NOTES AND ABBREVIATIONS:
Detected VOCs and SVOCs are shown.
mg/kg = milligrams per kilogram.
The total PCB concentration was calculated as the addition of detected concentrations of Aroclor 1242, 1254, and 1260 for each sample and these total PCB concentrations were then used to derive the 95% Upper Confidence Limit concentration of the mean which was used as the exposure point concentration (presented in the table above and in the Appendix D risk assessment calculations as Aroclor 1254).

NOTES AND ABBREVIATIONS:

Detected VOCs and SVOCs are shown.

mg/kg = milligrams per kilogram.

The total PCB concentration was calculated as the addition of detected concentrations of Aroclor 1242, 1254, and 1260 for each sample and these total PCB concentrations were then used to derive the 95% Upper Confidence Limit concentration of the mean which was used as the exposure point concentration (presented in the table above and in the Appendix D risk assessment calculations as Aroclor 1254).

Notes:
Volatile Organic Compounds (VOCs) analyzed by EPA Method TO-15.
BOLD = concentration detected at or above reported detection limit.
< = analyte not detected above the indicated reporting limit.
- = not analyzed or not applicable.
µg/m3 = micrograms per cubic meter.

Notes:

Volatile Organic Compounds (VOCs) analyzed by EPA Method TO-15.

BOLD = concentration detected at or above reported detection limit.

< = analyte not detected above the indicated reporting limit.

- = not analyzed or not applicable.

µg/m3 = micrograms per cubic meter.

Notes and Abbreviations:
BOLD = concentration detected at or above reported detection limit.
Detected VOCs and SVOCs are shown.
< = analyte not detected above the indicated reporting limit.
B = compound detected in the associated blank
J = estimated concentration.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes and Abbreviations:
BOLD = concentration detected at or above reported detection limit.
Detected VOCs and SVOCs are shown.
< = analyte not detected above the indicated reporting limit.
B = compound detected in the associated blank
J = estimated concentration.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes and Abbreviations:
BOLD = concentration detected at or above reported detection limit.
Detected VOCs and SVOCs are shown.
< = analyte not detected above the indicated reporting limit.
B = compound detected in the associated blank
J = estimated concentration.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes and Abbreviations:
BOLD = concentration detected at or above reported detection limit.
Detected VOCs and SVOCs are shown.
< = analyte not detected above the indicated reporting limit.
B = compound detected in the associated blank
J = estimated concentration.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes and Abbreviations:
BOLD = concentration detected at or above reported detection limit.
Detected VOCs and SVOCs are shown.
< = analyte not detected above the indicated reporting limit.
B = compound detected in the associated blank
J = estimated concentration.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes and Abbreviations:
BOLD = concentration detected at or above reported detection limit.
Detected VOCs and SVOCs are shown.
< = analyte not detected above the indicated reporting limit.
B = compound detected in the associated blank
J = estimated concentration.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes and Abbreviations:
BOLD = concentration detected at or above reported detection limit.
Detected VOCs and SVOCs are shown.
< = analyte not detected above the indicated reporting limit.
B = compound detected in the associated blank
J = estimated concentration.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes and Abbreviations:
BOLD = concentration detected at or above reported detection limit.
Detected VOCs and SVOCs are shown.
< = analyte not detected above the indicated reporting limit.
B = compound detected in the associated blank
J = estimated concentration.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes and Abbreviations:
BOLD = concentration detected at or above reported detection limit.
Detected VOCs and SVOCs are shown.
< = analyte not detected above the indicated reporting limit.
B = compound detected in the associated blank
J = estimated concentration.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes and Abbreviations:
BOLD = concentration detected at or above reported detection limit.
Detected VOCs and SVOCs are shown.
< = analyte not detected above the indicated reporting limit.
B = compound detected in the associated blank
J = estimated concentration.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes and Abbreviations:
BOLD = concentration detected at or above reported detection limit.
Detected VOCs and SVOCs are shown.
< = analyte not detected above the indicated reporting limit.
B = compound detected in the associated blank
J = estimated concentration.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes and Abbreviations:
BOLD = concentration detected at or above reported detection limit.
Detected VOCs and SVOCs are shown.
< = analyte not detected above the indicated reporting limit.
B = compound detected in the associated blank
J = estimated concentration.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

NOTES AND ABBREVIATIONS:

Volatile Organic Compounds (VOCs) analyzed by EPA Method TO-15.
BOLD = concentration detected at or above reported detection limit.
< = analyte not detected above the indicated reporting limit.
- = not analyzed or not applicable.
µg/m3 = micrograms per cubic meter.

Notes:
Volatile Organic Compounds (VOCs) analyzed by EPA Method TO-15.
BOLD = concentration detected at or above reported detection limit.
< = analyte not detected above the indicated reporting limit.
- = not analyzed or not applicable.
µg/m3 = micrograms per cubic meter.

Notes:
Volatile Organic Compounds (VOCs) analyzed by EPA Method TO-15.
BOLD = concentration detected at or above reported detection limit.
< = analyte not detected above the indicated reporting limit.
- = not analyzed or not applicable.
µg/m3 = micrograms per cubic meter.

UCL Statistics for Data Sets with Non-Detects

User Selected Options	
Date/Time of Computation	ProUCL 5.14/26/2022 1:41:49 PM
From File	2022-0426-HAI-ProUCL_B29_ParcelA_Vadose.xls
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

Arsenic

General Statistics

Total Number of Observations	60	Number of Distinct Observations	55
		Number of Missing Observations	104
Number of Detects	54	Number of Non-Detects	6
Number of Distinct Detects	53	Number of Distinct Non-Detects	2
Minimum Detect	1.1	Minimum Non-Detect	0.46
Maximum Detect	24.6	Maximum Non-Detect	1.13
Variance Detects	43.92	Percent Non-Detects	10%
Mean Detects	5.417	SD Detects	6.627
Median Detects	2.765	CV Detects	1.223
Skewness Detects	2.09	Kurtosis Detects	2.904
Mean of Logged Detects	1.229	SD of Logged Detects	0.868

Normal GOF Test on Detects Only

Shapiro Wilk Test Statistic	0.597	**Normal GOF Test on Detected Observations Only**
5% Shapiro Wilk P Value	0	Detected Data Not Normal at 5% Significance Level
Lilliefors Test Statistic	0.328	**Lilliefors GOF Test**
5% Lilliefors Critical Value	0.12	Detected Data Not Normal at 5% Significance Level

Detected Data Not Normal at 5% Significance Level

Kaplan-Meier (KM) Statistics using Normal Critical Values and other Nonparametric UCLs

KM Mean	4.923	KM Standard Error of Mean	0.834
KM SD	6.402	95% KM (BCA) UCL	6.313
95% KM (t) UCL	6.318	95% KM (Percentile Bootstrap) UCL	6.381
95% KM (z) UCL	6.296	95% KM Bootstrap t UCL	6.717
90% KM Chebyshev UCL	7.426	95% KM Chebyshev UCL	8.56
97.5% KM Chebyshev UCL	10.13	99% KM Chebyshev UCL	13.22

Gamma GOF Tests on Detected Observations Only

A-D Test Statistic	4.394	**Anderson-Darling GOF Test**
5% A-D Critical Value	0.774	Detected Data Not Gamma Distributed at 5% Significance Level
K-S Test Statistic	0.203	**Kolmogorov-Smirnov GOF**
5% K-S Critical Value	0.124	Detected Data Not Gamma Distributed at 5% Significance Level

Detected Data Not Gamma Distributed at 5% Significance Level

Gamma Statistics on Detected Data Only

k hat (MLE)	1.226	k star (bias corrected MLE)	1.17
Theta hat (MLE)	4.421	Theta star (bias corrected MLE)	4.631
nu hat (MLE)	132.4	nu star (bias corrected)	126.3
Mean (detects)	5.417		

53	**Gamma ROS Statistics using Imputed Non-Detects**											
54	GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs											
55	GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)											
56	For such situations, GROS method may yield incorrect values of UCLs and BTVs											
57	This is especially true when the sample size is small.											
58	For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates											
59					Minimum	0.01			Mean	4.877		
60					Maximum	24.6			Median	2.61		
61					SD	6.49			CV	1.331		
62					k hat (MLE)	0.65			k star (bias corrected MLE)	0.629		
63					Theta hat (MLE)	7.497			Theta star (bias corrected MLE)	7.752		
64					nu hat (MLE)	78.05			nu star (bias corrected)	75.49		
65					Adjusted Level of Significance (β)	0.046						
66					Approximate Chi Square Value (75.49, α)	56.47			Adjusted Chi Square Value (75.49, β)	56.07		
67					95% Gamma Approximate UCL (use when n>=50)	6.518			95% Gamma Adjusted UCL (use when n<50)	6.565		
68												
69	**Estimates of Gamma Parameters using KM Estimates**											
70					Mean (KM)	4.923			SD (KM)	6.402		
71					Variance (KM)	40.99			SE of Mean (KM)	0.834		
72					k hat (KM)	0.591			k star (KM)	0.573		
73					nu hat (KM)	70.97			nu star (KM)	68.75		
74					theta hat (KM)	8.325			theta star (KM)	8.593		
75					80% gamma percentile (KM)	8.114			90% gamma percentile (KM)	12.94		
76					95% gamma percentile (KM)	18.01			99% gamma percentile (KM)	30.34		
77												
78	**Gamma Kaplan-Meier (KM) Statistics**											
79					Approximate Chi Square Value (68.75, α)	50.67			Adjusted Chi Square Value (68.75, β)	50.28		
80					95% Gamma Approximate KM-UCL (use when n>=50)	6.681			95% Gamma Adjusted KM-UCL (use when n<50)	6.732		
81												
82	**Lognormal GOF Test on Detected Observations Only**											
83					Shapiro Wilk Approximate Test Statistic	0.861			**Shapiro Wilk GOF Test**			
84					5% Shapiro Wilk P Value	1.3848E-6			Detected Data Not Lognormal at 5% Significance Level			
85					Lilliefors Test Statistic	0.147			**Lilliefors GOF Test**			
86					5% Lilliefors Critical Value	0.12			Detected Data Not Lognormal at 5% Significance Level			
87	**Detected Data Not Lognormal at 5% Significance Level**											
88												
89	**Lognormal ROS Statistics Using Imputed Non-Detects**											
90					Mean in Original Scale	4.927			Mean in Log Scale	1.036		
91					SD in Original Scale	6.454			SD in Log Scale	1.011		
92					95% t UCL (assumes normality of ROS data)	6.319			95% Percentile Bootstrap UCL	6.324

General Statistics

Total Number of Observations	33	Number of Distinct Observations	27
Number of Detects	23	Number of Non-Detects	10
Number of Distinct Detects	23	Number of Distinct Non-Detects	4
Minimum Detect	0.00228	Minimum Non-Detect	2.9000E-4
Maximum Detect	37.8	Maximum Non-Detect	4.0400E-4
Variance Detects	62.83	Percent Non-Detects	30.3%
Mean Detects	2.216	SD Detects	7.926
Median Detects	0.0502	CV Detects	3.577
Skewness Detects	4.504	Kurtosis Detects	20.83
Mean of Logged Detects	-2.416	SD of Logged Detects	2.532

Normal GOF Test on Detects Only

Shapiro Wilk Test Statistic	0.306	**Shapiro Wilk GOF Test**
5% Shapiro Wilk Critical Value	0.914	Detected Data Not Normal at 5% Significance Level
Lilliefors Test Statistic	0.453	**Lilliefors GOF Test**
5% Lilliefors Critical Value	0.18	Detected Data Not Normal at 5% Significance Level

Detected Data Not Normal at 5% Significance Level

Kaplan-Meier (KM) Statistics using Normal Critical Values and other Nonparametric UCLs

KM Mean	1.545	KM Standard Error of Mean	1.166
KM SD	6.551	95% KM (BCA) UCL	3.716
95% KM (t) UCL	3.52	95% KM (Percentile Bootstrap) UCL	3.742
95% KM (z) UCL	3.463	95% KM Bootstrap t UCL	29.99
90% KM Chebyshev UCL	5.043	95% KM Chebyshev UCL	6.628
97.5% KM Chebyshev UCL	8.827	99% KM Chebyshev UCL	13.15

Gamma GOF Tests on Detected Observations Only

A-D Test Statistic	2.274	**Anderson-Darling GOF Test**
5% A-D Critical Value	0.885	Detected Data Not Gamma Distributed at 5% Significance Level
K-S Test Statistic	0.23	**Kolmogorov-Smirnov GOF**
5% K-S Critical Value	0.2	Detected Data Not Gamma Distributed at 5% Significance Level

Detected Data Not Gamma Distributed at 5% Significance Level

Gamma Statistics on Detected Data Only

k hat (MLE)	0.225	k star (bias corrected MLE)	0.225
Theta hat (MLE)	9.854	Theta star (bias corrected MLE)	9.869
nu hat (MLE)	10.35	nu star (bias corrected)	10.33
Mean (detects)	2.216		

Gamma ROS Statistics using Imputed Non-Detects

53	GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs											
54	GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)											
55	For such situations, GROS method may yield incorrect values of UCLs and BTVs											
56	This is especially true when the sample size is small.											
57	For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates											
58					Minimum	0.00228				Mean	1.548	
59					Maximum	37.8				Median	0.0186	
60					SD	6.652				CV	4.298

Risk Calculations – Exposure Area-Specific HHRA

Building 99/100 Exposure Area

Construction Worker

Appendix D, Table 1
Cancer Risk Calculations - Single Age
Maximum Concentrations - Soil
FUTURE ON-SITE CONSTRUCTION WORKER - CONSTRUCTION WORKER (ADULT)

Human Health Risk Assessment
Building 99/100 Exposure Area
Parcel A, North Campus

Exposure Routes Evaluated		ELCR (Total)
Incidental Ingestion	Yes	5E-08
Dermal Contact	Yes	4E-08
Particulate Inhalation	Yes	1E-08
Ambient Vapor Inhalation	Yes	0E+00
		1E-07

NC - not carcinogenic by this exposure route
NTV - no toxicity value available
NV - not volatile
DAD - dermally absorbed dose
EC - exposure concentration
ABS - absorption factor
CSF - cancer slope factor
UR - cancer unit risk
ELCR - excess lifetime cancer risk
EPC - exposure point concentration
COPC - chemical of potential concern

Non-Cancer Risk Calculations
Maximum Concentrations - Soil
FUTURE ON-SITE CONSTRUCTION WORKER - CONSTRUCTION WORKER (ADULT)

Human Health Risk Assessment
Building 99/100 Exposure Area
Parcel A, North Campus

Exposure Routes Evaluated		HI (Total)
Incidental Ingestion	Yes	6E-02
Dermal Contact	Yes	3E-02
Particulate Inhalation	Yes	2E-01
Ambient Vapor Inhalation	Yes	5E-06
		0.3

NV - not volatile
V - volatile
NTV - no toxicity value available

EC - exposure concentration
DAD - dermally absorbed dose
ABS - absorption factor

RfD - reference dose
RfC - reference concentration

HI - hazard index
HQ - hazard quotient

EPC - exposure point concentration (if blank, then COPC was not detected)
COPC - chemical of potential concern

COPC	CASRN	EPC (mg/kg)	Intake Calculations				Absorption Factors		Non-Cancer Toxicity Values			HQ

Appendix D, Table 3
Intake and Risk Equations - Single Age

Human Health Risk Assessment
Building 99/100 Exposure Area
Parcel A, North Campus

Cancer Risk from Ingestion

$$ELCR = Intake_{ing} * CSF$$

$$Intake_{ing\ (age\ group\ x)} = \frac{[EPC]_{soil} * IR * ABS_{ing} * FI * EF * ED * C1}{BW_x * AT_{lifetime}}$$

Cancer Risk from Dermal Absorption

$$ELCR = DAD * CSF$$

$$DAD_{derm(age\ group\ x)} = \frac{DA_{Event} * SA * EV * EF * ED}{BW_x * AT_{lifetime}}$$

$$DA_{Event} = [EPC]_{soil} * ABS_d * AF * C1$$

Cancer Risk from Inhalation

$$ELCR_{inh} = EC_{can} * IUR$$

$$EC_{can\ (age\ group\ x)} = \frac{[EPC]_{PART} * ET_{Part} * EF * ED \text{ --- OR--- } [EPC]_{VAPOR} * ET_{Vap} * EF * ED}{24 * AT_{lifetime}}$$

Noncancer Risk from Ingestion

$$HQ = \frac{Intake_{ing}}{RfD}$$

$$Intake_{ing} = \frac{[EPC]_{soil} * IR * ABS_{ing} * FI * EF * ED * C1}{BW * AT}$$

Noncancer Risk from Dermal Absorption

$$HQ = \frac{DAD}{RfD}$$

$$DAD_{derm} = \frac{DA_{Event} * SA * EV * EF * ED}{BW * AT}$$

$$DA_{Event} = [EPC]_{soil} * ABS_d * AF * C1$$

Noncancer Risk from Inhalation

$$HQ = \frac{EC_{nc}}{RfC}$$

$$EC_{nc} = \frac{[EPC]_{PART} * ET_{Part} * EF * ED * C2 \text{ --- OR--- } [EPC]_{VAPOR} * ET_{Vap} * EF * ED * C2}{24 * AT}$$

Calculation of Q/C During Construction
Building 99/100 Exposure Area

Sources: EPA, 1996. Soil Screening Guidance: Technical Background Document. May.
EPA, 2001. Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. Peer Review Draft. March.

$Q/C = A \times \exp [(\ln A_{site} - B)^2 / C]$

Where:

Q/C = Inverse of mean concentration at center of source (g/m^2-s per kg/m^2);
A, B, C = Constants based on air dispersion modeling for Los Angeles, CA, from EPA 2001;
A_{site} = Areal extent of site or contamination (acres);

A	B	C	A_{site}	Q/C
2.4538	17.566	189.0426	5.2	9.37

Building 99/100 Exposure Area

Human Health Risk Assessment
Building 99/100 Exposure Area
Parcel A, North Campus

Exposure Routes Evaluated		ELCR (Total)
Incidental Ingestion	Yes	1E-07
Dermal Contact	Yes	9E-08
Particulate Inhalation	Yes	2E-10
Ambient Vapor Inhalation	Yes	0E+00
		2E-07

NC - not carcinogenic by this exposure route
NTV - no toxicity value available
NV - not volatile
DAD - dermally absorbed dose
EC - exposure concentration
ABS - absorption factor
CSF - cancer slope factor
UR - cancer unit risk
ELCR - excess lifetime cancer risk
EPC - exposure point concentration
COPC - chemical of potential concern

COPC	CASRN	EPC (mg/kg)	Intake Calculations				Absorption Factors		Cancer Toxicity Values			ELCR

Appendix D, Table 3
Intake and Risk Equations - Single Age

Human Health Risk Assessment
Building 99/100 Exposure Area
Parcel A, North Campus

Cancer Risk from Ingestion

$$ELCR = Intake_{ing} * CSF$$

$$Intake_{ing\ (age\ group\ x)} = \frac{[EPC]_{soil} * IR * ABS_{ing} * FI * EF * ED * C1}{BW_x * AT_{lifetime}}$$

Cancer Risk from Dermal Absorption

$$ELCR = DAD * CSF$$

$$DAD_{derm(age\ group\ x)} = \frac{DA_{Event} * SA * EV * EF * ED}{BW_x * AT_{lifetime}}$$

$$DA_{Event} = [EPC]_{soil} * ABS_d * AF * C1$$

Cancer Risk from Inhalation

$$ELCR_{inh} = EC_{can} * IUR$$

$$EC_{can\ (age\ group\ x)} = \frac{[EPC]_{PART} * ET_{Part} * EF * ED \text{ --- OR--- } [EPC]_{VAPOR} * ET_{Vap} * EF * ED}{24 * AT_{lifetime}}$$

Noncancer Risk from Ingestion

$$HQ = \frac{Intake_{ing}}{RfD}$$

$$Intake_{ing} = \frac{[EPC]_{soil} * IR * ABS_{ing} * FI * EF * ED * C1}{BW * AT}$$

Noncancer Risk from Dermal Absorption

$$HQ = \frac{DAD}{RfD}$$

$$DAD_{derm} = \frac{DA_{Event} * SA * EV * EF * ED}{BW * AT}$$

$$DA_{Event} = [EPC]_{soil} * ABS_d * AF * C1$$

Noncancer Risk from Inhalation

$$HQ = \frac{EC_{nc}}{RfC}$$

$$EC_{nc} = \frac{[EPC]_{PART} * ET_{Part} * EF * ED * C2 \text{ --- OR--- } [EPC]_{VAPOR} * ET_{Vap} * EF * ED * C2}{24 * AT}$$

Calculation of Respirable Particulate Emission Factor (PEF)
Building 99/100 Exposure Area

Sources: EPA, 1996. Soil Screening Guidance: Technical Background Document. May.
EPA, 2001. Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. Peer Review Draft. March.

Assumptions: The soil surface has an unlimited erosion potential.
The surface soil is comprised of fine sand.
Highly erodible soils do not retain moisture.
The ground surface is comprised only of soil containing 50 percent vegetative cover.
No portion of the property is paved or contains structures (e.g., surfaces with limited erosion potential.)

$PEF = Q/C \times [3{,}600 \text{ s/hr} / (0.036 \times (1\text{-}V) \times (U_m/U_t)^3 \times F(x))]$

$Q/C = A \times \exp[(\ln A_{site} - B)^2 / C]$

Where:

PEF = Particluate emission factor of annual average PM_{10} impacted fugitive dust emissions (m^3/kg);
PM_{10} = Respirable fraction, particles less than 10 um in diameter;
Q/C = Inverse of mean concentration at center of source (g/m^2-s per kg/m^2);
A, B, C = Constants based on air dispersion modeling for Los Angeles, CA, from EPA, 2001;
A_{site} = Areal extent of site or contamination (acres);
0.036 = Respirable fraction (g/m^2-hr);
V = Fraction of impacted surface with vegetative cover (unitless);
U_m = Mean annual wind speed (m/s), from EPA 1996, 2001;
U_t = Equivalent threshold value of windspeed at 7 m (m/s), from EPA, 1996, 2001;
F(x) = Function dependent on U_m/U_t derived using Cowherd et al. 1985 (unitless), from EPA, 1996, 2001.

A	B	C	A_{site}	Q/C	V	U_m	U_t	F(x)	PEF
11.911	18.439	209.7845	5.2	45.66	0.5	4.69	11.32	0.194	6.62E+08

Maximum/95%UCL Concentrations - Soil
FUTURE ON-SITE LANDSCAPER/UTILITY MAINTENANCE WORKER - LANDSCAPER/UTILITY MAINTENANCE WORKER (ADULT)

Human Health Risk Assessment
Building 29 Area
Parcel A, North Campus

Exposure Routes Evaluated		HI (Total)
Incidental Ingestion	Yes	8E-01
Dermal Contact	Yes	2E-01
Particulate Inhalation	Yes	2E-04
Ambient Vapor Inhalation	Yes	6E-03
		1

NV - not volatile
V - volatile
NTV - no toxicity value available

EC - exposure concentration
DAD - dermally absorbed dose
ABS - absorption factor

RfD - reference dose
RfC - reference concentration

HI - hazard index
HQ - hazard quotient

EPC - exposure point concentration (if blank, then COPC was not detected)
COPC - chemical of potential concern

Appendix D, Table 3
Intake and Risk Equations - Single Age

Human Health Risk Assessment
Building 29 Area
Parcel A, North Campus

Cancer Risk from Ingestion

$$ELCR = Intake_{ing} * CSF$$

$$Intake_{ing\ (age\ group\ x)} = \frac{[EPC]_{soil} * IR * ABS_{ing} * FI * EF * ED * C1}{BW_x * AT_{lifetime}}$$

Cancer Risk from Dermal Absorption

$$ELCR = DAD * CSF$$

$$DAD_{derm(age\ group\ x)} = \frac{DA_{Event} * SA * EV * EF * ED}{BW_x * AT_{lifetime}}$$

$$DA_{Event} = [EPC]_{soil} * ABS_d * AF * C1$$

Cancer Risk from Inhalation

$$ELCR_{inh} = EC_{can} * IUR$$

$$EC_{can\ (age\ group\ x)} = \frac{[EPC]_{PART} * ET_{Part} * EF * ED \text{ --- OR--- } [EPC]_{VAPOR} * ET_{Vap} * EF * ED}{24 * AT_{lifetime}}$$

Noncancer Risk from Ingestion

$$HQ = \frac{Intake_{ing}}{RfD}$$

$$Intake_{ing} = \frac{[EPC]_{soil} * IR * ABS_{ing} * FI * EF * ED * C1}{BW * AT}$$

Noncancer Risk from Dermal Absorption

$$HQ = \frac{DAD}{RfD}$$

$$DAD_{derm} = \frac{DA_{Event} * SA * EV * EF * ED}{BW * AT}$$

$$DA_{Event} = [EPC]_{soil} * ABS_d * AF * C1$$

Noncancer Risk from Inhalation

$$HQ = \frac{EC_{nc}}{RfC}$$

$$EC_{nc} = \frac{[EPC]_{PART} * ET_{Part} * EF * ED * C2 \text{ --- OR--- } [EPC]_{VAPOR} * ET_{Vap} * EF * ED * C2}{24 * AT}$$

Calculation of Respirable Particulate Emission Factor (PEF)
Building 29 Area

Sources: EPA, 1996. Soil Screening Guidance: Technical Background Document. May.
EPA, 2001. Supplemental Guidance for Developing Soil Screening Levels for Superfund Sites. Peer Review Draft. March.

Assumptions: The soil surface has an unlimited erosion potential.
The surface soil is comprised of fine sand.
Highly erodible soils do not retain moisture.
The ground surface is comprised only of soil containing 50 percent vegetative cover.
No portion of the property is paved or contains structures (e.g., surfaces with limited erosion potential.)

$PEF = Q/C \times [3{,}600 \text{ s/hr} / (0.036 \times (1\text{-}V) \times (U_m/U_t)^3 \times F(x))]$

$Q/C = A \times \exp[(\ln A_{site} - B)^2 / C]$

Where:

PEF = Particluate emission factor of annual average PM_{10} impacted fugitive dust emissions (m^3/kg);
PM_{10} = Respirable fraction, particles less than 10 um in diameter;
Q/C = Inverse of mean concentration at center of source (g/m^2-s per kg/m^2);
A, B, C = Constants based on air dispersion modeling for Los Angeles, CA, from EPA, 2001;
A_{site} = Areal extent of site or contamination (acres);
0.036 = Respirable fraction (g/m^2-hr);
V = Fraction of impacted surface with vegetative cover (unitless);
U_m = Mean annual wind speed (m/s), from EPA, 1996, 2001;
U_t = Equivalent threshold value of windspeed at 7 m (m/s), from EPA, 1996, 2001;
F(x) = Function dependent on U_m/U_t derived using Cowherd et al. 1985 (unitless), from EPA, 1996, 2001.

