

San Gabriel Valley
Greenway Network
Implementation Plan
*Draft Program
Environmental Impact
Report*

Prepared for: Los Angeles County Public Works

April 2025

Executive Summary

The LA County Board of Supervisors passed a resolution “to create a network of interconnected, multi-use community greenways” by updating the flood control systems along the San Gabriel and Rio Hondo River watersheds in the San Gabriel Valley in May 2017. Accordingly, Los Angeles County Public Works (Public Works) developed the San Gabriel Valley Greenway Network Implementation Plan (Plan). The Plan integrates multiple previous planning and design efforts focusing on parks and open space, flood control, green infrastructure and water quality, and transportation projects. The Plan expands on the San Gabriel Valley Council of Governments' ongoing Active Transportation Planning Initiative - Greenway Feasibility Study and identifies areas of opportunity and creates an implementation framework for creating multi-benefit projects that advances the goals of Plan that were developed with the various stakeholder and partner agencies. The Plan is a multi-objective effort to guide the development of future projects to transform existing Los Angeles County Flood Control District (District) rights-of-way (ROW) in the San Gabriel Valley (SGV) into a network of bicycle, equestrian, and pedestrian pathways along the San Gabriel River, Rio Hondo, and tributaries while simultaneously upgrading and enhancing the District's existing flood control facilities.

This program environmental impact report (PEIR) has been prepared pursuant to the California Environmental Quality Act (CEQA) by Los Angeles County (County) through Public Works to assess the potential environmental impacts that could result from the implementation of the proposed Plan (Project) in Los Angeles County, California, and support the LA County Board of Supervisors decision-making in considering adoption of the Plan. Design information for projects to be implemented under the Plan is at a conceptual level because it is anticipated that the County and/or incorporated cities within the Plan area or other parties may choose to develop and implement their own site-specific projects using the Plan as a guide for such projects in the future; therefore, the environmental impact analysis is presented at a program level and does not include project-specific or site-specific analysis. Conceptual designs have been completed for 10 example projects to provide an illustration of how the Plan may be applied by future project proponents. While these conceptual design projects are evaluated under the PEIR, they are described for illustrative purposes only.

ES.1 Project Location

The SGV includes the approximately 200 square mile valley that lies east of the City of Los Angeles, within Los Angeles County. The SGV is bounded by the San Gabriel Mountains to the north, the San Rafael Mountains to the west, Puente Hills to the south, and the Chino Hills and San Jose Hills to the east.

The Project area evaluated in this PEIR is defined as the 140 linear miles of District ROW and adjacent parcels along the washes and creeks in the SGV in eastern Los Angeles County (Plan Area; Figure ES-1). As part of the Plan preparation, the County reviewed each waterbody for opportunities and constraints and developed conceptual designs for 10 example projects along the most optimal reaches.

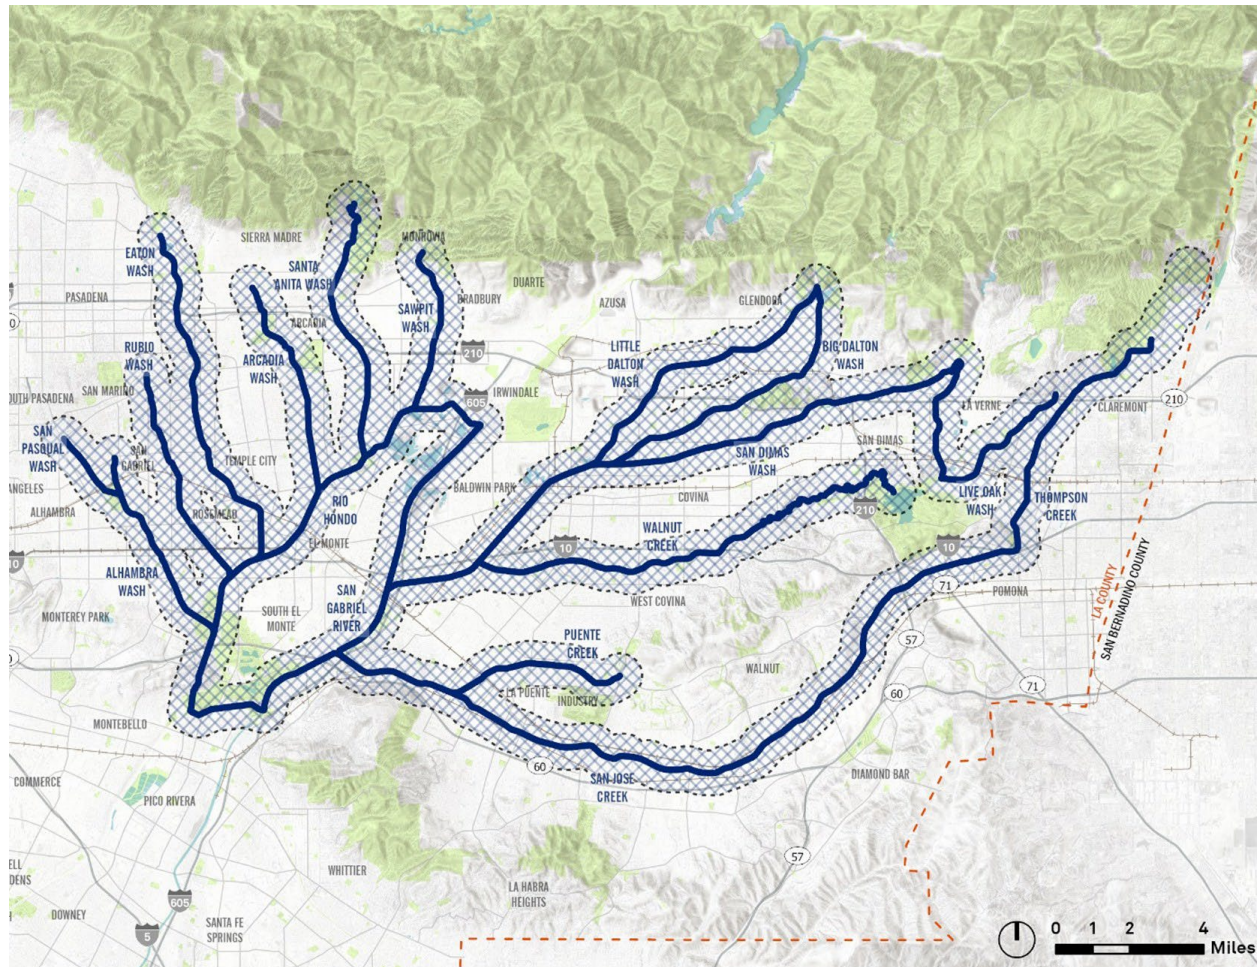

Figure ES-1. SGV Greenway Network Plan Area

ES.2 Project Objectives

State CEQA Guidelines Section 15124(b) requires the project description to include a statement of objectives for the proposed project, including the underlying purpose of the proposed project. The goals of the Plan (referred to as objectives under CEQA) began in May 2017, as a Board motion set forth by the LA County Board of Supervisors, that stated “The flood control systems in the County rivers, creeks, and channels present a unique opportunity to create a countywide network of interconnected, multiuse community greenways for linear parks and open space for recreation, bike paths for active transportation, trails for equestrian use, and integrated stormwater management practices.” The Board motion also outlines six specific plan objectives and goals which include:

- Promoting Equitable Practices
- Creating Recreational Opportunities
- Integrating Stormwater Management
- Boosting Connections
- Enhancing Natural Habitats
- Enriching Community Well-Being

ES.3 Project Overview

The Plan would accelerate development of greenway design standards and facilitate cooperative agreements with other agencies to expedite project delivery for shovel-ready projects within the Plan area. This approach would enable simultaneous implementation of high priority greenway projects while ensuring consistency with the broad master planning of the Greenway Network.

The Plan envisions the development of an active transportation and recreational corridor for bicyclists, pedestrians, and equestrians utilizing the open spaces adjacent to the District's stormwater channels; beautification of the District ROW; and enhancement of stormwater management and natural habitats along river channels, stormwater channels, washes, and creeks in the SGV.

The Plan consists of infrastructure and greenway designs that illustrate the range of possible strategies that the proponents of subsequent projects, including the County, can use to develop the Greenway Network. These project components can be combined in various ways to create multi-benefit projects throughout the Plan area, and the decision to carry out a future project would be driven by the local jurisdiction's needs, funding, and policy decisions. The main project component in the Plan is a **greenway path**, which may consist of multi-use trails and paths, bike paths and bikeways, pedestrian paths, and equestrian trails. In addition to the main project component (greenway path), are subcomponents, which include the following:

- Greenway Amenities
- Pocket Parks and Greenspaces
- Safe Crossings
- Stormwater Management

Within each class of subcomponents is a recommended collection of beneficial project elements. Beneficial project elements are intended to contribute to the attractiveness of the Greenway Network; promote safety, accessibility, and legibility; and build a cohesive identity within the Greenway Network. Beneficial project elements can include, but are not limited to, fencing, benches, trash cans, or signage for greenway amenities; playgrounds or sports fields for pocket parks and greenspaces; curb extensions and raised medians or signage for safe crossings; and green infrastructure or low impact development such as bioretention or permeable pavement for stormwater management.

ES.4 Environmental Review Process

CEQA requires a lead agency to disclose the significant environmental effects of proposed actions to decision-makers and the public. CEQA applies to all discretionary activities proposed to be carried out or approved by public agencies. Approval of the proposed Project (the Plan) would be a discretionary action by a public agency, in this case the Los Angeles County Board of Supervisors, acting on behalf of the County as the lead agency for the Project. Therefore, compliance with CEQA is required. As approved in the LA County Board of Supervisors Motion, dated May 16, 2017, the LA County Board of Supervisors intended for a PEIR to be prepared in conjunction with the Plan to facilitate CEQA review for subsequent projects to be implemented in accordance with the Plan.

The County, in accordance with CEQA, prepared a Notice of Preparation (NOP), which was released to the public and filed with the State Clearinghouse (SCH No. 2022090340) in the Office of Planning and Research and Los Angeles County Clerk on September 20, 2022.

Release of the PEIR to the public begins a 45-day comment period, and upon completion of the 45-day PEIR public review period, a Final PEIR will be prepared, which will include comments on the Draft PEIR received during the formal public review period, as well as the County's written responses to those comments. The Final PEIR will also contain corrections to the text of the PEIR, if needed. This Draft PEIR and the Final PEIR will make up the PEIR for the SGV Greenway Network. If the decision-making body of the lead agency (here, the LA County Board of Supervisors) approves the proposed Project, CEQA requires the board to adopt findings with respect to each significant effect identified in the PEIR (Public Resources Code [PRC] Section 21081, State CEQA Guidelines Section 15091).

While this PEIR provides an initial program-level CEQA clearance for the Plan, all subsequent projects proposed under the finalized Plan will be examined in light of this PEIR to determine whether the impacts of the subsequent project are adequately addressed in this PEIR and a project-specific analysis and Notice of Determination may be filed or if subsequent or new CEQA documentation must be prepared (State CEQA Guidelines Section 15168 (c)(2)). The type of CEQA document (e.g., Addendum, Categorical Exemption, Negative Declaration, or EIR) will be determined on a project-by-project basis.

ES.5 Purpose and Use of the PEIR

An Environmental Impact Report (EIR) is an informational document prepared in compliance with CEQA that describes a proposed project's significant environmental effects, measures to mitigate those effects, and alternatives for avoiding or minimizing the effects. A PEIR is a type of EIR that can be prepared on a series of actions that can be categorized as one large project and are related geographically; as logical parts in the chain of contemplated actions; in connection with issuance of rules, regulations, plan, or other general criteria to govern the conduct of a continuing program; or as individual activities carried out under the same authorizing statutory or regulatory authority (State CEQA Guidelines Section 15168).

ES.6 Lead Agency

The lead agency is the public agency that has the greatest responsibility for carrying out or approving a project which may have a significant effect upon the environment (Public Resources Code Section 21067). The County of Los Angeles, through Public Works, will serve as the lead agency under CEQA for the PEIR and will be responsible—through its governing board, the LA County Board of Supervisors—for approving the Plan. The Plan will guide the County in decision-making for subsequent projects and facilities owned, operated, funded, permitted, or maintained by the County.

ES.7 Required Permits and Consultations

Responsible agencies in CEQA include all public agencies, besides the lead agency, with discretionary permitting authority over the Project. Because this is a PEIR, and project-level approvals are not anticipated at this point, no other permits or approvals (and hence, no responsible agency actions) are anticipated for the PEIR. After the final PEIR is certified, more detailed project-level review can proceed along the SGV Greenway Network study area by the County or other jurisdictions. The PEIR will serve as a first-tier analysis for later project-level and site decisions by these agencies. Individual entities with jurisdiction along the SGV Greenway Network—including the District, U.S. Army Corps of Engineers

(USACE), and the cities—will continue having decision-making authority associated with any Plan implementation activities affecting their respective jurisdictions.

ES.8 Summary of Environmental Impacts and Mitigation Measures

As approved in the LA County Board of Supervisors Motion, dated May 16, 2017, the LA County Board of Supervisors intended for a PEIR to be prepared in conjunction with the Plan to facilitate CEQA review for subsequent projects to be implemented in accordance with the Plan. Mitigation measures are identified for each potentially significant impact where appropriate and feasible. Significant and unavoidable impacts were identified for CEQA categories of aesthetics, agriculture and forestry resources, air quality, hazards and hazardous materials, land use and planning, noise, recreation, transportation, tribal cultural resources, and wildfire.

ES.9 Alternatives to the Proposed Project

State CEQA Guidelines Section 15126.6 requires that an EIR describe a range of reasonable alternatives to a project or its location that could feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any significant environmental impacts, if any exist. A comparative analysis of impacts is required to allow for consideration by decision-makers. Section 15126.6(e)(1) of the State CEQA Guidelines requires that the alternatives analysis include a discussion of a No Project alternative.

Specifically, CEQA requires consideration of a range of alternatives to the Project that: (1) could feasibly attain most of the basic Project objectives and (2) would avoid or substantially lessen any of the significant impacts of the proposed Project. The range of alternatives discussed in an EIR is governed by the rule of reason, which requires the identification of only those alternatives necessary to permit a reasonable choice between the alternatives and the proposed Project. An alternative cannot be eliminated simply because it is costlier than the proposed Project or if it could impede the attainment of all Project objectives to some degree. However, the State CEQA Guidelines state that an EIR need not consider an alternative whose effects cannot be reasonably ascertained and whose implementation is remote or speculative. CEQA requires that an EIR include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed Project.

No discreet, standalone, alternatives were proposed during public outreach, especially considering the broad-scale program-level analysis presented in this PEIR. Community workshops were hosted by the SGV Greenway Network Team, including the Los Angeles County Public Works and consultant team. The community workshops served to educate the community about the purpose and goals of the Plan, build an understanding of the planning process, gather feedback on amenities, uses, and potential concerns, and to promote the Plan. On the whole, the majority of input received through the community outreach effort included suggestions that were carried forward for inclusion in the Plan or suggestions for specific locations for future project implementation. The following list summarizes the input that was provided that was not incorporated into the Plan and was therefore considered as potential alternatives:

1. Provide parking for users to leave their cars and use the greenway network.
2. Create designated “slow zones” along the bike path to ensure cyclist safety.

3. Expand the network outside the ROW and adjacent parcels to connect to commercial areas or transportation hubs (i.e., Metro).
4. Expand the network to connect the bike path to waterfalls and hiking trails.

The County considered and evaluated the feasibility of each of these alternatives in comparison to the Plan objectives and potential to avoid or substantially lessen any of the potentially significant adverse environmental impacts of the Plan. Based on this evaluation, the County determined that the suggested alternatives listed above do not meet the Plan objectives, would not avoid or minimize potentially significant adverse impacts of the Plan or are infeasible, and the suggestions listed above were therefore eliminated from further analysis.

In considering potential options to avoid or minimize significant impacts, while still meeting most of the Project objectives, the County identified two feasible alternatives to be carried forward for full comparative analysis to the Plan:

- Alternative 1 – Reduced Plan Area Alternative
- Alternative 2 – Reduced Components Alternative

ES.9.1 Alternative 1: Reduced Plan Area Alternative

Under this Alternative, the Plan Area for the Plan would be restricted to the District ROW and no project components would be constructed or operated on parcels adjacent to or outside of the District ROW. Implementation of this alternative would continue to meet all of the project objectives described above, although project opportunities would be limited for certain Plan components, such as pocket parks and safe crossings, as most of the opportunities for these components identified in the Plan are located outside of the District ROW. In addition, implementation of this alternative may not fully meet the overall goal of the Plan to expand the active transportation network in the SGV and or the objective of enhancing connectivity to schools, parks, transit, jobs, and other local points of interest, as without safe crossings, the network may not be fully connected and include a set of trails that start and stop along the District ROW.

As all projects implemented under the Plan would follow the *Design Guidelines and Standards*, implementation of this alternative would minimize or avoid the potential for significant and unavoidable land use conflicts that could occur on adjacent parcels under the jurisdiction of local municipalities. In addition, the potential for adverse impacts to cultural resources, tribal cultural resources, and biological resources during construction would be somewhat reduced due to the decreased footprint of disturbance.

Therefore, because this alternative is feasible, would meet most of the project objectives, and would reduce or avoid significant impacts identified for the Plan, it is carried forward for full analysis.

ES.9.2 Alternative 2: Reduced Components Alternative

Under this alternative, the Plan would be revised to include only greenway paths + amenities and safe crossings. The Plan Area would remain the same. The Plan components not included in this alternative are pocket parks and additional stormwater measures beyond those required by the *Design Guidelines and Standards*.

This alternative would meet the overall goal of the Plan to expand the active transportation network throughout the SGV, enhancing connectivity, increasing recreational opportunities, promoting equitable practices, and enriching community well-being. Because stormwater management is required by the *Design Guidelines and Standards*, this alternative would still meet the objective of integrating stormwater management, but to a lesser degree than the Plan. However, this alternative would not meet the objective of enhancing natural habitats, as pocket parks provide the greatest opportunity to enhance natural habitats and increase vegetated areas.

Focusing the plan on greenway paths, associated amenities and safe crossings would reduce potential significant impacts related to cultural resources, tribal cultural resources, and biological resources during construction, as project opportunities outside of the District ROW, on adjacent parcel would be limited to safe crossings that have a much smaller area of disturbance than a pocket park. Therefore, overall construction activity and ground disturbance would be minimized. It would also potentially reduce significant and unavoidable impacts related to increases in ambient noise levels, as recreationalists along the greenway path would be constantly moving through the network, whereas recreationalists at pocket parks are more likely to remain for a longer duration of time and enjoy active play at the park.

Therefore, because this alternative is feasible, would meet most of the project objectives, and would reduce or avoid significant impacts identified for the Plan, it is carried forward for full analysis.

ES.9.3 No Project Alternative

Under the No Project Alternative, the Plan would not be adopted. Development of bicycle paths and stormwater improvements along the District ROW in the SGV could continue via individual projects implemented by the County in accordance with the 2012 Los Angeles County Bicycle Master Plan and 2015 Los Angeles County Enhanced Watershed Management Plan. Similar to the Plan, these other plans provide information on potential project opportunities and sites, along with guidance on how to complete a project, but do not dictate that any specific projects be completed within any specific timeline. Therefore, full implementation of either plan, and associated goals and anticipated benefits such as improved air quality, reduced flooding and increased groundwater recharge, as well as increased recreational opportunities, may or may not be realized.

In addition, individual municipalities within the Plan Area may develop and implement individual recreational improvement projects within their cities on a project-by-project basis. These projects would have to be completed in accordance with individual city general plans and policies, including those related to water and energy conservation, land use compatibility, and recreational goals. However, there would be no coordinated plan or effort specific to improving the connectivity of greenway alignments in the SGV. Under the No Project Alternative, comprehensive improvements, guided by the six multi-benefit goals of the Plan along with the *Design Guidelines and Standards*, for greenway paths, amenities, and other components would not occur. As projects are completed over time, there would not be a cohesive aesthetic between various segments of greenway path in the Plan Area, ensuring that the cumulative total of all projects developed meet the six goals defined for the Plan.

Because the activities under No Project could be similar to that of the Plan, the following differences drive the comparative analysis of impacts. Individual projects would not have the same requirements for compliance with the *Design Guidelines and Standards*, which have been developed by the Plan to ensure

that projects developed under the Plan are energy and water efficient and develop a consistent aesthetic along the entire length of the Greenway Network. The Plan requires a specific plant palette for revegetation after construction that would not be a requirement under the No Project alternative. In addition, projects developed under the No Project Alternative could consist of much larger projects than described in the Plan which could result in greater intensity and duration of construction activity.

ES.9.4 Comparison of Alternatives

A comparative summary of the potential impacts under each alternative is provided in Table ES-1.

ES.9.5 Environmentally Superior Alternative

Pursuant to State CEQA Guidelines Section 15126.6, the EIR is required to identify the environmentally superior alternative among the alternatives analyzed. As shown in Table ES-1 below, implementation of Alternative 1 – Reduced Plan Area, would avoid the significant and unavoidable impact of potential land use conflicts identified in the Plan, which could occur if an individual project proposed components on a parcel adjacent to the District ROW for which the zoned use is incompatible. Alternative 1 would also potentially reduce other impacts related to agriculture and forestry resources, biological resources, cultural resources, mineral resources, and public services, because projects would be limited to disturbances only on the District ROW which are already known to be disturbed. Alternative 2 – Reduced Pan Components are equal to the Proposed Plan, with fewer opportunities for significant impact in noise resources. Although impacts under the No Project Alternative would be largely similar to the Project, it would potentially result in greater significant impacts with regard to aesthetics, air quality, GHG, and biological resources because individual projects would not have the same requirements for compliance with the *Design Guidelines and Standards*, which would ensure that projects developed under the Plan are energy and water efficient, and develop a consistent aesthetic along the entire length of the Greenway Network.

Alternative 1 is considered the environmentally superior alternative, and overall impacts on environmental resources would be reduced compared to the proposed Project. However, the proposed Plan would have numerous benefits on the environment that would not be realized to the same extent with Alternative 1, and Alternative 1 would not achieve the same level of project objectives as the Plan.

Table ES-1. Comparison Summary of Potential Impacts of the Project and Alternatives

Resource Area	Proposed Plan	Alternative 1 – Reduced Plan	Alternative 2 – Reduced	Alternative 3 – No Project
	Construction and Operation	Construction and Operation	Construction and Operation	Construction and Operation
Aesthetics	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable
Agriculture and Forestry Resources	Significant and Unavoidable	No Impact	Significant and Unavoidable	Significant and Unavoidable
Air Quality	Significant and Unavoidable	Less than Significant with Mitigation	Significant and Unavoidable	Significant and Unavoidable
Biological Resources	Less than Significant with Mitigation	Less than Significant with Mitigation	Less than Significant with Mitigation	Potentially Significant*
Cultural Resources	Less than Significant with Mitigation	Less than Significant with Mitigation	Less than Significant with Mitigation	Potentially Significant*
Energy	Less than Significant with Mitigation	Less than Significant with Mitigation	Less than Significant with Mitigation	Potentially Significant*
Geology and Soils	Less than Significant with Mitigation	Less than Significant with Mitigation	Less than Significant with Mitigation	Potentially Significant*
Greenhouse Gas Emissions	Less than Significant with Mitigation	Less than Significant with Mitigation	Less than Significant with Mitigation	Potentially Significant*
Hazards and Hazardous Materials	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable
Hydrology and Water Quality	Less than Significant	Less than Significant	Less than Significant	Less than Significant
Land Use and Planning	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable
Mineral Resources	Less than Significant with Mitigation	No Impact	Less than Significant with Mitigation	Potentially Significant*

Resource Area	Proposed Plan	Alternative 1 – Reduced Plan	Alternative 2 – Reduced	Alternative 3 – No Project
	Construction and Operation	Construction and Operation	Construction and Operation	Construction and Operation
Noise	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable
Population and Housing	Less than Significant	Less than Significant	Less than Significant	Less than Significant
Public Services	Less than Significant with Mitigation	Less than Significant with Mitigation	Less than Significant with Mitigation	Potentially Significant*
Recreation	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable
Transportation	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable
Tribal Cultural Resources	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable
Utilities and Service Systems	Less than Significant with Mitigation	Less than Significant with Mitigation	Less than Significant with Mitigation	Potentially Significant*
Wildfire	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable	Significant and Unavoidable

Note: = *it is unknown what mitigation measures, if any, would be applied to individual projects under the No Project alternative, and whether these would reduce impacts to less than significant. Therefore, these are considered potentially significant (vs. significant and unavoidable).

WTP	waste treatment plant
WUI	wildland-urban interface

SECTION 1 Introduction

This program environmental impact report (PEIR) has been prepared by Los Angeles County (County) through Los Angeles County Public Works (Public Works) to assess the potential environmental impacts that could result from the implementation of the proposed San Gabriel Valley Greenway Network Strategic Implementation Plan (Plan; Project) in Los Angeles County, California, and support the Los Angeles County Board of Supervisors decision-making in considering adoption of the Plan. The County of Los Angeles, through Public Works, is the lead agency for the proposed Project, pursuant to the California Environmental Quality Act (CEQA). Design information for the proposed Project is at a conceptual level because it is anticipated that the County and/or incorporated cities within the Plan Area or other parties may choose to develop and implement their own site-specific projects using the Plan as a guide for such projects in the future; therefore, the environmental impact analysis is presented at a program level and does not include project-specific or site-specific analysis. Conceptual designs have been completed for 10 example projects to provide an illustration of how the Plan may be applied by future project proponents. These conceptual design projects are described for illustrative purposes only and evaluated in the PEIR at a program level.

The Draft Plan was released to the public on March 27, 2025, for review and comment. The proposed Project is a multi-objective effort to guide the development of future projects to transform existing Los Angeles County Flood Control District (District) rights-of-way (ROW) in the San Gabriel Valley (SGV) into a network of bicycle and pedestrian pathways along the San Gabriel River, Rio Hondo, and tributaries while simultaneously upgrading and enhancing the District's existing flood control facilities. The Plan provides guidance to project proponents on how to transform the many flood control channels, utility rows, abandoned rail lines, and street corridors in this heavily developed and urban region of Los Angeles County into a network of safe, cohesive, and easily accessible community greenways. This network of paths will connect communities via an active transportation system and expand access to open recreation and greenspace for those who live, work, and play in the SGV.

1.1 Background and Overview

On May 16, 2017, the LA County Board of Supervisors passed a resolution “to create a network of interconnected, multi-use community greenways” by updating the flood control systems along the San Gabriel River and Rio Hondo watersheds in the San Gabriel Valley. The Plan integrates multiple previous planning and design efforts focusing on parks and open space, flood control, green infrastructure, water quality, and transportation projects. The Plan expands on the San Gabriel Valley Council of Governments' (SGVCOG) ongoing Active Transportation Planning Initiative - Greenway Feasibility Study and identifies areas of opportunity and creates an implementation framework for creating multi-benefit projects that advances the goals of Plan that were developed with the various stakeholder and partner agencies.

The Plan would accelerate development of greenway design standards and facilitate cooperative agreements with other agencies to expedite project delivery for shovel-ready projects within the Plan

Area. This approach would enable simultaneous implementation of high priority greenway projects while ensuring consistency with the broad master planning of the Greenway Network.

1.1.1 San Gabriel Valley Greenway Network Strategic Implementation Plan Objectives

The goals of the Plan (referred to as objectives under CEQA) began in May 2017, as a Board motion set forth by the LA County Board of Supervisors, that stated “The flood control systems in the County rivers, creeks, and channels present a unique opportunity to create a countywide network of interconnected, multiuse community greenways for linear parks and open space for recreation, bike paths for active transportation, trails for equestrian use, and integrated stormwater management practices.” The Board motion also outlines six specific plan objectives and goals which include the following (Figure 1-1):

- Promoting Equitable Practices
- Creating Recreational Opportunities
- Integrating Stormwater Management
- Boosting Connections
- Enhancing Natural Habitats
- Enriching Community Well-Being

Figure 1-1. Plan Goals

1.1.1.1 Promoting Equitable Practices

Promoting equitable practices is at the forefront of decision-making processes throughout the entirety of the Plan. This can be seen not only in the broad and diverse community engagement efforts but also in the tributary and greenway analyses, and project selection and conceptual designs throughout the SGV. It is the LA County Board of Supervisors practice and goal to “Promot[e] equitable funding to improve environmental justice outcomes.”

1.1.1.2 Creating Recreational Opportunities

For this objective, the LA County Board of Supervisors set forth two specific Plan goals: “Improving mobility and recreational opportunities for people with disabilities, youth and the aging population, bicyclists and pedestrians and equestrians”, and “Creating access to more open recreational space and promoting physical activity.” Greenway projects provide extensive recreational opportunities for all types of users throughout the SGV.

1.1.1.3 Integrating Stormwater Management/Capture, Groundwater Recharge, Water Quality

Water management throughout the region includes stormwater capture for treatment and use, groundwater recharge, and water quality improvements. LA County Board of Supervisors goals for the Plan include “Integrating stormwater capture and water management opportunities.” Local and off-site water management is incorporated into planned greenway projects and can support project implementation through available Measure W funding.

1.1.1.4 Enhancing Connections

A Plan priority is to create more connectivity and opportunities for residents to reach schools, parks, transit, jobs, shopping, and numerous other local points of interest. Specific LA County Board of Supervisors Plan goals include “Enhancing connections to transit, schools, jobs, and everyday destinations.”

1.1.1.5 Enhancing Natural Habitats

“Enhancing natural habitats and enriching community well-being” is another important LA County Board of Supervisors objective. Initiated by previous plans and projects, the Plan aims to adopt, standardize, and expand on those guiding principles. Greenway projects incorporate specific elements such as native plants and pollinator gardens to effectively achieve these objectives.

1.1.1.6 Enriching Community Well-Being

Finally, the LA County Board of Supervisors Plan objectives include “Reducing vehicle miles traveled and associated greenhouse gas emissions.” Disadvantaged communities within the SGV Greenway Network experience degraded air quality. The Plan creates vast opportunities for alternative greenway transportation and extensive planting of trees and many other types of vegetation. The Plan is developed to provide communities with green solutions including reducing heat island effects to enhance community well-being.

1.1.2 San Gabriel Valley Greenway Network Strategic Implementation Plan Public Involvement and Review

The development process for the Plan included a comprehensive community engagement program, in addition to input from the SGV Greenway Steering Committee and expertise from the technical design team. The three-pronged approach was designed to represent the broad range of interests within the SGV. Community outreach included digital surveys, pop-up community events, and community workshops to inform residents and gather feedback and input. Six community workshops (virtual and in-person) and thirteen in-person pop-up events specifically focused on Plan content were held in various

communities along the San Gabriel River and Rio Hondo in 2021 and 2022. Each workshop was attended by 7-20 members of the public who provided input on community needs and potential project locations. The large-scale community engagement process—along with the robust data-driven analysis of existing conditions within the SGV—helped establish the community needs and inform the Plan objectives and design considerations.

Thirty-four public meetings of the Steering Committee were held between April 2020 and August 2022 and included public comment opportunities. The Steering Committee consists of representatives from the SGVCOG, Native American Indian Commission, LA County Supervisor Districts 1, 4, and 5, Active San Gabriel Valley, Nature for All, Southern California Association of Governments (SCAG), Rivers and Mountains Conservancy, San Gabriel Valley Conservation Corps, and Public Works. The PowerPoint slide content of the Steering Committee meetings as well as meeting summaries and additional technical data were made publicly available at the [San Gabriel Valley Greenway Network Project website \(sgvgreenway.org\)](https://sgvgreenway.org). Upon completion of the Steering Committee meeting process, the Draft Plan was reviewed by the subcommittees. The Draft Plan was made available to the public on March 27, 2025 for review.

1.2 Overview of the CEQA Process

CEQA requires a lead agency to disclose the significant environmental effects of proposed actions to decision-makers and the public. CEQA applies to all discretionary activities proposed to be carried out or approved by public agencies. Approval of the proposed Project (the Plan) would be a discretionary action by a public agency, in this case the LA County Board of Supervisors, acting on behalf of the County as the lead agency for the Project. Therefore, compliance with CEQA is required. As approved in the LA County Board of Supervisors Motion, dated May 16, 2017, the LA County Board of Supervisors intended for a PEIR to be prepared in conjunction with the Plan to facilitate CEQA review for subsequent projects to be implemented in accordance with the Plan.

An Environmental Impact Report (EIR) is an informational document prepared in compliance with CEQA that describes a proposed project's significant environmental effects, measures to mitigate those effects, and alternatives for avoiding or minimizing the effects. A PEIR is a type of EIR that can be prepared on a series of actions that can be categorized as one large project and are related geographically; as logical parts in the chain of contemplated actions; in connection with issuance of rules, regulations, plan, or other general criteria to govern the conduct of a continuing program; or as individual activities carried out under the same authorizing statutory or regulatory authority (State CEQA Guidelines Section 15168).

The Plan provides guidance to serve as framework for future projects; however, the Plan lacks sufficient detail to support project-level analysis (e.g., Initial Study or EIR) as individual projects will be developed as funding and resources become available to project proponents. A PEIR does not analyze site-specific construction and operation details. Rather, a PEIR serves as a first-tier environmental document that focuses on the purpose and need for the program and broadly describes the effects of implementing the program. The focus is on identifying types of potential environmental impacts, and future detailed review would occur at the project stage. To make this PEIR useful to future project proponents, the County has identified the likely extent of potential greenway path projects and subcomponents (greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management) and

estimated the likely construction activity for each to calculate the potential air, noise, and greenhouse gas (GHG) emissions, as well as potential traffic impacts.

This PEIR is being prepared for the Plan because it is the appropriate environmental document for a series of actions that can be characterized as one large project and are related geographically (State CEQA Guidelines Section 15168). Under Section 15060 (d), if a lead agency can determine that an EIR will clearly be required for a project, it may commence directly with the EIR preparation commencing with Section 15080. Accordingly, the County did not prepare a separate Initial Study in advance of preparation of this PEIR. The Plan includes a multitude of actions that could be implemented in the future, and all of them are in geographic proximity to the SGV. While this PEIR provides an initial program-level CEQA clearance for the Plan, all subsequent projects proposed under the finalized Plan will be examined in light of this PEIR to determine whether the impacts of the subsequent project are adequately addressed in this PEIR and whether a project-specific analysis and Notice of Determination may be filed or if subsequent or new CEQA documentation must be prepared (State CEQA Guidelines Section 15168 (c)(2)). The type of CEQA document (e.g., Addendum, Categorical Exemption, Negative Declaration, or EIR) will be determined on a project-by-project basis.

The major steps that have been and will be taken by the County in preparing the PEIR in compliance with CEQA are described below.

1.2.1 Notice of Preparation and Scoping Period

The County, in accordance with CEQA, prepared a Notice of Preparation (NOP), which was released to the public and filed with the State Clearinghouse (SCH No. 2022090340) in the Office of Planning and Research and Los Angeles County Clerk on September 20, 2022. The NOP provided notice to the public and public agencies that a PEIR would be prepared, described the proposed Project that would be evaluated in detail in the PEIR, listed the probable environmental effects of the Project, and identified the date, time, and location for a scoping meeting, which was held on October 4, 2022. The purpose of the meeting was to present the proposed Plan to the interested parties and receive public input regarding the proposed scope of the PEIR analysis. Attendees were provided an opportunity to voice comments or concerns regarding potential effects of the Plan at the meeting.

The NOP was distributed to involved public agencies and interested parties for a 30-day public review period, which began on September 20, 2022, and ended on October 20, 2022. Copies of the NOP were also sent via certified mail to members of the Steering Committee, all incorporated cities, water districts, and transportation agencies within the Plan Area. Public notices were also published in the Los Angeles Times, Los Angeles Daily News, Pasadena Star-News, San Gabriel Valley Tribune, and La Opinion during the week of September 20. Ten comment letters were received via mail or email during the scoping period. The following issues were raised in the comments received during the scoping period and are addressed in this PEIR:

- Ensuring the safety of recreationalists that may use future greenway paths within the Plan Area (as shown on Figure 2-2)
- Potential for conflicts in use of the Greenway Network between recreationalists and unhoused individuals
- Potential for reduced vehicle use and greenhouse gas emissions
- Need to address the issue of extreme heat days

- Opportunities to partner with other agencies to adopt green streets program
- Improved transportation and connectivity
- Cultural resources assessments and tribal consultation
- Potential impacts to biological resources, particularly sensitive species and Sensitive Natural Communities
- Coordination with other County efforts, such as County Park Design Guidelines and Trails Manual
- Potential for cumulative impacts
- Potential effects of construction on existing recreational resources

A copy of the NOP is included in Appendix A of this PEIR, along with written comments provided by the public and public agencies in response to the NOP.

1.2.2 Draft PEIR Public Review and Comment Period

Public notice of the availability of the Draft PEIR was provided in the Los Angeles Times, Los Angeles Daily News, Pasadena Star-News, San Gabriel Valley Tribune, and La Opinion the week of April 14, 2025. The Notice of Availability was also sent via certified mail to all members of the public that submitted comments during the scoping period, as well as representatives from state agencies, and all incorporated cities, water districts, and transportation agencies within the Plan Area.

Release of the Draft PEIR to the public begins a 45-day comment period, extending from April 15 to May 30, 2025. During this timeframe, members of the public and public agencies are asked to review the Draft PEIR and provide comments on the document, including adequacy of the impact analyses. A public meeting to summarize the results of the environmental analysis and solicit comments from the public and agencies will be held online during the public review period.

The Draft PEIR can be reviewed on Public Works' website (www.sgvgreenway.org) and hard copies of the PEIR are available at the following locations:

- LA County Public Works Headquarters, 900 S. Fremont Street, 11th Floor, Alhambra, CA 91803
- Arcadia Public Library, 20 W. Duarte Road, Arcadia, CA 91006
- Baldwin Park Library, 4181 Baldwin Park Boulevard, Baldwin Park, CA 91706
- Covina Public Library, 234 N. 2nd Avenue, Covina, CA 91723
- Glendora Public Library, 140 Glendora Avenue, Glendora, CA 91741
- Hastings Branch Library, 3325 E. Orange Grove Boulevard, Pasadena, CA 91107
- La Puente Library, 15920 Central Avenue, La Puente, CA 91744
- La Verne Public Library, 3640 D Street, La Verne, CA 91750
- Monrovia Public Library, 321 S. Myrtle Avenue, Monrovia, CA 91016
- Rosemead Library, 8800 Valley Boulevard, Rosemead, CA 91770
- San Gabriel Library, 500 S. Del Mar Avenue, San Gabriel, CA 91776

Public Works is soliciting the views of interested persons and agencies on the content of this Draft PEIR. In accordance with CEQA, agencies are requested to provide their comments on environmental issues related to the statutory responsibilities of the agency. The PEIR will be used by the County's governing Board—the Los Angeles County Board of Supervisors—when considering approval of the proposed Project as well as any related discretionary actions. Any interested individuals or entities can provide written comments on the Draft PEIR. Written comments on the Draft PEIR must be postmarked by May 30, 2025, and should be addressed to:

Ariana Villanueva
Los Angeles County Public Works, Stormwater Quality Division
P.O. Box 1460
Alhambra, California 91802-1460

1.2.3 Preparation of the Final PEIR and Approval

Upon completion of the 45-day Draft PEIR public review period, a Final PEIR will be prepared, which will include comments on the Draft PEIR received during the formal public review period, as well as the County's written responses to those comments. The Final PEIR will also contain corrections to the text of the Draft PEIR, if needed. This Draft PEIR and the Final PEIR will make up the PEIR for the San Gabriel Valley Greenway Network Strategic Implementation Plan.

If the decision-making body of the lead agency (here, the LA County Board of Supervisors) approves the proposed Project, CEQA requires the Board to adopt findings with respect to each significant effect identified in the PEIR (Public Resources Code [PRC] Section 21081, State CEQA Guidelines Section 15091). For each significant effect, CEQA requires the approving agency to make one or more of the following findings:

- Changes or alterations have been required for, or incorporated into, the Project that avoid or substantially lessen the significant environmental effect, as identified in the Final PEIR.
- Such changes or alterations are within the responsibility and jurisdiction of another public agency and not the agency making the finding. Such changes have been adopted by such other agency or can and should be adopted by such other agency.
- Specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the Final PEIR.

In the event that the County, as the lead agency, concludes that the proposed Project would result in significant effects that would not be reduced to less than significant levels or avoided by feasible mitigation measures and alternatives, the County must adopt a statement of overriding considerations (PRC Section 21081, subd. (b); State CEQA Guidelines Section 15093). Under CEQA, such statements are intended to provide a written means by which the lead agency balances the benefits of a proposed project and any significant and unavoidable environmental impacts arising from its implementation. Where the lead agency concludes that the economic, legal, social, technological, or other benefits outweigh the unavoidable significant environmental impacts, the lead agency may find such impacts acceptable and approve the project. In addition, pursuant to PRC Section 21081.6, public agencies, when approving a project, must also adopt a program for monitoring or reporting the changes that were incorporated into the project or made a condition of project approval, for mitigating or avoiding significant effects on the environment. The purpose of the monitoring and reporting program is to ensure mitigation measures and project revisions identified in the PEIR are implemented. The program, which will be referred to as the Mitigation Monitoring and Reporting Plan (MMRP) for the proposed Project, will be recommended for adoption by the LA County Board of Supervisors at the time it considers its project approval. A draft MMRP is included as Appendix B to this PEIR.

1.3 About This PEIR

1.3.1 Purpose of the PEIR

The basic purposes of CEQA (PRC Section 21000 et seq.) are to: (1) inform the public and government decision makers regarding the potential significant environmental effects of proposed activities, (2) identify ways in which potential environmental damage can be avoided or significantly reduced, (3) prevent significant, avoidable environmental damage by requiring changes in projects through the use of alternatives or mitigation measures, and (4) disclose to the public the reasons why a government agency approved the project if significant environmental effects are involved.

As described in Section 1.2, this document has been prepared as a PEIR. A PEIR is prepared for an agency program or series of related actions that can be characterized as one large project. Typically, a large project involves actions that are closely related either geographically or temporally and PEIRs are commonly prepared for agency plans, policies, or regulatory programs. PEIRs analyze broad environmental effects of a program with the knowledge that site-specific environmental review may be required for particular portions or projects implemented under a program or plan (State CEQA Guidelines Section 15168 (a)).

As described in State CEQA Guidelines Sections 15168 (a) and (b), a PEIR is an EIR that may be prepared on a series of related actions that are:

- Linked geographically,
- Logical parts of a chain of contemplated actions,
- In connection with issuance of rules, regulations, plans, or other general criteria to govern the conduct of a continuing program, or
- As individual activities carried out under the same authorizing statutory or regulatory authority, and having generally similar environmental effects which can be mitigated in similar ways.

State CEQA Guidelines Section 15168 emphasizes that a “program EIR will be most helpful in dealing with subsequent activities if it deals with the effects of the program as specifically and comprehensively as possible. With a good and detailed analysis of the program, many subsequent activities could be found to be within the scope of the project described in the program EIR, and no further environmental documents would be required.”

Because the proposed Project consists of the Plan with components that would be implemented over a period of years, the County determined that a PEIR would be the appropriate document for the proposed Project.

According to the State CEQA Guidelines (Section 15168[b]), a PEIR can provide the following advantages:

- Provide an occasion for a more exhaustive consideration of effects and alternatives than would be practical in an EIR on an individual action.
- Ensure consideration of cumulative impacts that may be slighted on a case-by-case basis.
- Avoid duplicative reconsideration of basic policy considerations.
- Allow the lead agency to consider broad policy alternatives and program-wide mitigation measures at an earlier time, when the agency has greater flexibility to deal with basic problems or cumulative impacts.
- Allow a reduction in paperwork.

1.3.2 Documents Incorporated by Reference

In recent years, Los Angeles County has completed efforts that are related to the Plan but address the entire geographic area of the County, whereas the Project focuses on the SGV. These efforts include the 2015 Los Angeles County Enhanced Watershed Management Programs (EWMP) PEIR and the 2012 Bikeway Master Plan PEIR. These two certified PEIR's provide a firm basis to support the implementation of the Plan, and therefore, are incorporated by reference into this PEIR to eliminate repetitive discussions of topics that have already been thoroughly evaluated at the County level while focusing the analysis on the most important and specific issues to the Plan itself.

Design guidelines and standards for the Plan draw from numerous traffic, transportation, bike path, and wayfinding/signage standards and guidelines. These include the SGV Regional Active Transportation Plan and Greenway Network Study (November 2018) prepared by the SGVCOG, the San Gabriel River Master Plan, the Emerald Necklace Implementation Plan, and the Los Angeles River Master Plan Design Guidelines for greenway and bikeway design standards. The contribution of these guidelines and standards to the Plan are described in detail in the San Gabriel Valley Greenway Network Strategic Implementation Plan Design Guidelines and Standards (hereafter referred to as *Design Guidelines and Standards*; Appendix H of the Draft Plan).

1.3.2.1 2012 County of Los Angeles Bicycle Master Plan PEIR

In 2012, the County prepared the County of Los Angeles Bicycle Master Plan PEIR, which provided CEQA analysis of the Bicycle Master Plan, a sub-element of the Transportation Element within the County of Los Angeles General Plan. The purpose of the Bicycle Master Plan is to guide the development of infrastructure, policies, and programs that improve the bicycling environment in Los Angeles County. It focuses on areas under the County's jurisdictional authority; however, it also coordinates planning efforts with other agencies. The Bicycle Master Plan provides direction for expanding bikeway network, connecting gaps, addressing constrained areas, providing for greater local and regional connectivity, and encouraging residents to bike more often.

There is significant overlap between the Bicycle Master Plan's goals, geography, and analyses and those of the Plan. The Plan will incorporate information from the Bicycle Master Plan where practical, particularly with regards to the overall goals of connectivity within Los Angeles County as well as when establishing existing environment and environmental impacts for similar scale and purpose projects (e.g., bikeways, greenways).

1.3.2.2 2015 Los Angeles County Enhanced Watershed Management Programs PEIR

In December 2012, the Los Angeles Regional Water Quality Control Board (LARWQCB) issued a Municipal Separate Storm Sewer System (MS4) Permit (Order No. R4-2012-0175; National Pollutant Discharge Elimination System [NPDES] Permit No. CAS004001) covering discharges within coastal watersheds from the collective storm sewer systems in Los Angeles County (except from the City of Long Beach). The 2012 MS4 Permit provided Permittees with the option of implementing an innovative approach to Permit compliance through development of an EWMP, which identified potential and priority structural and non-structural best management practices (BMPs) to improve water quality. Twelve EWMPs were prepared by the 12 watershed groups in Los Angeles County. As part of the EWMPs, the County certified the 2015 EWMP PEIR, which analyzed multi-benefit stormwater projects,

with a focus on flood risk mitigation and water conservation and supply. The EWMP PEIR included discussion of both institutional and structural elements and analysis of EWMP implementation in the Upper San Gabriel River Watershed. Example multi-benefit projects described in the 2015 EWMP PEIR include creek restoration which provides habitat restoration as well as flood management and water quality improvement and could include installation of a greenway for additional water infiltration. A general construction footprint and impacts from these structural and non-structural types of projects are analyzed in the EWMP PEIR and many environmental impacts have been addressed at the program level.

There is considerable geographic overlap between the EWMP PEIR discussion of implementation in the Upper San Gabriel River Watershed with the SGV Greenway Network Plan elements. The SGV Greenway Network Plan will incorporate information from the existing environment and impacts analysis in the EWMP PEIR as applicable to this Project. The 2015 EWMP PEIR also incorporates by reference the 2014 Upper San Gabriel River EWMP Group's Enhanced Watershed Management Program Work Plan.

1.3.3 Organization and Content of the PEIR

The following describes the organization of this PEIR:

- **Executive Summary.** This section summarizes the contents of the Draft PEIR.
- **Section 1: Introduction and Plan Background.** This section discusses the CEQA process, the purpose of the PEIR, and public involvement in the CEQA process.
- **Section 2: Project Description.** This section provides a detailed description of the proposed Plan, including likely project components and bike path alignments that would proceed and potential future Plan activities, such as additional pocket parks along the bike paths or opportunities to construct additional stormwater treatment features.
- **Section 3: Environmental Setting, Impacts, and Mitigation Measures.** This section describes the environmental setting and identifies potential impacts of the proposed Project for each of the following environmental resource areas: Aesthetics; Agriculture and Forestry; Air Quality; Biological Resources; Cultural Resources; Energy; Geology and Soils; Greenhouse Gas Emissions; Hazards and Hazardous Waste; Hydrology and Water Quality; Mineral Resources; Land Use and Planning; Noise; Population and Housing; Public Services; Recreation; Transportation; Tribal Cultural Resources; Utilities and Service Systems; and Wildfire. Measures to mitigate the impacts of the proposed Project are presented for each resource area.
- **Section 4: Cumulative Impacts.** This section analyzes the potential for the proposed Plan to have significant cumulative effects when combined with other past, present, and reasonably foreseeable future projects in each resource area's cumulative geographic scope.
- **Section 5: Other CEQA Considerations.** This section identifies areas of the PEIR where significant environmental effects cannot be avoided, if any. It also includes an analysis of growth inducement impacts that could occur due to the proposed Plan.
- **Section 6: Alternatives.** This section presents an overview of the alternatives development process and describes the alternatives to the proposed Plan that were considered.
- **Section 7: Report Preparers.** This section identifies authors involved in preparing the PEIR, including persons and organizations consulted.
- **Section 8: References.** This section provides a complete list of all references used to prepare the PEIR.
- **Appendices.**

1.4 Agency Actions Anticipated in the PEIR

Because this is a PEIR, and project-level approvals are not anticipated at this point, no other permits or approvals (and hence, no responsible agency actions) are anticipated for the PEIR. After the final PEIR is certified, more detailed project-level review can proceed along the Plan Area by the County or other jurisdictions. The PEIR will serve as a first-tier analysis for later project-level and site-specific decisions by these agencies. Individual entities with jurisdiction along the SGV Greenway Network—including the District, U.S. Army Corps of Engineers (USACE), and the cities within the Plan Area—will continue to have decision-making authority associated with any Plan implementation activities affecting their respective jurisdictions.

1.4.1 Lead Agency Actions

The County of Los Angeles, through Public Works, will serve as the lead agency under CEQA for the PEIR and will be responsible—through its governing board, the LA County Board of Supervisors—for approving the Plan. The Plan will guide the County in decision-making for subsequent projects and facilities owned, operated, funded, permitted, or maintained by the County. As part of the decision-making process, the County will take the following specific actions:

- Certify the Final PEIR
- Adopt Findings of Fact and Statement of Overriding Considerations
- Adopt an MMRP
- Adopt the Plan.

The County will establish an implementation team responsible for ongoing coordination after the adoption of the Plan.

SECTION 2 Project Description

2.1 Introduction

This chapter describes the proposed Plan. It includes a description of the Plan location and an overview of the existing environmental setting where the Plan would be implemented. It presents the elements of the proposed Plan, along with a summary of the *Design Guidelines and Standards*.

2.2 Project Location and Setting

The SGV includes the approximately 200 square mile valley that lies east of the City of Los Angeles, within Los Angeles County. The SGV is bounded by the San Gabriel Mountains to the north, the San Rafael Mountains to the west, Puente Hills to the south, and the Chino Hills and San Jose Hills to the east. Pasadena is the largest city of the 33 incorporated cities located in the SGV. In addition to incorporated cities, there are 14 unincorporated county neighborhoods within SGV.

The primary watershed in the SGV is the San Gabriel River watershed. The San Gabriel River receives drainage from 689 square miles of eastern Los Angeles County; its headwaters originate in the San Gabriel Mountains. The watershed consists of extensive areas of undisturbed riparian and woodland habitats in its upper reaches. Much of the watershed of the West Fork and East Fork of the San Gabriel River is set aside as a wilderness area; other areas in the upper watershed are subject to heavy recreational use. The upper watershed also contains a series of flood control dams. Further downstream, towards the middle of the watershed, are large spreading grounds utilized for groundwater recharge. The lower part of the river flows through a concrete-lined channel in a heavily urbanized portion of the County before becoming a soft bottom channel once again near the ocean in the city of Long Beach.

2.2.1 Plan Area

For the purposes of CEQA and consistency with the Plan, the Project Area or Plan Area evaluated in this PEIR is defined as 140 linear miles of District ROW and adjacent parcels along the washes and creeks in the SGV in eastern Los Angeles County (Plan Area; Figure 2-1). As part of the Plan preparation, the County reviewed each waterbody for opportunities and constraints and developed conceptual designs for 10 example projects along the most optimal reaches.

The SGV tributary channels (tributaries) included in the Plan vary in size and character. Tributaries range from larger trapezoidal channels and box channels to natural bottom channels. The primary function of these tributaries is to efficiently convey flood waters and protect life and property. The ROW conditions were analyzed extensively during the development of the Plan.

Given the vast SGV and the many miles of tributaries within the Plan Area, the project team, along with Steering Committee and community feedback, created a prioritization process to identify areas of the tributaries that have the greatest potential to meet the County's goals for a greenway project. These are called "Tier 1" areas, and the County considers these particular reaches in the Plan Area to present the most beneficial future starting points for developing greenway projects and using County resources efficiently. Brief descriptions of each of these Tier 1 areas are provided below.

2.2.1.1 Alhambra Wash

Alhambra Wash is a 4.7-mile-long tributary that weaves through a complex urban and suburban fabric of diverse communities (Figure 2-2). Alhambra Wash runs through the cities of San Gabriel, Alhambra, Rosemead, and unincorporated areas of Los Angeles County. The tributary segment connects to many potential destinations, including commercial and retail areas along prominent throughfares, public parks, and schools along Las Tunas Drive and Valley Boulevard. Garvey Park, Whittier Narrows Recreation Area, and Vincent Lugo Park also serve as potential destinations for users of the greenway.

Few existing bikeways exist in the area, aside from the Rio Hondo bike path and a short segment along Junipero Serra. With few existing bikeway connections in the area, the Alhambra Wash has been identified through previous path planning efforts by SGVCOG and SCAG. Alhambra Wash presents physical challenges to implementation with constrained ROW, complex intersections, and complicated jurisdictional and land ownership interests. Environmentally, the area surrounding Alhambra Wash is lacking in tree canopy, has high concentrations of impervious surfaces, and has a highly vulnerable heat index.

Figure 2-2. Alhambra Wash

2.2.1.2 Arcadia Wash

Arcadia Wash is approximately five miles long and passes through many communities in the SGV, including Pasadena, Arcadia, and North El Monte (Figure 2-3). Arcadia Wash weaves through a mostly residential area with a few large destinations including the Santa Anita Racetrack, the Los Angeles County Arboretum and Botanic Garden, and the Santa Anita Golf Course. Arcadia Wash presents physical and legal opportunities (e.g., Arcadia Wash is entirely within the District's jurisdiction) for greenway development; however, a large section of Arcadia Wash is underground north of Huntington Boulevard. Greenways along Arcadia Wash would potentially have to cross some large roads, including five-lane arterials (e.g., West Duarte Road and Las Tunas Drive). Arcadia Wash has a healthy tree canopy and an average heat vulnerability throughout much of the adjacent area.

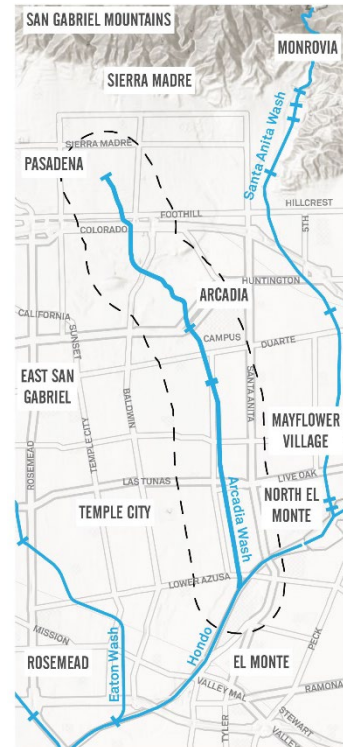

Figure 2-3. Arcadia Wash

2.2.1.3 Big Dalton Wash

At approximately 16.6 miles in length, Big Dalton Wash is one of the longest tributaries in the Project Area (Figure 2-4). Big Dalton Wash stretches from the San Gabriel River to the Big Dalton Wilderness Park in the Angeles National Forest. Big Dalton Wash passes through El Monte, Baldwin Park, and Glendora. The area is mostly residential with few commercial, retail, or industrial land uses. Community connections near the tributary include several nearby schools, on-street bike routes near Glendora as well as parts of Covina and toward the San Gabriel River, and nearby rail stations. Situated between Little Dalton Wash and San Dimas Wash, the Big Dalton Wash greenway could serve as future connections to adjacent tributaries.

Greenway project opportunities could help address environmental challenges such as limited tree canopy and vulnerability to heat island effects, which are prevalent in the area. With over 13 feet of available ROW width along most of the tributary and few identified impediments, Big Dalton Wash has promising potential for greenway projects.

Figure 2-4. Big Dalton Wash

Additionally, several vacant parcels adjacent to the tributary are government-owned and identified as good potential opportunities for future greenway connections with adjacent parks or open spaces. The underlying parcels of Big Dalton Wash are mostly owned by the District.

2.2.1.4 Eaton Wash

Eaton Wash is an 8.1-mile-long tributary, flowing north to south, from Pasadena, through Temple City and Rosemead to the Rio Hondo (Figure 2-5). Connection opportunities are prominent in the tributary, including a potential greenway network connection point with an existing Class IV bikeway along Rosemead Boulevard, schools, retail, office, and industrial areas.

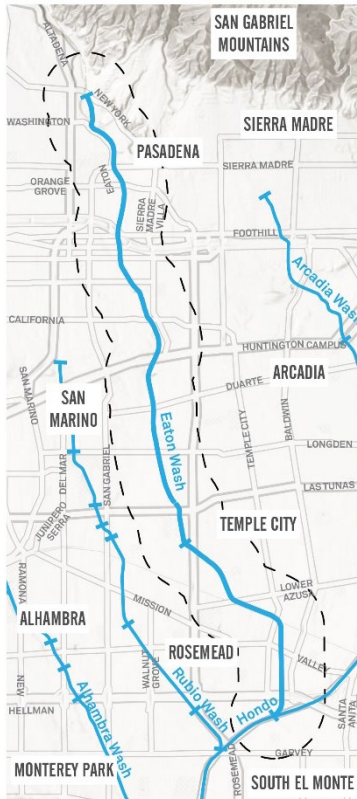

Figure 2-5. Eaton Wash

Southern portions of Eaton Wash lack access to transit options and tree canopy. The tributary has a promising amount of ROW available along its channels in most areas and generally has over ten feet of ROW available outside of the flood control channel, providing at least the minimum requirement for a greenway. Physical constraints and attributes include underground segments and intersections of the tributary that may present alignment challenges. Other complexities include several potentially challenging crossings of major arterials located along the tributary. Existing bikeways are concentrated to the north in Pasadena, with fewer connections existing in the southern portions of the tributary. There is a lack of tree canopy in the area south of Las Tunas Boulevard.

2.2.1.5 Little Dalton Wash

Little Dalton Wash is a 6.7-mile-long tributary connecting the Angeles National Forest to the San Gabriel River via Big Dalton Wash. It passes through Glendora, Citrus, and Covina (Figure 2-6). With available ROW along most of the tributary, Little Dalton Wash presents many opportunities. Additionally, the area is primarily residential with few commercial, retail, or industrial centers. There are several schools in the area, including Citrus College, Azusa Pacific University, Paramount Elementary, and Merwin Elementary School. Toward the center of the tributary, the Azusa Downtown Gold Line Station provides potential connection to high quality transit.

Figure 2-6. Little Dalton Wash

While few previously planned projects along the tributary have been identified, Little Dalton was identified in the SGVCOG's Greenway Study as a project for greenway opportunities. The area has limited tree canopy and presents limited multi-benefit opportunities for consideration with greenway project implementation.

2.2.1.6 San Dimas Wash/Puddingstone/Live Oak

The areas of San Dimas Wash, Puddingstone Channel, and Live Oak Wash are considered a single unit for this Project (Figure 2-7). These tributaries flow through Citrus, Vincent, Covina, San Dimas, Claremont, La Verne, and Pomona. The area is primarily residential with several schools and

Figure 2-7. San Dimas Wash, Puddingstone, and Live Oak Wash

connections to major parks and recreational areas, including Bonelli Regional Park, South Hills Recreational Area, and Horsethief Canyon Park.

The area ranks average in terms of tree canopy, heat vulnerability, and permeability. With sufficient ROW available in many areas, greenway opportunities along the tributaries are plentiful. The underlying parcels of these tributaries are mostly owned by the District; however, some of the easements only allow for flood control operation and would need to be modified for a greenway to be operated.

The area was identified as a project in the SGVCOG's Greenways Study. There are several projects in development along the tributaries, including a three-phase project along San Dimas Wash in Glendora.

2.2.1.7 Puente Creek

Puente Creek is a four-mile-long tributary to the north of San Jose Creek, coursing through portions of West Covina, Valinda, West Puente Valley, La Puente, and Hacienda Heights (Figure 2-8). Community connections identified in the vicinity include pockets of commercial or retail sites and several schools, including Wing Lane Elementary School, Nelson Elementary School, Del Valle Elementary School, Grandview College Preparatory Academy, Sparks Elementary School, Sierra Vista Middle School, and Workman High School.

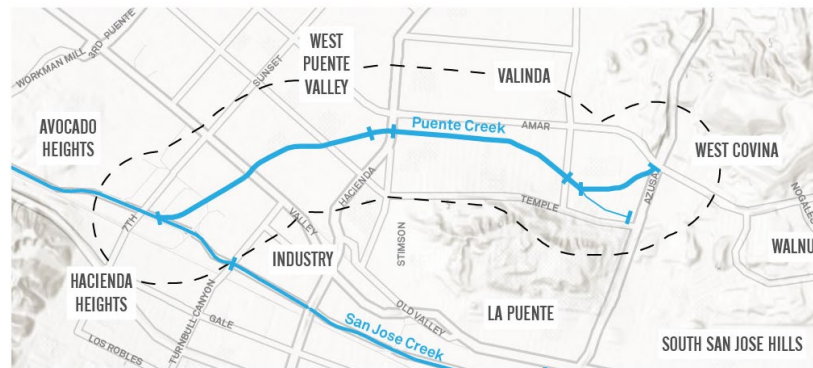

Figure 2-8. Puente Creek

Major existing on-street bikeways near Puente Creek could serve as important circulation connections, including Temple Avenue, Valinda Avenue, and along San Jose Creek. Additionally, a 1.9-mile, on-street early implementation bikeway project, located on the north side of the Puente Creek greenway between Valinda Avenue and Hacienda Boulevard, is currently being designed. The Puente Creek Bikeway/Greenway early implementation project was identified in the 2012 Los Angeles County Bicycle

Master Plan and will provide several benefits including a new rest area with benches. Combined with additional access and greenway implementation projects, this area of Puente Creek could provide combined benefits and improved community access.

Puente Creek has been identified and recommended through previous planning studies for a community bikeway. Puente Creek lacks park space, and tree canopy is also lacking across the area. Multi-benefit greenway projects would provide valuable enhancement for the area by offering combined use of available ROW for bikeway access as well as community enhancements via parks, open space, or other vegetated/shaded areas.

2.2.1.8 Rubio Wash

Rubio Wash is an approximately five-mile-long tributary that crosses through urban and suburban communities including San Gabriel, Rosemead, and South El Monte (Figure 2-9). The tributary has a highly constrained ROW along much of the channel, with homes and structures encroaching the ROW on either side of the channel, abutting the channel in some areas. With few roads providing access to the tributary and less than eight feet of available space for greenway or other uses along much of the ROW, physical constraints may require complex design to improve opportunities for project implementation.

A greenway has been proposed along Rubio Wash through previous planning efforts, including the 2012 SCAG's Regional Transportation Plan, the 2016 Metro Active Transportation Strategic Plan, the 2012 Los Angeles County Bicycle Plan, and the SGVCOG's Greenway Study. The tributary is rich with potential community connections, including two nearby schools, Emma W. Shuey Elementary School and Mildred B. Janson Elementary School, and retail or commercial corridors near the greenway, including areas along Valley Boulevard and Las Tunas Boulevard, and the Southern Pacific Railway.

With few existing bikeways aside from the Rio Hondo Bike Path and few parks, gateways, or open space adjacent to Rubio Wash, the area has a high need and great potential to benefit from greenway projects. Additionally, the communities in the northern portion of the tributary lack access to reliable transit. The southern part of the tributary could benefit from greenway projects to address lacking tree canopy, high concentrations of impervious surfaces, and a highly vulnerable heat index.

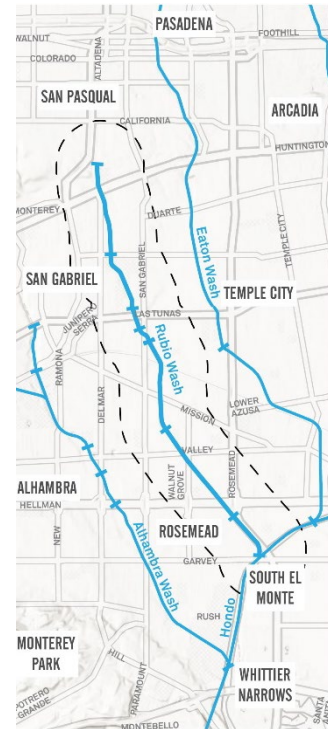

Figure 2-9. Rubio Wash

2.2.1.9 San Jose Creek

At 24 miles, San Jose Creek is one of the largest tributaries in the Plan Area and, with only minor segments of constrained ROW, there are many opportunities for greenway development along the channels of the creek (Figure 2-10). San Jose Creek passes through San Dimas, Diamond Bar, Pomona, Walnut, Valinda, Hacienda Heights, and Industry. The area does not have many retail or commercial corridors, but there are some light industrial job centers and important connections to transit. Many of the San Jose Creek communities are heavily burdened environmentally and socioeconomically, and many are ranked as “park poor” and lack tree canopy.

Figure 2-10. San Jose Creek

A short bikeway exists on the western end of San Jose Creek. San Jose Creek has been identified for greenway development in the 2012 LA County Bicycle Master Plan as an early implementation project. A three-mile greenway project within Pomona is currently in development. The underlying parcels of this tributary are mostly owned by the District, enabling potential greenway implementation. Some of these easement agreements only allow for flood control operation and would need to be modified for a greenway to be opened. There is a portion of San Jose Creek, towards the San Gabriel River confluence, that is operated by the USACE.

2.2.1.10 Santa Anita Wash

Santa Anita Wash stretches 6.3 miles from the San Gabriel Mountains near Monrovia through the city of Arcadia down to El Monte and the Rio Hondo (Figure 2-11). The area is mainly residential with little access to high quality transit. The Santa Anita Wash community has low to average rates of environmental and socioeconomic burden. People living in this area have access to regional parks and wilderness areas (e.g., Arcadia Wilderness Park and the Angeles Nation Forest to the north and the Los Angeles County Arboretum and Botanic Garden toward the middle of the tributary).

Santa Anita Wash was identified as a project by the SGVCOG’s Greenways Study. There is a short greenway planned in the Unincorporated area between Live Oak Ave and Longden Ave, identified in both the 2012 LA County Bicycle Master Plan and the SCAG Regional Transportation Plan. Additionally, the Monrovia’s City Profile within the Department of Parks and Recreation Park Needs Assessment identified “Multipurpose Trail in Flood Control Wash” as a top priority for the community.

The underlying parcels of this tributary are mostly owned by the District, enabling potential greenway implementation. Some of these easement agreements only allow for flood

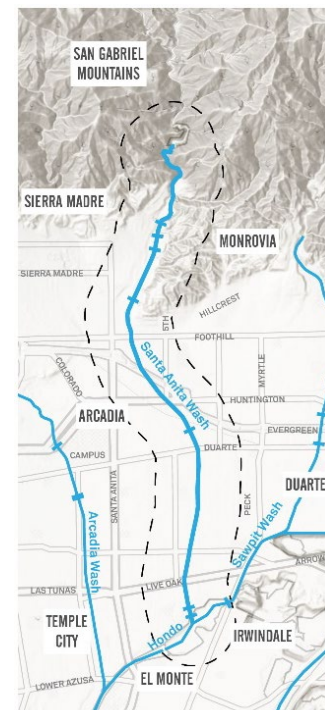

Figure 2-11. Santa Anita Wash

control operation and would need to be modified for a greenway to be opened. Additionally, these channels are operated and maintained entirely by the District. This area has a healthy tree canopy throughout much of the area, likely contributing to low heat vulnerability. Much of the adjacent area has good permeability, especially to the north.

2.2.1.11 Sawpit Wash

Sawpit Wash stretches 4.9 miles from the base of the San Gabriel Mountains in Monrovia to the Rio Hondo confluence in North El Monte (Figure 2-12). The area is mostly residential with a handful of schools and industrial centers. The Metro Gold Line crosses Sawpit Wash, and the wash is adjacent to two stations: Monrovia and Duarte. Sawpit Wash was identified as a project in the SGVCOG's Greenways Study. Additionally, as part of the Los Angeles County Department of Parks and Recreation's Parks Need Assessment, developing a greenway along Sawpit Wash was an identified priority for the community. Vacant, government-owned parcels along the tributary could provide opportunities for adjacent pocket parks and amenities in this area as well.

A few existing on-street bikeways are present in the area, however, there are generally few bike connections. This area has a healthy tree canopy and a low heat vulnerability index. Generally, the communities to the southeast near Duarte and Irwindale are most affected by environmental factors, showing greater heat vulnerability, less tree canopy, and less permeable surfaces.

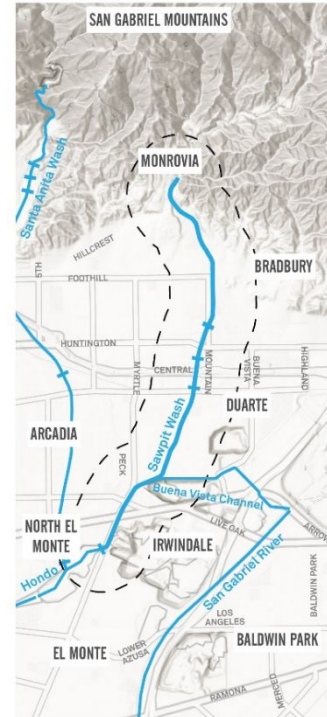

Figure 2-12. Sawpit Wash

2.2.1.12 Thompson Creek

Figure 2-13. Thompson Creek

Thompson Creek is a 5.9-mile-long tributary that connects the canyons above Claremont with San Jose Creek (Figure 2-13). The creek passes through Pomona and Claremont. Thompson Creek presents excellent opportunities for greenway development with greater than 20 feet of ROW width available along most of its banks. Community connections in the area include a handful of schools and colleges, a Metrolink commuter rail line, and several

on-street bikeways. Generally, this area is served by on-street bikeway facilities with major connections on Baseline Road, as well as a bikeway along a portion of the Creek itself.

Areas to the south of Thompson Creek are the most burdened environmentally and socioeconomically. Several parks and two major open spaces located in the area serve as places for community gatherings and recreation activities. With these existing amenities, the area generally shows average need for

parks, except for the southern portion of the tributary near Pomona; this area has limited parks and tree canopy.

With greater than 20 feet of ROW width available along most of its channels, Thompson Creek presents excellent opportunities for greenway development. Much of the Thompson Creek tributary is lacking tree canopy. Vacant, government-owned parcels along the tributary could provide opportunities for greenway adjacent projects and amenities, such as pocket parks and greenspace or shade structures.

2.2.1.13 Walnut Creek

Walnut Creek stretches approximately 7.7 miles from the confluence with Big Dalton Wash to the hills above Pomona and the Puddingstone Reservoir (Figure 2-14). The creek flows through the neighborhoods of La Verne, San Dimas, Charter Oak, Covina, West Covina, Valinda, Vincent, and West Puente Valley. Walnut Creek is a naturalized channel east of Covina Hill Road. There are several potential community connections along the channel, including California State Polytechnic University, Pomona (Cal Poly Pomona), and several schools adjacent to Walnut Creek. Pockets of commercial, retail, and industrial facilities are located throughout the area.

Figure 2-14. Walnut Creek

Existing trails contribute to circulation opportunities. Walnut Creek has potential to connect with several on-street bikeways. Existing bikeways are concentrated in the eastern areas near La Verne, with a few other on-street facilities near West Covina.

With greater than 20 feet of ROW width available along most of its channels, Walnut Creek presents excellent opportunity and sufficient area for greenway development along most of this tributary. Tree canopy and other environmental factors are healthier to the south as compared to the north of the tributary where limited tree canopy, higher heat vulnerability, and low permeability/pervious surfaces exist.

Walnut Creek was identified as a project in the SGVCOG's Greenways Study and opportunities are currently underway including a short multi-use trail being developed near the San Gabriel River, connecting to Walnut Creek.

2.3 San Gabriel Valley Greenway Network Strategic Implementation Plan

The Plan envisions the development of an active transportation and recreational corridor for bicyclists, pedestrians, and equestrians utilizing the open spaces adjacent to the District's stormwater channels; beautification of the District ROW; and enhancement of stormwater management and natural habitats along river channels, stormwater channels, washes, and creeks in the SGV.

The Plan aims to provide guidance and resources to future project proponents for implementation of subsequent projects in the Plan Area. The Plan identifies and describes a series of opportunities for

development within the Plan Area where multi-use trails and paths, bicycle paths, pedestrian paths, and equestrian paths could be installed along tributaries to the San Gabriel River and Rio Hondo. During the Plan's development, a prioritization framework was established to determine where the greatest impact could be made through five key lenses: circulation, community, synergy, environment, and equity. This framework can be used to identify future opportunities, demonstrate benefits, and secure funding.

Leading up to development of the Plan, the suitability of sites along the tributaries for conversion to bike or multi-use pathways was evaluated, and individual potential sites were ranked in consideration of their benefits (e.g., ease of tie-in to existing paths or early implementation projects [EIPs], neighborhood access) and constraints (e.g., narrow ROW, hazardous crossings). Some of the District's ROW in the SGV are paved or partially paved but the condition of the surfaces varies greatly, and the ROW widths vary from less than 8 feet wide to greater than 24 feet wide in the Plan Area.

The Plan consists of infrastructure and greenway designs that illustrate the range of possible strategies that the proponents of subsequent projects, including the County, can use to develop the Greenway Network. These project components can be combined in various ways to create multi-benefit projects throughout the Plan Area. The decision to carry out a future project would be driven by the local jurisdiction's needs, funding, and policy decisions.

The main project component is a greenway path, which may consist of multi-use trails and paths, bike paths and bikeways, pedestrian paths, and equestrian trails. Following the main project component (greenway path), are subcomponents, which include the following:

- Greenway Amenities
- Pocket Parks and Greenspaces
- Safe Crossings
- Stormwater Management

Future projects implemented from the Plan are assumed to consist of the main project component (greenway path) with the greenway amenities subcomponent and are analyzed in this PEIR as such (greenway paths + greenway amenities). Pocket parks and greenspaces, safe crossings, and stormwater management subcomponents are described individually; however, future projects can be implemented in any combination of subcomponents as subsequent projects and would be driven by the local jurisdiction's needs, funding, and policy decisions.

Within each class of subcomponents are a recommended collection of beneficial project elements that can include, but are not limited to, fencing, benches, trash cans, or signage for greenway amenities; playgrounds or sports fields for pocket parks and greenspaces; and curb extensions and raised medians or signage for safety. Beneficial project elements are intended to contribute to the habitability of the Greenway Network; promote safety, accessibility, and legibility; and build a cohesive identity within the Greenway Network. Table 2.2-1 provides information about the main project component (greenway paths), subcomponents, and beneficial project elements.

The Plan also includes *Design Guidelines and Standards* (summarized below in Section 2.3.2) that have been developed as a framework to support the development of specific design and technical solutions for subsequent projects to be implemented under the Plan while presenting a unified, cohesive identity along the open space corridor and promoting best practices and resiliency. The County intends to adopt these *Design Guidelines and Standards* along with the Plan.

Table 2.2-1. Summary of San Gabriel Valley Greenway Project Component and Subcomponents, and Beneficial Project Elements.

	Greenway Paths and Amenities	Pocket Parks and Greenspaces	Safe Crossings	Stormwater Management
Beneficial Project Elements	<u>Greenway paths</u> Multi-use Trails and Paths Bike paths and Bikeways Pedestrian Paths Equestrian Trails <u>Amenities</u> Barriers: Fencing, Guardrails, Rails, Privacy Screen, Gates Lighting Seating, Benches Bike Parking, Racks Equestrian Amenities Landscaping Gateways Shade Structures Water Stations Restrooms Kiosks Trash Cans Emergency Call Boxes Signage: Bikeways, Wayfinding, Informational, Confirmation, Interpretive, Directional, Pavement Markings, Striping, Markers Community: Public Art, Message Boards, Gardens Access for Maintenance and Emergency Vehicles	Pocket Parks Parks Playgrounds Sports Fields Open Fields	ADA-Compliant Ramps Signage Signals Bridges: Pedestrian, Equestrian, Bike, Multi-use Within Public Right-of-Ways (ROWs): Class II, II, IV Bike Lanes and Routes, Connections between Greenways Curb Extensions and Raised Median Islands Undercrossings, Overcrossings of Streets, Freeways, and Railroads Decks and Cantilevers Greenway Segments Over Channels	Bioretention Permeable Pavement Subsurface Infiltration Constructed Wetlands Extended Detention Basin Proprietary Devices
Maximum Extent	<u>Greenway paths</u> maximum width ranges 13 to 24 feet, up to 5 miles in length <u>Greenway amenities</u> are variable, many prefabricated	25 acres is largest potential project size	Variable	Maximum bioretention = 8,500 square feet (0.2 acres) General "other BMP" = 12,750 square feet (0.29 acres)
Anticipated Number of Daily Visitors	1,000 visitors/day	1 acre park - 1,500 visitors/day* 25-acre park - 4,292 visitors/day**	1,500 visitors/day*	0 (these facilities are not designations and do not support visitors)

Notes: * assumes 500 visitors per day to park/safe crossing would also use trail with an additional 1,000 visitors per day on the trail that do not visit the park, for total visitors traveling on greenway path of 1,500 per day

** assumes 3,292 visitors per day to park would also use trail with an additional 1,000 visitors per day on the trail that do not visit the park for total visitors on greenway path of 4,292 per day

2.3.1 Components of the Plan and CEQA Organization

To inform decision-making in a comprehensive manner, this PEIR includes the analysis of the potential environmental impacts from implementation of the Plan for the project components (i.e. greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management) and 10 conceptual design projects at a program level. Future actions resulting from the Plan would not involve any in-channel disturbance; as described in Section 2.2.1, the Plan Area considered in this PEIR is the District ROW along the tributary segments and adjacent parcels. The maximum extent for each subcomponent indicated in Table 2.2-1 is used to evaluate the potential effects of each element in this PEIR, in terms of short-term impacts during construction activities and potential effects of operations following construction. These extents are considered the largest potential greenway segments and parks that could be constructed at any one time based on the County's review in the Plan of the potential opportunities and constraints within the Plan Area. Any projects proposed beyond this area and extent are outside the scope of this PEIR and will require further CEQA review.

Greenway amenities are small structures that serve to enhance the recreator experience and are considered additions to a greenway path or other project. Since greenway amenities are not standalone projects, future projects implemented from the Plan are assumed to consist of the main project component (greenway path) with a greenway amenities subcomponent and are analyzed in this PEIR as such (greenway paths + greenway amenities). The other subcomponents (pocket parks and greenspaces, safe crossings, and stormwater management) are described individually below, but construction and operation impacts consider both the subcomponent and greenway path and greenway amenities (Tables 2.3-1 through 2.3-5, and Section 3). Future projects designed along the San Gabriel River tributaries and washes present opportunities to combine greenways with stormwater capture and reuse structures, small parks, attractive landscaping, and other amenities to better serve the public; therefore, all potential future projects covered by this CEQA analysis would include a greenway path and greenway amenities in the District ROW, and can be implemented with or without any combination of subcomponents as subsequent projects pursuant to a community's needs.

2.3.1.1 Greenway Paths + Greenway Amenities

2.3.1.1.1 Greenway Paths

Greenway paths along the SGV Greenway Network may support use by pedestrian, bicycle, or equestrian users as well as emergency and maintenance vehicles and may consist of multi-use trails and paths along the SGV tributaries. For the purposes of the SGV Greenway Network, a "path" generally refers to a paved facility, which may be for pedestrians or bicyclists; "greenway" may refer to a path, trail, or any combination of paths and trails. These ROW are often appropriately wide to accommodate a pathway and pass through neighborhoods with existing or potential access points to other path segments, parks, or other community benefit features (e.g., schools, fairgrounds). A minimum ROW width of 13 feet is needed to implement a greenway path project, with 24 feet being the maximum available ROW width analyzed in the Plan. The minimum width of 13 feet accommodates the California Department of Transportation (Caltrans) Highway Design Manual minimum for emergency and maintenance vehicles (12 feet) as well as additional necessary width (1 foot) to accommodate other auxiliary features, such as channel wall fencing or sign posts outside of the shoulder area. The CEQA

analysis includes greenway segments up to 5 miles long and 24 feet wide. Examples of greenways are provided in Figures 2-15 through 2-18.

Caltrans classifies facilities with exclusive right of way for bicyclists and pedestrians, away from roadways and with cross flows by motor traffic minimized, as Class I bikeways. Class I bike facilities support both recreational and commuting opportunities and are commonly located along rivers, shorelines, canals, utility ROW, railroad ROW, within school campuses, or within and between parks. Class I bikeway is the default bikeway design in District and USACE channel ROW. Whenever possible, a Class I bikeway or multi-use greenway is the preferred design for segments of the SGV Greenway Network. Pedestrian and equestrian facilities may be combined with a Class I bikeway (and the associated requirements) as part of a multi-use greenway.

Class II and IV bikeways provide some type of division between the bicycle lane and motor vehicle lanes, are preferred for safety, and should be used if space is available, or if space can be provided with street improvements. Class II bikeways are generally referred to as a buffered bikeway and include a striped lane for one-way bike travel on a street or roadway. Class IV bikeways, also referred to as separated bikeways or cycle tracks, include additional protection through a physical barrier between bicycle and vehicle traffic. Class IV bikeways encourage greater use and provide access to a larger number of users. Class III bike routes provide for shared use of a street or roadway among bicyclists and motor vehicles, generally with no striping or physical barrier for separation. Class III bike routes may be appropriate for local streets with limited traffic and low speed limits. Although not preferred, Class III bike routes may be used to provide continuity where a Class II or Class IV bikeway is not feasible, but for most streets and roadways, a safer Class II or IV bikeway should be considered and implemented if feasible. All potential bikeway design types are described in detail in the *Design Guidelines and Standards*.

To create continuity between dedicated on-channel bikeways and multi-used greenways, connecting bicycle routes may need to be located along streets and/or roadways. Off-channel facilities may be designed as Class II, III, or IV bikeways depending on the road type, the posted speed limit, the surrounding area, and the preferred level of separation between the bicycle and vehicle ROW. Alignment characteristics will also be incorporated into a greenway design in accordance with the *Design Guidelines and Standards*, and include consideration of stop distances, sight distances, turning radius, and traffic calming elements such as rumble strips or paver sections. Different surface types will be appropriate for different greenway uses. Recommended surface materials can include concrete, asphalt, permeable concrete, or permeable asphalt, stone fines and decomposed granite, or compacted earth.

The greenway path is the key component of all future projects in transforming the SGV Greenway Network. All other project subcomponents and beneficial project elements would be optional, discretionary, and could be proposed in many configurations or combinations in addition to the greenway path by project proponents.

Figure 2-15. An example of a Flood District ROW suitable for conversion to a bike path or multi-use path. This site (SD26) is situated between the San Dimas Wash and an existing park, Hollenbeck Park, where opportunities for offsite stormwater management have been identified.

Figure 2-16. An example of a multi-use path constructed along a creek.

Figure 2-17. A Class I bike path along the San Gabriel River.

Figure 2-18. Example of an inflexible barrier separating bikeway from traffic (Class IV bikeway).

2.3.1.1.2 Greenway Amenities

Greenway amenities (amenities) are essential in adding character and function to the greenways and are intended to enhance the recreator experience along the greenway. These features are not standalone projects, but would be optional additions to a greenway path, or incorporated in a pocket park and greenspace or safe crossings project. Amenities may also provide community character opportunities to integrating public art or other visual expressions to reflect the community and enhance overall aesthetics. Amenities proposed in the Plan are as follows:

- Fencing, railings, guardrails, barriers
- Gates
- Privacy screens
- Lighting
- Seating, benches
- Shade structures
- Equestrian amenities
- Bike parking
- Signage
- Trash receptacles
- Public art
- Community gardens
- Emergency call boxes
- Restrooms
- Water stations
- Kiosks
- Community message boards

The addition of these amenities to new greenways would provide users respite from the sun and heat, as well as resting places to gather or picnic and overall enhance the attractiveness, usefulness, and accessibility of the greenway path. Fencing, railings, guardrails, or barriers would help ensure public safety and restrict access to waterways and maintenance areas and could also enhance the greenway to feel inviting to users. Gates also play a role in public safety and in the programming/operation of greenways to restrict access (during flood events or evening hours). Examples of amenities are shown in Figures 2-19 through 2-22.

Figure 2-19. Example shade structure and existing bike path along Big Dalton Wash near site BD21, Hilda Solis Park.

Figure 2-20. Example of benches and rest area along an existing greenway path.

Figure 2-21. Bike parking along greenways is an amenity that allows recreators to rest and secure their bicycles while they visit businesses or other attractions along the greenway.

Figure 2-22. Interpretive signs and displays are used to educate users and expand the SGV Greenway Network into something more than a commuter corridor.

2.3.1.1.3 Anticipated Construction

Construction of the greenway paths would occur within the District ROW and would typically involve ground disturbance (including excavation and grading), construction equipment operation, and temporary facilities such as assembly areas, parking areas, and staging and laydown areas for material stockpiling. Heavy equipment used for construction could include excavators, graders, rollers, concrete trucks, pavers, and water trucks. Although the District's ROW are typically maintained for access via foot and, in some cases, light duty vehicles, some vegetation clearing may be required for site preparation. Amenities are small in size and would generally consist of installation of prefabricated products. With the exception of a restroom amenity, this PEIR anticipates no construction of amenities is required beyond possible mounting of structures to existing pavement or minor site preparation and restoration (e.g., leveling surfaces, replanting vegetation after small disturbance); therefore, the construction impacts of amenities are considered with the construction impacts of greenway paths.

For the purposes of this PEIR, a typical restroom, when included as an amenity, is assumed to consist of four stalls and two handwashing stations with a footprint of 20 feet by 40 feet and would be constructed on a concrete slab foundation. Installation of additional wastewater lines, plumbing and electricity associated with restrooms is assumed to require trenching to a tie-in less than 1,000 feet from the project site and would be conducted during the construction phase following grading activities.

Construction would involve up to ten construction workers per day and may include heavy construction equipment such as excavators, dump trucks, backhoes, utility trucks, paving machines, loaders, rollers, and pile drivers. Construction would occur Monday through Friday with 8-hour days. For the purposes of this analysis, Table 2.3-1 provides an estimate of project duration and construction equipment required for each phase assuming a conservative scenario that involves the construction of five miles of paved greenway path in addition to any or all of the greenway amenities beneficial project elements. Due to the program nature of the proposed Project, staging areas cannot be determined at this time. However, it can be reasonably assumed that staging areas would occur on District ROW.

Table 2.3-1. Equipment and work duration for the phases of construction for typical greenway paths* and greenway amenities.

Phase	Number of Work Days	Equipment Type	Number	Horsepower	Hours/Day
Demolition	10	Excavator	1	158	8
		Dump Truck	2	402	3
		Backhoe	2	97	8
		Concrete Saw	1	81	8
		Hoe Ram	1	--	8
		Jack Hammer	1	2.5	8
Site Preparation	20	Skip Loader	1	69	8
		Backhoe	1	97	8
		Wheel Loader	1	203	7
Grading	20	Motor Grader	1	187	7

Phase	Number of Work Days	Equipment Type	Number	Horsepower	Hours/Day
Construction	35	Skip Loader	1	69	8
		Vibratory Roller	1	80	8
		Backhoe	1	97	7
		Excavator	1	158	8
		Forklift	1	89	8
		Hydraulic Post Pile Driver	1	50	8
		Trencher	1	40	8
		Utility Truck	1	350	8
		Generator Set	1	84	8
Paving	10	Paving Machine	1	130	8
		Oil Truck	1	402	8
		Vibratory Roller	1	80	8
		Skid Steer	1	65	8

Notes: * Greenway path maximum width of 24 feet, maximum length of 5 miles.

2.3.1.1.4 Anticipated Operations

Operations would involve recreational uses from visitors along the greenway paths, and the increased number of users/visitors would also increase pedestrian, bike, and multi-use traffic. Operations would include routine inspection and maintenance of the greenway paths to remove trash/debris and landscaping. Hazardous materials used for maintenance would be minimal and may consist of commonly used hazardous materials such as solvents for cleaning, paints, fuels for equipment, and approved herbicides or pesticides. Maintenance of the greenway paths and amenities would be temporary in nature and may consist of maintenance trucks/vehicles and powered equipment such as lawnmowers, edgers, and leaf blowers and would not require equipment that would block roadways or emergency access. There would be no permanent road closures or obstructions associated with operations.

The County assumes that up to 1,000 visitors would visit the greenway paths and amenities daily. These visitors are assumed to be dispersed equally throughout the five-mile-long greenway path. In addition, these visits are assumed to be dispersed equally throughout the day (7:00 a.m. through 10:00 p.m.), resulting in approximately 67 visitors per hour along a typical five-mile-long greenway path. This equates to roughly one visitor per minute in any given location. Regular landscape and maintenance activities are assumed to be conducted by two workers once per week with a maximum duration of four hours at any given site. In addition, periodic repair and maintenance of structures and facilities may include use of additional equipment such as cranes or excavators.

2.3.1.2 Pocket Parks and Greenspaces

Many opportunities for expansion of existing park features or creation of new parks and greenspaces are possible on parcels located along SGV tributaries based on initial feasibility assessment efforts.

During early assessments, 64 potential parks or greenspaces were considered feasible. Pocket parks and greenspaces could include playgrounds, sports fields, or open fields. In many cases, the District ROW provide access to areas where public use could be optimized by the addition of greenspaces to complement the addition of bike paths and multi-use paths in neighborhoods where these facilities are greatly needed. Pocket parks and greenspaces may be located immediately adjacent to a planned greenway path and/or within District ROW. A typical pocket park would be approximately one acre in size and located immediately adjacent to a planned greenway path. The maximum greenspace that could be feasibly developed in the Plan Area would be 25 acres on a site near the fairgrounds that was identified during early constraints analysis. Therefore, the CEQA analysis for the Project addresses parks and greenspaces between 1 and 25 acres. Examples of greenway pocket parks are shown in Figures 2-23 through 2-26. An example of a District ROW with space that could be used to create a pocket park along in the Project area is shown in Figure 2-27.

Figure 2-23. Example greenspace of Walnut Creek Nature Park along a multi-use trail.

Figure 2-24. Walnut Creek Nature Park, an example pocket park.

Figure 2-25. Example pocket park at Cudahy Gateway Park.

Figure 2-26. Closer view of pocket park at Cudahy Gateway Park.

Figure 2-27. Example of an opportunity to combine a greenway path with a small pocket park in the bump-out (left side of photo) adjacent to Walnut Creek (Site WC47).

2.3.1.2.1 Anticipated Construction

New parks and greenspaces may require extensive excavation and grading of site soils, off-hauling of soils and related materials, utility relocation, infrastructure construction, and related activities. Depending on the nature and size of the development, construction activities may include use of heavy construction equipment such as excavators, dump trucks, backhoes, utility trucks, paving machines, loaders, rollers, and pile drivers. Construction would occur Monday through Friday with 8-hour days. For the purposes of this analysis, construction activities associated with two scenarios are considered: 1) construction of five miles of greenway path in addition to a 1-acre pocket park, 2) construction of five miles of greenway path in addition to a 25-acre park with associated parking lot. As noted, it is assumed that a five-mile-long greenway path and greenway amenities would be constructed under both scenarios. Table 2.3-2 provides an estimate of project duration and construction equipment required for each phase associated with construction of a one-acre pocket park. Table 2.3-3 provides an estimate of project duration and construction equipment required for the development of a 25-acre park with a parking lot. Due to the program nature of the proposed Project, staging areas cannot be determined at this time. For the purposes of this PEIR, all staging areas are assumed to be located on District ROW.

Table 2.3-2. Equipment and work duration for the phases of construction for typical small pocket parks (1-acre park) and greenway path* and greenway amenities

Phase	Number of Work Days	Equipment Type	Number	Horsepower	Hours/Day
Demolition	10	Excavator	1	158	8
		Dump Truck	2	402	3
		Backhoe	2	97	8

		Utility Truck	1	350	8
		Generator Set	1	84	8
Landscaping	20	Wheel Loader	1	203	8
		Skip Loader	1	69	8
		Truck-Mounted Crane	1	231	7
Paving	15	Paving Machine	1	130	8
		Oil Truck	1	402	8
		Vibratory Roller	1	80	8
		Skid Steer	1	65	8

Notes: * Greenway path maximum width of 24 feet, maximum length of 5 miles.

2.3.1.2.2 Anticipated Operations

Greenway paths + pocket parks and greenspaces include additional beneficial project elements in addition to the greenway path, such as pocket parks, parks, playgrounds, sports fields, or open fields, which would increase recreational opportunities for visitors. A typical pocket park would be approximately 1-acre in size and the maximum greenspace that could be feasibly developed in the Plan

Area would be 25-acres (on a location near the fairgrounds). Greenway paths + pocket parks and greenspaces may be located immediately adjacent to a planned greenway path and/or within District ROW. Visitors to pocket parks and greenspaces would not be considered permanent occupants in any structures as none of the park components include human occupancy in their design. Similar to greenway paths + greenway amenities, operational activities would involve recreational uses from visitors and maintenance of the facilities, including routine inspection and maintenance to remove trash/debris and landscaping. Materials used during operations would be primarily for maintenance and may consist of commonly used hazardous materials such as solvents for cleaning, paints, fuels for equipment, and approved herbicides or pesticides. Maintenance of a pocket park and greenspaces project may consist of maintenance trucks/vehicles and would not require equipment that would roadways or emergency access.

For purposes of analysis in this PEIR, the County assumes 500 visitors per day would visit 1-acre pocket parks and greenspaces, in addition to the 1,000 visitors anticipated for greenway paths. This would be equivalent to roughly 33 visitors per hour in any one location. For 25-acre greenspaces, up to 3,292 visitors per day are estimated, equivalent to roughly 220 visitors per hour (7:00 a.m. through 10:00 p.m.), in addition to the 1,000 visitors per day anticipated for greenway paths. Regular landscape and maintenance activities would include use of powered equipment such as lawnmowers, edgers, and leaf blowers and are assumed to be conducted by two workers once per week, with a maximum duration of four hours at any given site. Infrequent maintenance activities such as intermittent repair or maintenance of structures and facilities may require use of additional equipment such as cranes or excavators.

2.3.1.3 Safe Crossings

Safe crossings will be needed at intersections, roads, bridges, and railroad tracks, and over channels. Safe crossing infrastructure includes signals and signage. This PEIR includes analysis of the construction of bridges/crossings up to a maximum of 400 feet long and 8 feet wide (the largest crossing opportunity identified during Plan development).

Channel crossings could be facilitated by utilizing existing roads and railroad tracks, which may require addition of safety signals, crosswalk signage, and other infrastructure meant to protect cyclists and pedestrians from road and rail traffic. Channel crossings could also be achieved with dedicated pedestrian bridges. Some pedestrian bridges are present already and could be converted to multi-use crossings by removing stairs and adding ramps.

Important considerations for roadway crossings include ensuring safe and appropriate distances from the nearest intersection or routing the crossing to an intersection with signals and/or highly visible crosswalks when possible. For railroad crossings, California Public Utilities Commission (CPUC) coordination would be required. Examples of existing crossings in the Plan Area as well as an example of a controlled intersection are shown in Figures 2-28 through 2-31.

Figure 2-28. Existing pedestrian bridge crossing over Big Dalton Wash

Figure 2-29. An inaccessible railroad crossing over Walnut Creek

Figure 2-30. Union Pacific Railroad Tracks Cross San Jose Creek in West Covina, CA

Figure 2-31. Example protected intersection in San Francisco, CA.

2.3.1.3.1 Anticipated Construction

Depending on the type and size of the crossing structure, construction activities may include use of heavy construction equipment such as excavators, dump trucks, backhoes, utility trucks, paving machines, loaders, bore/drill rigs, and cranes. For the purposes of this conservative analysis, the construction of a road overcrossing is considered as typical of a larger-scale safe crossing project component. Most footbridges up to spans of about 150 feet can be prefabricated as a complete length of the span and then installed. Longer overcrossings would be constructed in place. Table 2.3-4 provides an estimate of project duration and construction equipment required for each phase associated with construction of a pedestrian overcrossing spanning a four-lane road, which is the maximum extent of any safe crossing identified in the Plan. Due to the program nature of the Plan, staging areas cannot be determined at this time. However, for the purposes of this PEIR, all staging areas are assumed to be located on District ROW.

Table 2.3-4. Equipment and work duration for the phases of construction for typical road overcrossing of four-lane roadway (maximum width 8 feet, maximum length of 400 feet) and greenway path and greenway amenities

Phase	Number of Work Days	Equipment Type	Number	Horsepower	Hours/Day
Demolition	10	Excavator	1	158	8
		Dump Truck	2	402	3
		Backhoe	2	97	8
		Concrete Saw	1	81	8
		Hoe Ram	1	--	8
		Jack Hammer	1	2.5	8
Site Preparation	20	Skip Loader	1	69	8
		Backhoe	1	97	8
		Wheel Loader	1	203	7
Grading	20	Motor Grader	1	187	7
		Wheel Dozer	1	247	8
		Backhoe	2	97	8
		Excavator	1	158	8
		Bore/Drill Rig	1	221	8
Construction	125	Backhoe	2	97	7
		Excavator	1	158	8
		Crane	1	231	7
		Forklift	2	89	8
		Utility Truck	1	350	8
		Trencher	1	158	8
		Generator Set	1	84	8
		Welder	1	46	8
Paving	10	Paving Machine	1	130	8
		Oil Truck	1	402	8
		Vibratory Roller	1	80	8
		Skid Steer	1	65	8
Architectural	10	Air Compressor	1	78	8
Coating		Utility Truck	1	350	8

Notes: * Greenway path maximum width of 24 feet, maximum length of 5 miles.

2.3.1.3.2 Anticipated Operations

Beneficial project elements of greenway paths + safe crossings include Americans with Disability Act (ADA)-compliant ramps, signage and signals, bridges, bikeways, curb extensions and raised median islands, undercrossings/overcrossings, and decks of cantilever greenway segments over channels.

Operational activities would involve recreation from visitors and maintenance of the greenway paths and safe crossings. Visitors would not be permanent occupants as none of the greenway types or safe crossings are structures that would include human occupancy in their design. Maintenance of the safe crossing beneficial elements may include routine inspections, testing, repairs, and removal of trash/debris, and landscaping when as needed. Materials used during operations would be small and localized, primarily for maintenance, and may include commonly used hazardous materials such as solvents for cleaning, paints, fuels for equipment, and herbicides or pesticides or herbicides. Maintenance of the safe crossings may require temporary partial lane closures, which would be done in compliance with the Caltrans Manual on Uniform Traffic Control Devices (2024) guidelines to ensure the safety of vehicle, pedestrian, and bicycle traffic. Maintenance trucks/vehicles would be used to conduct inspections and maintenance of the safe crossing elements. Certain types of safe crossings (e.g., underpasses) require additional infrastructure to ensure flooding does not occur. This infrastructure would be inspected and maintained periodically.

The County assumes that up to 1,000 visitors per day would visit greenway paths, amenities, and safe crossings. These visitors are assumed to be dispersed equally throughout the five-mile greenway path and dispersed equally throughout the day (7:00 a.m. through 10:00 p.m.), resulting in approximately 67 visitors per hour along a typical five-mile-long greenway path. This equates to roughly one visitor per minute in any given location. Regular landscape and maintenance activities would include use of powered equipment such as lawnmowers, edgers, and leaf blowers and are assumed to be conducted by two workers once per week with a maximum duration of four hours at any given site. In addition, periodic repair and maintenance of structures and facilities may include use of additional equipment such as cranes or excavators.

2.3.1.4 Stormwater Management

As described in the *Design Guidelines and Standards*, the Plan requires that stormwater BMPs treat or infiltrates a site's stormwater quality design volume (SWQDv) where new infrastructure (impervious surface) is proposed with a preference for nature-based solutions. The protocol for quantifying a site's SWQDv is detailed in Section 11 of the *Design Guidelines and Standards*. With any new construction (e.g., a bikeway), a stormwater BMP must be selected to manage the calculated SWQDv.

Reducing impervious surface area is an overall beneficial change to the landscape and would allow more water to enter the soil as well as dedicated stormwater treatment facilities. Stormwater management options function primarily in three categories:

- **Infiltration**, where runoff is directed to percolate into the underlying soils. Infiltration generally reduces the volume of runoff and increases groundwater recharge.
- **Treatment**, where pollutants are removed through various unit processes, including filtration, settling, sedimentation, sorption, straining, and biological or chemical transformations.
- **Storage**, where runoff is captured, stored (detained), and slowly released into downstream waters. Storage can reduce the peak flow rate from a site but does not directly reduce runoff volume.

Combining a reduction of impervious surfaces with greenway paths and parks fulfills the Plan's goals of creating multi-benefit projects. Stormwater treatment options may be included as a component of these projects and would vary by site based on the unique constraints and needs of the location. These types of facilities are generally "retrofit" type projects that replace existing impervious surfaces with pervious surfaces such as bioinfiltration cells, bioswales, porous pavement, and filter strips that tie into existing stormwater management systems. The types of stormwater treatment options most likely to be constructed as part of the Plan are listed in Table 2.3-5 and described in greater detail below.

Table 2.3-5. Potential Stormwater Management Facilities and Structures for Pairing with Greenways and Parks

Stormwater Management Facility Types	Examples
Bioretention	Bioretention, Biofiltration, Green streets Bioretention with underdrain, bio infiltration, high flow biotreatment and raised underdrain, vegetated swales, filter strips Facilities to capture, store, and treat stormwater
Permeable Pavement	Permeable pavement
Subsurface Infiltration	Surface infiltration (e.g., infiltration basins, infiltration trenches, bioretention, permeable pavement); subsurface infiltration galleries; multi-directional infiltration BMPs (e.g., dry wells, hybrid bioretention and dry wells)
Constructed Wetlands	Facilities to capture, store, and treat stormwater
Extended Detention Basin	Aboveground or Belowground options Dry detention basin, Wet detention pond, Detention chamber
Proprietary Devices	Planter boxes & Rainfall harvest Debris booms/nets, End-of-pipe nets, Floating trash booms, Hydrodynamic separators, Water clarifiers, Stormwater quality vaults

2.3.1.4.1 Stormwater Management Facilities

2.3.1.4.1.1 Permeable Pavement

Permeable pavement is a stable load-bearing surface that allows for stormwater infiltration. Beneath the permeable surface is a crushed-rock/aggregate reservoir that provides structural support while allowing runoff to percolate to the underlying soils. Permeable pavement can be fully infiltrating or can have an underdrain like biofiltration practices. There are multiple types of permeable pavement. The mixes for pervious concrete and porous asphalt exclude fines from the aggregate to create permeable void space. Permeable interlocking concrete pavers allow infiltration of stormwater through joints between the blocks. Permeable pavements are an option for new parks where leaving an area vegetated is not preferred.

2.3.1.4.1.2 Green Streets

Green streets are systems of multiple stormwater management options arranged in a linear fashion within the street ROW (as opposed to a parcel-based implementation). This system could also be applied to facilitate better stormwater management and aesthetics when constructing greenways. Green streets are designed to reduce runoff and improve water quality of runoff from the roadway and

adjacent parcels by replacing impervious surfaces with more porous ones and directing stormwater to vegetated systems that can filter and infiltrate stormwater. Bioretention, biofiltration, and permeable pavement are commonly used together and can be hydraulically connected using subsurface stone reservoirs.

2.3.1.4.1.3 Site-scale Detention

Site-scale detention facilities are designed to detain runoff from an individual parcel and improve water quality through pollutant settling. Site-scale detention facilities can reduce peak flows and improve water quality by storing water in a basin before slowly draining the water through an orifice to the downstream waterway. Settling of sediment and sediment-bound pollutants is the primary pollutant removal mechanism. There are two primary types of site-scale detention: dry detention basins, in which runoff fully drains during storm events, and wet detention ponds, which capture water in a temporary storage zone above a permanent pool.

2.3.1.4.1.4 Green Infrastructure/Low-Impact Development

Green infrastructure and low-impact development (LID) include a broad range of development elements and facilities that aim to manage and treat stormwater as a resource and minimize the differences between pre- and post-development hydrology. Design options for infiltration facilities include bioretention, biofiltration, and infiltration designs. Vegetated swales can be used to help guide water to infiltration facilities.

Bioretention areas are shallow, depressed, vegetated basins with permeable soil media and no underdrains. Runoff temporarily ponds on the surface of these basins before filtering through the soil. Biofiltration areas are bioretention areas with underdrains. Infiltration in these systems is considered incidental, although substantial infiltration can occur in some unlined systems.

Infiltration facilities capture and infiltrate runoff into unvegetated underlying soils. Runoff is typically stored in subsurface trenches or vaults filled with engineered soil media, gravel, or concrete chambers. There are multiple types of infiltration facilities, including dry/wet wells, which are gravel-surrounded vaults with perforated walls that receive runoff from a pipe and allow it to infiltrate into the ground, and infiltration trenches, which are media-filled trenches that capture runoff in pore space prior to infiltration.

Bioswales are vegetated areas that collect and convey storm flow through vegetated, shallow depressions to remove sediment-associated pollutants by settling and filtering mechanisms. Bioswales are typically implemented to act as pretreatment and used to transport runoff to an associated bioretention cell or infiltration structure to provide additional pollutant removal and volume reduction. There are three primary types of bioswales: vegetated swales (which are linear), vegetated channels that convey concentrated flow to another structure (detention, infiltration, storage), and vegetative filter strips (which are more broadly sloped than swales).

Planter boxes are bioretention systems enclosed in concrete structures. They are most commonly designed to drain runoff from paved areas or roofs. They are typically used in urban settings where space constraints limit the implementation of other LID elements such as bioswales and bioretention systems. Planter boxes may be designed to both filter and store runoff using a series of filter media and

aggregate layers below the vegetated layers. They can be used in combination with rain barrels and cisterns that store the runoff and then direct these boxes to filter the runoff.

Manufactured flow-through devices are commercial products that aim to provide stormwater treatment using patented, innovative technologies. Typical types of manufactured devices for stormwater management include cartridge/media filters and high-flow biotreatment devices. Cartridge/media filters are proprietary filtration devices used to remove pollutants. High-flow biotreatment devices are modular, vault-type practices that contain high-flow media and typically incorporate vegetation.

Source control structural products are commercial products designed to treat runoff in highly urbanized environments. Mechanical separation, or more complex physicochemical processes, provides separation of gross solids and other pollutants. Many models feature media or materials designed to sequester hydrocarbons and other pollutants. Types of source control BMPs include catch basin inserts, which use nets, screens, fabric, or similar filtration media to separate sediment and gross solids from stormwater, and hydrodynamic separators, which use screens, baffles, or vertical flow to separate the two.

2.3.1.4.2 Anticipated Construction

The construction of small-scale stormwater capture and use facilities such as detention basins, bioswales, and green infrastructure/LID typically requires the permanent removal of aboveground infrastructure and/or surface materials such as asphalt and concrete for retrofit type projects and excavation and grading for projects on soil-covered sites.

Similar to bioretention and biofiltration installations, porous pavement would typically require the permanent removal of aboveground infrastructure and/or surface materials such as asphalt and concrete for retrofit type projects and excavation and grading for projects on soil covered sites. Porous pavement projects are generally retrofit type projects to increase infiltration and/or filtering of stormwater but may include installation in new development and redevelopment, which may require clearing and grubbing activities prior to installation. The depth of excavation for these distributed systems will vary from several feet and up to six feet depending on the thickness and number of structural support, filter, underground stormwater storage, and underdrain transmission layers. Systems with underdrains will require additional excavation. Generally, excavation is limited to two to six feet below existing grade for these systems. The installation of permeable pavement is frequently associated with the reconstruction of transportation elements such as parking lots, sidewalks, non-motorized paths, and related features.

Because green streets include both porous pavement and LID, the installation of green streets would include construction activities for both as described above. Green streets would typically require the replacement of aboveground infrastructure and/or surface materials such as asphalt and concrete for retrofit type projects with LID and excavation and grading for projects on soil covered sites. In areas proposed for biofiltration without suitably permeable soils, native soils would either have to be excavated, amended, and put back in place, or replaced entirely with biofiltration media (e.g., coarse gravels). The replacement of local soils would likely require that those soils then be hauled off-site. Systems with underdrains may require more extensive excavation and construction so that the underdrain can be connected to the municipal separate storm sewer system (MS4). The depth of excavation for green streets would typically vary from several feet up to six feet depending on the

thickness and number of filter and storage layers. Some of the County's existing green streets have dry wells with depths of over 50 feet; however, generally, excavation is limited to four feet below existing grade for green streets.

Depending on the type, scale, and site-selection for stormwater management BMPs, construction activities may include use of heavy construction equipment such as excavators, dump trucks, backhoes, utility trucks, paving machines, loaders, bore/drill rigs, and cranes. For the purposes of this conservative analysis, the construction of a 0.29-acre BMP feature is considered as typical of a larger-scale BMP project. Table 2.3-6 provides an estimate of project duration and construction equipment required for each phase associated with construction of a typical BMP feature. Due to the program nature of the proposed Project, staging areas cannot be determined at this time. However, it can be reasonably assumed that staging areas would occur on District ROW.

Table 2.3-6. Equipment and work duration for the phases of construction for typical stormwater management feature (maximum size of 0.29 acres) and greenway path and amenities

Phase	Number of Work Days	Equipment Type	Number	Horsepower	Hours/Day
Demolition	10	Excavator	1	158	8
		Dump Truck	2	402	3
		Backhoe	2	97	8
		Concrete Saw	1	81	8
		Hoe Ram	1	--	8
		Jack Hammer	1	2.5	8
Site Preparation	20	Skip Loader	1	69	8
		Backhoe	1	97	8
		Wheel Loader	1	203	7
Grading	20	Motor Grader	1	187	8
		Skip Loader	1	69	8
		Vibratory Roller	1	80	8
Construction	35	Forklift	1	89	8
		Excavator	1	158	8
		Generator Set	1	84	8
		Backhoe	2	97	7
		Trencher	1	40	8
		Welder	1	46	8
Paving	10	Paving Machine	1	130	8
		Oil Truck	1	402	8
		Vibratory Roller	1	80	8

Phase	Number of Work Days	Equipment Type	Number	Horsepower	Hours/Day
		Skid Steer	1	65	8

Notes: * Greenway path maximum width of 24 feet, maximum length of 5 miles.

2.3.1.4.3 Anticipated Operations

Stormwater management includes the following beneficial project elements: bioretention, permeable pavement, subsurface infiltration, constructed wetlands, extended detention basins, and proprietary devices for treatment of water flows. Stormwater management facilities are intended to infiltrate, treat, and store stormwater and non-stormwater runoff and would occur within the constraints of managing flood risk, including maintaining existing flood conveyance capacity and not deteriorating the capacity of any of the Plan Area washes. As described previously, the County assumes up to 1,000 visitors per day at greenway paths and amenities. These visitors are assumed to be dispersed equally throughout the five-mile-long greenway path and equally throughout the day (7:00 a.m. through 10:00 p.m.), resulting in approximately 67 visitors per hour along a typical five-mile-long greenway path. This equates to roughly one visitor per minute in any given location. The inclusion of stormwater management facilities would not affect the assumed number of visitors to the greenway path.

Regular landscape and maintenance activities are assumed to be conducted by two workers once per week with a maximum duration of four hours at any given site. Periodic maintenance would be required to optimize performance of the stormwater management systems, and the type of maintenance would be dependent on the type of BMP installed. For example, a subsurface infiltration system would require different equipment to conduct maintenance if the system is located solely underground versus constructed wetlands which may be accessible from the surface. Maintenance activities would include, but are not limited to, weed removal or tree trimming for bioretention devices, sediment and debris/trash removal from detention basins and treatment devices, and/or landscaping. Materials used for maintenance may include commonly used hazardous materials such as solvents for cleaning, paints, fuels for equipment, and approved herbicides or pesticides or herbicides. Maintenance trucks/vehicles would be used to conduct routine inspections and maintenance of the stormwater management facilities, and specific vehicles such as a vacuum truck to remove sediment and/or debris may be necessary on a less periodic basis. Any sediment and debris removal would be properly handled and disposed of in accordance with regulations and requirements. Any partial lane closures to conduct maintenance would be done in compliance with the Manual on Uniform Traffic Control Devices (Caltrans 2024) guidelines to ensure the safety of vehicle, pedestrian, and bicycle traffic.

2.3.2 Design Guidelines and Standards

The Plan *Design Guidelines and Standards* were created to guide improvements on District property and will be adopted as part of the Plan. The guidelines will ensure overall greenway consistency and provide a framework of best practices for greenway development within the SGV.

For project components located outside of the District ROW on adjacent parcels, additional requirements and standards may apply based on the project location and project type. For example, bicycle facilities adjacent to a roadway (referred to as Class II and Class IV bikeways) should be designed based on Caltrans design criteria. The remaining guidelines and standards are derived from a

compilation of other local, state, and federal references. Design priorities for the Plan include safety, vector control, comfort, community engagement, connectivity, and connection to the environment.

This PEIR assumes that the Plan would be implemented consistent with the *Design Guidelines and Standards* and that all subsequent projects implemented by individual project proponents under the Plan would be in accordance with the *Design Guidelines and Standards*. For the purposes of the impact analysis presented in Chapter 3 of this PEIR, compliance with these required *Design Guidelines and Standards* is assumed and factored into the impact analysis and CEQA determination for the Plan.

2.4 Conceptual Examples of Potential Subsequent Projects

Conceptual designs were developed for 10 example projects to illustrate the opportunities and benefits provided by different greenway project configurations throughout the SGV. Various combinations of channel ROW/greenway section and project components were used to illustrate the multitude of opportunities and benefits available to communities.

As described in Chapter 1, Introduction, after the Plan is approved, subsequent project-specific activities (also known as later activities as defined in State CEQA Guidelines) identified in the Plan could be designed, approved, and implemented over time by any of the jurisdictions or other stakeholders in the Plan Area. These subsequent projects could be located anywhere in the Plan Area, including the area between the top of the levee to the fence line or beyond the fence line (i.e., outside of the District ROW) on adjacent parcels.

The initial planning process led to identification of 10 potential locations for development of conceptual examples. These examples have not yet been funded or planned for implementation; however, they represent the types of projects that are feasible in the SGV and that would be covered under this PEIR. These are described briefly below for illustrative purposes only (Table 2.4-1).

Table 2.4-1. Multi-Benefit Conceptual Project Examples

Conceptual Project Example Name	Description of Conceptual Example Project
Alhambra Wash at Vincent Lugo Park	This conceptual project would provide 1.3 miles of new multi-use trail along Alhambra Wash, connecting Mission Road to the north, and Hovey Boulevard to the south. A portion of the proposed Alhambra Wash Greenway project falls within an area of the wash that is owned and operated by USACE. The project extents fall within the Cities of Alhambra and San Gabriel. Central to the project is connecting Vincent Lugo Park to the greenway network as a shared community park/greenway amenity. There is space for an interpretive neighborhood garden or pollinator habitat. The greenway segment would provide connection to existing parks and would require replacing an existing pedestrian bridge with an ADA compliant 10-foot-wide crossing.
Big Dalton Wash at Hilda L. Solis Park	This example greenway path would start at Hilda Solis Park and continue northeast along the east bank of Big Dalton Wash for 1.8 miles to Irwindale Avenue. At the south limit, it would connect with the recently completed Big Dalton Wash Greening Phase II project, a multi-use trail along the north bank of Walnut Creek from Baldwin Park Boulevard, up Big Dalton Wash to Badillo Avenue. At the north limit, it would connect with the recently completed Vincent Community Bikeway Project. The project area for this conceptual design falls within the Cities of

Conceptual Project Example Name	Description of Conceptual Example Project
	<p>Baldwin Park and Irwindale. The project has the potential to expand open spaces, incorporate two gateway parks, and add stormwater BMPs to Puente Avenue via a green street.</p> <p>Hilda L. Solis Park itself is somewhat constrained for treating off-site stormwater, but there may be potential for a subsurface infiltration area to treat stormwater from Big Dalton Wash. There is limited stormwater drainage nearby Hilda L. Solis Park to treat stormwater from neighboring areas. Stormwater that is feasibly captured nearby planted vegetation may support passive irrigation.</p>
Eaton Wash Greenway at Spreading Ground Site	<p>This conceptual project would provide 2 miles of greenway paths, starting at Woodlyn Road to the north and ending at Blanche Park on Eaton Wash to the south. A central component of this conceptual design is the large spreading grounds site north of Sierra Madre Boulevard into a park ribbon around the spreading basin for pedestrians, studies, nature enthusiasts, and cyclists to enjoy. The ROW has space available to create greening, shade, and stormwater BMPs. The site is in the City of Pasadena. Amenities would include parking, trail head and signage, a gateway bridge park, a garden, a rest area and bathroom, and safe crossing at Sierra Madre Boulevard.</p>
Eaton Wash at Eaton Blanche Park	<p>This conceptual design includes open-space and functional landscape improvements to Eaton Blanche Park, and a greenway path along the eastern bank of the tributary from Eaton Blanche Park to Longden Avenue. This would connect to the Eaton Wash Bike Path Phase I project by LA County, between Longden Avenue and Rosemead Boulevard. A bicycle/pedestrian bridge linking the greenway to Eaton Blanche Park would enhance connectivity and access to the project. Eaton Blanche Park consists of open greenspace that could be adapted for stormwater control. Surface nature-based or subsurface stormwater controls could be implemented across the site. The location of this conceptual design is within the City of Pasadena.</p>
San Dimas Wash at Arrow High School	<p>This conceptual project's main focus would be to navigate the intersection and crossing in front of Arrow High School at Gladstone Street and Sunflower Avenue, to build a connection to the school yard, and potentially create an education amenity within the school yard itself and further enhancing the existing San Dimas Wash Urban Trail. This project would modify the existing pocket park, currently fenced off from the public, to improve security by means of lighting and visibility improvements. An accessible pocket park could be built, and the greenway would present opportunities for native gardens, art display, a bike fix station, etc.</p>
San Dimas Wash at Hollenbeck Park	<p>This conceptual project would include a multi-use path starting at Lark Ellen Avenue and continuing east along the north bank of San Dimas Wash for 1.5 miles to Citrus Avenue within the City of Covina. The western end would connect with the existing Vincent Community Bikeways Project by LA County. The ROW is spacious enough to allow inclusion of pocket parks, outdoor classrooms, small community garden plots, or rest areas with seating or shade. The park location is nearby a storm drain running from north to south on Hollenbeck Ave before it discharges to the San Dimas Wash. Storm drain flows could be diverted and infiltrated/treated using stormwater control measures (e.g., bioretention, subsurface infiltration, or an extended detention basin.) There may also be potential for stormwater measures to treat stormwater directly from San Dimas Wash. Stormwater that is feasibly captured nearby planted vegetation may support passive irrigation.</p>

Conceptual Project Example Name	Description of Conceptual Example Project
San Jose Creek at Pocket Park	<p>This conceptual project is a 2.3-mile-long segment of greenway path along San Jose Creek that would start at the LA County San Jose Creek Regional Access project at Workman Mill Road and continue east with enhancements along the existing bike path on the south bank from Workman Mill Road to 7th Avenue. The western end of the proposed alignment connects to Workman Mill Road and extends the greenway to the San Gabriel River. A Class I bike path can be provided on the north (right) bank adjacent to the channel edge, within the existing equestrian trail between the proposed cross-channel EIP bridge to the west and the road leading to Workman Mill Road. Adequate separation will be provided between bicycle and equestrian uses. The design includes a small pocket park on the south bank where the concrete-bottom wash meets the natural-bottom channel. The greenway path brushes up against a roughly 0.25-acre area. A seating area with shade that overlooks the San Jose Creek could be implemented to create a moment of respite along the multi-use path.</p> <p>This conceptual example is located within the City of Industry and the unincorporated LA County community of Avocado Heights. Greenway segments to the west of 7th Avenue overlap with an existing storm drain, which could be captured and routed through nature-based stormwater controls instead of being discharged to the channel. There also may be potential to add stormwater controls to treat dry weather flows and/or stormwater from San Jose Creek. There are multiple other storm drains that intersect with the existing bike path that could be re-routed to on-path stormwater controls if desired. Stormwater that is feasibly captured nearby planted vegetation may support passive irrigation.</p>
Thompson Creek at the Fairplex	<p>This conceptual example depicts a 3.3-mile-long greenway path that would connect the Fairplex to the Pomona North Metrolink Station while reducing impact runoff from a large, paved area at its southern end. The location of the greenway in this example falls within the City of Pomona, City of La Verne, and City of Claremont.</p> <p>The Fairplex parking parcel represents significant impervious area that could be adapted for stormwater controls. Stormwater could be diverted from Thompson Creek or from a stormwater drainage line to the North under Arrow Highway. There is 66.7 acres of parking area that could be adapted to add nature-based stormwater controls while still maintaining core site purpose. This could be a potential LA County Safe Clean Water Project application. Stormwater that is feasibly captured nearby planted vegetation may support passive irrigation. The project elements that could be incorporated into this large project area include gateways, public art, shaded seating, picnic areas, pollinator garden, bioretention, bike fix-it station, riparian plant community, interpretive signage, etc.</p>
Walnut Creek at Syhre Park	<p>This conceptual example presents a potential greenway path that would start at Baldwin Park Boulevard and continue east along the southern bank of Walnut Creek for 2.9 miles to Sunset Avenue. The design shows how a greenway path could provide connection to the Big Dalton Wash Trail Greening Project Phase I, and the Big Dalton Wash Greening Project Phase II, which is proposed along the north bank from Baldwin Park Boulevard (where the SGR/WCB terminates) and up Big Dalton Wash to Badillo Street at Hilda L. Solis Park. The depicted greenway path in this example falls within the City of Baldwin Park and City of West Covina. A bicycle and pedestrian overcrossing of the Metrolink tracks could provide a direct connection between the Greenway and the City of Baldwin Park's San Gabriel River Greenway Project.</p> <p>The two nursery sites along the south bank, on either side of Syhre Park provide a unique opportunity to expand the width of the Greenway to create habitat gardens for birds, and a slower meandering pedestrian walk through the gardens. Syhre Park is 1.6 acres and includes a baseball field. Surface nature-based stormwater controls could be implemented around the baseball field, and subsurface options could be implemented using the full site. Stormwater</p>

Conceptual Project Example Name	Description of Conceptual Example Project
	could be diverted from the Walnut Creek Channel, but there is limited formal stormwater drainage nearby Syhre Park to enable diversion and treatment of stormwater from neighboring areas. Stormwater that is feasibly captured nearby planted vegetation may support passive irrigation.
Walnut Creek at Pocket Park	This conceptual design includes a greenway path that would start at the intersection of Glendora Avenue and Valinda Avenue, continuing east along the south bank for 2.2 miles to Citrus Street. Both ends of this proposed alignment would connect with an existing bike path between Lark Ellen Avenue and Azusa Avenue, creating a continuous path for the community. The greenway path presented in this example falls within the City of West Covina. This conceptual project provides opportunities to include public artwork, character planting, shade, seating, interpretive signage, and a small area for picnicking that serves greenway users and neighborhood residents. In addition to providing amenities for people, habitat creation can work to optimize biodiversity along the greenway as a primary objective.

SECTION 3 Environmental Impacts and Mitigation Measures

3.0 Introduction to the Impact Analysis

This section describes the existing environmental conditions in the Plan Area, the thresholds used to determine the significance of potential impacts, the potential impacts that could occur due to construction and operation of future projects implemented under the Plan, and measures to mitigate impacts that are identified as significant. The thresholds that have been identified to determine the significance of impacts are based on the environmental checklist questions in Appendix G of the State CEQA Guidelines. Where there are agencies that have specific jurisdiction within a particular resource category and those agencies have numeric thresholds (e.g., the South Coast Air Quality Management District (SCAQMD) emissions thresholds), those thresholds have been used in addition to Appendix G to determine the significance of potential impacts.

This analysis evaluates the construction and operation impacts of potential future projects implemented under the Plan based on the identified set of Plan project components and beneficial project elements (as described in Section 2, Project Description and Table 2.2-1, San Gabriel Valley Greenway Project Component, Subcomponent, and Beneficial Elements). The impacts are assessed at a program-level based on the relevant regulatory framework. All Plan components area analyzed by comparing baseline conditions, as described in the Environmental Setting section of each resource category, to conditions that would occur during construction and/or operation of projects that may be implemented under the Plan. The potential effects evaluated in each resource category are based on a literature review of conditions within and adjacent to the Plan Area. Where feasible, maps have been prepared to visualize these conditions. In addition, as described in Section 1.3.2, Documents Incorporated by Reference, the discussion of potential effects incorporates by reference the analysis conducted in the EWMP PEIR (2015), where applicable, to support the significance determinations. Further, the analysis assumes that the design of all future projects implemented under the Plan would adhere to the *Design Guidelines and Standards*. Additionally, this PEIR qualitatively evaluates the impacts of 10 conceptual design examples within the bounds of the program-level analysis.

3.0.1 Organization of the Environmental Analysis

The NOP and comments on the NOP were used to identify those impacts requiring further analysis in this section. This section is organized as follows:

- Section 3.1, Aesthetics
- Section 3.2, Agricultural and Forestry Resources
- Section 3.3, Air Quality
- Section 3.4, Biological Resources
- Section 3.5, Cultural Resources
- Section 3.6, Energy
- Section 3.7, Geology and Soils
- Section 3.8, Greenhouse Gases

- Section 3.9, Hazards and Hazardous Materials
- Section 3.10, Hydrology and Water Quality
- Section 3.11, Land Use and Planning
- Section 3.12, Mineral Resources
- Section 3.13, Noise
- Section 3.14, Population and Housing
- Section 3.15, Public Services
- Section 3.16, Recreation
- Section 3.17, Transportation
- Section 3.18, Tribal Cultural Resources
- Section 3.19, Utilities and Service Systems
- Section 3.20, Wildfire

3.0.2 Format of the Environmental Analysis

Each of the environmental resource topics presented in this section contains the following subsections:

- **Environmental Setting.** This subsection presents a description of the baseline physical environmental conditions in the Plan Area with respect to the environmental resource topics. Baseline environmental conditions are the physical conditions that existed at the time of publication of the NOP (October 2022).
- **Regulatory Setting.** This subsection describes the relevant laws and regulations that apply to the environmental resources in the Plan Area and the governmental agencies responsible for enforcing those laws and regulations. This subsection provides the applicable federal, state, and Los Angeles County regulations, as well as a table that describes the relevant general plans, municipal codes, and other ordinances adopted by each of the incorporated cities within the Plan Area. A general plan is a basic planning document that, alongside the zoning code, governs development in a city or county. The state requires each city and county to adopt a general plan with seven mandatory elements: land use, open space, circulation, housing, noise, conservation, and safety, along with any number of optional elements as appropriate. The Los Angeles County General Plan and regulations are applicable to those portions of the Plan Area and future projects implemented under the Plan that are in unincorporated County jurisdiction. Individual city general plans, municipal codes, and ordinances are applicable to those portions of the Plan Area and future projects implemented under the Plan that are located within the boundaries of an incorporated city or cities.
- **Impact Analysis.** This subsection evaluates the potential for the construction and operation of projects implemented under the Plan to adversely affect the physical environment described in the environmental setting. Significance criteria for evaluating environmental impacts are defined for each resource category and are based on Appendix G of the State CEQA Guidelines and any applicable thresholds that may be set by a specific jurisdiction within a particular resource category (e.g., SCAQMD emissions thresholds). The impact analysis concludes by determining the significance of each impact; identifies feasible mitigation measures, as necessary, to avoid and/or minimize potentially significant impacts; and determines the significance of each impact with mitigation measures incorporated. The impact analysis discussion for each resource category is organized as follows:
 - Plan Impacts
 - a. Greenway Paths + Greenway Amenities
 - b. Greenway Paths + Pocket Parks and Greenspaces
 - c. Greenway Paths + Safe Crossings

d. Greenway Paths + Stormwater Management

- Impacts of Example Conceptual Designs

Chapter 2, Project Description, describes the Plan project components and beneficial project elements of the Plan in detail, including the anticipated typical and/or maximum size of projects that would be developed under the Plan, summarized below:

- Greenway Paths: Segments up to 5 miles long and 24 feet wide.
- Greenway Amenities: Fitting within the greenway paths.
- Pocket Parks and Greenspaces: Typical pocket parks approximately 1 acre in size; maximum greenspace possible in the Plan Area would be 25 acres in size.
- Safe Crossings: Bridges/crossings up to a maximum of 400 feet long and 8 feet wide.
- Stormwater Management: A typical stormwater BMP up to approximately 0.29 acres in size.

Impacts associated with greenways, amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities under the Plan are analyzed at a program level based on these estimated sizes. The categories of project components (greenway paths + amenities, greenway paths + pocket parks and greenspaces; greenway paths + safe crossings, and greenway paths + stormwater management) and construction and operations impacts are presented separately for impact analysis, but combined for discussion if there is an overlap to address a specific criterion and it would not be meaningful to discuss the impacts separately.

The 10 conceptual design examples are analyzed within the bounds of the program-level analysis to determine if their impacts would be more significant than the project component findings. Thus, no new mitigation measures that are not already identified during program level analysis for the project components are proposed for the conceptual design examples. A more detailed description of impacts of the 10 conceptual design examples within the specific jurisdictions or environmental setting of their location is included when applicable. It is important to note that the 10 conceptual design examples serve only as examples of the types of projects possible under the Plan, are not being proposed for implementation as part of the Plan and have not been developed at a level of detail sufficient to support project-level analysis.

As described in Section 2.3.2, *Design Guidelines and Standards*, these standards were created to guide the subsequent design and implementation of improvements and would be adopted as part of the Plan. The impact analyses in this PEIR assume that all subsequent projects under the Plan would be implemented in accordance with the *Design Guidelines and Standards* by project proponents. Therefore, compliance with these *Design Guidelines and Standards* is assumed and factored into the impact analysis and CEQA determination for the Plan.

3.0.3 Impact Determinations in this PEIR

As described in Section 1, Introduction, the impact analysis in the PEIR is at a program level because the exact location and design of projects that would be implemented under the Plan have not yet been determined with sufficient detail to complete a project-level analysis. Rather, the Plan provides a guide for future project proponents to design and implement a greenway project anywhere within the Plan Area, which includes the District ROW along specific waterbodies in the SGV and adjacent parcels. As such, impact determinations presented in this PEIR could change once specific information for later activities or subsequent projects is known. Therefore, a conclusion of a significant and unavoidable

impact determination or less than significant with mitigation determination in this PEIR does not preclude a less than significant impact determination for subsequent project approvals, if supported by substantial evidence. For projects implemented in unincorporated LA County or by the County, the County would enforce implementation of all applicable mitigation measures, which would reduce many, if not all, impacts to less than significant levels. For projects outside of unincorporated lands, as well as projects implemented by project proponents other than the County, the County would not have jurisdiction to enforce mitigation measures. However, all mitigation measures identified in this PEIR are feasible, and local agencies can and should adopt these mitigation measures in order for project proponents to carry out future projects in accordance with the Plan.

3.1 Aesthetics

This section discusses the aesthetic and visual setting of the Plan Area, the laws and policies applicable to these resources, and the potential impacts on these resources that would result from the Plan, as well as mitigation measures to reduce these impacts.

Table 3.1-1. Summary of Potential Impacts of the Plan on Aesthetics

Plan Component	Impact Determination: Construction	Impact Determination: Operation	Mitigation Measures
Would the plan:			
1(a) Have a substantial adverse effect on a scenic vista?			
Greenway Paths + Greenway Amenities	Less than Significant with Mitigation	Less than Significant.	Construction: MM AES-1: Install Construction Fencing for Visual Screening and Security for Construction Lasting Longer than 30 Days
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant with Mitigation	Less than Significant	Operations: No mitigation
Greenway Paths + Safe Crossings	Less than Significant with Mitigation	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant with Mitigation	Less than Significant	
1(b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant	Operations: No mitigation
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	
1(c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project			

Plan Component	Impact Determination: Construction	Impact Determination: Operation	Mitigation Measures
conflict with applicable zoning and other regulations governing scenic quality?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Significant and Unavoidable	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Significant and Unavoidable	Operations: No mitigation
Greenway Paths + Safe Crossings	Significant and Unavoidable	Significant and Unavoidable	
Greenway Paths + Stormwater Management	Significant and Unavoidable	Significant and Unavoidable	
1(d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant with Mitigation	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant with Mitigation	Operations: MM AES-2: Develop and Submit Lighting Plan
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant with Mitigation	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant with Mitigation	

3.1.1 Environmental Setting

Aesthetic and visual resources encompass a large swath of existing forms, including landforms, vegetation, and water features, as well as the features of the surrounding built environment. The Plan Area is located in the SGV, an area of east Los Angeles County. Most of this area is characterized by the vast urban sprawl that exists throughout the County but still has significant aesthetic and natural resources. The valley includes the San Gabriel Mountains to the north, the Puente Hills to the south, and boasts multiple greenspaces, including areas such as the Santa Fe Dam Recreation Area and the Frank G. Bonelli Regional Park. All of these areas provide aesthetic and other environmental benefits to the residents of the valley, and are under the protection of federal, regional, and local entities. These natural spaces also provide habitat and space for endemic flora and fauna and are of high value to the region (LA County Department of Regional Planning 2022).

The SGV's rivers and tributaries sit within one of the world's most diverse Mediterranean biodiversity hotspots. The Plan Area includes the District ROW and adjacent parcels along segments of the following tributaries: Alhambra Wash, Arcadia Wash, Big Dalton Wash, Eaton Wash, Little Dalton Wash, Puente

Creek, Rubio Wash, San Dimas Wash/Puddingstone Channel/Live Oak Wash, San Jose Creek, Santa Anita Wash, Sawpit Wash, Thompson Creek, and Walnut Creek. These flood control channels are characterized by their flat, open concrete planes, and cut through various municipalities to convey stormwater to downstream watercourses. The channels traverse through both residential and industrial areas. The parks existing within the Plan Area provide open and greenspace to the communities in which they reside, allowing for recreation and aesthetic benefit.

3.1.1.1 State Scenic Highways

The California Scenic Highway Program identifies lengths of highway that are protected by Caltrans, as discussed in Section 3.1.2.2.1, California Scenic Highway Program. These stretches of highway preserve scenic vistas and unique visual resources along roadway corridors. Within the Plan Area, there are stretches of “Eligible” highways, but no areas of roadway are listed as “Officially Designated”, as shown in Figure 3.1-1.

3.1.1.2 Hillsides, Scenic Viewsheds, and Ridgelines

In addition to scenic roadways, Los Angeles County includes hillsides, scenic viewsheds, and ridgelines as scenic resources in planning documents. The County of Los Angeles has identified significant ridgelines that provide views of unincorporated areas as well as hillside management areas throughout the County. The San Gabriel Mountains, Verdugo Hills, Santa Susana Mountains, Simi Hills, Santa Monica Mountains, and Puente Hills are where most of these scenic resources have been identified (LA County Department of Regional Planning 2022). In addition, there are County-designated hillside management areas located in the vicinity of the Plan Area. While the Plan Area is visible from the ridgelines and scenic viewpoints in the region, there are no County-designated scenic viewpoints, hillsides, or ridgelines present in the Plan Area.

3.1.1.3 Light and Glare

Light and glare are typical features in urban environments. The primary sources of light within the vicinity of Plan Area are associated with transportation, including vehicle and streetlights, and commercial and residential uses. Glare occurs when light from any source, natural or artificial, is reflected on a surface. Regardless of the source, light and glare can be highly detrimental to the health of an ecosystem, disrupting plants, animals, and residents alike (National Geographic 2019).

3.1.2 Regulatory Setting

3.1.2.1 State

3.1.2.1.1 California Scenic Highway Program

In 1963, the California Legislature created the California Scenic Highway Program through the adoption of Senate Bill 1467. This bill called for the designation of scenic highways to protect the aesthetic value of various scenic corridors adjacent to said highways throughout the state. These areas of highway may be nominated for designation by the local governing body with jurisdiction over the lands surrounding the highway. At this point, Caltrans will review the application and issue notifications of approval.

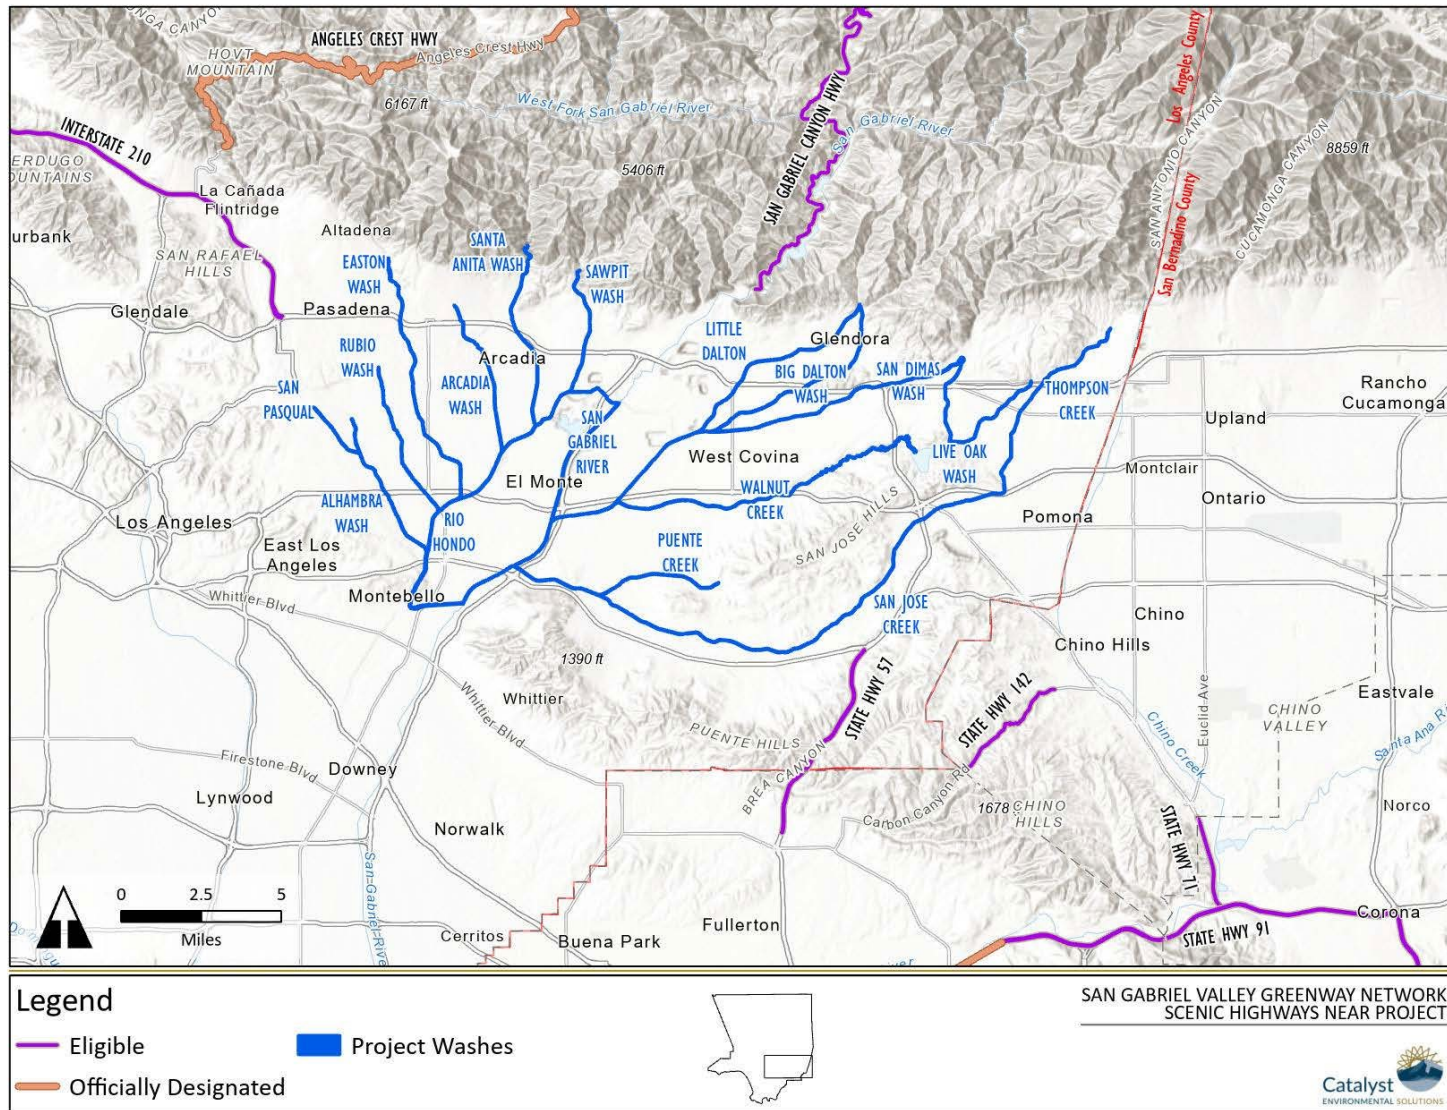

Figure 3.1-1. Designated Scenic Highways in Vicinity of Plan Area

Once designated as a scenic highway, it becomes the responsibility of the state to assign regulation of the land use along these corridors to the appropriate agencies (Caltrans 2022). A highway may be designated as “scenic” depending on how much of the natural landscape can be seen by travelers, the scenic quality of the surrounding landscape, and the extent to which development intrudes upon the traveler’s enjoyment of the view. Highways may also be identified as “candidate” scenic highways, pending official designation. State laws that govern the Scenic Highway Program are found in the Street and Highways Code, Sections 260 through 263. Caltrans maintains a list of eligible and officially designated State scenic highways, which are identified in Section 263 of the Streets and Highways Code (Caltrans 2022). As described in Section 3.1.1, no designated scenic highways are located in the Plan Area, as observed in Figure 3.1-1.

3.1.2.2 Los Angeles County

3.1.2.2.1 Los Angeles County General Plan

The Conservation and Natural Resources Element of the General Plan addresses the County’s intention to protect scenic resources throughout its jurisdiction (LA County Department of Regional Planning 2022). The General Plan is applicable to those areas of the Plan Area that are in unincorporated LA County and not applicable to incorporated cities. Within the County, scenic resources consist of designated scenic highways and corridors, and hillsides and ridgelines. The following goals and policies identified in the General Plan are relevant to the Plan:

- Goal C/NR 13: Protected visual and scenic resources.
- Policy C/NR 13.1: Protect scenic resources through land use regulations that mitigate development impacts.
- Policy C/NR 13.2: Protect ridgelines from incompatible development that diminishes their scenic value.
- Policy C/NR 13.3: Reduce light trespass, light pollution and other threats to scenic resources.
- Policy C/NR 13.4: Encourage developments to be designed to create a consistent visual relationship with the natural terrain and vegetation.
- Policy C/NR 13.5: Encourage required grading to be compatible with the existing terrain.
- Policy C/NR 13.6: Prohibit outdoor advertising and billboards along scenic routes, corridors, waterways, and other scenic areas.
- Policy C/NR 13.7: Encourage the incorporation of roadside rest stops, vista points, and interpretive displays into projects in scenic areas.
- Policy C/NR 13.8: Manage development in Hillside Management Areas to protect their natural and scenic character and minimize risks from natural hazards, such as fire, flood, erosion, and landslides.

3.1.2.3 Incorporated Cities Within the Plan Area

The table below presents the policies related to aesthetics from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.1-2. Applicable Local City Policies Related to Aesthetics

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Land Use and Community Design:</p> <p>Policy LU-1D Encourage land use patterns that minimize incompatibility between uses.</p> <p>Policy LU-2A Promote the use of high-quality design, materials, landscaping, and pedestrian connections.</p> <p>Policy LU-2C Design parking and loading areas as an integral part of the total project design. Locate parking and loading areas so that the visual impacts of these areas on adjacent development and the public right-of-way are minimized, and screen them attractively using a combination of fencing and landscaping.</p> <p>Goal LU-3: A high quality overall community appearance and identity.</p> <p>Policy LU-3A Foster new development that is consistent with the established land use type, intensity, character, and scale of the area.</p> <p>Policy LU-3B Promote neighborhood cohesiveness through neighborhood-based design guidelines consistent with existing or proposed architectural themes, taking into consideration spatial definition, continuity, and building scale.</p> <p>Policy LU-3C Beautify entry points to the City and develop attractive parks, signs, and landscaped rights-of-way clearly visible to motorists that will distinguish Alhambra from surrounding cities.</p> <p>Policy LU-3D Incorporate streetscape design improvements for important corridors, such as Atlantic, Fremont, Valley, Main, and Garfield.</p> <p>Goal LU-8 Maintenance and development of quality public spaces.</p> <p>Policy LU-8A Continue to implement the parkway tree planting plan to promote pedestrian activity by establishing well-designed streetscapes, active ground floor uses, and tree-canopied sidewalks that are unique to the neighborhood.</p> <p>Policy LU-8B Ensure that signs, lighting, and other potential nuisances are sensitive to existing residential neighbors.</p> <p>Policy LU-8C Enhance the open space network around corridors and activity nodes by providing paseos, courtyards, plazas, larger parkways, and landscaped setbacks.</p>	<p>Municipal codes applicable to aesthetic resources within the Plan Area can be found in Chapter 23.50 (Sign Standards).</p> <p>Chapter 23.50 (Sign Standards) of the Alhambra Code of Ordinances establishes sign regulations that are intended to support the use of signs for businesses, local activities, and city character, as well as facilitate the ability for the public to identify uses and premises without creating distractions to pedestrians or vehicles. General standards for signs include (1) the sign primarily identifies the business, establishment, or type of activity conducted on the same premises, or the product, service, or interest being offered for sale, rent, or lease thereon, (2) the sign is restrained in size, design, and illumination, and as an identification device, does not excessively compete for the public’s attention, (3) the sign is harmonious with the materials, color, texture, scale, size, shape, height, placement, and design of the building, property, and neighborhood of which it is a part, (4) The sign improves community appearances by avoiding excessive variety and monotonous repetition and is not so at variance with the appearance of the neighborhood as to cause the nature of the local environment to materially depreciate in appearance, (5) the sign is architecturally integrated and does not overwhelm or dominate the structure or object to which it is attached, (6) the sign’s illumination is directed solely at the sign or is internal to it, and (7) the sign’s design and placement would not be detrimental to the public interest, health, safety, convenience, or welfare.</p>	<p>No other applicable ordinances were identified.</p>
Arcadia	<p>Land Use & Community Design Element:</p> <p>Goal LU-2: A City with a distinctive and attractive public realm, with pedestrian-friendly amenities in commercial and mixed-use districts and single-family neighborhoods that continue to maintain Arcadia’s standard of architectural and aesthetic quality.</p> <p>Policy LU-2.1: Ensure that trees planted in the public right-of-way continue to be well maintained where they exist, are planted in areas where they are currently lacking, and encourage replacement of undesirable tree species in public rights-of-way.</p> <p>Policy LU-2.6: Ensure the aesthetic quality and pedestrian orientation of the City’s commercial corridors by implementing the recommendations of the Community Design section, as well as the Architectural Design Guidelines for commercial and industrial properties.</p>	<p>Municipal codes applicable to aesthetic resources within the Plan Area can be found in Section 9103.01.120 (Exterior Lighting), Section 9103.09 (Landscaping), Section 9103.13.070 (Light and Glare), and Section 9103.11.070 (Permanent Signs by Zone).</p> <p>Section 9103.01.120 (Exterior Lighting) establishes exterior lighting standards that are intended to balance safety and security needs for lighting with efforts to guard against adverse light trespass (spill light), light pollution, and glare onto surrounding properties. Unless specifically exempted, Section 9103.01.120 applies to any exterior lighting that is not within a fully enclosed building or structure.</p> <p>Section 9103.09 (Landscaping) establishes minimum landscape standards for all uses in compliance with applicable state standards and guidelines and to promote sustainable development and is intended to supplement the Water Efficient Landscaping Ordinance (Article VII, Part 5, Division 4, Section 7554 of the City’s Municipal Code).</p>	<p>Water Efficient Landscape Ordinance</p> <p>According to Article VII, Part 5, Division 4, Section 7554, Water Efficient Landscaping, the Project would be subject to the City’s Water Efficient Landscaping Ordinance. The purpose of this ordinance is to promote landscaping practices that integrate water conservation and water waste prevention. This Section establishes requirements regarding landscaping irrigation, soil and grading, and recycled water. Additionally, the Water Efficient Landscaping Ordinance requires the preparation of a Landscape Design Plan and a Landscape Documentation Package by a license landscape architect pursuant to Section 7554.4, which shall include information on the proposed plant material, water features, and soil preparation, mulch, and amendments.</p> <p>Signage Design Guidelines</p> <p>The City Signage Design Guidelines are intended to balance the legitimate needs for business identification with the need to prevent visual clutter that detracts from a</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal LU-5 Hillside management approaches that balance desires for unique neighborhoods and home sites with the need to protect residents from environmental hazards and to respect wildlife habitat and viewsheds.</p> <p>Policy LU-5.1: Maintain the visual character of hillsides, recognizing both the importance of the exposure of hillside development from off-site public views and the importance of providing panoramic public views from and of hillsides.</p> <p>Policy LU-5.2: Minimize the alteration of existing landforms and maintain the natural topographic characteristics of hillside areas, allowing only minimal disruption.</p> <p>Policy LU-5.3: Protect the natural character of hillside areas by means of contour grading to blend graded slopes and terraces with the natural topography.</p> <p>Policy LU-5.6: Require hillside development to incorporate architecture, scale, massing, building form, building color, roof materials, and landscaping to reflect the natural hillside setting.</p> <p>Policy LU-6.11: Provide mature street trees, continuous landscaping (that includes drought-tolerant plants), and pedestrian amenities along corridors and within districts to create a more visually pleasing and cohesive streetscape.</p> <p>Policy LU-6.12: Create pedestrian connections along corridors and districts that link surrounding neighborhoods and provide a more pedestrian-friendly atmosphere.</p>	<p>The purpose of Section 9103.09 is to establish a structure for planning, designing, installing, maintaining, and managing water-efficient landscapes in new construction and rehabilitated projects.</p> <p>Section 9103.13.070 (Light and Glare) requires that every existing or proposed use, activity, or process or portion thereof producing glare be shielded in such a manner that the glare is not perceptible at or beyond any property line.</p> <p>Section 9103.11.070 (Permanent Signs by Zone), Locations and Allowed Sign Area. This Section provides regulations for permanent signs by designated zoning areas.</p>	<p>project and the community’s overall character (City of Arcadia 2019b). In general signs should be integrated into the building design, complementary of the building architecture, and compatible with the building colors and materials and other signage on the building. The Signage Design Guidelines are not intended to supersede the requirements of the Development Code but rather, the Signage Design Guidelines are utilized during the City’s development review process to encourage “the highest level of design quality” while at the same time providing the flexibility necessary to encourage creativity on the part of an applicant in response to existing site conditions.</p>
Azusa	<p>Chapter 3 The Built Environment:</p> <p><i>Land Use Compatibility</i></p> <p>Goal 10: Ensure the compatibility among various types of land uses.</p> <p>Policy 10.6: Work with public and private organizations and individuals to minimize the land use impacts in and around the river, the canyons, and foothills, such impacts may include but not be limited to noise generation, natural resources encroachment, air quality degradation, aesthetic degradation, etc.</p> <p><i>Building and Property Maintenance</i></p> <p>Goal 11: Ensure the proper maintenance of buildings and properties.</p> <p>Policy 11.2: Periodically review and update the City’s building and development codes and regulations to ensure that they incorporate professionally accepted state of-the-art standards.</p> <p>Policy 11.5: Promote programs and work with local service, business, and neighborhood organizations to inform property owners and tenants regarding property maintenance responsibilities, and maintenance and rehabilitation opportunities.</p> <p>Policy 11.7: Require new development and existing development be maintained in a safe manner.</p> <p><i>Urban Form</i></p> <p>Goal 1: Protect the historic and significant built and natural resources in the city.</p> <p>Policy 1.1 Require development projects to establish the historicity of existing buildings and landscapes and require City review and permission to allow for their removal in accordance with California Environmental Quality Act (CEQA) and the Cultural and Historic Preservation Ordinance.</p> <p>Policy 1.2 Consider including the preservation and rehabilitation of historically significant landscapes.</p> <p>Goal 4: Improve the visual appeal of the city.</p>	<p>Municipal codes applicable to aesthetic resources within the Plan Area can be found in Chapter 88.31 (Operational Standards) Section 88.31.030 (Outdoor Lighting), Section 88.31.040 (Performance Standards).</p> <p>Under Chapter 88.31 (Operational Standards) Section 88.31.030 (Outdoor Lighting) the following apply:</p> <p>A. An outdoor light fixture shall be limited to a maximum height of 14 feet or the height of the nearest building, whichever is less.</p> <p>B. Outdoor lighting shall utilize energy-efficient fixtures and lamps; examples include high pressure sodium, hardwired compact fluorescent, or other lighting technology that is of equal or greater energy efficiency.</p> <p>C. Lighting fixtures shall be shielded or recessed to reduce light bleed to adjoining properties, by:</p> <ul style="list-style-type: none">1. Ensuring that the light source (e.g., bulb, etc.) is not visible from off the site; and2. Confining glare and reflections within the boundaries of the site to the maximum extent feasible. <p>Each light fixture shall be directed downward and away from adjoining properties and public rights-of-way, so that no on-site light fixture directly illuminates an area off the site.</p> <p>D. No lighting on private property shall produce an illumination level greater than one footcandle on any property within a Neighborhood except on the site of the light source.</p> <p>E. No permanently installed lighting shall blink, flash, or be of unusually high intensity or brightness, as determined by the director.</p> <p>Under Section 88.31.040 (Performance Standards) the following applies:</p> <p>F. Light and Glare. Outdoor lighting shall comply with the requirements of Section 88.31.030 (Outdoor Lighting).</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 4.1: Plant all public thoroughfares with rows of trees, as feasible.</p> <p>Policy 4.2: Encourage attractive gateway treatments to establish a positive image at the edges of the city and its districts and corridors.</p> <p>Policy 4.3: Continue the underground overhead utilities.</p> <p>Policy 4.4: Require signage to be designed considering the scale and materials of adjacent buildings, the desired character of the neighborhood, district, or corridor where the site is located, and pedestrian orientation.</p>	<p>Under Chapter 88.38 (Signs) Section 88.38.050 (</p>	
Baldwin Park	<p>Urban Design Element:</p> <p>This element addresses six major issues:</p> <ol style="list-style-type: none">1. Provide urban design opportunities for gateway entrances in Baldwin Park;2. Establish a positive image on the I-10 San Bernardino Freeway corridor;3. Establish Downtown as a pedestrian-oriented zone;4. Enhance the aesthetic quality of development in the City; and5. Improve streetscape environments to enhance the city’s environmental conditions; and6. Enhance residential neighborhoods in Baldwin Park. <p>The Design Element specifically identifies streets that should be given high priority for upgrading the City’s image; they include Baldwin Park Boulevard, Ramona Boulevard, Pacific Avenue, and Maine Avenue. Upgrading, according to the Design Element, should include the following streetscape improvements:</p> <ul style="list-style-type: none">• Street trees;• Underground utilities;• Street furniture;• Enhanced paving;• Graphics and signage; and• Lighting. <p>Goal 2: Establish a positive City image on the I-10 Corridor between I- 605 and Baldwin Park Town Center (Merced Avenue). Create a “green corridor” on both sides of the freeway. A high-quality overall community appearance and identity.</p> <p>Policy 2.1: Provide coordinated landscape design within the corridor. Coordinate with Caltrans during the I-10 widening and access improvements for landscape enhancements, soundwall design and materials, signage and access. Plant clinging vines to all freeway abutments, grade separations and pedestrian bridges to enhance the green corridor concept and discourage graffiti.</p> <p>Policy 2.2: Establish landscape buffers and/ or aesthetically treated walls to screen unsightly views.</p> <p>Policy 2.3: Provide special landscaping and gateway signage and graphics at key freeway access points.</p> <p>Goal 4: Enhance the aesthetic quality of development in the City.</p> <p>Policy 4.2: Review and revise, as necessary, the City’s development standards to improve the quality of new development and to protect public health and safety.</p>	<p>Municipal codes applicable to aesthetic resources within the Plan Area can be found in Section 153.140.040 (Light and Glare) and Subchapter 153.170 (Sign Regulations).</p> <p>Section 153.140.040 (Light and Glare) establishes light and glare performance standards for development within the city, including standards related to acceptable candle-power of lighting, the height of lighting support structures, lighting shielding, and sign lighting. Specifically, Section 153.140.040 mandates that candle-power shall be the minimum necessary in order to achieve the purpose of the light and that all lights shall be directed, oriented and shielded to prevent light from shining onto adjacent properties, onto public rights-of-way, and into driveway areas in a manner that would obstruct motorists’ vision.</p> <p>Subchapter 153.170 (Sign Regulations) establishes urban design and safety standards, goals for city appearance, hazards prevention, and visual quality. General standards include (1) Sigh lettering and numbering criteria, (2) sigh lighting and illumination, (3) sign location, and (4) sign aesthetics.</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 5: Promote urban forestry concepts to enhance the environmental conditions in the city by providing shade, shelter from inclement weather, improved air quality, and aesthetic improvements to neighborhoods.</p> <p>Goal 6: Enhance the neighborhood environments within Baldwin Park.</p> <p>Policy 6.2: Buffer residential from non-residential uses with aesthetically pleasing walls, landscaping and/ or fencing.</p> <p>Land Use Element</p> <p>Goal 6: Enhance the neighborhood environments within Baldwin Park.</p> <p>Policy 6.2: Buffer residential from non-residential uses with aesthetically pleasing walls, landscaping and/or fencing.</p> <p>Public Safety Element:</p> <p>Goal 5.0: Provide a safe environment for the community of Baldwin Park.</p> <p>Policy 5.4: Promote the use of defensible space concepts (e.g. site and building lighting, visual observation of open spaces, secured areas) in project design to enhance public safety.</p>		
Claremont	<p>Land Use Character, Community Character, and Heritage Preservation Element:</p> <p>Goal 2-4: Protect, preserve, and manage the City’s diverse and valuable open space, water, air, and habitat resources.</p> <p>Policy 2-4.1: Encourage the preservation of different types of open spaces.</p> <p>Policy 2-4.2: Continue to place a high priority on acquiring and preserving open space lands in Claremont’ s hillside areas for purposes of recreation. Habitat protection and enhancement. Fire hazard management. Public safety purposes, water resource protection. And overall community benefit.</p> <p>Policy 2-4.4: Provide a high standard of maintenance and quality of construction of facilities and grounds in public parks and City-maintained landscaped areas taking into account the need to conserve water and energy.</p> <p>Policy 2.9-2: Provide lighting for walking and nighttime activities, where appropriate.</p> <p>Policy 2-10.4: Look for opportunities to provide connections along easements and other areas where vehicles are not permitted.</p> <p>Goal 2-12: Create distinctive places throughout Claremont.</p> <p>Policy 2-12.3: 3 Encourage new developments to incorporate drought tolerant and native landscaping that is pedestrian-friendly, attractive, and consistent with the landscaped character of Claremont.</p> <p>Policy 2-12.4: Encourage all new development to preserve the natural topography of a site and existing mature trees.</p>	<p>Municipal codes applicable to aesthetic resources within the Plan Area can be found in Chapter 16.154 (Environmental Protective Standards) and Title 18 (Signs).</p> <p>Chapter 16.154 (Environmental Protective Standards) of the Claremont Municipal Code, includes the following general outdoor lighting and glare requirements. General Requirements include (1) outdoor light fixtures shall be designed, installed, and maintained so as to direct light only onto the property on which the light source is located. All outdoor lighting fixtures shall have prismatic diffusing lenses and/or appropriate shielding so the light source is not directly visible from the public right-of-way or abutting residential properties, (2) In residential areas, no mercury vapor utility yard lights or other light fixtures with high intensity discharge lamps or bulbs, which are not designed to limit or control where light is directed and/or which do not shield the light source from direct view from neighboring residential properties or public right-of-way, shall be permitted, (3) Any indirect illumination of neighboring residential properties or uses shall not exceed 0.5 footcandles at the property line as measured horizontally and vertically from adjacent grade to a height of 14 feet, and (5) All illumination of signs shall be reviewed and approved per the provisions of Title 18.</p> <p>Title 18 (Signs) establishes standards for the use of signs within the City. General standards include (1) sign area measurement, (2) sign height measurement, (3) sign locations, (4) sign illumination and shielding, and (5) sign maintenance.</p>	<p>No other applicable ordinances were identified.</p>
Covina	<p>No scenic vistas have been officially designated within the City’s General Plan.</p> <p>Land Use Element:</p> <p>Goal 1: A physical environment that provides for the housing, employment, business, service, recreational, social, educational, cultural, and entertainment needs of and maintains and enhances a high quality of life for its residents.</p> <p>Policy 6: Preserve the very low-density character, sensitive environmental resources, and natural appearance of Covina Hills by minimizing future grading and development.</p>	<p>Municipal codes related to aesthetic resources within the Plan Area can be found in Chapter 9.42 (Environmental Disturbances).</p> <p>Chapter 9.42 (Environmental Disturbances) defines disturbances and prevents disturbances imposed upon residential uses. Sources of environmental disturbances include (A) Odors. No operation or activity of odorous gases or other odorous matter in such quantities as to be dangerous, injurious, noxious, or otherwise objectionable, which is detectable with or without the aid of instruments, shall be permitted at or beyond the lot line of the property generating the odorous gases or matter, (B) glare, no operation, activity, sign, or lighting fixture shall create illumination that exceeds five</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 9: Ensure that all properties and uses are physically, aesthetically, and functionally maintained to retain community appearance, image, and stability.</p> <p>Objective 3: A community that is attractive and maintains a good image and small-town atmosphere.</p> <p>Policy ee: Maintain and, where possible, enhance Covina’s attractive appearance, positive image, and small-town character.</p> <p>Natural Resources and Open Space Element:</p> <p>Policy 2: Preserve and protect in their natural conditions, through appropriate land use controls, development standards, and other reasonable measures, the unimproved segments of two flood control channels running though Covina (Charter Oak Wash in Wingate Park and Walnut Creek in the Covina Hills/southeastern area) and concomitant riparian woodland communities as important functional, ecological, biological, aesthetic, and passive open space resources.</p> <p>Policy 3: Continue to enforce the Covina Oak Tree Ordinance as a means of protecting oak tree resources and to attempt to preserve mature trees of all types in conjunction with new private and quasi-pubic construction or redevelopment proposals as well as public works projects for aesthetic and ecological purposes.</p> <p>Policy 4: Meeting all applicable City standards, provide for needed landscape improvements of the City’s parks and recreational facilities and continue to require and/or call for the maintenance of landscaping in conjunction with private, quasi-public, and public developments or lands for aesthetic and ecological reasons.</p>	<p>foot-candles on any adjacent property, whether the illumination is direct or indirect light from the source. Glare levels shall be measured with a photoelectric photometer following the standard spectral luminous efficiency curve adopted by the International Commission on Illumination. For purposes of this subsection, a foot-candle is the illumination produced by a light of one international candle upon a surface one foot away, (C) Smoke. No operation or activity is permitted to have operations that emit excessive smoke, fumes, or dust that exceeds the requirements or levels specified by the South Coast Air Quality Management District (SCAQMD), (D) Temperature Change. No operation or activity shall emit heat or cold that would cause a temperature increase or decrease on any adjacent property in excess of 10 degrees Fahrenheit, whether the change is in the air, on the ground, or on any structure, (E) Electrical Interference. No operation or activity shall transmit, generate, or otherwise cause any electrical or magnetic radiation disturbance that affects persons in the operation of any use, equipment (including, but not limited to, television and radio reception), or process employed by any use beyond the boundary of the site, and (F) Ground Water Pollution. No operation or activity shall cause the seeping into the ground of any area of wastes, whether liquid or not, that are determined by the State Department of Health Services to be toxic or of a similar hazardous nature. (Ord. 1666 § 1, 1988.)</p>	
El Monte	<p>General Plan Goals:</p> <p>Goal 1: A safe, aesthetically pleasing, and unified community appearance within the context of distinct districts and neighborhoods.</p> <p>Policy 1.1 Require public landscaping along streets, sidewalks, and property frontages and in public spaces to strengthen the City’s identity.</p> <p>Program 1.1 Create a streetscape plan addressing landscaping, signage, lighting, and special design features along Durfee Road.</p> <p>Community Design Element:</p> <p>Policy CD-1.5: Streetscapes. Develop unifying streetscape plans for major corridors and subdistricts that include specialized streetlights, landscaping, a community forest, signage, and street furniture.</p> <p>Policy CD-1.8: Emerald Necklace. Recreate the Emerald Necklace of multi-use trails and parks along the San Gabriel and Rio Hondo rivers to provide parks, open space, and recreational amenities.</p> <p>Policy CD-2.12: Public Signage. Establish a comprehensive signage plan that identifies City entries, street names, public facilities, parks, multiuse trails, transit stations, and key districts.</p> <p>Policy CD-2.14: Sign Quality. Prohibit signs that incorporate blinking or flashing elements, pole structures, roof signs, or temporary lettering or structures; require the use of high quality materials, complementary colors, and nondistracting lighting.</p> <p>Policy CD-3.1: Public Rights-of-Way. Beautify major transportation corridors, freeway easements, utility easements, railroad rights-of-way, schools, parks, and public facilities with a forest of canopy trees.</p>	<p>Municipal codes applicable to aesthetic resources within the Plan Area can be found in Section 17.60.050 (Outdoor Lighting) and Chapter 17.80 (Signage Regulations).</p> <p>Section 17.60.050 (Outdoor Lighting) requires the submittal of a lighting plan prepared by a qualified lighting engineer. Performance standards include (1) All lights shall be directed, oriented, and shielded to prevent light trespass or glare onto adjacent properties, onto the public right-of-way and/or driveway areas, (2) Exterior lighting shall demonstrate an efficient distribution of lighting using low-glare, low-light pollution fixtures for lighting building exteriors and surrounding areas, (3) Motion detector lighting fixtures are allowed; provided, that: (a) There is no light trespass or spillover onto adjacent properties; (b) The fixtures are mounted within five, and (5) feet of an entrance or exit door, garage door, or alcove of a structure; (c) Installed no more than eight (8) feet above the ground; and (d) Illuminated with a maximum of two (2) light bulbs of no more than seventy-five (75) watts each, (4) Exterior lighting shall be turned off during daylight hours. As used herein, "daylight hours" means the hours between sunrise (dawn) and sunset (dusk), (5) No permanently installed lighting shall blink, flash or be of unusually high intensity or brightness, and (6) Outdoor lighting shall not be directed skyward with exception to typical landscape lighting meant to accent architectural features of structures, trees and shrubs. (Ord. No. 3011 , § 3(Exh. B), 6-21-2022; Ord. No. 3023 , § 4.B(Exh. B), 5-2-2023)</p> <p>Chapter 17.80 (Signage Regulations) defines the uses, standards, and design requirements regarding signs in the City. General standards cover (A) applicability, (B) design and placement, (C) colors, (D) sign copy and graphics, (E) materials and installation, and (F) lighting. (Ord. No. 3011 , § 3(Exh. B), 6-21-2022)</p>	No other applicable ordinances were identified.

