements.

Water Quality Control Plan, Los Angeles Region

The Porter-Cologne Act authorizes the RWQCBs to adopt, review, and revise policies for all waters of the State (including surface water and groundwater) and directs them to develop regional basin plans. The relevant regional basin plan is the Water Quality Control Plan: Los Angeles Region Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties. Section 13170 of the California Water Code also authorizes the SWRCB to adopt basin plans on its own initiative. RWQCBs are required, by law, to develop, adopt, and implement a basin plan for the entire region. Water quality standards are set forth in the regional Basin Plan. According to Section 13050 of the California Water Code, basin plans consist of designation or establishment of beneficial uses to be protected, water quality objectives to protect those uses, and a program of implementation needed for achieving the objectives for the waters within a specified area. Because beneficial uses, together with their corresponding water quality objectives, can be defined per federal regulations as water quality standards, the basin plans are regulatory references for meeting the state and federal requirements for water quality control.

CWA Section 402 mandates permits for municipal stormwater discharges. On November 8, 2012, the Los Angeles RWQCB adopted Order No. R4-2012-175 (NPDES Permit No. CAS004001), which was updated in 2021 to meet CWA Section 402 requirements. The adopted Waste Discharge Requirements (WDRs) applied to MS4 discharges within the Coastal Watersheds of Los Angeles County, except those discharges originating from the City of Long Beach MS4 (County MS4 Permit). The County MS4 Permit

became effective December 28, 2012. Order No. R4-2012-175, as updated in 2021, is the fourth iteration of the stormwater permit for MS4s in Los Angeles County, which includes the District, County, and 84 incorporated cities (including the City of Los Angeles) within the County watersheds, excluding the City of Long Beach. This permit requires runoff issues to be addressed during major phases of urban development (planning, construction, and operation) to reduce the discharge of pollutants from stormwater to the maximum extent practicable, effectively prohibits non-stormwater discharges, and protects the beneficial uses of receiving waters.

The County MS4 Permit includes TMDL provisions designed to ensure that Los Angeles County achieves waste load allocations and meets other requirements of TMDLs covering receiving waters affected by the County's MS4 discharges. The County MS4 Permit also contains provisions that allow the permit to be modified, revoked, reissued, or terminated under certain circumstances. For example, provisions may be incorporated as a result of future amendments to the Basin Plan, such as a new or revised water quality objective or the adoption or reconsideration of a TMDL, including program implementation.

The County MS4 Permit allows permittees the flexibility to develop Watershed Management Programs (WMPs) or EWMPs to implement the requirements of the permit on a watershed scale through customized strategies, control measures, and BMPs. An EWMP provides guidance for municipalities throughout Los Angeles County to simultaneously comply with federal and state water quality mandates; improve the quality of rivers, creeks, and beaches; and address current and future regional water supply challenges. EWMPs identify current and future multi-benefit projects that will capture, treat, and use or infiltrate as much stormwater as possible.

LA County Public Works prepared the LID Standards Manual (LA County Department of Public Works 2014) to comply with the requirements of the MS4 Permit and supersede the County Standard Urban Stormwater Mitigation Plan. The LID Standards Manual provides guidance for the implementation of stormwater quality control measures in new development and redevelopment projects in unincorporated County areas with the intention of improving water quality and mitigating potential water quality impacts from stormwater and non-stormwater discharges. Unlike traditional stormwater management, which collects and conveys stormwater runoff through storm drains, pipes, or other conveyances to a centralized stormwater facility, LID uses site design and stormwater management to mimic a site's predevelopment hydrology by using design techniques that infiltrate, filter, store, evaporate, and detain runoff close to the source of rainfall.

The LID standards (Chapter 12.84; Ord. 2013-0044 § 1, 2013: Ord. 2008- 0063 § 1) include mimicking undeveloped stormwater runoff rates and volumes in any representative storm events up to and including the Capital Flood;³ preventing pollutants of concern from leaving the development site in stormwater as the result of storms, up to and including a Water Quality Design Storm Event; and minimizing hydromodification impacts on natural drainage systems. Applicable projects include, but are not limited to, new development involving one acre or greater of disturbed area and adding more than 10,000 square feet of impervious surface area; new restaurants with 5,000 square feet or more of

³ The Capital Flood is defined in the Los Angeles County Department of Public Works Hydrology Manual (2006) as the runoff produced by a 50-year frequency design storm, falling on a water saturated watershed. The Capital Flood also requires adding the effects of fires and erosion (known as bulking). The Capital Flood is different from the 100-year flood typically used by FEMA, but the inclusion of bulking can result in the Capital Flood being greater than the 100-year flood in terms of flooded area.

surface area; redevelopment projects that result in the creation, addition, or replacement of 5,000 square feet or more of impervious surface area on a site that has been previously developed; or development of a previously undeveloped site.

3.10.2.2.2 Policy for Implementation of Toxics Standards for Inland Surface Waters Enclosed Bays and Estuaries of California

In 1994, the SWRCB and USEPA agreed to a coordinated approach for addressing priority toxic pollutants in inland surface waters, enclosed bays, and estuaries of California. In March 2000, the SWRCB adopted the Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California, commonly referred to as the State Implementation Policy. The State Implementation Policy implements NTR and CTR criteria, and applicable Basin Plan objectives, for toxic pollutants. When the RWQCBs issue any permit allowing the discharge of any toxic pollutant(s) pursuant to the CWA or the Porter-Cologne Act, the permit's promulgation and implementation must be consistent with the State Implementation Policy's substantive or procedural requirements. Any deviation from the State Implementation Policy requires the concurrence of USEPA if the RWQCBs are issuing any permit pursuant to the CWA. Consistency with the State Implementation Policy occurs when water permits are issued for individual projects implemented under the Plan.

3.10.2.2.3 California Anti-Degradation Policy

The SWRCB enacted the Statement of Policy with Respect to Maintaining High Quality of Waters in California, which is also referred to as the California Anti-Degradation Policy. This policy incorporated the federal anti-degradation policy and is used to ensure that high quality water is maintained and limits the discharge of pollutants into high quality water in the state (Resolution Number 68-16, SWRCB 1968), as follows:

1. Whenever the existing quality of water is better than the quality established in policies as of the date on which such policies become effective, such existing high quality will be maintained until it has been demonstrated to the State that any change will be consistent with maximum benefit to the people of the State, will not unreasonably affect present and anticipated beneficial use of such water and will not result in water quality less than that prescribed in the policies.
2. Any activity which produces or may produce a waste or increased volume or concentration of waste and which discharges or proposes to discharge to existing high quality waters will be required to meet waste discharge requirements which will result in the best practicable treatment or control of the discharge necessary to assure that (a) a pollution or nuisance will not occur and (b) the highest water quality consistent with maximum benefit to the people of the State will be maintained.

3.10.2.3 Los Angeles County

3.10.2.3.1 Los Angeles County General Plan Goals and Policies

The General Plan Safety Element outlines the following relevant goal and policies to reduce the potential risk of death, injuries, and economic damage resulting from natural and man-made hazards Los Angeles County Department of Regional Planning 2022):

Goal S 2: An effective regulatory system that prevents or minimizes personal injury, loss of life, and property damage due to flood and inundation hazards.

- Policy S 2.1: Discourage development in the County’s Flood Hazard Zones.
- Policy S 2.2: Discourage development from locating downslope from aqueducts.
- Policy S 2.4: Ensure that developments located within the County’s Flood Hazard Zones are sited and designed to avoid isolation from essential services and facilities in the event of flooding.

3.10.2.3.2 Los Angeles County Stormwater Pollution Control Requirements for Construction Activities

To comply with the Phase II General Construction Permit, Los Angeles County has established a set of BMPs with which all permitted construction activities on unincorporated county lands must comply (LA County Department of Public Works 2010). The Manual applies to the County and to contractors and is enforced by the County⁴. The BMPs, which are based on the state’s Stormwater Best Management Practices Handbook (2003), are as follows:

- Eroded sediments and other pollutants must be retained on site and may not be transported from the site via sheetflow, swales, area drains, natural drainage courses or wind.
- Stockpiles of earth and other construction related materials must be protected from being transported from the site by the forces of wind or water.
- Fuels, oils, solvents and other toxic materials must be stored in accordance with their listing and are not to contaminate the soil and surface waters. All approved storage containers are to be protected from the weather. Spills must be cleaned up immediately and disposed of in a proper manner. Spills may not be washed into the drainage system.
- Non-stormwater runoff from equipment and vehicle washing and any other activity shall be contained at the project site.
- Excess or waste concrete may not be washed into the public way or any other drainage system. Provisions shall be made to retain concrete wastes on site until they can be disposed of as solid waste.
- Trash and construction related solid wastes must be deposited into a covered receptacle to prevent contamination of rainwater and dispersal by wind.
- Sediments and other materials may not be tracked from the site by vehicle traffic. The construction entrance roadways must be stabilized so as to inhibit sediments from being deposited into the public way. Accidental depositions must be swept up immediately and may not be washed down by rain or other means.
- Any slopes with disturbed soils or denuded of vegetation must be stabilized so as to inhibit erosion by wind and water.

LA County Public Works may identify and require additional BMPs, as appropriate.

⁴ From page 8 of the Manual: “The Contractor is subject to enforcement action by Chapter 12.80 of the Los Angeles County Code (12.80.630) that states, “Any person, firm, corporation, municipality or district or any officer or agent of any firm corporation, municipality or district violating any provision of this chapter shall be guilty of a misdemeanor. Such violation shall be punishable by a fine of not more than \$1,000 or by imprisonment in the county jail for a period not to exceed six months, or by both fine and imprisonment. Each day during any portion of which such violation is committed, continued or permitted shall constitute a separate offense and shall be punishable as such (Ord. 98-0021§1(part), 1998).” LACDPW applies this code to all their construction sites.”

3.10.2.3.3 Los Angeles County Hydrology Manual

The Los Angeles County Hydrology Manual establishes Public Works' hydrologic design procedures and serves as a reference and training guide. The hydrologic techniques in the manual apply to the design of local storm drains, retention and detention basins, pump stations, and major channel projects. The techniques also apply to storm drain deficiency and flood hazard evaluations. Low-flow hydrology methods related to water quality standards are also discussed. Standards provided in the manual govern all hydrology calculations done under Public Works' jurisdiction.

The Los Angeles County Hydrology Manual requires that a storm drain conveyance system be designed for a 10-year storm event, and that the combined capacity of a storm drain and street flow system accommodate flow from a 25-year storm event. Areas with sump conditions are required to have a storm drain conveyance system capable of conveying flow from a 2 percent (50-year) storm event.

3.10.2.3.4 Los Angeles County Hydraulics Design Manual

The District's Hydraulic Design Manual provides criteria for hydraulic design, design requirements for maintenance and access, and water surface calculations for closed conduits and open channels, as well as criteria for catch basins, levees, and other hydraulic infrastructure features within Los Angeles County.

3.10.2.4 Incorporated Cities Within the Plan Area

The table below presents the policies related to hydrology and water quality from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.10-5. Applicable Local City Policies Related to Hydrology and Water Quality

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Resources Element:</p> <p>Goal R-1: Maintenance of water supplies that meet the needs of Alhambra residents, businesses, and visitors.</p> <p>Policy R-1A: Maintain high-quality, reliable water supply, treatment, distribution, pumping, and storage systems to meet current and future daily and peak water demands.</p> <p>Policy R-1B: Encourage water conservation and, when feasible, use recycled water in residential, commercial, industrial, public, and other developments.</p> <p>Policy R-1C: Efficiently manage water demands and efficiently use urban water supplies.</p> <p>Policy R-1D: Focus on further development and implementation of water conservation programs.</p> <p>Policy R-1E: Maximize stormwater filtration and/or infiltration through use of low-impact development methods.</p> <p>Policy R-1F: Maintain appropriate levels of water pressure throughout the City's fire hydrant system and implement appropriate system upgrades as needed and feasible.</p> <p>Services & Infrastructure Element:</p> <p>Goal SI-9 A: reliable water supply, treatment, and distribution system that meets current and future water demand as affordably as possible, while considering the City's goals related to resource conservation.</p> <p>Policy SI-9A: Maintain, upgrade, and expand water supply, distribution, storage, and treatment facilities to ensure access to adequate water supplies.</p> <p>Policy SI-9B: Ensure that local drinking water meets or exceeds federal and state drinking water regulatory standards.</p> <p>Policy SI-9C: Explore opportunities to aid in the recharge of local groundwater basins.</p> <p>Goal SI-10: A wastewater and stormwater collection and treatment system that meets the needs of existing and planned development.</p> <p>Policy SI-10A: Maintain, upgrade, and expand wastewater and stormwater collection facilities to ensure that wastewater and stormwater generated in Alhambra can be effectively managed.</p> <p>Policy SI-10B: Track regional treatment system capacity and, as necessary and appropriate, participate in efforts to upgrade or expand treatment capabilities.</p> <p>Policy SI-10C: Require that development be connected to the municipal sewer system and ensure that adequate capacity is available for the treatment of generated wastewater flows and safe disposal of generated sludge.</p> <p>Policy SI-10D: Explore ways in which gray water can be used to reduce demands on groundwater and other water supplies.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 16.36 (Stormwater Low Impact Development (LID) Standards), Section 16.36.060 (Source Control Best Management Practices Requirements), Section 16.34.070 (Construction Activity Storm Water Measures), Section 23.48.030 (Applicability of State Model Water Efficient Landscape Ordinance), and Section 16.36.050 (Stormwater Pollution LID Control Measures).</p> <p>Chapter 16.36 (Stormwater Low Impact Development (LID) Standards) defines projects that must comply with the requirements of low impact development standards to include:</p> <p>(A) All development projects equal to 1 acre or greater of disturbed area that adds more than 10,000 square feet of impervious surface area.</p> <p>(I) Projects located in or directly adjacent to, or discharging directly to an environmentally sensitive area (ESA), where the development will:</p> <p>(1) Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>(2) Create 2,500 square feet or more of impervious surface area.</p> <p>(K) Redevelopment projects.</p> <p>(1) Land disturbing activity that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site on planning priority project categories.</p> <p>(2) Where redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, the entire project must be mitigated.</p> <p>(3) Where redevelopment results in an alteration of less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, only the alteration must be mitigated, and not the entire development.</p> <p>(4) Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.</p> <p>(L) Any other project as deemed appropriate by the Director.</p> <p>(Ord. 4654, passed 3-10-14)</p>	<p>City of Alhambra Final 2020 Urban Water Management Plan (UWMP) provides the City with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (City of Alhambra 2021).</p> <p>The Model Water Efficient Landscaping Ordinance (MWELO), was adopted by the State on July 15, 2015. A corresponding ordinance was adopted by the City on January 11, 2016, and is contained in AMC Chapter 23.48, Landscaping Standards. Under Chapter 23.48, all projects that require landscape and irrigation plan review by the Model WELO are required to submit landscape and irrigation plans compliant with the Model WELO for approval by the Design Review Board.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	Policy SI-10E: Require storm drain infrastructure that implements Low-Impact Development practices (bioretention areas, cisterns, and/or rain barrels) and incorporates state-of-the-art best management practices.	<p>Section 16.36.060 (Source Control Best Management Practices Requirements) requires the following Best Management Practices be implemented and if necessary additional BMPS which are listed in the National Pollutant Discharge Elimination System Municipal Separate Storm Sewer System (MS4) Permit Order No. R4-2012-0175:</p> <p>(A) Signage at storm drains. In the project area of new development or redevelopment subject to this chapter, a notice that dumping in storm drains and catch basins is illegal.</p> <p>(B) Outdoor storage of materials. (1) All materials stored outdoors in new development or redevelopment subject to this chapter which, if exposed to storm water, reasonably may be expected to add pollutants to storm water, shall be isolated from contact with storm water. (2) The storage area for materials referred to in division (1) above must be covered completely.</p> <p>(C) Outdoor trash storage areas. Except where they serve only single-family residences, solid waste containers in new development or redevelopment subject to this chapter shall be placed between collections.</p> <p>(D) Wash area. Each wash area for motor vehicles or equipment in any new development or redevelopment subject to this chapter shall use:</p> <p>(1) An adequate overhead covering;</p> <p>(2) A device that clarifies or otherwise pretreats all wash water; and</p> <p>(3) A drain conducting all treated wash water to a sanitary sewer.</p> <p>(Ord. 4654, passed 3-10-14)</p> <p>Under Section 16.34.070 (Construction Activity Storm Water Measures) projects must adhere to the following:</p> <p>(A) Each person applying to the city for a grading or building permit for projects for which compliance with regulations governing State Construction Activity Storm Water Permits (“GCASPs”) is required, must submit satisfactory proof to the city (1) that a Notice of Intent (NOI) to comply with the GCASP has been filed, and (2) that a Storm Water Pollution Prevention Plan has been prepared, before the city shall issue any grading or building permit on the construction project. A copy of the NOI and the SWPPP shall be maintained on-site during grading and construction and shall be made available for inspection, review and copying upon the request of any city inspector.</p> <p>(B) It shall be a violation of this chapter for any person or entity required under federal or state law to comply with the requirements for a State Construction Activity Storm Water Permit (GCASP) for construction activity in the city to conduct, authorize or permit construction activities in the city at any facility which discharges to the city’s MS4 without complying with all applicable requirements for a GCASP.</p> <p>(C) Each person applying for a grading or building permit for any project for which compliance with regulations governing State Construction Activity Storm Water Permits is not required, shall submit to the city for information, and shall implement a grading and construction activity runoff control program adequate to accomplish all of the following:</p> <p>(1) Retain on-site the sediments generated on or brought to the project site, using treatment control or structural BMPs;</p> <p>(2) Retain construction-related materials and wastes, spills and residues at the project site and prevent discharges to streets, drainage facilities, the MS4, receiving waters or adjacent properties;</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(3) Contain non-storm water runoff from equipment and vehicle washing at the project site; and,</p> <p>(4) Control erosion from slopes and channels through use of effective BMPs, such as limitation of grading during the wet season, inspection of graded areas during rain events; planting and maintenance of vegetation on slopes, if any, and covering any slopes susceptible to erosion.</p> <p>(D) No person generating or producing pavement saw cutting wastes in any street, curb or sidewalk in the city shall fail to recover and properly dispose of such saw cutting wastes, and in no case shall such wastes be permitted or suffered to enter any part of the MS4, including, but not limited to any storm drain.</p> <p>(E) No person performing street and road maintenance in any street in the city shall fail to manage street and road maintenance materials in a manner which prevents such materials from being discharged to the MS4.</p> <p>(F) No person shall wash any concrete truck or any part of any concrete truck, including, but not limited to any chute, pump or tools, in any place in the city except an area designated for that purpose by the city, if the city has designated such a place. No person shall permit or suffer any concrete rinseate or washwater from any truck, pump, tool or equipment to enter any drain, open ditch, street or road or any catch basin or any other part of the MS4.</p> <p>(Ord. 4445, passed 2-10-03; Am. Ord. 4446, passed 2-24-03; Am. Ord. 4646, passed 12-9-13; Am. Ord. 4648, passed 12-9-13)</p> <p>Section 23.48.030 (Applicability of State Model Water Efficient Landscape Ordinance) states that:</p> <p><i>All projects that require landscape and irrigation plan review as required by the Model Water Efficient Landscape Ordinance shall comply with 23 California Code of Regulations 490, et seq. Applicants for such projects shall submit landscape and irrigation plans compliant with the Model Water Efficiency Landscape Ordinance for approval by the Design Review Board.</i></p> <p>(Ord. 4682, passed 1-11-16)</p> <p>Section 16.36.050 (Stormwater Pollution Low Impact Development Control Measures):</p> <p>(B) Street and road construction of 10,000 square feet or more of impervious surface shall follow USEPA guidance regarding Managing Wet Weather with Green Infrastructure: Green Streets (December 2008 EPA-833-F-08-009) to the maximum extent practicable.</p> <p>(C) The remainder of planning priority projects shall prepare a Low Impact Development Plan to comply with the following:</p> <p>(1) Retain stormwater runoff onsite for the Stormwater Quality Design Volume (SWQDv) defined as the runoff from:</p> <p>(a) The 85th percentile 24-hour runoff event as determined from the Los Angeles County 85th percentile precipitation isohyetal map; or</p> <p>(b) The volume of runoff produced from a 0.75 inch, 24-hour rain event, whichever is greater.</p> <p>(2) Minimized hydromodification impacts to natural drainage systems as defined in the Municipal NPDES permit.</p> <p>(3) When, as determined by the City, 100 percent onsite retention of the SWQDv is technically infeasible, partially or fully, the infeasibility shall be demonstrated in the</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>submitted Low Impact Development Plan. The technical infeasibility may result from conditions that may include, but are not limited to:</p> <p>(a) The infiltration rate of saturated in-situ soils is less than 0.3 inch per hour and it is not technically feasible to amend the in-situ soils to attain an infiltration rate necessary to achieve reliable performance of infiltration or bioretention BMPs in retaining the SWQDv onsite.</p> <p>(b) Locations where seasonal high groundwater is within five to 10 feet of surface grade;</p> <p>(c) Locations within 100 feet of a groundwater well used for drinking water;</p> <p>(d) Brownfield development sites or other locations where pollutant mobilization is a documented concern;</p> <p>(e) Locations with potential geotechnical hazards;</p> <p>(f) Smart growth and infill or redevelopment locations where the density and/or nature of the project would create significant difficulty for compliance with the onsite volume retention requirement.</p> <p>(4) If partial or complete onsite retention is technically infeasible, the project Site may biofiltrate 1.5 times the portion of the remaining SWQDv that is not reliably retained onsite. Biofiltration BMPs must adhere to the design specifications provided in the Municipal NPDES Permit.</p> <p>(a) Additional alternative compliance options such as offsite infiltration may be available to the project site. The project site should contact the City to determine eligibility. Alternative compliance options are further specified in County of Los Angeles Low Impact Development Standards Manual 2009 or as may later be amended.</p> <p>(5) The remaining SWQDv that cannot be retained or biofiltered onsite must be treated onsite to reduce pollutant loading. BMPs must be selected and designed to meet pollutant-specific benchmarks as required per the Municipal NPDES Permit. Flow-through BMPs may be used to treat the remaining SWQDv and must be sized based on a rainfall intensity of:</p> <p>(a) 0.2 inches per hour, or</p> <p>(b) The one year, one-hour rainfall intensity as determined from the most recent Los Angeles County isohyetal map, whichever is greater.</p> <p>(6) A multi-phased project may comply with the standards and requirements of this section for all of its phases by: (a) designing a system acceptable to the City to satisfy these standards and requirements for the entire site during the first phase, and (b) implementing these standards and requirements for each phase of development or redevelopment of the Site during the first phase or prior to commencement of construction of a later phase, to the extent necessary to treat the stormwater from such later phase. For purposes of this section, MULTI-PHASED PROJECT shall mean any planning priority project implemented over more than one phase and the site of a multi-phased project shall include any land and water area designed and used to store, treat or manage stormwater runoff in connection with the development or redevelopment, including any tracts, lots, or parcels of real property, whether developed or not, associated with, functionally connected to, or under common ownership or control with such development or redevelopment.</p> <p>(Ord. 4654, passed 3-10-14)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Arcadia	<p>Resource Sustainability Element:</p> <p>Goal RS-4: Wise and sustainable water use practices that respond to and support the needs of City residents and businesses.</p> <p>Policy RS-4.1: Continue to participate in regional programs that protect water resources in Arcadia.</p> <p>Policy RS -4.2: Address state-of-the-science approaches to water supply, demand, and conservation as part of regular updates to the City’s Urban Water Management Plan, including the possibility of using reclaimed water as part of a groundwater basin recharge strategy.</p> <p>Policy RS-4.3: Require that applications for major new development projects address the adequacy and reliability of water supplies as described in SB 610.</p> <p>Policy RS-4.4: Maintain a high level of groundwater recharge capacity within formal recharge facilities belonging to the City.</p> <p>Policy RS-4.5: Analyze the City’s current water conservation programs (such as plumbing retrofits, public information programs) to expand, as necessary, the effectiveness of City efforts to reduce water consumption.</p> <p>Policy RS-4.6: Implement aggressive public and private programs to reduce water use and water waste associated with landscape irrigation, including the planting of native and drought-tolerant plants, use of efficient irrigation systems, and collection and recycling of runoff.</p> <p>Policy RS-4.7: Cooperate with the efforts of other cities and agencies and pursue City-sponsored ventures to make use of recycled water more cost effective. Prioritize establishment of recycled water infrastructure and services and implement the use of recycled water at schools, parks, at City facilities, and other potential irrigation, commercial, or industrial use sites.</p> <p>Policy RS-4.8: Explore how private on-site storm water capture systems can be designed and maintained to maximize protection of surface water quality and groundwater basin recharge capabilities.</p> <p>Policy RS-4.9: Incorporate Low Impact Development (LID) strategies into new construction and city projects.</p> <p>Policy RS-4.10: Fulfill the City’s responsibilities relative to the requirements of the County’s NPDES permit program by enforcing regulations aimed at reducing groundwater and urban runoff pollution.</p> <p>Policy RS-4.11: Maintain contingency plans for continuing water service in the event of large-scale emergencies.</p> <p>Policy RS-4.12: Require the installation of efficient irrigation systems (e.g., drip irrigation, soil moisture sensors and automatic irrigation systems) which minimize runoff and evaporation, and which maximize the water that will reach the plant roots.</p> <p>Policy RS-4.13: Investigate the efficacy and long-term benefits both environmentally and fiscally of using pervious pavement systems.</p> <p>Policy RS-4.14: Consider requiring the plumbing retrofit of older existing buildings with water efficient plumbing fixtures when the unit is sold.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 7828. (Low Impact Development (LID) – Control of Runoff Required for Planning Priority Projects), Chapter 7827. (Control Of Runoff Required - Construction Activity), Chapter 7554.3 (Applicability), Chapter 8 (Stormwater Management and Discharge Control) Section 7813. (Construction and Application), and Chapter 8 (Stormwater Management and Discharge Control) Section 7823. (Best Management Practices Authorized and Required).</p> <p>Under Chapter 7828. (Low Impact Development (LID) – Control of Runoff Required for Planning Priority Projects) Planning Priority Projects include and must follow this guidance:</p> <p>B. Street and road construction of 10,000 square feet or more of impervious surface shall follow USEPA guidance regarding Managing Wet Weather with Green Infrastructure: Green Streets (December 2008 EPA-833-F-08-009) to the maximum extent practicable.</p> <p>C. The remainder of Planning Priority Projects shall prepare a Low Impact Development Plan to comply with the following:</p> <p>(1) Retain stormwater runoff onsite for the Stormwater Quality Design Volume (SWQDv) defined as the runoff from:</p> <p>(a) The 85th percentile 24-hour runoff event as determined from the Los Angeles County 85th percentile precipitation isohyetal map; or</p> <p>(b) The volume of runoff produced from a 0.75 inch, 24-hour rain event, whichever is greater.</p> <p>(2) Minimize hydromodification impacts to natural drainage systems as defined in the Permit.</p> <p>(3) When, as determined by the City, 100 percent onsite retention of the SWQDv is technically infeasible, partially or fully, the infeasibility shall be demonstrated in the submitted Low Impact Development Plan. The technical infeasibility may result from conditions that may include, but are not limited to:</p> <p>(a) The infiltration rate of saturated in-situ soils is less than 0.3 inch per hour and it is not technically feasible to amend the in-situ soils to attain an infiltration rate necessary to achieve reliable performance of infiltration or bioretention BMPs in retaining the SWQDv onsite.</p> <p>(b) Locations where seasonal high groundwater is within five to 10 feet of surface grade;</p> <p>(c) Locations within 100 feet of a groundwater well used for drinking water;</p> <p>(d) Brownfield development sites or other locations where pollutant mobilization is a documented concern;</p> <p>(e) Locations with potential geotechnical hazards;</p> <p>(f) Smart growth and infill or redevelopment locations where the density and/or nature of the project would create significant difficulty for compliance with the onsite volume retention requirement.</p> <p>(4) If partial or complete onsite retention is technically infeasible, the project Site may biofiltrate 1.5 times the portion of the remaining SWQDv that is not reliably retained onsite. Biofiltration BMPs must adhere to the design specifications provided in the Permit. Additional alternative compliance options such as offsite infiltration may be available to the project Site. Alternative compliance options are further specified in the</p>	<p>City of Arcadia Final 2020 Urban Water Management Plan (UWMP) provides the City with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (City of Arcadia 2021).</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>County of Los Angeles Department of Public Works Stormwater Best Management Practices Design and Maintenance Manual. The project Site should contact the Director to determine eligibility and obtain approval. In all cases, the project Site must comply with all relevant provisions of the Permit.</p> <p>(5) The remaining SWQDv that cannot be retained or biofiltered onsite must be treated onsite to reduce pollutant loading. BMPs must be selected and designed to meet pollutant specific benchmarks as required per the Permit. Flow through BMPs may be used to treat the remaining SWQDv and must be sized based on a rainfall intensity of:</p> <p>(a) 0.2 inches per hour, or(b)The one year, one hour rainfall intensity as determined from the most recent Los Angeles County isohyetal map, whichever is greater.</p> <p>(6) A Multi-Phased Project may comply with the standards and requirements of this section for all of its phases by:</p> <p>(a) designing a system acceptable to the City to satisfy these standards and requirements for the entire Site during the first phase, and</p> <p>(b) implementing these standards and requirements for each phase of Development or Redevelopment of the Site during the first phase or prior to commencement of construction of a later phase, to the extent necessary to treat the stormwater from such later phase. For purposes of this section, "Multi-Phased Project" shall mean any Planning Priority Project implemented over more than one phase and the Site of a Multi-Phased Project shall include any land and water area designed and used to store, treat or manage stormwater runoff in connection with the Development or Redevelopment, including any tracts, lots, or parcels of real property, whether Developed or not, associated with, functionally connected to, or under common ownership or control with such Development or Redevelopment.</p> <p>(Ord. No. 2325, § 1(Exh. A), 4-7-15)</p> <p>Chapter 7827. (Control of Runoff Required – Construction Activity):</p> <p>A. Generally. In addition to any other requirements set forth in this Chapter, prior to obtaining a grading or building permit, each operator of any construction activity shall submit evidence to the Director that all applicable permits have been obtained, including but not limited to the State Water Board's Construction Permit, State Water Board 401 Water Quality Certification. Each operator of any construction activity shall implement such an erosion and sediment control plan and BMPs required by the Director to ensure that discharges of pollutants are effectively prohibited and will not cause or contribute to an exceedance of water quality standards. A SWPPP prepared in accordance with the General Construction Permit may be substituted for an erosion and sediment control plan. All construction and grading activities shall comply with applicable laws and regulatory documents, including all applicable City ordinances and the City's Permit regulating discharges into and from the storm drain system.</p> <p>B. Best Management Practices for New Developments and Redevelopments. No grading permit shall be issued for any development with a disturbed area of one (1) acre or greater unless the applicant can show that (i) a Notice of Intent to comply with the State Construction Activity Stormwater Permit has been filed and (ii) a Stormwater Pollution Prevention Plan has been prepared. The City may adopt regulations establishing controls on the volume and rate of stormwater runoff from new developments and redevelopments of less than one (1) acre as</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>may be appropriate to minimize the discharge and transport of pollutants. The Public Works Director may require of any developer or construction contractor performing work in the City provide a local stormwater pollution prevention plan prior to the beginning of such work. Construction activity does not include routine maintenance to maintain original line and grade, hydraulic capacity, the original purpose of the facility or emergency construction activities required to protect the public health and safety.</p> <p>C. Erosion and Sediment Control Plan Required. In addition to any other requirements set forth in this Chapter, prior to obtaining a grading or building permit, each operator of any construction site of less than one (1) acre shall cause to be prepared and submitted to the City an erosion and sediment control plan. No operator of any construction activity shall commence any construction activity prior to receiving written approval of the erosion and sediment control plan from the Director.</p> <p>D. Erosion and Sediment Control Plan Contents. An erosion and sediment control plan must address the following elements, at a minimum:</p> <p>(1) For construction sites of less than one acre:</p> <p>(a) Best management practices designed to control erosion and sediment, and manage waste and non-stormwater in accordance with the Permit; and</p> <p>(2) For construction sites of one acre or more:</p> <p>(a) All elements of a Stormwater Pollution Prevention Plan, but only if a construction site is one acre or greater;</p> <p>(b) Methods to minimize the footprint of the disturbed area and to prevent soil compaction outside of the disturbed area;</p> <p>(c) Methods to protect native vegetation and trees;</p> <p>(d) Sediment and erosion control;</p> <p>(e) Controls to prevent tracking on and off the site;</p> <p>(f) Nonstormwater control (e.g., vehicle washing, dewatering, etc.);</p> <p>(g) Material management (delivery and storage);</p> <p>(h) Spill prevention and control;(i) Waste management (e.g., concrete washout, waste management, sanitary waste management);</p> <p>(i) Identification of site Risk Level as identified in the General Construction Permit;</p> <p>(j) Rationale for the selection and design of the proposed BMPs, including quantifying the expected soil loss from different BMPs; and</p> <p>(3) For all construction sites: Any other element required by the Director.</p> <p>E. Erosion and Sediment Control Plan Development. Erosion and sediment control plans for construction sites of one acre or more must be developed and certified by a Qualified SWPPP Developer. Structural BMPs shall be designed by a licensed California Engineer.</p> <p>F. Erosion and Sediment Control Plan Certification. Erosion and sediment control plans for construction sites of one acre or more shall be signed by the landowner or landowner's agent, certifying as follows:</p> <p>"I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>submitted is true, accurate, and complete. I am aware that submitting false or inaccurate information, failing to update the erosion and sediment control plan to reflect current conditions, or failing to properly or adequately implement the erosion and sediment control plant may result in revocation of grading and other permits and other sanctions provided by law."</p> <p>(Ord. No. 2325, § 1(Exh. A), 4-7-15)</p> <p>Under Chapter 7554.3 (Applicability) the following projects fall under the Water Efficient Landscaping Ordinance:</p> <p>A. After December 1, 2015, and consistent with the Governor's Executive Order No. B-29-15, this Division shall apply to all of the following landscape projects:</p> <ol style="list-style-type: none">1. New construction projects with an aggregate landscape area equal to or greater than 500 square feet requiring a building or landscape permit, plan check, or design review;2. Rehabilitated landscapes projects with an aggregate landscape area equal to or greater than 2,500 square feet requiring a building or landscape permit, plan check, or design review;3. Existing landscapes that were installed before December 1, 2015, and are over one acre in size are limited to Section 7554.3.E. <p>B. Any project with an aggregate landscape area of 2,500 square feet or less may comply with the performance requirements of this ordinance or conform to the prescriptive measures contained in the City's Water Efficient Landscaping Documentation Package and Guidelines.</p> <p>C. For projects using treated or untreated graywater or rainwater captured on site, any lot or parcel within the project that has less than 2,500 square feet of landscape and meets the lot or parcel's landscape water requirement (Estimated Total Water Use) entirely with treated or untreated graywater or through stored rainwater captured on site is only subject to the prescriptive measures compliance option in the City's Water Efficient Landscaping Documentation Package and Guidelines.</p> <p>(Ord. No. 2330, § 1, 11-3-15)</p> <p>Chapter 7554.5 (Irrigation Requirements) of the Water Efficient Landscaping Ordinance, projects must adhere to the following:</p> <p>A. Irrigation Design Plan—This section applies to landscaped areas requiring permanent irrigation, not areas that require temporary irrigation solely for the plant establishment period. For the efficient use of water, an irrigation system shall meet all the requirements listed in this section and the manufacturers' recommendations. The irrigation system and its related components shall be planned and designed to allow for proper installation, management, and maintenance. An irrigation design plan meeting the following design criteria shall be submitted as part of the Landscape Documentation Package.</p> <p>(Ord. No. 2330, § 1, 11-3-15)</p> <p>Chapter 7554.6 (Soil and Grading Requirements) of the Water Efficient Landscaping Ordinance, projects must provide the following reports:</p> <p>A. Soil Management Report—In order to reduce runoff and encourage healthy plant growth, a soil management report shall be completed by the project applicant, or his/her designee</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>B. Grading Design Plan—For the efficient use of water, grading of a project site shall be designed to minimize soil erosion, runoff, and water waste. A grading plan shall be submitted as part of the Landscape Documentation Package. A comprehensive grading plan prepared by a civil engineer for other local agency permits satisfies this requirement.</p> <p>(Ord. No. 2330, § 1, 11-3-15)</p> <p>Chapter 7554.9 (Stormwater Management and Rainwater Retention) of the Water Efficient Landscaping Ordinance, projects must adhere to the following:</p> <p>A. Stormwater management combines practices to minimize runoff and increase infiltration which recharges groundwater and improves water quality. Implementing stormwater best management practices into the landscape and grading design plans to minimize runoff and to increase on-site rainwater retention and infiltration are encouraged.</p> <p>B. Project applicants shall refer to the City of Arcadia or Regional Water Quality Control Board for information on any applicable stormwater technical requirements.</p> <p>C. All planted landscape areas are required to have friable soil to maximize water retention and infiltration. Refer to Section 7554.4.A.3D. It is strongly recommended that landscape areas be designed for capture and infiltration capacity that is sufficient to prevent runoff from impervious surfaces (i.e. roof and paved areas) from either:</p> <ol style="list-style-type: none">1. The one inch, 24-hour rain event; or2. The 85th percentile, 24-hour rain event, and/or additional capacity as required by any applicable local, regional, state or federal regulation. <p>(Ord. No. 2330, § 1, 11-3-15)</p> <p>Chapter 8 (Stormwater Management and Discharge Control) Section 7813. (Construction and Application) states the following:</p> <p>This Chapter shall be construed to assure consistency with the requirements of the Federal Clean Water Act and acts amendatory thereof or supplementary thereto, applicable implementing regulations, and existing or future NPDES Permit and any amendment, revision or reissuance thereof.</p> <p>(Ord. No. 2325, § 1(Exh. A), 4-7-15)</p> <p>Chapter 8 (Stormwater Management and Discharge Control) Section 7823. (Best Management Practices Authorized and Required) states the following:</p> <p>D. The following BMPs are required:</p> <p>(1) The occupant or tenant, or in the absence of occupant or tenant, the owner, lessee, or proprietor of any real property in the City in front of which there is a paved sidewalk shall maintain the sidewalk free of dirt or litter to the maximum extent practicable. Sweepings from the sidewalk shall not be swept or otherwise made or allowed to go into the gutter or roadway, but shall be disposed of in receptacles maintained on the real property as required for the disposal of garbage.</p> <p>(2) Standard for Parking Lots and Similar Structures. Persons owning or operating a paved parking lot or similar structure with twenty-five (25) or more parking spaces shall clean those structures as frequently and thoroughly as practicable in a manner that does not result in discharge of pollutants to the storm drain system.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(3) Each person who owns, manages, or operates any machinery or equipment which is to be repaired or maintained shall use Best Management Practices or shall place the machinery or equipment that is to be repaired or maintained in such a place that leaks, spills, and other maintenance-related pollutants are not discharged to the storm drain system.</p> <p>(4) All hazardous substances and hazardous materials shall be stored in such a manner as to prevent such substances or materials from coming into contact with stormwater or other runoff which discharges into the storm drain system. It is unlawful for any person to dispose of any hazardous waste in any trash container used for municipal trash disposal.</p> <p>(6) Standards for Private Drains and Catch Basins. Persons owning or operating drainage facilities that are directly connected to the public storm drain system shall clean those facilities between May 1st and September 30th of each year, and reclean those facilities, as needed, before their sumps are forty percent (40 percent) full of material. This requirement includes, but is not limited to, catch basins, culverts and parkway drains.</p> <p>(Ord. No. 2325, § 1(Exh. A), 4-7-15)</p>	
Azusa	<p>Chapter 3: The Built Environment</p> <p><i>Infrastructure</i></p> <p>Goal 2: Provide a water supply system that is able to meet the projected water demands; upgrade and expand water treatment, supply, and distribution facilities; and pursue funding sources to reduce the cost of water provision for the city.</p> <p>Policy 2.1: Monitor the demands on the water system, manage development to mitigate impacts and/or facilitate improvements to the water supply and distribution system, and maintain and expand water supply and distribution facilities.</p> <p>Policy 2.2: Continue to update the water master plan and an associated capital improvements program, and evaluate the adequacy of the water supply and distribution supply.</p> <p>Policy 2.3: Designate, preserve, and acquire land for water storage and transmission facilities, as necessary.</p> <p>Policy 2.4: Require that new development and retrofit existing developments to contain safeguards and measures preventing water supply degradation.</p> <p>Policy 2.5: Require all new development to connect to the sewer system.</p> <p>Policy 2.6: Minimize water consumption through site design, use of efficient systems, and other techniques.</p> <p>Policy 2.7: Continue the City’s water conservation efforts; review programs periodically and modify and/or expand them as appropriate and feasible.</p> <p>Policy 2.8: Continue to require the incorporation of water conservation features in the design of all new construction and site development.</p> <p>Policy 2.9: Consider creating rebate or other incentive programs for the replacement of leaking, aging, and/or inefficient plumbing with water saving plumbing and fixtures.</p> <p>Policy 2.10: Require the use of reclaimed water for landscaped irrigation, grading, and other non-contact uses in new developments, where available or expected to be available.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 60 (Stormwater and Urban Runoff Pollution Prevention) Section 60-9 (Stormwater and Runoff Pollution Mitigation for Construction Activity), Section 60-15 (Good Housekeeping Provisions), and Section 60-16 (Best Management Practice for Construction Activity), Section 60-19 (BMPs to be Consistent with Environmental Goals), Chapter 14 (Buildings and Building Regulations) Section 14-412 (Nuisances Designated), and Chapter 88.34 (Landscaping Standards) Section 88.34.020 (Applicability)</p> <p>Under Chapter 60 (Stormwater and Urban Runoff Pollution Prevention) Section 60-9 (Stormwater and Runoff Pollution Mitigation for Construction Activity) the following apply:</p> <p>No person shall commence any construction activity for which a permit is required by this Code without implementing all stormwater and runoff pollution mitigation measures required by such permit. (Ord. No. 04-02, § 2, 2-2-04)</p> <p>Under Section 60-15 (Good Housekeeping Provisions) the following apply:</p> <p>An owner or occupant of any property shall comply with the following good housekeeping requirements:</p> <p>No person shall leave, deposit, discharge, dump, or otherwise expose any pollutant in an area where actual or potential discharge to the city streets or the storm drain system may occur. Any spills, discharge, or residues shall be removed as soon as possible and disposed of properly.</p> <p>(1) Runoff from landscape irrigation, air conditioning condensate, water line flushing, foundation/footing drains, individual residential car washing, dechlorinated swimming pool discharges and sidewalk washing shall be conducted in a manner not in violation of other provisions of this Code.</p> <p>(2) Runoff from washing paved areas, including but not limited to parking lots, on industrial or commercial property is prohibited unless specifically required by federal, state, or local health or safety codes and not in violation of any other provision of this Code. Runoff from authorized washing of paved areas shall be minimized to the extent practicable.</p>	<p>City of Azusa Final 2020 Urban Water Management Plan (UWMP) provides the City with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (City of Azusa 2021).</p>

	<p>Policy 4.7: Require improvements to the existing storm drain and flood control facilities necessitated by new development to be borne by the new development benefiting from the improvements, either through the payment of fees, or the actual cost of construction, or both in accordance with State Nexus legislation.</p> <p>Policy 4.8: Require new developments to employ the most efficient drainage technology to increase ground percolation, control drainage, and minimize damage to environmentally sensitive areas.</p> <p>Policy 4.10: Encourage using construction methods and technologies that will reduce the size or decrease the number of impervious surfaces in both new development and the retro-fit of existing development.</p>		
Baldwin Park	<p>Health and Sustainability Element:</p> <p>Goal HS-4. Increase the efficiency and sustainability of public and private infrastructure in Baldwin Park.</p> <p>Policy 4.01: Reduce the amount of impermeable surfaces citywide.</p> <p>Policy 4.02: Incorporate Low Impact Development (LID) techniques in the design and upgrade of public infrastructure.</p> <p>Action HS-4.1: Develop a city-wide approach to stormwater management that takes advantage of excellent local soil infiltration environment, including bottomless catch basins; porous concrete gutters; pervious pavers at intersections, crosswalks, and in park hardscapes; linear bioinfiltration strips in parkways and building setbacks; and rain gardens with dry wells.</p> <p>Action HS-4.4: Continue to require all new development projects that exceed \$25,000 to install Low Impact Development technologies to treat, capture, and infiltrate stormwater and urban runoff on site, where it lands.</p> <p>Action HS-4.5: Require the use of permeable paving for parking lots, streets, driveways, pathways, etc.</p> <p>Action HS-4.7: Work to mitigate irrigation practices that result in overspray and collection of runoff in gutters.</p> <p>Action HS-4.9: Require all new developments to utilize Low Impact Development strategies, including rain gardens, bioswales, stormwater filters and screens for storm drains, in-ground infiltration using dry wells and infiltration trenches, and water recycling facilities, with the goal of retaining and treating all stormwater on site.</p> <p>Goal HS-8. Achieve a high level of water conservation, and continue to improve the quality of local groundwater.</p> <p>Policy 8.01: Promote drought-tolerant landscaping and water conservation technologies and techniques.</p> <p>Policy 8.02: Protect and restore above and below ground water bodies from the negative impacts of stormwater pollution. (See also Modern and Green Infrastructure.)</p> <p>Policy 8.03: Reduce the amount of impervious surfaces in the City through selection of materials, site planning, and street design.</p> <p>Action HS-8.1: Develop a native and drought-tolerant planting palette for use by local developers, with a focus on the physical and climatic context and corresponding maintenance needs.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Section 153.160 (Water-Efficient Landscaping Standards) Subsection 153.160.020 (Applicability), Subsection 153.160.200 (Stormwater Management and Rainwater Retention), and Chapter 52 (Storm Water and Urban Runoff Pollution Prevention) Section 52.11 (control of Pollutants from State Permitted Construction Activities), Section 52.12 (Control of Pollutants from Other Construction Activities), and Section 52.13 (Control of Pollutants from New Developments/Redevelopment Projects).</p> <p>Under Section 153.160 (Water-Efficient Landscaping Standards) Subsection 153.160.020 (Applicability) the following projects must adhere to water-efficient landscaping standards:</p> <p>(A) Landscape projects. After December 1, 2015 and consistent with Executive Order No. B-29-15, the provisions of this subchapter shall apply to all of the following landscape projects:</p> <p> (1) New development projects with an aggregate landscape area equal to or greater than 500 square feet requiring a building or landscape permit, plan check, or design review.</p> <p> (2) Rehabilitated landscape projects with an aggregate landscape area equal to or greater than 2,500 square feet requiring a building or landscape permit, plan check or design review.</p> <p>(B) The reporting requirements of this subchapter shall become effective December 1, 2015 and the remainder of this subchapter shall be effective no later than February 1, 2016.</p> <p>(C) Any project with an aggregate landscape area of 2,500 square feet or less may comply with the performance requirements of this subchapter or conform to the prescriptive measures contained in § 153.160.225.</p> <p>(D) For projects using treated or untreated graywater or rainwater captured on site, any lot or parcel within the project that has less than 2,500 square feet of landscape and meets the lot or parcel's landscape water requirement (estimated total water use) entirely with treated or untreated graywater or through stored rainwater captured on site is subject only to § 153.160.220(A)(5) of the city's Municipal Code. (Ord. 1346, passed 5-2-12; Am. Ord. 1379, passed 11-4-15)</p> <p>Under Section 153.160 (Water-Efficient Landscaping Standards) Subsection 153.160.200 (Stormwater Management and Rainwater Retention) projects defined above must adhere to the following:</p> <p>A) Stormwater best management practices. Stormwater management practices minimize runoff and increase infiltration which recharges groundwater and improves</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Action HS-8.2: Install drought-tolerant landscaping and water-conserving irrigation systems at City facilities, medians, and parkway strips to reduce water use and maintenance costs.</p> <p>Action HS-8.3: Require that all newly installed private landscaping covering more than 1,000 square feet install drought-tolerant landscaping and water conserving irrigation systems.</p> <p>Action HS-8.5: Encourage the use of high-efficiency irrigation technology, and allow recycled site water to be used for irrigation.</p> <p>Action HS-8.6: Explore opportunities for more actions using treated or raw well water for park irrigation.</p> <p>Action HS-8.7: Consider adopting an ordinance that requires the installation of water efficient fixtures upon the sale of a property.</p> <p>Action HS-8.8: Increase awareness and involve the public in addressing water runoff problems associated with daily activities.</p> <p>Action HS-8.9: Work with new development projects to increase on-site water infiltration and storage, and to preserve, restore, or incorporate natural drainage systems into the site design for the project.</p> <p>Action HS-8.10: Require contractors to comply with approved stormwater pollution prevention planning practices for all projects.</p> <p>Action HS-8.11: Conduct routine inspections of construction sites to check for proper erosion control methods during construction activities.</p> <p>Action HS-8.12: Consider revising the Water Conservation Ordinance to allow the use of artificial turf for landscaping purposes.</p> <p>Open Space and Conservation Element:</p> <p>Goal 5.0: Conserve and protect groundwater supply and water resources.</p> <p>Policy 5.1: Encourage water conservation through education, use of drought tolerant landscapes, and water-conserving technology.</p> <p>Policy 5.2: Promote the use of native plant material in landscapes and drought tolerant trees, especially in landscapes on City properties.</p> <p>Policy 5.3: Encourage use and production of reclaimed water.</p> <p>Policy 5.4: Continue enforcement of municipal National Pollutant Discharge Elimination System (NPDES) Permit to protect water quality within the San Gabriel River watershed.</p> <p>Policy 5.5: Cooperate with the EPA in efforts to remedy groundwater contamination and implement cleanup practices for the Baldwin Park Superfund site.</p> <p>Policy 5.6: Vigorously prosecute unlicensed dumping of toxic or hazardous materials into the ground or water in Baldwin Park. Encourage citizens to report dumping when they observe it.</p>	<p>water quality. Implementing stormwater best management practices into the landscape and grading design plans to minimize runoff and to increase on-site rainwater retention and infiltration are encouraged.</p> <p>(B) Regional Water Quality Control Board. Project applicants shall refer to the Regional Water Quality Control Board for information on any applicable stormwater technical requirements.</p> <p>(C) Friable soil. All planted landscape areas are required to have friable soil to maximize water retention and infiltration. (Ord. 1346, passed 5-2-12; Am. Ord. 1379, passed 11-4-15)</p> <p>Under Chapter 52 (Storm Water and Urban Runoff Pollution Prevention) Section 52.11 (control of Pollutants from State Permitted Construction Activities) states the following:</p> <p>(A) No person shall be granted a grading permit by the city or shall commence or continue any construction activity within the city that is subject to an General Construction Activity Storm Water NPDES Permit without showing proof of having applied for such permit.</p> <p>(B) Any person engaged in a construction activity requiring an NPDES General Construction Activity Storm Water NPDES Permit construction permit shall retain at the construction site the following documents: (i) a copy of the Notice of Intent to Comply with Terms of the General Permit to Discharge Water Associated with Construction Activity; (ii) a waste discharge identification number issued by the SWRCB; (iii) a Storm Water Pollution Prevention Plan and Monitoring Program Plan for the construction activity requiring the construction permit; and (iv) records of all inspections, compliance and non-compliance reports, evidence of self-inspection and good housekeeping practices.</p> <p>(C) Any person engaged in a construction activity in the city requiring an NPDES General Construction Storm Water Activity permit shall, upon reasonable request from a duly authorized officer of the city, provide any of the documents specified in division (B) and shall retain said documents for at least three years after completion of construction. (Ord. 1193, passed 8-21-02)</p> <p>Chapter 52 (Storm Water and Urban Runoff Pollution Prevention) Section 52.12 (Control of Pollutants from Other Construction Activities) states the following:</p> <p>Any person engaged in a construction activity that is not subject to the General Construction Storm Water Activity NPDES Permit but is subject to the municipal NPDES Permit, shall be required to comply with requirements contained therein as specified in the city's Storm Water Quality Management Program, including any revisions made thereto. (Ord. 1193, passed 8-21-02)</p> <p>Under Chapter 52 (Storm Water and Urban Runoff Pollution Prevention) Section 52.13 (Control of Pollutants from New Developments/Redevelopment Projects) the following projects must adhere to Chapter 52:</p> <p>(B) Stormwater pollution control measures for development planning and construction activities.</p> <p>(3) Applicability. The following development and redevelopment projects, termed “planning priority projects,” shall comply with the requirements of this chapter:</p> <p>(a) All development projects equal to 1 acre or greater of disturbed area that adds more than 10,000 square feet of impervious surface area.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(i) Projects located in or directly adjacent to, or discharging directly to an environmentally sensitive area (ESA), where the development will:</p> <ol style="list-style-type: none">1. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and2. Create 2,500 square feet or more of impervious surface area. <p>(k) Redevelopment projects.</p> <ol style="list-style-type: none">1. Land disturbing activity that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site on planning priority project categories.2. Where redevelopment results in an alteration to more than 50 percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, the entire project must be mitigated.3. Where redevelopment results in an alteration of less than 50 percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, only the alteration must be mitigated, and not the entire development.4. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade. <p>(5) Stormwater pollution control requirements. The site for every planning priority project shall be designed to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use.</p> <p>(c) The remainder of planning priority projects shall prepare a Low Impact Development plan to comply with the following:</p> <ol style="list-style-type: none">1. Retain stormwater runoff onsite for the stormwater quality design volume (SWQDv) defined as the runoff from:<ol style="list-style-type: none">a. The 85th percentile 24-hour runoff event as determined from the Los Angeles County 85th percentile precipitation isohyetal map; orb. The volume of runoff produced from a 0.75 inch, 24-hour rain event, whichever is greater.2. When, as determined by the City Engineer, 100 percent onsite retention of the SWQDv is technically infeasible, partially or fully, the infeasibility shall be demonstrated in the submitted Low Impact Development plan.5. A multi-phased project may comply with the standards and requirements of this section for all of its phases by: (a) designing a system acceptable to the Department of Public Works to satisfy these standards and requirements for the entire site during the first phase, and (b) implementing these standards and requirements for each phase of development or redevelopment of the site during the first phase or prior to commencement of construction of a later phase, to the extent necessary to treat the stormwater from such later phase. For purposes of this section, MULTI-PHASED	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		PROJECT shall mean any planning priority project implemented over more than one phase and the site of a multi-phased project shall include any land and water area designed and used to store, treat or manage stormwater runoff in connection with the development or redevelopment, including any tracts, lots, or parcels of real property, whether developed or not, associated with, functionally connected to, or under common ownership or control with such development or redevelopment. (Ord. 1193, passed 8-21-02; Am. Ord. 1363, passed 2-19-14)	
Claremont	<p>Open Space, Parkland, Conservation, and Air Quality Element:</p> <p>Goal 5-4: Protect groundwater resources.</p> <p>Policy 5-4. 1: Protect. preserve. and enhance the San Antonio Spreading Grounds and Thompson Creek Spreading Grounds as important open space resources for recharging groundwater basins.</p> <p>Policy 5-4.2: Encourage use of drainage improvements designed with native vegetation where possible, to retain or detain stormwater runoff, minimizing volume and pollutant concentrations.</p> <p>Policy 5-4.3: Design sidewalks. roads, and driveways to minimize impervious surfaces.</p> <p>Goal 5-5: Maintain and enhance groundwater resources.</p> <p>Policy 5-5.1: Require all new development to connect to public sewers. Explore alternatives for connecting the existing development which is not currently connected to the sanitary sewer system.</p> <p>Policy 5-5.2: Persuade water agencies that have wells in Claremont to develop programs that would pump water from high nitrate wells for irrigation use so the nitrates can be assimilated by vegetation, or if possible, that would blend the water for sale human consumption so that over the long term the contaminated portions of the aquifer can be cleaned.</p> <p>Policy 5-5.3: Reduce the spreading of high nitrate fertilizers, herbicides, pesticides, and other chemicals in City landscaping that can contaminate groundwater.</p> <p>Policy 5-5.4: Encourage the public to reduce the use of chemicals in maintenance of landscaping.</p> <p>Goal 5-15: Achieve the highest level of water conservation possible.</p> <p>Policy 5-15.1: Support water conservation through requirements for landscaping with drought- tolerant plants and efficient irrigation.</p> <p>Policy 5-15.2: Educate the public about the importance of water conservation and avoiding wasteful water habits.</p> <p>Policy 5-15.3: Work with the City water provider in exploring water conservation programs and encourage the water provider to offer incentives for water conservation.</p> <p>Policy 5-15.4: Direct staff to work with Sanitation Districts of Los Angeles County to explore infrastructure improvements that could make it possible to use reclaimed water in Claremont for nonpotable uses, such as landscape irrigation.</p> <p>Policy 5-15.5: Explore with Three Valley Water District water recycling opportunities in Claremont.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 16.131 (Water Efficient Landscape Requirements), Section 16.131.030 (Implementation Procedures), Section 16.131.040 (Landscape Water Use Standards), and Chapter 8.30 (Water Conservation) Section 8.30.030 (Application), and Section 8.30.040 (Permanent Water Conservation Requirements), and Chapter 8.28 (Stormwater and Runoff Pollution Control) Section 8.28.032 (Best Management Practices Required), Chapter 8.30 (Water Conservation) Section 8.30.030 (Application), Section 8.28.040 (Control of Runoff Required – Construction Activity), Section 8.28.041 (Control of Runoff Required – New Development and Redevelopment), and Section 8.28.050 (Stormwater Pollution Control Measures for Development Planning and Construction Activities).</p> <p>Under Chapter 16.131 (Water Efficient Landscape Requirements) the following projects apply:</p> <p>A. New Landscape Installations or Rehabilitation Projects</p> <p>This chapter shall apply to the following landscape projects:</p> <p>1. New landscape installations or landscape rehabilitation projects by public agencies or private nonresidential developers, except for cemeteries, with a landscaped area, including pools or other water features but excluding hardscape, equal to or greater than 2,500 square feet, and which are otherwise subject to a discretionary approval of a landscape plan, or which otherwise require a ministerial permit for a landscape or water feature;</p> <p>B. Existing Landscapes</p> <p>Section 16.131.040.B of this chapter shall apply to:</p> <p>1. All landscaped areas over one acre in size, whether installed prior to or after January 1, 2010; and</p> <p>2. All landscaped areas installed after January 1, 2010 to which Section 16.131.020.A is applicable. [Note: Authority cited: Section 65595, Government Code. Reference: Section 65596, Government Code.] (10-02)</p> <p>Under Section 16.131.030 (Implementation Procedures) the following is required:</p> <p>A. Prior to installation, a landscape documentation package shall be submitted to the City for review and approval of all landscape projects subject to the provisions of this chapter. Any landscape documentation package submitted to the City shall comply with the provisions of the guidelines.</p> <p>B. The landscape documentation package shall include a certification by a professional appropriately licensed in the State of California stating that the landscape design and water use calculations have been prepared by or under the supervision of the licensed professional and are certified to be in compliance with the provisions of this chapter and the guidelines. [Note: Authority cited: Section 65595, Government Code. Reference: Section 65596, Government Code.] (10-02)</p> <p>Under Section 16.131.040 (Landscape Water Use Standards) the following water use standards are required:</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>A. New and Rehabilitated Landscapes</p> <p>For landscape installation or rehabilitation projects subject to the applicability requirements of Section 16.131.020.A, the estimated applied water use allowed for the landscaped area shall not exceed the maximum applied water allowance (MAWA) calculated using an evapotranspiration adjustment factor (ETAF) of 0.7, except for special landscaped areas where the MAWA is calculated using an ETAF of 1.0; or the design of the landscaped area shall otherwise be shown to be equivalently water-efficient in a manner acceptable to the City; as provided in the guidelines.</p> <p>B. Existing Landscapes</p> <p>Irrigation of all landscaped areas shall be conducted in a manner conforming to the rules and requirements, and shall be subject to penalties and incentives for water conservation and water waste prevention as determined and implemented by the local water purveyor or as mutually agreed by local water purveyor and the City. (10-02)</p> <p>Under Chapter 8.30 (Water Conservation) Section 8.30.030 (Application) the following applies to water conservation in the City:</p> <p>A. The provisions of this chapter apply to any person in the use of any potable water in the City.</p> <p>C. The provisions of this chapter do not apply to the use of recycled water, with the exception of Section 8.30.040(A).</p> <p>E. This chapter is intended solely to further the conservation of water. It is not intended to implement any provision of federal, state, or local statutes, ordinances, or regulations relating to protection of water quality or control of drainage or runoff.</p> <p>F. Where any provision of the Claremont Municipal Code is in conflict with this chapter, the provision of this chapter shall take precedence. (09-10)</p> <p>Under Section 8.30.040 (Permanent Water Conservation Requirements) the following water conservation requirements are effective at all times:</p> <p>A. Limits on water hours. Outdoor watering or irrigating of lawn, landscape or any other vegetated area with potable water is prohibited between the hours of 9:00 a.m. and 5:00 p.m. Pacific Standard Time (PST) on any day, except by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting ore repairing an irrigation system. This subsection does not apply to landscape irrigation systems that exclusively use very low-flow drip type irrigation systems when no emitter produces more than two (2) gallons of water per hour.</p> <p>B. Limit on watering duration. Watering or irrigating of lawn, landscape or other vegetated area with potable water using a landscape irrigation system or a watering device that is not continuously attended is limited to no more than fifteen (15) minutes watering per day per station. This subsection does not apply to landscape irrigation systems that exclusively use very low-flow drip type irrigation systems when no emitter produces more than two (2) gallons of water per hour and weather based controllers or stream rotor sprinklers that meet a 70 percent efficiency standard.</p> <p>C. No excessive water flow or runoff. Watering or irrigating of any lawn, landscape or other vegetated area in a manner that causes or allows excessive water flow or runoff onto an adjoining sidewalk, driveway, street, alley, gutter or ditch is prohibited.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>D. No washing down hard or paved surfaces. Washing down hard or paved surfaces, including but not limited to sidewalks, walkways, driveways, parking areas, tennis courts, patios or alleys is prohibited, except when necessary to alleviate safety or sanitary hazards, and then only by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off device, a low-volume, high-pressure cleaning machine equipped to recycle any water used, or a low-volume high-pressure water broom.</p> <p>E. Obligation to fix leaks, breaks or malfunctions. Excessive use, loss or escape of water through breaks, leaks or other malfunctions in the water user’s plumbing or distribution system for any period of time after such escape of water should have reasonably been discovered and corrected and in no event more than five (5) business days of the property owner receiving notice from the local retail water agency or the City of Claremont, is prohibited.</p> <p>F. Re-circulating water required for water fountains and decorative water features. Operating a water fountain or other decorative water feature that does not use re-circulated water is prohibited.</p> <p>G. Limits on washing vehicles. Using water to wash or clean a vehicle, including but not limited to any automobile, truck, van, bus, motorcycle, boat or trailer, whether motorized or not is prohibited, except by use of a hand-held bucket or similar container or a hand-held hose equipped with a positive self-closing water shut-off nozzle or device. This subsection does not apply to any commercial car washing facility.</p> <p>Under Chapter 8.28 (Stormwater and Runoff Pollution Control) Section 8.28.032 (Best Management Practices Required) the following stormwater and runoff best management practices must be adhered to:</p> <p>F. The following BMPs are required of every owner or occupant of any property:</p> <ol style="list-style-type: none">1. No person shall leave, deposit, discharge, dump, or otherwise expose any chemical, fuel, animal waste, garbage, batteries and/or septic waste in an area where actual or potential discharge to the City streets or the storm drain system may occur. Any spills, discharge, or residues shall be removed as soon as possible and disposed of properly.2. Runoff from landscape irrigation, air conditioning condensate, water-line flushing, foundation/footing drains, individual residential car washing, dechlorinated/debrominated swimming pool/spa discharges and sidewalk washing shall be conducted in a manner which minimizes or eliminates the possibility of pollutant discharges reaching the City storm drain system or receiving waters.3. Runoff from washing paved areas, including, but not limited to, parking lots, on industrial or commercial property is prohibited unless specifically required by federal, state, or local health or safety codes and not in violation of any other provision of this Code. Runoff from authorized washing of paved areas shall be minimized to the extent practicable.4. Objects, such as motor vehicle parts containing grease, oil, or other hazardous materials, and unsealed receptacles containing hazardous materials, shall not be stored in area exposed to stormwater or otherwise susceptible to runoff.5. Any machinery or equipment which is to be repaired or maintained in areas exposed to stormwater or otherwise susceptible to runoff shall be provided with containment areas to control leaks, spills, or discharges.	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>6. All motor vehicle parking lots with more than 25 parking spaces and located in areas exposed to stormwater or otherwise susceptible to runoff shall have debris removed by regular sweeping or other equally effective measures. Such debris shall be collected and properly disposed of.</p> <p>7. Motor vehicle parking lots with a gravel/sediment base to implement BMPs to prevent the discharge of gravel and sediment to the MS4. (22-01; 14-05)</p> <p>Under Section 8.28.040 (Control of Runoff Required – Construction Activity) the following best management practices must be adhered to:</p> <p>D. The following minimum set of BMPs shall apply to all construction sites:</p> <ol style="list-style-type: none">1. Site management – housekeeping;2. Erosion controls – scheduling and preservation of existing vegetation;3. Sediment controls – perimeter controls and stabilized construction site entrance/exit;4. Non-stormwater management – water conservation practices and dewatering operations;5. Waste management – material delivery and storage; stockpile management; solid waste management; concrete waste management; and sanitary/septic waste management. <p>E. The following minimum BMPs are required for both private or public roadway paving or repair operations:</p> <ol style="list-style-type: none">1. Restrict paving and repaving activities to exclude periods of rainfall or predicted rainfall unless required by emergency conditions.2. Install gravel bags and filter fabric or other equivalent inlet protection at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat.3. Prevent the discharge of release of agents including soybean oil, other oils, or diesel to the asphalt.4. Minimize non-stormwater runoff from water use for roller equipment and for evaporative cooling of the asphalt.5. Clean equipment over absorbent pads, drip pans, plastic sheeting or other materials to capture all spillage and dispose properly.6. Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled, or disposed of properly.7. Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled, or disposed of properly.8. Cover “cold-mix” asphalt with protective sheeting during a rainstorm.9. Cover loads with tarp before haul-off to a storage site, and do not overload trucks.10. Minimize airborne dust by using water spray or other approved dust suppressant during grinding.11. Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near stormwater drainage systems or receiving waters.12. Protect stockpiles with a cover or sediment barriers during rain. (22-01; 14-05)	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>Under Section 8.28.041 (Control of Runoff Required – New Development and Redevelopment) the following applies:</p> <p>A. Prior to construction of a development equal to or greater than 300 square feet, new development/redevelopment project (as defined in this chapter) such project shall be evaluated by the City for its potential to discharge pollutants to the storm drain system or to receiving waters based on its intended land use. Such evaluation shall be conducted in accordance with development planning requirements established by the Regional Board or its Executive Officer, pursuant to the municipal NPDES permit. No discretionary permit may be issued for any construction or development project until the Director finds that the project plans comply with the Low Impact Development/ Standard Urban Stormwater Mitigation Plan requirements set forth in the permit and in this chapter.</p> <p>B. Once a project has been evaluated for its potential to discharge pollutants to the storm drain system or receiving waters, the City shall require appropriate BMPs to be implemented during construction and following project completion. The prescription of BMPs shall be in keeping with the Low Impact Development design standards pursuant to the municipal NPDES permit and this chapter. (22-01; 14-05)</p> <p>Under Section 8.28.050 (Stormwater Pollution Control Measures for Development Planning and Construction Activities) the following applies:</p> <p>C. The following development and redevelopment projects, termed “planning priority projects,” shall comply with the requirements of this section:</p> <p>1. New development projects that are in any of the following categories:</p> <p>a. Projects equal to one acre or greater of disturbed area and adding more than 10,000 square feet or more of impervious surface area (collectively over the entire project site).</p> <p>2. Redevelopment projects that create and/or replace 5,000 square feet or more of impervious surfaces (collectively over the entire project site) on any of the following:</p> <p>a. Existing sites of 10,000 square feet or more of impervious surface area.</p> <p>b. Industrial parks 10,000 square feet or more of impervious surface area.</p> <p>c. Commercial malls 10,000 square feet or more of impervious surface area.</p> <p>4. New development and redevelopment projects that create and/or replace 2,500 square feet or more of impervious area; discharge stormwater that is likely to impact a sensitive biological species or habitat; and are located in or directly adjacent to or are discharging to an ASBS, Sensitive Ecological Area in Los Angeles County.</p> <p>5. Street and road construction of 10,000 square feet or more of impervious surface area, in addition to complying with the requirements of this section, shall also follow the City’s Green Streets Policy (available on the City’s website). Street and road construction applies to standalone streets, roads, highways, and freeway projects. Temporary access roads are not subject to this requirement.</p> <p>The following construction projects are subject to the stormwater runoff mitigation requirements in this chapter:</p> <p>1. The project will be built on a currently vacant and/or undeveloped parcel.</p> <p>2. Projects that add and/or replace 50 percent of any impervious surface area with a total square footage of 300 square or greater.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>3. Projects that will create a new detached structure that is 300 square feet in floor area or greater.</p> <p>4. The project is located in or within 200 feet of an environmentally sensitive area.</p> <p>E. The following considerations are applicable to redevelopment projects:</p> <p>1. Where redevelopment results in an alteration of more than 50 percent of impervious surfaces of a previously existing development the entire project must be mitigated.</p> <p>2. Where redevelopment results in an alteration of less than 50 percent of impervious surfaces of a previously existing development, only the alteration must be mitigated, and not the entire development.</p> <p>3. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.</p> <p>F. Stormwater Pollution Control Requirements. Every applicable project shall be designed to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use.</p> <p>1. Projects that add and/or replace 300 square feet or more impervious surface shall complete the City of Claremont’s low impact development worksheet (available on the City’s website) and retain the 85th percentile 24-hour runoff event volume (as calculated on the worksheet).</p> <p>4. Street and road construction of 10,000 square feet or more of impervious surface shall be in accordance with the City of Claremont’s green street policy and the USEPA guidance regarding Managing Wet Weather with Green Infrastructure: Green Streets (December 2008 EPA-833-F-08-009) to the maximum extent practicable.</p> <p>5. The remainder of planning priority projects shall prepare a Low Impact Development Plan to comply with the following:</p> <p>a. Retain and infiltrate stormwater runoff on site for the Stormwater Quality Design Volume (SWQDv) defined as the runoff from the 85th percentile 24-hour runoff event; or bioretention and/or rainfall harvest and use of the SWQDv. If partial or complete on-site retention is technically infeasible, the project site may biofiltrate 1.5 times the portion of the remaining SWQDv that is not reliably retained on site. biofiltration BMPs must adhere to the design specifications provided in the Los Angeles County Low Impact Development Manual.</p> <p>b. Additional alternative compliance options such as off-site infiltration may be available to the project site. The project site should contact the City of Claremont to determine eligibility.</p> <p>6. The remaining SWQDv that cannot be retained or biofiltered on site must be treated on site to reduce pollutant loading. BMPs must be selected and designed to meet pollutant-specific benchmarks as required per the municipal NPDES</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>permit. Flow-through BMPs may be used to treat the remaining SWQDv and must be sized based on a rainfall intensity:</p> <ul style="list-style-type: none">a. 0.2 inches per hour for each hour of a storm event; orb. The maximum flow rate of runoff produced by the 85th percentile hourly rainfall intensity for each hour of the storm event, as determined by historical rainfall records, multiplied by a factor of two. <p>i. A multi-phased project shall comply with the standards and requirements of this section for all of its phases by: (1) designing a system acceptable to the City of Claremont to satisfy these standards and requirements for the entire Site during the first phase; and (2) implementing these standards and requirements for each phase of development or redevelopment of the site during the first phase or prior to commencement of construction of a later phase, to the extent necessary to treat the stormwater from such later phase. For purposes of this section, “multi-phased project” shall mean any planning priority project implemented over more than one phase and the site of a multi-phased project shall include any land and water area designed and used to store, treat, or manage stormwater runoff in connection with the development or redevelopment, including any tracts, lots, or parcels of real property, whether developed or not, associated with, functionally connected to, or under common ownership or control with such development or redevelopment.</p> <p>H. Hydromodification Management Requirements. Planning priority projects located within natural drainage systems shall implement hydrological control measures to prevent accelerated downstream erosion and protect stream habitat.</p> <ul style="list-style-type: none">1. Natural drainage systems that are subject to the hydromodification assessments and control include all drainages that have not been modified using engineering controls or drainages that are tributary to a natural drainage system. Examples of engineering modifications to a drainage include channelization, armoring with concrete, and application of rip-rap.3. Projects disturbing an area less than or equal to one acre shall implement the Low Impact Development control standards in subsection (F)(5) of this section.4. Projects disturbing an area greater than 1 acre, but less than 50 acres will be presumed to meet pre-development hydrology if one of the following demonstrations are made:<ul style="list-style-type: none">a. The project is designed to retain on site the runoff of the 95th percentile 24-hour storm; orb. The runoff flow rate, volume, velocity, and duration of the post-development condition does not exceed the pre-development condition for the two-year, 24-hour storm event; orc. The erosion potential (Ep) in the receiving water is approximately one. Ep shall be determined in accordance with the NPDES permit.5. Projects disturbing 50 acres or more will be presumed to meet pre-development hydrology based on the successful demonstration of one of the following conditions:<ul style="list-style-type: none">a. The project site infiltrates on-site runoff from a two-year, 24-hour storm event; orb. The runoff flow rate, volume, velocity, and duration for the post-development condition does not exceed the pre-development condition for the two-year, 24-	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		hour storm event. These conditions must be substantiated by hydrologic modeling.	
Covina	<p>Natural Resources and Open Space Element:</p> <p><i>Water Resources and Air Quality</i></p> <p>Policy a. Support the efforts at all levels of government to monitor and regulate water quality and conditions, ensuring that all applicable standards are met.</p> <p>Policy b. Support the efforts at and various codes and standards of all levels of government to protect ground water resources from depletion and sources of pollution, such as soil-leaching hazardous materials.</p> <p>Policy c. Support Federal, State, and regional efforts to remedy existing ground water pollution problems.</p> <p>Policy d. Continue local efforts to handle ground water contamination problems, including, but not limited to, shutting down or reconstructing water wells and appropriately treating water from operating wells to meet all applicable water quality standards.</p> <p>Policy e. Ensure that existing flood control system-related ground water recharge areas or spreading grounds (Ben Lomond at the southwest corner of Arrow Highway and Barranca Avenue and Walnut Wash at the easterly terminus of Workman Avenue) are preserved and protected via land use regulations (except where the entire facility or a portion thereof is determined by appropriate analysis to be no longer needed) and, when utilized, guarded against illegal discharge into surface waters (that feed ground water basins).</p> <p>Policy f. Preserve and protect in their natural conditions, through appropriate land use controls, development standards, and any other reasonable measures, the unimproved segments of two flood control channels running through Covina (Charter Oak Wash in Wingate Park and Walnut Creek in the Covina Hills/southeastern area) and concomitant elements, such as soil conditions, as important functional, ecological, biological, aesthetic, and passive open space resources.</p> <p>Policy g. Minimize the alteration of drainage patterns in Covina Hills to preserve the stream flow in and immediately abutting the unimproved section of Walnut Creek.</p> <p>Policy h. Handle the problem of soil erosion occurring along the banks of the unimproved portion of Walnut Creek and elsewhere.</p> <p>Policy i. Ensure the adequacy of water supplies to meet all existing and future demands and applications, particularly public safety.</p> <p>Policy l. Follow the Covina Water Conservation Ordinance, when necessary, and provide conservation kits and general information to best promote water conservation.</p> <p>Policy m. Follow the City’s Water-Efficient Landscape Ordinance for the sites of new and significantly expanded/remodeled developments as a viable conservation tool.</p> <p>Policy n. Encourage the incorporation of water conservation features in the design of all new and significantly expanded/remodeled developments and in the installation of conservation devices in existing developments, including, but not limited to, low-flow toilets and shower registers.</p> <p><i>Retention, Development, and Enhancement of Park and Recreational Facilities</i></p> <p>Policy d. Preserve and protect in their natural conditions the unimproved segments of the Charter Oak Wash (running through Wingate Park) and Walnut Creek (which passes through the Covina Hills area) by way of appropriate General Plan and Zoning</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 13.06 (Water Conservation), Under Section 13.06.040 (Permanent Water Conservation Requirements – Prohibition Against Waste), Chapter 17.82 (Water-efficient Landscape Regulations) Section 17.82.040 (Applicability of Water-efficient Landscape Regulations, and Section 17.82.060 (Landscape Water Use Standards), Chapter 8.50 (Storm Water Quality and Urban Runoff Control) Section 8.50.060 (Best Management Practices and Permits Authorized and Required), Section 8.50.100 (Construction Sites Requiring a Building Permit and/or a Grading Plan), and Section 8.50.120 (Low Impact Development).</p> <p>Under Chapter 13.06 (Water Conservation) the following must adhere to the City’s water conservation ordinance:</p> <p>A. The provisions of this chapter apply to any person in the use of potable water provided by the city of Covina.</p> <p>B. The provisions of this chapter do not apply to the following:</p> <p>1. Uses of water necessary to protect public health and safety or for essential government services, such as police, fire and other similar emergency services.</p> <p>2. The use of recycled water, with the exception of CMC 13.06.040(A).</p> <p>3. The use of water by commercial nurseries and commercial growers to sustain plants, trees, shrubs, crops or other vegetation intended for commercial sale. (Ord. 22-10 § 1, 2022; Ord. 09-1973 § 1, 2009.)</p> <p>Under Section 13.06.040 (Permanent Water Conservation Requirements – Prohibition Against Waste) projects must follow water conservation requirements effective at all times.</p> <p>Under Chapter 17.82 (Water-efficient Landscape Regulations) Section 17.82.040 (Applicability of Water-efficient Landscape Regulations) the following project must adhere to the water-efficient landscape regulations:</p> <p>A. The water-efficient landscape regulations set forth in this chapter shall apply to the following landscape projects:</p> <p>1. New construction projects by public agencies or private developers of nonresidential projects which have a proposed landscaped area equal to or greater than 2,500 square feet, and are otherwise subject to:</p> <p>a. A discretionary approval of a landscape plan, or</p> <p>b. A ministerial permit for a landscape or water feature;</p> <p>3. Landscape rehabilitation projects by public agencies, private developers, associations, or property managers of residential or nonresidential projects which:</p> <p>a. Have a proposed landscaped area equal to or greater than 2,500 square feet,</p> <p>b. Propose to rehabilitate 50 percent or more of the existing landscaped area,</p> <p>c. Will be completed within one year, and</p> <p>d. Are otherwise subject to:</p> <p>i. A discretionary approval of a landscape plan, or</p> <p>ii. A ministerial permit for a landscape or water feature;</p> <p>D. A landscape design plan for projects in fire-prone areas and fuel modification zones shall comply with any applicable fire safety requirements. When conflicts</p>	<p>City of Covina 2020 Urban Water Management Plan (UWMP) provides the City with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (City of Covina 2021).</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>designations and standards and any other reasonable measures as important functional, ecological, aesthetic, and passive open space resources.</p> <p>Policy e. To the greatest degree possible, encourage land uses adjacent to the unchanneled portions of Walnut Creek and Charter Oak Washes to consist of low density residential, park/open space, or other appropriate, compatible categories to prevent unreasonable encroachments thereon.</p> <p>Policy f. Preserve and protect the various improved flood control channels through appropriate General Plan and Zoning designations and standards and any other reasonable measures (excluding minor, excess portions thereof that are being sold off to owners of abutting residential and other properties).</p>	<p>between the provisions of applicable fire safety requirements and fire safety design elements exist, the fire safety requirements shall have priority. (Ord. 10-1979 § 2, 2010.)</p> <p>Under Section 17.82.060 (Landscape Water Use Standards) the following landscaped water standards apply:</p> <p>A. For new landscape installation or rehabilitated landscape projects subject to CMC 17.82.040(A), the estimated applied water use allowed for the landscaped area shall not exceed the MAWA calculated using an ET adjustment factor of 0.7, except for special landscaped areas where the MAWA is calculated using an ET adjustment factor of 1.0; or the design of the landscaped area shall otherwise be shown to be equivalently water-efficient in a manner acceptable to the city, as provided in the guidelines.</p> <p>B. Irrigation of all landscaped areas shall be conducted in a manner conforming to the rules, regulations, and requirements, including any established watering windows, and shall be subject to the penalties and incentives for water conservation and water waste prevention as determined and implemented by the applicable local water purveyors or as mutually agreed by the local water purveyors and the city.</p> <p>C. All irrigation controllers installed on or after January 1, 2012, within the city shall be smart controllers. (Ord. 10-1979 § 2, 2010.)</p> <p>Under Chapter 8.50 (Storm Water Quality and Urban Runoff Control) Section 8.50.060 (Best Management Practices and Permits Authorized and Required) the following Best Management Practices are required:</p> <p>1. No vehicle, machinery, device or storage container shall be allowed to leak, spill or discharge in any manner oil, grease, coolant, or other hazardous material onto any street, alley, road, parking area, or surface in the city whereon such pollutants or hazardous materials can or may be conveyed into the MS4 or any receiving water by storm water or non-storm water runoff.</p> <p>2. Objects such as vehicle motor parts containing grease, oil or other hazardous substances, and unsealed receptacles containing hazardous materials, shall not be stored in areas susceptible to storm water runoff or stored so that they may leak into the MS4.</p> <p>3. Any machine which is to be repaired or maintained in an uncovered outdoor area shall be placed on a pad of absorbent material to contain leaks, spills or small discharges. Any absorbent material used to contain such leaks, spills or discharges shall be properly disposed of.</p> <p>4. Machinery and equipment, including motor vehicles, which are leaking oil or fluid must be repaired.</p> <p>5. The uncovered outdoor storage of unsealed containers containing grease, oil, or other hazardous substances is prohibited in areas susceptible to runoff.</p> <p>6. The discharge of wash waters into the MS4 from the cleaning or washing of gas stations, automotive repair facilities and other types of automotive service facilities is prohibited.</p> <p>7. The discharge of wastewater into the MS4 from mobile auto washing, steam cleaning, mobile carpet cleaning and other such mobile commercial and industrial operations is prohibited.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>8. The discharge of wastewater from the washing of toxic material from paved or unpaved areas or the washing out of concrete trucks or concrete or cement-laden pumps, tools, and equipment into the MS4 is prohibited.</p> <p>9. The discharge into the MS4 of wastewater from the washing of impervious surfaces in industrial/commercial areas is prohibited.</p> <p>12. In areas exposed to storm water, the use of best management practices (including but not limited to the practices set forth in subsections (D)(1) through (11) of this section) and/or removal and lawful disposal of all fuels, chemicals, fuel and chemical wastes, animal wastes, garbage, batteries, and other materials which have potential adverse impacts on water quality shall be required. Treatment control best management practices must be properly operated and maintained to prevent the breeding of vectors.</p> <p>13. Dumping or disposal of the following materials into the MS4 system is prohibited: construction debris; any state or federally banned or unregistered pesticides; food and food processing wastes; and fuel and chemical wastes, animal wastes, garbage, batteries, and other materials that have potential adverse impacts on water quality. (Ord. 15-2038 § 1, 2015.)</p> <p>Under Section 8.50.100 (Construction Sites Requiring a Building Permit and/or a Grading Plan) the following are required:</p> <p>A. Generally. In addition to any other requirements set forth in this chapter, prior to obtaining a grading or building permit, each operator of any construction activity shall submit evidence to the director that all applicable permits have been obtained, including but not limited to the State Water Board’s Construction Permit and State Water Board 401 Water Quality Certification. Each operator of any construction activity shall implement such an erosion and sediment control plan and BMPs required by the director to ensure that discharges of pollutants are effectively prohibited and will not cause or contribute to an exceedance of water quality standards. A SWPPP prepared in accordance with the general construction permit may be substituted for an erosion and sediment control plan. All construction and grading activities shall comply with applicable laws and regulatory documents, including all applicable city ordinances and the city’s permit regulating discharges into and from the storm drain system.</p> <p>B. Erosion and Sediment Control Plan Required. In addition to any other requirements set forth in this chapter, prior to obtaining a grading or building permit, each operator of any construction site of less than one acre shall cause to be prepared and submitted to the city an erosion and sediment control plan. No operator of any construction activity shall commence any construction activity prior to receiving written approval of the erosion and sediment control plan from the director.</p> <p>D. Erosion and Sediment Control Plan Development. For construction sites one acre or greater, erosion and sediment control plans must be developed and certified by a qualified SWPPP developer. Structural BMPs shall be designed by a licensed California engineer.</p> <p>Under Section 8.50.120 (Low Impact Development) the following projects must adhere to the following storm water pollution control requirements:</p> <p>C. Applicability. The following development and redevelopment projects, termed “planning priority projects,” shall comply with the requirements of this section:</p> <p>1. All development projects equal to one acre or greater of disturbed area that adds more than 10,000 square feet of impervious surface area.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>6. Parking lots with 5,000 square feet or more of impervious surface area, or with 25 or more parking spaces.</p> <p>7. Street and road construction of 10,000 square feet or more of impervious surface area.</p> <p>9. Projects located in or directly adjacent to, or discharging directly to, an environmentally sensitive area (ESA), where the development will:</p> <p>a. Discharge storm water runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>b. Create 2,500 square feet or more of impervious surface area.</p> <p>11. Redevelopment Projects.</p> <p>a. Land disturbing activity that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site on planning priority project categories.</p> <p>b. Where redevelopment results in an alteration to more than 50 percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction storm water quality control requirements, the entire project must be mitigated.</p> <p>c. Where redevelopment results in an alteration of less than 50 percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction storm water quality control requirements, only the alteration must be mitigated, and not the entire development.</p> <p>E. Storm Water Pollution Control Requirements. The site for every planning priority project shall be designed to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use.</p> <p>2. Street and road construction of 10,000 square feet or more of impervious surface area (and street and road redevelopment that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site), in addition to complying with all other applicable provisions of this section shall employ green street strategies per the U.S. EPA guidance manual, “Managing Wet Weather with Green Infrastructure: Green Streets” (EPA-833-F-08-009, December 2008) to the maximum extent practicable.</p> <p>3. The remainder of planning priority projects shall prepare a Low Impact Development plan to comply with the following:</p> <p>a. Retain storm water runoff on site for the storm water quality design volume (SWQDv) defined as the runoff from:</p> <p>i. The eighty-fifth percentile 24-hour runoff event as determined from the Los Angeles County eighty-fifth percentile precipitation isohyetal map; or</p> <p>ii. The volume of runoff produced from a three-quarter-inch, 24-hour rain event, whichever is greater.</p> <p>F. Non-Planning Priority Projects. For new development or redevelopment projects not meeting the “planning priority projects” thresholds, but which may potentially have adverse impacts on post-development storm water quality, a site-specific plan</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>including post-construction design, source and/or treatment control to mitigate storm water pollution shall be required where one or more of the following project characteristics exist:</p> <ol style="list-style-type: none">1. Vehicle or equipment fueling areas;2. Vehicle or equipment maintenance areas, including washing and repair;4. Outdoor handling or storage of hazardous materials;5. Outdoor manufacturing areas <p>H. Conditional Use Permit. For any development project requiring a conditional use permit (“CUP”) or other discretionary entitlement required under CMC Title 17, or other applicable title of the Covina Municipal Code, the Low Impact Development plan shall be approved prior to the issuance of any such CUP or other discretionary entitlement.</p>	
El Monte	<p>Public Health and Safety Element:</p> <p>Goal PHS-2: A healthy and safe watershed exemplified by the implementation of flood control measures, protection of water resources, and the restoration of the beneficial uses of the San Gabriel and Rio Hondo Rivers watersheds.</p> <p>Policy PHS-2.1: Flooding. Work with local, regional, state and federal agencies to implement updated flood control measures, encourage regular maintenance and monitoring of flood control channels, and maintain excellent state-of-emergency preparedness.</p> <p>Policy PHS-2.2: Water Quality. Improve in-stream water quality through best management practices to meet or exceed Regional Water Quality Control Board standards and National Pollutant Discharge Elimination Systems permitting requirements.</p> <p>Policy PHS-2.3: Water Resource. Continue to ensure water resource protection through the cleanup of the El Monte Superfund site, cleaning of waters within and entering into the Peck Water Conservation Park, and activities to reduce nonpoint resource pollutants.</p> <p>Policy PHS-2.4: Habitat Restoration. Restore the quality, quantity, and connectivity of habitat and natural open areas in El Monte with watershed best management practices and restoration of stream channels wherever feasible.</p> <p>Policy PHS-2.5 Green Infrastructure. Implement green infrastructure projects (e.g., greenways, community forest, linear parks, vegetated swales, miniparks) to help filter stormwater runoff, improve water resources, and restore the health of our watershed.</p> <p>Policy PHS-2.7: Emerald Necklace Accord. Participate in the Emerald Necklace Accord for the purposes of recreation, environmental education, development and enhancement of trails, native habitat conservation and restoration, water protection, and protection of water resources.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 13.16 (Stormwater Management and Discharge Control) Section 13.16.100 (Reduction of Pollutants in Stormwater), Chapter 13.20 (Stormwater and Urban Runoff Pollution Control) Section 13.20.020 (Stormwater Pollution Control Measures for Development Planning and Construction Activities), Chapter 14.02 (Water Usage Prohibitions Applying to All Persons) Section 14.02.015 (Water Usage Prohibitions applying to All Persons), and Chapter 17.74 (Water Efficiency) Section 17.74.020 (Applicability).</p> <p>Under Chapter 13.16 (Stormwater Management and Discharge Control) Section 13.16.100 (Reduction of Pollutants in Stormwater) the following applies to stormwater in the City:</p> <p>A.</p> <ol style="list-style-type: none">1. Littering. No person shall throw, deposit, leave, maintain, keep, or permit to be thrown, deposited, placed, left or maintained, any refuse, rubbish, garbage, or other discarded or abandoned objects, articles, and accumulations, in or upon any street, alley, sidewalk, storm drain, inlet, catch basin, conduit or other drainage structures, business place, or upon any public or private plot of land in the city, so that the same might be or become a pollutant, except containers or in lawfully established waste disposal facilities.2. The occupant or tenant, or in the absence of occupant or tenant, the owner, lessee or proprietor of any real property in the city in front of which there is a paved sidewalk shall maintain said sidewalk free of dirt or litter to the maximum extent practicable. Sweepings from said sidewalk shall not be swept or otherwise made or allowed to go into the gutter or roadway, but shall be disposed of in receptacles maintained on said real property as required for the disposal of garbage.3. No person shall throw or deposit litter in any fountain, pond, lake, stream, or any other body in a park or elsewhere within the city. <p>B. Standard for Parking Lots and Similar Structures. Persons owning or operating a paved parking lot, gas station pavement, paved private street or road, or similar structure, shall clean those structures as frequently and thoroughly as practicable in a manner that does not result in discharge of pollutants to the city storm drain system.</p> <p>D. Notification of Intent and Compliance with General Permits. Each industrial discharger, discharger associated with construction activity, or other discharger,</p>	<p>City of El Monte 2020 Urban Water Management Plan (UWMP) provides the City of El Monte with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (City of El Monte 2021).</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>described in any general stormwater permit addressing such discharges, as may be adopted by the United States Environmental Protection Agency, the State Water Resources Control Board, or the California Regional Water Quality Control Board, shall provide notice of intent, comply with, and undertake all other activities required by any general stormwater permit applicable to such discharges. Each discharger identified in an individual National Pollutant Discharge Elimination System permit relating to stormwater discharges shall comply with and undertake all activities required by such permit.</p> <p>E. Compliance with Best Management Practices. Where Best Management Practices guidelines or requirements have been adopted by any federal, state of California, regional, and/or City Agency, for any activity, operation, or facility which may cause or contribute to stormwater pollution or contamination, illicit discharges, and/or discharges of nonstormwater to the stormwater system, every person undertaking such activity or operation, or owning or operating such facility shall comply with such guidelines or requirements as may be identified by the Director.</p> <p>(Ord. 2572 §§ 6, 7, 2002; prior code § 7810)</p> <p>Under Chapter 13.20 (Stormwater and Urban Runoff Pollution Control) Section 13.20.020 (Stormwater Pollution Control Measures for Development Planning and Construction Activities) the following projects must adhere to this section and implement the following best management practices:</p> <p>C. Applicability. This section is applicable to projects as defined below:</p> <ol style="list-style-type: none">1. All development and redevelopment projects, termed "planning priority projects," as defined in the municipal NPDES permit currently in effect at the time of the development application, shall comply with subsection E of Section 13.20.020.2. Street and road construction projects of ten thousand (10,000) square feet or more of impervious surface, in addition to complying with all other applicable provisions of Section 13.20.020, shall follow USEPA guidance regarding "Managing West Weather with Green Infrastructure: Green Streets" (December 2008, EPA-833-F-08-009) to the maximum extent practicable. This subsection applies to standalone streets, roads, highways, and freeway projects, and also applies to streets within larger projects, including capital improvement projects (CIPs).4. Any other project, as deemed appropriate by the department, submitted for complete discretionary or non-discretionary permit application filed with the department after December 31, 2012. <p>E. Stormwater Pollution Control Requirements. All applicable projects listed in subsection C of Section 13.20.020 shall be designed to control pollutants, pollutant loads, and runoff volumes to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use. All applicable projects shall prepare a Low Impact Development plan that is submitted to and approved by the Department. All LID plans shall comply with the following:</p> <ol style="list-style-type: none">a. Low impact development standards and best management practices implementation hierarchy: All project applicants shall:	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>i. Properly select, design and maintain Low Impact Development and hydromodification control best management practices to address pollutants that are likely to be generated, reduce changes to pre-development hydrology, assure long-term function and avoid breeding of vectors.</p> <p>ii. Prioritize the selection of best management practices to remove stormwater pollutants, reduce stormwater runoff volume, and beneficially use stormwater to support an integrated approach to protecting water quality and managing water resources in the following order:</p> <ol style="list-style-type: none">1. On-site infiltration, bioretention and/or rainfall harvest and use; then2. On-site biofiltration, offsite groundwater replenishment, and/or off-site retrofit. <p>b. Retain onsite the stormwater quality design volume (SWQDv) as required per the permit currently in effect at the time of development application submittal.</p> <p>c. When one hundred (100) percent onsite retention of the SWQDv is technically infeasible, partially or fully, the infeasibility shall be demonstrated in the submitted Low Impact Development plan and approved by the Department. Technical infeasibility may result from conditions that may include, but are not limited to:</p> <ol style="list-style-type: none">i. The infiltration rate of saturated in-situ soils is less than 0.3 inch per hour and it is not technically feasible to amend the in-situ soils to attain an infiltration rate necessary to achieve reliable performance of infiltration or bioretention BMPs in retaining the SWQDv onsite.ii. Locations where seasonal high groundwater is within 10 (10) feet of surface grade.iii. Locations within one hundred (100) feet of a groundwater well used for drinking water.v. Locations with potential geotechnical hazards.vi. Smart growth and infill or redevelopment locations where the density and/or nature of the project would create significant difficulty for compliance with the onsite volume retention requirement. <p>d. Projects that have successfully demonstrated technical infeasibility for full retention of the SWQDv to the Department, shall implement alternate compliance measures (alternate mitigation options) as designated in the permit currently in effect at the time of development application submittal.</p> <p>e. Additional alternative compliance options, such as offsite infiltration, may be available to the project. The project applicant should contact the Department to determine eligibility. Alternative compliance options are as further specified in the permit currently in effect at the time of development application submittal.</p> <p>f. A multi-phased project shall comply with the standards and requirements of this section for all of its phases by:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>i. Designing a system acceptable to the Department to satisfy these standards and requirements for the entire site during the first phase; and/or</p> <p>ii. Implementing these standards and requirements for each phase of development or redevelopment of the project during the first phase or prior to commencement of construction of a later phase, to the extent necessary to treat the stormwater from such later phase.</p> <p>iii. For purposes of this subsection, "multi-phased project" shall mean any planning priority project implemented over more than one phase and the site of a multi-phased project shall include any land and water area designed and used to store, treat or manage stormwater runoff in connection with the development or redevelopment, including any tracts, lots, or parcels of real property, whether developed or not, associated with, functionally connected to, or under common ownership or control with such development or redevelopment.</p> <p>g. Minimize hydromodification impacts by maintaining the project's pre-development storm water runoff volumes, flow rates, and durations by maintaining the erosion potential (EP) in streams at 1, or implementing hydromodification control BMPs and/or LID strategies, or other restoration measures to meet hydromodification control criteria as designated in the permit currently in effect at the time of development application submittal.</p> <p>h. Department may exempt certain applicable projects listed in subsection C of Section 13.20.020 from hydromodification control requirements where assessments of downstream channel conditions and proposed discharge hydrology indicate that adverse hydromodification effects to beneficial uses of natural drainage systems are unlikely:</p> <p>i. The replacement, maintenance or repair of existing, publicly-maintained flood control facilities, storm drains, or transportation networks.</p> <p>ii. Redevelopment of a previously developed site in an urbanized area that does not increase the effective impervious area or decrease the infiltration capacity of pervious areas compared to the pre-project conditions.</p> <p>iii. Projects that have any increased discharge directly or via a storm drain to a sump, lake, area under tidal influence, into a waterway that has an estimated one-hundred-year peak flow of twenty-five thousand (25,000) cubic feet per second or more, or other receiving water that is not susceptible to hydromodification impacts.</p> <p>iv. Projects that discharge directly or through a storm drain into concrete or other engineered (not natural) channels (e.g. channelized or armored rip rap, shotcrete, etc.) which, in turn, discharge into receiving water that is not susceptible to hydromodification impacts.</p> <p>(Ord. No. 2840, § 2(Exh. A), 6-10-2014)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>Under Chapter 14.02 (Water Usage Prohibitions Applying to All Persons) Section 14.02.015 (Water Usage Prohibitions applying to All Persons) the following apply to all projects in the City:</p> <p>A. The water conservation requirements under this Section 14.02.015 shall apply to all persons within the city of El Monte.</p> <p>B. To promote water conservation, each of the following actions is prohibited, except where necessary to address an immediate health and safety need or to comply with a term or condition in a permit issued by any state or federal governmental agency:</p> <ol style="list-style-type: none">1. The application of potable water to outdoor landscapes in a manner that causes runoff such that water flows onto adjacent property, non-irrigated areas, private and public walkways, roadways, parking lots, or structures;2. The use of a hose that dispenses potable water to wash a motor vehicle, except where the hose is fitted with a shut-off nozzle or device attached to it that causes it to cease dispensing water immediately when not in use;3. The application of potable water to driveways and sidewalks;4. The use of potable water in a fountain or other decorative water feature, except where the water is part of a recirculating system;5. The application of potable water to outdoor landscapes during and up to forty-eight (48) hours after measurable rainfall; and6. The serving of drinking water other than upon request in eating or drinking establishments, including but not limited to restaurants, hotels, cafes, cafeterias, bars, or other public places where food or drink are served and/or purchased. <p>C. Violations of this Section 14.02.015 may result in the imposition of fines or other penalties pursuant to Section 14.02.085 (penalties for violation of water usage prohibitions under Section 14.02.015) below.</p> <p>(Ord. No. 2845, § 3, 10-14-2014; Ord. No. 2861, § 2, 8-4-2015)</p> <p>Under Chapter 17.74 (Water Efficiency) Section 17.74.020 (Applicability) the following projects must comply with the Cities water efficiency regulations:</p> <p>A. This chapter shall apply to all of the following landscape projects:</p> <ol style="list-style-type: none">1. New construction projects with an aggregate landscape area equal to or greater than five hundred (500) square feet requiring a building or landscape permit, plan check or design review;2. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than two thousand five hundred (2,500) square feet requiring a building or landscape permit, plan check, or design review; and3. Existing landscapes limited to Sections 17.74.220, 17.74.230, and 17.74.240 of this chapter. <p>B. Any project with an aggregate landscape area of two thousand five hundred (2,500) square feet or less may comply with the performance requirements of this section or conform to the prescriptive measures contained in Table 17.74-5.</p> <p>C. For projects using treated or untreated graywater or rainwater captured on site, any lot or parcel within the project that has less than two thousand five hundred (2,500) square feet of landscape and meets the lot or parcel's landscape water requirement (estimated total water use) entirely with treated or untreated graywater or through</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>stored rainwater captured on site is subject only to Table 17.74-5 Section E. This section does not apply to:</p> <ol style="list-style-type: none">1. Registered federal, state or local historical sites;2. Ecological restoration projects that do not require a permanent irrigation system;3. Mined-land reclamation projects that do not require a permanent irrigation system; or4. Existing plant collections, as part of botanical gardens and arboreta open to the public. <p>(Ord. No. 3011 , § 3(Exh. B), 6-21-2022; Ord. No. 3023 , § 4.B(Exh. B), 5-2-2023)</p>	
Glendora	<p>Conservation Element:</p> <p>Gola CON-1: Protection and conservation of Glendora’s water resources.</p> <p>Policy CON-1.1: Establish a comprehensive program for the utilization of recycled water for irrigation purposes.</p> <p>Policy CON-1.2: Reduce water demand for irrigation purposes through the utilization of water conserving landscape materials.</p> <p>Policy CON-1.3: Establish specific requirements for the use of water conserving landscape materials in new development and redevelopment projects, parks and municipal facilities.</p> <p>Policy CON-1.4: Establish outreach and incentive programs to educate residents on methods of water conservation and to encourage their use.</p> <p>Policy CON-1.5: Establish methods to analyze water conservation issues when determining the need and development of future parks.</p> <p>Goal CON-2: Utilization of water conservation technologies and practices.</p> <p>Policy CON-2.1: Establish a comprehensive program for the utilization of recycled water for irrigation purposes.</p> <p>Policy CON-2.2: Reduce water demand for irrigation purposes through the utilization of water-conserving landscape materials.</p> <p>Policy CON-2.3: Establish specific requirements for the use of water conserving landscape materials in new development and redevelopment projects, parks and municipal facilities.</p> <p>Policy CON-2.4: Establish and implement water conservation methods for all municipal facilities.</p> <p>Goal CON-3: Effective and well-maintained water infrastructure system.</p> <p>Policy CON-3.1: Ensure the City’s Water Master Plan provides an accurate projection of future water demand and conveyance.</p> <p>Policy CON-3.2: Ensure existing water infrastructure systems are properly maintained.</p> <p>Policy CON-3.3: Ensure infrastructure for new development is limited to serving properties within the planning area or water service area.</p> <p>Goal CON-4: Adequate conveyance and disposal of wastewater.</p> <p>Policy CON-4.1: Ensure the wastewater infrastructure system within the City is effective and adequately maintained.</p> <p>Policy CON-4.2: Ensure new development and redevelopment projects adequately analyze potential impacts to the existing wastewater infrastructure system.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 21.03 (General Regulations) Section 21.03.090 (Urban Runoff Pollution), and Section 21.030.060 (State Model Water Efficient Landscaping Ordinance Adopted by Reference).</p> <p>Under Chapter 21.03 (General Regulations) Section 21.03.090 (Urban Runoff Pollution) project in the City must ensure the following:</p> <p>K. Erosion and Sediment Control Plan (ESCP)—Control of Pollutants from Construction Activities.</p> <ol style="list-style-type: none">1. No person shall be granted a grading permit or shall commence or continue any construction activity in the city that causes the disturbance of less than one acre or more of soil by clearing, grading, and excavating, without submitting an ESCP/local SWPPP for review and approval by the city.2. No person shall be granted a grading permit or shall commence or continue any construction activity in the city that causes the disturbance of one acre or more of soil by clearing, grading, and excavating, without demonstrating to the city that such person has prepared a ESCP/SWPPP and obtained a NPDES General Construction Activity Storm Water Permit from the SWRCB. The SWPPP shall be prepared by a Qualified SWPPP Developer (QSD). All structural BMPs must be designed by a licensed California civil engineer. <p>L. Control of Pollutants from Other Construction Activities. Any person engaged in a construction activity subject to the municipal National Pollutant Discharge Elimination System permit, shall be required to implement best management practices specified by the regional board, its executive officer, or the city's public works director.</p> <p>M. Control of Pollutants from New Development and Redevelopment—Low Impact Development (LID).</p> <ol style="list-style-type: none">1. This section creates Glendora's Planning and Land Development Program for all new development and redevelopment to accomplish the following:<ol style="list-style-type: none">a. Lessen the water quality impacts of development by using smart growth practices such as compact development, directing development towards existing communities via infill or redevelopment, and safeguarding of environmentally sensitive areas.b. Minimize the adverse impacts from storm water runoff on the biological integrity of natural drainage systems and the beneficial uses of waterbodies in accordance with requirements under CEQA (California Public Resources Code Section 21000 et seq.).c. Minimize the percentage of impervious surfaces on land developments by minimizing soil compaction during construction, designing projects to minimize the impervious area footprint, and	<p>City of Glendora Draft 2015 Urban Water Management Plan (UWMP) provides the City of Glendora with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UWMP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (City of Glendora 2016).</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy CON-4.3: Incorporate project-level stormwater mitigation measures to reduce potential impacts to water quality and ensure mitigation measures are adequately monitored.</p> <p>Policy CON-4.4: Establish programs to educate residents regarding impacts of stormwater runoff on water quality and provide a variety of opportunities for Glendora residents to dispose of hazardous materials.</p> <p>Policy CON-4.5: Protect the planning area from unnecessary stormwater run-off from outside the planning area that would have the potential to require additional stormwater conveyance or treatment facilities maintained by the City.</p> <p>Policy CON-4.6: Ensure new development and redevelopment projects adequately analyze potential impacts to the existing wastewater infrastructure system.</p> <p>CON-4.7 Protect the planning area from the conveyance of wastewater from outside the planning area that would have the potential to require additional wastewater conveyance or treatment facilities.</p> <p>Goal CON-8: Proper conveyance and treatment of stormwater and implementation of techniques to reduce pollutants consistent with Federal, State and regional regulations and standards.</p> <p>Policy CON-8.1: Ensure existing drainage facilities are properly maintained.</p> <p>Policy CON-8.2: Ensure all new development and redevelopment projects comply with Federal, State, regional and City regulations and ordinances related to stormwater.</p> <p>Policy CON-8.3 :Incorporate project-level stormwater mitigation measures to reduce potential impacts to water quality and ensure mitigation measures are adequately monitored.</p> <p>Policy CON-8.4: Establish programs to educate residents regarding impacts of stormwater runoff on water quality and provide a variety of opportunities for Glendora residents to dispose of hazardous materials.</p> <p>Policy CON-8.5: Continue to support regional and State efforts in controlling point and non-point sources of water pollution.</p>	<p>employing LID design principles to mimic predevelopment hydrology through infiltration, evapotranspiration and rainfall harvest and use.</p> <p>d. Maintain existing riparian buffers and enhance riparian buffers when possible.</p> <p>e. Minimize pollutant loadings from impervious surfaces such as roof tops, parking lots, and roadways through the use of properly designed, technically appropriate BMPs (including source control BMPs such as good housekeeping practices), LID strategies, and treatment control BMPs.</p> <p>f. Properly select, design and maintain LID and hydromodification control BMPs from the LID manual to address pollutants that are likely to be generated, reduce changes to pre-development hydrology, assure long-term function, and avoid the breeding of vectors.</p> <p>g. Prioritize the selection of BMPs to remove storm water pollutants, reduce storm water runoff volume, and beneficially use storm water to support an integrated approach to protecting water quality and managing water resources in the following order of preference:</p> <p>i. On-site infiltration, bioretention and/or rainfall harvest and use.</p> <p>ii. On-site biofiltration, off-site ground water replenishment, and/or off-site retrofit.</p> <p>2. Applicability.</p> <p>a. New Development Projects. Development projects subject to LID requirements during conditioning and approval for the design and implementation of post-construction controls to mitigate storm water pollution, prior to completion of the project(s), are:</p> <p>i. All development projects equal to one acre or greater of disturbed area and adding more than ten thousand square feet of impervious surface area.</p> <p>Parking lots five thousand square feet or more of impervious surface area, or with twenty-five or more parking spaces.</p> <p>vii. Street and road construction of ten thousand square feet or more of impervious surface area shall follow USEPA guidance regarding managing wet weather with green infrastructure: Green Streets (December 2008 EPA-833-F-08-009 or most recent edition) to the maximum extent practicable. Street and road construction applies to standalone streets, roads, highways, and freeway projects, and also applies to streets within larger projects.</p> <p>ix. Redevelopment projects in subject categories that meet redevelopment thresholds identified in subsection (M)(2)(b) (Redevelopment projects).</p> <p>x. Projects located in or directly adjacent to, or discharging directly to a significant ecological area (SEA), where the development will:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(A) Discharge storm water runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>(B) Create two thousand five hundred square feet or more of impervious surface area.</p> <p>b. Redevelopment Projects. Redevelopment projects subject to LID conditioning and approval for the design and implementation of post-construction controls to mitigate storm water pollution, prior to completion of the project(s), are:</p> <p>i. Land-disturbing activity that results in the creation or addition or replacement of five thousand square feet or more of impervious surface are on an already developed site on development categories as stated in subsection (M)(2)(c)(i) (Integrated water quality/flow reduction/resources management criteria).</p> <p>ii. Where redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction storm water quality control requirements, the entire project must be mitigated.</p> <p>iii. Where redevelopment results in an alteration of less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction storm water quality control requirements, only the alteration must be mitigated, and not the entire development.</p> <p>(A) Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.</p> <p>c. New Development/Redevelopment Project Performance Criteria.</p> <p>i. Integrated Water Quality/Flow Reduction/Resources Management Criteria.</p> <p>(A) Each new development and redevelopment project (referred to hereinafter as "new projects") shall control pollutants, pollutant loads, and runoff volume emanating from the project site by: (1) minimizing the impervious surface area; and (2) controlling runoff from impervious surfaces through infiltration, bioretention and/or rainfall harvest and use.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(B) All projects shall retain on-site the stormwater quality design volume (SWQDv) defined as the runoff from:</p> <p>(1) The 0.75-inch, twenty-four-hour rain event or</p> <p>(2) The 85th percentile, twenty-four-hour rain event, as determined from the Los Angeles County 85th percentile precipitation isohyetal map, whichever is greater.</p> <p>(C) Bioretention and biofiltration systems shall meet the design specifications provided in Attachment H of the MS4 NPDES permit.</p> <p>(D) When evaluating the potential for on-site retention, credit will include considering the maximum potential for evapotranspiration from green roofs and rainfall harvest and use.</p> <p>d. Hydromodification (Flow/Volume/Duration) Control Criteria. All new development and redevelopment projects located within natural drainage systems must implement hydrologic control measures, to prevent accelerated downstream erosion and to protect stream habitat in natural drainage systems. The purpose of the hydrologic controls is to minimize changes in post-development hydrologic storm water runoff discharge rates, velocities, and duration. This shall be achieved by maintaining the project's pre-project storm water runoff flow rates and durations.</p> <p>iii. Hydromodification Control Criteria. The hydromodification control criteria to protect natural drainage systems are as follows:</p> <p>(A) Projects disturbing an area greater than one acre but less than fifty acres within natural drainage systems will be presumed to meet pre-development hydrology if one of the following demonstrations is made:</p> <p>(1) The project is designed to retain on-site, through infiltration, evapotranspiration, and/or harvest and use, the storm water volume from the runoff of the 95th percentile, twenty-four-hour storm; or</p> <p>(2) The runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the two-year, twenty-four-hour rainfall event. This condition may be substantiated by simple screening models, including those described in Hydromodification Effects on Flow Peaks and Durations in Southern California Urbanizing Watersheds (Hawley et al., 2011) or other models acceptable to the Executive Officer of the Regional Water Board; or</p> <p>(3) The erosion potential (Ep) in the receiving water channel will approximate 1, as determined by a hydromodification analysis study and the equation presented in Attachment J in the current NPDES MS4 permit.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(B) Projects disturbing fifty acres or more within natural drainage systems will be presumed to meet pre-development hydrology based on the successful demonstration of one of the following conditions:</p> <p>(1) The site infiltrates on-site at least the runoff from a two-year, twenty-four-hour storm event; or</p> <p>(2) The runoff flow rate, volume, velocity, and duration for the post-development condition does not exceed the pre-development condition for the two-year, twenty-four-hour rainfall events. These conditions must be substantiated by hydrologic modeling acceptable to the Regional Water Board executive officer; or</p> <p>(3) The erosion potential (Ep) in the receiving water channel will approximate 1, as determined by a Hydromodification Analysis Study and the equation presented in Attachment J.</p> <p>(Ord. 1633 § 1, 1995; Ord. 1722 § 2, 2000; Ord. 1994 §§ 2, 4, 6, 2014)</p> <p>Section 21.030.060 (State Model Water Efficient Landscaping Ordinance Adopted by Reference) states the following:</p> <p>The city adopts by reference the California State Model Water Efficient Landscaping Ordinance (AB 1881), and any amendments thereto, as the law of the city. One copy of the California State Model Water Efficient Landscaping Ordinance has been, and is now, filed in the office of planning, and the ordinance is adopted by reference as if incorporated and set out in full in this chapter.</p> <p>(Ord. 1996 § 3, 2015; Ord. 1997 § 3, 2015; Ord. 2043 § 3, 2019)</p>	
Industry	<p>Resource Management Element:</p> <p>Goal RM1: A reliable system that enables the City to efficiently and cost- effectively manage its water resources and needs.</p> <p>Policy RM1-1: Work with local water providers to construct, maintain, and upgrade our water supply, transmission, storage, and treatment facilities to support existing and new development.</p> <p>Policy RM 1-2: Encourage the use of recycled water.</p> <p>Policy RM 1-3: Encourage the conservation of water resources through the use of drought-tolerant plants and water saving irrigation systems.</p> <p>Policy RM 1-4: Require the control and management of urban runoff, consistent with Regional Water Quality Control Board and Los Angeles County MS4 Permit regulations.</p> <p>Policy RM 1-5: Seek and pursue the most efficient and cost-effective means of implementing NPDES permit requirements. Allow new development projects to creatively implement NPDES standards and requirements.</p> <p>Policy RM 1-6: Encourage the use of low impact development strategies to intercept runoff, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.</p> <p>Policy RM 1-7: Protect groundwater quality by incorporating strategies that prevent pollution, require remediation where necessary, capture and treat urban runoff, and</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 13.16 (Stormwater and Urban Runoff Pollution Control) Section 13.16.070 (Requirements for New Development and Redevelopment Projects), Section 13.16.080 (Requirements for Industrial/Commercial and Construction Activities), Chapter 13.18 (Water Efficient Landscapes) Section 13.18.030 (Applicability), Under Chapter 13.16 (Stormwater and Urban Runoff Pollution Control) Section 13.16.070 (Requirements for New Development and Redevelopment Projects) the following applies:</p> <p>A. Compliance with Municipal National Pollutant Discharge Elimination System (NPDES) Permit. The following new development and redevelopment projects are required to comply with the municipal NPDES permit:</p> <p>1. All development projects equal to one acre or greater of disturbed area and adding more than ten thousand square feet of impervious surface area.</p> <p>6. Parking lots with five thousand square feet or more of impervious area or with twenty-five or more parking spaces.</p> <p>8. Street and road construction of ten thousand square feet or more of impervious surface area must be consistent with the city’s Green Street Policy. This street and road construction consistency requirement applies to stand alone streets, roads, and highway projects, and also applies to streets within larger projects.</p> <p>10. Projects located in or directly adjacent to, or discharging directly to a significant ecological area (SEA), where the development will:</p>	<p>Walnut Valley Water District Final 2020 Urban Water Management Plan (UWMP) provides the Walnut Valley which includes the cities of Diamond Bar, Industry, Pomona, Walnut, and West Covina with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (Walnut Valley 2021).</p> <p>City of Industry Landscaping Irrigation Plan Standards and Requirements outlines general policies, processes, requirements, and guidelines for landscaping irrigation within the City. The following general guidelines apply:</p> <ul style="list-style-type: none">– Landscape and irrigation plans are reviewed and approved by the Planning Department.– Unless it is strictly a landscape rehabilitation project, landscape and irrigation plans are submitted to the Planning Department after approval of the Development Plan application and prior to submittal for building permits.– Landscape plans must conform to the approved development plan. Landscape plans must conform to Chapter 13.18, Water Efficient Landscapes, and the Water Efficient Landscape Guidelines (see attached).– Water usage should be minimized through the planting of native and low-water species and the utilization of water-efficient and drip irrigation systems.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>recharge the aquifer. Cooperate with federal, state, and local agencies that are charged with improving water quality in the region.</p> <p>Policy RM 1-8: Require the management of wastewater discharge and collection consistent with requirements adopted by the Regional Water Quality Control Board.</p>	<p>a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>b. Create two thousand five hundred square feet or more of impervious surface area.</p> <p>11. The following redevelopment projects:</p> <p>a. Land-disturbing activities which create, add, or replace five thousand square feet or more of impervious surface area on an already developed site excluding single-family dwellings and accessory structures.</p> <p>b. Land-disturbing activities which create, add, or replace ten thousand square feet or more of impervious surface area on existing single-family dwellings and accessory structures.</p> <p>c. Where redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-development stormwater quality control requirements, the entire project must be mitigated.</p> <p>d. Where redevelopment results in an alteration to less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-development stormwater quality control requirements, only the alteration must be mitigated, and not the entire development.</p> <p>C. Incorporation of Municipal NPDES Planning and Land Development Program Requirements into Project Plans. New development and redevelopment projects subject to the planning and land development requirements under the municipal NPDES permit must incorporate required BMPs into plans submitted to the city as follows:</p> <p>1. In General. Projects must control pollutants, pollutant loads, and runoff volume from the project site by minimizing the impervious surface area and controlling runoff through infiltration, bioretention, or rainfall harvest and use. Projects must incorporate BMPs in accordance with the requirements of the municipal NPDES permit.</p> <p>2. Stormwater Mitigation. Project applicants must prepare a stormwater mitigation plan that includes those BMPs necessary to control stormwater pollution from the completed project. The structural or treatment control BMPs (including, as applicable, post-construction treatment control BMPs) in the stormwater mitigation plan must meet the design standards set forth in the municipal NPDES permit.</p> <p>6. Hydromodification.</p> <p>a. All non-exempt new development and redevelopment projects located within natural drainage systems as defined in the municipal NPDES permit must implement hydrologic control measures to prevent accelerated downstream erosion and to protect stream habitat in natural drainage systems. Projects exempt from hydromodification controls are listed in the municipal NPDES permit.</p> <p>b. Non-exempt new development and redevelopment projects must include one, or a combination of, hydromodification control BMPs, low impact development (LID) strategies, or stream and riparian buffer restoration measures:</p> <p>ii. Non-single-family home projects disturbing an area greater than one acre but less than fifty acres within natural drainage systems must demonstrate one of the following:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(A) The project has been designed to retain on-site, through infiltration, evapotranspiration, and/or harvest and use, the stormwater volume from the runoff of the 95th percentile, twenty-four-hour storm; or</p> <p>(B) The runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the two-year, twenty-four-hour rainfall event; or</p> <p>(C) The erosion potential (Ep) in the receiving water channel will approximate 1, as determined by a hydromodification analysis study and the equation presented in Attachment J of the municipal NPDES permit, or other approved equations.</p> <p>iii. Non-single-family home projects disturbing fifty acres or more within natural drainage systems must demonstrate one of the following:</p> <p>(A) The project has been designed to infiltrate on-site the stormwater volume from the runoff of the two-year, twenty-four-hour storm event; or</p> <p>(B) The runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the two-year, twenty-four-hour rainfall event; or</p> <p>(C) The erosion potential (Ep) in the receiving water channel will approximate 1, as determined by a hydromodification analysis study and the equation presented in Attachment J of the municipal NPDES permit, or other approved equations.</p> <p>Under Section 13.16.080 (Requirements for Industrial/Commercial and Construction Activities) all construction activities must adhere to the following:</p> <p>A. Each industrial discharger, discharger associated with construction activity, or other discharger described in any general stormwater permit addressing such discharges, as may be issued by the USEPA, the State Board, or the Regional Board, must comply with all requirements of such permit. Each discharger identified in an individual NPDES permit must comply with and undertake all activities required by such permit. Proof of compliance with any such permit may be required in a form acceptable to the enforcement officer prior to the issuance of any grading, building, final approval, or any other type of permit or license issued by the city.</p> <p>B. Non-stormwater discharges to the MS4 from industrial, commercial, or construction activities are prohibited.</p> <p>C. Industrial and commercial dischargers and dischargers associated with construction activities must implement effective BMPs, including source control BMPs, in accordance with the municipal NPDES permit to reduce pollutants in stormwater from such sites to the maximum extent practicable.</p> <p>D. Stormwater runoff containing sediment, construction materials, or other pollutants from the construction site and any adjacent staging, storage or parking areas must be reduced to the maximum extent practicable.</p> <p>E. Construction sites less than one acre must implement an effective combination of erosion and sediment control BMPs from the municipal NPDES permit to prevent erosion and sediment loss, and the discharge of construction wastes.</p> <p>F. Construction sites covering one acre or more must adhere to the requirements set forth in the municipal NPDES permit and the construction general permit. A stormwater pollution prevention plan (SWPPP) for construction sites of one acre or</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>greater must be developed by a qualified SWPPP developer (QSD) consistent with the municipal NPDES permit. (Ord. 792 § 2, 2015)</p> <p>Under Chapter 13.18 (Water Efficient Landscapes) Section 13.18.030 (Applicability) the following project must adhere to the City’s water efficient landscape ordinance:</p> <p>A. This chapter shall apply to all of the following landscape projects:</p> <ol style="list-style-type: none">1. New construction projects with an aggregate landscape area equal to or greater than five hundred square feet requiring a building or landscape permit, plan check or design review;2. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than two thousand five hundred square feet requiring a building or landscape permit, plan check, or design review;3. Existing landscapes limited to Section 3.1 of the Water Efficient Landscape Guidelines. <p>B. Any project with an aggregate landscape area of two thousand five hundred square feet or less may comply with the performance requirements of this ordinance or conform to the prescriptive measures contained in Appendix E of the Water Efficient Landscape Guidelines.</p> <p>C. For projects using treated or untreated graywater or rainwater captured on site, any lot or parcel within the project that has less than two thousand five hundred square feet of landscape and meets the lot or parcel’s landscape water requirement (estimated total water use) entirely with treated or untreated graywater or through stored rainwater captured on site is subject only to Section B.5 of Appendix E of the Water Efficient Landscape Guidelines. (Ord. 793 § 5, 2016)</p>	
Irwindale	<p>Resource Management Element:</p> <p>Issue Area – Natural Resources. The City of Irwindale will continue to cooperate in the maintenance and conservation of the area’s natural resources.</p> <p>Policy 4. The City of Irwindale will continue to protect the use of the area’s resources through appropriate land use controls and planning.</p> <p>Issue Area – Resource Preservation The City of Irwindale will maintain and preserve those natural and man-made amenities that contribute to the City’s livability.</p> <p>Policy 9. The City will continue to cooperate with the other agencies that are charged with improving air and water quality in the region.</p> <p>Policy 10. The City of Irwindale will continue to cooperate with surrounding cities in the formulation and implementation of regional resource management plans and programs.</p> <p><i>Programs:</i></p> <p>Environmental Review. The City shall continue to evaluate the environmental impacts of new development and identify applicable mitigation measures prior to development approval, as required by the California Environmental Quality Act (CEQA). Environmental review shall be provided for those projects that will have a potential to adversely affect the environment. Issue areas that will be addressed in the environmental analysis related to resource issues include: air quality, water and hydrology, plant life, animal life, natural resources, energy, aesthetics, recreation, and</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 8.24 (Waste or Refuse Disposal Sites) Section 8.24.260 (Water Pollution Control), Chapter 8.28 (Storm Water and Urban Runoff Pollution) Section 8.28.110 (Control of Pollutants from State Permitted construction Activities), Section 8.28.120 (Control of Pollutants from Other Construction Activities), Chapter 15.30 (Water Efficient Landscape Standards and Guidelines) Section 15.30.060 (Landscape Water Use Standards)</p> <p>Under Chapter 8.24 (Waste or Refuse Disposal Sites) Section 8.24.260 (Water Pollution Control) the following apply:</p> <p>No excavation shall be made to a depth greater than 10 feet above the maximum recorded groundwater table. Any existing areas which are below this depth shall be filled with clean earth or sand or other material approved or permitted by the Water Pollution Control Board and well compacted. Where groundwater elevation records indicate that it is safe to do so, a variance from the 10-foot distance stated above may be granted as a deviation under Section 8.24.280. (Ord. 66 § 1(part), 1959: prior code § 6300.25).</p> <p>Under Chapter 8.28 (Storm Water and Urban Runoff Pollution) Section 8.28.110 (Control of Pollutants from State Permitted construction Activities) the following apply:</p> <p>A. No person shall be granted a grading permit or shall commence or continue any construction activity that is subject to a General Construction Activity Storm Water NPDES Permit without showing proof of having applied for such permit.</p>	<p>The City of Irwindale provides Stormwater and Construction Best Management Practices (BMPs) online (City of Irwindale 2023). The BMPs include the following:</p> <ul style="list-style-type: none">– Protection of natural features;– Construction phasing;– Vegetative buffers;– Site stabilization;– Storm drain inlet protection;– Dirt stockpiles;– Slopes;– Construction entrance maintenance, and;– Silt fencing.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>cultural resources. In compliance with CEQA, the City shall also assign responsibilities for the verification of the implementation of any mitigation measures.</p> <p>Stormwater Pollution Prevention. This program is designed to prevent contaminants from entering the storm drain system. A key element of this program is the National Pollution Discharge Elimination System (NPDES) requirements, which are administered through a countywide permit. These requirements call for measures to be imposed during construction activities, handouts for residential uses, and best management practices (BMPs) for nonresidential uses. The City shall also continue to implement projects to maintain storm water quality, such as street sweeping, catch basin grills, signs, etc.</p>	<p>B. Any person engaged in a construction activity requiring an NPDES General Construction Activity Storm Water NPDES Permit construction permit shall retain at the construction site the following documents: (i) a copy of the Notice of Intent to Comply with Terms of the General Permit to Discharge Water Associated with Construction Activity; (ii) a waste discharge identification number issued by the SWRCB; (iii) a Storm Water Pollution Prevention Plan and Monitoring Program Plan for the construction activity requiring the construction permit; and (iv) records of all inspections, compliance and non-compliance reports, evidence of self-inspection and good housekeeping practices.</p> <p>C. Any person engaged in a construction activity in the city requiring an NPDES General Construction Storm Water Activity Permit shall, upon reasonable request from a duly authorized officer of the city, provide any of the documents specified in paragraph B of this section and shall retain said documents for at least three years after completion of construction. (Ord. 564 § 2, 2002).</p> <p>Under Section 8.28.120 (Control of Pollutants from Other Construction Activities) the following apply:</p> <p>A. Any person engaged in a construction activity that is not subject to the General Construction Storm Water Activity NPDES Permit but is subject to the municipal NPDES permit, shall comply with all requirements specified in the Storm Water Management Quality Program, including any revisions made thereto. (Ord. 564 § 2, 2002).</p> <p>Under Chapter 15.30 (Water Efficient Landscape Standards and Guidelines) Section 15.30.060 (Landscape Water Use Standards) the following apply:</p> <p>A. For applicable new landscape or landscape rehabilitation projects subject to Section 15.30.030(A) of this chapter, the estimated applied water use allowed for the landscape area may not exceed the MAWA calculated using an ET adjustment factor of 0.7, except for the portion of the MAWA applicable to any special landscape areas within the landscape project, which may be calculated using an ETAF of 1.0. Where the design of the landscaped area can be otherwise shown to be equivalently water efficient, the applicant may submit alternative or abbreviated information supporting the demonstration that the annual EAWU is less than the MAWA, at the discretion of and review and approval of the city.</p> <p>B. Irrigation of all landscaped areas must be conducted in a manner conforming to the rules and requirements of this chapter, and is subject to penalties and incentives for water conservation and water waste prevention as determined and implemented by the local water purveyor(s) or as mutually agreed by local water purveyor(s) and the city. (Ord. No. 701, § 2, 2-10-16)</p>	
La Puente	<p>Community Resources Element:</p> <p>Goal 5: Adequate water for La Puente residents and businesses, and a clean underground aquifer.</p> <p>Policy 5.1: Work with water suppliers to ensure that adequate water resources continue to be available to meet the needs of La Puente residents and business.</p> <p>Policy 5.2: Encourage residents and businesses in La Puente to reduce unnecessary consumption of water and educate residents to avoid or minimize activities that pollute urban runoff.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 4.16 (Stormwater and Urban Runoff Pollution Prevention) Section 4.16.070 (Low Impact Development Measures), and Section 10.32.120 (Landscape Installation and Maintenance Standards).</p> <p>Under Chapter 4.16 (Stormwater and Urban Runoff Pollution Prevention) Section 4.16.070 (Low Impact Development Measures) the following projects apply and must adhere to:</p> <p>c) Applicability. The following Development and Redevelopment projects, termed “Planning Priority Projects,” shall comply with the requirements of this Chapter:</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 5.3: Work with local, regional, and State agencies to provide a cost-effective and equitable means of reducing urban runoff.</p> <p>Policy 5.4: Adopt and enforce regulations and engage in educational efforts to eliminate groundwater and urban runoff pollution.</p> <p>Action CR-20: Ensure Adequate Water Supply Continue to work with Suburban Water Systems, the La Puente Valley County Water District and the San Gabriel Water Company to implement their Water Master Plans and ensure that adequate water supplies are available to meet the needs of current and future growth.</p> <p>Action CR-21: Reduce Pollutants in Urban Runoff Meet the requirements of the Los Angeles National Pollutant Discharge and Elimination System (NPDES) permit. Comply with the County's Stormwater Quality Management Program and require Best Management Practices in the planning and construction of new development and redevelopment. Educate City staff and the community as a whole regarding polluted urban runoff.</p>	<p>(1) All development projects equal to 1 acre or greater of disturbed area that adds more than 10,000 square feet of impervious surface area.</p> <p>(6) Parking lots with 5,000 square feet or more of impervious surface area, or with 25 or more parking spaces.</p> <p>(7) Streets and roads construction of 10,000 square feet or more of impervious surface area.</p> <p>(9) Projects located in or directly adjacent to, or discharging directly to an Environmentally Sensitive Area (ESA), where the development will:</p> <p>a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>b. Create 2,500 square feet or more of impervious surface area</p> <p>(11) Redevelopment Projects</p> <p>a. Land disturbing activity that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site on Planning Priority Project categories.</p> <p>b. Where Redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, the entire project must be mitigated.</p> <p>c. Where Redevelopment results in an alteration of less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, only the alteration must be mitigated, and not the entire development.</p> <p>d. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.</p> <p>(e) Stormwater Pollution Control Requirements. The Site for every Planning Priority Project shall be designed to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use.</p> <p>(2) Street and road construction of 10,000 square feet or more of impervious surface shall follow USEPA guidance regarding Managing Wet Weather with Green Infrastructure: Green Streets (December 2008 EPA-833-F-08-009) to the maximum extent practicable.</p> <p>(3) The remainder of Planning Priority Projects shall prepare a Low Impact Development Plan to comply with provisions 3a – 3e.</p> <p>(Ord. 936 § 3, 2015)</p> <p>Under Chapter 10.32 (Landscaping) Section 10.32.030 (Applicability) the following projects must adhere to the provisions of this chapter:</p> <p>A. New landscape installations or rehabilitation projects: As of the effective date of this chapter, all sections of this chapter shall apply to the following landscape projects:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>1. New landscape projects, with an aggregate landscape area equal to or greater than 500 square feet, requiring a building permit or landscape permit, plan check or design.</p> <p>2. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than 2,500 square feet requiring a building or landscape permit, plan check, or design review.</p> <p>3. New or rehabilitated landscape projects with an aggregate landscape area of 2,500 square feet or less may comply with the performance requirements of this ordinance or conform to the prescriptive measures (Appendix G) contained in the Planning Commission Guidelines for Water Efficient Landscape.</p> <p>4. New or rehabilitated landscape projects using treated or untreated graywater or rainwater capture on site, any lot or parcels within the project that has less than 2,500 square feet of landscape area and meets the lot or parcel’s landscape water requirements (Estimated Total Water Use) entirely with the treated or untreated graywater or through stored rainwater capture on site is subject only to Appendix G of the Guidelines.</p> <p>Section 10.32.120 (Landscape Installation and Maintenance Standards) maintains the following rules regarding landscape and irrigation maintenance:</p> <p>B. Landscape and irrigation system maintenance.</p> <p>1. The property owner shall be responsible for the maintenance of landscape to ensure that plant material is maintained to be healthy. Dead or diseased plants must be replaced immediately.</p> <p>2. Plants shall be selectively pruned in accordance with professional trimming standards to maintain their intended shapes and sizes, and to ensure due health of the species and safety of the public.</p> <p>3. To the extent possible, topping of trees shall be avoided.</p> <p>4. Irrigation systems shall be constantly maintained and adjusted to eliminate water waste and ensure the healthy survival of the plant material.</p> <p>5. Water waste resulting from inefficient landscape irrigation leading to excessive runoff, low-head drainage, overspray, or other similar conditions where water flows onto adjacent property, non-irrigated areas, walks, roadways, or structures is prohibited.</p> <p>6. Irrigation systems and their components shall be maintained in a fully functional manner consistent with the originally approved design. A regular maintenance schedule shall be followed, including but not limited to checking, adjusting, and repairing irrigation equipment; resetting the automatic controller; aerating and dethatching turf areas; replenishing mulch; fertilizing; pruning; and weeding in all landscaped areas. (Ord. 17-948 § 4, 2017)</p>	
La Verne	<p>Resource Management Element:</p> <p>Goal 6: Conserve Our Water</p> <p>Policy OSP-6.1: Reduce wasteful use of water.</p> <p>Community Facilities Element:</p> <p>Goal 2: Have a clean and ample water supply.</p> <p>Policy 2.1: Contain our demand for water.</p> <p>Goal 3: Prevent flooding and water contamination.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 13.50 (Stormwater and Urban Runoff Pollution Control) Section 13.50.093 (Standard Urban Stormwater Mitigation Plan (SUSMP)), Section 13.50.140 (Good Housekeeping Provisions), Section 13.50.150 (BMPs for Construction Activities), Chapter 13.60 (Low Impact Development) Section 13.60.060 (New Development and Redevelopment Project Provisions Applicability), Section 13.60.070 (Project Performance Criteria), Chapter 18.118 (Water Efficient Landscapes) Section 18.118.030</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 3.1: Provide an efficient, attractive, environmentally sound storm drain system.</p> <p>Goal 6: Good community relations with the Metropolitan Water District.</p> <p>Policy 6.1: Work with the Metropolitan Water District to further its goals.</p>	<p>(Applicability), Section 18.118.070 (Landscape Water Use Standards), and Chapter 18.68 (H-D-O-Z Hillside Development Overlay Zone) Section 18.68.040 (Water Supply).</p> <p>Under Chapter 13.50 (Stormwater and Urban Runoff Pollution Control) Section 13.50.093 (Standard Urban Stormwater Mitigation Plan (SUSMP)) the following new developments must complete a SUSMP:</p> <p>A. A standard urban stormwater mitigation plan (SUSMP) shall be required for the following categories of new development or redevelopment:</p> <p>7. Parking lots five thousand square feet or more of surface area or with twenty-five or more parking spaces;</p> <p>8. Redevelopment projects that results in the creation, addition, or replacement of five thousand square feet or more of impervious surface area on an already developed site; and</p> <p>9. Projects located in or directly adjacent to or discharging directly to an environmentally sensitive area if the development would create two thousand five hundred or more square feet of impervious area and would discharge stormwater or urban runoff likely to impact a sensitive biological species or habitat.</p> <p>B. All projects for development or redevelopment not requiring an SUSMP which have the potential to have adverse impacts on the post-development stormwater flows from the site, shall include the submission of a site-specific plan adequate to mitigate post development stormwater quality if the project has any one or more of the following characteristics:</p> <p>1. A vehicle or equipment fueling area;</p> <p>2. A vehicle or equipment maintenance area including washing and repair;</p> <p>4. An area for outdoor handling or storage of hazardous materials;</p> <p>C. The authorized enforcement officer shall have the authority to grant a waiver to a development or redevelopment project from the requirements of the SUSMP and/or a structural or treatment control BMP, if the enforcement officer finds that:</p> <p>1. Inadequate space for treatment exists on a redevelopment project; or</p> <p>2. Soil conditions strongly disfavor the use of infiltration; or</p> <p>3. The natural land surface where the BMP would be located lies above a known aquifer or less than 10 feet above an existing or potential source of drinking water.</p> <p>Any request for waiver not falling within the foregoing categories shall be forwarded to the regional board for consideration. (Ord. 964 § 1, 2002)</p> <p>Under Section 13.50.140 (Good Housekeeping Provisions) any owner or occupant of any property within the city shall comply with the following good housekeeping requirements:</p> <p>A. No person shall leave, deposit, discharge, dump or otherwise expose any chemical, fuel, animal waste, garbage, batteries or septic waste in an area where actual or potential discharge to city streets or storm drain system may occur. Any spills, discharge, or residues shall be removed immediately and disposed of properly.</p> <p>D. Objects, such as motor vehicle parts, containing grease, oil or other hazardous substances, and unsealed receptacles containing hazardous materials, shall not be stored in areas susceptible to runoff.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>E. Any machinery or equipment which is to be repaired or maintained in areas susceptible to runoff shall be placed in a confined area to contain leaks, spills or discharges.</p> <p>F. All motor vehicle parking lots with more than twenty-five parking spaces and located in areas susceptible to runoff shall have debris removed by sweeping or other equally effective measure, at a minimum, on a monthly basis. Such debris shall be collected and properly disposed. Parking lots are not required to be swept for a one-month period following any day on which precipitation of one inch or more occurs. (Ord. 964 § 1, 2002)</p> <p>Under Section 13.50.150 (BMPs for Construction Activities) the following applies: All BMPs required as a condition of any approval for construction activity shall be maintained in full force and effect during the term of the project, unless otherwise authorized by the authorized enforcement officer, the community development director or building official. (Ord. 964 § 1, 2002)</p> <p>Under Chapter 13.60 (Low Impact Development) Section 13.60.060 (New Development and Redevelopment Project Provisions Applicability) the following projects are subject to post-construction controls to mitigate stormwater pollution:</p> <p>A. New Development Projects. Development projects subject to city conditioning and approval for the design and implementation of post-construction controls to mitigate stormwater pollution prior to completion of the project(s) include:</p> <ol style="list-style-type: none">1. All development projects equal to one acre or greater of disturbed area and adding more than ten thousand square feet of impervious surface area.6. Parking lots five thousand square feet or more of impervious surface area, or with twenty-five or more parking spaces.7. Public and private street and road construction of ten thousand square feet or more of impervious surface area shall follow the city’s Green Streets Policy to the maximum extent practicable. Street and road construction applies to streets, roads, highways, and freeway projects, and also applies to streets within larger projects.10. Projects located in or within two hundred feet of, or discharge directly to a significant ecological area (SEA), where the development will:<ol style="list-style-type: none">a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; andb. Create two thousand five hundred square feet of impervious surface area. <p>B. Redevelopment Projects. Redevelopment projects subject to conditioning and approval requirements outlined in this chapter for the design and implementation of post-construction controls to mitigate stormwater pollution prior to completion of the project(s) include:</p> <ol style="list-style-type: none">1. Land-disturbing activity that results in the creation or addition or replacement of five thousand square feet or more of impervious surface area on an already developed site.2. Redevelopment projects that result in an alteration to more than fifty percent of impervious surfaces of an existing development which had not been subject to post-construction stormwater quality control requirements at the time of the previous development shall be required to mitigate the entire project site.	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>3. Redevelopment projects that result in an alteration of less than fifty percent of impervious surfaces of an existing development, which had not been subject to post-construction stormwater quality control requirements at the time of the previous development shall be required to mitigate only the alteration and shall not be required to mitigate the entire development.</p> <p>4. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways, which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.</p> <p>5. Existing single-family dwellings and accessory structures are exempt from the redevelopment requirements unless such projects create, add, or replace ten thousand square feet of impervious surface area. (Ord. 1047 § 1, 2014)</p> <p>Under Section 13.60.070 (Project Performance Criteria) performance criteria for stormwater is the following:</p> <p>All development projects that fit the project criteria listed in Section 13.60.060 of this chapter shall control pollutants, pollutant loads, and runoff volume by retaining the 85th percentile stormwater quality design volume (SWQDv) on-site through:</p> <p>A. Minimizing the impervious surface area; and/or</p> <p>B. Controlling runoff from impervious surfaces through infiltration, bioretention and/or rainfall harvest and use. (Ord. 1047 § 1, 2014)</p> <p>Under Chapter 18.118 (Water Efficient Landscapes) Section 18.118.030 (Applicability) the following projects must comply with the water efficient landscapes ordinance:</p> <p>A. After February 1, 2016, and consistent with Executive Order No. B-29-15, this chapter applies to the following landscape projects:</p> <p>1. New landscape projects with an aggregate landscape area of five hundred square feet to two thousand five hundred square feet, requiring building or landscape permit, plan check or design review shall comply with the prescriptive measures contained in Appendix F of the Guidelines. Any new landscape projects above two thousand five hundred square feet are subject to all requirements of this ordinance and associated Guidelines.</p> <p>2. Rehabilitation landscape projects with an aggregate landscaped area equal to or greater than two thousand five hundred square feet, requiring a building or landscape permit, plan check or design review.</p> <p>3. New or rehabilitation projects using treated or untreated graywater or rainwater capture on site that has less than two thousand five hundred square feet of landscape area and meets the lot or parcel’s landscape water requirement (estimated total water use) entirely with the treated or untreated graywater or through stored rainwater capture on site is subject only to Appendix F Section (5) of the Guidelines.</p> <p>B. Section 18.118.070(B) of this chapter regarding water waste applies to all landscaped areas installed prior to or after February 1, 2016.</p> <p>C. Section 18.118.070(C) of this chapter regarding water efficiency programs applies to all existing landscapes installed before February 1, 2016, that are greater than one</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>acre in size and are served by a dedicated landscape water meter. (Ord. 1065 § 2, 2016)</p> <p>Section 18.118.070 (Landscape Water Use Standards) establishes the following water use standards:</p> <p>A. For applicable new landscape or landscape rehabilitation projects subject to Section 18.118.030(A) of this chapter, the estimated applied water use allowed for the landscaped area may not exceed the maximum applied water allowance (MAWA) calculated using an evapotranspiration adjustment factor not exceeding 0.55 for residential and 0.45 for nonresidential, except for the portion of the MAWA applicable to any special landscaped areas within the landscape project, which may be calculated using an evapotranspiration adjustment factor of 1.0. Where the design of the landscaped area can be otherwise shown to be equivalently water efficient, the applicant may submit alternative or abbreviated information supporting the demonstration that the annual estimated applied water use is less than the MAWA, at the discretion of and review and approval of the city.</p> <p>B. Irrigation of all landscaped areas must be conducted in a manner conforming to the rules and requirements, and is subject to penalties and incentives for water conservation and water waste prevention as determined and implemented by the local water purveyor(s) or as mutually agreed by local water purveyor(s) and the city.</p> <p>C. For all existing landscapes installed before February 1, 2016, the local water purveyor is implementing budget based tiered-rate billing and/or enforcement of water waste prohibitions for all existing metered landscaped areas throughout its service area, which includes the city of La Verne in its entirety. (Ord. 1065 § 2, 2016)</p> <p>Under Chapter 18.68 (H-D-O-Z Hillside Development Overlay Zone) Section 18.68.040 (Water Supply) the following applies to development in the Hillside Development Overlay Zone:</p> <p>Fire flow and hydrant locations shall be provided so that adequate water is available in the event of fire. Planned water supplies, piping and hydrants must be installed and in working order prior to construction involving combustible materials. All development proposals must demonstrate conclusively that the development can be served with adequate water capacity. Development is prohibited beyond the elevation of one thousand seven hundred eighty feet unless served by private water systems. (Ord. 853 § 2, 1993)</p>	
Monrovia	<p>Conservation Element:</p> <p>Objective 4: Expansion of existing water supply and sewer system to accommodate future city growth.</p> <p>Land Use Element:</p> <p>Goal 10: Ensure that new development is sensitive to the City's natural and open space resources and constraints.</p> <p>Policy 10.6: Encourage the conservation of water and energy resources in order to reduce the need for expansion of water reservoirs and distribution facilities, as well as energy generating plants and distribution facilities.</p> <p>Policy 10.9: Require water efficient landscaping in regard to plant selection and irrigation.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 12.36 (Storm Water and Urban Runoff Pollution Control) Section 12.36.080 (Requirements for Existing Properties), Section 12.36.090 (Requirements for Industrial/Commercial and Construction Activities), Section 12.36, Section 12.36.100 (Planning and Land Development Program requirements for New Development and Redevelopment – Low Impact Development), Section 8.46.100 (Model Water Efficient Landscaping Ordinance Requirements), and Section 17.20.030 (Water Efficient Landscape Ordinance Adopted by Reference).</p> <p>Under Chapter 12.36 (Storm Water and Urban Runoff Pollution Control) Section 12.36.080 (Requirements for Existing Properties) the following rules must be adhered to:</p> <p>(A) Storage of materials, machinery, and equipment. Machinery or equipment that is to be repaired or maintained in areas susceptible to or exposed to storm water shall be</p>	<p>City of Monrovia Final 2020 Urban Water Management Plan (UWMP) provides the City of Monrovia with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (City of Monrovia 2021).</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>GOAL 11: The City of Monrovia shall provide its residents with a high quality urban environment through the development and conservation of resources such as land, water, minerals, wildlife, and vegetation.</p> <p>Policy 11.7: Comply with the National Pollutant Discharge Elimination System regarding storm water management to reduce impacts from storm water run-off.</p> <p>Environmental Justice Element:</p> <p>Goal 4: Protect human and environmental health by restoring and improving potable water resources and protecting land uses and air quality from future contamination.</p> <p>Policy 4.1: Protect potable water resources from future contamination.</p> <p>Program 4.1.1: Enforce existing green strategies and infrastructure to support a sustainable approach to stormwater management, urban runoff, flood management, groundwater recharge and infiltration, and landscaping, such as the Low Impact Development (LID) Ordinance.</p> <p>Program 4.1.4: Coordinate with local and regional agencies to continue and, as needed, expand remediation efforts for contaminated surface water, groundwater, and soils.</p>	<p>placed in a manner so that leaks, spills and other maintenance-related pollutants are not discharged to the MS4.</p> <p>(C) Best management practices. BMPs shall be used in areas exposed to storm water for the removal and lawful disposal of all fuels, chemicals, fuel and chemical wastes, animal wastes, garbage, batteries, or other materials which have potential adverse impacts on water quality.</p> <p>(E) Use of water. Runoff of water used for irrigation purposes shall be minimized to the maximum extent practicable. Runoff of water from the permitted washing down of paved impervious areas shall be minimized to the maximum extent practicable, and diverted so that flow is directed to landscaped areas for infiltration where possible.</p> <p>(G) Maintenance of Structural BMPs. Structural BMPs required by the City, County of Los Angeles, or any state or federal agency shall be properly operated and maintained, as specified by an approved storm water mitigation plan, or otherwise determined by the Authorized Enforcement Officer. Records and documentation of such maintenance shall be provided to the Director upon request.</p> <p>(Ord. 2015-01U § 4 (part), 2015; Ord. 2015-01 § 4 (part), 2015)</p> <p>Under Section 12.36.090 (Requirements for Industrial/Commercial and Construction Activities) projects must adhere to the following:</p> <p>(A) Each industrial discharger, discharger associated with construction activity, or other discharger described in any general NPDES permit addressing such discharges, as may be issued by the U.S. Environmental Protection Agency, the State Water Resources Control Board, or the Regional Board, shall comply with all requirements of such permit and the provisions of this chapter. Each discharger identified in an individual NPDES permit shall comply with and undertake all activities required by such permit. Proof of compliance with any such NPDES permit may be required in a form acceptable to the Authorized Enforcement Officer, or designated representative, prior to the issuance of any grading, building or occupancy permits, or any other type of permit or license issued by the city.</p> <p>(B) Non-storm water discharges to the MS4 from industrial, commercial, or construction activities in violation of any applicable NPDES permit or the provisions of this chapter are prohibited.</p> <p>(C) Industrial and commercial dischargers and dischargers associated with construction activities shall implement effective BMPs, including source control BMPs, in accordance with Table 10 of Part VI.D.6.f of the Municipal NPDES Permit unless a particular pollutant generating activity does not occur on a facility's site.</p> <p>(Ord. 2015-01U § 4 (part), 2015; Ord. 2015-01 § 4 (part), 2015)</p> <p>Under Section 12.36.100 (Planning and Land Development Program requirements for New Development and Redevelopment – Low Impact Development) low impact development standards apply to the following projects:</p> <p>(C) Applicability. This section applies to the following new development and redevelopment projects that are subject to city conditioning and approval for the design and implementation of post-construction controls and other BMPs to mitigate storm water pollution, prior to completion of the project(s), as follows:</p> <p>(1) New development projects.</p> <p>(a) All development projects equal to one acre or greater of disturbed area and adding more than 10,000 square feet of impervious area;</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(f) Parking lots with 5,000 square feet or more of impervious area or with twenty-five or more parking spaces;</p> <p>(h) Street and road construction of 10,000 square feet or more of impervious surface area shall follow USEPA guidance regarding Managing Wet Weather with Green Infrastructure: Green Streets (December 2008 EPA-833-F-08-009) to the maximum extent practicable. Street and road construction applies to standalone streets, roads, highways, and freeway projects, and also applies to streets within larger projects;</p> <p>(j) Projects located in or directly adjacent to, or discharging directly to a Significant Ecological Area (SEA), where the development will:</p> <ol style="list-style-type: none">1. Discharge storm water runoff that is likely to impact a sensitive biological species or habitat; and2. Create 2,500 square feet or more of impervious surface area. <p>(2) Redevelopment projects in the foregoing subject categories that meet redevelopment thresholds (pursuant to the Municipal NPDES Permit), which include:</p> <p>(a) Land-disturbing activities that create, add, or replace 5,000 square feet or more of impervious surface area on an already developed site excluding single family dwellings and accessory structures.</p> <p>(c) Where redevelopment results in an alteration to more than 50percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-development storm water quality control requirements, the entire project must be mitigated.</p> <p>(d) Where redevelopment results in an alteration to less than 50percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-development storm water quality control requirements, only the alteration must be mitigated, and not the entire development.</p> <p>(D) Specific requirements.</p> <p>(2) New development and redevelopment projects are required to control pollutants and runoff volume from the project site by minimizing the impervious surface area and controlling runoff through infiltration, bioretention, and/or rainfall harvest and use, in accordance with the standards set forth in the Municipal NPDES Permit.</p> <p>(3) An applicant for a new development or a redevelopment project identified in this chapter shall incorporate into the applicant’s project plans a storm water mitigation plan which includes those BMPs necessary to control storm water pollution from the completed project. Structural or treatment control BMPs (including, as applicable, post-construction treatment control BMPs) set forth in project plans shall meet the design standards set forth in the Municipal NPDES Permit.</p> <p>(4) New development/redevelopment project performance criteria.</p> <p>(a) All new development and redevelopment projects, unless otherwise exempted herein or in the Municipal NPDES Permit, shall comply with Part VI.D.7.c of the Municipal NPDES Permit.</p> <p>(b) Post-construction BMPs to mitigate storm water pollution are required for all new development and redevelopment projects identified in this chapter</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>unless alternative measures are allowed as provided in Part VI.D.7.c of the Municipal NPDES Permit.</p> <p>(c) BMPs must be implemented to retain on-site the SWQDv, defined as runoff from either:</p> <ol style="list-style-type: none">1. The 0.75 inch, 24-hour rain event; or2. The 85th percentile, 24-hour event, as determined from the Los Angeles County 85th percentile precipitation isohyetal map, whichever is greater. <p>(d) BMPs shall meet the design specifications and on-site retention potential outlined in the Part VI.D.7.c of the Municipal NPDES Permit. Projects unable to retain 100 percent of the SWQDv on-site due to technical infeasibility as defined in the Municipal NPDES Permit must implement alternative compliance measures in accordance with Part VI.D.7.c of the Municipal NPDES Permit.</p> <p>(f) Street and road construction projects of 10,000 square feet or more of impervious surface area are exempt from the new development/redevelopment project performance criteria of Part VI.D.7.c of the Municipal NPDES Permit but shall adhere to the City’s Green Streets Policy.</p> <p>(Ord. 2015-01U § 4 (part), 2015; Ord. 2015-01 § 4 (part), 2015)</p> <p>Under Section 8.46.100 (Model Water Efficient Landscaping Ordinance Requirements) the following applies:</p> <p>Notwithstanding any other provision in this code, property owners or their building or landscape designers, including anyone requiring a building or planning permit, plan check, or landscape design review from the city, who are constructing a new (single-family, multi-family, public, institutional, or commercial) project with a landscape area greater than 500 square feet, or rehabilitating an existing landscape with a total landscape area greater than 2,500 square feet, shall comply with §§ 492.6(a)(3)(B), (C), (D), and (G) of the MWEL0, including sections related to use of compost and mulch, as amended September 15, 2015.</p> <p>(Ord. 2021-11 § 1 (part), 2021)</p> <p>Under Section 17.20.030 (Water Efficient Landscape Ordinance Adopted by Reference) the City has adopted the model water efficient landscape ordinance of the State of California, as contained in the California Code of Regulations Title 23, Waters; Division 2, Department of Water Resources; Chapter 2.7, Model Water Efficient Landscape Ordinance; and as amended from time-to-time by the State of California. (’83 Code, § 17.20.030) (Ord. 94-03 § 6, 1994; Ord. 2016-01 § 7, 2016)</p>	
Montebello	<p>Our Natural Community Chapter:</p> <p>Policy P1.1 Enhance air and water quality, increase public green space through the integration of green infrastructure.</p> <p>Action A1.1d Promote the use of captured rainwater, grey water, or recycled water.</p> <p>Action A1.1f Promote the use of green roofs, bioswales, pervious materials for hardscape, and other stormwater management practices to reduce water pollution.</p> <p>Policy P1.7 Montebello will protect, conserve, and replenish existing and future water resources.</p> <p>Action A1.7b Encourage public and private property owners to plant native or drought-tolerant vegetation.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 8.36 (Stormwater and urban Runoff Pollution Prevention) Section 8.36.100 (Control of pollutants from other construction activities), Chapter 8.29 (Water conservation and Water supply Shortage Program) Section 8.29.060 (Permanent water conservation requirements—Prohibition against waste), Chapter 15.60 (California Green Building Standards Code) Section 15.60.010 (Adoption), Chapter 17.65 (Water Conservation in Landscaping Regulations) Section 17.65.050 (Landscape standards), and Chapter 12.04 (Chapter 12.04 - Streets And Sidewalks Generally) Section 12.04.270 (Excavations and obstructions—Connection to sewer—Permit required).</p> <p>Under Chapter 8.36 (Stormwater and urban Runoff Pollution Prevention) Section 8.36.100 (Control of pollutants from other construction activities) the following apply:</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Action A1.7c Continue to coordinate with the developers for opportunities to expand use of reclaimed water systems.</p> <p>Our Well Planned Community Chapter:</p> <p>Policy P3.7 Maintain high-quality reliable potable water and non-potable water services, diversify</p> <p>and maintain and create facilities that meet existing and future water demands including drought conditions.</p> <p>Action A3.7d Implement water reuse strategies where potable water, gray water, recycled water and stormwater are all viewed as viable sources and integral components to a holistic water management program.</p> <p>Policy P3.8 Maintain, upgrade, and expand water pipeline, storage, and pumping infrastructure to meet projected domestic, commercial, and fire flow demands for all land uses within the City.</p> <p>Action A3.8b Construct, maintain, and revitalize distribution infrastructure as needed throughout the City in response to changes in demands land use patterns and aging infrastructure and incorporate fair cost-sharing policies between beneficiaries, developers, water suppliers and the City.</p> <p>Policy P3.9 Ensure that wastewater in the City of Montebello is safely and efficiently conveyed and treated under all demand scenarios, including existing and future average and peak flow sewer flow scenarios.</p> <p>Action A3.9c Construct, maintain, and revitalize wastewater infrastructure as needed throughout the City in response to changes in demands land use patterns and aging infrastructure and incorporate fair cost-sharing policies between beneficiaries, developers, water suppliers and the City.</p> <p>Policy P3.10 Utilize and maintain a robust stormwater conveyance system that protects the City from flooding impacts while seeking multi-benefit solutions including water quality.</p> <p>Policy P3.11 Effectively treat all urban runoff and stormwater and ensure that local groundwater supplies and downstream receiving waters are protected.</p> <p>Action A3.11b Inspect all new developments during both construction and operational phases for compliance with local, regional, and state level water quality regulations.</p> <p>Action A3.11c Encourage the implementation of low impact design features for all new developments and redevelopments within the City.</p> <p>Our Safe Community Chapter:</p> <p>Policy P6.9 Minimize the risks from flooding and related hazards to persons, property, and city assets.</p> <p>Action A6.9c Maintain storm drains to prevent local and stormwater flooding and encourage residents to assist in maintaining those drains that are the responsibility of the homeowner.</p> <p>Our Active Community Chapter:</p> <p>Policy P7.3 Promote, expand, and protect a green infrastructure that links the natural habitat A7.3a Prepare a citywide Green Infrastructure Framework.</p> <p>A7.3b Use parks as functional landscapes that perform green stormwater infrastructure and flood mitigation roles to enhance resiliency, recreational use, and beauty.</p>	<p>A. Any person engaged in a construction activity that is not subject to the general construction storm water activity NPDES permit, but is subject to the municipal NPDES permit, shall comply with all requirements specified in the storm water management quality program, including any revisions made thereto.</p> <p>(Ord. 2245 § 1 (part), 2002)</p> <p>Under Chapter 8.29 (Water conservation and Water supply Shortage Program) Section 8.29.060 (Permanent water conservation requirements—Prohibition against waste) the following apply:</p> <p>The following water conservation requirements are effective at all times and are permanent. Violations of this section will be considered waste and an unreasonable use of water.</p> <p>A. Limits on Watering Hours. Watering or irrigating of lawn, landscape or other vegetated area with potable water is prohibited between the hours of 10 a.m. and one hour before sunset Pacific Standard Time on any day, except by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting or repairing an irrigation system. Lawns or other irrigated areas shall not be watered more frequently than every other day. Odd-numbered street-addressed properties may water on odd-numbered dates. Even-numbered street-addressed properties may only do so on even-numbered dates. All irrigated areas may be watered on the 29th day of the month of February every fourth year or the 31st day of the month having thirty days. The provisions of this subsection shall not apply to restrict watering of newly seeded or reseeded lawns once a year, nor to prohibit drip irrigation systems.</p> <p>B. Limit on Watering Duration. Watering or irrigating of lawn, landscape or other vegetated area with potable water using a landscape irrigation system or a watering device that is not continuously attended is limited to no more than fifteen minutes watering per day per station. This subsection does not apply to landscape irrigation systems that exclusively use very low-flow drip type irrigation systems when no emitter produces more than two gallons of water per hour or weather based controllers or stream rotor sprinklers that meet a seventy percent efficiency standard.</p> <p>C. No Excessive Water Flow or Runoff. Watering or irrigating of any lawn, landscape or other vegetated area in a manner that causes or allows excessive water flow or runoff onto an adjoining property, or non-landscaped areas such as sidewalks, driveways, streets, alleys, gutters or ditches is prohibited.</p> <p>D. No Washing Down Hard or Paved Surfaces. Washing down hard or paved surfaces, including but not limited to sidewalks, walkways, driveways, parking areas, tennis courts, patios or alleys, is prohibited except when necessary to alleviate safety or sanitary hazards, and then only by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off device, a low-volume, high-pressure cleaning machine equipped to recycle any water used, or a low-volume high-pressure water broom. Should the use of water for wash-down have to do with an immediate fire or sanitation hazard, written permission shall have been obtained from the fire department, the health department or the building department.</p> <p>E. Obligation to Fix Leaks, Breaks or Malfunctions. Excessive use, loss or escape of water through breaks, leaks or other malfunctions in the water user's plumbing or distribution system for any period of time after such escape of water should have reasonably been discovered and corrected and in no event more than seven days of</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>receiving notice from the city, is prohibited. This section also applies to all water purveyors in the city.</p> <p>F. Recirculating Water Required for Water Fountains and Decorative Water Features. Operating a water fountain or other decorative water feature that does not use recirculated water is prohibited.</p> <p>Under Chapter 15.60 (California Green Building Standards Code) Section 15.60.010 (Adoption) the following applies:</p> <p>Subject to certain changes and amendments hereinafter set forth in this chapter, the city council does adopt as the green building regulations for the city, the 2019 California Green Building Standards Code (Title 24, California Code of Regulations), and is also called the CALGreen Code, and as thereafter amended and published from time to time, by the California Building Standards Commission (hereinafter referred to as the "code"). The code provides minimum standards for the purpose of improving public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a positive environmental impact and encouraging sustainable construction practices in planning and design, energy efficiency, water efficiency and conservation, material conservation and resource efficiency and environmental air quality. One copy of the code is on file in the office of the city clerk for public inspection, and the same is made a part hereof as though fully set forth in this chapter.</p> <p>(Ord. No. 2336, § 46, 3-10-2010; Ord. No. 2347, § 10, 12-14-2011; Ord. No. 2356, § 38, 2-26-2014; Ord. No. 2392, § 40, 1-25-2017; Ord. No. 2421, § 43, 5-13-2020; Ord. No. 2424, § 43, 5-27-2020)</p> <p>Under Chapter 17.65 (Water Conservation in Landscaping Regulations) Section 17.65.050 (Landscape standards) the following apply:</p> <p>A. Water Features. Decorative water features such as ponds, and waterfalls used in landscaped areas shall incorporate the recycling of water to minimize water loss. Where available, and appropriate, the use of reclaimed water shall be designed and incorporated into the water features.</p> <p>B. Water Meters. Each landscape irrigation system shall be metered for water use, separately from domestic and other non-landscape uses.</p> <p>C. Landscape Irrigation Audit. Each landscape irrigation system that services a landscape area of two thousand five hundred square feet or more shall be audited every five years by the property owner for conformance with the approved plan, in accordance with the state of California Landscape Water Management Program, Landscape Irrigation Auditor Handbook, incorporated by reference. Landscaped area of less than two thousand five hundred square feet shall be exempt from the requirement to conduct an irrigation audit</p> <p>D. Landscape Maintenance. The property owner shall permanently and continuously maintain all landscaping and irrigation in a neat, clean and healthy condition, including removal of litter, proper pruning, mowing of lawns, weeds, fertilizing, and watering; and replacement of diseased and/or dead plants and malfunctioning or missing irrigation system components.</p> <p>E. Model Home Landscaping. For each subdivision with model homes the developer shall submit a landscape plan and install landscaping for each model home, incorporating the requirements of this chapter and including:1.Signs identifying elements of the water conserving landscape and irrigation system design placed around the model homes;2.Literature describing water conserving landscapes to</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>be available to individuals touring the model homes;3.The location, text, and size of signs shall be clearly shown on the landscape plan and shall be in substantial accordance with the guidelines established to implement the provisions of this chapter.</p> <p>F. Landscape Certificate. Upon completion of the installation of the landscaping, the designer shall certify that the landscape complies with all requirements of this chapter. Certification shall be accomplished by completion of a landscape certificate on a form approved by the director. Failure to submit a complete and accurate landscape certificate will delay final approval of the project and/or discontinue water service.</p> <p>G. Relative Water Requirements of Commonly Used Plants. The director shall develop a list of plants that are commonly used in landscape designs with water requirement classifications of low, medium, and high to assist landscape designers to choose species of appropriate water demands to comply with this chapter and to group species of similar water demands to facilitate efficient irrigation. This list shall be included in the landscape guidelines developed to implement the provisions of this chapter. (Ord. 2085 § 1 (part), 1993: prior code § 9249.4)</p> <p>Under Chapter 12.04 (Chapter 12.04 - Streets And Sidewalks Generally) Section 12.04.270 (Excavations and obstructions—Connection to sewer—Permit required.) the following apply:</p> <p>No person shall make any connection to any public sewer without first obtaining a permit so to do from the public works department in accordance with applicable provisions of this code.</p>	
Pasadena	<p>Open Space & Conservation Element:</p> <p>Goal: Establish Pasadena as a national and international leader on energy and water conservation and environmental stewardship efforts, including air quality protection, energy efficiency requirements, renewable energy standards, natural resource conservation, and greenhouse gas emission standards in the areas of energy, water, air and land.</p> <p>Objectives:</p> <ul style="list-style-type: none">• Protect and conserve natural resources.• Improve the quality of the natural environment through increased conservation and sustainable practices.• Improve the quality of the urban environment through increased conservation and sustainable practices.• Effectively manage environmental health and reduce solid waste utilizing best practices and the most current technologies.• Increase public, private, and governmental awareness of the natural environment and environmental health. <p><i>Water</i></p> <p>Objectives:</p> <ul style="list-style-type: none">• Increase the efficiency of water use among Pasadena residents, and commercial and industrial organizations.• Protect local water supply sources and plant trees and vegetation that are consistent with habitat and water conservation policies.	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 8.70 (Stormwater Management and Discharge Control) Section 8.70.095 (Construction Sites Requiring a Building Permit or a Grading Permit), Section 8.70.095 (Construction Sites Requiring a Building Permit or a Grading Permit), Section 8.70.100 (Natural Watercourse Protection), and Chapter 17.44 (Landscaping) Section 17.44.050 (Water Efficient Landscape: Incorporation of Model Water Efficient Landscape Ordinance), Chapter 17.29 (Hillside Overlay Districts) Section 17.29.080 (Hillside Development Permit), Chapter 14.05 (Excavation and Grading in Hillside Areas) Section 14.05.083 (Hydrology and Soil Loss Report), and Section 14.05.086 (Grading Activity During Rainy Season).</p> <p>Under Chapter 8.70 (Stormwater Management and Discharge Control) Section 8.70.095 (Construction Sites Requiring a Building Permit or a Grading Permit) the following applies to construction activity:</p> <p>A. Any person or company engaging in construction activities of five acres or more will be requested to have a general construction permit issued by California Regional Water Quality Control Board and must demonstrate possession of such permit before grading or building permits can be issued. The general construction permit shall be retained on site and shall be shown to city officers or inspectors at their request.</p> <p>B. The following best management practices shall apply to all construction sites:</p> <ol style="list-style-type: none">1. Sediment and construction waste from construction sites and parking areas shall not leave the site.2. Between October 15th and April 15th, any sediments or other materials which are tracked off the site shall be removed the same day as they are tracked off the site. A sediment barrier shall be installed on land exceeding 15	<p>City of Pasadena Final 2020 Urban Water Management Plan (UWMP) provides the City of Pasadena with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (City of Pasadena 2021).</p>

	<ul style="list-style-type: none">Improve surface permeability and recharge aquifers / enhance storm water quality to prevent pollution/trash from entering Los Angeles and San Gabriel Rivers and ocean. <p>Land Use Element:</p> <p>GOAL 10. City Sustained and Renewed. Development and infrastructure practices that sustain natural environmental resources for the use of future generations and, at the same time, contribute to the reduction of greenhouse gas emissions and impacts on climate change.</p> <p>10.1: Environmental Quality and Conservation. Establish Pasadena as a leader on environmental stewardship efforts, including air quality protection, energy and water efficiency, renewable energy standards, natural resource conservation, and greenhouse gas emission standards in the areas of energy, water, air and land.</p> <p>10.18: Water Quality. Encourage the use of natural processes to capture, treat, and infiltrate urban runoff throughout the watershed.</p> <p>Green Space, Recreation and Parks Element:</p> <p>Objective 1 – Stewardship of the Natural Environment: Encourage and promote the stewardship of Pasadena’s natural environment, including water conservation, clean air, natural open space protection, and recycling. (Land Use Element (LUE1) Policy 9.5)</p> <p>Policy 1.1 – Identify Open Space Areas: Identify critical open space areas and regularly monitor and inventory natural resources within these areas, such as water resources, plant and wildlife habitat, geology.</p> <p>Policy 1.2 – Protect Open Spaces: Protect natural open areas, watersheds, and environmentally sensitive areas such as Hahamongna, Eaton Canyon, riparian areas, and other open spaces.</p> <p>Policy 1.7 – Water Conservation: Encourage the use of drought-tolerant plants and regionally appropriate landscaping in parks and open spaces in order to conserve water. Utilize creative means of maintenance and watering of fields and recreation areas.</p> <p>Policy 1.8 – Water Resources: Conserve and protect water resources in parks and open spaces; maximize the quality and quantity of groundwater recharge to minimize the dependence on imported water.</p> <p>Objective 2 – Preservation and Protection of the Arroyo Seco and Adjacent Open Space Areas: Recognize the importance to Pasadena of the history, cultural resources, and unique character of the Arroyo Seco, and conserve and enhance these assets.</p> <p>Policy 2.1 – Arroyo Seco Planning: Fully implement all master plans and design guidelines for the Arroyo. This includes the Lower Arroyo Master Plan, the Hahamongna Watershed Park Master Plan, and the Central Arroyo Master Plan. (LUE Policy 9.2)</p> <p>Policy 2.3 – Balance Recreation with Environmental Protection: Implement the Arroyo Seco Master Plans by balancing recreational opportunities with protection and restoration of the ecosystem, while recognizing the important existing water resources and flood management functions of the area.</p>	<p>percent slope in accord with Chapter 14.05 of this code, and where determined necessary by the building official.</p> <p>3. Excavated soil shall be located on the site in a manner that eliminates the possibility of sediments running into the street or adjoining properties. Between October 15th and April 15th, soil piles shall be covered until the soil is either used or removed.</p> <p>4. No washing of construction or other industrial vehicles shall be allowed adjacent to a construction site. No runoff from washing vehicles on a construction site is allowed to leave the site.</p> <p>(Ord. 6601 § 2 (part), 1994)</p> <p>Under Section 8.70.095 (Construction Sites Requiring a Building Permit or a Grading Permit) the following best management practices apply to construction sites:</p> <p>B. The following best management practices shall apply to all construction sites:</p> <p>1. Sediment and construction waste from construction sites and parking areas shall not leave the site.</p> <p>2. Between October 15th and April 15th, any sediments or other materials which are tracked off the site shall be removed the same day as they are tracked off the site. A sediment barrier shall be installed on land exceeding 15 percent slope in accord with Chapter 14.05 of this code, and where determined necessary by the building official.</p> <p>3. Excavated soil shall be located on the site in a manner that eliminates the possibility of sediments running into the street or adjoining properties. Between October 15th and April 15th, soil piles shall be covered until the soil is either used or removed.</p> <p>4. No washing of construction or other industrial vehicles shall be allowed adjacent to a construction site. No runoff from washing vehicles on a construction site is allowed to leave the site.</p> <p>(Ord. 6601 § 2 (part), 1994)</p> <p>Under Section 8.70.100 (Natural Watercourse Protection) the following protections must be adhered to:</p> <p>A. Every person owning or occupying property through which a natural watercourse of a municipal stormwater system passes, as shown on the public works and transportation department's storm drain index map, shall:</p> <p>1.Keep and maintain that part of the watercourse within the property reasonably free of pollutants and obstacles which would enter, or retard the flow of water through the municipal stormwater system; and</p> <p>2. Maintain existing structures within or adjacent to such a watercourse so that those structures will not become a hazard to the use, function, or physical integrity of the municipal stormwater system; and</p> <p>3. Not remove healthy bank vegetation in such a manner as to increase the vulnerability of the watercourse to erosion.</p> <p>B. It is unlawful for any person to commit or cause to be committed any of the following acts, excepting pursuant to a permit:</p> <p>1. Modify the natural flow of water in a watercourse;</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>2. Undertake developments within 30 feet of the center line of any watercourse or twenty feet of the top of a watercourse bank, whichever is the greater distance from the top of the bank;</p> <p>3. Construct, enlarge, change, or remove any structure in a watercourse.</p> <p>4. Place any loose or unconsolidated material along the side of a watercourse so close to its bank as to create a potential for those materials entering the watercourse.</p> <p>(Ord. 6601 § 2 (part), 1994)</p> <p>Under Chapter 17.44 (Landscaping) Section 17.44.050 (Water Efficient Landscape: Incorporation of Model Water Efficient Landscape Ordinance) the following water efficient ordinance has been adopted:</p> <p>The administrative, organizational and enforcement for the technical codes which regulate water efficiency in landscaping shall be in accordance with the provisions and in the manner prescribed in the California Code of Regulations, Title 23, Waters, Division 2, Department of Water Resources, Chapter 2.7 Model Water Efficient Landscape Ordinances, § 490 et seq. ("MWELO"), as may be amended from time to time. For the purposes of this section and applicability of water efficiency requirements, the definitions provided in the MWELO shall supersede other conflicting definitions in this title.</p> <p>(Ord. 7324, § 2, 2018)</p> <p>Under Chapter 17.29 (Hillside Overlay Districts) Section 17.29.080 (Hillside Development Permit) the following projects must adhere to the following:</p> <p>B. Applicability. A Hillside Development Permit is required to authorize any proposed development that is subject to the requirements of this Chapter.</p> <p>C. Application filing and processing. The following addition information is required:</p> <p>3. Hydrology report. A hydrology report shall be required that analyzes the effects of water runoff, drainage, sustained landscape irrigation, and increased groundwater on slope stability and analyzes the potential effects (flooding, mudslides, higher water table, etc.) of added groundwater on properties down slope. The Zoning Administrator may waive the hydrology report requirement for projects where no or only minor alterations to the existing topography or drainage patterns are proposed, or where the slope does not exceed 15 percent.</p> <p>(Ord. No. 7310, § 2 (Exh. 1), 9-25-2017)</p> <p>Under Chapter 14.05 (Excavation and Grading in Hillside Areas) Section 14.05.083 (Hydrology and Soil Loss Report) a soil loss report is required for Hillside Areas meeting the following criteria:</p> <p>A soil loss report is required for grading in excess of 2,000 cubic yards. The soil loss report shall contain calculations showing the predicted soil loss under natural conditions, the soil loss potential, the soil loss during the grading and construction period, and the predicted annual loss following completion of the project based upon recognized engineering standards. Sheet and soil loss calculations shall be based upon the universal soil loss equation and factors, specific to the area to be graded, developed by the U.S. Soil Conservation Service. The report shall be prepared by a soils or civil engineer.</p> <p>(Ord. 7127 § 5 (part), 2007: Ord. 6483 § 2 (part), 1992)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>Section 14.05.086 (Grading Activity During Rainy Season) provides the following protocol for grading activity during the rainy season:</p> <p>Activities such as clearing of brush and vegetation shall not be initiated during the rainy season on any site which is not adequately protected with desilting basins or other temporary drainage or control measures.</p> <p>A. Temporary Erosion Control. Temporary erosion control plans shall be provided for the following:</p> <ol style="list-style-type: none">1. Temporary soil stabilization measures shall be installed on graded slopes exceeding a 3 to 1 ratio or 10 feet in height as required by Section 14.05.484(B).2. Desilting facilities shall be provided at all drainage outlets from the graded site, designed for a 25-year, 6-hour storm intensity. They must be detailed on the plans. Design and specific recommendations shall be submitted for the following:<ol style="list-style-type: none">a. Desilting basin volume based on gradient and nature of soils;b. The area of the graded site and identification of any temporary soil stabilization measures;c. Size of desilting basin outlet pipe and overflow;d. Dike requirements: minimum wall width, slope of walls, percent compaction, and other material features.3. A standby crew for emergency work shall be available at all times during the rainy season. Necessary materials shall be available on site and stockpiled at convenient locations to facilitate rapid construction of temporary devices or to repair any damaged erosion-control measures when rain is imminent.4. Devices shall not be moved or modified without the approval of the building official.5. All removable protective devices shown shall be in place at the end of each working day when the 5-day rain probability forecast by the National Weather Service of the Department of Commerce exceeds 40 percent.6. After a rainstorm, all silt and debris shall be expeditiously removed from check berms and desilting basins and the basins pumped dry. Any graded slope surface protection measures damaged during a rainstorm shall also be repaired immediately.7. Fill slopes at the site perimeter must drain away from the top of the slope at the conclusion of each working day.8. A guard shall be posted on the site whenever the depth of water in any device exceeds 18 inches. <p>B. The plans required by this section shall indicate which streets will be paved and which drainage devices will be completed by October 15th.</p> <p>C. Placement of devices to reduce erosion damage within the site is left to the discretion of the civil engineer. These devices, if any, must be shown on the plan if their presence will affect the required capacity of the desilting basin.</p> <p>D. Outlet conditions from the desilting basin shall not exceed downstream limitations, with the exception of overflow which is to be designed to provided capacity of 1.5 times the maximum design flow.</p>

Pico Rivera	<p>Community Facilities Element:</p> <p>Goal 6.4 A sustainable supply of water delivered through an efficient infrastructure system to meet existing and future needs. Policy 6.4-1 Reliable Supply and Distribution. Provide high quality potable water and a regularly maintained distribution system to meet normal and emergency demands in both wet and dry years.</p> <ul style="list-style-type: none">Coordinate with PWD to ensure high quality groundwater is provided within their service area, and that the distribution system is well-maintained. <p>Policy 6.4-2 Urban Water Management Plan. Maintain and keep up to date the Urban Water Management Plan and other water master planning and capital improvement tools to ensure adequate water supply, infrastructure, maintenance, rehabilitation, funding, and conservation measures. Implementation Program for Policy 6.4-2 Review and regularly update the City’s Urban Water Management Plan and other water master planning and capital improvement tools, including coordination with PWD for the portion of Pico Rivera within the PWD service area.</p> <p>Policy 6.4-3 New Development. Require new development to demonstrate the availability of adequate water supply and fire flow, and to provide infrastructure and/or finance the costs of improvements necessary to serve the demands created by the development, as appropriate.</p> <p>Policy 6.4-5 Water Conservation. Encourage water conservation as a means of protecting the long term availability of water resources. Require new and retrofitted development to be equipped with water conservation devices.</p> <p>Goal 6.5 Adequate and well-maintained wastewater infrastructure to meet existing and future needs and to ensure the health and safety of the Pico Rivera community.</p> <p>Policy 6.5-1 Sufficient Infrastructure. Maintain and upgrade the City’s wastewater collection system to meet the needs of existing development and future growth such that restricted wastewater flows occur only during peak-day, peak-hour conditions.</p> <p>Policy 6.5-2 Wastewater Treatment Plant Capacity. Maintain coordination with the Los Angeles County Sanitation Districts to ensure that the wastewater treatment plants serving the City can accept wastewater flows from Pico Rivera and remain within the rated capacity of the wastewater treatment facilities serving the City.</p> <p>Policy 6.5-8 Reclaimed Water. Utilize reclaimed water for all municipal parks and greenways including the Bicentennial Park Campground and Sports Arena and continually search for local, state and federal grants to develop the proper infrastructure.</p> <p>Safety Element:</p> <p>Policy 9.2-1 Sufficient Infrastructure. Coordinate with the Los Angeles County Flood Control District to ensure that the City’s storm drainage system is adequately sized, maintained, rehabilitated and funded to accommodate stormwater runoff and prevent flooding.</p> <p>Implementation Program for Policies 9.2-1, 9.2-2 and 9.2-6:</p> <ul style="list-style-type: none">Pursue available state, federal, and other funding sources to support facilities, projects, and programs for storm drainage and flood control. <p>Policy 9.2-2 Deficient Areas. Prioritize the construction and upgrade of storm drainage infrastructure in areas where localized flooding and deficient storm drainage systems exist.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 13.28 (Sanitary Sewers and Industrial Waste) Section 13.28.010 (Sanitary Sewers and Industrial Waste Ordinance adopted by reference.), Chapter 16.04 (Stormwater and Urban Runoff pollution prevention) Section 16.04.050 (Reduction of pollutants in runoff) and Section 16.04.100 (Control of pollutants from other construction activities), Chapter 13.70 (Water Conservation and Water Supply Shortage Program) Section 13.70.160 (Water recycling plan), and Section 13.70.040 (Permanent water conservation requirements—Prohibition against waste)</p> <p>Under Title 13 (Water and Sewers) Chapter 13.12.090 (Application—Form and fees) the following apply:</p> <p>A. An application for a service connection shall be made on a form furnished or approved by the city. This application shall specify the size of the service connection desired, the property to be served, and the purpose for which the water is to be used. The information supplied by the applicant shall be considered as authoritative and final. The city shall install the service connection at such location as the applicant requests, subject to approval by the manager. The service shall be installed from the nearest water distribution main to a point as close to the property line as is reasonable, depending upon all applicable conditions, whether such nearest water distribution main is located in a public street, utility right-of-way, or easement. If any error in the application shall cause the installation of a service connection that is improper either in type, size or location, the cost of all charges required shall be paid by the applicant.</p> <p>B. The applicant shall make proper application for service in accordance with subsection A of this section, and make payment of fees or deposits as set forth in resolution of the city council before water service connection will be provided. If the application has been made and the applicant requests the water turned on, the billing for water service shall begin when the service connection is installed and the meter is set.</p> <p>C. The rates set forth by resolution are for normal connections where there is a main adjacent to the property. For all extensions required between the nearest distribution main and the curblin e or property line for installations over two inches, or, on long runs, where the actual cost is charged, a deposit in the amount of the estimated cost shall be made with the city prior to any installation.</p> <p>(Prior code § 5442.2(a))</p> <p>Under Title 13 (Water and Sewers) Chapter 13.28.010 (Sanitary Sewers and Industrial Waste Ordinance adopted by reference.) the following apply:</p> <p>There is adopted as the Sanitary Sewers and Industrial Waste Ordinance of the city, except as it is hereinafter amended, Los Angeles County Code, Title 20, Utilities, Division 2, Sanitary Sewers and Industrial Waste (Los Angeles County Ordinance 89-0101 adopted July 27, 1989).</p> <p>Three copies of Los Angeles County Code, Title 20, Utilities, Division 2, have been deposited with the city clerk and shall be at all times maintained by the city clerk for use and examination by the public. Whenever in said code reference is made to the unincorporated area of the county of Los Angeles, such area shall be deemed to include in its true geographical location the area of the city.</p> <p>(Ord. 861 § 2, 1994)</p>	No other applicable ordinances were identified

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Implementation Program for Policy 9.2-2:</p> <ul style="list-style-type: none">Identify required improvements and funding sources to eliminate deficient storm drainage systems, and incorporate such improvements into the City’s Capital Improvement Program. Locations with deficient storm drainage are: Washington Street (north side) between Rosemead and Paramount, Mines (south side) at Manzanar, Olympic north of Acacia Avenue, Beverley Road and Tobias Avenue, Terradell Street and Pico Vista Road, Greenvale and Masoncrest Drive. <p>Policy 9.2-3 Adequate Capacity for New Development. Require new development to demonstrate the availability of adequate capacity in the storm drainage system to accommodate projected flows and not exacerbate existing deficiencies.</p> <p>Policy 9.2-4 New Development Contribution. Ensure that new development constructs, dedicates and/or pays its fair share contribution to the storm drainage system improvements necessary to serve the demands created by the development.</p> <p>Environmental Resources element:</p> <p>Policy 8.4-5 National Pollution Discharge Elimination System. Regulate construction and operational activities to incorporate stormwater protection measures and best management practices in accordance with the City’s National Pollution Discharge Elimination System (NPDES) permit.</p> <p>Policy 8.4-11 Recycled Water. Continue to use, and expand opportunities to increase the use of, recycled water in the city parks, landscaped areas along roadways, and the municipal golf course, if supplies are available.</p> <p>Land Use Element:</p> <p>Policy 3.6-2 Sustainable Development. Promote land development practices that reduce energy and water consumption, pollution, greenhouse gas emissions, and disposal of waste materials incorporating such techniques as:</p> <ul style="list-style-type: none">Capture and reuse of stormwater on-site for irrigation;Management of wastewater and use of recycled water, including encouraging the use of grey water;Use of landscapes that conserve water and reduce green waste;Use of permeable paving materials or reduction of paved surfaces.	<p>Chapter 13.90 (Water Efficient Landscape) Section 13.90.010</p> <p>Purpose and intent.</p> <p>The purpose of this chapter is:</p> <p>A. That this chapter be at least as effective in conserving water as the model ordinance adopted pursuant to Government Code Section 65595;</p> <p>B. To assure beneficial, efficient, and responsible use of water resources for all users within the city of Pico Rivera;</p> <p>C. To retain the land's natural hydrological role and promote the infiltration of surface water into the groundwater;</p> <p>F. To encourage the appropriate design, installation, maintenance, and management of landscapes so that water demand can be decreased, runoff can be retained, and flooding can be reduced without a decline in the quality or quantity of landscapes;</p> <p>G. To preserve existing natural vegetation and the incorporation of native plants, plant communities, and ecosystems into landscape design, where possible;</p> <p>H. To promote and encourage the use of low water use plants;</p> <p>J. To promote the conservation of potable water by maximizing the use of recycled water and other water conserving technology for appropriate applications;</p> <p>L. To reduce or eliminate water waste.</p> <p>(Ord. 1061 § 1, 2010)</p> <p>Under Chapter 16.04 (Stormwater and Urban Runoff pollution prevention) Section 16.04.050 (Reduction of pollutants in runoff.) the following apply:</p> <p>No person shall cause, or threaten to cause, the discharge of pollutants to the MS4 by exposing such pollutants to stormwater runoff.</p> <p>(Ord. 1086 § 1, 2014)</p> <p>Under Chapter 16.04 (Stormwater and Urban Runoff pollution prevention) Section 16.04.100 (Control of pollutants from other construction activities) the following apply:</p> <p>Any person engaged in a construction activity that is not subject to the general construction stormwater activity NPDES permit, but is subject to the municipal NPDES permit, shall comply with all requirements specified in the stormwater management quality program, including any revisions made thereto.</p> <p>(Ord. 1086 § 1, 2014)</p> <p>Under Chapter 13.70 (Water Conservation and Water Supply Shortage Program) Section 13.70.040 (Permanent water conservation requirements—Prohibition against waste) the following apply:</p> <p>The following water conservation requirements are effective at all times and shall be permanent. Violations of this section shall be considered waste and an unreasonable use of water:</p> <p>A. Limits on Water Hours. Watering or irrigating of lawn, landscape or other vegetated area with potable water is prohibited between the hours of 10 a.m. and four p.m. Pacific Standard Time on any day, except by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting or repairing an irrigation system.</p> <p>B. Limit on Watering Duration. Watering or irrigating of lawn, landscape or other vegetated area with potable water using a landscape irrigation system or a watering</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>device that is not continuously attended to is limited to no more than fifteen minutes of water per day per station. This subsection does not apply to landscape irrigation systems that exclusively use very low-flow drip type irrigation systems when no emitter produces more than two gallons of water per hour and weather based controllers or stream rotor sprinklers that meet a seventy percent efficiency standard.</p> <p>C. No Excessive Water Flow or Runoff. Watering or irrigating of any lawn, landscape or other vegetated area in a manner that causes or allows excessive water flow or runoff onto an adjoining sidewalk, driveway, street, alley, gutter or ditch is prohibited.</p> <p>D. No Washing Down Hard or Paved Surfaces. Washing down hard or paved surfaces, including, but not limited to, sidewalks, walkways, driveways, parking areas, tennis courts, patios or alleys, is prohibited except when necessary to alleviate safety or sanitary hazards, and then only by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive selfclosing water shut-off device or a low-volume, high pressure cleaning machine equipped to recycle any water used.</p> <p>E. Obligation to Fix Leaks, Breaks or Malfunctions. Excessive use, loss or escape of water through breaks, leaks or other malfunctions in the water user's plumbing or distribution system for any period of time after such escape of water should have reasonably been discovered and corrected, and in no event more than fourteen days of receiving notice from the city, is prohibited.</p> <p>F. Recirculating Water Required for Water Fountains and Decorative Water Features. Operating a water fountain or other decorative water feature that does not use recirculated water is prohibited after April 1, 2010. (Ord. 1056 § 1, 2009)</p>	
Pomona	<p>Conservation Element:</p> <p>Goal 7E.G1: Achieve the City's vision for Pomona Tomorrow without adverse environmental impacts that compromise the ability of future generations to meet their needs.</p> <p>Policy 7E.P1: Prepare a Green Plan focused on: 1) Energy Efficiency and Conservation; 2) Water and Wastewater Systems; 3) Green Building; 4) Waste Reduction and Recycling; 5) Climate-Friendly Purchasing; 6) Renewable Energy and Low-Carbon Fuels; 7) Efficient Transportation; 8) Land Use and Community Design; 9) Storing and Offsetting Carbon Emissions; and 10) Promoting Community and Individual Action.</p> <p>Goal 7E.G11: Promote the orderly and efficient operation and expansion of the water supply system to meet current and projected needs.</p> <p>Goal 7E.G13: Comply with the Los Angeles RWQCB regulations and standards to maintain and improve the quality of both surface water and groundwater resources.</p> <p>Goal 7E.G14: Enhance the quality of groundwater and surface water resources, prevent their contamination, and reduce the amount of polluted runoff that reaches the City's storm drain system.</p> <p>Goal 7E.G15: Maintain a wastewater system adequate to protect the health and safety of all Pomona residents, businesses and institutions.</p> <p>Goal 7E.G16: Increase the availability of reclaimed water resources in Pomona.</p> <p>Goal 7E.G17: Achieve the goal of the most recent Water and Recycled Water Master Plan to increase recycled water demand.</p> <p>Policy 7E.P23: Transition to a pattern of development that uses water more efficiently as identified in the Pomona Tomorrow General Plan diagram.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Division 3 (Discharge Regulations and Requirements) Section 18-495 (Reduction of Pollutants in Stormwater), Section 18-496 (Watercourse Protection), Article VII (Low Impact Development) Division 2 (New Developments and Redevelopment Projects Provisions) Section 74-314 (Applicability), Division 5 (Water Conservation and Water Supply Shortage Program) Section 62-353 (Permanent Water conservation Requirements)</p> <p>Under Division 3 (Discharge Regulations and Requirements) Section 18-495 (Reduction of Pollutants in Stormwater) the following minimal requirements shall apply:</p> <p>(2) Standards for parking lots and similar structures. A person owning or operating a parking lot, gas station pavement or similar structure shall clean those structures as frequently and thoroughly as practicable in a manner that does not result in discharge of pollutants to the city storm sewer system.</p> <p>(3) Best management practices for new developments and redevelopments. Any construction contractor performing work in the city shall endeavor, whenever possible, to provide filter materials at the catchbasin to retain any debris and dirt from flowing into the city's storm sewer system. The city engineer may establish controls on the volume and rate of stormwater runoff from new developments and redevelopments as may be appropriate to minimize the discharge and transport of pollutants. Any person or company engaging in a construction activity that requires an NPDES construction permit must demonstrate possession of such permit before grading and/or building permits may be issued. A copy of the NPDES permit shall be retained on site and shall be shown to authorized enforcement officials upon request.</p> <p>(5) Compliance with best management practices. Where best management practices guidelines or requirements have been adopted by any federal, state, regional, and/or</p>	<p>City of Pomona Final 2020 Urban Water Management Plan (UWMP) provides the City of Pomona with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (City of Pomona 2021).</p>