A	B	C	A_{site}	Q/C	V	U_m	U_t	F(x)	PEF

Appendix D, Table 3
Intake and Risk Equations - Single Age

Human Health Risk Assessment
Building 29 Excavation Area
Parcel A, North Campus

Cancer Risk from Ingestion

$$ELCR = Intake_{ing} * CSF$$

$$Intake_{ing\ (age\ group\ x)} = \frac{[EPC]_{soil} * IR * ABS_{ing} * FI * EF * ED * C1}{BW_x * AT_{lifetime}}$$

Cancer Risk from Dermal Absorption

$$ELCR = DAD * CSF$$

$$DAD_{derm(age\ group\ x)} = \frac{DA_{Event} * SA * EV * EF * ED}{BW_x * AT_{lifetime}}$$

$$DA_{Event} = [EPC]_{soil} * ABS_d * AF * C1$$

Cancer Risk from Inhalation

$$ELCR_{inh} = EC_{can} * IUR$$

$$EC_{can\ (age\ group\ x)} = \frac{[EPC]_{PART} * ET_{Part} * EF * ED \text{ --- OR--- } [EPC]_{VAPOR} * ET_{Vap} * EF * ED}{24 * AT_{lifetime}}$$

Noncancer Risk from Ingestion

$$HQ = \frac{Intake_{ing}}{RfD}$$

$$Intake_{ing} = \frac{[EPC]_{soil} * IR * ABS_{ing} * FI * EF * ED * C1}{BW * AT}$$

Noncancer Risk from Dermal Absorption

$$HQ = \frac{DAD}{RfD}$$

$$DAD_{derm} = \frac{DA_{Event} * SA * EV * EF * ED}{BW * AT}$$

$$DA_{Event} = [EPC]_{soil} * ABS_d * AF * C1$$

Noncancer Risk from Inhalation

$$HQ = \frac{EC_{nc}}{RfC}$$

$$EC_{nc} = \frac{[EPC]_{PART} * ET_{Part} * EF * ED * C2 \text{ --- OR--- } [EPC]_{VAPOR} * ET_{Vap} * EF * ED * C2}{24 * AT}$$

Human Health Risk Assessment
Building 29 Excavation Area
Parcel A, North Campus

Exposure Routes Evaluated		ELCR (Total)
Incidental Ingestion	Yes	1E-07
Dermal Contact	Yes	1E-07
Particulate Inhalation	Yes	3E-09
Ambient Vapor Inhalation	Yes	2E-07
		5E-07

NC - not carcinogenic by this exposure route
NTV - no toxicity value available
NV - not volatile
DAD - dermally absorbed dose
EC - exposure concentration
ABS - absorption factor
CSF - cancer slope factor
UR - cancer unit risk
ELCR - excess lifetime cancer risk
EPC - exposure point concentration
COPC - chemical of potential concern

COPC	CASRN	EPC (mg/kg)	Intake$_{ingestion}$ (mg/kg/day)	DAD$_{dermal}$ (mg/kg/day)	EC$_{particulate}$ (ug/m^3)	EC$_{vapor}$ (ug/m^3)	ABS$_{ing}$ (unitless)	ABS$_{d}$ (unitless)	CSF$_{oral}$ (mg/kg/day)$^{-1}$	CSF$_{dermal}$ (mg/kg/day)$^{-1}$	IUR (ug/m^3)$^{-1}$	ELCR$_{ingestion}$	ELCR$_{dermal}$	ELCR$_{particulate}$	ELCR$_{vapor}$	ELCR$_{total}$

Appendix E, Table 3
Intake and Risk Equations - Single Age

Human Health Risk Assessment
Building 29 Excavation Area
Parcel A, North Campus

Cancer Risk from Ingestion

$$ELCR = Intake_{ing} * CSF$$

$$Intake_{ing\ (age\ group\ x)} = \frac{[EPC]_{soil} * IR * ABS_{ing} * FI * EF * ED * C1}{BW_x * AT_{lifetime}}$$

Cancer Risk from Dermal Absorption

$$ELCR = DAD * CSF$$

$$DAD_{derm(age\ group\ x)} = \frac{DA_{Event} * SA * EV * EF * ED}{BW_x * AT_{lifetime}}$$

$$DA_{Event} = [EPC]_{soil} * ABS_d * AF * C1$$

Cancer Risk from Inhalation

$$ELCR_{inh} = EC_{can} * IUR$$

$$EC_{can\ (age\ group\ x)} = \frac{[EPC]_{PART} * ET_{Part} * EF * ED \text{ --- OR--- } [EPC]_{VAPOR} * ET_{Vap} * EF * ED}{24 * AT_{lifetime}}$$

Noncancer Risk from Ingestion

$$HQ = \frac{Intake_{ing}}{RfD}$$

$$Intake_{ing} = \frac{[EPC]_{soil} * IR * ABS_{ing} * FI * EF * ED * C1}{BW * AT}$$

Noncancer Risk from Dermal Absorption

$$HQ = \frac{DAD}{RfD}$$

$$DAD_{derm} = \frac{DA_{Event} * SA * EV * EF * ED}{BW * AT}$$

$$DA_{Event} = [EPC]_{soil} * ABS_d * AF * C1$$

Noncancer Risk from Inhalation

$$HQ = \frac{EC_{nc}}{RfC}$$

$$EC_{nc} = \frac{[EPC]_{PART} * ET_{Part} * EF * ED * C2 \text{ --- OR--- } [EPC]_{VAPOR} * ET_{Vap} * EF * ED * C2}{24 * AT}$$

Human Health Risk Assessment
Building 29 Excavation Area
Parcel A, North Campus

EQUATIONS:

$$EPC_{[PARTICULATE]} = EPC_{[SOIL]} \times PARTICULATE_{[AIR]} \times 1E\text{-}06 \text{ [kg/mg]}$$

where:

$$PARTICULATE_{[AIR]} = (1/PEF * 1E+09 \text{ ug/kg}) \text{ or Measured/Modelled}$$

and:

$$PEF (m^3/kg) = Q/C \times [(3600 \text{ s/hr}) / ((0.036 \times (1-V) \times (U_m/U_t)^3 \times F(x))]$$

PARAMETER/DEFINITION	UNITS	DEFAULT	Source
$PARTICULATE_{[Air]}$ / Particulate concentration in air	ug/m^3	1000.00	Calculated or measured
Measured or modeled $PARTICULATE_{[AIR]}$	ug/m^3		Measured value
PEF / Particulate emission factor	m^3/kg		Guidance value
PEF / Particulate emission factor	m^3/kg	1.00E+06	Calculated here
Q/C / inverse of the mean concentration at the center of a 0.5-acre-square source	g/m^2-s per kg/m^3	8.49	Calculated / USEPA, 2014 [a]
V / Fraction of vegetative cover	unitless	0.5	Site-specific, estimated
U_m / mean annual windspeed	m/s	4.69	Site-specific / USEPA, 2014
U_t / equivalent threshold value of wind speed at 7 m	m/s	11.32	USEPA, 2014
F(x) / function dependant on U_m/U_t derived using Cowherd et al. (1985)	unitless	1.94E-01	Calculated / USEPA, 2014

USEPA, 2014. Regional Screening Levels.

Human Health Risk Assessment
Building 29 Excavation Area
Parcel A, North Campus

EQUATIONS:

$$EPC_{[VAPOR]} = EPC_{[SOIL]} \times 1/VF \times 1000\ ug/mg$$

where:

$$VF\ (m^3/kg) = Q/C \times (3.14 \times D_A \times T)^{1/2} \times 10^{-4}(m^2/cm^2) / (2 \times P_b \times D_A) \times (1/Fd)$$

and:

$$DA = [(O_a^{10/3} D_i H' + O_w^{10/3} D_w)/n^2] / P_b K_d + O_w + O_a H'$$

ARAMETER/DEFINITION	UNITS	DEFAULT	Source
VF / volatilization factor	m^3/kg	Calculated	
D_A / apparent diffusivity	cm^2/s	Calculated	
Q/C / inverse of the mean concentration at the center of a 0.5-acre-square source	g/m^2-s per kg/m^3	8.49	USEPA, 2014 [a]
T / exposure interval	s	3.15E+07	FUTURE ON-SITE CONSTRUCTION WORKER
Π_b / dry soil bulk density	g/cm^3	1.66	USEPA, 2014
O_a / air-filled soil porosity	L_{air}/L_{soil}	0.321	USEPA, 2014
n / total soil porosity	L_{pore}/L_{soil}	0.375	USEPA, 2014
O_w / water-filled soil porosity	L_{water}/L_{soil}	0.054	USEPA, 2014
Ψ_s / soil particle density	g/cm^3	2.65	USEPA, 1996
D_i / diffusivity in air	cm^2/s	chemical-specific	
H' / Henry's Law constant	dimensionless	chemical-specific	
D_w / diffusivity in water	cm^2/s	chemical-specific	
K_d / soil-water partition coefficient (Koc x foc) organics	cm^3/g	chemical-specific	
K_{oc} / soil organic carbon partition coefficient	cm^3/g	chemical-specific	
f_{oc} / fraction organic carbon in soil	g/g	0.006	Default
Fd / Disperson correlation factor	Unitless	0.185	Default, USEPA 2002

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 2/24/2023 at 12:32 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Rohr Parcel A, North Campus
Buildings 29, 99, and 100
850 Lagoon Drive and 390 Bay Boulevard
Chula Vista, California

FINDINGS AND OPINIONS

At the request of PSIP Wohl Bay Boulevard, LLC (PSIP), GSI Environmental Inc. (GSI) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of the ASTM International, Inc., Standard E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Assessment Process (ASTM Standard) for the property identified below and in Figures 1 and 2. Any exceptions to, or deletions from, this practice are described in Section 9.0 of this report.

SITE IDENTIFICATION	
Name:	Rohr Parcel A, North Campus
Address:	850 Lagoon Drive and 390 Bay Boulevard
City:	Chula Vista
County:	San Diego
State:	California
Assessor Parcel Number(s):	567-022-30-00 (Building 99 and 100) and 571-330-29-00 (Building 29)

The purpose of the Phase I ESA was to identify Recognized Environmental Conditions (RECs) as defined in the ASTM Standard. It is our understanding that this Phase I ESA has been solicited as part of environmental due diligence activities in connection with a commercial real estate transaction.

This report presents the results of the Phase I ESA and is based on the following:

- Review of the physical setting and Site reconnaissance
- Review of historical information from Sanborn fire insurance maps, topographic maps, aerial photographs, and city directories
- Review of prior Site reports provided to GSI
- Information obtained from owner and/or user interviews
- Review of available agency files including the following:
    - Chula Vista Building Department
    - Chula Vista Fire Department
    - Chula Vista Public Works Department – Industrial Waste
    - San Diego Air Pollution Control District
    - San Diego County Hazardous Materials Management District
    - Department of Toxic Substances Control (DTSC)

- Office of the State Fire Marshal
- Regional Water Quality Control Board, San Diego Region (RWQCB)
- California State Water Resources Control Board GeoTracker website
- California DTSC Envirostor website
- San Diego County Assessor's Office website
- California Department of Conservation, Division of Gas and Geothermal Resources (DOGGR)

- Review of regulatory agency database information for the Site and surrounding properties

The following sections summarize the findings of this ESA for both the Site and pertinent surrounding properties based on review of site reconnaissance information, regulatory agency databases and files, historical information, physical setting information, and existing documents.

The 11.82-acre Site consists of two parcels and is bifurcated by G Street. The Site is a portion of the Rohr aircraft parts manufacturing facility that has been in operation since 1941. The area north of G Street (390 Bay Boulevard; APN No. 567-022-30-00) is 3.12 acres and is occupied by Buildings 99 and 100. The area south of G Street (eastern portion of APN No. 571-330-29-00) is 8.70 acres and is occupied by Building 29. The Building 29 parcel utilized the address of 850 Lagoon Drive which is the Rohr Facility address.

Historical uses of the parcel north of G Street, currently occupied by Buildings 99 and 100, included agricultural, trailer park, a hardware store, possible residences, and Lawless and Valley Detroit Diesel (repair of semi-trucks). Rohr purchased the property in 1986, with Buildings 99 and 100 already existing, and conducted non-manufacturing activities in this area. Building 99 has not been occupied since approximately 2018. This building was previously used for human resources, training, gym, medical services, and a print shop. Building 100 is currently utilized for R&D. Prior to Rohr's purchase of the property, the building was utilized for servicing trucks and three service bays and a sump were in the building.

Historical uses of the parcel south of G Street, currently occupied by Building 29, included agricultural and possible residences. Additionally, Haley & Aldrich, Inc. (HAI) opined in a 2016 Phase I ESA that a lumber yard may have existed at the Site; the City Directory list obtained for this ESA identified Bay Surplus Boxes at 426 Bay Boulevard; it is possible that the neatly stacked materials identified on aerial photographs, which were interpreted as possible lumber, actually are related to the Bay Surplus Boxes. Former Building 28 was constructed by 1945, and was used as a warehouse, and demolished by the early 2000s. Building 29 was built in four phases, starting from the south in about 1957. The majority was completed by 1962. Building 29 previously housed the Maintenance Department (northern third of the building to approximately Door 29-20), tooling with a machine shop, and offices. Recent to 2013, operations were primarily manufacturing related. Operations in the central portion of Building 29 are being shut down; this area currently houses some after-market equipment.

During the Site reconnaissance, six monitoring well covers were observed near the northeast corner of Building 99. These are likely wells that were installed during a 1998/1999 Deep Boring Investigation conducted by URS. A wastewater aboveground storage tank (AST) was observed in Building 29 in the vicinity of the R&D laboratory. Most of the features identified at Building 29 during previous Phase I ESAs are no longer present at the Site.

Several historical features were identified at the Site in information compiled by others including underground storage tanks (USTs), underground vessels, ASTs, clarifiers, paint booths, sumps, and degreasers. With the exception of the 500-gallon wastewater AST observed at the Site, these have all been removed or are inactive (Haley & Aldrich, 2020a). A list of historical features is included in Table 1 of HAI's Conceptual Site Model (CSM) in Appendix C.

The primary regulatory oversight agency was San Diego County Department of Environmental Health (SDCDEH) prior to 1998, when the Site was transferred to the RWQCB and a Corrective Action Order (CAO) was issued. Site investigation activities date back to at least 1986. Primary findings include volatile organic compound (VOC) impacts to groundwater, soil vapor, and indoor air and limited arsenic-affected soil.

No off-Site properties are judged to have impacted environmental conditions at the Site.

Recognized Environmental Conditions

RECs are defined in the ASTM Standard as *"the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*

This Phase I ESA has revealed the following RECs in connection with the Site:

- Arsenic in soil at Building 29 - Arsenic was detected at concentrations above background at three locations (B29-02, B29-03, and B29-07) at the Building 29 parcel. Step-out borings were advanced at these locations (HAI, 2020b). Two of the step-out borings around boring B29-03 (B29-03A and -03B) and two around B29-07 (B29-07A and -07B) contained arsenic above the background level of 8 milligrams per kilogram (mg/kg) established for South Campus, but below its groundwater protection level (GPL). The arsenic concentration exceeded its GPL in one soil sample (B29-07A).The arsenic results, in combination with other soil data collected around the northern portion of Building 29, indicate that the distribution of arsenic above screening levels is not constrained.
- Limited polychlorinated biphenyls (PCBs) in soil at Building 29 - PCBs were detected at concentrations above the commercial/industrial screening level (SL) at one location (B29-05) in Building 29. PCBs were detected in the step-out borings around B29-05; however, concentrations were below commercial industrial SLs. Based on the information reviewed, PCB impacts appear to be discrete and limited in extent.
- VOCs in soil, groundwater, soil vapor, and indoor air – VOCs, primarily trichloroethene (TCE), are present beneath the Site in soil, soil gas, and groundwater. Analytical results from B29-23 and B29-24 suggest that there are sources of TCE in soil beneath the former Maintenance Department of Building 29. TCE is present in Zone A and Upper Zone B groundwater beneath the Former Maintenance Department at concentrations that exceed the maximum contaminant level (MCL). TCE was detected in soil vapor samples across the Site at concentrations up to 3,000,000 micrograms per cubic meter ($\mu g/m^3$) (HAI, 2020b). HAI concluded that this data suggest there may be residual sources in soil beneath the building. TCE was measured in indoor air in Building 29; concentrations were below response action levels for workers, but additional screening and engineering controls were recommended by HAI.

- Mills and Lathes - VOCs were detected in soil samples from 7 of the 12 borings advanced at and near the former mills and lathes. Tetrachloroethene (PCE) and TCE were reported in soil samples from some borings. Although none of the detected concentrations were present above the commercial/industrial SLs or GPLs, the presence of volatile constituents in soil could suggest these constituents exist in soil vapor at concentrations exceeding vapor intrusion environmental screening levels (VI-ESLs).
- Metals in groundwater - Dissolved metals (antimony, arsenic, and thallium) concentrations exceeded MCLs at some on-Site groundwater sampling locations. Although groundwater at the Site is not utilized as a drinking water source, there is no information in the publicly available regulatory record that beneficial uses of groundwater, at and in the vicinity of the Site, were re-designated to exclude use of groundwater for potable purposes.

Controlled Recognized Environmental Conditions (CRECs)

CRECs are defined in the ASTM Standard as *"a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a NFA letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls."*

This Phase I ESA has revealed no evidence of CRECs in connection with the Site.

Historical Recognized Environmental Conditions (HRECs)

HRECs are defined in in the ASTM Standard as *"a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls."* [1]

This Phase I ESA has revealed no evidence of HRECs in connection with the Site:

***De minimis* Conditions**

De minimis conditions are defined in the ASTM Standard as: *"a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions or controlled recognized environmental conditions."*

This Phase I ESA has revealed the following de minimis conditions in connection with the Site:

- Six monitoring well covers were observed near the northeast corner of Building 99 during the Site reconnaissance. These wells appear to be related to a 1998/1999 investigation. Reportedly, the six wells and two borings were installed in this area during that investigation. The wells/borings should be properly abandoned if not in use.

[1] If the Site has received closure in the past, but a review of the closure information indicates that Site conditions do not meet unrestricted/residential land use standards, the Site is no longer considered an HREC, and must be identified as an REC.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Rohr Parcel A, North Campus
Buildings 29, 99, and 100
850 Lagoon Drive and 390 Bay Boulevard
Chula Vista, California

1.0 INTRODUCTION

This Phase I environmental site assessment (ESA) was conducted to fulfill ASTM International, Inc. (ASTM) Standard E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Standard) and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property identified below (Site; Figures 1 and 2).

SITE IDENTIFICATION	
Name:	Rohr Parcel A, North Campus
Owner:	Rohr, Inc., a Collins Aerospace Company (Rohr)
Address:	850 Lagoon Drive and 390 Bay Boulevard
City:	Chula Vista
County:	San Diego
State:	California
Assessor Parcel Number(s):	567-022-30-00 (Buildings 99 and 100) and 571-330-29-00 (eastern portion; Building 29)

1.1 Purpose of the ESA

The purpose of the ESA was to identify Recognized Environmental Conditions (RECs) as defined in the ASTM Standard. It is our understanding that this Phase I ESA has been solicited as part of environmental due diligence activities in connection with a commercial real estate transaction.

1.2 Limitations

GSI has completed this Phase I ESA in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment. This Phase I ESA is not and should not be construed as a warranty or guarantee, expressed or implied, regarding the presence or absence of environmental contaminants that may affect the Site. All findings, opinions, and conclusions reported in this Phase I ESA are based on conditions and available information existing at the time of the assessment. No independent verification of the information provided to GSI was made. While GSI has no reason to doubt the accuracy of the information provided, this report is accurate and complete only to the extent that information provided to GSI was itself accurate and complete. Site conditions and regulations (local, state, tribal, and federal) can change over time. Therefore, changes in Site conditions, available information, and/or regulations may alter the findings, opinions, and conclusions of this Phase I ESA.

1.3 Non-Scope Considerations

Non-scope considerations include environmental issues or conditions that may warrant additional assessment but are outside the scope of the ASTM Standard. Environmental issues that are considered non-scope considerations are summarized in the ASTM standard and include but are

not limited to; asbestos-containing building materials (ACBM), indoor air quality, lead-based paint, mold, and radon. GSI was not retained to evaluate non-scope considerations as part of this ESA.

1.4 User Reliance

This report and all related correspondence has been prepared exclusively for use by PSIP Wohl Bay Boulevard, LLC (PSIP), Penwood Real Estate Investment Management, and Wohl Property Group, LLC (collectively "User"), and may not be relied upon by any other person or entity without the express written permission of GSI and PSIP. Without express written permission of both GSI and PSIP, no third parties shall have any rights of recourse or recovery under course of action against GSI, its officers, employees, subcontractors, vendors, or successors.

2.0 SITE DESCRIPTION

GSI contracted with Environmental Data Resources (EDR) to compile physical setting information (included in the Radius Report; Appendix A) that was used in combination with information obtained during Site reconnaissance, historical document review, interviews with the Site owner representatives during reconnaissance, review of regulatory agency records, and review of prior Site reports provided to GSI to produce a description of the Site and its physical setting.

The Site is occupied by two parcels and is bifurcated by G Street. Identifying information for each parcel is provided below.

Area	Buildings	APN No.	Acreage	Address
North of G Street ("Building 99 parcel")	Buildings 99 and 100	567-022-30-00	3.12 acres	390 Bay Boulevard (parcel specific address)
South of G Street ("Building 29 parcel")	Building 29	571-330-29-00 (Eastern portion only)	8.70 acres	850 Lagoon Drive (Rohr Facility address)

The Site is a small part of a large aircraft parts manufacturing facility (referred to herein as the "Rohr Facility"). The Rohr Facility address is 850 Lagoon Drive. Many of the documents reviewed as part of this Phase I included information about the entire Rohr Facility or sub-areas of the Rohr Facility. The Site is situated on the "North Campus" of the Rohr Facility and comprises "Parcel A".

2.1 Site Physical Description

SITE DETAILS	
Physical Description:	Office space and manufacturing buildings with associated parking.
Roads:	G Street, which runs northeast-southwest, bifurcates the Site
Parking Facilities:	Asphalt lots
Site Zoning:	Commercial/Industrial
Vicinity Zoning:	Commercial/Industrial
Site Size (acres):	11.82
Current Property Use:	Office space and manufacturing
Surface Drainage Direction:	Surface drainage generally slopes to the west and southwest.

BUILDING 29 DESCRIPTION	
Number of Buildings:	1 of 3
Building Age:	Constructed in phases between 1957 and 1962
Building Details	Spread footings foundation; corrugated metal on steel frame structure; single story with partial mezzanine
Basements:	none
Building Square footage:	281,597
Building Occupants:	Currently some laboratory workers and laborers
Building Operations:	Offices, tooling, laboratory, after-market storage, photo lab
Building Interior Hazardous Substance Use or Presence:	Currently, hydraulically powered crane systems are located on the southern and northern portions of the building
Building Exterior Hazardous Substance Use or Presence:	Currently, hydraulic fluid is located on the northern exterior end of the building

BUILDING 99 DESCRIPTION	
Number of Buildings:	2 of 3
Building Age:	Constructed in 1980
Building Details	Spread footing foundation, concrete exterior; wood frame superstructure; single-story
Basements:	none
Building Square footage:	35,560
Building Occupants:	Not occupied since approximately 2018. Previously used for human resources, training, gym, and medical services.
Building Operations:	Offices
Building Interior Hazardous Substance Use or Presence:	None identified
Building Exterior Hazardous Substance Use or Presence:	None identified

BUILDING 100 DESCRIPTION	
Number of Buildings:	3 of 3
Building Age:	Constructed in 1980
Building Details	Spread footing foundation, concrete exterior; wood frame superstructure; single-story
Basements:	none
Building Square footage:	2,800
Building Occupants:	Currently less than five laboratory workers.
Building Operations:	Currently houses a laboratory. This building was used for truck maintenance before Rohr purchased it. After it was purchased by Rohr it was used for research and development.
Building Interior Hazardous Substance Use or Presence:	A small oil/water separator is located in the laboratory for use with the laboratory equipment.
Building Exterior Hazardous Substance Use or Presence:	None identified.

SITE UTILITIES	
Sewage:	City of Chula Vista
Electricity:	San Diego Gas & Electric
Potable Water:	Sweetwater Authority
Heating System:	Yes
Cooling System:	All buildings are air conditioned.
Gas:	San Diego Gas & Electric
Other:	A stormwater culvert runs adjacent to railroad tracks located along the western border of the Site.

2.2 Surrounding Properties

SURROUNDING PROPERTIES	
Direction	**Address and Use**
North:	Undeveloped Land (owned by Rohr)
East:	Highway 5, railroad right-of-way (ROW), residences, and Trolley Transit Center.
South:	H Street and parking lot (part of the Rohr Facility)
West:	Railroad ROW, parking lots, and Building 1 (part of the Rohr Facility)

2.3 Geologic, Hydrogeologic, Hydrologic, and Topographic Conditions

The Site is located at an elevation of approximately 22 feet above mean sea level (EDR Radius Report, 2020) and is relatively flat. Topographic maps indicate that there is a slight slope to the southwest, in the direction of the shoreline. The closest surface water body is San Diego Bay, located less than 1 mile to the west of the Site.

Numerous subsurface investigations have been conducted on the Site and the surrounding area. The summary of the lithological findings below is based on the description of Site geology and hydrogeology in the 2020 Conceptual Site Model published by Haley & Aldrich, Inc. (HAI, 2020b).

The Site is immediately underlain by the Bay Point Formation, which extends to approximately 150 feet below ground surface (bgs). The on-Site portion of the Bay Point Formation consists of heterogeneous, interbedded silts and clays with sand and gravel layers and lenses. The Bay Point Formation is underlain by a low-conductivity clay unit starting at 125 to 150 feet bgs with a thickness of 20 to 65 feet. This unit is referred to as the “clay aquitard” and is described as consisting of a blue-gray estuarine clay, though the color varies across the Site. The clay aquitard is underlain by an interval of coarse sands, gravels, and cobbles at least 20 feet thick and attributed to the San Diego Formation. Below this interval of coarse-grained soils are a series of discontinuous lenses of sands, silts, and clays to a depth of at least 400 feet bgs.

First-encountered groundwater has been found to range between 10 and 18 feet bgs at the Site (URS, 2015). The main groundwater-bearing zone within the Bay Point Formation is referred to in Site literature as “Zone B” and extends from approximately 25 feet bgs to approximately 125 feet bgs, or the top of the clay aquitard. This zone is further split into an upper and lower zone with a dividing line between 55 and 70 feet bgs. Groundwater is also present in the coarse-grained unit at the top of the San Diego Formation.

Groundwater monitoring wells indicate that groundwater flow in Zone B is generally to the west with a gradient of 0.0005 to 0.0007 feet per foot in the upper zone and 0.002 to 0.0007 feet per foot in the lower zone. The vertical gradient between the upper and lower zones is typically

upward. Tidal studies in the upper zone indicate that this groundwater bearing zone is tidally influenced, though the magnitude is minimal on Site because of its location east of the historical shoreline.

3.0 SITE RECONNAISSANCE

A Site reconnaissance was performed on 9 June 2020 to observe current Site conditions and identify and document potential notable environmental conditions. GSI representatives Samantha Curtis and Becky Chen were accompanied through portions of the Site by Richard Siordia, Environmental Health and Safety (EHS) Manager for Rohr. Mr. Siordia has been employed at the facility since 1987 and has worked in the environmental department since approximately 1989.

In Building 29, photographs were limited to areas where no equipment was stored within the northern 1/3 of the building due to ongoing operations.

The Sections below describe the Site and adjoining property uses, and observations during the reconnaissance. Photographs taken during the Site reconnaissance are included in Appendix B.

3.1 Current and Past Site Use

According to Mr. Siordia, when he began his employment at the Site in approximately 1989, Building 29 was utilized for equipment maintenance on the northern end, though the presence of hydraulic lifts is unknown. A tooling area and paint booth were located in the center of Building 29. Building 99 and 100 were used for a business that repaired trucks. A smaller building (Building 28) located in the southern parking lot of Building 29, was utilized for office space. The location of this building is shown on a plot plan in Appendix C (Adrian Brown, 1998).

Mr. Siordia noted that to his knowledge, there were no designated hazardous waste storage areas, and all wastes were collected and transferred off Site to the South Campus for disposal. All transformers at the Site were retrofitted in the 1990s and do not contain polychlorinated biphenyls (PCBs).

Current uses of the property are summarized below.

Building 99

Building 99 has not been occupied since approximately 2018. This building was previously used for human resources, training, gym, medical services, and a print shop. At the time of the Site walk, the building had been completely cleaned out and no furniture or equipment remained. No evidence of hazardous waste storage or significant stains or spills were observed in Building 99 during the Site reconnaissance (photographs #1 through #4, Appendix B). Six groundwater monitoring wells are located in the parking lot to the north of Building 99.

Building 100

Building 100 has three large bay doors and is currently utilized for research and development (R&D), including a laboratory. According to Mr. Siordia, prior to Rohr's purchase of the property, the building was utilized for servicing trucks and three service bays and a sump were located in the building. No evidence of sumps or hydraulic equipment were observed during the Site reconnaissance. No hazardous waste storage or significant stains or spills were observed in Building 100 during the Site reconnaissance; small quantities of janitorial chemicals are stored in a cabinet in the building (photograph #7, Appendix B).