	<p>Policy CD-3.4 Greenways. Place greenways/medians, dotted with miniparks where feasible, and appropriate landscaping along major corridors and in commercial areas and residential neighborhoods.</p> <p>Policy CD-3.6: Emerald Necklace. Create an Emerald Necklace of multi-use trails and parks along the Rio Hondo and San Gabriel Rivers that offer ample greenery, trees, and open space.</p> <p>Policy CD-4.7 Landscaping. Require lush and well-maintained landscaping appropriate the structure and its use and context in a manner that meets community expectations for quality.</p> <p>CD-4.9 Utilitarian Aspects. Mechanical equipment, electrical boxes, fencing, and other utilitarian aspects should be shielded so as not to detract from the aesthetic quality of the building or site.</p> <p>Parks and Recreation Element:</p> <p>Goal PR-4: A lush network of greenways, linear parks, and a community forest that enhances property values, public health, aesthetics, and quality of life.</p> <p>Policy PR-4.1: Location. Place green infrastructure along freeways, utility corridors, major roadways, public rights-of-way, near schools,</p>		
Glendora	<p>Land Use Element:</p> <p>Policy LU-18.1: Ensure the preservation of a scale and character of development is sensitive to adjoining uses.</p> <p>Policy LU-18.3: Encourage land uses that are complimentary in form and function with existing development.</p> <p>Policy LU-22.2: Establish programs that identify important community attributes that should be preserved.</p> <p>Open Space and Recreation Element:</p> <p>Policy OSR-1.8: Support regional and local efforts to acquire, develop, and maintain open space linkages.</p> <p>Policy OSR-2.3 Control the grading of land to minimize the potential for erosion, land sliding, and other forms of land failure, as well as to limit the negative aesthetic impact of excessive modification of natural landforms.</p>	<p>Municipal codes applicable to aesthetic resources within the Plan Area can be found in Chapter 19.24 (Sign Code).</p> <p>Chapter 19.24 (Sign Code) defines the uses, zones, and sign conformance throughout the City. General provisions include (a) Except as expressly permitted by this chapter, or by the requirements of law or federal or state regulations, all signs are prohibited on private property; (b) Except as expressly permitted by this chapter, or by the requirements of law or federal or state regulations, all signs are prohibited on public property; (c) All signs and their supporting structures, except interior signs, shall be constructed of metal, wood or comparable weatherproof material, shall be so enclosed as to provide against their infestation by birds and vermin, shall be structurally safe, and shall be maintained in good condition, and in a manner so as not to constitute a hazard to public safety or to property; (d) Signs attached to a building shall not extend above the top of the wall, parapet, fascia or mansard to which they are attached. No sign structure or part thereof shall project from the wall or façade to which it is attached more than three inches; (e) Signs painted directly on buildings pertaining to other than the identification of the building or business contained therein are prohibited; (f) No sign, nor any part thereof, shall be constructed or maintained to flash, move, or in any way simulate motion, except those signs which thereby advise the viewing public of time, temperature, or both; (g) No illumination permitted herein shall be distracting to traffic on public rights-of-way, interfere with illuminated traffic signals, or shine directly onto residential zones. Intensity shall be determined from specifications as covered in the current county sign code; (h) Abandoned signs are prohibited. Upon application and hearing by the planning commission any sign which would be presumed abandoned may be found by the planning commission not to have been abandoned where:</p> <p>(1) All identification of the premises, the services or goods available thereon, and the name or names of any and all persons have been removed;</p> <p>(2) The sign is in conformity with all other provisions of this chapter; and</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		(3) There is a substantial probability that the sign will be utilized without substantial changes in, or additions to, the structure thereof by a business subsequently operating on the premises. And (i) Portable signs are prohibited. (Ord. 1481 § 3, 1986; Ord. 1415 § 2, 1983; Ord. 1370 § 1, 1981; Ord. 1342 § 3, 1980)	
Industry	Land Use Element: Goals LU 5: High quality and well-maintained properties, buildings, and infrastructure that enhance property values and encourage additional public and private investment. Policy LU 5-1: Maintain a high-quality appearance and functionality of public lands, properties, and rights-of-way, including sidewalks, street trees/landscaping, curbs, and street lighting.	Municipal codes applicable to aesthetic resources within the Plan Area can be found in Section 15.32.070 (Material, design, construction and maintenance standards). Section 15.32.070 (Material, design, construction and maintenance standards) of the Industry Municipal Code establishes sign regulations and illumination standards to ensure that illumination from or upon any sign must be shaded, shielded, directed or reduced so as to minimize light spillage onto the public right-of-way or adjacent properties. Externally illuminated signs must be lighted by screened or hidden light sources.	No other applicable ordinances were identified.
Irwindale	Community Development Element: Issue Area – Urban Design: The City of Irwindale will continue its efforts in improving the appearance of the community. Policy 14: The City of Irwindale will continue to promote property maintenance in all areas of the City. Policy 15: The City of Irwindale will continue to work towards improving the appearance of the City entryways. Policy 16. The City of Irwindale will continue to work towards the development of streetscape, sign standards, and a Public Art Program.	No applicable ordinances relevant to aesthetic resources within the Plan Area were identified.	No other applicable ordinances were identified.
La Puente	Community Development Element: Goal 5: Safe and attractive neighborhoods providing a range of quality housing, parks, community services, and public facilities. Policy 5.2: Encourage property maintenance and rehabilitation and housing replacement activities, where appropriate, to improve neighborhood conditions.	Municipal codes applicable to aesthetic resources within the Plan Area can be found in section 10.38.080 (Outdoor light and Glare). Section 10.38.080 (Outdoor light and Glare). All lighting shall be arranged so as to keep light from directed on site, whether the illumination is direct or indirect light from the source. No operation, activity, sign or lighting fixture shall create illumination which exceeds 0.5 foot-candles minimum maintained on any adjacent property. No direct or sky-reflected glare, whether from floodlights or from high temperature processes such as combustion or welding or otherwise, visible at the property lot line of the source, shall be permitted.	No other applicable ordinances were identified.
La Verne	Community Design Element: Goal 1: Protect our small-town character. Policy 1.7: Monitor neighboring development in unincorporated areas. Implementation Measure a: Use the environmental review process to ensure that the environmental and aesthetic qualities of projects in adjacent unincorporated areas meet the same standards expected of La Verne projects. Goal 4: Develop in deference to our natural setting. Policy 4.1: Design Sensitive and subtle hillside development. Implementation Measures: a. Uphold the Hillside Development policies of the land Ule Chapter. b. Adhere to the standards of the Hillside Development Overlay Zone ordinance.	Municipal codes applicable to aesthetic resources within the Plan Area can be found in Title (Signs) and Chapter 18.16 (Development Review). Title (Signs) establishes the standards for signs placed in the City. General objectives of the sign regulation include (1) to provide a reasonable system of controls for signs, to ensure the development of a high quality environment, (2) encourage signs which are well designed and pleasing in appearance and to provide incentive and latitude for variety, good design relationship, and spacing, (3) enhance the economic value of the community through the regulation of such characteristics as size, number, location, design and illumination of signs, (4) reduce possible traffic and safety hazards through good signs, and (5) implement goals and objectives contained in the La Verne general plan community design element. (Ord. 855 § 2, 1993) Chapter 18.16 (Development Review) ensures that development is consistent with the general plan, applicable zoning and specific plans. It implements hillside, tree	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>c. Require the following measures for all hillside development:</p> <p>(1) HILLSIDE siting shall be sensitive to the environment:</p> <ul style="list-style-type: none">Prohibit "view" and ridgeline lots visible from the valley below.Limit development to flat mesas or gently sloping plains that can accommodate it without incurring visual or physical damage.Provide a view analysis for all development projects.Conceal the full building height, screen rooflines and preserve views from below through City approved grading practices.Minimize effect of grade change through split level buildings and uphill/downhill building siting.Determine project density by net developable area: that is, density credit shall not be given for those portions of a development site having geologic, topographic, ecological or other constraints. <p>(2) Hillside design shall incorporate architecture that melds itself to the topography rather than dominates it, by design:</p> <ul style="list-style-type: none">Architecture that incorporates the natural limitations identified by the constraints analysis into its design.Natural materials complementary to the landscape, such as creek rock, clinker brick, heavy wood timbers, glazed and unglazed tile.Earthen tones complementary to the natural landscape.Low height and intensity street lighting and underground utilities to minimize the visual impact. <p>Land Use Element:</p> <p>Policy 2.2: Shield all hillside development from view from the valley floor below.</p> <p>Implementation Measures</p> <ul style="list-style-type: none">a. Require a dense screen of trees where residential development approaches a significant ridgeline or viewshed that may be compromised by encroaching development (rooflines, antennae, streetlights).b. Prohibit development in areas with a natural slope of 25 percent or greater. Roads to service development may be permitted in these areas if they are designed to minimize visibility and grading scars.c. Prohibit hillside grading and development practices which damage the integrity of hillside areas in order to provide off-site views. <p>Resource Management Element:</p> <p>Goal 3: Protect and promote our scenic vistas and routes.</p> <p>Policy 3.1: Preserve our scenic vistas.</p> <p>Implementation Measures:</p> <ul style="list-style-type: none">a. require that any development that is proposed within the scenic vista areas are designed so views of the mountains or the canyons will not be compromised.b. Prohibit grading of any type of feature that could be considered a ridge.c. Require that all plans for these scenic vistas conform to standards contained in the Community Design Chapter. <p>Policy 3.2 Improve our scenic routes.</p> <p>Implementation Measures:</p>	<p>preservation, architectural, site planning, circulation, landscaping and other planning policies. Development review shall be performed by either the community development director of the development review committee, as specified in this chapter. (Ord. 753 § 6, 1988)</p>

		<p>accessory feature on a temporary basis in conjunction with a special event permit, and (E) lighting shall be integrated with landscaping wherever possible.</p> <p>(Ord. No. 931, § 5(Exh. A), 10-22-13)</p> <p>Chapter 17.116 (Signs) establishes all standards and provisions related to signage in the City. General standards include (A) no sign of any kind shall be permitted to advertise or display an unlawful act, business or purpose, (B) illumination signs shall be located, and light sources shielded to prevent glare, annoyance or hazard to the public or neighboring properties:</p> <ol style="list-style-type: none">1. Signs may be internally or indirectly lighted;2. No blinking or flashing signs shall be permitted in any zone, except for time and temperature signs, <p>(C) maximum height of freestanding and roof signs in any commercial or industrial zone shall not exceed thirty-five (35) feet above grade level of the adjoining public walk, (D) signs projecting out over the building line or public right-of-way are prohibited, except projecting flag (vertical) signs, (E) clearance above grade less than eight feet: no projection is permitted. Clearance above grade over eight feet: one inch of projection is permitted for each additional inch of clearance, provided that no such projection shall exceed a distance of four feet, (F) all signs shall be established under a valid building permit in accordance with fire and building code regulations, and (G) all signs shall be maintained in good condition and repair and shall pose no hazard to public safety statutes, standards and ordinances.</p> <p>(Ord. No. 931, § 5(Exh. A), 10-22-13; Ord. No. 978, § 5(Exh. A), 2-27-18)</p>	
San Dimas	<p>Open Space:</p> <p>Policy 4.1: Preserve existing views of the foothills.</p> <p>Land Use:</p> <p>Policy 2.4.3: Control exterior light sources.</p> <p>Policy 2.5.1: Minimize changes to the natural topography.</p> <p>Policy 2.5.2: Follow hillside contours</p> <p>Policy 9.15: Preserve important view corridors.</p>	<p>Municipal codes applicable to aesthetic resources within the Plan Area can be found in Chapter 18.108 (Scenic Highway Overlay Zone), Chapter 18.152 (Signs), Chapter 18.164 (Hillside Development), and Section 18.516.080 (Scenic easements).</p> <p>Chapter 18.108 (Scenic Highway Overlay Zone) describes standards to Scenic Highways in the City. Scenic Highways shall be designated on the official zoning map and apply to property adjacent to designated scenic highways, as follows:</p> <p>A. Whenever a scenic highway overlay designation is placed on a highway and/or street, those properties adjacent to the designated highway and/or street shall be subject to the provisions of the scenic highway overlay zone in addition to the provisions of the underlying zone of the property.</p> <p>B. Method of designation. The abbreviation “SHO,” designating property adjacent to the scenic highway, shall be appended to the base zoning district on the official zoning map. (Example: A commercial-highway zone would show on the official zoning Map as C-H (SHO)). (Ord. 975 § 1, 1992)</p> <p>In addition to those development standards required by the base zoning district, the following minimum development standards shall be applicable to all property with a <i>scenic</i> highway overlay designation:</p> <p>A. Setbacks. Except as otherwise provided in this chapter, all <i>scenic</i> highway overlay required yards shall be void of structures and improvements and fully landscaped. For the purposes of this section, the <i>scenic</i> highway overlay zone required yard shall be measured from the property line of those properties abutting the designated <i>scenic</i> highway, towards the interior of the property. The following required yards shall be provided as follows, and as indicated on Exhibits A, B, and C located at the end of this chapter:</p>	No other applicable ordinances were identified.

Incorporated			licable Ordinances
		<p>1. Foothill Boulevard. The required yard for both sides of Foothill Boulevard shall be twenty-five feet, except for the intersection of Foothill Boulevard and San Dimas Canyon Avenue, as indicated on Exhibit C, the required yard area shall be 10 feet. Said yard area may be reduced to five feet for drive aisles and circulation routes if approved in the Precise Plan during the site plan review process.</p> <p>2. Via Verde. Except for the intersections of Via Verde and San Dimas Avenue, and Via Verde and Puente Street, as indicated on said Exhibits A and B, the required yard for both sides of Via Verde shall be fifty feet.</p> <p>3. Puente Street. Except for the intersection of Via Verde and Puente Street, as indicated on Exhibit B, the required yard for Puente Street shall be as follows:</p> <p>a. The northerly side of Puente Street, fifty feet.</p> <p>b. The southerly side of Puente Street, thirty five feet.</p> <p>4. The setback requirements for those streets designated with the <i>scenic</i> highway overlay zone, and not specifically provided for in subsection A shall be determined at the time of designation of the overlay zone.</p> <p>B. Building location, height and coverage shall be arranged to protect the significant views and vistas.</p> <p>C. Landscaping shall be designed, installed and maintained in such a manner as to protect and enhance the visual appearance of the <i>scenic</i> highway.</p> <p>D. All utilities related to the project shall be located underground.</p> <p>E. Street dedications and improvements, as required by Chapter <u>17.32</u> of the San Dimas Municipal Code, shall be completed.</p> <p>Chapter 18.152 (Signs) the intent is to encourage the installation of signs that provide reasonable opportunities for business identification, improve the appearance of buildings and neighborhoods, encourage innovation and enhance the economic effectiveness of the business community while preventing needless distraction and clutter from the other signs in the area. All signs shall be subject to the following design and maintenance specifications:</p> <p>A. Safety.</p> <p>1. Signs, as permitted in this chapter, shall in no way endanger the health or safety by causing distraction or impairing visibility to operators of motor vehicles on the streets and highways. Location, lighting and color of signs shall be such as to cause no confusion with public signs or traffic signals.</p> <p>2. Any sign that contains red, yellow or green lights shall not be located within a distance of one hundred feet from traffic signals. Such signs may cause a potential distraction or hazard to highway users.</p> <p>3. No exposed light bulb used as a part of sign display shall exceed a rating of eleven watts as measured equivalent to an incandescent bulb.</p> <p>4. No beacons shall be allowed in the city.</p> <p>5. No sign, including the illumination thereof, shall be animated or so designed or operated as to flash, scintillate or in any way simulate motion other than: time and temperature signs, barber pole signs and electronic message boards.</p> <p>B. Affixing Signs on Curbs, Streets or Street Signs. No person shall paint, mark, paste, fasten or in any manner affix or cause to be painted, marked, pasted, fastened or in any manner affixed to or on any curb, street, sidewalk, street sign post, or to or on any sign erected for the purpose of directing or warning traffic, or to or on any telephone,</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>telegraph or electric light pole, or to or on any tree or shrub in any park, public street, alley, parkway or sidewalk any sign, poster or advertisement of any kind without first obtaining a written permit from the city council. Nothing in this section shall be so construed as to prohibit the erection and maintenance of official warning or directional signs by any department of the city or to legal notices posted in the places and manner prescribed by law.</p> <p>C. Sign Maintenance.</p> <p>1. All signs together with their supports and appurtenances shall be kept in a proper state of preservation. The display surface of all signs shall be kept neatly painted and posted. The planning director or building official may order the removal of any sign that is not maintained in accordance with the provisions of this chapter.</p> <p>2. All signs and identification structures which are constructed on property lines, or within five feet thereof, shall have a smooth surface. No nails, tacks or wires shall protrude therefrom, except electrical reflectors and devices which may extend over the top and in front of the sign or identification structure.</p> <p>D. Illumination. The application for a permit for erection of a sign or other identification structure in which electrical wiring and connections are to be used shall be submitted to the building official. The building official shall examine the plans and specifications respecting all wiring and connections to determine if the same comply with the electrical code of the city, and shall approve or disapprove the plans and specifications accordingly.</p> <p>1. Illuminated signs shall be constructed of approved combustible or incombustible materials.</p> <p>2. Illuminated signs which do not bear the label of an approved testing laboratory shall be inspected before erection.</p> <p>3. Electrical equipment used in connection with all signs shall be installed in accordance with local ordinances regulating electrical installations.</p> <p>4. Gooseneck reflectors shall be permitted on wall signs; provided, however, such reflectors shall be provided with proper glass lenses concentrating the illumination upon the area of the sign so as to prevent glare upon the street or adjacent property.</p> <p>5. Any sign that contains red, yellow or green lights shall not be located within a distance of one hundred feet from traffic control signals. Such signs creating a potential distraction or hazard to highway users will not be permitted.</p> <p>6. No exposed light bulb used as a part of a sign display shall exceed a rating of eleven watts as measured equivalent to an incandescent bulb.</p> <p>7. No beacons shall be allowed in the city.</p> <p>8. No sign, including the illumination thereof, hereinafter erected or maintained in the city, shall be animated or so designed or operated as to flash, scintillate, or in any way simulate motion other than:</p> <p>a. Time and temperature signs;</p> <p>b. Barber pole signs;</p> <p>c. Electronic message boards, subject to the standards in subsection E.</p> <p>E. Electronic Message Boards. Where permitted by this chapter as a component of a monument or freeway-oriented sign but not as a component of any other sign including wall signs, electronic message boards shall comply with the following:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>1. An electronic message board may contain a changeable message that utilizes changeable text, images, pictures, and/or symbols that may appear as an on/off message. An electronic message board shall not contain or display animated, moving video, scroll, flash, blink, fly, or chase sign message into view or create a sense of motion. An electronic message board sign shall contain only static displays. The changeable commercial message display intervals shall change no more frequently than once every eight seconds; and that blinking and/or moving characters shall be prohibited. A change of message shall be accomplished within two seconds with an on/off cycle. Fade out/fade in from one static image to another static image is allowed.</p> <p>2. Electronic message boards shall have automatic dimming capability that adjusts the brightness to the ambient light at all times of day and night. Electronic message boards shall not increase their luminance by greater than three-tenths foot-candle above ambient levels of lighting measured at a distance of one hundred feet from the sign face and five feet above grade.</p> <p>3. The electronic message board component of a sign shall be automatically dimmed after dark. The electronic message board must contain a default mechanism that freezes the sign in one position if a malfunction occurs; and automatically adjusts the intensity of its display according to natural ambient light conditions.</p> <p>4. The sign shall be properly maintained so that inoperative or improperly lighted bulbs do not impair the appearance and legibility of the sign.</p> <p>5. That the electronic changeable-copy sign shall be screened, tinted, shielded or otherwise modified, as necessary, to eliminate excessive glare, as deemed sufficient by the planning director.</p> <p>6. Commercial messages on signs permitted pursuant to this chapter shall advertise only the businesses conducted, services rendered, or goods produced or sold within the development complex which the identification sign is intended to serve. Public service information, including, but not limited to, the time, date, temperature, weather, and similar information shall be permitted. No off-site advertising or messages, other than public service information approved by the city, shall be displayed.</p> <p>7. Public service messages are encouraged. Such messages include announcements of meetings, activities and events of a general community-wide interest but do not include political messages.</p> <p>F. Identification. Every sign or other advertising structure hereafter erected shall have an identifying number, name of erector, installation year, and when illuminated, the voltage plainly placed on the exterior surface of the sign body in a location where such information will be readily visible after installation and erection. (Ord. 1212 § 1, 2012; Ord. 1103 § 1, 1999)</p> <p>Chapter 18.164 (Hillside Development) regulates use, development and alteration of land in hill areas so that essential natural characteristics such as land form, vegetation and wildlife communities, scenic qualities and open spaces can be substantially maintained; to preserve unique and significant geologic, biologic and hydrologic features of public value; to encourage alternative approaches to conventional hillside construction practices by achieving land use patterns and intensities that are consistent with the natural characteristics of hill areas such as slope, land form, vegetation and scenic quality.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>It is further the intent of this chapter to protect predominant views of and from hill areas in order to maintain the identity, image and environmental quality of the city. (Ord. 463 § 1, 1974; Ord. 37 § 703.02, 1961)</p> <p>General development standards must comply with Section 18.164.070 (Development standards)</p> <p>Section 18.516.080 (Scenic easements), the intent of this easement is to preserve the open space character of the bluff by restricting the introduction of visible man-made structures, preserving and enhancing the natural aesthetics of the bluff area, while also maintaining the health, safety and welfare of residents and protection of property. Restrictions in the <i>scenic</i> easement area, as identified on the land use development plan, Exhibit A, are as follows:</p> <p>A. Grading and removal of existing plant material is permitted for slope stability and control, fire hazard modification, and for the promotion of health, safety and protection of property only;</p> <p>B. No structures, appurtenances, or walls may be constructed in this easement area except for those conditions listed in subsection A of this section;</p> <p>C. Introduction of plant material is restricted to native species and/or those plant types presently existing on-site;</p> <p>D. The open space easement shall be located as depicted on Exhibit A. (Ord. 774 § 1, 1982)</p>	
San Gabriel	<p>Community Design:</p> <p>Goal 10.1: Create an expectation that San Gabriel will accept nothing less than the highest quality in architecture, in landscape design, and in streetscape.</p> <p>Target 10.1.1: Adopt the principles for design enhancement specified below.</p> <p>14 Actions Leading to a More Livable San Gabriel:</p> <ol style="list-style-type: none">1. Expect and demand the best quality design;2. Build on our community’s history and culture;3. Create designs that live and breathe like the neighborhoods in which they are placed;4. Build on existing neighborhood centers to reinforce their value;5. Beautify key commercial corridors;6. Create unique and compelling gateways into town;7. Reward good design;8. Make good landscaping a part of every project;9. End sign clutter;10. Establish engineering standards that will make walking safe and enjoyable;11. Enhance the Alameda Corridor East;12. Integrate public art and architecture;13. Design for pedestrian safety and comfort; and14. Respect historical and environmental features. <p>Target 10.1.5: Reject projects that fail to properly adhere to design standards, and insist that new projects meet the standards of the general plan and design guidelines.</p> <p>Goal 10.2. Build on the history and culture of San Gabriel in defining future design directions.</p>	<p>Municipal codes applicable to aesthetic resources within the Plan Area can be found in Chapter 153.320 (Signs), Chapter 153.350 (Design Review), and Chapter 153.530 (Landscape).</p> <p>Chapter 153.320 (Signs) describes the standards and purposes of signage within the City. General polices regarding signage include:</p> <p>(A) Signs shall be limited to the identification of the business and/or product or service being sold or leased on the premises. Logos for national or regional businesses shall be addressed as a special consideration in reviewing compliance with the provisions of this subchapter.</p> <p>(B) Signage shall be no larger or higher than necessary for adequate identification of the business or building.</p> <p>(C) Signs shall be designed with minimum copy and crowding.</p> <p>(D) Signs shall identify a business without interfering with the ability of adjoining businesses to properly identify themselves.</p> <p>(E) Signs located on the same lot or parcel shall be designed to be harmonious and visually related to other signs on the same lot or parcel as well as the building on rich they are located. This shall be accomplished and enforced by the requirement of a Master Sign Plan for such lots or parcels with multiple businesses and signs.</p> <p>(F) Signs in residential zones shall be designed and located so as to minimize the visual impact on adjoining residential properties.</p> <p>('65 Code, § 9-3.2402) (Ord. 445-C.S., passed 5-16-95)</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 10.11 End Sign Clutter in San Gabriel.</p> <p>Target 10.11.3: Require that master sign programs be submitted, reviewed and approved by the City for all multi-tenant developments.</p> <p>Environmental Resources:</p> <p>Goal 8.1. Goal Create a verdant City by maintaining significant trees, requiring developers to plant additional trees, and promoting the healthy maintenance of trees.</p> <p>Target 8.3.3: Require that all new construction include a landscape component that will increase the number of trees onsite.</p> <p>Target 8.3.4: Implement policies to require developers to plant one tree for every one thousand square feet of net lot area on new commercial and residential projects. At least one tree shall be planted in the front yard of every new house or addition.</p> <p>Target 8.3.5: Require applicants submitting plans for all additions of more than 800 square feet and all new buildings to submit landscape plans.</p> <p>Target 8.3.6: Encourage developers to incorporate existing mature and specimen tree and other significant vegetation into the design of a development project for that site.</p> <p>Goal 8.5. Restore the lost environmental value of San Gabriel’s waterways – the Los Angeles County Flood Control channels (Alhambra Wash, Rubio Wash) and the San Gabriel River.</p> <p>Target 8.5.1 Investigate the feasibility of using the flood control channels for functional and/or passive open space.</p> <p>Target 8.5.2 Protect the flood control channels from enclosure by developers.</p> <p>Target 8.5.3 Work with the San Gabriel Mountains and River Conservancy, and other interested agencies, to restore the San Gabriel River to a more environmentally healthy state.</p>	<p>Chapter 153.350 (Design Review) establishes that no building or construction permit shall be issued until a precise plan of design or site plan review covering the parcel or parcels to be used is approved. General purposes of the Chapter include</p> <p>(A) To ensure the implementation of urban design policies and principles consistent with the city's General Plan;</p> <p>(B) To maintain and protect property values and financial investments;</p> <p>(C) To ensure the development of safe and adequate circulation and parking;</p> <p>(D) To promote the highest quality of architectural design for the public benefit and the improvement of the city's community environment; and</p> <p>(E) To, within the dictates of the Zoning Code, balance the rights of adjoining property owners regarding privacy, noise, light and air.</p> <p>(F) To ensure fair, equitable and consistent application of design standards in a timely manner.</p> <p>('65 Code, § 9-3.2501) (Ord. 449-C.S., passed 6-6-95; Am. Ord. 512-C.S., passed 3-20-01)</p> <p>Chapter 153.530 (Landscape) describes the purposes of the landscape regulations. Purposes specific to the Project include,</p> <p>(H) Help restore the lost environmental value of the Los Angeles County flood control channels (Alhambra Wash, Rubio Wash) and enhance the washes as scenic community amenities.</p> <p>Specific areas to be landscaped include,</p> <p>(D) <i>Flood control channels.</i> A 15-foot wide landscape buffer planted with drought tolerant plants, including a 12-foot wide service road and bike path, shall be provided along the outer edge of flood channel easements. In those cases where a strict compliance with the landscaping requirements set forth in this division may be a hardship on the property owner or the developer thereof, an alternate plan accomplishing the objectives of helping restore the lost environmental value of the Alhambra and Rubio washes and enhancing the washes as scenic community amenities may be submitted for review by the Community Development Director. The Community Development Director shall be authorized to disapprove, approve, or conditionally approve the alternate plan.</p>	
San Marino	<p>Land Use Chapter:</p> <p>Goal 1: Maintain the residential character of San Marino.</p> <p>Goal 12: Maintain the current standard of high-quality and well-maintained properties.</p> <p>Community Services Chapter:</p> <p>Goal 1: Keep public infrastructure systems in San Marino operational, safe, and aesthetically pleasing.</p>	<p>No applicable ordinances relevant to aesthetic resources within the Plan Area were identified.</p>	<p>No other applicable ordinances were identified.</p>
South El Monte	<p>Land Use Element:</p> <p>Goal 5.0: Create a sense of identity and place for South El Monte within the San Gabriel Valley.</p> <p>Policy 5.1: Locate distinctive public signage and landscaping that identify South El Monte at key entry points into the City, including Santa Anita A venue, Peck Road, Rosemead Boulevard, and Garvey A venue.</p>	<p>Municipal codes applicable to aesthetic resources within the Plan Area can be found in Chapter 17.20 (Public Facilities Zone (P-F)) Section 17.20.190 (Exterior Lighting Facilities), and Chapter 17.62 (Advertising Signs) Section 17.62.080 (General Sign Provision).</p> <p>Under Chapter 17.20 (Public Facilities Zone (P-F)) Section 17.20.190 (Exterior Lighting Facilities) the following apply:</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 5.2: Provide for the consistent use of street trees along all sidewalks and property frontages.</p> <p>Policy 5.3: Establish a consistent style of design for all public signage, including fixture type, lettering, colors, symbols/and logos.</p> <p>Goal 6.0: Provide for the revitalization of deteriorating land uses and properties.</p> <p>Policy 6.3: Promote vigorous enforcement of City codes, including building, zoning, and health and safety, to promote property maintenance.</p>	<p>Exterior lighting facilities shall be arranged in a manner that will not provide a direct glare or create hazardous interference with highways and neighboring properties. (Ord. 822 §1, 1989)</p> <p>Under Chapter 17.62 (Advertising Signs) Section 17.62.080 (General Sign Provision) the following applies:</p> <p>The following provisions pertain generally to all signs erected or maintained within the city. Where a conflict occurs between this section and any other sections of the City Code concerning signs, these regulations shall apply:</p> <p>A. Sign Maintenance.</p> <p>1. All signs, together with their supports and appurtenances, shall be kept in a proper state of repair. The display surface of all signs shall be kept neatly painted or posted. The building official may order the repair or removal of any sign that is not maintained in accordance with the provisions of these regulations.</p> <p>2. All signs and advertising structures which are constructed on property lines, or within five feet thereof, shall have a smooth surface. No nails, tacks or wires shall protrude, except for electrical reflectors and devices which extend over the top and in front of the advertising structure.</p> <p>B. Signs at Intersections. No on-site advertising display or portion thereof shall be erected or maintained at the intersection of any public or private street within a triangular area formed by a line connecting points forty feet from the intersection of the projected street property lines. No sign shall be placed in such a location as to interfere with, obstruct the view of, or be confused with any authorized traffic sign or signal.</p> <p>C. Obstruction of Passage. No sign or sign structure shall be erected in such a manner that any portion of its surface or supports will interfere in any way with the free use of a fire escape, exit or standpipe. No sign shall obstruct any window to such an extent that light or ventilation is reduced to a point below that required by any law, code or ordinance.</p> <p>D. Signs on Public Property. Signs on public property or within the public right-of-way shall be prohibited unless otherwise authorized by these regulations.</p> <p>E. Signs on Curbs, Streets or Street Signs. No person shall paint, mark, paste, fasten, or in any manner affix or cause to be painted, marked, pasted, fastened, or any manner affixed to or on the curb, street, sidewalk, street sign post, or to or on any sign erected for the purpose of directing or warning traffic, or to or on any telephone, telegraph or electric light pole, or to or on any tree or shrub in any park, public street, alley, parkway or sidewalk any sign, poster, or advertisement of any kind without first obtaining written approval of the city council to do so. Nothing in this section shall be construed as to prohibit the posting of official signs by any department of the city, county, state or federal government, or to the posting of legal notices in the place or manner prescribed by law. (Ord. 822 §1, 1989; Ord. 963 §36, 1995)</p>	
Temple City	<p>Land Use:</p> <p>Goal LU 2: Land Use Mix. A complete community that is balanced with places for living, working, shopping, recreation, education, and arts and culture that reflect Temple City’s history, tradition, and diversity.</p> <p>LU 2.1 Complete Community. Allow for the development of uses contributing a complete and self-sustaining community, containing a mix of uses that minimize the</p>	<p>Municipal codes applicable to aesthetic resources within the Plan Area can be found in Title 9 Article F (Signs).</p> <p>Title 9 Article F (Signs) was established for the purpose of protecting and enhancing the aesthetic qualities that define and distinguish Temple City, protecting public safety and general welfare, assisting property and business owners and business tenants to benefit from their investments, and promoting economic development and</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>need for residents to travel outside of the City for retail goods and services, employment, entertainment, and recreation.</p> <p>LU 2.7 Places for Recreation and Celebration. Provide parks, open spaces, venues for community events, and similar uses enabling residents to participate in healthy lifestyles and celebrate the community.</p> <p>LU 3.6 Pedestrian-Active Districts. Maintain a robust network of streetscape and pedestrian amenities within the downtown core and mixed-use and commercial centers supporting pedestrian activity and enhancing walkability.</p> <p>LU 4.1 Development Compatibility. Require that development is located and designed to assure compatibility among land uses, addressing such elements as building orientation and setbacks, buffering, visibility and privacy, automobile and truck access, impacts of noise and lighting, landscape quality, and aesthetics.</p> <p>LU 4.7 Development that is Compatible. Require that development demonstrates a contextual relationship with neighboring structures and sites addressing such elements as building scale, massing, orientation, setbacks, buffering, arrangement of shared and private open spaces, visibility, privacy, automobile and truck access, impacts of noise and lighting, landscape quality, infrastructure, and aesthetics.</p> <p>Natural Resources:</p> <p>Goal NR 5: Conservation and Protection. Conserve, protect, and enhance Temple City’s natural environment.</p> <p>NR 5.1 A Greener City. Maintain and protect the City’s urban forest which provides shade and avian habitat, sequesters carbon monoxide emissions, and supports pedestrian activity.</p> <p>NR 5.2 Tree Preservation. Encourage the on-site preservation or off-site relocation of all mature and native trees in good health in all new development or renovation projects, as feasible.</p> <p>NR 5.4 Landscaping. Require landscaping that minimizes the need for herbicides and pesticides and provides food, water, habitat, and nesting sites for birds and other beneficial insects that help maintain the environmental resources and restore the larger ecosystem.</p> <p>NR 5.5 Native Plant Use. Require the use of native and drought tolerant plant materials, including native tree species, in public and private landscaping and revegetation projects.</p> <p>Community Services:</p> <p>CS 8.9 Vacant and/or Underutilized Property. Develop a strategy to acquire, activate, or program vacant and/or underutilized property within Temple City to expand recreation and open space opportunities, while also improving the aesthetics and urban form of the community.</p> <p>CS 8.11 Sustainable Parks. Require that new parks are designed and existing parks are retrofitted over time to incorporate sustainable development and landscape practices that reduce water and energy consumption.</p> <p>CS 8.12 Physical Activity. Ensure that Temple City’s recreation and open space areas provide opportunities for residents of all ages, abilities, and incomes to achieve recommended levels of daily physical activity.</p> <p>Goal CS 10: Trails. An accessible and connected trail system that provides recreational opportunities throughout Temple City.</p>	<p>investments through enhanced aesthetic appeal, proper sign regulations are an important governmental interest. Specific rules and regulations include the following;</p> <p>A. Compliance Required: No person shall erect, re-erect, construct, maintain, enlarge, alter, change copy, repair, move, improve, remove, convert, or equip any sign or sign structure, or paint a new wall mural in the city, or cause or permit the same to be done, contrary to, or in violation of, any provision of this article.</p> <p>B. Interpretations by Director: Interpretations of the requirements of this article shall be exercised considering the city’s content neutrality policy. Where a particular type of sign is proposed in a permit application, and the type is neither expressly allowed nor prohibited by this article, or whenever a sign does not qualify as a “structure” as defined in the California Building Code, then the director shall approve, conditionally approve, or deny the application based on the most similar sign type that is expressly regulated by this article.</p> <p>C. Content Neutrality: It is the city’s policy to regulate signs in a constitutional manner that is content neutral with respect to both noncommercial and commercial messages. For the purposes of this article, a content-neutral regulation is a so-called “time, place, or manner” regulation, which, as the name suggests, does no more than place limits on when, where, and how a message may be displayed or conveyed.</p> <p>D. Message Substitution: Signs authorized by this article can carry noncommercial messages in lieu of any other commercial or noncommercial messages. Substitution of messages may be made without an additional permitting process. This provision prevails over any more specific provision to the contrary within this article. The purpose of this provision is to prevent an inadvertent favoring of commercial speech over noncommercial speech, or favoring of any noncommercial message over any other noncommercial message. This provision does not create a right to increase the total amount of signs or allowable sign area on a parcel, nor does it affect the requirement that a sign structure or mounting device be properly constructed.</p> <p>E. Rules for Design and Installation Aspects of Signs: Rules and regulations concerning the design and installation aspects of signs, (e.g., number, type, location, size, height, illumination, spacing orientation, etc.) stand enforceable.</p> <p>F. Address Signs: Address signs, 12 inches high or less, do not count toward the maximum allowable sign area and are required to comply with Title 3 (Public Safety).</p> <p>G. Property Owner’s Consent Required: Signs shall not be displayed without the expressed written consent of the legal owner of the property or authorized representative of the property on which the sign is mounted or displayed. For purposes of this regulation, “owner” means the holder of the legal title to the property and all parties and persons holding a present right to possession, control, or use of the property.</p> <p>H. Off-Site Commercial Sign Regulation: The city clearly and completely prohibits the construction, erection, or use of off-site signs displaying off-site commercial messages (i.e., billboards), other than those that legally exist in the city, or for which a valid permit has been issued and has not yet expired, as of the date on which this provision was first adopted. The city adopts this regulation in compliance with California Government Code Section 65850, California Business and Professions Code Sections 5354(a) and 5408.3 (both effective January 1, 2003). Permits shall not be issued for off-site signs displaying off-site commercial messages that violate this regulation, and the city will take immediate abatement action against such signs constructed or maintained in violation of this regulation. The council affirmatively declares that it</p>

	<p>CS 10.1 Connections. Connect residential neighborhoods, schools, recreational and open space areas, and key commercial and activity centers to the extent feasible, with trails, walking paths, and bikeways.</p> <p>CS 10.2 Safe Trails. Ensure that trails are safe, well-marked, and well lit.</p> <p>CS 10.3 Linear Park/Greenbelt. Strive towards the development of a linear park/greenbelt system that includes trails along the Eaton Wash and Arcadia Wash that is linked with neighborhoods, recreation and open spaces, and adjoining communities.</p> <p>CS 10.4 Regional Trail System. Cooperate and collaborate with adjacent jurisdictions in developing a regional trail system.</p>	<p>would have adopted this regulation even if it were the only provision in this article. The council intends for this off-site sign regulation to be severable and separately enforceable even if other provisions of this article may be declared, by a court of competent jurisdiction, to be unconstitutional, invalid, or unenforceable. This provision does not prohibit agreements to relocate existing, legal off-site signs, as encouraged by California Business and Professions Code Section 5412. (Ord. 19-1036; amd. Ord. 22-1060)</p>	
West Covina	<p>Our Natural Community:</p> <p>Goal: To live in balance with our natural environment by preserving the existing open spaces, improving the quality of natural resources, and greater access to open space.</p> <p>Policy P1.1: Promote alternative transportation modes like walking, biking, and transit that reduce emissions related to vehicular travel.</p> <p>Policy P1.5: Where appropriate, new development shall minimize impervious area, minimize runoff and pollution, and incorporate best management practices.</p> <p>Policy P1.6: Preserve, conserve, and add to public open space.</p> <p>Policy P1.9: During the review of public and private development projects, analyze potential impacts to views of natural areas from public streets, parks, trails, and community facilities.</p> <p>Policy P1.10: To preserve nighttime views within and immediately adjacent to single family residential zones, require property owners within and directly adjacent to these zones to utilize shielding and directional lighting methods to direct lighting away from adjoining properties.</p> <p>Policy P1.11: Adopt development standards that prevent glare and light trespass and assess the impact of outdoor lighting during the development review process.</p> <p>Our Prosperous Community:</p> <p>Policy P2.3: Focus new growth in the Downtown Area to create vibrancy and invest in key public improvements.</p> <p>Action A2.3a: Invest in infrastructure and improve the public realm.</p> <p>A cohesive “sense of place” and aesthetic appeal is increasingly important to a broad range of demographics and implementing public realm improvements will be essential to capturing new development. West Covina should prioritize realizing the improvements identified in the General Plan update during regular streetscape upgrades, as well as investing in targeted improvements. In addition to streetscape, signage, and lighting improvements, the City should consider aesthetic improvements to the Walnut Creek Wash in partnership with County and other regional partners. The improved Wash can become a recreational and leisure hub for residents and visitors. The City should create a targeted downtown infrastructure implementation plan as part of the City’s capital development and public works plan, and prioritize investments based available resources.</p> <p>Our Well Planned Community:</p>	<p>Municipal codes applicable to aesthetic resources within the Plan Area can be found in Article XIII (Overlay Zones), Article VII (Signs), and Article X (Nonresidential Zones).</p> <p>Article XIII (Overlay Zones) Division 2 regarding Hillside zones establishes standards for undeveloped land designated as being within the hillside overlay zone. Guiding principles and standards are set forth to accomplish the following:</p> <ul style="list-style-type: none">a. To assure the orderly development of hillside areas.b. To achieve land use densities that are in conformance with the general plan; however, the uniformity of these densities will be modified by, (1) prohibiting development on excessively steep slopes and (2) permitting "density transfers" in order to achieve specific economic, energy, environmental and aesthetic objectives.c. To promote a development pattern that balances economics with environmental concerns, and private property rights with the public interest.d. To assure land planning and development patterns that take into account the cost-benefits of alternative designs upon city services and fiscal resources.e. To assure development patterns that will minimize the utilization of the critically scarce resources, water and energy.f. To encourage hillside development that will leave a residual amount and pattern of undeveloped land, so as to form the nucleus of a viable open space system in the San Jose Hills.g. To assure the placement of hillside development so that the open space will coincide with areas of critical environmental concern and/or recreational opportunity.h. To assure that well-designed residential development occurs, that is compatible with the site and the adjacent hillsides.i. To assure that hillside development demonstrates a concern for the view of the hills as well as the view from the hills so as to retain the sense of identity and image that these hill areas impart to the city and its environs.j. To assure that streets, public utilities and facilities are designed and constructed in an orderly, well-managed, planned manner; with each development taking into consideration its impact on existing and future development in the area. <p>(Code 1960, § 11202.01; Ord. 3.1.3 Impact Assessment

3.1.3.1 Significance Criteria

Appendix G of the State CEQA guidelines was reviewed to determine if the Plan would result in significant impacts related to aesthetics. These guidelines serve as the threshold of significance for determining impacts to aesthetic resources and consider if the Plan would:

- 1(a) Have a substantial adverse effect on a scenic vista?*
- 1(b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?*
- 1(c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experiences from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?*
- 1(d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?*

3.1.3.2 Methodology

Analysis of potential impacts on the aesthetic, scenic, and visual environment was conducted using a viewshed approach where a three-mile limit (i.e., the general extent of the human eyes line of sight, per Doerry 2013) was considered around the Plan Area. This approach allows for the assessment of both nearby/localized visual impacts as well as how the Project would contrast or blend in with the existing scenic environment. Contextual factors such as form, color, height, and lighting were considered in assessing the compatibility of a proposed facility with the existing urbanized and developed environment.

3.1.3.3 Plan Impacts

3.1.3.3.1 1(a) Have a substantial adverse effect on a scenic vista?

3.1.3.3.1.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Stormwater Management

Construction

Less than Significant with Mitigation. A substantial adverse effect on scenic vistas can occur when the visible scenic landscape is altered or when a new contrasting object or structure is introduced that blocks or obscures a scenic vista from a public location. A scenic vista can be defined as any view of a beautiful landscape. Given the range of potential areas encapsulated in the Plan Area, there is the potential for an individual project to include or be adjacent to a scenic vista, including but not limited to open spaces, undeveloped hillsides, and ridgelines that provide beneficial aesthetic qualities to the existing environment. These existing scenic vistas may be impacted by the alteration of the landscape or the construction of a feature that may obstruct the vista. Some municipalities note in their general plan that no scenic vistas have been officially designated (e.g., City of Covina, City of Pomona, City of

Rosemead, La Puente); however, lack of official designation does not mean that a scenic vista does not exist in the Plan Area.

Construction of the greenway paths and amenities, pocket parks and greenspaces, and stormwater management facilities would typically result in new or newly configured greenspaces in the parcels affected. Construction would involve ground disturbance, construction equipment operation, stockpiling of materials, views of incomplete structures, and worker activities that would contrast with the aesthetic character of a site. Equipment could include excavators, dump trucks, backhoes, pavers, loaders, cranes, water trucks, and utility trucks. Construction would occur during normal business hours (e.g., Monday through Friday with 8-hr workdays). Staging areas would be located primarily in the District ROW. Construction equipment is likely to remain on-site during non-construction hours. Construction equipment and activities may be visible from certain distances or angles from informal scenic views.

These conditions would be present for the duration of the construction period and would temporarily impact scenic vistas if located within the viewshed of a designated area. Construction activities could also result in an adverse impact to the views from nearby residents and people on the District ROW and adjacent parcels where a project may be located. The larger and more complex the proposed project is, the greater the potential impacts to visual resources. Implementation of **MM AES-1: Install Construction Fencing for Visual Screening and Security for Construction Lasting Longer than 30 Days** would reduce visual impacts of construction areas using screening/fencing. While temporary and limited to the construction phase, substantial adverse impacts to scenic vistas and viewsheds may occur.

Operation

Less than Significant. Many of the Project components would be low in profile or small in scale (e.g., fencing, gates, seating, benches, bike parking, signage, public art, trash receptacles, water stations), and some would be moderate in size (e.g., restrooms, shade structures). As the pathways would be constructed along existing stormwater channels, the existence of greenways in the District ROW would not create a new significant linear feature from a scenic vista. Pathways and amenities, such as shade structure, public art, or seating, as well as features such as pocket parks and greenspaces and stormwater management facilities would likely be considered as improved views of the District ROW from existing scenic vistas due to their integration of plants and other visually appealing features. Further, all proposed features, art, signage, and structures would be subject to the applicable municipal code(s) for aesthetics and visual environment; therefore, operational impacts to scenic vistas and views would be less than significant.

Mitigation Measures

MM AES-1: Install Construction Fencing for Visual Screening and Security for Construction Lasting Longer than 30 Days. For construction projects lasting greater than 30 days, the project proponent shall require contractors to 1) install neutral color (e.g., green, brown, black, white, tan, navy) perimeter fencing of a minimum height of six feet around construction areas to screen and provide security to pedestrians and other people with a view of the site to reduce views of construction staging areas, grading, and site disturbance.

Significance After Mitigation

For construction impacts, implementation of **MM AES-1: Install Construction Fencing for Visual Screening and Security for Construction Lasting Longer than 30 Days** would screen construction equipment and activities from scenic vistas/views and the views of nearby residents and commuters, such that construction vehicles, excavation activity or stockpiles are less visible, and construction sites are more likely to blend into the surrounding views. The construction sites would still stand out to nearby viewers, but the developed nature of the area and District ROW would allow for the screened construction areas to blend in with the surrounding aesthetic environment, reducing the potentially significant impacts to less than significant levels.

Operational impacts would be less than significant. No mitigation is required.

3.1.3.3.1.2 Greenway Paths and Greenway Amenities + Safe Crossings

Construction

Less than Significant with Mitigation. Impacts associated with construction of greenway paths would occur as described above. The inclusion of safe crossings in an individual project design would result in additional potential impacts to visual resources as this project component would be more readily visible to visual receptors and could be located along public roadways and could include new bridges crossing existing channels. While all construction would be temporary and many projects would be short in duration, disturbance to scenic vistas could vary in intensity as well as the length of time necessary to complete a project, particularly for larger crossings, such as pedestrian bridges. Implementation of **MM AES-1: Install Construction Fencing for Visual Screening and Security for Construction Lasting Longer than 30 Days** would reduce visual impacts of construction areas using screening/fencing. This could result in a significant adverse effect to a scenic vista. Construction activities could also result in an adverse impact to the views from nearby residents and commuters along the District ROW where a project may be located. While temporary and limited to the construction phase, potentially significant impacts to scenic vistas and viewsheds may occur.

Operations

Less than Significant. As the pathways would be constructed along existing stormwater channels, the existence of greenways in the ROW would not create a new significant linear feature from a scenic vista. Safe crossings would permanently alter the aesthetic of existing roads and channels by introducing pedestrian-friendly safety features such as pedestrian bridges or ramps crossing the channels, crosswalk signage, and safety signals. While the majority of project upgrades will be to existing roadways, new bridges that span the existing channels (up to 400 feet in length) may also be constructed under the Plan to improve access throughout the Plan Area. These bridges would be developed over the existing stormwater channels, an entirely developed project area. Due to the highly urbanized nature of the Plan Area, these alterations to road structure and design would blend in with the surrounding urbanized environment and have less than significant impacts to scenic vistas.

Mitigation Measures

MM AES-1: Install Construction Fencing for Visual Screening and Security for Construction Lasting Longer than 30 Days.

Significance After Mitigation

It may not be possible to use construction fencing entirely around an active bridge development site. Construction equipment and activities may be visible during bridge construction, but fencing would be used to the greatest extent feasible to minimize aesthetic impacts. The construction sites would still stand out to nearby viewers, but the developed nature of the area and District ROW would allow for the screened construction areas to blend in with the surrounding aesthetic environment, reducing the potentially significant impacts to less than significant levels.

Operational impacts would be less than significant. No mitigation is required.

3.1.3.3.2 1(b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

3.1.3.3.2.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less Than Significant. Approximately three miles with clean line-of-sight is considered the visible extent of the human eye; therefore, anything beyond three miles is considered outside of the visible zone (Doerry 2013). As observed in Figure 3.1-1, the Plan Area does not include any designated state scenic highways; no designed scenic highways are within three miles of the Plan Area; and the Plan Area is not visible from any state scenic highways. Accordingly, any proposed projects greater than three miles from a scenic highway would not result in the damage of any scenic resources, such as trees, rock outcroppings, or historic buildings that are located within or along a state scenic highway. Therefore, potential impacts to scenic resources within a state scenic highway zone would be less than significant.

Operations

Less than Significant. Operation of the greenway and amenities and any other Plan component would not substantially damage natural features, such as trees, rock outcroppings, and historic buildings. For those proposed greenways and Plan components located within visual zone of any scenic highways, these new permanent features would serve as a long-term beneficial impact to the surrounding highly urbanized scenic area as viewed from scenic highways. Therefore, potential operational impacts to scenic resources within a state scenic highway zone would be less than significant.

Mitigation Measures

Potential impacts to natural features and resources within a state scenic highway zone would be less than significant, and no mitigation is required.

Significance After Mitigation

Construction and operational impacts would be less than significant. No mitigation is required.

3.1.3.3.3 1(c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

3.1.3.3.3.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Significant and Unavoidable. There are no nonurbanized areas in the Plan Area. Greenway paths and amenities, pocket parks and greenspaces, safe crossings, and stormwater management would be constructed within the District ROW and on adjacent parcels and would be designed, constructed, and implemented following the *Design Guidelines and Standards*, which are compatible with the General Plan and subject to the applicable municipal zoning, codes, and other relevant County regulations. However, the potential exists that construction of future projects in accordance with the *Design Guidelines and Standards* may still conflict with the specific zoning and regulations of an incorporated city within the Plan Area in which the project is located. Therefore, impacts would be significant and unavoidable.

Operations

Significant and Unavoidable. The Plan Area is within urbanized or industrial areas of the SGV. One objective of the Plan is to facilitate the development of more greenspace and natural features within existing urbanized areas. The Plan, therefore, does not seek to degrade a site's existing visual character or quality, but rather enhance it. The *Design Guidelines and Standards* were prepared to support the development of specific design and technical solutions for future greenway projects to be implemented under the Plan. The overall goal is to build compatible projects that provide a secure and uniform visual identity and user experience across the Plan Area. This uniform visual identity is crucial to ensuring that future projects will not conflict with applicable zoning and other regulations governing scenic quality to the extent feasible. Design priorities required by the *Design Guidelines and Standards* intentionally incorporate community values and priorities identified through the community engagement process described in the Plan. Bikeway and multi-use greenways design criteria are described in detail in Sections 4-8 of the *Design Guidelines and Standards*. These details include descriptions of alignment, horizontal clearance, surface types, and other aspects of design that contribute to the ultimate aesthetic. In addition, the potential effects of construction and installation of the stormwater management features included in the Plan on visual character were evaluated in detail in the Los Angeles County EWMP PEIR (2015) and are incorporated by reference herein. As described in Section 3.1 of the EWMP PEIR, aboveground stormwater management features such as bioswales and constructed wetlands could result in adverse effects to aesthetics if not properly maintained. As stated, "[p]oorly maintained BMPs, such as wet ponds or constructed wetlands, may be unsightly as a result of excess algal growth or public littering. Wet ponds and constructed wetlands can also become mosquito-breeding grounds. However, mosquito problems can usually be reduced or eliminated through proper design and/or organic controls such as mosquito-eating fish. Successful design avoids shallow or stagnant water and reduces large areas of periodic drying, which can occur in a dry detention basin. In addition, all BMPs need to have trash and debris removed periodically to prevent odor and preserve

aesthetic values.” Section 11 of the *Design Guidelines and Standards* specifically addresses these potential maintenance issues and specifies design and maintenance requirements to avoid potential vector control issues.

Landscaping guidelines for the greenways and their amenities (e.g., gardens, gateways, greenspaces) are provided in Section 10.10 of the *Design Guidelines and Standards*. Greenway paths would be constructed within the District ROW and would be designed, constructed, and implemented following the *Design Guidelines and Standards*, which are compatible with the General Plan and subject to the applicable but not necessarily with the municipal zoning, codes, and regulations of every city in the Plan Area. Policies relevant to urban design and aesthetics for the many municipalities in the Plan Area are identified in Section 3.1.2, Regulatory Setting. Specific policies pertaining to land use, aesthetics, and scenic quality generally pertain to ensuring compatible uses for all development and ensuring high quality design and architectural elements. Some municipal regulations specifically identify goals of promoting and protecting public spaces, pedestrian and bicycle access and amenities, and increased opportunities for open space and recreation. However, the potential exists that project designs for greenways, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management completed in accordance with the *Design Guidelines and Standards* may still conflict with the specific zoning and regulations of an incorporated city within the Plan Area in which the project is located, resulting in significant and unavoidable impacts to scenic quality.

Mitigation Measures

No mitigation measures that would avoid a significant impact or reduce impacts to less than significant levels have been identified.

Significance After Mitigation

Projects would comply with the *Design Guidelines and Standards*, which ensure compatibility with County rules and regulations. However, projects implemented under the Plan may be implemented by community groups or other private entities anywhere within the Plan Area, including areas under the jurisdiction of incorporated cities. While projects completed by cities or private entities would be required to obtain local land use approvals for individual projects, the County is not subject to permitting requirements and compliance with local jurisdictions; Therefore, potential exists for projects to conflict with local regulations. Accordingly, impacts would be significant and unavoidable.

3.1.3.3.4 1(d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

3.1.3.3.4.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant. Construction activities and staging areas for construction of greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management would be located within the District ROW and on adjacent parcels. Any Plan components proposed for construction under the Plan would be in a setting in which there are numerous existing sources of light and glare including safety lighting; nearby rail and road/freeway activity; and nearby residential,

industrial, and commercial buildings on adjacent streets. Construction activities would not produce substantial glare. The contribution of any lights from construction equipment, vehicles, and materials from project construction activities when added to the existing sources of light and glare would not be major, and lighting would only be operated during work hours. Impacts associated with additional illumination would be temporary.

Construction activities are generally expected to occur during daylight hours in eight-hour days, consistent with County and city regulations governing construction. Therefore, construction activities for greenway paths and greenway amenities are unlikely to substantially alter ambient illumination light levels or result in significant light impacts or glare on surrounding land uses. Therefore, construction activities for greenway paths and greenway amenities are unlikely to substantially alter ambient illumination light levels or result in significant light impacts or glare on surrounding land uses and impacts during construction would be less than significant.

Operations

Less Than Significant with Mitigation. Lighting plays an important role in keeping greenways safe and accessible for all. Adjacent parks, gathering spaces, undercrossings, overcrossings, wayfinding signage, call boxes, and other important amenities require attention to lighting with regards to safety and visibility. All greenway and adjacent project area lighting shall be sensitive to greenway users and area residents and habitat.

The SGV is a highly urbanized area. Lighting along the District ROW is from the surrounding surface streets, bridges, parks, buildings, residences, and other developments. Nighttime lighting fluctuates throughout the Plan Area due to motor vehicle headlights, existing streetlights, and building security lights. Existing glare in the surrounding environment is typical of highly urbanized areas, with sunlight reflected off the surfaces of buildings, vehicles, and windows. The channels in the Plan Area feature concrete or natural bottoms and do not contain reflective materials. While highly urbanized, a significant impact would occur if a new substantial source of light/glare is introduced by a project.

The County and local codes and ordinances applicable to light/glare are provided in Section 3.1.2. Section 10.6 of the *Design Guidelines and Standards* provides Plan-specific lighting guidance. Aesthetic guidance for lighting includes the following:

- Select fixtures that have a modern, urban aesthetic free of extraneous decorative elements.
- Acorn light fixtures and light masts are prohibited.
- Integrate lighting into architecture where possible rather than having standalone fixtures.
- Finish for luminaries and pole must be available in a neutral solid metallic gray color matching RAL 9007 or comparable equal.
- Complete lighting study to determine appropriate light levels and fixture types, locations, and heights.
- Install lighting at over/underpasses, intersections, and trailheads for safety.
- Ensure lighting is consistent for all Plan Areas and will not be blocked by growing trees/shrubs and any other obstructions.
- Use light-emitting diode (LED) or more efficient light source.
- Use Dark Sky compliant and BUG rated (backlight, up-light, glare) fixtures. These ratings should be as efficient as possible and eliminate spillover lighting. Fixtures should meet these requirements without adding additional shielding.

- Use downlighting and yellow-spectrum lighting to minimize overall impacts on people, wildlife, and the night sky.
- Provide fixtures that have Illuminating Engineering Society files for illumination measured in lumens (bulb strength depending on pole height) and footcandles (light falling on a surface determined by lighting designer).
- Engineer poles and footings to withstand all project loads, including but not limited to, wind loads.
- Luminaire housing to be IP66 suitable for damp locations.
- Require UL listed products.
- Require manufacturers with an established history of light fixture production.
- Snap together assembly or comparable system for ease of installation.
- Use fixtures that can host other uses including emergency call boxes, banners, and signs.
- Use products supported with complete engineering drawings and patents.
- Energy Use and Maintenance
- Use solar powered light fixtures.
- Use fixtures made with recycled content as much as possible.
- Ensure fixtures have LED cartridges that are easily replaced.

Additional guidance for wildlife and habitat areas is also provided in the Design Guidelines and Standards:

- Use only what fixtures are needed, and the warmest color temperature possible to provide safety and egress.
- Do not over-light or make lights unnecessarily bright.
- Provide fixtures and controls capable of dimming or shutting off lighting when occupancy loads are low (example: dimmable driver and occupancy sensor).
- Color rendering should be at least 80 CRI.
- Avoid light bollards where possible.
- Use as few fixtures as possible. Fixtures should be low-level lighting. Avoid tall poles where possible.
- Use the warmest color temperature possible, no more than 2200K as a maximum. Consider other measures that impact wildlife when selecting an appropriate fixture, such as the light spectrum emitted.
- Transition to a warm color temperature in gradual steps if moving from a street or path of egress to a habitat area.
- Provide fixtures and controls capable of shutting off lighting on a timer, such as when a park is closed, to limit the duration of lighting to the absolute minimum period possible.
- No CRI level is required. Light should be as amber as possible.

Sample fixtures that may meet requirements include Landscape Forms RAMA, Landscape Forms Torres, and Hess Linea. BEGA also carries low-level lighting fixtures that may meet requirements for lighting wildlife habitat areas.

The design, construction, and operations of greenways and other Plan components would follow the *Design Guidelines and Standards*, as described above, including lighting standards meant to minimize lighting and glare impacts that could affect day or nighttime views in the Plan Area. Although greenway paths and other Plan components would be implemented within the Plan Area, light or glare generated in the ROW and adjacent parcels would be visible from outside of the Plan Area. Proposed lighting would be limited to dispersed and few sources of light, such as spaced post lamps and security/safety lighting. These types of new lighting sources would not constitute a significant new source and are anticipated to blend into the existing developed and urbanized environment. However, depending on

location relative to the location of other designated open spaces or residential areas, individual projects may conflict with the lighting code and policies of the individual incorporated cities in which they are located, which could result in the introduction of a new source of lighting that may cause a potentially significant impact. Implementation of **MM AES-2: Develop and Submit Lighting Plan** would reduce visual impacts from lighting by gaining approval of lighting options prior to project finalization.

Mitigation Measures

MM AES-2: Develop and Submit Lighting Plan. The project proponent shall develop a lighting plan consistent with the lighting code and policies of the municipality in which the project is located.

Significance After Mitigation

Construction impacts would be less than significant. No mitigation is required.

While project lighting is not anticipated to represent a new significant source of lighting, **MM AES-2: Develop and Submit Lighting Plan** would ensure that the project lighting plan adheres to local codes, plans, policies and would provide the municipality the discretion in allowing new sources of light. This measure would ensure that residual impacts during operation are less than significant after mitigation.

3.1.3.4 Impacts of Conceptual Designs

This section discusses potential impacts from the 10 conceptual designs discussed in Section 2.4.

3.1.3.4.1 1(a) Have a substantial adverse effect on a scenic vista?

Construction

Less than Significant with Mitigation. The components proposed for all 10 conceptual designs are within the maximum extent limits as described for the Plan in Section 2. Further, based on the example locations for each of the conceptual designs, no scenic vistas are located within close proximity of the example sites from which the construction of any of the conceptual designs would be visible (if implemented in the future by a project proponent). Further, with implementation of **MM AES-1: Install Construction Fencing for Visual Screening and Security for Construction Lasting Longer than 30 Days**, as described in Section 3.1.3.1.1, Impacts 1(a) for the Plan, any impacts to visual setting from construction activity would be minimized to less than significant levels. Therefore, none of the 10 conceptual design examples would result in any impacts to scenic vistas not previously described for the Plan in Section 3.1.3.1.1, and none of the 10 conceptual designs would result in impacts of greater severity than described for the Plan. No additional mitigation measures would be required. Construction impacts from the 10 conceptual design projects would be less than significant with mitigation **MM AES-1: Install Construction Fencing for Visual Screening and Security for Construction Lasting Longer than 30 Days**.

Operations

Less than Significant. Because all of the 10 conceptual designs are within the maximum extent limits as described for the Plan in Section 2, the 10 conceptual designs would have less than significant and potentially beneficial impact to scenic vistas as described previously under Plan Impacts.

3.1.3.4.2 1(b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?

Construction

Less than Significant. As described in Section 3.1.3.3, Impacts 1(b) for the Plan, any projects located greater than three miles from a state scenic highway would not be visible from the scenic highway and therefore would result in no impacts to scenic resources within a state scenic highway. As described in Table 3.1-3, several of the conceptual design project examples are greater than three miles from the nearest scenic highway and therefore, no impacts would occur. There would be no additional impacts not already addressed in Section 3.1.3.3, Impacts 1(b) for the Plan, and no impacts of greater severity than described in Section 3.1.3.3, Plan Impacts 1(b). For the other conceptual design projects, the example locations are under three miles from Highway 210, San Gabriel Canyon Highway, or State Highway 57, and construction activities could be visible to motorist traveling on the highway. However, there would be no additional impacts or impacts of greater severity than as described in Section 3.1.3.3, Plan Impacts 1(b). No additional mitigation measures are required.

Operations

Less than Significant. Following construction, operation of the conceptual design projects at each of these example locations would contribute beneficially to the scenic resources along nearby scenic resources. Operation of the conceptual design projects would not substantially damage natural features, such as trees, rock outcroppings, and historic buildings. Brief descriptions providing greater details of this analysis for each example site are provided in the table below. As indicated in each of the descriptions, none of the conceptual design examples introduce any components not previously considered within the Plan and therefore, would not result in any new impacts or more severe impacts than as described for the Plan.

Table 3.1-3. Analysis of Construction and Operations Impacts to Scenic Resources Visible from State Scenic Highways from Conceptual Design

Conceptual Design Project	1(b). Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	No Impact. Route 110 (federal byway) is the closest scenic route at approximately four miles to the northwest of the site, putting the site outside of the visible zone of the Scenic Highway. Accordingly, the proposed activities would not result in the damage of any scenic resources, such as trees, rock outcroppings, or historic buildings that are located within or along a state scenic highway. Thus, there would be no impact as a result of either construction activities or long-term operation of the proposed facilities, if this conceptual design project was to be implemented in the future by a project proponent.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	Less Than Significant. Route 210 (eligible state scenic highway) is the closest scenic route to the location identified for this proposed conceptual project design and is approximately two miles to the northeast of the site. Based on the conceptual design example for this site, the conceptual project would not require the removal or damage of any scenic resources along or adjacent to the scenic highway; however, if this conceptual project were to be implemented by a project proponent in the future, the construction activities would potentially be visible by motorists traveling along Route 210. This would be considered a short-term but less than significant impact because no

Conceptual Design Project	1(b). Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?
	<p>physical damage would occur to natural features or historic buildings visible from Route 210.</p> <p>In addition, if this conceptual project were to be implemented in the future, the long-term operation of the proposed greenway and other facilities would expand open spaces, incorporate two gateway parks, and add stormwater BMPs to Puente Avenue via a green street, which could serve as a long-term beneficial feature of the surrounding scenic area as viewed from the eligible state scenic highway. Therefore, potential impacts would be less than significant.</p>
<p>Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i></p>	<p>Less Than Significant. Route 110 is the closest scenic route to the location identified for this proposed conceptual project design and is approximately two miles west of the site. Based on the conceptual design example for this site, the conceptual project would not require the removal or damage of any scenic resources along or adjacent to the scenic highway; however, if this conceptual project were to be implemented by a project proponent in the future, the construction activities would potentially be visible by motorists traveling along Route 110. This would be considered a short-term but less than significant impact because no physical damage would occur to natural features or historic buildings visible from Route 110.</p> <p>In addition, if this conceptual project were to be implemented in the future, the long-term operation of the proposed greenway and other facilities would permanently alter the scenery from a large spreading ground to a new park ribbon around the spreading basin for pedestrians, studies, nature enthusiasts, and cyclists to enjoy as well as feature amenities (e.g., shade) and stormwater management facilities. This could serve as a long-term beneficial feature of the surrounding scenic area as viewed from the state scenic highway.</p>
<p>Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i></p>	<p>Less Than Significant. Route 110 is the closest scenic route to the location identified for this proposed conceptual project design and is approximately two miles west of the site. Based on the conceptual design example for this site, the conceptual project would not require the removal or damage of any scenic resources along or adjacent to the scenic highway; however, if this conceptual project were to be implemented by a project proponent in the future, the construction activities would potentially be visible by motorists traveling along Route 110. This would be considered a short-term but less than significant impact because no physical damage would occur to natural features or historic buildings visible from Route 110.</p> <p>In addition, if this conceptual project were to be implemented in the future, the long-term operation of the proposed greenway, safe crossing, and other facilities would permanently alter the scenery to include greenspaces and possibly stormwater management facilities. This could serve as a long-term beneficial feature of the surrounding scenic area as viewed from the state scenic highway.</p>
<p>San Dimas Wash at Arrow High School <i>City of Glendora</i></p>	<p>Less Than Significant. Route 210 (eligible state scenic highway) is the closest scenic route to the location identified for this proposed conceptual project design and is approximately two miles to the west of the site. Based on the conceptual design example for this site, the conceptual project would not require the removal or damage of any scenic resources along or adjacent to the scenic highway; however, if this conceptual project were to be implemented by a project proponent in the future, the construction activities would potentially be visible by motorists traveling along Route 210. This would be considered a short-term but less than significant impact because no</p>

Conceptual Design Project	1(b). Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?
	<p>physical damage would occur to natural features or historic buildings visible from Route 210.</p> <p>In addition, if this conceptual project were to be implemented in the future, the long-term operation of the proposed greenway, safe crossing in front of Arrow High School, potential creations of an education amenity within the school yard itself, further enhancement of the existing San Dimas Wash Urban Trail, modification of the existing pocket park, improved security by means of lighting and visibility improvements, and optional new pocket parks, native gardens, art displays, and bike fix station could serve as a long-term beneficial feature of the surrounding scenic area as viewed from the eligible state scenic highway.</p>
<p>San Dimas Wash at Hollenbeck Park <i>City of Covina</i></p>	<p>Less Than Significant. Route 210 (eligible state scenic highway) is the closest scenic route to the location identified for this proposed conceptual project design and is approximately one mile to the north of the site. Based on the conceptual design example for this site, the conceptual project would not require the removal or damage of any scenic resources along or adjacent to the scenic highway; however, if this conceptual project were to be implemented by a project proponent in the future, the construction activities would potentially be visible by motorists traveling along Route 210. This would be considered a short-term but less than significant impact because no physical damage would occur to natural features or historic buildings visible from Route 210.</p> <p>In addition, if this conceptual project were to be implemented in the future, the long-term operation of the proposed greenway, pocket parks, outdoor classrooms, small community garden plots, or rest areas with seating or shade, and possibly stormwater BMPs could serve as a long-term beneficial feature of the surrounding scenic area as viewed from the state scenic highway.</p>
<p>San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i></p>	<p>No Impact. Route 90 is the closest scenic route at more than five miles to the east of the site, putting it outside of the visible zone of the scenic highway. Accordingly, the proposed activities would not result in the damage of any scenic resources, such as trees, rock outcroppings, or historic buildings that are located within or along a state scenic highway. Thus, there would be no impact as a result of either construction activities or long-term operation of the proposed facilities, if this conceptual design project were to be implemented in the future by a project proponent.</p>
<p>Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i></p>	<p>No Impact. Route 210 is the closest scenic highway at more than five miles to the west of the conceptual design site, putting it outside of the visible zone of the scenic highway. Accordingly, the proposed activities would not result in the damage of any scenic resources, such as trees, rock outcroppings, or historic buildings that are located within or along a state scenic highway. Thus, there would be no impact as a result of either construction activities or long-term operation of the proposed facilities, if this conceptual design project were to be implemented in the future by a project proponent.</p>
<p>Walnut Creek at Syhre Park <i>Cities of Baldwin Park West Covina</i></p>	<p>No Impact. Route 210 is the closest scenic route at more than five miles to the west of the site, putting it outside of the visible zone of the scenic highway. Accordingly, the proposed activities would not result in the damage of any scenic resources, such as trees, rock outcroppings, or historic buildings that are located within or along a state scenic highway. Thus, there would be no impact as a result of either construction activities or long-term operation of the proposed facilities, if this conceptual design project were to be implemented in the future by a project proponent.</p>

Conceptual Design Project	1(b). Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?
Walnut Creek at Pocket Park <i>City of West Covina</i>	No Impact. Route 210 is the closest scenic route at approximately five miles to the northeast of the site, putting it outside of the visible zone of the scenic highway. Accordingly, the proposed activities would not result in the damage of any scenic resources, such as trees, rock outcroppings, or historic buildings that are located within or along a state scenic highway. Thus, there would be no impact as a result of either construction activities or long-term operation of the proposed facilities, if this conceptual design project were to be implemented in the future by a project proponent.

3.1.3.4.3 1(c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from a publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?

Construction and Operations

Less than Significant. As described in Section 3.1.3.3, Impacts 1(c) for the Plan, the entire Plan Area is urbanized, therefore this analysis evaluates whether the conceptual design examples would conflict with applicable zoning and other regulations governing scenic quality. Construction of any of the 10 conceptual design examples is not anticipated to result in any additional impacts not already addressed in Section 3.1.3.3, and no impacts of greater severity than described in Section 3.1.3.3, because the size of each of the components included in the conceptual design examples are all within the maximum extent analyzed for the Plan. Specific compatibility with local policies is described for each conceptual design project in the table below. As described for each of the conceptual design examples in the table, as currently illustrated at a conceptual level, none are anticipated to conflict with applicable zoning in the example locations or with any of the other applicable regulations governing scenic quality in those locations. More detailed analysis for each of the conceptual designs is provided in Table 3.1-4 below.

Table 3.1-4. Analysis of Conceptual Design Examples for Consistency with Applicable Zoning and Regulations Governing Scenic Quality for both Construction and Operations

Conceptual Design Project	1(c). In [...] an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	Less Than Significant. The cities of Alhambra and San Gabriel are urbanized. The construction and operation of the features included in this conceptual design project would conform with the <i>Design Guidelines and Standards</i> and are anticipated to be compatible with the Alhambra General Plan policies and goals and the City of San Gabriel General Plan's Community Design and Environmental Resources elements related to visual resources, aesthetics, and light/glare. The San Gabriel General Plan includes a goal under Environmental Resources that demonstrates the compatibility of this conceptual design project with the City's goals. Environmental Resources Goal 8.5 is "restore the lost environmental value of San Gabriel's waterways – the Los Angeles County Flood Control channels (Alhambra Wash, Rubio Wash) and the San Gabriel River." Target 8.5.1 of the San Gabriel General Plan is to "invest in the feasibility of using the flood control channels for functional and/or passive open space". Impacts would therefore be less than significant for both construction and operation of this conceptual design project.

Conceptual Design Project	1(c). In [...] an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	Less Than Significant. The cities of Baldwin Park and Irwindale are urbanized. The construction and operation of the features included in this conceptual design project would conform with the <i>Design Guidelines and Standards</i> and would likely be compatible with the Baldwin Park 2020 General Plan Urban Design Element, which addresses improvements to gateway entrances, pedestrian zones, enhanced aesthetic quality, improved streetscapes, and enhanced neighborhoods. Impacts would therefore be less than significant for both construction and operation of this conceptual design project.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	Less Than Significant. The City of Pasadena is urbanized. The construction and operation of the features included in this conceptual design project would conform with the <i>Design Guidelines and Standards</i> and would likely be compatible with the City of Pasadena 2015 General Plan Policy 4.11 regarding compatible developments, including on the basis of aesthetics. The project would also likely comply with the Pasadena Municipal Code zoning regulations and standards applicable to aesthetic qualities of the City. Impacts would therefore be less than significant for both construction and operation of this conceptual design project.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i>	Less Than Significant. The City of Pasadena is urbanized. The construction and operation of the features included in this conceptual design project would conform with the <i>Design Guidelines and Standards</i> and would likely be compatible with the City of Pasadena 2015 General Plan Policy 4.11 regarding compatible developments, including on the basis of aesthetics. The project would also likely comply with the Pasadena Municipal Code zoning regulations and standards applicable to aesthetic qualities of the City. Impacts would therefore be less than significant for both construction and operation of this conceptual design project.
San Dimas Wash at Arrow High School <i>City of Glendora</i>	Less Than Significant. The City of Glendora is urbanized. The construction and operation of the features included in this conceptual design project would conform with the <i>Design Guidelines and Standards</i> and would likely be compatible with the City of Glendora's Community Plan 2025 which contains Land Use Element policies and Open Space and Recreation Element policies. The project would also likely comply with the City of Glendora Municipal Code. Impacts would therefore be less than significant for both construction and operation of this conceptual design project.
San Dimas Wash at Hollenbeck Park <i>City of Covina</i>	Less Than Significant. The City of Covina is urbanized. The construction and operation of the features included in this conceptual design project would conform with the <i>Design Guidelines and Standards</i> and would likely be compatible with the City of Covina General Plan as well as comply with the City of Covina Citywide Design Guidelines. Impacts would therefore be less than significant for both construction and operation of this conceptual design project.
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i>	Less Than Significant. The City of Industry and the unincorporated community of Avocado Heights (Los Angeles County) are urbanized. The construction and operation of the features included in this conceptual design project would conform with the <i>Design Guidelines and Standards</i> and would likely be compatible with the City of Industry 2014 General Plan Land Use Element. The project would also likely comply with the City of Industry Municipal Code specific development requirements regulating materials, designs, construction, and maintenance standards. Los Angeles County General Plan goals and policies regarding visual and scenic resources would also be complied with. Impacts would therefore be less than significant for both construction and operation of this conceptual design project.

Conceptual Design Project	1(c). In [...] an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	Less Than Significant. The cities of Pomona, La Verne, and Claremont are urbanized. The construction and operation of the features included in this conceptual design project would conform with the <i>Design Guidelines and Standards</i> and would likely be compatible with the City of Pomona 2014 General Plan Conservation Component and Community Design policy. Additionally, the project would likely conform to the Pomona Municipal Code. The project would likely comply with the City of La Verne Zoning Ordinance and the City of La Verne General Plan Land Use Element. The project would likely comply with the City of Claremont General Plan policies on Land Use Character, Community Character, and Heritage Preservation Element. Impacts would therefore be less than significant for both construction and operation of this conceptual design project.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park and West Covina</i>	Less Than Significant. The cities of Baldwin Park and West Covina are urbanized. The construction and operation of the features included in this conceptual design project would conform with the <i>Design Guidelines and Standards</i> and would likely be compatible with the Baldwin Park 2020 General Plan Urban Design Element which addresses improvements to gateway entrances, pedestrian zones, enhanced aesthetic quality, improved streetscapes, and enhanced neighborhoods. The project would likely be compatible with the West Covina General Plan which features elements for community planning with goals and policies preserving views (e.g., Our Natural Community Policy P1.9 and P1.10) and providing safe access to corridors (Our Accessible Community Policy P4.5) and encouraging development of greenways and pocket parks (Our Active Community Policy P8.2). The project would also likely comply with the West Covina Municipal Code, Chapter 19 (Streets, Sidewalks, and Public Places). Impacts would therefore be less than significant for both construction and operation of this conceptual design project.
Walnut Creek at Pocket Park <i>City of West Covina</i>	Less Than Significant. The City of West Covina is urbanized. The construction and operation of the features included in this conceptual design project would conform with the Design Guidelines and Standards and would likely be compatible with the West Covina General Plan which features elements for community planning with goals and policies preserving views (e.g., Our Natural Community Policy P1.9 and P1.10) and providing safe access to corridors (Our Accessible Community Policy P4.5) and encouraging development of greenways and pocket parks (Our Active Community Policy P8.2). The project would also likely comply with the West Covina Municipal Code, Chapter 19 (Streets, Sidewalks, and Public Places). Impacts would therefore be less than significant for both construction and operation of this conceptual design project.

3.1.3.4.4 1(d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?

Construction

Less than Significant. As described in Section 3.1.3.3, Impacts 1(d) for the Plan, the entire Plan Area is highly urbanized, and lighting and glare are present from many surrounding sources. Construction of the conceptual design projects would not result in additional impacts to day or nighttime views in the area not already addressed in Section 3.1.3.3 and no impacts of greater severity than described in Section 3.1.3.3.

Operations

Less than Significant with Mitigation. Lighting is an important component of the Plan. All of the conceptual design projects would include permanent lighting. As described in Section 3.1.3.3.4 above, the entire Plan Area is highly urbanized and lighting and glare are present from many surroundings. Operation of the conceptual design projects would not result in additional impacts or nighttime views in the area not already addressed. While conceptual project lighting is not anticipated to represent a new significant source of lighting, **MM AES-2: Develop and Submit Lighting Plan** would ensure that the project lighting plan adheres to local codes, plans, policies and provide the municipality the discretion in allowing new sources of light. This measure would ensure that residual impacts during operation are less than significant after mitigation.

3.2 Agriculture and Forestry Resources

This section describes the existing conditions and applicable regulations pertaining to agriculture and forestry resources in the proposed Plan Area and describes the impacts associated with agriculture and forestry resources that could result from implementation of the proposed Plan.

Table 3.2-1. Summary of Potential Impacts of the Plan on Agriculture and Forestry

Plan Component	Impact Determination: Construction	Impact Determination: Operation	Mitigation Measures
Would the Plan:			
2(a). Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?			
Greenway Paths + Greenway Amenities	No Impact	No Impact	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	No Impact	No Impact	Operations: No mitigation
Greenway Paths + Safe Crossings	No Impact	No Impact	
Greenway Paths + Stormwater Management	No Impact	No Impact	
2(b). Conflict with existing zoning for agricultural use, or a Williamson Act contract?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Significant and Unavoidable	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Significant and Unavoidable	Operations: No mitigation
Greenway Paths + Safe Crossings	Significant and Unavoidable	Significant and Unavoidable	
Greenway Paths + Stormwater Management	Significant and Unavoidable	Significant and Unavoidable	
2(c). Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Significant and Unavoidable	Construction: No mitigation

Plan Component	Impact Determination: Construction	Impact Determination: Operation	Mitigation Measures
Would the Plan:			
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Significant and Unavoidable	Operations: No mitigation
Greenway Paths + Safe Crossings	Significant and Unavoidable	Significant and Unavoidable	
Greenway Paths + Stormwater Management	Significant and Unavoidable	Significant and Unavoidable	
2(d). Result in the loss of forest land or conversion of forest land to non-forest use?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Significant and Unavoidable	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Significant and Unavoidable	Operations: No mitigation
Greenway Paths + Safe Crossings	Significant and Unavoidable	Significant and Unavoidable	
Greenway Paths + Stormwater Management	Significant and Unavoidable	Significant and Unavoidable	
2(e). Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?			
Greenway Paths + Greenway Amenities	Significant and Unavoidable	Significant and Unavoidable	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Significant and Unavoidable	Operations: No mitigation
Greenway Paths + Safe Crossings	Significant and Unavoidable	Significant and Unavoidable	
Greenway Paths + Stormwater Management	Significant and Unavoidable	Significant and Unavoidable	

3.2.1 Environmental Setting

Agricultural land is an important resource in California and in Los Angeles County. Much of the agricultural land in Los Angeles County has been developed. Therefore, agricultural land is viewed as a non-renewable resource that needs to be protected from conversion and encroachment of incompatible uses (Los Angeles Department of Regional Planning 2022). In 2019 (the most recent published data) the total gross value of agricultural crops and commodities produced in Los Angeles County was \$177,612,300 with nursery products accounting for the majority at 55.4 percent (Table 3.2-2).

Table 3.2-2. Los Angeles County Agricultural Summary

Commodity	Percentage of Total	2019 Financial Value
Nursery Products	55.4%	\$98,440,000
Flowers & Foliage	2.9%	\$5,089,000
Fruit & Nut Crops	2.3%	\$4,102,000
Vegetable Crops	21.3%	\$37,770,300
Field Crops	7.1%	\$12,600,000
Dairy & Livestock	7.4%	\$13,130,000
Apiary Products	3.6%	\$6,479,000
Forest Products	<0.1%	\$2,000

Source: County of Los Angeles 2019

The California Department of Conservation's (CDOC) Farmland Mapping and Monitoring Program (FMMP) produces maps and statistical data used for analyzing land use impacts on California's agricultural resources. The FMMP categorizes agricultural production potential based on a combination of physical and chemical characteristics of the soil and climate that determine the degree of suitability of the land for crop production. A detailed breakdown of the FMMP classifications and total acreage by category within Los Angeles County is shown in Table 3.2-3. Prime Farmland, Farmland of Statewide Importance, and Unique Farmland are sparsely present within the Plan Area (CDOC 2022a; Figure 3.2-1). In addition to farmland, Figure 3.2-2 indicates the location of lands zoned for agricultural use in the Plan Area.

The most recent status report published by the CDOC lists Los Angeles County as a non-participating county for Williamson Act. The status report specifies there are no executed Land Conservation Act (Williamson Act) contracts reported for the County (CDOC 2022b). Therefore, no Williamson Act lands are located within the proposed Plan Area.

Table 3.2-3. Important Farmland and Other Land Use Acreages in Los Angeles County

FMMP Category	FMMP Description	Acres in Los Angeles County
Prime Farmland	Farmland with the best combination of physical and chemical features able to sustain long term agricultural production. This land has the soil quality, growing season, and moisture supply needed to produce sustained high yields. Land must have been used for irrigated agricultural production at some time during the four years prior to the mapping date.	22,238
Farmland of Statewide Importance	Farmland similar to Prime Farmland but with minor shortcomings, such as greater slopes or less ability to store soil moisture. Land must have been used for irrigated agricultural production at some time during the four years prior to the mapping date.	703
Unique Farmland	Farmland of lesser quality soils used for the production of the state's leading agricultural crops. This land is usually irrigated but may include non-irrigated orchards or vineyards as found in some climatic zones in	1,785

FMMP Category	FMMP Description	Acres in Los Angeles County
	California. Land must have been cropped at some time during the four years prior to the mapping date.	
Farmland of Local Importance	Land of importance to the local agricultural economy as determined by each county's board of supervisors and a local advisory committee. In some counties, confined animal agriculture facilities are part of this category.	2,739
Grazing Land	Land on which the existing vegetation is suited to the grazing of livestock.	260,697
Urban & Built-up Land	Land occupied by structures with a building density of at least 1 unit to 1.5 acres, or approximately 6 structures to a 10-acre parcel. This land is used for residential, industrial, commercial, construction, institutional, public administration, railroad and other transportation yards, cemeteries, airports, golf courses, sanitary landfills, sewage treatment, water control structures, and other developed purposes.	788,355
Other Land	Land not included in any other mapping category. Common examples include low density rural developments; brush, timber, wetland, and riparian areas not suitable for livestock grazing; confined livestock, poultry or aquaculture facilities; strip mines, borrow pits; and water bodies smaller than forty acres. Vacant and nonagricultural land surrounded on all sides by urban development greater than 40 acres is mapped as other Land.	754,979
Water Area	Perennial water bodies with an extent of at least 40 acres.	6,414

Source: CDOC 2018, 2023a

PRC Section 12220(g) defines “forest land” as land that can support 10-percent native tree cover of any species, including hardwoods, under natural conditions, and that allows for management of one or more forest resources, including timber, aesthetics, fish and wildlife, biodiversity, water quality, recreation, and other public benefits. Forest land is present throughout portions of the Plan Area (Figure 3.2-3) and includes urban forest and non-urban forest.

PRC Section 4526 defines “timberland” as land, other than land owned by the federal government and land designated by the California Board of Forestry and Fire Protection as experimental forest land, which is available for, and capable of, growing a crop of trees of a commercial species used to produce lumber and other forest products, including Christmas trees. No areas in the Plan Area meet the definition of timberland and none are zoned for timberland production as defined by Government Code Section 51104(g).

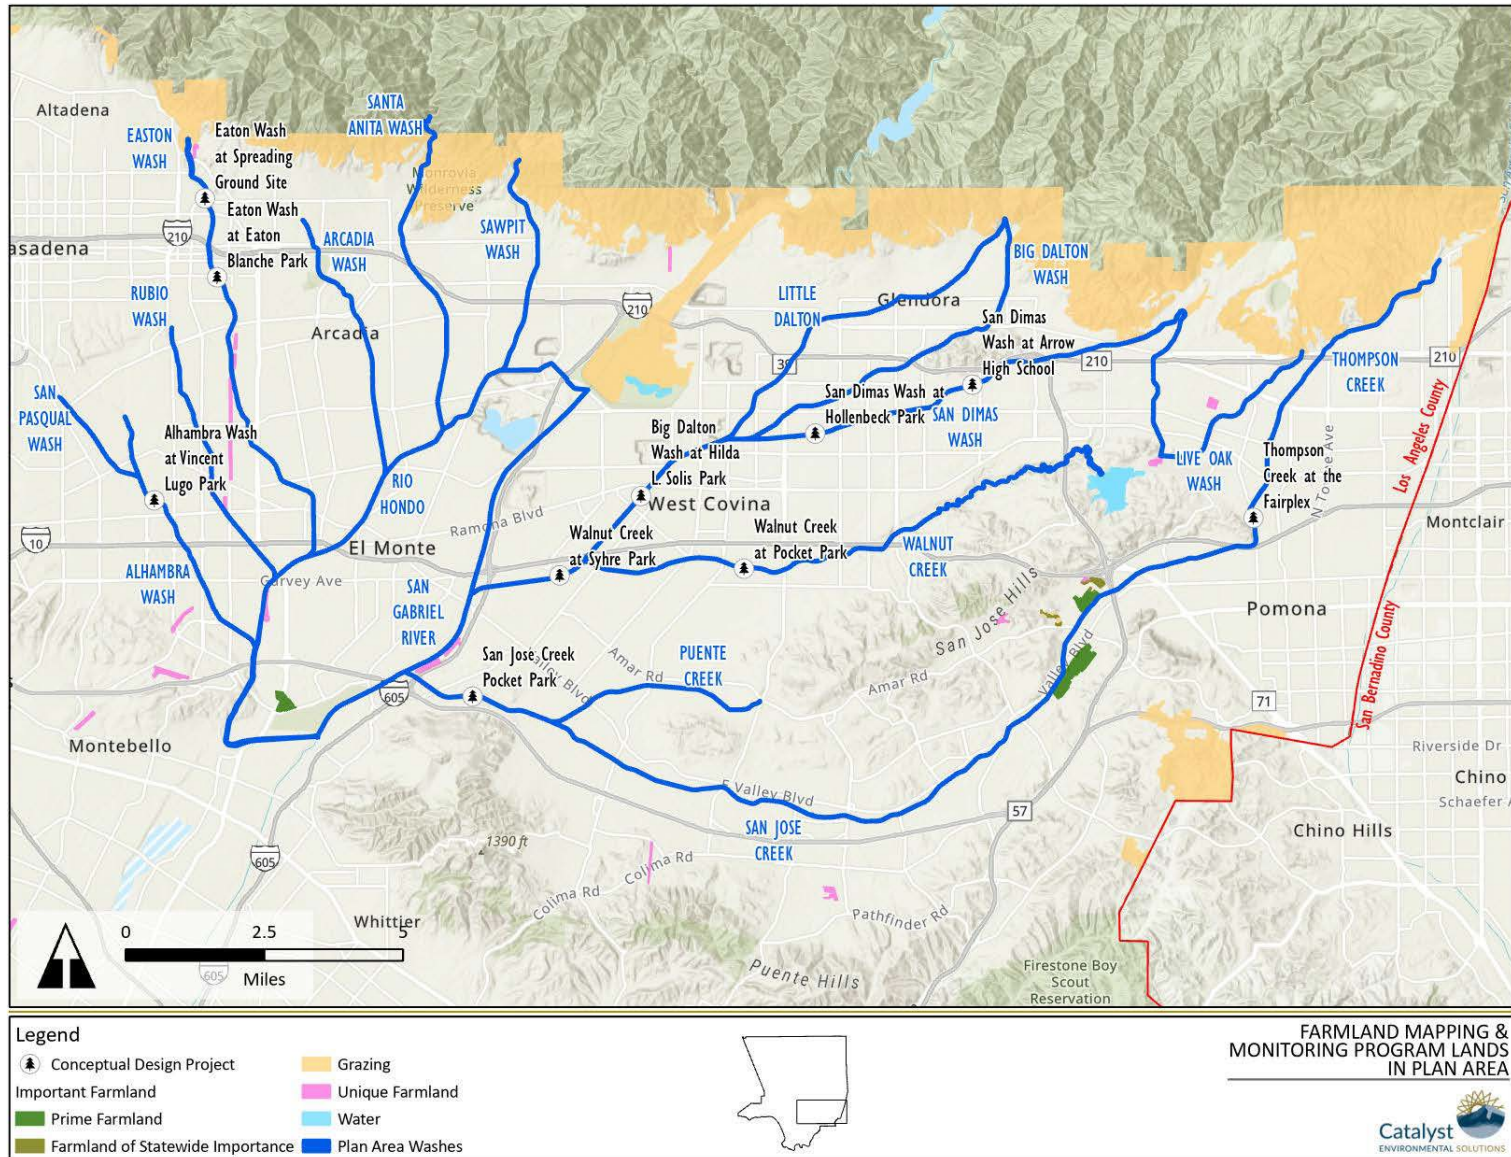

Figure 3.2-1. Farmland Mapping and Monitoring Program Lands in the Plan Area.

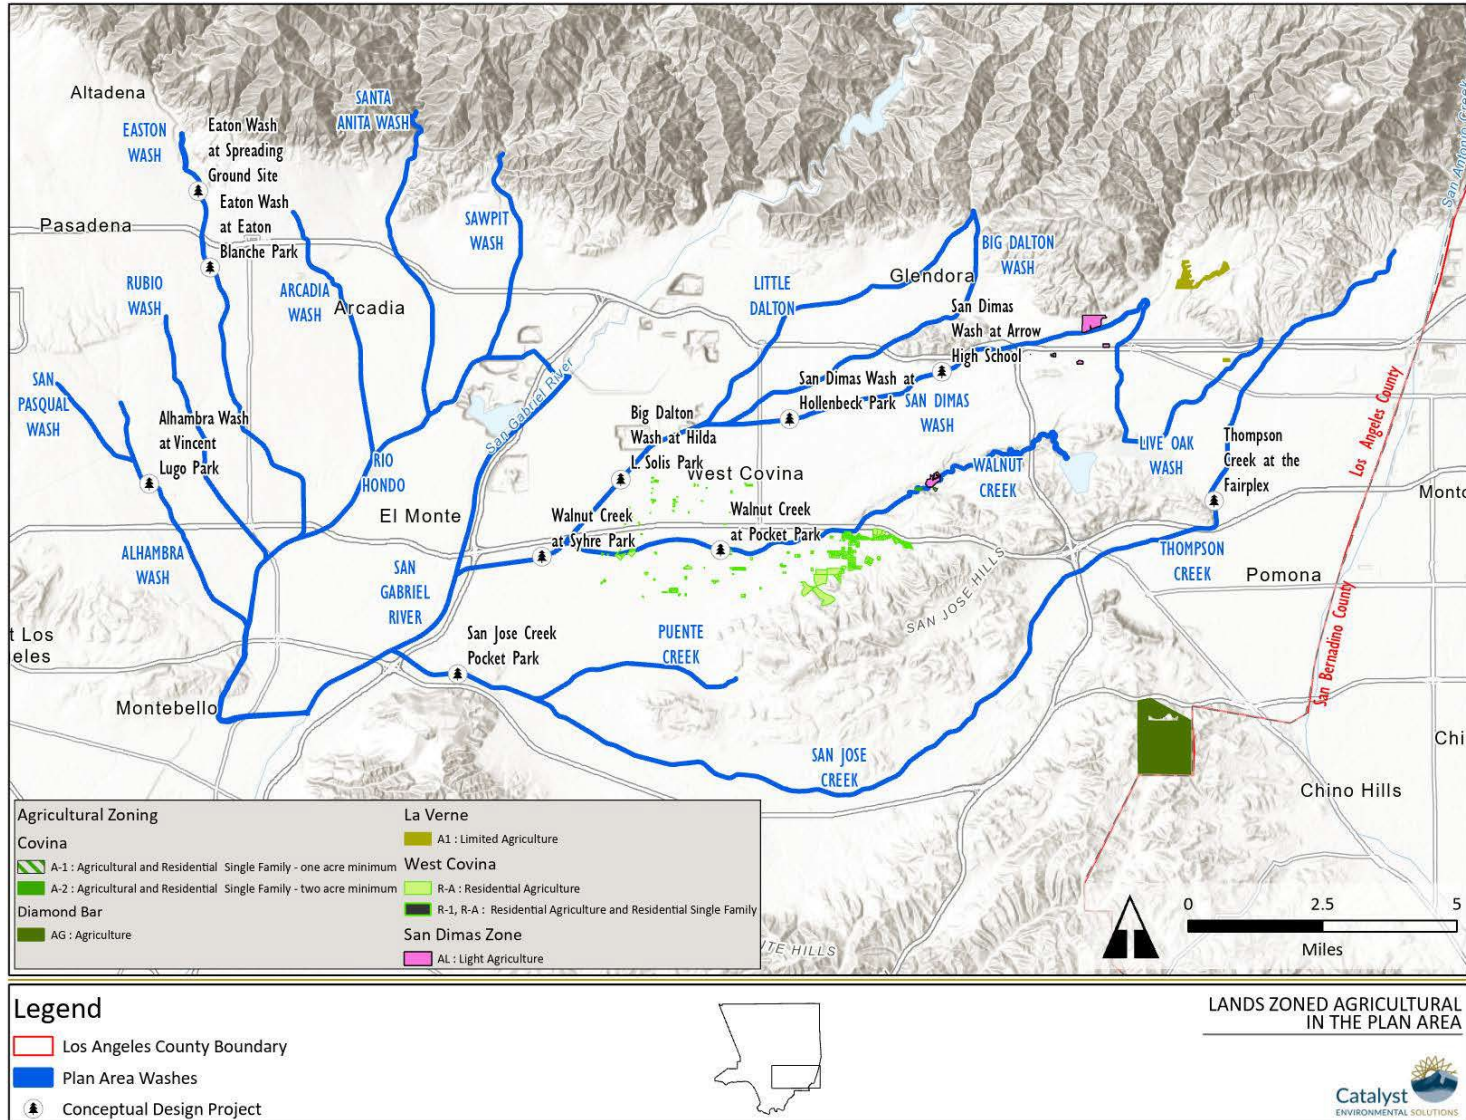

Figure 3.2-2. Lands Zoned Agricultural in the Plan Area

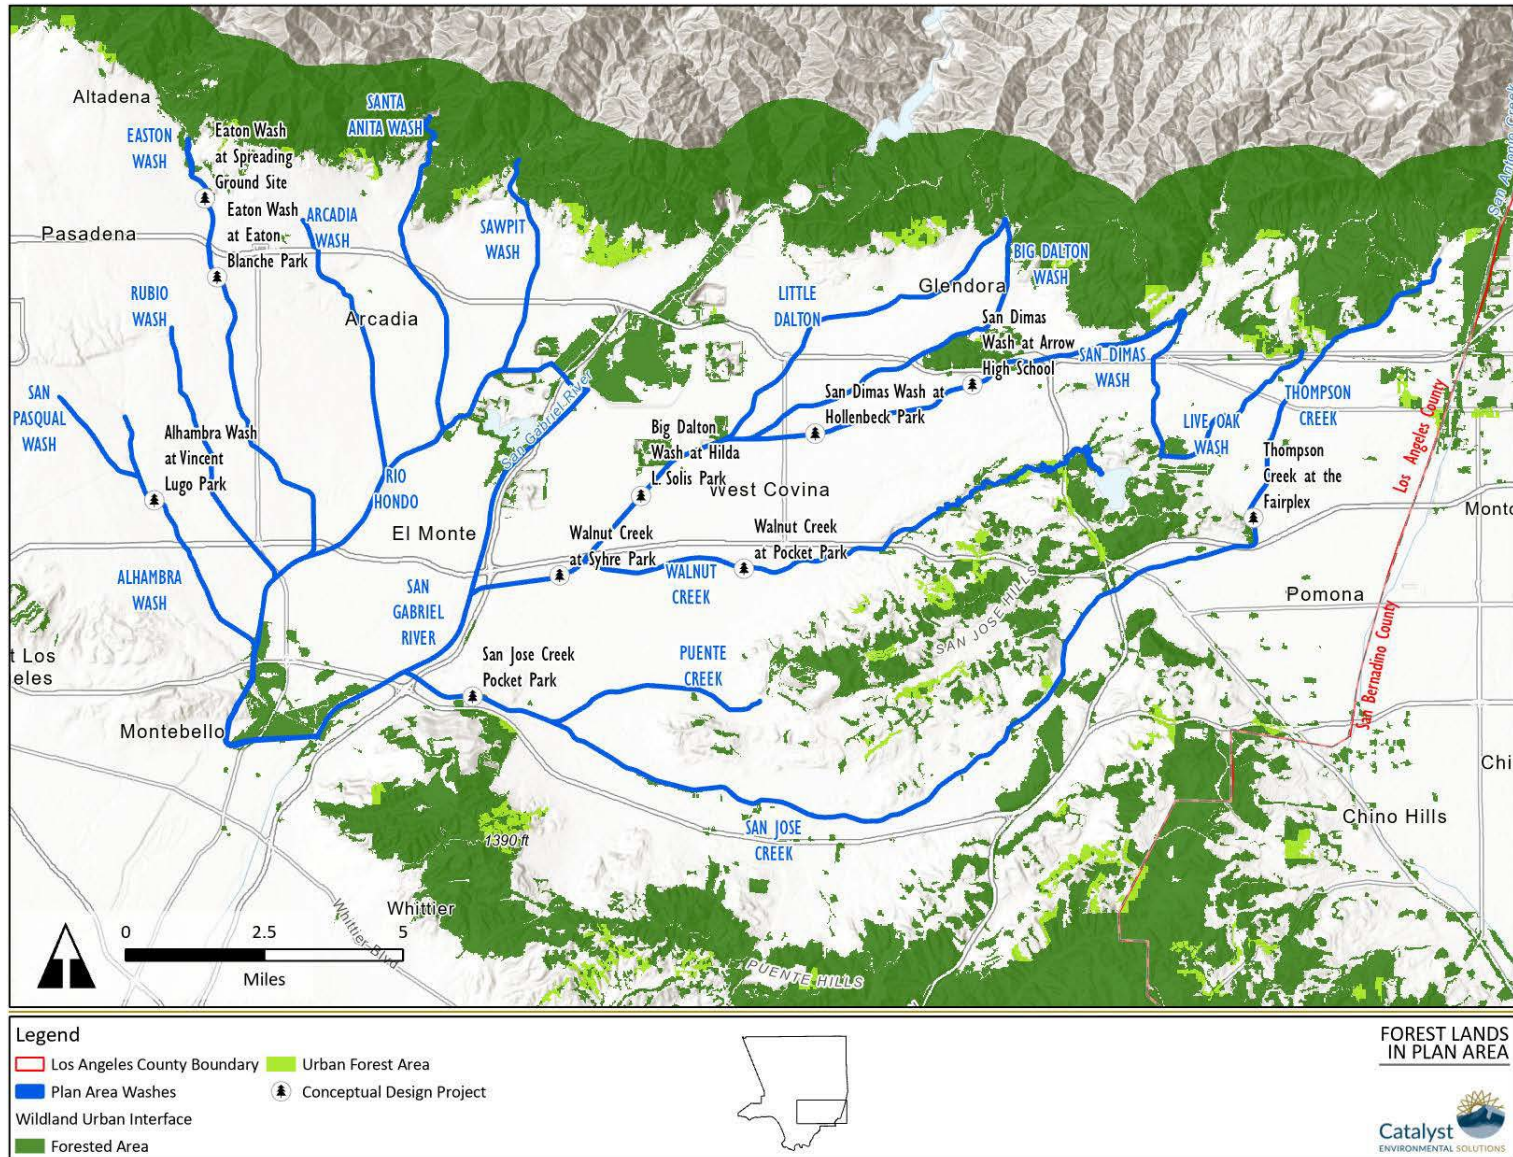

Figure 3.2-3. Forested Lands in the Plan Area

3.2.2 Regulatory Setting

3.2.2.1 Federal

3.2.2.1.1 Farmland Protection Policy Act

Congress passed the Farmland Protection Policy Act in 1981 in response to a substantial decrease in the amount of open farmland (7 United States Code [U.S.C.] 4201 et seq.). Under the Farmland Protection Policy Act, the Secretary of Agriculture established criteria for use by federal agencies to consider effects on farmland. As stipulated by the Farmland Protection Policy Act, federal agencies are to: (1) use the criteria to identify and account for the adverse effects of their programs on the preservation of farmland; (2) consider alternative actions, as appropriate, that could lessen adverse effects; and (3) ensure that their programs, to the extent practicable, are compatible with state, units of local government, and private programs and policies to protect farmland (7 U.S.C. 658.1).

3.2.2.2 State

3.2.2.2.1 Farmland Mapping and Monitoring Program

The CDOC, under the Division of Land Resource Protection, established the FMMP in 1982 to provide consistent and impartial data on agricultural land use throughout California. The FMMP monitors the conversion of the state's farmland to and from agricultural use and reports on the amount of land converted from agricultural to non-agricultural use. The FMMP maintains an inventory of state agricultural land and updates its "Important Farmland Series Maps" every two years (last updated in 2018). The FMMP has developed categorical definitions of Important Farmland that incorporate the land's suitability for agricultural production based on data on the location of agricultural land, land use changes from agriculture to urban development, and soil quality. Land that is identified as Important Farmland is mapped as one of the following four categories Prime Farmland, Farmland of Statewide Importance, Unique Farmland, or Farmland of Local Importance according to the definitions provided in Table 3.2-2 (CDOC 2023a). In addition to Important Farmland, the FMMP also includes Grazing Land as a category of agricultural land. Non-agricultural land categories include Urban and Built-up Land, Other Land, and Water Area.

3.2.2.2.2 California Land Conservation Act of 1965 (Williamson Act)

The California Land Conservation Act of 1965, better known as the Williamson Act, is California's primary program to protect agricultural land. The Williamson Act discourages premature and unnecessary conversion of agricultural land to urban uses. Local governments and landowners enter into voluntary contracts to restrict enrolled lands to agricultural and open space uses, typically for 10- or 20-year rolling terms, in exchange for property tax reductions. The state implements the Williamson Act when a city or county creates an agriculture preserve. The purpose of an agriculture preserve is the long-term conservation of agricultural and open space lands: the lands are restricted to agricultural, open space, or recreational uses in exchange for reduced property tax assessments. The Williamson Act supports California's conservation, food security, and orderly growth goals while helping farmers and ranchers to stay in production.

3.2.2.3 Los Angeles County

3.2.2.3.1 County of Los Angeles General Plan

The following goals and policies of the General Plan are relevant to any projects proposed within the unincorporated County portion of the Plan Area. Relevant policies and goals for cities and municipalities within the Plan Area are provided in Table 3.2-4 in the next section.

- Goal C/NR 8: Productive farmland that is protected for local food production, open space, public health, and the local economy.
 - Policy C/NR 8.1: Protect ARAs, and other land identified as Prime Farmland, Farmland of Statewide Importance, Unique Farmland, and Farmland of Local Importance by the California Department of Conservation, from encroaching development and discourage incompatible adjacent land uses.
 - Policy C/NR 8.2: Discourage land uses in ARAs, and other land identified as Prime Farmland, Farmland of Statewide Importance, Unique Farmland, and Farmland of Local Importance by the California Department of Conservation, that are incompatible with agricultural activities.
 - Policy C/NR 8.3: Encourage agricultural activities within ARAs.
- Goal C/NR 9: Sustainable Agricultural Practices.
 - Policy C/NR 9.1: Support agricultural practices that minimize and reduce soil loss, minimize pesticide use, and prevent water runoff from leaching pesticide and fertilizer into groundwater and affecting water, soil, and air quality.
 - Policy C/NR 9.2: Support innovative agricultural practices that conserve resources and promote sustainability, such as drip irrigation, hydroponics, organic farming, and the use of compost.
 - Policy C/NR 9.3: Support farmer markets, farm stands, and community-supported agriculture.
 - Policy C/NR 9.4: Support countywide community garden and urban farming programs.
 - Policy C/NR 9.5: Discourage the conversion of native vegetation to agricultural uses.

3.2.2.4 Incorporated Cities Within the Plan Area

The table below presents the policies related to agriculture and forestry from each of the incorporated cities within the Plan Area that would be applicable to any projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.2-4. Applicable Local City Policies Related to Agriculture and Forest Resources

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	No applicable goals or policies related to agricultural/forest resources were identified. The City does not contain any forest, or agricultural zoned lands.	No applicable ordinances were identified.	No other applicable ordinances were identified.
Arcadia	No applicable goals or policies related to agricultural/forest resources were identified. The City does not contain any forest, or agricultural zoned lands.	No applicable ordinances were identified.	No other applicable ordinances were identified.
Azusa	No applicable goals or policies related to agricultural/forest resources were identified. The City does not contain any forest, or agricultural zoned lands.	No applicable ordinances were identified.	No other applicable ordinances were identified.
Baldwin Park	No applicable goals or policies related to agricultural/forest resources were identified. The City does not contain any forest, or agricultural zoned lands.	No applicable ordinances were identified.	No other applicable ordinances were identified.
Claremont	<p>No applicable goals or policies related to agricultural/forest resources were identified. There are no lands zoned as agriculture/forest in the City of Claremont, however, policies specific to agricultural resources for the City of Claremont include;</p> <p>Open Space, Parkland, Conservation, and Air Quality Element:</p> <p>Open Space in Urban Areas:</p> <p>Goal 5-7: Maximize the distribution of open space in urban areas.</p> <p>Policy 5-7.4: Support small-scale agriculture such as community gardens and the growing of organic produce.</p>	<p>Municipal codes related to agricultural/forest resources relevant to the Plan can be found in Chapter 16.007 (RR Rural Residential Districts) and Chapter 16.075 (WP Wilderness Park District).</p> <p>Chapter 16.007 (RR Rural Residential Districts) describes the intended uses of lands within the Rural Residential Districts. All new development must be in harmony with the rural character of this area. The area’s rural character is depicted by the presence of agricultural features such as citrus groves, barns, rock walls, pump houses built of rock, and other characteristics such as mountain vistas, minimal outdoor artificial lighting, narrow streets accompanied by equestrian, pedestrian, and bike trails, and native landscaping. The lack of such urban features as curb and gutters, streetlights, and sidewalks also contribute greatly to the rural character of this area. In addition to the above attributes, this area is identified by the General Plan as a significant aquifer recharge area which should be maintained.</p> <p>No building, structure, or land shall be used, and no building or structure shall be erected or altered in the RR Districts except in accordance with the provisions of this chapter. (08-05)</p> <p>Chapter 16.075 (WP Wilderness Park District) is intended to assure the preservation of the natural characteristics of hillside properties that have been acquired by the City, while providing the public opportunities for recreation and passive enjoyment. Properties within the district must remain essentially undeveloped and the following uses are permitted:</p> <ul style="list-style-type: none">A. Low intensity, outdoor recreation activities such as hiking, running, mountain bike riding, horseback riding, photography, bird watching, and picnicking.B. Conservation projects, student research, or education programs involving the study of nature, ecology, or earth sciences.C. Outdoor programs, lectures, and organized community activities.D. Unobtrusive ancillary facilities for use by the public such as benches, shade structures, informational signs, and trails approved by the City Council.E. Parking areas for park visitors, restroom buildings, fencing, trash receptacles, information kiosks, message boards, and other ancillary facilities, located in staging areas adjacent to park entrances and at the beginning of trails.	No other applicable ordinances were identified.

La Verne	Land Use Element: Goal 4: Protect hillside development & nature from each other. Policy 4.6: Protect neighborhood one from encroachment. Implementation Measure c. Examine the possibility of incorporating this area into the national forest. Implementation Measure e. Work with the Forest Service to retain access to the trail and equestrian network. Goal 5: Protect the visual quality of our community. Policy 5.2: Protect our natura open space areas. Implementation Measure b. Work with the Forest Service to retain access to the trail and equestrian network. Goal 6: Protect the residential-agricultural character of Northwest La Verne. Policy 6.7: Prescribe compatible, low intensity land uses. Implementation Measure b. Encourage the retention of our last agricultural resources. Implementation Measure c. Ensure compatibility of interim agricultural uses with surrounding residential uses. Implementation Measure e. Require conditional use permit approval for agricultural uses, including utility right-of-ways, protecting the surrounding properties. Policy 8.4: Provide for a smooth transition between land uses. Implementation Measure c. require neighborhood compatibility for development of our agricultural parcels. Implementation Measure d. Require environmental studies for development of remaining agricultural parcels. Implementation Measure f. Control interim land uses through standards on vacant freeway right-of-ways that: 2) Identify what social, recreational, or fiscal benefits are to be realized from the proposed interim land use. These may include: pedestrian use, recreational opportunities, enhanced revenue, economic utilization, preservation and enhancements of agricultural land uses, provision of greenery, protection of cultural resources (archaeological and historic) and buffer value. Resource Management Element: Goal 2: Preserve and protect our open space. Policy 2.2 Develop a natural buffer zone. Implementation Measure a. Ensure that the hillside residential general plan designation provides for an undeveloped buffer zone between developed areas in the city and the national forest. Implementation Measure b. Continue work with the City of Claremont to incorporate the forest lands and sphere of influence areas between our cities.	The municipal code does not contain zoning or regulations specific to timberland resources. Municipal codes related to agriculture/forest resources relevant to the Plan Area can be found in Chapter 18.32 (A-1 Limited Agricultural Zone). Chapter 18.32 (A-1 Limited Agricultural Zone) The A-1 zone is intended for limited agricultural purposes, with appropriate single-family residences, and similar open space uses. Except as specifically provided in this code, any and every building and premises or land in an A-1 zone shall be used for or occupied and every building shall be erected, constructed, established, altered, enlarged, maintained, moved into or within the A-1 zone exclusively and only in accordance with the general provisions stated in Chapter 18.10 of this title, the development review provisions stated in Chapter 18.16 of this title, with the regulations provided in this chapter, and other applicable regulations of this code and the La Verne general plan. (Ord. 907 § 3, 1997) The following uses are permitted in the A-1 zone: (A) single-family residential structures of a permanent nature placed in a permanent location, with not more than one dwelling unit per lot or parcel of land, (B) farms or ranches for orchards, tree crops, field crops, berry and bush crops, flower gardening and other similar agricultural uses provided that these uses are operated in a manner harmonious with the residential nature of the community; and provided that chemical pesticides, herbicides, fertilizers, dust and other substances that can degrade the environment are controlled in a manner that protects human health and the environment, (C) accessory buildings and uses customarily incidental to permitted residential and other uses and developments, including a private garage, private recreation facilities, and servants or guest quarters, provided no kitchen or kitchen facilities shall be included in any such accessory building, (D) the keeping of animals such as household pets (not for commercial purposes) as provided in Title 6 of this code, (E) home occupations, subject to approval as provided in Chapter 18.96 of this title, (F) signs and name plates as provided in Title 17 of this code, (G) open space designated for agricultural preservation or ecological preservation held by a city-approved land conservancy trust or similar organization, (H) supportive housing, (I) transitional housing. (Ord. 1040 § 3, 2013; Ord. 907 § 3, 1997)	No other applicable ordinances were identified.

Buildings, structures and land shall be used, and buildings and structures shall hereafter be erected, structurally altered or enlarged only for the following uses, plus such other uses as the commission may deem, pursuant to the provisions of Chapter 18.192, to be similar and not more obnoxious or detrimental to the public health, safety and welfare. All uses shall be subject to the property development standards in Section 18.64.040.</p> <p>B. The following uses are permitted:</p> <p>1. General Uses.</p> <p>a) Horticulture and agriculture.</p> <p>b) Single-family residences with not more than one residence per lot.</p> <p>c) Grazing on permanent pasture of cattle or horses on a lot or parcel of land having an area of not less than five acres; provided that such grazing is not conducted in conjunction with any dairy, livestock feed yard, or livestock sales yard. The number of such animals shall not exceed 10 per acre, unweaned offsprings excepted. Such animals shall not be kept within thirty-five feet of any residence.</p> <p>2. Accessory Uses.</p> <p>a) Home occupation.</p> <p>b) Two horses may be maintained on a lot or parcel of land having an area of sixteen thousand square feet; provided, the horses are kept or maintained for the private use of the family residing on the premises. One additional horse may be kept for each additional seven thousand five hundred square feet; however, the number of horses maintained shall not exceed five per acre. A registered breeder may maintain an additional three horses per acre for breeding purposes, provided a permit for such purposes has been obtained. Horses shall not be maintained within thirty-five feet of any residence. They shall be maintained in a corral area containing at least three hundred square feet for the first horse; an additional two hundred square feet of corral area shall be provided for each additional horse. Corral areas shall consist of pipe fencing at least five feet in height. Stables shall be provided consisting of structures with weatherproof roofs having an area of sixty square feet for the first horse and an additional thirty-six square feet for each additional horse. The corral and stable areas shall be sprinklered so as to prevent the emanation of dust and odors, and in addition, all accumulations of manure, mud or refuse shall be eliminated so as to prevent the breeding of flies.</p> <p>c) Household pets as described and regulated in Chapter 18.20 Residential Zones Generally.</p> <p>d) The following may be maintained on a parcel of land having a minimum area of eleven thousand square feet, and provided such are maintained a minimum of thirty-five feet from any residence:</p> <p>i. Rabbits, not to exceed one buck and four does;</p> <p>ii. Fowl for meat purposes, not to exceed twenty-five;</p>

		have access to neighboring property. (Ord. 1226 § 1, 2014; Ord. 1074 § 1, 1997; Ord. 558 § 1, 1976; Ord. 487 § 2, 1975; Ord. 37 § 3.02.01, 1961)	
San Gabriel	No applicable goals or policies related to agricultural/forest resources were identified. The City does not contain any forest, or agricultural zoned lands.	No applicable ordinances were identified.	No other applicable ordinances were identified.
San Marino	<p>No applicable goals or policies related to agricultural/timberland resources were identified. The City does not contain any forest, timberland, or agricultural zoned lands. The following goals and policies pertain to the City’s urban forest.</p> <p>Land Use Chapter:</p> <p>Objective L.7: Tree and Tree Trimming: San Marino’s mature urban forest should be protected.</p> <p>Policies:</p> <ul style="list-style-type: none">– Require city permits prior to tree removal from private property.– Require replacement trees where appropriate on private and public property.– Provide guidelines for proper pruning of trees on private property.– Publicize information regarding tree trimming from time to time, to raise property owner awareness of requirements. <p>Natural Resources Chapter:</p> <p>Goal 1: To maintain attractive tree-lined residential streets and other public areas.</p> <p>Objective NR.14: Maintain existing urban forest.</p> <p>Policies:</p> <ul style="list-style-type: none">– Require City review and approval for the removal of street trees.– Plant replacement street, median, and park trees of an appropriate size and species, in a timely manner.– Implement a tree-pruning program that includes pruning of street trees on a regular cycle by tree experts. <p>Employ a qualified City employee, whose responsibilities include the tree maintenance program.</p>	No applicable ordinances were identified.	No other applicable ordinances were identified.
South El Monte	No applicable goals or policies related to agricultural/forest resources were identified. The City does not contain any forest, timberland, or agricultural zoned lands.	No applicable ordinances were identified.	No other applicable ordinances were identified.
Temple City	<p>No applicable goals or policies related to timberland resources were identified. The City does not contain any forest, or agricultural zoned lands. The following goals and policies pertain to agriculture use and community forest practices.</p> <p>Land Use Element:</p> <p>Policy LU 6.7 Locally Grown Healthy Food. Promote the production and distribution of locally grown food by allowing farmers markets, food cooperatives, and use of parks, public rights-of-way, alleys, vacant lands, and rooftops for urban agriculture.</p> <p>Policy LU 7.4: Heat Island Effect. Reduce the heat island effect by maintaining and expanding the City’s urban forest and promoting such features as reflective roofing, cool and green roofs, light-colored paving, and reducing the extent of unshaded area in existing and new parking lots or other large impervious surfaces.</p>	No applicable ordinances were identified.	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy LU 9.6 Walkable Neighborhoods. Maintain sidewalks, parkways, the urban forest, and landscaping throughout residential neighborhoods to promote a safe and pleasant pedestrian environment.</p> <p>Natural Resources Element:</p> <p>Goal NR 5: Conservation and Protection. Conserve, protect, and enhance Temple City’s natural environment.</p> <p>Policy NR 5.1 A Greener City. Maintain and protect the City’s urban forest which provides shade and avian habitat, sequesters carbon monoxide emissions, and supports pedestrian activity.</p> <p>Policy NR 5.6 Community Involvement. Encourage community volunteerism and stewardship in protecting and maintaining Temple City’s urban forest and natural environment.</p>		
West Covina	<p>No applicable goals or policies related to agricultural/timberland resources were identified. The City does not contain any forest zoned lands. The following goals and policies pertain to community forest practices.</p> <p>Our Natural Community:</p> <p>Policy P1.11. Plant to maximize the social, economic, and environmental benefits of trees.</p> <p>Action 1.11a. Develop a street tree master plan for the downtown area as part of the Downtown Plan and Code. Develop urban design strategies with unique palettes of trees that add character to the street space. Consistency and variation in tree form, color, and seasonal display can be used to create dynamic and harmonious streetscapes.</p> <p>A1.11b. Increase the number of street trees by adding new trees in the downtown area and the three corridors (Azusa, Sunset, and Glendora Avenue).</p> <p>A 1.11c. Pursue an expanded and equitable distribution of trees and greening throughout the City. Fill in the gaps in canopy cover, address aging tree population, and identify vacant and new planting spots. Target planting where pedestrian and public realm improvements are prioritized such as safe streets to schools and parks. Set a citywide tree canopy coverage goal.</p>	<p>The municipal code does not contain zoning or regulations specific to forest/timberland resources. Municipal codes related to agriculture resources relevant to the Plan Area can be found in Article VIII (Residential Agricultural Zone/ Single-Family Zone).</p> <p>Article VIII (Residential Agricultural Zone/ Single-Family Zone) establishes the permitted uses, development standards, and specific restrictions specific to the Residential Agricultural Zone. Generally the zone allows for the following, (1) one single-family dwelling per lot, (2) accessory buildings, (3) agricultural crops for sale, (4) private greenhouses and horticultural collections, (5) poultry and animals, in area districts III, IV, and V bovine animals, sheep, and goats, on sites having at least twenty thousand (20,000) square feet, provided that the ratio of animals to lot area is followed as defined in Article VIII, (6) garage sales. (See requirements in sections 14-101 to 14-104.), (7) home occupations as set forth in article XII, division 5 of this chapter, (8) state-authorized small family day care, and (9) state-authorized residential care facilities (six (6) or fewer clients).</p> <p>(Code 1960, §§ 1071, 10701.01—10701.09; Ord. No. 1441, § 1, 5-29-79; Ord. No. 1450, § 1, 8-13-79; Ord. No. 1488, § 17, 8-25-80; Ord. No. 1530, § 1, 2-8-82; Ord. No. 1574, § 1, 1-24-83; Ord. No. 1603, § 1, 8-22-83; Ord. No. 1628, § 1, 3-12-84; Ord. No. 1855, § 2, 8-13-90; Ord. No. 1857, § 2, 8-27-90; Ord. No. 1917, § 2, 4-20-93; Ord. No. 1922, § 2, 6-1-93; Ord. No. 1959, § 2, 9-5-95; Ord. No. 2030, § 4, 4-20-99; Ord. No. 2039, § 3, 6-15-99; Ord. No. 2060, § 3, 10-3-00; Ord. No. 2153, § 3, 9-19-06; Ord. No. 2184, § 3(Exh. A), 12-16-08; Ord. No. 2230, § 2(Exh. A, § 2), 5-15-12; Ord. No. 2260, § 3(Exh. A), 7-1-14; Ord. No. 2316, § 2(Exh. A), 5-2-17; Ord. No. 2441, § 2, 6-19-18; Ord. No. 2465, § 3, 12-17-19; Ord. No. 2469, § 4, 2-4-20; Ord. No. 2473 , § 3, 11-2-21; Ord. No. 2493 , § 3, 12-7-21)</p>	No other applicable ordinances were identified.

3.2.3 Impact Assessment

3.2.3.1 Significance Criteria

Appendix G of the State CEQA Guidelines was reviewed to determine if the Plan would result in significant impacts related to agriculture and forestry resources. These guidelines serve as the threshold of significance for determining impacts to agriculture and forestry resources and consider if the Plan would:

- 2(a) *Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?*
- 2(b) *Conflict with existing zoning for agricultural use, or a Williamson Act contract?*
- 2(c) *Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?*
- 2(d) *Result in the loss of forest land or conversion of forest land to non-forest use?*
- 2(e) *Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?*

3.2.3.2 Methodology

Potential impacts to agriculture and forestry resources were assessed qualitatively through a review of lands zoned for agriculture and/or forestry within the Plan Area. For the purposes of agriculture and forestry resources, any conflicts with such zoning and/or any conversion of land currently used for agricultural and forestry purposes to a non-agricultural or non-forestry use would be considered a potentially significant impact.

3.2.3.3 Plan Impacts

- 3.2.3.3.1 2(a). Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?
- 3.2.3.3.1.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction and Operations

No Impact. Only small areas of Designated Prime, Unique and Important Farmlands exist within the Plan Area (Figure 3.2-1). The construction of greenway paths and pocket parks or greenways under the proposed Plan would be unlikely to convert any Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural uses because the greenway and parks would be located primarily in high-density urban, commercial, industrial, and transportation areas where they would connect to existing greenways or other transportation routes or destinations. The construction of parks

and greenspaces and stormwater management features would occur on developed or undeveloped parcels adjacent to the District ROW, while safe crossings would be focused on continuing the greenway path where existing roadways intersect with the District ROW. While some proposed projects implemented under the Plan could be in or near existing parks or open space areas that may be adjacent to or on farmland, none of the future projects proposed under the Plan would replace designated Prime, Unique, or Important Farmland or convert such land to non-agricultural uses. The General Plan guidance is to protect these lands and discourage land uses that are incompatible with agricultural activities. Therefore, no impacts would occur.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

There would be no impacts. No mitigation is required.

3.2.3.3.2 2(b). Conflict with existing zoning for agricultural use, or a Williamson Act contract?

3.2.3.3.2.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction and Operations

Significant and Unavoidable. No Williamson Act contract lands are present in Los Angeles County according to the 2020-2021 Williamson Act Status Report (CDOC 2022b). Some municipalities within the Plan Area have agricultural zoning as shown in Figure 3.2-2. Projects developed under the Plan would be constructed on urbanized land primarily in the District ROW, and along streets, sidewalks, and in parks or other public lands or private lands adjacent to the District ROW within the Plan Area and would therefore not conflict with existing land that are not zoned for agricultural use. However, it is possible that private parcels could be acquired in the future for the purposes of developing the County or other public entity which is not subject to municipal zoning codes, could implement a project under the Plan. If future projects are proposed on lands zoned for agriculture for which open space/recreational development is not a designated allowed or permitted use, the project proponent might be required to consult with CDOC and local municipalities to determine if zoning changes, conditional use permits, or agricultural offsets (e.g., easements, in-lieu mitigation, etc.) would be required to develop the parcel under the Plan. The County is not subject to permitting requirements and compliance with local jurisdiction land use codes, therefore, projects implemented by the County could conflict with existing zoning for agricultural use, which would be a significant and unavoidable impact.

Mitigation Measures

No mitigation measures that would avoid a significant impact or reduce impacts to less than significant levels have been identified.

Significance After Mitigation

Impacts would be significant and unavoidable.

3.2.3.3.3 2(c). Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

3.2.3.3.3.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction and Operations

Significant and Unavoidable. Future projects that could be constructed and operated under the Plan would not conflict with existing zoning for, or cause rezoning of, timberland, or timberland zoned Timberland Production, because there is no land within the Plan Area zoned timberland.

Future projects implemented under the Plan would primarily be constructed and operated on urbanized public and private land primarily in the District ROW and on public and private parcels adjacent to the ROW, typically on other lands owned by municipalities within the Plan Area. Private parcels could be acquired in the future for the purposes of developing under the Plan. Greenway paths, amenities, and other components constructed and operated under the Plan may provide new connections to or amenities near forested areas, particularly urban forests and in some cases may include proposed trails through said forests. Such proposed projects could potentially conflict with existing zoning for or cause rezoning of forest land.

It is possible that the County or other public entity that is not subject to municipal zoning codes could implement projects that are proposed on lands categorized as forest, for which open space/recreational use is not a designated allowable use or permitted use, this would be considered a potentially significant impact. The proponent may be required to consult with local municipalities to determine if zoning changes, conditional use permits, or other regulatory processes would be required to develop the parcel under the Plan. The County is not subject to permitting requirements and compliance with local jurisdiction land use codes, therefore, projects implemented by the County could conflict with existing zoning for forest land which would be a significant and unavoidable impact.

Mitigation Measures

No mitigation measures that would avoid a significant impact or reduce impacts to less than significant levels have been identified.

Significance After Mitigation

Impacts would be significant and unavoidable.

3.2.3.3.4 2(d). Result in the loss of forest land or conversion of forest land to non-forest use?

3.2.3.3.4.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction and Operations

Significant and Unavoidable. Future projects implemented under the Plan would primarily be constructed and operated on urbanized public and private land primarily in the District ROW and/or on

parcels adjacent to the ROW, typically on other lands owned by municipalities within the Plan Area. Private parcels could be acquired in the future for the purposes of developing under the Plan. Greenway paths, amenities, and other components constructed and operated under the Plan may provide new connections to or amenities near forested areas, particularly urban forests and in some cases may include proposed trails through said forests. Such proposed projects could potentially result in the conversion of forest land to non-forest use.

Also, the County or other public entity that is not subject to local zoning codes could implement projects that are proposed on lands categorized as forest, for which open space/recreational use is not a designated allowable use or permitted use, this would be considered a potentially significant impact. The proponent may be required to consult with local municipalities to determine if zoning changes, conditional use permits, or other regulatory processes would be required to develop the parcel under the Plan. The County is not subject to permitting requirements and compliance with local jurisdiction land use codes; therefore, projects implemented by the County could result in the conversion of forest land to non-forest use, which would be a significant and unavoidable impact.

Mitigation Measures

No mitigation measures that would avoid a significant impact or reduce impacts to less than significant levels have been identified.

Significance After Mitigation

Impacts would be significant and unavoidable.

3.2.3.3.5 2(e). Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

3.2.3.3.5.1 Greenway Paths and Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction and Operations

Significant and Unavoidable. Projects implemented under the Plan would be constructed and operated on urbanized land in the District ROW and adjacent parcels; however, the acquisition of private parcels for development of projects under the Plan could result in impacts to agricultural land or forest land, as discussed previously under 2(a-d).

It is possible that the County or other public entity that is not subject to local zoning may implement a project on lands categorized as forest or agricultural land, for which open space/recreation is not a designated allowable or permitted use, this would be considered a potentially significant impact. The proponent would be required to consult with local municipalities to determine if zoning changes, conditional use permits, or other regulatory processes would be required to develop the parcel under the Plan. The County is not subject to permitting requirements and compliance with local jurisdiction land use codes; therefore, projects implemented by the County could convert farmland to non-agricultural use or forest land to non-forest use, which would be a significant and unavoidable impact.

Mitigation Measures

No mitigation measures have been identified which would avoid significant impact or reduce impacts to less than significant levels.

Significance After Mitigation

Impacts would be significant and unavoidable.

3.2.3.4 Impacts of Conceptual Design Projects

This section discusses potential impacts from the 10 conceptual designs discussed in Section 2.4 above.

- 3.2.3.4.1 2(a). Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?

Construction and Operations

No Impact. The components proposed for all 10 conceptual designs are within the maximum extent limits as described for the Plan in Section 2. Further, based on the example locations for each of the conceptual designs, none of the projects are sited adjacent to or overlapping Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Figure 3.2-1). Therefore, the projects would not convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance to non-agricultural use. There would be no impact.

- 3.2.3.4.2 2(b). Conflict with existing zoning for agricultural use, or a Williamson Act contract?

Construction and Operations

No Impact. The components proposed for all 10 conceptual designs are within the maximum extent limits as described for the Plan in Section 2. Further, based on the example locations for each of the conceptual designs, none of the conceptual design projects are sited on land with existing zoning or agricultural use. No Williamson Act contract lands are present in Los Angeles County (CDOC 2022b). Therefore, the 10 conceptual design projects would not conflict with existing zoning for agricultural use or a Williamson Act contract. There would be no impact.

- 3.2.3.4.3 2(c). Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code Section 12220(g)), timberland (as defined by Public Resources Code Section 4526), or timberland zoned Timberland Production (as defined by Government Code Section 51104(g))?

Construction and Operations

No Impact. While forest land as defined by PRC Section 12220(g) exists within the Plan Area, none of the 10 conceptual design projects are sited in or adjacent to these areas (Figure 3.2-3). The conceptual design projects would have no impact on areas zoned for forest land, timberland, or Timberland Production.

3.2.3.4.4 2(d). Result in the loss of forest land or conversion of forest land to non-forest use?

Construction and Operations

No Impact. The conceptual design projects would not result in the loss of forest land or conversion of forest land to non-forest use. None of the 10 conceptual design projects are sited in or adjacent to these areas (Figure 3.2-3). There would be no impact.

3.2.3.4.5 2(e). Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?

Construction and Operations

No Impact. All of the conceptual design projects would be constructed and operated on urbanized land in the District ROW and adjacent parcels and would not result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use, as discussed previously under 2(a-d). There would be no impact.

3.3 Air Quality

This section discusses the environmental setting relative to air quality, identifies the laws and policies applicable to the types of emissions-generating activities that could occur as a result of construction and operation of the Plan, and addresses the potential air quality impacts associated with implementation of the Plan. Air quality technical data is included in Appendix C.

Table 3.3-1. Summary of Potential Impacts of the SGV Greenway Network Plan on Air Quality

Plan Component	Impact Determination: Construction	Impact Determination: Operation	Mitigation Measures
Would the Plan:			
3(a). Conflict with or obstruct implementation of the applicable air quality plan?			
Greenway Paths + Greenway Amenities	Less than Significant with Mitigation	Less than Significant	Construction: MM AQ-1: Emission Reduction Measures
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant with Mitigation	Less than Significant	Operations: No mitigation
Greenway Paths + Safe Crossings	Less than Significant with Mitigation	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant with Mitigation	Less than Significant	
3(b). Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant	Operations: No mitigation
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	

Plan Component	Impact Determination: Construction	Impact Determination: Operation	Mitigation Measures
3(c). Expose sensitive receptors to substantial pollutant concentrations?			
Greenway Paths + Greenway Amenities	Less than Significant with Mitigation	Less than Significant	Construction: MM AQ-1: Emission Reduction Measures
Greenway Paths + Pocket Parks and Greenspaces	Significant and Unavoidable	Less than Significant	MM AQ-2: Health Risk Assessment and Health Risk Reduction Measures
Greenway Paths + Safe Crossings	Significant and Unavoidable	Less than Significant	Operations: No mitigation
Greenway Paths + Stormwater Management	Less than Significant with Mitigation	Less Than Significant	
3(d). Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant with Mitigation	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant with Mitigation	Operations: MM AQ-3: Implement Equestrian Manure Management
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant with Mitigation	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant with Mitigation	

3.3.1 Environmental Setting

The Plan Area is located in the portion of the San Gabriel River Watershed that lies within Los Angeles County. The Plan Area covers both unincorporated Los Angeles County and numerous incorporated cities, where future projects implemented under the Plan may be constructed.

The Plan Area is under the jurisdiction of the SCAQMD. The SCAQMD has jurisdiction over an area of approximately 10,743 square miles. This area includes all of Orange County, Los Angeles County except for the Antelope Valley, the non-desert portion of western San Bernardino County, and the western and Coachella Valley portions of Riverside County. The South Coast Air Basin (SCAB) is a sub-region of the SCAQMD jurisdiction and covers an area of 6,745 square miles and is bounded by the Pacific Ocean to the west; the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east, and the San Diego County line to the south. The SCAB includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino counties in addition to the San Geronio Pass area of Riverside County.

Factors such as wind, sunlight, temperature, humidity, rainfall, and topography all affect the accumulation and/or dispersion of air pollutants throughout the SCAB. Air pollutant emissions within the SCAB are generated by stationary and mobile sources. Stationary sources can be divided into two major subcategories: point sources and area sources. Point sources occur at an identified location and are usually associated with manufacturing and industry. Examples of point sources are boilers or combustion equipment that produce electricity or generate heat. Area sources are widely distributed and produce many small emissions. Examples of area sources include residential and commercial water heaters, painting operations, lawn mowers, agricultural fields, landfills, and consumer products, such as barbecue lighter fluid and hair spray. Mobile sources are emissions from motor vehicles, including tailpipe and evaporative emissions, and are classified as either on-road or off-road. On-road sources may be legally operated on roadways and highways. Off-road sources include aircraft, ships, trains, race cars, and self-propelled construction equipment. Air pollutants can also be generated by the natural environment, such as when fine dust particles are pulled off the ground surface and suspended in the air during high winds.

Both the federal and state governments have established ambient air quality standards for outdoor concentrations of various pollutants to protect public health and welfare. These pollutants are referred to as “criteria air pollutants” because of the specific standards, or criteria, which have been adopted for them. The federal and state standards have been set at levels considered safe to protect public health, including the health of “sensitive” populations, such as asthmatics, children, and the elderly with a margin of safety; and to protect public welfare, including protection against decreased visibility and damage to animals, crops, vegetation, and buildings.

3.3.1.1 Criteria Pollutants

A criteria air pollutant is any air pollutant for which ambient air quality standards have been set by the United States Environmental Protection Agency (USEPA) (National Ambient Air Quality Standards [NAAQS]) or California Air Resources Board (CARB) (California Ambient Air Quality Standards [CAAQS]). The presence of these pollutants in ambient air is generally due to numerous diverse and widespread sources of emissions, and air quality standards have been established for these pollutants to protect public health. Criteria pollutants include ozone (O_3), fine particulate matter ($PM_{2.5}$), respirable particulate matter (PM_{10}), carbon monoxide (CO), nitrogen dioxide (NO_2), lead (Pb), sulfur dioxide (SO_2), visibility-reducing particles, sulfates, and hydrogen sulfide (H_2S). Table 3.3-2 presents the federal and state air quality standards for criteria pollutants. The sections below provide additional details about each of these criteria pollutants.

3.3.1.1.1 Ozone

O₃ is formed in the atmosphere by a series of complex chemical reactions and transformations in the presence of sunlight. Oxides of nitrogen (NO_x) and reactive organic gases (ROGs) are the principal constituents in these reactions. O₃ is a pungent, colorless, toxic gas and is a primary component of smog.

O₃ is known as a secondary pollutant because it is formed in the atmosphere through a complex series of chemical reactions, rather than emitted directly into the air. The major sources of NO_x in California are motor vehicles and other combustion processes. The major sources of ROGs in California are motor vehicles and the evaporation of chemical solvents and fuels.

O₃ is a strong irritating gas that can chemically burn and cause narrowing of airways, forcing the lungs and heart to work harder to provide oxygen to the body. This would affect those who suffer from respiratory diseases.

3.3.1.1.2 PM₁₀

PM₁₀ consists of particulate matter (fine dusts and aerosols) that is 10 microns or smaller in aerodynamic diameter. For reference, 10 microns is about one-seventh the width of a human hair. When inhaled, particles larger than 10 microns are generally caught in the nose and throat and do not enter the lungs. PM₁₀ gets into the large upper branches of the lungs just below the throat, where it is caught and removed (by coughing, spitting, or swallowing).

The primary sources of PM₁₀ include dust, paved and unpaved roads, diesel exhaust, acidic aerosols, construction and demolition operations, soil and wind erosion, agricultural operations, residential wood combustion, and smoke. Secondary sources of PM₁₀ include tailpipe emissions and industrial sources. These sources have different constituents and therefore, varying effects on health. Airborne particles absorb and adsorb toxic substances and can be inhaled and lodged in the lungs. Once in the lungs, the toxic substances can be absorbed into the bloodstream and carried throughout the body. PM₁₀ concentrations tend to be lower during the winter months because meteorology greatly affects PM₁₀ concentrations. During rainfall events, concentrations are relatively low, and on windy days, PM₁₀ levels can be high. Photochemical aerosols, formed by chemical reactions with manmade emissions, may also influence PM₁₀ concentrations.

Elevated ambient particulate levels are associated with premature death, an increased number of asthma attacks, reduced lung function, aggravation of bronchitis, respiratory disease, and cancer.

Table 3.3-2. Ambient Air Quality Standards

Pollutant	Averaging Time	CAAQS ppm	CAAQS $\mu\text{g}/\text{m}^3$	NAAQS ppm	NAQQS $\mu\text{g}/\text{m}^3$
Ozone (O_3)	1-hour	0.09	177	--	--
	8-hour	0.07	137	0.070	137
Nitrogen Dioxide (NO_2)	1-hour	0.18	339	0.100	188
	Annual	0.03	56	0.053	100
Sulfur Dioxide (SO_2)	1-hour	0.25	655	0.075	196
	3-hour	--	--	0.5	1,300
	24-hour	0.04	105	0.14 (for certain areas)	0.030 (for certain areas)
	Annual arithmetic mean	--	--	0.03	--
Carbon Monoxide (CO)	1-hour	20	0.020	35	0.040
	8-hour	9	0.023	9	0.010
Particulates (as PM_{10})	24-hour	--	50	--	150
	Annual arithmetic mean	--	20	--	--
Particulates (as $\text{PM}_{2.5}$)	24-hour	--	--	--	35
	Annual	--	12	--	9.0
Lead (Pb)	30-day	--	1.5	--	--
	Calendar average	--	--	--	1.5 (for certain areas)
	3-month (rolling average) ¹	--	--	--	1.5
Sulfates (as SO_4)	24-hour	--	25	--	--
Hydrogen Sulfide (H_2S)	1-hour	0.03	42	--	--
Vinyl Chloride ($\text{C}_2\text{H}_3\text{Cl}$)	24-hour	0.01	26	--	--

Notes: ¹ A rolling average is a calculation to analyze data points by creating series of averages of different subsets of the full data set. ppm = part(s) per million; $\mu\text{g}/\text{m}^3$ = microgram(s) per cubic meter

Source: CARB 2020 and USEPA 2024

3.3.1.1.3 PM_{2.5}

PM_{2.5} is a mixture of particulate matter (fine dusts and aerosols) that is 2.5 microns or smaller in aerodynamic diameter. For reference, 2.5 micrometers is approximately 1/30th the size of a human hair. PM_{2.5} can travel into the deepest portions of the lungs where gas exchange occurs between the air and the bloodstream. These particles are very dangerous because the deepest portions of the lungs have no efficient mechanisms for removing them. If inhaled, soluble particles could pass directly into the bloodstream within minutes and insoluble particles could be permanently retained in the lungs.

PM_{2.5} particles are emitted from activities such as industrial and residential combustion processes, wood burning, as well as diesel and gasoline-powered vehicles. They are also formed in the atmosphere from gases such as SO₂, NO_x, ammonia, and volatile organic compounds (VOCs) that are emitted from combustion activities, and then become particles due to chemical transformations in the air (secondary particles).

Exposure to PM_{2.5} increases the risks of long-term disease, including chronic respiratory disease, cancer, and increased and premature death. Other effects include increased respiratory stress and disease, decreased lung function, alterations in lung tissue and structure, and alterations in respiratory tract defense mechanisms.

3.3.1.1.4 Carbon Monoxide

CO is a common colorless, odorless, highly toxic gas. It is produced by natural and anthropogenic combustion processes. The major source of CO in urban areas is incomplete combustion of carbon containing fuels (primarily gasoline, diesel fuel, and natural gas). However, it also results from combustion processes, including forest fires and agricultural burning. Over 80 percent of the CO emitted in urban areas is contributed by motor vehicles. Ambient CO concentrations are generally higher in the winter, usually on cold, clear days and nights with little or no wind. Low wind speeds inhibit horizontal dispersion, and surface inversions inhibit vertical mixing. Traffic-congested intersections have the potential to result in localized high levels of CO. These localized areas of elevated CO concentrations are termed CO “hotspots”. CO hotspots are defined as locations where ambient CO concentrations exceed the CAAQS (20 parts per million (ppm), 1-hour; 9 ppm, 8-hour).

When inhaled, CO does not directly harm the lungs; rather, it combines chemically with hemoglobin, the oxygen-transporting component of blood and diminishes the ability of blood to carry oxygen to the brain, heart, and other vital organs. Red blood cells have 220 times the attraction for CO than for oxygen. This affinity interferes with movement of oxygen to the body’s tissues. Effects from CO exposure include headaches, nausea, and death. High levels of CO in a concentrated area can result in asphyxiation.

3.3.1.1.5 Nitrogen Dioxide

NO₂ is formed in the atmosphere primarily by the rapid reaction of the colorless gas nitric oxide (NO) with atmospheric oxygen. It is a reddish-brown gas with an odor like that of bleach. NO₂ participates in the photochemical reactions that result in O₃. The greatest source of NO, and subsequently NO₂, is the high-temperature combustion of fossil fuels such as in motor vehicle engines and power plant boilers. NO₂ and NO are referred to collectively as NO_x.

NO₂ can irritate and damage the lungs, cause bronchitis and pneumonia, and lower resistance to respiratory infections such as influenza. Negative health effects are apparent after exposure to NO₂ levels as low as 0.11 ppm for a few minutes. This level of exposure may elicit or alter sensory responses. Higher concentrations (0.45 - 1.5 ppm) may cause impaired pulmonary function, increased incidence of acute respiratory disease, and difficult breathing for both bronchitis sufferers and healthy people.

3.3.1.1.6 Lead

Lead is a bluish-gray metal that occurs naturally in small quantities. Pure lead is insoluble in water. However, some lead compounds are water soluble. Lead and lead compounds in the atmosphere often come from fuel combustion sources, such as the burning of solid waste, coal, and oils. Historically, the largest source of lead in the atmosphere resulted from the combustion of leaded gasoline in motor vehicles. However, with the phase-out of leaded gasoline, concentrations of lead in the air have substantially decreased. Industrial sources of atmospheric lead include steel and iron factories, lead smelting and refining, and battery manufacturing. Atmospheric lead may also result from lead in entrained dust and dirt contaminated with lead.

Acute health effects of lead include gastrointestinal distress (such as colic), brain and kidney damage, and even death. Lead also has numerous chronic health effects, including anemia, central nervous system damage, reproductive dysfunction, as well as effects on blood pressure, kidney function, and vitamin D metabolism. The USEPA's Office of Air Quality Planning and Standards ranks lead as a "high concern" pollutant based on its severe chronic toxicity.

3.3.1.1.7 Sulfur Dioxide

SO₂ is a colorless gas with a sharp, irritating odor. It can react in the atmosphere to produce sulfuric acid and sulfates, which contribute to acid deposition and atmospheric visibility reduction. It also contributes to the formation of PM₁₀. Most of the SO₂ emitted into the atmosphere is from the burning of sulfur-containing fossil fuels by mobile sources, such as marine vessels and farm equipment, and stationary fuel combustion.

SO₂ irritates the mucous membranes of the eyes and nose, and may also affect the mouth, trachea, and lungs, causing sore throat, coughing, and breathing difficulties.

3.3.1.2 Toxic Air Contaminants

Toxic air contaminants (TACs), also referred to as hazardous air pollutants, are air pollutants (excluding O₃, CO, SO₂, and NO₂) that may reasonably be anticipated to cause cancer, developmental effects, reproductive dysfunction, neurological disorders, heritable gene mutations, or other serious or irreversible acute or chronic health effects in humans. TACs are regulated under different federal and State regulatory processes than O₃ and the other criteria air pollutants. Health effects of TACs may occur at extremely low levels, and it is typically difficult to identify levels of exposure that do not produce adverse health effects. TACs generally consist of four types: 1) organic chemicals such as benzene, dioxins, toluene, and perchloroethylene; 2) inorganic chemicals such as chlorine and arsenic; 3) fibers such as asbestos; and 4) metals such as mercury, cadmium, chromium, and nickel. These air contaminants are defined by the USEPA, the State of California, and other governmental agencies. Currently, more than 900 substances are regulated TACs under federal, state, and local regulations. To

date, CARB has identified 21 TACs including diesel particulate matter (DPM) emissions (CARB 2024a). The greatest potential for TAC emissions during construction is related to DPM emissions associated with heavy-duty equipment.

TACs are produced by a variety of sources, including industrial facilities such as refineries, chemical plants, chrome plating operations, and surface coating operations; commercial facilities such as dry cleaners and gasoline stations; motor vehicles, especially diesel-powered vehicles; and consumer products. TACs can be released from normal industrial operations, as well as from accidental releases during process upset conditions.

Health effects from TACs vary with the type of pollutant, the concentration of the pollutant, the duration of exposure, and the exposure pathway. TACs usually get into the body through inhalation, though they can also be ingested or absorbed through the skin. Adverse effects on people tend to be either acute or chronic. Acute effects result from short-term, high levels of airborne toxic substances. These effects may include nausea, skin irritation, cardiopulmonary distress, and even death. Chronic effects result from long-term, low-level exposure to airborne toxic substances. Effects can range from relatively minor to life-threatening. Less serious chronic effects include skin rashes, dry skin, coughing throat irritation, and headaches. More serious chronic effects include lung, liver, and kidney damage; nervous system damage; miscarriages; genetic and birth defects; and cancer. Many TACs can have both carcinogenic and non-carcinogenic health effects.

3.3.1.3 Other Issues of Concern

3.3.1.3.1 Odors

Odors are substances in the air that pose a nuisance to nearby land uses such as residences, schools, daycare centers, and hospitals. Odors are typically not a health concern but can interfere with the use and enjoyment of nearby property. Odors may be generated by a wide variety of sources. The odor associated with decomposing organic material (such as plants removed from ponds and left to decay) may also be considered to be objectionable. Objectionable odors created by a facility or operation may cause a nuisance or annoyance to adjacent populations.

3.3.1.3.2 Fugitive Dust

Fugitive dust refers to solid particulate matter that becomes airborne because of wind action and human activities. Fugitive dust particles are mainly soil minerals, but can also be sea salt, pollen, spores, tire particles. About half of fugitive dust particles (by weight) are larger than 10 microns and settle quickly. Fugitive dust particles 10 microns or smaller (i.e., PM₁₀) can remain airborne for weeks.

The primary sources of fugitive dust include grading and excavation operations associated with road and building construction, aggregate mining and processing operations, and sanitary landfill operations. Unpaved roadways are also a large source of fugitive dust. Other sources of fugitive dust include demolition activities, unpaved roadway shoulders, vacant lots, material stockpiles, abrasive blasting operations, and off-road vehicle use. The amount of fugitive dust created by such activities is dependent largely on the type of soil, type of operation taking place, size of the area, degree of soil disturbance, soil moisture content, and wind speed.

When fugitive dust particles are inhaled, they can travel easily to the deep parts of the lungs and may remain there, causing respiratory illness, lung damage, and even premature death in sensitive people. Fugitive dust may also be a nuisance to those living and working nearby. Dust blown across roadways can lead to traffic accidents by reducing visibility. Fugitive dust can soil and damage materials and property, such as fabrics, vehicles, and buildings. Particulates deposited on agricultural crops can lower crop quality and yield.

3.3.1.4 Existing Regional Air Quality

Measurements of ambient concentrations of the criteria pollutants are used by the USEPA and CARB to assess and classify the air quality of each air basin, county, or, in some cases, a specific urbanized area. The classification is determined by comparing actual monitoring data with national and state standards. If a pollutant concentration in an area is lower than the standard, the area is classified as being in “attainment.” If the pollutant exceeds the standard, the area is classified as a “nonattainment” area. If there is not enough data available to determine whether the standard is exceeded in an area, the area is designated “unclassified.”

The Los Angeles County portion of the SCAB is designated by the USEPA as a nonattainment area for O₃, lead, and PM_{2.5}; an attainment area for PM₁₀; and an attainment/unclassified area for NO₂. The SCAB is designated by CARB as a state-level nonattainment area for O₃, PM_{2.5}, and PM₁₀ and as an attainment area for lead, CO, NO₂, and SO₂. Table 3.3-3 shows the attainment status of the SCAB for the state and federal standards.

Table 3.3-3. South Coast Air Basin Attainment Status

Pollutant	CAAQS	NAAQS
Ozone (O ₃)	Nonattainment	Extreme Nonattainment
Nitrogen Dioxide (NO ₂)	Attainment	Unclassified/Attainment
Sulfur Dioxide (SO ₂)	Attainment	Unclassified/Attainment
Carbon Monoxide (CO)	Attainment	Unclassified/Attainment
Particulates (as PM ₁₀)	Nonattainment	Attainment
Particulates (as PM _{2.5})	Nonattainment	Serious Nonattainment
Lead (Pb)	Attainment	Nonattainment (Los Angeles County Portion)

Source: CARB 2024b.

The SCAQMD divides the SCAB into 37 source receptor areas (SRAs) in which 42 monitoring stations currently operate to monitor concentrations of air pollutants in the region. The Plan Area is located in multiple jurisdictions within Los Angeles County. Given the large geographic region of the Plan, an extensive listing of the air quality monitoring data collected at each SCAQMD monitoring station located within the Plan Area is not provided in this PEIR. As individual projects are not assessed separately in this PEIR, the presentation of the air quality data collected by monitoring stations relevant to each project associated with the Plan is more applicable for inclusion in the environmental documents for future individual Plan projects.

3.3.1.5 Sensitive Receptors

Certain population groups are considered more sensitive to air pollutants than others; in particular, children, elderly, and acutely ill and chronically ill people, especially those with cardiorespiratory diseases such as asthma and bronchitis. Sensitive receptors (land uses) indicate locations where such individuals are typically found, namely schools, day care centers, hospitals, convalescent homes, residences of sensitive persons, and parks with active recreational uses.

Persons engaged in strenuous work or physical exercise also have increased sensitivity to poor air quality. Residential areas are considered more sensitive to air quality conditions than commercial and industrial areas because people generally spend longer periods of time at their residences, resulting in greater exposure to ambient air quality conditions. Recreational uses such as parks are also considered sensitive due to the greater exposure to ambient air quality conditions, and because the presence of pollution detracts from the recreational experience.

The majority of the Plan Area is highly urbanized and includes a variety of land use types (e.g., open space, residential, commercial, mixed use, public, and industrial uses). There are many schools within the Plan Area. Table 3.3-4 shows the various school districts that operate within the Plan Area. Given the breadth and extent of the Plan, individual projects would be located within proximity to sensitive uses such as residences, schools, hospitals, and daycare centers.

Table 3.3-4. School Districts within the Plan Area

School District	Incorporated Cities
Alhambra Unified School District operates 19 schools throughout the City.	Alhambra
Arcadia Unified serves 9,500 students across 11 schools in the City.	Arcadia
Baldwin Park Unified serves over 11,000 students across 19 schools.	Baldwin Park
Claremont Unified operates 11 schools throughout the City.	Claremont
Covina-Valley Unified operates 19 Schools throughout Covina, West Covina, Glendora, San Dimas, and Irwindale.	Covina, Glendora, San Dimas, West Covina
Walnut Valley Unified School district serves 14,600 students across 15 schools in Walnut and Diamond Bar.	Diamond Bar, Walnut
Duarte Unified School District serves 8 schools throughout the city.	Duarte
El Monte City School District serves approximately 7,000 students across 14 schools.	El Monte
Hacienda La Puente Unified School District serves over 22,000 students within the cities of Industry and La Puente, and the unincorporated Los Angeles County areas of Hacienda Heights and Valinda across 32 schools.	Industry, La Puente
Bonita Unified School District operates 13 schools in the communities of San Dimas and La Verne, and part of Glendora.	Glendora, La Verne, San Dimas
Monrovia Unified School District operates 13 schools throughout the City.	Monrovia
Pasadena Unified School District serves 15,000 students across 23 schools.	Pasadena
Pomona Unified School District serves 20,915 students across 38 schools.	Pomona
Rosemead Unified School District serves 2,900 students across 5 schools.	Rosemead

School District	Incorporated Cities
San Gabriel Unified School District serves 6,000 students across 8 schools.	San Gabriel
Temple City Unified School District operates 9 schools.	Temple City

3.3.2 Regulatory Setting

3.3.2.1 Federal

3.3.2.1.1 Clean Air Act

The Clean Air Act (CAA) governs air quality in the United States and is enforced by the USEPA. The USEPA is also responsible for establishing the NAAQS. As required by the CAA, the NAAQS have been established for seven major air pollutants: CO, NO₂, O₃, PM_{2.5}, PM₁₀, SO₂, and Pb. Primary standards set limits to protect public health, including the health of at-risk populations such as people with pre-existing heart or lung disease (such as asthmatics), children, and older adults. Secondary standards set limits to protect public welfare, including protection against visibility impairment, damage to animals, crops, vegetation, and buildings. The CAA requires the USEPA to designate areas as attainment, nonattainment, or maintenance (previously nonattainment and currently attainment) for primary standards based on whether the NAAQS have been achieved. The USEPA has classified the SCAB as a nonattainment area for O₃, PM_{2.5}, and Pb and an attainment/maintenance area for PM₁₀, CO, SO₂, and NO₂.

In addition to the criteria pollutants, the air toxics provisions of the CAA require the USEPA to develop and enforce regulations to protect the public from exposure to airborne contaminants that are known to be hazardous to human health. In accordance with Section 112 of the CAA, the USEPA establishes National Emission Standards for Hazardous Air Pollutants. The list of Hazardous Air Pollutants or air toxics includes specific compounds that are known or suspected to cause cancer or other serious health effects.

3.3.2.2 State

3.3.2.2.1 California Clean Air Act

In addition to being subject to the requirements of the CAA, air quality in California is also governed by the California Clean Air Act (CCAA). In California, the CCAA is administered by CARB at the state level and by the air quality management districts and air pollution control districts at the regional and local levels.

The CAAQS are generally more stringent than the corresponding federal standards and incorporate additional standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. The CCAA requires CARB to designate areas within California as either attainment or nonattainment for each criteria pollutant based on whether the CAAQS have been achieved. Under the CCAA, areas are designated as nonattainment for a pollutant if air quality data shows that a State standard for the pollutant was violated at least once during the previous three calendar years. Exceedances that are affected by highly irregular or infrequent events are not considered violations of a State standard and

are not used as a basis for designating areas as nonattainment. Under the CCAA, the Los Angeles County portion of the SCAB is designated as a nonattainment area for O₃, PM_{2.5}, and PM₁₀.

3.3.2.3 Regional

3.3.2.3.1 SCAQMD

The 1977 Lewis Air Quality Management Act merged four air pollution control districts to create the SCAQMD to coordinate air quality planning efforts throughout southern California. It is responsible for monitoring air quality, as well as planning, implementing, and enforcing programs designed to attain and maintain State and federal ambient air quality standards. Programs include air quality rules and regulations that regulate stationary sources, area sources, point sources, and certain mobile source emissions. The SCAQMD is also responsible for establishing stationary source permitting requirements and for ensuring that new, modified, or relocated stationary sources do not create net emission increases.

All areas designated as non-attainment under the CCAA are required to prepare plans showing how they will meet the air quality standards. The SCAQMD prepares the Air Quality Management Plan (AQMP) to address CAA and CCAA requirements by identifying policies and control measures. The SCAG assists by preparing the transportation portion of the AQMP. On December 2, 2022, the SCAQMD adopted its 2022 AQMP, which is now the legally enforceable plan for meeting the 24-hour PM_{2.5} strategy standard (SCAQMD 2022b). The AQMP also incorporates the transportation strategy and transportation control measures from SCAG's adopted 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (2016-2040 RTP/SCS) Plan. SCAG is required by law to ensure that transportation activities in its jurisdiction "conform" to, and are supportive of, the goals of regional and state air quality plans to attain the NAAQS. The RTP/SCS includes transportation programs, measures, and strategies generally designed to reduce vehicle miles traveled (VMT), which are contained in the AQMP. The SCAQMD combines its portion of the AQMP with those prepared by SCAG.

In addition to criteria pollutants, the SCAQMD also regulates TACs. A cornerstone of its work was the development of the Multiple Air Toxics Exposure Study (MATES-V). The monitoring program measured a broad list of air pollutants, including both gases and particulates, and estimated the risk of cancer from breathing toxic air pollution throughout the region. MATES-V found that the average cancer risk in Los Angeles County from carcinogenic air pollutants was 462 per million (SCAQMD 2021).

In its role as the local air quality regulatory agency, the SCAQMD also provides guidance on how environmental analyses should be prepared. This includes recommended thresholds of significance for evaluating air quality impacts. To determine whether air quality impacts from the Plan may be significant, impacts are evaluated and compared to the criteria in Table 3.3-5 and Table 3.3-6. If impacts equal or exceed any of the criteria in Table 3.3-5 and Table 3.3-6, they are considered significant.

Table 3.3-5. SCAQMD Air Quality Mass Daily Significance Thresholds

Pollutant	Mass Daily Thresholds (Construction)	Mass Daily Thresholds (Operation)
NO _x	100 lbs/day	55 lbs/day
VOC	75 lbs/day	55 lbs/day
PM ₁₀	150 lbs/day	150 lbs/day
PM _{2.5}	55 lbs/day	55 lbs/day
SO _x	150 lbs/day	150 lbs/day
CO	550 lbs/day	550 lbs/day
Lead	3 lbs/day	3 lbs/day

Source: SCAQMD 2019. Notes: lbs/day = pounds per day

Table 3.3-6. SCAQMD Air Quality Mass Daily Significance Thresholds for TACs and Odor

Pollutant	Mass Daily Thresholds (Construction)
TACs (including carcinogens and non-carcinogens)	Maximum Incremental Cancer Risk ≥ 10 in 1 million Cancer Burden > 0.5 excess cancer cases (in areas ≥ 1 in 1 million) Chronic & Acute Hazard Index ≥ 1.0 (project increment)
Odor	Project creates an odor nuisance pursuant to SCAQMD Rule 402

Source: SCAQMD 2019.

SCAQMD is currently in the process of developing an "Air Quality Analysis Guidance Handbook" (Handbook) to replace the SCAQMD CEQA Handbook. Until the Air Quality Analysis Guidance Handbook becomes available, the SCAQMD provides supplemental information to assist in air quality analysis. Specifically, the SCAQMD provides Localized Significance Thresholds (LSTs) for projects that are five acres or less and take into consideration location and localized meteorologic (i.e., the SCAQMD identifies 38 "Source Receptor Areas"). To provide a conservative assessment, each individual project site is considered a 1-acre construction site for the purpose of comparing to the relevant LSTs. Since the Plan sites span several Source Receptor Areas, the most conservative emissions thresholds for all Source Receptor Areas within the Plan Area (i.e., SRA 8 – West San Gabriel Valley) located 25 feet from individual project sites as summarized in Table 3.3-7, are used to determine whether air quality impacts from the Plan may be significant.

Table 3.3-7. Emission Localized Significance Thresholds for Construction and Operation (1-Acre Project Site in SRA 8, 25 Meters from Sensitive Receptor)

Pollutant	Localized Significance Thresholds for Construction (pounds per day)	Localized Significance Thresholds for Operation (pounds per day)
NO _x	69	69
CO	535	535
PM ₁₀	4	1
PM _{2.5}	3	1

Source: SCAQMD 2008.

The SCAQMD has established various rules to manage air quality in the SCAB, including and not limited to:

- Rule 402, Nuisance: Rule 402 prohibits the discharge of air contaminants or other material that cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public; endanger the comfort, repose, health, or safety of any such persons or the public; or cause, or have a natural tendency to cause, injury or damage to business or property. Odors are regulated under this rule.
- Rule 403, Fugitive Dust: Rule 403 prohibits emissions of fugitive dust from any active operation, open storage pile, or disturbed surface area that remains visible beyond the property line of the emission's source. During construction, best available control measures identified in the rule would be required to minimize fugitive dust emissions from proposed earthmoving and grading activities. These measures would include site pre-watering and rewatering as necessary to maintain sufficient soil moisture content. Additional requirements apply to construction projects on properties with 50 or more acres of disturbed surface area or any earthmoving operation with a daily earthmoving or throughput volume of 5,000 cubic yards or more three times during the most recent 365-day period. These requirements include submittal of a dust control plan, maintenance of dust control records, and designation of an SCAQMD-certified dust control supervisor.
- Rule 404, Particulate Matter - Concentration: Rule 404 sets concentration limits for PM₁₀ emissions based on process flow rate.
- Rule 407, Liquid and Gaseous Air Contaminants: Rule 407 sets concentration limits for CO and sulfur compounds that any person is discharging into the atmosphere from any equipment.
- Rule 409, Combustion Contaminants: Rule 409 sets concentration limits for any equipment combustion contaminants being discharged into the atmosphere.
- Rule 431.1, Sulfur Content of Gaseous Fuels: The purpose of Rule 431.1 is to reduce SO_x emissions from the burning of gaseous fuels in stationary equipment requiring a permit to operate by the SCAQMD.
- Rule 474, Fuel Burning Equipment – Oxides of Nitrogen: Rule 474 sets concentration limits for NO_x discharged into the atmosphere from non-mobile fuel burning and steam generating equipment.
- Rule 1108, Cutback Asphalt: Rule 1108 specifies VOC content limits for cutback asphalt.
- Rule 1110.2, Emissions from Gaseous- and Liquid-Fueled Engines: The purpose of Rule 1110.2 is to reduce NO_x, VOCs, and CO from engines rated over 50 brake horsepower.
- Rule 1113, Architectural Coatings: Rule 1113 specifies VOC content limits for architectural coatings.

3.3.2.3.2 Los Angeles County General Plan

The General Plan is an applicable guiding policy document for the unincorporated Plan Area. The General Plan is intended to provide policy framework for development within the County through the year 2035. The General Plan provides the fundamental basis for the County's land use and development policy, and represents the basic community values, ideals, and aspirations to govern a shared environment through 2035. The following goals and policies from the General Plan Air Quality Element are applicable to the Plan:

- Goal AQ 1: Protection from exposure to harmful air pollutants.
 - Policy AQ 1.1: Minimize health risks to people from industrial toxic or hazardous air pollutant emissions, with an emphasis on local hot spots, such as existing point sources affecting immediate sensitive receptors.
 - Policy AQ 1.2: Encourage the use of low or no VOC emitting materials.
 - Policy AQ 1.3: Reduce particulate inorganic and biological emissions from construction, grading, excavation, and demolition to the maximum extent feasible.
 - Policy AQ 1.4: Work with local air quality management districts to publicize air quality warnings, and to track potential sources of airborne toxics from identified mobile and stationary sources.
- Goal AQ 2: The reduction of air pollution and mobile source emissions through coordinated land use, transportation and air quality planning.
 - Policy AQ 2.1: Encourage the application of design and other appropriate measures when siting sensitive uses, such as residences, schools, senior centers, daycare centers, medical facilities, or parks with active recreational facilities within proximity to major sources of air pollution, such as freeways.
 - Policy AQ 2.2: Participate in, and effectively coordinate, the development and implementation of community and regional air quality programs.
 - Policy AQ 2.3: Support the conservation of natural resources and vegetation to reduce and mitigate air pollution impacts.
 - Policy AQ 2.4: Coordinate with different agencies to minimize fugitive dust from different sources, activities, and uses.
- Goal AQ 3 Implementation of plans and programs to address the impacts of climate change.
 - Policy AQ 3.2: Reduce energy consumption in County operations by 20 percent by 2015.
 - Policy AQ 3.3: Reduce water consumption in County operations.
 - Policy AQ 3.4 Participate in local, regional, and state programs to reduce greenhouse gas emissions.
 - Policy AQ 3.5 Encourage energy conservation in new development and municipal operations.
 - Policy AQ 3.6 Support rooftop solar facilities on new and existing buildings.