	<p>Policy 7E.P24: For both private and public construction in new development and renovations, encourage rainwater and wastewater Best Management Practices (BMPs) to minimize rainwater runoff, and maximize rainwater and greywater collection and reuse.</p> <p>Policy 7E.P25: Encourage the use of water efficient appliances and fixtures in new development and upgrades in existing development.</p> <p>Policy 7E.P26: Encourage low water use irrigation such as drip irrigation and rainwater capture systems.</p> <p>Policy 7E.P27: Encourage the use of drought tolerant plant species (especially native plants), and low water use irrigation such as drip irrigation and rainwater capture systems.</p> <p>Policy 7E.P28: Discourage use of insecticides, herbicides or toxic chemical substances within the City.</p> <p>Policy 7E.P29: Continue to monitor water supply and demand to ensure that projections are consistent with the most recent Water and Recycled Water Master Plan, which projects adequate water supply for the City through the year 2025.</p> <p>Policy 7E.P30: Continue working with the Los Angeles RWQCB in the implementation of the NPDES for the protection of surface water and groundwater quality.</p> <p>Policy 7E.P31: Review and update rainwater and runoff Best Management Practices adopted by the City as needed. Consider developing and implementing a stormwater management program designed to ensure as much stormwater as soil infiltration rates permit is accommodated on individual sites throughout the City.</p> <p>Noise & Safety Element:</p> <p>Policy 7G.P49 Require that new development incorporate features into site drainage plans that would reduce impermeable surface area, increase surface water infiltration and minimize surface water runoff during storm events. Such features may include:</p> <ul style="list-style-type: none">• Additional landscape areas, or rain gardens.• Streets or parking lots with bio-infiltration systems.• Permeable paving designs; and• Stormwater detention basins.	<p>city agency for any activity, operation, or facility which may cause or contribute to stormwater pollution or contamination, illicit discharges, and/or discharge of nonstormwater to the stormwater system, every person undertaking such activity or operation or owning or operating such facility shall comply with such guidelines or requirements as may be identified by the city engineer.</p> <p>(Code 1959, § 35-12; Ord. No. 3735, § 1 (part))</p> <p>Under Section 18-496 (Watercourse Protection) the following rules shall apply:</p> <p>(a) Every person owning property through which a watercourse passes or such person's lessee or tenant shall:</p> <ol style="list-style-type: none">(1) Keep and maintain that part of the watercourse within the property reasonably free of trash, debris, excessive vegetation, and other obstacles which would pollute, contaminate, or significantly retard the flow of water through the watercourse;(2) Maintain existing privately owned structures within or adjacent to a watercourse so that such structures will not become a hazard to the use, function, or physical integrity of the watercourse; and(3) Not remove such vegetation in such a manner as to increase the vulnerability of the watercourse to erosion. <p>(b) No person shall commit or cause to be committed any of the following acts, unless written authorization has first been obtained from the city engineer or other applicable controlling public agency:</p> <ol style="list-style-type: none">(1) Discharge into or connect any pipe or channel to a watercourse;(2) Modify the natural flow of water in a watercourse;(3) Deposit in, plant in, or remove any material from a watercourse, including its banks, except as required for necessary maintenance;(4) Construct, alter, enlarge, connect to, change, or remove any structure in a watercourse; or(5) Place any loose or unconsolidated material along the side of or within a watercourse or so close to the side as to cause a diversion of the flow or to cause a probability of such material being carried away by stormwaters passing through such watercourse. <p>(Code 1959, § 35-13; Ord. No. 3735, § 1 (part))</p> <p>Under Article VII (Low Impact Development) Division 2 (New Developments and Redevelopment Projects Provisions) Section 74-314 (Applicability) the following projects apply to this section:</p> <p>(a) New development projects. Development projects subject to city conditioning and approval for the design and implementation of post-construction controls to mitigate stormwater pollution prior to completion of the project(s) include:</p> <ol style="list-style-type: none">(1) All development projects equal to one acre or greater of disturbed area and adding more than 10,000 square feet of impervious surface area;(6) Parking lots 5,000 square feet or more of impervious surface area, or with 25 or more parking spaces;(7) Street and road construction of 10,000 square feet or more of surface area shall follow the city green street policy to the maximum extent practicable.	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>Street and road construction applies to standalone streets, roads, highways, and freeway projects, and also applies to streets within larger projects;</p> <p>(9) New development projects located in or directly adjacent to, or discharging directly to the proposed significant ecological area ("SEA") which will:</p> <p>a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>b. Create two thousand 2,500 square feet or more of impervious surface area; and(10)Redevelopment projects in subject categories that meet redevelopment thresholds identified in Part B—Redevelopment projects, below;</p> <p>(11) Redevelopment projects located in or within 200 feet of, or discharging directly to a significant ecological area (SEA) where the development will:</p> <p>a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>b. Create 2,500 square feet or more of impervious surface area.</p> <p>(b) Redevelopment projects. Redevelopment projects subject to conditioning and approval requirements outlined in this article for the design and implementation of post-construction controls to mitigate stormwater pollution prior to completion of the project(s) include:</p> <p>(1) Land disturbing activity that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site.</p> <p>(2) Redevelopment project that result in an alteration to more than 50 percent of impervious surfaces of an existing development which had not been subject to post-construction stormwater quality control requirements at the time of the previous development shall be required to mitigate the entire project site.</p> <p>(3) Redevelopment project that result in an alteration of less than 50 percent of impervious surfaces of an existing development which had not been subject to post-construction stormwater quality control requirements at the time of the previous development shall be required to mitigate only the alteration and shall not be required to mitigate the entire project site.</p> <p>(Ord. No. 4185, § 1, 6-2-2014)</p> <p>Under Section 74-315 (Project Performance Criteria) projecting meeting the above criteria must apply the following:</p> <p>All development projects that fit the project criteria listed above in section 74-331 of this article shall control pollutants, pollutant loads, and runoff volume by retaining the stormwater quality design volume (SWQDv) (as defined in definitions) on-site through:</p> <p>(1) Minimizing the impervious surface area; and</p> <p>(2) Controlling runoff from impervious surfaces through infiltration, bioretention and/or rainfall harvest and use. (Ord. No. 4185, § 1, 6-2-2014)</p> <p>Under Division 5 (Water Conservation and Water Supply Shortage Program) Section 62-353 (Permanent Water conservation Requirements) the following shall comply with water conservation policies of the City:</p> <p>The following water conservation requirements are effective at all times and are permanent. Violations of this section will be considered waste and an unreasonable use of water.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(a) Limits on watering hours. Watering or irrigating of lawn, landscape or other vegetated area with potable or recycled water is prohibited between the hours of 10:00 a.m. and 6:00 p.m. Pacific Standard Time on any day, except by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting, or repairing an irrigation system.</p> <p>(b) Limit on watering duration. Watering or irrigating of lawn, landscape, or other vegetated area with potable water using a landscape irrigation system or a watering device, that is not continuously attended, is limited to no more than 15 minutes watering per day per station. This subsection does not apply to landscape irrigation systems that exclusively use very low-flow drip type irrigation systems when no emitter produces more than two gallons of water per hour and weather based controllers or stream rotor sprinklers that meet a 70 percent efficiency standard.</p> <p>(c) No excessive water flow or runoff. Watering or irrigating of any lawn, landscape or other vegetated area in a manner that causes or allows excessive water flow or runoff onto an adjoining sidewalk, driveway, street, alley, gutter, or ditch is prohibited.</p> <p>(d) No washing down hard or paved surfaces. Washing down hard or paved surfaces, including but not limited to sidewalks, walkways, driveways, parking areas, tennis courts, patios, or alleys, is prohibited except when necessary to alleviate safety or sanitary hazards, and then only by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off device, or a low-volume, high-pressure cleaning machine equipped to recycle any water used, or a low-volume high-pressure water broom.</p> <p>(e) Obligation to fix leaks, breaks or malfunctions. Excessive use, loss or escape of water through breaks, leaks or other malfunctions in the water user's plumbing or distribution system for any period of time after such escape of water should have reasonably been discovered and corrected and in no event more than seven days of receiving notice from the city, is prohibited. The city, in its sole discretion, may discontinue service to consumers who willfully violate provisions of this subsection.</p> <p>(f) Recirculating water required for water fountains and decorative water features. Operating a water fountain or other decorative water feature that does not use recirculated water is prohibited, effective January 1, 2010.</p> <p>(g) Limits on washing vehicles. Using water to wash or clean a vehicle, including but not limited to any automobile, truck, van, bus, motorcycle, boat, motor home or trailer, whether motorized or not is prohibited, except by use of a hand-held bucket or similar container or a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or at a commercial car washing facility that utilizes a recirculating water system to capture or reuse water. (Ord. No. 4122, § 1, 6-15-2009)</p>	
Rosemead	<p>Resource Management Element:</p> <p>Goal 3: Manage the use of and protect water resources that provide supplies to Rosemead residents and businesses.</p> <p>Policy 3.1: Work with water suppliers to ensure that adequate water resources continue to be available to meet the needs of residents and business.</p> <p>Policy 3.2: Promote water conservation measures, reduce urban runoff, and prevent groundwater pollution associated with development projects, property maintenance, City operations, and all activities requiring City approval.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 13.16 (Storm Water Management) Section 13.16.030 (Control of Urban Runoff), Section 13.16.180 (Low Impact Development), Chapter 13.08 (Water-Efficient Landscapes) Section 13.08.030 (Applicability), and Section 13.08.060 (Landscape Water Use Standards).</p> <p>Under Chapter 13.16 (Storm Water Management) Section 13.16.030 (Control of Urban Runoff) the following standards are required:</p> <p>B. New Development, Redevelopment and Construction.</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 3.3: Work with local, regional, and State agencies to maintain and improve the quality of local groundwater and to provide a cost-effective and equitable means of reducing urban runoff.</p> <p>Policy 3.4: Adopt and enforce regulations and engage in educational efforts to eliminate groundwater and urban runoff pollution.</p> <p>Policy 3.5: Take steps to use reclaimed water whenever and wherever possible in both public and private facilities.</p> <p><i>Implementation Measures</i></p> <p>Goal 3: Managed use and protection of water resources that provide supplies to Rosemead residents and businesses.</p> <p>Action 3.1: Actively support and partner with other agencies regarding the development and implementation of viable water management programs to enhance water supply reliability.</p> <p>Action 3.2: Enforce regulations and guidelines and update them as needed to meet the specific needs in the planning area to manage stormwater flows. This may include requirements for on-site detention or retention that implement the NPDES program, enhance groundwater recharge, complement regional flood control facilities, and address applicable community design policies.</p> <p>Action 3.3: Adopt a water pollution control ordinance or policy to regulate urban runoff discharges to the storm drain system in coordination with regional efforts.</p> <p>Action 3.4: Participate in developing and implementing a public information program regarding the appropriate use of herbicides and fertilizers to limit pollutants entering the storm drain system.</p> <p>Action 3.5: Consider adopting a comprehensive water conservation strategy. The strategy may include, but not be limited to, imposing restrictions on the time of watering, requiring water efficient irrigation equipment, and requiring new construction to offset demand so that there is no net increase in water use.</p> <p>Action 3.6: Consider adopting water-efficient landscape ordinances.</p>	<p>1. Copies of Documents. All persons engaged in construction activity within the City requiring a state general permit shall have at the construction site available for review (1) a copy of the notice of intent for the state general permit; (2) the waste discharge identification number issued by the State Board; and (3) copies of the stormwater pollution protection plan required by permit.</p> <p>2. All persons engaged in construction activity within the City shall implement best management practices to avoid, to the maximum extent practicable, the discharge of pollutants to the municipal separate storm sewer system, in accordance with the city's grading manual, as developed and updated by the City Engineer, and, when applicable, in accordance with a grading plan approved by the City Engineer for such project.</p> <p>3. All applicants for construction projects equal to or greater than one acre and less than five acres shall prepare and submit a stormwater pollution protection plan to the City Engineer for review and approval prior to issuance of any permits.</p> <p>5. Water Quality Management Plan (WQMP). All applicants for new development and redevelopment projects shall submit a WQMP with their project applications to the city. The WQMP shall be submitted to the City Engineer for review and approval and shall comply with all requirements of the city's national pollutant discharge elimination system (NPDES) permit, including applicable standard urban storm water mitigation plan (SUSMP) or other similar plan, developed as a part of or pursuant to the city's NPDES permit and any applicable SUSMP or other similar plan.</p> <p>9. Development Construction Requirements.</p> <p>a. Runoff from construction activity at all construction sites shall meet the following minimum requirements:</p> <p>(1) Sediments generated on the project site shall be retained using adequate treatment control or structural best management practices (BMPs);</p> <p>(2) Construction-related materials, wastes, spills, or residues shall be retained at the project site to avoid discharge to streets, drainage facilities, receiving waters, or adjacent properties by wind or runoff;</p> <p>(3) Non-storm water runoff from equipment and vehicle washing and any other activity shall be contained at the project site; and</p> <p>(4) Erosion from slopes and channels shall be controlled by implementing an effective combination of BMPs (as approved in Regional Board Resolution No. 99-03), such as the limiting of grading scheduled during the wet season; inspecting graded areas during rain events; planting and maintenance of vegetation on slopes; and covering erosion susceptible slopes.</p> <p>(Ord. 825 § 2 (part), 2003)</p> <p>Under Section 13.16.180 (Low Impact Development) the City of Rosemead adopts Chapter 12.84 of the Los Angeles County Code and the following amendments:</p> <p>A. Title. This Section, 13.16.180, shall be known as the Low Impact Development Ordinance of the City of Rosemead.</p> <p>B. Adoptions by Reference.</p> <p>1. Except as amended in Section 13.16.180.C, below, Chapter 12.84 of the Los Angeles County Code, which is entitled "Low Impact Development Standards,"</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>is hereby incorporated in its entirety by reference and expressly incorporated herein. Chapter 12.84 of the Los Angeles County Code is hereby made a part of this Chapter 13.16.180 as if, for all intents and purposes, fully set forth in this Chapter. This adoption by reference shall include any subsequent amendments to Chapter 12.84 unless modified in this Chapter, 13.16.180.</p> <p>2. A certified copy of Chapter 12.84 of the Los Angeles County Code is on file in the office of the City Clerk for public record and inspection.</p> <p>3. If there is any inconsistency between any provisions of Chapter 12.84 of the Los Angeles County Code and other provisions of this Municipal Code, such other provisions of this Municipal Code shall prevail.</p> <p>C. Amendments. Chapter 12.84 of the Los Angeles County Code is hereby amended as follows:</p> <p>1. Section 12.84.420 of Chapter 12.84 of the Los Angeles County Code is hereby amended to amend the following definition:</p> <p>"County" means the City of Rosemead</p> <p>2. Section 12.84.420 of Chapter 12.84 of the Los Angeles County Code is hereby amended to amend the following definition:</p> <p>"Director" means the Director of Public Works of the City of Rosemead</p> <p>3. Section 12.84.420 of Chapter 12.84 of the Los Angeles County Code is hereby amended to amend the following definition:</p> <p>"Public Works" means the City of Rosemead Department of Public Works</p> <p>4. Section 12.84.430.E.2 of Chapter 12.84 of the Los Angeles County Code is hereby amended to amend to read as follows:</p> <p>"2. Any development project for which a complete discretionary or nondiscretionary permit application was filed with the City of Rosemead prior to December 28, 2012."</p> <p>5. Section 12.84.440.B of Chapter 12.84 of the Los Angeles County Code is hereby amended to read as follows:</p> <p>"B. Low impact development plans shall be submitted in accordance with the Low Impact Development Standards Manual issued by the County of Los Angeles Department of Public Works, a copy of which shall be located in the Public Works Department."</p> <p>D. Responsibility for Administration. This chapter shall be administered by the Director of Public Works of the City of Rosemead.</p> <p>(Ord. No. 952, § 1, 5-12-15)</p> <p>Under Chapter 13.08 (Water-Efficient Landscapes) Section 13.08.030 (Applicability) the following project must adhere to the water efficient landscaping ordinance:</p> <p>A. Beginning February 1, 2016, and consistent with Executive Order No. B-29-15, this Chapter applies to the following landscape projects:</p> <p>1. New landscape projects with an aggregate landscape area equal to or greater than five hundred (500) square feet, requiring a building or landscape permit, plan check or design review;</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>2. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than two thousand five hundred (2,500) square feet, requiring a building permit or landscape permit, plan check or design review;</p> <p>3. New or rehabilitated landscape projects with an aggregate landscape area of 2,500 square feet or less may comply with the performance requirements of this section or conform to the prescriptive measures contained in Appendix A of the guidelines.</p> <p>4. New or rehabilitated projects using treated or untreated graywater or rainwater capture on site, any lot or parcels within the project that has less than two thousand five hundred (2,500) square feet of landscape area and meets the lot or parcel's landscape water requirement (Estimated Total Water Use) entirely with the treated or untreated graywater or though stored rainwater capture on site is subject only to Appendix A of the guidelines.</p> <p>B. Section 13.08.060(B) of this chapter regarding water waste applies to:1.All landscaped areas, whether installed prior to or after January 1, 2010; and2.All landscaped areas installed after February 1, 2016 to which Section 13.08.030(A) is applicable.</p> <p>(Ord. No. 885, § 2, 12-8-09; Ord. No. 960, § 2, 1-12-16)</p> <p>Under Section 13.08.060 (Landscape Water Use Standards) the following standards apply:</p> <p>A. For applicable new landscape or landscape rehabilitation projects subject to Section 13.08.030(A) of this chapter, the Estimated Applied Water Use allowed for the landscape area may not exceed the Maximum Applied Water Allowance (MAWA) calculated using an Evapotranspiration Adjustment Factor (ETAF) adjustment factor of 0.7, except for the portion of the MAWA applicable to any special landscaped areas within the landscape project, which may be calculated using an ETAF of 1.0. Where the design of the landscaped area can be otherwise shown to be equivalently water efficient, the applicant may submit alternative or abbreviated information supporting the demonstration that the annual Estimated Applied Water Use (EAWU) is less than the MAWA, at the discretion of and review and approval of the City.</p> <p>B. Irrigation of all landscaped areas must be conducted in a manner conforming to the rules and requirements, and is subject to penalties and incentives for water conservation and water waste prevention as determined and implemented by the local water purveyor(s) or as mutually agreed by local water purveyor(s) and the City.</p> <p>(Ord. No. 885, § 2, 12-8-09; Ord. No. 960, § 2, 1-12-16)</p>	
San Dimas	<p>Conservation Element:</p> <p>Goal CN-3: Manage and conserve San Dimas' water resources to maintain a high level of quality and sufficient quantity to its citizens.</p> <p>Objective 3.1: Protect the remaining natural watersheds and ground water with open space systems coordinated with multiple use flood plain management.</p> <p>Implementation Measure e: The City shall utilize and promote more efficient water management The City shall consider the use of reclaimed water for irrigation of public areas, such as medians, parkways, golf courses, and selected public landscaped areas.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 14.11 (Stormwater Management and Discharge) Section 14.11.050 (Requirements for Existing Properties), Section 14.11.060 (Requirements for Construction Projects), Chapter 14.13 (Low Impact Development) Section 14.13.050 (New Development and Redevelopment Project Provisions Applicability), Section 14.13.060 (Project Performance Criteria), Chapter 18.14 (Water-Efficient Landscapes) Section 18.14.030 (Applicability), and Section 18.14.060 (Landscape Water Use Standards).</p> <p>Under Chapter 14.11 (Stormwater Management and Discharge) Section 14.11.050 (Requirements for Existing Properties) the following applies to existing properties:</p>	No other applicable ordinances were identified

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	Implementation Measure b: The City -shall support programs to promote natural resources conservation, such as solid waste recycling, water conservation, efficient irrigation systems, drought tolerant planting materials, and soil conservation.	<p>Any owner or occupant of property within the city shall comply with the following requirements:</p> <p>A. Use of Water. Runoff of water used for irrigation purposes shall be minimized to the maximum extent practicable. In addition, washing down of paved areas is prohibited, unless necessary for health or safety purposes as determined by the director of public works, and is not in violation of any other provision of this code. Runoff of water from the permitted washing down of paved areas shall be minimized to the maximum extent practicable.</p> <p>B. The storage of materials, machinery and equipment, such as motor vehicle parts, containing grease, oil, or other hazardous substances, and unsealed receptacles containing hazardous materials, shall not be in areas susceptible to runoff.</p> <p>C. Any machinery or equipment which is to be repaired in areas susceptible to runoff shall be placed on a pad of absorbent material to contain leaks, spills or small discharges.</p> <p>D. The discharge of gray water to street or storm drains is prohibited.</p> <p>(Ord. 1064 § 4, 1997)</p> <p>Under Section 14.11.060 (Requirements for Construction Projects) the following applies to construction within the City:</p> <p>A. No grading permit shall be issued for developments with disturbed areas of five acres or greater unless the applicant can show that:</p> <ol style="list-style-type: none">1. A notice of intent (NOI) to comply with the state construction activity stormwater permit has been filed, and2. A stormwater pollution prevention plan (SWPPP) has been prepared. <p>B. In addition to any adopted best management practices (BMPs) or other requirements for construction projects adopted by the city, the following requirements shall apply to all projects undergoing construction in the city. The requirements set forth below shall apply at the time of demolition of an existing structure or commencement of construction and until the project receives final occupancy/clearance from the city.</p> <ol style="list-style-type: none">1. Sediment, construction waste and other pollutants from construction sites and parking areas, including runoff from equipment at construction sites, shall be retained on the site to the maximum extent practicable.2. Any sediments or other materials that are not retained on the site shall be removed the same day as they leave the site. Where determined necessary by the director of public works, or a designated representative, a temporary sediment barrier shall be installed.3. On an emergency basis only, plastic covering may be utilized to prevent erosion of an otherwise unprotected area, along with runoff devices to intercept and safely convey the runoff.4. Excavated soil shall be located on the site in a manner that minimizes the amount of sediments running into the street or adjoining properties. Soil piles shall be covered until the soil is either used or removed.5. No washing of construction or other industrial vehicles shall be allowed on a construction site or property adjacent to a construction site.	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>6. Drainage controls shall be utilized as needed, depending on the extent of the proposed grading and topography of the site, including but not limited to the following:</p> <ul style="list-style-type: none">a. Detention ponds, sediment ponds, or infiltration pits;b. Dikes, filter berms or ditches;c. Down drains, chutes or flumes. <p>C. The city may, as a condition of granting a permit, set forth reasonable limits on the clearing of vegetation from construction sites, including, but not limited to, regulating the length of time during which soil may be bare, and, in certain sensitive cases, prohibiting bare soil.</p> <p>D. Project plans must include a narrative discussion of the reasons used for selecting or rejecting BMPs. In lieu of a narrative, the project architect or engineer of record may sign a statement on the plan to the effect:</p> <p>"As the architect/engineer of record, I have selected appropriate BMPs to effectively minimize the negative impacts of this project's construction activities on stormwater quality. The project owner and contractor are aware that the selected BMPs must be installed, monitored, and maintained to ensure their effectiveness. The BMPs not selected for implementation are redundant or deemed not applicable to the proposed construction activities." (Ord. 1064 § 4, 1997)</p> <p>Under Chapter 14.13 (Low Impact Development) Section 14.13.050 (New Development and Redevelopment Project Provisions Applicability) the following applies:</p> <p>These procedures and standards set forth in this chapter and the BMP design information found in the Los Angeles County Municipal Storm Water Permit Order No. R4-2012-0175, and any amendment, revision, or reissuance thereof provide minimum standards to be complied with by developers and in no way limit the authority of the city of San Dimas to adopt or publish and/or enforce higher standards as a condition of approval of developments.</p> <p>A. New Development Projects. Development projects subject to city conditioning and approval for the design and implementation of post-construction controls to mitigate stormwater pollution prior to completion of the project(s) include:</p> <ul style="list-style-type: none">1. All development projects equal to one acre or greater of disturbed area and adding more than ten thousand square feet of impervious surface area.6. Parking lots five thousand square feet or more of impervious surface area, or with twenty-five or more parking spaces.7. Street and road construction of ten thousand square feet or more of impervious surface area shall follow the city of San Dimas green streets policy to the maximum extent practicable. Street and road construction applies to streets, roads, highways, and freeway projects, and also applies to streets within larger projects.9. Redevelopment projects in subject categories that meet redevelopment thresholds identified in subsection B (Redevelopment Projects) of this section.10. Projects located in or within two hundred feet of, or discharging directly to a significant ecological area (SEA), such as San Dimas Canyon/San Antonio Wash where the development will:<ul style="list-style-type: none">a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>b. Create two thousand five hundred square feet or more of impervious surface area.</p> <p>B. Redevelopment Projects. Redevelopment projects subject to conditioning and approval requirements outlined in this chapter for the design and implementation of post-construction controls to mitigate stormwater pollution prior to completion of the project(s) include:</p> <ol style="list-style-type: none">1. Land-disturbing activity that results in the creation or addition or replacement of five thousand square feet or more of impervious surface area on an already developed site.2. Redevelopment projects that result in an alteration to more than fifty percent of impervious surfaces of an existing development which had not been not subject to post-construction stormwater quality control requirements at the time of the previous development shall be required to mitigate the entire project site.3. Redevelopment projects that result in an alteration of less than fifty percent of impervious surfaces of an existing development, which had not been subject to post-construction stormwater quality control requirements at the time of the previous development shall be required to mitigate only the alteration and shall not be required to mitigate the entire development.4. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade. <p>(Ord. 1231 § 1, 2014)</p> <p>Under Section 14.13.060 (Project Performance Criteria) project must do the following:</p> <p>All development projects that fit the project criteria listed in Section 14.13.050 of this chapter shall control pollutants, pollutant loads, and runoff volume by retaining the stormwater quality design volume (SWQDv) on-site through:</p> <p>A. Minimizing the impervious surface area; and</p> <p>B. Controlling runoff from impervious surfaces through infiltration, bioretention and/or rainfall harvest and use. (Ord. 1231 § 1, 2014)</p> <p>Under Chapter 18.14 (Water-Efficient Landscapes) Section 18.14.030 (Applicability) the following project must adhere to the water-efficient landscape ordinance:</p> <p>A. Beginning February 1, 2016, all landscaping projects subject to this chapter shall obtain a permit from the department of development services prior to installation of any landscaping. All planting, irrigation, and landscape related improvements required by this chapter shall apply to the flowing landscape projects:</p> <ol style="list-style-type: none">1. New landscape projects with an aggregate landscape area equal to or greater than five hundred square feet requiring a building or landscape permit, plan check or design review;	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>2. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than two thousand five hundred square feet requiring a building or landscape permit, plan check or design review;</p> <p>3. New or rehabilitated landscape projects between five hundred and two thousand five hundred square feet may comply with the performance requirements of this ordinance or conform to the prescriptive measures contained in Appendix A of the Guidelines;</p> <p>4. New or rehabilitated projects using treated or untreated graywater or rainwater capture on site, any lot or parcels within the project that has less than two thousand five hundred square feet of landscape area and meets the lot or parcel's landscape water requirement (estimated total water use) entirely with the treated or untreated graywater or though stored rainwater capture on site is subject only to Appendix A Section (5) of the Guidelines;</p> <p>5. Special landscaped areas, such as areas dedicated to edible plants, irrigated with recycled water, or dedicated to active play, shall prepare a water efficient landscape worksheet and landscape documentation package according to specifications for special landscaped areas;</p> <p>7. Irrigation of landscaped areas of any size shall be conducted in a manner conforming to the rules and requirements, and shall be subject to penalties and incentives for water conservation and water waste prevention as determined and implemented by the local water purveyor or as mutually agreed by the local water purveyor and the city of San Dimas.</p> <p>8. Existing landscapes that are one acre or more shall not exceed their maximum applied water allowance.</p> <p>B. Section 18.14.070 of this chapter regarding water conservation and water waste applies to all landscaped areas installed prior to or after January 1, 2010.</p> <p>C. Section 18.14.030 of this chapter shall apply to all landscape areas installed after February 1, 2016.</p> <p>(Ord. 1196 § 1, 2010; Ord. 1240 § 1, 2016)</p> <p>Under Section 18.14.060 (Landscape Water Use Standards) the following must be adhered to:</p> <p>For applicable landscape installation or rehabilitation projects subject to this chapter, the estimated applied water use allowed for the landscaped areas shall not exceed the maximum applied water allowance calculated using an evapotranspiration (ET) adjustment factor of 0.55 for residential areas and 0.45 for nonresidential areas, exclusive of special landscape areas, except for special landscaped areas where the maximum applied water allowance is calculated using an ET adjustment factor of 1.0; or the design of the landscaped area shall otherwise be shown to be equivalently water-efficient in a manner acceptable to the city as provided in the Guidelines.</p> <p>(Ord. 1196 § 1, 2010; Ord. 1240 § 1, 2016)</p> <p>Under Section 18.544.795 (Erosion Control) the following general development standards shall apply:</p> <p>A. New development shall follow minimum best management practices (BMPs) required by the National Pollutant Discharge Elimination System (NPDES), and also submit a local stormwater pollution prevention plan/wet weather erosion control plan (SWPPP).</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>B. For all projects subject to standard urban stormwater mitigation plan (SUSMP) regulations, applicant must submit a site-specific drainage concept and stormwater quality plan to mitigate post-development stormwater. A fully executed "maintenance covenant for SUSMP requirements" shall be recorded with the L.A. County registrar/recorder and submitted to the city prior to the issuance of certificate of occupancy.</p> <p>C. Erosion control and drainage systems shall be maintained in proper working order, including subsurface retention, infiltration and bioswales. (Ord. 1175 § 1 Exh. B, 2008)</p>	
San Gabriel	<p>Safety Element:</p> <p>Target 5.7.5: Promote opportunities for aquifer recharge to minimize groundwater hazards by encouraging developers to minimize paved areas in new developments and requiring these areas to be interspersed with landscaping.</p> <p>Action 5.7.5.1: Encourage, where feasible, use of turf block, decomposed granite, or similar permeable surfaces rather than conventional pavement.</p> <p>Environmental Resources Element:</p> <p>Goal 8.4: Encourage the conservation and protection of water quality within San Gabriel.</p> <p>Target 8.4.1: Discourage the use of fertilizers, pesticides, and insecticides on private property.</p> <p>Target 8.4.2: Reduce or eliminate the use of fertilizers, pesticides, and insecticides by the City.</p> <p>Target 8.4.3: Reduce the amount of storm water runoff by updating the City’s Best Management Practices.</p> <p>Target 8.4.4: Where feasible, direct runoff from rooftops and other areas to water tanks.</p> <p>Target 8.4.5: Encourage property owners to use paving surfaces that reduce the amount of urban storm water runoff.</p> <p>Target 8.4.6: Require new buildings and the construction of additions to include water conserving toilets and fixtures; expand existing provisions in the City’s building and plumbing code.</p> <p>Goal 8.5: Restore the lost environmental value of San Gabriel’s waterways – the Los Angeles County Flood Control channels (Alhambra Wash, Rubio Wash) and the San Gabriel River.</p> <p>Target 8.5.1: Investigate the feasibility of using the flood control channels for functional and/or passive open space.</p> <p>Target 8.5.2: Protect the flood control channels from enclosure by developers.</p> <p>Target 8.5.3: Work with the San Gabriel Mountains and River Conservancy, and other interested agencies, to restore the San Gabriel River to a more environmentally healthy state.</p> <p>Implementation Measures:</p> <p>Improved Water Courses and Flood Control Channels:</p> <ul style="list-style-type: none">Initiate a meeting between employees responsible for the Los Angeles County Flood Control Channels and the City of San Gabriel in order to create	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 53 (Stormwater and Urban Runoff Pollution Prevention) Section 53.10 (Control of Pollutants From State Permitted Construction Activities), Section 53.11 (Control of Pollutants from Other Construction Activities), Section 53.12 (Control of Pollutants from New Development/Redevelopment Projects), Section 53.19 (Low Impact Development Standards), Section 153.132 (Stormwater Runoff), Chapter 150 (Building Regulations) Section 150.200 (Existing Landscapes)</p> <p>Under Chapter 53 (Stormwater and Urban Runoff Pollution Prevention) Section 53.10 (Control of Pollutants From State Permitted Construction Activities) state permitted construction activities must adhere to the following:</p> <p>(A) No person shall be granted a grading permit or shall commence or continue any construction activity that is subject to a General Construction Activity Stormwater NPDES permit without showing proof of having applied for such permit.</p> <p>(B) Any person engaged in a construction activity requiring an NPDES General Construction Activity Stormwater NPDES permit construction permit shall retain at the construction site the following documents:</p> <p>(1) A copy of the Notice of Intent to Comply with Terms of the General Permit to Discharge Water Associated with Construction Activity;</p> <p>(2) A waste discharge identification number issued by the SWRCB;</p> <p>(3) A Stormwater Pollution Prevention Plan and Monitoring Program Plan for the construction activity requiring the construction permit; and</p> <p>(4) Records of all inspections, compliance and non-compliance reports, evidence of self-inspection and good housekeeping practices.</p> <p>(C) Any person engaged in a construction activity in the city requiring an NPDES General Construction Stormwater Activity permit shall, upon reasonable request from a duly authorized officer of the city, provide any of the documents specified in paragraph (B) of this section and shall retain said documents for at least three years after completion of construction.</p> <p>(Ord. 530-C.S., passed 8-20-02)</p> <p>Under Section 53.11 (Control of Pollutants from Other Construction Activities) all other projects must adhere to the following:</p> <p>Any person engaged in a construction activity that is not subject to the General Construction Stormwater Activity NPDES permit but is subject to the municipal NPDES permit, shall be required to comply with requirements contained therein as specified in the city's Stormwater Quality Management Program, including any revisions made thereto. (Ord. 530-C.S., passed 8-20-02)</p> <p>Under Section 53.12 (Control of Pollutants from New Development/Redevelopment Projects) new development/redevelopment projects must adhere to the following:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>a reasonable set of policies and programs to initiate the City’s visions for creating active or passive open space around the channels.</p> <ul style="list-style-type: none">Discourage the covering of the Los Angeles County Flood Control Channels.By 2005, create an impact fee and begin requiring a 10-foot easement for properties adjacent to or within 300 feet within the Los Angeles County Flood Control Channels in order to provide for additional public open space.Create a policy requiring all commercial and residential development within 300 feet from the Los Angeles County Flood Control Channels to put aside 2 percent of construction costs for public art that underlies the importance water and waterways – or an in lieu fee can be paid.	<p>(A) Prior to the construction of a new development or redevelopment project, the subject project shall be evaluated for its potential to discharge pollutants to the MS4, based on its intended land use and other considerations. Such evaluation shall be conducted in accordance with development planning requirements established by the Regional Board or its Executive Officer, pursuant to the municipal NPDES permit, as specified in the city's Stormwater Quality Management Program, including any revisions made thereto.</p> <p>(B) Once a development or redevelopment project has been evaluated for its potential to discharge pollutants to the MS4, the city shall require appropriate BMPs to be installed during construction for implementation following project completion. The prescription of such BMPs shall be in keeping with development planning requirements established by the Regional Board or its Executive Officer, pursuant to the municipal NPDES permit, as described more particularly in the city's Stormwater Quality Management Program. (Ord. 530-C.S., passed 8-20-02)</p> <p>Section 53.19 (Low Impact Development Standards) details the adoption of low impact development standards:</p> <p>(A) Title. This section shall be known as the low impact development ordinance of the City of San Gabriel.</p> <p>(B) Adoptions by reference.</p> <p>(1) Except as amended in the divisions below, Chapter 12.84 of the Los Angeles County Code, which is entitled "Low Impact Development Standards," is hereby incorporated in its entirety by reference and expressly incorporated herein. Chapter 12.84 of the Los Angeles County Code is hereby made a part of this section as if, for all intents and purposes, fully set forth in this section. This adoption by reference shall include any subsequent amendments to Chapter 12.84 unless otherwise modified in this section.</p> <p>(2) A certified copy of Chapter 12.84 of the Los Angeles County Code is on file in the office of the City Clerk for public record and inspection.</p> <p>(3) If there is any inconsistency between any provisions of Chapter 12.84 of the Los Angeles County Code and other provisions of this municipal code, such other provisions of this municipal code shall prevail.</p> <p>(C) Amendments. Chapter 12.84 of the Los Angeles County Code is hereby amended as follows:</p> <p>(1) Section 12.84.420 of Chapter 12.84 of the Los Angeles County Code is hereby amended to amend the following definitions:</p> <p>COUNTY. The City of San Gabriel.</p> <p>DEVELOPMENT. Any construction, rehabilitation, redevelopment or reconstruction of any public or private residential project (whether single-family, multi-unit or planned unit development); industrial, commercial, retail and other non-residential projects, including public agency projects; or mass grading for future construction. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility, nor does it include emergency construction activities required to immediately protect public health and safety.</p> <p>PUBLIC WORKS. The City of San Gabriel Department of Public Works.</p> <p>REDEVELOPMENT. Land-disturbing activity that results in the creation, addition, or replacement of 5,000 square feet or more of impervious surface area on an already developed site. REDEVELOPMENT includes, but is not limited to: the expansion of a</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>building footprint, addition or replacement of a structure, replacement of impervious surface area that is not part of a routine maintenance activity, and land disturbing activities related to structural or impervious surfaces. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility, nor does it include emergency construction activities required to immediately protect public health and safety.</p> <p>REGIONAL BOARD. The California Regional Water Quality Control Board, Los Angeles Region.</p> <p>(2) Section 12.84.430.E.2 of Chapter 12.84 of the Los Angeles County Code is hereby amended to amend to read as follows:</p> <p>"2. Any development project for which a complete discretionary or nondiscretionary permit application was filed with the City of San Gabriel prior to June 28, 2015."</p> <p>(3) Section 12.84.440.B of Chapter 12.84 of the Los Angeles County Code is hereby amended to read as follows:</p> <p>"B. Low impact development plans shall be submitted in accordance with the Low Impact Development Standards Manual issued by the County of Los Angeles Department of Public Works, a copy of which shall be located in the San Gabriel Public Works Department."</p> <p>(D) Responsibility for administration. This chapter shall be administered by the Director of Public Works of the City of San Gabriel.</p> <p>(Ord. 624-C.S., passed 12-1-15)</p> <p>Section 153.132 (Stormwater Runoff) lists general standards for stormwater runoff:</p> <p>(A) Site drainage. The site drainage and stormwater runoff shall comply with stormwater runoff regulations and National Pollution Discharge Elimination Systems (NPDES) requirements and Chapter 53, Stormwater and Urban Runoff Pollution Prevention, of the San Gabriel Municipal Code. Where feasible, drainage shall be retained on site and directed toward landscaped areas.</p> <p>(B) Best management practices. BMPs shall incorporate numeric design criteria to infiltrate, filter, or treat storm water runoff. Design criteria are provided in the NPDES permit. BMPs include but are not limited to bioretention facilities: catch basin inserts: cisterns: constructed wetlands: dry wells: extended/dry detention basins or underground detention tanks: infiltration basins: infiltration trenches: media filtration; porous pavement; storm drain inserts; vegetated filter strips: vegetated swales; and wet ponds.</p> <p>(Ord. 608-C.S., passed 5-10-14)</p> <p>Under Chapter 150 (Building Regulations) Section 150.200 (Existing Landscapes) the following apply to water-efficient landscape requirements:</p> <p>(A) Water waste resulting from inefficient landscape irrigation leading to excessive runoff, low head drainage, overspray, and other similar conditions where water flows onto structures is prohibited.</p> <p>(B) All landscape areas, whether installed pursuant to this subchapter or not, shall be maintained in a healthful and sound condition. Irrigation systems and their components shall be maintained in a fully functional manner consistent with the originally approved design and the provisions of this subchapter.</p> <p>(C) Landscapes shall be maintained to ensure water-efficiency. A regular maintenance schedule should include, but not be limited to, checking, adjusting and repairing</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		irrigation equipment; resetting the automatic controller; aerating and dethatching turf areas; replenishing mulch; fertilizing; pruning; and weeding in all landscaped areas. (‘65 Code, § 7-9.04) (Ord. 414-C.S., passed - -) Penalty, see § 10.99	
San Marino	<p>Land Use Element:</p> <p>General Goal 6. Accommodate future needs for municipal facilities.</p> <p>Natural Resources Chapter:</p> <p>Objective NR.2 Sustain turf areas within the park while conserving water resources.</p> <p>Policies:</p> <ul style="list-style-type: none">– Take advantage of the latest irrigation technology where appropriate.– Set irrigation systems to water during periods when evaporation is likely to be minimal.– Upgrade and maintain an adequate drainage system. <p><i>Recycling</i></p> <p>Goal 3: Meet requirements of the National Pollutant Discharge Elimination System (NPDES).</p> <p>Objective NR.13 Comply with National Pollutant Discharge Elimination System (NPDES).</p> <p>Policies:</p> <ul style="list-style-type: none">– Detect and eliminate illegal discharges and illicit disposal practices.– Control pollutants in surface run-off as appropriate.– Implement a public information campaign regarding illegal dumping.– Enhance public awareness about the catch basin and storm drain system and the impact of illegal dumping on the environment. <p>Objective NR.18 Comply with requirements of the urban water management plan adopted by the water agency.</p> <p><i>Water</i></p> <p>Goals</p> <ol style="list-style-type: none">1. Maintain a high level of water quality.2. Conserve water resources.3. Provide adequate water supply to residents, businesses and public agencies. <p>Objective NR.18 Comply with requirements of the urban water management plan adopted by the water agency.</p> <p>Objective NR.19 Coordinate efforts with the water agency to support supply, production and distribution to San Marino residents and businesses, and public agencies.</p> <p>Objective NR.20 Educate the community regarding water resources.</p> <p>Policies:</p> <ul style="list-style-type: none">– Encourage water conservation measures.– Support partnerships between San Marino water providers and those of neighboring agencies and other water districts. <p>Objective NR.21 Adopt water conservation measures for City facilities.</p> <p>Policies:</p> <ul style="list-style-type: none">– Retrofit City facilities as reasonable to conserve water.– Utilize current water conservation technology in irrigation systems.	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 22.06 (Department of Community Development- Duties), Chapter 22.06.07: (Grading Plan and Compliance With Stormwater Management, Section 23.16.18 (Stormwater Management and Rainwater Retention), Article 16 (Water Efficient Landscaping) Section 23.16.21 (Water Waste Prevention), Article 06 (Connection to public sewers) Section 16.06.01 (Required Connection to Public Sewers), and Section 16.06.02 (Sewer Connection Charges).</p> <p>Under Article 22.06 (Department of Community Development- Duties) Chapter 22.06.07: (Grading Plan and Compliance With Stormwater Management) the following apply:</p> <p>A. There shall be filed with each urban lot split subdivision a grading plan showing graded building site elevations and grading proposed for the creation of building sites or for construction or installation of improvements to serve the subdivision. The grading plan, together with the original topography contours, may be shown on an exhibit to the urban lot split map. The grading plan shall indicate approximate earthwork volumes of proposed excavation and filling operations. In the event no grading is proposed, a statement to that effect shall be placed on the urban lot split map. In no event shall grading pursuant to an application submitted under this chapter exceed fifty (50) cubic yards. The grading plan shall comply with Section 25.16.01.</p> <p>B. Applicant shall comply with Section 14.12.01 and 25.16.01 related to compliance with the City’s MS4 Water Quality Permit. (Ord. O-21-1385, 12-15-2021; amd. Ord. O-21-1386, 1-12-2022)</p> <p>Under Article 16 (Water Efficient Landscaping) Section 23.16.18 (Stormwater Management and Rainwater Retention):</p> <p>A. Stormwater management practices minimize runoff and increase infiltration which recharges groundwater and improves water quality. Implementing stormwater best management practices into the landscape and grading design plans to minimize runoff and to increase on site rainwater retention and infiltration are encouraged.</p> <p>B. Project applicants shall refer to the city or regional water quality control board for information on any applicable stormwater technical requirements.</p> <p>C. All planted landscape areas are required to have friable soil to maximize water retention and infiltration.</p> <p>D. It is strongly recommended that landscape areas be designed for capture and infiltration capacity that is sufficient to prevent runoff from impervious surfaces (i.e., roof and paved areas) from either: 1) the one inch (1"), 24-hour rain event or 2) the eighty fifth percentile, 24-hour rain event, and/or additional capacity as required by any applicable local, regional, state or federal regulation.</p> <p>E. It is recommended that stormwater projects incorporate any of the following elements to improve on site stormwater and dry weather runoff capture and use:</p> <ol style="list-style-type: none">1. Grade impervious surfaces, such as driveways, during construction to drain to vegetated areas.2. Minimize the area of impervious surfaces such as paved areas, roof and concrete driveways.	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>3. Incorporate pervious or porous surfaces (e.g., gravel, permeable pavers or blocks, pervious or porous concrete) that minimize runoff.</p> <p>4. Direct runoff from paved surfaces and roof areas into planting beds or landscaped areas to maximize site water capture and reuse.</p> <p>5. Incorporate rain gardens, cisterns, and other rain harvesting or catchment systems.</p> <p>6. Incorporate infiltration beds, swales, basins and dry wells to capture stormwater and dry weather runoff and increase percolation into the soil.</p> <p>7. Consider constructed wetlands and ponds that retain water, equalize excess flow, and filter pollutants. (Ord. 0-16-1308, 12-14-2016)</p> <p>Under Article 16 (Water Efficient Landscaping) Section 23.16.21 (Water Waste Prevention) the following apply:</p> <p>A. Water waste is prohibited per chapter XIV, article 16 of this code.</p> <p>B. Runoff shall not leave the target landscape due to low head drainage, overspray, or other similar conditions where water flows onto adjacent property, nonirrigated areas, walks, roadways, parking lots, or structures.</p> <p>C. Restrictions regarding overspray and runoff may be modified if:</p> <p>1. The landscape area is adjacent to permeable surfacing and no runoff occurs; or</p> <p>2. The adjacent nonpermeable surfaces are designed and constructed to drain entirely to landscaping. (Ord. 0-16-1308, 12-14-2016)</p> <p>Under Article 06 (Connection to public sewers) Section 16.06.01 (Required Connection to Public Sewers) and Section 16.06.02 (Sewer Connection Charges) the following apply:</p> <p>Whenever the director of public works shall declare a sewer line available for connection, no person shall construct or enlarge or pump out a new or existing cesspool with regard to any property in the city; provided, however, that any person dissatisfied with such director's decision or failure to decide thereon may request a decision thereon by the city council. In the event the decision of such director or council finds the availability of a sewer line, then such person shall forthwith connect to such available sewer line. (1954 Code §19.42; amd. 1994 Code)</p> <p>Section 16.06.02 (Sewer Connection Charges)</p> <p>Any person who desires to or is obliged to connect to any sewer installed at city in any place in the city shall pay a sewer connection charge to the city as set by city council resolution. (Ord. 0-07-1191, 10-10-2007)</p>	
South El Monte	<p>Land Use Element:</p> <p>Policy 6.3 Promote vigorous enforcement of City codes, including building, zoning, and health and safety, to promote property maintenance.</p> <p>Resources Element:</p> <p>Goal 3.0 Ensure that City residents and businesses are provided with a reliable: safe domestic water source.</p> <p>Policy 3.1 Continue to participate in the National Pollution Discharge Elimination Systems (NPDES) program under the direction of the Los Angeles County Department of Public Works.</p> <p>Policy 3.2 Support Federal government efforts to reduce contamination within the San Gabriel groundwater basin.</p>	<p>Municipal codes related to hydrology and water quality relevant to the Plan Area can be found in Chapter 8.44 (Stormwater Management and Discharge Control) Section 8.44.030 (Purpose and intent), Section 8.44.090 (Good housekeeping provisions), Section 8.44.100 (Requirements for industrial/commercial and construction activities), Section 8.44.110 (Standard Urban Stormwater Mitigation Plan (SUSMP) and Low Impact Development (LID) Requirements for New Development and Redevelopment Projects), Chapter 13.04 (Sanitary Sewer and Industrial Waste Ordinance Adopted) Section 13.04.010 (Adoption of county sanitary sewer and industrial waste ordinance), and Chapter 15.12 Green Building Standards Code) Section 15.12.010 (Los Angeles County Code, Title 31, Green Building Standards Code adopted)</p>	<p>No other applicable ordinances were identified</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 4.0 Achieve broad based participation in water conservation programs.</p> <p>Policy 4.1 Provide residents and businesses with information about landscaping and irrigation systems that reduce water use.</p> <p>Policy 4.2 Establish regulations that require new developments to incorporate water-saving plumbing fixtures.</p>	<p>Under Chapter 8.44 (Stormwater Management and Discharge Control) Section 8.44.030 (Purpose and intent) the following apply:</p> <p>A. The purpose of this chapter is to ensure the future health, safety and general welfare of the citizens of the city and the water quality of the receiving waters of the County of Los Angeles and surrounding coastal areas by:</p> <ol style="list-style-type: none">1. Reducing pollutants in stormwater discharges to the maximum extent practicable;2. Regulating illicit connections and illicit discharges and reducing the level of contamination of stormwater and urban runoff in the municipal stormwater system; and3. Regulating nonstormwater discharges to the municipal stormwater system. <p>B. The intent of this chapter is to protect and enhance the quality of watercourses, water bodies, and wetlands within the city in a manner consistent with the Federal Clean Water Act, the California Porter-Cologne Water Quality Control Act and the municipal NPDES permit.</p> <p>C. This chapter is also intended to provide the city with the legal authority necessary to control discharges to and from those portions of the municipal stormwater system over which it has jurisdiction as required by the municipal NPDES permit, and fully and timely comply with the terms of the municipal NPDES permit while the watershed management program is being developed by the permittees under the municipal NPDES permit, and in contemplation of the subsequent amendment of this chapter or adoption by the city of additional provisions of this chapter to implement the subsequently adopted watershed management program, or other programs developed under the municipal NPDES permit.</p> <p>D. This chapter also sets forth requirements for the construction and operation of certain commercial development, new development and redevelopment and other projects (as further defined herein) which are intended to ensure compliance with the stormwater mitigation measures prescribed in the current MS4 permit. This chapter authorizes the director to define and adopt applicable best management practices and other stormwater pollution control measures, as provided herein, to carry out all inspections including entering entities discharging to the MS4, conduct surveillance, conduct monitoring, cite infractions and to impose fines pursuant to this chapter. Except as otherwise provided herein, the director shall administer, implement and enforce the provisions of this section.</p> <p>E. The city council shall approve and enter into interagency agreements as deemed necessary by the city council to control the contribution of pollutants of the shared MS4. (Ord. 1182 §1, 2014)</p> <p>Under Chapter 13.04 (Sanitary Sewer and Industrial Wate Ordinance Adopted) Section 13.04.010 (Adoption of county sanitary sewer and industrial waste ordinance) the following apply:</p> <p>A. Title 10, Utilities, Division 2, Sanitary Sewers and Industrial Waste, of the Los Angeles County Code, as amended and in effect on July 27, 1989, except as amended in this chapter, is adopted by reference as the sanitary sewers and industrial waste ordinance of the city.</p> <p>B. A copy of Title 20, Division 2, as amended, of the Los Angeles County Code, has been deposited with the city clerk and shall at all times be maintained by the city clerk for use and examination by the public. (Ord. 881 §1, 1990; prior code §8-2-1)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>Under Section 8.44.090 (Good housekeeping provisions), the following apply:</p> <p>Owners and occupants of property within the city shall comply with the following requirements:</p> <p>A. Septic Waste. No person shall leave, deposit, discharge, dump, or otherwise expose any chemical or septic waste to precipitation in an area where a discharge to city streets or MS4 may or does occur.</p> <p>B. Use of Water. Runoff of water used for irrigation purposes shall be minimized to the maximum extent practicable. Runoff of water from the permitted washing down of paved areas shall be minimized to the maximum extent practicable.</p> <p>C. Storage of Materials, Machinery and Equipment. Machinery or equipment that is to be repaired or maintained in areas susceptible to or exposed to stormwater, shall be placed in a manner so that leaks, spills and other maintenance-related pollutants are not discharged to the MS4.</p> <p>F. Best Management Practices. Best management practices shall be used in areas exposed to storm-water for the removal and lawful disposal of all fuels, chemicals, fuel and chemical wastes, animal wastes, garbage, batteries, or other materials which have potential adverse impacts on water quality.</p> <p>G. Maintenance of Structural BMPs. Structural BMPs shall be properly operated and maintained, consistent with the approved SUSMP. Records and documentation of such maintenance shall be provided to the director upon request. (Ord. 1182 §1, 2014)</p> <p>Under Section 8.44.100 (Requirements for industrial/commercial and construction activities), the following apply:</p> <p>A. Industrial/Commercial and Construction-Related Dischargers Generally. Each discharger associated with industrial/commercial activity or construction activity, or other discharger described in any general NPDES permit addressing such discharges, as may be issued by the U.S. Environmental Protection Agency, the State Water Resources Control Board, or the Regional Board shall comply with all requirements of such NPDES permit and the city's development construction program. Each discharger identified in an individual NPDES permit shall comply with and undertake all activities required by such permit. Proof of compliance with any such NPDES permit and the city's development construction program may be required in a form acceptable to the director prior to the issuance of any grading, building or occupancy permits, or any other type of permit or license issued by the city.</p> <p>B. Nonstormwater discharges to the MS4 from industrial, commercial or construction are prohibited.</p> <p>C. Source Control BMPs for Industrial/Commercial Facilities. Industrial/commercial facilities shall implement the effective source control BMPs listed in Table 10 of Part VI.D.6.f. of the municipal NPDES permit, unless a particular pollutant generating activity does not occur on a facility's site.</p> <p>(Ord. 1182 §1, 2014)</p> <p>Under Section 8.44.110 (Standard Urban Stormwater Mitigation Plan (SUSMP) and Low Impact Development (LID) Requirements for New Development and Redevelopment Projects), the following apply:</p> <p>C. Applicability—Planning Priority Projects. The following development and redevelopment projects shall be designated as planning priority projects, which are subject to city conditioning and approval for the design and implementation of post-</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>construction controls to mitigate stormwater pollution prior to completion of the projects, and shall meet the requirements of this section:</p> <p>1. New Development Projects.</p> <p>a. All development projects equal to one acre or greater of disturbed area that adds more than ten thousand square feet of impervious surface area.</p> <p>f. Parking lots with five thousand square feet or more of impervious surface area, or with twenty-five or more parking spaces.</p> <p>g. Streets and roads construction of ten thousand square feet or more of impervious surface area. Street and road construction applies to standalone streets, roads, highways, and freeway projects, and also applies to streets within larger projects.</p> <p>i. Projects located in or directly adjacent to, or discharging directly to an environmentally sensitive area (ESA), where the development will:</p> <p>i. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>ii. Create two thousand five hundred square feet or more of impervious surface area.</p> <p>2. Redevelopment Projects.</p> <p>a. Land disturbing activity that results in the creation or addition or replacement of five thousand square feet or more of impervious surface area on an already developed site on planning priority project categories.</p> <p>b. Where redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, the entire project must be mitigated.</p> <p>c. Where redevelopment results in an alteration of less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, only the alteration must be mitigated, and not the entire development.</p> <p>d. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.</p> <p>D. Specific Requirements. The site for every planning priority project shall be designed to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use. In addition, the following specific requirements apply:</p> <p>2. Street and Road Construction of Ten Thousand Square Feet or More. Street and road construction of ten thousand square feet or more of impervious surface shall follow the city's green street manual developed by the director and approved by city council resolution. The city's green street manual shall be based on the USEPA guidance</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>regarding managing wet weather with green infrastructure: green streets (December 2008 EPA-833-F-08-009).</p> <p>3. Remainder of Planning Priority Projects Require a SUSMP. Except for the projects listed in paragraphs (1) and (2) of this subsection, all other planning priority projects shall prepare and submit to the director for review and approval a SUSMP which shall also contain LID requirements consistent with Parts VI.D.7.c. and VI.D.7.d.(iii) of the municipal NPDES permit. In addition, planning priority projects subject to this paragraph (3) shall do the following:</p> <ul style="list-style-type: none">a. Incorporate the SUSMP into Project Plans. An applicant for a planning priority project identified in paragraph (3) of this subsection D shall incorporate into the applicant's project plans a stormwater mitigation plan (SWMP), which includes those BMPs necessary to control stormwater pollution from construction activities and facility operations, as set forth in the SUSMP applicable to the applicant's project. Structural or treatment control BMPs (including, as applicable, post-construction treatment control BMPs) set forth in project plans shall meet the design standards set forth in the SUSMP and the current municipal NPDES permit.b. Verify Maintenance of BMPs. If a project applicant has included or is required to include structural or treatment control BMPs in project plans, the applicant shall provide verification of maintenance provisions. The verification shall include the applicant's signed statement, as part of its project application, accepting responsibility for all structural and treatment control BMP maintenance until such time, if any, the property is transferred. <p>E. Issuance of Discretionary Permits. No discretionary permit may be issued for any planning priority project identified in this section until the director confirms the project plans comply with the applicable requirements of this section.</p> <p>F. Issuance of Certificates of Occupancy. As a condition for issuing a certificate of occupancy for a planning priority project identified in this section, the director shall require facility operators and/or owners to build all the stormwater pollution control BMPs and structural or treatment control BMPs that are shown on the approved project plans and to submit a signed certification statement stating that the site and all structural or treatment control BMPs will be maintained in compliance with the SUSMP and other applicable regulatory requirements.</p> <p>G. Transfer of Properties Subject to Requirement for Maintenance of Structural and Treatment Control BMPs.</p> <ul style="list-style-type: none">1. The transfer or lease of a property subject to a requirement for maintenance of structural and treatment control BMPs shall include conditions requiring the transferee and its successors and assigns to either: (a) assume responsibility for maintenance of any existing structural or treatment control BMP; or (b) to replace an existing structural or treatment control BMP with new control measures or BMPs meeting the then current standards of the city and the SUSMP. Such requirement shall be included in any sale or lease agreement or deed for such property. The condition of transfer shall include a provision that the successor property owner or lessee conduct maintenance inspections of all structural or treatment control BMPs at least once a year and retain proof of inspection.2. For residential properties where the structural or treatment control BMPs are located within a common area which will be maintained by a homeowners	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>association, language regarding the responsibility for maintenance shall be included in the projects conditions, covenants and restrictions (CC&Rs). Printed educational materials will be required to accompany the first deed transfer to highlight the existence of the requirement and to provide information on what storm-water management facilities are present, signs that maintenance is needed, and how the necessary maintenance can be performed. The transfer of this information shall also be required with any subsequent sale of the property.</p> <p>3. If structural or treatment control BMPs are located within an area proposed for dedication to a public agency, said BMPs shall be the responsibility of the developer until the dedication is accepted by the public agency.</p> <p>H. CEQA. Provisions of this section shall be complementary to, and shall not replace, any applicable requirements for stormwater mitigation required under the California Environmental Quality Act. (Ord. 1182 §1, 2014)</p> <p>Under Chapter 15.12 Green Building Standards Code) Section 15.12.010 (Los Angeles County Code, Title 31, Green Building Standards Code adopted) the following apply:</p> <p>Los Angeles County Green Building Standards Code, Chapters 2 through 8, Title 31, the Los Angeles County Green Building Code, as amended and in effect on or before January 1, 2023, adopting the 2022 California Green Building Standards Code, except as otherwise provided in said Title 31, is hereby adopted by reference pursuant to the provisions of Sections 50022.1 through 50022.10 of the Government Code of the State of California as though fully set forth herein and made a part of the South El Monte Municipal Code with the same force and effect as though set out herein in full, including all of the regulations, revisions, conditions and terms contained therein except as revised in this chapter by Section 15.12.020 below.</p> <p>Not less than one copy of said Title 31 of the Los Angeles County Green Building Standards Code together with any and all amendments thereto proposed by the city of South El Monte, has been and is now filed in the office of the community development department and shall be remain on file with building official, and shall collectively be known as the “City of South El Monte Green Building Standards Code” and may be cited as Chapter 15.12 of the South El Monte Municipal Code. 3.10.3 Impact Assessment

3.10.3.1 Significance Criteria

Appendix G of the State CEQA guidelines was reviewed to determine if the Plan would result in significant impacts related to hydrology and water quality. These guidelines serve as the threshold of significance for determining impacts to hydrology and water quality and consider if the Plan would:

- 10(a) *Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?*
- 10(b) *Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?*
- 10(c) *Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would:*
 - i. *result in substantial erosion or siltation on- or off-site;*
 - ii. *substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;*
 - iii. *create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff;*
 - iv. *impede or redirect flood flows?*
- 10(d) *In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?*

3.10.3.2 Methods

This analysis evaluates the construction and operations impacts of the Plan on hydrology and water quality based on literature review of conditions within and adjacent to the Plan Area. Where feasible, maps have been prepared to visualize these conditions.

The analysis focuses on issues related to surface hydrology, groundwater supply, surface water and groundwater quality, and flood hazards. The key construction-related impacts were identified and evaluated based on the physical characteristics of the Plan Area and the magnitude, intensity, location, and duration of activities that could occur under the Plan.

- **Surface Water and Groundwater Quality:** Impacts to surface water and groundwater quality were analyzed using information on potential existing sources of pollution generated by construction activities required to build the greenways, amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities as well as the typical pollution that could be associated with operation of these components (e.g., public use of a greenway path, operation of a stormwater facility; irrigation of landscape features, etc.). These were then compared to the baseline conditions of the ROW and adjacent parcels in the Plan Area, either generally (e.g., typical pollution associated with heavily urbanized areas) or specifically (e.g., when waterbodies are 303(d) listed as impaired or fall within special flood hazard areas).

- **Flood Hazards:** The impact analysis for flood risk was conducted using FEMA mapping to determine the existing flood zones within the Plan Area as they relate to the potential project components that could be constructed under the Plan and how those components may affect or not affect flood risk.

3.10.3.3 Plan Impacts

The Plan is in part responding to the need to improve water quality and water supply. As such, a summary of the protective elements of the Plan is provided before considering individual resource issues. One of the Plan goals is the integration of stormwater management/capture, groundwater recharge, and water quality improvement into future greenways. The Plan would contribute to the County's overall water quality and supply goals by adding improvements to flood control ROW for stormwater management and treatment of runoff for cleaner surface water and groundwater. Stormwater reuse and groundwater recharge are effective in offsetting increased potable water demand and shrinking water supplies. Stormwater management supports healthy plants, trees, and soil which are key for climate resilience through urban cooling, carbon sequestration, improved air quality, and habitat.

Reducing impervious surface area is an overall beneficial change to the landscape and would allow more water to enter the soil as well as dedicated stormwater treatment facilities. Stormwater management options function primarily in three categories:

- Infiltration, where runoff is directed to percolate into the underlying soils. Infiltration generally reduces the volume of runoff and increases groundwater recharge.
- Treatment, where pollutants are removed through various unit processes, including filtration, settling, sedimentation, sorption, straining, and biological or chemical transformations.
- Storage, where runoff is captured, stored (detained), and slowly released into downstream waters. Storage can reduce the peak flow rate from a site but does not directly reduce runoff volume.

Combining a reduction of impervious surfaces with greenway paths and parks fulfills the Plan's goals of creating multi-benefit projects. Specific stormwater management options would vary by site based on the unique constraints and needs of the location. Stormwater BMP implementation will depend on available ROW and specific greenway project formulation which may limit the use of some types of BMPs. Under the Plan, BMP selection would generally be determined at the project-level considering project objectives and constraints, regulatory and/or permit requirements, and jurisdictional approvals. In cases where specific pollutants are of concern in a project area, the appropriate BMP and treatment will be determined on a case-by-case basis for that pollutant.

For example, many of the waterbodies in the Plan Area are 303(d) listed as impaired as discussed previously in Section 3.10.1.2, Water Quality. The water quality of both listed and unlisted waterbodies would benefit from the additional stormwater management infrastructure that would accompany a project implemented under the Plan, and for those specific pollutants that are 303(d) listed, Plan elements may offer specific additional improvements.

As another example, future projects implemented from the Plan would be required by County LID analysis (LA County Department of Public Works 2014) to include a stormwater management option to treat or infiltrate a site's SWQDv where new infrastructure (impervious surface) is proposed with a

preference for nature-based solutions, as is detailed in Section 11 of the *Design Guidelines and Standards*.

3.10.3.3.1 10(a). Would the proposed Project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?

3.10.3.3.1.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant. Construction of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities would involve varying degrees of demolition/material removal, grading, stockpiling of spoil materials, and other construction-related earth-disturbing activities that could result in short-term water quality degradation from soil erosion and subsequent sediment transport to adjacent properties, roadways, or watercourses. Sediment transport to drainage inlets, culverts, and storm drains could result in reduced storm flow capacity, causing localized ponding or flooding during storm events. Construction activities could also generate dust, settlement, litter, oil, and other pollutants that could temporarily contaminate water runoff from a construction site.

Any project implemented under the Plan involving construction or demolition of an area that results in a land disturbance equal or greater than one acre would be required to obtain NPDES coverage under the NPDES Construction General Permit, Order No. 2022-0057-DWQ (SWRCB 2022). Construction activities covered under the Construction General Permit include demolition and pre-development site preparation, grading and land development, streets and utilities, vertical construction, and final landscaping and site stabilization. If applicable to a proposed project, the Construction General Permit requires the development and implementation of a SWPPP, which includes BMPs to regulate stormwater runoff, including measures to prevent soil erosion and loss of topsoil. The Construction General Permit requires that all SWPPPs be site-specific and are written, amended, and certified by a QSD and includes the information needed to demonstrate compliance with all requirements of the General Permit to ensure that water quality is being protected. Typical construction BMPs include silt fences, straw wattles, sediment traps, and gravel sandbag barriers.

Erosion management would be implemented during and after construction, as exposed slopes would be treated to avoid dust and sediment erosion. Erosion-control measures for disturbed surfaces would be required by the NPDES Construction General Permit during the rainy season, which generally occurs between October and April. In addition to complying with the Construction General Permit, construction activities would be required to comply with local stormwater quality and grading, erosion, and sediment control ordinances. These requirements involve development and implementation of erosion and sediment control plans (ESCPs) specific to the construction site to minimize water quality impacts.

Only if dewatering for an individual project site is required, the SWPPP would include a dewatering plan, which would establish measures to prevent and minimize sediment and contaminant releases into groundwater during excavation. Dewatering activities would be required to comply with the NPDES Construction General Permit, LARWQCB WDRs for discharges of groundwater (Order No. R4-2018-0125), and local dewatering requirements to prevent potential water quality impacts on surface waters or

ensure proper treatment measures are implemented prior to discharge. In the event of dewatering during construction activities or before dewatering to surface water via a storm drain, the contractor would obtain coverage under the NPDES Construction General Permit from the LARWQCB. Coverage under the NPDES Construction General Permit typically includes dewatering activities as authorized non-stormwater discharges, provided that dischargers prove the quality of water to be adequate and not likely to affect beneficial uses. All requirements of dewatering would be met to ensure water quality is not adversely affected.

Projects implemented under the Plan that would involve less than one acre of soil disturbance would be consistent with the applicable LID standards (either LA County or local jurisdiction) depending on project location (summarized above in Section 3.7.2.3.2, Geology and Soils) and stormwater pollution control activities for construction projects. Additionally, the *Design Guidelines and Standards* include design considerations for various BMPs that address sediment capture and soil stability. Per the *Design Guidelines and Standards*, implementation of any infiltration-reliant stormwater BMPs require subsurface geologic characterizations that must be conducted before construction to ensure geologic conditions are considered. Site investigation, infiltration testing, and geotechnical reports are required components of infiltration stormwater design. Geologic considerations are meant to ensure infiltration BMP implementation is both feasible and does not pose undue adverse impacts to the built and natural environment. Per the *Design Guidelines and Standards*, a stormwater infiltration project shall not put existing soils, existing structures, and sub-surface utilities at risk of failure. Further, site filtration rate must be sufficient to infiltrate water onsite and pollutants shall not be mobilized. Therefore, adherence to the *Design Guidelines and Standards* as well as regulatory compliance would ensure that construction impacts are less than significant.

Compliance with these regulatory requirements and adherence to the *Design Guidelines and Standards* would ensure that construction activities for greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities do not result in a violation of water quality standards or WDRs or otherwise result in water quality degradation to surface water or groundwater. Therefore, the impacts would be less than significant.

Operations

Less than Significant. Water quality in urban areas, such as the Plan Area, is influenced by many processes and activities in the watershed. Stormwater runoff in the Plan Area is affected by point and nonpoint sources including outfalls, overland flow, storms, parking lots, streets, exposed soil, building roofs, and more. Runoff may be contaminated with automobile oils, fuels, lubricants; pesticides; fertilizers; sediments and soil erosion; trash; and other pollutants. Pollutants accumulate on impervious areas and are mobilized during precipitation events.

Although the construction of Plan components could increase impervious surfaces, the *Design Guidelines and Standards* require a stormwater BMP to infiltrate and/or treat a site's SWQDv where new infrastructure (greenway and other impervious surface) is proposed as described above. with a preference for nature-based solutions. With any new construction (e.g., greenway path), a stormwater BMP must be selected to manage the calculated SWQDv through on-site infiltration or an alternative action. The most common practices include bioretention, subsurface infiltration, and permeable pavement. Permeable pavement can be used for the greenway surface and narrow bioretention strips

(bioswales) can be used along the greenway to capture runoff from asphalt and concrete surfaces. BMPs are described in detail in the *Design Guidelines and Standards*.

BMPs would be designed to work with the overall stormwater approach for the project site and would be properly sized with respect to drainage areas they are treating. Recommended best practices, including pre-treatment BMPs to remove solids, sediments, trash, and debris, may be added or required. BMP design would comply with the Public Works LID Standards Manual.

Implementation of stormwater treatment and landscape features would allow water to percolate into the ground, thereby treating stormwater runoff through biological uptake, and/or reducing the discharge of pollution to the storm drain system. Any potential contaminants would be filtered, minimizing adverse effects on groundwater quality. The use of permeable paving, filtration and percolation of stormwater, and on-site water retention or detention would reduce or eliminate stormwater pollution and reduce runoff.

With implementation of stormwater BMPs and compliance with NPDES Construction General Permit post-construction stormwater standards, County or other local water quality requirements, as applicable, degradation of surface water and groundwater quality from operations of greenway paths and greenway amenities would be minimized. The *Design Guidelines and Standards* provide guidance for the implementation of stormwater quality control measures and the recommended design methodology to manage stormwater. Additionally, municipalities in the Plan Area, as MS4 permittees, have similar LID standards (see Section 3.10.2.4 for a summary of local policies). Implementation of stormwater BMPs would reduce stormwater runoff flows and associated pollutants and treat stormwater runoff. Operation of the greenway paths and greenway amenities would not violate any water quality standards or degrade water quality. Therefore, impacts would be less than significant.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.10.3.3.2 10(b). Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

3.10.3.3.2.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant. Construction of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities would involve excavations of varying depths and groundwater levels would also vary at each location. In the event groundwater is encountered during construction, dewatering would be conducted on a temporary basis during the construction phase and would not result in a loss of water that would substantially deplete groundwater supplies. After dewatering activities are completed, groundwater levels would return to pre-

construction conditions. The water supply for construction activities (e.g., dust control, concrete mixing, material washing) would most likely come from nearby hydrants and existing surface supplies and/or would be trucked to the proposed site. Impacts would be less than significant.

Operations

Less than Significant. Natural groundwater recharge throughout the Plan Area occurs primarily from infiltration of rainfall and applied water recharge. New impervious areas can reduce infiltration capacities resulting in runoff into storm drains or nearby surface waters instead of infiltrating and recharging the underlying aquifer. Greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities could create new impervious surfaces, depending on the material used for construction; however, the operation of greenway paths and other Plan components would not substantially interfere with groundwater recharge because it would not increase groundwater demand or decrease the size of groundwater recharge areas.

The Los Angeles County General Plan as well as the individual city general plans within the Plan Area include policies to protect natural groundwater recharge areas, promote groundwater recharge, and manage drainage and stormwater. Implementation of required stormwater BMPs and landscaping to promote infiltration are incorporated into the *Design Guidelines and Standards* would allow for infiltration and promote groundwater recharge. Recharge in the area would continue to occur through infiltration of precipitation and applied water recharge.

Landscaping associated with greenway paths and greenway amenities would include planted buffers. Planted buffers along the Plan Area would provide an opportunity for the treatment of stormwater before it infiltrates or flows into a receiving waterbody. The *Design Guidelines and Standards* stipulate that new projects should aim to create bioswales or treatment basins to collect stormwater runoff. Furthermore, new greenways, especially those that are paved with impervious materials, should slope to drain away from the channel towards a bioswale or other BMP area.

Plantings would require irrigation. The following guidelines may be implemented in accordance with latest water use and code compliance, such as the LA County LID Manual, LA County water sources, conservation standards, and the current California Green Building Standards Code to establish native plant materials using drip irrigation:

- Provide separate drip zones to plant materials with differing watering requirements, target root zone depths, and application.
- Irrigation to be applied to the entire dripline of mature trees and shrubs.
- Where possible, utilize irrigation approaches that allow for the phased expansion of the drip irrigation area as trees and shrubs mature.

The most common and broadly applicable strategy to ensure success of planting is the type and timing of supplemental irrigation during the three-year course of the establishment period. Therefore, the operation of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities would not substantially decrease groundwater supplies, interfere with groundwater recharge, or impede sustainable groundwater management of the basin and impacts would be less than significant.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.10.3.3.3 10(c). Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would:

- i. result in substantial erosion or siltation on- or off-site;
- ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;
- iii. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff;
- iv. impede or redirect flood flows?

3.10.3.3.3.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant. During construction of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities, existing drainage patterns could be altered through the addition of impervious surfaces. However, these alterations would not i) result in substantial erosion or siltation on- or off-site; ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site; iii) create or contribute to runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or iv) impede or redirect flood flows.

These impacts would not occur because all future projects constructed under the Plan would implement construction BMPs, when/if required in the SWPPP, and an ESCP to minimize the potential for erosion or siltation. When required, projects would also comply with the NPDES Construction General Permit, which requires implementation of BMPs to control construction site runoff, ensure proper stormwater control and treatment, and reduce the discharge of pollution to the storm drain system. No flood capacity deficiencies have been identified that would be exacerbated by the minor alterations to drainage at project sites and these minor alterations would be subject to regulatory compliance as stated above. The course of a stream or river would not be altered by any future projects as no in-water work is proposed as part of the Plan. Therefore, the impacts would be less than significant.

Operation

Less than Significant. Existing surface conditions on parcels adjacent to the District ROW vary from bare ground to vegetated to concrete/impervious. Final impervious surface areas are unknown under future project conditions. Projects implemented under the Plan may result in a decrease in impervious surfaces

where new greenspaces are added to otherwise compacted or impervious ground. However, in many cases impervious surfaces are likely to increase compared to baseline conditions at some locations where bare ground is present on parcels adjacent to the District ROW. Increases in impervious surface can result in larger volumes and flows of stormwater runoff.

All projects implemented under the Plan would be required to comply with *Design Guidelines and Standards* measures related to stormwater BMPs. County-led, -funded, or -permitted projects would also comply with the Public Works LID Standards Manual (see Section 0 regarding Water Quality Control Planning for the Region).

In addition to state, County, and local regulations related to managing the flow of water, the *Design Guidelines and Standards* have incorporated these County-wide requirements to also apply, which would therefore be implemented to Plan elements that extend to adjacent cities wherever located. The protocol for quantifying a site's SWQDV is detailed in Section 11 of the *Design Guidelines and Standards*. With any new project implemented under the Plan, a stormwater BMP must be selected to manage the calculated SWQDV. This standard applies to all project components when impervious surface is created or expanded. Therefore, the following general discussion applies to all projects that could be implemented under the Plan, including greenway paths, amenities, greenspaces, safe crossings, and stormwater management facilities.

Stormwater management is a priority across the LA Basin to capture and reuse stormwater, recharge groundwater, reduce flooding, and improve water quality. One of the Plan goals is the integration of stormwater management/capture, groundwater recharge, and water quality improvement into future greenways. The Plan would contribute positively to the County's overall flood reduction goals by improving flood control ROWs for stormwater management and treatment of runoff.

Numerous storm drains convey stormwater runoff from adjacent watershed areas through pipes and discharge directly to the tributaries throughout the SGV. On planned greenway projects with wide available ROWs and adjacent project elements (gateway, park, etc.) larger stormwater BMPs can be planned and constructed to capture adjacent watershed areas and further control flooding, recharge groundwater, and improve water quality.

Reducing impervious surface area is an overall beneficial change to the landscape and would allow more water to enter the soil as well as dedicated stormwater treatment facilities. Stormwater management options function primarily in three categories:

- Infiltration, where runoff is directed to percolate into the underlying soils. Infiltration generally reduces the volume of runoff and increases groundwater recharge.
- Treatment, where pollutants are removed through various unit processes, including filtration, settling, sedimentation, sorption, straining, and biological or chemical transformations.
- Storage, where runoff is captured, stored (detained), and slowly released into downstream waters. Storage can reduce the peak flow rate from a site but does not directly reduce runoff volume.

Combining a reduction of impervious surfaces with greenway paths and parks fulfills the Plan's goals of creating multi-benefit projects. Stormwater treatment options would vary by site based on the unique constraints and needs of the location. Stormwater BMP implementation would depend on available ROW and specific greenway project formulation which may limit the use of some types of BMPs. BMP

selection would therefore be at the designer's discretion considering project objectives and constraints but is subject to District approval.

All greenway paths, amenities, pocket parks and greenspaces, safe crossings, and stormwater management projects proposed for implementation under the Plan would occur within the constraints of managing flood risk. This includes maintaining existing flood conveyance capacity and not deteriorating the capacity of any of the Plan Area washes. Impervious surface areas would be increased by operation of greenway paths; however, these would be addressed by the operation of suitable stormwater BMPs to capture, treat, or infiltrate all stormwater originating on these surfaces required by County guidelines, and incorporated into the *Design Guidelines and Standards* as described above. Sustainable site design features such as stormwater treatment areas, surface landscaping design, and permeable materials would increase permeability and reduce stormwater runoff flows and associated pollutants.

The *Design Guidelines and Standards* and other policies, regulations, and guidelines described above would ensure that operation of subsequent actions resulting from Plan implementation does not result in increased surface runoff in a manner that would i) result in substantial erosion or siltation on- or off-site; ii) substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site; iii) create or contribute to runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or iv) impede or redirect flood flows. Therefore, impacts would be less than significant.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.10.3.3.4 10(d). In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

3.10.3.3.4.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant. The Plan Area is not at risk of flooding from tsunamis. Some portions of the Plan Area are within the one percent storm event (100-year) flood hazard area and areas around Walnut Creek are within the moderate flood risk area (Figure 3.10-3). As a result, in a flood hazard, the construction of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management could risk release of pollutants due to site inundation.

During construction of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities, stormwater BMPs would be implemented as required by federal, county, and local policies (see discussions previously under 10(a), 10(b), and 10(c)). These policies and regulations are designed specifically to minimize degradation of water quality from a variety of sources associated with stormwater runoff or construction-related pollutants. Other measures in the

SWPPP, if required, would include a range of stormwater control BMPs described previously to prevent silt runoff to storm drains or waterways. Therefore, impacts related to risk of release of pollutants due to project inundation in a flood hazard, tsunami, or seiche zone would be less than significant.

Operations

Less than Significant. Operations of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities would be subject to stormwater requirements established by regional WDRs, and local jurisdictions' water quality and stormwater ordinances. Furthermore, the greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities would be designed in accordance with the federal and local requirements and general plan policies to reduce impacts associated with flood risks.

Stormwater management facilities are specifically included as a category of Plan component as well as a required element for the other components when impervious surfaces are created. These could include a variety of configurations and types, described in Table 2.3-5 of Section 2.3.1.5, Stormwater Management. Options range from small (e.g., bioswales, permeable pavement, rainfall harvest) to large facilities (e.g., above or belowground detention basins, cisterns, treatment facilities). No in-water work would be included under the Plan, therefore projects under the Plan would not alter the washes or streams beyond changing the pathway by which rainfall enters those washes and streams (e.g., by capturing stormwater). The stormwater management strategies that are fundamental to the goals of the Plan would provide substantial water quality improvements through contaminant filtration and biological uptake or through storage of water for later treatment and use. Therefore, impacts related to risk of release of pollutants due to project inundation in a flood hazard, tsunami, or seiche zone are not expected to occur. Impacts would be less than significant.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.10.3.4 Impacts of Conceptual Design Projects

This section discusses potential impacts from the 10 conceptual designs discussed above. Each table below addresses the CEQA framework question for each conceptual design.

3.10.3.4.1 10(a). Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?

Construction

Less than Significant. The components proposed for all 10 conceptual design projects are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization. Since the 10 conceptual design projects are anticipated to result in greater than one acre of ground disturbance, they would require NPDES coverage under the NPDES Construction General

Permit as well as development and implementation of a SWPPP. There would be no additional impacts or impacts of greater severity than those already addressed in Section 3.10.3.3.1 (Plan Impacts: 10(a)).

Operations

Less than Significant. The components proposed for all 10 conceptual design projects are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization. All greenways constructed as part of a conceptual design would include stormwater BMPs as part of the *Design Guidelines and Standards*. Regulatory compliance ensures that impacts would be less than significant during operation. Some conceptual design projects are located along 303(d) listed waterbodies. The stormwater management facilities associated with projects implemented under the Plan would be beneficial to both 303(d)-listed and non-listed waterbodies. The listing status of the washes associated with the conceptual design projects is shown below in Table 3.10-6. There would be no additional impacts or impacts of greater severity than those already addressed in Section 3.10.3.3.1 (Plan Impacts: 10(a)).

Table 3.10-6. Analysis of Conceptual Design Examples for Operations Impacts from Risks of Flood Hazard, Tsunami, Seiche Zones, or Release of Pollutants Due to Inundation.

Conceptual Design Project	10(a). Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	Less than Significant. Alhambra Wash is a 303(d) listed waterbody (ammonia) (Figure 3.10-1). Water quality of Alhambra Wash would not be further degraded by construction or operation of the conceptual design project due to compliance with permitting requirements and operation of required stormwater BMPs. Therefore, impacts would be less than significant.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	Less than Significant. Big Dalton Wash is not a 303(d) listed waterbody. Water quality of Big Dalton Wash would not be degraded by construction or operation of the conceptual design project due to compliance with permitting requirements and operation of required stormwater BMPs. Therefore, impacts would be less than significant.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	Less than Significant. Eaton Wash is not a 303(d) listed waterbody. This conceptual design project would be located in the immediate vicinity of the Eaton Wash debris basin (Figure 3.10-2). Water quality of Eaton Wash would not be degraded by construction or operation of the conceptual design project due to compliance with permitting requirements and operation of required stormwater BMPs. Therefore, impacts would be less than significant.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i>	Less than Significant. Eaton Wash is not a 303(d) listed waterbody. Water quality of Eaton Wash would not be degraded by construction or operation of the conceptual design project due to compliance with permitting requirements and operation of required stormwater BMPs. Therefore, impacts would be less than significant.
San Dimas Wash at Arrow High School <i>City of Glendora</i>	Less than Significant. San Dimas Wash is not a 303(d) listed waterbody. This conceptual design project would be located approximately 1 mile downstream of an existing stormwater spreading ground (Figure 3.10-2). Water quality of San Dimas Wash would not be degraded by construction or

Conceptual Design Project	10(a). Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality?
	operation of the conceptual design project due to compliance with permitting requirements and operation of required stormwater BMPs. Therefore, impacts would be less than significant.
San Dimas Wash at Hollenbeck Park <i>City of Covina</i>	Less than Significant. San Dimas Wash is not a 303(d) listed waterbody. This conceptual design project would be located approximately 0.75 miles downstream of an existing stormwater spreading ground (Figure 3.10-2). Water quality of San Dimas Wash would not be degraded by construction or operation of the conceptual design project due to compliance with permitting requirements and operation of required stormwater BMPs. Therefore, impacts would be less than significant.
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i>	Less than Significant. San Jose Creek at this conceptual design location (Reach 1) is a 303(d) listed waterbody (ammonia, pH, total dissolved solids, indicator bacteria, and toxicity) (Figure 3.10-1). Water quality of San Jose Creek would not be further degraded by construction or operation of the conceptual design project due to compliance with permitting requirements and operation of required stormwater BMPs. Therefore, impacts would be less than significant.
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	Less than Significant. Thompson Creek at the Fairplex (San Jose Creek Reach 2) is a 303(d) listed waterbody (indicator bacteria) (Figure 3.10-1). Water quality of Thompson Creek would not be further degraded by construction or operation of the conceptual design project due to compliance with permitting requirements and operation of required stormwater BMPs. Therefore, impacts would be less than significant.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park West Covina</i>	Less than Significant. Walnut Creek is a 303(d) listed waterbody (pH, indicator bacteria, benthic community effects) (Figure 3.10-1). Water quality of Walnut Creek would not be further degraded by construction or operation of the conceptual design project due to compliance with permitting requirements and operation of required stormwater BMPs. Therefore, impacts would be less than significant.
Walnut Creek at Pocket Park <i>City of West Covina</i>	Less than Significant. Walnut Creek is a 303(d) listed waterbody (pH, indicator bacteria, benthic community effects) (Figure 3.10-1). Water quality of Walnut Creek would not be further degraded by construction or operation of the conceptual design project due to compliance with permitting requirements and operation of required stormwater BMPs. Therefore, impacts would be less than significant.

3.10.3.4.2 10(b). Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?

Construction

Less than Significant. The components proposed for all 10 conceptual design projects are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization. All 10 conceptual design projects would involve excavations of varying depths. In the event groundwater is encountered during construction, dewatering would be conducted on a

temporary basis during the construction phase and would not result in a loss of water that would substantially deplete groundwater supplies. The water supply for construction activities (e.g., dust control, concrete mixing, material washing) would most likely come from nearby hydrants and existing surface supplies and/or would be trucked to the conceptual design project site. There would be no additional impacts or impacts of greater severity than those already addressed in Section 3.10.3.3.2, Plan Impacts: 10(b).

Operations

Less than Significant. The components proposed for all 10 conceptual design projects are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization. All 10 conceptual design projects could create new impervious surfaces; however, the operation of these projects would not substantially interfere with groundwater recharge for the reasons described previously under Section 3.10.3.3.2, Plan Impacts: 10(b). There would be no additional impacts or impacts of greater severity than those already addressed above.

3.10.3.4.3 10(c). Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or through the addition of impervious surfaces, in a manner which would:

- i. result in substantial erosion or siltation on- or off-site;
- ii. substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site;
- iii. create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff;
- iv. impede or redirect flood flows?

Construction

Less than Significant. The components proposed for all 10 conceptual design projects are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization. All 10 conceptual design projects would involve ground disturbing activities that could temporarily alter stormwater drainage patterns and increase impervious surfaces. These conceptual design projects would require NPDES coverage under the NPDES Construction General Permit, as well as development and implementation of a SWPPP. If the final design of a conceptual design project includes ground disturbance less than one acre in size, a SWPPP would not be required, but construction BMPs would still be implemented. There would be no additional impacts or impacts of greater severity than those already addressed in Section 3.10.3.3.3, Plan Impacts: 10(c).

Operations

Less than Significant. The components proposed for all 10 conceptual design projects are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization. The 10 conceptual design projects would be implemented within the constraints of managing flood risk. This includes maintaining existing flood conveyance capacity and not deteriorating the capacity of any of the Plan Area washes. Impervious surface areas would be increased by operation

of the 10 conceptual design projects; however, these would be required to be addressed by the operation of suitable stormwater BMPs to capture, treat, or infiltrate all stormwater originating on these surfaces. There would be no additional impacts or impacts of greater severity than those already addressed in Section 3.10.3.3.3, Plan Impacts: 10(c).

3.10.3.4.4 10(d). In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?

Construction

Less than Significant. The components proposed for all 10 conceptual design projects are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization. These conceptual design projects would require NPDES coverage under the NPDES Construction General Permit as well as development and implementation of a SWPPP. There would be no additional impacts or impacts of greater severity than those already addressed in Section 3.10.3.3.4, Plan Impacts: 10(d).

Operations

Less than Significant. The components proposed for all 10 conceptual design projects are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization. Some conceptual design projects are located along 303(d) listed waterbodies. The stormwater management facilities associated with projects implemented under the Plan would be beneficial to both 303(d)-listed and non-listed waterbodies. All conceptual design projects are located in areas of minimal flood hazard with the exception of Walnut Creek at Pocket Park, which is located in a moderate flood hazard area. The listing status and flood hazard category of the washes associated with the conceptual design projects is shown below in Table 3.10-7.

All greenways constructed as part of a conceptual design would include stormwater BMPs as part of their design and would comply with the County MS4 Permit and its associated provisions, applicable low-impact development requirements from local jurisdictions, and local stormwater management programs, as applicable. Regulatory compliance ensures that impacts would be less than significant during operation. There would be no additional impacts or impacts of greater severity than those already addressed in Section 3.10.3.3.4, Plan Impacts: 10(d).

Table 3.10-7. Analysis of Conceptual Design Examples for Operations Impacts from Risks of Flood Hazard, Tsunami, Seiche Zones, or Release of Pollutants Due to Inundation.

Conceptual Design Project	10(d). In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	Less than Significant. This conceptual design project is located in FEMA Zone X (unshaded), which is defined as an area of minimal flood hazard above the 500-year flood level (Figure 3.10-3). As the project would not be located in a flood hazard area, there would be no risk of pollutant release due to project inundation.

Conceptual Design Project	<i>10(d). In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?</i>
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	Less than Significant. This conceptual design project is located in FEMA Zone X (unshaded), which is defined as an area of minimal flood hazard above the 500-year flood level. As the project would not be located in a flood hazard area, there would be no risk of pollutant release due to project inundation.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	Less than Significant. This conceptual design project is located in FEMA Zone X (unshaded), which is defined as an area of minimal flood hazard above the 500-year flood level (Figure 3.10-3). As the project would not be located in a flood hazard area, there would be no risk of pollutant release due to project inundation.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i>	Less than Significant. This conceptual design project is located in FEMA Zone X (unshaded), which is defined as an area of minimal flood hazard above the 500-year flood level (Figure 3.10-3). As the project would not be located in a flood hazard area, there would be no risk of pollutant release due to project inundation.
San Dimas Wash at Arrow High School <i>City of Glendora</i>	Less than Significant. This conceptual design project would be located downstream of an existing stormwater spreading ground (Figure 3.10-2). This conceptual design project is located in FEMA Zone X (unshaded), which is defined as an area of minimal flood hazard above the 500-year flood level (Figure 3.10-3). As the project would not be located in a flood hazard area, there would be no risk of pollutant release due to project inundation.
San Dimas Wash at Hollenbeck Park <i>City of Covina</i>	Less than Significant. This conceptual design project would be located downstream of an existing stormwater spreading ground (Figure 3.10-2). This conceptual design project is located in FEMA Zone X (unshaded), which is defined as an area of minimal flood hazard above the 500-year flood level (Figure 3.10-3). As the project would not be located in a flood hazard area, there would be no risk of pollutant release due to project inundation.
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i>	Less than Significant. This conceptual design project is located in FEMA Zone X (unshaded), which is defined as an area of minimal flood hazard above the 500-year flood level (Figure 3.10-3). As the project would not be located in a flood hazard area, there would be no risk of pollutant release due to project inundation.
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	Less than Significant. This conceptual design project is located in FEMA Zone X (unshaded), which is defined as an area of minimal flood hazard above the 500-year flood level (Figure 3.10-3). As the project would not be located in a flood hazard area, there would be no risk of pollutant release due to project inundation.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park West Covina</i>	Less than Significant. This conceptual design project is located in FEMA Zone X (unshaded), which is defined as an area of minimal flood hazard above the 500-year flood level (Figure 3.10-3). As the project would not be located in a flood hazard area, there would be no risk of pollutant release due to project inundation.
Walnut Creek at Pocket Park <i>City of West Covina</i>	Less than Significant. This conceptual design project is located in FEMA Zone X (shaded), which is defined as an area of moderate flood hazard between the limits of the FEMA 100- and 500-year floodplain (0.2 percent annual

Conceptual Design Project	<i>10(d). In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?</i>
	chance of flood) (Figure 3.10-3). With adherence to the <i>Design Guidelines and Standards</i> as well as compliance with permit requirements, there would be a less than significant risk of pollutant release due to project inundation.

3.11 Land Use and Planning

This section discusses the land use setting of the Plan Area; the applicable plans, laws and policies; and the potential impacts on land use and planning that would result from the project, as well as mitigation measures to reduce these impacts.

Table 3.11-1. Summary of Potential Impacts of the Plan on Land Use and Planning.

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the Plan:			
11(a). Physically divide an established community?			
Greenway Paths + Greenway Amenities	Less Than Significant	Less Than Significant	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less Than Significant	Less Than Significant	Operations: No mitigation
Greenway Paths + Safe Crossings	Less Than Significant	Less Than Significant	
Greenway Paths + Stormwater Management	Less Than Significant	Less Than Significant	
11(b). Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Significant and Unavoidable	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Significant and Unavoidable	Operations: No mitigation
Greenway Paths + Safe Crossings	Significant and Unavoidable	Significant and Unavoidable	
Greenway Paths + Stormwater Management	Significant and Unavoidable	Significant and Unavoidable	

3.11.1 Environmental Setting

There are multiple jurisdictions within the Plan Area, which include the District; the County of Los Angeles and 14 unincorporated county neighborhoods; and the following 33 cities: Alhambra, Arcadia, Azusa, Baldwin Park, Charter Oak, Citrus, Claremont, Covina, Diamond Bar, Duarte, El Monte, Glendora, Hacienda Heights, Industry, Irwindale, La Verne, La Puente, Monrovia, North El Monte, Pasadena, Pomona, Rosemead, San Dimas, San Gabriel, Sierra Madre, South El Monte, Temple City, Walnut, West Covina, Valinda, Vincent, and West Puente Valley. City of Pasadena is the largest city located in the SGV.

Each of these jurisdictions has independent planning documents (i.e., General Plans; Specific Plans) that guide development on lands within their jurisdictional boundaries. Land uses along and adjacent to the Plan Area are diverse, including open space, residential, commercial, mixed-use, public/institutional, transportation, agriculture, and industrial.

3.11.2 Regulatory Setting

3.11.2.1 Regional

3.11.2.1.1 Southern California Association of Governments Regional Comprehensive Plan

The SCAG is the federally mandated Metropolitan Planning Organization representing six counties: Los Angeles, Imperial, Orange, Riverside, San Bernadino, and Ventura. The SCAG Regional Comprehensive Plan addresses important regional issues such as housing, traffic/transportation, water, and air quality and serves as an advisory planning document to support and encourage local agencies in their planning efforts.

3.11.2.2 Los Angeles County

3.11.2.2.1 County of Los Angeles Low Impact Development Manual

The County of Los Angeles prepared the 2014 LID Standards (LA County Department of Public Works 2014) to comply with the requirements of the NPDES MS4 Permit for stormwater and non-stormwater discharges from the MS4 within the coastal watersheds of Los Angeles County (CAS004001, Order No. R4-2012-0175), referred to as the 2012 MS4 Permit (LA County Department of Public Works 2014). The LID Standards provide guidance for the implementation of stormwater quality control measures in new development and redevelopment projects in unincorporated areas of the County with the intention of improving water quality and mitigating potential water quality impacts from stormwater and non-stormwater discharges. The November 2013 LID Ordinance became effective December 5, 2013.

3.11.2.2.2 Los Angeles County General Plan

The Land Use Element of the General Plan (LA County Department of Regional Planning 2022) includes the following goals and policies that are applicable to the proposed Plan Area:

- Goal LU 3: A development pattern that discourages sprawl, and protects and conserves areas with natural resources and SEAs.
 - Policy LU 3.1: Encourage the protection and conservation of areas with natural resources, and SEAs.
- Goal LU 5: Vibrant, livable and healthy communities with a mix of land uses, services and amenities.
 - Policy LU 5.3: Support a mix of land uses that promote bicycling and walking, and reduce VMTs.
- Goal LU 9: Land use patterns and community infrastructure that promote health and wellness.
 - Policy LU 9.2: Encourage patterns of development that promote physical activity.

3.11.2.2.3 East San Gabriel Valley Area Plan

The Land Use Element of East San Gabriel Valley Area Plan (LA County Department of Regional Planning 2023b) includes the following goals and policies that are applicable to the proposed Plan Area:

- Goal LU-1: Growth is planned to facilitate sustainable patterns and is targeted to areas with existing and future transit opportunities and commercial services, to facilitate transit use and accessibility to everyday goods and services within walking distance.
 - Policy LU-1.2: Complete Communities. Foster a land use pattern that brings everyday needs and amenities within walking distance of residential neighborhoods, including public transit, parks, school, schools, commercial services, and other daily needs.
- Goal LU-3: Growth areas in ESGV that offer diversity and accessibility of land uses, preserving and providing a variety of housing options, jobs, services, and amenities within walking distance for residents and employees in ESGV.
 - Policy LU-3.1: Land Use Diversity. Enable more diverse land use pattern to meet the needs of residents and employees, including increased housing options, viable commercial uses, a variety of employment opportunities, ample parks and open space, and a range of superior community services and amenities to support the mental, physical, emotional, and social well-being of the community.
 - PolicyLU-3.29: Parks, Open Spaces, and Trails. Ensure that existing neighborhoods contain a diverse mix of parks and open spaces that are well maintained and connected by trails, pathways, transit, and bikeways and within walking distance of residents.
 - PolicyLU-3.30: Park Placement and Design Locate parks away from freeways and major sources of traffic, air pollution, and noise (e.g., major corridors). Design parks to be friendly for all ages, abilities, and cultures. Design parks with wide entrances and visibility from the street to promote safety.

3.11.2.2.4 West San Gabriel Valley Area Plan

The Land Use Element of West San Gabriel Valley Area Plan (LA County Department of Regional Planning 2023c) includes the following goals and policies that are applicable to the proposed Plan Area:

- Goal LU-1: Growth facilitates sustainable development patterns and is targeted to areas with existing and future transit access, proximity to commercial services and employment centers, and is aligned with supportive infrastructure and access to public facilities.
 - Policy LU-1.2: Increase land use diversity. Enable a diverse land use pattern to meet the needs of residents and employees, including increased proximity between housing and commercial uses, job centers, parks and open spaces, and community services and amenities to support the well-being of the community.
- Goal LU-5: A resilient and sustainable community that balances development with the conservation of natural resources.
 - Policy LU-5.7: Expand community recreation spaces. Prioritize the development of vacant land owned by Los Angeles County (County) for recreational uses and other facilities that enhance public well-being and community engagement.

- Policy LU-5.8: Expand parks, open spaces, and trails. Ensure that existing neighborhoods contain a diverse mix of parks and open spaces that are connected by trails, pathways, transit, and bikeways and within walking distance of residents.
 - Policy LU-5.9: Address park needs. Support additional resources to provide park space in areas identified as having high and very high park needs.
- Goal LU-7: An active transportation environment that enhances mobility and reduces reliance on personal vehicles.
- Policy LU-7.1: Enhance mobility in growth areas. Align investments in mobility with designated growth areas, prioritizing disadvantaged communities, to improve access to pedestrian pathways, public transit, and bicycle routes.

3.11.2.3 Incorporated Cities Within the Plan Area

The table below presents the policies related to land use and planning from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.11-2. Applicable Local City Policies Related to Land Use and Planning

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Land Use & Community Design</p> <p>Policy LU-2A: Promote the use of high-quality design, materials, landscaping, and pedestrian connections.</p> <p>Policy LU-3A: Foster new development that is consistent with the established land use type, intensity, character, and scale of the area.</p> <p>Goal LU-4 Focal points throughout the City that encourage diverse public places and foster economic growth.</p> <p>Policy LU-4B Enhance public buildings and parks by enhancing spatial definition, creating focal points, and providing landscaping and trees.</p> <p>Goal LU-7 Maintenance and development of vital, attractive, and functional corridors and activity nodes.</p> <p>Policy LU-7A: Enhance commercial areas, including façade improvements, enriched streetscapes and landscaping, unified signage programs, and improved pedestrian access.</p> <p>Goal LU-8 Maintenance and development of quality public spaces.</p> <p>Policy LU-8A Continue to implement the parkway tree planting plan to promote pedestrian activity by establishing well-designed streetscapes, active ground floor uses, and tree-canopied sidewalks that are unique to the neighborhood.</p> <p>Policy LU-8B Ensure that signs, lighting, and other potential nuisances are sensitive to existing residential neighbors.</p> <p>Policy LU-8C Enhance the open space network around corridors and activity nodes by providing paseos, courtyards, plazas, larger parkways, and landscaped setbacks.</p> <p>Policy LU-8D Integrate group gathering spaces, drought-tolerant landscaping, trees, picnic areas, and community gardens into existing and future public spaces.</p> <p>Policy LU-8E Investigate the potential for new parks, including in the I-710 right-of-way.</p> <p>Resources Element</p> <p>Goal R-6: Preservation of the cultural identity of Alhambra as a diverse residential and commercial city with distinct single-family neighborhoods.</p> <p>R-6C: Promote and maintain the unique history and architectural character of individual neighborhoods.</p>	<p>Municipal codes related to land use and planning resources relevant to the Plan Area can be found in Chapter 23.34: OS (Open Space) Zone.</p> <p>Under Section 23.34.010, the purpose of the OS Zone is provided, which states that in order to establish and provide outdoor recreational and open space resources, and to prevent inappropriate development of areas which should be regulated to provide for scenic, recreational, historic, conservation, aesthetic or public health and safety uses, the regulations set out in this chapter shall be applicable to all lots classified in the OS zone.</p> <p>('86 Code, § 23.34.010) (Ord. 4110, passed - -)</p> <p>Under Section 23.34.020, Permitted uses in the OS Zone include:</p> <ul style="list-style-type: none">• Public recreational uses such as parks, playgrounds and recreation areas, excepting buildings and structures thereon;• Golf courses and country clubs, excepting buildings and structures thereon;• Flood-control channels;• Public utility rights-of-way;• Creeks rivers, spreading grounds and other similar water courses. <p>('86 Code, § 23.34.020) (Ord. 4110).</p> <p>Under Section 23.82.020 (Land Use Analysis Program), all development projects for which an Environmental Impact Report (EIR) will be prepared shall be subject to the Land Use Analysis Program contained in the Los Angeles County Congestion Management Program ("CMP"), and shall incorporate into the EIR an analysis of the project impacts on the regional transportation system. The analysis shall be conducted consistent with the Transportation Impact Analysis (TIA) Guidelines contained in the most recent Congestion Management Program adopted by the Los Angeles County Metro-politan Transit Authority.</p> <p>('86 Code, § 23.82.020) (Ord. 4231, passed - -)</p>	No other applicable ordinances were identified.
Arcadia	<p>Land Use Element</p> <p>Goal LU-1: A balance of land uses that preserves Arcadia’s status as a Community of Homes and a community of opportunity.</p> <p>Policy LU-1.1: Promote new infill and redevelopment projects that are consistent with the City’s land use and compatible with surrounding existing uses.</p> <p>Policy LU-1.2: Promote new uses of land that provide diverse economic, social, and cultural opportunities, and that reinforce the characteristics that make Arcadia a desirable place to live.</p> <p>Policy LU-1.3: Encourage community involvement in the development review process.</p>	<p>Municipal codes related to land use and planning resources relevant to the Plan Area can be found in Article IX (Division and Use of Land) of the City of Arcadia Municipal Code, Chapter 1 (Development Code), Section 9102.09 (Public Facilities, Open Space, and Rail Right-of-Way Zones), Subsection 9102.09.010 (Purpose and Intent), and Subsection 9102.09.050 (Other Applicable Regulations).</p> <p>Under Section 9102.09 (Public Facilities, Open Space, and Rail Right-of-Way Zones), Subsection 9102.09.010 (Purpose and Intent), the purpose of the open space zone is provided, as it is intended to provide areas to be used for active and passive recreational activities, such as parks, golf courses, trails, and the Los Angeles County</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy LU-1.6: Establish consistency between the Land Use Plan and the Zoning Code.</p> <p>Policy LU-1.7: Encourage developments to be placed in areas that reduce or better distribute travel demand.</p> <p>Policy LU-1.8: Encourage development types that support transit and other alternative forms of transportation, including bicycling and walking.</p> <p>Policy LU-1.9: Establish incentives and development standards to encourage development of land uses that provide public amenities and/or desirable facilities or features, as well as private open space and recreation areas.</p> <p>Goal LU-2: A City with a distinctive and attractive public realm, with pedestrian-friendly amenities in commercial and mixed-use districts and single-family neighborhoods that continue to maintain Arcadia’s standard of architectural and aesthetic quality</p> <p>Policy LU-2.1: Ensure that trees planed in the public right-of way continue to be well maintained where they exist, are planted in areas where they are currently lacking, and encourage replacement of undesirable tree species in public rights-of-way.</p> <p>Policy LU-2.2: Emphasize the use of public spaces and design that are oriented toward the pedestrian and use of transit throughout the community.</p> <p>Policy LU-2.7: Through a combination of incentives to business owners and enforcement measures, attain compliance with signage standards and guidelines throughout the City, with a priority placed on high-traffic commercial corridors and gateway areas.</p> <p>Goal LU-9: Preservation of the City’s existing natural and recreation-oriented open space areas.</p> <p>Policy LU-9.3: Consider creative open space uses such as native landscaping, community gardens, or creation of wildlife habitat along rights-of-way or other public spaces.</p> <p>Goal LU-16: Regional coordination and cooperation that represent Arcadia’s interests at regional and statewide levels.</p> <p>Policy LU-16.4: Assist agencies providing services within the City of Arcadia, as well as agencies involved in land use, transportation, and the provision of public services and facilities within the City, to understand the importance of the physical components of Arcadia’s character, as well as the potential impacts of their actions on Arcadia.</p> <p>Policy LU-16.5: Foster systems of inter-jurisdictional communications and development review and provide that such review respects the values of adjacent municipalities and equitably distributes both the benefits and impacts associated with a given project.</p>	<p>Arboretum. This zone implements the General Plan Open Space-Outdoor Recreation designation. This section of the Development Code is intended to regulate the use and development of land within the City consistent with the City of Arcadia General Plan.</p> <p>Under Section 9102.09 (Public Facilities, Open Space, and Rail Right-of-Way Zones), Subsection 9102.09.050 (Other Applicable Regulations), in addition to the requirements contained in this Section 9102.09 (Public Facilities, Open Space, and Rail Right-of-Way Zones), regulations contained in the following Divisions may apply to development in PF, OS-OR, OS-RP, and RR zones:</p> <p>Division 2 - Zones, Allowable Uses, and Development Standards (Section 9102.11 Overlay Zones).</p> <p>Division 3 - Regulations Applicable to All Zones - Site Panning and General Development Standards.</p> <p>Division 4 - Regulations for Specific Land Uses and Activities.</p> <p>No regulations in Divisions 2-4 were found to be applicable to potential Plan projects.</p>	
Azusa	<p>Natural Environment Chapter</p> <p>Goal 2: Provide adequately sized and located parklands and recreational facilities to meet local needs, and to preserve the natural resources within and adjacent to Azusa.</p> <p>Policy 2.6 Future community and neighborhood park and recreation sites shall be located in accordance with the pending Parks and Recreation Master Plan.</p> <p>Policy 2.7 Provide for the inclusion of recreational trails, staging signage, and access in new and existing neighborhoods, commercial, and industrial developments, along the river, into the foothills, and along the rails that link with existing or planned trails.</p> <p>Policy 3.3 Develop park and recreation facilities that link trails and existing recreation facilities.</p>	<p>Municipal codes related to land use and planning resources relevant to the Plan Area can be found in Chapter 88.28 (Special Purpose Zones), Section 88.28.020 (Intent of Special Purpose Zones) and Section 88.28.030 (Special Purpose Zone Land Uses and Permit Requirements).</p> <p>Under Section 88.28.020 (Intent of Special Purpose Zones), individual special purpose zones are intended to be applied as follows:</p> <p>B) The OS (Open Space) Zone allowable land uses are: public recreation; limited residential development on legal lots of record with adequate access, buildable areas, and infrastructure; limited agricultural uses; and, where authorized by the general plan lodging, resort, and conference center facilities and related activities.</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 5: Provide a foothill and river recreation environment that enhances the enjoyment of the natural resources without resulting degradation.</p> <p>Economy and Community Chapter</p> <p>Goal 11: Create a unique place with high quality of life for all its residents.</p> <p>Policy 11.4 Invest in community amenities such as parks, community centers, cultural centers, etc.</p> <p>Built Environment Chapter</p> <p>Policy 7.5 Permit, where appropriate, greenbelts, trail connections, and landscaped open space as secondary uses in and/or along flood control channels and storm drainage rights-of-way.</p> <p>Goal 8: Preserve and provide open spaces for City’s residents that provide visual amenity, recreational opportunities, protect environmental resources, and protect the population from natural hazards.</p> <p>Policy 8.7 Work with other public, quasi-public, and private agencies to develop open space and recreation amenities (trails, paths, parks, trail heads, etc.) along the river and River Parkway.</p> <p>Policy 8.8 Seek the introduction of natural habitat and pocket parks into neighborhoods.</p> <p>Policy 8.10 Provide for the development of additional open spaces for recreational purposes in accordance with the Parks Master Plan.</p> <p>8.11 Provide for the acquisition and development of parks and recreational lands and facilities in accordance with the Parks Master Plan.</p> <p>8.12 Protect the canyons, foothills, and river as open space and environmental resources.</p>	<p>C) The REC (Recreation) Zone is applied to public park and recreation sites and areas within the city. The REC zoning district is consistent with and implements the recreation land use classification of the general plan.</p> <p>(Ord. No. 11-O16, § 3, 10-24-11)</p>	
Baldwin Park	<p>Land Use Element</p> <p>Goal 1 Maintain a balanced mix and distribution of land uses throughout Baldwin Park.</p> <p>Goal 2 Accommodate new development that is compatible with and complements existing conforming land uses.</p> <p>Goal 3 Provide for the revitalization of deteriorating land uses and properties.</p> <p>Policy 3.1 Encourage and continue use of redevelopment activities, including provision of incentives for private development, joint public-private partnerships, and public improvements, in designated Redevelopment Project Areas.</p> <p>Policy 3.7 As part of the neighborhood beautification efforts, provide street trees and landscaping in the public rights-of-way.</p> <p>Goal 18 Minimize the impact of new development on regional water quality.</p> <p>Policy 18.1 Evaluate development projects for compliance with NPDES requirements, aiming toward reducing pollutant loads in stormwater runoff, minimizing impervious surface areas, and minimizing peak flows.</p> <p>Urban Design Element</p> <p>Examine potential transit opportunities which could be developed to link this area with the Metrolink station.</p>	<p>Municipal codes related to land use and planning resources relevant to the Plan Area can be found in Title XV (Land Usage), Chapter 153 (Zoning Code), Section 153.060 (Open Space Zone).</p> <p>Under Section 153.060 (Open Space Zone), the Open Space Zone is established to maintain open space areas in the city for recreational opportunities and to prevent incompatible development in areas that should be preserved or regulated for scenic, recreational, conservation, aesthetic or health and safety purposes.</p> <p>(A) Permitted uses. The following uses are permitted within the Open Space Zone:</p> <ul style="list-style-type: none">(1) Public school buildings and associated facilities;(2) Public recreational uses;(3) Public utility rights-of-way;(4) Flood control channels and similar flood control structures; and(5) Creeks, rivers, spreading grounds and other similar water courses. <p>(B) Conditional uses. The following uses may be permitted within the Open Space Zone upon issuance of a conditional use permit obtained pursuant to subchapter 153.210, Administrative Procedures:</p> <ul style="list-style-type: none">(1) Agricultural and horticultural cultivation;(2) Private recreational uses; and	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	Goal 5 Promote urban forestry concepts to enhance the environmental conditions in the city by providing shade, shelter from inclement weather, improved air quality, and aesthetic improvements to neighborhoods.	(3) Off-street parking in conjunction with an adjacent commercial or industrial use. (Ord. 1346)	
Claremont	<p>Land Use, Community Character, and Heritage Preservation Element</p> <p>Goal 2-1 Make Claremont a model for the application of sustainable development practices.</p> <p>Policy 2-1.1 Encourage sustainable development that incorporates green building best practices and involves the reuse of previously developed property and/or vacant sites within a built-up area.</p> <p>Policy 2-1.3 Encourage development that incorporates green building practices to conserve natural resources as part of sustainable development practices.</p> <p>Goal 2-2 Preserve the City's distinctive residential character by maintaining land use patterns that strengthen our neighborhoods.</p> <p>Policy 2-2.2 Promote neighborhood identity and conservation of individual neighborhood character.</p> <p>Goal 2-3 Accommodate a range of land uses that meet the economic, environmental, educational, and social needs of the City while remaining sensitive to the community's residential character.</p> <p>Policy 2-3.1 Allow for institutional land uses that benefit City residents and provide employment.</p> <p>Policy 2-3.3 Develop and apply standards specific to areas designated on the Land Use Plan as Mixed Use to help ensure compatibility of the different land uses and minimize impacts to surrounding neighborhoods.</p> <p>Goal 2-4 Protect, preserve, and manage the City's diverse and valuable open space, water, air, and habitat resources.</p> <p>Policy 2-4.1 Encourage the preservation of different types of open spaces.</p> <p>Policy 2-4.2 Continue to place a high priority on acquiring and preserving open space lands in Claremont's hillside areas for purposes of recreation, habitat protection and enhancement, fire hazard management, public safety purposes, water resource protection, and overall community benefit.</p> <p>Policy 2-4.3 Require creative and attractive open space to be incorporated into development projects, as appropriate.</p> <p>Policy 2-4.4 Provide a high standard of maintenance and quality of construction of facilities and grounds in public parks and City-maintained landscaped areas, taking into account the need to conserve water and energy.</p> <p>Goal 2-6 Create activity nodes as important destination areas, with an emphasis on public life within the community.</p> <p>Policy 2-6.2 Provide pedestrian amenities, traffic-calming features, plazas and public areas, attractive streetscapes, shade trees, lighting, and retail stores at activity nodes.</p> <p>Goal 2-8 Establish thresholds and entryways to our neighborhoods and streets that make positive impressions of our neighborhoods.</p> <p>Policy 2-8.1 Encourage the use of a variety of native materials to demarcate thresholds and boundaries through a change in color, material, and texture.</p> <p>Goal 2-10 Maintain and expand where possible the system of neighborhood connections that attach neighborhoods to larger roadways.</p>	<p>Municipal codes related to land use and planning resources relevant to the Plan Area can be found in Chapter 16.072 (P/RC Park/Resource Conservation District) of the Claremont Municipal Code, Section 16.072.000 (Intent), and Chapter 16.303 (Conditional Use Permits), Section 16.303.010 (Conditional uses), and Chapter 16.075 (Wilderness Park District), Section 16.075.010 (Permitted Uses).</p> <p>Under Chapter 16.072 (P/RC Park/Resource Conservation District), Section 16.072.000 (Intent), the purpose of the Parks/Resource Conservation (P/RC) District is described, as to assure open space areas for uses such as public parks, outdoor recreation, cemetery uses, protection of natural habitat, preservation of cultural resources, management of groundwater resources, protection and conservation of mineral resources, and the protection of the public health and safety due to hazardous or special condition. No building, structure, or land shall be used, and no building or structure shall be erected, altered, or enlarged, in the P/RC District except in accordance with the provision of this chapter.</p> <p>(08-05; 12-01)</p> <p>Chapter 16.075 (Wilderness Park District), Section 16.075.010 (Permitted Uses), properties in the WP District shall remain essentially undeveloped. Only the following uses are permitted in the WP Wilderness Park District:</p> <p>A. Low intensity, outdoor recreation activities such as hiking, running, mountain bike riding, horseback riding, photography, bird watching, and picnicking.</p> <p>B. Conservation projects, student research, or education programs involving the study of nature, ecology, or earth sciences.</p> <p>C. Outdoor programs, lectures, and organized community activities.</p> <p>D. Unobtrusive ancillary facilities for use by the public such as benches, shade structures, informational signs, and trails approved by the City Council.</p> <p>E. Parking areas for park visitors, restroom buildings, fencing, trash receptacles, information kiosks, message boards, and other ancillary facilities, located in staging areas adjacent to park entrances and at the beginning of trails.</p> <p>F. Vegetation management as determined necessary by the City and County of Los Angeles Fire Department (LACFD) to reduce hazardous wildfire conditions.</p> <p>(08-05)</p> <p>Under Chapter 16.303 (Conditional Use Permits), Section 16.303.010 (Conditional uses), uses specified in this title as requiring the approval of a conditional use permit may be permitted in said districts subject to the provisions of this chapter. As stated in section B) below, parks are a conditionally permitted use in all land districts of Claremont.</p> <p>B. Conditional Uses in All Land Use Districts</p> <p>The following uses may be permitted in any land use district, except if otherwise noted, subject to the provisions of this chapter:</p> <p>1. Government offices;</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 2.10-3 Implement the bicycle plan contained in the Community Mobility Element.</p> <p>Policy 2.10-4 Look for opportunities to provide connections along easements and other areas where vehicles are not permitted.</p> <p>Goal 2-15 Revitalize and enhance the Foothill Boulevard Corridor into a place that supports walking, bicycling, transit, and sustainable economic development.</p> <p>Policy 2-15.1 Provide new opportunities in the Foothill Boulevard Corridor for mixed-use residential, retail, commercial, and civic uses.</p> <p>Policy 2-15.2 Make Foothill Boulevard a distinct place that lets people know when they have entered or exited the City.</p>	<p>2. Public utility structures;</p> <p>3. Public parks.</p> <p>(08-05)</p>	
Covina	<p>Land Use Element</p> <p>Goal 1 A physical environment that provides for the housing, employment, business, service, recreational, social, educational, cultural, and entertainment needs of and maintains and enhances a high quality of life for its residents.</p> <p>Objective 1 A climate where moderate residential, commercial, and industrial development and redevelopment are accommodated.</p> <p>Policy C.4.2 Preserve existing parklands and discourage possibly incompatible land uses or inappropriate encroachments upon parks and open space resources.</p> <p>Policy 4.3 Consider developing additional parks of all types and sizes at various areas, with an emphasis placed on locating new facilities in the eastern and western portions of the City and in neighborhoods in and around medium- to high-density developments.</p> <p>Policy 4.5 Ensure that recreational areas and open space I large residential and nonresidential developments are ample in terms of quantity and location, and where feasible and practical, accessible to the general public.</p> <p>Objective 2 An adequate amount and distribution of and compatibility of adjacent land uses throughout the community.</p>	<p>Municipal codes related to land use and planning resources relevant to the Plan Area can be found in Title 17 (Zoning), Chapter 17.28 RD Residential Zone (Multiple-Family), Section 17.28.010 (Intent and purpose), and Section 17.28.030 (Land use regulations permitted and conditionally permitted uses).</p> <p>Under Section 17.28.010 (Purpose), the purpose of the RD multiple-family zone is to do the following:</p> <ol style="list-style-type: none">1. Preserve, protect, and enhance the character of residential neighborhoods; and2. Provide a physical environment that contributes to and enhances the quality of life of city residents; and3. Ensure adequate light, air, privacy, and open space for each dwelling; and4. Ensure that the scale and design of new development and alterations to existing structures are compatible with surrounding homes and appropriate to the physical characteristics of the site and the area where the project is proposed; and5. Provide an adequate supply and range of housing types and prices that will accommodate the city’s future population growth; and6. Ensure the provisions of public services and facilities needed to accommodate planned population densities. <p>(Ord. 21-09 § 4 (Exh. A), 2021.)</p> <p>Under Section 17.28.030 (Land use regulations permitted and conditionally permitted uses), the activities of all land uses must conduct wholly inside the building premises unless otherwise permitted under this section or Chapter 17.62 CMC (Conditional Use Permits); public parks are a fully permitted use under this zoning designation.</p> <p>(Ord. 21-09 § 4 (Exh. A), 2021.)</p>	<p>No other applicable ordinances were identified.</p>
El Monte	<p>Community Design Element</p> <p>Goal CD-1 An attractive and unified community identity for El Monte that affirms its diverse heritage of multicultural influences, physical and natural environment, and collective vision for the future.</p> <p>Policy CD-1.8 Emerald Necklace. Recreate the Emerald Necklace of multi-use trails and parks along the San Gabriel and Rio Hondo rivers to provide parks, open space, and recreational amenities.</p> <p>Goal CD-2 Attractive commercial corridors exemplified by consistency of hardscape, landscaping, signage, sidewalks, and other treatments appropriate to their context to foster a pleasant driving and pedestrian experience.</p>	<p>Municipal codes related to land use and planning resources relevant to the Plan Area can be found in Chapter 17.44 (Public and Quasi-Public Zoning Districts), Section 17.44.010 (Summary and purpose of zoning districts) and Section 17.44.030 (Development standards).</p> <p>Under Section 17.44.010 (Summary and purpose of zoning districts), the Open Space (OS) Zoning District is consistent with the General Plan Land Use Designation of Open Space and refers to areas designated for parks, open space, linear parks, trails, and other similar recreational uses. It includes areas as diverse as Peck Water Conservation Park, the Emerald Necklace, pocket parks, plazas, and other gathering places.</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy CD-2.1 Streetscape Intent. Balance the achievement of the functional, design, pedestrian, and aesthetics goals and policies for commercial corridors as set forth in the Circulation and Parks and Recreation Elements.</p> <p>Policy CD-2.6 Pedestrian Design. Improve pedestrian safety and comfort along major corridors by incorporating wider sidewalks, appropriate landscape buffers and canopy trees, and other pedestrian amenities to facilitate a walkable street environment.</p> <p>Policy CD-2.10 Landscaped Medians. Provide medians with landscaping where the right-of-way exists; where it does not exist, condition the improvement of projects on the provision of right-of-way.</p> <p>Goal CD-3 A green City with beautifully landscaped corridors, residential streets, commercial areas, developments, and public areas that are symbolically and physically encircled by an Emerald Necklace of parks and open space.</p> <p>Policy CD-3.1 Public Rights-of-Way. Beautify major transportation corridors, freeway easements, utility easements, railroad rights-of-way, schools, parks, and public facilities with a forest of canopy trees.</p> <p>Policy CD-3.4 Greenways. Place greenways/medians, dotted with miniparks where feasible, and appropriate landscaping along major corridors and in commercial areas and residential neighborhoods.</p> <p>Policy CD-3.6 Emerald Necklace. Create an Emerald Necklace of multi-use trails and parks along the Rio Hondo and San Gabriel Rivers that offer ample greenery, trees, and open space.</p> <p>Policy CD-3.7 Public Parks. Develop a network of community and neighborhood parks within each residential neighborhood, with smaller green areas in commercial and industrial areas.</p> <p>Goal CD-5 A vibrant Downtown that is an attractive, accessible and pedestrian friendly center noted for its wide range of quality shopping, entertainment, and cultural and recreational amenities.</p> <p>Policy CD-5.7 Linkages. Establish a stronger link between the cultural center, Main Street, transit district, governmental center, and surrounding neighborhoods of the El Monte Downtown by incorporating unifying streetscape improvements along key roadways, an interconnected and coordinated system of walkways, and improvements to the Emerald Necklace of multi-use trails.</p> <p>Policy CD-5.8 Streetscape. Develop a comprehensive streetscape improvement plan that uniquely defines the Downtown El Monte experience, improves the pedestrian experience, and helps make it a special place. Incorporate:</p> <ul style="list-style-type: none">• Street landscape—parkways and planters along sidewalk frontages, with the highest intensity in core pedestrian areas.• Street trees—different street trees to denote the Downtown, provide shade for walking, and beautify the streetscape.• Sidewalk and crosswalk improvements—distinctive paving materials or treatment and sidewalk pullouts at intersections. <p>Policy CD-6.11 Public Parks. Create a series of interconnected public parks that encourage pedestrian interest and activity, equipped with plazas, public art, and fountains, statutes, and other features; link the public parks across Telstar Avenue or major streets through a series of landscaped paths that allow for pedestrian movement.</p>	<p>(Ord. No. 3011, § 3(Exh. B), 6-21-2022; Ord. No. 3023, § 4.B (Exh. B), 5-2-2023)</p> <p>Under Section 17.44.030 (Development standards) this zoning district include setback rules for OS Zoning as follows:</p> <ul style="list-style-type: none">• Street Yard. There shall be a minimum setback of 10 (10) feet for all structures and parking areas. The setback shall be landscaped and maintained with an underground irrigation system.• Public Facilities. Structures associated with a public facility shall comply with the variable height requirements as outlined in Section 17.40.010 (Height Exceptions and Restrictions) of this title. <p>(Ord. No. 3011, § 3(Exh. B), 6-21-2022; Ord. No. 3023, § 4.B (Exh. B), 5-2-2023)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>CD-6.16 Pedestrian Path System. Create a coordinated system of paths that weave through each district and connect districts separated by internal streets according to the following principles:</p> <ul style="list-style-type: none">• Line paths with public art, small seating areas, street furniture, and pedestrian-scaled lamps that lend an air of informality.• Paths should be a combination of linear and nonlinear configurations, lending visual interest for the pedestrian.• Paths should link to major plazas and gathering places; avoid creating paths that simply follow building property lines.• Include pavement colorings, treatments, and detailed materials (not undifferentiated concrete) that lend a domestic quality while still clearly demarcating high quality nonresidential uses.• Include pedestrian-scaled monument signage and wayfaring of quality materials and finishes that withstand weather. <p>Goal CD-9 Quality neighborhoods evidenced by distinct identities; focal points that provide recreation and social opportunities; attractive streetscapes that accommodate autos, pedestrians, and cyclists; and attractive and well-designed residential projects that improve property values.</p> <p>CD-9.5 Streetscapes. Connect residences, schools, parks, and activity centers with streets that accommodate autos, pedestrians, bicyclists, and, in appropriate areas, equestrian uses. Streetscapes should incorporate the following design features:</p> <ul style="list-style-type: none">• Landscaped parkways or medians where adequate right-of way exists for canopy street trees, grass landscape, and shrubs to provide shade and a pleasant walking experience.• Continuous sidewalks of sufficient width to accommodate seniors, people with disabilities, and families with children.• Pedestrian-level and human-scaled amenities, including benches, lighting, signage, etc.• Consider traffic-calming measures such as the actual or visual narrowing of streets through widened parkways, canopy trees, and bulb-out curbs at key intersections.• Bicycle lanes equipped with large enough right-of-way to provide a safety buffer for bicyclists.• Equestrian amenities, where appropriate, such as alternative sidewalk design, rolled curb, and other equestrian amenities. <p>Policy CD-9.6 Parks and Open Space. Consistent with policy direction set forth in the Parks and Recreation Element, provide adequate parks and open space within each neighborhood planning area, with an emphasis on placing parks near to residences through implementation of:</p> <ul style="list-style-type: none">• Joint-use park and school facilities• Greenways along key streets• Emerald Necklace improvements• Community forest along public rights-of-way• Community gardens where possible <p>Land Use Element</p> <p>Policy LU-3.2 Connections. Strengthen connections between the diverse residential and nonresidential districts in the community through streetscape design, provision of</p>

	<p>open space, and other improvements that create a cohesive identity for the community.</p> <p>Policy LU-3.3 Green Infrastructure. Utilize landscaping, trees, parkways, paths and equestrian trails, such as the Emerald Necklace, to define and enhance the identify of places, create a pedestrian friendly environment, and link the various districts throughout El Monte.</p> <p>Goal LU-4 A complementary balance of land uses that provide adequate opportunities for housing, economic activity, transportation, parks, and recreation to support an exemplary quality of life and sustainable community.</p> <p>Policy LU-4.3 Parks and Open Space. Provide sufficient quality parks, open space, greenways, trails, and recreational facilities that meet community needs through the implementation of the goals and policies set forth in the Parks and Recreation Element.</p> <p>Goal LU-9 Recreate vibrant commercial corridors with the introduction of a mix of higher density residential uses, sensitively integrated commercial uses concentrated at critical nodes, and tree-lined streetscapes that are aesthetically pleasing, encourage walking, and inspire community pride.</p> <p>Policy LU-9.5 Bicycle Lanes/Walkways. Create a Class 2 bicycle lane along Durfee Road, from the south City limits to Ramona Boulevard to provide an exclusive or semi-exclusive use of bicycles; also line the street with complete sidewalks to encourage pedestrian activity.</p> <p>Policy LU-9.6 Streetscape Program. Establish a comprehensive streetscape and landscape program for corridors that include right-of-way improvements to street trees, street lighting, streetscape elements (sidewalk/crosswalk paving, street, furniture), and public signage.</p> <p>Goal PR-3 An Emerald Necklace that encircles the community with parks and multiuse biking, walking, equestrian trails; restores open space and habitat; protects the watershed; and provides multiple recreational and health benefits.</p> <p>Policy PR-3.1 Parks. Create a variety of scales of parks, including miniparks, neighborhood parks, joint-use facilities, and other recreational resources linked to the Emerald Necklace.</p> <p>Policy PR-3.3 Trails. Develop an interconnected network of multiuse trails and related facilities for horseback riding, bicycling, hiking, and jogging in the washes and along the rivers of the Emerald Necklace.</p> <p>Policy Goal PR-4 A lush network of greenways, linear parks, and a community forest that enhances property values, public health, aesthetics, and quality of life.</p>		
Glendora	<p>Land Use Element</p> <p>Goal LU-1: Balanced open space, residential and commercial development citywide.</p> <p>LU-1.3 Consider opportunities for open space acquisition.</p> <p>Policy LU-1.4 Establish open space conservation areas and identify compatible uses such as natural resource conservation, hiking and passive recreation.</p> <p>Goal LU-16: Expanded access to community gathering places.</p> <p>Policy LU-16.2 Promote the provision of usable open space as part of infill housing development.</p> <p>Policy LU-16.3 Establish more accessibility with the South Hills and Wilderness Park through the provision of pedestrian and bike linkages.</p>	<p>Municipal codes related to land use and planning resources relevant to the Plan Area can be found in the City of Glendora Code of Ordinances, Chapter 21.06 (Special Use Zones), Section 21.06.050 (Open space—Natural zone).</p> <p>Under Section 21.06.050 (Open space—Natural zone), the purpose and permitted spaces of the open space—natural zone are as follows:</p> <p>A) Purpose:</p> <p>(1) conserve and manage natural resources which may include biological resources, watercourses, hills, canyons, major rock outcroppings, etc.;</p> <p>(2) protect the public health and safety by including areas requiring management due to hazardous or special conditions such as fire, flood and earthquake fault; and</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy LU-16.4 Encourage the use of temporary vacant land for transitional open space uses.</p> <p>Goal LU-18: Compatibility of adjacent land uses.</p> <p>LU-18.3 Encourage land uses that are complimentary in form and function with existing development.</p> <p>LU-20.3 Encourage the development of usable pedestrian space within future developments, including urban plazas, pocket parks and other pedestrian amenities.</p> <p>Policies LU-23.1 Identify transition areas that buffer residential development from nonresidential uses through the incorporation of landscaping, open space and other design features.</p>	<p>(3) provide outdoor recreation including areas of scenic, historic or cultural value. The OSN zoning designation shall only be applied to public and quasi-public property; provided, however, that a private property owner may request and be considered for a change of zone to OSN.</p> <p>B) Permitted Uses:</p> <p>All property located in an OSN zone shall be left in its natural, wilderness state except for the following uses: riding and hiking trails, picnic and playground areas, flood control structures and facilities, and utility substations and related equipment and structures.</p> <p>(Ord. 1637 § 3, 1995)</p>	
Industry	<p>Land Use Element</p> <p>Goal LU-5 High quality and well-maintained properties, buildings, and infrastructure that enhance property values and encourage additional public and private investment.</p> <p>Policy LUS-1 Maintain a high-quality appearance and functionality of public lands, properties, and rights-of-way, including sidewalks, street trees/landscaping, curbs, and street lighting.</p> <p>Policy LUS-2 Design new and, when necessary, retrofit existing streets and public rights-of-way to maintain a high quality, professional appearance.</p> <p>Resource Management Element</p> <p>RM3: Open space areas that are well maintained, serve the target population, and function as a citywide amenity.</p>	<p>Municipal codes related to land use and planning resources relevant to the Plan Area can be found in the City of Industry Code of Ordinances, Chapter 17.26, (Recreation and Open Space Zone), Section 17.26.020 (Uses permitted), Section 17.26.030 (Development standards), and Chapter 17.24 (Planned Development Overlay Zone).</p> <p>Under Section 17.26.020 (Uses Permitted), property zoned ROS may be used for the following uses subject to the issuance of a conditional use permit pursuant to Chapter 17.48 (Conditional Use Permits/Exceptions):</p> <ol style="list-style-type: none">1. Golf courses, driving ranges, course maintenance facilities, golf club houses;2. Parks, public and private;3. Resorts, including spas, dining facilities, restaurants, gyms, pro-shops, conference facilities, recreational amenities, and other similar uses;4. Equestrian facilities;5. Indoor and outdoor recreational facilities;6. Exposition centers;7. Commercial nurseries;8. Interpretive centers;9. Reservoir. <p>B. Approval of a development plan pursuant to Section 17.36.020, Development plan review required, will be required for any structures and physical improvements deemed significant by the planning director.</p> <p>C. Trails, bikeways, and similar minor improvements do not require separate planning approvals but, if included, will be reviewed as part of the conditional use permit and/or development plan application process. Stand-alone proposals for trails and bikeways require approval by the city engineer.</p> <p>D. New hotels are not permitted except as allowed pursuant to Chapter 17.24, Planned Development Overlay Zone (P-D Overlay).</p> <p>E. Housing units existing as of the effective date of the ordinance codified in this chapter (February 21, 2015) are permitted and considered legal conforming uses. The like-for-like replacement of, enlargement of, and improvements/modifications to existing housing may be permitted with approval of a development plan short-form application.</p> <p>(Ord. 786 § 3, 2015)</p>	No other applicable ordinances were identified.

	<p>Action 4.1d: Facilitate non-motorized connectivity to key destinations in the city through bicycle- and pedestrian-oriented wayfinding signage.</p> <p>Action 4.1e: Improve access to the Rio Hondo River Trail by opening additional access points and positioning wayfinding between the trail and key destinations in Montebello.</p> <p>Action 4.1f: Require new development projects to provide adequate bicycle and pedestrian access, plus the provision of safe and secure bicycle parking.</p> <p>Action 4.1g: Enhance the pedestrian and bicycle experience in the Downtown Specific Plan area and other key destinations through amenities such as wide sidewalks, low-stress bikeways, landscaping, pedestrian-oriented lighting, high-visibility crosswalks, and other improvements.</p> <p>Action 4.1h: Establish citywide mode split and VMT targets as a means to reduce traffic congestion, support healthy communities, and improve accessibility by transit-dependent populations.</p> <p>Our Natural Community</p> <p>P1.1 Enhance air and water quality, increase public green space through the integration of green infrastructure.</p>		
Pasadena	<p>Open Space and Conservation Element</p> <p>The Open Space and Conservation Element of the General Plan was adopted by the City Council on January 23, 2012. The Open Space and Conservation Element provides a blueprint for natural open space and conservation.</p> <p>Open Space Goal – Preserve, Acquire and Create Open Space</p> <p>Objective: Preserve currently zoned open spaces, natural open spaces, hillsides, viewsheds, watersheds and recreational areas.</p> <p>Open Space Goal – Develop Access & Connectivity for Wildlife and People</p> <p>Objective: Ensure that all Pasadena residents have access to information about where open spaces are located and the transportation opportunities and options for getting to them.</p> <p>Open Space Goal – Preserve, Restore and Maintain the Eaton Canyon Corridor and the Arroyo Seco</p> <p>Objective: Preserve, restore and maintain the natural character of the Eaton Canyon Corridor and the Arroyo Seco as self-sustaining healthy ecosystems of plants and animals. Their natural character will continue to inspire people, as it has throughout time.</p> <p>Objective: Promote responsible human interfaces with these unique natural environments in open space planning.</p> <p>Open Space Goal – Welcome and Value the Importance of Citizen Participation</p> <p>Objective: Citizen participation shall play a major role in all phases of open space planning.</p> <p>Objective: The City shall provide the public with timely information regarding open space planning and decision making.</p> <p>Land Use Element</p>	<p>Municipal codes related to land use and planning resources relevant to the Plan Area can be found in Title 17 (Zoning Code), Chapter 17.26 (Purpose and Applicability of Special Purpose Zoning Districts), Section 17.26.010 (Purpose of Chapter), Section 17.26.020 (Purpose and Applicability of Special Purpose Zoning Districts), and Section 17.26.040 (Special Purpose District General Development Standards).</p> <p>Under Chapter 17.26 (Purpose and Applicability of Special Purpose Zoning Districts), Section 17.26.010 (Purpose of Chapter). This Chapter lists the land uses that may be allowed within the special purpose zoning districts established by Section 17.20.020 (Zoning Map and Districts), determines the type of land use permit/approval required for each use, and provides basic standards for site layout and building size.</p> <p>(Ord. No. 7411 , § 2, 4-3-2023; Ord. 7321 § 6, 2018; Ord. 7277 §§ 2—4, 2016)</p> <p>Under Section 17.26.020 (Zoning Map and Districts), the type of land use permit/approval required for each use is listed. The OS (Open Space) District is applied to sites with open space, parks, and recreational facilities of a landscaped, open character having a minimum contiguous site area of two acres. The OS zoning district is consistent with and implements the Open Space land- use designation of the General Plan.</p> <p>(Ord. No. 7411 , § 2, 4-3-2023; Ord. 7321 § 6, 2018; Ord. 7277 §§ 2—4, 2016)</p> <p>Under Section 17.26.040 (Special Purpose District General Development Standards), subdivisions, new land uses and structures, and alterations to existing land uses and structures in all special purpose districts except PD (Planned Development), shall be designed, constructed, and/or established in compliance with the following requirements, the development standards (e.g., landscaping, parking and loading, etc.) in Article 4 (Site Planning and General Development Standards), and all other</p>	<p>Green Space, Recreation and Parks Element and Master Plan:</p> <p>Objective 1 – Stewardship of the natural environment: encourage and promote the stewardship of Pasadena’s natural environment, including water conservation, clean air, natural open space protection, and recycling.</p> <p>Policy 1.2 – Protect Open Spaces: Protect natural open areas, watersheds, and environmentally sensitive areas such as Hahamongna, Eaton Canyon, riparian areas, and other open spaces.</p> <p>Objective 2 – Preservation and protection of the Arroyo Seco and adjacent open space areas: recognize the importance to Pasadena of the history, cultural resources, and unique character of the Arroyo Seco, and conserve and enhance these assets.</p> <p>Policy 2.3 – Balance recreation with environmental protection: Implement the Arroyo Seco Master Plans by balancing recreational opportunities with protection and restoration of the ecosystem, while recognizing the important existing water resources and flood management functions of the area.</p> <p>Policy 2.4 – Promote multi-faceted use of the Arroyo: Through implementation of the Arroyo Seco Master Plans, continue to maintain and enhance the area as a prime resource for quality of life of Pasadena residents.</p> <p>Objective 7 – Provide access to Parks: New projects should be planned so that neighborhood recreational needs of its future citizens are largely met on site or nearby and so that future facilities are integrated with, provide support for, and enhance the effectiveness of the overall recreation system in Pasadena. Growth and expansion in a particular area should be accompanied by commensurate growth and expansion in recreation facility, programming capacity, and natural open space capacity.</p> <p>Policy 7.2 – Access to open spaces within projects: Projects should be connected to the public realm through vistas, physical access, and/or sightlines. Provide an adequate total quantity and equitable distribution of public or publicly accessible open spaces throughout the City.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 2.8: Equitable Distribution of Community Devices and Amenities. Ensure that parks and recreation facilities, community services, and amenities are equitably distributed and accessible throughout the City.</p> <p>Policy 2.13: Parks. Maintain existing and develop new parks and recreational facilities within walking distance of residents, supporting healthy lifestyles.</p> <p>Goal 5. Pedestrian-Oriented Places. Development that contributes to pedestrian vitality and facilitates bicycle use in the Central District, Transit Villages, Neighborhood Villages, and community corridors.</p> <p>Policy 5.1: Walkable City. Maintain and improve sidewalks and pedestrian paths in Pasadena’s neighborhoods and business districts by incorporating street trees, landscaping, and pedestrian-oriented amenities.</p> <p>Policy 5.2: Pedestrian-Oriented Development. Require buildings in the Central District, Transit Villages, Neighborhood Villages, and along corridors specified by the adopted specific plans to be located along the street/sidewalk and designed to promote pedestrian activity. This can be accomplished by incorporating transparent facades, small plazas, and dining areas; while locating parking to the rear or underground and placing primary entries on the street.</p> <p>Policy 5.3: Community Greenways. Improve Pasadena’s public sidewalks as “greenway” corridors with extensive tree canopies, connecting its neighborhoods, Transit Villages, Neighborhood Villages, neighborhoods, parks, schools, and open spaces.</p> <p>Policy 5.4: Pedestrian Connections. Support and enhance the pedestrian experience along public and private pedestrian passages, pathways, courtyards, paseos, alleys, and public walkways with increased connectivity and infrastructure, as well as businesses located along these pedestrian corridors.</p> <p>Goal 10: City Sustained and Renewed. Development and infrastructure practices that sustain natural environmental resources for the use of future generations and, at the same time, contribute to the reduction of greenhouse gas emissions and impacts on climate change.</p> <p>Policy 10.19: Sustainable Transportation Network. Implement an integrated network of transit, bike facilities, and pedestrian improvements as specified by the Mobility Element to reduce automobile trips and commute lengths, with corresponding reductions in energy consumption, pollution, and GHG emissions.</p> <p>Goal 18: Land Use/Transportation Relationship. Pasadena will be a City where there are effective and convenient alternatives to using cars and the relationship of land use and transportation is acknowledged through transit-oriented development, multimodal design features, and pedestrian and bicycle amenities in coordination with and accordance with the Mobility Element.</p> <p>Policy 18.1: Development Mix and Densities. Accommodate the mix and density of land uses and urban form that induce walking, bicycling, and transit use as an alternative to the automobile, as specified by the Land Use Diagram.</p> <p>Policy 18.2 Mobility: Correlate land use development intensities with adequate infrastructure improvements and transportation strategies to ensure mobility in all areas of Pasadena.</p> <p>Policy 18.3: Modal Choices. Promote the development of infrastructure supporting walking, bicycling, and transit use and complete streets as specified by the Mobility Element.</p>	<p>applicable requirements of this Zoning Code. Principal and accessory structures shall meet the same development stand.</p> <p>B. OS and PS district development standards.</p> <p>1. Development standards shall be as specified by a Conditional Use Permit or Master Plan.</p> <p>2. Prior to the approval of a Conditional Use Permit or Master Plan, properties within the OS and PS districts shall be subject to the development standards of the most restrictive abutting zoning district.</p> <p>3. Development consistent with an approved Master Plan shall not be subject to Conditional Use Permit review.</p> <p>4. City projects shall comply with the public art design standards of Section 17.40.100 unless otherwise modified in this Zoning Ordinance.</p>	<p>Objective 17 – Facilitate ongoing community dialogue to ensure that residents’ open space, parkland, and recreation needs are met.</p> <p>Policy 17.1 - Community Input and Feedback: Provide methods for community members to offer ongoing information on their experiences with recreation and parks management, programs, and facilities. Surveys, questionnaires, website forms, and targeted outreach methods will provide feedback on areas in need of improvement and areas where goals are being met.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 18.4: Transit-Pedestrian Coordination. Implement physical improvements facilitating pedestrian access from development projects to the street, bus stops, and/or transit stations.</p> <p>Policy 18.5: Land Use-Mobility Compatibility. Manage vehicle traffic volumes and speeds to improve their compatibility with the character of the adjacent land uses, the function of the street(s), and bicycle and pedestrian traffic.</p> <p>Policy 18.6: Relationship of Buildings to Transit Stops. Require that building entrances or accessways be oriented toward transit stops when located adjacent to these facilities.</p>		
Pico Rivera	<p>Land Use Element</p> <p>Goal 3.10 A mix of governmental, educational, recreational and open space facilities that conveniently support the needs of Pico Rivera’s residents and businesses.</p> <p>Policy 3.10-4 Parks and Open Spaces. Seek to expand the city’s parklands, greenways and open spaces as land and funding become available, encouraging the redevelopment of vacant sites and coordinate with the appropriate regional agencies for future planning related to the river corridors, the Bicentennial Park Campground and the Sports Arena area.</p> <p>Policy 3.10-4 Parks and Open Spaces. Seek to expand the city’s parklands, greenways and open spaces as land and funding become available, encouraging the redevelopment of vacant sites and coordinate with the appropriate regional agencies for future planning related to the river corridors, the Bicentennial Park Campground and the Sports Arena area.</p>	<p>Municipal codes related to land use and planning resources relevant to the Plan Area can be found in Chapter 18.10 (O-S Open Space Zone), Section 18.10.020 (Intent and Purpose), Section 18.10.04 (Permitted Uses), Section 18.10.050 (Property development conditions), and Chapter 18.48 (Precise Plan of Design Regulations), Section 18.48.040 (Application filing—Form and contents).</p> <p>Under Section 18.10.020 (Intent and purpose), the O-S zone is intended to:</p> <p>A. To principally designate and classify certain lands within the city for providing both interim and permanent open-space areas;</p> <p>B. To recognize those other open-space lands generally oriented to public interests and owned or controlled by a governmental or quasi-public agency;</p> <p>C. To recognize and restrict development and uses to such functions that primarily serve the interest of the community as a whole; and</p> <p>D. To function and serve as the instrument by which the preservation and conservation of open space areas can be attained.</p> <p>(Prior code § 9205.02(A))</p> <p>Under Section 18.10.040 (Permitted Uses), regulations governing permitted uses of land in the O-S zone are specifically set forth in Chapter 18.40 of this title; public parks are a listed use under this chapter.</p> <p>(Prior code § 9205.02(C))</p> <p>Under Section 18.10.050 (Property development conditions), because of the unique character and nature of the O-S zone, the use and development of property therein shall be determined by and subject to a precise plan of design as set forth in Chapter 18.48 of this title.</p> <p>(Prior code § 9205.02(D))</p> <p>Under Chapter 18.48 (Precise Plan of Design Regulations), Section 18.48.040 (Application filing—Form and contents), the requirements set out by section 18.10.050 above triggers the following plans of designs required for OS zoned proejcts:</p> <p>A. Whenever any proposed development is subject to the provisions of this chapter, the legal owner of property upon which such development is proposed to be located shall file with the zoning administrator an application and fee in the amount established by a resolution of the city council for precise plan of design approval, verified by the owner, on forms prescribed by the zoning administrator.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>B. The application shall set forth and include such information as the zoning administrator may require, and each such application shall be accompanied by seven copies of a proposed precise plan of design being not less than eighteen inches wide and twenty-four inches long, and shall specify and include the following information:</p> <ol style="list-style-type: none">1. A general description of the scope, nature and purpose of the proposed development;2. A key diagram showing the general location of the property in relationship to the general area in which the development is proposed to be located;3. The exact zone classification of the subject property and surrounding properties;4. The location, size, height, dimensions and type of all existing and proposed buildings and other structures, including signs, walls and fences;5. The location, size and exact dimensions of the property upon which the development is proposed to be located;6. The location, size and dimensions of all yards, building setbacks and spaces between buildings, and all other open spaces, including landscape areas;7. The exact legal description of the property upon which the development is proposed to be located; and8. The location, dimensions and method of improvement of all driveways, off-street parking facilities, walkways, means of access, ingress and egress, existing and/or proposed off-site street improvements, property to be dedicated to the public, and any public and private utility easements. <p>(Prior code § 9210.03 (A); Ord. 765 § 45, 1989)</p>	
Pomona	<p>Land Use Component</p> <p>Policy 7A.P4 Maintain minimum and maximum development intensities as stipulated in the Land Use & Density Component to ensure availability of land for future growth. Approval of developments at lower than stipulated densities should be accomplished by map amendments to the General Plan, not by providing exemptions from stipulated densities.</p> <p>Open Space Network Component</p> <p>Policy 7C.G17 Ensure pedestrian and bicycle friendly street environments.</p> <p>Policy 7C.G18 Strengthen and enhance pedestrian linkages from surrounding areas to public open spaces.</p> <p>Mobility & Access Component</p> <p>Goal 7C.G3 Develop additional parkland in the City, particularly in areas lacking these facilities and where new growth is proposed.</p> <p>Goal 7C.G4 Improve access to public open space and recreation facilities.</p> <p>Goal 7C.G9 Expand the variety of public spaces in the City through the creation of nature parks, especially those that preserve or restore existing natural open space.</p> <p>Policy 7C.P2 Require that at least one public park be located within one-quarter mile, via a direct pedestrian route, of 75 percent of all homes within a specific or master plan area.</p> <p>7C.P5 Achieve park standards through a combination of dedications, in-lieu fees, and other mechanisms such as grant opportunities, developer incentive programs, transfer of development rights programs, and joint use opportunities with Pomona Unified School District.</p>	<p>Municipal codes related to land use and planning resources within the City that are relevant to the Project can be found in Appendix I, Part II, Sec. .220. (“O” Open space land zone district. Intent and purpose), and Sec. .221 (Uses permitted) of the Pomona Zoning Ordinance.</p> <p>Under Sec. .220. (“O” Open space land zone district. Intent and purpose), he purpose of individual zoning districts for Open Space (O-S) District is intended to provide for urban relief, recreation and environmental preservation. This zoning district is applied to parks, streams, urban forestry areas and other similar features to enhance the quality of the environment consistent with the General Plan.</p> <p>(Ord. No. 931, § 5(Exh. A), 10-22-13)</p> <p>Under Sec. .221 (Uses permitted), No building, structure or land shall be used, and no building or structure shall be designed, erected, structurally altered or enlarged except for the following purposes:</p> <p>(A) Recreational uses owned and/or controlled by a governmental or quasi-public agency;</p> <p>(B) All permanent structures that are developed to be the primary or dominant use of a property within this zone by either a governmental agency or a private party shall be allowed only by conditional use permit. All permanent structures that are a collateral, accessory, or incidental component of a recreational open-space or an open space agricultural use shall be allowed without the requirement of a conditional use permit. The conditional use permit shall be reviewed per criteria described in section .221 (G)(7);</p>	No other applicable ordinances were identified.

Standards applicable to individual uses are found in Chapters 17.24 through 17.58 of these regulations.</p> <p>(Ord. 822 §1, 1989)</p>	
Temple City	<p>Goal LU 2: Land Use Mix. A complete community that is balanced with places for living, working, shopping, recreation, education, and arts and culture that reflect Temple City’s history, tradition, and diversity.</p> <p>LU 2.7 Places for Recreation and Celebration. Provide parks, open spaces, venues for community events, and similar uses enabling residents to participate in healthy lifestyles and celebrate the community.</p> <p>LU 3.7 Connected Greenways Network. Explore opportunities to develop trails along Eaton and Arcadia Wash to serve as the backbone of a citywide greenway network incorporating greenbelts, parklands, bicycle and pedestrian paths, and trails.</p> <p>Encourage properties that are redeveloped along their length to incorporate setbacks and landscape amenities that extend the open space character and recreational amenity into their sites.</p> <p>LU 7.1 Sustainable Land Development. Promote land use and urban design development practices that reduce energy and water consumption, pollution, greenhouse gas emissions, and waste and noise generation. These should include practices described in the United States Green Building Council’s LEED-ND rating program such as concentrating development to promote walking in lieu of the automobile, capturing and re-using stormwater onsite, managing and reusing wastewater, orienting buildings to maximize opportunities for solar energy use, use of drought tolerant and native landscapes, shading of exterior public spaces, and recycling and salvage for reuse of construction and demolition debris.</p>	<p>Municipal codes related to land use and planning resources relevant to the Plan Area can be found in Article K (Institutional and Open Space Zone) of the Temple City Code of Ordinances.</p> <p>Under Article K (Institutional and Open Space Zone) , the Institutional Zone and Open Space Zone is intended to accommodate public, semi-public, and institutional uses, including but not limited to offices and facilities used by federal, state, and local government; special districts; public schools; hospitals; and other public agencies and public utilities. This zone implements the General Plan Institutional designations. It also is intended to be used to accommodate active and passive recreational activities, such as parks and trails, as well as areas used for detention basins, conservation, sensitive habitat areas, and groundwater recharge basins. This zone implements the General Plan Open Space designation.</p> <p>(Ord. 19-1036)</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	LU 7.6 Green Streets. Transform impervious street surfaces into landscape green spaces to capture and filter stormwater runoff, in appropriate and reasonable locations.		
West Covina	<p>Land Use Element</p> <p>4. Arrange land uses with regard to the health, safety, convenience and welfare of the residents of the City.</p> <p>Our Accessible Community</p> <p>Policy 4.1 Coordinate and integrate land use, economic and transportation planning policies.</p> <p>Policy 4.4 Allocate street space equitably among all modes. Action 4.4a Ensure that pedestrians, bicyclists, transit vehicles and automobiles each have space in the right-of-way that is consistent with the street’s designated mobility function and land use context per street typologies and modal-priority overlays as defined in the Thoroughfares Plan.</p> <p>P4.5 Work to eliminate barriers to pedestrian and bicycle travel.</p> <p>Our Resilient Community</p> <p>Policy 5.1 Promote fine-grained network of complete streets in new and redevelopment projects.</p> <p>Action 5.1 Adjust development regulations and review processes to require new development and redevelopment projects to provide a fine-grained, interconnected, multimodal transportation network with a balance of motor vehicle, pedestrian, bike, and transit amenities.</p> <p>P5.2 Allocate land uses based primarily on the control of physical form, intensity, and arrangement of buildings, landscapes, and public spaces that enable land and building functions to adapt to economic, environmental, energy, and social changes over time.</p>	<p>Municipal codes related to land use and planning resources relevant to the Plan Area can be found in Section 26-545, Open space (O-S) zone, Section 26-558, Section 26-559, and Section 26-597.</p> <p>Under Section 26-545, the purpose of the open space zone is to identify and set forth permitted uses, and standards of development within open space lands.</p> <p>Sec. 26-558 requires a demonstrated public need shall be established within the area, and Sec. 26-559. the existing utilities systems (water, sewer, drainage, electrical, gas and communications facilities) are adequate or new systems shall be constructed to adequately serve the land use.</p> <p>Open space zoned land may be located anywhere in the city provided it is consistent with the city's adopted policies and plans.</p> <p>Environmental quality element is the adopted element of the city combining the city's open space, conservation, scenic highways and recreation elements.</p> <p>The section defines open space land as any parcel or area of land or water which is primarily unimproved and devoted to an open space use as defined in section 26-597, and which is designated in the city's environmental quality element and general plan as any of the following:</p> <ul style="list-style-type: none">• Open space for the preservation of natural resources including, but not limited to, areas required for the preservation of plant and animal life, including habitat for fish and wildlife species; areas required for ecologic and other specific study purposes; rivers, streams, bays and estuaries; and coastal beaches, lakeshores, banks of rivers and streams, and watershed lands.• Open space used for the managed production of resources, including, but not limited to, forest lands, rangeland, agricultural lands and areas of economic importance for the production of food or fiber; areas required for recharge of ground water basins; bays, estuaries, marshes, rivers and streams which are important for the management of commercial fisheries; and areas containing major mineral deposits, including those in short supply.• Open space for outdoor recreation, including but not limited to, areas of outstanding scenic, historic and cultural value; areas particularly suited for park and recreation purposes, including access to lakeshores, beaches and rivers and streams; and areas which serve as links between major recreation and open-space reservations, including utility easements, banks of rivers and streams, trails, and scenic corridors.• Open space for public health and safety, including, but not limited to, areas which require special management or regulation because of hazardous or special conditions such as earthquake fault zones, unstable soil areas flood plains, watersheds, areas presenting high fire risks, areas required for the protection of water quality and water reservoirs and areas required for the protection and enhancement of air quality. <p>(Code 1960, § 10901.10; Ord. No. 1333, § 1, 4-25-77; Ord. No. 2204, § 3(Exh. A), 2-16-10)</p>	No other applicable ordinances were identified.

3.11.3 Impact Assessment

3.11.3.1 Significance Criteria

Appendix G of the State CEQA guidelines was reviewed to determine if the Plan would result in significant impacts related to land use and planning. These guidelines serve as the threshold of significance for determining impacts to land use and planning and consider if the Plan would:

11(a) Physically divide an established community?

11(b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

3.11.3.2 Methodology

This section evaluates the construction and operation impacts of the Plan on land use and planning, based on literature review of conditions within and adjacent to the Plan Area, to determine if the Plan would physically divide an established community and for consistency with relevant land use plans, policies, and regulations. Where feasible, maps have been prepared to visualize these conditions.

Construction impacts were identified and evaluated qualitatively based on the land use characteristics of the Plan Area and the magnitude, intensity, location, and duration of activities that could occur under the Plan.

3.11.3.3 Plan Impacts

For each of the impact analyses below, the potential impacts are related to the location of future potential projects within the Plan Area, which includes the District ROW and adjacent parcels. Accordingly, the impact analysis is focused on project location and the conclusions are the same for all of the project components that may be included in any future projects implemented under the Plan.

3.11.3.3.1 11(a). Physically divide an established community?

3.11.3.3.1.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less Than Significant. Construction of greenway paths and greenway amenities, pocket parks, safe crossings, and stormwater management infrastructure would occur along the District ROW and adjacent parcels. The District ROWs follow the San Gabriel River and Rio Hondo, and its tributaries, which are physical barriers for communities. However, construction of the greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities are not anticipated to further divide communities. Any road or existing bike and pedestrian paths closures would be temporary and comply with applicable laws and regulations requiring the proper flow and detours as needed. Therefore, construction impacts would be less than significant.

Operations

Less Than Significant. A key objective of the Plan is to connect neighborhoods and serve as a new network for cyclists, pedestrians, and equestrians throughout the SGV. Long-term use of the Greenway Network would not further physically divide a community beyond the physical barriers already created by the San Gabriel River, Rio Hondo, and tributaries and instead would serve to bring communities together by providing a new greenway network in the SGV. Therefore, operational impacts would be less than significant.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Construction and operation impacts would be less than significant.

3.11.3.3.2 11(b). Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

3.11.3.3.2.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction and Operations

Significant and Unavoidable. Greenway paths and greenway amenities, pocket parks, safe crossings, and stormwater management infrastructure would be constructed within the District ROW and adjacent parcels. The District ROWs traverse multiple municipal jurisdictions, each with a General Plan that includes a specific vision and designation of uses for land development. Land uses within the Plan Area are diverse, including general commercial, light industrial, low/medium/high density residential, open space, utility/flood control, schools, institutional, and mixed use (see Table 3.11-2).

All greenway paths, greenway amenities, pocket parks, safe crossings, and stormwater management facilities would be developed within and adjacent to the District ROW. To construct a project on District ROW, a project proponent would generally be required to obtain a permit, lease, use agreement and/or other authorization from the District. In addition, portions of projects within incorporated areas would be under the land use jurisdiction of those incorporated cities and a project proponent may also have to apply for a land use permit or other approval from that the County or specific city, in addition to a permit from the District for the portion of the project is proposed to be located on District ROW. As discussed in Section 2.3.2, the *Design Guidelines and Standards* are focused on multi-use for pedestrians. For projects proposed entirely in the unincorporated County jurisdiction, compliance with the *Design Guidelines and Standards* would ensure compliance with County land use policies and impacts would be less than significant. For projects that are proposed in incorporated cities within the Plan Area, compliance with the *Design Guidelines and Standards* may conflict with the land use policies or regulations of the municipality in which the project is located. While land use permitting may be achieved through a conditional use permit, variance, zoning amendment, and/or specific plan amendment, these land use conflicts may result in significant and unavoidable impacts.

Mitigation Measures

No mitigation measures have been identified which would reduce or avoid impacts.

Significance After Mitigation

No mitigation measures have been identified which would reduce or avoid impacts. Therefore, impacts would be significant and unavoidable.

3.11.3.4 Impacts of Conceptual Design Projects

This section discusses potential impacts from the 10 conceptual designs discussed in Section 2.4.

3.11.3.4.1 11(a). Physically divide an established community?

Construction

Less Than Significant. Construction activity for all of the conceptual projects, if implemented in the future, would be temporary (i.e., when heavy equipment is in use and/or earthwork is being conducted) and would not result in long-term access/use limitations that would physically divide a community. Any road or existing bike and pedestrian paths closures would be temporary and comply with applicable laws and regulations requiring the proper flow and detours as needed. Therefore, construction impacts would be less than significant.

Operations

Less Than Significant. An objective of the Plan is to connect neighborhoods and serve as a new network for pedestrians throughout the SGV. All of the conceptual design projects would occur within the District ROW and adjacent parcels. The individual conceptual designs are examples of greenway paths within the Plan Area which would result in increased connections between communities and access for recreationalists to move safely from one community to another. Therefore, operational impacts for all conceptual designs would be less than significant.

3.11.3.4.2 11(b). Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?

Construction and Operations

Table 3.11-3 discusses the potential for each of the conceptual design projects to conflict with applicable land use plans and policies based on the identified location for each of the projects in comparison to the Plan components described as included for each of the conceptual projects. As shown in the table, the impact conclusion for each conceptual design project is site-specific and ranges from **no impact and significant and unavoidable impacts** on existing land use designations and plans.

Table 3.11-3. Analysis of Conceptual Design Examples to Land Use Plans for Construction and Operations

Conceptual Design Project	11(b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	Significant and Unavoidable. The proposed project area is designated for open space and public facilities by the City of Alhambra and single family residential by the City of San Gabriel. The proposed facilities would not conflict with the City of Alhambra's land use for the site, but the project would conflict with the residential zoning designation by the City of San Gabriel; therefore, potential impacts with regard to land use conflicts could be significant and unavoidable.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	Significant and Unavoidable. The proposed project area is designated for open space, single family residential, and multi-family residential by the City of Baldwin Park. The proposed facilities would not conflict with the open space designation but may conflict with the residential designations; therefore, potential impacts with regard to land use conflicts could be significant and unavoidable.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	No Impact. The proposed project area is designated for open space, planned development, and public and semi-public (institutional) use by the City of Pasadena. The proposed facilities would not conflict with the open space and public use designations; therefore, the project would conform with the existing land uses and no potential land use conflict impacts would occur.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i>	No Impact. The proposed project area is designated for open space and public and semi-public (institutional) use by the City of Pasadena. The proposed facilities would not conflict with the open space and public use designations; therefore, the project would conform with the existing land uses and no potential land use conflict impacts would occur.
San Dimas Wash at Arrow High School <i>City of Glendora</i>	No Impact. The proposed project area is designated for planned redevelopment by the City of Glendora. The proposed facilities would not conflict with this established redevelopment use; therefore, the project would conform with the existing land uses and no potential land use conflict impacts would occur.
San Dimas Wash at Hollenbeck Park <i>City of Covina</i>	Significant and Unavoidable. The proposed project area is designated for single family residential by the City of Glendora. The proposed facilities would potentially conflict with this housing designation; therefore, potential impacts related to land use conflicts could be significant and unavoidable.
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i>	Significant and Unavoidable. The proposed project area is designated for commercial, industrial, and recreation/open space by the City of Industry. The proposed facilities would potentially conflict with the commercial and industrial uses but would comply with the recreation/open space designations. The project would also comply with LA County land use designations (MM-LUP-1). However, the potential conflict with the industrial and commercial uses could generate significant and unavoidable impacts.

Conceptual Design Project	11(b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	Significant and Unavoidable. The proposed project area is designated for numerous uses, including single family residential, public use, open space, multiple family residential, commercial, and transportation by the Cities of Pomona, La Verne, and Claremont. The proposed facilities would not conflict with the open space, public use, and transportation uses but do conflict with the residential, commercial, and industrial designations. Therefore, potential land use conflict impacts could be significant and unavoidable.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park and West Covina</i>	Significant and Unavoidable. The proposed project area is designated for numerous uses, including single family residential, public use, open space, multiple family residential, commercial, and mixed use by the Cities of Baldwin Park and West Covina. The proposed facilities would not conflict with the open space, public use, and mixed uses but do conflict with the residential and commercial. Therefore, potential land use conflict impacts could be significant and unavoidable.
Walnut Creek at Pocket Park <i>City of West Covina</i>	Significant and Unavoidable. The proposed project area is primarily designated for low/medium/high density residential, commercial, and utility. The proposed facilities would not conflict with the utility designation but do pose conflicts to the residential and commercial uses. Therefore, potential land use conflict impacts could be significant and unavoidable.

3.12 Mineral Resources

This section provides a description of the regional geology of the impacted area, a summary of regulations related to the described geology and mineral resources, and an assessment of the potential impacts to the Plan Area.

Table 3.12-1. Summary of Potential Impacts of the Plan on Mineral Resources.

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the Plan:			
12 (a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state??			
Greenway Paths + Greenway Amenities	Less than Significant with Mitigation	Less than Significant	Construction: MM MR-1. Ensure Access to Mineral Resources Operations: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant with Mitigation	Less than Significant	
Greenway Paths + Safe Crossings	Less than Significant with Mitigation	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant with Mitigation	Less than Significant	
12 (b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?			
Greenway Paths + Greenway Amenities	Less than Significant with Mitigation	Less than Significant	Construction: MM MR-1. Ensure Access to Mineral Resources Operations: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant with Mitigation	Less than Significant	
Greenway Paths + Safe Crossings	Less than Significant with Mitigation	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant with Mitigation	Less than Significant	

3.12.1 Environmental Setting

A mineral is defined as a naturally occurring crystalline solid with a definite, but not necessarily fixed, chemical composition. A mineral resource that is mined, or an “ore deposit”, is defined as a mineral deposit that can be extracted and sold for profit. Mineral resources are commercially-viable concentrations of solid material in Earth’s crust. Mineral resources include commercially viable oil and gas deposits, and nonfuel mineral resources deposits. Non-fuel mineral resources include metals, such as gold, silver, iron, and copper; industrial metals including boron compounds, rare-earth elements, clays, limestone, gypsum, salt, and dimension stone; and construction aggregate, such as sand, gravel, and crushed stone (LA County Flood Control District 2015).

Mineral resource areas are classified into four Mineral Resource Zones (MRZs) based on geologic data. Of these, MRZ-1 are lands where geology indicates no mineral resources are present; MRZ-2 are lands that contain identified mineral resources; MRZ-3 are areas of undetermined mineral resource significance; and MRZ-4 are areas of unknown mineral resource potential. MRZ-2 areas are underlain by known or inferred mineral resources of significance, including commercially viable mineral or aggregate deposits, such as sand, gravel, and other construction aggregate. MRZ-2 zones are found in the Plan Area within central SGV. There is also an MRZ-2 zone along Eaton Wash, along the Arroyo Seco, and along Monrovia Canyon. Within the Plan Area are approximately 3,386 acres designated as MRZ-2 zones (LA County Department of Regional Planning, 2014). Much of the area within Los Angeles County was developed with structures prior to the MRZ classification and, therefore, is unavailable for extraction. Three prospective and two past producer mines (clay, sand, gravel resources) have been identified within 300 feet of the Plan Area washes in Irwindale and Pomona; however, no active mines are present (California Mineral Resources 2011).

The Los Angeles metropolitan area is one of the largest producers and consumers of construction aggregate in the country (Los Angeles County Department of Regional Planning 2022). The SGV is known for its abundant aggregate resources, which are durable and suitable for making concrete and asphalt. Rock, sand, and gravel from the San Gabriel River alluvial fans have been used for building throughout Southern California (LA County Department of Public Works 2006). Rock, sand, gravel, cement, water, and other “ad mixtures” are the primary components of Portland Cement Concrete, which is specified in many construction projects for buildings, streets, and sidewalks (LA County Department of Public Works 2006). Major sand and gravel extraction sites classified as MRZ-2 zones are located in the alluvial fans of the San Gabriel River near Irwindale.

According to the California Department of Conservation, Geologic Energy Management Division (CalGEM), there are 75 oil fields located in Los Angeles County (26 abandoned, 49 active). Within these oil and gas fields, there are a total of 3,250 active oil wells, not including those offshore (CalGEM 2024a). As depicted in Figure 3.12-1, the Plan Area runs through four oil field areas with several nearby wells noted in Tables 3.12-2. The mineral and oil and gas resources zones identified by the County and CalGEM are shown in Figure 3.12-2.

Table 3.12-2. Number of Wells within 300-ft of Plan Area

City	Oil Field	Active/Abandoned Oil and Gas Wells
Industry	N/A (1), Rowland Oil Field (1)	2
Montebello	Montebello Oil Field	29
Pomona	N/A	2
Rosemead	N/A	3
Unincorporated Los Angeles County	N/A (2), Montebello Oil Field (2)	4

Source: CalGEM 2024b, CMR 2011

Notes: N/A – not applicable; well is located outside defined oil field

3.12.2 Regulatory Setting

3.12.2.1 State

3.12.2.1.1 Surface Mining and Reclamation Act: California Public Resources Code Sections 2710 et seq.

The Surface Mining and Reclamation Act of 1975 mandated mineral land classification to identify and protect mineral resources in areas within the State subject to urban expansion or other irreversible land uses which would preclude mineral extraction. The Act also allowed the State Mining and Geology Board after receiving classification information from the State Geologist to designate lands containing mineral deposits of regional or statewide significance.

Sections 2761(a) and (b) and 2790 of the Surface Mining and Reclamation Act provide for a mineral lands inventory process termed classification-designation. The California Division of Mines and Geology and the State Mining and Geology Board are the state agencies responsible for administering this process. The primary objective of classification-designation is to provide local agencies with information on the location, need, and importance of minerals within their respective jurisdictions. It is also the intent of this process that this information be considered in future land-use decisions planning decisions. Under Surface Mining and Reclamation Act, local land use jurisdictions are the enforcing lead agencies for mineral resource issues, which state agencies guide and regulate city and county enforcement of Surface Mining and Reclamation Act.

As stated within the Surface Mining and Reclamation Act, the CGS is responsible for identifying aggregate and mineral resource areas and designate them into the following categories: (1) containing little or no mineral deposits, (2) containing significant deposits, or (3) deposits identified, but further evaluation needed. In areas where deposits are identified, they are then designated as MRZ. The classification of these mineral resources is done by both the State and local governments. It is based on several geologic factors and requires that the State Geologist classify the mineral resources area as one of the four MRZs, or Scientific Resource Zones, or Identified Resource Areas, which are described below:

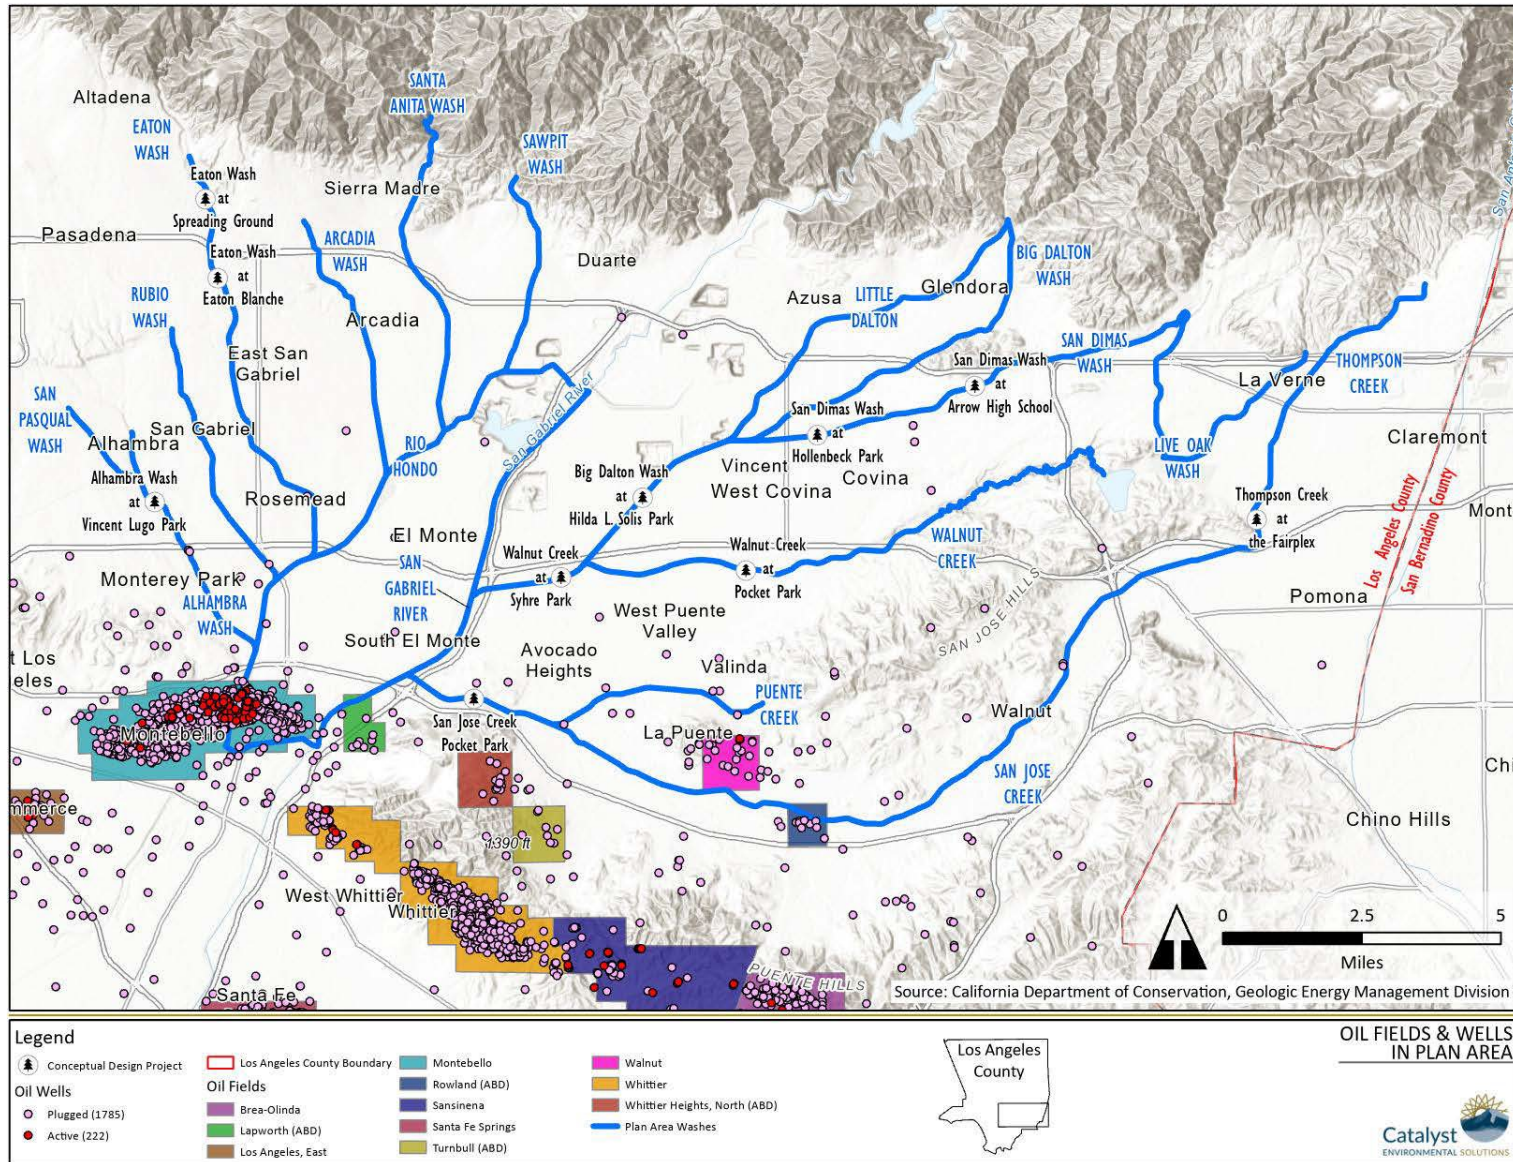

Figure 3.12-1. Oil and Gas Wells and Oil Fields in and near the Plan Area.

- MRZ-1: Areas where available geologic information indicates there is little or no likelihood for presence of significant mineral resources.
- MRZ-2: Areas where available geologic information indicates that significant measured or indicated resources are present or where adequate information indicates that significant mineral deposits are present or where it is judged that a high likelihood for their presence exists.
- MRZ-3: Areas where available geologic information indicates known or inferred mineral occurrences of undetermined mineral resource significance.
- MRZ-4: Areas of no known mineral occurrences where geologic information does not rule out the presence or absence of significant mineral resources.
- Scientific Resource Zone Areas: Containing unique or rare occurrences of rocks, minerals, or fossils that are of outstanding scientific significance shall be classified in this zone.
- Identified Resource Areas: County or State Division of Mines and Geology Identified Areas where adequate production and information indicates that significant minerals are present (LA County Department of Regional Planning 2014).

3.12.2.1.2 California Oil and Gas Regulations

CalGEM was formed in 1915 to implement regulations in the PRC and CCR that pertain to the drilling, operation, maintenance, and plugging and abandonment of oil, natural gas, and geothermal wells (PRC Sections 2710–2719 and CCR Section 3704.1). Under the California Oil and Gas Regulations, PRC §3106, CalGEM is responsible for the supervision of drilling, operation, maintenance, and abandonment of wells and the operation, maintenance, and removal or abandonment of tanks and facilities attendant to oil and gas production, including pipelines that are within an oil and gas field, so as to prevent, as far as possible, damage to life, health, property, and natural resources; damage to underground oil and gas deposits from infiltrating water and other causes; loss of oil, gas, or reservoir energy, and damage to underground and surface waters suitable for irrigation or domestic purposes by the infiltration of, or the addition of, detrimental substances. As shown in Figure 3.12-1, numerous oil wells are present within the Plan Area. If projects implemented in the future under the Plan are located in an area where an active or abandoned oil well is present, the project proponent would be required to coordinate with CalGEM prior to implementing the project.

3.12.2.2 Los Angeles County

3.12.2.2.1 Los Angeles County General Plan

The Conservation and Natural Resources Element of the General Plan (LA County Department of Regional Planning 2022) includes the following relevant goals and policies related to the protection of mineral resources.

- Goal C/NR 10: Locally available mineral resources to meet the needs of construction, transportation, and industry.
 - Policy C/NR 10.1: Protect MRZ-2s and access to MRZ-2s from development and discourage incompatible adjacent land uses.
 - Policy C/NR 10.2: Prior to permitting a use that threatens the potential to extract minerals in an identified Mineral Resource Zone, the County shall prepare a statement specifying its reasons for permitting the proposed use, and shall forward a copy to the State Geologist and

the State Mining and Geology Board for review, in accordance with the Public Resources Code, as applicable.

- Policy C/NR 10.3: Recognize newly identified MRZ-2s within 12 months of transmittal of information by the State Mining and Geology Board.
- Policy C/NR 10.4: Work collaboratively with agencies to identify Mineral Resource Zones and to prioritize mineral land use classifications in regional efforts.
- Policy C/NR 10.5: Manage mineral resources in a manner that effectively plans for access to, development and conservation of, mineral resources for existing and future generations.

The Land Use Element of the General Plan (Los Angeles County Department of Regional Planning 2022) includes the following relevant goals and policies related to the protection of mineral resources.

- Goal LU 7: Compatible land uses that complement neighborhood character and the natural environment.
 - Policy LU 7.5: Ensure land use compatibility in areas adjacent to mineral resources where mineral extraction and production, as well as activities related to the drilling for and production of oil and gas, may occur.

3.12.2.2.2 Los Angeles County Building Code

Los Angeles County Building Code Section 110.4 states that permits shall not be issued for buildings or structures regulated by this code, adjacent to or within 300 feet (91.44 m) of active, abandoned, or idle oil or gas well(s) unless provided with a methane gas protection system.

In addition, permits shall not be issued for a building or structure regulated by this code located between 25 feet and 200 feet from active, abandoned, or idle oil or gas well(s) unless designed according to the recommendations contained in a report prepared by a licensed civil engineer and approved by the building official. Permits could also be issued if all active, abandoned, or idle oil or gas well(s) between 25 feet and 200 feet from said building or structure are examined by a licensed petroleum engineer to evaluate whether, in accordance with the current rules and regulations of CalGEM, such wells are being properly operated or maintained, or are abandoned. No permits shall be issued until certification of proper operation, maintenance, or abandonment or re-abandonment, as determined by CalGEM, is submitted to the building official.

3.12.2.3 Cities Within the Plan Area

The table below presents the policies related to mineral resources from each of the cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any city.

Table 3.12-3. Applicable Local City Policies Related to Mineral Resources

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	No applicable goals or policies related to mineral resources were identified.	<p>Municipal codes related to mineral resources relevant to the Plan Area can be found in Title 21 Oil and Gas Wells Section 21.04.010 (Purpose) and Section 21.04.040 (Applicability of Zoning Provisions)</p> <p>Under Section 21.04.010 (Purpose) the following apply:</p> <p>The purpose of this title is to prohibit the drilling on the surface or into the subsurface of oil and gas wells, the production of oil and gas and the storing and transportation thereof in the city, except as may be provided herein.</p> <p>(A) The City Council hereby declares that it is also the object and purpose of this title to establish reasonable and uniform limitations, safeguards and controls for the drilling for and production of oil, gas and other hydrocarbon substances within and under the city. Such limitations, safeguards and controls are found to be necessary in order to protect the citizens, their property rights and the general public of the city and to put into effect practices which will provide a plan for the orderly drilling for and production of oil and gas, which substances are important to the national economy. Such orderly development is necessary and will protect the surface uses and the value and character of residential, commercial and other real property in the city as such uses are set forth in the zoning ordinances and regulations of the city. The City Council recognizes that many of its citizens and property owners have made substantial investments in real property and do not own the mineral rights lying in or under such property and will not profit directly from oil or gas development. Therefore, in order to protect such citizens and their property rights, to protect the owners of mineral rights and to provide for the orderly exploration, development and production of oil and gas, it is necessary to regulate the drilling for and production of oil and gas as set forth in this title.</p> <p>(B) The City Council hereby finds and deter-mines that the uncontrolled drilling on the surface or into the subsurface for oil and gas and the production thereof in the city would be detrimental to the general welfare of its citizens and residents, and detrimental to the general public peace, health, safety, comfort, convenience and prosperity. The City Council finds and determines that subsurface areas within the city may be explored for oil and gas and, if the substances are found, the same may be produced by directional or slant drilling methods from surface locations within the city, all of which operations must be limited to certain controlled drilling sites hereby established and created in this title. Such controlled drilling sites and the limitations and regulations set forth herein are necessary in order to protect the citizens and residents of the city from oil odors, noise, dust, the spreading of oil, dirt and debris upon the public streets of the city and to protect buildings and structures from vibration, sinking, or other damage caused by the drilling for and production of oil and gas in an unrestricted location and manner.</p> <p>('86 Code, § 21.04.010) (Ord. 3115, passed - -)</p> <p>Under Section 21.04.040 (Applicability of zoning provisions) the following apply:</p> <p>The location of controlled drilling sites, exploratory areas, oil wells and seismic testing locations shall be controlled by this title, and nothing contained in Title 23 hereof with respect to zoning shall be deemed to prohibit the selection or use of any such location in any zone within the city.</p> <p>('86 Code, § 21.04.040) (Ord. 3115, passed - -)</p>	No other applicable ordinances were identified.
Arcadia	<p>Resource Sustainability Element:</p> <p>Goal RS-7: Productive reuse of former mineral extraction sites in Arcadia, and support of adjacent jurisdictions’ continued extraction operations</p> <p>Policy RS-7.1: Facilitate the reclamation of mined lands in Arcadia to a usable condition that is readily adaptable for long-term planned land uses.</p> <p>Policy RS-7.2: Support the production of aggregate materials that benefit the region, provided such activities appropriately consider watershed, wildlife, range and forage, aesthetic enjoyment, and other environmental factors.</p> <p>Policy RS-7.3: Work with adjacent jurisdictions to minimize any adverse environmental effects and potential public safety hazards associated with mining operations along Arcadia’s borders.</p>	<p>Municipal codes related to mineral resources relevant to the Plan Area can be found in Chapter 5 (Mining Permits and Reclamation Plans Part 1) Section 9510.3. (Purpose and Intent)</p> <p>Under Chapter 5. (Mining Permits and Reclamation Plans Part 1) Section 9510.3. (Purpose and Intent) the following apply:</p> <p>The City Council further finds that surface mining takes place in diverse areas where the geologic, topographic, climatic, biological, and social conditions are significantly different and that reclamation operations and the specifications therefor may vary accordingly.</p>	No other applicable ordinances were identified.

City		Applicable Sections of Municipal Code	Other Applicable Ordinances
Azusa	<p>Mineral Resource Element</p> <p>Goal 1: Balance the need for mineral resources extraction with the city’s goals to minimize biological, aesthetic and other impacts.</p> <p>Policy</p> <p>1.5 Limit effects of mining operations on biological and recreational resources. Effects include but are not limited to effects on adjacent vegetation of runoff, erosion, and dust, effects due to vegetation removal, effects on wildlife and recreationalists of noise and vibration. (MR2, MR4, MR5, MR6, MR7, MR8, and MR10)</p> <p>1.8 However, recognizing the community’s strong interest in improving and accelerating reclamation and reducing the environmental impacts of existing vested mining, trade-offs affecting ongoing operations may be considered through a formal development agreement based on appropriate public participation and environmental review. (LU5, LU11, and LU24)</p>	<p>Municipal codes related to mineral resources relevant to the Plan Area can be found in C Chapter 88.44 (Surface Mining and Reclamation) Section 88.44.030 (Applicability),</p> <p>Chapter 88.44 (Surface Mining and Reclamation) Section 88.44.030 (Applicability) the following apply:</p> <p>The requirements of this chapter apply to all surface mining activities within the city, except the following:</p> <p>A. Excavations or grading conducted for farming or onsite construction or for the purpose of restoring land following a flood or natural disaster;</p> <p>Under Chapter 88.28 Special Purpose zones Section 88.28.020. (Intent of Special Purpose Zones) the following apply:</p> <p>B. OS (Open Space) Zone. The Open Space zone is intended to protect its important natural resources by limiting building within the mountains, foothills, and river channels. The primary allowable land uses are: public recreation; limited residential development on legal lots of record with adequate access, buildable areas, and infrastructure; limited agricultural uses; and, where authorized by the general plan lodging, resort, and conference center facilities and related activities. Certain areas within the OS zone may be subject to long-term preservation through land conservancy arrangements.</p> <p>Surface mining operations may also be allowed where they were established prior to the effective date of this Development Code, recognizing the community's strong interest in improving and accelerating reclamation and reducing the environmental impacts of existing vested mining, with consideration of trade-offs affecting vested mining operations and future operations adjacent and contiguous to vested operations. Future operations adjacent and contiguous to vested operations may be considered through a formal development agreement based on public participation and environmental review. For the purposes of this Development Code, vested mining rights shall mean that valid use permits have been issued by the city, or that mining is otherwise considered vested pursuant to other applicable laws.</p>	
Baldwin Park	<p>No applicable General Plan Goals or Policies related to Mineral Resources have been identified. The City General Plan makes the following assertion:</p> <p>However, established urban uses are incompatible with mineral extraction and/ or surface mining activities. Mining use is not required by any applicable state law or local ordinance, and in a regional context, potential resources in Baldwin Park are limited in extent and largely inaccessible due to urbanization. Thus, General Plan policy does not provide for mining activity to occur.</p>	<p>No applicable ordinances were identified.</p>	<p>No other applicable ordinances were identified.</p>
Claremont	<p>Open Space, Parkland, Conservation, and Air Element:</p> <p>Goal 5-17 Protect and conserve state-designated significant mineral resources from land uses that threaten their availability for future mining, and require that any future mining of those resources will not adversely impact the environment or the livability of Claremont's residential neighborhoods.</p> <p>Policy 5-17. 1 Protect mineral resource deposits in designated areas of regional significance in order that such deposits may be available for future use except in already urbanized locations where development has already occurred or is planned as shown in Figure 5-3 (of the General Plan).</p> <p>Policy 5-17. 2 Balance the regional need to produce mineral resources against other City goals set forth in this General Plan.</p> <p>Policy 5-17. 3 Balance the importance of mineral resources against alternative land uses, and consider the value of the minerals to their market region or to the state in reviewing any project involving mineral resources from areas designated regionally significant.</p> <p>Policy 5-17.4 Prior to the approval of any use that would threaten the potential to extract from any state-designated significant mineral resource. require that sufficient mitigation be provided to eliminate land use conflicts between the approved use and any future mining of the mineral resources.</p>	<p>Municipal codes related to mineral resources relevant to the Plan Area can be found in Title 16 Zoning Chapter 16.336 Surface Mining and Reclamation and Section 16.336.020 (Scope)</p> <p>Section 16.336.020 (Scope)</p> <p>D. Exceptions</p> <p>This chapter does not apply to any of the following activities:</p> <p>2. Onsite excavation and onsite earthmoving activities that are an integral and necessary part of a construction project that are undertaken to prepare a site for construction of structures, landscaping, or other land improvements associated with those structures, including the related excavation, grading, compaction, or the creation of fills, road cuts, and embankments, whether or not surplus materials are exported from the site, subject to all of the following conditions:</p> <p>a. All required permits for the construction, landscaping, or related land improvements have been approved by a public agency in accordance with applicable provisions of state law and locally adopted plans and ordinances, including, but not limited to, the California Environmental Quality Act (California Public Resources Code Section 21000 et seq.) ("CEQA").</p> <p>b. The lead agency's approval of the construction project included consideration of the onsite excavation and onsite earthmoving activities pursuant to CEQA (California Public Resources Code Section 21000 et seq.).</p> <p>c. The approved construction project is consistent with the City General Plan or zoning of the site.</p> <p>d. Surplus materials shall not be exported from the site unless and until actual construction work has commenced and shall cease if it is determined that construction activities have terminated, have been indefinitely suspended, or are no longer being actively pursued.</p>	<p>No other applicable ordinances were identified.</p>

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Covina	No applicable goals or policies related to mineral resources were identified.	No applicable ordinances were identified.	No other applicable ordinances were identified.
El Monte	No applicable goals or policies related to mineral resources were identified.	No applicable ordinances were identified.	No other applicable ordinances were identified.
Glendora	No applicable goals or policies related to mineral resources were identified.	No applicable ordinances were identified.	No other applicable ordinances were identified.
Industry	No applicable goals or policies related to mineral resources were identified.	No applicable ordinances were identified.	No other applicable ordinances were identified.
Irwindale	Community Development Policy: Policy 11: The City of Irwindale will permit quarry operations to continue as long as it is feasible to do so and only if the quarries are operating in a healthful and safe manner pursuant to existing codes and regulations. Resource Management element: Policy 1: The City’s commitment to the maintenance and management of natural resources; Policy 4. The City of Irwindale will continue to protect the use of the area’s resources through appropriate land use controls and planning.	Municipal codes related to mineral resources relevant to the Plan Area can be found in Chapter 17. (Surface Mining and Reclamation Plans) Section 17.63.170 (Mineral resource protection). Under Section 17.63.170 (Mineral resource protection) the following apply: A. Mine development is encouraged in compatible areas before encroachment of conflicting uses. Mineral resource areas that have been classified by the State Department of Conservation's Division of Mines and Geology or designated by the State Board, as well as existing surface mining operations that remain in compliance with the provisions of this chapter, shall be protected from intrusion by incompatible land uses that may impede or preclude mineral extraction or processing, to the extent consistent with the city's general plan. B. In accordance with PRC Section 2767, the city's general plan and resource maps will be updated to reflect mineral information (classification and/or designation reports) within twelve months of the city's receipt of this information from the State Board, land use decisions within the city will, in part, be guided by information provided on the location of identified mineral resources of regional significance. Conservation and potential development of identified mineral resource areas will be considered and encouraged. Recordation on title to property of the presence of important mineral resources within the identified mineral resource areas may be encouraged as a condition of approval of any development project in the impacted area. Prior to approving uses that would otherwise be incompatible with mineral resource, protection, conditions of approval may be applied to proposed encroaching uses to minimize potential conflicts. (Ord. No. 683, § 3, 12-10-14)	No other applicable ordinances were identified.
La Puente	No applicable goals or policies related to mineral resources were identified.	No applicable ordinances were identified.	No other applicable ordinances were identified.
La Verne	No applicable goals or policies related to mineral resources were identified.	No applicable ordinances were identified.	No other applicable ordinances were identified.
Monrovia	Land use element: Goal 11: The City of Monrovia shall provide its residents with a high-quality urban environment through the development and conservation of resources such as land, water, minerals, wildlife, and vegetation.	Municipal codes related to mineral resources relevant to the Plan Area can be found in Chapter 15.30 (Surface Mining) Section 15.30.020 (Purpose) and Section 15.30.050 (Exemptions) Under Chapter 15.30 (Surface Mining) Section 15.30.020 (Purpose) the following apply: (A) The purpose of this chapter is to regulate surface mining operations in accordance with the requirements of the Surface Mining and Reclamation Act of 1975 (as amended) (“SMARA”), the regulations adopted thereunder, and Cal. Public Resources Code § 2207. (B) Mine development is encouraged in compatible areas before encroachment of conflicting uses. Mineral resource areas that have been classified or designated by the state, as well as existing surface mining operations that remain in compliance with the	No other applicable ordinances were identified.

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>provisions of this chapter, shall be protected from intrusion by incompatible land uses that may impede or preclude mineral extraction or processing, to the extent possible under the city's general plan.</p> <p>(`83 Code, § 15.30.020) (Ord. 97-03 § 1, 1997)</p> <p>This chapter shall not apply to the following activities</p> <p>(B) On-site excavation and on-site earthmoving activities which are an integral and necessary part of a construction project that are undertaken to prepare a site for construction of structures, landscaping, or other land improvements, including the related excavation, grading, compaction, or the creation of fills, road cuts, and embankments, whether or not surplus materials are exported from the site, subject to all of the following conditions:</p> <p>(1) All required permits for the construction, landscaping, or related land improvements have been approved by a public agency in accordance with applicable provisions of state law and locally adopted plans and ordinances, including, but not limited to the California Environmental Quality Act (CEQA).</p> <p>(2) The city's approval of the construction project included consideration of the on-site excavation and on-site earthmoving activities pursuant to CEQA.</p> <p>(3) The approved construction project is consistent with the city's general plan and zoning of the site.</p> <p>(4) Surplus materials shall not be exported from the site unless and until actual construction work has commenced and shall cease if it is determined that construction activities have terminated, have been indefinitely suspended, or are no longer being actively pursued.</p>	
Montebello	No applicable goals or policies related to mineral resources were identified.	<p>Municipal codes related to mineral resources relevant to the Plan Area can be found in Chapter 5.52 (Oil and Gas Drilling) and Chapter 17.44 (Oil and Gas production district) Section 17.44.010 (Purpose) and 17.44.020 (Superimposed nature – designation – precedence)</p> <p>Under Chapter 5.52 (Oil and Gas Drilling) the following apply:</p> <p>A. Oil Permit. No person, without first obtaining a permit in the manner hereinafter prescribed, shall engage in any of the following activities:</p> <p>1.Drilling or re-drilling of oil wells in connection with the exploration for, or the production of, petroleum or allied products, including secondary recovery; or</p> <p>2.Erection, construction, enlargement, alteration, repair, movement, improvement, removal, conversion, or demolition of any structure utilized in connection with an oil well.</p> <p>B. Excavation Permit. A permit from the city engineer shall be obtained for all excavating and grading work as required by Chapter 15.48 of this code.</p> <p>Under Chapter 17.44 (Oil and Gas Production District Section 17.44.010 (Purpose) the following apply:</p> <p>The purpose of the oil and gas production (O) district shall be to allow the economic recovery of oil and gas in certain areas of the city which are or will be a part of a recognized oil and gas field but which are zoned for more restricted uses. The exploration for and production of oil and gas shall be permitted subject only to such limitations, safeguards and controls which are deemed necessary to protect the land values and surface uses of surrounding areas.</p> <p>(Prior code § 9253)</p> <p>Under Section 17.44.020 (Superimposed nature—Designation—Precedence) the following apply:</p> <p>The O district shall be in the nature of a superimposed district. Land so classified shall also be classified in one or more other zones. Property so classified shall be delineated on the zoning map by a combination of the zone symbols (for example: M-1-O for light manufacturing and oil and gas production district). The regulations hereof shall be in addition to those regulations in the underlying zone. In the event of a conflict between the provisions hereof and the provisions of an underlying zone, the oil and gas production district provisions take precedence.</p> <p>(Prior code § 9253.1)</p>	No other applicable ordinances were identified.

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Pasadena	No applicable goals or policies related to mineral resources were identified.	No applicable ordinances were identified	No other applicable ordinances were identified.
Pico Rivera	Environmental Resources Element Goal 8.5 Mineral resource extraction activities compatible with adjacent uses. Policy 8.5-1 Compatible Activities. Require that any future oil, gas, and mineral resource extraction activities be compatible with and minimize impacts on adjacent uses.	No applicable ordinances were identified	No other applicable ordinances were identified.
Pomona	No applicable goals or policies related to mineral resources were identified.	No applicable ordinances were identified	No other applicable ordinances were identified.
Rosemead	The General Plan does not specify policies regarding minerals or mineral resources. Resources Management Element: As Rosemead is completely urbanized and the State has not identified any significant recoverable mineral resources, no mineral extraction activities are permitted within the city limits.	No applicable ordinances were identified	No other applicable ordinances were identified.
San Dimas	No applicable goals or policies related to mineral resources were identified.	<p>Municipal codes related to mineral resources relevant to the Plan Area can be found in Chapter 18.116 (Conservation Overlay zone) Section 18.116.010 (Purpose) and Chapter 18.124 (OS Open Space Zone Section) 18.124.020 (Uses permitted)</p> <p>Under Chapter 18.116 Conservation Overlay zone Section 18.116.010 (Purpose) the following apply:</p> <p>A. The purpose of the conservation overlay zone is to provide a means of implementing the environmental resources management element of the general plan by requiring that development within areas designated "Conservation" on the plan be planned and used in a manner that will ensure the preservation of the following resources:</p> <ol style="list-style-type: none">1. Natural resources including surface and subsurface mineral deposits, soils, flora and fauna, water courses, bodies of water and watershed areas.2. Ecological areas including, but not limited to, significant and salvageable units of natural habitat.3. Scenic resources consisting of creeks, lakes, canyons, significant topographic features, trees, shrubs or other flora which are of scenic value to the general public. <p>B. Protection of such resources is assured by the requirement of submission of a conditional use permit incorporating a plan indicating that such development will be planned and executed in a manner which will ensure the protection of those resources designated within such zone. It is not the purpose of this zone to prohibit or impede uses permitted within the underlying zone but rather to promote orderly and harmonious development, recognizing the rights of public property while protecting irreplaceable resources determined to be of sufficient public interest to require preservation.</p> <p>(Ord. 37 § 199.1, 1961; Ord. 453 § 1, 1974)</p> <p>Under Chapter 18.124 OS Open Space Zone Section 18.124.020 (Uses permitted) the following apply:</p> <p>Buildings, structures and land shall be used, and buildings and structures shall hereafter be erected, structurally altered or enlarged only for the following uses, other than those uses the commission may deem, pursuant to the provisions of Chapter 18.192, to be similar and not more detrimental to the public health, safety and welfare. All uses shall be subject to the property development standards of Section 18.124.040.</p> <p>A. General Uses.</p> <ol style="list-style-type: none">1. Open space for the preservation of natural resources including, but not limited to, areas necessary for the preservation of plant and animal life, including habitat for fish and wildlife species, channels, creeks, lakes, reservoirs, banks of channels and creeks, lakeshores and watershed lands.2. Open space for the managed production of resources, including, but not limited to, forest land and agricultural lands; areas required for recharge of groundwater basins; and areas containing natural mineral deposits.	No other applicable ordinances were identified.

