Appendix H1

Phase I ESA Parcel A and Land Parcels

PARTNER
Engineering and Science, Inc.®

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

Parcel A and Land Parcels
795 H Street, 360, 364, 368 and 390 Bay Boulevard
Chula Vista, CA 91910

Report Date: March 8, 2023
Partner Project No. 23-399112.1

Prepared for:

PSIP Wohl Bay Boulevard, LLC
2828 East Foothill, Suite 201
Pasadena, California 91107

PARTNER
Engineering and Science, Inc.

March 8, 2023

Ms. Katrina Snyder
PSIP Wohl Bay Boulevard, LLC
2828 East Foothill, Suite 201
Pasadena, California 91107

Subject: **Phase I Environmental Site Assessment**
795 H Street and 360, 364, 368 and 390 Bay Boulevard
Chula Vista, CA 91910
Partner Project No. 23-399112.1

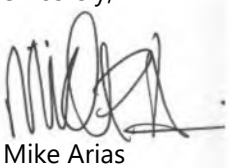
Dear Ms. Snyder:

Partner Engineering and Science, Inc. (Partner) is pleased to provide this *Phase I Environmental Site Assessment* (Phase I ESA) report of the abovementioned address (the "subject property"). This assessment was performed in conformance with the scope and limitations as detailed in the ASTM Practice E1527-13 and E1527-21 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process and Client Agreement.

This assessment included a site reconnaissance as well as research and interviews with representatives of the public, property ownership, site manager, and regulatory agencies. An assessment was made, conclusions stated, and recommendations outlined.

We appreciate your trust in Partner and the opportunity to provide environmental services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (626) 604-5203 or Marias@partneresi.com.

Sincerely,



Mike Arias
Principal

EXECUTIVE SUMMARY

Partner Engineering and Science, Inc. (Partner) has performed a *Phase I Environmental Site Assessment* (ESA) in accordance with the scope of work and limitations of ASTM Standard Practice E1527-13 and E1527-21, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) and set forth by PSIP Wohl Bay Boulevard, LLC (PSIP Wohl) for the property located at 795 H Street and 360, 364, 368 and 390 Bay Boulevard, Chula Vista, CA 91910, Chula Vista, San Diego County, California (the "subject property").

Property Description

The subject property is located on the west side of Bay Boulevard, between H Street and Lagoon Drive, within an industrial area of San Diego County. Please refer to the table below for further description of the subject property:

Subject Property Data	
Addresses:	795 H Street and 360, 364, 368 and 390 Bay Boulevard , Chula Vista, CA 91910
Historical Addresses:	Land Parcels: 362 Bay Boulevard Parcel A: 388 Bay Boulevard, 850 Lagoon Drive (Rohr Facility address)
Property Use:	Industrial - Vacant Parcels and Industrial Buildings
Land Acreage (Ac):	14.7 Ac Total
Number of Buildings:	Not applicable
Assessor's Parcel Number (APN):	567-022-31-00 (360 Bay Boulevard/Rohr Property ID 8) 567-022-33-00 (364 Bay Boulevard/Rohr Property ID 9) 567-022-28-00 (368 Bay Boulevard/Rohr Property ID 6) 567-022-30-00 (390 Bay Boulevard/Rohr Buildings 99/100) 571-330-35-00 (795 H Street/Rohr Building 29)
Current Tenants:	Vacant Land (360-368 Bay Boulevard); Land Care (390 Bay Boulevard/Rohr Building 99/100); and Marine Group and Proactive Group Logistics (795 H Street/Rohr Building 29)
Site Assessment Performed By:	Heather Hodgetts of Partner*
Site Assessment Conducted On:	February 16, 2023

Site Description

The subject property, referred to as Land Parcels and Parcel A, is located on the former North Campus of Rohr, Inc. (Rohr), a Collins Aerospace Company. Rohr is a large aircraft parts manufacturing facility that has been operating since 1941. The Rohr facility address is 850 Lagoon Drive. In 2020, Rohr sold the Land Parcels and Parcel A to PSIP Wohl for redevelopment. A description of the subject property is presented below:

Land Parcels - The northern portion of the subject property, referred to as the Land Parcels, consisted of three parcels of vacant land covered with low-lying vegetation. The three parcels were owned by Rohr, Inc. from 1999 to 2020. The parcels are identified by site addresses and Rohr Inc. ID numbers: 360 Bay Boulevard (Rohr Property ID 8); 364 Bay Boulevard (Rohr Property ID 9); and 368 Bay Boulevard (Rohr Property ID 6). The Land Parcels are surrounded by a fence. Access to the subject property is via a gate along Bay Boulevard.