3.3.2.4 Incorporated Cities Within the Plan Area

The table below presents the policies related to air quality from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.3-8. Applicable Local City Policies Related to Air Quality

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Resources Element:</p> <p>Goal R-3: Minimization of energy use and its associated impacts to air quality and climate change.</p> <p>Goal R-4: Minimization of Alhambra’s contribution to regional air pollution and local exposure to elevated air pollution concentrations.</p> <p>Policy R-4A: Coordinate as appropriate with SCAQMD to ensure compliance with applicable emissions standards.</p> <p>Policy R-4B: Through land use decisions, minimize to the degree feasible the generation of air pollution and exposure of sensitive populations to elevated air pollution concentrations.</p> <p>Policy R-4C: Use SCAQMD recommended methodologies to analyze and mitigate the air quality impacts of individual development projects.</p>	<p>Municipal codes applicable to air quality within the Plan Area can be found in Chapter 6.26 (Real Property Nuisances) Section 6.26.030 (Prohibited Public Nuisance Conditions).</p> <p>Under Chapter 6.26 (Real Property Nuisances) Section 6.26.030 (Prohibited Public Nuisance Conditions) the following apply:</p> <p>(14) Flammable materials or liquids. The keeping or disposing of, or the scattering or accumulating of flammable, combustible or other materials or liquids including, but not limited to, composting, firewood, lumber, junk, trash, debris, packing boxes, papers, pallets, plant cuttings, tree trimmings or wood chips, discarded items, or other personal property on exterior portions of real property, or within any building or structure thereon, when such items or accumulations:</p> <p>(e) Cause, create, or tend to contribute to, an offensive odor.</p>	No other applicable ordinances were identified.
Arcadia	<p>Resource Sustainability Element:</p> <p>Goal RS-1: Continued improvement in local and regional air quality.</p> <p>Policy RS-1.1: Reduce local contributions of airborne pollutants to the air basin.</p> <p>Policy RS-1.2: Limit, when feasible, locating sensitive receptors near pollutant emitting sources.</p> <p>Policy RS-1.3: Continue to participate in regional efforts to meet state and federal air quality standards.</p> <p>Policy RS-1.4: Lower the emissions caused by motor vehicles through Transportation Demand Management strategies and land use patterns that reduce vehicle miles traveled.</p> <p>Policy RS-1.5: Promote the reduction of vehicular traffic and improved efficiency of the City’s circulation system (i.e. roadways) as a means to improving air quality.</p> <p>Policy RS-1.6: Require projects that generate potentially significant levels of air pollutants to incorporate the most effective air quality mitigation into project design, as appropriate.</p> <p>Policy RS-1.7: Promote energy-efficient building construction and operation practices that reduce emissions and improve air quality.</p> <p>Goal RS-2: Reducing Arcadia’s carbon footprint in compliance with SB 375 and AB 32.</p> <p>Policy RS-2.4: Pursue the strategies in the Land Use and Community Design Element to encourage transit-oriented development in established focused areas.</p> <p>Policy RS-2.5: Pursue the enhancement of bicycle and pedestrian infrastructure set forth in the Circulation and Infrastructure Element to help decrease vehicle miles traveled and vehicle trips.</p> <p>Policy RS-2.6: Coordinate land use, circulation, and infrastructure improvement efforts with the West San Gabriel Valley Planning Council, regional planning agencies, and surrounding municipalities.</p>	<p>Municipal codes applicable to air quality within the Plan Area can be found in Chapter 1 (Development Code) Section 9103.13 (Performance Standards).</p> <p>Under Chapter 1 (Development Code) Section 9103.13 (Performance Standards) the following apply:</p> <p>9103.13.020 - Dust and Dirt.</p> <p>No existing or proposed use, activity, or process or portion thereof shall from any single or combined source of emission whatsoever discharge into the atmosphere dust, dirt, or ash, except as may be permitted by the South Coast Air Quality Management District.</p> <p>9103.13.030 - Smoke.</p> <p>No existing or proposed use, activity, or process or portion thereof shall from any source whatsoever discharge smoke or other particulate matter into the atmosphere, except as may be permitted by the South Coast Air Quality Management District.</p> <p>9103.13.090 - Odors.</p> <p>No existing or proposed use, activity, or process or portion thereof shall discharge from any source whatsoever such quantities of odorous gases or other odorous matter which would cause injury to the public or endanger the comfort, repose, health, and safety of any persons, or would cause or have a natural tendency to cause injury or damage to business or property.</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal RS-3: Promoting and utilizing clean forms of transportation to reduce Arcadia’s carbon Footprint Policy RS-3.1: Develop a City fleet that to the extent feasible uses clean, alternative fuel and consists of energy-efficient vehicles.</p> <p>Policy RS-3.2: Incorporate energy-efficient vehicles into the City’s transit system.</p> <p>Policy RS-3.3: Educate residents on methods of sustainable driving techniques such as: reducing excessive speeding, preventing car idling, regular car maintenance for maximizing fuel efficiency, and carpooling.</p> <p>Policy RS-3.4: Promote residents’ and business owners’ awareness and education of traffic congestion’s effect on air pollution and help create voluntary programs that reduce traffic throughout the City.</p>		
Azusa	<p>Chater 5 Natural Environment</p> <p>Goal 1: Improve air quality in Azusa and reduce exposure to air pollutants.</p> <p>Policy 1.1 Integrate air quality concerns into land use planning decisions.</p> <p>Policy 1.2 Integrate air quality concerns into site design review.</p> <p>Policy 1.4 Participate in regional air quality planning strategies.</p> <p>Policy 1.5 Consider encouraging the use of “green roof” construction technologies.</p>	<p>Municipal code relevant to air quality within the Plan Area can be found in Chapter 88.31 (Operational Standards) Section 88.31.040 (Performance Standards).</p> <p>Chapter 88.31 (Operational Standards) Section 88.31.040 (Performance Standards) states the following:</p> <p>C. Air Emissions. No operation or activity shall emit excessive smoke, fumes, dust, or particulate matter, or which exceed the requirements or levels specified by the South Coast Air Quality Management District.</p> <p>I. Odor. No obnoxious odor or fumes shall be emitted that are perceptible without instruments by a reasonable person at or beyond the property line of the site.</p>	<p>No other applicable ordinances were identified.</p>
Baldwin Park	<p>Air Quality Element:</p> <p>Goal 1.0: Improve air quality by reducing the amount of air pollution through proper land use planning.</p> <p>Policy 1.1: Establish a new Mixed Used land use category for Downtown which provides for the integration of residential and commercial uses. Establish Downtown as a pedestrian district through development regulations, public improvements, and street design.</p> <p>Policy 1.2: Locate multiple family developments close to commercial areas to encourage pedestrian rather than vehicular travel.</p> <p>Policy 1.3: Encourage the development of higher density housing in close proximity to the City's Metrolink station.</p> <p>Policy 1.4: Provide for the enhancement of neighborhood commercial centers to provide services within walking distance of residential neighborhoods.</p> <p>Policy 1.5: Encourage the design of new residential and commercial areas to foster pedestrian circulation.</p> <p>Goal 2.0: Improve air quality by reducing the amount of vehicular emissions through planning for alternative forms of travel.</p> <p>Policy 2.1: Continue to operate the City's fixed route shuttle system, and evaluate expansion of the route as necessary to serve additional centers of activity in the City.</p> <p>Policy 2.2: Cooperate and participate in regional air quality management planning, programs, and enforcement measures.</p> <p>Policy 2.3: Utilize Transportation Demand Management to influence transportation choices related to mode and time of travel.</p> <p>Policy 2.4: Create the maximum possible opportunities for bicycles as an alternative transportation mode and recreational use.</p>	<p>Municipal code relevant to air quality within the Plan Area can be found in Chapter 153 (Zoning Code) Section 153.140 (Performance Standards) and Chapter 95 (Nuisances) Section 95.02 (Declaration of Nuisance).</p> <p>Under Chapter 153 (Zoning Code) Section 153.140 (Performance Standards) the following applies:</p> <p>Section 153.140.080 (Odor)</p> <p>(A) Odor standards. Any process that creates or emits and odors, gases or other odorous matter shall comply with standards set by the South Coast Air Quality Management District.</p> <p>(B) Continuous, frequent or repetitive odorous gases. No use shall be permitted to emit continuous, frequent or repetitive odorous gases such as to be detectable without the aid of instruments at or beyond the lot line of the site. An odor emitted no more than 15 minutes in any one day shall not be deemed as continuous, frequent or repetitive.</p> <p>(Ord. 1346, passed 5-2-12)</p> <p>Under Chapter 95 (Nuisances) Section 95.02 (Declaration of Nuisance) the following applies:</p> <p>(D) To maintain upon such property trash, garbage or refuse cans, bins, boxes, or other such containers:</p> <p>(3) In any place in such condition so as to cause offensive odors on any other property.</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 2.5: Encourage non-motorized transportation through the provision of bicycle and pedestrian pathways.</p> <p>Policy 2.6: Review the zoning regulations annually to identify whether revisions are required to accommodate and encourage the use of alternative fuel vehicles (e.g. electric cars).</p> <p>Goal 3.0: Improve air quality by reducing the amount of vehicular emissions through transportation planning that encourages trip reduction.</p> <p>Policy 3.1: Utilize incentives, regulations and/or Transportation Demand Management programs in cooperation with other jurisdictions in the South Coast Air Basin to eliminate vehicle trips which would otherwise be made.</p> <p>Policy 3.2: Utilize incentives, regulations and/or Transportation Demand Management in cooperation with other jurisdictions to reduce the vehicle miles traveled for auto trips which still need to be made.</p> <p>Goal 4.0: Improve air quality by reducing vehicular emissions through transportation planning improvements that improve the flow of traffic.</p> <p>Policy 4.1: Promote and establish modified work schedules which reduce peak period auto travel.</p> <p>Policy 4.2: Participate in efforts to achieve increased designation, construction, and operation of High Occupancy Vehicle (HOV) lanes on local freeways.</p> <p>Policy 4.3: Encourage employer rideshare and transit incentives programs by local businesses.</p> <p>Policy 4.4: Encourage businesses to alter truck delivery routes and local delivery schedules during peak hours, or switch to off-peak delivery hours.</p> <p>Policy 4.5: Implement citywide traffic flow improvements outlined in the Circulation Element.</p> <p>Policy 4.6: Adopt and implement the required components of the Congestion Management Plan, and continue to work with Los Angeles County on annual updates to the CMP.</p> <p>Policy 4.7: Promote State and federal legislation which would improve vehicle/transportation technology.</p> <p>Goal 5.0: Reduce particulate emissions to the greatest extent feasible.</p> <p>Policy 5.1: Adopt incentives, regulations, and/ or procedures to minimize particulate emissions from paved roads.</p> <p>Policy 5.2: Adopt incentives, regulations, and/ or procedures to minimize particulate emissions from unpaved roads, parking lots, and staging areas.</p>		
Claremont	<p>Open Space, Parkland, Conservation, and Air Quality Element:</p> <p>Goal 5-13: Maximize energy conservation throughout all segments of the community to reduce air pollutant emissions, and to reduce consumption of natural resources and fossil fuels.</p> <p>Policy 5-13.1: Promote the use of energy-saving designs and devices in all new construction and reconstruction.</p> <p>Policy 5-13.2: Incorporate the use of energy conservation strategies in City projects.</p> <p>Goal 15-14: Incorporate green building and other sustainable building practices into development projects.</p>	<p>Municipal code relevant to air quality within the Plan Area can be found in Chapter 16.154 (Environmental Protective Standards) Section 16.154.040 (Environmental Development Standards).</p> <p>Under Chapter 16.154 (Environmental Protective Standards) Section 16.154.040 (Environmental Development Standards) the following applies:</p> <p>A. Air Contaminants</p> <p>The emission of any air contaminants shall not exceed the requirements of the South Coast Air Quality Management District or the requirements of any Air Quality Plan adopted by the City of Claremont.</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 5-14.1: Facilitate the use of green building standards and Leadership in Energy and Environmental Design (LEED) in both private and public projects.</p> <p>Goal 5-18: Reduce the amount of air pollution emissions from mobile and stationary sources and enhance the airshed.</p> <p>Policy 5-18-1: Enhance pedestrian and bike facilities within the City and encourage alternative modes of transportation.</p> <p>Policy 5-18.2: Encourage the use of clean fuel vehicles.</p> <p>Policy 5-18.5: Continue to require the planting of street trees along City streets and inclusion of trees and landscaping for all development projects to help improve airshed and minimize urban heat island effects.</p> <p>Policy 5-18.6: Encourage small businesses to utilize clean, innovative technologies to reduce air pollution.</p> <p>Policy 5-18.7: Implement principles of green building (see policies under Goal 5-14).</p> <p>Goal 5-19: Reduce the amount of fugitive dust released into the atmosphere.</p> <p>Policy 5-19.1: Support programs and policies of the South Coast Air Quality Management District regarding restrictions on grading operations at construction projects.</p> <p>Policy 5-19.2: Cooperate with local, regional, state, and federal jurisdictions to control fugitive dust from stationary, mobile, and area sources.</p> <p>Policy 5-19.3: Enforce regulations that do not allow vehicles to transport aggregate or similar material upon a roadway unless the material is stabilized or covered, in accordance with state law and South Coast Air Quality Management District regulations.</p> <p>Goal 5-20: Elevate public awareness regarding air pollution sources and pollutant reduction initiatives.</p> <p>Policy 5-20.1: Encourage and publicly recognize innovative approaches that improve air quality.</p> <p>Policy 5-20.2: Encourage the participation of environmental groups, the business community, civic groups, special interest groups, and the general public in the formulation and implementation of programs that effectively reduce air pollution.</p>		
Covina	<p>Land Use Element:</p> <p>Objective 1: A climate where moderate residential, commercial, and industrial development and redevelopment are accommodated.</p> <p>Policy 14: Require that future growth, infill, and revitalization activities be consistent with City-adopted positions, policies, and programs regarding regional planning and growth management matters— such as air quality attainment, recycling, hazardous waste management, trip reduction, congestion management, stormwater runoff, water quality, housing, transportation, and circulation.</p> <p>Natural Resources and Open Space Element:</p> <p>Goal Natural Resources: A setting in which a high environmental quality is achieved through the bona fide conservation and protection of existing natural resources.</p> <p><i>Water Resources and Air Quality Polices</i></p> <p>Policy o: Comply with applicable portions of Federal, State, regional, and County plans and programs pertaining to air pollution mitigation/air quality enhancement by following, in a manner that recognizes local needs, issues, views, and policy and</p>	<p>Municipal code relevant to air quality within the Plan Area can be found in Chapter 9.42 (Environmental Disturbances) Section 9.42.020 (Sources of Environmental Disturbances) and Chapter 8.40 (Public Nuisances) Section 8.40.030 (Prohibited Public Nuisance Conditions).</p> <p>Under Chapter 9.42 (Environmental Disturbances) Section 9.42.020 (Sources of Environmental Disturbances) the following applies:</p> <p>A. Odors. No operation or activity of odorous gases or other odorous matter in such quantities as to be dangerous, injurious, noxious, or otherwise objectionable, which is detectable with or without the aid of instruments, shall be permitted at or beyond the lot line of the property generating the odorous gases or matter.</p> <p>C. Smoke. No operation or activity is permitted to have operations that emit excessive smoke, fumes, or dust that exceeds the requirements or levels specified by the South Coast Air Quality Management District (SCAQMD).</p> <p>Under Chapter 8.40 (Public Nuisances) Section 8.40.030 (Prohibited Public Nuisance Conditions) the following applies:</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>financial constraints, various vehicular emissions-reducing and traffic congestion-reducing land use and transportation control and energy conservation measures, proposals, and policies outlined in the Land Use and Circulation Elements, to the greatest extent feasible and practical.</p> <p>Policy s: Separate sensitive areas and uses (e.g., parks, schools, child care centers, and nursing homes) from significant sources of air pollution, to the greatest extent possible.</p> <p>Policy t: Preclude the development of land uses and land use practices that would contribute significantly to air quality degradation.</p>	<p>13. The keeping or disposing of, or the scattering or accumulating of, flammable, combustible or other materials including, but not limited to, composting, firewood, lumber, junk, trash, debris, packing boxes, pallets, plant cuttings, tree trimmings or wood chips, discarded items, or other personal property on exterior portions of real property, or within any building or structure thereon, when such items or accumulations:</p> <p>e. Cause, create, or tend to contribute to an offensive odor.</p>	
El Monte	<p>Land Use Element:</p> <p>Policy LU-7.15: Land Use Buffers. Require developers and property owners to mitigate the negative impacts (e.g., noise, air quality, traffic, etc.) of their nonresidential operations that materially affect the quality of life of neighboring residential areas as a precondition to expansion, relocation, or operation of nonresidential uses.</p> <p>Public Health and Safety Element:</p> <p>Goal PHS-3: Clean and healthful air through the implementation of responsive land use practices, enhancement to the natural landscape, pollution reduction strategies, and cooperation with regional agencies.</p> <p>Policy PHS-3.1 Land Use. As a condition for siting or expanding operations in El Monte, require air pollution emitters to evaluate and fully mitigate the impacts of their operations on schools, homes, medical facilities, child care centers, and other sensitive receptors.</p> <p>Policy PHS-3.3 Community Forest. As prescribed in the Parks and Recreation Element, enhance the City’s community forest by planting trees along all roadways as a means to help filter air pollutants, clean the air, and provide other health benefits to the community.</p> <p>Policy PHS-3.4 Transportation. Encourage alternative modes of travel to work and school by maximizing transit service, purchasing alternative fuel vehicles, completing all sidewalks, and creating a network of multiuse trails and bicycle paths.</p> <p>Policy PHS-3.5 Regional Coordination. Work cooperatively with cities through the San Gabriel Valley Council of Governments to address interjurisdictional and regional issues of air quality, including mobile and stationary sources of air pollution.</p> <p>Policy PHS-5.5: Air Pollution. Reduce public exposure to toxic air contaminants through appropriate land use policy, transportation strategies, and prohibition or phasing out of incompatible emissions.</p> <p>sources.</p> <p>Circulation Element:</p> <p>Policy CD-7.9: Buffering. Plant buffers of lush deciduous trees along the railroad right-of-way, adjacent to neighborhoods and industries, and in parks and at schools to create a noise buffer, filter air pollutants, and beautify the district.</p> <p>Health and Wellness Element:</p> <p>Goal HW-12: Land use patterns reduce driving, enhance air quality, and improve respiratory health.</p>	<p>Municipal code relevant to air quality within the Plan Area can be found in Chapter 17.50 (Performance Standards) Section 17.50.050 (Air Quality) and Chapter 8.40 (Public Nuisances) Section 8.40.030 (Prohibited Public Nuisance Conditions).</p> <p>Under Chapter 17.50 (Performance Standards) Section 17.50.050 (Air Quality) the following applies:</p> <p>A. Discharge Prohibited. The operation of any structure or use shall not directly or indirectly discharge air contaminants (e.g. carbon, dust, fumes, gases, mist, noxious acids, odors, particulate matter, smoke, soot and sulfur compounds) into the atmosphere that exceed any federal, state or local air quality standards or that might be obnoxious or offensive to anyone residing or conducting business either on-site or abutting the site.</p> <p>B. Compliance with Rules and Regulations. Stationary sources of air pollution shall comply with the requirements of the most recent Air Quality Management Plan and any rules identified by the California Environmental Protection Agency (CalEPA), the California Air Resources Board (ARB) and the South Coast Air Quality Management District (SCAQMD).</p> <p>D. Minimum Separation Distances. The proximity of proposed sensitive land uses to air pollution sources should be considered in the siting of the sensitive use. For the purposes of this section, sensitive land uses are those land uses where individuals who are more susceptible to the effects of air pollution (e.g. athletes, children, the elderly, those with illnesses) than the population at large.</p> <p>E. Odor Emissions.</p> <p>1. No existing or proposed use, activity or process or portion thereof shall discharge from any source whatsoever such quantities of odorous gases or other odorous matter which would cause injury to the public or endanger the comfort, repose, health, and safety of any persons, or would cause or have a natural tendency to cause injury or damage to business or property.</p> <p>F. Dust and Dirt. Land use activities that may create dust emissions (e.g. construction, grading) shall be conducted so as to create as little dust or dirt emission beyond the boundary line of the parcel as possible, including, but not limited to, the following:</p> <p>1. Scheduling. Grading activities shall be scheduled to ensure that repeated grading will not be required and that implementation of the proposed land use will occur as soon as possible after grading.</p> <p>2. Operations During High Winds. Clearing, earthmoving, excavation operations or grading activities shall cease when the wind speed exceeds twenty-five (25) miles per hour averaged over one hour.</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy HW-12.5: Air Pollution Mitigation. Use landscaping, ventilation systems, double paned windows, or other mitigation measures to achieve healthy indoor air quality and noise levels in sensitive land uses.</p> <p>Policy HW-12.9: Air Quality Policies. Support policies that reduce emissions of pollutants from stationary and mobile sources such as industrial facilities, motor vehicles and trains.</p>	<p>3. Area of Disturbance. The area disturbed by clearing, demolition, earthmoving, excavation operations or grading shall be the minimum required to implement the allowed use.</p> <p>4. Dust Control. During clearing, demolition, earthmoving, excavation operations or grading, dust emissions shall be controlled by regular watering, paving of construction roads or other dust-preventive measures (e.g. hydroseeding), subject to the approval of the City Engineer.</p> <p>a. Material(s) excavated or graded shall be watered to prevent dust. Watering, with complete coverage, shall occur at least twice daily, preferably in the late morning and after work is done for the day.</p> <p>b. Material(s) transported off-site shall be either sufficiently watered or securely covered to prevent dust.</p> <p>5. On-site Roads. On-site roads shall be paved as soon as feasible. During construction, roads shall be watered periodically and/or shall be chemically stabilized.</p> <p>6. Revegetation. Graded areas shall be revegetated as soon as possible to minimize dust and erosion. Portions of the construction site to remain inactive longer than three (3) months shall be seeded and watered until grass cover is grown and maintained, subject to the discretion of the City Engineer.</p> <p>7. Exhaust Emissions. Construction-related exhaust emissions shall be minimized by maintaining equipment in good running condition and in proper tune in compliance with manufacturer's specifications. Construction equipment shall not be left idling for long periods of time.</p> <p>G. Smoke. No existing or proposed use, activity or process or portion thereof shall, from any source whatsoever, discharge smoke or other particulate matter into the atmosphere, except as may be permitted by the SCAQMD.</p> <p>(Ord. No. 3011 , § 3(Exh. B), 6-21-2022; Ord. No. 3023 , § 4.B(Exh. B), 5-2-2023)</p>	
Glendora	<p>Air Quality Element:</p> <p>Goal AQ-1: Coordination with Regional, State and Federal Agencies.</p> <p>Policy AQ-1.1: Encourage the construction of regional transportation facilities such as HOV lanes, Metrolink, bus routes, and pedestrian and bicycle facilities.</p> <p>Goal AQ-2: Reduction of vehicular trips.</p> <p>Policy AQ-2.1: Reduce mobile source emissions by encouraging a reduction in project related vehicle trips and vehicle miles traveled (VMT).</p> <p>Policy AQ-2.3 Encourage “walkable” neighborhoods with pedestrian walkways and bicycle paths in residential and other types of developments to encourage pedestrian rather than vehicular travel.</p> <p>Goal AQ-4: Protect the health of all residents, regardless of age, culture, ethnicity, gender, race, socioeconomic status, or geographic location, from the health effects of pollution with equitable environmental policymaking and enforcement.</p> <p>Policy AQ-4.1: Evaluate potential environmental justice issues by requiring a review of environmental impacts for potential development projects.</p> <p>Policy AQ-4.2: Separate, buffer, and protect sensitive receptors from significant sources of pollution to the greatest extent possible.</p>	<p>Municipal code relevant to air quality within the Plan Area can be found in Chapter 9.36 (Abatement of Nuisances – Premises) Section 9.36.010 (Maintenance of Premises – Nuisances).</p> <p>Under Chapter 9.36 (Abatement of Nuisances – Premises) Section 9.36.010 (Maintenance of Premises – Nuisances) the following applies:</p> <p>(11) Nuisance Odor or Fumes. To store, keep, operate or maintain any equipment, machinery, vehicle, liquid or solid waste or any other device, which emits an objectionable odor or by reason of its dust, exhaust or fumes that creates a health or safety hazard to any person(s) or which causes discomfort or annoyance to reasonable persons of normal sensitivity.</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy AQ-4.3: Encourage the participation of the business community, civic groups, special interest groups, and the general public in the formulation and implementation of programs that effectively reduce air pollution.</p> <p>Goal AQ-7: Reduced pollutant emissions from stationary sources, including point sources and area sources.</p> <p>Policy AQ-7.2: Require projects to mitigate anticipated emissions that exceed Air Quality Management Plan Guidelines.</p>		
Industry	<p>Resource Management Element:</p> <p>Goal RM2: Improved air quality and reduced greenhouse gas emissions.</p> <p>Policy RM2-1: Comply with state building codes relative to indoor air quality.</p> <p>Policy RM2-2: Support efforts to reduce pollutants to meet State and Federal Clean Air Standards.</p> <p>Policy RM2-3: Collaborate with the CARB and other agencies within the South Coast Air Basin to improve regional air quality and achieve GHG reduction targets.</p> <p>Policy RM2-4: Prohibit siting of sensitive land uses within distances defined by CARB unless sufficient mitigation is provided.</p> <p>Implementation Measure IMP-4: Address truck idling limits during the design review process, especially when adjacent to sensitive uses.</p> <p>Implementation Measure IMP-5: Coordinate with SCAG and surrounding jurisdictions on infrastructure improvements intended to relieve congestion and thereby reduce air emissions.</p> <p>Implementation Measure IMP-6: Strive to achieve the California Air Resources Board's Scoping Plan. Opportunities may include:</p> <ul style="list-style-type: none">• Construction of new energy efficient buildings• Use of energy efficient materials and features during retrofitting activities• Use of recycled materials in new and retrofit construction activities• An energy financing program, such as that available through AB 811 energy financing districts, to encourage energy efficiency retrofits in existing residential and commercial buildings• Use of solar or other renewable energy technologies in parking structures• Conversion or replacement of city fleet vehicles with hybrid or more fuel-efficient vehicles• Replacement of incandescent traffic and crosswalk lights with energy-efficient light-emitting diodes (LEDs)• Replacement of incandescent and mercury vapor street and parking lot lights with energy efficient alternatives <p>Increased opportunities fore-waste and hazardous waste recycling by businesses</p> <p>Incorporation of demolition waste recycling or recovery practices</p> <p>Use of rubberized asphalt concrete and/or recycled asphalt pavement for streets and parking lots</p>	No applicable ordinances relevant to air quality within the Plan Area were identified.	No other applicable ordinances were identified.
Irwindale	<p>Resource Management Element:</p> <p>Policy 22: The City of Irwindale will facilitate communications among residents, businesses, and the South Coast Air Quality Management District (SCAQMD) to quickly resolve air pollution nuisance complaints. The City will distribute information to advise</p>	No applicable ordinances relevant to Air Quality within the Plan Area were identified.	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>residents on how to register a complaint with SCAQMD (SCAQMD’s —Cut Smog program).</p> <p>Policy 30: The City of Irwindale will provide regional and local air quality information on the City’s website, including the SCAQMD’s 1-800-CUT-SMOG number for the public to report air pollution complaints to the SCAQMD.</p> <p>Program: Air Quality Planning. The City of Irwindale will continue to participate in the regional planning efforts being undertaken by the South Coast Air Quality Management District (SCAQMD) and the Southern California Association of Governments (SCAG) to develop and implement strategies to improve regional air quality. The City of Irwindale will continue to work with the SCAQMD and SCAG and the surrounding cities in improving air quality.</p>		
La Puente	<p>Community Resources Element:</p> <p>Goal 4: Conservation of La Puente's natural resources, improvement of air quality, and energy conservation.</p> <p>Policy 4.2: Participate with the South Coast Air Quality Management District and neighboring cities in supporting local and regional projects that improve mobility on freeways and railways, reduce emissions, and improve air quality.</p> <p>Policy 4.4: Encourage alternative modes of transportation, such as walking, bicycling, public transportation, and carpooling.</p>	<p>Municipal code relevant to air quality within the Plan Area can be found in Chapter 10.38 (Performance Standards) Section 10.38.020 (Air Quality, Dust, and Dirt).</p> <p>Under Chapter 10.38 (Performance Standards) Section 10.38.020 (Air Quality, Dust, and Dirt) the following applies:</p> <p>No operation or activity (for example, construction, grading, and agriculture) shall cause the emission of any smoke, fly ash, dust, fumes, vapors, gases or other forms of air pollution, beyond any boundary line of the parcel, which exceeds the requirements of any air quality plan or General Plan Air Quality Element adopted by the City. To ensure a dust free environment, appropriate grading procedures shall include, but are not limited to, the following:</p> <p>A. Schedule all grading activities to ensure that repeated grading will not be required and implementation of the desired land use (e.g. planting, paving or construction) will occur as soon as possible after grading.</p> <p>B. Disturb as little native vegetation as possible.</p> <p>C. Water graded areas as often as necessary to prevent blowing dust or dirt, hydro seeding with temporary irrigation, adding a dust palliative, and/or building wind fences.</p> <p>D. Re-vegetate graded areas as soon as possible.</p> <p>E. Construct appropriate walls or fences to contain the dust and dirt within the parcel subject to the approval of the City Engineer. (Ord. 935 § 3 (part), 2015)</p>	<p>No other applicable ordinances were identified.</p>

3.3.3 Impact Assessment

3.3.3.1 Significance Criteria

Appendix G of the State CEQA guidelines was reviewed to determine if the Plan would result in significant impacts related to air quality. The criteria listed below consider if the Plan would:

- 3(a) *Conflict with or obstruct implementation of the applicable air quality plan.*
- 3(b) *Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is in non-attainment under an applicable Federal or State ambient air quality standard.*
- 3(c) *Expose sensitive receptors to substantial pollutant concentrations.*
- 3(d) *Result in other emissions (such as those leading to odors or adversely affecting a substantial number of people).*

3.3.3.1.1 SCAQMD Significance Thresholds

The screening criteria, significance thresholds, and analysis methodologies from the SCAQMD CEQA Air Quality Handbook were used to evaluate air quality impacts. Accordingly, as detailed in Section 3.3.2.3.1, SCAQMD above, the SCAQMD provides Air Quality Significance Thresholds to assess the impact of project-related air pollution emissions. Table 3.3-7 above presents these significance thresholds. There are separate thresholds for construction and operation emissions. A project with daily emission rates below these thresholds is considered to have a less than significant effect on regional air quality and to not make a considerable contribution to a cumulative impact. Further, the SCAQMD provides LSTs for projects that are five acres or less, which is appropriate to use as a threshold for projects of this size implemented under the Plan (e.g., for one acre pocket parks). To provide a conservative assessment, the most conservative LSTs for the Plan Area (i.e., source receptor area Zone 8 – West SGV), were used to evaluate the localized air quality impacts since this source receptor area has the most stringent thresholds in the Plan Area. In addition, each individual project site is considered a one-acre construction site for the purpose of comparing to the relevant LSTs. Since project details of construction and operation of Plan components are currently unknown, the most conservative emissions thresholds for all source receptor areas located 25 feet from a potential project site are used to determine whether air quality impacts from the Plan may be significant. These thresholds are summarized in Table 3.3-7. If the emissions exceed the screening level thresholds, the individual project implemented under the Plan would have the potential to result in significant local impacts, and the SCAQMD recommends air quality dispersion modeling to assess impacts to nearby sensitive receptors.

3.3.3.1.2 Health-Based Thresholds

The California Supreme Court decision on December 24, 2018, *Sierra Club v. County of Fresno (Friant Ranch)*, held that projects with significant air quality impacts need to “relate the expected adverse air quality impacts to likely health consequences or explain why it is not feasible at the time of drafting to provide such an analysis, so that the public may make informed decisions regarding the costs and benefits of the project.” As such, the following discussion addresses this requirement with respect to the Plan.

As discussed in Section 3.3.1, Environmental Setting, all criteria pollutants that would be generated by the construction or operation of Plan components are associated with some form of health risk (e.g., asthma). Criteria air pollutants can be classified as either regional or localized pollutants: regional pollutants can be transported over long distances and affect ambient air quality far from the emissions source, and localized pollutants affect ambient air quality near the emissions source. Ozone is considered a regional criteria pollutant, whereas CO, NO₂, SO₂, and Pb are localized pollutants. PM can be both a local and a regional pollutant, depending on its composition. As discussed above, the primary criteria pollutants of concern generated by construction and operation activities are ozone precursors (VOCs and NO_x), CO, and PM (including DPM).

Adverse health effects induced by regional criteria pollutant emissions generated by the construction and operation of Plan components (ozone precursors and PM) are highly dependent on a multitude of interconnected variables (e.g., cumulative concentrations, local meteorology and atmospheric conditions, the number and character of exposed individuals [e.g., age, gender]). For these reasons, ozone precursors (VOCs and NO_x) contribute to the formation of ground-borne ozone on a regional scale, where emissions of VOC and NO_x generated in one area may not equate to a specific ozone concentration in that same area. Similarly, some types of particulate pollutant may be transported over long distances or formed through atmospheric reactions. As such, the magnitude and locations of specific health effects from exposure to increased ozone or regional PM concentrations are the product of emissions generated by numerous sources throughout a region, as opposed to an individual project. Moreover, exposure to regional air pollution does not guarantee that an individual will experience an adverse health effect—as discussed above, there are large individual differences in the intensity of symptomatic responses to air pollutant. These differences are influenced, in part, by the underlying health condition of an individual, which cannot be known.

Models and tools have been developed to correlate regional criteria pollutant emissions to potential community health impacts. While there are models capable of quantifying ozone and secondary PM formation and associated health effects, these tools were developed to support regional planning and policy analysis and have limited sensitivity to small changes in criteria pollutant concentrations induced by individual projects. Therefore, translating project-generated criteria pollutants to the locations where specific health effects could occur or the resultant number of additional days of nonattainment cannot be estimated with a high degree of accuracy for relatively small projects (relative to the regional air basin).

Technical limitations of existing models to correlate project-level regional emissions to specific health consequences are recognized by air quality management districts throughout the State, including the San Joaquin Valley Air Pollution Control District (SJVAPCD) and SCAQMD, both of which provided *amici curiae* briefs for the Friant Ranch legal proceedings. In its brief, SJVAPCD acknowledged that while health risk assessments (HRAs) for localized TACs, such as DPM, are commonly prepared, “it is not feasible to conduct a similar analysis for criteria air pollutants because currently available computer modeling tools are not equipped for this task.” SJVAPCD further noted that emissions solely from the Friant Ranch project (which equate to less than 0.1 percent of the total NO_x and VOCs in the San Joaquin Valley) are not likely to yield valid information, and that any such information should not be “accurate when applied at the local level” (SJVAPCD 2015). SCAQMD presented similar information in its brief, stating that “it takes a large amount of additional precursor emissions to cause a modeled increase in ambient

ozone levels”. For example, SCAQMD’s analysis of its 2012 Air Quality Attainment Plan showed that modeled NO_x and ROG reductions of 432 and 187 tons per day, respectively, only reduced ozone levels by 9 parts per billion. Analysis of SCAQMD’s Rule 1315 showed that emissions of NO_x and ROG of 6,620 and 89,180 pounds per day, respectively, contributed to 20 premature deaths per year and 89,947 school absences (SCAQMD 2015).

As discussed above, air districts develop region-specific CEQA thresholds of significance in consideration of existing air quality concentrations and attainment or nonattainment designations under the NAAQS and CAAQS, both of which are informed by a wide range of scientific evidence that demonstrates there are known safe concentrations of criteria pollutants. While recognizing that air quality is a cumulative problem, air districts typically consider projects that generate criteria pollutant and O₃ precursor emissions below these thresholds to be minor in nature and to not adversely affect air quality such that the NAAQS or CAAQS would be exceeded. Emissions generated by a project could increase photochemical reactions and the formation of tropospheric O₃ and secondary PM, which at certain concentrations could lead to increased incidence of specific health consequences. Although these health effects are associated with O₃ and PM pollution, the effects are a result of cumulative and regional emissions. As such, a project’s incremental contribution cannot be traced to specific health outcomes on a regional scale, and a quantitative correlation of project-generated regional criteria pollutant emissions to specific human health impacts is not included in this analysis.

In contrast, localized pollutants generated by a project are deposited and potentially affect population near the emissions source. Because these pollutants dissipate with distance, emissions from individual projects can result in direct and material health impacts on adjacent sensitive receptors. Models and thresholds are readily available to quantify these potential health effects and evaluate their significance. Locally adopted thresholds (i.e., SCAQMD LSTs) and analysis procedures for the localized pollutants of concern associated with construction and operation activities are identified in Section 3.3.1.1, Criteria Pollutants. Accordingly, the following impact assessment focuses on the analysis of emissions of criteria pollutants resulting from the Plan in relation to the potential to exceed the applicable LST. This analysis would indicate whether construction and operation of Plan components would: 1) have the potential to cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard (established to protect the health of the most sensitive groups), and 2) have the potential for emissions of TACs to contribute to an increase in associated health risks.

3.3.3.2 Methodology

Emissions associated with construction and operation activities of Plan components as summarized in Section 2, Project Description were forecasted using the California Emissions Estimator Model (CalEEMod) Version 2022.1.1.18, the official statewide land use computer model designed to provide a uniform platform for estimating potential criteria pollutant and GHG emissions associated with both construction and operations of land use projects under CEQA. The model quantifies direct emissions from construction and operations (including vehicle use), as well as indirect emissions, such as GHG emissions from energy use, solid waste disposal, vegetation planting and/or removal, and water use. The mobile source emission factors used in the model, published by CARB, include the Pavley standards and Low Carbon Fuel standards. The model also identifies project design features, regulatory measures, and control measures to reduce criteria pollutant and GHG emissions along with calculating the benefits

achieved from the selected measures. CalEEMod was developed by the California Air Pollution Control Officers Association (CAPCOA) in collaboration with the SCAQMD, the Bay Area Air Quality Management District, the SJVAPCD, and other California air districts. Default land use data (e.g., emission factors, trip lengths, meteorology, source inventory) were provided by the various California air districts to account for local requirements and conditions. As the official assessment methodology for land use projects in California, CalEEMod is relied upon herein for construction and operational emissions quantification, which forms the basis for the impact analysis of Plan components. For the purposes of analysis, fugitive dust emissions assume compliance with SCAQMD Rule 403, which would reduce fugitive dust emissions by a minimum of 61 percent by requiring watering at least two times per day.

3.3.3.3 Plan Impacts

3.3.3.3.1 3(a). Conflict with or obstruct implementation of the applicable air quality plan?

3.3.3.3.1.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant with Mitigation. To identify if projects would conflict or obstruct implementation of applicable air quality plans, the SCAQMD recommends that lead agencies demonstrate that a project would not directly obstruct implementation of an applicable air quality plan and that a project be consistent with the assumptions upon which the air quality plan is based (typically land-use related, such as resultant employment or residential units). The 2022 AQMP (SCAQMD 2022) applicable to the Plan Area establishes a program of rules and regulations directed at reducing air pollutant emissions and achieving state and national air quality standards. A project is consistent with regional planning efforts in part if it is consistent with the population, housing, and employment assumptions that were used in the development of the SCAQMD air quality plans. Generally, three sources of data form the basis for the projections of air pollutants in Los Angeles County. Specifically, SCAG's Regional Comprehensive Plan and Guide (SCAG 2008) provides regional population forecasts for the region and SCAG's 2020-2045 RTP/SCS (SCAG 2020) provides socioeconomic forecast projections of regional population growth. The Los Angeles County General Plan is referenced by SCAG in order to assist forecasting future growth in Los Angeles County.

Construction of greenway paths and amenities, along with any other Plan components, would result in an increase in short-term employment compared to existing conditions. However, these jobs are temporary in nature (i.e., would last only for the duration of construction activity) and would be expected to be filled from the local labor market. Thus, it is not anticipated that a substantial number of construction workers would move to the region to work on future projects implemented under the Plan. Furthermore, the construction activities are varied and intermittent and would not result in permanent employment opportunities for the region. Therefore, the population, housing, and employment associated with construction of greenway paths and any other Plan components consistent with the assumptions in the 2022 AQMP and would not conflict with this plan.

Control strategies as denoted in the 2022 AQMP with potential applicability to short-term emissions from construction activities include MOB-08 (Small Off-Road Engine Equipment Exchange Program [VOCs, NOx, CO]) and MOB-10 (Off-Road Mobile Source Emission Reduction Credit Generation Program

[NO_x, PM]), which are intended to reduce emissions from on-road and off-road heavy-duty vehicles and equipment by accelerating replacement of older, emissions-prone engines with newer engines meeting more stringent emission standards. Plan components would utilize low-VOC coatings during construction activities to avoid excessive VOC emissions (in accordance with SCAQMD Rule 1113). Trucks and other vehicles in loading and unloading queues would turn off engines to reduce vehicle emissions during construction activities. Additionally, the greenway paths and any other Plan components associated with the Plan would comply with CARB requirements to minimize short-term emissions from on-road and off-road diesel equipment. Projects implemented under the Plan would also be required to comply with SCAQMD regulations for controlling fugitive dust pursuant to SCAQMD Rule 403 (Fugitive Dust). However, in the event that construction of an individual Plan project would result in emissions that exceed regional or localized standards and therefore would not be consistent with the applicable regulations, implementation of **MM AQ-1: Emission Reduction Measures** would reduce emissions below such thresholds ensure consistency with control strategies MOB-8 and MOB-10 by implementing Tier 4 final construction equipment and therefore implementing more efficient equipment in conformance with the implementation requirements of the AQMP. Furthermore, as detailed in Impact Criteria 3(b) below, construction activities would not lead to an exceedance of any applicable air quality standards.

Compliance with these requirements is consistent with and meets or exceeds the AQMP requirements for control strategies intended to reduce emissions from construction equipment and activities. With implementation of **MM AQ-1: Emission Reduction Measures**, construction of greenway paths and amenities associated with the Plan would not conflict with the control strategies intended to reduce emissions from construction equipment, the construction activities would not conflict with or obstruct implementation of the AQMP, and impacts would be less than significant with mitigation.

Operations

Less than Significant. The 2022 AQMP was prepared to accommodate growth, reduce the levels of pollutants within the areas under the jurisdiction of SCAQMD, return clean air to the region, and minimize the impact on the economy. Projects that are considered consistent with the AQMP would not interfere with attainment because this growth is included in the projections used in the formulation of the AQMP.

Greenway paths and amenities and other Plan components would not result in a direct increase in regional residential population since it is not a residential project. Operation would also not result in a substantial increase in employment since operation of Plan components would not result in an increase in employment compared to existing conditions. Operation of future projects resulting from the Plan would be consistent with the active transportation strategies outlined in SCAG's 2020-2045 RTP/SCS to expand regional greenways in order to reduce vehicle miles traveled and improve air quality and public health by reducing emissions and increasing levels of physical activity. The Plan is also consistent with the General Plan goals and policies of incorporated cities within the Plan Area related to reducing vehicular traffic as a means to improving air quality and promoting clean forms of transportation. Further, greenway paths and amenities and other Plan components would not result in a direct or indirect increase in population and is not anticipated to induce growth beyond current adopted local land use plans. Therefore, operation of individual projects developed under the Plan would be consistent with the 2022 AQMP, and impacts would be less than significant.

Mitigation Measures

MM AQ-1: Emissions Reduction Measures. For projects that would exceed the SCAQMD regional or local thresholds or with an anticipated construction duration of greater than six months and are located within 500 feet of a residence or other sensitive receptor, the following emission reduction measures shall be implemented:

- Require the use of electricity from power poles rather than temporary diesel or gasoline powered generators, as feasible.
- Minimize vehicle idling time in accordance with the Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling (Title 13, Division 3, Chapter 10, Section 2485).
- Minimize equipment idling time in accordance with the In-Use Off-Road Diesel-Fueled Fleets (Title 13, CCR, Section 2449).
- Require the use 2013 model year engines for all diesel-powered vehicles that conform to the USEPA “Emission Standards and Supplemental Requirements for 2007/2010 Model Year Diesel Heavy-Duty Engines and Vehicles” per 40 CFR 86.007-11 (e.g., material delivery trucks and soil import/export). Additionally, consider other measures such as incentives, phase-in schedules for clean trucks, etc. during the construction period.
- Vehicles with a GVWR greater than 14,000 pounds shall comply with the Truck and Bus Regulations (Title 13, CCR, Section 2025), the Clean Truck Check Program/Heavy-Duty Vehicle Inspection and Maintenance Program (Title 13, CCR, Sections 2195 through 2199.1), and all amendments. All vehicle owners shall register and report on the Truck Regulation Upload, Compliance, and Reporting System and report in the Clean Truck Check-Vehicle Inspection System Database to certify regulation compliance.
- During construction activities, at a minimum, all internal combustion engines/construction equipment operating shall meet Tier 4 Final CARB/USEPA emission standards per 40 CFR 1039.
- All off-road diesel-powered equipment 25 horsepower or greater shall comply with the In-Use Off-Road Diesel Fueled Fleets Regulations (Title 13, California Code of Regulations, Section 2449) and amendments. Equipment owners shall report on the Diesel Off-Road Online Reporting System to certify regulation compliance.
- Where it is determined that construction emissions would exceed the applicable SCAQMD regional thresholds and/or LSTs even with the requirement that all construction equipment meet Tier 4 Final CARB/USEPA emissions standards, the project shall reduce its daily construction intensity (e.g., reducing the amount of equipment used daily, reducing the amount of soil graded/excavated daily) to a level where the project’s construction emissions would no longer exceed SCAQMD’s regional thresholds and/or LSTs.

Significance After Mitigation

If construction of an individual Plan project would result in emissions that exceed regional or localized standards, implementation of **MM AQ-1: Emission Reduction Measures** would reduce emissions and would be consistent with control strategies MOB-8 and MOB-10 by implementing Tier 4 final construction equipment and therefore implementing more efficient equipment in conformance with the implementation requirements of the AQMP. Accordingly, implementation of **MM AQ-1: Emission Reduction Measures** would reduce impacts to less than significant.

Operational impacts would be less than significant. No mitigation.

3.3.3.3.2 3(b). Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?

3.3.3.3.2.1 Greenway Paths and Greenway Amenities

Construction

Less than Significant. Construction would result in a temporary increase in criteria pollutant emissions from engine exhaust during on-road vehicle and truck trips and off-road construction equipment operations, and fugitive dust during earthmoving and demolition activities. Primary criteria pollutants emitted during construction projects are NO_x, VOC, PM₁₀, and PM_{2.5}. Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of construction activity, and prevailing weather conditions. As detailed in Section 3.3.3.2, Methodology, CalEEMod was used to estimate emissions associated with construction activities. Detailed CalEEMod inputs and results are provided in Appendix C. Table 3.3-9 summarizes the estimated maximum daily emissions from construction activities for greenway paths and amenities compared to the applicable SCAQMD threshold.

Table 3.3-9. Project Construction Emissions Summary and Significance Evaluation (Greenway Paths + Greenway Amenities)

Facility Type	ROG (VOC) (lb/day) ¹	NO _x (lb/day) ¹	CO (lb/day) ¹	SO _x (lb/day) ¹	Total PM ₁₀ (lb/day) ^{1,2}	Total PM _{2.5} (lb/day) ^{1,2}
Greenway Paths + Greenway Amenities	4.69	14.33	17.20	0.05	3.54	0.94
SCAQMD Significance Evaluation	75	100	550	150	150	55
Exceed Threshold?	No	No	No	No	No	No
SCAQMD LST	--	69	535	--	4	3
Exceed LST?	--	No	No	--	No	No

Source: CalEEMod Emissions Summary Reports in Appendix C

Notes:

¹ Mass daily emissions are maximum of winter or summer modeled emissions

² Total PM₁₀ / PM_{2.5} comprises fugitive dust plus engine exhaust.

As shown in Table 3.3-9, the construction of greenway paths and amenities would not result in emissions that would exceed the SCAQMD's regional thresholds. The SCAQMD *White Paper on Potential Control Strategies to Address Cumulative Impacts* (2003) addresses cumulative impacts of air pollution and notes that projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant. Specifically, the SCAQMD cumulative significance thresholds are the same as project-specific significance thresholds. Therefore, potential adverse impacts associated with the Plan would not be "cumulatively considerable" as defined by State CEQA Guidelines Section 15064(h)(1) for air quality impacts. The court upheld the SCAQMD's approach to utilizing the established significance thresholds to determine whether the impacts of a project would be cumulatively considerable in *Rialto Citizens for Responsible Growth v. City of Rialto* (2012) Cal. App. 4th 899. Thus, it may be concluded that

construction of greenway paths and amenities would not significantly contribute to an existing violation of air quality standards for regional pollutants (e.g., ozone) and would not contribute to a significant and unavoidable cumulative air quality impact. In terms of local air quality, the construction of greenway paths and amenities would not produce significant emissions exceeding SCAQMD's LSTs for NO_x, CO, PM₁₀, or PM_{2.5} during the construction phase. Compliance with existing SCAQMD regulations summarized in Section 3.3.2.3.1, SCAQMD, including Rule 403, which is designed to reduce fugitive dust emissions, would ensure PM₁₀ and PM_{2.5} emissions during site preparation and construction do not exceed localized thresholds recommended by SCAQMD. Accordingly, impacts related to regional and local emissions during construction of greenway paths and amenities are expected to be less than significant.

Operations

Less than Significant. Emissions from operation of greenway paths and amenities would include those generated by mobile sources associated with motor vehicle trips and area source pollutants associated with pesticide and fertilizer use, reapplication of architectural coatings, onsite use of solvents and consumer products, off-gassing from pavement, and emissions associated with landscape maintenance equipment. Operations-related emissions are shown in Table 3.3-10.

Table 3.3-10. Project Operation Emissions Summary and Significance Evaluation (Greenway Paths + Greenway Amenities)

Facility Type	ROG (VOC) (lb/day) ¹	NO _x (lb/day) ¹	CO (lb/day) ¹	SO _x (lb/day) ¹	Total PM ₁₀ (lb/day) ^{1,2}	Total PM _{2.5} (lb/day) ^{1,2}
Greenway Paths + Greenway Amenities	0.36	0.02	1.36	0.0004	0.03	0.01
<i>SCAQMD Significance Evaluation</i>	<i>55</i>	<i>55</i>	<i>550</i>	<i>150</i>	<i>150</i>	<i>55</i>
Exceed Threshold?	No	No	No	No	No	No
<i>SCAQMD LST</i>	<i>--</i>	<i>69</i>	<i>535</i>	<i>--</i>	<i>1</i>	<i>1</i>
Exceed LST?	--	No	No	--	No	No

Source: CalEEMod Emissions Summary Reports in Appendix C

Notes:

¹ Mass daily emissions are maximum of winter or summer modeled emissions

² Total PM₁₀ / PM_{2.5} comprises fugitive dust plus engine exhaust.

As shown, the net increase in emissions generated during operation of greenway paths and amenities would not exceed the regional thresholds or LSTs recommended by the SCAQMD. As noted for construction impacts above, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant. In addition, the regulatory compliance controls during operations including compliance with SCAQMD Rules 402, 403, 404, 407, 409, 431.1, 474, 1108, 1110.2, and 1113 as summarized in Section 3.3.2.3.1, SCAQMD, above would further reduce emissions during operations. Therefore, impacts during operation would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Construction and operational impacts would be less than significant. No mitigation is required.

3.3.3.3.2.2 Greenway Paths + Pocket Parks and Greenspaces

Construction

Less than Significant. As described above, construction would result in a temporary increase in criteria pollutant emissions from engine exhaust during on-road vehicle and truck trips and off-road construction equipment operations, and fugitive dust during earthmoving and demolition activities. Table 3.3-11 summarizes the estimated maximum daily emissions from construction activities of projects that include pocket parks and greenspaces in addition to greenway paths and amenities compared to the applicable SCAQMD threshold.

Table 3.3-11. Project Construction Emissions Summary and Significance Evaluation (Greenway Paths + Pocket Parks + Greenspaces)

Facility Type	ROG (VOC) (lb/day) ¹	NO _x (lb/day) ¹	CO (lb/day) ¹	SO _x (lb/day) ¹	Total PM ₁₀ (lb/day) ^{1,2}	Total PM _{2.5} (lb/day) ^{1,2}
Greenway Paths + 1-Acre Pocket Parks + Greenspaces	4.69	14.01	17.22	0.05	3.54	0.94
Greenway Paths + 25-Acre Greenspaces	3.42	22.17	21.11	0.05	2.28	1.38
SCAQMD Significance Evaluation	75	100	550	150	150	55
Exceed Threshold?	No	No	No	No	No	No
SCAQMD LST	--	69	535	--	4	3
Exceed LST?	--	No	No	--	No	No

Source: CalEEMod Emissions Summary Reports in Appendix C

Notes: ¹ Mass daily emissions are maximum of winter or summer modeled emissions

² Total PM₁₀ / PM_{2.5} comprises fugitive dust plus engine exhaust.

As shown in Table 3.3-11, the construction of greenway paths and amenities in addition to either a 1-acre pocket park or 25-acre greenspace would not result in emissions that would exceed the SCAQMD's regional thresholds. The SCAQMD *White Paper on Potential Control Strategies to Address Cumulative Impacts* (2003) addresses cumulative impacts of air pollution and notes that projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant. Specifically, the SCAQMD cumulative significance thresholds are the same as project-specific significance thresholds. Therefore, potential adverse impacts associated with the Plan would not be "cumulatively considerable" as defined by State CEQA Guidelines Section 15064(h)(1) for air quality impacts. The court upheld the SCAQMD's approach to utilizing the established significance thresholds to determine whether the impacts of a project would be cumulatively considerable in *Rialto Citizens for Responsible Growth v. City of Rialto* (2012) Cal. App. 4th 899. Thus, it may be concluded that construction of greenway paths and greenspaces in addition to either a 1-acre pocket park or 25-acre greenspace would not significantly

contribute to an existing violation of air quality standards for regional pollutants (e.g., O₃) and would not contribute to a significant and unavoidable cumulative air quality impact. In terms of local air quality, the construction of greenway paths, pocket parks, and greenspaces would not produce significant emissions exceeding SCAQMD's LSTs for NO_x, CO, PM₁₀, or PM_{2.5} during the construction phase. Compliance with existing SCAQMD regulations summarized in Section 3.3.2.3.1, SCAQMD, including Rule 403, which is designed to reduce fugitive dust emissions, would ensure PM₁₀ and PM_{2.5} emissions during site preparation and construction do not exceed localized thresholds recommended by SCAQMD. Accordingly, impacts related to regional and local emissions during construction of greenway paths, pocket parks, and greenspaces are expected to be less than significant.

Operations

Less than Significant Emissions from operation of greenway paths, amenities, and pocket parks or greenspaces would include those generated by mobile sources associated with motor vehicle trips and area source pollutants associated with pesticide and fertilizer use, reapplication of architectural coatings, onsite use of solvents and consumer products, off-gassing from pavement, and emissions associated with landscape maintenance equipment. Operations-related emissions are shown in Table 3.3-12.

Table 3.3-12. Project Operation Emissions Summary and Significance Evaluation (Greenway Paths + Pocket Parks + Greenspaces)

Facility Type	ROG (VOC) (lb/day) ¹	NO _x (lb/day) ¹	CO (lb/day) ¹	SO _x (lb/day) ¹	Total PM ₁₀ (lb/day) ^{1,2}	Total PM _{2.5} (lb/day) ^{1,2}
Greenway Paths + 1-Acre Pocket Parks + Greenspaces	0.36	0.02	1.36	0.0004	0.03	0.01
Greenway Paths + 25-Acre Greenspaces	0.71	0.03	2.59	0.0005	0.03	0.01
<i>SCAQMD Significance Evaluation</i>	<i>55</i>	<i>55</i>	<i>550</i>	<i>150</i>	<i>150</i>	<i>55</i>
Exceed Threshold?	No	No	No	No	No	No
<i>SCAQMD LST</i>	<i>--</i>	<i>69</i>	<i>535</i>	<i>--</i>	<i>1</i>	<i>1</i>
Exceed LST?	--	No	No	--	No	No

Source: CalEEMod Emissions Summary Reports in Appendix C

Notes: ¹ Mass daily emissions are maximum of winter or summer modeled emissions

² Total PM₁₀ / PM_{2.5} comprises fugitive dust plus engine exhaust.

As shown, the net increase in emissions generated during operation of greenway paths and greenspaces in addition to either a 1-acre pocket park or 25-acre greenspace would not exceed the regional thresholds or LSTs recommended by the SCAQMD. As noted for construction impacts above, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant. In addition, the regulatory compliance controls during operations including compliance with SCAQMD Rules 402, 403, 404, 407, 409, 431.1, 474, 1108, 1110.2, and 1113 as summarized in Section

3.3.2.3.1, SCAQMD, above would further reduce emissions during operations. Therefore, impacts during operation would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Construction and operation impacts would be less than significant. No mitigation is required.

3.3.3.3.2.3 Greenway Paths + Safe Crossings

Construction

Less than Significant. As described above, construction would result in a temporary increase in criteria pollutant emissions from engine exhaust during on-road vehicle and truck trips and off-road construction equipment operations, and fugitive dust during earthmoving and demolition activities. Detailed CalEEMod inputs and results are provided in Appendix C. Table 3.3-13 summarizes the estimated maximum daily emissions from construction activities for projects involving safe crossings in addition to greenway paths and amenities compared to the applicable SCAQMD threshold.

Table 3.3-13. Project Construction Emissions Summary and Significance Evaluation (Greenway Paths + Safe Crossings)

Facility Type	ROG (VOC) (lb/day) ¹	NO _x (lb/day) ¹	CO (lb/day) ¹	SO _x (lb/day) ¹	Total PM ₁₀ (lb/day) ^{1,2}	Total PM _{2.5} (lb/day) ^{1,2}
Greenway Paths + Safe Crossings	4.69	21.13	22.40	0.06	3.64	1.84
SCAQMD Significance Evaluation	75	100	550	150	150	55
Exceed Threshold?	No	No	No	No	No	No
SCAQMD LST	--	69	535	--	4	3
Exceed LST?	--	No	No	--	No	No

Source: CalEEMod Emissions Summary Reports in Appendix C

Notes: ¹ Mass daily emissions are maximum of winter or summer modeled emissions

² Total PM₁₀ / PM_{2.5} comprises fugitive dust plus engine exhaust.

As shown in Table 3.3-13, the construction of greenway paths and safe crossings would not result in emissions that would exceed the SCAQMD's regional thresholds. The SCAQMD *White Paper on Potential Control Strategies to Address Cumulative Impacts* (2003) addresses cumulative impacts of air pollution and notes that projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant. Specifically, the SCAQMD cumulative significance thresholds are the same as project-specific significance thresholds. Therefore, potential adverse impacts associated with the Plan would not be "cumulatively considerable" as defined by State CEQA Guidelines Section 15064(h)(1) for air quality impacts. The court upheld the SCAQMD's approach to utilizing the established significance thresholds to determine whether the impacts of a project would be cumulatively considerable in *Rialto Citizens for Responsible Growth v. City of Rialto* (2012) Cal. App. 4th 899. Thus, it may be concluded that

construction of greenway paths and safe crossings would not significantly contribute to an existing violation of air quality standards for regional pollutants (e.g., ozone) and would not contribute to a significant and unavoidable cumulative air quality impact. In terms of local air quality, the construction of greenway paths and safe crossings would not produce significant emissions exceeding SCAQMD's LSTs for NO_x, CO, PM₁₀, or PM_{2.5} during the construction phase. Compliance with existing SCAQMD regulations summarized in Section 3.3.2.3.1, SCAQMD, including Rule 403, which is designed to reduce fugitive dust emissions, would ensure PM₁₀ and PM_{2.5} emissions during site preparation and construction do not exceed localized thresholds recommended by SCAQMD. Accordingly, impacts related to regional and local emissions during construction of greenway paths and safe crossings are expected to be less than significant.

Operations

Less than Significant. Emissions from operation of greenway paths, amenities, and safe crossings would include those generated by mobile sources associated with motor vehicle trips and area source pollutants associated with pesticide and fertilizer use, reapplication of architectural coatings, onsite use of solvents and consumer products, off-gassing from pavement, and emissions associated with landscape maintenance equipment. Operations-related emissions are shown in Table 3.3-14.

Table 3.3-14. Project Operation Emissions Summary and Significance Evaluation (Greenway Paths + Safe Crossings)

Facility Type	ROG (VOC) (lb/day) ¹	NO _x (lb/day) ¹	CO (lb/day) ¹	SO _x (lb/day) ¹	Total PM ₁₀ (lb/day) ^{1,2}	Total PM _{2.5} (lb/day) ^{1,2}
Greenway Paths + Safe Crossings	0.36	0.02	1.36	0.0004	0.03	0.01
<i>SCAQMD Significance Evaluation</i>	<i>55</i>	<i>55</i>	<i>550</i>	<i>150</i>	<i>150</i>	<i>55</i>
Exceed Threshold?	No	No	No	No	No	No
<i>SCAQMD LST</i>	<i>--</i>	<i>69</i>	<i>535</i>	<i>--</i>	<i>1</i>	<i>1</i>
Exceed LST?	--	No	No	--	No	No

Source: CalEEMod Emissions Summary Reports in Appendix C

Notes: ¹ Mass daily emissions are maximum of winter or summer modeled emissions

² Total PM₁₀ / PM_{2.5} comprises fugitive dust plus engine exhaust.

As shown, the net increase in emissions generated during operation of greenway paths and safe crossings would not exceed the regional thresholds or LSTs recommended by the SCAQMD. As noted for construction impacts above, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant. In addition, the regulatory compliance controls during operations including compliance with SCAQMD Rules 402, 403, 404, 407, 409, 431.1, 474, 1108, 1110.2, and 1113, as summarized in Section 3.3.2.3.1, SCAQMD above would further reduce emissions during operations. Therefore, impacts during operation would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Construction and operational impacts would be less than significant. No mitigation is required.

3.3.3.3.2.4 Greenway Paths + Stormwater Management

Construction

Less than Significant. As described above, construction would result in a temporary increase in criteria pollutant emissions from engine exhaust during on-road vehicle and truck trips and off-road construction equipment operations, and fugitive dust during earthmoving and demolition activities. Primary criteria pollutants emitted during construction projects are NO_x, VOC, PM₁₀, and PM_{2.5}. Table 3.3-15 summarizes the estimated maximum daily emissions from construction activities of projects incorporating larger stormwater management features with greenway paths and amenities compared to the applicable SCAQMD threshold.

Table 3.3-15. Project Construction Emissions Summary and Significance Evaluation (Greenway Paths + Stormwater Management)

Facility Type	ROG (VOC) (lb/day) ¹	NO _x (lb/day) ¹	CO (lb/day) ¹	SO _x (lb/day) ¹	Total PM ₁₀ (lb/day) ^{1,2}	Total PM _{2.5} (lb/day) ^{1,2}
Greenway Paths + Stormwater Management	5.98	17.52	26.34	0.04	3.54	0.94
SCAQMD Significance Evaluation	75	100	550	150	150	55
Exceed Threshold?	No	No	No	No	No	No
SCAQMD LST	--	69	535	--	4	3
Exceed LST?	--	No	No	--	No	No

Source: CalEEMod Emissions Summary Reports in Appendix C

Notes: ¹ Mass daily emissions are maximum of winter or summer modeled emissions

² Total PM₁₀ / PM_{2.5} comprises fugitive dust plus engine exhaust.

As shown in Table 3.3-15, the construction of greenway paths and stormwater management would not result in emissions that would exceed the SCAQMD's regional thresholds. The SCAQMD *White Paper on Potential Control Strategies to Address Cumulative Impacts* (2003) addresses cumulative impacts of air pollution and notes that projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant. Specifically, the SCAQMD cumulative significance thresholds are the same as project-specific significance thresholds. Therefore, potential adverse impacts associated with the Plan would not be "cumulatively considerable" as defined by State CEQA Guidelines Section 15064(h)(1) for air quality impacts. The court upheld the SCAQMD's approach to utilizing the established significance thresholds to determine whether the impacts of a project would be cumulatively considerable in *Rialto Citizens for Responsible Growth v. City of Rialto* (2012) Cal. App. 4th 899. Thus, it may be concluded that construction of greenway paths and stormwater management would not significantly contribute to an existing violation of air quality standards for regional pollutants (e.g., ozone) and would not contribute to a significant and unavoidable cumulative air quality impact. In terms

of local air quality, the construction of greenway paths and stormwater management would not produce significant emissions exceeding SCAQMD's LSTs for NO_x, CO, PM₁₀, or PM_{2.5} during the construction phase. Compliance with existing SCAQMD regulations summarized in Section 3.3.2.3.1, SCAQMD, including Rule 403, which is designed to reduce fugitive dust emissions, would ensure PM₁₀ and PM_{2.5} emissions during site preparation and construction do not exceed localized thresholds recommended by SCAQMD. Accordingly, impacts related to regional and local emissions during construction of greenway paths and stormwater management are expected to be less than significant.

Operations

Less than Significant. Emissions from operation of greenway paths, amenities, and stormwater management facilities would include those generated by mobile sources associated with motor vehicle trips and area source pollutants associated with pesticide and fertilizer use, reapplication of architectural coatings, onsite use of solvents and consumer products, off-gassing from pavement, and emissions associated with landscape maintenance equipment. Operations-related emissions are shown in Table 3.3-16.

Table 3.3-16. Project Operation Emissions Summary and Significance Evaluation (Greenway Paths + Stormwater Management)

Facility Type	ROG (VOC) (lb/day) ¹	NO _x (lb/day) ¹	CO (lb/day) ¹	SO _x (lb/day) ¹	Total PM ₁₀ (lb/day) ^{1,2}	Total PM _{2.5} (lb/day) ^{1,2}
Greenway Paths + Stormwater Management	0.36	0.02	1.36	0.0004	0.03	0.01
<i>SCAQMD Significance Evaluation</i>	<i>55</i>	<i>55</i>	<i>550</i>	<i>150</i>	<i>150</i>	<i>55</i>

Source: CalEEMod Emissions Summary Reports in Appendix C

Notes: ¹ Mass daily emissions are maximum of winter or summer modeled emissions

² Total PM₁₀ / PM_{2.5} comprises fugitive dust plus engine exhaust.

As shown, the net increase in emissions generated during operation of greenway paths and stormwater management would not exceed the regional thresholds or LSTs recommended by the SCAQMD. As noted for construction impacts above, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant. In addition, the regulatory compliance controls during operations including compliance with SCAQMD Rules 402, 403, 404, 407, 409, 431.1, 474, 1108, 1110.2, and 1113, as summarized in Section 3.3.2.3.1, SCAQMD, above would further reduce emissions during operations. Therefore, impacts during operation would be less than significant.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

Construction and operational impacts would be less than significant. No mitigation is required.

3.3.3.3.3 3(c). Expose sensitive receptors to substantial pollutant concentrations?

3.3.3.3.3.1 Greenway Paths and Greenway Amenities

Construction

Less than Significant with Mitigation. Land uses that are generally considered more sensitive to air pollution than others are as follows: hospitals, schools, residences, playgrounds, child-care centers, athletic facilities, and retirement/convalescent homes. The LSTs represent emission levels from onsite sources from a project that would cause or contribute to a violation of any short-term NAAQS or CAAQS at a sensitive receptor for a particular area. As shown in Table 3.3-9, Project Construction Emissions Summary and Significance Evaluation (Greenway Paths + Greenway Amenities) above, the estimated emissions associated with construction of greenway paths and amenities would not exceed any of SCAQMD's regional thresholds or the most conservative LSTs in the Plan Area. Therefore, construction of greenway paths and amenities would not cause or contribute to a violation of any health-protective standard.

Accordingly, an analysis correlating the relatively minor emissions generated by construction activities with specific levels of health impacts would not yield reliable or accurate results and has therefore not been conducted. Furthermore, it should be noted that the NAAQS and CAAQS are health-protective standards and define the maximum amount of ambient pollution that can be present without harming public health. As shown in Table 3.3-9, the maximum daily emissions from construction of a project that included greenway paths and greenway amenities would not exceed the applicable LSTs, and, by extension, USEPA and CARB health protective standards. Therefore, there would be no violations of the health protective CAAQS and NAAQS. As such, construction of greenway paths and amenities would not be expected to contribute a significant level of air pollution during construction such that air quality within the SCAB would be degraded. Criteria pollutant emissions would not expose receptors to substantial pollutant concentrations or risk.

Exhaust of off-road heavy-duty diesel equipment would emit DPM, which is a TAC, during construction activities, such as site preparation (e.g., excavation and grading), materials transport and handling, construction, paving, and other miscellaneous activities. Similar to the localized criteria pollutant emissions during construction, the short-term emissions of DPM during construction would only affect existing sensitive receptors that are located nearby. Health-related risks associated with diesel-exhaust emissions are primarily linked to long-term exposure and the associated risk of developing cancer. The State of California Office of Environmental Health Hazard Assessment (OEHHA) has identified carcinogenic and chronic noncarcinogenic effects from long-term (chronic) exposure, but it has not identified health effects due to short-term (acute) exposure to DPM (OEHHA 2015). Construction activities associated with greenway paths and amenities would occur over a period of approximately 95 workdays. Carcinogenic risks are generally assessed over an averaging period of 30 years. Given the brief duration of activities that would be intermittent over five miles of greenway path length (i.e., construction activities are not likely to be continuous at any one location along the greenway), individual receptors would not be expected to be exposed to construction-related TACs for a period of longer than

two months. Due to the uncertainty in assessing cancer risk from very short-term exposures, OEHHA does not recommend assessing cancer risk for projects lasting less than two months at the Maximum Exposed Individual Residential (MEIR) receptor (OEHHA 2015). Accordingly, since no MEIR would be exposed to construction-related TACs for any period longer than two months, a Health Risk Assessment is not warranted. With compliance with CARB Heavy-Duty On-Road and Off-Road Vehicle Regulations, construction activities would limit idling to no more than five minutes, which would further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions. Furthermore, even during the most intense period of construction, emissions of DPM would be generated from different locations on the project site rather than in a single location because different types of construction activities (e.g., site preparation and paving) would not occur at the same place at the same time. As described above, construction emissions exceed established thresholds and would be potentially significant. Implementation of **MM AQ-1: Emission Reduction Measures** would substantially reduce on-site emissions DPM from off-road equipment (the use of Tier 4 Final off-road diesel construction equipment reduces DPM emissions by at least 80 percent compared to the default CalEEMod fleet mix, which is composed of Tier 0 to Tier 2 equipment with higher DPM emissions). Requiring that construction equipment meet Tier 4 Final emissions standards, as well as ensuring compliance with the best management practices outlined in SCAQMD Rule 403 (Fugitive Dust), would ensure that construction of greenway paths and amenities would not expose sensitive receptors to substantial pollutant concentrations. Construction impacts related to sensitive receptor exposures would be less than significant with mitigation.

Operations

Less than Significant. Emissions of greenway paths and amenities would include those generated by mobile sources associated with motor vehicle trips and area source pollutants associated with pesticide and fertilizer use, reapplication of architectural coatings, onsite use of solvents and consumer products, off-gassing from pavement, and emissions associated with landscape maintenance equipment. As shown in Table 3.3-10, Project Operation Emissions Summary and Significance Evaluation (Greenway Paths + Greenway Amenities) above, the net increase in emissions generated during operation of greenway paths and amenities would not exceed the regional thresholds or LSTs recommended by the SCAQMD. As such, operation of greenway paths and amenities would not be expected to contribute significant levels of air pollution during operations such that air quality within the SCAB would be degraded. Criteria pollutant emissions would not expose receptors to substantial pollutant concentrations or risk. Further, it is not anticipated that operation of greenway paths and amenities would exceed the most stringent 1-hour CO standard and no detailed CO hot spots analysis would be required. Operation of greenway paths and amenities is not anticipated to generate a substantial amount of onsite DPM emissions from diesel-powered maintenance equipment or diesel-powered trucks that could expose adjacent receptors to significant health risks. Operational VMT would be negligible and would not create mobile source emissions concentrated in any one location. Further, the main objective of the Plan is to create a network of interconnected, multi-use community greenways to improve mobility for cyclists, pedestrians, and equestrians. Thus, the Plan would provide routes for active transportation opportunities and reduce VMT and associated emissions. Therefore, operation of greenway paths and amenities would not have the potential to expose sensitive receptors to substantial pollutant concentrations and impacts would be less than significant.

Mitigation Measures

MM AQ-1: Emission Reduction Measures

Significance After Mitigation

If construction of an individual Plan project would result in emissions that exceed regional or localized standards, implementation of **MM AQ-1: Emission Reduction Measures** would reduce emissions of DPM by implementing Tier 4 final construction equipment and therefore minimize exposure of sensitive receptors to construction-related TACs. Accordingly, implementation of **MM AQ-1: Emission Reduction Measures** would reduce impacts to less than significant.

3.3.3.3.2 Greenway Paths + Pocket Parks and Greenspaces

Construction

Significant and Unavoidable. Land uses that are generally considered more sensitive to air pollution than others are as follows: hospitals, schools, residences, playgrounds, child-care centers, athletic facilities, and retirement/convalescent homes. As shown in Table 3.3-11 above, the estimated emissions associated with construction of greenway paths, pocket parks, and greenspaces would not exceed any of SCAQMD's regional thresholds or the most conservative LSTs in the Plan Area. The LSTs represent emission levels that would cause or contribute to a violation of any short-term NAAQS or CAAQS for a particular area, and because construction of greenway paths, pocket parks, and greenspaces would not exceed these LSTs, construction of these components would not cause or contribute to a violation of any health-protective standard. Accordingly, an analysis correlating the relatively minor emissions generated by construction activities with specific levels of health impacts would not yield reliable or accurate results and has therefore not been conducted. Furthermore, it should be noted that the NAAQS and CAAQS are health-protective standards and define the maximum amount of ambient pollution that can be present without harming public health. SCAQMD's LSTs represent the level of pollutant emissions from onsite sources from a project that would not exceed the most stringent applicable federal or State ambient air quality standards. As such, projects with emissions below the applicable LSTs will not be in violation of the NAAQS or CAAQS, and, by extension, USEPA and CARB health protective standards. As shown in Table 3.3-11, the maximum daily emissions from construction of a greenway path along with a pocket park would not exceed the applicable LSTs. Therefore, there would be no violations of the health protective CAAQS and NAAQS. As such, construction of greenway paths, pocket parks, and greenspaces would not be expected to contribute a significant level of air pollution during construction such that air quality within the SCAB would be degraded. Criteria pollutant emissions would not expose receptors to substantial pollutant concentrations or risk.

Intermittent construction activities would result in short-term emissions of DPM, which is a TAC. Specifically, the exhaust of off-road heavy-duty diesel equipment would emit DPM during general construction activities, such as site preparation (e.g., excavation and grading), materials transport and handling, construction, paving, and other miscellaneous activities. Similar to the localized criteria pollutant emissions during construction, the short-term emissions of DPM during construction of greenway paths, pocket parks, and greenspaces would only affect existing sensitive receptors that are located nearby. Health-related risks associated with diesel-exhaust emissions are primarily linked to long-term exposure and the associated risk of developing cancer. OEHHA has identified carcinogenic and

chronic noncarcinogenic effects from long-term (chronic) exposure, but it has not identified health effects due to short-term (acute) exposure to DPM (OEHHA 2015). Construction activities associated with greenway paths and 1-acre pocket parks would occur over a period of approximately 112 workdays. Carcinogenic risks are generally assessed over an averaging period of 30 years. Given the brief duration of construction activities that would be intermittent over five miles of greenway path, individual receptors would not be expected to be exposed to construction-related TACs for a period of longer than two months for projects including pocket parks one acre or smaller. Due to the uncertainty in assessing cancer risk from very short-term exposures, OEHHA does not recommend assessing cancer risk for projects lasting less than two months at the MEIR receptor (OEHHA 2015). Accordingly, for greenway paths and pocket parks one acre or smaller, no MEIR would be exposed to construction-related TACs for any period longer than two months. Thus, a Health Risk Assessment is not warranted for construction of greenway paths and pocket parks less than one acre in size. However, construction of greenway paths and pocket parks and greenspaces between 1 and 25 acres would be completed over a longer period of up to 170 working days. Without specific details on the locations of 25-acre greenspaces, a quantitative evaluation of potential health risk impacts is not possible. Depending on the proximity of an individual project, it is conservatively assumed that there may be instances in which DPM emissions could result in cancer or non-cancer health risks that exceed SCAQMD's thresholds. Therefore, impacts of a greenway path and a 25-acre greenspace would be potentially significant.

With compliance with CARB Heavy-Duty On-Road and Off-Road Vehicle Regulations, construction activities would limit idling to no more than five minutes, which would further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions. Furthermore, even during the most intense period of construction, emissions of DPM would be generated from different locations on the project site rather than in a single location because different types of construction activities (e.g., site preparation and paving) would not occur at the same place at the same time. Implementation of **MM AQ-1: Emission Reduction Measures** would substantially reduce on-site emissions DPM from off-road equipment (the use of Tier 4 Final off-road diesel construction equipment reduces DPM emissions by at least 80 percent compared to the default CalEEMod fleet mix, which is composed of Tier 0 to Tier 2 equipment with higher DPM emissions). Requiring that construction equipment meet Tier 4 Final emissions standards, as well as ensuring compliance with the best management practices outlined in SCAQMD Rule 403 (Fugitive Dust), would ensure that construction of greenway paths, pocket parks, and greenspaces would not expose sensitive receptors to substantial pollutant concentrations. For projects that include 25-acre greenspaces that are within 1,000 feet of existing sensitive receptors, as defined by SCAQMD (e.g., residences, daycares), implementation of **MM AQ-2: Health Risk Assessment and Health Risk Reduction Measures** would require a site-specific construction Health Risk Assessment. For 25-acre greenspace projects that exceed the SCAQMD project-level thresholds, additional on-site mitigation shall be analyzed by the implementing agency to reduce risks to the greatest extent practicable. Because it cannot be concluded what the result of the project-level evaluation will be without speculation, it is possible that mitigation for future project health risks may be inadequate to reduce construction impacts below the SCAQMD's threshold level. Impacts are therefore considered potentially significant and unavoidable.

Operations

Less than Significant. Emissions from operation of greenway paths, amenities, and pocket parks or greenspaces would include those generated by mobile sources associated with motor vehicle trips and area source pollutants associated with pesticide and fertilizer use, reapplication of architectural coatings, onsite use of solvents and consumer products, off-gassing from pavement, and emissions associated with landscape maintenance equipment. As shown in Table 3.3-12 above, the net increase in emissions generated during operation of greenway paths, pocket parks, and greenspaces would not exceed the regional thresholds or LSTs recommended by the SCAQMD. As such, the operation of greenway paths, pocket parks, and greenspaces would not be expected to contribute a significant level of air pollution during operations such that air quality within the SCAB would be degraded. Criteria pollutant emissions would not expose receptors to substantial pollutant concentrations or risk. Further, it is not anticipated that operation of greenway paths, pocket parks, and greenspaces would exceed the most stringent 1-hour CO standard, and no detailed CO hot spots analysis would be required. Operation of greenway paths, pocket parks, and greenspaces is not anticipated to generate a substantial amount of onsite DPM emissions from diesel-powered maintenance equipment or diesel-powered trucks that could expose adjacent receptors to significant health risks. Operational VMT would be negligible and would not create mobile source emissions concentrated in any one location. Further, the main objective of the Plan is to create a network of interconnected, multi-use community greenways to improve mobility for cyclists, pedestrians, and equestrians. Thus, the Plan would provide routes for active transportation opportunities and reduce VMT and associated emissions. Therefore, operation of greenway paths, pocket parks, and greenspaces would not have the potential to expose sensitive receptors to substantial pollutant concentrations and impacts would be less than significant.

Mitigation Measures

MM AQ-1: Emission Reduction Measures

MM AQ-2: Health Risk Assessment and Health Risk Reduction Measures. For projects with construction activities in proximity to an individual sensitive receptor lasting more than two months that: 1) exceed the SCAQMD LSTs and 2) are within 1,000 feet of existing sensitive receptors, as defined by SCAQMD (e.g., residences, daycares), the project proponent shall prepare a site-specific construction and operational Health Risk Assessment. The Health Risk Assessment must identify whether the health risk exposures for adjacent receptors will be less than the SCAQMD project-level thresholds. If the Health Risk Assessment demonstrates that the health risk exposures for adjacent receptors will be less than SCAQMD project-level thresholds, then additional mitigation shall be unnecessary. However, if the Health Risk Assessment demonstrates that health risks will exceed SCAQMD project-level thresholds, additional on- and off-site mitigation, including and not limited to implementation of **MM AQ-1: Emission Reduction Measures** shall be analyzed by the project proponent to help reduce risks to the greatest extent practicable.

Significance After Mitigation

If construction of an individual Plan project would result in emissions that exceed regional or localized standards, implementation of **MM AQ-1: Emission Reduction Measures** would reduce emissions of DPM by implementing Tier 4 final construction equipment and therefore minimize exposure of sensitive receptors to construction-related TACs. For projects with construction activities lasting more than two

months in proximity to an individual sensitive receptor that exceeds the LTSs and is within 1,000 feet of existing sensitive receptors, **MM AQ-2: Health Risk Assessment and Health Risk Reduction Measures** would apply to this impact, which requires preparation of a site-specific construction Health Risk Assessment. If the Health Risk Assessment demonstrates that the health risk exposures for adjacent receptors would exceed SCAQMD project-level thresholds, additional feasible on- and offsite mitigation will be analyzed by the implementing agency to help reduce risks to the greatest extent practicable. Because it cannot be concluded what the result of the project-level evaluation will be without speculation, it is possible that mitigation for future project health risks may be inadequate to reduce construction impacts below the SCAQMD's threshold level. Therefore, impacts are considered potentially significant and unavoidable.

3.3.3.3.3 Greenway Paths + Safe Crossings

Construction

Significant and Unavoidable. Land uses that are generally considered more sensitive to air pollution than others are as follows: hospitals, schools, residences, playgrounds, child-care centers, athletic facilities, and retirement/convalescent homes. As shown in Table 3.3-13 above, the estimated emissions associated with construction of greenway paths and safe crossings would not exceed any of SCAQMD's regional thresholds or the most conservative LTSs in the Plan Area. The LTSs represent emission levels that would cause or contribute to a violation of any short-term NAAQS or CAAQS for a particular area, and because construction of greenway paths and safe crossings would not exceed these LTSs, construction of these components would not cause or contribute to a violation of any health-protective standard. Accordingly, an analysis correlating the relatively minor emissions generated by construction activities with specific levels of health impacts would not yield reliable or accurate results and has therefore not been conducted. Furthermore, it should be noted that the NAAQS and CAAQS are health-protective standards and define the maximum amount of ambient pollution that can be present without harming public health. SCAQMD's LTSs represent the level of pollutant emissions from onsite sources from a project that would not exceed the most stringent applicable federal or State ambient air quality standards. As such, projects with emissions below the applicable LTSs will not be in violation of the NAAQS or CAAQS, and, by extension, USEPA and CARB health protective standards. As shown in Table 3.3-13, the maximum daily emissions from construction would not exceed the applicable LTSs. Therefore, there would be no violations of the health protective CAAQS and NAAQS. As such, construction of greenway paths and safe crossings would not be expected to contribute a significant level of air pollution during construction such that air quality within the SCAB would be degraded. Criteria pollutant emissions would not expose receptors to substantial pollutant concentrations or risk.

Intermittent construction activities would result in short-term emissions of DPM, which is a TAC. Specifically, the exhaust of off-road heavy-duty diesel equipment would emit DPM during general construction activities, such as site preparation (e.g., excavation and grading), materials transport and handling, construction, paving, and other miscellaneous activities. Similar to the localized criteria pollutant emissions during construction, the short-term emissions of DPM during construction would only affect existing sensitive receptors that are located nearby. Health-related risks associated with diesel-exhaust emissions are primarily linked to long-term exposure and the associated risk of developing cancer. OEHHA has identified carcinogenic and chronic noncarcinogenic effects from long-term (chronic) exposure, but it has not identified health effects due to short-term (acute) exposure to

DPM (OEHHA 2015). Construction activities associated with greenway paths and safe crossings would occur over a period of approximately 195 workdays. Carcinogenic risks are generally assessed over an averaging period of 30 years. Given the brief duration of construction activities that would be intermittent over five miles of greenway path, individual receptors would not be expected to be exposed to construction-related TACs for a period of longer than two months for projects including pocket parks one acre or smaller. Due to the uncertainty in assessing cancer risk from very short-term exposures, OEHHA does not recommend assessing cancer risk for projects lasting less than two months at the MEIR receptor (OEHHA 2015). Without specific details on the locations of safe crossings, a quantitative evaluation of potential health risk impacts is not possible. Depending on the proximity of an individual project to sensitive receptors, it is conservatively assumed that there may be instances where DPM emissions could result in cancer or non-cancer health risks that exceed SCAQMD's thresholds. Therefore, impacts would be potentially significant.

With compliance with CARB Heavy-Duty On-Road and Off-Road Vehicle Regulations, construction activities would limit idling to no more than five minutes, which would further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions. Furthermore, even during the most intense period of construction, emissions of DPM would be generated from different locations on the project site rather than in a single location because different types of construction activities (e.g., site preparation and paving) would not occur at the same place at the same time. Implementation of **MM AQ-1: Emission Reduction Measures** would substantially reduce on-site emissions DPM from off-road equipment (the use of Tier 4 Final off-road diesel construction equipment reduces DPM emissions by at least 80 percent compared to the default CalEEMod fleet mix, which is composed of Tier 0 to Tier 2 equipment with higher DPM emissions). Requiring that construction equipment meet Tier 4 Final emissions standards, as well as ensuring compliance with the best management practices outlined in SCAQMD Rule 403 (Fugitive Dust), would ensure that construction of greenway paths, pocket parks, and greenspaces would not expose sensitive receptors to substantial pollutant concentrations. For safe crossings with anticipated construction duration of greater than two months that are within 1,000 feet of existing sensitive receptors, as defined by SCAQMD (e.g., residences, daycares), implementation of **MM AQ-2: Health Risk Assessment and Health Risk Reduction Measures** would require a site-specific construction Health Risk Assessment. For safe crossing projects that exceed the SCAQMD project-level thresholds, additional on-site mitigation shall be analyzed by the implementing agency to reduce risks to the greatest extent practicable. Because it cannot be concluded what the result of the project-level evaluation will be without speculation, it is possible that mitigation for future project health risks may be inadequate to reduce construction impacts below the SCAQMD's threshold level. Impacts are therefore considered potentially significant and unavoidable.

Operations

Less than Significant. Emissions from operation of greenway paths, amenities, and safe crossings would include those generated by mobile sources associated with motor vehicle trips and area source pollutants associated with pesticide and fertilizer use, reapplication of architectural coatings, onsite use of solvents and consumer products, off-gassing from pavement, and emissions associated with landscape maintenance equipment. As shown in Table 3.3-12 above, the net increase in emissions generated during operation of greenway paths and safe crossings would not exceed the regional thresholds or LSTs recommended by the SCAQMD. As such, the operation of greenway paths and safe

crossings would not be expected to contribute a significant level of air pollution during operations such that air quality within the SCAB would be degraded. Criteria pollutant emissions would not expose receptors to substantial pollutant concentrations or risk. Further, it is not anticipated that operation of greenway paths and safe crossings would exceed the most stringent 1-hour CO standard, and no detailed CO hot spots analysis would be required. Operation of greenway paths and safe crossings is not anticipated to generate a substantial amount of onsite DPM emissions from diesel-powered maintenance equipment or diesel-powered trucks that could expose adjacent receptors to significant health risks. Operational VMT would be negligible and would not create mobile source emissions concentrated in any one location. Further, the main objective of the Plan is to create a network of interconnected, multi-use community greenways to improve mobility for cyclists, pedestrians, and equestrians. Thus, the Plan would provide routes for active transportation opportunities and reduce VMT and associated emissions. Therefore, operation of greenway paths and safe crossings would not have the potential to expose sensitive receptors to substantial pollutant concentrations and impacts would be less than significant.

Mitigation Measures

MM AQ-1: Emission Reduction Measures

MM AQ-2: Health Risk Assessment and Health Risk Reduction Measures

Significance After Mitigation

If construction of an individual Plan project would result in emissions that exceed regional or localized standards, implementation of **MM AQ-1: Emission Reduction Measures** would reduce emissions of DPM by implementing Tier 4 final construction equipment and therefore minimize exposure of sensitive receptors to construction-related TACs. For projects with construction activities lasting more than two months in proximity to an individual sensitive receptor that exceeds the LSTs and is within 1,000 feet of existing sensitive receptors, **MM AQ-2: Health Risk Assessment and Health Risk Reduction Measures** would apply to this impact, which requires preparation of a site-specific construction Health Risk Assessment. If the Health Risk Assessment demonstrates that the health risk exposures for adjacent receptors would exceed SCAQMD project-level thresholds, additional feasible on- and offsite mitigation will be analyzed by the project proponent to help reduce risks to the greatest extent practicable. Because it cannot be concluded what the result of the project-level evaluation will be without speculation, it is possible that mitigation for future project health risks may be inadequate to reduce construction impacts below the SCAQMD's threshold level. Therefore, impacts are considered potentially significant and unavoidable.

3.3.3.3.3.4 Greenway Paths + Stormwater Management

Construction

Less than Significant with Mitigation. Land uses that are generally considered more sensitive to air pollution than others are as follows: hospitals, schools, residences, playgrounds, child-care centers, athletic facilities, and retirement/convalescent homes. As shown in Table 3.3-15, above, the estimated emissions associated with construction of greenway paths and stormwater management would not exceed any of SCAQMD's regional thresholds or the most conservative LSTs in the Plan Area. The LSTs represent emission levels that would cause or contribute to a violation of any short-term NAAQS or

CAAQS for a particular area, and because construction of greenway paths and stormwater management would not exceed these LSTs, construction of these components would not cause or contribute to a violation of any health-protective standard. Accordingly, an analysis correlating the relatively minor emissions generated by construction activities with specific levels of health impacts would not yield reliable or accurate results and has therefore not been conducted. Furthermore, it should be noted that the NAAQS and CAAQS are health-protective standards and define the maximum amount of ambient pollution that can be present without harming public health. SCAQMD's LSTs represent the level of pollutant emissions from onsite sources from a project that would not exceed the most stringent applicable federal or State ambient air quality standards. As such, projects with emissions below the applicable LSTs will not be in violation of the NAAQS or CAAQS, and, by extension, USEPA and CARB health protective standards. As shown in Table 3.3-15, the maximum daily emissions from construction would not exceed the applicable LSTs. Therefore, there would be no violations of the health protective CAAQS and NAAQS. As such, construction of greenway paths and stormwater management would not be expected to contribute a significant level of air pollution during construction such that air quality within the SCAB would be degraded. Criteria pollutant emissions would not expose receptors to substantial pollutant concentrations or risk.

Intermittent construction activities would result in short-term emissions of DPM, which is a TAC. Specifically, the exhaust of off-road heavy-duty diesel equipment would emit DPM during general construction activities, such as site preparation (e.g., excavation and grading), materials transport and handling, construction, paving, and other miscellaneous activities. Similar to the localized criteria pollutant emissions during construction, the short-term emissions of DPM during construction would only affect existing sensitive receptors that are located nearby. Health-related risks associated with diesel-exhaust emissions are primarily linked to long-term exposure and the associated risk of developing cancer. OEHHA has identified carcinogenic and chronic noncarcinogenic effects from long-term (chronic) exposure, but it has not identified health effects due to short-term (acute) exposure to DPM (OEHHA 2015). Construction activities associated with greenway paths and stormwater management would occur over a period of approximately 95 workdays. Carcinogenic risks are generally assessed over an averaging period of 30 years. Given the brief duration of activities that would be intermittent over five miles of greenway path length, individual receptors would not be expected to be exposed to construction-related TACs for a period of longer than two months. Due to the uncertainty in assessing cancer risk from very short-term exposures, OEHHA does not recommend assessing cancer risk for projects lasting less than two months at the MEIR receptor (OEHHA 2015). Accordingly, since no sensitive receptor would be exposed to construction-related TACs for any period longer than two months, a Health Risk Assessment is not warranted. With compliance with CARB Heavy-Duty On-Road and Off-Road Vehicle Regulations, construction activities would limit idling to no more than five minutes, which would further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions. Furthermore, even during the most intense period of construction, emissions of DPM would be generated from different locations on the project site rather than in a single location because different types of construction activities (e.g., site preparation and paving) would not occur at the same place at the same time. Implementation of **MM AQ-1: Emission Reduction Measures** would substantially reduce on-site emissions DPM from off-road equipment (the use of Tier 4 Final off-road diesel construction equipment reduces DPM emissions by at least 80 percent compared to the default CalEEMod fleet mix, which is composed of Tier 0 to Tier 2 equipment with higher DPM emissions).

Requiring that construction equipment meet Tier 4 Final emissions standards, as well as ensuring compliance with the best management practices outlined in SCAQMD Rule 403 (Fugitive Dust), would ensure that construction of greenway paths and stormwater management would not expose sensitive receptors to substantial pollutant concentrations. Impacts related to sensitive receptor exposures would be less than significant with mitigation.

Operations

Less than Significant. Emissions from operation of greenway paths, amenities, and stormwater management facilities would include those generated by mobile sources associated with motor vehicle trips and area source pollutants associated with pesticide and fertilizer use, reapplication of architectural coatings, onsite use of solvents and consumer products, off-gassing from pavement, and emissions associated with landscape maintenance equipment. As shown in Table 3.3-12 above, the net increase in emissions generated during operation of greenway paths and stormwater management would not exceed the regional thresholds or LSTs recommended by the SCAQMD. As such, the operation of greenway paths and stormwater management would not be expected to contribute a significant level of air pollution during operations such that air quality within the SCAB would be degraded. Criteria pollutant emissions would not expose receptors to substantial pollutant concentrations or risk. Further, as described in Section 3.1 of the EWMP PEIR, operation of stormwater management BMPs are not anticipated to exceed the CO standard or require a detailed CO hot spots analysis. Accordingly, when considered in conjunction with operation of greenway paths, projects implemented under the Plan would not exceed the most stringent 1-hour CO standard and no detailed CO hot spots analysis would be required. Operation of greenway paths and stormwater management is not anticipated to generate a substantial amount of onsite DPM emissions from diesel-powered maintenance equipment or diesel-powered trucks that could expose adjacent receptors to significant health risks. Operational VMT would be negligible and would not create mobile source emissions concentrated in any one location. Further, the main objective of the Plan is to create a network of interconnected, multi-use community greenways to improve mobility for cyclists, pedestrians, and equestrians. Thus, the Plan would provide routes for active transportation opportunities and reduce VMT and associated emissions. Therefore, operation of greenway paths and stormwater management would not have the potential to expose sensitive receptors to substantial pollutant concentrations and impacts would be less than significant.

Mitigation Measures

MM AQ-1: Emission Reduction Measures

Significance After Mitigation

If construction of an individual Plan project would result in emissions that exceed regional or localized standards, implementation of **MM AQ-1: Emission Reduction Measures** would reduce emissions of DPM by implementing Tier 4 final construction equipment and therefore minimize exposure of sensitive receptors to construction-related TACs. Accordingly, implementation of **MM AQ-1: Emission Reduction Measures** would reduce impacts to less than significant.

3.3.3.3.4 3(d). Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

3.3.3.3.4.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings

Construction

Less than Significant. Construction of greenway paths, amenities, pocket parks and greenspaces, and safe crossings would involve the use of mobile sources of air quality emissions including off-road construction equipment and on-road mobile sources resulting from worker trips, hauling, and material delivery, all of which may emit objectionable odors due to the combustion of diesel fuel, as well as during asphalt paving. However, asphalt paving would occur for a limited time period (less than two weeks), and the locations of equipment usage and paving activities would be distributed over the five-mile length of greenway path at any one time. California ultralow sulfur diesel fuel with a maximum sulfur content of 15 ppm by weight would be required to be used in all diesel-powered equipment, which would minimize emissions of sulfurous gases (SO₂, hydrogen sulfide, carbon disulfide, and carbonyl sulfide) and, thus, would minimize odors. Furthermore, SCAQMD Rule 402 prohibits the discharge of air contaminants that cause nuisance or annoyance to the public, including odors. Given the limited duration and location of asphalt paving and equipment usage, mandatory compliance with SCAQMD Rule 402, and ability for the public to report complaints to SCAQMD, construction activities would not create a significant level of objectionable odors. Therefore, impacts during construction would be less than significant.

Operations

Less than Significant with Mitigation. According to the SCAQMD's CEQA Air Quality Handbook, land uses associated with odor complaints typically include agricultural uses, wastewater treatment facilities, food processing plants, chemical plants, composting areas, refineries, landfills, dairies, and fiberglass molding facilities. Community gardens envisioned under the Plan would not operate at the scale or intensity of commercial farming operations that are typically associated with odor complaints. However, the equestrian amenities component, similar to SCAQMD's identified agricultural uses, composting areas, and dairies, has the potential to generate nuisance odors during operations due to manure and soiled bedding generated and stockpiled on site. Improper handling and storage of manure, along with odor migration, may lead to offsite nuisance violations. Good housekeeping and BMPs can eliminate nuisance concerns. Implementation of **MM AQ-3: Implement Equestrian Manure Management** would reduce the potential for animal waste to result in odor impacts at nearby sensitive receptors. Further, SCAQMD Rule 402 prohibits the discharge of air contaminants that cause nuisance or annoyance to the public, including odors. Also, SCAQMD maintains both a toll-free phone line and a web-based platform for reporting complaints related to air quality, including odors. Consequently, mandatory compliance with SCAQMD Rule 402, and the ability for the public to report complaints to SCAQMD, would ensure that equestrian facilities would not result in emissions leading to significant odors. Impacts would be less than significant with mitigation.

Mitigation Measures

MM AQ-3: Implement Equestrian Manure Management. For Plan elements that include an equestrian facility, the implementing agency shall comply with the following measures:

- The facility, including animal stalls and warmup and training areas, will be cleaned at least once per day, including the removal of manure and soiled bedding.
- Manure and soiled bedding will either be incorporated into composting by the end of the day or temporarily stockpiled prior to incorporation into the composting system.
- Stockpiled material in containment vessels will be covered with a lid or tarp. Containment vessels will be located at the farthest feasible distance from nearby residents and/or sensitive receptors.

Significance After Mitigation

Implementation of **MM AQ-3: Implement Equestrian Manure Management** would reduce the potential for animal waste to result in odor impacts at nearby sensitive receptors. Further, SCAQMD Rule 402 prohibits the discharge of air contaminants that cause nuisance or annoyance to the public, including odors. Also, SCAQMD maintains both a toll-free phone line and a web-based platform for reporting complaints related to air quality, including odors. Consequently, mandatory compliance with SCAQMD Rule 402, and the ability for the public to report complaints to SCAQMD, would ensure that equestrian facilities would not result in emissions leading to significant odors. Impacts would be less than significant with mitigation.

3.3.3.3.4.2 Greenway Paths + Stormwater Management

Construction

Less than Significant. Construction of greenway paths, amenities, and stormwater would involve the use of mobile sources of air quality emissions including offroad construction equipment and on-road mobile sources resulting from worker trips, hauling, and material delivery, all of which may emit objectionable odors due to the combustion of diesel fuel, as well as during asphalt paving. However, asphalt paving would occur for a limited time period (less than two weeks), and the locations of equipment usage and paving activities would be distributed over the five-mile length of greenway path at any one time. California ultralow sulfur diesel fuel with a maximum sulfur content of 15 ppm by weight would be required to be used in all diesel-powered equipment, which would minimize emissions of sulfurous gases (SO₂, hydrogen sulfide, carbon disulfide, and carbonyl sulfide) and, thus, would minimize odors. Furthermore, SCAQMD Rule 402 prohibits the discharge of air contaminants that cause nuisance or annoyance to the public, including odors. Given the limited duration and location of asphalt paving and equipment usage, mandatory compliance with SCAQMD Rule 402, and ability for the public to report complaints to SCAQMD, construction activities would not create a significant level of objectionable odors. Therefore, impacts during construction would be less than significant.

Operations

Less than Significant with Mitigation. According to the SCAQMD's CEQA Air Quality Handbook, land uses associated with odor complaints typically include agricultural uses, wastewater treatment facilities, food processing plants, chemical plants, composting areas, refineries, landfills, dairies, and fiberglass molding facilities. The components envisioned under greenway paths and stormwater management include none of these land uses. However, as described in Section 3.1 of the EWMP PEIR and incorporated herein, some stormwater management options may involve retaining intermittent stormwater or dry weather flows on a site that may result in organic odors as water levels fluctuate and decomposition occurs in saturated mud. Constructed wetlands and/or bioretention facilities may be permanently wet, resulting in odors from saturated mud or algal blooms. Standing water may emit

odors if algal blooms occur for periods of time before the water dries or percolates. If these facilities are near sensitive receptors such as residential areas, these odors may result in a severe nuisance. The *Design Guidelines and Standards* requires preparation and implementation of operation and maintenance plans in accordance with the maintenance requirements of the LA County Public Works LID Standards Manual (2014). Elements to meet the operation and maintenance requirements include identification of inspection and maintenance activities and schedule as well as equipment and resource requirements necessary to operate and maintain stormwater quality control measures. Further, stormwater management facilities would be subject to the mandatory compliance requirements of SCAQMD Rule 402 which prohibits the discharge of air contaminants that cause nuisance or annoyance to the public, including odors. Also, SCAQMD maintains both a toll-free phone line and a web-based platform for reporting complaints related to air quality, including odors. As such, greenway paths and stormwater management facilities would be designed to meet Rule 402 standards. Consequently, implementation of operation and maintenance plans as required by the *Design Guidelines and Standards* and mandatory compliance with SCAQMD Rule 402, as well as the ability for the public to report complaints to SCAQMD, would minimize impacts related to significant odors.

However, the equestrian amenities component, similar to SCAQMD's identified agricultural uses, composting areas, and dairies, has the potential to generate nuisance odors during operations due to manure and soiled bedding generated and stockpiled on site. Improper handling and storage of manure, along with odor migration, may lead to offsite nuisance violations. Good housekeeping and best management practices can eliminate nuisance concerns. Implementation of **MM AQ-3: Implement Equestrian Manure Management** would reduce the potential for animal waste to result in odor impacts at nearby sensitive receptors. Further, SCAQMD Rule 402 prohibits the discharge of air contaminants that cause nuisance or annoyance to the public, including odors. Also, SCAQMD maintains both a toll-free phone line and a web-based platform for reporting complaints related to air quality, including odors. Consequently, mandatory compliance with SCAQMD Rule 402, and the ability for the public to report complaints to SCAQMD, would ensure that equestrian facilities would not result in emissions leading to significant odors. Impacts would be less than significant with mitigation.

Mitigation Measures

MM AQ-3: Implement Equestrian Manure Management

Significance After Mitigation

Construction of greenway paths, amenities, pocket parks or greenspaces, and safe crossings would have less than significant impacts without mitigation.

Impacts from operation would be less than significant with implementation of **MM-AQ-3: Implement Equestrian Manure Management** and compliance with SCAQMD Rule 402.

3.3.3.4 Impacts of Conceptual Design Projects

This section discusses potential impacts from the 10 conceptual designs discussed in Section 2, Project Description.

3.3.3.4.1 3(a). Conflict with or obstruct implementation of the applicable air quality plan?

Construction

Less than Significant with Mitigation. The components proposed for all 10 conceptual design projects are within the maximum extent limits as described for the Plan in Section 2. All conceptual design projects would be required to comply with regulatory compliance controls during construction including compliance with SCAQMD Rules 402, 403, 404, 407, 409, 431.1, 474, 1108, 1110.2, and 1113 as summarized in Section 3.3.2.3.1, which would reduce emissions during construction. In addition, as described in Section 3.3.3.3.1, Impacts 3(a) for the Plan, in the event that construction of an activities would result in emissions that exceed regional or localized standards, implementation of **MM AQ-1: Emission Reduction Measures** would further reduce emissions and would be consistent with control strategies MOB-8 and MOB-10 by implementing Tier 4 final construction equipment and therefore implementing more efficient equipment in conformance with the implementation requirements of the AQMP. Therefore, none of the 10 conceptual design examples would result in any impacts relating to consistency with the applicable air quality management plan not previously described for the Plan in Section 3.3.3.3.1. No additional mitigation measures would be required. Construction impacts from the 10 conceptual design projects would be less than significant with implementation of **MM AQ-1: Emission Reduction Measures**.

Operations

Less than Significant. Because all of the 10 conceptual designs are within the maximum extent limits as described for the Plan in Section 2, the 10 conceptual designs would have less than significant impacts with respect to consistency with the 2022 AQMP as described previously in Section 3.3.3.3.1, Impacts 3(a) for the Plan.

3.3.3.4.2 3(b). Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?

Construction

Less than Significant with Mitigation. The components proposed for all 10 conceptual design projects are within the maximum extent limits as described for the Plan in Section 2. Emissions of criteria pollutants during construction for the various types of components are provided in Tables 3.3-9, 3.3-11, 3.3-13, and 3.3-15. Because the 10 conceptual designs include multiple components, there is the potential that an individual project would exceed the SCAQMD regional thresholds and/or LSTs during construction. All conceptual design projects would be required to comply with regulatory compliance controls during construction including compliance with SCAQMD Rules 402, 403, 404, 407, 409, 431.1, 474, 1108, 1110.2, and 1113 as summarized in Section 3.3.2.3.1, SCAQMD, which would reduce emissions during construction. If construction activities would result in emissions that exceed regional or localized standards, implementation of **MM AQ-1: Emission Reduction Measures** would further reduce emissions by implementing Tier 4 final construction equipment. If the use of Tier 4 Final construction equipment is demonstrated to not sufficiently reduce emissions to below the SCAQMD regional thresholds and/or LSTs, **MM AQ-1: Emission Reduction Measures** would further require that the project

reduce its daily construction intensity (e.g., reducing the amount of equipment used daily, reducing the amount of soil graded/excavated daily) to a level where the project's construction emissions would no longer exceed SCAQMD's regional thresholds and/or LSTs. Accordingly, construction impacts from the 10 conceptual design projects would be less than significant with implementation of **MM AQ-1:**

Emission Reduction Measures.

Operations

Less than Significant. Once construction of a conceptual design project is completed, operational sources of emissions would include those generated by mobile sources associated with motor vehicle trips and area source pollutants associated with pesticide and fertilizer use, reapplication of architectural coatings, onsite use of solvents and consumer products, off-gassing from pavement, and emissions associated with landscape maintenance equipment. Emissions of criteria pollutants during operation for the various types of Plan components are provided in Tables 3.3-10, 3.3-12, 3.3-14, and 3.3-16. As shown in these tables, operational emissions associated with Plan components would be significantly below the SCAQMD regional thresholds and LSTs. The components proposed for all 10 conceptual design projects are within the maximum extent limits as described for the Plan in Section 2. As such, emissions associated with operation of the conceptual design projects would be similar to those described for the Plan Impact Criteria 3(b) above in Section 3.3.3.3.2. Projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant. In addition, regulatory compliance controls during operations, including compliance with SCAQMD Rules 402, 403, 404, 407, 409, 431.1, 474, 1108, 1110.2, and 1113 as summarized in Section 3.3.2.3.1 above, would further reduce emissions during operations. Therefore, impacts associated with operation of the 10 conceptual design projects would be less than significant.

3.3.3.4.3 3(c). Expose sensitive receptors to substantial pollutant concentrations?

Construction

Significant and Unavoidable. Land uses that are generally considered more sensitive to air pollution than others are as follows: hospitals, schools, residences, playgrounds, child-care centers, athletic facilities, and retirement/convalescent homes. The components proposed for all 10 conceptual design projects are within the maximum extent limits as described for the Plan in Section 2. Emissions of criteria pollutants during construction for the various types of Plan components are provided in Tables 3.3-9, 3.3-11, 3.3-13, and 3.3-15. Because the 10 conceptual designs include multiple components, there is the potential that an individual project would exceed the SCAQMD LSTs during construction. All conceptual design projects would be required to comply with regulatory compliance controls during construction including compliance with SCAQMD Rules 402, 403, 404, 407, 409, 431.1, 474, 1108, 1110.2, and 1113 as summarized in Section 3.3.2.3.1, SCAQMD, which would reduce emissions during construction. If construction activities would result in emissions that exceed regional or localized standards, implementation of **MM AQ-1: Emission Reduction Measures** would further reduce emissions by implementing Tier 4 final construction equipment. If the use of Tier 4 Final construction equipment is demonstrated to not sufficiently reduce emissions to below the SCAQMD LSTs, **MM AQ-1: Emission Reduction Measures** would further require that the project reduce its daily construction intensity (e.g., reducing the amount of equipment used daily, reducing the amount of soil graded/excavated daily) to a level where the project's construction emissions would no longer exceed SCAQMD's regional thresholds

and/or LSTs. Accordingly, criteria pollutant emissions during construction of the conceptual design projects would not expose receptors to substantial pollutant concentrations or risk.

Similar to impacts discussed for Plan components in Section 3.3.3.3.3, Impacts 3(c) for the Plan, intermittent construction activities would result in short-term emissions of DPM, which is a TAC. Specifically, the exhaust of off-road heavy-duty diesel equipment would emit DPM during general construction activities, such as site preparation (e.g., excavation and grading), materials transport and handling, construction, paving, and other miscellaneous activities. The short-term emissions of DPM during construction of conceptual design projects would only affect existing sensitive receptors that are located nearby. Due to the proximity of sensitive receptors to conceptual design project components, it is conservatively assumed that there may be instances where DPM emissions during construction could result in cancer or non-cancer health risks that exceed SCAQMD's thresholds. Therefore, impacts would be potentially significant. With compliance with CARB Heavy-Duty On-Road and Off-Road Vehicle Regulations, construction activities would limit idling to no more than five minutes, which would further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions. Furthermore, even during the most intense period of construction, emissions of DPM would be generated from different locations on the project site rather than in a single location because different types of construction activities (e.g., site preparation and paving) would not occur at the same place at the same time. Implementation of **MM AQ-1: Emission Reduction Measures** would substantially reduce on-site emissions DPM from off-road equipment (the use of Tier 4 Final off-road diesel construction equipment reduces DPM emissions by at least 80 percent compared to the default CalEEMod fleet mix, which is composed of Tier 0 to Tier 2 equipment with higher DPM emissions). Requiring that construction equipment meet Tier 4 Final emissions standards, as well as ensuring compliance with the best management practices outlined in SCAQMD Rule 403 (Fugitive Dust), would minimize exposure of sensitive receptors to substantial pollutant concentrations. As described in greater detail below in Table 3.3-17, all of the conceptual design projects include components within 1,000 feet of existing sensitive receptors as defined by SCAQMD (e.g., residences, daycares). Implementation of **MM AQ-2: Health Risk Assessment and Health Risk Reduction Measures** would require a site-specific construction Health Risk Assessment for any project construction activities lasting longer than two months in proximity to an individual sensitive receptor. For projects that exceed the SCAQMD project-level thresholds, additional on-site mitigation shall be analyzed by the implementing agency to reduce risks to the greatest extent practicable. The construction of the conceptual design projects would not be of greater severity than described above in Section 3.3.3.3.3, Impacts 3(c) for the Plan. However, because it cannot be concluded what the result of the project-level evaluation will be without speculation, it is possible that mitigation for future project health risks may be inadequate to reduce construction impacts below the SCAQMD's threshold level. Impacts are therefore considered potentially significant and unavoidable.

Operations

Less than Significant. As described in Section 3.3.3.3.3, Impacts 3(c) for the Plan, once construction is completed, operational sources of emissions would include those generated by mobile sources associated with motor vehicle trips and area source pollutants associated with pesticide and fertilizer use, reapplication of architectural coatings, onsite use of solvents and consumer products, off-gassing from pavement, and emissions associated with landscape maintenance equipment. The estimated net increase in emissions generated during operation of Plan components is provided in Tables 3.3-10, 3.3-

12, 3.3-14, and 3.3-16. As shown in Tables 3.3-10, 3.3-12, 3.3-14, and 3.3-16, operational emissions would be significantly below the SCAQMD regional thresholds and LSTs recommended by the SCAQMD. The operational requirements for the 10 conceptual design projects would be like that described for Plan components. As such, the operation of the 10 conceptual design projects would not be expected to contribute significant levels of air pollution during operations such that air quality within the SCAB would be degraded. Criteria pollutant emissions would not expose receptors to substantial pollutant concentrations or risk. Further, it is not anticipated that operation of the 10 conceptual design projects would exceed the most stringent 1-hour CO standard, and no detailed CO hot spots analysis would be required. Operation of the 10 conceptual design projects is not anticipated to generate a substantial amount of onsite DPM emissions from diesel-powered maintenance equipment or diesel-powered trucks that could expose adjacent receptors to significant health risks. Operational VMT would be negligible and would not create mobile source emissions concentrated in any one location. Further, the main objective of the Plan is to create a network of interconnected, multi-use community greenways to improve mobility for cyclists, pedestrians, and equestrians. Thus, the conceptual design projects would provide routes for active transportation opportunities and reduce VMT and associated emissions. Therefore, operation of the conceptual design projects would not be of greater severity than described above in Section 3.3.3.3.3, Impacts 3(c) for the Plan. Impacts would be less than significant.

Table 3.3-17. Analysis of Conceptual Design Examples for Operations to Expose Sensitive Receptors to Substantial Pollutant Concentrations.

Conceptual Design Project	<i>3(c). Expose sensitive receptors to substantial pollutant concentrations?</i>
<p>Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i></p>	<p>Significant and Unavoidable. Land uses that are generally considered more sensitive to air pollution than others are as follows: hospitals, schools, residences, playgrounds, child-care centers, athletic facilities, and retirement/convalescent homes. The Alhambra Wash at Vincent Lugo Park conceptual design incorporates components within 1,000 feet of single-family and multi-family residential developments, McKinley Elementary School, San Gabriel High School, retirement/convalescent facilities, daycare centers, and playgrounds. Emissions of criteria pollutants during construction for the various types of Plan components are provided in Tables 3.3-9, 3.3-11, 3.3-13, and 3.3-15. Because the Alhambra Wash at Vincent Lugo Park conceptual design incorporates multiple components, there is the potential that an individual project would exceed the SCAQMD LSTs during construction. The conceptual design project would be required to comply with regulatory compliance controls during construction including compliance with SCAQMD Rules 402, 403, 404, 407, 409, 431.1, 474, 1108, 1110.2, and 1113 as summarized in Section 3.3.2.3.1, which would reduce emissions during construction. If construction activities would result in emissions that exceed regional or localized standards, implementation of MM AQ-1: Emission Reduction Measures would further reduce emissions by implementing Tier 4 final construction equipment. If the use of Tier 4 Final construction equipment is demonstrated to not sufficiently reduce emissions to below the SCAQMD LSTs, MM AQ-1: Emission Reduction Measures would further require that the project reduce its daily construction intensity (e.g., reducing the amount of equipment used daily, reducing the amount of soil graded/excavated daily) to a level where the project's construction emissions would no longer exceed SCAQMD's regional thresholds and/or LSTs.</p>

Conceptual Design Project	3(c). <i>Expose sensitive receptors to substantial pollutant concentrations?</i>
	<p>Accordingly, criteria pollutant emissions during construction of the conceptual design project would not expose receptors to substantial pollutant concentrations or risk. With respect to emissions of DPM during construction, due to the proximity of sensitive receptors to conceptual design project components, it is conservatively assumed that the Alhambra Wash at Vincent Lugo Park conceptual design may result in DPM emissions during construction that could exceed SCAQMD's thresholds for cancer or non-cancer health risks. Therefore, impacts would be potentially significant. With compliance with CARB Heavy-Duty On-Road and Off-Road Vehicle Regulations, construction activities would limit idling to no more than five minutes, which would further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions. Furthermore, even during the most intense period of construction, emissions of DPM would be generated from different locations on the project site rather than in a single location because different types of construction activities (e.g., site preparation and paving) would not occur at the same place at the same time. Implementation of MM AQ-1: Emission Reduction Measures would substantially reduce on-site emissions DPM from off-road equipment (the use of Tier 4 Final off-road diesel construction equipment reduces DPM emissions by at least 80 percent compared to the default CalEEMod fleet mix, which is composed of Tier 0 to Tier 2 equipment with higher DPM emissions). Requiring that construction equipment meet Tier 4 Final emissions standards, as well as ensuring compliance with the best management practices outlined in SCAQMD Rule 403 (Fugitive Dust), would minimize exposure of sensitive receptors to substantial pollutant concentrations. Implementation of MM AQ-2: Health Risk Assessment and Health Risk Reduction would require a site-specific construction Health Risk Assessment for construction activities lasting longer than two months in proximity to an individual sensitive receptor. If the conceptual design project is determined to have the potential to exceed the SCAQMD project-level thresholds, additional on-site mitigation shall be analyzed by the implementing agency to reduce risks to the greatest extent practicable. Because it cannot be concluded what the result of the project-level evaluation will be without speculation, it is possible that mitigation for future project health risks may be inadequate to reduce construction impacts below the SCAQMD's threshold level. Impacts are therefore considered potentially significant and unavoidable.</p>
<p>Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i></p>	<p>Significant and Unavoidable. Land uses that are generally considered more sensitive to air pollution than others are as follows: hospitals, schools, residences, playgrounds, child-care centers, athletic facilities, and retirement/convalescent homes. The Big Dalton Wash at Hilda L. Solis Park conceptual design incorporates components within 1,000 feet of single-family and multi-family residential developments, Baldwin Park High School, Central Elementary School, and playgrounds. Emissions of criteria pollutants during construction for the various types of Plan components are provided in Tables 3.3-9, 3.3-11, 3.3-13, and 3.3-15. Because the Big Dalton Wash at Hilda L. Solis Park conceptual design incorporates multiple components, there is the potential that an individual project would exceed the SCAQMD LSTs during construction. The conceptual design project would be required to comply with regulatory compliance controls during construction including compliance with SCAQMD Rules 402, 403, 404, 407, 409, 431.1, 474, 1108,</p>

Conceptual Design Project	<i>3(c). Expose sensitive receptors to substantial pollutant concentrations?</i>
	<p>1110.2, and 1113 as summarized in Section 3.3.2.3.1, which would reduce emissions during construction. If construction activities would result in emissions that exceed regional or localized standards, implementation of MM AQ-1: Emission Reduction Measures would further reduce emissions by implementing Tier 4 final construction equipment. If the use of Tier 4 Final construction equipment is demonstrated to not sufficiently reduce emissions to below the SCAQMD LSTs, MM AQ-1: Emission Reduction Measures would further require that the project reduce its daily construction intensity (e.g., reducing the amount of equipment used daily, reducing the amount of soil graded/excavated daily) to a level where the project's construction emissions would no longer exceed SCAQMD's regional thresholds and/or LSTs. Accordingly, criteria pollutant emissions during construction of the conceptual design project would not expose receptors to substantial pollutant concentrations or risk. With respect to emissions of DPM during construction, due to the proximity of sensitive receptors to conceptual design project components, it is conservatively assumed that the Big Dalton Wash at Hilda L. Solis Park conceptual design may result in DPM emissions during construction that could exceed SCAQMD's thresholds for cancer or non-cancer health risks. Therefore, impacts would be potentially significant. With compliance with CARB Heavy-Duty On-Road and Off-Road Vehicle Regulations, construction activities would limit idling to no more than five minutes, which would further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions. Furthermore, even during the most intense period of construction, emissions of DPM would be generated from different locations on the project site rather than in a single location because different types of construction activities (e.g., site preparation and paving) would not occur at the same place at the same time. Implementation of MM AQ-1: Emission Reduction Measures would substantially reduce on-site emissions DPM from off-road equipment (the use of Tier 4 Final off-road diesel construction equipment reduces DPM emissions by at least 80 percent compared to the default CalEEMod fleet mix, which is composed of Tier 0 to Tier 2 equipment with higher DPM emissions). Requiring that construction equipment meet Tier 4 Final emissions standards, as well as ensuring compliance with the best management practices outlined in SCAQMD Rule 403 (Fugitive Dust), would minimize exposure of sensitive receptors to substantial pollutant concentrations. If the conceptual design project is determined to have the potential to exceed the SCAQMD project-level thresholds, additional on-site mitigation shall be analyzed by the implementing agency to reduce risks to the greatest extent practicable. Because it cannot be concluded what the result of the project-level evaluation will be without speculation, it is possible that mitigation for future project health risks may be inadequate to reduce construction impacts below the SCAQMD's threshold level. Impacts are therefore considered potentially significant and unavoidable.</p>
Eaton Wash Greenway at Spreading Ground Site	Significant and Unavoidable. Land uses that are generally considered more sensitive to air pollution than others are as follows: hospitals, schools, residences, playgrounds, child-care centers, athletic facilities, and

Conceptual Design Project	3(c). Expose sensitive receptors to substantial pollutant concentrations?
<i>City of Pasadena</i>	<p>retirement/convalescent homes. The Eaton Wash Greenway at Spreading Ground Site conceptual design incorporates components within 1,000 feet of single-family and multi-family residential developments, Focus Point Academy, Pasadena High School, St. Lukes Medical Center, and playgrounds. Emissions of criteria pollutants during construction for the various types of Plan components are provided in Tables 3.3-9, 3.3-11, 3.3-13, and 3.3-15. Because the Eaton Wash Greenway at Spreading Ground Site conceptual design incorporates multiple components, there is the potential that an individual project would exceed the SCAQMD LSTs during construction. The conceptual design project would be required to comply with regulatory compliance controls during construction including compliance with SCAQMD Rules 402, 403, 404, 407, 409, 431.1, 474, 1108, 1110.2, and 1113 as summarized in Section 3.3.2.3.1, which would reduce emissions during construction. If construction activities would result in emissions that exceed regional or localized standards, implementation of MM AQ-1: Emission Reduction Measures would further reduce emissions by implementing Tier 4 final construction equipment. If the use of Tier 4 Final construction equipment is demonstrated to not sufficiently reduce emissions to below the SCAQMD LSTs, MM AQ-1: Emission Reduction Measures would further require that the project reduce its daily construction intensity (e.g., reducing the amount of equipment used daily, reducing the amount of soil graded/excavated daily) to a level where the project's construction emissions would no longer exceed SCAQMD's regional thresholds and/or LSTs. Accordingly, criteria pollutant emissions during construction of the conceptual design project would not expose receptors to substantial pollutant concentrations or risk. With respect to emissions of DPM during construction, due to the proximity of sensitive receptors to conceptual design project components, it is conservatively assumed that the Eaton Wash Greenway at Spreading Ground Site conceptual design may result in DPM emissions during construction that could exceed SCAQMD's thresholds for cancer or non-cancer health risks. Therefore, impacts would be potentially significant. With compliance with CARB Heavy-Duty On-Road and Off-Road Vehicle Regulations, construction activities would limit idling to no more than five minutes, which would further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions. Furthermore, even during the most intense period of construction, emissions of DPM would be generated from different locations on the project site rather than in a single location because different types of construction activities (e.g., site preparation and paving) would not occur at the same place at the same time. Implementation of MM AQ-1: Emission Reduction Measures would substantially reduce on-site emissions DPM from off-road equipment (the use of Tier 4 Final off-road diesel construction equipment reduces DPM emissions by at least 80 percent compared to the default CalEEMod fleet mix, which is composed of Tier 0 to Tier 2 equipment with higher DPM emissions). Requiring that construction equipment meet Tier 4 Final emissions standards, as well as ensuring compliance with the best management practices outlined in SCAQMD Rule 403 (Fugitive Dust), would minimize exposure of sensitive receptors to substantial pollutant concentrations. Implementation of MM AQ-2: Health Risk Assessment and Health Risk Reduction would require a site-specific construction Health Risk</p>

Conceptual Design Project	3(c). <i>Expose sensitive receptors to substantial pollutant concentrations?</i>
	<p>Assessment for construction activities lasting longer than two months in proximity to an individual sensitive receptor. If the conceptual design project is determined to have the potential to exceed the SCAQMD project-level thresholds, additional on-site mitigation shall be analyzed by the implementing agency to reduce risks to the greatest extent practicable. Because it cannot be concluded what the result of the project-level evaluation will be without speculation, it is possible that mitigation for future project health risks may be inadequate to reduce construction impacts below the SCAQMD's threshold level. Impacts are therefore considered potentially significant and unavoidable.</p>
<p>Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i></p>	<p>Significant and Unavoidable. Land uses that are generally considered more sensitive to air pollution than others are as follows: hospitals, schools, residences, playgrounds, child-care centers, athletic facilities, and retirement/convalescent homes. The Eaton Wash at Eaton Blanche Park conceptual design incorporates components within 1,000 feet of single-family and multi-family residential developments, Willard Elementary School, retirement/convalescent facilities, and playgrounds. Emissions of criteria pollutants during construction for the various types of Plan components are provided in Tables 3.3-9, 3.3-11, 3.3-13, and 3.3-15. Because the Eaton Wash at Eaton Blanche Park conceptual design incorporates multiple components, there is the potential that an individual project would exceed the SCAQMD LSTs during construction. The conceptual design project would be required to comply with regulatory compliance controls during construction including compliance with SCAQMD Rules 402, 403, 404, 407, 409, 431.1, 474, 1108, 1110.2, and 1113 as summarized in Section 3.3.2.3.1, which would reduce emissions during construction. In the event that construction activities would result in emissions that exceed regional or localized standards, implementation of MM AQ-1: Emission Reduction Measures would further reduce emissions by implementing Tier 4 final construction equipment. If the use of Tier 4 Final construction equipment is demonstrated to not sufficiently reduce emissions to below the SCAQMD LSTs, MM AQ-1: Emission Reduction Measures would further require that the project reduce its daily construction intensity (e.g., reducing the amount of equipment used daily, reducing the amount of soil graded/excavated daily) to a level where the project's construction emissions would no longer exceed SCAQMD's regional thresholds and/or LSTs. Accordingly, criteria pollutant emissions during construction of the conceptual design project would not expose receptors to substantial pollutant concentrations or risk. With respect to emissions of DPM during construction, due to the proximity of sensitive receptors to conceptual design project components, it is conservatively assumed that the Eaton Wash at Eaton Blanche Park conceptual design may result in DPM emissions during construction that could exceed SCAQMD's thresholds for cancer or non-cancer health risks. Therefore, impacts would be potentially significant. With compliance with CARB Heavy-Duty On-Road and Off-Road Vehicle Regulations, construction activities would limit idling to no more than five minutes, which would further reduce nearby sensitive receptors' exposure to temporary and variable DPM emissions. Furthermore, even during the most intense period of construction, emissions of DPM would be generated from different locations on the project site rather than in a single location because different types of construction activities (e.g., site</p>

Conceptual Design Project	3(c). <i>Expose sensitive receptors to substantial pollutant concentrations?</i>
	<p>preparation and paving) would not occur at the same place at the same time. Implementation of MM AQ-1: Emission Reduction Measures would substantially reduce on-site emissions DPM from off-road equipment (the use of Tier 4 Final off-road diesel construction equipment reduces DPM emissions by at least 80 percent compared to the default CalEEMod fleet mix, which is composed of Tier 0 to Tier 2 equipment with higher DPM emissions). Requiring that construction equipment meet Tier 4 Final emissions standards, as well as ensuring compliance with the best management practices outlined in SCAQMD Rule 403 (Fugitive Dust), would minimize exposure of sensitive receptors to substantial pollutant concentrations. Implementation of MM AQ-2: Health Risk Assessment and Health Risk Reduction would require a site-specific construction Health Risk Assessment for construction activities lasting longer than two months in proximity to an individual sensitive receptor. If the conceptual design project is determined to have the potential to exceed the SCAQMD project-level thresholds, additional on-site mitigation shall be analyzed by the implementing agency to reduce risks to the greatest extent practicable. Because it cannot be concluded what the result of the project-level evaluation will be without speculation, it is possible that mitigation for future project health risks may be inadequate to reduce construction impacts below the SCAQMD's threshold level. Impacts are therefore considered potentially significant and unavoidable.</p>
<p>San Dimas Wash at Arrow High School <i>City of Glendora</i></p>	<p>Significant and Unavoidable. Land uses that are generally considered more sensitive to air pollution than others are as follows: hospitals, schools, residences, playgrounds, child-care centers, athletic facilities, and retirement/convalescent homes. The San Dimas Wash at Arrow High School conceptual design incorporates components within 1,000 feet of single-family and multi-family residential developments, Arrow High School, Willow Elementary School, sports parks, and playgrounds. Emissions of criteria pollutants during construction for the various types of Plan components are provided in Tables 3.3-9, 3.3-11, 3.3-13, and 3.3-15. Because the San Dimas Wash at Arrow High School conceptual design incorporates multiple components, there is the potential that an individual project would exceed the SCAQMD LSTs during construction. The conceptual design project would be required to comply with regulatory compliance controls during construction including compliance with SCAQMD Rules 402, 403, 404, 407, 409, 431.1, 474, 1108, 1110.2, and 1113 as summarized in Section 3.3.2.3.1, which would reduce emissions during construction. In the event that construction activities would result in emissions that exceed regional or localized standards, implementation of MM AQ-1: Emission Reduction Measures would further reduce emissions by implementing Tier 4 final construction equipment. If the use of Tier 4 Final construction equipment is demonstrated to not sufficiently reduce emissions to below the SCAQMD LSTs, MM AQ-1: Emission Reduction Measures would further require that the project reduce its daily construction intensity (e.g., reducing the amount of equipment used daily, reducing the amount of soil graded/excavated daily) to a level where the project's construction emissions would no longer exceed SCAQMD's regional thresholds and/or LSTs. Accordingly, criteria pollutant emissions during construction of the conceptual design project would not expose receptors to substantial pollutant concentrations or risk.</p>

Conceptual Design Project	3(c). Expose sensitive receptors to substantial pollutant concentrations?
	<p>With respect to emissions of DPM during construction, due to the proximity of sensitive receptors to conceptual design project components, it is conservatively assumed that the San Dimas Wash at Arrow High School conceptual design may result in DPM emissions during construction that could exceed SCAQMD's thresholds for cancer or non-cancer health risks. Therefore, impacts would be potentially significant. Impacts are therefore considered potentially significant and unavoidable.</p>

3.3.3.4.4 3(d). Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?

Construction

Less than Significant. Construction of conceptual design projects would involve the use of mobile sources of air quality emissions including offroad construction equipment and on-road mobile sources resulting from worker trips, hauling, and material delivery, all of which may emit objectionable odors due to the combustion of diesel fuel, as well as during asphalt paving. The components proposed for all 10 conceptual design projects are within the maximum extent limits as described for the Plan in Section 2. Construction activities associated with the 10 conceptual design projects would be similar in intensity and duration as described previously in Section 3.3.3.3.4, Impacts 3(d) for the Plan. Therefore, none of the 10 conceptual design examples would result in any impacts relating to emissions (such as those leading to odors) during construction described in Section 3.3.3.3.4, Impacts 3(d) for the Plan. No additional mitigation measures would be required.

Operations

Less than Significant. Since all of the conceptual designs are within the maximum extent limits as described for the Plan in Section 2, operation would have less than significant impacts with respect to other emissions (such as those leading to odors) adversely affecting a substantial number of people as described previously in Section 3.3.3.3.4, Impacts 3(d) for the Plan.

3.4 Biological Resources

This section discusses the existing biological resources present in the Plan Area, the laws and policies applicable to this resource, and evaluates potential impacts on biological resources that would result from the Plan as well as feasible mitigation measures to reduce significant impacts. Table 3.4-1 below provides a summary of potential impacts and mitigation measures pursuant to the CEQA Checklist.

Table 3.4-1. Summary of Potential Impacts of the SGV Plan on Biological Resources.

Greenway Paths + Safe Crossings	No impact	No impact	
Greenway Paths + Stormwater Management	No impact	No impact	

3.4.1 Environmental Setting

This section provides the environmental setting regarding biological resources and describes the potential for sensitive biological resources to be present within the Plan Area.

3.4.1.1 Habitat Types

Common plant communities in the Greater Los Angeles County area include coastal strands and bluffs, lagoons, coastal sage scrub, chaparral, foothill woodlands, and coniferous forests in the mountains. Many native plant communities within the region have been displaced due to grazing, agriculture, and urban development. As such, most of the native plant communities that remain in the County contain sensitive, rare, or endangered plants and animal species. Chaparral is the dominant native plant community in the Greater Los Angeles County area (LA County Department of Public Works 2013).

The Plan Area includes portions of the San Gabriel River and Los Angeles River watersheds. The San Gabriel River watershed consists of extensive areas of undisturbed riparian and woodland habitats in its upper reaches. San Gabriel River is unlined in the upper watershed and conveys flows to recharge basins and downstream sections of river. The middle of the watershed has large spreading grounds which are used for groundwater recharge. The lower part of the San Gabriel River consists of a concrete-lined channel in a heavily urbanized area. This watershed is characterized by high-density development in the lower areas and lower density development and open space in the upper areas of the San Gabriel Mountain foothills. Riparian habitat and coastal sage scrub are present in the Whittier Narrows area. The watershed is connected to the Los Angeles River through the Whittier Narrows Reservoir (Los Angeles Regional Water Quality Control Board 2000). Historically, the San Gabriel River system supported extensive and diverse plants and vegetation communities. However, these have been severely modified due to urban development, the various flood management infrastructure present (including many concrete-lined channels), and agriculture (Stein et al. 2007). The areas of native habitat that remain are isolated and generally degraded by the presence of invasive plant species (Stein et al. 2007).

The Plan Area includes potential project locations along segments of the following tributaries: Alhambra Wash, Arcadia Wash, Big Dalton Wash, Eaton Wash, Little Dalton Wash, Puente Creek, Rubio Wash, San Dimas Wash/Puddingstone Channel/Live Oak Wash, San Jose Creek, Santa Anita Wash, Sawpit Wash, Thompson Creek, and Walnut Creek.

3.4.1.1.1 Sensitive Natural Communities

Sensitive habitats in the SGV range from sparse riparian areas and scrub within drainages in the urbanized lower watersheds to pristine mountain forests and riparian corridors the San Gabriel Mountains.

The California Natural Diversity Database (CNDDDB) was used to identify the types of natural communities of management concern that are mapped within the Plan Area. The CNDDDB is an inventory of the status and locations of rare plants and animals and sensitive communities in California, which is managed by the California Department of Fish and Wildlife (CDFW). The following natural communities were identified within the Plan Area:

- Riversidian Alluvial Fan Sage Scrub (S1.1)
- Walnut Forest (S1.1)
- California Walnut Woodland (S2.1)
- Canyon Live Oak Ravine Forest (S3.3)
- Southern Coast Live Oak Riparian Forest (S4)
- Southern Sycamore Alder Riparian Woodland (S4)

Natural communities with a rank of S1-S3 are considered by CDFW to be sensitive (CDFW 2024a). Sensitive natural communities are communities that are of limited distribution statewide or within a county or region and are often vulnerable to environmental effects of projects. These communities may or may not contain special status plants or their habitat.

3.4.1.1.2 Significant Ecological Areas

LA County has designated Significant Ecological Areas (SEAs) for land that contains important biological resources. The following five SEAs are located within the Plan Area: Altadena Foothills and Arroyos, San Gabriel Canyon, East San Gabriel Valley, San Dimas Canyon/San Antonio Wash, and Puente Hills (Figure 3.4-1) (LA County Department of Regional Planning 2022, Los Angeles County 2022). The regulatory guidelines set forth by LA County for development in SEAs are provided below in Section 3.4.2, Regulatory Setting.

Altadena Foothills and Arroyos SEA: A small portion of the Plan Area (northwest area) overlaps the southern extent of this SEA. This SEA contains coastal sage scrub and other kinds of chaparral, riparian oaks, and oak woodlands which occurs both in the lower mountains and the valleys. This SEA serves as a wildlife corridor for species from low basin and foothill areas up to higher elevations in the San Gabriel Mountains.

San Gabriel Canyon SEA: The southern portion of this SEA overlaps the Plan Area in the San Gabriel foothills and at the Santa Fe Dam Recreation Area. This SEA includes several plant communities that have restricted distribution in the Southern California region, including walnut woodland, oak riparian woodland, southern willow scrub, coastal sage scrub, and alluvial fan scrub. In the area of overlap with the Plan Area, scrub habitat is present. This SEA provides habitat for a variety of migratory birds and resident species, as well as wildlife movement.

East San Gabriel Valley SEA: The Plan Area overlaps several parts of this SEA, including the Puddingstone Lake area and habitats in the vicinity. This SEA contains patches of coastal sage scrub over hillside habitat, which support and are designated critical habitat for the federally threatened coastal California gnatcatcher (*Poliophtila californica californica*). This SEA includes walnut woodlands, oak riparian woodland (specifically within the Walnut Creek drainage), isolated stands of willow woodland along many of the drainages, and freshwater marsh and open water habitat associated with Puddingstone Reservoir. Suitable scrub habitat for the multi-stemmed dudleya (*Dudleya multicaulis*) is present in Bonelli Park within this SEA.

San Dimas Canyon/San Antonio Wash SEA: The Plan Area overlaps this SEA south of the Marshall Canyon Regional Park and near the Claremont Hills Wilderness Park on the northeastern boundary of the Plan Area. This SEA contains the following habitat types: walnut woodland, oak riparian woodland, southern willow scrub, coastal sage scrub, and alluvial fan scrub which support various migratory birds and resident species.

Puente Hills SEA: The Plan Area overlaps several portions of this SEA in the vicinity of the Whittier Narrows Recreation Area. Natural open space within the Puente Hills and Chino Hills functions as a wildlife linkage and resident habitat area for regional wildlife populations. This area provides habitat for migrating and resident birds that use the lowland terrestrial habitats and areas of grassland and oak and walnut woodlands.

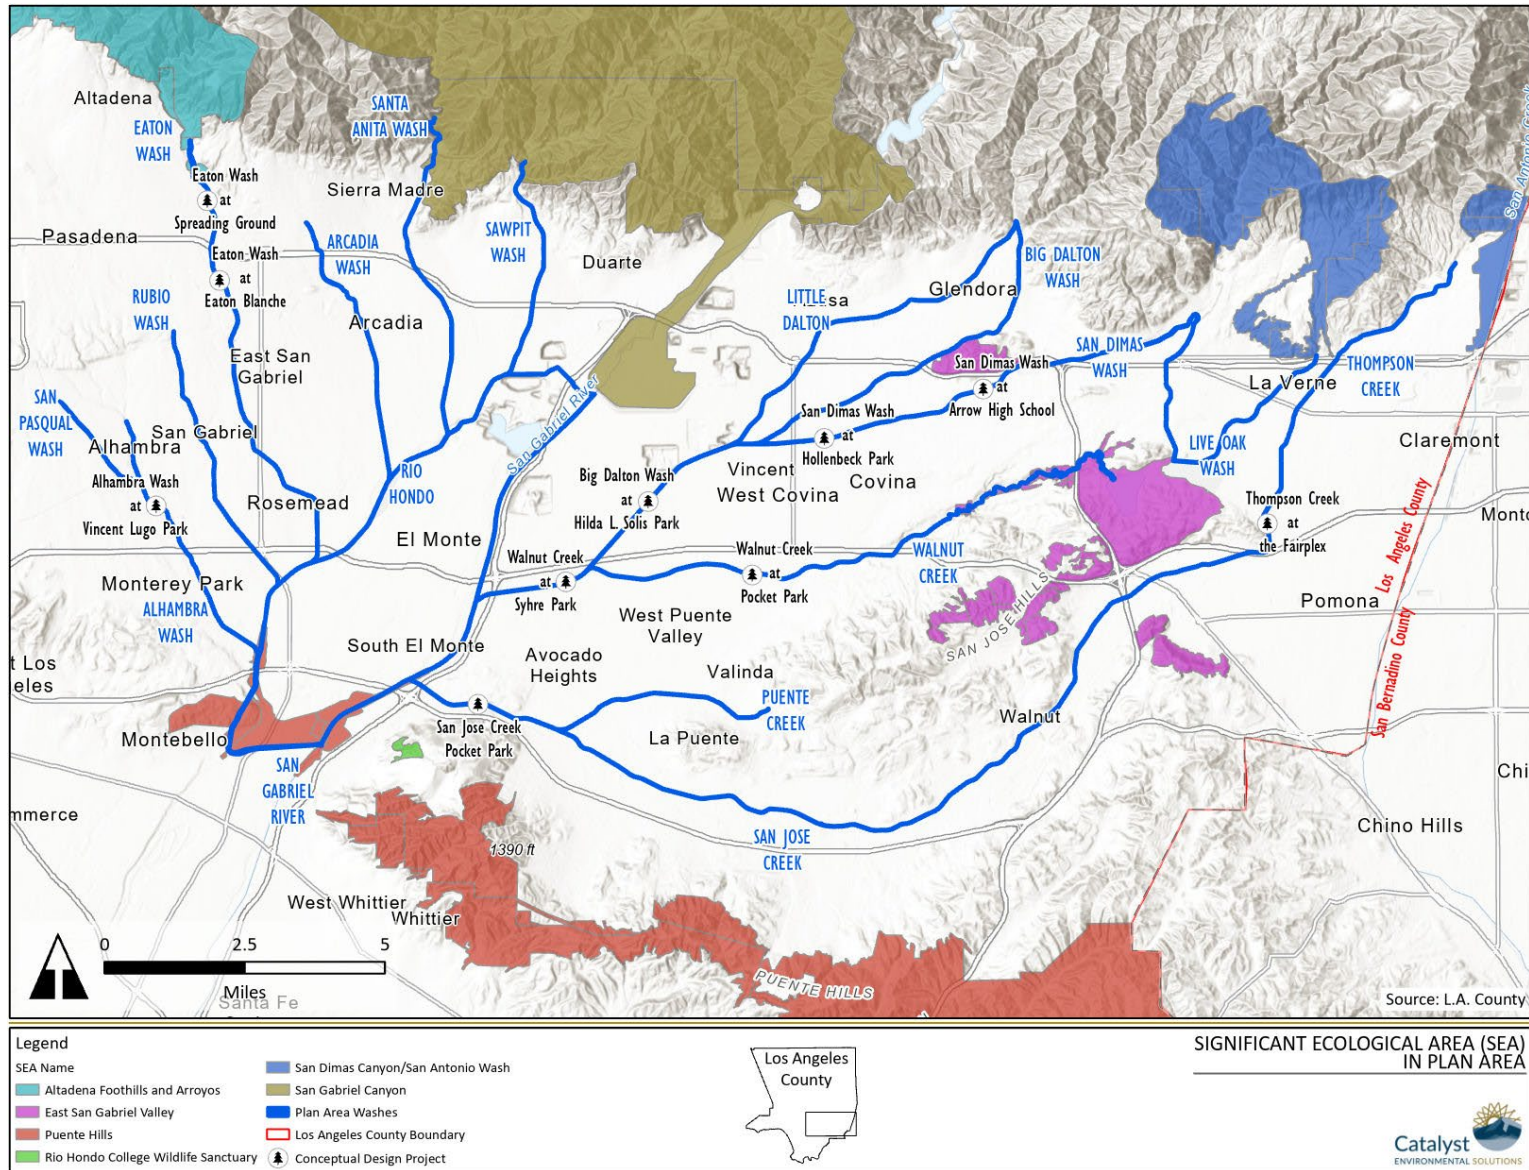

Figure 3.4-1. Significant Ecological Areas in the Plan Area

Rio Hondo College Wildlife Sanctuary: This small SEA overlaps the Plan Area and is located on the western edge of the Puente Hills near the San Gabriel River, within the City of Whittier. The SEA includes the following habitat types which support wildlife species: riparian woodland, chaparral, oak woodland, and coastal sage scrub. In addition, this area is designated critical habitat for the coastal California gnatcatcher. The wildlife sanctuary is used by the college to conduct scientific studies on native wildlife and plants (LA County Department of Regional Planning 2022).

3.4.1.2 Special Status Species

Special status species are plants and animals that meet the definition of rare, threatened, or endangered pursuant to State CEQA Guidelines Section 15380. Special status species discussed in this document include the following:

- Species listed or proposed for listing as threatened or endangered under the federal Endangered Species Act (ESA).
- Species listed as Sensitive or of Interest by U.S. Forest Service (USFS).
- Species listed or proposed for listing as threatened or endangered under the California Endangered Species Act (CESA).
- Species that are recognized as candidates for future listings by agencies such as United States Fish and Wildlife Service (USFWS), National Oceanic and Atmospheric Administration's (NOAA) National Marine Fisheries Service (NMFS), and CDFW.
- Species defined by CDFW as Species of Special Concern.
- Species classified as Fully Protected by CDFW.
- Plant species, subspecies, and varieties defined as rare or threatened by the California Native Plant Protection Act (California Fish and Game Code Section 1900 et seq.).
- Plant species listed by the California Native Plant Society (CNPS) as List 1 and 2 and some List 3 plants under CEQA (State CEQA Guidelines Section 15380).

CNDDDB (CDFW 2024) was the primary tool used to identify a list of potential special status species (including all categories listed above) that could occur in the Plan Area. A CNDDDB query was conducted of the U.S. Geological Survey topographic quadrangles that overlap the Plan Area, including the following: Pasadena, Mt. Wilson, Los Angeles, Whittier, Baldwin Park, Azusa, La Habra, Yorba Linda, Glendora, San Dimas, Ontario, and Mt. Baldy. Figures 3.4-2 and 3.4-3 respectively provide the CNDDDB plant and wildlife species occurrences that overlap with Plan Area washes. To comply with CNDDDB data use guidelines, species cannot be identified in maps within public documents so common names are not specified on these maps. A special status species list was generated from a CNDDDB records search of the quadrangles that overlap the Plan Area, and the species were evaluated for their potential to occur within the vicinity of the Plan Area washes, including the District ROW and adjacent parcels (approximately a 0.5-mile buffer). In addition, a species list was obtained through the USFWS' Information for Planning and Conservation (IPaC) website of Threatened and Endangered Species occurring within the Plan Area (USFWS 2024a). Based on the results of the CNDDDB search and IPaC lists, the following likelihood of occurrence for each species was established based on species life history and habitat requirements, proximity of records to Plan Area washes, suitability of habitat within the Plan Area, and the age of existing records.

- High: Recent occurrences (within 15 years) indicate that the species has been known to occur within the vicinity of the Plan Area, and moderate to high quality suitable habitat occurs in the vicinity of the Plan Area.
- Moderate: Recent occurrences (within 15 years) indicate that the species has been known to occur within the vicinity of the Plan Area, but low quality suitable habitat occurs in the vicinity of the Plan Area; or no recent occurrences within the Plan Area, but the Plan Area occurs within the historic range of the species, and moderate to high quality habitat occurs in the vicinity of the Plan Area.
- Low: Records indicate that the species have not been known to occupy areas within the vicinity of the Plan Area, and low-quality habitat for the species exists in the Plan Area.
- Unlikely: The species is restricted to habitats not occurring within the Plan Area or is considered possibly extirpated from the vicinity. If the only CNDDDB occurrences for a species are identified as extirpated by CDFW, these are not included in the list.

Based on the background literature review, 28 special status species were identified as having more than a low potential to occur within the Plan Area in the vicinity of Plan Area washes, including 10 plant species and 18 wildlife species. Special status plants and wildlife are shown in Table 3.4-2 and 3.4-3, respectively.

Table 3.4-2. Special status plant species with the potential to occur in the Plan Area

Common Name	Scientific Name	Listing Status	Likelihood to Occur
Rock Creek broomrape	<i>Aphyllon validum ssp. validum</i>	1B.2, USFS-S	Low
San Gabriel manzanita	<i>Arctostaphylos glandulosa ssp. gabrielensis</i>	1B.2, USFS-S	Low
Braunton's milk-vetch	<i>Astragalus brauntonii</i>	FE, 1B.1	Moderate
Nevin's barberry	<i>Berberis nevinii</i>	FE, SE, 1B.1	Moderate
thread-leaved brodiaea	<i>Brodiaea filifolia</i>	FT, SE, 1B.1	Moderate
slender mariposa-lily	<i>Calochortus clavatus var. gracilis</i>	1B.2, USFS-S	Moderate
intermediate mariposa-lily	<i>Calochortus weedii var. intermedius</i>	1B.2, USFS-S	Moderate
lucky morning-glory	<i>Calystegia felix</i>	1B.1	Low
Mt. Gleason paintbrush	<i>Castilleja gleasoni</i>	1B.2	Unlikely
southern tarplant	<i>Centromadia parryi ssp. australis</i>	1B.1	Moderate
Parry's spineflower	<i>Chorizanthe parryi var. parryi</i>	1B.1, USFS-S	Moderate
Peruvian dodder	<i>Cuscuta obtusiflora var. glandulosa</i>	2B.2	Low
slender-horned spineflower	<i>Dodecahema leptoceras</i>	FE, SE, 1B.1	Low
San Gabriel Mountains dudleya	<i>Dudleya densiflora</i>	1B.1, USFS-S	Low
many-stemmed dudleya	<i>Dudleya multicaulis</i>	1B.2, USFS-S	Moderate
hot springs fimbristylis	<i>Fimbristylis thermalis</i>	2B.2	Unlikely
San Gabriel bedstraw	<i>Galium grande</i>	1B.2, USFS-S	Unlikely

Common Name	Scientific Name	Listing Status	Likelihood to Occur
mesa horkelia	<i>Horkelia cuneata</i> var. <i>puberula</i>	1B.1, USFS-S	Moderate
California satintail	<i>Imperata brevifolia</i>	2B.1, USFS-S	Low
Coulter's goldfields	<i>Lasthenia glabrata</i> ssp. <i>coulteri</i>	1B.1	Low
Lemon lily	<i>Lilium parryi</i>	1B.2, USFS-S	Unlikely
Hall's monardella	<i>Monardella macrantha</i> ssp. <i>hallii</i>	1B.3	Unlikely
woolly mountain-parsley	<i>Oreonana vestita</i>	1B.3, USFS-S	Unlikely
Brand's star phacelia	<i>Phacelia stellaris</i>	1B.1	Unlikely
white rabbit-tobacco	<i>Pseudognaphalium leucocephalum</i>	2B.2	Low
Sanford's arrowhead	<i>Sagittaria sanfordii</i>	1B.2	High
chaparral ragwort	<i>Senecio aphanactis</i>	2B.2	Low
salt spring checkerbloom	<i>Sidalcea neomexicana</i>	2B.2, USFS-S	Unlikely
Greata's aster	<i>Symphyotrichum greatae</i>	1B.3	Low
rigid fringe-pod	<i>Thysanocarpus rigidus</i>	1B.2, USFS-S	Unlikely
Sonoran maiden fern	<i>Thelypteris puberula</i> var. <i>sonorensis</i>	2B.2, USFS-S	Low

Notes: Federally Endangered; FT: Federally Threatened; FC: Federal Candidate; SE: State Endangered; USFS-S: US Forest Service Sensitive Species

CRPR:1B: Plants rare, threatened, or endangered in California and elsewhere; 2B: Plants rare, threatened, or endangered in California but more common elsewhere; 3: Plants about which more information is needed; 4: Watch list, plants of limited distribution. 0.1: Seriously threatened in California (over 80 percent of occurrences threatened/high degree and immediacy of threat); 0.2: Moderately threatened in California (20-80 percent occurrences threatened/moderate degree and immediacy of threat); 0.3: Not very threatened in California (less than 20 percent of occurrences threatened/low degree and immediacy of threat or no current threats known)

Table 3.4-3. Special status wildlife species with the potential to occur in the Plan Area

Common Name	Scientific Name	Listing Status	Likelihood to Occur
Invertebrates			
Crotch bumble bee	<i>Bombus crotchii</i>	SCE	Moderate
San Gabriel Mountains elfin butterfly	<i>Callophrys mossii hidakupa</i>	USFS-S	Unlikely
Monarch butterfly	<i>Danaus plexippus</i>	FC	High
Fish			
Santa Ana sucker	<i>Catostomus santaanae</i>	FT	Low
arroyo chub	<i>Gila orcuttii</i>	SSC, USFS-S	Moderate
Santa Ana speckled dace	<i>Rhinichthys osculus</i> ssp.	SSC, USFS-S	Low
Amphibians			
Arroyo toad	<i>Anaxyrus californicus</i>	FE, SSC	Low

Common Name	Scientific Name	Listing Status	Likelihood to Occur
San Gabriel slender salamander	<i>Batrachoseps gabrieli</i>	USFS-S	Unlikely
Large-blotched salamander	<i>Ensatina eschscholtzii klauberi</i>	USFS-S	Low
southern mountain yellow-legged frog	<i>Rana muscosa</i>	FE, SE, USFS-S	Unlikely
western spadefoot	<i>Spea hammondi</i>	SSC	Low
Coast range newt	<i>Taricha torosa</i>	SSC	Low
Reptiles			
southwestern pond turtle	<i>Actinemys pallida</i>	FPT, SSC, USFS-S	Moderate
Southern California legless lizard	<i>Anniella stebbinsi</i>	SSC, USFS-S	High
California glossy snake	<i>Arizona elegans occidentalis</i>	SSC	Low
coastal whiptail	<i>Aspidoscelis tigris stejnegeri</i>	SSC	Moderate
red-diamond rattlesnake	<i>Crotalus ruber</i>	SSC, USFS-S	Moderate
coast horned lizard	<i>Phrynosoma blainvillii</i>	SSC	Low
Coast patch-nosed snake	<i>Salvadora hexalepis virgulata</i>	SSC	Low
two-striped gartersnake	<i>Thamnophis hammondi</i>	SSC, USFS-S	Moderate
Birds			
tricolored blackbird	<i>Agelaius tricolor</i>	ST, SSC	Low
grasshopper sparrow	<i>Ammodramus savannarum</i>	SSC	Low
burrowing owl	<i>Athene cunicularia</i>	SSC	Moderate
Swainson's hawk	<i>Buteo swainsoni</i>	ST	Low
coastal cactus wren	<i>Campylorhynchus brunneicapillus sandiegensis</i>	SSC, USFS-S	Moderate
western yellow-billed cuckoo	<i>Coccyzus americanus occidentalis</i>	FT, SE, USFS-S	Unlikely
black swift	<i>Cypseloides niger</i>	SSC	Unlikely
southwestern willow flycatcher	<i>Empidonax traillii extimus</i>	FE, SE	Moderate
American peregrine falcon	<i>Falco peregrinus anatum</i>	FP	Moderate
California condor	<i>Gymnogyps californianus</i>	FE, SE, FP	Low
yellow-breasted chat	<i>Icteria virens</i>	SSC	Moderate
California black rail	<i>Laterallus jamaicensis coturniculus</i>	ST, FP	Unlikely
coastal California gnatcatcher	<i>Poliophtila californica californica</i>	FT, SSC	High
yellow warbler	<i>Setophaga petechia</i>	SSC	Moderate
California spotted owl	<i>Strix occidentalis occidentalis</i>	FPE, SSC, USFS-S	Low
least Bell's vireo	<i>Vireo bellii pusillus</i>	FE, SE	Moderate

Common Name	Scientific Name	Listing Status	Likelihood to Occur
Mammals			
pallid bat	<i>Antrozous pallidus</i>	SSC, USFS-S	Low
northwestern San Diego pocket mouse	<i>Chaetodipus fallax fallax</i>	SSC	Moderate
Townsend's big-eared bat	<i>Corynorhinus townsendii</i>	SSC, USFS-S	Moderate
San Bernardino kangaroo rat	<i>Dipodomys merriami parvus</i>	FE, SCE, SSC	Low
western mastiff bat	<i>Eumops perotis californicus</i>	SSC	Low
western red bat	<i>Lasiurus blossevillii</i>	SSC	Moderate
western yellow bat	<i>Lasiurus xanthinus</i>	SSC	Low
San Diego desert woodrat	<i>Neotoma lepida intermedia</i>	SSC	Low
pocketed free-tailed bat	<i>Nyctinomops femorosaccus</i>	SSC	Unlikely
big free-tailed bat	<i>Nyctinomops macrotis</i>	SSC	Unlikely
southern grasshopper mouse	<i>Onychomys torridus ramona</i>	SSC	Unlikely
desert bighorn sheep	<i>Ovis canadensis nelsoni</i>	FP, USFS-S	Unlikely
American badger	<i>Taxidea taxus</i>	SSC	Low

Notes: FE: Federally Endangered; FT: Federally Threatened; FPE: Federally Proposed Endangered; FPT: Federally Proposed Threatened; FC: Federal Candidate; SE: State Endangered; ST: State Threatened; SCE: State Candidate Endangered; FP: California Fully Protected; SSC: California Species of Special Concern; USFS-S: U.S. Forest Service Sensitive Species

3.4.1.3 Critical Habitat

Critical habitat is a term that is defined and used in the federal ESA. Critical habitat includes specific geographic areas that contain features essential to the conservation of an endangered or threatened species and that may require special management or protection. Critical habitat may also include areas that are not currently occupied by an endangered or threatened species, but that will be needed for its recovery.

The USFWS has designated critical habitat for several listed species within Los Angeles County under the ESA. The following species have designated critical habitat within the Plan Area: coastal California gnatcatcher (*Poliophtila californica californica*), southwestern willow flycatcher (*Empidonax traillii extimus*), Braunton's milk-vetch (*Astragalus brauntonii*), and thread-leaved brodiaea (*Brodiaea filifolia*) (USFWS 2022) (Figure 3.4-4).

3.4.1.4 Wetlands

Historically, the San Gabriel River supported extensive and complex seasonal floodplains and wetlands. Urban development of the San Gabriel River watershed, especially channelization and other flood control systems, has resulted in extensive wetland and seasonal floodplain losses (Stein et al. 2007).

The USFWS National Wetland Inventory Wetlands Mapper (USFWS 2024b) and associated data was used to map existing wetlands and riparian areas within the Plan Area (Figure 3.4-5 and 3.4-6).

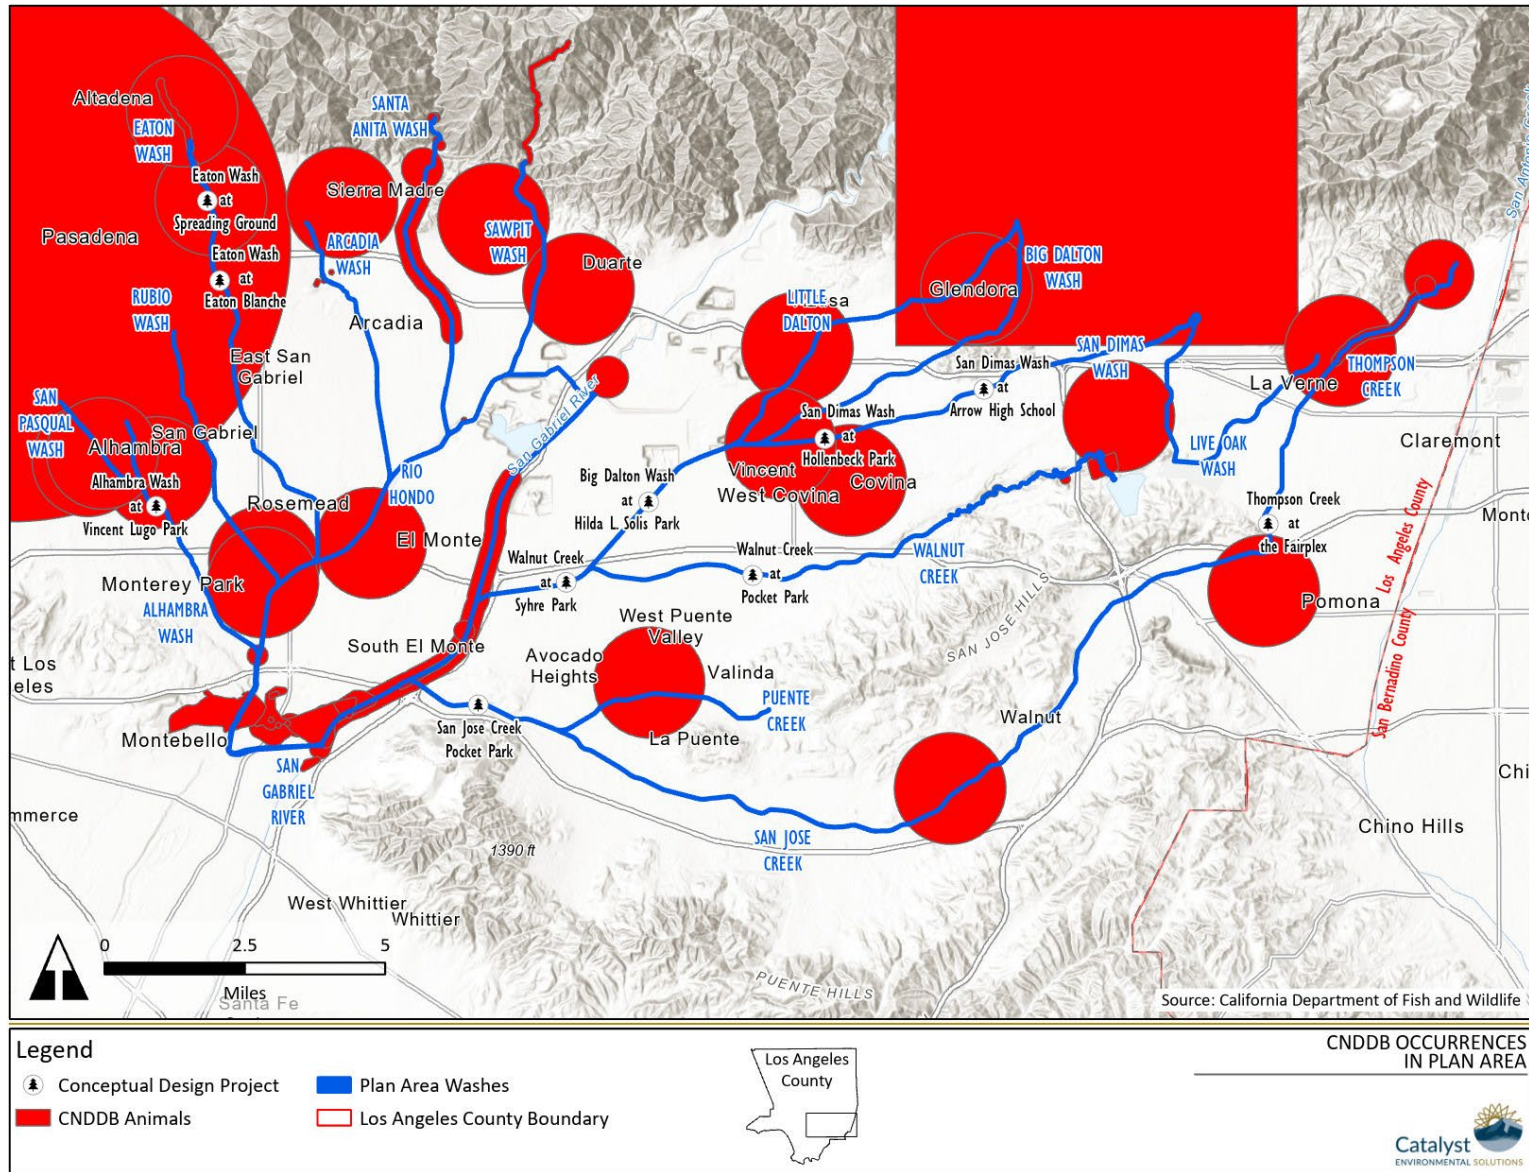

Figure 3.4-3. Special Status Wildlife Species Occurrences that Overlap Plan Area Washes

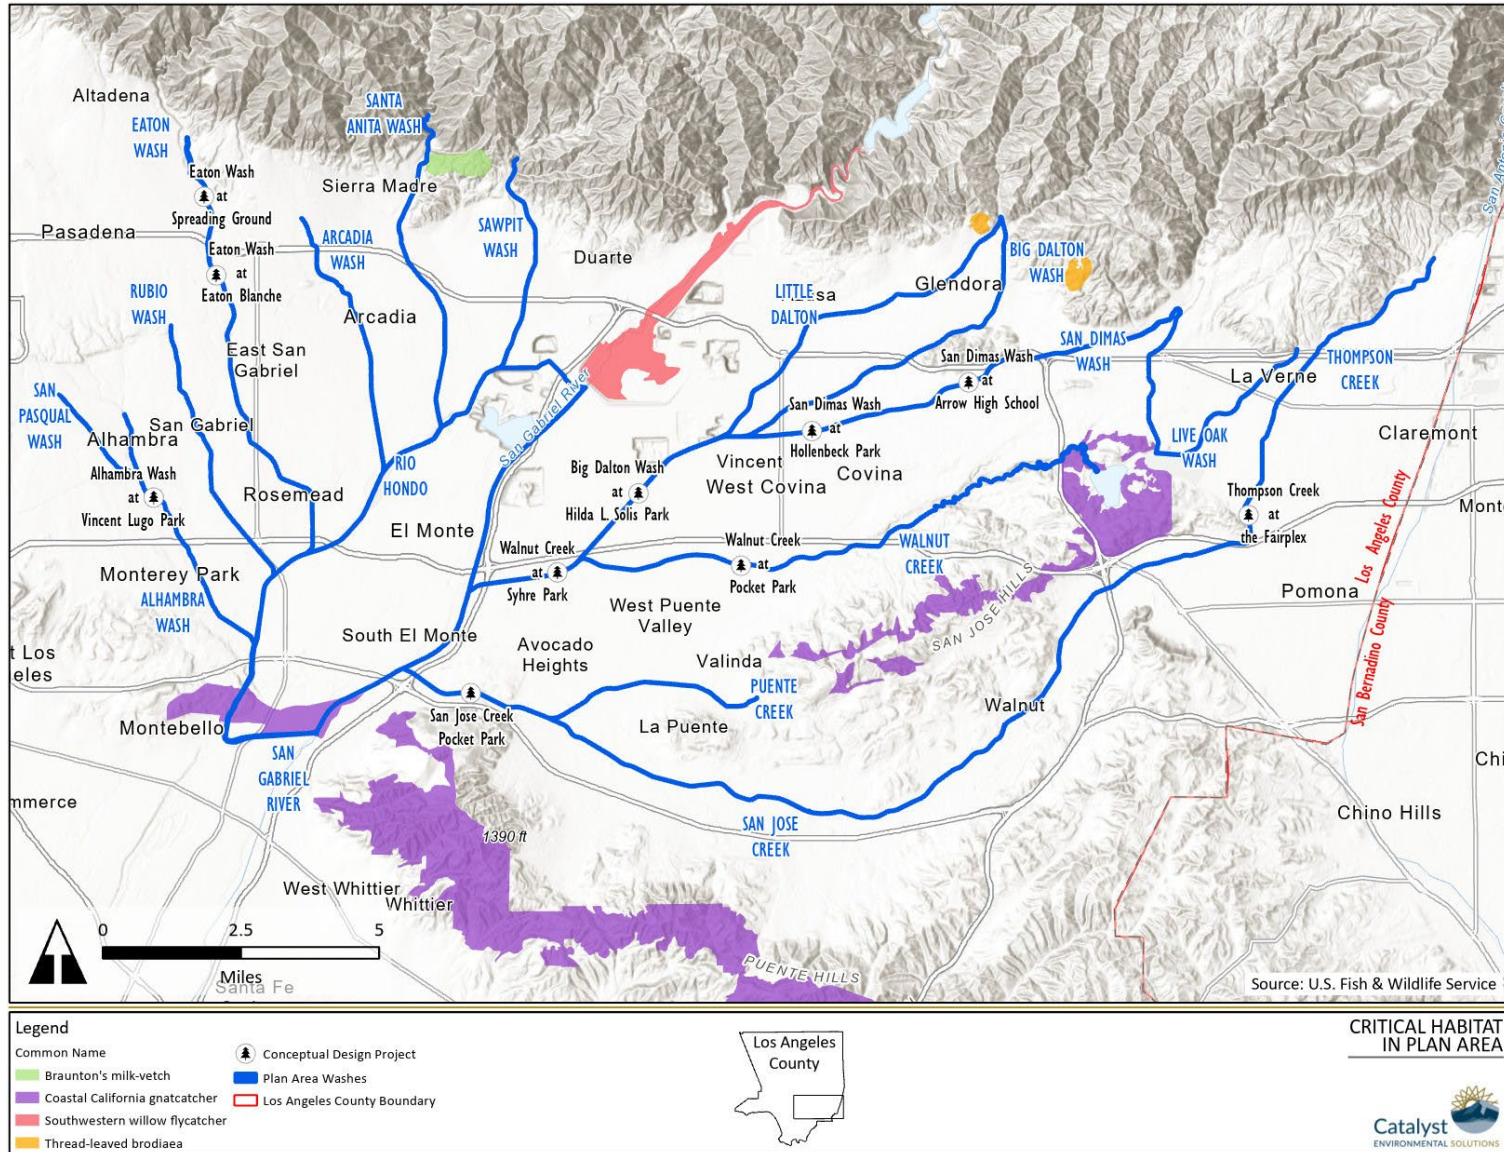

Figure 3.4-4. Critical Habitat in the Plan Area

Many wetlands present throughout the urban centers include washes which are mapped as riverine habitat and consist of channels that were excavated, many of which are concrete-lined. These washes generally are not associated with additional adjacent freshwater wetland habitat, besides occasional excavated freshwater ponds and lake habitat. Most washes within the Plan Area are confined and pass through highly urbanized areas. The upper reaches of rivers, washes, and segments which are not extremely confined by urban development are associated with more substantial adjacent freshwater wetlands. Freshwater pond, freshwater forested/shrub, and freshwater emergent wetland habitat is mapped in the vicinity of some washes within the Plan Area, and primarily occurs along less confined stretches of rivers/washes. These wetland types consist of seasonally or temporary flooded wetlands that have been created or modified by man-made barriers or dams which have obstructed the flow of water. Some of these areas within the Plan Area include the Santa Fe Dam Open Space area and upstream river segments and the Whittier Narrows Natural area.

The Plan Area includes various wetlands mapped as lake habitat, excavated and non-excavated, which have been created or modified by man-made barriers or dams which have obstructed the flow of water. Some examples of these include the Whittier Narrows Recreation Area and Puddingstone Reservoir.

In addition to wetlands, riparian habitat has been mapped where it occurs throughout the Plan Area (Figure 3.4-6). Riparian habitat is generally found adjacent to wetlands and especially along the drainages in the foothills of the San Gabriel Mountains near the northern boundary of the Plan Area.

3.4.2 Regulatory Setting

Federal, state, and local regulations specific to biological resources that may apply to future projects implemented under the Plan are described below.

3.4.2.1 Federal

3.4.2.1.1 Federal Endangered Species Act

The federal ESA establishes the legal requirements for the protection of plant and wildlife species federally-listed as endangered or threatened and their designated critical habitats. The federal ESA defines “endangered” as any plant or animal species that is in danger of extinction throughout all or a significant portion of its range and “threatened” as a species which is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. Under the ESA, the USFWS is responsible for protection of federally-listed terrestrial species and non-anadromous fish species, and NMFS is responsible for federally-listed marine and anadromous fish species. Section 7 of the ESA requires federal agencies to consult with the appropriate regulatory agency, either USFWS or NMFS, to ensure that their actions do not jeopardize listed species or critical habitat. Section 10 of the ESA requires similar consultation for non-federal applicants under a Habitat Conservation Plan. Take of listed threatened or endangered species is prohibited under the federal ESA, except as provided in Sections 7 and 10. Take is defined as to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct. The USFWS can authorize take when it is incidental to an otherwise lawful act (USFWS n.d.).

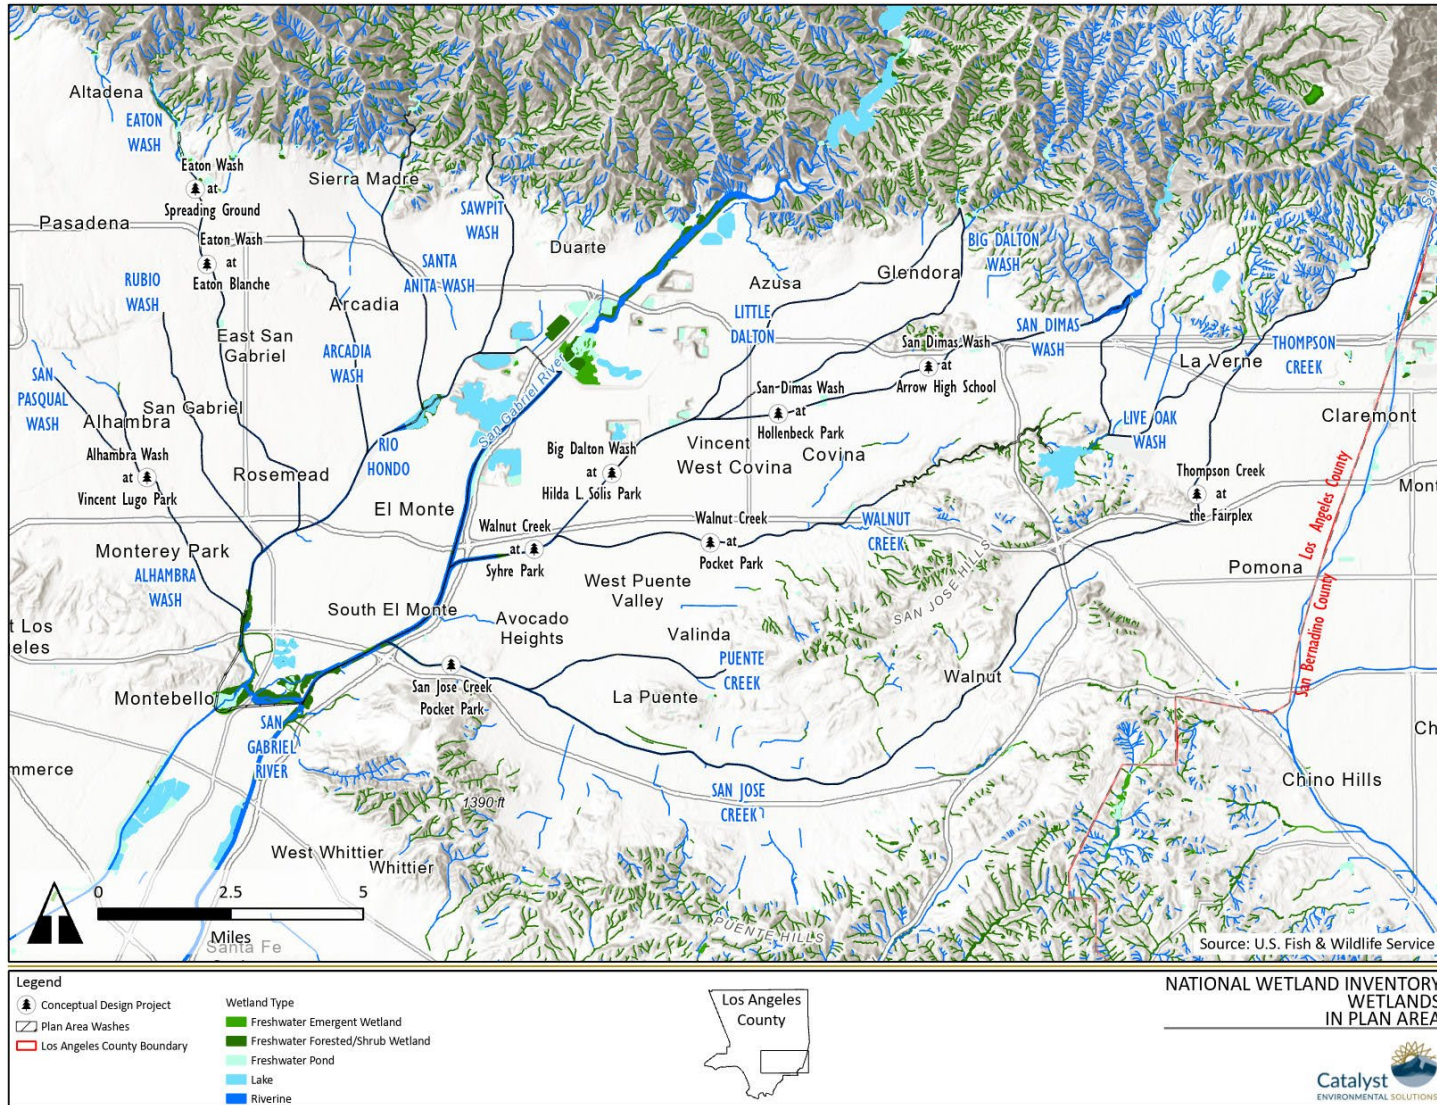

Figure 3.4-5. National Wetland Inventory Wetland Areas in the Plan Area

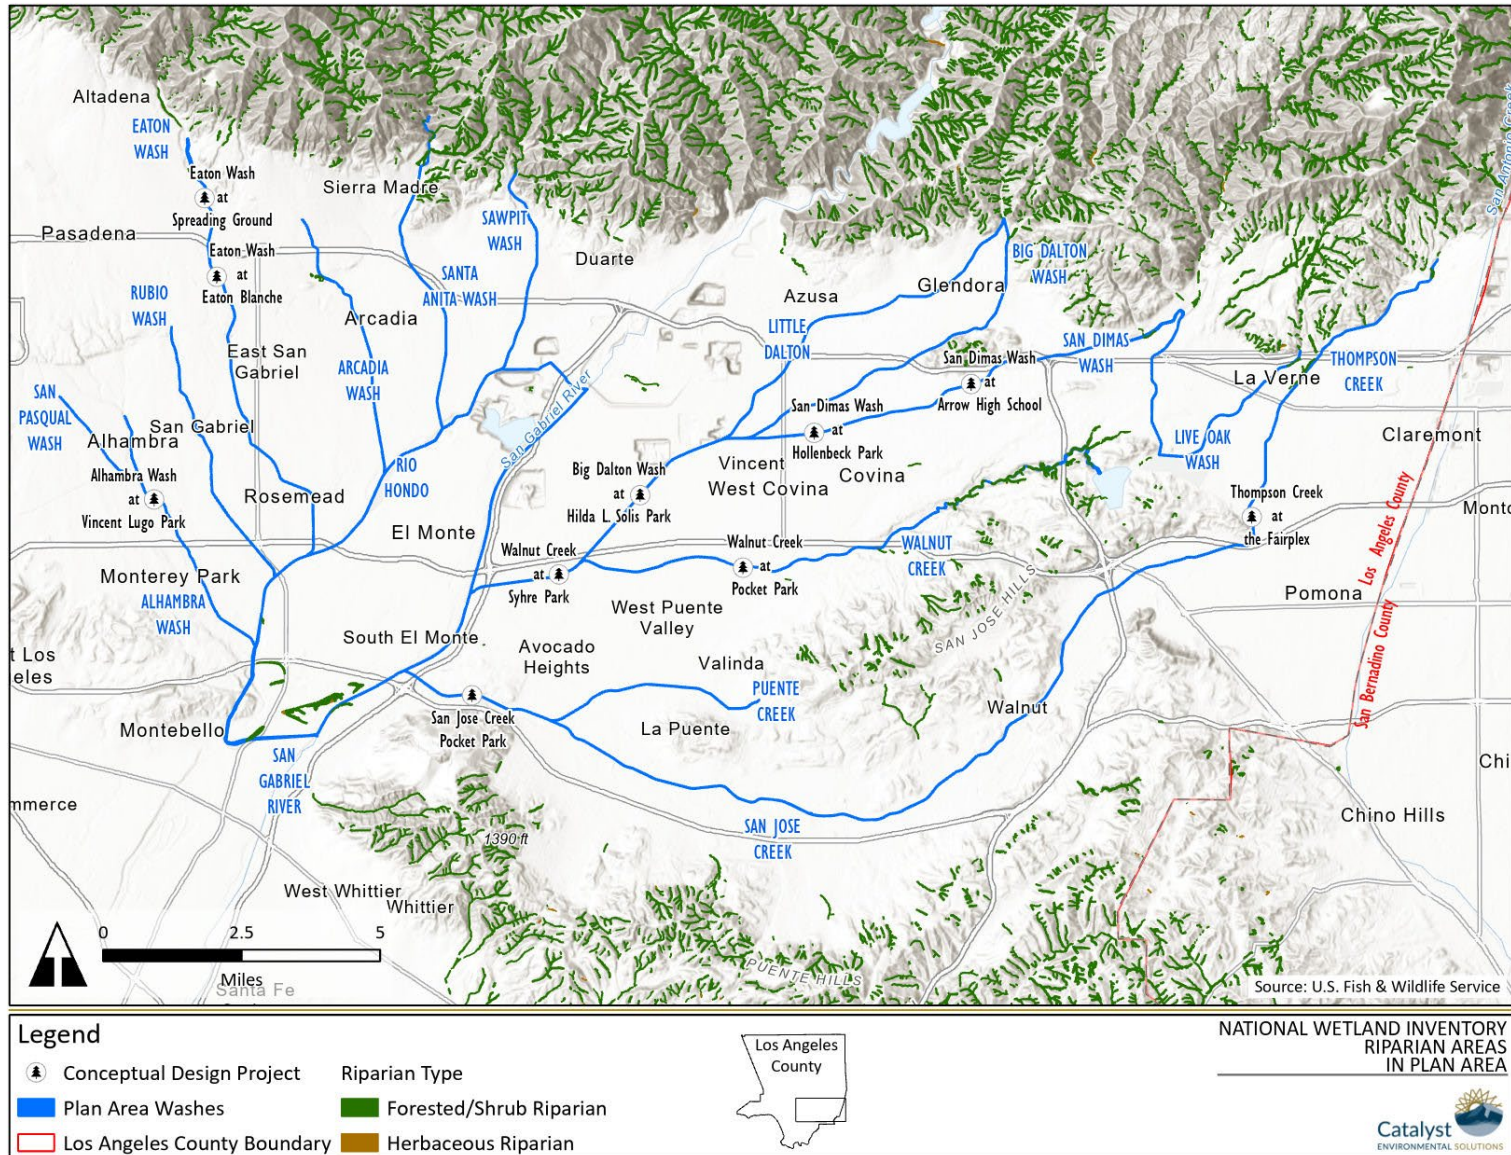

Figure 3.4-6. National Wetland Inventory Riparian Areas in the Plan Area

3.4.2.1.2 Migratory Bird Treaty Act (16 USC Sections 703–712)

Congress passed the Migratory Bird Treaty Act (MBTA) in 1918 to prohibit the kill or transport of native migratory birds, or any part, nest, or egg of any such bird unless allowed by another regulation adopted in accordance with the MBTA. The MBTA prohibits the unauthorized take of protected migratory bird species, which includes most native migratory bird species in the U.S. The regulatory definition of take means to pursue, hunt, shoot, wound, kill, trap, capture, or collect, or any attempt to do so.

Unauthorized take includes destroying nests of protected species with viable eggs and/or chicks.

Migratory bird species receive federal protection under the MBTA and state protection under the State CEQA Guidelines Section 15380(d).

3.4.2.1.3 Bald and Golden Eagle Protection Act (16 USC Section 668)

The Bald and Golden Eagle Protection Act prohibits the unauthorized take of bald eagles and golden eagles. The Bald and Golden Eagle Protection Act defines take as to pursue, shoot, shoot at, poison, wound, kill, capture, trap, collect, molest, or disturb or any attempts to do so. Unauthorized take includes project activities disturbing species resulting in injury, nest abandonment, or a decrease in productivity. The USFWS can authorize incidental take of bald and golden eagles for otherwise lawful activities, and consultation with the agency is required.

3.4.2.1.4 Clean Water Act (33 USC Sections 1251–1387)

The Clean Water Act (CWA) regulates discharges of pollutants to waters of the U.S. and the water quality standards for surface waters. Section 401 of the CWA requires state certification for any project that may result in a discharge of dredged or fill material to waters of the state. The LARWQCB administers the certification program in Southern California. Section 404 of the CWA requires a federal permit, administered by the USACE, before dredged or fill material may be discharged into waters of the U.S.

3.4.2.2 State

3.4.2.2.1 California Endangered Species Act (Fish and Game Code Section 2050 et seq.)

CESA protects plant and animal species at risk of extinction. It prohibits the take of listed species designated by the California Fish and Game Commission as threatened, endangered, or candidate for listing, except as authorized by CDFW. CDFW considers an endangered species to be in serious danger of becoming extinct throughout all, or a significant portion, of its range; and a threatened species to be one that, although not presently threatened with extinction, is likely to become an endangered species in the foreseeable future in the absence of the special protection and management efforts.

Approximately 250 species are currently listed under CESA (CDFW 2024b).

3.4.2.2.2 Fully Protected Designations (Fish and Game Code Sections 3511, 4700, 5050, and 5515)

The California Fish and Game Code designates 37 fish and wildlife species as “fully protected”. No licenses or permits may be issued for the take of these species, including hunting, harvesting, and other activities. CDFW may only authorize take of designated fully protected species through a natural community conservation plan or for necessary scientific research.

3.4.2.2.3 Birds (Fish and Game Code Sections 3503 and 3513)

The California Fish and Game Code deems it unlawful to take, possess, or needlessly destroy bird nests or eggs except as otherwise provided by the code. Section 3513 provides for the adoption of the MBTA's provisions (described above).

3.4.2.2.4 Lake and Streambed Alteration (Fish and Game Code Sections 1600–1616)

The Lake and Streambed Alteration Program, Fish and Game Code Section 1602, requires authorization from CDFW prior to project activities that may divert or obstruct the natural flow of any river, stream, or lake; change the bed, channel, or bank of any river, stream, or lake; use material from any river, stream, or lake; or deposit or dispose of material into any river, stream, or lake.

3.4.2.2.5 Native Plant Protection Act

The Native Plant Protection Act was enacted in 1977 and allows the Fish and Game Commission to designate plants as rare or endangered. There are 64 species, subspecies, and varieties of plants that are protected as rare under the Native Plant Protection Act. The Native Plant Protection Act prohibits take of endangered or rare native plants but includes some exceptions for agricultural and nursery operations; emergencies; and after properly notifying CDFW for vegetation removal from canals, roads, and other sites, changes in land use, and in certain other situations.

3.4.2.3 Los Angeles County

3.4.2.3.1 Los Angeles County Significant Ecological Areas

As described in Section 3.4.1.1.2, Significant Ecological Areas, Los Angeles County has designated SEAs for land that contains irreplaceable biological resources. The Conservation and Natural Resources Element and Land Use Element of the County's General Plan outline policies related to SEAs. SEAs are included as Special Management Areas and contain the County's most important biological resources. They are intended to support sustainable populations of species and include undisturbed or lightly disturbed habitat and corridors to promote species movement (LA County Department of Regional Planning 2022). SEAs are ecologically important land and water systems that support valuable habitat for plants and animals, often integral to the preservation of rare, threatened, or endangered species and the conservation of biological diversity in Los Angeles County. SEAs are areas where the County deems it important to facilitate a balance between development and resource conservation (therefore, the SEA designation doesn't change land use zoning but applies guidance, biological review and development standards to projects proposed within these areas). The County-adopted SEA Ordinance has been in effect since January 16, 2020. Any new development projects within SEAs are subject to the ordinance which establishes the permitting, design standards, and review process for development. The ordinance also specifies the species of tree protected in each individual SEA (County of Los Angeles 2020). The intent of the SEA regulations is not to preclude development but to allow controlled development without jeopardizing the biotic diversity of the County. Development within the boundaries of an SEA requires a conditional use permit (issued by LA County Regional Planning Department) that is reviewed by the SEA Technical Advisory Committee, an advisory committee to the County's Regional Planning Commission that specializes in various areas of biology in the County.