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
San Gabriel	No applicable goals or policies related to mineral resources were identified.	No applicable ordinances were identified.	No other applicable ordinances were identified.
San Marino	No applicable goals or policies related to mineral resources were identified.	No applicable ordinances were identified.	No other applicable ordinances were identified.
South El Monte	No applicable goals or policies related to mineral resources were identified.	No applicable ordinances were identified.	No other applicable ordinances were identified.
Temple City	No applicable goals or policies related to mineral resources were identified.	No applicable ordinances were identified.	No other applicable ordinances were identified.
West Covina	No applicable goals or policies related to mineral resources were identified.	No applicable ordinances were identified.	No other applicable ordinances were identified.

3.12.3 Impact Assessment

3.12.3.1 Significance Criteria

Appendix G of the State CEQA guidelines was reviewed to determine if the Plan would result in significant impacts related to mineral resources. These guidelines serve as the threshold of significance for determining impacts to mineral resources and consider if the Plan would:

- 12(a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state.*
- 12(b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local General Plan, Specific Plan, or other land use plan.*

3.12.3.2 Methodology

This analysis evaluates the construction and operations impacts of the proposed Plan on mineral resources based on literature review of conditions within and adjacent to the Plan Area. Where feasible, maps have been prepared to visualize these conditions (see Section 3.12.1, Environmental Setting).

The analysis focuses on issues related to the availability and historic use of minerals resources, including mining and oil and gas, in the Plan Area. The key construction-related impacts were identified and evaluated qualitatively based on the physical characteristics of the Plan Area and the magnitude, intensity, location, and duration of activities that could occur under the Plan.

3.12.3.3 Plan Impacts

3.12.3.3.1 12(a): Would the proposed Project result in the loss of availability of a known mineral resource of value to the region and the residents of the State?

3.12.3.3.1.1 Greenway Paths and Greenway Amenities + Pockets Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant with Mitigation. Although the Plan Area contains MRZ-2 zones, which include known mineral deposits or where there is a high likelihood for their presence, construction of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management infrastructure would be located predominantly within areas that are already urbanized and disturbed and would therefore not be available for mineral resource extraction. Further, the MRZ-2 zones mapped area for sand and gravel in the County was developed prior to the MRZ-2 classification and mapping, so it is already unavailable for future extraction. Depending on where future proposed projects are sited, ground-disturbing activities could uncover or affect mineral resources. Local jurisdictions that have known mineral resources within their area of jurisdiction review site plans for MRZ classification prior to construction and permit approvals to ensure lack of conflict with any designated areas such that the construction would not result in the loss of mineral resources of value to the region and the residents of the state as shown in Table 3.12.3. However, projects under the Plan may be implemented by a city without mineral resource review, the County or another public entity that is not subject to local general

plans or zoning ordinances of cities and therefore, a project implemented by the County in a city therefore could have a potentially significant and unavoidable impact if it restricts access to a mineral resource of value to the region and the residents of the state. Implementation of **MM MR-1: Ensure Access to Mineral Resources** would require all project proponents to review site plans for mineral resource with sites identified by the state, local General Plan, Specific Plan, or other land use plan prior to construction and permit approvals. Therefore, construction of the greenway paths and greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management would not result in the loss of availability of a known mineral resource of value to the region and the residents of the State. Impacts would be less than significant with mitigation.

Operations

Less than Significant. Operations of the greenway paths, and greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management infrastructure would involve general recreational uses and maintenance activities such as landscaping required for greenway paths and pocket parks and greenspaces or routine maintenance for safe crossings and stormwater management components. By design, the operation of the greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, or stormwater management does not include mechanisms for impacting mineral resources such as mining operations or extraction. With the exception of stormwater management, which includes subsurface beneficial elements such as subsurface infiltration, all other project subcomponents are aboveground. While the greenway paths and various subcomponents would introduce more users to the Plan Area, because there is no mechanism for impacting mineral resources, increased usership would not significantly impact mineral resources. No substantial ground disturbing activities would occur during the operations and maintenance of the greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, or stormwater components and result in the loss of availability of a known mineral resource of value to the region and the residents of the State. Therefore, impacts to mineral resources from operation of the greenway paths, greenway amenities, pocket parks, safe crossings, and stormwater management infrastructure would be less than significant.

Mitigation Measures

MM MR-1: Ensure Access to Mineral Resources: The project proponent shall ensure that final project design does not restrict access to known mineral resource sites.

Significance After Mitigation

Implementation of **MM MR-1: Ensure Access to Mineral Resources** would require all project proponents to review site plans for mineral resource with sites identified by the state, local General Plan, Specific Plan, or other land use plan prior to construction and permit approvals and reduce impacts to less than significant.

Operation impacts would be less than significant. No mitigation is required.

3.12.3.3.2 12(b): Would the proposed Project result in the loss of availability of a *locally important mineral resource recovery site delineated on a local General Plan, Specific Plan, or other land use plan?*

3.12.3.3.2.1 Greenway Paths and Greenway Amenities + Pockets Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant with Mitigation. As shown on Figure 3.12-1, active wells are located within the Montebello Oil Field area, which is within the Plan Area. Depending on their final design, greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management would be required to comply with the City of Montebello municipal code and provisions of the Oil and Gas Production District zoning, which specify setbacks from active and abandoned wells, including 25 feet for street ROW, 100 feet for buildings intended for human occupancy, and 300 feet for schools and other buildings meant for public assemblage (Section 5.520.070). Thus, construction would not impact the active wells located within the Montebello Oil Field area.

Construction of greenway paths and greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management would generally need to comply with the local municipality's and County general plan and zoning ordinances, such as restrictions for projects to be sited on mineral resource sites or ensure access to a known mineral resource site, but the specific applicable restrictions would depend on final design and configuration of individual projects proposed under the Plan. Jurisdictions that do not contain policies regarding mineral resources in their general plan have determined the land covered by their plan is fully developed with no potential for extraction, and the applicable general plans do not provide for extraction. However, projects under the Plan may be implemented by a city which are without mineral resource review, the County or another public entity that is not subject to local general plans or zoning ordinances of cities and therefore, could have a potentially significant and unavoidable impact if it restricts access to a mineral resource. Implementation of **MM MR-1: Ensure Access to Mineral Resources** would require all project proponents to review site plans for mineral resource sites delineated on a local General Plan, Specific Plan, or other land use plan prior to construction and permit approvals. Therefore, impacts would be less than significant with mitigation.

Operations

Less than Significant. Operations of the greenway paths, and greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management infrastructure would involve general recreational uses and maintenance activities such as landscaping required for greenway paths and pocket parks and greenspaces or routine maintenance for safe crossings and stormwater management components. By design, the operation of the greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, or stormwater management does not include mechanisms for impacting mineral resources such as mining operations or extraction. With the exception of stormwater management, which includes subsurface beneficial elements such as subsurface infiltration, all other project subcomponents are aboveground. While the greenway paths and various subcomponents would introduce more users to the Plan Area, because there is no mechanism for impacting mineral resources, increased usership would not significantly impact mineral resources. No substantial ground disturbing activities would occur during the operations and maintenance of the greenway paths, greenway

amenities, pocket parks and greenspaces, safe crossings, or stormwater components and result in the loss of availability of a known mineral resource of value to the region. Therefore, impacts to mineral resources from operation of the greenway paths, greenway amenities, pocket parks, safe crossings, and stormwater management infrastructure would be less than significant.

Mitigation Measures

MM MR-1: Ensure Access to Mineral Resources.

Significance After Mitigation

For construction, implementation of **MM MR-1: Ensure Access to Mineral Resources** would require project proponents to design and site projects such that access to mineral resources would not be restricted. Therefore, impacts after mitigation would be less than significant with mitigation.

Operation impacts would be less than significant. No mitigation is required.

3.12.3.4 Impacts of Conceptual Design Projects

This section discusses potential impacts from the 10 conceptual designs discussed in Section 2.4. The table below addresses the CEQA framework question for each conceptual design.

- 3.12.3.4.1 12(a) and (b): Would the proposed Project result in the loss of availability of a known mineral resource or mineral resource recovery delineated on a local general plan, specific plan, or other land use plan site that would be of value to the region and the residents of the State?

Construction and Operations

The subcomponents and beneficial elements proposed for all 10 conceptual design projects are within the maximum extents described in Section 2.3.1, Components of the Plan and CEQA Organization. Some of the conceptual design projects are located within an MRZ-2 zone, as identified in 3.12.1, Environmental Setting. Brief descriptions providing greater details of this analysis for each example site are provided in Table 3.12-4. As indicated in each of the descriptions, none of the conceptual design examples introduce any subcomponents or beneficial elements not previously considered within the Plan and therefore, would not result in any new impacts or more severe impacts than as described for the Plan.

Based on review of the general location of each of the conceptual design projects in the Plan Area, construction and operation of the conceptual design projects would not occur adjacent to or within 300-feet of active, abandoned, or idle oil or gas well(s) as designed. As a result, construction and operation of the conceptual design projects would not result in additional impacts related to the loss of availability of mineral resources or impacts to a delineated mineral recovery zone not already addressed in Section 3.12.3.3.1, Plan Impacts.

Table 3.12-4. Analysis of Construction and Operations Impacts from Conceptual Design Projects within MRZ-2 designation

Conceptual Design Project	12(a) and (b): Would the proposed Project result in the loss of availability of a known mineral resource or mineral resource recovery delineated on a local general plan, specific plan, or other land use plan site that would be of value to the region and the residents of the State?
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	No Impact. The City of Alhambra and the City of San Gabriel do not contain an MRZ-2 zone within their city limits, and the Project-site would not conflict with any applicable general plan or municipal code. This conceptual design project would not occur within an oil field area or within 300 feet of active, abandoned, or idle oil or gas wells. There would be no impact.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	Less than Significant. All of Baldwin Park is located within an MRZ-2 land designation. The Project-site is located within an MRZ-2 land designation; however, the project area is fully urbanized and has experienced prior ground disturbance. Additionally, construction activities and operation of the Project would not conflict with any local general plan policy or municipal code relating to mineral resources. This conceptual design project would not occur within an oil field area or within 300 feet of active, abandoned, or idle oil or gas wells. Impacts would be less than significant.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	Less than Significant. Portions of Pasadena contain an MRZ-2 land designation. The Project site is located within an MRZ-2; however, the project area is fully urbanized and has experienced prior ground disturbance. Additionally, ground disturbance or construction activities at the Project site would not conflict with any local general plan policy or municipal code relating to mineral resources. This conceptual design project would not occur within an oil field area or within 300 feet of active, abandoned, or idle oil or gas wells. Impacts would be less than significant.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i>	Less than Significant. Portions of Pasadena contain an MRZ-2 land designation. The Project site is located within an MRZ-2; however, the project area is fully urbanized and has experienced prior ground disturbance. Additionally, ground disturbance or construction activities at the Project site would not conflict with any local general plan policy or municipal code relating to mineral resources. This conceptual design project would not occur within an oil field area or within 300 feet of active, abandoned, or idle oil or gas wells. Impacts would be less than significant.
San Dimas Wash at Arrow High School <i>City of Glendora</i>	Less than Significant. Portions of Glendora contain an MRZ-2 land designation. The Project-site is located within an MRZ-2 land designation; however, the project area is fully urbanized and has experienced prior ground disturbance. Additionally, ground disturbance or construction activities at the Project site would not conflict with any local general plan policy or municipal code relating to mineral resources. This conceptual design project would not occur within an oil field area or within 300 feet of active, abandoned, or idle oil or gas wells. Impacts would be less than significant.
San Dimas Wash at Hollenbeck Park <i>City of Covina</i>	Less than Significant. Portions of Covina contain an MRZ-2 land designation. The Project site is located within an MRZ-2; however, the project area is fully urbanized and has experienced prior ground disturbance. Additionally, ground disturbance or construction activities at the Project site would not conflict with any local general plan policy or municipal code relating to mineral resources. This conceptual design project would not occur within an oil field area or within 300 feet of active, abandoned, or idle oil or gas wells. Impacts would be less than significant.
San Jose Creek at Pocket Park	Less than Significant. Portions of the City of Industry and unincorporated LA County contain an MRZ-2 land designation. However, the Project site is not located within an

Conceptual Design Project	12(a) and (b): Would the proposed Project result in the loss of availability of a known mineral resource or mineral resource recovery delineated on a local general plan, specific plan, or other land use plan site that would be of value to the region and the residents of the State?
<i>City of Industry and the unincorporated LA County community of Avocado Heights</i>	MRZ-2. The project area is fully urbanized and has experienced prior ground disturbance. Additionally, ground disturbance or construction activities at the Project site would not conflict with any local general plan policy or municipal code relating to mineral resources. This conceptual design project would not occur within an oil field area or within 25 feet of active, abandoned, or idle oil or gas wells. This conceptual design project would not occur within an oil field area or within 300 feet of active, abandoned, or idle oil or gas wells. Impacts would be less than significant.
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	Less than Significant. Portions of Claremont, Pomona, and La Verne contain an MRZ-2 land designation. The Project site is located within an MRZ-2; however, the project area is fully urbanized and has experienced prior ground disturbance. Additionally, ground disturbance or construction activities at the Project site would not conflict with any local general plan policy or municipal code relating to mineral resources. This conceptual design project would not occur within an oil field area or within 300 feet of active, abandoned, or idle oil or gas wells. Impacts would be less than significant.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park and West Covina</i>	Less than Significant. Portions of Baldwin Park and West Covina contain an MRZ-2 land designation. The Project site is located within an MRZ-2; however, the project area is fully urbanized and has experienced prior ground disturbance. Additionally, ground disturbance or construction activities at the Project site would not conflict with any local general plan policy or municipal code relating to mineral resources. This conceptual design project would not occur within an oil field area or within 300 feet of active, abandoned, or idle oil or gas wells. Impacts would be less than significant.
Walnut Creek at Pocket Park <i>City of West Covina</i>	Less than Significant. Portions of West Covina contain an MRZ-2 land designation. The Project site is located within an MRZ-2; however, the project area is fully urbanized and has experienced prior ground disturbance. Additionally, ground disturbance or construction activities at the Project site would not conflict with any local general plan policy or municipal code relating to mineral resources. This conceptual design project would not occur within an oil field area or within 300 feet of active, abandoned, or idle oil or gas wells. Impacts would be less than significant.

3.13 Noise

This section discusses existing sources of noise and vibration in the Plan Area, describes applicable laws and policies related to noise and vibration, and evaluates potential environmental impacts associated with implementation of the Plan. Noise technical data is included as Appendix D.

Table 3.13-1. Summary of Potential Impacts of the Plan on Noise.

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the plan:			
13(a). Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Significant and Unavoidable	Construction: MM AQ-1: Emission Reduction Measures. MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan. Operation: MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures.
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Significant and Unavoidable	
Greenway Paths + Safe Crossings	Significant and Unavoidable	Significant and Unavoidable	
Greenway Paths + Stormwater Management	Significant and Unavoidable	Significant and Unavoidable	
13(b). Generation of excessive groundborne vibration or groundborne noise levels?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Less than Significant	Construction: MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Less than Significant	Operations: No mitigation

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the plan:			
Greenway Paths + Safe Crossings	Significant and Unavoidable	Less than Significant	
Greenway Paths + Stormwater Management	Significant and Unavoidable	Less than Significant	
13(c). For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant	Operations: No mitigation
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	

3.13.1 Environmental Setting

3.13.1.1 Fundamentals of Acoustics

Sound is mechanical energy transmitted by pressure waves in a compressible medium such as air. When sound becomes excessive or unwanted, it is referred to as noise. Although exposure to high noise levels has been demonstrated to cause hearing loss, the principal human response to environmental noise is annoyance. The response of individuals to similar noise events is diverse and influenced by the type of noise, the perceived importance of the noise and its appropriateness in the setting, the time of day and the type of activity during which the noise occurs, and the sensitivity of the individual.

Noise is commonly defined as sound that is undesirable or unpleasant (unwanted sound). Sound levels are measured and quantified with several metrics. All of them use the logarithmic decibel (dB) scale with 0 dB roughly equal to the threshold of human hearing. A property of the decibel scale is that the sound pressure levels of two separate sounds are not directly additive. For example, if a 50 dB sound is added to another 50 dB sound, the total is only a 3 dB increase (to 53 dB). Thus, every 3 dB change in sound levels represents a doubling or halving of sound energy. Related to this is the fact that a less-than-3 dB change in sound levels is imperceptible to the human ear.

The frequency of sound is a measure of the pressure fluctuations per second, measured in hertz (Hz). Most sounds do not consist of a single frequency but consist of a broad band of frequencies differing in level. The characterization of sound level magnitude with respect to frequency is the sound spectrum. While many rating methods exist to analyze sound of different spectra, this analysis uses the A-weighting scale (dBA) since it most closely approximates how the human ear responds to sound at various frequencies. The A-weighted scale progressively deemphasizes frequency components below 1,000 Hz and above 6,300 Hz and reflects the relative decreased sensitivity of humans to both low and extremely high frequencies (Federal Highway Administration [FHWA] 2018). Table 3.13-2 lists typical sound levels from representative sources.

Table 3.13-2. Typical Noise Levels (Measured at a Distance a Person Would Typically be From the Source)

Common Outdoor Activities	Sound Level (dBA)	Common Indoor Activities
	110	Rock band
Jet fly-over at 1,000 feet	100	
Gas lawn mower at 3 feet	90	
Diesel truck at 50 feet at 50 miles per hour	80	Food blender at 3 feet Garbage disposal at 3 feet
Noisy urban area, daytime Gas lawn mower at 100 feet	70	Vacuum cleaner at 10 feet, Normal speech at 3 feet
Commercial area, Heavy traffic at 300 feet	60	
Quiet urban daytime	50	Large business office, Dishwasher next room
Quiet urban nighttime	40	Theater, large conference room (background)
Quiet suburban nighttime	30	Library, Bedroom at night
Quiet rural nighttime	20	
	10	Broadcast/recording studio
Lowest threshold of human hearing	0	Lowest threshold of human hearing

Source: Caltrans 2013

The duration of noise and the time at which it occurs are important factors in determining the impact of noise. Several methods are used for describing variable sounds including the equivalent level (L_{eq}), the maximum level (L_{max}), and the percent-exceeded levels. These metrics are derived from many moment-to-moment A-weighted sound level measurements. Some common metrics reported in community noise monitoring studies are described below:

- L_{eq} , the equivalent level, can describe any series of noise events of arbitrary duration, although the most common averaging period is hourly. Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events, and L_{eq} is the common energy-equivalent sound/noise descriptor.

- L_{max} is the maximum sound level during a given time. L_{max} is typically due to discrete, identifiable events such as an airplane overflight, car or truck passing by, or a dog barking.
- L_{90} is the sound level in dBA exceeded 90 percent of the time during the measurement period. L_{90} is close to the lowest sound level observed. It is essentially the same as the residual sound level, which is the sound level observed when no obvious nearby intermittent noise sources occur.
- L_{50} is the median sound level in dBA exceeded 50 percent of the time during the measurement period.
- L_{10} is the sound level in dBA exceeded only 10 percent of the time. It is close to the maximum level observed during the measurement period. L_{10} is sometimes called the intrusive sound level because it is caused by occasional louder noises like those from passing motor vehicles.

In determining the daily measure of community noise, it is important to account for the difference in human response to daytime and nighttime noise. Noise is more disturbing at night than during the day, and noise indices have been developed to account for the varying duration of noise events over time as well as community response to them. The Day-Night Average Level (L_{dn}) is such an index. L_{dn} represents the 24-hour A-weighted equivalent sound level with a 10 dBA penalty added to the “nighttime” hourly noise levels between 10:00 p.m. and 7:00 a.m. Because of the time-of-day penalties associated with the L_{dn} index, the L_{eq} for a continuously operating sound source during a 24-hour period will be numerically less. The CNEL, similar to L_{dn} , applies a 5 dBA penalty for noise levels occurring during evening hours between 7:00 p.m. and 10:00 p.m. and a 10 dBA penalty for noise levels occurring during the nighttime hours between 10:00 p.m. and 7:00 a.m. CNEL has been adopted by the State of California to define the community noise environment for development of the community noise element of a General Plan. Noise is also more disturbing the closer a receptor is to the source; noise levels decrease by 6 dB as the distance from its source doubles (FHWA 2011).

3.13.1.2 Fundamentals of Vibration

Groundborne vibration consists of waves transmitted through solid material. Several types of wave motions exist in solids, unlike air, including compressional, shear, torsional, and bending. The solid medium can be excited by forces, moments, or pressure fields. Groundborne vibration propagates from the source through the ground to adjacent buildings by surface waves. Vibration may be composed of a single pulse, a series of pulses, or a continuous oscillatory motion. The frequency of a vibrating object describes how rapidly it is oscillating, measured in Hz. Most environmental vibrations consist of a composite or “spectrum” of many frequencies and are generally classified as broadband or random vibrations. The normal frequency range of most groundborne vibration that can be felt generally starts from a low frequency of less than 1 Hz to a high of about 200 Hz.

Vibration may be defined in terms of the displacement, velocity, or acceleration of the particles in the medium material. In environmental assessments, where human response is the primary concern, velocity is commonly used as the descriptor of vibration level, typically expressed in inches per second (in/sec) or millimeters per second (mm/s). The amplitude of vibration can be expressed in terms of the wave peaks or as an average, called the root mean square. The root mean square level is generally used to assess the effect of vibration on humans. Like noise, vibration can be expressed in terms of decibels with a reference velocity of 1×10^{-6} in/sec. The abbreviation “VdB” is often used for vibration decibels to reduce the potential for confusion with sound decibels.

Vibration can produce several types of wave motion in solids including compression, shear, and torsion, so the direction in which vibration is measured is significant and should generally be stated as vertical or horizontal. Human perception also depends to some extent on the direction of the vibration energy relative to the axes of the body. In whole-body vibration analysis, the direction parallel to the spine is usually denoted as the z-axis, while the axes perpendicular and parallel to the shoulders are denoted as the x- and y-axes, respectively.

The two primary concerns with project-induced vibration, the potential to damage a structure and the potential to annoy people, are evaluated against different vibration limits. Studies have shown that the threshold of perception for the average person is a peak particle velocity (PPV) in the range of 0.2 to 0.3 mm/s (0.008 to 0.012 in/sec). Human perception of vibration varies with the individual and is a function of physical setting and the type of vibration. People exposed to elevated ambient vibration levels, such as people in an urban environment, may tolerate a higher vibration level. Vibration levels for typical construction-related sources of groundborne vibration are shown in Table 3.13-3 below.

Table 3.13-3. Vibration Source Amplitudes for Construction Equipment

Equipment	PPV at 25 feet (in/sec)	Approximate Vibration Velocity Level at 25 feet (Velocity Level in Decibels [VdB])
Vibratory Roller	0.210	94
Large Bulldozer	0.089	87
Caisson Drilling	0.089	87
Loaded Trucks	0.076	86
Jackhammer	0.035	79
Small Bulldozer	0.003	58

3.13.1.3 Existing Noise Sensitive Land Uses

The extent and duration of Plan activities may vary across a variety of land uses including urban, residential, industrial/commercial, agricultural, and open space. Noise-sensitive land uses are generally considered to include those uses where noise exposure could result in health-related risks to individuals, as well as places where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both interior and exterior noise levels, and because of the potential for nighttime noise to result in sleep disruption. Additional land uses such as schools, transient lodging, historic sites, cemeteries, and places of worship are also generally considered sensitive to increases in noise levels. These land use types are also considered vibration-sensitive land uses, as are commercial and industrial buildings where vibration would interfere with operations within the building, including levels that may be well below those associated with human annoyance.

3.13.1.4 Existing Noise Sources and Ambient Levels

As the Plan Area is located throughout the SGV portion of Los Angeles County, many sites may be located adjacent to developed areas, including residential communities, schools, commercial and industrial parks, roadways, freeways and highways as well as in undeveloped and rural areas. Existing ambient noise sources in the Plan Area commonly include, but are not limited to, traffic, construction work, commercial operations, human activities, emergency vehicles, and aircraft overflights. Of these sources, transportation-related noise is generally the constant dominant source that comprises an urban environment's ambient noise levels.

3.13.1.5 Existing Groundborne Vibration Levels

Aside from periodic construction work that may occur throughout the Plan Area, other sources of groundborne vibration in the County include heavy-duty vehicular travel (e.g., refuse trucks, delivery trucks, and transit buses) on local roadways. Trucks and buses traveling at a distance of 50 feet typically generate groundborne vibration velocity levels of around 63 VdB (approximately 0.006 in/sec PPV), and these levels could reach 72 VdB (approximately 0.016 in/sec PPV) where trucks pass over bumps in the road (FTA 2006). In terms of PPV levels, a heavy-duty vehicle traveling at a distance of 50 feet from a receptor can result in a vibration level of approximately 0.001 inch per second.

3.13.2 Regulatory Setting

Federal, state, and local noise regulations and policies that may apply to the Plan are described below.

3.13.2.1 Federal

3.13.2.1.1 Noise Control Act of 1972

USEPA, pursuant to the Noise Control Act of 1972, established guidelines for acceptable noise levels for sensitive receptors such as residential areas, schools, and hospitals. The levels set forth are 55 dBA L_{dn} for outdoor use areas, 45 dBA L_{dn} for indoor use areas, and a maximum level of 70 dBA L_{dn} is identified for all areas to prevent hearing loss (USEPA 1974). These levels provide guidance for local jurisdictions but do not have regulatory enforceability. In the absence of applicable noise limits, the USEPA levels can be used to assess the acceptability of Plan-related noise.

3.13.2.1.2 U.S. Department of Housing and Urban Development

The U.S. Department of Housing and Urban Development has also established guidelines for acceptable noise levels for sensitive receivers such as residential areas, schools, and hospitals (24 CFR 51). The U.S. Department of Housing and Urban Development's noise levels include a two-pronged guidance, one for the desirable noise level and the other for the maximum acceptable noise level. The desirable noise level established by the U.S. Department of Housing and Urban Development conforms to the USEPA guidance of 55 dBA L_{dn} for outdoor use areas of residential land uses and 45 dBA L_{dn} for indoor areas of residential land uses. The secondary standard establishes a maximum acceptable noise level of 65 dBA L_{dn} for outdoor use areas of residential areas.

3.13.2.1.3 Federal Transit Authority

The FTA has published guidance relevant to assessing vibration impacts (FTA 2018). As an example from the guidance, engineered concrete and masonry (no plaster) buildings can be exposed to groundborne vibration levels of 0.3 inches per second without experiencing structural damage. Buildings extremely susceptible to vibration damage (e.g., historic buildings) can be exposed to groundborne vibration levels of 0.12 in/sec without experiencing structural damage.

3.13.2.2 State

The CCR has guidelines for evaluating the compatibility of various land uses as a function of community noise exposure, as shown in Table 3.13-4 below. The extensive state regulations pertaining to worker noise exposure are applicable to the Plan (for example CalOSHA Occupational Noise Exposure Regulations [8 CCR General Industrial Safety Orders, Article 105, Control of Noise Exposure, Section 5095, et seq.]), for workers in a “central plant” and/or maintenance facility, or for those involved in the use of maintenance equipment or heavy machinery.

Table 3.13-4. Estimating Existing Noise Exposure for General Assessment

Land Use Category	Noise Exposure Ranges (dB CNEL) Normally Acceptable ¹	Noise Exposure Ranges (dB CNEL) Conditionally Acceptable ²	Noise Exposure Ranges (dB CNEL) Normally Unacceptable ³	Noise Exposure Ranges (dB CNEL) Clearly Unacceptable ⁴
Residential: Low-density Single Family, Duplex, Mobile Homes	<60	55-70	70-75	>75
Residential: Multiple Family	<65	60-70	70-75	>75
Transient Lodging: Motels, Hotels	<65	60-70	70-80	>80
Schools, Libraries, Churches, Hospitals, Nursing Homes	<70	60-70	70-80	>80
Auditoriums, Concert Halls, Amphitheatres	Undefined	<70	>65	Undefined
Sports Arena, Outdoor Spectator Sports	Undefined	<75	>70	Undefined
Playgrounds, Neighborhood Parks	<70	67-75	>73	Undefined
Golf Courses, Riding Stables, Water Recreation, Cemeteries	<75	Undefined	70-80	>80
Office Buildings, Business Commercial and Professional	<70	67-77	>75	Undefined

Land Use Category	Noise Exposure Ranges (dB CNEL) Normally Acceptable ¹	Noise Exposure Ranges (dB CNEL) Conditionally Acceptable ²	Noise Exposure Ranges (dB CNEL) Normally Unacceptable ³	Noise Exposure Ranges (dB CNEL) Clearly Unacceptable ⁴
Industrial, Manufacturing, Utilities, Agriculture	<75	70-80	>75	Undefined

Source: OPR 2017

Notes:

¹ Normally Acceptable: specified land use is satisfactory, based upon the assumption that any buildings involved are of normal construction without any special noise insulation requirements.

² Conditionally Acceptable: New construction or development should only be undertaken after a detailed analysis of the noise reduction requirements is made and the needed insulation features included in the design.

³ Normally Unacceptable: New construction or development should generally be discouraged. If new development is to proceed, a detailed analysis of the noise reduction requirements is made, and the needed insulation features are included in the design.

⁴ Clearly Unacceptable: New development or construction should not be undertaken.

3.13.2.3 Los Angeles County

3.13.2.3.1 Los Angeles County General Plan Noise Element

The California Government Code Section 65302(g) requires that a noise element be included in the General Plan of each county and city in the state. The General Plan directs development in the County's unincorporated areas and establishes goals, policies, and objectives that pertain to the entire County. The General Plan includes a Noise Element that addresses land use compatibility as it relates to noise levels, noise abatement to achieve acceptable noise levels as defined by the County's Exterior Noise Standards, and cumulative noise impacts. The noise guidelines used by the County are based on the community noise compatibility guidelines established by ORP (OPR 2017) summarized in Table 3.13-4 above.

3.13.2.3.2 Los Angeles County Noise Control Ordinance

The Los Angeles County Noise Control Ordinance (County Noise Ordinance Section 12.08.010, *et seq.*, of the County Code) establishes noise standards to control unnecessary, excessive, and annoying noise and vibration in the County. The ordinance establishes acceptable ambient sound levels to regulate intrusive noise within specific land use zones and provides procedures and criteria for the measurement of the sound level of noise sources. Table 3.13-5 details the designated noise zones, land use of the receptor property, time interval, and corresponding exterior noise standards. The exterior noise levels detailed in Table 3.13-5 are further applied as exterior noise standards based on the duration and level of the noise (i.e., the greater the noise level, the shorter the time is allowed for the noise to last). The Los Angeles County Noise Ordinance uses the noise metrics L₅₀, L₂₅, L_{8.3}, L_{1.7}, and L_{max} which indicate exceedances of 50, 25, 8.3, and 1.7 percent of the time (based on 1-hour timeframe) in addition to the maximum sound level during that time period. Accordingly, the following noise standards are applied to the exterior noise levels and are summarized in Table 3.13-5:

- **Standard No. 1** shall be the exterior noise level which may not be exceeded for a cumulative period of more than 30 minutes in any hour. Standard No. 1 shall be the applicable noise level from

subsection A of this section; or, if the ambient L_{50} exceeds the foregoing level, then the ambient L_{50} becomes the exterior noise level for Standard No. 1.

- **Standard No. 2** shall be the exterior noise level which may not be exceeded for a cumulative period of more than 15 minutes in any hour. Standard No. 2 shall be the applicable noise level from subsection A of this section plus 5 dB; or, if the ambient L_{25} exceeds the foregoing level, then the ambient L_{25} becomes the exterior noise level for Standard No. 2.
- **Standard No. 3** shall be the exterior noise level which may not be exceeded for a cumulative period of more than five minutes in any hour. Standard No. 3 shall be the applicable noise level from subsection A of this section plus 20 dB; or, if the ambient $L_{8.3}$ exceeds the foregoing level, then the ambient $L_{8.3}$ becomes exterior noise level for Standard No. 3.
- **Standard No. 4** shall be the exterior noise level which may not be exceeded for a cumulative period of more than one minute in any hour. Standard No. 4 shall be the applicable noise level from subsection A of this section plus 15 dB; or, if the ambient $L_{1.7}$ exceeds the foregoing level, then the ambient $L_{1.7}$ becomes the exterior noise level for Standard No. 4.
- **Standard No. 5** shall be the exterior noise level which may not be exceeded for any period of time. Standard No. 5 shall be the applicable noise level from subsection A of this section plus 20 dB; or, if the ambient L_0 exceeds the foregoing level then the ambient L_0 becomes the exterior noise level for Standard No. 5.

Table 3.13-5. Los Angeles County Exterior Noise Standards.

Noise Zone	Designated Noise Zone Land Use (Receptor Property)	Time Interval	Exterior Noise Level (dBA)	Standard No.				
				1	2	3	4	5
I	Noise-Sensitive Area	Anytime	45	45	50	55	60	65
II	Residential Properties	10:00 p.m. to 7:00 a.m.	45	45	50	55	60	65
		7:00 a.m. to 10:00 p.m.	50	50	55	60	65	70
III	Commercial Properties	10:00 p.m. to 7:00 a.m.	55	55	60	65	70	75
		7:00 a.m. to 10:00 p.m.	60	60	65	70	75	80
IV	Industrial Properties	Anytime	70	70	75	80	85	90

Source: Los Angeles County Code, Section 12.08.930

With respect to construction noise in the County, Section 12.08.440 of the noise ordinance prohibits the operation of any tools or equipment used between the hours of 7:00 p.m. and 7:00 a.m. Monday through Saturday and all day on Sundays or holidays, where the noise would create a disturbance across a residential or commercial property line. The only exceptions would be emergency work or public safety projects (Section 12.08.0570, part 5, exemption H, Public Health and Safety Activities) or by

variance issued by the health officer. Additionally, both the working hours and maximum level of equipment and activity noise that are allowable from both mobile and stationary equipment in the County are defined by land use and shown in Table 3.13-6.

Table 3.13-6. Los Angeles County Construction Maximum Noise Standards at Residential Structures.

Allowable Work Dates & Hours	Single-Family Mobile Equipment ^a	Single-Family Stationary Equipment ^b	Multi-Family Mobile Equipment ^a	Multi-Family Stationary Equipment ^b	Semi-Residential/Commercial Mobile Equipment ^a	Semi-Residential/Commercial Stationary Equipment ^b
Daily 7:00 a.m. to 8:00 p.m. ^c	75 dBA	60 dBA	80 dBA	65 dBA	85 dBA	70 dBA
Daily 8:00 p.m. to 7:00 a.m. ^d	60 dBA	50 dBA	64 dBA	55 dBA	70 dBA	60 dBA

Source: Los Angeles County Code, Section 12.08.0440

Notes:^a Represents maximum noise levels for nonscheduled, intermittent, short-term operation (less than 10 days).

^b Represents maximum noise level for repetitively scheduled and relatively long-term operation (periods of 10 days or more).

^c Exception for Sundays and legal holidays.

^d Includes all day Sunday and legal holidays.

In addition to the limits specified for residential land uses above, the maximum noise level for nonscheduled, intermittent, short-term operation of mobile equipment at business structures is 85 dBA all hours daily, including Sunday and legal holidays.

3.13.2.3.3 Los Angeles County Groundborne Vibration Regulation

With respect to vibration, the County Noise Ordinance identifies a presumed perception threshold of 0.01 inches per second over the range of 1 to 100 hertz. Section 12.08.560 of the County Noise Ordinance prohibits the operation of any device that creates vibration above the vibration perception threshold of any individual at or beyond the property boundary of the source if on private property, or at 150 feet (46 meters) from the source if on a public space or public right-of-way.

3.13.2.4 Cities Within the Plan Area

The table below presents the policies related to noise from each of the cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any city.

Table 3.13-7. Applicable Local City Policies Related to Noise

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>The City of Alhambra land use/noise compatibility matrix can be referenced in Figure 23 of the General Plan Noise Element (pg. 97).</p> <p>Noise Element:</p> <p>Goal HS-6: Minimization of exposure to excessive noise.</p> <p>Policy HS-6A: Avoid or reduce excessive noise impacts on noise-sensitive receptors through land use planning, review of new development proposals, and physical interventions such as noise insulation in building design, setbacks, or noise barriers when necessary.</p> <p>Policy HS-6B: Comply with and enforce applicable City Municipal Code standards related to noise.</p> <p>Policy HS-6C: Use the land use/noise compatibility matrix on page 97 to determine the compatibility of proposed new development in the City with ambient noise levels.</p> <p>Policy HS-6D: Ensure that the potential impacts of transportation noise sources (including non-roadway sources such as helicopter operations and train movement) are analyzed and, when necessary, mitigated through the environmental review process.</p> <p>Policy HS-6E: Establish and maintain coordination among City departments and other relevant agencies involved in noise abatement.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 18.02 (Noise and Vibration Control Regulations) Section 18.02.010 (Declaration of Policy) and Section 18.02.060 (Exemptions) and Chapter 13.20 (Excavation) Section 13.20.090 (Dust, Noise and Nuisance Abatement)</p> <p>Under Chapter 18.02 (Noise and Vibration Control Regulations) Section 18.02.010 (Declaration of Policy).</p> <p>(A) In order to control unnecessary, excessive and annoying noise and vibration in the city, it is hereby declared to be the policy of the city to prohibit such noise and vibration generated from or by all sources as specified in this title.</p> <p>(B) It is hereby determined that certain noise levels and vibrations are detrimental to the public health, welfare and safety and contrary to public interest and, therefore, the City Council hereby declares that creating, maintaining, causing or allowing to be created, caused or maintained, any noise or vibration in a manner prohibited by, or not in conformity with, the provisions of this title, is a public nuisance and shall be punishable and/or abated as such.</p> <p>(C) Nothing in this chapter is intended to establish standards for what levels or type of noise or vibration may or may not constitute a private nuisance under the law.</p> <p>(‘86 Code, § 18.02.010) (Ord. 4022, passed - -; Am. Ord. 4611, passed 2-11-13)</p> <p>Under Chapter 18.02 (Noise and Vibration Control Regulations) Section 18.02.060 (Exemptions) the following apply:</p> <p>(C) Noise sources associated with or vibration created by construction, repair, remodeling or grading of any real property or during authorized seismic surveys, provided the activities do not take place between the hours of 7 p.m. and 7 a.m. on weekdays including Saturday, or at any time on Sunday or a federal holiday, and provided any vibration created does not endanger the public health, welfare and safety.</p> <p>(D) Noise sources associated with the maintenance of real property, provided the activities take place between the hours of 7 a.m. to 6 p.m. on any day except Sunday, or between the hours of 9 a.m. and 5 p.m. on Sunday.</p> <p>Under Chapter 13.20 (Excavation) Section 13.20.090 (Dust, Noise and Nuisance Abatement) the following apply:</p> <p>In every case and at all times, the work of removing from the streets all obstructions, surplus materials, debris and waste matter of every description caused by and accumulated from the excavation shall be the responsibility of the permittee. At all times during cut, excavation, filling or backfilling operations dust, noise and nuisance abatement procedures shall be carried out. On failure so to do, the Director of Public Works may take such remedial action as deemed necessary, including revoking of permit, in which event any expense of such remedial action on the part of the city shall be charged to, and collected from the permittee.</p>	<p>No other applicable ordinances were identified.</p>
Arcadia	<p>The City of Arcadia land use/noise compatibility matrix can be referenced in Table N-2 (Interior/Exterior Noise Standards) and Figure N-4 (Noise/Land Use Compatibility Guidelines) of the General Plan Noise Element.</p> <p>Noise Element:</p> <p>Goal N-1: Effective incorporation of noise consideration into land use planning decisions.</p> <p>Policy N-1.1: Consider noise impacts as part of the development review process relative to residential and other noise-sensitive land uses.</p> <p>Policy N-1.2: Ensure that acceptable noise levels are maintained near schools, hospitals, and other sensitive areas in accordance with the Noise/Land Use Compatibility Guidelines in Figure N-4, Table N-2 Interior/Exterior Noise Standards, and the City’s noise ordinance.</p> <p>Policy N-1.3: New commercial and industrial developments located adjacent to residential areas and identified noise-sensitive uses shall demonstrate reduction of potential noise impacts on neighboring sensitive uses to acceptable levels.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 2 (Disorderly Conduct, Nuisances, Etc.), Chapter 6 (Noise Regulations) Section 4610.2 (Sound Level Measurements), Section 4630.2 (Noise. Gardening and Landscaping)</p> <p>Under Chapter 2 (Disorderly Conduct, Nuisances, Etc.) Section 4261 (Prohibited Hours), nighttime construction is prohibited after the hour of 6:00 p.m. or any weekday; any time before the hour of 7:00 a.m. or any weekday; any time after the hour of 5:00 p.m. of any Saturday; any time before the hour of 8:00 a.m. of any Saturday; any time on any Sunday; and any time on any of the following holidays: New Year’s Day; Memorial Day; Independence Day; Labor Day; Veteran’s Day; Thanksgiving Day; and Christmas Day, provided that if any calendar year any such holiday falls on a Sunday, the following Monday shall constitute the holiday.</p> <p>Under Chapter 6 (Noise Regulations) Section 4610.3 (Noise Limits) the following apply:</p> <p>(a) It shall be unlawful for any person within the City of Arcadia to produce or cause or allow to be produced sound or noise which is amplified by the use of sound amplifying equipment and which amplified noise or sound is received on property occupied by another person within the designated region, in excess of the following levels, except as expressly provided otherwise or exempted hereinafter:</p>	<p>No other applicable ordinances were identified.</p>

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy N-1.4: Discourage new development of residential or other noise-sensitive uses in noise-impacted areas unless effective mitigation measures are incorporated into the project design to reduce noise levels that comply with Noise/Land Use Compatibility Guidelines in Figure N-4 and Table N-2 Interior/Exterior Noise Standards.</p> <p>Policy N-1.5: Require that proposed projects that have the potential to result in noise impacts include an acoustical analysis and appropriate mitigation to achieve the interior and exterior noise standards indicated in Table N-2 Interior/Exterior Noise Standards.</p> <p>Goal N-2: Reduced noise impacts from transportation sources.</p> <p>Policy N-2-1: Enforce State Motor Vehicle Code noise standards for cars, trucks, and motorcycles, and coordinate enforcement with the California Highway Patrol and County of Los Angeles Sheriff’s Department.</p> <p>Policy N-2-2: Continue to work with and lobby Metro to fund gap closure of the I-210 sound walls between Baldwin and Santa Anita Avenues.</p> <p>Policy N-2-5: Enforce truck routes established in the Circulation and Infrastructure Element and the Municipal Code.</p> <p>Goal N-3: Limited intrusion of point-source noise within residential neighborhoods and on noise-sensitive uses.</p> <p>Policy N-3-3: Explore requiring the use of noise suppression devices and techniques on all exterior noise sources (construction operations, pumps, fans, leaf blowers) to lower exterior noise to levels that are compatible with adjacent land uses.</p> <p>Policy N-3-5: Require noise created by new non-transportation noise sources to be mitigated so as not to exceed acceptable interior and exterior noise level standards identified in this Noise Element.</p> <p>Policy N-3-6: Provide appropriate funding to monitor noise levels and investigate noise complaints.</p> <p>Policy N-3-7: Educate the community at large about the importance of maintaining a healthy noise environment, and identify ways residents can assist in noise abatement efforts.</p>	<ul style="list-style-type: none">Residential Zone<ul style="list-style-type: none">Day 7:00 a.m. to 10:00 p.m. (55 dBA)Night 10:00 p.m. to 7:00 a.m. (50 dBA)Commercial Zone<ul style="list-style-type: none">Day 7:00 a.m. to 10:00 p.m. (65 dBA)Night 10:00 p.m. to 7:00 a.m. (60 dBA)Industrial Zone<ul style="list-style-type: none">Day 7:00 a.m. to 10:00 p.m. (70 dBA)Night 10:00 p.m. to 7:00 a.m. (70 dBA) <p>(c) It shall be unlawful for any person to produce or cause or allow to be produced sound or noise from air-conditioning equipment, pumps, fans or similar machinery which is received on residentially zoned property occupied by another person in excess of 55 dBA, provided, however, that if such machinery was installed prior to December 1, 1970, the noise level shall not be in excess of 60 dBA.</p> <p>(d) Exemption: Noise caused by "Emergency Work" as herein defined and from mechanical devices, apparatus, or equipment used, related to, or connected with such Emergency Work is exempt from the limits prescribed by this Chapter. (Amended by Ord. 1567 adopted 7-20-76; amended by Ord. 2302 adopted 10-2-12)</p> <p>Under Section 4630.2 (Noise. Gardening and Landscaping) the following apply:</p> <p>No person shall operate any mechanical equipment related to the gardening and/or landscaping of any property within a residential zone other than from seven (7) a.m. to seven (7) p.m., Monday through Saturday, and from twelve (12) p.m. to five (5) p.m. on Sundays within all residential zones; provided, however, that use of mechanical equipment for tree trimming on Sundays shall be prohibited. (Added by Ord. 2246 adopted 10-7-08) (Ord. No. 2396 , § 4(Exh. C), 4-18-2023)</p>	
Azusa	<p>The City of Azusa land use/noise compatibility matrix can be referenced in Table N-1 (Land Use Compatibility for Community Noise Environments) of Chapter 5 of the General Plan.</p> <p>Chapter 5 Natural Environment:</p> <p>Goal 1: Maintain community noise levels that meet health guidelines and allow for a high quality of life.</p> <p>Policy 1.1 Integrate noise considerations in the City’s land use planning and project approval process.</p> <p>Policy 1.2: Protect those areas of the City where the existing noise environments are considered unacceptable or “noise sensitive” (Figure N-2 of General Plan).</p> <p>Noise Implementation Programs:</p> <p>N1: Noise as an evaluation factor for new development:</p> <ul style="list-style-type: none">Include noise impacts as an evaluation factor in the consideration of the siting, design and construction of new residential, commercial, industrial developments or public/semipublic facilities such as parks, schools, convalescent homes, assisted living facilities and hospitals. <p>N15: New Truck Routes</p> <ul style="list-style-type: none">Review existing City designated truck routes and develop a new truck route plan that minimizes truck traffic adjacent to existing and planned residential neighborhoods. <p>N18: Enforcement Of Regulations</p> <ul style="list-style-type: none">Encourage the enforcement of all state and federal safety and health regulations related to occupational, stationary and vehicular noise sources.	<p>Municipal codes related to noise relevant to the Plan Area can be found in Article IX (Offenses Against Public Peace) Division 2 (Noise Standards) Section 46-404 (Designated Noise Zones), Section 46-405 (Exterior Noise Standards), Section 46-406 (Exterior Noise Levels Prohibited), Section 46-409 (Construction), Section 46-410 (Prohibited Noises), Section 46-413 (Exemptions), and Chapter 88.31 (Operational Standards) Section 88.31.020 (Noise Standards).</p> <p>Under Article IX (Offenses Against Public Peace) Division 2 (Noise Standards) Section 46-404 (Designated Noise Zones) the following apply:</p> <p>The properties hereinafter described, whether within or without the city, are hereby assigned to the following noise zones:</p> <ul style="list-style-type: none">Noise Zone 1: All residential properties;Noise Zone 2: All professional office and public institutional properties;Noise Zone 3: All commercial properties with the exception of professional office properties; andNoise Zone 4: All industrial properties. <p>(Ord. No. 08-O3, § 4, 5-14-08; Ord. No. 08-O5, § 3, 6-2-08)</p> <p>Under Section 46-405 (Exterior Noise Standards) the following apply:</p> <p>(a) The following noise standards, unless otherwise specifically indicated, shall apply to all real property within a designated noise zone:</p> <ul style="list-style-type: none">Noise Zone 1<ul style="list-style-type: none">7:00 a.m. to 10:00 p.m. (55 dbA)10:00 p.m. to 7:00 a.m. (50 dbA)	No other applicable ordinances were identified.

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<div><ul style="list-style-type: none">Noise Zone 2<ul style="list-style-type: none">Anytime (55 dbA)Noise Zone 3<ul style="list-style-type: none">Anytime (60 dbA)Noise Zone 4<ul style="list-style-type: none">Anytime (70 dbA)<p>(b) In the event the alleged offensive noise consists entirely of impact noise, simple tone noise, speech, music or any combination thereof, each of the above noise levels shall be reduced by five db(A). City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(4) Noise sources associated with construction, repair, remodeling, or grading of any real property; provided a permit has been obtained from the city; and provided said activities take place between the hours enumerated in section 46-409.</p> <p>(5) Noise sources associated with the maintenance of real property provided said activities take place between the hours of 8:00 a.m. and 8:00 p.m. on any day except Sunday or between the hours of 9:00 a.m. and 5:00 p.m. on Sunday or a federal holiday;</p> <p>(6) Noise sources associated with the authorized collection of solid waste.</p> <p>(7) Any activity or equipment to the extent that design regulation thereof has been pre-empted by state or federal laws. (Ord. No. 08-03, § 13, 5-14-08; Ord. No. 08-05, § 12, 6-2-08)</p> <p>Under Chapter 88.31 (Operational Standards) Section 88.31.020 (Noise Standards) the following shall apply:</p> <p>C. Noise Source Standards.</p> <p>1. Noise Level Limitations. No use, activity, or process within the city shall generate noise in excess of the levels identified by Tables 3-3 and 3-4 (of the Municipal Code), as the noise is measured at the property line of a noise sensitive land use identified in Tables 3-3 and 3-4 (of the Municipal Code)</p> <p>a. If the measured ambient noise level exceeds the applicable noise level standard in any category shown in Table 3-3 (of the Municipal Code), the applicable standards shall be adjusted to equal the ambient noise level.</p> <p>b. If the intruding noise source is continuous and cannot reasonably be discontinued or stopped to allow measurement of the ambient noise level, the noise level measured while the source is in operation shall be compared directly to the applicable noise level standards identified in Table 3-3 (of the Municipal Code).</p> <p>Notwithstanding the above requirements, no person shall allow or cause the generation of any noise of a type, volume, pitch, tone, repetition, or duration that would be found to be a nuisance by a reasonable person beyond the boundaries of the property where the noise is generated.</p> <p>2. Acoustical Analysis Required. Where the director determines that a proposed project may generate noise in excess of any limit established by Table 3-3 (of the Municipal Code), and/or where the use may generate noise in outdoor areas in excess of 60 dBA, the land use permit application for the use shall include an acoustical analysis by a qualified professional approved by the director.</p> <p>a. Contents. The analysis shall determine the potential for stationary source noise impacts to neighboring land uses, include field measurements to determine more precise locations for existing and projected future noise levels (based on traffic projections in the circulation element of the general plan or as otherwise accepted by the city), and recommend appropriate mitigation measures.</p> <p>b. Preferred Mitigation Measures for Receptor Sites. When development is subject to high noise levels requiring mitigation, the following measures shall be considered and preference shall be given where feasible in the following order:</p> <p>(1) Site layout, including setbacks, open space separation and shielding of noise sensitive uses with non-noise-sensitive uses;</p> <p>(2) Acoustical treatment of buildings; or</p> <p>(3) Structural measures such as constructed of earth berms and/or wood or concrete barriers; provided that no sound wall shall be located adjacent to a public street.</p> <p>3. Limitation on Hours of Construction. In order to allow construction schedules to take advantage of the weather and normal daylight hours, and to ensure that nearby residents as well as nonresidential activities are not disturbed by the early morning or late night activities, the city has established the following limits on construction, in compliance with Table 3-5 (of the Municipal Code) or as required by conditions of approval.</p> <p>D. Noise Receptor Standards. Where noise-sensitive land uses are proposed in areas exposed to existing or projected noise levels in excess of the standards in Tables 3-3 and 3-4 (of the Municipal Code), the city shall require an acoustical analysis as part of the environmental review process so that noise mitigation may be included in the project design, so that proposed structures are designed to limit intruding noise in interior rooms to 45 dBA Ldn. At the discretion of the director, the requirement for an acoustical analysis may be waived if all of the following conditions are satisfied:</p>	

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>1. The development is for less than five single-family dwellings or less than 10,000 square feet of total gross floor area for office buildings meeting facilities;</p> <p>2. The noise source in question consists of a single roadway or railroad for which up-to-date noise exposure information is available. An acoustical analysis will be required if the noise source is a stationary noise source, or if there are multiple noise sources that could affect the project;</p> <p>3. The projected future noise exposure at the exterior of proposed buildings or outdoor activity areas does not exceed 65 dBA Ldn;</p> <p>4. The topography of the area is essentially flat; and</p> <p>5. Effective noise mitigation, as determined by the director, is incorporated into the project design. The measures can include, but are not limited to, the use of building setbacks, building orientation, or noise barriers. If closed windows are required for compliance with interior noise level standards, air conditioning or a mechanical ventilation system will be required.</p> <p>E. Noise Measurement. In order to determine compliance with the standards in Tables 3-3 and 3-4 (of the Municipal Code), exterior noise levels shall be measured at the property line of the noise sensitive land use receiving the noise. Noise measurement shall be made with a sound level meter using the "A" weighted scale at slow meter response. Fast meter response shall be used only for an impulsive noise. (Ord. No. 06-O6, § 1B, 8-7-06)</p>	
Baldwin Park	<p>The City of Baldwin Park land use noise compatibility matrix can be referenced in Table NE-1 (Noise/Land Use Compatibility Matrix) of the General Plan Noise Element (pg. NE-4).</p> <p>Goal 1.0: Incorporate noise considerations into land use planning decisions.</p> <p>Policy 1.1: Use the noise/land use compatibility standards presented in Table NE-1 as a guide for future planning and development decisions.</p> <p>Policy 1.2: Require noise-reduction techniques in site planning, architectural design, and construction where noise reduction is necessary. Provide noise control measures such as berms, walls, and sound attenuating construction in areas of new construction.</p> <p>Goal 5.0 Develop measures to control excessive noise citywide.</p> <p>Policy 5.1 Adopt and implement a comprehensive City Noise Ordinance to regulate hours of operation and control excessive noise from landscape maintenance equipment, construction activity, and machinery.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 130 (General Offenses) Section 130.37 (Special Noise Sources) and Chapter 153.140 (Residential Zones (Part 1. Permitted Uses and Development Standards)</p> <p>Under Chapter 130 (General Offenses) Section 130.37 (Special Noise Sources) the following apply:</p> <p>(E) Construction of buildings and projects. It is unlawful for any person within a residential zone, or within a radius of 500 feet therefrom, to operate equipment or perform any outside construction or repair work on buildings, structures, or projects or to operate any piledriver, power shovel, pneumatic hammer, derrick, power hoist, or any other construction type device (between the hours of 7:00 p.m. of one day and 7:00 a.m. of the next day) in such a manner that a reasonable person of normal sensitiveness residing in the area is caused discomfort or annoyance unless beforehand a permit therefor has been duly obtained from the Department of Public Works. No permit shall be required to perform emergency work as defined in § 130.31.</p> <p>Under Section 153.140.020 (Applicability) the following apply:</p> <p>The performance standards in this subchapter shall apply to all new construction, renovation and alteration of existing uses or structures in all zone districts. Buildings and land uses shall not be used or constructed if they create a dangerous, noxious, fire, explosive or other hazard; noise or vibration; smoke, dust, odor, air pollution or glare; or liquid or solid wastes in amounts that adversely affect surrounding areas. These standards shall be applied in addition to the development standards required for each zone.</p> <p>(Ord. 1346, passed 5-2-12)</p>	No other applicable ordinances were identified.
Claremont	<p>The City of Claremont land use noise compatibility matrix can be referenced in Table 6-5 (Claremont Land Use/Noise Guidelines) of the General Plan Noise Element (pg. 6-47)</p> <p>Public Safety and Noise Element:</p> <p>Goal 6-11 Work with other agencies to minimize the impact of transportation-related noise, including noise associated with freeways, rail lines, and airports.</p> <p>Policy 6-11.2 Encourage existing City vehicles and equipment to the extent practical to reduce or eliminate unnecessary noise.</p> <p>Goal 6-12: Minimize the impact of excessive noise levels throughout the community and adopt appropriate noise level requirements for all land uses.</p> <p>Policy 6- 12.3 Minimize noise from property maintenance equipment, construction activities and other non-transportation noise sources by enforcing designated construction and maintenance hours.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 16.154 (Environmental Protective Standards) Section 16.154.020 (Noise and Vibration Standards)</p> <p>Under Chapter 16.154 (Environmental Protective Standards) Section 16.154.020 (Noise and Vibration Standards) the following apply:</p> <p>F. Exemptions</p> <p>Noise sources associated with or vibration created by construction, repair, remodeling or grading of any real property, or during authorized seismic surveys, provided:</p> <p>a. Activities take place between the hours of 7:00 a.m. and 8:00 p.m. weekdays and Saturdays, excluding national holidays; and</p>	No other applicable ordinances were identified.

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>b. Noise levels, as measured on residential properties, do not exceed 65 dBA for a cumulative period of more than 15 minutes in any one hour, 70 dBA for a cumulative period of more than 10 minutes in any one hour, 79 dBA for a cumulative period of more than 5 minutes in any one hour or 80 dBA at any time; and</p> <p>c. Any vibration created does not endanger the public health, welfare, and safety</p> <p>Only that construction, repair, remodeling and grading activity that does not exceed the noise levels set by Section 16.154.020.D may occur on Sundays and national holidays.</p> <p>5. All mechanical devices, apparatus or equipment associated with agricultural operations provided:</p> <p>a. Operations take place between 7:00 a.m. and 8:00 p.m. weekdays and Saturdays, excluding national holidays, and operations do not take place on Sundays or national holidays, or...</p> <p>6. Noise sources associated with the maintenance of real property provided said activities are approved by the Director and take place between the hours of 7:00 a.m. and 8:00 p.m. on any day except Sunday, or between the hours of 9:00 a.m. and 8:00 p.m. on Sunday. Lawn mowers, edgers, and similar lawn and garden maintenance equipment shall be exempted only until January 1, 1980.</p> <p>7. Any activity to the extent regulation thereof has been preempted by state or federal law.</p> <p>K. Proposed Developments</p> <p>Each department whose duty it is to review and approve new projects or changes to existing projects that result or may result in the creation of noise shall consult with the Director prior to any such approval. If at any time the Director has reason to believe that a standard, regulation or action, or proposed standard, regulation or action of any department respecting noise does not conform to the provisions as specified in this chapter, the Director may request such department to consult with him or her on the advisability of revising such standard or regulation to obtain conformity.</p>	
Covina	<p>The City of Covina land use noise compatibility matrix can be referenced above in Table 3.13-4 (Section 3.13.2.2 of this PEIR)</p> <p>The City of Covina land use noise compatibility matrix can be referenced in Table 1. Existing LND Noise Contours (pg. F-9) and Table 2. Future LND Noise Contours (pg. F-10) of the General Plan Noise Element</p> <p>Goal: An environment in which potential adverse impacts of noise on the City’s residents and workers are identified and prevented and mitigated.</p> <p>Policy Area 1 Transportation Noise Sources:</p> <p>6. Require noise-reduction techniques and features in site planning, architectural design, project landscaping, building materials, and/or construction, where necessary or required by law.</p> <p>30. Balance the City’s obligation to protect local residents from excessive transportation noise with Covina’s need to accommodate moderate growth and to continue with ongoing communitywide construction, economic development, code enforcement, neighborhood preservation, and affordable housing activities/programs.</p> <p>Policy Area 2 Commercial and Industrial Noise Sources repeats identical policies.</p> <p>Policy Area 3 Miscellaneous Stationary Noise Sources:</p> <p>Continue implementing the Covina Noise Ordinance to regulate the hours of operation for, among other things, lawn equipment, domestic power tools, garbage trucks, and miscellaneous repair or maintenance equipment, when in or within 500 feet of a residential area.</p> <p>Policy Area 4 Construction Noise Sources and General Matters:</p> <p>1. Continue implementing the Covina Noise Ordinance to regulate the hours of operation and excessive noise associated with on-site construction activities, particularly activities occurring in or near residential uses, permitting exceptions only under special circumstances.</p> <p>2. Where necessary, require the construction of barriers to shield noise-sensitive uses from intrusive, construction related noise.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 9.40 (Noise) Section 9.40.090 (Controlled hours of operation) and Section 9.40.110 (Construction)</p> <p>Under Section 9.40.090 (Controlled hours of operation) the following apply:</p> <p>It is unlawful for any person to operate, permit, use, or cause to operate, any of the following, other than between the hours of 7:00 a.m. and 8:00 p.m. of any one day:</p> <p>A. Powered model vehicles;</p> <p>B. Loading and unloading vehicles such as garbage trucks, forklifts or cranes in a residential area or within 500 feet of a residence;</p> <p>C. Domestic power tools;</p> <p>D. Lawn equipment, including, but not limited to, lawn mowers, edgers, cultivators, chain saws, and leaf blowers in any residential area or within 500 feet of any residence;</p> <p>E. Equipment associated with the repair and maintenance of real property. (Ord. 1665 § 2, 1988.)</p> <p>Under Section 9.40.110 (Construction) the following apply:</p> <p>A. It is unlawful for any person within any residential land use category or within a radius of 500 feet therefrom to operate equipment or perform any outside construction or repair work on any building, structure, or project; or to operate any pile driver, steam shovel, pneumatic hammer, electric saw, grinder, steam or electric hoist, or other construction-type equipment or device between the hours of 8:00 p.m. of any one day and 7:00 a.m. of the next day, at any time on any Sunday or at any time on any public holiday in such a manner that a reasonable person of normal sensitivity residing in the area is caused discomfort or annoyance, unless beforehand a permit therefor has been duly obtained in accordance with the provisions of subsection (B) of this section. No permit shall be required to perform emergency work.</p> <p>“Public holiday” as used in this subsection shall mean the day upon which each of the following holidays is recognized and celebrated as a holiday by the employees of the city: Independence Day, Labor Day, Veterans Day, Thanksgiving, Christmas Eve, Christmas Day, New Year’s Eve, New Year’s Day, Washington’s Birthday, Memorial Day, or any other holiday recognized as such by the city.</p>	No other applicable ordinances were identified.

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>3. Require that construction activities incorporate feasible and practical techniques, measures, and procedures that minimize the noise impacts on all adjacent uses.</p> <p>7. Best implement the Noise Element through the Zoning Ordinance and Design Guidelines, Capital Improvement Program, Subdivision Ordinance, Building and Safety and Police provisions, general Code Enforcement, and any related Covina Municipal Code sections, City policies, plans, or proposals or through other matters.</p>	<p>B. A permit may be issued authorizing the work prohibited by this section whenever it is found that the public interest will be served thereby. An application for such a permit shall be in writing and shall be accompanied by an application fee in an amount that may be set from time to time by a resolution of the city council. The application shall set forth in detail facts showing that the public interest will be served by the issuance of such permit, and the application shall be made to the planning division of the community development department. The chief planning official shall be responsible for the administration and enforcement of the provisions of this section and shall have the authority to issue such permits. He/she shall coordinate the processing of each application for a permit with such departments and divisions as he/she deems will be affected by the issuance of the permit. (Ord. 09-1975 § 1, 2009; Ord. 1665 § 2, 1988.)</p> <p>Under Section 9.40.120 (Loud and/or unusual noises) the following apply</p> <p>J. Vibration. It is unlawful to operate or permit the operation of any device that creates a vibration that is above the vibration perception threshold of an average individual at or beyond the property boundary of the source if on private property or at 150 feet from the source if on a public space or public right-of-way. (Ord. 97-1810 § 3 1997; Ord. 1665 § 2, 1988.)</p>	
El Monte	<p>The City of El Monte land use/noise compatibility matrix can be referenced in Table PHS-3 (Noise/Land Use Compatibility Standards), and Municipal guidelines for exterior noise can be referenced in Table PHS-4 (El Monte Land Use Guidelines for Exterior Noise) of the General Plan Public Health and Safety Element (pgs. PHS-54-55).</p> <p>Community Design Element:</p> <p>Policy CD-7.9 Buffering. Plant buffers of lush deciduous trees along the railroad right-of-way, adjacent to neighborhoods and industries, and in parks and at schools to create a noise buffer, filter air pollutants, and beautify the district.</p> <p>Public Health and Safety Element:</p> <p>Goal PHS-9: Proper planning for the threat of manmade and natural hazards so as to minimize, to the greatest extent possible, the risk to life, limb, property, and essential facilities through emergency preparedness, recovery, and response.</p> <p>Policy PHS-9.1 Residential Neighborhoods. Continue to enforce noise abatement and control measures in El Monte, particularly within residential neighborhoods and around noise sensitive land uses.</p> <p>Policy PHS-9.2 Land Use Compatibility. Require the inclusion of noise reducing design features in development consistent with standards in PHS-1, Title 24 California Code of Regulations and the El Monte Municipal Code (EMMC).</p> <p>Policy PHS-9.3 Site Planning. Incorporate noise considerations into the site plan review process, particularly with regard to parking and loading areas, ingress/egress points and refuse collection areas.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Title 8 (Health and Safety) Chapter 8.36 (Noise Control) Section 8.36.040 (Ambient Noise Standards), Section 8.36.050 (Special Noise Sources), Chapter 17.50 (Performance Standards) Section 17.50.070 (Construction Impacts), Section 17.50.110 (Noise), and Section 17.50.140 (Vibration).</p> <p>Under Title 8 (Health and Safety) Chapter 8.36 (Noise Control) Section 8.36.040 (Ambient Noise Standards) the following apply:</p> <p>A. The following ambient noise standards, unless otherwise specifically indicated, shall apply to all property within their assigned zoning districts and said standards shall constitute the permissible noise level:</p> <ul style="list-style-type: none">• Single-family Zone<ul style="list-style-type: none">○ Day 7:00 a.m. to 10:00 p.m. (50 dBA)○ Night 10:00 p.m. to 7:00 a.m. (45 dBA)• Multifamily Zone<ul style="list-style-type: none">○ Day 7:00 a.m. to 10:00 p.m. (55 dBA)○ Night 10:00 p.m. to 7:00 a.m. (50 dBA)• Commercial Zone<ul style="list-style-type: none">○ Day 7:00 a.m. to 10:00 p.m. (65 dBA)○ Night 10:00 p.m. to 7:00 a.m. (60 dBA)• Industrial<ul style="list-style-type: none">○ Day 7:00 a.m. to 10:00 p.m. (70 dBA)○ Night 10:00 p.m. to 7:00 a.m. (70 dBA) <p>B. It is unlawful for any person to create any noise which would cause the noise level at the property line of any property to exceed the ambient noise level by more than five (5) decibels for a cumulation period of fifteen (15) minutes in any hour.</p> <p>C. At the boundary line between a residential zone and a commercial and/or manufacturing zone, the noise level of the residential zone shall be used.</p> <p>D. If a residential use is located within a commercial or industrial zone, the ambient noise level shall not exceed fifty (50) dBA between the hours of 10 p.m. and seven a.m.</p> <p>E. Corrections to Noise Limits. The numerical limits given in subsection A of this section shall be adjusted by the following corrections, where appropriate (reference Table 1 of Section 8.36.030). (Prior code §§ 5940—5940.4)</p> <p>Under Section 8.36.050 (Special Noise Sources) the following apply:</p> <p>B. Machinery, Fans and Other Mechanical Devices. Any noise level from the use or operation of any machinery, equipment, pump, fan, air conditioning apparatus, refrigerating equipment, motor vehicle, or other mechanical or electrical device, or in repairing or rebuilding any motor vehicle which exceeds the noise limits at any property line, of any receiving property shall be a violation of the provisions of Section 8.36.040(A).</p>	No other applicable ordinances were identified.

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>C. Construction of Building.</p> <p>1. Except as otherwise permitted under subsections (C)(2) or (G) of this section, it is unlawful for any person within the city to operate power construction tools or equipment in the performance of any outside construction or repair work on buildings, structures, or projects in or adjacent to a residential area, except between the hours of six a.m. and seven p.m. Monday through Friday or between the hours of eight a.m. and seven p.m. on Saturday and Sunday.</p> <p>2. Upon a written showing of good cause by a project applicant and the applicant's construction contractor or subcontractor, the Chief Building Official may conditionally relax the hourly restrictions of this subsection on a case-by-case basis, provided such authorization is made in writing. The Chief Building Official is authorized to impose such reasonable conditions as may be deemed necessary and/or desirable to mitigate any noise or other adverse impacts generated by the construction undertaking during specially authorized work hours. The conduct of operations in a manner inconsistent with or beyond the scope of any written authorization granted by the Chief Building Official shall be unlawful and shall constitute a violation of this section. The Chief Building Official shall establish reasonable criteria for the grant of special work hours requests which balances the desire of residents for peace and quiet during evening and early morning hours with the efficiencies derived from authorizing special work hours requests. In accordance with the Chief Building Official's established criteria, each individual request shall be evaluated on its individual merits and on the specific circumstances and characteristics of the project or undertaking. No one grant request shall serve as binding precedent for any subsequent request.</p> <p>3. By City Council resolution, the city may also impose such reasonable fees as may be necessary to review, process and enforce requests for special operating hours.</p> <p>G. Exemptions.</p> <p>5. The provisions of this regulation shall not preclude the construction, operation, maintenance, and repairs of equipment, apparatus, or facilities of park and recreation departments, public work projects, or essential public services and facilities, including those of public utilities subject to the regulatory jurisdiction of the California Public Utilities Commission.</p> <p>E. Loading/Unloading. In residential zones, the opening, closing or other handling of boxes, crates, containers, building materials, or similar objects in such a manner as to cause a noise disturbance is not permitted between the hours of 10 p.m. and seven a.m. (Ord. 2728 § 2, 2008; Ord. 2470 § 1 (part), 1997; Ord. 2469 § 1 (part), 1997; prior code §§ 5950—5950.9)</p> <p>Under Chapter 17.50 (Performance Standards) Section 17.50.070 (Construction Impacts) the following apply:</p> <p>Any nonresidential or multiuse project that requires discretionary approvals that include the demolition of more than five thousand (5,000) square feet and/or the construction of more than two thousand five hundred (2,500) square feet or any residential project that includes the construction of two (2) or more units, shall comply with the following construction impact requirements:</p> <p>D. Construction Hours.</p> <p>1. Residential zoning districts. Construction activities shall be limited to 7:00 a.m. to 6:00 p.m. on Mondays through Fridays and 8:00 a.m. to 6:00 p.m. on Saturdays. No construction shall occur on Sundays or federal holidays.</p> <p>2. All other zoning districts. Construction activities shall be limited to 6:00 a.m. to 7:00 p.m. on Mondays through Fridays and 8:00 a.m. to 7:00 p.m. on Saturdays and Sundays. No construction shall occur on federal holidays.</p> <p>3. All Projects. The Community Development Director may extend the construction hours beyond those listed above provided the applicant has demonstrated that: it is a necessity; additional measures have been taken to reduce noise impacts on adjacent properties; all residentially zoned or used properties have been notified; and the duration will not extend beyond 10 (10) consecutive days.</p> <p>4. The construction hours listed above may be further limited by the City Council, Planning Commission, Zoning Review Committee or Community Development Director as a condition of approval.</p> <p>5. If there are any conflicts between the regulations of this section and Chapter 8.36 (Noise Controls) of the EMMC, the stricter of the two (2) shall apply. (Ord. No. 3011 , § 3(Exh. B), 6-21-2022; Ord. No. 3023 , § 4.B(Exh. B), 5-2-2023)</p> <p>Under Section 17.50.110 (Noise) the following applies:</p>	

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>A. Ambient Noise Standards. Unless otherwise specifically indicated, the following ambient noise standards shown in Table 17.50-2 (of the Municipal Code) shall apply to all property within their assigned zoning districts and said standards shall constitute the permissible noise level:</p> <p>1. It is unlawful for any person to create any noise which would cause the noise level at the property line of any property to exceed the ambient noise level by more than five (5) decibels for a cumulation period of fifteen (15) minutes in any hour.</p> <p>C. Special Noise Sources.</p> <p>2. Machinery, Fans and Other Mechanical Devices. Any noise level from the use or operation of any machinery, equipment, pump, fan, air conditioning apparatus, refrigerating equipment, motor vehicle, or other mechanical or electrical device, or in repairing or rebuilding any motor vehicle which exceeds the noise limits at any property line, of any receiving property shall be a violation of the provisions given in subsection A.</p> <p>F. Exemptions.</p> <p>5. The provisions of this regulation shall not preclude the construction, operation, maintenance, and repairs of equipment, apparatus, or facilities of park and recreation departments, public work projects, or essential public services and facilities, including those of public utilities subject to the regulatory jurisdiction of the California Public Utilities Commission.</p> <p>G. Other Provisions. If there are any conflicts between the regulations of this section and Chapter 8.36 (Noise Controls) of the El Monte Municipal Code, the stricter of the two (2) shall apply. (Ord. No. 3011 , § 3(Exh. B), 6-21-2022; Ord. No. 3023 , § 4.B(Exh. B), 5-2-2023)</p> <p>Under Section 17.50.140 (Vibration) the following applies: All uses shall be so operated so as not to generate vibration discernible without instruments by the average person while on or beyond the lot upon which the source is located or within an adjoining enclosed space if more than one establishment occupies a structure. Vibration caused by motor vehicles, trains and temporary construction is exempted from this standard. (Ord. No. 3011 , § 3(Exh. B), 6-21-2022)</p>	
Glendora	<p>The City of Glendora land use/noise compatibility matrix can be referenced in Table N-1 (Noise and Land Use Compatibility Matrix – California) of the General Plan Noise Element (pg. 7).</p> <p>Noise Element:</p> <p>Goal N-1: Reduced noise impacts from transportation sources.</p> <p>Policy N-1.1: Ensure traffic noise mitigation measures are included and implemented in the design of new development.</p> <p>Policy N-1.2: Encourage the State Department of Transportation (Caltrans) to continue programs that lead to the reduction of the noise levels on I-210.</p> <p>Policy N-1.3: Limit construction, delivery, and through truck traffic to designated routes.</p> <p>Policy N-1.4: Mitigate transportation equipment impacts at construction sites.</p> <p>Goal N-2: Reduced noise impacts from non-transportation sources.</p> <p>Policy N-2.1: Review and update the Noise Ordinance, on a regular basis, to ensure noise-generating uses are adequately addressed.</p> <p>Policy N-2.2: Strive to resolve existing and potential conflicts between noise generating uses and human activities.</p> <p>Policy N-2.3: Prohibit significant noise generating activities from locating adjacent to residential neighborhoods and near schools.</p> <p>Policy N-2.4: Ensure that construction noise does not cause an adverse impact to the residents of the City by requiring that noise mitigation techniques be incorporated into all construction-related activities.</p> <p>Policy N-2.5: Consider developing maximum noise standards for ventilation systems (i.e., air conditioning units) in residential areas.</p> <p>Goal N-3: Coordinated land use planning and noise mitigation.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Table N-2 of the Glendora General Plan Noise Element (pg. 7), and Chapter 9.44 (Noise Regulation) Section 9.44.040 (Ambient noise base levels), Section 9.44.100 (Machinery, Equipment, Fans and Air Conditioning), Section 9.44.110 (Construction of Buildings and Projects), and Chapter 9.36 (Abatement of Nuisances – Premises) Section 9.36.010 (Maintenance of Premises – Nuisances).</p> <p>Under Chapter 9.44 (Noise Regulation) Section 9.44.040 (Ambient noise base levels) the following apply:</p> <p>(1) Actual measured ambient noise level; or</p> <p>(2) Ambient base level (see chart in Section 9.44.040 of the City of Glendora Municipal Code for details).</p> <p>Wherever two different zones are contiguous, the lower ambient noise level at the common property line shall apply. (Ord. 1173 § 1, 1972; Ord. 1180 § 3, 1973)</p> <p>Under Section 9.44.100 (Machinery, Equipment, Fans and Air Conditioning) the following applies:</p> <p>It is unlawful for any person to operate any machinery, equipment, pump, fan, air conditioning apparatus or similar mechanical device in any manner so as to create any noise which would cause the noise level at the property line of any property to exceed the ambient noise level by more than five decibels.(Ord. 1173 § 1, 1972)</p> <p>Under Section 9.44.110 (Construction of Buildings and Projects) the following applies:</p> <p>It is unlawful for any person within a residential zone, or within a radius of five hundred feet therefrom, to operate equipment or perform any outside construction or repair work on buildings, structures or projects or to operate any pile driver, power shovel, pneumatic hammer, derrick, power hoist or any other construction type device (between the hours of nine p.m. of one day and seven a.m. of the next day) in such a manner that a reasonable person of normal sensitiveness residing in the area is caused discomfort or annoyance unless beforehand a permit therefor has been duly obtained from the city. No permit shall be required to perform emergency work as defined in Section 9.44.020(c). (Ord. 1173 § 1, 1972)</p> <p>Under Chapter 9.36 (Abatement of Nuisances – Premises) Section 9.36.010 (Maintenance of Premises – Nuisances) the following applies:</p>	No other applicable ordinances were identified.

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy N-3.1: Ensure Community Noise Equivalent Levels (CNEL) levels for noise sensitive land uses meet or exceed normally acceptable levels, as defined by State of California standards.</p> <p>Policy N-3.2: Enforce all noise standards as outlined in the City’s Noise Ordinance.</p>	<p>(2) Maintenance of Buildings, Structures or Property. To maintain such property in such a manner that any of the following conditions are found to exist thereon:</p> <p style="padding-left: 40px;">(15) Noise Nuisance. To operate or maintain any device, instrument, vehicle or machinery such that the operation or maintenance causes noise or vibrations which cause discomfort or annoyance to reasonable persons of normal sensitivity or endangers the comfort, repose, health or peace of the residents in the area.</p> <p>(Ord. 1909 § 2, 2008)</p>	
Industry	<p>The City of Industry land use/noise compatibility matrix can be referenced in Table 4 (Land Use Compatibility for Community Noise Environments) of the General Plan Safety Element.</p> <p>Safety Element:</p> <p>Goal S6: An environment where noise does not adversely affect sensitive land uses.</p> <p>Policy S6-1: Coordinate with Cal trans, San Gabriel Valley Council of Governments, Southern California Association of Governments, neighboring jurisdictions, and other transportation providers in the preparation and maintenance of transportation and land use plans to minimize noise impacts and provide appropriate mitigation measures.</p> <p>Policy S6-2: Address noise impacts through the effective enforcement of the noise ordinance, project and environmental review, and compliance with state and federal noise standards.</p> <p>Policy S6-3 Consider the noise levels likely to be produced by any new businesses or substantially expanded business activities locating near existing noise-sensitive uses such as schools, community facilities, and residences, as well as adjacent to established businesses involving vibration-sensitive activities.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Title SR (Statutory References for California Cities) Section SR. 060 (Health and Safety)</p> <p>Under Title SR (Statutory References for California Cities) Section SR. 060 (Health and Safety) the noise control in the city references the California Health & Safety Code § 46000 et seq. and Gov’t Code § 65302(f).</p>	No other applicable ordinances were identified.
Irwindale	<p>The City of Irwindale adheres to the State land use/noise compatibility matrix which can be referenced above in Table 3.13-4 (Section 3.13.2.2 of this PEIR).</p> <p>Public Safety Element:</p> <p>Policy 4. The City of Irwindale will strive to reduce the community’s exposure to noise from on-going manufacturing activities.</p> <p>Policy 5. The City of Irwindale will work towards reducing noise exposure in the City by considering noise and land use compatibility in land use planning.</p> <p>Policy 6. The City of Irwindale will continue to investigate strategies that will be effective in reducing the community’s exposure to harmful noise levels.</p> <p>Program:</p> <ul style="list-style-type: none">Code Enforcement. A significant cause of damage, injury, and loss of life to fire involves unsafe structures with poor or obsolete wiring or construction materials. The Building Code contains regulations regarding construction techniques and materials that may be effective in eliminating or reducing the spread of fire. Code enforcement will also ensure that the City’s noise control ordinance is adhered to. For this reason, ongoing code enforcement efforts are an important implementation program within the Safety Element. <p><i>Noise and Land Use Compatibility</i></p> <p>The State Office of Noise Control has prepared Guidelines for the Preparation and Content of Noise Elements of General Plans. This provides a guide for compatibility of noise-sensitive land uses in areas subject to noise levels of 55 to 80 dB CNEL or Ldn. Residential uses are normally unacceptable in areas exceeding 70 dB CNEL; and conditionally acceptable between 55-70 dB CNEL for low-density single-family dwelling units, duplexes, and mobile homes, and between 60-70 dB CNEL for multiple-family units. Schools, libraries, hospitals, and nursing homes are treated as noise-sensitive land uses, requiring acoustical studies within areas exceeding 60 dB CNEL. Commercial/professional office buildings and industrial land uses are normally unacceptable in areas exceeding 75 dB CNEL, and are conditionally acceptable within 67 to 78 dB CNEL (for commercial and professional offices only).</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 9.28 (Noise Regulation) Section 9.28.030 (Ambient base noise levels designated (Proof of Violation), Section 9.28.040 (Noise Level Violation Designated), Section 9.28.100 (Machinery, Equipment, Fans, and Air Conditioning), and Section 9.28.110 (Construction of Building and Projects – Times Specified).</p> <p>Under Chapter 9.28 (Noise Regulation) Section 9.28.030 (Ambient base noise levels designated (Proof of Violation) the following ambient noise levels apply:</p> <p>A. Where the ambient noise level is less than designated in this section, the ambient base noise level in this section shall govern.</p> <p>(a) Residential Zone</p> <ul style="list-style-type: none">10 p.m. to 7 a.m. (45)7 a.m. to 10 p.m. (50) <p>(b) Commercial Zone</p> <ul style="list-style-type: none">10 p.m. to 7 a.m. (50)7 a.m. to 10 p.m. (55) <p>(c) Industrial Zone</p> <ul style="list-style-type: none">10 p.m. to 7 a.m. (60)7 a.m. to 10 p.m. (70) <p>B. Any noise at a level which exceeds the ambient or the ambient base level as set forth in subsection A of this section, whichever is greater, by more than 10 dB when measured at any boundary line of the property from which the noise emanates shall constitute sufficient proof of a violation. (Ord. 297 § 1(part), 1976: prior code § 4803).</p> <p>Under Section 9.28.040 (Noise Level Violation Designated) the following defines a noise violation:</p> <p>It is unlawful for any person to willfully make or continue, or cause to be made or continued any noise at a level which exceeds by more than five dB the ambient or the ambient base level as set forth in Section 9.28.030, whichever is greater, when measured at any boundary line of the property from which the noise emanates. (Ord. 297 § 1(part), 1976: prior code § 4804).</p> <p>Under Section 9.28.100 (Machinery, Equipment, Fans, and Air Conditioning) the following apply:</p>	No other applicable ordinances were identified.

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>It is unlawful for any person to operate any machinery, equipment, pump, fan, air-conditioning apparatus, or similar mechanical device in any manner so as to create any noise which would cause the noise level at any boundary line of any property from which such noise emanates to exceed the ambient noise level or the ambient base level as set forth in Section 9.28.030, whichever is greater, by more than 10 decibels; provided, however, this section shall not prevent the reasonable operation of customary household gardening equipment or hobby shop equipment during the hours of eight a.m. to nine p.m., Monday through Saturday, and 10 a.m. to eight p.m. on Sunday, provided the same may not exceed eighty decibels (as measured from the adjacent property line) for more than three hours from sunup to sundown (Ord. 297 § 1(part), 1976: prior code § 4825).</p> <p>Under Section 9.28.110 (Construction of Building and Projects – Times Specified) the following apply:</p> <p>A. It is unlawful for any person within a residential zone, or within a radius of five hundred feet therefrom, to operate equipment or perform any outside construction or repair work on buildings, structures, or projects or to operate any pile driver, steam shovel, pneumatic hammer, derrick, steam or electric hoist or other construction type device on a development requiring a city permit, in such a manner that noise is produced which would constitute a violation of Section 9.28.040, unless beforehand authorization therefor has been duly obtained from the building inspector. Such activity is unlawful without a permit during all hours on Sunday. No permit shall be required to perform emergency work as defined in subsection E of 9.28.020.</p> <p>B. Construction authorized by subsection A of this section shall be limited to seven a.m. to seven p.m. (Ord. 297 § 1(part), 1976: prior code § 4830).</p>	
La Puente	<p>The City of La Puente land use/noise compatibility matrix can be referenced in Figure CS-6 (Noise/Land Use Compatibility Criteria) of the General Plan Community Safety Element (pg. CS-20).</p> <p>Community Safety Element:</p> <p>Goal 4: Protection from undesirable traffic, business activity, and nuisance noise to the extent feasible.</p> <p>Policy 4.1: Encourage property owners to repair deteriorating sound walls along Valley Boulevard.</p> <p>Policy 4.2: Require trucks to travel on designated truck routes to minimize impacts of traffic noise on residential neighborhoods.</p> <p>Policy 4.3: Minimize spillover noise from commercial and industrial uses into nearby residential neighborhoods.</p> <p>Policy 4.4: Continue to enforce the City's noise regulations to protect residents from excessive noise levels associated with loud parties, loud music, and other nuisance noise sources.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 4.34 (Noise Regulations) Section 4.34.020 (Prohibited Noises – Specific Examples), Section 4.34.030 (Exemptions), Chapter 10.38 (Performance Standards) Section 10.38.060 (Noise), and Section 10.38.100 (Vibration).</p> <p>Under Chapter 4.34 (Noise Regulations) Section 4.34.020 (Prohibited Noises – Specific Examples) the following apply:</p> <p>(c) Engines, Motors and Mechanical Devices Near Residential District. The sustained, continuous or repeated operation or use between the hours of eight p.m. and seven a.m. of any motor or engine or the repair, modification, reconstruction, testing or operation of any automobile, motorcycle, machine, contrivance, or mechanical device or other contrivance or facility unless such motor, engine, automobile, motorcycle, machine or mechanical device is enclosed within a sound insulated structure so as to prevent noise and sound from being plainly audible at: (1) distance of fifty feet or more from the property line of the property from which the noise, sound or vibration is emanating or (2) the exterior wall of any adjacent residence, whichever is less.</p> <p>(e) Loading and Unloading. Loading, unloading, opening, closing or other handling of boxes, crates, containers, building materials, garbage cans or similar objects between the hours of eight p.m. and seven a.m. in volume sufficiently loud as to be plainly audible at a distance of fifty feet or more from the property line of the property where the activity is occurring.</p> <p>(f) Construction. Operating or causing the operation of any tools, equipment, impact devices, derricks or hoists used on construction, drilling, repair, alteration, demolition or earthwork, between the hours of eight p.m. and seven a.m. on weekdays or at any time on Saturdays (except, between the hours of seven a.m. and eight p.m., interior construction is permissible); or at any time on Sundays or city holidays.</p> <p>(j) Leaf Blowers. The use or operation or allowing the use or operation of any portable machine powered with a combustion or gasoline engine to blow leaves, dirt and other debris off sidewalks, driveways, lawns and other surfaces, between the hours of eight p.m. and seven a.m. (Ord. 753 § 4 (part), 1997)</p> <p>Under Section 4.34.030 (Exemptions) the following apply:</p> <p>(d) Construction; Special Circumstances. The provisions of Section 4.34.020 of this chapter do not apply to any person who performs construction, repair, excavation or earthmoving work if and to the extent that the city manager or his or her designee has given express prior written permission to perform such work at times prohibited in Section 4.34.020 of this chapter. In order to be given such permission, the person must submit to the city manager or to the city manager’s designee an application in writing, stating the reasons for the request and the facts upon which such reasons are based. The city manager</p>	No other applicable ordinances were identified.

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>or his or her designee may grant or conditionally grant such permission if the city manager, city engineer, code enforcement officer or building official has found that:</p> <p>(1) The work proposed to be done is necessary to protect or promote public safety or welfare or is otherwise in the public interest; or</p> <p>(2) Hardship including, but not limited to, unreasonable delay due to weather, acts of God or labor strikes, would result from the interruption thereof during the hours and days specified in Section 4.34.020 of this chapter; or</p> <p>(3) The building or structure involved is devoted or intended to be devoted to a use immediately incidental to public defense.</p> <p>Any applicant dissatisfied with the decision of the city manager or the city manager’s designee may appeal to the city council by filing a notice of appeal with the city clerk within 10 days after notice of the decision. The appeal shall be accompanied by the applicable appeal fee, which shall be established by a resolution of the city council. The city council shall, within thirty days of filing the appeal, affirm, reverse or modify the decision of the city manager.</p> <p>The provisions of Section 4.34.020 of this chapter also do not apply to the construction, repair, or excavation during prohibited hours as may be necessary for the preservation of life or property, when such necessity arises during such hours as the offices of the city are closed, or where such necessity requires immediate action prior to the time at which it would be possible to obtain a permit pursuant to this section. The person doing such construction, repair or excavation shall obtain a permit therefore within one business day of such construction, repair or excavation. The application for the permit shall be accompanied by the payment of the applicable fee established by resolution of the city council. (Ord. 753 § 4 (part), 1997)</p> <p>Under Chapter 10.38 (Performance Standards) Section 10.38.060 (Noise) the following apply:</p> <p>The regulations set forth in Chapter 4.34 (Noise Regulations) of the Municipal Code shall apply. (Ord. 935 § 3 (part), 2015)</p> <p>Under Chapter 10.38 Section 10.38.100 (Vibration) the following apply:</p> <p>No vibration shall be permitted which can be felt at or beyond the property line. (Ord. 935 § 3 (part), 2015)</p>	
La Verne	<p>The City of La Verne land use/noise compatibility matrix can be referenced in Table N-1 (Noise/Land Use Compatibility Matrix) of the General Plan Noise Element.</p> <p>Noise Element:</p> <p>Goal 1: Protect our community from excessive noise.</p> <p>Policy 1.1: Maintain or reduce noise levels citywide.</p> <p>Implementation Measure:</p> <p>a. Enforce the Noise Control Ordinance to assure that all new development is consistent with the land use compatibility criteria, exterior and interior noise standard.</p> <p>b. Establish the land use compatibility criteria that are shown in Table N-1.</p> <p>c. Establish interior and exterior noise standards that are shown in Table N-2.</p> <p>d. Require all new residential construction in areas with an exterior noise level greater than 60 dB to include sound attenuation measures that reduce interior noise levels to the standards shown in Table N-2.</p> <p>Sound attenuation measures include but are not limited to:</p> <ul style="list-style-type: none">• Soundwalls• Double glazing• Sitting• Façade treatment <p>e. Maintain a technical resource for builders, developers and homeowners which discusses a variety of sound attenuation measures, the amount of noise reduction each produces and how to combine them to meet City requirements.</p> <p>f. Consider the noise of a proposed project in both absolute and relative terms.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 8.20 (Noise Control) Section 8.20.010 (Adoption by Reference) and Section 8.20.030 (Interpretation).</p> <p>Under Chapter 8.20 (Noise Control) Section 8.20.010 (Adoption by Reference) the City has adopted the Ordinance No. 11,773 of the county of Los Angeles, known as the “noise control ordinance of the county of Los Angeles.” (Ord. 621 § 1, 1981; prior code § 11,300)</p> <p>Under Section 8.20.030 (Interpretation) the following interpretation applies:</p> <p>A. In Ordinance No. 11,773, the references in that ordinance to an office, official title or other designation means the corresponding office, title or designation in the governmental structure of the city. All references in Articles III, IV, VI and VIII to the “Health Officer” shall be to the code enforcement officer or city planning technician. All references to the health officer in Articles V and VII shall be to the commission on environmental quality. All references in Article VII to the “Hearing Officer” shall be to the city council. If there is no corresponding office, title or designation within the city government, then the reference means the office or person in the city who performs the function or duty referred to in Ordinance No. 11,773.</p> <p>B. In the case of any mixed land uses, the most intense land use shall define the land use of the property. (Ord. 621 § 1, 1981; prior code § 11,302)</p>	No other applicable ordinances were identified.

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>A proposed project will be considered to have a significant adverse impact on the environment if the expected noise increase exceeds 5 dB, even though it may not exceed the standard in Table N-2. Sound attenuation measures will be required as a condition of approval.</p> <p>g. Require stringent mitigation measures to limit construction noise for all new projects. Establish a graduated system of fines for violations that increase in severity with each offense.</p> <p>h. Revise the city's noise ordinance to address standards for abatement of neighborhood noise nuisances and the impacts of events outside direct city control.</p>		
Monrovia	<p>The City of Monrovia land use/noise compatibility matrix can be referenced in Figure 2 (Land Use Compatibility Guidelines) of the General Plan Noise Element.</p> <p>Noise Element:</p> <p><i>Noise Control Program</i></p> <p>Program No. 1: The City will continue to implement and enforce the City of Monrovia’s noise ordinance for the control of unnecessary and unwanted noises.</p> <p>Program No. 3: The City may implement a noise zoning code, defining compatible land usage requirements based on the guidelines of Figure 2. The City would require an analysis of whether or not the proposed development would be in compliance with this code. If the development falls in the CNEL or Ldn range above that indicated for the normally acceptable category, noise control design steps must be included in the project plans.</p> <p>Program No. 4: The City will periodically review other elements of the General Plan for inclusion of possible revisions giving recognition to noise level/land use relationships. To some degree, all the elements of the General Plan are related and interdependent. The Noise Element is closely related to a number of elements of the General Plan including Land Use, Circulation, Housing, and Conservation and Open Space. The City should review these related elements and revise them where necessary to protect the noise environment of Monrovia.</p> <p>Program No. 6: Future projects within the City will reflect a consciousness on the part of the City regarding the reduction of unnecessary noise near noise-sensitive areas such as residences, schools, parks, hospitals, libraries, and convalescent homes.</p> <p>Actions that can be taken to implement this program can include:</p> <ul style="list-style-type: none">2. Consideration should be given to buffering noise-sensitive areas from noise-generating land uses.3. Noise monitoring within the City will be an ongoing process conducted by the appropriate departments.5. Close attention shall be paid to the noise evaluation in environmental assessments, environmental impact reports and environmental impact statements. <p>Land Use Element:</p> <p>Goal 10: Ensure that new development is sensitive to the City's natural and open space resources and constraints.</p> <p>Policy 10.12: Consider the issue of noise on the existing and future environment when planning the location of residential areas and other noise sensitive land uses in Monrovia.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Title 9 (Public Peace, Morals, and Welfare) Chapter 9.44 (Noise) Section 9.44.04 (Allowable Noise Levels), Section 9.44.080 (Exemptions), Chapter 17.32 (Performance Standards) Section 17.32.030 (Noise), and Section 17.32.040 (Vibration).</p> <p>Under Title 9 (Public Peace, Morals, and Welfare) Chapter 9.44 (Noise) Section 9.44.04 (Allowable Noise Levels) the following apply:</p> <p>(A) The noise standards imposed by this section shall apply to all properties in the city occupied for residential purposes, without regard to zoning classification. Except as otherwise allowed in this chapter, no person shall create or allow the creation of noise on any such residential property which causes the noise level to exceed the actual measured median ambient noise level, or the following presumed ambient noise level, whichever is greater:</p> <ul style="list-style-type: none">• 7:00 a.m. to 9:00 p.m.<ul style="list-style-type: none">○ Allowable Noise Level – dBA 55• 9:00 p.m. to 7:00 a.m.<ul style="list-style-type: none">○ Allowable Noise Level – dBA 50 <p>(B) If the intruding noise source is continuous and cannot be reasonably discontinued for sufficient time in which the ambient noise level can be determined, the presumed ambient noise level shall be used.</p> <p>(`83 Code, § 9.44.040) (Ord. 85-5 § 1 (part), 1985)</p> <p>Under Section 9.44.080 (Exemptions) the following apply:</p> <p>The following activities shall be exempt from the provisions of this chapter:</p> <p>(D) The handling of boxes, crates, containers, garbage cans or other similar objects between the hours of 7:00 a.m. and 7:00 p.m.;</p> <p>(E) The operation of any mechanically powered saw, sander, drill, grinder, lawn or garden tool or similar tool between 7:00 a.m. and 7:00 p.m. on weekdays and the hours of 10:00 a.m. and 10:00 p.m. on weekends and holidays;</p> <p>(F) Construction or demolition work conducted between the hours of 7:00 a.m. and 7:00 p.m. on weekdays and the hours of 9:00 a.m. and 6:00 p.m. on weekends and holidays;</p> <p>(G) Any activity to the extent regulation thereof has been preempted by state or federal law. (`83 Code, § 9.44.080) (Ord. 85-5 § 1 (part), 1985; Ord. 88-31 § 1, 1989)</p> <p>Under Chapter 17.32 (Performance Standards) Section 17.32.030 (Noise) the following applies:</p> <p>The maximum sound level radiated by any use of facility, when measured at the boundary line of the property on which the sound is generated, shall not be obnoxious by reason of its intensity, pitch or dynamic characteristics, as determined by the city. (`83 Code, § 17.32.030) (Ord. 94-03 § 6, 1994)</p> <p>Under Section 17.32.040 (Vibration) the following applies:</p> <p>No vibration shall be permitted which causes a noticeable tremor beyond the boundary line of the property upon which the vibration exists. (`83 Code, § 17.32.040) (Ord. 94-03 § 6, 1994)</p>	<p>No other applicable ordinances were identified.</p>
Montebello	<p>The City of Montebello land use/noise compatibility matrix can be referenced in Table C5.3 (Land Use/Noise Compatibility Matrix) in Chapter 5 (Our Healthy Community) of the General Plan.</p> <p>Our Well Planned Community:</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 9.08 (Offenses Against Public Peace) Section 9.08.050 (Loud and Raucous Noise),</p> <p>Under Chapter 9.08 (Offenses Against Public Peace) Section 9.08.050 (Loud and Raucous Noise) the following applies:</p>	<p>No other applicable ordinances were identified.</p>

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy P3.3: Revitalize established neighborhoods and corridors.</p> <p>Action A3.3b: Protect adjoining properties from the potential adverse impacts associated with non-residential uses on corridors adjacent to residential areas with proper mitigation measures that address scale, massing, traffic, noise, appearance, lighting, and drainage.</p> <p>Our Healthy Community:</p> <p>Policy P5.4: Minimize noise impacts to ensure that noise does not detract from Montebello’s quality of life.</p> <p>Action A5.4a Manage relationship between homes and major noise sources through zoning and environmental review and design measures.</p> <p>Action A5.4b Require development projects to implement mitigation measures, where necessary, to reduce exterior and interior noise levels to meet adopted standards and criteria. Require mixed-use structures to minimize the transfer of noise from commercial uses to residential uses.</p> <p>Action A5.4c Discourage through traffic in neighborhoods through noise-attenuating roadway materials, and modifications to street design.</p> <p>Action A5.4d Minimize stationary noise impacts on sensitive receptors, and require control of noise from construction activities, private developments/ residences, landscaping activities, and special events.</p> <p>Policy P5.5 Minimize excessive construction-related noise and vibrations.</p> <p>Action A5.5a Adopt and implement measures that reduce construction noise and vibrations.</p> <p>Action A5.5b Construction plans submitted to the City shall include construction noise analysis (and vibration analysis where applicable) and identify measures to mitigate excessive noise and vibrations associated with demolition, grading, and construction plans.</p> <p><i>The noise and vibration analysis shall be conducted by a qualified and experienced acoustical consultant or engineer. The vibration levels shall not exceed Federal Transit Administration (FTA) architectural damage thresholds.</i></p>	<p>The following acts, among others, are declared to be loud or raucous noises but the enumeration shall not be deemed to be exclusive:</p> <p>H. Loading, Unloading, Opening Boxes. The creation of any noise which disturbs the peace and quiet of a reasonable person in connection with loading or unloading of any vehicle, or the opening and destruction of bales, boxes, crates and containers between the hours of 10 p.m. and seven a.m.;</p> <p>I. Construction or Repairing of Real Property. Noise sources associated with construction, demolition, grading, repair or remodeling of any real property other than between the hours of seven a.m. and eight p.m. on weekdays (Monday through Friday), and nine a.m. to six p.m. on Saturdays, Sundays and legal holidays, except in the case of an emergency where such action is immediately required to prevent injuries to persons or damage to property as determined by the director of building and safety or his designated representative;</p> <p>L. Pile Drivers, Hammers, Etc. Any pile driver, pneumatic hammer, bulldozers or other construction vehicles, motorized hoists or other devices operated between the hours of eight p.m. and seven a.m.;</p> <p>M. Blowers. The operation of any noise-creating blower, power fan or internal combustion engine in which the power is produced by the explosion of a fuel and air mixture within the cylinder(s) shall be prohibited unless the noise from such blower or fan is muffled and such engine is equipped with a muffler device sufficient to deaden such noise. (Ord. 2164 §§ 1, 2, 1997; Ord. 2143 § 5, 1996)</p>	
Pasadena	<p>The City of Pasadena land use/noise compatibility matrix can be referenced in Figure 1 (Guidelines for Noise Compatible Land Use) of the General Plan Noise Element (pg. 6).</p> <p>Noise Element:</p> <p>Objective 1: The City will work to reduce the effects of noise from freeway traffic on residential and other sensitive land uses.</p> <p>Policy 1a: The City will encourage noise-compatible land uses near existing freeways.</p> <p>Policy 1b: The City will cooperate with Caltrans and Metropolitan Transportation Authority (MTA) to landscape or install noise attenuation along freeways adjacent to residential or noise sensitive uses.</p> <p>Objective 7: The City will minimize the effects of nuisance noise on sensitive land uses as defined in Figure 1 (of the General Plan) to the degree feasible.</p> <p>Policy 7a: Whenever possible, City-sponsored events that generate noise will be scheduled during hours when effects would be minimal.</p> <p>Policy 7b: The City will encourage limitations on construction activities adjacent to sensitive noise receptors as defined in Figure 1 (of the General Plan).</p> <p>Policy 7c: The City will encourage construction and landscaping activities that employ techniques to minimize noise.</p> <p>Policy 7d: The City will enforce noise level restrictions contained in the City of Pasadena Noise Regulations (Chapter 9.36 of the Municipal Code), except during federal, State, or local emergencies (such as power generators required for energy emergencies).</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 9.36 (Noise Restrictions) Section 9.36.070 (Construction Projects), Section 9.36.080 (Construction Equipment), Section 9.36.090 (Machinery, Equipment, Fans and Air Conditioning)</p> <p>Under Chapter 9.36 (Noise Restrictions) Section 9.36.070 (Construction Projects) the following apply:</p> <p>A. No person shall operate any pile driver, power shovel, pneumatic hammer, derrick power hoist, forklift, cement mixer or any other similar construction equipment within a residential district or within a radius of 500 feet therefrom at any time other than as listed below:</p> <ol style="list-style-type: none">1. From 7:00 a.m. to 7:00 p.m. Monday through Friday;2. From 8:00 a.m. to 5:00 p.m. on Saturday;3. Operation of any of the listed construction equipment is prohibited on Sundays and holidays. <p>B. No person shall perform any construction or repair work on buildings, structures or projects within a residential district or within a radius of 500 feet therefrom in such a manner that a reasonable person of normal sensitiveness residing in the area is caused discomfort or annoyance at any time other than as listed below:</p> <ol style="list-style-type: none">1. From 7:00 a.m. to 7:00 p.m. Monday through Friday;2. From 8:00 a.m. to 5:00 p.m. on Saturday;3. Performance of construction or repair work is prohibited on Sundays and holidays. <p>C. The prohibition against construction on Sundays and holidays as set forth in subsection B of this section shall not apply under either of the following conditions:</p> <ol style="list-style-type: none">1. The construction is actually performed by an individual who is the owner or lessor of the premises and who is assisted by not more than two individuals;2. The person performing the construction shall have provided the building official with a petition which indicates the consent of 65 percent of the households residing within 500 feet of the construction site and the unanimous consent	No other applicable ordinances were identified.

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>of the households adjacent to the construction site. Said petition shall be on a form promulgated by said building official and shall be accompanied by a fee, the amount of which shall be established by resolution by the city council.</p> <p>D. The prohibitions of this section shall not apply to the performance of emergency work as defined in Section 9.36.030.</p> <p>E. For purposes of this section, holidays are New Year's Day, Martin Luther King Jr. Day, Lincoln's Birthday, Washington's Birthday, Memorial Day, Independence Day, Labor Day, Veterans Day, Thanksgiving Day, Day after Thanksgiving, and Christmas. (Ord. 7150 § 2 (part), 2008)</p> <p>Under Section 9.36.080 (Construction Equipment) the following apply:</p> <p>It is unlawful for any person to operate any powered construction equipment if the operation of such equipment emits noise at a level in excess of 85 dBA when measured within a radius of 100 feet from such equipment. (Ord. 7150 § 2 (part), 2008)</p> <p>Under Section 9.36.090 (Machinery, Equipment, Fans and Air Conditioning) the following apply:</p> <p>Except for emergency work, as defined in this chapter it is unlawful for any person to operate any machinery, equipment, pump, fan, air conditioning apparatus or similar mechanical device in any manner so as to create any noise which would cause the noise level at the property line of any property to exceed the ambient noise level by more than 5 decibels. (Ord. 7150 § 2 (part), 2008)</p> <p>Under Chapter 9.37 (Leaf-Blowing Machines) Section 9.37.030 (Prohibition) the following apply:</p> <p>A. It is unlawful for any person to use or to operate, or cause to be operated any type of leaf-blowing machine or device within a residential area before 8:00 a.m. and after 6:00 p.m., Monday through Friday; before 9:00 a.m. and after 5:00 p.m. on Saturday; or at any time on Sunday.</p> <p>B. It is unlawful for any person to use or allow to be used, or to operate or cause to be used or operated any type of leaf-blowing machine or device in the city within a radius of 500 feet of a residential area before 8:00 a.m. and after 6:00 p.m., Monday through Friday; before 9:00 a.m. and after 5:00 p.m. on Saturday; or at any time on Sunday.</p> <p>C. It is unlawful for any person to use or operate, or cause to be used or operated, a leaf blower in such a manner as to blow, dispel or make airborne, leaves, grass cuttings, paper, trash or any other type of unattached debris or material, which, by use of the leaf blower, will intentionally cause such leaves, grass cuttings, paper, trash or any other type of unattached debris or material to become airborne or travel beyond the property boundaries of the parcel on which it is being used, to adjoining properties or public rights-of-way within the city, and to remain there for more than 15 minutes.</p> <p>D. It is unlawful to operate more than one leaf blower per parcel.</p> <p>E. It is unlawful to operate a leaf blower for more than 15 minutes per hour on a parcel less than ½ acre, and for more than 30 minutes per hour on a parcel greater than ½ acre.</p> <p>F. It is unlawful to operate a leaf blower with a maximum noise level of 65 decibels when measured from a distance of 50 feet.</p> <p>G. Commencing February 28, 2023, it is unlawful for the city, and commencing April 28, 2023, it is unlawful for any person to operate or authorize the operation of a gas-powered leaf blower at any time for any purpose. Notwithstanding the preceding sentence, the person responsible for any violation of this Section G shall be limited to the landscape business owner, or homeowner if using their private gas-powered leaf blower. Use of gas-powered leaf blowers is exempt from this section as follows:</p> <p>1. When utilized by or at the direction of emergency responders for the purposes of responding to an emergency, or necessary to restore, preserve, protect or save lives or property from imminent danger of loss or harm.</p> <p>2. When used to clear downed trees or vegetation in areas needing expedient clearance when necessary to protect public safety, as authorized by the City.</p> <p>(Ord. 6845 § 3, 2000: Ord. 6227 § 1 (part), 1987)</p>	
Pico Rivera	<p>The City of Pico Rivera land use/noise compatibility matrix can be referenced in Table 11-1 (Maximum Allowable Environmental Noise Standards) and vibration criteria can be referenced in Table 11-2 (Groundborne Vibration Impact Criteria for General Assessment) of the General Plan Noise Element.</p> <p>Noise Element:</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 8.40 (Noise) Section 8.40.010 (Unnecessary Noises Prohibited)</p> <p>Under Chapter 8.40 (Noise) Section 8.40.010 (Unnecessary Noises Prohibited) the following apply:</p> <p>A. No person shall make, cause or suffer, or permit to be made, upon any premises owned, occupied or controlled by him, any unnecessary noises or sounds which are physically annoying to persons of ordinary sensitiveness, or which are so harsh or so</p>	<p>No other applicable ordinances were identified.</p>

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 11.1: An acceptable noise environment for existing and future residents that also meets the business needs of the community.</p> <p>Policy 11.1-1 Land Use Compatibility. Strive to achieve and maintain land use patterns that are consistent with the noise compatibility guidelines set forth in Table 11-1.</p> <p>Policy 11.1-2 Existing Noise Incompatibilities. Within areas where existing or future noise levels exceed the guidelines set forth in Table 11-1, encourage establishment of noise buffers and barriers, modifications to noise-generating operations, and/or retrofitting of buildings housing noise-sensitive uses, where feasible and appropriate.</p> <p>Implementation Program for Policies 11.1-1 through 11.1-2:</p> <ul style="list-style-type: none">Adopt regulations in the zoning ordinance addressing acceptable noise and vibration levels and duration. <p>Policy 11.1-3 New Noise-Sensitive Development. Require development of new noise-sensitive land uses to provide appropriate noise buffers or barriers, as well as to implement feasible building designs needed to meet the noise compatibility guidelines shown in Table 11-1.</p> <p>Policy 11.1-4 New Stationary Noise Sources. Require new stationary noise sources to mitigate impacts on noise-sensitive uses consistent with the noise compatibility guidelines set forth in Table 11-1.</p> <p>Policy 11.2-4 Truck Routes. Maintain a system of truck routes that avoid truck travel through or adjacent existing and future residential neighborhoods, to the extent feasible.</p> <p>Goal 11.3: Minimize disruptions to residential neighborhoods and businesses caused by construction-related noise.</p> <p>Policy 11.3-1 Construction Noise. Minimize construction-related noise and vibration by limiting construction activities within 500 feet of noise-sensitive uses from 7:00 A.M. to 7:00 P.M. seven days a week; after hour permission shall be granted by City staff, Planning Commission, or the City Council.</p> <ul style="list-style-type: none">Require proposed development adjacent to occupied noise sensitive land uses to implement a construction-related noise mitigation plan. This plan would depict the location of construction equipment storage and maintenance areas, and document methods to be employed to minimize noise impacts on adjacent noise sensitive land uses.Require that construction equipment utilize noise reduction features (e.g., mufflers and engine shrouds) that are no less effective than those originally installed by the manufacturer.Require that haul truck deliveries be subject to the same hours specified for construction. Additionally, the plan shall denote any construction traffic haul routes where heavy trucks would exceed 100 daily trips (counting those both to and from the construction site). To the extent feasible, the plan shall denote haul routes that do not pass sensitive land uses or residential dwellings. <p>Policy 11.3-2 Vibration Standards. Require construction projects and new development anticipated to generate a significant amount of vibration to ensure acceptable interior vibration levels at nearby noise-sensitive uses based on Federal Transit Administration criteria as shown in Table 11-2.</p>	<p>prolonged or unnatural or unusual in their use, time or place as to occasion physical discomfort to the inhabitants of any neighborhood.</p> <p>B. When any loud or unruly assemblage occurs or is held, and the city's law enforcement agency is required to respond to the scene in response to citizen complaints, and the senior peace officer at the scene determines that there is a threat to the public peace, health, safety or general welfare, then that senior peace officer shall notify the owner of the property and/or the person in charge of the property where the assemblage exists, and/or the person responsible for said assemblage, that such person or persons, or in the case of a minor, the parents and/or guardians of such minor, shall be held personally liable for the cost of providing additional law enforcement personnel on special security assignment over and above the normal services provided by the law enforcement agency in response to such assemblage. Such person or persons shall be given a first warning, in the form of notification by the senior peace officer that the first police response shall be deemed to be the normal police services provided. Such notice may include a written notice, receipt of which is signed by the owner, responsible person or person in charge. The police personnel necessarily utilized after such first warning to control the threat to the public peace, health, safety or general welfare shall be deemed to be on special security assignment over and above the normal services provided and the owner of the property and/or the person in charge of the property where such assemblage occurs, and/or the person responsible for the cost of such special security assignment in an amount determined upon a cost accounting basis by the city. The cost of such special security assignment shall include damage to city property and/or injuries to city personnel. A fee charged will not be in excess of five hundred dollars for a single incident. The city reserves its legal options to elect any other legal remedies when said costs or damage exceed five hundred dollars.</p> <p>C. The city council declares that loud or unruly assemblages described in subsection B of this section are a public nuisance. The cost of abating such public nuisance, including police services, may be made a lien upon the property where the nuisance is located, and/or collected as a special assessment against the property at the same time and in the same manner as ordinary municipal taxes are collected. Prior to the recordation of the lien, or the collection of the charge in the manner of a municipal tax, the property owner shall be entitled to a hearing before the city council upon at least 10 days prior written notice. Notice shall be given in accordance with Government Code Section 38773.1. (Prior code § 4201; Ord. 873 § 1, 1995)</p>	
Pomona	<p>The City of Pomona land use/noise compatibility matrix can be referenced in Figure 7-G.1 (community Noise Expoure) of the General Plan Noise & Safety Chapter (pg. 158).</p> <p>Conservation Element:</p> <p>Goal 7E.G6: Protect the natural environment, including wildlife, from destruction during new construction or redevelopment within Pomona.</p> <p>Policy 7E.P4: Protect natural vegetation in parks, open spaces, and scenic areas as wildlife habitat, to prevent erosion and to serve as noise and scenic buffers.</p> <p>Noise & Safety Chapter:</p> <p>Goal 7G.G1: Protect public health and welfare by eliminating or minimizing the effects of existing noise and vibration problems, and by minimizing the increase of noise and vibration levels in the future.</p> <p>Goal 7G.G2: Continue efforts to incorporate noise considerations into land use planning decisions, and guide the location and design of transportation facilities to minimize the effects of noise on adjacent noise-sensitive land uses.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Article VII (Noise and Vibration Control) Section 18-305 (Exemptions), Section 18-309 (Vibration), Section 18-309 (Vibration), Section 18-311 (Exterior Noise Standards), Appendix I (Zoning Ordinance) Section .399 (Property Development Standards)</p> <p>Under Article VII (Noise and Vibration Control) Section 18-305 (Exemptions) the following apply:</p> <p>(3) Noise sources associated with or vibration created by construction, repair, remodeling or grading of any real property or during authorized seismic surveys, provided such activities do not take place between the hours of 8:00 p.m. and 7:00 a.m. on weekdays, including Saturday, or at any time on Sunday or a federal holiday, and provided the noise level created by such activities do not exceed the noise standard of 65 dB(A) plus the limits specified in section 18-311(b) as measured on residential property and any vibration created does not endanger the public health, welfare and safety.</p> <p>(5) Noise sources associated with the maintenance of real property, provided such activities take place between the hours of 7:00 a.m. and 8:00 p.m. on any day except Sunday or between the hours of 9:00 a.m. and 8:00 p.m. on Sunday.</p> <p>(6) Any activity to the extent regulation thereof has been preempted by state or federal law.</p> <p>(Code 1959, § 14.9-7; Ord. No. 3120, § 1(part); Ord. No. 4110, § 1, 11-17-2008)\</p>	No other applicable ordinances were identified.

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 7G.P1: As part of development review, use Figure 7-G.1 (Land Use Compatibility for Community Noise Environments of the General Plan) to determine acceptable uses and insulation requirements in noise-impacted areas.</p> <p>Policy 7G.P2: Discourage location of new noise-sensitive uses, primarily residential and educational facilities, in areas with projected noise levels greater than 65 dB CNEL, as shown in Figure 7-G.2 (Future Noise Contours of the General Plan). Where such uses are permitted, require incorporation of mitigation measures to ensure that interior noise levels do not exceed 45 dB CNEL, including:</p> <ul style="list-style-type: none">Require that applicants for new noise-sensitive development, in areas subject to noise levels greater than 65 db CNEL, first obtain the services of a professional acoustical engineer to provide a technical analysis and design of mitigation measures.In the Zoning Ordinance, require placement of fixed equipment, such as air conditioning units and condensers, inside or in the walls of new buildings or on rooftops of central units to reduce noise impacts on any nearby sensitive receptors.Establish appropriate noise-emission standards to be used in connection with the purchase, use and maintenance of City vehicles. <p>Policy 7G.P3: Continue to restrict noise and require mitigation measures for any noise emitting construction equipment or activity.</p>	<p>Under Section 18-309 (Vibration) the following applies: Notwithstanding other sections of this article, it shall be unlawful for any person to create, maintain or cause any ground vibration which is perceptible without instruments at any point on any affected property adjoining the property on which the vibration source is located. For the purpose of this article, the perception threshold shall be presumed to be more than 0.05 inch per second RMS vertical velocity. (Code 1959, § 14.9-10; Ord. No. 3120, § 1 (part))</p> <p>Under Section 18-311 (Exterior Noise Standards) the following apply:</p> <p>(a) The following noise standards, unless otherwise specifically indicated, shall apply to all property within a designated noise zone (reference code above)</p> <p>(b) It shall be unlawful for any person at any location within the incorporated area of the city to create any noise or to allow the creation of any noise on property owned, leased, occupied or otherwise controlled by such person which causes the noise level, when measured on any other property, to exceed the following:</p> <ol style="list-style-type: none">(1) The noise standard for a cumulative period of more than 30 minutes in any hour;(2) The noise standard plus five dB(A) for a cumulative period of more than 15 minutes in any hour;(3) The noise standard plus 10 dB(A) for a cumulative period of more than five minutes in any hour;(4) The noise standard plus 15 dB(A) for a cumulative period of more than one minute in any hour; or(5) The noise standard plus 20 dB(A) for any period of time. <p>(c) If the ambient noise level exceeds any of the noise limit categories in subsections (b)(1) through (4) of this section, the cumulative period applicable to such category shall be increased to reflect such ambient noise level. If the ambient noise level exceeds the noise limit category in subsection (b)(5) of this section, the maximum allowable noise level under such category shall be increased to reflect the maximum ambient noise level.</p> <p>(d) If the measurement location is on a boundary between two different noise zones, the lower noise level standard applicable to the noise zone shall apply.</p> <p>(e) If the intruding noise source is continuous and cannot reasonably be discontinued or stopped for a time period whereby the ambient noise level can be determined, the measured noise level obtained while the source is in operation shall be compared directly to the allowable noise level standards as specified respective to the measurement location's designated land use and for the time of day the noise level is measured. The reasonableness of temporarily discontinuing the noise generation by an intruding noise source shall be determined by the chief of police for the purpose of establishing the existing ambient noise level at the measurement location.</p> <p>(Code 1959, § 14.9-5; Ord. No. 3120, § 1 (part); Ord. No. 3861, § 1; Ord. No. 3939, § 3)</p> <p>Under Appendix I (Zoning Ordinance) Part II Section .399 (Property Development Standards) the following apply:</p> <p>(m) STANDARDS OF OPERATION</p> <p>(1) No portion of any lot or parcel shall be used in such a way as to create a nuisance to adjacent sites, such as, but not limited to, vibration, sound, electro-mechanical disturbance and radiation, electro-magnetic disturbance, radiation, air or water pollution, dust, emission of odorous, toxic or noxious matter.</p> <p>The applicant should be aware that his proposed operation shall have adequate controls, measures, or devices provided to insure and protect against the emission of odor, dust, gas, smoke, noise, fumes, vibrations, or heat beyond the exterior limits of the premises. (Ord. No. 2788 § 2 (part); Ord. No. 2906, §§ 1, 2; Ord. No. 3049, § 4; Ord. No. 3625, § 2 (part).)</p>	
Rosemead	<p>The City of Rosemead land use/noise compatibility matrix can be referenced in Figure 6-3 (Noise/Land Use Compatibility Matrix) of the General Plan Noise Element</p> <p>Noise Element:</p> <p>Goal 1: Effective incorporation of noise considerations into land use planning decisions.</p> <p>Policy 1.3: Periodically review and update the Existing Noise Contours Map to ensure that any future noise increases not considered in the Noise Element will be identified.</p> <p>Policy 1.4: Encourage acoustical design in new construction.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 8.36 (Noise Control) Section 8.36.030 (Exemptions), Section 8.36.050 (Designated Noise Zones), Section 8.36.060 (Noise Standards), and Section 8.36.100 (Specific Prohibitions).</p> <p>Under Chapter 8.36 (Noise Control) Section 8.36.030 (Exemptions) the following apply:</p> <p>A. The following activities shall be exempted from the provisions of this chapter:</p> <ol style="list-style-type: none">3. Noise sources associated by construction, repair, remodeling or grading of any real property or during authorized seismic surveys, provided such activities do not take place between the hours of eight p.m. and seven a.m. on weekdays, including Saturday, or at any time on Sunday or a federal holiday, and provided the noise level created by	<p>No other applicable ordinances were identified.</p>

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 1.5: Require sound walls to be constructed in designated mixed-use districts where noise-sensitive land uses are located on adjacent properties.</p> <p>Goal 2: Reduced noise impacts from transportation sources.</p> <p>Policy 2.2: Reduce transportation noise by prohibiting through truck traffic on local streets in residential areas.</p> <p>Goal 3: Effective implementation of measures to control non-transportation noise impacts.</p> <p>Policy 3.1: Enforce provisions of the Community Noise Ordinance to mitigate noise conflicts.</p> <p>Policy 3.2: Require that potential sources of noise be considered when approving new development to reduce the possibility of adverse affects.</p> <p>Policy 3.3: Evaluate noise generated by construction activities to ensure compliance with the Community Noise Ordinance.</p> <p>Policy 3.4: Establish and maintain coordination among the City departments involved in noise abatement.</p> <p>Action 1.1 Enforce the City Noise Ordinance, which specifies acceptable limits of noise for various land uses located throughout the City.</p> <p>Action 1.2 Incorporate noise reduction features during site planning to mitigate anticipated noise impacts on affected noise sensitive land uses. The noise contours, illustrated on the Existing Noise Contours Map, identify areas within the City exposed to noise levels greater than 60dB CNEL and shall be used to identify locations of potential conflict. Require acoustical analyses, as appropriate, for proposed residential development within the 60 dB CNEL or higher contour. New developments will be permitted only if appropriate mitigation measures are included.</p> <p>Goal 3: Effective implementation of measures to control non-transportation noise impacts.</p> <p>Action 3.1 Enforce the comprehensive community noise ordinance to ensure that City residents are not exposed to excessive noise levels from stationary noise sources including but not limited to gatherings, entertainment devices, loudspeakers, loading and unloading, powered model vehicles, and vehicle repairs and alarms.</p> <p>Action 3.3 Reduce construction-related noise using control measures at all construction sites, including but not limited to the use of mufflers on construction equipment or the physical separation or machinery from adjacent residential uses.</p> <p>Action 3.4 The Planning Division shall act as the City noise control coordinating agency and will ensure the continued operation of City noise enforcement efforts.</p>	<p>such activities does not exceed the noise standard of sixty-five (65) dBA plus the limits specified in Section 8.36.060(B) as measured on residential property and does not endanger the public health, welfare and safety;</p> <p>Operations do not take place between eight p.m. and seven a.m. on weekdays, including Saturday or at any time on Sunday or a federal holiday;</p> <p>5. Noise sources associated with the maintenance of real property provided such activities take place between the hours of seven a.m. and eight p.m. on any day except Sunday, or between the hours of nine a.m. and eight p.m. on Sunday;</p> <p>6. Any activity to the extent regulation thereof has been preempted by state or federal law, including but not limited to: aircraft, motor vehicles, railroads, and other interstate carriers;</p> <p>7. The provisions of this chapter shall not preclude the construction, operation, maintenance and repairs of equipment, apparatus or facilities of park and recreation departments, public work projects, or public utilities subject to the regulatory jurisdiction of the California Public Utilities Commission. (Prior code §§ 4309, 4310)</p> <p>Under Section 8.36.050 (Designated Noise Zones) the following apply:</p> <p>Receptor properties hereinafter described are assigned to the following noise zones:</p> <ul style="list-style-type: none">Noise Zone I: Single-, double- and multiple-family residential properties.Noise Zone II: Commercial properties.Noise Zone III: Manufacturing or industrial properties. <p>(Prior code § 4305)</p> <p>Under Section 8.36.060 (Noise Standards) exterior and interior noise standards can be referenced in tables depicted. (Prior code §§ 4306, 4307)</p> <p>Under Section 8.36.100 (Specific Prohibitions) the following acts, and the causing thereof, are declared to be in violation of this chapter:</p> <p>C. Loading and Unloading. Loading, unloading, opening, closing or other handling of boxes, crates, containers, building materials, garbage cans, or similar objects between the hours of 10 p.m. and six a.m. the following day in such a manner as to cause a noise disturbance across a residential real property boundary.</p> <p>D. Vehicle or Motorboat Repairs and Testing. Repairing, rebuilding, modifying or testing any motor vehicle, motorcycle, or motorboat in such a manner as to cause a noise disturbance across a residential real property boundary.</p> <p>E .Powered Model Vehicles. Operating or permitting the operation of powered model vehicles so as to create a noise disturbance across a residential real property boundary, in a public space between the hours of 10 p.m. and seven a.m. the following day. Maximum sound levels in a public space during the permitted period of operation shall conform to those set forth for residential land use in Section 8.36.060(A)(1). Maximum sound levels for residential property during the permitted period of operation, shall be governed by Section 8.36.060(A)(1). (Prior code § 4312)</p>	
San Dimas	<p>The City of San Dimas land use noise compatibility matrix can be referenced in Exhibit VII-3 Land use Compatibility for Community Noise Environments of the General Plan Noise Element</p> <p>Noise Element:</p> <p>Goals statement N-2A:</p> <p>To develop strategies for the abatement of excessive noise exposures</p> <p>Goals Statement N-2B:</p> <p>To establish the community noise environment (in the form of noise contours) for local compliance with the state mandated noise insulation standards.</p> <p>Policy 2.1.6 The City will review noise characteristics of applicants requesting conditional use permits, variance, zone changes and other discretionary actions.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 8.36 Noise Ordinance) Section 8.36.030 (Fixed and Mobile Noise Sources), Section 8.36.090 (Controlled hours of operation), Section 8.36.100 (Construction), and Section 8.36.110 (Loud and/or unusual noises).</p> <p>Under Section 8.36.030 (Fixed and Mobile Noise Sources) the following apply:</p> <p>On or after the effective date of the ordinance codified in this chapter, unless a permit has been granted by the development plan review board, it is unlawful for any person to operate or cause to be operated, any single or combination fixed source or mobile source type of equipment or machinery, that individually or collectively constitute an identifiable noise source in such a manner as to cause the sound level at any point on the property line of any property to exceed the noise level limits set forth in Section 8.36.040 of this chapter, however, that if all provisions of Section 8.36.110 are complied with, this section shall not apply to construction equipment used in connection with construction operations.</p> <p>(Ord. 868 § 1, 1987)</p> <p>Under Section 8.36.090 (Controlled hours of operation) the following apply:</p>	

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>It is unlawful for any person to operate, permit, use or cause to operate, any of the following, other than between the hours of seven a.m. to eight p.m. of any one day:</p> <p>A. Powered model vehicles;</p> <p>B. Loading and unloading vehicles such as trash collectors, forklifts or cranes within five hundred feet of a residence;</p> <p>C. Domestic power tools.</p> <p>(Ord. 868 § 1, 1987)</p> <p>Under Section 8.36.100 (Construction) the following apply:</p> <p>A. It is unlawful for any person within a residential zone, or within a radius of five hundred feet therefrom, to operate equipment or perform any outside construction or repair work on any building, structure or project, or to operate any pile driver, steam shovel, pneumatic hammer, steam or electric hoist or other construction-type equipment or device between the hours of eight p.m. of one day and seven a.m. of the next day, at any time on Sunday, or at any time on any public holiday in such a manner that a reasonable person of normal sensitivity residing in the area is caused discomfort or annoyance unless beforehand a permit therefor has been duly obtained in accordance with the provisions of subsection B of this section. No permit shall be required to perform emergency work. "Public holiday," as used in this section, means the day upon which each of the following holidays is recognized and celebrated as a holiday by the employees of the city: Independence Day, Labor Day, Veteran's Day, Thanksgiving Day, Friday after Thanksgiving, Christmas Eve, Christmas, New Year's Eve, New Year's, Washington's Birthday, Memorial Day or any other holiday recognized as such by the city council.</p> <p>B. A permit may be issued authorizing the work prohibited by this section whenever it is found that the public interest will be served thereby. An application for such a permit shall be in writing, shall be accompanied by an application fee in the amount of fifty dollars, or as from time to time an amount set by a resolution of the city council, and shall set forth in detail facts showing that the public interests will be served by the issuance of such permit. Such application shall be made to the building and safety division of the department of community development. The building official shall be responsible for the administration and enforcement of the provisions of this section and shall have the authority to issue such permits. He shall coordinate the processing of each application for a permit with such departments as he deems will be affected by the issuance of the permit.</p> <p>(Ord. 868 § 1, 1987)</p> <p>Under Section 8.36.110 (Loud and/or unusual noises) the following apply:</p> <p>The following acts, among others, are declared to be loud, disturbing and unnecessary noises in violation of Section 8.36.080 of this chapter, but such enumeration shall not be deemed to be exclusive:</p> <p>H. Vibration. It is unlawful to operate or permit the operation of any device that creates a vibration which is above the vibration perception threshold of an individual at or beyond the property boundary of the source if on private property or at one hundred fifty feet from the source if on a public space or public right-of-way.</p> <p>(Ord. 868 § 1, 1987)</p>	
San Gabriel	<p>The City of San Gabriel land use/noise compatibility matrix can be referenced in Table x.1 (Exterior Noise Standards) of the General Plan Noise Chapter (pg. N-8).</p> <p>Noise Element:</p> <p>Goal 9.5: Provide our schools, libraries, churches, hospitals and parks with the quiet they need to function effectively.</p> <p>Target 9.5.1: Meet in 2005 with representatives of local schools, the Los Angeles County Library, churches, San Gabriel Valley Medical Center and the Parks and Recreation Department to identify specific noise issues they are facing.</p> <p>Action 9.5.1.1: Contact these institutions and set a date in 2005 for a meeting to discuss noise issues.</p> <p>Target 9.5.2: Develop and implement a strategy for addressing the specific noise issues facing noise-sensitive uses by 2006.</p> <p>Action 9.5.2.1: Work with noise-sensitive uses in 2006 on creating solutions to noise issues they have identified in their vicinity.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 130 (General Offenses) Section 130.09 (Noise Caused by Machinery), Section 100.058 (Noise, Vibration, Dust and Debris),</p> <p>Under Chapter 130 (General Offenses) Section 130.09 (Noise Caused by Machinery) the following applies:</p> <p>It shall be unlawful for any person to run or operate, or permit to be run or operated, any mechanical, electrical, electronic, hydraulic, or wind-driven equipment, fan, pump, compressor, blower, motor, engine, machine, or other similar apparatus, whether as owner, agent, employee, lessee, or other person having the charge thereof, which causes, or is likely to cause, any loud, excessive, unnecessary, or unusual continued or intermittent noise, or any noise which annoys, disturbs, injures, or endangers the comfort, repose, health, peace, or safety of others within the city unless such noise is muffled effectually and the apparatus is either equipped with a muffler device in constant operation and properly maintained to deaden such noise, or the apparatus is enclosed in a room, building, or other enclosure sufficiently insulated to deaden such noise.</p> <p>('65 Code, § 5-14.08) (Ord. 118, passed - - ; Am. Ord. 802, passed - -) Penalty, see § 130.99</p> <p>Under Section 100.058 (Noise, Vibration, Dust and Debris) the following applies:</p>	<p>No other applicable ordinances were identified.</p>

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 9.6: Promote the health of our community by protecting it from the harmful effects of noise.</p> <p>Target 9.6.1: Co-sponsor a workshop on the effects of noise and how to cope with them in conjunction with the San Gabriel Valley Medical Center.</p> <p>Action 9.6.1.1: Contact the Medical Center for recommended speakers and to schedule and plan the workshop.</p>	<p>Each permittee shall conduct and carry out excavation work in such a manner as to avoid unnecessary inconvenience to the general public and occupants of neighboring property. In the performance of the excavation work, the permittee shall take appropriate measures to reduce, to the fullest extent practicable, noise, vibration, dust and unsightly debris. On Sundays and holidays and between the hours of 6:00 p.m. and 7:00 a.m., the permittee shall not use, except with the express written permission of the Administrative Authority, or in case of emergency, any tool, appliance or equipment producing vibration or noise of sufficient volume or intensity to disturb the occupants of the neighboring property.</p> <p>('65 Code, § 7-3.14) (Ord. 349-C.S., passed - -) Penalty, see § 10.99</p> <p>Under Chapter 98 (Nuisances) Section 98.02 (Maintenance of Premises; Nuisances) the following applies:</p> <p>(T) To maintain or operate, between the hours of 10:00 p.m. and 7:00 a.m., any device, instrument, vehicle or machinery in such a manner as to create noise or cause vibrations which cause discomfort or annoyance to reasonable persons of normal sensitivity, or which endangers the comfort, repose, health or peace of the public or of any person using or occupying other property in the vicinity. ('65 Code, § 8-11.02) (Ord. 350-C.S., passed - - ; Am. Ord. 587 C.S., passed 12-7-10; Am. Ord. 607-C.S., passed 11-19-13; Am. Ord. 630-C.S., passed 12-6-16; Am. Ord. 655, passed 11-19-19; Am. Ord. 686, passed 11-15-22) Penalty, see § 98.99</p>	
San Marino	<p>The City of San Marino land use noise compatibility matrix can be referenced above in Table 3.13-4 (Section 3.13.2.2 of this PEIR)</p> <p>Safety Chapter, Noise element:</p> <p>Objective S. 14 Maintain a Noise Ordinance that includes the latest technologies and policies in the field of noise.</p> <p>Restrict grading and construction activities to daily operation between 7 a.m. and 6 p.m. Monday through Friday and 9 a.m. to 4 p.m. on Saturdays, with no construction on Sundays or federal holidays.</p> <p>Include a provision in the noise ordinance requiring that all construction, grading, and gardening equipment be properly maintained.</p> <p>Require vehicles and compressors to utilize exhaust mufflers and engine enclosure covers as designed by the manufacturer.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Article 14.04 (Noise Control) Section 14.04.06 (Special Noise Sources)</p> <p>Under Section 14.04.06 (Special Noise Sources) the following apply:</p> <p>F. Portable Engine or Motor-Powered Blowers:</p> <p>1. Definition: For the purposes of this subsection, a "portable blower" shall mean any mechanically powered device, regardless of the source of power, which is not stationary and used for the purpose of blowing leaves, dirt or other debris off sidewalks, driveways, lawns or other surfaces.</p> <p>2. Permitted Hours Of Use: No portable blower shall be used within the City except during the following hours:</p> <p>Monday through Friday 8:00 A.M. to 5:00 P.M.</p> <p>Saturday 9:00 A.M. to 4:00 P.M.</p> <p>3. Number Of Permitted Portable Blowers:</p> <p>a. No more than one portable blower shall be used in operation at a given time on any parcel in Area Districts III, IV, V, VI, VII of the R-1 Zones.</p> <p>b. No more than two (2) portable blowers shall be used in operation at a given time on any parcel in Area Districts I, IE and II of the R-1 Zones.</p> <p>G. Operation Of Gasoline Powered Gardening Equipment:</p> <p>1. Permitted Hours Of Operation: It shall be unlawful for any person to operate any gas powered gardening equipment before eight o'clock (8:00) A.M. or after nine o'clock (9:00) P.M., Monday through Saturday, or before nine o'clock (9:00) A.M. or after eight o'clock (8:00) P.M. on Sunday. (Ord. 0-09-1222, 11-12-2009)</p> <p>Under Section 14.04.07 (Construction of Buildings and Projects) the following apply:</p> <p>It shall be unlawful for any person within a residential zone, or within a radius of five hundred feet (500') therefrom, to operate equipment or perform any outside construction or repair work on buildings, structures or projects or to operate any pile driver, steam shovel, pneumatic hammer, derrick, steam or electric hoist or other construction type device on construction requiring a building, plumbing, electrical or grading permit in such a manner that noise is produced which would constitute a violation of section 14.04.05 of this article unless, beforehand, an additional permit therefor has been duly obtained from the planning and building director. (Ord. 096-1098, 9-11-1996)</p>	
South El Monte	<p>The City of South El Monte land use noise compatibility matrix can be referenced above in Table 3.13-4 (Section 3.13.2.2 of this PEIR)</p> <p>Land Use element:</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Chapter 8.20 (Noise Regulations) Section 8.20.040 (Special provisions)</p> <p>Under Chapter 8.20 (Noise Regulations) Section 8.20.030 (Prohibited Acts) the following apply:</p>	

City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 3.0 Accommodate new development that is compatible with and complements existing land uses.</p> <p>Policy 3.2 Require that commercial development provide adequate buffers (such as decorative walls and landscaped setbacks) at the designated boundaries with adjacent residential uses so as to prevent impacts on residences due to noise, traffic, parking, light and glare, and differences in scale; to ensure privacy; and to provide visual compatibility.</p>	<p>D. No person shall operate or cause or authorize the operation of any tools or equipment used in construction, drilling, repair, alteration or demolition work between the hours of 10 p.m. and seven a.m., or at any time on weekends or holidays, such that the sound therefrom creates a noise disturbance across the real property line of an adjacent or nearby property developed entirely or partially for residential use.</p> <p>Under Chapter 8.20 (Noise Regulations) Section 8.20.040 (Special provisions) the following apply:</p> <p>B. Special Exemption. The provisions of this chapter shall not preclude the construction, operation, maintenance and repairs of equipment, apparatus or facilities of park and recreation departments, public works projects, or essential public services and facilities, including those of public utilities subject to the regulatory jurisdiction of the Public Utilities Commission.</p>	
Temple City	<p>The Temple City land use noise compatibility matrix can be referenced in the Land Use Compatibility with Community Noise Environments Table of the General Plan Hazards Element</p> <p>Land Use Compatibility:</p> <p>Goal LU 4: Compatible Land Uses. Development is located and designed to ensure compatibility among uses that differ in their activities, physical form and scale, design, and avoid negative impacts on residents and existing uses.</p> <p>LU 4.1 Development Compatibility. Require that development is located and designed to assure compatibility among land uses, addressing such elements as building orientation and setbacks, buffering, visibility and privacy, automobile and truck access, impacts of noise and lighting, landscape quality, and aesthetics.</p> <p>LU 4.7 Development that is Compatible. Require that development demonstrates a contextual relationship with neighboring structures and sites addressing such elements as building scale, massing, orientation, setbacks, buffering, arrangement of shared and private open spaces, visibility, privacy, automobile and truck access, impacts of noise and lighting, landscape quality, infrastructure, and aesthetics.</p> <p>Hazard Element:</p> <p>Goal H 5: Noise Environment. Ambient noise levels that are compatible with Temple City’s small-town character and are not disruptive to residents’ quality of life.</p> <p>H 5.1 Noise Standards. Require noise attenuation for new development where the projected exterior or interior noise levels exceed those shown in the Future Noise Level Contours Map and the Land Use Compatibility with Community Noise Environments.</p> <p>H 5.2 Compatible Uses. Restrict the development of sensitive receptors in areas where current or future noise levels (mobile or stationary source) exceed regulatory standards.</p> <p>H 5.3 Acoustical Study. Require an acoustical study for all new sensitive receptors located in areas within the 65 dBA noise contour based on projections of future noise conditions resulting from the Plan’s traffic increases to ensure indoor levels will not exceed City standards.</p> <p>H 5.4 Noise Attenuation. Require measures which attenuate exterior and interior noise to acceptable levels be incorporated into all development projects where current or future noise levels may be unacceptable, and consider noise attenuation in the City’s Site Plan Review process.</p> <p>H 5.5 Mixed-Use and Residential Noise Isolation. Require that mixed-use buildings that demonstrate adequate isolation of noise between residential and non-residential uses through building design and construction materials and techniques.</p> <p>H 5.6 Noise Generating Uses. Require that high-noise generating uses, such as bars, nightclubs, entertainment venues and other uses characterized by high levels of patronage and activity be designed and constructed consistent with the City’s noise standards to isolate noise to the interiors and limit perceptible exterior noise.</p> <p>H 7.3 Construction Hours. Continue to enforce restrictions on the hours of construction activity to minimize impacts of noise and vibration on adjoining uses.</p> <p>H 7.4 Construction Noise. Require construction and development projects to assess potential construction noise and vibration impacts on nearby uses and mitigate impacts on the community.</p> <p>H 7.3 Construction Hours. Continue to enforce restrictions on the hours of construction activity to minimize impacts of noise and vibration on adjoining uses.</p>	<p>The Temple City land use noise compatibility matrix can be referenced in Article P. (Regulation of Excessive Noise) Section 9-1P-3 (General Sound Level Standards) of the city Municipal Code</p> <p>Municipal codes related to noise relevant to the Plan Area can be found in Article P. (Regulation of Excessive Noise) Section 9-1P-1 (Exemptions)</p> <p>Under Article P. (Regulation of Excessive Noise) Section 9-1P-1 (Exemptions) the following apply</p> <p>D. Construction operation, maintenance, and repairs of equipment, apparatus, or facilities of the parks and recreation department, public works projects, or essential public services and facilities, including those of public utilities subject to the regulatory jurisdiction of the California public utilities commission.</p> <p>G. Construction projects requiring a building permit are exempt from noise regulations, provided that such construction activities occur on weekdays between 7:00 a.m. and 7:00 p.m., and Saturdays between 8:00 a.m. to 4:00 p.m. No construction work is allowed on Sundays or federal holidays.</p> <p>Under Section 9-1P-3 (General Sound Level Standards) the following apply:</p> <p>A person must not create any sound, or allow the creation of any sound, on any property that causes the exterior sound level on any other occupied property to exceed the sound level standards set forth by the following standards:</p> <p>Zone / 7:00 A.M. TO 10:00 P.M. / 10:00 P.M. TO 7:00 A.M.</p> <p>Residential / 55 dBA / 45 dBA</p> <p>Commercial / 65 dBA / 55 dBA</p> <p>Industrial / 75 dBA /75 dBA</p> <p>At the boundary line between two (2) of the above zones, the noise level of the quieter zone will be used. (Ord. 19-1036).</p> <p>Under Section 4-2C-2 (Prohibited Public Nuisance Conditions) the following apply:</p> <p>The city council finds and declares that, notwithstanding any other provision of this code, it is a public nuisance and unlawful for any person to allow, cause, create, maintain, or suffer, or permit others to cause, create, or maintain the following:</p> <p>A. Any real property or premises in the city in such a manner that any one or more of the following conditions are found to exist thereon:</p> <p>41. Any noise that is made, generated, produced, or continued in such a manner that it unreasonably disturbs the peace and quiet of any neighborhood or which causes any discomfort or annoyance to any reasonable person of normal sensitivities, or that otherwise violates any provision of this Code, including the noise limits set forth in the Temple City Zoning Code. Factors which shall be considered in determining whether the noise is a nuisance shall include, but not be limited to, the following:</p> <p>a. The volume of the noise;</p> <p>b. The intensity of the noise;</p> <p>c. Whether the nature of the noise is usual or unusual;</p> <p>d. Whether the origin of the noise is natural or unnatural;</p> <p>e. The volume and intensity of the background noise, if any;</p> <p>f. The proximity of the noise to residential sleeping facilities;</p> <p>g. The nature of the zoning of the area from which the noise emanates;</p>

West Covina	<p>The City of West Covina land use/noise compatibility matrix can be referenced in Table 6.4 of the General Plan.</p> <p>Our Healthy and Safe Community Chapter:</p> <p>Policy P6.23 Ensure that new development is not exposed to excessive noise.</p> <p>Action A6.23a Require new developments to reduce exterior noise levels for any usable outdoor area to the “normally acceptable” range in the City’s land use/noise compatibility matrix, shown in Table 6.4 of this Noise Element.</p> <p>Action A6.23b Require mixed-use structures and areas to be designed to prevent transfer or noise from commercial to residential uses, and to ensure a 45 CNEL level or lower for all interior living spaces.</p> <p>Action A6.23c Require any residential component of all new buildings to comply with the requirements of the residential noise insulations standards of the most recent edition of California’s building code.</p> <p>Policy P6.24 Ensure that new development does not expose surrounding land uses to excessive noise.</p> <p>Action A6.24 Through the environmental review process, require applicants for new development to analyze potential noise impacts on nearby noise-sensitive receivers. If noise levels generated exceed the “normally acceptable” range shown in Table 6.4 of this Noise Element, require appropriate noise mitigation so that these levels would no longer be exceeded.</p> <p>Policy 6.25 Minimize noise conflicts between local noise generators and sensitive receivers.</p> <p>Action 6.25a Continue to enforce the City’s existing Noise Ordinance.</p> <p>Action 6.25b Track noise complaints to determine areas of potential problems, and work proactively with the noise generators and the affected parties to reduce the impacts of such noise.</p> <p>Policy P6.27 Minimize the noise impacts of transportation facilities and improvements.</p> <p>Action A6.27a Continue to encourage the enforcement of regulations such as the State Vehicle Code noise standards for automobiles, trucks, and motorcycles operating within the City.</p> <p>Action A6.27b Maintain liaison with transportation agencies such as Caltrans regarding reduction of noise from existing transportation facilities.</p> <p>Action A6.27c Consider, where appropriate, tools for mitigating noise impacts of transportation facilities on new and existing development. Such tools may include noise insulation for interior spaces, site design solutions, and noise barriers such as soundwalls and berms. Site design solutions such as setbacks are frequently preferable to barriers, and berms are frequently preferable to soundwalls, for reasons of aesthetics and potential noise reflection effects.</p> <p>Action A6.27d Consider, where appropriate, the diversion of through traffic from purely residential areas.</p> <p>Action A6.27e The City shall partner with adjacent cities and other jurisdictions and the private sector to seek and secure funding for railroad safety improvements, including securing rail right-of-way, and developing “Quiet Zones”, grade separations, and/or other safety projects for at-grade rail crossings at the intersection of Azusa Canyon Road and Los Angeles Street and on Fairway Drive at Valley Boulevard.</p>	<p>Municipal codes related to noise relevant to the Plan Area can be found in Article IV (Noise Regulations) Section 15-95. (Construction and Building Projects), Section 15-97 (Restrictions on the Operation of Two and Four Stroke Engines), Article X (Nonresidential Zones) Division 3 (Development standards) Section 26-580 (Nuisances).</p> <p>Under Article IV (Noise Regulations) Section 15-95. (Construction and Building Projects) the following apply:</p> <p>(a) Regulation. Between the hours of 8:00 p.m. of one day and 7:00 a.m. of the next day, it shall be unlawful for any person within a residential zone, or within a radius of five hundred (500) feet therefrom, to operate equipment or perform any outside construction or repair work on buildings, structures, or projects or to operate any pile driver, steam shovel, pneumatic hammer, derrick, steam or electric hoist, or other construction type device in such manner as to create any noise which causes the noise level at the property line to exceed the ambient noise level by more than five (5) decibels unless a permit therefor has been duly obtained in accordance with paragraph (b) of this section. No permit shall be required to perform emergency work as defined in section 15-83 of this article.</p> <p>(b) Permit procedure. A permit may be issued authorizing noises prohibited by this section whenever it is found that the public interest will be served thereby. Applications for permits shall be in writing, shall be accompanied by an application fee in the amount of five dollars (\$5.00), and shall set forth in detail facts showing that the public interest will be served by the issuance of such permit. Applications shall be made to the building director; provided, however, that, with respect to work upon or involving the use of a public street, alley, building, or other public place under the jurisdiction of the engineering department, applications shall be made to the city engineer. Anyone dissatisfied with the denial of a permit may appeal to the council.</p> <p>(c) Unloading and Loading. Between the hours of 8:00 p.m. of one day and 6:00 a.m. of the next day, it shall be unlawful for any person within the radius of five hundred (500) feet of generally occupied residences to unload, load or otherwise perform duties preparatory to the commencement of construction or repair work on buildings or structures. Generally occupied residences shall include, but not be limited to, areas in which there is a reasonable probability of occupancy within the area.</p> <p>Under Section 15-97 (Restrictions on the Operation of Two and Four Stroke Engines) the following apply:</p> <p>(a) Regulation. Between the hours of 8:00 p.m. and 8:00 a.m. of the next day, it shall be unlawful for any person within a residential zone to operate any gasoline-powered two- or four-stroke engine such as a leaf blower, lawn mower, edger, chain saw, roto-tiller, and other such devices for the purpose of maintaining a lawn or property.</p> <p>(b) Exceptions.</p> <p>(1) This section shall not apply to any publicly owned properties, including but not limited to public schools, parks, fire stations, etc., located within residential zones.</p> <p>(2) This section shall not apply to privately owned schools located within residential zones.</p> <p>(Ord. No. 1753, § 1, 10-12-87; Ord. No. 1937, § 1, 6-7-94)</p> <p>Under Article X (Nonresidential Zones) Division 3 (Development standards) Section 26-580 (Nuisances) the following apply:</p> <p>No portion of the property shall be used in such a manner as to create a nuisance to adjacent properties, such as but not limited to vibration, sound, electro-mechanical disturbance or radiation, air or water pollution, dust, emission of odorous, toxic, or noxious matter.</p> <p>(Code 1960, § 10904.14; Ord. No. 1333, § 1, 4-25-77; Ord. No. 2204, § 3(Exh. A), 2-16-10)</p>	No other applicable ordinances were identified.

3.13.3 Impact Assessment

3.13.3.1 Significance Criteria

Appendix G of the State CEQA Guidelines was reviewed to determine if the Plan would result in significant impacts related to noise. The Plan would have a significant impact to noise if the Plan would result in:

- 13(a) *Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?*
- 13(b) *Generation of excessive groundborne vibration or groundborne noise levels?*
- 13(c) *For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?*

For the assessment of vibration impacts, the FTA has published guidance for assessing building damage impacts from vibration. Table 3.13-8 shows the FTA building damage criteria for vibration. The FTA has also established criteria related to vibration annoyance, which are shown in Table 3.13-9.

Table 3.13-8. Construction Vibration Damage Criteria

Building Category	Peak Particle Velocity (inches/second)
I. Reinforced-concrete, steel, or timber (no plaster)	0.5
II. Engineered concrete and masonry (no plaster)	0.3
III. Non-engineered timber and masonry buildings	0.2
IV. Buildings extremely susceptible to vibration damage	0.12

Source: FTA 2006

Table 3.13-9. Construction Vibration Annoyance Criteria

Land Use Category	Vibration Impact Level (VdB re-micro-inch/second) Frequent Events ¹	Vibration Impact Level (VdB re-micro-inch/second) Occasional Events ²	Vibration Impact Level (VdB re-micro-inch/second) Infrequent Events ³
1. Buildings where vibration would interfere with interior operations	65 ⁴	65 ⁴	65 ⁴
2. Residences and buildings where people normally sleep	72	75	80
3. Institutional land uses with primarily daytime use	75	78	83

Source: FTA 2006

Notes:

¹ Frequent Events are defined as more than 70 vibration events of the same source per day.

² Occasional Events" are defined as between 30 and 70 vibration events of the same source per day.

³ Infrequent Events" are defined as fewer than 30 vibration events of the same kind per day.

⁴ This criterion limit is based on levels that are acceptable for most moderately-sensitive equipment such as optical microscopes. Vibration-sensitive manufacturing or research will require detailed evaluation to define the acceptable vibration levels. Ensuring lower vibration levels in a building often requires special design of the HVAC systems and stiffened floors.

3.13.3.2 Methods

Construction

This noise impact analysis evaluates the temporary noise and groundborne vibration associated with proposed construction activities, the changes in noise levels in the Plan Area that would occur as a result of implementation of a project under the Plan (including onsite operations and project-generated traffic), and the effects of noise from operation and maintenance of the Plan project. Construction-related noise was analyzed based on the procedures of ISO 9613-2:1996, Acoustics – Attenuation of Sound during Propagation Outdoors – Part 2: General Method of Calculation. This international standard procedure is widely used for propagation and evaluation of environmental noise over distances and is the basis for calculation protocols in numerous computer models, including CadnaA and SoundPLAN. Such computer models require specific project location as well as specific scheduling and daily duration of each noise-producing activity to be able to calculate and propagate noise levels. Given the broad scale of the Plan activities, the methodology used in this analysis involved spreadsheet-based calculations based on the ISO 9613-2:1996 standard. The procedure involved determining the maximum noise levels from an assumed point source, based on noise data from equipment manufacturers, the FHWA's database of construction equipment noise levels (FHWA 2006), and assumed noise levels around the existing Plan Area, and then propagating the maximum noise level to various distances from the source. It is important to note that the propagation calculations do not consider any barriers to noise (e.g., buildings, vegetation, and topography between the noise source and receptor) and, therefore, the calculated noise at the nearest sensitive receptor is likely much greater than the actual noise that would be experienced at that location.

Construction-related noise was analyzed based on the construction assumptions developed for Plan subcomponents provided in Chapter 2, Project Description. Based on the types of equipment and associated maximum noise levels and the number of equipment to be used (see Tables 2.3-2 through 2.3-6), construction activities associated with the demolition phase of each Plan subcomponent are identified to have the greatest potential to increase noise levels at the nearest sensitive receptors. Accordingly, the modeled cumulative noise for this phase of construction is propagated to a distance of 50 feet with no intervening shielding and is chosen to represent the worst-case noise levels for each Plan subcomponent. Table 3.13-10 provides the reference noise levels of construction equipment expected to be used for demolition activities for each Plan subcomponent.

Table 3.13-10. Construction Equipment Reference Noise Levels for Maximum Construction Activity Phase (Demolition) for Each Plan Component

Plan Component	Equipment Type	Qty	Hours/Day	Typical Equipment L_{max} at 50 feet from Source ¹ (dBA)	Absolute Noise Level at 50 Feet (dBA L_{eq}) ²	Maximum Noise Level at 50 Feet (dBA L_{max}) ²

Notes:

¹ L_{max} noise levels adapted from FHWA 2006² Cumulative noise calculations provided in Appendix D

Operations

For the estimate of noise associated with use of an individual greenway path, visitation is assumed to be up to 1,000 visitors daily. These visitors are assumed to be dispersed equally throughout the 5-mile greenway path. In addition, these visits are assumed to be dispersed equally throughout the day (7:00 a.m. through 10:00 p.m.), resulting in approximately 67 visitors per hour along a typical 5-mile-long greenway path. This equates to roughly one visitor per minute in any given location. For greenway amenities, 1-acre pocket parks and greenspaces, and safe crossings, visits are assumed to be 500 visitors per day which would be equivalent to roughly 33 visitors per hour in any one location. For 25-acre greenspaces, up to 3,292 visitors per day are estimated, equivalent to roughly 220 visitors per hour (7:00 a.m. through 10:00 p.m.). These visitors are assumed to be distributed throughout the 25-acre park. However, for a conservative analysis, it is assumed that up to 30 percent of the hourly visitors (66 visitors) are concentrated within a 1-acre area. Stormwater management facilities are not assumed to generate any additional visitors (besides what is assumed for a greenway path) as the beneficial project elements for stormwater management (i.e. bioretention, permeable pavement, subsurface infiltration, constructed wetlands, extended detention basin, or proprietary devices) are facilities meant to support infiltration, treatment, and storage of runoff.

The primary noise source associated with visitors would be visitors speaking. To simplify quantification of visitors' speech, it is assumed that a typical raised voice at a distance of one meter (3.28 feet) would be 65 dBA (USEPA 1977). To calculate the average hourly L_{eq} associated with visitors attending the developments associated with the Plan, it was assumed that all visitors would be talking at the same time. Accordingly, one person speaking in any given location along the 5-mile greenway path would equate to approximately 41 dBA at 50 feet from the source. Assuming all 33 visitors are speaking at the same time at the location of an amenity, pocket park, or safe crossing, the combined L_{eq} at 50 feet

would approximately 56 dBA. It is widely accepted that changes of 3 dBA in the normal environment are considered just noticeable to most people (FHWA 2011). Conservatively assuming a daytime ambient noise level of 50 dBA consistent with rural environments (USEPA 1978), the noise contribution from visitors of greenway paths and amenities may increase noise levels by up to 6 dB at receptors within 50 feet or a project site.

In addition to noise associated with visitors, landscape and maintenance activities would generate noise primarily due to the use of powered equipment such as lawnmowers, edgers, and leaf blowers which can generate noise levels of up to 65 to 80 dBA at 50 feet. These activities are assumed to be conducted once per week, with a maximum duration of four hours at any given site. In addition, noise may be generated from other equipment such as cranes or excavators (with typical noise levels of 85 dBA at 50 feet) during the less frequent and intermittent repair or maintenance of Plan structures and facilities.

3.13.3.3 Plan Impacts

3.13.3.3.1 13(a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

For the following construction analyses, construction activities by the County or by other project proponents within unincorporated Los Angeles County would be limited to the hours of 7:00 a.m. to 7:00 p.m. Monday through Saturday where work would create a disturbance across a residential or commercial property line. For Plan projects within cities implemented by project proponents other than the County, construction activities would be limited to the construction period allowed by the noise ordinance of the respective jurisdiction as detailed in Table 3.13-7 above. Given that the noise ordinances for LA County and cities within the SGV Plan Area allow construction work to begin at 7:00 a.m., construction worker trips would be expected to occur before 7:00 a.m. and before 4:00 p.m. (assuming an 8-hour workday), and would therefore occur outside the peak traffic hours (generally the peak hour of traffic occurs between 7:00 a.m. and 9:00 a.m. and 4:00 p.m. and 6:00 p.m. Construction noise is usually made up of intermittent peaks and continuous lower levels of noise from construction equipment cycling through use. The types and numbers of construction equipment near any specific receptor location would vary over time. Potential noise impacts were conservatively modeled using a 50-foot distance; assuming ambient noise levels of 50 dBA (7:00 a.m. to 10:00 p.m.) and nighttime noise of 40 dBA (10:00 p.m. to 7:00 a.m.) (consistent with rural environments [USEPA 1978]). The loudest construction phase would be during demolition activities, which may require break-up and removal of existing pavement or structures requiring use of concrete saws, hoe rams, or jack hammers. Accordingly, Table 3.13-10 lists the construction equipment expected to be used during demolition activities along with the typical expected equipment noise levels and usage factors listed in the FHWA Roadway Construction Noise Model User's Guide (FHWA 2006). Taking into account standard attenuation of noise with increased distance from a noise source (6 dBA/doubling of distance), the noise generated during the noisiest phase of construction (i.e., demolition) was propagated out to 50 feet to estimate the maximum noise levels during construction. The noise model calculations are provided in Appendix D.

3.13.3.3.1.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Significant and Unavoidable. Short-term construction noise impacts could result from demolition activities; land clearing and grading; construction of greenway paths, greenway amenities, pocket parks, greenspaces, safe crossings, and stormwater management; transportation of materials, workers, and equipment to the project site; and operation of the construction equipment. As shown in Table 3.13-10, the noise model indicates that maximum noise at a sensitive receptor within 50 feet of construction activities would be 90 dBA L_{max} with cumulative noise levels of up to 93 dBA L_{eq} (note that the County uses an L_{max} standard for construction; however, most municipalities use an L_{eq} standard). Noise attenuates at a rate of 6 dB per doubling of distance for a single source (point source) such as construction. Construction noise levels of 90 dBA L_{max} would generally dominate the noise environment if construction occurs within 50 feet; however, noise would be expected to attenuate to 78 dBA at a distance of 200 feet from the source, not accounting for intervening structures, topography, or anomalous and atmospheric spreading. As such, impacts associated with construction would be potentially significant if conducted less than 200 feet from a noise-sensitive receptor. Implementation of **MM AQ-1: Emission Reduction Measures** would require zero-emission and near-zero emission construction equipment (i.e., electric or hydrogen-powered heavy equipment) which operates much quieter than traditional diesel-powered equipment (estimated at 10 dB reduction compared to diesel versions), which would reduce noise levels associated with construction activities up to 25 dB at nearby sensitive receptors. In addition, for Plan projects within 200 feet of a sensitive receptor or where the estimated construction noise levels identified in Table 3.13-10 propagated to the nearest receptor (i.e., assuming an attenuation rate of 6 dB per double of distance) would exceed the noise ordinance of the respective jurisdiction, implementation of **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan** would minimize construction noise impacts by requiring a project-specific noise study. Where a study identifies noise impacts, **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan** also requires implementation of noise reduction strategies such as providing temporary barriers near sensitive receiving properties, limiting the number of equipment operating simultaneously, and/or locating construction equipment further away from noise-sensitive land uses. However, despite those measures, construction noise impacts may still exceed the applicable significance threshold of the jurisdiction within the Plan Area in which the project is located depending on the applicable noise standards, construction equipment spread, and distance to sensitive receptors. In some circumstances, noise attenuation measures (e.g., fencing, soundwalls, or increasing the distance between noise generating equipment and off-site sensitive receptors) applied to reduce noise levels to below the applicable threshold may be infeasible or inapplicable. Therefore, construction noise impacts would remain potentially significant and unavoidable where construction noise levels at sensitive receptors cannot be reduced to below the applicable noise threshold.

Construction activities would also generate additional traffic on local roadways as described in Section 3.17, Transportation. During construction of Plan components, it is assumed that maximum daily vehicle trips during construction would be at most 49 delivery/haul truck trips per day and a conservative estimate of up to 23 construction worker trips for travel to and from the project site daily. For an eight-hour construction workday, it is assumed that approximately six delivery/haul truck per hour would be

traveling on the surrounding streets (no delivery/haul trucks would operate during night-time hours). It is also assumed that construction worker vehicles would be traveling on the roadways outside of AM and PM peak hours. The construction worker vehicles would likely be distributed throughout the roadways within the vicinity of a future project site implemented under the Plan. Generally, noise levels increase by 3 dBA when the number of similar noise sources double, which is the threshold of perception to the human ear (FHWA 2011). The increase in delivery/haul trucks and construction worker vehicle trips are not anticipated to double the amount of traffic that currently exist in the area surrounding a project site. As such, the increase in delivery/haul trucks and worker vehicles in the surrounding roadways is not anticipated to incrementally increase noise levels in the surrounding area by 3 dBA or more, and noise impacts from traffic would not be significant.

While an increase in traffic is not anticipated to generate significant noise, since short-term construction impacts are significant and unavoidable as described above, construction noise impacts would remain potentially significant and unavoidable with implementation of **MM AQ-1: Emission Reduction Measures** and **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan** where construction activities would be within 200 feet of a sensitive receptor or where construction noise levels identified in Table 3.13-10 propagated to the nearest sensitive receptor would exceed the applicable noise threshold.

Operations

Significant and Unavoidable. As discussed in Section 3.13.3.2, Methods, the primary noise source associated with operation of greenway paths, greenway amenities, pocket parks, greenspaces, safe crossings, and stormwater management components would be visitors speaking in addition to periodic landscape and maintenance activities. As discussed in Section 3.13.3.2, visitation of greenway paths and greenway amenities is assumed to be up to 1,000 visitors daily. These visitors are assumed to be dispersed equally throughout the 5-mile greenway path and equally throughout the day (7:00 a.m. through 10:00 p.m.), resulting in approximately 67 visitors per hour along a typical 5-mile-long greenway path. This equates to roughly one visitor per minute in any given location. Accordingly, one person speaking in any given location along the 5-mile greenway path would equate to approximately 41 dBA at 50 feet from the source. For 1-acre pocket parks or safe crossings, visits are assumed to be 500 visitors per day, which would be equivalent to roughly 33 visitors per hour (7:00 a.m. through 10:00 p.m.) in any one location. Assuming all 33 visitors are speaking at the same time at the location of a 1-acre park or safe crossing, the combined L_{eq} at 50 feet would be approximately 56 dBA. For 25-acre greenspaces, up to 3,292 visitors per day are estimated, equivalent to roughly 220 visitors per hour (7:00 a.m. through 10:00 p.m.). These visitors are assumed to be distributed throughout the 25-acre park. However, for a conservative analysis, it is assumed that up to 30 percent of the hourly visitors (66 visitors) are concentrated within a 1-acre area. Assuming all 66 visitors are speaking at the same time, the combined L_{eq} at 50 feet would be approximately 59.2 dBA. Stormwater management facilities are not assumed to generate any additional visitors (besides what is assumed for greenway paths and greenway amenities). The assessment of noise impacts is dependent on the proximity of a noise source to a sensitive receptor. For each of the Plan projects (i.e., greenway paths and amenities, greenway paths + pocket parks and greenspaces, greenway paths + safe crossings, and greenway paths + stormwater management), the impacts would be relative to the proximity of a Plan component to a sensitive receptor and the applicable land use compatibility standards of the respective jurisdiction. It is widely accepted that

changes of 3 dBA in the normal environment are considered just noticeable to most people. Conservatively assuming a daytime ambient noise level of 50 dBA consistent with rural environments (USEPA 1978), the noise contribution from visitors of greenway paths and amenities may increase noise levels by up to 6 dB at receptors within 50 feet of a project site which may exceed the noise standards of jurisdictions within the Plan Area. Visitors to pocket parks, greenspaces, or safe crossings would generate additional noise to the environment, which may further exceed the applicable noise standards. In addition to noise associated with visitors, landscape and maintenance activities would generate noise primarily due to the use of powered equipment such as lawnmowers, edgers, and leaf blowers which can generate noise levels of up to 65 to 80 dBA at 50 feet which may exceed the noise standards of jurisdictions within the Plan Area. Implementation of **MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures** would require a focused noise study be conducted for future projects, and where impacts are identified, provide measures or engineering BMPs to reduce exterior noise below the limit. However, despite those measures, operational impacts may still cause a temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. In some circumstances, noise-attenuating features (e.g., soundwalls and acoustical shielding) applied to reduce noise levels to below the applicable threshold may be infeasible or inapplicable. Therefore, operational noise impacts would remain potentially significant and unavoidable.

Mitigation Measures

MM AQ-1: Emission Reduction Measures.

MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan. For projects within 200 feet of a sensitive receptor, or where the estimated construction noise levels identified in Table 3.13-10 propagated to the nearest receptor (i.e., assuming an attenuation rate of 6 dB per double of distance) would exceed the applicable noise threshold(s) of the respective jurisdiction, the project proponent shall prepare a focused noise and vibration study that identifies nearby noise and vibration sensitive receptors that could be affected, predicts anticipated construction-related noise and vibration levels, and identifies measures that shall be implemented by the construction contractor in order to comply with the standards of the applicable jurisdiction. Such noise and vibration reduction measures that could be implemented include, but are not limited to, the following:

— Noise Reduction Measures

- Reduce intensity of construction activity, including limiting the number of equipment operating simultaneously;
- Locating construction equipment far enough from noise-sensitive land uses such that noise attenuates to below the applicable noise standard. In particular, all stationary noise-generating construction equipment, such as pumps and generators, shall be located as far as possible from nearby noise-sensitive receptors. Noise-generating equipment shall be shielded from nearby noise sensitive receptors by noise-attenuating buffers, such as structures or haul truck trailers. Water tanks and equipment storage, staging, and warm-up areas shall be located as far from noise sensitive receptors as possible; and/or
- Designing and installing temporary sound barriers, which would provide attenuation below the applicable noise standard.

— Vibration Reduction Measures

- Using less vibration-intensive construction equipment;
- Timing construction so that structures would not be occupied when high levels of vibration are expected; and/or
- Informing residents of the timing of construction and that vibration may be noticeable during these times.

MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures. During final design, the project proponent shall prepare a focused noise study to determine the existing ambient baseline noise level by which to compare the operational noise level of the project. The focused noise study shall analyze the existing baseline noise level against operational noise, and, if it is determined that operational noise levels from the project exceed the applicable noise threshold(s) of the respective jurisdiction, the project proponent shall provide measures or engineering BMPs to reduce exterior noise below the applicable noise threshold(s). If the results of study indicate no exceedance than no further measures necessary. Measures or BMPs could include, but are not limited to, the following:

- Locating the project away from noise-sensitive receptors to reduce operational noise to below the existing baseline;
- Designing the project to shield noise-sensitive receptors from noise-producing elements; and/or
- Inclusion of noise-attenuating features such as soundwalls, berms, acoustical shielding, etc., which would block the line of sight and provide noise reduction to surrounding noise-sensitive land uses.

Significance After Mitigation

For construction, implementation of **MM AQ-1: Emission Reduction Measures** would require more efficient construction equipment, resulting in quieter equipment, and **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan** would require noise reduction strategies. However, noise impacts would remain significant and unavoidable where construction noise levels at sensitive receptors cannot be reduced to below the applicable noise threshold.

For operation, implementation of **MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures** would require a noise study be conducted for proposed projects, and where impacts are identified, provide measures or engineering best management practices to reduce exterior noise below the limit. However, operational noise impacts would remain potentially significant and unavoidable where operational noise levels at sensitive receptors cannot be reduced to below the applicable noise threshold.

3.13.3.3.2 13(b) Generation of excessive groundborne vibration or groundborne noise levels?

3.13.3.3.2.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Significant and Unavoidable. Construction of greenway paths and greenway amenities, greenway paths + pocket parks, and greenspaces, greenway paths + safe crossings, and greenway paths + stormwater management, can generate varying degrees of ground vibration, depending on the construction procedures and the types of construction equipment used. The operation of construction equipment generates vibrations that spread through the ground and diminish in amplitude with distance from the source. Groundborne vibrations can be perceptible within 30 to 100 feet of a source, depending on the

construction equipment used. As presented in Table 3.13-3 above, vibration from typical construction equipment (e.g., vibratory roller) can reach up to 0.210 inches/second at a distance of 25 feet from the source. The effect on buildings located in the vicinity of the construction site often varies depending on soil type, ground strata, and construction characteristics of the receptor buildings. The closest distance between anticipated vibration-producing construction equipment (e.g., a vibratory roller) and off-site occupied structures would likely be at least 25 feet which, according to FTA (2006) prediction methodology, would attenuate groundborne vibration to 0.210 inches /second, which would exceed the relevant criteria for non-engineered timber and masonry buildings or buildings extremely susceptible to vibration damage the thresholds established by the FTA (2006) presented in Table 3.13-8. Groundborne vibration dissipates very rapidly with distance, reducing the typical construction-related vibrations to less than an imperceptible level at about 200 feet from the source (FTA 2006). However, because the specific locations of future projects implemented under the Plan are currently unknown, depending on the proximity to sensitive receptors and project-specific construction methods, vibration levels may exceed the FTA thresholds for Construction Vibration Damage Criteria (Table 3.13-8) and Annoyance Criteria (Table 3.13-9). Therefore, impacts related to vibration are potentially significant. For projects within 200 feet of a sensitive receptor, implementation of **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan** would require a project-specific noise and vibration study and implementation of noise reduction strategies to reduce noise and vibration levels, including measures such as using less vibration-intensive construction equipment, timing construction so structures would not be occupied when high levels of vibration are expected, and/or informing residents of the timing of construction and that vibration may be noticeable during these times. However, despite those measures, construction vibration impacts may still exceed the significance threshold for construction vibration in certain circumstances where sensitive receptors are near vibration-inducing construction activities. Therefore, where vibration reduction measures are either not feasible or would not reduce vibration to below the applicable threshold, construction vibration impacts would remain potentially significant and unavoidable.

Operations

Less than Significant. Greenway paths and greenway amenities include pedestrian trails, equestrian trails, bike trails, multi-use trails, vegetated buffers, and associated amenities such as lighting, restrooms, bike parking, shade structures, or seating and benches. Uses of these types would not result in noticeable levels of vibration. Similarly, pocket parks and greenspaces may include playgrounds, sports facilities, and open fields which would also not result in noticeable levels of vibration. Stormwater management facilities such as bioretention basins, constructed wetlands, and permeable pavement, also do not have features that would cause noticeable levels of vibration during operations. Therefore, impacts would be less than significant.

Mitigation Measures

MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan.

Significance After Mitigation

Construction impacts would remain significant and unavoidable with implementation of **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan.**

Operational impacts would be less than significant. No mitigation is required.

3.13.3.3.3 13(c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

3.13.3.3.3.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction and Operations

Less than Significant. Since the location and design of future projects are currently unknown, the greenway with any combination of subcomponents could be constructed and operated within the vicinity of a public airport or public use airport and within areas covered by an airport land use if near the SGV Airport and Brackett Field.

Projects implemented under the Plan do not include residential or commercial development that would introduce residents or workers to excessive noise levels within two miles of a public airport. For the Brackett Field Airport, noise compatibility guidelines within the Brackett Field Airport Land Use Compatibility Plan are outlined to avoid establishment of noise-sensitive land uses in the portions of the airport land use plan area. Portions of the Plan Area that are within the planning area boundaries of the Brackett Field Airport Land Use Plan are: San Dimas Wash, Puddingstone Channel, and Live Oak Wash. In addition, portions of the Puddingstone Channel Plan Area may be within the B1 Compatibility Zone as designated in the Brackett Field Airport Land Use Plan. Outdoor land uses such as those associated with greenway paths, greenway amenities, pocket parks, greenspaces, and stormwater management are considered conditionally acceptable within the airport land use plan. Use is compatible if usage intensity and other listed conditions are met. The maximum usage intensity for land uses within the B1 Compatibility Zone is 80 people per acre sitewide or 160 people per acre for any single acre at any given time. During construction, less than 20 workers would be expected to be onsite daily. As discussed in Section 3.13.3.2, Methods, the maximum number of visitors from greenway paths and all the components would be up to 1,000 visitors daily. These visitors are assumed to be dispersed equally throughout the 5-mile greenway path. In addition, these visits are assumed to be dispersed equally throughout the day (7:00 a.m. through 10:00 p.m.), resulting in approximately 67 visitors per hour along a typical 5-mile-long greenway path. This equates to roughly one visitor per minute in any given location. For 1-acre pocket parks, visits are assumed to be 500 visitors per day which would be equivalent to roughly 33 visitors per hour in any one location. For 25-acre greenspaces, visitation is assumed to be 3,292 visitors per day, or 220 visitors per hour. These visitors are assumed to be distributed throughout the 25-acre area. However, for a conservative analysis, it is assumed that up to 30 percent of the hourly visitors (66 visitors) are concentrated within a 1-acre area of the greenspace. Thus, construction and operation of greenway paths and amenities, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management would not exceed the usage intensity threshold for project sites within the B1 Compatibility Zone. Therefore, implementation of the Plan would comply with the Brackett Field Airport Land Use Compatibility Plan.

Additionally, temporary noise increases may result from construction activities within two miles of a public airport as well as an increase in noise from use and maintenance of the greenway paths,

amenities, pocket parks or greenspaces, and stormwater management facilities. However, the increase in noise associated with construction activities would be temporary and subject to the construction noise standards of the respective jurisdiction. Similarly, landscape and maintenance activities would also be subject to the noise standards of the respective jurisdiction and would be of short duration and intermittent throughout the year. Noise associated with visitors is expected to be below 65 dBA CNEL, which is defined in Title 21 Airport Noise Standard as the threshold for noise-sensitive land use compatibility. Thus, visitors would not increase noise levels above the 65 dBA CNEL land use compatibility contour. As such, the construction and operation activities associated with greenway paths, greenway amenities, pocket parks or greenspaces, safe crossings, and stormwater management facilities would not be excessive for people residing or working near an airport. Therefore, construction and operation impacts would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Construction and operation impacts are less than significant. No mitigation is required.

3.13.3.4 Impacts of Conceptual Design Projects

This section discusses potential impacts from the 10 conceptual designs discussed in Section 2.4. The components proposed for all 10 conceptual design projects are within the maximum extent limits as described for the Plan in Section 2.

- 3.13.3.4.1 13(a). Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Construction

Significant and Unavoidable. Short-term construction noise impacts could result from demolition; land clearing and grading; construction of the project components; transportation of materials, workers, and equipment to the project site; and construction equipment operation. Further, as described in Section 3.13.3.3.1 (Impact 13(a)), construction-related noise impacts would be minimized with implementation of **MM AQ-1: Emission Reduction Measures** and **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan**. Where a noise study identifies noise impacts, **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan** also required implementation of noise reduction strategies such as providing temporary barriers near sensitive receiving properties, limiting the number of equipment operating simultaneously, and/or locating construction equipment further away from noise-sensitive land uses. However, the Cities of Claremont, Irwindale, Pasadena, and West Covina have restrictive noise ordinances applicable to construction related noise. The Cities of Irwindale and West Covina prohibit any noise at a level which exceeds the ambient noise level at the project property line by more than 5 dB. Due to the close proximity of the 10 conceptual designs to sensitive receptors including residential developments, schools, and parks, the noise reduction measures identified in **MM AQ-1: Emission Reduction Measures** and **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan** may not reduce

construction-related noise levels to below the threshold of the applicable municipality. Therefore, as was determined for impact 13(a) for the Plan, impacts would be potentially significant and unavoidable for conceptual design projects in jurisdictions with restricted noise standards (Table 3.13-11).

Table 3.13-11. Analysis of Conceptual Design Examples for Construction to Generate a Substantial Temporary or Permanent Increase in Ambient Noise Levels in the vicinity of the Project in Excess of Standards Established in the Local General Plan or Noise Ordinance, or Applicable Standards of Other Agencies

Conceptual Design Project	13(a). Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
<p>Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i></p>	<p>Less than Significant with Mitigation. As summarized in Table 3.13-8 above, construction activities could generate noise up to 93 dbA L_{eq} at 50 feet from the source. The Alhambra Wash at Vincent Lugo Park conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., McKinley Elementary School and San Gabriel High School). Chapter 18.02 of the City of Alhambra Municipal Code limits construction activities to the hours of 7:00 a.m. to 7:00 p.m. on weekdays, including Saturday. Section 100.050 of the City of San Gabriel Municipal Code limits construction activities to the hours of 7:00 a.m. to 6:00 p.m. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require noise reduction strategies such as limiting construction activities to the hours specified in the City of San Gabriel's noise ordinance to ensure construction activities would not exceed the noise standards of the applicable jurisdiction. With implementation of MM NOI-1, and incorporation of mitigation measures that would limit construction activities to the hours of 7:00 a.m. and 6:00 p.m., impacts would be reduced to less than significant.</p>
<p>Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i></p>	<p>Less than Significant with Mitigation. As summarized in Table 3.13-8 above, construction activities could generate noise up to 93 dbA L_{eq} at 50 feet from the source. The Big Dalton Wash at Hilda L. Solis Park conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., Manzanita Elementary School, Monte Vista Elementary School, and Baldwin Park High School). Chapter 130.37 of the City of Baldwin Park Municipal Code limits construction activities to the hours of 7:00 a.m. to 7:00 p.m. In addition, Section 9.28.110 of the City of Irwindale Municipal Code prohibits activities that would generate noise at a level that would exceed ambient noise levels by 5 dBA or more at the property line. Implementation of MM-AQ-1: Emission Reduction Measures would require zero-emission and near-zero emission construction equipment (i.e., electric or hydrogen-powered heavy equipment) which operates much quieter than traditional diesel-powered equipment (estimated at 10 dB reduction compared to diesel versions), which would reduce noise levels associated with construction activities up to 25 dB at nearby sensitive receptors. In addition, implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require noise reduction strategies such as limiting construction activities to the hours specified in the Cities' noise ordinance and installing temporary sound barriers between construction activities and noise-sensitive receptors. However, at this time, it is not possible to determine to what degree zero-emission equipment would</p>

Conceptual Design Project	13(a). Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
	be used and whether noise reduction measures implemented under MM NOI-1 would reduce noise levels to below the restrictive noise standard specified in the City of Irwindale Municipal Code. Therefore, construction noise impacts are conservatively presumed to be potentially significant and unavoidable.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	<p>Less than Significant with Mitigation. As summarized in Table 3.13-8 above, construction activities could generate noise up to 93 dBA L_{eq} at 50 feet from the source. The Eaton Wash Greenway at Spreading Ground Site conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., Pasadena High School). Chapter 9.36 of the Pasadena Municipal Code limits construction activities to the hours of 7:00 a.m. to 7:00 p.m. on weekdays, and from 8:00 a.m. to 5:00 p.m. on Saturdays. Maximum construction levels allowed under the noise ordinance is 85 dBA when measured within a radius of 100 feet from the source. Construction activities summarized in Table 3.18-8 above propagated to 100 feet from the source would generate maximum noise levels up to 81 dBA, which would not exceed the City of Pasadena's noise limit. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require noise reduction strategies such as limiting construction activities to the hours specified in the City of Pasadena's noise ordinance to ensure construction activities would not exceed the noise standards of the applicable jurisdiction. With implementation of MM NOI-1, and incorporation of mitigation measures that would limit construction activities to weekdays between the hours of 7:00 a.m. and 7:00 p.m. and Saturdays between the hours of 8:00 a.m. to 5:00 p.m., impacts would be reduced to less than significant.</p>
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i>	<p>Less than Significant with Mitigation. As summarized in Table 3.13-8 above, construction activities could generate noise up to 93 dBA L_{eq} at 50 feet from the source. The Eaton Wash at Eaton Blanche Park conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., Boys and Girls Clubs Pasadena and Willard Elementary School). Chapter 9.36 of the Pasadena Municipal Code limits construction activities to the hours of 7:00 a.m. to 7:00 p.m. on weekdays, and from 8:00 a.m. to 5:00 p.m. on Saturdays. Maximum construction levels allowed under the noise ordinance is 85 dBA when measured within a radius of 100 feet from the source. Construction activities summarized in Table 3.18-8 above propagated to 100 feet from the source would generate maximum noise levels up to 81 dBA, which would not exceed the City of Pasadena's noise limit. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require noise reduction strategies such as limiting construction activities to the hours specified in the City of Pasadena's noise ordinance to ensure construction activities would not exceed the noise standards of the applicable jurisdiction. With implementation of MM NOI-1, and incorporation of mitigation measures that would limit construction activities to weekdays between the hours of 7:00 a.m. and 7:00 p.m. and Saturdays between the hours of 8:00 a.m. to 5:00 p.m., impacts would be reduced to less than significant.</p>

Conceptual Design Project	13(a). Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
<p>San Dimas Wash at Arrow High School <i>City of Glendora</i></p>	<p>Less than Significant with Mitigation. As summarized in Table 3.13-8 above, construction activities could generate noise up to 93 dbA L_{eq} at 50 feet from the source. The San Dimas Wash at Arrow High School conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., Arrow High School). Section 9.44.110 of the Glendora Municipal Code limits construction activities to the hours of 7:00 a.m. to 9:00 p.m. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require noise reduction strategies such as limiting construction activities to the hours specified in the City of Glendora's noise ordinance to ensure construction activities would not exceed the noise standards of the applicable jurisdiction. With implementation of MM NOI-1, and incorporation of mitigation measures that would limit construction activities to weekdays between the hours of 7:00 a.m. and 9:00 p.m., impacts would be reduced to less than significant.</p>
<p>San Dimas Wash at Hollenbeck Park <i>City of Covina</i></p>	<p>Less than Significant with Mitigation. As summarized in Table 3.13-8 above, construction activities could generate noise up to 93 dbA L_{eq} at 50 feet from the source. The San Dimas Wash at Hollenbeck Park conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., Fair Valley High School and Tri-Community Adult School). Section 9.40.110 of the City of Covina Municipal Code limits construction activities to the hours of 7:00 a.m. to 8:00 p.m. on weekdays, including Saturday. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require noise reduction strategies such as limiting construction activities to the hours specified in the City of Covina's noise ordinance to ensure construction activities would not exceed the noise standards of the applicable jurisdiction. With implementation of MM NOI-1 and incorporation of mitigation measures that would limit construction activities to the hours of 7:00 a.m. and 8:00 p.m., impacts would be reduced to less than significant.</p>
<p>San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i></p>	<p>Significant and Unavoidable. As summarized in Table 3.13-8 above, construction activities could generate noise up to 93 dbA L_{eq} at 50 feet from the source. The San Jose Creek at Pocket Park conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., parks). Section 12.08.440 of the Los Angeles County noise ordinance limits construction activities to the hours of 7:00 a.m. to 7:00 p.m. on weekdays, including Saturday. In addition, the noise ordinance limits construction-related maximum noise levels to 75 dBA at single-family structures. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require noise reduction strategies such as limiting construction activities to the hours specified in the County's noise ordinance, as well as installing temporary sound barriers to reduce noise levels to the maximum extent feasible. However, due to the close proximity of noise-sensitive receptors to the San Jose Creek at Pocket Park construction areas, it may not be feasible to reduce maximum construction-related noise levels to below 75 dBA at nearby single-</p>

Conceptual Design Project	13(a). Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
	family structures. Therefore, impacts are conservatively presumed to be significant and unavoidable.
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	<p>Significant and Unavoidable. As summarized in Table 3.18-8 above, construction activities could generate noise up to 93 dBA L_{eq} at 50 feet from the source. The Thompson Creek at the Fairplex conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., parks). Section 16.154.020 of the City of Claremont Municipal Code limits construction activities to the hours of 7:00 a.m. to 8:00 p.m. on weekdays, including Saturday and prohibits maximum noise levels above 65 dBA for a cumulative period of more than 15 minutes in any one hour, 70 dBA for a cumulative period of more than 10 minutes in any one hour, 79 dBA for a cumulative period of more than 5 minutes, or 80 dBA at any time as measured at residential properties. Section 18-305 of the City of Pomona Municipal code limits construction activities to the hours of 7:00 a.m. and 8:00 p.m. on weekdays, including Saturday and prohibits noise levels above 65 dBA for a cumulative period of more than 30 minutes in any one hour, 70 dBA for a cumulative period of more than 15 minutes in any one hour, 75 dBA for a cumulative period of more than 5 minutes, 80 dBA for a cumulative period of more than 1 minute, or 85 dBA at any time as measured at residential property. The City of La Verne adopts by reference the Los Angeles County noise ordinance. Section 12.08.440 of the Los Angeles County noise ordinance limits construction activities to the hours of 7:00 a.m. to 7:00 p.m. on weekdays, including Saturday. In addition, the noise ordinance limits construction-related maximum noise levels to 75 dBA at single-family structures. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require noise reduction strategies such as limiting construction activities to the hours specified in the Cities' noise ordinances as well as noise reduction strategies such as installing temporary noise barriers where unmitigated noise levels would exceed the applicable standard. However, due to the close proximity of noise-sensitive receptors to the Thompson Creek at the Fairplex construction areas, it may not be feasible to reduce maximum construction-related noise levels to below the applicable noise standard. Therefore, impacts are conservatively presumed to be significant and unavoidable.</p>
Walnut Creek at Syhre Park <i>Cities of Baldwin Park and West Covina</i>	<p>Less than Significant with Mitigation. As summarized in Table 3.13-8 above, construction activities could generate noise up to 93 dBA L_{eq} at 50 feet from the source. The Walnut Creek at Syhre Park conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., Edgewood School). Chapter 130.37 of the City of Baldwin Park Municipal Code limits construction activities to the hours of 7:00 a.m. to 7:00 p.m. In addition, Section 15-95 of the City of West Covina Municipal Code limits construction activities to the hours of 7:00 a.m. to 8:00 p.m. on weekdays, including Saturday. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require noise reduction strategies such as limiting construction activities to the hours specified in the Cities; noise ordinances to ensure construction activities would not exceed the noise standards of the applicable jurisdiction.</p>

Conceptual Design Project	13(a). Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
	With implementation of MM NOI-1 , and incorporation of mitigation measures that would limit construction activities to the hours of 7:00 a.m. and 7:00 p.m., impacts would be reduced to less than significant.
Walnut Creek at Pocket Park <i>City of West Covina</i>	Less than Significant with Mitigation. As summarized in Table 3.13-8 above, construction activities could generate noise up to 93 dBA L_{eq} at 50 feet from the source. Walnut Creek at Pocket Park conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., parks). Section 15-95 of the City of West Covina Municipal Code limits construction activities to the hours of 7:00 a.m. to 8:00 p.m. on weekdays, including Saturday. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require noise reduction strategies such as limiting construction activities to the hours specified in the City of West Covina's noise ordinance to ensure construction activities would not exceed the noise standards of the applicable jurisdiction. With implementation of MM NOI-1 , and incorporation of mitigation measures that would limit construction activities to the hours of 7:00 a.m. and 8:00 p.m., impacts would be reduced to less than significant.

Operations

Significant and Unavoidable. The primary noise source associated with operation of the 10 conceptual designs would be visitors speaking in addition to periodic landscape and maintenance activities. As described in Section 3.13.3.3.1 for impact 13(a) for the Plan, visitors would generate noise of up to 56 dBA at 50 feet. In addition to noise associated with visitors, landscape and maintenance activities would generate noise primarily due to the use of powered equipment such as lawnmowers, edgers, and leaf blowers which can generate noise levels of up to 65 to 80 dBA at 50 feet which may exceed the noise standards of several jurisdictions. Implementation of **MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures** would require a noise study be conducted for each of the 10 conceptual designs, and where impacts are identified, provide measures or engineering best management practices to reduce exterior noise below the limit. However, despite those measures, operational impacts may still exceed the applicable significance threshold of a jurisdiction within restrictive noise ordinance (e.g. City of Irwindale and City of West Covina). Therefore, operational noise impacts would remain potentially significant and unavoidable.