Parcel A - Parcel A consists of two industrial parcels located to the south of the Land Parcels and separated by G Street.

- The northern parcel is located on the north side of G Street at 390 Bay Boulevard (APN 567-022-30-00) and developed with Rohr Buildings 99 and 100. Building 99 consists of 35,560 square feet constructed in 1980. Building 99 was previously used for human resources, training, gym, and medical services by Rohr. Building 100 consists of 2,800 square feet constructed in 1980. Building 100 was previously used as a laboratory, research and development by Rohr and truck maintenance before Rohr purchased it. A small oil/water separator was previously utilized by the Rohr laboratory use with the laboratory equipment. The site is currently leased to Land Care, a landscaping company since March 2022. Land Care utilizes Building 100 to store equipment and uses the gated parking lot to store trucks/vehicles. Building 99 is currently vacant office and service space that is not used by Land Care.
- The southern parcel is located on the south side of G Street at 795 H Street (APN 571-330-35-00) and developed with Rohr Building 29. Building 29 consists of 281,597 square feet constructed between 1957 and 1962. The building interior consists of former office, tooling, laboratory, and photo lab areas, and hydraulic powered crane systems. A former crane pit is located on the north side of the building. The pit is reported to be approximately 18-inches deep and was filled with rain water. Former testing labs, hydraulic pumps, and storage areas were located on the north side of the building. The building was vacant from September 2020 until November 2021. In the summer of 2021, approximately 50,000 square feet of mezzanine was removed from the east wall of the building.

  The site is currently leased to Marine Group and Proactive Logistics. Marine Group leases approximately 1,500 square feet to store motor homes on the south side of Building 29. Proactive Group Logistics leases approximately 150,000 square feet in the central portion of Building 29 for storage. The northern portion of the Building 29 is currently not in use.

  In April 2023, Wohl intends to demolish the northern 24,000 square feet of Building 29 to construct a new loading dock. Once demolition is complete remedial activities including removing volatile organic compound (VOC) impacted soil and installing and operating a sub-slab depressurization system (SSDS) to mitigate VOCs in soil vapor from impacted groundwater will be completed as part of the Cleanup and Abatement Order No. R9-2021-0042 (CAO) discussed further below.

Historical Use

Land Parcels

According to available historical sources, the Land Parcels was undeveloped or vacant land in 1904. From 1928 to 1949, the Land Parcels were agriculturally developed land. From 1953 to at least 1985, the Land Parcels were developed with multiple small industrial structures. Businesses reportedly included aircraft parts manufacturing, refrigeration unit repair, storage, junkyards, and a veterinary hospital. According the city directories, former tenants on the subject property appeared to include B&H Metal Co., Hammer Benj W, Lyman Jos, Mansell Marine Inc. engine exchange, Mansell Earl A (1955-1960); South Bay Vet Hospital (1956-1966); Post Aircraft Co. Inc. (1960); Yarie Richard J GA27905, Post Aircraft Co GA (1961); A&R Used

Auto Parts wreckers, South Bay Marine boat sales & repair (1965); Ultra Plastics (1966); A&R Used Truck Parts, SD Pump & Compressor Supply (1971-1986); Thermo King (1975); Durrant Marcia A, Elliott Carol (1979-1982); Edwards Hugh L (1980-1986); and Jennings Dale J (1986). According to the July 2022 Revised Baseline Human Health Risk Assessment prepared by Haley & Aldrich (H&A), after 1953, the Land Parcels at 360, 364, and 368 Bay Boulevard were developed with mixed commercial/industrial and residential use. Businesses that occupied these parcels included aircraft parts manufacturing, refrigeration unit repair, storage, junkyards, and a veterinary hospital. 360 Bay Boulevard was formerly used for auto maintenance and repair, auto dismantling, and salvaging that included a gold ore extraction/recovery operation. By the mid-1980s, the properties were acquired by the City of Chula Vista and business operations ceased. In 1999, Rohr acquired the Land Parcels and they have remained vacant since.

Parcel A - Buildings 99/100

According to available historical sources, Parcel A currently was developed with agriculturally developed land from 1928 to 1949. From 1953 to 1966, the site was developed with a trailer park and a parking lot. By 1976, the trailer park was no longer present. By 1980, Buildings 99 and 100 were constructed on the property. According the city directories, former tenants on the subject property appeared to include Duvall Co. (1956-1961)Harbor Trailer Park, Maksor Trailer Park (1956-1975); Lawless Detat Diesel (1980) and Valley Det Dies All (1985). According to the H&A July 2022 Revised Baseline Human Health Risk Assessment, Valley Detroit Diesel repaired semi-truck engines at Buildings 99 and 100 starting in 1978. In 1986, Rohr purchased Buildings 99 and 100 from Valley Detroit Diesel and used the buildings primarily for administrative purposes. Test laboratories were housed in Building 100 until 2021.