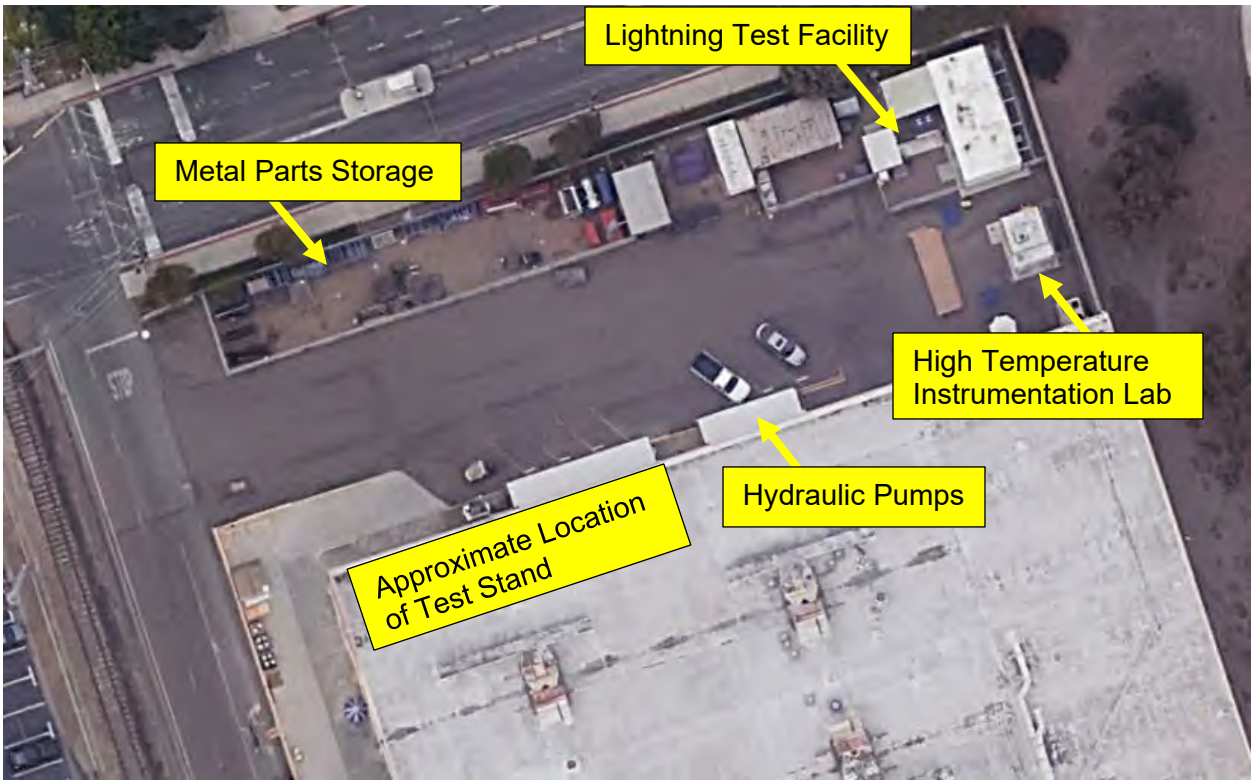
Building 29, moving from northern end (G Street) to the southern end (H Street)

The yard on the northern end of Building 29 includes parking as well as an enclosure for metal storage, and several small locked portable units that include a "Lightning Test Facility"(photograph #11) and a "High Temperature Instrumentation Lab" (photograph 10).

Historically, the northern portion of the building was utilized for equipment maintenance, but in the late 1990s to early 2000s R&D and a test laboratory was added to the maintenance area.

Hydraulic pumps are located on the mezzanine platform immediately outside the northern door 29-3. Hydraulic oil is utilized to run the "Test Stand", located immediately inside the northern door 29-3, within the "Structures Lab". The Test Stand is a large piece of steel equipment that measures approximately 75 feet long, 15 feet wide, and 20 feet high, set into a recess in the floor that is approximately 6 feet deep. The Test Stand is utilized to conduct stress tests on equipment to evaluate whether there are potential flaws (photographs #12 and #13).

Approximate Location of Features on Northern End of Building 29 (aerial photograph source: Google Earth, 2020)



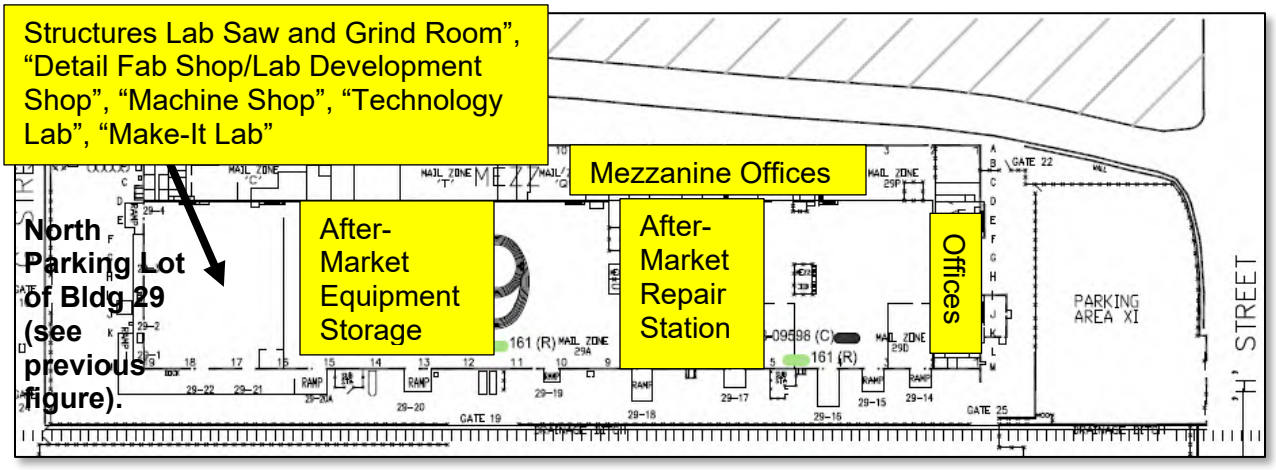
The "Structures Lab Saw and Grind Room", "Detail Fab Shop/Lab Development Shop" and "Machine Shop" are located to the south of the main Structures Lab (photographs #14 and #15). Several metal machining stations, and several empty drums are located within the Machine Shop.

The "Technology Lab" or R&D "Make-It Lab" is located to the south of the Structures Lab and completes the northern 1/3rd of Building 29. A polyethylene wastewater aboveground storage tank (AST) is located in the vicinity of the laboratory, within secondary containment (photograph 16).

The central portion of Building 29 is in the process of shutting down and currently houses some after-market equipment. A paint booth was historically present in this area but was reportedly moved to the southern portion of the building. No evidence of significant stains or spills was observed in the area.

The south-central area of Building 29 is vacant but was historically utilized for tooling and most recently was identified as the "Aftermarket Repair Station" (photographs #18 through #21). In the early 1990s "Blanchard Grinders" and lathe machines were utilized in this area and Graymills degreasing units, approximately 6 square feet in area and 2 feet in height, were used to store the waste from the machines. These degreasing units were emptied by maintenance personnel and the waste fluid was stored on the South Campus for disposal until approximately the year 2000. Concrete in the south-central area of Building 29 shows evidence of areas where heavy equipment workstations had been present and removed. The concrete was patched at the surface identifying areas where the base of equipment may have extended below the current surface.

General Locations of Features in Building 29 (Base figure from URS, 2013)



A large Coordinate Measuring Machine (CMM) room is located in the south-central portion of Building 29, where high-level measurements were conducted. The CMM rested on granite blocks that did not expand or contract due to heat or cold. This equipment had been removed prior to the Site reconnaissance and the CMM room was empty. No stains or evidence of spills were evident in the CMM room.

Immediately adjacent to the CMM room to the south was the historical location of a paint booth that had been moved from the central portion of the building. The paint booth has been removed and no evidence of significant stains or spills was observed in the area.

The southern portion of Building 29 is primarily vacant (photograph #23), with some equipment that is being dismantled, including "Water Jet" equipment used to cut aluminum rings (FlowWaterjet.com). This area has most recently been used for "spin-form" operations where large aluminum plates are cut, heated, and rolled to create large parts. Vacant offices are present on the far southern portion of the building, adjacent to the vacant southern parking area. Drums

were present in the vicinity and were visually observed to contain sand that has been removed from the Water Jet in preparation for removal.

Mr. Siordia identified a small tool repair area where “small parts cleaning” was previously located, near the location identified as an “underground vessel” in the 2016 Phase I ESA (labeled as feature 204 on Figure 3; HAI, 2016a). No evidence of an underground vessel or former parts cleaning operations were visible at the time of the Site reconnaissance.

The parking lot of Building 29 once included Building 28, which, according to Mr. Siordia, was a raised building used for administrative tasks, but dismantled in the early 2000s.

The eastern portion of the building includes a second story (or mezzanine) where offices were located. The offices have been vacated and all equipment and furniture have been removed.

The eastern, frontage along Bay Boulevard is lined with shrubs and grass. One fence-enclosed area, approximately 6 feet by 12 feet is present along the building and is filled with debris (photograph #33).

3.2 Site Observations

Observations of Site conditions that may indicate the likelihood of an REC in connection with the Site are discussed in the following Sections. If the observation is indicated with a “yes”, additional information related to that item is included following the table.

3.2.1 General Site Observations

GENERAL OBSERVATIONS	YES	NO
Hazardous Substances and Petroleum Products in Connection with Identified Uses	X	
Stains or Corrosion	X	
Storage Tanks	X	
Wells (dry, irrigation, injection, monitoring, abandoned)	X	
Drains, Sumps, Clarifiers	X	
Odors		X
Pools of Liquid		X
Drums	X	
Hazardous Substance and Petroleum Products Containers (Not Necessarily in Connection with Identified Uses)		X
Unidentified Substance Containers		X
Air Emissions		X
Equipment that may Contain Polychlorinated Biphenyls (PCBs)	X	
Pits, Ponds, or Lagoons (Site or adjoining)		X
Stained Soil or Pavement		X
Stressed Vegetation from Something other than Insufficient Water		X
Solid Waste, Construction Debris, Trash Mounds	X	
Wastewater, Storm Water, Discharged Water	X	
Septic Systems, Cesspools, Sewer	X	
Heating/Cooling System	X	
Stains or Corrosion		X

A description of Site observations is provided below.

- Hazardous Substances and Petroleum Products in Connection with Identified Uses
    - Currently, hydraulic fluid is utilized in the northern portion of Building 29. Hydraulic pumps are located on the mezzanine platform immediately outside the northern door 29-3. Hydraulic oil is utilized to run the “Test Stand”, located immediately inside the northern door 29-3, within the “Structures Lab”.
    - In Building 29, large hydraulic track-mounted crane equipment is present across the Structures Lab, which was utilized to move equipment such as engines to the “Test Stand” for testing.
    - A paint booth was historically present in the central portion of Building 29 but was reportedly relocated to the southern portion of the building immediately adjacent to the CMM room. The paint booth is no longer present in the southern portion of Building 29 No evidence of significant stains or spills was observed in either area where the paint booth was previously located.
    - The south-central area of Building 29 is vacant but was historically utilized for tooling and most recently was identified as the “Aftermarket Repair Station”. In the early 1990s “Blanchard Grinders” and lathe machines were utilized in this area and Graymills degreasing units, approximately 6 square feet in area and 2 feet in height, were used to store the waste from the machines. These degreasing units were emptied by maintenance personnel and the waste fluid was stored on the South Campus for disposal until approximately the year 2000.
- Stains or Corrosion
    - Concrete in the south-central area of Building 29 shows evidence of areas where heavy equipment workstations had been present and removed. The concrete was patched at the surface identifying areas where the base of equipment may have extended below the current surface.
    - A small tool repair area was identified in the southern portion of Building 29 where “small parts cleaning” was conducted. This was near a location identified as an “underground vessel” (location 204) in the 2016 HAI Phase I ESA. No evidence of an underground vessel or former parts cleaning operations were visible at the time of the Site reconnaissance.
- Storage Tanks (current or removed)
    - A polyethylene wastewater AST is located in the vicinity of the R&D laboratory in Building 29.
- Wells (dry, irrigation, injection, monitoring, abandoned.)
    - Six well boxes were observed in the northern Building 99 parking lot. The locations of these well boxes are consistent with locations of four monitoring wells shown on Figure 3 of the 2016 HAI Phase I ESA (Appendix C).
- Drains, Sumps, Clarifiers
    - The location of a historical sump was identified during the Site visit in the vicinity of door 29-15 of Building 29, however Mr. Siordia noted that the sump had been removed and closed as a UST. Evidence of subsurface sampling locations was

observed in the area surrounding the removed sump (observed borings V19, B29-35A, B and C; Map ID 3-09596 on Figure 3 of HAI, 2020b).

- Drums
    - In the southern portion of Building 29, immediately adjacent to the CMM room, two 55-gallon drums were presently stored on pallets and labeled “on hold pending analysis” and “soil cuttings VB20” and “concrete slurry”.
    - Several empty drums are located within the Machine Shop of Building 29.
- Equipment that may Contain PCBs
    - During Site reconnaissance, transformers were observed on the western side of Buildings 99 and 29. A list of transformers present at the Site is included in the 2016 Phase I ESA. However, Mr. Siordia noted that all transformers at the Site were retrofitted in the 1990s and currently do not utilize PCBs.
- Solid Waste, Construction Debris, Trash Mounds
    - The eastern, frontage road along Bay Boulevard is lined with shrubs and grass. One enclosed area, approximately 6 feet by 12 feet is present along the building and is filled with debris.
- Wastewater, Storm Water, Discharged Water
    - A drainage swale is located adjacent to the rail tracks along the western border of the Site.
- Septic Systems, Cesspools, Sewer
    - Mr. Siordia noted that in the last 10 years all sewer drains have been plugged and capped with concrete within Building 29. The plumbing associated with the sewer drains remains beneath the building.
- Heating/Cooling System – Heating and cooling systems were identified outside of both Building 29 and Building 99 on the west. The following information was presented in the 2016 Phase I ESA (HAI, 2016a):
    - Buildings 99 and 100 utilize direct expansion packaged units.
    - Building 29 utilizes chilled water from cogeneration absorption chiller and electric chillers to air handling units, and hot water from a penthouse boiler to the air handling units.

3.2.2 Previous Site Features Not Observed

As noted above, the facilities on Parcel A are only partially utilized at this time, and various features not observed during GSI’s reconnaissance previously existed at the Site. A list of historical features, including sample locations, a paint booth, ASTs, and underground vaults is provided in the Conceptual Site Model (CSM; HAI, 2020b) and the 2016 Phase I (HAI, 2016a). The potential for these features to impact environmental conditions at the Site and constitute RECs is discussed further in Sections 5.1.1 and 7.0 of this ESA.

4.0 HISTORICAL INFORMATION

GSI contracted with EDR to compile historical documents for the Site and surrounding area to develop an understanding of the history of the Site. The following historical data sources were compiled and are included in the Appendices:

- Sanborn fire insurance maps (Appendix D),
- United States Geological Survey (USGS) topographic maps (Appendix E),
- Aerial photographs (Appendix F), and
- City directories (Appendix G)

Pertinent historical information is incorporated in the Summary of Findings (Section 7.0).

Historical Source	Available Dates
Sanborn Fire Insurance Maps (SFIM)	SFIM covering the Site were not found through EDR, but maps of the west-adjacent property from 1918 and 1926, and 1950 were available in a 2013 Phase I (URS, 2013).
USGS Topographic Maps (USGS)	15-minute topographic map series: 1904, 1930, and 1991 7.5-minute topographic map series: 1943/1944, 1953, 1967, 1975, 1996, and 2012
Aerial Photographs (AP)	AP from the following dates were obtained from EDR: 1949*, 1953, 1964, 1966, 1970, 1979, 1985, 1989, 1994, 2005, 2009, 2012, and 2016. Additional AP from the following dates were obtained from Geotracker[2]: 1939, 1945, 1953, 1957, 1964, 1965, 1970, 1974, 1978, 1986, and 1998.
City Directories (CD)	1956, 1960, 1965, 1971, 1975, 1979, 1982, 1986, 1992, 1995, 2000, 2005, 2010, 2014, and 2017

* Photograph of poor quality and not included in our review.

Subject Property

Historical sources show that the Site was likely undeveloped as late as 1930. The 1930 topographic maps show small structures present on Site, south of G Street. Small commercial/industrial buildings and structures and possible residences were present on the central portion of the block between G and H Streets by 1944; HAI opined that operations may have included a lumber yard based on the presence of orderly stacked materials (HAI, 2016a). The City Directory identified Bay Surplus Boxes at 426 Bay Boulevard; it is possible that the neatly stacked materials identified on aerial photographs actually are related to the Bay Surplus Boxes entity. According to the City Directory, a warehouse for Rohr Aircraft Corp was located on the portion of the Site along H Street by 1956.[3]. Building 29 was constructed between 1957 and 1962 (HAI, 2016a) and occupied approximately three-quarters of the block. This area remained roughly in the same configuration until the building along H Street was removed between 1994 and 2005.

[2] https://geotracker.waterboards.ca.gov/profile_report?global_id=SL209294204
[3] The 1956 City Directory also lists a restaurant at 426 Bay Boulevard; it is not known if this entity was located directly on the Site.

The portion of the Site north of G Street was used for agriculture possibly as early as 1945 until it was developed between 1953 and 1956 into Harbor Trailer Park and a hardware manufacturing business, listed in historical City Directories as Duvall Co hardware manufacturing. The trailer park and other structures were replaced with the current buildings (Buildings 99 and 100) between 1975 and 1978, which housed Lawless Detroit Diesel and Valley Detroit Diesel as recently as 1986. According to a 2016 Phase I by HAI, this parcel was purchased by Rohr in 1986 and has since housed non-manufacturing activities (HAI, 2016a).[4]

Surrounding Properties

The surrounding properties were largely used for agriculture prior to development. Interstate 5 was built parallel to the northeast Site boundary across Bay Boulevard between 1949 and 1953 with the area beyond gradually filling in with residential and small commercial/industrial developments by 1985. The property to the northwest was first developed between 1949 and 1953 and housed various commercial/industrial activities, such as a wrecker yard, pump and compressor supply, and veterinary hospital. This block was completely vacant by 2005.

The southwestern property boundary bordered a rail line as early as 1904, as shown on topographic maps, through to the present. As early as 1918, International Magnesite Company, a magnesite manufacturer, was located on the other side of the rail line. By 1926, R&H Tyce, a building material manufacturer was also present. In 1941, the area began to be used for manufacturing generally for the aviation and aerospace industry (Adrian Brown, 1998), and became the sole operation on these properties by 1959 (URS, 2013). The southeast-adjacent property was developed as a surface lot as early as 1953 and has remained a surface lot to the present.

Details of the historical review are tabulated below.

[4] The 1986 City Directory shows Valley Detroit Diesel as the occupant of the Site. There is no listing for 390 Bay Boulevard on subsequent City Directory listings.

Historical Summary (SFIM, USGS, and AP)			
Year	**Source**	**Site Description**	**Adjacent Site Description**
1904	USGS	A street (likely G Street) runs northeast-southwest through the Site, and the Site appears otherwise undeveloped	A street grid is shown to the north, east, and southeast with some structures. A Coronado Railroad line is shown along the southwestern edge of the Site. A pier or dock is shown on the bay margin to the west beyond the rail line. Undeveloped bay margin and marsh are shown over most of the area to the west and southwest.
1918	SFIM	Not shown	International Magnesite Company, a magnesite manufacturer, is shown on the parcel to the west of the Site. A mill and calcination area are shown.
1926	SFIM	Not shown	In addition to International Magnesite Company, R.&H. Tyce, a building material manufacturer, is now shown on the parcel to the west. Building operations shown include a laboratory and paint shop.
1930	USGS	At least two structures are shown on the Site between G and H Street.	An additional rail line is shown paralleling the street along the northeastern Site boundary. More structures are shown to the north, east, and southeast. Structures and additional streets are near the bay margin and marshes to the west and south of the Site. The pier or dock directly to the west of the Site is no longer present.
1939	AP	Small structures (possibly residences) are present on the portion of the Site nearest H Street, while the remaining space between G and H Street appears to be used for agriculture.	Small structures that appear to be residential are present southwest and south of the Site. Undeveloped marshland and bay margin are west of the rail line along the northwest Site boundary. Industrial buildings, likely associated with International Magnesite Company and R.&H. Tyce are also present northwest of the Site near G Street.
1943/1944	USGS	Additional structures are shown on the Site between G and H Street.	Increasing density of structures and streets to the north, east, and southeast. Street and structure configurations to the west and south of the Site have changed but remain similar in density.
1949	AP	South of G Street, observations from north to south: undeveloped, commercial/industrial with several structures and materials/equipment storage, small structures (possibly residential) surrounded by large plots of land, large building surrounded by parking lot along H Street. The portion of the Site north of G Street appears to be used for agriculture.	Agricultural land is shown across the street and rail line to the northeast of the Site, beyond which are potentially trailer parks. Additional agricultural land is shown to the northwest and portions near the bay margin appear undeveloped. Large industrial buildings, two large aboveground storage tanks (ASTs), and smaller nearby buildings are shown to the west and south. Small structures and a parking lot or car storage yard are shown on the property to the southeast.
1950	SFIM	Not shown	R.&H. Tyce has been replaced by Pioneer Pyrophylite Manufacturing Co., which includes grinding and mixing rooms. Aircraft Engineering Service is also shown on the parcel to the west of the Site and includes multiple machine shops and a plating shop.

1953	AP, USGS	The configuration of the commercial/industrial buildings at the central portion of the Site has changed slightly.	Interstate 5 is present along the northeastern Site boundary beyond Bay Boulevard. Beyond the street, highway, and rail line, some of the agricultural land has been converted into subdivisions, trailer parks, and an industrial yard. Some agricultural land to the southwest has been developed for commercial or industrial use. Additional structures are evident alongside the large industrial buildings to the west and south. The car storage area to the southeast has expanded
1957	AP	South of G Street, a large, industrial building is present in the central portion of the block, with smaller buildings and structures along Bay Boulevard and between the large building and G Street. The area north of G Street is not clearly shown.	Most of the agricultural land to the northeast has been developed into trailer parks, residential buildings, and commercial/industrial buildings. Commercial/industrial operations to the west have been expanded. Areas north of the site are not clearly visible.
1964, 1965	AP	South of G Street, the large, industrial building is present across the northern three-quarters of the block between G and H Street with smaller buildings and structures shown between the northern portion of the building and Bay Boulevard. A trailer park, parking lot, and single commercial/industrial building are present on the Site north of G Street.	The agricultural land to the northeast continues to be developed into trailer parks, residential buildings, and commercial/industrial buildings. Commercial/industrial operations to the northwest have been expanded. The bay has been filled in such that the bay margin extends farther west. Previous undeveloped bay margin to the northwest has been converted to agricultural land. Additional small buildings and structures are shown around the large industrial buildings to the west and south. The car storage area to the southeast has expanded.
1966, 1967	AP, USGS	No change	Agricultural land to the northeast has been further developed into residential and commercial/industrial buildings. Additional commercial/industrial buildings and structures are shown to the west and south. No substantial changes are evident on the properties adjacent to the northwest and southeast. A sewage disposal area is labeled on the 1967 USGS topographic map.
1970	AP	The large industrial building present south of G street has been expanded to its current configuration (Building 29). Most of the small buildings and structures along Bay Boulevard are no longer present.	The areas to the northeast have been redeveloped for residential and commercial/industrial purposes. No agricultural land use is apparent. The large, industrial building to the west of the Site has expanded and other buildings have been added to the west and south of the Site. An additional commercial/industrial building is shown on the property to the northwest. No substantial changes are evident on the southeast-adjacent property.
1974, 1975	AP	All small buildings and structures along Bay Boulevard are no longer shown.	No change.

1978, 1979, 1985, 1986	AP	The trailer park and parking lot north of G Street have been replaced by two commercial/industrial buildings. Buildings 99 and 100 are present on the portion of the Site north of G Street is their current configuration.	During the period of the APs, more infill residential and commercial/industrial development has occurred. By 1985, the large, industrial building to the west is in its current configuration
1989, 1991	AP, USGS	Two additional buildings are shown in the northwestern corner of the Site, northwest of Building 99[5].	The northwest-adjacent property is shown as vacant. A portion of the agricultural land to the northwest is shown as a surface lot. No substantial changes are shown on other adjacent properties.
1994	AP	The two buildings in the northwest corner are no longer shown.	The agricultural land and surface lot to the northwest have been developed with the current commercial/industrial building, parking structure, and some surface lots. No substantial changes are shown on other adjacent properties.
1996, 1998	AP, USGS	No change.	No change
2005	AP	The Site is shown in its current configuration with the removal of the building along H Street.	The northwest-adjacent block is in its approximate current configuration. Around the large industrial building to the west, many smaller buildings, structures, and the two large ASTs are no longer shown. Most of the smaller structures are no longer shown on the property to the south. No substantial changes are shown on other adjacent properties.
2009	AP	No change	A surface lot is shown in place of the large, industrial building to the south and the surrounding smaller buildings. No substantial changes are shown on other adjacent properties.
2012	AP, USGS	No change	The property to the west is shown in its current configuration. No substantial changes are shown on other adjacent properties.
2016	AP	No change	The commercial/industrial building and parking structure to the northwest are shown in their current configuration. No substantial changes are shown on other adjacent properties.

City directory listings were provided by EDR at approximately 5-year intervals from 1956 to 2017. Addresses that appeared to be associated with the Site included 388 to 452 Bay Boulevard and 850 Lagoon Drive. Of the on-Site tenants shown in the city directory listings, the following are potentially associated with industrial activities or hazardous material use based on the business name:

[5] Based on a Coastal Development permit dated 2 May 1989, these structures were temporary trailers that were permitted to be on Site for 3 years (City of Chula Vista, 1989).

Historical City Directory Summary		
Address	**Year**	**Directory Listing**
850 Lagoon Drive	2005 2005-2017	Tolo Inc. Goodrich Aerostructures/Goodrich Aerostructures Group/Goodrich Corp/Goodrich Corp Aerostructure Group
390 Bay Boulevard	1956-1965 1979-1986	Duvall Co hdw mfr Valley Det Dies All/Lawless Detrt Diesl
444 Bay Boulevard	1956-1965	Rohr whse/CorpArchitectural Div/Rohr Aircraft Corp whse

Directory listings were also provided for addresses within a block of the Site. The following are potentially associated with industrial activities or hazardous material use based on the business name:

Historical City Directory Summary		
Address	**Year**	**Directory Listing**

5.0 OWNER/USER PROVIDED INFORMATION AND INTERVIEWS

The following owner and user provided documentation was utilized in this Phase I ESA.

5.1 Documents

PSIP provided access to a document repository containing many historical documents for the Site and the Rohr Facility. The following reports were deemed to have relevant information and were reviewed in preparation of this Phase I ESA:

- Woodward Clyde, 1998, Data Compilation and Evaluation Report, Rohr, Inc., Chula Vista, California, 27 May.
- URS, 2013, Phase I Environmental Site Assessment, UTAS – Chula Vista, 850 Lagoon Drive, Chula Vista, California 91910, 2 April.
- URS, 2015, Supplemental Remedial Investigation Report, Rohr, Inc. – North Campus, 850 Lagoon Drive, Chula Vista, California, 30 April.
- HAI, 2016a, ASTM Phase I Environmental Site Assessment, Rohr, Inc., Property IDs 7 and 15, Chula Vista, California, 21 July.

- HAI, 2016b, Phase II Environmental Site Assessment, Rohr IDs 7 and 15 (Eastern Portion), Building 99 and 29, 850 Lagoon Drive, Chula Vista, California, 8 December.
- HAI, 2018a, Phase II Environmental Site Assessment, Buildings 99 and 29, 850 Lagoon Drive, Chula Vista, California, 10 January.
- HAI, 2018b, Sub-Slab and Focused Soil Vapor Work Plan, Rohr, Inc. – Eastern Parcels, Buildings 29, 99 and 100, Chula Vista, California, 7 May.
- HAI, 2018c, Sub-Slab and Focused Soil Vapor Survey Report, Rohr, Inc. – Eastern Parcels, Buildings 29, 99 and 100, Chula Vista, California, 6 September.
- HAI, 2018d, Indoor Air Screening Technical Memorandum, Rohr, Inc., – Building 29, Chula Vista, California, Geotracker ID: T0000011095, 31 October.
- HAI, 2020a, Conceptual Site Model, Rohr, Inc. – North Campus, 850 Lagoon Drive, Chula Vista, California, Geotracker ID: T0000011095, 3 April.
- HAI ,2020b, Data Gap Assessment Report, Rohr, Inc., Parcel A, Building 29, Chula Vista, California, 13 May.[6]

Additionally, several of these reports reference the following report, which was not provided by the User, but was obtained from Geotracker and incorporated into this section:

- Adrian Brown, 1998, ASTM Phase I Site Assessment, B.F. Goodrich Aerospace, Foot of "H" Street, 4 June.

Some of the above reports pertain to the larger Rohr Facility or the North Campus portion of the facility, which include the Site. Information included in these reports that is pertinent to the Site is summarized below. Excerpts from these documents are included in Appendix C, as relevant to the discussion below.