Table 3.13-12. Analysis of Conceptual Design Examples for Operations to Generate a Substantial Temporary or Permanent Increase in Ambient Noise Levels in the vicinity of the Project in Excess of Standards Established in the Local General Plan or Noise Ordinance, or Applicable Standards of Other Agencies

Conceptual Design Project	13(a). Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
<p>Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i></p>	<p>Less than Significant with Mitigation. The primary noise source associated with operation of the Alhambra Wash at Vincent Lugo Park conceptual design project would be visitors speaking in addition to periodic landscape and maintenance activities. As described in Section 3.13.3.3.1 for impact NOI (a) for the Plan, visitors would generate noise of up to 56 dBA at 50 feet. In addition to noise associated with visitors, landscape and maintenance activities would generate noise primarily due to the use of powered equipment such as lawnmowers, edgers, and leaf blowers which can generate noise levels of up to 65 to 80 dBA at 50 feet. Chapter 18.02 of the City of Alhambra Municipal Code limits noise sources associated with the maintenance of real property to between the hours of 7:00 a.m. and 6:00 p.m. Monday through Saturday, and 9:00 a.m. to 5:00 p.m. on Sunday. Chapter 98.02 of the City of San Gabriel Municipal Code limits noise sources associated with maintenance between the hours of 7:00 a.m. and 10:00 p.m. Implementation of MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures would require a noise study be conducted for the Alhambra Wash at Vincent Lugo Park conceptual design project and would require implementation of noise reduction strategies such as limiting maintenance activities to the hours specified in the City of Alhambra's noise ordinance to ensure maintenance activities would not exceed the noise standards of the applicable jurisdiction. With implementation of MM NOI-2 and incorporation of mitigation measures that would limit maintenance activities to the hours of 7:00 a.m. and 6:00 p.m., impacts would be reduced to less than significant.</p>
<p>Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i></p>	<p>Less than Significant with Mitigation. The primary noise source associated with operation of the Big Dalton Wash at Hilda L. Solis Park conceptual design project would be visitors speaking in addition to periodic landscape and maintenance activities. As described in Section 3.13.3.3.1 for impact NOI (a) for the Plan, visitors would generate noise of up to 56 dBA at 50 feet. Section 9.28.030 of the City of Irwindale Municipal Code prohibits any noise at a level that would exceed the ambient or the presumed ambient (whichever is greater), by more than 10 dB when measured at the boundary line of the property from which the noise emanates. The presumed ambient noise level as specified in Section 9.28.030(A) of the City of Irwindale Municipal Code, for residential zones between the hours of 7:00 a.m. and 10:00 p.m. is 50 dBA. As such, visitors to the Big Dalton Wash at Hilda L. Solis Park conceptual design project would not be expected to exceed the City's noise standard. In addition to noise associated with visitors, landscape and maintenance activities would generate noise primarily due to the use of powered equipment such as lawnmowers, edgers, and leaf blowers which can generate noise levels of up to 65 to 80 dBA at 50 feet. Section 9.28.100 of the City of Irwindale Municipal Code limits noise sources associated with the operation of machinery (e.g., landscaping equipment) to 80 dB (as measured from the adjacent property line) and only between the hours of 8:00 a.m.</p>

Conceptual Design Project	13(a). Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
	<p>and 9:00 p.m. Monday through Saturday, and 10:00 a.m. to 8:00 p.m. on Sunday. Implementation of MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures would require a noise study be conducted for the Big Dalton Wash at Hilda L. Solis Park conceptual design project and would require implementation of noise reduction strategies such as limiting maintenance activities to the hours specified in the City of Irwindale's noise ordinance to ensure maintenance activities would not exceed the noise standards of the applicable jurisdiction. With implementation of MM NOI-2 and incorporation of mitigation measures that would limit maintenance activities to the hours of 8:00 a.m. and 9:00 p.m. Monday through Saturday, impacts would be reduced to less than significant.</p>
<p>Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i></p>	<p>Less than Significant with Mitigation. The primary noise source associated with operation of the Eaton Wash Greenway at Spreading Ground Site conceptual design project would be visitors speaking in addition to periodic landscape and maintenance activities. As described in Section 3.13.3.3.1 for impact NOI (a) for the Plan, visitors would generate noise of up to 56 dBA at 50 feet. In addition to noise associated with visitors, landscape and maintenance activities would generate noise primarily due to the use of powered equipment such as lawnmowers, edgers, and leaf blowers which can generate noise levels of up to 65 to 80 dBA at 50 feet. Section 9.37.090 of the City of Pasadena Municipal Code limits noise associated with machinery (e.g., landscape equipment) that would exceed the ambient noise level by more than 5 dB at the property line. In addition, Section 9.37.030 of the City of Pasadena Municipal Code restricts the use of leaf-blowing machines within a residential area between the hours of 8:00 a.m. and 6:00 p.m. weekdays and 9:00 a.m. and 5:00 p.m. on Saturday. The noise ordinance further restricts operation of leaf-blowers to less than 30 minutes per hour on parcels greater than ½ acre with maximum noise levels not to exceed 65 dB when measured from a distance of 50 feet. Implementation of MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures would require a noise study be conducted for the Eaton Wash Greenway at Spreading Ground Site conceptual design and would require implementation of noise reduction strategies such as limiting maintenance activities to the hours specified in the City of Pasadena's noise ordinance to ensure maintenance activities would not exceed the noise standards of the applicable jurisdiction. With implementation of MM NOI-2 and incorporation of mitigation measures that would limit maintenance activities to the hours of 8:00 a.m. and 6:00 p.m., impacts would be reduced to less than significant.</p>
<p>Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i></p>	<p>Less than Significant with Mitigation. The primary noise source associated with operation of the Eaton Wash at Eaton Blanche Park conceptual design project would be visitors speaking in addition to periodic landscape and maintenance activities. As described in Section 3.13.3.3.1 for impact NOI (a) for the Plan, visitors would generate noise of up to 56 dBA at 50 feet. In addition to noise associated with visitors, landscape and maintenance activities would generate noise primarily due to the use of powered equipment such as lawnmowers, edgers, and leaf blowers which can generate noise levels of up to 65 to 80 dBA at 50 feet. Section 9.37.090 of the</p>

Conceptual Design Project	13(a). Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
	<p>City of Pasadena Municipal Code limits noise associated with machinery (e.g., landscape equipment) that would exceed the ambient noise level by more than 5 dB at the property line. In addition, Section 9.37.030 of the City of Pasadena Municipal Code restricts the use of leaf-blowing machines within a residential area between the hours of 8:00 a.m. and 6:00 p.m. weekdays and 9:00 a.m. and 5:00 p.m. on Saturday. The noise ordinance further restricts operation of leaf-blowers to less than 30 minutes per hour on parcels greater than ½ acre with maximum noise levels not to exceed 65 dB when measured from a distance of 50 feet. Implementation of MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures would require a noise study be conducted for the Eaton Wash at Eaton Blanche Park conceptual design project and would require implementation of noise reduction strategies such as limiting maintenance activities to the hours specified in the City of Pasadena’s noise ordinance to ensure maintenance activities would not exceed the noise standards of the applicable jurisdiction. With implementation of MM NOI-2 and incorporation of mitigation measures that would limit maintenance activities to the hours of 8:00 a.m. and 6:00 p.m., impacts would be reduced to less than significant.</p>
<p>San Dimas Wash at Arrow High School <i>City of Glendora</i></p>	<p>Significant and Unavoidable. The primary noise source associated with operation of the San Dimas Wash at Arrow High School conceptual design project would be visitors speaking in addition to periodic landscape and maintenance activities. As described in Section 3.13.3.3.1 for impact NOI (a) for the Plan, visitors would generate noise of up to 56 dBA at 50 feet. In addition to noise associated with visitors, landscape and maintenance activities would generate noise primarily due to the use of powered equipment such as lawnmowers, edgers, and leaf blowers which can generate noise levels of up to 65 to 80 dBA at 50 feet. Section 9.36.010 of the City of Glendora Municipal Code limits noise associated with maintenance of buildings, structures, or property (e.g., landscape maintenance activities), such that operation or maintenance activities cause noise or vibration which cause discomfort or annoyance to reasonable persons of normal sensitivity, or endangers the comfort or repose, health or peace of residents in the area. Implementation of MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures would require a noise study be conducted for the San Dimas Wash at Arrow High School conceptual design project and would require implementation of noise reduction strategies such as designing the project to shield noise-sensitive receptors from noise-producing elements, or inclusion of noise-attenuating features such as soundwalls and acoustical shielding. However, it is widely accepted that changes of 3 dBA in the normal environment are considered just noticeable to most people and an increase in noise levels above 3 dBA could be considered to cause discomfort or annoyance to some sensitive receptors. Due to the close proximity of residents to the project site, it is unlikely that noise reduction measures implemented under MM NOI-2 would reduce noise associated with landscape and maintenance activities to below this threshold. Therefore, operational noise impacts are conservatively presumed to be potentially significant and unavoidable.</p>

Conceptual Design Project	13(a). Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
<p>San Dimas Wash at Hollenbeck Park <i>City of Covina</i></p>	<p>Less than Significant with Mitigation. The primary noise source associated with operation of the San Dimas Wash at Hollenbeck Park conceptual design project would be visitors speaking in addition to periodic landscape and maintenance activities. As described in Section 3.13.3.3.1 for impact NOI (a) for the Plan, visitors would generate noise of up to 56 dBA at 50 feet. In addition to noise associated with visitors, landscape and maintenance activities would generate noise primarily due to the use of powered equipment such as lawnmowers, edgers, and leaf blowers which can generate noise levels of up to 65 to 80 dBA at 50 feet. Section 9.40.090 of the City of Covina Municipal Code limits noise sources associated with the maintenance of real property to between the hours of 7:00 a.m. and 8:00 p.m. Implementation of MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures would require a noise study be conducted for the San Dimas Wash at Hollenbeck Park conceptual design project and would require implementation of noise reduction strategies such as limiting maintenance activities to the hours specified in the City of Covina's noise ordinance to ensure maintenance activities would not exceed the noise standards of the applicable jurisdiction. With implementation of MM NOI-2 and incorporation of mitigation measures that would limit maintenance activities to the hours of 7:00 a.m. and 8:00 p.m., impacts would be reduced to less than significant.</p>
<p>San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i></p>	<p>Significant and Unavoidable. The primary noise source associated with operation of the San Jose Creek at Pocket Park conceptual design project would be visitors speaking in addition to periodic landscape and maintenance activities. As described in Section 3.13.3.3.1 for impact NOI (a) for the Plan, visitors would generate noise of up to 56 dBA at 50 feet. In addition to noise associated with visitors, landscape and maintenance activities would generate noise primarily due to the use of powered equipment such as lawnmowers, edgers, and leaf blowers which can generate noise levels of up to 65 to 80 dBA at 50 feet. Section 12.08.010 of the Los Angeles County noise ordinance applies noise standards based on the duration and level of noise as summarized in Table 3.13-5 above. Operation of landscape maintenance equipment is assumed to be conducted once per week for a period of four hours. Based on the County's noise standard for residential properties and the expected duration of four hours, the exterior noise level of 50 dBA applies (or based on Section 12.08.390 subsection B, where ambient exceeds the baseline of 50 dBA L_{eq}, the ambient L_{50} will become the baseline). Implementation of MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures would require a noise study be conducted for the San Jose Creek at Pocket Park conceptual design project and would require implementation of noise reduction strategies such as limiting maintenance activities to the hours specified in the County's noise ordinance and designing the project to shield noise-sensitive receptors from noise-producing elements. However, due to the close proximity of noise-sensitive receptors to the San Jose Creek at Pocket Park project site, it may not be feasible to reduce maximum operation-related noise levels to below the applicable noise threshold. Therefore, impacts are conservatively presumed to be significant and unavoidable.</p>

Conceptual Design Project	13(a). Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?
<p>Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i></p>	<p>Significant and Unavoidable. The primary noise source associated with operation of the Thompson Creek at the Fairplex conceptual design project would be visitors speaking in addition to periodic landscape and maintenance activities. As described in Section 3.13.3.3.1 for impact NOI (a) for the Plan, visitors would generate noise of up to 56 dBA at 50 feet. In addition to noise associated with visitors, landscape and maintenance activities would generate noise primarily due to the use of powered equipment such as lawnmowers, edgers, and leaf blowers which can generate noise levels of up to 65 to 80 dBA at 50 feet. Section 16.154.020 9.40.090 of the City of Claremont Municipal Code and Section 18-305 of the City of Pomona Municipal Code limit noise sources associated with the maintenance of real property to between the hours of 7:00 a.m. and 8:00 p.m. The City of La Verne adopts by reference the Los Angeles County noise ordinance. Section 12.08.010 of the Los Angeles County noise ordinance applies noise standards based on the duration and level of noise as summarized in Table 3.13-5 above. Operation of landscape maintenance equipment is assumed to be conducted once per week for a period of four hours. Based on the County's noise standard for residential properties and the expected duration of four hours, the exterior noise level of 50 dBA applies (or based on Section 12.08.390 subsection B, where ambient exceeds the baseline of 50 dBA L_{eq}, the ambient L_{50} will become the baseline). Implementation of MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures would require a noise study be conducted for the San Jose Creek at Pocket Park conceptual design project and would require implementation of noise reduction strategies such as limiting maintenance activities to the hours specified in the County's noise ordinance and designing the project to shield noise-sensitive receptors from noise-producing elements. However, due to the close proximity of noise-sensitive receptors to the San Jose Creek at Pocket Park project site, it may not be feasible to reduce maximum operation-related noise levels to below the applicable noise threshold. Therefore, impacts are conservatively presumed to be significant and unavoidable.</p>
<p>Walnut Creek at Syhre Park <i>Cities of Baldwin Park and West Covina</i></p>	<p>Less than Significant. The primary noise source associated with operation of the Walnut Creek at Syhre Park conceptual design project would be visitors speaking in addition to periodic landscape and maintenance activities. As described in Section 3.13.3.3.1 for impact NOI (a) for the Plan, visitors would generate noise of up to 56 dBA at 50 feet. Section 15-97 of the City of West Covina Municipal Code restricts operation of two and four stroke engines (e.g., leaf blower, lawnmower, edger, etc.) except for between the hours of 8:00 a.m. and 8:00 p.m. and where operated on publicly owned properties. Accordingly, impacts associated with operation of the Walnut Creek at Syhre Park conceptual design project would be less than significant.</p>
<p>Walnut Creek at Pocket Park <i>City of West Covina</i></p>	<p>Less than Significant. The primary noise source associated with operation of the Walnut Creek at Pocket Park conceptual design project would be visitors speaking in addition to periodic landscape and maintenance activities. As described in Section 3.13.3.3.1 for impact NOI (a) for the Plan, visitors would generate noise of up to 56 dBA at 50 feet. In addition to noise associated with visitors, landscape and maintenance activities would generate noise</p>

Conceptual Design Project	<i>13(a). Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?</i>
	primarily due to the use of powered equipment such as lawnmowers, edgers, and leaf blowers which can generate noise levels of up to 65 to 80 dBA at 50 feet. Section 15-97 of the City of West Covina Municipal Code restricts operation of two and four stroke engines (e.g., leaf blower, lawnmower, edger, etc.) except for between the hours of 8:00 a.m. and 8:00 p.m. and where operated on publicly owned properties. Accordingly, impacts associated with operation of the Walnut Creek at Pocket Park conceptual design project would be less than significant.

3.13.3.4.2 13(b) Generation of excessive groundborne vibration or groundborne noise levels?

Construction

Significant and Unavoidable. The main concern associated with groundborne vibration is annoyance; however, in extreme cases, vibration can cause damage risk to buildings, particularly those that are old or otherwise fragile. Depending on the construction or operational equipment used, groundborne vibrations can be perceptible within 30 to 100 feet of a source. Depending on the proximity to sensitive receptors and construction methods, vibration levels may exceed the FTA thresholds identified in Tables 3.13-8 and 3.13-9 with respect to building damage risk and annoyance. Therefore, impacts relative to vibration are considered potentially significant. Implementation of **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan** would require a project-specific noise and vibration study and implementation of mitigation measures to reduce noise and vibration levels such as using less vibration-intensive construction equipment, timing construction so that structures would not be occupied when high levels of vibration are expected, and/or informing residents of the timing of construction and that vibration may be noticeable during these times. However, despite those measures, construction vibration impacts may still exceed the significance threshold for construction vibration in certain circumstances where sensitive receptors are in close proximity to vibration-inducing construction activities. Therefore, for the 10 conceptual design projects where mitigation measures are either not feasible or would not reduce vibration to below the applicable threshold, construction vibration impacts would remain potentially significant and unavoidable.

Table 3.13-13. Analysis of Conceptual Design Examples for Construction and Operations to Generate Excessive Groundborne Vibration or Groundborne Noise Levels

Conceptual Design Project	<i>13(b). Generation of excessive groundborne vibration or groundborne noise levels?</i>
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	Significant and Unavoidable. The Alhambra Wash at Vincent Lugo Park conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., McKinley Elementary School and San Gabriel High School). Chapter 18.02 of the City of Alhambra Municipal Code limits construction activities to the hours of 7:00 a.m. to 7:00 p.m. on weekdays, including Saturday. Section 100.050 of the City of San Gabriel Municipal Code limits construction activities to the hours of 7:00 a.m. to 6:00 p.m. In addition, Section 98.02 of the City of San Gabriel Municipal Code

Conceptual Design Project	13(b). Generation of excessive groundborne vibration or groundborne noise levels?
	<p>prohibits activities that would generate vibration that would cause discomfort or annoyance of persons of normal sensitivity. Based on Table 3.13-3, loaded trucks produce vibration on the levels of 0.089 inches per second PPV at 25 feet from the source. Vibration attenuates at a rate of $PPV_{ref} \times (25/D)^n$. Accordingly, transient construction vibration levels would attenuate to the Los Angeles County threshold of 0.01 inches per second at a distance of approximately 150 feet from the source. The 0.01 threshold is well below any damage potential criteria and, therefore, does not represent any damage potential with respect to vibration. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require vibration reduction strategies such as using less vibration-intensive equipment or timing construction so that structures would not be occupied when high levels of vibration are expected. However, despite those measures, due to the close proximity of nearby residents, construction vibration impacts may still cause annoyance in certain circumstances. Therefore, where mitigation measures are either not feasible or would not reduce vibration to below the applicable threshold, construction vibration impacts would remain potentially significant and unavoidable.</p>
<p>Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i></p>	<p>Significant and Unavoidable. The Big Dalton Wash at Hilda L. Solis Park conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., Manzanita Elementary School, Monte Vista Elementary School, and Baldwin Park High School). Chapter 130.37 of the City of Baldwin Park Municipal Code limits construction activities to the hours of 7:00 a.m. to 7:00 p.m. In addition, Section 9.28.110 of the City of Irwindale Municipal Code prohibits activities that would generate noise at a level that would exceed ambient noise levels by 5 dBA or more at the property line. Equipment such as loaded trucks and small bulldozers would be the most vibratory intensive construction equipment used. Based on Table 3.13-3, loaded trucks produce vibration on the levels of 0.089 inches per second PPV at 25 feet from the source. Vibration attenuates at a rate of $PPV_{ref} \times (25/D)^n$. Accordingly, transient construction vibration levels would attenuate to the Los Angeles County threshold of 0.01 inches per second at a distance of approximately 150 feet from the source. The 0.01 threshold is well below any damage potential criteria and, therefore, does not represent any damage potential with respect to vibration. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require vibration reduction strategies such as using less vibration-intensive equipment or timing construction so that structures would not be occupied when high levels of vibration are expected. However, despite those measures, due to the close proximity of nearby residents, construction vibration impacts may still cause annoyance in certain circumstances. Therefore, where mitigation measures are either not feasible or would not reduce vibration to below the applicable threshold, construction vibration impacts would remain potentially significant and unavoidable.</p>
<p>Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i></p>	<p>Significant and Unavoidable. The Eaton Wash Greenway at Spreading Ground Site conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., Pasadena High School). Chapter 9.36 of the Pasadena Municipal Code limits construction activities to the hours of 7:00 a.m. to 7:00 p.m. on weekdays, and from 8:00 a.m. to 5:00</p>

Conceptual Design Project	13(b). Generation of excessive groundborne vibration or groundborne noise levels?
	<p>p.m. on Saturdays. Based on Table 3.13-3, loaded trucks produce vibration on the levels of 0.089 inches per second PPV at 25 feet from the source. Vibration attenuates at a rate of $PPV_{ref} \times (25/D)^n$. Accordingly, transient construction vibration levels would attenuate to the Los Angeles County threshold of 0.01 inches per second at a distance of approximately 150 feet from the source. The 0.01 threshold is well below any damage potential criteria and, therefore, does not represent any damage potential with respect to vibration. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require vibration reduction strategies such as using less vibration-intensive equipment or timing construction so that structures would not be occupied when high levels of vibration are expected. However, despite those measures, due to the close proximity of nearby residents, construction vibration impacts may still cause annoyance in certain circumstances. Therefore, where mitigation measures are either not feasible or would not reduce vibration to below the applicable threshold, construction vibration impacts would remain potentially significant and unavoidable.</p>
<p>Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i></p>	<p>Significant and Unavoidable. The Eaton Wash at Eaton Blanche Park conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., Boys and Girls Clubs Pasadena and Willard Elementary School). Chapter 9.36 of the Pasadena Municipal Code limits construction activities to the hours of 7:00 a.m. to 7:00 p.m. on weekdays, and from 8:00 a.m. to 5:00 p.m. on Saturdays. Based on Table 3.13-3, loaded trucks produce vibration on the levels of 0.089 inches per second PPV at 25 feet from the source. Vibration attenuates at a rate of $PPV_{ref} \times (25/D)^n$. Accordingly, transient construction vibration levels would attenuate to the Los Angeles County threshold of 0.01 inches per second at a distance of approximately 150 feet from the source. The 0.01 threshold is well below any damage potential criteria and, therefore, does not represent any damage potential with respect to vibration. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require vibration reduction strategies such as using less vibration-intensive equipment or timing construction so that structures would not be occupied when high levels of vibration are expected. However, despite those measures, due to the close proximity of nearby residents, construction vibration impacts may still cause annoyance in certain circumstances. Therefore, where mitigation measures are either not feasible or would not reduce vibration to below the applicable threshold, construction vibration impacts would remain potentially significant and unavoidable.</p>
<p>San Dimas Wash at Arrow High School <i>City of Glendora</i></p>	<p>Significant and Unavoidable. The San Dimas Wash at Arrow High School conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., Arrow High School). Section 9.44.110 of the Glendora Municipal Code limits construction activities to the hours of 7:00 a.m. to 9:00 p.m. Based on Table 3.13-3, loaded trucks produce vibration on the levels of 0.089 inches per second PPV at 25 feet from the source. Vibration attenuates at a rate of $PPV_{ref} \times (25/D)^n$. Accordingly, transient construction vibration levels would attenuate to the Los Angeles County threshold of 0.01 inches per second at a distance of approximately 150 feet from the source. The 0.01 threshold is well below any damage</p>

Conceptual Design Project	13(b). Generation of excessive groundborne vibration or groundborne noise levels?
	<p>potential criteria and, therefore, does not represent any damage potential with respect to vibration. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require vibration reduction strategies such as using less vibration-intensive equipment or timing construction so that structures would not be occupied when high levels of vibration are expected. However, despite those measures, due to the close proximity of nearby residents, construction vibration impacts may still cause annoyance in certain circumstances. Therefore, where mitigation measures are either not feasible or would not reduce vibration to below the applicable threshold, construction vibration impacts would remain potentially significant and unavoidable.</p>
<p>San Dimas Wash at Hollenbeck Park <i>City of Covina</i></p>	<p>Significant and Unavoidable. The San Dimas Wash at Hollenbeck Park conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., Fair Valley High School and Tri-Community Adult School). Section 9.40.110 of the City of Covina Municipal Code limits construction activities to the hours of 7:00 a.m. to 8:00 p.m. on weekdays, including Saturday. In addition, the noise ordinance prohibits vibration above the perception threshold of the average individual or beyond the property boundary of the source if on private property or at 150 feet from the source if on a public space or public right-of-way. Based on Table 3.13-3, loaded trucks produce vibration on the levels of 0.089 inches per second PPV at 25 feet from the source. Vibration attenuates at a rate of $PPV_{ref} \times (25/D)^n$. Accordingly, transient construction vibration levels would attenuate to the City's threshold of perception (i.e., 0.01 inches per second) at a distance of approximately 150 feet from the source. The 0.01 threshold is well below any damage potential criteria and, therefore, does not represent any damage potential with respect to vibration. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require vibration reduction strategies such as using less vibration-intensive equipment or timing construction so that structures would not be occupied when high levels of vibration are expected. However, despite those measures, due to the close proximity of nearby residents, construction vibration impacts may still cause annoyance in certain circumstances. Therefore, where mitigation measures are either not feasible or would not reduce vibration to below the applicable threshold, construction vibration impacts would remain potentially significant and unavoidable.</p>
<p>San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i></p>	<p>Significant and Unavoidable. The San Jose Creek at Pocket Park conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., parks). Section 12.08.440 of the Los Angeles County noise ordinance limits construction activities to the hours of 7:00 a.m. to 7:00 p.m. on weekdays, including Saturday. Based on Table 3.13-3, loaded trucks produce vibration on the levels of 0.089 inches per second PPV at 25 feet from the source. Vibration attenuates at a rate of $PPV_{ref} \times (25/D)^n$. Accordingly, transient construction vibration levels would attenuate to the Los Angeles County threshold of 0.01 inches per second at a distance of approximately 150 feet from the source. The 0.01 threshold is well below any damage potential criteria and, therefore, does not represent any damage potential with respect to vibration. Implementation MM NOI-1: Prepare</p>

Conceptual Design Project	13(b). Generation of excessive groundborne vibration or groundborne noise levels?
	<p>Construction Noise/Vibration Work and Mitigation Monitoring Plan would require vibration reduction strategies such as using less vibration-intensive equipment or timing construction so that structures would not be occupied when high levels of vibration are expected. However, despite those measures, due to the close proximity of nearby residents, construction vibration impacts may still cause annoyance in certain circumstances. Therefore, where mitigation measures are either not feasible or would not reduce vibration to below the applicable threshold, construction vibration impacts would remain potentially significant and unavoidable.</p>
<p>Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i></p>	<p>Significant and Unavoidable. The Thompson Creek at the Fairplex conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., parks). Section 16.154.020 of the City of Claremont Municipal Code prohibits construction-related vibration at levels that would endanger the public health, welfare, and safety. limits construction activities to the hours of 7:00 a.m. to 8:00 p.m. on weekdays. Section 18-305 of the City of Pomona Municipal Code limits construction activities to the hours of 7:00 a.m. and 8:00 p.m. on weekdays, including Saturday. In addition, Section 18.309 of the City of Pomona Municipal Code prohibits construction-related vibration at levels that would be perceptible without instruments at any point on any affected property adjoining the property on which the vibration source is located (i.e., the City's perception threshold is presumed to be more than 0.05 inch per second RMS vertical velocity). Based on Table 3.13-3, loaded trucks produce vibration on the levels of 0.089 inches per second PPV at 25 feet from the source. Vibration attenuates at a rate of $PPV_{ref} \times (25/D)^n$. Accordingly, transient construction vibration levels would attenuate to the City of Pomona threshold of 0.05 inches per second at a distance of approximately 40 feet from the source. The 0.05 threshold is well below any damage potential criteria and, therefore, does not represent any damage potential with respect to vibration. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require vibration reduction strategies such as using less vibration-intensive equipment or timing construction so that structures would not be occupied when high levels of vibration are expected. However, despite those measures, due to the close proximity of nearby residents, construction vibration impacts may still cause annoyance in certain circumstances. Therefore, where mitigation measures are either not feasible or would not reduce vibration to below the applicable threshold, construction vibration impacts would remain potentially significant and unavoidable.</p>
<p>Walnut Creek at Syhre Park <i>Cities of Baldwin Park and West Covina</i></p>	<p>Significant and Unavoidable. The Walnut Creek at Syhre Park conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., Edgewood School). Chapter 130.37 of the City of Baldwin Park Municipal Code limits construction activities to the hours of 7:00 a.m. to 7:00 p.m. In addition, Section 15-95 of the City of West Covina Municipal Code limits construction activities to the hours of 7:00 a.m. to 8:00 p.m. on weekdays, including Saturday. Based on Table 3.13-3, loaded trucks produce vibration on the levels of 0.089 inches per second PPV at 25 feet from the source. Vibration attenuates at a rate of $PPV_{ref} \times (25/D)^n$. Accordingly, transient construction vibration levels would attenuate to the Los Angeles County threshold of 0.01 inches per second at a distance of</p>

Conceptual Design Project	13(b). Generation of excessive groundborne vibration or groundborne noise levels?
	<p>approximately 150 feet from the source. The 0.01 threshold is well below any damage potential criteria and, therefore, does not represent any damage potential with respect to vibration. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require vibration reduction strategies such as using less vibration-intensive equipment or timing construction so that structures would not be occupied when high levels of vibration are expected. However, despite those measures, due to the close proximity of nearby residents, construction vibration impacts may still cause annoyance in certain circumstances. Therefore, where mitigation measures are either not feasible or would not reduce vibration to below the applicable threshold, construction vibration impacts would remain potentially significant and unavoidable.</p>
<p>Walnut Creek at Pocket Park <i>City of West Covina</i></p>	<p>Significant and Unavoidable. Walnut Creek at Pocket Park conceptual design project includes components within 50 feet of residential and other sensitive receptors (e.g., parks). Section 15-95 of the City of West Covina Municipal Code limits construction activities to the hours of 7:00 a.m. to 8:00 p.m. on weekdays, including Saturday. Based on Table 3.13-3, loaded trucks produce vibration on the levels of 0.089 inches per second PPV at 25 feet from the source. Vibration attenuates at a rate of $PPV_{ref} \times (25/D)^n$. Accordingly, transient construction vibration levels would attenuate to the Los Angeles County threshold of 0.01 inches per second at a distance of approximately 150 feet from the source. The 0.01 threshold is well below any damage potential criteria and, therefore, does not represent any damage potential with respect to vibration. Implementation MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan would require vibration reduction strategies such as using less vibration-intensive equipment or timing construction so that structures would not be occupied when high levels of vibration are expected. However, despite those measures, due to the close proximity of nearby residents, construction vibration impacts may still cause annoyance in certain circumstances. Therefore, where mitigation measures are either not feasible or would not reduce vibration to below the applicable threshold, construction vibration impacts would remain potentially significant and unavoidable.</p>

Operations

Less than Significant. The 10 conceptual design projects would generally include operational uses such as pedestrian trails, equestrian trails, bike trails, multi-use trails, vegetated buffers, and associated amenities such as lighting, restrooms, bike parking, shade structures, or seating and benches. Uses of these types would not result in noticeable levels of vibration. Therefore, impacts would be less than significant.

3.13.3.4.3 13(c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

Construction and Operations

Less than Significant. SGV Airport and Brackett Field Airport are located within the Plan Area. The Brackett Field Airport has a land use plan while the SGV Airport does not. The Thompson Creek at the Fairplex conceptual design is located within the planning area boundaries of the Brackett Field Airport Land Use Plan. Portions of the Thompson Creek at the Fairplex conceptual design project are located within the C1 Compatibility Zone as designated in the Bracket Field Airport Land Use Plan. Outdoor land uses such as those associated with greenway paths and amenities are considered conditionally acceptable. Use is compatible if usage intensity and other listed conditions are met. The maximum usage intensity for land uses within the C1 Compatibility Zone is 150 people per acre sitewide or 400 people per acre for any single acre at any given time. During construction, less than 20 workers would be expected to be onsite daily. As discussed above, visitation of greenway paths is assumed to be up to 1,000 visitors daily. These visitors are assumed to be dispersed equally throughout the 5-mile greenway path. In addition, these visits are assumed to be dispersed equally throughout the day (7:00 a.m. through 10:00 p.m.), resulting in approximately 67 visitors per hour along a typical 5-mile-long greenway path. This equates to roughly one visitor per minute in any given location. For amenities, visits are assumed to be 500 visitors per day which would be equivalent to roughly 33 visitors per hour in any one location. Thus, operation of greenway paths and amenities would not exceed the usage intensity threshold for project sites within the C1 Compatibility Zone. As such, the construction and operation of the Thompson Creek at the Fairplex conceptual design project would not have the potential to expose people residing or working in the project area to excessive noise levels associated with airstrip operations or aircraft; therefore, impacts would be less than significant.

Otherwise, none of the other conceptual designs are located within the planning area of either airport. None of the 10 conceptual designs involve construction or expansion of the airport. In addition, none of the 10 conceptual design examples would result in any impacts not previously described for the Plan in Section 3.13.3.3 and none of the 10 conceptual designs would result in impacts of greater severity than described for the Plan. No additional mitigation measures would be required.

3.14 Population and Housing

This section describes the existing conditions and applicable regulations pertaining to population and housing in the Plan Area and describes the potential impacts associated with population and housing that could result from implementation of the Plan.

Table 3.14-1. Summary of Potential Impacts of the Plan on Population and Housing.

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the Plan:			
14(a). Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?			
Greenway Paths + Greenway Amenities	No Impact	No Impact	Construction: No Mitigation Operations: No Mitigation
Greenway Paths + Pocket Parks and Greenspaces	No Impact	No Impact	
Greenway Paths + Safe Crossings	No Impact	No Impact	
Greenway Paths + Stormwater Management	No Impact	No Impact	
14(b). Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction: No Mitigation Operations: No Mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant	
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	

3.14.1 Environmental Setting

3.14.1.1 Los Angeles County

The Plan Area is located in Los Angeles County, which has a population of approximately 9,721,138 people as of July 1, 2022. This represents a 2.9 percent decrease in population in Los Angeles County from the April 2020 Census, which reported a total population of 10,014,009 people (U.S. Census Bureau 2022). From 2017 through 2021, the median household income for Los Angeles County was \$76,367, and the per capita income was \$37,924, with approximately 14.2 percent of people in poverty (U.S.

Census Bureau 2022). The employment rate in Los Angeles County is 58.3 percent (U.S. Census Bureau 2021).

There are approximately 3,591,981 housing units in Los Angeles County and the homeownership rate is approximately 47 percent. The County vacancy rate for all housing units is 4.8 percent (171,353 vacant housing units) (U.S. Census Bureau 2020, 2021). Vacancy rates are an indicator of housing market balance in the County, where high vacancy rates demonstrate low demand and/or high prices, and low vacancy rates demonstrate high demand and/or low prices in the market. The County's vacancy rates are lower compared to both the statewide level (7.5 percent in California) and the national level (10.3 percent), indicating a relatively high demand for housing in the region (U.S. Census Bureau 2021). According to the 2023 Greater Los Angeles Homeless Count released June 29, 2023, 75,818 people experience homelessness on any given night in the County (LAHSA 2023).

According to the American Community Survey 5-year estimates data (U.S. Census Bureau 2021), the racial breakdown of Los Angeles County is as follows: 49.1 percent Hispanic or Latino of any race, 24.6 percent White, 14.6 percent Asian, 7.3 percent Black or African American, 0.2 percent Native Hawaiian and Other Pacific Islander, 0.1 percent American Indian and Alaska Native, 0.6 percent some other race, and 3.4 percent two or more races.

3.14.1.2 Plan Area

Within Los Angeles County, the following census county divisions (CCD) bureau areas are within the proposed Plan Area: (1) East San Gabriel Valley CCD, (2) Upper San Gabriel Valley CCD, (3) Southwest San Gabriel Valley CCD, and (4) Pasadena CCD. Population and housing statistics for median income, housing units, poverty rate, and unemployment for each of these subdivisions of Los Angeles County are provided in Table 3.14-2.

Table 3.14-2. Population and Housing Statistics for Plan Area

County Subdivision	Population	Median Household Income	Employment Rate	Total Housing Units (Vacancy Rate)	Poverty Rate
East San Gabriel Valley CCD	946,959	\$85,416	59.1%	289,758 (3.0%)	10.4%
Upper San Gabriel Valley CCD	322,587	\$77,186	58.4%	105,349 (3.9%)	13.1%
Southwest San Gabriel Valley CCD	316,586	\$70,476	57.4%	107,922 (3.7%)	11.8%
Pasadena CCD	270,935	\$104,295	61.8%	111,595 (5.2%)	9.4%
Totals/Averages	1,857,067	\$84,343	59.2%	614,624	11.2%

Source: U.S. Census Bureau 2020, 2021 (2020 Decennial Census and 2021 American Community Survey 5-Year Estimates)

Within the Plan Area, median household income ranges from \$70,476 to \$104,295, with an average across all areas of \$84,343, which is 10 percent higher than the County median household income. The average employment rate within the Plan Area is 59.2 percent, which is almost one percentage point higher than the County rate. The average poverty rate within the Plan Area is 3 percentage points lower

than the County poverty rate (U.S. Census Bureau 2020, 2021). According to the 2023 Greater Los Angeles Homeless Count released June 29, 2023, the number of unhoused people in the SGV is 5,009 (LAHSA 2023).

Race and ethnicity data for the San Gabriel Valley are provided in Table 3.14-3 as percents for each county subdivision within the Plan area along with the average for all subdivisions.

Table 3.14-3. Race and Ethnicity within the San Gabriel Valley

Race/Ethnicity	East San Gabriel Valley CCD	Upper San Gabriel Valley CCD	Southwest San Gabriel Valley CCD	Pasadena CCD	Average
American Indian and Alaska Native	0.3%	0.2%	0.2%	0.1%	0.2%
Asian	23.7%	34.9%	49.9%	21.4%	32.5%
Black/African American	3.2%	1.7%	1.0%	7.6%	3.4%
Hispanic or Latino of any race	54.3%	44.8%	39.8%	28.3%	41.8%
Native Hawaiian and Other Pacific Islander	0.2%	0.5%	0.2%	0.1%	0.3%
White	16.0%	15.6%	7.3%	37.3%	19.1%
Some Other Race	0.3%	0.2%	0.2%	0.4%	0.3%
Two or More Races	2.0%	2.0%	1.4%	4.8%	2.6%

3.14.2 Regulatory Setting

3.14.2.1 Regional

3.14.2.1.1 Southern California Association of Governments

SCAG is the federally designated metropolitan planning organization for six Southern California counties including Los Angeles County. SCAG prepared and adopted the 1996 Regional Comprehensive Plan and Guide, the 5th Cycle for 2014-2021 Regional Housing Needs Assessment (2014-2021 RHNA) (approved November 26, 2012), the 2008 Regional Transportation Plan (RTP), and the Regional Transportation Improvement Program to address regional growth and measure progress toward achieving regional planning goals and objectives. SCAG has released its 2008 Regional Comprehensive Plan (RCP), as an update to the adopted 1996 Regional Comprehensive Plan and Guide. In April 2016, SCAG adopted the 2016-2040 RTP/SCS based, in part, on data from the 2010 U.S. Census.

3.14.2.1.1.1 2008 Regional Comprehensive Plan

In 2008, the RCP was prepared and issued in response to the SCAG's Regional Council directive in the 2002 Strategic Plan to define solutions to interrelated housing, traffic, water, air quality, and other regional challenges.

The 2008 RCP serves as a policy framework for implementation of short-term strategies and long-term initiatives to improve regional mobility and sustainability, while also directly addressing the interrelationships between natural resource sustainability, economic prosperity, and quality of life. The 2008 RCP incorporates principles and goals of the 2004 Compass Blueprint Growth Vision, as discussed below. The 2008 Regional Comprehensive Plan includes nine different chapter areas: Land Use and Housing, Transportation, Air Quality, Energy, Open Space and Habitat, Water, Solid Waste, Economy, and Security and Emergency Preparedness. Each chapter is organized into three sections: goals, outcomes, and action plans.

The 2008 RCP chapters that are relevant to population and housing are the Growth Management and Housing Chapters. The purpose of the Growth Management Chapter is to present forecasts which establish the socioeconomic context for the RCP particularly the Regional Mobility and Air Quality Chapters. It also addresses issues related to growth and land consumption by encouraging local land use actions that could ultimately lead to the development of an urban form that will help minimize development costs, save natural resources, and enhance the quality of life in the region.

The Housing Chapter includes advisory strategies for bringing housing costs and decent shelter within reach of more households in order to support the economic health and social vitality of the region. Its goals include providing for decent and affordable housing for all people; an adequate supply and availability of housing; housing stock maintenance and preservation; and promoting a mix of housing opportunities region wide.

3.14.2.1.1.2 Regional Housing Needs Assessment

The Regional Housing Needs Assessment is mandated by State Housing Law as part of the periodic process of updating local housing elements of the General Plan. The Regional Housing Needs Assessment quantifies the need for housing within each jurisdiction for cities to include in the housing elements of their general plans. The Regional Housing Needs Assessment does not necessarily encourage or promote growth, but rather allows communities to anticipate growth, so that they can grow in ways that enhance quality of life, and improve access to jobs, transportation and housing, without adversely impacting the environment. The Regional Housing Needs Assessment quantifies the need for housing within each jurisdiction during specified planning periods. The Regional Housing Needs Assessment is produced periodically by SCAG, as mandated by state law, to coincide with the region's schedule for preparing housing elements. It consists of two measurements of housing need: (a) existing need and (b) future need.

The existing need assessment is based on data from the most recent U.S. Census to measure ways in which the housing market is not meeting the needs of current residents. These variables include the number of low-income households paying more than 30 percent of their income for housing, as well as severe overcrowding.

The future need for housing is determined primarily by the forecasted growth in households in a community, based on historical growth patterns, job creation, household formation rates, and other factors to estimate how many households will be added to each community over the projection period. The housing need for new households is then adjusted to account for an ideal level of vacancy needed to promote housing choice, maintain price competition, and encourage acceptable levels of housing upkeep and repair. The Regional Housing Needs Assessment also accounts for units expected to be lost

due to demolition, natural disaster, or conversion to non-housing uses. The sum of these factors - household growth, vacancy need, and replacement need - form the “construction need” assigned to each community. There is no process for allocating the citywide total to subareas within a city. Finally, the Regional Housing Needs Assessment considers how each jurisdiction might grow in ways that will decrease the concentration of low-income households in certain communities. The need for new housing is distributed among income groups so that each community moves closer to the regional average income distribution.

3.14.2.1.1.3 2016-2040 Regional Transportation Plan/Sustainable Community Strategy

On September 30, 2008, SB 375 was instituted to help achieve AB 32 goals through regulation of cars and light trucks. SB 375 aligns three policy areas of importance to local government: (1) regional long-range transportation plans and investments; (2) regional allocation of the obligation for cities and counties to zone for housing; and (3) a process to achieve GHG emissions reductions targets for the transportation sector. It establishes a process for the CARB to develop GHG emissions reductions targets for each region (as opposed to individual local governments or households). SB 375 also requires Metropolitan Planning Organizations to prepare a SCS within the RTP that guides growth while taking into account the transportation, housing, environmental, and economic needs of the region. SB 375 uses CEQA streamlining as an incentive to encourage residential projects, which help achieve AB 32 goals to reduce GHG emissions.

On September 23, 2010, CARB adopted regional targets for the reduction of GHG emissions applying to the years 2020 and 2035. For the area under the SCAG jurisdiction, including the Project Site, CARB adopted Regional Targets for reduction of GHG emissions by eight percent for 2020 and by 13 percent for 2035. On February 15, 2011, CARB’s Executive Officer approved the final targets.

On April 4, 2012, the Regional Council of SCAG adopted the 2012-2035 RTP/SCS. SCAG updates the RTP/SCS every four years. Through the conduct of a continuing, comprehensive, and coordinated transportation planning process in conformance with all applicable federal and state requirements, SCAG developed and prepared its latest RTP/SCS, the Final 2016-2040 RTP/SCS. The 2016-2040 RTP/SCS sets forth the long-range regional plan, policies and strategies for transportation improvements and regional growth throughout the SCAG region through the horizon year of 2040, includes a regional growth forecast that was developed by working with local jurisdictions using the most recent land use plans and policies and planning assumptions, and establishes a financially constrained plan and a strategic plan. The constrained plan includes transportation projects that have committed, available, or reasonably available revenue sources, and thus are probable for implementation. The strategic plan is an illustrative list of additional transportation investments that the region would pursue if additional funding and regional commitment were secured.

The 2016-2040 RTP/SCS includes a sustainable communities strategy, which sets forth a forecasted development pattern for the region, which, when integrated with the transportation network, and other transportations measures and policies, if implemented, will reduce the GHG emissions from automobiles and light trucks to achieve the regional GHG targets set by CARB for the SCAG region.

3.14.2.2 Los Angeles County

3.14.2.2.1 Los Angeles County General Plan Housing Element

The Housing Element of the General Plan (LA County Department of Regional Planning 2022) includes the following goals and policies that relate to the proposed Plan:

- Goal 8: Neighborhoods and housing environments that are livable, healthy, and safe for all residents.
 - Policy 8.2: Maintain adequate neighborhood infrastructure, community facilities, and services as a means of sustaining the overall livability of neighborhoods and protecting the health, safety, and welfare of the community.
- Goal 9: An adequate supply of housing preserved and maintained in sound condition.
- Policy 9.2: Prioritize disadvantaged communities in the allocation of resources to maintain and improve the conditions of existing housing stock, including but not limited to the provision of financial assistance for senior and/or lower income homeowners to repair, improve, or modernize their homes and to remove health and safety hazards.

3.14.2.3 Incorporated Cities Within the Plan Area

The table below presents the policies related to population and housing from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.14-4. Applicable Local City Policies Related to Population and Housing

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	Land Use and Community Design Element: Goal LU-7 Maintenance and development of vital, attractive, and functional corridors and activity nodes. Policy LU-7A Enhance commercial areas, including façade improvements, enriched streetscapes and landscaping, unified signage programs, and improved pedestrian access. Goal LU-8 Maintenance and development of quality public spaces. Policy LU-8C Enhance the open space network around corridors and activity nodes by providing paseos, courtyards, plazas, larger parkways, and landscaped setbacks. Policy LU-8D Integrate group gathering spaces, drought-tolerant landscaping, trees, picnic areas, and community gardens into existing and future public spaces.	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
Arcadia	Land Use and Community Design Element: Policy LU-1.8: Encourage development types that support transit and other alternative forms of transportation, including bicycling and walking. Goal LU-2: A City with a distinctive and attractive public realm, with pedestrian-friendly amenities in commercial and mixed-use districts and single-family neighborhoods that continue to maintain Arcadia’s standard of architectural and aesthetic quality. Emphasize the use of public spaces and design that are oriented toward the pedestrian and use of transit throughout the community.	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
Azusa	Housing Element: Goal H1: Maintain and enhance the quality of existing housing and residential neighborhoods in Azusa.	Municipal code relevant to Population and Housing within the Plan Area can be found in Chapter 88.22 (Neighborhoods) which states the following: The purpose of this chapter is to outline the general plan goals and development guidelines within the Neighborhoods of Azusa. It is a guideline to assist present and future residents, developers and city staff in evaluating the evolving character and potential of each Neighborhood. The neighborhood is the basic unit of town planning. It is a compact, urbanized area containing a balanced range of human activities within pedestrian range from each family that lives there. A neighborhood standing alone is a hamlet or village. A cluster of neighborhoods becomes a town. A cluster of many neighborhoods becomes a city. In all cases a neighborhood population can vary depending on local conditions yet, depending on its context, it should always contain a balanced mix of dwellings, workplaces, shops, civic places and parks.	No other relevant ordinances were identified.
Baldwin Park	Housing Element: Goal 1.0 Maintain and improve the quality of existing housing and residential neighborhoods. Urban Design Element: Goal 1.0: Improve City gateway entrances to welcome visitors and enhance the city image at primary and secondary entrances to the City.	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 3.0: Establish Downtown as a pedestrian-friendly environment.</p> <p>Goal 4.0: Enhance the aesthetic quality of development in the City.</p> <p>Goal 6.0: Enhance the neighborhood environments within Baldwin Park.</p> <p>Land Use Element:</p> <p>Goal 1: Maintain a balanced mix and distribution of land uses throughout Baldwin Park.</p> <p>Goal 2: Accommodate new development that is compatible with and complements existing conforming land uses.</p> <p>Goal 2.5; Require that multi-family, commercial and industrial development provide adequate buffers (such as decorative walls and landscaped setbacks) at the designated boundaries with adjacent uses to prevent impacts on residences due to noise, traffic, parking, light and glare, and differences in scale; to ensure privacy; and to provide visual compatibility.</p> <p>Goal 5.0: Designate the corridor Mixed Use and encourage creation of activity nodes around Performing Arts Center and Continuing Education Center, and Maine and Olive A venue neighborhood commercial area.</p> <p>Policy 5.5: Develop streetscape beautification improvements combined with traffic calming measures to facilitate pedestrian access to neighborhood- serving commercial uses.</p> <p>Goal 6: Expand and upgrade existing neighborhood-serving commercial uses.</p> <p>Policy 6.5: Pursue alternative uses for vacant or underutilized parcels such as parks or open space.</p>		
Claremont	<p>Housing Element:</p> <p>Goal 8-1: Enhance and maintain the quality of housing throughout the community.</p> <p>Goal 8-2: Preserve the integrity of the unique physical and social characteristics of individual neighborhoods.</p> <p>Goal 4-3: Establish and maintain a comprehensive system of pedestrian ways and bicycle routes that provides viable options to travel by automobile.</p> <p>Policy 4.3-10: Attract bicyclists from neighboring communities to ride their bicycles or to bring their bicycles on the train to enjoy bicycling around the community and to support local businesses.</p> <p>Policy 4.3-13: Provide and maintain safe bicycle and pedestrian links to adjacent communities east, west and south of Claremont.</p> <p>Land Use, Community Character, and Heritage Preservation Element:</p> <p>Goal 2-3: Accommodate a range of land uses that meet the economic, environmental, educational, and social needs of the City while remaining sensitive to the community's residential character.</p> <p>Goal 2-10: Maintain and expand where possible the system of neighborhood connections that attach neighborhoods to larger roadways.</p> <p>Policy 2-10.2: Make walking comfortable at intersections through traffic-calming, landscaping, and designated crosswalks.</p>	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
Covina	<p>Land Use Element:</p>	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal: A physical environment that provides for the housing, employment, business, service, recreational, social, educational, cultural, and entertainment needs of and maintains and enhances a high quality of life for its residents.</p> <p>Housing Element:</p> <p>Goal: A Housing Element that accurately reflects Covina’s early 1990s housing-related situation, resources, and needs and establishes a clear, unambiguous, and locally acceptable policy orientation and program framework so that community decisions and actions will affectively, viably, and efficiently address Covina housing issues, needs, and problems.</p>		
El Monte	<p>Housing Element:</p> <p>Goal: A Housing Element that accurately reflects Covina’s early 1990s housing-related situation, resources, and needs and establishes a clear, unambiguous, and locally acceptable policy orientation and program framework so that community decisions and actions will affectively, viably, and efficiently address Covina housing issues, needs, and problems.</p> <p>Policy 1.1 Require public landscaping along streets, sidewalks, and property frontages and in public spaces to strengthen the City’s identity.</p> <p>Goal CD-3 A green City with beautifully landscaped corridors, residential streets, commercial areas, developments, and public areas that are symbolically and physically encircled by an Emerald Necklace of parks and open space.</p> <p>CD-3.4 Greenways. Place greenways/medians, dotted with miniparks where feasible, and appropriate landscaping along major corridors and in commercial areas and residential neighborhoods.</p> <p>CD-3.7 Public Parks. Develop a network of community and neighborhood parks within each residential neighborhood, with smaller green areas in commercial and industrial areas.</p> <p>Land Use Element:</p> <p>Goal LU-1. Compatible residential, commercial, and industrial development that is sensitively integrated with existing development and neighborhoods and minimizes impacts on surrounding land uses.</p> <p>Goal LU-3. Distinct and identifiable residential neighborhoods and commercial, industrial and office districts that reflect and augment the historical, cultural, economic, and social fabric and roles in El Monte.</p> <p>Goal LU-4. A complementary balance of land uses that provide adequate opportunities for housing, economic activity, transportation, parks, and recreation to support an exemplary quality of life and a sustainable community.</p> <p>Goal LU-9. Recreate vibrant commercial corridors with the introduction of a mix of higher density residential uses, sensitively integrated commercial uses concentrated at critical nodes, and tree-lined streetscapes that are aesthetically pleasing, encourage walking, and inspire community pride.</p> <p>Housing Element:</p> <p>Goal 1. Sustainable neighborhoods evidenced by quality housing conditions, ample community services, exemplary public safety and security, quality public facilities and infrastructure, and civic pride.</p>	<p>No municipal codes related to population and housing resources relevant to the Plan Area were identified.</p>	<p>No other relevant ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	Goal 2. Adequate sites for new housing that create a vibrant downtown, revitalize transportation corridors with quality housing, and motivate reinvestment and revitalization in neighborhoods.		
Glendora	Housing Element: Goal 1: Assure the quality, safety, and habitability of existing housing and the continued high quality of residential neighborhoods. Land Use Element: Goal LU-1: Balanced open space, residential and commercial development citywide. Goal LU-11: Rehabilitation and enhancement of existing land uses. Goal LU-13: Clearly defined strategies for neighborhood preservation and enhancement. Goal LU-18: Compatibility of adjacent land uses. Policies LU-18.1: Ensure the preservation of a scale and character of development is sensitive to adjoining uses. LU-18.2 Utilize design review to determine the appropriateness of new development prior to approval. LU-18.3 Encourage land uses that are complimentary in form and function with existing development.	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
Industry	Housing Element: Goal 2: Encourage the maintenance, preservation, and improvement of existing housing units in the city. H2-2 Continue to maintain supporting capital infrastructure and provide public services and facilities to existing residences in a manner that preserves the viability and quality of life in residential neighborhoods.	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
Irwindale	Housing Element: Housing Element Policy 1. The City of Irwindale will continue to maintain and conserve the character of its existing residential neighborhoods.	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
La Puente	Housing Element: Goal 1 Preserve and improve the conditions of the City’s established housing stock.	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
La Verne	Housing Element Goal 1: A City that preserves and improves its existing housing stock and neighborhoods. Goal 4: A community with a diversity of housing opportunities that satisfy the physical, social, and economic needs of existing and future residents of La Verne.	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
Monrovia	Housing Element Goal 1: Conservation and Preservation of existing supply. Policy 4.2 Encourage development and long-range planning that uses compact urban forms that foster healthy living, connectivity, walkability, the use of alternative transportation modes, and a closer link between housing and jobs.	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 4.3 Support the long-term maintenance, improvement, and conservation of existing neighborhoods, existing housing, and infrastructure through code enforcement, housing rehabilitation, and reinvestment strategies.</p> <p>Land Use Element</p> <p>Policy 1.11: Develop residential areas with densities and housing types related to existing and proposed public facilities and services.</p> <p>Policy 1.12: Consider the potential impact on housing opportunities when reviewing petitions to rezone properties from residential to non-residential.</p>		
Montebello	<p>Housing Element</p> <p>Goal 1: Conservation and Preservation of existing supply.</p>	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
Pasadena	<p>Housing Element</p> <p>Goal HE-1: Neighborhoods citywide with quality housing, parks and community services, infrastructure, and public services that maintain and enhance neighborhood quality, character, and residents' health.</p> <p>Policy HE-1.6: Green Spaces. Preserve neighborhood and community parks, street trees, open spaces and recreational areas, hillsides, and other landscape amenities that support, define, and lend character to residential neighborhoods. For new development., ensure that residents have ready access to public parks and private open space.</p>	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
Pico Rivera	<p>Housing Element</p> <p>Housing Goal #1: Preservation and Improvement of existing housing stock and neighborhoods.</p>	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
Pomona	<p>Housing Element</p> <p>Goal 1: Conserve and improve the condition of the existing affordable housing stock</p>	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	<p>Under Pomona Zoning code, appendix I- Zoning Ordinance, Part II, Sec. .223. - Property development standards for Open space zoned land incudes the following population requirements (limitations):</p> <p>The following property development standards shall apply to all land and/or structures in the "O" District:</p> <p>A) Lot Area: No limitations</p> <p>B) Lot Dimensions: No limitations;</p> <p>C) Population Density: None permitted, except for a residence of a watchman or caretaker and his family;</p> <p>(Ord. No. 3385, § 2.)</p>
Rosemead	<p>Housing Element</p> <p>Goal 1: Protect existing stable, single-family neighborhoods throughout the City.</p>	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
San Dimas	<p>Housing Element</p> <p>Goal HE-1: Neighborhoods of well-maintained homes, ample public services and facilities, open spaces and recreation, and well-maintained infrastructure that provide quality places to reside.</p> <p>Policy HE 1.3: Neighborhood Amenities. Provide quality community facilities, parks and recreational facilities, infrastructure, water and sanitation, and other municipal services tailored to each neighborhood.</p>	<p>Municipal code relevant to Population and Housing within the Plan Area can be found in Chapter 17.36 (Park and Recreational Facilities), Section § 17.36.030 (Relation of land required to population density), and Section § 17.36.010 (Subdividers must provide park and recreational facilities).</p> <p>Under Section § 17.36.010 (Subdividers must provide park and recreational facilities), the city may require any subdivider who subdivides land to dedicate a portion of such land, pay a fee, or do both, as set forth in this chapter, for the purpose of developing</p>	No other relevant ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>new or rehabilitating existing park and recreational facilities to serve future residents of such subdivision.</p> <p>(Ord. 795 § 1, 1983)</p> <p>Under Section § 17.36.030 (Relation of land required to population density), it is found and determined:</p> <p>1. The general plan of the city sets a standard of one acre per one hundred people as the appropriate ratio for a proper well balanced recreational program as it relates to available facilities, and three acres per one thousand people for neighborhood parks.</p> <p>2. Residential density for the purpose of this chapter shall be determined in accordance with the most recent available census, to wit:</p> <p>a. Single-family dwelling units equal 2.95 persons per dwelling unit, pursuant to the 1980 General Census; and</p> <p>b. Duplexes and multiple-family dwelling units, including but not limited to condominiums equal 2.1 persons per dwelling unit, pursuant to the 1974 Special Census.</p> <p>B. The basis for determining the total number of dwelling units shall be the number of such units permitted by the city on the property included in the subdivision at the time the final subdivision map is filed with the city council for approval.</p> <p>(Ord. 795 § 1, 1983)</p>	
San Gabriel	Housing Element Goal 2.2: Promote and encourage the provision of adequate housing to meet the needs of the community.	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
San Marino	Housing Element Goal 2: Maintain the existing housing stock.	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
South El Monte	Housing Element Goal 2: High quality residential neighborhoods that are enhanced and well-maintained. Goal 3: Compatible land uses that meet the needs of residents, employers and employees. Policy 3.2: The City shall provide new opportunities for housing in the City, such as through intensification in designated neighborhoods and other appropriate areas. Policy 3.3: The City shall encourage development of higher density housing in close proximity to public transportation, services, employment, recreation, and other resources and amenities.	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
Temple City	Housing Element Section 2 Achieve a housing stock free of substandard conditions.	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.
West Covina	Our Well-Planned Community Element Policy 3.1: Preserve existing housing stock. Policy 3.2: Support vibrant, economically strong neighborhoods through education and enforcement of property maintenance regulations. Policy 3.3: New growth will complete, enhance, and reinforce the form and character of the unique West Covina neighborhoods, districts, and corridors.	No municipal codes related to population and housing resources relevant to the Plan Area were identified.	No other relevant ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Action 3.3: Adjust regulations for the neighborhoods, districts and corridors to reflect the nature of intended change.</p> <p>Policy 3.4: Direct new growth to downtown area and the corridors. Adapt economically underused and blighted buildings, consistent with the character of surrounding districts and neighborhoods, to support new uses that can be more successful. Provide opportunities for healthy living, commerce, employment, recreation, education, culture, entertainment, civic engagement, and socializing.</p> <p>Housing Element</p> <p>Goal 1: Maintain and enhance the quality of existing housing and residential neighborhoods in West Covina.</p>		

3.14.3 Impact Assessment

3.14.3.1 Significance Criteria

Appendix G of the State CEQA Guidelines was reviewed to determine whether the Plan would result in significant impacts related to population and housing. The criteria listed below consider if the Plan would:

- 14(a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?*
- 14(b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?*

3.14.3.2 Methodology

Potential population and employment increases due to development that could occur under the Plan were calculated and compared with existing and projected population data to determine potential project impacts with respect to inducing unplanned population growth. The analysis presented below also discusses whether the proposed Project would displace existing housing, residents, and homeless populations. Impacts associated with the Plan are analyzed qualitatively at a program level. Where the construction and operation of the greenway path and amenities and other Plan components would result in similar impacts related to a specific criterion, the discussion is combined.

3.14.3.3 Plan Impacts

- 3.14.3.3.1 14(a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

- 3.14.3.3.1.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction and Operations

No Impact. A project could indirectly induce growth by reducing or removing barriers to growth or by creating a condition that attracts additional population or new economic activity. However, a project's potential to induce growth does not automatically result in growth. Growth can only happen through capital investment in new economic opportunities by the private or public sectors. Under CEQA, growth inducement is not considered necessarily detrimental, beneficial, or of little significance to the environment. Typically, the growth-inducing potential of a project would be considered substantial if it fosters growth or a concentration of population in excess of what is assumed in a county or city's general plan or in projections made by regional planning agencies (e.g., SCAG). Substantial growth impacts could also occur if a project provides infrastructure or service capacity to accommodate growth beyond the levels currently permitted by local or regional plans and policies. In general, growth induced by a project is considered a significant impact if it directly or indirectly affects the ability of agencies to provide needed public services or if it can be demonstrated that the potential growth significantly

affects the physical environment in some other way. The Plan does not include residential development or the extension of roads that would directly or indirectly induce substantial population growth in the Plan Area.

Construction activities for the greenway and amenities, or any other components for individual projects developed under the Plan, would be temporary and not require the permanent relocation of workers. Construction of any individual project developed under the Plan would be short-term (up to 100 days) and would most likely be constructed by the numerous contractor crews located in the Southern California region and not require workers outside the region. Therefore, the construction of Plan components at individual project sites would not induce substantial population growth in the Plan Area.

Plan implementation would increase the number of recreational users in the Plan area; however, since the Plan does not propose construction of any new housing or business, any recreationalists from outside the SGV who may elect to move into the region would be occupying existing housing units as part of normal property transactions. Further, extensions of the greenway throughout the Plan Area would improve connections for non-automotive transit throughout the region but would not provide extension of these greenways into unpopulated areas that may indirectly induce population growth outside of the Plan Area. Therefore, implementation of projects under the Plan would not result in unplanned population growth.

In addition, operation of any Plan components would not require long-term workers. Operations include landscaping and other maintenance activities that would not result in a substantive amount of new permanent jobs and would not require long-term workers. Therefore, the Plan, and any future projects implemented under the Plan, would have no impact on population growth in the Plan Area.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Construction and operations would have no impact on population and housing.

3.14.3.3.2 14(b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

3.14.3.3.2.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction and Operations

Less than Significant. The design of individual projects under the Plan would consider the existing land uses and would not result in the removal of any housing because the objectives of the Plan are to enhance community connectivity and provide equitable access and removal of housing would not meet these objectives. Further, implementation of the Plan does not consider the demolition of any existing residential or commercial structures. Therefore, although the District ROW is adjacent to residential housing in some locations within the Plan Area, the construction of projects under the Plan would not displace any existing permanent housing.

Homeless encampments are present along the District ROW, therefore, construction and operation of projects developed under the Plan could displace homeless encampments and could affect the density and distribution of homeless encampments throughout the Plan Area. For example, construction of individual projects would involve the introduction of heavy equipment and personnel into possibly occupied areas. Homeless encampments and associated structures would be removed from construction areas in coordination with local jurisdictional authorities, subject to applicable local and state law, prior to the start of construction activities, consistent with existing homeless encampment removal practice. Moreover, because individual projects developed under the Plan could result in greater public recreational use of areas along the District ROW, the maintenance of existing encampments and the creation of new encampments would become less viable.

The complex issue of homeless encampments in LA County requires the involvement and coordination of multiple local agencies, including the County, as well as the affected cities. The County and cities currently implement programs involving the relocation of transient populations to safer, more sanitary shelters or more permanent residences, including solutions for people that choose not to stay in shelters for varying reasons (e.g., drug dependency or having pet(s), which are not allowed in some shelters). The County provides outreach, programs, and resources with the overall goal of reducing homelessness by providing an array of housing options and programs based on community needs. The removal of unpermitted structures, debris, or materials associated with homeless encampments would be environmentally beneficial for the District ROW, both reducing human hazards and eliminating trash and other sources of waste in and around the area. Relocation of transient individuals, removal of homeless encampments, and cleanup of remaining refuse would be coordinated and conducted among the County and/or cities prior to construction. Given that local jurisdictions would relocate individuals and families experiencing homelessness and that encampments would be removed prior to construction activities, the construction and operation of individual projects would not displace a substantial number of existing people or housing, necessitating the construction of replacement housing elsewhere. Therefore, impacts would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Construction and operations impacts would be less than significant.

3.14.3.4 Impacts of Conceptual Design Projects

This section discusses potential impacts from the 10 conceptual designs discussed in Section 2.4 above.

- 3.14.3.4.1 14 (a). Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?

Construction and Operations

No Impact. Construction activities for each of the conceptual design projects would be temporary and not require the permanent relocation of workers. None of the conceptual design projects propose to

develop new housing or businesses and would not require long-term workers to operate and maintain. Therefore, the operation of the conceptual design projects would not directly induce substantial population growth. The greenway and amenities would require the extension and operation of electrical, water, and stormwater infrastructure; however, the greenway and amenities would be public areas and not subject to future housing or business development. Therefore, operation of each of the conceptual design projects would have no impact on population growth in the Plan Area.

3.14.3.4.2 14(b) Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?

Construction and Operations

Less than Significant. The construction of the greenway path and proposed facilities in the 10 conceptual projects would occur in the District ROW and on public lands, and would not require the demolition, removal, or closure of existing housing units. Further, construction of the facilities would not exceed the number of days described in Section 2, Project Description, and therefore would not require long-term workers that would increase the demand for housing in the Plan Area.

The greenway and proposed facilities in the 10 conceptual projects would operate in the District ROW and on public lands, and would not require the demolition, removal, or closure of existing housing units. Further, operation and maintenance of the greenway and proposed facilities would be conducted by the existing maintenance workforce of the municipalities in which the projects are located, and any new employees would be drawn from the existing region and thus would not displace people/housing in the Plan Area. Accordingly, operation of projects implemented under the Plan would have no impact on available housing in the Plan area and would not displace a substantial number of existing people or housing that would necessitate replacement housing development.

In the event that homeless encampments are present in the location where one of the 10 conceptual design projects may be proposed, or an encampment were to develop following installation of one of the conceptual design projects, the removal of these unpermitted structures and debris would be handled by the municipality in which the project is located, as described for the Plan above. Given that local jurisdictions would relocate individuals and families experiencing homelessness and that encampments would be removed prior to construction activities, the construction and operation of individual projects would not displace a substantial number of existing people or housing, necessitating the construction of replacement housing elsewhere. Therefore, impacts would be less than significant.

3.15 Public Services

This section describes the existing conditions and applicable regulations pertaining to public services in the Plan Area and describes the potential impacts associated with public services that could result from implementation of the Plan.

Table 3.15-1. Summary of Potential Impacts of the Plan on Public Services

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
<i>Would the Plan:</i>			
15(a). Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the following public services? i. Fire Protection? ii. Police Protection? iii. Schools? iv. Parks? v. Other Public Facilities?			
Greenway Paths + Greenway Amenities	Less Than Significant With Mitigation	Less Than Significant	Construction: MM TR-4: Notify Emergency Personnel of Road Closures Operations: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less Than Significant With Mitigation	Less Than Significant	
Greenway Paths + Safe Crossings	Less Than Significant With Mitigation	Less Than Significant	
Greenway Paths + Stormwater Management	Less Than Significant With Mitigation	Less Than Significant	

3.15.1 Environmental Setting

The following provides a description of the existing environment with regard to fire protection, police protection, and schools in the Plan Area. For a detailed description of park facilities and needs in the Plan Area, please refer to Section 3.16, Recreation.

3.15.1.1 Fire Protection

The Los Angeles County Fire Department (LACFD) provides fire protection services to all 122 unincorporated areas as well as 60 incorporated cities located within Los Angeles County. LACFD

employs approximately 3,000 fire series personnel and works out of 177 fire stations located across Los Angeles County. In addition to fire suppression, LACFD also provides the following services: fire prevention, emergency medical, hazardous materials, urban search and rescue, and swift water rescue (LACFD 2022a).

While LACFD serves the majority of the Plan Area, the following cities have fire departments within the Plan Area: Alhambra, Arcadia, La Verne, Monrovia, Pasadena, San Gabriel, Sierra Madre, and West Covina.

3.15.1.2 Police Protection

The Los Angeles County Sheriff's Department (LASD) provides law enforcement services to more than one million people living within 90 unincorporated communities, as well as to more than four million residents living within 40 contract cities within Los Angeles County. Additionally, LASD provides law enforcement services to nine community colleges, Los Angeles County Metropolitan Transportation Authority, and 48 Superior Courts. LASD is divided into 10 divisions, including four patrol divisions and the Office of Homeland Security. In addition to law enforcement, the LASD also provides investigative, traffic enforcement, accident investigation, and community education functions (LA County Department of Regional Planning 2022). LASD maintains 24 patrol stations located throughout the County (LASD 2024).

The SGV includes cities and unincorporated areas that are served by the LASD as well as city police departments. Most of the Plan Area is within the jurisdiction of the LASD, but some areas are served by city police departments. The following cities have municipal police departments with jurisdictions in the Plan Area: Alhambra, Arcadia, Azusa, Baldwin Park, Claremont, Covina, El Monte, Glendora, Irwindale, La Verne, Monrovia, Pasadena, Pomona, San Gabriel, Sierra Madre, and West Covina.

3.15.1.3 Schools

There are more than 2,000 public schools that provide education services to approximately 1.3 million students in Los Angeles County. There are many schools within the Plan Area. Table 3.15-2 provides a list of the various school districts that operate within the Plan Area.

Table 3.15-2. School Districts within the Plan Area

School District	Incorporated Cities
Alhambra Unified School District operates 19 schools throughout the City.	Alhambra
Arcadia Unified serves 9,500 students across 11 schools in the City.	Arcadia
Baldwin Park Unified serves over 11,000 students across 19 schools.	Baldwin Park
Claremont Unified operates 11 schools throughout the City.	Claremont
Covina-Valley Unified operates 19 Schools throughout Covina, West Covina, Glendora, San Dimas, and Irwindale.	Covina, Glendora, San Dimas, West Covina
Walnut Valley Unified School district serves 14,600 students across 15 schools in Walnut and Diamond Bar.	Diamond Bar, Walnut
Duarte Unified School District serves 8 schools throughout the city.	Duarte

School District	Incorporated Cities
El Monte City School District serves approximately 7,000 students across 14 schools.	El Monte
Hacienda La Puente Unified School District serves over 22,000 students within the cities of Industry and La Puente, and the unincorporated Los Angeles County areas of Hacienda Heights and Valinda across 32 schools.	Industry, La Puente
Bonita Unified School District operates 13 schools in the communities of San Dimas and La Verne, and part of Glendora.	Glendora, La Verne, San Dimas
Monrovia Unified School District operates 13 schools throughout the City.	Monrovia
Pasadena Unified School District serves 15,000 students across 23 schools.	Pasadena
Pomona Unified School District serves 20,915 students across 38 schools.	Pomona
Rosemead Unified School District serves 2,900 students across 5 schools.	Rosemead
San Gabriel Unified School District serves 6,000 students across 8 schools.	San Gabriel
Temple City Unified School District operates 9 schools.	Temple City

3.15.1.4 Parks

Please refer to Section 3.16, Recreation, for a detailed description of park facilities and needs assessments in Los Angeles County and the SGV.

3.15.1.5 Other Public Facilities

Other public facilities may include government buildings, such as community centers, post offices, governmental offices, storage facilities, libraries, etc. These types of public facilities are typically grouped together and are present throughout the SGV.

3.15.2 Regulatory Setting

3.15.2.1 State

3.15.2.1.1 California Building Code

CCR Title 24, California Building Code is a compilation of building standards, including fire safety standards for residential and commercial buildings. California Building Code standards are based on: (1) building standards that have been adopted by State agencies without change from a national model code; (2) building standards based on a national model code that have been modified to address particular California conditions; and (3) building standards authorized by the California legislature, not covered by the national model code. The California Fire Code is part of the California Building Code. Typical fire safety requirements of the California Fire Code include: (1) the installation of sprinklers in all high-rise buildings; (2) the establishment of fire resistance standards for fire doors, building materials, and particular types of construction; and (3) the clearance of debris and vegetation within a prescribed distance from occupied structures in wildfire hazard areas. The California Fire Code applies to all occupancies in California, except where more stringent standards have been adopted by local agencies.

3.15.2.1.2 Office of Emergency Services Mutual Aid Plan

Office of Emergency Services a Mutual Aid Plan outlines procedures for establishing mutual aid agreements at the local, operational, regional, and state levels, and divides the State into six mutual aid regions to facilitate the coordination of mutual aid. The Mutual Aid Plan is based on the concept of "self-help" and "mutual aid." The State of California, all 58 counties and nearly all city governments are signatory to a Master Mutual Aid Agreement. Through the Emergency Mutual Aid system, the Office of Emergency Services is informed of conditions in each geographic and organizational area of the state, and the occurrence or imminent threat of disaster.

3.15.2.1.3 State Quimby Act

In response to California's rapid urbanization and decrease in the number of parks and recreational facilities, Section 66477 of the California Government Code, also known as the Quimby Act, was enacted in an effort to promote the availability of park and open space areas. Under the Quimby Act, the dedication of land, or the payment of fees, or both, shall not exceed the proportionate amount necessary to provide three acres of parkland, unless the amount of existing neighborhood and community parkland exceeds that limit. As a condition to the approval of a tentative map or parcel map, or a zone change, the Quimby Act also authorizes cities and counties to enact ordinances requiring the dedication of land, or the payment of fees for park and/or recreational facilities in-lieu thereof, or both, by developers of residential subdivisions.

3.15.2.2 Los Angeles County

3.15.2.2.1 Los Angeles County General Plan

The Public Services and Facilities Element of the General Plan (LA County Planning 2022) includes the following goals and policies relevant to the Project:

- Goal PS/F 1: A coordinated, reliable, and equitable network of public facilities that preserves resources, ensures public health and safety, and keeps pace with planned development.
 - Policy PS/F 1.1: Discourage development in areas without adequate public services and facilities.
 - Policy PS/F 1.3: Ensure coordinated service provision through collaboration between County departments and service providers.

The Safety Element of the General Plan (LA County Planning 2022) includes the following goals and policies:

- Goal S 7: Effective County emergency response management capabilities.
 - Policy S 7.1: Ensure that residents are protected from the public health consequences of natural or human-made disasters through increased readiness and response capabilities, risk communication, and the dissemination of public information.
 - Policy S 7.2: Support County emergency providers in reaching their response time goals.
 - Policy S 7.5: Ensure that there are adequate resources, such as sheriff and fire services, for emergency response.

- Goal S 4: An effective regulatory system that prevents or minimizes personal injury, loss of life, and property damage due to fire hazards.
 - Policy S 4.4: Reduce the risk of wildland fire hazards through meeting minimum State and local regulations for fire-resistant building materials, vegetation management, fuel modification, and other fire hazard reduction programs.
 - Policy S 4.9: Adopt by reference the County of Los Angeles Fire Department Strategic Fire Plan, as amended.

3.15.2.2.2 Los Angeles County Strategic Fire Plan

The LACFD provides fire, safety, and emergency medical services to all unincorporated areas as well as to several cities in Los Angeles County. LACFD's Strategic Fire Plan is updated annually and includes department goals and policies that are implemented to ensure safety of residents and to carry out the County's public safety mission. The latest plan was updated in 2022 (LACFD 2022b).

3.15.2.3 Incorporated Cities Within the Plan Area

The table below presents the policies related to public services from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.15-3. Applicable Local City Policies Related to Public Services

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Fire:</p> <p>Services and Infrastructure Element / Resources Element:</p> <p>Goal SI-8: Fire and emergency medical response that meets the needs of residents, visitors, and businesses.</p> <p>Policy R-1F Maintain appropriate levels of water pressure throughout the City’s fire hydrant system and implement appropriate system upgrades as needed and feasible.</p> <p>Policy SI-8A Maintain Fire Department staffing and equipment levels adequate to meet community fire and emergency medical response demands.</p> <p>Policy SI-8B Ensure that existing and new development minimizes fire risk through application of appropriate fire code requirements.</p> <p>Police:</p> <p>Services and Infrastructure Element:</p> <p>Goal SI-6: An environment safe from crime against persons and property.</p> <p>Goal SI-7: A positive relationship with and effective partnerships between the community and the Alhambra Police Department.</p> <p>Policy SI-6A: Ensure that police service is provided in a manner that reflects and is sensitive to the characteristics and needs of Alhambra residents, businesses, and visitors.</p> <p>Policy SI-6C: Provide neighborhood patrol to maintain rapid response times and to deter crime.</p> <p>Policy SI-6E: Upgrade police facilities as necessary to meet Department needs and accommodate technological advances.</p> <p>Schools:</p> <p>Quality of Life Element:</p> <p>Goal QL-6: Quality educational opportunities that maximize the use of school facilities.</p> <p>Parks and Recreation:</p> <p>Quality of Life Element:</p> <p>Goal QL-6: Provision of adequate and accessible recreation and open space amenities.</p> <p>Policy QL-6A: Where feasible and desirable, add new recreation facilities such as dog parks and fitness courses.</p> <p>Policy QL-6G: Where feasible and desirable, utilize vacant properties to provide new open space and passive recreation opportunities in the form of pocket parks and/or community gardens.</p> <p>Libraries:</p> <p>Services and Infrastructure Element:</p> <p>Goal SI-4: An Alhambra Public Library that provides high-quality service in a high-quality setting to Alhambra residents.</p> <p>Policy SI-4B: Provide adequate space in the Alhambra Public Library for current and planned collections, users, staff, and services.</p>	<p>Municipal codes related to public service resources relevant to the Plan Area can be found in Chapter 23.34: OS (Open Space) Zone, Chapter 19.02 (Fire Code) Section 19.02.010 (Fire Code Administration), and Chapter 14.04 (Park Regulations) Section 14.04.110 (Superintendent of Parks, Employees Given Powers of Special Policemen).</p> <p>Chapter 23.34: OS (Open Space) Zone Permitted uses include:</p> <ul style="list-style-type: none">• Public recreational uses such as parks, playgrounds and recreation areas, excepting buildings and structures thereon;• Golf courses and country clubs, excepting buildings and structures thereon;• Flood-control channels;• Public utility rights-of-way; <p>Creeks rivers, spreading grounds and other similar water courses. ('86 Code, § 23.34.020) (Ord. 4110).</p> <p>Chapter 19.02 (Fire Code) Section 19.02.010 (Fire Code Administration) establishes regulations affecting or relating to structures, processes, premises and safeguards regarding:</p> <ol style="list-style-type: none">1. The hazard of fire and explosion arising from the storage, handling or use of structures, materials or devices;2. Conditions hazardous to life, property or public welfare in the occupancy of structures or premises;3. Fire hazards in the structure or on the premises from occupancy or operation;4. Matters related to the construction, extension, repair, alteration or removal of fire suppression or alarm systems; and5. Conditions affecting the safety of firefighters and emergency responders during emergency operations. <p>(Ord. 4507, passed 12-10-07; Am. Ord. 4508, passed 12-10-07; Am. La Verne	<p>Fire & Police:</p> <p>Public Safety Element</p> <p>Goal 5: Protect our community from crime, fire, and inadequate medical emergency care.</p> <p>Policy 5.1: Provide adequate police protection.</p> <p>Policy 5.4: Provide adequate fire protection.</p> <p>Policy 5.6: Provide adequate emergency medical care.</p> <p>Schools:</p> <p>Community Resources Element</p> <p>Goal 4: Ensure quality education for all our children.</p> <p>Parks and Recreation:</p> <p>Resource Management Element:</p> <p>Goal 1: An attractive, safe and accessible parks and recreation system.</p> <p>Policy 1.1: Provide ample and accessible parks throughout our community.</p> <p>Implementation measures:</p> <p>a. Ensure that all of the existing and future residential neighborhoods are served by at least one neighborhood park.</p> <p>d. Focus future park site acquisition on the development of mini-parks along the designated hiking/bikeway trails, small neighborhood parks (five acres or less).</p> <p>f. Ensure major park developments are reviewed by the Development Review Committee, the Planning Commission and/or the City Council for the project's impacts on existing parks.</p> <p>The level of review will be determined by the scope of the project. i. Develop and maintain parks and recreation facilities at a minimum standard of four (4.0) acres per 1,000 persons. This standard does not include open space areas used for recreational purposes, sensitive habitats, and other natural resource preserves.</p> <p>Policy 1.2: Develop a connecting trail system.</p> <p>Policy 1.3: Provide a variety of recreation facilities and activities for all age groups.</p> <p>Libraries:</p> <p>Community Resources Element</p> <p>Goal 5: Improve our library system.</p> <p>Policy 5.1: Expand library access and facilities through innovative means.</p>	<p>Municipal codes related to public service resources relevant to the Plan Area can be found in Chapter 3.20 (Parks and Recreation Charges) Section 3.20.010 (Purpose—Intent) and Chapter 18.64 (SP Specific Plan Zone), and Chapter 15.32 (Fire Code), and Chapter 18.68 (H-D-O-Z Development Overlay Zone).</p> <p>Under Chapter 3.20 (Parks and Recreation Charges) Section 3.20.010 (Purpose—Intent) identifies the following goals:</p> <p>A. One of the amenities that makes a city a desirable place to live and work and that contributes to the quality of life is having adequate parks, open space and recreational facilities within the city.</p> <p>B. The resource management element of the La Verne general plan identifies the following as goals, policies and implementation measures: providing a variety of recreational facilities and activities for all age groups; and maintaining open space requirements of 10 acres per one thousand population (including public and private recreation and open spaces).</p> <p>C. The city council desires to make sure that the city has adequate open space, park and recreational facilities to serve its existing and future population.</p> <p>The purpose of Chapter 18.64 (SP Specific Plan Zone) requires the following for the zone: - To respond sensitively to the natural and built environment and increase amenities to serve the inhabitants and surrounding community areas; -to provide an enriched environment with aesthetic cohesiveness and harmonious massing of structures within a framework of natural and landscaped open space through the utilization of superior land planning and architectural design -To minimize the intrusion of new development into environmentally sensitive areas; -To protect new development from adverse visual impacts and excessive noise from nearby off-site structures and transportation corridors.</p> <p>(Ord. 852 § 2, 1993)</p> <p>Under Chapter 15.32 (Fire Code),with the exception of the additions, deletions and amendments set forth in the chapter, Part 9 of Title 24 of the California Code of Regulations, comprising the California Fire Code 2022 Edition, which incorporates and amends the International Fire Code 2021 Edition, published by the International Code Council, including Appendices Chapters 4, B, C, D, and I, and the International Fire Code standards, is hereby adopted by reference as the fire code of the city of La Verne.</p> <p>A copy of such code is now on file in the office of the city clerk.</p> <p>(Ord. 873 § 1, 1995; Ord. 935 § 1, 1999; Ord. 985 § 1, 2006; Ord. 1001 § 1, 2007; Ord. 1042 § 9, 2013; Ord. 1075 § 9, 2016; Ord. 1088 § 8, 2019; Ord. 1101 § 1, 2021; Ord. 1114 § 7, 2022)</p> <p>Chapter 18.68 H-D-O-Z Hillside development overlay Zone Section 18.68.160 Community Amenities determines the following:</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>A. All proposed developments shall provide appropriate community amenities to the satisfaction of the development review committee. Amenities include, but are not limited to, the following: community buildings; parks/open space; greenbelts; equestrian, hiking or biking trails; scenic view turnouts; paths connecting schools, parks and other destinations; corrals and other equestrian facilities; nature trails along water courses. The following shall be taken into consideration when determining appropriate community amenities to be provided by a project:</p> <ol style="list-style-type: none">1. The size of the project and the number of dwelling units;2. The nature of the project, (for example, developments that provide for horses might be required to provide corrals and equestrian trails);3. The location of the project (for example, if it is near a trail system, enhancement and extension of the trail system);4. The need to a particular facility (for example, a development proposal may find that circumstances warrant funding a public park). <p>C. Completion, enhancement and coordination of trail systems and parks shall be given top priority. Connections among recreational and school sites shall be included in development plans whenever feasible.</p>	
Monrovia	<p>Fire & Police: Safety Element Policy 3.1.6: Develop and implement fire protection policy and programs including the incorporation of the Monrovia Local Hazard Mitigation Plans. Action 3.1.6.1: Regularly assess that emergency response services (including Fire and Police) are adequate to combat structural and wildland fires and to direct emergency evacuations. Environmental Justice Element Policy 2.3: Address park safety concerns through community-based safety interventions.</p> <p>Schools: Land Use Element Goal 15: Ensure consistency with goals and policies of other elements of the general plan. Policy 15.5: Provide for adequate schools for future residential growth.</p> <p>Parks and Recreation: Open Space Element Goal 1: Expand the physical and social connections linking the City together and bridging to its neighbors. Policy 1.1: Encourage and support active and ongoing participation by diverse community members in the planning and decision-making for parks and recreational opportunities. Policy 1.2: Develop a network of shared-use recreational, pedestrian and bicycle trails to enable connections within parks and between parks, neighborhoods, public amenities and regional trail corridors, to include washes.</p>	<p>Municipal codes related to public service resources relevant to the Plan Area can be found in Chapter 3.21 (Fire Service Impact Fee) Section 3.21.010 (Short Title, Authority and Applicability) and Section 3.21.050 (Exemptions).</p> <p>Under Chapter 3.21 (Fire Service Impact Fee) Section 3.21.010 (Short Title, Authority and Applicability) the following apply:</p> <p>(A) This chapter shall be known and may be cited as the “Fire Service Impact Fee Ordinance.”</p> <p>(B) The City Council has the authority to adopt this chapter pursuant to Cal. Gov't Code §§ 66000 et seq.</p> <p>(C) There is hereby established a revenue source to be known as the Fire Service Impact Fee.</p> <p>(D) This chapter is intended to require developers and builders to contribute their proportionate share of revenues necessary to accommodate the impacts having a rational nexus to the proposed building, development or addition, and for which the need is reasonably attributable to the proposed building, development or addition.</p> <p>(E) This chapter shall be applied only to new construction, including additions, new buildings, demolitions and re-build (except as exempted) within the city. (`83 Code, § 3.21.010) (Ord. 01-012 § 1, 2001)</p> <p>Exemptions under Section 3.21.050 (Exemptions) are as follows:</p> <p>The following new construction shall be exempt from the fees established by this chapter and service demand from such projects will be satisfied from other, available city resources:</p> <p>(A) City facilities projects.</p> <p>(B) Monrovia Unified School District facilities projects.</p> <p>(C) Demolition and re-build of buildings damaged by fire, earthquake and natural disasters. The area of the re-build must be the same size as the original building area or smaller.</p>	<p>Parks Master Plan (PMP) Strategic Direction 1: Encourage Connectedness Goal: Monrovia’s Public Services Department fosters and expands the physical and social connections linking the City together and bridging to its neighbors.</p> <p>Policy 2.1: Develop a network of shared-use recreational, pedestrian and bicycle trails to enable connections within parks and between parks, neighborhoods, public amenities and regional trail corridors.</p> <p>Policy 2.2: Design and construct trails to serve a variety of users at varying skill levels.</p> <p>2.3 Support other City departments in the implementation of the MultiChoice Transportation System Plan. Policy 2.4: Develop additional nonmotorized trails outside of parks to meet a targeted walkability score and promote Monrovia as a “walkable city.” Action 1.2.2: Implement trail signage standards, route and wayfinding signage for trails and associated facilities and informational maps and materials identifying existing and planned trail facilities.</p> <p>Action 1.2.5: Implement the goals and projects noted in the Bicycle Master Plan to strengthen the connections between the on-street infrastructure to existing and planned recreational trails.</p> <p>Strategic Direction 2: Secure Lands for The Future Goal: Monrovia provides a comprehensive system of parks, open space and recreation facilities that serves current and future needs</p> <p>Policy 3.1: Acquire additional parklands necessary to adequately serve the City’s current and future population based on adopted service levels.</p> <p>Policy 3.2: Plan for the location of parks in the proximity of underserved neighborhoods and/or high-density developments.</p> <p>Strategic Direction 3: Create Great Parks and Public Spaces Goal: Monrovia’s parks and open spaces meet local needs for active and passive recreation, enhance the environmental and visual quality of the community, and healthy living.</p> <p>4.1 Design and develop park sites and facilities to maximize recreational value and experience, while minimizing maintenance and operational costs and negative environmental and community impacts.</p>

	<p>Goal 1: Protect and enhance natural vegetation in parks and open spaces for wildlife habitat, erosion control, and to serve as noise and scenic buffers.</p> <p>Open Space Element:</p> <p>Policy 4.1</p> <p>Support and promote walking, biking, and other nonvehicular modes as an alternative to driving within Montebello.</p> <p>Goals:</p> <p>1. To insure the preservation and conservation of sufficient open space to introduce relief from the otherwise uninterrupted urban development of the Southern California region.</p> <p>2. To insure the preservation and conservation of sufficient open space to serve the recreational, health, and welfare needs of the residents.</p> <p>Objective 3: Provide open space and a full range of recreation facilities and programs which are easily accessible to all residents.</p> <p>Libraries: No applicable goals or plans were identified.</p>		
Pasadena	<p>Fire & Police:</p> <p>Safety Element</p> <p>Goal R-1: It is the City’s desire to reduce threats to public and private property from wildland and urban fire hazards.</p> <p>Schools: No applicable goals or plans were identified.</p> <p>Parks and Recreation:</p> <p>Green Space, Parks, and Recreation Element Objective 6: Preserve and acquire spaces for neighborhood parks and other types of urban open spaces in under-served areas of the City in order to enhance the quality of life of all Pasadenans by using traditional and creative strategies.</p> <p>Land Use Element</p> <p>Goal 2. Land Use Diversity. A mix of land uses meeting the diverse needs of Pasadena’s residents and businesses, fostering improved housing conditions, offering a variety of employment and recreation opportunities, and supporting a healthy population while protecting the environment.</p> <p>Policy 2.8 Equitable Distribution of Community Devices and Amenities. Ensure that parks and recreation facilities, community services, and amenities are equitably distributed and accessible throughout the City.</p> <p>Policy 2.13 Parks. Maintain existing and develop new parks and recreational facilities within walking distance of residents, supporting healthy lifestyles.</p> <p>Goal 4. Elements Contributing to Urban Form. A safe, well-designed, accessible City with a diversity of uses and forms. These diverse forms include distinct, walkable districts, corridors, and transit and neighborhood villages and cohesive, unique single and multi-family residential neighborhoods and open spaces where people of all ages can live, work, shop and recreate.</p>	<p>Municipal codes related to public service resources relevant to the Plan Area can be found in Title 3 (Civic Events and Facilities), Chapter 3.32 (Arroyo Seco Public Lands), Article II (Natural Preservation Area), and Title 17 (Zoning Code) Article 3 (Specific Plan Standards).</p> <p>Under Title 3 (Civic Events and Facilities), Chapter 3.32 (Arroyo Seco Public Lands), Article II (Natural Preservation Area), The purpose of this chapter is to establish regulations for preservation, enhancement and enjoyment of the Arroyo Seco as a unique environmental, recreational and cultural resource of the city surrounded by residential neighborhoods. Such resource and the neighborhoods must be preserved, protected and properly maintained. These regulations are designed to identify uses, activities, facilities and structures as well as their limitations. Additionally, under this section, trails and roads shall not be paved.</p> <p>(Ord. 6403 § 2 (part), 1990)</p>	<p>The Pasadena Green Space, Recreation and Parks Element Master Plan includes the following relevant objectives and policies:</p> <p>Objective 1 – Stewardship of the natural environment: encourage and promote the stewardship of Pasadena’s natural environment, including water conservation, clean air, natural open space protection, and recycling.</p> <p>Policy 1.2 – Protect Open Spaces: Protect natural open areas, watersheds, and environmentally sensitive areas such as Hahamongna, Eaton Canyon, riparian areas, and other open spaces.</p> <p>Objective 2 – Preservation and protection of the Arroyo Seco and adjacent open space areas: recognize the importance to Pasadena of the history, cultural resources, and unique character of the Arroyo Seco, and conserve and enhance these assets.</p> <p>Policy 2.3 – Balance recreation with environmental protection: Implement the Arroyo Seco Master Plans by balancing recreational opportunities with protection and restoration of the ecosystem, while recognizing the important existing water resources and flood management functions of the area.</p> <p>Policy 2.4 – Promote multi-faceted use of the Arroyo: Through implementation of the Arroyo Seco Master Plans, continue to maintain and enhance the area as a prime resource for quality of life of Pasadena residents.</p> <p>Objective 7 – Provide access to Parks: New projects should be planned so that neighborhood recreational needs of its future citizens are largely met on site or nearby and so that future facilities are integrated with, provide support for, and enhance the effectiveness of the overall recreation system in Pasadena. Growth and expansion in a particular area should be accompanied by commensurate growth and expansion in recreation facility, programming capacity, and natural open space capacity.</p> <p>Policy 7.2 – Access to open spaces within projects: Projects should be connected to the public realm through vistas, physical access, and/or sightlines. Provide an adequate total quantity and equitable distribution of public or publicly accessible open spaces throughout the City.</p>

	<p>Goal 21. Desirable Neighborhoods. A City composed of neighborhoods with a variety of housing types that are desirable places to live, contribute to the quality of life, and are well maintained.</p> <p>Policy 21.10 Neighborhood Parks and Open Space Amenities. Ensure that existing neighborhoods contain a diverse mix of parks and open spaces that are connected by trails, pathways, and bikeways and are within easy walking distance of residents.</p> <p>Green Space, Recreation and Parks Element</p> <p>Objective 2 – Preservation and Protection of the Arroyo Seco and Adjacent Open Space Areas: Recognize the importance to Pasadena of the history, cultural resources, and unique character of the Arroyo Seco, and conserve and enhance these assets.</p> <p>Policy 2.1 – Arroyo Seco Planning: Fully implement all master plans and design guidelines for the Arroyo. This includes the Lower Arroyo Master Plan, the Hahamongna Watershed Park Master Plan, and the Central Arroyo Master Plan. (LUE Policy 9.2)</p> <p>Policy 2.2 – Balance of Interests in the Lower Arroyo Seco: Improve the aesthetics and preserve the historical elements and unique natural character of the Lower Arroyo. Manage and maintain the area to balance the natural habitat, recreational needs and public health and safety.</p> <p>Policy 2.3 – Balance Recreation with Environmental Protection: Implement the Arroyo Seco Master Plans by balancing recreational opportunities with protection and restoration of the ecosystem, while recognizing the important existing water resources and flood management functions of the area.</p> <p>Objective 3 – Preservation And Protection of Eaton Canyon, Eaton Wash, and Adjacent Open Space Areas: Recognize the importance to Pasadena of the history, cultural resources, and unique character of Eaton Canyon and Eaton Wash, and conserve and enhance these assets.</p> <p>Policy 3.1 – Eaton Canyon: Continue protection of Eaton Canyon as an open space and recreation area, and as a nature center. Explore master planning opportunities in the existing OS (Open Space) zoned area associated with the civil defense site and flood control areas. (LUE Policy 9.3)</p> <p>Policy 3.2 – Eaton Wash: Pursue improvements to Eaton Wash and a proposed north/south trail element that would link Pasadena to natural open space to the north.</p> <p>Objective 5: Trails and Open Space Connectivity: Acknowledge and enhance Pasadena’s important relationship with the Angeles National Forest and other regional trail systems.</p> <p>Policy 5.1 – Open Space Corridors: Develop open space corridors, easement and acquisition programs and trails. This is especially relevant for hillside areas and ridgelines. (from LUE Policy 9.1)</p> <p>Policy 5.2 – Trails for Bicyclists and Pedestrians: Review the OS (Open Space) zoned areas and city rights-of-way for opportunities to develop bike path and/or walking path connectivity.</p> <p>Objective 8 – Neighborhood Park Distribution and Planning: Preserve, enhance, and acquire parks in residential areas, within reasonable walking distance of all neighborhoods.</p> <p>Libraries: No applicable goals or plans were identified.</p>		<p>Objective 17 – Facilitate ongoing community dialogue to ensure that residents’ open space, parkland, and recreation needs are met.</p> <p>Policy 17.1 - Community Input and Feedback: Provide methods for community members to offer ongoing information on their experiences with recreation and parks management, programs, and facilities. Surveys, questionnaires, website forms, and targeted outreach methods will provide feedback on areas in need of improvement and areas where goals are being met.</p>

Open space zoned land may be located anywhere in the city provided it is consistent with the city's adopted policies and plans. The section defines open space land as any parcel or area of land or water which is primarily unimproved and devoted to an open space use as defined in section 26-597, and which is designated in the city's environmental quality element and general plan as any of the following:</p> <ul style="list-style-type: none">• Open space for the preservation of natural resources including, but not limited to, areas required for the preservation of plant and animal life, including habitat for fish and wildlife species; areas required for ecologic and other specific study purposes; rivers, streams, bays and estuaries; and coastal beaches, lakeshores, banks of rivers and streams, and watershed lands.• Open space used for the managed production of resources, including, but not limited to, forest lands, rangeland, agricultural lands and areas of economic importance for the production of food or fiber; areas required for recharge of ground water basins; bays, estuaries, marshes, rivers and streams which are important for the management of commercial fisheries; and areas containing major mineral deposits, including those in short supply.• Open space for outdoor recreation, including but not limited to, areas of outstanding scenic, historic and cultural value; areas particularly suited for park and recreation purposes, including access to lakeshores, beaches and rivers and streams; and areas which serve as links between major recreation and open-space reservations, including utility easements, banks of rivers and streams, trails, and scenic corridors.• Open space for public health and safety, including, but not limited to, areas which require special management or regulation because of hazardous or special conditions such as earthquake fault zones, unstable soil areas flood plains, watersheds, areas presenting high fire risks, areas required for the protection of water quality and water reservoirs and areas required for the protection and enhancement of air quality. (Code 1960, § 10901.10; Ord. No. 1333, § 1, 4-25-77; Ord. No. 2204, § 3(Exh. A), 2-16-10) <p>Under Chapter 10 (Fire Prevention and Protection), Article II (Fire Code), except as otherwise provided in this article, the city council of the City of West Covina has adopted by reference for the purpose of prescribing regulations governing conditions hazardous to life and property from fire or explosion, that certain code known as the 2022 California Fire Code, which adopts by reference the 2021 International Fire Code, published by the International Code Council, with errata, including Appendices A, B, BB, C, CC, D, E, F, G, H, I, K, M, N, O, and Appendix Dchapter 4.</p> <p>(Ord. No. 2503 , § 2, 11-15-22)</p>	

3.15.3 Impact Assessment

3.15.3.1 Significance Criteria

Appendix G of the State CEQA Guidelines was reviewed to determine whether the Plan would result in significant impacts related to public service resources. The criteria listed below consider if the Plan would:

15(a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services?

i. Fire protection?

ii. Police protection?

iii. Schools?

iv. Parks?

v. Other public facilities?

3.15.3.2 Methodology

This analysis qualitatively evaluates the impacts of the Plan on existing public services as a result of both construction and operations of future projects implemented under the Plan, which include a range of recreational features.

Assessment of potential impacts are based on determining if the proposed facilities would displace, disrupt, or restrict any governmental facilities or emergency responder operations. A significant impact would occur if the construction or operation of the proposed facilities would 1) inhibit emergency responders from meeting operational goals, service ratios, response times, or other performance levels of service; or 2) require the development of new facilities to meet operational goals and maintain service levels.

3.15.3.3 Plan Impacts

3.15.3.3.1 15(a) Would the Project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services?

i. Fire Protection?

ii. Police Protection?

iii. Schools?

iv. Parks?

v. Other Public Facilities?

3.15.3.3.1.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings
+ Stormwater Management

Construction

Less Than Significant with Mitigation. Construction activities for projects implemented under the Plan would occur within District ROWs and adjacent parcels. No fire protection facilities, police protection facilities, schools, parks, libraries, or other public facilities are located within the District ROW. However, such facilities may exist on an adjacent parcel. The Plan does not propose to demolish, relocate, or retire any existing public facilities on adjacent parcels and therefore would not physically impact a public facility.

Fire Protection and Police Protection

While the Plan does not propose to demolish, relocate, or retire any existing public facilities on adjacent parcels, construction activities would occur within densely populated areas and could temporarily disrupt the provision of fire response and police response services by restricting access to construction areas, resulting in potentially significant impacts such as delayed response times. Implementation of **MM TR-4: Notify Emergency Personnel of Road Closures** would require project proponents to coordinate with police/fire/emergency responders prior to any temporary road closures during construction in order to proactively address and prevent potential delays in response times. Therefore, potentially significant impacts would be mitigated with site-specific plans to less than significant levels.

Schools, Libraries, Other Public Facilities

With regard to schools, libraries and other public facilities, construction activities for individual projects developed under the Plan would occur within the District ROWs and adjacent parcels. While some school, libraries, and other public facility properties neighbor the Plan Area, the Plan does not propose to alter or demolish any such facilities. Any nuisance impacts from construction activity near school grounds, libraries, or other public facilities would be limited to the construction phase (as discussed in Sections 3.1, Aesthetics, 3.3, Air Quality, and 3.13, Noise) and not require the development of new facilities during construction. Therefore, impacts would be less than significant.

Parks

With regard to potential impacts to existing parks, construction activities for the proposed developments would occur within the District ROWs or adjacent parcels, including at/near existing parks, as is the intent of the greenway to connect open space and parks throughout the SGV. By design, a park may experience physical alteration to include enhanced or new recreational/public facilities. Construction activities related to greenway paths and proposed developments would expand recreational opportunity and access to public facilities throughout the SGV, and any closures or partial closure of park facilities during construction would be temporary. However, as described in Section 3.16, Recreation, temporary closures of some park facilities could lead to increased visitation of other park facilities, which could result in potentially significant impacts. Implementation of **MM REC-1: Coordinate With Parks Departments/Agencies** would ensure advance coordination with other nearby parks prior to

temporary closures such that municipalities are able to plan for temporary increases in maintenance operations during construction activities. Therefore, impacts are considered less than significant with mitigation.

Operations

Less Than Significant. Projects implemented under the Plan would not include any habitable structures (i.e., offices, residences, businesses) and would not require any fire hazards or flammable materials for construction. Furthermore, the Plan does not propose any physical changes to any fire protection or first responder facilities. While individual projects developed across the Plan Area would result in increased recreational use and visitors within the District ROW and adjacent parcels, the development of a dedicated greenway network would improve public safety by providing an active transportation network off public roadways, thereby reducing the number of pedestrian/cyclist and vehicle collisions.

Further, the demand for fire protection and emergency response services would be generally shared across the various jurisdictions that future projects would traverse and would not necessitate the development of new fire or police protection facilities to maintain operational goals and response times. Police, fire, and other emergency response services are based on the communities' needs as local departments conduct ongoing evaluations, as well as annual budgeting processes. If ongoing evaluations indicate increased response time, then the acquisition of equipment, personnel, and new stations is considered. A proposed project would have the potential to attract a large number of people on a daily basis (e.g., a 25-acre park in addition to a greenway path may attract up to 4,292 visitors per day), which may result in additional demand for fire protection services because a higher density of visitors to the area could result in more incidents requiring fire intervention. However, the visitors are anticipated to be primarily existing residents of Los Angeles County, not new residents to the area. Fire and police staffing ratios are typically based on a per-1,000-permanent-residents ratio, and the increase in visitors is not expected to be substantial so as to affect that ratio. Accordingly, it is not expected that operation of any individual projects developed under the Plan would require new or physically altered government facilities in order to maintain acceptable service ratios for fire or police protection services, the construction of which could cause significant environmental impacts. Impacts would be less than significant.

Furthermore, as discussed in detail in Section 3.14, Population and Housing, the Plan would not create housing or lead to population growth that could require the development of new public facilities, schools, or parks to maintain operational goals, service ratios, and response times. The Plan and all projects implemented under the Plan would contribute to meeting the demand for local recreational opportunities, which would be a beneficial effect. The proposed developments would increase visitation along the District ROW but are expected to consist primarily of existing residents in the region. Operation of the greenway paths and proposed developments under the Plan may result in increased usership of existing parks, as the greenway paths would provide new transportation access to existing recreational facilities throughout the SGV. Projects developed under the Plan would potentially open up areas of the District ROW currently inaccessible to the public, which could result in increased demand for police and fire services in these areas. However, all projects would be constructed in accordance with current building and safety ordinances and codes, including all applicable County and local jurisdiction code requirements related to construction and access. Therefore, impacts would be less than significant.

Mitigation Measures

MM TR-4: Notify Emergency Personnel of Road Closures.

MM REC-1: Coordinate With Parks Departments/Agencies.

Significance After Mitigation

With the implementation of **MM TR-4: Notify Emergency Personnel of Road Closures** potential impacts related to delayed response times if temporary road closures are required for construction of individual projects developed under the Plan would be mitigated to less than significant levels. Similarly, implementation of **MM REC-1: Coordinate With Parks Departments/Agencies** would ensure coordination between recreational facilities in advance of any construction activities that would require temporary or partial closure of an existing park facility so that other nearby facilities may plan in advance for temporary increases in recreational users and necessary temporary increases in maintenance activities.

Operational impacts would be less than significant. No mitigation is required.

3.15.3.4 Impacts of Conceptual Design Projects

This section discusses potential impacts from the 10 conceptual designs discussed in Section 2.4 above.

3.15.3.4.1 15(a). Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services?

- i. Fire Protection?
- ii. Police Protection?
- iii. Schools?
- iv. Parks?

Construction

Less Than Significant with Mitigation. Construction impacts for all 10 conceptual projects would be the same as the impacts for the Plan discussed above in Section 3.15.3.3.1. None of the conceptual design projects would result in the physical alteration of any government buildings/facilities or require alterations to other public facilities, with the exception of existing parks which would be improved through the implementation of projects under the Plan by design. However, most of the conceptual design examples are illustrated to connect the greenway path with existing recreational facilities which could require potential partial closures of these existing parks during construction activity. However, any potential partial or full closures of an existing park would be mitigated with **MM-REC-1: Coordinate With Parks Departments/Agencies** which requires proponents/contracts to notify and coordinate park agencies in advance of the nature, extent, and duration of construction activities that may affect parks, trails and other recreational facilities. In addition, while construction activity for those conceptual design examples that would connect the greenway paths to existing schools, temporary nuisance impacts from

increased noise and dust near the schools would result (as described above for the Plan) but would not necessitate the alteration or construction of alternative school sites.

Construction could result in the need for temporary road closures or detours, particularly those conceptual design projects incorporating safe crossings into the design. This may adversely impact response times for fire and police projects, which could result in potentially significant impacts. Implementation of **MM TR-4: Notify Emergency Personnel of Road Closures** would ensure that project proponents coordinate any temporary road closures with emergency service providers in advance and ensure adequate emergency access or alternate routes for emergency access during construction activity. Implementation of the mitigation measure would reduce impacts to less than significant levels.

Operations

Less than Significant. Potential operational impacts on governmental buildings/facilities would result from increased public use of the proposed developments throughout the region. As described in the project description, the greenway and amenities may attract up to 1,000 visitors per day to each new segment installed, while safe crossings and pocket parks would attract additional visitors above and beyond the 1,000 estimated for greenway paths.

As described in the Plan impacts above in Section 3.15.3.3.1 above, new segments of greenway paths and amenities and associated pocket parks would be likely to provide public access to areas of the District ROW and adjacent parcels previously inaccessible to the public which may increase the demand for fire and police protection in these areas. However, none of the conceptual design projects would create a habitable structure or induce any population growth which would affect the service ratios of any government facilities, and none would result in any physical impacts to any government ratios. Therefore, impacts would be less than significant. Table 3.15-4 provides a brief description of potential impacts of each individual conceptual design project.

Table 3.15-4. Analysis of Potential Operational Impacts of Conceptual Design Examples to Public Service Resources

Conceptual Design Project	<p><i>15(a). Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services?</i></p> <p><i>Fire protection?</i></p> <p><i>Police protection?</i></p> <p><i>Schools?</i></p> <p><i>Parks?</i></p> <p><i>Other public facilities?</i></p>
<p>Alhambra Wash at Vincent Lugo Park</p> <p><i>City of Alhambra and City of San Gabriel</i></p>	<p>Less Than Significant. The proposed facilities do not propose any habitable structures (i.e., offices, residences, businesses) or any physical changes to fire, police, or emergency response provider facilities. The conceptual design project includes approximately 1.3 miles of greenway path and amenities, as well as safe crossings, to connect Vincent Lugo Park and Alhambra Municipal Golf Course via the active</p>

<p>Conceptual Design Project</p>	<p>15(a). Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services?</p> <p>Fire protection?</p> <p>Police protection?</p> <p>Schools?</p> <p>Parks?</p> <p>Other public facilities?</p>
<p><i>Greenway, lighting, pollinator garden, seating, safe crossing, linear stormwater management</i></p>	<p>transportation network. The conceptual design project would also provide a greenway network access to McKinley Elementary School and San Gabriel High School. Accordingly, the conceptual design project may result in beneficial impacts to fire and police protection through reductions in potential for vehicle/pedestrian or cyclist collisions. Impacts would be less than significant.</p>
<p>Big Dalton Wash at Hilda L. Solis Park</p> <p><i>Cities of Baldwin Park and Irwindale</i></p> <p><i>Greenway, bike service station, pollinator garden, seating, safe crossing, stormwater management</i></p>	<p>Less Than Significant. The conceptual design project includes approximately two miles of greenway path and amenities, as well as safe crossings, to connect existing greenway path along Big Dalton Wash to the existing Hilda L. Solis Park. The conceptual design also includes opportunities for passive stormwater BMPs to be installed beneath the greenway path and adjacent planters. Operation of the greenway path and associated components would require no physical changes to fire, police, or emergency response provider facilities, or other government facilities to maintain service ratios or existing operations. The conceptual design project would likely increase the number of daily visitors using active transportation network to access the existing park, but would require no physical changes to the park to accommodate the additional users. Impacts would be less than significant.</p>
<p>Eaton Wash Greenway at Spreading Ground Site</p> <p><i>City of Pasadena</i></p> <p><i>Greenway, bike service station, park ribbon, shade structures, stormwater BMPs, educational signage, outdoor classroom</i></p>	<p>Less Than Significant. The conceptual design project includes approximately two miles of greenway path and amenities, as well as pocket park components at the existing spreading ground. The conceived location for the conceptual design project would provide active transportation access to Pasadena High School, an elementary school, and several existing parks. The conceptual design project does not propose any habitable structures (i.e., offices, residences, businesses) that would require any physical changes to fire, police, or emergency response provider facilities to maintain service ratios or existing operations. The conceptual design project may result in beneficial impacts to fire and police protection through reductions in potential for vehicle/pedestrian or cyclist collisions for those visitors that use the greenway to access the existing public facilities (e.g., schools and parks). Impacts would be less than significant.</p>
<p>Eaton Wash at Eaton Blanche Park</p> <p><i>City of Pasadena</i></p> <p><i>Greenway, safe crossing, landscaping</i></p>	<p>Less Than Significant. This conceptual design project would include approximately three miles of greenway path with safe crossing, as well as functional improvements to the existing Eaton Blanche Park. The proposed changes to the existing park would be designed to improve stormwater controls at the park, and once construction is completed, there would be no impacts to operation of the park. The proposed facilities do not propose any habitable structures (i.e., offices, residences, businesses) that would require any physical changes to fire, police, or</p>

Conceptual Design Project	<p>15(a). Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services?</p> <p>Fire protection?</p> <p>Police protection?</p> <p>Schools?</p> <p>Parks?</p> <p>Other public facilities?</p>
	<p>emergency response provider facilities, or other public facilities. Impacts would be less than significant.</p>
<p>San Dimas Wash at Arrow High School</p> <p><i>City of Glendora</i></p> <p><i>Greenway, safe crossing, landscaping, shade structure, outdoor classroom, picnic area, seating</i></p>	<p>Less Than Significant. This conceptual design project would provide greenway path connecting three segments of existing greenway path alignment and provide a safe crossing in front of Arrow High School at Gladstone Street and Sunflower Avenue, to build a connection to the school yard, and potentially create an education amenity within the school yard itself. The proposed facilities do not include any habitable structures (i.e., offices, residences, businesses) or any physical changes to fire, police, or emergency response provider facilities, but would involve a physical change to an existing school to provide improvements to school operation, as well as safe access to the school. Accordingly, the project would provide beneficial impacts at the existing school site and could result in beneficial impacts in reduction in vehicle/pedestrian and cycling collisions for those residents accessing the school via the greenway network. The project would have no impact on the operation of any other public facilities. Impacts would be less than significant.</p>
<p>San Dimas Wash at Hollenbeck Park</p> <p><i>City of Covina</i></p> <p><i>Greenway, safe crossing, seating, river overlook, community garden</i></p>	<p>Less Than Significant. This conceptual design project would include approximately 1.5 miles of greenway path and amenities, including potential opportunities to pocket park connecting the greenway to the existing Hollenbeck Park, along with new crosswalks in segments of the greenway path that cross an existing road. The proposed facilities do not propose any habitable structures (i.e., offices, residences, businesses) that would require any physical changes to fire, police, or emergency response provider facilities. The conceptual design project would not involve any physical changes to schools, parks, or other public facilities, but would provide safe access to the existing facilities for pedestrians and cyclists. The project may result in beneficial impacts to fire, police, and emergency responders through reductions vehicle/pedestrian and cyclist collisions. Impacts would be less than significant.</p>
<p>San Jose Creek at Pocket Park</p> <p><i>City of Industry and the unincorporated Los Angeles County community of Avocado Heights</i></p> <p><i>Greenway, pocket park, overlook, stair climb</i></p>	<p>Less Than Significant. This conceptual design project would include approximately 2.3 miles of greenway network and amenities, along with a new pocket park. The proposed facilities do not propose any habitable structures (i.e., offices, residences, businesses) that would require any physical changes to fire, police, or emergency response provider facilities, or schools, parks or other public facilities to maintain service ratios or current operations. While the operation of the greenway path and pocket park would make available to the public portions of the ROW that are not currently accessible for up to 1,000 to 1,500 visitors per day, it is anticipated that the visitors would be current residents of the area since the project does not involve any new housing or other features to induce population growth. Thus, the</p>

<p>Conceptual Design Project</p>	<p>15(a). Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services?</p> <p><i>Fire protection?</i></p> <p><i>Police protection?</i></p> <p><i>Schools?</i></p> <p><i>Parks?</i></p> <p><i>Other public facilities?</i></p>
	<p>increased visitors are not anticipated to adversely affect response times or operations of any public services. Therefore, impacts would be less than significant.</p>
<p>Thompson Creek at the Fairplex</p> <p><i>Cities of Pomona, La Verne, and Claremont</i></p> <p><i>Greenway, pollinator garden, permeable pavement, flexible greenspace</i></p>	<p>Less Than Significant. This conceptual design project would include approximately 3.3 miles of greenway network and amenities, along with installation of stormwater management BMPs such as vegetated basins for bioretention in the existing Fairplex parking lot. The proposed facilities do not propose any habitable structures (i.e., offices, residences, businesses) that would require any physical changes to fire, police, or emergency response provider facilities or schools, parks, or other public facilities to maintain service ratios or current operations. While the operation of the greenway path and pocket park would make available to the public portions of the ROW that are not currently accessible for up to 1,000 visitors per day, it is anticipated that the visitors would be current residents of the area since the project does not involve any new housing or other features to induce population growth. Thus, the increased visitors are not anticipated to adversely affect response times or operations of any public services. Therefore, impacts would be less than significant.</p>
<p>Walnut Creek at Syhre Park</p> <p><i>Cities of Baldwin Park and West Covina</i></p> <p><i>Greenway, plaza, shade trees</i></p>	<p>Less Than Significant. This conceptual design project would include approximately three miles of greenway network and amenities that would connect two other existing segments of the greenway network. The proposed facilities do not propose any habitable structures (i.e., offices, residences, businesses) that would require any physical changes to fire, police, or emergency response provider facilities or schools, parks, or other public facilities to maintain service ratios or current operations. While the operation of the greenway path and pocket park would make available to the public portions of the ROW that are not currently accessible for up to 1,000 visitors per day, it is anticipated that the visitors would be current residents of the area since the project does not involve any new housing or other features to induce population growth. Thus, the increased visitors are not anticipated to adversely affect response times or operations of any public services. Therefore, impacts would be less than significant.</p>
<p>Walnut Creek at Pocket Park</p> <p><i>City of West Covina</i></p> <p><i>Greenway, gateway, bike service station, picnic area, landscaping, pollinator garden, public art</i></p>	<p>Less Than Significant. This conceptual design project includes approximately 2.2 miles of greenway path and amenities connecting an existing equestrian center and Cortez Park to an existing bike path segment. The conceptual design also includes potential opportunities to development of a new pocket park. The proposed greenway segment would also provide active transportation network access to West Covina High School and a nearby elementary school. The proposed facilities do not propose any habitable structures (i.e., offices, residences, businesses) that would require any physical changes to fire, police, or emergency response provider</p>

<p>Conceptual Design Project</p>	<p><i>15(a). Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services?</i></p> <p><i>Fire protection?</i></p> <p><i>Police protection?</i></p> <p><i>Schools?</i></p> <p><i>Parks?</i></p> <p><i>Other public facilities?</i></p>
	<p>facilities or schools, parks, or other public facilities to maintain service ratios or current operations. While the operation of the greenway path and pocket park would make available to the public portions of the ROW that are not currently accessible for up to 1,500 visitors per day, it is anticipated that the visitors would be current residents of the area since the project does not involve any new housing or other features to induce population growth. Thus, the increased visitors are not anticipated to adversely affect response times or operations of any public services. The conceptual design project would also provide safe access to the existing facilities for pedestrians and cyclists and may result in beneficial impacts to fire, police, and emergency responders through reductions vehicle/pedestrian and cyclist collisions. Impacts would be less than significant.</p>

3.16 Recreation

This section describes the existing conditions and applicable regulations pertaining to recreation in the Plan Area and describes the potential impacts associated with recreation that could result from implementation of the Plan.

Table 3.16-1. Summary of Potential Impacts of the Plan on Recreation.

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the Plan:			
16 (a). Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?			
Greenway Paths + Greenway Amenities	Less than Significant with Mitigation	Less than Significant	Construction: MM REC-1: Coordinate With Parks Departments/Agencies Operations: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant with Mitigation	Less than Significant	
Greenway Paths + Safe Crossings	Less than Significant with Mitigation	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant with Mitigation	Less than Significant	
16 (b). Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Significant and Unavoidable	Construction: All Mitigation Measures as described in Sections 3.1, Aesthetics, 3.3 Air Quality, 3.4 Biological Resources, 3.5 Cultural Resources, 3.7 Geology and Soils, 3.10 Hydrology and Water Quality, 3.12, Mineral Resources, and 3.13 Noise

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
<i>Would the Plan:</i>			
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Significant and Unavoidable	Operations: All Mitigation Measures as described in Sections 3.1, Aesthetics, 3.3 Air Quality, 3.4 Biological Resources, 3.5 Cultural Resources, 3.7 Geology and Soils, 3.10 Hydrology and Water Quality, 3.12, Mineral Resources, and 3.13 Noise
Greenway Paths + Safe Crossings	Significant and Unavoidable	Significant and Unavoidable	
Greenway Paths + Stormwater Management	Significant and Unavoidable	Significant and Unavoidable	

3.16.1 Environmental Setting

The LA County Department of Parks and Recreation maintains and manages 182 parks and recreational facilities properties in both unincorporated areas and cities within Los Angeles County (Los Angeles County Department of Parks and Recreation 2023). These facilities serve local needs of communities in the unincorporated areas, as well as regional needs countywide (LA County Department of Regional Planning 2022). Park facilities maintained and managed by LA County Department of Parks and Recreation, including local and regional parks, golf courses, natural areas, sanctuaries, and special use facilities as well as multi-use trails within Los Angeles County are shown on Figure 3.16-1 (County of Los Angeles 2023).

The General Plan establishes a goal of four acres of local parkland per 1,000 residents of the population in the unincorporated areas and a goal of six acres of regional parkland per 1,000 residents of the total population of Los Angeles County. In addition, pursuant to the Quimby Act and to the County's Subdivision Code, new residential subdivisions must dedicate parkland or pay in-lieu fees (or both, in some circumstances) to enable the County to maintain a ratio of three acres of local parkland for every 1,000 residents.

According to the Los Angeles Countywide Comprehensive Park Needs Assessment completed in 2016, there are 3.3 acres of local and regional recreation parkland per 1,000 residents and 86.2 acres of regional open space and natural areas per 1,000 residents countywide (LA County Department of Parks and Recreation 2016). However, there are still unmet park needs in the County, with 14 unincorporated communities having either "Very High or High" park need (LA County Department of Parks and Recreation 2016). Areas with a "Very High and High" park need currently have much less than the Countywide average of 3.3 acres of parkland per 1,000 residents, and approximately 53 percent of the County's population live in an area with a "Very High or High" park need.

The Plan Area is located within the East and West SGV Planning Areas, as described in the Parks and Recreation Element of the General Plan. Both these planning areas have deficits in parkland acreage for

both the unincorporated population and the countywide population. The East SGV planning area has a local parkland deficit of 717 acres and a regional parkland deficit of 2,159 acres. The West SGV planning area has a local parkland deficit of 435 acres and a regional parkland deficit of 2026 acres (LA County Department of Regional Planning 2022). The Plan Area traverses both of these Planning Areas.

The LA County Department of Parks and Recreation completed a Parks Needs Assessment Plus for both these planning areas in 2022 (LACDPR 2022). The East and West SGV Planning Areas include a variety of regional facilities, which consist of parks, nature-based recreation areas, regional specialized recreation areas, conservation areas, and other public and semi-public open space. Table 3.16-2 provides a breakdown of the total acres for each of these recreational facilities as well as the total acres per 1,000 residents.

In the West SGV Planning Area, the highest rates of visitation are to the Angeles National Forest, Santa Fe Dam Recreational Area, and Whittier Narrows Recreation Area. Regional site visitation was tracked at five locations within the West SGV Planning Area (Eaton Canyon Natural Area and Nature Center, Arcadia Community Regional Park, Hahamongna Watershed Park, Santa Fe Dam Recreational Area, and Whittier Narrows Recreation Area). In 2019, annual visitorship at these regional sites ranged from 188,761 visitors to 1.3 million visitors, with totals variable throughout the year with peaks in April, July, and October (LA County Department of Parks and Recreation 2022). The highest rates of visitation in the East SGV Planning Area are at various park facilities in the Puente Hills (e.g., the Puente Hills Landfill Park and Master Plan area), Frank G. Bonelli Regional Park, and the entries to the Angeles National Forest in Claremont (LA County Department of Parks and Recreation 2022). Regional site visitation was tracked at four locations within the East SGV Planning Area (San Dimas Canyon Community Regional Park, Frank G. Bonelli Regional Park, Peter F. Schabarum Regional County Park, and Marshall Canyon Regional Park). In 2019, annual visitorship at these regional sites ranged from 97,142 visitors to 1.25 million visitors, with totals variable throughout the year with peaks from May to July and September. Peak season for visitation varied across all these sites, and no peak time of day for public use was identified (LA County Department of Parks and Recreation 2022). A park use study at 83 neighborhood parks located in the City of Los Angeles between 2003 and 2014 defined peak hours as 4 to 8 pm during weekdays, and for weekends it was the late morning and early evening (Han et al. 2014).

Both the West and East SGV Planning Areas have a limited number of trails. There is a total of 149 miles of regional trails within the West and a total of 179 miles of regional trails within the East, which results in 0.16 miles and 0.19 miles of regional trails per 1,000 residents, respectively, which are below the countywide average of 0.33 miles (LA County Department of Parks and Recreation 2022). Lack of connectivity was noted by the community as a barrier to using regional parks and facilities, specifically that bike paths along waterways are not always open for use and there are not enough trail networks or safe biking and pedestrian options. Another community theme identified to increase and improve visits to regional parks was to create more recreation facilities, enhance connectivity, and to provide more pedestrian, biking, and equestrian trails near other facilities and activities (LA County Department of Parks and Recreation 2022). However, as described in Section 2.2 of the Plan, there are 15 planned greenway and bikeway projects within the SGV that have advanced into design, construction, or have been recently completed within the Plan Area, including the San Jose Creek Trail, the San Dimas Bikeway, the Big Dalton Wash Trail Greening Project, and the East-West Bikeway project.

Table 3.16-2. Existing Regional Recreation Areas

Regional Facility Type	West SGV Planning Area		East SGV Planning Area	
	Total acres	Total acres per 1,000 residents	Total acres	Total acres per 1,000 residents
Recreational parkland	3,484	4	2,611	3
Nature-based recreation areas	9,663	11	13,829	15
Specialized recreation areas	1,755	Not provided	2,001	Not provided
Conservation areas	1,672	Not provided	1,131	Not provided
Other public and semi-public open space	985	Not provided	1,266	Not provided
Total Regional Facility Land	17,558	19	20,839	22

Source: LACDPR 2022

3.16.2 Regulatory Setting

No federal or state regulations are applicable to recreation associated with the Plan.

3.16.2.1 Los Angeles County

3.16.2.1.1 Los Angeles County General Plan

The Parks and Recreation Element of the General Plan (Los Angeles County Department of Regional Planning 2022) includes the following goals and policies:

- Goal P/R 1: Enhanced active and passive park and recreation opportunities for all users.
 - Policy P/R 1.2: Provide additional active and passive recreation opportunities based on a community's setting, and recreational needs and preferences.
 - Policy P/R 1.4: Promote efficiency by building on existing recreation programs.
 - Policy P/R 1.5: Ensure that County parks and recreational facilities are clean, safe, inviting, usable and accessible.
 - Policy P/R 1.11: Provide access to parks by creating pedestrian and bicycle-friendly paths and signage regarding park locations and distances.
- Goal P/R 2: Enhanced multi-agency collaboration to leverage resources.
 - Policy P/R 2.5: Support the development of multi-benefit parks and open spaces through collaborative efforts among entities such as cities, the County, state, and federal agencies, private groups, schools, private landowners, and other organizations.
- Goal P/R 3: Acquisition and development of additional parkland.
 - Policy P/R 3.1: Acquire and develop local and regional parkland to meet the following County goals: 4 acres of local parkland per 1,000 residents in the unincorporated areas and 6 acres of regional parkland per 1,000 residents of the total population of Los Angeles County.

- Policy P/R 3.4: Expand the supply of regional parks by acquiring land that would: 1) provide a buffer from potential threats that would diminish the quality of the recreational experience; 2) protect watersheds; and 3) offer linkages that enhance wildlife movements and biodiversity.
- Goal P/R 4: Improved accessibility and connectivity to a comprehensive trail system including rivers, greenways, and community linkages.
 - Policy P/R 4.1: Create multi-use trails to accommodate all users.
 - Policy P/R 4.6: Create new multi-use trails that link community destinations including parks, schools and libraries.

3.16.2.1.2 2016 Los Angeles Countywide Parks Needs Assessment

Adopted by the LA County Board of Supervisors on July 5, 2016, the Parks Needs Assessment is a comprehensive study of the diverse park and recreation needs in cities and unincorporated communities across the county. Prepared by LA County Department of Parks and Recreation, the Parks Needs Assessment gathered data to determine the scope, scale, and location of park need in Los Angeles County. Since its completion in 2016, the Parks Needs Assessment has been invaluable in informing planning, decision-making, and resource allocation for parks and recreation. The primary goal of the Parks Needs Assessment was to quantify the magnitude of need for parks and recreational facilities and determine the potential costs of meeting that need. This goal has been accomplished, as evidenced by the final report, which uses a transparent, best-practices approach to evaluate park and recreation needs and is the product of an engagement process that involved the public, cities, unincorporated communities, community-based organizations, and other stakeholders. Specifically, the Parks Needs Assessment:

- Uses a set of metrics to measure and document park needs for each study area;
- Establishes a framework to determine the overall level of park need for each study area;
- Offers a list of priority park projects for each study area;
- Details estimated costs for the priority park projects by study area;
- Builds a constituency of support and understanding of the park and recreational needs and opportunities; and
- Informs future decision-making regarding planning and funding for parks and recreation.

3.16.2.1.3 2022 Los Angeles Countywide Parks Needs Assessment Plus

Adopted by the LA County Board of Supervisors on December 6, 2022, the Parks Needs Assessment Plus complements and offers new information not previously included in the 2016 Parks Needs Assessment. Specifically, Parks Needs Assessment Plus includes data about access to regional parks, open space, trails, beaches and lakes, and local parks in rural areas, as well as mapping and analyses related to population vulnerability, environmental benefits, environmental burdens, and priority areas for environmental conservation and restoration.

3.16.2.1.4 County of Los Angeles Park Design Guidelines and Standards

The County of Los Angeles Park Design Guidelines and Standards are intended to guide County staff, design professionals, and other agencies on how to design and develop parks that meet County standards and expectations. The manual provides offers input from DPR staff, other departments, and outside partners such as nonprofit organizations and private developers with an interest in park design. The guidelines and standards address topics for recreational facilities such as spatial organization, circulation, landscaping, utilities, and sustainable products and plants.

3.16.2.1.5 County of Los Angeles Trails Manual

The County of Los Angeles Trails Manual (Trails Manual) provides guidance to County departments that interface with trail planning, design, development and maintenance of hiking, equestrian, and mountain biking trails. The Trails Manual was adopted by the LA County Board of Supervisors on May 17, 2011, and was revised in June 2013 (County of Los Angeles 2013). The Trails Manual provides guidelines for implementation of multi-use trails within the unincorporated communities of Los Angeles County and recognizes the existence of the broader regional trail network in the County and surrounding counties that provides access to recreational resources operated by federal, State, and local agencies. The Trails Manual sets the guidelines for reviewing plans and specifications for trails that are provided in conjunction with land use planning and the entitlement process for projects proposed for development within the County. Proposed developments are reviewed for consistency with the Trails Manual. The goal of the Trails Manual is to establish well-defined trail types, guidelines, and priorities to facilitate the development of high-quality trails that benefit the public.

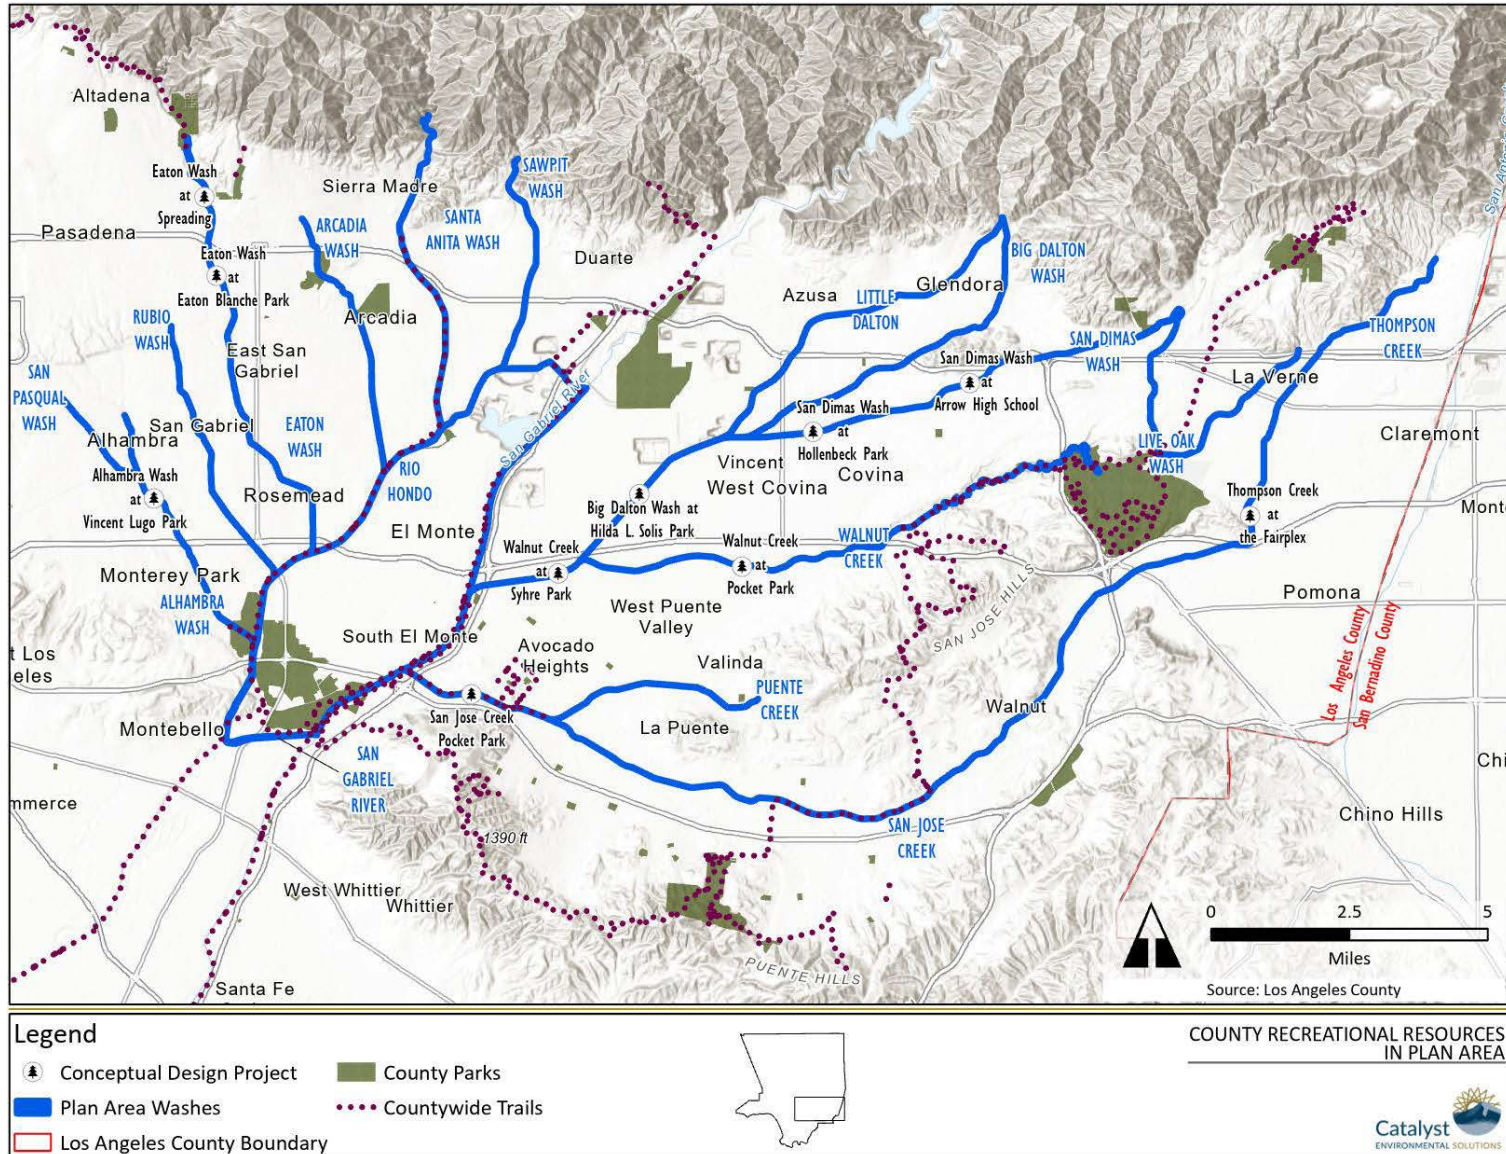

Figure 3.46-1. County Park Facilities and Multi-use Trails within the Plan Area

3.16.2.2 Incorporated Cities Within the Plan Area

The table below presents the policies related to recreation from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.16-3. Applicable Local City Policies Related to Recreation

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Quality of Life Chapter:</p> <p>Goal QL-6: Provision of adequate and accessible recreation and open space amenities.</p> <p>Policy QL-6A: Where feasible and desirable, add new recreation facilities such as dog parks and fitness courses.</p> <p>Policy QL-6B: Investigate the feasibility of a new regional park in the I-710 right-of-way.</p> <p>Policy QL-6C: Connect existing open spaces to the population with the greatest need for these open spaces.</p> <p>Policy QL-6G: Where feasible and desirable, utilize vacant properties to provide new open space and passive recreation opportunities in the form of pocket parks and/or community gardens.</p>	<p>Municipal codes related to recreation resources relevant to the Plan Area can be found in Chapter 23.34: OS (Open Space) Zone. Section 23.34.020 Permitted uses include:</p> <ul style="list-style-type: none">• Public recreational uses such as parks, playgrounds and recreation areas, excepting buildings and structures thereon;• Golf courses and country clubs, excepting buildings and structures thereon;• Flood-control channels;• Public utility rights-of-way;• Creeks rivers, spreading grounds and other similar water courses. ('86 Code, § 23.34.020) (Ord. 4110). <p>Section 23.34.040 Applicable Regulations describes chapters of the City Municipal code require the following:</p> <p>All uses shall be subject to the applicable regulations of this title, including standards which are located in the following chapters:</p> <p>(A) Chapter 23.42 Property Development Standards;</p> <p>(B) Chapter 23.44 Design Standards;</p> <p>(C) Chapter 23.48 Landscaping Standards;</p> <p>(D) Chapter 23.50 Sign Standards;</p> <p>(E) Chapter 23.52 Off-street Parking and Loading Standards;</p> <p>(F) Chapter 23.60 Temporary Use Permits;</p> <p>(G) Chapter 23.62 Planned Development Permit</p>	<p>No other applicable ordinances were identified.</p>
Arcadia	<p>Parks, Recreation, and Community Resources Element:</p> <p>Goal PR-1: Providing superior parks, public spaces, and recreation facilities to meet the community’s evolving needs.</p> <p>Policy PR-1.2: Strive to provide a minimum of 2.43 acres of parkland per 1,000 residents.</p> <p>Policy PR-1.6: Prioritize acquisition of land for parks in neighborhoods that are underserved.</p> <p>Policy PR-1.7: Locate new community facilities in neighborhoods and centers where they will serve populations of the greatest needs.</p> <p>Policy PR-1.10: Explore the conversion of marginal lands, such as street corridors, parkways, and public property between buildings to serve as recreation and green spaces.</p> <p>Policy PR-1.12: Maintain and enhance pedestrian, bicycle, and transit linkages to provide better access to parks, recreation, and public spaces and meet the needs of Arcadia residents.</p> <p>Goal PR-2: Preserving open space resources to meet the City’s recreation and conservation needs.</p>	<p>Municipal codes related to recreational resources relevant to the Plan Area can be found in Article IX (Division and Use of Land) of the City of Arcadia Municipal Code, Chapter 1, Development Code).” This section of the Development Code is intended to regulate the use and development of land within the City consistent with the City of Arcadia General Plan.</p> <p>Article IX (Division and Use of Land), Chapter 1 – (Development Code) Section 9101.03.020 establishes zones related to recreational uses under Special Zones in Table 1-1 of the City code.</p> <p>Section 9102.09.020 Land Use Regulations and Allowable Uses in PF, OS-OR, OS-RP, and RR Zones Determines allowable uses within the zoning regulation as described in Table 2-13 of the City code.</p> <p>Section 9102.09.040 (Site Plan and Design Review) requires the following:</p> <p>Structures erected or modified to accommodate the land use activities listed in Division 2 (Zones, Allowable Uses, and Development Standards) shall require the approval of a Site Plan and Design Review subject to the requirements of Section 9107.19 (Site Plan and Design Review) of this Development Code.</p> <p>Section 9102.09.050 - Other Applicable Regulations.</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy PR-2.2: Coordinate with Los Angeles County to investigate the long-term possibility of multi-use functions for the Santa Anita sediment basins.</p> <p>Policy PR-2.3: Maintain and enhance the trail system in Wilderness Park to provide connections to lands and open space resources in adjacent jurisdictions.</p>	<p>In addition to the requirements contained in this Section 9102.09 (Public Facilities, Open Space, and Rail Right-of-Way Zones), regulations contained in the following Divisions may apply to development in PF, OS-OR, OS-RP, and RR zones.</p> <p>Division 2 - Zones, Allowable Uses, and Development Standards (Section 9102.11 Overlay Zones).</p> <p>Division 3 - Regulations Applicable to All Zones - Site Panning and General Development Standards.</p> <p>Division 4 - Regulations for Specific Land Uses and Activities.</p>	
Azusa	<p>Natural Environment Chapter:</p> <p>Goal 1: Provide constructive and creative leisure opportunities for all Azusans.</p> <p>Policy 1.3 Enhance the river and canyon trailheads to function as “hubs” of regional recreational and community activity.</p> <p>Goal 2: Provide adequately sized and located parklands and recreational facilities to meet local needs, and to preserve the natural resources within and adjacent to Azusa.</p> <p>Policy 2.1 Maintain the current park per capita ratio of 1.14 acre per 1,000 persons.</p> <p>Policy 2.2 Strive to achieve the National Parks and Recreation Associations recommended per capita ratio of 3.0 acres per 1,000 persons. When the City has met the 3.0 ratio strive to achieve the NPRA’s suggested per capital ratio of 5.0 acres per 1,000 persons.</p> <p>Policy 2.7 Provide for the inclusion of recreational trails, staging signage, and access in new and existing neighborhoods, commercial, and industrial developments, along the river, into the foothills, and along the rails that link with existing or planned trails.</p> <p>Goal 3: Develop new park sites and renovate existing park sites to provide diverse recreational and sports activities.</p> <p>Policy 3.3 Develop park and recreation facilities that link trails and existing recreation facilities.</p> <p>Goal 5: Provide a foothill and river recreation environment that enhances the enjoyment of the natural resources without resulting degradation.</p> <p>Policy 5.2 Conduct an inventory of trail and other foothill and river recreation facilities on a periodic basis to determine renovation needs and/or capital improvements, prepare a capital improvements programs and adopt a prioritization schedule for improvement.</p> <p>The Build Environment Element:</p> <p>Goal 8: Preserve and provide open spaces for city’s residents that provide visual amenity, recreational opportunities, protect environmental resources, and protect the population from natural hazards.</p> <p>Policy 8.8: Seek the introduction of natural habitat and pocket parks into neighborhoods. (LU1, OS1, and OS12)</p> <p>Policy 8.9: Require developers of any use whose scale may significantly impact existing open space resources to allocate sufficient lands as permanent open space for recreation, visual amenity, and/or environmental resources protection (by dedication, easement, or other City approved technique.) (LU5, LU6, and LU7).</p> <p>Policy 8.10 Provide for the development of additional open spaces for recreational purposes in accordance with the Parks Master Plan. (LU 1 and REC3)</p>	<p>Municipal codes related to recreation resources relevant to the Plan Area can be found in Chapter 88.28—Special Purpose Zones, Chapter 50 (Parks and Recreation) Article I. (In General), Section 50-1. (Night closure).</p> <p>Chapter 88 Development Code Section 88.28.020. - Intent of Special Purpose Zones. (Special Purpose Zones) determines the following:</p> <p>OS (Open Space) Zone allowable land uses are: public recreation; limited residential development on legal lots of record with adequate access, buildable areas, and infrastructure; limited agricultural uses; and, where authorized by the general plan lodging, resort, and conference center facilities and related activities.</p> <p>The REC (Recreation) Zone is applied to public park and recreation sites and areas within the city. The REC zoning district is consistent with and implements the recreation land use classification of the general plan. (Ord. No. 11-O16, § 3, 10-24-11)</p> <p>Chapter 50 (Parks and Recreation) Article I. (In General), Section 50-1. (Night closure) regulates park hours as follows:</p> <p>d) Posting required. Any municipal park or recreational facility subject to this ordinance shall be posted with the following notice:</p> <p>"Hours of Closure - This facility is closed between the hours of 10:00 pm at night and 5:00 am in the morning.</p> <p>Any person entering, remaining, staying, or loitering upon these premises during hours of closure is guilty of an infraction Ref. §50-1 (b) A.M.C."</p> <p>Posting of the notice shall be made at all parking lot entrances if the facility is equipped with an off-street parking area, and upon the perimeter of the park adjoining any public street at not more than 150-foot intervals. All signs shall be not less than 17 inches wide by 22 inches in height with one-inch lettering.</p> <p>(Code 1971, §§ 8.55.010, 8.55.020; Ord. No. 02-05, § 1, 4-1-02)</p> <p>(Code 1971, § 8.52.010)</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 8.11 Provide for the acquisition and development of parks and recreational lands and facilities in accordance with the Parks Master Plan. (LU1 and REC3)</p> <p>Policy 8.12 Protect the canyons, foothills, and river as open space and environmental resources. (LU1)</p>		
Baldwin Park	<p>Land Use element:</p> <p>Goal 6: Expand and upgrade existing neighborhood-serving commercial uses.</p> <p>Policy 6.5: Pursue alternative uses for vacant or underutilized parcels such as parks or open space.</p> <p>Health and Sustainability Element:</p> <p>Goal HS-13. Provide residents of all ages with a range of safe and accessible opportunities for recreation and physical activities.</p> <p>Policy 13.01: Prioritize the maintenance and expansion of existing parks, recreation facilities, and open space amenities.</p> <p>Policy 13.02: Build new park spaces and recreational facilities that respond to the community’s changing demographics.</p> <p>Policy 13.03: Facilitate pedestrian, bicycle, and transit connections to new and existing parks and recreational facilities to enhance use and access.</p> <p>Action HS-13.6: Continue to identify new opportunities to increase access to open spaces by creating pocket parks, greenways, and tot lots as new developments are proposed.</p> <p>Action HS-13.7: When programming new parks and improvements to existing parks, consider installing flexible facilities that include informal natural play areas and opportunities to interact with the natural environment.</p> <p>Goal HS-18. Baldwin Park will have land use and development patterns and recreational programs that encourage healthy, active living for all ages.</p> <p>Policy 18.01: Promote development patterns that prioritize the location of grocery stores, banks, restaurants, retail outlets, parks, and recreational fields near residential neighborhoods.</p> <p>Open Space and Conservation Element:</p> <p>Goal 1: Provide and maintain adequate parks and open space.</p> <p>Policy 1.1 Preserve all existing park space, and provide improvements to enhance utilization.</p> <p>Goal 2.0 Provide a diversity of recreational programs to meet the needs of all individuals and groups in Baldwin Park.</p> <p>Policy 2.3 Incorporate areas for both active and passive recreation in parks and facilities, and ensure that these are accessible to all age groups, as practical.</p> <p>Goal 4: Ensure that the costs of park and recreation facilities and programs are borne by those who benefit and contribute to additional demands.</p> <p>Policy 4.1: Require that developers contribute to provide parks and recreational facilities to offset additional demands brought about by new development.</p> <p>Policy 4.2: Pursue the utilization of various state and county funding mechanisms to provide additional funding resources.</p>	<p>Municipal codes related to recreation resources relevant to the Plan Area can be found in the Title XV (Land Usage) Chapter 153 (Zoning Code), Section 153.060 (Open Space Zone).</p> <p>As described in Section 153.060 (Open Space Zone) The Open Space Zone is established to maintain open space areas in the city for recreational opportunities and to prevent incompatible development in areas that should be preserved or regulated for scenic, recreational, conservation, aesthetic or health and safety purposes. (A) Permitted uses. The following uses are permitted within the Open Space Zone:</p> <ul style="list-style-type: none">(1) Public school buildings and associated facilities;(2) Public recreational uses;(3) Public utility rights-of-way;(4) Flood control channels and similar flood control structures; and(5) Creeks, rivers, spreading grounds and other similar water courses. <p>(B) Conditional uses. The following uses may be permitted within the Open Space Zone upon issuance of a conditional use permit obtained pursuant to subchapter 153.210, Administrative Procedures:</p> <ul style="list-style-type: none">(1) Agricultural and horticultural cultivation;(2) Private recreational uses; and(3) Off-street parking in conjunction with an adjacent commercial or industrial use. <p>(Ord. 1346)</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	Policy 4.4: Encourage the development of recreation programs by non-City public and private sports organizations to involve more children and adults in outdoor recreation activity. Use volunteers to operate and maintain programs whenever possible.		
Claremont	<p>Land Use, Community Character, and Heritage Preservation Element.</p> <p>Goal 2-4 Protect, preserve, and manage the City's diverse and valuable open space, water, air, and habitat resources.</p> <p>Policy 2-4.2: Continue to place a high priority on acquiring and preserving open space lands in Claremont's hillside areas for purposes of recreation, habitat protection and enhancement, fire hazard management, public safety purposes, water resource protection, and overall community benefit.</p> <p>Policy 2-4.4: Provide a high standard of maintenance and quality of construction of facilities and grounds in public parks and City-maintained landscaped areas, taking into account the need to conserve water and energy.</p> <p>Human Services, Recreational Programs, and Community Facilities Element:</p> <p>Goal 7-4: Provide a diverse range of recreation services, programs, and activities that respond to the present and future needs of all Claremont residents.</p> <p>Policy 7-4.8 Build and maintain parks and community facilities in a manner that is environmentally responsible.</p>	<p>Municipal codes related to recreation resources relevant to the Plan Area can be found in Title 16 Chapter 16.072 (P/RC Park/Resource Conservation District) of the Claremont Municipal Code. The purpose of the Parks/Resource Conservation (P/RC) District is intended to assure open space areas for uses such as public parks, outdoor recreation, cemetery uses, protection of natural habitat, preservation of cultural resources, management of groundwater resources, protection and conservation of mineral resources, and the protection of the public health and safety due to hazardous or special condition. B. No building, structure, or land shall be used, and no building or structure shall be erected, altered, or enlarged, in the P/RC District except in accordance with the provision of this chapter. (08-05)</p> <p>Section 16.072.010 (Uses and development) determines only the following uses and development shall be permitted as a matter of right in the P/RC District:</p> <p>A. Parks and outdoor recreation facilities such as playgrounds, playing fields, and trails, open to the public and for which no admission fee is charged.</p> <p>B. Community, senior and youth activity centers.</p> <p>C. Cemetery uses.</p> <p>D. Highway and freeway landscaping.</p> <p>E. Water recharge facilities, settling basins, and drainage channels.</p> <p>F. Natural habitat protection.</p> <p>G. Preservation of architectural, historic, cultural and natural resources.</p> <p>H. The growing of plants, provided no sales occur at the site.</p> <p>I. Facilities for use by the public such as benches, picnic tables, shade structures, paved walkways, parking lots, fencing, restroom buildings, other minor buildings, and ancillary improvements such as lighting related to permitted uses.</p> <p>J. Commercial antenna/wireless telecommunication facilities pursuant to Chapter 16.100.</p> <p>(08-05; 12-01)</p> <p>Section 16.072.040 (Development standards) Identifies standards that shall apply to all privately owned land and structures in the P/RC District:</p> <p>A. Height. The maximum height of a building or structure is 30 feet unless otherwise permitted by this title. No building may exceed two stories. The maximum wall or fence height is eight feet.</p> <p>B. Setbacks. Any building or structure with a height of more than eight feet shall be set back a minimum of 25 feet from any street and 10 feet from any interior lot abutting a residential district boundary.</p> <p>C. Parking spaces for private uses shall be provided as required by the Planning Commission. An applicant may be required to submit a parking study to demonstrate the appropriate amount of parking for a proposed use of property. Parking areas shall be subject to the standards of Chapter 16.136.</p> <p>(08-05)</p>	<p>Claremont Hills Wilderness Park Master Plan</p> <p>The primary goals of this Master Plan are to:</p> <p>Preserve the park as an environmental resource;</p> <p>Manage the park as a passive recreational1 opportunity; and</p> <p>Minimize the impact park attendance has on surrounding residential neighborhoods.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Covina	<p>Natural Resources and Open Space Element:</p> <p>Goal, Open Space Lands:</p> <p>A complete, well-balanced, and functional system of parks, open space facilities, and trails and appurtenant thorough, viable programs and services that meet the diverse active and passive recreational needs of current and future Covina residents.</p> <p>Summary of Key Policies, Open Space Lands:</p> <p>1. Preserve, protect, and maintain all existing local parks, ball fields, trail facilities, and bicycle ways through appropriate measures, procedures, and funding sources to best sustain recreational opportunities as well as community appearance and image and keep joint-use agreements with public schools to provide Covina residents with open space lands that supplement the City’s park system;</p> <p>2. Whenever possible and feasible, enhance existing parks and attempt to acquire and improve additional recreational facilities, considering creative, practical approaches, such as developing mini parks or converting vacated institutional properties, to address current deficiencies;</p> <p>3. In augmenting existing or developing new parks and recreational facilities, ensure that all appropriate site design, accessibility, landscaping, equipment safety, and security requirements and standards are met and that viable, cost-effective funding sources and mechanisms for construction and maintenance are attained; and</p> <p>4. Continue to offer quality and diverse park/recreational programs, activities, and services to address local needs, particularly those of the generally less mobile segments of the City’s population, to best maintain community image and vitality.</p> <p>Covina General Plan Natural Resources and Open Space Element</p> <p>1. Policy Area 1</p> <p>Retention, Development, and Enhancement of Park and Recreational Facilities.</p> <p>b. To the greatest degree possible, encourage land uses adjacent to parks and recreational facilities to consist of residential, school, institutional, and/or other appropriate, compatible categories to prevent unreasonable encroachments thereon.</p> <p>g. Encourage optimum usage of available green space and recreational facilities.</p> <p>h. Endeavor to provide for its citizens a total park acreage equal to 2.0 acres for every 1,000 population at the time of General Plan buildout.</p> <p>i. Whenever possible and feasible, attempt to acquire and improve land for park and recreational uses.</p> <p>j. Consider to emphasize locating new parklands in the western and eastern portions of the community, in neighborhoods in and around apartments and condominiums/townhomes, and in other areas that are markedly deficient in open space.</p> <p>3. Policy Area 3</p> <p>Trail Facilities</p> <p>b. Support County efforts to preserve, provide for, and, where appropriate, expand and improve local- and regional-oriented equestrian/hiking trails and reasonable linkages thereto that run through southeastern Covina, notably the Peter F. Scharabum or Walnut Creek Trail that generally abuts Walnut Creek, for both recreational and leisure activities.</p>	<p>Municipal codes related to recreation resources relevant to the Plan Area can be found in Title 17 (Zoning) under Chapter 17.32 R-R Residential Recreation Zone and Chapter 17.48 C-R Commercial Zone (Recreation).</p> <p>Chapter 17.32 (R-R Residential Recreation Zone) is for small neighborhood recreation centers, noncommercial in nature, which fit into the residential pattern. (1964 Code Appx. A § 6.00.)</p> <p>Section 17.32.020 (Permitted uses) determines buildings, structures and land shall be used, and buildings and structures shall hereafter be erected, structurally altered or enlarged only for the following uses, plus such other uses as the commission and council may deem (pursuant to Chapter 17.60 CMC) to be similar and not more obnoxious or detrimental to the public health, safety and welfare, and equally related to the neighborhood recreation function of this zone. All uses shall be subject to the property development standards in CMC 17.32.050 through 17.32.180:</p> <p>A. Clubhouse or cabana;</p> <p>B. Lawn and court games;</p> <p>C. Nursery school or child care center; provided it is operated in conjunction with the recreation facilities;</p> <p>D. Picnic and barbecue facilities;</p> <p>E. Playground;</p> <p>F. Swimming pool, spray pool;</p> <p>G. Tennis courts;</p> <p>H. Vending machines for the sale of cigarettes, soft drinks and food. (1964 Code Appx. A § 6.01.)</p> <p>Chapter 17.48 C-R Commercial Zone (Recreation) is intended to group commercial recreation uses into a planned, integrated recreation center, including related service and commercial uses. (1964 Code Appx. A § 8.00.)</p> <p>Section 17.48.020 Permitted uses.</p> <p>Buildings, structures and land shall be used, and buildings and structures shall hereafter be erected, structurally altered or enlarged only for the following uses, plus such other uses as the commission and council may deem (pursuant to Chapter 17.60 CMC) to be similar and not more obnoxious or detrimental to the public health, safety and welfare. All uses shall be subject to the property development standards in the C-2 zone, CMC 17.38.050 through 17.38.210:</p> <p>A. Recreational Uses.</p> <p>1. Archery range;</p> <p>2. Batting cages;</p> <p>3. Billiard parlor;</p> <p>4. Bowling alleys;</p> <p>5. Fishing and fly-casting ponds;</p> <p>6. Golf driving range;</p> <p>7. Golf pitch and putt courses;</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>c. Because of their greater usage and simpler development, regard improving and expanding the network of bicycle ways as a higher priority than enhancing the equestrian/hiking trails.</p> <p>4. Policy Area 4</p> <p>Design and Landscaping of Parks, Trails, and Recreational Facilities</p> <p>a. Follow the park classification system listed in Table 1 of this Element in categorizing, preserving, expanding, and enhancing the City’s park system.</p> <p>b. In developing new or enhancing existing parks and recreational facilities, to the greatest extent possible, ensure that all buildings, amenities, open air facilities, and landscaping are unified, functionally related to improve efficiency, architecturally coordinated, and consistent with all applicable City and other standards as well as provide a high level of public safety to maintain and bolster the park system’s overall purposes.</p> <p>c. Design parks and recreational facilities such that appurtenant buildings, outdoor amenities, people-gathering areas, lighting, parking lots, and other elements do not adversely affect adjacent uses, to the greatest degree possible.</p> <p>d. Follow appropriate security measures in future park development and enhancement, including, but not limited to, adequate lighting, sufficient walkways, and safety-based site design principles, to discourage and combat graffiti, vandalism, and illicit activities.</p> <p>e. Follow the restroom facility standards listed in the Covina Park System Master Plan and ensure that new or remodeled restrooms are reasonably accessible to park patrons, located in safe, highly visible areas, and constructed of the most durable and vandal-resistant materials.</p> <p>f. Encourage variety in the design of park facilities to enhance the lifestyle of residents to be served.</p> <p>g. Prioritize the aesthetic aspects of facility development or enhancement on a park-by-park basis and, to the greatest extent feasible, attempt to achieve complementary color schemes in each facility.</p> <p>h. Ensure that new landscape and irrigation systems in City recreational facilities comply with the Covina Water-Efficient Landscaping Ordinance and any related measures, as applicable.</p> <p>i. Install new or replace existing landscaping, where severely deteriorating, inappropriately located for park activities, and/or incompatible with other facility landscape materials.</p> <p>j. Follow the park signage guidelines of the Covina Park System Master Plan.</p> <p>k. Observe the requirements imposed by the California Environmental Quality Act (CEQA) when undertaking the development or acquisition of new and the improvement or redevelopment of existing parks and open space lands to address all applicable potential impacts, such as land use, circulation, noise, and aesthetics.</p> <p>l. Consider to require minimum building setback standards along the unchanneled portions of Walnut Creek and Charter Oak Wash to maintain the riparian habitat, natural contours, and full functionalism of the stream channels.</p> <p>m. Attempt to preserve the stream flow in the riparian woodland communities of the unchanneled portions of Walnut Creek and Charter Oak Wash by minimizing alteration of their drainage patterns.</p> <p>n. Ensure that all new and modified bicycle ways, equestrian/hiking trails, and related facilities plus appurtenant amenities and entry points conform to all applicable design and access requirements and standards.</p>	<p>8. Lawn and court games;</p> <p>9. Miniature golf courses;</p> <p>10. Nursery school or day nursery; provided it is operated in conjunction with the recreation facilities;</p> <p>11. Picnic and barbecue facilities;</p> <p>12. Playground;</p> <p>13. Skating rinks;</p> <p>14. Swim parks, natatoriums;</p> <p>15. Tennis courts;</p> <p>B. Related commercial uses including, but not limited to, the following, when operated in connection with those uses listed in subsection (A) of this section:</p> <p>1. Barber and/or beauty shop;</p> <p>2. Electric distribution and public utility substations;</p> <p>3. Off-street parking lot;</p> <p>4. Restaurants;</p> <p>5. Sporting goods stores;</p> <p>6. Sports equipment rental and incidental maintenance;</p> <p>7. Vending machines for sales of cigarettes, soft drinks and food. (Ord. 19-01 § 33, 2019; Ord. 11-1997 § 15, 2011; Ord. 1535 §§ 16, 17, 1983; 1964 Code Appx. A § 8.01.)</p>

	<p>o. Seek the maximum community input feasible in locating, conceptualizing, and designing new and enhanced park and recreational facilities.</p> <p>Policy Area 5</p> <p>Maintenance of Parks, Trails, and Recreational Facilities</p> <p>c. Consider the inclusion of low-maintenance facilities in the development or acquisition of new and improvement or redevelopment of existing parks or recreational facilities.</p>		
El Monte	<p>Community Design Element:</p> <p>Goal CD-3: A green City with beautifully landscaped corridors, residential streets, commercial areas, developments, and public areas that are symbolically and physically encircled by an Emerald Necklace of parks and open space.</p> <p>Policy CD-9.6 Parks and Open Space. Consistent with policy direction set forth in the Parks and Recreation Element, provide adequate parks and open space within each neighborhood planning area, with an emphasis on placing parks near to residences through implementation of:</p> <ul style="list-style-type: none">– Joint-use park and school facilities– Greenways along key streets– Emerald Necklace improvements– Community forest along public rights-of-way– Community gardens where possible <p>Parks and Recreation Element:</p> <p>Goal PR-1: Sufficient quality, number, and distribution of parks that are well maintained, safe, and attractive, and that meet the full active and passive recreational needs of residents of all ages and abilities.</p> <p>Policy PR-1.7 Funding. Dedicate and raise sufficient funds to finance regular and adequate levels of maintenance, rehabilitation, and modernization of all park and recreation facilities, including the community forest.</p> <p>Goal PR-4: A lush network of greenways, linear parks, and a community forest that enhances property values, public health, aesthetics, and quality of life.</p> <p>Policy PR-4.4 Miniparks. Create miniparks that offer passive recreation opportunities, situated along the major arterials and linked by the network of major greenways and the community forest.</p> <p>Policy PR-4.6 New Construction. Where green infrastructure is proposed on the community forest plan, condition the construction or substantial rehabilitation of properties on the dedication of easements or fees.</p> <p>Cultural Resources Element:</p> <p>Goal CR-3: A community that respects and re-creates its natural environmental and cultural legacy through a comprehensive program to restore the natural environment.</p> <p>Policy CR-3.1 Community Forest. Develop a community forest program that balances indigenous trees and plants and modern requirements for maintenance, water conservation, and aesthetics, as a visual reminder of the City’s heritage and natural environment.</p>	<p>Municipal codes related to recreational resources relevant to the Plan Area can be found in Chapter 17.44 Public and Quasi-Public Zoning Districts.</p> <p>Under Chapter 17.44 (Public and Quasi-Public Zoning districts) the Open Space (OS) Zoning District is consistent with the General Plan Land Use Designation of Open Space and refers to areas designated for parks, open space, linear parks, trails, and other similar recreational uses. Development standards within this zoning district include setback rules as follows:</p> <ul style="list-style-type: none">• Street Yard. There shall be a minimum setback of 10 (10) feet for all structures and parking areas. The setback shall be landscaped and maintained with an underground irrigation system. <p>Public Facilities. Structures associated with a public facility shall comply with the variable height requirements as outlined in Section 17.40.010 (Height Exceptions and Restrictions) of this title. (Ord. No. 3011 , § 3(Exh. B), 6-21-2022; Ord. No. 3023 , § 4.B(Exh. B), 5-2-2023)</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Public Health and Safety Element:</p> <p>Goal PHS-2: A healthy and safe watershed exemplified by the implementation of flood control measures, protection of water resources, and the restoration of the beneficial uses of the San Gabriel and Rio Hondo Rivers watersheds.</p> <p>Policy PHS-2.5 Green Infrastructure. Implement green infrastructure projects (e.g., greenways, community forest, linear parks, vegetated swales, miniparks) to help filter stormwater runoff, improve water resources, and restore the health of our watershed.</p>		
Glendora	<p>Land Use Element</p> <p>Goal LU-1: Balanced open space, residential and commercial development Citywide.</p> <p>Policy LU-1.4: Establish open space conservation areas and identify compatible uses such as natural resource conservation, hiking and passive recreation.</p> <p>Goal LU-20: Appropriate scale and character of development</p> <p>LU-20.3: Encourage the development of usable pedestrian space within future developments, including urban plazas, pocket parks and other pedestrian amenities.</p> <p>Open Space and Recreation Element</p> <p>Goal OSR-4 Diversified range of park and recreation facilities and programs for all Glendora residents.</p> <p>Policies OSR-4.1 Investigate opportunities to enhance and expand existing park and recreation facilities.</p> <p>OSR-4.2 Create an implementation strategy to link land use decisions with the Parks Master Plan in coordination with the Conservation and Open Space Elements.</p> <p>OSR-4.5 Encourage the use of open space resources through the provision of passive amenities.</p> <p>Goal OSR-5: Improved community access to recreation facilities.</p> <p>Policy OSR-5.1: Create access trails to link open space and recreational areas within the City.</p> <p>OSR-5.3 Encourage the development of park and recreation facilities in areas of the City where existing supplies are limited.</p> <p>Goal OSR-7 Enhanced trail system in and throughout the community. Policies OSR-7.1 Prepare and implement a Trails Master Plan evaluating the potential for creation of a variety of trail types to serve all residents. The Master Plan should include topics such as trail restoration, enhancements, amenities, and safety.</p> <p>OSR-7.4 Improve and create more connections, and increase the safety of the pedestrian, bicycling, and equestrian trail system in the City.</p>	<p>Municipal codes related to recreation resources relevant to the Plan Area can be found in the City of Glendale Code Open space—Natural zone (§ 21.06.050). The purpose of the open space—natural zone is to:</p> <p>(1) conserve and manage natural resources which may include biological resources, watercourses, hills, canyons, major rock outcroppings, etc.;</p> <p>(2) protect the public health and safety by including areas requiring management due to hazardous or special conditions such as fire, flood and earthquake fault; and</p> <p>(3) provide outdoor recreation including areas of scenic, historic or cultural value. The OSN zoning designation shall only be applied to public and quasi-public property; provided, however, that a private property owner may request and be considered for a change of zone to OSN. All property located in an OSN zone shall be left in its natural, wilderness state except for the following uses: riding and hiking trails, picnic and playground areas, flood control structures and facilities, and utility substations and related equipment and structures. (Ord. 1637 § 3, 1995)</p>	<p>Other applicable ordinances include Ordinance 2084, under Chapter 13.18 Safe Streets Program Chapter 13.18.010 A “Safe Street” shall be defined as a non-arterial roadway as defined in the General Plan with connections to (i) citywide bicycle networks, (ii) destinations that are within walking distance, (iii) or green space; in accordance with state law. the City seeks to offer children, families, and constituents the opportunity to play, exercise, and socialize through safer and more accessible streets that promote healthy neighborhood recreation.</p>
Industry	<p>Open Space and Recreation resources:</p> <p>Goal</p> <p>RM3 Open space areas that are well maintained, serve the target population, and function as a citywide amenity.</p> <p>Policies</p> <p>RM3-1 Cooperate with regional efforts to upgrade the resource and recreational value of the San Gabriel River.</p>	<p>Municipal codes related to recreation resources relevant to the Plam Area can be found in the City of Industry Code of Ordinances, Chapter 17.26, (Recreation and Open Space Zone), and Chapter 17.24, (Planned Development Overlay Zone). Permitted uses can be found in Section 17.26.020 (Uses permitted) as follows:</p> <p>A. Property zoned ROS may be used for the following uses subject to the issuance of a conditional use permit pursuant to Chapter 17.48, Conditional Use Permits/Exceptions:</p> <p>1. Golf courses, driving ranges, course maintenance facilities, golf club houses;</p> <p>2. Parks, public and private;</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	RM3-3 Explore opportunities to maximize the recreational value, use, and access of the areas designated for recreation and open space on the land use plan.	<p>3. Resorts, including spas, dining facilities, restaurants, gyms, pro-shops, conference facilities, recreational amenities, and other similar uses;</p> <p>4. Equestrian facilities;</p> <p>5. Indoor and outdoor recreational facilities;</p> <p>6. Exposition centers;</p> <p>7. Commercial nurseries;</p> <p>8. Interpretive centers;</p> <p>9. Reservoir.</p> <p>Approval of a development plan pursuant to Section 17.36.020, Development plan review required, will be required for any structures and physical improvements deemed significant by the planning director.</p> <p>C. Trails, bikeways, and similar minor improvements do not require separate planning approvals but, if included, will be reviewed as part of the conditional use permit and/or development plan application process. Stand-alone proposals for trails and bikeways require approval by the city engineer.</p> <p>D. New hotels are not permitted except as allowed pursuant to Chapter 17.24, Planned Development Overlay Zone (P-D Overlay).</p> <p>E. Housing units existing as of the effective date of the ordinance codified in this chapter (February 21, 2015) are permitted and considered legal conforming uses. The like-for-like replacement of, enlargement of, and improvements/modifications to existing housing may be permitted with approval of a development plan short-form application.</p> <p>(Ord. 786 § 3, 2015)</p>	
Irwindale	<p>Resource Management Element</p> <p>Issue Area – Open Space Resources. The City of Irwindale will strive to enhance the recreational and open space resources for the benefit and enjoyment of the existing and future residents.</p> <p>Resource Management Element Policy 5. The City of Irwindale will maintain and improve the existing park facilities in the City for the benefit and enjoyment of future generations.</p>	<p>Municipal codes related to recreation resources relevant to the Plan Area can be found in Chapter 17.18 (Open Space Zone) and in Chapter 17.80 (Zone Variances and Conditional Use Permits) Section 17.8030 (Conditional Use permits – Required when).</p> <p>Under Chapter 17.18 (Open Space Zone): The OS open space zone provides zoning standards and requirements to regulate open space areas in the city that are consistent with the open space/easements land use that is designated by the general plan.</p> <p>Permitted uses include parks and open space. (Ord. No. 663, § 2, 11-14-12)</p> <p>Under Chapter 17.80 (Zone Variances and Conditional Use Permits) Section 17.8030 (Conditional Use permits – Required when) it is the policy of the city that:</p> <p>The purpose of any conditional use permit shall be to insure that the proposed use will be rendered compatible with other existing and permitted uses located in the general area of the proposed use. The following uses, having unique and unusual characteristics, shall be permitted, provided that a conditional use permit is first issued:</p> <p>15. Parks, playgrounds and other public or private recreational facilities;</p> <p>(Ord. 605 § 5, 2006; Ord. 571 §§ 1, 14, 2003; Ord. 485 § 7, 1994; Ord. 452 § 2, 1991; Ord. 439 § 1, 1989; Ord. 417 § 2, 1987; Ord. 347 § 1, 1980; Ord. 230 § 2, 1969; Ord. 207 § 1, 1967; Ord. 205 § 1, 1967; Ord. 199 § 1, 1967; Ord. 177 § 2(part), 1966: prior code § 9340).</p>	No other applicable ordinances were identified.

La Puente	<p>Community Development Element:</p> <p>Goal 5: Safe and attractive neighborhoods providing a range of quality housing, parks, community services, and public facilities.</p> <p>Policy 5.5: Pursue the creation of additional pocket parks through lot consolidation, recycling of underutilized parcels, and City financial assistance as available.</p> <p>Community Resources Element:</p> <p>Goal 1: A flexible system of parks and recreational programs that addresses the needs of La Puente residents.</p> <p>Policy 1.1: Maintain La Puente Park as an important community resource by providing regular investments in landscaping, equipment, recreational and community facilities, and playground equipment. Intensify the recreational uses at the park to allow for a more efficient use of the facilities.</p> <p>Policy 1.3: Identify vacant and underutilized sites for purchase, donation, or consolidation with adjacent vacant or underutilized sites for the potential development of neighborhood parks.</p> <p>Action CR-9: Identify Potential Pocket Park Sites Create a database of potential pocket park and passive recreation sites within the City to facilitate the creation of new park and recreational resources. Identify the types of opportunities that may be feasible on a specific site and the type of funding/investment levels needed. Identify State, federal and private funding opportunities.</p> <p>Policy 1.5: Ensure and expand opportunities for equal access to recreational facilities and programs by making accessibility improvements and subsidizing recreational activities, as feasible, for those in need.</p>	<p>Municipal codes related to recreation resources relevant to the Plan Area can be found in Chapter 10.18 (Open Space Zone, of the La Puente Code of Ordinances) and Chapter 3.68 (Public Parks).</p> <p>Under Chapter 10.18 (Open Space Zone, of the La Puente Code of Ordinance) the Open Space Zone (OS) implements the General Plan Public Open Space and Private Open Space land use categories, and is established to allow uses that provide active and passive recreation areas and facilities, including parks, sports fields and courts, and golf courses. Also allowed are plant nurseries. (Ord. 935 § 3 (part), 2015). Development standards for any structures developed in the OS zone can be found in (Ord. 935 § 3 (part), 2015).</p> <p>Under Chapter 3.68 (Public Parks) Section 3.68.055 (Posting of park regulations and rules) requires the following:</p> <p>The city manager is directed to post and prominently display signs with park hours and regulations and rules at the major pedestrian entrances to city parks.</p> <p>(Ord. 827 § 1 (part) 2004)</p>	<p>No other applicable ordinances were identified.</p> <p>Park master plan</p>
La Verne	<p>Resource management element:</p> <p>Goal 1: An attractive, safe and accessible parks and recreation system.</p> <p>Policy 1.1: Provide ample and accessible parks throughout our community.</p> <p>Implementation measures:</p> <p>a. Ensure that all of the existing and future residential neighborhoods are served by at least one neighborhood park.</p> <p>d. Focus future park site acquisition on the development of mini-parks along the designated hiking/bikeway trails, small neighborhood parks (five acres or less).</p> <p>f. Ensure major park developments are reviewed by the Development Review Committee, the Planning Commission and/or the City Council for the project's impacts on existing parks. The level of review will be determined by the scope of the project.</p> <p>i. Develop and maintain parks and recreation facilities at a minimum standard of four (4.0) acres per 1,000 persons. This standard does not include open space areas used for recreational purposes, sensitive habitats, and other natural resource preserves.</p> <p>Policy 1.2: Develop a connecting trail system.</p> <p>Implementation measures:</p> <p>a. Develop trails to connect our parks and open space.</p> <p>b. Encourage multiple trail use for biking, jogging and equestrian use.</p> <p>c. Focus future park site acquisition on open space easements for trails.</p> <p>d. Design trails to connect with regional trails.</p>	<p>Municipal codes related to recreation resources relevant to the Plan Area can be found in Chapter 3.20 (Parks and Recreation Charges) Section 3.20.010 (Purpose—Intent) and Chapter 18.64 (SP Specific Plan Zone)</p> <p>Under Chapter 3.20 (Parks and Recreation Charges) Section 3.20.010 (Purpose—Intent) identifies the following goals:</p> <p>A. One of the amenities that makes a city a desirable place to live and work and that contributes to the quality of life is having adequate parks, open space and recreational facilities within the city.</p> <p>B. The resource management element of the La Verne general plan identifies the following as goals, policies and implementation measures: providing a variety of recreational facilities and activities for all age groups; and maintaining open space requirements of 10 acres per one thousand population (including public and private recreation and open spaces).</p> <p>C. The city council desires to make sure that the city has adequate open space, park and recreational facilities to serve its existing and future population.</p> <p>The purpose of Chapter 18.64 (SP Specific Plan Zone) requires the following for the zone:</p> <p>- To respond sensitively to the natural and built environment and increase amenities to serve the inhabitants and surrounding community areas;</p>	<p>No other applicable ordinances were identified.</p>

	<p>e. Encourage the county to complete the development of the Marshall Canyon Trail and the San Dimas/Live Oak Trail.</p> <p>Policy 1.3: Provide a variety of recreation facilities and activities for all age groups</p> <p>Implementation measures:</p> <p>a. Adopt the park master plan recommendations regarding deficiencies in specific uses and types and of facilities.</p> <p>Goal 2: Preserve and protect our open space</p> <p>Policy 2.2 Develop a natural buffer zone</p> <p>Implementation measures:</p> <p>d. Maintain the minimum open space requirement as stated in the preservation standard of 10 acres per 1,000 population (including public and private recreation and open spaces).</p> <p>Community design element:</p> <p>Goal 4. Develop in deference to our natural setting</p> <p>Policy 4.1 Design sensitive and subtle hillside development.</p> <p>Implementation measures:</p> <p>Required the following measures for all hillside development</p> <p>5. Natural Recreational</p> <p>Open space shall be maintained and connected to existing natural resources through: Hiking and equestrian trail system improvement.</p> <p>Siting and design hillside parks and recreational open space to take advantage of valley views.</p> <p>Community Health and Wellness element:</p> <p>Resource Management</p> <p>Goal 1: An Attractive, Safe, & Accessible Parks & Recreation System</p> <p>Policy OSP-1.1: Provide ample and accessible parks throughout our community.</p> <p>Policy OSP-1.2: Develop a connecting trail system.</p> <p>Policy OSP-1.3: Provide a variety of recreational facilities and activities for all age groups.</p> <p>Policy OSP-1.4: Design safe parks.</p>	<p>-to provide an enriched environment with aesthetic cohesiveness and harmonious massing of structures within a framework of natural and landscaped open space through the utilization of superior land planning and architectural design</p> <p>-To minimize the intrusion of new development into environmentally sensitive areas;</p> <p>-To protect new development from adverse visual impacts and excessive noise from nearby off-site structures and transportation corridors. (Ord. 852 § 2, 1993)</p>	
Monrovia	<p>Open Space Element:</p> <p>Goal 1: Expand the physical and social connections linking the City together and bridging to its neighbors.</p> <p>Policy 1.1: Encourage and support active and ongoing participation by diverse community members in the planning and decision-making for parks and recreational opportunities.</p> <p>Policy 1.2: Develop a network of shared-use recreational, pedestrian and bicycle trails to enable connections within parks and between parks, neighborhoods, public amenities and regional trail corridors, to include washes</p> <p>Goal 2: Provide a comprehensive system of parks, open space and recreation facilities that serves current and future needs.</p>	<p>Municipal codes related to recreation resources relevant to the Plan Area can be found in Title 17.08 Permitted Uses of Title 17 Zoning and are subject to the provisions of the Land Use Element of the General Plan, under Open-space zoning (Cal. Gov't. Code §§ 65910 et seq.)</p> <p>Chapter 12.32 (Parks) designates the following areas within the city as public parks for the recreational use of the public:</p> <p>(A) Monrovia Canyon Park, on North Canyon Boulevard;</p> <p>(B) Grand Avenue Park, on North Grand Avenue and Prospect Avenue;</p> <p>(C) Julian Fisher Park, on South California Avenue and Almond Avenue;</p> <p>(D) Olive Avenue Park, on West Olive Avenue and Mayflower Avenue;</p> <p>(E) Recreation Park, on South Shamrock Avenue and Lemon Avenue;</p>	<p>Parks Master Plan (PMP)</p> <p>Strategic Direction 1: Encourage Connectedness</p> <p>Goal: Monrovia’s Public Services Department fosters and expands the physical and social connections linking the City together and bridging to its neighbors.</p> <p>Policies</p> <p>2.1 Develop a network of shared-use recreational, pedestrian and bicycle trails to enable connections within parks and between parks, neighborhoods, public amenities and regional trail corridors.</p> <p>2.2 Design and construct trails to serve a variety of users at varying skill levels.</p> <p>2.3 Support other City departments in the implementation of the MultiChoice Transportation System Plan.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 2.1 Continue to maintain and improve a high standard of operations and management for both quantity and quality of park facilities to serve the community and stay current with changing recreational trends.</p> <p>Policy 2.2 Acquire additional parklands when feasible to equitably provide access to all residents by seeking additional park facilities in the proximity of underserved neighborhoods and/or high-density developments.</p> <p>Goal 3: Ensure Monrovia’s parks and open spaces meet local needs for active and passive recreation, enhance the environmental and visual quality of the community, and healthy living.</p> <p>Policy 3.1 Design and develop park sites and facilities to maximize recreational value and experience, while minimizing maintenance and operational costs and negative environmental and community impacts.</p> <p>Policy 3.2 Reduce barriers to participation and improve safety to provide universal access to facilities and programs. Implement an ADA Transition Plan to inform, guide and prioritize the removal of existing barriers.</p> <p>Policy 3.3 Establish and operate specialized recreational facilities (e.g. sport facilities, off leash dog areas, skateparks, community gardens) to respond to identified public needs, as appropriate.</p> <p>Policy 3.4 Conserve significant natural areas to meet habitat and hillside protection needs and to provide opportunities for residents to recreate and connect with nature, as appropriate.</p> <p>Goal 5: Allocate available resources and seek out additional funding to upgrade and maintain Monrovia’s existing parkland and open space infrastructure needs to maintain and expand recreational opportunities for residents.</p> <p>Policy 5.5 Continue to implement the strategies of the Parks Master Plan (PMP) and amend/update the Open Space Element and the PMP as needed to reflect community growth and changing needs.</p>	<p>(F) Monrovia Library Park, on South Myrtle Avenue and Lime Avenue;</p> <p>(G) Rotary Park, on South California Avenue and Lime Avenue; and</p> <p>(H) Station Square Park on South Myrtle Avenue and Pomona Avenue.</p> <p>(Ord. 2010-17 § 1, 2010; Ord. 2016-05 § 1, 2016)</p>	<p>2.4 Develop additional nonmotorized trails outside of parks to meet a targeted walkability score and promote Monrovia as a “walkable city.”</p> <p>Actions:</p> <p>1.2.2 Implement trail signage standards, route and wayfinding signage for trails and associated facilities and informational maps and materials identifying existing and planned trail facilities.</p> <p>1.2.5 Implement the goals and projects noted in the Bicycle Master Plan to strengthen the connections between the on-street infrastructure to existing and planned recreational trails.</p> <p>Strategic Direction 2: Secure Lands for The Future</p> <p>Goal: Monrovia provides a comprehensive system of parks, open space and recreation facilities that serves current and future needs</p> <p>Policies:</p> <p>3.1 Acquire additional parklands necessary to adequately serve the City’s current and future population based on adopted service levels. 3.2 Plan for the location of parks in the proximity of underserved neighborhoods and/or high-density developments.</p> <p>Actions:</p> <p>2.3.1 Provide a city-specific acreage standard for urban parks of 1.10 acres per 1,000 people to reinforce the importance of active-use urban parklands and provide for a land base to accommodate a variety of recreational uses.</p> <p>Strategic Direction 3: Create Great Parks and Public Spaces</p> <p>Goal: Monrovia’s parks and open spaces meet local needs for active and passive recreation, enhance the environmental and visual quality of the community, and healthy living.</p> <p>4.1 Design and develop park sites and facilities to maximize recreational value and experience, while minimizing maintenance and operational costs and negative environmental and community impacts. 4.2 Strive to reduce barriers to participation and improve safety to provide universal access to facilities and programs. 4.3 Establish and operate specialized recreational facilities (e.g. sport facilities, off leash dog areas, skateparks, community gardens) to respond to identified public needs, as appropriate.</p> <p>4.4 Conserve significant natural areas to meet habitat and hillside protection needs and to provide opportunities for residents to recreate and connect with nature, as appropriate.</p> <p>Action:</p> <p>3.4.1 Design new parks and provide improvements to existing parks which promote public safety and security, and provide accessibility to all in accordance with Americans with Disabilities Act standards.</p> <p>3.4.4 Incorporate sustainable development and low impact design practices into the design, planning and rehabilitation of new and existing facilities; consider the use of native or drought tolerant vegetation for landscaping in parks and reductions in irrigated turf to minimize maintenance requirements and reduce water demands.</p>
Montebello	<p>Our Well Planned Community Element:</p> <p>Action A3.1b Encourage parkland dedication and conservation easements for trails that support the City’s Parks Master Plan and the Green Infrastructure Plan.</p>	<p>Municipal codes related to recreation resources relevant to the Plan Area can be found in Title 17 Chapter 17.10 Development Standards - Open Space – Minimum. These requirements refer to Exhibit 17.10.020, Residential Development Standards, which details minimum open space area requirements for residential zoning designations.</p>	<p>City’s Parks Master Plan</p> <p>Parks and Recreation Element</p> <p>Goals:</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Action 3.1c: Capture the inherent value of parks, open spaces, and trails by providing more opportunities for people to live and work on properties with direct frontage on these investments.</p> <p>Our Accessible Community Element:</p> <p>Action 4.1e: Improve access to the Rio Hondo River Trail by opening additional access points and positioning wayfinding between the trail and key destinations in Montebello.</p> <p>Our Healthy Community Element:</p> <p>Policy 5.1: Create and enhance equitable access to spaces that will foster positive interactions and encourage healthy lifestyles.</p> <p>A5.1a: Create public spaces with seating, art, and play features near shopping and business areas of the City (partner with restaurants to create sidewalk outdoor seating areas to activate the sidewalk).</p> <p>Action 5.1b: Ensure that parks, recreation facilities, and other community services are equitably distributed and accessible throughout the community.</p> <p>Policy 5.6: Promote opportunities for people to build connections with their peers, neighbors, and the greater community supporting inter-generational and inter-cultural programs, activities, and events.</p> <p>Action 5.7b: Remove barriers and enhance access to existing parks.</p> <p>Our Active community:</p> <p>Policy 7.1: Expand park inventory to strive for the standard of 5 acres per 1000 residents.</p> <p>To encourage maximum use, the open space circulation system should integrate and connect with the circulation patterns of the neighborhood. The entrances and exits should be easy to locate from inside and outside the open space. Primary access route through the open space should be clearly identifiable, well maintained, and well lit.</p> <p>Action 7.1b: Provide parks, open spaces, and trails at Montebello Hills.</p> <p>Action 7.1c: Provide parks, open spaces, and trails along the Edison Easement.</p> <p>Policy 7.2: Ensure the maximum distance between residents’ homes and the nearest public park is 1/2 mile.</p> <p>Invest in the acquisition of new parkland that can make parks a part of everyday life in existing and future underserved areas. The City should introduce and develop a collection of smaller pocket parks that can be woven into existing urban areas with insufficient access to parks. Additionally, areas in the Downtown and along the Corridors where the city is focusing future transportation investments will help improve, increase, and expand access to future parkland.</p> <p>Policy 7.3: Promote, expand, and protect a green infrastructure that links the natural habitat</p> <p>Action 7.3b Use parks as functional landscapes that perform green stormwater infrastructure and flood mitigation roles to enhance resiliency, recreational use, and beauty. New parks will be designed with resiliency in mind with multi-benefit landscapes that protect against flooding, clean and filter stormwater, produce shade and prevent heat island effects, and promote not just environmental resiliency, but also social resiliency.</p> <p>Action 7.3c: Encourage simple, small, and low-cost demonstration green infrastructure projects both in the public and private realm. Parks can be everywhere humans can</p>	<p>(Prior code § 9230.2 (D))</p>	<p>1. To provide a full range of park and recreational facilities and programs which are easily accessible to all residents of the community.</p> <p>2. To provide 4.0 acres of parks and recreational use per 1,000 residents. Objectives:</p> <p>1. Provide neighborhood parks and recreational facilities wherever possible within walking distance of all residents.</p> <p>3. Establish park and recreational space in utility easements where open land is available.</p> <p>4. Channel area.</p> <p>5. Establish park and recreational facilities in the hill area.</p> <p>7.Add park facilities in the South Montebello area.</p> <p>Policies:</p> <p>3. City to meet the standard of 4.0 acres of per and recreational use per 1,000 residents.</p> <p>4. Pursue the goals and objectives for parks and recreation.</p> <p>Conservation Element:</p> <p>Goals:</p> <p>2. To ensure the preservation and conservation of and welfare needs of the residents.</p> <p>Objectives:</p> <p>3. In addition to obtaining new open space areas, the City should seek to make more use or multiuse of the existing open space areas of the community. This program would include recreation use of school playground facilities during non-school hours.</p> <p>Chapter 6: Recommendations</p> <p>Strategy 2:</p> <p>Linear Parks & Urban Spaces</p> <p>6.3.1 Develop Linear Parks</p> <ul style="list-style-type: none">Expand and explore opportunities for linear parks.Find areas where linear parks may occur.Reclaim underutilized streets and or infrastructure within the City. <p>6.3.2 Create A Unique Linear Trail at the Rio Hondo</p> <ul style="list-style-type: none">Expand the Rio Hondo Trail SystemIncorporate trails within the northern hills in Montebello and in new development areasInclude an urban trails signage program that connects corridors and trails within the city to other regional trails. <p>6.3.4 Connect to Urban Trails Outside of the City</p> <ul style="list-style-type: none">Look into connection along Rio Hondo that can connect green space in Pico Rivera and South El Monte

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>find a spot for peaceful reflection. The advent of green roofs is offering new opportunities to site innovative parks on roof tops.</p> <p>Action 7.3d: Include an urban trails signage program that connects corridors and trails within the City to other regional trails.</p> <p>Policy 7.4: Identify and remove barriers to access parks. Encourage walking and biking as preferred way to get to and from parks.</p> <p>Action 7.4b: Proactively plan entrances and access points for new parks to ensure the greatest number of residents are within walking distance.</p> <p>Action 7.4c: Prioritize new access or entry points near existing mobility networks, including sidewalks, bike routes, trails, and transit. A welcome change during the pandemic was streets transformed to be people-centered — from walking and biking to outdoor dining and street games. In downtown core and select neighborhoods, streets should be designed for people while accommodating cars.</p> <p>Policy 7.5: Make parks safer. Visibility is an important design criteria for enhancing people’s comfort and security. Dense, visually impenetrable planting creates the opportunity for crime.</p> <p>Action 7.5a: Design parks to be in the line of sight of adjacent land uses and activities to ensure visibility. The frontages of the buildings should have active edges such as front doors, windows, and storefronts.</p> <p>Action 7.5b: Lighting should direct movement between destinations.</p> <p>Action 7.5c: Increase presence of security officers in parks of concern.</p> <p>Open Space Element:</p> <p>Policy 4.1</p> <p>Support and promote walking, biking, and other nonvehicular modes as an alternative to driving within Montebello.</p> <p>Goals:</p> <p>1. To insure the preservation and conservation of sufficient open space to introduce relief from the otherwise uninterrupted urban development of the Southern California region.</p> <p>2. To insure the preservation and conservation of sufficient open space to serve the recreational, health, and welfare needs of the residents.</p> <p>Objectives:</p> <p>3. Provide open space and a full range of recreation facilities and programs which are easily accessible to all residents.</p>		
Pasadena	<p>Land Use Element:</p> <p>Goal 2. Land Use Diversity. A mix of land uses meeting the diverse needs of Pasadena’s residents and businesses, fostering improved housing conditions, offering a variety of employment and recreation opportunities, and supporting a healthy population while protecting the environment. Policy 2.8 Equitable Distribution of Community Devices and Amenities. Ensure that parks and recreation facilities, community services, and amenities are equitably distributed and accessible throughout the City.</p> <p>Policy 2.13 Parks. Maintain existing and develop new parks and recreational facilities within walking distance of residents, supporting healthy lifestyles.</p> <p>Goal 4. Elements Contributing to Urban Form. A safe, well-designed, accessible City with a diversity of uses and forms. These diverse forms include distinct, walkable</p>	<p>Municipal codes related to recreation resources relevant to the Plan Area can be found in Title 17 (Zoning Code) Article 2 (Zoning Districts, Allowable Land Uses, and Zone - Specific Standards) Chapter 17.26 – Special Purpose Zoning Districts which identifies the following:</p> <p>A. OS (Open Space) District. The OS district is applied to sites with open space, parks, and recreational facilities of a landscaped, open character having a minimum contiguous site area of two acres. The OS zoning district is consistent with and implements the Open Space land- use designation of the General Plan.</p> <p>Section 17.26.040 (Special Purpose District General Development Standards) requires that subdivisions, new land uses and structures, and alterations to existing land uses and structures in all special purpose districts except PD (Planned Development), shall</p>	<p>Green Space, Recreation and Parks Element and Master Plan:</p> <p>Objective 1 – Stewardship of the natural environment: encourage and promote the stewardship of Pasadena’s natural environment, including water conservation, clean air, natural open space protection, and recycling.</p> <p>Policy 1.2 – Protect Open Spaces: Protect natural open areas, watersheds, and environmentally sensitive areas such as Hahamongna, Eaton Canyon, riparian areas, and other open spaces.</p> <p>Objective 2 – Preservation and protection of the Arroyo Seco and adjacent open space areas: recognize the importance to Pasadena of the history, cultural resources, and unique character of the Arroyo Seco, and conserve and enhance these assets.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>districts, corridors, and transit and neighborhood villages and cohesive, unique single and multi-family residential neighborhoods and open spaces where people of all ages can live, work, shop and recreate.</p> <p>Goal 21. Desirable Neighborhoods. A City composed of neighborhoods with a variety of housing types that are desirable places to live, contribute to the quality of life, and are well maintained.</p> <p>Policy 21.10 Neighborhood Parks and Open Space Amenities. Ensure that existing neighborhoods contain a diverse mix of parks and open spaces that are connected by trails, pathways, and bikeways and are within easy walking distance of residents.</p> <p>Green Space, Recreation and Parks Element</p> <p>Objective 2 – Preservation and Protection of the Arroyo Seco and Adjacent Open Space Areas: Recognize the importance to Pasadena of the history, cultural resources, and unique character of the Arroyo Seco, and conserve and enhance these assets.</p> <p>Policy 2.1 – Arroyo Seco Planning: Fully implement all master plans and design guidelines for the Arroyo. This includes the Lower Arroyo Master Plan, the Hahamongna Watershed Park Master Plan, and the Central Arroyo Master Plan. (LUE Policy 9.2)</p> <p>Policy 2.2 – Balance of Interests in the Lower Arroyo Seco: Improve the aesthetics and preserve the historical elements and unique natural character of the Lower Arroyo. Manage and maintain the area to balance the natural habitat, recreational needs and public health and safety.</p> <p>Policy 2.3 – Balance Recreation with Environmental Protection: Implement the Arroyo Seco Master Plans by balancing recreational opportunities with protection and restoration of the ecosystem, while recognizing the important existing water resources and flood management functions of the area.</p> <p>Objective 3 – Preservation And Protection of Eaton Canyon, Eaton Wash, and Adjacent Open Space Areas: Recognize the importance to Pasadena of the history, cultural resources, and unique character of Eaton Canyon and Eaton Wash, and conserve and enhance these assets.</p> <p>Policy 3.1 – Eaton Canyon: Continue protection of Eaton Canyon as an open space and recreation area, and as a nature center. Explore master planning opportunities in the existing OS (Open Space) zoned area associated with the civil defense site and flood control areas. (LUE Policy 9.3)</p> <p>Policy 3.2 – Eaton Wash: Pursue improvements to Eaton Wash and a proposed north/south trail element that would link Pasadena to natural open space to the north.</p> <p>Objective 5: Trails and Open Space Connectivity: Acknowledge and enhance Pasadena’s important relationship with the Angeles National Forest and other regional trail systems.</p> <p>Policy 5.1 – Open Space Corridors: Develop open space corridors, easement and acquisition programs and trails. This is especially relevant for hillside areas and ridgelines. (from LUE Policy 9.1)</p> <p>Policy 5.2 – Trails for Bicyclists and Pedestrians: Review the OS (Open Space) zoned areas and city rights-of-way for opportunities to develop bike path and/or walking path connectivity.</p>	<p>be designed, constructed, and/or established in compliance with the following requirements, the development standards (e.g., landscaping, parking and loading, etc.) in Article 4 (Site Planning and General Development Standards), and all other applicable requirements of this Zoning Code. Principal and accessory structures shall meet the same development standards unless otherwise modified in this Zoning Ordinance.</p> <p>A. Master Plan requirement.</p> <p>1.The Planning Director may require any use within the OS and PS districts to submit a Master Plan, in compliance with Section 17.61.050.</p> <p>2.The Planning Director may require any public or semi-public use to submit a Master Plan, in compliance with Section 17.61.050.</p> <p>B.OS and PS district development standards. 1.Development standards shall be as specified by a Conditional Use Permit or Master Plan.</p> <p>2.Prior to the approval of a Conditional Use Permit or Master Plan, properties within the OS and PS districts shall be subject to the development standards of the most restrictive abutting zoning district.</p> <p>3.Development consistent with an approved Master Plan shall not be subject to Conditional Use Permit review.</p> <p>4.City projects shall comply with the public art design standards of Section 17.40.100.</p>	<p>Policy 2.3 – Balance recreation with environmental protection: Implement the Arroyo Seco Master Plans by balancing recreational opportunities with protection and restoration of the ecosystem, while recognizing the important existing water resources and flood management functions of the area.</p> <p>Policy 2.4 – Promote multi-faceted use of the Arroyo: Through implementation of the Arroyo Seco Master Plans, continue to maintain and enhance the area as a prime resource for quality of life of Pasadena residents.</p> <p>Objective 7 – Provide access to Parks: New projects should be planned so that neighborhood recreational needs of its future citizens are largely met on site or nearby and so that future facilities are integrated with, provide support for, and enhance the effectiveness of the overall recreation system in Pasadena. Growth and expansion in a particular area should be accompanied by commensurate growth and expansion in recreation facility, programming capacity, and natural open space capacity.</p> <p>Policy 7.2 – Access to open spaces within projects: Projects should be connected to the public realm through vistas, physical access, and/or sightlines. Provide an adequate total quantity and equitable distribution of public or publicly accessible open spaces throughout the City.</p> <p>Objective 17 – Facilitate ongoing community dialogue to ensure that residents’ open space, parkland, and recreation needs are met.</p> <p>Policy 17.1 - Community Input and Feedback: Provide methods for community members to offer ongoing information on their experiences with recreation and parks management, programs, and facilities. Surveys, questionnaires, website forms, and targeted outreach methods will provide feedback on areas in need of improvement and areas where goals are being met.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Objective 8 – Neighborhood Park Distribution and Planning: Preserve, enhance, and acquire parks in residential areas, within reasonable walking distance of all neighborhoods.</p> <p>Policy 8.1 – Service Area Radius: Provide neighborhood park facilities or other green space area within reasonable walking distance of the majority of residential areas. The City’s goal is to have a neighborhood park or facility within a ½ mile walk from anywhere in the City, taking into consideration natural and manmade barriers such as the I-210 Freeway and Eaton Wash.</p> <p>Objective 12 – Improve Access To Park And Recreation Facilities: The interface between all modes of travel (i.e. public transit, walking, bicycling) and recreation facilities is key in promoting the Citywide mobility policy that Pasadena will be a City where people can circulate without cars.</p> <p>Policy 12.1 – Pedestrian and Bicycle Connectivity: Parks and open spaces should be planned to be accessible to pedestrians and bicyclists through public sidewalks and bike routes.</p> <p>Policy 12.2 – Pedestrian and Bicycle Amenities: Benches, drinking fountains, and bicycle racks should be available at all park and recreation facilities. Buses routed to parks and open space areas should be equipped with bike racks.</p> <p>Policy 12.3 – Transit Connections: The ARTS bus program shall continue to plan routes to provide access to key recreation and park facilities throughout the City. This is especially true to connect senior living facilities with recreation facilities.</p>		
Pico Rivera	<p>Healthy Communities Element:</p> <p>Goal 10.7</p> <p>A complete system of parks and recreational facilities and programs that provide diverse opportunities for active recreation, passive recreation, and social interaction, meeting the needs of the community.</p> <p>Policy 10.7-2 Existing Facility Improvement. Continue to improve, rehabilitate, and expand existing park and recreation facilities, as funding is available, to meet the needs of Pico Rivera residents, employees, and visitors.</p> <p>Land Use Element:</p> <p>Goal 3.5</p> <p>Recognize the importance of the Whittier Narrows Dam, Rio Hondo and San Gabriel River channels in shaping the character, identity and physical structure of the community by protecting and enhancing these features.</p> <p>Policy 3.5-3 Recreation. Identify opportunities for passive recreation areas within and along the Whittier Narrows Dam, Rio Hondo and San Gabriel River channels.</p> <p>Goal 3.10</p> <p>A mix of governmental, educational, recreational and open space facilities that conveniently support the needs of Pico Rivera’s residents and businesses.</p> <p>Policy 3.10-1 Adequate Facilities. Ensure that community facilities and parks are distributed equitably throughout the city to provide efficient services to the broadest number of residents.</p> <p>Policy 3.10-4 Parks and Open Spaces. Seek to expand the city’s parklands, greenways and open spaces as land and funding become available, encouraging the redevelopment of vacant sites and coordinate with the appropriate regional agencies</p>	<p>Municipal codes related to recreation resources relevant to the Plan Area can be found in Chapter 18.10 O-S Open Space Zone, and are zoned under Public Uses of Parks and Playgrounds.</p> <p>Section 18.10.030 (Applicability – Criteria) determine:</p> <p>A. The O-S zone is a land use classification which, in part, assists in the implementation of the environmental and public facilities elements of the general plan. It is a zone classification designed to be applied on land as a separational transition between heavy and light land use intensities, and for the purpose of providing permanent open-space lands such as public schools, parks, recreational facilities, and other publicly oriented uses.</p> <p>B. Application of the O-S zone must be clearly defined within the scope and purpose qualifying land for an open-space function, and must be protected from the encroachment of land uses and development not performing such overall function and purpose.</p> <p>C. Uses of land which do not qualify and which are not specifically permitted in the O-S zone are hereby expressly prohibited.</p> <p>(Prior code § 9205.02(B))</p> <p>Section 18.10.040 (Permitted Uses) Regulations governing permitted uses of land in the O-S zone are specifically set forth in Chapter 18.40 of this title, which designates particular zones for Open Space uses including public parks, open spaces, and recreational facilities. Refer to Table 18.40.040 Land Use Chart. (Prior code § 9205.02(C))</p>	No other applicable ordinances were identified

	<p>Action A8.5: Identify and eliminate barriers, safety issues along walkways, and gaps in pedestrian and bike networks, and improve bike facilities that encourage access to parks.</p> <p>Policy P8.6 Develop a network of open spaces.</p> <p>Action A8.6a Connect the open spaces to neighborhoods through a series of landscaped streets that provide green links to the Walnut Creek as well as stormwater drainage.</p> <p>Policy P8.11: Ensure equal access to facilities and programs.</p> <p>Action A8.11a: Improve facilities at City Parks to respond to the requirements of special needs groups.</p>	<p>areas presenting high fire risks, areas required for the protection of water quality and water reservoirs and areas required for the protection and enhancement of air quality. (Code 1960, § 10901.10; Ord. No. 1333, § 1, 4-25-77; Ord. No. 2204, § 3(Exh. A), 2-16-10)</p>	

3.16.3 Impact Assessment

3.16.3.1 Significance Criteria

Appendix G of the State CEQA Guidelines was reviewed to determine whether the Plan would result in significant impacts related to recreation. The criteria listed below consider if the Plan would:

- 16(a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?*
- 16(b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?*

3.16.3.2 Methodology

Construction and operation impacts of the Plan on recreation are evaluated based on a literature review of conditions within and adjacent to the Plan Area. Where feasible, maps have been prepared to visualize these conditions.