Parcel A - Building 29

According to available historical sources, Parcel A was agriculturally developed land in 1928. Several small structures were located on the northeast corner and southern portion of the parcel located south of G Street. By 1949, the parcel was developed with several structures on the central and southern (Building 28) portions of the site. By 1964, the parcel was developed with a large building (Building 29), a smaller building (Building 28) on the south side of the site, and several out-buildings on the northeast corner of the parcel as part of the Rohr facility. Building 28 was used as a cafeteria and a warehouse. By 1996, Building 28 had been removed and was replaced with a parking lot. According to the H&A July 2022 Revised Baseline Human Health Risk Assessment, Building 29 was constructed by Rohr in phases beginning in about 1957 to 1962. Building 29 was covered under the Rohr North Campus address of 850 Lagoon Drive. The building was used for tooling and machining and office space. The Maintenance Department for the facility was located in the northern portion of the building. The building also formerly housed laboratories, kitting, an Aftermarket Spares Warehouse, Service Center and FAI repairs, storage, tool calibration, product development, and office space. Historical uses for the parcel prior to Rohr included agriculture, a possible lumber yard, and residential.

In 2020, Rohr sold the Land Parcels and Parcel A to PSIP Wohl.

Previous Site Investigations

The subject property was identified on the GeoTracker database as part of ongoing investigations associated with Rohr, Inc. and Cleanup and Abatement Order (CAO) No. R9-2021-0042. The Rohr facility has been divided into three parts: Parcels A, B, and C. Buildings 29, 99, and 100 were investigated as part of Case Number T10000011095 Goodrich Aerostructures – North Campus – Eastern Parcel A at 850 Lagoon Drive. The Land Parcels at 360, 364, and 368 Bay Boulevard were formerly investigated as Parcel C (Case Number T0608199629). Upon the sale of Parcel A and the Land Parcels to PSIP Wohl, the Land Parcels (APNs 567-022-28, 567-022-31, and 567-022-33) were added to Parcel A and included in the H&A July 2022 Revised Baseline Human Health Risk Assessment.

Partner reviewed available documents on the GeoTracker online database. Previous investigations conducted between 1986 and 2022 at the subject property have included soil, soil vapor, and groundwater sampling. Historical environmental features on Parcel A have been investigated for their specific chemicals of potential concern (COPCs) in soil, soil vapor, indoor air, and groundwater as well as indoor air screening (Building 29). The most recent information was largely provided in the April 2021 Revised Conceptual Site Model (CSM), the July 8, 2022 Revised Baseline Human Health Risk Assessment (HHRA) and the December 20, 2022 Demolition and Environmental Management Plan (DEMP) prepared for the North Campus Parcel A, Chula Vista, CA (Site ID #2092900) by Haley & Aldrich. Haley & Aldrich is the primary consultant for Rohr. The April 2021 Revised Conceptual Site Model (CSM) report prepared by Haley & Aldrich indicated that historical environmental features that could be potential sources of chemicals beneath Parcel A included aboveground storage tanks (ASTs), underground storage tanks (USTs), paint booths, and vapor degreasers. Figures 2, 3, and 4 in the CSM depicts the former operational features, including buildings, ASTs, USTs, underground vessels, vaults, paint booths, degreasers, hydraulic equipment, and maintenance and storage areas located at the subject property. This equipment has been removed. A summary of pertinent information is summarized below:

- **Formerly Thermo King (Case Number T0608199629) – 340 Bay Blvd.**

In May 1992, TorStan Inc. completed a Lead, Pesticide, and Polychlorinated Biphenyl Soil Sampling Report for 350-360 Bay Boulevard. TorStan Inc. concluded that there was soluble lead contamination above the CCR STLC throughout the top six inches of soil at 350-360 Bay Boulevard.

In the late 1980s, the environmental due diligence conducted by Rohr identified recognized environmental conditions (RECs) at the subject property and the adjacent property to the north. Regulatory cases were opened with the Couth of San Diego Department of Environmental Health (DEH) for subject property (350-360 Bay Boulevard) and the adjacent properties to the north (340 and 390 Bay Boulevard and 798 Lagoon Drive), commonly referred to as Rohr IDs 4, 11, 10, 5, and 8; the Bay Boulevard Parcels; or Vacant Bay Boulevard Properties. Between 1987 and 2007, soil and groundwater investigations, some soil remediation and groundwater monitoring was conducted on the parcels under the oversight of the DEH. No Further Action (NFA) Letters were issued by DEH in 2001, 2004, 2006, and 2007.