3.4.2.3.2 Los Angeles County Oak Tree Ordinance

The Los Angeles County Oak Tree Ordinance was established to recognize oak trees as significant historical, aesthetic, and ecological resources. The goal of the ordinance is to preserve and maintain healthy oak trees. It prohibits people from cutting, destroying, removing, relocating, inflicting damage, or encroaching into the protected zone of any oak tree that is eight inches diameter at breast height without a permit. This ordinance applies to all unincorporated areas of the County; individual cities may have adopted the county ordinance or their own ordinance (Oak tree permits 22.56, Part 16).

3.4.2.3.3 Los Angeles County Oak Woodlands Conservation Management Plan

The main goal of the Los Angeles County Oak Woodlands Conservation Management Plan is to develop a consistent policy for managing oak woodlands which can be incorporated into the General Plan and other planning documents. In addition, it aims to develop a comprehensive strategy for addressing loss and creating opportunities for recovering oak woodlands. The management plan was developed to meet the requirements of the California Oak Woodlands Conservation Act (AB 242).

3.4.2.3.4 Los Angeles County General Plan

The Conservation and Natural Resources Element of the General Plan (LA County Department of Regional Planning 2022) includes the following goals and policies that relate to the proposed Project:

- Goal C/NR 3: Permanent, sustainable preservation of genetically and physically diverse biological resources and ecological systems including: habitat linkages, forests, coastal zone, riparian habitats, streambeds, wetlands, woodlands, alpine habitat, chaparral, shrublands, and SEAs.
 - Policy C/NR 3.1: Conserve and enhance the ecological function of diverse natural habitats and biological resources.
 - Policy C/NR 3.8: Discourage development in areas with identified significant biological resources, such as SEAs.

3.4.2.4 Incorporated Cities Within the Plan Area

The table below presents the policies related to biological resources from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.4-4. Applicable Local City Policies Related to Biological Resources

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Resources Element:</p> <p>Goal R-2: Conservation and enhancement of open spaces, greenbelts, and natural areas.</p> <p>Policy R-2A: Preserve, maintain, and expand the City's urban forest.</p> <p>Policy R-2B: Explore opportunities to incorporate green space into development projects and expand open spaces in the City.</p> <p>Policy R-2C: Avoid impacts to sensitive biological species and habitats through compliance with state and federal laws and regulations pertaining to biological resource conservation.</p>	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Chapter 23.88 (Tree Preservation).</p> <p>Section 23.88.010 (Purpose and Scope) establishes to recognize oaks, and other California native and mature trees as significant aesthetic and ecological resources and to create favorable conditions for the preservation and propagation of plant heritage for the benefit of the current and future residents of the city. General standards for tree preservation include (1) protected trees shall not be removed or damaged except in conformance with the provisions of this chapter, (2) the provisions of this chapter apply to all protect trees within the city indiscriminate of zoning except in the rear and side yards of single family residential dwellings of R-1 and R-2 zoning, and (3) protected trees shall not be topped or trimmed except as allowed in the exceptions in division (B)(2) of the Tree Preservation Chapter (City Code, Chapter 23.88).</p> <p>The California Building Code, 2022 edition, published at Title 24, Part 2, of the California Code of Regulations, including relevant Appendices, is adopted by reference pursuant to Article VIII, Chapter 1, Section 8110 of the City of Arcadia Municipal Code.</p> <p>According to Division 10, Section 9110.01, Tree Preservation, of the City's Development Code (codified in Article IX, Chapter 1 of the Municipal Code) a permit is required prior to removal of any protected tree, as well as prior to any encroachment into the protected zone of any protected tree. Protected trees include oak trees (e.g., Engelmann oak (<i>Quercus Engelmannii</i>), coast live oak (<i>Quercus agrifolia</i>)), California sycamore trees (<i>Platanus racemose</i>) on any public or private property, as well as certain mature trees located within a required front, side, street-side, or rear yard setback. Exceptions are provided for in Section 9110.01.060, and include allowances for combined permits, visual barriers, and emergency situations, among others. Section 9110.01 also provides explicit lists of protected tree species, as well as unprotected tree species (Section 9110.01.040), and gives guidance on the application processes and applicable fees (Section 9110.01.070), required protective measures (9110.01.090), and enforcement and liability protocols (9110.01.100/110).</p> <p>Additionally, Article IX, Chapter 8, Comprehensive Tree Management Program of the Municipal Code governs the planting, maintenance, removal, and replacement of City-owned trees on public property. City-issued permits are required for removal of street trees, and property owners requesting removals are responsible for costs associated with street tree removal and replacement. City-issues permits are not required for removal of tree limbs or pruning or trimming branches of street trees in conjunction with construction activities; however, the City requires that pruning or trimming be completed in accordance with the industry standards as set forth by the International Society of Arboriculture or the American National Standards Institute and in consultation with a Certified Arborist. Section 9812, Tree Planting and Maintenance Regulations, of Chapter 8 also mandates that the owner of property adjacent to a parkway or public right-of-way shall have the responsibility to maintain in good condition all street trees in the parkway or public right-of-way. Such maintenance shall include, but is not limited to, consistent deep watering to help train roots to grow</p>	<p>No other applicable ordinances were identified.</p>

		down and away from other sources of moisture (e.g., water/sewer laterals and irrigation systems) and to prevent roots from surfacing, causing hardscape damage.	
Arcadia	<p>Parks, Recreation, and Community Resources Element:</p> <p>Goal PR-3: Ensuring that trees and the urban forest make a continuing and significant contribution to community character.</p> <p>Policy PR-3.1: Provide consistent funding for the street tree program reflective of the importance of the urban forest to community aesthetics and the environment.</p> <p>Policy PR-3.2: Heighten public awareness regarding the City’s Street Tree Master Plan and comprehensive tree management program.</p> <p>Policy PR-3.3: Strive to be business friendly regarding the planting and maintenance of street trees in business districts without compromising overall City objectives regarding public landscaping and community aesthetics.</p> <p>Policy PR-3.4: Continue to use the Arcadia Tree Commission or any successor advisory group to further City objectives regarding public trees.</p> <p>Policy PR-3.5: Require that new private and public developments incorporate trees in a manner that maximizes the utility of trees for passive cooling, screening, carbon sequestration, erosion and runoff control, and integration of landscape design into the overall design of the development.</p> <p>Policy PR-3.6: Ensure that existing mature trees on private property are considered in the planning and development process and are retained to the greatest extent feasible.</p> <p>Resource Sustainability Element:</p> <p>Goal RS-8: Balanced use of hillside properties that respects the natural environment and private property rights.</p> <p>Policy RS-8.1: Determine the environmental sensitivity of individual hillside sites using site-specific investigations, information in the General Plan EIR, and other applicable information sources and regulatory documents. Incorporate the findings into conditions of approval for individual development projects.</p> <p>Policy RS-8.2: Require detailed biological and other appropriate environmental resource and hazard studies for properties within the foothills, and ensure that appropriate mitigation is employed to avoid and/or minimize impacts.</p> <p>Policy RS-8.3: Investigate the value and feasibility of establishing hillside areas within Arcadia as habitat mitigation/banking sites.</p>	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Section 9110.01 (Tree Preservation), and Chapter 8 (Comprehensive Tree Management Program).</p> <p>Section 9110.01. Tree Preservation: This Tree Preservation Chapter is established to recognize oaks, sycamores and mature trees as significant aesthetic and ecological resources as well as valuable environmental assets, and to create favorable conditions for the preservation and propagation of irreplaceable plant heritage for the benefit of the current and future residents of the City. General standards for tree preservation include (1) this Chapter shall apply to all protected trees on all public and private property whether vacant, undeveloped, in the process of development or developed, (2) no protected trees shall be removed, topped, trimmed, damaged or have its protected zone encroached upon except in conformance with the provisions of this section, except as allowed under Exemptions, (3) tree valuations shall be established by the City’s chosen methodology as set forth in the most current edition of the Guide for Plant Appraisal, published by the International Society of Arboriculture. This shall be applied to those trees damaged, topped, trimmed or removed without a permit as well as those removed with a permit when an alternative replacement fee is required, and (4) Any person, property owner, and contractor who violates or permits the violation of any provisions of this Ordinance shall be subject to the enforcement remedies set forth in the subsection 9110.01.100 Violations and Enforcement of the Tree Preservation Section (City Code, Section 9110.01).</p> <p>Chapter 8 (Comprehensive Tree Management Program) provides the regulations regarding the maintenance, removal and replacement of City-owned trees on public property and establishes the Arcadia Tree Commission (Section 9803.) which shall review the annual City-owned tree inventory and master plan prepared by the Public Works Department. No person shall plant, remove, cut any portion of or damage any City-owned tree or shrub on any public property without first obtaining a permit from the Arcadia Public Works Department (Section 9806).</p>	City’s Street Tree Master Plan
Baldwin Park	<p>Health and Sustainability Element:</p> <p>Goal HS-9. Protect and enhance natural features in Baldwin Park to beautify the City, take advantage of ecological services, and build a community connection to the larger ecosystem.</p> <p>Action HS-9.1: Develop an Urban Greening Citywide Strategy/Urban Forest Plan that includes a citywide tree planting program. The plan should establish a canopy cover goal and a comprehensive street tree palette. In crafting the plan, consider General Plan goals, including pedestrian orientation and complete streets concepts. Species selection shall prioritize those tree types that have the ability to provide sufficient shade, reduce pollutants, produce oxygen, reduce stormwater runoff, retain moisture, minimize impact to sidewalks, have few known disease and insect pests, and acceptable fruit and flower litter. Establish tree criteria (such as minimum number of</p>	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Subchapter 153.165.010 (Tree Preservation and Protection).</p> <p>This Subchapter (153.165.020) shall apply to every public tree, every required tree and every mature tree located on private property. (Ord. 1346, passed 5-2-12).</p> <p>Subchapter 153.165.010 (Tree Preservation and Protection) establishes the following intent:</p> <p>(A) Public trees. Establish standards and measures for preserving and protecting trees located on public and private property.</p> <p>(B) Mature trees. Establish standards and measures for preserving and protecting Mature Trees on private property.</p>	<p>Municipal code Subchapter 153.165.060 (Tree Master Plan):</p> <p>The Tree Master Plan shall apply to Public Trees and shall include, in general, maps of streets and public areas in the city upon which there shall be designated a general plan for the uniform planting of trees, and specifications for the size and type of such trees permissible within parkways and other public places within the city. No species other than those included in this list may be planted in public areas without written permission of the Tree Officer. The Tree Department shall be responsible for administering and implementing the approved Tree Master Plan, and recommending to the Tree Advisory Board any changes or additions to the Tree Master Plan.</p> <p>(Ord. 1346, passed 5-2-12)</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>trees for street frontage) for new development and redevelopment projects, and to facilitate canopy cover on streets and parking areas.</p> <p>Action HS-9.3: Consider creating an Urban Forestry Advisory Subcommittee within the Recreation and Community Services Commission.</p> <p>Action HS-9.4: Maintain the City’s Tree City USA designation, and continue yearly celebration of Arbor Day.</p> <p>Action HS-9.5: Continue to enforce all ordinances pertaining to tree protection and preservation.</p>	<p>(C) Tree canopy. Maintain, to the greatest extent possible, a maximum amount of tree canopy coverage throughout the city.</p> <p>(D) Healthy trees. Maintain trees in a healthy condition through good arboricultural practices.</p> <p>(E) Protect trees. Prohibit indiscriminate damage and destruction of trees in the city. (Ord. 1346, passed 5-2-12)</p> <p>This Subchapter shall apply to every public tree, every required tree and every mature tree located on private property.</p> <p>(Ord. 1346, passed 5-2-12)</p> <p>Responsibilities (Subchapter 153.165.050) include:</p> <p>(A) Private property owner responsibilities. It shall be the duty of the owner or person in possession of each lot in the city to:</p> <p> (1) Accept, protect and provide adequate water to any Public Tree planted in parkways or other public right-of-way abutting such lots, and not to interfere with the city’s maintenance and pruning of such trees; and</p> <p> (2) Notify the Tree Officer of any suspected tree hazards or maintenance needs of any Public Tree on his or her property. An application for trimming or removal is not required for such notification.</p> <p>(B) City responsibilities. The city shall be responsible for planting, trimming, pruning, removing and other forms of maintenance of public trees.</p> <p>(Ord. 1346, passed 5-2-12)</p>	
Claremont	<p>Open Space, Parkland, Conservation, and Air Quality Element:</p> <p>Goal 5-1: Maintain unique and diverse open space resources throughout Claremont for purposes of resource and habitat protection.</p> <p>Policy 5-1.1: Strive to acquire or otherwise protect open space areas that provide key wildlife corridors, and provide connectivity between habitat areas.</p> <p>Policy 5-1.2: Wark with state and federal agencies to protect areas containing rare or endangered species of plants and animals.</p> <p>Policy 5-1.4: Develop and implement specific management programs for hillside properties and other natural areas acquired by the City. These programs should be based on sound ecological principles and professionally accepted methods to protect and enhance sensitive animal populations and their habitats.</p> <p>Policy 5-1.7: Preserve the integrity of riparian habitat areas, creek corridors, and other drainages that support biological resources, and contribute to the overall health of the watershed through the preservation of native plants and the removal of invasive, non-native plants.</p> <p>Policy 5-1.9: Minimize impacts to birds by site disturbance activities.</p> <p>Goal 5-4: Protect groundwater resources.</p> <p>Policy 5-4.1: Protect, preserve, and enhance the San Antonio Spreading Grounds and Thompson Creek Spreading Grounds as important open space resources for recharging groundwater basins.</p> <p>Policy 5-4.2: Encourage use of drainage improvements designed with native vegetation where possible, to retain or detain stormwater runoff, minimizing volume and pollutant concentrations.</p>	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Chapter 12.26 (City Trees), Subchapter 8.30.070 (Level 3 Water Supply Shortage Emergency), and Subchapter 8.28.050 (Stormwater Pollution Control Measures for Development Planning and Construction Activities).</p> <p>Chapter 12.26 (City Trees) General standards for protection of City trees include (A) It is unlawful for any person to injure, cut, damage, carve, transplant, prune, root prune or re-move any public tree. (B) It is unlawful for any person to attach, cause to be attached or keep attached to any public tree, or to the guard or stake of a public tree, any rope, wire nails, tacks, staples, advertising posters, decorations, ornaments, flags, toys, swings, lights or any other contrivance whatsoever without first obtaining a permit or explicit approval from the City, (C) It is unlawful for any person to cause or allow any poison or other substance harmful to tree life to lie, leak, pour, flow or drip upon or into the soil within the drip line of any public tree; or set fire or permit any fire to burn when such fire or heat thereof will injure any portion of any public tree; or to operate any equipment, such as mechanical weeding devices, in such a manner as to cause damage to a public tree in any way, (D) No person shall injure any public tree located within an easement or public right-of-way on his or her private property by neglecting to provide the necessary amount of water, as determined by the Tree Policy Manual and the terms of this chapter, required for said tree’s continued good health and viability, (E) No person shall impact the drip line area of a City tree in a way that may reasonably be expected to damage the root system, compact the soil over the roots, or impede free passage of water, air or fertilizer to the roots of any public tree, (F) Special consideration shall be afforded public trees determined by the Community and Human Services Commission to be heritage trees. Such trees shall be removed only when public interest served by removal outweighs the interest in preservation</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 5-8 : Preserve Claremont' s unique community forests, and provide for sustainable increase and maintenance of this valuable resource.</p> <p>Policy 5-8.1: Develop a tree planting policy that strives to accomplish 50 percent shading of constructed paved and concrete surfaces within five years of construction.</p> <p>Policy 5-8.2: Provide adequate funding to manage and maintain the City's urban forest, including sufficient funds for tree planting, pest control, scheduled pruning, and removal and replacement of dead trees.</p> <p>Policy 5- 8.3: Coordinate with local and regional plant experts (e. g. Rancho Santa Ana Botanic Garden) in selecting tree species that respect the natural region in which Claremont is located to help create a healthier, more sustainable urban forest.</p> <p>Policy 5-8.4: Safeguard and enhance Claremont" s community forest by protecting, existing stands of trees and other plant material of substantial value.</p> <p>Policy 5-8.5: Continue to plant new trees (in particular native tree species where appropriate), and work to preserve mature native trees.</p> <p>Policy 5-8.6: Increase the awareness of the benefits of street trees and the community forest through a citywide education effort.</p> <p>Policy 5-8.7: Continue to manage and care for all trees located on City property or within the City's right of way.</p> <p>Policy 5-8.8: Provide information to the public on correct tree pruning practices.</p> <p>Policy 5-8.9: Encourage residents to properly care for and preserve large and beautiful trees on their own private property.</p> <p>Goal 5-12: Conserve and properly manage natural resources for future generations.</p> <p>Policy 5-12.2: Consider the environmental impacts of proposed development of natural areas, recognizing the loss of natural resources is irreversible. The environmental analysis shall carefully weigh the costs and benefits of such development.</p>	<p>and heritage status, (G) All trees of any species or variety of the genus Ulmus which are found to be infected with Ceratocystis ulmi (Dutch Elm disease) in the City are a threat and a hazard to all trees of the genus Ulmus in Claremont. This section requires that all aboveground portions of such infected trees be destroyed or properly disposed of as provided in this chapter, (H) No person shall possess, store or transport into the City all or any part of the trees of the genus Ulmus infected with Ceratocystis ulmi (Dutch Elm disease); provided, however, that wood, branches and roots of such trees may be transported either to a safe place for burning or burial, under a minimum of two feet of earth, within five days following the discovery of such infection, or to such sites, and under such conditions, as are approved by the Community and Human Services Commission for the processing and subsequent elimination of the disease hazard. Infected trees may be treated in a manner approved by the County Agriculture Commissioner to effect a cure for the disease if and when an effective cure becomes known, and (I) During the construction, repair, alteration, moving or removal of any building, structure of any other type of construction in the City, no person in control of such work shall leave any public tree, shrub or plant in the vicinity of such activity without sufficient guards or protectors as identified in the tree policy manual to prevent injury to the tree, shrub or plant in connection with such construction, repair, alteration, moving or removal. The costs of any such protection shall be borne by the person responsible for the improvement (12-04; 09-06; 07-04).</p> <p>Subchapter 8.30.070 (Level 3 Water Supply Shortage Emergency) establishes the following exceptions to water conservation requirements during a declared Level 3 water supply shortage emergency:</p> <p>a. Maintenance of vegetation, including trees and shrubs, that are watered using a hand-held bucket or similar container, hand-held hose equipped with a positive self-closing water shut-off nozzle or device;</p> <p>b. Maintenance of existing landscape necessary for fire protection;</p> <p>c. Maintenance of existing landscape for soil erosion control;</p> <p>d. Maintenance of plant materials identified to be rare or essential to the well-being of protected species;</p> <p>e. Maintenance of landscape within active public parks and playing fields, day care centers, golf course greens, and school grounds, provided that such irrigation does not exceed two (2) days per week according to the schedule established in Section 8.30.060(B)(1) and time restrictions in Sections 8.30.040(A) and (B);</p> <p>f. Actively irrigated environmental mitigation projects.</p> <p>Subchapter 8.28.050 (Stormwater Pollution Control Measures for Development Planning and Construction Activities) applies to planning priority projects including:</p> <p>4. New development and redevelopment projects that create and/or replace 2,500 square feet or more of impervious area; discharge stormwater that is likely to impact a sensitive biological species or habitat; and are located in or directly adjacent to or are discharging to an ASBS, Sensitive Ecological Area in Los Angeles County.</p> <p>(22-01; 14-05)</p>	
Covina	Land Use Element:	Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Chapter 17.83 (Tree Preservation).	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 6: Preserve the very low density character, sensitive environmental resources, and natural appearance of Covina Hills by minimizing future grading and development.</p> <p>Natural Resources and Open Space Element:</p> <p>Natural Resources Goal: A setting in which a high environmental quality is achieved through the bona fide conservation and protection of existing natural resources.</p> <p>Policy 2: Preserve and protect in their natural conditions, through appropriate land use controls, development standards, and other reasonable measures, the unimproved segments of two flood control channels running though Covina (Charter Oak Wash in Wingate Park and Walnut Creek in the Covina Hills/southeastern area) and concomitant riparian woodland communities as important functional, ecological, biological, aesthetic, and passive open space resources.</p> <p><i>Policy Area 2 Vegetation and Wildlife</i></p> <p>Policy a. Continue to enforce the Covina Oak Tree Ordinance as a means of protecting oak tree resources and to attempt to preserve mature trees of all types in conjunction with new private and quasi-public construction or redevelopment proposals as well as public works projects for aesthetic and ecological purposes.</p> <p>Policy b. Retain existing trees, such as oak woodlands, in their natural setting or incorporate into planned landscaping, to the greatest extent feasible.</p> <p>Policy c. In new construction or redevelopment proposals, preserve existing mature trees, whenever feasible, particularly those located within forty feet of any public right-of-way or within any existing or proposed parking lot.</p> <p>Policy d. Preserve and protect, through appropriate land use controls, development standards, and any other reasonable measures, the ecologically, biologically, and aesthetically important riparian woodland communities in and abutting the unimproved segments of the Charter Oak Wash and Walnut Creek.</p> <p>Policy e. Designate all Covina parks and recreational facilities and unimproved flood control channels and concomitant riparian woodland communities as open space because of their ecological and biological importance and, to the greatest extent possible, restrict adjacent land uses to ensure compatibility thereon.</p> <p>Policy f. Follow appropriate measures to handle and/or protect any officially recognized sensitive plant, animal, or other species that may be identified in the City.</p> <p>Policy g. Require that new and significantly expanded/remodeled private, quasi-public, and public developments, including parking lots, incorporate adequate landscaping, in accordance with City Zoning, Design Guidelines, and general landscape installation provisions, for both aesthetic and ecological reasons.</p> <p>Policy h. Provide for landscape improvements to the City’s sidewalks, streets, civic properties, and related public spaces and facilities, in accordance with all applicable standards and provisions, for aesthetic and ecological reasons, to the greatest extent possible.</p> <p>Policy i. Provide for needed landscape improvements to the City’s parks and recreational facilities, as described in the Covina Park System Master Plan and other sources, in accordance with all applicable standards and provisions, for aesthetic and ecological reasons, to the greatest extent possible.</p> <p><i>Policy Area 3 General Matters</i></p> <p>Policy c. Endeavor to monitor future ecological conditions, discoveries, and local policy changes and, when necessary, make appropriate General Plan amendments.</p>	<p>Chapter 17.83 (Tree Preservation) establishes the following guidelines for the preservation and protection of city trees:</p> <p>A. At the time of planting, any heritage tree provided pursuant to this chapter shall be of a health, size, height and trunk caliper that conforms with the current edition of “Horticultural Standards” for number one grade nursery stock as adopted by the American Association of Nurserymen.</p> <p>B. Utility companies shall practice good arboricultural practice.</p> <p>C. Heritage trees shall only be trimmed in a manner consistent with the standards of the Western Chapter of the International Society of Arboriculture.</p> <p>D. It is the responsibility of the property owner to maintain all heritage trees in a sound, healthy and attractive manner. This shall include but is not limited to the provision of adequate water, trimming to prevent excessive overgrowth and entanglement, removal of dead or dangerous branches, and the avoidance of practices which endanger the tree(s).</p> <p>E. Trenching and excavation under the dripline of a heritage tree shall only be undertaken using hand tools.</p> <p>F. Protective fencing shall be provided around the dripline of all heritage trees during construction.</p> <p>G. Utility trenches and footings shall not be placed under the dripline of a heritage tree without prior city approval.</p> <p>H. Irrigation systems shall be designed to suit the needs of the tree(s) located on the property.</p> <p>I. Prior to issuance of building, grading, demolition, and construction permits, the applicant shall:</p> <ol style="list-style-type: none">1. Obtain a tree preservation permit if subject to this chapter.2. Submit final tree report to the chief planning official, unless waived by the chief planning official, pursuant to CMC 17.83.060(B)(8).3. Submit all required security deposits and agreements.4. 4. A copy of the city-approved final tree report shall be kept on the site at all times and the developer shall follow all recommendations therein. <p>(Ord. 07-1938 § 1, 2007; Ord. 05-1925 § 1, 2005; Ord. 96-1807, 1996.)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy d. Balance the City’s obligation to preserve, protect, and maintain natural resources with Covina’s need to accommodate moderate growth and to continue with ongoing communitywide economic development, commercial revitalization, public improvement enhancement, residential construction, neighborhood preservation, code enforcement, and housing activities/programs.</p> <p>Policy e. Best implement the natural resources component of this Element through the Zoning Ordinance and Design Guidelines, Capital Improvement Program, Subdivision Ordinance, Park System Master Plan, Building and Safety provisions, and any related Covina Municipal Code sections, City policies, plans, or proposals or through other matters.</p> <p>Policy j. Implement the natural resources component of this Element in a manner consistent with the desired implementation/administration of all other General Plan Elements, as presented in those chapters, as well as applicable City and Redevelopment Agency plans and community goals.</p> <p>Policy k. Maintain departments/divisions to carry out the Natural Resources and Open Space Element’s various natural resource-related responsibilities and obligations.</p> <p>Open Space Lands Goal: A complete, well balanced, and functional system of parks, open space facilities, and trails and appurtenant thorough, viable programs and services that meet the diverse active and passive recreational needs of current and future Covina residents.</p> <p>Policy e. To the greatest degree possible, encourage land uses adjacent to the unchanneled portions of Walnut Creek and Charter Oak Washes to consist of low density residential, park/open space, or other appropriate, compatible categories to prevent unreasonable encroachments thereon.</p> <p>Policy f. Preserve and protect the various improved flood control channels through appropriate General Plan and Zoning designations and standards and any other reasonable measures (excluding minor, excess portions thereof that are being sold off to owners of abutting residential and other properties).</p>		
Diamond Bar	<p>Resource Conservation Element:</p> <p>Goal RC-G-1: Create and maintain a balanced open space system that will preserve scenic beauty and community identity, protect important biological resources, provide open space for outdoor recreation and the enjoyment of nature, conserve natural resources, and ensure public health and safety.</p> <p>Goal RC-G-2: Seek to link the various elements of the open space network through the development of an integrated system of trails and greenways.</p> <p>Goal RC-G-3: Preserve to the extent possible open space ridgelines, hilltops, and prominent slopes for aesthetic, biological and natural resource conservation, and safety purposes.</p> <p>Policy RC-P-1: As opportunities arise, obtain and designate open space land through acquisition techniques such as:</p> <p>a. Incorporating open space and recreational areas into the design of new development projects, preserving and enhancing as open space significant stands of vegetation, natural landforms, and any areas of special ecological significance through site design approaches such as clustering and ecological planning.</p> <p>b. Allowing clustering or transferring of all or part of the development potential of a site to a portion of the site to preserve significant environmental resources such as</p>	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Section 22.16.040 (Environmental Resource Protection), Section 8.12.1695 (Low impact development measures for new development and/or redevelopment planning and construction activities) and Chapter 17.83 (Tree Preservation).</p> <p>Section 22.16.040. (Environmental resource protection) establishes the following general property and development use standards:</p> <p>Development proposals shall be evaluated in compliance with the California Environmental Quality Act (Public Resources Code § 21.000 et seq.), city and general plan environmental policies including, but not limited to, open space habitat, sensitive biological and botanical resources; rare, threatened and/or endangered species; air quality; mineral resources; archaeological resources; and geologic hazards.</p> <p>(Ord. No. 02(1998), § 2, 11-3-98)</p> <p>Section 8.12.1695 (Low impact development measures for new development and/or redevelopment planning and construction activities) states that development projects subject to permittee conditioning and approval for the design and implementation of post-construction controls to mitigate stormwater pollution, prior to completion of the project(s), are:</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>natural and native habitats (oak woodland, coastal sage scrub, etc.), natural creeks, artesian springs, vernal pools, seeps, riverine, wetlands, riparian habitats, wildlife corridors and linkages, and natural geological features within proposed developments as open space.</p> <p>Policy RC-P-2: As future parks are developed, incorporate existing natural open space, existing water resources and mature vegetation to provide for passive recreation opportunities and wildlife habitats.</p> <p>Goal RC-G-4: Maintain, protect, and preserve biologically significant areas, including Significant Ecological Area (SEA) 15, riparian areas, oak and walnut woodlands, and other areas of natural significance, providing only such recreational and cultural opportunities as can be designed in a way that sustains, repairs or restores ecosystems rather than detracts from them.</p> <p>Goal RC-G-5: Protect rare, threatened, endangered, and other special-status plant and animal communities.</p> <p>Goal RC-G-6: Utilize native and drought-tolerant vegetation in landscaping, site stabilization and restoration where practical to prevent the spread of invasive plant species into natural open spaces.</p> <p>Policy RC-P-9: Require, as part of the environmental review process prior to approval of discretionary development projects involving parcels within, adjacent to, or surrounding a significant biological resource area, a biotic resources evaluation of the site by a qualified biologist. Focused plant surveys shall be conducted at the appropriate time of year, and local reference populations checked to ensure detectability of the target species. Wildlife shall also be evaluated by a qualified biologist through appropriate survey or trapping techniques necessary to determine presence. Such evaluation shall analyze the existing and potential natural resources of a given site as well as the potential for significant adverse impacts on biological resources. The report shall identify measures to avoid, minimize, or mitigate any impacts to species that have been observed or have the potential of being pre permit based on the evaluation, the City shall require implementation of mitigation measures supported by the evaluation, or work with the applicant to modify the project if mitigation is determined not to be adequate to reduce the impacts to a non-significant level.</p> <p>Policy RC-P-10: Require, to the greatest extent feasible, new development to preserve mature native trees including oak and walnut, and trees of significant cultural or historical value such as sycamore and arroyo willow, etc., as set forth under the Diamond Bar Tree Preservation and Protection Ordinance. Review the ordinance periodically and update it as necessary to reflect current best practices.</p> <p>Policy RC-P-11: Require that all development, including roads and trails, proposed adjacent to riparian and other biologically sensitive habitats avoid, to the greatest extent feasible, significant impacts that would undermine the healthy natural functioning of those areas. Require that new development proposed in such locations be designed to:</p> <ul style="list-style-type: none">a) Minimize to the greatest extent possible or eliminate impacts on environmentally sensitive areas;b) Protect the visual seclusion of forage areas from road intrusion by providing vegetative buffering;c) Protect wildlife movement linkages to water, food, shelter, and nesting sites;	<p>(9) Projects located in or directly adjacent to, or discharging directly to an environmentally sensitive area (ESA), where the development will:</p> <ul style="list-style-type: none">a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; andb. Create 2,500 square feet or more of impervious surface area <p>Chapter 17.83 (Tree Preservation) establishes the purpose (Section 22.38.010), applicability (Section 22.38.020), and permitting and application processes (Sections 22.38.040 – 22.38.199) for the City’s tree and protection ordinance. The following are protected trees:</p> <ul style="list-style-type: none">(1) Native Oak, walnut, sycamore and willow trees with a diameter at breast height (DBH) of eight inches or greater;(2) Trees of significant historical or value as designated by the council;(3) Any tree required to be preserved or relocated as a condition of approval for a discretionary permit;(4) Any tree required to be planted as a condition of approval for a discretionary permit; and(5) A stand of trees, the nature of which makes each tree dependent upon the others for survival. <p>(Ord. No. 02(1998), § 2, 11-3-98; Ord. No. 02(2003), 9-16-03; Ord. No. 04(2012), § 9, 4-17-12</p>

	<p>minimum. Streets should be carefully designed to reduce or eliminate the possibility of erosion in the hillside and mountainous areas.</p> <p>Policy Con 1.1.4: Promote and encourage multi-agency involvement in identifying opportunities for hillside preservation and protection.</p> <p>Policy Con 1.1.5: Form partnerships with Federal, State, County, other agencies, and private entities to help protect and preserve hillside land.</p> <p>Policy Con 1.1.6: Continue to investigate open space land opportunities for the preservation of natural resources and sensitive habitat.</p> <p>Goal 6: To ensure that developments in the mountain and hillside areas are sensitive to the local environment.</p> <p>Policy Con 6.1.1 Maintain very low densities in the northernmost portion of the city not included in the national forest. Further development must be sensitive to the terrain, natural environment and aesthetics.</p>	<p>from DBH; and (2) Specimen trees twenty-four inches in diameter or greater, as measured from DBH.</p> <p>(b) PROPERTIES SUBJECT TO THIS CHAPTER.</p> <p>(1) Developed, single-family residential zoned properties with trees in the front or street-facing side yard(s);</p> <p>(2) Undeveloped, single-family residential zoned properties with trees on the property;</p> <p>(3) Developed or undeveloped properties in multiple-family residential, commercial, industrial, hospital, and open space zones, with trees on the property; and</p> <p>(4) Developed or undeveloped properties in specific plan zones, with trees on the property, unless otherwise regulated by the individual specific plan.</p> <p>(c) ACTIVITIES SUBJECT TO THIS CHAPTER.</p> <p>(1) Tree removal; and</p> <p>(2) Tree alteration.</p> <p>(Ord. No. 882, § 1, 9-11-2018)</p> <p>Chapter 19.46 (Hillside Development Standards) establishes the purpose (Section 19.46.010), application requirements (Section 19.46.040), development and grading standards (Section 19.46.060 - .070), and landscaping and irrigation standards (Section 19.46.120). Requirements for applications include:</p> <p>2) A biological resource survey report identifying all existing plant communities, with sensitive or protected species or communities clearly delineated, as well as known habitat area for protected animal species, including the location of sensitive biological resources. All sensitive species surveys shall be conducted in accordance with any applicable protocols established by the U.S. Fish and Wildlife Agency and the California Department of Fish and Game. The report shall be signed by the person preparing such report, with the signature intended to verify that the mandatory protocols were conformed to in the analysis. A map shall be included that shows all of the existing plant communities, with sensitive or protected species or communities clearly delineated, as well as known habitat area for protected animal species including the location of sensitive biological resources. The map should including identifying significant trees, which, for the purposes of this map, are defined to be trees with a caliper greater than six inches when measured four feet above grade.</p> <p>Section 6.15.130 (New development and redevelopment pollutant reduction) lays out requirements for stormwater pollution control measures in development and/or redevelopment projects, the following apply to this section:</p> <p>9. Projects located in or directly adjacent to, or discharging directly to an significant ecological area (SEA) where the development will:</p> <p>a) Discharge stormwater that is likely to impact a sensitive biological species or habitat; and</p> <p>b) Create two thousand five hundred square feet or more of impervious surface area.</p> <p>(Ord. No. 855, § 1, 2-10-2015)</p>	
El Monte	Parks and Recreation Element:	Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Chapter 14.03 (Tree Protection and Preservation)	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal PR-3: An Emerald Necklace that encircles the community with parks and multiuse biking, walking, equestrian trails; restores open space and habitat; protects the watershed; and provides multiple recreational and health benefits.</p> <p>Policy PR-3.2: Open Space. Develop Peck Water Conservation Park into an open space resource, with areas for water recreation, open space, habitat, and passive and active recreation.</p> <p>Policy PR-3.4: Habitat Restoration. Seek to restore and protect native habitat and landscaping that sustains plants and wildlife species along the banks of rivers, lakes, and washes in the Emerald Necklace.</p> <p>Policy PR-3.5: Watershed Management. Improve the watershed through water conservation, water quality protection and restoration, best management practices, and control of stormwater pollutants.</p> <p>Cultural Resources Element:</p> <p>Goal CR-3: A community that respects and recreates its natural environmental and cultural legacy through a comprehensive program to restore the natural environment.</p> <p>Policy CR-3.1 Community Forest. Develop a community forest program that balances indigenous trees and plants and modern requirements for maintenance, water conservation, and aesthetics, as a visual reminder of the City’s heritage and natural environment.</p> <p>Public Health and Safety Element:</p> <p>Goal PHS-2: A healthy and safe watershed exemplified by the implementation of flood control measures, protection of water resources, and the restoration of the beneficial uses of the San Gabriel and Rio Hondo Rivers watersheds.</p> <p>Policy PHS-2.4: Habitat Restoration. Restore the quality, quantity, and connectivity of habitat and natural open areas in El Monte with watershed best management practices and restoration of stream channels wherever feasible.</p> <p>Policy PHS-2.5 Green Infrastructure. Implement green infrastructure projects (e.g., greenways, community forest, linear parks, vegetated swales, miniparks) to help filter stormwater runoff, improve water resources, and restore the health of our watershed.</p> <p>Policy PHS-2.7: Emerald Necklace Accord. Participate in the Emerald Necklace Accord for the purposes of recreation, environmental education, development and enhancement of trails, native habitat conservation and restoration, water protection, and protection of water resources.</p> <p>Policy PHS-3.3 Community Forest. As prescribed in the Parks and Recreation Element, enhance the City’s community forest by planting trees along all roadways as a means to help filter air pollutants, clean the air, and provide other health benefits to the community.</p>	<p>Chapter 14.03 (Tree Protection and Preservation) establishes that all persons shall undertake the following prior to the commencement of any construction or demolition activities and until the issuance of a certificate of occupancy or a temporary certificate of occupancy:</p> <p>A. Install a sturdy fence at the perimeter of the protected zone of a Protected Tree;</p> <p>B. Prohibit excavation, grading, drainage and leveling within the protected zone of a Protected Tree;</p> <p>C. Prohibit the storage or disposal of oil, gasoline, chemicals or other harmful materials within the protected zone or in drainage channels, swales or other areas that may lead to the protected zone;</p> <p>D. Refrain from any of the unlawful activities set forth under Section 4.03.030;</p> <p>E. Design utility services and irrigation lines to be located outside of the protected zone of a Protected Tree to the extent reasonable feasible;</p> <p>F. Notify the City Arborist of any serious harm, destruction or other damage that befall a Protected Tree during construction or demolition activities and in no event shall the applicant undertake the removal of any Protected Tree not otherwise slated for removal unless and until the City Arborist has been given the opportunity to inspect the subject tree, evaluate its prospects for survival and issue a written determination as to whether the tree should be allowed to remain or removed pursuant to a retroactively issued permit pursuant to this chapter.</p> <p>(Ord. No. 2791, § 2, 3-20-2012)</p>	
Glendora	<p>Conservation Element:</p> <p>Policy CON-6.3: Establish a tree master plan to expand the urban forest throughout the City.</p> <p>Policy CON-6.4: Ensure appropriate placement and proper maintenance of tree resources within the City.</p> <p>Goal CON-9: Preservation and conservation of natural resources and sensitive habitats.</p> <p>Policy CON-9.1: Investigate opportunities for open space land acquisition for the preservation of natural resources and sensitive habitats.</p>	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Subchapter 21.06.050 (Open Space – Natural Zone (OSN)), Section 21.04.030 (Hillside Development), Section 21.03.090 (Urban runoff pollution), and Section 21.12.160 (Oak Tree Preservation).</p> <p>Subchapter 21.06.050 (Open Space – Natural Zone (OSN) establishes the following purposes for the OSN; (1) conserve and manage natural resources which may include biological resources, watercourses, hills, canyons, major rock outcroppings, etc.; (2) protect the public health and safety by including areas requiring management due to hazardous or special conditions such as fire, flood and earthquake fault; and</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy CON-9.2: Continue to partner with the Glendora Community Conservancy to determine funding opportunities for open space land acquisition for the preservation of natural resources and sensitive habitats.</p> <p>Policy CON-9.3: Pursue partnerships with other organizations, such as the United States Forest Service to ensure preservation of natural resources and sensitive habitats.</p> <p>Policy CON-9.4: Ensure the preservation of the natural plant communities in the hillside areas.</p> <p>Policy CON-9.5: Ensure land use decisions consider the preservation of sensitive plant and animal species, critical habitat, wildlife corridors and biologically sensitive areas.</p> <p>Policy CON-9.6: Develop a land management/ land maintenance plan, including best management practices, of City-owned conservation areas to increase fire safety, protect biodiversity and preserve native plant species.</p> <p>Policy CON-9.7: Ensure preservation of local watersheds in development to maintain native plant habitats and ensure connectivity of wildlife corridors.</p> <p>Goal CON-10 A tree preservation strategy.</p> <p>Policy Con-10.1 Involve residents in the maintenance and preservation of individual trees by providing them with a choice of trees planted.</p> <p>Policy CON-10.2 Maintain the tree preservation ordinance to ensure the preservation of existing tree resources.</p> <p>Policy CON-10.3 Establish a tree master plan to expand the urban forest throughout the City.</p> <p>Open Space and Recreation Element:</p> <p>Goal OSR-1: Preserve open space resources.</p> <p>Policy OSR-1.6 Pursue partnerships with other organizations, such as the United States Forest Service to ensure preservation of natural resources and sensitive habitats.</p> <p>Policy OSR-1.10: Develop a land management/ land maintenance plan of City-owned wilderness parks to increase fire safety, minimize potential naturally occurring safety hazards in wilderness park areas, protect biodiversity and native plant species.</p> <p>Goal OSR-2: Coordinated land use and environmental planning.</p> <p>Policies OSR-2.1 Develop and implement a comprehensive hillside development strategy.</p> <p>Goal OSR-2.2: Require a constraints analysis for proposed hillside residential development to ensure that significant land and natural resource features are avoided, such as ridgelines, significant watershed areas, tributaries, and streams, and rare, threatened, or endangered species habitat.</p>	<p>(3) provide outdoor recreation including areas of scenic, historic or cultural value. The OSN zoning designation shall only be applied to public and quasi-public property; provided, however, that a private property owner may request and be considered for a change of zone to OSN.</p> <p>B. Permitted Uses. All property located in an OSN zone shall be left in its natural, wilderness state except for the following uses: riding and hiking trails, picnic and playground areas, flood control structures and facilities, and utility substations and related equipment and structures.</p> <p>C. Development Requirements. Development standards for the OSN zone shall be determined on a site-by-site basis. Consideration shall be given to surrounding properties and developments in order to blend the development with, and to keep it consistent with, the surrounding area. Factors to be considered for determination of standards shall be topography, water drainage, circulation, use of site, and any other environmental factors related to the site.</p> <p>D. Development Plan Review Required. Development or modification of an approved plan shall be subject to development plan review in accordance with Section 21.02.040.</p> <p>(Ord. 1637 § 3, 1995)</p> <p>Section 21.04.030 (Hillside Development) states the purpose to be to regulate the use of land in hillside areas so that natural characteristics such as landforms, vegetation, wildlife, scenic qualities and open space can substantially be maintained, and more specifically to:</p> <ol style="list-style-type: none">1. Preserve unique and significant geological, biological and hydrological features;2. Encourage alternative approaches to conventional hillside development practices by achieving land use patterns and intensities that are consistent with natural characteristics;3. Protect predominant vistas of hillside areas in order to maintain the identity, image, environmental quality and aesthetic quality of the city;4. Protect public health and safety from potentially hazardous conditions related to the hillsides. <p>The following development standards are required for hillside development:</p> <ol style="list-style-type: none">3. Natural Landform. Development of parcels shall conform to the natural land form and require minimal grading.4. Canyons. Development near canyons shall be prohibited to protect the watershed and preserve large areas of undeveloped space and significant natural features. <p>(Ord. 1618 § 1 Exh. A, 1993; Ord. 1756 § 4, 2002; Ord. 1768 § 5, 2003; Ord. 1868 § 2, 2007)</p> <p>Projects subject to limited impact development requirements (Section 21.03.090 Urban runoff pollution) applies to:</p> <ol style="list-style-type: none">x. Projects located in or directly adjacent to, or discharging directly to a significant ecological area (SEA), where the development will:<ol style="list-style-type: none">(A) Discharge storm water runoff that is likely to impact a sensitive biological species or habitat; and	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(B) Create two thousand five hundred square feet or more of impervious surface area. (Ord. 1633 § 1, 1995; Ord. 1722 § 2, 2000; Ord. 1994 §§ 2, 4, 6, 2014)</p> <p>Section 21.12.160 (Oak Tree Preservation) establishes oak tree preservation measures for oak trees in the William Lyon Homes Arboreta Specific Plan. Specifically mitigation measures and guidelines to preserve the oak trees during construction and over the life of the project. These measures may include:</p> <ol style="list-style-type: none">1. Grading interface to the drip line and trunk;2. Horizontal setbacks to limbs, trunks from fences, walks and streets;3. Drainage around trees;4. Long-term maintenance;5. Irrigation requirements;6. Pruning to remove dead or broken limbs or approve the overall health of the tree. <p>These mitigation measures will be defined in an oak tree conservation plan to be prepared by a certified arborist as part of the tree study and incorporated into the project EIR. Ultimate responsibility for the long-term maintenance of the oak trees will be the responsibility of the master homeowner association.</p> <p>(Ord. 1835 § 2 Exh. A, 2006)</p>	
Industry	No applicable goals or policies specific to biological resources are contained in the General Plan.	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Chapter 13.16 (Stormwater and Urban Runoff Pollution Control).</p> <p>Chapter 13.16 (Stormwater and Urban Runoff Pollution Control) implements the Clean Water Act, the Porter-Cologne Water Quality Control Act, and the city’s municipal national pollutant discharge elimination system (NPDES) permit. Among the projects required to comply with the municipal NPDES (Subchapter 13.16.070) permit include:</p> <p>10. Projects located in or directly adjacent to, or discharging directly to a significant ecological area (SEA), where the development will:</p> <ol style="list-style-type: none">a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; andb. Create two thousand five hundred square feet or more of impervious surface area.	No other applicable ordinances were identified.
La Puente	No applicable goals or policies specific to biological resources are contained in the General Plan.	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Chapter 4.1 (Stormwater and Urban Runoff Pollution Prevention).</p> <p>Chapter 4.16 (Stormwater and Urban Runoff Pollution Prevention) implements the Clean Water Act, the Porter-Cologne Water Quality Control Act, and the city’s municipal national pollutant discharge elimination system (NPDES) permit. La Verne	<p>Conservation and Natural Resources Element:</p> <p>Goal 4: Preserve our diversified plant and animal life.</p> <p>Policy 4.1: Preserve mature trees wherever possible.</p> <p>Policy 4.2: Protect and preserve our native plant communities and habits.</p> <p>Policy 4.3: Protect and preserve our Southern Mixed Chaparral and Coastal Sage Scrub communities.</p> <p>Policy 4.4: Protect and preserve our Southern Oak Riparian Woodland.</p> <p>Policy 4.5: Protect and preserve our other Riparian Habitat.</p> <p>Policy 4.6: Protect and restore our Ruderal-Disturbed habitat.</p>	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Chapter 18.78 (Preservation, Protection and Removal of Trees), and Section 13.50.093 (Standard urban stormwater mitigation plan).</p> <p>Chapter 18.78 (Preservation, Protection and Removal of Trees). The purpose of this chapter is to protect certain trees in order to preserve cultural heritage, maintain and enhance the scenic beauty of the city, improve air quality, abate soil and slope erosion, preserve and enhance property values and thereby promote public health, safety and welfare by (A) Identifying significant and heritage trees or groves and establishing procedures to encourage their conservation, (B) Including consideration of existing trees and their protection in the review and implementation of development proposals, (C) Requiring permits for the removal and pruning of significant and heritage trees except in emergencies, and (D) Requiring replacement plantings when significant and heritage trees are removed. (Ord. 999 § 1, 2007)</p> <p>The following protective measures must be followed (Subchapter 18.78.160):</p> <p>A. No grading construction, or construction related activities shall occur within the safety zone of a heritage tree or a significant tree as defined by this chapter, including, but not limited to, storage of materials, grade changes, or attachment of wires to or around tree trunks, stems or limbs.</p> <p>B. No structure or impervious paving shall be located within the safety zone or within a six-foot radius of the trunk perimeter, whichever is greater, of any heritage tree or significant tree. A tree with a caliper of thirty inches or more shall require additional space as determined by the city landscape architectural consultant or parks director.</p> <p>C. Heritage trees and significant trees shall be shielded from damage during construction by chain link and steel stake fence enclosing the entire safety zone area. All exposed roots shall be inside the fence or barrier, which shall have a minimum height of four feet measured from grade. In all cases where a fence or barrier is to be used around a protected tree, the fence or barrier shall be installed prior to commencement of any development on the site and shall remain in place throughout the construction period.</p> <p>D. Branches that could be injured by vehicles or that interfere with construction shall be pruned to the satisfaction of the city landscape architectural consultant or designee. (Ord. 999 § 1, 2007)</p> <p>Section 13.50.093 (Standard urban stormwater mitigation plan) establishes that a standard urban stormwater plan is required for the following projects:</p> <p>9. Projects located in or directly adjacent to or discharging directly to an environmentally sensitive area if the development would create two thousand five hundred or more square feet of impervious area and would discharge stormwater or urban runoff likely to impact a sensitive biological species or habitat.</p> <p>(Ord. 964 § 1, 2002)</p>	<p>No other applicable ordinances were identified.</p>
Monrovia	<p>Open Space Element:</p> <p>Goal 3: Ensure Monrovia’s parks and open spaces meet local needs for active and passive recreation, enhance the environmental and visual quality of the community, and healthy living.</p> <p>Policy 3.1: Design and develop park sites and facilities to maximize recreational value and experience, while minimizing maintenance and operational costs and negative environmental and community impacts.</p>	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Section 17.20.040 (Oak Tree Preservation), Chapter 17.18 (Angeles National Forest Zone), Subchapter 17.52.095 (Hillside Development Permit), and Chapter 12.36 (Storm Water and Urban Runoff Pollution).</p> <p>Section 17.20.040 (Oak Tree Preservation): The purpose of this section is the preservation of healthy oak trees which are necessary to preserve the present scenic beauty and heritage of Monrovia, maintain property values and promote conservation</p>	<p>Hillside Wilderness Preserve and Hillside Recreation Area Draft Resource Management Plan:</p> <p>Relevant Objectives:</p> <ul style="list-style-type: none">To preserve existing designated open space areas in the City for the foreseeable future.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 3.4 Conserve significant natural areas to meet habitat and hillside protection needs and to provide opportunities for residents to recreate and connect with nature, as appropriate.</p> <p>Goal 5: Allocate available resources and seek out additional funding to upgrade and maintain Monrovia’s existing parkland and open space infrastructure needs to maintain and expand recreational opportunities for residents.</p> <p>Policy 5.4 Continue to provide stewardship of the Hillside Wilderness Preserve and Hillside Recreation Area through the implementation of the HWP Resource Management Plan (RMP).</p>	<p>of natural resources. It is the intent of this chapter to establish regulations for the removal and pruning of oak trees within the city. General standards include (A) oak trees subject to the section includes any oak tree 10 inches in diameter or more measured at two feet above the level ground and Oak Trees mean the native California Live Oak (<i>Quercus Agrifolia</i>) and or any other trees of the oak family, (B) all oaks trees on vacant lands and oak trees indicated on an oak tree preservation plan, and (C) permits are required to cut, kill, remove, prune, and install irrigation.</p> <p>Chapter 17.18 (Angeles National Forest Zone) establishes the Angeles National Forest Zone and applies to all property within the Corporate Boundary of the City of Monrovia that is also within the boundary of the Angeles National Forest. Utility operations facilities are the only use allowed, and must ensure:</p> <p>(K) Tree preservation/landscaping. The development shall be situated in such a way that no trees of any species shall be removed that have a diameter greater than 10 inches measured two feet above the natural grade. No limbs of any tree or shrub greater than two inches in diameter may be removed. No structures may be built within the drip line of any tree. No landscaping is allowed. (Ord. 2006-03 § 6, 2006)</p> <p>Subchapter 17.52.095 (Hillside Development Permit) is intended to protect the integrity and character of established neighborhoods and minimize potential environmental impacts of new construction on infill hillside lots. Before a permit may be granted the Planning Commission must find that the project:</p> <p>(6) That the project preserves mature trees, rare plant and animal species, riparian ecosystems, significant natural features and prominent ridgelines.</p> <p>The intent of Chapter 12.36 (Storm Water and Urban Runoff Pollution) is to protect and enhance the quality of watercourses, water bodies, and wetlands within the city in a manner consistent with the federal Clean Water Act, the California Porter-Cologne Water Quality Control Act and the Municipal national pollutant discharge elimination system (NPDES) Permit. Applicable projects include (Subchapter 12.36.100):</p> <p>(j) New development projects located in or directly adjacent to, or discharging directly to a Significant Ecological Area (SEA), where the development will:</p> <ol style="list-style-type: none">1. Discharge storm water runoff that is likely to impact a sensitive biological species or habitat; and2. Create 2,500 square feet or more of impervious surface area. <p>(Ord. 2015-01U § 4 (part), 2015; Ord. 2015-01 § 4 (part), 2015)</p>	<ul style="list-style-type: none">• To encourage the preservation of natural resources and private and public outdoor recreational uses permitted in open space areas by State and local law.
Pasadena	<p>Open Space and Conservation Element:</p> <p>Open Space Goal 1: Preserve, Acquire and Create Open Space</p> <p>Policy 1: Preserve currently zoned open spaces, natural open spaces, hillsides, viewsheds, watersheds and recreational areas.</p> <p>Open Space Goal 2: Develop Access & Connectivity for Wildlife and People</p> <p>Policy 1: Develop open space and wildlife corridors and establish easement and acquisition programs.</p> <p>Policy 2: Acknowledge, restore and maintain Pasadena’s connections with trails in the Angeles National Forest and regional trail systems.</p> <p>Open Space Goal 3: Preserve, Restore and Maintain the Eaton Canyon Corridor & the Arroyo Seco.</p>	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Chapter 8.52 (City Trees and Tree Protection Ordinance).</p> <p>Chapter 8.52 (City Trees and Tree Protection Ordinance). This chapter is established to protect mature trees in the City for aesthetics, environmental, and economic benefits to the city. General standards include the following, (A)Preserve and grow Pasadena's canopy cover by protecting landmark, native and specimen trees on specified areas of private property and expanding the protection of street trees and trees on public property, (B) Safeguard the City's urban forest by providing for the regulation of the protection, planting, maintenance and removal of trees in the city, (C) Protect the visual and aesthetic character of the city, (D) Improve and enhance property values by conserving and adding to the distinctive and unique aesthetic character of the many areas of Pasadena, (E) Improve the quality of life for residents, visitors and wildlife, (F) Create favorable conditions for the protection of designated landmark, native and specimen trees, for the benefit of current and future residents of Pasadena, (G)</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 1: Preserve, restore and maintain the natural character of the Eaton Canyon Corridor and the Arroyo Seco as self-sustaining healthy ecosystems of plants and animals. Their natural character will continue to inspire people, as it has throughout time.</p> <p>Wildlife Goal 1: Protect, restore and maintain native wildlife in the city.</p> <p>Policy 1: Create, protect, restore and maintain areas of the city to support important native wildlife resources.</p> <p>Policy 2: Identify, prioritize and restore high priority habitat in open space areas.</p> <p>Policy 3: Balance urban wildlife and habitat with public health and safety.</p> <p>Policy 4: Reduce attractive nuisances for wildlife.</p> <p>Native Plants Goal 1: Protect, restore and maintain areas of the city containing important native vegetation resources.</p> <p>Policy 1: Create and restore historic native plant communities in open space areas.</p> <p>Policy 2: Encourage use of native plants in public and private landscapes.</p> <p>Policy 3: Provide public education programs regarding the benefits of native vegetation and plants in open space and developed areas of the city.</p> <p>Habitat Connectivity Goal 1: Protect important open space and habitat linkages.</p> <p>Policy 1: Identify, prioritize and protect open space corridors.</p> <p>Policy 2: Coordinate and partner with adjacent land managers to identify and protect critical wildlife linkages.</p> <p>Policy 3: Develop strong protection measures for the most critical wildlife corridors.</p> <p>Urban Forest Goal 1: Protect and enhance Pasadena’s trees on public and privately owned land.</p> <p>Policy 1: Increase the number of trees in the City to diminish the urban heat sink, and improve air quality.</p> <p>Policy 2: Continue with citywide tree replacement planting program to replace street trees as they meet their life expectancy.</p> <p>Policy 3: Increase tree canopy coverage by 5 percent by 2020 ensuring equitable distribution throughout all neighborhoods in the City.</p> <p>Environmental Quality, Conservation & Sustainable Use Practices Goal: Establish Pasadena as a national and international leader on energy and water conservation and environmental stewardship efforts, including air quality protection, energy efficiency requirements, renewable energy standards, natural resource conservation, and greenhouse gas emission standards in the areas of energy, water, air and land.</p> <p>Policy 1: Protect and conserve natural resources.</p> <p>Policy 2: Improve the quality of the natural environment through increased conservation and sustainable practices.</p> <p>Policy 3: Improve the quality of the urban environment through increased conservation and sustainable practices.</p> <p>Policy 4: Increase public, private, and governmental awareness of the natural environment and environmental health.</p>	<p>Maintain and enhance the general health, safety and welfare of the city and its residents by assisting in counteracting air pollution and in minimizing soil erosion and other related environmental damage, (H) Protect and maintain healthy trees in the land use planning processes as set forth herein, (I) Establish procedures and practices for fulfilling the purposes of this city tree and tree protection ordinance. (Ord. 6896 § 2 (part), 2002)</p>	
Pomona	Conservation Element:	Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Section .5809-23 (Oak Tree Preservation) and Section 74-314 (Applicability).	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 7E.G2: Protect special status species and their supporting habitats within Pomona, including species that are state or federally listed as endangered, threatened or rare.</p> <p>Goal 7E.G3: Preserve critical habitat areas and sensitive species.</p> <p>Goal 7E.G4: Conserve wildlife ecosystems and sensitive habitat areas in the following order of protection preference: 1) avoidance, 2) on-site mitigation and 3) off-site mitigation.</p> <p>Goal 7E.G5: Preserve open space essential for the conservation of Pomona’s biological resources.</p> <p>Goal 7E.G6: Protect the natural environment, including wildlife, from destruction during new construction or redevelopment within Pomona.</p> <p>Goal 7E.G7: Recognize areas of overlapping jurisdiction with respect to biological resources, such as Los Angeles County’s Significant Ecological Area, and coordinate the City’s actions with efforts of surrounding cities, agencies and Los Angeles County.</p> <p>Policy 7E.P2: Contribute to regional goals of conserving wildlife ecosystems, sensitive habitat areas, and undeveloped land by promoting a more efficient pattern of development within the City.</p> <p>Policy 7E.P3: Preserve, as open space, those lands that are identified, through environmental review, as sensitive habitat areas. Require setbacks to development as buffer areas, as appropriate.</p> <p>Policy 7E.P4: Protect natural vegetation in parks, open spaces, and scenic areas as wildlife habitat, to prevent erosion and to serve as noise and scenic buffers.</p> <p>Policy 7E.P5: Work with county, state and federal agencies to ensure that development within the City of Pomona does not substantially affect state or federally listed rare, endangered or threatened species or their habitats. Require assessments of biological resources prior to approval of any development in or within 300 feet of ecologically sensitive areas.</p> <p>Policy 7E.P6: Ensure that lighting from new development adjacent to sensitive habitat, including in Phillips Ranch, Westmont Hill, Mountain Meadows and Ganesha Hills, minimizes nighttime lighting on these sensitive habitat areas.</p> <p>Policy 7E.P7: Coordinate with Los Angeles County to protect the East San Gabriel Valley Significant Ecological Area (SEA #6). Develop local regulations to protect areas within and adjacent to SEA #6 and adjacent SEAs such as Buzzard Peak-San Jose Hills SEA, including the possibility of identifying the East San Gabriel Valley SEA area with an overlay district in the Zoning Ordinance.</p> <p>Policy 7E.P8: Consider the most recent annual report on open space conservation in planning and evaluating projects in areas with regionally significant open space resources, including Bonelli Regional Park, East San Gabriel Valley SEA, and others, and ensure consistency with the open space conservation policies and goals of the SCAG Regional Comprehensive Plan.</p> <p>Policy 7E.P9: Ensure that construction adjacent to open canyon areas is sensitive to the natural environment. Preserve to the fullest extent possible the natural topography and vegetation.</p> <p>Policy 7E.P11: Prior to development of areas with drainage features such as ponds, detention</p>	<p>Section .5809-23 (Oak Tree Preservation) applies to Oak trees of all species that have a diameter greater than eight (8) inches as measured 4.5 feet above the mean natural grade, are located outside of designated Historic Districts and Historic Landmarks and have not been designated as Specimen Trees. Such Oak trees may be located on either public or private property. (Ord. No. 4076, § 2.)</p> <p>Section 74-314 (Applicability) of Division 2 (New Developments and Redevelopment Projects Provisions states that development projects subject to city conditioning and approval for the design and implementation of post-construction controls to mitigate stormwater pollution prior to completion of the project(s) include:</p> <p>9. New development projects located in or directly adjacent to, or discharging directly to the proposed significant ecological area ("SEA") which will:</p> <p>a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>b. Create two thousand 2,500 square feet or more of impervious surface area; and</p> <p>11. Redevelopment projects located in or within 200 feet of, or discharging directly to a significant ecological area (SEA) where the development will:</p> <p>a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>b. Create 2,500 square feet or more of impervious surface area.</p> <p>(Ord. No. 4185, § 1, 6-2-2014)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>basins, or wetlands, a site specific investigation shall be conducted to define the extent of drainage features, determine wetland permit requirements, and propose measures to mitigate any impacts on the resources.</p> <p>Policy 7E.P12: Conduct presence/absence biological surveys for sensitive plant and animal species in during the appropriate time of year and time of day in natural areas prior to any construction activities proposed adjacent to or within natural areas. If no special status species are detected during these surveys, then construction-related activities may proceed. If listed special status species are found within the construction zone, then avoid these species and their habitat or consult with U.S. Fish and Wildlife Service and/or California Department of Fish and Game prior to the commencement of construction.</p> <p>Policy 7E.P13: Conduct nesting bird surveys prior to any construction activities, including projects proposed to remove/disturb native and ornamental landscaping and other nesting habitat for native birds during bird breeding season from March 1 through August 31 (as early January 1 for some raptors). If no nesting birds are detected during these surveys, then construction-related activities may proceed. Active nests within and adjacent to the construction zone should be avoided and provided a minimum buffer as determined by a biological monitor (CDFW recommends a 300 foot nest avoidance buffer or 500 feet for all active raptor nests) or consult with the U.S. Fish and Wildlife Service and/or California Department of Fish and Wildlife prior to the commencement of construction.</p>		
Rosemead	<p>Resource Management Element:</p> <p>Goal 2: Increase greenspace throughout Rosemead to improve community aesthetics, encourage pedestrian activity, and provide passive cooling benefits.</p> <p>Policy 2.1: Increase landscaping and tree plantings along all major arterials, including Valley Boulevard, Garvey Avenue, San Gabriel Boulevard, and Del Mar Avenue.</p> <p>Policy 2.3: Require new developments to incorporate creative and effective landscaping into the overall site plan of proposed projects.</p> <p>Policy 2.4: Maintain a coordinated City street tree program for all areas of Rosemead.</p> <p><i>Implementation Actions:</i></p> <p>Goal 2: Increased greenspace throughout Rosemead to improve community aesthetics, encourage pedestrian activity, and provide passive cooling benefits.</p> <p>Action 2.1: Prepare an inventory and database of all street trees in the City.</p> <p>Action 2.2: Create a Street Tree Master Plan to guide the planting and maintenance of street trees in the City.</p> <p>Action 2.4: Consider adopting a tree protection and replacement ordinance, e.g., requiring that trees larger than a specified diameter that are removed to accommodate development must be replaced at a set ratio.</p>	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Chapter 17.104 (Oak Tree Preservation).</p> <p>Chapter 17.104 (Oak Tree Preservation) is established to recognize oak trees as significant historical, aesthetic and ecological resources and to create favorable conditions for the preservation and propagation of this unique irreplaceable plant heritage for the benefit of the current and future residents of the City. General provisions include A) Tree preservation plans, which are required as a part of any application is filed for a conditional use permit for commercial development, tentative tract map, discretionary site plan and design review, or minor land division concurrently a tree preservation plan shall be submitted showing all trees. (Ord. No. 931, § 5 (Exh. A), 10-22-13)</p>	No other applicable ordinances were identified.
San Dimas	<p>Conservation Element:</p> <p>Goal CN-1: Manage and conserve San Dimas' natural resources which contribute and enhance the quality of life.</p>	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Chapter 13.36 (Community Tree Management), Chapter 18.542 (Specific Plan NO. 25), Chapter 18.162 (Tree Preservation), Subchapter</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal CN-3: Manage and conserve San Dimas' water resources to maintain a high level of quality and sufficient quantity to its citizens.</p> <p>Objective 3.1: Protect the remaining natural watersheds and ground water with open space systems coordinated with multiple use flood plain management.</p> <p>Policy 3.1.1: Retain flood control areas in their natural state, where possible as passive open space for habitat preservation, viewing, and recreation.</p> <p>Implementation Measure a: The City shall develop standards, special requirements, and revise the City's zoning ordinance and conservation overlay zones where necessary, to protect natural resources within areas to be preserved or developed. Specific sections shall address fences which impact wildlife habitats and corridors.</p> <p>Land Use Element:</p> <p>Goal L-2: preserve the integrity of the foothills, including the: northern foothills, puddingstone hills and way hill.</p> <p>Objective 2.1: Protect the identity of prominent ridgelines and canyons with significant stands of trees by directing development on slope areas within the foothills.</p> <p>Goals L-10: development of the northern foothills area shall maximize preservation of the natural environment, recognize the opportunities and constraints that the land imposes, and accommodate such development as can be designed to minimize impacts on the natural environment and protect public health and safety.</p> <p>Policy 10.2.7: 10.2.7 Clustered development is encouraged as a means of preserving the natural appearance of the hillside and maximizing the amount of open space. Under this concept, dwelling units are grouped in the more level portions of the site, while steeper areas are preserved in a natural state. The effect of permitted clustering is to enhance the environmental sensitivity of a development project, and facilitate the permanent protection of key features of the natural environment, such as steep slopes, biological habitats, ridgelines, and scenic areas, including their retention protected open space areas. Clustering is not to be used to increase the overall density of an area beyond that which is otherwise permitted by the General Plan and applicable zoning regulations, nor is clustering to be used to create suburban style subdivisions within the Northern Foothills area.</p> <p>Objective 10.4: New development shall be designed so as to maximize the permanent reservation of open space, and to minimize the loss of biological resources.</p> <p>Policy 10.4.3: Development projects are to be designed to protect habitat values and to preserve significant, viable habitat areas and habitat connections m their natural condition.</p> <p>Policy 10.4.4: Within proposed developments, primary emphasis is to be placed on protecting the integrity of habitats and habitat linkages.</p> <p>Policy 10.4.5: Within occupied habitat areas of rare, threatened, or endangered species, disturbance of protected biotic resources is prohibited.</p> <p>Policy 10.4.6: Within riparian areas, wetland areas, and coastal sage scrub habitats, the vegetative resources which contribute to habitat carrying capacity (vegetative diversity, faunal resting areas, foraging areas, and food sources) should be preserved in place or replaced so as to not result in a measurable reduction in the reproductive capacity of sensitive biotic resources.</p>	<p>18.12.020 (Uses Permitted) of Chapter 18.124 (Open Space Zone (OS)), and Subchapter 14.13.050 (New Development and Redevelopment Project Provisions Applicability).</p> <p>Chapter 13.36 (Community Tree Management) is established to protect, preserve, and enhance community trees. The chapter discusses permits (Subchapter 13.36.050), prohibited activities and conditions (Subchapter 13.36.060), and appeals (Subchapter 12.36.090). (Ord. 1163 § 1, 2006)</p> <p>Chapter 18.542 (Specific Plan NO. 25) Article III (Development Standards) establishes the standards of all residential and open space land uses within the specific Plan Area. Within Specific Plan NO. 25 all development proposals shall be designed to protect habitat values and preserve significant, viable habitat areas and connections in their natural state and shall comply with the following standards.</p> <p>A. Within proposed developments, primary emphasis is to be placed on protecting the integrity of habitats and habitat linkages.</p> <p>B. Within occupied habitat areas of rare, threatened or endangered species, disturbance of protected biotic resources is prohibited.</p> <p>C. Within riparian areas, wetland areas and coastal sage scrub habitats, the vegetative resources which contribute to habitat carrying capacity (vegetative diversity, faunal resting areas, foraging areas, and food sources) shall be preserved in place or replaced so as to not result in a measurable reduction in the reproductive capacity of sensitive biotic resources.</p> <p>D. Within habitats of plants listed by the California Natural Diversity Data Base (CNDDB) as “special” or “of concern,” new development shall not result in a reduction in the number of these plants, if they are present.</p> <p>E. The use of motorized off-road vehicles shall be prohibited, and off-trail activities shall be limited to those that are consistent with protection of environmental values.</p> <p>F. The establishment of buffer zones adjacent to areas of preserved biological resources shall be required. Such buffer zones shall be adequate in width so as to protect biological resources from grading and construction activities, as well as from the long-term use of adjacent lands. The landscape design adjacent to areas of preserved biological resources shall be designed so as to avoid invasive species which could negatively impact the value of the preserved resource.</p> <p>(Ord. 1106 § 1, 1999)</p> <p>Chapter 18.162 (Tree Preservation) establishes that all construction shall preserve and protect the health of trees to remain in place, to be relocated, and new trees planted to replace those removed and any trees adjacent to the subject property in accordance with the following measures (Subchapter 18.162.110):</p> <p>A. All trees to be saved shall be enclosed by an appropriate construction barrier, such as chain link fence or other means acceptable to the director of development services, prior to the issuance of any grading or building or building permit and prior to commencement of work. Fences are to remain in place during all phases of construction and may not be removed without the written consent of the director of development services, until construction is complete;</p> <p>B. Any tree which is adjacent to the subject property and may be potentially impacted by persons or activity on the subject property shall be protected pursuant to the provisions of Section 18.162.110. It shall be the responsibility of the agent of the subject property to obtain the written permission from adjacent property owners prior to action for the protection of trees on adjacent property as required by Section 18.162.110;</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 10.4.7: Within habitats of plants listed by the California Natural Diversity Data Base (CNDDB) as "special" or "of concern," new development shall not result in a reduction in the number of these plants, if they are present.</p> <p>Policy 10.4.9: The establishment of buffer zones adjacent to areas of preserved biological resources shall be required. Such buffer zones shall be adequate in width so as to protect biological resources from grading and construction activities, as well as from the long-term use of adjacent lands. The landscape design adjacent to areas of preserved biological resources shall be designed so as to avoid invasive species which could negatively impact the value of the preserved resource.</p> <p>Plan Proposal W: Amend the land use designation of all privately owned lands within the Northern Foothills that are currently designated Single Family Residential to Very Low Estate, with the exception of Terrebonne tract, to "Northern Foothills." Retain existing "Park" and "Open Space" land use designations for the National Forest, Camp Glen Rocky, Horsethief Canyon Park, San Dimas Wash, San Dimas Canyon Golf Course, and other publicly owned properties. Amend the land use designation of the privately owned property (APN 8678-030-301) within the boundaries of the National Forest to "Northern Foothills."</p>	<p>C. No substantial disruption or removal of the structural or absorptive roots of any tree shall be performed;</p> <p>D. No fill material shall be placed within the drip line of any tree;</p> <p>E. No construction, including structures and walls, that disrupts the root system shall be permitted. As a guideline, no cutting of roots should occur within the drip line of the tree as measured at ground level. Actual setbacks may vary to meet the needs of individual tree species as determined by an arborist or landscape architect. Where some root removal is necessary, the tree crown may require thinning to prevent wind damage;</p> <p>F. Topping and/or severe pruning of trees that results in significant damage to the tree to the point that reasonable future growth may be limited, as determined by a Certified Arborist, shall constitute a tree removal and is subject to the penalties outlined in Section 18.162.130; and</p> <p>G. The director of development services may impose such additional measures determined necessary to preserve and protect the health of trees to remain on site. (Ord. 1165 § 8, 2006)</p> <p>Subchapter 18.12.020 (Uses Permitted) of Chapter 18.124 (Open Space Zone (OS)) establishes uses permitted in the OS zone to include the following:</p> <p>A. General Uses.</p> <p>1. Open space for the preservation of natural resources including, but not limited to, areas necessary for the preservation of plant and animal life, including habitat for fish and wildlife species, channels, creeks, lakes, reservoirs, banks of channels and creeks, lakeshores and watershed lands.</p> <p>2. Open space for the managed production of resources, including, but not limited to, forest land and agricultural lands; areas required for recharge of groundwater basins; and areas containing natural mineral deposits.</p> <p>3. Open space for outdoor recreation including, but not limited to, areas of outstanding scenic historic and cultural values; areas particularly suited for park and recreation purposes; and areas which serve as links between major recreation and open space reservations, including utility easements, banks of channels and creeks, trails and scenic highway corridors.</p> <p>4. Open space for public health and safety including, but not limited to, areas which require special management or regulations because of hazardous or special conditions such as earthquake fault zones, unstable soil areas, floodplains, watershed, areas presenting high fire risk, areas required for the protection of water quality and water reservoirs and areas required for the protection and enhancement of air quality. (Ord. 565 § 1, 1977; Ord. 449 § 1, 1973; Ord. 37 § 200.1, 1961)</p> <p>Subchapter 14.13.050 (New Development and Redevelopment Project Provisions Applicability) declares new development and redevelopment projects subject to city conditioning and approval for the design and implementation of post-construction controls to mitigate stormwater pollution prior to completion of the project(s) include the following:</p> <p>(10) Projects located in or within two hundred feet of, or discharging directly to a significant ecological area (SEA), such as San Dimas Canyon/San Antonio Wash where the development will:</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>b. Create two thousand five hundred square feet or more of impervious surface area.</p>	
San Gabriel	<p>Environmental Resources:</p> <p>Goal 8.1: Goal Create a verdant City by maintaining significant trees, requiring developers to plant additional trees, and promoting the healthy maintenance of trees.</p> <p>Target 8.1.1: The City shall work to plant additional trees throughout San Gabriel.</p> <p>Action 8.1.1.1: Strive to plant 10,000 new trees by the year 2010.</p> <p>Action 8.1.1.2: Work with non-profit organizations to obtain grants that will assist in implementing a citywide tree planting program.</p> <p>Action 8.1.1.3: Work with non-profit organizations to help plant street trees.</p> <p>Action 8.1.1.4: Celebrate Arbor Day by: allowing all City Employees to participate in a citywide tree planting exercise; working with local school and other nonprofit organizations to plant street trees; offering classes to local residents on the proper manner in which to trim trees; and award local property owners and designers for superb landscape design.</p> <p>Goal 8.5: Restore the lost environmental value of San Gabriel’s waterways – the Los Angeles County Flood Control channels (Alhambra Wash, Rubio Wash) and the San Gabriel River.</p> <p>Target 8.5.1: Investigate the feasibility of using the flood control channels for functional and/or passive open space.</p> <p>Target 8.5.2: Protect the flood control channels from enclosure by developers.</p> <p>Target 8.5.3: Work with the San Gabriel Mountains and River Conservancy, and other interested agencies, to restore the San Gabriel River to a more environmentally healthy state.</p>	No applicable municipal codes were identified.	No other applicable ordinances were identified.
Temple City	<p>Natural Resources Element:</p> <p>Goal NR 5: Conservation and Protection. Conserve, protect, and enhance Temple City’s natural environment.</p> <p>Policy NR 5.1 A Greener City. Maintain and protect the City’s urban forest which provides shade and avian habitat, sequesters carbon monoxide emissions, and supports pedestrian activity.</p> <p>Policy NR 5.2 Tree Preservation. Encourage the on-site preservation or off-site relocation of all mature and native trees in good health in all new development or renovation projects, as feasible.</p> <p>Policy NR 5.3 Enhanced Development Landscape. Encourage business and non-residential property owners to incorporate appropriate landscaping into surface parking lots to support wildlife habitat, shade, and the sequestration of carbon monoxide emissions.</p> <p>Policy NR 5.4 Landscaping. Require landscaping that minimizes the need for herbicides and pesticides and provides food, water, habitat, and nesting sites for birds and other beneficial insects that help maintain the environmental resources and restore the larger ecosystem.</p>	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Article D (Tree Preservation and Protection).</p> <p>Article D (Tree Preservation and Protection) provides full power and authority to the city over all trees, plants and shrubs located within street rights of way, public parks and public areas of the city; and to trees and shrubs located on private property that constitute a hazard or threat to the community at large. (Ord. 13-983) Under Article D Section 3-4D-8 (Protection of Trees) no person shall:</p> <p>A. Plant, remove, trim, prune, spray or cut above or below ground any tree or shrub growing in the public right-of-way without first obtaining a permit to do so from the Director pursuant to section 3-4D-10 of this article. A permit shall not be required to perform the routine maintenance of parkway trees required by subsection 3-4D-7B of this article.</p> <p>B. Remove, injure or misuse any guard or device placed to protect any tree or shrub growing in the public right-of-way of the City.</p> <p>C. Attach or keep attached to any tree growing in the public right-of-way any rope, wire, nail, tack, staples, advertising posters or other contrivance whatsoever.</p> <p>D. Deposit, discharge, release, or apply, or allow any agent, employee, invitee, or licensee allowed to enter upon his property to deposit, discharge, release or apply, any hazardous material or toxic substance upon the ground that lies within the drip line of any tree or shrub growing in the public right-of-way.</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy NR 5.5 Native Plant Use. Require the use of native and drought tolerant plant materials, including native tree species, in public and private landscaping and revegetation projects.</p> <p>Goal NR 6: Conservation and Protection. Conservation and protection of Temple City’s groundwater resources.</p> <p>Policy NR 6.2 Flood Control Channels. Work with LADPW, to explore the removal of the concrete lining along the Eaton Wash and Arcadia Wash where flood protection is not compromised allowing for greater groundwater recharge and wildlife habitat.</p>	<p>E. Construct, place or maintain any structure or thing that impedes the free access of water or air to a public tree.</p> <p>F. Place or pile building material, equipment or other substances around any public tree.</p> <p>G. Construct retaining walls, fences, or similar improvements which impede the planting or maintaining of public trees or affect the growth of public trees.</p> <p>H. Interfere, or cause any person to interfere, with employees of the City or contractors employed by the City, who are engaged in planting, maintaining, treating, removing or replacing any public tree or shrub or removing any material which is likely to cause injury to the tree or shrub.</p> <p>I. Change the grade around any public tree.</p> <p>(Ord. 13-983)</p>	
Walnut	<p>Land Use and Community Design Element:</p> <p>Policy LCD-5.4: Healthy City. Develop health-focused programs that weave together the goals, policies, and strategies in all Elements, such as complete streets policies, sustainability, and suburban greening/urban forest.</p> <p>Goal LCD-10: Development that respects the natural environment of Walnut and preserves the scenic quality of hills, ridgelines, and creek areas.</p> <p>Conservation, Open Space, and Recreation Element:</p> <p>Hoal COR-1: Open spaces that are protected and managed for current and future generations to enjoy.</p> <p>Policy COR-1.1: Open Space Resources. Preserve and protect natural habitats, creeks, hillside areas for use by wildlife, for education, and for residents’ passive enjoyment. Consider acquiring vacant parcels that can contribute to the network of open space for these purposes.</p> <p>Goal COR-2: Intact natural habitats and protected open spaces that support wildlife.</p> <p>Policy COR-2.1: Compatible Activities. Limit recreation in natural areas to activities compatible and appropriate with preserving natural vegetation, such as hiking and limited horseback riding.</p> <p>Policy COR-2.2: Habitat. Protect and enhance natural habitat areas that are vital for wildlife, including Coastal Sage Scrub for the California Gnatcatcher.</p> <p>Policy COR-2.3: Open Space Linkages. Provide additional linkages between open space in order to accommodate wildlife movement.</p> <p>Policy COR-2.4: Preservation. Require identification on all new project site plans of sensitive areas that may be candidates for preservation.</p> <p>Policy COR-2.5: Ecological Reserve and Sanctuary. Coordinate with Mt. San Antonio College and Cal Poly Pomona to preserve, enhance, and promote the Mt. SAC Wildlife Sanctuary and the Voorhis Ecological Reserve.</p> <p>Policy COR-2.6: Fencing. Confine fencing on hillside property to the area around a building rather than around an entire site to allow for the migration of wild animals.</p> <p>Goal COR-3: Preserved and rehabilitated riparian areas and creeks.</p> <p>Policy COR-3.1: Preserve and Enhance. Preserve and enhance existing waterways and natural riparian areas to achieve natural states that support wildlife and that provide flood control and groundwater recharge functions.</p>	<p>Municipal codes related to biological resources within the City that are relevant to the Plan Area can be found in Article V (Oak/Walnut Tree Preservation), and Section 5.08.130 (Stormwater pollution control measures for development planning and construction activities) of Chapter 5.08 (Stormwater and Urban Runoff Pollution Control).</p> <p>Article V (Oak/Walnut Tree Preservation) establishes the City tree policy (6.52.250) which requires the preservation of all healthy trees unless compelling reasons justify the removal of such trees. This policy shall apply to the removal, pruning, cutting and/or encroachment into the protected zone of the trees. The Community Development Department shall have the primary and overall responsibility to administer, evaluate and monitor this policy to assure strict compliance. Section 6.52.290 (Permit required) describes the permitting process, Section 6.52.340 (Standards for performance of permitted work) describes general information about the ordinance, tree maintenance and pruning operations, and phases of construction, including grading.</p> <p>Section 5.08.130 (Stormwater pollution control measures for development planning and construction activities) declares development and redevelopment projects, termed “planning priority projects,” shall comply with the requirements of this section and include the following:</p> <p>9. Projects located in or directly adjacent to, or discharging directly to an Environmentally Sensitive Area (ESA), where the development will:</p> <p>a. Discharge stormwater runoff that is likely to impact a sensitive biological species or habitat; and</p> <p>b. Create 2,500 square feet or more of impervious surface area.</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy COR-3.3: Natural Vegetation. When development is proposed near natural vegetation, encourage the landscaping to be consistent with the palette of vegetation found in the natural vegetation.</p> <p>Policy COR-3.7: Habitat Restoration. Work with nonprofit groups and pursue grant funding to help restore and rehabilitate degraded natural habitat and implement conservation measures that protect local ecosystems.</p> <p>Goal COR-4: A healthy and vibrant community forest.</p> <p>Policy COR-4.1: Incentives. Provide incentives and adopt policies to encourage a healthy and abundant tree canopy Citywide.</p> <p>Policy COR-4.2: Planting Program. Prioritize the planting of street trees in new development projects, and ensure that any dying or diseased tree within a public right-of-way is quickly replaced with healthy and appropriate specimens.</p> <p>Policy COR-4.3: Private Tree Preservation. Implement effective programs that provide protection for mature trees on private properties.</p> <p>Policy COR-4.4: California Black Walnut/Oak Trees. Encourage the preservation, maintenance, and protection of California Black Walnut/Oak Trees, as well as other important native tree species Citywide.</p>

		<p>construction. Fences may not be removed without obtaining written authorization from the planning director.</p> <p>(c) No structure or impervious paving shall be located within the dripline or within a six (6) foot radius of the trunk perimeter, whichever is greater, of any significant tree or heritage tree. A tree with a caliper of thirty (30) inches or more shall require additional space as determined by the planning director, superintendent of maintenance operations, or arborist.</p> <p>(d) Branches that could be injured by vehicles or that interfere with the development activity may be pruned to the satisfaction of the planning director, superintendent of maintenance operations, or arborist.</p> <p>(e) No compaction of the soil within the dripline of any tree shall be undertaken.</p> <p>(f) No construction, including structures and walls, that disrupts the root system, shall be permitted. As a guideline, no cutting of roots should occur within a distance equal to three and one-half (3½) times the trunk diameter, as measured at ground level. Actual setback may vary to meet the needs of individual tree species as determined by the planning director, superintendent of maintenance operations, or arborist. Where some root removal is necessary, the tree crown may require thinning to prevent wind damage.</p> <p>(g) The required landscape and irrigation plan shall be tailored per the needs of retained trees, as specified by a tree arborist. Trees of the oak family must be on a separate clock.</p> <p>(h) The planning director may impose additional measures determined necessary to preserve and protect the health of trees to remain, relocated trees, and new trees planted to replace those removed.</p> <p>(Ord. No. 1864, § 2, 11-12-90; Ord. No. 2030, § 4, 4-20-99)</p> <p>Sec. 24-22. - Permission required for planting, maintaining, and removal of street trees. Except as otherwise provided in this article and Chapter 26, Article VI, Division 8, it shall be unlawful for any person to plant, maintain (except watering), or remove any street trees without prior written permission from the director in accordance with section 24-18 and when applicable section 26-293(c). The director may grant permission subject to the condition that any removed street tree be replaced by a tree in accordance with section 24-18 and when applicable section 26-193(c). No such permission shall be valid for a period longer than thirty (30) days after its date of issuance.</p> <p>(Ord. No. 1714, § 1, 4-14-86; Ord. No. 1864, § 2, 11-12-90)</p>	

3.4.3 Impact Assessment

3.4.3.1 Significance Criteria

Appendix G of the State CEQA guidelines was reviewed to determine if the Plan would result in significant impacts related to biological resources. These guidelines serve as the threshold of significance for determining impacts to biological resources and consider if the Plan would:

- 4(a) *Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW, USFWS, or NMFS?*
- 4(b) *Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the CDFW or USFWS?*
- 4(c) *Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?*
- 4(d) *Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?*
- 4(e) *Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?*
- 4(f) *Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?*

3.4.3.2 Methodology

The evaluation of impacts on biological resources within the Plan Area was conducted by first determining the likelihood of the presence or absence of biological resources, and then conducting a qualitative analysis of the potential for impacts based on project activities. Project impacts that are considered permanent are construction activities that may have permanent effects on biological resources, such as the removal of existing vegetation, grading and soil disturbance, and loss of resources (e.g., mortality of plants or wildlife, reduction or removal of aquatic resources or movement corridors). Temporary impacts are those that are temporary in nature and whose effects would cease following the completion of construction, such as noise and vibration disturbances, equipment staging, and temporary clearing of vegetation that would be replaced following construction activity. The assessments of a special-status species potential to occur within the Plan Area were conducted through a high-level, qualitative analysis and are not a final project-level determination. Each individual project will need to include site-specific desktop and/or field reviews and analyses to conclusively determine if suitable habitat is present or absent for all special-status species potentially occurring within the Plan Area.

3.4.3.3 Plan Impacts

3.4.3.3.1 4(a). Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW, USFWS, or NOAA Fisheries?

3.4.3.3.1.1 Greenway Paths and Greenway Amenities + Safe Crossings + Stormwater Management

Construction

Less than Significant with Mitigation. Construction of the greenway paths and greenway amenities, safe crossings, or stormwater management features would occur within the District ROW and adjacent parcels, and would typically involve mobilization, ground disturbance (including excavation and grading), construction equipment operation, and temporary facilities such as assembly areas, parking areas, and staging and laydown areas for stockpiling of materials. Heavy equipment used for construction could include excavators, graders, rollers, concrete trucks, pavers, and water trucks. Although the District's ROWs are typically maintained for access via foot and, in some cases, light duty vehicles, some vegetation clearing may be required for site preparation of the greenway path and larger greenway amenities such as restrooms.

Construction activities associated with greenway paths, amenities, safe crossings or stormwater management could result in direct and indirect impacts on special status plant and wildlife species. Based on the background literature review, a total of 28 special status species were identified as having more than a low potential to occur within the Plan Area in the vicinity of Plan Area washes, including 10 plant species and 18 wildlife species. Generally, the Plan components would aim to be constructed in ruderal areas within the District ROW, which do not support high quality habitat for native plants and wildlife species. However, a site-specific evaluation would be conducted by a qualified biologist to determine the specific potential for special status species to occur at the specific location for individual projects proposed under the Plan and inform the specific biological surveys required (**MM BIO-1: Desktop Review and Biological Surveys**). Depending on the results of the desktop review, biological surveys shall be implemented as deemed necessary by the qualified biologist. Construction could have a substantial adverse impact, either directly or indirectly through habitat modifications, on special status plant and wildlife species, as described below.

Special Status Plants

A total of 10 special status plant species has a moderate or high potential to occur within the Plan Area. Construction could directly affect special status plant species that have a potential to occur within the Plan Area through the permanent and temporary removal of suitable habitat, including wetland, riparian, chaparral, and scrub habitats, if these communities are present within the top of bank or the landside portion of the District ROW. Potential impacts to jurisdictional waters such as wetlands and riparian areas would be subject to permitting under the CWA and/or Porter-Cologne Water Quality Control Act and/or California Fish and Game Code, as described above in Section 3.4.2, Regulatory Setting, which may result in required compensatory mitigation to address removal of these habitats. Loss of suitable and occupied habitat could result in reduced available habitat to support special status plant species in the region. If temporarily disturbed construction areas are not restored to allow suitable habitat to reestablish, then individuals and populations of special status plant species may not occur in

areas that were previously occupied. Direct impacts (e.g., removal of suitable habitat or direct injury and/or mortality) on special status plant species could occur from construction including grading, excavation, soil stockpiling, vegetation or tree trimming and/or removals, or other ground disturbance activities. Heavy equipment and increased human presence during construction could result in crushing or trampling of plants, if not protected. A desktop review and biological surveys would be conducted as needed (**MM BIO-1: Desktop Review and Biological Surveys**) to determine if a construction site is located within or adjacent to habitat which supports sensitive plant species. If present, MM BIO-1 would require avoidance of impacts during construction, to the extent feasible. If impacts cannot be avoided, under State regulations, project proponents would be required to coordinate with CDFW to establish any appropriate buffer zones to protect sensitive species or critical habitat subject to CDFW jurisdiction. To reduce potentially significant impacts, biological monitoring would occur during construction (**MM BIO-5: Conduct Biological Monitoring**) and monitors would have stop work authority to protect resources onsite. Additionally, prior to the start of construction, a Worker Environmental Awareness Program would be implemented (**MM BIO-6: Implement a Worker Environmental Awareness Program**), which provides training that would cover the appropriate protocol for protection of any sensitive plant species within or adjacent to the construction footprint. Therefore, impacts would be less than significant with mitigation.

Indirect impacts may include dust, erosion, chemical spills, trash and debris, and the introduction of invasive, non-native plant species. Construction equipment, vehicles, and imported materials used during construction have the potential to introduce and spread invasive non-native plant species into the work area. Non-native plant species can often colonize areas and outcompete special status plant species, if present, and may degrade the suitability of native habitats to support special status species. **MM BIO-7: Implement Weed Abatement Measures** would require implementation of weed abatement measures during construction to prevent degradation of habitat which supports sensitive species and **MM BIO-8: Construction BMPs to Protect Wildlife** would ensure construction BMPs are in place to minimize the spread of invasive plant species from construction. Additionally, as described in Section 3.3, Air Quality, compliance with SCAQMD Rule 403 would ensure that dust control measures are implemented to prevent movement offsite into adjacent habitat areas or waters. Therefore, impacts would be less than significant with mitigation.

Special Status Invertebrates

Two special status invertebrates were determined to have a moderate or high likelihood to occur within the Plan Area, including Crotch bumble bee (*Bombus crotchii*) and monarch butterfly (*Danaus plexippus*). Direct impacts, including removal of suitable habitat or direct injury and/or mortality, on these species could occur as a result of vegetation and tree trimming or removal. No CNDDDB occurrences of overwintering populations of monarch butterflies were located within the Plan Area, but milkweeds species which monarchs rely on can commonly occur along roadside and other disturbed areas. If suitable habitat for this species were present within the construction footprint, there is potential for direct impacts to occur. Suitable scrub habitat is also located within the Plan Area and direct impacts could result if Crotch bumble bees were present at the time of construction. A desktop review and biological surveys would be conducted as needed (**MM BIO-1: Desktop Review and Biological Surveys**) to determine if a construction site is located within or adjacent to habitat which supports sensitive bumble bee or butterfly species. If present, MM BIO-1 would require avoidance of impacts during

construction, to the extent feasible. If impacts cannot be avoided, under state regulations, project proponents would be required to coordinate with CDFW to establish any appropriate buffer zones to protect sensitive species or critical habitat subject to CDFW jurisdiction. To reduce potentially significant impacts, biological monitoring would occur during construction (**MM BIO-5: Conduct Biological Monitoring**) and monitors would have stop work authority to protect resources onsite. Additionally, prior to the start of construction, a Worker Environmental Awareness Program would be implemented (**MM BIO-6: Implement a Worker Environmental Awareness Program**), which would cover sensitive species which have the potential to occur within or adjacent to the construction footprint. Therefore, impacts would be less than significant with mitigation.

Indirect impacts may include dust and the introduction of invasive, non-native plant species. Construction equipment, vehicles, and imported materials used during construction have the potential to introduce and spread invasive, non-native plant species into work areas. These invasive non-native species can outcompete native species that may support sensitive insect species, including butterflies and bees, resulting in potential significant impacts to special status invertebrates. However, implementation of weed abatement measures (**MM BIO-7: Implement Weed Abatement Measures**) during construction would prevent degradation of habitat which supports sensitive species and **MM BIO-8: Construction BMPs to Protect Wildlife** would ensure construction BMPs are in place to minimize the spread of invasive plant species from construction. Additionally, as described in Section 3.3, Air Quality, compliance with SCAQMD Rule 403 would ensure that dust control measures are implemented to prevent movement of dust and debris offsite into adjacent habitat areas or waters. Further, future projects would have proper storage onsite and cleanup of any inadvertent spills consistent with applicable regulations, as outlined in Section 3.9, Hazards and Hazardous Materials. Therefore, construction impacts would be less than significant with mitigation.

Special Status Fish

One special status fish species, arroyo chub (*Gila orcuttii*), was determined to have a moderate likelihood to occur within the watercourses located within the Plan Area. Others were determined to have a low potential or be unlikely to occur. Direct construction impacts on arroyo chub are not anticipated to result from construction of the greenway paths and greenway amenities, safe crossings or stormwater management because these facilities would not require in-water work, which has the potential to directly impact fish species. Greenway paths and greenway amenities, safe crossings, or stormwater management infrastructure would be located within the District ROW or adjacent parcels along washes and creeks but would not be constructed within these waterbodies.

Indirect impacts on special status fish due to construction activities may include dust, erosion, trash, and chemical spills. Dust and erosion adjacent to the washes and creeks could result in increased levels of sediment and turbidity, which can reduce water quality and stress fish species within the aquatic ecosystems. Increased sediment inputs can result in lethal or sublethal effects depending on the amount and duration of reduced water quality. Additionally, there is potential for chemical spills from construction equipment to enter waterways if not managed properly, which can also result in lethal or sublethal effects on fish, if present. Lastly, construction materials or trash may enter the water from adjacent work areas, which fish may ingest or become entangled in, resulting in reduced fitness or potentially lethal effects. As required by the *Design Guidelines and Standards*, litter control would require trash receptacles and debris at future project locations to be checked on a weekly basis and

emptied no less than every two weeks. **MM BIO-7: Implement Weed Abatement Measures** would require the implementation of weed abatement measures during construction to prevent degradation of habitat which supports sensitive species and **MM BIO-8: Construction BMPs to Protect Wildlife** would ensure construction BMPs are in place to minimize the spread of invasive plant species from construction. Additionally, as described in Section 3.3 Air Quality, compliance with SCAQMD Rule 403 would ensure that dust control measures are implemented to prevent movement offsite into adjacent habitat areas or waters. Further, future projects implemented under the Plan would have proper storage onsite and cleanup of any inadvertent spills consistent with applicable regulations, as outlined in Section 3.9, Hazards and Hazardous Materials. Therefore, impacts would be less than significant with mitigation.

Special Status Reptiles and Amphibians

A total of five special status reptile species were determined to have a moderate or high potential to occur within the Plan Area: southwestern pond turtle (*Actinemys pallida*), southern California legless lizard (*Anniella stebbinsi*), coastal whiptail (*Aspidoscelis tigris stejnegeri*), red-diamond rattlesnake (*Crotalus ruber*), and two-striped gartersnake (*Thamnophis hammondi*). No special status amphibians were determined to have more than a low likelihood to occur within the Plan Area. Direct effects on reptile species including injury and/or mortality and loss of suitable habitat could result from the use of heavy equipment during construction of greenway paths and amenities, safe crossings or stormwater management and increased human presence and vehicles which could damage habitat or other refuge areas for reptile species. Soil compaction and soil stockpiling could also affect reptiles that burrow in loose soils, resulting in injury or mortality. Reptiles can also become trapped in open, excavated areas or construction pipes/equipment if they are not capped properly, which may result in injury or mortality. Lastly, netting installed around erosion control materials (fiber rolls) has the potential to trap reptiles, which could also result in injury or mortality.

MM BIO-1: Desktop Review and Biological Surveys would include a desktop review and biological surveys conducted as needed to determine if a construction site is located within or adjacent to habitat which supports sensitive reptile species. If present, MM BIO-1 would require avoidance of impacts during construction, to the extent feasible. If impacts cannot be avoided, under State regulations, project proponents would be required to coordinate with CDFW to establish any appropriate buffer zones to protect sensitive species or critical habitat subject to CDFW jurisdiction. Biological monitoring would occur during construction (**MM BIO-5: Conduct Biological Monitoring**) and monitors would have stop work authority to protect resources onsite. Additionally, prior to the start of construction, a Worker Environmental Awareness Program would be implemented (**MM BIO-6: Implement a Worker Environmental Awareness Program**), which would provide training regarding the avoidance and minimization measures for biological resources within or adjacent to the construction footprint, the laws and regulations related to biological resources, and the fines and penalties for violating those laws. Construction BMPs to protect wildlife (**MM BIO-8: Construction BMPs to Protect Wildlife**) would be implemented to avoid injury or mortality from entrapment in construction equipment or materials. Therefore, impacts would be less than significant with mitigation.

Indirect impacts from construction could include an increase in invasive plant species from construction equipment and materials, which reduces the habitat suitability for reptile species. Soil compaction could reduce available loose soils for burrowing, reducing refuge habitat for reptiles. Trash and food waste left

onsite by construction workers may attract opportunistic predators to the area, which may increase predation on reptile species. Reptile species may also consume inedible trash or become entangled in trash left on site. No construction would occur at night, and therefore no light disturbance to wildlife is anticipated during construction. As part of the *Design Guidelines and Standards*, litter control would require trash receptacles and debris at future project locations to be checked on a weekly basis and emptied no less than every two weeks. **MM BIO-7: Implement Weed Abatement Measures** would require implementation of weed abatement measures during construction to prevent degradation of habitat which supports sensitive species and **MM BIO-8: Construction BMPs to Protect Wildlife** would ensure that construction BMPs are in place to minimize the spread of invasive plant species from construction. Additionally, as described in Section 3.3, Air Quality, compliance with SCAQMD Rule 403 would ensure that dust control measures are implemented to prevent movement offsite into adjacent habitat areas or waters. Further, future projects implemented under the Plan would have proper storage onsite and cleanup of any inadvertent spills consistent with applicable regulations, as outlined in Section 3.9, Hazards and Hazardous Materials. Therefore, impacts would be less than significant with mitigation.

Special Status Birds

A total of seven special status bird species were determined to have a moderate or high potential to occur within the Plan Area: burrowing owl (*Athene cunicularia*), coastal cactus wren (*Campylorhynchus brunneicapillus sandiegensis*), southwestern willow flycatcher (*Empidonax traillii extimus*), American peregrine falcon (*Falco peregrinus anatum*), yellow-breasted chat (*Icteria virens*), coastal California gnatcatcher, yellow warbler (*Setophaga petechia*), and least Bell's vireo (*Vireo bellii pusillus*).

Direct impacts from construction on special status birds, raptors, and migratory birds include disturbances to nesting birds or injury and/or mortality (which includes nest loss or failure) from unplanned damage due to construction equipment or from planned vegetation or tree trimming/removal for access and disturbances to nesting or foraging birds due to construction noise and vibration. Direct impacts to habitat could occur during construction through site grading, excavation, grubbing, staging and stockpile areas, and vehicle access. There is potential for construction of greenway paths to widen the urban areas into intact vegetation communities, which may alter movement patterns due to habitat fragmentation; however, because of the existing constrained nature of the District ROW and generally low habitat quality, the impact of habitat fragmentation due to greenway path construction is expected to be minimal. However, the permanent or temporary loss of habitat occupied by federally or state-listed bird species would be a potentially significant direct impact. Implementation of **MM BIO-1: Desktop Review and Biological Surveys** would include a desktop review and biological surveys would be conducted as needed to determine if a construction site is located within or adjacent to habitat which supports sensitive bird species. If present, biological monitoring would occur during construction (**MM BIO-5: Conduct Biological Monitoring**) and qualified biological monitor would have stop work authority to protect resources onsite. Additionally, prior to the start of construction, a Worker Environmental Awareness Program would be implemented (**MM BIO-6: Implement a Worker Environmental Awareness Program**), which would provide training regarding the avoidance and minimization measures for biological resources within or adjacent to the construction footprint, the laws and regulations related to biological resources, and the fines and penalties for violating those laws. Therefore, impacts would be less than significant with mitigation.

If construction occurs during the breeding season for passerine bird species, which is February 1 through August 31, or raptor species which extends from January 15 through September 15, active nests could be disturbed by increased human presence and noise. This could cause adults to abandon active nests during incubation, nestling, or fledgling stages, resulting in loss of eggs or developing young. Additionally, increased human presence can also attract predators and increase predation of eggs. Pre-construction nesting bird surveys would be conducted (**MM BIO-2: Pre-construction Nesting Bird Surveys**) and biological monitoring (**MM BIO-5: Conduct Biological Monitoring**) would be implemented, as needed if the surveys determine presence of nesting birds, to ensure protection of nests during construction. Burrowing owls use both natural and artificial burrows, which could be damaged due to vibration from heavy construction equipment or soil compaction which could collapse or bury the entrances to burrows. If suitable burrowing owl habitat is identified during desktop review, pre-construction burrowing surveys would be conducted (**MM BIO-3: Conduct Burrowing Owl Pre-construction Surveys**) and biological monitoring (**MM BIO-5: Conduct Biological Monitoring**) would be implemented as needed, to ensure protection of burrowing owls during construction. Therefore, impacts to sensitive bird species would be less than significant with mitigation.

Indirect effects from construction activities may include removal of nearby suitable habitat, the introduction or spread of non-native invasive plant species from equipment which could degrade existing habitat and foraging opportunities, and an increase in predation. Trash and food waste from construction could lead to an increase in avian predators or other birds which may outcompete sensitive bird species. Birds may also ingest trash or become entangled in it if left at construction sites. No construction would occur at night, and therefore no light disturbance to avian species is anticipated during construction. As part of the *Design Guidelines and Standards*, litter control would require trash receptacles and debris at future project locations to be checked on a weekly basis and emptied no less than every two weeks. **MM BIO-7: Implement Weed Abatement Measures** would require implementation of weed abatement measures during construction to prevent degradation of habitat which supports sensitive species and **MM BIO-8: Construction BMPs to Protect Wildlife** would ensure construction BMPs are in place to minimize the spread of invasive plant species from construction. Additionally, as described in Section 3.3, Air Quality, compliance with SCAQMD Rule 403 would ensure that dust control measures are implemented to prevent movement offsite into adjacent habitat areas or waters. Therefore, impacts would be less than significant with mitigation.

Special Status Mammals

Two special status bat species and one mouse were determined to have a moderate or high potential to occur within the Plan Area: northwestern San Diego pocket mouse (*Chaetodipus fallax fallax*), Townsend's big-eared bat (*Corynorhinus townsendii*), and western red bat (*Lasiurus blossevillei*). Direct effects on bat species during construction could include injury or mortality from tree trimming or removals, if required for access, which may also result in a loss of roosting habitat. Pre-construction surveys for special-status bat species would be conducted in areas which support suitable habitat (**MM BIO-4: Conduct Pre-construction Special Status Bat Surveys**). Ground disturbance activities or vegetation trimming and/or removals in or near scrub, sagebrush, and chaparral habitats, which support northwestern San Diego pocket mouse, could result in direct effects on the species (CDFW 2000). Additionally, burrowing mammal species, including northwestern San Diego pocket mouse, could be directly impacted by soil compaction which could damage excavated burrows or reduce available

burrowing habitat for daytime resting, predator escape, and care of young (CDFW 2000). Construction BMPs to protect wildlife (**MM BIO-8: Construction BMPs to Protect Wildlife**) would be implemented to avoid injury or mortality from entrapment in construction equipment or materials. A desktop review and biological surveys would be conducted as needed (**MM BIO-1: Desktop Review and Biological Surveys**), to determine if a construction site is located within or adjacent to habitat which supports sensitive mammal species. If present, **MM BIO-1: Desktop Review and Biological Surveys** would require avoidance of impacts during construction, to the extent feasible. If impacts cannot be avoided, under State regulations, project proponents would be required to coordinate with CDFW to establish any appropriate buffer zones to protect sensitive species or critical habitat subject to CDFW jurisdiction. To reduce potentially significant impacts, biological monitoring would occur during construction (**MM BIO-5: Conduct Biological Monitoring**) and monitors would have stop work authority to protect resources onsite. Additionally, prior to the start of construction, a Worker Environmental Awareness Program would be implemented (**MM BIO-6: Implement a Worker Environmental Awareness Program**) which would cover sensitive biological resources within or adjacent to the construction footprint. Therefore, impacts would be less than significant with mitigation.

Indirect effects due to construction activities could include increases in human disturbance including workers and vehicle traffic, and noise within adjacent habitat areas, which may result in disruption of foraging or roosting, especially if located near riparian habitat which supports special status bat species. Townsend's big-eared bats forage in riparian habitat and western red bats forage and roost in riparian habitat (CDFW 2000). Food waste left behind from construction may attract opportunistic predators to the area (e.g., raptors, raccoons, feral cats) which may result in increased predation on small mammal species. No construction would occur at night and therefore no nighttime light disturbance to special status mammal species is anticipated during construction. As part of the *Design Guidelines and Standards*, litter control would require trash receptacles and debris at future project locations to be checked on a weekly basis and emptied no less than every two weeks. **MM BIO-7: Implement Weed Abatement Measures** would require implementation of weed abatement measures during construction to prevent degradation of habitat which supports sensitive species and **MM BIO-8: Construction BMPs to Protect Wildlife** would ensure construction BMPs are in place to minimize the spread of invasive plant species from construction. Additionally, as described in Section 3.3, Air Quality, compliance with SCAQMD Rule 403 would ensure that dust control measures are implemented to prevent movement offsite into adjacent habitat areas or waters. Therefore, impacts would be less than significant with mitigation.

Operations

Less than Significant with Mitigation. As described in the Construction section above for greenway paths and greenway amenities, safe crossings, and stormwater management, based on the background literature review, a total of 28 special status species were identified as having more than a low potential to occur within the Plan Area in the vicinity of Plan Area washes, including 10 plant species and 18 wildlife species. Potential for direct and indirect impacts on these special status species related to operations of the greenway paths and greenway amenities, safe crossings, and stormwater management are discussed below.

Special Status Plants

Special status plants would not be expected to occur within the built greenway paths and greenway amenities, safe crossings, or stormwater management. Areas would be landscaped with common native species or landscape plants, and as such no direct effects are anticipated. However, if nearby suitable habitat for these species is present, there is potential for maintenance operations to result in indirect effects on habitat.

Indirect effects from operations include dust and the introduction of invasive species from vehicles and equipment used during maintenance, which could degrade suitable or occupied habitat located in areas adjacent to or nearby greenway paths and greenway amenities, as described above in the analysis for construction activity. In addition, landscaping and other maintenance/repair operations could indirectly affect adjacent or nearby habitat by increasing runoff of fertilizers, green waste, or chemicals and petroleum products.

Recreational use along the District ROW may increase due to implementation of the greenway paths and greenway amenities, safe crossings, or stormwater management. Indirect operational effects due to recreational users to special status plant species may include changes in vegetation cover due to increases in non-native, invasive plant species introduced and spread from humans and pets tracking them into the area and soil compaction due to the use of trails. Direct impacts may include plant mortality due to crushing from pedestrian and equestrian uses if they are completed outside the boundaries of the greenway paths and amenities. To reduce impacts of increased recreational use of the area, an operations recreation plan would be implemented, which would include signage for pets to remain on leash and for people to stay on designated trails/paths to protect adjacent wildlife and habitat (**MM BIO-9: Operations Recreation Plan**). Additionally, weed abatement measures would be implemented (**MM BIO-7: Implement Weed Abatement Measures**), and non-native, invasive species would be prohibited for use in landscaping as required in the *Design Guidelines and Standards*. Therefore, operation impacts on habitat that supports sensitive species would be less than significant with mitigation.

Special Status Invertebrates

Maintenance operations that involve use of pesticides or herbicides for landscaped areas could degrade habitat and remove nectar and host plants. Pesticide use can cause bee mortality as well as sublethal effects. Specifically, neonicotinoids are more likely to directly harm bumble bees because they are broadly toxic to insects. Invasive plant species may also be introduced during operations, which may outcompete native plants which support bumble bee and butterfly species by providing nectar sources and host plants. Recreational use along the District ROW may increase due to implementation of the greenway paths and greenway amenities, safe crossings, or stormwater management. Indirect operation effects to special status invertebrate species could include human disturbance of host plants or nectar sources from walking, biking, bird watching, and equestrian use. Other indirect impacts may include an increase in non-native, invasive plant species due to introduction and spread from humans. Direct mortality of bee and butterfly species may also occur due to bike collisions.

A pest management plan (**MM BIO-10: Prepare and Implement Pest Management Plan**) would be implemented during operations which would prohibit the use of neonicotinoid pesticides as part of operations, which are known to be harmful to bumble bees. To reduce impacts of increased recreational

use of the area, an operations recreation plan would be implemented which would include signage for pets to remain on leash and for people to stay on designated trails/paths to protect adjacent wildlife and habitat (**MM BIO-9: Operations Recreation Plan**). Additionally, weed abatement measures would be implemented (**MM BIO-7: Weed Abatement Measures**), and non-native, invasive species would be prohibited for use in landscaping as required by the *Design Guidelines and Standards*; therefore, impacts from operations on native habitat which supports sensitive species would be less than significant with mitigation.

Special Status Fish

Direct impacts to special status fish from operations are not anticipated due to operations of the greenway paths and greenway amenities, safe crossings, or stormwater management because projects would not be located in aquatic environments where fish species could be directly affected by operations. Indirect impacts on special status fish from operations may consist of dust, erosion, and trash in washes/creeks from increased human use; runoff of pesticide and/or fertilizer used for landscaping; and chemical spills related to equipment needed for maintenance operations which may include mowing and vegetation/tree trimming. Recreational use along the District ROW may increase due to implementation of the Plan components. Indirect operations effects due to recreational users to special status fish species may include increase in trash and increases in sedimentation due to erosion. Litter control, requiring trash receptacles and debris at future project locations to be checked on a weekly basis and emptied no less than every two weeks, would be implemented as part of the *Design Guidelines and Standards*. Additionally, to reduce impacts of increased recreational use of the area, an operations recreation plan would be implemented which would include signage for pets to remain on leash and educational signage to stay on designated trails/paths to protect adjacent wildlife and habitat (**MM BIO-9: Operations Recreation Plan**). Therefore, with implementation of mitigation measures and the SGV *Design Guidelines and Standards* for litter control, impacts would be less than significant.

Special Status Reptiles and Amphibians

Direct impacts resulting from greenway paths and greenway amenities could include injury or mortality of special status reptiles due to direct collisions with vehicles or equipment used in landscape maintenance. Indirect impacts resulting from maintenance operations could include increased predation due to more perching locations for avian predators. Additionally, spills of fuels, oil, or other pollutants used during maintenance operations could reduce the quality of nearby habitat.

Recreational use along the District ROW may increase due to implementation of the greenway paths and greenway amenities. Indirect operations effects due to recreational users to special status reptile species may include avoidance of areas due to increases in noise and a reduction in suitable nearby habitat for burrowing due to soil compaction from off path human use. Negative impacts on reptiles due to littering may include ingestion, entanglement, and increases in predators. Increased recreation use may also result in mortality due to collisions with bikes and an increase in predation by domestic predators, including dogs and cats. As part of the *Design Guidelines and Standards*, litter control would require trash receptacles and debris at future project locations to be checked on a weekly basis and emptied no less than every two weeks. To reduce impacts of increased recreational use of the area, an operations recreation plan would be implemented which would include signage for pets to remain on leash and educational signage to stay on designated trails/paths to protect adjacent wildlife and habitat

(MM BIO-9: Operations Recreation Plan). Additionally, weed abatement measures would be implemented (**MM BIO-7: Implement Weed Abatement Measures**) and non-native, invasive species would be prohibited for use in landscaping as required by *Design Guidelines and Standards*. Implementation of these mitigation measures and the *Design Guidelines and Standards* would reduce impacts from operations on native habitat that supports sensitive species to less than significant with mitigation.

Special Status Birds

Maintenance operations (which may include mowing, weed control, and vegetation/tree trimming) could result in the removal or disturbance of areas that support nesting habitat for birds. Maintenance that occurs during the nesting bird season, generally February 1 through August 31, could disturb nesting birds within or near the maintenance area, causing adults to abandon active nests resulting in the loss of eggs and/or young (nestlings, fledglings). To avoid impacts to nesting birds, any maintenance-related vegetation/tree trimming would be scheduled outside the nesting bird season. If required during the nesting bird season, a pre-construction nesting bird survey would be required (**MM BIO-2: Pre-Construction Nesting Bird Surveys**).

Project lighting could also alter the movement and migration patterns of bird species. If additional nighttime light sources are located near suitable habitat for special status birds, this could disturb individuals and cause them to leave the area. Habitat fragmentation as a result of operations is not anticipated, as it would occur within the existing disturbance footprint from construction.

Recreational use along the District ROW may increase due to implementation of the greenway paths and greenway amenities, safe crossings, or stormwater management. Indirect operations effects to special status bird species due to recreational users may include human disturbance of nesting, foraging, and breeding due to the following activities: bird watching, biking, walking, and equestrian uses. Negative impacts on birds due to littering may include ingestion, entanglement, and increases in predators. Increased recreation use may also result in mortality due to collisions with bikes and an increase in predation by domestic predators, including dogs and cats. As part of the *Design Guidelines and Standards*, litter control will consist of trash receptacles and debris at future project locations to be checked on a weekly basis and emptied no less than every two weeks. To reduce impacts of increased recreational use of the area, an operations recreation plan would be implemented which would include signage for pets to remain on leash and people to stay on designated trails/paths and educational signage to protect wildlife and habitat (**MM BIO-9: Operations Recreation Plan**). This measure would reduce the potential for domestic predation on wildlife, by requiring people to keep pets leashed. To reduce impacts of new light sources from operation, all lighting adjacent to wildlife areas would be shielded to prevent light from entering the wildlife area as described in the *Design Guidelines and Standards*. Weed abatement measures would be implemented (**MM BIO-7: Implement Weed Abatement Measures**) and non-native, invasive species would be prohibited for use in landscaping as required by the *Design Guidelines and Standards*. Additionally, any glass used in the design of facilities would be safe for birds, to avoid bird strikes with buildings (**MM BIO-11: Use Bird Safe Glass**). Therefore, impacts would be less than significant with mitigation.

Special Status Mammals

Maintenance activities may temporarily increase noise levels and ground disturbance which could affect burrowing, foraging, and roosting habitat. Additionally, vegetation and tree trimming done as part of ongoing operations could disturb roosting bats, if present. If the project area was determined to be suitable habitat for bat species, a biological monitor would be required during maintenance work which could disturb habitat (**MM BIO-5: Conduct Biological Monitoring**).

Recreational use along the District ROW may increase due to implementation of the greenway paths and greenway amenities, safe crossings, or stormwater management. Indirect operations effects to special status mammal species due to recreational users may include human disturbance due to biking, walking, bird watching, and equestrian use. Indirect effects of operations include increases to nighttime lighting, which may affect bat species foraging and use of the area. Additionally, increased recreational use may introduce or spread weeds or other invasive plant species which may affect native vegetation that mammal species use as habitat. For burrowing mammal species, soil compaction from people walking or biking off designated paths could reduce suitable habitat available in the vicinity of greenway paths and greenway amenities. To reduce impacts of increased recreational use of the area, including soil compaction in areas off designated trails/paths, an operations recreation plan would be implemented which would include signage for pets to remain on leash and educational signage to stay on designated trails/paths to protect nearby wildlife and habitat (**MM BIO-9: Operations Recreation Plan**). As part of the SGV Design Guidelines and Standards, litter control will require trash receptacles and debris at future project locations to be checked on a weekly basis and emptied no less than every two weeks. To reduce impacts of new light sources from operation, all lighting adjacent to wildlife areas would be shielded to prevent light from entering the wildlife area, as required by the *Design Guidelines and Standards*. Additionally, weed abatement measures would be implemented (**MM BIO-7: Implement Weed Abatement Measures**) and non-native, invasive species would be prohibited for use in landscaping as required by the *Design Guidelines and Standards* in order to reduce impacts from operations on habitat which supports sensitive mammal species to less than significant with mitigation.

Mitigation Measures

MM BIO-1: Desktop Review and Biological Surveys. Conduct biological surveys of any areas where potential special status biological resources (special status species and species of special of concern), or sensitive natural communities may occur. During the design of the project, and prior to construction, the project proponent shall employ a qualified biologist to review the proposed project. To the extent feasible, the location(s) of a proposed project shall be on previously disturbed or developed sites and shall avoid undisturbed, high-quality, natural habitat that supports special status biological resources, areas that are used for regional or local wildlife movement, and jurisdictional wetlands and associated waters. If a desktop review indicates that special status biological resources or natural communities may occur in the project area, the project proponent shall either assume presence and mitigate accordingly, or a qualified biologist shall conduct species-specific biological surveys or botanical field surveys to confirm the presence and extent of special status biological resources and/or sensitive natural communities prior to the start of construction. If special status biological resources or their sign (e.g., scat, burrows) are observed, the project proponent shall develop a plan to avoid impacts that is specific to each species. If impacts cannot be avoided, the project proponent shall consult with CDFW. If the

desktop review indicates that no special status biological resources or natural communities may occur in the project area, then biological surveys are not required.

MM BIO-2: Pre-construction Nesting Bird Surveys. Conduct pre-construction nesting bird surveys and implement appropriate buffers. To avoid disturbance of nesting and special status birds, including species protected by the MBTA and California Fish and Game Code, activities related to the implementation of any project, including, but not limited to, ground disturbance, and vegetation trimming/removal, shall occur outside of the non-raptor bird breeding season (February 1 through August 31). If these activities must begin during the breeding season, then the project proponent shall conduct a pre-construction nesting bird survey no more than three days prior to initiation of ground disturbance activities. The nesting bird pre-construction survey shall be conducted on foot inside the project area, including a 300-foot buffer, and conducted in inaccessible areas (e.g., private lands) from afar using binoculars to the extent practical. The survey shall be conducted by a biologist familiar with the identification of avian species known to occur in the Plan Area. If construction is scheduled to occur during the breeding season for raptors (January 15 to September 15), then no more than seven days before the start of the activities, a qualified biologist will conduct a pre-construction survey for nesting raptors in areas where suitable habitat is present within the project area and up to a 500-foot buffer, as determined by a qualified biologist. If active nests are found, an avoidance buffer (dependent upon the species, and existing disturbances associated with land uses outside of the site) shall be determined and demarcated by the biologist with construction fencing, flagging, construction lathe, or other means. All project personnel working at a project site shall be notified of the buffer zone and all construction activities and project personnel will avoid entering the buffer zone until the avian biologist has confirmed that breeding/nesting is completed and the young have fledged the nest or confirmed that the nest is no longer active. Encroachment into the buffer shall occur only at the discretion of the qualified biologist.

MM BIO-3: Conduct Burrowing Owl Pre-construction Surveys. Prior to any construction or ground disturbance which could disturb burrowing owl burrows or nesting, a qualified biologist shall conduct protocol-level surveys for burrowing within suitable habitat and extending 500 feet from the boundary of the work area, where access is available. Surveys shall be conducted in accordance with guidelines in the *CDFW Staff Report on Burrowing Owl Mitigation* (CDFW 2012).

MM BIO-4: Conduct Pre-construction Special Status Bat Surveys. Pre-construction bat surveys will be conducted by a qualified bat biologist within 30 days of starting construction in a work area with suitable habitat for roosting bats during the bat maternity season (March 1 to September 30). The pre-construction survey will include a visual and acoustic survey conducted by the qualified bat biologist within the work area and surrounding areas that have suitable habitat for roosting bats including bridges, abandoned structures or trees with large cavity or dense foliage. If bat roost sites are identified and could be disturbed by project activities, then appropriate bat avoidance, mitigation or relocation measures will be implemented. Prior to any ground-disturbing activity or activities that could disturb bat roost sites, a qualified bat biologist will survey for active bat colonies, such as hibernacula or maternity roosts. If active hibernacula or maternity roosts are identified in the work area or in the buffer area (as defined by the qualified bat biologist, based on site conditions, planned work, and anticipated indirect impacts on bats), a qualified bat biologist will develop and implement appropriate protection measures

for that maternity roost or hibernacula. Trees and/or structures determined to be maternity roosts should be left in place until the end of the maternity season. No night-time work will be permitted.

MM BIO-5: Conduct Biological Monitoring. In area that may support special status biological resources or adjacent to special status plants, wildlife, and/or aquatic resources; Sensitive Natural Communities; or protected trees, a qualified biological monitor shall be required to monitor construction or maintenance activities while work is immediately adjacent to these area, or as deemed necessary by the qualified biologist to ensure that protection measures are in place to avoid incidental disturbance of habitat and special status species outside the Plan footprint. Biological monitoring shall include, but not be limited to, monitoring installation of protective barriers, monitoring of active bird nests, ensuring food waste and trash are enclosed in sealed containers and removed from the site, construction equipment remains within the project footprint and designated staging areas, and ensuring that staging and areas used to refuel are located in upland areas away from riparian habitat and aquatic sites.

The qualified biological monitor shall have the authority to stop work to protect biological resources onsite, including special status species, riparian and aquatic resources, and protected trees. If any special status plant or wildlife species are found in a work area, the biological monitor shall have stop work authority to halt construction as necessary to prevent the death or injury to the species until the species leaves of its own accord or the proper consultation with USFWS and/or CDFW can be completed.

MM BIO-6: Implement a Worker Environmental Awareness Program. Prior to the start of construction (including staging and mobilization), all project personnel shall attend a Workers Environmental Awareness Program training, conducted by a qualified biologist, to aid workers in recognizing special status resources that may occur in the Plan Area. The specifics of this program shall include identification of the special status biological resources and habitats, a description of the regulatory status and general ecological characteristics of sensitive resources, and review of the limits of construction and mitigation measures required to reduce impacts to biological resources within the project area.

MM BIO-7: Implement Weed Abatement Measures. The project proponent shall implement weed abatement measures during construction and operations to minimize the spread and introduction of non-native plant material and/or tree diseases. Weed control shall be performed through a physical, cultural, biological, inorganic, or organic method. Chemicals that may be used include pre-emergent herbicides, post-emergent herbicides, and organic herbicides (all post-emergent, non-selective) as per the Countywide Integrated Pest Management Program and one or more of the following measures as applicable:

- Equipment and vehicles shall be cleaned of mud or other debris that may contain invasive plants and/or seeds to reduce the potential of spreading invasive weeds before mobilizing to the site and before leaving the site. Cleaning of equipment shall occur in a designated area away from sensitive natural communities and watercourses.
- Trucks carrying loads of vegetation removed from the work area shall be covered and disposed of in accordance with applicable laws and regulations.
- Only certified weed-free straw, mulch, and/or fiber rolls shall be used for erosion control. Fill material shall be obtained from weed-free sources.
- Any trees identified for removal shall be inspected for contagious tree diseases. To avoid the spread of infectious tree diseases, diseased trees and plant material shall not be transported from the

Project site without first being treated using best available management practices relevant for each tree disease observed.

- Following completion of construction, disturbed areas shall be returned to original grade (unless the design incorporated permanent grade changes), soils shall be decompacted, and areas shall be revegetated with native hydroseed and/or container plantings consistent with the *SGV Greenway Network Plant Communities and Planting List* as detailed in design plans or a project-specific restoration plan. All revegetated areas shall avoid the use of species listed in Cal-IPC's California Invasive Plant Inventory.

MM BIO-8: Construction Best Management Practices to Protect Wildlife. The project proponent shall ensure appropriate BMPs are implemented during construction, which consist of the following, as applicable to the project:

- Plastic monofilament netting (e.g., erosion control wattles or matting) or similar material shall be prohibited as part of erosion-control activities. Alternative allowable materials may include, but are not limited to, geotextiles, fiber rolls, geomembranes, hydroseeding compounds, loose-weave mesh, such as jute, hemp, and coconut fiber, and rice straw wattles (e.g., biodegradable, photodegradable, burlap).
- Any excavated areas (holes, pits, or trenches) with steep sides more than 12 inches deep with sidewalls steeper than 45 degrees shall be covered with plywood or similar materials at the end of the day or have escape ramps put in place to keep wildlife from becoming trapped and/or allowing them to escape, with at least one ramp per 100 feet of trenching, and escape ramp slopes of no greater than 3:1. All construction pipe, culverts, or other structures with a diameter of three inches or greater that are stored overnight shall be screened or covered each night to prevent wildlife entrapment.
- Incorporate appropriate buffer zones to avoid and minimize the effects of noise on special status wildlife and nesting birds in areas where special status biological resources have been identified. If a qualified biologist determines that that buffer zones are not sufficient to avoid disturbance, other measures may be incorporated, such as delaying construction until nesting is completed (for nesting birds) or until special status species are no longer present or until a take permit for special status species is obtained.
- The disturbance footprint for construction activity shall be minimized to the extent feasible. Trimming is defined as removal of vegetation to the extent necessary to allow a specific level of access (e.g., vehicles) for specific types of equipment (e.g., trucks, trailers, excavators). There shall be no vegetation removal beyond what is necessary to allow the level of access required for construction activities to occur.

MM BIO-9: Operations Recreation Plan. The Operations Recreation Plan shall include requirements for the following measures, as applicable, to be implemented for by the project proponent in areas where recreational opportunities will be created:

- Signage requiring pets to be on leash
- Pet dropping/waste bag dispensers and disposal stations
- Foot-wiping stations with signage explaining the purpose of the station (to prevent the spread of invasive weeds that degrade natural habitats that species depend on)
- Wildlife-proof waste bins
- Educational interpretive kiosks/signage (e.g., how to respect wildlife and habitats, stay on trail signs, identifying sensitive areas, pick up trash and fishing line, pick up after pets; opportunities to view wildlife)

- Incorporation of signage to avoid ESAs around sensitive wildlife/habitat features
- Prevention of fertilizer runoff
- Management of unauthorized uses through coordination with local resources
- Proper handling of any non-native plant species removed during operations and maintenance activities to prevent sprouting or regrowth; development of methods to ensure that non-native plant seeds are not spread during plant removal and that plants will be removed prior to flowering, if feasible.

MM BIO-10: Prepare and Implement Pest Management Plan. The project proponent shall require that a pest management plan that adheres to the County's Integrated Pest Management Program be prepared and implemented to prevent inadvertent poisoning of non-target wildlife during operations. The use of rodenticides as a pest-control measure shall be prohibited. Additionally, the use of neonicotinoid pesticides shall be prohibited as part of operations, which are known to be harmful to bumble bees.

MM BIO-11: Use Bird Safe Glass. The project proponent shall require that any glass used in the design of facilities is safe for birds. Bird safe glass is designed so that it is a visible obstacle to birds to avoid bird strikes with buildings, while still being transparent to people.

Significance After Mitigation

With implementation of the mitigation measures listed above (**MM BIO-1** through **MM BIO-11**), impacts of construction and operations of greenway paths and greenway amenities on special status plant and wildlife species would be reduced from potentially significant to less than significant with mitigation.

3.4.3.3.1.2 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces

Construction

Less than Significant with Mitigation. Construction of the greenway paths would occur within the District ROW while pocket parks and greenspaces could occur within the District ROW or on adjacent parcels. Construction activities would typically involve mobilization, ground disturbance (including excavation and grading), construction equipment operation, parking of worker vehicles and equipment, and staging and laydown areas for stockpiling of materials. Although the District's ROW are typically maintained for access via foot and, in some cases, light duty vehicles, some vegetation clearing may be required for site preparation. New parks and greenspaces may require extensive excavation and grading of site soils, off-hauling of soils and related materials, utility relocation, infrastructure construction, and related activities. Depending on the nature and size of the development, construction activities may include use of heavy construction equipment such as excavators, dump trucks, backhoes, utility trucks, paving machines, loaders, rollers, and pile drivers. No night-time construction would occur and therefore no new nighttime light sources would result from construction operations. This analysis assumes that staging areas would be located within the Plan Area near the location of individual projects implemented under the Plan. A typical pocket park would be approximately one acre in size and located immediately adjacent to a planned greenway path. The maximum greenspace that could be feasibly developed in the Plan Area would be 25 acres on a site near the fairgrounds that was identified during early constraints analysis. While construction would be temporary and many projects would be short in duration, since the design and location of future projects are unknown, the potential

disturbance could vary in intensity as well as the length of time necessary to complete a project, particularly for larger park and greenspace projects.

Generally, project proponents would aim to construct greenway paths and pocket parks and greenspaces in ruderal areas within the District ROW and adjacent parcels, which do not currently support high quality habitat for native plants and wildlife species. However, a site-specific evaluation would need to be conducted by a qualified biologist (**MM BIO-1: Desktop Review and Biological Surveys**) to determine the specific potential for special status species to occur at each location. Depending on the results of the desktop review, biological surveys would be implemented as deemed necessary by the qualified biologist. Construction could have a substantial adverse impact, either directly or indirectly through habitat modifications, on special status plant and wildlife species.

Construction activities associated with greenway paths and pocket parks and greenspaces could result in similar direct and indirect impacts on special status plant and wildlife species as described in Section 3.4.3.3.1.1 Greenway Paths + Amenities-Construction. Although a typical pocket park is assumed to be 1 acre, greenspaces could be up to 25 acres in size, which would result in larger areas and lengths of time where direct and indirect impacts could occur. Direct impacts on special status species, if they occur within or near the Plan Area, could include removal/loss of suitable habitat and direct injury and/or mortality, and are similar to those described in detail in Section 3.4.3.3.1.1, Greenway Paths + Amenities-Construction for special status plants, fish, reptiles, birds, and mammal species. As detailed in Section 3.4.3.3.1.1, **MM BIO-1** through **MM BIO-8** would be implemented, as required during construction to avoid and minimize direct impacts on sensitive plant and wildlife species. Therefore, impacts would be less than significant with mitigation.

Indirect effects on special status species, if they are present in the vicinity of the Plan Area, could include dust, introduction and spread of non-native plant species, erosion, sedimentation, trash, chemical spills, and increases in noise or predation due to increased vehicle traffic and human presence, as described in detail in “Greenway Paths + Amenities” for special status plants, fish, reptiles, birds, and mammal species. As detailed in Section 3.4.3.3.1.1, construction BMPs would be in place to reduce noise levels and avoid wildlife entrapment as described in **MM BIO-8: Construction BMPs to Protect Wildlife**. Additionally, as described in Section 3.3, Air Quality, compliance with SCAQMD Rule 403 would ensure that dust control measures are implemented to prevent movement offsite into adjacent habitat areas or waters. Measures would be in place to ensure proper storage onsite and cleanup of any inadvertent spills consistent with applicable regulations, as outlined in Section 3.9, Hazards and Hazardous Materials. To reduce the spread of invasive, non-native plant species during construction, weed abatement measures (**MM BIO-7: Implement Weed Abatement Measures**) would be implemented during construction to prevent degradation of habitat which supports sensitive species. Lastly, as part of the *Design Guidelines and Standards*, litter control would require trash receptacles and debris at future project locations to be checked on a weekly basis and emptied no less than every two weeks, reducing the potential for trash to end up in nearby habitat areas. These mitigation measures would minimize the indirect effects on sensitive plant and wildlife species. Therefore, impacts would be less than significant with mitigation.

Operations

Less than Significant with Mitigation. Operations associated with greenway paths and pocket parks and greenspaces, which include maintenance activities and recreation, could result in direct and indirect impacts on special status wildlife species and indirect effects on special status plant species as described in Section 3.4.3.3.1.1, Greenway Paths + Amenities-Operations. Areas would be landscaped with common native species or landscape plants, and as such no direct effects on sensitive plants are anticipated. However, if nearby suitable habitat for these species is present, there is potential for maintenance operations to result in indirect effects on habitat. A typical pocket park is one acre, and greenspaces could be up to 25 acres in size, which would result in larger areas where direct and indirect impacts from maintenance activities could occur. Direct impacts on special status wildlife species, if they occur within or near the Plan Area, could include removal/loss of suitable habitat and direct injury and/or mortality, and are similar to those described in detail in Section 3.4.3.3.1.1, Greenway Paths + Amenities-Operations for special status fish, reptiles, birds, and mammal species.

Indirect effects from operations on special status species, if they are present in the vicinity of the Plan Area, could include dust, introduction and spread of non-native plant species, sedimentation and erosion, runoff from pesticide and/or fertilizer used for landscaping, spills of fuel or other pollutants used in maintenance equipment, increased nighttime lighting, and increases in noise or predation due to increased vehicle traffic and human presence, as described in detail in Section 3.4.3.3.1.1, Greenway Paths + Amenities-Operations for special status plants, fish, reptiles, birds, and mammal species. As detailed in Section 3.4.3.3.1.1, **MM-BIO-2**, **MM BIO-7** and **MM BIO-9** through **MM BIO-11** would be implemented during operations to avoid and minimize impacts on sensitive plant and wildlife species. Nighttime lighting would be shielded to prevent light from entering wildlife and habitat areas and only native plants would be used for landscaping with non-native plant species eradicated, as outlined in the lighting and landscaping requirements of the *Design Guidelines and Standards*. Additionally, litter control, requiring trash receptacles and debris at future project locations to be checked on a weekly basis and emptied no less than every two weeks, would be implemented as part of the *Design Guidelines and Standards*. Therefore, impacts would be less than significant with mitigation.

Mitigation Measures

MM BIO-1 through **MM BIO-11**.

Significance After Mitigation

With implementation of **MM BIO-1** through **MM BIO-11**, impacts of construction and operations of greenway paths and pocket parks and greenspaces on special status plants and wildlife species would be reduced from potentially significant to less than significant.

3.4.3.3.2 4(b). Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

3.4.3.3.2.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant with Mitigation. Construction activities for greenway paths and greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management beneficial project elements may be located within the District ROW or adjacent parcels along the washes within the Plan Area. Additionally, safe crossings could occur within the footprint of existing roads or span the washes. Because future project locations are not known at this time and habitat conditions and types at specific locations within the Plan Area may change over time, sensitive natural communities may occur where they are not currently mapped as occurring by CDFW and USFWS. A desktop and field verification would be required to determine actual riparian and sensitive natural communities present at specific project locations prior to construction (**MM BIO-1: Conduct a Desktop Review and Biological Surveys**). If sensitive riparian and other natural communities are present, **MM BIO-1: Conduct a Desktop Review and Biological Surveys** would require avoidance of impacts during construction, to the extent feasible. If impacts cannot be avoided, under state regulations, project proponents would be required to coordinate with CDFW to establish any appropriate buffer zones to protect sensitive species or critical habitat subject to CDFW jurisdiction.

Any riparian habitat or other sensitive plant communities that are identified for future project locations within the District ROW could be directly affected by construction of greenway paths and greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management beneficial project elements. Direct effects could include the removal of existing vegetation and encroachment into riparian and other sensitive natural communities during clearing/grading and site preparation for access and staging areas. To reduce potentially significant impacts, prior to the start of construction, a Worker Environmental Awareness Program would be implemented (**MM BIO-6: Implement a Worker Environmental Awareness Program**). Then, during construction, biological monitoring would occur to ensure that protection measures are in place to avoid incidental disturbance of habitat and special status species outside of the project area (**MM BIO-5: Conduct Biological Monitoring**) and qualified biological monitors would have stop work authority to protect resources onsite. With the inclusion of these measures, construction impacts to riparian and sensitive natural communities would be less than significant with mitigation.

Indirect effects on riparian habitat and other sensitive natural communities located adjacent to greenway paths and greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management beneficial project elements could include habitat degradation during construction due to soil compaction, introduction of invasive plant species, dust generation, chemical spills, and sedimentation. Soil compaction can affect the germination and growth of plants by reducing the amount of water that is able to move through the soil. Vegetation removal and soil compaction may lead to erosion which could cover vegetation within and adjacent to construction boundaries. Introduction and spread of invasive, non-native species could encroach and alter the vegetation structure of adjacent

plant communities. Unlike native plant species, many invasive plant species do not provide habitat components that support native wildlife, and some invasives will form dense stands that may increase the risk of fire in nearby riparian or other sensitive communities. Invasive grasses and other species may also pose an increased fire risk compared to riparian and other native habitats. Lastly, the accidental releases of contaminants during construction (e.g., gasoline spills when refueling, or other chemical spills when storing equipment) poses a risk to adjacent plant communities. **MM BIO-7: Implement Weed Abatement Measures** would require implementation of weed abatement measures during construction to prevent degradation of habitat which supports sensitive species and **MM BIO-8: Construction BMPs to Protect Wildlife** would ensure that construction BMPs are in place to minimize the spread of invasive plant species from construction. Additionally, as described in Section 3.3, Air Quality, compliance with SCAQMD Rule 403 would ensure that dust control measures are implemented to prevent movement offsite into adjacent habitat areas or waters. Further, future projects would have proper storage onsite and cleanup of any inadvertent spills consistent with applicable regulations, as outlined in Section 3.9, Hazards and Hazardous Materials. Therefore, impacts would be less than significant with mitigation.

Operations

Less than Significant with Mitigation. Greenway paths and greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management beneficial project elements could result in direct effects on sensitive natural communities, including trampling of native vegetation since operations would increase the number of users/visitors and vehicle, bike, and pedestrian traffic in a particular area. Landscaping and vegetation trimming and/or removal within and adjacent to the District ROW could also reduce areas of sensitive native vegetation or disturb these communities due to trampling from the maintenance operations. Maintenance to the safe crossing beneficial elements may include inspections, repairs, and removal of trash/debris when needed. For stormwater management, depending on the type of BMP installed (e.g., subsurface infiltration system or constructed wetlands), periodic maintenance would be required to optimize performance of the system. Maintenance activities for stormwater BMPs would include, but are not limited to, weed removal or tree trimming for bioretention devices, sediment and debris removal from detention basins and treatment devices, and/or landscaping of vegetation. Which may also impact sensitive native vegetation or disturb native communities.

Indirect effects from increased use of the greenway paths, amenities, pocket parks and greenspaces, safe crossings, and maintenance of the stormwater BMPs may include soil compaction, introduction of non-native, invasive species, dust generation, chemical spills, sedimentation, fertilizer runoff, pet waste, and increased trash from public access. These indirect effects could degrade riparian habitat and other sensitive natural communities located in the Plan Area. To reduce impacts of recreation and operations on sensitive natural communities, weed abatement measures would be implemented (**MM BIO-7: Implement Weed Abatement Measures**), non-native, invasive species would be prohibited for use in landscaping as required by SGV Design Guidelines, and an operations recreation plan would be implemented which would include signage for pets to remain on leash and for people to stay on designated trails/paths to protect nearby sensitive natural communities (**MM BIO-9: Operations Recreation Plan**). For potential increased trash generation, the *Design Guidelines and Standards* would require future greenway projects to include litter control, requiring trash receptacles and debris at

future project locations to be checked on a weekly basis and emptied no less than every two weeks. Therefore, impacts would be less than significant with mitigation.

Mitigation Measures

MM BIO-1: Conduct a Desktop Review and Biological Surveys

MM BIO-5: Conduct Biological Monitoring

MM BIO-6: Implement a Worker Environmental Awareness Program

MM BIO-7: Implement Weed Abatement Measures

MM BIO-8: Construction BMPs to Protect Wildlife

MM BIO-9: Operations Recreation Plan

Significance After Mitigation

With implementation of the mitigation measures **MM BIO-1**, **MM BIO-5** through **MM BIO-9**, impacts of construction and operations of greenway paths and greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management on riparian habitat and other sensitive natural communities would be reduced to less than significant with mitigation.

3.4.3.3.3 4(c). Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

3.4.3.3.3.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant with Mitigation. Since project locations are unknown at this time, construction of greenway paths and greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities could be located within the District ROW along the washes and could result in direct and indirect effects on wetlands and/or potentially jurisdictional aquatic resources if present within or adjacent to the construction footprint. Wetlands occur within the Plan Area, as outlined in Figure 3.4-5. Direct effects to wetlands could result from grading, excavation, soil stockpiling activities, other ground-disturbing activities, and vehicle use and access during construction. Any use of construction equipment or vehicles within wetland areas would be a significant impact, which could damage the area through direct removal, filling, or hydrological interruption. Any clearing and grading, or elevation changes requiring fill material, could compact soils and alter existing hydrologic conditions of wetlands present in the construction area or nearby wetlands. Prior to construction, a desktop review would be completed to determine if wetland or other aquatic resources are potentially present within a project area which could be impacted by construction and to determine if a jurisdictional wetland delineation is required (**MM BIO-12: Desktop Review and Conduct a Jurisdictional Delineation** to comply with regulatory requirements and/or revise project plans to minimize or avoid impacts to jurisdictional waters).

If any wetlands and/or jurisdictional aquatic resources are identified within the project footprint, then the project proponent would be required to obtain the required permits in compliance with Section 404 (issued by the USACE) and Section 401 (issued by the LARWQCB) of the federal CWA and/or Porter-Cologne Water Quality Control Act, and Section 1600 of the California Fish and Game Code. The project proponent would be required to implement all avoidance and mitigation measures and conditions included in the permits approved by the resource agencies.

Additionally, if avoidance of an adjacent wetland is possible, to reduce potentially significant impacts to wetlands adjacent to work areas, biological monitoring would occur during construction (**MM BIO-5: Conduct Biological Monitoring**) and monitors would have stop work authority to protect resources onsite. Additionally, prior to the start of construction, a Worker Environmental Awareness Program would be implemented (**MM BIO-6: Implement a Worker Environmental Awareness Program**) which would cover sensitive biological resources within or adjacent to the construction footprint, including wetlands. Therefore, impacts would be less than significant with mitigation.

Indirect impacts to wetlands and/or potentially jurisdictional aquatic resources resulting from construction activities include erosion, sedimentation, introduction of non-native plant species, alteration of downstream conditions, and spills of pollutants including chemicals and fuel. Construction equipment and vehicles could introduce/spread non-native plant species in mud or other debris tracked into the work area and imported fill materials could also contain these non-native species which may compete with wetland plant species for resources in or near the work area or potentially displace them. Erosion and sedimentation from construction activity could fill in wetland areas and reduce the quality of the wetlands or remove the resource. Similarly, exposure to pollutants through spills or improper equipment refueling could also reduce the quality of wetland habitat in the vicinity. Wetland areas exposed to these indirect effects may become degraded over time, reducing the quality of the habitat or resulting in removal of the resources. If wetlands or aquatic resources are identified within or nearby the project footprint, but will not be affected by construction, then those resources shall be clearly marked for avoidance using flagging, fencing, or other appropriate avoidance method, which would also minimize potential for the introduction of sediment into wetlands (**MM-BIO 13: Permanent Wetlands Signage**). **MM BIO-7: Implement Weed Abatement Measures** would require implementation of weed abatement measures during construction to prevent degradation of habitat which supports sensitive species and **MM BIO-8: Construction BMPs to Protect Wildlife** would ensure that construction BMPs are in place to minimize the spread of invasive plant species from construction. Additionally, as described in Section 3.3, Air Quality, compliance with SCAQMD Rule 403 would ensure that dust control measures are implemented to prevent movement offsite into adjacent habitat areas or waters. Further, future projects would have proper storage onsite and cleanup of any inadvertent spills consistent with applicable regulations, as outlined in Section 3.9, Hazards and Hazardous Materials. Therefore, impacts would be less than significant with mitigation.

Operations

Less than Significant with Mitigation. Wetlands or other aquatic resources that are present within the District ROW could be affected by operations for greenway paths and greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management, which would include maintenance and recreation. Increased recreational use of the greenway paths and each subcomponent could result in direct effects on wetlands, including trampling or damaging wetland vegetation from visitors and/or

pets straying off designated greenway paths and other amenities. Landscaping and vegetation trimming and/or removal, as well as potential trampling from maintenance operations or access, within and adjacent to the District ROW could also degrade wetland habitat or disturb wetland plant communities.

Indirect operational impacts to wetlands resulting from maintenance and recreation activities may include introduction of non-native, invasive species from maintenance vehicles and equipment or increased human use of the greenway paths and amenities, pocket parks and greenspaces, or safe crossings and stormwater management. This could degrade wetlands located in the District ROW and adjacent parcels, as these non-native species which may compete with wetland plant species for resources or potentially displace them. Other potential indirect effects on adjacent wetlands and aquatic resources due to operations and increased recreational use include erosion and sedimentation from people walking outside designated trails/paths, fertilizer runoff, and pet waste and litter from increased public access. If wetlands are located within or adjacent to a site, permanent signage and fencing to restrict trespassing of the resource by the public and operations and maintenance staff (**MM BIO-13 Permanent Wetlands Signage**). To reduce impacts of operations and recreation on wetlands and aquatic resources, weed abatement measures would be implemented (**MM BIO-7: Implement Weed Abatement Measures**) and non-native, invasive species would be prohibited for use in landscaping as required by *Design Guidelines and Standards*, and an operations recreation plan would be implemented which would include signage for pets to remain on leash and for people to stay on designated trails/paths to reduce potential inputs of sediment to wetlands and aquatic resources (**MM BIO-9: Operations Recreation Plan**). For potential increased trash generation, the *Design Guidelines and Standards* would require future greenway projects to include litter control, requiring trash receptacles and debris at future project locations to be checked on a weekly basis and emptied no less than every two weeks. Therefore, impacts would be less than significant with mitigation.

Mitigation Measures

MM BIO-5: Conduct Biological Monitoring

MM BIO-6: Implement a Worker Environmental Awareness Program

MM BIO-7: Implement Weed Abatement Measures

MM BIO-8: Construction BMPs to Protect Wildlife

MM BIO-9: Operations Recreation Plan

MM BIO-12: Desktop Review and Conduct a Jurisdictional Delineation. A desktop review of the National Wetland Inventory and/or field review shall be conducted to determine if a formal delineation is required. To the extent feasible, the location(s) of all greenway paths, any subcomponents, and associated beneficial project elements shall be on previously disturbed or developed sites and shall avoid jurisdictional wetlands and associated waters. However, if any jurisdictional wetlands or associated waters are identified, a jurisdictional delineation shall be completed. If wetlands or aquatic resources are identified within the project footprint, but will not be affected by construction, then those resources shall be clearly marked for avoidance using flagging, fencing, or other appropriate avoidance method prior to construction. If any wetlands and/or jurisdictional aquatic resources are identified, then implement MM BIO-13.

MM BIO-13: Permanent Wetlands Signage. Any wetlands identified within or adjacent to the construction footprint, but not affected by construction activities, shall be clearly marked with permanent signage and fencing to restrict trespassing by the public and operations and maintenance staff.

Significance After Mitigation

With implementation of the mitigation measures listed above, impacts of construction and operations of greenway paths and greenway amenities on wetlands or other aquatic resources would be reduced from potentially significant to less than significant.

3.4.3.3.4 4(d). Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

3.4.3.3.4.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant with Mitigation. Construction of greenway paths and greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management would occur in the ROW and areas adjacent to channel banks of the washes within the Plan Area. Construction equipment use and storage, and site preparation including vegetation trimming and/or removal for access and staging areas may result in impacts that could adversely affect habitat connectivity, the movement of native species, and use of wildlife nursery sites. Grading and vegetation removal could result in damage or removal of existing habitat which serves as movement corridors or nursery sites for native species. Unlined washes that support vegetation can provide higher quality habitat connectivity than non-vegetated areas for various species, including fish, bats, and resident and migratory birds. These areas support important habitat for the movement, migration, and breeding of fish and wildlife species that use them. Additionally, vegetated areas and the associated infrastructure within the District ROW and adjacent parcels, including bridges and culverts, may also provide habitat features which support nesting or roosting for bird and bat species (e.g., ledges and crevices). Direct effects to the movement of fish species are not anticipated as construction would not occur within the Plan Area washes. A desktop review (**MM BIO-1: Desktop Review and Biological Surveys**) would determine if a construction site is located within or adjacent to habitats of native resident or migratory fish or wildlife species, established native resident or migratory wildlife corridors, or native wildlife nursery sites. If these habitats are nearby, construction could damage habitat (i.e., vegetation/tree removal) or cause wildlife to avoid sites previously used as migration corridors due to increased human presence and noise. To reduce potentially significant impacts, biological monitoring would occur during construction in sensitive areas or adjacent to habitat which supports wildlife movement (**MM BIO-5: Conduct Biological Monitoring**) to monitor any negative impact or disturbance to these habitats, and construction BMPs to protect wildlife would be implemented (**MM BIO-8: Construction BMPs to Protect Wildlife**). Therefore, impacts would be less than significant with mitigation.

Indirect effects of construction activities may include increased noise, vibration, dust, human encroachment on habitat areas, spills of fuel or other pollutants, introduction of non-native plant

species, and erosion and sedimentation. If construction occurs in or adjacent to SEAs or other high-quality habitat that provides connectivity for native species, these indirect effects may degrade habitat which currently supports the movement and reproduction of fish and wildlife. Construction BMPs would be in place to ensure protection of wildlife (**MM BIO-8: Construction BMPs to Protect Wildlife**) and proper storage onsite and cleanup of any inadvertent spills consistent with applicable regulations, as outlined in Section 3.9, Hazards and Hazardous Materials. To reduce the spread of invasive, non-native plant species during construction, weed abatement measures (**MM BIO-7: Weed Abatement Measures**) would be developed and implemented during construction to prevent degradation of habitat which supports wildlife movement or nursery sites. Therefore, impacts would be less than significant with mitigation.

Operations

Less than Significant with Mitigation. Habitat areas that currently support wildlife movement, migration, or serve as nursery sites that are located within the Plan Area could be affected by operations, which includes maintenance activities as well as recreation. Direct effects include the disturbance or removal of vegetation within or adjacent to the greenway paths and greenway amenities footprint, which makes up these habitat areas. Direct effects during operations could result from trampling from an increase in human use or vegetation trimming/removal during maintenance operations. Direct effects to the movement of fish species are not anticipated as operations would not occur within the Plan Area washes.

Indirect effects due to operations could include species avoidance due to noise or human use, increased introduction and spread of non-native plant species, increased predation due to littering from increased human use, increased nighttime light sources associated with operations, impacts on water quality due to runoff. These indirect effects could degrade habitat which supports native species, change the behavior of species as well as access to habitat, and interfere with species movement, migration, and reproduction. Litter control would be implemented as part of the *Design Guidelines and Standards*. To reduce impacts of new light sources from operation, all lighting adjacent to wildlife areas would be shielded to prevent light from entering the wildlife area as required by the *Design Guidelines and Standards*. Additionally, weed abatement measures would be implemented (**MM BIO-7: Weed Abatement Measures**) and non-native, invasive species would be prohibited for use in landscaping as required by the *Design Guidelines and Standards* to reduce impacts from operations on habitat which supports wildlife movement and reproduction. Therefore, impacts would be less than significant with mitigation.

Mitigation Measures

MM BIO-1: Desktop Review and Biological Surveys

MM BIO-5: Conduct Biological Monitoring

MM BIO-7: Prepare and Implement a Weed Abatement Measures

MM BIO-8: Construction Best Management Practices to Protect Wildlife

Significance After Mitigation

With implementation of the mitigation measures listed above, impacts of construction and operations of greenway paths and greenway amenities on the movement of native species or habitat which supports migration or nursery sites would be reduced from potentially significant to less than significant.

3.4.3.3.5 4(e). Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

3.4.3.3.5.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Significant and Unavoidable. Construction of greenway paths and greenway amenities, pocket parks and greenspaces, safe crossings, and/or stormwater management could conflict with local policies or ordinances protecting biological resources, such as tree preservation policies and ordinances under the jurisdiction of the incorporated cities within the Plan Area (described in Table 3.4-4) as well as the Los Angeles County Oak Tree Ordinance. Tree trimming and/or removal may be required for construction of greenway paths and greenway amenities, pocket parks and greenspaces, safe crossings, and/or stormwater management and construction activities may be located in areas that contain or are located adjacent to protected trees. Tree trimming and removal may be subject to local tree policies and ordinances, including Los Angeles County and incorporated cities within the Plan Area. Compliance with local regulations may include establishing protective buffers to avoid impacts or implementing compensatory mitigation if impacts cannot be avoided, based on regulatory standards set forth in the local ordinances, policies, and regulations of the municipality in which the project is located. Any protected trees within or near the project footprint would be identified during the desktop review (**MM BIO-1: Desktop Review and Surveys**), and the project proponent would implement **MM BIO-5: Conduct Biological Monitoring** as needed, to be consistent with local tree protection ordinances. However, at the program level, site-specific jurisdiction and the regulatory requirements are currently unknown and therefore could be potentially significant. Further, the County or other public entity that is not subject to municipal zoning codes may implement a project. Further projects implemented by the County are not subject to local regulations and even with mitigation, implementation may include the trimming or removal of trees in a manner that conflicts with local policies and ordinances. Therefore, impacts would be significant and unavoidable.

Operations

Less than Significant. Operations would include vegetation management activities such as landscaping, tree trimming, and/or tree removal for maintenance, safety, and to ensure continued access to a project site. Tree trimming and removal would be subject to local tree policies and ordinances from LA County and incorporated cities within the Plan Area. Operations for future projects would be required to comply with any applicable local tree policies and/or ordinances, as well as any general plan or municipal codes that pertain to biological resources. Therefore, impacts would be less than significant.

Mitigation Measures

MM BIO-1: Desktop Review and Biological Surveys

MM BIO-5: Conduct Biological Monitoring

Significance After Mitigation

As described above, projects under the plan may be implemented by the County or other public entity that are not subject to local regulations and even with mitigation, implementation may conflict with local policies and ordinances. Therefore, impacts would be significant and unavoidable.

3.4.3.3.6 4(f). Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

3.4.3.3.6.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction and Operations

No Impact. No habitat conservation plans, Natural Community Conservation Plans or other approved local, regional, or state habitat conservation plans are located within the Plan Area (CDFW 2022b, 2024b). Therefore, no impacts would occur.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

No impacts would occur. No mitigation is required.

3.4.3.4 Impacts of Conceptual Design Projects

This section discusses potential impacts from the 10 conceptual design projects discussed in Section 2.4. Each table below addresses the CEQA framework question for each conceptual design. Any mitigation referenced in the tables below is discussed in the sections above.

3.4.3.4.1 4(a). Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife, U.S. Fish and Wildlife Service, or NOAA Fisheries?

Construction and Operations

The components proposed for all 10 conceptual design projects are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization. Some are located in areas that are more heavily urbanized and confined along washes and others support habitat areas adjacent to the washes, including dense stands of trees, riparian habitat, scrub habitat, and potential oak woodland habitat, which may support various plants and wildlife. Some of the urban areas also support large trees and other structures, like bridges, which could provide habitat for nesting birds and roosting habitat for bats. There would be no additional impacts or impacts of greater severity than those already addressed for the construction and operations of greenway paths and amenities in Section 3.4.3.3.1.1.

The following mitigation measures would be implemented, as required, during construction and operations to reduce any potential impacts on special status species from potentially significant to less than significant with mitigation, should a conceptual design project be pursued: **MM BIO-1: Desktop Review and Biological Surveys, MM BIO-2: Pre-construction Nesting Bird Surveys, MM BIO-3: Burrowing Owl Pre-construction Surveys; MM BIO-4: Conduct Preconstruction Special-Status Bat Surveys, MM BIO-5: Conduct Biological Monitoring, MM BIO-6: Implement a Worker Environmental Awareness Program, MM BIO-7: Weed Abatement Measures, MM BIO-8: Construction Best Management Practices to Protect Wildlife, MM-BIO-9: Operations Recreation Plan, MM BIO-10: Prepare and Implement Pest Management Plan, and MM BIO-11: Use Bird Safe Glass.**

Table 3.4-5. Analysis of Conceptual Design Examples for Construction and Operations to Have a Substantial Adverse Effect, either Directly or through Habitat Modifications, on Any Species Identified as a Candidate, Sensitive, or Special Status Species

Conceptual Design Project	3(a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife, U.S. Fish and Wildlife Service, or NOAA Fisheries?
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	Less than Significant with Mitigation. This project area overlaps several historic CNDDB occurrences for plants and wildlife. There is no critical habitat for listed species in the vicinity of this design project area. Trees along the wash could support nesting birds and roosting bats. If construction or operations resulted in vegetation trimming or removal which supported sensitive species, impacts could occur. The addition of a pollinator garden may have a beneficial impact on sensitive butterfly and bumble bee species if it supports suitable host and nectar plant species. With implementation of the mitigation measures as described above in Section 3.4.3.3.1.1 during construction and operations, impacts would be less than significant.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	Less than Significant with Mitigation. This project area does not overlap any CNDDB occurrences for plant or wildlife species and no critical habitat is located in the vicinity. The addition of a pollinator garden may have a beneficial impact on sensitive butterfly and bumble bee species if it supports suitable host and nectar plant species. There is limited vegetation in the vicinity of this wash, but existing bridge crossings could support roosting bat habitat. With implementation of the mitigation measures as described above in Section 3.4.3.3.1.1 during construction and operations, impacts would be less than significant.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	Less than Significant with Mitigation. There is a recent (2015) CNDDB occurrence for least Bell's vireo just north of the project area in riparian habitat above the Eaton Wah Reservoir. Riparian habitat appears limited to areas outside the project area but there are areas in the vicinity that could support sensitive species. There are also various historical occurrences within CNDDB which overlap the project area. There is no critical habitat in the vicinity of this design project. Vegetated habitat areas and trees along the wash and nearby areas could support nesting birds and roosting bats. If construction or operations resulted in vegetation trimming or removal which supported sensitive species, impacts could occur. With implementation of the

Conceptual Design Project	3(a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife, U.S. Fish and Wildlife Service, or NOAA Fisheries?
	mitigation measures as described above in Section 3.4.3.3.1.1 during construction and operations, impacts would be less than significant.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i>	Less than Significant with Mitigation. There are two historical occurrences within CNDDDB which overlap the project area. There is no critical habitat in the vicinity of this design project. Vegetated habitat areas and trees along the wash could support nesting birds and roosting bats. These habitat areas along the wash may also support oak woodland habitat. With implementation of the mitigation measures as described above in Section 3.4.3.3.1.1 during construction and operations, impacts would be less than significant.
San Dimas Wash at Arrow High School <i>City of Glendora</i>	Less than Significant with Mitigation. This project area does not overlap any CNDDDB occurrences for plant or wildlife species, and no critical habitat is located in the vicinity. There is a stand of sycamore trees within the existing pocket park and nearby vegetation and trees which could support nesting bird habitat or roosting habitat for bats. If construction or operations resulted in vegetation trimming or removal which supported sensitive species, impacts could occur. With implementation of the mitigation measures as described above in Section 3.4.3.3.1.1 during construction and operations, impacts would be less than significant.
San Dimas Wash at Hollenbeck Park <i>City of Covina</i>	Less than Significant with Mitigation. This project area overlaps several historic CNDDDB occurrences for bat species. There is no critical habitat located in the vicinity. Nearby buildings may provide roosting habitat for bats, and potential nesting sites for birds are limited to backyard trees. If construction or operations resulted in vegetation trimming or removal which supported sensitive species, impacts could occur. With implementation of the mitigation measures as described above in Section 3.4.3.3.1.1 during construction and operations, impacts would be less than significant.
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i>	Less than Significant with Mitigation. There are no CNDDDB occurrences overlapping this area. There is a recent occurrence and critical habitat for coastal California gnatcatcher within one mile, south of San Jose Creek. There is potentially suitable scrub habitat for this species in the vicinity of San Jose Creek. Riparian habitat is also present along a portion of San Jose Creek which could support species that require this habitat type for nesting or foraging. If construction or operations resulted in impacts on this scrub or riparian habitat, which may support sensitive species, impacts could occur. With implementation of the mitigation measures as described above in Section 3.4.3.3.1.1 during construction and operations, impacts would be less than significant.
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	Less than Significant with Mitigation. This project area overlaps a historic CNDDDB occurrence for a bat species. There is no critical habitat mapped in the vicinity of this segment of Thompson Creek. Some of the trees located along access roads may provide habitat for nesting birds and nearby structures may serve as roosting bat habitat. If construction or operations resulted in vegetation trimming or removal which supported sensitive species, impacts could occur. The addition of a pollinator garden may have a beneficial impact

Conceptual Design Project	3(a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife, U.S. Fish and Wildlife Service, or NOAA Fisheries?
	on sensitive butterfly and bumble bee species if it supports suitable host and nectar plant species. With implementation of the mitigation measures as described above in Section 3.4.3.3.1.1 during construction and operations, impacts would be less than significant.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park West Covina</i>	Less than Significant with Mitigation. This project area does not overlap any CNDDDB occurrences, and no critical habitat is mapped in the vicinity of this segment of Walnut Creek. There are stretches of vegetated areas between the concrete-lined channel and nearby roads which support various trees and shrubs, which may provide nesting habitat for birds and several channel crossings which may support bat roosting habitat, but habitat areas are generally limited to these roadside areas. If construction or operations resulted in vegetation trimming or removal which supported sensitive species, impacts could occur. With implementation of the mitigation measures as described above in Section 3.4.3.3.1.1 during construction and operations, impacts would be less than significant.
Walnut Creek at Pocket Park <i>City of West Covina</i>	Less than Significant with Mitigation. This project area does not overlap any CNDDDB occurrences, and no critical habitat is mapped in the vicinity of this segment of Walnut Creek. Landscape trees are present adjacent to the access roads along the concrete-lined channel, which could potentially support nesting birds. If construction or operations resulted in vegetation trimming or removal which supported sensitive species, impacts could occur. With implementation of the mitigation measures as described above in Section 3.4.3.3.1.1 during construction and operations, impacts would be less than significant.

3.4.3.4.2 4(b). Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?

Construction and Operations

The components proposed for all 10 conceptual design projects are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization. There would be no additional impacts or impacts of greater severity than those already addressed for construction and operations of Greenway Paths + Greenway Amenities, Pocket Parks and Greenspaces, Safe Crossings, and Stormwater Management in Section 3.4.3.3.2.1. If work areas overlap or are located adjacent to any riparian habitat or sensitive natural communities, including SEAs, as described in Table 3.4-6 below for any of the 10 conceptual design projects, potentially significant impacts to habitat could occur.

The following mitigation measures would be implemented, as required, during construction and to reduce impacts on riparian and other sensitive natural communities from potentially significant to less than significant with mitigation: **MM BIO-1: Desktop Review and Biological Surveys, MM BIO-5:**

Conduct Biological Monitoring, MM BIO-6: Implement a Worker Environmental Awareness Program, MM BIO-7: Implement Weed Abatement Measures, and MM BIO-9: Operations Recreation Plan.

Table 3.4-6. Analysis of Conceptual Design Examples for Construction and Operations to Have a Substantial Adverse Effect on Any Riparian Habitat or Other Sensitive Natural Community

Conceptual Design Project	<i>3(b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?</i>
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	No impact. Alhambra Wash is confined by urban development, but there are portions of the concrete-lined channel which are lined with habitat which contains large trees, some of which appear to be landscape trees, as well as <i>Eucalyptus</i> spp. and other species. No riparian areas are mapped by the USFWS in this project area, and it does not overlap any SEAs or other sensitive natural communities mapped by CDFW. Due to the wash being channelized, riparian habitat is not expected to occur at this project site.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	No impact. This is a heavily urbanized area with paved and gravel surfaces adjacent to the concrete-lined wash. No riparian habitat is mapped along Big Dalton Wash. No habitat areas which support trees are visible in the vicinity of the wash, except for existing landscape trees in Hilda Solis Park.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	Less than Significant with Mitigation. Eaton Wash is a concrete-lined channel with paved and gravel access roads on each side. There are several segments of this wash with vegetated habitat areas which support various landscape trees as well as oak, sycamore, and eucalyptus trees, which are visible in the areas adjacent to the wash. The closest riparian habitat appears to be within the Eaton Canyon Reservoir, which would be outside the project area. This project is located in the vicinity of the Altadena Foothills and Arroyos SEA. With implementation of the mitigation measures as described above in Section 3.4.3.3.2.1 during construction and operations, impacts would be less than significant.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i>	Less than Significant with Mitigation. Eaton Wash is a concrete-lined channel with dense stands of vegetation and trees lining the wash. No riparian areas are mapped by the USFWS in this project area, and it does not overlap any SEAs or other sensitive natural communities mapped by CDFW. Due to the wash being channelized, riparian habitat is not expected to occur at this project site. Areas of oak woodland may be supported in these stretches of habitat areas. With implementation of the mitigation measures as described above in Section 3.4.3.3.2.1 during construction and operations, impacts would be less than significant.
San Dimas Wash at Arrow High School <i>City of Glendora</i>	No impact. There is no riparian habitat mapped at this project site along San Dimas wash, which is a concrete-lined channel. The existing pocket park supports a small area of sycamore trees. The closest mapped sensitive natural community is located an area mapped as East SGV SEA located 0.25 miles north of San Dimas Wash at Arrow High School. No impacts to that habitat area would occur.
San Dimas Wash at Hollenbeck Park	No impact. There is no riparian habitat mapped at this project site along San Dimas wash, which is a concrete-lined channel. There are no mapped sensitive

Conceptual Design Project	3(b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?
<i>City of Covina</i>	natural communities or SEAs in the vicinity of this segment of San Dimas Wash, which supports limited vegetation. Paved or gravel access roads are along both sides of the channel, with minimal vegetation/trees consisting of those within backyards that abut the channel and ruderal vegetation growing along the access roads.
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i>	Less than Significant with Mitigation. San Jose Creek supports wetland and riparian habitat along channel banks of the western extent of this project area, where the creek substrate is natural. This portion of San Jose Creek provides vegetated habitat in an otherwise urban area. Where San Jose Creek transitions to a concrete-lined channel, it no longer supports banks with vegetation. With implementation of the mitigation measures as described above in Section 3.4.3.3.2.1 during construction and operations, impacts would be less than significant.
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	No impact. There is no riparian habitat mapped at this project site along Thompson Creek, which is a concrete-lined channel. There are no mapped sensitive natural communities or SEAs in the vicinity of Thompson Creek. The channel is confined by development on both sides with adjacent landscape trees present and segments that abut access roads and residential backyards.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park West Covina</i>	Less than Significant with Mitigation. There is no riparian habitat mapped in the vicinity of this segment of Walnut Creek, however the mapped wetland just upstream of Baldwin Park Boulevard may support riparian species. There are stretches of vegetated areas between the channel and nearby roads which support various trees and shrubs, but habitat areas are generally limited to these roadside areas. With implementation of the mitigation measures as described above in Section 3.4.3.3.2.1 during construction and operations, potential indirect impacts on riparian vegetation would be less than significant.
Walnut Creek at Pocket Park <i>City of West Covina</i>	No impact. There is no riparian habitat mapped at this project site along Walnut Creek, which is a concrete-lined channel. There are no mapped sensitive natural communities or SEAs in the vicinity of Walnut Creek. The channel is confined by development on both sides, primarily residential areas that abut the access roads adjacent to the channel. These areas support landscape trees and ruderal shrubs.

3.4.3.4.3 4(c). Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?

Construction and Operations

The components proposed for all 10 conceptual design projects are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization. There would be no additional impacts or impacts of greater severity than those already addressed in Section 3.4.3.3.3.1. Most the washes within the 10 conceptual design projects are concrete-lined and mapped as riverine habitat and lack associated wetland habitat.

For areas where there is associated wetland habitat mapped or potentially present in the vicinity of the washes, the following mitigation measures would be implemented, as required, during construction and operations to reduce any potentially significant impacts on wetlands to less than significant should a conceptual design project be pursued: **MM BIO-5: Conduct Biological Monitoring, MM BIO-6: Implement a Worker Environmental Awareness Program, MM BIO-7: Weed Abatement Measures, MM BIO-9: Operations Recreation Plan, MM BIO-12: Conduct a Jurisdictional Delineation, and MM BIO-13: Permanent Wetlands Signage.**

Table 3.4-7. Analysis of Conceptual Design Examples for Construction and Operations to Have a Substantial Adverse Effect on State or Federally Protected Wetlands

Conceptual Design Project	<i>3(c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?</i>
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	No impact. Alhambra Wash is mapped as riverine habitat (R4SBAX), which is an excavated channel that is intermittent and temporarily flooded (USFWS 2024b). This is an urbanized area of the Plan Area, with the channel lined with various residential and commercial uses as well as a golf course. Alhambra Wash is concrete-lined throughout this project area, and therefore no wetland areas are anticipated to be located in the work area. No wetlands are mapped by USFWS along Alhambra Wash. There is a freshwater pond mapped in the nearby gold course, but this would be outside the work area.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	No impact. Big Dalton Wash is mapped as riverine habitat (R4SBCx), which is an excavated channel that is intermittent and seasonally flooded (USFWS 2024b). This is a heavily urbanized area with paved and gravel surfaces adjacent to the concrete-lined wash or residential/commercial lots that directly abut the concrete channel. No wetlands are mapped along this segment of Big Dalton Wash.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	Less than Significant with Mitigation. Eaton Wash is mapped as riverine habitat (R4SBAX), which is an excavated channel that is intermittent and temporarily flooded (USFWS 2024b). At the northern segment of the project, Eaton Wash runs parallel to a mapped freshwater pond with associated freshwater forested/shrub wetland habitat. There is potential for indirect effects on these nearby wetland features, and with implementation of the mitigation measures listed above in Section 3.4.3.3.3.1 during construction and operations, impacts would be less than significant.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i>	No impact. Eaton Wash is mapped as riverine habitat (R4SBAX), which is an excavated channel that is intermittent and temporarily flooded (USFWS 2024b). South of Eaton Blanche Park, the wash runs parallel to a mapped freshwater pond which may support riparian vegetation, but no wetland habitat is mapped in the area.
San Dimas Wash at Arrow High School <i>City of Glendora</i>	No impact. San Dimas Wash is mapped as riverine habitat (R4SBAX), which is an excavated channel that is intermittent and temporarily flooded (USFWS 2024b). San Dimas Wash is concrete-lined channel, and no wetland habitat is mapped in the vicinity of the design project area.

Conceptual Design Project	3(c) Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?
San Dimas Wash at Hollenbeck Park <i>City of Covina</i>	No impact. San Dimas Wash is mapped as riverine habitat (R4SBAX), which is an excavated channel that is intermittent and temporarily flooded (USFWS 2024b). San Dimas Wash is a concrete-lined channel, and no wetland habitat is mapped in the vicinity of the design project area. This channel is confined by fenced residential backyards which abut the access roads.
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i>	Less than Significant with Mitigation. Portions of San Jose Creek are mapped as riverine habitat (R4SBCx) which is an excavated channel that is intermittent and seasonally flooded with adjacent portions mapped as freshwater emergent wetland habitat and freshwater ponds (USFWS 2024b). There is potential for direct and indirect effects on these wetland features, and with implementation of the mitigation measures listed above in Section 3.4.3.3.1 during construction and operations, impacts would be reduced from potentially significant to less than significant.
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	No impact. Thompson Creek is mapped as riverine habitat (R4SBAX), which is an excavated channel that is intermittent and temporarily flooded (USFWS 2024b). Thompson Creek is a concrete-lined channel, and no wetland habitat is mapped in the vicinity of the design project area. The channel is confined by development on both sides with adjacent landscape trees present and segments that abut access roads and residential backyards.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park West Covina</i>	Less than Significant with Mitigation. Downstream of Baldwin Park Boulevard, Walnut Creek is an unlined channel mapped as freshwater emergent wetland habitat. Downstream of the Baldwin Park Boulevard bridge, the channel becomes concrete-lined and is mapped only as riverine habitat (R4SBCx), which is an excavated channel that is intermittent and seasonally flooded (USFWS 2024b). There is potential for indirect effects on the nearby wetland, and with implementation of the mitigation measures listed above in Section 3.4.3.3.1 during construction and operations, impacts would be reduced from potentially significant to less than significant.
Walnut Creek at Pocket Park <i>City of West Covina</i>	No impact. Walnut Creek is a concrete-lined channel that is mapped as riverine habitat (R4SBCx), which is an excavated channel that is intermittent and seasonally flooded (USFWS 2024b). Walnut Creek is a concrete-lined channel, and no wetland habitat is mapped in the vicinity of the design project area.

3.4.3.4.4 4(d). Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?

Construction and Operations

Less than Significant with Mitigation. The components proposed for all 10 conceptual design projects are within the maximum extent limits described for the Plan components in Section 2.3.1, Components of the Plan and CEQA Organization. There would be no additional impacts or impacts of greater severity than those already addressed for construction and operations of Greenway Paths + Greenway Amenities, Pocket Parks and Greenspaces, Safe Crossings, and Stormwater Management in Section

3.4.3.3.4.1. Unlined washes which support vegetation (e.g., portion of San Jose Creek and an area just downstream of Walnut Creek at Syhre Park) can provide higher quality habitat connectivity than non-vegetated areas for various species, including fish, bats, and resident and migratory birds. These areas support important habitat for the movement, migration, and breeding of fish and wildlife species that use them. Additionally, vegetated areas and the associated infrastructure within the District ROW and adjacent parcels, including bridges and culverts, may also provide habitat features which support nesting or roosting for bird and bat species (e.g., ledges and crevices). No in-water work would occur for 10 conceptual design projects, so no direct impacts on the movement of fish are anticipated. However, indirect effects that result in degraded riverine habitat which supports fish could occur should a conceptual design project be pursued. Direct and indirect effects could occur as a result from vegetation trimming/removal during construction and operations. If work areas overlap or are located adjacent to areas which support the movement of fish and wildlife or serve as nursery sites, potentially significant impacts could occur. The following mitigation measures would be implemented, as required, during construction and operations to reduce impacts on areas supporting the movement or reproduction of fish and wildlife species from potentially significant to less than significant with mitigation should a conceptual design project be pursued: **MM BIO-5: Conduct Biological Monitoring**, **MM BIO-7: Weed Abatement Measures**, and **MM BIO-8: Construction Best Management Practices to Protect Wildlife**. Therefore, impacts would be less than significant with mitigation.