5.1.1 Site Operations and Environmental Features

The Rohr facility has been in operation since 1941, primarily manufacturing structural and engine components for aircraft. A brief history of the Rohr Facility expansion is provided in the HAI Phase I (HAI, 2016a):

> *Rohr began operating on the Bayfront in 1941, at which time Buildings 1 and 2 were constructed and other buildings followed in response to business growth and an increased demand for aircraft components and other manufacturing business lines including light rail trains, buses, large array antennas, and other products. The expansion of the Chula Vista facility was accomplished in part by incrementally expanding its footprint onto dredged fill areas that extended into San Diego Bay. By 1969, the combined plant area included 47 buildings totaling more than two million square feet of factory, warehouse, and office space (Bodhi 2013). In the late 1980s, Rohr purchased the agricultural properties just to the northwest of Rohr ID 7* [Building 99 parcel] *to construct its corporate office complex (Building 107). The final area ultimately occupied by Rohr extended between F Street (Marina Parkway) on the north, J Street (Marina Parkway) on the south and west, and Bay Boulevard to the east. In 1999, Goodrich (who had acquired Rohr), the City, and the San Diego Unified Port District*

[6] Note that HAI initially published the Data Gap Assessment Report on 18 February 2020; however, the version of this report posted on Geotracker is dated May. It appears that these two documents contain the same information.

(Port) entered into a Relocation Agreement, by which portions of Goodrich-owned property south of H Street were transferred to the Port in exchange for transfer of tidelands north of H Street to Goodrich.

Entities that have owned and operated the Site include Rohr, Inc., BF Goodrich, United Technologies Aerospace Systems, and Collins Aerospace.

Historical uses of the parcel north of G Street, currently occupied by Buildings 99 and 100, included agricultural, trailer park, possible residences, and Lawless and Valley Detroit Diesel (repair of semi-trucks). Rohr purchased the property in 1986, with Buildings 99 and 100 already existing, and conducted non-manufacturing activities in this area.

Historical uses of the parcel south of G Street, currently occupied by Building 29, included agricultural, residences and a possible lumber yard. Former Building 28 was constructed by 1945, and was used as a warehouse, and demolished by the early 2000s. Building 29 was built in four phases, starting from the south in about 1957. The majority was completed by 1962.

The previous Phase I ESAs describe past uses of the buildings at the Site as follows:

Building 29: Previously housed the Maintenance Department (northern third of the building to approximately Door 29-20), tooling with a machine shop, and offices. Recent to 2013, operations were primarily manufacturing and included the following:

- Vibration testing
- Machine shop
- Test area
- After Market Spares warehouse
- Service center and FAI repairs
- Storage
- Tool calibration
- Product development
- Offices and training
- Photo Lab
- Technical/Metallurgy Labs
- Kitting activities

Building 99 – Administrative functions (e.g., payroll, human resources, reproduction, offices, conference/meeting rooms).

Building 100 – Test Lab

The previous Phase I ESAs identified several then-current or historical environmental features at the Site that included USTs and underground vessels, ASTs, paint booths, degreasers, mills and lathes, and drainage swales. The HAI 2020 Conceptual Site Model included a table that includes each feature and the status, and whether potential associated chemicals of concern (COCs) are present above groundwater protection limits (GPLs) and/or DTSC commercial/industrial screening levels in soil (HAI, 2020a). This table and figures showing the location of the listed

features is included in Appendix C. According to the CSM table, a 1,345-gallon machining coolant UST (Blanchard Grinder, Map ID3-09598) at Building 29 and four USTs (10,000-gallon gasoline, 10,000-gallon diesel, 1,000-gallon waste oil, and 100-gallon waste solvent) at Building 100 received regulatory closure. The "former vessels and vaults" were identified as an REC in the 2016 Phase I ESA. With the exception of some of the mills and lathes, sampling was conducted at these features during HAI's Phase II investigation (HAI, 2016b). Data from this and previous investigations in the vicinity of these features did not identify concentrations of COCs in soil above GPLs or commercial/industrial screening levels. Subsequently, additional investigation was conducted at the mills and lathes, this is discussed further below.

None of the previously identified storage tanks/vessels, paint booths, degreasers, or equipment identified on the HAI table were observed during the Site visit, with the exception of the 500-gallon R&D Lab Collection AST. Two clarifiers in Building 29 are listed as "inactive" in the HAI table and the status of one sump in Building 100 is listed as "unknown". These were not observed during the Site visit; it is unknown if they remain at the Site. According to Mr. Rick Siordia, there are no active clarifiers in Building 29 and no active sumps in Building 100.[7]

A transformer summary table in the 2013 URS Phase I ESA lists six transformers associated with Building 29; there is a notation for three of them indicating they were retrofitted on 25 April 1992. Reportedly, there is no PCB-containing equipment used on Site (URS, 2013); this was confirmed by Mr. Siordia.[8]

According to the 2013 URS Phase I ESA, degreasers are reported to use or have used products comprised of acetone, chlorofluorocarbons, methylene chloride, perchloroethene (PCE), and 1,1,1-trichloroethane (1,1,1-TCA). The URS Phase I also states:

> *"Historically the facility used TCE and 1,1,1-TCA as its primary degreasing solvents. TCE use was phased out in about 1973, and replaced by 1,1,1-TCA. 1,1,1-TCA was used at the facility until the late 1990s, at which time it was replaced by water-based degreasers, such as Spray Clean 12, a non-hazardous aqueous alkaline cleaner to clean parts of oil and grease prior to painting. MEK, MIBK and acetone have also been used for this purpose."*

An extensive storm water conveyance system, which includes drainage features beneath Building 29, is present at the Rohr Facility that drains to two outfalls to San Diego Bay (Adrian Brown, 1998). Surface water at the Site flows west to a drainage swale that conveys water to the SWCS.

5.1.2 Regulatory Status

The North Campus of the Rohr Facility, which includes the Site, is primarily under the regulatory oversight of RWQCB. Cleanup and Abatement Order No. 98-08 (CAO) was issued in March 1998 and specified a schedule for several initial activities to be completed. Rohr met these deadlines and continues to address soil and groundwater impacts under this CAO. Prior to issuance of the CAO, San Diego County Department of Environmental Health (SDCDEH) provided oversight, which was primarily related to UST permitting, investigation, and closure. The DTSC oversees permitting for waste treatment, storage, and disposal. A draft of CAO No. R9-2020-0099, entitled An Order Directing Rohr and Goodrich Corporation to Clean Up or Abate the Effects of Waste

[7] Email from Rick Siordia, of Collins, to Gino Bianchi-Mosquera, of GSI and Bob Scott, of HAI, 17 August 2020.
[8] Ibid.

Discharged from the Rohr/Goodrich North Campus Property for the North Campus , that will supersede CAO 98-08, was issued on 3 July 2020.

5.1.3 Environmental Investigations

This section provides a summary of the primary environmental investigations that have been conducted at the Site. Where available, copies of site maps that show sampling locations and analytical results are presented in Appendix C. Note that data generated from the investigations discussed below generally have been compared to applicable regulatory screening levels for a commercial/industrial use of the Site. The data evaluation and resulting conclusions may not be applicable for a residential (unrestricted) Site use.

1986 Building 99 Due Diligence Investigation (Woodward-Clyde, 1998)

In 1986, McLaren Hart conducted a groundwater investigation as part of due diligence activities prior to Rohr's purchase of the property, which was formerly occupied by Valley Detroit Diesel Allison (Woodward Clyde, 1998). Four monitoring wells were installed near the eastern and western property boundaries (MW-A through MW-D). The following constituents were detected in soil at depths ranging from 8.5 to 10 feet bgs: total recoverable petroleum hydrocarbons (TRPH; 11 to 27 milligrams per kilogram [mg/kg]), 1,4-dichlorobenzene (0.02 to 0.03 mg/kg), toluene (0.06 to 0.10 mg/kg), ethylbenzene (0.02 mg/kg), and total xylenes (0.11 to 0.17 mg/kg). MW-A, located along the upgradient property boundary, contained the following: TRPH (0.1 milligram per liter [mg/L]), toluene (2 micrograms per liter [µg/L]), and chloroform (4 µg/L). Downgradent wells MW-B through MW-D contained TRPH (0.06 to 0.27 mg/L), toluene (2 to 3 µg/L), total xylenes (1 µg/L), bromodichloromethane (4 to 14 µg/L), chloroform (15 to 23 µg/L), dibromodichloromethane (4 to 7 µg/L), 1,1-dichloroethane (5.9 µg/L), methylene chloride (5.6 µg/L), and TCE (1 µg/L). Rohr destroyed the wells in 1996, with approval from the SDCDEH.

1998/1999 Deep Boring Program (URS, 2013)

URS conducted a deep boring program in 1998/1999 to assess the subsurface geology and hydrogeology of the San Diego formation in support of re-designation of the groundwater basin uses from beneficial to non-beneficial. Five monitoring wells were installed on the Building 99 parcel (screen intervals are indicated in parentheses): DB-2 (180 to 200 feet bgs), DB-4 (424 to 484 feet bgs), DB-5 (182 to 202 feet bgs), OW-3 (10 to 30 feet bgs) and OW-4 (60 to 80 feet bgs). Two pressure transducers were also installed in separate grouted boreholes to monitor changes in pressure within the aquitard during aquifer testing: OW-1 (150 feet bgs) and OW-2 (168.5 feet bgs). Wells/boreholes DB-2, DB4, OW-2, and OW-4 are shown of Figure 3 of the 2016 HAI Phase I, which is included in Appendix C (note that six wells were observed northeast of Building 99 during the Site reconnaissance). There is no information in the publicly available regulatory record that beneficial uses of groundwater at and in the vicinity of the Site were re-designated.

Blanchard Grinder UST Closure (HAI, 2020b)

The former Blanchard Grinder was located in the tooling area in the southern portion of Building 29. In 1999, URS Greiner Woodward-Clyde drilled borings adjacent to the underground structure and analyzed soil samples for TRPH. TRPH were not detected and the SDCDEH approved in-place closure of the former Blanchard Grinder.

2005 San Diego Gas and Electric (SDG&E) Undergrounding Project (URS, 2013)

In 2005, SDG&E planned a project (OMPPA Transmission Project) to underground the overhead high-voltage line that crossed the parking lot areas of the facility from north to south. BF Goodrich, the facility owner at the time, filed a stay with the California Public Utilities Commission (CPUC)

to modify construction procedures described in the Environmental Impact Report because planned trenching below the groundwater table and dewatering could affect migration of a TCE plume at the Rohr Facility. SDG&E's consultant and URS conducted soil and groundwater sampling. Two borings (B11 and B15) were located on the Site near Building 29. TCE was detected in the groundwater sample collected from boring B15, located near the northwest corner of Building 29 at a concentration of 3.3 µg/L. Based on TCE concentrations detected in borings B4 and B5,located downgradient of the Site, it was concluded that there may be a source of TCE in the vicinity of the northern portion of Building 29. Groundwater modeling was conducted by both SDG&E and URS; the CPUC deemed the effects of the construction dewatering not significant and SDG&E's project proceeded as planned.

2013 Supplemental Remedial Investigation (URS, 2015)

URS performed a supplemental remedial investigation as part of due diligence activities when United Technologies Corporation (UTC) acquired Goodrich Corporation. The investigation was across the North Campus area of the facility. As part of this investigation, six borings were advanced in the drainage swale adjacent to the west (downgradient) of the Site (two west of the Building 99 parcel [UT-02 and UT-03] and eight west of the Building 29 parcel [UT-18 to -21 and UT-66]). Additionally, one boring was advanced near the former Blanchard Grinder (UT-22) and three borings were advanced in the former maintenance area of Building 29 (UT-23 to -25). Results indicated the following:

- PCBs were detected at concentrations up to 770 micrograms per kilogram (µg/kg), above industrial/commercial screening levels, in one of four soil samples collected in the drainage swale downgradient from the Building 99 parcel.
- VOCs were detected in groundwater at two locations within the maintenance area of Building 29 and near the Blanchard Grinder. TCE concentrations exceeded commercial/industrial screening levels at one location (UT-23) in the former maintenance area.
- TPH was detected in groundwater from two borings (UT-19 and UT-21) at concentrations of 860 and 1300 µg/L, respectively.

2016 Phase II ESA (HAI, 2016b and 2018)

HAI conducted a Phase II ESA to further assess RECs identified in its 2016 Phase I ESA. These RECs included:

- North of G Street (referred to as Rohr ID 7):
- Former sump – soil sampling west of the sump identified no soil impacts, but groundwater was not sampled
- Historical agricultural property use
- Possible presence of PCBs – PCBs were detected by URS in a drainage swale west of this parcel (boring UT-02)
- South of G Street (referred to as Rohr ID 15)
- Former vessels and vaults – each former vessel or vault was considered an REC
- Possible historical use as a lumber yard that may have included wood treating

- Former depression on northern quarter of the parcel observed on a 1948 aerial photograph
- Former maintenance area – possible use of oils and solvents
- Former mills and lathes – photographs showed fluid on the floor
- TCE in downgradient groundwater and potential vapor intrusion risk – TCE was detected in groundwater west of the northern portion of Building 29 at 1,000 to 2,000 µg/L
- Historical agricultural property use

In June 2016, HAI advanced 25 soil borings (4 on the Building 99 parcel and 21 on the Building 29 parcel) and analyzed 49 soil and 9 grab groundwater samples. Tables and figures presenting the data and sampling locations are included in Appendix C. HAI compared the soil data to residential and commercial industrial screening levels (SLs). Groundwater data was compared to maximum contaminant levels (MCLs) and environmental screening levels for vapor intrusion (VI ESLs). Results indicated the following:

- Soil:
    - Metals (with the exception of arsenic), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and organochlorine pesticides (OCPs) were not detected above SLs.
    - Arsenic exceeded background concentrations in shallow soil at three locations (B29-02, B29-03, and B29-07) in the northern portion of the Building 29 parcel.
    - PCBs exceeded residential and commercial screening in one soil sample (B29-05) located in the former Maintenance Department area of Building 29 at 2 feet bgs.
    - Polycyclic aromatic hydrocarbons (PAHs) exceeded residential SLs at two locations but were below commercial/industrial SLs at all locations;[9] HAI opined that PAHs were likely attributable to the presence of petroleum hydrocarbons.
- Groundwater:
    - TCE concentrations exceeded the residential VI ESLs at three locations (four samples) in the vicinity of the former Maintenance Department and exceeded the commercial industrial VI ESL at two locations
    - Concentrations of other VOCs exceeded MCLs at three locations
    - SVOCs were not detected in groundwater samples
    - Dissolved metals (antimony, arsenic, and thallium) concentrations exceeded MCLs at six locations

<u>2018 Vapor Intrusion Assessments (HAI, 2018b, c, and d)</u>

In May 2018, HAI performed sub-slab sampling and a focused soil vapor survey in preparation for sale of the property. Twenty-six sub-slab sampling probes were installed: 6 beneath Building

[9] Data was originally reported in HAI's 2016 Phase II ESA report (HAI, 2016b). The report was subsequently revised and submitted to the RWQCB in HAI's 2018 Phase II ESA report. Between 2016 and 2018, screening levels for some of the PAHs increased. In the 2018 report, data was compared to the new screening levels, which is reflected herein.

99, 3 beneath building 100, and 17 beneath Building 29. Additionally, 8 soil vapor probes were installed around the northern portion of Building 29 to identify possible TCE sources to groundwater. VOCs detected in the sub-slab samples included TCE, PCE, cis-1,2-dichloroethene (cis-1,2-DCE), trans-1,2-dichloroethene (trans-1,2-DCE), 1,1,1-TCA, chloroform, benzene, toluene, ethylbenzene, and xylenes (collective referred to as BTEX) and styrene. TCE was detected in 10 of 17 locations beneath Building 29 (42 to 920,000 micrograms per cubic meter [µg/m^3]). The highest concentrations were detected in the northwest corner (former Maintenance Department). TCE was only detected in one sample in each of Buildings 99 and 100 at concentrations of 32 and 30 µg/m3, respectively. The commercial/industrial screening level (0.03 attenuation factor) is 100 µg/m^3).

TCE was detected in all but one of the soil vapor samples at concentrations up to 3,000,000 µg/m^3. It was concluded that this data suggests there may be residual sources in soil beneath the building.

Subsequently, an indoor air screening program was conducted in September 2018. Indoor air was screened for total VOCs using a photoionization detector (PID) and for TCE using a Hapsite gas chromatography/mass spectrometer (GC/MS). HAI concluded that, "TCE screening results were less than the 8 µg/m^3 EPA Region 9 Indoor Air Response Action Level for TCE, also identified by DTSC as the commercial/industrial worker accelerated response action level assuming an 8-hour workday," and that results were likely influenced by building ventilation and indoor chemical usage (HAI, 2018d). Additionally, some slab penetrations appeared to be serving as preferential pathways for subsurface vapor intrusion. HAI recommended the following:

- Seal cracks, utility trench plate perforations, and conduits.
- Conduct a targeted rescreening at locations with TCE screening results above 3 µg/m^3 after sealing potential preferential pathways to confirm its effectiveness in reducing TCE in indoor air.
- Conduct indoor air screening during the winter to evaluate the effect of closed doors on indoor air quality.
- Maintain ventilation consistent with the conditions observed during the indoor air screening event and improve ventilation as necessary when doors are closed, and the building is occupied.

2020 Data Gap Assessment (HAI, 2020b)

In January 2020, HAI conducted a data gap assessment to support development of a human health risk assessment and soil remedial action plan and to further characterize VOCs present in groundwater present at the Site. Sampling included step-out sampling at three locations where arsenic was above background (B29-02, B29-03, and B29-07) and one location where PCBs were above the commercial/industrial screening level (B29-05), soil and groundwater sampling to identify potential TCE sources, and soil and groundwater sampling in the vicinity of the former mills and lathes. HAI advanced 32 soil borings and analyzed 68 soil samples and 11 groundwater samples. Data tables and figures are included in Appendix C. Results are summarized below:

> *Step-Out Borings*: Two of the step-out borings around boring B29-03 (B29-03A and -03B) and two around B29-07 (B29-07A and -07B) contained arsenic above the background level of 8 mg/kg established for South Campus, but below its GPL. The arsenic concentration exceeded its GPL in one soil sample (B29-07A). The arsenic results, in combination with other soil data collected around the northern portion of Building 29, indicate that the distribution of arsenic above screening levels is not constrained.

PCBs were detected in the step-out borings around B29-05; however, concentrations were below commercial industrial SLs. From the data that was generated, it appears that PCBs in soil may not be widespread.

Mills and Lathes: PCBs were detected in one soil sample (B29-33B) at concentrations below the commercial/industrial screening levels. VOCs were detected in soil samples from 7 of the 12 borings. PCE was reported in soil samples from four borings (B29-33A, B29-33B, B29-33C and B29-35C) at concentrations up to 0.323 mg/kg. TCE was reported in four borings (B29-32A, B29-32B, B29-32C and B29-33B) at concentrations up to 0.173 mg/kg. None of the detected concentrations were present above the commercial/industrial SLs or GPLs; however, the presence of volatile constituents in soil suggest these constituents may exist in soil vapor at concentrations exceeding VI-ESLs.

Source of TCE: TCE was detected in soil samples collected from 10 of 11 borings in the former Maintenance Department at concentrations ranging from 0.00228 to 37.8 mg/kg. Two samples exceeded the commercial/industrial screening level and one exceeded the GPL. Other VOCs, including PCE, were detected in soil samples; however, concentrations were below screening levels. HAI designated the borings in the Maintenance Department from which soil samples contained elevated concentrations of TCE as "Source Identification Borings" (HAI, 2020b).

Groundwater: TCE was detected in five borings (B29-23, B29-28, B29-30, B29-33C, B29-25C) at concentrations ranging from 1.52 to 1490 µg/L; concentrations in four of the borings exceeded MCLs and concentrations in two of the borings exceeded the commercial/industrial VI ESL. Cis-1,2-DCE was detected in three borings at concentrations ranging from 0.478 to 32 µg/L; concentrations in two of them exceeded the MCL. Chloroform was detected in three borings at concentrations ranging from 0.357 to 56.6 µg/L); concentrations in two of them exceeded the commercial/industrial VI ESL but were below the MCL. Other VOCs were detected, but concentrations were below screening levels. No metals were detected at concentrations exceeding the MCLs.

HAI concluded the following:

- Arsenic was detected in soil at concentrations above the GPL at one step-out boring (B29-07A).
- PCBs were not detected in soil at concentrations above the DTSC-SLs at the step-out borings.
- Analytical results of soil and groundwater samples collected at the reported locations of the former mills and lathes did not identify impacted areas associated with these former features.
- Analytical results from B29-23 and B29-24 suggest that there are sources of TCE in soil beneath the former Maintenance Department. The soil samples from these borings reported TCE concentrations that were above the commercial/industrial DTSC-SL. TCE in the sample from B29-23 was also above the GPL.
- TCE is present in Zone A and Upper Zone B groundwater beneath the Former Maintenance Department at concentrations that exceed the MCL.

Despite the various exceedances of screening levels, sources of TCE in soil beneath the Maintenance Department, and detections of PCE and TCE in soil at the mills and lathes, HAI stated in the Executive Summary of its report: "Based on the results of this data gap assessment,

no further investigation is recommended for Building 29 at this time." The presence of chemicals and metals as reported by HAI are discussed as RECs in Section 7.0 of this ESA.

5.2 Interviews/Questionnaires

On 6 August 2020, GSI spoke with Mr. Tom Alo, the RWQCB case worker for the Site, regarding the regulatory status of the Site. Mr. Alo confirmed that there is a draft CAO that includes the Site, which is currently being reviewed by Rohr. He also indicated that Site closure is subject to a public notification and comment period and that he will involve the California Office of Environmental Health Hazard Assessment (OEHHA) for human health risk assessment review.

A "User Questionnaire" was completed by Mr. Emil Wohl, of PSIP. Mr. Wohl indicated this ESA is being performed as part of a property purchase and that the purchase price contemplates environmental impacts. Additionally, he indicated there are no liens or activity and use limitations recorded against the property; however, as a condition of closing, they are required to record a deed restriction on the property, the form of which is attached to the 8 May 2020 purchase agreement between Rohr and PSIP.[10]. Mr. Wohl indicated that the past use of the Site is aircraft manufacturing but that he has no specialized knowledge relating to the property. Mr. Wohl provided a link to Geotracker for additional environmental information.

An "Owner/Occupant Questionnaire" was also provided to PSIP to forward to owner/occupant representatives. As of the date of this report, a response had not been received. However, Richard Siordia, Environmental Health and Safety (EHS) Manager for Rohr, was interviewed during the Site Reconnaissance. Information provided by Mr. Siordia is presented in Section 3.0.

The User questionnaire is included in Appendix H and applicable information has been incorporated in the Summary of Findings (Section 7.0).

6.0 RECORDS REVIEW

Environmental records were obtained by requesting records from state and local regulatory agencies and conducting a search of federal and state databases.

6.1 Regulatory Agency Records Review

On 26 May 2020, GSI contracted with Environmental Support Services, Inc. (ESS) to request regulatory agency records for the Site. Agency requests included a request for reasonably ascertainable records for the Site addresses and APNs. All agency file review requests and documents subsequently supplied by the agencies are included in Appendix I. A summary of the agencies that were contacted and their responses is provided in the Table below.

[10] Personal communication with Emil Wohl, of PSIP, 16 July 2020.

AGENCY	ANTICIPATED RECORD TYPES	RECORDS AVAILABLE?		
		YES	NO	PEND
City and Local Agencies				
Chula Vista Building Department	Historical tenants, property use, permits.	X		
Chula Vista Fire Department	Hazardous materials/waste storage, USTs.		X	
Chula Vista Public Works Department – Industrial Waste	Industrial waste discharge permits or violations		X	
San Diego Air Pollution Control District	Air emissions and permits.	X		
County Agencies				
SDCDEH - Hazardous Materials Division	Agency oversight information and documents.	X		
State Agencies				
DTSC – Cypress Office	Agency oversight information and documents.	X		
DTSC – Chatsworth Office	Agency oversight information and documents.		X	
DTSC – San Diego Office	Agency oversight information and documents.		X	
Office of the State Fire Marshall	Storage of hazardous materials/waste, pipeline information, USTs.		X	
RWQCB – San Diego Region	Agency oversight information and documents.	X		
Agency Website Databases				
County Assessor's Office	Development dates, APNs, parcel details.	X		
SWQCB Geotracker	Agency oversight information and documents.	X		
DTSC Envirostor	Agency oversight information and documents.		X	
Division of Gas and Geothermal Resources (DOGGR)	Oil and gas development, active oil wells, plugged wells, methane.		X	

The DTSC – Cypress Office indicated that a significant number of files were available dating from 1992 to 1998; these files are not available on Envirostor. These files would be difficult, if not impossible, to obtain in a timely manner due to the current COVID-19 pandemic. GSI deemed review of these files unnecessary because 1) HAI reviewed these files in preparation of the 2016 Phase I ESA, and 2) SDCDEH and RWQCB have been the primary oversight agencies for environmental investigation at the Site.

The SDCDEH responded to the information request and provided 8,605 pages of files for the North Campus, which includes the Site. The SDCDEH has not been the lead agency since 1998 and its files were reviewed and summarized in multiple Phase I ESAs, which were relied upon for this ESA. Based on these factors, GSI judged that review of these files was not needed and that the PSIP-provided documents adequately characterized the Site for the purposes of this ESA.

Significant information identified from the regulatory agency file review are included in applicable sections of this report.

As noted above, the Site address is the same as the Rohr Facility address. As such, much of the information provided for 850 Lagoon Drive was for other areas of the Rohr Facility, which are downgradient of the Site. The primary documents of relevance were provided by PSIP and are summarized in Section 5.1.

6.2 Regulatory Database Review

GSI contracted with EDR to compile a database report that summarizes the results of a search of federal, state, and tribal agency databases to assess whether the Site or nearby properties are under investigation for potential environmental issues or have been identified as conducting operations that could potentially impact the environment. The database report includes searches of regulatory databases of sites with environmental liens, deed restrictions, land use restrictions, engineering controls, and institutional controls.[11] Significant findings from the database report are summarized below and in applicable information is incorporated in the Summary of Findings (Section 7.0). The database report is included as Appendix C.

6.3 Subject Site

The 390 Bay Boulevard parcel is listed on the following databases under various names:

EDR Designation	Name	Regulatory List(s)/Description
A2	Lawless	Hist UST
A3	Valley Detroit Diesel	HAZNET, HWTS
A11	Rohr Corp	CHMIRS
A14	City of Chula Vista	HWTS
A16	Rohr Inc.	San Diego Co. HMMD

Hist UST	Hazardous Substance Storage Container Database
HAZNET	Facility and Manifest Data
HWTS	Hazardous Waste Tracking System
CHMIRS	California Hazardous Material Incident Report System
San Diego Co. HMMD	Listing of sites that handle or store hazardous materials

Review of the EDR report regarding the listings above included the following significant information:

- Lawless (A1) - a 10,000-gallon gasoline UST and a 10,000-gallon diesel UST was installed at 390 Bay Boulevard in 1977. These USTs were removed in 1986 and the SDCDEH granted closure in 1996 (URS, 2013).

There are 13 separate listings for 850 Lagoon Drive under various names and the listings appear on the following databases:[12] RCRA-SQG, RCRA-LQG, CPS-SLIC, EMI, UST, CERS HAZ WASTE, CERS TANKS, CERS, CHMRIS, TRIS, PADS, ICIS, USAIRS, FINDS, ECHO, CIWQS, LUST, AST, San Diego Co. HMMD, HAZNET, HWTS. As noted above, the Site address is the same as the Rohr Facility address. As such, much of the information provided for 850 Lagoon Drive may pertain to other areas of the Rohr Facility and it is difficult to ascertain from information provided in the EDR report. The documents provided by PSIP, which are summarized in Section 5.1 are judged to provide sufficient information for assessing the presence of RECs at the Site.

[11] In some cases, environmental databases are not updated by the specific regulatory agencies for periods of up to 1 year (depending on the database). The dates of updates are provided in in the Regulatory Database Search Report, included in Appendix H.
[12] Database descriptions are included in the EDR report in Appendix C.

6.4 Nearby Sites

As presented in Section 2.3, the groundwater flow direction is generally to the west, which follows the regional topography and flows toward San Diego Bay. For the purposes of the assessment of the potential impact to the Site from nearby environmental cases identified in the database report, properties located northeast, east, and southeast were assumed to be upgradient of the Site.