The analysis focuses on issues related to the current and future use of the Plan Area for recreation. The key construction-related impacts were identified and evaluated qualitatively based on the physical characteristics of the Plan Area and the magnitude, intensity, location, and duration of activities that could occur under the Plan. Section 21060.5 of the State CEQA Guidelines defines environment as “the physical conditions that exist within the area which will be affected by the proposed project, including land, air, water, minerals, flora, fauna, noise, or objects of historic or aesthetic significance.” Therefore, the evaluation of potential for adverse physical effects on the environment draws from the analyses presented in Sections 3.1, Aesthetics, 3.3, Air Quality, 3.4, Biological Resources, 3.5 Cultural Resources, 3.7 Geology and Soils, 3.10 Hydrology and Water Quality, 3.12, Mineral Resources, and 3.13 Noise.

3.16.3.3 Plan Impacts

- 3.16.3.3.1 16(a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

- 3.16.3.3.1.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant with Mitigation. Portions of the Plan Area have limited available park land based on current standards (see Section 3.16.1, Environmental Setting). One of the primary goals of the Plan is to connect existing recreation areas via greenways. Therefore, it is anticipated that construction of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities may occur near and/or adjacent to existing regional parks or recreational facilities.

Construction of projects implemented under the Plan could result in partial closures of existing recreational areas or facilities at the points of connection where the Plan components would connect to those existing recreational facilities; however, the details would be highly dependent on the size and final configuration of a proposed project. Construction activity for individual projects would be limited to the permitted hours within the jurisdiction in which it is located. If an existing park or recreational facility needs to close temporarily for construction, users may disperse to other parks or recreational facilities in the region, resulting in increased usage, waste generation, noise, traffic, and additional maintenance of these alternate facilities during construction. However, this dispersal is not anticipated to lead to direct overuse and subsequent deterioration of any individual facilities given the broad geographic extent of the Plan Area in which projects may be located. Further, these temporary displacements would occur during the construction window or a portion of the construction window which involves direct construction activity at an existing recreational facility (see Section 2 for estimates of construction timelines for Plan components). Implementation of **MM REC-1: Coordinate with Parks Departments/Agencies** would allow recreational facilities to plan for potential temporary disruptions, as needed, and to plan for additional maintenance at nearby recreational facilities to ensure any increases in use do not result in physical deterioration of the facility. Therefore, potential impacts to the deterioration of existing neighborhood and regional parks or other recreational facilities would be less than significant with mitigation.

Operations

Less than Significant. Implementation of projects under the Plan would provide new and additional recreational opportunities and facilities throughout the Plan Area. This would increase and enhance recreation opportunities available to the public as well as potentially increase access to existing recreational areas, a key goal of the Plan. This would have a beneficial impact with regard to recreation in the Plan Area by providing additional recreational facilities and alleviating potential overuse of existing parks and recreational areas, thereby reducing rates of deterioration at existing recreational facilities. Implementation of the Plan would promote recreation and increase users to existing recreation areas and the improved connection to recreation areas would help meet the park needs within the Plan Area. Because these existing recreational facilities are operated by various jurisdictions in the Plan Area which already have existing operations and maintenance requirements, it is not anticipated that increased use would result in substantial physical deterioration of these facilities. Therefore, impacts would be less than significant.

Mitigation Measures

MM REC-1: Coordinate with Parks Departments/Agencies. Project proponents shall notify park agencies in advance of the nature, extent, and duration of construction activities that may affect parks, trails and other recreational facilities in order to minimize disruptions of recreational uses during construction activity and ensure adequate planning with regard to any needs for temporary increased levels of maintenance activity.

Significance After Mitigation

The application of **MM REC-1: Coordinate with Parks Departments/Agencies** would ensure that potential impacts to the deterioration of parks and/or recreational facilities would be less than significant.

3.16.3.3.2 16(b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

3.16.3.3.2.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Significant and Unavoidable. The objective of the Plan is to facilitate the construction of recreational facilities and supporting infrastructure within the Plan Area. Some future projects may also include the expansion of existing recreational facilities. Construction of Plan components would result in temporary, localized impacts to the physical environment, including from construction-related emissions and noise. These effects to the physical environment are described in detail within the respective chapters for each resource. Refer to Sections 3.1, Aesthetics, 3.3 Air Quality, 3.4 Biological Resources, 3.5 Cultural Resources, 3.7 Geology and Soils, 3.10 Hydrology and Water Quality, 3.12, Mineral Resources, and 3.13 Noise.

Impacts from construction or expansion of recreational facilities may be potentially significant and unavoidable or have mitigation measures assigned that reduce impacts to less than significant, as discussed in each of these resource analyses in the PEIR. The majority of potentially significant construction impacts for individual projects implemented under the Plan would be mitigated to less than significant; however, depending on the location of an individual project in relation to the presence of sensitive receptors, there remains the potential that for some projects implemented under the Plan, impacts to the physical environment would be significant and unavoidable.

Operations

Significant and Unavoidable. Operation of projects implemented under the Plan would result in operation of new recreational facilities that would be designed to attract recreational users. These projects would be designed to accommodate use by up to 1,000 visitors per day for greenway paths and amenities to as many as 3,292 visitors per day to a 25-acre greenspace. Operation of the new facilities would fill an identified need for additional recreational facilities in the SGV, as described in the LA County Park Needs Assessment and would likely result in reduced deterioration and adverse physical impacts at existing facilities that may be currently operating above capacity. This would result in a beneficial impact to recreational facilities throughout the SGV. Operation of projects under the Plan would require regular maintenance as described for each Plan component in Section 2.3. Maintenance activities may result in an adverse physical effect on the environment through noise and air emissions of maintenance equipment and use of chemicals to control weeds and pests. The effects are described in detail within the respective chapters for each resource and could be potentially significant, depending on the size and location of an individual project developed under the Plan relative to the location of nearby sensitive receptors. Refer to Sections 3.1, Aesthetics, 3.3 Air Quality, 3.4 Biological Resources, 3.5 Cultural Resources, 3.7 Geology and Soils, 3.10 Hydrology and Water Quality, 3.12, Mineral Resources, and 3.13 Noise.

Mitigation Measures

For construction, refer to all mitigation measures identified for construction impacts in Sections 3.1, Aesthetics, 3.3 Air Quality, 3.4 Biological Resources, 3.5 Cultural Resources, 3.7 Geology and Soils, 3.10 Hydrology and Water Quality, 3.12, Mineral Resources, and 3.13 Noise.

For operations, refer to all mitigation measures identified for operational impacts in Sections 3.1, Aesthetics, 3.3 Air Quality, 3.4 Biological Resources, 3.5 Cultural Resources, 3.7 Geology and Soils, 3.10 Hydrology and Water Quality, 3.12, Mineral Resources, and 3.13 Noise.

Significance After Mitigation

For both construction and operation, application of mitigation measures would reduce the impacts of most projects implemented under the Plan to less than significant levels; however, depending on individual project location and size, the potential exists for significant and unavoidable impacts to the physical environment to result from operation of new recreational facilities and/or expansion of existing recreational facilities under the Plan. Impacts would remain significant and unavoidable.

3.16.3.4 Impacts of Conceptual Design Projects

This section discusses potential impacts from the 10 conceptual designs discussed in Section 2, Project Description.

- 3.16.3.4.1 16(a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?

Construction

Less than Significant. Construction of the conceptual design projects would not result in additional impacts or impacts of greater severity related to existing parks or other recreational facilities than the program impacts discussed in Section 3.16.3.3.1, Impact 16(a). Partial closures of existing recreation areas or facilities could occur at the points of connection, depending on the size and final configuration of a proposed project. For each of the conceptual design projects which illustrate connection of the greenway path to an existing recreational facility, the potential exists that construction would result closure of a portion of that recreational facility where the interconnection is illustrated. Accordingly, the existing recreational users of these facilities would either move to a different area of the existing facility or disperse to other parks/recreational facilities in the region. While this would potentially result in increased use of these other facilities, recreational users would only be displaced for a short/temporary amount of time during the construction phase (i.e., only the phase of construction that directly impacts the existing recreational facility. Construction phases for the conceptual design projects that are not within the existing facilities would have no impact). Construction activities for all 10 conceptual design projects are within the limits of the Plan as described in Section 2, therefore, none are anticipated to result in more severe impacts or different impacts than as described above for the Plan. The application of **MM REC-1: Coordinate with Parks Departments/Agencies** would ensure that potential impacts to regional parks and recreational facilities are minimized and/or avoided to the extent feasible. Therefore, potential impacts to the deterioration of existing neighborhood and regional parks or other recreational facilities would be less than significant with mitigation.

Operations

Less than Significant. As discussed in Table 3.16-4 below, impacts of operation of the 10 conceptual design projects on nearby parks and recreational facilities would be similar as the program impacts described in Section 3.16.3.3.1.1 above.

Table 3.16-4. Analysis of Operations Impacts of Conceptual Design Examples to Recreational Resources

Conceptual Design Project	<i>16(a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?</i>
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i> <i>Greenway, lighting, pollinator garden, seating, safe crossing, linear stormwater management</i>	Less Than Significant with Mitigation. The Project would connect the greenway to the existing Vincent Lugo Park. Operation of the proposed facilities would introduce additional users to Vincent Lugo Park but also provide additional facilities and amenities. Therefore, potential impacts to this existing recreational facility would be less than significant with implementation of MM REC-1: Coordinate with Parks Departments/Agencies.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i> <i>Greenway, bike service station, pollinator garden, seating, safe crossing, stormwater management</i>	Less Than Significant with Mitigation. The Project would connect the greenway to the existing Hilda L. Solis Park. Operation of the proposed facilities may introduce additional users to Hilda L. Solis Park but would also provide additional facilities and amenities. Therefore, potential impacts to this existing recreational facility would be less than significant with implementation of MM REC-1: Coordinate with Parks Departments/Agencies.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i> <i>Greenway, bike service station, park ribbon, shade structures, stormwater BMPs, educational signage, outdoor classroom</i>	Less Than Significant with Mitigation. The Project would connect the greenway to the existing Victory Park, Sunnyslope Park, Gwinn Park, and Alice's Dog Park. Operation of the proposed facilities may introduce additional users to these parks but also provide additional facilities and amenities. Therefore, potential impacts to this existing recreational facility would be less than significant with implementation of MM REC-1: Coordinate with Parks Departments/Agencies.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i> <i>Greenway, safe crossing, landscaping</i>	Less Than Significant with Mitigation. The Project would connect the greenway to the existing Eaton Blanche Park. Operation of the proposed facilities may introduce additional users to Eaton Blanche Park but also provide additional facilities and amenities. Therefore, potential impacts to this existing recreational facility would be less than significant with implementation of MM REC-1: Coordinate with Parks Departments/Agencies.
San Dimas Wash at Arrow High School <i>City of Glendora</i> <i>Greenway, safe crossing, landscaping, shade structure, outdoor classroom, picnic area, seating</i>	Less Than Significant with Mitigation. The Project would connect the greenway to the Arrow High School, providing pedestrian access and thoroughfare to the school. The greenway would pass through the existing Gladstone Park. Operation of the proposed facilities may introduce additional users to Gladstone Park but also provide additional facilities and amenities. Therefore, potential impacts to this existing recreational facility would be less than significant with implementation of MM REC-1: Coordinate with Parks Departments/Agencies.

Conceptual Design Project	16(a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?
San Dimas Wash at Hollenbeck Park <i>City of Covina</i> <i>Greenway, safe crossing, seating, river overlook, community garden</i>	Less Than Significant with Mitigation. The Project would connect the greenway to the existing Hollenbeck Park. Operation of the proposed facilities may introduce additional users to these parks but also provide additional facilities and amenities. Therefore, potential impacts to this existing recreational facility would be less than significant with implementation of MM REC-1: Coordinate with Parks Departments/Agencies.
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated Los Angeles County community of Avocado Heights</i> <i>Greenway, pocket park, overlook, stair climb</i>	Less Than Significant. The Project would connect the greenway to a new pocket park along the San Jose Creek drainage canal. Operation of the proposed facilities would create a new recreational opportunity (i.e., the Pocket Park), providing additional recreational facilities and assets to the area. Because this project would not be connecting to an existing recreational facility, no coordination with existing parks or recreation facilities would be needed. Therefore, potential impacts to other facilities would be less than significant.
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i> <i>Greenway, pollinator garden, permeable pavement, flexible greenspace</i>	Less Than Significant with Mitigation. The Project would connect the greenway to the existing Ganesha Park. Operation of the proposed facilities may introduce additional users to Ganesha Park but also provide additional facilities and amenities. Therefore, potential impacts to this existing recreational facility would be less than significant with implementation of MM REC-1: Coordinate with Parks Departments/Agencies.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park and West Covina</i> <i>Greenway, plaza, shade trees</i>	Less Than Significant. The Project would connect the greenway to a new open space area along the Walnut Creek drainage canal. Operation of the proposed facilities would create a new recreational opportunity (i.e., the open space/habitat), providing additional recreational facilities and assets to the area. Because this project would not be connecting to an existing recreational facility, no coordination with existing parks or recreation facilities would be needed. Therefore, potential impacts to other facilities would be less than significant.
Walnut Creek at Pocket Park <i>City of West Covina</i> <i>Greenway, gateway, bike service station, picnic area, landscaping, pollinator garden, public art</i>	Less Than Significant with Mitigation. The Project would connect the greenway to a new open space area along the Walnut Creek drainage canal. Operation of the proposed facilities would create a new recreational opportunity (i.e., the open space/habitat), providing additional recreational facilities and assets to the area. Therefore, potential impacts may be potentially beneficial and less than significant.

3.16.3.4.2 16(b). Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?

Construction

Significant and Unavoidable. Potential construction impacts for the conceptual projects would be the same as the Plan impacts discussed in Section 3.16.3.3.2 above. Construction of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management would result in temporary, localized impacts to air quality (dust), traffic/transportation, noise, and visual/aesthetic resources. These impacts may be potentially significant and have mitigation assigned, as

discussed in each of these resource analyses in the PEIR. However, all 10 of the conceptual design projects are located within 50 feet of residences and sensitive receptors, therefore, as discussed in Section 3.13, Noise, there is potential for groundborne vibration during construction to exceed significance thresholds and result in adverse physical impacts to nearby structures. Therefore, the construction of all 10 conceptual design projects would potentially result in significant and unavoidable adverse physical impacts to the environment.

Operations

Less than Significant with Mitigation. The components proposed for all 10 conceptual design projects are within the maximum extent limits as described for the Plan in Section 2.3.1, Components of the Plan and CEQA Organization. Construction and operations of the conceptual design projects would not result in additional impacts or impacts of greater severity related to existing parks or other recreational facilities than those already addressed in Section 3.16.3.3.2, Impact 16(b). Impacts of operations would be the same as described above.

Table 3.16-5. Analysis of Operations Impacts of Conceptual Design Examples to Recreational Resources

Conceptual Design Project	16(b). Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i> <i>Greenway, lighting, pollinator garden, seating, safe crossing, linear stormwater management</i>	<p>Significant and Unavoidable. This conceptual design project would include construction of new recreation facilities as well as connect the greenway to the existing Vincent Lugo Park and is approximately 50 feet from the nearest sensitive receptors. Construction of these new recreational facilities could have the following impacts on the physical environment, as described in respective resource categories and summarized below:</p> <p>Potential impacts to scenic vistas (Aesthetic Resources), air quality, biological resources, cultural resources, paleontological resources, mineral resources, and noise would all be less than significant with mitigation. However, as described in Section 3.13, Noise, based on the location of the conceptual design in close proximity to sensitive receptors, groundborne vibration during construction of this recreational facility would be potentially significant and unavoidable.</p>
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i> <i>Greenway, bike service station, pollinator garden, seating, safe crossing, stormwater management</i>	<p>Significant and Unavoidable. The Project would connect the greenway to the existing Hilda L. Solis Park. This conceptual design projects is located within 50 feet of nearby residences and close proximity to three elementary schools. Construction of these new recreational facilities could have the following impacts on the physical environment, as described in respective resource categories and summarized below:</p> <p>Potential impacts to scenic vistas (Aesthetic Resources), air quality, biological resources, cultural resources, paleontological resources, mineral resources, and noise would all be less than significant with mitigation. However, as described in Section 3.13, Noise, based on the location of the conceptual design in close proximity to sensitive receptors, groundborne vibration during construction of this recreational facility would be potentially significant and unavoidable.</p>
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	<p>Significant and Unavoidable. The Project would connect the greenway to the existing Victory Park, Sunnyslope Park, Gwinn Park, and Alice's Dog Park. This conceptual design project would be within 50 feet of residences and Pasadena High School. Construction of these new recreational facilities could have the following impacts on the physical environment, as described in respective resource categories and summarized below:</p>

Conceptual Design Project	16(b). Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?
<i>Greenway, bike service station, park ribbon, shade structures, stormwater BMPs, educational signage, outdoor classroom</i>	Potential impacts to scenic vistas (Aesthetic Resources), air quality, biological resources, cultural resources, paleontological resources, mineral resources, and noise would all be less than significant with mitigation. However, as described in Section 3.13, Noise, based on the location of the conceptual design in close proximity to sensitive receptors, groundborne vibration during construction of this recreational facility would be potentially significant and unavoidable.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i> <i>Greenway, safe crossing, landscaping</i>	Significant and Unavoidable. The Project would connect the greenway to the existing Eaton Blanche Park. This conceptual design project would be within 50 feet of residences and a nearby elementary school. Construction of these new recreational facilities could have the following impacts on the physical environment, as described in respective resource categories and summarized below: Potential impacts to scenic vistas (Aesthetic Resources), air quality, biological resources, cultural resources, paleontological resources, mineral resources, and noise would all be less than significant with mitigation. However, as described in Section 3.13, Noise, based on the location of the conceptual design in close proximity to sensitive receptors, groundborne vibration during construction of this recreational facility would be potentially significant and unavoidable.
San Dimas Wash at Arrow High School <i>City of Glendora</i> <i>Greenway, safe crossing, landscaping, shade structure, outdoor classroom, picnic area, seating</i>	Significant and Unavoidable. The Project would connect the greenway to the Arrow High School, providing pedestrian access and thoroughfare to the school. This conceptual design project would be within 50 feet of residences and Arrow High School. Construction of these new recreational facilities could have the following impacts on the physical environment, as described in respective resource categories and summarized below: Potential impacts to scenic vistas (Aesthetic Resources), air quality, biological resources, cultural resources, paleontological resources, mineral resources, and noise would all be less than significant with mitigation. However, as described in Section 3.13, Noise, based on the location of the conceptual design in close proximity to sensitive receptors, groundborne vibration during construction of this recreational facility would be potentially significant and unavoidable.
San Dimas Wash at Hollenbeck Park <i>City of Covina</i> <i>Greenway, safe crossing, seating, river overlook, community garden</i>	Significant and Unavoidable. The Project would connect the greenway to the existing Hollenbeck Park. This conceptual design project would be within 50 feet of residences. Construction of these new recreational facilities could have the following impacts on the physical environment, as described in respective resource categories and summarized below: Potential impacts to scenic vistas (Aesthetic Resources), air quality, biological resources, cultural resources, paleontological resources, mineral resources, and noise would all be less than significant with mitigation. However, as described in Section 3.13, Noise, based on the location of the conceptual design in close proximity to sensitive receptors, groundborne vibration during construction of this recreational facility would be potentially significant and unavoidable.
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated Los Angeles County community of Avocado Heights</i>	Significant and Unavoidable. The Project would connect the greenway to a new pocket park along the San Jose Creek drainage canal. This conceptual design project would be within 50 feet of residences and Pasadena High School. Construction of these new recreational facilities could have the following impacts on the physical environment, as described in respective resource categories and summarized below: Potential impacts to scenic vistas (Aesthetic Resources), air quality, biological resources, cultural resources, paleontological resources, mineral resources, and noise would all be less than significant with mitigation. However, as described in Section 3.13, Noise, based on the location of

Conceptual Design Project	16(b). Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?
<i>Greenway, pocket park, overlook, stair climb</i>	the conceptual design in close proximity to sensitive receptors, groundborne vibration during construction of this recreational facility would be potentially significant and unavoidable.
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i> <i>Greenway, pollinator garden, permeable pavement, flexible greenspace</i>	<p>Significant and Unavoidable. The Project would connect the greenway to the existing Ganesha Park. This conceptual design project would be within 50 feet of residences. Construction of these new recreational facilities could have the following impacts on the physical environment, as described in respective resource categories and summarized below:</p> <p>Potential impacts to scenic vistas (Aesthetic Resources), air quality, biological resources, cultural resources, paleontological resources, mineral resources, and noise would all be less than significant with mitigation. However, as described in Section 3.13, Noise, based on the location of the conceptual design in close proximity to sensitive receptors, groundborne vibration during construction of this recreational facility would be potentially significant and unavoidable.</p>
Walnut Creek at Syhre Park <i>Cities of Baldwin Park and West Covina</i> <i>Greenway, plaza, shade trees</i>	<p>Significant and Unavoidable. The Project would connect the greenway to a new open space area along the Walnut Creek drainage canal. This conceptual design project would be within 50 feet of residences. Construction of these new recreational facilities could have the following impacts on the physical environment, as described in respective resource categories and summarized below:</p> <p>Potential impacts to scenic vistas (Aesthetic Resources), air quality, biological resources, cultural resources, paleontological resources, mineral resources, and noise would all be less than significant with mitigation. However, as described in Section 3.13, Noise, based on the location of the conceptual design in close proximity to sensitive receptors, groundborne vibration during construction of this recreational facility would be potentially significant and unavoidable.</p>
Walnut Creek at Pocket Park <i>City of West Covina</i> <i>Greenway, gateway, bike service station, picnic area, landscaping, pollinator garden, public art</i>	<p>Significant and Unavoidable. The Project would connect the greenway to a new open space area along the Walnut Creek drainage canal. This conceptual design project would be within 50 feet of residences. Construction of these new recreational facilities could have the following impacts on the physical environment, as described in respective resource categories and summarized below:</p> <p>Potential impacts to scenic vistas (Aesthetic Resources), air quality, biological resources, cultural resources, paleontological resources, mineral resources, and noise would all be less than significant with mitigation. However, as described in Section 3.13, Noise, based on the location of the conceptual design in close proximity to sensitive receptors, groundborne vibration during construction of this recreational facility would be potentially significant and unavoidable.</p>

3.17 Transportation

This section includes a description of the existing transportation systems and traffic conditions in the Plan Area; a summary of applicable regulations related to transportation; and an evaluation of the potential impacts of the Plan related to traffic and transportation in and around the Plan Area.

Table 3.17-1. Summary of Potential Impacts of the Plan on Transportation.

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the Plan:			
17(a). Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Less than Significant	Construction: MM TR-1: Construction Transportation Management Plan
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Less than Significant	MM TR-2: Restrict Lane Closures and Maintain Access
Greenway Paths + Safe Crossings	Significant and Unavoidable	Less than Significant	MM TR-3: Closure Notification and Detours
Greenway Paths + Stormwater Management	Significant and Unavoidable	Less than Significant	MM TR-4: Notify Emergency Personnel of Road Closures Operations: No mitigation
17(b). Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction No mitigation Operations: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Significant and Unavoidable	Construction: No Mitigation Operations: MM TR-5: Determine VMT Based on Type of Subsequent Project MM TR-6: Implement Transportation Demand

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the Plan:			
			Management Strategies and/or Enhancements to Reduce VMT
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant	Construction No mitigation
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	Operations: No mitigation
17(c). Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Less than Significant	Construction: MM TR-1: Construction Transportation Management Plan
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Less than Significant	Operations: No mitigation
Greenway Paths + Safe Crossings	Significant and Unavoidable	Less than Significant	
Greenway Paths + Stormwater Management	Significant and Unavoidable	Less than Significant	
17(d). Result in inadequate emergency access?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Less than Significant	Construction: MM TR-1: Construction Transportation Management Plan
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Less than Significant	Operations: No mitigation
Greenway Paths + Safe Crossings	Significant and Unavoidable	Less than Significant	
Greenway Paths + Stormwater Management	Significant and Unavoidable	Less than Significant	

3.17.1 Environmental Setting

3.17.1.1 Regional Circulation System

The transportation system serving the SGV is a complex, built-out, multimodal network designed to carry both people and goods. It consists of major freeways, roadways, bicycle facilities, sidewalks, public transit, freight railways, airports, seaports, and intermodal terminals. There is also a network of trails through the extensive open areas and mountains that lie between the urbanized areas. Major components of the transportation network within the Plan area are described below.

3.17.1.2 Local Roadway Network

Figure 3.17-1 presents the existing roadway network within the Plan Area, including freeways, arterials, secondary streets, and local roads. The network of freeways and State highways supports high-capacity limited-access travel, whereas the arterial network provides high levels of signalized street capacity and serves as a feeder system for the regional freeways and local street system. The freeway and highway system is the primary means of regional person and goods movement, providing for direct vehicular access to river access points, and to employment, services, and goods. The Plan Area is served by portions of Interstate 10 (I-10), Interstate 210 (I-210), Interstate 605 (I-605), Interstate 710 (I-710), State Route 39 (SR-39), State Route (SR-57), State Route (SR-60), State Route 66 (SR-66), State Route (SR-71), State Route 110 (SR-110), State Route 164 (SR-164), and State Route 210 (SR-210).

The arterial network in the Plan Area provides high levels of signalized street capacity and serves as a feeder system for regional freeways and the local street system. In many locations, the arterial streets provide the only local access to Plan Areas within the SGV, with many secondary and especially local roads dead-ending at the District ROW.

Los Angeles County has developed a Vision Zero Plan (2019), which aims to reduce traffic fatalities and/or injuries to zero. The County has identified specific roadway corridors that experience higher than average collisions, injuries, and fatalities. Table 3.17-2 provides the locations of the Collision Concentration Corridors identified in the Plan Area.

Table 3.17-2. Vision Zero Los Angeles County Collision Concentration Corridors in Plan Area

Community Name	Roadway	Approximate Limits
Bassett	Puente St	Amar Rd to Cagliero St
	Amar Rd	Feather Ave to Puente Ave
Charter Oak	Arrow Hwy	1300 feet east of Grand Ave to 1500 feet east
Hacienda Heights	Gale Ave	Latchford Ave to Fieldgate Ave
South San Gabriel	San Gabriel Boulevard	Potrero Grande Ave to Hill Dr/ Paramount Blvd
South San Jose Hills	Valley Blvd	Hambledon Ave to Giano Rd
Unincorporated Arcadia	Live Oak Ave	9th Ave to Peck Road / Myrtle Ave
Unincorporated Azusa	Gladstone St	Citrus Ave to Barranca Ave

Community Name	Roadway	Approximate Limits
	Barranca Ave	1800 feet south of Gladstone St to Ghent St
	Arrow Hwy	500 feet west of Citrus Av to 500 feet west of
Unincorporated Covina	Arrow Hwy	Roxburgh Ave to 500 feet east of Homerest Ave
	Vincent Ave	1500 feet north of Bellbrook St to Edna Pl
	Cypress St	Ellen Dr to Lark Ellen Ave
	Lark Ellen Ave	Tudor St to Cypress St
Valinda	Amar Rd	Aileron Ave to Lidford Ave
	Valinda Ave	Fellowship St to Burtree St/ Summer Pl
Valinda/South San Jose Hills	Azusa Ave	Amar Rd to Temple Ave
Whittier Narrows	Rosemead Blvd	1100 feet south of San Gabriel Blvd/ Durfee Ave to 3750 feet south of San Gabriel Blvd/ Durfee Ave

Source: Los Angeles County 2019

3.17.1.3 Public Transit System

The regional public transit system includes heavy rail transit operations, regional commuter rail services, regional and municipal bus operations, and local shuttles. The Los Angeles County Metropolitan Transportation Authority (Metro) is the largest provider of public transit service in the Plan, and its service is supplemented by numerous municipal transit lines and local shuttle services.

Metro operates six lines, including two subway (heavy rail rapid transit) lines (the B and D lines) and four light rail lines (the A, C, L and E lines), and 93 stations. The Metro rail system connects with the Metro Busway bus rapid transit system (the G and J lines) and also with the Metrolink commuter rail system. Figure 3.17-2 illustrates the existing and planned major transit projects in the County included in Metro's Long-Range Transportation Plan for the horizon year 2060.

Metrolink and Amtrak are the two additional rail service operators in the County. The Southern California Regional Rail Authority operates the Metrolink commuter rail system, which has its hub in Downtown Los Angeles at Union Station and extends to Ventura, San Bernardino, Riverside, Orange, and San Diego counties and serves some of the unincorporated areas. Amtrak provides interstate service from points around the country to Union Station, as well as regional service between major cities throughout California.

Metro bus system comprises 140 lines/170 routes serving 16,000 bus stops in the County, per the NextGen Bus Plan (Metro 2020). Metro approved the NextGen Bus Plan in October 2020 to provide a better bus system for the County. LA County Public Works and LAGOBUS operate fixed route shuttle services and the Link to provide an affordable and efficient transit service (generally with a frequency of 30 to 60 minutes) to key destinations for residents in communities in unincorporated areas. These shuttle services connect with transit providers such as Metro, Metrolink, Torrance Transit, Los Angeles Department of Transportation DASH, Gardena Bus Lines, Culver City Bus, Gardena Bus lines, Inglewood I-Line Trolley, Big Blue Bus, Santa Clara Transit, La Puente Link, Foothill Transit, La Puente Link, Alhambra Community Transit, El Sol Shuttle, Monterey Park Spirit, Montebello Transit, and Norwalk Transit.

3.17.1.4 Bicycle and Pedestrian Facilities

An extensive system of bicycle facilities exists in the Plan Area (LA County Public Works 2012). Bicycle facilities in unincorporated areas are maintained by the County of Los Angeles and others are maintained by their respective municipalities. Per the County's 2012 Bicycle Master Plan, bicycle facilities in unincorporated areas of the County are classified as follows (LA County Public Works 2012):

- **Bicycle Path (Class I).** These routes are exclusive to bicycles and are typically not located within roadways. Bicycle paths may be completely separated from roadways and are often located near recreational areas like rivers or coastlines.
- **Bicycle Lane (Class II).** These routes are part of the on-street network and are designated by signage and markings to be separate from vehicle lanes.
- **Bicycle Route (Class III).** These routes are included within road ROWs with signage and sharrows on the pavement to designate the bicycle route. Motorists and bicycle riders share the road under this designation.
- **Bikeways (Class IV).** A Class IV Bikeway (separated bikeway) is a bikeway for the exclusive use of bicycles and includes a physical separation between the bicyclist and motorist. The separation may include, but is not limited to, grade separation, flexible posts, inflexible physical barriers, or on-street parking.

Note that as of the writing of this PEIR the County is working on updating the Bicycle Master Plan which will be adopted as part of the General Plan Amendment. This proposed update to the Bicycle Master Plan is addressed in Section 4, Cumulative Effects. Existing and planned bikeways in the Plan Area are illustrated in Figure 3.17-3. Table 3.17-3 identifies the existing County-maintained bikeways in the East SGV Planning Area while Table 3.17-4 provides the existing county-maintained bikeways in the West SGV Planning Area. As summarized in Table 3.17-3 and Table 3.17-4, approximately 54.4 miles of County-maintained Class I, II, and III bikeways are in the Plan Area.

Table 3.17-3. East SGV Existing County-Maintained Bikeways

Community Name	Segment	From	To	Class	Mileage
Avocado Heights and City of Industry	San Jose Creek Bicycle Path	Workman Mill Road	7th Avenue	1	2.1

Source: LA County Public Works 2012

According to the Los Angeles County Bicycle Master Plan, the proposed future bicycle network within East SGV Planning area includes approximately 25.2 miles of Class I bicycle paths, 31.0 miles of Class II bicycle paths, 30.6 miles of Class III bicycle paths, and 4.3 miles of bicycle boulevard. The proposed future bicycle network within West SGV Planning area includes approximately 9.1 miles of Class I bicycle paths, 17.1 miles of Class II bicycle paths, 34.3 miles of Class III bicycle paths, and 5.2 miles of bicycle

boulevard. Individual cities in the Plan Area have plans to implement their own bike lanes according to their master plans that are above and beyond the facilities planned in the County of Los Angeles.

Pedestrian facilities include sidewalks, crosswalks, and pedestrian signals. The Plan Area includes existing pedestrian facilities along many local roadways.

3.17.2 Regulatory Setting

The U.S. Department of Transportation is the primary federal department concerned with transportation regulation and consists of multiple agencies, including the FHWA, FTA, and Federal Motor Carrier Safety Administration. Federal transportation regulations are primarily found in CFR 23 and 49. Caltrans is the primary state agency responsible for implementing regulations on the state's highways and freeways. State regulations are primarily found in California's Streets and Highways Code and Vehicle Code and regulate many aspects of transportation such as truck operation and routes.

3.17.2.1 State

3.17.2.1.1 Senate Bill 743

OPR published its proposal for comprehensive updates to the State CEQA Guidelines in November 2017 which included proposed updates related to analyzing transportation impacts pursuant to SB 743. These updates indicated that VMT be the primary metric used to identify transportation impacts. In December 2018, OPR published the most recent version of the Technical Advisory on Evaluating Transportation Impacts (December 2018), which provides guidance for VMT analysis. The Office of Administrative Law approved the updated State CEQA Guidelines and lead agencies were required to implement the updated guidelines by July 1, 2020.

3.17.2.1.2 Statewide Transportation Improvement Program

The California Transportation Commission administers transportation programming. Transportation programming is the public decision-making process that sets priorities and funds projects envisioned in long-range transportation plans. It commits expected revenues over a multiyear period to transportation projects. The Statewide Transportation Improvement Program is a multi-year Capital Improvement Program of transportation projects on and off the State Highway System, funded with revenues from the State Highway Account and other funding sources. Caltrans manages the operation of State Highways, including the freeways passing through Los Angeles County.

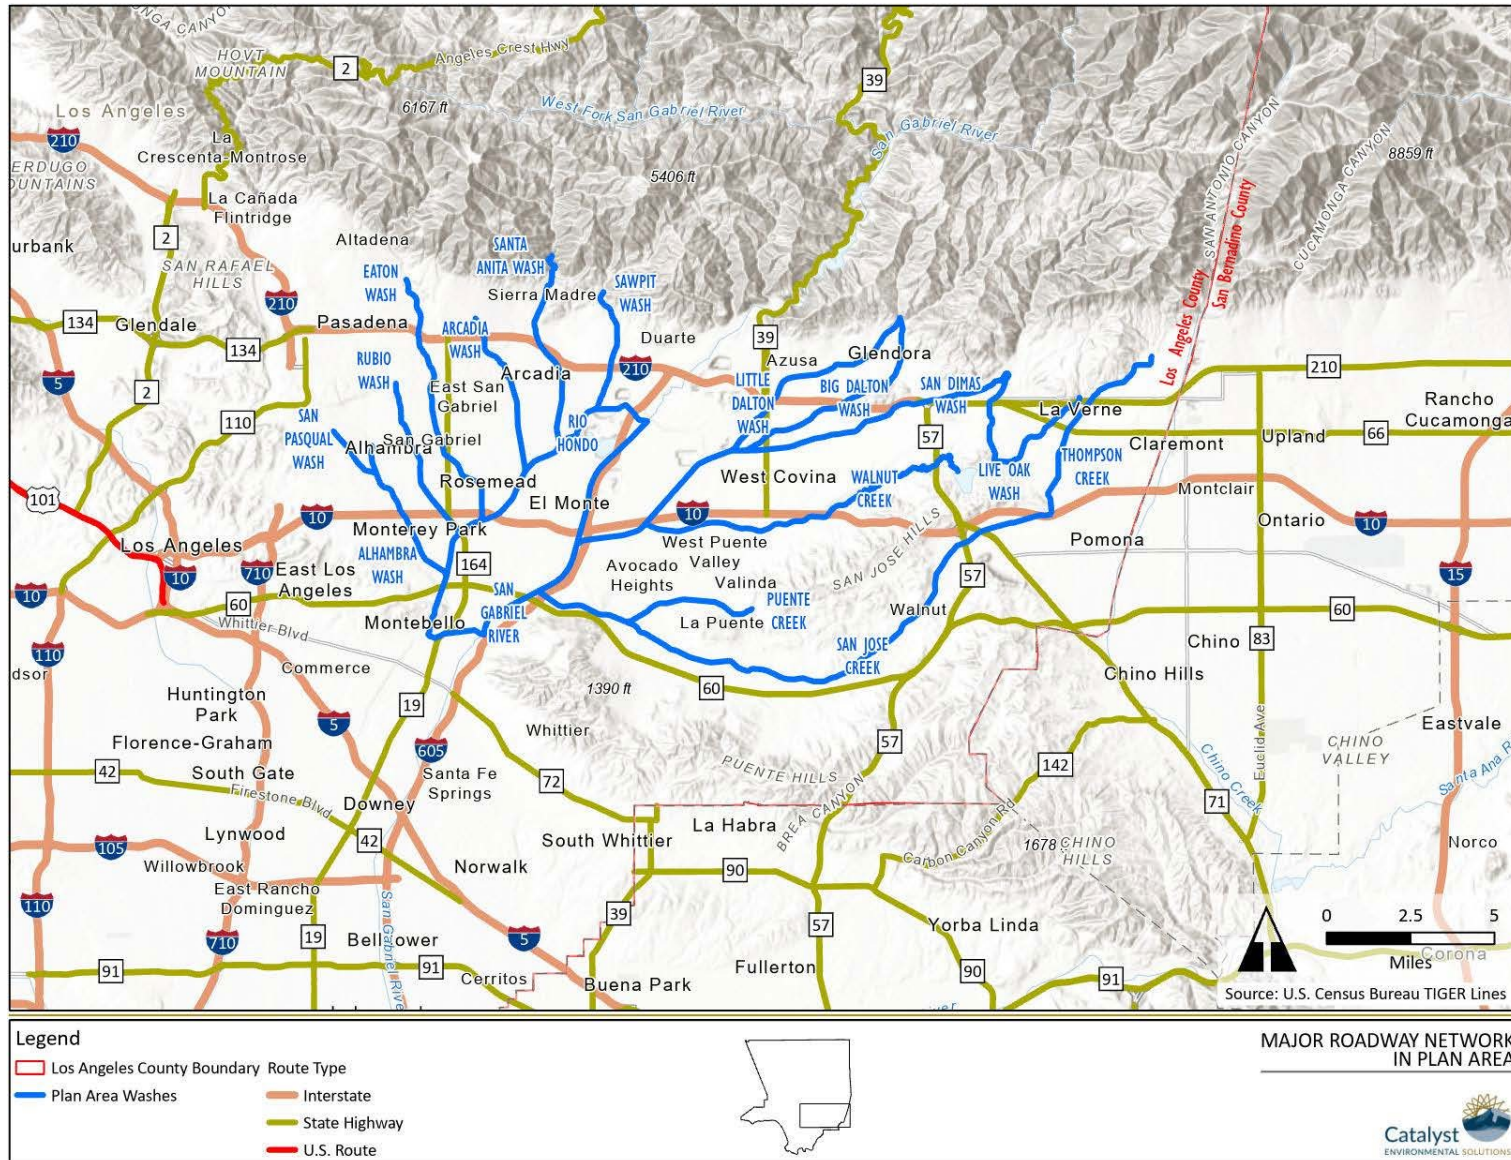

Figure 3.17-1. Major Roadway Network in Plan Area

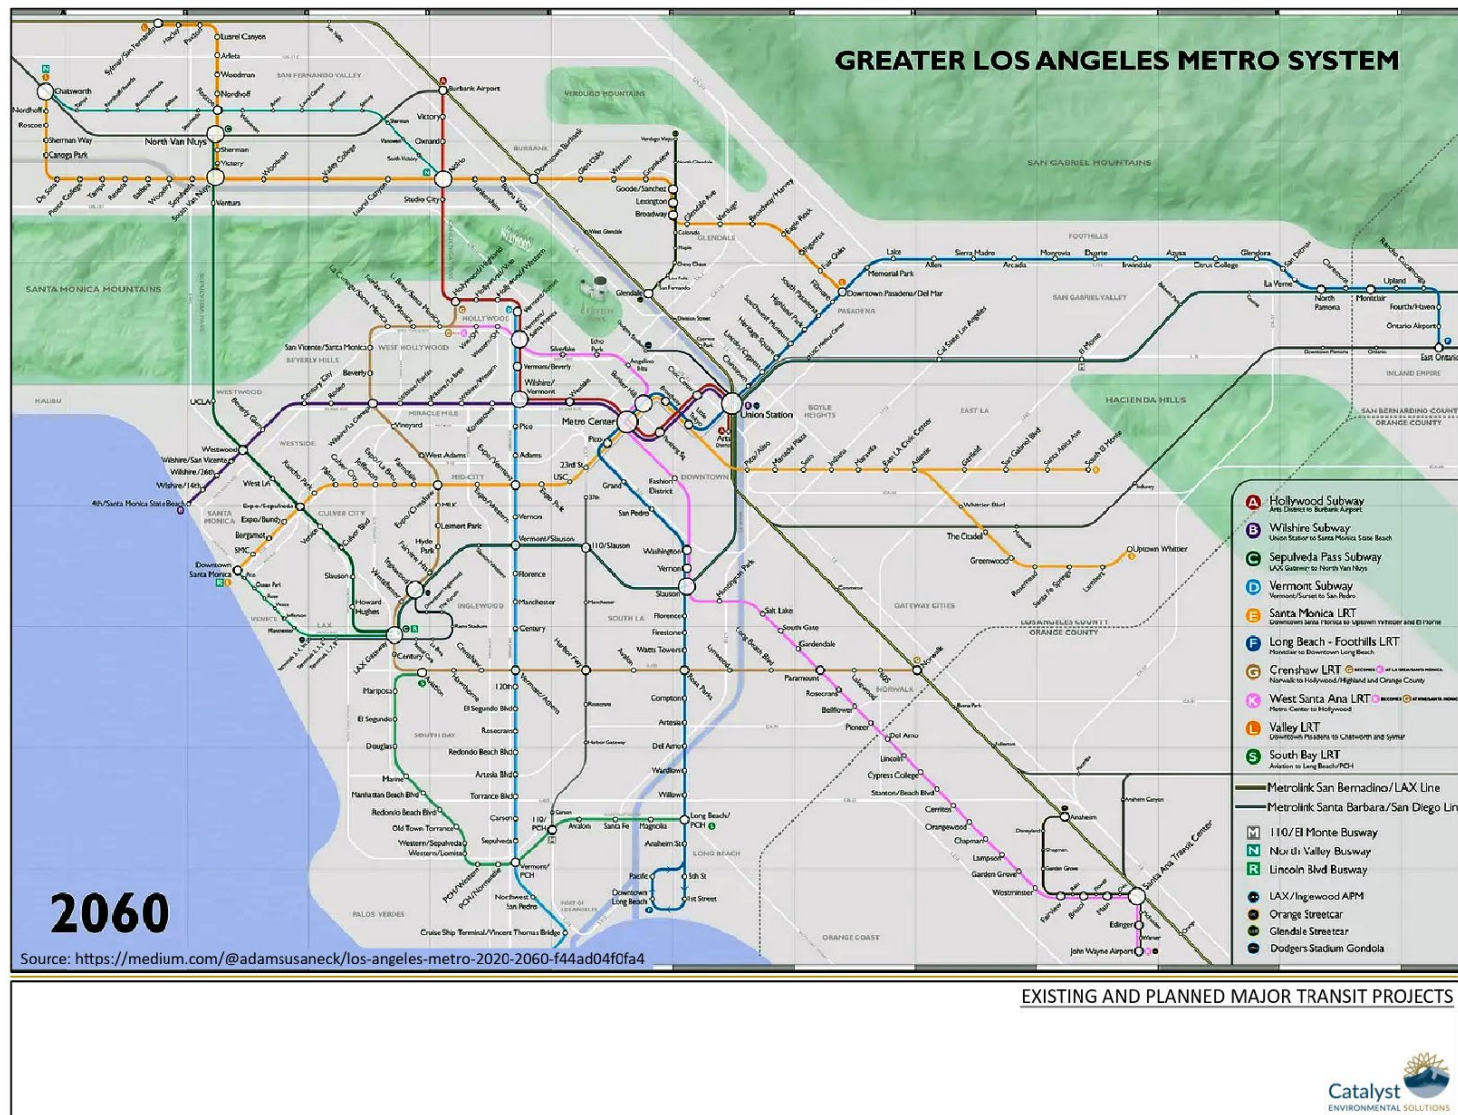

Figure 3.17-2. Existing and Planned Major Transit Projects

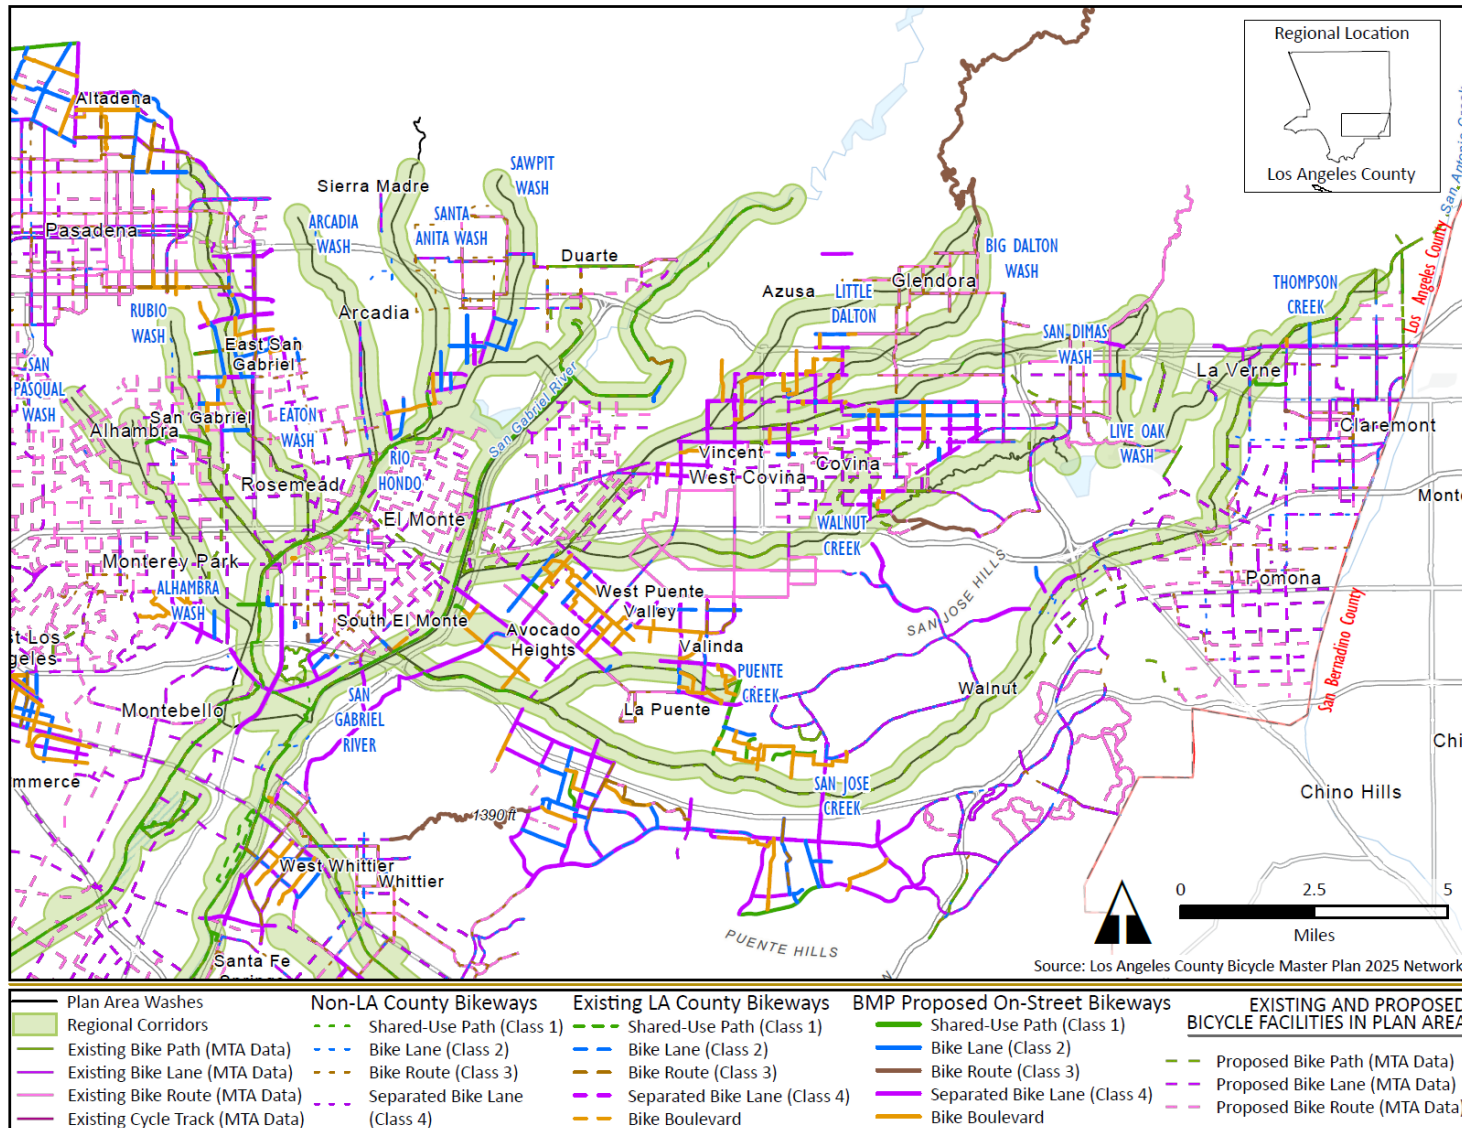

Figure 3.17-3. Existing and Planned Major Transit Projects

3.17.2.1.3 Senate Bill 32/Executive Order B-30-15

This executive order sets in place a new statewide policy goal to reduce GHG emissions 40 percent below their 1990 levels by 2030. This order acts as an intermediate goal to achieving 80 percent reductions by 2050. California's new emission reduction target of 40 percent below 1990 levels by 2030 will make it possible to reach the goal established by Executive Order S-3-05 of reducing emissions 80 percent under 1990 levels by 2050. Such reductions will require major changes in the transportation sector. This intermediate target was codified into law by SB 32, which was signed into law by Governor Jerry Brown on September 8, 2016.

3.17.2.1.4 Senate Bill 375

The adoption of SB 375 on September 30, 2008, created a process whereby local governments and other stakeholders must work together within their region to achieve the GHG reductions specified in AB 32 through integrated development patterns, improved transportation planning, and other transportation measures and policies. Under SB 375, CARB is required to set regional vehicular GHG reduction targets for 2020 and 2035. Additionally, SB 375 required that those targets be incorporated within a SCS, a newly required element within the Metropolitan Planning Organization's RTP. On March 22, 2018, CARB adopted updated vehicular GHG emissions reduction targets relative to emissions in 2005 for each Metropolitan Planning Organization. SCAG is the Metropolitan Planning Organization for the Southern California region and is required to work with local jurisdictions. CARB has determined SCAG's reduction target for per capita vehicular emissions to be 19 percent by 2035. Achieving such reductions will require major changes in the transportation sector, travel behavior and mobility choices.

3.17.2.2 Los Angeles County

3.17.2.2.1 Southern California Association of Governments 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy

In compliance with SB 375, on September 3, 2020, the SCAG Regional Council adopted the 2020-2045 RTP/SCS, a long-range visioning plan that incorporates land use and transportation strategies to increase mobility options and achieve a more sustainable growth pattern while meeting GHG reduction targets set by CARB. The 2020-2045 RTP/SCS contains baseline socioeconomic projections that are used as the basis for SCAG's transportation planning, as well as the provision of services by the six-county region of Imperial, Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties. SCAG policies are directed towards the development of regional land use patterns that contribute to reductions in vehicle miles and improvements to the transportation system.

The 2020-2045 RTP/SCS "Core Vision" prioritizes the maintenance and management of the region's transportation network, expanding mobility choices by co-locating housing, jobs, and transit, and increasing investment in transit and complete streets. Strategies to achieve the "Core Vision" include but are not limited to: Smart Cities and Job Centers, Housing Supportive Infrastructure, Go Zones, and Shared Mobility. Connect SoCal intends to create benefits for the SCAG region by achieving regional goals for sustainability, transportation equity, improved public health and safety, and enhancement of the regions' overall quality of life. These benefits include but are not limited to a five percent reduction

in VMT per capita, nine percent reduction in vehicle hours traveled, and a two percent increase in work-related transit trips.

3.17.2.2.2 County of Los Angeles Transportation Impact Analysis Guidelines

The County of Los Angeles adopted transportation analysis methods and project CEQA thresholds through the Transportation Impact Analysis Guidelines document (LA County Public Works 2020). Many of the Los Angeles County methods and criteria included in the document are the same as those published by OPR in their Technical Advisory document, including the net increase of 110 or more daily vehicle trips. In addition to trip count screening thresholds, the County's document also provides baseline VMT per capita data which can be used to determine a project's potential transportation impacts under CEQA. Specifically, Los Angeles County has adopted a threshold of 16.8 percent below the existing VMT of the region (North County or South County). For the South County region, which includes the Project area, the existing 2024 baseline VMT per capita is an average of 16.0 miles per employee per day (Fehrs and Peers 2021).

3.17.2.2.3 Los Angeles County General Plan

The Mobility Element of the General Plan (LA County Planning 2022) includes the following goals and policies:

- Goal M 1: Street designs that incorporate the needs of all users. (Complete Streets)
 - Policy M 1.1: Provide for the accommodation of all users, including pedestrians, motorists, bicyclists, equestrians, users of public transit, seniors, children, and persons with disabilities when requiring or planning for new, or retrofitting existing, roads and streets.
 - Policy M 1.2: Ensure that streets are safe for sensitive users, such as seniors and children.
 - Policy M 1.3: Utilize industry standard rating systems, such as the Institute for Sustainable Infrastructure (ISI) Rating System, to assess sustainability and effectiveness of street systems for all users.
- Goal M 2: Interconnected and safe bicycle- and pedestrian-friendly streets, sidewalks, paths and trails that promote active transportation and transit use.
 - Policy M 2.1: Provide transportation corridors/networks that accommodate pedestrians, equestrians and bicyclists, and reduce motor vehicle accidents through a context-sensitive process that addresses the unique characteristics of urban, suburban, and rural communities whenever appropriate and feasible.
 - Policy M 2.2: Accommodate pedestrians and bicyclists, and reduce motor vehicle accidents by implementing the following street designs, whenever appropriate and feasible:
 - Lane width reductions to 10 or 11 feet in low speed environments with a low volume of heavy vehicles.
 - Wider lanes may still be required for lanes adjacent to the curb, and where buses and trucks are expected.
 - Low-speed designs.
 - Access management practices developed through a community-driven process.
 - Back in angle parking at locations that have available roadway width and bike lanes, where appropriate.

- Policy M 2.3: Accommodate pedestrians and bicyclists, and reduce motor vehicle accidents by implementing the following intersection designs, whenever appropriate and feasible:
 - Right angle intersections that reduce intersection skew.
 - Smaller corner radii to reduce crossing distances and slow turning vehicles.
 - Traffic calming measures, such as bulb-outs, sharrows, medians, roundabouts, and narrowing or reducing the number of lanes (road diets) on streets.
 - Crossings at all legs of an intersection.
 - Shorter crossing distances for pedestrians.
 - Right-turn channelization islands. Sharper angles of slip lanes may also be utilized.
 - Signal progression at speeds that support the target speed of the corridor.
 - Pedestrian push buttons when pedestrian signals are not automatically recalled.
 - Walk interval on recall for short crossings.
 - Left-turn phasing.
 - Prohibit right turn on red.
 - Signs to remind drivers to yield to pedestrians.
- Policy M 2.4: Ensure a comfortable walking environment for pedestrians by implementing the following, whenever appropriate and feasible:
 - Designs that limit dead-end streets and dead-end sidewalks.
 - Adequate lighting on pedestrian paths, particularly around building entrances and exits, and transit stops.
 - Designs for curb ramps, which are pedestrian friendly and compliant with the American Disability Act (ADA).
 - Perpendicular curb ramps at locations where it is feasible.
 - Pedestrian walking speed based on the latest standard for signal timing. Slower speeds should be used when appropriate (i.e., near senior housing, rehabilitation centers, etc.)
 - Approved devices to extend the pedestrian clearance times at signalized intersections.
 - Accessible Pedestrian Signals (APS) at signalized intersections.
 - Pedestrian crossings at signalized intersections without double or triple left or right turn lanes.
 - Pedestrian signal heads, countdown pedestrian heads, pedestrian phasing and leading pedestrian intervals at signalized intersections.
 - Exclusive pedestrian phases (pedestrian scrambles) where turning volume conflicts with very high pedestrian volumes.
 - Advance stop lines at signalized intersections.
 - Medians or crossing islands to divide long crossings.
 - High visibility crosswalks.
 - Pedestrian signage.
 - Advanced yield lines for uncontrolled crosswalks.
 - Rectangular Rapid Flashing Beacon or other similar approved technology at locations of high pedestrian traffic.
 - Safe and convenient crossing locations at transit stations and transit stops located at safe intersections.
- Policy M 2.5: Ensure a comfortable bicycling environment by implementing the following, whenever appropriate and feasible:
 - Bicycle signal heads at intersections.
 - Bicycle signal detection at all signalized intersections.

- Wayfinding signage.
- Road diet techniques, such as lane narrowing, lane removal, and parking removal/restriction.
- Appropriate lighting on all bikeways, including those in rural areas.
- Designs, or other similar features, such as: shoulder bikeways, cycle tracks, contra flow bike lanes, shared use paths, buffered bike lanes, raised bike lanes, and bicycle boulevards.
- Policy M 2.6: Encourage the implementation of future designs concepts that promote active transportation, whenever available and feasible.
- Policy M 2.7: Require sidewalks and bikeways to accommodate the existing and projected volume of pedestrian and bicycle activity, considering both the paved width and the unobstructed width available for walking.
- Policy M 2.8: Connect pedestrian and bicycle paths to schools, public transportation, major employment centers, shopping centers, government buildings, residential neighborhoods, and other destinations.
- Policy M 2.9: Encourage the planting of trees along streets and other forms of landscaping to enliven streetscapes by blending natural features with built features.
- Policy M 2.10: Encourage the provision of greenway amenities, such as benches, shelters, secure bicycle storage, and street furniture, and comfortable, safe waiting areas near transit stops.
- Policy M 2.11: Promote the continuity of streets and sidewalks through design features, such as limiting mid-block curb cuts, encouraging access through side streets or alleys, and promoting shorter block lengths.
- Goal M-3: Streets that incorporate innovative designs. (Innovative Street Design)
 - Policy M 3.1: Facilitate safe roadway designs that protect users, preserve state and federal funding, and provide reasonable protection from liability.
 - Policy M 3.2: Consider innovative designs when part of an accepted standard, or when properly vetted through an appropriate engineering/design review, in compliance with all state and federal laws.
 - Policy M 3.3: Complete the following studies prior to the implementation of innovative design concepts:
 - An analysis of the current and future context of the community and neighborhood in which they are proposed;
 - A balanced assessment of the needs of all users and travel modes (i.e., pedestrian, bicycle, transit, vehicular, and equestrian, where appropriate);
 - A technical assessment of the operational and safety characteristics for each mode; and
 - A consistency check with transportation network plans, including the Highway Plan, Bicycle Master Plan, and Community Pedestrian Plans.
- Goal M 4: An efficient multimodal transportation system that serves the needs of all residents
 - Policy M 4.1: Expand transportation options that reduce automobile dependence.
 - Policy M 4.2: Expand shuttle services to connect major transit centers to community points of interest.
 - Policy M 4.3: Maintain transit services within the unincorporated areas that are affordable, timely, cost-effective, and responsive to growth patterns and community input.

- Policy M 4.4: Ensure expanded mobility and increase transit access for underserved transit users, such as seniors, students, low income households, and persons with disabilities.
 - Policy M 4.5: Encourage continuous, direct routes through a connected system of streets, with small blocks and minimal dead ends (cul-de-sacs).
 - Policy M 4.8: Provide and maintain appropriate signage for streets, roads and transit.
 - Policy M 4.9: Ensure the participation of all potentially affected communities in the transportation planning and decision-making process.
 - Policy M 4.10: Support the linkage of regional and community-level transportation systems, including multimodal networks.
 - Policy M 4.11: Improve the efficiency of the public transportation system with bus lanes, signal prioritization, and connections to the larger regional transportation network.
 - Policy M 4.12: Work with adjacent jurisdictions to ensure connectivity and the creation of an integrated regional network.
 - Policy M 4.13: Coordinate with adjacent jurisdictions in the review of land development projects near jurisdictional borders to ensure appropriate roadway transitions and multimodal connectivity.
 - Policy M 4.14: Coordinate with Caltrans on mobility and land use decisions that may affect state transportation facilities.
 - Policy M 4.15: Reduce vehicle trips through the use of mobility management practices, such as the reduction of parking requirements, employer/institution-based transit passes, regional carpooling programs, and telecommuting.
 - Policy M 4.16: Promote mobility management practices, including incentives to change transit behavior and using technologies, to reduce VMTs
- Goal M 5: Land use planning and transportation management that facilitates the use of transit.
 - Policy M 5.1: Facilitate transit-oriented land uses and pedestrian-oriented design to encourage transit ridership.
 - Policy M 5.2: Implement parking strategies that facilitate transit use and reduce automobile dependence.
 - Policy M 5.3: Maintain transportation right-of-way corridors for future transportation uses, including bikeways, or new passenger rail or bus services.
 - Goal M 7: Transportation networks that minimizes negative impacts to the environment and communities.
 - Policy M 7.5: In rural areas, require rural highway and street standards that minimize the width of paving and the placement of curbs, gutters, sidewalks, street lighting, and traffic signals, except where necessary for public safety.

3.17.2.2.4 Los Angeles County Bicycle Master Plan 2012 and Bicycle Master Plan Update

The LA County Board of Supervisors adopted the current Bicycle Master Plan in March 2012. The plan estimates that by 2030 the total number of daily bicycle commuters in the East SGV Planning Area could increase from the current estimate of 4,198 to 11,401 and from 1,643 to 4,408 in the West SGV Planning area (LA County Public Works 2012). The bike-to-work mode share is estimated by the plan to increase from the current 2.0 percent to 4.0 percent for the East SGV Planning Area and 0.6 percent to 1.0 percent for the West San Gabriel Plan Area. Metro publishes the LA Metro Bike Map, a regional map that includes existing bicycle facilities within all jurisdictions of the County. The Bike Map identifies Class II Bike Lanes, Class III Bike Routes, and Bicycle Boulevards throughout County. On October 15, 2019, the

Board of Supervisors directed LA County Public Works to initiate an update to the 2012 Bicycle Master Plan in partnership with Regional Planning, Beaches and Harbors, Parks and Recreation, the Sheriff's Department, and Highway Patrol. LA County Public Works would propose new bikeways, revisit the feasibility of unconstructed bikeways from the 2012 Bicycle Master Plan, incorporate new policies to share bikeway facilities with micro-mobility devices, identify first/last mile bikeway improvements to further connect to transit stations and bus stops, and conduct a PEIR to include analyzing transportation impacts using VMT rather than LOS. As of this writing, the updated Bicycle Master Plan is expected to be completed and adopted by the Board of Supervisors in Summer 2025.

Along with the proposed bikeways, the current Bicycle Master Plan recommends various bicycle-friendly policies and programs to promote bicycle ridership among users of all ages and skill sets within the County. The relevant goals and policies are presented below (LA County Public Works 2012):

- Goal 1: Bikeway System. Expanded, improved, and interconnected system of county bikeways and bikeway support facilities to provide a viable transportation alternative for all levels of bicycling abilities.
 - Policy 1.1: Construct bikeways proposed in 2012 County of Los Angeles Bicycle Master Plan over the next 20 years.
 - Policy 1.3: Coordinate with developers to provide bicycle facilities that encourage biking and link to key destinations.
 - Policy 1.4: Support the development of bicycle facilities that encourage new riders.
 - Policy 1.6: Develop a bicycle parking policy.
- Goal 2: Increased safety of roadway for all users.
 - Policy 2.1: Implement projects that improve the safety of bicyclists at key locations.
 - Policy 2.2: Encourage alternative street standards that improve safety such as lane reconfigurations and traffic calming.
 - Policy 2.4: Evaluate impacts on bicyclists when designing new or reconfiguring streets.
 - Policy 2.6: Support development of a Healthy Design Ordinance.
 - Policy 2.7: Support the use of the Model Design Manual for Living Streets and Design as a reference for LA County Public Works.

3.17.2.2.5 Step by Step Los Angeles County

In 2019, the LA County Board of Supervisors adopted Step by Step Los Angeles County: Pedestrian Plan for Unincorporated Communities, a policy framework for how the County proposes to get more people walking, make walking safer, and support healthy active lifestyles. It also includes Community Pedestrian Plans for the communities of Lake Los Angeles, Walnut Park, Westmont/West Athens, and Whittier-Los Nietos. The Step by Step pedestrian plan communities were selected based on key criteria that identified communities in unincorporated LA County with high rates of pedestrian collisions that resulted in death or injury (Los Angeles County Department of Public Health 2019). Additionally, one goal of the inaugural pedestrian plans that were approved in 2019 was to pilot pedestrian planning and design in a mix of rural (Lake Los Angeles), urban (Westmont-West Athens and Walnut Park), and suburban (West Whittier-Los Nietos) communities.

Step by Step outlines actions, policies, procedures, and programs that the County will consider to enhance walkability across unincorporated communities. The pedestrian plans also provide guidance in

developing a network of sidewalks, off-street paths, trails, and facilities (such as lighting, crosswalks, and benches) that allow people to walk safely and comfortably to key destinations. It includes policies that address safety, traffic, education, and programs to promote a safe, walkable community. The relevant goals and policies of Step by Step Los Angeles County are presented below (Los Angeles County Department of Public Health 2019):

- Goal 1: Safe Streets Eliminate all fatalities and severe injuries involving people walking.
 - Policy SS-1: Coordinate across County departments, and with the California Highway Patrol, community members, and organizations to implement Vision Zero Los Angeles County to eliminate traffic-related pedestrian fatalities and severe injuries.
 - Policy SS-2: Elevate the pedestrian walking experience by enhancing pedestrian crossings and implementing traffic calming measures where feasible and appropriate.
- Goal 2: Make Walking the Easy and Healthy Choice Communities, streets, and sidewalks are designed to promote walking and healthy living.
 - Policy EH-1: Make transportation, land use, and building design or site planning decisions that make walking a logical first choice transportation option for residents and visitors.
 - Policy EH-2: Design pedestrian-friendly streets to make walking a convenient first choice for daily activities.
 - Policy EH-3: Provide opportunities for community participation in creating safe and inviting pedestrian environments.
- Goal 3: Connectivity Develop and maintain a complete pedestrian network that links transit, schools, parks, and other key destinations in the community.
 - Policy C-1: Support projects that increase pedestrian connectivity, reduce walking distances, and enhance safety.
 - Policy C-2: Create a barrier-free pedestrian network. Maintain pedestrian facilities to ensure they are free of hazards and obstructions.
- Goal 4: Equity Make unincorporated Los Angeles County more walkable for all through equity in public engagement, service delivery, accessibility, planning, and capital investments.
 - Policy EQ-1: Prioritize the needs of low-income communities of color and the most vulnerable users.
 - Policy EQ-2: Create a pedestrian network.
- Goal 5: Safe Communities Address real and perceived personal safety concerns to encourage walking.
 - Policy SC-1: Implement community environmental design and community programs that enhance public safety that supports people of all abilities – especially youth, seniors, and those with disabilities. This includes, but is not limited to, wide sidewalks, curb ramps, accessible pedestrian signals to aid the visually impaired, and adequate pedestrian crossing times.
- Goal 6: Sustainability and Preservation Pedestrian projects and programs enhance the natural environment including clean air and water.
 - Policy SP-1: Improve air quality and reduce greenhouse gas emissions through reduced car dependency.

- Policy SP-2: Enhance the natural environment through the greening of pedestrian space by planting trees and vegetation, and the use of efficient materials and processes in sidewalk and street enhancement projects.

3.17.2.2.6 Los Angeles County Vision Zero Action Plan

The *Vision Zero Los Angeles County: A Plan for Safer Roadways*, published in November 2019 and adopted by the LA County Board of Supervisors in August 2020, focuses County efforts for the years 2020–2025 to achieve the goal of eliminating traffic-related fatalities on unincorporated County roadways by 2035. The plan includes a vision for the future, objectives, and actions to enhance traffic safety. It is guided by principles of health equity, data driven processes, and transparency. It identifies Collision Concentration Corridors throughout the unincorporated areas of the County, any half-mile roadway segment on which three or more fatal or severe injury collisions occurred over a 5-year period from 2013–2017. Strategies to enhance roadway safety and reduce collisions include a wide range of roadway enhancements, such as lighting, curb extensions, and pedestrian signal timing, and a commitment to collaborate on data analysis and develop partnerships across jurisdictions. The plan is structured around five objectives: enhancing County processes and collaboration; addressing health inequities and protecting vulnerable users; collaborating with communities to enhance roadway safety; fostering a culture of traffic safety; and transparency, responsiveness, and accountability (LA County Public Works 2019).

3.17.2.2.7 San Gabriel Valley Regional Bicycle Master Plan

The SGV Regional Bicycle Master Plan (2014) is intended to guide the development and maintenance of a comprehensive bicycle network and set of programs within the cities of Baldwin Park, El Monte, Monterey Park, San Gabriel, and South El Monte for the next 20 years. The SGV Regional Bicycle Master Plan provides a broad vision, as well as strategies and actions, to improve conditions for bicycling throughout the region as well as in each partner city. As a means of bettering the bicycling environment, the SGV Regional Bicycle Master Plan provides direction for expanding the existing bikeway network, closing key gaps within the project cities, and connecting to bicycle facilities in adjacent cities and unincorporated LA County communities. The SGV Regional Bicycle Master Plan aims to encourage bicycling in order to decrease motorized vehicle travel, resulting in fewer GHGs and helping the region meet the state legislated targets set by AB 32 and SB 375. Total estimated vehicle miles reduced as a result of full buildout of the master plan is 17,946,000 miles annually. In addition to providing recommendations for bikeways and support facilities, the SGV Regional Bicycle Master Plan offers recommendations for education, encouragement, enforcement, and evaluation programs.

3.17.2.3 Incorporated Cities Within the Plan Area

The table below presents the policies related to transportation from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.17-5. Applicable Local City Policies Related to Transportation

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Mobility Element</p> <p>Goal M-1 A circulation system that is efficient, safe, pleasant, and attractive for all users.</p> <p>Policy M-1C Plan and maintain the City’s transportation facilities in a way that provides adequate and safe access for all users, including pedestrians, bicyclists, and motorists of all ages and abilities.</p> <p>Policy M-1D Develop and implement new mobility metrics that address alternative transportation modes and vehicle miles traveled, as required by Senate Bill 743.</p> <p>Goal M-2 A circulation system that accommodates and encourages the use of alternative modes of transportation, including walking, bicycling, and transit.</p> <p>Policy M-2B Improve transportation infrastructure and services in a way that will increase the utility, safety, and attractiveness of alternative modes of transportation.</p> <p>Policy M-2C Improve connectivity for alternative transportation modes throughout and beyond the City.</p> <p>Policy M-2F As feasible, implement improvements to the City's bike network. The bikeway system should connect to the regional system and may need to be adjusted over time as conditions change. The bike network will include, as appropriate, enhancements to bicyclist safety and bike parking.</p> <p>Resources Element</p> <p>Policy R-5A Facilitate compact development patterns that minimize motor vehicle trips and VMT while maintaining community character.</p> <p>Health & Safety Element</p> <p>Policy HS-7C Encourage community design that facilitates active transportation such as walking and bicycling.</p>	<p>Municipal code related to transportation relevant to the Plan Area can be found in Chapter 23.82 (Transportation Demand Management), Section 23.82.020 (Land Use Analysis Program), and Section 32.82.040 (Transportation Demand and Trip Reduction Measures).</p> <p>Under Section 23.82.020, Land Use Analysis Program, all development projects for which an Environmental Impact Report (EIR) will be prepared shall be subject to the Land Use Analysis Program contained in the Los Angeles County Congestion Management Program (“CMP”), and shall incorporate into the EIR an analysis of the project impacts on the regional transportation system. The analysis shall be conducted consistent with the Transportation Impact Analysis (TIA) Guidelines contained in the most recent Congestion Management Program adopted by the Los Angeles County Metropolitan Transit Authority.</p> <p>Under Section 32.82.040, (A) Applicability of requirements are listed: Prior to approval of any development project, the applicant shall make provision for, as a minimum, all of the following applicable transportation demand management and trip reduction measures.</p> <p>(1) The ordinance shall not apply to projects for which a development application has been deemed “complete” by the city pursuant to Cal. Gov’t Code § 65943, or for which a Notice of Preparation for a Draft EIR has been circulated or for which an application for a building permit has been received, prior to the effective date of this ordinance.</p> <p>(2) All facilities and improvements constructed or otherwise required shall be maintained in a state of good repair.</p> <p>Development standards for non-residential development of 25,000 square feet or more shall provide, among other requirements,</p> <ul style="list-style-type: none">• Bicycle route and facility information, including regional/local bicycle route maps and safety information;• A listing of facilities available for carpoolers, vanpoolers bicyclists, transit riders and pedestrians at the site.	<p>Alhambra Bicycle Master Plan</p>
Arcadia	<p>Circulation Element</p> <p>Goal CI-1: An efficient roadway system that serves all of Arcadia, supports all transportation modes, and balances the roadway system with planned land uses.</p> <p>Policy CI-1.1: Pursue enhancements to the roadway network consistent with the Figure CI-3, Master Plan of Roadway, and the Transportation Master Plan.</p> <p>Maintain a maximum Level of Service (LOS) D throughout the City, except that LOS E may be permitted in the following circumstances:</p> <ul style="list-style-type: none">• Intersections/roadways at, or adjacent to freeway ramps• Intersections/roadways adjacent to Santa Anita Park during racing season	<p>Municipal code related to transportation relevant to the Plan Area can be found in Chapter 9, (Traffic Congestion Management), Section 5902 (Review of Transit Impacts).</p> <p>Under Section 5902, (Review of Transit Impacts), prior to approval of any development project for which an Environmental Impact Report (EIR) will be prepared pursuant to the requirements of the California Environmental Quality Act (CEQA) or based on a local determination, regional and municipal fixed-route transit operators providing service to the project shall be identified and consulted with. Projects for which a notice of preparation (NOP) for a draft EIR has been circulated pursuant to the provisions of CEQA prior to the effective date of this Chapter shall be exempted from its provisions. The "Transit Impact Review Worksheet," contained in the Los Angeles County</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<ul style="list-style-type: none">Intersections/roadways at or adjacent to designated Downtown, Baldwin Avenue, and Live Oak Avenue commercial and mixed-use districts <p>These performance standards may require, but are not intended to mandate, roadway and/or intersection widenings. They represent goals used to monitor traffic conditions and to assess traffic impacts of development projects. Because LOS standards apply only to vehicular mobility and do not account for enhanced pedestrian movement or other modes, the City will not use them as the sole criteria for judging transportation system performance. Pedestrian convenience, transit access and operations, urban aesthetics, and other factors will be considered.</p> <p>Goal CI-2: Maximized operational efficiency of the street System.</p> <p>Policy CI-2.2: Design and operate arterials and intersections for the safe operation of all modes, including transit, bicyclists, and pedestrians.</p> <p>Policy CI-2.4: Implement intelligent transportation system measures and advanced traffic management technologies where appropriate as a means of reducing traffic and improving emergency response times.</p> <p>Goal CI-4: Connected, balanced, and integrated bicycle and pedestrian networks that provide viable alternatives to use of the car.</p> <p>Policy CI-4.1: Develop and maintain the citywide bicycle network of off-street bike paths, on-street bike lanes, and bike streets identified in Figure CI-7. Development of this plan will include use of easements and flood control channel rights-of way.</p> <p>Policy CI-4.2: Establish bike hubs (centralized locations with convenient bike parking for trip destinations or transfer to other transportation modes) at key transit and commercial nodes.</p> <p>Policy CI-4.3: Encourage the establishment of secure bike parking facilities throughout the City.</p> <p>Policy CI-4.5: Develop and implement a comprehensive pedestrian circulation plan that includes, among other components: 1) enhanced pedestrian crossings of streets, 2) sidewalk improvement plans, 3) pedestrian amenities on sidewalks on major streets that are key pedestrian routes, including the benches, street trees, trash cans, and pedestrian scaled lighting 4) ADA compliant crossings, 5) convenient crossing of arterials with landscaped medians, particularly in the vicinity of schools, and 6) strategies to remove barriers to pedestrian movement (for example, news racks, utility poles and boxes).</p> <p>Policy CI-4.9: Enhance pedestrian and bicycle access to local and regional transit, including connections to bus routes and the light rail station.</p> <p>Policy CI-4.10: Coordinate the provision of the bicycle and pedestrian networks with adjacent jurisdictions to maximize connectivity.</p> <p>Policy CI-4.11: Encourage walking, biking, and use of transit through a variety of supportive land use development and urban design measures, including site planning that promotes safety, pedestrian-friendly design, and access to transit facilities.</p> <p>Goal CI-6: Reduced auto traffic and improved traffic management around schools.</p> <p>Policy CI-6.2: Look for ways to enhance pedestrian and bicycle facilities in the vicinity of schools.</p> <p>Goal CI-8: Effective coordination with other jurisdictions and agencies on regional transportation issues.</p>	<p>Congestion Management Program Manual, or similar worksheets, shall be used in assessing impacts. Pursuant to the provisions of CEQA, transit operators shall be sent a NOP for all contemplated EIR's and shall, as part of the NOP process, be given opportunity to comment on the impacts of the project, to identify recommended transit service or capital improvements which may be required as a result of the project, and to recommend mitigation measures which minimize automobile trips on the CMP network. Impacts and recommended mitigation measures identified by the transit operator shall be evaluated in the draft Environmental Impact Report prepared for the project. Related migration measures adopted shall be monitored through the mitigation monitoring requirements of CEQA.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	Policy CI-8.2: Maintain consistency with the South Coast Air Quality Management District air quality mandates, the Los Angeles Congestion Management Program, and SCAG Regional Mobility Plan requirements.		
Azusa	<p>The Built Environment Element</p> <p>Citywide Access and Circulation</p> <p>Goal 1: Balance the roadway with the planned land uses in the City.</p> <p>Policy 1.1: Provide an efficient street system in the city, to support the City’s mobility goals and land use plan. (See Figures M-1 and Appendix Mobility Plan).</p> <p>Policy 1.3: Require the cost of improvements to the existing circulation system and new circulation system necessitated by new development to be borne by that development that gains benefit.</p> <p>Policy 1.4: Work with adjacent jurisdictions and agencies to ensure that development projects and infrastructure projects outside the City of Azusa do not adversely impact the City.</p> <p>Goal 3: Provide a connected, balanced, and integrated transportation system that enables Azusans to walk, bike, and take transit, rather than using their car.</p> <p>Policy 3.1: Develop and maintain a citywide pedestrian network of both on-street and off -street walkways. Network shall link new neighborhoods with existing neighborhoods, connect neighborhood centers, schools, parks, commercial centers, and citywide destinations such as Downtown, the San Gabriel River, and Civic Center.</p> <p>Policy 3.3: Provide pedestrian amenities (such as benches, seats, water fountains, shady street trees, etc.) and conditions that enhance the pedestrian experience along the pedestrian network.</p> <p>Policy 3.4: Develop and maintain a citywide bicycle network of both on-street bike lanes and off -street bike paths in accordance with the Bicycle Routes (Figure M-2). The network provides for off -street paths along the San Gabriel River, railroad rights-of way, alongside flood control channels, and within existing and new neighborhoods, where feasible. The network improves connections between residential neighborhoods, schools and commercial centers, as well as providing connections to citywide destinations such as Downtown, the University District, the San Gabriel River, and Civic Center.</p> <p>Policy 3.5: Provide bicycle amenities (bicycle parking spaces, bike lockers, etc.) on/near the bicycle network.</p> <p>Goal 4: Design/Redesign streets to encourage pedestrians and bicycles and to accommodate vehicles. Make City streets more pedestrian-friendly and bicycle-friendly.</p> <p>Goal 5: Calm traffic in the City and design/redesign residential streets to discourage through traffic and encourage residentially oriented traffic, walkers, bikes.</p> <p>Land Use Planning Support of Mobility Goals</p> <p>Goal 8: Encourage walking, biking, and the use of transit through a variety of land use development and urban design measures.</p>	<p>Municipal code related to transportation relevant to the Plan Area can be found in Chapter 88.21 (Specific Plans), Section 88.21.060 (Azusa TOD Specific Plan).</p> <p>Under Section 88.21.060 (Azusa TOD Specific Plan), the Azusa Transit-Oriented Development (TOD) General Plan/Development Code Update and Specific Plan is provided as a comprehensive document that will implement the vision for the Specific Plan Area as established by the City of Azusa planning process.</p> <p>A. Allowable Uses. Refer to the Azusa TOD Specific Plan.</p> <p>B. Site Planning and Building Design. Refer to the Azusa TOD Specific Plan.</p>	<p>City of Azusa Pedestrian Plan (2022), called Azusa Walks, is the City’s 2022 Pedestrian Master Plan that prioritizes and guides investments to create a safer and more walkable Azusa. Most importantly, it works towards the City’s mobility vision where: “By putting people first, Azusa will become a pedestrian-friendly, transit-oriented community.” This vision, laid out in the City’s 2004 General Plan, relies on the goal to provide a connected, balanced, and integrated transportation system that enable Azusans to walk, bike, and take transit —rather than using their car. At some point of getting to and from a destination, everyone walks; every trip in a car, on a bus, or by bike starts and ends with a walking trip. As a result, improving walkability and pedestrian infrastructure is one of the most critical elements to enhancing overall mobility and transportation options for any community.</p>
Baldwin Park	<p>Circulation Element</p> <p>Public Transportation</p> <p>Goal 3: Encourage increased use of public transportation.</p>	<p>Municipal code related to transportation relevant to the Plan Area can be found in Chapter 153 (Zoning Code), Section 153.190 Trip Reduction and Transportation Demand Management.</p>	<p>The City of Baldwin Park enacted a 2011 ordinance of the Complete Streets Policy (2011). The objective of this policy is to establish guiding principles and practices so transportation improvements are planned, designed, constructed, operated, and</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 4: Accommodate alternative modes of transportation in land use and circulation planning.</p> <p>Policy 4.1: Provide for a Citywide bicycle path system consistent with Figure C-4 that can be implemented in a safe and efficient manner.</p> <p>Policy 4.2: Continue funding City programs which provide for sidewalk construction in residential neighborhoods where sidewalks do not exist and are desired by local residents.</p> <p>Policy 4.3: Continue funding City programs which provide for sidewalk improvements and enhancements, particularly in areas where sidewalks link residential neighborhoods to local schools, parks, and shopping areas.</p> <p>Goal 8.0: Provide a circulation system in Downtown that supports a cohesive pedestrian district. Pursue development of a Specific Plan that clearly defines circulation improvements in the area.</p> <p>Policy 8.4: Improve alternative through traffic routes to make these alternatives more attractive to existing Main Street traffic.</p> <p>Policy 8.5: Provide alternative viable access options for the land uses located along Main Street (north of Ramona Boulevard) to reduce congestion in this area.</p> <p>Policy 8.8: Examine potential transit opportunities which could be developed to Downtown with the Metrolink station.</p> <p>Policy 8.9: Establish a pedestrian linkage between the Metrolink station and Downtown.</p>	<p>Under Section § 153.190.030 (Review of Transit Impacts), the requirements for approval of any development project are provided:</p> <p>(A) Consult with fixed-route transit operators. Prior to approval of any development project for which an environmental impact report (EIR) will be prepared pursuant to the requirements of the California Environmental Quality Act (CEQA), or based on a local determination, regional and municipal fixed-route transit operators providing service to the project shall be identified and consulted. The “Transit Impact Review Worksheet,” contained in the Los Angeles County Congestion Management Program Manual, or similar worksheets, shall be used in assessing impacts. Pursuant to the provisions of CEQA, transit operators shall be sent a notice of preparation (NOP) for all contemplated EIRs and shall, as part of the NOP process, be given opportunity to comment on the impacts of the project, to identify recommended transit service or capital improvements which may be required as a result of the project, and to recommend mitigation measures which minimize automobile trips on the CMP network. Impacts and recommended mitigation measures identified by the transit operator shall be evaluated in the draft EIR prepared for the project. Related mitigation measures adopted shall be monitored through the mitigation monitoring requirements of CEQA.</p> <p>(B) Phased development projects. Phased development projects, development projects subject to a development agreement or development projects requiring subsequent approvals, need not repeat this process as long as no significant changes are made to the project. It shall remain the discretion of the lead agency to determine when a project is substantially the same and therefore covered by a previously certified EIR.</p>	<p>maintained to encourage walking, bicycling, and transit use while promoting safe operations for all users.</p>
Claremont	<p>Community Mobility Element</p> <p>Goal 4-1 Support efforts that will enhance the regional transportation network and benefit Claremont residents. Policy 4.1.1 Participate in regional transportation planning. and encourage systems that meet regional goals while protecting Claremont from external impacts.</p> <p>Policy 4.1.1 Participate in regional transportation planning. and encourage systems that meet regional goals while protecting Claremont from external impacts.</p> <p>Policy 4.1. 4 Coordinate the different modes of travel to enable users to transfer easily from one mode to another.</p> <p>Policy 4-1. 6 Continue to work to provide a strong paratransit system that promotes the mobility of all residents and educate residents about local mobility choices.</p> <p>Policy 4.1.7 Promote transit-oriented development to facilitate the use of the community's transit services.</p> <p>Goal 4-2 Reduce traffic congestion while retaining the historic patterns and functions of City streets.</p> <p>Policy 4.2.11 Continue to implement the Congestion Management Plan of the Los Angeles County Metropolitan Transportation Authority and the City's Transportation Demand Management Ordinance.</p> <p>Goal 4-3: Establish and maintain a comprehensive system of pedestrian ways and bicycle routes that provides viable options to travel by automobile. Policy 4-3. 1 Promote walking throughout the community. Install sidewalks where missing and make improvements to existing sidewalks for accessibility purposes. Particular attention should be given to needed sidewalk improvement near schools and activity</p>	<p>Municipal code related to transportation relevant to the Plan Area can be found in Chapter 16.078 (Public District), Section 16.078.030 (Development Standards), and Chapter 16.200 (Transportation Impact Fees), Sections 16.200.000 (Purpose), and Section 16.200.060 (Fee Exemptions, Waivers, Reductions, and Refunds).</p> <p>Under Section 16.078.030 (Development Standards), approval of proposed public parks would be considered under the Public District mapping zone. The Development standards for the Public District shall be determined on a site-by-site basis. Consideration shall be given to surrounding properties and developments in order to blend the developments with, and to keep it consistent with, the surrounding area. Additional factors to be considered for the determination of standards are topography, water drainage, circulation, use of site, and any other environmental factors related to the site.</p> <p>Under Section 16.200.000 (Purpose), the purpose in establishing transportation impact fees is provided. New development generates additional traffic in the City that incrementally impacts the City's existing transportation facilities, endangers the safety of pedestrians and bicyclists, and threatens the quality of life of Claremont residents. The transportation impact fees are necessary in order to fund needed improvements to the City's circulation and transportation systems to reduce the cumulative transportation impacts caused by new development and are apportioned to new development based on new development's fair share of the estimated costs of the improvements.</p>	<p>The City of Claremont's 2007 Bicycle Plan contains municipal planning guidance for the development of bicycle infrastructure in the City.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>centers. Policy 4.3.2 Implement the bicycle and trail improvements I indicated on figure 4.3 and figure a.2 through the City's five-Year Capital Improvement Plan. Provide a network of bicycle routes and support facilities to encourage bicycling and walking as local commute and transportation modes.</p> <p>Policy 4.3.3 Continue to provide for compatible joint use of the I Thompson Creek Trail and Wilderness Park Trail by bicyclists. Pedestrians and equestrians.</p> <p>Policy 4-3.4 Explore development of a community bicycle plan which can be implemented with the assistance of all volunteers and/or private funding. Policy 4-3.5 Recognize and accommodate the pedestrian ADA access in Claremont's neighborhoods. and continue to make improvements to increase pedestrian safety.</p> <p>Policy 4-3.7 Support completion of regional trail bikeways such as Thompson Creek Trail and Citrus Regional bikeway.</p> <p>Policy 3-3.8 Encourage businesses or residents to sponsor street furniture and landscaped areas.</p> <p>Policy 4-3.9 Strive to provide pedestrian pathways that are well shaded and pleasantly landscaped to encourage use.</p> <p>Policy 4-3.10 Attract bicyclists from neighboring communities to ride their bicycles or to bring their bicycles on the train to enjoy bicycling around the community and to support local businesses.</p> <p>Policy 4-3.11 Meet guidelines to become nationally recognized as a Bicycle- Friendly community.</p> <p>Policy 4-3.12 Provide for an education program and stepped-up code enforcement to address and minimize vegetation that degrades access along public rights. of-way. Such growth can be a hazard to pedestrians and cyclists alike.</p> <p>Policy 4-3.13 Provide and maintain safe bicycle and pedestrian links to adjacent communities east. west and south of Claremont.</p> <p>Goal 4-7</p> <p>Policy 4-7.1 Work with the Claremont Unified School District and community organizations to create a Routes to Schools program that encourages students to walk and bicycle to and from schools and parks.</p> <p>Policy 4-7.2 Work with the Claremont Unified School District to apply effective traffic management approaches to address congestion in the vicinity of schools and parks.</p>	<p>Under Section 16.200.060 (Fee Exemptions, Waivers, Reductions, and Refunds), fee exemptions for the transit impact fee are outlined, and are not required as a condition for the issuance of a building permit for:</p> <ol style="list-style-type: none">1. Alterations which will result in no additional floor area, and which will not expand or change the use at the site to one that will generate 20 percent or more vehicle trips than the previous or existing use;2. Reconstruction when permits are issued within two years of the destruction of a structure due to fire, vandalism, wind, earthquakes or other natural or manmade disasters and the reconstruction is substantially equivalent to the damaged or destroyed property. (Any reconstruction or portion thereof, which is not substantially equivalent to the damaged or destroyed property shall be deemed to be new construction and shall be subject to the applicable fee.);3. Additions to single-family or multiple-family residential units, or construction of or additions to residential accessory structures. (Note: Transportation impact fees shall be required for new additions or conversions of existing space which result in new dwelling units.);4. Projects of a temporary nature (one year or less) as determined by the Director of Community Development; and5. New public facility improvements constructed by public agencies if doing so will further the implementation of the General Plan as determined by the Director of Community Development.	
Covina	<p>Land Use Element</p> <p>General Land Use</p> <p>Ensure that major land use change proposals, particularly those regarding vacated schools, utility sites, and other institutional surplus properties, carefully consider many factors, including, but not limited to:</p> <ol style="list-style-type: none">a) Land use impacts, on both neighborhood and citywide levels.b) Street capacity, public facilities, and other infrastructure impacts.c) Effects on the local circulation, public transportation, and regional circulation/transportation networks.d) The local economy.e) The provision of services and utilities.f) All relevant environmental and physical constraints and resources.	<p>Municipal code related to transportation relevant to the Plan Area can be found in Chapter 17.64 9Site Plan Review), Section 17.64.150 (Congestion management and transportation demand management (TDM) requirements). The relevant policy to the project is included below:</p> <p>A. Review of Development Impact on Transit Service:</p> <ol style="list-style-type: none">1. For any development project for which an environmental impact report is to be prepared, or because of a local determination, the city shall identify regional and municipal fixed-route transit operators providing service to the project and give them an opportunity to recommend transit-related mitigation measures.2. The city shall send each transit operator a notice of preparation (or, in the case of a local determination, a project description) and a copy of the transit impact review work sheet contained in the most current version of the Los Angeles County congestion management program manual (or a similar form	<p>The City of Covina Bicycle Master Plan (2011) provides a broad vision of actions and strategies to improve conditions for bicycling in the City and the surrounding region. The BMP recommends improvements and policies to increase the bicycling population; increase cyclists’ trip frequency and distance; improve bicyclist, pedestrian and motorist safety; and increase public awareness and support for bicycling.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>g) Covina’s image and character.</p> <p>h) The quality of life for Covina residents, workers, shoppers, and others.</p> <p>Policy 14: Require that future growth, infill, and revitalization activities be consistent with City-adopted positions, policies, and programs regarding regional planning and growth management matters— such as air quality attainment, recycling, hazardous waste management, trip reduction, congestion management, stormwater runoff, water quality, housing, transportation, and circulation.</p> <p>Policy 15: Monitor land use, traffic, and circulation pressures associated with the Metrolink Commuter Train Station near the downtown and best capitalize on potentially beneficial impacts by adopting strategies such as an “urban village” or livable cities concept, incorporating mixed uses (like residential on top of commercial), sufficient businesses, and attractive and functional public and private improvements.</p> <p>Objective 2: An adequate amount and distribution of and compatibility of adjacent land uses throughout the community.</p> <p>Policy C: Effects on the local circulation, public transportation, and regional transportation networks.</p> <p>Policy I. Ensure that the circulation network and major street widths adequately serve all current and planned residential, commercial, industrial, and institutional uses—or that all future developments not overburden streets and other infrastructure or local services.</p> <p>Objective 5: The provision of sufficient public facilities and services.</p> <p>Circulation Element</p> <p>Policy Area 1: Maintenance and improvement of public rights-of-way and related infrastructure to accommodate future growth.</p> <p>C1-3. Maintain and, where administratively and financially possible, improve the physical condition, structural integrity, design capacity, utilization, appearance, and/or cleanliness of Covina’s public rights-of-way and facilities, including, but not limited to, streets, alleys, sidewalks, medians, landscaping, parking areas, and miscellaneous infrastructure.</p> <p>C1-5. Consider relevant sources, such as the accompanying Technical Appendix, in identifying, approaching, analyzing, and handling street maintenance, improvement, and modification, traffic circulation enhancement, and congestion mitigation.</p> <p>C1-6. Handle needed street and related infrastructure and transportation improvements on a realistic, viable, prioritized, systematic, consistent, and cost-effective basis and, if possible, from the standpoint of benefiting the greatest number of Covina residents and businesses.</p> <p>C1-7 Accommodate, where financially, administratively, and technically feasible, needed street and related Infrastructure and transportation improvements, among other reasons, to minimize traffic conflicts and hazards as well as liability, to improve vehicular and pedestrian safety, to bolster ongoing code enforcement efforts, and to enhance community appearance, image, and character, social economic, and recreational vitality, and overall quality of life.</p> <p>C1-8 Reconcile the need to resolve remaining, major road and infrastructure deficiencies with the need to maintain the maturing community’s aging street and circulation networks.</p>	<p>based on that work sheet). As part of the notice of preparation process, each transit operator may complete and return to the city the transit impact review work sheet, which will contain the operator’s comments on the project’s potential effect on transit service, recommendations for transit service or capital improvements, and recommendations for transit-related mitigation measures that minimize project-generated vehicle trips on the congestion management program network.</p> <p>3. Impacts and mitigation measures identified by the transit operator shall be evaluated in the draft environmental impact report or other environmental review prepared for the project. The mitigation measures adopted shall be monitored through the mitigation monitoring requirements of the California Environmental Quality Act.</p> <p>B. Traffic Impact Analyses.</p> <p>1. The applicant shall complete and provide to the city a congestion management program network traffic impact analysis for any development project that requires an environmental impact report, except as exempted by the Los Angeles County congestion management program and subsection (G) of this section. The city may require a local intra-jurisdictional traffic impact analysis for any development project. The congestion management program network traffic impact analysis shall assess the impact on the congestion management program network of traffic generated by the project. It must use the methodology specified in the most current Los Angeles County congestion management program manual, and must describe costs and measures to mitigate project-generated traffic at points on the congestion management program network where that traffic will have a significant impact. All traffic impact analyses must be approved by the city.</p> <p>2. The city reserves the right to determine the definition of “significant impact” on intersections and roadway segments that are not part of the congestion management program network. The city further reserves the right to establish a more stringent definition of “significant impact” on the congestion management program network than is provided in the guidelines of the most current Los Angeles County congestion management program manual.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>C1-12. Ensure, where applicable, that private as well as public parking, drive-through, and drop-off/pick-up ingress/egress locations off of public rights-of-way provide for sufficient access, circulation, maneuverability, visibility, and safety as well as separation from any residential or other sensitive adjacent uses and that all on-site parking facilities adequately serve their accompanying uses and are designed to facilitate safe, functionable, and viable circulation and maneuverability.</p> <p>C1-23. Continue encouraging, where administratively and financially feasible, public transportation- and pedestrian accommodating enhancements to the infrastructure, including, but not limited to, bus pads and sidewalks and wheelchair ramps.</p> <p>Policy Area 2: Public transit and transportation programs.</p> <p>C2-4. Where appropriate consider infrastructure and related enhancements to facilitate downtown pedestrian circulation, taking into account safety, lighting, pleasantness, adequacy, and accessibility for the disabled.</p> <p>C2-5. In analyzing and/or considering any changes to Citrus Avenue or other streets in the downtown, balance traffic and circulation matters with business and economic development needs and follow all applicable provisions of other Policy Areas of this Circulation Element, particularly Policy Area 1.</p> <p>C2-6. Continue accommodating, where appropriate, vibrant, quality, and pedestrian-oriented retail activities in the Downtown to bolster district vitality, economic development, and revitalization but without overburdening parking, traffic, and circulation.</p> <p>C2-7. Consider accommodating appropriate mixed uses in and around the downtown, via “urban village” or livable cities concepts, as a means for, among other benefits maximizing the efficiency and attractiveness of transit usage, reducing vehicle trips, and encouraging and facilitating pedestrian circulation.</p> <p>Policy Area 5: General circulation and infrastructure matters.</p> <p>C5-4. Reconcile the community’s traffic, transportation, accessibility, circulation, parking, and overall infrastructure situations, needs, and desires with corresponding regional issues and concerns, to the greatest degree feasible.</p> <p>C5-13. Continue accommodating pedestrian circulation, to the greatest degree possible, in terms of adequately-sized, conveniently located, safe, functional, unobstructed, and disable accessible major- and small-street public sidewalks, public crosswalks, private walkways and access routes, private walkways/access route linkages to public sidewalks and sufficient connections between public sidewalks and crosswalks.</p> <p>C5-16. Work with Los Angeles County, to the greatest extent possible, to promote the preservation and maintenance of the equestrian and hiking trail, which meanders through the Covina Hills area, and direct linkages thereto.</p> <p>C5-17. Ensure that future development- and public works-generated traffic, accessibility, and recreational activities preserve the appearance, integrity, and full functionality of the unchanneled portions of Walnut Creek and appurtenant equestrian/hiking trail in Covina Hills as well as the Charter Oak Wash through Wingate Park.</p> <p>C5-26. Attempt to work with other City departments/divisions to best approach and handle various circulation- and transportation-related proposals, issues, and problems.</p>		

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>C5-30. Maintain departments/divisions to carry out the Circulation Element’s various circulation, transportation-, and infrastructure-related responsibilities and obligations.</p> <p>Policy Area 6: Funding</p> <p>C6-7. Continue utilizing the City Capital Improvement Program and related processes as the framework for planning/scheduling Circulation Element-related infrastructure.</p> <p>Open Space Lands</p> <p>Policy Area 1. Retention, Development, and Enhancement of Park and Recreational Facilities</p> <p>O1-R. Regard improving and expanding the City’s park system as a higher priority than enhancing the (policy area 3 discussed) bicycle ways and equestrian/hiking trails.</p> <p>O1-S. Consider the Covina Park System Master Plan as a viable framework for identifying, addressing, and resolving needed improvements to specific parks, pertaining to matters including, but not limited to, parking and walkways, picnic facilities, benches, playgrounds, and ball fields as well as major systemwide deficiencies in capital facilities, such as the lack of a major youth center and a gymnasium.</p> <p>Policy Area 3: Trail Facilities</p> <p>a. Continue to support, encourage the utilization of, and, where deemed reasonable by appropriate analyses or studies, expand and improve the City’s limited network of bicycle ways for recreational as well as functional purposes to link local and regional recreational areas and other major points of interest.</p> <p>b. Support County efforts to preserve, provide for, and, where appropriate, expand and improve local- and regional-oriented equestrian/hiking trails and reasonable linkages thereto that run through southeastern Covina, notably the Peter F. Scharabum or Walnut Creek Trail that generally abuts Walnut Creek, for both recreational and leisure activities.</p> <p>c. Because of their greater usage and simpler development, regard improving and expanding the network of bicycle ways as a higher priority than enhancing the equestrian/hiking trails.</p> <p>d. Consider using the improved flood control channels for active recreational purposes, such as trails or exercise courses, if feasible.</p> <p>e. Monitor the trail plans of the State and County for any changes relating to linkages to Covina trails or recreational facilities.</p> <p>f. Consider to coordinate bikeway improvements and enhancements with adjoining jurisdictions.</p> <p>g. Provide commercial and major employment areas that are conducive to bicycle and pedestrian circulation, to the greatest extent feasible.</p> <p>k. Observe the requirements imposed by the California Environmental Quality Act (CEQA) when undertaking the development or acquisition of new and the improvement or redevelopment of existing parks and open space lands to address all applicable potential impacts, such as land use, circulation, noise, and aesthetics.</p> <p>n. Ensure that all new and modified bicycle ways, equestrian/hiking trails, and related facilities plus appurtenant amenities and entry points conform to all applicable design and access requirements and standards.</p>

	<p>Resource Management</p> <p>Goal 5: Improve Our Air Quality</p> <p>Policy OSP-5.1: Reduce vehicular air pollution.</p>	<p>connections to surrounding street system; landscaped and natural areas; play areas; plazas; buffer or transition zones and other land development features.</p>	<p>actions, and performance measures, identify an implementation plan, and identify funding opportunities to augment local funds. The ATP identifies four overarching goals for the City, with proposed actions to address each goal. The ATP goals are:</p> <ol style="list-style-type: none">1. Accessibility: Provide Safe, direct, and comfortable routes for all people walking, biking, and rolling.2. Safety: Improve safety for people walking, biking, and rolling.3. Support: Create a welcoming and friendly environment for walkers and bikers in La Verne that encourages more people to choose to walk or bike.4. Encouragement: Support a culture of active transportation that creates more visibility and awareness of walkers and bikers.
Monrovia	<p>Circulation Element</p> <p>Goal 2: Provide a system of streets and alleys that meets the needs of current and future residents, local and commuter traffic demands and ensures the safe and efficient movement of vehicles, people and goods throughout the City. Improve streets and alleys to their full design standards.</p> <p>Policy 2:7: Seek to maintain at least LOS E during peak hours at intersections, except at locations where LOS F currently exists.</p> <p>Goal 3: Reduce the number of street accidents and maintain adequate traffic safety in the entire circulation system.</p> <p>Policy 3.1: Pursue the “3 E’s” (engineering, education, and enforcement) approach to improving traffic safety in the City. Engineering strategies typically consist of physical measures to control speeds or improve safety. Education strategies provide drivers, pedestrians, and cyclists with information on the most appropriate ways to share the roads. Enforcement strategies include observance of speed limits, traffic signals and stop signs and other violations, such as failing to yield to pedestrians.</p> <p>Policy 3.2: Provide for safe operations of rail service, motorized traffic, pedestrians, bicycles and other modes by adhering to state and national standards and uniform practices.</p> <p>Policy 3:6: Provide continuity to the sidewalk system, including wheelchair ramps, when new development occurs, to minimize pedestrian/vehicle conflicts. Policy 3:7: Expand bicycle routes where opportunities arise and demand warrants to minimize conflicts between cyclists and motorists.</p> <p>Goal 4: Support the use of the public transportation, including light rail transit, to provide mobility to all City residents and encourage use of public transportation as an alternative to automobile travel.</p> <p>Pedestrian and Bicycle Facilities</p> <p>Goal 6: Protect and encourage non-motorized transportation such as bicycle and pedestrian travel.</p> <p>Policy 6:2: Develop a Citywide Pedestrian Master Plan and a Bicycle Master Plan. These may include preparing Geographic Information System-based inventories of existing pedestrian and bicycle facilities within the City and at its perimeter (including all handicapped-accessible ramps, marked crosswalks, paved sidewalks and bicycle facilities) and key activity generators and locations (such as schools, retail districts, parks, public buildings, downtown, higher density areas, and transit corridors), identifying existing gaps or other deficiencies, developing and prioritizing necessary improvements, and identifying funding sources to implement those improvements.</p>	<p>Municipal code related to transportation relevant to the Plan Area can be found in Chapter 17.24 (Parking), Section 17.24.170 (Transportation Demand Management).</p> <p>Under Section 17.24.170, the purpose is to provide trip reduction and travel demand measures in conformance with the adopted congestion management program for Los Angeles County as required by the State of California, and provided below:</p> <p>(C) Review of transit impacts. Prior to approval of any development project for which an environmental impact report (EIR) will be prepared pursuant to the requirements of the California Environmental Quality Act (CEQA) or based on a local determination, regional and municipal fixed-route transit operators providing service to the project shall be identified and consulted with. Projects for which a notice of preparation (NOP) for a draft EIR has been circulated pursuant to the provisions of CEQA prior to the effective date of this chapter shall be exempted from its provisions. The “Transit Impact Review Worksheet,” contained in the Los Angeles County Congestion Management Program Manual, or similar worksheets, shall be used in assessing impacts. Pursuant to the provisions of CEQA, transit operators shall be sent an NOP for all contemplated EIRs and shall, as part of the NOP process, be given opportunity to comment on the impacts of the project to identify recommended transit service or capital improvements which may be required as a result of the project, and to recommend mitigation measures which minimize automobile trips on the CMP network. Impacts and recommended mitigation measures identified by the transit operator shall be evaluated in the draft environmental impact report prepared for the project. Related mitigation measures adopted shall be monitored through the mitigation monitoring requirements of CEQA. Phased development projects, development projects subject to a development agreement, or development projects requiring subsequent approvals, need not repeat this process as long as no significant changes are made to the project. It shall remain the discretion of the lead agency to determine when a project is substantially the same and therefore covered by a previously certified EIR.</p>	<p>City of Monrovia Bicycle Master Plan (City 2018). The City’s Bicycle Master Plan is intended to serve as a framework for potential infrastructure improvements, programming opportunities, and policies that can be pursued in Monrovia related to bicycling as an alternative method of transportation. The Plan provides a number of recommendations related to infrastructure and programming that support the Plan’s overall goals of Mobility, Design, Safety, and Programming.</p>

	<p>the City and offers convenient mobility options, including vehicular travel, transit services, bicycle routes, and pedestrian paths.</p> <p>Policy 5.1-1 Multimodal Options. Make transportation mode shifts possible by designing, operating, and maintaining streets to enable safe and convenient access and travel for all users—pedestrians, bicyclists, transit riders, and people of all ages and abilities, as well as freight and motor vehicle drivers—and to foster a sense of place in the public realm.</p> <p>Policy 5.1-2 Serve All Users. Provide a safe, efficient, and accessible transportation network that meets the needs of all users in the community, including seniors, youth, and the disabled, and contributes to the community’s quality of life by:</p> <p>Balancing the needs of all users of the public rights-of-way by providing safe and convenient travel and access for bicyclists, transit riders, freight and motor vehicle drivers, and people of all ages and abilities. Designing streets to accommodate larger vehicles such as buses, fire service vehicles, and freight delivery trucks without compromising pedestrian and bicycle safety.</p> <p>Providing safe and comfortable access for persons with disabilities. ▢ Providing public open space that integrates amenities including street trees and landscaping, street and sidewalk lighting, transit facilities, street furniture, water features, and public art work.</p> <p>Policy 5.1-3 Complete Streets. Accommodate other modes of travel such as bicycling and walking when implementing roadway improvements, where feasible.</p> <p>Promote the use of transit by improving the efficiency of transit systems and creating safe and attractive walking environments.</p> <p>Promote the ability to walk by providing safe and comfortable pedestrian facilities and traffic signal timing that allows for the safe crossing of major roadways by pedestrians.</p> <p>Provide street lighting that is attractive, functional, and appropriate to the character and scale of the neighborhood or area, and that contributes to vehicular, pedestrian, and bicycle safety.</p> <p>Policy 5.1-5 Access to Key Locations. Strive to provide multimodal access throughout the City, but especially to key locations such as employment centers, schools, parks medical facilities, libraries, and grocery stores. Policy 5.1-6 System Expansion. Require new development to contribute funds to area-wide transit improvements to expand the system and increase efficiency.</p> <p>Goal 5.2 A roadway system that ensures the safe and efficient movement of people, goods, and services. Policy 5.2-1 Roadway Plan. Plan, design, and improve roadways in accordance with Figure 5-1 Circulation Plan.</p> <p>Policy 5.2-2 Level of Service Objective. Strive to achieve and maintain operations at intersections at LOS D or better at peak travel times within the City.</p> <p>In those locations where this objective is infeasible, implement all feasible mitigation measures.</p> <p>Require all development projects to provide their fair share (in the form of physical improvements and/or fee payment) for all feasible improvements.</p> <p>Policy 5.2-3 Alternative Measures to Increase Efficiency. Maximize the operational efficiency of the roadway system by developing alternative measures where improvements are needed but are not feasible to implement. Measures can include traffic demand management programs, consolidation of driveways, and prohibiting on-street parking to ease congestion.</p>	<p>Under Section 18.47.030 (Review of transit impacts), requirements for projects conducting an EIR are found below:</p> <p>A. Prior to approval of any development project for which an environmental impact report (EIR) will be prepared pursuant to the requirements of the California Environmental Quality Act (CEQA) or based on a local determination, regional and municipal fixed-route transit operators providing service to the project shall be identified and consulted with. Projects for which a Notice of Preparation (NOP) for a draft EIR has been circulated pursuant to the provisions of CEQA prior to the effective date of Ordinance No. 835, adopted May 17, 1993, shall be exempted from its provisions. The “Transit Impact Review Worksheet,” contained in the Los Angeles County Congestion Management Program Manual, or similar worksheets, shall be used in assessing impacts. Pursuant to the provisions of CEQA, transit operators shall be sent a NOP for all contemplated EIRs and shall, as part of the NOP process, be given opportunity to comment on the impacts of the project, to identify recommended transit service or capital improvements which may be required as a result of the project, and to recommend mitigation measures which minimize automobile trips on the CMP network. Impacts and recommended mitigation measures identified by the transit operator shall be evaluated in the draft environmental impact report prepared for the project. Related mitigation measures adopted shall be monitored through the mitigation monitoring requirements of CEQA.</p> <p>B. Phased development projects, development projects subject to a development agreement, or development projects requiring subsequent approvals, need not repeat this process as long as no significant changes are made to the project. It shall remain the discretion of the lead agency to determine when a project is substantially the same and therefore covered by a previously certified EIR.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 5.2-10 Traffic Studies. Require the preparation of site-specific traffic studies for new development proposals that are determined by the City to have the potential to impact traffic.</p> <p>Bicycle and Pedestrian Network</p> <p>Goal 5.4 A balanced transportation system where bicycling and walking are alternative methods to the automobile.</p> <p>Policy 5.4-1 Continuous Network. Provide a safe and continuous bicycle and pedestrian network that links neighborhoods, parks, schools, libraries, commercial development, major employers, and other frequently visited destinations as a means of improving health in the city.</p> <p>Policy 5.4-2 Roadway Improvement Projects. Incorporate bicycle and pedestrian features within roadway improvement projects, when feasible. Policy 5.4-3 Bicycle Network. Design and implement a functional bicycle network by expanding bicycle routes, striping bicycle lanes where feasible, providing signage for bicycle routes, and providing adequate bicycle parking at City facilities.</p> <p>Policy 5.4-4 Bicycle Support Facilities. Require bicycle parking and support facilities at new industrial, commercial, institutional developments, and transit facilities, as appropriate.</p> <p>Policy 5.4-5 River Bike Trails. Improve, maintain, and expand bike trails along the Rio Hondo and San Gabriel river corridors.</p> <p>Policy 5.4-6 Pedestrian Network. Improve the pedestrian network by incorporating streetscape improvements such as shade trees, plantings, lighting, and street furniture.</p> <p>Policy 5.4-7 Sidewalk Deficiencies. Improve areas with sidewalk deficiencies to increase walking in Pico Rivera. Policy 5.4-8 ADA. Incorporate American with Disabilities Act (ADA) requirements to create an accessible pedestrian system that can serve all users. Policy 5.4-9 Regional System. Coordinate with surrounding jurisdictions, regional agencies, and non-profit groups to improve the Emerald Necklace Park Network, a loop trail system of parks and greenways which includes areas within the City of Pico Rivera.</p>		
Pomona	<p>Mobility & Access Element</p> <p>Regional Transportation</p> <p>Goal 7D.G1: Distribute vehicular, transit, bicycle, and pedestrian traffic appropriately throughout the City.</p> <p>Goal 7D.G3 Support regional efforts to the extent feasible, to reduce greenhouse gas (GHG) emissions from cars and light trucks.</p> <p>Street System</p> <p>Goal 7D.G8: Maintain a safe, efficient, and coherent system of both motorized and active, non-motorized circulation.</p> <p>Goal 7D.G9: Expand the choices of available transportation modes to effectively increase the freedom of movement for Pomona’s residents and reduce reliance on the automobile.</p> <p>Goal 7D.G10: Develop beautiful, livable, safe, and multi-modal streets that are flattering to the City’s identity.</p>		<p>Other applicable plans include The City of Pomona “Active Transportation Plan: Bicycle Master Plan and Pedestrian Master Plan” (2012) and the City of Pomona Green Plan.</p> <p>Active Transportation Plan</p> <p>Active Transportation Plan (ATP) is consistent with these sustainability efforts and provides detailed direction on how to continue the City’s progress toward a better bicycling and walking environment. The Plan does this by proposing a system of bikeways connecting neighborhoods to key activity centers throughout the City, developing support facilities, such as bike parking, and education programs, and by identifying recommendations for improving bicyclist safety. This document satisfies the requirements of the California Bicycle Transportation Act, granting the City eligibility for Bicycle Transportation Account (BTA) funding through the California Department of Transportation (Caltrans) for any of the bicycle improvements identified in this plan.</p> <p>City of Pomona Green Plan</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 7D.G11: Promote transportation access and connectivity between neighborhoods, Downtown, and activity centers.</p> <p>Goal 7D.G12: Balance the need to ensure efficient motor vehicle circulation with goals related to quality of life, neighborhood preservation and community development.</p> <p>7D.P15: Use the Motor Vehicle Level of Service (LOS) Guidelines (Fig.7-D.9) and the Traffic Congestion Management Policy (Fig.7-D.10) to pursue efficient, balanced, multi-modal circulation.</p> <p>Goal7D.P18: Ensure that new developments provide an integrated pattern of streets and pedestrian paths that provide connections between neighborhoods. As part of the City’s Subdivision Ordinance, establish street connectivity requirements that:</p> <ul style="list-style-type: none">• Discourage gated entrances and restricted public access to subdivision/residential streets;• Provide street and pedestrian connections to adjacent areas to enable more efficient movement throughout the City. Avoid single-point-access neighborhoods and cul-de-sacs;• Align streets with existing arterials and collector streets in adjacent areas; and• Limit block lengths to no more than 500 feet and encourage four-way intersections to increase accessibility and connectivity. <p>Goal 7D.P19: Prepare and adopt “green” street standards and incorporate these practices in the design and construction of City streets.</p> <p>Goal 7D.P19: Minimize the negative impacts of motor vehicle traffic on residential neighborhoods where appropriate.</p> <p>Goal 7D.P19: Preserve the livability of and increase the safety in residential areas while protecting neighborhood connectivity and basic accessibility.</p> <p>Pedestrian Circulation</p> <p>Goal 7D.G19: Improve pedestrian safety and comfort along City streets, particularly in residential neighborhoods and areas where significant pedestrian activity is envisioned as identified in Section. 6 Pomona Tomorrow.</p> <p>Goal 7D.G20: Foster walkable and accessible street environments that connect Pomona’s many unique neighborhoods and districts.</p> <p>Policy 7D.P37: Create pedestrian- and bicycle-only mid-block cut-throughs to enhance neighborhood interconnectivity where street connections are limited due to existing cul-de-sac or dead-end conditions, grade separations, property ownership, or topographical challenges.</p> <p>Policy 7D.P43: Develop guidelines and standards for the design of pedestrian facilities and establish pedestrian-friendly residential and commercial design guidelines.</p> <p>Policy 7D.P45: Continue to participate in and implement recommendations of the Safe Route to Schools program.</p> <p>Policy 7D.P46: Establish a Pedestrian Safety Program that provides pedestrian educational materials and a regularly updated pedestrian safety report.</p> <p>Bicycle Circulation</p>		<p>Land Use and Community Design Element</p> <p>Policy 1.3.2: Create communities and neighborhoods that are attractive, safe, and convenient for pedestrians and bicyclists.</p> <p>Efficient Transportation Element</p> <p>Policy 3.1.4: Increase bikability within the City through implementation of the bike master plan and other actions</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 7D.G21: Develop a comprehensive bicycle network that connects local and regional commuter and recreation routes.</p> <p>Goal 7D.G22: Establish realistic bikeway usage goals in concert with SCAG’s Regional Transportation Plan</p> <p>Goal 7D.G23: Ensure bicycle safety through engineering, education and enforcement programs.</p> <p>Goal 7D.G24: Require new development or redevelopment to provide bicycle parking where appropriate and ensure it is located in safe, prominent locations.</p> <p>Policy 7D.P52: Implement the Active Transportation Plan including installation of marked, on-street bike lanes such as along the potential bike routes identified on Fig.7-D.16 Conceptual Bikeway Network.</p> <p>Policy 7D.P53: Integrate bicycle facility features from the Active Transportation Plan into new development projects as a condition of approval.</p> <p>Policy 7D.P54: Expand on the existing Bicycle Safety Program including bicycling educational materials and a regularly updated bicycle safety report.</p> <p>Transportation Demand Management</p> <p>Goal 7D.G25: Use transportation demand management (TDM) tools on a Citywide basis to encourage and create incentives for the use of alternate travel modes for various project sizes and land uses.</p>		
Rosemead	<p>Goal 5: Targeted land use changes that improve housing and economic opportunities for residents and businesses and achieve City fiscal and environmental objectives.</p> <p>Action 5.20: Discourage projects that impede bicycle and walking access, e.g., large parking areas that cannot be crossed by non-motorized vehicles, and new residential communities that block through access on existing or potential bicycle and pedestrian routes.</p> <p>Circulation Element</p> <p>Goal 1: Maintain efficient vehicular and pedestrian movements throughout the City.</p> <p>Policy 1.3: Assure that traffic studies for individual developments, and traffic studies conducted for sectors of the community and specific plans by the City, make every effort to provide LOS D operations or better on arterial roadways and collector roadways if a nexus to the project exists.</p> <p>Goal 2: Development of infrastructure and service to support alternatives modes of travel.</p> <p>Policy 2.2: The provision of Class II (striped and signed) bicycle lanes along minor arterial or collector roadway corridors during roadway reconstruction projects should be evaluated and implemented if feasible.</p> <p>Policy 2.6: Walkable areas of the city, such as in the downtown area or the proposed mixed-use districts, should be reviewed for ways to improve pedestrian access (driveway access point reductions, buffers between roadways and sidewalks, crosswalks, etc.).</p> <p>Policy 2.8 Include safe and convenient bicycle and pedestrian access in all transportation improvement projects. Ensure that nonmotorized transportation systems are connected and not interrupted by impassable barriers, such as freeways and include amenities such as secure bicycle parking.</p>	<p>Municipal code related to transportation relevant to the Plan Area can be found in Chapter 12.32 (Transportation Demand Management Program), Section 12.32.020 – (Review of transit impacts).</p> <p>Under Section 12.32.020 – (Review of transit impacts), Prior to approval of any development project for which an Environmental Impact Report (EIR) will be prepared pursuant to the requirements of the California Environmental Quality Act (CEQA) or based on a local determination, regional and municipal fixed-route transit operators providing service to the project shall be identified and consulted with projects for which a notice of preparation (NOP) for a draft EIR has been circulated pursuant to the provisions of CEQA prior to the effective date of the ordinance codified in this chapter shall be exempted from its provisions. The "Transit Impact Review Worksheet," contained in the Los Angeles County Congestion Management Program Manual, or similar worksheets, shall be used in assessing impacts. Pursuant to the provisions of CEQA, transit operators shall be sent a NOP for all contemplated EIRs and shall, as part of the NOP process, be given an opportunity to comment on the impacts of the project, to identify recommended transit service or capital improvements which may be required as a result of the project, and to recommend that mitigation measures adopted shall be monitored through the mitigation monitoring requirement of CEQA.</p> <p>Phased development projects, development projects subject to a development agreement, or development projects requiring subsequent approvals, need not repeat this process as long as no significant changes are made to the project. It shall remain the discretion of the lead agency to determine when a project is substantially the same and therefore covered by a previously certified EIR.</p>	No additional ordinances were identified.

		<p>minimize automobile trips on the CMP network. Impacts and recommended mitigation measures identified by the transit operator(s) shall be evaluated in the draft EIR prepared for the project. Related mitigation measures which may be adopted shall be monitored through the mitigation monitoring requirements of CEQA.</p> <p>B. Phased development projects, development projects subject to a development agreement, or development projects requiring subsequent approvals, are not required to repeat the process described in subsection A of this section, as long as no significant changes are made to the project. It shall remain the discretion of the city to determine when a project is substantially the same and therefore covered by a previously certified EIR.</p>	
Temple City	<p>Mobility Element</p> <p>Goal M 1: Livable Streets. A balanced transportation system that accommodates all modes of travel safely and efficiently while considering the community context of all transportation investments.</p> <p>M 1.1 Complete Streets. Require that the planning, design, and construction of all transportation projects consider the needs of all modes of travel to create safe, livable, and inviting environments for pedestrians, bicyclists, motorists, and public transit users of all ages and abilities.</p> <p>M 1.2 Transportation System Impacts. Evaluate transportation and development projects to account for the full benefits and impacts on all modes of transportation, not just automobiles.</p> <p>M 1.4 Pedestrian and Cyclist Safety. Balance the safety concerns of pedestrians and cyclists with motor vehicles to ensure that the safety of all users of the transportation system is considered.</p> <p>M 1.5 Emergency Vehicle Access. Allow for adequate access of emergency vehicles to meet critical response times safely.</p> <p>M 1.6 Traffic Management. Manage the construction and operations of streets, intersections, and traffic signals so that motorists adhere to intended speeds on all City roadways and limit intrusion into neighborhood streets.</p> <p>M 1.8 Wayfinding. Develop a comprehensive and visible pedestrian and cyclist friendly way-finding signage system in the city to direct pedestrians and cyclists to transit facilities, local and regional trails and routes, civic and cultural amenities, and visitor and recreation destinations. The way-finding system should make an effort to connect with the region and surrounding cities.</p> <p>Pedestrian Network</p> <p>Goal M 3: Pedestrian Network. A safe pedestrian network that provides direct connections between residences, employment, shopping, and civic uses.</p> <p>M 3.1 Pedestrian Network. Create a safe and convenient circulation system for pedestrians that addresses crosswalks; improves the connections between neighborhoods and commercial areas; provides places to sit or gather, pedestrian-scaled street lighting, buffers from moving vehicle traffic; and includes amenities that attract people of all ages and abilities.</p>	<p>No ordinances related to transportation relevant to the Plan Area were identified.</p>	<p>The 2011 Temple City Bicycle Master Plan proposes a 27-mile network of bike routes and infrastructure in the community. To date, the City has received two Caltrans Bicycle Transportation Account (BTA) grants totaling \$922,000 to implement 15 miles of bikeways in 2014. Staff is also coordinating with the County and adjacent municipalities to ensure bicycle network connections beyond City limits to key destinations like transit hubs and the regional Rio Hondo Bike Trail. The plan includes:</p> <p>A network of on-street and off-street bikeways</p> <p>A plan for expanding existing regional bikeways and connecting gaps to neighboring communities</p> <p>Recommendations for bike education and enforcement</p> <p>Potential funding sources to support bike improvements</p> <p>A map of proposed bikeways.</p> <p>(Temple City 2024)</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>M 3.2 Pedestrian Improvement Prioritizations. Prioritize pedestrian improvements in areas of the City with community facilities, supportive land use patterns, and facilities that provide connectivity to other modes of travel such as bicycling and transit.</p> <p>M 3.6 School Accessibility. Consider the safety of school children as a priority over vehicular movement on all streets.</p> <p>Bicycle Network</p> <p>Goal M 4: Bicycle Trail Network. A bicycle and multi-use trail network that facilitates bicycling for commuting, school, shopping, and recreational trips.</p> <p>M 4.1 Bicycle Networks. Require that the City provide additional bicycle facilities along roadways in the City, where appropriate and feasible, in support of the City’s Bicycle Master Plan and other planning documents.</p> <p>M 4.2 Priority Bike Improvements. Prioritize improvements that address bicycling in existing areas of the City with community facilities, complementary land use patterns, and connections to other modes of travel including walking and transit.</p> <p>M 4.3 Bicycle Parking. Require that public and private development in the City provide sufficient bicycle parking.</p> <p>M 4.4 Bicycle Share Program. Explore the feasibility of developing a citywide bike share program. Work with the local business community to identify and coordinate with possible corporate sponsors.</p> <p>M 4.5 Bicycle Education and Awareness. Encourage bicyclists and automobile users to be aware of bicycling issues, and lawful/responsible riding. Work with TCUSD, bicycle-related organizations, public-safety agencies, and other groups to support bicycle education events and classes that help new and experienced bike riders become more knowledgeable and effective at bike riding and bike maintenance.</p>		
West Covina	<p>Our Natural Community Element</p> <p>Our Well Planned Community</p> <p>Policy 1.7. Develop a multi-use integrated trail system that supports recreational and mobility needs.</p> <p>Action 1.7a. Prioritize a phased program for the planning and design, funding and implementation of a citywide trail program.</p> <p>Action 1.7b. Convert the east-west Walnut Creek Wash into a walking and biking trail.</p> <p>Action 1.7c. Identify and provide additional access points adjacent to the Walnut Creek Wash and existing and planned trails.</p> <p>Policy 4.2. Accommodate multimodal mobility, accessibility and safety needs when planning, designing, and implementing transportation improvements, improving access and circulation for all users of City streets.</p> <p>Action 4.2c. Accommodate the needs of all travelers through a Complete Streets approach to designing new transportation improvements. Complete streets are roadways designed to facilitate safe, comfortable, and efficient travel for all roadway users.</p> <p>Policy 4.3. Establish protection of human life and health as the highest transportation system priorities and seek to improve safety through the design and maintenance of streets, sidewalks, intersections and crosswalks.</p>	<p>Municipal code related to transportation relevant to the Plan Area can be found in Division 2 (Transportation and Air Quality Control Measures) Sec. 26-751.1300. (Land use analysis program).</p> <p>Under Sec. 26-751.1300. (Land use analysis program), the purpose of this section is to adopt and implement a land use analysis program to ensure that the city, in addition to examining and mitigating transportation impacts on the local street network, considers the regional transportation impact of new development through the land use approval process. Integrated with CEQA, this program is designed to provide a consistent, countywide methodology, to determine the impact of new development on the CMP roadway system. It is the intent of this program to promote increased coordination between jurisdictions, transit providers, local decisionmakers and interested parties, and thereby enhancing countywide mobility and improving air quality.(b)Applicability of requirements. All development projects required to prepare an environmental impact report (EIR) based on the city's determination, will be subject to the land use analysis program. In addition to the procedural guidelines already established by CEQA, traffic and transit impacts shall be assessed using the "Transportation Impact Analysis" methods contained in the Los Angeles County Congestion Management Program and/or Planning Commission Resolution No. 1-93-4135.</p>	No additional ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Action 4.3a. Develop and implement an enforcement program to encourage safe behavior and to reduce aggressive and/or negligent behavior among drivers, bicyclists and pedestrians.</p> <p>Policy 4.4. Allocate street space equitably among all modes.</p> <p>Action 4.4a. Ensure that pedestrians, bicyclists, transit vehicles and automobiles each have space in the right-of-way that is consistent with the street’s designated mobility function and land use context per street typologies and modal-priority overlays as defined in the Thoroughfares Plan.</p> <p>Action 4.4b. Adopt the NACTO Urban Street Design Guide and Urban Bikeway Design Guide as a supplement to the Tax California Manual for Uniform Traffic Control Devices.</p> <p>Policy 4.5. Work to eliminate barriers to pedestrian and bicycle travel.</p> <p>Action 4.5c Accompany installation of new bicycle facilities with educational programs for motorists, bicyclists, and pedestrians — particularly children.</p> <p>Action 4.5g. Develop a pedestrian and bicycle path along Walnut Creek Wash between Glendora and Sunset. A pedestrian and bicycle path is recommended to take the place of the existing service vehicle access road on the north side of the Wash in the Downtown area, connecting to the existing segment to the east, between Glendora and Azusa. The existing segment might also be improved using new signs and other wayfinding strategies and enhanced lighting for greater security.</p> <p>Action 4.5h. Explore opportunities for a “shared street” on Toluca Avenue. In the near term, no changes are recommended to this street. However, over the longer term it might be reconfigured as part of redevelopment of adjacent parcels. One option, given the street’s relatively short length and role as a way access to adjacent parcels, rather than as an important element of the larger street network, would be a shared street or “woonerf” configuration in which curbs are eliminated and the roadway is shared by all users, including pedestrians. Such designs are appropriate for low-speed environments, are proven to be safe if properly located and designed, and can greatly contribute to the urban design character of a street by branding it as unique, providing additional opportunities for placemaking and greatly improving walkability.</p> <p>Policy 4.10. Improve mobility and accessibility for travelers of all incomes through a process of equitable public engagement, service delivery and capital investment.</p> <p>Action 4.10a. Identify low-income and transit-dependent communities, and implement pedestrian, bicycle and transit-related improvements in these communities.</p> <p>A4.10b Improve multimodal access to schools, senior centers, social service agencies, civic institutions and other destinations used by low-income and other segments of the community.</p> <p>Policy 4.12. Work to develop a safer transportation system.</p> <p>Action 4.12a. Encourage development and application of strategies and actions pertaining to response and prevention of security incidents on the local and regional transportation system through improved system monitoring, rapid recovery planning, and coordination with other security agencies.</p>		

3.17.3 Impact Assessment

3.17.3.1 Significance Criteria

Appendix G of the State CEQA Guidelines was reviewed to determine whether the Plan would result in significant impacts related to transportation. The criteria listed below consider if the Plan would:

- 17(a) *Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.*
- 17(b) *Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b).*
- 17(c) *Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).*
- 17(d) *Result in inadequate emergency access.*

3.17.3.2 Methodology

Per the County's Transportation Impact Analysis Guidelines (LA Public Works 2020), a project has a potentially significant VMT impact if it meets one or more of the criteria listed below when comparing to the baseline VMT for the North and South County areas:

- Residential Projects: The project's residential VMT (i.e., the VMT generated by home-based work and other trips) per capita would not be 16.8 percent below the existing residential VMT per capita for the Baseline Area (i.e., within North or South County) in which the project is located.
- Office Projects: The project's employment VMT (i.e., the VMT generated by home-based work trips) per employee would not be 16.8 percent below the existing employment VMT per employee for the Baseline Area (i.e., within North or South County) in which the project is located.
- Regional Serving Retail Projects: The project would result in a net increase in existing total VMT.
- Land Use Plans: The plan total VMT per service population (i.e., sum of residents and employees) would not be 16.8 percent below the existing VMT per service population for the Baseline Area in which the plan is located.
- Other Land use Type: Public Works to determine which of the above is an appropriate threshold of significance to be used.

Onroad construction vehicle trips include construction worker trips to and from the job site, off-site hauling trips, and material delivery trips. The number of one-way trips of each type of onroad activity for construction of the various Plan components was estimated using CalEEMod default values based on project dimensions and quantities of various construction materials. Trip lengths are based on CalEEMod defaults developed for the Plan area. Operational vehicle trips associated with the proposed development include trips associated with landscape and maintenance activities generated worker vehicles and are based on the estimated landscape and maintenance schedule, number of workers, and CalEEMod trip length values developed for the Plan area.

3.17.3.3 Plan Impacts

3.17.3.3.1 17(a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

The construction of Plan components would generate short-term additional trips associated with workers, vendors, and hauling of materials. Although the location, size, and access to Plan components is currently unknown, for the purposes of this PEIR, a typical construction scenario was developed for each type of project to represent estimated construction trips. Construction trip generation assumptions consider the size of the project, construction phase, and number of workers. Worker, vendor, and haul trip lengths are based on CalEEMod default assumptions for the County of Los Angeles-South Coast in an urban setting. Daily trips for workers, vendors, and haul trips are estimated under the assumption that construction phases would not overlap, in order to evaluate compliance with the County's Transportation Impact Guidelines and the SCAG RTP/SCS.

There are no programs, plans, ordinances, or policies that address the construction phase that are relevant to greenway paths and amenities. Based on the maximum extent assumptions described in Section 2, Project Description, traffic and circulation impacts are not anticipated to be of a magnitude such that they could conflict with any programs, plans, or policies addressing the circulation system, or transit, roadway, bicycle, or pedestrian facilities. However, the typical project elements could involve intermittent lane and sidewalk closures during construction of those elements, which could impede vehicle, pedestrian, equestrian, and bicycle circulation. These impacts have the potential to be significant.

3.17.3.3.1.1 Greenway Paths + Greenway Amenities

Construction

Significant and Unavoidable. Table 3.17-6 provides a trip generation summary for construction of greenway paths and greenway amenities. As summarized in Table 3.17-6, construction trip generation would range from 7.5 to 57.9 daily trips, depending on the construction phase. While the additional vehicle trips are below the County's Transportation Impact Analysis Guidelines screening threshold of 110 daily trips, the temporary increase in vehicle trips generated during construction could have a potentially significant impact. If the timing of those trips occurred during peak hours, they could contribute to congestion within designated congested roadway segments. In addition, it is possible that construction activities for an individual project could require intermittent closures of roadways, sidewalks, or paths that could impede vehicle, pedestrian, equestrian, and bicycle circulation and/or conflict with a program, plan, ordinance, or policy addressing the circulation system (e.g., Los Angeles County General Plan Policy M 1.2 to ensure that streets are safe for sensitive users, such as seniors and children, Policy M 2.3 to accommodate pedestrian and bicyclist, and reduce motor vehicle accidents, Policy M 2.4 to ensure a comfortable walking environment for pedestrians, as well as Step by Step Los Angeles County and Los Angeles County Vision Zero Action Plan goals and policies that address safety and traffic). These impacts would be potentially significant. **MM TR-1: Construction Transportation Management Plan** requires the preparation and implementation of a project-specific Construction Transportation Management Plan once a project has been proposed at a specific location that will identify the location and timing of temporary closures and detours with the goal of maintaining traffic flow, especially during peak periods as well as minimize impacts to pedestrians and bicyclists when bike

lanes or sidewalks must be closed. Implementation of **MM TR-2: Restrict Lane Closures and Maintain Access** would further minimize impacts to circulation by limiting lane closures to off-peak periods to reduce traffic delays as well as requiring access to schools, residential areas, and business be maintained. To avoid conflicts between construction activities and pedestrians and bicyclists, **MM TR-3: Closure Notification and Detours** would require advanced notice and detours and/or safe areas along the construction zone when construction results in temporary closures of sidewalks, other pedestrian facilities, and bike paths/routes. In addition, implementation of **MM TR-4: Notify Emergency Personnel of Road Closures** would reduce impacts to emergency services by providing advanced notification of proposed lane closures to emergency personnel. However, project specific circumstances from construction of greenway paths and amenities could still result in unforeseen circumstances such as temporary closures being unable to maintain traffic flow during peak period resulting in a significant impact. Temporary closures may also result in increased congestion necessitating alternative routes, and potentially forcing existing traffic to take longer trips along local roadways. With implementation of **MM TR-1, MM TR-2, MM TR-3, and MM TR-4**, the magnitude of transportation and circulation impacts are expected to be reduced, but these measures cannot guarantee avoidance of all significant impacts for every project. Therefore, project components may result in a conflict with programs, plans, or policies addressing the circulation system, or transit, roadway, bicycle, or pedestrian facilities, through the possible increase in congestion and VMT from temporary facilities closures. Therefore, impacts will be potentially significant and unavoidable.

Table 3.17-6. Construction-Related Vehicle Trips and Daily VMT (Greenway Paths + Greenway Amenities)

Construction Phase	Trip Type	One-Way Trips per Day	Miles per Trip	Daily VMT
Demolition	Worker	17.5	18.5	323.8

Operations

Less than Significant. The primary goal of the Plan is to improve mobility and recreational opportunities for people with disabilities, youth and the aging populations, bicyclists, pedestrians, and equestrians in the San Gabriel Valley. The Plan proposes to implement greenways along more than one hundred miles of tributaries that would provide for alternative greenway transportation, with the goal of reducing VMT and associated GHG emissions. Future projects implemented from the Plan would be designed along the SGV River and Rio Hondo and their tributaries to connect with existing or potential access points to other greenway paths, parks, or other community benefit features (e.g., schools, business), providing opportunities for long-distance commuting via active transportation modes such as bicycles, scooters, and walking or running. Thus, the Plan would increase neighborhood connectivity to the trails and open spaces developed within the Plan Area, reducing or eliminating the need to travel extended distances via private vehicle to reach a destination within the Plan Area. The ability to replace long-distance vehicle commute trips with an active transportation trip will reduce VMT, consistent with State and regional policy initiatives, including SB 743 and SCAG's 2020-2045 RTP/SCS. It is also consistent with 2020-2045 RTP/SCS RTP Goals 2, 5, 6, 7, and 10 which seek to reduce GHG emissions and protect the environment and the health of SCAG region residents by improving air quality and encouraging active transportation.

The County of Los Angeles adopted the Los Angeles County Bicycle Master Plan, which sets forth a vision for a regional bicycle system of interconnected corridors with support facilities to encourage and make bicycling more comfortable. The Bike Master Plan has policies which support the development of bicycle facilities in Los Angeles County that encourage new riders (Bicycle Master Plan Policy 1.4), encourages landscaping along bikeways where appropriate (Bicycle Master Plan Implementation Action 1.4.2), and allows the use of and promote new and/or innovative bicycle facility designs and standards on County bicycle facilities (Bicycle Master plan Implementation Action 1.4.4). The portions of the Plan within County jurisdiction align with the Bicycle Master Plan since the greenway paths and amenities meet the vision of the Bicycle Master Plan and would also address each of these policies and implementation actions of the Bicycle Master Plan. Therefore, implementation of the Plan is not in conflict with the Bicycle Master Plan.

Los Angeles County's Vision Zero action plan seeks to eliminate traffic-related fatalities and severe injuries on unincorporated County roadways by 2035. By providing a framework for construction of off-street paths for active transportation trips, development of greenway paths and greenway amenities will provide Los Angeles County residents with a safe corridor for active transportation trips free of risk from injury or death by collision with a motor vehicle. Implementation of the Plan will allow the County

to achieve many of the goals and policies from its general plan Mobility Element. Goals and policies supported by Plan implementation include Goal M2, Policies M2.5 and M2.7; Goal M4, Policies M4.1, M4.10, and M4.12; and Goal M7, Policy M7.1, all of which relate to active transportation and reducing automobile dependence. Therefore, implementation of the Plan is not in conflict with the LA County's Vision Zero.

Similarly, greenway paths and greenway amenities are consistent with active transportation-related goals, policies, and policy actions of the other 33 incorporated cities within the Plan Area, as detailed in Section 3.17.2.3, Incorporated Cities. Specifically, greenway paths and greenway amenities would directly support the cities' complimentary goals for reducing VMT and improving connectivity for alternative transportation modes. As such, operations of greenway paths and greenway amenities would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities, and impacts would be less than significant.

Mitigation Measures

MM TR-1: Construction Transportation Management Plan. The project proponent shall prepare and implement a Construction Transportation Management Plan that will include provisions for the following:

- Implementation of standard safety practices, including installation of appropriate barriers between work zones and transportation facilities, placement of appropriate signage, and use of traffic control devices.
- Use of flaggers and/or signage to guide vehicles through or around construction zones using proper techniques for constructing activities including staging area entrance and exit.
- Alternate traffic routes and the use of construction personnel carpools or shuttles to avoid roads that are operating at a Level of Service D or lower.
- Traffic detours for any road or land closures with appropriate signage marking the detours.
- Timing of lane and road closures.
- Plans for construction worker parking and transportation to work sites.
- Methods for keeping roadways clean.
- Storage of all equipment and materials in designated work areas in a manner that minimizes traffic obstructions and maximizes sign visibility.
- Routing of trucks to avoid minor roads, where possible to reduce congestion and potential asphalt damage.
- Repair asphalt and other road damage (e.g., curb and gutter damage, rutting in unpaved roads) caused by construction vehicles.
- Detours for cyclists and pedestrians when bike lanes or sidewalks must be closed.
- Maintain emergency ingress and egress to access roads at all times.

MM TR-2: Restrict Lane Closures and Maintain Access. The project proponent shall restrict all necessary lane closures or obstructions associated with construction activities to off-peak periods to reduce traffic delays. Lane closures shall not occur between 6:00 and 9:30 a.m. and between 3:30 and 6:30 p.m., unless otherwise authorized by the responsible public agency with jurisdiction over the affected street or highway through the issuance of an encroachment permit. The project proponent or its construction contractors shall coordinate with schools prior to construction within 1,000 feet of school property to ensure entryways to schools are not blocked during peak drop-off and pick-up hours. Underground work areas within intersections or traffic lanes shall be adequately covered with steel plating prior to 3:30

p.m. to allow uninterrupted traffic flow during peak traffic periods. All residents within 300 feet of a proposed temporary lane or road closure shall be notified within at least seven days prior to a temporary lane or road closure. The project proponent or its construction contractors shall maintain travel through intersections at all times during construction. The project proponent or its construction contractors shall provide the ability to quickly lay a temporary steel plate trench bridge upon request in order to ensure driveway access to schools, businesses, and residences and shall provide continuous access to properties when not actively performing construction activities. In the event of a nearby fire or other emergency, steel plating shall be placed over underground work areas and construction equipment shall be removed from the partially or fully closed roadways, as needed, to permit uninterrupted traffic flow.

MM TR-3: Closure Notification and Detours. Where construction results in temporary closures of sidewalks and other pedestrian facilities, the project proponent shall provide temporary pedestrian access, through detours or safe areas along the construction zone. Where construction activity results in bike route or bike path closures, appropriate detours shall be defined. Signs shall be placed along the closed bike path a minimum of seven days prior to bike path closure notifying bicyclists of the proposed construction activities and duration of bike path closure. Notifications posted along the bike path shall include the location of detours and alternate routes to avoid conflicts with the construction area.

MM TR-4: Notify Emergency Personnel of Road Closures. The project proponent shall notify local emergency personnel (i.e., fire departments, police departments, ambulance, and paramedic services) at least seven days prior to lane or road closures. The notice shall include location(s), date(s), time(s), and duration of closure(s), and a contact number for project personnel.

Significance After Mitigation

Construction impacts would be reduced with implementation of **MM TR-1: Construction Transportation Management Plan**, **MM TR-2: Restrict Lane Closures and Maintain Access**, **MM TR-3: Closure Notification and Detours**, and **MM TR-4: Notify Emergency Personnel of Road Closures**, but remain significant and unavoidable.

Impacts from operation would be less than significant. No mitigation is required.

3.17.3.3.1.2 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces

Construction

Significant and Unavoidable. Construction of greenway paths and amenities would have transportation impacts as described above. The addition of a pocket park or greenspace would increase the number of days of construction, depending on the size of the proposed park or greenspace, which would increase the total number of vehicle trips during construction, although the number of daily trips may not necessarily increase due to the extended project construction schedule and distribution of trips over a greater number of days. Table 3.17-7 provides a trip generation summary for construction of greenway paths, one-acre pocket parks, and greenspaces. Table 3.17-8 provides a trip generation summary for construction of greenway paths, 25-acre greenspaces.

Source: CalEEMod Reports provided in Appendix C

As summarized in Table 3.17-7 and Table 3.17-8, construction trip generation would range from 7.5 to 57.9 daily trips, depending on the construction phase. These additional vehicle trips are below the Los Angeles County's Transportation Impact Analysis Guidelines screening threshold of 110 daily trips. As described for greenway paths and amenities, the temporary increases in vehicle trips generated during construction could have a potentially significant impact if the timing of those trips occurred during peak hours and contributed to congestion within designated congested roadway segments. In addition, as the location, design details, and construction phasing of greenway path, pocket park, and greenspace projects are not known, it is possible that construction activities could require intermittent closures of

roadways, sidewalks, or paths that could impede vehicle, pedestrian, equestrian, and bicycle circulation and/or conflict with a program, plan, ordinance, or policy addressing the circulation system. These impacts have the potential to be significant. **MM TR-1: Construction Transportation Management Plan** requires the preparation and implementation of a project-specific Construction Transportation Management Plan once a project has been proposed at a specific location that would identify the location and timing of temporary closures and detours with the goal of maintaining traffic flow, especially during peak periods as well as minimize impacts to pedestrians and bicyclists when bike lanes or sidewalks must be closed. Implementation of **MM TR-2: Restrict Lane Closures and Maintain Access** would further minimize impacts to circulation by limiting lane closures to off-peak periods to reduce traffic delays as well as requiring access to schools, residential areas, and business be maintained. To avoid conflicts between construction activities and pedestrians and bicyclists, **MM TR-3: Closure Notification and Detours** would require advanced notice and detours and/or safe areas along the construction zone when construction results in temporary closures of sidewalks, other pedestrian facilities, and bike paths/routes. In addition, implementation of **MM TR-4: Notify Emergency Personnel of Road Closures** would reduce impacts to emergency services by providing advanced notification of proposed lane closures to emergency personnel. However, project specific circumstances from construction greenway path, pocket park, and greenspace could still result in impacts such as temporary closures being unable to maintain traffic flow during peak periods, resulting in a significant impact. Temporary closures and increased vehicle trips may also result in increased congestion within designated congested roadway segments; congestion necessitating alternative routes; and potentially forcing existing traffic to take longer trips along local roadways. With implementation of **MM TR-1, MM TR-2, MM TR-3, and MM TR-4**, the magnitude of transportation and circulation impacts are expected to be reduced, but these measures cannot guarantee avoidance of all significant impacts for every project. Therefore, project components may result in a conflict with programs, plans, or policies addressing the circulation system, or transit, roadway, bicycle, or pedestrian facilities through the possible increase in congestion and VMT from temporary facilities closures. Therefore, impacts will be significant and unavoidable.

Operations

Less than Significant. For projects that include pocket parks and greenspaces in addition to greenway paths and amenities, impacts would be the same as described for greenway paths and amenities. In addition, development of pocket parks and greenspaces adjacent to greenway paths would increase neighborhood connectivity to the trails and open spaces developed within the Plan Area, creating new neighborhood parks and reducing or eliminating the need to travel extended distances via private vehicle to reach a neighborhood park for the residents who live in the Plan Area. Accordingly, development of greenway paths, pocket parks, and greenspaces will allow for an increased share of trips to be completed via active transportation instead of by private vehicle. Thus, the inclusion of pocket parks and greenspaces would not result in any additional potential to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. Impacts would be less than significant.

Mitigation Measures

MM TR-1: Construction Transportation Management Plan.

MM TR-2: Restrict Lane Closures and Maintain Access.**MM TR-3: Closure Notification and Detours.****MM TR-4: Notify Emergency Personnel of Road Closures.***Significance After Mitigation*

Construction impacts would be reduced with implementation of **MM TR-1: Construction Transportation Management Plan, MM TR-2: Restrict Lane Closures and Maintain Access, MM TR-3: Closure Notification and Detours, and MM TR-4: Notify Emergency Personnel of Road Closures** but remain significant and unavoidable.

Impacts from operation would be less than significant. No mitigation is required.

3.17.3.3.1.3 Greenway Paths and Greenway Amenities + Safe Crossings

Construction

Significant and Unavoidable. Construction of greenway paths and amenities would have the same impacts as described in Section 3.17.3.3.1.1 above. The addition of a safe crossing would increase the number of days of construction, depending on the type and size of the proposed safe crossing design. The addition of a safe crossing would also increase the total number of vehicle trips during construction, although the number of daily trips may not necessarily increase due to the extended project construction schedule and distribution of trips over a greater number of days. Table 3.17-9 provides a trip generation summary for construction of greenway path and safe crossing projects.

Table 3.17-9. Construction-Related Vehicle Trips and Daily VMT (Greenway Paths + Safe Crossings)

Source: CalEEMod Reports provided in Appendix C

As summarized in Table 3.17-9, construction trip generation would range from 5.2 to 63.9 daily trips, depending on the construction phase. These additional vehicle trips are below the County's Transportation Impact Analysis Guidelines screening threshold of 110 daily trips. As described for greenway paths and amenities, the temporary increases in vehicle trips generated during construction could have a potentially significant impact if the timing of those trips occurred during peak hours and contributed to congestion within designated congested roadway segments. In addition, as the location, design details, and construction phasing of greenway path and safe crossing projects are not known, it is possible that construction activities could require intermittent closures of roadways, sidewalks, or paths that could impede vehicle, pedestrian, equestrian, and bicycle circulation and/or conflict with a program, plan, ordinance, or policy addressing the circulation system. These impacts would be potentially significant. **MM TR-1: Construction Transportation Management Plan** requires the preparation and implementation of a project-specific Construction Transportation Management Plan once a project has been proposed at a specific location that will identify the location and timing of temporary closures and detours with the goal of maintaining traffic flow, especially during peak periods as well as minimize impacts to pedestrians and bicyclists when bike lanes or sidewalks must be closed. Implementation of **MM TR-2: Restrict Lane Closures and Maintain Access** would further minimize impacts to circulation by limiting lane closures to off-peak periods to reduce traffic delays as well as requiring access to schools, residential areas, and business be maintained. To avoid conflicts between construction activities and pedestrians and bicyclists, **MM TR-3: Closure Notification and Detours** would require advanced notice and detours and/or safe areas along the construction zone when construction results in temporary closures of sidewalks, other pedestrian facilities, and bike paths/routes. In addition, implementation of **MM TR-4: Notify Emergency Personnel of Road Closures** would reduce impacts to emergency services by providing advanced notification of proposed lane closures to emergency personnel. However, project specific circumstances from construction safe crossings could still result in impacts such as temporary closures being unable to maintain traffic flow during peak periods, resulting in a significant impact. Temporary closures and increased vehicle trips may also result in increased

congestion within designated congested roadway segments; congestion necessitating alternative routes; and potentially forcing existing traffic to take longer trips along local roadways. With implementation of **MM TR-1: Construction Transportation Management Plan, MM TR-2: Restrict Lane Closures and Maintain Access, MM TR-3: Closure Notification and Detours, and MM TR-4: Notify Emergency Personnel of Road Closures**, the magnitude of transportation and circulation impacts are expected to be reduced, but these measures cannot guarantee avoidance of all significant impacts for every project. Therefore, project components may result in a conflict with programs, plans, or policies addressing the circulation system, or transit, roadway, bicycle, or pedestrian facilities through the possible increase in congestion and VMT from temporary facilities closures. Therefore, impacts will be significant and unavoidable.

Operations

Less than Significant. For projects that include safe crossings in addition to greenway paths and amenities, impacts would be the same as described for greenway paths and amenities. The inclusion of safe crossing features would not result in any additional potential to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. Impacts would be less than significant.

Mitigation Measures

MM TR-1: Construction Transportation Management Plan.

MM TR-2: Restrict Lane Closures and Maintain Access.

MM TR-3. Closure Notification and Detours.

MM TR-4. Notify Emergency Personnel of Road Closures.

Significance After Mitigation

Construction impacts would be reduced with implementation of **MM TR-1: Construction Transportation Management Plan, MM TR-2: Restrict Lane Closures and Maintain Access, MM TR-3: Closure Notification and Detours, and MM TR-4: Notify Emergency Personnel of Road Closures** but remain potentially significant and unavoidable.

Impacts from operation would be less than significant. No mitigation is required.

3.17.3.3.1.4 Greenway Paths and Greenway Amenities + Stormwater Management

Construction

Significant and Unavoidable. For future projects that propose stormwater management in addition to greenway path and amenities, transportation impacts during construction would be as described above. The construction of stormwater management features in addition to greenway paths and amenities is expected to be comparable in construction duration and vehicle trips as compared to projects that do not include such features. Table 3.17-10 provides a trip generation summary for construction of greenway paths and stormwater management.

Table 3.17-10. Construction-Related Vehicle Trips and Daily VMT (Greenway Paths + Stormwater Management)

Construction Phase	Trip Type	One-Way Trips per Day	Miles per Trip	Daily VMT
Demolition	Worker	17.5	18.5	323.8
	Vendor	0	10.2	0.0
	Hauling	40.4	20.0	808.0
TOTAL		57.9	--	1,137.8

TOTAL		10	--	185

Source: CalEEMod Reports provided in Appendix C

As summarized in Table 3.17-10, construction trip generation would range from 7.5 to 57.9 daily trips, depending on the construction phase. These additional vehicle trips are below the County's Transportation Impact Analysis Guidelines screening threshold of 110 daily trips. As described for greenway paths and amenities, the temporary increases in vehicle trips generated during construction could have a potentially significant impact if the timing of those trips occurred during peak hours and contributed to congestion within designated congested roadway segments. In addition, as the location, design details, and construction phasing of greenway path and stormwater management projects are not known, it is possible that construction activities could require intermittent closures of roadways, sidewalks, or paths that could impede vehicle, pedestrian, equestrian, and bicycle circulation and/or conflict with a program, plan, ordinance, or policy addressing the circulation system. These impacts would be potentially significant. **MM TR-1: Construction Transportation Management Plan** requires the preparation and implementation of a project-specific Construction Transportation Management Plan once a project has been proposed at a specific location that will identify the location and timing of

temporary closures and detours with the goal of maintaining traffic flow, especially during peak periods as well as minimize impacts to pedestrians and bicyclists when bike lanes or sidewalks must be closed. Implementation of **MM TR-2: Restrict Lane Closures and Maintain Access** would further minimize impacts to circulation by limiting lane closures to off-peak periods to reduce traffic delays as well as requiring access to schools, residential areas, and business be maintained. To avoid conflicts between construction activities and pedestrians and bicyclists, **MM TR-3: Closure Notification and Detours** would require advanced notice and detours and/or safe areas along the construction zone when construction results in temporary closures of sidewalks, other pedestrian facilities, and bike paths/routes. In addition, implementation of **MM TR-4: Notify Emergency Personnel of Road Closures** would reduce impacts to emergency services by providing advanced notification of proposed lane closures to emergency personnel. However, project specific circumstances from construction of stormwater management could still result in impacts such as temporary closures being unable to maintain traffic flow during peak periods, resulting in a significant impact. Temporary closures and increased vehicle trips may also result in increased congestion within designated congested roadway segments; congestion necessitating alternative routes; and potentially forcing existing traffic to take longer trips along local roadways. With implementation of **MM TR-1: Construction Transportation Management Plan**, **MM TR-2: Restrict Lane Closures and Maintain Access**, **MM TR-3: Closure Notification and Detours**, and **MM TR-4: Notify Emergency Personnel of Road Closures**, the magnitude of transportation and circulation impacts are expected to be reduced, but these measures cannot guarantee avoidance of all significant impacts for every project. Therefore, project components may result in a conflict with programs, plans, or policies addressing the circulation system, or transit, roadway, bicycle, or pedestrian facilities through the possible increase in vehicle trips, congestion and VMT from temporary facilities closures. Therefore, impacts would remain potentially significant and unavoidable.

Operations

Less than Significant. For projects that include stormwater management in addition to greenway paths and amenities, impacts would be the same as described for greenway paths and amenities. The inclusion of stormwater management features would not result in any additional potential to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities. Impacts would be less than significant.

Mitigation Measures

MM-TR-1: Construction Transportation Management Plan.

MM-TR-2: Restrict Lane Closures and Maintain Access.

MM-TR-3: Closure Notification and Detours.

MM-TR-4: Notify Emergency Personnel of Road Closures.

Significance After Mitigation

Construction impacts would be reduced with implementation of **MM TR-1: Construction Transportation Management Plan**, **MM TR-2: Restrict Lane Closures and Maintain Access**, **MM TR-3: Closure Notification and Detours**, and **MM TR-4: Notify Emergency Personnel of Road Closures** but remain potentially significant and unavoidable.

Impacts from operation would be less than significant. No mitigation is required.

3.17.3.3.2 17(b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

3.17.3.3.2.1 Greenway Paths and Greenway Amenities

Construction

Less than Significant. CEQA Guidelines Section 15064.3(b) sets forth criteria for analyzing transportation impacts, with the applicable methodology based on project type, and specifying other criteria for conducting VMT analysis. As detailed in Section 3.17.3.3.1, Impact 17(a), conservatively accounting for all new project construction-related vehicle activity, construction of greenway paths and greenway amenities would temporarily increase trips per day by a maximum of 57.9 additional daily vehicle trips during construction. The estimated maximum daily vehicle trip count is below the County's Transportation Impact Analysis Guidelines screening threshold of 110 threshold trips per day. Per the County's Transportation Impact Analysis Guidelines, projects that generate fewer than 110 trips per day generally may be assumed to cause a less than significant impact relative to VMT. As such, construction of greenway paths and greenway amenities would not be expected to conflict with or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b), and impacts would be less than significant.

Operations

Less than Significant. Operation of greenway paths and greenway amenities would generate trips associated with landscape and maintenance activities. Landscape and maintenance of greenway paths with greenway amenities is assumed to be conducted by two workers (traveling to the project site together) once per week, resulting in two trips per week up to 18.5 miles per trip (per CalEEMod default trip distances for the Plan Area). Accordingly, landscape and maintenance activities would generate a maximum daily VMT of 37 miles and an estimated 9,646 VMT annually. The availability of greenway paths would encourage active transportation instead of using motor vehicles for short-distance trips and could reduce overall VMT as a result of replacing motor vehicle trips with alternative modes of transportation depending on location and connectivity to community benefit features (e.g., schools, businesses, parks). With respect to greenway amenities, these components associated with greenway paths would not be expected to generate trips exceeding the County's Transportation Impact Analysis Guidelines screening threshold of 110 daily trips. Thus, greenway paths and greenway amenities would not conflict with or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b) for land use or transportation projects, and impacts would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.17.3.3.2.2 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces

Construction

Less than Significant. For future projects which propose a pocket park or greenspace in addition to greenway path and amenities, transportation impacts during construction would be as described above. As detailed in Section 3.17.3.3.2, Impact 17(a), conservatively accounting for all new project construction-related vehicle activity, construction of greenway paths, pocket parks, and greenspaces would temporarily increase trips per day by a maximum of 57.9 additional daily vehicle trips during construction. The estimated maximum daily vehicle trip count is below the County's Transportation Impact Analysis Guidelines screening threshold of 110 threshold trips per day. Per the County's Transportation Impact Analysis Guidelines, projects that generate fewer than 110 trips per day generally may be assumed to cause a less than significant impact relative to VMT. As such, construction of greenway paths, pocket parks, and greenspaces would not be expected to conflict with or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b), and impacts would be less than significant.

Operations

Significant and Unavoidable. Operation of greenway paths, pocket parks or greenspaces would generate trips associated with landscape and maintenance activities as described for greenway paths and amenities above. Landscape and maintenance of greenway paths, pocket parks, and greenspaces is assumed to be conducted by two workers (traveling to the project site together) once per week, resulting in two trips per week up to 18.5 miles per trip (per CalEEMod default trip distances for the Plan Area). Accordingly, landscape and maintenance activities would generate a maximum daily VMT of 37 miles and an estimated 9,646 VMT annually.

For recreational use of the greenway paths and pocket parks or greenspaces, the availability of greenway paths would encourage active transportation instead of using motor vehicles for short-distance trips and could reduce overall VMT as a result of replacing motor vehicle trips with alternative modes of transportation depending on location and connectivity to community benefit features (e.g., schools, businesses, parks). With respect to greenway amenities, these components associated with greenway paths would not be expected to generate trips exceeding the County's Transportation Impact Analysis Guidelines screening threshold of 110 daily trips.

For the purposes of the VMT analysis for park and greenspace facilities, two critical pieces of detail are still unknown: specific project location of the park or greenspace and programming (i.e., function/use, capacity). Without these pieces of information, trip generation estimates and user vehicle trip lengths for the projects that include parks and greenspaces cannot be developed and cannot be evaluated quantitatively. For example, a 25-acre open field would generate fewer trips than a 25-acre sports complex or playground. Thus, the VMT impacts associated with parks and greenspaces have been evaluated qualitatively in this analysis, as is allowed under CEQA Section 15064.3, subdivision (b)(3). For pocket parks and greenspaces that are not sports fields or playgrounds, visitations are assumed to be 500 visitors per day at an individual facility. Based on a conservative assumption that each visitor drove to the site alone would result in 1,000 daily vehicle trips, exceeding the County's Transportation Impact Guidelines screening criteria of 110 net daily trips. 25-acre parks and greenspaces that include sports fields and playgrounds may generate substantially more net daily trips, which could result in a significant

VTM impact. Implementation of **MM TR-5: Determine VMT Based on Type of Subsequent Project** would require that a project-specific VMT analysis be performed using the County's VMT impact criteria that have been developed based on guidance from OPR and CARB. If a proposed project cannot be screened out and the VMT is determined to exceed the applicable thresholds based on the applicable guideline and project type, then implementation of **MM TR-6: Implement Transportation Demand Management Strategies and/or Enhancements to Reduce VMT** would be required. **MM-TR-6: Implement Transportation Demand Management Strategies and/or Enhancements to Reduce VMT** would require implementation of transportation demand management strategies such as increasing transit accessibility, relocating a project in order to be adjacent to transit, and/or pricing any provided parking to discourage vehicle trips. However, depending on the project location and number of vehicle trips generated as a result of operations, in some circumstances, transportation demand management strategies applied to reduce transportation impacts may not reduce impacts below the applicable threshold or may be infeasible. Therefore, operation of greenway paths, pocket parks, and greenspaces would have a potentially significant and unavoidable impact relative to CEQA Guidelines 15064.3(b).

Mitigation Measures

MM TR-5: Determine VMT Based on Type of Subsequent Project. For any proposed projects that include parks and greenspaces, the project proponent shall conduct the following two-step screening process:

- Step 1: Conduct a trip generation analysis to determine whether a project would generate a net increase of 110 or more daily trips, or determine whether the location is located within one-half mile of a major transit stop or high-quality transit corridor based on its County Transportation Impact Analysis Guidelines Sections 3.1.2.1 and 3.1.2.3. If the project is screened out once project design and location details are known, then no further actions are required. If the subsequent project is not screened out after Step 1, the implementing agency will move on to Step 2.
- Step 2: Perform a VMT analysis for the subsequent project using the County's VMT impact criteria that have been developed based on guidance from OPR and CARB. Per the criteria, project VMT impact thresholds vary depending on the project type, as follows:
 - For residential development land use projects, the project's residential VMT per capita would not be 16.8 percent below the existing residential VMT per capita for the Baseline Area in which the project is located.
 - For office land use projects, the project would generate employment VMT per employee exceeding 16.8 percent below the existing employment VMT per employee for the Baseline Area in which the project is located.
 - For regional serving retail land use projects, entertainment projects, and/or event center land uses, the project would result in a net increase in existing Total VMT. Trips associated with these land uses are typically discretionary trips, which may be either substitute trips to other, closer destinations, or new trips entirely. A project-specific customized approach will be required to estimate VMT for such projects. The methodology should be developed in consultation with and approved by Public Works staff at the outset of the study.
 - For unique land uses in which a land use project does not fit into any of the above categories, a project-specific customized approach may be required to estimate daily trips and VMT but may be based on the existing employment trip element using an approach similar to that for office projects, above. The methodology and thresholds to be used in such cases should be

developed in consultation with and approved by LA County Public Works staff at the outset of the study.

If the subsequent project cannot be screened out but the VMT is determined to not exceed the threshold based on the applicable guideline and project type, then no further action is needed. If the subsequent project cannot be screened out and the VMT is determined to exceed the threshold based on the applicable guideline and project type, then **MM TR-6** shall be implemented.

MM TR-6: Implement Transportation Demand Management Strategies and/or Enhancements to Reduce VMT. The project proponent shall implement a subsequent project-specific program utilizing transportation demand management strategies and neighborhood or site enhancements to reduce VMT, and any other appropriate strategies to address identified impacts and reduce VMT associated with the project.

The program to reduce VMT shall be based on the suite of eligible transportation demand management strategies included in the County Guidelines or other measures with substantial evidence, or, if the subsequent project is located in an incorporated city, the program shall be based on that city's list of qualifying VMT mitigation strategies. Specific measures can include but are not limited to:

- Increasing transit accessibility
- Relocating a project in order to be adjacent to transit
- Pricing any provided parking at river access sites to discourage vehicle trips to the project site
- Implementation of neighborhood or site enhancements such as pedestrian network improvements (for example, high-visibility crosswalks, continuous sidewalks, and Americans with Disabilities Act (ADA)-compliant directional curb cuts at intersections), and traffic calming measures such as speed humps or chicanes.

Significance After Mitigation

Construction impacts would be less than significant. No mitigation is required.

For operations, implementation of **MM TR-5: Determine VMT Based on Type of Subsequent Project** would require that a project-specific VMT analysis be performed using the County's VMT impact criteria that have been developed based on guidance from OPR and CARB. If a proposed project cannot be screened out and the VMT is determined to exceed the applicable thresholds based on the applicable guideline and project type, then implementation of **MM TR-6: Implement Transportation Demand Management Strategies and/or Enhancements to Reduce VMT** would be required. **MM TR-6: Implement Transportation Demand Management Strategies and/or Enhancements to Reduce VMT** would require implementation of transportation demand management strategies such as increasing transit accessibility, relocating a project in order to be adjacent to transit, and/or pricing any provided parking to discourage vehicle trips. However, depending on the project location and number of vehicle trips generated as a result of operations, in some circumstances, transportation demand management strategies applied to reduce transportation impacts may not reduce impacts below the applicable threshold or may be infeasible. Therefore, operation of greenway paths, pocket parks, and greenspaces would have a potentially significant and unavoidable impact relative to CEQA Guidelines 15064.3(b).

3.17.3.3.2.3 Greenway Paths and Greenway Amenities + Safe Crossings

Construction

Less than Significant. For future projects which propose a safe crossing in addition to greenway path and amenities, transportation impacts during construction would be as described above. As detailed for Impact 17(a), conservatively accounting for all new project construction-related vehicle activity, construction of greenway paths and safe crossings would temporarily increase trips per day by a maximum of 63.9 additional daily vehicle trips during construction. The estimated maximum daily vehicle trip count is below the County's Transportation Impact Analysis Guidelines screening threshold of 110 threshold trips per day. Per the County's Transportation Impact Analysis Guidelines, projects that generate fewer than 110 trips per day generally may be assumed to cause a less-than-significant impact relative to VMT. As such, construction of greenway paths and safe crossings would not be expected to conflict with or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b), and impacts would be less than significant.

Operations

Less than Significant. Operation of greenway paths and safe crossings would generate trips associated with landscape and maintenance activities as described for greenway paths and amenities above. As such, the inclusion of safe crossings in a project design with a greenway path and amenities is not anticipated to result in any greater operational impacts than are described above for greenway paths and amenities without such features. Thus, greenway paths and safe crossings would not conflict with or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b) for land use or transportation projects, and impacts would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.17.3.3.2.4 Greenway Paths and Greenway Amenities + Stormwater Management

Construction

Less than Significant. For future projects which propose stormwater management in addition to greenway path and amenities, transportation impacts during construction would be as described above. As detailed in Section 3.17.3.3.1.1, Impact 17(a), conservatively accounting for all new project construction-related vehicle activity, construction of greenway paths and stormwater management would temporarily increase trips per day by a maximum of 57.9 additional daily vehicle trips during construction. The estimated maximum daily vehicle trip count is below the County's Transportation Impact Analysis Guidelines screening threshold of 110 threshold trips per day. Per the County's Transportation Impact Analysis Guidelines, projects that generate fewer than 110 trips per day generally may be assumed to cause a less-than-significant impact relative to VMT. As such, construction of greenway paths and stormwater management would not be expected to conflict with or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b), and impacts would be less than significant.

Operations

Less than Significant. Operation of greenway paths and stormwater management would generate trips associated with landscape and maintenance activities as well as occasional trips associated with maintenance of stormwater management components. Landscape and maintenance of greenway paths is assumed to be conducted by two workers (traveling to the project site together) once per week, resulting in two trips per week up to 18.5 miles per trip (per CalEEMod default trip distances for the Plan Area). Accordingly, landscape and maintenance activities would generate a maximum daily VMT of 37 miles and an estimated 9,646 VMT annually. Maintenance of stormwater management components would be dependent on the type of feature, storm events, and/or sediment loading. These types of trips would be infrequent and sporadic and would not contribute substantially to project-related VMT. The availability of greenway paths would encourage active transportation instead of using motor vehicles for short-distance trips and could reduce overall VMT as a result of replacing motor vehicle trips with alternative modes of transportation depending on location and connectivity to community benefit features (e.g., schools, businesses, parks). With respect to greenway amenities, these components associated with greenway paths would not be expected to generate trips exceeding the County's Transportation Impact Analysis Guidelines screening threshold of 110 daily trips. Thus, greenway paths and stormwater management would not conflict with or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b) for land use or transportation projects, and impacts would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.17.3.3.3 17(c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

3.17.3.3.3.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Significant and Unavoidable. Construction of projects developed under the Plan may result in short-term roadway effects (e.g., localized increases in delay and traffic queuing that stems from lane closures), which could result in increased hazards from geometric design (e.g., reduced sight lines due to temporary obstructions such as construction equipment parked in the roadway) and emergency access, both along the river (e.g., due to closed access ramps) and to adjacent land uses (e.g., due to driveways affected by lane closures). Implementation of **MM TR-1: Construction Transportation Management Plan** requires the preparation and implementation of a project-specific construction transportation management plan once a project has been proposed at a specific location. The project-specific construction transportation management plan shall provide a traffic control plan that would minimize hazards associated with construction activities. However, depending on the project location, in some circumstances, the measures outlined in **MM TR-1: Construction Transportation Management Plan**

applied to reduce transportation impacts during construction may not reduce impacts below the applicable threshold or may be infeasible. Therefore, construction activities may result in a potentially significant and unavoidable impact related to hazards due to a geometric design feature or incompatible uses.

Operations

Less than Significant. Impacts regarding the potential increase of hazards due to a geometric design feature and/or incompatible use generally relate to the design of access points and/or roadway modifications to and from projects implemented under the Plan. Design principles used to integrate greenway paths and associated components within the community and neighborhood regarding traffic are anticipated to be given consideration. The site location, off-site routes, and ingress and egress plans would be chosen to work with the existing traffic patterns and limit the potential traffic burdens. However, the future locations of projects developed under the Plan are currently undetermined. Therefore, it is unknown whether any geometric design hazards existing that would need to be remediated, or whether design of specific access points may require modifications to existing roadway geometries. However, all access points and any roadway modifications would be required to be designed according to the *Design Guidelines and Standards*, and, where applicable, to the local agency's design guidelines in which they are located. Accordingly, projects implemented under the Plan would be subject to, and designed in accordance with, the relevant local agency and/or the County standards and specifications that address potential design hazards including sight distance, driveway placement and access, and signage and striping. Additionally, any new transportation facilities or improvements to such facilities associated with the Plan within unincorporated LA County would be constructed based on design standards consistent with the latest version of the Los Angeles County Standard Plans and/or Los Angeles County Code Chapter 21.24, Design Standards, and best practices consistent with General Plan Mobility Element Goals M-1 and M-2.

Based on criteria included in the County's Transportation Impact Analysis Guidelines, individual projects may be required to prepare Site Access Studies and/or Site Access Analyses to address the needs of vehicles, bicycles, and pedestrians (LA County Public Works 2020). Operational analysis may be necessary for some individual projects to evaluate primary site access points, unsignalized intersections integral to the project's access, and signalized intersections in the vicinity of the individual project. Potential corrective actions for project access and circulation constraints can include, but are not limited to, the following:

- Installation of a traffic signal or stop signs or electronic warning devices at site access points,
- Redesign and/or relocation of project access points,
- Redesign of the internal access and circulation system,
- Installation of stop-signs and pavement markings internal to the site,
- Restriction or prohibition of turns at site access points,
- Installation of new traffic signal, left-turn signal phasing, or other vehicle flow enhancements at nearby intersections, and/or
- Reconfiguration of intersections that reduces gridlock and unsafe conflict points.

A site access analysis of individual projects within the program would ensure appropriate improvement measures are identified to reduce hazards due to geometric design features. Therefore, with the implementation of County's Transportation Impact Analysis Guidelines, the Plan would not increase

hazards because of a roadway design feature or incompatible uses, and impacts would be less than significant.

Mitigation Measures

MM TR-1: Construction Transportation Management Plan.

Significance After Mitigation

Construction impacts would be potentially significant and unavoidable with implementation of **MM TR-1: Construction Transportation Management Plan**.

Impacts from operation would be less than significant. No mitigation is required.

3.17.3.3.4 17(d) Result in inadequate emergency access?

3.17.3.3.4.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Significant and Unavoidable. Construction of projects implemented under the Plan may result in short-term roadway effects, including localized increases in delay and traffic queuing that stems from lane closures, which could result in impediments to emergency access, both along the District ROW (e.g., due to closed access ramps) and to adjacent land uses (e.g., due to driveways affected by lane closures). Incorporation of **MM TR-1: Construction Transportation Management Plan** would ensure adequate access and travel for emergency access for the facility. Should construction of any of these facilities result in any kind of temporary road closure, per **MM TR-1: Construction Transportation Management Plan**, a construction transportation management plan would be developed to identify appropriate lane closures/routing and detours. This information would also be provided to local emergency providers to ensure adequate access and travel for emergency vehicles is maintained. However, depending on the project location and construction activities and/or feasibility of mitigation measures, in some circumstances, emergency access may be impeded. Therefore, emergency access impacts during the construction phase of future projects implemented under the Plan are considered potentially significant and unavoidable.

Operations

Less than Significant. The County and responsible emergency service agencies including the LACFD have emergency access and design standards that are based on the size and intensity of development. In addition, all Plan components would be required to be designed according to the *Design Guidelines and Standards*, including minimum requirements for width, vertical clearance, and vegetation maintenance to allow for emergency vehicle access. Accordingly, Plan components would be designed to meet all applicable emergency access and design standards that require adequate emergency access would be provided. Compliance with these provisions would be ensured through the review process by the County and, if relevant, local agency's approval as well as approval by the relevant emergency service agencies. Further, the County would maintain a current evacuation plan and ensure that projects implemented under the Plan provide adequate emergency and/or secondary access throughout the District ROW. Therefore, impacts would be less than significant.

Mitigation Measures

MM TR-1: Construction Transportation Management Plan.

Significance After Mitigation

MM TR-1: Construction Transportation Management Plan would require the preparation and implementation of a project-specific construction transportation management plan once a project has been proposed at a specific location that will identify the location and timing of temporary closures and detours with the goal of maintaining traffic flow, especially during peak periods as well as minimize impacts to emergency services. However, depending on the location of future projects, short-term roadway effects such as localized increases in delay and traffic queuing that stems from lane closures, could delay or impact emergency response. The project-specific construction transportation management plan shall provide a traffic control plan that would minimize impacts to emergency service operations. However, depending on the project location, in some circumstances, the measures outlined in **MM TR-1: Construction Transportation Management Plan** applied to reduce transportation impacts during construction may not reduce impacts below the applicable threshold or may be infeasible. Therefore, construction activities may result in a potentially significant and unavoidable impact related to inadequate emergency access.

Impacts from operation would be less than significant. No mitigation is required.

3.17.3.4 Impacts of Conceptual Design Projects

3.17.3.4.1 17(a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?

Construction

Significant and Unavoidable. The construction activities associated with each of the 10 conceptual designs are within maximum extent limits as described for the Plan in Section 2, Project Description. As summarized in Section 3.17.3.3.1, Impacts 17(a) for the Plan, additional vehicle trips associated with construction activities would be below the County's Transportation Impact Analysis Guidelines screening threshold of 110 daily trips. The temporary increases in vehicle trips generated during construction could have a potentially significant impact if the timing of those trips occurred during peak hours and contributed to congestion within designated congested roadway segments. In addition, construction activities could require intermittent closures of roadways, sidewalks, or paths that could impede vehicle, pedestrian, equestrian, and bicycle circulation and/or conflict with a program, plan, ordinance, or policy addressing the circulation system. These impacts have the potential to be significant. With implementation of **MM TR-1: Construction Transportation Management Plan, MM TR-2: Restrict Lane Closures and Maintain Access, MM TR-3: Closure Notification and Detours, and MM TR-4: Notify Emergency Personnel of Road Closures**, the magnitude of transportation and circulation impacts are expected to be reduced to less than significant such that they would not result in a conflict with any programs, plans, or policies addressing the circulation system, or transit, roadway, bicycle, or pedestrian facilities. However, project-specific plans for each of the conceptual projects have not yet been developed and traffic management measures to be implemented during construction phases are currently unknown. As such, circumstances from construction of a conceptual project could still result in

unforeseen circumstances such as temporary closures and being unable to maintain traffic flow during peak periods resulting in a significant impact. Temporary closures may also result in increased congestion necessitating alternative routes, and potentially forcing existing traffic to take longer trips along local roadways. Therefore, impacts would remain potentially significant and unavoidable.

Operations

Less than Significant. The primary goals of the Plan are centered on promoting and expanding active commuting and enhancing connections to transit, schools, jobs, and everyday destinations. The 10 conceptual design plans would provide for alternative greenway transportation, with the goal of reducing VMT and associated GHG emissions. As described in Section 3.17.3.3.1, Impacts 17(a) for the Plan, projects implemented under the Plan present opportunities to connect with existing or potential access points to other path segments, parks, or other community benefit features (e.g., schools, business), providing opportunities for commuting via active transportation modes such as bicycles, scooters, and walking or running. Thus, the 10 conceptual design projects would increase neighborhood connectivity to the trails and community benefit features in the respective project site areas, reducing or eliminating the need to travel via private vehicle to reach a school, neighborhood park, or business for the residents who live in the respective project areas. Accordingly, development of the 10 conceptual design projects will allow for an increased share of trips to be completed via active transportation instead of by private vehicle. Increasing the active transportation mode share and the ability to replace vehicle commute trips with an active transportation trip will reduce VMT, consistent with state and regional policy initiatives, including SB 743 and SCAG's 2020-2045 RTP/SCS. The 10 conceptual design projects are also consistent with 2020-2045 RTP/SCS RTP Goals 2, 5, 6, 7, and 10 which seek to reduce GHG emissions and protect the environment and the health of SCAG region residents by improving air quality and encouraging active transportation. Similarly, the 10 conceptual design projects are consistent with active transportation-related goals, policies, and policy actions of the respective incorporated cities in which they are located. As such, the 10 conceptual design projects are not anticipated to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities and impacts would be less than significant.

Table 3.17-11. Analysis of Operations of Conceptual Design Examples to Conflict with a Program, Plan, Ordinance, or Policy Addressing the Circulation System, Including Transit, Roadway, Bicycle and Pedestrian Facilities

Conceptual Design Project	<i>17(a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?</i>
<p>Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i> <i>Greenway, lighting, pollinator garden, seating, safe crossing, linear stormwater management</i></p>	<p>Less than Significant. Alhambra Wash at Vincent Lugo Park conceptual design is within the City of Alhambra and City of San Gabriel, and would be consistent with the Alhambra Mobility Element Policies M-1C as it would provide safe access pedestrians and bicyclists all ages and abilities, Policies M-2B and M-2C as it would improve transportation infrastructure and services in a way that will increase the utility, safety, attractiveness of alternative modes of transportation, and connectivity for alternative transportation modes throughout and beyond the City, Policy M-2F as it would implement improvements to the City's bike network, Policy R-5A as it would minimize motor vehicle trips and VMT, and Policy HS-7C as it would encourage community design that facilitates active transportation such as</p>

Conceptual Design Project	17(a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?
	walking and bicycling. The project is also consistent with the San Gabriel Mobility Element Goals 3.5 and 3.6 and related policies to promote use of bicycles for transportation and enhance pedestrian access and circulation. Within the City of San Gabriel, the project would also support the San Gabriel Mobility Element Goal 8.6 to improve air quality within the city by reducing emissions associated with motorized vehicles. Accordingly, the project is not anticipated to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i> <i>Greenway, bike service station, pollinator garden, seating, safe crossing, stormwater management</i>	Less than Significant. Big Dalton Wash at Hilda L. Solis Park conceptual design is within the Cities of Baldwin Park and Irwindale and would be consistent with the City of Baldwin Park Circulation Element Policy 4.1 to provide for a Citywide bicycle path system and the City of Irwindale Infrastructure Element goal to improve safe and efficient circulation in the City. Accordingly, the project is not anticipated to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i> <i>Greenway, bike service station, park ribbon, shade structures, stormwater management, educational signage, outdoor classroom</i>	Less than Significant. Eaton Wash Greenway at Spreading Ground Site conceptual design is within the City of Pasadena and is consistent with the City of Pasadena Bicycle Transportation Action Plan and Objective 1 of the City of Pasadena Mobility Element to enhance livability and improve community health and safety through policies to encourage and promote connectivity and accessibility throughout the City, as well as policies related to Objective 2 to encourage walking, biking, and other alternatives to motor vehicles. Accordingly, the project is not anticipated to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i> <i>Greenway, safe crossing, landscaping</i>	Less than Significant. Eaton Wash at Eaton Blanche Park conceptual design is within the City Pasadena and is consistent with the City of Pasadena Bicycle Transportation Action Plan and Objective 1 of the City of Pasadena Mobility Element to enhance livability and improve community health and safety through policies to encourage and promote connectivity and accessibility throughout the City, as well as policies related to Objective 2 to encourage walking, biking, and other alternatives to motor vehicles. Accordingly, the project is not anticipated to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities, and impacts.
San Dimas Wash at Arrow High School <i>City of Glendora</i> <i>Greenway, safe crossing, landscaping, shade structure, outdoor classroom, picnic area, seating</i>	Less than Significant. San Dimas Wash at Arrow High School conceptual design is within the City of Glendora and is consistent with the Glendora Circulation Element, Goal CIR-7 to improve access to alternative modes of transportation as well as the Land Use Element Policy LU-20.5 to encourage the development of pedestrian-friendly development through properly scaled design and amenities. Accordingly, the project is not anticipated to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.

Conceptual Design Project	17(a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?
<p>San Dimas Wash at Hollenbeck Park <i>City of Covina</i> <i>Greenway, safe crossing, seating, river overlook, community garden</i></p>	<p>Less than Significant. San Dimas Wash at Hollenbeck Park conceptual design is within the City of Covina and is consistent with the City of Covina Master Plan goals and policies to improve conditions for bicycling in the City of Covina and surrounding region. In addition, the project directly supports policies outlined under City of Covina Land Use Element Policy Area 5 to accommodate pedestrian circulation, to the greatest degree possible, in addition to policies established under the City's Open Space Lands Element Policy Area 3 to encourage the utilization of, and, where deemed reasonable by appropriate analyses or studies, expand and improve the City's limited network of bicycle ways for recreational as well as functional purposes to link local and regional recreational areas and other major points of interest. Accordingly, the project is not anticipated to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.</p>
<p>San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i> <i>Greenway, pocket park, overlook, stair climb</i></p>	<p>Less than Significant. San Jose Creek at Pocket Park conceptual design includes components within the City of Industry and would be consistent with Goal C2 of the City of Industry Circulation Element, to provide safe and efficient circulation systems for bicycles and pedestrians. Accordingly, the project is not anticipated to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.</p>
<p>Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i> <i>Greenway, pollinator garden, permeable pavement, flexible greenspace</i></p>	<p>Less than Significant. Thompson Creek at the Fairplex conceptual design is within the Cities of Pomona, La Verne, and Claremont and would be consistent with the City of Claremont 2007 Bicycle Plan, City of La Verne Active Transportation Plan, and City of Pomona Active Transportation Plan: Bicycle Master Plan and Pedestrian Master Plan. In addition, the project would increase bikability within the City, consistent with Policy 3.1.4 of the City of Pomona Green Plan. The project directly supports Goals 4-3 and 4-7 and related policies of the City of Claremont Community Mobility Element through the development of pedestrian ways and bicycle routes that provides viable options to travel by automobile. The project is also consistent with Goal 7 and related policies within the La Verne Transportation and Circulation Element which aim to create a comprehensive network of pedestrian, equestrian and bicycle paths, as well as Goal 5 of the Resource Management Element which aims to improve air quality through reductions in vehicular air pollution. Accordingly, the project is not anticipated to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.</p>
<p>Walnut Creek at Syhre Park <i>Cities of Baldwin Park and West Covina</i> <i>Greenway, plaza, shade trees</i></p>	<p>Less than Significant. Walnut Creek at Syhre Park conceptual design is within the Cities of Baldwin Park and West Covina and would be consistent with the City of Baldwin Park Circulation Element Policy 4.1 to provide for a Citywide bicycle path system and the City of Irwindale Infrastructure Element goal to improve safe and efficient circulation in the City. In addition, the project directly supports Policy 1.7 and related actions within the West Covina Our Natural Community Element, which aims to develop a multi-use integrated trail system that supports recreational and mobility needs, and Policy 4.5 and related actions by eliminating barriers to pedestrian and bicycle travel.</p>

Conceptual Design Project	17(a) Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?
	Accordingly, the project is not anticipated to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.
Walnut Creek at Pocket Park <i>City of West Covina</i> <i>Greenway, gateway, bike service station, picnic area, landscaping, pollinator garden, public art</i>	Less than Significant. Walnut Creek at Pocket Park conceptual design is within the City of West Covina. The project directly supports Policy 1.7 and related actions within the West Covina Our Natural Community Element, which aims to develop a multi-use integrated trail system that supports recreational and mobility needs, and Policy 4.5 and related actions by eliminating barriers to pedestrian and bicycle travel. Accordingly, the project is not anticipated to conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.

3.17.3.4.2 17(b) Would the project conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?

Construction

Less than Significant. The construction activities associated with each of the 10 conceptual designs are within maximum extent limits as described for the Plan in Section 2, Project Description. As summarized in Section 3.17.3.3.2, Impacts 17(b) for the Plan, additional vehicle trips associated with construction activities would be below the County's Transportation Impact Analysis Guidelines screening threshold of 110 daily trips. As detailed for Impact 17(a), conservatively accounting for all new project construction-related vehicle activity, construction of Plan components would temporarily increase trips per day by a maximum of 63.9 additional vehicle trips per day. However, the majority of construction workers would be drawn from the existing regional transportation network, resulting in trips that are essentially relocations from other construction sites. Consequently, the impact of construction worker trips can be assumed to have a less than significant impact on regional VMT. The estimated maximum daily vehicle trip count is below the County's Transportation Impact Analysis Guidelines screening threshold of 110 threshold trips per day. Per the County's Transportation Impact Analysis Guidelines, projects that generate fewer than 110 trips per day generally may be assumed to cause a less-than-significant impact relative to VMT. As such, construction of the 10 conceptual design projects would not be expected to conflict with or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b), and impacts would be less than significant.

Operations

Less than Significant. The primary goals of the Plan are centered on promoting and expanding active commuting and enhancing connections to transit, schools, jobs, and everyday destinations. The 10 conceptual design plans would provide for alternative greenway transportation, with the goal of reducing VMT and associated GHG emissions. As described in Section 3.17.3.3.2, Impacts 17(b) for the Plan, projects implemented under the Plan present opportunities to connect with existing or potential access points to other path segments, parks, or other community benefit features (e.g., schools, business, etc.), providing opportunities for commuting via active transportation modes such as bicycles,

scooters, and walking or running. Thus, the 10 conceptual design projects would increase neighborhood connectivity to the trails and community benefit features in the respective project site areas, reducing or eliminating the need to travel via private vehicle to reach a school, neighborhood park, or business for the residents who live in the respective project areas. Accordingly, development of the 10 conceptual design projects will allow for an increased share of trips to be completed via active transportation instead of by private vehicle. Increasing the active transportation mode share and the ability to replace vehicle commute trips with an active transportation trip will reduce VMT, thus the 10 conceptual design projects would not conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b). Impacts would be less than significant.

3.17.3.4.3 17(c) Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?

Construction

Less than Significant with Mitigation. The construction activities associated with each of the 10 conceptual designs are within maximum extent limits as described for the Plan in Section 2, Project Description. As summarized in Section 3.17.3.3.3, Impacts 17(c) for the Plan, construction of projects developed under the Plan may result in short-term roadway effects (e.g., localized increases in delay and traffic queuing that stems from lane closures), which could result in increased hazards from geometric design (e.g., reduced sight lines due to temporary obstructions such as construction equipment parked in the roadway) and emergency access, both along the river (e.g., due to closed access ramps) and to adjacent land uses (e.g., due to driveways affected by lane closures). Implementation of **MM TR-1: Construction Transportation Management Plan** would require the preparation and implementation of a project-specific CTMP once a project has been proposed at a specific location. The project-specific CTMP shall provide a traffic control plan that would minimize hazards associated with construction activities. However, the measures outlined in **MM TR-1: Construction Transportation Management Plan** applied to reduce transportation impacts during construction would reduce impacts below the applicable threshold. Therefore, construction activities would result in less than significant impacts related to hazards due to a geometric design feature or incompatible uses.