3.4.3.4.5 4(e). Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?

Construction and Operations

Significant and Unavoidable. Construction and operations of the 10 conceptual design projects could conflict with local policies or ordinances protecting biological resources if protected trees are impacted during tree trimming or removal. Trees present along the washes could be impacted by these projects. Tree trimming and removal would be subject to local tree policies and ordinances, including all incorporated cities where the 10 conceptual design projects are located. There would be no additional impacts or impacts of greater severity than those already addressed for construction and operations of Greenway Paths and Greenway Amenities, Pocket Parks and Greenspaces, Safe Crossings, and Stormwater Management in Section 3.4.3.3.5.1 and **MM BIO-1: Desktop Review and Biological Survey** and **MM BIO-5: Conduct Biological Monitoring** would apply, as needed, during construction and operations should a conceptual design project be pursued. However, depending on final design of the conceptual design projects and the project proponent, the potential exists for impacts to be significant and unavoidable.

3.4.3.4.6 4(f). Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?

Construction and Operations

No Impact. No habitat conservation plans, Natural Community Conservation Plans or other approved local, regional, or state habitat conservation plans are located within the Plan Area (CDFW 2022b, 2024b). Therefore, no impacts would occur for the 10 conceptual design projects, which are all located within the Plan Area.

3.5 Cultural Resources

This section describes the environmental setting and applicable regulations applicable to cultural resources in the Plan Area and evaluates the potential impacts on cultural resources associated with implementation of the Plan.

Table 3.5-1. Summary of Potential Impacts of the Plan on Cultural Resources

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
<i>Would the Plan:</i>			
5(a). Cause a substantial adverse change in the significance of a historical resource as defined in § 15064.5?			
Greenway Paths + Greenway Amenities	Less than Significant with Mitigation	Less than Significant	Construction: MM AQ-1: Emission Reduction Measures.
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant with Mitigation	Less than Significant	MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan.
Greenway Paths + Safe Crossings	Less than Significant with Mitigation	Less than Significant	MM CR-1: Historical Resources Assessment MM CR-2: Avoid Historical Resources
Greenway Paths + Stormwater Management	Less than Significant with Mitigation	Less than Significant	MM CR-3: Prepare and Implement a Historic Resources Mitigation Plan Operations: No Mitigation
5(b). Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?			
Greenway Paths + Greenway Amenities	Less than Significant with Mitigation	Less than Significant	Construction: MM CR-4: Cultural Resources Assessment
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant with Mitigation	Less than Significant	MM CR-5: Avoid Cultural Resources, Prepare Treatment Plan

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the Plan:			
Greenway Paths + Safe Crossings	Less than Significant with Mitigation	Less than Significant	MM CR-6: Monitoring MM CR-7: Unanticipated Discovery of a Cultural Resource Operations: No Mitigation
Greenway Paths + Stormwater Management	Less than Significant with Mitigation	Less than Significant	
5(c). Disturb any human remains, including those interred outside of dedicated cemeteries?			
Greenway Paths + Greenway Amenities	Less than Significant with Mitigation	No Impact	Construction: MM CR-8: Unanticipated Discovery of Human Remains and Associated Funerary or Ceremonial Objects. Operations: No Mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant with Mitigation	No Impact	
Greenway Paths + Safe Crossings	Less than Significant with Mitigation	No Impact	
Greenway Paths + Stormwater Management	Less than Significant with Mitigation	No Impact	

Cultural resources include prehistoric and historic sites, structures, districts, places, landscapes, objects, or any other physical evidence associated with human activity considered important to a culture, a subculture, or a community for scientific, traditional, religious, or any other reason. For the purposes of this analysis, cultural resources may be categorized into the following groups: archaeological resources, historic resources (including architectural/engineering resources), human remains, and contemporary Native American resources.

Archaeological resources are places where human activity has measurably altered the earth or left deposits of physical remains. Archaeological resources may be either prehistoric-era (before European contact) or historic-era (after European contact). The majority of places in California are associated with either Native American or Euro-American occupation of the area. The most frequently encountered prehistoric or historic Native American archaeological sites are village settlements with residential areas and sometimes cemeteries; temporary camps where food and raw materials were collected; smaller, briefly occupied sites where tools were manufactured or repaired; and special-use areas like caves, rock

shelters, and rock art sites. Historic-era archaeological sites may include foundations or features such as privies, corrals, and trash dumps.

Historic resources include standing structures, infrastructure, and landscapes of historic or aesthetic significance that are generally 50 years of age or older. In California, historic resources considered for protection tend to focus on architectural sites dating from the Spanish Period (1529–1822) through World War II and Post War–era facilities. Some resources, however, may have achieved significance within the past 50 years if they meet the criteria for exceptional significance. Historic resources are often associated with archaeological deposits of the same age.

Contemporary Native American resources, also called ethnographic resources, can include archaeological resources, rock art, and the prominent topographical areas, features, habitats, plants, animals, and minerals that contemporary Native Americans value and consider essential for the preservation of their traditional values. These resources are sometimes hard to define and traditional culture and concerns for vandalism often prohibits Native Americans from sharing these locations with the public. Additional discussion of tribal cultural resources is provided in Section 3.18.

3.5.1 Environmental Setting

The California Register of Historic Resources (CRHR) lists over 500 historic resources located within Los Angeles County, most of which are located in cities, with 31 sites located in unincorporated areas (LA County Department of Regional Planning 2022). Figure 3.5-1 below provides the location of registered historic sites within 0.5-mile of the Plan Area (i.e., greenway).

The San Gabriel River watershed has a long history of human habitation, from the early Native Americans to European arrival and periods of rule by Spain, Mexico, and the United States. The first inhabitants of the SGV were recorded around 500 B.C. Approximately 5 to 10 thousand indigenous people were estimated to be in the region when the Spanish arrived. In 1771, the Spaniards established the San Gabriel Mission in the SGV near present day El Monte (LA County Department of Public Works (LACDPW) 2006). The indigenous Chumash and Gabrieliño peoples have occupied land within Los Angeles County since prehistoric times. However, many of the known archaeological and historic cultural sites in the region have been disturbed by varying degrees by human activity (development, occupation, and use) as well as natural events (erosion resulting from earthquakes, fire, and flood). In some instances, historic and prehistoric artifacts, such as stone tools, antique nails, and equipment parts, have been disturbed and even destroyed by visitors or residents (LA County Department of Regional Planning 2022).

The potential for archaeological resources to be present in the Plan Area will be variable depending on local conditions. The low-lying alluvial plain would be expected to have been preferred areas for past subsistence and occupation. The extensive development of these low-lying areas into urban cities makes it likely that a high percentage of archaeological sites that once existed have been subject to disturbance or destruction by humans. Foothills and mountains may have been less favored for occupation due to steeper slopes and limited access to water, which also have generally been subject to less development (LACFCD 2015).

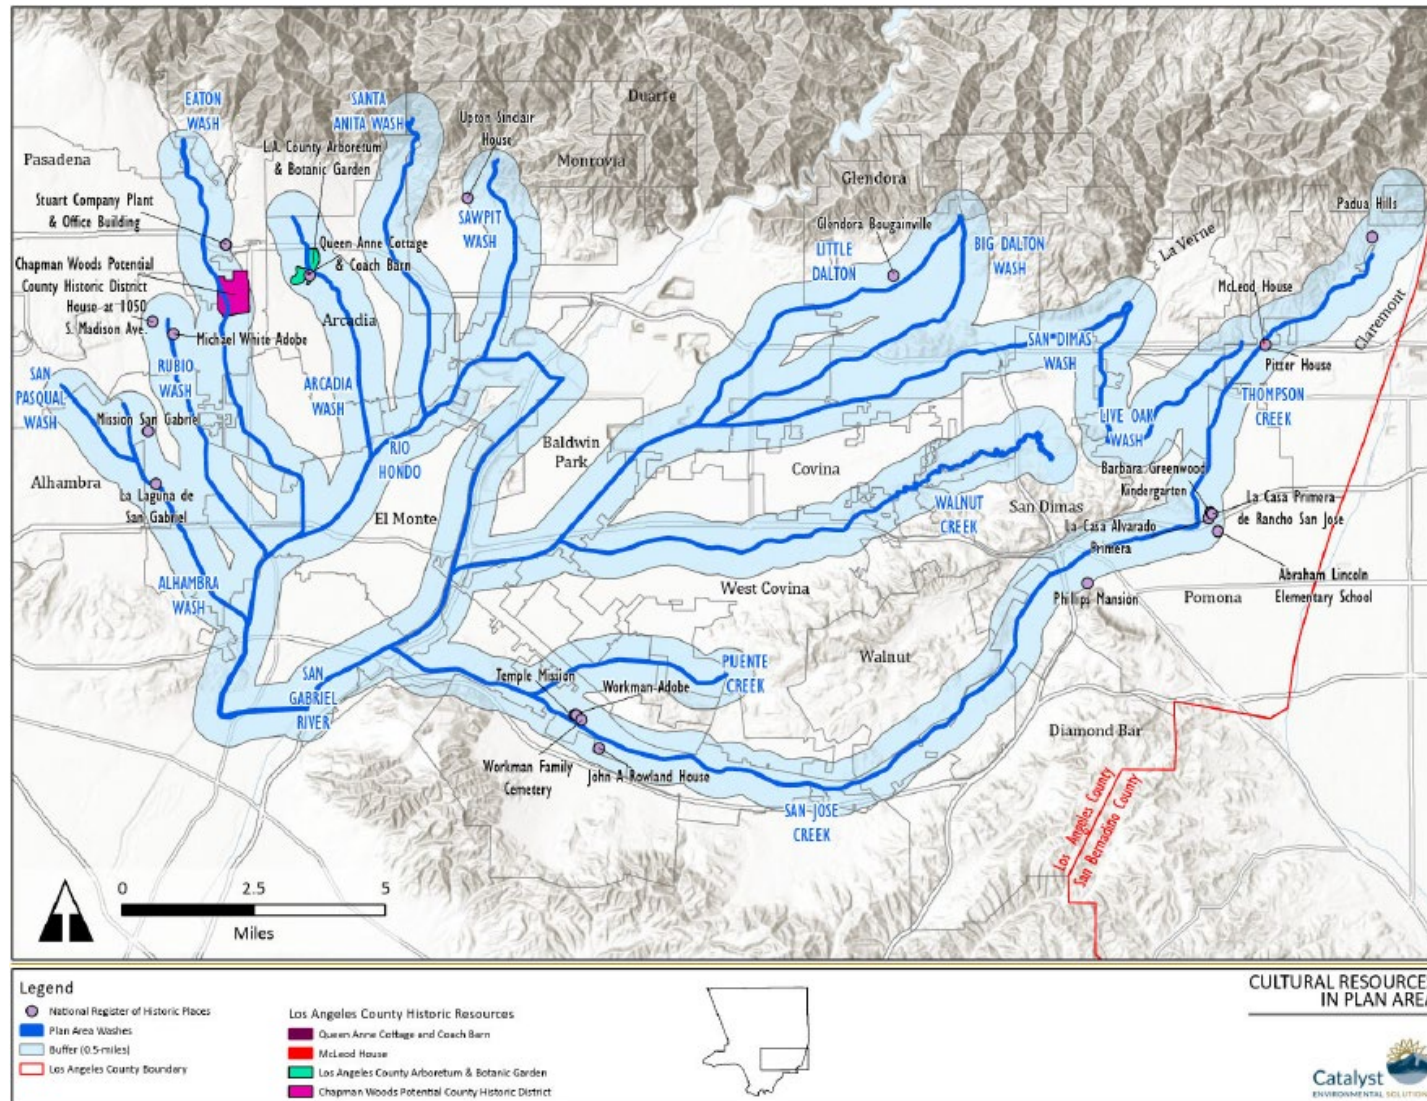

Figure 3.5-1. Known Historical Resources in the Plan Area

3.5.2 Regulatory Setting

3.5.2.1 Federal

3.5.2.1.1 National Historic Preservation Act

Section 106 of the National Historic Preservation Act requires that every federal agency take into account how each of its undertakings could affect historic properties. Historic properties are districts, sites, buildings, structures, traditional cultural properties, and objects significant in American history, architecture, engineering, and culture that are eligible for inclusion in the National Register of Historic Places (National Park Service 2012). Section 106 would be applicable to a project implemented under the Plan, if a federal permit is required for implementation or if federal funds (i.e., grants) are obtained for project development.

3.5.2.1.1.1 Secretary of the Interior Standards

The Secretary of the Interior's Standards and Guidelines for the treatment of Historic Properties (Standards) were developed by the National Park Service (NPS) to provide guidance in historic preservation best practices. The Standards were introduced in 36 CFR Part 68, (1995) and while they are advisory and not regulatory practices, they are considered essential in carrying out historic preservation responsibilities at the local, state, and federal levels. Each approach, be it preservation, rehabilitation, restoration, or reconstruction provide the accepted standards for repair, replacement, alteration and maintenance of historic properties and historic materials. Each of these terms (preservation, rehabilitation, restoration, and reconstruction) have very specific definition as they relate to historic preservation and historic properties. There are specific guidelines for the treatment of historic properties as well as cultural landscapes, sustainability, and rehabilitation.

Standards for Preservation

1. A property will be used as it was historically or be given a new use that maximizes the retention of distinctive materials, features, spaces, and spatial relationships. Where a treatment and use have not been identified, a property will be protected and, if necessary, stabilized until additional work may be undertaken.
2. The historic character of a property will be retained and preserved. The replacement of intact or repairable historic materials or alteration of features, spaces and spatial relationships that characterize a property will be avoided.
3. Each property will be recognized as a physical record of its time, place, and use. Work needed to stabilize, consolidate, and conserve existing historic materials and features will be physically and visually compatible, identifiable upon close inspection and properly documented for future research.
4. Changes to a property that have acquired historic significance in their own right will be retained and preserved.
5. Distinctive materials, features, finishes and construction techniques or examples of craftsmanship that characterize a property will be preserved.

6. The existing condition of historic features will be evaluated to determine the appropriate level of intervention needed. Where the severity of deterioration requires repair or limited replacement of a distinctive feature, the new material will match the old in composition, design, color, and texture.
7. Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments that cause damage to historic materials will not be used.
8. Archaeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.

Standards for Rehabilitation

1. A property will be used as it was historically or be given a new use that requires minimal change to its distinctive materials, features, spaces, and spatial relationships.
2. The historic character of a property will be retained and preserved. The removal of distinctive materials or alteration of features, spaces and spatial relationships that characterize a property will be avoided.
3. Each property will be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or elements from other historic properties, will not be undertaken.
4. Changes to a property that have acquired historic significance in their own right will be retained and preserved.
5. Distinctive materials, features, finishes and construction techniques or examples of craftsmanship that characterize a property will be preserved.
6. Deteriorated historic features will be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature will match the old in design, color, texture and, where possible, materials. Replacement of missing features will be substantiated by documentary and physical evidence.
7. Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments that cause damage to historic materials will not be used.
8. Archaeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.
9. New additions, exterior alterations or related new construction will not destroy historic materials, features and spatial relationships that characterize the property. The new work will be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment.
10. New additions and adjacent or related new construction will be undertaken in such a manner that, if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

Standards for Restoration

1. A property will be used as it was historically or be given a new use that interprets the property and its restoration period.
2. Materials and features from the restoration period will be retained and preserved. The removal of materials or alteration of features, spaces and spatial relationships that characterize the period will not be undertaken.
3. Each property will be recognized as a physical record of its time, place, and use. Work needed to stabilize, consolidate, and conserve materials and features from the restoration period will be physically and visually compatible, identifiable upon close inspection and properly documented for future research.
4. Materials, features, spaces, and finishes that characterize other historical periods will be documented prior to their alteration or removal.
5. Distinctive materials, features, finishes and construction techniques or examples of craftsmanship that characterize the restoration period will be preserved.
6. Deteriorated features from the restoration period will be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature will match the old in design, color, texture and, where possible, materials.
7. Replacement of missing features from the restoration period will be substantiated by documentary and physical evidence. A false sense of history will not be created by adding conjectural features, features from other properties, or by combining features that never existed together historically.
8. Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments that cause damage to historic materials will not be used.
9. Archaeological resources affected by a project will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.
10. Designs that were never executed historically will not be constructed.

Standards for Reconstruction

1. Reconstruction will be used to depict vanished or non-surviving portions of a property when documentary and physical evidence is available to permit accurate reconstruction with minimal conjecture, and such reconstruction is essential to the public understanding of the property.
2. Reconstruction of a landscape, building, structure, or object in its historic location will be preceded by a thorough archaeological investigation to identify and evaluate those features and artifacts that are essential to an accurate reconstruction. If such resources must be disturbed, mitigation measures will be undertaken.
3. Reconstruction will include measures to preserve any remaining historic materials, features and spatial relationships.

4. Reconstruction will be based on the accurate duplication of historic features and elements substantiated by documentary or physical evidence rather than on conjectural designs or the availability of different features from other historic properties. A reconstructed property will recreate the appearance of the non-surviving historic property in materials, design, color, and texture.
5. A reconstruction will be clearly identified as a contemporary re-creation.
6. Designs that were never executed historically will not be constructed.

3.5.2.2 State

3.5.2.2.1 California Environmental Quality Act

The cultural resources provisions of CEQA provide for the documentation and protection of significant prehistoric and historic-era resources. Before the approval of discretionary projects and the commencement of agency undertakings, the potential impacts of the project on archaeological and historical resources must be considered (PRC Sections 21083.2 and 21084.1 and the State CEQA Guidelines [CCR Title 14, Section 15064.5]). The significance of an archaeological or historical resource per the State CEQA Guidelines is an important consideration in terms of their management.

The State CEQA Guidelines Section 15064.5 also requires consideration of unique archaeological sites. If an archaeological site does not meet the criteria for inclusion on the CRHR but does meet the definition of a unique archaeological resource as outlined in the PRC Section 21083.2, it may be treated as a significant historical resource. Treatment options under Section 21083.2 include preserving such resources in place in an undisturbed state. Other acceptable methods of mitigation under Section 21083.2 include excavation and curation, or study in place without excavation and curation if the study finds that the artifacts would not meet one or more of the criteria for defining a “unique archaeological resource”.

3.5.2.2.2 California Register of Historical Resources

Listing on the CRHR, or eligibility for listing on the CRHR, is the primary consideration in whether or not a resource is subjected to further research and documentation. The significance of cultural resources is measured against the criteria outlined in the CRHR. Determining the CRHR eligibility of historic and prehistoric sites located within the study area is guided by the specific legal context of the site’s significance as outlined in PRC Sections 21083.2 and 21084.1 and the State CEQA Guidelines (CCR Title 14, Section 15064.5). In the CRHR, cultural resources are defined as buildings, sites, structures, or objects that may have historical, architectural, archaeological, cultural, or scientific importance. A cultural resource may be eligible for listing on the CRHR if it:

- Is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage;
- Is associated with the lives of persons important in our past;
- Embodies the distinctive characteristics of a type, period, region or method of construction or represents the work of an important creative individual or possesses high artistic values; or
- Has yielded, or may be likely to yield, information important in prehistory or history.

The significance of a prehistoric archaeological resource is normally defined relative to criterion (d), and its ability “to yield, information important in prehistory.” This is assessed by the type of information the resource may inform about research questions that explain prehistoric behavior. As a result, the condition or “integrity” of a prehistoric resource is critical; if the resource has been damaged and/or its original horizontal and/or vertical depositional context has been disturbed, it is possible that the ability of that resource to contribute to understanding prehistoric behavior has been compromised.

The significance of an historic-era archaeological resource and/or a built architectural resource is commonly associated with any of the four criteria listed above. Relative to criterion (d), such a resource is not normally considered “important in history” if it is less than 50 years old, given that it would otherwise not be sufficiently unique in terms of its number and distribution. The integrity of an historic-era archaeological resource is also a factor relative to its potential significance, similar to a prehistoric archaeological resource.

As a matter of policy, public agencies avoid damaging effects on historic and archaeological resources, particularly those that are CRHR-eligible. When impacts cannot be avoided, their effects can be mitigated through avoidance during construction phases, incorporation of a site into open space, capping resources with stable fill, deeding a site into a conservation easement, or data recovery through archaeological testing and excavation (State CEQA Guidelines Section 15126.4 (b)(3)).

3.5.2.3 Los Angeles County

3.5.2.3.1 Los Angeles County General Plan

The Conservation and Natural Resources Element of the General Plan (LA County Department of Regional Planning 2022) includes the following relevant goals and policies related to the protection of historic, cultural, and paleontological resources.

- Goal C/NR 14: Protected historic, cultural, and paleontological resources.
 - Policy C/NR 14.1: Mitigate all impacts from new development on or adjacent to historic, cultural, and paleontological resources to the greatest extent feasible.
 - Policy C/NR 14.2: Support an inter-jurisdictional collaborative system that protects and enhances historic, cultural, and paleontological resources.
 - Policy C/NR 14.3: Support the preservation and rehabilitation of historic buildings.
 - Policy C/NR 14.4: Ensure proper notification procedures to Native American tribes in accordance with Senate Bill 18 (2004).
 - Policy C/NR 14.5: Promote public awareness of historic, cultural, and paleontological resources.
 - Policy C/NR 14.6: Ensure proper notification and recovery processes are carried out for development on or near historic, cultural, and paleontological resources.

The Parks and Recreation Element of the General Plan (LA County Department of Regional Planning 2022) includes the following relevant goals and policies related to the protection of historic resources.

- Goal P/R 5: Protection of historical and natural resources on County park properties.
 - Policy P/R 5.1: Preserve historic resources on County park properties, including buildings, collections, landscapes, bridges, and other physical features.

- Policy P/R 5.4: Ensure maintenance, repair, rehabilitation, restoration, or reconstruction of historical resources in County parks and recreational facilities are carried out in a manner consistent with the most current Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings.

3.5.2.3.2 Los Angeles County Register of Landmarks and Historic Districts

The Los Angeles County Register of Landmarks and Historic Districts is the County's official list of County designated landmarks and historic districts in the unincorporated area of the County. Nominations for designation of landmarks and historic districts can come from private individuals and organizations, the Board of Supervisors, or the Historical Landmarks and Records Commission. The Landmarks Commission reviews each property proposed for designation and makes a recommendation on its eligibility. The Regional Planning Commission also reviews proposed historic districts for consistency with the General Plan. Ultimately, the Board of Supervisors has authority to designate a listing on the Los Angeles County Register of Landmarks and Historic Districts. The County Register is maintained by the Historical Landmarks and Records Commission pursuant to the County's Historic Preservation Ordinance No. 2015-0033.

3.5.2.4 Incorporated Cities Within the Plan Area

The table below presents the policies related to cultural resources from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.5-2. Applicable Local City Policies Related to Cultural Resources

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Resources Element:</p> <p>Goal R-6: Preservation of the cultural identity of Alhambra as a diverse, residential and commercial city with distinct single-family neighborhoods.</p> <p>Policy R-6A: Promote and encourage the preservation of Alhambra’s significant historic, architectural, cultural, archaeological, and paleontological resources.</p> <p>Policy R-6D: Develop and implement design standards that maintain the character of established residential neighborhoods, as discussed in the Land Use and Community Design chapter.</p> <p>Policy R-6E: Enforce applicable historic preservation laws to preserve state or federally designated historic resources and other resources (e.g., archaeological and paleontological) eligible for such designation.</p> <p>Policy R-6F: Investigate the possible establishment of a local regulatory framework for the designation and protection of significant historic and cultural resources.</p>	<p>Municipal codes related to cultural resources relevant to the Plan Area can be found in Section 23.34.010 (Purpose) of Chapter 23.34 (Open Space (OS) Zone).</p> <p>Section 23.34.010 (Purpose) establishes the purpose of the open space zone, which is to provide for outdoor recreational and open space resources, and to prevent inappropriate development of areas which should be regulated to provide for scenic, recreational, historic, conservation, aesthetic or public health and safety uses. The regulations set out in Chapter 23.34 (Open Space Zone) apply to all lots classified in the OS zone.</p> <p>(’86 Code, § 23.34.010) (Ord. 4110, passed - -)</p>	<p>The City is establishing its first Historic Preservation Program. The draft ordinance was published in December 2024 and is expected to be presented to the City Council for adoption in May/June 2025.</p>
Arcadia	<p>Parks, Recreation, and Community Resources Element:</p> <p>Goal PR-9 Retention and proper stewardship of historical and cultural resources</p> <p>Policy PR-9.1 Encourage the maintenance and preservation of historically, culturally, and or/ architecturally significant structures and sites in the community.</p> <p>Policy PR-9.2 Explore partnerships with local community organizations, such as the Arcadia Historical Society, to continue the preservation of historic and cultural resources.</p> <p>Policy PR-9.3 Collect, preserve, and celebrate Arcadia’s heritage with quality exhibits and programs.</p> <p>Policy PR-9.4 Preserve Santa Anita Park’s use as a live horse racing venue while economically feasible and preserve and maintain iconic structures at the racetrack such as the grandstand.</p> <p>Policy PR-9.5 Identify historic sites, structures, neighborhoods, and other resources through a Historic Resource Inventory.</p> <p>Policy PR-9.7 Develop incentives that promote preservation and rehabilitation of historic structures, sites, and other resources.</p>	<p>Municipal codes related to cultural resources relevant to the Plan Area can be found in Section 9103.17 (Historic Preservation) otherwise known as the Arcadia Historic Preservation Ordinance (Ordinance No. 2359, Article IX. Chapter 1, Division 3, Section 103.17) The designation and preservation of historic resources, and the regulation of alterations, additions, repairs, removal, demolition, or new construction to perpetuate the historic character of historic resources, is declared to be a public purpose of the city.</p> <p>The purposes of this Chapter include: A) Enabling informed planning decisions regarding the treatment of properties that contribute to the city’s character or reflect its historical and architectural development; B) Establishing priorities for preservation, restoration, and rehabilitation efforts within the city; C) Providing City planners with baseline information about potential historic resources from which to manage new development; D) Safeguarding Arcadia’s heritage by protecting resources that reflect elements of the city’s cultural, social, economic, architectural, and archaeological history; E) Deterring demolition, misuse, or neglect of designated historic landmarks, designated historic districts (and their contributing resources), and potential historic landmarks, which represent important links to the past of Arcadia, California, or the nation; F) Providing the public with a better understanding of and appreciation for the built environment as a tangible link to Arcadia’s history; G) Promoting the use of historic resources, especially for the education, appreciation, and general welfare of the people of Arcadia; H) Protecting and enhancing the City’s attractiveness to residents and visitors, and supporting economic development.</p> <p>Section 9103.17.060 (Local Eligibility and Designation Criteria)</p> <p>A. Criteria for Designation.</p> <p>Historic Landmark. On the recommendation of the Commission, the City Council may designate an individual resource (building, structure, object, or site) if it meets one or more of the following local eligibility criteria:</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>1. It is associated with events that have made a significant contribution to the broad patterns of Arcadia’s or California’s history;</p> <p>2. It is associated with the lives of persons important to local or California history;</p> <p>3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of master, or possesses high artistic values;</p> <p>4. It has yielded, or has the potential to yield, information important to the prehistory or history of the city or state.</p> <p>In addition to the requirements listed as 1. through 4. above in this section, an individual resource must satisfy at least one of the following requirements:</p> <p>5. It is listed on the National and/or California Register of Historic Places; or</p> <p>6. It is an iconic property.</p> <p>Historic District. On the recommendation of the Commission, the City Council may designate a historic district if it meets one or more of the four criteria in Section 9103.17.060(A) and:</p> <p>1. It possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development.</p> <p>2. A minimum of 60 percent of the buildings within the proposed historic district contribute to the district’s significance.</p> <p>B. Automatic Consideration. Any property individually listed in the National Register of Historic Places or California Register of Historical Resources shall be automatically considered designated historic resource by the City.</p> <p>C. Considerations for Evaluating Properties - Age. A resource considered for listing as a local historic landmark must be at least 45 years of age, unless it can be demonstrated that the resource has achieved exceptional importance within the last 45 years.</p> <p>D. Consideration for Evaluating Properties - Integrity. In order for a resource to be eligible for designation as a local landmark or historic district, the resource must retain sufficient integrity. Integrity is the authenticity of a historical resource’s physical identity as evidenced by the survival of characteristics that existed during the time period within which the resource attained significance. Only after significance has been established should the issue of integrity be addressed. There are seven aspects of integrity, as defined by the National Register: location, design, setting, materials, workmanship, feeling, and association. Since significance thresholds associated with local listing are generally less rigid than those associated with listing at the state or national levels, a greater degree of flexibility shall be provided when evaluating the integrity of a locally eligible historic resource, as opposed to one eligible for listing in the National or California Registers. For this reason, it is possible that a historic resource may not retain sufficient integrity to be eligible for listing in the National or California Registers, but may still be eligible for listing at the local level. Integrity shall be determined with reference to the particular characteristics that support the resource’s eligibility under the appropriate criteria of significance. (Ord. No. 2359 , § 3(Exh. A), 4-2-19; Ord. No. 2375 , § 4(Exh. A), 4-6-21)</p>	
Azuza	<p>Built Environment Element</p> <p>Goal 2: Provide the City with open space and cultural/historic areas in the downtown, in the San Gabriel River Corridor, and in neighborhoods that can provide educational benefits.</p>	<p>Municipal codes related to cultural resources relevant to the Plan Area can be found in Chapter 55 (Historic Preservation), Article II (Historic Preservation), Section 55.37 Sec. 55-37. (Intent and purpose), also known as the “Historic Preservation Ordinance of the City of Azusa”.</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 3: Preserve and protect places, buildings, and objects that embody the City’s social, commercial, architectural, and agricultural history.</p> <p>Policy 3.2: Incorporate natural resources such as the San Gabriel River drainage into development when appropriate as a means of understanding and appreciating the history of the site or area. This may include the mining activities and any prehistoric sites that may be encountered during subsequent studies of the drainage.</p>	<p>Under Sec. 55-37. (Intent and purpose), the city council has determined the following to be the intent of historic preservation in the City:</p> <p>(1) That the character, history and neighborhood identity of the city are reflected in and are reflections of its culture, physical, and architectural heritage.</p> <p>(2) That these historical and cultural foundations should be preserved as living parts of community life and development to build an understanding of the city's past so that future generations may have a genuine opportunity to appreciate, enjoy, and understanding the rich heritage of the city.</p> <p>(3) That city landmarks, neighborhoods, and other areas of historical and cultural interests are increasingly facing threats from modernization and urbanization.</p> <p>(4) That pursuant to the provisions of the National Historic Preservation Act of 1966, as amended, the city joins with private concerns, the State of California, and the United States Congress to develop preservation programs and activities to give maximum encouragement to agencies and individuals undertaking preservation of the city's unique architectural, historical, aesthetic, and cultural heritage.</p> <p>(5) The recognition, preservation, protection and use of all historical resources in the city are required in the interests of and to promote the public health, prosperity, safety, enrichment and general welfare and:</p> <p>a. To safeguard the city's unique cultural heritage as embodied and reflected in the city's architectural history and patterns of cultural development;</p> <p>b. To encourage and facilitate public knowledge, understanding, and appreciation of the city's historic past and unique sense of place;</p> <p>c. To foster civic and neighborhood pride and sense of identity based on the recognition, public participation and use of cultural resources;</p> <p>d. To promote the enjoyment, celebration, and use of cultural resources appropriate for the education and recreation of the people of the city;</p> <p>e. To preserve diverse architectural styles, patterns of development, and design preferences reflecting phases of the city's history and to encourage complementary design and construction and inspire a more livable urban environment.</p> <p>f. To enhance property values and to increase economic and financial benefits to the city and its inhabitants through the exploration of creative financial incentives for preservation;</p> <p>g. To protect and enhance the city's attraction to tourists, residents, and visitors thereby stimulating business and industry;</p> <p>h. To identify as early as possible and resolve conflicts between the preservation of cultural resources and alternative land uses;</p> <p>i. To integrate the preservation of cultural resources into public and private land use management and development processes;</p> <p>j. To conserve valuable material and energy resources by ongoing use and maintenance of the existing built environment;</p> <p>k. To enhance neighborhoods through the preservation of cultural resources and establishment of historic districts;</p> <p>l. To encourage public participation in identifying and preserving historical and architectural resources thereby increasing community pride in the city's cultural heritage.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		(Ord. No. 00-012, § 2, 10-16-00)	
Baldwin Park	<p>Open Space and Conservation Element:</p> <p>Goal 8.0: Promote the preservation of historic resources in Baldwin Park.</p> <p>Policy 8.1: Implement the provisions contained in the City’s Historic Resources Code to protect historically significant structures.</p> <p>Policy 8.2: Encourage restoration of historic structures.</p> <p>Policy 8.3: Baldwin Park 2020 General Plan Maximize public awareness about Baldwin Park's history and historical resources.</p>	<p>Municipal codes related to cultural resources relevant to the Plan Area can be found in Section 53.080 (Historic Overlay Zone).</p> <p>Section 53.080 (Historic Overlay Zone) describes the historic overlay zone of the City.</p> <p>Section 53.080.010 (Intent and Purpose) The Historic Overlay Zone is established to recognize, protect and ensure proper utilization of historic resources in the interest of public, health, safety, prosperity, social and cultural enrichment, and general welfare. The purpose of the Historic Overlay is as follows.</p> <p>(A) Cultural history. Safeguard the heritage of the city by protecting designated buildings and structures which reflect the city’s cultural history.</p> <p>(B) Public involvement. Encourage public understanding and involvement in the unique heritage of the city.</p> <p>(C) Civic pride. Strengthen civic pride in the beauty and notable accomplishments of the past.</p> <p>(D) City attractions. Protect and enhance the city’s attractions to residents and visitors and to support and stimulate business and industry.</p> <p>(E) Aesthetic character. Enhance the visual and aesthetic character of the city.</p> <p>(F) Promote use. Promote the use of historic buildings, structures and historic districts.</p> <p>(G) Property rights. Protect and safeguard the property rights of the owners whose property is declared to be historic or is located in an area designated as a historic district.</p> <p>(Ord. 1346, passed 5-2-12)</p> <p>Section 153.080.030 (Property Maintenance) states that the owner or occupant of a building, structure or place designated as historic or located within a Historic Overlay Zone shall maintain all exterior and interior portions of such buildings, structures and places in good repair to prevent deterioration, decay or excessive wear and tear.</p> <p>(Ord. 1346, passed 5-2-12)</p>	No other applicable ordinances were identified.
Claremont	<p>Land Use, Community Character, and Heritage Preservation Element:</p> <p>Goal 2-11: Promote community identity and local history by encouraging context-sensitive design and development.</p> <p>Policy 2-11.1: Encourage a variety of architectural styles for new and renovated structures that reflect local architectural characteristics.</p> <p>Policy 2-11.2: Strengthen neighborhood identity with new development that is architecturally compatible with surrounding structures.</p> <p>Policy 2-11.3: Require that new construction, additions, renovations, and infill developments be sensitive to neighborhood context and building forms and scale.</p> <p>Policy 2-11.4: Prohibit new and large structures that compromise neighborhood quality. Work with the Architectural Commission to study and define design issues to safeguard neighborhoods.</p> <p>Policy 2-11.5: Encourage designs and building layout that promote defensible spaces: discourage lengthy, blank walls.</p>	<p>Municipal codes related to cultural resources relevant to the Plan Area can be found in Chapter 16.072 (P/RC Park/Resource Conservation District), and Section 16.040.080 (Design Guidelines for Mixed-use Development) of Chapter 16.040 (MU Mixed Use Districts).</p> <p>Chapter 16.072 (P/RC Park/Resource Conservation District) establishes the following:</p> <p>Chapter 16.072.000 (Intent)</p> <p>A) The Parks/Resource Conservation (P/RC) District is intended to assure open space areas for uses such as public parks, outdoor recreation, cemetery uses, protection of natural habitat, preservation of cultural resources, management of groundwater resources, protection and conservation of mineral resources, and the protection of the public health and safety due to hazardous or special conditions.</p> <p>B) No building, structure, or land shall be used, and no building or structure shall be erected, altered, or enlarged, in the P/RC District except in accordance with the provision of this chapter. (08-05)</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 2-14: Retain and celebrate Claremont’s rich history and heritage, as evidence through its development</p> <p>patterns, buildings and building materials, landscaping, street treatments, parks and open space, and civic architecture.</p> <p>Policy 2-14.1: Continue to protect architectural, historical, open space, environmental, and archaeological resources throughout the City.</p> <p>Policy 2-14.2: Continue to heighten community awareness of Claremont’s history and the City’s physical development, and educate the public to the significance of historic areas, sites, and structures and the social events associated with them.</p> <p>Policy 2-14.3: Continue to encourage pride in the quality and character of historic areas.</p> <p>Policy 2-14.4: Continue to recognize the fragile nature of historic residential areas, and work to ensure the harmonious appearance of each historic area. Address the transitional areas between residential and commercial areas, residential and industrial areas, and residential areas and The Claremont Colleges.</p> <p>Policy 2-14.5: Continue to support retention and/or adaptive reuse of existing residential, commercial, and industrial buildings where possible, particularly structures listed on the Register of Structures of Historical and Architectural Merit of the City of Claremont.</p> <p>Policy 2-14.6: Strive to prevent the demolition of structures listed on the Register of Historical and Architectural Merit of the City.</p> <p>Policy 2-14.7: Add to the Register of Structure of Historical and Architectural Merit of the City of Claremont sites and structures that have special historic or community value as historic resources and are worthy of preservation.</p> <p>Policy 2-14.8: Continue to offer historic preservation tools such as the Mill Act.</p> <p>Policy 2-14.9: Explore and evaluate different approaches to protect and enhance historic resources throughout the community.</p> <p>Policy 2-14.10: Consider establishment of new historic districts where appropriate to help protect neighborhoods from incompatible development.</p>	<p>Chapter 16.072.010 (Uses and Development) allows for the following uses in the P/DC District:</p> <p>A) Parks and outdoor recreation facilities such as playgrounds, playing fields, and trails, open to the public and for which no admission fee is charged.</p> <p>B) Community, senior and youth activity centers.</p> <p>C) Cemetery uses.</p> <p>D) Highway and freeway landscaping.</p> <p>E) Water recharge facilities, settling basins, and drainage channels.</p> <p>F) Natural habitat protection.</p> <p>G) Preservation of architectural, historic, cultural and natural resources.</p> <p>H) The growing of plants, provided no sales occur at the site.</p> <p>I) Facilities for use by the public such as benches, picnic tables, shade structures, paved walkways, parking lots, fencing, restroom buildings, other minor buildings, and ancillary improvements such as lighting related to permitted uses.</p> <p>J) Commercial antenna/wireless telecommunication facilities pursuant to Chapter 16.100. (12-01; 08-05)</p> <p>Section 16.040.080 (Design Guidelines for Mixed-use Development) describes designs guidelines for Historic Preservation in Mixed-Use Districts, they include the following:</p> <ul style="list-style-type: none">• Protect and enhance historic and cultural resources that contribute to the City’s image, unique character, and sense of place.• Design new construction that is compatible with surrounding historic and cultural resources.• Respect the site’s context within the larger community. <p>(12-01; 08-05)</p>	
Covina	<p>Land Use Element:</p> <p>Goal: A physical environment that provides for the housing, employment, business, service, recreational, social, educational, cultural, and entertainment needs of and maintains and enhances a high quality of life for its residents.</p> <p>Policy 7: Attempt to preserve structures, resources, and/or areas that are of local historic and/or architectural significance.</p> <p>Objective 1: A climate where moderate residential, commercial, and industrial development and redevelopment are accommodated.</p> <p><i>General Land Use</i></p> <p>Policy 23: Identify and encourage the retention and preservation of significant architectural, historical, and/ or cultural resources, such as the Adams Park residential neighborhood (just west of Covina Park).</p> <p><i>Other Policies</i></p> <p>Policy 1: Attempt to preserve areas of outstanding scenic, historic, and/or cultural value in a reasonable fashion.</p>	<p>Municipal codes related to cultural resources relevant to the Plan Area can be found in Chapter 17.81 (Historic Preservation).</p> <p>The purpose of Chapter 17.81 (Historic Preservation) is to preserve, conserve and maintain the city of Covina’s cultural, architectural and archaeological and historical heritage and resources as living parts of community life by encouraging the voluntary designation of such properties and resources for protection, which will benefit and enrich the lives of its present and future residents and visitors. The intent of the chapter is to improve the quality of the city’s environment through preservation, conservation and maintenance of its neighborhoods as follows:</p> <p>A. Preserve the city of Covina’s architectural history and encourage complementary development and use on surrounding property.</p> <p>B. Build and strengthen civic pride in the beauty and notable accomplishments of the past and promote their continued use today.</p> <p>C. Protect, enhance and perpetuate the city’s historic attractions for residents desiring a pleasant way of life, as well as tourists and visitors seeking a pleasant shopping and recreational experience.</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Objective 2: An adequate amount and distribution of and compatibility of adjacent land uses throughout the community.</p> <p><i>General Land Use</i></p> <p>Policy 17: Identify and encourage the retention and preservation of significant architectural, historical, and/ or cultural resources.</p> <p>Open Space and Natural Resources Element:</p> <p><i>Safety, Accessibility, Security, and Miscellaneous Matters</i></p> <p>Policy t: Consider to preserve any areas, facilities, or buildings determined to be of outstanding scenic, historic, or cultural value.</p>	<p>D. Strengthen the economy of the city, stabilize and improve property values, and increase community vitality by encouraging adaptive reuse, increased social activity and increased community awareness of the attractions associated with historic resources.</p> <p>E. Promote the private and public use and preservation of designated structures or areas for the education, appreciation and general welfare of the people. (Ord. 97-1812 § 1, 1997.)</p>	
El Monte	<p>Community Design Element:</p> <p>Policy CD-5.4 Cultural Resources. Incorporate the City’s heritage in the Downtown design plans in many expressions. Use the cultural resources inventory to start identifying, recognizing, and celebrating El Monte’s heritage.</p> <p>CD-6.3 Cultural Resources. Incorporate the City’s history in the design plans of Flair Park. Utilize the Cultural Resources Inventory as a starting point for identifying, recognizing, and celebrating El Monte’s heritage.</p> <p>CD-6.10 Emerald Necklace. Improve the riverfront experience along the Rio Hondo River through the installation of Emerald Necklace Vision projects. Include the following improvements:</p> <ul style="list-style-type: none">• Linear park and multi-use trails along the river• Miniparks at key locations along the river• Trees and native habitat planted along the way ☐ Cultural and historical references• Bicycle paths and multi-use trails <p>Cultural Resources Element:</p> <p>Goal CR-1: A multifaceted program for enhancing cultural resources in the City as a means to acknowledge and celebrate the leadership, achievements, accomplishments, and diverse histories of its residents.</p> <p>Policy CR-1.1 Cultural Resources Index. Ratify the cultural resources index as a living document recording people, places, and events of local significance to the City of El Monte, and establish a protocol for updates and additions.</p> <p>Policy CR-1.2 Cultural Resources Map. Create a cultural resources map capturing the dynamic layers of El Monte’s history; locate the original map at a major civic institution and use reproductions throughout the city as appropriate.</p> <p>Policy CR-1.3 Cultural Heritage Commission. Establish a commission to develop and oversee cultural resources programs, including public art programs, annual cultural resources awards, collaborative school curriculum, and special events.</p> <p>Policy CR-1.4 Cultural Resources Ordinances. Update the El Monte Municipal Code to include authorizing ordinances that govern the designation, preservation, and recognition of cultural resources in El Monte and to delineate the roles of commissions.</p> <p>Policy CR-1.5 Cultural Resources Plan. Create a comprehensive cultural resources plan, based on the cultural resource index and map, to imbue the natural and built</p>	<p>Municipal codes related to cultural resources relevant to the Plan Area can be found in Chapter 17.74 (Water Efficiency).</p> <p>Chapter 17.74 (Water Efficiency) was established to provide minimum standards for all water usage in the City, including landscaping. However, the Chapter does not apply to the following:</p> <ol style="list-style-type: none">1. Registered federal, state or local historical sites;2. Ecological restoration projects that do not require a permanent irrigation system;3. Mined-land reclamation projects that do not require a permanent irrigation system; or4. Existing plant collections, as part of botanical gardens and arboreta open to the public. <p>(Ord. No. 3011 , § 3(Exh. B), 6-21-2022; Ord. No. 3023 , § 4.B(Exh. B), 5-2-2023)</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>environment with symbols and improvements drawing from El Monte’s rich cultural heritage.</p> <p>Policy CR-1.6 Cultural Resources Education. Inspire public support and recognition of cultural resources through a public education program, including school district curriculum, public art, library corners, displays in local museums, and special events.</p> <p>Policy CR-1.7 Government Role. Fully support the establishment of a cultural resources program and provide funding, staffing, and other mechanisms to maintain the program.</p> <p>Goal CR-2 A community that embraces the rich diversity of residents and the cultural heritage they bring from all over the world by incorporating local cultural history and special places into the fabric of the built environment.</p> <p>Policy CR-2.1 Cultural Districts. Designate cultural districts based on historical development and cultural settlement patterns. Where little historical precedent exists, evaluate the creation of a district from existing site or urban design characteristics.</p> <p>Policy CR-2.2 Historic Overlay Zones. Assess the feasibility of creating historic overlay zones, as relevant, that contain elements of potential historic significance such as the Valley Mall, El Monte Theatre, Wye Street/Rurban Homestead area, and Medina Court.</p> <p>PolicyCR-2.3 Cultural Elements. Develop elements relevant to defining traces of urban fabric: elements may include new gateways, streetscape elements such as kiosks with maps, special street signs, distinct textures for crosswalks or sidewalks, landscaping specific to districts, relevant public art, and interpretive signs.</p> <p>PolicyCR-2.4 Public Spaces. Assess the feasibility of creating distinctive public space and walking routes in each district and Citywide, with a central gathering place and an interpretive map of the history of El Monte. An example of this would be the El Monte Historic Plaza between the Valley Mall and Valley Boulevard.</p> <p>Policy CR-2.5 Capital Improvements. Create a plan for making infrastructure improvements (e.g., signage, historical markers, park improvements, public art, and other media) that incorporate relevant images of El Monte’s cultural heritage.</p> <p>Policy CR-2.6 Cultural Icons. Develop a program for placement of City symbols on sidewalks, street signs, retaining walls, freeway ramps, crosswalks, and other infrastructure to signify El Monte’s unique cultural heritage.</p> <p>Goal CR-4 A community that acknowledges, identifies, protects, enhances, and expands its inventory of historic buildings, sites, and resources.</p> <p>Policy CR-4.1 El Monte Historic Register. Establish an El Monte Register of Historic Buildings and Places and seek listing for appropriate properties to the national and state registers of historic places.</p> <p>Policy CR-4.2 Architectural Inventory. Survey all potentially historic structures and create an architectural period and styles inventory for El Monte as a means to identify potential historic or locally significant structures.</p> <p>Policy CR-4.3 Local List of Historic Places. Create a local list of historic places for properties that do not meet criteria of the national or state Registers but are important to protect in terms of local significance. Tie this to the cultural resources index.</p> <p>Policy CR-4.4 Historic Preservation Ordinance. Adopt a preservation ordinance that would require a special permit to demolish or modify a historic resource.</p>		
Glendora	Historic Preservation Element:	Municipal codes related to cultural resources relevant to the Plan Area can be found in Section 21.03.050 (Historic Preservation) of Chapter 21.03 (General Regulations),	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 1: Preserve and protect Glendora’s historic resources as physical reminders of the city’s past and as unique focal points to shape the community’s identity.</p> <p>Objective 1: Identify, evaluate, and document historic resources.</p> <p>Policy 1: Maintain a list of historic resources designated under national, state, and local agencies.</p> <p>Objective 2: Protect historic resources from demolition and inappropriate alterations.</p> <p>Policy 1: Ensure the protection of historic resources through the enforcement of existing codes.</p> <p>Policy 2: Historic resources should be relocated when retention of such buildings or structures on site is not feasible.</p> <p>Policy 3: In the downtown, mixed uses or adaptive reuse of historic resources shall be encouraged when necessary to make preservation feasible.</p> <p>Policy 4: Support the continuing education of city staff in the techniques of historic preservation.</p> <p>Policy 5: Provide relief from property taxes through Mills Act contracts.</p> <p>Goal 2: Use historic preservation concepts as tools to protect, enhance, and revitalize neighborhoods.</p> <p>Objective 4: Promote neighborhood preservation.</p> <p>Policy 1: Assist neighborhood groups in forming Historic Preservation Overlay Zoning’s.</p> <p>Policy 2: Develop a public outreach program which demonstrates the benefits of historic preservation.</p> <p>Policy 3: Development should be designed to be compatible with adjacent historic resources.</p> <p>Objective 5: Enhance historic streetscapes through public improvements.</p> <p>Policy 1: Preserve and when appropriate restore historic light standards.</p> <p>Policy 2: Preserve and when appropriate restore historic street trees.</p> <p>Land Use Summary from Historic Preservation Element:</p> <p>Goal: Preservation and protection of cultural sites, including historic sites.</p> <p>Objective: To identify and preserve cultural resources.</p> <p>Policy 1. Community participation in cultural preservation should be encouraged.</p> <p>Policy 2. Development should be designed to be compatible with adjacent cultural resources.</p> <p>Policy 3. Culturally significant structures should be relocated when retention of such structures on site is not feasible.</p> <p>Policy 4. In the downtown, mixed uses or adaptive reuse of culturally significant buildings shall be encouraged when necessary to make preservation feasible.</p>	<p>Section 21.07.060 (Historic Preservation Overlay HPOZ), and Section 21.06.050 (Open Space – Natural Zone OSN).</p> <p>The purpose of Section 21.03.050 (Historic Preservation) is to promote the general welfare by providing for the identification, protection, enhancement, perpetuation and use of improvements and areas within the city that reflect special elements of historical, architectural, archaeological, cultural or aesthetic heritage for the following reasons:</p> <ol style="list-style-type: none">1. To encourage public knowledge, understanding, appreciation and use of the city's past;2. To foster civic pride in the beauty and personality of the city and in the accomplishments of its past;3. To identify and resolve, as early as possible, conflicts between the preservation of cultural resources and alternative land uses;4. To encourage conservation of building material resources through maintenance and restoration of existing historical structures;5. To promote the enjoyment and use of cultural resources appropriate for the education and recreation of the people of the city;6. To encourage modification of historical buildings that is compatible with the historical character of such buildings;7. To promote awareness of the economic benefits of historic preservation. <p>This section also establishes the procedure for designating a landmark as historical and permits necessary when proposing to work on a historic site within the City.</p> <p>Section 21.07.060 (Historic Preservation Overlay HPOZ) was established to promote the general welfare, cultural enrichment, and economic prosperity of the people by providing for the identification, protection, preservation, and enhancement of areas of the city having historic, architectural, or cultural significance. To be designated as an HPOZ, an area must possess a significant concentration, linkage, or continuity of sites, buildings, structures, objects, or landscape features united historically or aesthetically by plan or physical development and meet one or more of the following criteria:</p> <ol style="list-style-type: none">1. Exemplifies or reflects special elements of the city's cultural, social, economic, political, aesthetic, engineering, or architectural history; or2. Is identified with persons or events significant in local, state, or national history; or3. Embodies distinctive characteristics of a style, type, period, or method of construction or are valuable examples of the use of indigenous materials or craftsmanship; or4. Is the notable work of a master builder, designer, or architect; or5. Pertains to features of early Glendora. <p>Section 21.06.050 (Open Space – Natural Zone OSN) establishes Open Space – Natural Zones to (1) conserve and manage natural resources which may include biological resources, watercourses, hills, canyons, major rock outcroppings, etc.; (2) protect the public health and safety by including areas requiring management due to hazardous or special conditions such as fire, flood and earthquake fault; and (3) provide outdoor recreation including areas of scenic, historic or cultural value. The OSN zoning designation shall only be applied to public and quasi-public property; provided, however, that a private property owner may request and be considered for a change of</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		zone to OSN. Permitted uses in this zone include riding and hiking trails, picnic and playground areas, flood control structures and facilities, and utility substations and related equipment and structures.	
Industry	<p>Resource Management Element:</p> <p>Goal RM5: Historical and cultural resources that celebrate the community and serve as a focal point for civic pride and identity.</p> <p>Policy RM5-1: Continue to support and enhance the Workman and Temple Family Homestead Museum.</p> <p>Policy RM5-2: Support the proper handling and documentation of historically or archaeologically significant sites, burial sites, and objects that may be discovered.</p> <p>Policy RM5-3: Comply with federal and state requirements when considering nominations for or modifications to resources of significant historical or cultural merit.</p> <p>Policy RM5-4: Continue to honor the heritage of the City on Industry.</p>	<p>Municipal codes related to cultural resources relevant to the Plan Area can be found in Chapter 13.18 (Water Efficient Landscapes).</p> <p>The purpose of Chapter 13.18 (Water Efficient Landscapes) is to establish water efficient landscape regulations that are “at least as effective in conserving water as” the State Model Water Efficient Landscape Ordinance (Government Code Section 65591 et seq.) in the context of conditions in the city in order to ensure that landscapes are planned, designed, installed, maintained, and managed in a manner that uses water efficiently, encourages water conservation, and prevents water waste. (Ord. 793 § 5, 2016). However, under the Exempt activities the Chapter does not apply to the following:</p> <ol style="list-style-type: none">1. Registered local, State, or federal historical sites.2. Ecological restoration projects that do not require a permanent irrigation system.3. Mined-land reclamation projects that do not require a permanent irrigation system.4. Existing plant collections, as part of botanical gardens and arboretums open to the public. (Ord. 793 § 5, 2016)	No other applicable ordinances were identified.
Irwindale	<p>Resource Management Element</p> <p>Issue Area – Resource Preservation The City of Irwindale will maintain and preserve those natural and man-made amenities that contribute to the City’s livability.</p> <p>Resource Management Element Policy 8. The City will identify and preserve those sites/building that are important to the community for the benefit of the future generations that will reside or work in the City.</p>	<p>Municipal codes related to cultural resources relevant to the Plan Area can be found in Chapter 15.30 (Water Efficient Landscape Standards and Guidelines), Section 15.30.010 (Purpose) and Section 15.30.040 (Exemptions).</p> <p>Under Section 15.30.010 (Purpose), the purpose of this chapter is to establish water efficient landscape regulations that are acceptable under Governor Brown’s April 1, 2015 Drought Executive Order (B-29-15) and that are at least as effective in conserving water as the State Model Water Efficient Landscape Ordinance, in the context of conditions in the city, in order to ensure that landscapes are planned, designed, installed, maintained, and managed in a manner that uses water efficiently, encourages water conservation, and prevents water waste.</p> <p>(Ord. No. 701, § 2, 2-10-16)</p> <p>Under Section 15.30.040 (Exemptions), the chapter’s requirements do not apply to sites that are registered local, state or federal historical sites. Therefore, historic sites within the City of Irwindale need not apply those water efficiency rules.</p> <p>(Ord. No. 701, § 2, 2-10-16)</p>	No other applicable ordinances were identified.
La Puente	No goals or policies were identified related to cultural resources.	<p>Municipal codes related to cultural resources relevant to the Plan Area can be found in Chapter 10.32 (Landscaping).</p> <p>The purpose of Chapter 10.32 (Landscaping) is to establish water efficient landscape regulations that are “at least as effective in conserving water as” the State Model Water Efficient Landscape Ordinance (Government Code Section 65591 et seq.) in the context of conditions in the city in order to ensure that landscapes are planned, designed, installed, maintained, and managed in a manner that uses water efficiently, encourages water conservation, and prevents water waste. However, under Section 10.32.030 (Applicability) the water efficient landscape ordinance does not apply to:</p> <ol style="list-style-type: none">1. Registered local, State, or federal historical sites.2. Ecological restoration projects that do not require a permanent irrigation system.3. Mined-land reclamation projects that do not require a permanent irrigation system.	No other applicable ordinances were identified.

		4. Existing plant collections, as part of botanical gardens and arboretums open to the public.	
La Verne	<p>Cultural Resources Element:</p> <p>Goal 1: Take inventory of our past.</p> <p>Policy 1.1: Identify and document our cultural resources.</p> <p>Policy 1.2: Maintain and update our record of local cultural resources.</p> <p>Policy 1.3: Establish a City archive.</p> <p>Policy 1.4: Preserve the history of those traditionally underrepresented.</p> <p>Goal 2: Act now to preserve and protect our cultural resources.</p> <p>Policy 2.1: Ensure compliance with our preservation program.</p> <p>Policy 2.2: Provide innovative means of preservation.</p> <p>Policy 2.3: Bolster our proven programs.</p> <p>Policy 2.4: Support community preservation organizations.</p> <p>Policy 2.5: Pursue preservation of archeological resources.</p> <p>Policy 2.6: Protect cultural resources through strategic use of California Environmental Quality Act provisions.</p> <p>Policy 2.7: Adopt a cultural resources ordinance and accompanying guidelines.</p> <p>Policy 2.8: Offer incentives for cultural resource preservation.</p> <p>Policy 2.9: Abide by adopted demolition policies to protect cultural resources from premature demolition.</p> <p>Policy 2.10: Protect and preserve cultural landscapes.</p> <p>Policy 2.11: Preserve and protect resources that are not only individually noteworthy but also collectively important.</p> <p>Goal 3: Expand and enhance our cultural resource program.</p> <p>Policy 3.1: Inform the public of preservation techniques and incentives.</p> <p>Policy 3.2: Establish outreach programs.</p> <p>Policy 3.3: Promote public art.</p> <p>Policy 3.4: Integrate cultural resources into daily planning practice.</p> <p>Policy 3.5: Establish an oral and video history program.</p>	<p>Municipal codes related to cultural resources relevant to the Plan Area can be found in Chapter 18.78 (Preservation, Protection and Removal of Trees), Chapter 18.16 (Development Review), Chapter 18.118 (Water Efficient Landscapes), and Chapter 18.56 (O Official Zone).</p> <p>The purpose of Chapter 18.78 (Preservation, Protection and Removal of Trees) is to protect certain trees in order to preserve cultural heritage, maintain and enhance the scenic beauty of the city, improve air quality, abate soil and slope erosion, preserve and enhance property values and thereby promote public health, safety and welfare by:</p> <p>A. Identifying significant and heritage trees or groves and establishing procedures to encourage their conservation;</p> <p>B. Including consideration of existing trees and their protection in the review and implementation of development proposals;</p> <p>C. Requiring permits for the removal and pruning of significant and heritage trees except in emergencies; and</p> <p>D. Requiring replacement plantings when significant and heritage trees are removed. (Ord. 999 § 1, 2007)</p> <p>Under Section 18.78.030 (Removal of significant or heritage trees or heritage groves without permit prohibited) except as provided in Section 18.78.040, no person shall remove or cause the removal of any significant or heritage tree unless a tree or heritage grove removal permit is first obtained. (Ord. 999 § 1, 2007)</p> <p>The purpose of Chapter 18.118 (Water Efficient Landscapes) is to establish water efficient landscape regulations that are at least as effective in conserving water as the State Model Water Efficient Landscape Ordinance, in the context of conditions in the city, in order to ensure that landscapes are planned, designed, installed, maintained, and managed in a manner that uses water efficiently, encourages water conservation, and prevents water waste. The provisions of this chapter shall be deemed to be controlling over the subject matter herein in the event of any conflict between this chapter and any other provision in the municipal code. (Ord. 1065 § 2, 2016) However, under Section 18.118.040 (Exemptions) the water efficient landscape ordinance does not apply to:</p> <ol style="list-style-type: none">1. Registered local, State, or federal historical sites.2. Ecological restoration projects that do not require a permanent irrigation system.3. Mined-land reclamation projects that do not require a permanent irrigation system.4. Existing plant collections, as part of botanical gardens and arboretums open to the public. <p>(Ord. 1065 § 2, 2016)</p> <p>Chapter 18.16 (Development Review) defines the purpose of the development review to protect the public health, safety and welfare. Development review ensures that development is consistent with the general plan, applicable zoning and specific plans. It implements hillside, tree preservation, architectural, site planning, circulation, landscaping and other planning policies. Development review shall be performed by either the community development director of the development review committee, as specified in this chapter. (Ord. 753 § 6, 1988)</p>	<p>Appendix C (Cultural and Paleontological Resources Assessment for the City of La Verne General Plan Update) of the 2018 Existing Conditions Report prepared for the forthcoming Environmental Impact Report summarizes available information regarding known paleontological, archaeological, and historical resources within the City of La Verne. Appendix C provides a general analysis of impacts of future projects within the City of La Verne that may adversely affect paleontological, archaeological or historic resources along with mitigation recommendations.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>Section 18.16.100 (Precise plans – Findings) states to grant precise plan approval (2) the site plan is safe, functional and environmentally sensitive to the surroundings. Grading, where required, minimizes environmental damage to the extent possible. For purposes of this finding the approving body shall consider, but not be limited to, the following:</p> <ul style="list-style-type: none">a. Orientation and location of buildings and open space;b. Vehicle access;c. Circulation, parking and loading;d. Building heights;e. Design of walls and fences;f. Preservation of natural land forms and vegetation;g. Protection and enhancement of historic, archaeological and cultural resources;h. Minimization of environmental impacts;i. Fiscal and economic impacts;j. Pedestrian amenity. <p>(Ord. 904 §§ 3, 4, 1997; Ord. 753 § 6, 1988)</p> <p>Chapter 18.56 (O Official Zone) defines the purpose of the official zones, which are intended for official and public uses of property, including public schools, public buildings, public parks and recreational areas, water works and drainage facilities, and areas which, for the welfare of the city, should be kept clear of particular structures or improvements. Except as specifically provided elsewhere in this title, any and every building and premises or land in O zones shall be used for or occupied and every building shall be constructed, established, altered, enlarged, maintained, moved into or within the O zones exclusively and only in accordance with the regulations of this chapter, the general plan, and applicable sections of this title. Standards for the “O” zone are intended to promote attractive and functional official uses, ensure conformity to the design standards established in the general plan, and protect neighboring properties. (Ord. 910 § 3, 1997)</p> <p>Section 18.56.020 (Master plan required) establishes that on sites of five acres or more in the official zone, except sites owned by the city of La Verne, a master plan approved by the planning commission in accordance with the provisions of Chapter 18.108 shall be required. (Ord. 910 § 3, 1997). Development standard changes (Section 18.56.110) may be approved if; (A) the proposed development standard change is necessary for the efficient, orderly, attractive, and cost-effective operation of the facility, (B) the proposed improvements are located and designed in a manner that minimizes adverse impacts including visual impacts, noise, light, vibration, odor, hazardous materials, and impacts on public health, safety and convenience, and does not adversely affect historic, cultural and environmental resources, (C) the proposed improvements otherwise meet the requirements and intent of this code, the La Verne general plan, and the California Environmental Quality Act, (D) the benefits of the proposed development standard change outweigh any potential adverse effects. (Ord. 910 § 3, 1997)</p>	
Monrovia	Land Use Element: Goal 9: Preserve the character of existing neighborhood and historic residences.	Municipal codes related to cultural resources relevant to the Plan Area can be found in Chapter 17.40 (Historic Preservation), and Chapter 2.54 (Historic Preservation Commission).	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 9.1: Continue to implement the historic preservation ordinance for designating, preserving, safeguarding historic structures, and creating historic districts in the City.</p> <p>Policy 9.2 Facilitate the use of state and federal funds for the preservation of historic buildings by seeking to qualify as a Certified Local Government (CLG).</p> <p>Policy 9.3: Continue to monitor development standards in single family and multi-family residential districts, including setbacks, height, density, and required open space, in order to ensure that new development is compatible with the scale and character of existing development.</p> <p>Policy 9.4: Continue to refine as needed, design guidelines for new multiple-family residential development in order to promote consistency and compatibility with the City's older development.</p> <p>Policy 9.5: Restore the Santa Fe Depot, preferably as a facility open to the public. (e.g., rail station, restaurant, shopping facility).</p> <p>Policy 9.6: Encourage the continued effort in the downtown to preserve its historic quality. New development shall be designed in harmony with existing buildings.</p> <p>Policy 9.7: Through the existing Planned Development (PD) designations control the architecture and site design of residential developments for compatibility with the existing neighborhood.</p> <p>Policy 9.8: Continue the street tree and sidewalk pattern in new development where Medium Density and PD neighborhoods have an established street tree and sidewalk pattern.</p> <p>Policy 9.9 Complete the City-wide survey and prepare a City-wide inventory of potentially historic structures.</p> <p>Policy 9.10 Assist and encourage other public agencies or private organizations in the purchase and/or relocation of sites, buildings, and structure that have been identified as historically significant that are in danger of demolition or alterations that could jeopardize their status as historic resources.</p> <p>Policy 9.11 Consider the adoption of special development standards for properties surrounding identified historic sites and structures to ensure compatibility of new development with the old. Such development standards could include requirement of a Conditional Use Permit for development of properties surrounding identified historic sites and structures.</p> <p>Policy 9.12 Consider providing restoration assistance to owners of historic sites and/or structures in return for agreements or deed restrictions prohibiting their destruction or alteration inconsistent with their historic character.</p>	<p>Chapter 17.40 (Historic Preservation) establishes the Historic Preservation Ordinance (Section 17.40.010) of the City. The ordinance applies to all cultural and historical resources within the City (Section 17.40.020). The intent and purpose (Section 17.40.020) of the ordinance includes the following:</p> <p>(A) That the character, history and neighborhood identity of the city are reflected in and are reflections of its cultural, physical, and architectural heritage.</p> <p>(B) That these historical and cultural foundations should be preserved as living parts of community life and development to build an understanding of the city's past so that future generations may have a genuine opportunity to appreciate, enjoy, and understand the rich heritage of the city.</p> <p>(C) That city landmarks, neighborhoods, and other areas of historical and cultural interest are increasingly facing the threats of modernization and urbanization.</p> <p>(D) That pursuant to the provisions of the National Historic Preservation Act of 1966, as amended, the City of Monrovia joins with private concerns, the State of California, and the United States Congress to develop preservation programs and activities to give maximum encouragement to agencies and individuals undertaking preservation of the city's unique architectural, historical, aesthetic, and cultural heritage.</p> <p>(E) The recognition, preservation, protection and use of all historical resources in the City of Monrovia are required in the interest of and to promote the public health, prosperity, safety, enrichment and general welfare and:</p> <p>(1) To safeguard the city's unique cultural heritage as embodied and reflected in the city's architectural history and patterns of cultural development;</p> <p>(2) To encourage and facilitate public knowledge, understanding, and appreciation of the city's historic past and unique sense of place;</p> <p>(3) To foster civic and neighborhood pride and a sense of identity based on the recognition, public participation and use of cultural resources;</p> <p>(4) To promote the enjoyment, celebration, and use of cultural resources appropriate for the education and recreation of the people of the city;</p> <p>(5) To preserve diverse architectural styles, patterns of development, and design preferences reflecting phases of the city's history and to encourage complementary design and construction and inspire a more livable urban environment;</p> <p>(6) To enhance property values and to increase economic and financial benefits to the city and its inhabitants through the exploration of creative financial incentives for preservation;</p> <p>(7) To protect and enhance the city's attraction to tourists, residents, and visitors thereby stimulating business and industry;</p> <p>(8) To identify as early as possible and resolve conflicts between the preservation of cultural resources and alternative land uses;</p> <p>(9) To integrate the preservation of cultural resources into public and private land use management and development processes;</p> <p>(10) To conserve valuable material and energy resources by ongoing use and maintenance of the existing built environment;</p> <p>(11) To enhance neighborhoods through the preservation of cultural resources and establishment of historic districts; and</p>

	Possible incentives may include the Mills Act Property Tax Abatement program, waving of permit fees for historical resources, and/or other incentives deemed appropriate by the City.		
Pasadena	<p>Land Use Element:</p> <p>Goal 8. Historic Preservation. Preservation and enhancement of Pasadena’s cultural and historic buildings, landscapes, streets and districts as valued assets and important representations of its past and a source of community identity, and social, ecological, and economic vitality.</p> <p>Policy 8.1 Identify and Protect Historic Resources. Identify and protect historic resources that represent significant examples of the City’s history.</p> <p>Policy 8.2 Historic Designation Support. Provide assistance and support for applicants applying for designation of a historic resource through a clear, thorough, and equitable process that identifies if monuments, individual or landmark districts, historic signs or landmark trees are eligible for designation based on adopted evaluation criteria.</p> <p>Policy 8.3 Preservation Efforts. Support preservation and restoration efforts through education, facilitation, and incentive programs.</p> <p>Policy 8.4 Adaptive Reuse. Encourage sensitive adaptive re-use including continuing the historic use of historic resources to achieve their preservation, sensitive rehabilitation, and continued economic and environmental value.</p> <p>Policy 8.5 Scale and Character of New Construction in a Designated Landmark and Historic Districts. Promote an architecturally sensitive approach to new construction in Landmark and Historic districts. Demonstrate the proposed project’s contextual relationship with land uses and patterns, spatial organization, visual relationships, cultural and historic values, and relationships in height, massing, modulation, and materials.</p> <p>Policy 8.6 Infrastructure and Street Design Compatibility. Encourage street design, public improvements, and utility infrastructure that preserves and is compatible with historic resources.</p> <p>Policy 8.7 Preservation of Historic Landscapes. Identify, protect, and maintain cultural and natural resources associated with a historic event, activity, or person or exhibiting other cultural or aesthetic values.</p> <p>Policy 8.8 Evolving Preservation Practices. Continue to implement practices for historic preservation consistent with community values and conformance with the Secretary of the Interior’s Standards for the Treatment of Historic Properties, California Historical Building Code, State laws, and best practices.</p> <p>Policy 8.9 Maintenance. Support and encourage maintenance and upkeep of historic resources to avoid the need for major rehabilitation and to reduce the risk of demolition, loss through fire, deterioration by neglect, or impacts from natural disasters.</p> <p>Policy 8.10 Enforcement. Ensure that City enforcement procedures and activities comply with local, State, and Federal historic preservation requirements and fosters the preservation of historic resources.</p> <p>Green Space and Recreation Element:</p>	<p>Municipal codes related to cultural resources relevant to the Plan Area can be found in Chapter 17.62 (Historic Preservation), and Section 17.62.020 (Administrative and Review Authorities – Powers and Duties).</p> <p>Chapter 17.62 (Historic Preservation) establishes the Historic Preservation Ordinance of the City. The ordinance applies to all cultural and historical resources within the City. The intent and purpose (Section 17.62.010) of the ordinance is to specify significance criteria for the designation of historic resources, procedures for designation, and review procedures to:</p> <ul style="list-style-type: none">A. Encourage and promote the adaptive reuse of the City's historic resources;B. Enhance, perpetuate, and preserve architecturally and historically significant structures and promote revitalization of historic neighborhoods and commercial areas;C. Ensure that the rights of the owners of historic resources and owners of properties adjacent to historic resources are safeguarded;D. Foster civic pride in the beauty and noble accomplishments of the past by promoting private stewardship of historic resources that represent these accomplishments;E. Fulfill the City's responsibilities:1.As a Certified Local Government under Federal preservation laws; and2.For Federal Section 106 reviews and for the California Environmental Quality Act regarding historic resources.F. Promote the identification, documentation, and evaluation of the significance of individual historic resources and districts;G. Implement the historic preservation goals, policies, and programs of the General Plan;H. Promote the City as a destination for tourists and as a desirable location for business;I. Promote public awareness of the value of rehabilitation, restoration, and maintenance of the existing building stock as a means to conserve reusable material and energy resources;J. Recognize the City's historic resources as economic assets; andK. Stabilize and improve property values, and enhance the aesthetic and visual character and environmental amenities of the City's historic properties and areas. <p>In addition, the Historic Preservation Commission (Section 17.62.020) holds the following powers and duties regarding the historic preservation ordinance:</p> <ol style="list-style-type: none">1. Review applications for designations of historic monuments, landmarks, historic signs, and landmark trees and either forward a recommendation to the Council to approve the applications or deny the applications.2. Review applications for designations of landmark districts and either forward a recommendation of approval to the Council or deny the applications.3. Outside of the CD zoning district, approve/disapprove, applications for Certificates of Appropriateness for major projects affecting historic resources and approve, disapprove or delay demolition projects affecting historic resources eligible for designation.	No other applicable ordinances were identified.

San Marino	<p>Land Use Chapter:</p> <p>Objective L.23 Review existing listed resources and determine appropriate action for state and national listings.</p> <p>Policies:</p> <ul style="list-style-type: none">– Consider whether or not resources are appropriately placed on current lists.– Recognize, publicize, and maintain the sites that are locally significant.– Identify significant architectural, cultural, and historic resources within the city that would qualify for the state or national register.– Cooperate with the San Marino Historical Society and other community groups involved in recognizing the City’s history. <p>Objective L.24 Encourage the preservation of significant architectural, historic, and cultural resources.</p> <p>Policies:</p> <ul style="list-style-type: none">– Encourage the identification of areas and structures of historic, architectural, and cultural significance within the city.– Any designation based upon area, site or structure within the city should be subject to the City’s approval.– Any designation of a property within the City should be subject to the property owner’s approval. <p>Objective L.25 Encourage and provide incentives to achieve preservation of significant architectural, historical, and cultural buildings and neighborhoods.</p> <p>Policies:</p> <ul style="list-style-type: none">– Support tax incentives and other methods deemed mutually agreeable to the City and the property owner, which will help to preserve historic resources.– Consider the relaxation of current building and zoning codes, as necessary, to preserve significant structures, while ensuring that basic health and safety goals are met.– Provide information to property owners who desire such information on how to rehabilitate, research, and appreciate their architecturally, historically, and culturally significant property.	<p>Municipal codes related to cultural resources relevant to the Plan Area can be found in Chapter XXIII (Zoning and Development, Advertising and Signs, Fences and Walls), Article 18 (Historic Preservation) under Section 23.18.12 (Mitigation/Conditions of Approval) and Section 23.18.13 (Demolition of Historic Resources).</p> <p>Under Section 23.18.12 (Mitigation/Conditions of Approval):</p> <p>Whenever any decision under this article by the Council, commission, or Director to approve an application has the potential to diminish or destroy the historic, cultural, or architectural value of a historic landmark, the Council, commission or Director may impose conditions to mitigate the loss of a historic landmark. Such conditions may include, but shall not be limited to the following:</p> <p> A. Documentation of the historic features of the property including, but not limited to, site plans, floor plans, elevations, detailed drawings of character defining features, photographic records of the exterior, interior, and any character defining features, title deed of the original owners, any historical information of person and events associated with the site.</p> <p> B. Requiring salvage, relocation, donation, or adaptive reuse of significant items or features within or on the property.</p> <p>(Ord. 0-18-1336, 4-11-2018)</p> <p>Under Section 23.18.13 (Demolition of Historic Resources):</p> <p> A. Demolition, in whole or in part, of a historic landmark without issuance of a Certificate of Appropriateness or Certificate of Economic Hardship is prohibited.</p> <p> B. A Certificate of Appropriateness or Certificate of Economic Hardship shall not be issued for the demolition, in whole or in part, for a historic landmark unless a plan for a replacement has been approved through the appropriate development review process.</p> <p> C. No permit shall be issued for the demolition, in whole or in part, of a historic landmark unless a permit has been issued for a replacement improvement, unless demolition is required in conformance with section 23.18.14 of this article because of unsafe or dangerous conditions. (Ord. 0-18-1336, 4-11-2018)</p> <p>Under Section 23.18.15 (Environmental Review):</p> <p>If any action required or taken pursuant to this article is subject to the provisions of the California Environmental Quality Act, the time in which such action must be taken shall</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		be extended in order to allow time to comply with said Act, provided, however, that such action is taken within the time limits imposed by the Permit Streamlining Act. (Ord. 0-18-1336, 4-11-2018)	
South El Monte	No goals or policies related to cultural resources were identified in the General Plan.	Municipal codes related to cultural resources relevant to the Plan Area can be found in Chapter 17.78 (Historic Preservation), Section 17.78.020 (Purpose). Under Chapter 17.78 (Historic Preservation), Section 17.78.020 (Purpose), it is the purpose of this chapter to provide special conditions and regulations for the protection, enhancement, perpetuation and use of places, buildings, structures, works of art, and other objects, having a special character or special historical or aesthetic interest or value, within the meaning of California Government Code Section 37361. (Ord. 822 §1, 1989; Ord. 963 §39, 1995)	No other applicable ordinances were identified.
Temple City	Land Use Element: Goal LU 5: Identification and Preservation. Identify and preserve Temple City’s historic and cultural resources to enrich our sense of place, foster stewardship and civic pride, and understand the City’s prehistory and history. LU 5.1 Consultation. Consult with the appropriate organizations and individuals (e.g., California Historical Resources Information System (CHRIS), the Native American Heritage Commission (NAHC), etc.) to minimize potential impacts to historic and cultural resources. LU 5.2 National, California, and Local Registers. Encourage property owners of qualified resources to seek listing under the appropriate register(s) including the National Register of Historic Places, California Register of Historic Resources, and Los Angeles County Historical Landmarks and Records. LU 5.3 Adaptive Reuse. Encourage adaptive reuse of historic resources when the original use of the resource is no longer feasible. LU 5.4 Incentive Program. Explore the feasibility of establishing a voluntary incentive program, such as a Mills Act program, that would provide financial assistance, including property tax reductions, to owners of qualifying historic properties, as demonstrated by owner-funded studies, for property maintenance and improvements. LU 5.5 Awareness of Historic Resources. Support programs and policies that raise awareness of Temple City’s historic buildings, sites, and contextual features. LU 5.6 Coordination with Other Entities. Coordinate with and support public, quasi-public, and private entities in their historic preservation programs and efforts.	Municipal codes related to cultural resources relevant to the Plan Area can be found in Article O (Water Efficient Landscape). Article O (Water Efficient Landscape) subsection 1O-1 establishes that the following do not apply to the City’s water efficient landscape ordinance: 1. Registered local, state, or federal historical sites; 2. Ecological restoration projects that do not require a permanent irrigation system; 3. Mined land reclamation projects that do not require a permanent irrigation system; or 4. Plant collections, as part of botanical gardens and arboretums open to the public. (Ord. 19-1036)	No other applicable ordinances were identified.
West Covina	“Our Creative Community”, Sub-Section D, Celebrate and Promote West Covina’s Cultural Assets: Policy 7.7 Assess, avoid, and mitigate potential impacts to archeological, paleontological, and tribal resources through the CEQA review process for development projects carried out within the City. Comply with existing regulations relating to Native American resources, including California Environmental Quality Act Section 15064.5(d) and (e) and Public Resources Code §5097.98 concerning burial grounds, and Assembly Bill 52 and Senate Bill 18 for consultation with Native American tribes for development projects carried out within the City. Action 7.7 Require development to avoid archaeological and paleontological resources, whenever possible. If complete avoidance is not possible, require development to	Municipal codes related to cultural resources relevant to the Plan Area can be found in Article III (Historical Resource Preservation), and Division 9 (Preservation, Protection and Removal of Trees). Article III (Historical Resource Preservation), is established to promote the public health, safety, and general welfare by providing for the identification, protection, enhancement, perpetuation, and use of historic resources such as buildings, structures, sites, places, and districts within the city that reflect special elements of the city's architectural, artistic, cultural, historical, political, and social heritage for the following reasons: (1) To safeguard the city's heritage by encouraging the protection of landmarks representing significant elements of its history.	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	minimize and fully mitigate the impacts to the resources. Notify California Native American tribes and organizations of proposed projects that have the potential to adversely impact cultural resources.	<p>(2) To foster civic and neighborhood pride and a sense of identity based on an appreciation of the city's past and the recognition and use of historic resources.</p> <p>(3) To enhance the visual character of the city by preserving diverse architectural styles reflecting phases of the city's history and by encouraging complementary contemporary design and construction.</p> <p>(4) To strengthen the economy of the city by protecting and enhancing the city's attractions to residents, tourists, and visitors.</p> <p>(5) To stabilize and improve property values within the city by recognizing historic landmarks and by protecting areas of historic buildings from encroachment by incompatible designs.</p> <p>(6) To promote the enjoyment and use of historic resources appropriate for the education and recreation of the people of the city.</p> <p>(7) To integrate the preservation of historic resources and the extraction of relevant data from such resources into public and private land management and development processes.</p> <p>(8) To conserve valuable material and energy resources by ongoing use and maintenance of the existing built environment.</p> <p>(9) To encourage and facilitate public knowledge, understanding, and appreciation of the city's historic past and unique sense of place.</p> <p>(10) To preserve diverse architectural styles, patterns of development, and design preferences reflecting phases of the city's history and to encourage complementary design and construction and inspire a more livable urban environment.</p> <p>(11) To enhance neighborhoods through the preservation of historic resources and establishment of historic districts.</p> <p>(12) To take whatever steps are reasonable and necessary to safeguard the property rights of owners whose property is declared to be a landmark or is located in a historic district.</p> <p>(Ord. No. 2173, § 1(Exh. A), 3-4-08)</p> <p>Division 9 (Preservation, Protection and Removal of Trees) establishes standards to provide protection for the trees of this city that are of historic, aesthetic or environmental importance. This section seeks to preserve the cultural and historic heritage that the city's trees represent; to maintain the scenic beauty of the city; and, by the conservation of energy, the abatement of soil and slope erosion, and the enhancement of air quality, to improve the environment of the city. These purposes will be accomplished by:</p> <p>(1) Identifying significant trees and heritage trees and establishing procedures to encourage their preservation;</p> <p>(2) Including consideration of existing trees and their protection in the review and implementation of development proposals;</p> <p>(3) Requiring permits for the removal of significant trees, heritage trees, and trees on public property except in emergencies; and</p> <p>(4) Requiring replacement planting when significant trees, heritage trees, and trees on public property are removed.</p> <p>(Ord. No. 1864, § 2, 11-12-90)</p>	

3.5.3 Impact Assessment

Appendix G of the State CEQA Guidelines was reviewed to determine whether the Plan would result in significant impacts related to cultural resources. These guidelines serve as the threshold of significance for determining impacts to cultural resources and consider if the Plan would:

- 5(a) *Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?*
- 5(b) *Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?*
- 5(c) *Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*
- 5(d) *Disturb any human remains, including those interred outside of dedicated cemeteries?*

3.5.3.1 Methods

A project that may cause a substantial adverse change in the significance of a historical resource would have a significant effect on the environment (CCR Title 14, 15064.4(b)). A substantial adverse change in the significance of a resource means the physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historic resource would be materially impaired. Actions that would materially impair the significance of a historical resource would demolish or adversely alter those physical characteristics that convey a resource's historical significance and qualify it for inclusion in the CRHR or in a local register or survey that meet the requirements of PRC Sections 5020.1(k) and 5024.1(g).

Cultural resources determined to be eligible for listing on the National Register of Historic Places (NRHP) are automatically eligible for listing on the CRHR and are considered to be significant cultural resources.

3.5.3.2 Plan Impacts

- 3.5.3.2.1 5(a) Cause a substantial adverse change in the significance of a historical resource as defined in § 15064.5?

- 3.5.3.2.1.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant with Mitigation. Construction of greenway paths and greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities would require ground-disturbing activities such as site clearing and excavation. Construction would occur along the District ROW and adjacent parcels. Greenway paths constructed under the Plan would have a maximum length of 5 miles and 24 feet wide. Pocket parks and greenspaces under the Plan are anticipated to have a typical size of 1-acre and a maximum size of 25 acres. Safe crossings are anticipated to have a maximum width of 8 feet and length of 400 feet. Stormwater management components are anticipated to have a maximum size of 0.29 acres. Depths of construction would be dependent on future projects and site-

specific details. Depending on the size, design, and location of a project, as well as any potential cultural resources that may be at or near a future project site, construction of greenway paths, amenities, pocket parks and greenspaces, safe crossings, stormwater management facilities have the potential to demolish or materially alter the significance of an historic resource.

As shown in Figure 3.5-1, a number of designated historic resources are present in the Plan Area. While most of the Plan Area does not contain any listed historic resources and construction activity within the District ROW would be unlikely to result in substantial adverse changes to the significance of any historic resources as defined in Title 24, Section 15064.5 of the CCR, the location of future project activities, particularly on parcels adjacent to the District ROW, could occur at or near sites listed on or eligible for listing on the NHRP or CRHR or locally designated as historic. A substantial adverse change in significance is defined in Section 15064.5 as physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired. Construction of future projects conducted under the Plan would involve ground disturbance, construction equipment operation, stockpiling of materials, views of incomplete structures, and worker activities. These construction activities may result in a significant impact if the project activities result in demolition of or material alteration of a historic resource. In addition, construction activities could indirectly cause damage to historic resources within or adjacent to an individual project site as a result of increased dust and/or vibration. These impacts would be minimized with implementation of **MM AQ-1: Emissions Reduction Measures** and **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan**, which would limit dust emissions from construction sites and a plan to minimize noise and vibration from construction sites. Direct impacts would be avoided and/or minimized with the implementation of **MM CR-1: Historical Resources Assessment**, which would require project proponents to conduct a site-specific historic resources assessment to identify if any such resources could be impacted by the project. If the assessment determines that no listed or eligible resources are present, the project would be confirmed to result in no impact, and no further mitigation would be required. If the historic resources assessment determines there is a potential to adversely affect an historic resource, the project proponent shall either redesign the project to avoid the resources (**MM CR-2: Avoid Historic Resources**) or prepare an historic resources mitigation plan (**MM CR-3: Prepare and Implement a Historic Resources Mitigation Plan**). With the implementation of these mitigation measures, potential impacts to historic resources would be minimized to less than significant levels.

Operations

Less Than Significant. Operation of projects under the Plan is anticipated to increase the number of recreational users in the Plan Area. Increased recreation at or near a historical resource would not result in a substantial change in the significance of the historic resource and may potentially bring more awareness to the historical site/resource. In addition to the increases in recreational users, implementation of projects under the Plan may introduce new light sources in the immediate surroundings of an historic resource (if present within or immediately adjacent to an individual project site). However, as discussed in 3.1, Aesthetics, no new significant sources of light are anticipated to be installed and all lighting plans would be consistent with the local municipality requirements/code (Section 10 of the *Design Guidelines and Standards – Architectural and Safety Elements*). Therefore, the

potential for operation of the Plan to result in substantial changes to the significance of historic resources within the Plan Area is less than significant.

Mitigation Measures

MM CR-1: Historical Resources Assessment. Historical resources shall be evaluated for their eligibility for listing in the CRHR or local register prior to project development. The records search will help identify any recorded sites/resources that may be impacted by a project. A historian or architectural historian, per the Secretary of Interior's Professional Qualification Standards for Architectural History, shall perform a records search and site investigation to identify potentially eligible historical sites/resources within a quarter-mile of a project site. The principal records search shall be conducted using the California Historical Resources Information System (CHRIS). The South Central Coastal Information Center at California State University Fullerton administers the historical records for Los Angeles County and is the preferred location to conduct the historical records search.

To supplement the CHRIS records search, at a minimum, the following sources shall be searched:

- NRHP National Park Service online website
- Office of Historic Preservation
- California Historical Landmarks
- California Points of Historical Interest
- Local historical societies
- Local registers and general plans
- Sanborn maps (available at the Los Angeles Public Library)
- Historic U.S. Geological Survey quadrangles
- Historic aerial maps

If no designated eligible or historic resources are identified during this assessment, no further mitigation shall be required.

MM-CR-2: Avoid Historical Resources. If eligible historical resources, as defined by CEQA, are identified, demolition or substantial alteration of such resources shall be avoided. This may require redesign of the proposed project to provide adequate buffer as to not significantly alter the historical resource.

MM CR-3: Prepare and Implement a Historic Resources Mitigation Plan. If avoidance is determined to be infeasible, the project proponent shall prepare a treatment plan to include, but not be limited to, photo-documentation and public interpretation of the resource. The plan shall be submitted to the local jurisdiction in which the project is proposed as part of the Plan Review process for review and approval prior to implementation. Required plan elements include the following:

- Survey or photographic documentation of the historical resource before construction begins as a baseline condition for assessing damage.
- Preparation of protocols for the documentation of inadvertent damage, should it occur, as well as notification to the appropriate owner and/or jurisdiction.
- Strategy for repair of historical resource in accordance with the Secretary of the Interior Standards.

MM AQ-1: Emission Reduction Measures.

MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan.

Significance After Mitigation

For construction, implementation of **MM AQ-1: Emission Reduction Measures**, **MM NOI-1: Prepare Construction Noise/Vibration Work and Mitigation Monitoring Plan**, **MM CR-1: Historical Resources Assessment**, **MM CR-2: Avoid Historical Resources**, and **MM CR-3: Prepare and Implement a Historic Resources Mitigation Plan** would avoid direct impacts and minimize potential for indirect impacts to historic resources to less than significant levels.

For operation, no mitigation measures are required, and impacts would be less than significant.

3.5.3.2.2 5(b). Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?

3.5.3.2.2.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant with Mitigation. Depending on the size, design, and location of a project, as well as any potential cultural resources that may be at or near a future project site, construction of the greenway paths, amenities, pocket parks and greenspaces, safe crossings, stormwater management facilities have the potential to demolish or materially alter the significance of an archaeological resource, through both direct destruction of the resource or indirectly due to localized dust and vibration. Because projects implemented under the Plan could occur anywhere within the Plan Area and the entirety of all potential archeological resources is not known, impacts to archaeological resources could be potentially significant. To avoid and/or minimize impacts to such resources, project proponents would be required to implement **MM CR-4: Cultural Resources Assessment** and conduct a site-specific records search and pedestrian survey of the project site in advance of construction activity. If no potential resources are identified in the assessment, the potential for impacts would be considered less than significant. However, implementation of **MM CR-6: Monitoring** would be required to ensure that any unanticipated discoveries are handled appropriately. If the results from the site-specific assessment indicate resources are present on a project site, implementation of **MM CR-5: Avoid Cultural Resources, Prepare Treatment Plan** would ensure the project is either redesigned to avoid known resources or a treatment plan is prepared to effectively mitigate impacts to the resources. Project proponents would also be required to implement **MM CR-7: Unanticipated Discovery** in the event other unanticipated discoveries of archaeological resources occur during construction. Accordingly, with implementation of these mitigation measures, the potential for construction activity to cause a substantial adverse change in the significance of archaeological resources in the Plan Area would be less than significant.

Operations

Less Than Significant. No ground disturbing activities would occur during the operation of future projects. Therefore, impacts during operations to archaeological resources would be less than significant.

Mitigation Measures

MM CR-4: Cultural Resources Assessment. Construction activities that result in ground disturbance have the potential to impact buried archaeological resources. A qualified archaeologist shall conduct an

archaeological inventory and assessment per the Secretary of the Interior's Professional Qualifications Standards for Archaeology, for any project that would result in ground disturbance. The assessment shall include a records search of CHRIS, at the South Central Coastal Information Center at California State University Fullerton which administers the historical records for Los Angeles County.

If a location has been previously surveyed and no cultural resources have been recorded on it, no further cultural resources studies shall be required. If a location has not been previously surveyed based on the records search information, an intensive (100 percent) pedestrian ground surface survey (Phase I survey/Class III inventory) by qualified archaeologists shall be required. All archaeological/cultural resources identified during the site survey will be recorded, pursuant to CDPR and applicable local/municipal guidance.

Any newly encountered archaeological resources shall be evaluated by a qualified archaeologist for their eligibility for listing in the CRHR or NHRP and for significance as a historical resource or unique archaeological resource per State CEQA Guidelines Section 15064.5. Recommendations shall be made for treatment of these resources if found to be significant, in consultation with the implementing agency. If, following the records search, literature review, and field survey, it is determined that there are no archaeological present in the project area, then no further action would be required.

MM CR-5: Avoid Cultural Resources, Prepare Treatment Plan. If a significant resource is present, the preferred treatment is to avoid the site/resource to preserve it in place, pursuant to State CEQA Guidelines Section 15126.4(b)(3). This may require redesign of the proposed project.

In accordance with State CEQA Guidelines Section 15126.4(b)(3)(C), if it is demonstrated that resources cannot be avoided, a qualified archaeologist shall develop additional treatment measures, which may include data recovery or other appropriate measures, in consultation with the project proponent. For sites with archaeological resources that cannot be avoided, the project proponent shall prepare an Archaeological Evaluation and Treatment Plan, in coordination with the qualified archaeologist, that describes methods and procedures for conducting subsurface excavations to determine the vertical and horizontal extents of an archaeological site. The draft plan shall be provided for review to any tribes that expressed interest in prehistoric or tribal resources. Implementation of such a plan may include mechanical and/or manual excavations to provide data on the cultural constituents at the site and the depositional context of such materials (if found to exist). This data can be used to determine the integrity of the site and make a formal evaluation based on the eligibility criteria set forth in CEQA and Section 106 of the NHPA for inclusion in the CRHR and NRHP. The Archaeological Evaluation and Treatment measures should define the parameters of archaeological testing at the site and the extent of excavation and analysis of any materials recovered. The Archaeological Evaluation and Treatment measures must also include guidelines for treatment and curation of any materials recovered during the testing process. Subsequent to implementation of the Archaeological Evaluation and Treatment measures, a technical report describing the methods and results of archaeological testing and formal evaluations of the archaeological sites and recommendations for further treatment will be completed.

MM CR-6: Monitoring. A Secretary of the Interior-qualified archaeologist or archaeological monitor working under the direction of a Secretary of the Interior-qualified archaeologist shall be retained by the implementing agency. The archaeologist or archaeological monitor, either meeting or working under the direction of an archaeologist who meets the Secretary of the Interior Professional Qualification

Standards in archaeology, shall monitor ground disturbing activities in areas with potential for archaeological resources.

MM CR-7: Unanticipated Discovery of a Cultural Resource. If a cultural resource is discovered inadvertently during construction, all work in the immediate vicinity of the find (within a 60-foot buffer) shall stop until a Secretary of Interior -qualified archaeologist can evaluate the significance of the find. Work on other portions of the project outside the buffered area may continue during this assessment period. If the find is determined to be significant, the project proponent shall prepare a treatment plan in accordance with MM CR-5 described above.

Significance After Mitigation

Implementation of **MM CR-4: Cultural Resources Assessment**, **MM CR-5: Avoid Cultural Resources, Prepare Treatment Plan**, **MM CR-6: Monitoring**, and **MM CR-7: Unanticipated Discovery of a Cultural Resource** would ensure that individual projects evaluate the site-specific potential for impacts to archaeological resources and avoid direct impacts to such resources through monitoring and development of treatment plans. Therefore, impacts after mitigation would be less than significant.

For operation, no mitigation measures are required, and impacts would be less than significant.

3.5.3.2.3 5(c). Disturb any human remains, including those interred outside of dedicated cemeteries?

3.5.3.2.3.1 Greenway Paths + Greenway Amenities; Pocket Parks and Greenspaces; Safe Crossings; Stormwater Management

Construction

Less Than Significant with Mitigation. The greenway paths, greenway amenities, pocket parks and greenspaces, safe crossings, and stormwater management facilities will be developed within the District ROWs or in parcels adjacent to the District ROW. While the Plan Area is mostly urbanized and the probability of an inadvertent discovery of human remains encountered during ground disturbing construction activities is low, in the unlikely event that human remains are inadvertently encountered, impacts due to construction could be significant. Implementation of **MM CR-8: Unanticipated Discovery of Human Remains and Associated Funerary or Ceremonial Objects** would require that project proponents handle such remains according to the protocols set forth in CEQA Guidelines Section 15064.5(e). With the implementation of this mitigation, the potential for construction activities associated with the Plan to disturb human remains would be less than significant.

Operations

No Impact. No ground disturbing activities would occur during the operation of the greenway paths, pocket parks and greenspaces, safe crossings, and stormwater management facilities. Therefore, no human remains would be inadvertently discovered or disturbed during operation, and no impacts would occur.

Mitigation Measures

MM CR-8: Unanticipated Discovery of Human Remains and Associated Funerary or Ceremonial Objects. If human remains and/or grave goods are discovered or recognized during project construction, the implementing agency shall immediately halt all work in the immediate vicinity (within a 100-foot

buffer of the find), contact the Los Angeles County Coroner to evaluate the remains, and follow the procedures and protocols set forth in State CEQA Guidelines Section 15064.5(e). If the County Coroner determines that the remains are Native American, the implementing agency shall contact the NAHC, in accordance with Health and Safety Code Section 7050.5(c) and PRC Section 5097.98 (as amended by AB 2641). The NAHC shall designate a Most Likely Descendant for the remains per PRC Section 5097.98. Per PRC Section 5097.98, the landowner shall ensure that the immediate vicinity, according to generally accepted cultural or archaeological standards or practices, where the Native American human remains and any associated grave goods are located, is not damaged or disturbed by further development activity until the landowner has discussed and conferred with the Most Likely Descendant regarding their recommendations, if applicable, taking into account the possibility of multiple human remains. The Most Likely Descendant shall make recommendations to the District within 48 hours for the treatment or disposition, with property dignity, of the human remains and/or grave goods, which shall be implemented in accordance with PRC Section 5097.98 and Section 15064.5(e) of the State CEQA Guidelines. If the Most Likely Descendant fails to make recommendations within 48 hours, the County may reinter the remains in an area of the property not subject to further disturbance. If the remains are determined to be neither of forensic value to the Coroner, nor of Native American origin, provisions of the CHSC (Section 7100 et seq.) directing identification of the next-of-kin will apply. The NAHC is authorized to resolve any disputes regarding the disposition of such remains, pursuant to Section 15064.5(e) of the State CEQA Guidelines. Work may resume at the implementing agency's discretion but will commence only after consultation and treatment have been concluded. Work may continue on other parts of the project while consultation and treatment are conducted.

Significance After Mitigation

For construction, implementation of **MM CR-8: Unanticipated Discovery of Human Remains and Associated Funerary or Ceremonial Objects** would ensure that in the unlikely event that human remains are encountered during ground disturbing activities, work is halted and appropriate personnel are notified, so impacts would be less than significant with mitigation.

No impacts to human remains would occur during operation.

3.5.3.3 Impacts of Conceptual Design Projects

This section discusses potential impacts from the 10 conceptual designs discussed in Section 2.4 above.

3.5.3.3.1 5(a). Cause a substantial adverse change in the significance of a historical resource as defined in § 15064.5?

Construction

As described in Section 3.5.3.2.1.1, construction impacts 5(a) for the Plan, construction activities for the facilities/developments proposed in the Plan and ten conceptual projects would typically involve ground disturbance, construction equipment operation, stockpiling of materials, views of incomplete structures, and worker activities. These construction activities may result in localized noise, dust, traffic, and vibration impacts. Off-site impacts may adversely affect nearby potentially eligible historic resources resulting in potentially significant impacts from construction.

Table 3.5-2. Analysis of Potential for Conceptual Design Examples Construction to Cause a Substantial Adverse Change in the Significance of a Historical Resource During Construction

Conceptual Design Project	<i>Cultural (a). Cause a substantial adverse change in the significance of a historical resource as defined in § 15064.5?</i>
<p>Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i></p>	<p>Less Than Significant with Mitigation. One recorded historical site, Laguna de San Gabriel, is within 1,000 feet of this proposed project (Figure 3.5-1). This site has been proposed for inclusion in the CRHP and is a local landmark for the City of San Gabriel. Dust and vibration generated during construction activity could affect this historic resource, however, implementation of MM AQ-1 and MM NOI-1 would ensure impacts are less than significant. Construction activity would not directly result in any substantial adverse changes to the significance of this historic resource. While initial review indicates that no other listed sites are within the project footprint, implementation of MM CR-1 would confirm the presence or absence of any other unlisted resources that may be eligible. Accordingly, impacts would be less than significant with mitigation.</p>
<p>Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i></p>	<p>Less Than Significant with Mitigation. There are no recorded historical sites/resources within the vicinity of the project site (Figure 3.5-1). While initial review indicates that no listed sites are within the project footprint, implementation of MM CR-1 would confirm the presence or absence of any other unlisted resources that may be eligible. Accordingly, impacts would be less than significant with mitigation.</p>
<p>Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i></p>	<p>Less Than Significant. A recorded historical site, Stuart Company Plant and Office Building, is approximately 1 mile to the south/southeast of the proposed project (Figure 3.5-1). This office building was designed by architect Edward Durell Stone in a Neo-Formalist style for Stuart Pharmaceuticals. The site was included in the CRHR in 1998. However, this site is too far from the project site (i.e., one mile) to experience direct noise or dust impacts from operations. While initial review indicates that no listed sites are within the project footprint, implementation of MM CR-1 would confirm the presence or absence of any other unlisted resources that may be eligible. Accordingly, impacts would be less than significant with mitigation.</p>
<p>Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i></p>	<p>Less Than Significant. A recorded historical site, Stuart Company Plant and Office Building, is approximately 2,000 feet to the northeast of the proposed project site (Figure 3.5-1). This office building was designed by architect Edward Durell Stone in a Neo-Formalist style for Stuart Pharmaceuticals. The site was included in the CRHR in 1998. Dust and vibration generated during construction activity could affect this historic resource, however, implementation of MM AQ-1 and MM NOI-1 would ensure impacts are less than significant. Construction activity would not directly result in any substantial adverse changes to the significance of this historic resource. While initial review indicates that no other listed sites are within the project footprint, implementation of MM CR-1 would confirm the presence or absence of any other unlisted resources that may be eligible. Accordingly, impacts would be less than significant with mitigation.</p>

Conceptual Design Project	<i>Cultural (a). Cause a substantial adverse change in the significance of a historical resource as defined in § 15064.5?</i>
San Dimas Wash at Arrow High School <i>City of Glendora</i>	<p>Less Than Significant. The closest registered historic site is the Glendora Bougainvillea, approximately 2.5 miles to the northeast of the project site (Figure 3.5-1). Planted in 1901 by R.W. Hamlins, the Glendora Bougainvillea is the largest of its kind in the United States. However, at over 1 mile, this site is located too far away from the project site to realize direct noise or dust impacts. While initial review indicates that no listed sites are within the project footprint, implementation of MM CR-1 would confirm the presence or absence of any other unlisted resources that may be eligible. Accordingly, impacts would be less than significant with mitigation.</p>
San Dimas Wash at Hollenbeck Park <i>City of Covina</i>	<p>Less Than Significant. The closest registered historic site is the Glendora Bougainvillea, approximately five miles to the northeast of the project site (Figure 3.5-1). Planted in 1901 by R.W. Hamlins, the Glendora Bougainvillea is the largest bougainvillea plant of its kind in the United States. However, this site is located too far away from the project site (i.e., over a mile) to realize direct dust impacts. While initial review indicates that no listed sites are within the project footprint, implementation of MM CR-1 would confirm the presence or absence of any other unlisted resources that may be eligible. Accordingly, impacts would be less than significant with mitigation.</p>
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i>	<p>Less Than Significant. There are four registered historic sites to the east/southeast of the project site – the Temple Mission, Workman Adobe, Workman Family Cemetery, and John A. Rowland House (Figure 3.5-1). The Temple Mission is the closest at approximately 2.25 miles away. These sites are, therefore, too far away from the project site (i.e., over a mile) to realize direct noise or dust impacts. While initial review indicates that no listed sites are within the project footprint, implementation of MM CR-1 would confirm the presence or absence of any other unlisted resources that may be eligible. Accordingly, impacts would be less than significant with mitigation.</p>
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	<p>Less Than Significant. There are four registered historic sites to the southeast of the project site – the Barbara Greenwood Kindergarten, La Casa Primera de Rancho San Jose, La Casa Alvarado Primera, and the Abraham Lincoln Elementary School (Figure 3.5-1). The Barbara Greenwood Elementary is the closest at approximately 2,000 feet from the project site. The site is a historical school and museum and is maintained by the Historical Society of Pomona Valley. Dust and vibration generated during construction activity could affect this historic resource, however, implementation of MM AQ-1 and MM NOI-1 would ensure impacts are less than significant. Construction activity would not directly result in any substantial adverse changes to the significance of this historic resource. While initial review indicates that no other listed sites are within the project footprint, implementation of MM CR-1 would confirm the presence or absence of any other unlisted resources that may be eligible. Accordingly, impacts would be less than significant with mitigation.</p>

Conceptual Design Project	<i>Cultural (a). Cause a substantial adverse change in the significance of a historical resource as defined in § 15064.5?</i>
Walnut Creek at Syhre Park <i>Cities of Baldwin Park and West Covina</i>	Less Than Significant. The closest registered historic site is the Temple Mission, approximately three miles to the south of the project site (Figure 3.5-1). However, at over one mile, this site is located too far away from the project site to realize direct noise or dust impacts. While initial review indicates that no listed sites are within the project footprint, implementation of MM CR-1 would confirm the presence or absence of any other unlisted resources that may be eligible. Accordingly, impacts would be less than significant with mitigation.
Walnut Creek at Pocket Park <i>City of West Covina</i>	Less Than Significant. The closest registered historic site is the Temple Mission, approximately three miles to the south/southwest of the project site (Figure 3.5-1). However, at over one mile, this site is located too far away from the project site to realize direct noise or dust impacts. While initial review indicates that no listed sites are within the project footprint, implementation of MM CR-1 would confirm the presence or absence of any other unlisted resources that may be eligible. Accordingly, impacts would be less than significant with mitigation.

Operations

Less than Significant. Potential impacts stem from increased visitation and use of the 10 conceptual design projects. Potential impacts from operations are discussed in the Plan impacts sections above in Section 3.5.3.2.1. As indicated in each of the descriptions, none of the conceptual design examples introduce any components not previously considered within the Plan and therefore, would not result in any new impacts or more severe impacts than as described for the Plan. As operational impacts would be less than significant, no additional mitigation is necessary.

3.5.3.3.2 5(b). Cause a substantial adverse change in the significance of an archaeological resource pursuant to § 15064.5?

Construction

Less than Significant with Mitigation. As described in Section 3.5.3.2.2.1, construction impacts (b) for the Plan, construction activities for the facilities/developments proposed in the Plan and 10 conceptual projects would typically involve ground disturbance, construction equipment operation, stockpiling of materials, views of incomplete structures, and worker activities. While most of the construction areas for the conceptual projects have experienced prior development/disturbance, it is possible that an unknown and unrecorded archaeological resource may be present in the subsurface. If an archaeological/cultural resource is encountered during construction of a conceptual project, a significant impact may result from disturbance, alteration, or destruction of the resource.

Implementation of **MM CR-4: Cultural Resources Assessment; MM CR-5 Avoid Cultural Resources, Prepare Treatment Plan; MM CR-6: Monitoring; and MM CR-7: Unanticipated Discovery of Cultural Resources** would avoid and/or minimize the potential for construction activity to cause a substantial adverse change in the significance of an archaeological resource.

Operations

Less than Significant. No ground disturbing activities would occur during the operation of the 10 conceptual projects. By design, the greenway would introduce more users to the Plan Area. While the greenway would be a concrete pathway, increased usership is not anticipated to significantly impact cultural resources. Therefore, no direct physical impacts to buried, unrecorded cultural resources are anticipated from operation of the proposed facilities. As indicated in each of the descriptions, none of the conceptual design examples introduce any components not previously considered within the Plan and therefore, would not result in any new impacts or more severe impacts than as described in Section 3.5.3.2.2.

3.5.3.3.3 5(c). Disturb any human remains, including those interred outside of dedicated cemeteries?

Construction

Less Than Significant with Mitigation. As described in Section 3.5.3.2.3, construction impacts (d) for the Plan, construction activities for the facilities/developments proposed in the Plan and 10 conceptual projects would typically involve ground disturbance, construction equipment operation, stockpiling of materials, views of incomplete structures, and worker activities. Most of the construction areas for the conceptual projects have likely experienced prior development/disturbance and therefore, the probability of an inadvertent discovery of human remains encountered during ground disturbing construction activities is low. In the event that human remains are inadvertently encountered, implementation of **MM CR-8: Unanticipated Discovery of Human Remains and Associated Funerary Objects** would ensure that all work stops and the Los Angeles County Coroner shall be contacted to evaluate the remains to determine that no investigation of the cause of death is required, pursuant to Section 15064.5(e)(1) of the CEQA Guidelines, along with next steps. Accordingly, construction activity related to the conceptual design projects would not result in significant impacts with regard to disturbance of human remains.

Operations

No Impact. No ground disturbing activities would occur during the operation of the greenway, amenities, or proposed facilities. By design, the greenway and proposed facilities would introduce more users to the Plan Area, but increased usership is not anticipated to significantly impact buried human remains. Therefore, no operational impacts to buried human remains are anticipated. As indicated in each of the descriptions, none of the conceptual design examples introduce any components not previously considered within the Plan and therefore, would not result in any new impacts or more severe impacts than as described in Section 3.5.3.2.3.

3.6 Energy

This section describes the environmental and regulatory setting for energy, discusses energy consumption-related impacts (i.e., natural gas, electricity, and transportation fuels) that could result from the Plan, and determines the significance of those impacts. The analysis assesses the proposed Plan's estimated consumption of energy resources during construction and operation and evaluates the proposed Plan's consistency with federal, state, and local plans for renewable energy and energy efficiency. Where needed, this section identifies feasible mitigation measures that would reduce or avoid any significant impacts. Table 3.6-1 summarizes the impact assessment for the Plan components related to energy.

Table 3.6-1. Summary of Potential Impacts of the Plan on Energy

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the Plan:			
6(a). Would the proposed Project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant with Mitigation	Construction: No Mitigation Operations: MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant with Mitigation	
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant with Mitigation	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant with Mitigation	
6(b). Would the proposed Project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant with Mitigation	Construction: No Mitigation

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
<i>Would the Plan:</i>			
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant with Mitigation	Operations: MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant with Mitigation	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant with Mitigation	

3.6.1 Environmental Setting

Energy use is typically quantified using the British Thermal Unit (BTU), and the BTU is used as a basis for comparing the consumption of different energy resources. California has a diverse portfolio of energy resources. In 2021, California was the seventh largest producer of crude oil in the United States) and ranked third in crude oil refining capacity. California is the largest consumer of jet fuel and second largest consumer of motor gasoline in the U.S. In 2022, California was the second largest total energy consumer among the states, but its per capita energy consumptions was the third lowest (United States Energy Information Administration 2024). In 2022, renewable resources, including hydroelectric power and small-scale, customer-sited solar power, accounted for nearly 50 percent of California's in-state electricity generation. Natural gas accounted for 42 percent of the electrical generation and nuclear power supplied the remainder. In 2022, California was the fourth largest electricity producer and the nation's third largest electricity consumer in the nation. California sources additional needed electricity supplies from out-of-state generators (United States Energy Information Administration 2023a).

The Plan Area is located within a highly urbanized area of LA County. The energy consumption of electricity, natural gas, and transportation fuels (e.g., gasoline and diesel fuel) in the state and LA County in 2022 is shown in Table 3.6-2 below.

Table 3.6-2. Energy Consumption in California and Los Angeles County in 2022

Energy Resource ¹	CA Consumption Mass	CA Consumption Million BTUs	LA County Consumption Mass	LA County Consumption Million BTUs	LA County as Percent of Total California Consumption
Electricity	287,826 GWh	982,103,080 ^a	66,003 GWh	225,202,240 ^a	23%
Natural Gas	2,130.9 million therms	2,130,900,000 ^b	2,820 million therms	281,930,000 ^b	13%
*Gasoline ^c	13,640 million gallons	1,496,608,100 ^d	3,070 million gallons	336,846,540 ^d	23%
*Diesel Fuel ^c	2,290 million gallons	291,883,400 ^e	295 million gallons	37,600,700 ^e	13%

Sources: CEC 2020, 2023; U.S. EIA 2023b

^aEstimated based on conversion factor of 3,412,000,000 BTU per 1 Gigawatt-hour (GWh).

^bEstimated based on conversion factor of 100,000 BTU per therm.

^cEstimated fuel sales based on data obtained from retail transportation fueling stations in California by the California Energy Commission

^dEstimated based on conversion factor of 109,722 BTU per 1 gallon of gasoline.

^eEstimated based on conversion factor of 127,460 BTU per 1 gallon of diesel.

3.6.1.1 Natural Gas

Natural gas throughout the Plan Area is provided by Southern California Gas Company.

3.6.1.2 Electricity

Electricity throughout the Plan Area is provided by Southern California Edison within the majority of Los Angeles County, with the Los Angeles Department of Water and Power (LADWP), Glendale Water & Power, and Pasadena Water & Power providing power in their respective service areas.

3.6.1.3 Transportation Fuels

Transportation dominates California's energy consumption profile. Overall, the transportation sector accounts for 34 percent of state end-use energy consumption (United States Energy Information Administration 2023a). According to CARB's on-road mobile source emissions inventory, EMFAC2021 Web Database, Los Angeles County's on-road transportation sources consumed approximately 3.7 billion gallons of gasoline, 523 million gallons of diesel fuel, and 69 million gallons of natural gas in 2023 (CARB 2024c).

3.6.2 Regulatory Setting

Federal, state, and local laws, regulations, plans, and/or guidelines related to energy resources that are applicable to the Plan are summarized below.

3.6.2.1 Federal

3.6.2.1.1 Corporate Average Fuel Economy Standards

Congress enacted the Corporate Average Fuel Economy standards in 1975 to reduce energy consumption and increase the fuel economy of cars and light trucks. Corporate Average Fuel Economy standards are regulated by the Department of Transportation National Highway Traffic and Safety Administration, and the USEPA calculates fuel economy levels and sets related GHG standards. Fuel efficiency standards for medium- and heavy-duty trucks have been jointly developed by USEPA and National Highway Traffic and Safety Administration (NHTSA). The NHTSA published a final rulemaking on June 7, 2024, that raised federal GHG emission standards for passenger cars and light trucks for model years 2027 through 2031, and heavy-duty vehicles for model years 2030 through 2035, increasing in stringency each year. The updated GHG emission standards will avoid more than 659 million metric tons for passenger cars and light trucks, and by 55 million metric tons for heavy-duty vehicles through 2050.

3.6.2.1.2 Energy Policy Act of 2005

The Energy Policy Act of 2005 addresses energy production in the U.S. and provides tax credits for electricity generated by qualified sources, such as gas generated by solid waste management activities. Section 203 of the Energy Policy Act of 2005 explicitly includes municipal solid waste-derived electricity as a “renewable energy” resource eligible to satisfy the federal renewable energy purchase requirement established in that section.

3.6.2.2 State

3.6.2.2.1 Senate Bill 1389

SB 1389 (PRC Sections 25300–25323) requires the California Energy Commission (CEC) to prepare a biennial integrated energy policy report to assess major energy trends and issues facing the state’s electricity, natural gas, and transportation fuel sectors and provide policy recommendations to conserve resources; protect the environment; ensure reliable, secure, and diverse energy supplies; enhance the state’s economy; and protect public health and safety (PRC Section 25301[a]). The CEC 2022 Integrated Energy Policy Report provides findings and recommendations for energy issues facing the state, including energy efficiency and reliability, decarbonizing buildings and California’s natural gas system, forecasting California’s energy demand, and quantifying the benefits of clean transportation programs, such as California’s transition to zero-emission vehicles.

3.6.2.2.2 Senate Bill 350, Clean Energy and Pollution Reduction Act

SB 350 established clean energy, clean air, and GHG reduction goals, which included goals to reduce GHGs to 40 percent below 1990 levels by 2030 and to 80 percent below 1990 levels by 2050. The CEC works with other state agencies, including the CPUC, CARB, and the California Independent System Operator to implement this bill. SB 350 increases the state’s renewable electricity procurement goal from 33 percent by 2020 to 50 percent by 2030, which will increase the use of Renewables Portfolio Standard eligible resources including solar, wind, biomass, geothermal, and others. In addition, California is required to double statewide energy efficiency savings in electricity and natural gas end uses by 2030. To meet these goals and reduce GHG emissions, the CEC will require large utilities to

develop and submit integrated resource plans, which detail how utilities will meet their customers' resource needs, reduce GHG emissions, and increase clean energy resource use.

3.6.2.2.3 CARB Heavy-Duty On-Road and Off-Road Vehicle Regulations

In 2004, CARB adopted an Airborne Toxic Control Measure to Limit Diesel-Fueled Commercial Motor Vehicle Idling in order to reduce public exposure of emissions to diesel particulate matter (Title 13, CCR, Section 2485). The measure applies to diesel-fueled commercial vehicles with gross vehicle weight ratings greater than 10,000 pounds that are licensed to operate on highways, regardless of where they are registered. This measure does not allow diesel-fueled commercial vehicles to idle for more than 5 minutes at any given location. While the goal of this measure is primarily to reduce public health impacts from diesel emissions, compliance with the regulation also results in energy savings in the form of reduced fuel consumption from unnecessary idling.

In addition to limiting exhaust from idling trucks, CARB also promulgated emissions standards for off-road diesel construction equipment greater than 25 horsepower such as loaders, backhoes, and forklifts, as well as many other self-propelled off-road diesel vehicles. The In-Use Off-Road Diesel-Fueled Fleets regulation adopted by CARB on July 26, 2007, encourages the retirement, replacement, or repower of older engines with newer emissions-controlled models (Title 13, CCR, Section 2449). The compliance schedule requires full implementation by 2023 for all equipment in large and medium fleets and by 2028 for small fleets. While the goal of this measure is primarily to reduce public health impacts from diesel emissions, compliance with the regulation has shown an increase in energy savings in the form of reduced fuel consumption from more fuel-efficient engines.

3.6.2.2.4 CARB Pavley Regulations

In 2004, CARB approved the "Pavley I" regulation which require automakers to reduce GHG emissions by approximately 30 percent from 2002 levels by 2016. The standards phased in over the years from 2009 to 2016. In June 2009, the USEPA granted California the authority to implement GHG emission reduction standards for light-duty vehicles. In September 2009, amendments to the Pavley I regulations were adopted by CARB and Pavley I regulations implementation began. The Pavley II regulation, which is now referred to as the Low Emission Vehicle III GHG, regulates model years 2017 through 2025 with the goal of reducing GHG emissions by 45 percent by the year 2020 as compared to the 2002 fleet. The new rules reduce emissions from gasoline-powered cars as well as promote zero-emission vehicle technologies such as electricity and hydrogen and increase the infrastructure for fueling hydrogen vehicles. In 2009, the USEPA granted California the authority to implement the GHG standards for passenger cars, pickup trucks, and sport utility vehicles but on September 27, 2019, the USEPA withdrew the waiver it had previously provided to California for the state's GHG and zero-emission vehicle programs under Section 209 of the CAA. The withdrawal of the waiver was effective November 26, 2019. In response, several states, including California, filed a lawsuit challenging the withdrawal of the USEPA waiver (*State of California vs. Chao*). In March 2022, the USEPA reinstated California's authority under the CAA to implement its own GHG emissions standards and zero-emission vehicle sales mandates (USEPA 2022).

3.6.2.2.5 Title 24 Building Energy Efficiency Standards

California's Energy Efficiency Standards for Residential and Nonresidential Buildings (Title 24, Part 6 of the CCR, also known as the California Energy Code) were established in 1978 in response to a legislative mandate to reduce California's energy consumption to ensure that building construction and system design and installation achieve energy efficiency and preserve outdoor and indoor environmental quality. The standards are updated periodically (typically every three years) to allow consideration and possible incorporation of new energy efficiency technologies and methods. The 2022 California Energy Codes went into effect on January 1, 2023, and improved upon the 2019 standards for new construction of, and additions and alterations to, residential and nonresidential buildings.

Part 11 of the Title 24 Building Energy Efficiency Standards is referred to as the California Green Building Standards (CALGreen) Code. The purpose of the CALGreen Code is to "improve public health, safety, and general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices in the following categories: (1) Planning and design; (2) Energy efficiency; (3) Water efficiency and conservation; (4) Material conservation and resource efficiency; and (5) Environmental air quality." The CALGreen Code establishes mandatory measures for new residential and non-residential buildings. Such mandatory measures include energy efficiency, water conservation, material conservation, planning and design, and overall environmental quality. As previously mentioned, the 2022 update to the CALGreen Code went into effect on January 1, 2023.

3.6.2.3 Los Angeles County

3.6.2.3.1 Los Angeles County General Plan

Several elements of the General Plan include goals and policies associated with energy resources including the Air Quality Element, Conservation and Natural Resources Element, Economic Development Element, Land Use Element, Parks and Recreation Element, and Public Services and Facilities Element. The following goals and policies identified in the General Plan are relevant to the Plan:

- Air Quality Element
 - Goal AQ 3: Implementation of plans and programs to address the impacts of climate change.
 - Policy AQ 3.2: Reduce energy consumption in County operations by 20 percent by 2015.
 - Policy AQ 3.5: Encourage energy conservation in new development and municipal operations.
- Conservation and Natural Resources Element
 - Goal C/NR 12: Sustainable management of renewable and non-renewable energy resources.
 - Policy C/NR 12.1: Encourage the production and use of renewable energy resources.
 - Policy C/NR 12.2: Encourage the effective management of energy resources, such as ensuring adequate reserves to meet peak demands.
 - Policy C/NR12.3: Encourage distributed systems that use existing infrastructure and reduce environmental impacts.
- Economic Development Element

- Goal ED 1: An economic base and fiscal structures that attract and retain valuable industries and businesses.
 - Policy ED 1.2: Encourage and foster the development of the renewable energy economic sectors.
- Land Use Element
 - Goal LU 11: Development that utilize sustainable design techniques.
 - Policy LU 11.1: Encourage new development to employ sustainable energy practices, such as utilizing passive solar techniques and/or active solar technologies.
 - Policy LU 11.4: Encourage subdivisions to utilize sustainable design practices, such as maximizing energy efficiency through lot configuration; preventing habitat fragmentation; promoting stormwater retention; promoting the localized production of energy; promoting water conservation and reuse; maximizing interconnectivity; and utilizing public transit.
 - Policy LU 11.8: Encourage sustainable subdivisions that meet green neighborhood standards, such as Leadership in Energy and Environmental Design–Neighborhood Development.
- Parks and Recreation Element
 - Goal P/R 1: Enhanced active and passive park and recreation opportunities for all users.
 - Policy P/R 1.9: Offer more lighted playing fields using energy efficient light fixtures to extend playing time, where appropriate (e.g., not in areas adjacent to open space or natural areas that can be impacted by spillover lighting).
 - Goal P/R 6: A sustainable parks and recreation system.
 - Policy P/R 6.2: Support the use of alternative sources of energy, such as wind and solar sources to reduce the use of energy at existing parks.
 - Policy P/R 6.4: Ensure that new buildings on County park properties are environmentally sustainable by reducing carbon footprints, and conserving water and energy.
 - Policy P/R 6.5: Ensure the routine maintenance and operations of County parks and recreational facilities to optimize water and energy conservation.
 - Goal PS/F 6: A County with adequate public utilities.
 - Policy PS/F 6.5: Encourage the use of renewable energy sources in utility and telecommunications networks.
 - Policy PS/F 6.8: Encourage projects that incorporate onsite renewable energy systems.

3.6.2.3.2 Los Angeles County Climate Action Plan

The 2020 Climate Action Plan (CAP), adopted in 2015, was a component of the County's General Plan Air Quality Element until it expired in 2020. To reduce impacts of climate change, the 2020 CAP set a target to reduce GHG emissions from community activities in the unincorporated areas of Los Angeles County by at least 11 percent below 2010 levels by 2020 (LA County Department of Regional Planning 2020). The 2020 CAP contained 26 local actions related to green buildings and energy; land use and transportation; water conservation and wastewater; waste reduction, reuse, and recycling; and land conservation and tree planting. It also included 17 reduction strategies from the following areas:

transportation; stationary energy; waste; industrial process and product use; agriculture, forestry, and other land use.

Los Angeles County approved the 2045 CAP on April 16, 2024, builds upon the efforts within the 2020 CAP, as well as the *OurCounty Los Angeles Countywide Sustainability Plan* (described below). The 2045 CAP outlines actions that the County plans to take to reduce GHG emissions and adapt to a changing climate in unincorporated County areas. The 2020 CAP ties together existing climate change initiatives and provides a blueprint for targeting carbon neutrality by 2045 in unincorporated County areas. In that sense, the CAP is aligned with EO B-55-18, which calls for statewide carbon neutrality by 2045.

3.6.2.3.3 OurCounty: The Los Angeles Countywide Sustainability Plan

OurCounty: The Los Angeles Countywide Sustainability Plan was adopted by the Board of Supervisors on August 6, 2019. *OurCounty Sustainability Plan* includes 12 primary goals that have a total of 37 strategies, with a total of 159 actions. The plan identifies lead County entities and partners for each goal. *OurCounty Sustainability Plan* is intended to help guide decision-making in unincorporated areas and provide a model for decision-making in the 88 incorporated cities in Los Angeles County. As a strategic plan, *OurCounty Sustainability Plan* does not supersede land use plans that have been adopted by the Regional Planning Commission and Board of Supervisors, including the County's General Plan and various community, neighborhood, and area plans. Overall, *OurCounty Sustainability Plan* proposes to make the County a more equitable, prosperous, and resilient region in the years ahead. The plan's goals and milestones include the following:

- Powering unincorporated areas and County facilities with 100 percent renewable energy by 2025
- Increasing urban tree canopy coverage by 15 percent by 2035
- Diverting more than 95 percent of waste from landfills
- Developing land-use tools to limit new development in high climate-hazard areas
- Phasing out single-use plastic by 2025 to ensure a cleaner ocean and less landfill waste
- Cutting back on imported water by sourcing 80 percent of water locally by 2045
- Ensuring that all residents have safe and clean drinking water, and that rivers, lakes and the ocean meet federal water quality standards
- Leading efforts to make sure that at least 65 percent of new housing is built within ½ mile of high frequency transit by 2035
- Supporting construction of more than half a million affordable housing units by 2045 to improve public health and community sustainability

3.6.2.4 Incorporated Cities Within the Plan Area

The table below presents the policies related to energy from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.6-3. Applicable Local City Policies Related to Energy

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Resources Element:</p> <p>Goal R-3: Minimization of energy use and its associated impacts to air quality and climate change.</p> <p>Policy R-3A: Work with energy providers to ensure adequate, dependable energy supplies to support existing and future land uses.</p> <p>Policy R-3B: Encourage the use of energy saving designs, systems, and innovations in public and private building construction.</p> <p>Policy R-3C: Promote using renewable energy, such as solar panels and biomethane.</p> <p>Goal R-5: Minimization of Alhambra’s contribution to global climate change by reducing GHG emissions to the degree feasible.</p> <p>Policy R-5C: Encourage the use of green building technology for building retrofits and pursue LEED-certification for new development.</p>	<p>Municipal codes related to energy relevant to the Plan Area can be found in Chapter 24.04 (Municipal solar and conservation Utility) Section 24.04.020 (Policy), and Chapter 23.44 (Design Standards) Section 23.44.060 (Solar Energy Design Standards).</p> <p>Under Chapter 24.04 (Municipal solar and conservation Utility) Section 24.04.020 (Policy) it is the policy of the City:</p> <p>(A) It is declared to be the policy of the city to encourage and promote the use of solar energy in order to prevent or reduce an adverse impact upon the economy of the city and in order to prevent interruption of employment of the residents of the city in commerce and industry and in order to prevent injury to the health and welfare of the residents of the city due to the shortage and high cost of energy in their homes and places of work.</p> <p>(B) It is also declared to be the policy of the city to improve the economics of solar energy use by facilitating the leasing of solar energy devices. This policy is premised on a finding that the initial cost of purchasing and installing a solar energy device is the primary economic barrier to expanded solar energy use. California law currently provides that taxpayers who lease a solar energy system from a municipal utility or from any lessor granted a permit from a municipal solar utility shall receive a tax credit for the first three years of operation or until the solar tax credit allowance terminates, whichever comes first.</p> <p>(C) It is further declared to be the policy of the city to provide consumer protection measures for residents who lease solar energy systems through the municipal solar and conservation utility.</p> <p>(’86 Code, § 24.04.020) (Ord. 3916, passed - -)</p> <p>Under Section 23.44.060 (Solar Energy Design Standards) it states that the design standards are established in part “to assure that solar energy systems are protected from shading and conform in appearance to the surrounding neighborhood”.</p> <p>(’86 Code, § 23.44.060) (Ord. 4110, passed - - ; Am. Ord. 4735, passed 5-14-18) Penalty, see § 1.12.010</p>	<p>Energy Efficiency Climate Action Plan (City of Alhambra 2019) summarized goals and targets:</p> <ul style="list-style-type: none">• Residential Electricity Goal: Achieve a 5 percent reduction below 2005 residential electricity use by 2020.<ul style="list-style-type: none">○ Target: 34,850 MTCO₂e• Nonresidential Electricity Goal: Achieve a 5 percent reduction below 2005 nonresidential electricity use by 2020.<ul style="list-style-type: none">○ Target: 12,423,110 kWh• New Development Goal: Reduce new electricity use to 20 percent below business-as-usual levels by 2020.<ul style="list-style-type: none">○ Target: 3,882,390 kWh• Municipal Electricity Goal: Achieve Gold Level status in SCE’s Energy Leader Partnership by reducing municipal electricity use and meeting demand response requirements.<ul style="list-style-type: none">○ Target: 332,440 kWh
Arcadia	<p>Resource Sustainability Element:</p> <p>Goal RS-5: Wise and creative energy use that incorporates new technologies for energy generation and new approaches to energy conservation.</p> <p>Policy RS-5.1: Support State agencies’ efforts to adopt regulations that can increase the thermal integrity of buildings, increase the efficiency of combustion equipment, and reduce building thermal loads through controls or automation.</p> <p>Policy RS-5.2: Support the development and use of alternative energy technologies for regional and local use. Remove barriers to use of individual energy systems that are consistent with City aesthetic and design objectives.</p> <p>Policy RS-5.3: Require that all new development meets or exceeds the state and local energy conservation requirements.</p>	<p>No applicable ordinances were identified.</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy RS-5.4: Investigate the options for adopting local “green” building standards that address energy use in particular. Consider having City facilities serve as a model for energy efficiency by incorporating state-of-the-art energy features in new public buildings and significant remodeling of existing buildings.</p> <p>Policy RS-5.5: Support State legislative initiatives to revise utility rates in a manner that provides incentives for energy conservation and provides funding for research and development of alternative energy sources.</p> <p>Policy RS-5.6: Reduce the amount of energy consumed by City operations, and assist residents and businesses in reducing their energy consumption by:</p> <ul style="list-style-type: none">• emphasizing fuel efficiency in the acquisition and use of City-owned vehicles and equipment;• periodically reviewing energy consumption in City buildings and implement programs to reduce energy use; and• increasing public awareness of energy conservation techniques through the public dissemination of conservation information. <p>Policy RS-5.8: Promote innovative building, site design, and orientation techniques which minimize energy use.</p> <p>Policy RS-5.9: Facilitate the provision of energy-efficient modes of transportation and fixed facilities which establish transit, bicycle, and pedestrian modes as viable alternatives.</p> <p>Policy RS-5.10: Support efforts at the State and federal levels relative to the funding of research and the development of renewable/reusable energy sources.</p> <p>Policy RS-5.11: Support efforts of the City’s electricity provider that increase energy conservation in all households and businesses.</p> <p>Policy RS-5.13: Promote the application of active solar energy systems in residential development by facilitating, where possible, the efforts of federal and state entities in the allocation of cost incentive programs.</p> <p>Policy RS-5.14: Explore the possibility of identifying City facilities that can accommodate solar installations.</p> <p>Policy RS-5.15: Educate the public on sustainable building practices and the environmental and economic benefits they offer.</p> <p>Policy RS-5.16: Set an example in the design and operation of new civic buildings by implementing LEED certifiable or similar building standards.</p> <p>Policy RS-5.17: Investigate providing incentives for LEED certifiable or equivalent for new and/or retrofitted private commercial and industrial buildings.</p>		
Azusa	<p>Chapter 5 Natural Environment:</p> <p>Goal 1: Improve air quality in Azusa and reduce exposure to air pollutants.</p> <p>Policy 1.1: Integrate air quality concerns into land use planning decisions (AQ1 through AQ4, and AQ8).</p> <p>Air Quality Implementation Programs</p> <p>AQ1 DESIGN REVIEW</p>	<p>Municipal codes related to energy relevant to the Plan Area can be found in Chapter 88.31 (Operational Standards) Section 88.31.030, Chapter 88.34 (Landscaping Standards) Section 88.34.060 (Landscape Standards), and Chapter 88.38 (Signs) Section 88.38.050 (general Requirements for All Signs).</p> <p>Under Chapter 88.31 (Operational Standards) Section 88.31.030 the following apply:</p> <p>Outdoor lighting on private property shall comply with the following requirements.</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Through design review processes:</p> <ul style="list-style-type: none">Encourage energy-efficient design elements in new development including appropriate site orientation, solar design, use of landscaping, and insulating materials, to reduce energy consumption for heating and cooling <p>Chapter 3 The Built Environment:</p> <p>Goal 1: Provide an electrical supply system that is able to meet the projected electrical demands; upgrade and expand supply, transmission, and distribution facilities; and pursue funding sources to reduce the cost of electric provision for the city.</p> <p>Policy 1.1 Monitor the demands on the electrical system, manage development to mitigate impacts and/or facilitate improvements to the energy supply and distribution system, and maintain and expand energy supply and distribution facilities. (I1, I2, I3, I4, and I5)</p> <p>Policy 1.2: Update the electric master plan to reflect anticipated growth and current capacity. (I4 and I5)</p> <p>Policy 1.3: Designate, preserve, and acquire land for electrical distribution facilities, as necessary. (I2)</p> <p>Policy 1.4: Minimize electrical consumption through site design, use of efficient systems, and other techniques. (I2)</p> <p>Policy 1.5: Continue the City’s electrical conservation efforts; review programs periodically and modify and/or expand them as appropriate and feasible. (I1 and I2)</p> <p>Policy 1.6: Continue to require the incorporation of electrical conservation features in the design of all new construction and site development. Encourage the retrofit to existing buildings and development to include electrical conservation features including, but not limited to, wireless technology and solar energy. (I2 and I7)</p>	<p>B. Outdoor lighting shall utilize energy-efficient fixtures and lamps; examples include high pressure sodium, hardwired compact fluorescent, or other lighting technology that is of equal or greater energy efficiency.</p> <p>Under Chapter 88.34 (Landscaping Standards) Section 88.34.060 (Landscape Standards) the following applies:</p> <p>A. Landscape Design. The required landscape plan shall be designed to integrate all elements of the project (e.g., buildings, parking lots, and streets) to achieve their aesthetic objectives, desirable microclimates, and minimize water and energy demand. (Ord. No. 10-O1, §§ 8, 9, 3-1-10)</p> <p>Under Chapter 88.38 (Signs) Section 88.38.050 (general Requirements for All Signs) the following applies:</p> <p>I. Sign Lighting. Sign lighting shall be designed to minimize light and glare on surrounding rights-of-way and properties.</p> <p>7. Light sources shall utilize hard-wired fluorescent or compact fluorescent lamps, or other lighting technology that is of equal or greater energy efficiency. Incandescent lamps shall be prohibited.</p> <p>(Ord. No. 06-O6, § 1B, 8-7-06; Ord. No. 2020-02 , § 3, 2-3-20)</p>	
Baldwin Park	<p>Health and Sustainability Element:</p> <p>Goal HS-7. Reduce greenhouse gas emissions citywide by reducing energy use and reliance on fossil fuels.</p> <p>Policy 7.01: Lead by example and reduce energy use in municipal operations.</p> <p>Policy 7.02: Support the use of energy-efficient design and renewable energy technologies in public and private development projects.</p> <p>Policy 7.03: Promote energy-efficient retrofit improvements in existing buildings.</p> <p>Policy 7.04: Increase public awareness about climate change, and encourage residents and businesses to become involved in improvement projects and lifestyle changes that help reduce greenhouse gas emissions.</p> <p>Policy 7.05: Partner with local energy providers to provide energy audits and public education about energy efficiency, conservation methods, and the financial benefits of conservation.</p> <p>Action HS-7.1: Implement an Energy Efficient City Plan that evaluates and prioritizes best practices for increasing the energy efficiency of City operations.</p> <p>Action HS-7.2: Perform energy audits of existing City operations and maintenance practices on a regular basis to identify and implement energy savings measures.</p> <p>Action HS-7.3: Continue to replace City operating systems as needed with energy efficient alternatives.</p>	No applicable ordinances were identified.	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Action HS-7.4: Continue to explore opportunities to generate energy on City properties, including installation of solar panels.</p> <p>Action HS-7.6: Adopt the Energy Action Plan prepared in conjunction with the San Gabriel Valley Council of Governments. Implement identified actions and strive to meet performance targets identified in the Energy Action Plan.</p> <p>Action HS-7.7: Promote and advertise State and local programs that provide low interest loans or rebates to property owners for the installation of energy efficiency improvements or renewable energy devices.</p> <p>Action HS-7.8: Explore funding opportunities to help the City make upgrades that increase conservation efforts (e.g., purchase of street lights and investments in new technology).</p> <p>Goal HS-19. Demonstrate Baldwin Park’s commitment to sustainability through progressive use of green building policies, practices, and technologies.</p> <p>Policy 19.01: Continue to incorporate green building strategies into the site design, construction, and renovation of public and private projects.</p> <p>Action HS-19.1: When new municipal facilities are constructed, endeavor to achieve building efficiency that would meet Leadership in Energy and Environmental Design (LEED)’s Silver certification level, or an equivalent.</p> <p>Action HS-19.2: Require that green building materials and techniques be used in projects financed by the City.</p> <p>Action HS-19.3: Require that all new buildings and substantial rehabilitations to existing buildings adhere to the California Green Building Code.</p> <p>Action HS-19.4: Continue to train and educate City employees in the latest green building practices, including the State’s Green Building Code, energy audits, and green building rating systems, so that City employees may act as green building ambassadors.</p> <p>Open Space and Conservation Element:</p> <p>Goal 6.0: Conserve energy resources through the use of technology and conservation methods.</p> <p>Policy 6.1: Encourage innovative building designs that conserve and minimize energy consumption.</p> <p>Policy 6.2: Enforce Title 24 regulations to conserve energy.</p>		
Claremont	<p>Open Space, Parkland, Conservation, and Air Quality Element:</p> <p>Goal 5-13: Maximize energy conservation throughout all segments of the community to reduce air pollutant emissions, and to reduce consumption of natural resources and fossil fuels.</p> <p>Policy 5-13.1 Promote the use of energy-saving designs and devices in all new construction and reconstruction.</p> <p>Policy 5-13.2: Incorporate the use of energy conservation strategies in City projects.</p> <p>Policy 5-13.3: Promote energy-efficient design features, including appropriate site orientation, use of light color roofing and building materials, and use of evergreen trees and wind-break trees to reduce fuel consumption for heating and cooling.</p> <p>Policy 5-13.5: Continue to promote the use of solar power and other energy conservation measures.</p>	<p>Municipal codes related to energy relevant to the Plan Area can be found in Chapter 15.18 (Energy Code), Chapter 16.145 (Solar Energy Systems) Section 16.145.010 (Permitted Uses) and Section 16.145.020 (Solar Access Protection).</p> <p>Under Chapter 15.18 (Energy Code) the City has adopted the following:</p> <p>A. The California Energy Code, 2022 Edition and Appendices, with changes, additions, and deletions set forth in this chapter, are adopted by reference as the Energy Code of the City.</p> <p>(13-10; 16-13; 19-08; 22-08)</p> <p>Under Chapter 16.145 (Solar Energy Systems) the following sections apply:</p> <p>Section 16.145.010 (Permitted Uses)</p> <p>Solar energy systems are a permitted use within all zones, whether as part of a structure or incidental to one or more structures. The use of solar energy systems is</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 5-13.7: Promote the use of different technologies that reduce use of non-renewable energy resources.</p> <p>Goal 5-14: Incorporate green building and other sustainable building practices into development projects.</p> <p>Policy 5-14.1: Facilitate the use of green building standards and Leadership in Energy and Environmental Design (LEED) in both private and public projects.</p> <p>Policy 5-14.2: Promote sustainable building practices that go beyond the requirements of Title 24 of the California Administrative Code, and encourage energy-efficient design elements, as appropriate.</p> <p>Human Services, Recreational Programs, and Community Facilities Element:</p> <p>Goal 7-15: Maintain street lighting and landscaping to enhance public safety and facilitate circulation for pedestrians and motorists.</p> <p>Policy 7-15.2: Investigate the feasibility of using solar (photovoltaic) street lights instead of conventional street lights that are powered by electricity in an effort to conserve energy.</p>	<p>subject to the restraints imposed by the zoning limitations of this title, by existing vegetation, buildings, walls, fences, and other structures, and by diversity of topography.</p> <p>(08-05)</p> <p>Section 16.145.020 (Solar Access Protection)</p> <p>No building permit shall be issued if the proposed building, wall, fence, or other structure shall shade more than 10 percent of the absorption area of an existing solar energy system located on any other property between the hours of 10:00 a.m. and 2:00 p.m. Pacific Standard Time on December 21, unless one or more of the following conditions exist:</p> <p>A. The building, wall, fence, or other structure is located more than 45 degrees off true south of the property on which the solar energy system is located.</p> <p>B. The property owner would be prevented from constructing a single story building not exceeding 10 feet in building height on the property for which the building permit is sought, if such building cannot be designed or located to avoid casting a shadow of more than 10 percent of the absorption area of an existing solar energy system located on any other property between the hours of 10:00 a.m. and 2:00 p.m. Pacific Standard Time on December 21.</p> <p>(08-05)</p>	
Covina	<p>Natural Resources and Open Space Element:</p> <p><i>Policy Area 1: Water Resources and Air Quality</i></p> <p>Policy o. Comply with applicable portions of Federal, State, regional, and County plans and programs pertaining to air pollution mitigation/air quality enhancement by following, in a manner that recognizes local needs, issues, views, and policy and financial constraints, various vehicular emissions-reducing and traffic congestion-reducing land use and transportation control and energy conservation measures, proposals, and policies outlined in the Land Use and Circulation Elements, to the greatest extent feasible and practical.</p> <p>Policy u. Encourage and, where necessary, require the incorporation of energy conservation features in the design of all new and significantly expanded/remodeled private and public developments and encourage the installation of conservation devices in existing developments to increase energy efficiency and decrease pollution emissions from off-site electrical power plants and on-site natural gas use.</p>	<p>Municipal codes related to energy relevant to the Plan Area can be found in Chapter 14.28 (Energy Code) Section 14.28.010 (2022 California Energy Code Adoption by Reference), Chapter 17.59 (Mixed-Use Overlay District (MUOD)) Section 17.59.070 (Statement of Intent for the Objective Design and Architectural Standards), and Section 17.59.060 (Property Development Standards and Special Development Regulations).</p> <p>Under Chapter 14.28 (Energy Code) Section 14.28.010 (2022 California Energy Code Adoption by Reference) the City has adopted the 2022 California Energy Code. Said code shall be and become the Covina energy code. One copy of said code is on file in the office of the city clerk, and is hereby referred to, adopted, and made a part hereof as if fully set out in this chapter. (Ord. 22-19 § 13, 2022; Ord. 19-10 § 16, 2019.)</p> <p>Under Chapter 17.59 (Mixed-Use Overlay District (MUOD)) Section 17.59.070 (Statement of Intent for the Objective Design and Architectural Standards) the following applies to energy in the mixed-use overlay district:</p> <p>F. Promote environmental sustainability. Incorporate green building techniques and infrastructure in building design for the efficient use of energy, water, construction materials, and waste reduction. (Ord. 22-12 § 4 (Exh. A), 2022.)</p> <p>Under Section 17.59.060 (Property Development Standards and Special Development Regulations) the following applies to energy:</p> <p>B. Special Development Regulations.</p> <p>11. Lighting. Exterior building lighting provides visibility and safety by illuminating sidewalks, pedestrian paths, and plazas. The light fixtures shall match the architectural style of the primary buildings. The maximum height of light poles from the finished surface to the top of the light fixture shall be 20 feet. Energy-efficient LED lights with shields shall be installed. The light illumination shall not exceed one foot-candle at the property line. Applicant shall submit a photometric plan/diagram prepared by an</p>	<p>City of Covina Energy Action Plan Update (City of Covina 2019). The City of Covina Energy Action Plan identifies goals and policies for reducing electricity use within the community. Goals and policies relevant to the Plan are listed below:</p> <p>Goal 1: Maximize Energy Efficiency at Existing City Facilities and Infrastructure</p> <p>Policy 1.2: Enhance the energy efficiency of City buildings and structures through retrofits.</p> <p>Policy 1.5: Become a water conservation leader in the San Gabriel Valley and lead other municipalities by example.</p> <p>Policy 1.6: Incorporate energy efficiency as a key element in designing and building new City structures and facilities.</p> <p>Goal 2: Ensure that Energy Efficiency Practices are Incorporated into Municipal Operations.</p> <p>Goal 4: Demonstrate a Commitment to Realizing the Energy Action Plan Goals Through Creative, Equitable, and Coordinated Partnerships.</p> <p>Policy 4.1: Maximize the benefits from regional partners to enhance energy efficiency projects at the City.</p>

	and feasible energy efficiency measures, in accordance with Appendix F of the California Environmental Quality Act Guidelines.		
Industry	<p>Resource Management Element:</p> <p>Implementation Measure IMP-6: Strive to achieve the California Air Resources Board's Scoping Plan. Opportunities may include:</p> <ul style="list-style-type: none">• Use of solar or other renewable energy technologies in parking structures• Replacement of incandescent traffic and crosswalk lights with energy-efficient light-emitting diodes (LEDs) <p>Replacement of incandescent and mercury vapor street and parking lot lights with energy efficient alternatives</p>	No applicable ordinances were identified.	No other applicable ordinances were identified.
Irwindale	<p>Resource Management Element:</p> <p>Policy 11: The City of Irwindale supports the ethic of conservation of non-renewable resources. This includes efforts to reduce the use of energy (in any form), greenhouse gas (GHG) emissions (consistent with AB 32) and efforts to find new and more energy efficient methods for delivering services. The City supports the development of building standards that enable the community to design energy saving features such as solar energy systems, water efficient landscaping, and sustainable, green, and energy efficient building standards.</p> <p>Programs:</p> <ul style="list-style-type: none">• Energy Conservation. The City shall continue to enforce the energy conservation standards in Title 24 of the California Administrative Code, the Uniform Building Code, and other state laws on energy conservation design, insulation, and appliances. Energy needs shall be evaluated and conservation measures incorporated into new development in accordance with Appendix F of the State of California Environmental Quality Act (CEQA) Guidelines. Other measures that would reduce energy consumption during• construction and subsequent operation of new development shall be encouraged. The City will continue to work with Sempra and the Southern California Gas Company to promote energy conservation practices. <p>Environmental Review. The City shall continue to evaluate the environmental impacts of new development and identify applicable mitigation measures prior to development approval, as required by the California Environmental Quality Act (CEQA). Environmental review shall be provided for those projects that will have a potential to adversely affect the environment. Issue areas that will be addressed in the environmental analysis related to resource issues include: air quality, water and hydrology, plant life, animal life, natural resources, energy, aesthetics, recreation, and cultural resources. In compliance with CEQA, the City shall also assign responsibilities for the verification of the implementation of any mitigation measures.</p>	No applicable ordinances were identified.	No other applicable ordinances were identified.
La Puente	<p>Resources Conservation Element:</p> <p>Goal 4: Conservation of La Puente’s natural resources, improvement of air quality, and energy conservation.</p> <p>Policy 4.3: Promote and encourage energy conservation measures by the public sector, private sector, and local school districts.</p> <ul style="list-style-type: none">• Action CR-13: Promote Energy Conservation. Continue to promote energy conservation by the public and private sector. Continue to implement Title 24	No applicable ordinances were identified.	No other applicable ordinances were identified.

			reduce ongoing operational and maintenance costs and achieve lower Southern California Edison (SCE) billing rates.
San Marino	No applicable General Plan goals or policies were identified.	Municipal codes related to energy relevant to the Plan Area can be found in Article 09 (Energy Code) Section 25.09.01 (Energy Code Adopted). Under Article 09 (Energy Code) Section 25.09.01 (Energy Code Adopted) the following applies: Except as hereinafter provided, the California Energy Code, 2022 Edition, as published by the California Building Standards Commission, including all appendices, is hereby adopted by reference and incorporated herein as though fully set forth herein and shall constitute the Energy Code of the City. A copy of said code shall be located in the Planning and Building Department and shall be, at all times, maintained by the Planning and Building Department for use and examination by the public. (Ord. 0-19-1357, 11-13-2019; amd. Ord. O-22-1400, 1-11-2023)	No other applicable ordinances were identified.
South El Monte	Housing Element: Program 12: Energy Efficiency Program The City encourages a range of initiatives designed to improve the local environment. Key elements include energy conservation measures, recycling, water conservation, and the use of alternative transit. The key elements of this program include the following: <ul style="list-style-type: none">• The City shall continue to support ongoing programs from SCE and Sempra Energy that promote energy conservation. The programs sponsored by the utility providers include rebates for energy conserving refrigerators, water heaters, and other household appliances.• The City will review the Zoning Ordinance to ensure that there are no requirements that are overly restrictive concerning the installation of solar panels. The City will then amend the Zoning Ordinance to ensure that solar panels are permitted in all Zone Districts. The City will consider reducing processing fees for those building improvements that involve the installation of solar panels.	No applicable ordinances were identified.	No other applicable ordinances were identified.
Temple City	Land Use Element: Goal LU 7: Sustainable Built Environment. A built environment that contributes to a sustainable environment, minimizes consumption of scarce environmental resources, and reduces greenhouse gas emissions. Policy LU 7.1 Sustainable Land Development. Promote land use and urban design development practices that reduce energy and water consumption, pollution, greenhouse gas emissions, and waste and noise generation. These should include practices described in the United States Green Building Council’s LEED-ND rating program such as concentrating development to promote walking in lieu of the automobile, capturing and re-using stormwater onsite, managing and reusing wastewater, orienting buildings to maximize opportunities for solar energy use, use of drought tolerant and native landscapes, shading of exterior public spaces, and recycling and salvage for reuse of construction and demolition debris. Community Services Element:	Municipal codes related to energy relevant to the Plan Area can be found in Article F (Signs) Section 9-1F-7 (Standards for All Types of Sign Types), and Chapter 1 (Building Code) Section 7-1-0 (Building Code Administration). Under Article F (Signs) Section 9-1F-7 (Standards for All Types of Sign Types) the following apply: J. Illuminated Signs and Lights: The following standards shall apply to all illuminated signs. 6. Light sources shall utilize energy-efficient fixtures to the greatest extent possible. (Ord. 19-1036) Under Chapter 1 (Building Code) Section 7-1-0 (Building Code Administration) the purpose of the code is to: establish the minimum requirements to safeguard the public health, safety and general welfare through structural strength, means of egress facilities, stability, sanitation, adequate light and ventilation, energy conservation, and safety to life and property from fire and other hazards attributed to the built environment and to provide safety	No other applicable ordinances were identified.

West Covina	<p>Our Resilient Community Chapter:</p> <p>Policy P5.6: Continue existing beneficial energy conservation programs, including adhering to the California Energy Code in new construction & major renovations.</p> <p>Action A5.6c: As the economy recovers and funding becomes available (through grants or bond proceeds), the City should explore energy efficiency projects such as installing solar panels for City facilities & retrofitting existing street lights.</p> <p>Action A5.6dL: Consider providing an incentive program for new buildings that exceed California Energy Code requirements by 15 percent.</p> <p>Action A5.6e: Provide on-going education of homeowners & businesses as to the value of energy efficiency & the need to upgrade existing structures on the regular basis.</p>	<p>No applicable ordinances were identified.</p>	<p>The City of West Covina EAP (City of West Covina 2011) guides the City of West Covina toward attainable conservation goals that may also significantly reduce the impact of GHG within the community. The EAP includes the following policy goals to reduce energy consumption and promote energy efficiency throughout the City:</p> <p>a. Surpass the energy efficiency standards of the California Building Code for proposed and existing municipal buildings and facilities.</p> <p>b. Provide on-line (Internet accessible) guidance and assistance to Homeowners and Builders to make compliance with new Title 24 energy requirements as effective and efficient as possible.</p> <p>c. Coordinate City Efficiency goals and programs with the efficiency projects and incentive programs of higher jurisdictional agencies. Expand the City’s Residential Solar Power permit-waiver program to include other alternative energy applications, Consider fee adjustments or rebates to local businesses and residents in support of those efforts.</p> <p>f. Promote energy and water conservation design features in all major renovation and development projects.</p> <p>h. Encourage the efficient use of water and reduce urban runoff through the use of natural drainage, drought tolerant landscaping, and efficient irrigation systems in major renovation and new development projects. Recommend the incorporation of these practices within the approval processes of other local and regional departments and jurisdictions.</p> <p>i. Promote the coordination of landscapers and residential Solar Power contractors to minimize heat buildup at existing and new homes through more effective shading design.</p>

3.6.3 Impact Assessment

3.6.3.1 Significance Criteria

Appendix G of the State CEQA Guidelines was reviewed to determine whether the Plan would result in significant impacts related to energy. The criteria listed below consider if the Plan would:

- 6(a) *Would the proposed Project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?*
- 6(b) *Would the proposed Project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?*

With regard to threshold (a), above, the following analysis relies upon Appendix F: Energy Conservation of the State CEQA Guidelines. Appendix F of the State CEQA Guidelines was prepared to ensure that EIRs include a discussion of the potential energy impacts of a proposed project, with a particular emphasis on avoiding or reducing inefficient, wasteful, and unnecessary consumption of energy. PRC 21100(b)(3) states that an EIR shall include a detailed statement setting forth “[m]itigation measures proposed to minimize significant effects of the environment, including, but not limited to, measures to reduce the wasteful, inefficient, and unnecessary consumption of energy.” State CEQA Guidelines Appendix F lists the following factors to be considered in the environmental impact analysis:

1. The project’s energy requirements and its energy use efficiencies by amount and fuel type for each state of the project’s life cycle including construction, operation, maintenance, and/or removal. If appropriate, the energy intensiveness of materials may be discussed.
2. The effects of the project on local and regional energy supplies and on requirements for additional capacity.
3. The effects of the project on peak and base period demands for electricity and other forms of energy.
4. The degree to which the project complies with existing energy standards.
5. The effects of the project on energy resources.
6. The project’s projected transportation energy use requirements and its overall use of efficient transportation alternatives.

With regard to threshold (b), the Plan is evaluated for consistency with adopted energy conservation plans and policies that are applicable to the proposed Program. Such adopted energy conservation plans and policies include Title 24 energy efficiency requirements, CALGreen Code, and applicable policies of the General Plan, *OurCounty: The Los Angeles Countywide Sustainability Plan*, and the Los Angeles County 2045 Climate Action Plan.

3.6.3.2 Methodology

The fuel consumption from the mobile sources used for construction was calculated from the results of the CalEEMod modeling procedure. CalEEMod calculates mass emissions of GHGs, including non-biogenic CO₂, from off-road and on-road mobile sources associated with project construction. CO₂

emissions from mobile source fuel combustion during project construction are included in the CO₂ emissions shown in Table 3.6-4 (refer to Section 3.8, Greenhouse Gas Emissions for further discussion on CalEEMod inputs and assumptions for construction-related GHG emissions).

Table 3.6-4. Estimated Total Construction GHG Emissions for All Plan Components

Plan Component	Total GHG (MTCO ₂ e/year)
Greenway Paths + Amenities	149.5
Greenway Paths + 1-Acre Pocket Parks + Greenspaces	160.6
Greenway Paths + 25-Acre Pocket Parks + Greenspaces	267.1
Greenway Paths + Safe Crossings	387.9
Greenway Paths + Stormwater Management	135.5

Source: CalEEMod Emissions Summary Reports in Appendix C

For construction of the Plan components, CalEEMod aggregates mobile source CO₂ emissions into three broad categories (typical fuel types assumed):

- Off-road equipment (diesel [Tiers 1-4]);
- Worker (light duty gasoline automobiles and trucks [LDA, LDT1, LDT2]);
- Vendor (medium-heavy and heavy-heavy duty diesel trucks [MHDT, HHDT]); and
- Haul (heavy-heavy duty diesel trucks [HHDT]).

For each category, diesel and gasoline fuel consumption can be estimated (back calculated) using 2020 Climate Registry (40 CFR 98 Subpart C) emission factors for those fuels:

- Diesel Fuel Oil No. 2: 10.21 kg CO₂ per gallon (22.51 lbs CO₂ per gallon); and
- Motor Gasoline: 8.78 kg CO₂ per gallon (19.36 lbs CO₂ per gallon).

Because of the Program-level of CEQA review for the Plan which provides guidance for project proponents to implement individual projects anywhere within the Plan Area, sufficiently detailed information about the location and exact nature of Plan components is not currently available. Therefore, it is not possible to estimate what the energy use would be during operations. Accordingly, it is also not possible to determine exactly what effects the proposed Plan would have on local and regional energy supplies, energy resources, and on requirements for additional capacity. The analysis in the following discussions does provide information about the regulatory environment and the degree to which a Plan component would comply with existing energy standards.

3.6.3.3 Plan Impacts

3.6.3.3.1 6(a) Would the proposed Project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

3.6.3.3.1.1 Greenway Paths and Greenway Amenities

Construction

Less than Significant. Construction of greenway paths and greenway amenities would require the use of fuels (primarily gasoline and diesel) for construction equipment and vehicles to perform a variety of activities, including excavation, installation of Plan components, and vehicle travel (including on-site and commuter trips). It is not anticipated that construction activities would require the use of natural gas. Accordingly, natural gas would not be supplied to support the future projects' construction activities; thus, there would be no demand generated by construction. Additionally, electric construction tools that would be used during project-related construction would be powered from diesel-operated generators at a site rather than by electricity from the power grid. As such, construction activities associated with greenway paths and greenway amenities would primarily involve onsite energy demand and consumption related to the use of transportation fuels (i.e., diesel and gasoline) for construction worker vehicle trips, hauling, and materials delivery truck trips; operation of off-road construction equipment; and electricity for lighting and other intermittent sources.

As discussed in Section 3.6.3.2, Methodology, fuel consumption was estimated for the construction of greenway paths and greenway amenities. As shown in Table 3.6-5, construction for a greenway path and greenway amenities would result in a maximum consumption of approximately 14,818 gallons of fuel.

Table 3.6-5. Construction Mobile Source Energy Use – CalEEMod Basis (Greenway Paths and Greenway Amenities)

Sources	Types	Fuels	Fuel Consumption (gallons)
Off-road	Fleet Average	Diesel	9,578
Worker	LDA, LDT1, LDT2	Gasoline	718
Vendor	MHDT, HHDT	Gasoline	0.0
		Diesel	0.0
Haul	HHDT	Gasoline	466
		Diesel	4,055
		TOTAL	14,818

Source: CalEEMod Emissions Summary Reports (Appendix C) and Construction Mobile Source Energy Calculations (Appendix C), TCR 2022 (40 CFR 98 Subpart C), EMFAC 2021.

Notes: The maximum length of a greenway path analyzed in this PEIR is five miles.

For Onroad HDT Mix: 9 percent Gasoline, 91 percent Diesel (EMFAC 2021); applies to Vendor and Haul.

Compliance with the CARB anti-idling and emissions regulations would ensure that fuel use and energy consumption are minimized to the extent feasible during construction. Idling times on all diesel-fueled commercial vehicles over 10,000 pounds shall be minimized either by shutting equipment off when not

in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure 13 CCR Section 2485). In addition, idling times on all diesel-fueled off-road vehicles over 25 horsepower (hp) shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes and fleet operators must develop a written policy as required by 13 CCR Section 2449 (“CARB Off-Road Diesel Regulations”). Implementation of these regulatory measures would further reduce fuel consumption and energy use. In addition, construction activities would be performed by contractors with an economic incentive to minimize costs, one element of which is fuel conservation.

Therefore, construction of greenway paths and amenities would not result in the wasteful, inefficient, or unnecessary consumption of energy. Accordingly, with compliance with applicable regulations discussed above, construction of greenway paths and greenway amenities would not result in wasteful, inefficient, or unnecessary consumption of energy resources and impacts would be less than significant.

Operations

Less than Significant with Mitigation. Operation of greenway paths and greenway amenities would require energy for the conveyance of water for landscaping and restrooms, electricity for lighting and appliances, and the use of fuels or electric charging for landscape equipment and mobile sources. Demand for energy would vary depending on the size and intensity of use of each project. Wasteful, inefficient, or unnecessary consumption of energy resources, during project operation would result in a potentially significant impact.

All projects would be required to conform to California Energy Code for energy-efficiency as well as CALGreen Code for new building structures, such as restrooms. The California Energy Code establishes energy conservation standards for new construction. These standards relate to insulation requirements, glazing, lighting, shading, and water and space heating systems, and are designed to reduce wasteful, uneconomic, inefficient, or unnecessary consumption of energy and enhance outdoor and indoor environmental quality. The CALGreen Code requires the installation of energy- and water-efficient indoor infrastructure for all new projects by all cities in California. To further reduce energy demand associated with Plan components, the *Design Guidelines and Standards* specify solar-powered lighting fixtures for Plan projects. In addition, implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would require that all new buildings and/or retrofit of existing buildings, such as restrooms, are of all-electric design with use of only ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings. This mitigation measure would also further reduce area energy use through water conservation and waste reduction measures. Further, maintenance would include routine inspection and maintenance of the greenway paths and amenities to remove trash/debris and landscaping. MM GHG-1 also includes several energy conservation measures to be implemented in project design as well as requiring that maintenance and operations activities that use landscaping equipment (e.g., lawn mowers, trimmers) shall employ electric landscaping equipment. During maintenance, idling times on all diesel-fueled commercial vehicles over 10,000 pounds shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure 13 CCR Section 2485). In addition, idling times on all diesel-fueled off-road vehicles over 25 hp shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes and fleet operators

must develop a written policy as required by the CARB Off-Road Diesel Regulations. Implementation of these regulatory measures would further reduce fuel consumption and energy use.

Implementation of the Plan would promote non-vehicular modes of travel and reduce the consumption of fuel from passenger vehicles, which would be a beneficial impact of Plan implementation.

Accordingly, with compliance with applicable regulations, as well as implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, operation of greenway paths and amenities would not result in wasteful, inefficient, or unnecessary consumption of energy resources. Therefore, impacts would be less than significant with mitigation.

Mitigation Measures

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies.

Significance After Mitigation

Construction impacts would be less than significant. No mitigation is required.

Impacts from operation would be less than significant with implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** and compliance with the *Design Guidelines and Standards*, California Energy Code for energy efficiency, and the CALGreen Code.

3.6.3.3.1.2 Greenway Paths + Pocket Parks and Greenspaces

Construction

Less than Significant. For future greenway paths and amenities and pocket parks or greenspaces energy consumption for the construction of greenway paths and amenities would be as described above. The addition of a pocket park or greenspace would increase the number of days of construction, depending on the size of the proposed park or greenspace, which would result in a corresponding increase in fuel consumption associated with construction activities. As discussed in Section 3.6.3.2, Methodology, fuel consumption was estimated for the construction of greenway paths, 1-acre pocket parks, and greenspaces and greenway paths, 25-acre pocket parks, and greenspaces as summarized in Table 3.6-6 and Table 3.6-7, respectively. As shown in Table 3.6-6, the construction of greenway paths, 1-acre pocket parks, and greenspaces would result in a maximum consumption of approximately 15,907 gallons of fuel. As summarized in Table 3.6-7, the construction of greenway paths, 25-acre pocket parks, and greenspaces would result in a maximum consumption of approximately 26,487 gallons of fuel.

Because project construction would comply with applicable regulations, construction of greenway paths, pocket parks, and greenspaces would not result in wasteful, inefficient, or unnecessary consumption of energy resources and impacts would be less than significant.

Table 3.6-6. Construction Mobile Source Energy Use – CalEEMod Basis (Greenway Paths + 1-Acre Pocket Parks and Greenspaces)

Sources	Types	Fuels	Fuel Consumption (gallons)
Off-road	Fleet Average	Diesel	10,578
Worker	LDA, LDT1, LDT2	Gasoline	806
Vendor	MHDT, HHDT	Gasoline	0.0
		Diesel	0.0
Haul	HHDT	Gasoline	466
		Diesel	4,055
		TOTAL	15,907

Notes: For Onroad HDT Mix: 9 percent Gasoline, 91 percent Diesel (EMFAC 2021); applies to Vendor and Haul

Table 3.6-7. Construction Mobile Source Energy Use – CalEEMod Basis (Greenway Paths + 25-Acre Pocket Parks and Greenspaces)

Sources	Types	Fuels	Fuel Consumption (gallons)
Off-road	Fleet Average	Diesel	20,304
Worker	LDA, LDT1, LDT2	Gasoline	1,662
Vendor	MHDT, HHDT	Gasoline	0.0
		Diesel	0.0
Haul	HHDT	Gasoline	466
		Diesel	4,055
		TOTAL	26,487

Source: CalEEMod Emissions Summary Reports (Appendix C) and Construction Mobile Source Energy Calculations (Appendix C), TCR 2022 (40 CFR 98 Subpart C), EMFAC 2021.

Notes: For Onroad HDT Mix: 9 percent Gasoline, 91 percent Diesel (EMFAC 2021); applies to Vendor and Haul.

Operations

Less than Significant with Mitigation. Operation of greenway paths and amenities, pocket parks, and greenspaces would require energy for the conveyance of water for landscaping and restrooms, electricity for lighting and appliances, and the use of fuels or electric charging for landscape equipment and mobile sources. Further, the Plan includes sports fields as potential recreational amenities within the pocket park category with larger parks and greenspaces estimated to accommodate up to 3,292 visitors daily that could use drinking fountains and restrooms. In addition, pocket parks could be planted entirely with turfgrass and sprinkler irrigation, which would result in greater energy demand associated with relative increase in conveyance of water for landscaping, drinking fountains, and/or restrooms. Wasteful, inefficient, or unnecessary consumption of energy resources, during project operation would result in a potentially significant impact.

As discussed above for greenway paths and amenities, all projects would be required to conform with California energy efficiency standards designed to reduce wasteful, uneconomic, inefficient, or unnecessary consumption of energy and enhance outdoor and indoor environmental quality. To further reduce energy demand associated with Plan components, the *Design Guidelines and Standards* specify solar-powered lighting fixtures for Plan projects. In addition, implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would require that all new buildings and/or retrofit of existing buildings, such as restrooms, are of all-electric design with use of only ENERGY STAR rated appliance for appliance types that are offered ENERGY STAR ratings. This mitigation measure would also further reduce area energy use through water conservation and waste reduction measures. Further, maintenance would include routine inspection and maintenance of the greenway paths and amenities to remove trash/debris and landscaping. **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** also includes several energy conservation measures to be implemented in project design as well as requiring that maintenance and operations activities that use landscaping equipment (e.g., lawn mowers, trimmers) shall employ electric landscaping equipment. During maintenance, idling times on all diesel-fueled commercial vehicles over 10,000 pounds shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure 13 CCR Section 2485). In addition, idling times on all diesel-fueled off-road vehicles over 25 hp shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes and fleet operators must develop a written policy as required by the “CARB Off-Road Diesel Regulations”. Implementation of these regulatory measures would further reduce fuel consumption and energy use.

Implementation of the Plan would promote non-vehicular modes of travel and reduce the consumption of fuel from passenger vehicles. Accordingly, compliance with applicable regulations, as well as implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would ensure that operation of greenway paths, pocket parks, and greenspaces would not result in wasteful, inefficient, or unnecessary consumption of energy resources. Therefore, impacts would be less than significant with mitigation.

Mitigation Measures

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies.

Significance After Mitigation

Construction impacts would be less than significant. No mitigation is required.

Impacts from operation would be less than significant with implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** and compliance with the *Design Guidelines and Standards*, California Energy Code for energy efficiency, and the CALGreen Code.

3.6.3.3.1.3 Greenway Paths + Safe Crossings

Construction

Less than Significant. For future greenway paths and amenities + safe crossings, energy consumption for the construction of greenway paths and amenities would be as described above. The addition of a safe crossing would increase the number of days of construction, depending on the safe crossing type and design, resulting in a corresponding increase in fuel consumption associated with construction activities.

Per the methodology presented in Section 3.6.3.2, Methodology, fuel consumption was estimated for the construction of greenway paths and safe crossings as summarized in Table 3.6-8. As shown in Table 3.6-8, the construction of greenway paths and safe crossings would result in a maximum consumption of approximately 38,454 gallons of fuel.

Table 3.6-8. Construction Mobile Source Energy Use – CalEEMod Basis (Greenway Paths + Safe Crossings)

Sources	Types	Fuels	Fuel Consumption (gallons)
Off-road	Fleet Average	Diesel	31,569
Worker	LDA, LDT1, LDT2	Gasoline	2,363
Vendor	MHDT, HHDT	Gasoline	0.0
		Diesel	0.0
Haul	HHDT	Gasoline	466
		Diesel	4,055
		TOTAL	38,454

Source: CalEEMod Emissions Summary Reports (Appendix C) and Construction Mobile Source Energy Calculations (Appendix C), TCR 2022 (40 CFR 98 Subpart C), EMFAC 2021.

Notes: For Onroad HDT Mix: 9 percent Gasoline, 91percent Diesel (EMFAC 2021); applies to Vendor and Haul

Because construction would comply with applicable regulations, construction of greenway paths and safe crossings would not result in wasteful, inefficient, or unnecessary consumption of energy resources and impacts would be less than significant.

Operations

Less than Significant with Mitigation. Operation of greenway paths and safe crossings in addition to greenway path and amenities would be as described above. The primary difference in a project that includes a safe crossing from a project that only includes a greenway path and amenities would be the nominal additional electricity that may be required for traffic signals, if installed. As such, the inclusion of safe crossings in a project design with a greenway path and amenities is not anticipated to result in any greater operational impacts than are described above for greenway paths and amenities without such features. As discussed above for greenway paths and amenities, all projects would be required to conform to with California energy efficiency standards designed to reduce wasteful, uneconomic, inefficient, or unnecessary consumption of energy and enhance outdoor and indoor environmental quality. To further reduce energy demand associated with Plan components, the *Design Guidelines and Standards* specify solar-powered lighting fixtures for Plan projects. In addition, implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would require that all new buildings and/or retrofit of existing buildings, such as restrooms, are of all-electric design with use of only ENERGY STAR rated appliance for appliance types that are offered ENERGY STAR ratings. This mitigation measure would also further reduce area energy use through water conservation and waste reduction measures. Further, maintenance would include routine inspection and maintenance of the greenway paths and amenities to remove trash/debris and landscaping. **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** also includes several energy conservation measures to be implemented in project design as well as requiring that maintenance and

operations activities that use landscaping equipment (e.g., lawn mowers, trimmers) shall employ electric landscaping equipment. During maintenance, idling times on all diesel-fueled commercial vehicles over 10,000 pounds shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure 13 CCR Section 2485). In addition, idling times on all diesel-fueled off-road vehicles over 25 hp shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes and fleet operators must develop a written policy as required by “CARB Off-Road Diesel Regulations”. Implementation of these regulatory measures would further reduce fuel consumption and energy use.

Implementation of the Plan would promote non-vehicular modes of travel and reduce the consumption of fuel from passenger vehicles which would be a beneficial impact. Accordingly, compliance with applicable regulations, as well as implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would ensure that operation of greenway paths and safe crossings would not result in wasteful, inefficient, or unnecessary consumption of energy resources. Impacts would be less than significant with mitigation.

Mitigation Measures

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies.

Significance After Mitigation

Construction impacts would be less than significant. No mitigation is required.

Impacts from operation would be less than significant with implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** and compliance with the *Design Guidelines and Standards*, California Energy Code for energy efficiency, and the CALGreen Code.

3.6.3.3.1.4 Greenway Paths + Stormwater Management

Construction

Less than Significant. For future greenway paths and amenities + stormwater management, energy consumption for the construction of greenway paths and amenities would be as described above. As analyzed in Section 3.14 of the EWMP PEIR and incorporated herein, the addition of stormwater management BMPs would likely not substantially increase the duration of construction activities under the assumption that a larger construction spread would be used, which would result in a corresponding increase in fuel consumption associated with construction activities as compared to projects that do not include such features. Per the methodology presented in Section 3.6.3.2, fuel consumption was estimated for the construction of greenway paths and stormwater management as summarized in Table 3.6-9. As shown in Table 3.6-9, the construction of greenway paths and stormwater management would result in a maximum consumption of approximately 15,680 gallons of fuel.

Table 3.6-9. Construction Mobile Source Energy Use – CalEEMod Basis (Greenway Paths + Stormwater Management)

Sources	Types	Fuels	Fuel Consumption (gallons)
Off-road	Fleet Average	Diesel	10,441
Worker	LDA, LDT1, LDT2	Gasoline	718
Vendor	MHDT, HHDT	Gasoline	0.0
		Diesel	0.0
Haul	HHDT	Gasoline	466
		Diesel	4,055
		TOTAL	15,680

Source: CalEEMod Emissions Summary Reports (Appendix C) and Construction Mobile Source Energy Calculations (Appendix C), TCR 2022 (40 CFR 98 Subpart C), EMFAC 2021.

Notes: For Onroad HDT Mix: 9 percent Gasoline, 91 percent Diesel (EMFAC 2021); applies to Vendor and Haul

Since construction would comply with applicable regulations, construction of greenway paths, greenway amenities, and stormwater management facilities would not result in wasteful, inefficient, or unnecessary consumption of energy resources and impacts would be less than significant.