Four adjacent properties, in addition to the other parcels of the Rohr Facility immediately adjacent to Parcel A, were listed in the database report. The adjacent portions of the Rohr Facility are located hydraulically downgradient of Parcel A and are not likely to have impacted soil or groundwater at the Site. The other adjacent properties also are judged unlikely to have impacted soil or groundwater conditions at the Site, as described below:

EDR Designation	Name / Address	Regulatory List(s)/Description	Likely to Impact the Site
B20, C25	Bay Blvd Projects 350 – 360 Bay Boulevard	CPS-SLIC, CERS, Envirostor • Removal of lead-impacted soil.	No
B21, B22	Party City Corp DBA Halloween City #8339 865 H Street	RCRA Non Gen/NLR • Disposal; no longer regulated	No
23	One-Hour Martinizing Dry Cleaning 885 H Street	FINDS, ECHO, EMI, CERS • Air emission permits	No
B24	University Cogeneration, Inc. H St	LUST, San Diego Co, HMMD • Soil impacts only related to a waste oil tank	No

Numerous upgradient properties were listed within the applicable search radii. The environmental issues at these properties primarily were related to historical fuel releases that were either constrained or remediated and received regulatory closure. As such, it is judged that these properties are unlikely to have impacted environmental conditions at the Site. Groundwater impacted with chlorinated solvents (including tetrachloroethene [PCE] and trichloroethene [TCE]) was reported at a property located at 340 Bay Boulevard ("Formerly Thermo King"). The environmental case for this property was closed in 2007. Based on isoconcentration maps that indicate groundwater impacts were limited to the property, it is judged that this property also is unlikely to have impacted environmental conditions at the Site. HAI reported that this property was acquired by Rohr in 1999 (HAI, 2016a).

There are other properties listed in the EDR Radius Report. However, due to their distance from the Site, relative cross- or downgradient location, type of listing, or regulatory closure status, these properties are not considered likely to impact soil or groundwater conditions at the Site.

6.5 Orphan Sites

GSI additionally reviewed the list of "orphan sites" provided in the EDR Radius Report. Orphan sites are those determined to be unmappable based on incomplete address information. Based on the information provided, none of the orphan sites are judged likely to impact soil or groundwater at the Site. Specifically, there are two listings north of the Site that do not have the potential to impact the Site due to their distance and cross-gradient location relative to the Site.

These properties are the BNSF Car Transfer Lot and Lex Tek. The Bay Boulevard Projects appear to be redundant with the listing by the same name under the mapped properties and is listed in the table above. Most of the orphan site listings appear related to the Rohr Facility. The locations for these listings are described as being on H Street, or the foot of H Street. As stated above, the other parcels of the Rohr Facility are located hydraulically downgradient of Parcel A and are not likely to have impacted soil or groundwater at the Site.

6.6 Environmental Lien Search and Activity and Use Limitations

GSI was not retained to perform a search for environmental liens and activity and use limitations (AULs) at the Site.[13] PSIP obtained a title report from Fidelity National Title Company, of Newport Beach, California, dated 13 July 2020 and amended 22 July 2020. The title report did not identify any AULs . There is one lien identified with an amount of $24,321.57 for claimant Rupinder Batoo, recorded 24 August 2018. It is not known if this is related to any environmental issues. Per Mr. William Waller, of Pillsbury Winthrop Shaw Pittman, LLP, counsel for PSIP, the property deed will include Covenants, Conditions and Restrictions (CC&Rs).[14] These CC&Rs will limit the types of use and occupancy of the Site to industrial, warehouse, retail, office, hotel, sports facilities, other commercial purposes, and Ancillary Recreation provided that such use does not require residential clean-up standards to be met. Additionally, the CC&Rs will prohibit use of surface or subsurface water for irrigation, or consumption by humans or animals and no USTs will be permitted at the Site. [15]

7.0 SUMMARY OF FINDINGS

The following sections summarize the findings of this ESA for both the Site and pertinent surrounding properties based on review of site reconnaissance information, regulatory agency databases and files, historical information, physical setting information, and existing documents.

The 11.82-acre Site consists of two parcels and is bifurcated by G Street. The Site is a portion of the Rohr aircraft parts manufacturing facility that has been in operation since 1941. The area north of G Street (390 Bay Boulevard; APN No. 567-022-30-00) is 3.12 acres and is occupied by Buildings 99 and 100. The area south of G Street (eastern portion of APN No. 571-330-29-00) is 8.70 acres and is occupied by Building 29. The Building 29 parcel utilized the address of 850 Lagoon Drive which is the Rohr Facility address.

Historical uses of the parcel north of G Street, currently occupied by Buildings 99 and 100, included agricultural, trailer park, a hardware store, possible residences, and Lawless and Valley Detroit Diesel (repair of semi-trucks). Rohr purchased the property in 1986, with Buildings 99 and 100 already existing, and conducted non-manufacturing activities in this area. Building 99 has not been occupied since approximately 2018. This building was previously used for human resources, training, gym, medical services, and a print shop. Building 100 is currently utilized for R&D. Prior to Rohr's purchase of the property, the building was utilized for servicing trucks and three service bays and a sump were in the building.

[13] AULs are defined in the ASTM Standard as legal or physical restrictions or limitations on the use of, or access to, a site or facility: (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, and/or surface water on the property, or (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

[14] Personal communication with William Waller, of Pillsbury Winthrop Shaw Pittman, 16 July 2020.

[15] CC&R's were provided by PSIP as an attachment to the Purchase and Sale Agreement between Rohr and PSIP.

Historical uses of the parcel south of G Street, currently occupied by Building 29, included agricultural and possible residences. Additionally, HAI opined that a lumber yard may have existed at the Site; the City Directory list obtained for this ESA identified Bay Surplus Boxes at 426 Bay Boulevard; it is possible that the neatly stacked materials identified on aerial photographs, which were interpreted as possible lumber, actually are related to the Bay Surplus Boxes. Former Building 28 was constructed by 1945, and was used as a warehouse, and demolished by the early 2000s. Building 29 was built in four phases, starting from the south in about 1957. The majority was completed by 1962. Building 29 previously housed the Maintenance Department (northern third of the building to approximately Door 29-20), tooling with a machine shop, and offices. Recent to 2013, operations were primarily manufacturing related. Operations in the central portion of Building 29 are being shut down; this area currently houses some after-market equipment.

During the Site reconnaissance, six monitoring well covers were observed near the northeast corner of Building 99. These are likely wells that were installed during the 1998/1999 Deep Boring Investigation conducted by URS. A wastewater AST was observed in Building 29 in the vicinity of the R&D laboratory. Most of the features identified at Building 29 during previous Phase I ESAs are no longer present at the Site.

Several historical features were identified at the Site in information compiled by others including USTs, underground vessels, ASTs, clarifiers, paint booths, sumps, and degreasers. With the exception of the 500-gallon wastewater AST observed at the Site, these have all been removed or are inactive (Haley & Aldrich, 2020a). A list of historical features is included in Table 1 of HAI's CSM in Appendix C.

The primary regulatory oversight agency was SDCDEH prior to 1998, when the Site was transferred to the RWQCB and a CAO was issued. Site investigation activities date back to at least 1986. Primary findings include VOC impacts to groundwater and soil vapor and limited arsenic-affected soil. Preliminary screening suggests the presence of VOCs in indoor air.

No off-Site properties are judged to have impacted environmental conditions at the Site.

7.1 Recognized Environmental Conditions

RECs are defined in the ASTM Standard as *"the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."*

This Phase I ESA has revealed the following RECs in connection with the Site:

- Arsenic in soil at Building 29 - Arsenic was detected at concentrations above background at three locations (B29-02, B29-03, and B29-07) at the Building 29 parcel. Step-out borings were advanced at these locations (HAI, 2020b). Two of the step-out borings around boring B29-03 (B29-03A and -03B) and two around B29-07 (B29-07A and -07B) contained arsenic above the background level of 8 mg/kg established for South Campus, but below its GPL. The arsenic concentration exceeded its GPL in one soil sample (B29-07A).The arsenic results, in combination with other soil data collected around the northern portion of Building 29, indicate that the distribution of arsenic above screening levels is not constrained.

- Limited PCBs in soil at Building 29 - PCBs were detected at concentrations above the commercial/industrial screening level at one location (B29-05) in Building 29. PCBs were detected in the step-out borings around B29-05; however, concentrations were below commercial industrial SLs. Based on the information reviewed, PCB impacts appear to be discrete and limited in extent.
- VOCs in soil, groundwater, soil vapor, and indoor air – VOCs, primarily TCE, are present beneath the Site in soil, soil gas, and groundwater. Analytical results from B29-23 and B29-24 suggest that there are sources of TCE in soil beneath the former Maintenance Department of Building 29. TCE is present in Zone A and Upper Zone B groundwater beneath the Former Maintenance Department at concentrations that exceed the MCL. TCE was detected in soil vapor samples across the Site at concentrations up to 3,000,000 µg/m^3 (HAI, 2020b). HAI concluded that this data suggests there may be residual sources in soil beneath the building. TCE was measured in indoor air in Building 29; concentrations were below response action levels for workers, but additional screening and engineering controls were recommended by HAI.
- Mills and Lathes - VOCs were detected in soil samples from 7 of the 12 borings advanced at and near the former mills and lathes. PCE and TCE were reported in soil samples from some borings. Although none of the detected concentrations were present above the commercial/industrial SLs or GPLs, the presence of volatile constituents in soil could suggest these constituents exist in soil vapor at concentrations exceeding VI-ESLs.
- Metals in groundwater - Dissolved metals (antimony, arsenic, and thallium) concentrations exceeded MCLs at some on-Site groundwater sampling locations. Although groundwater at the Site is not utilized as a drinking water source, there is no information in the publicly available regulatory record that beneficial uses of groundwater, at and in the vicinity of the Site were re-designated to exclude use of groundwater for potable purposes.

Controlled Recognized Environmental Conditions (CRECs)

CRECs are defined in the ASTM Standard as *"a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a NFA letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls."*

This Phase I ESA has revealed no evidence of CRECs in connection with the Site.

Historical Recognized Environmental Conditions (HRECs)

HRECs are defined in in the ASTM Standard as *"a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls."* [16]

[16] If the Site has received closure in the past, but a review of the closure information indicates that Site conditions do not meet unrestricted/residential land use standards, the Site is no longer considered an HREC, and must be identified as an REC.

This Phase I ESA has revealed no evidence of HRECs in connection with the Site:

***De minimis* Conditions**

De minimis conditions are defined in the ASTM Standard as: *"a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions or controlled recognized environmental conditions."*

This Phase I ESA has revealed the following de minimis conditions in connection with the Site:

- Six monitoring well covers were observed near the northeast corner of Building 99 during the Site reconnaissance. These wells appear to be related to a 1998/1999 investigation. Reportedly, the six wells and two borings were installed in this area during that investigation. The wells/borings should be properly abandoned if not in use.

8.0 RECOMMENDATIONS

Several RECs have been identified including known impacts to soil, groundwater, and soil vapor. TCE was detected in indoor air; however limited indoor air sampling has been conducted. Based on the presence of VOCs in the subsurface and previous detections of VOCs in indoor air, GSI recommends that a supplemental soil vapor assessment be conducted.

9.0 DATA GAPS OR FAILURES

Standard ASTM E1237-13 defines a "data gap" as a lack of or inability to obtain information required by the Standard despite good faith efforts by the environmental professional to gather the information. Significant data gaps are identified as those which affected the ability to identify RECs. A "data failure" is a type of data gap and is considered a failure to achieve the historical research objectives even after reviewing reasonably ascertainable standard historical sources.

An Owner questionnaire was not received by the time of publication of this ESA. However, given the historical and regulatory documentation available for the Site, and an interview of on-Site personnel with historical knowledge of Site operations, the absence of the Owner questionnaire is not judged to constitute a significant data gap.

10.0 DELETIONS OR DEVIATIONS FROM THE ASTM STANDARD

There were no deletions or deviations from ASTM Practice E-1527-13 in conducting this Phase I Environmental Site Assessment.

11.0 CERTIFICATION

The Site is defined as the following:

SITE IDENTIFICATION	
Name:	Rohr Parcel A, North Campus
Address:	850 Lagoon Drive and 390 Bay Boulevard
City:	Chula Vista
County:	San Diego
State:	California
APN(s):	567-022-30-00 (Building 99 and 100) and 571-330-29-00 (Building 29)

This environmental review of the Site as defined above was conducted by GSI on behalf of PSIP. The review conducted by GSI meets or exceeds the requirements for a Phase I ESA specified in the ASTM Standard.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the subject property. We have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Re: Limited Phase II Screening Site Investigation
Rohr, Inc, a Collins Aerospace Company
Parcel A, North Campus
850 Lagoon Drive and 390 Bay Blvd.
Chula Vista, California

Dear Rick, Nick and Emil:

GSI Environmental Inc. (GSI) has prepared this Limited Phase II Screening Site Investigation Report for PSIP Wohl Bay Boulevard LLC (PSIP) to summarize the results and findings of the soil and soil vapor sampling conducted in Buildings 29, 99, and 100 at the Collins Aerospace (Collins) properties located at 850 Lagoon Drive and 390 Bay Boulevard in the City of Chula Vista, California (the Site) on 27 through 31 July 2020.

BACKGROUND

The approximately 12-acre Site consists of two parcels bifurcated by G Street. The area north of G Street (390 Bay Boulevard; APN No. 567-022-30-00) is approximately 3 acres and is occupied by Buildings 99 and 100. The area south of G Street (eastern portion of APN No. 571-330-29-00) is approximately 9 acres and is occupied by Building 29.

Historical uses of the parcel north of G Street included agriculture, trailer park, a hardware store, possible residences, and a truck repair shop. Recent operations include non-manufacturing activities. Building 99 has not been occupied since approximately 2018 and was most recently used for human resources, training, gym, medical services, and a print shop. Building 100 is currently utilized for research and development, but prior to Rohr's purchase of the property the building was utilized for servicing trucks and included three service bays and a sump.

Historical uses of the parcel south of G Street included agricultural, residential, and possible lumber yard operations. More recently, Building 29 has included a maintenance department, a machine shop, storage of after-market equipment, and offices.

The results of previous investigations conducted at the Site by Haley & Aldrich (H&A) in 2016 and 2018 indicated that trichloroethene (TCE), tetrachloroethene (PCE), and arsenic

have been detected at elevated concentrations in subsurface soils within discrete areas of Building 29[1,2].

SOIL VAPOR AND SOIL SAMPLING

GSI conducted the Limited Phase II to assess the potential concentration and distribution of volatile organic compounds (VOCs) at the Site. This investigation was conducted at 17 locations within Building 29, 99, and 100. Soil samples were collected from 10 locations and soil vapor samples were collected from 16 locations (see Figures 1 to 3).

At each boring location, a geophysical utility clearance survey was performed by ULS Services Corporation of San Diego, California to assess the presence of subsurface utilities or other obstructions. Once each location was cleared of utilities, InterPhase Environmental of Commerce, California advanced an approximately 2.25-inch diameter, 4-foot long, direct-push, dual-cased drive sampler to facilitate the collection of soil cores. Soil was recovered using this method except for three locations where a hand auger was used to advance the boreholes.

Soil Vapor Sampling

Soil vapor probes were installed in each boring at depths between approximately 3 and 5-feet below ground surface (bgs), depending on lithology, to facilitate the collection of soil vapor samples. The soil vapor probes installation and sampling were performed in general accordance with the Soil Gas Advisory Cal/EPA July 2015 Advisory–Active Soil Gas Investigations. Soil vapor probes were constructed using approximately ¼-inch diameter Teflon tubing connected to a porous polypropylene sample tip centered within an approximately 1-foot vertical interval of clean sand. Approximately 1 foot of dry granular bentonite was placed on top of the sand and the remainder of the boring annular space was backfilled with granular bentonite hydrated with potable water in 1-foot lifts to create a seal. Soil vapor probes were allowed to equilibrate for approximately 48 hours before sampling.

Soil vapor samples were collected into laboratory-provided Summa canisters and analyzed for VOCs using United States Environmental Protection Agency (USEPA) Method TO-15 by American Analytics, a California ELAP-certified laboratory. Prior to purging and sampling, American Analytics performed a shut-in test on the Summa canister and above-ground valves, lines, and fittings downstream from the top of the probe tubing with no observable loss of vacuum for more than 1 minute. Except where noted, three purge volumes[3] were removed from each soil vapor probe using a vacuum pump with a flow rate of approximately 200 milliliters per minute (mL/min) following the shut-in test and prior to sampling. At PW-08, only one purge volume was removed due to low-flow conditions. At PW-10, a soil vapor sample could not be collected due to no-flow conditions. During purging and sampling, soil vapor probes and above-ground fittings were placed in a shroud filled with helium. Purged soil vapor was screened for helium to test for leaks in

[1] H&A, 2016, Phase II Environmental Site Assessment, Rohr IDs 7 and 15 (Eastern Portion), Building 99 and 29, December.
[2] H&A, 2018, Sub-Slab and Focused Soil Vapor Survey Report, Rohr, Inc. – Eastern Parcels, Buildings 29, 99, 100, September.
[3] One purge volume is equivalent to the combined volume of the internal tubing, the void space of the 1-foot sand pack around the probe tip, and the void space of the 1-foot of dry bentonite in the annular space above the sand pack.

the sampling manifold in the field using a hand-held helium detector. In addition, Summa canister samples were analyzed for helium to confirm the effectiveness of field leak testing.

Soil Sampling

Soil was retrieved from the sampler in 4-foot long clear acetate liners from 14 of the 17 locations. Soil was also retrieved from a 3.5-inch diameter hand auger from 3 of the 17 locations (PW-02, PW-03, and PW-06). GSI personnel used a MiniRAE 3000 photoionization detector (PID) with a 10.6 electron volt (eV) lamp calibrated using 100 parts per million (ppm) isobutylene span gas to screen the soil for elevated VOC concentrations. During the soil screening, the PID was held within approximately 0.5-inch above the core and moved along its length to screen for VOCs. In addition, soil from selected depths was placed in plastic bags for subsequent head space measurements. No PID readings at or above 5 ppm were measured except for PW-5, where a reading of 9.6 ppm was documented at a depth of approximately 4 feet bgs. In addition, no obvious signs of staining or odors were noted in the soil cores. The soil recovered at each of the boring locations was primarily fine to coarse grained sand and sandy lean clay to the maximum assessment depth of approximately 5.5 feet bgs.

Soil samples were analyzed for one or more of the following: total petroleum hydrocarbons (TPH) by USEPA Method 8015B, Title 22 Metals by USEPA Method 6010B, VOCs by USEPA Method 8260B, and polychlorinated biphenyls (PCBs) by USEPA Method 8082. Soil samples retained for analysis of VOCs were packaged using USEPA Method 5035 preservation kits. Samples for other analyses were placed in 4- or 8-ounce glass jars, labeled, and stored in an ice-filled cooler for delivery to Enthalpy Analytical Laboratories (Enthalpy), a California ELAP-certified laboratory following chain-of-custody procedures.

After soil and soil vapor sampling were completed, the soil vapor probes were destroyed by removing the tubing and backfilling the annulus space with hydrated granular bentonite to just below ground surface, followed by patching the surface to match the surrounding grade.[4]

SOIL VAPOR AND SOIL ANALYTICAL RESULTS

Analytical results for compounds detected in soil vapor and soil are summarized in Tables 1 to 3, respectively. Laboratory analytical reports are included in Attachment A. Analytical results are discussed below.

Soil Vapor Analytical Results

Seventeen soil vapor samples (including two duplicate samples) were collected at 15 locations from depths between approximately 3 and 5 feet bgs and analyzed for VOCs. Analytical results for PCE and TCE are summarized in Table 1 and below. The recent soil vapor results are consistent with the results reported by H&A (2018), which are presented in Table 2. TCE was the constituent detected at the highest concentrations in both assessments.

[4] This procedure was approved by the County of San Diego Environmental Health Well Program in an e-mail dated 23 July 2020.

Summary of Recent Soil Vapor Results for PCE and TCE

Location ID	Sample Depth (ft/bgs)	PCE ($\mu g/m^3$)	TCE ($\mu g/m^3$)
PW-01B	5	<28	140
PW-02	5	<4200	2,900,000
PW-03	5	<4200	1,100,000
PW-03	5	<4200	1,100,000
PW-04	5	47	1,400
PW-05	4	5,800	2,400,000
PW-06	3.5	<700	160,000
PW-07	4	330	7,600
PW-08	5	96	54
PW-09	4.5	<140	14,000
PW-11	3	16	5.9
PW-12	3	1,500	35
PW-13	4	4.7	91
PW-14	4	<2800	64,000
PW-14	4	<1400	64,000
PW-15	4.5	<350	13,000
PW-16	5	16	25

Note: Soil vapor data are reported in micrograms per cubic meter ($\mu g/m^3$).

Soil Analytical Results

Analytical results for detected compounds in soil samples are presented in Tables 3A to 3D. PCE was detected in PW-12 at a concentration of 4.7 micrograms per kilogram (µg/kg) at 1.5 feet bgs, and TCE was detected in PW-07 at a concentration of 23 µg/kg at 1.5 feet bgs. PCE and TCE were not detected above laboratory reporting limits (RLs) in other samples. PCBs (Aroclor-1260) were only detected in PW-11, at a concentration of 180 µg/kg. PCBs in other samples analyzed were not detected above RLs.

No analytes were detected in soil samples at concentrations exceeding commercial screening levels or (for arsenic) background soil concentrations.

FINDINGS AND CONCLUSIONS

The following findings are based on our evaluation of the analytical results for soil and soil vapor samples:

Building 29

- The current data are generally consistent with the data collected by H&A in 2018 both in terms of magnitude and chemicals of concern (i.e., PCE and TCE). The detected concentrations of TCE do not indicate an increase in risk to building occupants when compared to H&A's risk estimates.
- The analytical results for recent soil samples from Building 29 do not indicate a need for additional assessment.

GSI ENVIRONMENTAL

Buildings 99 and 100

- The soil vapor data collected within Buildings 99 and 100 do not indicate a need for additional assessment or vapor mitigation.
- The soil data collected within Buildings 99 and 100 do not indicate a need for additional assessment.

We appreciate the opportunity to assist PSIP with this project. Please do not hesitate to contact us if you have any questions or would like to discuss the information presented in this letter report.

Regards,

Samantha Curtis, PG 8633

Notes
1. Soil vapor samples collected into passivated canisters American Analytics of Chatsworth, California (AA) under the field oversight of by GSI Environmental, Inc. and analyzed for volatile organic compounds using USEPA Method TO-15 by AA.
2. Commercial soil vapor screening levels calculated by applying default attenuation factors for current commercial buildings (0.001) published by DTSC (2011) and for all buildings (0.03) published by USEPA (2015) to DTSC-SLs for commercial air (DTSC, 2020).

Abbreviations
bold = analyte detected above the reporting limit
– = not analyzed
< = analyte not detected above the reporting limit shown
bgs = below ground surface
$\mu g/m^3$ = micrograms per cubic meter
NA = not applicable
ND = not detected
NP = not published
DTSC = California Environmental Protection Agency, Department of Toxic Substances Control
USEPA = United States Environmental Protection Agency

San Diego, California 92110

Subject: **Phase I Environmental Site Assessment**
350, 360, 364, and 368 Bay Boulevard
Chula Vista, CA 91910
Partner Project No. 20-282919.2

Dear Ms. Snyder:

Partner Engineering and Science, Inc. (Partner) is pleased to provide the results of the *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

This assessment included research of the use and history of the subject property and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made with these limitations and conclusions stated.

We appreciate the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (626) 604-5203 or Marias@partneresi.com.

Sincerely,

Mike Arias
Principal

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by PSIP Wohl Bay Boulevard LLC for the property located at 350, 360, 364, and 368 Bay Boulevard, Chula Vista, CA 91910 in San Diego, San Diego County, California (the "subject property"). The Phase I ESA is designed to provide PSIP Wohl Bay Boulevard LLC with an assessment concerning environmental conditions (limited to those issues identified in the report) as they exist at the subject property.

Property Description

The subject property is located on the west side of Bay Boulevard, between G Street and Lagoon Drive, within an industrial area of San Diego County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Addresses:	350, 360, 364, and 368 Bay Boulevard, Chula Vista, CA 91910
Historical Addresses:	362 Bay Boulevard
Property Use:	Vacant Parcels
Land Acreage (Ac):	2.63 Ac Total: 0.65 Ac (567-022-17); 0.73 Ac (567-022-31); 0.63 Ac (567-022-33); and 0.62 Ac (567-022-28)
Number of Buildings:	Not applicable
Assessor's Parcel Number (APN):	567-022-17 (350 Bay Boulevard/Rohr Property ID 5) 567-022-31 (360 Bay Boulevard/Rohr Property ID 8) 567-022-33 (364 Bay Boulevard/Rohr Property ID 9) 567-022-28 (368 Bay Boulevard/Rohr Property ID 6)
Current Tenants:	Vacant Land
Site Assessment Performed By:	Heather Hodgetts of Partner*
Site Assessment Conducted On:	December 22, 2020

The subject property consists of four parcels of vacant land covered with low-lying vegetation. The four parcels are owned by Rohr, Inc. since 1999. The parcels are identified by site addresses and Rohr Inc. ID numbers: 350 Bay Boulevard (Rohr Property ID 5); 360 Bay Boulevard (Rohr Property ID 8); 364 Bay Boulevard (Rohr Property ID 9); and 368 Bay Boulevard (Rohr Property ID 6). The subject property is surrounded by a secure fence. Access to the subject property is via a gate along Bay Boulevard.

Based on the historical research and previous reports, the subject property was undeveloped or vacant land in 1904 and agriculturally developed land by 1949. From 1953 to at least 1985, the subject property was developed with multiple small industrial structures. Businesses reportedly included aircraft parts manufacturing, refrigeration unit repair, storage, junkyards, and a veterinary hospital. According the city directories, former tenants on the subject property appeared to include Bonita Garden Accessories, Casey Construction Co. (1955); B&H Metal Co., Hammer Benj W, South Bay Veterinary Hospital, Lyman Jos, Mansell Marine Inc. engine exchange, Mansell Earl A (1955-1960); Post Aircraft Co. Inc. (1960); A&R Used Auto Parts wreckers, South Bay Vet Hospital, South Bay Marine boat sales & repair (1965); Jackson Import Auto, A&R

Used Truck Parts, SD Pump & Compressor Supply (1971-1986); Durrant Marcia A, Elliott Carol (1979-1982); Edwards Hugh L (1982-1986); and Jennings Dale J (1986). By the mid-1980s, the businesses at the subject property and adjacent parcels to the north ceased operations and the land was acquired by the City of Chula Vista. In the late 1980s, the adjacent Rohr Aircraft Corp. (Rohr) considered purchasing the subject property and adjacent parcels to the north to construct their headquarters and subsequently acquired the subject property as part of its Relocation Agreement executed by the City of Chula Vista and the San Diego Unified Port District in 1999. The subject property has remained vacant land since 1999.

In the late 1980s, the environmental due diligence conducted by Rohr identified recognized environmental conditions (RECs) at the subject property and the adjacent property to the north. Regulatory cases were opened with the Couth of San Diego Department of Environmental Health (DEH) for subject property (350-360 Bay Boulevard) and the adjacent properties to the north (340 and 390 Bay Boulevard and 798 Lagoon Drive), commonly referred to as Rohr IDs 4, 11, 10, 5, and 8; the Bay Boulevard Parcels; or Vacant Bay Boulevard Properties. Between 1987 and 2007, soil and groundwater investigations, some soil remediation and groundwater monitoring was conducted on the parcels under the oversight of the DEH. No Further Action (NFA) Letters were issued by DEH in 2001, 2004, 2006, and 2007.

Between 1987 and 2001, environmental investigations were conducted at the subject property (350-360 Bay Boulevard – DEH Establishment # H26520-001). The former use of the subject property included an auto repair/salvage yard (with gold ore extraction) and the storage of used appliances. The investigations included soil and groundwater samples for lead, pesticides and polychlorinated biphenyls (PCBs). Lead and Total Petroleum Hydrocarbons (TPH) was identified in soil. Trichloroethene (14 micrograms per liter (µg/l in MW-2) and Chloroform (3-5 µg/l in MW-1 to MW-3) were identified in three wells onsite and the adjacent Rohr site (located adjacent to the west, southwest, south). Concentrations were detected above the recommended California State Action Level of 5 µg/l. Groundwater impacts were thought to have originated offsite. It was not clear from the documents reviewed how long groundwater continued to be monitored. Pesticides and PCBs were detected at relatively low concentrations (below concentrations requiring action).