Between 1987 and 2001, environmental investigations were conducted at the subject property (350-360 Bay Boulevard – DEH Establishment # H26520-001). The former use of the subject property included an auto repair/salvage yard (with gold ore extraction) and the storage of used appliances. The investigations included soil and groundwater samples for lead, pesticides and polychlorinated biphenyls (PCBs). Lead and Total Petroleum Hydrocarbons (TPH) was identified in soil. Trichloroethene (14 micrograms per liter (µg/l in MW-2) and Chloroform (3-5 µg/l in MW-1 to MW-3) were identified in three groundwater wells onsite and the adjacent Rohr site (located adjacent to the west, southwest, south). Concentrations were detected above the recommended California State Action Level of 5 µg/l. Groundwater impacts were thought to have originated offsite. It was not clear from the documents reviewed how long groundwater continued to be monitored. Pesticides and PCBs were detected at relatively low concentrations (below concentrations requiring action).

According to the Case Closure Summary dated September 6, 2001, the subject property was identified as a Vacant Lot (350-360 Bay Boulevard) owned by the City of Chula Vista. In February 2001, approximately 800 cubic yards lead contaminated soil were excavated to a depth of 2 feet and disposed offsite to the Otay Class I Landfill. Confirmation soil samples were collected from the perimeter and the floor of the footprint of the excavation at statistically random locations. The consultant concluded that the mean total lead concentration in-situ soils at the site was 54 milligram per kilogram (mg/kg) and the upper 95% confidence interval was 71 mg/kg, both lower than the residential (PRG) of 400 mg/kg. The consultant concluded that this soil contamination did not present a human health risk at the subject property. The proposed future use of the site was listed as light industrial with paved areas and building on concrete slabs. On September 17, 2001, DEH issued a No Further Action (NFA) letter.

In July 2016, Haley & Aldrich, Inc. prepared a Phase I ESA for the subject property and adjacent properties to the north for Rohr, the property owner. Rohr was proposing to sell the Bay Boulevard parcels. The subject property was vacant land at the time of the 2016 assessment. Haley & Aldrich, Inc. identified the RECs associated with lead, pesticides, and polychlorinated biphenyls (PCBs), in connection with the subject property and adjacent properties:

<u>Onsite RECs</u>

- Lead in Soil (Rohr IDs 5 and 8 -350-360 Bay Boulevard): In 2001, approximately 1,500 cubic yards of surface soil containing lead was excavated and used as foundation material for the cap at the Otay Class I Landfill. Regulatory oversight was conducted under the DEH VAP. An NFA letter was issued to the City of Chula Vista, but it was not posted on the GeoTracker website nor was it noted in the ERIS Database Report. The subject property cleanup level for lead at that time was the residential California Human Health Screening Level (CHHSL) of 150 milligrams per kilogram (mg/kg); the current residential CHHSL for lead is 80 mg/kg.
- PCBs in Soil (All Rohr IDs): PCBs were detected by URS Corporation (URS) in the drainage swale along the western boundary of the subject property (URS 2015). The source of the PCBs is not known. PCBs were also present in soil on the Rohr IDs 5 and 8 parcels at concentrations up to 7.4 mg/kg. It was unclear whether PCB-containing soil on these parcels had been characterized and removed.

- Agricultural Property Use (All Rohr IDs): The subject property had a history of agricultural use for cultivating citrus and row crops prior to the 1950s. There was the potential that pesticides, both inorganic (containing metals) and organic may have been used to control pests.

In December 2016, Haley & Aldrich, Inc. prepared a Phase II investigation for the subject property to investigate the RECs identified in the June 2016 ESA. The soil analytical results were compared to the U.S. EPA Region 9 Regional Screening Levels (RSLs) and, for lead, the California Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO). Arsenic concentrations were compared to DTSC established background concentrations for Southern California of 12 milligrams per kilogram (mg/kg). Analytical indicated the following:

Soil

- The concentrations of volatile organic compounds (VOCs), polynuclear aromatic hydrocarbons (PAHs), arsenic, PCBs detected were below their respective residential RSLs.
- Total Petroleum Hydrocarbons (TPH) were detected at concentrations between 3.3 J to 190 mg/kg at 795 H Street and 360, 364, 368 and 390 Bay Boulevard.
- Thallium (0.156 J to 0.929 mg/kg) was detected at 364 Bay Boulevard (Rohr Property ID 9) above the residential RSL, but below the commercial/industrial RSL.