Operations

Less than Significant within Mitigation. Since stormwater management facilities are passive features that do not require energy sources to operate, operation impacts are as described above for greenway paths and amenities. In addition to maintenance for the greenway paths and amenities, routing maintenance for stormwater BMPs would be required. As described in Chapter 2, Project Description, periodic maintenance will be required to optimize performance of the stormwater management systems, and the type of maintenance will be dependent on the type of BMP installed (e.g., a subsurface infiltration system would require different equipment to conduct maintenance if the system is located solely underground versus constructed wetlands which may be accessible from the surface). Maintenance activities would include, but are not limited to, weed removal or tree trimming for bioretention devices, sediment and debris/trash removal from detention basins and treatment devices, and/or landscaping of vegetation. Maintenance trucks/vehicles would be used to conduct routine inspections and maintenance of the stormwater management facilities, and specific vehicles such as a vacuum truck to remove sediment and/or debris may be necessary on a less periodic basis. **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would require use of electric landscaping equipment (e.g., lawn mowers, trimmers). As discussed above for greenway paths and amenities, all projects would be required to conform with California energy efficiency standards designed to reduce wasteful, uneconomic, inefficient, or unnecessary consumption of energy and enhance outdoor and indoor environmental quality. To further reduce energy demand associated with Plan components, the *Design Guidelines and Standards* specify solar-powered lighting fixtures for Plan projects. In addition, implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would require that all new buildings and/or retrofit of existing buildings, such as restrooms, are of all-electric design with use of only ENERGY STAR rated appliance for appliance types that are offered ENERGY STAR ratings. **MM GHG-1: Implement Section-Specific Operations GHG**

Emissions Reduction Strategies also includes several energy conservation measures to be implemented in project design as well as requiring that maintenance and operations activities that use landscaping equipment (e.g., lawn mowers, trimmers) shall employ electric landscaping equipment. During maintenance, idling times on all diesel-fueled commercial vehicles over 10,000 pounds shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure 13 CCR Section 2485). In addition, idling times on all diesel-fueled off-road vehicles over 25 hp shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes and fleet operators must develop a written policy as required by “CARB Off-Road Diesel Regulations”. Implementation of these regulatory measures would further reduce fuel consumption and energy use.

Implementation of the Plan would promote non-vehicular modes of travel and reduce the consumption of fuel from passenger vehicles which would be a beneficial impact. As described above for greenway paths and amenities, compliance with applicable regulations, as well as implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would ensure that operation of greenway paths and stormwater management would not result in wasteful, inefficient, or unnecessary consumption of energy resources. Impacts would be less than significant with mitigation.

Mitigation Measures

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies.

Significance After Mitigation

Construction impacts would be less than significant. No mitigation is required.

Impacts from operation would be less than significant with implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** and compliance with the *Design Guidelines and Standards*, California Energy Code for energy efficiency, and the CALGreen Code.

3.6.3.3.2 6(b) Would the proposed Project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?

3.6.3.3.2.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant. As detailed for Impact Criterion 6(a) for construction of greenway paths and amenities above, construction of Plan components would not result in wasteful, inefficient, or unnecessary consumption of energy resources. In addition, the energy conservation policies and plans relevant to Plan include the California Title 24 energy standards, CALGreen building code, the General Plan goals and policies related to energy resources, and all other relevant general plan goals and building codes of the other jurisdictions in the Plan Area. In addition, projects constructed under the Plan would be required to comply with CARB anti-idling regulations and the In-Use Off-Road Diesel Fleet regulations. Based on the above, construction of projects implemented under the Plan would not conflict with adopted energy conservation plans, or violate State or local energy standards, and impacts would be less than significant.

Operations

Less than Significant with Mitigation. All projects would be required to conform to California Energy Code standards for energy-efficiency as well as CALGreen Code. CCR Title 24, Part 6 (also known as the California Building Energy Efficiency Standards) establishes energy conservation standards for new construction. These standards relate to insulation requirements, glazing, lighting, shading, and water and space heating systems, and are designed to reduce wasteful, uneconomic, inefficient, or unnecessary consumption of energy and enhance outdoor and indoor environmental quality. The CALGreen Code requires the installation of energy- and water-efficient indoor infrastructure for all new projects by all cities in California. To further reduce energy demand associated with Plan components, the *Design Guidelines and Standards* specify solar-powered lighting fixtures for Plan projects. In addition, implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would require that all new buildings and/or retrofit of existing buildings are of all-electric design with use of only ENERGY STAR rated appliance for appliance types that are offered ENERGY STAR ratings. This mitigation measures would also further reduce area energy use through water conservation and waste reduction measures. Further, maintenance would include routine inspection and maintenance of the greenway paths and amenities to remove trash/debris and landscaping. **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** also includes several energy conservation measures to be implemented in project design as well as requiring that maintenance and operations activities that use landscaping equipment (e.g., lawn mowers, trimmers) shall employ electric landscaping equipment. During maintenance, idling times on all diesel-fueled commercial vehicles over 10,000 pounds shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure 13 CCR Section 2485). In addition, idling times on all diesel-fueled off-road vehicles over 25 hp shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes and fleet operators must develop a written policy as required by 13 “CARB Off-Road Diesel Regulations”. Implementation of these regulatory measures would further reduce fuel consumption and energy use. Compliance with the CALGreen Code and California Energy Code, adherence to the *Design Guidelines and Standards*, and implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would ensure that operation of greenway paths and amenities, pocket parks and greenspace, safe crossings, and stormwater management would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency. Impacts from operations would be less than significant with mitigation.

Mitigation Measures

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies.

Significance After Mitigation

Construction impacts would be less than significant. Impacts from operation would be less than significant with implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, compliance with the *Design Guidelines and Standards*, California Title 24 standards for energy-efficiency, and the CALGreen Code.

3.6.3.4 Impacts of Conceptual Design Projects

- 3.6.3.4.1 6(a). Would the proposed Project result in a potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?

Construction

Less than Significant. The components proposed for all 10 conceptual designs are within the maximum extent limits for the Plan components as described in Section 2, Project Description. These conceptual design projects would have similar construction impacts as identified previously for the Plan, although on a somewhat larger scale than the individual components described above. Based on the construction equipment and activity assumptions for Plan components (refer to Section 2), construction of each of the 10 conceptual designs is anticipated to utilize a maximum of 29,853 gallons of fuel during construction (i.e., the maximum estimated fuel consumption associated with construction of Plan components). Because construction emissions are considered to be relatively short-term emissions that would cease once construction is complete, they would represent a relatively short demand on local and regional fuel supplies that would be easily accommodated. Trucks and equipment used during proposed construction activities would also be required to comply with CARB's anti-idling regulations, as well as the In-Use Off-Road Diesel-Fueled Fleets regulation. In addition, on-road vehicles (i.e., haul trucks, worker vehicles) would be subject to federal fuel efficiency requirements. With the mandatory compliance with regulations (i.e., CARB's anti-idling and In-Use Off-Road Diesel-Fueled Fleets regulation) and federal fuel efficiency requirements, the use of construction-related fuels would not cause wasteful, inefficient, or unnecessary use of energy. Therefore, impacts related to energy use would be less than significant during construction.

Operations

Less than Significant with Mitigation. Similar to operation of Plan components described previously, the 10 conceptual designs would be required to conform to California Energy Code standards for energy-efficiency and the CALGreen Code. In addition, for specific project development, the *Design Guidelines and Standards* include provisions to review applicable codes—which may include, but are not limited to, municipal codes, California Energy Code standards for energy-efficiency as well as CALGreen Code, LA County Public Works and/or APWA Standard Plans, District code, municipal codes, LID ordinance and Manual, and LA County Department of Parks and Recreation Guidelines. Implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would require that all new buildings and/or retrofit of existing buildings are of all-electric design with use of only ENERGY STAR rated appliance for appliance types that are offered ENERGY STAR ratings. Further, **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** includes several energy conservation measures to be implemented in project design as well as requiring that maintenance and operations activities that use landscaping equipment (e.g., lawn mowers, trimmers) shall employ electric landscaping equipment. Area energy use would be further reduced by water conservation and waste reduction measures implemented under **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**. Therefore, the operations associated with the 10 conceptual designs

would not cause wasteful, inefficient, or unnecessary use of energy. Therefore, impacts would be less than significant with mitigation.

3.6.3.4.2 6(b) Would the proposed Project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?

Construction

Less than Significant. As discussed above, energy conservation policies and plans relevant to the Plan include the California Energy Code energy standards, CALGreen building code, General Plan goals and policies related to energy resources, and all other relevant general plan goals and building codes of the other jurisdictions in the Plan Area (Table 3.6-10). In addition, projects constructed under the Plan would be required to comply with CARB anti-idling regulations and the In-Use Off-Road Diesel Fleet regulations. Based on the above, construction of the 10 conceptual designs would not conflict with adopted energy conservation plans, or violate State or local energy standards, and impacts would be less than significant.

Operations

Less than Significant with Mitigation. For the same reason provided above for Plan components, the operation of the 10 conceptual design projects would not cause with or obstruct a State or local plan for renewable energy or energy efficiency. Specifically, the 10 conceptual design projects would be required to conform to California Energy Code standards for energy-efficiency as well as CALGreen Code for new building structures. To further reduce energy demand associated with the 10 conceptual designs, the *Design Guidelines and Standards* specify solar-powered lighting fixtures for Plan projects. In addition, implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would require that all new buildings and/or retrofit of existing buildings are of all-electric design with use of only ENERGY STAR rated appliance for appliance types that are offered ENERGY STAR ratings. Further, **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** includes several energy conservation measures to be implemented in project design as well as requiring that maintenance and operations activities that use landscaping equipment (e.g., lawn mowers, trimmers) shall employ electric landscaping equipment. Area energy use would be further reduced by water conservation and waste reduction measures implemented under **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**. Idling times on all diesel-fueled commercial vehicles over 10,000 pounds shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes (as required by the California airborne toxics control measure 13 CCR §2485). In addition, idling times on all diesel-fueled off-road vehicles over 25 hp shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to five minutes and fleet operators must develop a written policy as required by “CARB Off-Road Diesel Regulations”. Implementation of these regulatory measures would further reduce fuel consumption and energy use. In complying with the CALGreen Code and California Energy Code, in addition to adherence to the *Design Guidelines and Standards*, as well as implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** the operation of the 10

conceptual design projects would not conflict with or obstruct a state or local plan for renewable energy or energy efficiency and impacts would be less than significant with mitigation.

Table 3.6-10. Analysis of Conceptual Design Examples for Operations to Conflict with or Obstruct a State or Local Plan for Renewable Energy or Energy Efficiency

Conceptual Design Project	<i>6(b) Would the proposed Project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?</i>
<p>Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i></p>	<p>Less than Significant with Mitigation. The Alhambra Wash at Vincent Lugo Park conceptual design project would be consistent with Goal R-3 of the Alhambra Resources Element which aims to minimize energy use and its associated impacts to air quality and climate change through the reduction of motorized vehicle trips and incorporation of energy-efficient measures in project design. Implementation of energy-conservation measures included in MM GHG-1 along with compliance with CARB Off-Road Regulations limiting idling times on all diesel-fueled off-road vehicles would further reduce fuel consumption and energy use and ensure consistency with the Alhambra Energy Efficiency Climate Action Plan targets to policies related to the municipal electricity reduction goals, Goal 10.3 of the San Gabriel Community Design Chapter of the City's General Plan, which includes policies related to sustainable design, energy efficiency, and use of recycled and regenerated materials, and the City of San Gabriel Energy Action Plan policies and actions aimed at achieving energy efficiency in the community and in municipal operations.</p> <p>Additionally, because the Alhambra Wash at Vincent Lugo Park conceptual design project aims to connect to other trails and paths to enhance the mobility network for cyclists, pedestrians, and alternative modes of transportation, the Alhambra Wash at Vincent Lugo Park conceptual design project would promote non-vehicular modes of travel and reduce the consumption of fuel from passenger vehicles. In complying with the CALGreen Code and California Energy Code, in addition to adherence to the <i>Design Guidelines and Standards</i>, as well as implementation of MM GHG-1, the operation of the Alhambra Wash at Vincent Lugo Park conceptual design project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency and impacts would be less than significant with mitigation.</p>
<p>Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i></p>	<p>Less than Significant with Mitigation. The Big Dalton Wash at Hilda L. Solis Park conceptual design project would be required to conform to California Energy Code standards for energy-efficiency as well as CALGreen Code and California Energy Code for new building structures. To further reduce energy demand associated with the Big Dalton Wash at Hilda L. Solis Park conceptual design project, the <i>Design Guidelines and Standards</i> specify solar-powered lighting fixtures for Plan projects. In addition, implementation of MM GHG-1s along with compliance with CARB Off-Road Regulations limiting idling times on all diesel-fueled off-road vehicles would further reduce fuel consumption and energy use and ensure consistency with Goal HS-7 of the Baldwin Park Health and Sustainability Element which aims to reducing greenhouse gas emissions citywide by reducing energy use and reliance on fossil fuels, Goal HS-19, which commits to progressive use of green building policies, practices, and technologies, and Goal 6.0 of the Baldwin Park Open Space and Conservation Element that</p>

Conceptual Design Project	6(b) Would the proposed Project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?
	<p>aims to conserve energy resources through the use of technology and conservation methods. Compliance with California's energy efficiency standards, including the CALGreen Code would also be consistent with Policy 11 of the City of Irwindale Resource Management Element which commits to enforcement of the energy conservation standards in Title 24 of the California Administrative Code.</p> <p>Additionally, because the Big Dalton Wash at Hilda L. Solis Park conceptual design project aims to connect to other trails and paths to enhance the mobility network for cyclists, pedestrians, and alternative modes of transportation, the Big Dalton Wash at Hilda L. Solis Park conceptual design project would promote non-vehicular modes of travel and reduce the consumption of fuel from passenger vehicles. In complying with the CALGreen Code and California Energy Code, in addition to adherence to the <i>Design Guidelines and Standards</i>, as well as implementation of MM-GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies, the operation of the Big Dalton Wash at Hilda L. Solis Park conceptual design project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency and impacts would be less than significant with mitigation.</p>
<p>Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i></p>	<p>Less than Significant with Mitigation. The Eaton Wash Greenway at Spreading Ground Site conceptual design project would be consistent with the sustainable mobility and land use goals of the Pasadena Climate Action Plan. Implementation of MM GHG-1 would require that all new buildings and/or retrofit of existing buildings are of all-electric design with use of only ENERGY STAR rated appliance for appliance types that are offered ENERGY STAR ratings. Further, MM GHG-1 along with compliance with CARB Off-Road Regulations limiting idling times on all diesel-fueled off-road vehicles would further reduce fuel consumption and energy use and ensure consistency with the energy objectives of the City of Pasadena Open Space and Conservation Element aimed to protect air quality, enforce California's energy efficiency standards, and reduce greenhouse gas emissions.</p> <p>Additionally, because the Eaton Wash Greenway at Spreading Ground Site conceptual design project aims to connect to other trails and paths to enhance the mobility network for cyclists, pedestrians, and alternative modes of transportation, the Eaton Wash Greenway at Spreading Ground Site conceptual design project would promote non-vehicular modes of travel and reduce the consumption of fuel from passenger vehicles. In complying with the CALGreen Code and California Energy Code, in addition to adherence to the <i>Design Guidelines and Standards</i>, as well as implementation of MM GHG-1, the operation of the Eaton Wash Greenway at Spreading Ground Site conceptual design project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency and impacts would be less than significant with mitigation.</p>
<p>Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i></p>	<p>Less than Significant with Mitigation. The Eaton Wash at Eaton Blanche Park conceptual design project would be consistent with the sustainable mobility and land use goals of the Pasadena Climate Action Plan. Implementation of MM GHG-1 would require that all new buildings and/or retrofit of existing buildings are of all-electric design with use of only ENERGY STAR rated</p>

Conceptual Design Project	6(b) Would the proposed Project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?
	<p>appliance for appliance types that are offered ENERGY STAR ratings. Further, MM GHG-1 along with compliance with CARB Off-Road Regulations limiting idling times on all diesel-fueled off-road vehicles would further reduce fuel consumption and energy use and ensure consistency with the energy objectives of the City of Pasadena Open Space and Conservation Element aimed to protect air quality, enforce California's energy efficiency standards, and reduce greenhouse gas emissions.</p> <p>Additionally, because the Eaton Wash at Eaton Blanche Park conceptual design project aims to connect to other trails and paths to enhance the mobility network for cyclists, pedestrians, and alternative modes of transportation, the Eaton Wash at Eaton Blanche Park conceptual design project would promote non-vehicular modes of travel and reduce the consumption of fuel from passenger vehicles. In complying with the CALGreen Code and California Energy Code, in addition to adherence to the <i>Design Guidelines and Standards</i>, as well as implementation of MM GHG-1, the operation of the Eaton Wash at Eaton Blanche Park conceptual design project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency and impacts would be less than significant with mitigation.</p>
<p>San Dimas Wash at Arrow High School <i>City of Glendora</i></p>	<p>Less than Significant with Mitigation. The San Dimas Wash at Arrow High School conceptual design project would be required to conform to California Energy Code standards for energy-efficiency as well as CALGreen Code for new building structures. To further reduce energy demand associated with the E San Dimas Wash at Arrow High School conceptual design project, the <i>Design Guidelines and Standards</i> specify solar-powered lighting fixtures for Plan projects. In addition, implementation of MM GHG-1 along with compliance with CARB Off-Road Regulations limiting idling times on all diesel-fueled off-road vehicles would further reduce fuel consumption and energy use and ensure consistency with the City of Glendora Conservation Element Goal CON-5 and related policies aimed at reducing the demand for energy resources through the use of conservation techniques.</p> <p>Additionally, because the San Dimas Wash at Arrow High School conceptual design project aims to connect to other trails and paths to enhance the mobility network for cyclists, pedestrians, and alternative modes of transportation, the San Dimas Wash at Arrow High School conceptual design project would promote non-vehicular modes of travel and reduce the consumption of fuel from passenger vehicles. In complying with the CALGreen Code and California Energy Code, in addition to adherence to the <i>Design Guidelines and Standards</i>, as well as implementation of MM GHG-1, the operation of the San Dimas Wash at Arrow High School conceptual design project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency and impacts would be less than significant with mitigation.</p>
<p>San Dimas Wash at Hollenbeck Park <i>City of Covina</i></p>	<p>Less than Significant with Mitigation. The San Dimas Wash at Hollenbeck Park conceptual design project would be required to conform to California Energy Code standards for energy-efficiency as well as CALGreen Code for new building structures. To further reduce energy demand associated with the San Dimas Wash at Hollenbeck Park conceptual design project, the</p>

Conceptual Design Project	6(b) Would the proposed Project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?
	<p><i>Design Guidelines and Standards</i> specify solar-powered lighting fixtures for Plan projects. In addition, implementation of MM GHG-1 along with compliance with CARB Off-Road Regulations limiting idling times on all diesel-fueled off-road vehicles would further reduce fuel consumption and energy use and ensure consistency with The City of Covina Natural Resources and Open Space Element Policy O and Policy u which require the incorporation of energy conservation features in the design of all new and significantly expanded/remodeled private and public developments.</p> <p>Additionally, because the San Dimas Wash at Hollenbeck Park conceptual design project aims to connect to other trails and paths to enhance the mobility network for cyclists, pedestrians, and alternative modes of transportation, the San Dimas Wash at Hollenbeck Park conceptual design project would promote non-vehicular modes of travel and reduce the consumption of fuel from passenger vehicles. In complying with the CALGreen Code and California Energy Code, in addition to adherence to the <i>Design Guidelines and Standards</i>, as well as implementation of MM GHG-1, the operation of the San Dimas Wash at Hollenbeck Park conceptual design project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency and impacts would be less than significant with mitigation.</p>
<p>San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i></p>	<p>Less than Significant with Mitigation. The San Jose Creek at Pocket Park conceptual design project would be required to conform to California Energy Code standards for energy-efficiency as well as CALGreen Code for new building structures. To further reduce energy demand associated with the San Jose Creek at Pocket Park conceptual design project, the <i>Design Guidelines and Standards</i> specify solar-powered lighting fixtures for Plan projects. In addition, implementation of MM GHG-1 along with compliance with CARB Off-Road Regulations limiting idling times on all diesel-fueled off-road vehicles would further reduce fuel consumption and energy use and ensure consistency with the City of Industry Resource Management Element that includes implementation measures to ensure the energy conservation standards in Title 24 of the California Administrative Code as well as additional energy efficiency measures are incorporated into new development.</p> <p>Additionally, because the San Jose Creek at Pocket Park conceptual design project aims to connect to other trails and paths to enhance the mobility network for cyclists, pedestrians, and alternative modes of transportation, the San Jose Creek at Pocket Park conceptual design project would promote non-vehicular modes of travel and reduce the consumption of fuel from passenger vehicles. In complying with the CALGreen Code and California Energy Code, in addition to adherence to the <i>Design Guidelines and Standards</i>, as well as implementation of MM GHG-1, the operation of the San Jose Creek at Pocket Park conceptual design project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency and impacts would be less than significant with mitigation.</p>

Conceptual Design Project	6(b) Would the proposed Project conflict with or obstruct a State or local plan for renewable energy or energy efficiency?
<p>Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i></p>	<p>Less than Significant with Mitigation. The Thompson Creek at the Fairplex conceptual design project would be consistent with City of Pomona Energy Action Plan which aims to minimize energy use and requires incorporation of energy-efficient measures in project design. Implementation of MM GHG-1 along with compliance with CARB Off-Road Regulations limiting idling times on all diesel-fueled off-road vehicles would further reduce fuel consumption and energy use and ensure consistency with Goals 5-13 and 5-14 of the City of Claremont Open Space, Parkland, Conservation, and Air Quality Element, which aim to maximize energy conservation and incorporate sustainable building practices, Goal 7-15 of the City of Claremont Human Services, Recreational Programs, and Community Facilities, which include policies related to energy efficient lighting and landscape elements, Goal 7E.G1 of the City of Pomona Conservation Element that aims to promote energy efficient design in new development.</p> <p>Additionally, because the Thompson Creek at the Fairplex conceptual design project aims to connect to other trails and paths to enhance the mobility network for cyclists, pedestrians, and alternative modes of transportation, the Thompson Creek at the Fairplex conceptual design project would promote non-vehicular modes of travel and reduce the consumption of fuel from passenger vehicles. In complying with the CALGreen Code and California Energy Code, in addition to adherence to the <i>Design Guidelines and Standards</i>, as well as implementation of MM GHG-1, the operation of the Thompson Creek at the Fairplex conceptual design project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency and impacts would be less than significant with mitigation.</p>
<p>Walnut Creek at Syhre Park <i>Cities of Baldwin Park, West Covina</i></p>	<p>Less than Significant with Mitigation. The Walnut Creek at Syhre Park conceptual design project would be required to conform to California Energy Code standards for energy-efficiency as well as CALGreen Code for new building structures. To further reduce energy demand associated with the Walnut Creek at Syhre Park conceptual design project, the <i>Design Guidelines and Standards</i> specify solar-powered lighting fixtures for Plan projects. In addition, implementation of MM GHG-1 along with compliance with CARB Off-Road Regulations limiting idling times on all diesel-fueled off-road vehicles would further reduce fuel consumption and energy use and ensure consistency with Goal HS-7 of the Baldwin Park Health and Sustainability Element, which aims to reducing greenhouse gas emissions citywide by reducing energy use and reliance on fossil fuels, Goal HS-19 which commits to progressive use of green building policies, practices, and technologies, and Goal 6.0 of the Baldwin Park Open Space and Conservation Element that aims to conserve energy resources through the use of technology and conservation methods, as well as the policies included in the City of West Covina Energy Action Plan that aim to surpass the energy efficiency standards of the California Building Code and promote energy and water conservation design features in all major development projects.</p> <p>Additionally, because the Walnut Creek at Syhre Park conceptual design project aims to connect to other trails and paths to enhance the mobility network for cyclists, pedestrians, and alternative modes of transportation, the Walnut Creek at Syhre Park conceptual design project would promote non-vehicular modes of travel and reduce the consumption of fuel from</p>

	<p>passenger vehicles. In complying with the CALGreen Code and California Energy Code, in addition to adherence to the <i>Design Guidelines and Standards</i>, as well as implementation of MM GHG-1, the operation of the Walnut Creek at Syhre Park conceptual design project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency and impacts would be less than significant with mitigation.</p>
<p>Walnut Creek at Pocket Park <i>City of West Covina</i></p>	<p>Less than Significant with Mitigation. The Walnut Creek at Pocket Park conceptual design project would be required to conform to California Energy Code standards for energy-efficiency as well as CALGreen Code for new building structures. To further reduce energy demand associated with the Walnut Creek at Pocket Park conceptual design project, the <i>Design Guidelines and Standards</i> specify solar-powered lighting fixtures for Plan projects. In addition, implementation of MM GHG-1 along with compliance with CARB Off-Road Regulations limiting idling times on all diesel-fueled off-road vehicles would further reduce fuel consumption and energy use and ensure consistency the policies included in the City of West Covina Energy Action Plan that aim to surpass the energy efficiency standards of the California Building Code and promote energy and water conservation design features in all major development projects.</p> <p>Additionally, because the Walnut Creek at Pocket Park conceptual design project aims to connect to other trails and paths to enhance the mobility network for cyclists, pedestrians, and alternative modes of transportation, the Walnut Creek at Pocket Park conceptual design project would promote non-vehicular modes of travel and reduce the consumption of fuel from passenger vehicles. In complying with the CALGreen Code and California Energy Code, in addition to adherence to the <i>Design Guidelines and Standards</i>, as well as implementation of MM GHG-1, the operation of the Walnut Creek at Pocket Park conceptual design project would not conflict with or obstruct a State or local plan for renewable energy or energy efficiency and impacts would be less than significant with mitigation.</p>

3.7 Geology and Soils

This section describes the geographic and regulatory setting, as well as the potential project impacts related to geology, soils, seismicity, and paleontological resources. Where needed, this section identifies mitigation measures that would reduce or avoid any significant impacts, when feasible.

Table 3.7-1. Summary of Potential Impacts of the Plan on Geology and Soils

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
Would the Plan:			
7(a). Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. ii) Strong seismic ground shaking? iii) Seismic-related ground failure, including liquefaction? iv) Landslides?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant	Operations: No mitigation
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	
7(b). Result in substantial soil erosion or the loss of topsoil?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction: No mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant	Operations: No mitigation
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	
7(c). Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site

3.7.1 Environmental Setting

California is divided into eleven geomorphic provinces, which are naturally defined geologic regions that display a distinct landscape or landform. The Plan Area is in the Transverse Ranges province, which consists of an east-west trending series of steep mountain ranges and valleys. The east-west structure of the Transverse Ranges is oblique to the normal northwest trend of coastal California, hence the name "Transverse." The province extends offshore to include San Miguel, Santa Rosa, and Santa Cruz islands. Its eastern extension, the San Bernardino Mountains, has been displaced to the south along the San Andreas Fault. Intense north-south compression is squeezing the Transverse Ranges. As a result, this is one of the most rapidly rising regions on earth (California Geologic Survey [CGS] 2002).

The topography of the Plan Area ranges from approximately 200 to 1,000 ft above sea level (asl). The Plan Area is bounded to the north by the San Gabriel Mountains, the highest point of which is Mount San Antonio at 10,064 feet.

3.7.1.1 Geology

The geology in the Plan Area is dominated by unconsolidated to semi-consolidated alluvium deposited by streams flowing out of the San Gabriel Mountains. Deposits include Pleistocene and Holocene¹

¹ 10,000 years ago to the present

alluvium and the lower Pleistocene San Pedro Formation (CDWR 1966 as cited in LACDPW 2006). The Upper Pleistocene alluvium deposits form alluvial fans along the San Gabriel Mountains. The San Pedro Formation is characterized by interbedded marine sand, gravel, and silt (CDWR 1966 as cited in LACDPW 2006). The Plan Area is within the San Gabriel Basin, which includes the areas from San Gabriel Canyon Road in Azusa south to Whittier Narrows. Whittier Narrows is located between the Puente and Merced Hills and serves as the southern boundary for the San Gabriel Valley. The valleys below the south face of the San Gabriel Mountains still have particularly rich alluvial deposits (LACDPW 2006).

The San Gabriel Basin is an unconfined aquifer, which means that there is no impermeable geological boundary separating the groundwater from the ground surface (CSPUP 2000 as cited in LACDPW 2006). Alluvium is porous and can be hundreds of feet deep, providing a highly permeable connection between the surface and the aquifer. Therefore, much of the San Gabriel River flows underground southward from the San Gabriel Mountains below the valley and forms the San Gabriel Valley Groundwater Basin (CSPUP 2002 as cited in LACDPW 2006). The alluvium forms most of the productive water-bearing zones, but the San Pedro Formation also carries fresh water. The predominant soil types present in the San Gabriel Basin include sandy loam, silt loam, and clay loam (SCAG 2004 as cited in LACDPW 2006).

3.7.1.2 Soils

Soils in the Plan Area predominantly fall into four soil orders: entisols, mollisols, alfisols, and vertisols (Figure 3.7-1). Entisols are soils that show little or no evidence of pedogenic horizon development and occur in areas of recently deposited parent materials or in areas where erosion or deposition rates are faster than the rates of soil development. Mollisols are fertile soils due to their high organic matter content and typically form under grasslands (NRCS 2024a). Alfisols result from weathering processes that leach clay minerals and other constituents out of the surface layer into the subsoil where they hold and supply moisture and nutrients to plants. For this reason, alfisols can result in productive cropland (NRCS 2024a). Vertisols have a high content of expanding clay minerals. They undergo pronounced changes in volume with changes in moisture. Vertisols have cracks that open and close periodically (NRCS 2024a).

The Natural Resources Conservation Service's (NRCS) Web Soil Survey classifies the soils within the Plan Area into smaller map units based on soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features. The majority (86 percent) of the soil map units along and adjacent to the washes are classified as Urban Land, but secondary soil characteristics vary significantly (NRCS 2024b).

3.7.1.2.1 Soil Erosion

Soil erosion is caused by the detachment and entrainment of soil particles through the action of water and wind. Soils most susceptible to erosion are those high in coarse silt- and fine sand-sized particles (Balasubramanian 2017), particularly when organic matter content is low and soil structure is weak or nonexistent. The likelihood of erosion is greater when the vegetative cover is removed or reduced, the soil is otherwise disturbed, or when both conditions exist. Soil erosion by water is more aggressive on steep slopes than on shallow slopes (i.e., 10 percent gradient or less).

Soil erosion can also be caused by wind in areas with a combination of high winds, removed or disturbed vegetation, fine sandy or silty textures, and low organic matter content. The erosion rate of a particular

soil in the absence of human activities is referred to as the natural (background) or geologic erosion rate. Soil erosion greater than the natural erosion rate is called accelerated soil erosion and is usually caused by human activities such as cultivation, grazing, timber harvesting, poor road construction practices, grading, and other land-disturbing activities. Additionally, surface erosion from high severity wildfire can increase runoff and erosion rates by two or more orders of magnitude relative to unburned conditions (Robichaud et al. 2010). Erodibility by water is calculated using the K factor, and values range from 0.02 for the least erodible soils to 0.64 for the most erodible (NRCS 2020). The Transverse Ranges province is susceptible to erosion.

3.7.1.2.2 Expansive Soils

Expansive soils can present a geological hazard. When building foundations are placed on expansive soils, they will rise during the wet periods and settle during dry periods and different parts of a building may rise and settle at varying rates, causing foundation cracking. Vertisols with expansive properties are mapped along Puente Creek and San Jose Creek in the Plan Area (Figure 3.7-1). Potential impacts due to presence of expansive soils can generally be remedied through standard engineering practices.

3.7.1.3 Faulting and Seismicity

The CDOC maps earthquake hazard zones, which are defined areas subject to the following three types of geologic ground failures: (1) fault rupture, where the surface of the earth breaks along a fault; (2) liquefaction, in which the soil temporarily turns to quicksand and cannot support structures; and (3) earthquake-induced landslides (CDOC 2021).

Within Los Angeles County, there are over 50 active and potentially active fault segments, an undetermined number of buried faults, and at least four blind-thrust faults capable of producing damaging earthquakes. Earthquakes and associated ground shaking present a multitude of potentially dangerous consequences that can include ground rupture, ground failure, liquefaction, and landslides.

As shown in Figure 3.7-2, the Plan Area is intersected by numerous faults. The Raymond Fault crosses the upper reaches of Rubio, Eaton, Arcadia, and Santa Anita washes. The Sierra Madre and Duarte faults cross the upper reaches of Sawpit Wash. The East Montebello Fault parallels Alhambra Wash near Monterey Park.

3.7.1.3.1 Secondary Seismic Effects

Landslides are the movement of rock, debris, or earth masses down a slope. The geologic and topographic features of the landscape are the primary determinants of the shear strength of the hillslope materials (i.e., resistance to landslides) and hillslope shear stress (i.e., propensity for landsliding). Landslides occur when the shear stress exceeds the shear strength of the materials forming the slope (Highland and Bobrowsky 2008). Landslide susceptibility is the relative likelihood that landsliding will occur. Unstable hillslopes are areas susceptible to landslides. Over 50 percent of the unincorporated areas within Los Angeles County consist of hilly or mountainous terrain, which have potential for landslides as well as hillside erosion (LA County Department of Regional Planning 2022). Landslide zones in and near the Plan Area are predominantly associated with the Puente Hills south of San Jose Creek, the San Jose Hills south of Walnut Creek, and the San Gabriel Mountains at the

upstream reaches of Eaton, Santa Anita, Sawpit, Little Dalton, Big Dalton, and San Dimas washes (Figure 3.7-3).

Liquefaction is a process by which sediments below the water table (usually with the upper 50 feet of the ground surface) temporarily lose strength and behave as a liquid rather than a solid during strong earthquake groundshaking. Liquefaction-induced lateral spreading is defined as the finite, lateral displacement of gently sloping ground as a result of pore-pressure buildup or liquefaction in a shallow underlying deposit during an earthquake. The hazards of liquefaction include differential settlement, loss of ground support for foundations, ground cracking, heaving and cracking of structures due to sand boiling, movement of soil that places strain on buried pipelines and infrastructure, and buckling of deep foundations due to ground settlement. Numerous washes and creeks in the Plan Area fall within liquefaction zones, including nearly the entire length of San Jose Creek and Puente Creek, as well as the reaches of the San Gabriel and Rio Hondo rivers within the Plan Area (Figure 3.7-3). Some areas of overlapping landslide and liquefaction zones are present along the upper reaches of the San Gabriel River (Figure 3.7-3).

3.7.1.4 Paleontological Resources

Paleontology is the study of prehistoric and other past life forms through the examination of fossils. Paleontological resources are a limited, non-renewable, educational, and scientific resource that is sensitive to impacts. Paleontological resources, or fossils, are the remains of ancient animals and plants. Within Los Angeles County, over 1,000 fossil localities have been recorded. The County has identified 11 significant general fossil localities within Los Angeles County, of which two are in the vicinity of the proposed Plan Area. Within the Puente Formation, the Hacienda Heights and Diamond Bar areas of Puente Hills are included by the County as significant fossil localities for fish and leaves (LA County Department of Regional Planning 2022). The Puente Formation is within the San Gabriel River watershed and has a high sensitivity for paleontological resources (LACFCD 2015).

3.7.2 Regulatory Setting

Federal, state, and local laws, regulations, plans, and/or guidelines related to geological resources, soils, and geotechnical hazards that are applicable to the Program are summarized below.

3.7.2.1 Federal

3.7.2.1.1 Paleontological Resources Preservation Act

The Paleontological Resources Preservation Act of 2002 codifies the generally accepted practice of limited vertebrate fossil collection and limited collection of other rare and scientifically significant fossils by qualified researchers. Researchers must obtain a permit from the appropriate state or federal agency and agree to donate any materials recovered to recognized public institutions, where they would remain accessible to the public and other researchers.

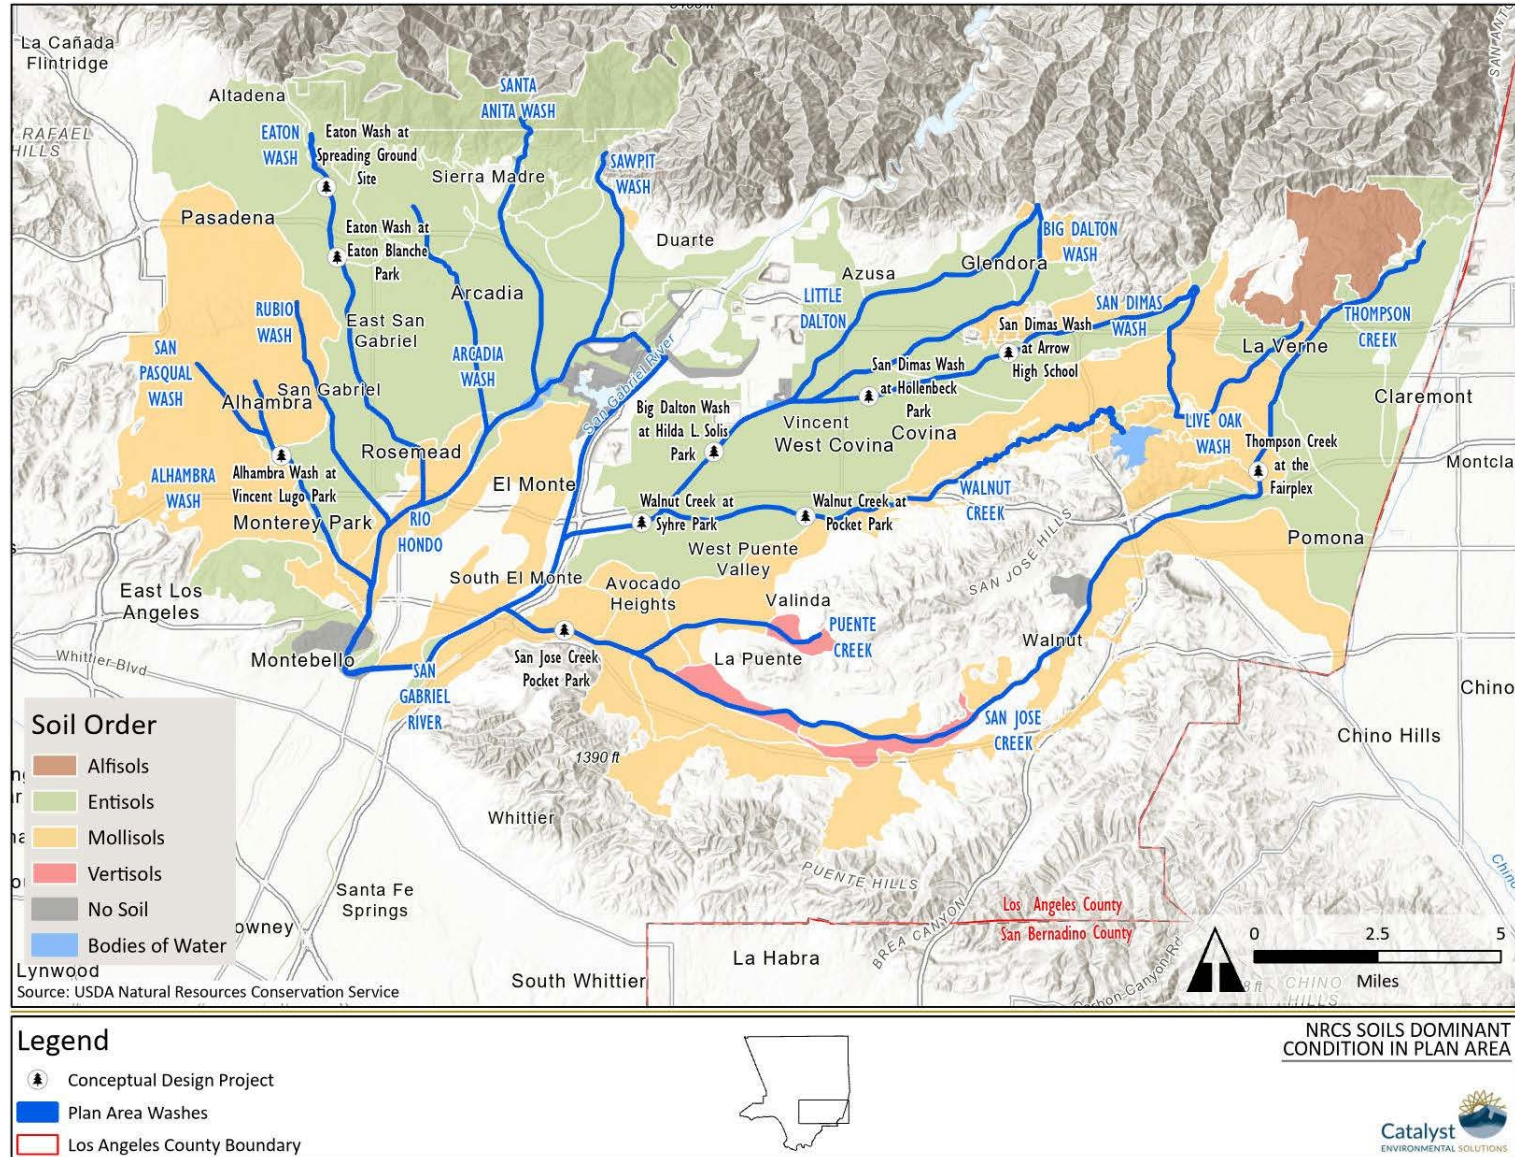

Figure 3.7-1. Soil Taxonomic Order Classifications in the Plan Area.

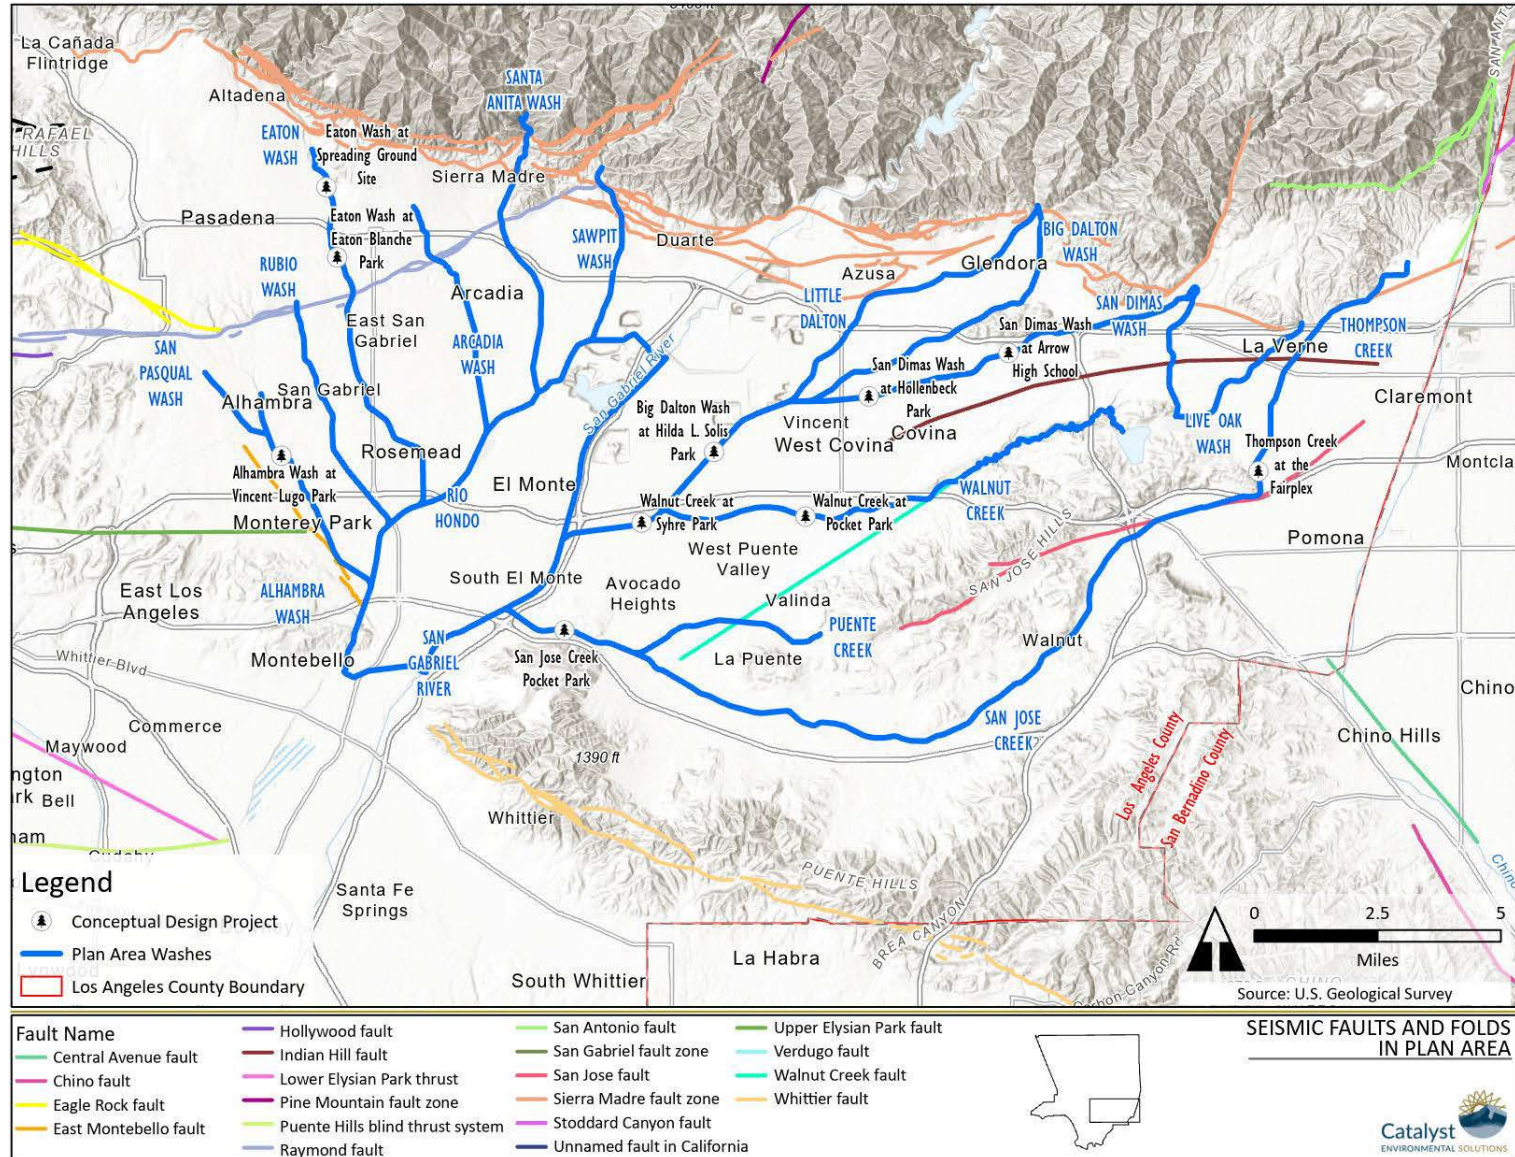

Figure 3.7-2. Seismic Faults in the Plan Area.

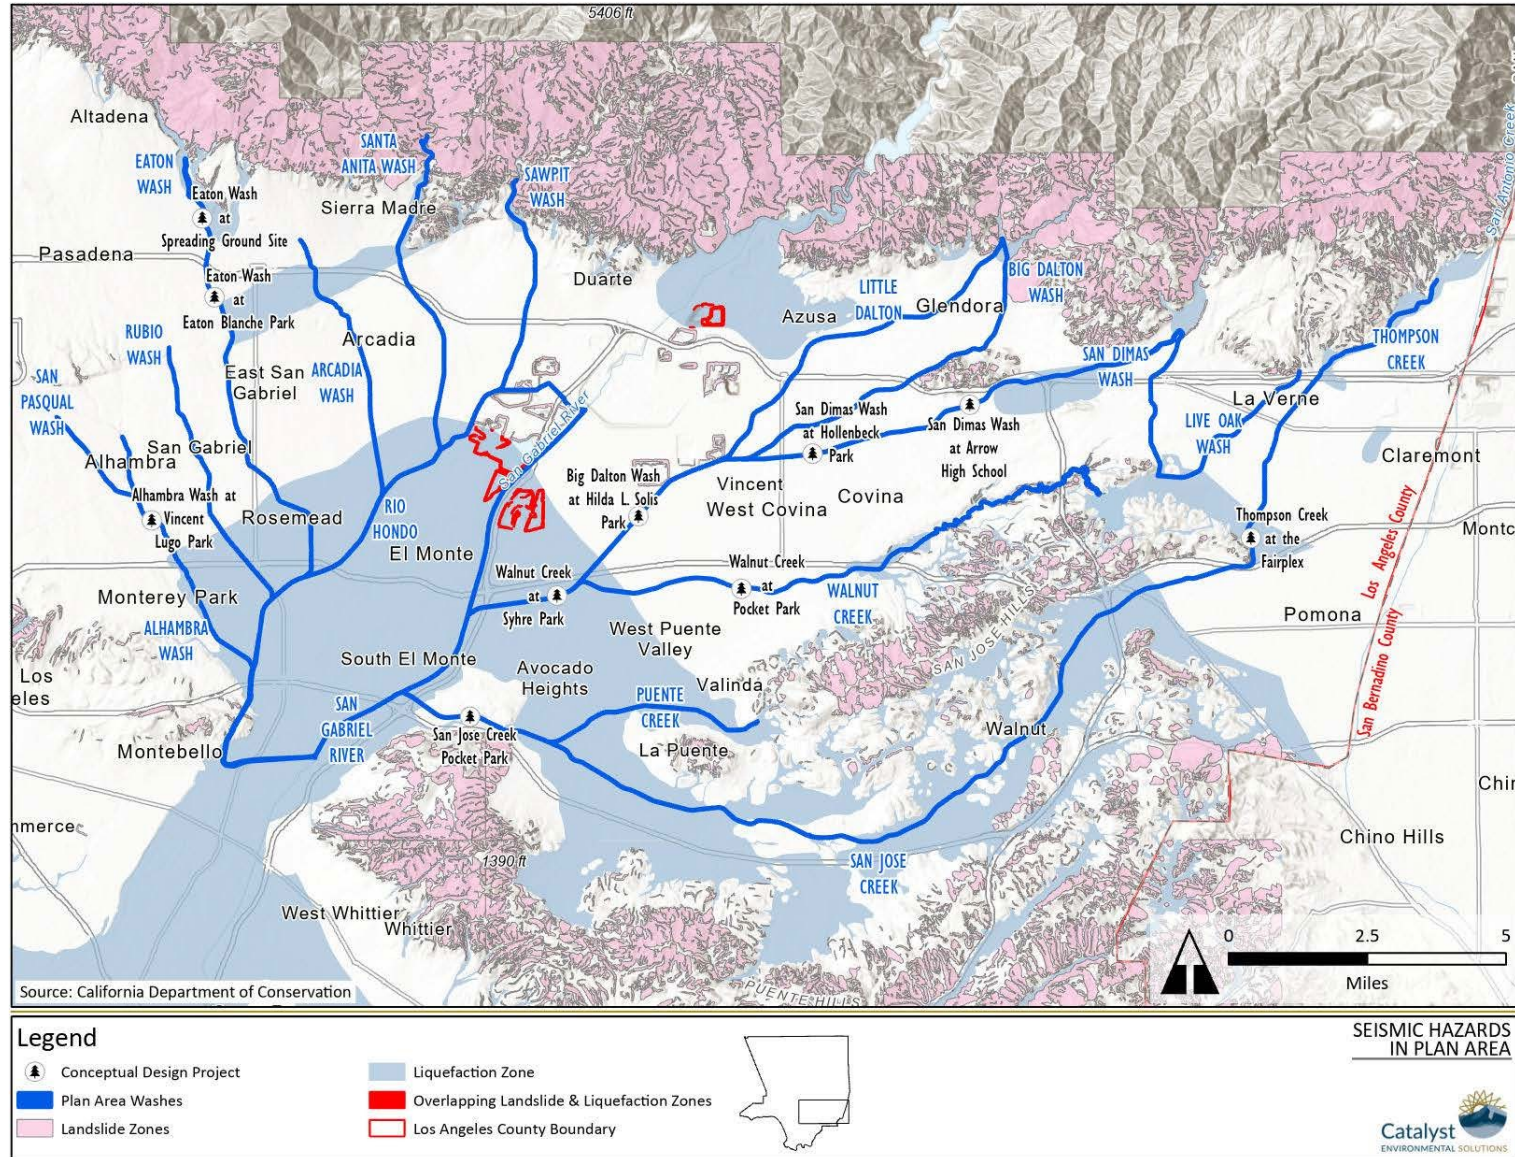

Figure 3.7-3. Liquefaction and Landslide Hazards in the Plan Area.

3.7.2.2 State

3.7.2.2.1 Alquist-Priolo Earthquake Fault Zoning Act, California Public Resources Code Sections 2621–2630

The Alquist-Priolo Earthquake Fault Zoning Act (Alquist-Priolo Act) (PRC Sections 2621–2630) was passed in 1972 to reduce the hazard of surface faulting on structures designed for human occupancy. The main purpose of the law is to prevent the construction of buildings used for human occupancy on the surface trace of active faults. The law addresses only the hazard of surface fault rupture and is not directed toward other earthquake hazards. The Alquist-Priolo Act requires the State Geologist to establish regulatory zones known as Earthquake Fault Zones around the surface traces of active faults and to issue appropriate maps. The maps are distributed to all affected cities, counties, and state agencies for their use in planning efforts. Before a project can be permitted in a designated Alquist-Priolo Earthquake Fault Zone, cities and counties must require a geologic investigation to demonstrate that proposed buildings are designed according to California Building Code standards, or City code standards that exceed the California Building Code protections within the City limits to be protective of the seismic conditions.

3.7.2.2.2 California Public Resources Code

PRC, Chapter 1.7, Section 30244 states that where development would adversely affect archaeological or paleontological resources, as identified by the State Historic Preservation Officer, reasonable mitigation measures shall be required.

3.7.2.2.3 Seismic Hazards Mapping Act

The only hazards addressed by the Alquist-Priolo Fault Zoning Act are those related to surface fault rupture, not other earthquake hazards. As such, the state passed the Seismic Hazards Mapping Act in 1990 to address non-surface rupture seismic hazards, which include liquefaction, landslides, and strong seismic ground shaking. Under the Seismic Hazards Mapping Act, the State Geologist is required to identify and map the locations of these secondary seismic hazards (CDOC 2023b).

3.7.2.3 Los Angeles County

Any projects proposed within the Plan Area would be subject to local plans and policies of the areas in which components are located.

3.7.2.3.1 Los Angeles County General Plan

The Safety Element of the General Plan (LA County Department of Regional Planning 2022) includes the following relevant goals and policies related to seismic and geotechnical hazards.

- Goal S 1: An effective regulatory system that prevents or minimizes personal injury, loss of life and property damage due to seismic and geotechnical hazards.
 - Policy S 1.1: Discourage development in Seismic Hazard and Alquist-Priolo Earthquake Fault Zones.

- Policy S 1.2: Prohibit construction of structures for human occupancy adjacent to active faults unless a comprehensive fault study that addresses seismic hazard risks and proposes appropriate actions to minimize the risk is approved.
- Policy S 1.3: Require developments to mitigate geotechnical hazards, such as soil instability and landslides, in Hillside Management Areas through siting and development standards.
- Policy S 1.4: Support the retrofitting of unreinforced masonry structures and soft-story buildings to help reduce the risk of structural and human loss due to seismic hazards.

The Conservation and Natural Resources Element of the General Plan (LA County Department of Regional Planning 2022) includes the following relevant goals and policies related to the protection of paleontological resources.

- Goal C/NR 14: Protected historic, cultural, and paleontological resources.
 - Policy C/NR 14.1: Mitigate all impacts from new development on or adjacent to historic, cultural, and paleontological resources to the greatest extent feasible.
 - Policy C/NR 14.2: Support an inter-jurisdictional collaborative system that protects and enhances historic, cultural, and paleontological resources.
 - Policy C/NR 14.5: Promote public awareness of historic, cultural, and paleontological resources.
 - Policy C/NR 14.6: Ensure proper notification and recovery processes are carried out for development on or near historic, cultural, and paleontological resources.

3.7.2.3.2 County of Los Angeles Low Impact Development Manual

The County of Los Angeles prepared the 2014 LID Standards Manual to comply with the requirements of the NPDES MS4 Permit for stormwater and non-stormwater discharges from the MS4 within the coastal watersheds of Los Angeles County (CAS004001, Order No. R4-2012-0175), referred to as the 2012 MS4 Permit. The LID Standards provide guidance for the implementation of stormwater quality control measures in new development and redevelopment projects in unincorporated areas of the County with the intention of improving water quality and mitigating potential water quality impacts from stormwater and non-stormwater discharges. The November 2013 LID Ordinance became effective December 5, 2013. The LID Standards Manual provides guidance for the implementation of stormwater quality control measures in new development and redevelopment projects in unincorporated areas of the County with the intention of improving water quality and mitigating potential water quality impacts from stormwater and non-stormwater discharges.

The LID Standards Manual addresses the following objectives and goals:

- Lessen the adverse impacts of stormwater runoff from development and urban runoff on natural drainage systems, receiving waters, and other water bodies.
- Minimize pollutant loadings from impervious surfaces by requiring development projects to incorporate properly-designed, technically-appropriate BMPs and other LID strategies.
- Minimize erosion and other hydrologic impacts on natural drainage systems by requiring development projects to incorporate properly-designed, technically appropriate hydromodification control development principles and technologies.

Section 8.d. of the MS4 permit specifies requirements for construction sites less than one acre and requires the implementation of an effective combination of erosion and sediment control BMPs to prevent erosion and sediment loss, and the discharge of construction wastes.

3.7.2.4 Incorporated Cities Within the Plan Area

The table below presents the policies related to geology and soils from each of the incorporated cities within the Plan Area that would be applicable to those projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.7-2. Applicable Local City Policies Related to Geology and Soils

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Health and Safety Element:</p> <p>Goal HS-1: Minimization of impacts to people and property due to soil instability.</p> <p>Policy HS-1A: Minimize the risk to life or limb, and property damage resulting from soil and related hazards.</p> <p>Policy HS-1B: Continue to enforce building code requirements to minimize exposure to geologic hazards.</p> <p>Policy HS-1C: Continue to participate in regional programs designed to protect the groundwater resources of the Raymond Basin from overdraft and avoid the hazard of regional ground subsidence.</p> <p>Goal HS-2: Minimization of impacts to people and property due to seismic threats.</p> <p>Policy HS-2A: Minimize the loss of life, serious injuries, and major social and economic disruption caused by damage to vulnerable buildings in an earthquake.</p> <p>Policy HS-2B: Require new developments and existing public facilities to comply with established seismic safety standards and consider location-specific seismic hazards.</p> <p>Policy HS-2C: Promote the upgrade of seismically hazardous buildings for the protection of health and safety.</p> <p>Policy HS-2D: Ensure that current geologic knowledge and state-certified professional review are incorporated into the design, planning, and construction stages of development projects, and that site-specific data are applied to each project.</p> <p>Policy HS-2E: Ensure to the fullest extent possible that, in the event of a major disaster, essential structures and facilities remain safe and functional, as required by current law. Essential facilities include hospitals, police stations, fire stations, emergency operation centers, communication centers, generators and substations, and reservoirs.</p> <p>Policy HS-2F: Ensure to the fullest extent possible that, in the event of a major disaster, dependent care and high occupancy facilities will remain safe.</p> <p>Policy HS-2G: Educate the public on the hazards that seismic activities can pose to the City and its residents.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Chapter 20.05 Building Code Section 111 (Engineering Geology and Soils Engineering Reports), and Subchapter 20.05.030 (Building Code Modified).</p> <p>Section 111 (Engineering Geology and Soils Engineering Reports) establishes the Building Official requirement of an engineering geology or soils engineering report, or both, for the evaluation of the safety of the site if deemed necessary. General Standards include:</p> <ul style="list-style-type: none">• The engineering geology or soils engineering report or both shall contain a finding regarding the safety of the site of the proposed work against hazard from landslide, settlement or slippage and a finding regarding the effect that the proposed work will have on the geotechnical stability of the area outside of the proposed work.• Any engineering geology report shall be prepared by a certified engineering geologist licensed in the State of California.• Any soils engineering report shall be prepared by a civil engineer licensed in the State of California, experienced in the field of soil mechanics, or a geotechnical engineer licensed in the State of California. When both an engineering geology and soils engineering report are required for the evaluation of the safety of a building site, the two reports shall be coordinated before submission to the Building Official. <p>Subchapter 20.05.030 (Building Code Modified) establishes the adoption of the Building Code of the City of Alhambra and the following subsections modifications:</p> <p>J103.6 Compliance with Zoning Code. The Building Official may refuse to issue a grading permit for work on a site if either the proposed grading or the proposed land use for the site shown on the grading plan application does not comply with the provisions of “Planning and Zoning” of the City of Alhambra Municipal Code.</p> <p>(D) Section J105.12 is amended in its entirety to read:</p> <p>J105.12 Completion of work. Upon completion of the rough grading work and at the final completion of the work, the following reports and drawings and supplements thereto are required for engineered grading or when professional inspection is otherwise required by the Building Official:</p> <ol style="list-style-type: none">1. A certification by the Field Engineer that to the best of his or her knowledge, the work within the Field Engineer’s area of responsibility was done in accordance with the final approved grading plan.2. A report prepared by the Soils Engineer retained to provide such services in accordance with Section J105.4, including locations and elevations of field density tests, summaries of field and laboratory tests, other substantiating data, and comments on any changes made during grading and their effect on the recommendations made in the approved soils engineering investigation report. The report shall include a certification by the Soils Engineer that to	No other applicable ordinances were identified.

	<p>Goal LU-5: Hillside management approaches that balance desires for unique neighborhoods and home sites with the need to protect residents from environmental hazards and to respect wildlife habitat and viewsheds.</p> <p>Policy LU-5.5: Ensure that any change in hillside land use is accompanied by appropriate safety measures and that the environmental constraints are adequately addressed especially with respect to runoff and erosion</p>		
Azuza	<p>Natural Environment Element:</p> <p>Goal 1: Ensure the continued functioning of essential (critical, sensitive and high-occupancy) facilities following a disaster; help prevent loss of life from the failure of critical and sensitive facilities in an earthquake; and help prevent major problems for post-disaster response, such as difficult or hazardous evacuations or rescues, numerous injuries, and major cleanup or decontamination of hazardous materials.</p> <p>Policy 1.4: Prohibit the location of Sensitive and High-Occupancy facilities within 100 feet of the identified active fault zone or potentially active fault zone of concern, unless it is determined by a qualified geologic engineer that a closer location will not result in undue risks based on detailed site investigations.</p> <p>Goal 2: Minimize to the greatest extend feasible the loss of life, serious injuries, and major social and economic disruption caused by the collapse of, or severe damage to, vulnerable structures (e.g. buildings, bridges, water storage facilities, key railroad components) resulting from an earthquake.</p> <p>Policy 1.7: 1.7 Incorporate planning for potential seismic incidents affecting Critical, Sensitive and High-Occupancy Facilities into the City’s contingency plans for disaster response and recovery.</p> <p>Implementation Program Geo 9: Utilities Report. Require public service agencies to prepare a Utilities Report for proposed projects located in liquefaction susceptibility zones. Utilities Reports will be used to help ensure that natural gas, electric, water, sewer and communication systems are designed to mitigate potential hazards arising from their location in liquefaction zones.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Article 3 (Site, Development and Operational Standards), Chapter 88.30 (Standards for All Development and Land Uses), Section 88.30.030 (Hazard Mitigation), and Article XIII (Earthquake Hazard Reduction in Existing Buildings), Section 14-381-2.</p> <p>Section 88.30.030. (Hazard Mitigation) requires this section to implement the hazard policies and standards of the natural environment element of the general plan. The requirements of this section apply to the location, site planning, and design of critical, sensitive, and high occupancy facilities, as defined in the general plan, and as identified in the tables of allowable land uses for each zone in Article 2 (Urban Standards). Additional requirements for hazard mitigation are as follows:</p> <p>C. Location Requirements. No critical facility shall be located within, or within 150 feet of an identified active or potentially active fault zone, or future Alquist-Priolo Earthquake Fault Zone, and no sensitive or high occupancy facility shall be located within 100 feet of the identified active or potentially active fault zone, unless a qualified engineer determines to the satisfaction of the city, based on detailed site investigations, that a closer location will not result in undue risks.</p> <p>D. Emergency Response/Contingency Plans. Each application for city approval of a proposed critical, sensitive, and/or high occupancy facility shall include emergency response plans with contingencies for all appropriate hazards, as determined by the director.</p> <p>(Ord. No. 06-06, § 1B, 8-7-06; Ord. No. 2015-01, § 1, 1-20-15)</p> <p>Article XIII (Earthquake Hazard Reduction in Existing Buildings), Section 14-381. (Purpose) promotes public safety and welfare by reducing the risk of death or injury that may result from the effects of earthquakes on unreinforced masonry bearing wall buildings constructed before 1934.</p> <p>(Code 1971, § 15.10.020)</p> <p>Article XIII (Earthquake Hazard Reduction in Existing Buildings), Section 14-382. (Scope) This article shall apply to all buildings constructed or under construction prior to October 6, 1933, or for which a building permit was issued prior to October 6, 1933, which as of October 3, 1985, have reinforced masonry bearing walls. This article shall not apply to detached one- or two-family dwellings and detached apartment houses containing less than five dwelling units and used solely for residential purposes.</p> <p>(Code 1971, § 15.10.020)</p>	<p>The Draft 2017 Azuza Local Hazard Mitigation Plan was prepared to guide hazard mitigation planning to better protect the people and property of the City from the effects of natural disasters and hazard events. The following goals and policies are related to geology and soils resources within the City:</p> <p>Goal 1: Minimize risk and vulnerability of Azusa to natural hazards and protect lives and prevent losses to property, public health, economy, and the environment.</p> <p>Objective 1.1: Reduce the risk and vulnerability to the community from all identified hazards of concern, with an emphasis on priority hazards, such as wildfire, flood, and earthquake.</p>
Baldwin Park	<p>Public Safety Element:</p> <p>Goal 1: Protect the community of Baldwin Park from seismic hazards.</p> <p>Policy 1.1: Sponsor City employee training programs in emergency management.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Section 153.160.120 (Soil Management Report), and Section 153.160.130 (Grading Design Plan).</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 1.2: Implement the Uniform Building Code’s seismic safety standards for construction of new buildings and maintain seismic safety of existing structures.</p> <p>Policy 1.3: Continue to implement emergency procedures contained in the City’s Multihazard Functional Plan and Supplemental Emergency Preparedness Plans.</p> <p>Policy 1.4: Support City’s participation in local, county, and state-wide emergency preparedness programs.</p> <p>Policy 1.5: Promote earthquake preparedness within the community by participation in quake awareness programs, including distribution of brochure materials in Spanish and English. Encourage property owners to anchor buildings to their foundations, bolt water heaters to walls, and implement other preventative measures.</p>	<p>Section 153.160.120 (Soil Management Report), to reduce runoff and encourage healthy plant growth, a soil management report shall be completed by the project applicant, or his or her designee, as follows:</p> <p>(A) Submit soil samples to a laboratory for analysis and recommendations.</p> <p>(1) Soil sampling shall be conducted in accordance with laboratory protocol, including protocols regarding adequate sampling depth for the intended plants.</p> <p>(2) The soil analysis shall include, as applicable:</p> <p>(a) Soil texture.</p> <p>(b) Infiltration rate determined by laboratory test or soil texture infiltration rate table.</p> <p>(c) pH.</p> <p>(d) Total soluble salts.</p> <p>(e) Sodium.</p> <p>(f) Percent organic matter.</p> <p>(g) Recommendations.</p> <p>(B) The project applicant, or his or her designee, shall comply with one of the following:</p> <p>(1) If significant mass grading is not planned, the soil analysis report shall be submitted as part of the Landscape Documentation Package.</p> <p>(2) If significant mass grading is planned, the soil analysis report shall be submitted as part of the Certificate of Completion.</p> <p>(C) The soil analysis report shall be made available, in a timely manner, to the professionals preparing the landscape design plans and irrigation design plans to make any necessary adjustments to the design plans.</p> <p>(D) The project applicant, or his or her designee, shall submit documentation verifying implementation of soil analysis report recommendations with Certificate of Completion.</p> <p>(Ord. 1346, passed 5-2-12; Am. Ord. 1379, passed 11-4-15)</p> <p>Section 153.160.130 (Grading Design Plan), For the efficient use of water, grading of a project site shall be designed to minimize soil erosion, runoff and water waste. A grading plan, prepared by a civil engineer, shall be submitted as part of the Landscape Documentation Package.</p> <p>(A) The project applicant shall submit a landscape grading plan that indicates finished configurations and elevations of the landscape area including all of the following:</p> <p>(1) Height of graded slopes.</p> <p>(2) Drainage patterns.</p> <p>(3) Pad elevations.</p> <p>(4) Finish grade.</p> <p>(5) Stormwater retention improvements, if applicable.</p> <p>(B) To prevent excessive erosion and runoff, it is highly recommended that project applicants do the following:</p> <p>(1) Grade so that all irrigation and normal rainfall remains within property lines and does not drain on to non-permeable hardscapes.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(2) Avoid disruption of natural drainage patterns and undisturbed soil.</p> <p>(3) Avoid soil compaction in landscape areas.</p> <p>(C) The grading design plan shall contain the following statement: “I have complied with the criteria of the ordinance and applied them accordingly for the efficient use of water in the grading design plan” and shall bear the signature of a licensed professional as authorized by law.</p> <p>(Ord. 1346, passed 5-2-12; Am. Ord. 1379, passed 11-4-15)</p>	
Claremont	<p>Goal 6-2: Minimize the risk of injury, loss of life, and damage to property resulting from natural and human-caused disasters and conditions.</p> <p>Policy 6-2.1: Practice proactive planning and development approaches that require developers to identify potential hazards that might affect a development and mitigate the potential hazards as needed to the satisfaction of the City.</p> <p>Policy 6-2.2: Enforce Uniform Building Code standards for grading.</p> <p>Policy 6-2.3: Review and explore disaster preparedness and emergency response capabilities on a regular basis.</p> <p>Policy 6-2.4: Cooperate with and coordinate emergency preparedness and response programs with jurisdictions. Agencies. And organizations such as surrounding cities, The Claremont Colleges, the Claremont School District, and the Los Angeles County Fire Department.</p> <p>Policy 6-2.5: Continue and expand public educational programs to include all aspects of public safety.</p> <p>Policy 6-2.6: Maintain a list of public buildings that could support emergency functions in the event of a disaster.</p> <p>Policy 6-2.7: require that development of major facilities and high occupancy buildings in the hazardous zone submit design analysis, soils, geologic, and seismic reports to the City to indicate that an undue hazard does not exist or would not result from construction on the property.</p> <p>Policy 6-2.8: Continually review the City’ s disaster communication system, and update/ modify as needed.</p> <p>Policy 6-2.9: Continue to implement the City’s hillside plan to reduce harm to future residents at the urban interface.</p> <p>Policy 6-2.10: Restrict vehicular and recreational use of the undeveloped foothill areas during critically hazardous periods.</p> <p>Goal 6-4: Minimize risks to public safety from seismic events.</p> <p>Policy 6-4.1: Enforce the most recent building codes governing seismic safety and structural design to minimize damage from earthquakes.</p> <p>Policy 6-4.2: Continue to support efforts to identify location, potential activity, and dangers associated with faults under investigation, and implement recommendations setbacks. Foundation/ building design methods, etc.) contained in geotechnical reports.</p> <p>Goal 6-5: Minimize risks to public safety from geologic events.</p> <p>Policy 6-5.1: Require geotechnical evaluation and recommendations prior to new development, as appropriate. Such geotechnical evaluation shall analyze the potential hazards from:</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Chapter 16.010 H Hillside District Section 16.010.020 (Requirements).</p> <p>Section 16.010.020 (Requirements) establishes grading requirements in the Hillside District which include the following;</p> <p>(1) No cut or fill slopes shall be created which exceed 30 feet vertical height, or 400 feet in horizontal length (except that slopes required for public streets may exceed 400 feet in length); except that the Planning Commission may permit slopes exceeding these dimensions where the slopes will be the result of earth contouring which the Commission finds will result in a natural appearance and will not create geological or erosion hazards.</p> <p>Other Requirements for the Hillside District</p> <p>(1) All applications for subdivisions of land or proposed residential developments shall be accompanied by sufficient information as determined appropriate by the City to demonstrate compliance with the provisions of this chapter and the General Plan. The General Plan describes goals and policies to preserve natural open space, protect limited natural habitats and watershed areas, minimize natural hazards including fire and earthquake induced landslides, and promote fiscal stability of the City; and it shall be incumbent on applicants to perform those studies as deemed necessary by the City to address all potential environmental, safety, and economic issues related to the development of the applicant’s property.</p>	<p>No other applicable ordinances were identified.</p>

	<p>Policy c: Ensure, to the greatest extent possible, that buildings/uses of which the State has permitting authority over, such as public schools, hospitals, and mobile home parks, comply with current, applicable seismic and general building codes, standards, and construction practices.</p> <p>Policy d: Follow all applicable development and grading standards and practices in the Covina Hills area.</p> <p>Policy e: Continue to review and, where necessary, modify general building-related codes and seismic design standards to better protect the City against the adverse effects of strong ground shaking.</p> <p>Policy f: Continue with voluntary seismic retrofitting of older, unreinforced masonry and similar buildings in conjunction with ongoing commercial revitalization, community development, and general renovation activities for the orderly and effective abatement of potentially hazardous structures.</p> <p>Policy g: Attempt to regularly update its inventory of unreinforced masonry structures in the community.</p> <p>Policy h: Consider to adopt a mandatory seismic retrofitting program, if necessary and feasible, including a funding mechanism, to assist applicable property owners.</p> <p>Policy i: Consider the aesthetic, historic, and/or cultural significance of a building to be upgraded for seismic safety and, to the greatest extent possible, avoid demolition or alteration of a structure’s appearance or character in seismic retrofitting.</p> <p>Policy j: Regard the cost of seismic reinforcement as an inadequate justification for demolition of a structure in Covina determined to be historic.</p> <p>Policy k: Request that the Los Angeles County Flood Control District (LACFCD) develop a program and funding mechanism to seismically reinforce Puddingstone Dam to protect Covina and other downstream areas from potential major flooding.</p> <p>Policy l: Monitor the dormant/potentially active Indian Hill Fault and Walnut Creek Fault systems in Covina for any officially documented movement.</p> <p>Policy m: Should either of Covina’s two dormant faults become active, closely investigate the fault, including determining the exact location and nature of the fault and probable extent of earthquake activity, follow applicable State mandates, and adopt appropriate development policies and standards.</p> <p>Policy n: Where slope-denuding fires strike in the Covina Hills area, maintain or encourage reasonable replanting efforts on public and private properties to stabilize bare hillsides against possible landslides or mudslides during subsequent rainstorms.</p> <p>Policy o: Further investigate and collect additional data on seismic, geologic, and soil conditions affecting the community, particularly in the Covina Hills area.</p> <p>Policy p: Should liquefaction, settlement, or subsidence be identified in any areas, closely investigate the hazard, including determining the exact location and extent of the problem, and require special, site-specific studies to identify engineering and development siting measures to permit construction to occur.</p> <p>Policy q: Promote earthquake preparedness within the community by participating in quake awareness programs, including, but not limited to, the distribution of brochure materials or informative literature on methods to safeguard lives and property during seismic events.</p>		

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy r: Maintain and periodically update, as appropriate, the Covina Emergency Plan with respect to emergency procedures to be followed in a potential seismic hazard or geologic incident.</p> <p><i>Policy Area 5: Emergency Preparedness and Related and General Matters</i></p> <p>Policy h: Establish the mitigation of earthquake hazards as a high priority for applicable City programs/strategies, both before and after an earthquake.</p> <p>Policy i: Develop programs, options, procedures, and funding sources to promote the rapid and effective reconstruction and recovery of effected portions of the City following an earthquake or other major disaster, as opportunities allow.</p>		
El Monte	<p>Public Health and Safety Element:</p> <p>Goal PHS-1: Adequate protection from seismic and geologic hazards, to ensure public health and safety, infrastructure, and City facilities and services are maintained.</p> <p>Policy PHS-1.1 Building Codes. Ensure that new and retrofitted buildings comply with the most recently adopted City and state building codes governing seismic safety and structural design to minimize the potential for damage, personal injury, and loss from earthquakes.</p> <p>Policy PHS-1.2 Geotechnical Study. As necessary, require detailed geologic, geotechnical, or soil investigations in areas of potential seismic or geologic hazards as part of the environmental and/or development review process.</p> <p>Policy PHS-1.3 Structural Hazards. Mitigate structural hazards related to seismic events through appropriate methods such as excavating and refilling land with engineered fill, ground improvements, structural design, and other appropriate mitigation.</p> <p>Policy PHS-1.4 Critical Structures. Encourage Caltrans, Southern Pacific Railroad, and local utility companies to regularly inspect and strengthen (if needed) bridges, elevated roadways, freeways, utilities, and other infrastructure susceptible to failure during an earthquake.</p> <p>Policy PHS-1.5 Critical Facilities. Ensure that police and fire stations, emergency operations centers, communications centers, reservoirs, medical facilities, and other essential structures and facilities remain safe and in a state of readiness for seismic events.</p> <p>Policy PHS-1.6 Public Education. Work with local schools, businesses, residents, and community organizations to ensure that adequate information on how to be prepared for hazards is available and routinely distributed to the community.</p> <p>Policy PHS-1.7 Emergency Response. Periodically conduct simulated emergency response drills to hazards, concentrating on interagency coordination needed to ensure that services will be available to the community with minimal delay and overlap of services.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Section 15.40.070 (Permit – Application), and Section 8.44.030 (Public nuisances designated).</p> <p>Section 15.40.070 (Permit – Application) establishes what documentation is needed with a grading permit. A preliminary soil report prepared by a registered soils engineer, which shall be based on adequate test borings or excavations is required. It shall be prepared by a registered soils engineer and recommend correction action to prevent structural damage for construction on expansive soils. The developer shall be guided by the principles of erosion prevention described in the following subdivisions or by any other acceptable principles or practices.</p> <ol style="list-style-type: none">1. The erosion and sedimentation control plan should be fitted to the topography and soil class so as to create the least potential for soil loss. Maximum use shall be made of vegetation to minimize inevitable soil loss through land disturbing activity, such as:<ol style="list-style-type: none">a. Natural vegetation should be retained wherever possible;b. Where inadequate natural vegetation exists, or where it becomes necessary to remove existing natural vegetation, temporary vegetation or mulching should be installed promptly to minimize inevitable soil loss and to ensure that soil losses are kept below the tolerable limits;c. Erosion control elements shall be implemented as soon as practical in the development process, except that the time elapsed shall not exceed sixty (60) days after the cessation, termination or completion of grading, whichever comes first.2. Exposure of the soil through land disturbing activity should be held to the smallest practicable area and to the shortest practicable period of time consistent with maximum tolerable soil loss levels.3. Appropriate provision should be made to accommodate increased storm water runoff and consequent soil loss occasioned by changed soil and surface conditions during and after development. In addition to the use of vegetation and limitations on soil exposure as prescribed herein, such provisions may include, but are not limited to:<ol style="list-style-type: none">a. Installing and maintaining sediment basins, debris basins, desilting basins or silt traps to substantially reduce sediment from runoff water. <p>C. Whenever an erosion and sedimentation control permit is required, a security deposit in the per the current Engineering Department fee schedule shall be required to guarantee that provisions of the permit are met. Any measures which are temporary and portable, such as sand bags and Visqueen, may be deposited so as to not interfere</p>	<p>City of El Monte 2017 Hazard Mitigation Plan Earthquake Action Items:</p> <p>Action Item EQ-1: Integrate new earthquake hazard mapping data from the State of California applicable to the City of El Monte into future Hazard Mitigation Plan and General Plan updates.</p> <p>Action Item EQ-2: Incorporate the Regional Earthquake Transportation Evacuation Routes developed by the Disaster Management Area Coordinators into appropriate planning documents.</p> <p>Action Item EQ-3: Identify funding sources for City-owned structural and nonstructural retrofitting of structures that are identified as seismically vulnerable.</p> <p>Action Item EQ-4: Encourage purchase of earthquake hazard insurance.</p> <p>Action Item EQ-5: Encourage seismic strength evaluations of critical facilities in the City to identify vulnerabilities of public infrastructure and critical facilities. Goal is to meet current seismic standards for all City-owned infrastructure and critical facilities.</p> <p>Action Item EQ-6: Encourage reduction of nonstructural and structural earthquake hazards in homes, schools, businesses, and government offices.</p>

		<p>with normal construction activity during dry weather. However, any necessary measures shown on the approved plan shall be in place during any storm event.</p> <ol style="list-style-type: none">1. If those erosion control measures shown on the plan are not in place within twenty-four (24) hours of the prediction of a storm event by the U.S. Weather Service, the City Engineer may have such measures installed and charge any costs thereof against the security deposit.2. If any sedimentation does collect in the public right-of-way, it shall be cleaned up within twenty-four (24) hours of the end of each storm event. Failure to do so may permit the City Engineer to have the street cleaned and charge any costs thereof against the security deposit. <p>(Ord. No. 3011 , § 3(Exh. A), 6-21-2022)</p> <p>Section 8.44.030 (Public nuisances designated) states that it is unlawful for any person owning, leasing, occupying, or having charge or possession of any residential, agricultural, commercial, industrial, business park, office, educational, religious, vacant, or other premises within the city, to maintain such premises as they become a nuisance due to (B) Any land, the topography, geology, or configuration of which, whether in a natural state or as a result of grading operations, excavations, fill, or other alteration, interferes with the established drainage pattern over the property or from adjoining or other properties which does or may result in erosion, subsidence, or surface water drainage problems of such magnitude as to be injurious to public health, safety and welfare or to neighboring properties.</p>	
Glendora	<p>Safety Element:</p> <p>Goal SAF-4: Protection from loss of life and property during seismic events.</p> <p>Policy SAF-4.1: Require that new development and infrastructure avoid on-site seismic hazards such as faults, liquefaction zones and landslide areas.</p> <p>Policy SAF-4.2: Adopt building regulations that minimize effects from seismic events in building construction.</p> <p>Policy SAF-4.3: Provide instructional materials, classes and other educational resources to ensure residents and the daytime population are knowledgeable of the risks and methods to reduce such risks, as well as involve the residents and community groups in the City’s annual emergency preparedness event.</p> <p>Goal SAF-5: Protection from landslides.</p> <p>Policy SAF-5.1: Ensure that development within landslide prone areas meets the City’s Hillside Development Criteria and Hillside Development Strategy.</p> <p>Policy SAF-5.2: Require proposed developments located within areas identified by California Department of Conservation Seismic Hazard Maps (dated March 25, 1999 or as revised) to prepare a geotechnical investigation report.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Section 21.02.050 (Development agreements), Section 9.36.010 (Maintenance of premises – Nuisances), and Section 21.06.050 (Open space – Natural Zone OSN).</p> <p>Section 21.02.050 (Development agreements) establishes the standards surrounding development agreements between any owner of property and the city. The development agreement shall include the following narrative text elements;</p> <ol style="list-style-type: none">a. A general description of the project including the uses proposed, building densities, heights, floor areas, parking ratios and similar information;b. A legal description of the parcels involved;c. The proposed starting and completion date for the project and its phases;d. A description of geological, seismic or other hazards and measures to mitigate these;e. A statement of the relationship of the project to the general plan and any applicable specific plan;f. Other such information that may be required to sufficiently describe the proposed project. <p>Section 9.36.010 (Maintenance of premises – Nuisances) describes unlawful maintenance of premises. The following is considered unlawful;</p> <p>(17) Maintenance of Adverse Topography. To maintain land, the topography, geology or configuration of which, whether in a natural state or as a result of grading operations, excavation or fill, causes erosion, subsidence, or surface water drainage problems of such magnitude as to be injurious or potentially injurious to the public health, safety and welfare or to adjacent properties.</p> <p>(Ord. 1909 § 2, 2008)</p> <p>Section 21.06.050 (Open space – Natural Zone OSN) describes the purpose of the Open space – Natural Zone, permitted uses, and development requirements. The purpose is</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>to (1) conserve and manage natural resources which may include biological resources, watercourses, hills, canyons, major rock outcroppings, etc.;(2) protect the public health and safety by including areas requiring management due to hazardous or special conditions such as fire, flood and earthquake fault; and (3) provide outdoor recreation including areas of scenic, historic or cultural value. The OSN zoning designation shall only be applied to public and quasi-public property; provided, however, that a private property owner may request and be considered for a change of zone to OSN. Development standards for the OSN zone shall be determined on a site-by-site basis. Consideration shall be given to surrounding properties and developments in order to blend the development with, and to keep it consistent with, the surrounding area. Factors to be considered for determination of standards shall be topography, water drainage, circulation, use of site, and any other environmental factors related to the site. Development or modification of an approved plan shall be subject to development plan review in accordance with Section 21.02.040.</p> <p>(Ord. 1637 § 3, 1995)</p>	
Industry	<p>Safety Element:</p> <p>Goal S1: Minimal loss of life and damage to property resulting from an earthquake or other geologic hazards.</p> <p>Policy S1-1: Require that all new habitable structures be designed in accordance with the most recent California Building Code adopted by the City, including provisions regarding lateral forces and grading.</p> <p>Policy 1-2: Conform to state law regarding unreinforced masonry structures.</p> <p>Policy S1-3: Cooperate and coordinate with public and quasi-public agencies to assure seismically strengthened or relocated facilities and other appropriate measures to safeguard water, electricity, natural gas, and other transmission and distribution systems.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Section 1.30.040 (Public nuisances designated).</p> <p>Section 1.30.040 (Public nuisances designated) describes conditions that constitute Substandard Property Conditions including (1) Landslide and Water Hazards. Land, the topography, geology or configuration of which, whether in natural state or as a result of grading operations, excavation or fill, causes erosion, subsidence, or surface water drainage problems of such magnitude as to be injurious or potentially injurious to the public health, safety and welfare or to adjacent properties. The excavation of land that results in the accumulation of any pool or body of water in such a manner that it is, or may become, a breeding place for mosquitoes.</p>	No other applicable ordinances were identified.
Irwindale	<p>Public Safety Element</p> <p>Issue Area: Emergency Preparedness. The City of Irwindale will strive to maintain the highest levels of readiness to respond to disasters or local emergencies.</p> <p>Safety Element Policy 3: The City of Irwindale will work to reduce potential hazards through conscientious land use planning. The City shall require liquefaction assessment studies as part of development proposals in areas identified by the California Geological Survey as susceptible to liquefaction. The studies shall be conducted in accordance with the California Geological Survey’s Special Publication 117; Guidelines for Evaluating and Mitigating Seismic</p> <p>Hazards in California, and the Southern California Earthquake Center’s (1999) procedures to implement Special Publication 117 – Liquefaction Hazards (both documents are incorporated herein by reference). On sites shown to be susceptible to liquefaction, the City shall require the implementation of mitigation measures designed to reduce this hazard to an acceptable level. The City shall require a State certified engineering geologist or registered civil engineer; have competence in the field of seismic hazard evaluation and mitigation, to review the study at the Applicant’s expense. The review shall determine the adequacy of the hazard evaluation and proposed mitigation measures and determine whether the requirements of State law are satisfied, as described in Special Publication 117 by the California Geological Survey.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Chapter 16.17 (Soils Reports), Section (16.17.005 – In general.) and Section 16.17.050 (Geologic investigation and report.).</p> <p>Chapter 16.17 (Soils Reports), Section (16.17.005 – In general.), when required by the city engineer, soils reports shall be provided by the applicant as required by this chapter; this title, Title 16 Subdivisions, applies to those splits of parcels on potential Projects.</p> <p>(Ord. No. 698, § 4, 10-14-15)</p> <p>Chapter 16.17 (Soils Reports), Section 16.17.050 (Geologic investigation and report.), if the city engineer determines that conditions warrant, a geologic investigation and report may also be required.</p> <p>(Ord. No. 698, § 4, 10-14-15)</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
La Puente	<p>Community Safety Element:</p> <p>Goal 1: Reduced risk from earthquakes, liquefaction, flooding and dam inundation hazards.</p> <p>Policy 1.1: Require appropriate geotechnical studies or require standard building and remediation measures for all new proposed development projects on properties identified as subject to liquefaction or landslides.</p> <p>Policy 1.2: Apply and enforce development standards and building construction codes.</p> <p>Policy 1.3: Participate in federal, State, and local earthquake preparedness and emergency response education programs.</p> <p>Policy 1.4: Apply and enforce earthquake safety standards for buildings, focusing on areas with expansive soils and unreinforced masonry buildings.</p> <p>Policy 1.5: Prepare an emergency operations plan to address potential earthquakes, hazards created from secondary earthquake effects, and dam inundation.</p> <p>Action CS-1: Apply Uniform Building Code Standards Continue to implement Uniform Building Code seismic safety standards for construction of new buildings, and update the City's codes as needed in response to new information and standards developed at the State level.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Section 3.20.070 (Prohibited Activities and Unlawful Conditions Declared Public Nuisances).</p> <p>Section 3.20.070 (Prohibited Activities and Unlawful Conditions Declared Public Nuisances) describes conditions that constitute nuisance properties including (1) land, the topography, geology or configuration of which, whether in a natural state or as a result of grading operations, excavation, or fill, causes erosion, subsidence or surface water drainage problems of such magnitude as to be injurious or potentially injurious to the public health, safety or welfare, or to adjacent properties.</p>	<p>Hazard Mitigation Plan (2018) contains Earthquake Action Items:</p> <p>EQ-1: Integrate new earthquake hazard mapping data into future City GIS.</p> <p>EQ-2: Incorporate earthquake transportation evacuation routes into the next update of the General Plan Safety Element.</p> <p>EQ-3: Seek funding and regulatory support to conduct seismic retrofitting on the nineteen privately owned unreinforced masonry (URM) buildings in downtown.</p> <p>EQ-4: Encourage reduction of nonstructural and structural earthquake hazards in homes, schools, businesses, and government offices.</p> <p>EQ-5: Adopt updates to the International Conference of Building Officials (ICBO).</p> <p>EQ-6: Support and facilitate additional building policies and requirements adopted by the State of California into local government building code for post-disaster situations.</p> <p>EQ-7: Encourage seismic strength evaluation of critical facilities in the City to identify vulnerabilities for mitigation of schools, public infrastructure, critical facilities and homes to meet current seismic standards.</p> <p>EQ-10: Minimize injuries associated with earthquakes. Many of these injuries are caused by nonstructural hazards such as attachments inside and outside of buildings. These include lighting fixtures, windows (glass), pictures, tall bookcases, computers, ornamental decorations on the outside of the buildings (like parapets), gas lines, etc. The City desires to encourage anchoring and other methods of nonstructural mitigation.</p>
La Verne	<p>Public Safety Element:</p> <p>Goal 2: Protect our residents from geologic hazards.</p> <p>Policy 2.1: Reduce the risk of geologic and groundwater hazards.</p> <p>Implementation Measures a. Require a full site-specific geologic study of any hillside site of proposed development in La Verne. The citywide evaluation prepared for the general plan shall not be considered adequate for site specific questions such as slope stability, erosion, subsidence, ground water effects and earthquakes. The study shall consider effects of proposed development on adjacent upslope and downslope areas as well as on the site itself.</p> <p>Implementation Measures b. Adhere to Chapter 70 of the Uniform Building Code regulating earth work and grading during construction, and hillside grading guidelines to minimize erosion.</p> <p>Implementation Measures d. Limit acreage of bare soils exposed at any one time.</p> <p>Implementation Measures e. Restrict grading to the dry season and require immediate revegetation.</p> <p>Policy 2.2 Minimize personal and property damage from earthquakes.</p> <p>Implementation Measure a. Monitor the geologic special studies zones, which extend 350 feet on both sides of known and suspected faults in MAP PS-I.</p> <p>Implementation Measure b. Require a study by a registered geologist or certified engineering geologist to determine exact location and nature of the fault and the probability and probable extent of earthquake damage prior to development in any such zone.</p> <p>Implementation Measure c. Require all development in a geologic special studies zone to be set back 50 feet from each side of a mapped active fault trace.</p>	<p>Municipal codes related to geology and soils within the City that are relevant to the Plan area can be found in Section 15.04.110 (Expansive soils), and Chapter 18.68 (H-D-O-Z Hillside Development Overlay Zone).</p> <p>Section 15.04.110 (Expansive soils), Section 1809.4 of the California Building Code is amended to read as follows:</p> <p><i>1809.4 Foundations on expansive soil. Unless otherwise specified by a registered geotechnical engineer, foundation systems within the City of La Verne are considered to be on expansive soil and shall be constructed in a manner that will minimize damage to the structure from movement of the soil. Slab-on-grade and mat-type footings for buildings located on expansive soils may be designed in accordance with the provisions of Section 1808.6.2 or such other engineering design based upon geotechnical recommendation as approved by the Building Official.</i> (Ord. 1075 § 8, 2016; Ord. 1042 § 8, 2013)</p> <p>Chapter 18.68 (H-D-O-Z Hillside Development Overlay Zone) provides supplemental standards for the development of hillside areas of the City. Grading guidelines for the district include the following (1) Geotechnical study for all proposed development within a geologic hazard special study zone must undergo independent engineering study concerning the potential impact of soil instability, liquefaction, landslide and seismic potential (2) citywide grading ordinances in addition to hillside development overlay zone standards. (Ord. 853 § 2, 1993)</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Implementation Measure d. Require special site-specific studies in areas potentially subject to liquefaction (shown in MAP PS-I) to determine the nature and extent of possible liquefaction and to identify engineering and development siting measures to permit development to occur.</p> <p>Implementation Measure e. Continue to implement the Unreinforced Masonry Program in Lordsburg. Complete the inventory of all unreinforced masonry structures in La Verne. Require structural reinforcement of all unreinforced masonry structures when renovated. The cost of such reinforcement shall not be an adequate justification for demolition of a structure determined to be historic with La Verne.</p> <p>Policy 2.3: Prepare our community for the event of an earthquake.</p> <p>Implementation Measure a. Include earthquake preparedness in all regular fire safety inspections by the fire department.</p> <p>Implementation Measure b. Take an active role in the earthquake preparedness planning and drills for all city schools conducted by the Fire Department.</p> <p>Implementation Measure c. Review earthquake emergency planning periodically for all major contingents in the city to promote effective interaction in the event of an emergency. Review to be conducted by the Fire Department.</p> <p>Implementation Measure d. Provide periodic earthquake drills involving all major contingents in the city to help coordinate emergency activity in the event of an earthquake. Drills to be conducted by the Fire Department.</p> <p>Land Use Element:</p> <p>Goal 11: Harmonize South La Vern’s diversified land use.</p> <p>Policy 11.1: Preserve and protect the integrity of Puddingstone Hill.</p> <p>Implementation Measure b. Prohibit any development that is not in strict compliance with the general plan, Hillside Development Overlay Zone, applicable specific plan, ordinances and regulations.</p> <p>Implementation Measure c. Prohibit development that can not satisfy grading, visual, geologic, land use compatibility, utility and safety concerns as required by our Hillside Development Overlay Zone.</p>		
Monrovia	<p>Land Use Element:</p> <p>Goal 10: Ensure that new development is sensitive to the City’s natural and open space resources and constraints.</p> <p>Policy 10.5: Prevent location of major population centers, other than open space or agricultural uses, near any known or suspected earthquake faults, or in potential flood hazard or landslide areas.</p> <p>Safety Element:</p> <p>Goal 1: Reduce to a minimum the loss of life, disruption of goods and services and destruction of property associated with an earthquake.</p> <p>Objective 1.1: Take potential fault areas into account in the General Plan.</p> <p>Policy 1.1.1: No structures for human occupancy are permitted on or across the trace of the Raymond Hill Fault. Prior to approval of development of properties within the Alquist-Priolo Geologic Studies Zone, as delineated by the California Division of Mines and Geology, an applicant shall submit a report of the geologic investigation of potential faults that may affect structures proposed at the site.</p>	<p>Municipal codes related to geology and soils within the City that are relevant to the Plan area can be found in Section 15.28.070 (Permit – Application), and Section 17.52.095 (Hillside Development Permit).</p> <p>Section 15.28.070 (Permit – Application) establishes the requirements for submitting a grading permit application. Among the requirements is a preliminary soil report which must include (1) presence of critically expansive soils or other soil problems prepared by a registered soils engineer with recommended corrective actions, (2) recommended actions likely to prevent structural damage may result in a City approval. Further, if an erosion and sedimentation control permit is required by Section 15.28.050 the applicant needs to provide plans and specifications prepared by a registered civil engineer, with specific erosion and sedimentation prevention practices to ensure the effective control of soil losses within the tolerable limits prescribed in § 15.28.075 (Soil loss standards).</p> <p>Section 17.52.095 (Hillside Development Permit) establishes the requirements for the Planning Commission to grant a hillside development permit. Among other findings,</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>The Report shall be required for parcel maps, tract maps, development on residential lots, and residential additions adding floor area for human occupancy, and shall be prepared by a Registered Geotechnical Engineer registered with the State of California.</p> <p>Policy 1.1.2 Properties located within known or potential fault areas shall be required to submit a geotechnical report at the time of submittal of the parcel or tract map, or for development on residential lots with single family dwellings, or additions to dwellings that add floor area for human occupancy (see policy 1.1.4). The report shall analyze the surface and subsurface geology of the site, the degree of seismic hazard and shall include conclusions and recommendations regarding the effect of geologic conditions on the proposed development, opinions and recommended criteria to mitigate any identified geologic hazards. This investigation and report shall be performed by a professional geotechnical engineer experienced in the practice of engineering geology and registered with the State of California.</p> <p>Policy 1.1.3: Modifications to the set back limits specified by the Alquist-Priolo Act may be permitted at the discretion of the City, if such modifications also comply with the Municipal Code, based on a geotechnical report prepared by an independent licensed geotechnical engineer and/or geologist, mutually agreed upon between the City and developer and paid for by the developer. The geotechnical report shall be reviewed and subject to the approval of the City Engineer or his designee and shall be maintained on file by the City. The recommendations made in the geotechnical report may be approved, modified or denied by the City. Setback modifications may be permitted only if the developer and/or owner executes and records a restrictive covenant, in a form acceptable to the City Attorney, against the title to the property.</p> <p>Such a restrictive covenant shall specifically define and require compliance with the permitted setbacks on the property and any applicable conditions required by the geotechnical report. Such restrictive covenant shall run with the land, be binding on successors in interest, acknowledge that the applicable setbacks have been modified at the request of the property owner in reliance on a geotechnical study, and further require that the property owner hold harmless, indemnify and defend the City, its officers, agents and employees from and against any liability or damage in any way arising out of the construction, maintenance and use of residential structures on the property.</p> <p>Policy 1.1.4: Geotechnical reports submitted in response to the standards above shall be reviewed for adequacy by a Registered Geotechnical Engineer, and a report of that review submitted to the appropriate agency of the City. All costs for the preparation of these required reports are to be borne by the developer/applicant.</p> <p>Objective 1.3: The City shall require that all development take appropriate measures to protect public health and safety.</p> <p>Policy 1.3.1: Continue to adopt and implement the most recent uniform building code (with special attention to Chapter 23 and Chapter 70), and all supplements which include the latest most stringent earthquake regulations for new construction.</p> <p>Policy 1.3.2: If an EIR, or detailed geologic investigation confirms existence of seismic hazards, the City shall require special earthquake resistant design features or use limitations, as appropriate, to protect the public health and safety and to reduce the exposure of individuals and property to seismic risks.</p> <p>Goal 2: Minimize flooding hazards in the City of Monrovia.</p> <p>Action 2.1.1.1: Implement the following development standards as flood control and landslide protection measures:</p>	<p>the project must provide safety with respect to fire, earthquake faults, drainage, and erosion control before the Commission shall grant a hillside development permit.</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<ul style="list-style-type: none">Graded slopes, other than those constructed in rock, shall be planted or otherwise protected from the effects of storm runoff erosion and shall be benched or terraced as required to provide for adequate drainage. Planting shall be designed to blend with the surrounding terrain and development. Graded slopes in rock shall be provided with soil pockets to contain landscaping where appropriate. Irrigation facilities shall be provided where necessary for proper establishment and maintenance of the planted areas.Provision shall be made to prevent surface waters from eroding natural and graded slopes.Graded slopes over three feet in vertical height and all graded slopes to be maintained by a Landscape Maintenance District, or other City approved maintenance agreement, shall be planted to protect against erosion. Planting shall be in the ratio of at least one tree per three hundred square feet of slope and one shrub per one hundred fifty square feet, with ground cover sufficient to cover the bank within one year from planting.For all projects that require grading, a soils engineering report shall be required to include data regarding the nature, distribution and strengths of existing soils, conclusion and recommendations for grading procedures, design criteria for and identified corrective measures, and opinions and recommendations regarding existing conditions and proposed grading. This investigation and report shall be performed by a professional soil engineer experienced in the practice of soil mechanics and registered with the State of California.Hillside development shall provide all necessary sewers, storm drains, debris basins and other flood control measures as specified in specific plans.		
Montebello	<p>Seismic Safety Element</p> <p>Goal 1: To promote consideration of seismic standards and criteria for existing structural hazards.</p> <p>Goal 2: To develop land use standards and development related to the level of seismic hazards.</p> <p>Goal 3: To establish a seismic hazards review procedure.</p> <p>Objective 1: To promote consideration of seismic standards and criteria for existing structural hazards.</p> <p>Objective 2: To develop land use standards and development regulations related to the level of seismic hazards.</p> <p>Objective 3: To establish a seismic hazards review procedure.</p> <p>Objective 4: To assure consistency of all elements of the General Plan with the Seismic Safety Element.</p> <p>Objective 5: To define and coordinate a disaster preparedness program in conjunction with other General Plan Elements.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Chapter 15.36 (Seismic Safety Code), Sections 15.36.010 (Adoption) and Section 15.36.030 (Purpose), and Chapter 15.48 (Grading), Section 15.48.040 (Applicability of provisions.), Section 15.48.060 (Permit—Required), and Section 15.48.070 (Supervised grading permit—Required when.)</p> <p>Under Chapter 15.36 (Seismic Safety Code), Section 15.36.010 (Adoption), subject to certain changes and amendments hereinafter set forth in this chapter, the city council does adopt as the seismic safety regulations for the city, the 2019 California Building Code (Title 24, California Code of Regulations), based on the 2018 International Building Code, and as thereafter amended and published from time to time, by the California Building Standards Commission (hereinafter referred to as the “code”). The code provides minimum standards to safeguard life or limb, health, property and public welfare by regulating and controlling the hazardous to life and property from seismic activity is made a part as though fully set forth in this chapter. One copy of the code is on file in the office of the city clerk for public inspection, and the same is made a part hereof as though fully set forth in this chapter.</p> <p>(Prior code § 8250)</p> <p>(Ord. No. 2336, § 43, 3-10-2010; Ord. No. 2347, § 9, 12-14-2011; Ord. No. 2356, § 19, 2-26-2014; Ord. No. 2392, § 30, 1-25-2017; Ord. No. 2421, § 42, 5-13-2020; Ord. Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>Under Chapter 15.36 (Seismic Safety Code), Section 15.36.030 (Purpose), the framework for the chapter’s success are framed below:</p> <p>A. The purpose of this chapter is to promote public safety and welfare by reducing the risk of death or injury that may result from the effects of earthquakes on unreinforced masonry bearing wall buildings constructed before 1934. Such buildings have been widely recognized for their sustaining of life hazardous damage as a result of partial or complete collapse during past moderate to strong earthquakes.</p> <p>B. The provisions of the ordinance codified in this chapter establish minimum standards for structural seismic resistance for the purpose of reducing risk of life loss or injury and will not necessarily prevent loss of life or injury or prevent earthquake damage to an existing building which complies with these standards. This chapter does not require existing electrical, plumbing, mechanical or fire safety systems to be altered unless they constitute a hazard to life or property.</p> <p>C. This chapter provides systematic procedures and standards for identification and classification of unreinforced masonry bearing wall buildings based on their present use.</p> <p>Priorities, time periods and standards are also established under which these buildings are required to be structurally analyzed and anchored. Where the analysis determines deficiencies, this chapter requires the building be strengthened or demolished.</p> <p>(Prior code § 8251)</p> <p>Chapter 15.8 (Grading), Section 15.48.040 (Applicability of provisions.), the provisions of this chapter shall apply to all persons, including any county, state or federal governmental agency, or any department, commission or board thereof, or a public utility, except the city; but, notwithstanding the provisions of this chapter, no such governmental agency or public utility shall be required to pay the city any fee.</p> <p>(Prior code § 8701 (part))</p> <p>Chapter 15.48 (Grading), Section 15.48.060 (Permit—Required.), no person shall do any grading, nor shall the owner of any real property located in the city cause or allow any grading to be performed on any such land without first obtaining a grading permit therefor from the city engineer.</p> <p>(Prior code § 8703 (part))</p> <p>Chapter 15.48 (Grading), Section 15.48.070 (Supervised grading permit—Required when.)</p> <p>A supervised grading permit shall be issued and performed under the supervision of a civil engineer if such grading will result in any one or more of the following conditions:</p> <p>A. Any excavation or fill exceeding a depth of three feet;</p> <p>B. Any excavation or fill within any public easement or public area;</p> <p>C. Any excavation or fill which will encroach upon, altar, or interfere with any natural watercourse;</p> <p>D. Any excavation or fill which will divert the surface water drainage to or from any adjoining property;</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>E. Any excavation or fill which will not permit surface water to drain by overland flow at a minimum slope of one percent, to the nearest practical street, storm drain or natural watercourse;</p> <p>F. Any excavation or fill in excess of five thousand cubic yards per lot or per acre, whichever may involve the smallest land area, provided the excavation or fill also results in any one or more of the preceding conditions:</p> <p>G. Any excavation or fill in connection with oil and gas defined in Section 5.52.020;</p> <p>H. Any excavation or fill where the city engineer determines that special conditions or potential hazards exist.</p> <p>(Prior code § 8703 (A))</p>	
Pasadena	<p>Safety Element:</p> <p>Goal S-1: Minimize injury and loss of life, property damage, and other impacts caused by seismic shaking, fault rupture, ground failure, earthquake-induced landslides, and other earthquake-induced ground deformation.</p> <p>Policy S-1: The City will monitor development or re-development within the Fault Hazard Management Zones identified for both the Sierra Madre and Raymond faults.</p> <p>Program S1-1: The City will cooperate with State and Federal agencies in conducting geological investigations of the Sierra Madre and Raymond faults. The City will investigate the possibility of partnering with the Earthquake Hazards Program of the U.S. Geological Survey to better identify the active traces of the Sierra Madre fault.</p> <p>Program S1-2: The City shall require geological studies, such as fault-trenching, of the defined traces of the Sierra Madre and the Raymond fault traces shown on Plate P-1. The studies shall be conducted by State-certified engineering geologists following the guidelines established in the Alquist-Priolo Earthquake Fault Studies Act. This should apply to the development and redevelopment of residential, commercial, or industrial parcels or tracts that amount to 5,000 square feet or more. The City Geologist shall review the fault studies to ensure that the excavations were conducted with an acceptable level of effort to determine whether or not there are active faults through the proposed development, and that suitable fault setbacks are defined.</p> <p>Program S1-3: The City will require geological studies of the less well-defined traces of the Sierra Madre fault shown on Plate P-1 for critical facilities proposed within this zone. The studies shall be conducted by State-certified engineering geologists.</p> <p>Policy S-2: The City will ensure that current geologic knowledge and State-certified professional review are incorporated into the design, planning and construction stages of a project, and that site specific data are applied to each project.</p> <p>Program S2-1: The City shall retain on staff, or on a contract basis, a State-certified engineering geologist and a geotechnical engineer to review all geotechnical studies for proposed development or redevelopment, including fault studies (Programs S1-1 through S1-3), and to review grading operations (Programs S2-3 and S2-4). These individuals, whether on staff or under contract to the City, are referred to herein as the City Geologist and City Geotechnical Engineer, respectively.</p> <p>Program S2-2: The City will modify the fault hazard management zones for the Raymond and Sierra Madre faults as data obtained from the implementation of Programs S1-1 through S1-3 become available. Modification of the map will be conducted by or under the direction of the City Geologist.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Chapter 14.05 (Excavation and Grading in Hillside Area), and Chapter 14.04 (Building Code and Related Codes).</p> <p>Chapter 14.05 (Excavation and Grading in Hillside Area) provides the provisions for excavation and grading activities on any one lot in the hillside development overlay (HD) districts; and on a slope any portion of which is greater than 15 percent. Required reports by the Chapter include (1) an engineering geology report (Section 14.05.081) prepared by an engineering geologist describing the geology of the site with opinions and recommendations covering the adequacy of structural locations to be developed by the proposed grading based upon recognized engineering standards, (2) a soil engineering report (Section 14.05.082) prepared by a soils engineer detailing data and conclusions regarding the nature, distribution and strength of existing soils, conclusions and recommendations for grading and compaction procedures and design criteria for corrective measures when necessary, and opinions and recommendations covering adequacy of sites to be developed by the proposed grading based upon recognized engineering standards, (3) a soil loss report (Section 14.05.083) for grading in excess of 2,000 cubic yards prepared by a soils or civil engineer containing calculations showing the predicted soil loss under natural conditions, the soil loss potential, the soil loss during the grading and construction period, and the predicted annual loss following completion of the project based upon recognized engineering standards, and (4) an erosion and sedimentation control design report and plans (Section 14.05.084) describing in detail the necessary methods, management practices and mechanical devices which will be used to mitigate the release of sediment-laden waters from the project standards.</p> <p>Chapter 14.04 (Building Code and Related Codes) details the Building Code of the City adopted from the California Building Code with associated amendments. Of the amended codes the following pertain to geology and soils (1) Section 14.04.142 (Section 1613.6 is added to Chapter 16 of the 2022 Edition of the California Building Code to read as follows) regarding minimum standards for seismic force resistance to reduce the risk of injury or loss of life in the event of earthquakes.</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Program S2-3: The City shall require geological and geotechnical investigations in areas of potential seismic or geologic hazards as part of the environmental and development review process. The City shall not approve proposals and projects for development or redevelopment which do not provide for mitigation of seismic or geologic hazards to the satisfaction of the responsible agencies.</p> <p>Program S2-4: The City shall continue to require preliminary geological investigations of tract sites by State-registered geotechnical engineers and certified engineering geologists (in accordance with the California Building Code).</p> <p>Program S2-5: The City shall continue to require liquefaction assessment studies in areas identified as susceptible to liquefaction in accordance with the California Geological Survey Special Publication 117 Guidelines, and the Southern California Earthquake Center’s procedures to implement Special Publication 117.</p> <p>Policy S-3: The City will strive to ensure that the design of new, and the performance of existing structures address the appropriate earthquake hazards.</p> <p>Program S3-1: The City shall continue to enforce the seismic design provisions for Seismic Zone 4 of the California Building Code, including near-source seismic conditions.</p> <p>Program S3-2: The City will identify un-retrofitted buildings, including tilt-up construction, non-ductile reinforced concrete, and tuck-under parking and other soft-story construction. A catalog of these buildings in the City will be completed.</p> <p>Policy S-7: The City will educate the public on the hazards that can pose a risk to the City and its residents, and will describe loss reduction strategies that can be used to mitigate the specific hazards identified.</p> <p>Program S-7.1: The City will regularly review the technical data on public safety and seismic safety for use in the planning process and undertake a technical update to the Safety Element as needed. This includes the periodic update of the maps that support the Technical Background Report with newly developed data obtained in response to geological studies undertaken for fault, liquefaction or landslide studies. Where sufficient data are developed to indicate that an area currently identified as susceptible to liquefaction is NOT liquefiable, modify the map to eliminate the need for future studies in that area. Results of these findings will be submitted to the California Geological Survey.</p> <p>Goal G-1: Minimize the risk to life or limb, and property damage resulting from soil and slope instability.</p> <p>Policy G-1: Whenever possible, mitigation of geologic hazards will be conducted without violating the property owners’ rights to modify or improve their investment, along with preserving the aesthetic or natural conditions of the area through minimal grading. When these goals are in conflict, protection of life and property will take precedence.</p> <p>Program G1-1: In the areas of Pasadena susceptible to slope instability, the City will require geotechnical investigations that include engineering analyses of slope stability, provide surface and subsurface drainage specifications, and provide detailed design for fill placement and excavation.</p> <p>Program G1-2: The City will discourage any grading beyond that which is necessary to create adequate and safe building pads. The City Geologist and Geotechnical Engineer shall conduct regular inspection of grading operations to maximize site safety and compatibility with community character.</p>		

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Program G1-3: In the hillside or mountainous areas of Pasadena, the City will discourage excessive grading of slopes greater than 3:1 (horizontal: vertical), and will encourage varied slope ratios on design slopes to reduce the visual impact of grading.</p> <p>Program G-1.4: The City shall prohibit cut or fill slopes steeper than 2:1.</p> <p>Policy G-2: The City will continue to participate in regional programs designed to protect the groundwater resources of the Raymond Basin while protecting the area from the hazard of regional ground subsidence.</p> <p>Program G-2.1: The City will continue to encourage water conservation through public education.</p> <p>Program G-2.2: The City will participate in a technical group consisting of representatives from various cities in the Raymond Basin brought together to evaluate the feasibility of implementing artificial recharge programs, protecting groundwater quality, monitoring the ground water, and publishing annual reports on basin conditions.</p>		
Pico Rivera	<p>Safety Element:</p> <p>Goal 9.1: Standards, improvements and actions that minimize risks posed by geologic and seismic hazards.</p> <p>Policy 9.1-2 Geotechnical Studies. Require that geotechnical studies be prepared for development in areas where geologic or seismic hazards may be present, such as liquefaction in the central portion of the city and in the Whittier Narrows Dam area.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Chapter 17.32 (Improvements), Section 17.32.130 (Flood or geological hazard protection), and Division IV (Water Conservation), Section 13.90.060 (Soil and grading requirements).</p> <p>Title 15 (Buildings and Construction), Section 15.08.220 (Chapter 38 added—Grading and excavation) includes amendments to Chapter 38 of the California Building Code, included as an attachment to this title.</p> <p>Under Section 13.90.060 (Soil and grading requirements):</p> <p>A. Soil testing shall be performed after mass grading if applicable, prior to landscape installation to ensure the selection of appropriate plant material that is suitable for the site, and reported in a soil management plan. The soil management plan shall include:</p> <ol style="list-style-type: none">1. Determination of soil texture, indicating the available water holding capacity;2. An approximate soil infiltration rate measure or derived from soil texture/infiltration rate tables. A range of infiltration rates shall be noted where appropriate;3. Measure of pH and total soluble salts;4. For landscape installations, compost at a rate of minimum of four cubic yards per one thousand square feet of permeable area shall be incorporated to a depth of six inches into the soil. Soils with greater than six percent organic matter in the top six inches of soil are exempt from adding compost and tilling.5. For landscape installations, a minimum three-inch layer of mulch shall be applied on all exposed soil surfaces of planting areas except in turf areas, creeping or rooting groundcovers, or direct seeding applications where mulch is contraindicated. To provide habitat for beneficial insects and other wildlife up to five percent of the landscape area may be left without mulch. Designated insect habitat must be included in the landscape design plan as such.6. Organic mulch materials made from recycled or post-consumer materials shall take precedence over inorganic materials or virgin forest products unless the recycled post-consumer organic products are not locally available. Organic mulches are not required	<p>A Pico Rivera Hazard Mitigation Plan has been submitted in a draft form as of early 2024; no final plan has been certified/approved.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>where prohibited by local fuel modification plan guidelines or other applicable local ordinances.</p> <p>7. Recommended amendments.</p> <p>B. Grading on-site shall be designed to minimize unnecessary soil compaction, erosion and water waste. Grading plans must satisfy all other applicable laws related to grading and be submitted as part of the landscape documentation package.</p> <p>C. Where slopes exceed 10 percent, a grading plan drawn at the same scale as the planting plan that accurately and clearly identifies finished grades, drainage patterns, pad elevations, spot elevations, and stormwater retention improvements.</p> <p>(Ord. 1061 § 1, 2010; Ord. 1150 § 3, 2021)</p> <p>Under Section 17.32.130 (Flood or geological hazard protection), the city council may require such structures to be installed as are necessary for the proper functioning and maintenance of the improvements required to remove a flood or geological hazard and as are necessary for the protection of property adjacent to the division of land.</p> <p>(Prior code § 9108.11; Ord. 855 § 3, 1994)</p>	
Pomona	<p>Noise and Safety Element:</p> <p>Goal 7G.G10: Avoid exposure to hazards, minimize losses to existing property and reduce the potential for damage to future development.</p> <p>Goal 7G.G11: Protect Pomona’s unique character and values from being compromised by seismic events.</p> <p>Policy 7G.P26: Limit development in high-risk seismic and landslide hazard areas.</p> <p>Policy 7G.P27: Provide educational materials about structural hazards to all property owners and renters in areas at risk of liquefaction.</p> <p>Policy 7G.P28: Make available at reasonable cost City building inspectors to review and identify vulnerabilities in structures in areas at risk of liquefaction and make cost-efficient rehabilitation recommendations to mitigate ground shaking and liquefaction hazards. Provide public funds to lower and moderate-income homeowners, and to landlords that rent to lower and moderate income households, to subsidize the enactment of the City inspectors’ recommendations.</p> <p>Policy 7G.P30: Continue to regularly update building and fire codes to provide for seismic safety design.</p> <p>Policy 7G.P32: Require that unreinforced masonry buildings be retrofitted during remodels to minimize damage in the event of seismic or geologic hazards. (A similar policy is also in the City’s Natural Hazards Mitigation Plan, adopted November 2004.)</p> <p>Policy 7G.P35: Review and amend the extent of property subject to the Zoning Ordinance’s Hillside Overlay District to ensure that all potential landslide areas are included.</p> <p>Policy 7G.P36 Require new development located above or below areas of potential landslide to include risk mitigation measures, such as barriers to moving earth or strategic placement of parking lots, which will lessen the risk of injury or death from landslides.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Section .58010 (Development for hillside property).</p> <p>Section .58010 (Development for hillside property) establishes the requirements for developments within the City’s hillsides. Policies specific to excavations and grading include the following (1) when required by the building code, a grading plan based on an accompanying report from a soils engineer and a geologist who is licensed by the state of California shall be submitted for approval as part of the application for site plan approval for a hillside development and said plan shall be approved by the advisory review board, (2) no excavation shall be permitted on any hillside area prior to the approval of a site plan and a grading plan excepting to drill holes and exploratory trenches for purposes of collecting geological and soils data, and (3) no hillside development shall be approved if a geology report prepared by a geologist who is licensed by the state of California states that construction should be prohibited.</p>	<p>City of Pomona Natural Hazards Mitigation Plan Part II (Pomona 2012):</p> <p><i>Protect Life and Property</i></p> <p>Goal 1.3: Minimize losses to existing property and reduce potential for damage to future development.</p> <p>Objective 1.3.2: Coordinate land use plans and regulations to direct development away, or buffer development from, area and site-specific natural hazards.</p> <p>Objective 1.3.3: Encourage insurance coverage for earthquake events.</p> <p>Objective 1.3.6: Avoid localized hazards and associated risks to property and people by implementing appropriate improvements, such as construction of stormwater drainage improvements for localized flooding and slope stabilization measures for localized landslide conditions.</p> <p><i>Natural Systems</i></p> <p>Goal 3.1: Balance natural resource management, and land use planning with natural hazard mitigation to protect life, property, and environment.</p> <p>Objection 3.1.1: Preserve, rehabilitate, and enhance natural systems to serve natural hazard mitigation functions where possible, recognizing the built-out character of the City.</p> <p>Goal 5.1: Ensure continued operations when the City is impacted by natural hazard events (Objective 5.1.1).</p> <p>Mitigation Action 5.8: Stabilizing Ganesha Park Slopes</p>
Rosemead	Public Safety Element:	No applicable ordinances were identified.	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 1: The City of Rosemead will act in cooperation with federal, State, and County agencies responsible for the enforcement of planning statutes, environmental laws, and building codes to minimize, to the extent practical, risks to people and property damage, risks related economic and social disruption, and other impacts resulting from 1) geologic and soil hazards, 2) seismic hazards including primary and secondary effects of seismic shaking, fault rupture, and other earthquake-induced ground deformation in Rosemead, and 3) dam failure-induced flood and inundation hazards, while reducing the disaster recovery time due to hazard incidents in Rosemead. The City of Rosemead will continue using a HAZUS-based loss estimation analysis to more fully quantify potential physical damage, economic loss, and social impacts from these events.</p> <p>Policy 1.1: Geology and Soil Hazards</p> <ul style="list-style-type: none">a) Encourage development in low hazards areas and implement actions that minimize changes to the natural topography and drainages, while protecting public safety and reducing potential property damage due to geologic and soil hazards through the use of proper design and construction techniques.b) Assure that all aspects of the geotechnical and engineering geology evaluation process (planning, investigation, analysis, reporting, review, construction, and operations) for new development and redevelopment are conducted, and independently reviewed, by qualified professionals. <p>Policy 1.2: Earthquake and Fault Hazards</p> <ul style="list-style-type: none">a) Minimize the exposure of people and property to primary and secondary earthquake-related hazards, while allowing properly designed projects to be developed in appropriate locations.b) Assure that all aspects of the earthquake, fault rupture, liquefaction, and related seismic hazard evaluation process (planning, investigation, analysis, reporting, review, construction, and operations) for new development and redevelopment are conducted, and independently reviewed, by qualified professionals. <p>Action 1.7: Encourage only the minimum grading necessary to create suitably sized and safe building areas.</p> <p>Action 1.8: Avoid grading and development that requires filling natural drainages or changing natural surface water flow patterns.</p> <p>Action 1.9: As required by law and statute, the City shall implement applicable federal, State, and County regulations related to geologic and soils investigations, analyses, designs, and construction, including but not limited to implementing the most up-to-date California Building Code (CBC) provisions regarding lateral forces (Chapter 23) and grading (Chapter 70), and incorporate and adopt Los Angeles County amendments to the CBC.</p> <p>Action 1.10 Require proper geotechnical and engineering geological investigations and reports that address and evaluate necessary analyses of (for example) soil foundation conditions (i.e., expansivity, collapse, seismic settlement), slope stability, surface and subsurface water, and provide necessary design recommendations for grading and site stability, such as excavation, fill placement, and stabilization or remediation measures.</p> <p>Action 1.11: Require routine inspection of grading operations by properly qualified City representatives to assure site safety and compatibility with approved plans and specifications.</p>		

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Action 1.12: Regularly review the technical data on public safety, seismic safety, and flooding safety for use in the planning process and undertake revisions or updates to the Public Safety Element as needed.</p> <p>Action 1.14: Required geological studies shall be conducted by California Certified Engineering Geologists following the guidelines published by the California Geological Survey and the State Mining and Geology Board, and geotechnical studies shall be conducted by California Registered Geotechnical Engineers.</p> <p>Action 1.15: Required liquefaction assessment studies shall be conducted in accordance with (a) the California Geological Survey’s Special Publication 117: Guidelines for Evaluating and Mitigating Seismic Hazards in California, (b) the Southern California Earthquake Center’s (1999 or subsequent document, as amended) procedures to implement Special Publication 117.</p> <p>Liquefaction Hazards, and (c) the Earthquake Engineering Research Center’s Report No. EERC-2003-6; Recent Advances in Soil Liquefaction Engineering: A Unified and Consistent Framework. Required slope stability analyses shall be conducted in accordance with California Geological Survey’s Special Publication 117: Guidelines for Evaluating and Mitigating Seismic Hazards in California, and the Southern California Earthquake Center’s (2002 or subsequent document, as amended) guidelines for evaluating and mitigating landslide hazards.</p> <p>Action 1.16: As required by law and statute, the City shall implement applicable federal, State, and County regulations related to earthquake hazard investigations, analyses, designs, and construction, including but not limited to the adoption of applicable sections of the current California Building Code and the County of Los Angeles Geotechnical Guidelines, and compliance with the State Alquist-Priolo Earthquake Fault Zoning Act and the Seismic Hazards Mapping Act requirements.</p> <p>Action 1.18: Encourage most new construction in areas with a minimum of identified earthquake-related and flood-related hazards.</p> <p>Action 1.22 Require routine and special inspection of investigation sites (e.g., fault exploration trenches) and grading operations by properly qualified City representatives to assure scientifically adequate methods, site safety, and compatibility with approved plans and specifications.</p>		
San Dimas	<p>Safety Element:</p> <p>Goal S-1: To maintain San Dimas safe from natural, seismic, and public safety hazards.</p> <p>Objective 1.1: Manage development of San Dimas to protect areas subject to geologic hazards.</p> <p>Policy 1.1.1: Continue to adopt updated versions Uniform Building Code and require all new private and public construction to conform to its earthquake resistant design provisions.</p> <p>Policy 1.1.2: Review and update, as appropriate, the Multi-Hazard Functional Planning Guidance document.</p> <p>Policy 1.1.3: Require that adequate soils, geologic and structural evaluation reports be prepared, by registered soils engineers, engineering geologists, and/or structural engineers, as appropriate, for all new development.</p> <p>Policy 1.1.4: Require that geological reports, building plans and the appropriate sections of environmental impact reports be reviewed by registered engineering geologists and/or structural engineers.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Section 15.04.010 (Adoption), Section 8.16.020 (Nuisances designated – Definition), Section 18.164.040 (Development Plan – Submission), and Section 18.124.020 (Uses permitted).</p> <p>Section 15.04.010 (Adoption), states that the City of San Dimas has adopted the California Building Code, 2022 Edition, Volumes 1 and 2, including Appendix Dhapters “C,” Agricultural Buildings “F,” Rodent proofing “I,” Patio Covers and “J,” Grading based on the 2021 International Building Code as published by the International Code Council as the City building code for regulating the construction, alteration, movement, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal and demolition of every buildings and/or structures or any appurtenances connected or attached to such buildings or structures throughout the City. The amendments in this chapter and referenced appendices are necessary due to the unique geology and topography and climate of San Dimas that can produce, significant lateral movement due to earthquakes as well as the climate that can produce high wind loads. (Ord. 1295 § 1, 2022)</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 1.1.5: Evaluate disaster plans and potential effectiveness in light of various earthquake intensities.</p> <p>Policy 1.1.6: Encourage the creation of countywide systematic review of emergency preparedness organizations, schools, police departments and programs.</p> <p>Policy 1.1.7: Establish a volunteer citizens Disaster Group to help during emergencies.</p> <p>Policy 1.1.8: Locate facilities that are necessary for post-disaster emergency services in areas of low geologic hazard risk.</p> <p>Implementation Measure a: Grading Ordinance and Erosion Control Ordinance: Continued enforcement to minimize risks associated with seismic hazards.</p> <p>Implementation Measure b: Geology and Soils Reports: Prior to hillside and flay land development these reports will be required.</p>	<p>Section 8.16.020 (Nuisances designated – Definition) describes unlawful maintenance of premises that result in injurious or potentially injurious to the public health, safety and welfare or to adjacent properties. The following is considered unlawful (E) land, topography, geology or configuration of which, whether in natural state or as a result of grading operations, excavation or fill, causes erosion, subsidence or surface water drainage problems of such magnitude to be injurious or potentially injurious to the public health, safety and welfare or to adjacent properties. (Ord. 1170 § 5, 2007; Ord. 1012 § 1, 1994)</p> <p>Section 18.164.040 (Development Plan – Submission) states the requirements for submitting development plans for hillside development. Among the requirements are data describing the existing topographic, soils, geologic, seismic and drainage conditions at the proposed site. (Ord. 754 § 1, 1981; Ord. 463 § 1, 1974; Ord. 37 § 703.06, 1961)</p> <p>Section 18.124.020 (Uses permitted) describes the general uses permitted in areas of the City zoned Open Space. General uses include (4) open space for public health and safety including, but not limited to, areas which require special management or regulations because of hazardous or special conditions such as earthquake fault zones, unstable soil areas, floodplains, watershed, areas presenting high fire risk, areas required for the protection of water quality and water reservoirs and areas required for the protection and enhancement of air quality. Specific areas include the following:</p> <ol style="list-style-type: none">1. Apiaries;2. Aquariums;3. Arboretums;4. Botanical gardens;5. Country clubs and golf courses;6. Cultural centers;7. Field crops, horticulture;8. Fisheries;9. Flood control channels, spreading grounds and settling basins;10. Forest reserves;11. Orchards and vineyards;12. Outdoor recreation areas;13. Scenic reserves;14. School sites;15. Transportation corridors and freeway rights-of-way;16. Tree farms, horticulture;17. Utility easements;18. Wildlife reserves;19. Zoological gardens;20. Living quarters of caretakers or managers of those uses set forth in this section;21. Accessory structures and uses necessary or incidental to the above uses. <p>(Ord. 565 § 1, 1977; Ord. 449 § 1, 1973; Ord. 37 § 200.1, 1961)</p>	

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
San Gabriel	<p>Public and Environmental Safety:</p> <p>Goal 5.1: Minimize the potential for loss of life and property from geologic and seismic hazards.</p> <p>Target 5.1.1: Ensure that the buildings and structures are adequately retrofitted and maintained for seismic shaking in accordance with State regulations.</p> <p>Action 5.1.1.1: Maintain a database of buildings and structures already retrofitted from past earthquakes and create a list of buildings to be retrofitted from seismic hazards.</p> <p>Action 5.1.1.2: Establish programs to encourage retrofit including reduced permit fees, grants to offset retrofit costs, or loan programs.</p> <p>Action 5.1.1.3: Provide information to the public on ways to reinforce buildings to reduce damage from earthquakes.</p> <p>Target 5.1.2: Protect life, safety and essential lifelines; reduce the potential for property damage from liquefaction; and promote the collection of more complete information on liquefaction susceptibility throughout the City.</p> <p>Action 5.1.2.1: Provide public information on awareness of liquefaction effects and ways to minimize property damage from its impacts.</p> <p>Action 5.1.2.2: Collect information every six months from the Department of Interior United States Geological Survey on liquefaction susceptibility and its potential impacts within the San Gabriel Valley.</p> <p>Action 5.1.2.3: Relate land use regulations regarding potential liquefaction zones to the importance or criticality of the use, size of the facility, and relative ease of evacuation of occupants if the building is damaged by liquefaction.</p> <p>Target 5.1.3: Protect life safety, substantially reduce the damage from fault rupture, and help ensure orderly evacuation of building occupants following an earthquake.</p> <p>Action 5.1.3.1: Promote and maintain the collection of relevant data from the Department of Interior United States Geological Survey, including FEMA maps showing faults within the San Gabriel Valley.</p> <p>Action 5.1.3.2: Provide public information via the City’s internet home page to community residents and businesses regarding the City’s Multihazard Functional Plan that will help improve the orderly evacuation of occupants following an earthquake.</p> <p>Goal 5.6: Attain a high level of emergency preparedness.</p> <p>Target 5.6.1: Maintain and update the City’s Multihazard Functional Plan, as required by State law, to minimize the risk to life and property of seismic and geologic hazards, flooding, hazardous materials and waste, fire, and consequences of a terrorist attack.</p> <p>Seismic Implementation Measures:</p> <ul style="list-style-type: none">• Earthquake prediction response plans should be developed, including procedures for protecting occupants of hazardous buildings, appropriate warning announcements and public education procedures, and other short-term preparations.• Cooperation of the business community should be enlisted for public education and mutual assistance through the Chamber of Commerce. Businesses should develop their own disaster response plans and have provisions for food, water, first aid and shelter of employees who may not be able to return home for several days following a major earthquake.	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Section 100.062 (Backfilling).</p> <p>Section 100.062 (Backfilling) describes the requirements for backfilling excavation sites in public places. Among the requirements is the furnishing of soil tests certified by a registered professional specializing in soils engineering. Prior to resurfacing, tests when required must show that the backfill material meets the minimum requirements as prescribed by the Administrative Authority. The permittee may be required to bear the expense of such tests.</p> <p>(‘65 Code, § 7-3.19) (Ord. 349-C.S., passed)</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 8.7: Minimize the harmful effects of seismic and geological hazards to people and property.</p> <p>Target 8.7.1: Reduce injuries and death due to earthquakes.</p> <p>Target 8.7.2: Reduce the potential damage caused by liquefaction.</p> <p>Action 8.6.2.1: Educate staff, local architects, builders, and property owners about how projects designed to be located in liquefaction areas should be built.</p> <p>Action 8.6.2.2: Require buildings in these areas to undergo an investigation that is more stringent, to reduce the potential for injury or loss of life.</p> <p>Enhanced Seismic and Geological Safety Implementation Measures:</p> <ul style="list-style-type: none">• Provide additional points to Community Development Block Grant projects and Redevelopment projects that incorporate seismic retrofitting.• Create a seminar for local architects, designers, and builders on the issues surrounding new construction in liquefaction areas.• Create a standard condition on all new construction for projects within the liquefaction zone that requires the construction to conform to the recommendations found in a geological technical study.• Avoid construction within any designated fault zone that exists within, or subsequently found to exist within, an Alquist-Priolo Special Studies Zone (lands specified by State law as being restricted because of recent seismological activity).• The City shall work with the County of Los Angeles, surrounding cities, local non-profit organizations, school districts, and other like agencies to help improve San Gabriel’s environment.		
San Marino	<p>Safety Chapter</p> <p>Flood and Seismic Safety</p> <p>Goal 1: Reduce to a minimum the loss of life, disruption of services and destruction of property associated with seismic activity.</p> <p>Objective S.5 Ensure that the City’s development related ordinances and policies reflect state laws.</p> <p>Policy 1.6: Prohibit the location of new critical, sensitive, and high occupancy facilities on or in proximity to active and potentially active faults.</p> <p>Objective S.6 Enhance the preparedness of City agencies and the community to respond to and recover from a major earthquake.</p> <p>Policy 1.6: Maintain a multi-hazard emergency preparedness plan that includes seismic safety.</p> <p>Objective S.7 Maximize seismic safety in residential structures.</p> <p>Emergency Preparedness</p> <p>Goal 1: Reduce life safety risks in the community.</p> <p>Policy 1.1: Implement an emergency response strategy in the event that public services are disrupted by seismic or other natural hazards.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Article 07 (Seismic Retrofit of Unreinforced Masonry Buildings), Section 25.07.01 (Seismic Safety Commission Draft Model Ordinance Adopted)</p> <p>Under Article 07 (Seismic Retrofit of Unreinforced Masonry Buildings), Section 25.07.01 (Seismic Safety Commission Draft Model Ordinance Adopted) the State of California Seismic Safety Commission Draft Model Ordinance, February 1990 Edition, as amended and in effect on November 1, 1990, is hereby adopted by reference as the Seismic Safety Ordinance of the City. The Draft Model Ordinance was recommended by the Seismic Safety Commission for local government consideration as a model for an earthquake hazard mitigation program for unreinforced masonry.</p> <p>(Ord. 984, 2-13-91)</p> <p>Article 15 (Water Efficient Landscaping), 23.16.10 (Grading Design Plan) provides soil/grading requirements for the efficient use of water, grading of a project site shall be designed to minimize soil erosion, runoff, and water waste. A grading plan shall be submitted as part of the landscape documentation package. A comprehensive grading plan prepared by a civil engineer for other city permits satisfies this requirement.</p> <p>1. The project applicant shall submit a landscape grading plan that indicates finished configurations and elevations of the landscape area including:</p> <p>a. Height of graded slopes;</p> <p>b. Drainage patterns;</p>	<p>The city of San Marino is preparing a 2024 update to the existing 2019 Local Hazard Mitigation Plan (LHMP) with a preliminary completion deadline of Winter 2024. The following are relevant Earthquake Mitigation Action Items:</p> <p>Long Term -Earthquake #4: Non-Structural Hazard Mitigation: Encourage reduction of nonstructural and structural earthquake hazards in homes, schools, businesses, and government offices. Provide information to government building and school facility managers and teachers on securing bookcases, filing cabinets, light fixtures, and other objects that can cause injuries and block exits. Explore partnerships to provide retrofitting classes for homeowners, renters, building professionals, and contractors.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>c. Pad elevations;</p> <p>d. Finish grade; and</p> <p>e. Stormwater retention improvements, if applicable.</p> <p>2. To prevent excessive erosion and runoff, it is highly recommended that project applicants:</p> <p>a. Grade so that all irrigation and normal rainfall remains within property lines and does not drain onto nonpermeable hardscapes;</p> <p>b. Avoid disruption of natural drainage patterns and undisturbed soil; and</p> <p>c. Avoid soil compaction in landscape areas.</p> <p>3. The grading design plan shall contain the following statement: “I have complied with the criteria of the ordinance and applied them accordingly for the efficient use of water in the grading design plan” and shall bear the signature of a licensed professional as authorized by law.</p> <p>(Ord. 0-16-1308, 12-14-2016)</p>	
South El Monte	<p>Public Health, Safety, and Environmental Justice Element</p> <p>Goal 1: Minimize risks, such as loss of life, injury, property damage, and natural resource destruction from natural hazards.</p> <p>Policy 1.2: Enforce Development Standards to Reduce Geologic Risk.</p> <p>Action 1.2b: Require liquefaction studies to be prepared for new development proposed to be located in areas of South El Monte with high susceptibility to liquefaction hazards.</p> <p>Goal 4: Strengthen regional systems and fortify critical infrastructure. Policy Policy 4.2: Advance Seismic Safety, Prioritizing the Most Vulnerable Buildings, Infrastructure, and Systems.</p> <p>Action 4.2b: Seek funding to conduct seismic strength evaluations of critical and essential facilities in South El Monte to identify vulnerabilities for mitigation of public infrastructure and critical facilities to meet current seismic standards.</p> <p>Action 4.2c: Integrate new earthquake hazard mapping data for the City of South El Monte and improve technical analysis of earthquake hazards.</p>	<p>Chapter 17.25 (Water Efficient Landscaping), Section 17.25.050 (Water efficient landscaping criteria).</p> <p>Section 17.25.050 (Water efficient landscaping criteria) requires a landscape design plan, prepared by a licensed landscape architect, meeting the following requirements shall be submitted as part of the landscape documentation package. The following specifications to geologic requirements under this section are as follows:</p> <p>Plant species and grouping: Plants shall be selected appropriately based upon their adaptability to the climatic, geological and topographical conditions of the site. Protection and preservation of native species and natural areas is encouraged. The planting of trees is encouraged wherever it is consistent with the other provisions of this chapter.</p>	No other applicable ordinances were identified.
Temple City	<p>Hazards Element:</p> <p>Goal H 8: Seismic Impacts. Adverse effects to life, property, and essential public facilities caused by geologic and seismic hazards are minimized.</p> <p>Policy H 8.1 Safety Standards. Enforce state and local seismic and geologic safety laws, standards, and guidelines, including the Alquist-Priolo Earthquake Fault Zoning Act, Seismic Hazard Mapping Act and the California Building Code throughout Temple City.</p> <p>Policy H 8.2 Existing Essential Public Facilities. Work with Los Angeles County to upgrade and/or retrofit existing essential public facilities (e.g., fire stations, sheriff stations, etc.) that do not meet current building and safety code standards as resources are available.</p> <p>Policy H 8.3 Geotechnical Investigations. Require geotechnical investigations prior to approval of development in areas where the potential for geologic or seismic hazards exists, addressing ground shaking, landslides, liquefaction, expansive soils, subsidence, and erosion and incorporate recommended mitigation measures to reduce or avoid hazards, as appropriate.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Section 110.2 (Geotechnical Hazards), Section 111 (Engineering Geology and Soils Engineering Reports), Section 112 (Earthquake Fault Maps), Section 113 (Earthquake faults), and Section 7-1-2 (Building Code Modified) of Title 7 (Building Code), and Section 4-2C-2 (Prohibited Public Nuisance Conditions).</p> <p>Section 110.2 (Geotechnical Hazards) establishes the conditions for refusal and granting of building and grading permits in areas of a geotechnically hazardous condition. Permits my be issues in the following cases (110.2.3.1) the applicant has submitted an engineering geology and/or soils engineering report or reports complying with the provisions of section 111 such that said reports show to the satisfaction of the building official that the hazard will be eliminated prior to the use or occupancy of the land or structures, (110.2.3.2) the applicant has submitted an engineering geology and/or soils engineering report or reports that comply with the provisions of section 111, and that demonstrate, to the satisfaction of the building official, that the site is safe for the intended use, Section 110.2.3.3 – 110.2.3.8 describes the process specific</p>	No other applicable ordinances were identified.

	<p>Policy H 8.4 Unreinforced Structures. Maintain an inventory of and retrofit unreinforced masonry, soft-story, and other structures susceptible to seismic-induced damage in Temple City.</p> <p>Policy H 8.5 Education and Coordination. Establish a public relations and education program to increase community awareness for seismic preparedness, including Community Emergency Response Teams (CERTs).</p> <p>Policy H 8.6 Multi-Agency Seismic and Geologic Information. Establish cooperative partnerships with federal, state, and local agencies to promote sharing of educational information regarding seismic and geologic hazards and safety.</p> <p>Policy H 8.7 Major Utility Coordination. Coordinate and cooperate with public and quasi-public agencies to ensure that major utility systems and roadways have continued functionality in the event of a major earthquake or other seismic or geologic hazard.</p>	<p>to the erection or alteration of structures, (110.2.3.9) notwithstanding any other provisions of this section, the building official may, at his or her discretion, deny a permit for any building, structure, or grading subject to hazard from landslide, settlement, or slippage, which cannot be mitigated and may endanger the health or safety of the occupants, adjoining property, or the public, (110.2.3.10) when the proposed work involves the repair and restoration of a slope. Before a permit may be issued pursuant to this section, the owner shall submit an engineering geology and/or soils engineering report or reports.</p> <p>Section 111 (Engineering Geology and Soils Engineering Reports) establish that the building official may require an engineering geology or soils engineering report, or both, where in the building official’s opinion, such reports are essential for the evaluation of the safety of the site. The engineering geology or soils engineering report or both shall contain a finding regarding the safety of the site of the proposed work against hazard from landslide, settlement or slippage and a finding regarding the effect that the proposed work will have on the geotechnical stability of the area outside of the proposed work. Any engineering geology report shall be prepared by a certified engineering geologist licensed in the state of California. Any soils engineering report shall be prepared by a civil engineer licensed in the state of California, experienced in the field of soil mechanics, or a geotechnical engineer licensed in the state of California. When both an engineering geology and soils engineering report are required for the evaluation of the safety of a building site, the two reports shall be coordinated before submission to the building official.</p> <p>Section 112 (Earthquake Fault Maps) adopts earthquake fault zone maps within the city prepared under sections 2622 and 2623 of the California Public Resources Code which show traces of earthquake faults on the date of official issues as a part of the City code. Earthquake fault zone maps revised under the above sections of the California Public Resources Code shall, on the date of their official issue, supersede previously issued maps which they replace.</p> <p>Section 113 (Earthquake faults) establishes the rules and regulations around the construction of buildings or structures near a known active earthquake fault. The provisions of this section apply only to permits for buildings or structures on individual lots or parcels and are not intended to be supplementary to geologic investigations required to qualify divisions of land as set forth in title 9 chapter 2 (Subdivision Regulations) the city of Temple City municipal code.</p> <p>Section 4-2C-2 (Prohibited Public Nuisance Conditions) establishes public nuisances within the City and declares it is a public nuisance and unlawful for any person to allow, cause, create, maintain, or suffer, or permit others to cause, create, or maintain any real property or premises in the city in such a manner that any (1) Land, the topography, geology or configuration of which whether in natural state or as a result of the grading operations, excavation or fill, causes erosion, subsidence, or surface water drainage problems of such magnitude as to be injurious or potentially injurious to the public health, safety and welfare, or to adjacent properties.</p> <p>Section 7-1-2 (Building Code Modified) describes the sections of the Los Angeles County Code adopted into the Building Code of the City of Temples and elects to amend, delete, or add thereto. Section J 105.12 is amended in its entirety to read;</p> <p>Section J 105.12 (Completion of Work). 		<p>supplements thereto are required for engineered grading or when professional inspection is otherwise required by the Building Official:</p> <ol style="list-style-type: none">1. A certification by the Field Engineer that to the best of his or her knowledge, the work within the Field Engineer’s area of responsibility was done in accordance with the final approved grading plan.2. A report prepared by the Soils Engineer retained to provide such services in accordance with Section J105.4, including locations and elevations of field density tests, summaries of field and laboratory tests, other substantiating data, and comments on any changes made during grading and their effect on the recommendations made in the approved soils engineering investigation report. The report shall include a certification by the Soils Engineer that to the best of his or her knowledge, the work within the Soils Engineer's area of responsibility is in accordance with the approved Soils Engineering report and applicable provisions of this chapter. The report shall contain a finding regarding the safety of the completed grading and any proposed structures against hazard from landslide, settlement, or slippage.3. A report prepared by the Engineering Geologist retained to provide such services in accordance with Section J105.5, including a final description of the geology of the site and any new information disclosed during the grading and the effect of such new information, if any, on the recommendations incorporated in the approved grading plan. The report shall contain a certification by the Engineering Geologist that, to the best of his or her knowledge, the work within the Engineering Geologists area of responsibility is in accordance with the approved engineering geology report and applicable provisions of this Chapter. The report shall contain a finding regarding the safety of the completed grading and any proposed structures against hazard from landslide, settlement. Or slippage. The report shall contain a final as-built geologic map and cross-sections depicting all the information collected prior to and during grading,4. The grading contractor shall certify, on a form prescribed by the Building Official that the grading conforms to the approved plans and specifications. <p>(Ord. 16-1020; amd. Ord. 19-1037; Ord. 22-1066)</p>	
Walnut	<p>Public Safety Element:</p> <p>Goal PS-3: Minimized risks associated with seismic and geologic hazards.</p> <p>Policy PS-3.1: Earthquake Preparedness. Conduct earthquake preparedness education campaigns in coordination with regional and State agencies, as well as local school districts and colleges. Education campaigns should engage with the whole community and target public behavior changes around earthquake preparedness.</p> <p>Policy PS-3.2: Geotechnical Evaluation. As appropriate, require geotechnical evaluation and recommendations prior to new development. Such geotechnical evaluation shall analyze the potential hazards from landslides, liquefaction, expansive soils, and mud and debris flow. Recommendations will include mitigation to avoid or minimize the identified hazards.</p> <p>Policy PS-3.3: Landslide Hazards. Require that any site with a slope exceeding 10 percent be reviewed against current Landslide Hazard Potential Zone maps of the State of California to determine the need for geotechnical and structural analysis.</p>	<p>Municipal codes related to geology and soils relevant to the Plan Area can be found in Section 2.04.040 (Appendix Dchapter J of said Los Angeles County Building Code supplemented by development grading standards) of Title 2 (Building and Building Regulations), and Section 3.36.060 (Public Nuisance).</p> <p>Section 2.04.040 (Appendix Dchapter J of said Los Angeles County Building Code supplemented by development grading standards) establishes complementary grading standards of the City to provisions set forth in Appendix Dchapter J of the Los Angeles County Building Code. The design standards include (1) minimizing the effects of mass grading of hillside areas and to provide the most natural appearance and to preserve natural terrain, (2) design complete landscaping plans for mitigation of grading, (3) proposed grading shall be designed to minimize adverse environmental effects on surrounding property or the permitted use thereof, (4) the proposed grading plan, when compared to possible alternative plans which would serve the same function, will result in the most natural appearance and preservation of natural terrain and water courses possible, (5) no cut or fill slopes shall be created which exceed 30 feet in vertical height. The Planning Commission may permit slopes exceeding this dimension</p>	<p>No other applicable ordinances were identified.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy PS-3.4: Seismic Building Codes. Require that all new development comply with the most recent State of California seismic building codes and the Seismic Hazards Mapping Act. As appropriate, require mitigation of potentially adverse impacts of geologic and seismic hazards.</p> <p><i>Development Review and Entitlement:</i> Action IA.C.3 The City will require all building permits to comply with all current State and Federal requirements which include, but are not limited to, seismic hazards.</p>	<p>where the slopes will be the result of earth contouring or which the Planning Commission finds will result in a natural appearance and will create no geological or erosion hazards, (6) all manufactured slopes adjoining the natural topography shall be contour graded so as to present a natural appearance and blend with the natural topography. This contour grading shall be designed and constructed in such a manner that the final earth form has a natural appearance. This is to be accomplished by rounding and smoothing sharp, angular forms, and avoiding flat, two-dimensional surfaces, (7) cut or fill slopes rising from public streets shall be designed to vary in form and magnitude so as to avoid long segments of uniform configuration, (8) areas adjacent to major natural drainage swales shall be kept in their natural state as much as practical, consistent with the need to minimize flood and erosion hazards. Open greenbelt swales and adequate setbacks for development are a preferred alternative to undergrounding or open concrete lined channels. Natural drainageways shall be stabilized sufficiently to minimize channel erosion. Here channelization projects are found necessary, they shall be part of a larger open space system, be landscaped to blend with the surroundings, and include trails and linear parks along their banks as part of the overall open space system, (9) Sediment catchment basins and/or other erosion/siltation control devices shall be constructed and maintained in accordance with an overall erosion control plan, (10) the overall drainage system shall be completed and made operational at the earliest practical time during construction, (11) roadway design should reflect rural rather than urban character and have sensitive alignments which preserve the natural topography and avoid environmentally sensitive areas, (12) grading plans shall include mitigating measures which will reduce to acceptable safety levels of any underground water seepage problems which may occur because of increased irrigation, rainfall, or alteration of the natural contours (13) development which borders permanent open space shall provide for fire hazard reduction zones in accordance with fire protection guidelines. Responsibility for maintenance of these buffer areas shall be provided for in the project proposal, (14) modifications of these standards may be permitted by the Planning Commission where it can be demonstrated that strict interpretation of such standards will prove to be impractical due to the nature of the terrain and such modification will not be detrimental to the environment.</p> <p>Specific requirements and procedures for grading specific to geology and soils include (4) where deemed necessary by the City Engineer, construction fencing will be placed so as to protect adjacent properties from slope sluffing, (7) erosion control planting shall be installed at the earliest practical date following rough grading, or as directed by the City Engineer, (10) verification of a complete soil and geologic analysis is required, (11) the following reports shall be submitted for staff and Planning Commission review:</p> <p>a. An engineering geologic investigation based on the proposed grading plan and including adequate description of the geology of the site and conclusions and recommendations regarding the effect of geologic conditions on the development;</p> <p>b. A soils engineering investigation based on the proposed grading plan and including data regarding the nature, distribution, and strength of soils, conclusions and recommendations for grading procedures, and design criteria for corrective measures.</p> <p>(Ord. 22-10, § 8; Ord. 19-11, § 8)</p> <p>Section 3.36.060 (Public Nuisance) establishes public nuisances within the City and prohibits (6) to maintain the property, the topography or configuration of which, whether in natural state or as a result of grading operations, in a manner which causes</p>

3.7.3 Impact Assessment

3.7.3.1 Significance Criteria

Appendix G of the State CEQA Guidelines was reviewed to determine if the Plan would result in significant impacts related to geology and soils. These guidelines serve as the threshold of significance for determining impacts to geology and soils and consider if the Plan would:

- 7(a) *Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:*
 - i. *Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.*
 - ii. *Strong seismic ground shaking?*
 - iii. *Seismic-related ground failure, including liquefaction?*
 - iv. *Landslides?*
 - v. *Result in substantial soil erosion or the loss of topsoil?*
- 7(b) *Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?*
- 7(c) *Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?*
- 7(d) *Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?*
- 7(e) *Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?*

3.7.3.2 Methodology

This analysis qualitatively evaluates the construction and operations impacts of the Plan on geologic, soils, and paleontological resources based on desktop review of geologic and soils conditions within and adjacent to the Plan Area. The impacts were assessed on a programmatic level based on the relevant regulatory framework. Impacts to geology, soils and paleontological resources are dependent on the resources present at a proposed project location and may result from ground-disturbing activities. Where the potential impacts of Plan components would be the same, these are combined into a single statement. Because future project-specific locations, details, and footprints have not been established the PEIR analyzes impacts according to the impact driver (for example excavation, erosion) and the potential for an environmental impact in a non-site specific manner; specifies project-specific assessments specific to resource areas with a potential for significant impact that would be conducted

for all future proposed projects under the Plan, and provides for mitigation measures when regulatory compliance does not reduce the impact to less than significant levels.

3.7.3.3 Plan Impacts

- 3.7.3.3.1 7(a). Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:
- i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.
 - ii. Strong seismic ground shaking?
 - iii. Seismic-related ground failure, including liquefaction?
 - iv. Landslides?
- 3.7.3.3.1.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant. The Plan Area is located in a seismically active area due to the various active and potentially active faults in the region (Figure 3.7-2). Seismic events from one or more of these faults could result in strong ground shaking in the San Gabriel River area; therefore, it is possible that greenway paths and amenities as well as any other Plan components could be affected by strong ground shaking, particularly during construction when the design is not yet fully installed.

Fault and landslide prone areas exist in the Plan Area (Figure 3.7-2 and Figure 3.7-3). Fault zones are described by CGS as regulatory zones surrounding the surface and traces of active faults. If a future project is constructed in these zones, it would be subject to fault zone regulations. Prior to a new project with load-bearing structures being permitted in a fault zone (e.g., a new restroom or a safe crossing design that includes a bridge), cities and counties require geologic investigation to demonstrate that proposed structures would be designed according to California Building Code standards.

Much of the Plan Area falls within liquefaction zones (Figure 3.7-3). Liquefaction zones identify where the stability of foundation soils must be evaluated and where site mitigation must be applied. Projects proposed within liquefaction zones would be subject to liquefaction zone mitigation recommendations by the County or applicable city.

There are landslide hazard areas within the Plan Area (Figure 3.7-3). Mapped landslide hazard areas identify where the evaluation of the stability of hillslopes is required by existing regulations and countermeasures undertaken in design and construction as part of regulatory compliance.

Construction of any structures associated with future projects would be consistent with prevailing building codes and relevant regulations and permits, which would minimize risk from seismic activity. The California Building Code considers these geologic hazards and requires geotechnical studies as part of regular plan review in areas where hazards are known to exist. The result of the studies with respect to geological hazards would be incorporated into the construction plan and design element. Therefore,

regulatory compliance ensures that impacts from strong i) seismic shaking, ii) fault rupture, iii) liquefaction, and iv) landslides would be less than significant.

Operations

Less than Significant. Potential projects implemented under the Plan would increase the availability of public space and public amenities (e.g., shade, water, restrooms, seating) and are likely to attract visitors to the Plan Area. As such, visitors could be exposed to strong seismic shaking, fault rupture, and secondary seismic activity (e.g., landslides, liquefaction). Any development occurring in fault zones, liquefaction zones, or landslide hazard areas would require evaluation, implementation of appropriate construction measures to avoid exacerbating existing hazard seismic and soil conditions, as necessary, and compliance with the California Building Code which addresses these seismic and soil hazards and would minimize the potential geologic hazard risk to visitors. Proposed projects under the Plan could result in the exposure of people or structures to risks associated with seismic phenomena including fault rupture, seismic ground shaking, ground failure, liquefaction hazards, and landslide hazards. Uses would typically include recreation. Visitors would not be permanent occupants as none of the greenway amenities include human occupancy in their design. However, any proposed restroom or structure expected to have a human occupancy rate of more than 2,000 person-hours per year is considered a structure for human occupancy and the appropriate seismic hazards would be addressed during the construction phase. The operation of greenway paths and amenities, and all other potential Plan components would not cause or exacerbate major geologic phenomena (e.g., strong seismic shaking, fault rupture) or secondary phenomena (e.g., liquefaction, landslides). The potential project elements would be designed according to the California Building Code, which addresses these issues. Therefore, impacts would be less than significant.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Construction and operation impacts would be less than significant. No mitigation is required.

3.7.3.3.2 7(b). Result in substantial soil erosion or the loss of topsoil?

3.7.3.3.2.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant. Erosion could adversely affect any proposed construction site and any of the Plan components. Construction activities could exacerbate erosion conditions by exposing soils to rainfall, adding water to the soil from irrigation and runoff from new impervious surfaces. The construction of greenways and amenities could disturb up to 5 miles of District ROW up to 24 feet wide. Inclusion of any of the other potential Plan components with the greenway path would result in additional ground disturbance area. Any proposed project involving grading an area greater than 1 acre would be required to obtain NPDES coverage under the NPDES Construction General Permit, Order No. 2022-0057-DWQ (State Water Resources Control Board 2022). Construction activities covered under the Construction

General Permit include demolition and pre-development site preparation, grading and land development, streets and utilities, vertical construction, and final landscaping and site stabilization.

The Construction General Permit would require the development and implementation of a Stormwater Pollution Prevention Plan (SWPPP), which includes BMPs to regulate stormwater runoff, including measures to prevent soil erosion and loss of topsoil. The Construction General Permit requires that all SWPPPs be site-specific and are written, amended, and certified by a Qualified SWPPP Developer (QSD) and includes the information needed to demonstrate compliance with all requirements of the General Permit to ensure that water quality is being protected. Typical construction BMPs include silt fences, straw waddles, sediment traps, gravel sandbag barriers, etc. Erosion management would be implemented during and after construction, as exposed slopes would be treated to avoid dust and sediment erosion. Erosion management is also discussed in Section 3.10, Hydrology and Water Quality. Proposed projects that would involve less than one acre of soil disturbance may be required to comply with County (or city's, depending on where the project is located within the Plan Area) LID standards (summarized above in Section 3.7.2.3.2) and stormwater pollution control activities for construction projects (these specific requirements are discussed in Section 3.10, Hydrology and Water Quality). Additionally, the *Design Guidelines and Standards* provide guidance for the implementation of stormwater quality control measures and the recommended design methodology to manage stormwater. Accordingly, all projects would be implemented in a manner that minimizes erosion and the discharge of pollutants offsite. Compliance with permit requirements and implementation of appropriate BMPs such as berms and covers would minimize erosion potential during construction.

Additionally, the *Design Guidelines and Standards* include design considerations for various BMPs that address sediment capture and soil stability. Per the *Design Guidelines and Standards*, implementation of any infiltration-reliant stormwater BMPs require subsurface geologic characterizations that must be conducted before construction to ensure geologic conditions are considered. Site investigation, infiltration testing, and geotechnical reports are required components of infiltration stormwater design. Geologic considerations are meant to ensure infiltration BMP implementation is both feasible and does not pose undue adverse impacts to the built and natural environment. Per the *Design Guidelines and Standards*, a stormwater infiltration project shall not put existing soils, existing structures, and sub-surface utilities at risk of failure. Further, site filtration rate must be sufficient to infiltrate water onsite and pollutants shall not be mobilized. Therefore, adherence to the *Design Guidelines and Standards* as well as regulatory compliance would ensure that construction impacts are less than significant. Therefore, construction impacts to topsoil and erosion would be less than significant.

Operations

Less than Significant. Operations of greenway paths, amenities, and other Plan components would not include any activities that would cause or exacerbate conditions leading to substantial erosion or loss of topsoil. As described above for construction, per the *Design Guidelines and Standards*, stormwater BMPs would be a required element whenever impervious surfaces are built. These BMPs would treat all surface runoff associated with storm events and filter sediments, further reducing the likelihood of significant amounts of sediments leaving the project site. Human foot and bike traffic as well as animal traffic (e.g., horses) could use the paths and could disturb trail materials and increase potential for erosion. These paths would be paved with concrete, asphalt, stone fines, decomposed granite, compacted earth, or permeable paving, depending on the particular site and the intended use. Soil

erosion during operation of greenway paths and amenities would be minimized through site drainage design and maintenance practices. Impacts would be less than significant.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation Measures

Construction and operation impacts would be less than significant. No mitigation is required.

3.7.3.3.2.2 Greenway Paths + Pocket Parks and Greenspaces

Construction

Less than Significant. Erosion could adversely affect any proposed site and any of the plan components. Construction activities could exacerbate erosion conditions by exposing soils, adding water to the soil from irrigation and runoff from new impervious surfaces. The construction of greenways and pocket parks and greenspaces could disturb up to 5 miles of District ROW up to 24 feet wide as well as adjacent parcels up to 25 acres in size. Any proposed project involving grading an area greater than 1 acre would be required to obtain NPDES coverage under the NPDES Construction General Permit, Order No. 2022-0057-DWQ (State Water Resources Control Board 2022). Construction activities covered under the Construction General Permit include demolition and pre-development site preparation, grading and land development, streets and utilities, vertical construction, and final landscaping and site stabilization.

The Construction General Permit would require the development and implementation of a SWPPP, which includes BMPs to regulate stormwater runoff, including measures to prevent soil erosion and loss of topsoil. The Construction General Permit requires that all SWPPPs be site-specific and are written, amended, and certified by a QSD and includes the information needed to demonstrate compliance with all requirements of the General Permit to ensure that water quality is being protected. Typical construction BMPs include silt fences, straw waddles, sediment traps, gravel sandbag barriers, etc. Erosion management would be implemented during and after construction, as exposed slopes would be treated to avoid dust and sediment erosion. Proposed projects that would involve less than 1 acre of soil disturbance would still be required to comply with County LID code requirements (summarized above in Section 3.7.2.3.2) and stormwater pollution control activities for construction projects. If a City has local requirements that exceed the County LID standards, these would also be addressed in construction plans in accordance with the County's MS4 permit under Section 402 of the CWA and any applicable local requirements from incorporated cities that are also covered by the County MS4 permit (discussed in Section 3.10, Hydrology and Water Quality). Accordingly, all projects would be implemented to minimize erosion and the discharge of pollutants offsite. Compliance with permit requirements and implementation of appropriate BMPs would minimize erosion potential during construction. Construction impacts from greenway paths and pocket parks and greenspaces to topsoil would be less than significant.

Mitigation Measures

No mitigation measures are required.

Significance after Mitigation Measures

Impacts would be less than significant. No mitigation is required.

Operations

Less than Significant. Operations activities associated with the greenway paths and pocket parks would not include any activities that would cause or exacerbate conditions leading to substantial erosion or loss of topsoil. Stormwater BMPs would be a required element.

3.7.3.3.3 7(c). Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

3.7.3.3.3.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant. The Plan Area covers a large geographic area primarily consisting of soils classified as Urban Land by NRCS. Urban Land typically consists of soils in areas of high population density in the built environment. These soils can contain human-transported composite materials, altered materials, or intact native soils. Soils could exhibit a wide range of conditions and properties, and soil instability could be a factor (NRCS 2019). Soil instability can lead to lateral spreading, liquefaction, or collapse.

Much of the Plan Area falls within liquefaction zones (Figure 3.7-3). Liquefaction zones identify where the stability of foundation soils must be evaluated and where site mitigation must be applied. Projects proposed within liquefaction zones could be subject to liquefaction zone mitigation recommendations. There are landslide hazard areas within the Plan Area (Figure 3.7-3). Mapped landslide hazard areas identify where the stability of hillslopes must be evaluated, and countermeasures undertaken in design and construction.

Construction of greenways paths, amenities, and other Plan components, specifically any projects that entail construction of physical structures such as restrooms, shade structures, or bridges (for safe crossing) would be consistent with prevailing building codes and relevant regulations and permits, which would minimize risk of landslide, lateral spreading, subsidence, liquefaction, or collapse from placement in a geologic unit or soil that is unstable or might become unstable. California Building Code considers these geologic hazards and requires geotechnical studies as part of regular plan review in areas where hazards are known to exist. The result of the studies with respect to geological hazards would be incorporated into the construction plan and design element.

Additionally, the *Design Guidelines and Standards* include design considerations for various BMPs that address sediment capture and soil stability. Per the *Design Guidelines and Standards*, implementation of any infiltration-reliant stormwater BMPs require subsurface geologic characterizations that must be conducted before construction to ensure geologic conditions are considered. Site investigation, infiltration testing, and geotechnical reports are required components of infiltration stormwater design. Geologic considerations are meant to ensure infiltration BMP implementation is both feasible and does not pose undue adverse impacts to the built and natural environment. A stormwater infiltration project shall not put existing soils, existing structures, and sub-surface utilities at risk of failure. Further, site

filtration rate must be sufficient to infiltrate water onsite and pollutants shall not be mobilized. Therefore, adherence to the *Design Guidelines and Standards* as well as regulatory compliance ensures that construction impacts from projects implemented under the Plan would be less than significant.

Operations

No Impact. Due to the nature of the components of the potential projects under the Plan, operational impacts associated with future projects would not include activities that would contribute significantly to soil instability. Operations activities associated with projects implemented under the Plan would primarily include recreation and social and cultural opportunities, as well as ongoing maintenance of the facilities, and would not include any activities that would cause or exacerbate soil instability including landslide, lateral spreading, subsidence, liquefaction, or collapse. Further, all projects would be required to incorporate stormwater management into their design and such features would actively contribute to greater soil stability by treating stormwater and preventing soil runoff. A discussion of landslide and liquefaction hazards during construction and operation is provided above in Section 3.7.3.3.1, Impact (a) for the Plan. There would be no impact from operations associated with the Plan.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Construction impacts would be less than significant. No mitigation is required.

Operations would result in no impacts. No mitigation is required.

3.7.3.3.4 7(d). Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

3.7.3.3.4.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant. Vertisols, which have expansive properties, have been mapped in the Plan Area along Puente Creek and San Jose Creek (Figure 3.7-1). Expansive soils expand when they get wet and shrink as they dry. Additionally, the urban soils units underlying the Plan Area can exhibit a wide variety of conditions and properties, including expansive potential. Urban soils can contain fine-grained soils such as silts or clays that may contain expansive minerals. Upward pressure can increase when these expansive soils swell which may result in detrimental effects on structures and surface improvements if not properly addressed in the construction design.

The construction of greenway paths, and other Plan components, particularly those that involve construction of structures such as restrooms, shade structures, or bridges for safe crossings, would be required to be consistent with all applicable building codes and permit requirements, thereby minimizing the potential for substantial direct or indirect expansive soil impacts on structures and visitors. Visitors would not be present during construction.

The *Design Guidelines and Standards* include design considerations for various BMPs that address soil stability. Per the *Design Guidelines and Standards*, implementation of any infiltration-reliant stormwater BMPs require subsurface geologic characterizations that must be conducted before construction to ensure geologic conditions are considered. Site investigation, infiltration testing, and geotechnical reports are required components of infiltration stormwater design. Geologic considerations are meant to ensure infiltration BMP implementation is both feasible and does not pose undue adverse impacts to the built and natural environment. The presence of expansive soils would be addressed by adhering to the *Design Guidelines and Standards* and regulatory requirements. Construction impacts from projects implemented under the Plan would be less than significant.

Operations

Less than Significant. Operation activities primarily would include recreation, social, and cultural opportunities, as well as ongoing maintenance of facilities. No greenway amenities included in the Plan would be designed for permanent human occupancy and visitors would be on site on a temporary basis. However, any proposed restroom or structure expected to have a human occupancy rate of more than 2,000 person-hours per year is considered a structure for human occupancy and the appropriate measures to address expansive soils would be addressed during the construction phase. Operations impacts would be less than significant.

Mitigation Measures

No mitigation measures are required.

Significance After Mitigation

Construction and operation impacts would be less than significant. No mitigation is required.

3.7.3.3.5 7(e). Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

3.7.3.3.5.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction and Operations

No Impact. There are no septic tanks or alternative wastewater disposal systems being proposed as part of the Plan. No impacts would occur.

Mitigation Measures

No mitigation is required.

Significance After Mitigation

No impacts would occur. No mitigation is required.

3.7.3.3.6 7(f). Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

3.7.3.3.6.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

Construction

Less than Significant with Mitigation. The entire Plan Area could contain deposits considered sensitive for containing significant unrecorded paleontological vertebrate fossils or other unique geological features. Sensitive paleontological deposits likely exist at various depths below the current ground surface within the Plan Area. The County has identified two significant fossil localities in the vicinity of the Plan Area. Both are within the Puente Formation: one in the Hacienda Heights and the other in the Diamond Bar areas of Puente Hills.

Construction of the greenway paths and greenway amenities and other Plan components would generally involve site disturbance, movement of construction equipment, and import and export of materials. Ground disturbance would include site clearing and excavation. Construction of greenway paths and greenway amenities could destroy, remove, disturb, and alter surface-exposed and buried paleontological resources or other unique geological features, resulting in potentially significant impacts. Since future project-specific locations, details, and footprints have not been established the PEIR analyzes impacts according to the impact driver (for example excavation, erosion) and the potential for an environmental impact in a non-site specific manner; specifies project-specific assessments specific to resource areas with a potential for significant impact that would be conducted for all future proposed projects under the Plan, and provides for mitigation measures when regulatory compliance does not reduce the impact to less than significant levels. Future project sites that include excavation in the Hacienda Heights or the Diamond Bar areas of Puente Hills have potential for significant impacts to paleontological resources. With implementation of **MM GEO-1: Pre-Construction Paleontological Resources Investigation** and **MM GEO-2: Avoid or Monitor/Curate Paleontological Resources**, the site-specific conditions of paleontological and other unique geological features would be identified, and if necessary either the area would be avoided, or monitored during construction and if paleontological or other unique geological features are encountered, they will be curated. Therefore, these impacts would be less than significant with mitigation.

Operations

Less than Significant with Mitigation. Operation activities related to projects implemented under the Plan could include new single-story structures, such as shade structures and restrooms and lower-profile infrastructure (e.g., trails, signs, lighting, benches, gardens, etc.) which may introduce activities that could directly affect significant paleontological resources. Operation could result in minor increased erosion as described previously under Section 3.7.3.3.2, Impact (b) for the Plan. Increased recreational use at new facilities operated under the Plan near an area with exposed deposits that are sensitive for significant paleontological resources could directly affect any undiscovered resources through exposure and removal from unanticipated disturbance and increased public use. For project sites that include excavation in the Hacienda Heights or Diamond Bar areas of Puente Hills, there is the potential for significant impacts to paleontological resources. If significant impacts on a newly exposed or existing significant paleontological resource cannot be avoided, then **MM GEO-3: Avoid/Minimize Impacts on**

Paleontological Resources During Operations would be implemented to reduce impacts to less than significant.

Mitigation Measures

MM GEO-1: Pre-Construction Paleontological Resources Investigation. During design of individual proposed projects with excavation in the Hacienda Heights or the Diamond Bar areas of Puente Hills, and prior to construction, the project proponent shall contract with a qualified paleontologist or registered geologist to conduct paleontological resource investigation consistent with Society of Vertebrate Paleontology Guidelines. If sensitive deposits are identified and could be affected by the proposed project in the Plan Area, **MM GEO-3** shall be implemented.

MM GEO-2: Avoid or Monitor Paleontological Resources. If sensitive deposits are identified in excavations in the Hacienda Heights or the Diamond Bar areas of Puente Hills and could be affected by the proposed project, the implementing agency will redesign the subsequent project to avoid sensitive paleontological resources and deposits that could potentially contain these resources. If avoidance and/or project redesign is not feasible, then paleontological monitoring will be implemented.

If sensitive deposits are identified and avoidance and/or project redesign is not feasible, prior to ground-disturbing activities, the project proponent shall retain a qualified paleontologist to be available “on-call” during excavation and ground-disturbing activities that occur in undisturbed deposits below ground surface, the extent of which will be determined based on review of the geotechnical report/paleontological resource investigation, and to inspect exposures for contained fossils. In the event that paleontological resources are discovered, work will be halted, the lead implementing agency will be notified immediately, and the implementing agency will consult with the qualified paleontologist to assess the significance of the find according to Section 15064.5 of the CEQA Guidelines. If any find is determined to be significant, the implementing agency and the paleontologist will determine appropriate avoidance measures or other appropriate mitigation. The implementing agency will make the final determination. All significant paleontological materials recovered will be reviewed, evaluated, and documented according to current professional standards by the consulting paleontologist and discussed with the implementing agency. The implementing agency will make the final determination. Based on observations, monitoring may be reduced or discontinued if the qualified paleontologist determines that the possibility of encountering fossiliferous deposits is low.

MM GEO-3: Avoid/Minimize Impacts on Paleontological Resources During Operations. If significant paleontological resources or sensitive deposits with the potential to contain significant paleontological resources are identified within a proposed project area with excavation in the Hacienda Heights or the Diamond Bar areas of Puente Hills in the Plan Area during design/planning of individual projects (**MM GEO-1: Pre-Construction Paleontological Resources Investigation** and **MM GEO-2: Avoid or Monitor Paleontological**), and sensitive deposits remain exposed at or near the ground surface, the project proponent, in coordination with the qualified paleontologist, shall prepare an avoidance and minimization plan to avoid and/or minimize potential impacts during operations. This plan may include, but not be limited to:

- Preparing an operations and maintenance plan to minimize degradation and exposure of sensitive deposits

- Designing and developing interpretive exhibits to provide education and understanding of the importance of avoiding and protecting sensitive deposits and paleontological resources
- Create Environmentally Sensitive Areas around the paleontological resources. Generally, the Environmentally Sensitive Area would be secured using some combination of exclusionary fencing or monitoring as an alternative to excavation/removal.

Significance After Mitigation

For construction, implementation of **MM GEO-1: Pre-Construction Paleontological Resources Investigation** and **MM- GEO-2: Avoid or Monitor Paleontological** would ensure that any as-yet-undiscovered paleontological resources are identified and protected during ground disturbing activities, and construction impacts would be reduced to less than significant with mitigation.

If impacts during construction cannot be avoided by implementation of **MM GEO-1: Pre-Construction Paleontological Resources Investigation** and **MM GEO-2: Avoid or Monitor Paleontological**, then implementation of **MM GEO-3: Avoid/Minimize Impacts on Paleontological Resources During Operations** would ensure that exposed paleontological resources are protected from potentially disturbing activities during operations. Impacts during operations would be less than significant with mitigation.

3.7.3.4 Impacts of Example Conceptual Designs

This section discusses potential impacts from the 10 conceptual designs.

- 3.7.3.4.1 7(a). Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:
- i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.
 - ii. Strong seismic ground shaking?
 - iii. Seismic-related ground failure, including liquefaction?
 - iv. Landslides?

Construction and Operations

Less than Significant. The components proposed for all 10 conceptual design projects are within the maximum extent limits as described for the Plan in Section 2, Project Description. Some are located near fault lines or in landslide hazard or liquefaction zones as described in Table 3.7-3 below. Regulatory compliance would ensure that impacts would be less than significant during construction and operation. There would be no additional impacts or impacts of greater severity than those already addressed in Section 3.7.3.3.1.1. Impacts would be less than significant.

Table 3.7-3. Analysis of Conceptual Design Examples for Construction and Operations Impacts from Risk of Loss, Injury, or Death Involving Seismic Hazards.