According to the Case Closure Summary dated September 6, 2001, the subject property was identified as a Vacant Lot (350-360 Bay Boulevard) owned by the City of Chula Vista. In February 2001, approximately 800 cubic yards lead contaminated soil were excavated to a depth of 2 feet and disposed offsite to the Otay Class I Landfill. Confirmation soil samples were collected from the perimeter and the floor of the footprint of the excavation at statistically random locations. The consultant concluded that the mean total lead concentration in-situ soils at the site was 54 milligram per kilogram (mg/kg) and the upper 95% confidence interval was 71 mg/kg, both lower than the residential (PRG) of 400 mg/kg. The consultant concluded that this soil contamination did not present a human health risk at the subject property. The proposed future use of the site was listed as light industrial with paved areas and building on concrete slabs. On September 17, 2001, DEH issued a No Further Action (NFA) letter.

In July 2016, Haley and Aldrich, Inc. prepared a Phase I ESA for the subject property and adjacent properties to the north for Rohr, the property owner. Rohr was proposing to sell the Bay Boulevard parcels. The subject property was vacant land at the time of the 2016 assessment. Haley and Aldrich, Inc. identified the following

RECs, associated with lead, pesticides, and Polychlorinated Biphenyls (PCBs), in connection with the subject property and adjacent properties:

Onsite RECs

- Lead in Soil (Rohr IDs 5 and 8 -350-360 Bay Boulevard): In 2001, approximately 1,500 cubic yards of surface soil containing lead was excavated and used as foundation material for the cap at the Otay Class I Landfill. Regulatory oversight was conducted under the DEH VAP. An NFA letter was issued to the City of Chula Vista, but it was not posted on the GeoTracker website nor was it noted in the EDR Database Report. The subject property cleanup level for lead at that time was the residential California Human Health Screening Level (CHHSL) of 150 milligrams per kilogram (mg/kg); the current residential CHHSL for lead is 80 mg/kg.
- PCBs in Soil (All Rohr IDs): PCBs were detected by URS Corporation (URS) in the drainage swale along the western boundary of the subject property (URS 2015). The source of the PCBs is not known. PCBs were also present in soil on the Rohr IDs 5 and 8 parcels at concentrations up to 7.4 mg/kg. It was unclear whether PCB-containing soil on these parcels had been characterized and removed.
- Agricultural Property Use (All Rohr IDs): The subject property had a history of agricultural use for cultivating citrus and row crops prior to the 1950s. There was the potential that pesticides, both inorganic (containing metals) and organic may have been used to control pests.

In December 2016, Haley and Aldrich, Inc. prepared a Phase II investigation for the subject property to investigate the RECs identified in the June 2016 ESA. The soil analytical results were compared to the U.S. EPA Region 9 Regional Screening Levels (RSLs) and, for lead, the California Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO). Arsenic concentrations were compared to DTSC established background concentrations for Southern California of 12 milligrams per kilogram (mg/kg). Analytical indicated the following:

Soil

- The concentrations of volatile organic compounds (VOCs), polynuclear aromatic hydrocarbons (PAHs), arsenic, PCBs detected were below their respective residential RSLs.
- Total Petroleum Hydrocarbons (TPH) were detected at concentrations between 3.3 J to 190 mg/kg at 350, 360, 364, and 368 Bay Boulevard.
- Thallium (0.156 J to 0.929 mg/kg) was detected at 364 Bay Boulevard (Rohr Property ID 9) above the residential RSL, but below the commercial/industrial RSL.

Groundwater

- VOCs was detected in the groundwater were below the MCL and the vapor-intrusion screening levels for these compounds.
- The arsenic concentration (0.0149 mg/l and 0.0112 mg/l) was slightly above the MCL of 0.010 mg/l at 360 and 368 Bay Boulevard/Rohr Property IDs 8 and 6.

The site investigation is now part of the ongoing larger Goodrich Aerostructures – North Campus – Eastern Parcel A (Case Number T10000011095) investigation under the oversight of the RWQCB. On April 9, 2018, Haley & Aldrich and Rohr met with the RWQCB to discuss the results of the 2016 Phase II investigation and additional scope of work. The scope of work included a soil vapor survey; however, Haley & Aldrich indicated that it was eliminated from the scope since Rohr will require that any buildings constructed on the subject property by a buyer include a vapor barrier as part of the property transaction. On December 26, 2018, Haley and Aldrich, Inc. submitted a Work Plan for Additional Investigation to the RWQCB. The proposed sample locations were located on the parcels adjacent to the north of the subject property.

During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties	
Northwest:	Vacant land at 340 Bay Boulevard and 798 F Street (Collins Aerospace (Rohr ID 10, 4, and 11), followed by Lagoon Drive.
Northeast:	Bay Boulevard, followed by Interstate 5 Freeway, railroad tracks, Sweetwater Authority (744 F Street and Cabrillo Motor Lodge (731 G Street).
Southeast:	Collins Aerospace (Rohr Buildings 99/10) at 390 Bay Boulevard, followed by G Street.
Southwest:	Stormwater ditch, railroad tracks, electrical transmission line, followed by Collins Aerospace (former UTC Aerospace/Rohr Inc./Goodrich Corporation) at 850 Lagoon Drive.

According to 2017 groundwater sampling data at the subject property and topographic map interpretation, the depth to groundwater in the vicinity of the subject property is inferred to be approximately 20 to 35 feet below ground surface (bgs) and flows to the west (Haley & Aldrich, Inc., January 11, 2018).

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

- The subject property and adjacent properties are part of the ongoing larger Goodrich Aerostructures – North Campus – Eastern Parcel A (Case Number T10000011095) investigation under the oversight of the RWQCB. Onsite soil and groundwater sampling indicted that:
    - Thallium was detected in soil at 364 Bay Boulevard (Rohr Property ID 9) above the residential RSL, but below the commercial/industrial RSL.
    - Arsenic was detected in groundwater was slightly above the MCL of 0.010 mg/l at 360 and 368 Bay Boulevard (Rohr Property IDs 8 and 6).

  The investigation is ongoing and considered a REC. Additional sampling is proposed for the adjacent parcels to the north.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable

regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- Partner did not identify controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- Partner did not identify HRECs during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion.

- Partner did not identify environmental issues during the course of this assessment.

Conclusions and Opinions

Partner has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of 350, 360, 364, and 368 Bay Boulevard, Chula Vista, CA 91910 in San Diego, San Diego County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in **Section 1.5** of this report.

With consideration of the access limitations stated herein, this assessment has revealed evidence of recognized environmental conditions in connection with the subject property.

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 350, 360, 364, and 368 Bay Boulevard, Chula Vista, CA 91910 in San Diego, San Diego County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a limited property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the safety concerns, if any, associated with the subject property.

1.4 User Reliance

PSIP Wohl Bay Boulevard LLC engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of PSIP Wohl Bay Boulevard LLC. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, past operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in **Section 3.0**), this data gap is not expected to alter the findings of this assessment.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 350, 360, 364, and 368 Bay Boulevard in Chula Vista, California is located on the west side of Bay Boulevard, between G Street and Lagoon Drive. According to the San Diego Geographic Information Source (SanGIS) online database, the subject property is identified by Assessor's Parcel Numbers (APNs) 567-022-17 (350 Bay Boulevard/Rohr Property ID 5); 567-022-31 (360 Bay Boulevard/Rohr Property ID 8), 567-022-33 (364 Bay Boulevard/Rohr Property ID 9); and 567-022-28 (368 Bay Boulevard/Rohr Property ID 6). According to the San Diego County Treasurer-Tax website, ownership has been vested in Rohr Inc. since 1999.

Please refer to **Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map**, and **Appendix A: Site Photographs** for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property consists of four parcels of vacant land covered with low-lying vegetation. The four parcels are owned by Rohr, Inc. since 1999. The parcels are identified by site addresses and Rohr Inc. ID numbers: 350 Bay Boulevard (Rohr Property ID 5); 360 Bay Boulevard (Rohr Property ID 8); 364 Bay Boulevard (Rohr Property ID 9); and 368 Bay Boulevard (Rohr Property ID 6). The subject property is surrounded by a secure fence. Access to the subject property is via a gate along Bay Boulevard.

The subject property is zoned Local Coastal Program Specific Plan Area for industrial development by the City of Chula Vista.

The subject property is identified in the regulatory database report of **Section 4.2**.

2.3 Current Use of Adjacent Properties

The subject property is located within an industrial area of San Diego County. During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties	
Northwest:	Vacant land at 340 Bay Boulevard and 798 F Street (Collins Aerospace (Rohr ID 10, 4, and 11), followed by Lagoon Drive.
Northeast:	Bay Boulevard, followed by Interstate 5 Freeway, railroad tracks, Sweetwater Authority (744 F Street and Cabrillo Motor Lodge (731 G Street).
Southeast:	Collins Aerospace (Rohr Buildings 99/10) at 390 Bay Boulevard, followed by G Street.
Southwest:	Stormwater ditch, railroad tracks, electrical transmission line, followed by Collins Aerospace (former UTC Aerospace/Rohr Inc./Goodrich Corporation) at 850 Lagoon Drive.

2.4 Physical Setting Sources

2.4.1 Topography

The United States Geological Survey (USGS) *National City, California* Quadrangle 7.5-minute series topographic map, dated 2012, was reviewed for this ESA. According to the contour lines on the topographic

map, the subject property is located at approximately 25 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping gently toward the southwest.

A copy of the 2012 topographic map is included as **Figure 3** of this report.

2.4.2 Hydrology

According to topographic map interpretation, groundwater in the vicinity of the subject property is inferred to flow toward the southwest. The nearest surface water in the vicinity of the subject property is the San Diego Bay located approximately 0.40-miles west of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment. A stormwater ditch was located adjacent to the west of the subject property.

According to 2017 groundwater sampling data at the subject property and topographic map interpretation, the depth to groundwater in the vicinity of the subject property is inferred to be approximately 20 to 35 feet below ground surface (bgs) and flows to the west (Haley & Aldrich, Inc., January 11, 2018).

2.4.3 Geology/Soils

The site is located in the Peninsular Ranges geomorphic province. The Peninsular Ranges are a northwest-southwest oriented complex of blocks separated by similarly trending faults. They extend from the Transverse Ranges and the Los Angeles Basin south to the Mexican border and beyond to the tip of Baja California and are bounded on the east by the Colorado Desert and the Gulf of California. The Peninsular Ranges contain minor Jurassic and extensive Cretaceous igneous rocks associated with the Nevadan plutonism. Marine Cretaceous sedimentary rocks are well represented and post-Cretaceous rocks form a restricted veneer of volcanic, marine, and nonmarine sediments.

According to a 2017 investigation at the subject property, the subject property is underlain by artificial fill and the Bay Point and San Diego Formations. Soil at the site is a mixture of interbedded sand, silt, and clay (Haley & Aldrich, Inc., January 11, 2018).

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map (FIRM), published by the Federal Emergency Management Agency (FEMA). According to Community Panel Number 06073C1913H, dated December 20, 2019, the subject property appears to be located in Zone X (unshaded), defined as an area of minimal flood hazard.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. Information regarding past land use was obtained by a review of historical aerial photographs, historical Sanborn Fire Insurance maps, city directories, historical topographic maps, and previous reports of the subject property and surrounding area obtained from Environmental Data Resources (EDR). Copies of the historical resources are included in **Appendix B**. A chronological listing of the historical data found is summarized in the table below.

Date	Scale or Address	Source	Summary
1904, 1930, 1943, 1944	1: 62,500	Topographic Map	Various improved roads and railroad lines are shown throughout the surrounding area. The subject property and adjacent properties are depicted as vacant land. Railroad tracks are located adjacent to the west. By 1943, G Street is located further to the south.
1949	1"=500'	Aerial Photograph	The subject property is depicted as agriculturally developed land. Surrounding properties consist of agriculturally developed land to the north, east, and south. Rohr Aircraft Corp. is located to the west-southwest. with scattered residences to the southwest.
1953, 1964, 1966, 1970, 1979, 1985	1"=500'	Aerial Photograph	The subject property is depicted with multiple structures. Bay Boulevard is located adjacent to the east, followed by Interstate 5. Railroad tracks are located adjacent to the west. By 1964, an increase in industrial development is visible adjacent to the subject property. A trailer park was located adjacent to the south from 1964 to at least 1970.
1953, 1967, 1975	1:24,000	Topographic Map	The subject property is depicted as developed with one small structure on the northeast corner. By 1967, several small structures are located onsite. Bay Boulevard is located adjacent to the east, followed by Interstate 5. Railroad tracks are located adjacent to the west. Several structures are depicted adjacent to the north.
1955	350 Bay Blvd.	City Directories	Bonita Garden Accessories, Casey Construction Co.
1955-1960	360 Bay Blvd. 364 Bay Blvd. 368 Bay Blvd.	City Directories	B&H Metal Co., Hammer Benj W South Bay Veterinary Hospital, Lyman Jos Mansell Marine Inc. engine exchange, Mansell Earl A

Date	Scale or Address	Source	Summary
1960	364 Bay Blvd.	City Directories	Post Aircraft Co. Inc.
1965	360 Bay Blvd. 364 Bay Blvd. 368 Bay Blvd.	City Directories	A&R Used Auto Parts wreckers South Bay Vet Hospital South Bay Marine boat sales & repair
1971-1986	350 Bay Blvd. 360 Bay Blvd. 368 Bay Blvd.	City Directories	Jackson Import Auto A&R Used Truck Parts SD Pump & Compressor Supply
1979-1982	368 ½ Bay Blvd.	City Directories	Durrant Marcia A, Elliott Carol
1982-1986	362 Bay Blvd.	City Directories	Edwards Hugh L
1986	368 ½ Bay Blvd.	City Directories	Jennings Dale J
1989, 2005, 2009, 2012, 2016	1"=500'	Aerial Photograph	The subject property is vacant land. The former buildings appear to have been removed. Surrounding properties consist of industrial buildings to the north and south; railroad tracks, a parking lot and Rohr property to the west; and Bay Boulevard and Interstate 5 to the east. By 2005, the buildings located adjacent to the north have been removed.
1992, 1995, 2000, 2005, 2010, 2014, 2017	350, 360, 364, and 368 Bay Blvd.	City Directories	No Listings
1996	1:24,000	Topographic Map	The subject property is shaded red indicating urban development.
2001	350-360 Bay Blvd.	Regulatory Records	No Further Action (NFA) letter dated September 17, 2001 issued following the removal of 800 cubic yards lead contaminated soil on February 5, 2001.
2012	1:24,000	Topographic Map	Current street configuration is depicted. Bay Boulevard is depicted to the east.
2020	350, 360, 364, and 368 Bay Blvd.	Site Visit	Vacant land

Based on the historical research and previous reports, the subject property was undeveloped or vacant land in 1904 and agriculturally developed land by 1949. From 1953 to at least 1985, the subject property was developed with multiple small industrial structures. Businesses reportedly included aircraft parts manufacturing, refrigeration unit repair, storage, junkyards, and a veterinary hospital. According the city directories, former tenants on the subject property appeared to include Bonita Garden Accessories, Casey

Construction Co. (1955); B&H Metal Co., Hammer Benj W, South Bay Veterinary Hospital, Lyman Jos, Mansell Marine Inc. engine exchange, Mansell Earl A (1955-1960); Post Aircraft Co. Inc. (1960); A&R Used Auto Parts wreckers, South Bay Vet Hospital, South Bay Marine boat sales & repair (1965); Jackson Import Auto, A&R Used Truck Parts, SD Pump & Compressor Supply (1971-1986); Durrant Marcia A, Elliott Carol (1979-1982); Edwards Hugh L (1982-1986); and Jennings Dale J (1986). By the mid-1980s, the businesses at the subject property and adjacent parcels to the north ceased operations and the land was acquired by the City of Chula Vista. In the late 1980s, the adjacent Rohr Aircraft Corp. (Rohr) considered purchasing the subject property and adjacent parcels to the north to construct their headquarters and subsequently acquired the subject property as part of its Relocation Agreement executed by the City of Chula Vista and the San Diego Unified Port District in 1999. The subject property has remained vacant land since 1999.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 Health Department

Regulatory Agency Data	
Name of Agency:	San Diego County Department of Environmental Health (DEH)
Point of Contact:	Mr. Edwin Andrus
Agency Address:	P.O. Box 129261, San Diego, California 92112-9261
Agency Phone Number:	(858) 505-6848
Date of Contact:	December 9, 2020
Method of Communication:	Email
Summary of Communication:	

On December 9, 2020, Partner received a reply from the DEH stating they have records for the subject property address.

- In the late 1980s, the environmental due diligence conducted by Rohr identified recognized environmental conditions (RECs) at the subject property and the adjacent property to the north. Regulatory cases were opened with the Couth of San Diego Department of Environmental Health (DEH) for subject property (350-360 Bay Boulevard) and the adjacent properties to the north (340 and 390 Bay Boulevard and 798 Lagoon Drive), commonly referred to as Rohr IDs 4, 11, 10, 5, and 8; the Bay Boulevard Parcels; or Vacant Bay Boulevard Properties. Between 1987 and 2007, soil and groundwater investigations, some soil remediation and groundwater monitoring was conducted on the parcels under the oversight of the DEH. No Further Action (NFA) Letters were issued by DEH in 2001, 2004, 2006, and 2007.

- Between 1987 and 2001, environmental investigations were conducted at the subject property (350-360 Bay Boulevard – DEH Establishment # H26520-001). The subject property consisted of three properties located on Bay Boulevard (350, 360, and 364 Bay Boulevard). The former use of the subject property included an auto repair/salvage yard (with gold ore extraction) and the storage of used appliances. The investigations included soil and groundwater samples for lead, pesticides and polychlorinated biphenyls (PCBs). Lead and Total Petroleum Hydrocarbons (TPH) was identified in soil. Trichloroethene (14 micrograms per liter (µg/l in MW-2) and Chloroform (3-5 µg/l in MW-1 to MW-3) were identified in three wells onsite and the adjacent Rohr site (located adjacent to the west, southwest, south). Concentrations were detected above the recommended California State Action Level of 5 µg/l. Groundwater impacts were thought to have originated offsite. It was not clear from the documents reviewed how long groundwater continued to be monitored. Pesticides and PCBs were detected at relatively low concentrations (below concentrations requiring action).

- On January 9, 2001, a County of San Diego County DEH Voluntary Assistance Program (VAP) Application was submitted by Rohr, Inc. and received on January 9, 2001 for Establishment # H26520-001 (350-360 Bay Boulevard). The project was described as the excavation of approximately 1,500 cubic yards of shallow soil impacted by lead. The soil was reclassified as non-hazardous waste by DTSC and the City would like the lead-containing soil to the Otay Class I Landfill. Rohr, Inc. was

requesting review of the work plan and issuance of a no further action (NFA) at the conclusion of confirmation sampling.

- According to the Case Closure Summary dated September 6, 2001, the subject property identified as a Vacant Lot (350-360 Bay Boulevard) owned by the City of Chula Vista. Previous site uses included agricultural farming, auto wreaking, and auto repair. Lead contaminated soil was encountered during a geophysical investigation. Approximately 800 cubic yards lead contaminated soil were excavated to a depth of 2 feet and disposed offsite to the Otay Class I Landfill. Confirmation soil samples were collected from the perimeter and the floor of the footprint of the excavation at statistically random locations. The consultant concluded that the mean total lead concentration in-situ soils at the site was 54 milligram per kilogram (mg/kg) and the upper 95% confidence interval was 71 mg/kg, both lower than the residential (PRG) of 400 mg/kg. The consultant concluded that this soil contamination did not present a human health risk at the subject property. The proposed future use of the site was listed as light industrial with paved areas and building on concrete slabs.
- On September 17, 2001, DEH issued a No Further Action (NFA) letter to the City of Chula Vista following the removal of 800 cubic yards lead contaminated soil on February 5, 2001. A copy of the NFA letter is provided in **Appendix B**.
- In 2016 and 2017, an application and boring completion report were submitted on behalf of Rohr, Inc. for the advancement of six borings at the Vacant Bay Boulevard Properties (Bay Boulevard) to collect soil and groundwater samples.

4.1.2 Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	San Diego County Air Pollution Control District (APCD)
Point of Contact:	Ms. Cynthia Gould
Agency Address:	10124 Old Grove Road, San Diego, California 92131
Agency Phone Number:	(858) 586-2600
Date of Contact:	December 9, 2020
Method of Communication:	Email
Summary of Communication:	On December 10, 2020, Partner received a reply from the APCD stating they have no records for the subject property address.

4.1.3 Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	Regional Water Quality Control Board (RWQCB)
Agency Website:	http://geotracker.waterboards.ca.gov/
Agency Address:	2375 Northside Drive, Suite 100, San Diego, California 92108
Agency Phone Number:	(619) 516-1990
Date of Contact:	December 9, 2020
Method of Communication:	Online
Summary of Communication:	

The subject property was identified on the GeoTracker database as part of the following adjacent investigations associated with Rohr, Inc.:

- Formerly Thermo King (Case Number T0608199629) – 340 Bay Blvd.

  In May 1992, TorStan Inc. completed a Lead, Pesticide, and Polychlorinated Biphenyl Soil Sampling Report for 350-360 Bay Boulevard. TorStan Inc. concluded that there was soluble lead contamination above the CCR STLC throughout the top six inches of soil at 350-360 Bay Boulevard.

- Goodrich Aerostructures – North Campus – Eastern Parcel A (Case Number T10000011095) – 850 Lagoon Drive

  According to the November 20, 2020 Conceptual Site Model (CSM) prepared by Haley & Aldrich, Inc., Rohr is in the process of decommissioning and selling portions of its facility that occupies approximately 82 acres. The Site has been divided into three parts: Parcels A, B, and C. Parcel A has been sold to PSIP Wohl Bay Boulevard LLC (Wohl); Parcel B is in the process of being sold; and Parcel C will be retained and continue to be owned and operated by Rohr. Parcel A occupies approximately 12 acres and includes APN 567-022-30-00 (located adjacent to the south of the subject property) and the eastern portion of 571-330-29-00. Three parcels including APNs 567-022-28-00, 567-022-31-00 and 567-022-33-00 and totaling approximately 2 acres (the subject property), which are currently part of Parcel C, are being purchased by Wohl.

  According to the CSM, historical environmental features on Parcel A have been investigated for their specific chemicals of potential concern (COPCs) in soil, soil vapor, indoor air, and shallow groundwater. Historical chemical sources are coincident with former Site areas associated with long-term chemical usage. VOC releases have migrated through the soil to groundwater, resulting in a groundwater plume that extends westward below Parcel B. Soil vapor has the potential to migrate through the building slab and into indoor air. Potential receptors to soil and soil vapor include an onsite commercial/industrial worker, a landscaper/utility worker, and a construction worker. Exposure pathways and receptors will be evaluated during the Human Health Risk Assessment (HHRA).

  Indoor air screening was conducted based on the findings of the soil gas surveys and addressed cracks and other penetrations to the slab in Building 29. No indoor air sampling was necessary in Buildings 99 and 100 (located adjacent to the south of the subject property). As previously noted, the Soil Remedial Action Plan (Soil RAP) will address soil during construction of the loading dock. The SSDS will also address potential vapor intrusion into the building. While indoor air sampling is a data gap, the data will only be relevant if the data are collected post-redevelopment prior to building occupancy. It is recommended that indoor air sampling be conducted at that time to address potential vapor intrusion concerns.

  Haley & Aldrich, Inc. concluded that based on their assessments, the existing soil and soil vapor data support the CSM and are adequate to proceed with an HHRA and a Soil Feasibility Study/Soil RAP (Soil FS/RAP). The COPCs analyzed, sample locations, and sample depths have been reviewed specific to each environmental feature to evaluate whether it has been adequately characterized.

Documents posted under the above case numbers are discussed in **Sections 4.2.3** and **5.2.6**.

4.1.4 Department of Toxic Substances Control

Regulatory Agency Data	
Name of Agency:	Department of Toxic Substances Control (DTSC)
Agency Websites:	http://www.EnviroStor.dtsc.ca.gov/public/and http://hwts.dtsc.ca.gov/index.cfm
Agency Address:	5796 Corporate Avenue, Cypress, California 90630-4732
Agency Phone Number:	(714) 484-5336; (714) 484-5337
Date of Contact:	December 9, 2020
Method of Communication:	Online
Summary of Communication:	The subject property address was identified in the online DTSC EnviroStor and Hazardous Waste Tracking System (HWTS) databases. The EnviroStor and HWTS listings are discussed in **Section 4.2.2**.

4.1.5 Building Department

Regulatory Agency Data	
Name of Agency:	City of Chula Vista Development Services
Point of Contact:	https://www.chulavistaca.gov/departments/development-services/building
Agency Address:	276 Fourth Avenue, Chula Vista, California 91910
Agency Phone Number:	(619) 691-5101
Date of Contact:	June 25, 2020
Method of Communication:	Online and On File
Summary of Communication:	As of the date of this report, Partner has not received a response from the CVDS for inclusion in this report.

4.1.6 Planning Department

Regulatory Agency Data	
Name of Agency:	City of Chula Vista Planning Department
Point of Contact:	https://www.chulavistaca.gov/departments/development-services/zoning-information
Agency Address:	276 Fourth Avenue, Chula Vista, California 91910
Agency Phone Number:	(619) 691-5101
Date of Contact:	December 9, 2020
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is zoned Local Coastal Program Specific Plan Area for industrial development by the City of Chula Vista.

4.1.7 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Geologic Energy Management Division (CalGEM)
Agency Website:	http://www.conservation.ca.gov/dog/Pages/Wellfinder.aspx
Agency Address:	801 K Street, MS 24-01, Sacramento, California 95814
Agency Phone Number:	(916) 322-1080
Date of Contact:	December 9, 2020
Method of Communication:	Online

Regulatory Agency Data	
Summary of Communication:	According to CalGEM, no oil or gas wells are located on or adjacent to the subject property.

4.1.8 Assessor's Office

Regulatory Agency Data	
Name of Agency:	San Diego Geographic Information Source (SanGIS)
Agency Website:	http://www.sangis.org/
Agency Address:	5510 Overland Avenue, Suite 230, San Diego, California 92123
Agency Phone Number:	(858) 874-7000
Date of Contact:	December 9, 2020
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is identified by Assessor's Parcel Numbers (APNs) 567-022-17 (350 Bay Boulevard); 567-022-31 (360 Bay Boulevard); 567-022-33 (364 Bay Boulevard); and 567-022-28 (368 Bay Boulevard).

Copies of pertinent documents are included in **Appendix B** of this report.

4.2 Mapped Database Records Search

Information from standard federal, state, county, and city environmental record sources was provided by EDR. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. The information contained in this report was compiled from publicly available sources and the locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the radius report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

Radius Report Data				
Database	**Search Radius (mile)**	**Subject Property**	**Adjacent Properties**	**Sites of Concern**
Federal NPL or Delisted NPL Site	1.00	N	N	N
Federal CERCLIS Site	0.50	N	N	N
Federal CERCLIS-NFRAP Site	0.50	N	N	N
Federal RCRA CORRACTS Facility	1.00	N	N	N
Federal RCRA TSDF Facility	0.50	N	N	N
Federal RCRA Generators Site (LQG, SQG, CESQG, NonGen/NLR)	0.25	N	**Y**	N
Federal IC/EC Registries	0.50	N	N	N
Federal ERNS Site	Subject Property	N	--	--
State/Tribal Equivalent NPL	1.00	N	N	N
State/Tribal Equivalent CERCLIS	1.00	N	N	N

Radius Report Data				
Database	**Search Radius (mile)**	**Subject Property**	**Adjacent Properties**	**Sites of Concern**
State/Tribal Landfill/Solid Waste Disposal Site	0.50	N	N	N
State/Tribal Leaking Storage Tank Site	0.50	N	**Y**	N
State/Tribal Registered Storage Tank Sites (UST/AST)	0.25	N	**Y**	N
State/Tribal Voluntary Cleanup Sites (VCP)	0.50	**Y**	**Y**	N

EDR US Hist Cleaner	0.125	N	N	N
Additional Databases- HAZNET, HWTS, San Diego HMMD, EnviroStor	Varies	**Y**		

4.2.2 Subject Property Listings

The subject property is identified in the regulatory database report, as discussed below:

- **IX City of Chula Vista** (EDR Map ID: A1, A2, A5, A7) at 350-368 Bay Boulevard, is listed in the HAZNET, HWTS, and EnviroStor databases. The facility is listed in the HAZNET database for generating state-regulated wastes including contaminated soil from site clean-up (1987), paint sludge (1991), and tank bottom waste (1992) that were manifested for off-site disposal. According to the EnviroStor database, the Cleanup status is listed as referred to Local Agency. A SB 1248 Notification was completed on January 31, 2001. A copy of the County of San Diego County DEH Voluntary Assistance Program (VAP) Application submitted by Rohr, Inc. was received on January 9, 2001 for Establishment # H26520-001 (350-360 Bay Boulevard). As discussed in Section 4.1.1, the project was described as the excavation of approximately 1,500 cubic yards of shallow soil impacted by lead. The soil was reclassified as non-hazardous waste by DTSC and the City would like the lead-containing soil to the Otay Class I Landfill. Rohr, Inc. was requesting review of the work plan and issuance of a no further action (NFA) at the conclusion of confirmation sampling. DEH provided a copy of the NFA letter (**Appendix B**).
- **Bay Blvd. Projects** (EDR Map ID: A3) at 350 Bay Boulevard, is listed in the San Diego County HMMD database. The APN associated with the listing was 567-022-31-00. The permit status is listed as inactive.
- **IX Jackson's Import Auto Parts** (EDR Map ID: A4) at 350 Bay Boulevard, is listed in the HAZNET and HWTS databases. The facility is listed in the HAZNET database for generating state-regulated waste including unspecified organic liquid mixture (1987) that was manifested for off-site disposal. The HWTS database indicated the facility was active between 1987 and 2001.
- **Unidentified Facility** (EDR Map ID: A5) at 350-360 Bay Boulevard, is listed in the Spills 90 database.