Operations

Less than Significant. The construction activities associated with each of the 10 conceptual designs are within maximum extent limits as described for the Plan in Section 2, Projection Description. As summarized in Section 3.17.3.3.3, Impacts 17(c) for the Plan, impacts regarding the potential increase of hazards due to a geometric design feature and/or incompatible use generally relate to the design of access points and/or roadway modifications to and from projects implemented under the Plan. Design principles used to integrate greenway paths and associated components within the community and neighborhood regarding traffic are anticipated to be given consideration. The site location, off-site routes, and ingress and egress plans would be chosen to work with the existing traffic patterns and limit the potential traffic burdens. Scoping comments received indicated concerns related to the Thompson Creek conceptual design project and potential safety concerns where users of the greenway may need to cross busy roadways. However, the specific design of project features including sidewalks, crossings, overpasses, and bridges are currently undetermined. Therefore, it is unknown whether any geometric design hazards existing that would need to be remediated, or whether design of specific access points

may require modifications to existing roadway geometries. However, all access points and any roadway modifications would be required to be designed according to the most current LA County Public Works Standard Plans Manual (which adopts by reference the Caltrans Standard Plans), the *Design Guidelines and Standards*, and, where applicable, to the local agency's design guidelines in which they are located. Accordingly, the Proposed Plan would be subject to, and designed in accordance with, the relevant local agency and/or the County standards and specifications that address potential design hazards including sight distance, driveway placement and access, and signage and striping. Additionally, any new transportation facilities or improvements to these facilities would be constructed based on design standards consistent with design standards and best practices of the local jurisdiction. Operational analysis may be necessary for the conceptual design projects to evaluate primary site access points, unsignalized intersections integral to the project's access, and signalized intersections in the vicinity of the individual project. Site access analysis of the individual projects would ensure appropriate improvement measures are identified to reduce hazards due to geometric design features. Therefore, with the compliance with Caltrans Standard Plans, the conceptual design projects would not increase hazards because of a roadway design feature or incompatible uses and impacts would be less than significant.

3.17.3.4.4 17(d) Result in inadequate emergency access?

Construction

Less than Significant with Mitigation. The construction activities associated with each of the 10 conceptual designs are within maximum extent limits as described for the Plan in Section 2, Project Description. As summarized in Section 3.17.3.3.4, Impacts 17(d) for the Plan, construction of projects implemented under the Plan may result in short-term roadway effects, including localized increases in delay and traffic queuing that stems from lane closures, which could result in impediments to emergency access, both along the District ROW (e.g., due to closed access ramps) and to adjacent land uses (e.g., due to driveways affected by lane closures). Incorporation of **MM TR-1: Construction Transportation Management Plan** would ensure adequate access and travel for emergency access for the facility. Should construction of any of these facilities result in any kind of temporary road closure, per **MM TR-1: Construction Transportation Management Plan**, a plan would be developed to identify appropriate lane closures/routing and detours. This information would also be provided to local emergency providers to ensure adequate access and travel for emergency vehicles is maintained. For the project locations and construction activities expected for the 10 conceptual design projects, measures implemented under **MM TR-1: Construction Transportation Management Plan** are expected to adequately ensure that emergency access would not be impeded. Therefore, emergency access impacts during the construction phase associated with the 10 conceptual design projects are considered less than significant with mitigation.

Operations

Less than Significant. The construction activities associated with each of the 10 conceptual designs are within maximum extent limits as described for the Plan in Section 2, Project Description. As summarized in Section 3.17.3.3.4, Impacts 17(d) for the Plan, impacts regarding the potential to result in inadequate emergency access associated with operation of Plan components are generally related to the design of Plan components including minimum width, vertical clearance, and vegetation maintenance to allow for

emergency vehicle access. The County and responsible emergency service agencies including the Los Angeles County Fire Department have emergency access and design standards that are based on the size and intensity of development. In addition, all Plan components would be required to be designed according to the *Design Guidelines and Standards* as well as the local agency's guidelines in which they are located, including minimum requirements for width, vertical clearance, and vegetation maintenance to allow for emergency vehicle access. Accordingly, the 10 conceptual design projects would be designed to meet all applicable emergency access and design standards that require adequate emergency access would be provided. Compliance with these provisions would be ensured through the review process by the County and relevant local agency's approval as well as approval by the relevant emergency service agencies. Further, the County will maintain a current evacuation plan and ensure that projects implemented under the Plan provide adequate emergency and/or secondary access throughout the District ROW. Therefore, operation of the 10 conceptual design projects would have a less than significant impact associated with inadequate emergency access.

3.18 Tribal Cultural Resources

Contemporary Native American resources, also called ethnographic resources, can include archaeological resources, rock art, and the prominent topographical areas, features, habitats, plants, animals, and minerals that contemporary Native Americans value and consider essential for the preservation of their traditional values. These locations are sometimes hard to define and traditional culture and concerns for vandalism often prohibits Native Americans from sharing these locations with the public. Additionally, as required under AB 52 (Chapter 532, Statutes 2014) and consistent with Government Code Sections 6254, subdivision (r) and 6254.10. (PRC Section 21082.3, subdivision (c)(1)), any information submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public without the prior consent of the tribe that provided the information.

This section evaluates potential impacts of the Plan on tribal cultural resources, which are defined in PRC Section 21074 (a)(1-2) as follows:

- Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:
 - Included or determined to be eligible for inclusion in the CRHR.
 - Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.
- A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.
- A cultural landscape that meets the criteria of subdivision (a) is a tribal cultural resource to the extent that the landscape is geographically defined in terms of the size and scope of the landscape.
- A historical resource described in Section 21084.1, a unique archaeological resource as defined in subdivision (g) of Section 21083.2, or a “non-unique archaeological resource” as defined in subdivision (h) of Section 21083.2 may also be a tribal cultural resource if it conforms with the criteria of subdivision (a).

Table 3.18-1. Summary of Potential Impacts of the Plan on Tribal Cultural Resources.

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
<i>Would the Plan:</i>			
18(a). Cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is: (i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or (ii) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resource Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Significant and Unavoidable	Construction: MM TCR-1: Tribal Cultural Resources Assessment.
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Significant and Unavoidable	MM TCR-2: Avoid Tribal Cultural Resources, Prepare Treatment Plan
Greenway Paths + Safe Crossings	Significant and Unavoidable	Significant and Unavoidable	MM TCR-3: Unanticipated Discovery
Greenway Paths + Stormwater Management	Significant and Unavoidable	Significant and Unavoidable	MM TCR-4: Conduct Native American Monitoring. Operations: MM TCR-4: Conduct Native American Monitoring.

3.18.1 Environmental Setting

3.18.1.1 Ethnography

The Native American people known to have inhabited the SGV, in which the Plan Area is located, and surrounding region are referred to as the Gabrieliño, The Gabrieliño, Gabrieleño, or San Gabrieleño (herein referred to as Gabrieliño). The term “Gabrielino” follows the Spanish custom of naming local tribes after nearby missions, in reference to Mission San Gabriel Arcangel. Many contemporary Gabrieliño identify themselves by the name “Tongva” and others refer to themselves as “Kizh.” Prior to European colonization, the Gabrieliño-Tongva occupied a diverse area that included the watersheds of the Los Angeles, San Gabriel, and Santa Ana rivers; the Los Angeles basin; and the islands of San Clemente, San Nicolas, and Santa Catalina (Kroeber 1925). The Gabrielino language was part of the Takic branch of the Uto-Aztecan language family.

The Gabrieliño-Tongva Indians were hunter-gatherers and lived in permanent communities located near the presence of a stable food supply, specialized processing sites, formal cemeteries, and trade networks with local and nonlocal groups. It is believed that they initially practiced a seasonal strategy, moving from location to location exploiting various food resources, but with technological advances they were able to maintain permanent year-round villages with reliance on acorns and marine resources. Community populations generally ranged from 50 to 100 inhabitants, although larger settlements may have existed. The Gabrieliño-Tongva are estimated to have had a population numbering around 5,000 in the precontact period (Kroeber 1925) and occupied a large portion of what is now Los Angeles County, including the SGV and San Fernando Valley, as well as areas within Orange County. Villages are reported to have been the most abundant in the San Fernando Valley, the Glendale Narrows area north of downtown, and around the Los Angeles River drainage (Gumprecht 2001). Maps produced by early explorers indicate that at least 26 Gabrieliño villages were within close proximity to known Los Angeles River courses, while an additional 18 villages were within reasonably close proximity to the river (Gumprecht 2001).

Subsistence consisted of hunting, fishing, and gathering. Small terrestrial game were hunted with deadfalls, rabbit drives, and by burning undergrowth, while larger game such as deer were hunted using bows and arrows. Fish were taken by hook and line, nets, traps, spears, and poison (Bean and Smith, 1978). The primary plant resources were the acorn, gathered in the fall and processed in mortars and pestles, and various seeds that were harvested in late spring and summer and ground with manos and metates. The seeds included chia and other sages, various grasses, and islay or holly-leaved cherry.

Coming ashore on Santa Catalina Island in October of 1542, Juan Rodriguez Cabrillo was the first European to make contact with the Gabrieliño-Tongva; the 1769 expedition of Gaspar de Portolá also passed through Gabrieliño-Tongva territory (Bean and Smith 1978). Native Americans suffered severe depopulation and their traditional culture was radically altered after Spanish contact. Nonetheless, Gabrieliño-Tongva descendants still reside in the greater Los Angeles and Orange County areas and maintain an active interest in their heritage.

In addition to the Gabrieliño, the northeastern portion of the Plan Area extends into the ancestral territory of the Yuhaaviatam of San Manuel Nation (formerly known as the San Manuel Band of Mission Indians). While the Yuhaaviatam of San Manuel Nation primarily lived in the San Bernardino Mountains and in the areas surrounding Big Bear Lake, the ancestral territory extended much farther covering

present-day Antelope Valley on the west, southwest Mojave Desert to the north, portions of San Gabriel and San Bernardino Mountains in the center, the Inland Empire north of the city of Riverside to the south, and the city of Twentynine Palms to the east.

3.18.2 Regulatory Setting

3.18.2.1 State

3.18.2.1.1 Assembly Bill 52

AB 52 requires lead agencies to consult with California Native American tribes that have requested consultation on a project per the provisions of Chapter 532, Statutes 2014. Accordingly, PRC Sections 21080.3.1 and 21080.3.2 require that the lead agency provide formal notification to the designated contact of, or a tribal representative of, traditionally affiliated California Native Tribes that have requested notice. Formal notification shall be accomplished by means of at least one written notification that includes a brief description of the proposed project and its location, the lead agency contact information, and a notification that the California Native American tribe has 30 days to request consultation pursuant to this section. AB 52 was ratified to provide Tribes with an ancestral connection to a project area the opportunity to provide information on the presence of potential tribal cultural resources.

In compliance with AB 52, Catalyst contacted the Native American Heritage Commission (NAHC) on behalf of the LA County Public Works on January 20, 2022, requesting a CEQA tribal consultation list. On February 23, 2022, the NAHC provided contact information for representatives of the following tribes traditionally and culturally affiliated with the Plan Area:

- Fernandeano Tataviam Band of Mission Indians
- Gabrieleno Band of Mission Indians – Kizh Nation
- Gabrieleno /Tongva San Gabriel Band of Mission Indians
- Gabrieleno /Tongva Nation
- Gabrieleno Tongva Indians of California Tribal Council
- Gabrieleno - Tongva Tribe
- Morongo Band of Mission Indians
- Quechan Tribe of the Fort Yuma Reservation
- San Fernando Band of Mission Indians
- San Manuel Band of Mission Indians
- Santa Rosa Band of Cahuilla Indians
- Serrano Nation of Mission Indians
- Soboba Band of Luiseno Indians

In addition to those tribes included in the response from NAHC, the five following tribes requested to be informed in all project notifications by Los Angeles County pursuant to PRC Section 21080.3.1.:

Fernandeano Tataviam Band of Mission Indians, Gabrieleno Band of Mission Indians—Kizh Nation, Gabrieleno/Tongva San Gabriel Band of Mission Indians, San Manuel Band of Mission Indians, and Tejon Indian Tribe.

On September 20, 2022, LA County Public Works sent letters to all representatives from the NAHC list and those tribes requesting notification for all projects in Los Angeles County, notifying them of the Plan and preparation of the PEIR, pursuant to PRC Section 21080.3, and providing a 30-day period to request consultation. LA County did not receive any requests for formal consultation, but did receive two responses. The Gabrieliño Tongva Indians of California responded via email stating that the geography of the Plan Area is outside of their tribal band territory, but the area is believed to be culturally sensitive and they referred to their sister tribe. The Yuhaaviatam of San Manuel Nation (formerly known as the San Manuel Band of Mission Indians) responded to the notification and stated that while the Plan Area exists within Serrano ancestral territory, due to the nature and location of the project, the tribe does not have concerns with project implementation as planned but provided mitigation measures to be considered. These mitigation measures are incorporated below in this impact analysis, as applicable.

3.18.2.1.2 California Native American Heritage Commission

In 1976, the California State Government passed AB 4239, establishing the NAHC as the primary government agency responsible for identifying and cataloging Native American cultural resources. As such, one of the NAHC's primary duties is to prevent irreparable damage to designated sacred sites, as well as prevent interference with the expression of Native American religion in California. The bill authorized the NAHC to prevent damage to and insure Native American access to sacred sites. The NAHC can request that a court issue an injunction for a sacred site, unless it found evidence that public interest and necessity required otherwise. The NAHC has authority to identify a Most Likely Descendant when Native American human remains are discovered any place other than a dedicated cemetery. Most Likely Descendants are granted the legal authority to make recommendations regarding the treatment and disposition of the discovered remains. These recommendations, although they cannot halt work on the project site, give Most Likely Descendants a means by which to ensure that the Native American human remains are treated in the appropriate manner (NAHC 2022).

3.18.2.2 Los Angeles County

3.18.2.2.1 Los Angeles County General Plan

The Conservation and Natural Resources Element of the General Plan (LA County Department of Regional Planning 2022) includes the following relevant goals and policies related to the protection of tribal cultural resources:

- Goal C/NR 14: Protected historic, cultural, and paleontological resources.
 - Policy C/NR 14.1: Mitigate all impacts from new development on or adjacent to historic, cultural, and paleontological resources to the greatest extent feasible.
 - Policy C/NR 14.2: Support an inter-jurisdictional collaborative system that protects and enhances historic, cultural, and paleontological resources.
 - Policy C/NR 14.4: Ensure proper notification procedures to Native American tribes in accordance with Senate Bill 18 (2004).
 - Policy C/NR 14.5: Promote public awareness of historic, cultural, and paleontological resources.
 - Policy C/NR 14.6: Ensure proper notification and recovery processes are carried out for development on or near historic, cultural, and paleontological resources.

3.18.2.3 Incorporated Cities Within the Plan Area

The table below presents the policies related to tribal cultural resources from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.18-2. Applicable Local City Policies Related to Tribal Cultural Resources

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	Resources Element: Goal R-6: Preservation of the cultural identity of Alhambra as a diverse residential and commercial city with distinct single-family neighborhoods. Policy R-6A: Promote and encourage the preservation of Alhambra’s significant historic, architectural, cultural, archaeological, and paleontological resources. Policy R-6E: Enforce applicable historic preservation laws to preserve state or federally designated historic resources and other resources (e.g., archaeological and paleontological) eligible for such designation.	No applicable ordinances were identified.	No other applicable ordinances were identified.
Arcadia	Parks, Recreation, and Community Resources Element Goal PR-9: Retention and proper stewardship of historical and cultural resources. Policy PR-9.1: Encourage the maintenance and preservation of historically, culturally, and/or architecturally significant structures and sites in the community. Policy PR-9.5: Identify historic sites, structures, neighborhoods, and other resources through a Historic Resource Inventory.	Municipal codes related to tribal cultural resources relevant to the Plan Area can be found in Section 9103.17 (Historic Preservation) otherwise known as the Arcadia Historic Preservation Ordinance (Ordinance No. 2359, Article IX. Chapter 1, Division 3, Section 103.17).	No other applicable ordinances were identified.
Azusa	Chapter 3: The Built Environment: <i>Historic/Cultural Resources</i> Goal 1: Acknowledge, preserve, and protect the city’s Native American heritage. Policy 1.1: Determine, early in the planning process, through field surveys and Native American consultation, whether archaeological or cultural resources are located within a proposed development site. <i>Implementation Programs</i> HR2 ARCHAEOLOGICAL SURVEYS Require archaeological surveys of undeveloped areas including those areas that although part of the built environment, may have the potential for subsurface archaeological sites. In the case of the San Gabriel River corridor, which may not have project specific actions, conduct surveys as part of the overall planning process so that resources can be integrated into the planning and enhancement process. If resources are encountered, encourage avoidance of the resources if they are determined to be significant as defined in CEQA Guidelines Section 15064.5. If avoidance is not feasible, implement a mitigation plan to excavate, analyze, and report on the discoveries. In the event that any prehistoric, historic, or paleontological resources are discovered during construction-related earth-moving activities, all work within 50 feet of the resources shall be halted and the developer shall consult with a qualified archaeologist or paleontologist to assess the significance of the find. If any finds are determined to be significant by the qualified archaeologist, then representatives from the City of Azusa and the qualified archaeologist and/or paleontologist shall meet to determine the appropriate course of action.	Municipal codes related to tribal cultural resources relevant to the Plan Area can be found in Chapter 55 (Historic Preservation). Chapter 55 (Historic Preservation) establishes regulations for designation, maintenance, mitigation, environmental review, alteration, and preservation incentives of important cultural and historic resources. (Ord. No. 00-012, § 2, 10-16-00; Ord. No. 2023-05 , §§ 2, 4(Exh. A), 10-16-23).	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	Should human remains be discovered during the implementation of a proposed project, the local coroner must be contacted immediately. Both the Native American Heritage Commission (pursuant to NAGPRA) and any identify ed descendants should be notified, and recommendations received, if the remains are determined to probe of Native American origin (CEQA Guidelines Section 15064.5, Health and Safety Code Section 7070.5, Public Resources Code Sections 5097.94 and 5097.98).		
Baldwin Park	Open Space and Conservation Element Goal 8 Promote the preservation of historic resources in Baldwin Park. Policy 8.1 Implement provision contained in the City’s Historic Resources Code to protect historically significant structures. Policy 8.3 Maximize public awareness about Baldwin Park’s history and historical resources.	Municipal codes related to tribal cultural resources relevant to the Plan Area can be found in Subchapter 153.080 (Historic Overlay Zone). Section 53.080.010 describes the intent and purpose of this ordinance, established to recognize, protect and ensure proper utilization of historic resources in the interest of public, health, safety, prosperity, social and cultural enrichment, and general welfare. (Ord. 1346, passed 5-2-12)	No other applicable ordinances were identified.
Claremont	Land Use, Community Character, and Heritage Preservation Element Goal 2-14 Retain and celebrate Claremont’s rich history and heritage, as evidenced through its development patterns, buildings and building materials, landscaping, street treatments, parks and open space, and civic architecture. Policy 2-14.1: Continue to protect architectural, historical, open space, environmental, and archaeological resources throughout the City. Policy 2-14.7 Add to the Register of Structure of Historical and Architectural Merit of the City of Claremont sites and structures that have special historic or community value as historic resources and are worthy of preservation.	Municipal codes related to tribal cultural resources relevant to the Plan Area can be found in Chapter 16.072 (P/RC Park/Resource Conservation District), and Section 16.040.080 (Design Guidelines for Mixed-use Development) of Chapter 16.040 (MU Mixed Use Districts).	No other applicable ordinances were identified.
Covina	Land Use Element Policy 2.1.17: Identify and encourage the retention and preservation of significant architectural, historical, and/or cultural resources. Policy 3.14: The City of Covina shall preserve residential districts and buildings in the community that are deemed architecturally and/or historically significant.	Municipal codes related to tribal cultural resources relevant to the Plan Area can be found in Chapter 17.81 (Historic Preservation). This chapter states that an individual resource may be locally designated as a Landmark or Structure of Merit if it meets one or more of the following criteria: 1. It exemplifies or reflects special elements of the City’s cultural, social, economic, political, aesthetic, engineering, architectural, or natural history; or 2. It is identified with persons or events significant in local, state, or national history; or 3. It represents the work of a notable builder, designer, or architect; or 4. It embodies distinctive characteristics of a style, type, period, or method of construction, or is a valuable example of the use of indigenous materials or craftsmanship; or 5. It contributes to the significance of an historic area being a geographically definable area possessing a concentration of historic or scenic properties or thematically related grouping of properties which contribute to each other and are unified aesthetically by plan or physical development; or 6. It is one of the few remaining examples in the city of Covina, region, state, or nation possessing distinguishing characteristics of an architectural or historic type or specimen (CMC §17.81.050(A)).	No other applicable ordinances were identified.
El Monte	Cultural Resources Element: Goal CR-2 A community that embraces the rich diversity of residents and the cultural heritage they bring from all over the world by incorporating local cultural history and special places into the fabric of the built environment.	No applicable ordinances were identified.	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Glendora	<p>Historic Preservation Element</p> <p>Goal 1: Preserve and protect Glendora’s historic resources as physical reminders of the city’s past and as unique focal points to shape the community’s identity.</p> <p>Objective 1: Identify, evaluate, and document historic resources.</p> <p>Policy 1: Maintain a list of historic resources designated under national, state, and local agencies.</p> <p>Objective 2: Protect historic resources from demolition and inappropriate alterations.</p> <p>Policy 1: Ensure the protection of historic resources through the enforcement of existing codes.</p> <p>Policy 2: Historic resources should be relocated when retention of such buildings or structures on site is not feasible.</p> <p>Policy 3: In the downtown, mixed uses or adaptive reuse of historic resources shall be encouraged when necessary to make preservation feasible.</p> <p>Policy 4: Support the continuing education of city staff in the techniques of historic preservation.</p> <p>Policy 5: Provide relief from property taxes through Mills Act contracts.</p> <p>Goal 2: Use historic preservation concepts as tools to protect, enhance, and revitalize neighborhoods.</p> <p>Objective 4: Promote neighborhood preservation.</p> <p>Policy 1: Assist neighborhood groups in forming Historic Preservation Overlay Zoning’s.</p> <p>Policy 2: Develop a public outreach program which demonstrates the benefits of historic preservation.</p> <p>Policy 3: Development should be designed to be compatible with adjacent historic resources.</p> <p>Objective 5: Enhance historic streetscapes through public improvements.</p> <p>Policy 1: Preserve and when appropriate restore historic light standards.</p> <p>Policy 2: Preserve and when appropriate restore historic street trees.</p>	<p>Municipal codes related to tribal cultural resources relevant to the Plan Area can be found in Section 21.03.050 (Historic Preservation) of Chapter 21.03 (General Regulations). The purpose of Section 21.03.050 (Historic Preservation) is to promote the general welfare by providing for the identification, protection, enhancement, perpetuation and use of improvements and areas within the city that reflect special elements of historical, architectural, archaeological, cultural or aesthetic heritage.</p> <p>§ 21.02.060 Historic resources and landmarks.</p> <p>Any application for a permit, which will result in the alteration, relocation or demolition of an historic resource or landmark, shall be subject to Section 21.03.050 of this title. 	<p>Policy 8.7-3 Consultation. As part of the development review process, ensure that potential impacts to historic, archaeological, and paleontological resources are minimized.</p> <p>Implementation Program for Policy 8.7-3:</p> <ul style="list-style-type: none">Consult with the following organizations and individuals regarding any known historic, archaeological, and paleontological resources that may be present: Pico Rivera History and Heritage Society; Information Centers of the California Historical Resources Information System; Native American Heritage Commission; and Native American groups and individuals. <p>Policy 8.7-4 Resource Assessment. Require new development necessitating discretionary approval that could potentially impact historic, archaeological, and/or paleontological resources to conduct a resource survey to ensure that potential sites are identified for avoidance or special treatment.</p> <p>Implementation Programs for Policy 8.7-4:</p> <ul style="list-style-type: none">Require the preparation of a historical resource assessment by a professional architectural historian who meets the Secretary of the Interior’s Standards for projects subject to discretionary approval that involve the demolition, relocation, or alteration of a building or structure over 45 years old or that would result in a change to the building or structure’s immediate setting and would cause a substantial adverse change in the significance of an historical resource pursuant to CEQA Guidelines Section 15064.5.Require, as a condition of project approval, the implementation of appropriate and feasible measures to reduce any potential impacts associated with a substantial adverse change in the significance of an historical resource identified in an historical resource assessment.Require that when any subsurface cultural resources, paleontological resources, or human remains are encountered, all work within 100 feet of the discovery be stopped and the area protected from further disturbance until the discovery is evaluated by a qualified professional. The appropriate City personnel shall be notified immediately. The resources shall be examined by qualified personnel to determine their significance and develop appropriate protection and preservation measures, if necessary. If human remains are discovered, they shall be treated in compliance with applicable state and federal laws, including notifying the County Coroner and consulting with the California Native American Heritage Commission, as appropriate.		
Pomona	No applicable goals or policies related to tribal cultural resources were identified.	No applicable ordinances were identified.	Pomona’s Historic Preservation Ordinance (Section .5809-13 of the Zoning Ordinance) established the official city landmarks program and the legal basis for the designation and treatment of historic properties.
Rosemead	No applicable goals or policies related to tribal cultural resources were identified.	No applicable ordinances were identified.	No other applicable ordinances were identified.
San Dimas	<p>Conservation Element:</p> <p>Goal Statement CN-2: Conserve the Historical and Cultural Resources of San Dimas</p> <p>Policy 2.1.1: Preserve significant paleontological and archaeological sites. Evaluate the significance of each site on a case-by-case basis.</p> <p>Policy 2.1.2 Preserve significant historical resources within the City of San Dimas. Evaluate each historical structure, place, and site on a case-by-case basis.</p>	No applicable ordinances were identified.	No other applicable ordinances were identified.
San Gabriel	<p>Cultural Resources Element:</p> <p>Goal 11.2: Celebrate San Gabriel’s connection to the culture of the Tongva People.</p>	Municipal codes related to tribal cultural resources relevant to the Plan Area can be found in Subchapter 153.600 (Historic Preservation and Cultural Resources), and Subchapter 153.604 (Historic Preservation and Cultural Resource Commission).	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Target 11.2.1: Document and enhance the continuing relationship between the Tongva people and the community.</p> <p>Target 11.2.2: Create an oral history to tap into the historical experiences of the Tongva/Gabrielino people.</p> <p>Target 11.2.3: Inventory structures, paleontological sites, archaeological sites, cultural landscapes, artifacts and documents in San Gabriel and institutions associated with the Tongva/Gabrielino people.</p> <p>Target 11.2.4: Create a bibliography of primary and secondary books and reports concerning the Tongva/Gabrielino people in San Gabriel.</p> <p>Target 11.2.5: Create an archive in association with the San Gabriel Historical Society, the San Gabriel Mission and the local community to preserve photographic, written, oral and iconographic material related to the Tongva/Gabrielino people.</p> <p>Goal 11.3: Improve a weak preservation ordinance.</p> <p>Target 11.3.1: Adopt an effective preservation ordinance that protects all structures, archaeological sites, cultural landscape, artifacts and documents from the period of settlement by native peoples, the Mission Period (1771-1834) and the Rancho Period (1835-1887).</p> <p>Target 11.3.2: Adopt an effective preservation ordinance that protects selected structures, archeological sites, cultural landscape, artifacts and documents of cultural value that are more than fifty years old.</p> <p>Community Design Element:</p> <p>Goal 10.17: Respect the value of historic landmark structures by requiring that the design of adjoining buildings embrace them.</p> <p>Target 10.17.1: Establish a 100’ zone immediately surrounding any historic structure appearing on the City’s register of historic and cultural resources, within which new construction must respect the architectural and historical integrity, viewscape, landscaping and other features associated with that structure.</p>	<p>Subchapter 153.600 (Historic Preservation and Cultural Resources) establishes the Historic Preservation and Cultural Resource Ordinance for protection of paleontological resources, archaeological and Native American resources, buildings, structures, objects, historic districts, sites, public art and parks, cultural landscapes, and natural features of the City. (Ord. 636-C.S., passed 8-15-17)</p> <p>Subchapter 153.604 (Historic Preservation and Cultural Resource Commission) establishes the San Gabriel Historic Preservation and Cultural Resource Commission and grants the Commission powers to advise the City Council, Planning Commission, and all city departments and staff on all matters relating to the identification, protection, retention, preservation, and registration of cultural resources in the city, as directed by the City Council.</p> <p>Subchapter § 153.625 Environmental Review. If any action required or taken pursuant to this subchapter is subject to the provisions of CEQA, the time in which such action must be taken shall be extended to the extent necessary to allow time to comply with the Act. This section also stipulates the requirements to prepare Cultural resources reports in a standard format: the California Office of Historic Preservation Archaeological Resource Management Reports (ARMR): Recommended Contents and Format. (Ord. 636-C.S., passed 8-15-17)</p>	
San Marino	No applicable goals or policies related to tribal cultural resources were identified.	<p>Municipal codes related to tribal cultural resources relevant to the Plan Area can be found in Article 18 (Historic Preservation).</p> <p>Under Article 18 (Historic Preservation) the purpose of this article is to promote the public health, safety, and general welfare by providing for the identification, designation, protection, enhancement, and ongoing use of historical resources that represent the City's cultural, architectural, social, economic, and political heritage. Article 18 establishes regulations for designation, maintenance, mitigation, environmental review, and preservation incentives of important cultural resources.</p>	No other applicable ordinances were identified.
South El Monte	No applicable goals or policies related to tribal cultural resources were identified.	<p>Municipal codes related to tribal cultural resources relevant to the Plan Area can be found in Chapter 17.78 (Historic Preservation).</p> <p>The purpose of Chapter 17.78 (Historic Preservation) is to provide special conditions and regulations for the protection, enhancement, perpetuation and use of places, buildings, structures, works of art, and other objects, having a special character or special historical or aesthetic interest or value, within the meaning of California Government Code Section 37361. (Ord. 822 §1, 1989; Ord. 963 §39, 1995)</p> <p>Chapter 17.78 (Historic Preservation) establishes regulations for designation, maintenance, mitigation, environmental review, alteration, and preservation incentives of important cultural and historic resources.</p>	No other applicable ordinances were identified.

Comply with existing regulations relating to Native American resources, including California Environmental Quality Act Section 15064.5(d) and (e) and Public Resources Code §5097.98 concerning burial grounds, and Assembly Bill 52 and Senate Bill 18 for consultation with Native American tribes for development projects carried out within the City.</p>	<p>No applicable ordinances were identified.</p>	<p>No other applicable ordinances were identified.</p>

3.18.3 Impact Assessment

3.18.3.1 Significance Criteria

Appendix G of the State CEQA guidelines was reviewed to determine if the Plan would result in significant impacts related to Tribal Cultural Resources. The criteria listed below consider if the Plan:

- 18(a) Would cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:*
- i. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k), or*
 - ii. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.*

According to CEQA (CCR Title 14, 15064.4), a project that may cause a substantial adverse change in the significance of a historical resource is a project that may have a significant effect on the environment (CCR Title 14, 15064.4(b)). The State CEQA Guidelines further state that a substantial adverse change in the significance of a resource means the physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historic resource would be materially impaired. Actions that would materially impair the significance of a historical resource are any actions that would demolish or adversely alter those physical characteristics of a historical resource that convey its historical significance and qualify it for inclusion in the CRHR or in a local register or survey that meet the requirements of PRC Sections 5020.1(k) and 5024.1(g).

3.18.3.2 Methodology

This analysis evaluates the construction and operation impacts of projects implemented under the proposed Plan on tribal cultural resources based on literature review and AB 52 outreach to understand conditions within and adjacent to the Plan Area.

The key construction-related impacts were identified and evaluated qualitatively based on the physical characteristics of the Plan Area and the magnitude, intensity, location, and duration of activities that could occur under the Plan. For the impact analyses below, the potential impacts are related to the location of future potential projects within the Plan Area, which includes the District ROW and adjacent parcels. Accordingly, the impact analysis is focused on project location, rather than the specific Plan component that may be proposed for an individual project.

3.18.3.3 Plan Impacts

3.18.3.3.1 18 (a). Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- i. listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?
- ii. a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

3.18.3.3.1.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Significant and Unavoidable. Tribal cultural resources (TCRs) include sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe. These cultural resources may be listed or eligible for listing in the CRHR or local register, such as through a cultural resource records search or the NAHC Sacred Lands File search. TCRs may also be identified through Native American Consultation.

Construction activities for each of the project components may involve ground disturbance, construction equipment operation, stockpiling of materials, and views of partially built or installed structures. These construction activities have the potential to cause a substantial adverse change in the significance of a TCR if the resource is present at or near a project site through both direct destruction of the resource or indirectly due to localized noise, dust, traffic, and vibration. In order to avoid and/or minimize impacts to such resources, project proponents would be required to implement **MM TCR-1: Tribal Cultural Resources Assessment** and conduct a site-specific records search and pedestrian survey of the project site in advance of construction activity. If no potential resources are identified in the assessment, the potential for impacts would be considered less than significant at the project level.

If the site-specific assessment indicates resources are present on a project site, implementation of **MM TCR-2: Avoid Cultural and Tribal Cultural Resources, Prepare Treatment Plan** would ensure the project is either redesigned to avoid known resources or a treatment plan is prepared to effectively mitigate impacts to the resources. Implementation **MM TCR-4: Conduct Native American Monitoring** would further ensure that any unanticipated discoveries are handled appropriately. Project proponents would also be required to implement **MM TCR-3: Unanticipated Discovery** in the event other unanticipated discoveries of archaeological resources occurs during construction activity.

In addition to CRHP-eligible TCRs, TCRs can also be determined through consultation between the lead agency and a tribe (TCRs identified under PRC Section 5024.1(c) are strictly determined through

consultation between the lead agency and California Native American tribe). If no TCRs are identified through consultation, then nothing further would be required. If, however, a TCR is identified by the lead agency in the Plan Area through the consultation process, and if construction could result in a substantial adverse change in the significance of the TCR, then the impact would be considered significant. The effects and individual circumstances of a potential project's impacts on TCRs cannot be known at this time, as individual site reconnaissance and consultation has not been completed. While **MM TCR-1: Tribal Cultural Resources Assessment, MM TCR-2: Avoid Cultural and Tribal Cultural Resources, Prepare Treatment Plan, MM TCR-4: Conduct Native American Monitoring, and MM TCR-3: Unanticipated Discovery** would reduce impacts to Tribal cultural resources, impacts at the project or program level could still be significant.

Accordingly, the potential for construction activity to cause a substantial adverse change in the significance of archaeological resources in the Plan Area would be significant and unavoidable.

Operations

Significant and Unavoidable. By design, the presence of a connected greenway network would introduce more recreational users to the Plan Area. An increase in users to recreational resources near TCRs could indirectly and directly degrade resources through increased erosion, unanticipated destruction of in situ resources, and destruction or removal by facility users. While no further ground disturbance would occur following the completion of construction activities, and consideration of any present TCRs would have been addressed as part of the project design and construction process unanticipated impacts by recreational users within the plan area could be significant. Therefore, impacts to TCRs would be significant and unavoidable.

Mitigation Measures

For construction, the following mitigation measures shall be implemented:

MM TCR-1: Tribal Cultural Resources Assessment. Construction activities that result in ground disturbance have the potential to impact buried TCRs. A qualified archaeologist shall conduct an archaeological inventory and assessment per the Secretary of the Interior's Professional Qualifications Standards for Archaeology, for any project that would result in ground disturbance. The assessment shall include a records search of the Sacred Land File Search at NAHC and CHRIS, at the South Central Coastal Information Center at California State University Fullerton which administers the historical records for Los Angeles County.

If a location has been previously surveyed and no TCRs have been recorded on it, no further TCRs studies shall be required. If a location has not been previously surveyed based on the records search information, an intensive (100 percent) pedestrian ground surface survey (Phase I survey/Class III inventory) by qualified archaeologists shall be required. All TCRs identified during the site survey will be recorded, pursuant to applicable local/municipal guidance.

Any newly encountered tribal cultural resources shall be evaluated by a qualified archaeologist for their eligibility for listing in the CRHR or NHRP and for significance as a historical resource or unique archaeological resource per State CEQA Guidelines Section 15064.5. Recommendations shall be made for treatment of these resources if found to be significant, in consultation with the implementing agency and the appropriate Native American tribes. If, following the records search, literature review, sacred

land file search, and field survey, it is determined that there are no TCRs present in the project area, then no further action would be required.

MM TCR-2: Avoid Cultural and Tribal Cultural Resources, Prepare Treatment Plan. If a significant resource is present, the preferred treatment is to avoid the site/resource to preserve it in place, pursuant to State CEQA Guidelines Section 15126.4(b)(3). This may require redesign of the proposed project.

In accordance with State CEQA Guidelines Section 15126.4(b)(3)(C), if it is demonstrated that resources cannot be avoided, a qualified archaeologist shall develop additional treatment measures, which may include data recovery or other appropriate measures, in consultation with the project proponent, and any local Native American representatives expressing interest in prehistoric or tribal resources. For sites with archaeological resources that cannot be avoided, the project proponent shall prepare an Archaeological Evaluation and Treatment Plan, in coordination with the qualified archaeologist, that describes methods and procedures for conducting subsurface excavations to determine the vertical and horizontal extents of an archaeological site. The draft plan shall be provided for review to any tribes that expressed interest in prehistoric or tribal resources. Implementation of such a plan may include mechanical and/or manual excavations to provide data on the cultural constituents at the site and the depositional context of such materials (if found to exist). This data can be used to determine the integrity of the site and make a formal evaluation based on the eligibility criteria set forth in CEQA and Section 106 of the NHPA for inclusion in the CRHR and NRHP. The Archaeological Evaluation and Treatment measures should define the parameters of archaeological testing at the site and the extent of excavation and analysis of any materials recovered. The Archaeological Evaluation and Treatment measures must also include guidelines for treatment and curation of any materials recovered during the testing process. Subsequent to implementation of the Archaeological Evaluation and Treatment measures, a technical report describing the methods and results of archaeological testing and formal evaluations of the archaeological sites and recommendations for further treatment will be completed.

MM TCR-3: Unanticipated Discovery. If a TCR is discovered inadvertently during construction, all work in the immediate vicinity of the find (within a 60-foot buffer) shall stop until a Secretary of Interior-qualified archaeologist can evaluate the significance of the find. Work on other portions of the project outside the buffered area may continue during this assessment period. Additionally, local Native American tribes who have expressed interest and concern regarding the proposed project shall be contacted, regarding any pre-contact and/or historic-era finds and be provided information after the archaeologist makes his/her initial assessment of the nature of the find, so as to provide Tribal input with regards to significance and treatment. If the find is determined to be significant, the project proponent shall prepare a treatment plan in accordance with MM TCR-2 described above.

Mitigation Measure TCR-4: Conduct Native American Monitoring. Native American monitoring shall be conducted by the tribe that identified the TCRs through AB 52 consultation and have requested monitoring and Tribes that have been identified through **MM TCR-1** Native American monitors will work with a project's qualified archaeologist during ground disturbing activities in native sediments and will observe all ground-disturbing activities within a distance agreed upon by the tribal monitor and the archaeologist. Should unanticipated discoveries be made during Native American monitoring, then the unanticipated discoveries protocol described in **MM TCR-3** shall be enacted. This includes halting ground-disturbing activities for a reasonable period of time, consulting with the lead agency and Native

American representatives (if the find is Native American in origin), developing a mitigation plan, and potentially developing and implementing a data recovery plan. In the event of an unanticipated discovery of human remains, the monitor will follow Section 7050.5 of the Health and Safety Code.

For operation, impacts would be significant and unavoidable.

Significance After Mitigation

Implementation of mitigation measures would ensure that potential impacts to TCRs during construction would be avoided and/or minimized. However, although implementation of the mitigation measures could help reduce impacts, specific locations of projects and presence of tribal cultural resources, as well as the projects' effects on tribal cultural resources, are not known at this time. Therefore, it is possible that impacts could remain significant. Thus, impacts are considered potentially significant and unavoidable.

3.18.3.4 Impacts of Conceptual Designs

This section discusses potential impacts from the 10 conceptual designs discussed in Section 2.4.

3.18.3.4.1 18 (a). Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- i. listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k)?
- ii. a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?

Construction

Significant and Unavoidable Construction activities for the 10 conceptual projects would typically involve ground disturbance, construction equipment operation, stockpiling of materials, views of incomplete structures, and worker activities. While most of the construction areas for the conceptual projects have experienced prior development/disturbance, it is possible that an unknown and unrecorded TCR may be present. If a TCR is encountered during construction of a conceptual project, a significant impact may result from disturbance, alteration, or destruction of the resource. The effects and individual circumstances for Construction activities for the 10 conceptual projects with regard to impacts on TCRs cannot be known at this time, as individual site resonance and consultation has not been completed. While **MM TCR-1: Tribal Cultural Resources Assessment, MM TCR-2: Avoid Cultural and Tribal Cultural Resources, Prepare Treatment Plan, MM TCR-4: Conduct Native American Monitoring, and MM TCR-3: Unanticipated Discovery** would reduce impacts to TCRs, impacts are still considered potentially significant and unavoidable.

Operations

Significant and Unavoidable. By design, the greenway network would introduce more users to the Plan Area. Increased usership is not anticipated to significantly impact tribal cultural resources. An increase in users to recreational resources near TCRs could indirectly and directly degrade resources through; increased erosion, unanticipated destruction of in situ resources, and destruction or removal by facility users. While no ground disturbing activities would occur during the operation of the proposed facilities of the 10 conceptual design examples, unanticipated impacts by recreational users within the plan area could be significant. Therefore, while no direct physical impacts to TCRs are planned from operation of the proposed facilities, unanticipated impacts may still occur. Impacts would be the same as described in Section 3.18.3.3.1.1, potentially significant and unavoidable.

3.19 Utilities and Service Systems

This section describes the existing conditions and applicable regulations pertaining to utilities and service systems in the Plan Area and the potential impacts associated with utilities and service systems that could result from implementation of the proposed Plan.

Table 3.19-1. Summary of Potential Impacts of the Plan on Utilities and Service Systems.

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
<i>Would the Plan:</i>			
19(a). Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?			
Greenway Paths + Greenway Amenities	Less than Significant with Mitigation	Less than Significant with Mitigation	Construction: MM UTL-1: Prepare and Implement Utilities Plan Operations: MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant with Mitigation	Less than Significant with Mitigation	Construction: MM UTL-1: Prepare and Implement Utilities Plan Operations: MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies MM UTL-1: Prepare and Implement Utilities Plan
Greenway Paths + Safe Crossings	Less than Significant with Mitigation	Less than Significant with Mitigation	Construction:

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
<i>Would the Plan:</i>			
			MM UTL-1: Prepare and Implement Utilities Plan Operations: MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies
Greenway Paths + Stormwater Management	Less than Significant with Mitigation	Less than Significant	Construction: MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies MM UTL-1: Prepare and Implement Utilities Plan Operations: No Mitigation
19(b). Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction: No mitigation Operations: No Mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant with Mitigation	Less than Significant	Construction: MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies MM UTL-1: Prepare and Implement Utilities Plan Operations: No Mitigation

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the Plan:			
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant	Construction: No mitigation
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	Operations: No Mitigation
19(c). Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?			
Greenway Paths + Greenway Amenities	No Impact	Less than Significant with Mitigation	Construction: No Mitigation
Greenway Paths + Pocket Parks and Greenspaces	No Impact	Less than Significant with Mitigation	Operations: MM UTL-1: Prepare and Implement Utilities Plan
Greenway Paths + Safe Crossings	No Impact	Less than Significant with Mitigation	
Greenway Paths + Stormwater Management	No Impact	Less than Significant with Mitigation	
19(d). Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant	Operations: No Mitigation
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	
19(e). Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?			

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
<i>Would the Plan:</i>			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction: No mitigation Operations: No Mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant	
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	

3.19.1 Environmental Setting

3.19.1.1 Water Services

Water services within Los Angeles County are provided by a complex network of water districts, water wholesalers, and private companies. The Metropolitan Water District (Metropolitan) is Southern California's primary water wholesaler. Metropolitan operates and maintains an expansive range of reservoirs, water treatment plants, hydroelectric facilities, large-diameter pipelines and tunnels, and about 400 service connections to distribute water imported from hundreds of miles away. This water is delivered to 26 member agencies and 19 million people across 5,200 square miles of southern California (Metropolitan 2024a).

The SGV receives water from both the Colorado River and the California State Water Project. The Colorado River Aqueduct is a 242-mile system of open canals, tunnels, and siphons that carry water from the Colorado River to southern California (Metropolitan 2024b). The system works by pumping water up to higher elevations along the aqueduct and then allowing it to flow downhill by gravity. The Colorado River begins in the Rocky Mountains of Colorado and flows mostly southwest before reaching the Arizona-Nevada border and heading south towards Mexico. About 40 million people depend on water from the Colorado River. The sharing of river water resources is governed by the "Law of the River" and constitutes a series of interstate compacts, statutes, Supreme Court rulings, a treaty with Mexico, and other contracts and regulatory guidelines (Metropolitan 2024b).

The California State Water Project is the largest state-built water and power system in the United States and is operated and maintained by the California Department of Water Resources (DWR). The State Water Project supplies 30 percent of southern California's drinking water (Metropolitan 2024c). This water is supplied via the California Aqueduct, which originates in the Sacramento-San Joaquin Delta. Water is drawn from the Clifton Court Forebay reservoir southwest of Stockton and enters the Harvey O. Banks Pumping Plant in Tracy. The Banks Pumping Plant has the ability to pump more water during the wet months to fill off stream storage reservoirs and groundwater basins south of the Delta to improve water supply reliability. Water is transported 444 miles along the California Aqueduct, through the San Joaquin Valley, over the Tehachapi Range (pumped via the A.D. Edmonston Pumping Plant), and

eventually diverted into three branches to supply various regions of southern California (Metropolitan 2024b).

The F.E. Weymouth Water Treatment Plant began operation in 1941 and was the first plant built by Metropolitan. It treats both Colorado River and State Water Project water and serves parts of Los Angeles County, including the SGV and areas of Orange County. Weymouth Water Treatment Plant has a treatment capacity of 520 million gallons per day. A sophisticated water quality lab is located on the grounds of the Weymouth Water Treatment Plan (MWD 2018).

The water purveyors within the Plan Area include SGV Municipal Water District (SGVMWD), the Upper San Gabriel Valley Municipal Water District (Upper District) and Three Valleys Municipal Water District (TVMWD), which are member agencies to Metropolitan. Most of the water needs for the SGV are supplied from local resources. Of the annual water consumed in the SGV, approximately 80 percent is supplied by groundwater and 20 percent is imported water (Upper District 2023).

The SGVMWD uses the imported water to replenish groundwater in the SGV for future use. The SGVMWD entered into a contract with DWR in 1962. The allocations each year are dependent on supply conditions such as rainfall, snowpack, and the amount of water already in storage, as well as operational constraints for fish and wildlife protection, water quality, and environmental and legal restrictions (SGVMWD 2024). Its service area encompasses 144 square miles, which includes 18 cities and portions of unincorporated Los Angeles County with almost 1 million residents. The Upper District service area includes the cities of Arcadia, Azusa, Baldwin Park, Bradbury, City of Industry, Covina, Duarte, El Monte, Glendora, Irwindale, La Puente, Monrovia, Rosemead, San Gabriel, South El Monte, South Pasadena, Temple City, and West Covina (Upper District 2023).

TVMWD is a wholesale water agency that provides water to 13 customers (member agencies). The service area for TVMWD includes areas within the following cities: Azusa, Glendora, San Dimas, La Verne, Claremont, Covina, Pomona, Walnut, Rowland Heights, and Diamond Bar. Water supply for the service area consists of approximately 50 percent imported water, which consists of State Water Project and the Colorado River Aqueduct supplies (TVMWD 2023).

In order to reduce the County's dependence on imported water supply, County agencies are establishing water conservation programs. The creation of water reclamation projects and groundwater recharge facilities to capture stormwater runoff by the District is one example of augmenting local groundwater supplies (LA County Planning 2022). The District's water recharge facilities, dam, and spreading grounds located within the proposed Plan Area are shown on Figure 3.19-1.

The Colorado River watershed has been classified as experiencing a drought for two decades. During this time, Metropolitan has used planning and policy efforts to reduce per-capita water demands to historic lows, ultimately achieving water supply reliability (Metropolitan 2022). Despite this long-term success, threats remain. Increased demands, whether from growth or from per capita use, represent a major risk to reliability. Demands can increase from rebounding per capita water use, but even with efficient use, total demands can still increase as the population and economy grow over time. Variability in retail-level demands mostly comes from factors that affect water-using behaviors (e.g., weather, climate). Metropolitan has determined that the underlying mechanisms and assumptions used to make past Integrated Resources Plan (IRP) projections are unpredictable under current climate conditions (Metropolitan 2022).

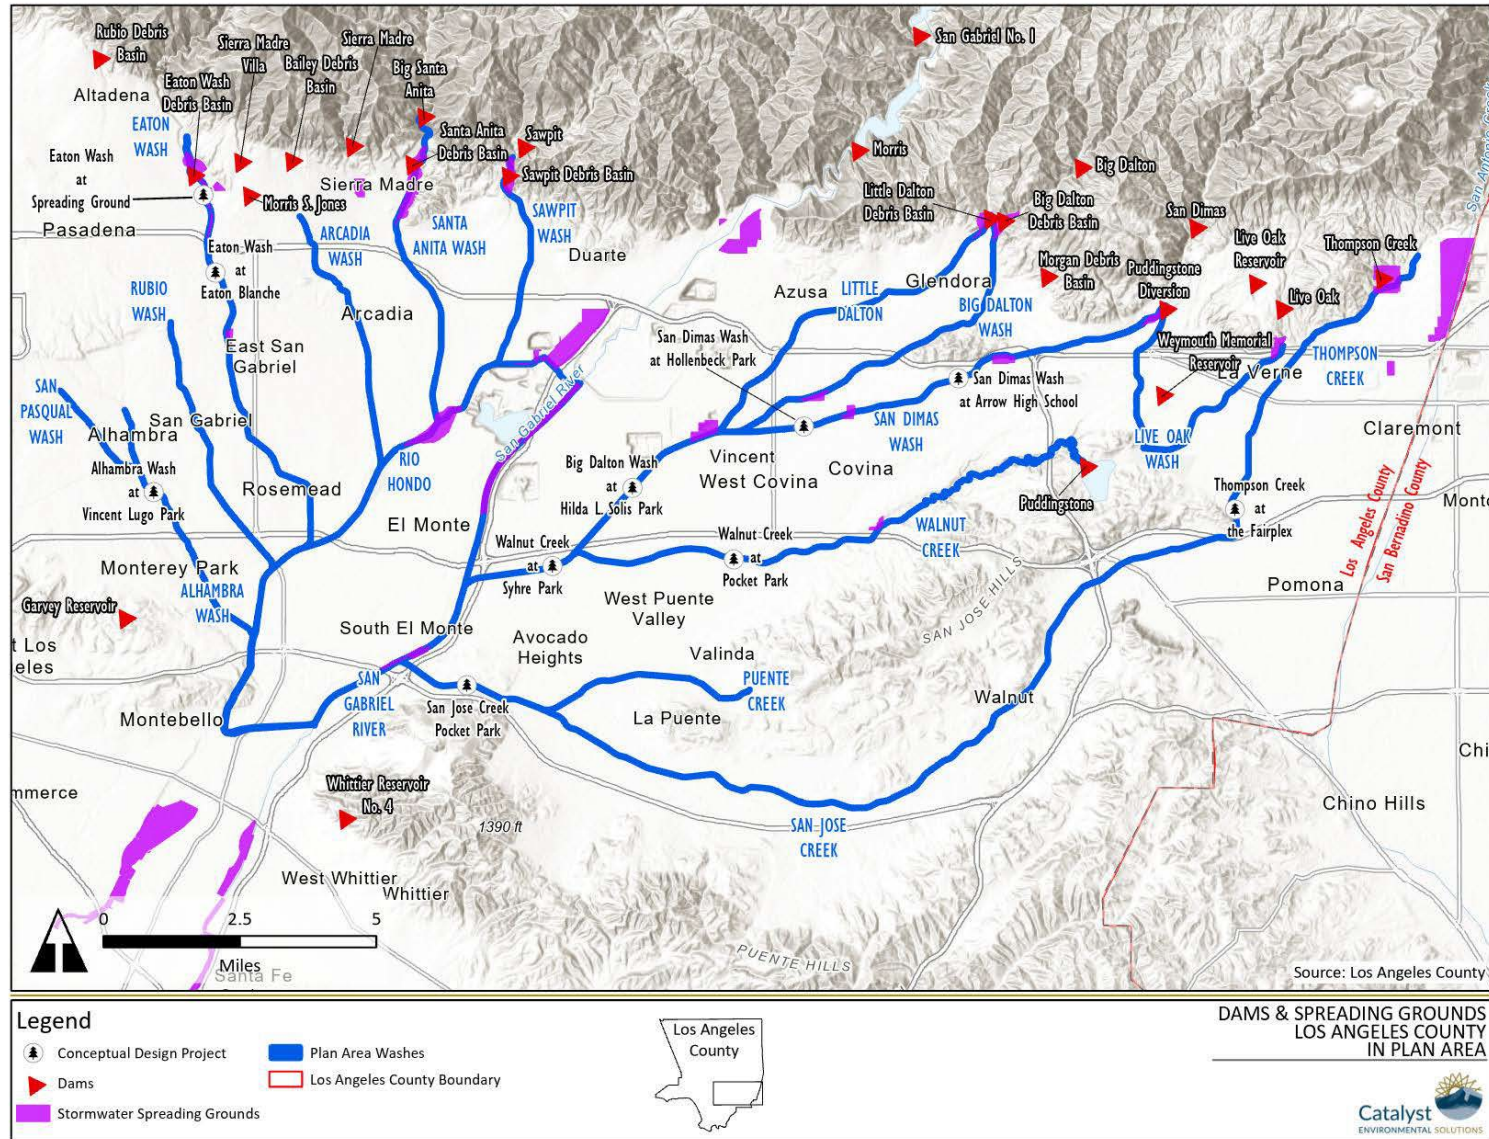

Figure 3.19-1. Dams and Spreading Grounds within the Plan Area

Thus, Metropolitan is engaged in developing a new analytical framework to define and account for uncertainties affecting water reliability and generate an adaptive management strategy. With the 2020 IRP decision support method, Metropolitan explicitly examined underlying drivers of change for the water supply and demand outlook for Southern California. The 2020 update collectively found that Southern California has the necessary tools and policies in place to adapt to a variety of plausible water use and demand scenarios (Metropolitan 2022).

3.19.1.2 Wastewater

Wastewater services within the Plan Area are provided by the Los Angeles County Sanitation Districts (Sanitation Districts). The Sanitation Districts are a public agency that consists of 24 independent special districts that serve the wastewater and solid waste management needs of approximately 5.5 million people in Los Angeles County. The Sanitation Districts service area covers approximately 850 square miles and encompasses 78 cities and unincorporated areas within the County. The Sanitation Districts operate and maintain the regional wastewater collection system, which includes approximately 1,400 miles of sewers, 49 pumping plants, and 11 wastewater treatment plants that transport and treat about half the wastewater in the county. The Sanitation Districts treat about 400 million gallons of water per day (Sanitation District 2023a). Within the Sanitation Districts service area, there are approximately 9,500 miles of sewers that are owned and operated by the cities and the County that are tributaries to the wastewater collection system (LA County Flood Control District 2015).

There are three Sanitation District water reclamation plants (WRPs) located within the vicinity of the Plan Area, including the Whittier Narrows, San Jose Creek, and Pomona water reclamation plants.

- Whittier Narrows WRP serves approximately 150,000 people; it treats approximately 15 million gallons of wastewater per day, all of which is reused at either the plant, the Upper District, or for groundwater recharge into the Rio Hondo and San Gabriel Coastal Spreading Grounds.
- San Jose Creek WRP serves approximately 1,000,000 people; it treats approximately 100 million gallons of wastewater per day, of which 42 million gallons per day are reused at over 130 sites.
- Pomona WRP serves approximately 130,000 people; it treats approximately 15 million gallons of wastewater per day, of which 8 million gallons per day are reused at over 190 sites (Sanitation Districts 2023b).

3.19.1.3 Stormwater

The District encompasses over 3,000 square miles, 85 cities, and approximately 2.1 million land parcels. The District includes the majority of drainage infrastructure within incorporated and unincorporated areas in every watershed of the county, including 500 miles of open channel, 2,800 miles of underground storm drains, and approximately 120,000 catch basins (Los Angeles County Department of Public Works 2024). In addition to the District maintaining regional storm drain structures, many of the cities within the Plan Area maintain storm drains within their respective city boundaries.

3.19.1.4 Solid Waste Management

The Sanitation District's solid waste management system currently provides about 20 percent of the countywide solid waste disposal needs through the operation of two sanitary landfills (Calabasas Landfill and Scholl Canyon Landfill) and three materials recovery/transfer facilities (in Puente Hills and Southgate). Sanitation Districts operate two facilities that convert landfill gas into renewable energy (in

Calabasas and Puente Hills) and are also a partner in a refuse-to-energy facility (Sanitation Districts 2023a).

There is one operational landfill with a service area that overlaps a small portion of the proposed Plan Area near Pasadena. The Scholl Canyon Landfill is owned by the City of Glendale and operated by City of Los Angeles Sanitation and Environment under a joint powers agreement. The landfill is prohibited from accepting solid waste from outside its watershed under a City of Glendale ordinance (Sanitation Districts 2023b). The Scholl Canyon Landfill services the incorporated cities of Glendale, La Cañada Flintridge, Pasadena, South Pasadena, San Marino, Sierra Madre; the Los Angeles County unincorporated communities known as Altadena, La Crescenta, Montrose; the unincorporated area bordered by the cities of San Gabriel, Rosemead, Temple City, Arcadia, and Pasadena; the unincorporated area immediately to the north of Arcadia and Pasadena; and the unincorporated area immediately to the north of the City of San Marino bordered by the City of Pasadena on the west, north and east sides.

The Puente Hill Materials Recovery Facility is located within the Plan Area. This facility accepts municipal solid waste from commercial and residential haulers with a goal to divert materials from landfills. Recyclables are recovered from trash at the facility as well as conversion of food waste to a slurry which is anaerobically digested into biogas (Sanitation Districts 2023b).

3.19.1.5 Utilities

The County's utility infrastructure, information, and communication networks are layered with utility rights of way and properties that contain tower structures, substations, generating plants, pipelines, storage fields, valve stations, wells, radio and television studios, and other equipment facilities. Most electric, natural gas, or telecommunication services are provided by private service providers within the unincorporated areas of Los Angeles County (LA County Planning 2022). Within the Plan Area, electricity is provided primarily by Southern California Edison and natural gas service is provided by SoCal Gas Company, although a subset of incorporated cities in the Plan Area have their own city-owned utilities.

3.19.2 Regulatory Setting

3.19.2.1 Federal

3.19.2.1.1 Clean Water Act

The CWA establishes regulatory requirements for potable water supplies, including raw and treated water quality criteria. The USEPA established primary drinking water standards in Section 304 of the CWA. States are required to ensure that potable water sold by retail providers to the public meets these standards. The County and all incorporated cities and water service providers are required to monitor water quality and conform to the regulatory requirements of the CWA.

3.19.2.1.2 Safe Drinking Water Act

Enacted in 1974 and implemented by the USEPA, the federal Safe Water Drinking Act imposes water quality and infrastructure standards for potable water delivery systems nationwide. The primary standards are health-based thresholds established for numerous toxic substances. Secondary standards are recommended thresholds for taste and mineral content.

3.19.2.2 State

3.19.2.2.1 California Water Plan

The California Water Plan is prepared by DWR and was most recently updated in 2023. The plan provides a framework for water managers, legislators, tribes, agencies, businesses, academia, stakeholders, and the public to consider options and make decisions regarding California's water future. The California Water Plan, which is updated every five years, presents basic data and information on California's water resources including water supply evaluations and assessments of agricultural, urban, and environmental water uses to quantify the gap between water supplies and uses. The California Water Plan also identifies and evaluates existing and proposed statewide demand management and water supply augmentation programs and projects to address the state's water needs. The California Water Plan provides resource management strategies and recommendations to strengthen integrated regional water management. The resource management strategies help regions meet future demands and sustain the environment, resources, and economy, involve communities in decision-making, and meet various goals. A resource management strategy is a project, program, or policy that helps local agencies and governments manage their water and related resources. These strategies can reduce water demand, improve operational efficiency, increase water supply, improve water quality, practice resource stewardship, and improve flood management. Additionally, the California Water Plan includes a finance plan that identifies critical priorities for State investment in integrated water management activities.

3.19.2.2.2 Integrated Waste Management Act (Public Resources Code Sections 41000-41460)

The California Integrated Waste Management Act of 1989 (AB 939), as amended, was enacted to reduce, recycle and reuse solid waste to the maximum extent feasible. Specifically, AB 939 requires city and county jurisdictions to identify an implementation schedule to divert 50 percent of total solid waste stream from landfill disposal by 2000 and also requires each city and county to promote source reduction, recycling, and safe disposal or transformation; and. Cities and counties are required to maintain the 50 percent diversion specified by AB 939 past the year 2000. AB 939 further requires cities and counties are also required to submit an annual report to CalRecycle, formerly the California Integrated Waste Management Board, to update their progress toward the AB 939 goals (i.e., source reduction, recycling and composting, and environmentally safe land disposal).

3.19.2.3 Regional

3.19.2.3.1 Greater Los Angeles County Integrated Regional Water Management Plan

The Greater Los Angeles County Region is comprised of the above five Sub-Regions that span from Ventura County to Orange County, including portions of both counties, and from the Pacific Ocean coastline to the San Gabriel Mountains, an area of over 2,200 square miles. The Greater Los Angeles County Integrated Regional Water Management Plan (IRWMP) reflects the Greater Los Angeles County Region's collaborative efforts to ensure a sustainable water supply through the more efficient use of water, the protection and improvement of water quality, and environmental stewardship. The plan integrates water supply, water quality, flood management, and open space strategies to maximize the utilization of local water resources. The region includes approximately 10 million residents, portions of

four counties, and 84 cities. The Greater Los Angeles County IRWMP was last amended in 2017 (LACDPW 2017).

3.19.2.3.2 Metropolitan Water District of Southern California Integrated Regional Water Management Plan

Metropolitan has released IRWMPs since 1996. These IRWMPs typically look ahead 25 years to assess the needs of southern California and adapt to challenges and are updated about every five years. In 2020, Metropolitan initiated a new IRWMP process using a fresh approach that evaluated multiple scenarios and how MWD could respond to maintain water reliability for the region. It is coordinated to be consistent with other long-term plans such as the new Climate Action Plan and Metropolitan's 2020 Urban Water Management Plan. Metropolitan's IRWMP is also coordinated with member agency plans to develop local resources. The IRWMP anticipates how much water southern California can expect from its imported and local supplies, and forecasts regional water demands. Understanding the gap between supplies and demand helps Metropolitan set the targets to maintain reliability and inform the board on what actions Metropolitan and its member agencies can take to close that gap. From these collaborative exercises, Metropolitan is investigating resources, policies, and investments needed to maintain reliable water supplies through 2045. Metropolitan is developing an adaptive management strategy along with a series of performance measures and reality checks so that plans can be adjusted as needed. The 2020 IRWMP Regional Needs Assessment was published in 2022, but the final IRWMP has not yet been released (Metropolitan 2022a).

3.19.2.3.3 OurCounty: The Los Angeles Countywide Sustainability Plan

OurCounty: The Los Angeles Countywide Sustainability Plan was adopted by the LA County Board of Supervisors on August 6, 2019. *OurCounty Sustainability Plan* includes 12 primary goals that have a total of 37 strategies, with a total of 159 actions. The plan identifies lead County entities and partners for each goal. *OurCounty Sustainability Plan* is intended to help guide decision-making in unincorporated areas and provide a model for decision-making in the 88 incorporated cities in the County. As a strategic plan, *OurCounty Sustainability Plan* does not supersede land use plans that have been adopted by the Regional Planning Commission and Board of Supervisors, including the County's general plan and various community, neighborhood, and area plans. Overall, *OurCounty Sustainability Plan* proposes to make the County a more equitable, prosperous, and resilient region in the years ahead. The plan's goals and milestones include the following:

- Powering unincorporated areas and County facilities with 100 percent renewable energy by 2025
- Increasing urban tree canopy coverage by 15 percent by 2035
- Diverting more than 95 percent of waste from landfills
- Developing land-use tools to limit new development in high climate-hazard areas
- Phasing out single-use plastic by 2025 to ensure a cleaner ocean and less landfill waste
- Cutting back on imported water by sourcing 80 percent of water locally by 2045
- Ensuring that all residents have safe and clean drinking water, and that rivers, lakes and the ocean meet federal water quality standards
- Leading efforts to make sure that at least 65 percent of new housing is built within ½ mile of high frequency transit by 2035
- Supporting construction of more than half a million affordable housing units by 2045 to improve public health and community sustainability

3.19.2.3.4 Los Angeles County General Plan

The Public Services and Facilities Element of the General Plan (LA County Planning 2022) includes the following goals and policies:

- Goal PS/F 2: Increased water conservation efforts.
 - Policy PS/F 2.1: Support water conservation measures.
- Goal PS/F 3: Increased local water supplies through the use of new technologies.
 - Policy PS/F 3.1: Increase the supply of water through the development of new sources, such as recycled water, gray water, and rainwater harvesting.
- Goal PS/F 4: Reliable sewer and urban runoff conveyance treatment systems.
 - Policy PS/F 4.1: Encourage the planning and continued development of efficient countywide sewer conveyance treatment systems.
- Goal PS/F 5: Adequate disposal capacity and minimal waste and pollution.
 - Policy PS/F 5.1: Maintain an efficient, safe and responsive waste management system that reduces waste while protecting the health and safety of the public.
- Goal PS/F 6: A County with adequate public utilities.
 - Policy PS/F 6.1: Ensure efficient and cost-effective utilities that serve existing and future needs.

3.19.2.3.5 Los Angeles County Water Plan

The Los Angeles County Water Plan, adopted in 2023, is organized around a framework of targets and strategies, supported by specific actions, to ensure a resilient water supply in the County. The four key focal areas of the plan are regional water supply reliability, groundwater management and quality, small at-risk system resilience and drinking water equity, and watershed sediment management. The County Water Plan fills current gaps to enhance the region's water resilience. The County Water Plan takes a bird's-eye view on what else can be done to optimize, leverage, and align programs and processes and complements existing efforts and fills in the gaps for matters not currently being addressed at a regional level. The County Water Plan does not recommend specific projects subject to environmental analysis or duplicate other ongoing efforts or supersede land use plans that have been adopted by the LA County Board of Supervisors.

3.19.2.4 Incorporated Cities Within the Plan Area

The table below presents the policies related to utilities and service systems from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.19-2. Applicable Local City Policies Related to Utilities and Service Systems

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Water Services</p> <p>Goal SI-9 A reliable water supply, treatment, and distribution system that meets current and future water demand as affordably as possible, while considering the City’s goals related to resource conservation.</p> <p>Policy SI-9A Maintain, upgrade, and expand water supply, distribution, storage, and treatment facilities to ensure access to adequate water supplies.</p> <p>Policy SI-9B Ensure that local drinking water meets or exceeds federal and state drinking water regulatory standards.</p> <p>Policy SI-9C Explore opportunities to aid in recharge of local groundwater basins.</p> <p>Wastewater</p> <p>Goal SI-10 A wastewater and stormwater collection and treatment system that meets the needs of existing and planned development.</p> <p>Policy SI-10A Maintain, upgrade, and expand wastewater and stormwater collection facilities to ensure that wastewater and stormwater generated in Alhambra can be effectively managed.</p> <p>Policy SI-10C Require that development be connected to the municipal sewer system and ensure that adequate capacity is available for the treatment of generated wastewater flows and safe disposal of generated sludge.</p> <p>Policy SI-10E Require storm drain infrastructure that implements Low-Impact Development practices (bioretention areas, cisterns, and/ or rain barrels) and incorporates state-of the- art best management practices.</p> <p>Solid Waste Management</p> <p>Goal SI-11 Solid waste services that meet the demands of residents and businesses while meeting applicable solid waste diversion requirements.</p> <p>Policy SI-11A Provide an adequate and orderly system for collection and disposal of solid waste for existing and future development.</p> <p>Policy SI-11B As feasible, emphasize source reduction and recycling in order to maximize diversion of waste from area landfills.</p> <p>Utilities</p> <p>Goal SI-12 A high-quality and consistently reliable telecommunications system accessible throughout the community.</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Chapter 16.36 (Stormwater Low Impact Development (LID) Standards), Section 16.36.060 (Source Control Best Management Practices Requirements), Section 16.34.070 (Construction Activity Storm Water Measures), Section 23.48.030 (Applicability of State Model Water Efficient Landscape Ordinance), and Section 16.36.050 (Stormwater Pollution LID Control Measures).</p> <p>Chapter 16.36 (Stormwater Low Impact Development (LID) Standards) defines projects that must comply with the requirements of low impact development standards to include:</p> <p>(C) All development projects equal to 1 acre or greater of disturbed area that adds more than 10,000 square feet of impervious surface area.</p> <p>(J) Projects located in or directly adjacent to, or discharging directly to an environmentally sensitive area (ESA), where the development will:</p> <p> (1) Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and</p> <p> (2) Create 2,500 square feet or more of impervious surface area.</p> <p>(M) Redevelopment projects.</p> <p> (1) Land disturbing activity that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site on planning priority project categories.</p> <p> (2) Where redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, the entire project must be mitigated.</p> <p> (3) Where redevelopment results in an alteration of less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, only the alteration must be mitigated, and not the entire development.</p> <p> (4) Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.</p> <p>(N) Any other project as deemed appropriate by the Director.</p> <p>(Ord. 4654, passed 3-10-14)</p>	<p>City of Alhambra Final 2020 Urban Water Management Plan (UWMP) provides the City with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (City of Alhambra 2021).</p> <p>The Model Water Efficient Landscaping Ordinance (MWELO), was adopted by the State on July 15, 2015. A corresponding ordinance was adopted by the City on January 11, 2016, and is contained in AMC Chapter 23.48, Landscaping Standards. Under Chapter 23.48, all projects that require landscape and irrigation plan review by the Model WELO are required to submit landscape and irrigation plans compliant with the Model WELO for approval by the Design Review Board.</p> <p>Energy Efficiency Climate Action Plan (City of Alhambra 2019) summarized goals and targets:</p> <ul style="list-style-type: none">• Residential Electricity Goal: Achieve a 5% reduction below 2005 residential electricity use by 2020.<ul style="list-style-type: none">○ Target: 34,850 MTCO2e• Nonresidential Electricity Goal: Achieve a 5% reduction below 2005 nonresidential electricity use by 2020.<ul style="list-style-type: none">○ Target: 12,423,110 kWh• New Development Goal: Reduce new electricity use to 20% below business-as-usual levels by 2020.<ul style="list-style-type: none">○ Target: 3,882,390 kWh• Municipal Electricity Goal: Achieve Gold Level status in SCE’s Energy Leader Partnership by reducing municipal electricity use and meeting demand response requirements.<ul style="list-style-type: none">○ Target: 332,440 kWh

		<p>Section 16.36.060 (Source Control Best Management Practices Requirements) requires the following Best Management Practices be implemented and if necessary additional BMPS which are listed in the National Pollutant Discharge Elimination System Municipal Separate Storm Sewer System (MS4) Permit Order No. R4-2012-0175:</p> <p>(E) Signage at storm drains. In the project area of new development or redevelopment subject to this chapter, a notice that dumping in storm drains and catch basins is illegal.</p> <p>(F) Outdoor storage of materials. (1) All materials stored outdoors in new development or redevelopment subject to this chapter which, if exposed to storm water, reasonably may be expected to add pollutants to storm water, shall be isolated from contact with storm water. (2) The storage area for materials referred to in division (1) above must be covered completely.</p> <p>(G) Outdoor trash storage areas. Except where they serve only single-family residences, solid waste containers in new development or redevelopment subject to this chapter shall be placed between collections.</p> <p>(H) Wash area. Each wash area for motor vehicles or equipment in any new development or redevelopment subject to this chapter shall use:</p> <p>(1) An adequate overhead covering;</p> <p>(2) A device that clarifies or otherwise pretreats all wash water; and</p> <p>(3) A drain conducting all treated wash water to a sanitary sewer.</p> <p>(Ord. 4654, passed 3-10-14)</p> <p>Under Section 16.34.070 (Construction Activity Storm Water Measures) projects must adhere to the following:</p> <p>(A) Each person applying to the city for a grading or building permit for projects for which compliance with regulations governing State Construction Activity Storm Water Permits (“GCASPs”) is required, must submit satisfactory proof to the city (1) that a Notice of Intent (NOI) to comply with the GCASP has been filed, and (2) that a Storm Water Pollution Prevention Plan has been prepared, before the city shall issue any grading or building permit on the construction project. A copy of the NOI and the SWPPP shall be maintained on-site during grading and construction and shall be made available for inspection, review and copying upon the request of any city inspector.</p> <p>(B) It shall be a violation of this chapter for any person or entity required under federal or state law to comply with the requirements for a State Construction Activity Storm Water Permit (GCASP) for construction activity in the city to conduct, authorize or permit construction activities in the city at any facility which discharges to the city’s MS4 without complying with all applicable requirements for a GCASP.</p> <p>(C) Each person applying for a grading or building permit for any project for which compliance with regulations governing State Construction Activity Storm Water Permits is not required, shall submit to the city for information, and shall implement a grading and construction activity runoff control program adequate to accomplish all of the following:</p> <p>(1) Retain on-site the sediments generated on or brought to the project site, using treatment control or structural BMPs;</p> <p>(2) Retain construction-related materials and wastes, spills and residues at the project site and prevent discharges to streets, drainage facilities, the MS4, receiving waters or adjacent properties;</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(3) Contain non-storm water runoff from equipment and vehicle washing at the project site; and,</p> <p>(4) Control erosion from slopes and channels through use of effective BMPs, such as limitation of grading during the wet season, inspection of graded areas during rain events; planting and maintenance of vegetation on slopes, if any, and covering any slopes susceptible to erosion.</p> <p>(D) No person generating or producing pavement saw cutting wastes in any street, curb or sidewalk in the city shall fail to recover and properly dispose of such saw cutting wastes, and in no case shall such wastes be permitted or suffered to enter any part of the MS4, including, but not limited to any storm drain.</p> <p>(E) No person performing street and road maintenance in any street in the city shall fail to manage street and road maintenance materials in a manner which prevents such materials from being discharged to the MS4.</p> <p>(F) No person shall wash any concrete truck or any part of any concrete truck, including, but not limited to any chute, pump or tools, in any place in the city except an area designated for that purpose by the city, if the city has designated such a place. No person shall permit or suffer any concrete rinseate or wash water from any truck, pump, tool or equipment to enter any drain, open ditch, street or road or any catch basin or any other part of the MS4.</p> <p>(Ord. 4445, passed 2-10-03; Am. Ord. 4446, passed 2-24-03; Am. Ord. 4646, passed 12-9-13; Am. Ord. 4648, passed 12-9-13)</p> <p>Section 23.48.030 (Applicability of State Model Water Efficient Landscape Ordinance) states that:</p> <p><i>All projects that require landscape and irrigation plan review as required by the Model Water Efficient Landscape Ordinance shall comply with 23 California Code of Regulations 490, et seq. Applicants for such projects shall submit landscape and irrigation plans compliant with the Model Water Efficiency Landscape Ordinance for approval by the Design Review Board.</i></p> <p>(Ord. 4682, passed 1-11-16)</p> <p>Section 16.36.050 (Stormwater Pollution Low Impact Development Control Measures):</p> <p>(B) Street and road construction of 10,000 square feet or more of impervious surface shall follow USEPA guidance regarding Managing Wet Weather with Green Infrastructure: Green Streets (December 2008 EPA-833-F-08-009) to the maximum extent practicable.</p> <p>(C) The remainder of planning priority projects shall prepare a Low Impact Development Plan to comply with the following:</p> <p>(1) Retain stormwater runoff onsite for the Stormwater Quality Design Volume (SWQDv) defined as the runoff from:</p> <p>(a) The 85th percentile 24-hour runoff event as determined from the Los Angeles County 85th percentile precipitation isohyet map; or</p> <p>(b) The volume of runoff produced from a 0.75 inch, 24-hour rain event, whichever is greater.</p> <p>(2) Minimized hydromodification impacts to natural drainage systems as defined in the Municipal NPDES permit.</p> <p>(3) When, as determined by the City, 100 percent onsite retention of the SWQDv is technically infeasible, partially or fully, the infeasibility shall be demonstrated in the</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>submitted Low Impact Development Plan. The technical infeasibility may result from conditions that may include, but are not limited to:</p> <p>(a) The infiltration rate of saturated in-situ soils is less than 0.3 inch per hour and it is not technically feasible to amend the in-situ soils to attain an infiltration rate necessary to achieve reliable performance of infiltration or bioretention BMPs in retaining the SWQDv onsite.</p> <p>(b) Locations where seasonal high groundwater is within five to 10 feet of surface grade;</p> <p>(c) Locations within 100 feet of a groundwater well used for drinking water;</p> <p>(d) Brownfield development sites or other locations where pollutant mobilization is a documented concern;</p> <p>(e) Locations with potential geotechnical hazards;</p> <p>(f) Smart growth and infill or redevelopment locations where the density and/or nature of the project would create significant difficulty for compliance with the onsite volume retention requirement.</p> <p>(4) If partial or complete onsite retention is technically infeasible, the project Site may bio filtrate 1.5 times the portion of the remaining SWQDv that is not reliably retained onsite. Biofiltration BMPs must adhere to the design specifications provided in the Municipal NPDES Permit.</p> <p>(a) Additional alternative compliance options such as offsite infiltration may be available to the project site. The project site should contact the City to determine eligibility. Alternative compliance options are further specified in County of Los Angeles Low Impact Development Standards Manual 2009 or as may later be amended.</p> <p>(5) The remaining SWQDv that cannot be retained or biofiltered onsite must be treated onsite to reduce pollutant loading. BMPs must be selected and designed to meet pollutant-specific benchmarks as required per the Municipal NPDES Permit. Flow-through BMPs may be used to treat the remaining SWQDv and must be sized based on a rainfall intensity of:</p> <p>(a) 0.2 inches per hour, or</p> <p>(b) The one year, one-hour rainfall intensity as determined from the most recent Los Angeles County isohyet map, whichever is greater.</p> <p>(6) A multi-phased project may comply with the standards and requirements of this section for all of its phases by: (a) designing a system acceptable to the City to satisfy these standards and requirements for the entire site during the first phase, and (b) implementing these standards and requirements for each phase of development or redevelopment of the Site during the first phase or prior to commencement of construction of a later phase, to the extent necessary to treat the stormwater from such later phase. For purposes of this section, MULTI-PHASED PROJECT shall mean any planning priority project implemented over more than one phase and the site of a multi-phased project shall include any land and water area designed and used to store, treat or manage stormwater runoff in connection with the development or redevelopment, including any tracts, lots, or parcels of real property, whether developed or not, associated with, functionally connected to, or under common ownership or control with such development or redevelopment. (Ord. 4654, passed 3-10-14)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Arcadia	<p>Resource Sustainability Element:</p> <p>Goal RS-4: Wise and sustainable water use practices that respond to and support the needs of City residents and businesses.</p> <p>Policy RS -4.2: Address state-of-the-science approaches to water supply, demand, and conservation as part of regular updates to the City's Urban Water Management Plan, including the possibility of using reclaimed water as part of a groundwater basin recharge strategy.</p> <p>Policy RS-4.3: Require that applications for major new development projects address the adequacy and reliability of water supplies as described in SB 610.</p> <p>Policy RS-4.4: Maintain a high level of groundwater recharge capacity within formal recharge facilities belonging to the City.</p> <p>Policy RS-4.5: Analyze the City's current water conservation programs (such as plumbing retrofits, public information programs) to expand, as necessary, the effectiveness of City efforts to reduce water consumption.</p> <p>Policy RS-4.6: Implement aggressive public and private programs to reduce water use and water waste associated with landscape irrigation, including the planting of native and drought-tolerant plants, use of efficient irrigation systems, and collection and recycling of runoff.</p> <p>Policy RS-4.7: Cooperate with the efforts of other cities and agencies and pursue City-sponsored ventures to make use of recycled water more cost effective. Prioritize establishment of recycled water infrastructure and services and implement the use of recycled water at schools, parks, at City facilities, and other potential irrigation, commercial, or industrial use sites.</p> <p>Policy RS-4.8: Explore how private on-site storm water capture systems can be designed and maintained to maximize protection of surface water quality and groundwater basin recharge capabilities.</p> <p>Policy RS-4.9: Incorporate Low Impact Development (LID) strategies into new construction and city projects.</p> <p>Policy RS-4.10: Fulfill the City's responsibilities relative to the requirements of the County's NPDES permit program by enforcing regulations aimed at reducing groundwater and urban runoff pollution.</p> <p>Policy RS-4.11: Maintain contingency plans for continuing water service in the event of large-scale emergencies.</p> <p>Policy RS-4.12: Require the installation of efficient irrigation systems (e.g., drip irrigation, soil moisture sensors and automatic irrigation systems) which minimize runoff and evaporation, and which maximize the water that will reach the plant roots.</p> <p>Policy RS-4.13: Investigate the efficacy and long-term benefits both environmentally and fiscally of using pervious pavement systems.</p> <p>Goal RS-5: Wise and creative energy use that incorporates new technologies for energy generation and new approaches to energy conservation.</p> <p>Policy RS-5.4: Investigate the options for adopting local "green" building standards that address energy use in particular. Consider having City facilities serve as a model for energy efficiency by incorporating state-of-the-art energy features in new public buildings and significant remodeling of existing buildings.</p> <p>Policy RS-5.8: Promote innovative building, site design, and orientation techniques which minimize energy use.</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Chapter 7828. (Low Impact Development (LID) – Control of Runoff Required for Planning Priority Projects), Chapter 7827. (Control Of Runoff Required - Construction Activity), Chapter 7554.3 (Applicability), Chapter 8 (Stormwater Management and Discharge Control) Section 7813. (Construction and Application), Chapter 8 (Stormwater Management and Discharge Control) Section 7823. (Best Management Practices Authorized and Required), and Chapter 11 (Underground Utility Districts) Section7991. (Responsibility of Property Owners).</p> <p>Under Chapter 7828. (Low Impact Development (LID) – Control of Runoff Required for Planning Priority Projects) Planning Priority Projects include and must follow this guidance:</p> <p>B. Street and road construction of 10,000 square feet or more of impervious surface shall follow USEPA guidance regarding Managing Wet Weather with Green Infrastructure: Green Streets (December 2008 EPA-833-F-08-009) to the maximum extent practicable.</p> <p>C. The remainder of Planning Priority Projects shall prepare a Low Impact Development Plan to comply with the following:</p> <p>(1) Retain stormwater runoff onsite for the Stormwater Quality Design Volume (SWQDv) defined as the runoff from:</p> <p style="padding-left: 40px;">(a) The 85th percentile 24-hour runoff event as determined from the Los Angeles County 85th percentile precipitation isohyet map; or</p> <p style="padding-left: 40px;">(b) The volume of runoff produced from a 0.75 inch, 24-hour rain event, whichever is greater.</p> <p>(2) Minimize hydromodification impacts to natural drainage systems as defined in the Permit.</p> <p>(3) When, as determined by the City, 100 percent onsite retention of the SWQDv is technically infeasible, partially or fully, the infeasibility shall be demonstrated in the submitted Low Impact Development Plan. The technical infeasibility may result from conditions that may include, but are not limited to:</p> <p style="padding-left: 40px;">(a) The infiltration rate of saturated in-situ soils is less than 0.3 inch per hour and it is not technically feasible to amend the in-situ soils to attain an infiltration rate necessary to achieve reliable performance of infiltration or bioretention BMPs in retaining the SWQDv onsite.</p> <p style="padding-left: 40px;">(b) Locations where seasonal high groundwater is within five to 10 feet of surface grade;</p> <p style="padding-left: 40px;">(c) Locations within 100 feet of a groundwater well used for drinking water;</p> <p style="padding-left: 40px;">(d) Brownfield development sites or other locations where pollutant mobilization is a documented concern;</p> <p style="padding-left: 40px;">(e) Locations with potential geotechnical hazards;</p> <p style="padding-left: 40px;">(f) Smart growth and infill or redevelopment locations where the density and/or nature of the project would create significant difficulty for compliance with the onsite volume retention requirement.</p> <p>(4) If partial or complete onsite retention is technically infeasible, the project Site may bio filtrate 1.5 times the portion of the remaining SWQDv that is not reliably retained onsite. Alternative compliance options are further specified in the County of Los Angeles Department of Public Works Stormwater Best Management Practices Design and Maintenance Manual. The project Site should contact the Director to determine eligibility and obtain approval. In all cases, the project Site must comply with all relevant provisions of the Permit.</p> <p>(5) The remaining SWQDv that cannot be retained or biofiltered onsite must be treated onsite to reduce pollutant loading. BMPs must be selected and designed to meet pollutant specific benchmarks as required per the Permit. Flow through BMPs may be used to treat the remaining SWQDv and must be sized based on a rainfall intensity of:</p> <p>(a) 0.2 inches per hour, or(b)The one year, one hour rainfall intensity as determined from the most recent Los Angeles County isohyet map, whichever is greater.</p> <p>(6) A Multi-Phased Project may comply with the standards and requirements of this section for all of its phases by:</p> <p>(a) designing a system acceptable to the City to satisfy these standards and requirements for the entire Site during the first phase, and</p> <p>(b) implementing these standards and requirements for each phase of Development or Redevelopment of the Site during the first phase or prior to commencement of construction of a later phase, to the extent necessary to treat the stormwater from such later phase. For purposes of this section, "Multi-Phased Project" shall mean any Planning Priority Project implemented over more than one phase and the Site of a Multi-Phased Project shall include any land and water area designed and used to store, treat or manage stormwater runoff in connection with the Development or Redevelopment, including any tracts, lots, or parcels of real property, whether Developed or not, associated with, functionally connected to, or under common ownership or control with such Development or Redevelopment.</p> <p>(Ord. No. 2325, § 1(Exh. A), 4-7-15)</p> <p>Chapter 7827. (Control of Runoff Required – Construction Activity):</p> <p>G. Generally. In addition to any other requirements set forth in this Chapter, prior to obtaining a grading or building permit, each operator of any construction activity shall submit evidence to the Director that all applicable permits have been obtained, including but not limited to the State Water Board's Construction Permit, State Water Board 401 Water Quality Certification. Each operator of any construction activity shall implement such an erosion and sediment control plan and BMPs required by the Director to ensure that discharges of pollutants are effectively prohibited and will not cause or contribute to an exceedance of water quality standards. A SWPPP prepared in accordance with the General Construction Permit may be substituted for an erosion and sediment control plan. All construction and grading activities shall comply with applicable laws and regulatory documents, including all applicable City ordinances and the City's Permit regulating discharges into and from the storm drain system.</p> <p>H. Best Management Practices for New Developments and Redevelopments. No grading permit shall be issued for any development with a disturbed area of one (1) acre or greater unless the applicant can show that (i) a Notice of Intent to comply with the State Construction Activity Stormwater Permit has been filed and (ii) a Stormwater Pollution Prevention Plan has been prepared. The City may adopt regulations establishing controls on the volume and rate of stormwater</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	Policy CI-13.3: Continue to require the placement of utilities underground for all new developments.	<p>runoff from new developments and redevelopments of less than one (1) acre as may be appropriate to minimize the discharge and transport of pollutants. The Public Works Director may require of any developer or construction contractor performing work in the City provide a local stormwater pollution prevention plan prior to the beginning of such work. Construction activity does not include routine maintenance to maintain original line and grade, hydraulic capacity, the original purpose of the facility or emergency construction activities required to protect the public health and safety.</p> <p>I. Erosion and Sediment Control Plan Required. In addition to any other requirements set forth in this Chapter, prior to obtaining a grading or building permit, each operator of any construction site of less than one (1) acre shall cause to be prepared and submitted to the City an erosion and sediment control plan. No operator of any construction activity shall commence any construction activity prior to receiving written approval of the erosion and sediment control plan from the Director.</p> <p>J. Erosion and Sediment Control Plan Contents. An erosion and sediment control plan must address the following elements, at a minimum:</p> <p>(4) For construction sites of less than one acre:</p> <p>(b) Best management practices designed to control erosion and sediment, and manage waste and non-stormwater in accordance with the Permit; and</p> <p>(5) For construction sites of one acre or more:</p> <p>(k) All elements of a Stormwater Pollution Prevention Plan, but only if a construction site is one acre or greater;</p> <p>(l) Methods to minimize the footprint of the disturbed area and to prevent soil compaction outside of the disturbed area;</p> <p>(m) Methods to protect native vegetation and trees;</p> <p>(n) Sediment and erosion control;</p> <p>(o) Controls to prevent tracking on and off the site;</p> <p>(p) Nonstormwater control (e.g., vehicle washing, dewatering, etc.);</p> <p>(q) Material management (delivery and storage);</p> <p>(r) Spill prevention and control;(i) Waste management (e.g., concrete washout, waste management, sanitary waste management);</p> <p>(s) Identification of site Risk Level as identified in the General Construction Permit;</p> <p>(t) Rationale for the selection and design of the proposed BMPs, including quantifying the expected soil loss from different BMPs; and</p> <p>(6) For all construction sites: Any other element required by the Director.</p> <p>K. Erosion and Sediment Control Plan Development. Erosion and sediment control plans for construction sites of one acre or more must be developed and certified by a Qualified SWPPP Developer. Structural BMPs shall be designed by a licensed California Engineer.</p> <p>L. Erosion and Sediment Control Plan Certification. Erosion and sediment control plans for construction sites of one acre or more shall be signed by the landowner or landowner's agent, certifying as follows:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>"I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false or inaccurate information, failing to update the erosion and sediment control plan to reflect current conditions, or failing to properly or adequately implement the erosion and sediment control plant may result in revocation of grading and other permits and other sanctions provided by law." (Ord. No. 2325, § 1(Exh. A), 4-7-15)</p> <p>Under Chapter 7554.3 (Applicability) the following projects fall under the Water Efficient Landscaping Ordinance:</p> <p>D. After December 1, 2015, and consistent with the Governor's Executive Order No. B-29-15, this Division shall apply to all of the following landscape projects:</p> <p>3. New construction projects with an aggregate landscape area equal to or greater than 500 square feet requiring a building or landscape permit, plan check, or design review;</p> <p>4. Rehabilitated landscapes projects with an aggregate landscape area equal to or greater than 2,500 square feet requiring a building or landscape permit, plan check, or design review;3. Existing landscapes that were installed before December 1, 2015, and are over one acre in size are limited to Section 7554.3.E.</p> <p>E. Any project with an aggregate landscape area of 2,500 square feet or less may comply with the performance requirements of this ordinance or conform to the prescriptive measures contained in the City's Water Efficient Landscaping Documentation Package and Guidelines.</p> <p>F. For projects using treated or untreated graywater or rainwater captured on site, any lot or parcel within the project that has less than 2,500 square feet of landscape and meets the lot or parcel's landscape water requirement (Estimated Total Water Use) entirely with treated or untreated graywater or through stored rainwater captured on site is only subject to the prescriptive measures compliance option in the City's Water Efficient Landscaping Documentation Package and Guidelines. (Ord. No. 2330, § 1, 11-3-15)</p> <p>Chapter 7554.5 (Irrigation Requirements) of the Water Efficient Landscaping Ordinance, projects must adhere to the following:</p> <p>B. Irrigation Design Plan—This section applies to landscaped areas requiring permanent irrigation, not areas that require temporary irrigation solely for the plant establishment period. For the efficient use of water, an irrigation system shall meet all the requirements listed in this section and the manufacturers' recommendations. The irrigation system and its related components shall be planned and designed to allow for proper installation, management, and maintenance. An irrigation design plan meeting the following design criteria shall be submitted as part of the Landscape Documentation Package.</p> <p>(Ord. No. 2330, § 1, 11-3-15)</p> <p>Chapter 7554.6 (Soil and Grading Requirements) of the Water Efficient Landscaping Ordinance, projects must provide the following reports:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>A. Soil Management Report—In order to reduce runoff and encourage healthy plant growth, a soil management report shall be completed by the project applicant, or his/her designee</p> <p>B. Grading Design Plan—For the efficient use of water, grading of a project site shall be designed to minimize soil erosion, runoff, and water waste. A grading plan shall be submitted as part of the Landscape Documentation Package. A comprehensive grading plan prepared by a civil engineer for other local agency permits satisfies this requirement. (Ord. No. 2330, § 1, 11-3-15)</p> <p>Chapter 7554.9 (Stormwater Management and Rainwater Retention) of the Water Efficient Landscaping Ordinance, projects must adhere to the following:</p> <p>D. Stormwater management combines practices to minimize runoff and increase infiltration which recharges groundwater and improves water quality. Implementing stormwater best management practices into the landscape and grading design plans to minimize runoff and to increase on-site rainwater retention and infiltration are encouraged.</p> <p>E. Project applicants shall refer to the City of Arcadia or Regional Water Quality Control Board for information on any applicable stormwater technical requirements.</p> <p>F. All planted landscape areas are required to have friable soil to maximize water retention and infiltration. Refer to Section 7554.4.A.3D. It is strongly recommended that landscape areas be designed for capture and infiltration capacity that is sufficient to prevent runoff from impervious surfaces (i.e. roof and paved areas) from either:</p> <p>The one inch, 24-hour rain event; or</p> <p>The 85th percentile, 24-hour rain event, and/or additional capacity as required by any applicable local, regional, state or federal regulation.</p> <p>(Ord. No. 2330, § 1, 11-3-15)</p> <p>Chapter 8 (Stormwater Management and Discharge Control) Section 7813. (Construction and Application) states the following:</p> <p>This Chapter shall be construed to assure consistency with the requirements of the Federal Clean Water Act and acts amendatory thereof or supplementary thereto, applicable implementing regulations, and existing or future NPDES Permit and any amendment, revision or reissuance thereof.</p> <p>(Ord. No. 2325, § 1(Exh. A), 4-7-15)</p> <p>Chapter 8 (Stormwater Management and Discharge Control) Section 7823. (Best Management Practices Authorized and Required) states the following:</p> <p>D. The following BMPs are required:</p> <p>(1) The occupant or tenant, or in the absence of occupant or tenant, the owner, lessee, or proprietor of any real property in the City in front of which there is a paved sidewalk shall maintain the sidewalk free of dirt or litter to the maximum extent practicable. Sweepings from the sidewalk shall not be swept or otherwise made or allowed to go into the gutter or roadway, but shall be disposed of in receptacles maintained on the real property as required for the disposal of garbage.</p> <p>(2) Standard for Parking Lots and Similar Structures. Persons owning or operating a paved parking lot or similar structure with twenty-five (25) or more parking spaces</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>shall clean those structures as frequently and thoroughly as practicable in a manner that does not result in discharge of pollutants to the storm drain system.</p> <p>(3) Each person who owns, manages, or operates any machinery or equipment which is to be repaired or maintained shall use Best Management Practices or shall place the machinery or equipment that is to be repaired or maintained in such a place that leaks, spills, and other maintenance-related pollutants are not discharged to the storm drain system.</p> <p>(4) All hazardous substances and hazardous materials shall be stored in such a manner as to prevent such substances or materials from coming into contact with stormwater or other runoff which discharges into the storm drain system. It is unlawful for any person to dispose of any hazardous waste in any trash container used for municipal trash disposal.</p> <p>(6) Standards for Private Drains and Catch Basins. Persons owning or operating drainage facilities that are directly connected to the public storm drain system shall clean those facilities between May 1st and September 30th of each year, and reclean those facilities, as needed, before their sumps are forty percent (40%) full of material. This requirement includes, but is not limited to, catch basins, culverts and parkway drains.</p> <p>(Ord. No. 2325, § 1(Exh. A), 4-7-15)</p> <p>Under Chapter 11 (Underground Utility Districts) Section 7991. (Responsibility of Property Owners) the following apply:</p> <p>(a) Every person owning, operating, leasing, occupying or renting a building or structure within a District shall construct and provide that portion of the service connection on his property between the facilities referred to in Section 8835 and the termination facility on or within said building or structure being served. If the above is not accomplished by any person within the time provided for in the resolution enacted pursuant to Section 8832, the City Engineer shall give notice in writing to the person in possession of such premises, and a notice in writing to the owner thereof as shown on the last equalized assessment roll, to provide the required underground facilities within 10 (10) days after receipt of such notice. (Part 3 added by Ord. 1375 adopted 3-5-68. Former Article VIII, Chapter 8, Part 3 was relocated to a new Article VII, Chapter 11, Part 1)</p>	
Azusa	<p>Chapter 3 The Built Environment:</p> <p><i>Electrical Power Supply and Transmission</i></p> <p>Goal 1: Provide an electrical supply system that is able to meet the projected electrical demands; upgrade and expand supply, transmission, and distribution facilities; and pursue funding sources to reduce the cost of electric provision for the city.</p> <p>Policy 1.1 Monitor the demands on the electrical system, manage development to mitigate impacts and/or facilitate improvements to the energy supply and distribution system, and maintain and expand energy supply and distribution facilities.</p> <p>Policy 1.2: Update the electric master plan to reflect anticipated growth and current capacity.</p> <p>Policy 1.3: Designate, preserve, and acquire land for electrical distribution facilities, as necessary.</p> <p><i>Land Use</i></p>	<p>Municipal codes related to utility and service systems relevant to the Plan Area can be found in Chapter 78 (Utilities) Section 78-84 (Overhead Facilities), Section 78-126 (Plumbing Connection Required), Division 7 (Landscape and Irrigation Standards) Section 78-532 (General Requirements), Section 78-533 (Special Requirements), Chapter 88.30 (Standards for All Development and Land Uses) Section 88.30.070 (Solid Waste/Recyclable Materials Storage), Section 88.30.070 (Underground Utilities), Chapter 60 (Stormwater and Urban Runoff Pollution Prevention) Section 60-9 (Stormwater and Runoff Pollution Mitigation for Construction Activity), Section 60-15 (Good Housekeeping Provisions), and Section 60-16 (Best Management Practice for Construction Activity), and Chapter 88.31 (Operational Standards) Section 88.31.030, Chapter 88.34 (Landscaping Standards) Section 88.34.060 (Landscape Standards).</p> <p>Under Chapter 78 (Utilities) Section 78-84 (Overhead Facilities) the following apply:</p> <p>(a) Unlawful use. Whenever the council creates an underground utility district and orders the removal of poles, overhead wires and associated overhead structures therein as provided in section 78-83, it is unlawful for any person or utility to erect,</p>	No other applicable plans, policies, or ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 9: Ensure that land use development is adequately served by supporting infrastructure and public services.</p> <p>Policy 9.1 Plan, implement, and monitor public infrastructure and service improvements necessary to support land uses accommodated by this General Plan.</p> <p>Policy 9.2 Require that type, amount, and location of development be correlated with the provision of adequate supporting infrastructure.</p> <p><i>Infrastructure</i></p> <p>Goal 1: Provide an electrical supply system that is able to meet the projected electrical demands; upgrade and expand supply, transmission, and distribution facilities; and pursue funding sources to reduce the cost of electric provision for the city.</p> <p>Policy 1.1: Monitor the demands on the electrical system, manage development to mitigate impacts and/or facilitate improvements to the energy supply and distribution system, and maintain and expand energy supply and distribution facilities.</p> <p>Policy 1.2: Update the electric master plan to reflect anticipated growth and current capacity.</p> <p>Policy 1.3: Designate, preserve, and acquire land for electrical distribution facilities, as necessary.</p> <p>Policy 1.7: Continue to underground all overhead electrical lines.</p> <p>Policy 1.8: Ensure the costs of improvements to the existing electrical supply and distribution facilities necessitated by new development to be borne by the new development benefiting from the improvements, either through the payment of fees, or the actual cost of construction, or both in accordance with State Nexus legislation.</p> <p>Goal 2: Provide a water supply system that is able to meet the projected water demands; upgrade and expand water treatment, supply, and distribution facilities; and pursue funding sources to reduce the cost of water provision for the city.</p> <p>Policy 2.5: Require all new development to connect to the sewer system.</p> <p>Policy 2.6: Minimize water consumption through site design, use of efficient systems, and other techniques.</p> <p>Policy 2.7: Continue the City’s water conservation efforts; review programs periodically and modify and/or expand them as appropriate and feasible.</p> <p>Policy 2.8: Continue to require the incorporation of water conservation features in the design of all new construction and site development.</p> <p>Policy 2.10: Require the use of reclaimed water for landscaped irrigation, grading, and other non-contact uses in new developments, where available or expected to be available.</p> <p>Policy 2.11: Ensure the costs of improvements to the existing water supply and distribution facilities necessitated by new development to be borne by the new development benefiting from the improvements, either through the payment of fees, or the actual cost of construction, or both in accordance with State Nexus legislation.</p> <p>Policy 2.12: Evaluate the water rate payer fees, development charges, and service acquisition charges to see if the fees and charges adequately meet the operation maintenance, renovation/upgrade, and new construction needs.</p> <p>Goal 3: Provide a wastewater (sewer) collection and treatment system that is able to support permitted land uses, upgrading existing deficient systems, and pursue funding sources to reduce costs of wastewater provision in the city.</p>	<p>construct, place, keep, maintain, continue, employ or operate poles, overhead wires and associated overhead structures in the district after the date when the overhead facilities are required to be removed by such resolution, except as the overhead facilities may be required to furnish service to an owner or occupant of property prior to the performance by such owner or occupant of the underground work necessary for such owner or occupant to continue to receive utility service as provided in section 78-87, and for such reasonable time required to remove the facilities after the work has been performed and except as otherwise provided in this article.</p> <p>(b) Types permitted. Notwithstanding this article, poles, overhead facilities and associated overhead structures may be installed and maintained in a district, with the approval of the city manager, in order to provide emergency or temporary service. Any resolution adopted pursuant to section 78-83 shall not, unless otherwise provided in such resolution, apply to any of the following types of facilities:</p> <p>(1) Any municipal facilities or equipment installed under the supervision and to the satisfaction of the city engineer.</p> <p>(2) Poles or electroliers used exclusively for street lighting.</p> <p>(3) Overhead wires, exclusive of supporting structures, crossing any portion of a district within which overhead wires have been prohibited or connecting to buildings on the perimeter of a district, when such wires originate in an area from which poles, overhead wires and associated overhead structures are not prohibited.</p> <p>(4) Overhead wires attached to the exterior surface of a building by means of a bracket or other fixture and extending from one location on the building to another location on the building or to an adjacent building without crossing any public street.</p> <p>(5) Antennas, associated equipment and supporting structures, used by a utility for furnishing communication services.</p> <p>(6) Equipment appurtenant to underground facilities, such as surface-mounted transformers, pedestal-mounted terminal boxes and meter cabinets and concealed ducts.</p> <p>(7) Temporary poles, overhead wires and associated overhead structures used or to be used in conjunction with construction projects.</p> <p>(Code 1971, §§ 13.04.040, 13.04.050; Ord. No. 98-09, § 2, 6-15-98)</p> <p>Under Section 78-126 (Plumbing Connection Required) the following apply:</p> <p>(a) All plumbing affecting the sanitary condition of any building or structure within the boundaries of any lot shall be connected with a public sewer. However, if such building or structure had been connected already to a cesspool or septic tank prior to the construction of a public sewer abutting the property on which such building or structure is located, it may be continued, but when such cesspool or septic tank is discontinued for use or is in an unsanitary condition, such building or structure shall be connected immediately with and drained into a public sewer. Provided, however, that if there is no public sewer in any street, alley or right-of-way abutting the lot upon which the structure is located and there is no public sewer to which it can be connected within 300 feet of the structure if the structure is:</p> <p>(2) Any other type of structure and the city engineer finds in writing that the expected effluent and soil conditions are such that adequate drainage would be accomplished and no pollution or harm would result, the structure may be connected to a cesspool</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 3.1: Ensure the City provides and maintains a sewer collection and treatment facilities system that adequately conveys and treats wastewater generated by existing and planned development at a maximized cost efficiency.</p> <p>Policy 3.3: Work with the County of Los Angeles to determine if the existing sewer collection systems are adequate to meet existing and anticipated future demand.</p> <p>Policy 3.5: Ensure the costs of improvements to the existing sewer collection and treatment facilities necessitated by new development to be borne by the new development benefiting from the improvements, either through the payment of fees, or the actual cost of construction, or both in accordance with State Nexus legislation.</p> <p>Policy 3.6 Evaluate the sewer connection fees and other charges to see if the fees and charges adequately meet the operation maintenance, renovation/ upgrade, and new construction needs.</p> <p>Policy 3.9 Continue to work with the County Sanitation District to ensure that use of Best Management Practices is used in the City.</p> <p>Goal 4: Provide a flood control system that is able to support the permitted land uses while preserving the public safety; upgrade existing deficient systems; and pursue funding sources to reduce the costs of flood control provision in the city.</p> <p>Policy 4.1: Maintain existing public storm drains and flood control facilities, upgrade and expand storm drain and flood control facilities.</p> <p>Policy 4.4: Monitor the demands and manage development to mitigate impacts and/or facilitate improvements to the storm drainage system.</p> <p>Policy 4.5: Designate, preserve, and acquire land, as necessary, for storm drainage and flood control facilities.</p> <p>Policy 4.7: Require improvements to the existing storm drain and flood control facilities necessitated by new development to be borne by the new development benefiting from the improvements, either through the payment of fees, or the actual cost of construction, or both in accordance with State Nexus legislation.</p> <p>Policy 4.8: Require new developments to employ the most efficient drainage technology to increase ground percolation, control drainage, and minimize damage to environmentally sensitive areas.</p> <p>Goal 5: Maintain solid waste collection and disposal services in accordance with the California integrated waste management act of 1989, pursue funding sources to reduce the cost of the collection and disposal services in the city.</p> <p>Policy 5.1: Maintain adequate solid waste collection for commercial, industrial, and residential developments in accordance with State law.</p> <p>Policy 5.2: Provide trash and recycling receptacles along City streets, in parks and along trails, and other pedestrian oriented areas.</p> <p>Goal 6: Maintain and expand service provision to city of Azusa residences and businesses.</p> <p>Policy 6.1: Continue to work with service providers to maintain current levels of service and improved levels of service. Revise and replace programs that do not achieve their intended purpose.</p> <p>Policy 6.2: Review requests for new utility facilities, relocations, or expansions to existing facilities.</p>	<p>or septic tank for such length of time and subject to such conditions as the city engineer may impose for the protection of the public health, safety and welfare. (Code 1971, § 16.04.130)</p> <p>Under Division 7 (Landscape and Irrigation Standards) Section 78-532 (General Requirements) the following apply:</p> <p>(a) These standards described herein are intended to be minimum requirements of development. Property enhancements beyond these standards are encouraged as they will further the goal of a more beautiful overall environment in which to live and work. Certain conditions outlined herein may be waived or changed upon formal request and accepted by the superintendent of public works, or designee, but in no case will any condition be modified in a manner which will adversely affect the intent of these standards.</p> <p>(b) Prior to any work at the project side, landscape and irrigation plans must be approved and signed by the superintendent of public works. These drawings shall contain all planting and irrigation work to be constructed as a part of the development. If the plans meet or exceed the requirements, they will be approved by the superintendent of public works, or designee. If corrections to the plans are required, the deficiencies will be noted and the plans will have to be corrected by the developed and resubmitted. Compliance with the letter and intent of these standards is the superintendent's responsibility during construction and the property owner's responsibility for the life of the project. The superintendent of public works, or designee has the responsibility to interpret and enforce these standards.</p> <p>(Ord. No. 93-03, § 2(16.40.020), 3-15-93)</p> <p>Under Section 78-533 (Special Requirements) the following apply:</p> <p>Areas of projects which will be dedicated to the city such as median islands, maintenance districts, parks, etc., shall be clearly delineated on the plans. Special requirements in addition to these standards may be required for those areas. Any special requirements will be noted after initial submittal of plans. Any questions regarding projects with special requirements shall be directed to the community development department. (Ord. No. 93-03, § 2(16.40.030), 3-15-93)</p> <p>Under Chapter 88.30 (Standards for All Development and Land Uses) Section 88.30.070 (Solid Waste/Recyclable Materials Storage) the following apply:</p> <p>B. Applicability. These requirements apply to new multi-family residential and nonresidential development, or changes to existing multi-family residential or nonresidential development that increase gross floor area by 25 percent or more.</p> <p>C. Extent of Storage Area Required. Solid waste and recyclables storage areas shall be provided in the number, dimensions, and types required by the department or review authority. Additional storage areas may be required, as deemed necessary by the director.</p> <p>D. Enclosure Requirements. Storage areas shall be fully enclosed by a six-foot solid enclosure that is architecturally compatible with adjacent structures.</p> <ol style="list-style-type: none">1. The dimensions and materials of the enclosure shall comply with standards provided by the department.2. Gates shall be solid and continuously maintained in working order.3. A concrete apron shall be provided within the enclosure.	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>4. Landscaping shall be provided to soften and screen the enclosure in compliance with Chapter 88.34 (Landscaping Standards). See Figure 3-4.</p> <p>Under Section 88.30.070 (Underground Utilities) the following applies: All electric, telephone and other telecommunications facilities, street lighting wiring, cable television and other wiring conduits, shall be placed underground by the developer. This requirement shall not apply in the case of an addition to an existing structure that increases the existing floor area by less than 50 percent.</p> <p>Under Chapter 60 (Stormwater and Urban Runoff Pollution Prevention) Section 60-9 (Stormwater and Runoff Pollution Mitigation for Construction Activity) the following apply: No person shall commence any construction activity for which a permit is required by this Code without implementing all stormwater and runoff pollution mitigation measures required by such permit. (Ord. No. 04-02, § 2, 2-2-04)</p> <p>Under Section 60-15 (Good Housekeeping Provisions) the following apply: An owner or occupant of any property shall comply with the following good housekeeping requirements: No person shall leave, deposit, discharge, dump, or otherwise expose any pollutant in an area where actual or potential discharge to the city streets or the storm drain system may occur. Any spills, discharge, or residues shall be removed as soon as possible and disposed of properly.</p> <p>(1) Runoff from landscape irrigation, air conditioning condensate, water line flushing, foundation/footing drains, individual residential car washing, dechlorinated swimming pool discharges and sidewalk washing shall be conducted in a manner not in violation of other provisions of this Code.</p> <p>(2) Runoff from washing paved areas, including but not limited to parking lots, on industrial or commercial property is prohibited unless specifically required by federal, state, or local health or safety codes and not in violation of any other provision of this Code. Runoff from authorized washing of paved areas shall be minimized to the extent practicable.</p> <p>(3) Objects, such as motor vehicle parts, containing grease, oil, or other hazardous materials, and unsealed receptacles containing hazardous materials, shall not be stored in areas exposed to stormwater or otherwise susceptible to runoff.</p> <p>(4) Any machinery or equipment which is to be repaired or maintained in areas exposed to stormwater or otherwise susceptible to runoff shall be provided with containment areas to control leaks, spills, or discharges.</p> <p>(5) All motor vehicle parking lots with more than 25 parking spaces and located in areas exposed to stormwater or otherwise susceptible to runoff shall have debris removed by regular sweeping or other equally effective measures. Such debris shall be collected and properly disposed of. (Ord. No. 04-02, § 2, 2-2-04)</p> <p>Under Section 60-16 (Best Management Practice for Construction Activity) the following apply: All BMPs required as a condition of any permit for construction activity granted pursuant to this Code shall be maintained in full force and effect during the term of the project, unless otherwise authorized by the city. (Ord. No. 04-02, § 2, 2-2-04)</p> <p>Under Chapter 88.31 (Operational Standards) Section 88.31.030 the following apply:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>Outdoor lighting on private property shall comply with the following requirements.</p> <p>B. Outdoor lighting shall utilize energy-efficient fixtures and lamps; examples include high pressure sodium, hardwired compact fluorescent, or other lighting technology that is of equal or greater energy efficiency.</p> <p>Under Chapter 88.34 (Landscaping Standards) Section 88.34.060 (Landscape Standards) the following applies:</p> <p>A. Landscape Design. The required landscape plan shall be designed to integrate all elements of the project (e.g., buildings, parking lots, and streets) to achieve their aesthetic objectives, desirable microclimates, and minimize water and energy demand. (Ord. No. 10-O1, §§ 8, 9, 3-1-10)</p>	
Baldwin Park	<p>Health and Sustainability Element:</p> <p>Goal HS-4. Increase the efficiency and sustainability of public and private infrastructure in Baldwin Park.</p> <p>Policy 4.01: Reduce the amount of impermeable surfaces citywide.</p> <p>Policy 4.02: Incorporate Low Impact Development (LID) techniques in the design and upgrade of public infrastructure.</p> <p>Action HS-4.1: Develop a city-wide approach to stormwater management that takes advantage of excellent local soil infiltration environment, including bottomless catch basins; porous concrete gutters; pervious pavers at intersections, crosswalks, and in park hardscapes; linear bioinfiltration strips in parkways and building setbacks; and rain gardens with dry wells.</p> <p>Action HS-4.4: Continue to require all new development projects that exceed \$25,000 to install Low Impact Development technologies to treat, capture, and infiltrate stormwater and urban runoff on site, where it lands.</p> <p>Action HS-4.5: Require the use of permeable paving for parking lots, streets, driveways, pathways, etc.</p> <p>Action HS-4.7: Work to mitigate irrigation practices that result in overspray and collection of runoff in gutters.</p> <p>Action HS-4.9: Require all new developments to utilize Low Impact Development strategies, including rain gardens, bioswales, stormwater filters and screens for storm drains, in-ground infiltration using dry wells and infiltration trenches, and water recycling facilities, with the goal of retaining and treating all stormwater on site.</p> <p>Goal HS-8. Achieve a high level of water conservation, and continue to improve the quality of local groundwater.</p> <p>Policy 8.01: Promote drought-tolerant landscaping and water conservation technologies and techniques.</p> <p>Policy 8.02: Protect and restore above and below ground water bodies from the negative impacts of stormwater pollution. (See also Modern and Green Infrastructure.)</p> <p>Policy 8.03: Reduce the amount of impervious surfaces in the City through selection of materials, site planning, and street design.</p> <p>Action HS-8.1: Develop a native and drought-tolerant planting palette for use by local developers, with a focus on the physical and climatic context and corresponding maintenance needs.</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Section 153.160 (Water-Efficient Landscaping Standards) Subsection 153.160.020 (Applicability), Subsection 153.160.200 (Stormwater Management and Rainwater Retention), and Chapter 52 (Storm Water and Urban Runoff Pollution Prevention) Section 52.11 (control of Pollutants from State Permitted Construction Activities), Section 52.12 (Control of Pollutants from Other Construction Activities), Section 52.13 (Control of Pollutants from New Developments/Redevelopment Projects), and Chapter 97 (Streets, Sidewalks and Public Places) Section 97.061 (Circumstances Requiring Undergrounding), and Section 97.062 (Exemption).</p> <p>Under Section 153.160 (Water-Efficient Landscaping Standards) Subsection 153.160.020 (Applicability) the following projects must adhere to water-efficient landscaping standards:</p> <p>(A) Landscape projects. After December 1, 2015 and consistent with Executive Order No. B-29-15, the provisions of this subchapter shall apply to all of the following landscape projects:</p> <p>(1) New development projects with an aggregate landscape area equal to or greater than 500 square feet requiring a building or landscape permit, plan check, or design review.</p> <p>(2) Rehabilitated landscape projects with an aggregate landscape area equal to or greater than 2,500 square feet requiring a building or landscape permit, plan check or design review.</p> <p>(B) The reporting requirements of this subchapter shall become effective December 1, 2015 and the remainder of this subchapter shall be effective no later than February 1, 2016.</p> <p>(C) Any project with an aggregate landscape area of 2,500 square feet or less may comply with the performance requirements of this subchapter or conform to the prescriptive measures contained in § 153.160.225.</p> <p>(D) For projects using treated or untreated graywater or rainwater captured on site, any lot or parcel within the project that has less than 2,500 square feet of landscape and meets the lot or parcel's landscape water requirement (estimated total water use) entirely with treated or untreated graywater or through stored rainwater captured on site is subject only to § 153.160.220(A)(5) of the city's Municipal Code. (Ord. 1346, passed 5-2-12; Am. Ord. 1379, passed 11-4-15)</p>	No other applicable plans, policies, or ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Action HS-8.2: Install drought-tolerant landscaping and water-conserving irrigation systems at City facilities, medians, and parkway strips to reduce water use and maintenance costs.</p> <p>Action HS-8.3: Require that all newly installed private landscaping covering more than 1,000 square feet install drought-tolerant landscaping and water conserving irrigation systems.</p> <p>Action HS-8.5: Encourage the use of high-efficiency irrigation technology, and allow recycled site water to be used for irrigation.</p> <p>Action HS-8.6: Explore opportunities for more actions using treated or raw well water for park irrigation.</p> <p>Action HS-8.7: Consider adopting an ordinance that requires the installation of water efficient fixtures upon the sale of a property.</p> <p>Action HS-8.8: Increase awareness and involve the public in addressing water runoff problems associated with daily activities.</p> <p>Action HS-8.9: Work with new development projects to increase on-site water infiltration and storage, and to preserve, restore, or incorporate natural drainage systems into the site design for the project.</p> <p>Action HS-8.10: Require contractors to comply with approved stormwater pollution prevention planning practices for all projects.</p> <p>Action HS-8.11: Conduct routine inspections of construction sites to check for proper erosion control methods during construction activities.</p> <p>Action HS-8.12: Consider revising the Water Conservation Ordinance to allow the use of artificial turf for landscaping purposes.</p> <p>Open Space and Conservation Element:</p> <p>Goal 5.0: Conserve and protect groundwater supply and water resources.</p> <p>Policy 5.1: Encourage water conservation through education, use of drought tolerant landscapes, and water-conserving technology.</p> <p>Policy 5.2: Promote the use of native plant material in landscapes and drought tolerant trees, especially in landscapes on City properties.</p> <p>Policy 5.3: Encourage use and production of reclaimed water.</p> <p>Policy 5.4: Continue enforcement of municipal National Pollutant Discharge Elimination System (NPDES) Permit to protect water quality within the San Gabriel River watershed.</p> <p>Policy 5.5: Cooperate with the EPA in efforts to remedy groundwater contamination and implement cleanup practices for the Baldwin Park Superfund site.</p> <p>Policy 5.6: Vigorously prosecute unlicensed dumping of toxic or hazardous materials into the ground or water in Baldwin Park. Encourage citizens to report dumping when they observe it.</p> <p>Goal 7: Reduce the amount of solid waste produced in Baldwin Park.</p> <p>Policy 7.1: Implement goals and policies contained in the City’s Household Hazardous Waste and Source Reduction and Recycling Elements as mandated by state law AB939, as amended.</p> <p>Policy 7.4: Encourage participation in local and County waste disposal programs for such household hazardous waste items as automotive products, paints, chemicals, tires and batteries.</p>	<p>Under Section 153.160 (Water-Efficient Landscaping Standards) Subsection 153.160.200 (Stormwater Management and Rainwater Retention) projects defined above must adhere to the following:</p> <p>A) Stormwater best management practices. Stormwater management practices minimize runoff and increase infiltration which recharges groundwater and improves water quality. Implementing stormwater best management practices into the landscape and grading design plans to minimize runoff and to increase on-site rainwater retention and infiltration are encouraged.</p> <p>(B) Regional Water Quality Control Board. Project applicants shall refer to the Regional Water Quality Control Board for information on any applicable stormwater technical requirements.</p> <p>(C) Friable soil. All planted landscape areas are required to have friable soil to maximize water retention and infiltration. (Ord. 1346, passed 5-2-12; Am. Ord. 1379, passed 11-4-15)</p> <p>Chapter 52 (Storm Water and Urban Runoff Pollution Prevention) Section 52.11 (control of Pollutants from State Permitted Construction Activities) states the following:</p> <p>(A) No person shall be granted a grading permit by the city or shall commence or continue any construction activity within the city that is subject to an General Construction Activity Storm Water NPDES Permit without showing proof of having applied for such permit.</p> <p>(B) Any person engaged in a construction activity requiring an NPDES General Construction Activity Storm Water NPDES Permit construction permit shall retain at the construction site the following documents: (i) a copy of the Notice of Intent to Comply with Terms of the General Permit to Discharge Water Associated with Construction Activity; (ii) a waste discharge identification number issued by the SWRCB; (iii) a Storm Water Pollution Prevention Plan and Monitoring Program Plan for the construction activity requiring the construction permit; and (iv) records of all inspections, compliance and non-compliance reports, evidence of self-inspection and good housekeeping practices.</p> <p>(C) Any person engaged in a construction activity in the city requiring an NPDES General Construction Storm Water Activity permit shall, upon reasonable request from a duly authorized officer of the city, provide any of the documents specified in division (B) and shall retain said documents for at least three years after completion of construction. (Ord. 1193, passed 8-21-02)</p> <p>Chapter 52 (Storm Water and Urban Runoff Pollution Prevention) Section 52.12 (Control of Pollutants from Other Construction Activities) states the following:</p> <p>Any person engaged in a construction activity that is not subject to the General Construction Storm Water Activity NPDES Permit but is subject to the municipal NPDES Permit, shall be required to comply with requirements contained therein as specified in the city's Storm Water Quality Management Program, including any revisions made thereto. (Ord. 1193, passed 8-21-02)</p> <p>Under Chapter 52 (Storm Water and Urban Runoff Pollution Prevention) Section 52.13 (Control of Pollutants from New Developments/Redevelopment Projects) the following projects must adhere to Chapter 52:</p> <p>(D) Stormwater pollution control measures for development planning and construction activities.</p>

	<p>Health and Sustainability Element:</p> <p>Action HS-7.1: Implement an Energy Efficient City Plan that evaluates and prioritizes best practices for increasing the energy efficiency of City operations.</p> <p>Action HS-7.2: Perform energy audits of existing City operations and maintenance practices on a regular basis to identify and implement energy savings measures.</p> <p>Action HS-7.3: Continue to replace City operating systems as needed with energy efficient alternatives.</p> <p>Action HS-7.4: Continue to explore opportunities to generate energy on City properties, including installation of solar panels.</p> <p>Action HS-7.6: Adopt the Energy Action Plan prepared in conjunction with the San Gabriel Valley Council of Governments. Implement identified actions and strive to meet performance targets identified in the Energy Action Plan.</p> <p>Goal HS-19. Demonstrate Baldwin Park’s commitment to sustainability through progressive use of green building policies, practices, and technologies.</p> <p>Action HS-19.1: When new municipal facilities are constructed, endeavor to achieve building efficiency that would meet Leadership in Energy and Environmental Design (LEED)’s Silver certification level, or an equivalent.</p> <p>Open Space and Conservation Element:</p> <p>Goal 6.0: Conserve energy resources through the use of technology and conservation methods.</p> <p>Policy 6.1: Encourage innovative building designs that conserve and minimize energy consumption.</p> <p>Policy 6.2: Enforce Title 24 regulations to conserve energy.</p> <p>Solid Waste Management</p> <p>Goal 7: Reduce the amount of solid waste produced in Baldwin Park.</p> <p>Policy 7.1: Implement goals and policies contained in the City’s Household Hazardous Waste and Source Reduction and Recycling Elements as mandated by state law AB939, as amended.</p> <p>Policy 7.2: Maximize public awareness of all source reduction and recycling programs.</p> <p>Policy 7.3: Encourage composting of organic materials and recycling in general as an alternative to waste disposal.</p> <p>Policy 7.4: Encourage participation in local and County waste disposal programs for such household hazardous waste items as automotive products, paints, chemicals, tires and batteries.</p>	<p>(3) Applicability. The following development and redevelopment projects, termed “planning priority projects,” shall comply with the requirements of this chapter:</p> <p>(a) All development projects equal to 1 acre or greater of disturbed area that adds more than 10,000 square feet of impervious surface area.</p> <p>(i) Projects located in or directly adjacent to, or discharging directly to an environmentally sensitive area (ESA), where the development will:</p> <p>1. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>2. Create 2,500 square feet or more of impervious surface area.</p> <p>(k) Redevelopment projects.</p> <p>1. Land disturbing activity that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site on planning priority project categories.</p> <p>2. Where redevelopment results in an alteration to more than 50% of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, the entire project must be mitigated.</p> <p>3. Where redevelopment results in an alteration of less than 50% of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, only the alteration must be mitigated, and not the entire development.</p> <p>4. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.</p> <p>(5) Stormwater pollution control requirements. The site for every planning priority project shall be designed to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use.</p> <p>(c) The remainder of planning priority projects shall prepare a Low Impact Development plan to comply with the following:</p> <p>1. Retain stormwater runoff onsite for the stormwater quality design volume (SWQDv) defined as the runoff from:</p> <p>a. The 85th percentile 24-hour runoff event as determined from the Los Angeles County 85th percentile precipitation isohyetal map; or</p> <p>b. The volume of runoff produced from a 0.75 inch, 24-hour rain event, whichever is greater.</p> <p>2. When, as determined by the City Engineer, 100% onsite retention of the SWQDv is technically infeasible, partially or fully, the infeasibility shall be demonstrated in the submitted Low Impact Development plan.</p> <p>5. A multi-phased project may comply with the standards and requirements of this section for all of its phases by: (a) designing a system acceptable to the</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>Department of Public Works to satisfy these standards and requirements for the entire site during the first phase, and (b) implementing these standards and requirements for each phase of development or redevelopment of the site during the first phase or prior to commencement of construction of a later phase, to the extent necessary to treat the stormwater from such later phase. For purposes of this section, MULTI-PHASED PROJECT shall mean any planning priority project implemented over more than one phase and the site of a multi-phased project shall include any land and water area designed and used to store, treat or manage stormwater runoff in connection with the development or redevelopment, including any tracts, lots, or parcels of real property, whether developed or not, associated with, functionally connected to, or under common ownership or control with such development or redevelopment. (Ord. 1193, passed 8-21-02; Am. Ord. 1363, passed 2-19-14)</p> <p>Under Chapter 97 (Streets, Sidewalks and Public Places) Section 97.061 (Circumstances Requiring Undergrounding) the following apply:</p> <p>Notwithstanding any other provision of this code, the undergrounding of utility facilities shall be required in all of the following circumstances, except as expressly provided in this section:</p> <p>(C) Other. All utilities to serve any other property upon which it is proposed to construct or reconstruct any building or structure, or combination thereof, for which one or more building permits is required, where the estimated cost of the construction is \$3,000 or more.</p> <p>(E) Responsibility for compliance. The owner and/or person who occupies any property to which this subchapter applies shall be responsible for compliance therewith, including but not limited to obtaining the installation of required facilities by the appropriate utility company or companies. ('83 Code, § 12.36.020) (Ord. 820, passed - -81; Am. Ord. 837, passed - -82)</p> <p>Under Section 97.062 (Exemption) the following apply:</p> <p>The Director shall grant an exemption from the provisions of this subchapter if he finds all of the following facts present:</p> <p>(A) All adjacent properties are served by overhead utility facilities;</p> <p>(B) The compliance with the provisions of this section constitute an undue financial hardship which renders the proposed development economically unfeasible; and</p> <p>(C) The owner of the property involved agrees, in written form as approved by the City Attorney, to join and participate in an undergrounding utility district should one be initiated pursuant to applicable law, within 10 years after the date upon which a building permit for such buildings or structures is issued, without protest as to the formation of such district. The agreement shall be recorded and shall bind, for the period of time, all assignees and successors in interest to the then owner of the property. ('83 Code, § 12.36.030) (Ord. 820, passed - -81; Am. Ord. 837, passed - -82)</p>	
Claremont	<p>Human Services, Recreational Programs, and Community Facilities Element:</p> <p>Goal 7-13: Promote affordable and quality water service capable of adequately meeting normal and emergency water demands to all areas in the City.</p> <p>Policy 7-13.1: Study alternatives for maintaining affordable water rates.</p> <p>Policy 7-13.2: Advocate regular evaluation of the entire water supply and distribution system to ensure its continued adequacy, reliability, and safety.</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Chapter 16.131 (Water Efficient Landscape Requirements), Section 16.131.030 (Implementation Procedures), Section 16.131.040 (Landscape Water Use Standards), and Chapter 8.30 (Water Conservation) Section 8.30.030 (Application), and Section 8.30.040 (Permanent Water Conservation Requirements), and Chapter 8.28 (Stormwater and Runoff Pollution Control) Section 8.28.032 (Best Management Practices Required), Chapter 8.30 (Water Conservation) Section 8.30.030 (Application),</p>	<p>No other applicable plans, policies, or ordinances were identified.</p>

New and Rehabilitated Landscapes</p> <p>For landscape installation or rehabilitation projects subject to the applicability requirements of Section 16.131.020.A, the estimated applied water use allowed for the landscaped area shall not exceed the maximum applied water allowance (MAWA) calculated using an evapotranspiration adjustment factor (ETAF) of 0.7, except for special landscaped areas where the MAWA is calculated using an ETAF of 1.0; or the design of the landscaped area shall otherwise be shown to be</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>equivalently water-efficient in a manner acceptable to the City; as provided in the guidelines.</p> <p>D. Existing Landscapes</p> <p>Irrigation of all landscaped areas shall be conducted in a manner conforming to the rules and requirements, and shall be subject to penalties and incentives for water conservation and water waste prevention as determined and implemented by the local water purveyor or as mutually agreed by local water purveyor and the City. (10-02)</p> <p>Under Chapter 8.30 (Water Conservation) Section 8.30.030 (Application) the following applies to water conservation in the City:</p> <p>A. The provisions of this chapter apply to any person in the use of any potable water in the City.</p> <p>C. The provisions of this chapter do not apply to the use of recycled water, with the exception of Section 8.30.040(A).</p> <p>E. This chapter is intended solely to further the conservation of water. It is not intended to implement any provision of federal, state, or local statutes, ordinances, or regulations relating to protection of water quality or control of drainage or runoff.</p> <p>F. Where any provision of the Claremont Municipal Code is in conflict with this chapter, the provision of this chapter shall take precedence. (09-10)</p> <p>Under Section 8.30.040 (Permanent Water Conservation Requirements) the following water conservation requirements are effective at all times:</p> <p>A. Limits on water hours. Outdoor watering or irrigating of lawn, landscape or any other vegetated area with potable water is prohibited between the hours of 9:00 a.m. and 5:00 p.m. Pacific Standard Time (PST) on any day, except by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting ore repairing an irrigation system. This subsection does not apply to landscape irrigation systems that exclusively use very low-flow drip type irrigation systems when no emitter produces more than two (2) gallons of water per hour.</p> <p>B. Limit on watering duration. Watering or irrigating of lawn, landscape or other vegetated area with potable water using a landscape irrigation system or a watering device that is not continuously attended is limited to no more than fifteen (15) minutes watering per day per station. This subsection does not apply to landscape irrigation systems that exclusively use very low-flow drip type irrigation systems when no emitter produces more than two (2) gallons of water per hour and weather based controllers or stream rotor sprinklers that meet a 70% efficiency standard.</p> <p>C. No excessive water flow or runoff. Watering or irrigating of any lawn, landscape or other vegetated area in a manner that causes or allows excessive water flow or runoff onto an adjoining sidewalk, driveway, street, alley, gutter or ditch is prohibited.</p> <p>D. No washing down hard or paved surfaces. Washing down hard or paved surfaces, including but not limited to sidewalks, walkways, driveways, parking areas, tennis courts, patios or alleys is prohibited, except when necessary to alleviate safety or sanitary hazards, and then only by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off device, a low-volume, high-pressure cleaning machine equipped to recycle any water used, or a low-volume high-pressure water broom.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>E. Obligation to fix leaks, breaks or malfunctions. Excessive use, loss or escape of water through breaks, leaks or other malfunctions in the water user’s plumbing or distribution system for any period of time after such escape of water should have reasonably been discovered and corrected and in no event more than five (5) business days of the property owner receiving notice from the local retail water agency or the City of Claremont, is prohibited.</p> <p>F. Re-circulating water required for water fountains and decorative water features. Operating a water fountain or other decorative water feature that does not use re-circulated water is prohibited.</p> <p>G. Limits on washing vehicles. Using water to wash or clean a vehicle, including but not limited to any automobile, truck, van, bus, motorcycle, boat or trailer, whether motorized or not is prohibited, except by use of a hand-held bucket or similar container or a hand-held hose equipped with a positive self-closing water shut-off nozzle or device. This subsection does not apply to any commercial car washing facility.</p> <p>Under Chapter 8.28 (Stormwater and Runoff Pollution Control) Section 8.28.032 (Best Management Practices Required) the following stormwater and runoff best management practices must be adhered to:</p> <p>F. The following BMPs are required of every owner or occupant of any property:</p> <ol style="list-style-type: none">1. No person shall leave, deposit, discharge, dump, or otherwise expose any chemical, fuel, animal waste, garbage, batteries and/or septic waste in an area where actual or potential discharge to the City streets or the storm drain system may occur. Any spills, discharge, or residues shall be removed as soon as possible and disposed of properly.2. Runoff from landscape irrigation, air conditioning condensate, water-line flushing, foundation/footing drains, individual residential car washing, dechlorinated/debrominated swimming pool/spa discharges and sidewalk washing shall be conducted in a manner which minimizes or eliminates the possibility of pollutant discharges reaching the City storm drain system or receiving waters.3. Runoff from washing paved areas, including, but not limited to, parking lots, on industrial or commercial property is prohibited unless specifically required by federal, state, or local health or safety codes and not in violation of any other provision of this Code. Runoff from authorized washing of paved areas shall be minimized to the extent practicable.4. Objects, such as motor vehicle parts containing grease, oil, or other hazardous materials, and unsealed receptacles containing hazardous materials, shall not be stored in area exposed to stormwater or otherwise susceptible to runoff.5. Any machinery or equipment which is to be repaired or maintained in areas exposed to stormwater or otherwise susceptible to runoff shall be provided with containment areas to control leaks, spills, or discharges.6. All motor vehicle parking lots with more than 25 parking spaces and located in areas exposed to stormwater or otherwise susceptible to runoff shall have debris removed by regular sweeping or other equally effective measures. Such debris shall be collected and properly disposed of.7. Motor vehicle parking lots with a gravel/sediment base to implement BMPs to prevent the discharge of gravel and sediment to the MS4. (22-01; 14-05) <p>Under Section 8.28.040 (Control of Runoff Required – Construction Activity) the following best management practices must be adhered to:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>F. The following minimum set of BMPs shall apply to all construction sites:</p> <ol style="list-style-type: none">1. Site management – housekeeping;2. Erosion controls – scheduling and preservation of existing vegetation;3. Sediment controls – perimeter controls and stabilized construction site entrance/exit;4. Non-stormwater management – water conservation practices and dewatering operations;5. Waste management – material delivery and storage; stockpile management; solid waste management; concrete waste management; and sanitary/septic waste management. <p>G. The following minimum BMPs are required for both private or public roadway paving or repair operations:</p> <ol style="list-style-type: none">1. Restrict paving and repaving activities to exclude periods of rainfall or predicted rainfall unless required by emergency conditions.2. Install gravel bags and filter fabric or other equivalent inlet protection at all susceptible storm drain inlets and at manholes to prevent spills of paving products and tack coat.3. Prevent the discharge of release of agents including soybean oil, other oils, or diesel to the asphalt.4. Minimize non-stormwater runoff from water use for roller equipment and for evaporative cooling of the asphalt.5. Clean equipment over absorbent pads, drip pans, plastic sheeting or other materials to capture all spillage and dispose properly.6. Collect liquid waste in a container, with a secure lid, for transport to a maintenance facility to be reused, recycled, or disposed of properly.7. Collect solid waste by vacuuming or sweeping and securing in an appropriate container for transport to a maintenance facility to be reused, recycled, or disposed of properly.8. Cover “cold-mix” asphalt with protective sheeting during a rainstorm.9. Cover loads with tarp before haul-off to a storage site, and do not overload trucks.10. Minimize airborne dust by using water spray or other approved dust suppressant during grinding.11. Avoid stockpiling soil, sand, sediment, asphalt material and asphalt grindings materials or rubble in or near stormwater drainage systems or receiving waters.12. Protect stockpiles with a cover or sediment barriers during rain. (22-01; 14-05) <p>Under Section 8.28.041 (Control of Runoff Required – New Development and Redevelopment) the following applies:</p> <p>E. Prior to construction of a development equal to or greater than 300 square feet, new development/redevelopment project (as defined in this chapter) such project shall be evaluated by the City for its potential to discharge pollutants to the storm drain system or to receiving waters based on its intended land use. Such evaluation shall be conducted in accordance with development planning requirements established by the Regional Board or its Executive Officer, pursuant</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>to the municipal NPDES permit. No discretionary permit may be issued for any construction or development project until the Director finds that the project plans comply with the Low Impact Development/ Standard Urban Stormwater Mitigation Plan requirements set forth in the permit and in this chapter.</p> <p>F. Once a project has been evaluated for its potential to discharge pollutants to the storm drain system or receiving waters, the City shall require appropriate BMPs to be implemented during construction and following project completion. The prescription of BMPs shall be in keeping with the Low Impact Development design standards pursuant to the municipal NPDES permit and this chapter. (22-01; 14-05)</p> <p>Under Section 8.28.050 (Stormwater Pollution Control Measures for Development Planning and Construction Activities) the following applies:</p> <p>G. The following development and redevelopment projects, termed “planning priority projects,” shall comply with the requirements of this section:</p> <ol style="list-style-type: none">1. New development projects that are in any of the following categories:<ol style="list-style-type: none">a. Projects equal to one acre or greater of disturbed area and adding more than 10,000 square feet or more of impervious surface area (collectively over the entire project site).2. Redevelopment projects that create and/or replace 5,000 square feet or more of impervious surfaces (collectively over the entire project site) on any of the following:<ol style="list-style-type: none">a. Existing sites of 10,000 square feet or more of impervious surface area.b. Industrial parks 10,000 square feet or more of impervious surface area.c. Commercial malls 10,000 square feet or more of impervious surface area.4. New development and redevelopment projects that create and/or replace 2,500 square feet or more of impervious area; discharge stormwater that is likely to impact a sensitive biological species or habitat; and are located in or directly adjacent to or are discharging to an ASBS, Sensitive Ecological Area in Los Angeles County.5. Street and road construction of 10,000 square feet or more of impervious surface area, in addition to complying with the requirements of this section, shall also follow the City’s Green Streets Policy (available on the City’s website). Street and road construction applies to standalone streets, roads, highways, and freeway projects. Temporary access roads are not subject to this requirement.<p>Appedix A The following construction projects are subject to the stormwater runoff mitigation requirements in this chapter:</p><ol style="list-style-type: none">1. The project will be built on a currently vacant and/or undeveloped parcel.2. Projects that add and/or replace 50 percent of any impervious surface area with a total square footage of 300 square or greater.3. Projects that will create a new detached structure that is 300 square feet in floor area or greater.4. The project is located in or within 200 feet of an environmentally sensitive area.<p>F. The following considerations are applicable to redevelopment projects:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<div>1. Where redevelopment results in an alteration of more than 50 percent of impervious surfaces of a previously existing development the entire project must be mitigated.</div> <div>2. Where redevelopment results in an alteration of less than 50 percent of impervious surfaces of a previously existing development, only the alteration must be mitigated, and not the entire development.</div> <div>3. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.</div> <div>G. Stormwater Pollution Control Requirements. Every applicable project shall be designed to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use.</div> <div>1. Projects that add and/or replace 300 square feet or more impervious surface shall complete the City of Claremont’s low impact development worksheet (available on the City’s website) and retain the 85th percentile 24-hour runoff event volume (as calculated on the worksheet).</div> <div>4. Street and road construction of 10,000 square feet or more of impervious surface shall be in accordance with the City of Claremont’s green street policy and the USEPA guidance regarding Managing Wet Weather with Green Infrastructure: Green Streets (December 2008 EPA-833-F-08-009) to the maximum extent practicable.</div> <div>5. The remainder of planning priority projects shall prepare a Low Impact Development Plan to comply with the following:<div>a. Retain and infiltrate stormwater runoff on site for the Stormwater Quality Design Volume (SWQDv) defined as the runoff from the 85th percentile 24-hour runoff event; or bioretention and/or rainfall harvest and use of the SWQDv. If partial or complete on-site retention is technically infeasible, the project site may biofiltrate 1.5 times the portion of the remaining SWQDv that is not reliably retained on site. biofiltration BMPs must adhere to the design specifications provided in the Los Angeles County Low Impact Development Manual.</div><div>b. Additional alternative compliance options such as off-site infiltration may be available to the project site. The project site should contact the City of Claremont to determine eligibility.</div></div> <div>6. The remaining SWQDv that cannot be retained or biofiltered on site must be treated on site to reduce pollutant loading. BMPs must be selected and designed to meet pollutant-specific benchmarks as required per the municipal NPDES permit. Flow-through BMPs may be used to treat the remaining SWQDv and must be sized based on a rainfall intensity:<div>a. 0.2 inches per hour for each hour of a storm event; or</div></div>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>b. The maximum flow rate of runoff produced by the 85th percentile hourly rainfall intensity for each hour of the storm event, as determined by historical rainfall records, multiplied by a factor of two.</p> <p>ii. A multi-phased project shall comply with the standards and requirements of this section for all of its phases by: (1) designing a system acceptable to the City of Claremont to satisfy these standards and requirements for the entire Site during the first phase; and (2) implementing these standards and requirements for each phase of development or redevelopment of the site during the first phase or prior to commencement of construction of a later phase, to the extent necessary to treat the stormwater from such later phase. For purposes of this section, “multi-phased project” shall mean any planning priority project implemented over more than one phase and the site of a multi-phased project shall include any land and water area designed and used to store, treat, or manage stormwater runoff in connection with the development or redevelopment, including any tracts, lots, or parcels of real property, whether developed or not, associated with, functionally connected to, or under common ownership or control with such development or redevelopment.</p> <p>I. Hydromodification Management Requirements. Planning priority projects located within natural drainage systems shall implement hydrological control measures to prevent accelerated downstream erosion and protect stream habitat.</p> <p>1. Natural drainage systems that are subject to the hydromodification assessments and control include all drainages that have not been modified using engineering controls or drainages that are tributary to a natural drainage system. Examples of engineering modifications to a drainage include channelization, armoring with concrete, and application of rip-rap.</p> <p>3. Projects disturbing an area less than or equal to one acre shall implement the Low Impact Development control standards in subsection (F)(5) of this section.</p> <p>4. Projects disturbing an area greater than 1 acre, but less than 50 acres will be presumed to meet pre-development hydrology if one of the following demonstrations are made:</p> <p>a. The project is designed to retain on site the runoff of the 95th percentile 24-hour storm; or</p> <p>b. The runoff flow rate, volume, velocity, and duration of the post-development condition does not exceed the pre-development condition for the two-year, 24-hour storm event; or</p> <p>c. The erosion potential (Ep) in the receiving water is approximately one. Ep shall be determined in accordance with the NPDES permit.</p> <p>5. Projects disturbing 50 acres or more will be presumed to meet pre-development hydrology based on the successful demonstration of one of the following conditions:</p> <p>a. The project site infiltrates on-site runoff from a two-year, 24-hour storm event; or</p> <p>b. The runoff flow rate, volume, velocity, and duration for the post-development condition does not exceed the pre-development condition for the two-year, 24-hour storm event. These conditions must be substantiated by hydrologic modeling.</p> <p>Under Chapter 15.18 (Energy Code) the City has adopted the following:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>A. The California Energy Code, 2022 Edition and Appendices, with changes, additions, and deletions set forth in this chapter, are adopted by reference as the Energy Code of the City.</p> <p>(13-10; 16-13; 19-08; 22-08)</p> <p>Under Chapter 16.145 (Solar Energy Systems) the following sections apply:</p> <p>Section 16.145.010 (Permitted Uses)</p> <p>Solar energy systems are a permitted use within all zones, whether as part of a structure or incidental to one or more structures. The use of solar energy systems is subject to the restraints imposed by the zoning limitations of this title, by existing vegetation, buildings, walls, fences, and other structures, and by diversity of topography.</p> <p>(08-05)</p> <p>Section 16.145.020 (Solar Access Protection)</p> <p>No building permit shall be issued if the proposed building, wall, fence, or other structure shall shade more than 10 percent of the absorption area of an existing solar energy system located on any other property between the hours of 10:00 a.m. and 2:00 p.m. Pacific Standard Time on December 21, unless one or more of the following conditions exist:</p> <p>A. The building, wall, fence, or other structure is located more than 45 degrees off true south of the property on which the solar energy system is located.</p> <p>B. The property owner would be prevented from constructing a single story building not exceeding 10 feet in building height on the property for which the building permit is sought, if such building cannot be designed or located to avoid casting a shadow of more than 10 percent of the absorption area of an existing solar energy system located on any other property between the hours of 10:00 a.m. and 2:00 p.m. Pacific Standard Time on December 21. (08-05)</p> <p>Under Chapter 8.08 (Garbage and Solid Waste) Section 8.08.060 (Self-hauler Requirements) the following apply:</p> <p>A person engaged in the business of recycling, commercial gardening, or construction/deconstruction activities may be authorized to collect, remove, and dispose of waste matter, including recyclable material, organic waste, and/or construction debris as incident to such business, utilizing employees and appropriate equipment owned by said contractor, and subject to the following requirements:</p> <p>1. Self-haulers shall source separate all recyclable materials and organic waste (materials that the City otherwise requires generators to separate for collection in the City's organics and recycling collection program) generated on site from solid waste in a manner consistent with 14 CCR Sections 18984.1 and 18984.2, or shall haul organic waste to a high diversion organic waste processing facility as specified in 14 CCR Section 18984.3.</p> <p>2. Self-haulers shall haul their source separated recyclable materials to a facility that recovers those materials; and haul their source separated green container organic waste to a solid waste facility, operation, activity, or property that processes or recovers source separated organic waste. Alternatively, self-haulers may haul organic waste to a high diversion organic waste processing facility.</p> <p>4. An organic waste generator that self-hauls organic waste is not required to record or report information to the City. (21-07)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Covina	<p>Natural Resources and Open Space Element:</p> <p><i>Water Resources and Air Quality</i></p> <p>Policy a. Support the efforts at all levels of government to monitor and regulate water quality and conditions, ensuring that all applicable standards are met.</p> <p>Policy b. Support the efforts at and various codes and standards of all levels of government to protect ground water resources from depletion and sources of pollution, such as soil-leaching hazardous materials.</p> <p>Policy c. Support Federal, State, and regional efforts to remedy existing ground water pollution problems.</p> <p>Policy i. Ensure the adequacy of water supplies to meet all existing and future demands and applications, particularly public safety.</p> <p>Policy l. Follow the Covina Water Conservation Ordinance, when necessary, and provide conservation kits and general information to best promote water conservation.</p> <p>Policy m. Follow the City’s Water-Efficient Landscape Ordinance for the sites of new and significantly expanded/remodeled developments as a viable conservation tool.</p> <p>Policy n. Encourage the incorporation of water conservation features in the design of all new and significantly expanded/remodeled developments and in the installation of conservation devices in existing developments, including, but not limited to, low-flow toilets and shower registers.</p> <p>Circulation Element:</p> <p>Policy Area 1: Maintenance and improvement of public rights-of-way and related infrastructure to accommodate future growth.</p> <p>Policy Area 4: Sewer, storm drainage, and public utilities and related systems.</p> <p>Policy 1: Ensure, to the greatest extent feasible, through director liaison efforts, the continued maintenance and adequacy and, where necessary, improvement of Covina’s sewers and sewage disposal system to prevent contamination of ground water and receiving water quality and to accommodate long-term growth and revitalization.</p> <p>Policy 3: Ensure, to the greatest extent feasible, through director liaison efforts, the continued maintenance and adequacy and, where necessary, improvement of Covina’s storm drains and storm drainage system to prevent or minimize Flooding and soil erosion and to accommodate future growth and revitalization.</p> <p>Policy 7. Ensure, to the greatest extent feasible, through liaison efforts, that energy and communications supply and distribution facilities and stations are structurally, mechanically, and physically sound, well maintained, sufficiently monitored, and adequate to meet project edgrowth and revitalization.</p> <p>Policy 8. Ensure, to the greatest extent feasible, through liaison efforts, that all current and future energy and communications demands, particularly peak period demands, will be met.</p> <p>Policy 9. Accommodate the necessity of utility companies and similar entities to obtain rights-of-way and easements, while attempting to maintain appropriate community standards.</p> <p>Policy 10. Continue to require that utility company and related new transmission and supply lines, including those for streetlights, be placed underground.</p> <p>Policy</p>	<p>Municipal codes related to utilities and service relevant to the Plan Area can be found in Chapter 13.06 (Water Conservation), Under Section 13.06.040 (Permanent Water Conservation Requirements – Prohibition Against Waste), Chapter 17.82 (Water-efficient Landscape Regulations) Section 17.82.040 (Applicability of Water-efficient Landscape Regulations, and Section 17.82.060 (Landscape Water Use Standards), Chapter 8.50 (Storm Water Quality and Urban Runoff Control) Section 8.50.060 (Best Management Practices and Permits Authorized and Required), Section 8.50.100 (Construction Sites Requiring a Building Permit and/or a Grading Plan), and Section 8.50.120 (Low Impact Development), Chapter 14.28 (Energy Code) Section 14.28.010 (2022 California Energy Code Adoption by Reference), Section 17.59.060 (Property Development Standards and Special Development Regulations), Chapter 8.09 (Diversion Requirements for Construction and Demolition Projects) Section 8.09.030 (Recyclable and Reusable Construction and Demolition Debris), Section 8.09.040 (Minimum Construction and Demolition Debris Diversion Requirements), and Chapter 11.16 (Undergrounding of Utilities) Section 11.16.040 (Unlawful Acts Within Districts).</p> <p>Under Chapter 13.06 (Water Conservation) the following must adhere to the City’s water conservation ordinance:</p> <p>A. The provisions of this chapter apply to any person in the use of potable water provided by the city of Covina.</p> <p>B. The provisions of this chapter do not apply to the following:</p> <p>1. Uses of water necessary to protect public health and safety or for essential government services, such as police, fire and other similar emergency services.</p> <p>2. The use of recycled water, with the exception of CMC 13.06.040(A).</p> <p>3. The use of water by commercial nurseries and commercial growers to sustain plants, trees, shrubs, crops or other vegetation intended for commercial sale. (Ord. 22-10 § 1, 2022; Ord. 09-1973 § 1, 2009.)</p> <p>Under Section 13.06.040 (Permanent Water Conservation Requirements – Prohibition Against Waste) projects must follow water conservation requirements effective at all times.</p> <p>Under Chapter 17.82 (Water-efficient Landscape Regulations) Section 17.82.040 (Applicability of Water-efficient Landscape Regulations) the following project must adhere to the water-efficient landscape regulations:</p> <p>A. The water-efficient landscape regulations set forth in this chapter shall apply to the following landscape projects:</p> <p>1. New construction projects by public agencies or private developers of nonresidential projects which have a proposed landscaped area equal to or greater than 2,500 square feet, and are otherwise subject to:</p> <p>a. A discretionary approval of a landscape plan, or</p> <p>b. A ministerial permit for a landscape or water feature;</p> <p>3. Landscape rehabilitation projects by public agencies, private developers, associations, or property managers of residential or nonresidential projects which:</p> <p>a. Have a proposed landscaped area equal to or greater than 2,500 square feet,</p> <p>b. Propose to rehabilitate 50 percent or more of the existing landscaped area,</p> <p>c. Will be completed within one year, and</p>	<p>City of Covina 2020 Urban Water Management Plan (UWMP) provides the City with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (City of Covina 2021).</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>d. Are otherwise subject to:</p> <p>i. A discretionary approval of a landscape plan, or</p> <p>ii. A ministerial permit for a landscape or water feature;</p> <p>D. A landscape design plan for projects in fire-prone areas and fuel modification zones shall comply with any applicable fire safety requirements. When conflicts between the provisions of applicable fire safety requirements and fire safety design elements exist, the fire safety requirements shall have priority. (Ord. 10-1979 § 2, 2010.)</p> <p>Under Section 17.82.060 (Landscape Water Use Standards) the following landscaped water standards apply:</p> <p>A. For new landscape installation or rehabilitated landscape projects subject to CMC 17.82.040(A), the estimated applied water use allowed for the landscaped area shall not exceed the MAWA calculated using an ET adjustment factor of 0.7, except for special landscaped areas where the MAWA is calculated using an ET adjustment factor of 1.0; or the design of the landscaped area shall otherwise be shown to be equivalently water-efficient in a manner acceptable to the city, as provided in the guidelines.</p> <p>B. Irrigation of all landscaped areas shall be conducted in a manner conforming to the rules, regulations, and requirements, including any established watering windows, and shall be subject to the penalties and incentives for water conservation and water waste prevention as determined and implemented by the applicable local water purveyors or as mutually agreed by the local water purveyors and the city.</p> <p>C. All irrigation controllers installed on or after January 1, 2012, within the city shall be smart controllers. (Ord. 10-1979 § 2, 2010.)</p> <p>Under Chapter 8.50 (Storm Water Quality and Urban Runoff Control) Section 8.50.060 (Best Management Practices and Permits Authorized and Required) the following Best Management Practices are required:</p> <p>1. No vehicle, machinery, device or storage container shall be allowed to leak, spill or discharge in any manner oil, grease, coolant, or other hazardous material onto any street, alley, road, parking area, or surface in the city whereon such pollutants or hazardous materials can or may be conveyed into the MS4 or any receiving water by storm water or non-storm water runoff.</p> <p>2. Objects such as vehicle motor parts containing grease, oil or other hazardous substances, and unsealed receptacles containing hazardous materials, shall not be stored in areas susceptible to storm water runoff or stored so that they may leak into the MS4.</p> <p>3. Any machine which is to be repaired or maintained in an uncovered outdoor area shall be placed on a pad of absorbent material to contain leaks, spills or small discharges. Any absorbent material used to contain such leaks, spills or discharges shall be properly disposed of.</p> <p>4. Machinery and equipment, including motor vehicles, which are leaking oil or fluid must be repaired.</p> <p>5. The uncovered outdoor storage of unsealed containers containing grease, oil, or other hazardous substances is prohibited in areas susceptible to runoff.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>6. The discharge of wash waters into the MS4 from the cleaning or washing of gas stations, automotive repair facilities and other types of automotive service facilities is prohibited.</p> <p>7. The discharge of wastewater into the MS4 from mobile auto washing, steam cleaning, mobile carpet cleaning and other such mobile commercial and industrial operations is prohibited.</p> <p>8. The discharge of wastewater from the washing of toxic material from paved or unpaved areas or the washing out of concrete trucks or concrete or cement-laden pumps, tools, and equipment into the MS4 is prohibited.</p> <p>9. The discharge into the MS4 of wastewater from the washing of impervious surfaces in industrial/commercial areas is prohibited.</p> <p>12. In areas exposed to storm water, the use of best management practices (including but not limited to the practices set forth in subsections (D)(1) through (11) of this section) and/or removal and lawful disposal of all fuels, chemicals, fuel and chemical wastes, animal wastes, garbage, batteries, and other materials which have potential adverse impacts on water quality shall be required. Treatment control best management practices must be properly operated and maintained to prevent the breeding of vectors.</p> <p>13. Dumping or disposal of the following materials into the MS4 system is prohibited: construction debris; any state or federally banned or unregistered pesticides; food and food processing wastes; and fuel and chemical wastes, animal wastes, garbage, batteries, and other materials that have potential adverse impacts on water quality. (Ord. 15-2038 § 1, 2015.)</p> <p>Under Section 8.50.100 (Construction Sites Requiring a Building Permit and/or a Grading Plan) the following are required:</p> <p>A. Generally. In addition to any other requirements set forth in this chapter, prior to obtaining a grading or building permit, each operator of any construction activity shall submit evidence to the director that all applicable permits have been obtained, including but not limited to the State Water Board’s Construction Permit and State Water Board 401 Water Quality Certification. Each operator of any construction activity shall implement such an erosion and sediment control plan and BMPs required by the director to ensure that discharges of pollutants are effectively prohibited and will not cause or contribute to an exceedance of water quality standards. A SWPPP prepared in accordance with the general construction permit may be substituted for an erosion and sediment control plan. All construction and grading activities shall comply with applicable laws and regulatory documents, including all applicable city ordinances and the city’s permit regulating discharges into and from the storm drain system.</p> <p>B. Erosion and Sediment Control Plan Required. In addition to any other requirements set forth in this chapter, prior to obtaining a grading or building permit, each operator of any construction site of less than one acre shall cause to be prepared and submitted to the city an erosion and sediment control plan. No operator of any construction activity shall commence any construction activity prior to receiving written approval of the erosion and sediment control plan from the director.</p> <p>D. Erosion and Sediment Control Plan Development. For construction sites one acre or greater, erosion and sediment control plans must be developed and certified by a</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>qualified SWPPP developer. Structural BMPs shall be designed by a licensed California engineer.</p> <p>Under Section 8.50.120 (Low Impact Development) the following projects must adhere to the following storm water pollution control requirements:</p> <p>C. Applicability. The following development and redevelopment projects, termed “planning priority projects,” shall comply with the requirements of this section:</p> <ul style="list-style-type: none">1. All development projects equal to one acre or greater of disturbed area that adds more than 10,000 square feet of impervious surface area.6. Parking lots with 5,000 square feet or more of impervious surface area, or with 25 or more parking spaces.7. Street and road construction of 10,000 square feet or more of impervious surface area.9. Projects located in or directly adjacent to, or discharging directly to, an environmentally sensitive area (ESA), where the development will:<ul style="list-style-type: none">a. Discharge storm water runoff that is likely to impact a sensitive biological species or habitat; andb. Create 2,500 square feet or more of impervious surface area.11. Redevelopment Projects.<ul style="list-style-type: none">a. Land disturbing activity that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site on planning priority project categories.b. Where redevelopment results in an alteration to more than 50 percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction storm water quality control requirements, the entire project must be mitigated.c. Where redevelopment results in an alteration of less than 50 percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction storm water quality control requirements, only the alteration must be mitigated, and not the entire development. <p>E. Storm Water Pollution Control Requirements. The site for every planning priority project shall be designed to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use.</p> <ul style="list-style-type: none">2. Street and road construction of 10,000 square feet or more of impervious surface area (and street and road redevelopment that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site), in addition to complying with all other applicable provisions of this section shall employ green street strategies per the U.S. EPA guidance manual, “Managing Wet Weather with Green Infrastructure: Green Streets” (EPA-833-F-08-009, December 2008) to the maximum extent practicable.3. The remainder of planning priority projects shall prepare a Low Impact Development plan to comply with the following:	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>a. Retain storm water runoff on site for the storm water quality design volume (SWQDv) defined as the runoff from:</p> <p>i. The eighty-fifth percentile 24-hour runoff event as determined from the Los Angeles County eighty-fifth percentile precipitation isohyetal map; or</p> <p>ii. The volume of runoff produced from a three-quarter-inch, 24-hour rain event, whichever is greater.</p> <p>F. Non-Planning Priority Projects. For new development or redevelopment projects not meeting the “planning priority projects” thresholds, but which may potentially have adverse impacts on post-development storm water quality, a site-specific plan including post-construction design, source and/or treatment control to mitigate storm water pollution shall be required where one or more of the following project characteristics exist:</p> <p>1. Vehicle or equipment fueling areas;</p> <p>2. Vehicle or equipment maintenance areas, including washing and repair;</p> <p>4. Outdoor handling or storage of hazardous materials;</p> <p>5. Outdoor manufacturing areas</p> <p>H. Conditional Use Permit. For any development project requiring a conditional use permit (“CUP”) or other discretionary entitlement required under CMC Title 17, or other applicable title of the Covina Municipal Code, the Low Impact Development plan shall be approved prior to the issuance of any such CUP or other discretionary entitlement.</p> <p>Under Chapter 14.28 (Energy Code) Section 14.28.010 (2022 California Energy Code Adoption by Reference) the City has adopted the 2022 California Energy Code. Said code shall be and become the Covina energy code. One copy of said code is on file in the office of the city clerk, and is hereby referred to, adopted, and made a part hereof as if fully set out in this chapter. (Ord. 22-19 § 13, 2022; Ord. 19-10 § 16, 2019.)</p> <p>Under Section 17.59.060 (Property Development Standards and Special Development Regulations) the following applies to energy:</p> <p>B. Special Development Regulations.</p> <p>11. Lighting. Exterior building lighting provides visibility and safety by illuminating sidewalks, pedestrian paths, and plazas. The light fixtures shall match the architectural style of the primary buildings. The maximum height of light poles from the finished surface to the top of the light fixture shall be 20 feet. Energy-efficient LED lights with shields shall be installed. The light illumination shall not exceed one foot-candle at the property line. Applicant shall submit a photometric plan/diagram prepared by an licensed engineer to demonstrate compliance with the standard of one foot-candle at the property line.</p> <p>Under Chapter 8.09 (Diversion Requirements for Construction and Demolition Projects) Section 8.09.030 (Recyclable and Reusable Construction and Demolition Debris) the following apply:</p> <p>For the purposes of this chapter, the following construction and demolition debris is determined to be recyclable and reusable:</p> <p>A. Masonry building materials and similar products generally used in construction including, but not limited to, asphalt, concrete, rock, stone, and brick.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>B. Wood materials including all dimensional lumber, fencing, or construction wood that has not been chemically treated, creosoted, CCA pressure treated, contaminated, or painted.</p> <p>C. Plant materials including trees, tree parts, shrubs, stumps, logs, brush, or any other type of plant or green waste that is cleared from a site for construction or other purpose.</p> <p>D. Land clearing and excavating debris including vegetation, rocks, and soils.</p> <p>E. Metals, including all metal scrap such as, but not limited to, pipes, siding, window frames, doorframes, and fences.</p> <p>G. Other salvageable materials including, but not limited to, wallboard, doors, windows, fixtures, sinks, bath tubs, and appliances.</p> <p>H. Any other construction or demolition debris that is nonhazardous and available for recycling or reuse, as may be identified on the building plans approved by the city. (Ord. 18-03 § 1, 2018.)</p> <p>Under Section 8.09.040 (Minimum Construction and Demolition Debris Diversion Requirements) the following apply:</p> <p>A. All covered projects shall reuse, recycle, or divert from landfills or disposal sites at least 75 percent, or the state-mandated construction and demolition diversion percentage, whichever is greater, of all construction and demolition debris, unless a lower rate is approved by the city as a part of the project’s pre-project recycling plan (“PPRP”) required pursuant to CMC 8.09.070.</p> <p>B. Diversion may be satisfied by any of the following methods:</p> <ol style="list-style-type: none">1. Documented on-site or off-site reuse of the construction and demolition debris.2. Documented delivery of construction and demolition debris to an approved recycling facility.3. Documented delivery of salvaged materials to a donation center.4. Other methods as approved by the city. <p>C. For nonresidential projects, 100 percent of trees, stumps, rocks, and associated vegetation and soils resulting from land clearing shall be reused or recycled.</p> <p>D. All hazardous waste and universal waste removed from any project site must be properly disposed of and diverted from landfills. (Ord. 18-03 § 1, 2018.)</p> <p>Under Chapter 11.16 (Undergrounding of Utilities) Section 11.16.040 (Unlawful Acts Within Districts) the following applies:</p> <p>Whenever the council creates an underground utility district and orders the removal of poles, overhead wires and associated overhead structures therein as provided in CMC 11.16.030, it is unlawful for any person or utility to erect, construct, place, keep, maintain, continue, employ or operate poles, overhead wires and associated overhead structures in the district after the date when such overhead facilities are required to be removed by such resolution, except as such overhead facilities may be required to furnish service to an owner or occupant of property prior to the performance by such owner or occupant of the underground work necessary for such owner or occupant to continue to receive utility service as provided in CMC 11.16.090, and for such reasonable time required to remove such facilities after such work has been performed, and except as otherwise provided in this chapter. (Ord. 10-1987 § 4, 2010; 1964 Code § 28A.4.)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
El Monte	<p>Community Design Element:</p> <p>Goal CD-4: High-quality architectural design of residential, commercial, and industrial buildings evidenced by thoughtful attention and balance of quality materials, durability, aesthetics, functionality, and sustainability concepts.</p> <p>Policy CD-4.5 Sustainability. Encourage “green building” and environmentally sustainable design concepts with respect to energy conservation, water conservation, storm drainage, etc.</p> <p>Housing Element:</p> <p>Policy 1.3. Require adequate provision of public services and facilities, infrastructure, open space, adequate parking and traffic management, pedestrian and bicycle routes, and public safety to create highly desirable neighborhoods.</p> <p>Policy 2.3 Require new residential projects to be adequately served by parks and recreation services, libraries, sanitary sewers and storm drains, transportation, public safety and other public services and facilities.</p> <p>Public Health and Safety Element:</p> <p>Policy 1.4. Encourage Caltrans, Southern Pacific Railroad, and local utility companies to regularly inspect and strengthen (if needed) bridges, elevated roadways, freeways, utilities, and other infrastructure susceptible to failure during an earthquake.</p> <p>Public Services and Facilities Element:</p> <p>Policy 3.1. Divert waste from the landfill in levels that meet or exceed state mandates and support sustainability practices through a comprehensive program of source reduction and recycling.</p> <p>Policy 3.2. Ensure that hazardous materials and waste are recycled and disposed of in a manner that is safe for the environment, residents, and visitors in El Monte.</p> <p>Policy 3.3. Continue to require and enforce the implementation of best management practices for existing public and private entities and new development to minimize stormwater runoff.</p> <p>Policy 3.4. Maintain a wastewater system adequate to serve the needs of the community and protect the health and safety of all residents, businesses, and institutions. (Policy 3.4)</p> <p>Policy 3.5. Investigate and pursue, wherever feasible, the use of trees, swales, and other green infrastructure to help conserve water, replenish the aquifer, and implement best practices.</p> <p>Policy 3.6. Continue to provide sufficient quantity of municipal water service that meets or exceeds state and federal health standards for drinking water.</p> <p>Policy 3.7. Require the incorporation of best management practices, where feasible, to conserve water in public landscaping, private development projects, and public agencies.</p> <p>Policy 3.8. Ensure that adequate investments continue to be made in repairing, rehabilitating, and upgrading City infrastructure to serve current and future customers.</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Chapter 13.16 (Stormwater Management and Discharge Control) Section 13.16.100 (Reduction of Pollutants in Stormwater), Chapter 13.20 (Stormwater and Urban Runoff Pollution Control) Section 13.20.020 (Stormwater Pollution Control Measures for Development Planning and Construction Activities), Chapter 14.02 (Water Usage Prohibitions Applying to All Persons) Section 14.02.015 (Water Usage Prohibitions applying to All Persons), and Chapter 17.74 (Water Efficiency) Section 17.74.020 (Applicability).</p> <p>Under Chapter 15.06 (Energy Code) Section 15.06.010 (Adoption of 2019 California Energy Code) the 2019 California Energy Code is adopted in its entirety and incorporated by reference into the El Monte Municipal Code, together with, and subject to, those amendments, additions and modifications delineated in this chapter, below. For the purposes of this Chapter 15.06, the 2019 California Energy Code as adopted herein may be referred to as the "El Monte Energy Code" or "this Code." (Ord. No. 3011 , § 3(Exh. A), 6-21-2022).</p> <p>Under Chapter 13.16 (Stormwater Management and Discharge Control) Section 13.16.100 (Reduction of Pollutants in Stormwater) the following applies to stormwater in the City: A. 1. Littering. No person shall throw, deposit, leave, maintain, keep, or permit to be thrown, deposited, placed, left or maintained, any refuse, rubbish, garbage, or other discarded or abandoned objects, articles, and accumulations, in or upon any street, alley, sidewalk, storm drain, inlet, catch basin, conduit or other drainage structures, business place, or upon any public or private plot of land in the city, so that the same might be or become a pollutant, except containers or in lawfully established waste disposal facilities.</p> <p>2. The occupant or tenant, or in the absence of occupant or tenant, the owner, lessee or proprietor of any real property in the city in front of which there is a paved sidewalk shall maintain said sidewalk free of dirt or litter to the maximum extent practicable. Sweepings from said sidewalk shall not be swept or otherwise made or allowed to go into the gutter or roadway, but shall be disposed of in receptacles maintained on said real property as required for the disposal of garbage.</p> <p>3. No person shall throw or deposit litter in any fountain, pond, lake, stream, or any other body in a park or elsewhere within the city.</p> <p>B. Standard for Parking Lots and Similar Structures. Persons owning or operating a paved parking lot, gas station pavement, paved private street or road, or similar structure, shall clean those structures as frequently and thoroughly as practicable in a manner that does not result in discharge of pollutants to the city storm drain system.</p> <p>D. Notification of Intent and Compliance with General Permits. Each industrial discharger, discharger associated with construction activity, or other discharger, described in any general stormwater permit addressing such discharges, as may be adopted by the United States Environmental Protection Agency, the State Water Resources Control Board, or the California Regional Water Quality Control Board, shall provide notice of intent, comply with, and undertake all other activities required by any general stormwater permit applicable to such discharges. Each discharger identified in an individual National Pollutant Discharge Elimination System permit relating to stormwater discharges shall comply with and undertake all activities required by such permit.</p> <p>E. Compliance with Best Management Practices. Where Best Management Practices guidelines or requirements have been adopted by any federal, state of California,</p>	No other applicable plans, policies, or ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 3.9. Engage and inform the public and business community in a variety of venues regarding the importance of waste management, water quality, and waste management services.</p> <p>Policy 4.3. Require development to pay the full cost of improving water, wastewater, road, parks, or other infrastructure necessitated by their projects, unless findings are made that the fair share requirement should be waived due to overriding public benefit.</p> <p>Public Health and Safety Element:</p> <p>Goal PHS-1 Adequate protection from seismic and geologic hazards, to ensure public health and safety, infrastructure, and City facilities and services are maintained.</p> <p>PHS-1.4 Critical Structures. Encourage Caltrans, Southern Pacific Railroad, and local utility companies to regularly inspect and strengthen (if needed) bridges, elevated roadways, freeways, utilities, and other infrastructure susceptible to failure during an earthquake.</p> <p>Policy 2.5 Implement green infrastructure projects (e.g., greenways, community forest, linear parks, vegetated swales, mini parks, etc.) to help filter stormwater runoff, improve water resources, and restore the health of our watershed. (Policy 2.5)</p>	<p>regional, and/or City Agency, for any activity, operation, or facility which may cause or contribute to stormwater pollution or contamination, illicit discharges, and/or discharges of nonstormwater to the stormwater system, every person undertaking such activity or operation, or owning or operating such facility shall comply with such guidelines or requirements as may be identified by the Director. (Ord. 2572 §§ 6, 7, 2002; prior code § 7810)</p> <p>Under Chapter 13.20 (Stormwater and Urban Runoff Pollution Control) Section 13.20.020 (Stormwater Pollution Control Measures for Development Planning and Construction Activities) the following projects must adhere to this section and implement the following best management practices:</p> <p>C. Applicability. This section is applicable to projects as defined below:</p> <p>1. All development and redevelopment projects, termed "planning priority projects," as defined in the municipal NPDES permit currently in effect at the time of the development application, shall comply with subsection E of Section 13.20.020. 2. Street and road construction projects of 10 thousand (10,000) square feet or more of impervious surface, in addition to complying with all other applicable provisions of Section 13.20.020, shall follow USEPA guidance regarding "Managing West Weather with Green Infrastructure: Green Streets" (December 2008, EPA-833-F-08-009) to the maximum extent practicable. This subsection applies to standalone streets, roads, highways, and freeway projects, and also applies to streets within larger projects, including capital improvement projects (CIPs).</p> <p>4. Any other project, as deemed appropriate by the department, submitted for complete discretionary or non-discretionary permit application filed with the department after December 31, 2012.</p> <p>E. Stormwater Pollution Control Requirements. All applicable projects listed in subsection C of Section 13.20.020 shall be designed to control pollutants, pollutant loads, and runoff volumes to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use. All applicable projects shall prepare a Low Impact Development plan that is submitted to and approved by the Department. All LID plans shall comply with the following: a. Low impact development standards and best management practices implementation hierarchy: All project applicants shall:</p> <p>i. Properly select, design and maintain Low Impact Development and hydromodification control best management practices to address pollutants that are likely to be generated, reduce changes to pre-development hydrology, assure long-term function and avoid breeding of vectors.</p> <p>ii. Prioritize the selection of best management practices to remove stormwater pollutants, reduce stormwater runoff volume, and beneficially use stormwater to support an integrated approach to protecting water quality and managing water resources in the following order:</p> <p>1. On-site infiltration, bioretention and/or rainfall harvest and use; then</p> <p>2. On-site biofiltration, offsite groundwater replenishment, and/or off-site retrofit.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>Under Chapter 17.74 (Water Efficiency) Section 17.74.020 (Applicability) the following projects must comply with the Cities water efficiency regulations: A. This chapter shall apply to all of the following landscape projects:</p> <ol style="list-style-type: none">1. New construction projects with an aggregate landscape area equal to or greater than five hundred (500) square feet requiring a building or landscape permit, plan check or design review;2. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than two thousand five hundred (2,500) square feet requiring a building or landscape permit, plan check, or design review; and3. Existing landscapes limited to Sections 17.74.220, 17.74.230, and 17.74.240 of this chapter. B. Any project with an aggregate landscape area of two thousand five hundred (2,500) square feet or less may comply with the performance requirements of this section or conform to the prescriptive measures contained in Table 17.74-5. <p>C. For projects using treated or untreated graywater or rainwater captured on site, any lot or parcel within the project that has less than two thousand five hundred (2,500) square feet of landscape and meets the lot or parcel's landscape water requirement (estimated total water use) entirely with treated or untreated graywater or through stored rainwater captured on site is subject only to Table 17.74-5 Section E. This section does not apply to:</p> <ol style="list-style-type: none">1. Registered federal, state or local historical sites;2. Ecological restoration projects that do not require a permanent irrigation system;3. Mined-land reclamation projects that do not require a permanent irrigation system;4. Existing plant collections, as part of botanical gardens and arboreta open to the public. (Ord. No. 3011 , § 3(Exh. B), 6-21-2022; Ord. No. 3023 , § 4.B(Exh. B), 5-2-2023)	
Glendora	<p>Land Use Element</p> <p>Goal LU-24: Coordinated infrastructure development with land use planning.</p> <p>Policy LU-24.1 Ensure the City of Glendora makes diligent efforts in coordinating with adjacent jurisdictions for projects that may have an impact on Glendora’s traffic, infrastructure, water quality or other interjurisdictional topics.</p> <p>Policy LU-24.3 Provide sufficient analysis of potential infrastructure impacts associated future development and the potential impacts on adjacent jurisdictions.</p> <p>Conservation Element</p> <p>Goal CON-8 Proper conveyance and treatment of stormwater and implementation of techniques to reduce pollutants consistent with Federal, State and regional regulations and standards.</p> <p>Policy CON-8.1 Ensure existing drainage facilities are properly maintained.</p> <p>Policy CON-8.2 Ensure all new development and redevelopment projects comply with Federal, State, regional and City regulations and ordinances related to stormwater.</p> <p>Policy CON-8.3 Incorporate project-level stormwater mitigation measures to reduce potential impacts to water quality and ensure mitigation measures are adequately monitored.</p> <p>Policy CON-8.6 Investigate the potential to create city or multi-jurisdictional facilities which remove or reduce stormwater pollutants.</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Chapter 21.03 (General Regulations) Section 21.03.090 (Urban Runoff Pollution), and Section 21.030.060 (State Model Water Efficient Landscaping Ordinance Adopted by Reference) Chapter 6.09 (Construction and Demolition Waste Management) Section 6.09.050 (Required Diversion Rate) and Section 6.09.060 (Submission of waste management plan (WMP)), and Chapter 15.12 (Sewers) Section 15.12.010 (Connection permit required).</p> <p>Under Chapter 21.03 (General Regulations) Section 21.03.090 (Urban Runoff Pollution) project in the City must ensure the following:</p> <p>K. Erosion and Sediment Control Plan (ESCP)—Control of Pollutants from Construction Activities.</p> <ol style="list-style-type: none">1. No person shall be granted a grading permit or shall commence or continue any construction activity in the city that causes the disturbance of less than one acre or more of soil by clearing, grading, and excavating, without submitting an ESCP/local SWPPP for review and approval by the city.2. No person shall be granted a grading permit or shall commence or continue any construction activity in the city that causes the disturbance of one acre or more of soil by clearing, grading, and excavating, without demonstrating to the city that such person has prepared a ESCP/SWPPP and obtained a NPDES General Construction Activity Storm Water Permit from the SWRCB. The	<p>City of Glendora Draft 2015 Urban Water Management Plan (UWMP) provides the City of Glendora with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (City of Glendora 2016).</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal CON-6 Reduced generation of solid waste within Glendora.</p> <p>Policy ON-6.2 Continue to work towards fulfilling the requirements established in the California Integrated Waste Management Act for the diversion of solid waste.</p> <p>Goal CON-5 Reduced demand for energy resources through the use of conservation techniques.</p> <p>Policy CON-5.1 Investigate and implement opportunities for energy conservation at all City-maintained facilities.</p> <p>Policy CON-5.2 Encourage the incorporation of energy conservation features in the design of all new construction and substantial rehabilitation projects and encourage the installation of conservation devices in existing developments.</p> <p>Goal CON-4 Adequate conveyance and disposal of wastewater.</p> <p>Policy CON-4.2 Ensure new development and redevelopment projects adequately analyze potential impacts to the existing wastewater infrastructure system.</p> <p>Policy CON-4.3 Incorporate project-level stormwater mitigation measures to reduce potential impacts to water quality and ensure mitigation measures are adequately monitored.</p> <p>Policy CON-4.6 Ensure new development and redevelopment projects adequately analyze potential impacts to the existing wastewater infrastructure system.</p> <p>Policy CON-4.7 Protect the planning area from the conveyance of wastewater from outside the planning area that would have the potential to require additional wastewater conveyance or treatment facilities.</p> <p>Goal CON-2 Utilization of water conservation technologies and practices.</p> <p>Policy CON-2.4 Establish and implement water conservation methods for all municipal facilities.</p> <p>Goal CON-1 Protection and conservation of Glendora’s water resources. Policies CON-1.1 Establish a comprehensive program for the utilization of recycled water for irrigation purposes.</p> <p>Policy CON-1.2 Reduce water demand for irrigation purposes through the utilization of water conserving landscape materials.</p> <p>Policy CON-1.3 Establish specific requirements for the use of water conserving landscape materials in new development and redevelopment projects, parks and municipal facilities.</p>	<p>SWPPP shall be prepared by a Qualified SWPPP Developer (QSD). All structural BMPs must be designed by a licensed California civil engineer.</p> <p>L. Control of Pollutants from Other Construction Activities. Any person engaged in a construction activity subject to the municipal National Pollutant Discharge Elimination System permit, shall be required to implement best management practices specified by the regional board, its executive officer, or the city's public works director.</p> <p>M. Control of Pollutants from New Development and Redevelopment—Low Impact Development (LID).</p> <p>1. This section creates Glendora's Planning and Land Development Program for all new development and redevelopment to accomplish the following:</p> <p>a. Lessen the water quality impacts of development by using smart growth practices such as compact development, directing development towards existing communities via infill or redevelopment, and safeguarding of environmentally sensitive areas.</p> <p>b. Minimize the adverse impacts from storm water runoff on the biological integrity of natural drainage systems and the beneficial uses of waterbodies in accordance with requirements under CEQA (California Public Resources Code Section 21000 et seq.).</p> <p>c. Minimize the percentage of impervious surfaces on land developments by minimizing soil compaction during construction, designing projects to minimize the impervious area footprint, and employing LID design principles to mimic predevelopment hydrology through infiltration, evapotranspiration and rainfall harvest and use.</p> <p>d. Maintain existing riparian buffers and enhance riparian buffers when possible.</p> <p>e. Minimize pollutant loadings from impervious surfaces such as roof tops, parking lots, and roadways through the use of properly designed, technically appropriate BMPs (including source control BMPs such as good housekeeping practices), LID strategies, and treatment control BMPs.</p> <p>f. Properly select, design and maintain LID and hydromodification control BMPs from the LID manual to address pollutants that are likely to be generated, reduce changes to pre-development hydrology, assure long-term function, and avoid the breeding of vectors.</p> <p>g. Prioritize the selection of BMPs to remove storm water pollutants, reduce storm water runoff volume, and beneficially use storm water to support an integrated approach to protecting water quality and managing water resources in the following order of preference:</p> <p>i. On-site infiltration, bioretention and/or rainfall harvest and use.</p> <p>ii. On-site biofiltration, off-site ground water replenishment, and/or off-site retrofit.</p> <p>2. Applicability.</p> <p>a. New Development Projects. Development projects subject to LID requirements during conditioning and approval for the design and implementation of post-construction controls to mitigate storm water pollution, prior to completion of the project(s), are:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>i. All development projects equal to one acre or greater of disturbed area and adding more than 10 thousand square feet of impervious surface area.</p> <p>Parking lots five thousand square feet or more of impervious surface area, or with twenty-five or more parking spaces.</p> <p>vii. Street and road construction of 10 thousand square feet or more of impervious surface area shall follow USEPA guidance regarding managing wet weather with green infrastructure: Green Streets (December 2008 EPA-833-F-08-009 or most recent edition) to the maximum extent practicable. Street and road construction applies to standalone streets, roads, highways, and freeway projects, and also applies to streets within larger projects.</p> <p>ix. Redevelopment projects in subject categories that meet redevelopment thresholds identified in subsection (M)(2)(b) (Redevelopment projects).</p> <p>x. Projects located in or directly adjacent to, or discharging directly to a significant ecological area (SEA), where the development will:</p> <p>(A) Discharge storm water runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>(B) Create two thousand five hundred square feet or more of impervious surface area.</p> <p>b. Redevelopment Projects. Redevelopment projects subject to LID conditioning and approval for the design and implementation of post-construction controls to mitigate storm water pollution, prior to completion of the project(s), are:</p> <p>i. Land-disturbing activity that results in the creation or addition or replacement of five thousand square feet or more of impervious surface are on an already developed site on development categories as stated in subsection (M)(2)(c)(i) (Integrated water quality/flow reduction/resources management criteria).</p> <p>ii. Where redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction storm water quality control requirements, the entire project must be mitigated.</p> <p>iii. Where redevelopment results in an alteration of less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction storm water quality control requirements, only the alteration must be mitigated, and not the entire development.</p> <p>(A) Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.</p> <p>c. New Development/Redevelopment Project Performance Criteria.</p> <p>i. Integrated Water Quality/Flow Reduction/Resources Management Criteria.</p> <p>(A) Each new development and redevelopment project (referred to hereinafter as "new projects") shall control pollutants, pollutant loads, and runoff volume</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>emanating from the project site by: (1) minimizing the impervious surface area; and (2) controlling runoff from impervious surfaces through infiltration, bioretention and/or rainfall harvest and use.</p> <p>(B) All projects shall retain on-site the stormwater quality design volume (SWQDv) defined as the runoff from:</p> <p>(1) The 0.75-inch, twenty-four-hour rain event or</p> <p>(2) The 85th percentile, twenty-four-hour rain event, as determined from the Los Angeles County 85th percentile precipitation isohyetal map, whichever is greater.</p> <p>(C) Bioretention and biofiltration systems shall meet the design specifications provided in Attachment H of the MS4 NPDES permit.</p> <p>(D) When evaluating the potential for on-site retention, credit will include considering the maximum potential for evapotranspiration from green roofs and rainfall harvest and use.</p> <p>d. Hydromodification (Flow/Volume/Duration) Control Criteria. All new development and redevelopment projects located within natural drainage systems must implement hydrologic control measures, to prevent accelerated downstream erosion and to protect stream habitat in natural drainage systems. The purpose of the hydrologic controls is to minimize changes in post-development hydrologic storm water runoff discharge rates, velocities, and duration. This shall be achieved by maintaining the project's pre-project storm water runoff flow rates and durations.</p> <p>iii. Hydromodification Control Criteria. The hydromodification control criteria to protect natural drainage systems are as follows:</p> <p>(A) Projects disturbing an area greater than one acre but less than fifty acres within natural drainage systems will be presumed to meet pre-development hydrology if one of the following demonstrations is made:</p> <p>(1) The project is designed to retain on-site, through infiltration, evapotranspiration, and/or harvest and use, the storm water volume from the runoff of the 95th percentile, twenty-four-hour storm; or</p> <p>(2) The runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the two-year, twenty-four-hour rainfall event. This condition may be substantiated by simple screening models, including those described in Hydromodification Effects on Flow Peaks and Durations in Southern California Urbanizing Watersheds (Hawley et al., 2011) or other models acceptable to the Executive Officer of the Regional Water Board; or</p> <p>(3) The erosion potential (Ep) in the receiving water channel will approximate 1, as determined by a hydromodification analysis study and the equation presented in Attachment J in the current NPDES MS4 permit.</p> <p>(B) Projects disturbing fifty acres or more within natural drainage systems will be presumed to meet pre-development hydrology based on the successful demonstration of one of the following conditions:</p> <p>(1) The site infiltrates on-site at least the runoff from a two-year, twenty-four-hour storm event; or</p> <p>(2) The runoff flow rate, volume, velocity, and duration for the post-development condition does not exceed the pre-development condition for the two-year, twenty-four-hour rainfall events. These conditions must be</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>substantiated by hydrologic modeling acceptable to the Regional Water Board executive officer; or</p> <p>(3) The erosion potential (Ep) in the receiving water channel will approximate 1, as determined by a Hydromodification Analysis Study and the equation presented in Attachment J.</p> <p>(Ord. 1633 § 1, 1995; Ord. 1722 § 2, 2000; Ord. 1994 §§ 2, 4, 6, 2014)</p> <p>Section 21.030.060 (State Model Water Efficient Landscaping Ordinance Adopted by Reference) states the following:</p> <p>The city adopts by reference the California State Model Water Efficient Landscaping Ordinance (AB 1881), and any amendments thereto, as the law of the city. One copy of the California State Model Water Efficient Landscaping Ordinance has been, and is now, filed in the office of planning, and the ordinance is adopted by reference as if incorporated and set out in full in this chapter.</p> <p>(Ord. 1996 § 3, 2015; Ord. 1997 § 3, 2015; Ord. 2043 § 3, 2019)</p> <p>Under Chapter 6.09 (Construction and Demolition Waste Management) Section 6.09.050 (Required Diversion Rate) the following applies: The applicant for a covered project shall divert a minimum of fifty percent by weight of the construction and demolition debris resulting from the project.</p> <p>(Ord. 1811 § 1, 2005)</p> <p>Under Chapter 6.09 (Construction and Demolition Waste Management) Section 6.09.060 (Submission of waste management plan (WMP)) the following applies:</p> <p>(a) WMP Forms. Applicants for building or demolition permits involving any covered project shall complete and submit a waste management plan (WMP), on a WMP application form approved by the city for this purpose as part of the application packet for the building or demolition permit. The completed WMP shall indicate all of the following:</p> <p>(1) The estimated weight of project C&D debris, by materials type, to be generated;</p> <p>(2) The maximum weight of such materials that can feasibly be diverted via reuse or recycling;</p> <p>(3) The vendor or facility that the applicant proposes to use to collect or receive that material; and</p> <p>(4) The estimated weight of C&D materials that will be landfilled.</p> <p>(b) Calculating Weight of Debris. In estimating the weight of materials identified in the WMP, the applicant shall use the standardized conversion rates approved by the city for this purpose including standard engineering practices as approved in the California Building Code and/or the conversion factors approved by the California Integrated Waste Management Board.</p> <p>(c) Deconstruction. In preparing the WMP, applicants for building or demolition permits involving the removal of all or part of an existing structure shall consider deconstruction, to the maximum extent feasible, and shall make the materials generated thereby available for salvage prior to being transported for disposal in a landfill. Deconstruction can be used to meet the fifty percent diversion requirement provided it is accounted for in the WMP.</p> <p>(Ord. 1811 § 1, 2005)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>Under Chapter 15.12 (Sewers) Section 15.12.010 (Connection permit required) the following applies:</p> <p>It is unlawful for any person other than the city engineer to commence or make any connection with any public or house connection sewer, or do or cause the same to be done, or to construct or cause to be constructed, or to use or cause to be used, or to alter or cause to be altered, any public or house connection sewer within the city without first obtaining a permit from the city engineer to do so.</p> <p>(Prior code § 16.13)</p>	
Industry	<p>Resource Management Element:</p> <p>Goal RM1 A reliable system that enables the City to efficiently and cost- effectively manage its water resources and needs.</p> <p>Policy RM1-1 Work with local water providers to construct, maintain, and upgrade our water supply, transmission, storage, and treatment facilities to support existing and new development.</p> <p>Policy RM 1-2 Encourage the use of recycled water.</p> <p>Policy RM 1-3 Encourage the conservation of water resources through the use of drought-tolerant plants and water saving irrigation systems.</p> <p>Policy RM 1-4 Require the control and management of urban runoff, consistent with Regional Water Quality Control Board an Los Angeles County MS4 Permit regulations.</p> <p>Policy RM 1-5 Seek and pursue the most efficient and cost-effective means of implementing NPDES permit requirements. Allow new development projects to creatively implement NPDES standards and requirements.</p> <p>Policy RM 1-6 Encourage the use of low impact development strategies to intercept runoff, slow the discharge rate, increase infiltration, and ultimately reduce discharge volumes to traditional storm drain systems.</p> <p>Policy RM 1-7 Protect groundwater quality by incorporating strategies that prevent pollution, require remediation where necessary, capture and treat urban runoff, and recharge the aquifer. Cooperate with federal, state, and local agencies that are charged with improving water quality in the region.</p> <p>Policy RM 1-8 Require the management of wastewater discharge and collection consistent with requirements adopted by the Regional Water Quality Control Board.</p> <p>Goal RM4 A cost-effective, integrated waste management system that meets or exceeds state and federal recycling and waste diversion mandates.</p> <p>Policy RM4-1 Meet or exceed AB 939 requirements.</p>	<p>Municipal codes related to utility and service systems relevant to the Plan Area can be found in Chapter 13.16 (Stormwater and Urban Runoff Pollution Control) Section 13.16.070 (Requirements for New Development and Redevelopment Projects), Section 13.16.080 (Requirements for Industrial/Commercial and Construction Activities), Chapter 13.18 (Water Efficient Landscapes) Section 13.18.030 (Applicability), Chapter 3.28 (utilities tax) Section 3.28.040 (Electricity tax) and Section 3.28.060 (Water tax), Chapter 8.20 (Integrated Waste Management) Section 8.20.580 (C&D diversion/recycling requirement) and Section 8.20.590 (Waste management plan requirement), and Article II (Service Connections, Meters and Customer's Facilities) 13.04.070 (Application for service)</p> <p>Under Chapter 13.16 (Stormwater and Urban Runoff Pollution Control) Section 13.16.070 (Requirements for New Development and Redevelopment Projects) the following applies:</p> <p>A. Compliance with Municipal National Pollutant Discharge Elimination System (NPDES) Permit. The following new development and redevelopment projects are required to comply with the municipal NPDES permit:</p> <ol style="list-style-type: none">1. All development projects equal to one acre or greater of disturbed area and adding more than 10 thousand square feet of impervious surface area.6. Parking lots with five thousand square feet or more of impervious area or with twenty-five or more parking spaces.8. Street and road construction of 10 thousand square feet or more of impervious surface area must be consistent with the city's Green Street Policy. This street and road construction consistency requirement applies to stand alone streets, roads, and highway projects, and also applies to streets within larger projects.10. Projects located in or directly adjacent to/or discharging directly to a significant ecological area (SEA), where the development will: a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and b. Create two thousand five hundred square feet or more of impervious surface area.11. The following redevelopment projects:<ol style="list-style-type: none">a. Land-disturbing activities which create, add, or replace five thousand square feet or more of impervious surface area on an already developed site excluding single-family dwellings and accessory structures.b. Land-disturbing activities which create, add, or replace 10 thousand square feet or more of impervious surface area on existing single-family dwellings and accessory structures.	<p>No other applicable plans, policies, or ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>c. Where redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-development stormwater quality control requirements, the entire project must be mitigated.</p> <p>d. Where redevelopment results in an alteration to less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-development stormwater quality control requirements, only the alteration must be mitigated, and not the entire development.</p> <p>C. Incorporation of Municipal NPDES Planning and Land Development Program Requirements into Project Plans. New development and redevelopment projects subject to the planning and land development requirements under the municipal NPDES permit must incorporate required BMPs into plans submitted to the city as follows:</p> <p>1. In General. Projects must control pollutants, pollutant loads, and runoff volume from the project site by minimizing the impervious surface area and controlling runoff through infiltration, bioretention, or rainfall harvest and use. Projects must incorporate BMPs in accordance with the requirements of the municipal NPDES permit.</p> <p>2. Stormwater Mitigation. Project applicants must prepare a stormwater mitigation plan that includes those BMPs necessary to control stormwater pollution from the completed project. The structural or treatment control BMPs (including, as applicable, post-construction treatment control BMPs) in the stormwater mitigation plan must meet the design standards set forth in the municipal NPDES permit.</p> <p>6. Hydromodification.</p> <p>a. All non-exempt new development and redevelopment projects located within natural drainage systems as defined in the municipal NPDES permit must implement hydrologic control measures to prevent accelerated downstream erosion and to protect stream habitat in natural drainage systems. Projects exempt from hydromodification controls are listed in the municipal NPDES permit.</p> <p>b. Non-exempt new development and redevelopment projects must include one, or a combination of, hydromodification control BMPs, low impact development (LID) strategies, or stream and riparian buffer restoration measures: ii. Non-single-family home projects disturbing an area greater than one acre but less than fifty acres within natural drainage systems must demonstrate one of the following:</p> <p>(A) The project has been designed to retain on-site, through infiltration, evapotranspiration, and/or harvest and use, the stormwater volume from the runoff of the 95th percentile, twenty-four-hour storm; or</p> <p>(B) The runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the two-year, twenty-four-hour rainfall event; or</p> <p>(C) The erosion potential (Ep) in the receiving water channel will approximate 1, as determined by a hydromodification analysis study and the equation</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>presented in Attachment J of the municipal NPDES permit, or other approved equations.</p> <p>iii. Non-single-family home projects disturbing fifty acres or more within natural drainage systems must demonstrate one of the following:</p> <p>(A) The project has been designed to infiltrate on-site the stormwater volume from the runoff of the two-year, twenty-four-hour storm event; or</p> <p>(B) The runoff flow rate, volume, velocity, and duration for the post-development condition do not exceed the pre-development condition for the two-year, twenty-four-hour rainfall event; or</p> <p>(C) The erosion potential (Ep) in the receiving water channel will approximate 1, as determined by a hydromodification analysis study and the equation presented in Attachment J of the municipal NPDES permit, or other approved equations.</p> <p>E. Construction sites less than one acre must implement an effective combination of erosion and sediment control BMPs from the municipal NPDES permit to prevent erosion and sediment loss, and the discharge of construction wastes.</p> <p>F. Construction sites covering one acre or more must adhere to the requirements set forth in the municipal NPDES permit and the construction general permit. A stormwater pollution prevention plan (SWPPP) for construction sites of one acre or greater must be developed by a qualified SWPPP developer (QSD) consistent with the municipal NPDES permit. (Ord. 792 § 2, 2015)</p> <p>Under Chapter 13.18 (Water Efficient Landscapes) Section 13.18.030 (Applicability) the following project must adhere to the City's water efficient landscape ordinance:</p> <p>A. This chapter shall apply to all of the following landscape projects:</p> <ol style="list-style-type: none">1. New construction projects with an aggregate landscape area equal to or greater than five hundred square feet requiring a building or landscape permit, plan check or design review;2. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than two thousand five hundred square feet requiring a building or landscape permit, plan check, or design review;3. Existing landscapes limited to Section 3.1 of the Water Efficient Landscape Guidelines. <p>B. Any project with an aggregate landscape area of two thousand five hundred square feet or less may comply with the performance requirements of this ordinance or conform to the prescriptive measures contained in Appendix E of the Water Efficient Landscape Guidelines.</p> <p>C. For projects using treated or untreated graywater or rainwater captured on site, any lot or parcel within the project that has less than two thousand five hundred square feet of landscape and meets the lot or parcel's landscape water requirement (estimated total water use) entirely with treated or untreated graywater or through stored rainwater captured on site is subject only to Section B.5 of Appendix E of the Water Efficient Landscape Guidelines. (Ord. 793 § 5, 2016)</p> <p>Under Chapter 3.28 (utilities tax) Section 3.28.040 (Electricity tax) the following apply:</p> <p>A. There is imposed and levied a tax upon every person in the city using electrical energy in the city. The tax imposed by this section shall be at the rate of five percent of the charges made for such energy and shall be paid by the</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>person paying for such energy. "Charges," as used in this section, shall include charges made for: (1) metered energy; and (2) minimum charges for such service, including customer charges, service charges, demand charges, standby charges, and annual and monthly charges.</p> <p>Under Chapter 3.28 (utilities tax) Section 3.28.060 (Water tax) the following apply:</p> <p>A. There is imposed and levied a tax upon every person using, in the city, water which is delivered through mains or pipes. The tax imposed by this section shall be at the rate of five percent of the charges made for such water and shall be paid by the person paying for such water. "Charges," as used in this section, shall include charges made for: (1) metered water; and (2) minimum charges for services, including customer charges, ready to serve charges, standby charges, and annual and monthly charges</p> <p>Under Chapter 8.20 (Integrated Waste Management) Section 8.20.580 (C&D diversion/recycling requirement) the following apply:</p> <p>All covered projects shall reuse, recycle, or divert the minimum percentage of construction and demolition debris generated from landfills and/or disposal sites. This minimum diversion requirement for construction and demolition debris is defined by the CALGreen Building Code, and at the time of the adoption of this chapter, is currently sixty-five percent. The CALGreen Building Code diversion/recycling requirement may change from time-to-time. It is the sole responsibility of the applicant to be familiar with current CALGreen Building Code requirements.</p> <p>(Ord. 818 § 3, 2022)</p> <p>Under Chapter 8.20 (Integrated Waste Management) Section 8.20.590 (Waste management plan requirement) the following applies:</p> <p>A. Covered Projects. Prior to beginning any construction or demolition activities, the applicant shall submit a waste management plan to the WMP compliance official and shall be subject to all applicable provisions of this chapter. Failure to comply with any of the terms of this section shall subject the project applicant to the full range of enforcement mechanisms set forth in this chapter.</p> <p>B. Non-covered projects are defined as those projects which do not generate any solid waste, recyclable materials or any discarded materials, all other projects are considered "covered projects."</p> <p>C. Compliance as a condition of approval. Compliance with the provisions of this chapter shall be listed as a condition of approval on any building or demolition permit issued for a covered project.</p> <p>D. City-Sponsored Projects (Construction and Renovation). All city-sponsored construction and renovation projects shall be considered "covered projects" for the purposes of this chapter and shall submit a waste management plan prior to beginning any construction or demolition activities and shall be subject to the provisions of this chapter.</p> <p>E. City-Sponsored Projects (Demolition). All city-sponsored demolition projects shall be considered "covered projects" for the purposes of this chapter and shall submit a waste management plan prior to beginning any demolition activities and shall be subject to the provisions of this chapter.</p> <p>F. Exempted Projects. A diversion deposit and a waste management plan shall not be required for the following:</p> <p>1. Work for which a building or demolition permit is not required.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>2. Roofing projects that do not include tear-off of existing roof.</p> <p>3. Work for which only a plumbing, only an electrical, or only a mechanical permit is required.</p> <p>4. Seismic tie-down projects.</p> <p>5. Emergency demolition required to protect the public health and safety.</p> <p>While not required, it shall be encouraged, that at least sixty-five percent of all project-related construction and demolition waste from exempt projects be diverted whenever possible.</p> <p>(Ord. 818 § 3, 2022)</p> <p>Under Article II (Service Connections, Meters and Customer's Facilities) 13.04.070 (Application for service) the following applies:</p> <p>A.</p> <p>1. The department may require a prospective customer to sign as applicant, or his or her agent to sign as such, an application for the service desired and also to establish his or her credit. Application may be made to the business office of the department or to a duly authorized employee.</p> <p>2. The department's requirements for the type of service desired must be met before an application will be approved. If mains, service connections and meters required for service to the premises have not been installed, the applicant will be informed of the terms and conditions which must be met before an application for service will be approved.</p> <p>3. When an application for service is made by a former customer who has failed to pay charges owned by him or her to the department, service may be refused until such charges are paid.</p>	
Irwindale	<p>Infrastructure Element:</p> <p>Issue Area – Maintenance of Service Standards. City of Irwindale will continue to maintain the highest levels of public service to respond to the existing and future demand for such services.</p> <p>Policy 1. The City will continue to support the efforts of the City of Irwindale Public Works Department in maintaining the highest service standards feasible.</p> <p>Policy 2. The City will continue to cooperate with those utility providers in the City to ensure that sufficient infrastructure capacity is available to meet current and future service demands.</p> <p><i>Programs:</i></p> <p>Capital Improvement Planning. The City's Capital Improvement Program (CIP) is a five-year plan that indicates the timing of major capital expenditures. Individual projects are reviewed and ranked on an annual basis, and may include streetscape upgrades, installation of traffic signals, slurry seal for streets, sidewalk repair, flood control infrastructure, and sewer line upgrades. The City will continue to update, review, and implement its CIP to consider infrastructure-related improvements.</p> <p>Mitigation Fee/User Fee Study. The City will explore strategies to ensure that the City's residents do not bear an undue burden associated with new development. The City will determine a reasonable and fair method of assessing new development for the cost of providing any additional infrastructure required by the development. The first step of this program's implementation calls for the preparation of a mitigation fee strategy</p>	<p>Municipal codes related to utility and service systems relevant to the Plan Area can be found in Chapter 3.16 (Utilities Tax) Section 3.16.030 (Electricity), Section 3.15.050 (Water), Chapter 8.24 (Waste or Refuse Disposal Sites) Section 8.24.260 (Water Pollution Control), Chapter 8.28 (Storm Water and Urban Runoff Pollution) Section 8.28.110 (Control of Pollutants from State Permitted construction Activities), Section 8.28.120 (Control of Pollutants from Other Construction Activities), Chapter 15.30 (Water Efficient Landscape Standards and Guidelines) Section 15.30.060 (Landscape Water Use Standards)</p> <p>Under Chapter 3.16 (Utilities Tax) Section 3.16.030 (Electricity) the following apply:</p> <p>A. There is imposed a tax upon every person in the city using electrical energy in the city. The tax imposed by this section shall be at the rate of seven and one-half percent of the charges made for such energy and shall be paid by the person paying for such energy. (Ord. No. 639, § 1, 11-3-09)</p> <p>Under Section 3.15.050 (Water) the following apply:</p> <p>A. There is imposed a tax upon every person in the city using water in the city which is delivered through mains or pipes. The tax imposed by this section shall be at the rate of seven and one-half percent 7.5%) of the charges made for such water and shall be paid by the person paying for such water.</p> <p>(Ord. No. 639, § 1, 11-3-09)</p> <p>Under Chapter 8.24 (Waste or Refuse Disposal Sites) Section 8.24.260 (Water Pollution Control) the following apply:</p>	<p>The City of Irwindale provides Stormwater and Construction Best Management Practices (BMPs) online (City of Irwindale 2023). The BMPs include the following:</p> <ul style="list-style-type: none">– Protection of natural features;– Construction phasing;– Vegetative buffers;– Site stabilization;– Storm drain inlet protection;– Dirt stockpiles;– Slopes;– Construction entrance maintenance, and;– Silt fencing.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>study to be initiated by the City Manager. The subsequent phases of this program will involve examining the current truck fees to ensure that the City is receiving its fair share of licensing fees, given the relatively high volumes of truck traffic in the City.</p> <p>Resource Management Element:</p> <p>Issue Area – Natural Resources. The City of Irwindale will continue to cooperate in the maintenance and conservation of the area’s natural resources.</p> <p>Policy 4. The City of Irwindale will continue to protect the use of the area’s resources through appropriate land use controls and planning.</p> <p>Issue Area – Resource Preservation The City of Irwindale will maintain and preserve those natural and man-made amenities that contribute to the City’s livability.</p> <p>Policy 9. The City will continue to cooperate with the other agencies that are charged with improving air and water quality in the region.</p> <p>Policy 10. The City of Irwindale will continue to cooperate with surrounding cities in the formulation and implementation of regional resource management plans and programs.</p> <p>Policy 11. The City of Irwindale supports the ethic of conservation of non-renewable resources. This includes efforts to reduce the use of energy (in any form), greenhouse gas (GHG) emissions (consistent with AB 32) and efforts to find new and more energy efficient methods for delivering services. The City supports the development of building standards that enable the community to design energy saving features such as solar energy systems, water efficient landscaping, and sustainable, green, and energy efficient building standards.</p> <p><i>Programs:</i></p> <p>Energy Conservation. The City shall continue to enforce the energy conservation standards in Title 24 of the California Administrative Code, the Uniform Building Code, and other state laws on energy conservation design, insulation, and appliances. Energy needs shall be evaluated and conservation measures incorporated into new development in accordance with Appendix F of the State of California Environmental Quality Act (CEQA) Guidelines. Other measures that would reduce energy consumption during construction and subsequent operation of new development shall be encouraged. The City will continue to work with Sempra and the Southern California Gas Company to promote energy conservation practices.</p> <p>Environmental Review. The City shall continue to evaluate the environmental impacts of new development and identify applicable mitigation measures prior to development approval, as required by the California Environmental Quality Act (CEQA). Environmental review shall be provided for those projects that will have a potential to adversely affect the environment. Issue areas that will be addressed in the environmental analysis related to resource issues include: air quality, water and hydrology, plant life, animal life, natural resources, energy, aesthetics, recreation, and cultural resources. In compliance with CEQA, the City shall also assign responsibilities for the verification of the implementation of any mitigation measures.</p> <p>Stormwater Pollution Prevention. This program is designed to prevent contaminants from entering the storm drain system. A key element of this program is the National Pollution Discharge Elimination System (NPDES) requirements, which are administered through a countywide permit. These requirements call for measures to be imposed during construction activities, handouts for residential uses, and best management practices (BMPs) for nonresidential uses. The City shall also continue to implement</p>	<p>No excavation shall be made to a depth greater than 10 feet above the maximum recorded groundwater table. Any existing areas which are below this depth shall be filled with clean earth or sand or other material approved or permitted by the Water Pollution Control Board and well compacted. Where groundwater elevation records indicate that it is safe to do so, a variance from the 10-foot distance stated above may be granted as a deviation under Section 8.24.280. (Ord. 66 § 1(part), 1959: prior code § 6300.25).</p> <p>Under Chapter 8.28 (Storm Water and Urban Runoff Pollution) Section 8.28.110 (Control of Pollutants from State Permitted construction Activities) the following apply:</p> <p>A. No person shall be granted a grading permit or shall commence or continue any construction activity that is subject to a General Construction Activity Storm Water NPDES Permit without showing proof of having applied for such permit.</p> <p>B. Any person engaged in a construction activity requiring an NPDES General Construction Activity Storm Water NPDES Permit construction permit shall retain at the construction site the following documents: (i) a copy of the Notice of Intent to Comply with Terms of the General Permit to Discharge Water Associated with Construction Activity; (ii) a waste discharge identification number issued by the SWRCB; (iii) a Storm Water Pollution Prevention Plan and Monitoring Program Plan for the construction activity requiring the construction permit; and (iv) records of all inspections, compliance and non-compliance reports, evidence of self-inspection and good housekeeping practices.</p> <p>C. Any person engaged in a construction activity in the city requiring an NPDES General Construction Storm Water Activity Permit shall, upon reasonable request from a duly authorized officer of the city, provide any of the documents specified in paragraph B of this section and shall retain said documents for at least three years after completion of construction. (Ord. 564 § 2, 2002).</p> <p>Under Section 8.28.120 (Control of Pollutants from Other Construction Activities) the following apply:</p> <p>A. Any person engaged in a construction activity that is not subject to the General Construction Storm Water Activity NPDES Permit but is subject to the municipal NPDES permit, shall comply with all requirements specified in the Storm Water Management Quality Program, including any revisions made thereto. (Ord. 564 § 2, 2002).</p> <p>Under Chapter 15.30 (Water Efficient Landscape Standards and Guidelines) Section 15.30.060 (Landscape Water Use Standards) the following apply:</p> <p>A. For applicable new landscape or landscape rehabilitation projects subject to Section 15.30.030(A) of this chapter, the estimated applied water use allowed for the landscape area may not exceed the MAWA calculated using an ET adjustment factor of 0.7, except for the portion of the MAWA applicable to any special landscape areas within the landscape project, which may be calculated using an ETAF of 1.0. Where the design of the landscaped area can be otherwise shown to be equivalently water efficient, the applicant may submit alternative or abbreviated information supporting the demonstration that the annual EAWU is less than the MAWA, at the discretion of and review and approval of the city.</p> <p>B. Irrigation of all landscaped areas must be conducted in a manner conforming to the rules and requirements of this chapter, and is subject to penalties and incentives for water conservation and water waste prevention as determined and implemented by the local water purveyor(s) or as mutually agreed by local water purveyor(s) and the city. (Ord. No. 701, § 2, 2-10-16)</p>