Conceptual Design Project	<i>7(a). Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. Strong seismic ground shaking? Seismic-related ground failure, including liquefaction? Landslides?</i>
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	Less than Significant. This conceptual design project is not located on a known active fault line or in a mapped liquefaction zone. Nevertheless, future design and construction of this project would be subject to regulations ensuring that impacts from strong seismic shaking, fault rupture, liquefaction, and landslides would be less than significant.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	Less than Significant. This conceptual design project is not located on a known active fault line or in a mapped liquefaction zone (Figure 3.7-3). Nevertheless, future design and construction of this project would be subject to regulations ensuring that impacts from strong seismic shaking, fault rupture, liquefaction, and landslides would be less than significant.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	Less than Significant. This conceptual design project is not located on a known active fault line; however, it is within a mapped liquefaction zone (Figure 3.7-3). Future design and construction of this project would be subject to regulations ensuring that impacts from strong seismic shaking, fault rupture, liquefaction, and landslides would be less than significant.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i>	Less than Significant. This conceptual design project is not located on a known active fault line; however, it is near a mapped liquefaction zone (Figure 3.7-3). Future design and construction of this project would be subject to regulations ensuring that impacts from strong seismic shaking, fault rupture, liquefaction, and landslides would be less than significant.
San Dimas Wash at Arrow High School <i>City of Glendora</i>	Less than Significant. This conceptual design project is not located on a known active fault line or in a mapped liquefaction zone (Figure 3.7-3). Nevertheless, future design and construction of this project would be subject to regulations ensuring that impacts from strong seismic shaking, fault rupture, liquefaction, and landslides would be less than significant.
San Dimas Wash at Hollenbeck Park <i>City of Covina</i>	Less than Significant. This conceptual design project is not located on a known active fault line or in a mapped liquefaction zone (Figure 3.7-3). Nevertheless, future design and construction of this project would be subject to regulations ensuring that impacts from strong seismic shaking, fault rupture, liquefaction, and landslides would be less than significant.
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i>	Less than Significant. This conceptual design project is not located on a known active fault line; however, it is near a mapped liquefaction zone and a mapped landslide hazard zone (Figure 3.7-3). Future design and construction of this project would be subject to regulations ensuring that impacts from strong seismic shaking, fault rupture, liquefaction, and landslides would be less than significant.

Conceptual Design Project	7(a). Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving: Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42. Strong seismic ground shaking? Seismic-related ground failure, including liquefaction? Landslides?
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	Less than Significant. This conceptual design project is not located on a known active fault line; however, it is in a mapped liquefaction zone and near a mapped landslide hazard zone (Figure 3.7-3). Future design and construction of this project would be subject to regulations ensuring that impacts from strong seismic shaking, fault rupture, liquefaction, and landslides would be less than significant.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park West Covina</i>	Less than Significant. This conceptual design project is not located on a known active fault line or in a mapped liquefaction zone (Figure 3.7-3). Nevertheless, future design and construction of this project would be subject to regulations ensuring that impacts from strong seismic shaking, fault rupture, liquefaction, and landslides would be less than significant.
Walnut Creek at Pocket Park <i>City of West Covina</i>	Less than Significant. This conceptual design project is not located on a known active fault line; however, it is within a mapped liquefaction zone (Figure 3.7-3). Future design and construction of this project would be subject to regulations ensuring that impacts from strong seismic shaking, fault rupture, liquefaction, and landslides would be less than significant.

3.7.3.4.2 7(b). Result in substantial soil erosion or the loss of topsoil?

Construction and Operations

Less than Significant. The components proposed for all 10 conceptual design projects are within the maximum extent limits as described for the Plan in Section 2. Most conceptual design projects would require NPDES coverage under the NPDES Construction General Permit as well as development and implementation of a SWPPP. If the final design of a conceptual design project includes ground disturbance less than one acre in size, a SWPPP would not be required, but construction BMPs would be implemented in accordance with the *Design Guidelines and Standards*. Following completion of construction activity, the design of the facilities would ensure regular operations and maintenance would not result in substantial soil erosion. There would be no additional impacts or impacts of greater severity than those already addressed in Sections 3.7.3.3.2. Impacts would be less than significant.

3.7.3.4.3 7(c). Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?

Construction and Operations

Less than Significant. The components proposed for all 10 conceptual design projects are within the maximum extent limits as described for the Plan in Section 2. Some are located in landslide hazard or liquefaction zones as described in Table 3.7-4 below. Regulatory compliance ensures that impacts would be less than significant during construction and operation. There would be no additional impacts or

impacts of greater severity than those already in Section 3.7.3.3.3. Impacts would be less than significant.

Table 3.7-4. Analysis of Conceptual Design Examples for Potential Construction and Operations to Cause Impacts from Being Located on Unstable Soils

Conceptual Design Project	7(c). Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	Less than Significant. This conceptual design project is not in a mapped liquefaction zone or landslide hazard zone (Figure 3.7-3). Nevertheless, construction and operation of this conceptual design project would be consistent with prevailing building codes and relevant regulations and permits, which would minimize risk of landslide, lateral spreading, subsidence, liquefaction, or collapse from placement in a geologic unit or soil that is unstable or might become unstable, resulting in less than significant impacts.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	Less than Significant. This conceptual design project is within a mapped liquefaction zone (Figure 3.7-3). Construction and operation of this conceptual design project would be consistent with prevailing building codes and relevant regulations and permits, which would minimize risk of landslide, lateral spreading, subsidence, liquefaction, or collapse from placement in a geologic unit or soil that is unstable or might become unstable, resulting in less than significant impacts.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	Less than Significant. This conceptual design project is within a mapped liquefaction zone (Figure 3.7-3). Construction and operation of this conceptual design project would be consistent with prevailing building codes and relevant regulations and permits, which would minimize risk of landslide, lateral spreading, subsidence, liquefaction, or collapse from placement in a geologic unit or soil that is unstable or might become unstable, resulting in less than significant impacts.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i>	Less than Significant. This conceptual design project is not in a mapped liquefaction zone or landslide hazard zone (Figure 3.7-3). Nevertheless, construction and operation of this conceptual design project would be consistent with prevailing building codes and relevant regulations and permits, which would minimize risk of landslide, lateral spreading, subsidence, liquefaction, or collapse from placement in a geologic unit or soil that is unstable or might become unstable, resulting in less than significant impacts.
San Dimas Wash at Arrow High School <i>City of Glendora</i>	Less than Significant. This conceptual design project is not in a mapped liquefaction zone or landslide hazard zone (Figure 3.7-3). Nevertheless, construction and operation of this conceptual design project would be consistent with prevailing building codes and relevant regulations and permits, which would minimize risk of landslide, lateral spreading, subsidence, liquefaction, or collapse from placement in a geologic unit or soil that is unstable or might become unstable, resulting in less than significant impacts.
San Dimas Wash at Hollenbeck Park <i>City of Covina</i>	Less than Significant. This conceptual design project is within a mapped liquefaction zone and a landslide hazard area (Figure 3.7-3). Construction and

Conceptual Design Project	7(c). Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?
	operation of this conceptual design project would be consistent with prevailing building codes and relevant regulations and permits, which would minimize risk of landslide, lateral spreading, subsidence, liquefaction, or collapse from placement in a geologic unit or soil that is unstable or might become unstable, resulting in less than significant impacts.
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i>	Less than Significant. This conceptual design project is within a mapped liquefaction zone and near a landslide hazard area (Figure 3.7-3). Construction and operation of this conceptual design project would be consistent with prevailing building codes and relevant regulations and permits, which would minimize risk of landslide, lateral spreading, subsidence, liquefaction, or collapse from placement in a geologic unit or soil that is unstable or might become unstable, resulting in less than significant impacts.
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	Less than Significant. This conceptual design project is not in a mapped liquefaction or landslide hazard zone (Figure 3.7-3). Nevertheless, construction and operation of this conceptual design project would be consistent with prevailing building codes and relevant regulations and permits, which would minimize risk of landslide, lateral spreading, subsidence, liquefaction, or collapse from placement in a geologic unit or soil that is unstable or might become unstable, resulting in less than significant impacts.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park West Covina</i>	Less than Significant. This conceptual design project is within a mapped liquefaction zone (Figure 3.7-3). Construction and operation of this conceptual design project would be consistent with prevailing building codes and relevant regulations and permits, which would minimize risk of landslide, lateral spreading, subsidence, liquefaction, or collapse from placement in a geologic unit or soil that is unstable or might become unstable, resulting in less than significant impacts.
Walnut Creek at Pocket Park <i>City of West Covina</i>	Less than Significant. This conceptual design project is not located in a mapped liquefaction zone or landslide hazard zone (Figure 3.7-3). Construction and operation of this conceptual design project would be consistent with prevailing building codes and relevant regulations and permits, which would minimize risk of landslide, lateral spreading, subsidence, liquefaction, or collapse from placement in a geologic unit or soil that is unstable or might become unstable, resulting in less than significant impacts.

3.7.3.4.4 7(d). Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?

Construction and Operations

Less than Significant. The components proposed for all 10 conceptual design projects are within the maximum extent limits as described for the Plan in Section 2. All 10 conceptual design projects are primarily located on soils classified as Urban by NRCS. Compliance with permit requirements and implementation of appropriate BMPs would minimize risks from expansive soils to less than significant.

There would be no additional impacts or impacts of greater severity than those already addressed in Section 3.7.3.3.4.1. Impacts would be less than significant.

3.7.3.4.5 7(e). Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?

Construction and Operations

No Impact. There are no septic tanks or alternative wastewater disposal systems being proposed as part of the 10 conceptual design projects. No impacts would occur.

3.7.3.4.6 7(f). Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?

Construction and Operations

Less than Significant with Mitigation. No previously recorded or as-yet-unrecorded paleontological resources have been identified at any of the sites; however, the locations of the 10 conceptual design projects could contain currently unknown deposits considered sensitive for containing significant unrecorded paleontological vertebrate fossils. Sensitive paleontological deposits could exist at various depths below the current ground surface at the conceptual design sites. There would be no additional impacts or impacts of greater severity than those already addressed in Sections 3.7.3.3.6.1 and **MM GEO-1: Pre-Construction Paleontological Resources Investigation** and **MM GEO-2: Avoid or Monitor Paleontological** would apply during construction. **MM GEO-3: Avoid/Minimize Impacts on Paleontological Resources During Operations** would apply during operations should a conceptual design project be pursued. Impacts would be less than significant with mitigation.

3.8 Greenhouse Gas Emissions

This section provides a discussion of GHG emissions as they relate to climate change, evaluates GHG emissions associated with the Plan, describes the applicable laws and policies relating to GHG emissions, and analyzes compliance with applicable regulations. Consideration of the Plan's consistency with applicable plans, policies, and regulations, as well as the introduction of new sources of GHGs is included in this section. GHG technical data is included as Appendix C.

Table 3.8-1. Summary of Potential Impacts on GHG Emissions.

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
<i>Would the Plan:</i>			
8(a). Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			
Greenway Paths + Greenway Amenities	Less than Significant with Mitigation	Less than Significant with Mitigation	Construction: MM AQ-1: Emissions Reduction Measure

3.8.1 Environmental Setting

Recent significant changes in global climate patterns have been associated with global warming, an average increase in the temperature of the atmosphere near Earth's surface. Global warming has been attributed to the accumulation of GHG emissions in the atmosphere. GHGs trap heat in the atmosphere, which in turn heats the surface of the Earth. Some GHGs occur naturally and are emitted to the atmosphere through natural processes, while others are created and emitted solely through human activities. The emission of GHGs through the combustion of fossil fuels (i.e., fuels containing carbon) in conjunction with other human activities appears to be closely associated with global warming.

The standard state definition of GHG includes six substances: CO₂; methane (CH₄); nitrous oxide (N₂O); hydrofluorocarbons (HFCs); perfluorocarbons (PFCs); and sulfur hexafluoride (SF₆) (CARB 2014). Tropospheric O₃ (a short-lived, not-well-mixed gas) and black carbon are also important climate pollutants. CO₂ is the most abundant GHG, and collectively CO₂, CH₄, and N₂O amount to 80percent of GHG effects.

3.8.1.1 GHG Global Warming Potential

The Global Warming Potential (GWP) was developed to allow comparisons of the global warming impacts of different gases. Individual GHG compounds have varying GWPs and atmospheric lifetimes. The GWP of a GHG is a measure of how much a given mass of a GHG is estimated to contribute to global warming, relative to CO₂, which is assigned a GWP of 1.0. The GWP is used to determine the carbon dioxide equivalent (CO₂e) mass of each GHG. The calculation of CO₂e is the accepted methodology for comparing GHG emissions because it normalizes various GHG emissions to a consistent reference gas, CO₂. For example, CH₄'s GWP of 25 indicates that the global warming effect of CH₄ is 25 times greater than that of CO₂ on a unit mass basis. CO₂e is the mass emissions of an individual GHG multiplied by its GWP. The physical properties and sources of GHGs are described in Table 3.8-2.

Table 3.8-2. Global Warming Potential, Properties, and Sources for Selected GHGs

Pollutant	GWP	Description and Physical Properties	Sources
CO ₂	1	CO ₂ is an odorless, colorless, naturally occurring GHG.	CO ₂ is emitted from natural and anthropogenic (human) sources. Natural sources include decomposition of dead organic matter; respiration of bacteria, plants, animals, and fungus; evaporation from oceans; and volcanic out gassing. Anthropogenic sources are from burning coal, oil, natural gas, and wood.
CH ₄	25	CH ₄ is an organic, colorless, naturally occurring, flammable gas. Its atmospheric concentration is less than CO ₂ and its lifetime in the atmosphere is brief (10-12 years) compared to other GHGs.	CH ₄ has both natural and anthropogenic sources. It is released as part of the biological processes in low oxygen environments, such as in swamplands or in rice production (at the roots of the plants). Over the last 50 years, human activities such as growing rice, raising cattle, using natural gas, and mining coal have added to the atmospheric concentration of CH ₄ . Other anthropogenic sources include fossil-fuel and biomass combustion, as well as landfilling and wastewater treatment.
N ₂ O	298	N ₂ O, commonly referred to as "laughing gas," is a colorless, nonflammable GHG. It is a powerful oxidizer and breaks down readily in the atmosphere.	Nitrous oxide is produced by microbial processes in soil and water, including those reactions that occur in fertilizer containing nitrogen. In addition to agricultural sources, some industrial processes (fossil fuel-fired power plants, nylon production, nitric acid production, and vehicle emissions) also contribute to its atmospheric load. It is used as an aerosol spray propellant, e.g., in whipped cream bottles. It is also used in potato chip bags to keep chips fresh. It is used in rocket engines and in race cars.
HFCs	92 - 14,900	HFCs are synthetic man-made chemicals that form one of the GHGs with the highest GWP	HFCs are man-made for applications such as automobile air conditioners and refrigerants.
PFCs	6,288 - 17,700	PFCs are colorless, non-flammable, dense gasses that have stable molecular structures and do not break down through the chemical processes in the lower atmosphere. Because of this, PFCs have very long lifetimes, between 10,000 and 50,000 years.	The two main sources of PFCs are primary aluminum production and semiconductor manufacture.
SF ₆	22,800	SF ₆ is an inorganic, odorless, colorless, nontoxic, nonflammable gas.	SF ₆ is used for insulation in electric power transmission and distribution equipment, in the magnesium industry, in semiconductor manufacturing, and as a tracer gas for leak detection.
NF ₃	17,200	NF ₃ is an inorganic, colorless, odorless, nonflammable gas.	NF ₃ is used primarily in the plasma etching of silicon wafers

Source: CARB 2023

There is growing concern about GHG emissions and their adverse impacts on the world's climate and environment. These concerns relate to the change in the average weather of the earth that may be measured by changes in wind patterns, storms, precipitation, and temperature.

Throughout history, climate has been changing due to forces unrelated to human activity, including solar energy input variation, volcanic activity, and changing concentrations of key atmospheric constituents such as CH₄ and CO₂. These climate changes resulted in ice ages and warm interglacial periods, accompanied by large differences in snow and ice cover and associated changes in ecological systems.

Large-scale combustion of fossil fuels (i.e., coal, oil, and natural gas) by humans beginning in the 19th century resulted in significant increases in CO₂ emissions. Simultaneously, average surface temperatures have been increasing at many locations around the world. Multiple lines of evidence confirm that human activities are the primary cause of global warming of the past 50 years. Natural factors, such as variations in the sun's output, volcanic activity, the Earth's orbit, the carbon cycle, and others, also affect Earth's radiative balance. However, beginning in the late 1700s, the net global effect of human activities has been a continual increase in GHG concentrations (Intergovernmental Panel on Climate Change [IPCC] 2021).

3.8.1.2 GHG Emissions Inventory

Emissions inventories identify and quantify the primary human-generated sources and sinks of GHGs. This section summarizes information on global, national, and state GHG emissions inventories. CARB is responsible for developing the California GHG Emission Inventory. The GHG inventory estimates the volume of GHGs emitted to and removed from the atmosphere by human activities within California and supports the AB 32 Climate Change Program. CARB's current GHG emission inventory covers the years 2000 through 2022, and is based on fuel use, equipment activity, industrial processes, and other relevant data (e.g., housing, landfill activity, and agricultural land area).

- Global Net Anthropogenic GHG Emissions. Worldwide emissions of GHGs in 2019 totaled 59 billion ± 6.6 billion MTCO₂e (IPCC 2022). Global estimates are based on country inventories developed as part of the programs of the United Nations Framework Convention on Climate Change (UNFCCC).
- United States Emissions. In 2019, the United States emitted approximately 6.5 billion MTCO₂e. Of the six major sectors - electric power industry, transportation, industry, agriculture, commercial, and residential - the electric power industry and transportation sectors combined account for approximately 55 percent of the GHG emissions; the majority of the electric power industry and all of the transportation emissions are generated from direct fossil fuel combustion (UNFCCC 2023).
- State of California Emissions. According to CARB emission inventory estimates, California emitted approximately 369.2 million MT CO₂e emissions in 2020 (CARB 2022a). GHG emissions from the transportation and electricity sectors are approximately 36.8 percent and 16.1 percent of California's emission inventory, respectively. The industrial sector contributes approximately 19.9 percent. The remaining sources of GHG emissions are high GWP gases at 5.8 percent, residential and commercial activities at 10.5 percent, agriculture at 8.6 percent, and recycling and waste at 2.4 percent.

3.8.1.3 Global Climate Change

"Global climate change" refers to change in average meteorological conditions on the earth with respect to temperature, precipitation, and storms, lasting for decades or longer. The term "global climate change" is often used interchangeably with the term "global warming," but "global climate change" is preferred by some scientists and policy makers to "global warming" because it helps convey the notion that in addition to rising temperatures, other changes in global climate may occur. Climate change may result from the following influences:

- Natural factors, such as changes in the sun’s intensity or slow changes in the earth’s orbit around the sun;
- Natural processes within the climate system (e.g., changes in ocean circulation); and/or
- Human activities that change the atmosphere’s composition (e.g., through burning fossil fuels) and the land surface (e.g., deforestation, reforestation, urbanization, and desertification).

The likely range of total human-caused global surface temperature increase from 1850–1900 to 2010–2019 is 33.4°F to 34.3°F, with a best estimate of 33.9°F (IPCC 2021). GHGs have been the main driver of tropospheric warming since 1979 and according to the IPCC, it is extremely likely that human-caused stratospheric ozone depletion was the main driver of cooling of the lower stratosphere between 1979 and the mid-1990s (IPCC 2021). Climate change modeling shows that further warming could occur, which could induce additional changes in the global climate system during the current century. Changes to the global climate system, ecosystems, and the environment of California could include higher sea levels, drier or wetter weather, changes in ocean salinity, changes in wind patterns or more energetic aspects of extreme weather (e.g., droughts, heavy precipitation, heat waves, extreme cold, and increased intensity of tropical cyclones). Specific effects from climate change in California may include a decline in the Sierra Nevada snowpack, erosion of California’s coastline, and seawater intrusion in the Sacramento-San Joaquin River Delta. According to the 2006 California Climate Action Team Report, several climate change effects can be expected in California over the course of the next century (CalEPA 2006). These are based on trends established by the IPCC and are summarized below.

- A diminishing Sierra snowpack declining by 70 percent to 90 percent, threatening the state’s water supply.
- A rise in sea levels, resulting in the displacement of coastal businesses and residences. During the past century, sea levels along California’s coast have risen about seven inches. If emissions continue unabated and temperatures rise into the higher anticipated warming range, sea level is expected to rise an additional 22 to 35 inches by the end of the century. Sea level rises of this magnitude would inundate coastal areas with salt water, accelerate coastal erosion, threaten vital levees and inland water systems, and disrupt wetlands and natural habitats.
- An increase in temperature and extreme weather events. Climate change is expected to lead to increases in the frequency, intensity, and duration of extreme heat events and heat waves in California. More heat waves can exacerbate chronic disease or heat-related illness.
- Increased risk of large wildfires if rain increases as temperatures rise. Wildfires in the grasslands and chaparral ecosystems of southern California are estimated to increase by approximately 30 percent toward the end of the 21st century because more winter rain will stimulate the growth of more plant fuel available to burn in the fall. In contrast, a hotter, drier climate could promote up to 90 percent more northern California fires by the end of the century by drying out and increasing the flammability of forest vegetation.
- Increasing temperatures from 8 to 10.4°F under the higher emission scenarios, leading to a 25 percent to 35 percent increase in the number of days that O₃ pollution levels are exceeded in most urban areas.
- Increased vulnerability of forests due to forest fires, pest infestation, and increased temperatures.
- Reductions in the quality and quantity of certain agricultural products. The crops and products likely to be adversely affected include wine grapes, fruit, nuts, and milk.
- Exacerbation of air quality problems. If temperatures rise to the medium warming range, there could be 75 to 85 percent more days with weather conducive to ozone formation in Los Angeles and the San Joaquin Valley, relative to today’s conditions. This is more than twice the increase expected if

rising temperatures remain in the lower warming range. This increase in air quality problems could result in an increase in asthma and other health-related problems.

- A decrease in the health and productivity of California’s forests. Climate change can cause an increase in wildfires, an enhanced insect population, and establishment of non-native species.
- Increased electricity demand, particularly in the hot summer months.
- Increased ground-level ozone formation due to higher reaction rates of ozone precursors.

In addition, at the local level, Los Angeles County Department of Public Health has noted that, all across Los Angeles, the effects of climate change have been evident in more very hot days and heat waves later in the summer. Scientists predict that climate change will continue to cause even more extreme heat in the future. Coastal areas and central Los Angeles will experience three times more days of temperatures over 95°F, and the San Fernando and San Gabriel Valleys will have even more extremely hot weather (LA DPH 2025).

3.8.2 Regulatory Setting

3.8.2.1 Federal

3.8.2.1.1 Clean Air Act

In *Massachusetts v. Environmental Protection Agency*, 127 S. Ct. 1438 (2007), the U.S. Supreme Court ruled that CO₂ and other GHGs are pollutants under the CAA, which the USEPA must regulate if it determines they pose an endangerment to public health or welfare. On December 7, 2009, the USEPA issued an “endangerment finding” under the CAA, concluding that current and projected GHG emissions threaten the public health and welfare of current and future generations and that motor vehicles contribute to GHG pollution (USEPA 2009). These findings provide the basis for adopting new national regulations to mandate GHG emission reductions under the CAA.

Under the Consolidated Appropriations Act of 2008 (HR 2764), Congress established mandatory GHG reporting requirements for some emitters of GHGs. In response to the requirements established under HR 2764 and under the authority of the CAA, on September 22, 2009, the USEPA issued the Final Mandatory Reporting of Greenhouse Gases Rule. The rule requires annual reporting to the USEPA of GHG emissions from large sources and suppliers of GHGs, including facilities that emit 25,000 MTCO₂e or more a year of GHGs.

3.8.2.1.2 Federal Vehicle Standards

In response to the *Massachusetts v. Environmental Protection Agency* ruling discussed above, the Bush Administration issued an Executive Order on May 14, 2007, directing the USEPA, the Department of Transportation, and the Department of Energy to establish regulations that reduce GHG emissions from motor vehicles, non-road vehicles, and non-road engines by 2008. On October 10, 2008, the NHTSA released a final environmental impact statement analyzing proposed interim standards for passenger cars and light trucks in model years 2011 through 2015. The NHTSA issued a final rule for model year 2011 on March 30, 2009 (NHTSA 2009), and the USEPA and the NHTSA issued a final rule for model years 2012–2016 on May 7, 2010 (USEPA and NHTSA 2010). On May 21, 2010, the President issued a memorandum to the Secretaries of Transportation and Energy, and the Administrators of the USEPA and

the NHTSA calling for the establishment of additional standards regarding fuel efficiency and GHG reduction, clean fuels, and advanced vehicle infrastructure (Government Publishing Office 2010).

In response to this directive, USEPA and NHTSA issued a Supplemental Notice of Intent announcing plans to propose stringent, coordinated federal GHG and fuel economy standards for model year 2017-2025 light-duty vehicles (Government Publishing Office 2011). The agencies proposed standards projected to achieve 163 grams per mile of CO₂ in model year 2025, on an average industry fleet wide basis, which is equivalent to 54.5 miles per gallon if this level were achieved solely through fuel efficiency. California has announced its support of this national program (CARB 2011). The final rule was adopted in October 2012, and NHTSA intends to set standards for model years 2022-2025 in future rulemaking (USEPA and NHTSA 2012; NHTSA 2012).

3.8.2.1.3 Heavy-Duty Engines and Vehicles Fuel Efficiency Standards

On August 9, 2011, the USEPA and the NHTSA announced fuel economy and GHG standards for medium- and heavy-duty trucks, which apply to vehicles from model years 2014 through 2018 (USEPA and NHTSA 2016). The USEPA and the NHTSA adopted standards for CO₂ emissions and fuel consumption, respectively, tailored to each of three main vehicle categories: (1) combination tractors, (2) heavy-duty pickup trucks and vans, and (3) vocational vehicles. According to the USEPA, this program will reduce GHG emissions and fuel consumption for affected vehicles by 6 percent to 23 percent. In August 2018, the USEPA and NHTSA issued a proposed ruling to roll back some of the fuel economy and GHG standards for medium- and heavy-duty trucks. The new ruling proposed by the USEPA and NHTSA, the Safer Affordable Fuel-Efficient Vehicle Rules, would replace the Corporate Average Fuel Economy standards set for model year 2022-2025 passenger car and light trucks, while the 2021 model year vehicles will maintain the Corporate Average Fuel Economy standards. On September 27, 2019, EPA and NHTSA published the “Safer Affordable Fuel-Efficient Vehicles Rule Part One: One National Program” (Part One Rule; 84 FR 51,310), which became effective November 26, 2019. Part One Rule revokes California’s authority to set its own GHG emissions standards and set zero-emission vehicle mandates in California. On March 31, 2020, the USEPA and NHTSA issued Part Two of the Safer Affordable Fuel-Efficient Rule (Part Two Rule), which went into effect 60 days after being published in the Federal Register. Part Two Rule sets CO₂ emissions standards and corporate average fuel economy standards for passenger vehicles and light duty trucks for model years 2021 through 2026. California and 22 other states, as well as the District of Columbia and four cities, filed suit against the USEPA and a petition for reconsideration of the rule on November 26, 2019. The litigation is ongoing.

3.8.2.2 State

3.8.2.2.1 Executive Order S-3-05

On June 1, 2005, Executive Order S-3-05 set the following GHG emission reduction targets: by 2010, reduce GHG emissions to 2000 levels; by 2020, reduce GHG emissions to 1990 levels; and by 2050, reduce GHG emissions to 80 percent below 1990 levels. The Secretary of CalEPA is responsible for coordination of State agencies and progress reporting.

3.8.2.2.2 Executive Order B-30-15

In April 2015, Governor Edmund Brown issued an Executive Order establishing a statewide GHG reduction goal of 40 percent below 1990 levels by 2030. The emission reduction target acts as an interim goal between the AB 32 goal (i.e., achieve 1990 emission levels by 2020) and Governor Brown's Executive Order S-03-05 goal of reducing statewide emissions 80 percent below 1990 levels by 2050. In addition, the Executive Order aligns California's 2030 GHG reduction goal with the European Union's reduction target (i.e., 40 percent below 1990 levels by 2030) that was adopted in October 2014.

3.8.2.2.3 Executive Order S-01-07

With Executive Order O S-01-07, Governor Schwarzenegger set forth the low carbon fuel standard (LCFS) for California in 2007. Under this Executive Order, the carbon intensity of California's transportation fuels is to be reduced by at least 10percent by 2020. In September 2018, the LCFS regulation was amended to increase the statewide goal to a 20percent reduction in carbon intensity of California's transportation fuels by 2030.

3.8.2.2.4 Assembly Bill 32

In September 2006, the California Global Warming Solutions Act of 2006, also known as AB 32, was signed into law. AB 32 focuses on reducing GHG emissions in California and requires CARB to adopt rules and regulations that would achieve GHG emissions equivalent to statewide levels in 1990 by 2020. CARB initially determined that the total statewide aggregated GHG 1990 emissions level and 2020 emissions limit was 427 million MT CO₂e. The 2020 target reduction was estimated to be 174 million MT CO₂e.

To achieve the goal, AB 32 mandates that CARB establish a quantified emissions cap, institute a schedule to meet the cap, implement regulations to reduce statewide GHG emissions from stationary sources, and develop tracking, reporting, and enforcement mechanisms to ensure that reductions are achieved.

3.8.2.2.5 Senate Bill 32

SB 32, signed September 8, 2016, updates AB 32 to include an emissions reduction goal for the year 2030. Specifically, SB 32 requires the state board to ensure that statewide GHG emissions are reduced to 40 percent below the 1990 level by 2030. The new plan, outlined in SB 32, involves increasing renewable energy use, imposing tighter limits on the carbon content of gasoline and diesel fuel, putting more electric cars on the road, improving energy efficiency, and curbing emissions from key industries.

3.8.2.2.6 Senate Bill 375

Acknowledging the relationship between land use planning and transportation sector GHG emissions, SB 375 was passed by the State Assembly on August 25, 2008, and signed by the Governor on September 30, 2008. This legislation links regional planning for housing and transportation with the GHG reduction goals outlined in AB 32. Reductions in GHG emissions would be achieved by, for example, locating employment opportunities close to transit.

Under SB 375, each Metropolitan Planning Organization would be required to adopt a Sustainable Community Strategy to encourage compact development that reduces passenger VMT and trips so that the region will meet a target, created by CARB, for reducing GHG emissions. If the Sustainable

Community Strategy is unable to achieve the regional GHG emissions reduction targets, then the Metropolitan Planning Organization is required to prepare an alternative planning strategy that shows how the GHG emissions reduction target could be achieved through alternative development patterns, infrastructure, and/or transportation measure.

3.8.2.2.7 Senate Bill 743

The California Office of Planning and Research (OPR) published its proposal for the comprehensive updates to the State CEQA Guidelines in November 2017, which included proposed updates related to analyzing transportation impacts pursuant to SB 743. These updates indicated that VMT be the primary metric used to identify transportation impacts. In December of 2018, OPR published the most recent version of the *Technical Advisory on Evaluating Transportation Impacts* (2018a), which provides guidance for VMT analysis. The Office of Administrative Law approved the updated State CEQA Guidelines, and lead agencies were required to implement the updated guidelines by July 1, 2020.

3.8.2.2.8 Senate Bill 1383

SB 1383, adopted in 2013, requires CARB to develop and implement a Short-Lived Climate Pollutant Strategy with the following 2030 goals: 40 percent reduction in CH₄, 40 percent reduction in HFC gases, and 50 percent reduction in anthropogenic black carbon below 2013 levels. Per its directive, CARB adopted the Short-Lived Climate Pollutant Strategy, establishing a path to decrease Short-Lived Climate Pollutants from various sectors of the economy. Strategies span from wastewater and landfill practices and CH₄ recovery to reducing natural gas leaks and consumption. The Short-Lived Climate Pollutant Strategy also identifies measures that can reduce HFC emissions through incentive programs and limitations on the use of high-GWP refrigerants in new refrigeration and air-conditioning equipment.

3.8.2.2.9 Assembly Bill 1279

AB 1279 was passed on September 16, 2022 and declares the state would achieve net zero GHG emissions as soon as possible, but no later than 2045. In addition, AB 1279 mandates that the state achieve and maintain net negative GHG emissions and ensure that statewide anthropogenic GHG emissions are reduced to at least 85 percent below the 1990 levels by 2045. The bill requires updates to the scoping plan (once every five years) to implement various policies and strategies that enable carbon dioxide removal solutions and carbon capture, utilization, and storage technologies.

3.8.2.2.10 Assembly Bill 1493

AB 1493 (known as the Pavley standards) requires CARB to develop and implement regulations to reduce automobile and light-truck GHG emissions. These stricter emissions standards were designed to apply to automobiles and light trucks beginning with model year 2009. Additional strengthening of the Pavley standards (referred to previously as Pavley II and now referred to as the Advanced Clean Cars measure) was adopted for vehicle model years 2017–2025 in 2012. Together, the two standards are expected to increase average fuel economy to roughly 54.5 miles per gallon in 2025.

3.8.2.2.11 Climate Change Scoping Plan

In 2008, CARB approved the original *Climate Change Scoping Plan* as required by AB 32. Subsequently, CARB approved updates to the *Climate Change Scoping Plan* in 2014 (First Update) and 2017 (2017 Update), with the 2017 Update considering SB 32 (adopted in 2016) in addition to AB 32. The original *Climate Change Scoping Plan* proposed a “comprehensive set of actions designed to reduce overall carbon GHG emissions in California, improve our environment, reduce our dependence on oil, diversify our energy sources, save energy, create new jobs, and enhance public health.” The original *Climate Change Scoping Plan* identified a range of GHG reduction actions that included direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, market-based mechanisms, such as a cap-and-trade system, and an AB 32 implementation fee to fund the program (CARB 2008).

The original *Climate Change Scoping Plan* called for a “coordinated set of solutions” to address all major categories of GHG emissions. Transportation emissions were addressed through a combination of higher standards for vehicle fuel economy, implementation of the LCFS, and greater consideration to reducing trip length and generation through land use planning and transit-oriented development. Buildings, land use, and industrial operations were encouraged and, sometimes, required to use energy more efficiently. Utility energy providers were required to change to include more renewable energy sources through implementation of the Renewables Portfolio Standard. Additionally, the original *Climate Change Scoping Plan* emphasized opportunities for households and businesses to save energy and money through increasing energy efficiency. It indicated that substantial savings of electricity and natural gas would be accomplished through “improving energy efficiency by 25 percent.”

On November 16, 2022, CARB adopted California’s 2022 Scoping Plan for Achieving Carbon Neutrality (referred to as the 2022 Scoping Plan Update, CARB 2022b). The 2022 Scoping Plan Update builds upon the framework established by the original Climate Change Scoping Plan (2008) and the First Update (2014) while identifying new, technologically feasible, and cost-effective strategies to ensure that California meets its GHG reduction targets in a way that promotes and rewards innovation, continues to foster economic growth, and delivers improvements to the environment and public health. The 2022 Scoping Plan Update includes policies to require direct GHG emissions reductions at some of the state’s largest stationary sources and mobile sources. These policies include the use of lower GHG fuels, efficiency regulations, and the cap-and-trade program, which constrains and reduces emissions at covered sources.

3.8.2.2.12 Title 24 Energy Efficiency Standards

The California Building Energy Efficiency Standards serve to reduce wasteful, uneconomical, and unnecessary uses of energy for the state. They include requirements in the California Energy Code (California Code of Regulations, Title 24, Part 6) and energy efficiency provisions in the CALGreen Code, which went into effect on January 1, 2017. While the scope of the California Energy Code is focused on reducing energy consumption, the CALGreen Code is focused on improving public health, reducing environmental impacts, and encouraging sustainable construction in residential and nonresidential buildings.

The California Energy Code (was created as part of the California Building Standards Code (Title 24 of the California Code of Regulations) by the California Building Standards Commission in 1978 to establish

statewide building energy efficiency standards to reduce California's energy consumption. These standards include provisions applicable to all buildings, residential and nonresidential, which describe requirements for documentation and certificates that the building meets the standards. Compliance with Title 24 is enforced through the building permit process.

CALGreen standards require new residential and commercial buildings to comply with mandatory measures under five topical areas: planning and design, energy efficiency, water efficiency and conservation, material conservation and resource efficiency, and environmental quality. CALGreen also provides voluntary tiers and measures that local governments may adopt that encourage or require additional measures in the five green building topics. The 2019 CALGreen code updates were published July 1, 2019, with an effective date of January 1, 2020.

3.8.2.3 Regional

3.8.2.3.1 Southern California Association of Governments

To implement SB 375 and reduce GHG emissions by correlating land use and transportation planning, SCAG adopted the 2020–2045 Regional Transportation Plan/Sustainable Communities Strategy (2020–2045 RTP/SCS) on September 3, 2020. The 2020–2045 RTP/SCS reaffirms the land use policies that were incorporated into the 2016–2040 RTP/SCS. The 2020–2045 RTP/SCS describes how the region can attain the GHG emission-reduction targets set by CARB by achieving a 19 percent reduction by 2035 compared to the 2005 level on a per capita basis. Compliance with and implementation of 2020 RTP/SCS policies and strategies would have co-benefits of reducing per capita criteria air pollutant emissions associated with reduced per capita VMT.

3.8.2.3.2 SCAQMD Interim CEQA GHG Thresholds

The SCAQMD adopted a “Policy on Global Warming and Stratospheric Ozone Depletion” on April 6, 1990. The policy commits the SCAQMD to consider global impacts in rulemaking and in drafting revisions to the AQMP. In March 1992, the SCAQMD Governing Board reaffirmed this policy and adopted amendments to the policy.

On December 5, 2008, SCAQMD adopted a staff proposal for an interim GHG significance threshold of 10,000 MTCO₂e per year for industrial permitting projects where SCAQMD is lead agency. In September 2010, SCAQMD proposed a tiered efficiency target approach to evaluate potential GHG impacts from various uses. This tiered approach allowed for flexibility when analyzing GHG emissions based on project size, land use type, or other characteristics. The various tiers include: (1) potential CEQA exemptions for certain projects; (2) compliance with a qualified GHG reduction strategy; (3) comparison with separate screening level thresholds for industrial (10,000 MTCO₂e/year), commercial (1,400 MTCO₂e/year), residential (3,500 MTCO₂e/year), and mixed-use (3,000 MTCO₂e/year) projects or comparison against a single numerical screening threshold of 3,000 MTCO₂e/year for all non-industrial projects; (4) consistency with compliance options, including a performance-based reduction analysis (i.e., compare with a Business-As-Usual level), compliance with AB 32, and/or comparison with efficiency-based thresholds (i.e., quantitative thresholds that are based on a per capita efficiency metric; 4.8 MTCO₂e/service population/year for project-level analysis and 6.6 MTCO₂e/ service population/year for plan level analysis relative to the 2020 target date under AB 32); and/or (5) implement offsite mitigation

to reduce GHG emission impacts to a less-than-significant level. The draft GHG guidance is included as part of the periodic updates to SCAQMD's Air Quality Handbook; however, the SCAQMD draft interim guidance was never officially adopted, and the proposed thresholds were not designed for versatile application to unique project types such as the Plan.

3.8.2.3.3 Los Angeles County Climate Action Plan

The 2020 Los Angeles County CAP, adopted in 2015, was a component of the County's General Plan Air Quality Element until it expired in 2020. To reduce impacts of climate change, the 2020 CAP set a target to reduce GHG emissions from community activities in the unincorporated areas of Los Angeles County by at least 11 percent below 2010 levels by 2020 (Los Angeles County Department of Regional Planning 2020b). The 2020 CAP contained 26 local actions related to green buildings and energy; land use and transportation; water conservation and wastewater; waste reduction, reuse, and recycling; and land conservation and tree planting. It also included 17 reduction strategies from the following areas: transportation; stationary energy; waste; industrial process and product use; agriculture, forestry, and other land use.

The LA County Board of Supervisors approved the 2045 CAP on April 16, 2024, which is an update to the 2020 CAP and sets new GHG emissions reduction targets for 2030 and 2035, consistent with state goals, and sets a long-term aspirational goal for carbon neutrality by 2045 (Los Angeles County Department of Regional Planning 2023a). The 2045 CAP includes five categories for GHG emissions reductions: (1) energy supply, (2) transportation, (3) building energy and water, (4) waste, and (5) agriculture, forestry, and other land uses. Under these categories, there are various strategies, measures, and actions which will achieve the GHG emissions reductions outlined in the 2045 CAP such as decarbonizing the energy supply, increase densities and diversity of land uses near transit, reducing single occupancy vehicle trips, improve efficiency of existing building energy use, conserving water, and others.

The 2045 CAP sets new GHG emission reduction targets for 2030 and 2035, consistent with state goals, and sets a long-term aspirational goal for carbon neutrality by 2045, similar to the 2022 Scoping Plan Update. The Los Angeles County 2045 CAP was adopted on April 16, 2024, and therefore, can be used as a qualified GHG reduction plan for CEQA tiering for projects within unincorporated Los Angeles County.

3.8.2.3.4 OurCounty: The Los Angeles Countywide Sustainability Plan

OurCounty: The Los Angeles Countywide Sustainability Plan was adopted by the LA County Board of Supervisors on August 6, 2019. As a strategic plan, the *OurCounty Sustainability Plan* does not supersede land use plans that have been adopted by the Regional Planning Commission and Board of Supervisors, including the County General Plan. The document serves as a regional sustainability plan for the County with the following 12 goals to help guide decision-making in the County's unincorporated areas and provide a model for decision-making in the 88 incorporated cities:

- Goal 1: Resilient and healthy community environments where residents thrive in place. The County will protect vulnerable communities from pollution, reduce health and economic inequalities, ensure access to safe, clean, and affordable water, and support more resilient and inclusive communities.
- Goal 2: Buildings and infrastructure that support human health and resilience. Old and new buildings and infrastructure will utilize more efficient technologies and practices that reduce resource use, improve health, and increase resilience.

- Goal 3: Equitable and sustainable land use and development without displacement. Utilize policy tools, such as anti-displacement measures, so existing community members can remain in and strengthen their neighborhoods and networks while accepting new residents through more compact, mixed-use development. Pursue outcomes that are inclusive, safe, healthy, accessible, and transit oriented.
- Goal 4: A prosperous LA County that provides opportunities for all residents and businesses and supports the transition to a green economy. Support the growth of green economy sectors through procurement practices, land use authority, and various economic and workforce development incentives.
- Goal 5: Thriving ecosystems, habitats, and biodiversity. Ensure that our ecosystems, including urban habitats, thrive even as our region becomes increasingly urbanized through careful planning.
- Goal 6: Accessible parks, beaches, recreational waters, public lands, and public spaces that create opportunities for respite, recreation, ecological discovery, and cultural activities. Make parks and public lands more accessible and inclusive and manage them so that all residents may enjoy their benefits.
- Goal 7: A fossil fuel-free LA County. Move towards a zero-carbon energy system that reduces GHG emissions by eliminating fossil fuel production in the County. By addressing sources of pollution, air will be cleaner for the residents and the imminent dangers from the magnitude of climate change will be limited.
- Goal 8: A convenient, safe, clean, transportation system that enhances mobility and quality of life while reducing car dependency. Provide a modern transportation system for all ages and abilities to access reliable, safe, affordable, and varied mobility choices that reduce pollution. Develop programs that focus on reducing the number of vehicle miles traveled, including transit systems, walking, biking, e-scooters, and zero-emission car-share services.
- Goal 9: Sustainable production and consumption of resources. Improve our ability to promote integrative and collaborative solutions at the local and regional levels to effectively manage the County's waste, water, energy, and material resources into the future.
- Goal 10: A sustainable and just food system that enhances access to affordable, local, and healthy food. Improve access to healthy food within County boundaries while optimizing purchasing power and business services to make food production more sustainable through leveraging of capital assets, public services, and regulatory authority.
- Goal 11: Inclusive, transparent, and accountable governance that encourages participation in sustainability efforts, especially by disempowered communities. Build stronger communities and better-informed policy and programs by creating a more inclusive and accountable governance structure. This will ensure equity in sustainability policies and programs by having diverse representation in development, implementation, and management.
- Goal 12: A commitment to realize OurCounty sustainability goals through creative, equitable, and coordinated funding and partnerships. Work with partners across the public, private, and nonprofit sectors for a more sustainable future through funding opportunities and leveraging of purchasing power.

3.8.2.3.5 Los Angeles County General Plan

The General Plan is an applicable guiding policy document for the unincorporated Plan Area. The General Plan is intended to provide policy framework for development within the County through the year 2035. The General Plan provides the fundamental basis for the County's land use and development policy, and represents the basic community values, ideals, and aspirations to govern a shared environment through 2035. The County does not have a General Plan Element specific to climate change

and GHG emissions. However, the following goals and policies from the General Plan Air Quality and Mobility Elements would also lead to GHG emission reductions:

- Goal AQ 3 Implementation of plans and programs to address the impacts of climate change.
 - Policy AQ 3.2: Reduce energy consumption in County operations by 20 percent by 2015.
 - Policy AQ 3.3: Reduce water consumption in County operations.
 - Policy AQ 3.4 Participate in local, regional, and state programs to reduce greenhouse gas emissions.
 - Policy AQ 3.5 Encourage energy conservation in new development and municipal operations.
 - Policy AQ 3.6 Support rooftop solar facilities on new and existing buildings.
- Goal M 4 An efficient multimodal transportation system that serves the needs of all residents.
 - Policy M 4.15 Reduce vehicle trips through the use of mobility management practices, such as the reduction of parking requirements, employer/institution-based transit passes, regional carpooling programs, and telecommuting.
 - Policy M 4.16 Promote mobility management practices, including incentives to change transit behavior and using technologies, to reduce VMTs.

3.8.2.3.6 Los Angeles County Code

The County has adopted, by reference, Sections 102 through 119 of Chapter 1 of Title 26 of the Los Angeles County Code as Title 31 Green Building Standards Code of the Los Angeles County Code. The Green Building Code increases energy and water efficiency and reduces waste generation. The Green Building Code has co-benefits of reducing criteria pollutant emissions through the increase in energy efficiencies, which reduces building energy demand and the combustion of natural gas within buildings.

As part of state and regional efforts towards water conservation, Titles 11 and 12 of the Los Angeles County Code include requirements for water conservation and sustainability. The code requires recirculating water required for water fountains and decorative water features and the use of recycled or approved non-potable water for construction purposes. It is recommended that large, landscaped areas such as parks, cemeteries, golf courses, school grounds, and playing fields use irrigation systems with rain sensors that automatically shut off such systems during periods of rain or irrigation timers that automatically use information such as evapotranspiration sensors to set an efficient water schedule.

Title 20 of the Los Angeles County Code contains provisions that implement the source reduction and recycling programs and other measures to achieve per capita waste generation for disposal in accordance with state programs.

3.8.2.4 Incorporated Cities Within the Plan Area

The table below presents the policies related to GHG emissions from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.8-3. Applicable Local City Policies Related to Greenhouse Gas Emissions

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Resources Element:</p> <p>Goal R-3: Minimization of energy use and its associated impacts to air quality and climate change.</p> <p>Policy R-3A: Work with energy providers to ensure adequate, dependable energy supplies to support existing and future land uses.</p> <p>Policy R-3B: Encourage the use of energy saving designs, systems, and innovations in public and private building construction.</p> <p>Policy R-3C: Promote using renewable energy, such as solar panels and biomethane.</p> <p>Goal R-5: Minimization of Alhambra’s contribution to global climate change by reducing GHG emissions to the degree feasible.</p> <p>Policy R-5A: Facilitate compact development patterns that minimize motor vehicle trips and VMT while maintaining community character.</p> <p>Policy R-5B: Collaborate with local transit agencies to develop programs that promote mass transit ridership.</p> <p>Policy R-5C: Encourage the use of green building technology for building retrofits and pursue Leadership in Energy and Environmental Design (LEED) certification for new development.</p> <p>Policy R-5D: Incorporate GHG reduction strategies into urban design and planning.</p> <p>Policy R-5E: Provide community outreach to educate the public about climate change and efforts that residents can make to reduce GHG emissions.</p> <p>Mobility Element:</p> <p>Goal M-2: A circulation system that accommodates and encourages the use of alternative modes of transportation, including walking, bicycling, and transit.</p> <p>Policy M-2A: Ensure that new development accommodates, and does not have a negative impact on, alternative transportation modes.</p> <p>Policy M-2B: Improve transportation infrastructure and services in a way that will increase the utility, safety, and attractiveness of alternative modes of transportation.</p> <p>Policy M-2C: Improve connectivity for alternative transportation modes throughout and beyond the City.</p> <p>Policy M-2F: As feasible, implement improvements to the City's bike network. The bikeway system should connect to the regional system and may need to be adjusted over time as conditions change. The bike network will include, as appropriate, enhancements to bicyclist safety and bike parking.</p>	No applicable municipal codes were identified.	No other applicable ordinances were identified.
Arcadia	<p>Resource Sustainability Element:</p> <p>Goal RS-1: Continued improvement in local and regional air quality.</p> <p>Policy RS-1.1: Reduce local contributions of airborne pollutants to the air basin.</p>	No applicable municipal codes were identified.	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy RS-1.4: Lower the emissions caused by motor vehicles through Transportation Demand Management strategies and land use patterns that reduce vehicle miles traveled.</p> <p>Policy RS-1.5: Promote the reduction of vehicular traffic and improved efficiency of the City’s circulation system (i.e. roadways) as a means to improving air quality.</p> <p>Policy RS-1.7: Promote energy-efficient building construction and operation practices that reduce emissions and improve air quality.</p> <p>Goal RS-2: Reducing Arcadia’s carbon footprint in compliance with SB 375 and AB 32.</p> <p>Policy RS-2.1: Cooperate with the state to implement AB 32, which calls for reducing greenhouse gas emissions to 1990 levels by 2020, and Executive Order S-3-05, which calls for 1990 levels by 2020 and 80 percent below 1990 levels by 2050.</p> <p>Policy RS-2.2: Reduce per capita greenhouse gas emissions to 15 percent below 2005 levels by 2020, and total municipal greenhouse gas emissions to 15 percent below 2005 levels by 2020.</p> <p>Policy RS-2.3: Participate in regional strategies and plan to implement SB 375, and in particular, use the legislatively authorized incentives, such as grants and transportation funding and waivers to environmental assessments, to encourage infill and transit-oriented development.</p> <p>Policy RS-2.4: Pursue the strategies in the Land Use and Community Design Element to encourage transit-oriented development in established focused areas.</p> <p>Policy RS-2.5: Pursue the enhancement of bicycle and pedestrian infrastructure set forth in the Circulation and Infrastructure Element to help decrease vehicle miles traveled and vehicle trips.</p> <p>Policy RS-2.6: Coordinate land use, circulation, and infrastructure improvement efforts with the West San Gabriel Valley Planning Council, regional planning agencies, and surrounding municipalities.</p> <p>Goal RS-3: Promoting and utilizing clean forms of transportation to reduce Arcadia’s carbon Footprint.</p> <p>Policy RS-3.1: Develop a City fleet that to the extent feasible uses clean, alternative fuel and consists of energy-efficient vehicles.</p> <p>Policy RS-3.2: Incorporate energy-efficient vehicles into the City’s transit system.</p> <p>PolicyRS-3.3: Educate residents on methods of sustainable driving techniques such as: reducing excessive speeding, preventing car idling, regular car maintenance for maximizing fuel efficiency, and car pooling.</p> <p>Policy RS-3.4: Promote residents’ and business owners’ awareness and education of traffic congestion’s effect on air pollution and help create voluntary programs that reduce traffic throughout the City.</p>		
Azusa	<p>Chapter 3: The Built Environment:</p> <p>Transportation Choices:</p> <p>Goal 3: Provide a connected, balanced, and integrated transportation system that enables Azusans to walk, bike, and take transit, rather than using their car.</p> <p>Policy 3.1: Develop and maintain a citywide pedestrian network of both on-street and off-street walkways. Network shall link new neighborhoods with existing neighborhoods, connect neighborhood centers, schools, parks, commercial centers,</p>	No applicable municipal codes were identified.	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>and citywide destinations such as Downtown, the San Gabriel River, and Civic Center. (M8)</p> <p>Policy 3.2: Coordinate the provision and maintenance of the non-motorized circulation network with adjacent jurisdictions. (M4)</p> <p>Policy 3.3 Provide pedestrian amenities (such as benches, seats, water fountains, shady street trees, etc.) and conditions that enhance the pedestrian experience along the pedestrian network. (M9 and M10)</p> <p>Policy 3.4 Develop and maintain a citywide bicycle network of both on-street bike lanes and off -street bike paths in accordance with the Bicycle Routes (Figure M-2). The network provides for off -street paths along the San Gabriel River, railroad rights-of way, alongside flood control channels, and within existing and new neighborhoods, where feasible. The network improves connections between residential neighborhoods, schools and commercial centers, as well as providing connections to citywide destinations such as Downtown, the University District, the San Gabriel River, and Civic Center. (M6 and M11)</p> <p>Policy 3.5 Provide bicycle amenities (bicycle parking spaces, bike lockers, etc.) on/near the bicycle network. (M6 and M12)</p> <p>Land Use Compatibility:</p> <p>Goal 10 Ensure the compatibility among various types of land uses.</p> <p>Policy 10.6: Work with public and private organizations and individuals to minimize the land use impacts in and around the river, the canyons, and foothills, such impacts may include but not be limited to noise generation, natural resources encroachment, air quality degradation, aesthetic degradation, etc. (LU11)</p> <p>Land Use Implementation Program:</p> <p>LU12 Local Compliance: The City of Azusa is responsible for complying with and executing local actions with a number of regional environmental regulations. These include but are not limited to:</p> <ul style="list-style-type: none">• South Coast Air Quality Management Plan and South Coast Air Quality Management District; <p>Chapter 5: Natural Environment</p> <p>Air Quality Goals and Policies</p> <p>Goal 1: Improve air quality in Azusa and reduce exposure to air pollutants.</p> <p>Policy 1.1 Integrate air quality concerns into land use planning decisions (AQ1 through AQ4, and AQ8).</p> <p>Policy 1.2 Integrate air quality concerns into site design review (AQ1 and AQ5).</p> <p>Policy 1.3 Reduce pollutant emissions from quarry operations, off -road vehicles use areas, industrial uses, and vehicular traffic (AQ4, and AQ6 through AQ8).</p> <p>Policy 1.4 Participate in regional air quality planning strategies (AQ8).</p>		
Baldwin Park	<p>Air Quality Element:</p> <p>Goal 2: Improve air quality by reducing the amount of vehicular emissions through planning for alternative forms of travel.</p> <p>Policy 2.4: Create the maximum possible opportunities for bicycles as an alternative transportation mode and recreational use.</p>	No applicable municipal codes were identified.	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 2.5: Encourage non-motorized transportation through the provision of bicycle and pedestrian pathways.</p> <p>Health and Sustainability Element:</p> <p>Goal HS-7. Reduce greenhouse gas emissions citywide by reducing energy use and reliance on fossil fuels.</p> <p>Policy 7.02: Support the use of energy-efficient design and renewable energy technologies in public and private development projects.</p> <p>Policy 7.04: Increase public awareness about climate change, and encourage residents and businesses to become involved in improvement projects and lifestyle changes that help reduce greenhouse gas emissions.</p> <p>Action HS-7.1: Implement an Energy Efficient City Plan that evaluates and prioritizes best practices for increasing the energy efficiency of City operations.</p> <p>Action HS-7.2: Perform energy audits of existing City operations and maintenance practices on a regular basis to identify and implement energy savings measures.</p> <p>Action HS-7.3: Continue to replace City operating systems as needed with energy efficient alternatives.</p> <p>Action HS-7.4: Continue to explore opportunities to generate energy on City properties, including installation of solar panels.</p> <p>Action HS-7.6: Adopt the Energy Action Plan prepared in conjunction with the San Gabriel Valley Council of Governments. Implement identified actions and strive to meet performance targets identified in the Energy Action Plan.</p> <p>Goal HS-11. Be a local leader in reducing greenhouse gas emissions and managing climate change.</p> <p>Policy 11.01: Support local, regional, and statewide efforts to reduce emissions of greenhouse gases linked to climate change.</p> <p>Action HS-11.1: Every five years, update the Greenhouse Gas Emissions Inventory developed as part of the Energy Action Plan.</p> <p>Action HS-11.2: Sign the Mayor’s Climate Protection Agreement.</p> <p>Action HS-11.3: Analyze and mitigate increases in greenhouse gas emissions during development project review, pursuant to the California Environmental Quality Act.</p> <p>Action HS-11.4: Collaborate with climate science experts on local climate change impacts, mitigation, and adaptation to inform public policy decisions.</p>		
Claremont	<p>Open Space, Parkland, Conservation, and Air Quality Element:</p> <p>Goal 5-13: Maximize energy conservation throughout all segments of the community to reduce air pollutant emissions, and to reduce consumption of natural resources and fossil fuels.</p> <p>Policy 5-13.1 Promote the use of energy-saving designs and devices in all new construction and reconstruction.</p> <p>Goal 5-14: Incorporate green building and other sustainable building practices into development projects.</p> <p>Policy 5-14.1: Facilitate the use of green building standards and Leadership in Energy and Environmental Design (LEED) in both private and public projects.</p>	<p>Municipal codes related to greenhouse gas emissions relevant to the Plan Area can be found in Chapter 16.154 (Environmental Protective Standards) Section 16.154.040 (Environmental Development Standards).</p> <p>Under Chapter 16.154 (Environmental Protective Standards) Section 16.154.040 (Environmental Development Standards) the following standards apply:</p> <p>A. Air Contaminants</p> <p>The emission of any air contaminants shall not exceed the requirements of the South Coast Air Quality Management District or the requirements of any Air Quality Plan adopted by the City of Claremont.</p>	<p>City of Claremont Sustainable City Plan (City of Claremont 2021). The Sustainable City Plan provides goals for seven topic areas including resource conservation, environmental public health and local agriculture, transportation, sustainable built environment, open space and biodiversity, housing and economic development, and public outreach and education.</p> <p>The following goals and polies are relevant to the Plan:</p> <p>Goal 1.1. Energy (Electrical and Gas)</p> <ul style="list-style-type: none">Promote energy efficiency and conservation technologies and practices to reduce the use of nonrenewable resources by both City government and the community. Technologies include solar energy systems, co-generation systems for larger facilities, next generation lighting technologies, energy efficient appliances and HVAC systems, and electric and other low emitting vehicles.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
			<ul style="list-style-type: none">• Promote community-wide energy awareness with energy audit information and implementation of programs such as Community Home Energy Retrofit Project (CHERP) and similar programs. Identify and promote Energy Efficient technologies and techniques that have a positive return on investment.• Educate the community regarding incentives (special financing, grants, rebates, exchanges, etc.) available for energy conservation and renewable energy projects.• Promote local installation of solar energy systems (electric power generation and water heating).• Seek innovative lighting technologies that might be implemented with the cooperation of the manufacturer. <p>Goal 1.2. Water and Wastewater</p> <ul style="list-style-type: none">• Minimize waste of water resources by advocating and implementing wise use and conservation measures.• Maximize recharge of local water resources and minimize pollution at local beaches by minimizing storm water runoff and eliminating dry weather runoff.• Build public awareness of water issues and support for wise water management.• Support efforts of Sustainable Claremont, the City, Three Valleys Municipal Water District and Golden State Water Company to establish local wastewater reclamation plants to supply major water users in Claremont with irrigation water.• Support efforts by Sustainable Claremont, the City, Three Valleys Municipal Water District, and Golden State Water Company to promote water-wise landscaping.• Support the proposed Thompson Creek Spreading Grounds Project to achieve a significant increase in groundwater recharge. <p>Goal 1.3. Solid Waste</p> <ul style="list-style-type: none">• Reduce the total amount of waste being generated, especially the amount being sent to landfills.• Replace commonly held ideas and practices of our current disposable society to become a resource-efficient and sustainable one. Decrease negative impacts related to the production and disposal of consumable products and packaging (greenhouse gas emissions, toxics, depletion of resources, need for landfills, and environmentally harmful waste).• Encourage development and use of products that consist of components that can be recycled or reused with no loss of quality or are composed of biological nutrients which can be composted or otherwise consumed.• Develop local programs to recycle food scraps, unused produce, and other biodegradable products so that these materials can be used for local soil regeneration or other useful purposes. Spreading mulch or amending soil with composted, dehydrated, or digested food scraps helps plants, increases biodiversity, sequesters carbon, and can help conserve water.• Advocate use of high-capacity, low-shelf-discharge rechargeable batteries (e.g., LSD Ni-MH) in place of disposable (alkaline) batteries.• Encourage proper disposal of environmentally harmful materials such as motor oil, surplus medications, electronic equipment, and spent batteries. <p>Goal 2.2. Air Quality</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
			<ul style="list-style-type: none">• Help achieve and maintain air quality standards that will protect public health and the environment, promote and participate in cooperative efforts with agencies and communities in the South Coast Air Basin to achieve clean air, and comply with AQMD requirements. Reduce air pollution due to residential and commercial lawn and garden maintenance equipment. <p>Goal 3.1. Transportation Mode Share</p> <ul style="list-style-type: none">• Decrease vehicle miles traveled (VMT) by increasing per vehicle ridership and decreasing number of single trips by autos and trucks. <p>Goal 3.2. Pedestrian Enhancements</p> <ul style="list-style-type: none">• Increase pedestrian activity by adding improvements that make walking more safe, convenient, and enjoyable. Improvements should include sidewalks, accessibility ramps, benches, bulb-outs at intersections, landscaping, and convenient transit stops. Streets should be viewed from a complete streets perspective where all modes of transportation (auto, transit, bicycle and walking) and people with all abilities are considered and accommodated. <p>Goal 3.3. Micro-Mobility Enhancement and Education</p> <ul style="list-style-type: none">• Increase bicycling by adding improvements that make bicycling more safe, convenient, and enjoyable. Improvements should include bike route wayfinding, additional protected bicycle lanes and paths, and additional bicycle racks. Education efforts should include outreach to schools and the broader community with periodic bicycle training classes at all schools regarding cycling safety. <p>Goal 3.4. Congestion Management</p> <ul style="list-style-type: none">• Decrease congestion on local and regional roadways to improve safety, reduce emissions, and maintain mobility. Actions should include signal synchronization and optimization. <p>Goal 3.6. Alternatives to Driving</p> <ul style="list-style-type: none">• Create incentives/develop programs that reduce the need for parking by encouraging walking, bike riding, taking the bus or train, or carpooling. Explore developing a parking management plan for the Claremont Village. Make changes that would reduce the amount of required parking in transit-oriented, mixed-use, or other developments. <p>Goal 4.1. City Facilities</p> <ul style="list-style-type: none">• Apply sustainable design and construction standards to all new and renovated City facilities. Implement best sustainable practices for operation and maintenance of existing City facilities and landscapes. <p>Goal 4.2. Privately-Owned Facilities</p> <ul style="list-style-type: none">• Apply sustainable design and construction standards to all new and renovated facilities community-wide. Incentivize adoption of best sustainable practices for the operation and maintenance of existing privately-owned facilities and landscapes. <p>Goal 4.3. Infrastructure</p> <ul style="list-style-type: none">• Apply sustainable development standards and operation and maintenance practices to all City infrastructure projects. Continue to implement a “Complete Streets” policy to create streets that minimize runoff of toxins, capture more

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
			<p>storm water, utilize sustainable landscaping, reduce the frequency of required street maintenance, and minimize the urban heat island effect.</p> <p>Goal 4.5. Sustainable Land Use and Smart Growth</p> <ul style="list-style-type: none">• Apply sustainable practices in all Community Development activities that impact the built environment, and in all City Capital Improvement planning and construction. <p>Goal 5.1. Protect and Expand Natural Open Space</p> <ul style="list-style-type: none">• Expand, improve, and protect natural open space resources throughout Claremont (see list at end of Indicator section). Take an active role in the protection and use of all nearby natural areas, including the San Gabriel Mountains Monument. Focus on protecting the natural environment and limiting potential damage to biodiversity and to the local watershed and groundwater basins. <p>Goal 5.2. Expand and Improve Constructed Open Spaces</p> <ul style="list-style-type: none">• Develop and maintain a constructed open space system diverse in services, uses, and opportunities which conserves natural resources; provides passive and active recreation; offers a fair distribution of parks, treed pathways, and public gathering places throughout the community; and increases the aesthetic quality of the community. Encourage parking lot landscaping that provides shade, drainage to allow percolation, and the use of solar/shade structures. <p>Goal 5.3. Maintain Diversity of Local Native Organisms</p> <ul style="list-style-type: none">• Maintain natural areas. Increase local native organisms in constructed landscapes. Prevent spread of invasive species. Work to create new viable natural areas in areas that are currently undeveloped or occupied by invasive plants, unsustainable plant communities, or plants that pose a danger to wildlife. Increase ability to monitor changes in species number, abundance, and distribution, and changes in ecosystem composition. Increase number of citizens involved in maintaining natural areas. <p>Goal 5.4. Protect the Urban Forest</p> <ul style="list-style-type: none">• Protect, improve, and expand our urban forest. Educate City staff, contractors, and property owners on proper trimming practices and watering techniques. Work to prevent damage to existing trees when irrigation patterns change due to conversion to drought-tolerant landscaping.
Covina	<p>Natural Resources and Open Space Element:</p> <p>Goal: A setting in which a high environmental quality is achieved through the bona fide conservation and protection of existing natural resources.</p> <p>Policy o: Comply with applicable portions of Federal, State, regional, and County plans and programs pertaining to air pollution mitigation/air quality enhancement by following, in a manner that recognizes local needs, issues, views, and policy and financial constraints, various vehicular emissions-reducing and traffic congestion-reducing land use and transportation control and energy conservation measures, proposals, and policies outlined in the Land Use and Circulation Elements, to the greatest extent feasible and practical.</p> <p>Policy r: Encourage bikeways, where feasible, to provide an alternative mode of transportation.</p>	No applicable municipal codes were identified.	<p>City of Covina Energy Action Plan Update (City of Covina 2019). The City of Covina Energy Action Plan identifies goals and policies for reducing electricity use within the community. Goals and policies relevant to the Plan are listed below:</p> <p>Goal 1: Maximize Energy Efficiency at Existing City Facilities and Infrastructure</p> <p>Policy 1.2: Enhance the energy efficiency of City buildings and structures through retrofits.</p> <p>Policy 1.5: Become a water conservation leader in the San Gabriel Valley and lead other municipalities by example.</p> <p>Policy 1.6: Incorporate energy efficiency as a key element in designing and building new City structures and facilities.</p> <p>Goal 2: Ensure that Energy Efficiency Practices are Incorporated into Municipal Operations.</p>

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy s: Separate sensitive areas and uses (e.g., parks, schools, childcare centers, and nursing homes) from significant sources of air pollution, to the greatest extent possible.</p> <p>Policy t: Preclude the development of land uses and land use practices that would contribute significantly to air quality degradation.</p>		<p>Goal 4: Demonstrate a Commitment to Realizing the Energy Action Plan Goals Through Creative, Equitable, and Coordinated Partnerships.</p> <p>Policy 4.1: Maximize the benefits from regional partners to enhance energy efficiency projects at the City.</p>
El Monte	<p>Public Health and Safety Element:</p> <p>Goal PHS-8: Effective adaptation to increase the community’s resilience to climate change impacts.</p> <p>Policy PHS-8.7 Adaptation Programs. Design adaptation initiatives and programs to provide multiple co-benefits, including the reduction of greenhouse gas emissions, support for the local economy, enhancements to the natural environment, or alleviating underlying health inequities.</p> <p>Health and Wellness Element:</p> <p>Goal HW-12: Land use patterns reduce driving, enhance air quality, and improve respiratory health.</p> <p>Policy HW-12.1 Walking, Cycling, and Transit Use. Promote land use patterns that reduce driving rates and promote walking, cycling and transit use.</p> <p>Policy HW-12.2 Truck Routes. Discourage locating truck routes on primarily residential streets.</p> <p>Policy HW-12.9 Air Quality Policies. Support policies that reduce emissions of pollutants from stationary and mobile sources such as industrial facilities, motor vehicles and trains.</p>	No applicable municipal codes were identified.	No other applicable ordinances were identified.
Glendora	<p>Air Quality Element:</p> <p>Goal AQ-1: Coordination with Regional, State and Federal Agencies.</p> <p>Policy AQ-1.3: Develop and adopt a policy to utilize federal Congestion Mitigation and Air Quality Improvement funds in coordination with regional agencies in a manner consistent with projects approved in the Air Quality Management Plan.</p> <p>Goal AQ-2: Reduction of vehicular trips.</p> <p>Policy AQ-2.1: Reduce mobile source emissions by encouraging a reduction in project related vehicle trips and vehicle miles traveled (VMT).</p> <p>Policy AQ-2.2: Reduce mobile source emissions by increasing population densities within one-half mile of transit nodes.</p> <p>Policy AQ-2.3: Encourage “walkable” neighborhoods with pedestrian walkways and bicycle paths in residential and other types of developments to encourage pedestrian rather than vehicular travel.</p> <p>Policy AQ-2.4: Promote and encourage ride-sharing activities throughout the community.</p>	No applicable municipal codes were identified.	No other applicable ordinances were identified.
Industry	<p>Resource Management Element:</p> <p>Goal RM2: Improved air quality and reduced greenhouse gas emissions.</p> <p>Policy RM2-1: Comply with state building codes relative to indoor air quality.</p> <p>Policy RM2-2: Support efforts to reduce pollutants to meet State and Federal Clean Air Standards.</p>	No applicable municipal codes were identified.	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy RM2-3: Collaborate with the CARB and other agencies within the South Coast Air Basin to improve regional air quality and achieve GHG reduction targets.</p> <p>Policy RM2-4: Prohibit siting of sensitive land uses within distances defined by CARB unless sufficient mitigation is provided.</p> <p>Implementation Measures:</p> <p>IMP-4: Address truck idling limits during the design review process, especially when adjacent to sensitive uses.</p> <p>IMP-5: Coordinate with SCAG and surrounding jurisdictions on infrastructure improvements intended to relieve congestion and thereby reduce air emissions.</p> <p>IMP-6: Strive to achieve the California Air Resources Board's Scoping Plan.</p>		
Irwindale	<p>Resource Management Element:</p> <p>Resource Management Element Policy 9. The City will continue to cooperate with the other agencies that are charged with improving air and water quality in the region.</p> <p>Resource Management Element Policy 10. The City of Irwindale will continue to cooperate with surrounding cities in the formulation and implementation of regional resource management plans and programs.</p> <p>Resource Management Element Policy 11. The City of Irwindale supports the ethic of conservation of non-renewable resources. This includes efforts to reduce the use of energy (in any form), greenhouse gas (GHG) emissions (consistent with AB 32) and efforts to find new and more energy efficient methods for delivering services. The City supports the development of building standards that enable the community to design energy saving features such as solar energy systems, water efficient landscaping, and sustainable, green, and energy efficient building standards.</p>	No applicable municipal codes were identified.	No other applicable ordinances were identified.
La Puente	<p>Community Resources Element:</p> <p>Goal 4: Conservation of La Puente’s natural resources, improvement of air quality, and energy conservation.</p> <p>Policy 4.2: Participate with the South Coast Air Quality Management District and neighboring cities in supporting local and regional projects that improve mobility on freeways and railways, reduce emissions, and improve air quality.</p> <p>Action CR-19: Improve Regional Air Quality: Continue to participate and coordinate with the South Coast Air Quality Management District (SCAQMD) and neighboring jurisdictions to identify and encourage projects that improve mobility and reduce congestion on freeways and major roads. Implement and interpret the General Plan in a manner consistent with SCAQMD’s Air Quality Management Plan.</p> <p>Policy 4.4: Encourage alternative modes of transportation, such as walking, bicycling, public transportation, and carpooling.</p>	No applicable municipal codes were identified.	No other applicable ordinances were identified.
La Verne	<p>Conservation and Natural Resources Element:</p> <p>Goal 5: Improve our air quality.</p> <p>Policy 5.1 – Reduce Vehicular Pollution.</p>	No applicable municipal codes were identified.	No other applicable ordinances were identified.
Monrovia	<p>Environmental Justice Element:</p> <p>Goal 4: Protect human and environmental health by restoring and improving potable water resources and protecting land uses and air quality from future contamination.</p> <p>Program 4.2.6: Preserve and enhance natural landscapes and tree canopies in and around the environmental justice community to minimize air pollution impacts and</p>	No applicable municipal codes were identified.	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	heat exposure. Promote the use of drought tolerant and native species in landscaped areas.		
Montebello	<p>Chapter 1: Our Natural Community</p> <p>Policy P1.3 Consider emission reduction goals in all major decisions on land use and investments in public infrastructure.</p> <p>Action A1.3a Reduce potential GHG emissions from development by encouraging electrification of new developments, promoting energy conservation in existing buildings, plan new development and redevelopment to reduce single-occupancy vehicle miles traveled, and consider green space during development.</p> <p>Action A1.3b Educate property owners and developers on greenspace inclusion through educational pamphlets, programs, and webpages.</p> <p>Policy P1.5 Coordinate initiatives and regulatory changes with local, regional, and state agencies to reduce motor vehicle emissions.</p> <p>Action A1.5a Develop incentives and adopt regulatory standards to reduce transportation emissions. In addition to reducing the number of miles driven, the fuel efficiency and emissions standards of vehicles must also improve. Working in collaboration with Local, Regional, and State agencies, Montebello will seek to increase use of clean fuels in public and private automobile fleets, consider new legislation, and implement educational programs.</p> <p>Action A1.5b Promote use of alternate modes of transportation in the City of Montebello, including pedestrian, bicycling, public transportation, car sharing programs and emerging technologies.</p> <p>Action A1.5c Invest in low-emission or zero-emission vehicles to replace the City’s gasoline powered vehicle fleet and transition to available clean fuel sources such as bio-diesel for trucks and heavy equipment.</p> <p>Action A1.5d Encourage the use of low or zero emission vehicles, bicycles, non-motorized vehicles, and car-sharing programs by supporting new and existing development that includes sustainable infrastructure and strategies such as vehicle charging stations, dropoff areas for ride-sharing services, secure bicycle parking, and transportation demand management programs.</p> <p>Chapter 4: Our Accessible Community</p> <p>P4.1 Support and promote walking, biking, and other nonvehicular modes as an alternative to driving within Montebello.</p> <p>Chapter 7: Our Active Community</p> <p>Policy P7.3 Promote, expand, and protect a green infrastructure that links the natural habitat.</p> <p>Action A7.3a Prepare a citywide Green Infrastructure Framework.</p> <p>Action A7.3b Use parks as functional landscapes that perform green stormwater infrastructure and flood mitigation roles to enhance resiliency, recreational use, and beauty. New parks will be designed with resiliency in mind with multi-benefit landscapes that protect against flooding, clean and filter stormwater, produce shade and prevent heat island effects, and promote not just environmental resiliency, but also social resiliency.</p> <p>Action A7.3c Encourage simple, small, and low-cost demonstration green infrastructure projects both in the public and private realm. Parks can be everywhere</p>	No applicable municipal codes were identified.	No other applicable ordinances were identified.

	<p>humans can find a spot for peaceful reflection. The advent of green roofs is offering new opportunities to site innovative parks on roof tops.</p> <p>Action A7.3d Include an urban trails signage program that connects corridors and trails within the City to other regional trails.</p> <p>Policy P7.4 Identify and remove barriers to access parks. Encourage walking and biking as preferred way to get to and from parks.</p> <p>Action A7.4a Increase the number of entrances to existing parks to expand the number of residents within walking distance of a park.</p> <p>Action A7.4b Proactively plan entrances and access points for new parks to ensure the greatest number of residents are within walking distance.</p> <p>Action A7.4c Prioritize new access or entry points near existing mobility networks, including sidewalks, bike routes, trails, and transit.</p>		
Pasadena	<p>Open Space and Conservation Element:</p> <p>Goal: Establish Pasadena as a national and international leader on energy and water conservation and environmental stewardship efforts, including air quality protection, energy efficiency requirements, renewable energy standards, natural resource conservation, and greenhouse gas emission standards in the areas of energy, water, air and land.</p> <p>Objectives:</p> <ul style="list-style-type: none">• Preserve and plant trees that absorb carbon dioxide and pollutants• Encourage and provide incentives for the use of alternatives to single-occupancy vehicle use, including using public transit, carpooling, vanpooling, telecommuting, bicycling and walking.• Encourage the transition of municipal fleet to electric, hybrid and natural gas. Support the expansion of electric vehicle infrastructure throughout the City. <p>Mobility Element:</p> <p>Objective 1. Enhance Livability.</p> <p>Policy 1.9 Support local and regional air quality, sustainability, and GHG emission reduction goals through management of the City's transportation network.</p>	No applicable municipal codes were identified.	<p>The City of Pasadena CAP serves as a qualified CAP through year 2035 (City of Pasadena 2018). Pasadena CAP goals include a reduction of GHGs by 59 percent below 2009 levels by 2035. The CAP contains 27 measures to accomplish the reduction goals for the years 2020, 2030, and 2035. Relevant strategies from the CAP include the following:</p> <p>Measure T-1. Walking and Bicycling</p> <ul style="list-style-type: none">• T-1.1 Continue to expand Pasadena’s bicycle and pedestrian network.• T-1.2 Continue to improve bicycle and pedestrian safety• T-1.3 Continue to encourage bicycle and pedestrian travel <p>Measure T-2. Public Transit</p> <ul style="list-style-type: none">• T-2.1 Continue to enhance safe, reliable, and seamless transit services <p>Measure T-3. Transportation Demand Management</p> <ul style="list-style-type: none">• T-3.1 Decrease annual commuter miles traveled by single-occupancy vehicles• T-3.2 Improve the existing transportation system to smooth traffic flow, reduce idling, minimize bottlenecks, and encourage efficient driving techniques <p>Measure T-4. Alternative Fuel Vehicles</p> <ul style="list-style-type: none">• T-4.1 Expand the availability and use of alternative fuel vehicles and fueling infrastructure <p>Measure T-5. Transit-Oriented Development</p> <ul style="list-style-type: none">• T-5.1 Facilitate high-density, mixed-use, transit-oriented and infill development <p>Measure T-6. Construction Vehicles</p> <ul style="list-style-type: none">• T-6.1 Reduce GHG emissions from heavy-duty construction equipment and vehicles <p>Measure T-7. Lawn and Garden Equipment</p> <ul style="list-style-type: none">• T-7.1 Reduce GHG emissions from lawn and garden equipment <p>Measure E-1 Building Performance Standards for New Construction</p> <ul style="list-style-type: none">• E-1.1 Increase energy efficiency requirements of new buildings to perform better than 2016 Title 24 Standards• E-1.2 Encourage the use of energy conservation devices and passive design concepts that make use of the natural climate to increase energy efficiency

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Goal 3.6 Improve the community image by ensuring a consistent level of high quality design and ongoing maintenance and improvement of existing development.</p> <p>Policy 3.6-2 Sustainable Development. Promote land development practices that reduce energy and water consumption, pollution, greenhouse gas emissions, and disposal of waste materials incorporating such techniques as:</p> <ul style="list-style-type: none">• Concentration of uses and design of development to promote walking, bicycling, and use of public transit in lieu of the automobile;• Encourage development of transit-oriented development near public transit and residential areas; <p>Circulation Element:</p> <p>Goal 5.1 Promote active living, improve local air quality, and enhance the livability of the community through an integrated multimodal network that serves all users within the City and offers convenient mobility options, including vehicular travel, transit services, bicycle routes, and pedestrian paths.</p> <p>Policy 5.1-1 Multimodal Options. Make transportation mode shifts possible by designing, operating, and maintaining streets to enable safe and convenient access and travel for all users—pedestrians, bicyclists, transit riders, and people of all ages and abilities, as well as freight and motor vehicle drivers—and to foster a sense of place in the public realm.</p> <p>Goal 5.4 A balanced transportation system where bicycling and walking are alternative methods to the automobile.</p> <p>Policy 5.4-9 Regional System. Coordinate with surrounding jurisdictions, regional agencies, and non-profit groups to improve the Emerald Necklace Park Network, a loop trail system of parks and greenways which includes areas within the City of Pico Rivera.</p> <p>Community Facilities Element:</p> <p>Goal 6.4 A sustainable supply of water delivered through an efficient infrastructure system to meet existing and future needs.</p> <p>Policy 6.4-4 Energy Efficient Infrastructure. Employ best practices to maintain the highest feasible energy efficiency in the water infrastructure system to reduce costs and greenhouse gas emissions.</p> <p>Environmental Resources Element:</p> <p>Goal 8.1 A sustainable community where land use and transportation improvements are consistent with regional planning efforts and adopted plans to reduce dependence on the use of fossil fuels and decrease greenhouse gas emissions.</p> <p>Policy 8.1-1 Regional Efforts. Continue to work with the Gateway Cities COG and member agencies in regional planning efforts, and to implement regional plans and programs.</p> <p>Policy 8.1-2 Gateway Cities SCS. Continue to implement sustainable strategies identified in, and maintain consistency with, the Gateway Cities Council of Governments 2012 Subregional Sustainable Communities Strategy and updated versions incorporated into SCAG’s RTP/SCS.</p> <p>Policy 8.1-3 Environmental Integrity. Foster sustainable living by reducing community dependency of fossil fuels and other non-renewable resources, minimizing air pollutant and GHG emissions, retaining existing open space lands, and restoring habitat areas along the Rio Hondo and San Gabriel Rivers.</p>		

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy 8.1-4 Efficient Land Use Patterns. Promote efficient land use patterns and compact development that supports widespread walkability and bicycle use, providing for a modest and incremental overall increase in community development intensity that complements the existing community fabric by:</p> <ul style="list-style-type: none">• Encouraging infill and redevelopment of vacant and underutilized sites;• Facilitating the development of engaging and livable streetscapes characterized by benches, vegetation-appropriate architecture, and pedestrian/bicycle linkages.• Providing opportunities for non-motorized transportation and linkages between new development and transit. <p>Policy 8.1-5 Energy Conservation. Promote energy conservation through:</p> <ul style="list-style-type: none">• Partnerships with Southern California Edison and Southern California Gas Company programs;• Improving the energy efficiency and increasing conservation in existing and new city buildings;• Improving energy efficiency of outdoor lighting, including upgrading of city owned street lights, as well as outdoor lighting within parks and municipal parking lots to more energy efficient models;• Increasing water efficiency and water conservation in existing city buildings and new development projects; and• Providing for renewable energy generation at city facilities with the aim of achieving five percent of city facilities’ energy needs with renewable energy generation by 2030. <p>Goal 8.2 Continued improvement in local and regional air quality with reduced greenhouse gas emissions to maintain the community’s health.</p> <p>Policy 8.2-1 Regional Efforts. Coordinate local air quality improvements and greenhouse gas emissions reduction efforts with surrounding communities, and regional agencies such as the South Coast Air Quality Management District, the Gateway Cities Council of Governments.</p> <p>Policy 8.2-2 GHG Reduction Measures. Reduce greenhouse gas emissions in the City and the region through the following measures including, but not limited to:</p> <ul style="list-style-type: none">• Encouraging the use of alternative modes of transportation by supporting transit facility and service expansion, expanding bicycle routes and improving bicycle facilities, and improving pedestrian facilities;• Increasing building energy efficiency through site design, building orientation, landscaping, and incentive/rebate programs;• Implementing water conservation measures;• Requiring the use of drought-tolerant landscaping; and• Increasing solid waste diversion through recycling efforts. <p>Policy 8.2-4 Operational Emissions. Require new development projects to incorporate feasible measures that reduce operational emissions through project and site design and use of best management practices to avoid, minimize, and/or offset their impacts consistent with South Coast Air Quality Management District requirements.</p> <p>Policy 8.3-8 City Facilities. Install energy-efficient lighting, appliances, and alternative-energy infrastructure (e.g., solar panels) in city facilities, where economically feasible.</p>

	<p>automobile, capturing and re-using stormwater onsite, managing and reusing wastewater, orienting buildings to maximize opportunities for solar energy use, use of drought tolerant and native landscapes, shading of exterior public spaces, and recycling and salvage for reuse of construction and demolition debris.</p> <p>Policy LU 7.5 Greenhouse Gas Reduction Plans. Require major development projects to prepare greenhouse gas reduction plans consistent with the targets defined in state statutory requirements.</p> <p>Natural Resources Element:</p> <p>Goal NR 1: Improved Air Quality. Air quality that enhances the health and well-being for all residents of Temple City.</p> <p>NR 1.1 Greenhouse Gas Emissions (GHG) Targets. Develop a Climate Action Plan (CAP) that defines transportation, land use, energy, area source, water, and solid waste reduction measures for Temple City, and establishes a target for GHG emission reductions.</p> <p>NR 1.2 Air Quality Assessment and Monitoring. Cooperate with the California Air Resource Board (CARB) and South Coast Air Quality Management District (SCAQMD) to measure air quality at emission sources and enforce the standards of the Clean Air Act for air quality and GHG emissions.</p> <p>Goal NR 3: Infrastructure. Reduced pollution and emissions from utility infrastructure.</p> <p>NR 3.1 Low Impact Infrastructure. Encourage utility service providers to adopt practices and implement improvements that reduce air pollution and GHG emissions.</p> <p>NR 3.3 Public Facilities. Reduce air pollution and GHG emissions through continued reduction of overall energy and water use of local public infrastructure, facilities, and programs for maintenance and efficiency.</p> <p>NR 3.5 Preference for Reduced-Emission Equipment. Give preference to contractors using reduced-emission equipment for City construction projects and contracts for services (e.g. garbage collection), as well as businesses that practice sustainable operations.</p> <p>Goal NR 4: Public Awareness. An informed public as to the importance of strategies to improve air quality and reduce GHG emissions.</p> <p>NR 4.1 Air Quality and Climate Change Education. Promote and disseminate information about state, federal, and regional standards; health effects; and efforts that Temple City’s residents and businesses can take to improve air quality and reduce GHG emissions.</p> <p>NR 4.2 Employer Education Programs. Encourage employers to participate in the Los Angeles County Metropolitan Transportation Authority (Metro) and Southern California Association of Governments (SCAG) public education programs to improve air quality and reduce GHG emissions.</p> <p>NR 4.3 Involvement of Schools and Organizations. Work with local schools, businesses, and organizations to increase citizens’ awareness and participation in efforts to reduce air pollution and GHG emissions.</p>		
West Covina	<p>Our Natural Community Chapter:</p> <p>Policy P1.1: Promote alternative transportation modes like walking, biking, and transit that reduce emissions related to vehicular travel.</p> <p>Action A 1.1: Continue to channel Federal, State and Local transportation funds to programs, and infrastructure improvements that reduce air pollution through the</p>	No applicable municipal codes were identified.	The City of West Covina Energy Action Plan (City of West Covina 2011) guides the City of West Covina toward attainable conservation goals that may also significantly reduce the impact of GHG within the community. The EAP includes the following policy goals to reduce energy consumption and promote energy efficiency throughout the City:

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>promotion of walking, biking, ride-sharing, public transit use, the use of alternative fuel vehicles or other clean engine technologies.</p> <p>Policy P1.2: Promote the use of energy-efficient vehicles.</p> <p>Action A1.2: Continue to control and reduce air pollution emissions from vehicles owned by the City and municipal operations and facilities by expanding the use of alternative fuel, electric, and hybrid vehicles in City fleets.</p> <p>Policy P1.3: Minimize the adverse impacts of growth and development on air quality and climate.</p> <p>Action A1.3: Prepare and adopt a plan to reduce greenhouse gases as part of the Environmental Impact Report (to be concurrently approved with the West Covina General Plan) to achieve compliance with State mandates, and consistency with the Regional Transportation Plan/Sustainable Community Strategy to facilitate development by streamlining the approval process, and to improve air quality.</p> <p>Our Well Planned Community Chapter:</p> <p>Land Use:</p> <p>Policy 3.6: Reduce West Covina’s production of greenhouse gas emissions and contribution to climate change and adapt to the effects of climate change.</p> <p>Action 3.6 Key land use adaptation strategies to reduce greenhouse gas emissions are:</p> <ul style="list-style-type: none">• Promoting transit-oriented infill development, and• Providing incentives for high-performance buildings and infrastructure.		<p>a. Surpass the energy efficiency standards of the California Building Code for proposed and existing municipal buildings and facilities.</p> <p>b. Provide on-line (Internet accessible) guidance and assistance to Homeowners and Builders to make compliance with new Title 24 energy requirements as effective and efficient as possible.</p> <p>c. Coordinate City Efficiency goals and programs with the efficiency projects and incentive programs of higher jurisdictional agencies. Expand the City’s Residential Solar Power permit-waiver program to include other alternative energy applications, Consider fee adjustments or rebates to local businesses and residents in support of those efforts.</p> <p>f. Promote energy and water conservation design features in all major renovation and development projects.</p> <p>h. Encourage the efficient use of water and reduce urban runoff through the use of natural drainage, drought tolerant landscaping, and efficient irrigation systems in major renovation and new development projects. Recommend the incorporation of these practices within the approval processes of other local and regional departments and jurisdictions.</p> <p>i. Promote the coordination of landscapers and residential Solar Power contractors to minimize heat buildup at existing and new homes through more effective shading design.</p>

3.8.3 Impact Assessment

3.8.3.1 Significance Criteria

Appendix G of the State CEQA guidelines was reviewed to determine if the Plan would result in significant impacts related to greenhouse gas emissions. The criteria listed below consider if the Plan would:

- 8(a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?*
- 8(b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?*

Generally, the evaluation of an impact under CEQA involves comparing a project's effects against a threshold of significance. The State CEQA Guidelines clarify that "when adopting thresholds of significance, a lead agency may consider thresholds of significance previously adopted or recommended by other public agencies or recommended by experts, provided the decision of the lead agency to adopt such thresholds is supported by substantial evidence." For GHG emissions and global warming, there is not one established, universally agreed-upon quantified threshold of significance for GHG impacts at this time, and the State CEQA Guidelines do not establish a quantified threshold of significance for GHG impacts. Instead, lead agencies have the discretion to establish significance thresholds for their respective jurisdictions. Therefore, this analysis relies on the following thresholds of significance to assess the environmental impacts associated with GHG emissions for the Plan:

- For projects implemented under the Plan within unincorporated LA County, a project would result in significant impacts if it would conflict with (and thereby be inconsistent with) the emissions reduction measures included within the LA County 2045 CAP Consistency Checklist.
- For projects implemented under the Plan within incorporated cities within the Plan Area, the project would result in significant impacts if it would generate GHG emissions exceeding 3,000 MTCO₂e/year or would conflict with (and thereby be inconsistent with) the applicable regulator plans and policies to reduce GHG Emissions, which include the emissions reduction measures included within AB/SB 32 and SB 375, the OPR and Climate Action Team recommendations, CARB's Climate Change Scoping Plan, and the General Plans, policies, regulations, and applicable action plans adopted by individual incorporated cities within the Plan Area.

As discussed above in Section 3.8.2.3.3, the Los Angeles County 2045 CAP is a qualified CAP because it was developed in conformance with State CEQA Guidelines Section 15183.5. LA County included a Consistency Checklist in the 2045 CAP that serves to apply the relevant emission reduction actions from the 2045 CAP for projects through a streamlined review process for proposed new development projects that are subject to discretionary review and that trigger environmental review under CEQA. Therefore, because the 2045 CAP constitutes as a qualified CAP, Plan components within unincorporated areas of LA County would result in less than significant impacts if the future projects implemented under the Plan would be consistent with the 2045 CAP Consistency Checklist. All future projects within unincorporated LA County must demonstrate consistency with the General Plan, the existing land use designation of the current Land Use Element, and the 2021–2029 Housing Element. If a project is not consistent with the General Plan, the land use designation of the Land Use Element, or the 2021–2029 Housing Element, then the 2045 CAP Consistency Checklist may not be used for CEQA

streamlining. While the 2045 CAP Consistency Checklist can be used for Plan components within unincorporated LA County, projects within incorporated communities cannot directly tier from it. Accordingly, the analysis of the Plan may only streamline its GHG impacts analysis for Plan components within unincorporated LA County by using the 2045 CAP's EIR. Table 3.8-4 shows the consistency of the Plan within unincorporated LA County with the Compliance Checklist items. Under the CAP Consistency Review Checklist, Tier 1 items are required to determine consistency, and Tier 2 items are strongly encouraged but not required. As shown in Table 3.8-4, the Plan is consistent with all Tier 1 items and therefore consistent with the CAP.

For future projects implemented under the Plan that have components located within incorporated communities that cannot directly tier from the LA County 2045 CAP, a comprehensive analysis of GHG emissions and impacts pursuant to CEQA has been conducted. The 2017 Climate Change Scoping Plan approved by CARB on December 14, 2017, sets the state on a course to reduce GHG emissions an additional 40 percent below 1990 levels by 2030 under SB 32 (CARB 2017). Under the 2017 Climate Scoping Plan, CARB recommends statewide efficiency targets of no more than 6.0 MTCO₂e/service population/year by 2030 and no more than 2.0 MTCO₂e/service population/year by 2050; however, it is important to note that these efficiency targets are intended to apply to sum of all sectors and are not appropriate for evaluating GHG emissions specific to the land use sector. Note that in comparison, the LA County 2045 CAP has established updated efficiency targets consistent with and more stringent than SB 32 for the 2030, 2035, and 2045 target years. Specifically, the LA County 2045 CAP targets are to reduce GHG emissions by 40 percent below 2015 levels by 2030, 50 percent below 2015 levels by 2035, and 83 percent below 2015 levels by 2045 in unincorporated LA County. The LA County 2045 CAP aspiration goal is to achieve carbon neutrality by 2045. These targets correspond with an efficiency target of 2.3 MTCO₂e/service population/year by 2030.

In addition to evaluation of a project impacts against a quantifiable significant threshold, per CEQA Guidelines Section 15064(h)(3), a project's incremental contribution to a cumulative impact can also be found not cumulatively considerable if the project would comply with an approved plan or mitigation program that provides specific requirements that will avoid or substantially lessen the cumulative problem within the geographic area of the project. To qualify, such a plan or program must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency. Examples of such programs include a "water quality control plan, air quality attainment or maintenance plan, integrated waste management plan, habitat conservation plan, natural community conservation plan, [and] plans or regulations for the reduction of greenhouse gas emissions." Thus, CEQA Guidelines Section 15064(h)(3) allows a lead agency to make a finding of non-significance for GHG emissions if a project complies with programs and/or other regulatory schemes to reduce GHG emissions. Accordingly, the project-level analysis of Plan projects in incorporated communities may rely on consistency with the plans, policies, and regulations adopted pursuant to achieving GHG reductions consistent with the adopted targets. Where applicable, guidance from CARB, OPR, and other agencies related to long-term emission reduction requirements is incorporated into the analysis. Specifically, projects that would the CARB 2022 Scoping Plan Update, AB 32/SB 32, AB 1279, and California Energy Efficiency Standards, as well as applicable regional plans including *OurCounty: Los Angeles Countywide Sustainability Plan*, the 2020–2045 RTP/SCS, and plans and policies adopted by local jurisdictions.

Table 3.8-4. LA County General Plan and 2045 CAP GHG Emissions Reduction Measures and Action Consistency Checklist

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
Step 1: Demonstrate Consistency with Los Angeles County General Plan		
<p>1. The Project is Consistent with the General Plan Land Use Element and Housing Element</p> <p>The growth projections included in the General Plan and the 2021–2029 Housing Element were used in the 2045 CAP to estimate unincorporated Los Angeles County GHG emissions over time.</p> <p>Therefore, projects must be consistent with the General Plan to be consistent with the 2045 CAP. To determine a project’s consistency with the General Plan, please answer the following question and provide an explanation with supporting documentation.</p> <p>Is the proposed project consistent with the existing land use designation of the Land Use Element and the 2021 Housing Element Update?</p> <p>If “Yes,” proceed to Step 2: 2045 CAP Consistency Screening Criteria below.</p> <p>If “No,” the proposed project may not streamline its GHG impacts analysis by using the 2045 CAP’s EIR and must prepare a comprehensive project-specific analysis of GHG emissions and impacts pursuant to CEQA and incorporate the measures in this 2045 CAP Checklist to the extent feasible.</p>	<p>Future projects implemented under the Plan that are located wholly within unincorporated LA County would be consistent with General Plan and land use designations and/or only within the District ROW.</p>	<p><input checked="" type="checkbox"/> Yes</p> <p><input type="checkbox"/> No</p>
Step 2: Determine Whether the Project Screens Out of Using the 2045 CAP Checklist		
<p>Certain projects may screen out of the 2045 CAP Checklist if they meet the following screening criteria.</p> <p>Does the project achieve zero GHG emissions compared to the existing on-site development at the project site? The project must conduct a comprehensive project-specific analysis of all GHG emissions, consistent with all CEQA guidelines and standard practice for modeling GHG emissions for projects, to demonstrate that the project achieves net zero.</p> <p>If “Yes,” the project is consistent with the 2045 CAP and no additional analysis is needed (no project-specific GHG impact analysis would be</p>	<p>Specific locations of future projects implemented under the Plan are currently unknown. Therefore, a comparison of project-related emissions to existing conditions cannot be conducted at the Plan-level. Accordingly, an analysis of 2045 CAP Consistency has been completed in Step 3 below.</p>	<p><input type="checkbox"/> Project Complies</p> <p><input checked="" type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply</p>

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
required). If “No,” proceed to Step 3: 2045 CAP Measure and Action Consistency Requirements below.		
Step 3: Demonstrate Consistency with the 2045 CAP GHG Emissions Reduction Measures and Actions		
Energy Supply		
1. TIER 1: Sunset Oil and Gas Operations For any project involving the decommissioning, replacement, retrofit, or redesign of infrastructure or facilities associated with the oil and gas industry, including energy generation (i.e., cogen), the project must: <ul style="list-style-type: none"> A) Comply with the Oil Well Ordinance (Title 22). B) Reduce fossil fuel–based emissions by at least 80 percent compared to existing conditions. C) If the project site includes existing active and abandoned oil wells, examine all wells for fugitive emissions of methane. Reduce such existing emissions by a minimum of 80 percent. D) To reduce any residual fossil fuel–based emissions generated by the project, incorporate carbon removal technologies including direct air capture and carbon and sequestration, as feasible. Supports 2045 CAP Measures (and Actions): ES1 (ES1.1, ES1.2, ES1.3)	The Plan does not involve the decommissioning, replacement, retrofit, or redesign of infrastructure or facilities associated with the oil and gas industry.	<input type="checkbox"/> Project Complies <input checked="" type="checkbox"/> Not Applicable <input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed
2. TIER 1: Utilize 100 percent Zero-Carbon Electricity The project must utilize 100 percent zero-carbon electricity on-site. The project must comply with one of the following options: <ul style="list-style-type: none"> A) Install on-site renewable energy systems or participate in a community solar program to supply 100 percent of the project’s estimated energy demand to the maximum extent feasible. B) Participate in Southern California Edison at the Green Rate level (i.e., 100 percent carbon-free electricity) for all electricity accounts associated with the project until SCE provides 100 percent carbon-free electricity for all accounts by default. 	The Plan <i>Design Guidelines and Standards</i> specify solar-powered lighting to reduce electricity consumption associated with Plan components. Implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would further require that 100 percent of a project’s electricity consumption is supplied by zero-GHG emissions sources of power generation, whether by utilities or by on-site electricity generation, or both. Because specific project design and locations are currently unknown, it is not possible to provide the project’s anticipated electricity demand, the project’s participation and opt-out rates for SCE’s Green Rate and CPA’s Clean Rate electricity rate options	<input checked="" type="checkbox"/> Project Complies <input type="checkbox"/> Not Applicable <input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
<p>C) Participate in the Clean Power Alliance at the Clean Rate level (i.e., 100 percent carbon-free electricity) for all electricity accounts associated with the project until CPA provides 100 percent carbon-free electricity for all accounts by default.</p> <p>D) A combination of #1, #2, and #3 above such that 100 percent of the project's electricity consumption is supplied by zero-GHG emission sources of power generation, whether by utilities or by on-site electricity generation or both.</p> <p>Supports 2045 CAP Measures (and Actions): ES2 (ES2.1, ES2.2), ES3 (ES3.1, ES3.2, ES3.3, ES3.4, ES3.5, ES3.6)</p>	<p>used by tenants; and/or the total kW of solar PV panels installed at the project site.</p>	
Transportation		
<p>3. Meets Transportation Screening Criteria</p> <p>For <u>development projects</u>, does the project:</p> <p>A) have no retail component and generate a net increase of less than 110 daily vehicle trips?</p> <p>If "Yes," skip checklist items #3, #4, #5, #11, and #12 below. Please complete items #7 through #11 below. If "No," proceed to item (B) below.</p> <p>For <u>development projects</u>, does the project:</p> <p>B) have a retail component and contains retail uses that do not exceed 50,000 square feet of gross floor area?</p> <p>If "Yes," skip checklist items #3, #4, #5, #11, and #12 below. Please complete items #7 through #11 below. If the project contains retail and is mixed use, proceed to item (C) below.</p> <p>If "No," proceed to item (C) below.</p> <p>For <u>development projects</u>, does the project:</p> <p>C) have a residential component and 100 percent of the units, excluding manager's units, are set aside for lower income households?</p> <p>If "Yes," skip checklist items #3, #4, #5, #11, and #12 below. Please complete items #7 through #11 below. If the project contains retail and is mixed use, proceed to item (D) below.</p>	<p>The Plan does not include a retail component and would generate a net increase of less than 110 daily vehicle trips for construction and operation (i.e., construction activities would generate a maximum of 58 trips per day and operations would generate a maximum of 4 trips per day).</p>	<p><input checked="" type="checkbox"/> Yes</p> <p><input type="checkbox"/> No</p>

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
<p>If “No,” proceed to item (D) below. For development projects:</p> <p>D) Is the project located within a one-half mile radius of a major transit stop or an existing stop along a high-quality transit corridor and:</p> <ul style="list-style-type: none"> i. has a Floor Area Ratio greater than 0.75? ii. provides less parking than required by the Los Angeles County Code? iii. is consistent with the Southern California Association of Governments (SCAG) Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS)? iv. does not replace residential units set aside for lower income households with a smaller number of market-rate residential units? <p>If “Yes,” skip checklist items #3, #4, #5, #11, and #12 below. Please complete items #7 through #11 below.</p> <p>If “No,” proceed to checklist item #3 below.</p> <p>For <u>transportation projects</u>, does the project meet one of the following transportation screening criteria?</p> <p>A) The project would not include the addition of through traffic lanes on existing or new highways, including general-purpose lanes, high-occupancy vehicle (HOV) lanes, peak-period lanes, auxiliary lanes, and lanes through grade-separated interchanges (except managed lanes, transit lanes, and auxiliary lanes of less than 1 mile in length designed to improve roadway safety).</p> <p>B) The project would reduce roadway capacity and VMT.</p> <p>If “Yes,” skip checklist items #3, #4, #5, #11, and #12 below. Please complete items #7 through #11 below.</p> <p>If “No,” proceed to checklist item #3 below.</p> <p>Supports 2045 CAP Measures (and Actions): T1 (T1.1, T1.2)</p>		
<p>4. TIER 1: Increase Density Near High-Quality Transit Areas</p>	<p>Skip per #3</p>	<p><input type="checkbox"/> Project Complies</p>

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
<p>If the project is located within a High Quality Transit Area (HQT), it must achieve a minimum of 20 dwelling units (DU) per acre, consistent with the Housing Element Rezoning Program.</p> <p>If the project is not located within an HQT, it must locate residential and employment centers within 1 mile of an HQT.</p> <p>Supports 2045 CAP Measures (and Actions): T1 (T1.1, T1.2)</p>		<p><input checked="" type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed</p>
<p>5. TIER 1: Incorporate Bicycle and Pedestrian Infrastructure</p> <p>The project must incorporate pedestrian and bicycle infrastructure into its design:</p> <p>A) Provide pedestrian facilities and connections to public transportation consistent with the Pedestrian Action Plan, Active Transportation Plans, and Vision Zero Action Plan, and any other relevant governing plan.</p> <p>B) Provide bicycle facilities consistent with the Bicycle Master Plan, Active Transportation Plans, and Vision Zero Action Plan, and any other relevant governing plan, and meet or exceed minimum standards for bicycle facilities in the Zoning Code and CALGreen Code.</p> <p>C) Increase sidewalk coverage to improve pedestrian access.</p> <p>D) Improve degraded or substandard sidewalks.</p> <p>E) Incorporate best practices to ensure pedestrian infrastructure is contiguous and links externally with existing and planned pedestrian facilities; best practices include high-visibility crosswalks, pedestrian hybrid beacons, and other pedestrian signals, mid-block crossing walks, pedestrian refuge islands, speed tables, bulb-outs (curb extensions), curb ramps, signage, pavement markings, pedestrian-only connections and districts, landscaping, and other improvements to pedestrian safety.</p> <p>F) Minimize barriers to pedestrian access and interconnectivity, such as walls, landscaping buffers, slopes, and unprotected crossings.</p>	<p>Skip per #3</p> <p>Note that the Plan is inherently consistent with CAP Measure T3.1 as the Plan's primary objective is to create a countywide network of interconnected multiuse community greenways for linear parks and open space for recreation, bike paths for active transportation, and trails for equestrian use. The Plan is also consistent with CAP Measure T3.2. There is significant overlap between the Los Angeles County Bicycle Master Plan's goals, geography, and analyses and those of the Plan. The Plan incorporates information from the Bicycle Master Plan where practical, particularly with regards to the overall goals of connectivity within Los Angeles County as well as when establishing existing environment and environmental impacts for similar scale and purpose projects (e.g., bikeways, greenways). The Plan would also enhance pedestrian and bicycle environments through energy efficient lighting and shading to promote active transportation consistent with CAP Measure T3.3.</p>	<p><input checked="" type="checkbox"/> Project Complies</p> <p><input type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed</p>

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
<p>G) Provide bicycle facilities for new and expanded buildings, new dwelling units, change of occupancy, increase of use intensity, and added off-street vehicle parking spaces.</p> <p>H) Provide short- and long-term (secure) bicycle parking for at least 5 percent of motorized vehicle capacity and nothing less than CALGreen Code requirements, whichever is more restrictive.</p> <p>I) Support the County's goal to increase bikeway miles by 300 percent by 2030 (including Class I bike paths, Class II bike lanes, and Class III bike routes).</p> <p>Supports 2045 CAP Measures (and Actions): T3 (T3.1, T3.2, T3.3)</p>		
<p>6. TIER 1: Comply with the County Transportation Demand Management (TDM) Ordinance</p> <p>The Project must comply with the TDM ordinance at the time of project approval. This may include preferential carpool/vanpool parking, bicycle parking, and shower facilities and locker rooms; trip reduction plans; transit-supportive infrastructure development; and similar strategies.</p> <p>Comply with any applicable VMT reduction target and incorporate any required monitoring mechanisms for development, subject to the ordinance.</p> <p>Supports 2045 CAP Measures (and Actions): T4 (T4.5)</p>	<p>The Plan is inherently consistent with CAP Measure T4 as the Plan's primary objective is to create a countywide network of interconnected multiuse community greenways for linear parks and open space for recreation, bike paths and trails for active transportation and alternative modes of transportation. Plan objectives also include reducing vehicle miles traveled and associated greenhouse gas emissions by creating opportunities for alternative greenway transportation. Because specific project locations are currently unknown, it is not possible to estimate the total trips and VMT reduced via the implementation of the Plan. However, providing more connectivity and opportunities for residents to reach schools, parks, transit, jobs, shopping, and numerous other local points of interest will encourage alternative modes of transportation and consequently reduce overall VMT in the region.</p>	<p><input checked="" type="checkbox"/> Project Complies</p> <p><input type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed</p>
<p>7. TIER 1: Comply with the County's Transportation Impact Guidelines</p> <p>The project must comply with the County's current Transportation Impact Analysis (TIA) Guidelines. Projects may screen out if they meet certain criteria, such as being located in a transit priority area or local-serving retail development less than 50,000 square feet. Projects that do not screen out must meet the VMT efficiency metrics identified by the TIA Guidelines (e.g., daily VMT per capita for residential projects that is 16.8 percent below the existing residential VMT per capita for the Baseline</p>	<p>The Plan complies with the County's Transportation Impact Guidelines as it would screen out by meeting the following screening criteria:</p> <ul style="list-style-type: none"> — The development of Plan projects would generate less than 110 daily vehicle trips. — The Plan would not include the addition of through traffic land on existing new highways, including general purpose lanes, high-occupancy vehicle lanes, peak period lanes, 	<p><input checked="" type="checkbox"/> Project Complies</p> <p><input type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative</p>

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
<p>Area in which the project is located) and quantitatively demonstrate how these metrics are achieved, pursuant to the TIA Guidelines requirements.</p> <p>Supports 2045 CAP Measures (and Actions): T1, T2, T3, T4, T5</p>	<p>auxiliary lanes, and lands through grade-separated interchanges. Further, the Plan would expand assets that serve bicycle and pedestrian facilities and would not add additional motor vehicle capacity.</p>	<p>Measures Proposed</p>
<p>8. TIER 1: Incorporate Electric Vehicle Charging Infrastructure</p> <p>The project must incorporate zero-emission vehicle (ZEV) infrastructure and incentives into its design as follows:</p> <p>A) Comply with any CALGreen Code requirement, County ordinance, building code, or condition of approval that requires a certain amount of electric vehicle (EV) charging infrastructure (EVCSs) and readiness. This may include minimum requirements for EV charging stations, EV-capable parking spaces, and EV- ready parking spaces.</p> <p>B) Comply with any provisions and requirements in the forthcoming Zero Emission Vehicle Master Plan.1</p> <p>C) Include electric options for promoting active transportation, such as electric scooters and e-bikes.</p> <p>D) Provide education and outreach to tenants and occupants about the benefits of ZEVs and the project's EV infrastructure.</p> <p>Supports 2045 CAP Measures (and Actions): T6 (T6.1, T6.2, T6.3, T6.4, T6.5, T6.6, T6.7)</p>	<p>The Plan promotes active transportation by creating a countywide network of interconnected multiuse community greenways for linear parks and open space for recreation, bike paths and trails for active transportation and alternative modes of transportation. Plan objectives also include reducing vehicle miles traveled and associated GHG emissions by creating opportunities for alternative greenway transportation. Installation of parking facilities as part of the Plan would be required to comply with the mandatory measures of the CALGreen Code for the minimum number of EV capable spaces. Because specific project design and locations are currently unknown, it is not possible to estimate the total number of public and private EV capable spaces that would be installed.</p>	<p><input checked="" type="checkbox"/> Project Complies</p> <p><input type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed</p>
<p>9. TIER 1: Decarbonize Trucks</p> <p>For projects that include goods movement facilities and/or warehouses, the project must incorporate freight decarbonization technologies and infrastructure, including:</p> <p>A) Comply with any CALGreen Code requirement, County ordinance, building code, or condition of approval that requires a certain amount of EV charging infrastructure and readiness for goods movement facilities and trucks.</p> <p>B) Provide EVCSs at all new warehouse loading docks.</p> <p>C) Comply with any provisions and requirements in the forthcoming Zero Emission Vehicle Master Plan related to goods movement.</p>	<p>Reduction measures under this question are not applicable as the Plan does not include goods movement facilities and/or warehouses.</p>	<p><input type="checkbox"/> Project Complies</p> <p><input checked="" type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed</p>

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
<p>D) Implement freight decarbonization technologies along highway corridors.</p> <p>E) For all goods movement facilities, install alternative fueling infrastructure such as EVCSs, green hydrogen fueling stations, and/or biomethane fueling stations.</p> <p>F) Comply with any established zero-emission delivery zones.</p> <p>Supports 2045 CAP Measures (and Actions): T8 (T8.1, T8.2, T8.3, T8.4, T8.5)</p>		
<p>10. TIER 1: Incorporate Zero-Emission Technologies for Off-Road Vehicles & Equipment</p> <p>The project must:</p> <p>A) Prohibit the use of small equipment powered by gasoline, diesel, propane, or other fossil fuels, including lawn and garden equipment and outdoor power equipment, for all tenants and owners.</p> <p>B) Provide educational materials to tenants regarding the SCAQMD Electric Lawn and Garden Equipment Incentive and Exchange Program, Commercial Lawn & Garden Battery Buy-Down Rebate Program, the Residential Lawn Mower Rebate Program, the new requirements of AB 1346, and any other available options and incentives for purchasing zero-emission equipment, including rebates and subsidies offered by CARB, the County, or other agencies and entities.</p> <p>C) Use electric and zero-emission construction equipment during project construction to the maximum extent feasible. Such equipment shall include forklifts, manlifts, loaders, welders, saws, pumps, fixed cranes, air compressors, sweepers, aerial lifts, pressure washers, and other small equipment. At minimum, the project must use off-road construction equipment that meet CARB Tier 4 Final engine emission standards.</p> <p>D) Use electric and zero-emission agriculture and manufacturing equipment to the maximum extent feasible.</p>	<p>Construction and operation of Plan components would require use of small, powered equipment and larger off-road construction equipment that typically are powered by gasoline or diesel. Implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would require maintenance and operations activities that use landscaping equipment (e.g., lawn mowers and trimmers) will employ electric landscaping equipment. Implementation of MM AQ-1: Emissions Reduction Measures would require that zero-emission or near-zero-emission off-road construction equipment is used to the maximum extent feasible or meet the minimum CARB Tier 4 Final engine emission standards.</p> <p>Estimates of off-road vehicle and equipment counts for the various Plan components are provided in Section 2.3.</p>	<p><input checked="" type="checkbox"/> Project Complies</p> <p><input type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed</p>

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
<p>These requirements must be stipulated in the contract specifications for the project's construction and for the project's future tenants and any landscaping contracts for the property or tenants.</p> <p>Supports 2045 CAP Measures (and Actions): T9 (T9.1, T9.2, T9.3)</p>		
<p>11. TIER 1: Electrify County Fleet Vehicles (for municipal projects only)</p> <p>For all new municipal projects and facilities that include the purchase or operation of new fleet vehicles, including public transit buses and shuttles, all such fleet vehicles must be ZEVs.</p> <p>Supports 2045 CAP Measures (and Actions): T7 (T7.1, T7.2)</p>	Skip per #3	<input type="checkbox"/> Project Complies <input checked="" type="checkbox"/> Not Applicable <input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed
<p>12. TIER 2: Achieve a High Jobs/Housing Balance</p> <p>For projects with nonresidential development, the Project must incorporate the following design elements:</p> <p>A) Support the County's goal to achieve a job density of 300 jobs per acre.</p> <p>Supports 2045 CAP Measures (and Actions): T2 (T2.1)</p>	Skip per #3	<input type="checkbox"/> Project Complies <input checked="" type="checkbox"/> Not Applicable <input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed
<p>13. TIER 2: Encourage Transit, Active Transportation, and Alternative Modes of Transportation</p> <p>For transit projects only, incorporate the following:</p> <p>A) Expand and improve frequency of existing network of County shuttles.</p> <p>B) Install bus-only lanes and signal prioritization along major thoroughfares.</p> <p>C) Install full bus rapid transit infrastructure along priority corridors.</p> <p>For all other projects, incorporate the following:</p>	<p>The Plan is inherently consistent with CAP Measure T4 as the Plan's primary objective is to create a countywide network of interconnected multiuse community greenways for linear parks and open space for recreation, bike paths and trails for active transportation and alternative modes of transportation. Plan objectives also include reducing vehicle miles traveled and associated greenhouse gas emissions by creating opportunities for alternative greenway transportation. Because specific project locations are currently unknown, it is not possible to estimate the total trips and VMT reduced via the implementation of the Plan. However, providing more connectivity and opportunities for residents to reach schools, parks, transit, jobs, shopping, and</p>	<input checked="" type="checkbox"/> Project Complies <input type="checkbox"/> Not Applicable <input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
<p>A) Provide new mobility services, such as micro transit, autonomous delivery vehicles, and on-demand autonomous shuttles, in unincorporated Los Angeles County.</p> <p>B) Offer free transit passes for students, youth, seniors, disabled, and low-income populations.</p> <p>C) Implement telecommuting by project tenants and residents.</p> <p>D) Establish temporary and permanent car-free areas at the project site.</p> <p>Supports 2045 CAP Measures (and Actions): T4 (T4.1, T4.2, T4.3, T4.6, T4.7, T4.8, T4.10)</p>	<p>numerous other local points of interest will encourage alternative modes of transportation and consequently reduce overall VMT in the region.</p> <p>The Plan is neither a transit project nor would Plan projects include tenants, residents, or employees. Because specific project design and locations are currently unknown, it is not possible to estimate the total number of residents that would benefit from enhanced connectivity opportunities promoted by the Plan.</p>	
<p>14. TIER 2: Implement Parking Limitations</p> <p>Projects should include the following characteristics:</p> <p>A) Shared and reduced parking strategies, such as shared parking facilities, carpool/vanpool-only spaces, shuttle facilities, EV-only spaces, and reduced parking below allowable amount</p> <p>B) Minimum amount of required parking</p> <p>C) Unbundled parking costs to reflect cost of parking</p> <p>D) Parking pricing to encourage “park-once” behavior</p> <p>E) Compliance with all County parking reform strategies and policies</p> <p>Supports 2045 CAP Measures (and Actions): T5 (T5.1)</p>	<p>Parking facilities that would be constructed under the Plan would comply with the mandatory measures of the CALGreen Code for minimum number of EV capable spaces. The Plan would encourage alternative transportation methods as well as provide bike parking facilities that would reduce motor vehicle trips and result in an overall reduction in VMT in the region.</p> <p>Because specific project design and locations are currently unknown, it is not possible to estimate the total number of parking spaces, number of EV capable spaces, parking costs, etc.</p>	<p><input checked="" type="checkbox"/> Project Complies</p> <p><input type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed</p>
Building Energy and Water		
<p>15. TIER 1: Electrify Existing Buildings</p> <p>This action applies only to projects that include a retrofit, remodel, or redesign of an existing building. If the proposed project does not include a retrofit, remodel, or redesign, select “Not Applicable” in the <i>Project Consistency</i> column.</p> <p>The project must incorporate the following design elements:</p> <p>A) All space heating and water heating must be electric.</p> <p>B) With the exception of restaurants, all cooking appliances must be electric.</p>	<p>Projects implemented under the Plan may involve retrofit, remodeling, or redesign of an existing building. Any modification of existing buildings would be required to comply with CALGreen Code Section 5.106.14 that requires all-electric buildings for all new buildings and qualifying alteration projects (i.e., construction or renovation of an existing structure). Implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would further ensure that all building mechanical equipment is electric.</p> <p>Because specific project design and locations are currently unknown, it is not possible to estimate the anticipated energy</p>	<p><input checked="" type="checkbox"/> Project Complies</p> <p><input type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed</p>

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
<p>C) For restaurants, use electric cooking appliances to the maximum extent feasible.</p> <p>D) Comply with all applicable Building Performance Standards.</p> <p>E) Comply with all building carbon intensity limits.</p> <p>F) If the project is a major renovation, achieve ZNE and/or comply with the City's ZNE ordinance.</p> <p>Supports 2045 CAP Measures (and Actions): E1 (E1.1, E1.2, E1.3, E1.4, E1.5, E1.6)</p>	<p>consumption (natural gas use and electricity use) and the number of existing buildings transitioned to all-electric buildings.</p>	
<p>16. TIER 1: Electrify New Buildings</p> <p>For projects under construction before 2030, the project must be fully electric with no natural gas infrastructure or appliances, as specified in the County's all-electric buildings ordinance, unless the project meets specific exemptions identified in the ordinance.⁵</p> <p>For projects under construction after 2030, the project must be zero- net-energy and fully electric with no natural gas infrastructure or appliances, as specified in the County's ZNE ordinance, unless the project meets specific exemptions identified in the ordinance.⁶</p> <p>Supports 2045 CAP Measures (and Actions): E2 (E2.1, E2.2, E2.3)</p>	<p>Projects implemented under the Plan may involve retrofit, remodeling, or redesign of an existing building. Any modification of existing buildings would be required to comply with CALGreen Code Section 5.106.14 that requires all-electric buildings for all new buildings. Implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would further ensure that all building mechanical equipment is electric.</p> <p>Because specific project design and locations are currently unknown, it is not possible to estimate the number and square footage of all-electric buildings built, all ZNE buildings built, or the total electricity consumption for all buildings.</p>	<p><input checked="" type="checkbox"/> Project Complies</p> <p><input type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed</p>
<p>17. TIER 1: Increase Building Energy Efficiency</p> <p>This action applies only to projects that include a retrofit of an existing building. If the proposed project does not include a retrofit, select "Not Applicable" in the Project Consistency column.</p> <p>The project shall incorporate the following energy efficiency measures into the design:</p> <p>A) Comply with all applicable building performance standards.</p> <p>B) Incorporate strategic energy management programs to reduce building energy demands.</p>	<p>Projects implemented under the Plan may involve retrofit, remodeling, or redesign of an existing building. Any modification of existing buildings would be required to comply with CALGreen Code Section 5.106.14 that requires all-electric buildings for all new buildings. Implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would require that all new construction use only ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings and that building energy best practices from the following standards are implemented: United States Green Building Council's LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. Further, the Plan directly</p>	<p><input checked="" type="checkbox"/> Project Complies</p> <p><input type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed</p>

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
<p>C) Conduct an energy audit or benchmarking analysis to identify potential energy savings opportunities and implement such opportunities.</p> <p>D) Achieve CALGreen Code Tier 2 or voluntary building energy measures as they apply to the retrofit.</p> <p>E) Replace existing appliances with higher-efficiency models.</p> <p>F) Install heat-trapping surfaces to cool or green surfaces, as feasible.</p> <p>G) Participate in SoCalREN, SCE, CPA, or other energy efficiency programs.</p> <p>H) Conduct other energy efficiency retrofits.</p> <p>I) Achieve zero-net-energy, if feasible.</p> <p>Supports 2045 CAP Measures (and Actions): E4 (E4.1, E4.2, E4.3)</p>	<p>supports Measure E4.3 by converting existing County-owned heat trapping surfaces to cool or green surfaces including use of low VOC, warm mix asphalt to reduce urban heat island effect associated with asphalt surfacing, light-colored or high albedo-surfaces to reflect rather than absorb solar energy, shade structures, and green solutions including reducing heat island effects by increasing vegetation and tree canopy.</p> <p>Because specific project design and locations are currently unknown, it is not possible to provide the total number of energy retrofits performed, the building size (square footage) retrofit, the total project energy use and anticipated energy savings through retrofits, and the number and area of cool and green roofs installed.</p>	
<p>18. TIER 1: Implement Water Use Efficiency and Water Conservation</p> <p>The project must comply with the current water conservation ordinance in place, including any requirements for LEED or Sustainable SITES standards.</p> <p>The project must also incorporate water use efficiency and conservation measures, including:</p> <p>A) High-efficiency appliances/fixtures to reduce water use, and/or include water-efficient landscape design</p> <p>B) CALGreen Code Tier 1 and Tier 2 voluntary water conservation measures</p> <p>C) Low-flow or high-efficiency water fixtures</p> <p>D) Water-efficient landscapes with lower water demands than required by the DWR 2015 Model Water Efficient Landscape Ordinance</p> <p>E) Drought-tolerant and native plant species only</p> <p>F) A comprehensive water conservation strategy</p> <p>G) Educational materials provided to future tenants and building occupants about water-saving behaviors and water-conserving landscaping</p>	<p>The Plan <i>Design Guidelines and Standards</i> require compliance with the latest water use and codes such as the LA County LID Manual, LA County water conservation standards, and CALGreen Code including use of high-efficiency appliances/fixtures and water efficient landscape design (i.e., incorporation of drought tolerant and native plants), and compliance with the California Department of Water Resources Model Water Efficient Landscape Ordinance and/or local water efficient landscape ordinance. In addition, LA County Public Works projects would be developed consistent with the County of Los Angeles Sustainable Infrastructure Guidelines, which identify CALGreen Code Tier 1 measures to further encourage best management practices including requiring water efficient landscaping to reduce potable water use by 30 percent and incorporation of high-efficiency irrigation and weather forecasting. Implementation of water conservation measures included in MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would further ensure that high-efficiency appliance/fixtures and water-efficient landscaping is incorporated into Plan projects as applicable.</p>	<p><input checked="" type="checkbox"/> Project Complies</p> <p><input type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed</p>

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
Supports 2045 CAP Measures (and Actions): E6 (E6.1, E6.2, E6.3, E6.4, E6.5)	Because specific project design and locations are currently unknown, it is not possible to estimate the project's total water consumption, the square footage of buildings that are water-neutral, and/or the project's building size.	
19. TIER 2: Reduce the Life-Cycle Carbon Intensity of Building Materials and Phase Out the Use of High-GWP Refrigerants The project must incorporate the following design elements to the maximum extent feasible: A) For projects that are not fully electric, incorporate biomethane into the natural gas mix in place of traditional natural gas. B) Use negative-carbon concrete for all construction. C) Use low-GWP refrigerants and fire suppression equipment for all uses on-site. D) Comply with all County codes and ordinances regarding building material carbon intensity and high-GWP refrigerants and other gases. Supports 2045 CAP Measures (and Actions): E3 (E3.1, E3.2, E3.3, E3.4)	The Plan <i>Design Guidelines and Standards</i> require compliance with all County code and ordinances for projects in unincorporated LA County including those regarding building carbon intensity and high-GWP refrigerants and other gases. Specifically, projects implemented under the Plan would be required to comply with SB 1013 which prohibits the refrigerants exceeding a GWP of 750 in new stationary air conditioning equipment. Further, all project components would be fully electric as applicable. The Plan <i>Design Guidelines and Standards</i> do not require negative-carbon concrete for all construction.	<input type="checkbox"/> Project Complies <input checked="" type="checkbox"/> Not Applicable <input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed
20. TIER 2: Use Energy Storage and Microgrids The project must incorporate the following design elements to the maximum extent feasible: A) Install energy storage systems. B) Use a building-scale or community microgrid to support demand management and peak shaving. Supports 2045 CAP Measures (and Actions): ES4 (ES4.1, ES4.2, ES4.3, ES4.4, ES4.5)	The Plan <i>Design Guidelines and Standards</i> require solar-powered light fixtures to reduce electricity demand associated with operation of Plan components. Although the Plan does not incorporate installation of energy storage systems, incorporation of solar-powered fixtures to the extent feasible will support demand management and peak shaving. Because specific project design and locations are currently unknown, it is not possible to provide total kW of energy storage capacity installed and operational information for any microgrids utilized, if applicable.	<input checked="" type="checkbox"/> Project Complies <input type="checkbox"/> Not Applicable <input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed
21. TIER 2: Use Recycled Water and Graywater for Non-potable Uses and Include Rainfall Capture The project must implement water reuse strategies onsite through the following design elements:	The Plan <i>Design Guidelines and Standards</i> requires use of drought tolerant and native plants to minimize water use. In addition, the Plan incorporates stormwater BMPs consistent with the Los Angeles County LID Manual that supports stormwater capture and reuse. Further, implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions	<input checked="" type="checkbox"/> Project Complies <input type="checkbox"/> Not Applicable <input type="checkbox"/> Project Does Not Comply and

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
<p>A) Require use of reclaimed/recycled water and/or graywater for outdoor uses.</p> <p>B) Install residential graywater systems that meet appropriate regulatory standards.</p> <p>C) Install rainfall capture systems.</p> <p>D) Install dual plumbing for the use of recycled water.</p> <p>Supports 2045 CAP Measures (and Actions): E5 (E5.1, E5.2, E5.3, E5.4)</p>	<p>Reduction Strategies would maximize use of recycled water for non-potable uses.</p> <p>Because specific project design and locations are currently unknown, it is not possible to provide the amount of reclaimed/recycled water and/or graywater used by the project.</p>	<p>Alternative Measures Proposed</p>
Waste		
<p>22. TIER 1: Compost Organic Materials</p> <p>The project must comply with all state and local requirements for composting and organic waste collection, including but not limited to Chapter 20.91 (Mandatory Organic Waste Disposal Reduction Ordinance) of the Los Angeles County Code, including all County requirements pursuant to AB 1826 and SB 1383. The project must also:</p> <p>A) Provide proper storage, collection, and loading of organics in a manner that is convenient and safe for all users of the building. Ensure there are sufficient sizes of collection containers for organics. Containers must be kept clean, be clearly labeled, and are co-located next to any other solid waste receptacles. Ensure sufficient pick-up of collection containers to meet the needs of the occupants.</p> <p>B) Include space for multi-stream collection containers for both recycling and organics in any location where a solid waste container is traditionally housed. This includes both outdoor collection containers serviced by a waste hauler or indoor collection containers utilized by occupants. Provide educational material and training to occupants and tenants in how to properly separate organics from all other solid waste and place organics in a separate container designated for organics.</p> <p>C) Ensure that all project occupants and tenants will separate compostables from all other refuse and place compostables in a separate container designated for composting.</p>	<p>Projects implemented under the Plan would be required to comply with LA County Code Chapter 20.91 including all LA County requirements pursuant to AB 1826 and SB 1383. Compliance with LA County Code Chapter 20.91 would require that all organic waste generated at project sites is collected and stored in properly labeled receptacles with a sufficient level of service to accommodate the amount of waste that is generated. No single-use products would be supplied as part of the Plan. Further, in accordance with LA County Code 20.91.070, containers would be periodically inspected for contamination.</p> <p>Because specific project design and locations are currently unknown, it is not possible to provide the project's estimated organic waste generation, the amount of organic waste sent to landfills, and the amount of organic waste generated by the project which is diverted from landfills.</p>	<p><input checked="" type="checkbox"/> Project Complies</p> <p><input type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed</p>

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
<p>D) Require that all single-use food service ware (plates, bowls, cups) and accessories (straws, utensils, condiment cups) used by tenants at the project site be BPI certified compostable fiber, except where certain materials may be deemed medically necessary or necessary to ensure equal access for persons with disabilities.</p> <p>E) Require that any single-use accessories (straws, utensils, condiment cups) be only available on demand.</p> <p>F) Ensure that containers are audited annually to ensure proper service levels and to check for contamination. Report findings back to occupants within 30 days and to the County as requested.</p> <p>G) Work with the waste hauler to provide educational materials to tenants on at least an annual basis.</p> <p>H) Provide compliance data to the County as required for any current auditing program.</p> <p>Supports 2045 CAP Measures (and Actions): W1 (W1.1, W1.2) and W2 (W2.1, W2.2, W2.5)</p>		
<p>23. TIER 1: Recycle Recyclable Materials</p> <p>The project must comply with all state and local requirements for recycling, also including but not limited to Section 20.72.170 (Recyclable Materials Collection Program) of the Los Angeles County Code and all County requirements pursuant to AB 341 and AB 1826. The project must also:</p> <p>A) Comply with any zero waste ordinance in place at the time of project approval.</p> <p>B) Comply with all Mandatory Construction & Demolition (C&D) Recycling Program Requirements, including Chapter 20.87 (Construction and Demolition Debris Recycling and Reuse).</p> <p>C) Provide substantial storage, collection, and loading of recyclables in a manner that is convenient and safe for all users of the building. Ensure there are sufficient sizes and amount of collection containers for recyclables. Containers must be kept clean, be clearly labeled, and are co-located next to any other solid waste receptacles. Ensure</p>	<p>Projects implemented under the Plan would be required to comply with the requirements set forth in LA County Codes 20.72.170, 20.87, and LA County requirements pursuant to AB 341 and AB 1826. The <i>Design Guidelines and Standards</i> supports separation and collection of recyclables at Plan sites. No single-use products would be provided as part of the Plan.</p> <p>Because specific project design and locations are currently unknown, it is not possible to provide the total C&D tonnage recycled and/or diverted from landfills, the project's estimated recyclable waste generation (tons), the amount of recyclable waste sent to landfills, and the amount of recyclable waste generated by the project which is diverted from landfills.</p>	<p><input checked="" type="checkbox"/> Project Complies</p> <p><input type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed</p>

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
<p>sufficient pick-up of collection containers to meet the needs of the occupants.</p> <p>D) Include space for multi-stream collection containers in any location where a solid waste container is traditionally housed. This includes both outdoor collection containers serviced by a waste hauler or indoor collection containers utilized by occupants. Provide educational materials and training to occupants and tenants in how to properly separate recyclables from all other solid waste and place recyclables in a separate container designated for recycling.</p> <p>E) Ensure that all project occupants and tenants separate recyclables from all other refuse and place recyclables in a separate container designated for recycling.</p> <p>F) Require that all single-use food service ware (plates, bowls, cups) and accessories (straws, utensils, condiment cups) used by tenants at the project site be BPI certified compostable fiber, except where certain materials may be deemed medically necessary or necessary to ensure equal access for persons with disabilities.</p> <p>G) Require that any single-use accessories (straws, utensils, condiment cups) be only available on demand.</p> <p>H) Ensure that containers are audited annually to ensure proper service levels and to check for contamination. Report findings back to occupants within 30 days and to the County as requested.</p> <p>I) Work with the waste hauler to provide educational materials to tenants on at least an annual basis.</p> <p>J) Provide compliance data to the County as required for any current auditing program.</p> <p>Supports 2045 CAP Measures (and Actions): W1 (W1.1, W1.3)</p>		
<p>24. TIER 2: Incorporate On-Site Composting, Mulching, and/or Anaerobic Digestion</p> <p>The project may incorporate organic waste processing capabilities, such as composting, mulching, or anaerobic digestion facilities (where applicable).</p>	<p>The <i>Design Guidelines and Standards</i> refers to the Los Angeles River Master Plan Design Guidelines, which specify that organic mulch in planting areas for erosion control, weed abatement, and to maintain moisture for the healthy establishment of</p>	<p><input checked="" type="checkbox"/> Project Complies</p> <p><input type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and</p>

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
Collaborate with PW and waste agencies to share organic processing information with interested parties. Supports 2045 CAP Measures (and Actions): W2 (W2.2, W2.3, W2.4)	plantings and water conservation. No anaerobic digestion or composting facilities are proposed as part of the Plan.	Alternative Measures Proposed
Agriculture, Forestry, and Other Land Use		
25. TIER 1: Incorporate Tree Plantings and Expand Urban Forest Cover The project must: A) Enhance and expand urban forest cover and vegetation by planting trees and other vegetation. All trees and vegetation planted must be drought-tolerant or California native trees and plants. B) Comply with the Urban Forest Management Plan. C) Replace all native trees removed by the project with an equal or greater number of new trees. D) To the extent feasible, incorporate equitable urban forest practices and prioritize: <ul style="list-style-type: none"> i. Tree- and park-poor communities ii. Climate and watershed-appropriate and drought/pest-resistant vegetation iii. Appropriate watering, maintenance, and disposal practices iv. Shading v. Biodiversity Supports 2045 CAP Measures (and Actions): A3 (A3.1, A3.2, A3.3)	Primary plan objectives include increasing vegetation and tree canopy consisting of native and drought-tolerant species to increase shade and biodiversity. The Plan is developed to provide communities with green solutions including reducing heat island effects to enhance community well-being. Projects implemented under the Plan would comply with <i>Design Guidelines and Standards</i> for the selection of species, as well as appropriate watering, maintenance, and disposal practices. Because specific project design and locations are currently unknown, it is not possible to provide the total number of trees planted, the total tree canopy cover, the project's total green space area, and the area of impervious surface converted to pervious surfaces. However, the Plan would result in an overall increase in trees, tree canopy, and greenspace area. Implementation of stormwater BMPs would mitigate impervious project areas. For on-channel greenway and adjacent path surfaces, only pervious concrete or porous asphalt shall be used. Permeable pavers may be used for non-greenway parking areas and pedestrian surfaces.	<input checked="" type="checkbox"/> Project Complies <input type="checkbox"/> Not Applicable <input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed
26. TIER 2: Conserve Forests, Woodlands, Shrublands, Grasslands, Desert, and other Carbon-Sequestering Wildlands and Working Lands For all projects involving the preservation, conservation, and restoration of agricultural lands, working lands, rangelands, forest lands, wetlands, and other wildlands in unincorporated Los Angeles County, the project may: A) Support the use of public and private land for urban and peri-urban agriculture, such as community gardens, and including urban vertical surfaces.	The Plan directly supports the preservation, conservation, and restoration of natural habitats. Greenway projects incorporate specific elements such as native plants and pollinator gardens to effectively achieve these objectives. Further, greenway amenities may include community gardens while stormwater management facilities may include constructed wetlands. Because specific project design and locations are currently unknown, it is not possible to provide the total number of acres preserved, conserved, and restored by land type, the number	<input checked="" type="checkbox"/> Project Complies <input type="checkbox"/> Not Applicable <input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed

2045 CAP Consistency Requirement	Description of Project Measure(s) / Documentation of Compliance / Explanation of Non-Compliance	Project Consistency
<p>B) Conserve and restore natural forest lands, wetlands and wildlands through land acquisitions and conservation easements.</p> <p>C) Preserve existing agricultural and farmlands, including those mapped as Agricultural Resource Areas. Expand adjoining areas to enlarge farmland area.</p> <p>D) Actively manage forests to reduce wildfire risk and prevent carbon loss in forest lands.</p> <p>Supports 2045 CAP Measures (and Actions): A1 (A1.1 and A1.2)</p>	<p>and size of community gardens added, the amount of vertical surface converted, and the acres of forest land managed for wildfire risk reduction and carbon stock savings if applicable. However, the Plan includes all of the District's ROW in the San Gabriel Valley along the San Gabriel River, Rio Hondo, and tributaries.</p>	
<p>27. TIER 2: Implement Regenerative Agricultural Practices</p> <p>For all agricultural projects, the project may:</p> <p>A) Utilize fallow and field resting practices to reduce bare-fallow land by adding cover crops and promoting crop rotation for active agricultural sites to improve soil quality and limit risks of nutrient erosion, pollutant runoff, and yield reduction.</p> <p>B) Implement a carbon farming plan with the primary objectives of carbon removal and regenerative agriculture.</p> <p>C) Use compost and/or organic fertilizer.</p> <p>Supports 2045 CAP Measures (and Actions): A2 (A2.1, A2.2)</p>	<p>The Plan is not an agricultural project.</p>	<p><input type="checkbox"/> Project Complies</p> <p><input checked="" type="checkbox"/> Not Applicable</p> <p><input type="checkbox"/> Project Does Not Comply and Alternative Measures Proposed</p>

3.8.3.2 Methodology

Although no specific projects are proposed as part of the Plan, GHG emissions associated with construction and operation activities were forecasted for a comparative analysis using the CalEEMod Version 2022.1.1.21. Methodologies, assumptions, and inputs to the CalEEMod model are the same as those described for the analysis of criteria pollutants described for Air Quality in Section 3.3.3.2, Methodology. In summary, the CalEEMod model quantifies direct emissions from construction and operations (including vehicle use), as well as indirect emissions, such as GHG emissions from energy use, solid waste disposal, vegetation planting and/or removal, and water use. Mobile source emissions were estimated using VMT data presented in Tables 3.17-5 and 3.17-6 provided in Section 3.17, Transportation. GHG emissions result from the energy used to supply, distribute, and treat water and wastewater, as well as from solid waste disposal by landfilling, recycling, or composting as CH₄ and CO₂ gas is emitted in the process. Area source emissions related to operational demand for water, wastewater treatment and conveyance, solid waste disposal, and energy were obtained based on CalEEMod defaults for the defined land use (refer to Table 3.6-5 provided in Section 3.6, Energy).

3.8.3.3 Plan Impacts

3.8.3.3.1 8(a). Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

As mentioned in Section 3.8.3.1, Significance Criteria, GHG emissions are measured exclusively as cumulative impacts; therefore, the construction emissions are considered part of total GHG emissions for the project lifecycle, which also includes GHG emissions during operations. In accordance with SCAQMD guidance, the construction emissions are amortized over a 30-year period, and the resulting annual emissions are combined with the annual operational GHG emissions. Therefore, for the following discussions (Sections 3.8.3.3.1.1 through 3.8.3.3.1.4), the significance determinations are based on the combined GHG emissions generated by both construction activities and operations activities.

It should be noted that the total and annual construction GHG emissions represent a conservative assessment because GHG emissions would decrease in future years as the construction industry shifts toward implementation of cleaner fuels (i.e., electrified equipment) and more efficient technologies. As such, the annual construction GHG emissions associated with greenway paths and greenway amenities would decrease with time and are likely to be lower for future activities implemented under the Plan than assumed herein.

3.8.3.3.1.1 Greenway Paths and Greenway Amenities

Construction and Operations

Less than Significant with Mitigation. Construction of the greenway paths and greenway amenities would generate GHG emissions from the use of heavy-duty construction equipment, construction worker vehicle trips, material deliveries, and trips by heavy-duty haul trucks. Construction of greenway paths and greenway amenities is estimated to generate a total of 149.5 MTCO₂e over the estimated three-month construction period. When amortized over a 30-year period, the construction GHG emissions would be approximately 4.98 MTCO₂e per year.

Once constructed, greenway paths and greenway amenities would consist of beneficial project elements such as barriers (e.g. fencing, guardrails, privacy screens, gates), lighting, seating/benches, bike parking/racks, equestrian amenities, landscaping, gateways, shade structures, water stations, restrooms, kiosks, trash cans, emergency call boxes, signage, community improvements such as public art, message boards, or gardens, and access for maintenance and emergency vehicles. Maintenance would occur at the project site periodically. Thus, project operations would result in GHG emissions from multiple sources of emissions, including energy, mobile, area, water, wastewater, and waste. Operations are estimated to generate a total of 4.0 MTCO₂e per year for the lifetime of the project. Table 3.8-5 presents the GHG emissions from greenway paths and greenway amenities, which include the amortized construction emissions and annual operation emissions.

Table 3.8-5. Estimated Annual GHG Emissions (Greenway Paths and Greenway Amenities)

Source	
Construction GHG Amortized Over 30 Years	4.98
Operations	4.0
TOTAL	8.98

Source: CalEEMod Emissions Summary Reports in Appendix C

As shown, construction and operation of greenway paths and greenway amenities would result in total annual GHG emissions of 8.98 MTCO₂e. The significance determination of this impact for projects within unincorporated LA County is based on consistency analysis with the 2045 CAP. Specifically, the GHG generation associated with implementation of projects under the Plan would be considered less than significant provided the project demonstrates that it is consistent with the 2045 CAP, which serves as the County's Qualified Climate Action Plan. The 2045 CAP identifies required General Plan policies and strategies to be implemented by development projects in the areas of energy supply, transportation, building energy and water, waste, and agriculture, forestry, and other land use. The completed Consistency Checklist is provided in Table 3.8-4. The Plan supports many GHG reduction and adaptation measures identified in the 2045 CAP by increasing connectivity in the Plan Area and thus, promoting active transport and an overall reduction in VMT and associated GHG emissions. Implementation of **MM AQ-1: Emissions Reduction Measures** and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would further ensure consistency with the applicable GHG emission reduction measures of the 2045 CAP by reducing GHGs during construction and operations. Specifically, implementation of **MM AQ-1: Emissions Reduction Measures** would require that zero-emission or near-zero-construction equipment is used to the maximum extent feasible, or at a minimum, Tier 4 Final construction equipment shall be used during all phases of construction, consistent with the 2045 CAP GHG Reduction Measure T9.3 which requires the use of zero-emission and near-zero emission construction equipment for LA County projects. Implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would require compliance with GHG reduction measures related to water, energy, and waste for all new construction. Mitigation would also require electrified buildings and landscaping equipment. Accordingly, with implementation of **MM AQ-1: Emissions Reduction Measures**, and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, as well as conformance with the *Design Guidelines and Standards*,

construction and operation of greenway paths and greenway amenities within unincorporated LA County would be consistent with the 2045 CAP and thus would not result in GHG emissions that would have a significant effect on the environment.

For projects implemented within incorporated cities that cannot directly tier from the 2045 CAP, per CEQA Guidelines Section 15064(h)(3), a project's incremental contribution to a cumulative impact can be found not cumulatively considerable if the project will comply with an approved plan or mitigation program that provides specific requirements that will avoid or substantially lessen the cumulative problem within the geographic area of the project. To qualify, such a plan or program must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency. Examples of such programs include a "air quality attainment or maintenance plan and/or plans or regulations for the reduction of greenhouse gas emissions." Put another way, CEQA Guidelines Section 15064(h)(3) allows a lead agency to make a finding of less than significance for GHG emissions if a project complies with regulatory programs to reduce GHG emissions. As summarized in Section 3.8.3.1, the SCAQMD adopted a screening threshold of 3,000 MTCO₂e per year for all non-industrial projects where SCAQMD is the lead agency (SCAQMD 2010). Although the SCAQMD is not the lead agency for this PEIR, estimated GHG emissions are compared against this threshold for the purposes of evaluating relative impacts.

In the absence of any adopted numeric threshold, the significance of the proposed project's GHG emissions is evaluated consistent with CEQA Guidelines Section 15064.4(b) by considering whether the projects implemented under the Plan within incorporated cities would comply with applicable plans, policies, regulations, and requirements adopted to implement a statewide, regional, or local plan for the reduction or mitigation of GHG emissions. At the time of this writing, the plans and policies for each incorporated city within the Plan area that address GHGs and climate change are provided in Table 3.8-3 above. For the purposes of this analysis, the significance determination of this impact for projects within incorporated cities is based on the following sector-by-sector analysis of the respective project features and measures to evaluate consistency with the 2022 Scoping Plan Update strategies and supporting regulations and guidance.

Energy

Greenway paths and greenway amenity projects would include continuous outdoor lighting, restrooms, and other amenities that would consume electricity or natural gas. The OPR 2018 *CEQA and Climate Change Advisory* recommends that a land use development project that "achieves applicable building energy efficiency standards, uses no natural gas or other fossil fuels, and includes ENERGY STAR appliances where available, may be able to demonstrate a less-than-significant greenhouse gas impact associated with project operation" (OPR 2018b). Development of greenway paths and greenway amenities would comply with all applicable local and State building measures at the time of their development, including Title 24, Part 6, California Energy Code baseline standard requirements for energy efficiency (i.e., CALGreen Code). Implementation of state and local measures (e.g., SB 100) would also reduce GHG emissions associated with electricity in future operations years. Relative to the indirect emissions of GHGs, the portion of GHG emissions associated with electricity use would decrease annually in future years from statewide implementation of SB 100, which sets a Renewable Portfolio Standard target of 60 percent by 2030 and 100 percent by 2045. Because SB 100 obligates utilities to

supply 100 percent carbon-free electricity by 2045, all electric buildings that do not consume any natural gas would not generate any emissions. The *Design Guidelines and Standards* for the Plan require solar-powered lighting fixtures in addition to compliance with the mandated CALGreen building measures. However, the *Design Guidelines and Standards* do not address the use of natural gas in buildings (such as might be used for hot water heaters in restrooms). Therefore, projects that include natural gas potentially could be inconsistent with the long-term GHG reduction goals of the 2022 Scoping Plan Update. Implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reductions Strategies** would ensure that new buildings and/or retrofit of existing buildings would be of all-electric design. In addition, the mitigation measure would require implementation of energy best practices from the United States green Building Council's LEED, United States Department of Energy Better Building Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes, which would ensure that greenway paths and greenway amenity projects would not conflict with the GHG reduction goals of the 2022 Scoping Plan Update.

Mobile

Mobile GHG emissions associated with on-road mobile sources would be generated from workers traveling to the project site for landscape and maintenance activities. Measures included in the CARB 2022 Scoping Plan Update would indirectly address GHG emission levels associated with construction activities, including the phasing-in of cleaner technology for diesel engine fleets (including construction equipment) and the development of a low-carbon fuel standard. Policies formulated under the mandate of AB 32 that apply to construction-related activity either directly or indirectly, are assumed to be implemented Statewide and would affect construction activities associated with projects implemented under the Plan. Specifically, implementation of AB 32 control measures for reduced vehicle emissions would decrease GHG emissions from the construction and operation of greenway paths and greenway amenities.

As discussed in Section 3.17, Transportation, the primary goals of the Plan are centered on promoting and expanding active commuting and enhancing connections to transit, schools, jobs, and everyday destinations. The greenway paths and greenway amenities components of the Plan include implementing greenways along more than one hundred miles of tributaries that would provide for alternative greenway transportation, with the goal of reducing VMT and associated GHG emissions. Projects designed along the San Gabriel River tributaries and washes present opportunities to connect with existing or potential access points to other path segments, parks, or other community benefit features (e.g., schools, business), providing opportunities for long-distance commuting via active transportation modes such as bicycles, scooters, and walking or running. Thus, the Plan would increase neighborhood connectivity to the trails and open spaces developed within the Plan Area, reducing or eliminating the need to travel extended distances via private vehicle to reach a neighborhood park for the residents who live in the Plan Area. Pedestrians, bicyclists and other micro-mobility mode users and equestrians would find space for travel and recreation along the District ROW on multi-use trails designed to equally accommodate them. Accordingly, development of greenway paths and greenway amenities would allow for an increased share of trips to be completed via active transportation instead of by private vehicle. Increasing the active transportation mode share and the ability to replace long-distance vehicle commute trips with an active transportation trip will reduce VMT, consistent with state and regional policy initiatives, including SB 743 and SCAG's 2020-2045 RTP/SCS. It is also consistent with

2020-2045 RTP/SCS RTP Goals 2, 5, 6, 7, and 10 which seek to reduce GHG emissions and protect the environment and the health of SCAG region residents by improving air quality and encouraging active transportation. Further, vehicle travel associated with operation greenway paths and greenway amenities would not conflict with the state's regulatory programs related to vehicle fuel efficiency and the carbon content of fuels (e.g., LCFS, Pavley Standards). Therefore, within implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reductions Strategies** greenway paths and greenway amenities would not conflict with the state's ability to meet its mobile source GHG reduction targets and would be consistent with the long-term GHG reduction goals of the 2022 Scoping Plan Update.

Area

Area-source GHG emissions from greenway path and greenway amenity projects would be generated by gasoline-powered landscaping equipment (e.g., trimmers, mowers). Area-source emissions are based on CalEEMod's default assumptions and represent a conservative estimate of equipment usage, according to the square footage of the proposed projects. Landscaping associated with greenway paths and greenway amenities would include primarily trees, shrubs and pervious pavement, as opposed to grass areas, thereby minimizing the routine use of mowers and other landscaping equipment. The 2022 Scoping Plan Update does not include specific measures for landscaping equipment. OPR guidance recommends that land use development projects strive to avoid fossil fuels (2018b). Because the landscaping equipment may be fueled with gasoline, operation and maintenance of greenway paths and greenway amenities could potentially be inconsistent with the long-term GHG reduction goals of the 2022 Scoping Plan Update. Implementation of **MM-GHG-1: Implement Section-Specific Operations GHG Emissions Reductions Strategies** would require the use of electric landscaping equipment (e.g., lawn mowers and trimmers) for maintenance and operations activities, thus ensuring that projects implemented under the Plan would not conflict with the GHG reduction goals of the 2022 Scoping Plan Update.

Land Use

The 2022 Scoping Plan Update has an overall goal of avoiding losses in carbon sequestration. Although the emissions benefit was not quantified, greenway path and greenway amenity projects would include planting of vegetation that would sequester carbon. The Plan provides vast opportunities for extensive planting of trees and many other types of vegetation that would sequester carbon emissions including measures outlined in the *Design Guidelines and Standards* for landscaping that prioritize continuous native trees and plant corridors along the river with linkages to riparian habitat and upland areas near the river. Because greenway path and greenway amenity projects may include restoration and development of natural vegetative habitat and plantings, greenway paths and greenway amenities would be consistent with the 2022 Scoping Plan Update's goal of avoiding losses in carbon sequestration.

Further, greenway path and greenway amenity projects implemented under the Plan would not conflict with population growth projections of the 2020-2045 RTP/SCS or its goals associated with GHG reductions. Specifically, greenway paths and greenway amenities would not create housing or would otherwise lead to substantial unplanned population growth, and thus, would not contribute to population or employment growth outside of the growth projections of the 2020-2045 RTP/SCS. As

such, a project implemented under the Plan within one of the 24 incorporated cities within the Plan Area would be considered consistent with the GHG reduction goals of the 2020-2045 RTP/SCS.

Water Use and Wastewater Generation

Indirect GHG emissions result from the production of electricity used to convey, treat, and distribute water and wastewater. The amount of electricity required to convey, treat, and distribute water depends on the volume of water as well as the sources of water. Additional wastewater emissions include CH₄ and N₂O, although these are generated by wastewater treatment at individual wastewater treatment plants. The Plan does not include any new wastewater treatment plants. The 2022 Scoping Plan Update outlines objectives and goals to reduce GHGs in the water sector, including using and reusing water more efficiently through greater water conservation, drought-tolerant landscaping, stormwater capture, and water recycling. Regulations have further targeted water supply and water conservation (e.g., Water Conservation Act of 2009 [SB X7-7] that requires water suppliers to increase their water use efficiency) through building and landscaping efficiency (e.g., Title 24). The *Design Guidelines and Standards* recommend the following best practices that should be incorporated to reduce water consumption: on-site water retention, detention, and filtration; stormwater capture and reuse; and compliance with the CALGreen Code which requires use of low-flow water fixtures. These features, if implemented, would be consistent with the 2022 Scoping Plan Update's water measures and the State's regulatory programs within the water sector. Further, implementation of **MM GHG-1 Implement Section-Specific Operations GHG Emissions Reductions Strategies** would require reuse of greywater and rainwater, incorporation of recycled water for non-potable uses to the maximum extent feasible, and installation of low-flow water fixtures that exceed the requirements of the CALGreen Code. Therefore, with implementation of MM GHG-1, water use and wastewater generation of greenway paths and greenway amenities would not conflict with the long-term GHG reduction goals of the 2022 Scoping Plan Update.

Waste Generation

Solid waste generated during construction and operation of greenway path and greenway amenity projects may be disposed of in landfills or diverted for recycling, composting, or reuse. GHG emissions from landfills are generated through anaerobic breakdown of material. The 2022 Scoping Plan Update aims to reduce waste emissions by diverting waste away from landfills through waste reduction, reuse, composting, and material recovery. In addition, ABs 341 and 1826 require certain commercial businesses to provide organics and recycling containers adjacent to trash to collect waste. The California Integrated Waste Management Act of 1989 requires that each local jurisdiction in the state divert 50 percent of all solid waste from disposal through measures including recycling and reuse. The LA County Construction and Demolition Debris Ordinance requires that at least 50 percent of all soil, rock, gravel, and construction and demolition debris removed from the project site be recycled or reused. Any organic waste, including landscaping waste, vegetation waste, or construction/demolition debris, will need to be diverted from landfill disposal, as required by SB 1383 regulations. Greenway path and greenway amenity projects would be required to comply with the state's and County's regulatory programs within the waste sector. In addition, greenway amenities include litter and recycling receptacles. Accordingly, consistency with regulatory measures would ensure that greenway paths and greenway amenities would not conflict with the 2022 Scoping Plan Update's waste measures.

Summary

As described above, for projects implemented within unincorporated LA County, with implementation of **MM AQ-1: Emissions Reduction Measures**, and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, as well as conformance with the *Design Guidelines and Standards*, construction and operation of greenway paths and greenway amenities within unincorporated LA County would be consistent with the 2045 CAP when carried out by the County and thus would not result in GHG emissions that would have a significant effect on the environment.

Further, total amortized GHGs associated with construction and operation of greenway paths and greenway amenities would be well below the SCAQMD's threshold of 3,000 MTCO₂e/year. For projects carried out within incorporated cities (i.e., outside of the purview of LA County's 2045 CAP), compliance with applicable regulatory measures and with implementation of **MM-GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, greenway paths and greenway amenity projects would be consistent with the 2022 Scoping Plan Update's overall goal of avoiding losses in carbon sequestration and limiting land use emissions. The *Design Guidelines and Standards* related to water, energy, and waste, would be consistent with the 2022 Scoping Plan Update's measures and the State's regulatory programs within these sectors. Furthermore, as summarized in Section 3.17, Transportation, daily vehicle trips would not exceed OPR's daily trip screening threshold (2018a). Accordingly, emissions from the energy, mobile, area, water, and waste sectors would not conflict with the 2022 Scoping Plan Update and applicable regulatory programs. Therefore, with implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** for projects carried out within incorporated cities, emissions associated with the construction and operation of greenway paths and greenway amenities would have a less than significant impact on the environment.

Mitigation Measures

MM AQ-1: Emissions Reduction Measures.

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies. Project proponents shall implement the following GHG emissions reduction strategies:

- Energy
 - Use renewable energy sources (e.g., solar) as feasible.
 - Optimize building orientation for solar exposure, diffused daylight, and passive ventilation, as feasible.
- Area
 - Electric Landscaping Equipment. Maintenance and operations activities that use landscaping equipment (e.g., lawn mowers, trimmers) shall employ electric landscaping equipment.
- Water Use
 - Implement County of Los Angeles LID Standards Manual or local LID ordinances.
- Waste
 - Waste Reductions. New construction shall implement one or more of the following measures related to minimization and recycling of waste generation.
 - Provide recycling receptacles that are clearly identified and labeled.

- Use locally sourced, recycled, and recyclable materials with low-embodied energy.
- Use green cleaning products and integrated building management.
- Regularly monitor building systems and optimize usage.

Significance After Mitigation

For projects carried out within unincorporated LA County, implementation of **MM AQ-1: Emissions Reduction Measures**, and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, as well as compliance with the *Design Guidelines and Standards*, LA County ordinances, and required measures under the County of Los Angeles Sustainable Infrastructure Guidelines emissions from the area, land use, water, mobile, and waste sectors would ensure consistency with the 2045 CAP.

For projects carried out within incorporated cities (i.e., outside of the purview of the 2045 CAP), compliance with applicable regulatory measures and with implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, greenway paths and greenway amenity projects would be consistent with the 2022 Scoping Plan Update's overall goal of avoiding losses in carbon sequestration and limiting land use emissions. The *Design Guidelines and Standards* related to water, energy, and waste, would be consistent with the 2022 Scoping Plan Update's measures and the state's regulatory programs within these sectors. Furthermore, as summarized in Section 3.17, Transportation, daily vehicle trips would not exceed OPR's daily trip screening threshold (2018a). Accordingly, emissions from the energy, mobile, area, water, and waste sectors would not conflict with the 2022 Scoping Plan Update and applicable regulatory programs. Therefore, with implementation of mitigation measures, construction and operation of greenway paths and amenities would result in less than significant impacts with regard to GHG emissions.

3.8.3.3.1.2 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces

Construction and Operations

Less than Significant with Mitigation. Construction of the greenway paths and amenities + pocket parks and greenspaces would generate GHG emissions from the use of heavy-duty construction equipment, construction worker vehicle trips, material deliveries, and trips by heavy-duty haul trucks. Construction of greenway paths + 1-acre pocket parks and greenspaces is estimated to generate a total of 160.57 MTCO₂e over the estimated three-month construction period. When amortized over a 30-year period, the construction GHG emissions would be approximately 5.35 MTCO₂e per year. Construction of greenway paths + 25-acre greenspaces is estimated to generate a total of 267.14 MTCO₂e over the estimated five-month construction period. When amortized over a 30-year period, the construction GHG emissions associated with greenway paths + 25-acre greenspaces would be approximately 8.9 MTCO₂e per year.

Beneficial project elements for a greenway path + pocket park and greenspaces project consist of recreational facilities such as a pocket park, playground, sports field, or open field, and would include maintenance activities. Therefore, project operations for the greenway path and amenities + pocket parks and greenspaces would result in GHG emissions from multiple sources of emissions, including energy, mobile, area, water, wastewater, and waste. Operations of greenway paths and amenities, 1-acre pocket parks, and greenspaces are estimated to generate a total of 4.03 MTCO₂e per year for the lifetime of each project. Operations of greenway paths and 25-acre greenspaces are estimated to

generate a total of 4.67 MTCO₂e per year for the lifetime of each project. Table 3.8-6 and Table 3.8-7 present the GHG emissions from greenway paths + 1-acre pocket parks and greenspaces and greenway paths 25-acre greenspaces, respectively, which include the amortized construction emissions and annual operation emissions.

Table 3.8-6. Estimated Annual GHG Emissions (Greenway Paths + 1-Acre Pocket Parks + Greenspaces)

Source	Annual GHG (MTCO ₂ e/year)
Construction GHG Amortized Over 30 Years	5.35
Operations	4.03
TOTAL	9.38

Source: CalEEMod Emissions Summary Reports in Appendix C

Table 3.8-7. Estimated Annual GHG Emissions (Greenway Paths + 25-Acre Greenspaces)

Source	Annual GHG (MTCO ₂ e/year)
Construction GHG Amortized Over 30 Years	8.90
Operations	4.67
TOTAL	13.57

Source: CalEEMod Emissions Summary Reports in Appendix C

As shown, greenway paths and amenities + pocket parks and greenspaces would result in a maximum annual GHG emissions of 13.57 MTCO₂e. As demonstrated in Table 3.8-6 and Table 3.8-7, construction and operation GHG emissions associated with projects that incorporate a 1-acre park or 25-acre greenspace would be incrementally greater than for projects that do not include these features. However, total amortized project GHG emissions would remain below the 3,000 MTCO₂e/year threshold established by the SCAQMD. As described for greenway paths and greenway amenities above, the significance determination for projects within unincorporated LA County is based on consistency analysis with the 2045 CAP. As demonstrated for greenway paths and greenway amenities, Plan projects would support many GHG reduction and adaptation measures identified in the 2045 CAP by increasing connectivity in the Plan Area, and thus, promoting active transport and overall reduction in VMT and associated GHG emissions. Projects that include 1-acre pocket parks or 25-acre greenspaces would further enhance access to these community amenities via active transport modes. Further, as described for greenway paths and greenway amenities, implementation of **MM AQ-1: Emission Reduction Measures**, and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, would ensure consistency with the applicable GHG emission reduction measures of the 2045 CAP by reducing GHGs during construction and operations. For projects within incorporated cities (outside the purview of the 2045 CAP), compliance with applicable regulatory measures and with implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, projects would be consistent with the 2022 Scoping Plan Update's overall goal of avoiding losses in carbon sequestration and limiting land use emissions. Furthermore, as summarized in Section 3.17, Transportation, daily vehicle trips attributed to greenway paths, pocket parks, and greenspaces

would not exceed OPR's daily trip screening threshold (2018a). Accordingly, emissions from the energy, mobile, area, water, and waste sectors would not conflict with the 2022 Scoping Plan Update and applicable regulatory programs. Therefore, with implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** for projects carried out within incorporated cities, emissions associated with the construction and operation of greenway paths, pocket parks, and greenspaces would have a less than significant impact on the environment.

Mitigation Measures

MM AQ-1: Emissions Reduction Measures.

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies.

Significance After Mitigation

For projects carried out within unincorporated LA County, implementation of **MM AQ-1: Emissions Reduction Measures**, and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, as well as compliance with the *Design Guidelines and Standards*, LA County ordinances, and required measures under the County of Los Angeles Sustainable Infrastructure Guidelines emissions from the area, land use, water, mobile, and waste sectors would ensure consistency with the 2045 CAP.

For projects carried out within incorporated cities (i.e., outside of the purview of the 2045 CAP), compliance with applicable regulatory measures and with implementation of **MM-GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, greenway paths and greenway amenity projects would be consistent with the 2022 Scoping Plan Update's overall goal of avoiding losses in carbon sequestration and limiting land use emissions. The *Design Guidelines and Standards* related to water, energy, and waste, would be consistent with the 2022 Scoping Plan Update's measures and the state's regulatory programs within these sectors. Furthermore, as summarized in Section 3.17, Transportation, daily vehicle trips would not exceed OPR's daily trip screening threshold (2018a). Accordingly, emissions from the energy, mobile, area, water, and waste sectors would not conflict with the 2022 Scoping Plan Update and applicable regulatory programs. Therefore, impacts would be less than significant with mitigation.

3.8.3.3.1.3 Greenway Paths and Greenway Amenities + Safe Crossings

Construction and Operations

Less than Significant with Mitigation. Construction of the greenway paths and safe crossings would generate GHG emissions from the use of heavy-duty construction equipment, construction worker vehicle trips, material deliveries, and trips by heavy-duty haul trucks. Construction of greenway paths and safe crossings is estimated to generate a total of 387.90 MTCO₂e over the estimated 6-month construction period. When amortized over a 30-year period, the construction GHG emissions would be approximately 12.93 MTCO₂e per year.

Beneficial project elements of greenway paths and safe crossings include ADA-compliant ramps, signage and signals, bridges, bikeways, curb extensions and raised median islands, undercrossings/overcrossings, and decks of cantilever greenway segments over channels. Thus, project operations would result in GHG emissions from multiple sources of emissions, including energy, mobile, area, water, wastewater, and

waste. Operations are estimated to generate a total of 4.0 MTCO₂e per year for the lifetime of the project. Table 3.8-8 presents the GHG emissions from greenway paths and amenities, which include the amortized construction emissions and annual operation emissions.

Table 3.8-8. Estimated Annual GHG Emissions (Greenway Paths + Safe Crossings)

Source	Annual GHG (MTCO ₂ e/year)
Construction GHG Amortized Over 30 Years	12.93
Operations	4.00
TOTAL	16.93

Source: CalEEMod Emissions Summary Reports in Appendix C

As shown, greenway paths and safe crossings would result in annual GHG emissions of 16.93 MTCO₂e. As demonstrated in Table 3.8-8, construction and operation GHG emissions associated with projects that incorporate safe crossings would be incrementally greater than for projects that do not include these features. However, total amortized project GHG emissions would remain below the 3,000 MTCO₂e/year threshold established by the SCAPCD. As described for greenway paths and greenway amenities above, the significance determination for projects within unincorporated LA County is based on consistency analysis with the 2045 CAP. As demonstrated for greenway paths and greenway amenities, Plan projects would support many GHG reduction and adaptation measures identified in the 2045 CAP by increasing connectivity in the Plan Area, and thus, promoting active transport and overall reduction in VMT and associated GHG emissions. Projects that include safe crossings would further encourage active transport modes by increasing safety for a variety of users. Further, as described for greenway paths and greenway amenities, implementation of **MM AQ-1: Emission Reduction Measures**, and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would ensure consistency with the applicable GHG emission reduction measures of the 2045 CAP by reducing GHGs during construction and operations. For projects within incorporated cities (outside the purview of the 2045 CAP), compliance with applicable regulatory measures and with implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, projects would be consistent with the 2022 Scoping Plan Update's overall goal of avoiding losses in carbon sequestration and limiting land use emissions. Furthermore, as summarized in Section 3.17, Transportation, daily vehicle trips attributed to greenway paths, pocket parks, and greenspaces would not exceed OPR's daily trip screening threshold (2018a). Accordingly, emissions from the energy, mobile, area, water, and waste sectors would not conflict with the 2022 Scoping Plan Update and applicable regulatory programs. Therefore, with implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** for projects carried out within incorporated cities, emissions associated with the construction and operation of greenway paths and safe crossings would have a less than significant impact on the environment.

Mitigation Measures

MM AQ-1: Emissions Reduction Measures.

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies.

Significance After Mitigation

For projects carried out within unincorporated LA County, implementation of **MM AQ-1: Emissions Reduction Measures**, and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, as well as compliance with the *Design Guidelines and Standards*, LA County ordinances, and required measures under the County of Los Angeles Sustainable Infrastructure Guidelines emissions from the area, land use, water, mobile, and waste sectors would ensure consistency with the 2045 CAP.

For projects carried out within incorporated cities (i.e., outside of the purview of the 2045 CAP), compliance with applicable regulatory measures and with implementation of **MM-GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, greenway paths and greenway amenity projects would be consistent with the 2022 Scoping Plan Update's overall goal of avoiding losses in carbon sequestration and limiting land use emissions. The *Design Guidelines and Standards* related to water, energy, and waste, would be consistent with the 2022 Scoping Plan Update's measures and the state's regulatory programs within these sectors. Furthermore, as summarized in Section 3.17, Transportation, daily vehicle trips would not exceed OPR's daily trip screening threshold (2018a). Accordingly, emissions from the energy, mobile, area, water, and waste sectors would not conflict with the 2022 Scoping Plan Update and applicable regulatory programs. Therefore, impacts would be less than significant with mitigation.

3.8.3.3.1.4 Greenway Paths + Stormwater Management

Construction and Operations

Less than Significant with Mitigation. Construction of the greenway paths and stormwater management would generate GHG emissions from the use of heavy-duty construction equipment, construction worker vehicle trips, material deliveries, and trips by heavy-duty haul trucks. Construction of greenway paths and stormwater management is estimated to generate a total of 135.52 MTCO₂e over the estimated 3-month construction period. When amortized over a 30-year period, the construction GHG emissions would be approximately 4.52 MTCO₂e per year.

Beneficial project elements for greenway paths and stormwater management consist of bioretention, permeable pavement, subsurface infiltration, constructed wetlands, extended detention basins, and proprietary devices which all require some operations and maintenance for functionality. Therefore, project operations would result in GHG emissions from multiple sources of emissions, including energy, mobile, area, water, wastewater, and waste. Operations are estimated to generate a total of 4.0 MTCO₂e per year for the lifetime of the project. Table 3.8-9 presents the GHG emissions from greenway paths and stormwater management, which include the amortized construction emissions and annual operation emissions.

Table 3.8-9. Estimated Annual GHG Emissions (Greenway Paths + Stormwater Management)

Source	Annual GHG (MTCO ₂ e/year)
Construction GHG Amortized Over 30 Years	4.52
Operations	4.00
TOTAL	8.52

Source: CalEEMod Emissions Summary Reports in Appendix C

As shown, greenway paths and stormwater management would result in annual GHG emissions of 8.52 MTCO₂e. As demonstrated in Table 3.8-9, construction and operation GHG emissions associated with projects that incorporate stormwater management would be similar to greenway path and greenway amenity projects that do not include these features with total amortized project GHG emissions below the 3,000 MTCO₂e/year threshold established by the SCAPCD. As described for greenway paths and greenway amenities above, the significance determination for projects within unincorporated LA County is based on consistency analysis with the 2045 CAP. As demonstrated for greenway paths and greenway amenities, Plan projects would support many GHG reduction and adaptation measures identified in the 2045 CAP by increasing connectivity in the Plan Area, and thus, promoting active transport and overall reduction in VMT and associated GHG emissions. Further, as described for greenway paths and greenway amenities, implementation of **MM AQ-1: Emission Reduction Measures**, and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would ensure consistency with the applicable GHG emission reduction measures of the 2045 CAP by reducing GHGs during construction and operations. For projects within incorporated cities (outside the purview of the 2045 CAP), compliance with applicable regulatory measures and with implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, projects would be consistent with the 2022 Scoping Plan Update's overall goal of avoiding losses in carbon sequestration and limiting land use emissions. Furthermore, as summarized in Section 3.17, Transportation, daily vehicle trips attributed to greenway paths, pocket parks, and greenspaces would not exceed OPR's daily trip screening threshold (2018a). Accordingly, emissions from the energy, mobile, area, water, and waste sectors would not conflict with the 2022 Scoping Plan Update and applicable regulatory programs. Therefore, with implementation of **MM-GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** for projects carried out within incorporated cities, emissions associated with the construction and operation of greenway paths and stormwater management would have a less than significant impact on the environment.

Mitigation Measures

MM AQ-1: Emissions Reduction Measures.

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies.

Significance After Mitigation

For projects carried out within unincorporated LA County, with implementation of **MM AQ-1: Emissions Reduction Measures**, and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, as well as compliance with the *Design Guidelines and Standards*, LA County ordinances, and required measures under the County of Los Angeles Sustainable Infrastructure

Guidelines emissions from the area, land use, water, mobile, and waste sectors would ensure consistency with the 2045 CAP.

For projects carried out within incorporated cities (i.e., outside of the purview of the 2045 CAP), compliance with applicable regulatory measures and with implementation of **MM-GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, greenway paths and greenway amenity projects would be consistent with the 2022 Scoping Plan Update's overall goal of avoiding losses in carbon sequestration and limiting land use emissions. The *Design Guidelines and Standards* related to water, energy, and waste, would be consistent with the 2022 Scoping Plan Update's measures and the State's regulatory programs within these sectors. Furthermore, as summarized in Section 3.17, Transportation, daily vehicle trips would not exceed OPR's (2018a) daily trip screening threshold. Accordingly, emissions from the energy, mobile, area, water, and waste sectors would not conflict with the 2022 Scoping Plan Update and applicable regulatory programs. Therefore, impacts would be less than significant with mitigation.

3.8.3.3.2 8(b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

3.8.3.3.2.1 Greenway Paths and Greenway Amenities + Pocket Parks and Greenspaces + Safe Crossings + Stormwater Management

For the purposes of this PEIR, the following analysis considers whether the Plan in its entirety, inclusive of all potential Plan components, is consistent with applicable plans, policies, and regulations adopted for the purpose of reducing the emissions of greenhouse gases. For projects carried out by the County or projects carried out by other parties entirely within unincorporated areas of LA County, the following discussion relies on consistency with the 2045 CAP Compliance Checklist. The 2045 CAP Compliance Checklist ensures consistency with the 2022 Scoping Plan Update, SB 32, and AB 1279. Accordingly, projects carried out by the County or projects carried out by other parties within unincorporated LA County that are considered consistent with the 2045 CAP Compliance Checklist, would also be consistent with those plans and policies applicable to each project implemented under the Plan.

All other projects implemented under the Plan would be subject to the ordinances and regulations adopted by the applicable jurisdiction. However, projects that are within incorporated cities of LA County cannot directly tier from the 2045 CAP and LA County would not have authority over projects that are outside of its regulatory authority. As such, for projects carried out within incorporated cities (i.e., outside the purview of the 2045 CAP), the following analysis considered whether projects implemented under the Plan are consistent with the applicable state, regional, and local plans, policies, or regulations adopted for the purpose of reducing GHG emissions. As of the writing of this PEIR, the City of Pasadena is the only incorporated city within the Plan Area that has adopted a CAP that serves as a long-range qualified GHG reduction plan to support California's efforts under Executive Order S-3-05, AB 32, and SB 32 (City of Pasadena 2018). As such, tiering from the City of Pasadena CAP is considered appropriate for projects carried out within the City of Pasadena. For all other incorporated cities, the plans, policies, and regulations relevant to the Plan include the 2020–2045 RTP/SCS, 2022 Scoping Plan Update, OurCounty Sustainability Plan, and the plans and policies adopted by each jurisdiction such as those incorporated into the respective General Plan, sustainability plans, energy action plans, etc.