As discussed in **Sections 4.0** and **5.2.6**, the subject property and adjacent properties to the north are part of an ongoing soil and groundwater investigation under the oversight of the RWQCB that is identified as a REC.

4.2.3 Adjacent Property Listings

The following adjacent properties are identified in the regulatory database report, as discussed below:

- **Thermo King of San Diego, Formerly Thermo King** (EDR Map ID: A6, A7, A8) at 340 Bay Boulevard, is located adjacent to the north and hydrologically cross-gradient of the subject property. This site was identified in the SEMS-Archive, CPS-SLIC, San Diego County SAM, and CERS databases. According the DEH SAM database, a release affecting the groundwater was discovered at the facility in 1991. The facility status is listed as Closed Case as of June 5, 2007. As discussed in **Section 5.2.6**, this property is included in the current Rohr investigation of the property collectively known as the Bay Boulevard parcels under the oversight of the RWQCB. The investigation is ongoing.
- **Rohr, Inc., BF Goodrich, UTC Aerostructures, Lawless** (EDR Map ID: E25-F38, 9) at 850 Lagoon Drive, 390 Bay Boulevard, and foot of H Street, is located adjacent to the west, south, and southwest and hydrologically cross- to down-gradient of the subject property. This site was identified in the HIST UST, UST, CPS-SLIC, SEMS-Archive, San Diego County SAM, RCRA, AST, CERS, CERS Tanks and CERS Haz Waste databases. As discussed in **Section 4.1.3**, this facility which includes the subject property, is being investigated under the oversight of the RWQCB. The investigation is ongoing.

As discussed in **Sections 4.0** and **5.2.6**, the adjacent properties to the north, west, and south are part of an ongoing soil and groundwater investigation under the oversight of the RWQCB that is identified as a REC.

4.2.4 Sites of Concern Listings

No sites of concern are identified in the regulatory database report.

4.2.5 Orphan Listings

Two orphan listings are identified in the regulatory database report. No orphan listings of concern were identified in the regulatory database report.

A copy of the regulatory database report is included in **Appendix C** of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional.* Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13, Partner requested the following site information from PSIP Wohl Bay Boulevard LLC (User of this report).

User Responsibilities

Item	Provided By User	Not Provided By User	Discussed Below	Does Not Apply
Environmental Pre-Survey Questionnaire		**X**		
Title Records, Environmental Liens, and AULs		**X**		
Specialized Knowledge		**X**		
Actual Knowledge		**X**		
Valuation Reduction for Environmental Issues		**X**		
Identification of Key Site Manager	**Section 5.1.3**			
Reason for Performing Phase I ESA	**Section 1.1**			
Prior Environmental Reports	**Section 5.2.6**		**X**	
Other				**X**

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property since 1999, identified as Rohr, Inc., was not available to be interviewed at the time of the assessment.

5.1.2 Interview with Report User

Please refer to **Section 5.2** below for information requested from the Report User. The information requested was not received prior to the issuance of this report. Because the Report User (Client) is a potential purchaser, it is understood that the Report User would not have knowledge of the property that would significantly impact our ability to satisfy the objectives of this assessment. The lack of this information is not considered to represent a significant data gap.

5.1.3 Interview with Key Site Manager

A key site manager was not available to be interviewed at the time of this assessment.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.1.5 Interview with Others

As the subject property is not an abandoned property as defined in ASTM 1527-13, interview with others were not performed.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

At the request of the User, Partner contracted XFX to perform an environmental lien search for the subject property. No environmental liens or AULs were identified for the subject property (**Appendix B**).

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment.

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment. Provided previous environmental reports are discussed below in **Section 5.2.6**.

5.2.6 Previous Reports and Other Provided Documentation

The following information was provided to Partner for review during the course of this assessment:

ASTM Phase I Environmental Site Assessment, Rohr IDs 4, 5, 6, 8, 9, 10, and 11, Chula Vista, California, Haley & Aldrich, Inc. (July 21, 2016)

Phase II Environmental Site Assessment, Rohr IDs 4, 11, 10, 5, 8, 9 and 6, Vacant Bay Boulevard Properties, Chula Vista, California, GeoTracker ID No. T10000011095, Haley & Aldrich, Inc. (December 8, 2016)

Phase II Environmental Site Assessment, Vacant Bay Boulevard Properties, 300 Block, Bay Boulevard, Chula Vista, California, GeoTracker ID No. T10000011095, Haley & Aldrich, Inc. (January 11, 2018)

Work Plan for Additional Investigation, Rohr – Eastern Parcel, Vacant Properties, Chula Vista, California, GeoTracker ID No. T10000011095, Haley & Aldrich, Inc. (December 26, 2018)

From the late 1980s to 2020, numerous environmental assessments have been performed and are currently ongoing at the subject property and the three adjacent properties to the north, collectively known as the Bay Boulevard parcels. The subject property is identified in these investigations by the following site addresses and Rohr Inc. ID numbers: 350 Bay Boulevard (Rohr Property ID 5); 360 Bay Boulevard (Rohr Property ID 8); 364 Bay Boulevard (Rohr Property ID 9); and 368 Bay Boulevard (Rohr Property ID 6).

In July 2016, Haley and Aldrich, Inc. prepared a Phase I ESA for the subject property and adjacent properties to the north for Rohr Inc. (Rohr), the property owner. Rohr was proposing to sell the Bay Boulevard parcels. The subject property was vacant land at the time of the assessment.

Haley and Aldrich, Inc. reported that in the late 1980s, Rohr considered purchasing the Bay Boulevard parcels for development of its corporate headquarters. As a result of environmental due diligence, recognized environmental conditions (RECs) were identified. In the late 1980s and 1990s, assessments of soil and groundwater conditions were conducted and four regulatory cases were opened for Rohr IDs 4, 11, 10, 5 and 8 through the Voluntary Assistance Program (VAP) with the San Diego County Department of Environmental Health (DEH). Some degree of remediation of soil and groundwater monitoring were conducted on the parcels. In 2006 and 2007, the DEH provided no further action (NFA) letters (three) for the open cases located adjacent to the north of the subject property, contingent on continued commercial/industrial property use. A fourth NFA letter was believed to have been issued for Rohr IDs 5 and 8 (the subject property at 350-360 Bay Boulevard/ DEH Case #H26520-001), but was not obtained by Haley and Aldrich, Inc. Partner obtained a copy of the NFA (see Appendix B). Haley and Aldrich, Inc. identified the following RECs, associated with lead, pesticides, and Polychlorinated Biphenyls (PCBs), in connection with the subject property and adjacent properties:

Onsite RECs

- Lead in Soil (Rohr IDs 5 and 8 -350-360 Bay Boulevard): In 2001, approximately 1,500 cubic yards of surface soil containing lead was excavated and used as foundation material for the cap at the Otay Class I Landfill. Regulatory oversight was conducted under the DEH VAP. An NFA letter was issued to the City of Chula Vista, but it was not posted on the GeoTracker website nor was it noted in the EDR Database Report. The subject property cleanup level for lead at that time was the residential California Human Health Screening Level (CHHSL) of 150 milligrams per kilogram (mg/kg); the current residential CHHSL for lead is 80 mg/kg.
- PCBs in Soil (All Rohr IDs): PCBs were detected by URS Corporation (URS) in the drainage swale along the western boundary of the subject property (URS 2015). The source of the PCBs is not known. PCBs were also present in soil on the Rohr IDs 5 and 8 parcels at concentrations up to 7.4 mg/kg. It was unclear whether PCB-containing soil on these parcels had been characterized and removed.
- Agricultural Property Use (All Rohr IDs): The subject property had a history of agricultural use for cultivating citrus and row crops prior to the 1950s. There was the potential that pesticides, both inorganic (containing metals) and organic may have been used to control pests.

In December 2016, Haley and Aldrich, Inc. prepared a Phase II investigation for the subject property to investigate the RECs identified in the June 2016 ESA.

The soil analytical results were compared to the U.S. EPA Region 9 Regional Screening Levels (RSLs) and, for lead, the California Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO). Arsenic concentrations were compared to DTSC established background concentrations for Southern California of 12 milligrams per kilogram (mg/kg). Results indicated:

Soil - 350 Bay Boulevard (Rohr Property ID 5)

- p/m-xylene was detected in soil samples BB-14-01 and BB-15-01 at concentrations of 0.82 J and 0.45 J micrograms per kilogram (µg/kg), respectively. Methylene chloride was detected in sample BB-15-01 at a concentration of 1.9 J µg/kg and acetone was detected in BB-14-01 at a concentration of 15 J µg/kg. These concentrations were below their respective residential RSLs.
- Arsenic concentrations were within the accepted range for background concentrations in Southern California. Concentrations of the other metals were below their respective residential RSLs.
- PCBs were detected in the shallow soil samples from each of the borings on Rohr ID 5. Aroclor 1260 was detected in samples BB-14-01 and BB-16-01 at concentrations of 110 and 33 J µg/kg, respectively. Aroclor 1254 was detected in samples BB-14-01 and BB-15-01 at concentrations of 160 and 94 µg/kg, respectively. These detected concentrations were below the respective residential RSLs for these PCB congeners.
- The concentrations of the polynuclear aromatic hydrocarbons (PAHs) detected were below their r espective residential RSLs.

- One soil sample, BB-15-01, was analyzed for organochlorine pesticides (OCPs). The sample contained 4,4'-DDT at a concentration of 2.7 J µg/kg, which was below its residential RSL.
- Total Petroleum Hydrocarbons (TPH) were detected in samples BB-14-01, BB-15-01, BB-15-03, and BB-16-01. TPH concentrations detected were generally in the C29 carbon range and greater. The TPH in the surface sample collected from boring BB-15 included hydrocarbons in the C9- C12 and C19 - C22 carbon ranges. Total TPH concentrations detected in soil samples form Rohr ID 5 ranged from 3.3 J to 140 mg/kg.

Groundwater - 350 Bay Boulevard (Rohr Property ID 5)

No groundwater samples taken.

Soil - 360 Bay Boulevard (Rohr Property ID 8)

- No volatile organic compounds (VOCs) were detected in the six soil samples from the three borings drilled on Rohr ID 8.
- Arsenic concentrations were within the accepted range for background concentrations in Southern California. Concentrations of the other metals were below their respective residential RSLs.
- Aroclor 1254 was detected in soil sample BB-17-01 at a concentration of 120 µg/kg. This concentration is below the residential RSL. PCBs were not detected in the other samples from this assessment area.
- None of the PAHs detected were present at a concentration above its respective residential RSL.
- OCPs were detected in each of the soil samples that were analyzed for OCPs on Rohr ID 8. Sample BB-17-01 contained 4,4'-DDT at concentrations of 4.8 J µg/kg and sample BB-19-01 contained chlordane, 4,4'-DDE, and 4,4'-DDT at concentrations of 33 J, 2.4 J, and 4.1 J µg/kg, respectively. These concentrations were below the respective residential RSLs for these compounds.
- TPH were detected in each of the six soil samples analyzed from Rohr ID 8. The total TPH concentrations ranged from 39 to 190 mg/kg. The hydrocarbons detected were in the C25-C44 carbon range.

Groundwater - 360 Bay Boulevard (Rohr Property ID 8)

- The following VOCs were detected in groundwater from boring BB-17: acetone (5.1 J micrograms per liter (µg/l)), bromomethane (0.88 J µg/l), chloroform (1.5 J µg/l), and chloromethane (0.24 J µg/l). These concentrations were below their respective MCLs and ESL vapor-intrusion screening levels for these compounds.
- The concentration of arsenic detected in BB-17-GW (0.0149 mg/l) was slightly above the MCL of 0.010 mg/l. Concentrations of the other metals in groundwater were below their respective MCLs.

Soil - 364 Bay Boulevard (Rohr Property ID 9)

- P-Isopropyltoluene was detected in three of the six shallow soil samples from Rohr ID 9 at concentrations ranging from 0.73 J µg/kg and 29 µg/kg. 2-Butanone and acetone were detected

in sample BB-21-01 at concentrations of 22 J and 76 J µg/kg, respectively. No other VOCs were detected in soil samples from Rohr ID 9. The concentrations of 2-butanone and acetone were below their respective residential RSLs. There were no RSLs established for P-Isopropyltoluene.

- Thallium (0.156 J to 0.929 mg/kg) was detected above the residential RSL, but below the commercial/industrial RSL. Arsenic concentrations were within the accepted range for background concentrations in Southern California. Concentrations of the other metals were below their respective RSLs.
- One of the soil samples on Rohr ID 9 contained PCBs. Aroclor 1260 was detected in sample BB-21-01 at a concentration of 33 J µg/kg. This concentration was below the residential RSL of 240 µg/kg.
- Each of the detected PAH compounds were below their respective residential RSLs.
- One soil sample from Rohr ID 9 was analyzed for OCPs. Soil sample BB-21-01 contained 7.4 µg/kg of 4,4'-DDE and 30 J µg/kg of chlordane. These concentrations were below their respective residential RSLs.
- TPH, in the carbon range of C25-C44, were detected in four of the six soil samples from Rohr ID 9. Total TPH concentrations in these samples ranged from 11 to 47 mg/kg.

Groundwater - 364 Bay Boulevard (Rohr Property ID 9)

No groundwater samples taken.

Soil - 368 Bay Boulevard (Rohr Property ID 6)

- No VOCs were detected in soil samples from Rohr ID 6.
- Arsenic concentrations were within the accepted range for background concentrations in Southern California. Concentrations of the other metals were below their respective residential RSLs.
- No PCBs were detected in the soil samples analyzed from Rohr ID 6.
- None of the PAHs detected was present above its respective residential RSL.
- OCPs were detected in both samples analyzed on Rohr ID 6. Sample BB-24-01 contained 4,4'-DDE and 4,4'-DDT at concentrations of 15 and 16 µg/kg, respectively. Sample BB-23-01 contained 4,4'-DDD, 4,4'-DDE, and 4,4'-DDT at concentrations of 9.9, 1,000, and 230 µg/kg, respectively. These concentrations were below their respective residential RSLs.
- TPH were detected in one of two borings on Rohr ID 6. Two samples from boring BB-24 at 1 and 3 feet bgs contained total TPH concentrations of 150 and 44 mg/kg, respectively. The TPH present in sample BB-24-01 were within the C28-C44 carbon range. The TPH present in sample BB-24-03 were within the C19-C44 carbon range.

Groundwater - 368 Bay Boulevard (Rohr Property ID 6)

- Chloroform was detected in the groundwater sample from boring BB-23 at a concentration of 0.34 J µg/l, which is below the MCL of 80 µg/l and the ESLs. No other VOCs were detected in groundwater analyzed from boring BB-23.

- The arsenic concentration (0.0112 mg/l) was slightly above the MCL of 0.010 mg/l.

The site investigation is now part of the ongoing larger Goodrich Aerostructures – North Campus – Eastern Parcel A (Case Number T10000011095) investigation under the oversight of the RWQCB. On April 9, 2018, Haley & Aldrich and Rohr met with the RWQCB to discuss the results of the 2016 Phase II investigation and additional scope of work. The scope of work included a soil vapor survey; however, Haley & Aldrich indicated that it was eliminated from the scope since Rohr will require that any buildings constructed on the subject property by a buyer include a vapor barrier as part of the property transaction. On December 26, 2018, Haley and Aldrich, Inc. submitted a Work Plan for Additional Investigation to the RWQCB. The proposed sample locations were located on the parcels adjacent to the north of the subject property.

Copies of pertinent pages reviewed are included in **Appendix B** of this report.

6.0 SITE RECONNAISSANCE

The weather at the time of the field reconnaissance was sunny and clear. Refer to **Section 1.5** for limitations encountered during the field reconnaissance and **Sections 2.1** and **2.2** for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Heather Hodgetts
Site Assessment Conducted On:	December 22, 2020

Partner was unaccompanied during the field reconnaissance activities.

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

No solid waste is currently generated at the subject property. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

No sanitary discharges are currently generated on the subject property. No wastewater treatment facilities or septic systems are located on the subject property.

6.1.3 Surface Water Drainage

Storm water is removed from the subject property primarily by percolation to unpaved ground surfaces on the subject property. A stormwater ditch is located adjacent to the west boundary of the subject property.

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish & Wildlife Service. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property. No drywells were identified on the subject property.

6.1.4 Source of Heating and Cooling

No buildings or mechanical systems are located on the subject property.

Electricity and natural gas are provided to the site vicinity by Southern California Edison (SCE) and the Southern California Gas Company.

6.1.5 Wells and Cisterns

No aboveground evidence of wells or cisterns was observed during this assessment.

6.1.6 Wastewater

No domestic wastewater is currently generated at the subject property. No commercial or industrial process is performed at the subject property.

6.1.7 Septic Systems

No septic systems were observed on the subject property during the Partner site reconnaissance.

6.1.8 Additional Site Observations

No additional general site characteristics were observed on the subject property during the Partner site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

No hazardous substances or petroleum products were observed on the subject property during the site reconnaissance.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current or former ASTs or USTs on the subject property was observed during the site reconnaissance.

6.2.3 Evidence of Releases

No spills, stains or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

No potential PCB-containing equipment (transformers, oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, etc.) was observed on the subject property during Partner's reconnaissance.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid on the subject property were observed during the Partner site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property during the Partner site reconnaissance.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property during the Partner site reconnaissance.

6.2.10 Additional Potential Environmental Hazards

No additional environmental hazards, including landfill activities or radiological hazards, were observed on the subject property during the Partner site reconnaissance.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

No buildings or structures are located on the subject property.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm^2 (or 5,000 ug/g or 0.5% by weight) or more of lead.

No buildings or structures are located on the subject property.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	**Average Predicted Radon Levels**	**Potential**
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 3. Based upon the radon zone classification, radon is not considered to be an environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the Sweetwater Authority (SA) serves the subject property vicinity. According to the SA and the 2019 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

No buildings or structures are located on the subject property. As such, a mold evaluation was not required by the scope of services.

7.0 FINDINGS AND CONCLUSIONS

Findings

A *recognized environmental condition (REC)* refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: due to release to the environment; under conditions indicative of a release to the environment; or under conditions that pose a material threat of a future release to the environment.

- The subject property and adjacent properties are part of the ongoing larger Goodrich Aerostructures – North Campus – Eastern Parcel A (Case Number T10000011095) investigation under the oversight of the RWQCB. Onsite soil and groundwater sampling indicted that:
    - Thallium was detected in soil at 364 Bay Boulevard (Rohr Property ID 9) above the residential RSL, but below the commercial/industrial RSL.
    - Arsenic was detected in groundwater was slightly above the MCL of 0.010 mg/l at 360 and 368 Bay Boulevard (Rohr Property IDs 8 and 6).

  The investigation is ongoing and considered a REC. Additional sampling is proposed for the adjacent parcels to the north.

A *controlled recognized environmental condition (CREC)* refers to a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

- Partner did not identify controlled recognized environmental conditions during the course of this assessment.

A *historical recognized environmental condition (HREC)* refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

- Partner did not identify HRECs during the course of this assessment.

An *environmental issue* refers to environmental concerns identified by Partner, which do not qualify as RECs; however, warrant further discussion.

- Partner did not identify environmental issues during the course of this assessment.

Conclusions and Opinions

Partner has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of 350, 360, 364, and 368 Bay Boulevard, Chula Vista, CA 91910 in San Diego, San Diego County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in **Section 1.5** of this report.

With consideration of the access limitations stated herein, this assessment has revealed evidence of recognized environmental conditions in connection with the subject property.

8.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I ESA of the property located at 350, 360, 364, and 368 Bay Boulevard in Chula Vista, San Diego County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY

Reliance on information in Report: This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

License for use of information in Report: No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

Your Liability for misuse: Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

No warranty of Accuracy or Liability for ERIS: The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

Trademark and Copyright: You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

Control No:
County: SAN DIEGO
Year: 1993
URL:
Notified Date: 1/13/1993
Notified Date Time: 02:16:00 PM

California Hazardous Material Incident Report System (as of 1993 to 1996)

Contained:
Substance: breacoat oil deliminate/water
Type: PETROLEUM
Qty:
Other:
Measure:
Amount: 1/2-1 gal 1/4-1/2 gal
Water:
Water Way:
Location: foot of h street
Description: transfer pump plugged, stream cleaning pump kicked in causing above substance to the soil
Incident Date: 1200
Injuries?: UNKNOWN
Fatals?: UNKNOWN
Evacs?: UNKNOWN
Cleanup: rohr inc.
Site: IND PLT
City: chula vista
County: SAN DIEGO
ZIP: 91912

Waste Code Details

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: 151
Waste Code Description: Asbestos-containing waste

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: F019
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: 711
Waste Code Description: Liquids with cyanides > 1000 mg/l

Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Handler Details

Sequence No: 1
Receive Date: 20100615
Handler Name: ROHR INC. DBA GOODRICH AEROSTRUCTURES
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report update with Notification

Waste Code Details

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 171

Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: F019
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Handler Details

Sequence No: 2
Receive Date: 19980126
Handler Name: ROHR INC
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator

Source Type: Notification

Waste Code Details

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: U210
Waste Code Description: ETHENE, TETRACHLORO- (OR) TETRACHLOROETHYLENE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: F001
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY

VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code Details

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F019
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Waste Code Details

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: D018
Waste Code Description: BENZENE

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: 121

Waste Code Description:	Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)
Hazardous Waste Code:	F002
Waste Code Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	D008
Waste Code Description:	LEAD
Hazardous Waste Code:	241
Waste Code Description:	Tank bottom waste
Hazardous Waste Code:	U159
Waste Code Description:	2-BUTANONE (I,T) (OR) METHYL ETHYL KETONE (MEK) (I,T)
Hazardous Waste Code:	551
Waste Code Description:	Laboratory waste chemicals
Hazardous Waste Code:	F005
Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	D011
Waste Code Description:	SILVER
Hazardous Waste Code:	U002
Waste Code Description:	2-PROPANONE (I) (OR) ACETONE (I)
Hazardous Waste Code:	134
Waste Code Description:	Aqueous solution with <10% total organic residues
Hazardous Waste Code:	791
Waste Code Description:	Liquids with pH < 2
Hazardous Waste Code:	272
Waste Code Description:	Polymeric resin waste
Hazardous Waste Code:	D007
Waste Code Description:	CHROMIUM
Hazardous Waste Code:	724
Waste Code Description:	Liquids with lead > 500 mg/l
Hazardous Waste Code:	U239
Waste Code Description:	BENZENE, DIMETHYL- (I,T) (OR) XYLENE (I)
Hazardous Waste Code:	F019
Waste Code Description:	WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.
Hazardous Waste Code:	513
Waste Code Description:	Empty containers less than 30 gallons
Hazardous Waste Code:	P030
Waste Code Description:	CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED
Hazardous Waste Code:	135
Waste Code Description:	Unspecified aqueous solution

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 212
Waste Code Description: Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 123
Waste Code Description: Unspecified alkaline solution

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Handler Details

Sequence No: 6
Receive Date: 20200227

Waste Code Details

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 122
Waste Code Description: Alkaline solution without metals (pH > 12.5)

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: 551
Waste Code Description: Laboratory waste chemicals

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: F019
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper,

lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 711
Waste Code Description: Liquids with cyanides > 1000 mg/l

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code: F006
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: 261
Waste Code Description: Polychlorinated biphenyls and material containing PCB's

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: 151
Waste Code Description: Asbestos-containing waste

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Waste Code Details

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: U220
Waste Code Description: BENZENE, METHYL- (OR) TOLUENE

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: F019
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: D035

Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: LABP
Waste Code Description: LAB PACK

Hazardous Waste Handler Details

Sequence No: 3
Receive Date: 20220105
Handler Name: ROHR INC., A COLLINS AEROSPACE COMPANY
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Notification

Waste Code Details

Hazardous Waste Code: D003
Waste Code Description: REACTIVE WASTE

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: 151
Waste Code Description: Asbestos-containing waste

Hazardous Waste Code: 791
Waste Code Description: Liquids with pH < 2

Hazardous Waste Code: 331
Waste Code Description: Off-specification, aged, or surplus organics

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: 513
Waste Code Description: Empty containers less than 30 gallons

Hazardous Waste Code:	352
Waste Code Description:	Other organic solids
Hazardous Waste Code:	122
Waste Code Description:	Alkaline solution without metals (pH > 12.5)
Hazardous Waste Code:	141
Waste Code Description:	Off-specification, aged, or surplus inorganics
Hazardous Waste Code:	D035
Waste Code Description:	METHYL ETHYL KETONE
Hazardous Waste Code:	551
Waste Code Description:	Laboratory waste chemicals
Hazardous Waste Code:	241
Waste Code Description:	Tank bottom waste
Hazardous Waste Code:	134
Waste Code Description:	Aqueous solution with <10% total organic residues
Hazardous Waste Code:	121
Waste Code Description:	Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)
Hazardous Waste Code:	D011
Waste Code Description:	SILVER
Hazardous Waste Code:	792
Waste Code Description:	Liquids with pH < 2 with metals
Hazardous Waste Code:	461
Waste Code Description:	Degreasing sludge
Hazardous Waste Code:	214
Waste Code Description:	Unspecified solvent mixture
Hazardous Waste Code:	172
Waste Code Description:	Metal dust (see 121) and machining waste
Hazardous Waste Code:	135
Waste Code Description:	Unspecified aqueous solution
Hazardous Waste Code:	181
Waste Code Description:	Other inorganic solid waste
Hazardous Waste Code:	D001
Waste Code Description:	IGNITABLE WASTE
Hazardous Waste Code:	343
Waste Code Description:	Unspecified organic liquid mixture
Hazardous Waste Code:	261
Waste Code Description:	Polychlorinated biphenyls and material containing PCB's
Hazardous Waste Code:	F006
Waste Code Description:	WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.
Hazardous Waste Code:	F019
Waste Code Description:	WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.
Hazardous Waste Code:	F002
Waste Code Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE

CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: 711
Waste Code Description: Liquids with cyanides > 1000 mg/l

Hazardous Waste Code: 132
Waste Code Description: Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Handler Details

Sequence No: 9
Receive Date: 20060118
Handler Name: ROHR INC. DBA GOODRICH AEROSTRUCTURES
Federal Waste Generator Code: 1
Generator Code Description: Large Quantity Generator
Source Type: Annual/Biennial Report

Waste Code Details

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: 151
Waste Code Description: Asbestos-containing waste

Hazardous Waste Code: 222
Waste Code Description: Oil/water separation sludge

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 241
Waste Code Description: Tank bottom waste

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004,

AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: 611
Waste Code Description: Contaminated soil from site clean-ups

Hazardous Waste Code: F019
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Hazardous Waste Code: 214
Waste Code Description: Unspecified solvent mixture

Hazardous Waste Code: 221
Waste Code Description: Waste oil and mixed oil

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 171
Waste Code Description: Metal sludge (see 121)

Hazardous Waste Code: 135
Waste Code Description: Unspecified aqueous solution

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Handler Details

Sequence No: 2

Waste Code Details

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: U226
Waste Code Description: ETHANE, 1,1,1-TRICHLORO- (OR) METHYL CHLOROFORM