	projects to maintain storm water quality, such as street sweeping, catch basin grills, signs, etc.		
La Puente	<p>Circulation and Infrastructure Element:</p> <p>Goal 4 Provision of public facilities and infrastructure that support the needs of City residents and businesses.</p> <p>Policy 4.1 Periodically inventory and monitor the condition of sewer, drainage, streets, and support facilities.</p> <p>Policy 4.2 Establish a comprehensive plan to finance the ongoing maintenance, repair, and rehabilitation of City infrastructure systems.</p> <p>Policy 4.3 Work with service providers to ensure that infrastructure investments are protected.</p> <p>Policy 4.4 Encourage creative integration of telecommunication facilities with adjacent facilities and land uses.</p> <p>Policy 4.5 Encourage the advancement of communication technologies for public and private organizations.</p> <p>Community Resource Element:</p> <p>Goal 5 Adequate water for La Puente residents and businesses, and a clean underground aquifer.</p> <p>Policy 5.1 Work with water suppliers to ensure that adequate water resources continue to be available to meet the needs of La Puente residents and business.</p> <p>Policy 5.3 Work with local, regional, and State agencies to provide a cost-effective and equitable means of reducing urban runoff.</p> <p>Policy 5.4 Adopt and enforce regulations and engage in educational efforts to eliminate groundwater and urban runoff pollution.</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Chapter 4.16 (Stormwater and Urban Runoff Pollution Prevention) Section 4.16.070 (Low Impact Development Measures), Section 10.32.120 (Landscape Installation and Maintenance Standards), Chapter 4.08 (Sanitary Sewers and Industrial Waste) Section 4.08.010 (Los Angeles County sanitary sewer and industrial waste ordinance adopted by reference).</p> <p>Under Chapter 4.16 (Stormwater and Urban Runoff Pollution Prevention) Section 4.16.070 (Low Impact Development Measures) the following projects apply and must adhere to: c) Applicability. The following Development and Redevelopment projects, termed “Planning Priority Projects,” shall comply with the requirements of this Chapter:</p> <p>(1) All development projects equal to 1 acre or greater of disturbed area that adds more than 10,000 square feet of impervious surface area.</p> <p>(6) Parking lots with 5,000 square feet or more of impervious surface area, or with 25 or more parking spaces.</p> <p>(7) Streets and roads construction of 10,000 square feet or more of impervious surface area.</p> <p>(9) Projects located in or directly adjacent to, or discharging directly to an Environmentally Sensitive Area (ESA), where the development will:</p> <p style="padding-left: 40px;">a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and b. Create 2,500 square feet or more of impervious surface area</p> <p>(11) Redevelopment Projects</p> <p>a. Land disturbing activity that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site on Planning Priority Project categories.</p> <p>b. Where Redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, the entire project must be mitigated.</p> <p>c. Where Redevelopment results in an alteration of less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, only the alteration must be mitigated, and not the entire development.</p> <p>d. Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.</p> <p>(e) Stormwater Pollution Control Requirements. The Site for every Planning Priority Project shall be designed to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling</p>	No other applicable plans, policies, or ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use.</p> <p>(2) Street and road construction of 10,000 square feet or more of impervious surface shall follow USEPA guidance regarding Managing Wet Weather with Green Infrastructure: Green Streets (December 2008 EPA-833-F-08-009) to the maximum extent practicable.</p> <p>(3) The remainder of Planning Priority Projects shall prepare a Low Impact Development Plan to comply with provisions 3a – 3e. (Ord. 936 § 3, 2015)</p> <p>Under Chapter 10.32 (Landscaping) Section 10.32.030 (Applicability) the following projects must adhere to the provisions of this chapter:</p> <p>A. New landscape installations or rehabilitation projects: As of the effective date of this chapter, all sections of this chapter shall apply to the following landscape projects:</p> <ol style="list-style-type: none">1. New landscape projects, with an aggregate landscape area equal to or greater than 500 square feet, requiring a building permit or landscape permit, plan check or design.2. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than 2,500 square feet requiring a building or landscape permit, plan check, or design review.3. New or rehabilitated landscape projects with an aggregate landscape area of 2,500 square feet or less may comply with the performance requirements of this ordinance or conform to the prescriptive measures (Appendix G) contained in the Planning Commission Guidelines for Water Efficient Landscape.4. New or rehabilitated landscape projects using treated or untreated graywater or rainwater capture on site, any lot or parcels within the project that has less than 2,500 square feet of landscape area and meets the lot or parcel’s landscape water requirements (Estimated Total Water Use) entirely with the treated or untreated graywater or through stored rainwater capture on site is subject only to Appendix G of the Guidelines. <p>Section 10.32.120 (Landscape Installation and Maintenance Standards) maintains the following rules regarding landscape and irrigation maintenance:</p> <p>B. Landscape and irrigation system maintenance.</p> <ol style="list-style-type: none">1. The property owner shall be responsible for the maintenance of landscape to ensure that plant material is maintained to be healthy. Dead or diseased plants must be replaced immediately.2. Plants shall be selectively pruned in accordance with professional trimming standards to maintain their intended shapes and sizes, and to ensure due health of the species and safety of the public.3. To the extent possible, topping of trees shall be avoided.4. Irrigation systems shall be constantly maintained and adjusted to eliminate water waste and ensure the healthy survival of the plant material.5. Water waste resulting from inefficient landscape irrigation leading to excessive runoff, low-head drainage, overspray, or other similar conditions where water flows onto adjacent property, non-irrigated areas, walks, roadways, or structures is prohibited.6. Irrigation systems and their components shall be maintained in a fully functional manner consistent with the originally approved design. A regular	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>maintenance schedule shall be followed, including but not limited to checking, adjusting, and repairing irrigation equipment; resetting the automatic controller; aerating and dethatching turf areas; replenishing mulch; fertilizing; pruning; and weeding in all landscaped areas. (Ord. 17-948 § 4, 2017)</p> <p>Under Section 4.08.010 (Los Angeles County sanitary sewer and industrial waste ordinance adopted by reference) Division 2 entitled “Sanitary Sewers and Industrial Waste,” of Title 20, Utilities, of the Los Angeles County Code, as amended and in effect on March 1, 1998, is hereby adopted by reference as the sanitary sewers and industrial waste code of the city of La Puente and may be cited as such.</p> <p>A copy of the sanitary sewers and industrial waste ordinance (Division 2 of Title 20 of the Los Angeles County Code) has been deposited in the office of the city clerk and shall be at all times maintained by the city clerk for use and examination by the public. 		<p>Under Chapter 18.118 (Water Efficient Landscapes) Section 18.118.030 (Applicability) the following projects must comply with the water efficient landscapes ordinance:</p> <p>A. After February 1, 2016, and consistent with Executive Order No. B-29-15, this chapter applies to the following landscape projects:</p> <ol style="list-style-type: none">1. New landscape projects with an aggregate landscape area of five hundred square feet to two thousand five hundred square feet, requiring building or landscape permit, plan check or design review shall comply with the prescriptive measures contained in Appendix F of the Guidelines. Any new landscape projects above two thousand five hundred square feet are subject to all requirements of this ordinance and associated Guidelines.2. Rehabilitation landscape projects with an aggregate landscaped area equal to or greater than two thousand five hundred square feet, requiring a building or landscape permit, plan check or design review.3. New or rehabilitation projects using treated or untreated graywater or rainwater capture on site that has less than two thousand five hundred square feet of landscape area and meets the lot or parcel’s landscape water requirement (estimated total water use) entirely with the treated or untreated graywater or through stored rainwater capture on site is subject only to Appendix F Section (5) of the Guidelines. <p>B. Section 18.118.070(B) of this chapter regarding water waste applies to all landscaped areas installed prior to or after February 1, 2016.</p> <p>C. Section 18.118.070(C) of this chapter regarding water efficiency programs applies to all existing landscapes installed before February 1, 2016, that are greater than one acre in size and are served by a dedicated landscape water meter. (Ord. 1065 § 2, 2016)</p> <p>Section 18.118.070 (Landscape Water Use Standards) establishes the following water use standards:</p> <p>A. For applicable new landscape or landscape rehabilitation projects subject to Section 18.118.030(A) of this chapter, the estimated applied water use allowed for the landscaped area may not exceed the maximum applied water allowance (MAWA) calculated using an evapotranspiration adjustment factor not exceeding 0.55 for residential and 0.45 for nonresidential, except for the portion of the MAWA applicable to any special landscaped areas within the landscape project, which may be calculated using an evapotranspiration adjustment factor of 1.0. Where the design of the landscaped area can be otherwise shown to be equivalently water efficient, the applicant may submit alternative or abbreviated information supporting the demonstration that the annual estimated applied water use is less than the MAWA, at the discretion of and review and approval of the city.</p> <p>B. Irrigation of all landscaped areas must be conducted in a manner conforming to the rules and requirements, and is subject to penalties and incentives for water conservation and water waste prevention as determined and implemented by the local water purveyor(s) or as mutually agreed by local water purveyor(s) and the city.</p> <p>C. For all existing landscapes installed before February 1, 2016, the local water purveyor is implementing budget based tiered-rate billing and/or enforcement of water waste prohibitions for all existing metered landscaped areas throughout its service area, which includes the city of La Verne in its entirety. (Ord. 1065 § 2, 2016)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>Under Chapter 18.68 (H-D-O-Z Hillside Development Overlay Zone) Section 18.68.040 (Water Supply) the following applies to development in the Hillside Development Overlay Zone:</p> <p>Fire flow and hydrant locations shall be provided so that adequate water is available in the event of fire. Planned water supplies, piping and hydrants must be installed and in working order prior to construction involving combustible materials. All development proposals must demonstrate conclusively that the development can be served with adequate water capacity. Development is prohibited beyond the elevation of one thousand seven hundred eighty feet unless served by private water systems. (Ord. 853 § 2, 1993)</p> <p>Under Chapter 18.16 (Development Review) Section 18.16.100 (Precise Plans – Findings) the following applies.</p> <p>A. To grant precise plan approval, the development review committee or the community development director must find from the facts presented that the following circumstances exist:</p> <p>3. The architecture proposed observes community standards and protects the character of adjacent development.</p> <p>For the purposes of this finding the approving body shall consider, but not be limited to, the following:</p> <p>g. Energy conservation</p> <p>(Ord. 904 §§ 3, 4, 1997; Ord. 753 § 6, 1988)</p> <p>Under Section 3.10.050 (Electricity user’s tax) the following apply:</p> <p>A. There is hereby imposed a tax upon every person using electricity in the city. The tax imposed by this section shall be at the rate of six percent of the charges made for such electricity, and for any supplemental services or other associated activities directly related and/or necessary for the provision of electricity to the service user, which are provided by a service supplier or nonutility service supplier to a service user. The tax shall be collected from the service user by the service supplier or nonutility service supplier, or its billing agent.</p> <p>Under Chapter 13 (Adoption of County Sewer and Industrial Waste code) Section 13.16.010 (Adopted) the following apply:</p> <p>The city adopts by reference, and enacts into law, the amended Los Angeles County Code, Title 20, Utilities, Division 2 entitled “Sanitary Sewers and Industrial Waste” adopted by the board of supervisors of the county of Los Angeles by enactment of Ordinance No. 89-0101, July 27, 1989.</p> <p>One copy of Los Angeles County Code, Title 20, Utilities, Division 2 entitled “Sanitary Sewers and Industrial Waste” has been deposited in the office of the city clerk of the city of La Verne and shall be at all times maintained by the city clerk for use and examination by the public. (Ord. 802 § 1, 1990; Ord. 666 § 1, 1983; prior code § 7310)</p> <p>Under Chapter 12.36 Parkways and Trees Section 12.36.120 (Utilities in trees) the following apply:</p> <p>Any person having a right to maintain poles or wires in streets, parkways, alleys or other public places shall keep such poles or wires free from all trees and shall, under the supervision of the parks and community services department, properly trim the</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>trees so that no danger is done to either the poles, wires or trees by contact therewith. No person shall trim any such tree without first notifying the public works department of the time and place of the trimming in order that supervision may be provided. (Ord. 1017 § 3, 2010; Ord. 838 § 1 Exh. A, 1992; Ord. 622 § 2, 1981; prior code § 7742.02)</p> <p>Under Chapter 15.04 (Building Codes Adopted) Section 15.04.100 (Public Utility Connection—Building permit compliance required) the following applies:</p> <p style="padding-left: 40px;">The building official shall not authorize any utility to energize permanent final service until all conditions of the building permit have been performed and approved by the city manager or his or her agent. (Prior code § 9926)</p>	
Monrovia	<p>Safety Element:</p> <p>Policy 2.1.3 Design flood control infrastructure to accommodate existing and anticipated storm flows associated with changing climatic conditions.</p> <p>Policy 2.1.4 Coordinate with appropriate agencies to identify and construct needed local and regional flood control improvements to address areas of concern.</p> <p>Action 2.1.1.2: Periodically update dam inundation maps and consider the proximity of dams in the site selection of vital public facilities.</p> <p>Action 2.1.1.3: Coordinate with the Los Angeles County Department of Public Works, the owner of all three dams, to develop Emergency Action Plans as required by State law.</p> <p>Action 2.1.1.4: The City Engineer will monitor the Cobey-Alquist Flood Plain Management Act for application in Monrovia.</p> <p>Action 2.1.1.5: Prepare an assessment of capacity needs of flood control and storm drainage.</p> <p>infrastructure resulting from extreme weather caused by climate change.</p> <p>Policy 4.1.3: Design future utility and infrastructure improvements in the city to respond and withstand climate change impacts.</p> <p>Conservation Element:</p> <p>Goal 1 Protection against potential public health dangers through the provisions of adequate facilities.</p> <p>Goal 2 Determine areas requiring utilities in the future.</p> <p>Goal 4 Expansion of existing water supply and sewer system to accommodate future city growth.</p> <p>Goal 5 Stimulation of planned growth through the expansion of utilizes.</p> <p>Goal 6 Determination of future utility needs in terms of plant and distribution facilities.</p> <p>Land Use Element:</p> <p>Goal 2. Provide adequate infrastructure for all development.</p> <p>Policy 2.5: Where appropriate, require developers to pay the cost of studies needed to determine infrastructure capacity in conjunction with a proposed project.</p> <p>Goal 11: The City of Monrovia shall provide its residents with a high-quality urban environment through the development and conservation of resources such as land, water, minerals, wildlife, and vegetation.</p> <p>Policy 11.7: Comply with the National Pollutant Discharge Elimination System regarding storm water management to reduce impacts from storm water run-off.</p> <p>Open Space element:</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Chapter 12.36 (Storm Water and Urban Runoff Pollution Control) Section 12.36.080 (Requirements for Existing Properties), Section 12.36.090 (Requirements for Industrial/Commercial and Construction Activities), Section 12.36, Section 12.36.100 (Planning and Land Development Program requirements for New Development and Redevelopment – Low Impact Development), Section 8.46.100 (Model Water Efficient Landscaping Ordinance Requirements), and Section 17.20.030 (Water Efficient Landscape Ordinance Adopted by Reference), Chapter 15.60 (California Green Building Standards Code) Section 15.60.010 (Adoption), and Chapter 15.70 (California Energy Code) Section 15.70.010 (Adoption), and Chapter 8.09 (Waste Management Plan) Section 8.09.020 (covered projects).</p> <p>Under Chapter 12.36 (Storm Water and Urban Runoff Pollution Control) Section 12.36.080 (Requirements for Existing Properties) the following rules must be adhered to:</p> <p>(A) Storage of materials, machinery, and equipment. Machinery or equipment that is to be repaired or maintained in areas susceptible to or exposed to storm water shall be placed in a manner so that leaks, spills and other maintenance-related pollutants are not discharged to the MS4.</p> <p>(C) Best management practices. BMPs shall be used in areas exposed to storm water for the removal and lawful disposal of all fuels, chemicals, fuel and chemical wastes, animal wastes, garbage, batteries, or other materials which have potential adverse impacts on water quality.</p> <p>(E) Use of water. Runoff of water used for irrigation purposes shall be minimized to the maximum extent practicable. Runoff of water from the permitted washing down of paved impervious areas shall be minimized to the maximum extent practicable, and diverted so that flow is directed to landscaped areas for infiltration where possible.</p> <p>(G) Maintenance of Structural BMPs. Structural BMPs required by the City, County of Los Angeles, or any state or federal agency shall be properly operated and maintained, as specified by an approved storm water mitigation plan, or otherwise determined by the Authorized Enforcement Officer. Records and documentation of such maintenance shall be provided to the Director upon request.</p> <p>(Ord. 2015-01U § 4 (part), 2015; Ord. 2015-01 § 4 (part), 2015)</p> <p>Under Section 12.36.090 (Requirements for Industrial/Commercial and Construction Activities) projects must adhere to the following:</p> <p>(A) Each industrial discharger, discharger associated with construction activity, or other discharger described in any general NPDES permit addressing such discharges, as may be issued by the U.S. Environmental Protection Agency, the State Water Resources Control Board, or the Regional Board, shall comply with all requirements of</p>	<p>City of Monrovia Final 2020 Urban Water Management Plan (UWMP) provides the City of Monrovia with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (City of Monrovia 2021).</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 3: Ensure Monrovia’s parks and open spaces meet local needs for active and passive recreation, enhance the environmental and visual quality of the community, and healthy living.</p> <p>Policy 3.1 Design and develop park sites and facilities to maximize recreational value and experience, while minimizing maintenance and operational costs and negative environmental and community impacts.</p>	<p>such permit and the provisions of this chapter. Each discharger identified in an individual NPDES permit shall comply with and undertake all activities required by such permit. Proof of compliance with any such NPDES permit may be required in a form acceptable to the Authorized Enforcement Officer, or designated representative, prior to the issuance of any grading, building or occupancy permits, or any other type of permit or license issued by the city.</p> <p>(B) Non-storm water discharges to the MS4 from industrial, commercial, or construction activities in violation of any applicable NPDES permit or the provisions of this chapter are prohibited.</p> <p>(C) Industrial and commercial dischargers and dischargers associated with construction activities shall implement effective BMPs, including source control BMPs, in accordance with Table 10 of Part VI.D.6.f of the Municipal NPDES Permit unless a particular pollutant generating activity does not occur on a facility's site.</p> <p>(Ord. 2015-01U § 4 (part), 2015; Ord. 2015-01 § 4 (part), 2015)</p> <p>Under Section 12.36.100 (Planning and Land Development Program requirements for New Development and Redevelopment – Low Impact Development) low impact development standards apply to the following projects:</p> <p>(C) Applicability. This section applies to the following new development and redevelopment projects that are subject to city conditioning and approval for the design and implementation of post-construction controls and other BMPs to mitigate storm water pollution, prior to completion of the project(s), as follows:</p> <p>(1) New development projects.</p> <p>(a) All development projects equal to one acre or greater of disturbed area and adding more than 10,000 square feet of impervious area;</p> <p>(f) Parking lots with 5,000 square feet or more of impervious area or with twenty-five or more parking spaces;</p> <p>(h) Street and road construction of 10,000 square feet or more of impervious surface area shall follow USEPA guidance regarding Managing Wet Weather with Green Infrastructure: Green Streets (December 2008 EPA-833-F-08-009) to the maximum extent practicable. Street and road construction applies to standalone streets, roads, highways, and freeway projects, and also applies to streets within larger projects;</p> <p>(j) Projects located in or directly adjacent to, or discharging directly to a Significant Ecological Area (SEA), where the development will:</p> <p>1. Discharge storm water runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>2. Create 2,500 square feet or more of impervious surface area.</p> <p>(2) Redevelopment projects in the foregoing subject categories that meet redevelopment thresholds (pursuant to the Municipal NPDES Permit), which include:</p> <p>(a) Land-disturbing activities that create, add, or replace 5,000 square feet or more of impervious surface area on an already developed site excluding single family dwellings and accessory structures.</p> <p>(c) Where redevelopment results in an alteration to more than 50% of impervious surfaces of a previously existing development, and the existing development was not subject to post-development storm water quality control requirements, the entire project must be mitigated.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(d) Where redevelopment results in an alteration to less than 50% of impervious surfaces of a previously existing development, and the existing development was not subject to post-development storm water quality control requirements, only the alteration must be mitigated, and not the entire development.</p> <p>(D) Specific requirements.</p> <p>(2) New development and redevelopment projects are required to control pollutants and runoff volume from the project site by minimizing the impervious surface area and controlling runoff through infiltration, bioretention, and/or rainfall harvest and use, in accordance with the standards set forth in the Municipal NPDES Permit.</p> <p>(3) An applicant for a new development or a redevelopment project identified in this chapter shall incorporate into the applicant’s project plans a storm water mitigation plan which includes those BMPs necessary to control storm water pollution from the completed project. Structural or treatment control BMPs (including, as applicable, post-construction treatment control BMPs) set forth in project plans shall meet the design standards set forth in the Municipal NPDES Permit.</p> <p>(4) New development/redevelopment project performance criteria.</p> <p>(a) All new development and redevelopment projects, unless otherwise exempted herein or in the Municipal NPDES Permit, shall comply with Part VI.D.7.c of the Municipal NPDES Permit.</p> <p>(b) Post-construction BMPs to mitigate storm water pollution are required for all new development and redevelopment projects identified in this chapter unless alternative measures are allowed as provided in Part VI.D.7.c of the Municipal NPDES Permit.</p> <p>(c) BMPs must be implemented to retain on-site the SWQDv, defined as runoff from either:</p> <ol style="list-style-type: none">1. The 0.75 inch, 24-hour rain event; or2. The 85th percentile, 24-hour event, as determined from the Los Angeles County 85th percentile precipitation isohyetal map, whichever is greater. <p>(d) BMPs shall meet the design specifications and on-site retention potential outlined in the Part VI.D.7.c of the Municipal NPDES Permit. Projects unable to retain 100% of the SWQDv on-site due to technical infeasibility as defined in the Municipal NPDES Permit must implement alternative compliance measures in accordance with Part VI.D.7.c of the Municipal NPDES Permit.</p> <p>(f) Street and road construction projects of 10,000 square feet or more of impervious surface area are exempt from the new development/redevelopment project performance criteria of Part VI.D.7.c of the Municipal NPDES Permit but shall adhere to the City’s Green Streets Policy.</p> <p>(Ord. 2015-01U § 4 (part), 2015; Ord. 2015-01 § 4 (part), 2015)</p> <p>Under Section 8.46.100 (Model Water Efficient Landscaping Ordinance Requirements) the following applies:</p> <p>Notwithstanding any other provision in this code, property owners or their building or landscape designers, including anyone requiring a building or planning permit, plan check, or landscape design review from the city, who are constructing a new (single-family, multi-family, public, institutional, or commercial) project with a landscape area greater than 500 square feet, or rehabilitating an existing landscape with a total</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>landscape area greater than 2,500 square feet, shall comply with §§ 492.6(a)(3)(B), (C), (D), and (G) of the MWELO, including sections related to use of compost and mulch, as amended September 15, 2015.</p> <p>(Ord. 2021-11 § 1 (part), 2021)</p> <p>Under Section 17.20.030 (Water Efficient Landscape Ordinance Adopted by Reference) the City has adopted the model water efficient landscape ordinance of the State of California, as contained in the California Code of Regulations Title 23, Waters; Division 2, Department of Water Resources; Chapter 2.7, Model Water Efficient Landscape Ordinance; and as amended from time-to-time by the State of California. ('83 Code, § 17.20.030) (Ord. 94-03 § 6, 1994; Ord. 2016-01 § 7, 2016)</p> <p>Under Chapter 15.60 (California Green Building Standards Code) Section 15.60.010 (Adoption) the city council does adopt as the green building regulations for the city, the 2019 California Green Building Standards Code (Title 24, California Code of Regulations), and is also called the CALGreen Code, and as thereafter amended and published from time to time, by the California Building Standards Commission (hereinafter referred to as the "code"). The code provides minimum standards for the purpose of improving public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a positive environmental impact and encouraging sustainable construction practices in planning and design, energy efficiency, water efficiency and conservation, material conservation and resource efficiency and environmental air quality. (Ord. No. 2336, § 46, 3-10-2010; Ord. No. 2347, § 10, 12-14-2011; Ord. No. 2356, § 38, 2-26-2014; Ord. No. 2392, § 40, 1-25-2017; Ord. No. 2421, § 43, 5-13-2020; Ord. No. 2424, § 43, 5-27-2020)</p> <p>Under Chapter 15.70 (California Energy Code) Section 15.70.010 (Adoption) the city council does adopt as the energy regulations for the city, the California Energy Code (Title 24, California Code of Regulations), and as thereafter amended and published from time to time, by the California Building Standards Commission (hereinafter referred to as the "code"). (Ord. No. 2356, § 41, 2-26-2014; Ord. No. 2392, § 43, 1-25-2017; Ord. No. 2421, § 46, 5-13-2020; Ord. No. 2424, § 46, 5-27-2020)</p> <p>Under Chapter 8.09 (Waste Management Plan) Section 8.09.020 (covered projects) the following apply:</p> <p>(A)</p> <p>(1) All construction, demolition, and renovation projects within the city that are 1,000 gross square feet or greater in area are covered projects and shall comply with this chapter.</p> <p>(2) Failure to comply with any of the terms of this chapter shall subject the applicant to the full range of enforcement mechanisms set forth in § 8.09.120.</p> <p>(B) All city-sponsored construction, demolition, and renovation projects, regardless of size, shall be considered “covered projects” for the purposes of this chapter.</p> <p>(C) Compliance with the provisions of this chapter shall be listed as a condition of approval on any building or demolition permit issued for a covered project.</p> <p>(D) Projects not covered by this chapter are limited to:</p> <p>(1) Construction, demolition, and renovation projects that are not city sponsored and are less than 1,000 square feet in area, or do not require the issuance of a building or demolition permit by the city;</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(2) Projects that only involve roofing or plumbing work, and do not include the construction, demolition, or renovation of structures or facilities.</p> <p>(Ord. 2003-08 § 2 (part), 2003)</p> <p>Under section 8.09.030 (Submission of a Waste Management Plan)</p> <p>(A) Applicants for building or demolition permits involving any covered project shall complete and submit a Waste Management Plan (“WMP”) on a WMP form approved by the city for this purpose as part of the application packet for the building or demolition permit. The completed WMP shall indicate all of the following:</p> <p>(1) The project location, the name and address of the applicant, and the project contact person;</p> <p>(2) The estimated volume or weight of project C&D debris to be generated;</p> <p>(3) The percentage of C&D debris that can feasibly be diverted via reuse or recycling;</p> <p>(4) The vendors or facilities that the applicant proposes to use to collect or receive the C&D debris that will be reused or recycled;</p> <p>(5) The disposal facility that will be used for C&D debris that cannot be recycled or reused; and</p> <p>(6) The amount and form of the performance security for the project.</p> <p>(B) To estimate the volume or weight of C&D debris identified in the WMP, the applicant shall use the Standardized Generation Rates Table approved by the City Manager for this purpose.</p> <p>(C) The WMP for a project must be reviewed and approved by the City Solid Waste Program Administrator prior to the issuance of a building or demolition permit for the project.</p> <p>(D) If an applicant believes that a covered project will not generate any recyclable materials, the applicant may include such a statement in the WMP and apply for an exemption from the diversion requirement pursuant to § 8.09.080.</p> <p>(Ord. 2003-08 § 2 (part), 2003)</p>

	<p>and maintain and create facilities that meet existing and future water demands including drought conditions.</p> <p>A3.7d Implement water reuse strategies where potable water, gray water, recycled water and stormwater are all viewed as viable sources and integral components to a holistic water management program.</p> <p>P3.8 Maintain, upgrade, and expand water pipeline, storage, and pumping infrastructure to meet projected domestic, commercial, and fire flow demands for all land uses within the City.</p> <p>A3.8b Construct, maintain, and revitalize distribution infrastructure as needed throughout the City in response to changes in demands land use patterns and aging infrastructure and incorporate fair cost-sharing policies between beneficiaries, developers, water suppliers and the City.</p> <p>P3.9 Ensure that wastewater in the City of Montebello is safely and efficiently conveyed and treated under all demand scenarios, including existing and future average and peak flow sewer flow scenarios.</p> <p>A3.9c Construct, maintain, and revitalize wastewater infrastructure as needed throughout the City in response to changes in demands land use patterns and aging infrastructure and incorporate fair cost-sharing policies between beneficiaries, developers, water suppliers and the City.</p> <p>P3.10 Utilize and maintain a robust stormwater conveyance system that protects the City from flooding impacts while seeking multi-benefit solutions including water quality.</p> <p>P3.11 Effectively treat all urban runoff and stormwater and ensure that local groundwater supplies and downstream receiving waters are protected.</p> <p>A3.11b Inspect all new developments during both construction and operational phases for compliance with local, regional, and state level water quality regulations.</p> <p>A3.11c Encourage the implementation of low impact design features for all new developments and redevelopments within the City.</p> <p>Our Safe Community</p> <p>P6.9 Minimize the risks from flooding and related hazards to persons, property, and city assets.</p> <p>A6.9c Maintain storm drains to prevent local and stormwater flooding and encourage residents to assist in maintaining those drains that are the responsibility of the homeowner.</p> <p>Our Active Community</p> <p>P7.3 Promote, expand, and protect a green infrastructure that links the natural habitat</p> <p>A7.3a Prepare a citywide Green Infrastructure Framework.</p> <p>A7.3b Use parks as functional landscapes that perform green stormwater infrastructure and flood mitigation roles to enhance resiliency, recreational use, and beauty.</p> <p>A7.5b</p> <p>Lighting should direct movement between destinations</p>	<p>(Ord. 2245 § 1 (part), 2002)</p> <p>Under Chapter 8.29 (Water conservation and Water supply Shortage Program) Section 8.29.060 (Permanent water conservation requirements—Prohibition against waste) the following apply:</p> <p>The following water conservation requirements are effective at all times and are permanent. Violations of this section will be considered waste and an unreasonable use of water.</p> <p>A. Limits on Watering Hours. Watering or irrigating of lawn, landscape or other vegetated area with potable water is prohibited between the hours of 10 a.m. and one hour before sunset Pacific Standard Time on any day, except by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting or repairing an irrigation system. Lawns or other irrigated areas shall not be watered more frequently than every other day. Odd-numbered street-addressed properties may water on odd-numbered dates. Even-numbered street-addressed properties may only do so on even-numbered dates. All irrigated areas may be watered on the 29th day of the month of February every fourth year or the 31st day of the month having thirty days. The provisions of this subsection shall not apply to restrict watering of newly seeded or reseeded lawns once a year, nor to prohibit drip irrigation systems.</p> <p>B. Limit on Watering Duration. Watering or irrigating of lawn, landscape or other vegetated area with potable water using a landscape irrigation system or a watering device that is not continuously attended is limited to no more than fifteen minutes watering per day per station. This subsection does not apply to landscape irrigation systems that exclusively use very low-flow drip type irrigation systems when no emitter produces more than two gallons of water per hour or weather based controllers or stream rotor sprinklers that meet a seventy percent efficiency standard.</p> <p>C. No Excessive Water Flow or Runoff. Watering or irrigating of any lawn, landscape or other vegetated area in a manner that causes or allows excessive water flow or runoff onto an adjoining property, or non-landscaped areas such as sidewalks, driveways, streets, alleys, gutters or ditches is prohibited.</p> <p>D. No Washing Down Hard or Paved Surfaces. Washing down hard or paved surfaces, including but not limited to sidewalks, walkways, driveways, parking areas, tennis courts, patios or alleys, is prohibited except when necessary to alleviate safety or sanitary hazards, and then only by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off device, a low-volume, high-pressure cleaning machine equipped to recycle any water used, or a low-volume high-pressure water broom. Should the use of water for wash-down have to do with an immediate fire or sanitation hazard, written permission shall have been obtained from the fire department, the health department or the building department.</p> <p>E. Obligation to Fix Leaks, Breaks or Malfunctions. Excessive use, loss or escape of water through breaks, leaks or other malfunctions in the water user's plumbing or distribution system for any period of time after such escape of water should have reasonably been discovered and corrected and in no event more than seven days of receiving notice from the city, is prohibited. This section also applies to all water purveyors in the city.</p>

		<p>F. Recirculating Water Required for Water Fountains and Decorative Water Features. Operating a water fountain or other decorative water feature that does not use recirculated water is prohibited.</p> <p>Under Chapter 15.60 (California Green Building Standards Code) Section 15.60.010 (Adoption) the following applies:</p> <p>Subject to certain changes and amendments hereinafter set forth in this chapter, the city council does adopt as the green building regulations for the city, the 2019 California Green Building Standards Code (Title 24, California Code of Regulations), and is also called the CALGreen Code, and as thereafter amended and published from time to time, by the California Building Standards Commission (hereinafter referred to as the "code"). The code provides minimum standards for the purpose of improving public health, safety and general welfare by enhancing the design and construction of buildings through the use of building concepts having a positive environmental impact and encouraging sustainable construction practices in planning and design, energy efficiency, water efficiency and conservation, material conservation and resource efficiency and environmental air quality. One copy of the code is on file in the office of the city clerk for public inspection, and the same is made a part hereof as though fully set forth in this chapter.</p> <p>(Ord. No. 2336, § 46, 3-10-2010; Ord. No. 2347, § 10, 12-14-2011; Ord. No. 2356, § 38, 2-26-2014; Ord. No. 2392, § 40, 1-25-2017; Ord. No. 2421, § 43, 5-13-2020; Ord. No. 2424, § 43, 5-27-2020)</p> <p>Under Chapter 17.65 (Water Conservation in Landscaping Regulations) Section 17.65.050 (Landscape standards) the following apply:</p> <p>H. Water Features. Decorative water features such as ponds, and waterfalls used in landscaped areas shall incorporate the recycling of water to minimize water loss. Where available, and appropriate, the use of reclaimed water shall be designed and incorporated into the water features.</p> <p>I. Water Meters. Each landscape irrigation system shall be metered for water use, separately from domestic and other non-landscape uses.</p> <p>J. Landscape Irrigation Audit. Each landscape irrigation system that services a landscape area of two thousand five hundred square feet or more shall be audited every five years by the property owner for conformance with the approved plan, in accordance with the state of California Landscape Water Management Program, Landscape Irrigation Auditor Handbook, incorporated by reference. Landscaped area of less than two thousand five hundred square feet shall be exempt from the requirement to conduct an irrigation audit</p> <p>K. Landscape Maintenance. The property owner shall permanently and continuously maintain all landscaping and irrigation in a neat, clean and healthy condition, including removal of litter, proper pruning, mowing of lawns, weeds, fertilizing, and watering; and replacement of diseased and/or dead plants and malfunctioning or missing irrigation system components.</p> <p>L. Model Home Landscaping. For each subdivision with model homes the developer shall submit a landscape plan and install landscaping for each model home, incorporating the requirements of this chapter and including:1.Signs identifying elements of the water conserving landscape and irrigation system design placed around the model homes;2.Literature describing water conserving landscapes to be available to individuals touring the model homes;3.The location, text, and size of signs shall be clearly shown on the landscape plan and shall be in substantial</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>accordance with the guidelines established to implement the provisions of this chapter.</p> <p>M. Landscape Certificate. Upon completion of the installation of the landscaping, the designer shall certify that the landscape complies with all requirements of this chapter. Certification shall be accomplished by completion of a landscape certificate on a form approved by the director. Failure to submit a complete and accurate landscape certificate will delay final approval of the project and/or discontinue water service.</p> <p>N. Relative Water Requirements of Commonly Used Plants. The director shall develop a list of plants that are commonly used in landscape designs with water requirement classifications of low, medium, and high to assist landscape designers to choose species of appropriate water demands to comply with this chapter and to group species of similar water demands to facilitate efficient irrigation. This list shall be included in the landscape guidelines developed to implement the provisions of this chapter. (Ord. 2085 § 1 (part), 1993: prior code § 9249.4)</p> <p>Under Chapter 12.04 (Chapter 12.04 - Streets And Sidewalks Generally) Section 12.04.270 (Excavations and obstructions—Connection to sewer—Permit required.) the following apply:</p> <p>No person shall make any connection to any public sewer without first obtaining a permit so to do from the public works department in accordance with applicable provisions of this code.</p> <p>Under Chapter 8.12 (Refuse collection and disposal) Section 8.08.010 (Adoption) the following apply:</p> <p>The solid waste ordinance of the county of Los Angeles, the same being Ordinance No. 11,886 of the county, dated March 13, 1979, is adopted as the solid waste ordinance for the city. Three copies of the solid waste Ordinance No. 11,886 are on file in the office of the city clerk of the city.</p> <p>(Prior code § 5400 (A)) (Ord. 2029 § 1 (part), 1990: prior code § 7105)</p> <p>Under Chapter 8.12 (Refuse collection and disposal) Section 8.12.120 (Construction and demolition debris collection—Requirements.)</p> <p>All solid waste haulers providing construction and demolition debris collection services shall to the extent economically feasible, provide construction and demolition waste recycling services to accounts served. All materials, disposed, scavenged or salvaged or in other ways diverted from landfills or solid waste facilities are included in this section. (Ord. 2267 § 1 (part), 2003)</p>	
Pasadena	<p>Land Use Element</p> <p>Policy 10.4 Sustainable Building Practices. Foster sustainable building practices and processes specified by the City’s Green Building Code by incorporating energy and water savings, toxic and solid waste reduction strategies into the building of new structures and remodeling of existing structures</p> <p>10.17 Greenstreets. Transform impervious street surfaces into landscaped green spaces, in appropriate and reasonable locations, to capture stormwater runoff and let water soak into the ground so that plants and soils can filter pollutants. This will contribute to the protection of water quality in the Arroyo Seco watershed and reduction of pollution/trash entering Los Angeles and San Gabriel Rivers and the ocean.</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Chapter 8.70 (Stormwater Management Discharge Control) Section 8.70.095 (Construction Sites Requiring a Building Permit or a Grading Permit), Chapter 14.05 (Excavation and grading in Hillside area) Section 14.05.086 (Grading Activity During Rainy Season).Chapter 17.44 (Landscaping) Section 17.44.050 (Water Efficient Landscape: Incorporation of Model Water Efficient Landscape Ordinance), Chapter 13.11 (Non-Potable Water) Section 13.11.015 (Policy), Chapter 4.56 (Utility Users Tax) Section 4.56.040 (Electricity tax), and Section 4.56.060 (Water tax), Chapter 8.62 (Waste Management Plan for Certain Construction and Demolition Projects Within the City of Pasadena) Section 8.62.031 (Required diversion rates), and Section 8.62.040 (Waste management plan requirements), and Chapter 13.18 (Poles and wires) Section 13.18.020 (Erection and use unlawful when)</p>	<p>Model Water Efficient Landscape Ordinance (MWELo) found in Section 17.44.050.</p> <p>City of Pasadena Final 2020 Urban Water Management Plan (UWMP) provides the City of Pasadena with a reliable management action plan for long-term resource planning to ensure adequate water supplies are available to meet existing and future water supply needs. In addition, the 2020 UMWP incorporates water supply reliability determinations resulting from potential prolonged drought, regulatory revisions, and/or changing climatic conditions. Further, the UWMP provides information on groundwater, surface water, and stormwater characteristics, and management actions (City of Pasadena 2021).</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 10.18 Water Quality Encourage the use of natural processes to capture, treat, and infiltrate urban runoff throughout the watershed. In appropriate and feasible locations, construct stormwater curb extensions and street planters to transform impervious street surfaces into landscaped green spaces that capture stormwater runoff and let water soak into the ground as plants and soil filter pollutants.</p> <p>GOAL 40. Northwest. Economically vigorous and well-maintained development.</p> <p>Policy 40.3 Community Services and Infrastructure. Assure that adequate community services and infrastructure are provided to local businesses and residents commensurate with needs.</p> <p>Open Space Element</p> <p>Alternative Energy Implementation Measures:</p> <p>Pursue partnerships with other governmental entities and with private companies and utilities to establish incentive programs for renewable energy.</p> <p>By 2020, establish a feed-in tariff program offering to purchase up to 10 MW of qualifying renewables of all technologies located inside Pasadena (Power IRP).</p> <p>By 2024, develop programs to add at least 19 MW of solar photovoltaic installations in Pasadena according to the following timeline: 3 MW by 2010; 10 MW by 2015; 15 MW by 2020; 19 MW by 2024 (Power IRP).</p> <p>Municipal Services Implementation Measures:</p> <p>Implement programmatic conservation measures. For example, consider including a stewardship fee on water bills, or greater PWP funding for customer conservation incentives (WIRP).</p> <p>Promote the local collection of rainwater through cisterns, rain gardens, bio-swales, parking lot swales, and permeable parking lot paving (WIRP).</p> <p>Provide public education regarding the proper disposal of liquid waste, household chemicals, and medications.</p> <p>Solid Waste Implementation Measures:</p> <p>Develop a Waste Reduction Plan to Achieve 75% diversion by 2015. Continue single stream recycling and curbside green waste recycling to all of its residential customers.</p> <p>Water Implementation Measures:</p> <p>Implement the CALGreen Code voluntary measures to have a minimum of 20% (Tier 1) and 30% (Tier 2) of the total parking, walking, or patio surfaces to be permeable. After some experience with CALGreen evaluate the effectiveness of this measure and determine if it should be strengthened.</p> <p>Continue to implement the CALGreen Code mandatory water efficiency measures to achieve a 20% reduction. Continue to implement both non-residential and residential voluntary measures of the CALGreen Code to reduce or eliminate potable water in outdoor water use. Methods used to comply with this section include use of graywater.</p>	<p>Under Chapter 8.70 (Stormwater Management and Discharge Control) Section 8.70.095 (Construction Sites Requiring a Building Permit or a Grading Permit) the following applies to construction activity:</p> <p>A. Any person or company engaging in construction activities of five acres or more will be requested to have a general construction permit issued by California Regional Water Quality Control Board and must demonstrate possession of such permit before grading or building permits can be issued. The general construction permit shall be retained on site and shall be shown to city officers or inspectors at their request.</p> <p>B. The following best management practices shall apply to all construction sites:</p> <ol style="list-style-type: none">1. Sediment and construction waste from construction sites and parking areas shall not leave the site.2. Between October 15th and April 15th, any sediments or other materials which are tracked off the site shall be removed the same day as they are tracked off the site. A sediment barrier shall be installed on land exceeding 15% slope in accord with Chapter 14.05 of this code, and where determined necessary by the building official.3. Excavated soil shall be located on the site in a manner that eliminates the possibility of sediments running into the street or adjoining properties. Between October 15th and April 15th, soil piles shall be covered until the soil is either used or removed.4. No washing of construction or other industrial vehicles shall be allowed adjacent to a construction site. No runoff from washing vehicles on a construction site is allowed to leave the site. <p>(Ord. 6601 § 2 (part), 1994)</p> <p>Under Section 8.70.095 (Construction Sites Requiring a Building Permit or a Grading Permit) the following best management practices apply to construction sites:</p> <p>B. The following best management practices shall apply to all construction sites:</p> <ol style="list-style-type: none">1. No washing of construction or other industrial vehicles shall be allowed adjacent to a construction site. No runoff from washing vehicles on a construction site is allowed to leave the site. <p>(Ord. 6601 § 2 (part), 1994)</p> <p>Section 14.05.086 (Grading Activity During Rainy Season) provides the following protocol for grading activity during the rainy season:</p> <p>Activities such as clearing of brush and vegetation shall not be initiated during the rainy season on any site which is not adequately protected with desilting basins or other temporary drainage or control measures.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>A. Temporary Erosion Control. Temporary erosion control plans shall be provided for the following:</p> <ol style="list-style-type: none">1. Temporary soil stabilization measures shall be installed on graded slopes exceeding a 3 to 1 ratio or 10 feet in height as required by Section 14.05.484(B).2. Desilting facilities shall be provided at all drainage outlets from the graded site, designed for a 25-year, 6-hour storm intensity. They must be detailed on the plans. Design and specific recommendations shall be submitted for the following:<ol style="list-style-type: none">a. Desilting basin volume based on gradient and nature of soils;b. The area of the graded site and identification of any temporary soil stabilization measures;c. Size of desilting basin outlet pipe and overflow;d. Dike requirements: minimum wall width, slope of walls, percent compaction, and other material features.3. A standby crew for emergency work shall be available at all times during the rainy season. Necessary materials shall be available on site and stockpiled at convenient locations to facilitate rapid construction of temporary devices or to repair any damaged erosion-control measures when rain is imminent.4. Devices shall not be moved or modified without the approval of the building official.5. All removable protective devices shown shall be in place at the end of each working day when the 5-day rain probability forecast by the National Weather Service of the Department of Commerce exceeds 40 percent.6. After a rainstorm, all silt and debris shall be expeditiously removed from check berms and desilting basins and the basins pumped dry. Any graded slope surface protection measures damaged during a rainstorm shall also be repaired immediately.7. Fill slopes at the site perimeter must drain away from the top of the slope at the conclusion of each working day.8. A guard shall be posted on the site whenever the depth of water in any device exceeds 18 inches. <p>B. The plans required by this section shall indicate which streets will be paved and which drainage devices will be completed by October 15th.</p> <p>C. Placement of devices to reduce erosion damage within the site is left to the discretion of the civil engineer. These devices, if any, must be shown on the plan if their presence will affect the required capacity of the desilting basin.</p> <p>D. Outlet conditions from the desilting basin shall not exceed downstream limitations, with the exception of overflow which is to be designed to provided capacity of 1.5 times the maximum design flow.</p> <p>(Ord. 7127 § 5 (part), 2007; Ord. 6483 § 2 (part), 1992)</p> <p>Under Chapter 17.44 (Landscaping) Section 17.44.050 (Water Efficient Landscape: Incorporation of Model Water Efficient Landscape Ordinance) the following water efficient ordinance has been adopted:</p> <p>The administrative, organizational and enforcement for the technical codes which regulate water efficiency in landscaping shall be in accordance with the provisions and</p>

	<p>Policy 6.6-2 New Development. Ensure that approvals of proposed development are contingent upon the ability of SCE and the Gas Company to provide sufficient energy supply and infrastructure.</p> <p>Policy 6.6-6 Undergrounding Utilities. Continue to work with energy providers to underground existing facilities, especially along arterials, targeted corridors and around substations, while utilizing the Underground Utility Districts to finance this construction.</p> <p>Policy 6.6-7 Visual Impacts. Work with SCE and the Gas Company to minimize the impacts of energy facilities within the community, including use of low profile or underground substation facilities. Policy 6.6-8 Joint Use. Where feasible, facilitate joint use of major electricity transmission line corridors for uses such as wholesale nurseries, pedestrian and bike trails, and linear parks.</p> <p>Goal 6.7 Reduced solid waste generation and disposal, and increased recycling opportunities.</p> <p>Policy 6.7-1 Adequate Services. Maintain adequate solid waste facilities and services to maximize diversion and minimize landfilling of solid wastes.</p> <p>Implementation Program for Policy 6.7-1:</p> <ul style="list-style-type: none">Undertake a regular review of solid waste diversion rates and work with appropriate solid waste collection, disposal, and recycling service providers to maximize diversion within the community. <p>Policy 6.7-5 Non-Residential Recycling. Provide convenient and effective composting and recycling programs for commercial and industrial uses, as well as waste diversion programs for construction activities, to minimize the solid waste stream to landfills.</p> <p>Safety Element:</p> <p>Policy 9.2-1 Sufficient Infrastructure. Coordinate with the Los Angeles County Flood Control District to ensure that the City’s storm drainage system is adequately sized, maintained, rehabilitated and funded to accommodate stormwater runoff and prevent flooding.</p> <p>Implementation Program for Policies 9.2-1, 9.2-2 and 9.2-6:</p> <ul style="list-style-type: none">Pursue available state, federal, and other funding sources to support facilities, projects, and programs for storm drainage and flood control. <p>Policy 9.2-2 Deficient Areas. Prioritize the construction and upgrade of storm drainage infrastructure in areas where localized flooding and deficient storm drainage systems exist.</p> <p>Implementation Program for Policy 9.2-2:</p> <ul style="list-style-type: none">Identify required improvements and funding sources to eliminate deficient storm drainage systems, and incorporate such improvements into the City’s Capital Improvement Program. Locations with deficient storm drainage are: Washington Street (north side) between Rosemead and Paramount, Mines (south side) at Manzanar, Olympic north of Acacia Avenue, Beverley Road and Tobias Avenue, Terradell Street and Pico Vista Road, Greenvale and Masoncrest Drive. <p>Policy 9.2-3 Adequate Capacity for New Development. Require new development to demonstrate the availability of adequate capacity in the storm drainage system to accommodate projected flows and not exacerbate existing deficiencies.</p>	<p>B. To assure beneficial, efficient, and responsible use of water resources for all users within the city of Pico Rivera;</p> <p>C. To retain the land's natural hydrological role and promote the infiltration of surface water into the groundwater;</p> <p>F. To encourage the appropriate design, installation, maintenance, and management of landscapes so that water demand can be decreased, runoff can be retained, and flooding can be reduced without a decline in the quality or quantity of landscapes;</p> <p>G. To preserve existing natural vegetation and the incorporation of native plants, plant communities, and ecosystems into landscape design, where possible;</p> <p>H. To promote and encourage the use of low water use plants;</p> <p>J. To promote the conservation of potable water by maximizing the use of recycled water and other water conserving technology for appropriate applications;</p> <p>L. To reduce or eliminate water waste.</p> <p>(Ord. 1061 § 1, 2010)</p> <p>Under Chapter 3.52 (Utility Users Tax) Section 3.52.030 (Electricity users tax) the following apply:</p> <p>A. There is hereby imposed a tax upon every person, other than an electric corporation, using electricity in the city. The tax imposed by this section shall be at a rate of four and one-half percent of the charges made for such electricity, and for any supplemental services or other associated activities directly related and/or necessary for the provision of electricity to the end-user, which are provided by a service supplier or nonutility supplier to a service user. The tax shall be collected from the service user by the service supplier or nonutility service supplier, or its billing agent.</p> <p>(Ord. 1016 § 1, 2005; Ord. 1060 § 1, 2010)</p> <p>Chapter 15.40 (Undergrounding of Utilities) 15.40.050 (Removal of poles and wires required when)</p> <p>Whenever the council creates an underground utility district and orders the removal of poles, overhead wires and associated overhead structures therein as provided in Section 15.40.040 of this chapter, it is unlawful for any person or utility to erect, construct, place, keep, maintain, continue, employ or operate poles, overhead wires and associated overhead structures in the district after the date when such overhead facilities are required to be removed by such resolution, except as such overhead facilities may be required to furnish service to an owner or occupant of property prior to the performance by such owner or occupant of the underground work necessary for such owner or occupant to continue to receive utility service as provided in Section 15.40.100 of this chapter, and for such reasonable time required to remove such facilities after the work has been performed, and except as otherwise provided in this chapter.</p> <p>(Prior code § 8804)</p> <p>Under Chapter 16.04 (Stormwater and Urban Runoff pollution prevention) Section 16.04.050 (Reduction of pollutants in runoff.) the following apply:</p> <p>No person shall cause, or threaten to cause, the discharge of pollutants to the MS4 by exposing such pollutants to stormwater runoff.</p> <p>(Ord. 1086 § 1, 2014)</p> <p>Under Chapter 16.04 (Stormwater and Urban Runoff pollution prevention) Section 16.04.100 (Control of pollutants from other construction activities) the following apply:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 9.2-4 New Development Contribution. Ensure that new development constructs, dedicates and/or pays its fair share contribution to the storm drainage system improvements necessary to serve the demands created by the development.</p> <p>Environmental Resources element:</p> <p>Policy 8.1-5 Energy Conservation. Promote energy conservation through:</p> <ul style="list-style-type: none">Improving energy efficiency of outdoor lighting, including upgrading of city owned street lights, as well as outdoor lighting within parks and municipal parking lots to more energy efficient models;Increasing water efficiency and water conservation in existing city buildings and new development projects; andProviding for renewable energy generation at city facilities with the aim of achieving five percent of city facilities’ energy needs with renewable energy generation by 2030. <p>Policy 8.1-7 Solid Waste Management. Practice and promote responsible waste management with the aim of exceeding mandated waste diversion targets when economically feasible to do so.</p> <p>Policy 8.4-5 National Pollution Discharge Elimination System. Regulate construction and operational activities to incorporate stormwater protection measures and best management practices in accordance with the City’s National Pollution Discharge Elimination System (NPDES) permit.</p> <p>Policy 8.4-11 Recycled Water. Continue to use, and expand opportunities to increase the use of, recycled water in the city parks, landscaped areas along roadways, and the municipal golf course, if supplies are available.</p> <p>Land Use Element:</p> <p>Policy 3.6-2 Sustainable Development. Promote land development practices that reduce energy and water consumption, pollution, greenhouse gas emissions, and disposal of waste materials incorporating such techniques as:</p> <ul style="list-style-type: none">Capture and reuse of stormwater on-site for irrigation;Management of wastewater and use of recycled water, including encouraging the use of grey water;Orientation of buildings to maximize opportunities for solar energy use, daylighting, and ventilation;Use of landscapes that conserve water and reduce green waste;Use of permeable paving materials or reduction of paved surfaces;Shading of surface parking, walkways, and plazas and incorporation of solar technology; and/orRecycling and/or salvaging of reuse of construction and demolition debris.	<p>Any person engaged in a construction activity that is not subject to the general construction stormwater activity NPDES permit, but is subject to the municipal NPDES permit, shall comply with all requirements specified in the stormwater management quality program, including any revisions made thereto.</p> <p>(Ord. 1086 § 1, 2014)</p> <p>Under Chapter 8.60 Demolition and Recycling) Section 8.60.030 (Threshold for covered projects.) the following applies:</p> <p>A. Covered Projects. All construction, demolition, and renovation projects within the city, the total costs of which are, or are projected to be, greater than or equal to one hundred thousand dollars ("covered projects") shall comply with this chapter. Failure to comply with any of the terms of this chapter shall subject the project applicant to the full range of enforcement mechanisms set forth in Section 8.60.090.</p> <p>Chapter 13.70 (Water Conservation and Water Supply Shortage Program) Section 13.70.160 (Water recycling plan)</p> <p>A. The city manager must prepare a water recycling master plan that contains recommendations to increase the amount of recycled water used and shall report to the city council annually on progress towards implementing such recommendations.</p> <p>B. Upon request of the city manager, city departments must prepare and submit quarterly reports on their water conservation efforts. The reports will be consolidated by the city manager and reported to the city council at a minimum of once a year.</p> <p>C. The city may, by written request, require all commercial, residential and industrial customer using twenty-five thousand or more billing units per year to submit a water conservation plan and to submit quarterly progress reports on such plan. The conservation plan must include recommendations for increased water savings, including increased water recycling based on feasibility, and the reports must include progress to date on implementation of such recommendations.</p> <p>(Ord. 1056 § 1, 2009)</p> <p>Under Chapter 13.70 (Water Conservation and Water Supply Shortage Program) Section 13.70.040 (Permanent water conservation requirements—Prohibition against waste) the following apply:</p> <p>The following water conservation requirements are effective at all times and shall be permanent. Violations of this section shall be considered waste and an unreasonable use of water:</p> <p>A. Limits on Water Hours. Watering or irrigating of lawn, landscape or other vegetated area with potable water is prohibited between the hours of 10 a.m. and four p.m. Pacific Standard Time on any day, except by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive self-closing water shut-off nozzle or device, or for very short periods of time for the express purpose of adjusting or repairing an irrigation system.</p> <p>B. Limit on Watering Duration. Watering or irrigating of lawn, landscape or other vegetated area with potable water using a landscape irrigation system or a watering device that is not continuously attended to is limited to no more than fifteen minutes of water per day per station. This subsection does not apply to landscape irrigation systems that exclusively use very low-flow drip type irrigation systems when no emitter produces more than two gallons of water per hour and weather based controllers or stream rotor sprinklers that meet a seventy percent efficiency standard.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>C. No Excessive Water Flow or Runoff. Watering or irrigating of any lawn, landscape or other vegetated area in a manner that causes or allows excessive water flow or runoff onto an adjoining sidewalk, driveway, street, alley, gutter or ditch is prohibited.</p> <p>D. No Washing Down Hard or Paved Surfaces. Washing down hard or paved surfaces, including, but not limited to, sidewalks, walkways, driveways, parking areas, tennis courts, patios or alleys, is prohibited except when necessary to alleviate safety or sanitary hazards, and then only by use of a hand-held bucket or similar container, a hand-held hose equipped with a positive selfclosing water shut-off device or a low-volume, high pressure cleaning machine equipped to recycle any water used.</p> <p>E. Obligation to Fix Leaks, Breaks or Malfunctions. Excessive use, loss or escape of water through breaks, leaks or other malfunctions in the water user's plumbing or distribution system for any period of time after such escape of water should have reasonably been discovered and corrected, and in no event more than fourteen days of receiving notice from the city, is prohibited.</p> <p>F. Recirculating Water Required for Water Fountains and Decorative Water Features. Operating a water fountain or other decorative water feature that does not use recirculated water is prohibited after April 1, 2010. (Ord. 1056 § 1, 2009)</p>	
Pomona	<p>Open Space Network Element</p> <p>7C.P27 Support local utility providers in the under-grounding of utility wires. Work with Southern California Edison and other public agencies to underground overhead utility lines along major commercial corridors using Rule 20A monies and other funding sources.</p> <p>Conservation Element</p> <p>7E.G15 Maintain a wastewater system adequate to protect the health and safety of all Pomona residents, businesses and institutions.</p> <p>Goals</p> <p>7E.G1 Achieve the City's vision for Pomona Tomorrow without adverse environmental impacts that compromise the ability of future generations to meet their needs.</p> <p>7E.P1 Prepare a Green Plan focused on: 1) Energy Efficiency and Conservation; 2) Water and Wastewater Systems; 3) Green Building; 4) Waste Reduction and Recycling; 5) Climate-Friendly Purchasing; 6) Renewable Energy and Low-Carbon Fuels; 7) Efficient Transportation; 8) Land Use and Community Design; 9) Storing and Offsetting Carbon Emissions; and 10) Promoting Community and Individual Action.</p> <p>7E.P31 Review and update rainwater and runoff Best Management Practices adopted by the City as needed. Consider developing and implementing a stormwater management program designed to ensure as much stormwater as soil infiltration rates permit is accommodated on individual sites throughout the City.</p> <p>7E.P33 Require that all new development or expansion of existing facilities bear the cost of expanding the wastewater disposal system to handle the increased loads anticipated by development.</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Division 3 (Discharge Regulations and Requirements) Section 18-495 (Reduction of Pollutants in Stormwater), Section 18-496 (Watercourse Protection), Chapter 50 (taxation) Section 50-204 (Electricity users tax), Chapter 62 (Utilities) Section (62-873) (Diversion requirements), Article IV (Municipal Water utility) Division 2 (Connections and Establishment of Service), Article II (Construction Standards) Section 74-31 (Construction Codes Adopted), and Article VII (Low Impact Development) Division 2 (New Developments and Redevelopment Projects Provisions) Section 74-314 (Applicability),</p> <p>Under Division 3 (Discharge Regulations and Requirements) Section 18-495 (Reduction of Pollutants in Stormwater) the following minimal requirements shall apply:</p> <p>(2) Standards for parking lots and similar structures. A person owning or operating a parking lot, gas station pavement or similar structure shall clean those structures as frequently and thoroughly as practicable in a manner that does not result in discharge of pollutants to the city storm sewer system.</p> <p>(3) Best management practices for new developments and redevelopments. Any construction contractor performing work in the city shall endeavor, whenever possible, to provide filter materials at the catchbasin to retain any debris and dirt from flowing into the city's storm sewer system. The city engineer may establish controls on the volume and rate of stormwater runoff from new developments and redevelopments as may be appropriate to minimize the discharge and transport of pollutants. Any person or company engaging in a construction activity that requires an NPDES construction permit must demonstrate possession of such permit before grading and/or building permits may be issued. A copy of the NPDES permit shall be retained on site and shall be shown to authorized enforcement officials upon request.</p> <p>(5) Compliance with best management practices. Where best management practices guidelines or requirements have been adopted by any federal, state, regional, and/or city agency for any activity, operation, or facility which may cause or contribute to stormwater pollution or contamination, illicit discharges, and/or discharge of nonstormwater to the stormwater system, every person undertaking such activity or</p>	No other applicable plans, policies, or ordinances were identified

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>operation or owning or operating such facility shall comply with such guidelines or requirements as may be identified by the city engineer.</p> <p>(Code 1959, § 35-12; Ord. No. 3735, § 1 (part))</p> <p>Under Section 18-496 (Watercourse Protection) the following rules shall apply:</p> <p>(a) Every person owning property through which a watercourse passes or such person's lessee or tenant shall:</p> <ul style="list-style-type: none">(1) Keep and maintain that part of the watercourse within the property reasonably free of trash, debris, excessive vegetation, and other obstacles which would pollute, contaminate, or significantly retard the flow of water through the watercourse;(2) Maintain existing privately owned structures within or adjacent to a watercourse so that such structures will not become a hazard to the use, function, or physical integrity of the watercourse; and(3) Not remove such vegetation in such a manner as to increase the vulnerability of the watercourse to erosion. <p>(b) No person shall commit or cause to be committed any of the following acts, unless written authorization has first been obtained from the city engineer or other applicable controlling public agency:</p> <ul style="list-style-type: none">(1) Discharge into or connect any pipe or channel to a watercourse;(2) Modify the natural flow of water in a watercourse;(3) Deposit in, plant in, or remove any material from a watercourse, including its banks, except as required for necessary maintenance;(4) Construct, alter, enlarge, connect to, change, or remove any structure in a watercourse; or(5) Place any loose or unconsolidated material along the side of or within a watercourse or so close to the side as to cause a diversion of the flow or to cause a probability of such material being carried away by stormwaters passing through such watercourse. <p>(Code 1959, § 35-13; Ord. No. 3735, § 1 (part))</p> <p>Under Chapter 50 (Taxation) Section 50-204 (Electricity users tax) the following apply:</p> <p>(a) There is imposed a tax upon every person in the city using electrical energy in the city. The tax imposed by this section shall be at the following rates of percentage of the charges made for such energy and shall be paid by the person paying for such energy. The term "charges," as used in this section, includes charges made for (i) metered energy; and (ii) minimum charges for service, including customer charges, service charges, demand charges, standby charges, and annual and monthly charges. The tax imposed by this section shall be as follows:</p> <ul style="list-style-type: none">(1) Residential users: nine percent, effective January 1, 1997.(2) Commercial/industrial users: nine percent, effective January 1, 1997. <p>Under Chapter 50 (Taxation) Section 50-206 (Water users tax) the following apply</p> <p>(a) There is imposed a tax upon every person in the city using water in the city. The tax imposed by this section shall be at the following rates of percentage of the charges made for such water and shall be paid by the person paying for such water. The term "charges," as used in this section includes charges made for (i) metered water, and (ii) minimum charges for service, including customer charges, service charges, demand</p>

	<p>Policy 3.2: Promote water conservation measures, reduce urban runoff, and prevent groundwater pollution associated with development projects, property maintenance, City operations, and all activities requiring City approval.</p> <p>Policy 3.3: Work with local, regional, and State agencies to maintain and improve the quality of local groundwater and to provide a cost-effective and equitable means of reducing urban runoff.</p> <p>Goal 3 Implementation Measures:</p> <p>Policy 3.4: Adopt and enforce regulations and engage in educational efforts to eliminate groundwater and urban runoff pollution.</p> <p>Action 3.1: Actively support and partner with other agencies regarding the development and implementation of viable water management programs to enhance water supply reliability.</p> <p>Action 3.2: Enforce regulations and guidelines and update them as needed to meet the specific needs in the planning area to manage stormwater flows. This may include requirements for on-site detention or retention that implement the NPDES program, enhance groundwater recharge, complement regional flood control facilities, and address applicable community design policies.</p> <p>Action 3.3: Adopt a water pollution control ordinance or policy to regulate urban runoff discharges to the storm drain system in coordination with regional efforts.</p> <p>Policy 3.5: Take steps to use reclaimed water whenever and wherever possible in both public and private facilities.</p> <p>Action 3.4: Participate in developing and implementing a public information program regarding the appropriate use of herbicides and fertilizers to limit pollutants entering the storm drain system. Action 3.5: Consider adopting a comprehensive water conservation strategy. The strategy may include, but not be limited to, imposing restrictions on the time of watering, requiring water efficient irrigation equipment, and requiring new construction to offset demand so that there is no net increase in water use. Action 3.6: Consider adopting water-efficient landscape ordinances</p> <p>Goal 4: Effective contributions to regional efforts to improve air quality and conserve energy.</p> <p>Policy 4.4: Encourage energy conservation efforts and the incorporation of energy-saving designs and features into new and refurbished buildings.</p> <p>Policy 4.5: Encourage public employees to follow energy conservation procedures.</p> <p>Public Safety Element:</p> <p>Goal 4: Effectively adapt to and increase the community’s resilience to climate change impacts.</p> <p>Policy 4.8: Incorporate resiliency measures and adaptation strategies into capital improvement planning and other investment decisions.</p> <p>a. Pursue resiliency measures which may include but are not limited to green infrastructure that reduces flooding, adaptation of stormwater systems, and tree planting for increased shade.</p> <p>b. Locate, when feasible, essential public facilities outside of at-risk areas, or identify construction methods or other methods to minimize damage if these facilities are located in at-risk areas.</p> <p>c. Prioritize investments that protect vulnerable communities.</p>	<p>1. Copies of Documents. All persons engaged in construction activity within the City requiring a state general permit shall have at the construction site available for review</p> <p>2. All persons engaged in construction activity within the City shall implement best management practices to avoid, to the maximum extent practicable, the discharge of pollutants to the municipal separate storm sewer system, in accordance with the city's grading manual, as developed and updated by the City Engineer, and, when applicable, in accordance with a grading plan approved by the City Engineer for such project.</p> <p>3. All applicants for construction projects equal to or greater than one acre and less than five acres shall prepare and submit a stormwater pollution protection plan to the City Engineer for review and approval prior to issuance of any permits.</p> <p>5. Water Quality Management Plan (WQMP). All applicants for new development and redevelopment projects shall submit a WQMP with their project applications to the city. The WQMP shall be submitted to the City Engineer for review and approval and shall comply with all requirements of the city's national pollutant discharge elimination system (NPDES) permit, including applicable standard urban storm water mitigation plan (SUSMP) or other similar plan, developed as a part of or pursuant to the city's NPDES permit and any applicable SUSMP or other similar plan.</p> <p>9. Development Construction Requirements.</p> <p>a. Runoff from construction activity at all construction sites shall meet the following minimum requirements:</p> <p>(1) Sediments generated on the project site shall be retained using adequate treatment control or structural best management practices (BMPs);</p> <p>(2) Construction-related materials, wastes, spills, or residues shall be retained at the project site to avoid discharge to streets, drainage facilities, receiving waters, or adjacent properties by wind or runoff;</p> <p>(3) Non-storm water runoff from equipment and vehicle washing and any other activity shall be contained at the project site; and</p> <p>(4) Erosion from slopes and channels shall be controlled by implementing an effective combination of BMPs (as approved in Regional Board Resolution No. 99-03), such as the limiting of grading scheduled during the wet season; inspecting graded areas during rain events; planting and maintenance of vegetation on slopes; and covering erosion susceptible slopes. (Ord. 825 § 2 (part), 2003)</p> <p>Under Chapter 13.08 (Water-Efficient Landscapes) Section 13.08.030 (Applicability) the following project must adhere to the water efficient landscaping ordinance:</p> <p>A. Beginning February 1, 2016, and consistent with Executive Order No. B-29-15, this Chapter applies to the following landscape projects:</p> <p>1. New landscape projects with an aggregate landscape area equal to or greater than five hundred (500) square feet, requiring a building or landscape permit, plan check or design review;</p> <p>2. Rehabilitated landscape projects with an aggregate landscape area equal to or greater than two thousand five hundred (2,500) square feet, requiring a building permit or landscape permit, plan check or design review;</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>3. New or rehabilitated landscape projects with an aggregate landscape area of 2,500 square feet or less may comply with the performance requirements of this section or conform to the prescriptive measures contained in Appendix A of the guidelines.</p> <p>4. New or rehabilitated projects using treated or untreated graywater or rainwater capture on site, any lot or parcels within the project that has less than two thousand five hundred (2,500) square feet of landscape area and meets the lot or parcel's landscape water requirement (Estimated Total Water Use) entirely with the treated or untreated graywater or though stored rainwater capture on site is subject only to Appendix A of the guidelines.</p> <p>B. Section 13.08.060(B) of this chapter regarding waterwaste applies to:</p> <p>1.All landscaped areas, whether installed prior to or after January 1, 2010; and</p> <p>2.All landscaped areas installed after February 1, 2016 to which Section 13.08.030(A) is applicable. (Ord. No. 885, § 2, 12-8-09; Ord. No. 960, § 2, 1-12-16)</p> <p>Under Chapter 15.24 (Energy Code) Section 15.24.010 (California Energy Code Adopted) the following is adopted: A. The 2022 California Energy Code, together with their appendices, which regulate the energy efficient design of newly constructed or altered buildings or structures within the City, provide for the issuance of permits and collection of fees thereof, and provide for penalties for violations thereto, are hereby adopted by reference, and conflicting ordinances are hereby repealed.</p> <p>B. All of the regulations, provisions, conditions, and terms of said codes, together with their appendices, one copy of which will be on file and accessible to the public for inspection at the City Clerk's office, are hereby referred to, adopted and made part of this chapter as if fully set forth in this chapter with the exceptions, deletions, additions, and amendments thereto as set forth in this subchapter. (Ord. No. 991 , § 17, 1-14-20; Ord. No. 992 , § 16, 2-25-20; Ord. No. 1011 , § 15, 12-13-22)</p> <p>Under 13.12.010 - County provisions adopted. Except as hereinafter provided, there is adopted as the "Sanitary Sewer and Industrial Waste Ordinance of the City of Rosemead," Title 20, Division 2 of the Los Angeles County Code, as the same is in full force and effect through and including amendments in Los Angeles County Ordinance No. 89-0101 (July 27, 1989), a copy of which has been deposited in the office of the City Clerk of the City and shall be at all times maintained by the Clerk for use and examination by the public. (Prior code § 8500)</p>	
San Dimas	<p>Conservation Element</p> <p>Goal CN-3: Manage and conserve San Dimas' water resources to maintain a high level of quality and sufficient quantity to its citizens.</p> <p>Objective 3.1: Protect the remaining natural watersheds and ground water with open space systems coordinated with multiple use flood plain management.</p> <p>Implementation Measure: The City shall utilize and promote more efficient water management The City shall consider the use of reclaimed water for irrigation of public areas, such as medians, parkways, golf courses, and selected public landscaped areas.</p> <p>Implementation Measure b: The City -shall support programs to promote natural resources conservation, such as solid waste recycling, water conservation, efficient irrigation systems, drought tolerant planting materials, and soil conservation.</p> <p>Goal Statement L-9: Enhance a unified and high quality visual image for the city</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Chapter 14.11 (Stormwater Management and Discharge) Section 14.11.050 (Requirements for Existing Properties), Section 14.11.060 (Requirements for Construction Projects), Chapter 14.13 (Low Impact Development) Section 14.13.050 (New Development and Redevelopment Project Provisions Applicability), and Section 14.13.060 (Project Performance Criteria) Chapter 15.60 (Flood Plain Management Code) Section 15.60.150 (Standards for utilities), Chapter 14.08 (County Sanitary sewers and industrial waste ordinance adopted) Section 14.08.010 (County sanitary sewers and industrial waste ordinance adopted—Where filed), Chapter 8.32 (Solid waste handling and disposal) Section 8.32.010 (Adoption of county solid waste ordinance—Copies on file), and Chapter 15.52 (Underground Utility Districts) Section 15.52.050 (Overhead facilities—When prohibited.).</p>	<p>No other applicable plans, policies, or ordinances were identified</p>

	<p>Objective 9.1 Preserve the visual identity and character of existing neighborhoods.</p> <p>Policy 9.1.1 Underground utilities to improve the visual environment.</p>	<p>Under Chapter 14.11 (Stormwater Management and Discharge) Section 14.11.050 (Requirements for Existing Properties) the following applies to existing properties: Any owner or occupant of property within the city shall comply with the following requirements:</p> <p>A. Use of Water. Runoff of water used for irrigation purposes shall be minimized to the maximum extent practicable. In addition, washing down of paved areas is prohibited, unless necessary for health or safety purposes as determined by the director of public works, and is not in violation of any other provision of this code. Runoff of water from the permitted washing down of paved areas shall be minimized to the maximum extent practicable.</p> <p>B. The storage of materials, machinery and equipment, such as motor vehicle parts, containing grease, oil, or other hazardous substances, and unsealed receptacles containing hazardous materials, shall not be in areas susceptible to runoff.</p> <p>C. Any machinery or equipment which is to be repaired in areas susceptible to runoff shall be placed on a pad of absorbent material to contain leaks, spills or small discharges.</p> <p>D. The discharge of gray water to street or storm drains is prohibited. (Ord. 1064 § 4, 1997) Under Section 14.11.060 (Requirements for Construction Projects) the following applies to construction within the City:</p> <p>A. No grading permit shall be issued for developments with disturbed areas of five acres or greater unless the applicant can show that:</p> <ol style="list-style-type: none">1. A notice of intent (NOI) to comply with the state construction activity stormwater permit has been filed, and2. A stormwater pollution prevention plan (SWPPP) has been prepared. <p>B. In addition to any adopted best management practices (BMPs) or other requirements for construction projects adopted by the city, the following requirements shall apply to all projects undergoing construction in the city. The requirements set forth below shall apply at the time of demolition of an existing structure or commencement of construction and until the project receives final occupancy/clearance from the city.</p> <ol style="list-style-type: none">1. Sediment, construction waste and other pollutants from construction sites and parking areas, including runoff from equipment at construction sites, shall be retained on the site to the maximum extent practicable.2. Any sediments or other materials that are not retained on the site shall be removed the same day as they leave the site. Where determined necessary by the director of public works, or a designated representative, a temporary sediment barrier shall be installed.3. On an emergency basis only, plastic covering may be utilized to prevent erosion of an otherwise unprotected area, along with runoff devices to intercept and safely convey the runoff.4. Excavated soil shall be located on the site in a manner that minimizes the amount of sediments running into the street or adjoining properties. Soil piles shall be covered until the soil is either used or removed. <p>Under Chapter 15.60 (Flood Plain Management Code) Section 15.60.150 (Standards for utilities) the following apply:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>A. All new and replacement water supply and sanitary sewage systems shall be designed to minimize or eliminate infiltration of floodwaters into the system and discharge from system into floodwaters.</p> <p>B. On-site waste disposal system shall be located to avoid impairment to them or contamination from them during flooding.</p> <p>(Ord. 887 § 1(Exh. A), 1988)</p> <p>Chapter 14.08 (County Sanitary sewers and industrial waste ordinance adopted) Section 14.08.010 (County sanitary sewers and industrial waste ordinance adopted—Where filed)</p> <p>A. Except as otherwise amended in this chapter and Chapter 14.12, Ordinance No. 89-0101 of the county, entitled "Los Angeles County Sanitary Sewers and Industrial Waste Ordinance," which is published by the county, and as codified in Title 20, Division 2 of the Los Angeles County Code, as amended through June 30, 2009, is adopted as the San Dimas Sanitary Sewers and Industrial Waste Ordinance.</p> <p>B. Three copies of the county ordinance effective through June 20, 2009, are on deposit in the office of the city clerk and shall be at all times maintained by the city clerk for use and examination by the public.</p> <p>C. References contained in this chapter to section numbers and amendments to the county Sanitary Sewer and Industrial Waste Ordinance are declared to be references to the section numbers contained in the Los Angeles County Code.</p> <p>(Ord. 953 § 1, 1991; Ord. 1192 § 1, 2010)</p> <p>Under Chapter 14.12 (Sewer fees) Section 14.12.030 (Connection fees—Generally) To establish appropriate provisions for the construction and expansion of the sanitary sewer system of the city and to be assured that the cost of such construction and expansion is borne by those who receive the benefits thereof, there are established connection charges for all connections made to the sanitary sewer system of the city in accordance with the following schedule:</p> <p>H. For uses not otherwise classified, a charge on the same basis as provided for commercial buildings in subsection B of this section; provided, that where vacant property is proposed to be connected to the city sewerage system, the connection charge shall be an amount equal to twelve dollars per front foot of such lot or parcel computed in accordance with the provisions of the sanitary sewers and industrial waste ordinance adopted by Section 14.08.010;</p> <p>Under Chapter 8.32 (Solid waste handling and disposal) Section 8.32.010 (Adoption of county solid waste ordinance—Copies on file)</p> <p>Except as herein provided, that certain solid waste ordinance known and designated as Ordinance No. 11,886 of the county of Los Angeles entitled Solid Waste Ordinance of the County of Los Angeles, as adopted and in effect on April 13, 1979, is adopted be reference and incorporated as fully as if set out at length herein, and shall, in conjunction with other applicable ordinances of the city of San Dimas, be the solid waste ordinance of the city, establishing minimum standards for solid waste handling and disposal. Three copies of said ordinance have been deposited in the office of the city clerk and shall be maintained at all times by the clerk for use and examination by the public.</p> <p>(Ord. 690 § 1, 1980)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>Under Chapter 15.52 (Underground Utility Districts) Section 15.52.050 (Overhead facilities—When prohibited.) the following apply:</p> <p>Whenever the council creates an underground utility district and orders the removal of poles, overhead wires and associated overhead structures therein as provided in Section 15.52.040, it shall be unlawful for any person or utility to erect, construct, place, keep, maintain, continue, employ or operate poles, overhead wires and associated overhead structures in the district after the date when such overhead facilities are required to be removed by such resolution, except as such overhead facilities may be required to furnish service to an owner or occupant of property prior to the performance by such owner or occupant of the underground work necessary for such owner or occupant to continue to receive utility service as provided in Section 15.52.090, and for such reasonable time required to remove such facilities after such work has been performed, and except as otherwise provided in this chapter.</p> <p>(Prior code § 17B-5)</p>	
San Gabriel	<p>Community Design Element:</p> <p>Target 5.7.3 Reduce the generation of solid wastes, including hazardous waste and recycle those materials that are used, to slow the filling of local and regional landfills, in accordance with the California Integrated Waste Management Act of 1989.</p> <p>Action 5.7.3.2 Encourage builders to incorporate interior and exterior storage areas at new or remodeled public and private development projects to make recycling activities more convenient.</p> <p>Goal 10.4 Design the necessary features of urban life so that they contribute to the community rather than detract from it.</p> <p>Target 10.4.1. Require that all new utilities be placed underground unless impractical or cost prohibitive, in which case a fee shall be paid to a Citywide fund to pay for future undergrounding of utility lines.</p> <p>Target 10.4.2. Require that all new developments screen utility structures with a combination of landscaping, berming, walls, screens, or other features designed to blend with the architecture and landscape amenities of the site. For the purposes of this target, utility structures include utility boxes, traffic signal controllers, cable television boxes, Edison transformer boxes and vaults.</p> <p>Environmental Resources Element:</p> <p>Goal 8.4 Encourage the conservation and protection of water quality within San Gabriel.</p> <p>Target 8.4.5 Encourage property owners to use paving surfaces that reduce the amount of urban storm water runoff.</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Chapter 35 (Taxation) Section 35.082 (Electricity Users Tax) and Section 35.084 (Water Users Tax), Chapter 50 (Solid Waste Collection and Recycling) Section 50.036 (Construction and Demolition Waste Recycling Program Effective Threshold for Covered Projects), Chapter 52 (Water gas and other utilities) Section 52.52 (Authority of Council to Designated) Chapter 53 (Stormwater and Urban Runoff Pollution Prevention) Section 53.10 (Control of Pollutants From State Permitted Construction Activities), Section 53.11 (Control of Pollutants from Other Construction Activities), Section 53.12 (Control of Pollutants from New Development/Redevelopment Projects), Section 53.19 (Low Impact Development Standards), Section 153.132 (Stormwater Runoff), Chapter 150 (Building Regulations) Section 150.001, Section 150.200 (Existing Landscapes), Chapter 153 (Zoning Code) Section 153.534 (Landscape Design Principles) Section 35.082 (Electricity Users Tax)</p> <p>(A) There is hereby imposed a tax upon every person using electricity in the city. The tax imposed by this section shall be at the rate of 8% of the charges made for such electricity, and for any supplemental services or other associated activities directly related to and/or necessary for the provision of electricity to the service user, which are provided by a service supplier or non-utility service supplier to a service user. The tax shall be collected from the service user by the service supplier or non-utility service supplier, or its billing agent.</p> <p>Section 35.084 (Water Users Tax)</p> <p>(A) There is hereby imposed a tax upon every person using water in the city which is delivered through a pipeline distribution system. The tax imposed by this section shall be at the rate of 8% of the charges made for such water and shall be collected from the service user by the water service supplier, or its billing agent.</p> <p>(‘65 Code, § 3-6.505) (Ord. 390-C.S., passed - - ; Am. Ord. Measure A, passed -- ; Am. Ord. 578, passed 11-4-08)</p> <p>Under Chapter 50 (Solid Waste Collection and Recycling) Section 50.036 (Construction and Demolition Waste Recycling Program Effective Threshold for Covered Projects) the following apply:</p> <p>(A) All projects within the city shall be considered covered projects and shall meet the diversion requirement and comply with all provisions of this chapter. For the purposes of determining whether a project meets the foregoing thresholds, all phases</p>	No other applicable plans, policies, or ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>of a project and all related projects taking place on a single or adjoining parcel, as determined by the compliance official, shall be deemed a single project.</p> <p>(B) All projects undertaken by the city shall be considered covered projects and shall meet the diversion requirement and comply with all provisions of this chapter. The city or its designee shall submit a Waste Management Plan (WMP) to the compliance official prior to beginning any construction or demolition activities and shall be subject to all applicable provisions of this chapter.</p> <p>(C) Demolition-only projects within the city shall be considered covered projects and shall comply with this chapter.</p> <p>(Ord. 680, passed 11-2-21)</p> <p>Under Chapter 52 (Section 52.52 Authority of Council to Designate Underground Utility Districts) the following apply:</p> <p>If, after any such public hearing, the Council finds that the public necessity, health, safety, or welfare requires such removal and such underground installation within a designated area, the Council shall, by resolution, declare such designated area an Underground Utility District and order such removal and underground installation. Such resolution shall include a description of the area comprising such district and shall fix the time within which the removal and underground installation shall be accomplished and within which affected property owners shall be ready to receive underground service. A reasonable time shall be allowed for the removal and underground installation, having due regard for the availability of labor, materials, and equipment necessary for the removal and for the installation of the underground facilities as may be occasioned thereby.</p> <p>('65 Code, § 6-8.303) (Ord. 50-C.S., passed - -)</p> <p>Under Chapter 53 (Stormwater and Urban Runoff Pollution Prevention) Section 53.10 (Control of Pollutants From State Permitted Construction Activities) state permitted construction activities must adhere to the following:</p> <p>(A) No person shall be granted a grading permit or shall commence or continue any construction activity that is subject to a General Construction Activity Stormwater NPDES permit without showing proof of having applied for such permit.</p> <p>(B) Any person engaged in a construction activity requiring an NPDES General Construction Activity Stormwater NPDES permit construction permit shall retain at the construction site the following documents:</p> <p>(1) A copy of the Notice of Intent to Comply with Terms of the General Permit to Discharge Water Associated with Construction Activity;</p> <p>(2) A waste discharge identification number issued by the SWRCB;</p> <p>(3) A Stormwater Pollution Prevention Plan and Monitoring Program Plan for the construction activity requiring the construction permit; and</p> <p>(4) Records of all inspections, compliance and non-compliance reports, evidence of self-inspection and good housekeeping practices.</p> <p>(C) Any person engaged in a construction activity in the city requiring an NPDES General Construction Stormwater Activity permit shall, upon reasonable request from a duly authorized officer of the city, provide any of the documents specified in paragraph (B) of this section and shall retain said documents for at least three years after completion of construction.</p> <p>(Ord. 530-C.S., passed 8-20-02)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>Under Section 53.11 (Control of Pollutants from Other Construction Activities) all other projects must adhere to the following:</p> <p>Any person engaged in a construction activity that is not subject to the General Construction Stormwater Activity NPDES permit but is subject to the municipal NPDES permit, shall be required to comply with requirements contained therein as specified in the city's Stormwater Quality Management Program, including any revisions made thereto.</p> <p>(Ord. 530-C.S., passed 8-20-02)</p> <p>Under Section 53.12 (Control of Pollutants from New Development/Redevelopment Projects) new development/redevelopment projects must adhere to the following:</p> <p>(A) Prior to the construction of a new development or redevelopment project, the subject project shall be evaluated for its potential to discharge pollutants to the MS4, based on its intended land use and other considerations. Such evaluation shall be conducted in accordance with development planning requirements established by the Regional Board or its Executive Officer, pursuant to the municipal NPDES permit, as specified in the city's Stormwater Quality Management Program, including any revisions made thereto.</p> <p>(B) Once a development or redevelopment project has been evaluated for its potential to discharge pollutants to the MS4, the city shall require appropriate BMPs to be installed during construction for implementation following project completion. The prescription of such BMPs shall be in keeping with development planning requirements established by the Regional Board or its Executive Officer, pursuant to the municipal NPDES permit, as described more particularly in the city's Stormwater Quality Management Program.</p> <p>(Ord. 530-C.S., passed 8-20-02)</p> <p>Section 53.19 (Low Impact Development Standards) details the adoption of low impact development standards:</p> <p>(A) Title. This section shall be known as the low impact development ordinance of the City of San Gabriel.</p> <p>(B) Adoptions by reference.</p> <p>(1) Except as amended in the divisions below, Chapter 12.84 of the Los Angeles County Code, which is entitled "Low Impact Development Standards," is hereby incorporated in its entirety by reference and expressly incorporated herein. Chapter 12.84 of the Los Angeles County Code is hereby made a part of this section as if, for all intents and purposes, fully set forth in this section. This adoption by reference shall include any subsequent amendments to Chapter 12.84 unless otherwise modified in this section.</p> <p>(2) A certified copy of Chapter 12.84 of the Los Angeles County Code is on file in the office of the City Clerk for public record and inspection.</p> <p>(3) If there is any inconsistency between any provisions of Chapter 12.84 of the Los Angeles County Code and other provisions of this municipal code, such other provisions of this municipal code shall prevail.</p> <p>(C) Amendments. Chapter 12.84 of the Los Angeles County Code is hereby amended as follows:</p> <p>(1) Section 12.84.420 of Chapter 12.84 of the Los Angeles County Code is hereby amended to amend the following definitions:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>COUNTY. The City of San Gabriel.</p> <p>DEVELOPMENT. Any construction, rehabilitation, redevelopment or reconstruction of any public or private residential project (whether single-family, multi-unit or planned unit development); industrial, commercial, retail and other non-residential projects, including public agency projects; or mass grading for future construction. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility, nor does it include emergency construction activities required to immediately protect public health and safety.</p> <p>PUBLIC WORKS. The City of San Gabriel Department of Public Works.</p> <p>REDEVELOPMENT. Land-disturbing activity that results in the creation, addition, or replacement of 5,000 square feet or more of impervious surface area on an already developed site. REDEVELOPMENT includes, but is not limited to: the expansion of a building footprint, addition or replacement of a structure, replacement of impervious surface area that is not part of a routine maintenance activity, and land disturbing activities related to structural or impervious surfaces. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility, nor does it include emergency construction activities required to immediately protect public health and safety.</p> <p>REGIONAL BOARD. The California Regional Water Quality Control Board, Los Angeles Region.</p> <p>(2) Section 12.84.430.E.2 of Chapter 12.84 of the Los Angeles County Code is hereby amended to amend to read as follows:</p> <p>"2. Any development project for which a complete discretionary or nondiscretionary permit application was filed with the City of San Gabriel prior to June 28, 2015."</p> <p>(3) Section 12.84.440.B of Chapter 12.84 of the Los Angeles County Code is hereby amended to read as follows:</p> <p>"B. Low impact development plans shall be submitted in accordance with the Low Impact Development Standards Manual issued by the County of Los Angeles Department of Public Works, a copy of which shall be located in the San Gabriel Public Works Department."</p> <p>(D) Responsibility for administration. This chapter shall be administered by the Director of Public Works of the City of San Gabriel.</p> <p>(Ord. 624-C.S., passed 12-1-15)</p> <p>Section 153.132 (Stormwater Runoff) lists general standards for stormwater runoff:</p> <p>(A) Site drainage. The site drainage and stormwater runoff shall comply with stormwater runoff regulations and National Pollution Discharge Elimination Systems (NPDES) requirements and Chapter 53, Stormwater and Urban Runoff Pollution Prevention, of the San Gabriel Municipal Code. Where feasible, drainage shall be retained on site and directed toward landscaped areas.</p> <p>(B) Best management practices. BMPs shall incorporate numeric design criteria to infiltrate, filter, or treat storm water runoff. Design criteria are provided in the NPDES permit. BMPs include but are not limited to bioretention facilities: catch basin inserts: cisterns: constructed wetlands: dry wells: extended/dry detention basins or underground detention tanks: infiltration basins: infiltration trenches: media filtration: porous pavement: storm drain inserts: vegetated filter strips: vegetated swales; and wet ponds.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(Ord. 608-C.S., passed 5-10-14)</p> <p>Under Chapter 150 (Building Regulations) Section 150.001 the City adopts the 2022 Edition, California Energy Code, including Appendix Dchapter 1-A, and 2022 Edition, California Green Building Standards Code. ('65 Code, § 8-1.01) (Ord. 457-C.S., passed 11-21-95; Am. Ord. 500-C.S., passed 6-3-99; Am. Ord. 532- C.S., passed 10-15-02; Am. Ord. 575-C.S., passed 11-20-07; Am. Ord. 587 C.S., passed 12-7-10; Am. Ord. 607-C.S., passed 11-19-13; Am. Ord. 630-C.S., passed 12-6-16; Am. Ord. 655, passed 11-19-19; Am. Ord. 686, passed 11-15-22)</p> <p>Under Chapter 150 (Building Regulations) Section 150.200 (Existing Landscapes) the following apply to water-efficient landscape requirements:</p> <p>(A) Water waste resulting from inefficient landscape irrigation leading to excessive runoff, low head drainage, overspray, and other similar conditions where water flows onto structures is prohibited.</p> <p>(B) All landscape areas, whether installed pursuant to this subchapter or not, shall be maintained in a healthful and sound condition. Irrigation systems and their components shall be maintained in a fully functional manner consistent with the originally approved design and the provisions of this subchapter.</p> <p>(C) Landscapes shall be maintained to ensure water-efficiency. A regular maintenance schedule should include, but not be limited to, checking, adjusting and repairing irrigation equipment; resetting the automatic controller; aerating and dethatching turf areas; replenishing mulch; fertilizing; pruning; and weeding in all landscaped areas.</p> <p>('65 Code, § 7-9.04) (Ord. 414-C.S., passed - -) Penalty, see § 10.99</p> <p>Under Chapter 153 (Zoning Code) Section 153.534 (Landscape Design Principles) the following apply:</p> <p>(F) Use of native and drought resistant plants. Landscape designs shall feature native and/or related plant species, especially in areas adjacent to existing native vegetation, to take advantage of the unique natural character and diversity of the San Gabriel Valley and the adaptability of native plants to local environmental conditions. Where feasible, the re-establishment of native habitats should be incorporated into the landscape design. In the same manner, landscape designs shall utilize drought tolerant plant materials to the maximum extent feasible. The use of drought-tolerant plants should enrich the existing landscape character, conserve water and energy, and provide a pleasant and varied visual appearance as well as habitat for local wildlife. San Marino	<p>Land Use Element:</p> <p>General Goal 6. Accommodate future needs for municipal facilities.</p> <p>Community Services Chapter:</p> <p>Objective CS.22 Identify opportunities to co-locate telecommunications and technology equipment.</p> <p>Policy: Encourage the placement of cable, utility and any other telecommunications and technology equipment to share locations both above and below ground.</p> <p>Objective CS.25 Ensure that utility poles and facilities are operational, safe and aesthetically pleasing.</p> <p>Natural Resources Chapter:</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Chapter 22.06 (Department of Community Development- Duties) Chapter 22.06.07: (Grading Plan and Compliance With Stormwater Management, Section 23.16.18 (Stormwater Management and Rainwater Retention), Article 16 (Water Efficient Landscaping) Section 23.16.21 (Water Waste Prevention) Article 03 (Utility User Tax) 26.03.09: (Water User Tax), section 26.03.06 (Electricity User Tax), Article 06 (Connection to public sewers) Section 16.06.01 (Required Connection to Public Sewers) and Section 16.06.02 (Sewer Connection Charges), Article 9 (Construction and Demolition Debris) Section 09.07.06 (Waste Management Plan Requirement)</p> <p>Under Article 22.06 (Department of Community Development- Duties) Chapter 22.06.07: (Grading Plan and Compliance With Stormwater Management) the following apply:</p>	No other applicable plans, policies, or ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Preserve Lacy Park as open space.</p> <p>Objective NR.1 Maintain the park’s infrastructure and ensure that it meets the needs of residents.</p> <p>Policies: Upgrade restroom facilities.</p> <p>Maintain patron conveniences, such as drinking fountains, tables, and benches.</p> <p>Objective NR.2 Sustain turf areas within the park while conserving water resources.</p> <p>Policies: Take advantage of latest irrigation technology where appropriate.</p> <p>Set irrigation systems to water during periods when evaporation is likely to be minimal.</p> <p>Upgrade and maintain an adequate drainage system.</p> <p>Objective NR.13 Comply with National Pollutant Discharge Elimination System (NPDES).</p> <p>Policies: Detect and eliminate illegal discharges and illicit disposal practices.</p> <p>Control pollutants in surface run-off as appropriate.</p> <p>Implement a public information campaign regarding illegal dumping.</p> <p>Enhance public awareness about the catch basin and storm drain system and the impact of illegal dumping on the environment.</p> <p><i>Water</i></p> <p>Goals</p> <ol style="list-style-type: none">1. Maintain a high level of water quality.2. Conserve water resources.3. Provide adequate water supply to residents, businesses and public agencies. <p>Objective NR.18 Comply with requirements of the urban water management plan adopted by the water agency.</p> <p>Objective NR.19 Coordinate efforts with the water agency to support supply, production and distribution to San Marino residents and businesses, and public agencies.</p> <p>Objective NR.20 Educate the community regarding water resources.</p> <p>Policies:</p> <ul style="list-style-type: none">– Encourage water conservation measures.– Support partnerships between San Marino water providers and those of neighboring agencies and other water districts. <p>Objective NR.21 Adopt water conservation measures for City facilities.</p> <p>Policies:</p> <ul style="list-style-type: none">– Retrofit City facilities as reasonable to conserve water. <p>Utilize current water conservation technology in irrigation systems.</p>	<p>A. There shall be filed with each urban lot split subdivision a grading plan showing graded building site elevations and grading proposed for the creation of building sites or for construction or installation of improvements to serve the subdivision. The grading plan, together with the original topography contours, may be shown on an exhibit to the urban lot split map. The grading plan shall indicate approximate earthwork volumes of proposed excavation and filling operations. In the event no grading is proposed, a statement to that effect shall be placed on the urban lot split map. In no event shall grading pursuant to an application submitted under this chapter exceed fifty (50) cubic yards. The grading plan shall comply with Section 25.16.01.</p> <p>B. Applicant shall comply with Section 14.12.01 and 25.16.01 related to compliance with the City’s MS4 Water Quality Permit. (Ord. O-21-1385, 12-15-2021; amd. Ord. O-21-1386, 1-12-2022)</p> <p>Under Article 16 (Water Efficient Landscaping) Section 23.16.18 (Stormwater Management and Rainwater Retention):</p> <p>A. Stormwater management practices minimize runoff and increase infiltration which recharges groundwater and improves water quality. Implementing stormwater best management practices into the landscape and grading design plans to minimize runoff and to increase on site rainwater retention and infiltration are encouraged.</p> <p>B. Project applicants shall refer to the city or regional water quality control board for information on any applicable stormwater technical requirements.</p> <p>C. All planted landscape areas are required to have friable soil to maximize water retention and infiltration.</p> <p>D. It is strongly recommended that landscape areas be designed for capture and infiltration capacity that is sufficient to prevent runoff from impervious surfaces (i.e., roof and paved areas) from either: 1) the one inch (1"), 24-hour rain event or 2) the eighty fifth percentile, 24-hour rain event, and/or additional capacity as required by any applicable local, regional, state or federal regulation.</p> <p>E. It is recommended that stormwater projects incorporate any of the following elements to improve on site stormwater and dry weather runoff capture and use:</p> <ol style="list-style-type: none">1. Grade impervious surfaces, such as driveways, during construction to drain to vegetated areas.2. Minimize the area of impervious surfaces such as paved areas, roof and concrete driveways.3. Incorporate pervious or porous surfaces (e.g., gravel, permeable pavers or blocks, pervious or porous concrete) that minimize runoff.4. Direct runoff from paved surfaces and roof areas into planting beds or landscaped areas to maximize site water capture and reuse.5. Incorporate rain gardens, cisterns, and other rain harvesting or catchment systems.6. Incorporate infiltration beds, swales, basins and dry wells to capture stormwater and dry weather runoff and increase percolation into the soil.7. Consider constructed wetlands and ponds that retain water, equalize excess flow, and filter pollutants. (Ord. O-16-1308, 12-14-2016) <p>Under Article 16 (Water Efficient Landscaping) Section 23.16.21 (Water Waste Prevention) the following apply:</p> <p>A. Water waste is prohibited per chapter XIV, article 16 of this code.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>B. Runoff shall not leave the target landscape due to low head drainage, overspray, or other similar conditions where water flows onto adjacent property, nonirrigated areas, walks, roadways, parking lots, or structures.</p> <p>C. Restrictions regarding overspray and runoff may be modified if:</p> <ol style="list-style-type: none">1. The landscape area is adjacent to permeable surfacing and no runoff occurs; or2. The adjacent nonpermeable surfaces are designed and constructed to drain entirely to landscaping. (Ord. 0-16-1308, 12-14-2016) <p>Under Article 03 (Utility User Tax) section 26.03.06 (Electricity User Tax) the following apply:</p> <p>A. There is hereby imposed a tax upon every person using electricity in the city. The tax imposed by this section shall be at the rate of five percent (5%) of the charges made for such electricity, and for any supplemental services or other associated activities directly related to and/or necessary for the provision of electricity to the service user, which are provided by a service supplier or nonutility service supplier to a service user. The tax shall be collected from the service user by the service supplier or nonutility service supplier, or its billing agent.</p> <p>Under Article 03 (Utility User Tax) 26.03.09: (Water User Tax) the following apply</p> <p>A. There is imposed a tax upon every person using water in the city which is transported and delivered through a pipeline distribution system. The tax imposed by this section shall be at the rate of five percent (5%) of the charges made for such water.</p> <p>Under Article 06 (Connection to public sewers) Section 16.06.01 (Required Connection to Public Sewers) and Section 16.06.02 (Sewer Connection Charges) the following apply:</p> <p>Whenever the director of public works shall declare a sewer line available for connection, no person shall construct or enlarge or pump out a new or existing cesspool with regard to any property in the city; provided, however, that any person dissatisfied with such director's decision or failure to decide thereon may request a decision thereon by the city council. In the event the decision of such director or council finds the availability of a sewer line, then such person shall forthwith connect to such available sewer line. (1954 Code §19.42; amd. 1994 Code)</p> <p>Section 16.06.02 (Sewer Connection Charges)</p> <p>Any person who desires to or is obliged to connect to any sewer installed at city in any place in the city shall pay a sewer connection charge to the city as set by city council resolution. (Ord. 0-07-1191, 10-10-2007)</p> <p>Under Article 9 (Construction and Demolition Debris) Section 09.07.06 (Waste Management Plan Requirement)</p> <p>All applicants for covered projects shall complete and submit a waste management plan as part of the application packet for a permit issued for a covered project. The waste management plan shall include the following information with any volume to weight conversion rate calculations, and shall be attested by the applicant, under penalty of perjury, as true and correct for all stated facts and as a best estimate based on all information reasonably available about the project, where all of the facts cannot be ascertained:</p> <p>A. The estimated volume or weight of construction and demolition debris;</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>B. The estimated volume or weight of construction and demolition debris that will be diverted;</p> <p>C. The estimated volume or weight of construction and demolition debris that will be landfilled as solid waste;</p> <p>D. The identification of the hauler(s), vendor(s), and facility(ies) that will collect or receive the diverted and landfilled construction or demolition debris or that will deconstruct the structure; and</p> <p>E. The estimated dates on which demolition or construction is to commence and conclude. (Ord. 0-05-1181, 9-14-2005)</p>	
South El Monte	<p>Land Use Element:</p> <p>Policy 6.3 Promote vigorous enforcement of City codes, including building, zoning, and health and safety, to promote property maintenance.</p> <p>Resources Element:</p> <p>Goal 3.0 Ensure that City residents and businesses are provided with a reliable: safe domestic water source.</p> <p>Policy 3.1 Continue to participate in the National Pollution Discharge Elimination Systems (NPDES) program under the direction of the Los Angeles County Department of Public Works.</p> <p>Policy 3.2 Support Federal government efforts to reduce contamination within the San Gabriel groundwater basin.</p> <p>Goal 4.0 Achieve broad based participation in water conservation programs.</p> <p>Policy 4.1 Provide residents and businesses with information about landscaping and irrigation systems that reduce water use.</p> <p>Policy 4.2 Establish regulations that require new developments to incorporate water-saving plumbing fixtures.</p> <p>Goal 6.0 Control and reduce the amount of waste generated in the City.</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Chapter 8.44 (Stormwater Management and Discharge Control) Section 8.44.030 (Purpose and intent), Chapter 13.04 (Sanitary Sewer and Industrial Waste Ordinance Adopted) Section 13.04.010 (Adoption of county sanitary sewer and industrial waste ordinance) Under Chapter 13.12 (Solid Waste Handling and Recycling Services) 13.12.710 (General requirements), Chapter 15.26 Undergrounding of Utilities Section 15.26.010 (Underground requirements), Chapter 15.12 Green Building Standards Code) Section 15.12.010 (Los Angeles County Code, Title 31, Green Building Standards Code adopted)</p> <p>Under Chapter 8.44 (Stormwater Management and Discharge Control) Section 8.44.030 (Purpose and intent) the following apply:</p> <p>A. The purpose of this chapter is to ensure the future health, safety and general welfare of the citizens of the city and the water quality of the receiving waters of the County of Los Angeles and surrounding coastal areas by:</p> <ol style="list-style-type: none">1. Reducing pollutants in stormwater discharges to the maximum extent practicable;2. Regulating illicit connections and illicit discharges and reducing the level of contamination of stormwater and urban runoff in the municipal stormwater system; and3. Regulating nonstormwater discharges to the municipal stormwater system. <p>B. The intent of this chapter is to protect and enhance the quality of watercourses, water bodies, and wetlands within the city in a manner consistent with the Federal Clean Water Act, the California Porter-Cologne Water Quality Control Act and the municipal NPDES permit.</p> <p>C. This chapter is also intended to provide the city with the legal authority necessary to control discharges to and from those portions of the municipal stormwater system over which it has jurisdiction as required by the municipal NPDES permit, and fully and timely comply with the terms of the municipal NPDES permit while the watershed management program is being developed by the permittees under the municipal NPDES permit, and in contemplation of the subsequent amendment of this chapter or adoption by the city of additional provisions of this chapter to implement the subsequently adopted watershed management program, or other programs developed under the municipal NPDES permit.</p> <p>D. This chapter also sets forth requirements for the construction and operation of certain commercial development, new development and redevelopment and other projects (as further defined herein) which are intended to ensure compliance with the stormwater mitigation measures prescribed in the current MS4 permit. This chapter</p>	No other applicable plans, policies, or ordinances were identified

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>authorizes the director to define and adopt applicable best management practices and other stormwater pollution control measures, as provided herein, to carry out all inspections including entering entities discharging to the MS4, conduct surveillance, conduct monitoring, cite infractions and to impose fines pursuant to this chapter. Except as otherwise provided herein, the director shall administer, implement and enforce the provisions of this section.</p> <p>E. The city council shall approve and enter into interagency agreements as deemed necessary by the city council to control the contribution of pollutants of the shared MS4. (Ord. 1182 §1, 2014)</p> <p>Under Chapter 13.04 (Sanitary Sewer and Industrial Wate Ordinance Adopted) Section 13.04.010 (Adoption of county sanitary sewer and industrial waste ordinance) the following apply:</p> <p>A. Title 10, Utilities, Division 2, Sanitary Sewers and Industrial Waste, of the Los Angeles County Code, as amended and in effect on July 27, 1989, except as amended in this chapter, is adopted by reference as the sanitary sewers and industrial waste ordinance of the city.</p> <p>B. A copy of Title 20, Division 2, as amended, of the Los Angeles County Code, has been deposited with the city clerk and shall at all times be maintained by the city clerk for use and examination by the public. Temple City	<p>Land Use Element:</p> <p>Goal LU 7: Sustainable Built Environment. A built environment that contributes to a sustainable environment, minimizes consumption of scarce environmental resources, and reduces greenhouse gas emissions.</p> <p>LU 7.1 Sustainable Land Development. Promote land use and urban design development practices that reduce energy and water consumption, pollution, greenhouse gas emissions, and waste and noise generation. These should include practices described in the United States Green Building Council’s LEED-ND rating program such as concentrating development to promote walking in lieu of the automobile, capturing and re-using stormwater onsite, managing and reusing wastewater, orienting buildings to maximize opportunities for solar energy use, use of drought tolerant and native landscapes, shading of exterior public spaces, and recycling and salvage for reuse of construction and demolition debris.</p> <p>LU 7.2 Sustainable Design and Construction. Require new development and substantial renovations to comply with the Cal Green Code’s sustainable building practices incorporating a “whole system” approach to designing and constructing buildings that consume comparatively less energy, water, and other natural resources, reduce wastes, facilitate natural ventilation, use daylight effectively, and are healthy, safe, comfortable, and durable.</p> <p>Natural Resources Element:</p> <p>Goal NR 3: Infrastructure. Reduced pollution and emissions from utility infrastructure.</p> <p>NR 3.2 Private Development Infrastructure. Facilitate the use of renewable energy and water-efficient systems in residential, commercial, industrial, and other private development projects, provided that they are designed consistent with the quality and character of Temple City.</p> <p>Goal NR 6: Conservation and Protection. Conservation and protection of Temple City’s groundwater resources.</p> <p>NR 6.1 Protection of Water Resources. Work with Los Angeles County Department of Public Works (LADPW), private property owners, and neighboring jurisdictions to</p>	<p>Municipal codes related to utilities and service systems relevant to the Plan Area can be found in Title 8 (Stormwater Pollution Elimination) Chapter 3 (Pollutant Source Reduction) Section 8-3-2 (Construction Activities), Article N (Site Planning and General Development Standards) Section 9-1N-10 (Low Impact Development (LID) Standards and Green Streets), Article O (Water Efficient Landscape) Section 9-1O-1 (Applicability), and Section 9-1O-2 (Landscape Water Use Standards), Chapter (Public Utilities) Section 6-3A-9 (Responsibility of Property Owners), and Chapter 2 (Sewers and Waste) Section 6-2C-15: (Licensed Contractors; Disposal of Construction and Demolition (C&D) Materials).</p> <p>Under Title 8 (Stormwater Pollution Elimination) Chapter 3 (Pollutant Source Reduction) Section 8-3-2 (Construction Activities) the following standards apply:</p> <p>E. Standard Best Management Practices: Stormwater runoff containing sediment, construction waste or other pollutants from the construction site and parking areas shall be reduced to the maximum extent practicable. All construction sites shall implement an effective combination of the erosion and sediment control best management practices (BMPs) listed in Table 7 and/or Table 8 of the Municipal NPDES Permit (where applicable). The following best management practices shall also apply to all construction projects within the city, and shall be required from the time of demolition of existing structure or commencement of construction until receipt of a certificate of occupancy.</p> <ol style="list-style-type: none">1. Sediment, construction waste, and other pollutants from construction activities shall be retained on the construction site to the maximum extent practicable.2. Structural controls such as sediment barriers, plastic sheeting, detention ponds, dikes, filter berms, etc., shall be utilized to the maximum extent practicable in order to minimize the escape of sediment and other pollutants from the site.3. All excavated soil shall be located on the site in a manner that minimizes the amount of sediments running onto the street, drainage facilities or adjacent properties and covered with appropriate materials until the soil is either used or removed from the site.	<p>Parkway Landscape Guidelines provide that it is the responsibility of the owner to maintain the parkway along property lines. The Temple City</p> <p>Municipal Code requires that it is maintained free of obstructions, but leaves creative capacity for deciding how to landscape it. The Plan provides guidelines on setback, permeability and plant requirements.</p> <p>Pavement Management Plan Update (2013) provides background information on the City’s current pavement status and provides guidance on future pavement improvements.</p> <p>Sewer System Management Plan (2014) Update</p> <p>Goals:</p> <ol style="list-style-type: none">1. The City's sanitary sewer collection system is properly operated, maintained, and managed to reduce the frequency and severity of SSOs and their potential impacts on public health, safety, and the environment.5. The City's sewer system is designed, constructed, and funded to provide adequate capacity to convey base and peak flows while meeting or exceeding applicable regulations, laws, and the generally accepted practices relative to sanitary sewer system operation and maintenance. <p>Actions:</p> <ol style="list-style-type: none">1. If possible, completely recover the overflow sewage, return it to the sewer system, and clean up the contaminated area. <p>Temple City Parks and Open Space Master Plan</p> <p>The Parks and Open Space Master Plan enables the City to recalibrate its goals and actions as a result of evolving community needs, constantly changing trends and the new economic normal that exists in light of the economic downturn that occurred in after the initial Master Plan was completed. The plan’s recommendations focus on meeting the needs of the changing demographics and ensure sustainable operations of the City’s parks, open spaces and programs.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>conserve areas for the purpose of groundwater recharge and stormwater management.</p> <p>NR 6.2 Flood Control Channels. Work with Los Angeles Department of Public works, to explore the removal of the concrete-lining along the Eaton Wash and Arcadia Wash where flood protection is not compromised allowing for greater groundwater recharge and wildlife habitat.</p> <p>NR 6.3 Groundwater Management Plan. Support the monitoring of groundwater quality and ensure compliance of groundwater management plans with the California Water Code.</p> <p>NR 6.4 New Development and Post-Development Stormwater Runoff. Require new development and post-development stormwater runoff to control sources of pollutants and improve and maintain urban runoff water quality through site design, stormwater treatment and protection measures, and best management practices (BMPs) consistent with the City’s National Pollutant Discharge Elimination System (NPDES) Permit.</p> <p>NR 6.5 Low Impact Development Standards. Incorporate Low Impact Development (LID) strategies and BMPs into new development or substantial renovation projects in an effort to restore the pre-development hydrograph.</p> <p>NR 6.6 Development in Adjoining Communities. Participate in the review of proposed development projects located within the Main San Gabriel Basin to assure that there are no adverse impacts on local surface or groundwater quality.</p> <p>NR 6.7 Landscaping. Require public and private landscaping in new development and renovation projects to be designed to reduce water demand, detain runoff, decrease flooding, and recharge groundwater through activities such as the selection of plant material, soil preparation, and the installation of irrigation systems.</p> <p>NR 6.8 Pervious Surfaces. Maximize pervious surfaces within new or substantially renovated development projects, to capture stormwater runoff and percolate into the groundwater basin, to the extent feasible.</p> <p>NR 6.9 Efficient Use. Explore the development of public and private programs to reduce water use and water waste associated with landscape irrigation, including the planting of native and drought-tolerant plans, use of efficient irrigation systems, and collection and recycling of runoff.</p> <p>NR 6.10 Regional Coordination. Coordinate with local and regional jurisdictions on groundwater use to minimize overdraft conditions of aquifers and to address water quality issues in the Main San Gabriel Valley Basin.</p> <p>NR 6.11 Water Resilience. Maintain contingency plans for continuing water service in the event of large-scale emergencies.</p> <p>Community Services Element:</p> <p>Policy CS 2.6 Low Impact Design. Promote sustainable building materials, energy and water efficient designs, permeable paving, and other low impact features in the renovation of existing facilities and construction of new community facilities.</p> <p>Policy CS 8.11 Sustainable Parks. Require that new parks are designed and existing parks are retrofitted over time to incorporate sustainable development and landscape practices that reduce water and energy consumption.</p>	<p>4. No washing of construction or other vehicles is permitted adjacent to a construction site. No water from the washing of construction or other vehicles is permitted to run off the construction site, or to otherwise enter the municipal storm sewer system.</p> <p>H. Construction Activities Requiring Construction General Permit Coverage: No person shall commence or continue any construction activity in the city that causes the disturbance of one (1) acre or more of soil by clearing, grading, excavation or demolition without first demonstrating to the satisfaction of the city manager that such person has filed a "notice of intent" to comply with the Construction General Permit for stormwater discharges associated with construction activity, or has obtained a waste discharge identification number from the State Water Resources Control Board and has prepared a state Stormwater Pollution Prevention Plan (SWPPP). (Ord. 96-799; amd. Ord. 23-1072)</p> <p>Under Article N (Site Planning and General Development Standards) Section 9-1N-10 (Low Impact Development (LID) Standards and Green Streets) the following projects must comply with this section:</p> <p>B. Low Impact Development (LID) and Green Streets Policy:</p> <p>1. Applicability: The priority new development and redevelopment projects listed in Part VIII.F.1.a-b of the Municipal NPDES Permit shall comply with the provisions of subsection B1a of this section.</p> <p>a. Redevelopment Projects:</p> <p>(1) Where redevelopment results in an alteration to more than fifty percent (50%) of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, the entire project must be mitigated.</p> <p>(2) Where redevelopment results in an alteration of less than fifty percent (50%) of impervious surfaces of a previously existing development, and the existing development was not subject to post-construction stormwater quality control requirements, only the alteration must be mitigated, and not the entire development.</p> <p>(3) Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety. Impervious surface replacement, such as the reconstruction of parking lots and roadways which does not disturb additional area and maintains the original grade and alignment, is considered a routine maintenance activity. Redevelopment does not include the repaving of existing roads to maintain original line and grade.</p> <p>2. Specific Requirements: The site for every priority development project shall be designed to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use.</p> <p>a. Street and road construction of 10 thousand (10,000) square feet or more of impervious surface shall follow USEPA guidance regarding managing wet weather with green infrastructure: green streets (December 2008 EPA-833-F-08-009) to the maximum extent practicable.</p> <p>b. The remainder of priority development projects shall prepare a LID plan to comply with the following:</p>	<p>The Document highlights on-going, short-term, mid-term, and long-term goals for future actions and improvements to parks and open space.</p> <p>City of Temple City Sewer System Management Plan (SSMP) 2014 Update was established to comply with State Water Resources Control Board adopted Statewide general Waste Discharge Requirements (WDRs) under Order No. 2006-0003. This occurred in response to growing public concern about the water quality impacts of sanitary sewer overflows (SSOs), particularly those that cause beach closures, adverse effects to other bodies of water, or pose serious health and safety or nuisance problems.</p> <p>The goals of the SSMP are as follows:</p> <p>1. The City's sanitary sewer collection system is properly operated, maintained, and managed to reduce the frequency and severity of SSOs and their potential impacts on public health, safety, and the environment.</p> <p>2. When an SSO occurs, prompt action is taken to identify, contain, and remove the cause; report the event to the appropriate regulatory authorities; and notify the public in a timely manner.</p> <p>3. All SSOs, system deficiencies, and remedial actions taken are well documented.</p> <p>4. The City's sewer system operators, employees, contractors, responders, and other agents are adequately trained and equipped to address an SSO event.</p> <p>5. The City's sewer system is designed, constructed, and funded to provide adequate capacity to convey base and peak flows while meeting or exceeding applicable regulations, laws, and the generally accepted practices relative to sanitary sewer system operation and maintenance.</p>

	<p>Goal CS 10: Trails. An accessible and connected trail system that provides recreational opportunities throughout Temple City.</p> <p>CS 10.2 Safe Trails. Ensure that trails are safe, well-marked, and well lit.</p> <p>Goal CS 11: Water System. High quality reliable potable water supply, services, and facilities that meet existing and future water needs.</p> <p>CS 11.1 Reliable Supply and Cost-Effective Distribution. Continue to maintain cooperative contracts with water service providers, including East Pasadena, Sunny Slope, Golden State, and California American Water Companies, and San Gabriel County Water District (water service providers) to ensure a reliable supply of high quality potable water and a cost-effective distribution system to meet existing and future needs.</p> <p>CS 11.2 Adequate Water Infrastructure. Ensure that the City’s potable water infrastructure is sized adequately for storage capacity and treatment to serve existing and future needs.</p> <p>CS 11.3 Infrastructure Maintenance. Ensure adequate capital improvement funding for the rehabilitation or replacement of critical infrastructure that has reached the end of its useful life.</p> <p>CS 11.4 Drinking Water Standards. Continue to work with water service providers to provide domestic water that meets or exceeds state and federal drinking water standards.</p> <p>CS 11.5 Best Practices. Employ best practices to maintain the highest possible energy efficiency in the water infrastructure system to reduce costs and decrease greenhouse gas emissions.</p> <p>Goal CS 14: Energy Provision and Conservation. Adequate and reliable energy services and facilities that promote efficiency and conservation.</p> <p>Goal CS 12: Wastewater System. Adequate wastewater collection service and treatment system facilities that minimize adverse effects to water quality and meet existing and future sewer needs.</p> <p>CS 12.1 Sewer System Management. Work with the Sanitation Districts of Los Angeles County (LACSD) to provide adequate wastewater treatment, collection capacity, infrastructure, and maintenance that complies with applicable discharge standards.</p> <p>CS 12.2 Wastewater Best Practices. Work with LACSD to identify and implement, as feasible, best practices and technologies for wastewater collection and treatment including those that reduce the amount of wastewater requiring treatment, avoid sewage spills affecting the Eaton Wash and Arcadia Wash, maintain the highest possible energy efficiency, and reduce costs and greenhouse gas (GHG) emissions.</p> <p>CS 12.3 New Development. Ensure that new development pays its fair share contribution to the wastewater treatment and collection system necessary to serve the demands created by the development.</p> <p>CS 12.4 Sewer Deposit Management. Continue to work with LACSD to enforce the restriction of material or liquid deposits (e.g. storm drain discharge, ground water discharge, and toxic gases) into the City’s sewer system and raise public awareness of proper disposal practices to prevent contamination of water and wastewater.</p> <p>Policy CS 14.1 Adequate Service and Facilities. Coordinate with Southern California Edison (SCE) and Southern California Gas (SoCal Gas) to continue to supply adequate</p>	<p>(1) Retain stormwater runoff on site for the stormwater quality design volume (SWQDv) defined as the runoff from: the eighty fifth percentile twenty-four (24)-hour runoff event as determined from the Los Angeles County eighty fifth percentile precipitation isohyetal map; or the volume of runoff produced from a 0.75 inch, twenty four (24)-hour rain event, whichever is greater.</p> <p>(2) Minimize hydromodification impacts to natural drainage systems as defined in the Municipal NPDES Permit.</p> <p>(3) To demonstrate technical infeasibility, the project applicant must demonstrate that the project cannot reliably retain one hundred percent (100%) of the SWQDv on site, even with the maximum application of green roofs and rainwater harvest and use, and that compliance with the applicable post-construction requirements would be technically infeasible by submitting a site specific hydrologic and/or design analysis conducted and endorsed by a registered professional engineer, geologist, architect, and/or landscape architect.</p> <p>D. Installation And Maintenance:</p> <p>1. The development project's LID and hydromodification control features shall be maintained and shall remain operable at all times and shall not be removed from the project site unless and until such features have been replaced with approval from the Community Development Director.</p> <p>2. The owner of the subject development project site shall record a covenant and agreement. approved as to form and content by the Director, in the office of the Los Angeles County Registrar-Recorder /County Clerk indicating that the owner of the subject development project site is aware of and agrees to the requirements in this chapter. (Ord. 13-979; amd. Ord. 19-1036; Ord. 23-1072)</p> <p>Under Article O (Water Efficient Landscape) Section 9-10-1 (Applicability) the following projects must comply with water efficient landscape ordiances:</p> <p>A. New landscape projects with an aggregate landscape area equal to or greater than five hundred (500) square feet, requiring a building or landscape permit, plan check or design review;</p> <p>B. Rehabilitated landscape projects with an aggregate landscaped area equal to or greater than two thousand five hundred (2,500) square feet, requiring a building or landscape permit, plan check or design review;</p> <p>C. New or rehabilitated landscape projects with an aggregate landscape area of two thousand five hundred (2,500) square feet or less may comply with the performance requirements of this article or conform to the prescriptive measures contained in appendix A of the guidelines on file in the city;</p> <p>D. New or rehabilitated projects using treated or untreated graywater or rainwater capture on site, any lot or parcels within the project that has less than two thousand five hundred (2,500) square feet of landscape area and meets the lot or parcel's landscape water requirement (estimated total water use) entirely with the treated or untreated graywater or through stored rainwater capture on site is subject only to appendix A of the guidelines on file in the city. (Ord. 19-1036)</p> <p>Under Section 9-10-2 (Landscape Water Use Standards) the projects mentioned above must adhere to the following standards:</p> <p>A. For applicable landscape installation or rehabilitation projects subject to section 9-10-1, the estimated total water use allowed for the landscaped area must not exceed the maximum allotment MAWA calculated using an evapotranspiration (ET)</p>

	<p>electricity and natural gas services and facilities, while also developing strategies to increase the use of renewable energy sources.</p> <p>Policy CS 14.3 Energy Efficient Design. Encourage site, building, and landscape designs that reduce energy demands and utilize renewable energy sources.</p> <p>Policy CS 14.5 City Operations. Promote city operations as a model for energy efficiency and green building and install, as feasible, energy-efficient lighting, appliances, and alternative-energy infrastructure within City facilities.</p> <p>Goal CS 16: Solid Waste. Reduction in the generation and disposal of solid waste sent to landfills.</p> <p>CS 16.1 Adequate Services and Waste Collection Facilities. Ensure that the City’s refuse hauling company maintains adequate residential, commercial, and industrial solid waste and mixed recycling collection service levels and solid waste facilities in accordance with state law.</p> <p>CS 16.2 Waste Collection Performance. Periodically review waste collection performance to verify adequacy of service.</p> <p>CS 16.3 AB 939. Continue to partner, plan for, and document compliance with AB 939 source reduction and recycling requirements of 50 percent diversion of solid waste from landfills.</p> <p>CS 16.4 AB 341. Strive to partner, plan for, and document compliance with AB 341 source reduction, recycling, and composting requirements of 75 percent by 2020.</p> <p>CS 16.5 Recycling and Reuse of Construction Waste. Continue to enforce the waste management plan for certain construction and demolition projects to reduce landfill waste by diverting a minimum of 50 percent of the construction and demolition debris (e.g., concrete, asphalt paving, asphalt roofing, lumber, gypsum board, rock, and soil).</p>	<p>adjustment factor of 0.55 for residential areas and 0.45 for nonresidential areas, except for special landscaped areas where the maximum applied water allowance (MAWA) is calculated using an ET adjustment factor of 1.0; or the design of the landscaped area must otherwise be shown to be equivalently water efficient in a manner acceptable to the city; as provided in the guidelines.</p> <p>B. Irrigation of all landscaped areas must be conducted in a manner conforming to the rules and requirements, and will be subject to penalties and incentives for water conservation and water waste prevention as determined and implemented by the local water purveyor or as mutually agreed by local water purveyor and the local agency. (Ord. 19-1036)</p> <p>Under Chapter (Public Utilities) Section 6-3A-9 (Responsibility of Property Owners) the following applies:</p> <p>The responsibilities of real property owners or others having control over real property, shall be as follows:</p> <p>A. Every person owning, operating, leasing, occupying or renting a building or structure within a district shall construct and provide that portion of the service connection on his property between the facilities referred to in section 6-3A-8 of this article, and the termination facility on or within said building or structure being served all in accordance with the applicable rules, regulations and tariffs of the respective utility or utilities on file with the commission;</p> <p>Under Chapter 2 (Sewers and Utility) Section 6-2C-15: Licensed Contractors; Disposal of Construction and Demolition (C&D) Materials the following apply:</p> <p>A. Prior to commencing any construction or demolition project, every applicant shall submit a properly completed "Construction Waste Management Plan" (CWMP) to the CWMP Compliance Official or Building Inspector, in a form as prescribed by that official, as a portion of the building or demolition permit process.</p> <p>B. Submission Of The CWMP: The completed CWMP shall contain, at a minimum, the following information:</p> <ol style="list-style-type: none">1. The estimated volume or weight of project waste to be generated by material type;2. Declaration of whether the materials will be sorted on site or mixed;3. The maximum volume or weight of such materials that can feasibly be diverted via reuse, recycling or salvage for future use or sale by material type;4. The vendor(s) that the applicant proposes to use to haul the materials;5. Facility(ies) the materials will be hauled to, and their expected diversion rates (by volume or weight) by material type; and6. Estimated "feasible" volume or weight of construction and demolition waste that will be disposed of. <p>Because actual material weights are not available in this stage, estimates are used. In estimating the volume or weight of materials as identified in the CWMP, the applicant shall use the standardized conversion rates approved by the City of Temple City for this purpose. Approval of the CWMP as complete and accurate shall be a condition precedent to the issuance of any building or demolition permit. If the applicant calculates the projected estimated feasible diversion rate as described above, and finds the rate does not meet the diversion goal of sixty-five percent (65%),</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>the applicant must then submit information supporting the lower diversion rate. If this documentation is not included, the CWMP shall be deemed incomplete.</p> <p>C. Compliance With The CWMP; Documentation: Prior to final inspection of any covered project, the applicant shall submit to the CWMP Compliance Official or Building Inspector, documentation proving that it has met the diversion requirement for the project. The diversion requirement shall be that the applicant has diverted at least sixty-five (65%) of the total C&D debris generated by the project via reuse or recycling. This documentation shall include all of the following:</p> <ol style="list-style-type: none">1. Receipts from the vendor or facility that collected or received each material showing the actual weight or volume of that material;2. A copy of the previously submitted CWMP for the project adding the actual volume of weight of each material diverted and landfilled; and3. Any additional information the applicant believes is relevant to determining its efforts to comply in good faith with this chapter. <p>D. Licensed contractors performing work within the scope of their licenses within the City may collect, transport and dispose or recycle self-generated construction and demolition materials using their own vehicles and employees, after obtaining a self-haul permit, provided that the licensed contractor adheres to the standards for disposal of construction and demolition material provided in the California Green Building Standards Code (California Code of Regulations Title 24, Part 11), as those provisions may be amended. Construction and demolition materials must be transported to a landfill or recycling facility permitted by CalRecycle or exempt from permitting.</p> <p>E. Licensed contractors shall not contract with a solid waste enterprise to collect, transport and dispose or recycle of construction and demolition materials unless that solid waste enterprise has a franchise from the City to perform said services. 3.19.3 Impact Assessment

3.19.3.1 Significance Criteria

Appendix G of the State CEQA Guidelines was reviewed to determine whether the Program would result in significant impacts related to utilities and service systems. The criteria listed below consider if the Plan would:

- 19(a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?*
- 19(b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?*
- 19(c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?*
- 19(d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?*
- 19(e) Comply with federal, state, and local statutes and regulations related to solid waste?*

3.19.3.2 Methodology

This analysis qualitatively evaluates the construction and operations impacts of the future projects implemented under the Plan on utilities and service systems based on literature review of conditions within and adjacent to the Plan Area and the regulatory environment present. Where feasible, maps have been prepared to visualize these conditions.

The analysis focuses on issues related to wastewater treatment, stormwater drainage, water supply, and solid waste disposal/landfilling. The key construction-related impacts were identified and evaluated qualitatively based on the physical characteristics of the Plan Area and the magnitude, intensity, location, and duration of activities that could occur under the Plan.

3.19.3.3 Plan Impacts

- 3.19.3.3.1 19(a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

3.19.3.3.1.1 Greenway Paths and Greenway Amenities

Construction

Less than Significant with Mitigation. Typical construction activities for greenway paths and greenway amenities would not involve the use of natural gas. Electric construction tools that would be used during project-related construction would be powered by diesel-operated generators at a site rather than by

electricity from the power grid. It is anticipated that construction sites would use portable chemical toilets, and no wastewater demand would occur. Minor water usage for dust control or concrete washout may be required, but water demand during construction is not expected to be substantial enough to require new or expanded water supply sources.

The vast majority of ground disturbance associated with construction of greenway amenities would be small in scale and would not require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities. If necessary, the relocation of above-ground utilities such as power poles or telecommunication structures to accommodate construction of a greenway paths and greenway amenities project would be coordinated with the local service provider and is not anticipated to result in significant impacts. Since greenway paths and greenway amenity projects are considered small in scale, substantial ground disturbance is not anticipated to occur with the exception of a larger amenity, such as the restroom, which would require excavation and ground disturbance in areas where existing utilities could be present. Construction of new restrooms may potentially require relocation of these utilities, or expansion of the water lines, sewer lines, electric lines, and natural gas lines to operate a proposed restroom or pipeline connections to municipal water sources or recycled water pipelines (e.g., purple pipe) for irrigation. Such small-scale actions could be classified as “construction of new” water facilities; however, these would consist of plumbing or piping that would utilize existing supply systems and would therefore not result in impacts beyond the associated ground disturbance during the construction phase.

Because greenway paths would be constructed within the District ROW (including fee property and easements but excluding projects completed by the District), project proponents would be required to obtain a Flood Permit from the District. The Flood Permit process includes an evaluation of the site for opportunities and constraints, including determining existing utilities (gas lines, water lines, electric lines, etc.). For those aspects of projects that would not require a Flood Permit (such as project activities on parcels adjacent to the ROW), impacts are considered potentially significant. However, the implementation of **MM UTL-1: Prepare and Implement Utilities Plan** would ensure that all existing utilities are identified and avoided or addressed safely and in compliance with District, County, and local rules and regulations. This mitigation measure also ensures that project proponents compare the expected operational demand and generation for the various utility resources against existing supply and infrastructure to determine whether sufficient capacity exists to accommodate the future project. All ground disturbance would be resurfaced as quickly as possible.

Construction of greenway paths and amenities may result in significant environmental effects from the relocation or construction of new or expanded water, wastewater treatment or stormwater drainage, electric power or natural gas facilities, but impacts would be reduced to less than significant with implementation of **MM UTL-1: Prepare and Implement Utilities Plan**.

Operations

Less than Significant with Mitigation. Operation of greenway paths and amenities is not anticipated to result in increased demand on existing utilities or the construction of new utilities because the Plan does not propose new habitable structures that would increase population, and the Greenway Network is most likely to serve existing residents in the area.

Demand for electricity, water supply, and wastewater treatment would vary depending on the size and intensity of use of each project. For example, water use and wastewater generation for a restroom assuming low-flow fixtures of 1.28 gallons per flush and 0.4 gallons per minute for bathroom faucets, would be approximately 1.68 gallons of water used per visitor with an equal volume of wastewater generated. For greenway paths and greenway amenities with an assumed visitation rate of 500 visitors per day and assuming every visitor uses the restroom, water use and wastewater generation would be roughly 840 gallons per day. Operation of greenway paths and greenway amenities would require water for landscaping, water stations, and restrooms; electricity for lighting and some amenities (e.g., restroom); and the use of fuels or electric charging for landscape equipment and mobile sources (e.g., mowers, leaf blowers, trimmers, etc.). Greenway paths and greenway amenities would attract recreational users that would rely on utilities and would generate wastewater and solid waste if restrooms are constructed.

To further reduce energy demand associated with Plan components, the *Design Guidelines and Standards* specify solar-powered lighting fixtures for Plan projects and provide guidance for ensuring vegetation is water efficient and suited for the climate of the Plan Area. Furthermore, energy and water use would be greatly reduced by implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, which requires the implementation of emissions reduction strategies for future projects to significantly reduce the consumption of energy and water and reduce waste. This measure is described in detail in Section 3.8, Greenhouse Gas Emissions. Additional discussions of how the Plan and the design of future projects would reduce or eliminate energy, water, and waste usage and would be designed using the most efficient energy, water, and waste management strategies are provided in Sections 3.3, Air Quality and 3.6, Energy.

All projects proposed under the Plan are required to capture and treat stormwater such that impacts from increases in impervious surface are offset by new or additional stormwater treatment (see Section 3.10, Hydrology and Water Quality). Water required for landscaping would be restricted to the minimum volume needed to establish plants in and around the greenway paths and amenities and runoff at the site would flow to stormwater management facilities for infiltration or be routed to the existing storm drain system.

Future projects designed under the Plan would adhere to the *Design Guidelines and Standards* and implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would ensure responsible use of electricity, water, and wastewater during operation of the greenway paths and amenities; thereby limiting their impact to service systems. Therefore, operation of greenway paths and greenway amenities is not expected to require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects. Operational impacts would be less than significant with mitigation.

Mitigation Measures

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies.

MM UTL-1: Prepare and Implement Utilities Plan. Utilities searches are required for all projects occurring on District ROW. For those projects proposed for adjacent parcels, project proponents shall conduct utilities search to identify the location of existing utilities in the project area and determine if

construction activity would impact existing utility lines. If results show no impact, project shall proceed. If potential impact is identified or if new/expanded infrastructure is required for project implementation, the proponent shall prepare a utilities plan during design that:

- Identifies the location of existing utilities and connections and new/expanded infrastructure that will be required to connect to existing services
- Quantifies demand and generation factors for construction of the new/expanded infrastructure on a project-specific basis and determine whether supply/capacity can meet demand
- Identifies project modifications that will minimize any significant environmental impact on utilities

As part of the utilities plan, the project proponent shall prepare a utilities report that compares the expected operational demand and generation for the various utility resources against existing supply and infrastructure to determine whether sufficient capacity exists to accommodate the project; if any insufficiency is identified, the project proponent shall modify the project to avoid the impact in consultation with the affected utility provider(s) and in compliance with site-specific conservation features above those required by the applicable codes and ordinances.

Significance After Mitigation

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure responsible use of electricity, water, and wastewater during operation of the greenway paths and amenities; thereby limiting their impact to service systems. **MM UTL-1: Prepare and Implement Utilities Plan** would ensure that all existing utilities are identified and avoided or addressed safely and in compliance with District, County, and local rules and regulations. and also ensures that project proponents compare the expected operational demand and generation for the various utility resources against existing supply and infrastructure to determine whether sufficient capacity exists to accommodate the future project. Therefore, with the implementation of mitigation measures, impacts of construction and operations would be less than significant.

3.19.3.3.1.2 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces

Construction

Less than Significant with Mitigation. For future greenway path and amenities components, construction impacts to utilities would be as described above. Construction of a pocket park and greenspace could require installation of new irrigation lines, plumbing, or piping, if not already present on the subject parcel, and could be supplied by the existing water supply systems. No new or expanded supply systems would be constructed. Typical construction activities for greenway paths and pocket parks and greenspaces would not involve the use or relocation of natural gas. Electric construction tools would be powered by diesel-operated generators at a site rather than by electricity from the power grid. It is anticipated that construction sites would use portable chemical toilets, and an increase in wastewater service is not expected. Minor water usage for dust control or concrete washout may be required, but water demand during construction is not expected to be substantial enough to require new or expanded water supply sources.

With implementation of **MM UTL-1: Prepare and Implement Utilities Plan** the inclusion of a pocket park (the typical 1-acre park or the larger 25-acre park considered in this analysis) would not be expected to result in significant environmental impacts due to the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or

telecommunications facilities above that already described for greenway paths and amenities. **MM UTL-1: Prepare and Implement Utilities Plan** would further ensure that project proponents compare the expected operational demand and generation for the various utility resources against existing supply and infrastructure to determine whether sufficient capacity exists to accommodate the Project. All ground disturbance would be resurfaced or planted with appropriate vegetation as quickly as possible. Consequently, impacts to utilities during construction would be less than significant with mitigation.

Operations

Less than Significant with Mitigation. During operation of greenway paths and pocket parks and greenspaces, the demand for electric power, water supply, and wastewater service would vary depending on the size and intensity of use of each project. Future projects that include pocket parks would have a greater demand for water and electricity based on the size of the proposed park and planting palette installed. Additionally, depending on the planting plan, the water demand for a 1-acre pocket park could range from 850 gallons per day (a 1-acre area planted with native plants) to 4,500 gallons per day (a 1-acre turf grass field). Projects implemented under the Plan would follow the *Design Guidelines and Standards*, including described planting strategies that focus on native, drought tolerant species and irrigation using drip irrigation methods. However, while the *Design Guidelines and Standards* provide a standard for 95 percent native, drought tolerant plantings within the District ROW, there is no such standard for adjacent parcels. Further, the Plan includes sports fields as potential recreational amenities within the pocket park category. Therefore, the potential exists for pocket park or greenspace planted entirely with turfgrass and sprinkler irrigation, which would have the highest water and demand. Accordingly, the largest park considered under the Plan, could result in increased water demand of 112,500 gallons per day if planted with turf grass, in addition to the water demand of up to 3,500 daily visitors using drinking fountains and restrooms. Even under this, the largest potential park/greenspace scenario possible under the Plan, operation would not be expected to result in demand for these utilities great enough to require later construction of additional utility connections or facilities, as discussed below. This is because adherence to the *Design Guidelines and Standards* would require use of drought tolerant planting and water saving features, and implementation of **MM UTL-1: Prepare and Implement Utilities Plan** would ensure that project proponents compare the expected operational demand and generation for the various utility resources against existing supply and infrastructure to determine whether sufficient capacity exists to accommodate the project prior to constructing the project. Therefore, greenway paths and pocket parks or greenspaces designed would not be built without knowledge of the utility demands of future projects. The *Design Guidelines and Standards* specify solar-powered lighting fixtures for Plan projects for energy efficiency. They also provide guidance for ensuring vegetation is water efficient and suited for the climate of the Plan Area so that pocket parks and greenspaces do not create excessive demand for water supply. Energy and water use would be greatly reduced by implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** as described above for greenway paths and greenway amenities. These policies, guidelines, and mitigation measures ensure that even large greenway paths and associated parks/greenspaces would be designed using the most efficient energy, water, and waste management strategies.

With regard to natural gas or telecommunication facilities, operation of a pocket park or greenspace would not require relocation or expansion of facilities, above and beyond that which would occur during development of a greenway and greenway amenities.

Because future projects designed under the Plan would adhere to the *Design Guidelines and Standards* and through implementation of **MM UTL-1: Prepare and Implement Utilities Plan**, requiring future utility demands to be calculated during design, operation of greenway paths, pocket parks or greenspaces would not require relocation or construction of new or expanded water, wastewater service, or stormwater management, electric power, natural gas, or telecommunications facilities that could cause significant environmental effects. Project proponents shall also implement **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** to ensure responsible use of electricity, water, and wastewater; reducing demand to service systems. Impacts would be less than significant with mitigation.

Mitigation Measures

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies.

MM UTL-1: Prepare and Implement Utilities Plan.

Significance After Mitigation

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure responsible use of electricity, water, and wastewater during operation of the greenway paths and amenities; thereby limiting their impact to service systems. **MM UTL-1: Prepare and Implement Utilities Plan** would ensure that all existing utilities are identified and avoided or addressed safely and in compliance with District, County, and local rules and regulations. and also ensures that project proponents compare the expected operational demand and generation for the various utility resources against existing supply and infrastructure to determine whether sufficient capacity exists to accommodate the future project. Therefore, with the implementation of mitigation measures, impacts of construction and operations would be less than significant.

3.19.3.3.1.3 Greenway Paths and Greenway Amenities + Safe Crossings

Construction

Less than Significant with Mitigation. For future greenway path and amenities projects, impacts to utilities from construction would be as described above. Construction of greenway paths and safe crossings would involve ground disturbance, such as trenching and excavating, in the District ROW and adjacent parcels that could require significant expansion or relocation of utilities, depending on the location of the project and the final design configuration.

The types of safe crossings that could be constructed under the Plan vary from simple striping of existing crossings to construction of bridges over channels in the Plan Area, railroad grade crossings, or below grade underpasses. The degree of disturbance associated with construction of greenway paths and safe crossings could range from ADA-compliant ramps, signage, safety striping, or signals to major construction of large crossing infrastructure such as bridges or a deck/cantilever segment. Larger or more complex project designs, such as a bridge or deck/cantilever segment, may require or result in the relocation or construction of new or expanded water, wastewater service or stormwater management,

electric power, or natural gas, but not likely telecommunications facilities. Greenway paths and safe crossings would be constructed in heavily urbanized areas with residences, business, and roadways in proximity. The highly developed nature of the Plan Area means that any ground disturbance of paved or unpaved areas could result in conflict with existing utilities. Future projects proposed within the District ROW (fee property and easements but excluding projects completed by the District) would require a Flood Permit from the District, which would require evaluation of the site for opportunities and constraints, including determining existing utilities (e.g., gas lines, water lines, electric lines). For future projects that would not require a Flood Permit, implementation of **MM UTL-1: Prepare and Implement Utilities Plan** would require project proponents to determine whether sufficient capacity exists to accommodate the project.

Safe crossings could also result in significant alterations to existing stormwater management facilities to ensure that some types of crossings, such as below-grade crossings or underpasses, do not flood. Per the *Design Guidelines and Standards*, infrastructure would be provided as needed for projects involving undercrossings so stormwater runoff drains immediately from the surface and does not pond.

Therefore, construction of greenway paths and safe crossings may result in significant environmental effects from the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power or natural gas facilities which would be reduced to less than significant with adherence to the *Design Guidelines and Standards* as well as implementation of **MM UTL-1: Prepare and Implement Utilities Plan**.

Operations

Less than Significant with Mitigation. Operation of safe crossings would have no impact on water or wastewater demand. Any electricity usage for signals would be consistent with existing demand and not require construction of a new electrical or telecommunications facility. Natural gas would not be required for any safe crossing projects. Therefore, the inclusion of safe crossings with a greenway path and amenities project is not anticipated to result in any greater operational impacts than as described above for greenway paths and amenities.

Furthermore, implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would ensure responsible use of electricity, water, and wastewater; thereby limiting their impact to service systems. Impacts would be less than significant with mitigation.

Mitigation Measures

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies.

MM UTL-1: Prepare and Implement Utilities Plan.

Significance After Mitigation

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure responsible use of electricity, water, and wastewater during operation of the greenway paths and amenities; thereby limiting their impact to service systems. **MM UTL-1: Prepare and Implement Utilities Plan** would ensure that all existing utilities are identified and avoided or addressed safely and in compliance with District, County, and local rules and regulations. and also ensures that project proponents compare the expected operational demand and generation for the various utility resources

against existing supply and infrastructure to determine whether sufficient capacity exists to accommodate the future project. Therefore, with the implementation of mitigation measures, impacts of construction and operations would be less than significant.

3.19.3.3.1.4 Greenway Paths and Greenway Amenities + Stormwater Management

Construction

Less than Significant with Mitigation. For future projects, impacts to utilities from construction would be as described above. The *Design Guidelines and Standards* requires all future projects implemented under the Plan to treat project-related stormwater runoff. To ensure future projects are not in conflict with utilities, the *Design Guidelines and Standards* require that stormwater BMPs be setback horizontally and vertically from existing utility infrastructure based on coordination with individual utility companies. Stormwater capacity would be verified during design as applicable, and temporary retention facilities may be used while construction of the proposed stormwater features is underway.

Stormwater management facilities are listed on Table 2.3-5 in Chapter 2, Project Description. The construction and installation of the stormwater management features included in the Plan were evaluated in detail in Section 3.14 EWMP PEIR (2015) and that evaluation is incorporated by reference herein.

Depending on the location of future projects, utilities, project footprint, depth of construction, and other construction details, construction of stormwater management features could require the relocation or construction of new or expanded water, wastewater service, stormwater management, electric power, telecommunications, or natural gas facilities. Construction of greenway paths and stormwater management facilities may require trenching/excavation and repaving/resurfacing, and relocation or construction of utilities, potentially causing significant environmental effects. Because greenway paths and stormwater management facilities would be constructed within the District ROW (including fee property and easements but excluding projects completed by the District), project proponents would be required to obtain a Flood Permit from the District, which would require an evaluation of the site for opportunities and constraints, including determining existing utilities (gas lines, water lines, electric lines, etc.). For future projects that would not require a Flood Permit, implementation of **MM UTL-1: Prepare and Implement Utilities Plan** would ensure that all existing utilities are identified and avoided or addressed safely and in compliance with all local, State, and Federal rules and regulations. All ground disturbance would be resurfaced or vegetated.

Typical construction activities for greenway paths and stormwater management facilities would not involve the use of natural gas. Electric construction equipment or tools needed for construction would be powered by diesel-operated generators at a site rather than by electricity from the power grid. It is anticipated that construction sites would use portable chemical toilets and an increase in wastewater service is not expected. Minor water usage for dust control, truck wheel-washing, cement mixing, or concrete washout may be required, but water demand during construction is not expected to be substantial enough to require new or expanded water supply sources. Therefore, construction of greenway paths and stormwater management facilities may result in significant environmental effects from the relocation water, wastewater service or stormwater management, electric power or natural gas facilities which would be reduced to less than significant with implementation of **MM UTL-1: Prepare and Implement Utilities Plan**.

Operations

Less than Significant. The purpose of stormwater management beneficial project elements is to reduce runoff and improve water quality. These beneficial project elements would not increase demand for water, wastewater, electricity, telecommunications, or natural gas. Additionally, the proposed stormwater management beneficial project elements designed for infiltration would augment local water supplies through enhanced stormwater recharge to groundwater. No adverse effects to new or expanded water supply resources or entitlements would occur. Stormwater management beneficial project elements are not anticipated to significantly increase demand for water, wastewater, electricity, telecommunications, or natural gas.

All projects proposed under the Plan are required to capture and treat stormwater such that impacts from increases in impervious surface are offset by new or additional stormwater treatment (see Section 3.10, Hydrology and Water Quality). Water required for landscaping would be restricted to the minimum volume needed to establish plants in and around the greenway paths and to provide appropriate vegetation for those stormwater management facilities that feature plants, such as bioswales. Any runoff would infiltrate into groundwater or be routed to the existing storm drain system.

As discussed in the Construction section above, greenway paths and stormwater management facilities would be designed to ensure existing utilities have capacity for the demand from future projects. Therefore, operation of greenway paths and stormwater management facilities would not be expected to require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities. Impacts would be less than significant.

Mitigation Measures

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies.

MM UTL-1: Prepare and Implement Utilities Plan.

Significance After Mitigation

For construction, **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would ensure responsible use of electricity, water, and wastewater during operation of the greenway paths and amenities; thereby limiting their impact to service systems. **MM UTL-1: Prepare and Implement Utilities Plan** would ensure that all existing utilities are identified and avoided or addressed safely and in compliance with District, County, and local rules and regulations. and also ensures that project proponents compare the expected operational demand and generation for the various utility resources against existing supply and infrastructure to determine whether sufficient capacity exists to accommodate the future project. Therefore, with the implementation of mitigation measures, construction impacts would be less than significant.

Impacts would be less than significant for operation. No mitigation is required.

3.19.3.3.2 19(b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

3.19.3.3.2.1 Greenway Paths and Greenway Amenities

Construction

Less than Significant. Construction of the greenway paths and greenway amenities would require the use of water to spray for dust control, truck wheel-washing, as well as cement mixing. It is estimated that projects may require water trucks using approximately 5,000 gallons (0.02 acre-feet) per day during construction. However, it is not anticipated that demand for water during construction of the greenway paths and greenway amenities would require construction or expansion of water supply or treatment infrastructure. The 2020 IWRP does not provide supply and demand estimates (Metropolitan 2022). However, the 2015 IWRP reported that the California State Water Project anticipated that water supplies available to Metropolitan for the next 20 years would average between 984,000 and 1,213,000 acre-feet. The Colorado River long term balance was estimated to be approximately 3.2 million acre-feet by 2060 (Metropolitan 2016). An average water truck would only use 0.0000016 percent of the lowest projected water supply for the California State Water Project per day. Therefore, construction of greenway paths and amenities would result in less than significant impacts on present or future water supply.

Operations

Less than Significant. As described above in Section 3.19.1.1, Water Services, various water providers serve the Plan Area cities and communities. Operation of greenway paths and amenities under the proposed Plan would be served by the water providers with jurisdiction over the future project's location. A typical restroom (sinks, toilets) would present the largest potential water use for a greenway paths and greenway amenities project. As a conservative estimate, if a future project were to include restrooms and anticipated 1,000 daily visitors to the greenway path were to use the restrooms each day, the water supply demand would be approximately 3,010 gallons. This is based on 3 gallons required to flush a toilet and 1.6 gallons to flush a urinal. If a typical bathroom features three toilets (3 gallons per flush for 1,000 flushes) and two urinals (1.6 gallons per flush for 500 visitors), the maximum demand per day would be 3,010 gallons. The *Design Guidelines and Standards* do not address restroom efficiency; therefore, this conservative estimate does not take into account the use of low-flow plumbing fixtures, which would further reduce water demand for greenway amenities. Furthermore, the Plan does not include development of any habitable structures that would increase local population, and visitors are anticipated to be residents of the area, so additional water supply sources are not necessary.

Metropolitan, Upper District, SGVWMD, and TVWMD as well as the General Plan all have water management and resource plans that address water supply and demand using growth projections. These plans contain water conservation strategies and policies to reduce water demand and prioritize future supply that will be needed to accommodate growth. However, as discussed above in Construction, while some landscaping, gardens, and other amenities will require water supply for irrigation or drinking, the most water intensive of amenities (restrooms) would only demand a small amount of water of the total water supply in the Plan Area. However, to further reduce demand on existing water supply, recycled water may be used to provide water for landscaping at greenway paths and greenway amenities, if available. Additionally, conservation efforts for water use would be included

where practicable. These could include planting drought-tolerant vegetation, using drip irrigation, using recycled water, following County LID standards, selection of water capture stormwater management facilities, or using low-flow fixtures for restrooms and drinking stations. Therefore, operational impacts to water supply would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.19.3.3.2.2 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces

Construction

Less than Significant with Mitigation. For future projects with greenway amenities, pocket parks and greenspaces, construction impacts to water supply from greenway paths and amenities would be as described above. Construction of a pocket park or greenspace would increase the construction duration, which would result in a corresponding increase in water needed for dust control or other construction best management practices. For a 1-acre pocket park, the additional water required is anticipated to be roughly 8,000 gallons per day. For a 25-acre pocket park, the additional water required is anticipated to be roughly 32,000 gallons per day. Furthermore, to ensure projects are designed to conserve water, **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would require projects to implement specific measures related to indoor and outdoor water conservation and efficiency. Accordingly, it is not anticipated that water demand during construction of greenway paths and amenities + pocket park or greenspace would necessitate the construction or expansion of water supply or treatment infrastructure. Impacts would be less than significant with mitigation.

Operations

Less than Significant. As described in Section 3.19.3.3.1.2, Impact 19(a), above, projects that include a pocket park or greenspace would increase in water use based on the size of the proposed pocket park or greenspace and planting palette. Therefore, a pocket park or greenspace with the highest maximum water demand the largest potential park/greenspace scenario possible under the Plan, operation is not anticipated to demand greater than the available supply in average, wet, and dry years. Since projects would be designed and constructed to adhere to the *Design Guidelines and Standards*, ensuring sufficient water capacity for project use as well as being designed with water conserving strategies.

Mitigation Measures

MM UTL-1: Prepare Utilities Plan.

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies.

Significance After Mitigation

For construction, **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would ensure responsible use of electricity, water, and wastewater during operation of the greenway paths and amenities; thereby limiting their impact to service systems. **MM UTL-1: Prepare and Implement Utilities Plan** would ensure that all existing utilities are identified and avoided or

addressed safely and in compliance with District, County, and local rules and regulations. and also ensures that project proponents compare the expected operational demand and generation for the various utility resources against existing supply and infrastructure to determine whether sufficient capacity exists to accommodate the future project. Therefore, with the implementation of mitigation measures, construction impacts would be less than significant.

Impacts would be less than significant for operation. No mitigation is required.

3.19.3.3.2.3 Greenway Paths and Greenway Amenities + Safe Crossings

Construction

Less than Significant. For future projects with greenway amenities, pocket parks and greenspaces, construction impacts to water supply from greenway paths and amenities would be as described above. The addition of a safe crossing would not likely substantially increase the overall area of disturbance assumed for a greenway path, as safe crossings would be incorporated into the overall length of greenway path segment proposed. Accordingly, the water demand for dust control and laying concrete would not exceed that estimated for greenway paths and amenities. Thus, it is not anticipated that demand for water during construction of a safe crossing in addition to a greenway path would necessitate the construction or expansion of water supply or treatment infrastructure. Impacts would be less than significant.

Operations

Less than Significant. Operation of projects that include a safe crossing in addition to greenway paths and amenities would have no impact on water supply or water demand beyond that already described for greenway paths and amenities because a safe crossing would not include any infrastructure that requires water. Further, maintenance of safe crossings is not anticipated to include water use since these facilities do not require landscaping or washing. Therefore, impacts would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.19.3.3.2.4 Greenway Paths and Greenway Amenities + Stormwater Management

Construction

Less than Significant. For future projects with greenway amenities pocket parks and greenspaces, construction impacts to water supply from greenway paths and amenities would be as described above. The addition of stormwater management features would not likely increase the number of days for construction activity as stormwater management features would be incorporated into the overall length of greenway path segment proposed (Table 2.3-6 provides estimated days for construction for the largest stormwater BMP feature evaluated in this PEIR). As described in Section 3.14 of the EWMP PEIR and incorporated herein, implementation of the stormwater management features would not increase water demand. Further, in many cases, stormwater management features may be part of the overall construction material design rather than a separately constructed feature (e.g., use of permeable

pavement or decomposed granite for the greenway path). While additional water demand may be required for construction or during construction of stormwater management features in addition to a greenway path, it is not anticipated that construction of greenway paths and greenway amenities + stormwater management facilities would necessitate the construction or expansion of water supply or treatment infrastructure. Impacts would be less than significant.

Operations

Less than Significant. The purpose of stormwater management beneficial project elements is to reduce runoff and improve water quality. These beneficial project elements capture runoff and do not require additional water for operation. Maintenance of bioswales and other BMPs that contain vegetation would not increase the demand for water since they would be developed for low impact development. Additionally, the proposed stormwater management beneficial project elements designed for infiltration would augment local water supplies through enhanced stormwater recharge to groundwater. Therefore, operation of stormwater management facilities would not have a significant impact on water demand in wet, dry and average years. No new or expanded water supply resources or entitlements would be required, and impacts would be less than significant.

Mitigation Measures

No mitigation would be required.

Significance After Mitigation

Impacts would be less than significant. No mitigation would be required.

3.19.3.3.3 19(c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

3.19.3.3.3.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

No Impact. Construction activity associated with greenway paths and amenities would not require installation of permanent restroom facilities for workers and would be accommodated either through use of existing public restrooms or portable toilets brought to the construction site. Water sprayed for dust control would evaporate or infiltrate, and water used for truck wheel-washing would be contained onsite. Wastewater demand for construction would be de minimis and not result in a significant capacity increase. Therefore, no impacts would occur.

Operations

Less than Significant with Mitigation. Wastewater would be generated from restrooms and water fountains amenities during operation. If a proposed project included a restroom facility and anticipated a conservative estimate of 1,000 daily visitors to use the restrooms amenity each day, the water supply demand would be approximately 3,010 gallons (described in detail above in response to question 19(b)). The Sanitation Districts treats over 400 million gallons of wastewater per day. The anticipated volume of wastewater generated at a project site would be less than 0.00007 percent of the total daily volume

treated by the Sanitation Districts. Further, no new habitable structures are proposed which could increase population in the Plan Area and it is anticipated that visitors to projects implemented under the Plan would be current residents of the area and would not increase the demand for wastewater services. Accordingly, operation of a project that includes a greenway path and amenities such as a restroom or water fountains is not anticipated to result in a load that exceeds wastewater treatment capacity. Further, implementation of **MM UTL-1: Prepare and Implement Utilities Plan** would ensure that project proponents compare the expected operational demand and generation for the various utility resources against existing supply and infrastructure to determine whether sufficient capacity exists to accommodate the project prior to constructing the project, to ensure that impacts are less than significant.

Mitigation Measures

MM UTL-1: Prepare and Implement Utilities Plan.

Significance After Mitigation

No impacts would occur during construction. No mitigation is required.

For operations, **MM UTL-1: Prepare and Implement Utilities Plan** would ensure that all existing utilities are identified and avoided or addressed safely and in compliance with District, County, and local rules and regulations. and also ensures that project proponents compare the expected operational demand and generation for the various utility resources against existing supply and infrastructure to determine whether sufficient capacity exists to accommodate the future project. Therefore, with the implementation of mitigation measures, operation impacts would be less than significant.

3.19.3.3.4 19(d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

3.19.3.3.4.1 Greenway Paths and Greenway Amenities

Construction

Less than Significant. The California Integrated Waste Management Act of 1989 and its subsequent amendments required all California cities and counties to implement programs by 2000 that would reduce, recycle, or compost at least 50 percent of the quantity of waste produced. CalRecycle, formerly called California Integrated Waste Management Board, is the state entity that administers the act. To comply with the California Integrated Waste Management Act, projects implemented by the County are required to comply with the County's construction and demolition debris recycling specifications and reporting the volume of debris generated and the percentages of debris that are recycled and disposed in landfills. Future projects implemented by non-County jurisdictions within the Plan Area would comply with applicable requirements that address reduction of solid waste, as described in the 3.19.2, Regulatory Framework. Due to compliance with state and applicable local standards, construction waste is not anticipated to exceed capacity of local infrastructure. Therefore, impacts would be less than significant.

Operations

Less than Significant. Per the *Design Guidelines and Standards*, segments of proposed greenway paths sponsored by a project proponent would include an operations and maintenance agreement with the District that would require maintenance of all features by the project proponent, including but not limited to fencing, benches, trash receptacles, bike repair stations, shade structures, vegetation, irrigation, pavement, signing and striping, graffiti cleanup, people experiencing homelessness encampment cleanup, and litter and dumping removal. Therefore, trash or solid waste generated by users of the greenway paths and amenities would be collected in receptacles and sent to local solid waste handling facilities and the local municipality or agency would be responsible for ensuring that local facilities have capacity to handle the generated waste. Further, once the construction of the greenway path and any additional components is complete, operation and maintenance would be the responsibility of the local jurisdiction and solid waste collection would occur in accordance any local ordinances regarding solid waste reduction. Waste would be generated by users of the greenway paths and amenities and through regular maintenance of vegetation along the greenway path. Although greenway paths and amenities are assumed to generate up to 1,000 daily visitors, these visitors are anticipated to come from the local region (SGV and greater Los Angeles County). Operation of the greenway paths and greenway amenities would not involve the construction of any habitable structures that would be likely to increase regional population. Therefore, the waste generated would be similar to the same waste by those visitors if they were at a different location in the region. The amount of waste produced through recreational use of a greenway path is not anticipated to be substantial enough to exceed State or local standards or the capacity of local infrastructure. As described above for construction, all jurisdictions within the Plan Area contain policies in their general plans that address reduction of solid waste and operation of individual segments of greenway paths would be maintained by the local jurisdiction in accordance with all State and local standards, as per the *Design Guidelines and Standards*, and solid waste reduction goals. Accordingly, impacts would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.19.3.3.4.2 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces

Construction

Less than Significant. Construction of a pocket park or greenspace in addition to the greenway paths and amenities is anticipated to increase the amount of ground disturbed and volume of solid waste generated during construction. However, all project proponents would be required to comply with state and local policies regarding solid waste reduction, as described for greenway paths and amenities above. Therefore, despite a potentially greater area of disturbance, the amount of waste disposed to landfills would be minimized. Construction impacts would be as described above for greenway paths and greenway amenities. Impacts would be less than significant.

Operations

Less than Significant. Pocket parks and greenspaces are anticipated to increase the volume of waste generated since users would spend more time at these parks and greenspaces for rest from greenway paths, picnicking and gathering, and other uses. In addition, the number of daily visitors to pocket parks is estimated to be as high as 3,292 people at larger parks, in addition to the 1,000 daily visitors along the associated segment of greenway path. However, as described above, per the *Design Guidelines and Standards*, greenway paths would have the appropriate maintenance. Therefore, trash or solid waste generated by users of the greenway paths and amenities would be collected in receptacles and sent to local solid waste handling facilities and the local municipality or agency would be responsible for ensuring that local facilities have capacity to handle the generated waste. Further, project proponents would be required to comply with any local ordinances regarding solid waste reduction. The amount of waste produced through recreational use of a greenway path and amenities + pocket parks or greenspaces is not anticipated to be substantial enough to exceed State or local standards or the capacity of local infrastructure. Therefore, impacts would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.19.3.3.4.3 Greenway Paths and Greenway Amenities + Safe Crossings

Construction

Less than Significant. Construction of greenway paths and amenities + safe crossings is anticipated to increase the level of ground disturbance and volume of solid waste generated during construction. However, all project proponents would be required to comply with state and local policies regarding solid waste reduction, as described for greenway paths and amenities above. Therefore, despite a potentially greater area of disturbance from the addition of safe crossings, the amount of waste disposed to landfills would be minimized. Therefore, impacts would be less than significant.

Operations

Less than Significant. Since safe crossings do not include solid waste-generating beneficial project elements, impacts related to solid waste generation for a greenway path + safe crossing would be the same as described above for greenway paths and amenities. Therefore, impacts would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.19.3.3.4.4 Greenway Paths and Greenway Amenities + Stormwater Management

Construction

Less than Significant. Construction of greenway paths and amenities + safe crossings is anticipated to increase the level of ground disturbance and volume of solid waste generated during construction. However, all project proponents would be required to comply with state and local policies regarding solid waste reduction, as described for greenway paths and amenities above. Therefore, despite a potentially greater area of disturbance from the addition of safe crossings, the amount of waste disposed to landfills would be minimized. Therefore, impacts would be less than significant.

Operations

Less than Significant. Since the stormwater management subcomponent does not include solid waste-generating beneficial project elements, impacts related to solid waste generation for a greenway path and amenities + stormwater management facility would be the same as described above for greenway paths and amenities. Therefore, impacts would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.19.3.3.5 19(e) Comply with federal, state, and local statutes and regulations related to solid waste?

3.19.3.3.5.1 Greenway Paths and Greenway Amenities + Pockets Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant. During construction, solid waste would be generated from workers onsite and any demolition or removal of existing surfaces or fixtures at a project site. Project proponents would comply with federal, state, and local management and reduction statutes and regulations related to solid waste. These would include compliance with the California Integrated Waste Management Act, AB 75, and the California Solid Waste Reuse and Recycling Access Act.

Additionally, all of the municipalities within the Plan Area contain policies in their general plans that address reduction of solid waste. Waste-reduction techniques are incorporated into individual resource management plans and would be expected to include reuse and diversion of materials in the waste stream from landfill disposal. Compliance with local ordinances and state regulations would ensure that impacts are less than significant, and no mitigation is required.

Operations

Less than Significant. During operation and maintenance of the greenway paths and amenities, pocket parks and greenspaces, safe crossings, and/or stormwater management facilities, solid waste would be generated from the daily visitors to the Greenway Network and the various project subcomponent projects. Minimal waste may be generated by workers operating and maintaining the facilities, or trash

and debris may be removed during cleanouts of the stormwater management facilities. Trash and debris at stormwater management facilities would be captured by the facility before it reaches a receiving water body. The management of solid waste would become the responsibility of the County if within the unincorporated area or the local municipality in which it is located. However, the County and local jurisdictions are required to comply with federal, state, and local management and reduction statutes and regulations related to solid waste. These would include compliance with the California Integrated Waste Management Act, AB 75, and the California Solid Waste Reuse and Recycling Access Act, as well as individual municipalities' ordinances concerning reduction of solid waste. Therefore, impacts from operations would be less than significant and no mitigation is required.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Impacts would be less than significant. No mitigation is required.

3.19.3.4 Impacts of Conceptual Design Projects

This section discusses potential impacts from the 10 conceptual designs discussed in Section 2.4 above.

- 3.19.3.4.1 19(a) Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

Construction

Construction activity associated with each of the conceptual design projects would vary depending on the final siting and construction plans developed for each project. At the conceptual design phase, it would be speculative to assess if construction activity would require the relocation of any facilities in order to construct the project. However, the implementation of **MM UTL-1: Prepare and Implement Utilities Plan** would ensure that all existing utilities are identified and avoided or addressed safely and in compliance with County and local rules and regulations. This mitigation measure also ensures that project proponents compare the expected operational demand and generation for the various utility resources against existing supply and infrastructure to determine whether sufficient capacity exists to accommodate the Project. All ground disturbance would be resurfaced as quickly as possible. Accordingly, the construction impacts of all conceptual design projects would be less than significant with mitigation, and none of the conceptual design projects are anticipated to result in additional impacts not previously described above for greenway paths and the various additional components or result in impacts of greater severity than described above.

Operations

Detailed analysis of the operational demand for utilities for the conceptual design projects would be speculative at this conceptual design stage as demand would depend on understanding the final project location, size, plant palette/landscaping, as well as the presence of existing utilities in the final project site. All of the conceptual design projects would be required to capture and treat stormwater because of

low impact development requirements, and any impacts from an increase in impervious surface are offset by new or additional stormwater treatment (see Section 3.10, Hydrology and Water Quality). Water for landscaping and irrigation would be restricted to the minimum volume needed to establish plants. Any remaining surface water flows from landscaping would evaporate, infiltrate into the ground, or be routed to the storm drain system.

None of the conceptual design projects are anticipated to result in increased demand on any existing utilities, as the proposed projects do not involve construction of any new habitable structures that would increase population. The only conceptual design project that proposes a new structure that would require electricity, natural gas, water, or wastewater services is the Eaton Wash Spreading Ground Fitness Loop which includes a new restroom in the conceptual design drawing. However, energy and water use would be reduced by implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**. This measure is described in detail in Section 3.8, Greenhouse Gas Emissions. Additional discussions of how Plan projects would reduce or eliminate the need for energy, water, and waste treatment are provided in Sections 3.3, Air Quality and 3.6, Energy. These policies, guidelines, and mitigations ensure that even large greenway paths and their amenities would be designed using the most efficient energy, water, and waste management strategies.

Operation and maintenance of the conceptual design projects would not be expected to require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, beyond that would occur during construction activity because projects designed under the Plan would adhere to the *Design Guidelines and Standards* and implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would ensure responsible use of electricity, water, and wastewater during operation of the greenway paths and amenities; thereby limiting their impact to service systems. Impacts would be less than significant with mitigation. The conceptual design projects are not anticipated to result in impacts not described above for the Plan nor impacts of greater severity than described for the Plan.

3.19.3.4.2 19(b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?

Construction

Construction activity associated with each of the conceptual design projects would be within the bounds discussed for the overall Plan based on estimated size and the components included with each segment of greenway path. Therefore, water use during construction activity is not anticipated to exceed that estimated above in Section 3.19.3.3.2, Impact 19(b) for the Plan. Impacts would be less than significant and no mitigation is required.

Operations

As described above, operation and maintenance of individual projects would be the responsibility of the local jurisdiction in which the project is located. In some instances, a conceptual design project spans multiple jurisdictions, in which case the project proponent would coordinate between the local municipalities to determine maintenance and operation responsibilities. However, the local jurisdiction would confirm sufficient water supplies with the local service provider during plan review and prior to

approving the project. Further, all the municipalities within the Plan Area have policies regarding water conservation and water use in their general plans that would have to be complied with. A brief description of operation impacts for each conceptual design project is provided below in Table 3.19-3.

Table 3.19-3. Analysis of Operations of Conceptual Design Examples to Utilities and Service Systems

Conceptual Design Project	19(b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i> <i>Greenway, lighting, pollinator garden, seating, safe crossing, linear stormwater management</i>	Less than Significant. Water supply for operation of this conceptual design project would be limited to irrigation for the pollinator garden along the greenway path. The <i>Design Guidelines and Standards</i> provide guidance for ensuring vegetation is water efficient and suited for the climate of the Plan Area so that pocket parks and greenspaces do not create excessive demand for water supply. Therefore, impacts would be less than significant.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i> <i>Greenway, bike service station, pollinator garden, seating, safe crossing, stormwater management</i>	Less than Significant. Water supply for operation of this conceptual design project would be limited to irrigation for the pollinator garden and additional plantings along the segments of greenway path on both sides of the channel. The <i>Design Guidelines and Standards</i> provide guidance for ensuring vegetation is water efficient and suited for the climate of the Plan Area so that pocket parks and greenspaces do not create excessive demand for water supply. Therefore, impacts would be less than significant.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i> <i>Greenway, bike service station, park ribbon, shade structures, stormwater management, educational signage, outdoor classroom</i>	Less than Significant. Water supply for operation of this conceptual design would primarily consist of operation of a new restroom, as only minimal planting is included along the new greenway segment. As described above, water demand for a new restroom is estimated to be approximately 3,010 gallons per day. Compared to the total water available in the Plan Area, the operation of a single new restroom is not anticipated to adversely affect water supplies. Therefore, impacts would be less than significant.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i> <i>Greenway, safe crossing, landscaping</i>	Less than Significant. Operation of this project would be unlikely to require additional water supply over baseline levels as the only landscaping proposed would be improvements to an existing park that is already planted with a lawn. The <i>Design Guidelines and Standards</i> provide guidance for ensuring vegetation is water efficient and suited for the climate of the Plan Area so that pocket parks and greenspaces do not create excessive demand for water supply. Therefore, impacts would be less than significant.
San Dimas Wash at Arrow High School <i>City of Glendora</i> <i>Greenway, safe crossing, landscaping, shade structure, outdoor classroom, picnic area, seating</i>	Less than Significant. Operation of this project would be unlikely to require additional water supply over baseline levels as the only landscaping proposed would be improvements to an existing vegetated park area. The <i>Design Guidelines and Standards</i> provide guidance for ensuring vegetation is water efficient and suited for the climate of the Plan Area so that pocket parks and greenspaces do not create excessive demand for water supply. Therefore, impacts would be less than significant.
San Dimas Wash at Hollenbeck Park <i>City of Covina</i> <i>Greenway, safe crossing, seating, river overlook, community garden</i>	Less than Significant. Operation of this project would be unlikely to require additional water supply over baseline levels as the only landscaping proposed would be at a new community garden where residents could rent plots for planting. The proposed greenway path segment would be located along an already vegetated area of San Dimas and existing sports facilities. The <i>Design</i>

Conceptual Design Project	
	<i>Guidelines and Standards</i> provide guidance for ensuring vegetation is water efficient and suited for the climate of the Plan Area so that pocket parks and greenspaces do not create excessive demand for water supply.
<p>San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i> <i>Greenway, pocket park, overlook, stair climb</i></p>	<p>Less than Significant. Water supply for operation of this conceptual design project would consist of irrigation for planting areas within a new pocket park. This conceptual design would be located near recently completed segment of the San Jose Creek Regional Access project which contains plantings along San Jose Creek and would extend this planting palette to the small parcel proposed for a pocket park. The <i>Design Guidelines and Standards</i> provide guidance for ensuring vegetation is water efficient and suited for the climate of the Plan Area so that pocket parks and greenspaces do not create excessive demand for water supply. Therefore, impacts would be less than significant.</p>
<p>Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i> <i>Greenway, pollinator garden, permeable pavement, flexible greenspace</i></p>	<p>Less than Significant with Mitigation. Water supply for the operation of this conceptual design would consist of irrigation for a lawn space, as well as a pollinator garden, and plantings in an existing large parking lot at the Fairplex complex. As described above, water requirements for sod lawns are more extensive than other plantings, and could require up to 4,500 gallons per day per acre of proposed lawn. However, operation is expected to have sufficient water supplies in average, wet, and dry years with adherence to the design guidelines and standards and implementation of MM UTL-1: Prepare and Implement Utilities Plan, which would ensure that project proponents compare the expected operational demand and generation for the various utility resources against existing supply and infrastructure to determine whether sufficient capacity exists to accommodate the Project prior to constructing the project.</p>
<p>Walnut Creek at Syhre Park <i>Cities of Baldwin Park and West Covina</i> <i>Greenway, plaza, shade trees</i></p>	<p>Less than Significant. Water supply for operation of this conceptual design project would be limited to the irrigation needed for the few new shade trees proposed. The <i>Design Guidelines and Standards</i> provide guidance for ensuring vegetation is water efficient and suited for the climate of the Plan Area so that pocket parks and greenspaces do not create excessive demand for water supply. Therefore, impacts would be less than significant.</p>
<p>Walnut Creek at Pocket Park <i>City of West Covina</i> <i>Greenway, gateway, bike service station, picnic area, landscaping, pollinator garden, public art</i></p>	<p>Less than Significant. Water supply for operation of this conceptual design project would consist of irrigation for the pollinator garden, picnic area, and planting buffer along the greenway path. The <i>Design Guidelines and Standards</i> provide guidance for ensuring vegetation is water efficient and suited for the climate of the Plan Area so that pocket parks and greenspaces do not create excessive demand for water supply. Therefore, impacts would be less than significant.</p>

- 3.19.3.4.3 19(c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?

Construction

No Impact. Construction activity associated with each of the conceptual design projects would be the same as described above for the Plan. No new restroom facilities would be required for workers and any water use for dust control or truck wheel-washing will be captured and disposed of appropriately. No new wastewater treatment would be required to meet the wastewater generated from construction of a project. No impacts would occur.

Operations

Less than Significant. The only conceptual design project that includes a restroom facility is Eaton Wash at the spreading grounds. Operation of a single new restroom facility would be unlikely to result in an inadequate capacity from an existing wastewater provider to meet the Eaton Wash conceptual design's projected demand, especially as most visitors would be from the existing community. Other wastewater generated from operation would be minimal. Therefore, operation impacts would be less than significant for the Eaton Wash conceptual design project and no impacts would occur for the other nine conceptual design projects as there are no facilities proposed that would require wastewater treatment.

- 3.19.3.4.4 19(d) Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?

Construction and Operations

Less than Significant. As described above, projects implemented by the County are required to comply with the County's construction and demolition debris recycling specifications, including submitting reports to Public Works' Environmental Programs Division detailing the volume of debris generated and the percentages of debris that are recycled and disposed in landfills. All of the jurisdictions within the Plan Area contain policies in their general plans that address reduction of solid waste. During construction, a project proponent would comply with all state and local standards and solid waste reduction goals. Therefore, impacts for all conceptual design projects would be less than significant.

- 3.19.3.4.5 19(e) Comply with federal, state, and local statutes and regulations related to solid waste?

Construction and Operations

Less than Significant. As described above, projects implemented by the County are required to comply with the County's construction and demolition debris recycling specifications, including submitting reports to Public Works' Environmental Programs Division detailing the volume of debris generated and the percentages of debris that are recycled and disposed in landfills. All of the jurisdictions within the Plan Area contain policies in their general plans that address reduction of solid waste. During construction, a project proponent would comply with all state and local standards and solid waste reduction goals. Therefore, impacts for all conceptual design projects would be less than significant.

3.20 Wildfire

This section describes the existing conditions and applicable regulations pertaining to wildfires in the proposed Plan Area and describes the impacts associated with wildfires that could result from implementation of the proposed Plan.

Table 3.20-1. Summary of Potential Impacts of the Plan on Wildfire.

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the Plan:			
20(a). Substantially impair an adopted emergency response plan or emergency evacuation plan?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Less than significant	Construction: MM WF-1: Construction Coordination with Emergency and Fire Services Operation: No Mitigation
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Less than significant	
Greenway Paths + Safe Crossings	Significant and Unavoidable	Less than significant	
Greenway Paths + Stormwater Management	Significant and Unavoidable	Less than significant	
20(b). Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of wildfire?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Significant and Unavoidable	Construction: MM WF-2: Prepare a Construction Fire Protection Plan Operations: MM WF-3: Operations Fire Prevention Measures
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Significant and Unavoidable	
Greenway Paths + Safe Crossings	Significant and Unavoidable	Significant and Unavoidable	

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the Plan:			
Greenway Paths + Stormwater Management	Significant and Unavoidable	Significant and Unavoidable	
20(c). Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Significant and Unavoidable	Construction: MM WF-2: Prepare a Construction Fire Protection Plan Operations: MM WF-3: Operations Fire Prevention Measures
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Significant and Unavoidable	
Greenway Paths + Safe Crossings	Significant and Unavoidable	Significant and Unavoidable	
Greenway Paths + Stormwater Management	Significant and Unavoidable	Significant and Unavoidable	
20(d). Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Significant and Unavoidable	Construction: MM WF-2: Prepare a Construction Fire Protection Plan Operations: MM WF-2: Prepare a Construction Fire Protection Plan
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Significant and Unavoidable	

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
<i>Would the Plan:</i>			
Greenway Paths + Safe Crossings	Significant and Unavoidable	Significant and Unavoidable	
Greenway Paths + Stormwater Management	Significant and Unavoidable	Significant and Unavoidable	

3.20.1 Environmental Setting

The Plan Area is susceptible to wildfire risk due to warm temperatures, including increased extreme heat events, rainfall/drought, topography, seasonal winds, and fire-adapted vegetation. Areas most susceptible to wildfires are generally located in mountainous areas or hillsides. However, the areas with the greatest wildfire risk to human safety and property are along the WUI, which is the transition zone between wildlands and the human/built environment and often where areas of housing and human development and vegetation commingle. In these areas, homes and other buildings abut vegetated areas where wildfires may occur. WUIs are common throughout Los Angeles County, particularly in rural and mountainous areas, and can also include urban communities that are located near open space, conservation areas, and national forests. WUIs are also present in the Plan Area. These are particularly prevalent at the upstream extent of washes as they approach more steeply sloped areas. WUIs are generally represented by the edges of the forested areas depicted in Figure 3.2-3 in Section 3.2, Agriculture and Forestry Resources.

PRC Section 4126 classifies lands that are state and privately-owned forest, watershed, and rangeland as State Responsibility Areas (SRAs), in which the California Department of Fire and Forestry (CAL FIRE) is the primary emergency response agency responsible for fire suppression and prevention. CAL FIRE is required to map FHSZs in SRAs based on factors such as fuel, slope, fire history, existing and potential fuel sources (natural vegetation), predicted flame length, blowing embers, terrain, and typical fire weather for an area. FHSZs are classified as moderate, high, or very high. Local Responsibility Areas (LRAs) are lands where the local government provides fire protection services instead of state or federal entities. PRC 4201-4204 direct CAL FIRE to provide FHSZ classification recommendations for LRAs but the responsibility for mapping LRAs lies within the local jurisdiction responsible for fire management and control.

Based on the FHSZ map for Los Angeles County, the Plan Area contains primarily urbanized/developed areas which are outside of the designated VHFHSZ (CAL FIRE 2007, 2011). However, small portions of the Plan Area, primarily the northern extent in the San Gabriel foothills region, are located within the LRA VHFHSZ, and there are small areas that are designated as SRA VHFHSZs along the edge of the Angeles National Forest (Figure 3.20-1). These VHFHSZ areas are generally located outside urban/developed areas in areas with flammable vegetation within the WUI.