Construction and Operations

Less than Significant with Mitigation. For projects carried out within unincorporated LA County, the 2045 Compliance Checklist has been completed for the Plan as provided in Table 3.8-4. As detailed in Table 3.8-4 and for Impact Criteria 8(a) above, the Plan would be consistent with all 2045 CAP GHG reduction strategies with compliance with the requirements of *Design Guidelines and Standards*, LA County ordinances, and required measures under the County of Los Angeles Sustainable Infrastructure Guidelines. Implementation of **MM AQ-1: Emissions Reduction Measures**, and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would further ensure consistency with the 2045 CAP. Projects that are demonstrated to be consistent with the 2045 CAP would also be consistent with the 2022 Scoping Plan Update, SB 32, and AB 1279. Specifically, the targets and carbon neutrality goal in the 2045 CAP align with various state, regional, and County targets for 2030, 2035, and 2045. The 2045 CAP includes a target for the year 2030 to align with SB 32, a target for the year 2045 to align with SB 1279, and an interim target year of 2035 to show substantial progress between the 2030 and 2045 targets and associated state goals. Since the 2045 CAP is a qualified CAP, and the Plan would be consistent with applicable actions with incorporation of **MM AQ-1: Emissions Reduction Measures**, and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, construction and operation of greenway paths and greenway amenities; greenway paths + pocket parks and greenspaces; greenway paths + safe crossings; and greenway paths + stormwater management would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases and impacts would be less than significant with mitigation for projects located entirely on unincorporated County jurisdiction.

For projects carried out within incorporated cities throughout the Plan Area, the following demonstrates consistency with the 2020–2045 RTP/SCS, 2022 Scoping Plan Update, OurCounty Sustainability Plan, and the plans and policies adopted by each jurisdiction such as those incorporated into the respective General Plan, sustainability plans, energy action plans, etc.

Consistency with 2020–2045 RTP/SCS

The 2020–2045 RTP/SCS is a long-range visioning plan that balances future mobility and housing needs with economic, environmental, and public health goals. The 2020–2045 RTP/SCS is consistent with SB 375, which requires SCAG to adopt an SCS that outlines policies to reduce per-service-population GHG emissions from automobiles and light trucks. The SCS presents strategies and tools that are consistent with local jurisdictions' land use policies and incorporates best practices for achieving the State-mandated reductions in GHG emissions at the regional level through reduced per-capita VMT. The strategies included in the 2020–2045 RTP/SCS to reduce GHG emissions consist of focusing growth near destinations and mobility options, promoting diverse housing choices, leveraging technology innovations, supporting implementation of sustainability policies, and promoting a green region. Consistent with the strategies of the RTP/SCS, the Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping, and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce per service population GHG

emissions from passenger vehicles. Thus, projects carried out within incorporated cities would be consistent with the goals of SB 375 and the 2020–2045 RTP/SCS.

Consistency with 2022 Scoping Plan Update, SB 32, and Executive Order S-3-05

The 2022 Scoping Plan Update outlines the state’s plan to reduce emissions and achieve carbon neutrality by 2045 in alignment with AB 1279 and assesses progress toward the 2030 SB 32 target (CARB 2022b). As such, given that SB 32 and AB 1279 are the relevant GHG emission targets, the 2022 Scoping Plan Updates that outline the strategy to achieve those targets are the most applicable to the Plan. Table 3.8-10 analyzes the potential of projects implemented under the Plan within incorporated cities to conflict with the 2022 Scoping Plan Update actions that are the most applicable to the Plan, or more specifically, actions to achieve the GHG emissions targets set forth by SB 32 and AB 1279 that are relevant to the Plan.

Table 3.8-10. Consistency of Plan Projects (Carried out Within Incorporated Cities) with the 2022 Scoping Plan Update

Sector	Action	Consistency Analysis
GHG Emissions Reductions Relative to the SB 32 Target	40 percent below 1990 levels by 2030	<u>No conflict.</u> While the SB 32 GHG emissions reduction target is not an action that is analyzed independently, it is included in Table 2-1 of the 2022 Scoping Plan for reference. Projects implemented under the Plan would not obstruct or interfere with agency efforts to meet the SB 32 reduction goal.
Smart Growth / VMT	VMT per capita reduced 25 percent below 2019 levels by 2030 and 30 percent below 2019 levels by 2045	<u>No conflict.</u> Projects implemented under the Plan would not obstruct or interfere with agency efforts to meet this regional VMT reduction goal, including through implementation of SB 375. As detailed above, projects implemented under the Plan would be consistent with the goals and policies of the SCAG 2020–2045 RTP/SCS, which is the regional growth management strategy that targets per capita GHG reduction from passenger vehicles and light trucks in the Southern California Region pursuant to SB 375. Additionally, the facilitation of the Plan would provide opportunities for active transport, which would replace vehicle trips and reduce VMT.
Light-duty Vehicle Zero Emission Vehicles (ZEVs)	100 percent of light-duty vehicle sales are ZEV by 2035	<u>No conflict.</u> As this action pertains to light-duty vehicle sales within California, the Plan would not obstruct or interfere with its implementation. Furthermore, Plan projects would support zero-emission travel modes (i.e., pedestrian and bicycle trips) for local trips within the Plan Area to reduce GHGs and promote resiliency.
Truck ZEVs	100 percent of medium-duty vehicle/ heavy-duty vehicle sales are ZEV by 2040	<u>No conflict.</u> As this action pertains to medium-duty vehicle and heavy-duty vehicle sales within California, projects implemented under the Plan

Sector	Action	Consistency Analysis
		would not obstruct or interfere with its implementation.
Electricity Generation	<p>Sector GHG target of 38 million MTCO₂e in 2030 and 30 million MTCO₂e in 2035</p> <p>Retail sales load coverage 20 gigawatts (GW) of offshore wind by 2045</p> <p>Meet increased demand for electrification without new fossil gas-fired resources</p>	<u>No conflict.</u> As this action pertains to the statewide procurement of renewably generated electricity, projects implemented under the Plan would not obstruct or interfere with its implementation.
New Residential and Commercial Buildings	All electric appliances beginning 2026 (residential) and 2029 (commercial), contributing to 6 million heat pumps installed statewide by 2030	<u>No conflict.</u> MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would require that all new buildings and/or retrofit of existing buildings shall be of all-electric design. Therefore, with implementation of MM GHG-1 , projects facilitated under the Plan within incorporated cities would not obstruct or interfere with CARB's efforts to meet the targets of all electric appliances for new residential and commercial buildings.
Existing Commercial Buildings	<p>80 percent of appliance sales are electric by 2030, and 100 percent of appliance sales are electric by 2045.</p> <p>Appliances are replaced at end of life, contributing to 6 million heat pumps installed statewide by 2030.</p>	<u>No conflict.</u> MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would require that all new buildings and/or retrofit of existing buildings shall be of all-electric design. Therefore, with implementation of MM GHG-1 , projects facilitated under the Plan within incorporated cities would not obstruct or interfere with CARB's efforts to meet the targets of all electric appliances for existing commercial buildings.
Construction Equipment	25 percent of energy demand electrified by 2030 and 75 percent electrified by 2045	<u>No conflict.</u> As this action pertains to the electrification of off-road equipment across California, the Plan would not obstruct or interfere with its implementation.
Chemicals and Allied Products; Pulp and Paper	<p>Electrify 0 percent of boilers by 2030 and 100 percent of boilers by 2045. Hydrogen for 25 percent of process heat by 2035 and 100 percent by 2045</p> <p>Electrify 100 percent of other energy demand by 2045.</p>	<u>No conflict.</u> As this action pertains to the electrification of industrial processes, the Plan would not obstruct or interfere with its implementation.
Stone, Clay, Glass, and Cement	<p>Carbon capture and sequestration on 40 percent of operations by 2035 and on all facilities by 2045</p> <p>Process emissions reduced</p>	<u>No Conflict.</u> As this action pertains to carbon capture and sequestration targets, the Plan would not obstruct or interfere with CARB's carbon capture and sequestration targets.

Sector	Action	Consistency Analysis
	through alternative materials and carbon capture and sequestration.	
Other Industrial Manufacturing	0 percent energy demand electrified by 2030 and 50 percent by 2045	<u>No conflict.</u> As this action pertains to the electrification of industrial processes, the Plan would not obstruct or interfere with its implementation.
Low Carbon Fuels for Transportation	Biomass supply is used to produce conventional and advanced biofuels, as well as hydrogen	<u>No conflict.</u> The Plan would not obstruct or interfere with CARB's efforts to increase the provision of low carbon fuels for transportation.
Low Carbon Fuels for Buildings and Industry	In 2030s biomethane blended in pipeline	<u>No conflict.</u> The Plan would not obstruct or interfere with CARB's efforts to increase the provision of low carbon fuels for use in buildings and industry.
Natural and Working Lands	<p>Conserve 30 percent of the State's Natural and Working Lands and coastal waters by 2030.</p> <p>Implement near- and long-term actions to accelerate natural removal of carbon and build climate resilience in our forests, wetlands, urban greenspaces, agricultural soils, and land conservation activities in ways that serve all communities—and in particular low-income, disadvantaged, and vulnerable communities.</p>	<u>No conflict.</u> Projects implemented under the Plan would directly support CARB's efforts to conserve Natural and Working Lands through development, restoration, and/or maintenance of greenspaces, wetlands, and natural communities. Projects implemented under the plan would provide amenities and greenways and connected open space that support the capture and cleaning of water, surface cooling, carbon sequestration, native habitat, parks, recreation, multi-use paths and trails (cyclists, pedestrians, and equestrians), human and ecosystem health, equity, access, and mobility.

Consistency with OurCounty Sustainability Plan

As discussed above, in July 2019, LA County adopted the OurCounty Sustainability Plan, which includes 12 primary goals that have a total of 37 strategies, with a total of 159 actions. The plan is used qualitatively for this analysis to determine if projects implemented under the Plan within incorporated cities would be generally consistent with the applicable GHG emissions goals, strategies, and actions.

The OurCounty Sustainability Plan includes numerous strategies related to urban forestry, sustainable building design, building energy consumption, renewable energy, active and alternative transportation, waste generation, integrated water systems, and water conservation. Plantings at the project site ensure that projects implemented under the Plan would be consistent with the OurCounty Sustainability Plan's strategies related to urban forestry. The Plan aims to connect to other trails and paths within the District ROW to create a mobility network across the Plan Area for cyclists, pedestrians, and equestrians, and intends to accommodate as many user types as safely possible. It is likely that a portion of the vehicle trips associated with operations of Plan projects would be displaced by other modes, such as pedestrian and cyclist trips. Biking infrastructure developed under the Plan would help promote cyclist trips in place of vehicle trips. These features address the OurCounty Sustainability Plan strategies related

to active and alternative transportation. Implementation of the requirements of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** related to water, energy, and waste and would minimize GHG emissions associated with future development through water and energy conservation and solid waste diversion, all of which are discussed in the strategies of the OurCounty Sustainability Plan. Accordingly, with implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, projects implemented under the Plan within incorporated cities would be consistent with the OurCounty Sustainability Plan.

Consistency with other State Regulations

As discussed above, systemic changes will be required at the state level to achieve California's future GHG reduction goals. Regulations, such as future amendments to the LCFS, future updates to the State's Title 24 standards, and implementation of the state's Short-Lived Climate Pollutant Reduction Strategy, including regulations for composting and organics diversion, will be necessary to attain the magnitude of reductions required for the state's goals. Projects implemented under the Plan would be required to comply with these regulations in new construction (in the case of updated Title 24 standards) or would be directly affected by the outcomes (vehicle trips and energy consumption would be less carbon intensive due to statewide compliance with future LCFS amendments and increasingly stringent Renewable Portfolio Standards). Therefore, for the foreseeable future, projects implemented under the Plan would not conflict with any other long-term state-level regulations pertaining to GHGs.

Consistency with Local Regulations

As discussed above, the City of Pasadena adopted a qualified CAP in 2018. This plan includes mitigation and adaptation strategies for the city to address climate impacts and to reduce the city's impacts on climate change through reducing GHG emissions. The CAP provides a checklist to determine whether new development projects comply with the CAP. New development projects within the City of Pasadena that meet the requirements of the CAP checklist are considered consistent with the CAP and would have a less than significant contribution to cumulative GHG emissions, pursuant to CEQA Guidelines Section 15064(h)(3), 15130(d), and 15183(d). For all other incorporated cities, consistency with the applicable plans, policies, and regulations identified in Table 3.8-3 above, would ensure that Plan projects carried out in those locations would not conflict with the GHG reduction strategies of the respective jurisdiction. Table 3.8-11, below, analyzes the potential of projects implemented under the Plan within incorporated cities to conflict with respective applicable local policies, regulations, and plans. With incorporation of **MM AQ-1: Emissions Reduction Measures**, and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, , projects carried out within incorporated cities throughout the Plan Area would be consistent with the 2022 Scoping Plan, SB 375, the 2020–2045 RTP/SCS, and other State regulations (e.g., LCFS, Title 24 standards, Short-Lived Climate Pollutant Reduction Strategy), as well as the applicable plans, policies, and regulations adopted by each for the purpose of reducing GHG emissions. Therefore, impacts would be less than significant with mitigation.

Mitigation Measures

MM AQ-1: Emissions Reduction Measures.

MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies.

Significance After Mitigation

For Plan projects carried out within unincorporated LA County, implementation of **MM AQ-1: Emissions Reduction Measures** and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, as well as compliance with the *Design Guidelines and Standards*, LA County ordinances, and required measures under the County of Los Angeles Sustainable Infrastructure Guidelines emissions from the area, land use, water, mobile, and waste sectors would ensure consistency with the 2045 CAP. Similarly, for projects carried out in incorporated cities within the Plan area, implementation of **MM AQ-1: Emissions Reduction Measures** and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would ensure consistency with State, regional, and local plans, policies, and regulations adopted for the purpose of reducing GHG emissions. Therefore, construction and operation of greenway paths and greenway amenities + pocket parks and greenspaces + safe crossings + stormwater management would not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases and impacts would be less than significant with mitigation.

Table 3.8-11. Consistency Analysis with Applicable Local City Policies Related to GHG Emissions

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
Alhambra	<p>Resources Element:</p> <p>Goal R-3: Minimization of energy use and its associated impacts to air quality and climate change.</p> <p>Policy R-3A: Work with energy providers to ensure adequate, dependable energy supplies to support existing and future land uses.</p> <p>Policy R-3B: Encourage the use of energy saving designs, systems, and innovations in public and private building construction.</p> <p>Policy R-3C: Promote using renewable energy, such as solar panels and biomethane.</p> <p>Goal R-5: Minimization of Alhambra’s contribution to global climate change by reducing GHG emissions to the degree feasible.</p> <p>Policy R-5A: Facilitate compact development patterns that minimize motor vehicle trips and VMT while maintaining community character.</p> <p>Policy R-5B: Collaborate with local transit agencies to develop programs that promote mass transit ridership.</p> <p>Policy R-5C: Encourage the use of green building technology for building retrofits and pursue Leadership in Energy and Environmental Design (LEED) certification for new development.</p> <p>Policy R-5D: Incorporate GHG reduction strategies into urban design and planning.</p> <p>Policy R-5E: Provide community outreach to educate the public about climate change and efforts that residents can make to reduce GHG emissions.</p> <p>Mobility Element:</p> <p>Goal M-2: A circulation system that accommodates and encourages the use of alternative modes of transportation, including walking, bicycling, and transit.</p> <p>Policy M-2A: Ensure that new development accommodates, and does not have a negative impact on, alternative transportation modes.</p> <p>Policy M-2B: Improve transportation infrastructure and services in a way that will increase the utility, safety, and attractiveness of alternative modes of transportation.</p> <p>Policy M-2C: Improve connectivity for alternative transportation modes throughout and beyond the City.</p> <p>Policy M-2F: As feasible, implement improvements to the City's bike network. The bikeway system should connect to the regional system and may need to be adjusted over time as conditions change. The bike network will include, as appropriate, enhancements to bicyclist safety and bike parking.</p>	<p><u>No Conflict.</u> MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies requires that all new buildings and/or retrofit of existing buildings shall be of all-electric design, that ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings should be used, and that new construction shall use renewable energy sources, and building energy best practices from United States Green Building Council’s LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. In addition, the Plan <i>Design Guidelines and Standards</i> specifies that solar-powered lighting fixtures should be used. Therefore, with implementation of MM GHG-1, projects facilitated under the Plan within the City of Alhambra would not conflict with the goals and policies of the City of Alhambra General Plan related to minimization of energy use. Further, the Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated per service population GHG emissions from passenger vehicles. Accordingly, projects facilitated under the Plan within the City of Alhambra would directly support the city’s goal to encourage active transport modes and would not conflict with the goals and policies of the City of Alhambra General Plan related to minimizing Alhambra’s contribution to global climate change.</p>
Arcadia	<p>Resource Sustainability Element:</p> <p>Goal RS-1: Continued improvement in local and regional air quality.</p> <p>Policy RS-1.1: Reduce local contributions of airborne pollutants to the air basin.</p> <p>Policy RS-1.4: Lower the emissions caused by motor vehicles through Transportation Demand Management strategies and land use patterns that reduce vehicle miles traveled.</p> <p>Policy RS-1.5: Promote the reduction of vehicular traffic and improved efficiency of the City’s circulation system (i.e. roadways) as a means to improving air quality.</p> <p>Policy RS-1.7: Promote energy-efficient building construction and operation practices that reduce emissions and improve air quality.</p> <p>Goal RS-2: Reducing Arcadia’s carbon footprint in compliance with SB 375 and AB 32.</p> <p>Policy RS-2.1: Cooperate with the state to implement AB 32, which calls for reducing greenhouse gas emissions to 1990 levels by 2020, and Executive Order S-3-05, which calls for 1990 levels by 2020 and 80 percent below 1990 levels by 2050.</p> <p>Policy RS-2.2: Reduce per capita greenhouse gas emissions to 15percent below 2005 levels by 2020, and total municipal greenhouse gas emissions to 15 percent below 2005 levels by 2020.</p> <p>Policy RS-2.3: Participate in regional strategies and plan to implement SB 375, and in particular, use the legislatively authorized incentives, such as grants and transportation funding and waivers to environmental assessments, to encourage infill and transit-oriented development.</p>	<p><u>No Conflict.</u> As discussed above, with implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies, Plan projects within incorporated cities would be consistent with the GHG reduction strategies of the 2022 Scoping Plan Update, SB 32, and Executive order S-3-05. MM GHG-1 requires that all new buildings and/or retrofit of existing buildings shall be of all-electric design, that ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings should be used, and that new construction shall use renewable energy sources, and building energy best practices from United States Green Building Council’s LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. In addition, the Plan <i>Design Guidelines and Standards</i> specifies that solar-powered lighting fixtures should be used. Therefore, with implementation of MM GHG-1, projects facilitated under the Plan within the City of Arcadia would not conflict with the goals and policies of the City of Arcadia General Plan related to minimization of energy use.</p> <p>Further, the Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated per service population GHG emissions from passenger vehicles consistent with the goals and policies of the SCAG 2020–2045 RTP/SCS, which is the regional growth management strategy that targets per capita GHG reduction from passenger vehicles and light trucks in the Southern California Region pursuant to SB 375. Accordingly, projects facilitated under the Plan within the City of Arcadia would directly support the city’s goal to encourage clean forms of transportation and would not conflict with the goals and policies of the City of Arcadia General Plan related to minimizing Arcadia’s contribution to global climate change.</p>

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
	<p>Policy RS-2.4: Pursue the strategies in the Land Use and Community Design Element to encourage transit-oriented development in established focused areas.</p> <p>Policy RS-2.5: Pursue the enhancement of bicycle and pedestrian infrastructure set forth in the Circulation and Infrastructure Element to help decrease vehicle miles traveled and vehicle trips.</p> <p>Policy RS-2.6: Coordinate land use, circulation, and infrastructure improvement efforts with the West San Gabriel Valley Planning Council, regional planning agencies, and surrounding municipalities.</p> <p>Goal RS-3: Promoting and utilizing clean forms of transportation to reduce Arcadia’s carbon Footprint.</p> <p>Policy RS-3.1: Develop a City fleet that to the extent feasible uses clean, alternative fuel and consists of energy-efficient vehicles.</p> <p>Policy RS-3.2: Incorporate energy-efficient vehicles into the City’s transit system.</p> <p>PolicyRS-3.3: Educate residents on methods of sustainable driving techniques such as: reducing excessive speeding, preventing car idling, regular car maintenance for maximizing fuel efficiency, and car pooling.</p> <p>Policy RS-3.4: Promote residents’ and business owners’ awareness and education of traffic congestion’s effect on air pollution and help create voluntary programs that reduce traffic throughout the City.</p>	
Azusa	<p>Chapter 3: The Built Environment:</p> <p>Transportation Choices:</p> <p>Goal 3: Provide a connected, balanced, and integrated transportation system that enables Azusans to walk, bike, and take transit, rather than using their car.</p> <p>Policy 3.1: Develop and maintain a citywide pedestrian network of both on-street and off -street walkways. Network shall link new neighborhoods with existing neighborhoods, connect neighborhood centers, schools, parks, commercial centers, and citywide destinations such as Downtown, the San Gabriel River, and Civic Center. (M8)</p> <p>Policy 3.2: Coordinate the provision and maintenance of the non-motorized circulation network with adjacent jurisdictions. (M4)</p> <p>Policy 3.3 Provide pedestrian amenities (such as benches, seats, water fountains, shady street trees, etc.) and conditions that enhance the pedestrian experience along the pedestrian network. (M9 and M10)</p> <p>Policy 3.4 Develop and maintain a citywide bicycle network of both on-street bike lanes and off -street bike paths in accordance with the Bicycle Routes (Figure M-2). The network provides for off -street paths along the San Gabriel River, railroad rights-of way, alongside flood control channels, and within existing and new neighborhoods, where feasible. The network improves connections between residential neighborhoods, schools and commercial centers, as well as providing connections to citywide destinations such as Downtown, the University District, the San Gabriel River, and Civic Center. (M6 and M11)</p> <p>Policy 3.5 Provide bicycle amenities (bicycle parking spaces, bike lockers, etc.) on/near the bicycle network. (M6 and M12)</p> <p>Land Use Compatibility:</p> <p>Goal 10 Ensure the compatibility among various types of land uses.</p> <p>Policy 10.6: Work with public and private organizations and individuals to minimize the land use impacts in and around the river, the canyons, and foothills, such impacts may include but not be limited to noise generation, natural resources encroachment, air quality degradation, aesthetic degradation, etc. (LU11)</p> <p>Land Use Implementation Program:</p> <p>LU12 Local Compliance: The City of Azusa is responsible for complying with and executing local actions with a number of regional environmental regulations. These include but are not limited to:</p> <ul style="list-style-type: none">• South Coast Air Quality Management Plan and South Coast Air Quality Management District; <p>Chapter 5: Natural Environment</p> <p>Air Quality Goals and Policies</p> <p>Goal 1: Improve air quality in Azusa and reduce exposure to air pollutants.</p> <p>Policy 1.1 Integrate air quality concerns into land use planning decisions (AQ1 through (AQ4, and AQ8).</p> <p>Policy 1.2 Integrate air quality concerns into site design review (AQ1 and AQ5).</p>	<p><u>No Conflict.</u> The Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated per service population GHG emissions from passenger vehicles consistent with the goals and policies of the SCAG 2020–2045 RTP/SCS, which is the regional growth management strategy that targets per capita GHG reduction from passenger vehicles and light trucks in the Southern California Region pursuant to SB 375. Accordingly, projects facilitated under the Plan within the City of Azusa would directly support the city’s goal to provide a connected transportation system that enables city residents to walk and bike rather than using their car. Further, Plan projects would provide greenspace and native plantings that would support the city’s goals related to land use compatibility and the natural environment.</p>

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
	<p>Policy 1.3 Reduce pollutant emissions from quarry operations, off -road vehicles use areas, industrial uses, and vehicular traffic (AQ4, and AQ6 through AQ8).</p> <p>Policy 1.4 Participate in regional air quality planning strategies (AQ8).</p>	
Baldwin Park	<p>Air Quality Element:</p> <p>Goal 2: Improve air quality by reducing the amount of vehicular emissions through planning for alternative forms of travel.</p> <p>Policy 2.4: Create the maximum possible opportunities for bicycles as an alternative transportation mode and recreational use.</p> <p>Policy 2.5: Encourage non-motorized transportation through the provision of bicycle and pedestrian pathways.</p> <p>Health and Sustainability Element:</p> <p>Goal HS-7. Reduce greenhouse gas emissions citywide by reducing energy use and reliance on fossil fuels.</p> <p>Policy 7.02: Support the use of energy-efficient design and renewable energy technologies in public and private development projects.</p> <p>Policy 7.04: Increase public awareness about climate change, and encourage residents and businesses to become involved in improvement projects and lifestyle changes that help reduce greenhouse gas emissions.</p> <p>Action HS-7.1: Implement an Energy Efficient City Plan that evaluates and prioritizes best practices for increasing the energy efficiency of City operations.</p> <p>Action HS-7.2: Perform energy audits of existing City operations and maintenance practices on a regular basis to identify and implement energy savings measures.</p> <p>Action HS-7.3: Continue to replace City operating systems as needed with energy efficient alternatives.</p> <p>Action HS-7.4: Continue to explore opportunities to generate energy on City properties, including installation of solar panels.</p> <p>Action HS-7.6: Adopt the Energy Action Plan prepared in conjunction with the San Gabriel Valley Council of Governments. Implement identified actions and strive to meet performance targets identified in the Energy Action Plan.</p> <p>Goal HS-11. Be a local leader in reducing greenhouse gas emissions and managing climate change.</p> <p>Policy 11.01: Support local, regional, and statewide efforts to reduce emissions of greenhouse gases linked to climate change.</p> <p>Action HS-11.1: Every five years, update the Greenhouse Gas Emissions Inventory developed as part of the Energy Action Plan.</p> <p>Action HS-11.2: Sign the Mayor’s Climate Protection Agreement.</p> <p>Action HS-11.3: Analyze and mitigate increases in greenhouse gas emissions during development project review, pursuant to the California Environmental Quality Act.</p> <p>Action HS-11.4: Collaborate with climate science experts on local climate change impacts, mitigation, and adaptation to inform public policy decisions.</p>	<p><u>No Conflict.</u> MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies requires that all new buildings and/or retrofit of existing buildings shall be of all-electric design, that ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings should be used, and that new construction shall use renewable energy sources, and building energy best practices from United States Green Building Council’s LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. In addition, the Plan <i>Design Guidelines and Standards</i> specifies that solar-powered lighting fixtures should be used. Therefore, with implementation of MM GHG-1, projects facilitated under the Plan within the City of Baldwin Park would not conflict with the goals and policies of the City of Baldwin Park General Plan related to minimization of energy use. Further, the Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated per service population GHG emissions from passenger vehicles. Accordingly, projects facilitated under the Plan within the City of Baldwin Park would directly support the city’s goal to encourage non-motorized transportation and would not conflict with the goals and policies of the City of Baldwin Park General Plan related to minimizing Baldwin Park’s contribution to global climate change.</p>
Claremont	<p>Open Space, Parkland, Conservation, and Air Quality Element:</p> <p>Goal 5-13: Maximize energy conservation throughout all segments of the community to reduce air pollutant emissions, and to reduce consumption of natural resources and fossil fuels.</p> <p>Policy 5-13.1 Promote the use of energy-saving designs and devices in all new construction and reconstruction.</p> <p>Goal 5-14: Incorporate green building and other sustainable building practices into development projects.</p> <p>Policy 5-14.1: Facilitate the use of green building standards and Leadership in Energy and Environmental Design (LEED) in both private and public projects.</p> <p>City of Claremont Sustainable City Plan (City of Claremont 2021)</p> <p>Goal 1.1. Energy (Electrical and Gas)</p> <ul style="list-style-type: none">Promote energy efficiency and conservation technologies and practices to reduce the use of nonrenewable resources by both City government and the community. Technologies include solar energy systems, co-generation systems for larger facilities, next generation lighting technologies, energy efficient appliances and HVAC systems, and electric and other low emitting vehicles.	<p><u>No Conflict.</u> MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies requires that all new buildings and/or retrofit of existing buildings shall be of all-electric design, that ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings should be used, and that new construction shall use renewable energy sources, and building energy best practices from United States Green Building Council’s LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. In addition, the Plan <i>Design Guidelines and Standards</i> specifies that solar-powered lighting fixtures should be used. Therefore, with implementation of MM GHG-1, projects facilitated under the Plan within the City of Claremont would not conflict with the goals and policies of the City of Claremont General Plan and Sustainability Plan related to maximizing energy conservation and reducing consumption of natural resources and fossil fuels.</p> <p>Incorporation of stormwater management in addition to implementation of the requirements of MM GHG-1 related to water and waste and would minimize GHG emissions associated with future development through water conservation and solid waste diversion, consistent with the goals and policies of the City of Claremont Sustainable City Plan related to water, wastewater, and solid waste.</p> <p>Further, the Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the</p>

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
	<ul style="list-style-type: none">Promote community-wide energy awareness with energy audit information and implementation of programs such as Community Home Energy Retrofit Project (CHERP) and similar programs. Identify and promote Energy Efficient technologies and techniques that have a positive return on investment.Educate the community regarding incentives (special financing, grants, rebates, exchanges, etc.) available for energy conservation and renewable energy projects.Promote local installation of solar energy systems (electric power generation and water heating).Seek innovative lighting technologies that might be implemented with the cooperation of the manufacturer. <p>Goal 1.2. Water and Wastewater</p> <ul style="list-style-type: none">Minimize waste of water resources by advocating and implementing wise use and conservation measures.Maximize recharge of local water resources and minimize pollution at local beaches by minimizing storm water runoff and eliminating dry weather runoff.Build public awareness of water issues and support for wise water management.Support efforts of Sustainable Claremont, the City, Three Valleys Municipal Water District and Golden State Water Company to establish local wastewater reclamation plants to supply major water users in Claremont with irrigation water.Support efforts by Sustainable Claremont, the City, Three Valleys Municipal Water District, and Golden State Water Company to promote water-wise landscaping.Support the proposed Thompson Creek Spreading Grounds Project to achieve a significant increase in groundwater recharge. <p>Goal 1.3. Solid Waste</p> <ul style="list-style-type: none">Reduce the total amount of waste being generated, especially the amount being sent to landfills.Replace commonly held ideas and practices of our current disposable society to become a resource-efficient and sustainable one. Decrease negative impacts related to the production and disposal of consumable products and packaging (greenhouse gas emissions, toxics, depletion of resources, need for landfills, and environmentally harmful waste).Encourage development and use of products that consist of components that can be recycled or reused with no loss of quality or are composed of biological nutrients which can be composted or otherwise consumed.Develop local programs to recycle food scraps, unused produce, and other biodegradable products so that these materials can be used for local soil regeneration or other useful purposes. Spreading mulch or amending soil with composted, dehydrated, or digested food scraps helps plants, increases biodiversity, sequesters carbon, and can help conserve water.Advocate use of high-capacity, low-shelf-discharge rechargeable batteries (e.g., LSD Ni-MH) in place of disposable (alkaline) batteries.Encourage proper disposal of environmentally harmful materials such as motor oil, surplus medications, electronic equipment, and spent batteries. <p>Goal 2.2. Air Quality</p> <ul style="list-style-type: none">Help achieve and maintain air quality standards that will protect public health and the environment, promote and participate in cooperative efforts with agencies and communities in the South Coast Air Basin to achieve clean air, and comply with AQMD requirements. Reduce air pollution due to residential and commercial lawn and garden maintenance equipment. <p>Goal 3.1. Transportation Mode Share</p> <ul style="list-style-type: none">Decrease vehicle miles traveled (VMT) by increasing per vehicle ridership and decreasing number of single trips by autos and trucks. <p>Goal 3.2. Pedestrian Enhancements</p> <ul style="list-style-type: none">Increase pedestrian activity by adding improvements that make walking more safe, convenient, and enjoyable. Improvements should include sidewalks, accessibility ramps, benches, bulb-outs at intersections, landscaping, and convenient transit stops. Streets should be viewed from a complete streets perspective where all modes of transportation (auto, transit, bicycle and walking) and people with all abilities are considered and accommodated. <p>Goal 3.3. Micro-Mobility Enhancement and Education</p>	<p>Plan would reduce VMT and the associated per service population GHG emissions from passenger vehicles. Accordingly, projects facilitated under the Plan within the City of Claremont would directly support the City of Claremont Sustainability Plan goals related to transport mode share, pedestrian and micro-mobility enhancements, congestion management, alternatives to driving, protection and expansion of natural open space, diversity of local native organisms, and protection of the urban forest.</p>

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
	<ul style="list-style-type: none">• Increase bicycling by adding improvements that make bicycling more safe, convenient, and enjoyable. Improvements should include bike route wayfinding, additional protected bicycle lanes and paths, and additional bicycle racks. Education efforts should include outreach to schools and the broader community with periodic bicycle training classes at all schools regarding cycling safety. <p>Goal 3.4. Congestion Management</p> <ul style="list-style-type: none">• Decrease congestion on local and regional roadways to improve safety, reduce emissions, and maintain mobility. Actions should include signal synchronization and optimization. <p>Goal 3.6. Alternatives to Driving</p> <ul style="list-style-type: none">• Create incentives/develop programs that reduce the need for parking by encouraging walking, bike riding, taking the bus or train, or carpooling. Explore developing a parking management plan for the Claremont Village. Make changes that would reduce the amount of required parking in transit-oriented, mixed-use, or other developments. <p>Goal 4.1. City Facilities</p> <ul style="list-style-type: none">• Apply sustainable design and construction standards to all new and renovated City facilities. Implement best sustainable practices for operation and maintenance of existing City facilities and landscapes. <p>Goal 4.2. Privately-Owned Facilities</p> <ul style="list-style-type: none">• Apply sustainable design and construction standards to all new and renovated facilities community-wide. Incentivize adoption of best sustainable practices for the operation and maintenance of existing privately-owned facilities and landscapes. <p>Goal 4.3. Infrastructure</p> <ul style="list-style-type: none">• Apply sustainable development standards and operation and maintenance practices to all City infrastructure projects. Continue to implement a “Complete Streets” policy to create streets that minimize runoff of toxins, capture more storm water, utilize sustainable landscaping, reduce the frequency of required street maintenance, and minimize the urban heat island effect. <p>Goal 4.5. Sustainable Land Use and Smart Growth</p> <ul style="list-style-type: none">• Apply sustainable practices in all Community Development activities that impact the built environment, and in all City Capital Improvement planning and construction. <p>Goal 5.1. Protect and Expand Natural Open Space</p> <ul style="list-style-type: none">• Expand, improve, and protect natural open space resources throughout Claremont (see list at end of Indicator section). Take an active role in the protection and use of all nearby natural areas, including the San Gabriel Mountains Monument. Focus on protecting the natural environment and limiting potential damage to biodiversity and to the local watershed and groundwater basins. <p>Goal 5.2. Expand and Improve Constructed Open Spaces</p> <ul style="list-style-type: none">• Develop and maintain a constructed open space system diverse in services, uses, and opportunities which conserves natural resources; provides passive and active recreation; offers a fair distribution of parks, treed pathways, and public gathering places throughout the community; and increases the aesthetic quality of the community. Encourage parking lot landscaping that provides shade, drainage to allow percolation, and the use of solar/shade structures. <p>Goal 5.3. Maintain Diversity of Local Native Organisms</p> <ul style="list-style-type: none">• Maintain natural areas. Increase local native organisms in constructed landscapes. Prevent spread of invasive species. Work to create new viable natural areas in areas that are currently undeveloped or occupied by invasive plants, unsustainable plant communities, or plants that pose a danger to wildlife. Increase ability to monitor changes in species number, abundance, and distribution, and changes in ecosystem composition. Increase number of citizens involved in maintaining natural areas. <p>Goal 5.4. Protect the Urban Forest</p> <p>Protect, improve, and expand our urban forest. Educate City staff, contractors, and property owners on proper trimming practices and watering techniques. Work to prevent damage to existing trees when irrigation patterns change due to conversion to drought-tolerant landscaping.</p>	
Covina	Natural Resources and Open Space Element:	<u>No Conflict.</u> The Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
	<p>Goal: A setting in which a high environmental quality is achieved through the bona fide conservation and protection of existing natural resources.</p> <p>Policy o: Comply with applicable portions of Federal, State, regional, and County plans and programs pertaining to air pollution mitigation/air quality enhancement by following, in a manner that recognizes local needs, issues, views, and policy and financial constraints, various vehicular emissions-reducing and traffic congestion-reducing land use and transportation control and energy conservation measures, proposals, and policies outlined in the Land Use and Circulation Elements, to the greatest extent feasible and practical.</p> <p>Policy r: Encourage bikeways, where feasible, to provide an alternative mode of transportation.</p> <p>Policy s: Separate sensitive areas and uses (e.g., parks, schools, childcare centers, and nursing homes) from significant sources of air pollution, to the greatest extent possible.</p> <p>Policy t: Preclude the development of land uses and land use practices that would contribute significantly to air quality degradation.</p> <p>City of Covina Energy Action Plan Update</p> <p>Goal 1: Maximize Energy Efficiency at Existing City Facilities and Infrastructure</p> <p>Policy 1.2: Enhance the energy efficiency of City buildings and structures through retrofits.</p> <p>Policy 1.5: Become a water conservation leader in the San Gabriel Valley and lead other municipalities by example.</p> <p>Policy 1.6: Incorporate energy efficiency as a key element in designing and building new City structures and facilities.</p> <p>Goal 2: Ensure that Energy Efficiency Practices are Incorporated into Municipal Operations.</p> <p>Goal 4: Demonstrate a Commitment to Realizing the Energy Action Plan Goals Through Creative, Equitable, and Coordinated Partnerships.</p> <p>Policy 4.1: Maximize the benefits from regional partners to enhance energy efficiency projects at the City.</p>	<p>creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would directly support the city’s goal to encourage clean forms of transportation and reduce emissions related to motorized vehicle travel.</p> <p>Further, MM-GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies requires that all new buildings and/or retrofit of existing buildings shall be of all-electric design, that ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings should be used, and that new construction shall use renewable energy sources, and building energy best practices from United States Green Building Council’s LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. In addition, the Plan <i>Design Guidelines and Standards</i> specifies that solar-powered lighting fixtures should be used. Therefore, with implementation of MM GHG-1, projects facilitated under the Plan within the City of Covina would not conflict with the goals and policies of the City of Covina Energy Action Plan Update related to maximizing energy efficiency and implementation of energy efficiency practices in municipal operations.</p>
El Monte	<p>Public Health and Safety Element:</p> <p>Goal PHS-8: Effective adaptation to increase the community’s resilience to climate change impacts.</p> <p>Policy PHS-8.7 Adaptation Programs. Design adaptation initiatives and programs to provide multiple co-benefits, including the reduction of greenhouse gas emissions, support for the local economy, enhancements to the natural environment, or alleviating underlying health inequities.</p> <p>Health and Wellness Element:</p> <p>Goal HW-12: Land use patterns reduce driving, enhance air quality, and improve respiratory health.</p> <p>Policy HW-12.1 Walking, Cycling, and Transit Use. Promote land use patterns that reduce driving rates and promote walking, cycling and transit use.</p> <p>Policy HW-12.2 Truck Routes. Discourage locating truck routes on primarily residential streets.</p> <p>Policy HW-12.9 Air Quality Policies. Support policies that reduce emissions of pollutants from stationary and mobile sources such as industrial facilities, motor vehicles and trains.</p>	<p><u>No Conflict.</u> The Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated per service population GHG emissions from passenger vehicles consistent with the goals and policies of the SCAG 2020–2045 RTP/SCS, which is the regional growth management strategy that targets per capita GHG reduction from passenger vehicles and light trucks in the Southern California Region pursuant to SB 375. Accordingly, projects facilitated under the Plan within the City of El Monte would directly support the city’s goal to promote land use patterns that reduce driving rates and promote walking, cycling and transit use and enhancements to the natural environment.</p>
Glendora	<p>Air Quality Element:</p> <p>Goal AQ-1: Coordination with Regional, State and Federal Agencies.</p> <p>Policy AQ-1.3: Develop and adopt a policy to utilize federal Congestion Mitigation and Air Quality Improvement funds in coordination with regional agencies in a manner consistent with projects approved in the Air Quality Management Plan.</p> <p>Goal AQ-2: Reduction of vehicular trips.</p> <p>Policy AQ-2.1: Reduce mobile source emissions by encouraging a reduction in project related vehicle trips and vehicle miles traveled (VMT).</p> <p>Policy AQ-2.2: Reduce mobile source emissions by increasing population densities within one-half mile of transit nodes.</p>	<p><u>No Conflict.</u> The Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated per service population GHG emissions from passenger vehicles consistent with the goals and policies of the SCAG 2020–2045 RTP/SCS, which is the regional growth management strategy that targets per capita GHG reduction from passenger vehicles and light trucks in the Southern California Region pursuant to SB 375. Accordingly, projects facilitated under the Plan within the City of Glendora would directly support the city’s goal to reduce vehicular trips and encourage “walkable” neighborhoods.</p>

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
	<p>Policy AQ-2.3: Encourage “walkable” neighborhoods with pedestrian walkways and bicycle paths in residential and other types of developments to encourage pedestrian rather than vehicular travel.</p> <p>Policy AQ-2.4: Promote and encourage ride-sharing activities throughout the community.</p>	
Industry	<p>Resource Management Element:</p> <p>Goal RM2: Improved air quality and reduced greenhouse gas emissions.</p> <p>Policy RM2-1: Comply with state building codes relative to indoor air quality.</p> <p>Policy RM2-2: Support efforts to reduce pollutants to meet State and Federal Clean Air Standards.</p> <p>Policy RM2-3: Collaborate with the CARB and other agencies within the South Coast Air Basin to improve regional air quality and achieve GHG reduction targets.</p> <p>Policy RM2-4: Prohibit siting of sensitive land uses within distances defined by CARB unless sufficient mitigation is provided.</p> <p>Implementation Measures:</p> <p>IMP-4: Address truck idling limits during the design review process, especially when adjacent to sensitive uses.</p> <p>IMP-5: Coordinate with SCAG and surrounding jurisdictions on infrastructure improvements intended to relieve congestion and thereby reduce air emissions.</p> <p>IMP-6: Strive to achieve the California Air Resources Board's Scoping Plan.</p>	<p><u>No Conflict.</u> As discussed above, with implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies, Plan projects within incorporated cities would be consistent with the GHG reduction strategies of the 2022 Scoping Plan Update, SB 32, and Executive order S-3-05. Therefore, with implementation of MM GHG-1, projects facilitated under the Plan within the City of Industry would not conflict with the goals and policies of the City of Industry General Plan related to reduction of GHG emissions.</p>
Irwindale	<p>Resource Management Element:</p> <p>Resource Management Element Policy 9. The City will continue to cooperate with the other agencies that are charged with improving air and water quality in the region.</p> <p>Resource Management Element Policy 10. The City of Irwindale will continue to cooperate with surrounding cities in the formulation and implementation of regional resource management plans and programs.</p> <p>Resource Management Element Policy 11. The City of Irwindale supports the ethic of conservation of non-renewable resources. This includes efforts to reduce the use of energy (in any form), greenhouse gas (GHG) emissions (consistent with AB 32) and efforts to find new and more energy efficient methods for delivering services. The City supports the development of building standards that enable the community to design energy saving features such as solar energy systems, water efficient landscaping, and sustainable, green, and energy efficient building standards.</p>	<p><u>No Conflict.</u> As discussed above, with implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies, Plan projects within incorporated cities would be consistent with the GHG reduction strategies of the 2022 Scoping Plan Update, SB 32, and Executive order S-3-05. MM GHG-1 requires that all new buildings and/or retrofit of existing buildings shall be of all-electric design, that ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings should be used, and that new construction shall use renewable energy sources, and building energy best practices from United States Green Building Council’s LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. In addition, the Plan <i>Design Guidelines and Standards</i> specifies that solar-powered lighting fixtures should be used. Therefore, with implementation of MM GHG-1, projects facilitated under the Plan within the City of Irwindale would not conflict with the goals and policies of the City of Irwindale General Plan related to conservation of non-renewable resources and reduction of GHG emissions.</p>
La Puente	<p>Community Resources Element:</p> <p>Goal 4: Conservation of La Puente’s natural resources, improvement of air quality, and energy conservation.</p> <p>Policy 4.2: Participate with the South Coast Air Quality Management District and neighboring cities in supporting local and regional projects that improve mobility on freeways and railways, reduce emissions, and improve air quality.</p> <p>Action CR-19: Improve Regional Air Quality: Continue to participate and coordinate with the South Coast Air Quality Management District (SCAQMD) and neighboring jurisdictions to identify and encourage projects that improve mobility and reduce congestion on freeways and major roads. Implement and interpret the General Plan in a manner consistent with SCAQMD’ s Air Quality Management Plan.</p> <p>Policy 4.4: Encourage alternative modes of transportation, such as walking, bicycling, public transportation, and carpooling.</p>	<p><u>No Conflict.</u> The Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated per service population GHG emissions from passenger vehicles consistent with the goals and policies of the SCAG 2020–2045 RTP/SCS, which is the regional growth management strategy that targets per capita GHG reduction from passenger vehicles and light trucks in the Southern California Region pursuant to SB 375.</p> <p>Further, MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies requires that all new buildings and/or retrofit of existing buildings shall be of all-electric design, that ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings should be used, and that new construction shall use renewable energy sources, and building energy best practices from United States Green Building Council’s LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. In addition, the Plan <i>Design Guidelines and Standards</i> specifies that solar-powered lighting fixtures should be used. Therefore, with implementation of MM GHG-1, projects facilitated under the Plan within the City of La Puente would not conflict with the goals and policies of the City of Covina La Puent General Plan related to air quality, conservation of natural resources, and energy conservation.</p>
La Verne	<p>Conservation and Natural Resources Element:</p> <p>Goal 5: Improve our air quality.</p> <p>Policy 5.1 – Reduce Vehicular Pollution.</p>	<p><u>No Conflict.</u> The Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect</p>

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
		to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated vehicular pollution, consistent with the goals of the City of La Verne General Plan.
Monrovia	<p>Environmental Justice Element:</p> <p>Goal 4: Protect human and environmental health by restoring and improving potable water resources and protecting land uses and air quality from future contamination.</p> <p>Program 4.2.6: Preserve and enhance natural landscapes and tree canopies in and around the environmental justice community to minimize air pollution impacts and heat exposure. Promote the use of drought tolerant and native species in landscaped areas.</p>	<p><u>No Conflict.</u> The Plan will use existing District ROW to provide additional ecological, recreational, and community benefits that incorporate greenspaces, tree canopy, and stormwater management for the enhancement and protection of human and environmental health, consistent with the goals and programs adopted by the City of Monrovia General Plan.</p>
Montebello	<p>Chapter 1: Our Natural Community</p> <p>Policy P1.3 Consider emission reduction goals in all major decisions on land use and investments in public infrastructure.</p> <p>Action A1.3a Reduce potential GHG emissions from development by encouraging electrification of new developments, promoting energy conservation in existing buildings, plan new development and redevelopment to reduce single-occupancy vehicle miles traveled, and consider green space during development.</p> <p>Action A1.3b Educate property owners and developers on greenspace inclusion through educational pamphlets, programs, and webpages.</p> <p>Policy P1.5 Coordinate initiatives and regulatory changes with local, regional, and state agencies to reduce motor vehicle emissions.</p> <p>Action A1.5a Develop incentives and adopt regulatory standards to reduce transportation emissions. In addition to reducing the number of miles driven, the fuel efficiency and emissions standards of vehicles must also improve. Working in collaboration with Local, Regional, and State agencies, Montebello will seek to increase use of clean fuels in public and private automobile fleets, consider new legislation, and implement educational programs.</p> <p>Action A1.5b Promote use of alternate modes of transportation in the City of Montebello, including pedestrian, bicycling, public transportation, car sharing programs and emerging technologies.</p> <p>Action A1.5c Invest in low-emission or zero-emission vehicles to replace the City’s gasoline powered vehicle fleet and transition to available clean fuel sources such as bio-diesel for trucks and heavy equipment.</p> <p>Action A1.5d Encourage the use of low or zero emission vehicles, bicycles, non-motorized vehicles, and car-sharing programs by supporting new and existing development that includes sustainable infrastructure and strategies such as vehicle charging stations, dropoff areas for ride-sharing services, secure bicycle parking, and transportation demand management programs.</p> <p>Chapter 4: Our Accessible Community</p> <p>P4.1 Support and promote walking, biking, and other nonvehicular modes as an alternative to driving within Montebello.</p> <p>Chapter 7: Our Active Community</p> <p>Policy P7.3 Promote, expand, and protect a green infrastructure that links the natural habitat.</p> <p>Action A7.3a Prepare a citywide Green Infrastructure Framework.</p> <p>Action A7.3b Use parks as functional landscapes that perform green stormwater infrastructure and flood mitigation roles to enhance resiliency, recreational use, and beauty. New parks will be designed with resiliency in mind with multi-benefit landscapes that protect against flooding, clean and filter stormwater, produce shade and prevent heat island effects, and promote not just environmental resiliency, but also social resiliency.</p> <p>Action A7.3c Encourage simple, small, and low-cost demonstration green infrastructure projects both in the public and private realm. Parks can be everywhere humans can find a spot for peaceful reflection. The advent of green roofs is offering new opportunities to site innovative parks on roof tops.</p> <p>Action A7.3d Include an urban trails signage program that connects corridors and trails within the City to other regional trails.</p> <p>Policy P7.4 Identify and remove barriers to access parks. Encourage walking and biking as preferred way to get to and from parks.</p> <p>Action A7.4a Increase the number of entrances to existing parks to expand the number of residents within walking distance of a park.</p> <p>Action A7.4b Proactively plan entrances and access points for new parks to ensure the greatest number of residents are within walking distance.</p>	<p><u>No Conflict.</u> MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies requires that all new buildings and/or retrofit of existing buildings shall be of all-electric design, that ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings should be used, and that new construction shall use renewable energy sources, and building energy best practices from United States Green Building Council’s LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. In addition, the Plan <i>Design Guidelines and Standards</i> specifies that solar-powered lighting fixtures should be used. Therefore, with implementation of MM GHG-1, projects facilitated under the Plan within the City of Montebello would not conflict with the goals and policies of the City of Montebello General Plan related to electrification of new developments.</p> <p>Further, the Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated per service population GHG emissions from passenger vehicles consistent with the goals and policies of the SCAG 2020–2045 RTP/SCS, which is the regional growth management strategy that targets per capita GHG reduction from passenger vehicles and light trucks in the Southern California Region pursuant to SB 375. Accordingly, projects facilitated under the Plan within the City of Montebello would directly support the city’s goal to promote alternative modes of transportation and expansion of green infrastructure that links natural habitat.</p>

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
	Action A7.4c Prioritize new access or entry points near existing mobility networks, including sidewalks, bike routes, trails, and transit.	
Pasadena	<p>Open Space and Conservation Element:</p> <p>Goal: Establish Pasadena as a national and international leader on energy and water conservation and environmental stewardship efforts, including air quality protection, energy efficiency requirements, renewable energy standards, natural resource conservation, and greenhouse gas emission standards in the areas of energy, water, air and land.</p> <p>Objectives:</p> <ul style="list-style-type: none">• Preserve and plant trees that absorb carbon dioxide and pollutants• Encourage and provide incentives for the use of alternatives to single-occupancy vehicle use, including using public transit, carpooling, vanpooling, telecommuting, bicycling and walking.• Encourage the transition of municipal fleet to electric, hybrid and natural gas. Support the expansion of electric vehicle infrastructure throughout the City. <p>Mobility Element:</p> <p>Objective 1. Enhance Livability.</p> <p>Policy 1.9 Support local and regional air quality, sustainability, and GHG emission reduction goals through management of the City's transportation network.</p> <p>City of Pasadena Climate Action Plan</p> <p>Measure T-1. As such, the Plan would reduce VMT and the associated per service population GHG emissions from passenger vehicles consistent with the goals and policies of the SCAG 2020–2045 RTP/SCS, which is the regional growth management strategy that targets per capita GHG reduction from passenger vehicles and light trucks in the Southern California Region pursuant to SB 375. Accordingly, projects facilitated under the Plan within the City of Pasadena would directly support the City of Pasadena General Plan objective to encourage alternative modes of transportation. In addition, planting of trees and native vegetation along greenway paths and within pocket parks and greenspaces would also support the city’s objectives related to carbon sequestration.</p> <p>With respect to consistency with the City of Pasadena CAP, the Plan would directly support Measure T-1 (Walking and Bicycling) through development of greenway paths that would expand Pasadena’s bicycle and pedestrian network, installation of safe crossings that would improve bicycle and pedestrian safety, and improved connectivity throughout the Plan Area that would encourage bicycle and pedestrian travel. Implementation of MM AQ-1: Emissions Reduction Measures would require that all construction equipment meet Tier 4 Final CARB/USEPA emissions standards, thus reducing emissions from heavy-duty construction equipment and vehicles and ensuring consistency with Measure T-6 (Construction Vehicles). Implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies requires use of electric landscaping equipment which would reduce GHG emissions associated with landscape maintenance activities, consistent with Measure T-7 (Lawn and Garden Equipment). In addition, MM GHG-1 requires that all new buildings and/or retrofit of existing buildings shall be of all-electric design, that ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings should be used, and that new construction shall use renewable energy sources, and building energy best practices from United States Green Building Council’s LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. In addition, the Plan <i>Design Guidelines and Standards</i> specifies that solar-powered lighting fixtures should be used. With implementation of MM GHG-1, Plan projects would exceed the standards of the 2016 Title 24 Standards and increase city-wide use of carbon-neutral energy in support of Measure E-1 (Building Performance Standards for New Construction), Measure E-2 (Energy Retrofits of Existing Buildings), Measure E-3 (Municipal Operations), and Measure E-5 (City’s Energy Portfolio). The water conservation requirements of MM GHG-1 would require that Plan projects incorporate water conservation and efficiency measures such as installation of low-flow water fixtures that exceed the requirements of codes and ordinances and incorporation of recycled water for non-potable uses to the maximum extent feasible. As such, Plan projects within the City of Pasadena would be consistent with Measure WC-1 (Potable Water) and Measure WC-2 (Non-Potable [Recycled] Water). Projects that incorporated stormwater management and pervious pavement would directly support Measures WC-3 (Storm Water) through capture and retention of storm water that would improve water quality and groundwater recharge. Implementation of MM GHG-1 would require incorporation of solid waste reduction measures such as providing recycling receptacles along greenway paths, pocket parks, and greenspaces, and using locally sourced recycled and recyclable materials reduce solid waste which would ensure consistency with Measure WR-1 (Solid Waste) and Measure WR-2 (Reuse and Recycling). Development of greenway paths, greenspaces, and pocket parks would directly support Measure UG-1 (Greenspace) through preservation, enhancement, and acquisition of greenspace within the City of Pasadena. Planting of native vegetation and trees would improve carbon sequestration and reduce the urban heat island effect as well as increase opportunities for active recreation. Similarly, planting new trees facilitated by the Plan would directly support the CAP Measures UG-2 (Urban Forest). Accordingly, Plan projects within the City of Pasadena would be consistent with the following mandatory actions, and thus consistent with the City of Pasadena qualified CAP:</p> <ul style="list-style-type: none">• T-1.2: Continue to improve bicycle and pedestrian safety• T-3.1: Decrease annual commuter miles traveled by single occupancy vehicles• T-4.1: Expand the availability and use of alternative fuel vehicles and fueling infrastructure• E-1.2: Encourage the use of energy conservation devices and passive design concepts that make use of the natural climate to increase energy efficiency

Pico Rivera	<p>Land Use Element:</p> <p>Goal 3.6 Improve the community image by ensuring a consistent level of high quality design and ongoing maintenance and improvement of existing development.</p> <p>Policy 3.6-2 Sustainable Development. Promote land development practices that reduce energy and water consumption, pollution, greenhouse gas emissions, and disposal of waste materials incorporating such techniques as:</p> <ul style="list-style-type: none">Concentration of uses and design of development to promote walking, bicycling, and use of public transit in lieu of the automobile;Encourage development of transit-oriented development near public transit and residential areas; <p>Circulation Element:</p> <p>Goal 5.1 Promote active living, improve local air quality, and enhance the livability of the community through an integrated multimodal network that serves all users within the City and offers convenient mobility options, including vehicular travel, transit services, bicycle routes, and pedestrian paths.</p> <p>Policy 5.1-1 Multimodal Options. Make transportation mode shifts possible by designing, operating, and maintaining streets to enable safe and convenient access and travel for all users—pedestrians, bicyclists, transit riders, and people of all ages and abilities, as well as freight and motor vehicle drivers—and to foster a sense of place in the public realm.</p>	<p><u>No Conflict.</u> MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies requires that all new buildings and/or retrofit of existing buildings shall be of all-electric design, that ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings should be used, and that new construction shall use renewable energy sources, and building energy best practices from United States Green Building Council’s LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. In addition, the Plan <i>Design Guidelines and Standards</i> specifies that solar-powered lighting fixtures should be used. The water conservation requirements of MM GHG-1 would require that Plan projects incorporate water conservation and efficiency measures such as installation of low-flow water fixtures that exceed the requirements of codes and ordinances and incorporation of recycled water for non-potable uses to the maximum extent feasible. In addition, implementation of MM GHG-1 would require incorporation of solid waste reduction measures such as providing recycling receptacles along greenway paths, pocket parks, and greenspaces, and using locally sourced recycled and recyclable materials reduce solid waste. Therefore, with implementation of MM GHG-1, projects facilitated under the Plan within the City of Pico River would not conflict with the goals and policies of the City of Pico Rivera General Plan related to energy and water conservation, disposal of waste materials, and associated GHG emissions.</p> <p>Further, the Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect</p>

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
	<p>Goal 5.4 A balanced transportation system where bicycling and walking are alternative methods to the automobile.</p> <p>Policy 5.4-9 Regional System. Coordinate with surrounding jurisdictions, regional agencies, and non-profit groups to improve the Emerald Necklace Park Network, a loop trail system of parks and greenways which includes areas within the City of Pico Rivera.</p> <p>Community Facilities Element:</p> <p>Goal 6.4 A sustainable supply of water delivered through an efficient infrastructure system to meet existing and future needs.</p> <p>Policy 6.4-4 Energy Efficient Infrastructure. Employ best practices to maintain the highest feasible energy efficiency in the water infrastructure system to reduce costs and greenhouse gas emissions.</p> <p>Environmental Resources Element:</p> <p>Goal 8.1 A sustainable community where land use and transportation improvements are consistent with regional planning efforts and adopted plans to reduce dependence on the use of fossil fuels and decrease greenhouse gas emissions.</p> <p>Policy 8.1-1 Regional Efforts. Continue to work with the Gateway Cities COG and member agencies in regional planning efforts, and to implement regional plans and programs.</p> <p>Policy 8.1-2 Gateway Cities SCS. Continue to implement sustainable strategies identified in, and maintain consistency with, the Gateway Cities Council of Governments 2012 Subregional Sustainable Communities Strategy and updated versions incorporated into SCAG’s RTP/SCS.</p> <p>Policy 8.1-3 Environmental Integrity. Foster sustainable living by reducing community dependency of fossil fuels and other non-renewable resources, minimizing air pollutant and GHG emissions, retaining existing open space lands, and restoring habitat areas along the Rio Hondo and San Gabriel Rivers.</p> <p>Policy 8.1-4 Efficient Land Use Patterns. Promote efficient land use patterns and compact development that supports widespread walkability and bicycle use, providing for a modest and incremental overall increase in community development intensity that complements the existing community fabric by:</p> <ul style="list-style-type: none">• Encouraging infill and redevelopment of vacant and underutilized sites;• Facilitating the development of engaging and livable streetscapes characterized by benches, vegetation-appropriate architecture, and pedestrian/bicycle linkages.• Providing opportunities for non-motorized transportation and linkages between new development and transit. <p>Policy 8.1-5 Energy Conservation. Promote energy conservation through:</p> <ul style="list-style-type: none">• Partnerships with Southern California Edison and Southern California Gas Company programs;• Improving the energy efficiency and increasing conservation in existing and new city buildings;• Improving energy efficiency of outdoor lighting, including upgrading of city owned street lights, as well as outdoor lighting within parks and municipal parking lots to more energy efficient models;• Increasing water efficiency and water conservation in existing city buildings and new development projects; and• Providing for renewable energy generation at city facilities with the aim of achieving five percent of city facilities’ energy needs with renewable energy generation by 2030. <p>Goal 8.2 Continued improvement in local and regional air quality with reduced greenhouse gas emissions to maintain the community’s health.</p> <p>Policy 8.2-1 Regional Efforts. Coordinate local air quality improvements and greenhouse gas emissions reduction efforts with surrounding communities, and regional agencies such as the South Coast Air Quality Management District, the Gateway Cities Council of Governments.</p> <p>Policy 8.2-2 GHG Reduction Measures. Reduce greenhouse gas emissions in the City and the region through the following measures including, but not limited to:</p> <ul style="list-style-type: none">• Encouraging the use of alternative modes of transportation by supporting transit facility and service expansion, expanding bicycle routes and improving bicycle facilities, and improving pedestrian facilities;• Increasing building energy efficiency through site design, building orientation, landscaping, and incentive/rebate programs;	<p>to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated per service population GHG emissions from passenger vehicles consistent with the goals and policies of the SCAG 2020–2045 RTP/SCS, which is the regional growth management strategy that targets per capita GHG reduction from passenger vehicles and light trucks in the Southern California Region pursuant to SB 375. Accordingly, projects facilitated under the Plan within the City of Pico Rivera would directly support the city’s goal to promote alternative modes of transportation and expansion of green infrastructure that links natural habitat.</p>

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
	<ul style="list-style-type: none">Implementing water conservation measures;Requiring the use of drought-tolerant landscaping; andIncreasing solid waste diversion through recycling efforts. <p>Policy 8.2-4 Operational Emissions. Require new development projects to incorporate feasible measures that reduce operational emissions through project and site design and use of best management practices to avoid, minimize, and/or offset their impacts consistent with South Coast Air Quality Management District requirements.</p> <p>Policy 8.3-8 City Facilities. Install energy-efficient lighting, appliances, and alternative-energy infrastructure (e.g., solar panels) in city facilities, where economically feasible.</p>	
Pomona	<p>Mobility & Access Element:</p> <p>Goal 7D.G3: Support regional efforts to the extent feasible, to reduce greenhouse gas (GHG) emissions from cars and light trucks.</p> <p>Conservation Element:</p> <p>Goal 7E.G1: Achieve the City’s vision for Pomona Tomorrow without adverse environmental impacts that compromise the ability of future generations to meet their needs.</p> <p>Policy 7E.P1: Prepare a Green Plan focused on: 1) Energy Efficiency and Conservation; 2) Water and Wastewater Systems; 3) Green Building; 4) Waste Reduction and Recycling; 5) Climate-Friendly Purchasing; 6) Renewable Energy and Low-Carbon Fuels; 7) Efficient Transportation; 8) Land Use and Community Design; 9) Storing and Offsetting Carbon Emissions; and 10) Promoting Community and Individual Action.</p> <p>Goal 7E.G9: SB375: support regional efforts to reduce greenhouse gas emissions to the extent feasible.</p> <p>Goal 7E.G10: Incorporate air quality protection and improvement programs and policies into local planning and development activities, with a particular focus on subdivision, zoning and site design measures that reduce the number and length of single-occupant automobile trips.</p> <p>Policy 7E.P14: Prepare a Green Plan to guide the City in its efforts to reduce greenhouse gas emissions.</p> <p>Policy 7E.P15: As part of the Green Plan, prepare a greenhouse gas emissions inventory and monitor changes in the City’s greenhouse gas emissions bi-annually.</p> <p>Policy 7E.P17: Require large projects (exceeding 150,000 square feet of development) to incorporate Transportation Demand Management (TDM) techniques, such as promoting carpooling and transit use and providing bicycle parking and showers, as a condition of project approval.</p> <p>Policy 7E.P20: Coordinate air quality planning efforts with local, regional and state agencies. Support the South Coast Air Quality Management District’s efforts to monitor and control air pollutants from stationary sources.</p> <p>Policy 7E.P21: Require all large construction projects to mitigate diesel exhaust emissions through use of alternative fuels and control devices, as appropriate and cost effective.</p> <p>Policy 7E.P40: Prepare a Green Plan to guide the City’s efforts towards reduced energy use and increased energy efficiency, particularly in support of reducing greenhouse gas emissions.</p> <p>City of Pomona Energy Action Plan</p> <p>Implementation Policy 2: Regularly Review and Update the City’s GHG Inventory, Energy Profile, And EAP.</p> <ul style="list-style-type: none">Conduct an annual review of electricity usage and associated GHG emissions.Re-inventory community and municipal GHG emissions every three to five years.Update the plan to incorporate new technology, programs, and policies as available to achieve electricity efficiency.Consider updating and amending the plan, as necessary, should the City find that policies and actions are not meeting the intended electricity reductions. <p>When City resources are available, integrate the EAP into a comprehensive climate action plan or GHG reduction plan to incorporate GHG and energy/fuel reduction targets to address energy supply, natural gas demand, transportation, waste, wastewater, and other sectors as applicable.</p>	<p><u>No Conflict.</u> MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies requires that all new buildings and/or retrofit of existing buildings shall be of all-electric design, that ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings should be used, and that new construction shall use renewable energy sources, and building energy best practices from United States Green Building Council’s LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. In addition, the Plan <i>Design Guidelines and Standards</i> specifies that solar-powered lighting fixtures should be used. The water conservation requirements of MM GHG-1 would require that Plan projects incorporate water conservation and efficiency measures such as installation of low-flow water fixtures that exceed the requirements of codes and ordinances and incorporation of recycled water for non-potable uses to the maximum extent feasible. In addition, implementation of MM GHG-1 would require incorporation of solid waste reduction measures such as providing recycling receptacles along greenway paths, pocket parks, and greenspaces, and using locally sourced recycled and recyclable materials reduce solid waste. Therefore, with implementation of MM GHG-1, projects facilitated under the Plan within the City of Pomona would not conflict with the goals and policies of the City of Pomona General Plan and City of Pomona Energy Action Plan related to energy efficiency and conservation, water and wastewater systems, green building, waste reduction and recycling, climate friendly purchasing, and renewable energy and low-carbon fuels.</p> <p>Further, the Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated per service population GHG emissions from passenger vehicles consistent with the goals and policies of the SCAG 2020–2045 RTP/SCS, which is the regional growth management strategy that targets per capita GHG reduction from passenger vehicles and light trucks in the Southern California Region pursuant to SB 375. Accordingly, projects facilitated under the Plan within the City of Pomona would directly support the city’s goals related to transportation, land use, and community design.</p>

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
Rosemead	<p>Resource Management Element:</p> <p>Goal 4: Effective contributions to regional efforts to improve air quality and conserve energy.</p> <p>Policy 4.1: Integrate air quality planning with City land use, economic development, and transportation planning efforts.</p> <p>Policy 4.2: Support programs that reduce air quality emissions related to vehicular travel.</p> <p>Policy 4.3: Support alternative transportation modes and technologies, and develop bike- and pedestrian friendly neighborhoods and districts to reduce emissions associated with automobile use.</p> <p>Policy 4.4: Encourage energy conservation efforts and the incorporation of energy-saving designs and features into new and refurbished buildings.</p> <p>Policy 4.6: Adopt a Climate Action Plan or Policy to address greenhouse gas mitigation.</p> <p>Action 4.9 The Climate Action Plan or policy should:</p> <ul style="list-style-type: none">require a baseline inventory of greenhouse gas emissions from all sources by a date certain, establish greenhouse gas emissions reduction targets and deadlines, and enforceable greenhouse gas emissions reduction measures.include mechanisms to ensure regular review of progress toward the emission reduction targets established by the Climate Action Plan, report progress to the public and responsible officials, and revise the plan as appropriate, using principles of adaptive management. <p>Action 4.12: In governmental construction, require or give preference to products that reduce or eliminate indirect greenhouse gas emissions, e.g., by giving preference to recycled products over those made from virgin materials.</p> <p>Action 4.13: Consider requiring government contractors to take action to minimize greenhouse gas emissions, e.g., by using low or zero-emission vehicles and equipment.</p> <p>Action 4.14: Consider providing public education and information about options for reducing greenhouse gas emissions through reduced automobile usage (including trip reduction/linkage, biking and walking, vehicle performance and efficiency, low or zero emission vehicles, car/ride sharing), responsible purchasing, conservation, and recycling.</p> <p>Action 4.15: Consider entering into partnerships to create and expand polluting vehicle buy-back programs to include vehicles with high greenhouse gas emissions.</p>	<p><u>No Conflict.</u> The Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated vehicular pollution, consistent with the goals of the City of Rosemead General Plan.</p> <p>MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies requires that all new buildings and/or retrofit of existing buildings shall be of all-electric design, that ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings should be used, and that new construction shall use renewable energy sources, and building energy best practices from United States Green Building Council’s LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. In addition, the Plan <i>Design Guidelines and Standards</i> specifies that solar-powered lighting fixtures should be used. Implementation of MM GHG-1 would further require incorporation of solid waste reduction measures such as providing recycling receptacles along greenway paths, pocket parks, and greenspaces, and using locally sourced recycled and recyclable materials. Thus, with implementation of MM GHG-1, Plan projects within the City of Rosemead would be consistent with the City of Rosemead General Plan policies related to energy conservation and reduction of indirect GHGs.</p>
San Dimas	<p>Conservation Element:</p> <p>Goal CN-5: Strive for air quality that is compatible with health, well-being and enjoyment of life for all citizens.</p> <p>Objective 5.1: Support the regional air quality goal to attain and maintain National Air Quality Standards while continuing economic growth and improvement in the quality of life afforded to the citizens of San Dimas and Los-Angeles County.</p> <p>Policy 5.1.2: The City shall coordinate with SCAQMD, SCAG, CARB and other local, state and national agencies in efforts to plan and implement clean air strategies for the South Coast Air Basin.</p> <p>Objective 5.2: Coordinate air quality planning and implementation efforts with other responsible agencies.</p>	<p><u>No Conflict.</u> The Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated vehicular pollution, consistent with the goals of the City of San Dimas General Plan.</p>
San Gabriel	<p>Environmental Resources Element:</p> <p>Goal 8.6: Improve air quality within the City of San Gabriel.</p> <p>Target 8.6.1: Reduce the amount of emissions from vehicles in San Gabriel.</p> <p>Target 8.6.5: Encourage the planting of street trees and yard trees because of their air quality contribution.</p> <p>Target 8.6.8: Work with the South Coast Air Quality Management District to reduce emissions from stationary sources in San Gabriel.</p> <p>City of San Gabriel Energy Action Plan</p> <p>Implementation Policy 1: Annually monitor and report the City’s progress toward achieving the reduction target.</p> <ul style="list-style-type: none">Facilitate implementation of policies and actions related to municipal operations.Prepare an annual progress report for review and consideration by the City Council, with the support of theSan Gabriel Valley Council of Governments Utilize the EAP monitoring and reporting tool to assist with annual reports.	<p><u>No Conflict.</u> The Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Implementation of MM GHG-1 would further require incorporation of solid waste reduction measures such as providing recycling receptacles along greenway paths, pocket parks, and greenspaces, and using locally</p>

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
	<ul style="list-style-type: none">Work with the San Gabriel Valley Council of Governments to identify key City staff responsible for annual reporting and monitoring. Implementation Policy 2: Regularly review and update the City’ GHG inventory, energy profile, and EAP.Conduct an annual review of electricity usage and associated GHG emissions.Re-inventory community-wide and municipal GHG emissions every 5 years if there is financial support.Update the Plan to incorporate new technology, programs, and policies as available to achieve electricity efficiency.Consider updating and amending the Plan, as necessary, should the City find that policies and actions are not meeting the intended electricity reductions. <p>When City resources are available, integrate the EAP into a comprehensive climate action plan or greenhouse gas reduction plan to incorporate GHG and energy/fuel reduction targets to address energy supply, natural gas demand, transportation, waste, wastewater, and other sectors as applicable.</p>	sourced recycled and recyclable materials. Thus, with implementation of MM GHG-1 , Plan projects within the City of San Gabriel would be consistent with the City of San Gabriel Energy Action Plan.
San Marino	No applicable General Plan Policies	<u>No Conflict</u> . No applicable policies related to GHGs and climate change were identified in the City of San Marino General Plan.
South El Monte	Public Health, Safety, and Environmental Justice Element: Goal 2: Promote a community safe from human-caused hazards. Policy 2.1: Reduce Localized Air Pollution Exposure Near Major Roads. Action 2.1a: Update the Zoning Code to protect residential uses and park uses from the impacts of industrial and roadway pollution. Resources Element: Goal 5.0 Improve air quality for future generations of South El Monte residents.	<u>No Conflict</u> . The Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated vehicular pollution, consistent with the goals of the City of South El Monte General Plan.
Temple City	Land Use Element: Goal LU 2: Land Use Mix. A complete community that is balanced with places for living, working, shopping, recreation, education, and arts and culture that reflect Temple City’s history, tradition, and diversity. Policy LU 2.5 Places to Live and Work. Provide for the development of projects integrating housing with commercial uses enabling residents to reduce automobile travel, air pollution, and greenhouse gas emissions. Goal LU 3: Neighborhoods, Centers, and Corridors. An urban pattern of distinct, compact, and walkable neighborhoods and districts that preserve Temple City’s small-town, friendly atmosphere; and contribute to residents’ health and quality of life, economic vitality, environmental sustainability, and reduction of greenhouse gas emissions. Goal LU 7: Sustainable Built Environment. A built environment that contributes to a sustainable environment, minimizes consumption of scarce environmental resources, and reduces greenhouse gas emissions. Policy LU 7.1 Sustainable Land Development. Promote land use and urban design development practices that reduce energy and water consumption, pollution, greenhouse gas emissions, and waste and noise generation. These should include practices described in the United States Green Building Council’s LEED-ND rating program such as concentrating development to promote walking in lieu of the automobile, capturing and re-using stormwater onsite, managing and reusing wastewater, orienting buildings to maximize opportunities for solar energy use, use of drought tolerant and native landscapes, shading of exterior public spaces, and recycling and salvage for reuse of construction and demolition debris. Policy LU 7.5 Greenhouse Gas Reduction Plans. Require major development projects to prepare greenhouse gas reduction plans consistent with the targets defined in state statutory requirements. Natural Resources Element: Goal NR 1: Improved Air Quality. Air quality that enhances the health and well-being for all residents of Temple City. NR 1.1 Greenhouse Gas Emissions (GHG) Targets. Develop a Climate Action Plan (CAP) that defines transportation, land use, energy, area source, water, and solid waste reduction measures for Temple City, and establishes a target for GHG emission reductions. NR 1.2 Air Quality Assessment and Monitoring. Cooperate with the California Air Resource Board (CARB) and South Coast Air Quality Management District (SCAQMD) to measure air quality at emission sources and enforce the standards of the Clean Air Act for air quality and GHG emissions.	<u>No Conflict</u> . The Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated vehicular emissions of GHGs as well as encourage the planting of trees and native vegetation that would sequester GHG, consistent with the goals of the Temple City General Plan. MM-GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies requires that all new buildings and/or retrofit of existing buildings shall be of all-electric design, that ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings should be used, and that new construction shall use renewable energy sources, and building energy best practices from United States Green Building Council’s LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. In addition, the Plan <i>Design Guidelines and Standards</i> specifies that solar-powered lighting fixtures should be used. The water conservation requirements of MM GHG-1 would require that Plan projects incorporate water conservation and efficiency measures such as installation of low-flow water fixtures that exceed the requirements of codes and ordinances and incorporation of recycled water for non-potable uses to the maximum extent feasible. In addition, implementation of MM GHG-1 would require incorporation of solid waste reduction measures such as providing recycling receptacles along greenway paths, pocket parks, and greenspaces, and using locally sourced recycled and recyclable materials reduce solid waste. Therefore, with implementation of MM GHG-1 , projects facilitated under the Plan within Temple City would not conflict with the goals and policies of the Temple City General Plan related to energy efficiency and conservation, water and wastewater systems, green building, and waste reduction and recycling.

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
	<p>Goal NR 3: Infrastructure. Reduced pollution and emissions from utility infrastructure.</p> <p>NR 3.1 Low Impact Infrastructure. Encourage utility service providers to adopt practices and implement improvements that reduce air pollution and GHG emissions.</p> <p>NR 3.3 Public Facilities. Reduce air pollution and GHG emissions through continued reduction of overall energy and water use of local public infrastructure, facilities, and programs for maintenance and efficiency.</p> <p>NR 3.5 Preference for Reduced-Emission Equipment. Give preference to contractors using reduced-emission equipment for City construction projects and contracts for services (e.g. garbage collection), as well as businesses that practice sustainable operations.</p> <p>Goal NR 4: Public Awareness. An informed public as to the importance of strategies to improve air quality and reduce GHG emissions.</p> <p>NR 4.1 Air Quality and Climate Change Education. Promote and disseminate information about state, federal, and regional standards; health effects; and efforts that Temple City’s residents and businesses can take to improve air quality and reduce GHG emissions.</p> <p>NR 4.2 Employer Education Programs. Encourage employers to participate in the Los Angeles County Metropolitan Transportation Authority (Metro) and Southern California Association of Governments (SCAG) public education programs to improve air quality and reduce GHG emissions.</p> <p>NR 4.3 Involvement of Schools and Organizations. Work with local schools, businesses, and organizations to increase citizens’ awareness and participation in efforts to reduce air pollution and GHG emissions.</p>	
West Covina	<p>Our Natural Community Chapter:</p> <p>Policy P1.1: Promote alternative transportation modes like walking, biking, and transit that reduce emissions related to vehicular travel.</p> <p>Action A 1.1: Continue to channel Federal, State and Local transportation funds to programs, and infrastructure improvements that reduce air pollution through the promotion of walking, biking, ride-sharing, public transit use, the use of alternative fuel vehicles or other clean engine technologies.</p> <p>Policy P1.2: Promote the use of energy-efficient vehicles.</p> <p>Action A1.2: Continue to control and reduce air pollution emissions from vehicles owned by the City and municipal operations and facilities by expanding the use of alternative fuel, electric, and hybrid vehicles in City fleets.</p> <p>Policy P1.3: Minimize the adverse impacts of growth and development on air quality and climate.</p> <p>Action A1.3: Prepare and adopt a plan to reduce greenhouse gases as part of the Environmental Impact Report (to be concurrently approved with the West Covina General Plan) to achieve compliance with State mandates, and consistency with the Regional Transportation Plan/Sustainable Community Strategy to facilitate development by streamlining the approval process, and to improve air quality.</p> <p>Our Well Planned Community Chapter:</p> <p>Land Use:</p> <p>Policy 3.6: Reduce West Covina’s production of greenhouse gas emissions and contribution to climate change and adapt to the effects of climate change.</p> <p>Action 3.6 Key land use adaptation strategies to reduce greenhouse gas emissions are:</p> <ul style="list-style-type: none">• Promoting transit-oriented infill development, and• Providing incentives for high-performance buildings and infrastructure. <p>The City of West Covina Energy Action Plan Goals:</p> <p>a. Surpass the energy efficiency standards of the California Building Code for proposed and existing municipal buildings and facilities.</p> <p>b. Provide on-line (Internet accessible) guidance and assistance to Homeowners and Builders to make compliance with new Title 24 energy requirements as effective and efficient as possible.</p> <p>c. Coordinate City Efficiency goals and programs with the efficiency projects and incentive programs of higher jurisdictional agencies. Expand the City’s Residential Solar Power permit-waiver program to include other alternative energy applications, Consider fee adjustments or rebates to local businesses and residents in support of those efforts.</p> <p>f. Promote energy and water conservation design features in all major renovation and development projects.</p>	<p><u>No Conflict.</u> The Plan will use existing District ROW to provide additional recreational and community benefits that increase neighborhood connectivity. Other improvements would include installing active transport-oriented lighting and landscaping and creating safe crossings. The Plan aims to provide amenities to promote active transport trips in place of vehicle trips and to connect to other trails and paths throughout the Plan Area to create a mobility network for cyclists, pedestrians, and equestrians. As such, the Plan would reduce VMT and the associated per service population GHG emissions from passenger vehicles consistent with the goals and policies of the SCAG 2020–2045 RTP/SCS, which is the regional growth management strategy that targets per capita GHG reduction from passenger vehicles and light trucks in the Southern California Region pursuant to SB 375. Accordingly, projects facilitated under the Plan within the City of West Covina would directly support the city’s goals related to transportation and land use.</p> <p>MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies requires that all new buildings and/or retrofit of existing buildings shall be of all-electric design, that ENERGY STAR rated appliances for appliance types that are offered ENERGY STAR ratings should be used, and that new construction shall use renewable energy sources, and building energy best practices from United States Green Building Council’s LEED, United States Department of Energy Better Buildings Initiative, ENERGY STAR, Dark Sky, Cradle-to-Cradle, and Green Globes. In addition, the Plan <i>Design Guidelines and Standards</i> specifies that solar-powered lighting fixtures should be used. The water conservation requirements of MM GHG-1 would require that Plan projects incorporate water conservation and efficiency measures such as installation of low-flow water fixtures that exceed the requirements of codes and ordinances and incorporation of recycled water for non-potable uses to the maximum extent feasible. In addition, implementation of MM GHG-1 would require incorporation of solid waste reduction measures such as providing recycling receptacles along greenway paths, pocket parks, and greenspaces, and using locally sourced recycled and recyclable materials reduce solid waste. Therefore, with implementation of MM GHG-1, projects facilitated under the Plan within the City of West Covina would not conflict with the goals and policies of the City of West Covina Energy Action Plan related to energy efficiency and conservation, water and wastewater systems, green building, waste reduction and recycling, climate friendly purchasing, and renewable energy.</p>

Incorporated City	Applicable General Plan Goals and Plans	Consistency Analysis
	<p>h. Encourage the efficient use of water and reduce urban runoff through the use of natural drainage, drought tolerant landscaping, and efficient irrigation systems in major renovation and new development projects. Recommend the incorporation of these practices within the approval processes of other local and regional departments and jurisdictions.</p> <p>i. Promote the coordination of landscapers and residential Solar Power contractors to minimize heat buildup at existing and new homes through more effective shading design.</p>	

3.8.3.4 Impacts of Conceptual Design Projects

3.8.3.4.1 8(a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?

Construction and Operations

Less than Significant with Mitigation. Construction-related emissions of GHGs amortized over a 30-year project life for the various types of components are provided in Tables 3.8-5 through 3.8-9. Because the 10 conceptual designs include multiple components, construction-related GHG emissions associated with each of the 10 conceptual designs may be greater than the maximum amortized construction GHG emissions estimated for each of the project types identified above. Project operations would result in GHG emissions from multiple sources of emissions, including energy, mobile, area, water, wastewater, and waste. With the operation of multiple project components at each of the 10 conceptual design projects (i.e., paths, amenities, safe crossings, stormwater management, pocket parks, and greenspaces), operation of the 10 conceptual designs may be greater than the maximum estimated GHG emissions estimated for each of the project types identified above.

Although the 10 conceptual design projects are either entirely or partially outside of the jurisdiction of LA County, the significance determination of this impact within project areas that are within unincorporated LA County is based on consistency analysis with the 2045 CAP. Specifically, the GHG generation associated with implementation of projects under the Plan would be considered less than significant provided the project demonstrates that it is consistent with the 2045 CAP which serves as the County's Qualified CAP. The 2045 CAP identifies required General Plan policies and strategies to be implemented by development projects in the areas of energy supply, transportation, building energy and water, waste, and agriculture, forestry, and other land use. The completed Consistency Checklist is provided in Table 3.8-4. The Plan supports many GHG reduction and adaptation measures identified in the 2045 CAP by increasing connectivity in the Plan Area, and thus, promoting active transport and an overall reduction in VMT and associated GHG emissions. Implementation of mitigation measures would further ensure consistency with the applicable GHG emission reduction measures of the 2045 CAP. Implementation of **MM AQ-1: Emissions Reduction Measures** would require that zero-emission or near-zero-construction equipment is used to the maximum extent feasible, or at a minimum Tier 4 Final construction equipment shall be used during all phases of construction, consistent with the 2045 CAP GHG Reduction Measure T9.3. Implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would require compliance with GHG reduction measures related to water, energy, and waste for all new construction. Mitigation would also require electrified buildings and landscaping equipment. Accordingly, with implementation of **MM AQ-1: Emissions Reduction Measures** and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, as well as conformance with the *Design Guidelines and Standards*, construction and operation of projects within unincorporated LA County would be consistent with the 2045 CAP and thus would not result in GHG emissions that would have a significant effect on the environment.

For the 10 conceptual designs have components that are within incorporated communities, and outside of the jurisdiction of LA County, compliance with applicable regulatory measures and with implementation of **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would ensure consistency with the 2022 Scoping Plan Update's overall goal of avoiding losses

in carbon sequestration and limiting land use emissions. The *Design Guidelines and Standards* related to water, energy, and waste, would be consistent with the 2022 Scoping Plan Update's measures and the state's regulatory programs within these sectors. Furthermore, as summarized in Section 3.17, Transportation, daily vehicle trips would not exceed OPR's (2018a) daily trip screening threshold. Accordingly, emissions from the energy, mobile, area, water, and waste sectors would not conflict with the 2022 Scoping Plan Update and applicable regulatory programs. Therefore, with implementation of **MM-GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** for 10 conceptual design projects within incorporated cities, emissions associated with the construction and operation would have a less than significant impact on the environment.

Table 3.8-12. Analysis of Conceptual Design Examples for Construction and Operations to Generate GHG Emissions, Either Directly or Indirectly, That May Have a Significant Impact on the Environment

Conceptual Design Example	<i>8(a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?</i>
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	Less than Significant with Mitigation. Alhambra Wash at Vincent Lugo Park conceptual design is within the City of Alhambra and City of San Gabriel, and outside of the jurisdiction of LA County. As described for the Plan in Section 3.8.3.3.1., for projects carried out within incorporated cities (i.e., outside of the purview of the 2045 CAP), compliance with applicable regulatory measures and implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with the 2022 Scoping Plan Update. Therefore, with implementation of MM GHG-1 emissions associated with the construction and operation of the Alhambra Wash at Vincent Lugo Park conceptual design project would have a less than significant impact on the environment.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	Less than Significant with Mitigation. Big Dalton Wash at Hilda L. Solis Park conceptual design is within the Cities of Baldwin Park and Irwindale, and outside of the jurisdiction of LA County. As described for the Plan in Section 3.8.3.3.1., for projects carried out within incorporated cities (i.e., outside of the purview of the 2045 CAP), compliance with applicable regulatory measures and implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with the 2022 Scoping Plan Update. Therefore, with implementation of MM GHG-1 emissions associated with the construction and operation of the Big Dalton Wash at Hilda L. Solis Park conceptual design project would have a less than significant impact on the environment.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	Less than Significant with Mitigation. Eaton Wash Greenway at Spreading Ground Site conceptual design is within the City of Pasadena, and outside of the jurisdiction of LA County. As described for the Plan in Section 3.8.3.3.1., for projects carried out within incorporated cities (i.e., outside of the purview of the 2045 CAP), compliance with applicable regulatory measures and implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with the 2022 Scoping Plan Update. Therefore, with implementation of MM GHG-1 emissions associated with the construction and operation of the Eaton Wash Greenway at Spreading Ground Site conceptual design project would have a less than significant impact on the environment.

Conceptual Design Example	8(a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?
<p>Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i></p>	<p>Less than Significant with Mitigation. Eaton Wash at Eaton Blanche Park conceptual design is within the City Pasadena, and outside of the jurisdiction of LA County. As described for the Plan in Section 3.8.3.3.1., for projects carried out within incorporated cities (i.e., outside of the purview of the 2045 CAP), compliance with applicable regulatory measures and implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with the 2022 Scoping Plan Update. Therefore, with implementation of MM GHG-1 emissions associated with the construction and operation of the Eaton Wash at Eaton Blanche Park conceptual design project would have a less than significant impact on the environment.</p>
<p>San Dimas Wash at Arrow High School <i>City of Glendora</i></p>	<p>Less than Significant with Mitigation. San Dimas Wash at Arrow High School conceptual design is within the City of Glendora, and outside of the jurisdiction of LA County. As described for the Plan in Section 3.8.3.3.1., for projects carried out within incorporated cities (i.e., outside of the purview of the 2045 CAP), compliance with applicable regulatory measures and implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with the 2022 Scoping Plan Update. Therefore, with implementation of MM GHG-1 emissions associated with the construction and operation of the San Dimas Wash at Arrow High School conceptual design project would have a less than significant impact on the environment.</p>
<p>San Dimas Wash at Hollenbeck Park <i>City of Covina</i></p>	<p>Less than Significant with Mitigation. San Dimas Wash at Hollenbeck Park conceptual design is within the City of Covina, and outside of the jurisdiction of LA County. As described for the Plan in Section 3.8.3.3.1., for projects carried out within incorporated cities (i.e., outside of the purview of the 2045 CAP), compliance with applicable regulatory measures and implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with the 2022 Scoping Plan Update. Therefore, with implementation of MM GHG-1 emissions associated with the construction and operation of the San Dimas Wash at Hollenbeck Park conceptual design project would have a less than significant impact on the environment.</p>
<p>San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i></p>	<p>Less than Significant with Mitigation. San Jose Creek at Pocket Park conceptual design includes components within the City of Industry, and outside of the jurisdiction of LA County. As described for the Plan in Section 3.8.3.3.1., for the portion of the project carried out within unincorporated LA County, implementation of MM AQ-1: Emission Reduction Measures, and MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies, would ensure consistency with the applicable GHG emission reduction measures of the 2045 CAP by reducing GHGs during construction and operations. For the portions of the project within the City of Industry, (i.e., outside of the purview of the 2045 CAP), compliance with applicable regulatory measures and implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with the 2022 Scoping Plan Update. Therefore, with implementation of MM AQ-1, and MM GHG-1, emissions associated with the construction and operation of the San Jose Creek at Pocket Park</p>

Conceptual Design Example	8(a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?
	conceptual design project would have a less than significant impact on the environment.
Thompson Creek at the Fairplex <i>Cities of Pomona, La Verne, and Claremont</i>	Less than Significant with Mitigation. Thompson Creek at the Fairplex conceptual design is within the Cities of Pomona, La Verne, and Claremont, and outside of the jurisdiction of LA County. As described for the Plan in Section 3.8.3.3.1., for projects carried out within incorporated cities (i.e., outside of the purview of the 2045 CAP), compliance with applicable regulatory measures and implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with the 2022 Scoping Plan Update. Therefore, with implementation of MM GHG-1 emissions associated with the construction and operation of the Thompson Creek at the Fairplex conceptual design project would have a less than significant impact on the environment.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park and West Covina</i>	Less than Significant with Mitigation. Walnut Creek at Syhre Park conceptual design is within the Cities of Baldwin Park and West Covina, and outside of the jurisdiction of LA County. As described for the Plan in Section 3.8.3.3.1., for projects carried out within incorporated cities (i.e., outside of the purview of the 2045 CAP), compliance with applicable regulatory measures and implementation of MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with the 2022 Scoping Plan Update. Therefore, with implementation of MM GHG-1 emissions associated with the construction and operation of the Walnut Creek at Syhre Park conceptual design project would have a less than significant impact on the environment.
Walnut Creek at Pocket Park <i>City of West Covina</i>	Less than Significant with Mitigation. Walnut Creek at Pocket Park conceptual design is within the City of West Covina, and outside of the jurisdiction of LA County. As described for the Plan in Section 3.8.3.3.1., for projects carried out within incorporated cities (i.e., outside of the purview of the 2045 CAP), compliance with applicable regulatory measures and implementation of MM-GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with the 2022 Scoping Plan Update. Therefore, with implementation of MM GHG-1 emissions associated with the construction and operation of the Walnut Creek at Pocket Park conceptual design project would have a less than significant impact on the environment.

3.8.3.4.2 8(b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?

Construction and Operations

Less than Significant with Mitigation. The LA County 2045 Compliance Checklist has been completed for the Plan as provided in Table 3.8-4. As detailed in Table 3.8-4 and for Impact Criteria 8(a) above, projects within unincorporated LA County would be consistent with all 2045 CAP GHG reduction strategies with compliance with the requirements of *Design Guidelines and Standards*, LA County ordinances, and required measures under the County of Los Angeles Sustainable Infrastructure Guidelines.

Implementation of **MM AQ-1: Emissions Reduction Measures** and **MM GHG-1: Implement Section-**

Specific Operations GHG Emissions Reduction Strategies would further ensure consistency with the 2045 CAP. Since the 2045 CAP is a qualified CAP, and Plan projects within unincorporated LA County would be consistent with applicable actions with incorporation of **MM AQ-1: Emissions Reduction Measures** and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**, construction and operation of projects within unincorporated LA County would not conflict with the 2045 CAP. Similarly, as described above in Section 3.8.3.3.2, for projects carried out in incorporated cities within the Plan Area, implementation of **MM AQ-1: Emissions Reduction Measures** and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies** would ensure consistency with State, regional, and applicable local plans, policies, and regulations adopted for the purpose of reducing GHG emissions. Therefore, none of the 10 conceptual design examples would result in any impacts relating to consistency with applicable GHG reduction plans not previously described for the Plan in Section 3.8.3.3.2. No additional mitigation measures would be required. Construction and operation of the 10 conceptual design projects would be less than significant with implementation of **MM AQ-1: Emissions Reduction Measures** and **MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies**.

Table 3.8-13. Analysis of Conceptual Design Examples for Construction and Operations to Conflict with an Applicable Plan, Policy, or Regulation Adopted for the Purpose of Reducing the Emissions of GHG

Conceptual Design Example	<i>8(b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?</i>
Alhambra Wash at Vincent Lugo Park <i>City of Alhambra and City of San Gabriel</i>	Less than Significant with Mitigation. The Alhambra Wash at Vincent Lugo Park conceptual design project is within the City of Alhambra and City of San Gabriel, and outside of the County's jurisdiction. Implementation of MM AQ-1: Emissions Reduction Measures and MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with state, regional, and City of Alhambra and City of San Gabriel plans, policies, and regulations adopted for the purpose of reducing GHG emissions. Therefore, impacts associated with construction and operation of the Alhambra Wash at Vincent Lugo Park conceptual design project would be less than significant with mitigation.
Big Dalton Wash at Hilda L. Solis Park <i>Cities of Baldwin Park and Irwindale</i>	Less than Significant with Mitigation. The Big Dalton Wash at Hilda L. Solis Park conceptual design project is within the Cities of Baldwin Park and Irwindale, and outside of the County's jurisdiction. Implementation of MM AQ-1: Emissions Reduction Measures and MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with state, regional, and City of Baldwin Park and City of Irwindale plans, policies, and regulations adopted for the purpose of reducing GHG emissions. Therefore, impacts associated with construction and operation of the Big Dalton Wash at Hilda L. Solis Park conceptual design project would be less than significant with mitigation.
Eaton Wash Greenway at Spreading Ground Site <i>City of Pasadena</i>	Less than Significant with Mitigation. The Eaton Wash Greenway at Spreading Ground Site conceptual design project is within the City of Pasadena, and outside of the County's jurisdiction. Implementation of MM AQ-1: Emissions Reduction Measures and MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with state and regional plans, policies, and regulations for the purpose of reducing GHG emissions, and City of Pasadena qualified CAP.

Conceptual Design Example	8(b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?
	Therefore, impacts associated with construction and operation of the Eaton Wash Greenway at Spreading Ground Site conceptual design project would be less than significant with mitigation.
Eaton Wash at Eaton Blanche Park <i>City of Pasadena</i>	Less than Significant with Mitigation. The Eaton Wash at Eaton Blanche Park conceptual design project is within the City of Pasadena, and outside of the County's jurisdiction. Implementation of MM AQ-1: Emissions Reduction Measures and MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with state and regional plans, policies, and regulations for the purpose of reducing GHG emissions and City of Pasadena qualified CAP. Therefore, impacts associated with construction and operation of the Eaton Wash at Eaton Blanche Park conceptual design project would be less than significant with mitigation.
San Dimas Wash at Arrow High School <i>City of Glendora</i>	Less than Significant with Mitigation. The San Dimas Wash at Arrow High School conceptual design project is within the City of Glendora, and outside of the County's jurisdiction. Implementation of MM AQ-1: Emissions Reduction Measures and MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with state, regional, and City of Glendora plans, policies, and regulations adopted for the purpose of reducing GHG emissions. Therefore, impacts associated with construction and operation of the San Dimas Wash at Arrow High School conceptual design project would be less than significant with mitigation.
San Dimas Wash at Hollenbeck Park <i>City of Covina</i>	Less than Significant with Mitigation. The San Dimas Wash at Hollenbeck Park conceptual design project is within the City of Covina, and outside of the County's jurisdiction. Implementation of MM AQ-1: Emissions Reduction Measures and MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with state, regional, and City of Covina plans, policies, and regulations adopted for the purpose of reducing GHG emissions. Therefore, impacts associated with construction and operation of the San Dimas Wash at Hollenbeck Park conceptual design project would be less than significant with mitigation.
San Jose Creek at Pocket Park <i>City of Industry and the unincorporated LA County community of Avocado Heights</i>	Less than Significant with Mitigation. The San Jose Creek at Pocket Park conceptual design project is within the City of Industry and unincorporated LA County community of Avocado Heights. Implementation of MM AQ-1: Emissions Reduction Measures and MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with the 2045 CAP for the portion within unincorporated LA County. For the portion of the project within the City of Industry, implementation of MM AQ-1: Emissions Reduction Measures and MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with state, regional, and City of Industry plans, policies, and regulations adopted for the purpose of reducing GHG emissions. Therefore, impacts associated with construction and operation of the San Jose Creek at Pocket Park conceptual design project would be less than significant with mitigation.
Thompson Creek at the Fairplex	Less than Significant with Mitigation. The Thompson Creek at the Fairplex conceptual design project is within the Cities of Pomona, La Verne, and

Conceptual Design Example	8(b) Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gases?
<i>Cities of Pomona, La Verne, and Claremont</i>	Claremont and outside of the County's jurisdiction. Implementation of MM AQ-1: Emissions Reduction Measures and MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with state and regional plans, policies, and regulations and those of the Cities of Pomona, La Verne, and Claremont adopted for the purpose of reducing GHG emissions. Therefore, impacts associated with construction and operation of the Thompson Creek at the Fairplex conceptual design project would be less than significant with mitigation.
Walnut Creek at Syhre Park <i>Cities of Baldwin Park and West Covina</i>	Less than Significant with Mitigation. The Walnut Creek at Syhre Park conceptual design project is within the Cities of Baldwin Park and West Covina and outside of the County's jurisdiction. Implementation of MM AQ-1: Emissions Reduction Measures and MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with state, regional, and City of Baldwin Park and City of West Covina plans, policies, and regulations of the adopted for the purpose of reducing GHG emissions. Therefore, impacts associated with construction and operation of the Walnut Creek at Syhre Park conceptual design project would be less than significant with mitigation.
Walnut Creek at Pocket Park <i>City of West Covina</i>	Less than Significant with Mitigation. Impacts would be potentially significant and unavoidable for the Walnut Creek at Pocket Park conceptual design project, which is within the City of West Covina and outside of the County's jurisdiction. The Walnut Creek at Pocket Park conceptual design project is within the City of West Covina and outside of the County's jurisdiction. Implementation of MM AQ-1: Emissions Reduction Measures and MM GHG-1: Implement Section-Specific Operations GHG Emissions Reduction Strategies would ensure consistency with state, regional, and City of West Covina plans, policies, and regulations adopted for the purpose of reducing GHG emissions. Therefore, impacts associated with construction and operation of the Walnut Creek at Pocket Park conceptual design project would be less than significant with mitigation.

3.9 Hazards and Hazardous Materials

This section describes the geographic and regulatory setting for hazards and hazardous materials, discusses impacts that could result from the Plan, and determines the significance of impacts. Where needed, this section identifies mitigation measures that would reduce or avoid any significant impacts.

A hazardous material is defined in California Code of Regulations (CCR) Title 22 as:

[a] substance or combination of substances which, because of its quantity, concentration, or physical, chemical or infectious characteristics, may either (1) cause, or significantly contribute to, an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness; or (2) pose a substantial present or potential hazard to human health or environment when improperly treated, stored, transported or disposed of or otherwise managed (CCR Title 22 Section 66260.10).

Under CCR Title 22, the term “hazardous substance” refers to both hazardous materials and hazardous wastes. Both are classified according to four properties: (1) toxicity, (2) ignitability, (3) corrosiveness, and (4) reactivity (CCR Title 22, Chapter 11, and Article 3).

Hazardous materials in various forms can cause death, serious injury, long-lasting health effects, and damage to buildings, homes, and other property. Hazards to human health and the environment can occur during production, storage, transport, use, or disposal of hazardous materials. This section also addresses emergency response/evacuation, airport safety, and wildfire hazards. For additional discussion related to emergency response and the location of schools within the Plan Area, please refer to Section 3.3, Air Quality, which discusses sensitive receptors and Section 3.15, Public Services. For a discussion of wildfire hazards in or near state responsibility areas or lands classified as very high fire hazard severity zone (VHFHSZ), see Section 3.20, Wildfire.

Table 3.9-1. Summary of Potential Impacts of the Plan on Hazards and Hazardous Materials.

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
<i>Would the Plan:</i>			
9(a). Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			
Greenway Paths + Greenway Amenities	Less than Significant	Less than Significant	Construction: No Mitigation
Greenway Paths + Pocket Parks and Greenspaces	Less than Significant	Less than Significant	Operations: No Mitigation
Greenway Paths + Safe Crossings	Less than Significant	Less than Significant	
Greenway Paths + Stormwater Management	Less than Significant	Less than Significant	

Plan Component	Impact Determination: Construction	Impact Determination: Operations	Mitigation Measures
<i>Would the Plan:</i>			
9(b). Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?

3.9.1 Environmental Setting

The following section contains a regional description of hazards and hazardous materials conditions within the Plan Area.

3.9.1.1 Cortese List Sites

The State of California Government Code Section 65962.5 (often referred to as the “Cortese List”) is composed of the SWRCB’s Geotracker database (including leaking underground storage tanks), solid

waste disposal sites list, Cease and Desist Orders list, and Cleanup and Abatement Orders list. Taken together with the California Department of Toxic Substance Control's (DTSC) EnviroStor database of hazardous waste sites (including contaminated Federal Superfund sites), all of these lists comprise the Cortese List. There are 19 open/active clean-up sites and nine hazardous waste sites listed in EnviroStor and 263 sites from Geotracker within the Plan Area (DTSC 2023, SWRCB 2023) (Figure 3.9-1).

The SGV has been under environmental investigation since 1979 when California first began requiring testing of drinking water supplies and discovered groundwater contaminated with VOCs in the SGV (USEPA 2021). The USEPA has determined that the groundwater contamination in the SGV results from the historic use and improper handling and disposal of chlorinated solvents (such as tetrachloroethene and trichloroethene) and other chemicals (other VOCs, 1,4-dioxane, perchlorate, NDMA). In May 1984, USEPA listed four broad areas of regional-scale groundwater contamination within the SGV Groundwater Basin (SGV Superfund Site Areas 1 through 4) on the National Priorities List (NPL) under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). In the 1990s, USEPA subsequently divided the San Gabriel Valley Superfund Site into smaller operable units (OU) (Figure 3.9-2), the following of which are active:

- Area 1: Whittier Narrows OU; El Monte OU; South El Monte OU
- Area 2: Baldwin Park OU
- Area 3: No OUs in this area because USEPA is completing the groundwater investigation
- Area 4: Puente Valley OU (USEPA 2021; DTSC 2022).

In 2001, the USEPA began installing the groundwater extraction and treatment systems needed to do the cleanup. There are 14 groundwater treatment systems operating as part of the SGV Superfund cleanup: in Area 1, there is one in the Whittier Narrows OU; four in the El Monte OU; four in the South El Monte OU; in Area 2, there are five in the Baldwin Park OU; and in Area 4, two systems are being built and a third is in the design phase in the Puente Valley OU (USEPA 2021).

3.9.1.2 Emergency Response

Los Angeles County ranks as the community with the most risk in the United States based on the Federal Emergency Management Agency's (FEMA) National Risk Index, which assesses possible hazards a jurisdiction is susceptible to in combination with the amount of loss that could result from those hazards (FEMA 2024). The LA County Board of Supervisors adopted the County of Los Angeles Operational Area Emergency Response Plan in November 2023 that establishes the coordinated emergency management system, which includes prevention, protection, response, recovery and mitigation in Los Angeles County (County of Los Angeles OEM 2023). The All-Hazards Mitigation Plan, prepared by the Los Angeles County Chief Executive Office—Office of Emergency Management, assesses risks posed by natural hazards and provides a mitigation action plan for reducing the risks in Los Angeles County (County of Los Angeles OEM 2020). Within the Plan Area, the Safety Element of the Los Angeles County General Plan 2035 identifies I-10, I-605, I-110, I-210, N Azusa Ave, and US 57 as major freeway disaster routes (LA County Department of Regional Planning 2022).

3.9.1.3 Fire Hazards

The areas in Los Angeles County that are most susceptible to wildfire are generally located in mountainous or hillside areas. The Plan Area is susceptible to wildfire risk due to warm temperatures,

rainfall/drought, topography, seasonal winds, and fire-adapted vegetation. Areas most susceptible to wildfires are generally located in mountainous areas or hillsides (e.g., Puente Hills, San Gabriel Mountains, San Jose Hills). However, the areas with the greatest wildfire risk to human safety and property are along the wildland-urban interface (WUI), which is the transition zone between wildlands and the human/built environment and often where areas of housing and human development and vegetation commingle. In these areas, homes and other buildings abut vegetated areas where wildfires may occur. WUIs are common throughout Los Angeles County (e.g., the Santa Monica Mountains, San Gabriel Mountains, Verdugo Mountains, Santa Susana Mountains, Palos Verdes Hills, Santa Clarita Valley, Antelope Valley, Angeles National Forest, Los Padres National Forest, and Puente Hills [County of Los Angeles OEM 2023]). WUIs are particularly common in rural and mountainous areas and can also include urban communities that are located near open space, conservation areas, and national forests. WUIs are present in the Plan Area. These are particularly prevalent at the upstream extent of washes as they approach more steeply sloped areas. WUIs are generally represented by the edges of the forested areas depicted in Figure 3.2-3 in Section 3.2, Agriculture and Forestry Resources.

The Plan Area is composed primarily of urbanized/developed areas, which are outside of the designated very high fire hazard severity zone (VHFHSZ) (CAL FIRE 2007, 2011). However, portions of the Plan Area, primarily the northern extent in the San Gabriel foothills region, are located within the designated VHFHSZ that are the responsibility of federal, state, and local agencies. Fire hazard areas are described in detail in Section 3.20, Wildfire, and are visualized in Figure 3.20-1.

3.9.1.4 Airports

There are two airports within two miles of the Plan Area: SGV Airport in El Monte and Brackett Field in La Verne. SGV Airport and Brackett Field have master plans that contain land use compatibility sections (Los Angeles County 1995 and County of Los Angeles Public Works Department of Aviation Division 1992). The Los Angeles County Airport Land Use Plan, adopted in December 1991 and updated in 2004, is a county-wide document that pertains to the 15 public-use airports within the County, including SGV Airport and Brackett Field (Los Angeles County Airport Land Use Commission 1991). As shown in Figure 3.9-3, portions of the Plan Area are within the airport influence zone of both airports.

Aircraft collisions with birds and other wildlife can damage aircraft and pose a threat to human safety. According to the Federal Aviation Administration (FAA), reported wildlife strikes involving civil aircraft in the past few years have exceeded 5,000 cases annually (FAA 2002). Over 97 percent involved birds, and less than three percent of the cases involved mammals or reptiles. Gulls, doves, raptors, and waterfowl were the most frequently struck bird groups among the reported cases. The majority of the reported strikes occurred at lower altitudes, such as during take-off, climb, approach, or landing-roll.

In 1997, the FAA issued an advisory circular (FAA 1997) that provides guidance on locating land uses having the potential to attract hazardous wildlife (wildlife attractants) to or in the vicinity of public-use airports. Putrescible-waste (i.e., organic waste) disposal operations, wastewater treatment facilities, artificial marshes, and wetlands are considered potential wildlife attractants. The FAA recommends the following minimum distances between these land uses and an airport's aircraft movement areas, loading ramps, or aircraft parking areas:

- Airports serving piston-powered aircraft: 5,000 feet
- Airports serving turbine-powered aircraft: 10,000 feet

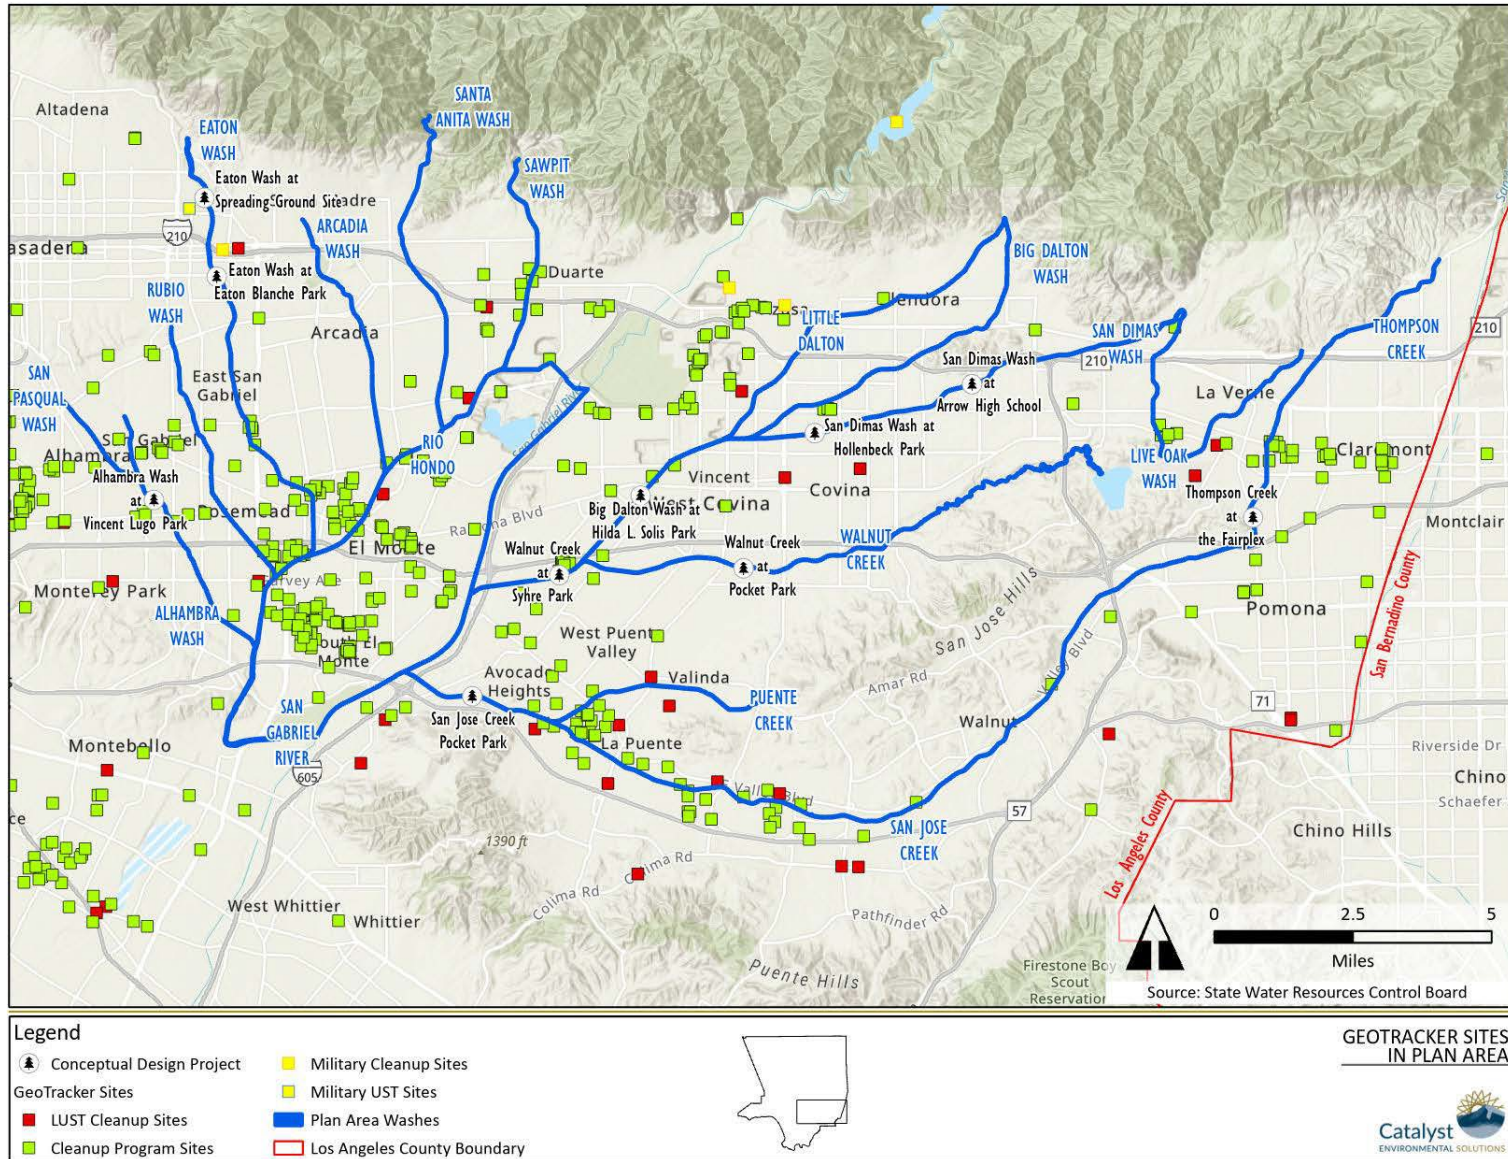

Figure 3.9-1. Active Cleanup Sites and Hazardous Waste Sites in and near the Plan Area.

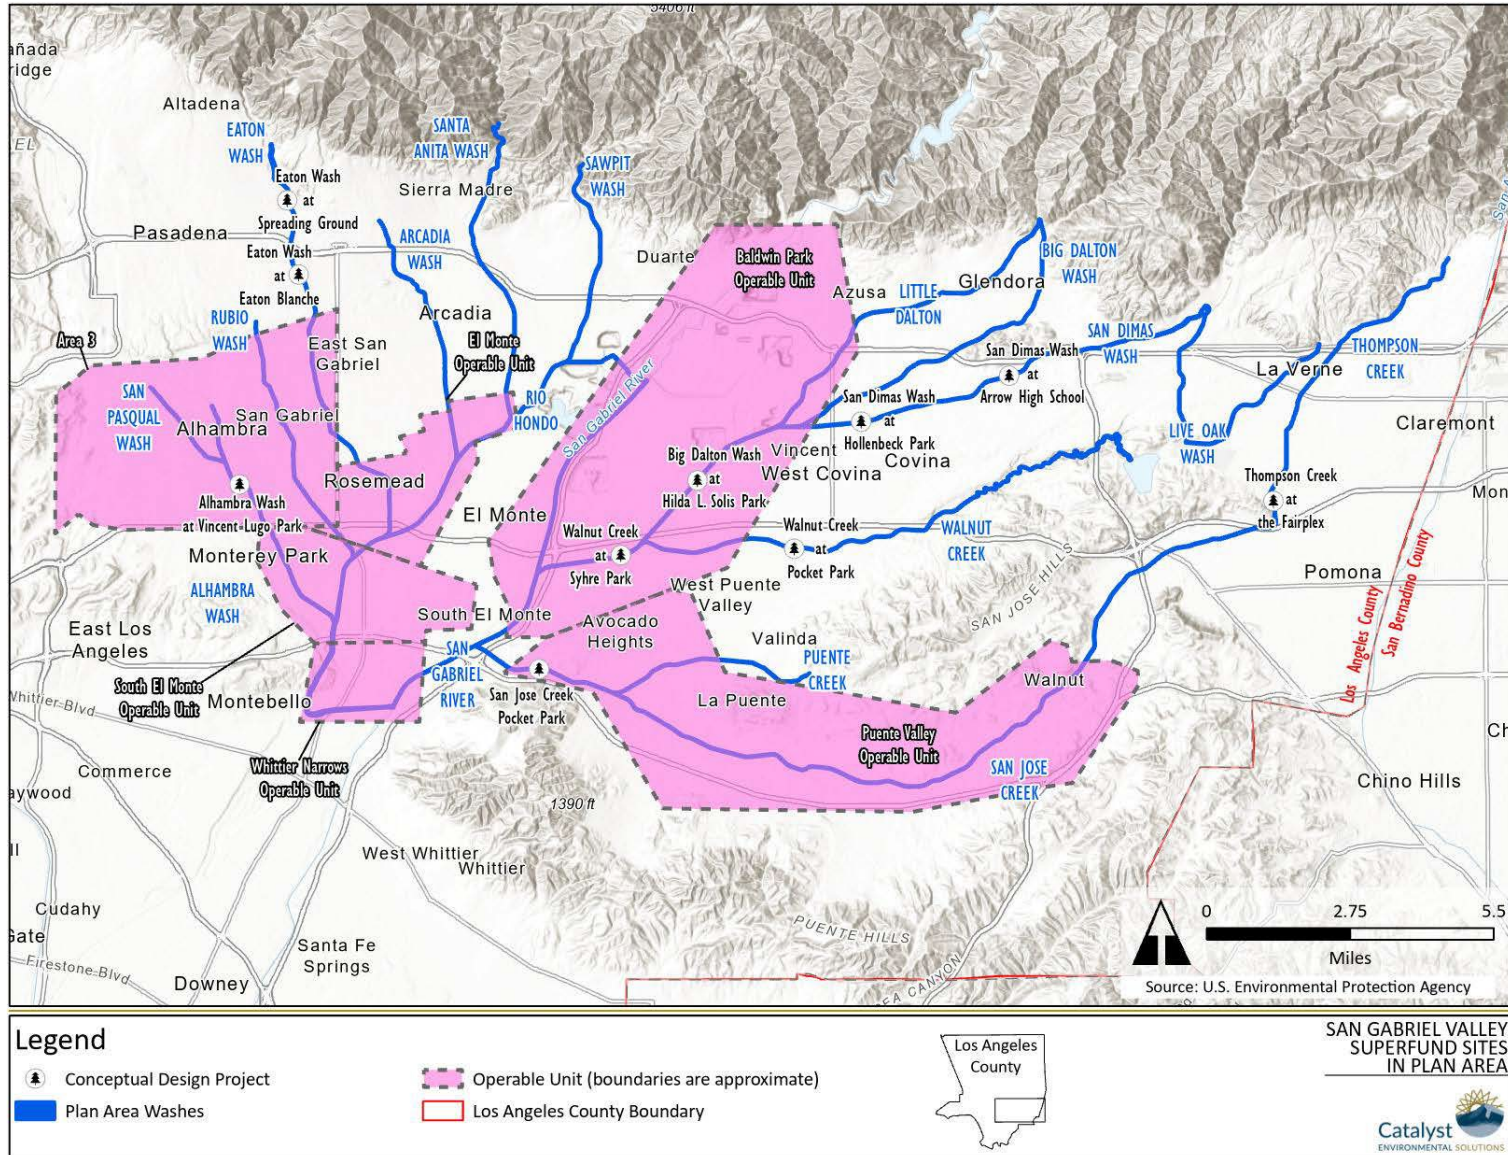

Figure 3.9-2. SGV Superfund Sites.

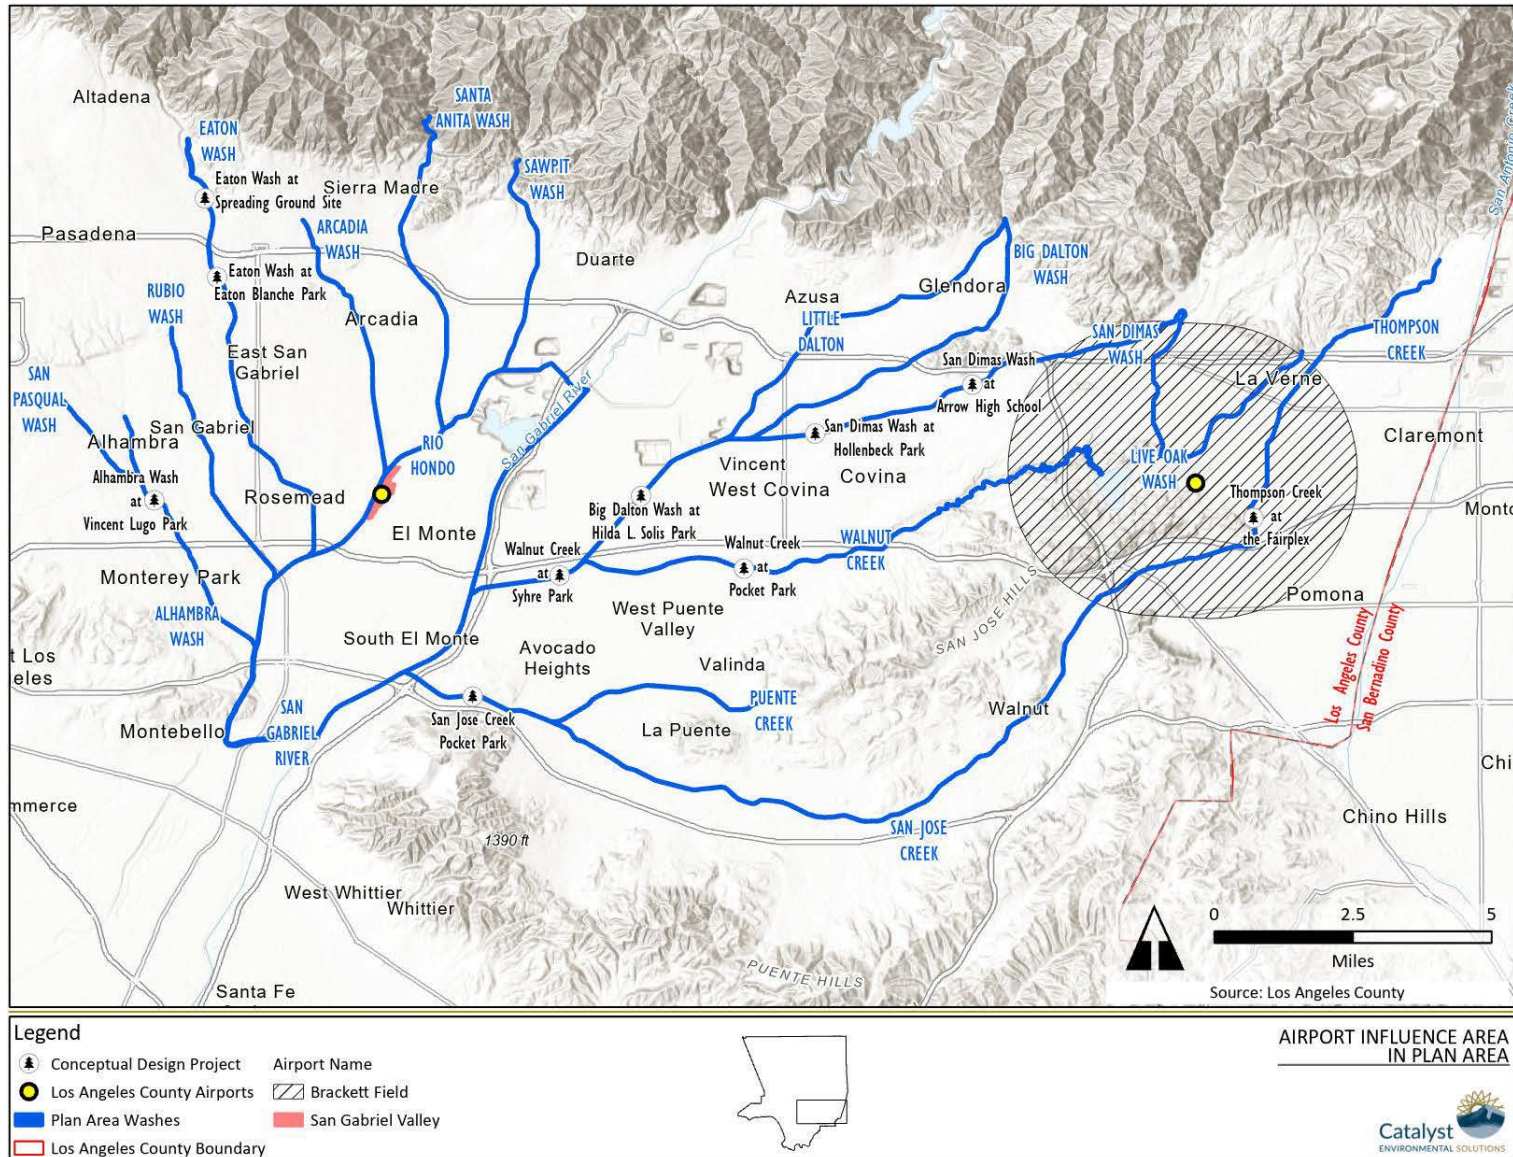

Figure 3.9-3. Airport Influence Areas in the Plan Area.

- Approach or departure airspace: 5 miles, if the wildlife attractant may cause hazardous wildlife movement into or across the approach or departure airspace

USEPA requires any operator proposing a new or expanded waste disposal operation within five statute miles of a runway end to notify the appropriate FAA Regional Airports Division Office and the airport operator of the proposal (40 CFR 258, Criteria for Municipal Solid Waste Landfills, section 258.10, Airport Safety). Although not legally required for other land use changes that do not involve landfills, FAA requests that similar notices be provided if a land use change proposed within the distances listed above has the potential to attract hazardous wildlife. Hazardous wildlife are species of wildlife (birds, mammals, reptiles), including feral and domesticated animals, not under control that may pose a direct hazard to aviation (i.e., strike risk to aircraft) or an indirect hazard such as an attractant to other wildlife that pose a strike hazard or are causing structural damage to airport facilities (e.g., burrowing, nesting, perching). Activities that could attract hazardous wildlife to airport zones of influence could include projects resulting in new or expanded wetlands, projects with poor waste management procedures, or projects that result in odors attractive to wildlife.

3.9.2 Regulatory Setting

3.9.2.1 Federal

3.9.2.1.1 Comprehensive Environmental Response, Compensation, and Liability Act/Superfund Amendments and Reauthorization Act

CERCLA, commonly known as “Superfund,” was enacted by Congress on December 11, 1980, and amended by the Superfund Amendments and Reauthorization Act on October 17, 1986. This law (42 United States Code 103) provides broad federal authority to respond directly to releases or threatened releases of hazardous substances that may endanger public health or the environment. CERCLA establishes requirements concerning closed and abandoned hazardous waste sites, provides for liability of persons responsible for releases of hazardous waste at these sites, and establishes a trust fund to provide for cleanup when no responsible party can be identified. CERCLA also enabled the revision of the National Contingency Plan. This plan (Title 40, CFR, Part 300) provides the guidelines and procedures needed to respond to releases and threatened releases of hazardous substances, pollutants, and/or contaminants. The National Contingency Plan also established the NPL. The NPL is the list of sites of national priority among the known releases or threatened releases of hazardous substances, pollutants, or contaminants throughout the United States and its territories. The NPL is intended primarily to guide the EPA in determining which sites warrant further investigation.

3.9.2.1.2 Solid Waste Disposal Act/Resource Conservation and Recovery Act

The Resource Conservation and Recovery Act (RCRA; (42 U.S.C. Section 6901 et seq.)) is a federal program established to regulate solid and hazardous waste management. RCRA defines solid and hazardous waste; authorizes USEPA to set standards applicable to the owners and operators of hazardous waste treatment, storage and disposal facilities; for hazardous waste generators and transporters, establishes a permit program for hazardous waste treatment, storage, and disposal facilities; and authorizes USEPA to set criteria for disposal facilities that accept municipal solid waste and other solid waste.

3.9.2.1.3 Occupational Safety and Health Act and Occupational Safety and Health Administration Regulations

The Occupational Safety and Health Act of 1970 created the Occupational Safety and Health Administration (OSHA) to ensure worker and workplace safety. The goal was to ensure employers provide their workers a place of employment free from recognized hazards to safety and health, such as exposure to toxic chemicals, excessive noise levels, mechanical dangers, heat or cold stress, or unsanitary conditions.

OSHA develops and enforces mandatory job safety and health standards. These standards, codified in Title 29, Part 1910 of the CFR, include hazardous materials and personal protective equipment and exposure limits for a wide range of hazardous materials. Employers are required to provide personal protective equipment (i.e., protective equipment for eyes, face, or extremities; protective clothing; respiratory devices) to their employees (CFR Title 29, Section 1910.132). The OSHA standards also require that chemical manufacturers, distributors, and importers obtain and develop Safety Data Sheets (SDSs), which include information such as the properties of each chemical; the physical, health, and environmental health hazards; protective measures; and safety precautions for handling, storing, and transporting the chemical. Employers must have an SDS in the workplace for each chemical they use (CFR Title 29, Section 1910.1200).

3.9.2.1.4 Department of Transportation Hazardous Materials Regulations (49 CFR 100–185)

The U.S. Department of Transportation (USDOT) Hazardous Materials regulations cover all aspects of hazardous materials packaging, handling, and transportation. Some of the topics covered include: Parts 107 (Hazard Materials Program), 130 (Oil Spill Prevention and Response), 172 (Emergency Response), 173 (Packaging Requirements), 174 (Rail Transportation), 176 (Vessel Transportation), 177 (Highway Transportation), 178 (Packaging Specifications), and 180 (Packaging Maintenance).

3.9.2.1.5 Federal Aviation Administration Regulations

Federal Regulation Title 14 Part 77 (14 CFR 77) lays out requirements for providing notification to the FAA for construction in proximity to an airport, including the following:

§ 77.9 Construction or alteration requiring notice. If requested by the FAA, or if you propose any of the following types of construction or alteration, you must file notice with the FAA of:

- (a) Any construction or alteration that is more than 200 ft. above ground level at its site.
- (b) Any construction or alteration that exceeds an imaginary surface extending outward and upward at any of the following slopes: 1) 100 to 1 for a horizontal distance of 20,000 ft. from the nearest point of the nearest runway of each airport described in paragraph (d) of this section with its longest runway more than 3,200 ft. in actual length, excluding heliports. (2) 50 to 1 for a horizontal distance of 10,000 ft. from the nearest point of the nearest runway of each airport described in paragraph (d) of this section with its longest runway no more than 3,200 ft. in actual length, excluding heliports. (3) 25 to 1 for a horizontal distance of 5,000 ft. from the nearest point of the nearest landing and takeoff area of each heliport described in paragraph (d) of this section.
- (c) Any highway, railroad, or other traverse way for mobile objects, of a height which, if adjusted upward 17 feet for an Interstate Highway that is part of the National System of Military and Interstate Highways

where overcrossings are designed for a minimum of 17 feet vertical distance, 15 feet for any other public roadway, 10 feet or the height of the highest mobile object that would normally traverse the road, whichever is greater, for a private road, 23 feet for a railroad, and for a waterway or any other traverse way not previously mentioned, an amount equal to the height of the highest mobile object that would normally traverse it, would exceed a standard of paragraph (a) or (b) of this section.

(d) Any construction or alteration on any of the following airports and heliports: (1) A public use airport listed in the Airport/Facility Directory, Alaska Supplement, or Pacific Chart Supplement of the U.S. Government Flight Information Publications; (2) A military airport under construction, or an airport under construction that will be available for public use; (3) An airport operated by a Federal agency or the DOD. (4) An airport or heliport with at least one FAA-approved instrument approach procedure. (e)

You do not need to file notice for construction or alteration of: (1) Any object that will be shielded by existing structures of a permanent and substantial nature or by natural terrain or topographic features of equal or greater height, and will be located in the congested area of a city, town, or settlement where the shielded structure will not adversely affect safety in air navigation; (2) Any air navigation facility, airport visual approach or landing aid, aircraft arresting device, or meteorological device meeting FAA-approved siting criteria or an appropriate military service siting criteria on military airports, the location and height of which are fixed by its functional purpose; (3) Any construction or alteration for which notice is required by any other FAA regulation. (4) Any antenna structure of 20 feet or less in height, except one that would increase the height of another antenna structure.

3.9.2.2 State

3.9.2.2.1 California Health and Safety Code

The State CEQA Guidelines define “extremely hazardous substances” as those defined by Section 25532(2)(g) of the California Health and Safety Code. Appendix A of Part 355 (commencing with Section 355.10) of Subchapter J of Chapter I of Title 40 of the CFR provides a list of extremely hazardous substances and their threshold planning quantities. The full list of extremely hazardous substances is available and updated as needed² (last updated on June 27, 2024).

The State CEQA Guidelines define “hazardous air emissions” as emissions of air contaminants identified as toxic by CARB or the designated air pollution control officer. These include substances identified in Section 44321 (a to f) of the California Health and Safety Code.

3.9.2.2.2 Government Code Section 65962.5: Cortese List

The Cortese List (summarized in Section 3.9.1.1 above) includes all hazardous waste facilities subject to corrective action; land designated as hazardous waste property or border zone property; information received by the DTSC about hazardous waste disposals on public land; sites listed pursuant to Section 25356 of the Health and Safety Code (removal and remedial action sites); and sites included in the Abandoned Site Assessment Program.

² <https://www.ecfr.gov/current/title-40/chapter-I/subchapter-J/part-355/appendix-Appendix%20A%20to%20Part%20355>

3.9.2.2.3 Hazardous Waste Control Act

The Hazardous Waste Control Act established the State hazardous waste management program, which is similar to, but more stringent than, Resource Conservation and Recovery Act program requirements. CCR Title 26 describes the requirements for the proper management of hazardous waste under the Hazardous Waste Control Act, including identification and classification; generation and transportation; design and permitting of recycling, treatment, storage, and disposal facilities; treatment standards; operation of facilities and staff training; and closure of facilities and liability requirements.

These regulations list more than 800 materials that may be hazardous and establish criteria for the identification, packaging, and disposal of such waste. Under the Hazardous Waste Control Act and CCR Title 26, the generator of hazardous waste must document waste from generation to transporter to disposal. Copies of this documentation must be filed with the DTSC. Any hazardous waste generated by projects implemented under the Plan would be disposed of in accordance with these requirements.

3.9.2.2.4 Unified Hazardous Waste and Hazardous Materials Management Regulatory Program

The Unified Hazardous Waste and Hazardous Materials Management Regulatory Program (Unified Program) (California Health and Safety Code, Chapter 6.11, Sections 25404–25404.9) provides authority to the Certified Unified Program Agency (CUPA). The Los Angeles County CUPA is managed by the Los Angeles County Fire Department Health Hazardous Materials Division. The Los Angeles County CUPA has jurisdiction in all unincorporated and incorporated areas unless a municipality is a participating agency or a CUPA. The Unified Program consolidates, coordinates, and makes consistent the administrative requirements, permits, inspections, and enforcement activities of the following hazardous materials programs: Site Mitigation Unit, Hazardous Materials Business Plan (HMBP) Program, California Accidental Release Prevention Program, UST Program, AST Program, Hazardous Waste Generator Program, and Hazardous Waste Tiered-Permitting Program.

3.9.2.2.5 California Labor Code (Division 5, Parts 1, 6, 7, and 7.5)

The California Labor Code includes regulations for the workplace to ensure appropriate training on the use and handling of hazardous materials and operation of equipment and machines that use, store, transport, or dispose of hazardous materials. Division 5, Part 1, Chapter 2.5, requires that employees who are in charge of handling hazardous materials are appropriately trained and informed with respect to the materials they handle. Division 5, Part 7, requires that employees who work with volatile flammable liquids are outfitted with appropriate safety gear and clothing.

3.9.2.2.6 California Code of Regulations, Title 8—Industrial Relations

The California Division of Occupational Safety and Health (Cal OSHA) assumes primary responsibility for developing and enforcing standards for safe workplaces and work practices. These standards would apply to construction activities.

3.9.2.3 Los Angeles County

3.9.2.3.1 Los Angeles County General Plan Goals and Policies

The General Plan Safety Element outlines the following relevant goals and policies to reduce the potential risk of death, injuries, and economic damage resulting from natural and man-made hazards (Los Angeles County Department of Regional Planning 2022):

- Goal S 3: An effective regulatory system that prevents or minimizes personal injury, loss of life, and property damage due to fire hazards.
 - Policy S 3.4: Reduce the risk of wildland fire hazards through the use of regulations and performance standards, such as fire-resistant building materials, vegetation management, fuel modification and other fire hazard reduction programs.
 - Policy S 3.5: Encourage the use of low-volume and well-maintained vegetation that is compatible with the area's natural vegetative habitats.
 - Policy S 3.7: Site and design developments located within FHSZs, such as in areas located near ridgelines and on hilltops, in a sensitive manner to reduce the wildfire risk.
 - Policy S 3.8: Support the retrofitting of existing structures in FHSZs to help reduce the risk of structural and human loss due to wildfire.
 - Policy S 3.11: Support efforts to address unique pest, disease, exotic species and other forest health issues in open space areas to reduce fire hazards and support ecological integrity.
 - Policy S 3.12: Support efforts to incorporate systematic fire protection improvements for open space, including facilitation of safe fire suppression tactics, standards for adequate access for firefighting, fire mitigation planning with landowners and other stakeholders, and water sources for fire suppression.
- Goal S 4: Effective County emergency response management capabilities.
 - Policy S 4.6: Ensure that essential public facilities are maintained during natural disasters, such as flooding.

3.9.2.4 Incorporated Cities Within the Plan Area

The table below presents the policies related to hazards and hazardous material from each of the incorporated cities within the Plan Area that would be applicable to projects implemented under the Plan within the boundaries of any incorporated city.

Table 3.9-2. Applicable Local City Policies Related to Hazards and Hazardous Materials

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
Alhambra	<p>Health and Safety:</p> <p>Goal HS-4 Minimization of injury, loss of life, property damage, and economic and social disruption caused by hazardous materials.</p> <p>Policy HS-4A Prevent and plan for response to hazardous materials releases.</p> <p>Policy HS-4B Encourage and support enforcement of state and federal laws and regulations pertaining to the generation, use, handling, storage, and transport of hazardous materials.</p> <p>Policy HS-4C Encourage and support participation in regional, state, and federal emergency preparedness actions.</p> <p>Policy HS-4D Coordinate as appropriate with the Department of Transportation and the California Highway Patrol to regulate the routing of vehicles carrying potentially hazardous materials along transportation corridors that reduce public exposure to risk.</p> <p>Policy HS-4E Coordinate as appropriate with the Los Angeles County Fire Department Health Hazardous Materials Division to regulate the siting and operation of establishments handling, generating, recycling, and/or disposing of hazardous waste.</p>	<p>Municipal Codes related to Hazards and Hazardous Materials relevant to the Plan Area can be found in Chapter 9.30 (Hazardous Materials Release Response), Section 17.50.33 (Extremely Hazardous Wastes), Section 14.08.160 (Removal of Hazards on Public Property) and Section 16.36.050 (Stormwater Pollution Lid Control Measures). Municipal codes for this city related to Wildfire are located in Table 3.21-1</p> <p>17.50.33 Extremely Hazardous Wastes Any storage, treatment, disposal or transportation of extremely hazardous waste, as defined in Cal. Health & Safety Code § 25115, by the facility owner/operator shall be reported to the Director of Community Development and the Fire Chief at least 48 hours prior to such storage, treatment, disposal or transportation. (Ord. 4499, passed 8-13-07; Am. Ord. 4735, passed 5-14-18)</p> <p>§ 9.30.020 Responsibilities of Administering Agency.</p> <p>In order to effect such implementation, the City Manager shall:</p> <p>(A) Enforce the provisions of the California Hazardous Materials Release Response Plans and Inventory Law; and</p> <p>(B) Prepare supplemental regulations from time to time to facilitate such enforcement; and</p> <p>(C) Set fees for the administration and enforcement of the program, which such fees shall be set pursuant to § 3.14.050 of this code.</p> <p>('86 Code, § 9.30.020) (Ord. 4056, passed - -)</p> <p>14.08.160 Removal of Hazards on Public Property.</p> <p>If, in the opinion of the Superintendent, any tree, shrub or plant mentioned in the preceding section is hazardous to the traveling public or impedes the progress or the vision of the public on any street, park, pleasure ground, boulevard, alley or public place, he may cause the same or such parts thereof as are hazardous or constitute an impediment to be trimmed or removed so as to remedy such conditions.</p> <p>('86 Code, § 14.08.160) (Ord. 2282, passed - -)</p> <p>Section 16.36.050 Stormwater Pollution Lid Control Measures.</p> <p>(B) The site for every planning priority project shall be designed to control pollutants, pollutant loads, and runoff volume to the maximum extent feasible by minimizing impervious surface area and controlling runoff from impervious surfaces through infiltration, evapotranspiration, bioretention and/or rainfall harvest and use.</p>	No other applicable ordinances were identified.
Arcadia	<p>Safety Element:</p> <p>Goal S-6: Comprehensive and effective emergency and disaster response preparedness</p> <p>Policy S-6.1: Coordinate with Los Angeles County, adjacent municipalities, the Federal Emergency Management Agency, and the California Emergency Management Agency in reducing the risk of loss of life, injury, and property damage in the event of an emergency.</p>	<p>Municipal Codes related to Hazards and Hazardous Materials relevant to the Plan Area can be found in Section 9103.13.050 (Hazardous Materials), Chapter 8 (Stormwater Management and Discharge Control), and Section 3214.17 (Amendment to Section 10.16 Vehicles Transporting Hazardous Materials). Municipal codes for this city related to Wildfire are located in Table 3.21-1.</p> <p>Section 9103.13.050 (Hazardous Materials).</p> <p>No existing or proposed use, activity, or process or portion thereof shall discharge from any source whatsoever such quantities of odorous gases or other odorous matter which</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	Policy S-6.3: Maintain an up-to-date Emergency Operations Plan and Natural Hazard Mitigation Plan on a five-year basis to secure adequate federal resources in the event of a disaster.	<p>would cause injury to the public or endanger the comfort, repose, health, and safety of any persons, or would cause or have a natural tendency to cause injury or damage to business or property.</p> <p>Chapter 8. 7823. - BMPs Authorized and Required</p> <p>(4) All hazardous substances and hazardous materials shall be stored in such a manner as to prevent such substances or materials from coming into contact with stormwater or other runoff which discharges into the storm drain system. It is unlawful for any person to dispose of any hazardous waste in any trash container used for municipal trash disposal. (Ord. No. 2325, § 1(Exh. A), 4-7-15)</p> <p>(Stormwater Management and Discharge Control 7820 - Discharges Prohibited/Illicit Discharges.)</p> <p>D. Prohibited discharges or deposits include, but are not limited to, the following:</p> <p>(4) Discharges of untreated runoff from storage areas of materials containing grease, oil or other hazardous substances, and uncovered receptacles containing hazardous materials;</p> <p>(6) Discharge of untreated runoff from the washing of toxic materials from paved or unpaved areas;</p> <p>3214.17. - Section 10.16 Added.</p> <p>To Article X of said Uniform Traffic Ordinance is added Section 10.16 and its subsections as follows:</p> <p>Section 10.16. Vehicles Transporting Hazardous Materials.</p> <p>A vehicle transporting a hazardous material or substance as identified in Title 49 of the Code of Federal Regulations, as amended from time to time, a copy of which is on file with the office of the City Clerk, Arcadia Police Department, and Fire Department, which materials and substances are by this reference incorporated herein, must be attended at all times by its driver or a qualified representative of the motor carrier that operates it, and shall not be parked on any highway, highway shoulder, street, alley, public way or public place, or within 5 feet of the traveled portion thereof, within a residential zone or within 1,000 feet of any school or hospital or within 300 feet of any bridge or tunnel, except for brief periods when mechanical or equipment failure or disablement or malfunction of the vehicle, or the necessities of operation require the vehicle to be parked and make it impractical to park the vehicle in any other place.</p>	
Azusa	<p>Economy and Community Element</p> <p>Goal 2: Ensure adequate protection from fire and medical emergencies for Azusa residents and property owners.</p> <p>The Build Environment Element</p> <p>Goal 8: Preserve and provide open spaces for city’s residents that provide visual amenity, recreational opportunities, protect environmental resources, and protect the population from natural hazards.</p> <p>Natural Environment Element:</p> <p>Goal 1: Ensure the continued functioning of essential (critical, sensitive and high-occupancy) facilities following a disaster; help prevent loss of life from the failure of critical and sensitive facilities in an earthquake; and help prevent major problems for post-disaster response, such as difficult or hazardous evacuations or rescues, numerous injuries, and major cleanup or decontamination of hazardous materials.</p>	<p>Municipal Codes related to Hazards and Hazardous Materials relevant to the Plan Area can be found in Chapter 30 Fire Prevention and Protection, Chapter 60 Stormwater and Urban Runoff Pollution Prevention Section 60-9 (Stormwater and Runoff Pollution Mitigation for Construction Activity.), Section 60-12 (Public Facility Sources required to obtain a NPDES Permit) and Article 4 Article 4 (Hazardous Wate or Substance Spills, Releases, and Other Incidents). Municipal codes for this city related to Wildfire are located in Table 3.20-1.</p> <p>Chapter 30 Fire Prevention and Protection Section 30-36. (Adoption) adopts the following:</p> <p>Subject to the changes and amendments as may be set forth in this article, that certain code entitled "2017 Los Angeles County Fire Code" has been filed in the office of the city clerk, which is referred to and by this reference expressly incorporated in this article, is adopted and by reference made a part of this article as fully and for all intents and purposes as though set forth in this article at length. If there is any inconsistency between any provisions of such Fire Code and other provisions of this Municipal Code, such other provisions of this Municipal Code shall prevail.</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>(Code 1971, § 15.28.010; Ord. No. 08-011, § 1, 1-17-08; Ord. No. 11-07, § 1, 6-6-11; Ord. No. 14-02, § 1, 6-16-14; Ord. No. 2017-01 , §§ 1, 2, 4-17-17)</p> <p>Chapter 60 (Stormwater and Urban Runoff Pollution Prevention) Section 60-9 (Stormwater and Runoff Pollution Mitigation for Construction Activity.) applies to all construction activities as follows:</p> <p>No person shall commence any construction activity for which a permit is required by this Code without implementing all stormwater and runoff pollution mitigation measures required by such permit. (Ord. No. 04-02, § 2, 2-2-04)</p> <p>Sec. 60-12. - Public facility sources required to obtain a NPDES permit.</p> <p>Any public facility required to have an NPDES permit shall retain on-site and, upon request, make immediately available to the city the following documents as evidence of compliance with permit requirements, as applicable:</p> <p>(1) A copy of the NPDES permit or notice of intent to comply with a general permit to discharge stormwater associated with industrial activity as submitted to the state board or report of waste discharge as submitted to the regional board;</p> <p>(2) A waste discharge identification number issued by the state board or copy of the NPDES permit issued by the regional board;</p> <p>(3) A SWPPP and a monitoring program plan or group monitoring plan;</p> <p>(4) Stormwater quality data; and</p> <p>(5) Evidence of facility self-inspection.</p> <p>(Ord. No. 04-02, § 2, 2-2-04)</p> <p>Article 4 (Hazardous Wate or Substance Spills, Releases, and Other Incidents) Section 34-164. (Liability for Unauthorized Disposal or Release) determines that if the city takes any corrective action which, in the judgment of the city manager, is reasonably necessary to remedy or prevent an imminent substantial danger to the public health, domestic livestock, wildlife or the environment arising out of any unauthorized disposal or release of any hazardous waste or substance, the following persons shall be jointly and severally liable to the city for the cost incurred by it in taking any such corrective action:</p> <p>(1) The person whose negligent or willful act or omission proximately caused such disposal or release;</p> <p>(2) The person who owned or had custody or control of the hazardous waste or substance at the time of such disposal or release, without regard to fault or proximate cause; and</p> <p>(3) The person who owned or had custody or control of the container which held such hazardous waste or substance at the time of or immediately prior to such disposal or release, without regard to fault or proximate cause.</p> <p>(Code 1971, § 12.60.040; Ord. No. 98-09, § 2, 6-15-98)</p>	
Baldwin Park	<p>Health and Sustainability Element:</p> <p>Policy 19.02: Minimize residents’ exposure to the harmful effects of hazardous materials and waste.</p> <p>Public Safety Element</p> <p>Goal 3.0. Reduce accidents and health risks associated with use, storage, handling, and disposal of hazardous materials.</p>	<p>Municipal Codes related to Hazards and Hazardous Materials relevant to the Plan Area can be found in Section 153.140.030 (Hazardous Materials and Wastes) Chapter 150 Part 20. (Adoption of the California Fire Code with Los Angeles) and Section 52.13 (Control of Pollutants from New Developments/ Redevelopment Projects.). Municipal codes for this city related to Wildfire are located in Table 3.21-1.</p> <p>153.140.030 Hazardous Materials and Wastes is a subsection of the Performance standards established to minimize public hazards and other issues which are applicable to</p>	<p>The Baldwin Park Multi-hazard Functional Plan (1996) and supplemental plans outline emergency response actions in the event of a hazardous waste emergency. The Plans identify responsible agencies and personnel to provide assistance in the event of a hazardous incident.</p>

Covina	<p>Safety Element:</p> <p>Policy Area 4C. Continue to contract with the Los Angeles County Fire Department, Hazardous Materials Division 1) to administer various State-required monitoring activities and permitting processes regarding the utilization, storage, and transportation of hazardous materials and 2) to respond to major above- and below-ground as well as transport-related hazardous materials accidents.</p> <p>Policy Area 4fff. Support the efforts of all Federal, State, and Los Angeles County agencies involved in matters pertaining to the Los Angeles County Hazardous Waste Management Plan (HWMP) process.</p>	<p>Municipal Codes related to Hazards and Hazardous Materials relevant to the Plan Area can be found in Section 14.12.010 (2022 California Fire Code adoption by reference.), Section 10.32.250 (Vehicles transporting hazardous materials) and Section 8.50.060 (BMPs and permits authorized and required). Municipal codes for this city related to Wildfire are located in Table 3.21-1.</p> <p>Section 14.12.010 (2022 California Fire Code adoption by reference.)</p> <p>The city adopts the 2022 California Fire Code. Said code shall be and become the Covina fire code.</p> <p>One copy of said code is on file in the office of the city clerk, and is hereby referred to, adopted, and made a part hereof as if fully set out in this chapter. (Ord. 22-19 § 11, 2022; Ord. 19-10 § 10, 2019; Ord. 17-19 § 1, 2018; Ord. 13-2027 § 7, 2013; Ord. 10-1990 § 7, 2010; Ord. 07-1947 § 2, 2007.)</p> <p>10.32.250 Vehicles transporting hazardous materials – Parking restrictions.</p> <p>A. For purposes of this section:</p> <p>1. A motor vehicle is attended when the person in charge of the vehicle is in the vehicle, awake, and not in a sleeper berth, or is within 100 feet of the vehicle and has it within his or her unobstructed field of view.</p> <p>2. A qualified representative of a motor carrier is a person who:</p> <p>a. Has been designated by the carrier to attend the vehicle;</p> <p>b. Is aware of the nature of the hazardous material or substance contained in the vehicle he or she attends;</p> <p>c. Has been instructed on the procedures he or she must follow in emergencies concerning hazardous materials or substances contained in the vehicle he or she attends;</p> <p>d. Is authorized to move the vehicle and has the means and ability to do so.</p> <p>B. A vehicle transporting a hazardous material or substance as identified in Title 49 of the Code of Federal Regulations must be attended at all times by its driver or qualified representative of the motor carrier that operates it, and shall not be parked on any highway, highway shoulder or public place, or within five feet of the traveled portion</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>thereof, within a residential zone, or within 1,000 feet of any school, hospital or water utility reservoir site, or within 300 feet of any bridge, except for brief periods of time when mechanical or equipment failure or malfunction of the vehicle, or the necessities of operation, require the vehicle to be parked and make it impractical to park the vehicle in any other place.</p> <p>D. The rules of this section do not relieve the driver from any obligation imposed by federal, state or local laws relating to the transportation of hazardous materials or explosives, motor carrier safety regulations, or the placement of warning signs or devices when a motor vehicle is stopped on a public highway. (Ord. 11-2002 § 26, 2011.)</p> <p>8.50.060 BMPs and permits authorized and required. 12. In areas exposed to storm water, the use of best management practices (including but not limited to the practices set forth in subsections (D)(1) through (11) of this section) and/or removal and lawful disposal of all fuels, chemicals, fuel and chemical wastes, animal wastes, garbage, batteries, and other materials which have potential adverse impacts on water quality shall be required. Treatment control best management practices must be properly operated and maintained to prevent the breeding of vectors.</p>	
El Monte	<p>Public Health and Safety Element:</p> <p>PSF-3.2 Hazardous Materials. Ensure that hazardous materials and waste are recycled and disposed of in a manner that is safe for the environment, residents, and visitors in El Monte.</p> <p>Goal PHS-5 A safe and healthy environment that minimizes the public health risks and threats posed by hazardous materials and wastes.</p> <p>Goal PHS-7 Proper planning for the threat of manmade and natural hazards so as to minimize, to the greatest extent possible, the risk to life, limb, property, and essential facilities through emergency preparedness, recovery, and response.</p>	<p>Municipal Codes related to Hazards and Hazardous Materials relevant to the Plan Area can be found in Section 17.50.100 (Hazardous Materials), Section 15.34.010 (Adoption of the 2020 Los Angeles County Fire Code), Section 8.20.263 – (Mandatory C&D reporting requirement) and Chapter 8.24 - Hazardous Materials Section 8.24.010 (Liability for cleanup costs). Municipal codes for this city related to Wildfire are located in Table 3.21-1.</p> <p>17.50.100 - Hazardous materials.</p> <p>A. Required Entitlements. A conditional use permit is required for the storage of hazardous materials in conjunction with an on-site primary use in the Light Manufacturing (M-1) and General Manufacturing (M-2) zoning districts. B. Reporting Requirements. All businesses required by state law (per Chapter 6.95 of the California Health and Safety Code) to prepare hazardous materials release response plans shall submit copies of these plans, including any revisions, to the Community Development Director.</p> <p>E. Any other use, handling, storage and distribution of hazardous materials shall comply with the applicable provisions of the California Hazardous Materials Regulations and the California Fire and Building Codes, as well as the laws and regulations of the California Department of Toxic Substances Control. Activities, processes, and uses shall not generate or emit any fissionable or radioactive materials into the atmosphere, a sewage system, or into the ground.</p> <p>(Ord. No. 3011 , § 3(Exh. B), 6-21-2022)</p> <p>Chapter 15.34 - Fire Code</p> <p>15.34.010 - Adoption of the 2020 Los Angeles County Fire Code.</p> <p>A. Title 32 of the 2020 Los Angeles County Fire Code as amended and adopted by the Los Angeles County Board of Supervisors on January 24, 2017 and in effect on March 1, 2017, adopting the 2019 California Fire Code is hereby incorporated herein by reference as if fully set forth below. For purposes of this chapter 15.34, the 2020 Los Angeles County Fire Code, as adopted, may be referred to as the "El Monte Fire Code" or the "Code." B. In the event of any conflict between the 2019 California Fire Code and the 2020 Los Angeles County Fire Code, the latter shall control. C. A copy of the 2020 Los Angeles County Fire Code has been deposited in the office of the city of El Monte Building Division and shall be maintained for examination and use by the public. D. The purpose of the Code is to provide</p>	No other applicable ordinances were identified.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
		<p>minimum standards to safeguard the life, limb, health, property, and public welfare within the city of El Monte.</p> <p>(Ord. No. 3011 , § 3(Exh. A), 6-21-2022)</p> <p>8.20.263 - Mandatory C&D reporting requirements.</p> <p>5.If the covered project contains contamination by hazardous contaminants, hazardous substances, hazardous waste, medical waste or radioactive waste, the applicant shall be required to provide documentation demonstrating and evidencing the pre-existence and/or prior occurrence of such contaminants through no fault of the applicant. The applicant shall also provide receipts, or other like documentation from the facility that received the contaminants as well as the actual weight of contaminants accepted; (Ord. 2701 § 3 (part), 2007) (Ord. No. 2908, § 4, 1-24-2017)</p> <p>Chapter 8.24 - Hazardous Materials Section 8.24.010 (Liability for cleanup costs)</p> <p>Any person or business causing an unauthorized release of any hazardous material which requires the city to expend public funds for the cleanup or removal of such hazardous material shall be civilly liable to the city for all costs incurred by the city for such cleanup and removal. The city shall provide such person who may be civilly liable to the city hereunder with a written account and invoice of the costs incurred by the city and such person or business shall pay such amount to the City Fire Marshal within thirty (30) days following transmittal of such invoice. In the event that an action may thereafter be initiated by the city to collect any sum which is owed to the city hereunder, the judgment in such action may include reasonable attorneys' fees of the city incurred in connection with such collection. There is established a "City of El Monte Hazardous Materials Civil Liability Cleanup and Reimbursement Fund" and all sums which may hereafter be collected by the City Fire Marshal under this section shall be deposited into such fund. The balance of said fund shall be used and applied by the City Fire Chief for the purchase of specialized equipment, including data processing equipment, which will aid the City Fire Department in ensuring the safety of the public from the unauthorized disposal or storage of hazardous materials, or from fires which may involve such materials.</p> <p>(Prior code § 3921)</p>	
Glendora	<p>Safety Element:</p> <p>Goal SAF-2 Reduced incident of damage to life and property from wildland fires.</p> <p>Policy SAF-2.1 Require all proposed developments to prove that the development can adequately be served by fire flows.</p> <p>Policy SAF-2.2 Maintain low density/intensity land use designations in the hillside areas.</p> <p>Policy SAF-2.3 Require fire resistant building materials for structures in the hillside areas.</p> <p>Policy SAF-2.4 Require proposed developments to comply with access requirements of the Los Angeles County Fire Department and Glendora Police Department.</p> <p>Policy SAF-2.5 Continue to implement brush-clearance requirements in areas subject to wildland fire hazards</p> <p>Policy SAF-2.6 Evaluate all new development to be located in or adjacent to wildland areas to assess its vulnerability to fire and its potential as a source of fire.</p>	<p>Municipal Codes related to Hazards and Hazardous Materials relevant to the Plan Area can be found in Section 21.03.040 (Hazardous materials) and Chapter 18.04 California Fire Code Section 18.04.010 (Adopted by reference) Municipal codes for this city related to Wildfire are located in Table 3.21-1.</p> <p>§ 21.03.040 - Hazardous materials.</p> <p>B. Conditional Use Permit Required. An establishment using more than five hundred pounds or fifty-five gallons of hazardous materials or two hundred cubic feet of compressed gas in the aggregate at any one time shall obtain a conditional use permit as delineated in Section 21.02.020 of this title. Hazardous materials contained solely in a consumer product for direct sale or distribution to, and use by, the general public are exempted from the provisions of this subsection.</p> <p>(Ord. 1618 § 1 Exh. A, 1993)</p> <p>Chapter 18.04 California Fire Code Section 18.04.010 (Adopted by reference).</p> <p>The city adopts by reference the California Fire Code, 2022 Edition, which contains substantial copyrighted material from the 2021 International Fire Code, which is copyrighted work owned by the International Code Council, Inc.; and said code, including the Appendix Dhapters 4, B, BB, C, CC, and H, is adopted in total as the law of the city. One</p>	<p>The City of Glendora is preparing an update to the General Plan Safety Element and Local Hazard Mitigation Plan (LHMP). The project will address Federal and State requirements to identify hazards and vulnerabilities associated with natural disasters and develop long-term strategies for protecting people and property from future hazard events.</p> <p>Hazard mitigation is the implementation of sustained actions to reduce or eliminate long-term risk to people and property from natural or human-caused hazards and their effects. Mitigation planning is the collaborative process of determining what actions are appropriate and responsive to local conditions. Consistent with Federal and State requirements and in line with the priorities of the California Office of Emergency Services (Cal OES) and the Federal Emergency Management Agency (FEMA), the mitigation planning process will be documented in a new LHMP that contributes to achieving the following objectives:</p> <ul style="list-style-type: none">– Protection of public safety and prevention of loss of life and injury.– Reduction of harm to existing and future development.– Prevention of damage to unique economic, cultural, and environmental assets.– Minimization of operational downtime and acceleration of restoration of government and business after disasters.

Incorporated City	General Plan Goals and Policies	Applicable Sections of Municipal Code	Other Applicable Ordinances
	<p>Policy SAF-9.4 Require new developments to incorporate appropriate development features and project mitigation measures that avoid natural and man-made hazards.</p> <p>Goal SAF-14 Safe transport, use, storage and disposal of toxic and/or hazardous materials.</p> <p>Policy SAF-14.3 Enforce Federal, State, and local laws and regulations relating to the use, storage, transport and cleanup of toxic, explosive and other hazardous materials to prevent unauthorized discharges.</p> <p>Policy CON-4.3 Incorporate project-level stormwater mitigation measures to reduce potential impacts to water quality and ensure mitigation measures are adequately monitored.</p>	<p>copy of the code has been, and is now, filed in the office of the building official, and the code is adopted by reference as if incorporated and set out in full in this chapter.</p> <p>(Ord. 2074 § 1, 2022)</p>	<ul style="list-style-type: none">– Reduction of disaster response and recovery costs and exposure to risk for first responders.– Accomplishment of other community objectives, such as leveraging capital improvements, infrastructure protection, open space preservation, and economic resiliency.– Reduction of exposure for public assets.– Assistance to the public in becoming more aware of local hazards and their implications.– Presentation of information to enhance eligibility for Federal and State funding programs.– Alignment with other planning initiatives.– Identification of targeted capital improvements focused on risk reduction. <p>To advance these objectives, the LHMP will identify a combination of physical improvements and emergency management activities that serve to mitigate the impacts of locally relevant hazards. Recognizing that successful mitigation planning efforts must be communicated and understood by the public, the City will include opportunities for local stakeholder participation and input, including through the use of GIS technology to map and update the hazard information for each hazard profiled.</p>
Industry	<p>Safety Element</p> <p>Goal S4: Reduced potential for hazardous materials exposure and contamination.</p> <p>Policy S4-1: Coordinate with the LACFD to identify and enforce disclosure laws that require all users, producers, and transporters of hazardous materials and wastes to clearly identify the materials that they store, use or transport.</p> <p>Policy S4-2: Require that the users of hazardous materials be adequately prepared to prevent and mitigate hazardous materials releases.</p> <p>Policy S4-3: Discourage new sensitive land uses from locating near existing sites that use, store, or generate large quantities of hazardous materials.</p> <p>Resource Management Element</p> <p>Policy RM4-2 Prohibit the disposal of hazardous and electronic waste into the municipal waste stream.</p>	<p>Municipal Codes related to Hazards and Hazardous Materials relevant to the Plan Area can be found in Section 13.16.060 (Spills, dumping and disposal prohibited.) and Section 15.28.010 (Adoption of fire code). Municipal codes for this city related to Wildfire are located in Table 3.21-1.</p> <p>Section 15.28.010 (Adoption of fire code)</p> <p>The Los Angeles County Fire Code, codified as Title 32 of the Los Angeles County Code, as such code may be amended from time to time, except as hereinafter amended by this chapter, is adopted by reference as the fire code of the city. (Ord. 680 § 8, 2002; Ord. 527 § 1, 1986; Ord. 304 § 1, 1969)</p> <p>13.16.060 Spills, dumping and disposal prohibited.</p> <p>A. No person may dump, deposit, release, spill, leak, pump, pour, emit, empty, discharge, inject, bury or dispose into the environment any solid waste or liquid waste, including any pollutant, in or upon any part of the MS4, or upon any public or private premises in the city, or to cause or permit any solid waste or liquid waste or other pollutant to come to be located upon, in, on or under any premises in the city, except in an authorized or permitted solid waste container or at an authorized or permitted solid waste facility or publicly owned or privately owned treatment works.</p>	<p>No other applicable ordinances were identified.</p>
Irwindale	<p>Public Safety Element</p> <p>Major Issue Area: The City’s commitment to emergency preparedness as a means to respond to disasters resulting from earthquakes, hazardous materials incidents, and other natural and manmade hazards;</p> <p>Safety Element Policy 2: The City of Irwindale, at a minimum, will maintain current emergency response standards.</p>	<p>Municipal Codes related to Hazards and Hazardous Materials relevant to the Plan Area can be found in Title 8 Chapter 8.20 Solid Waste Collection and Salvage of Recycled Materials. Chapter 8.28 (Storm water and Urban Runoff Pollution).</p> <p>As described in Section 8.20.190 (Use of trucks),any person who desires to operate privately owned vehicles for transportation of solid waste, medical waste, hazardous waste and/or recyclable material under the provisions of this chapter shall utilize vehicles which are reasonably watertight and are provided with a tight cover to the reasonable satisfaction of the city manager. The city manager shall require the permittee to remove from service or repair those vehicles that allow or permit offensive odors to escape and/or material to be blown, dropped or spilled therefrom. Municipal codes for this city related to Wildfire are located in Table 3.21-1.</p>	<p>No other applicable ordinances were identified.</p>

Municipal codes for this city related to Wildfire are located in Table 3.21-1.</p> <p>Section 13.50.130 (Notification of uncontrolled discharges required.)</p> <p>A. In the event or discovery of an uncontrolled discharge to the storm drain system, the discharger shall immediately notify the public works department by telephone. If the uncontrolled discharge may be considered hazardous material, hazardous substance or hazardous waste, the discharger shall immediately notify the fire department in addition to the public works department. The notification shall include location of the discharge, type of materials discharged, estimated concentration and volume of the discharge and corrective actions taken to contain or minimize the effects of the discharge.</p> <p>B. Within 10 calendar days from the first discovery of the uncontrolled discharge, the discharger shall submit to the director of public works a detailed, written report describing the cause of the discharge, corrective action taken, measures to be taken to prevent future occurrences, and measures taken to remediate the effects of the discharge. Such notification shall not relieve the discharger of liability or fines incurred as a result of the uncontrolled discharge. (Ord. 964 § 1, 2002)</p> <p>Section 15.32.010 (Fire code adopted by reference.)</p> <p>With the exception of the additions, deletions and amendments set forth in this chapter, Part 9 of Title 24 of the California Code of Regulations, comprising the California Fire Code 2022 Edition, which incorporates and amends the International Fire Code 2021 Edition, published by the International Code Council, including Appendices Chapters 4, B, C, D, and I, and the International Fire Code standards, is hereby adopted by reference as the fire code of the city of La Verne.</p> <p>A copy of such code is now on file in the office of the city clerk. 		<p>which is subject to, and in compliance with, the requirements of Cal. Veh. Code §§ 2453 and 23112.5.</p> <p>('65 Code, § 4-4.304) (Ord. 461-C.S., passed 12-5-95; Am. Ord. 575-C.S., passed 11-20-07; Am. Ord. 587 C.S., passed 12-7-10)</p> <p>Section 53.12 (Control Of Pollutants From New Developments/ Redevelopment Projects.)</p> <p>(A) Prior to the construction of a new development or redevelopment project, the subject project shall be evaluated for its potential to discharge pollutants to the MS4, based on its intended land use and other considerations. Such evaluation shall be conducted in accordance with development planning requirements established by the Regional Board or its Executive Officer, pursuant to the municipal NPDES permit, as specified in the city's Stormwater Quality Management Program, including any revisions made thereto.</p> <p>(B) Once a development or redevelopment project has been evaluated for its potential to discharge pollutants to the MS4, the city shall require appropriate BMPs to be installed during construction for implementation following project completion. The prescription of such BMPs shall be in keeping with development planning requirements established by the Regional Board or its Executive Officer, pursuant to the municipal NPDES permit, as described more particularly in the city's Stormwater Quality Management Program.</p>	
San Marino	<p>Safety Element:</p> <p>Objective S.10 Plan for and eliminate, to the extent possible, local hazards that pose a threat to persons’ safety, or may disrupt responses to emergencies.</p> <p>Policy: Plan for deployment of staff to divert public around hazards in the right-of-way caused by natural disasters and accidents, such as flooded areas, downed power lines, water and gas leaks, hazardous materials spills, etc.</p> <p>Natural Resources Element:</p> <p>Objective NR.11 Ensure that toxic and hazardous wastes are disposed of properly.</p> <p>Objective NR.13 Comply with National Pollutant Discharge Elimination System (NPDES).</p> <p>Policy: Control pollutants in surface run-off as appropriate.</p> <p>Objective NR.16 Protect vegetation in hazard zones.</p>	<p>Municipal Codes related to Hazards and Hazardous Materials relevant to the Plan Area can be found in Chapter 14 (Miscellaneous) Article 12 (Stormwater Management and Discharge Control), Chapter 25 (Uniform Codes), Municipal codes for this city related to Wildfire are located in Table 3.21-1.</p> <p>Under Article 12 (Stormwater Management and Discharge Control) 14.12.04: Prohibited Activities states that no person shall commence, establish, use, maintain, or continue any illicit connections to the MS4 or any illicit discharges to the MS4. This prohibition against illicit connections applies to the use, maintenance, or continuation of any illicit connection, whether that connection was established prior to, or after the effective date of this article. This includes:</p> <p>4. Discharges of runoff to the MS4 from storage areas of materials containing grease, oil, or other hazardous substances, and uncovered receptacles containing hazardous materials;</p> <p>Section 14.12.07: Requirements for Industrial/Commercial and Construction Activities:</p> <p>A. Each industrial discharger, discharger associated with construction activity, or other discharger described in any general NPDES permit addressing such discharges, as may be issued by the U.S. environmental protection agency, the state water resources control board, or the regional board, shall comply with all requirements of such permit and the provisions of this article. Each discharger identified in an individual NPDES permit shall comply with and undertake all activities required by such permit. Proof of compliance with any such NPDES permit may be required in a form acceptable to the authorized enforcement officer, or designated representative, prior to the issuance of any grading, building or occupancy permits, or any other type of permit or license issued by the city.</p> <p>B. Non stormwater discharges to the MS4 from industrial, commercial, or construction activities in violation of any applicable NPDES permit or the provisions of this article are prohibited.</p> <p>C. Industrial and commercial dischargers and dischargers associated with construction activities shall implement effective BMPs, including source control BMPs, in accordance with table 10 of part VI.D.6.f of the municipal NPDES permit unless a particular pollutant generating activity does not occur on a facility's site. (Ord. 0-15-1290, 5-29-2015)</p>	No other applicable ordinances were identified.

		<p>Section 25.12.01: Fire Code Adopted:</p> <p>Except as hereinafter provided, the 2022 California Fire Code, including all appendices with errata, based on the 2021 International Fire Code, is hereby adopted by reference and incorporated herein as though fully set forth herein and shall constitute the Fire Code of the City. A copy of such code shall be located in the Planning and Building Department and shall be, at all times, maintained by the Planning and Building Department for use and examination by the public. For the purpose of this code, the Planning and Building Director shall be the building official.</p> <p>(Ord. 0-19-1357, 11-13-2019; amd. Ord. O-22-1400, 1-11-2023)</p>	
South El Monte	<p>Public Health, Safety, and Environment Element:</p> <p>Policy 2.3: Limit the Potential Hazards from the Transportation and Disposal of Hazardous Waste. Policy 2.4: Support Remediation and Pollution Prevent Efforts that Arise from Industrial, Roadway, and Household Sources.</p> <p>Action 2.4c: Limit diesel truck idling, including construction and transit vehicles, within 100 feet of schools, parks, and residences.</p>	<p>Municipal Codes related to Hazards and Hazardous Materials relevant to the Plan Area can be found in Chapter 8.32 Hazardous Materials, Chapter 8.44 (Stormwater Management And Discharge Control), Chapter 15.14 (Fire Code)</p> <p>Chapter 8.32 (Hazardous Materials) Section 8.32.010 (Depositing Dangerous materials Cleanup or abatement – liability) require the following:</p> <p>A. Any person who intentionally or negligently causes the deposit of dangerous or hazardous materials on any city property, including street or sidewalk, shall be liable for the payment of all costs incurred by the city necessary to clean up such materials. The remedy provided by this section shall be in addition to any other remedies provided by law.</p> <p>B. For purposes of this section, "dangerous and hazardous materials" are defined as any substances or materials in a quantity or form which pose an unreasonable and imminent risk to the life, health or safety of persons or property, including any street or sidewalk, or to the ecological balance of the environment, and shall include, but not be limited to, such substances as explosives, radioactive materials, petroleum or petroleum products or gases, poisons, biologic agents, flammables, corrosives, trash, debris and glass.</p> <p>C. For purposes of this section, costs incurred by the city shall include, but shall not necessarily be limited to, the following: Actual labor costs of city personnel, including worker's compensation benefits, fringe benefits, administrative overhead; cost of equipment operation, cost of materials obtained directly by the city and cost of any contract labor and materials.</p> <p>(Prior code §5-35-1; Ord. 779 §1, 1986)</p> <p>Chapter 8.44 (Stormwater Management And Discharge Control) 8.44.070 Prohibited activities.</p> <p>Determines that the following nonstormwater discharges into the MS4 are prohibited unless in compliance with a separate NPDES permit or pursuant to a discharge exemption by the regional board, the Regional Board's executive officer, or the State Water Resources Control Board:</p> <p>3. To the maximum extent practicable, discharges to the MS4 from areas where repair of machinery and equipment, including motor vehicles, which are visibly leaking oil, fluid or antifreeze, is undertaken;</p> <p>4. Discharges of untreated runoff to the MS4 from storage areas of materials containing grease, oil, or other hazardous substances, and uncovered receptacles containing hazardous materials;</p> <p>6. Discharges of untreated runoff from the washing of toxic materials from paved or unpaved areas to the MS4; provided, however, that nonindustrial and noncommercial</p>	<p>No other applicable ordinances were identified.</p>