Hazardous Waste Code: D006
Waste Code Description: CADMIUM

Hazardous Waste Code: D009
Waste Code Description: MERCURY

Hazardous Waste Code: D011
Waste Code Description: SILVER

Hazardous Waste Code: D007
Waste Code Description: CHROMIUM

Hazardous Waste Code: D035
Waste Code Description: METHYL ETHYL KETONE

Hazardous Waste Code: F002
Waste Code Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: F019
Waste Code Description: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

Hazardous Waste Code: U228
Waste Code Description: ETHENE, TRICHLORO- (OR) TRICHLOROETHYLENE

Hazardous Waste Code: F005
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: U210
Waste Code Description: ETHENE, TETRACHLORO- (OR) TETRACHLOROETHYLENE

Hazardous Waste Code: D002
Waste Code Description: CORROSIVE WASTE

Hazardous Waste Code: D040
Waste Code Description: TRICHLORETHYLENE

Hazardous Waste Code: D001
Waste Code Description: IGNITABLE WASTE

Hazardous Waste Code: D004
Waste Code Description: ARSENIC

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Handler Details

Waste Code Details

Hazardous Waste Code: 461
Waste Code Description: Degreasing sludge

Hazardous Waste Code: 141
Waste Code Description: Off-specification, aged, or surplus inorganics

Hazardous Waste Code: D008
Waste Code Description: LEAD

Hazardous Waste Code: 172
Waste Code Description: Metal dust (see 121) and machining waste

Hazardous Waste Code: 223
Waste Code Description: Unspecified oil-containing waste

Hazardous Waste Code: 792
Waste Code Description: Liquids with pH < 2 with metals

Hazardous Waste Code: 343
Waste Code Description: Unspecified organic liquid mixture

Hazardous Waste Code: 121
Waste Code Description: Alkaline solution (pH >12.5) with metals (antimony, arsenic, barium, beryllium, cadmium, chromium, cobalt, copper, lead, mercury, molybdenum, nickel, selenium, silver, thallium, vanadium, and zinc)

Hazardous Waste Code: 352
Waste Code Description: Other organic solids

Hazardous Waste Code: 134
Waste Code Description: Aqueous solution with <10% total organic residues

Hazardous Waste Code: 591
Waste Code Description: Baghouse waste

Hazardous Waste Code: F003
Waste Code Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Hazardous Waste Code: D002

Waste Code Description:	CORROSIVE WASTE
Hazardous Waste Code:	F005
Waste Code Description:	THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	D009
Waste Code Description:	MERCURY
Hazardous Waste Code:	D035
Waste Code Description:	METHYL ETHYL KETONE
Hazardous Waste Code:	D006
Waste Code Description:	CADMIUM
Hazardous Waste Code:	221
Waste Code Description:	Waste oil and mixed oil
Hazardous Waste Code:	171
Waste Code Description:	Metal sludge (see 121)
Hazardous Waste Code:	F002
Waste Code Description:	THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Hazardous Waste Code:	D005
Waste Code Description:	BARIUM
Hazardous Waste Code:	331
Waste Code Description:	Off-specification, aged, or surplus organics
Hazardous Waste Code:	151
Waste Code Description:	Asbestos-containing waste
Hazardous Waste Code:	241
Waste Code Description:	Tank bottom waste
Hazardous Waste Code:	D007
Waste Code Description:	CHROMIUM
Hazardous Waste Code:	F006
Waste Code Description:	WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.
Hazardous Waste Code:	D001
Waste Code Description:	IGNITABLE WASTE
Hazardous Waste Code:	214
Waste Code Description:	Unspecified solvent mixture
Hazardous Waste Code:	F019
Waste Code Description:	WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.
Hazardous Waste Code:	132
Waste Code Description:	Aqueous solution w/metals (< restricted levels and see waste code 121 for a list of metals)

Hazardous Waste Code: 181
Waste Code Description: Other inorganic solid waste

Global ID: T0608187932
County: San Diego
Status Date: 5/8/2019
Latitude: 32.6292284883906
Longitude: -117.099366188049
Status: Completed - Case Closed
Site Facility Type: Cleanup Program Site
Data Source: Cleanup Sites from GeoTracker Cleanup Sites Data Download

Cleanup Sites from GeoTracker Cleanup Sites Data Download - Facilities Detail

RB Case No: 2092900
Local Case No:
Begin Date: 6/15/1999
Lead Agency: SAN DIEGO RWQCB (REGION 9)
Local Agency:
CUF Case: NO
CalEnvScreen Score:
EPA Region: 9
Qty Rlsd Gallons:
Potential COC: 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Other Solvent or Non-Petroleum Hydrocarbon, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride
How Discovered:
Stop Method: Close and Remove Tank
Stop Description: CLOSE AND REMOVE TANK
Case Worker: TCA
Military DoD Site: No
Leak Reported Dt: 1999-06-15 00:00:00
No Further Action Dt: 2019-05-08 00:00:00
Potential Media of Concern: Aquifer used for drinking water supply
How Discovered Description:
Calwater Watershed Name: Sweetwater - Lower Sweetwater - La Nacion (909.12)
DWR GW Subbasin Name: Coastal Plain Of San Diego (9-033)
Disadvantaged Community: Severely Disadvantaged Community
Coordinate Source: Google Map Move
Discharge Cause: Other
Discharge Source: Tank

Facility Project Sub Type:
Calenviroscreen 3 Score: 76-80%
Calenviroscreen 4 Score: 80-85%
File Location: Local Agency
Site History:

BF Goodrich Aerospace engages in the design and manufacture of technical equipment and technology used to build aircraft. The company provides various aerospace components, systems and services, such as fuel measurement, management, health monitoring, and diagnostic systems to the aerospace industry through a network of manufacturing, engineering and assembly plants, as well as service centers, including the airframe maintenance. It also supplies components, systems, and services to the aerospace industry. Administratively closed May 8, 2019. T34 in Building No. 1 is a sump release and is part of the larger cleanup and remediation efforts and will be addressed as part of Geotracker Site ID T10000001489 - GOODRICH AEROSTRUCTURES - NORTH CAMPUS.

Calenviroscreen 4 Score: 80-85%
File Location: Regional Board
Site History:

Since 1941, structural and engine components for use in the aviation and aerospace industry have been manufactured at the South Campus Property. Chemicals stored at the South Campus Property and used during manufacturing operations have been found in the soil, soil gas, and groundwater as reported in site environmental investigation reports and groundwater monitoring reports. The group of chemicals discharged include, but are not limited to, volatile organic compounds (VOCs), metals, petroleum hydrocarbons, polycyclic aromatic hydrocarbons (PAHs), and polychlorinated biphenyls (PCBs). In 1998, the San Diego Water Board issued CAO No. 98-08 to Rohr, Inc. CAO No. 98-08 requires the cleanup or abatement of wastes discharged from Rohr's manufacturing operations located at 850 Lagoon Drive in Chula Vista, California (North Campus Property and South Campus Property). CAO No. 98-08 includes directives to (1) conduct a site-wide environmental site assessment, (2) conduct a comprehensive storm water runoff sampling program, (3) conduct a comprehensive storm water conveyance system investigation, (4) perform a site-wide data compilation and evaluation, and (5) conduct interim remedial actions. The first four directives have been completed. On July 13, 1999, the City of Chula Vista, the Redevelopment Agency of the City of Chula Vista, the Port of San Diego, and Rohr entered into a Relocation Agreement. Thirty-eight acres of Rohr-owned property were transferred to the Port of San Diego and a 28-acre lease of Port tidelands was terminated as part of this Relocation Agreement for the entire South Campus Site. In 2002, Rohr vacated the South Campus Property and consolidated manufacturing operations to the North Campus Property. In 2007, the Port of San Diego demolished all buildings at the South Campus. In 2014, the San Diego Water Board issued CAO No. R9-2014-0019, which requires the cleanup or abatement of all wastes discharged to soil, soil gas, and groundwater from the manufacturing operations at the South Campus Property. CAO No. R9-2014-0019 supersedes CAO No. 98-08. Implementation of the soil Remedial Action Plan (RAP) is currently underway. The groundwater RAP will be finalized by Summer 2020.

Site History:

An authorized release was observed during soil sampling for the removal of a 550 gallon underground storage tank (UST) discovered some remodeling being conducted in the Oiler Shed area beneath the existing canopy. The former use of the UST was not known. The UST contained approximately 24 inches of liquid when discovered with approximately six inches of sludge on the bottom. Of the 24 inches of liquid, several inches was reported to be free hydrocarbon product. A sample was obtained of the liquid in the UST and was analyzed. The liquid was reported to be within the carbon range of kerosene and in the range of waste oil. Volatile Organic Vapors (VOCs) found in the liquid were reported to be 1,1-dichloroethane at a concentration of 37,500 µg/l and Freon 113 at a concentration of 48,500 µg/l. The single wall steel UST and associated piping was removed on April 24, 2000, after the contents of the tank were removed by Triad Marine & Industrial Cleaning Corp. Corrosion and several holes were noted on the UST by the Department of Environmental Health (DEH) inspector. Total Recoverable Petroleum Hydrocarbons (TRPH) up to 137 mg/kg were observed at a side-wall sample directed by the inspector. Five additional soil samples were collected at the request of BF Goodrich personnel. The additional soil sampling analytical results included low levels of Acetone, 2-butanone (MEK), 1,1-dichloroethane, 1,2-dichloroethane, cis-1,2-dichloroethene, and 1, 1, 1-tricholoethane.

The Underground Storage Tank Removal and Soil Sampling Report requested no further action as a low risk groundwater case. DEH directed that the groundwater impacts be evaluated and that a complete site assessment report be submitted in order to evaluate the case for closure. The area of investigation is located along the former high tide line of San Diego Bay and is underlain by artificially compacted fill. Fill materials are located at the surface grade to depths of 7 to 8 feet below ground surface (bgs). The fill consists of a mixture of clay and silty sand with gravel. Bay deposits and the Bay Point Formation encountered beneath the fill consist mostly of clay and sandy clay to the maximum depth investigated at approximately 12 feet bgs. The site is located within a designated beneficial use water basin, and the nearest surface water body is the San Diego Bay which is located approximately 2,500 feet west of the site. One soil boring was advanced on February 15, 2012 in the center of the former tank pit to a depth of approximately 12 feet bgs. A temporary slotted PVC casing was placed in the boring to collect a groundwater sample. The groundwater analytical results were Non-detect for TRPH, however the Trichloroethene concentration was observed at 74,000 µg/l. Additional VOCs included in the groundwater sample results were 1,1-Dichloroethane, 1,2-Dichloroethane, 1,1-Dichloethene, cis-1,2-Dichloroethene, and Vinyl Chloride. *The Trichloroethene (TCE) observed in groundwater in the investigation is above the Maximum Contaminant Levels for a beneficial groundwater use basin. Goodrich is investigating TCE in groundwater site-wide under the oversight of the Regional Water Quality Control Board (RWQCB) in accordance with Cleanup and Abatement Order No. 98-08. The RWQCB was notified of the proposed closure of this Voluntary Assistance Program (VAP) case on August 11, 2011 and they stated they had no issues concerning this closure. The Closure is for the TRPH contamination only. The remaining TRPH contamination does not pose a threat to human health or the environment.

Of the 24 inches of liquid, several inches was reported to be free hydrocarbon product. A sample was obtained of the liquid in the UST and was analyzed. The liquid was reported to be within the carbon range of kerosene and in the range of waste oil. Volatile Organic Vapors (VOCs) found in the liquid were reported to be 1,1-dichloroethane at a concentration of 37,500 µg/l and Freon 113 at a concentration of 48,500 µg/l. The single wall steel UST and associated piping was removed on April 24, 2000, after the contents of the tank were removed by Triad Marine & Industrial Cleaning Corp. Corrosion and several holes were noted on the UST by the Department of Environmental Health (DEH) inspector. Total Recoverable Petroleum Hydrocarbons (TRPH) up to 137 mg/kg were observed at a side-wall sample directed by the inspector. Five additional soil samples were collected at the request of BF Goodrich personnel. The additional soil sampling analytical results included low levels of Acetone, 2-butanone (MEK), 1,1-dichloroethane, 1,2-dichloroethane, cis-1,2-dichloroethene, and 1, 1, 1-tricholoethane. The Underground Storage Tank Removal and Soil Sampling Report requested no further action as a low risk groundwater case.

DEH directed that the groundwater impacts be evaluated and that a complete site assessment report be submitted in order to evaluate the case for closure. The area of investigation is located along the former high tide line of San Diego Bay and is underlain by artificially compacted fill. Fill materials are located at the surface grade to depths of 7 to 8 feet below ground surface (bgs). The fill consists of a mixture of clay and silty sand with gravel. Bay deposits and the Bay Point Formation encountered beneath the fill consist mostly of clay and sandy clay to the maximum depth investigated at approximately 12 feet bgs. The site is located within a designated beneficial use water basin, and the nearest surface water body is the San Diego Bay which is located approximately 2,500 feet west of the site.

One soil boring was advanced on February 15, 2012 in the center of the former tank pit to a depth of approximately 12 feet bgs. A temporary slotted PVC casing was placed in the boring to collect a groundwater sample. The groundwater analytical results were Non-detect for TRPH, however the Trichloroethene concentration was observed at 74,000 µg/l. Additional VOCs included in the groundwater sample results were 1,1-Dichloroethane, 1,2-Dichloroethane, 1,1-Dichloethene, cis-1,2-Dichloroethene, and Vinyl Chloride.

*The Trichloroethene (TCE) observed in groundwater in the investigation is above the Maximum Contaminant Levels for a beneficial groundwater use basin. Goodrich is investigating TCE in groundwater site-wide under the oversight of the Regional Water Quality Control Board (RWQCB) in accordance with Cleanup and Abatement Order No. 98-08. The RWQCB was notified of the proposed closure of this Voluntary Assistance Program (VAP) case on August 11, 2011 and they stated they had no issues concerning this closure. The Closure is for the TRPH contamination only. The remaining TRPH contamination does not pose a threat to human health or the environment.

Site History:

Since 1941, structural and engine components for use in the aviation and aerospace industry have been manufactured at the North Campus Property. Chemicals stored at the North Campus Property and used during manufacturing operations have been found in the soil, soil gas, and groundwater as reported in site environmental investigation reports and groundwater monitoring reports. The group of chemicals discharged include, but are not limited to, volatile organic compounds (VOCs), metals, petroleum hydrocarbons, polycyclic aromatic hydrocarbons (PAHs), and polychlorinated biphenyls (PCBs). In 1998, the San Diego Water Board issued CAO No. 98-08 to Rohr, Inc. CAO No. 98-08 requires the cleanup and abatement of wastes discharged from Rohr's manufacturing operations located at 850 Lagoon Drive in Chula Vista, California (North Campus Property and South Campus

Property). CAO No. 98-08 includes directives to (1) conduct a site-wide environmental site assessment, (2) conduct a comprehensive storm water runoff sampling program, (3) conduct a comprehensive storm water conveyance system investigation, (4) perform a site-wide data compilation and evaluation, and (5) conduct interim remedial actions. The first four directives have been completed. All subsequent activities have been conducted as interim remedial measures pursuant to the fifth directive. Interim remedial actions are currently underway at an off-property area located downgradient, known as Parcel H-3, pursuant to CAO No. 98-08. Redevelopment activities will be initiated on Parcel H-3 beginning in Summer 2020. The San Diego Water Board is currently preparing CAO No. R9-2020-0099, which addresses the cleanup or abatement of all wastes discharged to soil, soil gas, and groundwater from the manufacturing operations at the North Campus Property. CAO No. R9-2020-0099 will supersede CAO No. 98-08 except for the interim remedial actions at Parcel H-3, which will continue to be conducted under CAO No. 98-08. This CAO will be issued by Summer 2020. The North Campus Property is planned for redevelopment and is separated into three parcels: Parcels A, B, and C. Parcel A is approximately 12 acres and is currently for sale. The potential buyer plans to repurpose the three existing buildings on Parcel A. Parcel B is approximately 30 acres and is currently for sale. The potential buyer plans to demolish all the existing buildings on Parcel B. Parcel C is approximately 43 acres and includes 11 buildings, and is currently not for sale.

Common Name Inventory: TANK E-2 ALUMINUX 202

ID: 121876 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0163948 **Active Permit:** true
CAS No: 7782-44-7 **Haz Material Type:** Pure
Last Updated: 12/28/2017 02:31:53 AM **Trade Secret:** false
Chemical Name: OXYGEN (4460-0093-002914)
Common Name Inventory: OXYGEN

ID: 172246 **Permit Status:** Permit Renewed
Child Record ID: DEH2018-HCHEM-0190547 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 01/24/2019 02:33:34 AM **Trade Secret:** false
Chemical Name: SODIUM NITRITE SOLUTION (5655-0736-006517 / 5655-0980-006517)
Common Name Inventory: (C-145, C-208) AQUA QUENCH 251B

ID: 307672 **Permit Status:** Permit Renewed
Child Record ID: DEH2020-HWAST-0234174 **Active Permit:** true
CAS No: **Haz Material Type:**
Last Updated: 01/30/2021 01:18:05 AM **Trade Secret:** false
Chemical Name: WASTE 134 WASTE OIL & MIXED OIL*
Common Name Inventory: T-312 (WASTE MACHINE OIL)

ID: 307686 **Permit Status:** Permit Renewed
Child Record ID: DEH2020-HWAST-0234188 **Active Permit:** true
CAS No: **Haz Material Type:**
Last Updated: 01/30/2021 01:18:05 AM **Trade Secret:** false
Chemical Name: WASTE 792 LIQUIDS W/PH <OR= 2 W/METALS*
Common Name Inventory: T-302C (WASTE ACID)

ID: 254478 **Permit Status:** Permit Renewed
Child Record ID: DEH2019-HCHEM-0237209 **Active Permit:** true
CAS No: 64742-47-8 **Haz Material Type:** Pure
Last Updated: 03/03/2020 12:59:20 AM **Trade Secret:** false
Chemical Name: PETROLEUM HYDROCARBON (6445-0017-010615)
Common Name Inventory: 669 NAPHTHA

ID: 254516 **Permit Status:** Permit Renewed
Child Record ID: DEH2019-HWAST-0208569 **Active Permit:** true
CAS No: **Haz Material Type:**
Last Updated: 03/03/2020 12:59:27 AM **Trade Secret:** false
Chemical Name: WASTE 791 LIQUIDS WITH PH <OR= 2
Common Name Inventory: T-302A (WASTE ACID)

ID: 112086 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161222 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 11/09/2017 12:37:38 AM **Trade Secret:** false
Chemical Name: CHROMIC ACID (4490-0543-010858)
Common Name Inventory: TANK E-4 TURCO DEOXIDIZER 16 REPLENISHER

ID: 112124 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161261 **Active Permit:** true

Chemical Name: WASTE 214 UNSPEC SOLVENT MIXTURE

Common Name Inventory: WASTE PAINT/SOLVENTS

ID: 2794 **Permit Status:** Permit Renewed
Child Record ID: DEH2016-HCHEM-0124517 **Active Permit:** true
CAS No: 98-56-6 **Haz Material Type:** Pure
Last Updated: 05/31/2017 01:28:41 AM **Trade Secret:** false
Chemical Name: CHLOROBENZOTRIFLUORIDES (4460-1025-005932)
Common Name Inventory: TANK R-5 AC-815-O THINNER

ID: 112093 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161229 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 11/09/2017 12:37:38 AM **Trade Secret:** false
Chemical Name: ETHOXYLATED NONYLPHENOL
Common Name Inventory: E-1

ID: 112151 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161288 **Active Permit:** true
CAS No: 10043-52-4 **Haz Material Type:** Mixture
Last Updated: 11/09/2017 12:37:38 AM **Trade Secret:** false
Chemical Name: CALCIUM CHLORIDE (4460-1346-008340)
Common Name Inventory: CALCIUM CHLORIDE

ID: 307580 **Permit Status:** Permit Renewed
Child Record ID: DEH2020-HCHEM-0263485 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 01/30/2021 01:18:03 AM **Trade Secret:** false
Chemical Name: ALODINE 1200S (4060-0009-006327)
Common Name Inventory: TANK E-8 - ALODINE 1200S (Chromium VI Oxide 45%)

ID: 254425 **Permit Status:** Permit Renewed
Child Record ID: DEH2019-HCHEM-0237156 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 03/03/2020 12:59:20 AM **Trade Secret:** false
Chemical Name: secondary alcohol ethoxylate (5850-0013-001184)
Common Name Inventory: P-1 ZYGLO PENE ZL-67

ID: 254431 **Permit Status:** Permit Renewed
Child Record ID: DEH2019-HCHEM-0237162 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 03/03/2020 12:59:20 AM **Trade Secret:** false
Chemical Name: TALLOW (5655-0865-005822)
Common Name Inventory: POLYDRAW 660, FORMING LUBRICANT

ID: 121858 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0163929 **Active Permit:** true
CAS No: 74-86-2 **Haz Material Type:** Pure
Last Updated: 12/28/2017 02:31:53 AM **Trade Secret:** false
Chemical Name: ACETYLENE (4460-0133-012223)
Common Name Inventory: ACETYLENE

ID: 112113 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161249 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 11/09/2017 12:37:38 AM **Trade Secret:** false
Chemical Name: SODIUM HYDROXIDE
Common Name Inventory: R-8

ID: 112132 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161269 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture

Chemical Name: PETROLEUM (5655-0211-000186)
Common Name Inventory: V LUBE B

ID: 112142 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161279 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 11/09/2017 12:37:38 AM **Trade Secret:** false
Chemical Name: CASTING PLASTER REG (9310-9960-001206)
Common Name Inventory: CASTING PLASTER REG

ID: 112146 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161283 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 11/09/2017 12:37:38 AM **Trade Secret:** false
Chemical Name: BACTERIAL CONCENTRATE (4490-0480-006962)
Common Name Inventory: D-STROY

ID: 254512 **Permit Status:** Permit Renewed
Child Record ID: DEH2019-HWAST-0208565 **Active Permit:** true

CAS No: **Haz Material Type:**
Last Updated: 03/03/2020 12:59:27 AM **Trade Secret:** false
Chemical Name: WASTE 352 ORGANIC SOLIDS (OTHER) -
Common Name Inventory: CONTAMINATED RAGS

ID: 112212 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HWAST-0136701 **Active Permit:** true
CAS No: **Haz Material Type:**
Last Updated: 11/09/2017 12:37:44 AM **Trade Secret:** false
Chemical Name: WASTE 792 LIQUIDS W/PH <OR= 2 W/METALS*
Common Name Inventory: T-301B (WASTE CHROMIC ACID)

ID: 147417 **Permit Status:** Permit Renewed
Child Record ID: DEH2018-HCHEM-0176778 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 04/04/2018 12:53:43 AM **Trade Secret:** false
Chemical Name: CASTING PLASTER REG (9310-9960-001206)
Common Name Inventory: CASTING PLASTER REG

ID: 112187 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HWAST-0136676 **Active Permit:** true
CAS No: **Haz Material Type:**
Last Updated: 11/09/2017 12:37:44 AM **Trade Secret:** false
Chemical Name: WASTE 135 UNSPECIFIED AQUEOUS SOL'N
Common Name Inventory: T-307A (WASTE SOAP RINSEWATER)

ID: 112191 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HWAST-0136680 **Active Permit:** true
CAS No: **Haz Material Type:**
Last Updated: 11/09/2017 12:37:44 AM **Trade Secret:** false
Chemical Name: WASTE 172 METAL DUST & MACHINING WASTE
Common Name Inventory: WASTE SAND

ID: 254392 **Permit Status:** Permit Renewed
Child Record ID: DEH2019-HCHEM-0237123 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 03/03/2020 12:59:20 AM **Trade Secret:** false
Chemical Name: 4-(2-NITROBUTYL) MORPHOLINE (5655-0633-002304)
Common Name Inventory: LUBRICOOLANT AC

ID: 254394 **Permit Status:** Permit Renewed
Child Record ID: DEH2019-HCHEM-0237125 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 03/03/2020 12:59:20 AM **Trade Secret:** false
Chemical Name: ALIPHATIC HYDROCARBONS (STODDARD TYPE) (5655-0850-009823)
Common Name Inventory: TECTYL PRESERVATIVE OIL

ID: 254435 **Permit Status:** Permit Renewed
Child Record ID: DEH2019-HCHEM-0237166 **Active Permit:** true
CAS No: 7727-37-9 **Haz Material Type:** Pure
Last Updated: 03/03/2020 12:59:20 AM **Trade Secret:** false
Chemical Name: NITROGEN (4592-0070-012009 / 4460-0107-002034)
Common Name Inventory: LIQUID NITROGEN

ID: 254390 **Permit Status:** Permit Renewed
Child Record ID: DEH2019-HCHEM-0237121 **Active Permit:** true
CAS No: 74-98-6 **Haz Material Type:** Pure
Last Updated: 03/03/2020 12:59:20 AM **Trade Secret:** false
Chemical Name: PROPANE LIQUID (5655-0655-003121 / 4460-1189-003121)
Common Name Inventory: PROPANE

ID: 112089 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161225 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 11/09/2017 12:37:38 AM **Trade Secret:** false
Chemical Name: CHROMIC ACID DILUTE
Common Name Inventory: F-12

ID: 147449 **Permit Status:** Permit Renewed

Child Record ID: DEH2018-HCHEM-0176810 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 04/04/2018 12:53:43 AM **Trade Secret:** false
Chemical Name: PROPYLENE GLYCOL PHENYL ETHER (4490-0433-001472)
Common Name Inventory: BUCKEYE WORKOUT

ID: 254410 **Permit Status:** Permit Renewed
Child Record ID: DEH2019-HCHEM-0237141 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 03/03/2020 12:59:20 AM **Trade Secret:** false
Chemical Name: ETHOXYLATED NONYLPHENOL
Common Name Inventory: Tank E-1 (BORAX SOLUTION, ETHOXYLATED NONYLPHENOL)

ID: 112096 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161232 **Active Permit:** true
CAS No: 7440-59-7 **Haz Material Type:** Pure
Last Updated: 11/09/2017 12:37:38 AM **Trade Secret:** false
Chemical Name: HELIUM (4460-0105-012301 / 4460-0251-001766 / 4592-0109-014835)
Common Name Inventory: HELIUM

ID: 112137 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161274 **Active Permit:** true
CAS No: 64742-54-7 **Haz Material Type:** Pure
Last Updated: 11/09/2017 12:37:38 AM **Trade Secret:** false
Chemical Name: PETROLEUM OIL (5655-0911-011665)
Common Name Inventory: MOBILGEAR 600 XP 320 BASE OIL & ADDITIVES

ID: 112172 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161309 **Active Permit:** true
CAS No: 7440-37-1 **Haz Material Type:** Pure
Last Updated: 11/09/2017 12:37:38 AM **Trade Secret:** false
Chemical Name: ARGON (4460-0113-001765)
Common Name Inventory: ARGON "T" CYLINDERS (300 FT3)

ID: 112173 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161310 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 11/09/2017 12:37:38 AM **Trade Secret:** false
Chemical Name: 2-Ethylhexyl 7-oxabicyclo[4 1 0] heptane-3-carboxylate (824-98580-008597)
Common Name Inventory: SKYDROL 500 B-4 FIRE RESISTANT HYDRAULIC FLUID

ID: 254470 **Permit Status:** Permit Renewed
Child Record ID: DEH2019-HCHEM-0237201 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 03/03/2020 12:59:20 AM **Trade Secret:** false
Chemical Name: PETROLEUM DISTILLATES (5655-0640-000254)
Common Name Inventory: MOBIL DTE 24 OIL

ID: 112135 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161272 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 11/09/2017 12:37:38 AM **Trade Secret:** false
Chemical Name: PETROLEUM DISTILLATES (5655-0242-000171)
Common Name Inventory: MOBIL DTE 25 OIL

ID: 112162 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161299 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 11/09/2017 12:37:38 AM **Trade Secret:** false
Chemical Name: 2-BUTOXYETHANOL (4490-0431-005081)
Common Name Inventory: MISSION SPRAY 93

ID: 112165 **Permit Status:** Permit Renewed
Child Record ID: DEH2017-HCHEM-0161302 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 11/09/2017 12:37:38 AM **Trade Secret:** false
Chemical Name: AMMONIUM BIFLUORIDE (4015-0013-006809)
Common Name Inventory: MF ACID

ID: 400747 **Permit Status:** Permit Renewed
Child Record ID: DEH2021-HCHEM-0296630 **Active Permit:** true
CAS No: **Haz Material Type:** Mixture
Last Updated: 12/28/2021 02:32:28 AM **Trade Secret:** false