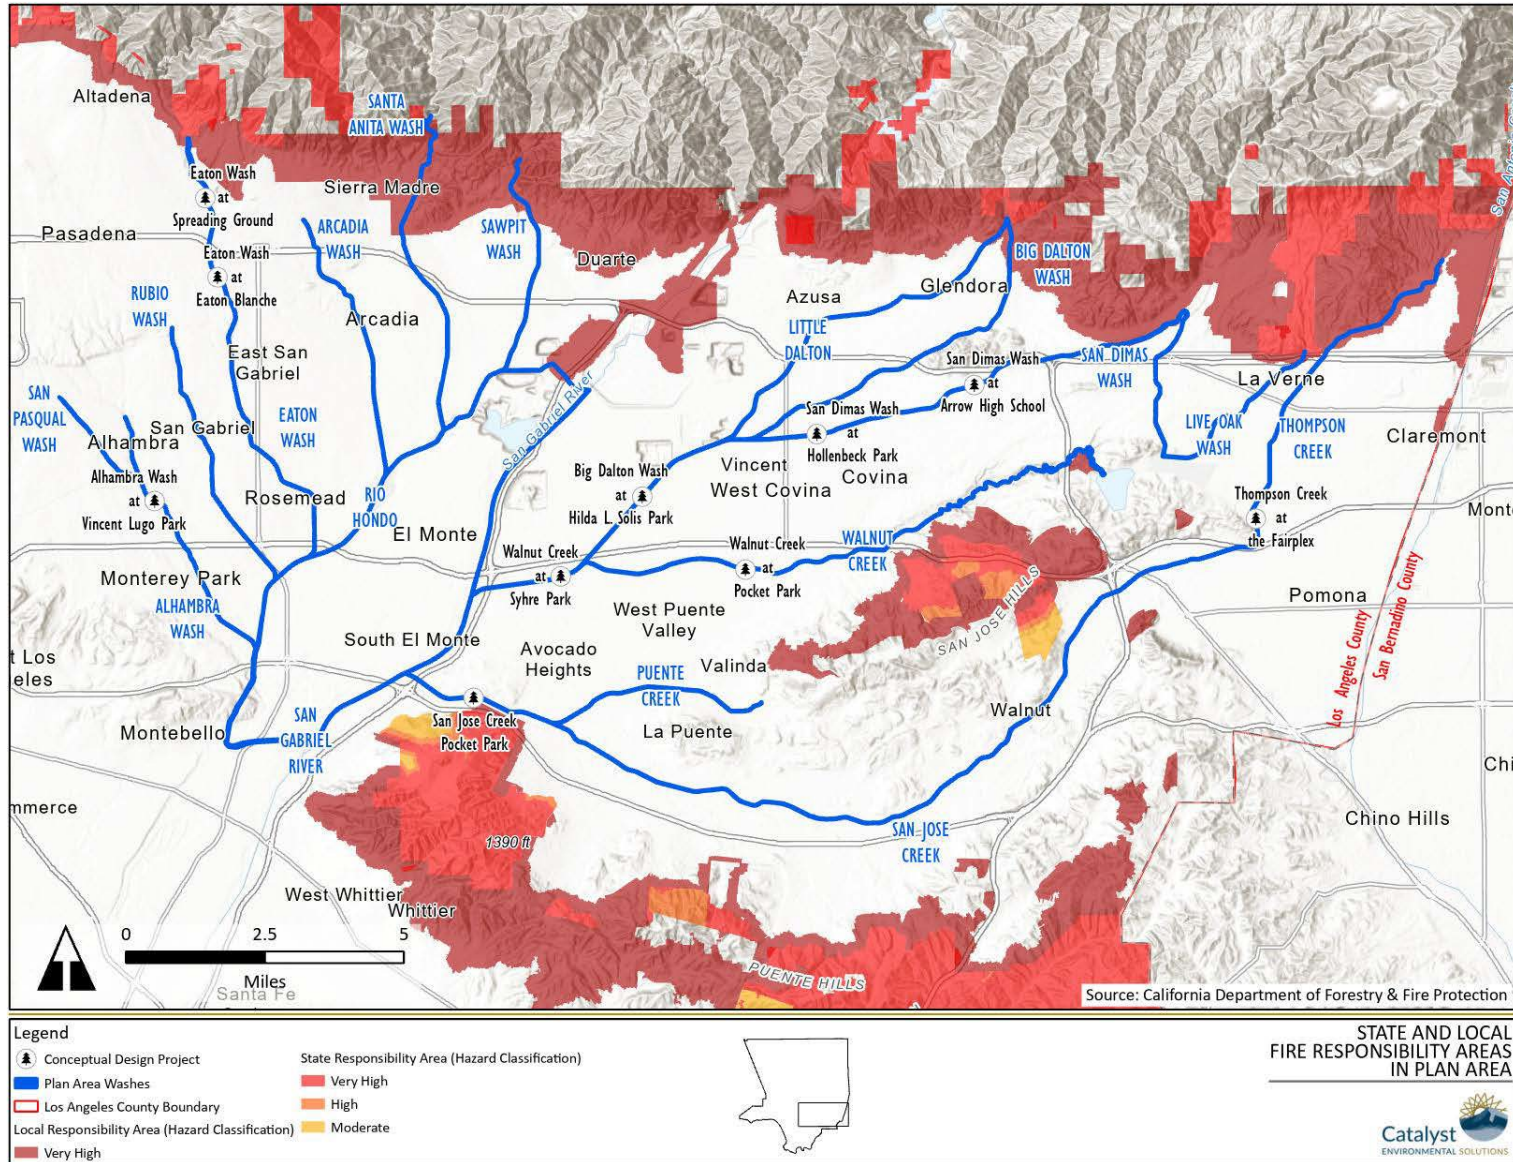

Figure 3.20-1. Fire Hazard Severity Zones in the Plan Area

The LACFD provides fire protection services to unincorporated Los Angeles County as well as 60 incorporated cities, which include Azusa, Baldwin Park, Claremont, Covina, El Monte, Glendora, Industry, Irwindale, La Puente, Pasadena, Pico Rivera, Pomona, Rosemead, San Dimas, San Gabriel, South El Monte, and Temple City. Alhambra, Arcadia, La Verne, Monrovia, Montebello, San Marino, and West Covina. have their own city fire departments with jurisdiction in the Plan area (LACFD 2022b; LACFD 2023).

3.20.2 Regulatory Setting

3.20.2.1 Federal

No federal regulations related to wildfire are relevant to the Plan.

3.20.2.2 State

3.20.2.2.1 Public Resources Code Section 4290

PRC Section 4290 mandates that Board of Forestry and Fire Protection set minimum standards related to defensible space (e.g., the 100-foot zone from a building to a potential fire source), including provisions pertaining to road standards for fire equipment access; standards for signs identifying streets, roads, and buildings; minimum private water supply reserves for emergency fire use; and fuel breaks and greenbelts. Applicable sections of the PRC mandate standards for firebreaks (Section 4292) and operation of power equipment (Sections 4427, 4428, 4431) intended to minimize risks in areas subject to wildfire.

3.20.2.2.2 California Code of Regulations Title 14, Chapter 7

CCR Title 14, Chapter 7, Subchapter 2 contains the “State Minimum Fire Safe Regulations” that stipulate requirements for emergency access (ingress and egress) to new construction; road signage; emergency water standards including fire hydrants and valves; building siting, setback distances, and fuel modification; and preservation of undeveloped ridgelines.

3.20.2.2.3 Public Resources Code Section 4291

PRC Section 4291 states that property owners within SRAs are responsible for ensuring that their property is in compliance with California’s building and fire codes that call for homeowners to take proactive steps to protect their property from a wildfire. The law requires that homeowners in SRAs clear out flammable materials, such as brush or vegetation, around their buildings to 100 feet (or the property line) to create a defensible space buffer. This helps halt the progress of an approaching wildfire and keeps firefighters safe while they defend the property (CAL FIRE 2022c).

3.20.2.2.4 California Building Code and Fire Code

The California Building Standards Code standards serve as the basis for the design and construction of buildings in California; the California Fire Code is a component of the California Building Standards Code. The California Fire Code, Chapter 9 of Title 24 of the CCR, is based on the International Fire code and is updated every three years. The overall purpose of the California Fire Code is to establish the minimum requirements to safeguard the public health, safety, and general welfare from the hazards of fire,

explosion, or dangerous conditions in new and existing buildings, structures, and premises, and to provide safety and assistance to firefighters and emergency responders during emergency operations. Chapter 49 of the California Fire Code contains minimum standards for development in the WUI and fire hazard areas. The California Fire Code includes regulations regarding fire-resistance-rated construction, fire protection systems such as alarm and sprinkler systems, fire service features such as fire apparatus access roads, means of egress, fire safety during construction and demolition, and wildland-urban interface areas. The California Fire Code also provides regulations and guidance for local agencies in the development and enforcement of fire safety standards.

Chapter 7A of the California Building Code regulates building materials, systems, and/or assemblies used in the exterior design and construction of new buildings located within a WUI. It establishes minimum standards for the protection of life and property by increasing the ability of a building located in any FHSZ within SRAs or a WUI to resist the intrusion of flames or burning embers projected by a vegetation fire. New buildings located in such areas are required to comply with the ignition resistant construction standards outlined in Chapter 7A.

The provisions of the California Fire Code apply to the construction, alteration, movement, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal, and demolition of every building or structure throughout California.

3.20.2.3 [Los Angeles County](#)

3.20.2.3.1 [Los Angeles County Fire Code](#)

Los Angeles County Code of Ordinances Title 32 contains the County's Fire Code. The 2022 California Fire Code regulations have been incorporated by reference, with amendments, in the Los Angeles County Fire Code. Relevant portions of the County's fire code are included below:

- **325.2.1 – Clearances:** requires at least 100 feet of defensible space around any building, structure, or apiary upon or adjoining any mountainous, or forest- or brush-covered land or land covered with flammable growth. The intensity of fuels management may vary within the 100-foot perimeter of the structure, with more intense fuel reductions being used between 5 and 30 feet (1524 and 9144 mm) around the structure, and an ember-resistant zone being required within 5 feet (1524 mm) of the structure, based on regulations promulgated by the State Board of Forestry and Fire Protection, in consultation with the Office of the State Fire Marshal, to consider the elimination of materials in the ember-resistant zone that would likely be ignited by embers. Defensible space of up to 200 feet may be required if the fire code official or Commissioner finds that because of the location of any building, structure, or apiary and because of other conditions, defensible space of 100 feet (30.48 m) around such building, structure, or apiary is not sufficient.
The amount of fuel deemed necessary to be removed or modified shall consider the flammability of the structure as affected by building material, building standards, location, and type of vegetation. Fuels shall be maintained and spaced in a condition so that a wildfire burning under average weather conditions would be unlikely to ignite the structure, as determined by the fire code official.
- **325.10 – Roadway Clearance:** The fire code official or commissioner may require removal and clearance of all flammable vegetation or other combustible growth for a minimum of 10 feet (3.05 m) on each side of every roadway, whether public or private. The fire code official or commissioner may enter upon private property to inspect, remove, and clear vegetation and growth as required by this section and may charge the responsible party for the cost of such action. This section shall not

apply to single specimens of trees, ornamental shrubbery, or cultivated ground cover such as green grass, ivy, succulents, or similar plants used as ground cover, provided that they do not form a means of readily transmitting fire. As used in this section, "roadway" means that portion of a highway or private street improved, designed, or ordinarily used for vehicular travel. The minimum clearance of 10 feet (3.05 m) may be increased if the fire code official determines additional distance is required to provide reasonable fire safety.

- **326.12.1 – Equipment:** prohibits the use or operation in, upon, or within any wildfire risk area, of any tractor, construction equipment, engine, or machinery, or any steam, oil, or gasoline-operated stationary or mobile equipment, from which a spark or fire may originate, unless such equipment is provided with a qualified device or spark arrester installed in or attached to the exhaust pipe which will prevent the escape of fire or sparks. Said qualified device or spark arrester shall meet the requirements of the current version of the United States Forest Service "Standard for Spark Arresters for Internal Combustion Engines" (Standard 5100-1).
- **326.13 - Open flame device:** No person shall operate or use any device, machine, or process such as a welding torch, tar pot, decorative torch, or any other device liable to start or cause fire in or upon any wildfire risk area, except by the authority of a written permit from the fire code official. However, no permit will be required if such use is within inhabited premises or a designated camp site, and such use is a minimum of 30 feet from any grass-, grain-, brush-, or forest-covered lands.
- **503.2.1 – Dimensions:** Fire apparatus access roads shall have an unobstructed width of not less than 20 feet (6096 mm), exclusive of shoulders, except for approved security gates in accordance with Section 503.6, and an unobstructed vertical clearance clear to the sky.
Exception: A minimum vertical clearance of 13 feet 6 inches (4114.8 mm) may be allowed for protected tree species adjacent to access roads. Any applicable tree-trimming permit from the appropriate agency is required.
- **507.1.1 - Water certificate:** Every building permit application shall be accompanied by either evidence that the proposed structure will be provided with a reliable water supply or a certificate from the Fire Department that there exists, or is under construction, a private water supply which, in the opinion of the fire code official, is adequate for fire protection.
- **4905.2 - Construction methods and requirements within established limits:** Construction methods intended to mitigate wildfire exposure shall comply with the wildfire protection building construction requirements contained in the applicable California Building Codes, Chapter 7A; California Residential Codes, Section R337; California Referenced Standards Code, Chapter 12-7A; California Fire Code, CCR Title 24, Part 9; and Los Angeles County Code, Title 32.
- **4906.2 – Application:** All new plantings of vegetation in Local Responsibility Areas (LRA) designated as a Very High Fire Hazard Severity Zone and in State Responsibility Areas (SRA) shall comply with Sections 4906.3 through 4906.5.3. Section 4906 is applicable to all unincorporated portions of Los Angeles County, to all cities that are a part of the Consolidated Fire Protection District of Los Angeles County, and to all cities that contract with the Consolidated Fire Protection District of Los Angeles County for services and adopt Section 4906 as part of their fire code.
- **4906.3 Fuel modification plans in fire hazard severity zones:** A fuel modification plan shall be submitted and have preliminary fire protection plan approval prior to any subdivision of land or Coastal Development Permit; or, have final fire protection plan approval as stipulated below; where, such structure, or subdivision is located within areas designated as a Fire Hazard Severity Zone within State Responsibility Areas or Very High Fire Hazard Severity Zone within the Local Responsibility Areas, according to applicable Fire Hazard Zone maps, and Appendix PP of this code at the time of application.
Final approval is required for applications for new construction for any enclosed structure over 120 square feet and any structure enclosed on three sides or more and greater than or equal to 200

square feet; any remodeling, modification, or reconstruction that increases the square footage of the existing structure or footprint by 50 percent or more within any 12-month period. Structures that do not require a building permit or are constructed of noncombustible materials, open on all sides, and not used for storage or habitation are exempt. Every fuel modification plan shall be reviewed by the Forestry Division of the Fire Department for defensible space, fire safety, compliance with Sections 325.2.1 (Clearance), 325.10 (Roadway Clearance), and 503.2.1 (Dimensions) of this code, the Fire Department's fuel modification guidelines, and CCR Title 14, Division 1.5, Chapter 7, subchapter 2. An on-site inspection must be conducted by the personnel of the Forestry Division of the Fire Department and a final approval of the fuel modification plan issued by the Forestry Division prior to a certificate of occupancy being granted by the building code official. The fuel modification inspection ensures compliance with applicable requirements of this code; the Building Code, Section 701A.5 (Vegetation management compliance); and the Residential Code, Section R337.1.5 (Vegetation management compliance).

- **4907.3 – Defensible Space Requirements:** Hazardous vegetation and fuels around all buildings and structures shall be maintained in accordance with Public Resources Code, Section 4291.2; CCR Title 14, Division 1.5, Chapter 7, Subchapter 3, Article 3, Section 1299.03; California Government Code, Section 51182; CCR Title 19, Division 1, Chapter 7, Subchapter 1, Section 3.07; and Los Angeles County Code, Title 32, including Section 325 (Clearance of Brush and Vegetative Growth).

3.20.2.3.2 Brush Clearance Inspection Program

The Brush Clearance Program is a joint effort between the LACFD and the County of Los Angeles Department of Agricultural Commissioner/Weights and Measures, Weed Hazard and Pest Abatement Bureau. This unified enforcement legally declares both improved and unimproved properties a public nuisance, and where necessary, requires the clearance of hazardous vegetation.

These measures create defensible space for effective fire protection of property, life, and the environment. The Department's Brush Clearance Unit enforces the Fire Codes as it relates to brush clearance on improved parcels, coordinates inspections and compliance efforts with fire station personnel, and provides annual brush clearance training to fire station personnel (LACFD 2022a).

3.20.2.3.3 Los Angeles County Fire Department Strategic Plan

The LACFD Strategic Fire Plan outlines goals focused on enhancing the protection of lives, property, and natural resources from wildland fire, as well as improving environmental resilience to wildland fires. The Strategic Fire Plan identifies the primary factors contributing to wildfire hazards, including vegetation, topography, and weather, and the relevant communities, agencies, and councils in Los Angeles County. Additionally, it provides pre-fire management strategies and tactics (LACFD 2022b).

3.20.2.3.4 Los Angeles County Operational Area Emergency Response Plan

The County of Los Angeles Operational Area Emergency Operations Plan addresses both the County's planned response to extraordinary emergency situations impacting unincorporated areas of the County as well as established Operational Area coordination. The Los Angeles County Operational Area consists of the County and all political subdivisions within the geographical boundaries of Los Angeles County. The plan identifies responsibility for emergency responses based on statutory authority, provides concepts of operational responses and recovery, specific roles and responsibilities of government and county agencies. The Plan recognizes Wildfire and post-wildfire events as hazards (e.g., geotechnical

hazards such as landslides) to the County and identifies coordination of Federal, State, and Los Angeles County Emergency Support Functions (Los Angeles OEM 2023).

3.20.2.3.5 Los Angeles County Fire Department Wildfire Action Plan

In 2021, the LACFD updated their adopted Wildfire Action Plan (Ready! Set! Go!), which was designed to provide residents with critical information on creating defensible space around homes, retrofitting homes with fire-resistant materials, and preparing to safely evacuate ahead of a wildfire. This plan provides residents with information regarding emergency preparedness and planning in the event of a wildfire (LACFD 2021).

3.20.2.3.6 Los Angeles County All Hazards Mitigation Plan

To meet the requirements of the Federal Disaster Mitigation Act of 2000, the Los Angeles County Chief Executive Office—Office of Emergency Management prepared an All-Hazards Mitigation Plan to assess risks posed by natural hazards and developed a mitigation action plan for reducing the risks in Los Angeles County. The 2020 Plan replaces the Plan approved in 2014 (Los Angeles County OEM 2020).

3.20.2.3.7 Los Angeles County General Plan Safety Element

Policy S 4.4: Reduce the risk of wildland fire hazards through meeting minimum State and local regulations for fire-resistant building materials, vegetation management, fuel modification, and other fire hazard reduction programs.

Policy S 4.7: Discourage building mid-slope, on ridgelines and on hilltops, and employ adequate setbacks on and below slopes to reduce risk from wildfires and post-fire, rainfall-induced landslides and debris flows.

Policy S 4.14: Encourage the strategic placement of structures in FHSZs that conserves fire suppression resources, increases safety for emergency fire access and evacuation, and provides a point of attack or defense from a wildfire (LA County Department of Regional Planning 2022).

3.20.2.4 Incorporated Cities Within the Plan Area

The table below presents the policies related to wildfire from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.20-2. Applicable Local City Policies Related to Wildfire

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Services & Infrastructure:</p> <p>Goal SI-8 Fire and emergency medical response that meets the needs of residents, visitors, and businesses.</p> <p>Policy SI-8B Ensure that existing and new development minimizes fire risk through application of appropriate fire code requirements.</p>	<p>Municipal Codes related to wildfire relevant to the Plan Area can be found in Section 2.20.110 (Emergency Plan), Chapter 19.02 (Fire Code), and 2.20.110 Emergency Plan. § 2.20.110 Emergency Plan.</p> <p>The Disaster Council shall be responsible for the continued development of the “City of Alhambra Multi-Hazard Functional Plan,” which plan shall provide for the effective mobilization of all of the resources of this city, both public and private, to meet any condition constituting a local emergency, state of emergency, or state of war emergency; and shall provide for the organization, powers and duties, services, and staff of the emergency organization. Any changes in the plan shall take effect upon adoption by resolution of the City Council.</p> <p>(’86 Code, § 2.20.110) (Ord. 3976, passed - -)</p> <p>19.02.020 California Fire Code Adopted.</p> <p>Chapters 1 through 80, Chapter 3 (as published in the 2022 California Fire Code), Appendix Chapter 4, Section 503 and Appendices B, BB, C, CC, D and O of Title 24, Part 9 of the California Code of Regulations (the 2022 California Fire Code), as amended and in effect on or before January 1 , 2023 are hereby adopted by reference pursuant to the provisions of §§ 50022.1 through 50022.10 of the Cal. Gov’t Code as though fully set forth herein, and made a part of the Alhambra Municipal Code with the same force and effect as though set out herein in full, including all of the regulations, revisions, conditions and terms contained therein except that those certain sections thereof which are necessary to meet local conditions as hereinafter set forth in § 19.02.030 of this code are hereby repealed, added or amended to read as set forth therein.</p> <p>In accordance with § 50022.6 of the Cal. (75-15)</p> <p>Section 15.20.010 and 15.20.020 (Adoption of Fire Code for the Consolidated Fire Protection District of Los Angeles County and Very High Fire Hazard Severity Zone.)</p> <p>15.20.010 Adoption of Fire Code for the Consolidated Fire Protection District of Los Angeles County.</p> <p>A. The 2022 Fire Code for the Consolidated Fire Protection District of Los Angeles County (Title 32, Los Angeles County Code) adopted by the Los Angeles County Board of Supervisors, amending the 2022 California Fire Code, incorporating the 2021 International Fire Code published by the International Code Council, with the changes, additions and deletions set forth in this chapter and amendments set forth are adopted by reference as the Fire Code of the City.</p> <p>B. At least one (1) copy of said Fire Code will be deposited in the office of the Building Official and shall at all times be maintained by the Building Official for use and examination by the public. (22-08; 19-08; 16-13; 13-10)</p> <p>15.20.020 Very High Fire Hazard Severity Zone.</p> <p>The Very High Fire Hazard Severity Zone is defined in Appendix M of the Los Angeles County Fire Code Title 32. (22-08; 19-08; 16-13; 13-10)</p> <p>Chapter 16.010 H Hillside District</p> <p>8. The proposed development shall not be in conflict with the goals and policies of the Los Angeles County Fire Department or the Los Angeles County Flood Control District unless there is a finding by the Planning Commission that said goals and policies are not consistent with other adopted goals and policies of the City of Claremont.</p> <p>16.010.000 Intent</p> <p>The Hillside District is intended to provide for limited uses of hillside areas which are consistent with the City’s General Plan. The mix of permitted uses, the intensity of uses, and the distribution of uses are to be based largely on natural environmental factors and accessibility to necessary facilities and services. The hillside areas must be kept in a natural state to the greatest extent feasible in order to protect the public health, safety and general welfare, and minimize the hazards identified in the Public Safety and Noise Element of the General Plan and to advance the goals and policies of the Open Space, Parkland and Conservation Element of the General Plan. Slope density regulations which correlate intensity of development to the steepness of terrain will be used to minimize grading, removal of vegetation, land instability, and fire hazards. Clustering of residential units will be encouraged. Transfer of development credits will also be used as a means of limiting residential development to areas designated on the General Plan. (08-05).</p> <p>16.075.010 Permitted Uses</p> <p>Properties in the WP District shall remain essentially undeveloped. Only the following uses are permitted in the WP Wilderness Park District:</p> <p>F. Vegetation management as determined necessary by the City and County of Los Angeles Fire Department (LACFD) to reduce hazardous wildfire conditions. (08-05)</p>	<p>– Planning and Intelligence</p> <p>– Logistics</p> <p>Finance and Administration</p>

		<p>2.48.080 Emergency plan.</p> <p>The Claremont Disaster Council shall be responsible for the development of the City’s emergency plan, which plan shall provide for the effective mobilization of all of the resources of this City, both public and private, to meet any condition constituting a local emergency, state of emergency or state of war emergency, and shall provide insofar as possible for the organization, powers and duties, services and staff of the emergency organization. Such plan shall take effect upon adoption by resolution of the City Council. (Prior code § 8.7)</p>	
Covina	<p>Safety Element</p> <p>Goal: A community in which the loss of lives, serious injuries, major damages to public and private structures/properties, the loss of natural resources, economic and social dislocation, and the disruption of vital services associated with a potential natural or man-made disaster are prevented.</p> <p>Policy 4. Maintain, enforce, and periodically review all codes, standards, guidelines, plan and environmental impact review procedures, building permit issuance activities, and inspection and monitoring tasks that are directly or indirectly associated with safety matters and issues to further community health, safety, welfare, land use compatibility, and/or environmental quality. These matters/issues include structural integrity, seismic stability, grading, development near the flood-prone unimproved portion of Walnut Creek, fire detection and suppression and fire-resistant materials (for both the flatland and fire-susceptible Covina Hills areas), the use, storage, disposal, and transport of hazardous materials, architectural design, site planning, building setback, landscape design, public roads and private driveways, property usage and maintenance, the potential siting of a hazardous waste management facility in Covina, City evacuation routes, weed abatement and brush clearance programs (particularly relating to Covina Hills), and water pressures and flow capacities;</p> <p>Objective 5:</p> <p>The provision of sufficient public facilities and services.</p> <p>i. Assure that all existing, new, and/or expanded development address fire protection in a preventative manner by requiring in various developments fire protection and smoke detection systems and/or automatic sprinkler systems. Also, require that all new buildings incorporate adequate ingress and egress and encourage owners of existing, old structures to upgrade their exit systems and structural conditions.</p> <p>Policy Area 3: Potential Fire Hazards</p> <p>C. Maintain all fire-inhibiting Planning Department requirements and standards for new construction and for</p> <p>substantial additions to existing structures, including those for architectural design, site planning, building</p> <p>setback, landscape design, minimum road and driveway widths, and property usage and maintenance.</p> <p>H. Continue to follow weed abatement programs in Covina Hills, which involve trimming and clearing overgrown plant materials from public and private properties, to reduce the amount of combustible vegetation.</p> <p>I. Consider to require fire-retardant plantings in conjunction with new construction and major expansions, if appropriate.</p> <p>Policy Area 5</p>	<p>Municipal Codes related to wildfire relevant to the Plan Area can be found in Section 14.12.010 (2022 California Fire Code adoption by reference.), Chapter 14.13 (Fire Hazard Severity Zones), 8.40.030 (Prohibited public nuisance conditions), and 2.40.080 (Emergency plan.)</p> <p>Section 14.12.010 (2022 California Fire Code adoption by reference.)</p> <p>The city adopts the 2022 California Fire Code. Said code shall be and become the Covina fire code.</p> <p>One copy of said code is on file in the office of the city clerk, and is hereby referred to, adopted, and made a part hereof as if fully set out in this chapter. (Ord. 22-19 § 11, 2022; Ord. 19-10 § 10, 2019; Ord. 17-19 § 1, 2018; Ord. 13-2027 § 7, 2013; Ord. 10-1990 § 7, 2010; Ord. 07-1947 § 2, 2007.)</p> <p>Chapter 14.13 (Fire Hazard Severity Zones)</p> <p>14.13.010 Designation.</p> <p>The city council hereby designates within the city of Covina a very high fire hazard severity zone (“FHSZ”) as required by California Government Code Section 51179 and as recommended by the Director of the California Department of Forestry and Fire Protection. The FHSZ is designated on a map titled “City of Covina FHSZ, Tile 1” (“FHSZ Map”). The FHSZ map is intended to be used in conjunction with the most current edition of the California Building Standards Code and supersedes any other maps previously adopted by the city of Covina designating high fire hazard areas. (Ord. 08-1959 § 1, 2008.)</p> <p>8.40.030 Prohibited public nuisance conditions.</p> <p>The city council finds and declares that, notwithstanding any other provision of the Covina Municipal Code, it is a public nuisance and unlawful for any person to allow, cause, create, maintain, or suffer, or permit others to cause, create, or maintain, the following:</p> <p>18. Dead, decayed, diseased or hazardous trees, weeds, ground cover, and other vegetation, or the absence of healthful vegetation, that causes, contributes to, or tends to cause or contribute to, any one of the following conditions or consequences:</p> <p>b. A fire hazard;</p> <p>2.40.080 Emergency plan.</p> <p>The Covina disaster council shall be responsible for the development of the city emergency plan, which plan shall provide for the effective mobilization of all of the resources of this city, both public and private, to meet any condition constituting a local emergency, state of emergency or state of war emergency; and shall provide for the organization, powers and duties, services and staff of the emergency organization. Such plan shall take effect upon adoption by resolution of the city council. (Ord. 1177 § 1, 1972.)</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Emergency Preparedness and Related and General Matters</p> <p>u. Continue to encourage and support City weed abatement and brush clearance programs, particularly in the Covina Hills area, to reduce the potential for fire hazards.</p> <p>IX. Programs/Implementation Measures: Potential Fire Hazards</p> <p>1. Uniform Building and Fire Codes</p> <p>Fire prevention is of great importance to the City of Covina. Therefore, the Covina Building and Safety</p> <p>Division and Fire Department follow and enforce various requirements and standards from, respectively, the</p> <p>Uniform Building Code (UBC) and Uniform Fire Code (UFC) for new construction and for substantial additions</p> <p>to existing structures to ensure the safety of persons against the adverse impacts of both urban and wild land</p> <p>fire hazards. The City will further review and, where necessary, change these provisions, which include fire resistant materials and fire sprinkler systems, to better protect Covina residents, property owners, workers,</p> <p>and others.</p> <p>4. Weed Abatement Efforts</p> <p>An abundance of overgrown, combustible weeds and plant materials can make Covina Hills and other areas susceptible to wild land fires. Therefore, the Covina Fire Department has managed a weed abatement program that involves trimming and clearing such materials from public and private properties. Covina will continue with this effort, which, along with general Fire inspection and monitoring activities, suppresses potential fire hazards.</p> <p>Inter-Topic General Matters: Site Plan Review Process</p> <p>This part of the Zoning Ordinance constitutes the process by which private development applications and certain public proposals are reviewed and analyzed and, thus, by which General Plan, Zoning, Design Guidelines, and related provisions pertaining to site planning, land use impacts, grading, site runoff, erosion minimization, and landscaping are applied. Site Plan Review also serves as a mechanism for determining General Plan/Zoning consistency and for routing projects to other City departments/divisions for study and comment on such issues as structural adequacy, soils stability, infrastructure accommodation, fire suppression, and emergency service capabilities. When reviewing applications, the City Planning Division may impose reasonable conditions to ensure conformance with respect to the General Plan, Zoning Ordinance, Design Guidelines, and other documents. This process shall continue.</p>		
El Monte	<p>El Monte does not have any areas within wildfire state responsibility area (SRA) or very high fire hazard severity zones (VHFHSZs).</p> <p>No other applicable ordinances were identified.</p>	<p>Municipal Codes related to wildfire relevant to the Plan Area can be found in (15.34.010 - Adoption of the 2020 Los Angeles County Fire Code) and 17.74.090 – (Landscape design plan modified)</p> <p>15.34.010 - Adoption of the 2020 Los Angeles County Fire Code, and section 2.36.090 – (Emergency plan.)</p> <p>A. 	Fire Prevention. The City shall continue to work with the County of Los Angeles Fire Department to promote fire prevention and fire safety programs. The City shall also encourage periodic inspections of existing structures by the Fire Department for compliance with fire safety standards and practices. All new development plans must be submitted to the Fire Department for review and comment during the plan check process. This review must be completed for the development process to continue. New development must conform to applicable standards and regulations.	The Los Angeles County Fire Code, codified as Title 32 of the Los Angeles County Code, as such code may be amended from time to time, except as hereinafter amended by this chapter, is adopted by reference as the fire code of the city. (Ord. 680 § 8, 2002; Ord. 527 § 1, 1986; Ord. 304 § 1, 1969)	
La Puente	Community Safety Element: Action CS-10: Require Building and Fire Code Compliance Review all new proposed projects to ensure they comply with building and fire codes. Actively enforce all building and fire codes.	Municipal Codes related to wildfire relevant to the Plan Area can be found in Section 9.04.010 (Adoption of Fire Code) and Section 2.28.080 (Emergency plan). 9.04.010 Adoption of Fire Code. Except as hereinafter provided, Title 32 - Fire Code of the Los Angeles County Code, as amended and in effect on March 1, 2017, adopting the California Fire Code, 2016 Edition (Part 9 of Title 24 of the California Code of Regulations) is incorporated herein by reference as if fully set forth below and shall be known and may be cited as the Fire Code of the City of La Puente. In the event of any conflict between provisions of the California Fire Code, 2016 Edition, Title 32 of the Los Angeles County Code, or any amendment to the fire code, as set forth in the La Puente Municipal Code, the provisions contained in the La Puente Municipal Code shall control. A copy of Title 32 of the Los Angeles County Code and the California Fire Code, 2016 Edition, have been deposited in the office of the city clerk and shall be at all times maintained by the city clerk for use and examination by the public. (Ord. 952 § 2, 2018: Ord. 932 § 2, 2014: Ord. 909 § 10, 2011: Ord. 908 § 10, 2010) 2.28.080 Emergency plan. The disaster council is responsible for the development of the city’s emergency plan, which plan must provide for the effective mobilization of all resources of the city, both public and private, to meet any condition constituting a local emergency, state of emergency, or state of war emergency, and must provide for the organization, powers, duties, services and staff of the emergency organization. This plan will take effect upon its adoption by resolution of the city council. (Ord. 767 § 1 (part), 1998)	No other applicable ordinances were identified.
La Verne	Public Safety Element: Goal 1: Protect our community from wildfires. Policy 1.1: Provide adequate fire protection. Policy 1.2: Minimize risk of wildfire spread Implementation i. Ensure that all development in areas subject to wildfire will meet Very High Fire Hazard Zone standards as adopted by city ordinance. A California-registered landscape architect or a person with similar qualifications shall develop landscape plans. m. Continue implementation of design standards in the hillside development overlay zone to reduce fire danger. Goal 5: Protect our community from crime, fire, and inadequate medical emergency care.	Municipal Codes related to wildfire relevant to the Plan Area can be found in Chapter 8.14 (Fire Hazards Relating to Vegetation and Other Conditions or Activities), Section 18.68.020 (Fire hazard standards), 15.37.020 (Very high fire hazard severity zone territory), 15.32.110 (Fuel modification plan in fire hazard severity zones), and 2.56.070 (Emergency plan) Chapter 8.14 (Fire Hazards Relating to Vegetation and Other Conditions or Activities), All development in the hillside areas shall be subject to review and approval by the fire chief for compliance with those aspects of the hillside development overlay zone designed to reduce fire hazards. (Ord. 853 § 2, 1993) 8.14.050 Additional Regulations and Provisions (D) Spark arresters required in the very high fire severity zone. (1) No responsible person shall, in the very high fire severity zone, use or operate, or allow the use or operation of, any tractor, construction equipment, engine,	Community Wildfire Protection Plan Goal 1: Minimize the wildland fire threat to life safety. • Identify specific areas within the City with the greatest potential wildfire threat • Develop guidelines to mitigate these hazards and risks Goal 2: Reduce the threat to assets at risk from a wildfire; including homes, critical infrastructure, natural and historic resources and recreational opportunities. • Utilize a City-wide assessment to develop specific guidelines for the protection of assets at risk • Prioritize high hazard areas for potential hazard mitigation treatments • Develop recommendations for homeowners to enhance the potential survivability of their personal assets which may be at risk • Develop fuel treatment strategies for all lands

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 5.4: Provide adequate fire protection.</p> <p>Policy 5.5: Minimize fire threat through safe development</p> <p>Land Use Element:</p> <p>Protect our community from hillside wildfires:</p> <p>b. Preserve our natural fire breaks through designated open space land use.</p> <p>f. Approve only development plans that conclusively prove that they can be adequately served with fire flow.</p> <p>g. Require that all development within the seven-minute response time contribute to the fire equipment fund established to provide additional fire coverage from station number two.</p> <p>h. Not permit development unless the project is brought within the seven-minute response time.</p> <p>Goal 9: Adequate community facilities in north La Verne:</p> <p>Policy 9.1 Increase community facilities in North La Verne.</p> <p>Implementation measure:</p> <p>b. Require new development to provide an equitable share of the cost of mitigating emergency and fire responses in the hillside development overlay zone.</p>	<p>machinery, or any steam, oil or gasoline-operated, or other combustive stationary or mobile equipment or device (collectively “Equipment”), from which a spark or fire may originate or escape, unless an approved spark arrester or other similar device is installed in, or attached to, an exhaust pipe of the Equipment at all times. Said approved spark arrester or other similar device shall meet the United States Forest Service “standard for spark arresters for internal combustion engines” (Standard 5100-1B, July 1991). For the purpose of this section, any registered motor vehicle operated on a road or highway and which is equipped with a muffler in good working condition, as required by the Vehicle Code, shall be deemed to be in compliance with this section.</p> <p>18.68.020 Fire hazard standards.</p> <p>All development in the hillside areas shall be subject to review and approval by the fire chief for compliance with those aspects of the hillside development overlay zone designed to reduce fire hazards. (Ord. 853 § 2, 1993)</p> <p>15.37.020 Very high fire hazard severity zone territory.</p> <p>The territory described as a very high fire hazard severity zone (VHFHSZ) shall be as established by the Director of California Department of Forestry and Fire Protection and as designated on a map entitled city of La Verne VHFHSZ, dated July 1, 2008, and retained on file at the city of La Verne and which shall also be retained on file at the office of the State Fire Marshal. (Ord. 1075 § 12, 2016; Ord. 1042 § 12, 2013; Ord. 1008 § 1, 2009; Ord. 930 § 1, 1999)</p> <p>4. Preliminary fuel modification plans for all improvements in areas containing combustible vegetation shall be submitted to and approved by the fire department concurrent with the submittal for approval of any project requiring discretionary approval by the city. Final fuel modification plans shall be submitted to and approved by the fire department prior to the issuance of a grading permit. The plans shall consider the criteria set forth in the Fuel Modification Plan Guidelines for Very High Fire Hazard Severity Zones.</p> <p>15.32.110 Fuel modification plan in fire hazard severity zones</p> <p>Permits shall be required as set forth in Los Angeles County Fire Code Section 105.7, with the exception of any differences which may be specified in this chapter or by the fire code official. A fuel modification plan shall be submitted and have preliminary approval prior to any subdivision of land; or, have final approval prior to the issuance of a permit for any permanent structure used for habitation; where, such structure, or subdivision is located within areas designated as a fire hazard severity zone within state responsibility areas or very high fire hazard severity zone within the local responsibility areas, according to applicable fire hazard zone maps, and Appendix P of the Los Angeles County Fire Code at the time of application.</p> <p>2.56.070 Emergency plan.</p> <p>The city disaster council shall be responsible for the development of the city emergency plan, which plan shall provide for the effective mobilization of all the resources of the city, both public and private, to meet any condition constituting a local emergency, state of emergency, or state of war emergency; and shall provide for the organization, powers and duties, services and staff of the emergency organization. Such plan shall take effect upon adoption by resolution of the city council. The fire chief shall recommend where such easements are required. (b)No ridge which is presently usable for fire fighting shall be graded in relation to hillside development unless an accessway is provided around the cut to the top of the ridge for fire fighting equipment (track laying equipment).</p>	No other applicable ordinances were identified.

3.20.3 Impact Assessment

3.20.3.1 Significance Criteria

Appendix G of the State CEQA guidelines was reviewed to determine if the Plan would result in significant impacts related to wildfire. These guidelines serve as the threshold of significance for determining impacts to wildfire and consider if the Plan would:

- 20(a) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project substantially impair an adopted emergency response plan or emergency evacuation plan?*
- 20(b) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of wildfire?*
- 20(c) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project, require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?*
- 20(d) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?*

3.20.3.2 Methodology

Potential impacts to wildfire risk were assessed qualitatively through a review of FHSZ areas and any construction within those zones could be considered potentially significant where a future project results in alterations to existing fire risk or emergency response. Construction and operations impacts are presented together where they largely overlap and it would not be meaningful to discuss them separately to address a specific criterion.

3.20.3.3 Plan Impacts

- 3.20.3.3.1 20(a) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

- 3.20.3.3.1.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Significant and Unavoidable. As described in Section 3.20.1, Environmental Setting, the Plan Area contains primarily urbanized/developed areas which are outside of the designated VHFHSZ (CAL FIRE 2007, 2011); however, small portions of the Plan Area, primarily the northern extent in the San Gabriel

foothills region, are located within the VHFHSZ, and there are small areas designated as VHFHSZs along the edge of the Angeles National Forest.

Due to the programmatic nature of Plan, the location and design of future projects cannot be determined at this time. However, it can reasonably be assumed that staging areas and construction zones for greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities could occur on the District ROW and adjacent parcels where they fall within or near SRAs or lands classified as VHFHSZ.

Large construction vehicles entering or exiting a future project would have the potential to temporarily restrict access for emergency vehicles traveling to and around the project site. Projects could be located near emergency service facilities (e.g., fire stations and hospitals) and along roadways used by emergency service providers and have the potential to temporarily restrict access for emergency vehicles traveling to and around future project sites. Temporary lane closures for vehicle, bike, or pedestrian traffic may be required, but closures would depend on local conditions. Therefore, construction of projects under the Plan may result in short-term, localized increases in delays and traffic queueing from lane closures. However, construction would be required to comply with the Los Angeles County Operational Area Emergency Operations Plan (see Section 3.20.2.3.4). It is anticipated that construction would not result in the full closure of roadways or other means of emergency access. Additionally, construction managers and personnel would follow the Manual on Uniform Traffic Control Devices (Caltrans 2024) guidelines to ensure the safety of vehicle, pedestrian, and bicycle traffic during construction. Nonetheless, impacts would be potentially significant.

Implementation of **MM WF-1: Construction Coordination with Emergency and Fire Services** would require that the relevant emergency response services are consulted prior to construction and are able to identify necessary measures to prevent the impairment of emergency response, thereby reducing the potential impacts during construction. However, the possibility remains that consulting emergency service agencies would not result in measures capable of reducing impacts to less than significant when projects are sited in or near SRAs or lands classified as VHFHSZ. Therefore, impacts from construction would remain potentially significant and unavoidable within these areas.

Operations

Less than Significant. Once operational, greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management would be expected to result in increased numbers of daily users to project sites (e.g., increased vehicle, bike, and pedestrian traffic). Increased daily use of these areas would not result in structures or activities that would substantially obstruct or interfere with emergency vehicle access or impair emergency response or evacuation plans. This is because projects developed under the Plan would be constructed in accordance with current building and safety codes and ordinances. These include all applicable County code requirements and local jurisdiction requirements related to access, water mains, and fire hydrants.

Additionally, greenway paths would include a minimum of 12 feet of unobstructed, drivable width to allow access by emergency and maintenance vehicles as required by the *Design Guidelines and Standards*. Overall, the greenway segments would be located on a minimum 13-foot ROW width to accommodate the minimum 12 feet of unobstructed width for the path and its shoulders and additional one foot to accommodate channel wall fencing and signposts or other auxiliary features outside of the

shoulders. Additionally, there would be a vertical clearance of at least 10 feet to the bottom of overhead structures, including lighting.

Greenway path access would also serve as a primary point of access to project components on adjacent parcels where people may gather (e.g., pocket parks and greenspaces). In some cases, access via greenways along the District ROW would be in addition to access from existing roadways. The number of points of access and their connectivity to project components would be dependent on the layout of the individual project and constraints of the parcel(s).

Maintenance activities for greenway paths and amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities would occur on a routine basis and would be temporary in nature. Such activities would not require large equipment that would block emergency access. There would be no permanent road closures or obstructions associated with operations. Signage (per the *Design Guidelines and Standards*) would be used to alert users to rules and regulations within and along the Greenway Network, to warn users of dangerous conditions, and/or inform bicyclists and drivers of regulations and upcoming conditions. Therefore, operations would not physically impair or otherwise interfere with emergency response or evacuation in the project vicinity, and impacts would be less than significant.

Mitigation Measures

MM WF-1: Construction Coordination with Emergency and Fire Services. The project proponent shall notify and coordinate with Los Angeles County and/or local jurisdictions' emergency department(s) on project information (e.g., project design, construction activities, and scheduling), including fire station(s) and/or police station(s) servicing the project area. This mitigation measure is designed to ensure that the emergency service providers serving an individual project area are engaged and that project proponents utilize these local experts to identify and document alternative fire and emergency medical response routes where needed.

If determined to be necessary by the relevant police and/or fire service providers, one or more of the following applicable traffic control measures capable of reducing the temporary adverse effects on police and emergency vehicle travel during project construction shall be implemented:

- Use of flag persons to direct traffic.
- Posting of "No Parking" signs along the affected area.
- Installation of temporary signals or signs to direct traffic or other equivalent traffic control measures.

Significance After Mitigation

While **MM WF-1: Construction Coordination with Emergency and Fire Services** is a required measure for projects constructed under the Plan, the possibility remains that consulting emergency service agencies would not result in measures capable of reducing impacts to less than significant. Therefore, for construction, impacts would remain potentially significant and unavoidable.

For operation, impacts would be less than significant, and no mitigation is required.

3.20.3.3.2 20(b) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project, due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of wildfire?

3.20.3.3.2.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Significant and Unavoidable. As described in Section 3.20.1, Environmental Setting, the Plan Area contains primarily urbanized/developed areas which are outside of the designated VHFHSZ (CAL FIRE 2007, 2011); however, small portions of the Plan Area, primarily the northern extent in the San Gabriel foothills region, are located within the VHFHSZ, and there are small areas designated as VHFHSZs along the edge of the Angeles National Forest.

Due to the programmatic nature of Plan, the location and design of future projects cannot be determined at this time. However, it can reasonably be assumed that staging areas and construction zones for greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities could occur on the District ROW and adjacent parcels where they fall within or near SRAs or lands classified as VHFHSZ.

Where the Plan Area intersects these designations, there is a potential for construction to occur in or adjacent to canyons or steep slopes. In these areas, construction activities may include operation of equipment that may exacerbate wildfire risk, although it is anticipated that most construction activity associated with the Plan would occur in the existing built environment where fuel sources (e.g., dry vegetation) are absent or minimal.

Construction activities, when at sites within a VHFHSZ or in or near an SRA, would involve equipment that may exacerbate wildfire risk in these areas. Heat or sparks from construction equipment or vehicles or from the use of flammable materials have the potential to ignite nearby vegetation and start a fire. This risk of wildfire during construction would be increased during Santa Ana weather events, which are most common in September through May, due to the dryness of the winds and the speed at which they can spread a flame across the landscape (NWS 2023). These conditions can occur year-round in Los Angeles County but are most common in summer and fall.

Construction equipment such as cranes, excavators, dump trucks, backhoes, utility trucks, paving machines, loaders, and other vehicles that create heated exhaust have the potential to generate heat or sparks that could result in wildfire ignition. Welding activities could also create sparks that could ignite vegetation. New potential ignition sources could be introduced, such as building materials (e.g., wood), vegetation for landscaping, and fuels and household cleaners. These flammable materials could contribute to the risk of a wildfire starting at the construction site, which would exacerbate the existing high wildfire risk when located within or near a VHFHSZ or SRA.

Construction would comply with applicable construction standards that ensure fire prevention including a pre-fire plan, refueling protocols, and proper storage of combustible materials as required by the California Fire Code, and OSHA Safety and Health Regulations, which require the development of a fire protection program through all phases of construction and demolition work, and addresses

requirements for appropriate firefighting equipment, water sources, and sprinkler and alarm systems. Construction would also comply with municipal codes and/or the Los Angeles County fire code, which requires such wildfire-preventing practices as the use of spark arrestors on construction equipment. Compliance with state, County, and local agency criteria and rules and regulations pertaining to wildfire prevention and the temporary nature of construction would reduce impacts from Plan implementation with regards to wildfire risks and exposure of nearby residents to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire.

While existing regulations would address potential fire risks associated with construction, when these activities occur within a VHFHZ, the existing regulations may not adequately address the heightened risks. Further precautions may need to be taken, including **MM WF-2: Prepare a Construction Fire Protection Plan**. Future project sites could feature conditions that would present additional wildfire risk and construction in these areas could result in potentially significant impacts related to exacerbating wildfire risks of, and exposing project occupants to, direct or indirect risk of injury, loss, or death due to wildfire. Impacts would be potentially significant.

Operations

Significant and Unavoidable. Once operational, greenway paths and other plan components would be expected to result in increased numbers of daily users to project sites (e.g., increased vehicle, bike, and pedestrian traffic). If a newly constructed project is within or adjacent to a VHFSZ, it could expose visitors and staff to hazardous conditions associated with the high risk of wildfire at the site who were not previously exposed to this risk. Increased presence of humans along newly constructed greenways and at amenities and pocket parks and greenspaces within VHFSZs could exacerbate existing wildfire risk by increasing the possibility of human-caused wildfires. Approximately 80 percent of wildfires are estimated to have been ignited by humans (Balch et al. 2017).

Operations would also include routine maintenance such as landscaping and repair of amenities, as needed. These activities would be conducted in accordance with California Fire Code, which mandates proper refueling protocols and storage of combustible materials, and OSHA Safety and Health Regulations, which requires appropriate firefighting equipment, water sources, and sprinkler and alarm systems. Projects would also operate in compliance with the State-mandated defensible space standards (PRC Section 4291, see Section 0). Compliance with local and state regulations will be further ensured via implementation of **MM WF-3: Operations Fire Prevention Measures**. However, because the exact locations of project sites are unknown at this time, and could be within or adjacent to VHFSZs, it cannot be guaranteed that the operation of greenway paths and other project components would not exacerbate wildfire risk, thereby exposing project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. Impacts would be potentially significant.

Mitigation Measures

Mitigation Measure WF-2: Prepare a Construction Fire Protection Plan. For any project proposed under that Plan that would be sited in or adjacent to areas designated as Very High FHSZs, prior to construction, the implementing agency shall prepare a construction-specific fire protection plan in compliance with CCR Title 8, Article 36, Fire Protection and Prevention. The construction fire protection plan shall include at minimum the following measures to address potential ignition sources during construction:

- Parking for workers' vehicles and equipment shall be sited away from dry brush or other ignition sources.
- Vehicle idling shall be prohibited.
- Personnel must be trained in the practices of the fire safety plan relevant to their duties. Construction and maintenance personnel will be trained and equipped to extinguish small fires to prevent spread.
- Smoking in wildland areas shall be prohibited. Smoking shall be limited to paved areas or areas cleared of all vegetation.
- Designated vehicles shall carry fire-prevention equipment (e.g., water, shovel, extinguisher) on the construction site at all times during high fire conditions.
- Fireproof mats or shields shall be used during welding or other construction activities that could produce sparks during high fire risk conditions.
- The plan shall include a section demonstrating compliance with applicable plans and policies established by State agencies.

In addition, for those projects sited in an area that was recently burned by wildfire, the construction fire protection plan shall include one or more of the following applicable measures:

- Treat all wildfire burned areas within the construction area to control stormwater runoff prior to winter rains.
- Restore wildfire areas within the construction area by planting native vegetation cover or encouraging the re-growth of native species using best practices as soon as possible to aid in control of stormwater runoff.
- Remove dead, woody vegetation along watercourses following a catastrophic fire, as directed by local fire officials.
- Post-fire, implement slope stabilization measure by planting native vegetation cover as soon as possible to aid in landslide control, as directed by local fire officials.
- Ensure excess storm flow is properly diverted away from important property improvements or unstable slopes.
- Check drainage systems and clear out culverts, roof gutters, street gutters, infiltration and detention basins, concrete waterways, etc., to allow water to drain, as directed by local fire officials.
- Remove potentially toxic materials, ideally before rain washes toxic runoff into storm drains and waterways, as directed by local fire officials.
- Minimize foot traffic, equipment, and disturbance on burned landscapes.

Mitigation Measure WR-3: Operations Fire Prevention Measures. For projects proposed in or adjacent to areas designated as VHFSZs, the project proponent shall ensure that projects are in compliance with current regulatory codes and that impacts from wildland fire hazards are avoided or reduced to the extent feasible by reducing flammable vegetations around the property's structure and installing sprinklers that activate in the case of fire. In addition, the project shall incorporate ignition resistant construction, and project proponent shall evaluate and confirm accessibility and reliability of firefighting water supply to the project site.

Significance After Mitigation

While **MM WF-2: Prepare Construction Fire Protection Plan** and **MM WF-3: Operations Fire Prevention Measures** would be required for projects constructed under the Plan that occur in or adjacent to VHFSZs and would reduce impacts, the possibility remains that a wildfire could occur in these sensitive areas and could result in potentially significant impacts related to exacerbating wildfire risks of, and exposing

future recreationalists to, direct or indirect risk of injury, loss, or death due to wildfire. Impacts during construction and operation would therefore remain significant and unavoidable.

3.20.3.3.3 20(c) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project, require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

3.20.3.3.3.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Significant and Unavoidable. Greenway paths and other Plan components may require extension of or construction of new utilities, such as water, electric, and sewer infrastructure such as mains, distribution pipes, as well as relocation of existing utilities on sites that are within or adjacent to VHFHSZ areas since the location and design of future projects are currently unknown. The *Design Guidelines and Standards* stipulate that solar powered lights be installed to provide lighting along greenway paths, in parks, and for projects under the Plan in general, thus power lines and electrical utilities would not typically be needed for outdoor lighting. However, some larger amenities (e.g., restrooms), parks or greenspaces, or lighted signage associated with safe crossings (e.g., crosswalk lighting, warning lights), would potentially require new electrical connections, sewer connections, or other utilities. While major utility upgrades would not be anticipated, if any upgrades are made within VHFHSZs, these extensions (especially electrical), could exacerbate wildfire risk due to the high fire ignition potential of electricity and the highly flammable nature of materials used during construction.

Construction of projects under the Plan would be required to comply with all applicable California Building Code and California Fire Code requirements for development in a VHFHSZ (e.g., water supply, hydrant and standpipe spacing, signs, fire department access). The construction of and installation of overhead or underground electric utilities may temporarily increase the risk of ignition of materials due to the high fire risk of electricity. Electric utility construction would be conducted by qualified experts who would follow proper safety procedure required by CPUC and structures requiring electricity (primarily restrooms) would be required to be built in accordance with California Building Code requirements. **MM WF-2: Prepare a Construction Fire Protection Plan** would be implemented to reduce the risk of fire during construction. Nonetheless, construction or extension of utilities associated with Plan projects would have the potential to exacerbate the existing wildfire risk if they are located in VHFHSZs. Therefore, construction of Plan projects could include activities that would exacerbate wildfire risk or result in temporary or permanent impacts to the environment. Impacts would be significant and unavoidable.

Operations

Significant and Unavoidable. Once Plan projects are operational, their utility needs would be serviced by existing public utilities or via extensions from the nearest location as described above under Construction. Operation of greenway paths and other Plan components in or adjacent to VHFHSZs would require implementation of measures to protect defensible space surrounding the property such

as routine vegetation clearing or additional sprinkler systems to reduce the potential for fire ignition and spread. These protective measures as well as those described in **MM WF-3: Operations Fire Prevention Measures** are intended to reduce the risk of wildfire; however, the locations of future Plan projects are unknown and there remains potential that operation and maintenance of fire breaks, utilities (especially electric), or other infrastructure could result in a potentially significant impact.

Mitigation Measures

MM WF-2: Prepare a Construction Fire Protection Plan.

MM WF-3: Operations Fire Prevention Measures.

Significance After Mitigation

While **MM WF-2: Prepare Construction Fire Protection Plan** and **MM WF-3: Operations Fire Prevention Measures** would be required for projects constructed under the Plan that occur in or adjacent to VHFSZs and would reduce impacts, the possibility remains that a wildfire could occur in these sensitive areas and could result in potentially significant impacts related to exacerbating wildfire risks of, and exposing future recreationalists to, direct or indirect risk of injury, loss, or death due to wildfire. Impacts during construction and operation would therefore remain significant and unavoidable.

3.20.3.3.4 20(d) If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

3.20.3.3.4.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Significant and Unavoidable. As described in Section 3.20.1, Environmental Setting, the Plan Area contains primarily urbanized/developed areas which are outside of the designated VHFHSZ (CAL FIRE 2007, 2011); however, small portions of the Plan Area, primarily the northern extent in the San Gabriel foothills region, are located within the VHFHSZ, and there are small areas designated as VHFHSZs along the edge of the Angeles National Forest.

Due to the programmatic nature of Plan, the location and design of future projects cannot be determined at this time. However, it can reasonably be assumed that staging areas and construction zones for greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities could occur on the District ROW and adjacent parcels where they fall within or near SRAs or lands classified as VHFHSZ.

Where the Plan Area intersects these designations, there is a potential for construction to occur in or adjacent to canyons or steep slopes. Additionally, portions of the Plan Area are in flood hazard areas, as described in Section 3.10, Hydrology and Water Quality, and within or in proximity to landslide zones as described in Section 3.6, Geology and Soils.

Areas adjacent to flood zones could experience flood conditions during large storm events made more severe by runoff caused by post-fire conditions. Any project component could be constructed within

both VHFHSZ areas and mapped flood zone areas. Projects proposed at locations at the base of slopes or canyons could experience increased runoff and drainage changes that could expose people and property to additional flood risk from post-fire flooding due to increased runoff or altered drainage. As previously discussed in Section 3.10, Hydrology and Water Quality, construction of projects under the Plan would require stormwater BMPs be implemented per the *Design Guidelines and Standards*, federal, County, and local policies to minimize degradation of water quality associated with stormwater runoff or construction-related pollutants. In addition, construction and maintenance activities would be subject to local stormwater ordinances, and regional WDRs. Other measures in the SWPPP, if required, would include a range of stormwater control BMPs described previously to prevent silt runoff to storm drains or waterways. No additional mitigation measures have been proposed to address stormwater management as it is already a core component of the Plan.

Fault and landslide-prone areas in the Plan Area are shown in Figures 3.7-2 and 3.7-3 in Section 3.7, Geology and Soils. Approximately 6,500 acres of landslide-prone areas also overlap VHFHSZs in the Plan Area. Construction of any structures associated with future projects would be consistent with prevailing building codes and relevant regulations and permits, which would minimize risk from seismic activity. The California Building Code considers these geologic hazards and requires geotechnical studies as part of regular plan review in areas where hazards are known to exist. The result of the studies with respect to geological hazards would be incorporated into the construction plan and design element. For those Cities that provide for more protective design than the California Building Code, the geotechnical studies would also identify these requirements, and incorporate the City-specific additional protections for those portions of the plan within the City limits. Therefore, regulatory compliance ensures that impacts from strong seismic shaking, fault rupture, liquefaction, and landslides would be less than significant. No additional mitigation measures have been proposed to address geological hazards.

Ultimately, wildfires could exacerbate conditions of slope instability or flood because wildfires destroy vegetation and change soil conditions, which could expose people or structures to post-fire hazards regardless of whether flood or geologic hazards are addressed during project design. Because locations of specific project sites are not known at this time, construction of projects located in VHFHSZs or that have recently involved wildfires combined with areas prone to landslides or slope instability could expose workers, structures, and property to significant risks related to post-fire conditions. Impacts would be potentially significant. **MM WF-2: Prepare a Construction Fire Protection Plan** would ensure that project proponents plan for these potentialities by compiling a post-fire risk reduction measures into the construction fire prevention plan.

Operations

Significant and Unavoidable. The location of greenway paths, amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities could be within or adjacent to VHFHSZs and/or areas prone to flood, landslide, or slope instability. The operation of Plan components would likely introduce an increased number of daily visitors to project sites and expose those people as well as staff and structures to an area highly susceptible to landslides or slope instabilities after a wildfire event.

Therefore, operating a new project under the Plan in these areas could exacerbate the existing risk of post-fire hazard by exposing additional people to this existing hazard. Because the locations of future Plan projects are unknown, implementation of any greenway path project with any arrangement of

components could result in significant impact related to post-fire hazards. Implementation of **MM WF-2: Construction Fire Prevention Plan** would allow project proponents to prepare for the possibility, however, impacts would remain potentially significant.

Mitigation Measures

MM WF-2: Construction Fire Prevention Plan.

Significance After Mitigation

Potential future projects constructed and operated under the Plan in or adjacent to SRAs and VHFHSZs would benefit from planning for post-fire risk mitigation via compilation of post-fire risk reduction measures required by **MM WF-2: Construction Fire Prevention Plan**); however, even with careful planning, the existence of Plan projects in sensitive areas could expose people or structures to significant risks, including downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes. Construction and operation impacts would remain significant and unavoidable.

3.20.3.4 Impacts of Conceptual Design Projects

This section discusses potential impacts from the 10 conceptual designs discussed in Section 2.4. Any mitigation referenced below is discussed in the section above. Nine of the conceptual plans are not located within or near an SRA or VHFHSZ. Although no project footprints are available to analyze these conceptual design projects, their general location is known to be significantly distant from fire hazard zone and therefore, those projects would have no impact to wildfire related risks under CEQA Appendix G questions 20(a) through 20(d). The general location of the conceptual design projects is shown in Figure 3.20-1.

One conceptual design project, San Jose Creek Pocket Park, appears to be located adjacent to a LRA and SRA VHFHSZ (Figure 3.20-1); however, as no design footprint is available, it is not known how close the conceptual design project is to those sensitive areas. The discussions below assume that only the San Jose Creek Pocket Park has the potential for impacts to or from wildfire risks and that all other projects would have a finding of no impact.

- 3.20.3.4.1 20(a). If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project substantially impair an adopted emergency response plan or emergency evacuation plan?

Construction

Significant and Unavoidable. The components proposed for all 10 conceptual design projects, including the San Jose Creek Pocket Park, are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization and therefore the findings for these conceptual projects would not exceed those described for the Plan components in section 3.20.3.3, Plan Impacts. As the San Jose Creek Pocket Park would be sited near a VHFHSZ, impacts from construction of that conceptual design project could be potentially significant and unavoidable as described in Section 3.20.3.3.1. **MM WF-1: Construction Coordination with Emergency and Fire Services** would be implemented to reduce the risk that construction would impair an adopted

emergency response plan or evacuation plan. However, the possibility remains that consulting emergency service agencies will not result in measures capable of reducing impacts to less than significant. Therefore, for construction, impacts would remain significant and unavoidable.

Operations

Less than Significant. If the San Jose Creek Pocket Park were to be constructed and become operational, maintenance activities at the greenway, pocket park, overlook, and stair climb would occur on a routine basis and would be temporary in nature. Such activities would not require large equipment that would block emergency access. There would be no permanent road closures or obstructions associated with operations. Signage (per the *Design Guidelines and Standards*) would be used to alert users to rules and regulations within and along the Greenway Network, to warn users of dangerous conditions, and/or inform bicyclists and drivers of regulations and upcoming conditions. Therefore, operations would not physically impair or otherwise interfere with emergency response or evacuation in the project vicinity, and impacts would be less than significant. No mitigation would be required.

3.20.3.4.2 20(b). Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of wildfire?

Construction

Significant and Unavoidable. As the San Jose Creek Pocket Park would be sited near a VHFSZ, impacts from construction of that conceptual design project could be potentially significant and unavoidable as described in Section 3.20.3.3.2. While existing regulations would address potential fire risks associated with construction, when these activities occur within a VHFHZ, the existing regulations may not adequately address the heightened risks. Further precautions may need to be taken, including **MM WF-2: Prepare a Construction Fire Protection Plan**. The final design footprint of the San Jose Creek Pocket Park could present additional wildfire risk and construction in the areas could result in potentially significant impacts related to exacerbating wildfire risks of, and exposing project occupants to, direct or indirect risk of injury, loss, or death due to wildfire. Impacts would be potentially significant.

Operations

Significant and Unavoidable. Operation of the San Jose Creek Pocket Park would include routine maintenance such as landscaping and repair of amenities, as needed. These activities would be conducted in accordance with California Fire Code, which mandates proper refueling protocols and storage of combustible materials, and OSHA Safety and Health Regulations, which requires appropriate firefighting equipment, water sources, and sprinkler and alarm systems. The San Jose Creek Pocket Park would also operate in compliance with the State-mandated defensible space standards (PRC Section 4291, see Section 3.20.2.2.3). Compliance with local and State regulations will be further ensured via implementation of **MM WF-3: Operations Fire Prevention Measures**. However, because the San Jose Pocket Park project would be within or adjacent to a VHFSZ, it cannot be guaranteed that the operation of the greenway, pocket park, overlook, and stair climb would not exacerbate wildfire risk, thereby exposing project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire. Impacts would be potentially significant.

- 3.20.3.4.3 20(c). Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?

Construction

Less than Significant with Mitigation. Although the San Jose Creek Pocket Park would be sited near a VHFSZ, construction of this conceptual design project would not be expected to require installation or maintenance of roads, fuel breaks, emergency water sources, powerlines, or other utilities. This is because the conceptual design project does not include any components that would require utility connection of any kind. The concept project would include a greenway, pocket park, overlook, and stair climb. For projects in VHFSZs, electrical connection is the most significant risk factor that could exacerbate fire risk. As no electrical connection would be needed given the current level of information available for this concept project, impacts would be less than significant with implementation of **MM WF-2: Prepare a Construction Fire Protection Plan.**

Operations

Less than Significant with Mitigation. Although the San Jose Creek Pocket Park would be sited near a VHFSZ, operation of the greenway, pocket park, overlook, and stair climb for this conceptual design project would not be expected to require maintenance of fire breaks, utilities (especially electric), or other infrastructure that could result in environmental impacts. Potential impacts would be further limited by implementation of **MM WF-3: Operations Fire Prevention Measures.** Impacts would be less than significant with this mitigation measure in place.

- 3.20.3.4.4 20(d). Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?

Construction

Significant and Unavoidable. As the San Jose Creek Pocket Park would be sited near a VHFSZ, impacts from construction of that conceptual design project could be potentially significant and unavoidable as described in Section 3.20.3.3.4. The location is not within a flood hazard area. Due to its location adjacent to steep slopes, wildfires could exacerbate conditions of slope instability or flood because wildfires destroy vegetation and change soil conditions, which could expose people or structures to post-fire hazards. **MM WF-2: Construction Fire Prevention Plan** ensures that project proponents plan for these potentialities by incorporating post-fire risk reduction measures into the construction fire prevention plan. However, risk still remains due to the location of the conceptual design project. Therefore, the San Jose Creek Pocket Park conceptual design project could have potentially significant and unavoidable impacts by exposing people or structures to significant risks, including landslides, as a result of post-fire slope instability.

Operations

Significant and Unavoidable. As the San Jose Creek Pocket Park would be sited near a VHFSZ, impacts from operation of that conceptual design project could be significant because it would attract visitors to the area which may be susceptible to landslides or slope instabilities after a wildfire event.

Implementation of **MM WF-2: Prepare a Construction Fire Prevention Plan** would allow project proponents to prepare for the possibility; however, impacts would remain potentially significant.

SECTION 4 Cumulative Impacts

This section presents the cumulative impact analysis for each of the resource topics in Section 3, Environmental Impacts and Mitigation Measures. The evaluation of cumulative impacts considers the potential impact of the Plan in combination with past, present, and probable future projects that overlap in terms of the nature of the impact, the time frame, and the geographic area (e.g., a watershed or air basin). This section describes the methodology, projects considered in the cumulative impact assessment, and potential cumulative impacts that would occur if these projects were implemented along with the Plan. The cumulative baseline condition is the same as the environmental baseline and is described in each resource category in Section 3, Environmental Impacts and Mitigation Measures. The focus of this analysis is to identify the potential impacts of the Plan that might not be significant when considered alone, but that could contribute to a significant impact when viewed in conjunction with other projects/programs.

4.1 Cumulative Impact Methodology

According to State CEQA Guidelines Section 15130(a)(1), a “cumulative impact” consists of an impact that is created as a result of the combination of the project evaluated in the EIR together with other projects causing related impacts. As stated in State CEQA Guidelines Section 15130(a)(1), the cumulative impacts discussion in an EIR need not discuss impacts that do not result in part from the project evaluated in the EIR. Therefore, the application of those thresholds of significance that result in no adverse impact from a proposed project are not required to be subjected to cumulative impact analysis.

Section 15355 of the State CEQA Guidelines defines cumulative impacts as two or more individual effects that, when considered together, are considerable and may compound or increase other environmental impacts. Cumulative impacts can result from individually minor, but collectively significant projects occurring over a period of time (Section 15355(b)). Section 15130 of the State CEQA Guidelines stipulates that EIRs must consider the significant environmental effects of a proposed project as well as its contribution to cumulative impacts when the project’s incremental effect is cumulatively considerable. Per Section 15065(a)(3), *cumulatively considerable* means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects. The standards for “significant” or “cumulatively considerable” are based on the established significance thresholds for each resource area. Per Sections 15130(b)(1)(B) and 15130 (d), consistency with the projects or requirements of previously approved local, regional, statewide, or planning documents may also be a guide to determining whether a project’s impact is cumulatively significant.

There are two ways to address the question of which related actions should be considered in the context of past, present, and reasonably foreseeable actions when considered with a proposed project. State CEQA Guidelines Section 15130 specifically identifies the following methodologies:

- The list approach, which involves listing past, existing, and probable future projects or activities producing-related or cumulative impacts, including, if necessary, those projects outside the control of the lead agency; or

- The projection approach, which uses a summary of projects contained in an adopted local, regional, or statewide plan, or related planning document, that describes or evaluates conditions and their contribution to the cumulative effect.

For this PEIR, related plans and programs with a potential to contribute to cumulative impacts were analyzed using the “projection” approach (i.e., the second approach identified above). Therefore, the cumulative impact analysis for each resource area considers the short-term and long-term impacts related to general growth projected for the area, as well as policies and programs that are in place and have been adopted to protect and conserve environmental resources and minimize resulting impacts on human health. If the Plan is found to have *no impact* for a particular significance criterion, then there would be no potential for a cumulative impact either, and no discussion is provided for that significance criterion.

Using this approach, the cumulative analysis relies on the following regional projections:

- Long-range demographic forecasts based on adopted regional plans that are presented in Section 4.1.2 below.
- A determination of whether the long-term impacts of all related past, present, and future plans and projects would cause a cumulatively significant impact.
- A determination as to whether implementation of the Plan would have a “cumulatively considerable” contribution to any significant cumulative impact (See State CEQA Guidelines Sections 15130[a] and 15130[b], 15355[b], 15064[h], and 15065[c]).

4.1.1 Geographic Scope of Cumulative Impact Analysis

For the purposes of this PEIR, the geographic boundary considered in the environmental analysis varies depending on the type of resource considered, as depicted in Table 4.1-1. The geographic boundary considered in the cumulative impact analysis (Table 4.1-1) considers the SGV and reflects consideration of whether the Plan would cause a new significant cumulative impact or result in a cumulatively considerable contribution to a previously identified significant cumulative impact included in an adopted local, regional, or statewide plan. Most of the environmental resources are considered to be regionwide in their geographic scope because their effect is relatively local to the SGV region in which the Plan would be implemented. The geographic area for air quality is larger and includes the airshed under the jurisdiction of the SCAQMD. The geographic area of water quality is considered at the watershed level under the jurisdiction of the LARWQCB. GHG emissions are global in effect.

Table 4.1-1. Geographic Scope for Resources with Potential Cumulative Impacts Relevant to the Proposed Program

Resource Category	Geographic Scope
Aesthetics	San Gabriel Valley
Agriculture and Forestry Resources	San Gabriel Valley, in those areas zoned specifically for agriculture and/or forestry resources
Air Quality	South Coast Air Basin
Biological Resources	San Gabriel Valley
Cultural Resources	San Gabriel Valley
Energy	San Gabriel Valley

Resource Category	Geographic Scope
Geology and Soils	San Gabriel Valley
GHG Emissions	Global
Hazards and Hazardous Materials	San Gabriel Valley
Hydrology and Water Quality	San Gabriel Valley
Land Use and Planning	San Gabriel Valley
Mineral Resources	San Gabriel Valley, in those areas zoned for mineral resource extraction
Noise	San Gabriel Valley
Population and Housing	San Gabriel Valley
Public Services	San Gabriel Valley
Recreation	San Gabriel Valley
Transportation	San Gabriel Valley
Tribal Cultural Resources	San Gabriel Valley
Utilities and Service Systems	San Gabriel Valley within the Service Territories of the Utility Systems
Wildfire	San Gabriel Valley

The analysis of cumulative impacts proceeds using a “summary of projections contained in an adopted local, regional, or statewide plan, or related planning document, that describes or evaluates conditions contributing to the cumulative impact. Such plans may include a general plan, a regional transportation plan, or plans for the reduction of GHG emissions. A summary of projections may also be contained in an adopted or certified environmental document for such a plan” (State CEQA Guidelines Section 15130(b)).

The cumulative impacts analysis for each resource area using the projection approach considers impacts related to the general growth projected for the area as well as the policies and programs that are in place to protect, conserve, and improve environmental resources. The regional plans and programs for land use and mobility were consulted for planned future conditions. General plans prepared by the County, as well as SCAG’s RTP/SCS, provide information on trends as well as forecasts relevant to the cumulative impacts analysis for specific disciplines.

The discussion below describes the plans, programs, and projections as well as the context in which the Plan may contribute to potential cumulative impacts.

4.1.2 Cumulative Baseline Condition

The cumulative baseline condition for each resource category is the same as the environmental setting described in each resource category in Section 3, Environmental Impacts and Mitigation Measures. The environmental setting for each resource category in Section 3 describes the current condition prior to the Plan’s potential contribution to cumulative effects. Baseline environmental conditions are the physical conditions that existed at the time of publication of the NOP (October 2022).

4.1.3 San Gabriel Valley Growth Projections

Comprehensive land use planning for the SGV region is provided by the SCAG, as well as county and city general plans, which local governments are required by state law to prepare as a guide for future development. The regional plans and programs for land use and mobility were consulted for planned future conditions. The Los Angeles County 2035 General Plan and the SCAG 2020-2045 RTP/SCS provide information on trends as well as forecasts relevant to the cumulative impact analysis for specific disciplines. The regional growth forecast represents the most likely growth scenario for the SGV region in the future, taking into account a combination of recent and past trends, reasonable key technical assumptions, and regional growth policies. The regional growth forecast is completed through collaboration among the various stakeholders. In addition to regional growth forecasts, the California Department of Finance provides annual growth projections. Table 4.1-2 summarizes the population estimates for Los Angeles County for 2020-2055, which covers that planning period for the Plan. As shown in the table, the current projections indicate that the County population is anticipated to steadily decrease over the subject period, by a total of 15 percent in the 35-year period between 2020 and 2055.

Table 4.1-2. Department of Finance Population Forecast (Los Angeles County)

2020	2025	2030	2035	2040	2045	2050	2055
10,013,543	9,676,333	9,566,663	9,487,840	9,306,759	9,111,732	8,877,939	8,600,780

Source: California Department of Finance, Demographic Research Unit 2024

4.1.3.1 San Gabriel Valley Economic Forecast Report

According to the 2023 SGV Economic Forecast Report, prepared by the San Gabriel Valley Economic Partnership, the SGV's population has declined for five consecutive years since peaking in 2017 at 1,512,100 people. The forecast report states that in 2022 (the most recent year for which population has been reported), the population of the incorporated cities in the SGV declined by 0.2 percent over the year to 1,486,800. Total population in Los Angeles County experienced a similar decrease, driven by several causes including declining international migration, increasing domestic outmigration to other counties and other states, falling birth rates, and increases in both the cost of living and housing.

The largest cities in the SGV in 2022 (those with populations over 100,000) were Pomona, with 149,766 residents, followed by Pasadena (138,310), West Covina (108,243), and El Monte (107,706). Most of the cities in the region experienced a population decline, with the most notable decreases in total population coming from four cities, El Monte (-8,759), Pasadena (-6,996), South Pasadena (-6,000), and Baldwin Park (-5,080), for a combined loss of 26,835 residents. While 11 cities saw population growth, the three most significant (those with increases over 1,000 in population) include West Covina (2,650), Covina (1,616), and Claremont (1,365). Overall, the SGV cities had a net loss of 38,400 residents between 2021 and 2022 (Cal Poly Pomona 2023).

4.1.3.2 SCAG Connect SoCal (2024-2050 Regional Transportation Plan/Sustainable Communities Strategy)

On April 4, 2024, SCAG's Regional Council adopted the RTP/SCS. The RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health

goals. The goals of the RTP/SCS fall into four core categories: mobility, communities, environment, and economy. The 2024-2050 RTP/SCS goals are as follows:

- Support investments that are well-maintained and operated, coordinated, resilient and result in improved safety, improved air quality and minimized greenhouse gas emissions
- Ensure that reliable, accessible, affordable and appealing travel options are readily available, while striving to enhance equity in the offerings in high-need communities
- Support planning for people of all ages, abilities and backgrounds
- Create human-centered communities in urban, suburban, and rural settings to increase mobility options and reduce travel distances
- Produce and preserve diverse housing types in an effort to improve affordability, accessibility and opportunities for all households
- Develop communities that are resilient and can mitigate, adapt to and respond to chronic and acute stresses and disruptions, such as climate change
- Integrate the region’s development pattern and transportation network to improve air quality, reduce greenhouse gas emissions and enable more sustainable use of energy and water
- Conserve the region’s resources
- Improve access to jobs and educational resources
- Advance a resilient and efficient goods movement system that supports the economic vitality of the region, attainment of clean air and quality of life for our communities.

In this 2024 RTP/SCS, SCAG is projecting just over half the level of population growth in the region over the Plan’s horizon as was forecasted in the 2020 RTP/SCS. The total projected population growth for Los Angeles County through 2050 is 747,000 people, with the 2050 population forecasted at a total of 10,793,000 people.

4.1.4 Adopted Local and Regional Plans

4.1.4.1 Los Angeles County 2035 General Plan

The Los Angeles County 2035 General Plan was adopted by the LA County Board of Supervisors on October 6, 2015. The General Plan provides the policy framework for how and where the unincorporated County will grow through the year 2035, while recognizing and celebrating the County’s wide diversity of cultures, abundant natural resources, and status as an international economic center. The General Plan discusses new housing and jobs within the unincorporated areas in anticipation of population growth in the County and region. The Land Use Element provides strategies and planning tools to facilitate and guide future development and revitalization efforts. In accordance with the California Government Code, the Land Use Element designates the proposed general distribution and general location and extent of uses and serves as a blueprint for how land will be used to accommodate growth and change in the unincorporated areas. Land use policies for projects within unincorporated Los Angeles County in the SGV would be relevant to the proposed Plan.

4.1.4.2 Local Jurisdictions’ General Plans

Cumulative growth assumptions for the incorporated cities within the Plan Area use the growth projections contained in the SGV Economic Forecast Report. Each of the individual jurisdictions in the Plan Area have an adopted general plan, for which an EIR was certified, and various specific plans covering portions of the Plan Area. Each of the applicable general plans covers various planning periods

ranging from 2010 to 2040 and contain goals and policies directed at mitigating or avoiding environmental impacts on environmental topics (the list of goals and policies relevant to each resource category are included in the regulatory framework section of each resource category in Section 3, Environmental Impacts and Mitigation Measures).

4.1.4.3 Los Angeles County Bicycle Master Plan

The Los Angeles County Bicycle Master Plan (Bicycle Master Plan) was adopted by the Board of Supervisors in 2012. The Bicycle Master Plan provides a vision for biking throughout the County and serves as a guide for development of bicycle paths in unincorporated areas and along flood control channels over a 20-year period of 2012 to 2032. The plan recommends 832 miles of new bicycle paths throughout Los Angeles County, including potential opportunities for new bicycle paths in the SGV. Los Angeles County Public Works is currently in the process of updating the Bicycle Master Plan with a draft plan and associated PEIR expected to be published in 2025. For the purposes of this cumulative effects analysis, the 2012 Bicycle Master Plan is considered in establishing anticipated future conditions with regard to development and implementation of an active transportation network.

4.1.4.4 Emerald Necklace Implementation Plan

The Emerald Necklace is a 17-mile-long network of existing and future parks, greenways, and trails located along the Rio Hondo and San Gabriel River between Peck Road Water Conservation Park to the north and Whittier Narrows Recreation Area to the south. To advance the Emerald Necklace Vision, the Watershed Conservation Authority is the lead agency for the Feasibility Study & Implementation Planning Project. This planning project has identified a series of proposed trail and greening projects which would provide a continuous, looped network of bike paths and multi-use trails while providing improved connections to communities within and adjacent to the SGV, including Avocado Heights, Arcadia, Azusa, Baldwin Park, Bassett, El Monte, Irwindale, La Puente, Monrovia, Montebello, Pico Rivera, Rosemead, South El Monte, Temple City, and Whittier. The Emerald Necklace Master Plan was completed in 2013 and identified 44 project opportunities, including 15 high priority projects. The Master Plan did not specify a timeframe for implementation or analysis of individual projects. The Final EIR for the Plan was certified by the Watershed Conservation Authority in 2017, and a subset of identified projects are either under construction or have been completed since then. For the purposes of this cumulative effects analysis, this plan is considered in establishing anticipated future conditions with regard to development and implementation of an active transportation network.

4.2 Cumulative Effects Analysis

4.2.1 Aesthetics

4.2.1.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on aesthetics if it would have impacts that are individually limited but if, in combination with other projects within the cumulative geographic context, it would have a substantial adverse effect on a scenic vista; substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway; or in non-urbanized areas, substantially degrade the existing visual

character or quality of public views of the site and its surroundings (public views are those that are experienced from publicly accessible vantage point). Since the Plan Area is in an urbanized area, the Plan would have the potential to result in a cumulatively considerable impact if it would conflict with applicable zoning and other regulations governing scenic quality or create a new source of substantial light or glare that would adversely affect day or nighttime views in the area.

4.2.1.2 Contribution of the Plan to Cumulative Impacts

The SGV is largely built out of single- and multi-family residential homes, as well as commercial and industrial land uses. Few remaining vacant and open spaces remain in the SGV that are not already designated as open spaces/recreational land uses. While population projects from the LA County 2035 General Plan and SCAG 2020-2045 RTP/SCS indicate an anticipated population decline over the next few decades, growth and development in the SGV is anticipated to continue as the few remaining vacant parcels are developed and underutilized parcels are redeveloped in accordance with the land use plans of the various incorporated cities within the Plan Area. This continued urbanization of the SGV will result in changes that could potentially affect visual resources and visual character of the valley.

Cities in the SGV, as well as the County of Los Angeles, have development and design standards that projects must comply with to avoid or mitigate adverse visual impacts. Development and design review of individual projects by individual cities or the County would prevent the potential for adverse visual impacts for many projects implemented under the Plan, including potential increases in light and glare. However, as discussed in Section 3.1, Aesthetics, depending on where the project is located and who is implementing the project, the potential exists for a project to conflict with applicable zoning and regulations regarding scenic quality, which could result in significant and unavoidable impacts. Similar impacts were not identified in the environmental analyses for the Emerald Necklace Implementation Plan or the current Bicycle Master Plan (these plans were determined consistent with regulations regarding scenic quality). Therefore, while impacts under the Plan may be significant and unavoidable in this regard, when considered with other plans in the region, this is not considered a cumulatively considerable impact.

Overall implementation of the Plan is anticipated to develop a cohesive aesthetic for the overall Greenway Network. Further, projects implemented under the Plan, in addition to those implemented under the Emerald Necklace Implementation Plan and Bicycle Master Plan, would cumulatively result in an overall increase in open spaces in the SGV, contributing to beneficial impacts to aesthetics in the region. Taken together with the regional conditions and projections for aesthetics, the impacts of the Plan would not be cumulatively considerable.

4.2.2 Agriculture and Forestry Resources

4.2.2.1 Criteria for Determining Significance of Cumulative Impacts

The Plan could result in cumulative impacts to agriculture and forestry resources if, when considered in combination with other plans and projects, it resulted in a cumulatively considerable conversion of Prime farmland, Unique farmland, or Farmland of Statewide importance to non-agricultural purposes; resulted in a cumulative loss of forest land or involved other changes that resulted in a cumulatively considerable conversion of agricultural land to non-agricultural use.

4.2.2.2 Contribution of the Plan to Cumulative Impacts

Individual projects implemented under the Plan could result in potentially significant impacts to agriculture and forestry resources depending on location, and who is conducting the project. Overall, the Plan Area includes very little land designated for agricultural purposes. Similarly, implementation of the Emerald Necklace Implementation Plan and Bicycle Master Plan are focused on expansion of the active transportation network along existing flood control channels, and do not propose the conversion of agricultural resources. Therefore, while individual projects under the Plan could result in significant and unavoidable impacts to agricultural resources, overall implementation of the Plan would not have a considerable contribution to potential cumulative impacts for agricultural resources.

4.2.3 Air Quality

4.2.3.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on air quality if, in combination with other projects within the Basin, it would conflict with or obstruct implementation of the SCAQMD AQMP; generate air pollutant emissions during construction or operational activities of sufficient quantity to exceed the Air Quality Significance Thresholds established by the SCAQMD; or expose sensitive receptors to substantial TAC concentrations.

4.2.3.2 Contribution of the Plan to Cumulative Impacts

The greatest cumulative impact on the quality of regional air quality would be the incremental addition of pollutants through increased traffic from residential, commercial, and industrial developments over time. However, as described above in Section 4.1.2, San Gabriel Valley Growth Projections, the most recently completed forecasts for LA County and the SGV indicate population decline, while the SCAG forecast suggests potential growth but at a much slower rate than previous forecasts. The Plan once implemented, and when considered in combination with the anticipated implementation of projects under the Emerald Necklace Implementation Plan and Bicycle Master Plan, would provide a means of alternative transportation potentially resulting in overall fewer vehicle trips throughout the SGV and a beneficial impact.

Air quality would be temporarily degraded during construction activities that occur separately or simultaneously. The Los Angeles County portion of the SCAB is designated by the USEPA as a nonattainment area for ozone, lead, and PM_{2.5}. The SCAB is designated by CARB as a state-level nonattainment area for ozone, PM_{2.5}, and PM₁₀. However, as discussed in Section 3.3.3.1.1, SCAQMD Significance Thresholds, the SCAQMD provides project-level thresholds of significance for criteria pollutants for which the SCAB is in nonattainment. These are the levels at which, if exceeded, the SCAQMD has determined that an individual project's contribution to the cumulative impact (nonattainment) is cumulatively considerable. As detailed in Section 3.3.3.3.2, Project construction emissions are expected to be below the SCAQMD thresholds for construction activities. Once constructed, Project operation-related emissions would also be below the SCAQMD thresholds for operational activities. Therefore, implementation of the Plan would not have a considerable contribution to the significant cumulative impact for air quality.

4.2.4 Biological Resources

4.2.4.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on biological resources if, in combination with other projects within the SGV region, it would have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations or by CDFW or USFWS; have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, or regulations or by CDFW or USFWS; have a substantial adverse effect on state or federally protected wetlands (e.g., marshes, vernal pools, coastal wetlands) through direct removal, filling, hydrological interruption, or other means; interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites; conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance; or conflict with the provisions of an adopted habitat conservation plan, natural community conservation plan, or other approved local, regional, or state habitat conservation plan.

4.2.4.2 Contribution of the Plan to Cumulative Impacts

Development associated with implementation of the Plan would be focused along the San Gabriel River and associated creeks in the Plan Area, most of which have undergone significant transformation from their natural state and are managed with levees and dams. All projects would occur on or adjacent to existing flood control and transportation infrastructure along the existing District ROW. Construction activities and maintenance of individual projects implemented under the Plan have the potential for significant impacts to Biological Resources, but implementation of mitigation measures (**MM BIO-1** through **MM BIO-13**) would avoid and/or minimize the short-term adverse effects of individual construction projects, such that all impacts would be less than significant). With the implementation of mitigation, impacts to wildlife and habitat would be avoided and/or minimized during construction activity of individual projects (e.g., wildlife would likely move to other areas nearby during construction activity as any wildlife present are already adapted to urban conditions). Further, construction of individual projects would occur intermittently in various areas throughout the SGV over time. Similarly, a wide range of mitigation measures that must be implemented by individual projects in order to reduce impacts to special status species and sensitive natural habitat are required for projects implemented under the Emerald Necklace Implementation Plan and the Bicycle Master Plan (e.g., nesting bird surveys, pre-construction biological clearance surveys), and cumulatively considerable impacts from the construction and maintenance of greenways and paths developed in accordance with all plans in the SGV are not anticipated. As such, the Plan is not anticipated to considerably contribute to cumulative adverse impacts to biological resources in the SGV region. Further, the combined implementation of the Plan, along with the Emerald Necklace Implementation Plan and Bicycle Master Plan, is expected to enhance natural habitats and improve wildlife habitat in the region, which would contribute to long-term beneficial impacts to biological resources in the SGV region.

4.2.5 Cultural Resources

4.2.5.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on cultural resources, if, in combination with other projects within the SGV, it would cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5; cause a substantial adverse change in the significance of an archaeological resource pursuant to Section 15064.5; or disturbance of human remains, including those interred outside of dedicated cemeteries.

4.2.5.2 Contribution of the Plan to Cumulative Impacts

The Plan Area is considered sensitive with a high potential for cultural resources (both archaeological resources and historic resources) in the region. Depending on the location of individual projects, the potential exists that adverse impacts to cultural resources could occur. With implementation of mitigation measures which require avoiding sites with known cultural resources or historic resources (**MM CR-2: Avoid Historic Resources** and **MM CR-5: Avoid Cultural Resources, Prepare Treatment Plan**) or preparing appropriate treatment plans (**MM CR-3: Prepare and Implement Historic Resources Mitigation Plan** and **MM-CR-6: Monitoring**), impacts would be reduced to less than significant levels, which would also reduce the potential for cumulative impacts of overall Plan development. Similar mitigation measures are required for the Emerald Necklace Implementation Plan, and it is anticipated that similar mitigation measures would be implemented for projects developed under the Bicycle Master Plan that could affect cultural resources. Therefore, effects to cultural resources are not anticipated to be cumulatively considerable.

4.2.6 Energy

4.2.6.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact related to energy, if, in combination with other projects within the SGV, it would result in the wasteful, inefficient, or unnecessary consumption of energy.

4.2.6.2 Contribution of the Plan to Cumulative Impacts

Implementation of individual projects under the Plan would require energy use during construction activity, and long-term maintenance of facilities. However, projects would be implemented according to the *Design Guidelines and Standards*, which specify numerous measures to ensure energy and water conservation and efficiency, including installation of solar-powered lights. Overall, implementation of the Plan would increase the active transportation network and open space areas in the region, which would reduce vehicle miles traveled. Further, the Plan would not result in any population growth and the need for new housing or facilities which would increase current demand for energy. When considered together with the Emerald Necklace Implementation Plan and the Bicycle Master Plan as well as current forecasts for future population levels in the region, cumulative impacts with regard to energy are not anticipated. Therefore, effects to energy would not be cumulatively considerable.

4.2.7 Geology and Soils

4.2.7.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on geology and soils, if, in combination with other projects within the SGV, it would directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault, strong seismic ground shaking, seismic-related ground failure, including liquefaction, or landslides; result in substantial soil erosion or the loss of topsoil; be located on a geologic unit or soil that is unstable or that would become unstable as a result of the Plan and potentially result in an onsite or offsite landslide, lateral spreading, subsidence, liquefaction, or collapse; be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property; have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal where sewers are not available for the disposal of waste water, or directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

4.2.7.2 Contribution of the Plan to Cumulative Impacts

Geology and soil impacts are considered site-specific, such that development of a project in one site would not alter the potential for geologic events or soil types at another project site. Seismic events are regional and affect large areas at one time. Strong ground-shaking events could lead to damage of structures constructed under the Plan, as well as buildings and structures in the surrounding areas. However, implementation of the Plan would not increase these impacts, and the Plan does not propose any structures for human occupancy that would increase risks of injury as a result of strong ground shaking.

Site-specific geologic and soil hazards such as liquefaction, landslides, erosion and expansive soils would be addressed at each individual project site through implementation of the mitigation measures described in Section 3.7, Geology and Soils. As geologic and soil hazards are site-specific, they would similarly be addressed for individual Emerald Necklace Implementation Plan and the Bicycle Master Plan projects as they're implemented. As such, that development of a project in one site would not alter the potential for geologic events or soil types at another project and seismic events are already considered regional; therefore, compliance with mitigation measures would assure that impacts would not be cumulatively significant, and that the Plan would not contribute to any cumulatively adverse effects related to geology and soils, including the risk of loss, injury, or death to people or structures due to geologic or soil hazards.

4.2.8 Greenhouse Gas Emissions

4.2.8.1 Criteria for Determining Significance of Cumulative Impacts

The consideration of GHG emissions is ultimately a cumulative issue, as described in Section 3.8.1, GHG Emissions, Environmental Setting. The Plan would be considered to result in cumulatively considerable

impacts if it resulted in significant GHG emissions or conflicted with a plan adopted to reduce GHG emissions.

4.2.8.2 Contribution of the Plan to Cumulative Impacts

GHG emissions resulting from implementation of the Plan would be related to construction and mobile sources (visitor traffic). Although construction activities would be temporary in nature, traffic related to the Plan would continue through operation of the trails system. With continued growth in the region, the number of vehicle trips would also likely increase with population growth, although as described above growth in the region is expected to be slow or even decrease over the next few decades. In addition, federal regulations require that car manufacturers reduce GHG emissions from vehicles, and the SCAG RTP/SCS includes plans for numerous public transportation system improvements that would further reduce vehicle traffic in the region. Nonetheless, given the area is already impacted by motor vehicle traffic, any increase in total number of vehicles on the road, including those during construction activity, within the Plan Area is anticipated to result in a significant cumulative impact associated with GHG emissions.

As described in Section 3.8, Greenhouse Gas Emissions, Los Angeles County adopted the 2045 CAP which took effect in June 2024, which is an update to the 2020 CAP and sets new GHG emissions reduction targets for 2030 and 2035, consistent with state goals, and sets a long-term aspirational goal for carbon neutrality by 2045 (Los Angeles County Department of Regional Planning 2024). The 2045 CAP includes five categories for GHG emissions reductions: (1) energy supply, (2) transportation, (3) building energy and water, (4) waste, and (5) agriculture, forestry, and other land uses. Under these categories, there are various strategies, measures, and actions which will achieve the GHG emissions reductions outlined in the 2045 CAP such as decarbonizing the energy supply, increase densities and diversity of land uses near transit, reducing single occupancy vehicle trips, improve efficiency of existing building energy use, conserving water, and others. Projects completed by the County or Flood Control District in unincorporated areas of the County would be consistent with the CAP; however, projects implemented under the Plan by other entities in incorporated cities may not be consistent with the Plan, which could result in cumulatively considerable contribution of cumulative impacts associated with GHG.

Implementation of the Plan when considered in combination with the Emerald Necklace Implementation Plan would help meet the goals of the Bicycle Master Plan. Fewer vehicle trips and vehicle miles traveled as a result of all three plans would translate into fewer mobile source emissions. As such, the Plan could result in beneficial impacts related to GHG emissions by providing trails and access to bicyclists, pedestrians, and equestrians as an alternative means of transportation in the SGV.

4.2.9 Hazards and Hazardous Materials

4.2.9.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact related to hazards and hazardous materials, if, in combination with other projects within the SGV, it would create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials; create a significant hazard to the public or the environment through reasonably foreseeable

upset and accident conditions involving the release of hazardous materials into the environment; emit hazardous emissions or involve handling hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school; be located on a site that is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would create a significant hazard to the public or the environment; be located within an airport land use plan area or, where such a plan has not been adopted, be within two miles of a public airport or public use airport, and result in a safety hazard or excessive noise for people residing or working in the project area; impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; or expose people or structures, either directly or indirectly, to a significant risk of loss, injury, or death involving wildland fires.

4.2.9.2 Contribution of the Plan to Cumulative Impacts

Hazards and hazardous materials impacts related to the Plan are related to construction of individual projects and subsequent maintenance activities. These impacts could include exposure of construction workers and the public to hazardous materials that could be encountered or used during construction and maintenance activities. However, as construction will be temporary and maintenance will be conducted intermittently, implementation of the mitigation measures, as described in Section 3.9, Hazardous and Hazardous Materials (**MM HAZ-1: Pre-construction Hazardous Sites Records Search, MM HAZ-2: Phase I/II Environmental Site Assessment and MM HAZ-3: Soil and Groundwater Management Plan**), would reduce impacts to less than significant levels. Any other developments in the region, including projects developed for the Emerald Necklace Implementation Plan and the Bicycle Master Plan would be required to comply with similar mitigation measures and similar applicable regulations. Therefore, it is not anticipated that cumulatively considerable impacts related to use, transport or disposal of hazardous materials would occur. Further risk of upset from release of hazardous materials would not be cumulatively considerable. Accordingly, the Plan would not have a considerable contribution to cumulative impacts. (Discussion of cumulative impacts related to exposure to risks related to wildland fires is discussed in Section 4.2.20, Wildfire, below).

4.2.10 Hydrology and Water Quality

4.2.10.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on hydrology and water quality if, in combination with other projects within the SGV region, it would violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality; substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Plan may impede sustainable groundwater management of the basin; substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner that would: result in substantial erosion or siltation on or off site, substantially increase the rate or amount of surface runoff in a manner that would result in flooding on or off site, create or contribute runoff water that would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff, or impede or redirect flood flows; risk release

of pollutants due to project inundation in flood hazard, tsunami, or seiche zones; or conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan.

4.2.10.2 Contribution of the Plan to Cumulative Impacts

Hydrology and water quality impacts associated with Plan implementation are related to earthmoving during construction activity. While earthmoving activities would increase the potential for erosion and sedimentation, projects implemented under the Plan would be required to comply with stormwater management features as specified in the *Design Guidelines and Standards*, and overall implementation of the Plan is anticipated to result in an increase in greenspace and decrease in impervious surface coverage which would result in a beneficial impact. The implementation of this Plan in combination with the Emerald Necklace Implementation Plan and Bicycle Master Plan would further result in a cumulative increase in greenspace and improved stormwater management in the SGV. Therefore, the construction and operation of projects under the Plan are not anticipated to contribute to cumulatively considerable adverse impacts related to hydrology and water quality.

4.2.11 Land Use and Planning

4.2.11.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on land use and planning, if, in combination with other projects within the SGV region, it would be inconsistent with adopted land use goals, objectives, or policies of applicable lands use plans or create incompatible land uses with the immediate surrounding land uses. The cumulative growth and development in the SGV region is expected to be largely consistent with the plans that have been established to guide and regulate growth patterns and infrastructure improvements. As described in Section 4.1.2, SGV Growth Projections, regional planning documents anticipate an overall decrease in SGV population in the coming years. Regional planning documents, such as SCAG's RCP and the 2020–2045 RTP/SCS, are used for planning within the SGV. However, some strategies may not be consistent with the general plans of city and County areas when it comes to land use patterns and densities. On a local level, goals and policies in the local jurisdictions' general plans would supersede strategies in the 2020–2045 RTP/SCS.

4.2.11.2 Contribution of the Plan to Cumulative Impacts

The Plan, when considered in conjunction with other future developments that occur based on growth projections, would not increase the intensity of land uses in the area. The Plan has the potential to contribute to cumulative but not considerable impacts due to increased recreational use, potentially in areas not previously accessible to the public. Further, the Plan, when considered in combination with the Emerald Necklace Implementation Plan and Bicycle Master Plan, would result in cumulatively beneficial impacts with regard to physically connecting established communities via a more extensive active transportation network.

However, projects implemented under the Plan could potentially result in significant and unavoidable conflicts with general plan and zoning designations of individual cities, as projects conducted by the County are not required to comply with local regulations, and the County does not have the authority to enforce mitigation measures in instances where projects are located in other municipalities. Where

projects may pose a conflict with the local land use designations/zoning, mitigation measures can and should be adopted by such other agency. Accordingly, when considered with other regional plans and local land use plans, the Plan could result in a cumulatively considerable land use impact.

4.2.12 Mineral Resources

4.2.12.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on mineral resources, if, in combination with other projects regionwide, in those areas zoned for mineral resource extraction, it would result in the loss of availability of a known mineral resource or mineral resource recovery delineated on a local general plan, specific plan, or other land use plan site that would be of value to the region and the residents of the State.

4.2.12.2 Contribution of the Plan to Cumulative Impacts

Future projects implemented under the Plan could result in potentially significant impacts if located in a designated mineral resource area, but with implementation of **MM MR-1: Ensure Access to Mineral Resources**, implementation of the Plan would not preclude access to any known minerals. Similarly, implementation of the Emerald Necklace Implementation Plan has been determined to not preclude access to any known minerals and the Bicycle Master Plan would develop the District ROW, which would not preclude access to known minerals. Mineral extraction is in specifically designated areas. Future growth of the region, based on projections described in Section 4.1.2, SGV Growth Projections (e.g., growth induced by private development such as new residential units or commercial areas), if any, would have to comply with local plans and zoning designations regarding mineral resources. Therefore, cumulatively considerable impacts to mineral resources would not occur.

4.2.13 Noise

4.2.13.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on noise, if, in combination with other projects within the defined geographic context, it would result in a substantial temporary or permanent increase in ambient noise levels in the vicinity of the individual projects developed under the Plan in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. This impact would occur if any project construction activity would take place outside the codified hours of construction specified by any city or County government codes; any project construction activity generates maximum noise levels that exceed thresholds set by the local municipal codes; any operations activity would generate noise related to the Plan that would exceed the limits specified in any jurisdiction's municipal code; the Plan would generate excessive groundborne vibration or groundborne noise levels; or the Plan would be located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport and expose people residing or working in the project area to excessive noise levels.

4.2.13.2 Contribution of the Plan to Cumulative Impacts

Implementation of the Plan could result in significant and unavoidable impacts in ambient noise levels, both during construction and long-term operation depending on the location of individual projects relative to sensitive receptors. The plan would require the implementation of **MM AQ-1: Emission Reduction Measures**, **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan**, and **MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures**. However, these mitigation measures may not mitigate all ambient noise impacts to sensitive receptors or local established noise standards in all locations for all projects that could be completed under the Plan, resulting in significant and unavoidable impacts. While the Plan could result in increases in noise in specific locations where projects are implemented, because the Plan Area covers such a large geographic region and projects would be implemented intermittently in the future, implementation of the Plan would not result in an increase in the overall noise setting of the region. Therefore, the Plan would contribute, but not considerably, to cumulative noise impacts in the region. Further, overall implementation of the Plan, when considered with implementation of the Emerald Necklace Implementation Plan and Bicycle Master Plan, as well as forecasted decline in population, could result in fewer vehicle miles traveled in the region (as all such projects are intended to provide opportunities for alternative modes of transportation throughout the region). Any decrease in motor vehicles on local roadways and highways would result in an associated decrease in noise from motor vehicles, which would be a beneficial impact.

4.2.14 Population and Housing

4.2.14.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on population and housing if, in combination with other projects within the SGV, it would induce substantial unplanned population growth in an area, either directly (e.g., by proposing new homes and businesses) or indirectly (e.g., through extension of roads or other infrastructure) or displace a substantial number of existing people or housing, necessitating the construction of replacement housing elsewhere.

4.2.14.2 Contribution of the Plan to Cumulative Impacts

Based on the projections described in Section 4. 1.2, SGV Growth Projections, the population of the SGV is anticipated to decline over the coming years. Implementation of the Plan would extend pedestrian and cycling pathways through the SGV, and when considered in combination with projects implemented under the Emerald Necklace Implementation Plan and Bicycle Master Plan, could result in a comprehensive greenway network throughout the SGV. However, none of these plans would extend additional infrastructure (i.e., water, sewer, electricity beyond that needed for potential restrooms), which would indirectly induce unplanned population growth, and the Plan does not include construction or operation of any new residential or commercial structures. Therefore, there would be no cumulatively considerable adverse impacts related to population and housing.

4.2.15 Public Services

4.2.15.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on public services if, in combination with other projects within the SGV, it would result in the demand for police services at the time of the proposed Project build-out compared to the expected level of service available; result in substantial adverse physical impacts associated with the provision of new or physically altered fire protection, police protection, schools, parks, or other public facilities, the construction of which could cause significant environmental impacts to maintain acceptable service ratios, responses times, or other performance objectives; or require the addition of a new fire station or the expansion, consolidation, or relocation of an existing facility to maintain service.

4.2.15.2 Contribution of the Plan to Cumulative Impacts

The implementation of the Plan would result in less than significant impacts with mitigation to public services as related to construction with implementation of **MM TR-4: Notify Emergency Personnel of Road Closures** and **MM REC-1: Coordinate with Park Departments/Agencies** and less than significant impacts during operations. The Plan would facilitate the construction of new recreational facilities and active transportation infrastructure. Recreational users that would use the network are anticipated to come from the existing regional population, which are already served by local and regional fire and police departments, schools and parks. Implementation of the Plan would not have any impact on population growth in the region, and as previously discussed, current forecasts anticipate population decline over the next few decades. Although there are no public facilities located on District ROW, the Plan does not propose to demolish, relocate, or retire any existing public facilities that may be located on adjacent parcels, and with proper notification per **MM TR-4: Notify Emergency Personnel of Road Closures** and **MM REC-1: Coordinate with Park Departments/Agencies**, potentially significant impacts related to response times (for police and fire protection) or temporary closures (for parks), projects would be less than significant with mitigation. These project impacts are not exacerbated when considered with implementation of the Emerald Necklace Implementation Plan and Bicycle Master Plan. Therefore, cumulatively considerable impacts to public services would not occur.

4.2.16 Recreation

4.2.16.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on recreation, if, in combination with other projects within the SGV, it would increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated or if the Plan would include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment.

4.2.16.2 Contribution of the Plan to Cumulative Impacts

As previously discussed, current population forecasts for the region anticipate population to decline over the next few decades. However, LA County's assessment of park needs in the region determined

that existing recreational facilities are not sufficient to meet the demand of the current population. Implementation of the Plan, in conjunction with the Emerald Necklace Implementation Plan and Bicycle Master Plan, along with the development of other expanded parks and recreational facilities in the County, would result in a cumulatively beneficial impact to recreation with improved access to recreational facilities and meeting the recreational demands as determined by LA County. In addition, the implementation of these plans could increase the use of existing neighborhood or regional parks as the active transportation infrastructure would provide additional access to these facilities and could result in cumulatively considerable impacts to these facilities. Implementation of **MM REC-1: Coordinate with Park Departments/Agencies**, to coordinate with parks departments and agencies prior to development of individual projects, would reduce the Plan's contribution to this cumulatively considerable impact to less than significant with mitigation.

However, as the Plan consists of the development of recreational facilities, the overall construction and maintenance activities associated with development of future individual projects under the Plan, in combination with projects developed under the Emerald Necklace Implementation Plan and Bicycle Master Plan, could result in significant and unavoidable impacts related to physical adverse effects to the environment (as discussed in Section 3.16, Recreation), even with the implementation of mitigation measures. This would be considered a cumulatively considerable adverse impact, and the Plan contribution to this cumulative impact could be significant and unavoidable depending on the location of individual projects.

4.2.17 Transportation/Traffic

4.2.17.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on transportation/traffic, if, in combination with other projects within the SGV, it would conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities; conflict or be inconsistent with State CEQA Guidelines Section 15064.3, subdivision (b); substantially increase hazards because of a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment); or result in inadequate emergency access.

4.2.17.2 Contribution of the Plan to Cumulative Impacts

A primary goal of the Plan is to improve mobility and recreational opportunities for people with disabilities, youth and aging populations, bicyclists, pedestrians, and equestrians in the SGV. As such, the transportation impacts of the Plan will primarily result from vehicle trips during construction activity, and vehicle trips for recreational users to access the constructed greenway. Depending on the location of individual projects, impacts on transportation could be significant as a result of road closures or detours during construction. However, overall implementation of the Plan, when considered in conjunction with the Bicycle Master Plan and Emerald Necklace Implementation Plan, is anticipated to cumulatively reduce vehicle miles traveled in the region through the development of a comprehensive active transportation network. Therefore, the Plan would contribute to, but not considerably, cumulative impacts to transportation and traffic.

4.2.18 Tribal Cultural Resources

4.2.18.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on tribal cultural resources, if, in combination with other projects within the SGV, it would cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC Section 21074 as a site, feature, place, or cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe and that is either of the following: listed or eligible for listing in the CRHR, or in a local register of historical resources as defined in PRC Section 5020.1(k); or a resource determined by the lead agency to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1. In applying these criteria, the lead agency will consider the significance of the resource to a California Native American tribe.

4.2.18.2 Contribution of the Plan to Cumulative Impacts

The Plan Area is considered sensitive for tribal cultural resources in the region. Depending on the location of individual projects, the potential exists that adverse impacts to tribal cultural resources could occur. With implementation of mitigation measures which require avoiding sites with known tribal cultural resources (**MM TCR-1: Tribal Cultural Resources Assessment**) or preparing appropriate treatment plans (**MM TCR-2: Avoid Tribal Cultural Resources, Prepare Treatment Plan** and **MM TCR-4: Conduct Native American Monitoring**), and unanticipated discovery plan (**MM TCR-3: Unanticipated Discovery**), impacts would be reduced but would remain potentially significant and unavoidable. Similar mitigation measures are required for the Emerald Necklace Implementation Plan, and it is anticipated that similar mitigation measures would be implemented for projects developed under the Bicycle Master Plan that could affect tribal cultural resources. Therefore, effects to tribal cultural resources would not be cumulatively considerable.

4.2.19 Utilities and Service Systems

4.2.19.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact on utilities and service systems, if, in combination with other projects within the SGV, it would require or result in the relocation or construction of new or expanded water, wastewater treatment, stormwater drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects; have insufficient water supplies available to serve the Project and reasonably foreseeable future development during normal, dry, and multiple dry years; result in a determination by the wastewater treatment provider that serves or may serve the Project that it has inadequate capacity to serve the Project's projected demand in addition to the provider's existing commitments; generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals; or not comply with federal, state, and local management and reduction statutes and regulations related to solid waste.

4.2.19.2 Contribution of the Plan to Cumulative Impacts

The Plan would not have a significant adverse impact on utilities such as wastewater services, water services, or solid waste disposal services, although construction activities of individual projects may result in the relocation of existing utilities. Implementation of **MM UTIL-1: Prepare and Implement Utilities Plan** would ensure that any projects that require relocation of existing utilities coordinate with service providers in advance to ensure there is sufficient capacity prior to construction. All projects implemented under the Plan, along with any other development in the region, including projects completed under the Emerald Necklace Implementation Plan and Bicycle Master Plan, would be required to comply with utility regulations and address site-specific utilities issues. The Emerald Necklace Implementation Plan included only one project that would require drinking fountain or restroom facilities, and the Bicycle Master Plan does not include installation of any infrastructure other than a transportation network. Therefore, cumulative impacts to utilities and service systems would not be cumulatively considerable.

4.2.20 Wildfire

4.2.20.1 Criteria for Determining Significance of Cumulative Impacts

The Plan would have the potential to result in a cumulatively considerable impact related to wildfire, if, in combination with other projects within the SGV, it would substantially impair an adopted emergency response plan or emergency evacuation plan; exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire; require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines, or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts on the environment; or expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes.

4.2.20.2 Contribution of the Plan to Cumulative Impacts

Implementation of the Plan would not impair an adopted emergency response plan or emergency evacuation plan, result in increased fire risk in high hazard areas, require the installation or maintenance of associated infrastructure that may exacerbate fire risk or would it result in the development of any structures for human occupancy that could be adversely affected by wildfires, nor would it expose people or structures to significant risks, including the downslope or downstream flooding or landslides as a result of runoff, post-fire slope instability, or drainage changes. However, individual projects implemented under the Plan if located in a VHFHZ would increase the number of people recreating in such area which could result in a significant impact in the event of a wildfire. Although implementation of **MM WF-1: Construction Coordination with Emergency and Fire Services** would require coordination with emergency and service providers; **MM WF-2: Construction Fire Prevention Plan** and **MM WF-3: Operations Fire Prevention Measures** would require the project proponent to prepare a construction fire protection plan and implement operational fire prevention measures, respectively, the possibility remains that future project locations may be sited in or near SRAs or lands classified as VHFSZ, or project sites could feature conditions that would present additional wildfire risks; therefore, construction and operation impacts, even with mitigation measures, remain significant and unavoidable. Similarly, neither

the Emerald Necklace Implementation Plan nor the Bicycle Master Plan would result in development of any structures for occupancy or result in increased fire risks in high hazard areas. However, depending on the location of individual projects developed under the Plan, it could result in an increase in recreationalists spending time in a high fire hazard area, which could expose people to significant risks and result in a significant and unavoidable impact. The geographic scope of the Emerald Necklace Implementation Plan is outside of designated high hazard areas. Portions of the Bicycle Master Plan network are within high hazard areas. Therefore, when considered in combination, cumulative risks related to wildfire or wildfire risk would be considerable with regard to more people being exposed to effects of wildland fires.

SECTION 5 Other CEQA Considerations

The State CEQA guidelines require specific consideration of certain impacts as required in Sections 15126 and 15128. Specifically, Section 15126 requires consideration, preferably in separate sections, which must be indicated, of the following items:

- a. Significant Environmental Effects of the Proposed Project (Section 3 of this PEIR and summarized in Section 6.3.4).
- b. Significant Environmental Effects Which Cannot be Avoided if the Proposed Project is Implemented (Section 3 of this PEIR and summarized in Section 5.1).
- c. Significant Irreversible Environmental Changes Which Would be Involved in the Proposed Project Should it be Implemented (Section 5.2 of this PEIR).
- d. Growth-Inducing Impact of the Proposed Project (Section 5.3 of this PEIR).
- e. The Mitigation Measures Proposed to Minimize the Significant Effects (Section 3 of this PEIR).
- f. Alternatives to the Proposed Project (Section 4 of this PEIR).

Section 15126 also requires consideration of the reasons that various possible effects of a project were determined not to be significant and were therefore not discussed in detail in the EIR. This PEIR includes detailed discussion of all potential effects under each resource category as listed in Appendix G of the State CEQA Guidelines. As no potential issues were excluded from detailed discussion, this provision is not applicable to this PEIR.

5.1 Significant effects that cannot be avoided if project is implemented

According to Section 15126.2 (b), significant impacts, including those which can be mitigated but not reduced to a level of insignificance, shall be discussed in the PEIR. For impacts that cannot be alleviated without imposing an alternative design, their implications and the reason why the reasons why the project is being proposed, notwithstanding their effect, should be described.

Implementation of the Plan would result in significant and unavoidable impacts for the following resources areas: Aesthetics, Agriculture and Forestry, Air Quality, Cultural, Noise, Recreation, Transportation, and Wildfire.

5.2 Irreversible Environmental Changes

State CEQA Guidelines Section 15126.2(c) requires a discussion of any significant irreversible environmental changes that would be caused by the proposed project, such as uses of nonrenewable resources if a large commitment of resources makes removal or nonuse thereafter likely, primary and secondary impacts that would generally commit future generations to similar uses, or if the proposed consumption of resources is not justified (e.g., the project involves the wasteful use of energy). Irretrievable commitments of resources should be evaluated to determine that the consumption is justified.

Implementation of the Plan would occur along the District ROW and adjacent parcels in the SGV, crossing through unincorporated County areas as well as local jurisdictions within the Plan Area. Proposed development would include the irreversible commitment of natural resources (water and raw materials required during construction and operations), energy, land, and human resources. Ongoing maintenance of new greenway paths and amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities would entail a further irreversible commitment of energy resources in the form of petroleum products (diesel fuel and gasoline), natural gas, and electricity generated by burning fossil fuels. Long-term impacts would also result from an increase in noise levels as the new greenway path and other components attract visitors to areas along the District ROW not previously accessible to the public.

5.3 Growth-Inducing Impacts

According to Section 15126.2 (e) of the State CEQA Guidelines, growth-inducing impacts of a proposed project shall be discussed in the PEIR. Growth-inducing impacts are those effects of the proposed project that might foster economic or population growth or the construction of new housing, either directly or indirectly, in the surrounding environment. According to CEQA, increases in the population may tax existing community service facilities, requiring construction of new facilities that could cause significant environmental effects.

Induced growth is any growth that exceeds planned growth and results from new development that would not have taken place without implementation of the proposed project. Typically, the growth-inducing potential of a project would be considered significant if it results in growth or population concentration that exceeds those assumptions included in pertinent master plans, land use plans, or projections made by regional planning authorities. However, the creation of growth-inducing potential does not automatically lead to growth, whether it would be below or in exceedance of the projected level. Under CEQA, it must not be assumed that growth in any area is necessarily beneficial, detrimental, or of little significance to the environment.

As described in Section 3.14, Population and Housing, the temporary and specialized nature of construction work, as well as the large available construction workforce in the Los Angeles region, would not lead to a substantial population increase during the construction period. With respect to the operations period, Section 3.14 states that the Plan includes goals and objectives of promoting equitable practices, creating recreational opportunities, integrating stormwater management, enhancing connections and natural habitats, and enriching community well-being. Future projects to be implemented under the Plan would be intended to serve the local community and not intended to substantially increase population growth. Consequently, the Plan is not expected to result in significant growth-inducing impacts on the environment.

SECTION 6 Alternatives Analysis

6.1 Introduction

State CEQA Guidelines Section 15126.6 requires that an EIR describe a range of reasonable alternatives to a project or its location that could feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any significant environmental impacts, if any exist. A comparative analysis of impacts is required to allow for consideration by decision-makers.

Specifically, CEQA requires consideration of a range of alternatives to the project or program that: (1) could feasibly attain most of the basic program objectives and (2) would avoid or substantially lessen any of the significant impacts of the proposed program. The range of alternatives discussed in an EIR is governed by the rule of reason, which requires the identification of only those alternatives necessary to permit a reasonable choice between the alternatives and the proposed project. An alternative cannot be eliminated simply because it is costlier than the proposed program or if it could impede the attainment of all program objectives to some degree. However, the State CEQA Guidelines state that an EIR need not consider an alternative whose effects cannot be reasonably ascertained and whose implementation is remote or speculative. CEQA requires that an EIR include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed program.

An EIR need not consider an alternative that would be infeasible. State CEQA Guidelines Section 15126.6(f)(1) explains that the evaluation of project alternative feasibility can consider many factors, including site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, and jurisdictional boundaries, and whether the proponent can reasonably acquire, control, or otherwise access the alternative site. Therefore, an EIR is also not required to evaluate an alternative that (1) has an effect that cannot be reasonably identified or that has remote or speculative implementation, or (2) would not achieve the basic project objectives. From the alternatives, an environmentally superior alternative will be identified.

6.2 Alternatives Considered but Eliminated from Further Analysis

The process of determining potential greenway alignments for conceptual design included extensive public outreach. Community workshops were hosted by the SGV Greenway Network Team, including the Los Angeles County Public Works and consultant team. The community workshops served to educate the community about the purpose and goals of the Plan, build an understanding of the planning process, gather feedback on amenities, uses, and potential concerns, and to promote the Plan. During these meetings, no significant revisions or alternatives were proposed that would be more than variations of the Plan. On the whole, the majority of input received through the community outreach effort included suggestions that were carried forward for inclusion in the Plan or suggestions for specific locations for future project implementation. No discreet, standalone, alternatives were proposed during public outreach, especially considering the broad-scale program-level analysis presented in this PEIR. The following list summarizes the input that was provided that was not incorporated into the Plan and was therefore considered as potential alternatives in this Section:

1. Provide parking for users to leave their cars and use the greenway network.

2. Create designated “slow zones” along the bike path to ensure cyclist safety.
3. Expand the network outside the ROW and adjacent parcels to connect to commercial areas or transportation hubs (i.e., Metro).
4. Expand the network to connect the bike path to waterfalls and hiking trails.
5. Install exercise equipment in the pocket parks.

The County considered and evaluated the feasibility of each of these five potential alternatives in comparison to the Plan objectives and potential to avoid or substantially lessen any of the potentially significant adverse environmental impacts of the Plan. Based on this evaluation, the County determined that the suggested alternatives listed above do not meet the Plan objectives, would not avoid or minimize potentially significant adverse impacts of the Plan or are infeasible, and the reasoning is described below:

1. Providing parking for users to leave their cars and use the network is not consistent with the objective of increasing miles of bike paths available to the community and reducing VMT in the region. Individual projects that are within the scope of the Plan can be sited near existing parking in the future. Construction of parking lots would also not avoid or minimize any of the significant impacts of the Plan and would potentially increase noise levels at projects near sensitive receptors by increasing traffic in these locations, and the number of cars idling and starting in a concentrated area.
2. Creating designated “slow zones” along the bike path to ensure cyclist safety is a component of future individual proposed projects that could occur under the Plan and are not themselves individual projects. Designated slow zones would not have their own environmental impacts to consider.
3. Since development of this Plan is in accordance with the LA County Board of Supervisors’ resolution to “create a network of interconnected, multi-use community greenways” by updating the flood control systems along the San Gabriel and Rio Hondo River watersheds in the SGV, expanding the network outside the District ROW and adjacent parcels to connect to commercial areas or transportation hubs (i.e., Metro) is beyond the purpose of the resolution. The resolution identified the unique opportunities to create a greenway network through flood control systems of the County’s rivers, creeks and channels. While connecting from transportation hubs would meet the goal of enhancing connectivity and boost connections in the SGV, this expansion would not transform the flood control system and would require extensive connections that are outside of the purpose of the resolution. Therefore, this alternative is not potentially feasible for comparison.
4. Expanding the network to connect the greenway network to waterfalls and hiking trails beyond adjacent parcels is similarly infeasible since creating these type of projects would be outside the scope of the resolution that is driving development of this Plan. While connecting the greenway network to hiking trails and water features such as waterfalls would meet the goal of enhancing connectivity and boost connections in the San Gabriel Valley, this expansion would not transform the flood control system and would require extensive connections that are outside the purpose of the resolution. Therefore, this alternative is not potentially feasible for comparison.

6.3 Alternatives Retained for Comparative Analysis

Section 15126.6(e)(1) of the State CEQA Guidelines requires that the alternatives analysis includes a discussion of a No Project Alternative. This chapter considers alternatives to the Plan, including the No Project Alternative, so that decision-makers can compare the impacts of approving the proposed Project (i.e., the Plan) with the impacts of not approving the proposed Project.

In addition to the No Project Alternative, as described above, additional alternatives may be considered if they reduce or avoid the impacts of the Project and meet the basic objectives. Therefore, after considering the input received during stakeholder outreach for potential alternatives (as described above in Section 6.2) the County considered the following project objectives, identified below, as described in Section 1.1.1 of this EIR, with respect to developing alternatives to the Plan:

- Promoting Equitable Practices
- Creating Recreational Opportunities
- Integrating Stormwater Management
- Boosting Connections
- Enhancing Natural Habitats
- Enriching Community Well-Being

Based on the analysis provided in Section 3 of this PEIR, significant and unavoidable impacts were identified that could result from implementation of the Plan. These include potential land use conflicts that could occur because of following the *Design Guidelines and Standards* on adjacent parcels which are under the jurisdiction of local municipalities. The *Design Guidelines and Standards* are in alignment with all Los Angeles County plans and policies but may conflict with policies of individual cities within the Plan Area. Similarly, in addition to potentially significant and unavoidable land use conflicts, implementation of the Plan may result in significant and unavoidable increases in ambient noise if projects are located near sensitive receptors such as residences and schools, through increased visitation and public use of the areas. In considering potential options to avoid or minimize these two impacts, while still meeting most of the Project objectives, the County identified two feasible alternatives to be carried forward for full comparative analysis to the Plan, in addition to the No Project Alternative:

- Alternative 1 – Reduced Plan Area Alternative
- Alternative 2 – Reduced Plan Components Alternative

The following subsections describe these alternatives in detail and provide an environmental analysis in comparison to the Plan.

6.3.1 Alternative 1 - Reduced Plan Area Alternative

Under this Alternative, the Plan Area would be restricted to the District ROW, and no project components would be constructed or operated on parcels adjacent to or outside of the District ROW. Implementation of this alternative would continue to meet all of the project objectives described above. However, components such as pocket parks and greenspaces and safe crossings would commonly be located in adjacent parcels outside of the District ROW, and without those areas, project opportunities would be limited and implementation of this alternative may not fully meet the overall goal of the Plan to expand the active transportation network in the SGV or the objective of enhancing connectivity to

schools, parks, transit, jobs, and other local points of interest. Additionally, without safe crossings, the network may not be fully connected and would include trails that start and stop along the District ROW.

As all projects implemented under the Plan would follow the *Design Guidelines and Standards*, implementation of this alternative would minimize or avoid the potential for significant and unavoidable land use conflicts that could occur if components were built on adjacent parcels under the jurisdiction of local municipalities. In addition, the potential for adverse impacts to cultural resources, tribal cultural resources, and biological resources during construction of individual projects implemented under this Alternative would be somewhat reduced due to the decreased footprint of disturbance.

Therefore, because this alternative is feasible, would meet most of the project objectives, and would reduce or avoid significant impacts identified for the Plan, it is carried forward for full analysis.

6.3.1.1 Environmental Evaluation of Alternative 1

6.3.1.1.1 Aesthetics

Overall, implementation of the Plan is anticipated to result in beneficial impacts to aesthetics within the Plan Area due to the creation of a visually cohesive and beautified greenway network. Alternative 1 would result in similar impacts as the Plan, but to a lesser degree due to the reduced area available for project implementation to the District ROWs. The improvements to landscaping, pedestrian, bicycle, and equestrian trails would be limited to the District ROW, creating gaps in a cohesive identity within the greenway network as the adjacent parcels would not be considered under the Plan. Alternative 1 reduces the area available for project implementation; however, Alternative 1 would still create a beautified greenway network and increase greenspace. The potential impacts to scenic vistas, scenic resources or scenic highways during construction of individual projects would be the same as described for the Plan, and similarly would be dependent on the location of individual projects. Accordingly, **MM AES-1: Construction Fencing**, and **AES-2: Develop and Implement Lighting Plan** would still be required to avoid and/or minimize potentially significant impacts, but potential would still exist for individual projects to conflict with local zoning or regulations related to scenic quality. Therefore, impacts to Aesthetics under Alternative 1 would be significant and unavoidable, the same as those described for the Plan.

6.3.1.1.2 Agriculture and Forestry Resources

As described in Section 3.3, Agriculture and Forestry Resources, implementation of the Plan has the potential to cause significant and unavoidable impacts due to the potential of future project proponents developing a project under the Plan that conflicts with lands zoned for agriculture or forest land. However, Alternative 1 would be restricted to the existing District ROW and would not be located on land zoned for agriculture or forest land. Since adjacent parcels are not considered under this alternative, no land use conversion or ground disturbance would occur on any lands designated for agricultural resources or forest lands. Therefore, no impacts to agriculture and forestry resources would occur under Alternative 1, and impacts to agriculture and forestry resources would be less impactful than as described for the Plan.

6.3.1.1.3 Air Quality

As described in Section 3.3.1.4, Existing Regional Air Quality, the SGV has poor air quality due to smog as a result of its location in the SCAB, which serves to trap and hold the regional air emissions. Implementation of the Plan over time is anticipated to reduce vehicle miles traveled in the SGV and indirectly improve air quality from reduced vehicle emissions, due to increased use of the Greenway Network. Similarly, under Alternative 1, individual greenway projects may be implemented over time and achieve the same presumed indirect effect of improved air quality. Construction and operation of future projects would similarly result in emissions from heavy vehicles and ground disturbance and result in the same impacts as the Plan, requiring the same mitigation measure (**MM AQ-1: Emission Reduction Measures**). However, under Alternative 1, all project components would be located within the District ROW, which would preclude potential project opportunities for pocket parks and greenspaces or safe crossings of the same size as considered for the Plan (i.e., there would be no ability to construct a 25-acre park or 400-foot footbridge). As described in Section 3.3.3, response to CEQA Checklist question 3(c), for pocket parks and greenspaces that are 1 acre in size or less, a health risk assessment is not warranted, and impacts would be less than significant with mitigation (**MM AQ-1: Emission Reduction Measures**). Therefore, impacts to air quality from construction activities for projects developed under Alternative 1 would be less than significant with mitigation and at a reduced intensity and footprint than for the construction associated with maximum extent of potential projects that could be developed under the Plan.

6.3.1.1.4 Biological Resources

As discussed in Section 3.4, Biological Resources, the Plan would result in potentially significant adverse effects related to habitat modifications or special status species during construction or operations from construction disturbance, human activity, addition of supplemental lighting, introduction of weeds or pests, or interruption of hydrological processes. However, these impacts would all be reduced to less than significant for Plan activities by implementation of the identified pre-construction mitigation measures and post-construction monitoring and compensatory mitigation measures determined on a site-by-site basis (**MM BIO-1: Desktop Review and Biological Surveys, MM BIO-2: Pre-Construction Nesting Bird Surveys, MM BIO-3: Burrowing Owl Pre-Construction Surveys, MM BIO-4: Pre-Construction Special Status Bat Surveys, MM BIO-5: Conduct Biological Monitoring, MM BIO-6: Worker Environmental Awareness Program, MM BIO-7: Weed Abatement Measures, MM BIO-8: Construction BMPs to Protect Wildlife, MM BIO-9: Operations Recreation Plan, MM BIO-10: Pest Management Plan, MM BIO-11: Use Bird Safe Glass, MM BIO-12: Desktop Review and Jurisdictional Delineation, MM BIO-13: Permanent Wetlands Signage**). Many projects implemented under the Plan would have a long-term beneficial effect to biological resources by increasing the acreage of greenspace or parks featuring habitat (e.g., bushes, shrubs, trees, pollinator host plants) available for use by wildlife.

Since Alternative 1 reduces the project area to the District ROW and maintains the same project components, this alternative would result in a reduced area for potential impacts to occur during construction and maintenance activities. Reducing the Plan Area to the District ROW only would decrease the potential for individual projects to result in habitat modifications or remove vegetation during construction activity as vegetation and habitat removal would be limited to the ROW. Accordingly, implementation of Alternative 1 would lessen the potential for significant adverse impacts

to biological resources during construction identified for the Plan. Alternative 1 would result in similar long-term beneficial impacts to biological resources as described for the Plan, but to a lesser degree, as a reduced area would be available to projects to develop new greenspace. Therefore, while the impact conclusions would remain the same as described for the Plan (less than significant with mitigation), overall impacts to biological resources under Alternative 1 would be less than the Plan due to the smaller footprint available for project implementation.

6.3.1.1.5 Cultural Resources

Impacts to cultural resources would be less than significant with mitigation under the Plan. Under Alternative 1, impacts to cultural resources from individual projects would be less than as described for the Plan, because limiting the Plan Area to the District ROW would avoid potential impacts to historic resources that may be present on adjacent parcels proposed for projects under the Plan. Accordingly, under Alternative 1, **MM CR-1: Historical Records Search and Investigation**, **MM CR-2: Avoid Historical Resources**, and **MM CR-3: Prepare and Implement Historic Resources Mitigation Plan** would not be required, and potential impacts to historic resources would be less than significant. However, depending on project location, the potential exists for construction activity to destroy known archaeological resources. While Limiting the Plan Area to the District ROW would reduce the project footprint, the potential to discover cultural would still exist regardless of the size of the project area, and **MM CR-4: Cultural Resources Assessment**, **MM CR-5: Avoid Cultural Resources and Prepare Treatment Plan** through **MM CR-6: Monitoring** would still be necessary to ensure impacts are reduced to less than significant levels. Therefore, while impacts to cultural resources under Alternative 1 would be less than significant with mitigation, overall potential for adverse impacts to cultural resources would be reduced under Alternative 1 compared to the Plan due to the smaller footprint available for project implementation.

6.3.1.1.6 Energy

As discussed in Section 3.6, Energy, energy use during construction of all project components would be less than significant for the Plan. However, with the reduced footprint in Alternative 1, only pocket parks within the District ROW would be developed and not parks in adjacent parcels or safe crossings at the maximum extent analyzed for the Plan (up to 400 feet in length). Therefore, impacts of energy use during construction would be less than significant under Alternative 1 and would require less fuel and energy than as calculated for the Plan. Operation of individual projects under Alternative 1 may still incorporate restrooms and other beneficial elements such as lighting, drinking fountains, turf grass, or sprinkler irrigation which could result in potentially wasteful and inefficient energy use and require implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**. Therefore, operational activities under Alternative 1 would be less than significant with mitigation and the same as described for the Plan.

6.3.1.1.7 Geology and Soils

Future projects proposed on the District ROW under Alternative 1 would use the same construction methods (e.g., site preparation, excavation) as described for the Plan and would be subject to the same rules and requirements governing development in the Plan Area, which is known to feature geological hazards, unstable areas, and expansive soils. Therefore, Alternative 1 impacts related to geology and

soils would be the same as described for the Plan and would be less than significant. Further, while Alternative 1 would reduce the potential for unanticipated paleontological resources because the project area would be limited to the District ROW, which reduces the Plan footprint, and has previously been disturbed and graded, the potential for paleontological resources impacts would be the same as those described for the Plan since future project locations are unknown and the potential for an unanticipated discovery is still present. Similar to the Plan, Alternative 1 would still require **MM GEO-1: Pre-Construction Paleontological Resources Investigation**, **GEO-2: Avoid or Monitor Paleontological Resources**, and **GEO-3: Avoid/Minimize Impacts on Paleontological Resources During Operations** to ensure impacts are less than significant.

6.3.1.1.8 Greenhouse Gas Emissions

Implementation of the Plan is anticipated to result in a reduction of vehicle miles traveled in the SGV due to increased bicycle, pedestrian, and equestrian use of the greenway paths, reducing GHG emissions from vehicles. Under Alternative 1, projects would be limited to the District ROW; therefore, fewer safe crossings connecting the paths across roadways would be implemented which may result in multiple greenway paths that start and stop in segments along the tributaries. As a result, Alternative 1 may not provide the same enhanced connectivity to promote reduction in vehicle miles traveled in the region, and associated reduction in GHG emissions.

Construction and maintenance impacts under Alternative 1 would be the same as described for the Plan for greenways and greenway amenities, stormwater infrastructure, and smaller pocket parks and greenspaces (up to one acre), because the assumed maximum size of disturbance and therefore, estimated activities associated with use of heavy equipment would be the same. With the reduced footprint available for project implementation under Alternative 1, there would not be opportunities for construction of larger pocket parks and greenspaces (up to 25 acres) or safe crossings. Implementation of **MM AQ-1: Emissions Reduction Measures**, and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, would still be required under Alternative 1 to ensure impacts related to GHG emissions and consistency with applicable plans adopted for the purposes of reducing GHG gases are reduced to less than significant levels. Therefore, impacts with regard to GHG emissions under Alternative 1 would be the same as described for the Plan (less than significant with mitigation).

6.3.1.1.9 Hazards and Hazardous Waste

Similar to the Plan, Alternative 1 is not anticipated to result in a significant risk associated with routine transport, use, and disposal of hazardous materials. Additionally, projects constructed under Alternative 1 are not expected to result in a significant risk associated with potential upset and accident conditions, nor would they be expected to result in a significant risk associated with hazardous emissions or handling of hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school, because projects would be similar in nature to those described for the Plan (i.e., bicycle paths, stormwater improvement projects). Although the Plan Area would be restricted to the District ROW, construction activity could potentially occur on hazardous materials sites compiled pursuant to Government Code Section 65962.5, as these areas are present in the areas traversed by the District ROW. Therefore, the reduction in Plan Area would not reduce or avoid the potential for impacts to occur in this regard. Implementation of **MM HAZ-1: Pre-construction Hazardous Site Records Search**, **MM**

HAZ-2: Phase I/II Environmental Site Assessment, and MM HAZ-3: Soil and Groundwater Management Plan would ensure impacts are less than significant with mitigation.

Alternative 1 is also not anticipated to hinder or impair an adopted emergency response or evacuation plan or route during construction activity. Similar to the Plan, Alternative 1 would comply with existing standard industry practices such as traffic control and signage, adherence to County and local agency criteria (as necessary), and rules and regulations pertaining to emergency response that would provide and maintain adequate emergency access. However, similar to the Plan, even with implementation **MM WF-1: Construction Coordination with Emergency and Fire Services**, the potential exists for significant and unavoidable impacts related to wildfire hazard for projects that are implemented under the Plan within an area designated VHFHSZ. Therefore, impacts related to hazards and hazardous materials under Alternative 1 would be the same as described for the Plan for both construction and operation.

6.3.1.1.10 Hydrology and Water Quality

Alternative 1 would have similar impacts to the Plan since the construction and operations of the Plan components would be the same, except limited to the District ROW. Similar to the Plan, all projects implemented under Alternative 1 would be required to include new or improved stormwater capture and reuse BMPs, as described under the *Design Guidelines and Standards*, which would cumulatively improve stormwater management in the region, reduce flooding, and increase groundwater supplies. Additionally, all individual projects implemented under Alternative 1 would be required to comply with the numerous regulatory requirements and permit conditions of the federal, state, and local agencies with jurisdiction over the Plan Area. Therefore, impacts to hydrology and water quality under Alternative 1 would be less than significant. However, due to the reduced plan area, the potential beneficial impacts related to hydrology and water quality may be less than described for the Plan.

6.3.1.1.11 Land Use Planning

As described in Section 3.11, Land Use and Planning, the Plan would not result in significant impacts from physically dividing an established community. However, operation of some projects could result in significant and unavoidable impacts due to conflicts with applicable land use plans, policies, or regulations even after mitigation because the District ROW traverse multiple municipal (city) jurisdictions, each with a general plan that includes a specific vision and designation of uses for land development, which may conflict with the standards set for under the *Design Guidelines and Standards*. Under Alternative 1 and a reduced Plan Area, project components would all be constructed within the District ROW. However, even parcels designated as within District ROW may be designated by the local agency in which the parcel is located in a particular land use zone that may not be compatible with the Plan. Therefore, implementation of Alternative 1 would not avoid the potential for significant and unavoidable land use conflicts between the Plan and local municipality land use plans, policies or regulations. Accordingly, land use impacts under Alternative 1 would be significant and unavoidable, the same as described for the Plan.

6.3.1.1.12 Mineral Resources

As described in Section 3.12 Mineral Resources of the Plan, impacts to mineral resources would be less than significant with mitigation. However, Under Alternative 1, projects would be constructed only

within the District ROW, which is already graded, disturbed and not available for mineral resource extraction. Alternative 1 would avoid any potential impacts to adjacent parcels that may be mapped MRZ-2 and contain mineral resources, as well as active oil wells located in the Montebello Oil Field (as depicted on Figure 3.12-1). Therefore, there would be no potential for impacts to mineral resources under Alternative 1, and impacts would be less than described for the Plan.

6.3.1.1.13 Noise

Potentially significant increases in ambient noise level and vibration from construction and operation of greenway paths are heavily dependent on project location relative to the location of sensitive receptors. Despite a reduced Plan area in Alternative 1, the likelihood of future individual projects in locations near sensitive receptors is the same as the Plan. Therefore, impacts with regard to noise and vibration under Alternative 1 could be significant and unavoidable even with implementation of **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan** and **MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures** during construction activity, the same as described for the Plan.

6.3.1.1.14 Population and Housing

The Plan would have less than significant impacts on population and housing for projects implemented within the Plan Area. Similar to the Plan, Alternative 1 does not include the development of new housing or structures designed for human occupancy. Both Alternative 1 and the Plan include increased recreational opportunities for existing residents and visitors and does not intend to indirectly induce population growth or displace existing people or housing. Therefore, impacts under Alternative 1 would have less than significant impacts on population or housing, the same as described for the Plan.

6.3.1.1.15 Public Services

As described in Section 3.15, Public Services, the Plan could result in significant impacts to public services such as fire protection and police protection during construction, due to potential road closures and detours that could impede or delay emergency services, which would be less than significant with mitigation. Alternative 1 would slightly decrease the potential need for temporary road closures during construction since future projects are limited to District ROW, but construction may still occur in densely populated areas which could temporarily disrupt fire or police response services; thus, implementation of **MM TR-4: Notify Emergency Personnel of Road Closures** would still be required to ensure impacts are less than significant with mitigation. Once operational, the reduction in Plan Area would have no effect on the potential for impacts related to public services and impacts would be less than significant. Therefore, Alternative 1 would be less than significant with mitigation during construction and less than significant during operation, the same as the Plan.

6.3.1.1.16 Recreation

Alternative 1 is anticipated to result in similar impacts on recreation as the Plan. Alternative 1 would increase connectivity to recreation areas, resulting in beneficial impacts and increased and higher quality recreational opportunities in the SGV. Alternative 1 would provide the same beneficial impacts as described for the Plan, although to a lesser degree due to a reduced Plan Area available for project opportunities. With the Plan Area limited to the District ROW, the potential opportunities for pocket

parks and greenspaces would be reduced and larger greenspaces up to 25 acres in size would not be feasible. Similarly, the ability to install safe crossings and ensure connectivity of the entire Greenway Network would be limited in areas where roadways cross the District ROW.

With regard to potential impacts to recreation from construction and operation of individual projects, Alternative 1 would result in significantly increased use of existing facilities that could result in the deterioration of existing facilities. However, projects would be implemented in accordance with the *Design Guidelines and Standards* with the objective of improving existing facilities, and implementation of **MM REC-1: Coordinate With Parks Departments/Agencies** would ensure impacts are less than significant with mitigation. Construction of projects under Alternative 1 would, by design, result in the expansion of recreational facilities, and as discussed under the other resource categories, this construction could result in significant and unavoidable impacts to the physical environment depending on the location of individual projects. Therefore, even with the implementation of mitigation measures, impacts from Alternative 1 would be significant and unavoidable, the same as described for the Plan.

6.3.1.1.17 Transportation

Implementation of the Plan is anticipated to result in beneficial impacts to transportation and traffic through the development of an active transportation network and reductions in VMT in the region. While Alternative 1 would likely result in similar beneficial impacts, opportunities for safe crossings on adjacent parcels and in areas where roadways cross the District ROW would be limited in comparison to the Plan. Similar to the Plan, construction of individual projects under Alternative 1 could result in conflicts with programs, plans, ordinances, or policies addressing the circulation system during construction, as well as road closures or detours that could hinder or impair emergency access or increase response times. Therefore, **MM TR-1: Construction Transportation Management Plan, MM TR-2: Restrict Lane Closures and Maintain Access, MM TR-3: Closure Notification and Detours and MM TR-4: Notify Emergency Personnel of Road Closures** would be necessary however impacts would remain significant and unavoidable. With regard to conflicts with CEQA Section 15064.3, Alternative 1 would avoid the significant and unavoidable impact identified for the Plan due to potential VMT increases associated with parks adjacent to the District ROW, including the 25-acre park component, as the reduced Plan Area would provide no opportunities for greenspaces not located within the District ROW. Impacts under Alternative 1 related to VMT increased due to park construction would be less than significant. Similar to the Plan, construction activities could result in significant and unavoidable impacts due to geometric design, depending on the location of individual projects, even with the reduced Plan Area. Similar to the Plan, Alternative 1 would reduce hazards through the development of increased designated access for cyclists and pedestrians; however, the reduced Plan Area would also reduce the number of safe crossings and limit connectivity throughout the Greenway Network. Although the beneficial impacts would be realized to a lesser degree than under the Plan, operational impacts would be less than significant, similar to those described for the Plan.

6.3.1.1.18 Tribal Cultural Resources

As described in Section 3.18, Tribal Cultural Resources, the Plan could have significant and unavoidable impacts to tribal cultural resources due to the ground disturbance along the District ROWs and on adjacent parcels, which could adversely affect previously undiscovered tribal cultural resources, depending on the location of the project. Although Alternative 1 is a reduced project footprint,

individual projects implemented under Alternative 1 could similarly result in significant impacts due to ground disturbance and depending on the location of the project and would require **MM TCR-1: Tribal Cultural Resources Assessment, MM TCR-2: Avoid Tribal Cultural Resources, Prepare Treatment Plan, MM TCR-3: Unanticipated Discovery, and MM TCR-4: Conduct Native American Monitoring** to minimize impacts. However, impacts under Alternative 1 would remain significant and unavoidable, the same as described for the Plan.

6.3.1.1.19 Utilities and Service Systems

Construction and operation of projects under the Plan would result in less than significant impacts with mitigation to utilities and service systems from the potential disturbance, relocation, or construction of new utilities to service greenway amenities (e.g., restrooms), pocket parks and greenspaces, safe crossings (e.g., underpasses), or stormwater management. Additionally, the Plan impacts would be less than significant or less than significant with mitigation as related to having sufficient water supplies to serve the Plan and adequate capacity for wastewater treatment, respectively. While the area in Alternative 1 is reduced, impacts to utilities and service systems would be similar to the Plan since utilities could still occur within the District ROW and the water and wastewater needs would still be required. **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies and MM UTIL-1: Prepare and Implement Utilities Plan** would reduce impacts to less than significant with mitigation. Additionally, for both the Plan and Alternative 1, impacts to solid waste and compliance with federal, state, and local management and reduction statutes and regulations related to solid waste would be similar since waste generation and compliance would be required for all projects, regardless of being on District ROW or on adjacent parcels. Therefore, impacts under Alternative 1 would be less than significant with mitigation, the same as described for the Plan.

6.3.1.1.20 Wildfire

Alternative 1 would have similar impacts as the Plan on wildfire. While Alternative 1 would limit the project area to the District ROW, it would still require the same construction and operations that would result in potentially significant impacts. Similar to the Plan, Alternative 1 could temporarily hinder or impair an adopted emergency response or evacuation plan during construction if temporary road closures or detours are required during construction. Additionally, while the project area would be reduced under Alternative 1, it would still result in significant and unavoidable impacts during construction due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and therefore expose project occupants to pollutant concentrations from a wildfire. Alternative 1 also has the potential to involve construction in or adjacent to areas designated as VHFHSZs, which could exacerbate wildfire risks from construction equipment and introduction of potential ignition sources. Alternative 1 also has potential to be within or adjacent to areas prone to flood, landslide, or slope instability and would have the potential to expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage change. Once operational, implementation of Alternative 1 would not result in the development of new structures for occupancy within a wildfire risk zone and would not increase potential risk for wildfire hazards. However, as with the Plan, the potential exists for individual projects to be developed in areas designated high fire zones which would attract a greater number of recreationalists to these areas that

could be at risk in the event of a wildfire. Therefore, impacts under Alternative 1 would be significant and unavoidable, the same as described for the Plan.

6.3.2 Alternative 2 – Reduced Components Alternative

Under this Alternative 2, the Plan would be revised to include only greenway paths and amenities and safe crossings. The Plan Area would remain the same. The Plan components not included in this alternative are pocket parks and additional stormwater measures beyond those required by the *Design Guidelines and Standards*.

Alternative 2 would meet the overall goal of the Plan to expand the active transportation network throughout the SGV, enhancing connectivity, increasing recreational opportunities, promoting equitable practices, and enriching community well-being. Since stormwater BMPs are required to treat a site's stormwater quality design volume where new infrastructure is proposed, Alternative 2 would still meet the objective of integrating stormwater management, but to a lesser degree than the Plan. However, this alternative would not meet the objective of enhancing natural habitats, as pocket parks and greenspaces provide an opportunity to enhance natural habitats and increase vegetated areas.

Focusing the plan on greenway paths, associated amenities and safe crossings would reduce the disturbed area to discover cultural resources and tribal cultural resources and/or impact biological resources during construction, as project opportunities outside of the District ROW on adjacent parcels would be limited to safe crossings that have a much smaller area of disturbance than a pocket park or greenspace. Therefore, overall construction activity and ground disturbance would be minimized. It would also potentially reduce significant and unavoidable impacts related to increases in ambient noise levels, as recreationalists along the greenway path would be constantly moving through the network, whereas recreationalists at pocket parks and greenspaces are more likely to remain for a longer duration of time and enjoy active play at the park.

Therefore, because this alternative is feasible, would meet most of the project objectives, and would reduce or avoid significant impacts identified for the Plan, it is carried forward for full analysis.

6.3.2.1 Environmental Evaluation of Alternative 2

6.3.2.1.1 Aesthetics

Overall, implementation of the Plan is anticipated to result in beneficial impacts to aesthetics within the Plan Area due to the creation of a visually cohesive and beautified Greenway Network, and an increased acreage of greenspace areas. Alternative 2 would still provide some beneficial impact, but to a lesser degree because no pocket parks or greenspaces would be installed, and greenway amenities do not include options for vegetated areas or plantings. Alternative 2 would create a connected and beautified Greenway Network but would not increase greenspace. Therefore, the Greenway Network would be limited to the greenway paths and installed features such as drinking fountains, signage, and constructed shade structures, but not adjacent gardens or shade trees, which would provide additional colors and enhance the aesthetics of the greenway design.

The potential impacts to scenic vistas, scenic resources or scenic highways during construction activity of individual projects would be the same as described for the Plan and similarly would be dependent on

the location of individual projects. Accordingly, **MM AES-1: Construction Fencing** and **MM AES-2: Develop and Submit Lighting Plan** would still be required to avoid and/or minimize these potentially significant impacts. However, under Alternative 2, the potential still exists for individual projects to conflict with local ordinances related to scenic vistas and aesthetics. Therefore, potential for adverse impacts to aesthetics under Alternative 2 would be significant and unavoidable in this regard, the same as described for the Plan.

6.3.2.1.2 Agriculture and Forestry Resources

Individual projects implemented under this alternative would be the same as described for the Plan since there is potential for projects to be proposed on adjacent parcels zoned for agricultural use. Therefore, the individual projects may conflict with local ordinances and regulations related to agriculture and forestry. Accordingly, impacts with regard to agriculture and forestry resources would be significant and unavoidable, the same as described for the Plan.

6.3.2.1.3 Air Quality

As described in Section 3.3.1.4, Existing Regional Air Quality, the SGV has poor air quality due to smog as a result of its location in the SCAB, which traps and holds the regional air emissions. Implementation of the Plan over time is anticipated to result in a reduction of vehicle miles traveled in the SGV, as the overall greenway path is constructed and becomes operational, which would indirectly improve air quality in the region due to reduced air emissions from vehicles. Alternative 2 would reduce the types of components implemented, and pocket parks and greenspaces and stormwater management components would not be constructed; thus, reducing or eliminating emissions from construction or operation of these types of improvements. However, similar to the Plan, individual greenway projects under Alternative 2 may be implemented over time and achieve the same presumed indirect effect of improved air quality. Construction and operation of future projects would similarly result in emissions from heavy vehicles and ground disturbance and result in the same impacts as the Plan, requiring the same mitigation measure (**MM AQ-1: Emissions Reduction Measures**). While no greenspaces or pocket parks would be constructed, large safe crossings (i.e., 400-foot footbridge) could result in significant and unavoidable impacts related to exposure of sensitive receptors to increased pollutants, even with the implementation of **MM AQ-2: Health Risk Assessment and Health Risk Reduction Measures**, the same as described for the Plan. Therefore, impacts to air quality under Alternative 2 would be the same as those described for the Plan.

6.3.2.1.4 Biological Resources

As discussed in Section 3.4, Biological Resources, the Plan would result in potentially significant adverse effects related to habitat modifications or special status species during construction or operations from construction disturbance, human activity, addition of supplemental lighting, introduction of weeds or pests, or interruption of hydrological processes. However, these impacts would all be reduced to less than significant for Plan activities by implementation of the identified pre-construction mitigation measures and post-construction monitoring and compensatory mitigation measures determined on a site-by-site basis (**MM BIO-1: Desktop Review and Biological Surveys**, **MM BIO-2: Pre-Construction Nesting Bird Surveys**, **MM BIO-3: Burrowing Owl Pre-Construction Surveys**, **MM BIO-4: Pre-Construction Special Status Bat Surveys**, **MM BIO-5: Conduct Biological Monitoring**, **MM BIO-6:**

Worker Environmental Awareness Program, MM BIO-7: Weed Abatement Measures, MM BIO-8: Construction BMPs to Protect Wildlife, MM BIO-9: Operations Recreation Plan, MM BIO-10: Pest Management Plan, MM BIO-11: Use Bird Safe Glass, MM BIO-12: Desktop Review and Jurisdictional Delineation, MM BIO-13: Permanent Wetlands Signage). While projects under Alternative 2 would result in similar impacts to biological resources during construction and maintenance activities, reducing the number of Plan components would decrease the potential for individual projects to result in habitat modifications or remove vegetation during construction activity. Accordingly, although still less than significant with mitigation, implementation of Alternative 2 would lessen the potential for significant adverse impacts to biological resources during construction identified for the Plan.

Many projects implemented under the Plan would have a long-term beneficial effect on biological resources by increasing the acreage of greenspace or parks featuring habitat (e.g., bushes, shrubs, trees, pollinator host plants) available for use by wildlife. Under Alternative 2, the potential for long-term beneficial impacts to biological resources would not occur, as there would be no increase in greenspace acreage or parks featuring habitat available for use by wildlife.

6.3.2.1.5 Cultural Resources

As discussed in Section 3.5, Cultural Resources, impacts to cultural resources would be less than significant with mitigation under the Plan. Under Alternative 2, projects would still occur within the District ROW and adjacent parcels and therefore, even without development of larger parks and greenspaces. Depending on project location, the potential exists for construction activity to destroy known cultural resources. Reducing the project component types would have no effect on the potential area of disturbance or potential for impact. Accordingly, under Alternative 2, **MM CR-1: Historic Resources Records Search and Investigation, MM CR-2: Avoid Historical Resources, MM CR-3: Prepare and Implement Historic Resources Mitigation Plan, MM CR-4: Cultural Resources Assessment, MM CR-5: Avoid Cultural Resources and Prepare Treatment Plan, MM CR-6: Monitoring, and MM CR-7: Unanticipated Discovery of a Cultural Resource** would still be required, and potential impacts to historic resources and archaeological resources would be less than significant with mitigation, the same as described for the Plan.

6.3.2.1.6 Energy

As discussed in Section 3.6, Energy, energy use during construction of all project components would be less than significant for the Plan. With reduced project components it would be infeasible to develop larger parks (up to 25 acres) as is evaluated under the Plan, but still possible to construct safe crossings at the maximum extent analyzed for the Plan (up to 400 feet in length), which would be the most energy-intensive potential activity. Therefore, impacts of energy use during construction would be less than significant under Alternative 2 and would require the same fuel and energy as calculated for the Plan. Operation of individual projects under Alternative 2 may still incorporate restrooms and other beneficial elements such as lighting, and drinking fountains, but would not include items such as turf grass for sports facilities or sprinkler irrigation, which would reduce the potential for wasteful and inefficient energy use compared to the Plan. However, implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would still be necessary to ensure restrooms and lighting are energy-efficient. Therefore, operational activities under Alternative 2 would be less than significant with mitigation and the same as described for the Plan.

6.3.2.1.7 Geology and Soils

As discussed in Chapter 3.7, Geology and Soils, impacts resulting from the Plan to geology and soils would be less than significant. Future projects proposed on adjacent parcels under Alternative 2 would use similar construction methods (e.g., site preparation, excavation) and would be subject to the same rules and requirements governing development in the Plan Area; which is known to feature geological hazards, unstable areas, and expansive soils; as the Plan. Therefore, impacts related to these geologic hazards would be the same as described for the Plan and would be less than significant. Further, potential for impacts to paleontological resources would be the same as those described for the Plan, as the Plan Area would still consist of the District Row and adjacent parcels. Therefore, the potential for unanticipated discovery of paleontological resources is the same as described for the Plan, and **MM GEO-1: Pre-Construction Paleontological Resources Investigation, GEO-2: Avoid or Monitor Paleontological Resources, and GEO-3: Avoid/Minimize Impacts on Paleontological Resources During Operations** would still be necessary to ensure impacts are less than significant.

6.3.2.1.8 Greenhouse Gas Emissions

Implementation of the Plan over time is anticipated to result in a reduction of vehicle miles traveled in the SGV due to increased bicycle, pedestrian, and equestrian use of the greenway paths reducing GHG emissions from vehicles. Since Alternative 2 would only reduce the plan components to the greenway, amenities, and safe crossings, the Alternative could still achieve a cohesive network and would provide the same anticipated reduction in VMT and reduction in GHG emissions from vehicles.

With regard to construction, operation and maintenance activity, the impacts under Alternative 2 would be the same as described for the Plan for greenways and greenway amenities and safe crossings, although those emissions related to construction and maintenance of pocket parks and stormwater management features would not occur. However, pocket parks and stormwater management features in the Plan are optional components that an individual project may or may not elect to incorporate into the design. Therefore, quantification of any overall reduction in GHG emissions from not constructing or maintaining pocket parks or stormwater management features is not possible. In addition, impacts with regard to consistency with the County CAP and climate plans and policies of incorporated cities for the purposes of reducing GHG gases would be the same as described for the Plan. Implementation of **MM AQ-1: Emissions Reduction Measures** and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would still be required under Alternative 2 to ensure impacts related to GHG emissions and consistency with applicable plans adopted for the purposes of reducing GHG gases are reduced to less than significant levels. Therefore, impacts with regard to GHG emissions under Alternative 2 would be the same as described for the Plan.

6.3.2.1.9 Hazards and Hazardous Waste

Similar to the Plan, Alternative 2 is not anticipated to result in a significant risk associated with routine transport, use, and disposal of hazardous materials. Additionally, projects that are constructed under the Alternative 2 are not expected to result in a significant risk associated with potential upset and accident conditions, nor would they be expected to result in a significant risk associated with hazardous emissions or handling of hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school, because projects would be similar in nature to those described for the Plan (i.e.,

bicycle paths, stormwater improvement projects). Also similar to the Plan, construction activity under Alternative 2 could potentially occur on hazardous materials sites compiled pursuant to Government Code Section 65962.5, as these areas are present in the Plan Area. Therefore, the reduction in Plan components would not reduce or avoid the potential for impacts to occur in this regard. Implementation of **MM HAZ-1: Pre-construction Hazardous Site Records Search**, **MM HAZ-2: Phase I/II Environmental Site Assessment**, and **MM HAZ-3: Soil and Groundwater Management Plan** would ensure impacts are less than significant with mitigation.

Alternative 2 is also not anticipated to hinder or impair an adopted emergency response or evacuation plan or route. Similar to the Plan, Alternative 2 would comply with existing standard industry practices such as traffic control and signage, adherence to County and local agency criteria (as necessary), and rules and regulations pertaining to emergency response that would provide and maintain adequate emergency access. Further, implementation of **MM WF-1: Construction Coordination with Emergency and Fire Services** would ensure coordination with emergency responders prior to project implementation. However, similar to the Plan, even with implementation **MM WF-1: Construction Coordination with Emergency and Fire Services**, the potential exists for significant and unavoidable impacts related to wildfire hazard for projects that are implemented under the Plan within an area designated VHFHSZ.

6.3.2.1.10 Hydrology and Water Quality

All projects implemented under Alternative 2 would be required to include new or improved stormwater capture and reuse BMPs, as described under the *Design Guidelines and Standards*, which would cumulatively improve stormwater management in the region, reduce flooding, and increase groundwater capture. However, the potential for beneficial impacts related to hydrology and water quality that would occur under Alternative 2, would be less than described for the Plan, as no additional stormwater management features would be constructed and operated, and greenways would not include vegetated features or pocket parks to naturally support groundwater infiltration.

Similar to the Plan, construction of all individual projects implemented under Alternative 2 would be required to comply with the numerous regulatory requirements and permit conditions of the federal, state, and local agencies with jurisdiction over the Plan Area. Therefore, impacts to hydrology and water quality under Alternative 2 would be less than significant, the same as described for the Plan.

6.3.2.1.11 Land Use Planning

The Plan would not result in significant impacts from physically dividing an established community. However, some projects that could be operated under the Plan could have significant and unavoidable impacts to land use planning because they could result in conflicts with applicable land use plans, policies, or regulations, even after mitigation. This is because the District ROW traverse multiple municipal (city) jurisdictions; each with a general plan that includes a specific vision and designation of uses for land development, which may conflict with the standards set for under the *Design Guidelines and Standards*. Under Alternative 2, these potential land use conflicts would not be avoided by limiting project components to greenways, amenities, and safe crossings. These project components may still be required to follow municipal jurisdiction requirements, which would still have the potential to conflict

with the standards set under the *Design Guidelines and Standards*. Accordingly, land use impacts under Alternative 2 would be significant and unavoidable, the same as described for the Plan.

6.3.2.1.12 Mineral Resources

Under Alternative 2, the potential for impacts to mineral resources would be the same as described for the Plan, if individual projects are proposed on adjacent parcels that are mapped as MRZ-2 and contain mineral resources. Construction and operation of a greenway network and safe crossing on these areas could preclude access to available minerals, therefore, implementation of **MM MR-1: Ensure Access to Mineral Resources** would be necessary to ensure the projects maintain access to minerals. Therefore, the potential for impacts to mineral resources under Alternative 2 would be less than significant with mitigation, the same as described for the Plan.

6.3.2.1.13 Noise

Potentially significant increases in ambient noise level and vibration from construction and operation of greenway paths are heavily dependent on project location relative to the location of sensitive receptors. Individual projects completed under Alternative 2 would be similar to those described for the Plan (greenway paths and amenities and safe crossings, but without pocket parks and greenspaces) and would have the same likelihood of occurring in locations near sensitive receptors as under the Plan. However, once operational, the increase in ambient noise under Alternative 2 would be less than described for the Plan. This is because recreational users of the Greenway Network would be constantly moving through the network on the greenway path and would not remain in any one location for a duration of time. In contrast, visitors to pocket parks would be more likely to linger and spend an extended duration of time recreating at the park. The elimination of the pocket park component from the Plan would reduce potential adverse increases in noise at sensitive receptor sites, particularly at those areas that are currently not accessible to the public, but which would become accessible under the Plan. As described in Section 3.13, Noise, the impacts would be relative to the proximity of a Plan component to a sensitive receptor and the applicable land use compatibility standards of the respective jurisdiction. It is widely accepted that changes of 3 dBA in the normal environment are considered just noticeable to most people. Conservatively assuming a daytime ambient noise level of 50 dBA consistent with rural environments (USEPA 1978), the noise contribution from visitors of greenway paths and amenities may increase noise levels by up to 6 dB at receptors within 50 feet of a projects site which may exceed the noise standards of jurisdictions within the Plan Area. Therefore, impacts of Alternative 2 with regard to noise and vibration would be the same during construction (significant and unavoidable even with implementation of **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan** and **MM NOI-2: Prepare Focused Noise Study and Noise Reduction Measures**), and although potentially still significant and unavoidable during operation depending on specific project locations, impacts would likely be less adverse during operation, as compared to the Plan.

6.3.2.1.14 Population and Housing

Implementation of the Plan would have less than significant impacts on population and housing within the Plan Area. The Plan would result in increased recreational opportunities for existing residents and visitors and no projects would involve development of new housing or structures designed for human occupancy. Similarly, individual projects implemented under Alternative 2 would not involve

development of any new housing. Therefore, impacts under Alternative 2 would also have less than significant impacts on population or housing, the same as described for the Plan.

6.3.2.1.15 Public Services

As described in Section 3.15, Public Services, the Plan could result in significant impacts to public services such as fire protection and police protection during construction, due to potential road closures and detours that could impede or delay emergency services, which would be less than significant with implementation of mitigation measures. Removing pocket parks and additional stormwater management features from the Plan would not have any impact on the potential need for temporary road closures during construction. Therefore, implementation of **MM TR-4: Notify Emergency Personnel of Road Closures** would be required to ensure impacts are less than significant with mitigation, the same as described for the Plan. Once operational, the reduction in plan components would have no effect on the potential for impacts related to public services and impacts would be as described for the Plan. Therefore, Alternative 2 would still result in less than significant impacts with mitigation to public services during construction and operation, the same as described for the Plan.

6.3.2.1.16 Recreation

Overall implementation of the Plan is anticipated to result in beneficial impacts and increased and higher quality recreational opportunities in the SGV. Alternative 2 would provide some of the beneficial impacts as described for the Plan through enhanced connections of an active transportation network to existing park spaces, although to a lesser degree due to the reduced plan components that would be available to a project proponent installing a new project. As described in Section 3.16, Recreation, the LA County Park Needs Assessment found that the existing park area in the SGV is not sufficient to meet current demand. Elimination of the pocket parks would reduce the types of new recreational opportunities available under the Plan, and the Plan would no longer provide the beneficial effect of increasing the acreage of park space available to meet the demands of the SGV.

With regard to potential impacts to recreation from construction and operation of individual projects, Alternative 2 could still result in significantly increased use of existing facilities that could result in the deterioration of existing facilities. However, projects would be implemented in accordance with the *Design Guidelines and Standards* with the objective of improving existing facilities, and implementation of **MM REC-1: Coordinate with Park Departments/Agencies** would ensure impacts are less than significant with mitigation. Construction of projects under Alternative 2 would, by design, result in the expansion of recreational facilities, and as discussed under the other resource categories, this construction could result in significant and unavoidable impacts to the physical environment depending on the location of individual projects. Therefore, even with the implementation of mitigation measures, impacts would be significant and unavoidable, the same as described for the Plan.

6.3.2.1.17 Transportation

Implementation of the Plan is anticipated to result in beneficial impacts to transportation and traffic through the development of an active transportation network and reductions in vehicle miles traveled in the region. Similar to the Plan, construction of individual projects under Alternative 2 could result in conflicts with programs, plans, ordinances, or policies addressing the circulation system during

construction, as well as road closures or detours that could impair emergency access or increase response times. Mitigation measures **MM TR-1: Construction Transportation Management Plan**, **MM TR-2: Restrict Lane Closures and Maintain Access**, **MM TR-3: Closure Notification and Detours** and **MM TR-4: Notify Emergency Personnel of Road Closures** would be necessary to minimize potential impacts. However, impacts would remain significant and unavoidable. Once operational, individual projects completed under Alternative 2 would reduce hazards through the development of increased designated access for cyclists, same as described for the Plan. Therefore, the potential for adverse impacts during construction of individual projects under Alternative 2 would be the same as described for the Plan, and operational impacts would be similar to those described for the Plan. With regard to conflicts with CEQA Section 15064.3, Alternative 2 would avoid the significant and unavoidable impact identified for the Plan due to potential VMT increases associated with a 25-acre park, as the reduced Plan Area would provide no opportunities for greenspaces of that size. However Alternative 2 would not avoid the significant and unavoidable impacts of construction VMT increases due to congestion and detour induced VMT increases. Impacts under Alternative 2 would remain potentially significant and unavoidable. Similar to the Plan, construction activities could result in significant and unavoidable impacts due to geometric design, depending on the location of individual projects, even with the reduced Plan Area. Similar to the Plan, Alternative 2 would reduce hazards through the development of increased designated access for cyclists and pedestrians; therefore, operational impacts would be less than significant, similar to those described for the Plan.

6.3.2.1.18 Tribal Cultural Resources

As described in Section 3.18, Tribal Cultural Resources, the Plan could have significant and unavoidable impacts to tribal cultural resources due to the ground disturbance along the District ROWs and on adjacent parcels, which could adversely affect previously undiscovered tribal cultural resources, depending on the location of the project. Individual projects implemented under Alternative 2 could similarly result in significant impacts as projects depending on location and would require implementation of **MM TCR-1: Tribal Cultural Resources Assessment**, **MM TCR-2: Avoid Tribal Cultural Resources**, **Prepare Treatment Plan**, **MM TCR-3: Unanticipated Discovery**, and **MM TCR-4: Conduct Native American Monitoring** to minimize impacts. However, impacts would remain significant and unavoidable, under Alternative 2, the same as described for the Plan.

6.3.2.1.19 Utilities and Service Systems

Construction and operation of projects under the Plan could result in potentially significant but mitigable impacts to utilities and service systems from the potential disturbance, relocation, or construction of new utilities to services greenway amenities (e.g., restrooms) or safe crossings (e.g., underpasses). Individual projects implemented under Alternative 2 would result in similar impacts if similar components were included as part of a project. Depending on location, individual projects may require ground disturbance or relocation of an existing telecommunication structure or power pole during construction. In these instances, implementation of **MM UTIL-1: Prepare and Implement Utilities Plan** would reduce potential impacts to less than significant. Therefore, impacts under Alternative 2 would be less than significant with mitigation, the same as described for the Plan.

6.3.2.1.20 Wildfire

Similar to projects implemented under the Plan, individual projects implemented under Alternative 2 could temporarily impair an adopted emergency response or evacuation plan during construction if road closures or detours are required. Once operational, individual projects would not result in the development of new structures for occupancy within a wildfire risk zone and would not increase potential risk for wildfire hazards. However, as with the Plan, the potential exists for individual projects to be developed in areas designated high fire zones which would attract a greater number of recreationalists to these areas that could be at risk in the event of a wildfire. Therefore, impacts under Alternative 1 would be significant and unavoidable, the same as described for the Plan.

6.3.3 Alternative 3 - No Project Alternative

As required by the State CEQA Guidelines Section 15126.6(e), a No Project Alternative:

...shall be evaluated along with its impact. The purpose of describing a No Project Alternative is to allow decision makers to compare the impacts of approving the proposed project with the impact of not approving the proposed project. The No Project Alternative analysis is not the baseline for determining whether the proposed project's environmental impacts may be significant, unless it is identical to the existing environmental setting analysis which does not establish the baseline.

Under the No Project Alternative, the San Gabriel Valley Greenway Network Implementation Plan would not be adopted. Development of bicycle paths and stormwater improvements along the District ROW in the SGV could continue via individual projects implemented by the County in accordance with the 2012 Bicycle Master Plan and 2015 Los Angeles County Enhanced Watershed Management Plan. Similar to the Plan, these other plans provide information on potential project opportunities and sites, along with guidance in how to complete a project, but do not dictate that any specific projects be completed within any specific timeline. Therefore, full implementation of either plan, and associated goals and anticipated benefits such as improved air quality, reduced flooding and increased groundwater recharge, as well as increased recreational opportunities, may or may not be realized.

The 2017 motion that directed the development of the Plan stated "The collaborative planning between various stakeholders in the past has resulted in the construction of Class 1 bike paths along channels like the San Gabriel River and Rio Hondo and within the Rio Hondo Coastal Basin Spreading Grounds. These examples can be used as models for expanding the active transportation system throughout the San Gabriel Valley. Although many communities are independently pursuing greenways, these efforts in large part lack a holistic and methodical regionwide implementation strategy, resulting in a fragmented trail network and a demonstrated need for an updated comprehensive plan" (LA County Board of Supervisors 2017). Therefore, the No Project Alternative assumes that it is reasonably foreseeable that individual municipalities within the Plan Area would continue to develop and implement individual recreational improvement projects within their cities on a project-by-project basis. These projects would have to be completed in accordance with individual city general plans and policies, including those related to water and energy conservation, land use compatibility, and recreational goals. However, there would be no coordinated plan or effort specific to improving the connectivity of greenway alignments in the SGV. Under the No Project Alternative, comprehensive improvements, guided by the six multi-benefit goals of the Plan along with the *Design Guidelines and Standards*, for greenway paths,

amenities, and other components would not occur. As projects are completed over time, there would not be a cohesive aesthetic between various segments of greenway path in the Plan Area, ensuring that the cumulative total of all projects developed meet the six goals defined for the Plan.

Because the activities under No Project could be similar to that of the Plan, the following differences drive the comparative analysis of impacts. Individual projects would not have the same requirements for compliance with the *Design Guidelines and Standards*, which have been developed to ensure that projects developed under the Plan are energy and water efficient, manage stormwater runoff, and develop a consistent aesthetic along the entire length of the Greenway Network. The Plan requires a specific plant palette for revegetation after construction that would not be a requirement under the No Project alternative. In addition, projects developed under the No Project Alternative could consist of much larger projects than described in the Plan, which could result in greater intensity and duration of construction activity.

6.3.3.1 Environmental Evaluation of the No Project Alternative

6.3.3.1.1 Aesthetics

Overall, implementation of the Plan is anticipated to result in beneficial impacts to aesthetics within the Plan Area because of the creation of a visually cohesive and beautified Greenway Network, and an increased acreage of greenspace areas. Under the No Project Alternative, public or private groups may choose to pursue the construction of greenway paths, pocket parks, safe crossings, or stormwater management facilities on these parcels; however, such projects would lack the aesthetic cohesion that would be gained under the Plan. Any project developed under the No Project Alternative would be subject to applicable zoning and other regulations governing scenic quality, but it may not have a beneficial long-term effect on scenic resources in the SGV.

Under the No Project Alternative, potential impacts to scenic vistas, scenic resources or scenic highways during construction activity of individual projects would be the same as described for the Plan, depending on their location. These would be due to the visual disturbance created by the presence of ground disturbing equipment, exclusion fencing, and other types of construction-related activities that could adversely alter the existing views. Additionally, individual projects implemented under the No Project Alternative could result in conflicts with local scenic quality regulations or result in new sources of light or glare, similar to those implemented under the Plan depending on project location. Individual projects implemented by the County under the No Project Alternative would be required to comply with the mitigation measures as adopted in the PEIRs for the Bicycle Master Plan or EWMP but may still conflict with local policies and ordinances of the individual jurisdiction where the project is located. Individual projects implemented by other project proponents would be required to comply with the policies of the individual jurisdiction where the project is located. Therefore, impacts to scenic vistas, resources and highways would be the same as described for the Plan, and would not avoid identified potentially significant and unavoidable impacts.

6.3.3.1.2 Agriculture and Forestry Resources

Individual projects implemented under the No Project Alternative would have similar impacts to agriculture and forestry as those under the Plan, if proposed on parcels that are currently zoned or used

for agricultural purposes and requiring conversion to a different land use. Therefore, the No Project alternative would not avoid identified significant and unavoidable impacts of the Plan.

6.3.3.1.3 Air Quality

As described in Section 3.3, Air Quality, the SGV has poor air quality due to smog as a result of its location in the SCAB, which serves to trap and hold the regional air emissions. Implementation of the Plan over time is anticipated to result in a reduction of vehicle miles traveled in the SGV, as the overall greenway path is constructed and becomes operational, which would indirectly improve air quality in the region due to reduced air emissions from vehicles. Similarly, under the No Project Alternative, individual greenway projects may be implemented over time and achieve the same presumed indirect effect of improved air quality. Construction of any future projects, of a similar size and scale as the projects completed under the Plan would similarly result in emissions from heavy vehicles and ground disturbance and result in the same impacts as the Plan. However, under the No Project Alternative, the size of individual projects is not constrained by the sizes assumed for the Plan. Therefore, construction activity may be more intensive, resulting in greater air emissions than described for the plan. Once operational, maintenance activities of similar types of projects completed under the No Project Alternative may result in slightly greater impacts as projects would not be required to comply with the *Design Guidelines and Standards* that specify all maintenance equipment be electric, or low-emission equipment. Therefore, impacts would still be potentially significant and unavoidable.

6.3.3.1.4 Biological Resources

As discussed in Section 3.4, Biological Resources, the Plan would result in potentially significant adverse effects related to habitat modifications or special status species during construction or operations from construction disturbance, human activity, addition of supplemental lighting, introduction of weeds or pests, or interruption of hydrological processes. However, these impacts would all be reduced to less than significant for Plan activities by implementation of the identified pre-construction mitigation measures and post-construction monitoring and compensatory mitigation measures determined on a site-by-site basis. Many projects implemented under the Plan would have a long-term beneficial impact to biological resources by increasing the acreage of greenspace or parks featuring habitat (e.g., bushes, shrubs, trees, pollinator host plants) available for use by wildlife.

Any greenway projects completed under the No Project Alternative would likely result in similar impacts during construction and maintenance activities, as described above. However, without the Plan, projects would not be developed in accordance with the *Design Guidelines and Standards*, which specifies use of a plant palette that favors native species, eradication of invasive species, to achieve species diversity and enhance wildlife habitat. Accordingly, under the No Project alternative, without similar guidelines, long-term operation of projects may result in plantings that provide little to no wildlife habitat, do not enhance soil biology, and result in greater impacts to biological resources and permanent loss of habitat. Further, it is unknown what mitigation measures, if any, may be applied to individual projects implemented under the No Project Alternative and whether these measures would reduce impacts to less than significant levels. Therefore, impacts are considered potentially significant.

6.3.3.1.5 Cultural Resources

Under the No Project Alternative, impacts to cultural resources from individual projects would be similar as described for the Plan. Depending on project location, the potential exists for construction activity to destroy known cultural resources. However, projects under the No Project Alternative would be required to comply with applicable policies related to cultural resources within the individual jurisdiction in which the project is located. However, it is unknown what mitigation measures, if any, may be applied to individual projects implemented under the No Project Alternative, and whether these measures would reduce impacts to less than significant levels. Therefore, impacts of construction are considered potentially significant. Once operational, no further impacts to cultural resources are anticipated.

6.3.3.1.6 Energy

Individual projects developed under the No Project Alternative have the potential to be more energy intensive than estimated under the Plan, because individual projects would not be constrained by the estimated project size developed for the plan, nor would they comply with the *Design Guidelines and Standards* which specify that all light fixtures be solar-powered. While all projects would be required to comply with policies related to energy conservation as adopted by the individual municipalities, in which a project may be located, construction activity may be more energy-intensive due to larger project size and inclusion of additional components/structures. Therefore, under the No Project alternative, impacts related to energy use may be greater than the Plan for both construction and operation, resulting in significant impacts

6.3.3.1.7 Geology and Soils

Future projects proposed on adjacent parcels under the No Project Alternative would use similar construction methods (e.g., site preparation, excavation) and would be subject to the same rules and requirements governing development in the Plan Area, which is known to feature geological hazards, unstable areas, and expansive soils, as the Plan. Further, potential for impacts to paleontological resources would be similar to those described for the Plan. It is unknown what mitigation measures, if any, would be applied to projects under the No Project Alternative, and whether these would reduce impacts to less than significant levels. Therefore, impacts to paleontological resources during construction activity are considered potentially significant. In addition, any structures constructed would be required to follow the California Building Code, and any policies related to geologic hazards adopted by the municipality in which the project is located. Therefore, impacts to geologic resources under the No Project Alternative would be similar to that described for the Plan.

6.3.3.1.8 Greenhouse Gas Emissions

Implementation of the Plan over time is anticipated to result in a reduction of VMT in the SGV, as the overall greenway path is constructed and becomes operational, which would reduce GHG emissions from vehicles. Similarly, under the No Project Alternative, individual greenway projects may be implemented over time and achieve the same presumed reduction in GHG emissions. Construction of any future projects, if of a similar size and scale as the projects completed under the Plan would similarly result in GHG emissions from heavy vehicles and ground disturbance and result in the same impacts as the Plan. However, under the No Project Alternative, the size of individual projects is not constrained by

the sizes assumed for the Plan. Therefore, construction activity may be more intensive, resulting in greater GHG emissions than described for the plan. Once operational, maintenance activities of similar types of projects completed under the No Project Alternative may result in slightly greater impacts as projects would not be required to comply with the *Design Guidelines and Standards* that specify all maintenance equipment be electric, or low-emission equipment. Therefore, impacts under the No Project alternative would be potentially significant.

6.3.3.1.9 Hazards and Hazardous Waste

Similar to the Plan, the No Project Alternative is not expected to result in a significant risk associated with routine transport, use, and disposal of hazardous materials. Additionally, projects that are constructed under the No Project Alternative are not expected to result in a significant risk associated with potential upset and accident conditions, nor would they be expected to result in a significant risk associated with hazardous emissions or handling of hazardous materials, substances, or waste within 0.25 mile of an existing or proposed school, because projects would be similar in nature to those described for the Plan (i.e., bicycle paths, stormwater improvement projects).

Also similar to the Plan, as the exact location of individual projects that would be developed under the No Project Alternative is unknown, construction activity could potentially occur on hazardous materials sites compiled pursuant to Government Code Section 65962.5, which are present throughout the SGV. It is unknown what mitigation measures, if any, would be applied to individual projects under the No Project alternative, and whether these would reduce potential impacts to less than significant levels. Further, depending on project location, if an individual project is proposed within an area designated VHSFHZ, impacts would be potentially significant and unavoidable, the same as described for the Plan.

6.3.3.1.10 Hydrology and Water Quality

All projects implemented under the Plan would be required to include new or improved stormwater capture and reuse BMPs, as described under the *Design Guidelines and Standards*, which would cumulatively improve stormwater management in the region, reduce flooding, and increase groundwater capture. In addition to the required BMPs, the Plan includes options for additional stormwater management components to further manage stormwater and increase the anticipated benefits. Under the No Project Alternative, similar beneficial impacts would be expected for all projects implemented under the EWMP. However, projects implemented under the Bicycle Master Plan would not have the same guidelines or standards. Therefore, the potential for beneficial impacts related to hydrology and water quality would be reduced under the No Project Alternative.

Similar to the Plan, construction of all individual projects implemented under the No Project Alternative would be required to comply with the numerous regulatory requirements and permit conditions of the federal, state, and local agencies with jurisdiction over the Plan Area. While the potential for volume of water used during construction and operation is greater because the size of individual projects under the No Project Alternative could be greater than that described for the Plan, individual project proponents would be required to identify their water source and confirm capacity during the project approval process at the individual jurisdiction. Therefore, impacts to hydrology and water quality under the No Project Alternative would be less than significant, the same as that described for the Plan.

6.3.3.1.11 Land Use Planning

The Plan would not result in significant impacts from physically dividing an established community. However, some projects that could be operated under the Plan could have significant and unavoidable impacts to land use planning because they could result in conflicts with applicable land use plans, policies, or regulations, even after mitigation. This is because the District ROWs traverse multiple municipal (City) jurisdictions; each with a General Plan that includes a specific vision and designation of uses for land development, which may conflict with the standards set for under the *Design Guidelines and Standards*. Individual projects developed under the No Project Alternative would not be required to comply with the *Design Guidelines and Standards*, therefore, the potential for conflicts with applicable land use policies and regulations would be reduced as compared to the Plan, although projects implemented by the County within the District ROW may still conflict with applicable land use policies. Therefore, the No Project Alternative would not avoid this significant and unavoidable impact.

6.3.3.1.12 Mineral Resources

As described in Section 3.12, Mineral Resources, construction of projects under the Plan would include ground-disturbing activities (e.g., site preparation and grading). Depending on where future proposed projects are sited, these activities could uncover or affect mineral resources. However, projects implemented under the Plan would be constructed predominantly within areas that are already urbanized and disturbed and would therefore not be available for mineral resource extraction. Much of the MRZ-2 mapped area for sand and gravel in the County was developed prior to the MRZ-2 classification and mapping, so it is already unavailable for future extraction. However, the potential exists that projects implemented under the No Project alternative preclude access to a known mineral resource site (e.g., the Montebello Oil Field). It is unknown what mitigation measures, if any, would be applied to a project under the No Project alternative and whether it would reduce impacts to less than significant levels. Therefore, impacts under the No Project Alternative would be potentially significant.

6.3.3.1.13 Noise

Potentially significant increases in ambient noise level and vibration from construction and operation of greenway paths are heavily dependent on project location relative to the location of sensitive receptors. Individual projects completed under the No Project Alternative would be similar to those described for the Plan and would have the same likelihood of occurring in locations near sensitive receptors as under the Plan. Therefore, impacts with regard to noise and vibration under the No Project Alternative would be potentially significant, the same as described for the Plan.

6.3.3.1.14 Population and Housing

Implementation of the Plan would have less than significant impacts on population or housing within the Plan Area. The Plan would result in increased recreational opportunities for existing residents and visitors and no projects would involve development of new housing or structures designed for human occupancy. Similarly, individual projects implemented under the No Project Alternative in accordance with the Bicycle Master Plan, the EWMP, or individual municipalities goals and objective to increase recreational opportunities, would not involve development of any new housing. Therefore, impacts under the No Project Alternative would be less than significant, the same as described for the Plan.

6.3.3.1.15 Public Services

As described in Section 3.15, Public Services, the Plan could result in significant impacts to public services such as fire protection and police protection during construction as a result of potential road closures and detours that could temporarily impede emergency vehicle access and delay service times. It is unknown what mitigation measures, if any, would be applied to a project under the No Project alternative and whether these measures would be sufficient to reduce impacts to less than significant levels. Therefore, this is considered a potentially significant impact. Under the No Project Alternative, adjacent parcels owned by myriad private and public entities could be developed for a wide variety of end uses, including housing, industry, commerce, or recreational facilities. It is very unlikely that any project developed on an adjacent parcel would be large enough or attract enough people to require expansion of public services. This is because most projects that could be developed on adjacent parcels would be limited in size by the parcel ownership boundaries. Therefore, the impacts to public services would be expected to be less for the No Project Alternative compared to the Plan.

6.3.3.1.16 Recreation

Overall implementation of the Plan is anticipated to result in beneficial impacts and increased and higher quality recreational opportunities in the SGV. Construction and operation of individual projects under the Plan would not result in significantly increased use of existing facilities that results in deterioration or require the construction or expansion of facilities that would adversely affect the environment, because projects would be implemented in accordance with the *Design Guidelines and Standards* with the objective of improving existing facilities. Similarly, overall implementation of the Bicycle Master Plan would result in beneficial impacts for recreational opportunities in the SGV but would be limited to development of bicycle paths. Therefore, the additional beneficial impacts of pocket parks and greenway amenities would not be realized. However, construction and operation of individual projects under the No Project Alternative would similarly result in potentially significant impacts to the environment (as described above for biological resource, cultural resources, geology and soils, and energy). Therefore, impacts under the No Project Alternative would be potentially significant, the same as described for the Plan.

6.3.3.1.17 Transportation

Overall implementation of the Plan is anticipated to result in beneficial impacts to transportation and traffic once operational through the development of an active transportation network and reductions in vehicle miles traveled in the region, with significant and unavoidable impacts during the construction. Similarly, under the No Project alternative, projects would still be implemented under the Bicycle Master Plan which would provide the same beneficial impact. Similar to the Plan, construction of individual projects under the No Project alternative could result in conflicts with programs, plans, ordinances, or policies addressing the circulation system during construction, as well as road closures or detours that could impair emergency access or increase response times (therefore, impacts would be potentially significant), and increase VMT. Once operational, individual projects completed under the No Project Alternative would reduce hazards through the development of increased designated access for cyclists, same as described for the Plan, but depending on project design and location could require permanent changes to the transportation network which may impair emergency access or increase

response times to certain areas. Therefore, impacts under the No Project alternative would remain significant and unavoidable, the same as described for the Plan.

6.3.3.1.18 Tribal Cultural Resources

As described in Section 3.18, Tribal Cultural Resources, the Plan will result in potentially significant and unavoidable impacts to Tribal Cultural Resources. Individual projects implemented under the No Project Alternative could similarly result in significant impacts as projects could also be implemented throughout the SGV. However, it is unknown what mitigation measures, if any, would be applied to projects under the No Project alternative. However, even with project specific mitigation significant impacts are likely due to direct impacts from construction, as well as indirect and direct impacts from operation similar to those described in the plan. Therefore, impacts to tribal cultural resources under the No Project Alternative would be significant and unavoidable.

6.3.3.1.19 Utilities and Service Systems

Construction and operation of projects under the Plan could result in potentially significant but mitigable impacts to utilities and service systems from the potential disturbance, relocation, or construction of new utilities to services greenway amenities (e.g., restrooms) or safe crossings (e.g., underpasses). Individual projects implemented under the No Project Alternative would result in similar impacts if similar components were included as part of a project. Depending on location, individual bicycle path projects or stormwater management projects may require ground disturbance or relocation of an existing telecommunication structure or power pole during construction. However, it is unknown what mitigation measures, if any, would be applied to projects under the No Project Alternative, and whether these measures would be sufficient to reduce impacts to less than significant levels. Therefore, this is considered a potentially significant impact. While project components such as restrooms are not contemplated under the Bicycle Master Plan or EWMP, projects developed under individual municipality programs to increase recreational opportunities could include new restrooms that would require expansion of water, natural gas, electricity, and sewer lines. However, similar to the Plan, individual projects implemented under the No Project Alternative would be anticipated to serve the existing community in the SGV and therefore, not result in increased demand for utilities such that new or expanded sources of water or wastewater treatment facilities would be required. Therefore, impacts under the No Project Alternative would be similar to those described for the Plan.

6.3.3.1.20 Wildfire

Similar to projects implemented under the Plan, individual projects implemented under the No Project Alternative could temporarily impair an adopted emergency response or evacuation plan during construction if road closures or detours are required. Once operation, individual projects would not result in the development of new structures for occupancy within a wildfire risk zone, but, depending on location, could still increase the number of visitors to an area designated VHFSZ. Therefore, impacts under the No Project Alternative would be the same as described for the Plan (potentially significant).

6.3.4 Summary of Comparative Analysis

As required by the State CEQA Guidelines, the impacts of the alternative are discussed in a comparative analysis to the impacts of the proposed Plan. Table 6.3-1 summarizes the impacts of the proposed Plan for each resource area and compares them to Alternatives 1, 2, and the No Project Alternative.

Table 6.3-1. Summary of Comparison of Impacts of the Alternative to the Proposed Plan

Resource Area	Proposed Plan	Alternative 1 – Reduced Plan Area	Alternative 2 – Reduced Components	Alternative 3 – No Project Alternative
	Construction and Operation	Construction and Operation	Construction and Operation	Construction and Operation
Aesthetics	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable
Agriculture and Forestry Resources	Significant and Unavoidable	No Impact	Significant and Unavoidable	Significant and Unavoidable
Air Quality	Significant and Unavoidable	Less than Significant with Mitigation	Significant and Unavoidable	Significant and Unavoidable
Biological Resources	Less than Significant with Mitigation	Less than Significant with Mitigation	Less than Significant with Mitigation	Potentially Significant*
Cultural Resources	Less than Significant with Mitigation	Less than Significant with Mitigation	Less than Significant with Mitigation	Potentially Significant*
Energy	Less than Significant with Mitigation	Less than Significant with Mitigation	Less than Significant with Mitigation	Potentially Significant*
Geology and Soils	Less than Significant with Mitigation	Less than Significant with Mitigation	Less than Significant with Mitigation	Potentially Significant*
Greenhouse Gas Emissions	Less than Significant with Mitigation	Less than Significant with Mitigation	Less than Significant with Mitigation	Potentially Significant*
Hazards and Hazardous Materials	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable
Hydrology and Water Quality	Less than Significant	Less than Significant	Less than Significant	Less than Significant
Land Use and Planning	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable
Mineral Resources	Less than Significant with Mitigation	No Impact	Less than Significant with Mitigation	Potentially Significant*

Resource Area	Proposed Plan	Alternative 1 – Reduced Plan Area	Alternative 2 – Reduced Components	Alternative 3 – No Project Alternative
	Construction and Operation	Construction and Operation	Construction and Operation	Construction and Operation
Noise	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable
Population and Housing	Less than Significant	Less than Significant	Less than Significant	Less than Significant
Public Services	Less than Significant with Mitigation	Less than Significant with Mitigation	Less than Significant with Mitigation	Potentially Significant*
Recreation	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable
Transportation	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable
Tribal Cultural Resources	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable
Utilities and Service Systems	Less than Significant with Mitigation	Less than Significant with Mitigation	Less than Significant with Mitigation	Potentially Significant*
Wildfire	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable

Note: = *it is unknown what mitigation measures, if any, would be applied to individual projects under the No Project alternative, and whether these would reduce impacts to less than significant. Therefore, these are considered potentially significant (vs. significant and unavoidable).

6.4 Environmentally Preferred and Superior Alternative

Pursuant to State CEQA Guidelines Section 15126.6, the EIR is required to identify the environmentally superior alternative among the alternatives analyzed. As shown in Table 6.3-1 above, implementation of Alternative 1 – Reduced Plan Area, would avoid the significant and unavoidable impact of potential land use conflicts identified in the Plan, which could occur if an individual project proposed components on a parcel adjacent to the District ROW for which the zoned use is incompatible. Alternative 1 would also potentially reduce other impacts related to agriculture and forestry resources, biological resources, cultural resources, mineral resources, and public services, because projects would be limited to disturbances only on the District ROW which are already known to be disturbed and not zoned for agricultural or mineral resources. Under the Plan these impacts would be less than significant or less than significant with mitigation; therefore, the selection of Alternative 1 would not result in a substantial difference or improvement in environmental impact of the Plan overall. However, because it would avoid a potentially significant and unavoidable impact and minimize other potential impacts, Alternative 1 is considered the environmentally preferred alternative.

Implementation of Alternative 2 – Reduced Plan Components, would not completely avoid potentially significant and unavoidable impacts in ambient noise increases, but would reduce the potential for impacts through the elimination of pocket parks from the Plan. Otherwise, the potential for adverse impacts would be similar to the Plan for all resource categories. However, implementation of Alternative 2 would reduce the potential beneficial impacts of the Plan with regard to improved wildlife connections and increases in parks and open space which have been identified as a need in the SGV. Therefore, Alternative 2 is not considered the environmentally superior alternative.

Although impacts under the No Project Alternative would be largely similar to the Project, it would potentially result in greater significant impacts with regard to aesthetics, air quality, GHG, and biological resources because individual projects would not have the same requirements for compliance with the *Design Guidelines and Standards*, which would ensure that projects developed under the Plan are energy and water efficient, and develop a consistent aesthetic along the entire length of the Greenway Network. In addition, projects developed under the No Project Alternative could consist of much larger projects than described in the Plan which could result in greater intensity and duration of construction activity. Therefore, the No Project Alternative is not considered environmentally superior to the Plan.

In accordance with State CEQA Guidelines Section 15126.6, Alternative 1 is considered the environmentally superior alternative, and overall impacts on environmental resources would be reduced compared to the proposed Project. However, the proposed Plan would have numerous benefits on the environment that would not be realized to the same extent with Alternative 1, and Alternative 1 would not achieve the same level of project objectives as the Plan.

SECTION 7 Report Preparers

This section identifies the authors involved in preparing the PEIR, including persons and organizations consulted. Resumes for County consultant preparers are included in Appendix E.

7.1 County of Los Angeles

7.1.1 Los Angeles County Public Works

Ariana Villanueva – Project Manager, Environmental Engineering Specialist (Stormwater Quality Division)

Grace Komjakraphan – Deputy Project Manager, Environmental Engineering Specialist (Stormwater Quality Division)

7.1.2 Technical Reviewers

Ariana Villanueva – Stormwater Quality Division

Grace Komjakraphan – Stormwater Quality Division

Melissa Turcotte – Stormwater Quality Division

Darian Wong – Stormwater Quality Division

Jeremy Morales – Stormwater Quality Division

Patricia Ramirez – Stormwater Quality Division

Hank Hsing – Transportation Planning and Programs

Shirely Lai – Transportation Planning and Programs

Sarah Ahmed – Stormwater Maintenance Division

Rosa Cruz – Stormwater Maintenance Division

Oscar Enriquez – Stormwater Quality Division

Chris Jones – Stormwater Quality Division

Kent Tsujii – Traffic Safety and Mobility Division

James Harris – Traffic Safety and Mobility Division

Karin Burger – Geotechnical Materials and Engineering Division

Davis Vo – Geotechnical Materials and Engineering Division

Pat Wood – Stormwater Engineering Division

Eric Batman – Stormwater Engineering Division

Lance Cervantes – Environmental Programs Division

Trishena Robinson – Environmental Programs Division

Aric Rodriguez – Environmental Programs Division

Sheela Mathai – County of Los Angeles, Department of Parks and Recreation

Clement Lau – County of Los Angeles, Department of Parks and Recreation

Jui Ing Chien – County of Los Angeles, Department of Parks and Recreation

7.2 Catalyst Environmental Solutions Corporation

Megan Schwartz – Senior Principal, Project Manager, Technical Reviews, QA/QC

Emily Merickel – Senior Scientist, Deputy Project Manager, and Author of Agricultural Resources, Alternatives, Mineral Resources, Population and Housing, Public Services, Utilities and Services Systems, Wildfire

Paden Voget, PE – Senior Engineer, Air Quality, Energy, Greenhouse Gases, Noise, Transportation

Lindsey Garner, PhD – Principal, Biological Resources, Hazards and Hazardous Materials, QA/QC

Daniel Tormey, PhD, PG – Managing Director, Geology and Soils, Hydrology and Water Quality

Benjamin Pogue, AICP – Senior Principal, Aesthetics, Cultural Resources, Land Use, Recreation, Tribal Cultural Resources

Hannah Donaghe – Senior Scientist, Biological Resources

Adrian Gonzalez – Staff Scientist, GIS Maps and Graphics, Regulatory Framework

Olivia Hogan – Staff Scientist, Regulatory Framework, Environmental Setting

Timothy Lee – Staff Scientist, Regulatory Framework, Environmental Setting