Groundwater

- VOCs detected in the groundwater were below the MCL and the vapor-intrusion screening levels for these compounds.
- The arsenic concentration (0.0149 mg/l and 0.0112 mg/l) was slightly above the MCL of 0.010 mg/l at 360 and 368 Bay Boulevard/Rohr Property IDs 8 and 6.

The site investigation is now part of the ongoing larger Goodrich Aerostructures – North Campus – Eastern Parcel A (Case Number T10000011095) investigation under the oversight of the RWQCB. On April 9, 2018, Haley & Aldrich and Rohr met with the RWQCB to discuss the results of the 2016 Phase II investigation and additional scope of work. The scope of work included a soil vapor survey; however, Haley & Aldrich indicated that it was eliminated from the scope since Rohr will require that any buildings constructed on the subject property by a buyer include a vapor barrier as part of the property transaction. On December 26, 2018, Haley & Aldrich, Inc. submitted a Work Plan for Additional Investigation to the RWQCB. The proposed sample locations were located on the parcels adjacent to the north of the subject property.

- **Goodrich Aerostructures – North Campus – Eastern Parcel A (Case Number T10000011095) – 850 Lagoon Drive**

The April 2021 Revised Conceptual Site Model (CSM) report prepared by Haley & Aldrich indicated that historical environmental features that could be potential sources of chemicals beneath Parcel A included aboveground storage tanks (ASTs), underground storage tanks (USTs), paint booths, and vapor degreasers. Figures 2, 3, and 4 in the CSM depicts the former operational features, including buildings, ASTs, USTs, underground vessels, vaults, paint booths, degreasers, hydraulic equipment, and maintenance and storage areas located at the subject property. Table 1 – Environmental Historical Features for Parcel A provides detail regarding the current status of areas or features of potential environmental concern identified in the

environmental investigations. The status of the areas or features of potential environmental concern is listed as closed, inactive, or removed. According to the Revised CSM, the environmental investigations were conducted to evaluate chemical impacts to soil, soil gas, and groundwater as well as indoor air screening (Building 29).

The results of the site investigations identified the following chemicals of potential concern (COPCs) in soil within the Project footprint: VOCs, Total Petroleum Hydrocarbons (TPH), semi-volatile organic compounds (SVOCs), PCBs and the organochlorine pesticide, DDT. Metals concentrations within the Project footprint fall within background ranges. Of the VOCs, trichloroethene (TCE) and tetrachloroethene (PCE) were the primary VOCs detected in soil in Project footprint and vicinity. The maximum concentrations of TCE and PCE were reported in boring B29-23 (37,800 µg/kg) and B29-28 (1,260 µg/kg), respectively. The maximum PCB (Aroclor 1260) concentration reported for soil in the Project footprint was 1,300 µg/kg in boring B29-05 (sample ID B29-05-2). This sample was also reported to contain low concentrations of TPH (in the oil carbon range [C32-C44]; 185 mg/kg), certain SVOCs (maximum concentration was for fluoranthene, 0.21 mg/kg) and DDT (0.021 mg/kg). The maximum VOC soil gas concentrations reported within the vicinity of the Project footprint were: Chloroform: 39,000 µg/m3; PCE: 11,000 µg/m3; and TCE: 3,000,000 µg/m3.

On July 8, 2022, Haley & Aldrich, on behalf of Rohr, Inc., prepared an update to the Revised Baseline Human Health Risk Assessment (HHRA) for North Campus Parcel A, Chula Vista, CA (Site ID #2092900) dated July 8, 2022. The HHRA stated that Rohr was in the process of selling portions of its facility that occupied approximately 82 acres. The Site had been divided into three parts: Parcels A (the subject property), B (adjoining property to the west), and C (adjoining property to the northwest).

In September 2020, Rohr sold Parcel A that includes Buildings 29, 99, and 100 (assessor parcel number [APN] 567-022-30 and the eastern portion of APN 571-330-29) to PSIP Wohl. Wohl had also purchased the vacant parcels (Also referred to as the Land Parcels) at 360, 364, and 368 Bay Boulevard (APNs 567-022-28, 567-022-31, and 567-022-33). These parcels, formerly included in Parcel C, were now also included in the Update to the Revised HHRA. With these added parcels, Parcel A occupied approximately 14.7 acres.

The HHRA stated that Wohl intended to raze the northern portion of Building 29 to build a loading dock and may raze Buildings 99 and 100 to redevelop this parcel and the adjoining vacant properties to the north for surface parking. The Update to the Revised HHRA considered two scenarios, one with Buildings 99 and 100 remaining in place and the other assuming these buildings have been demolished. In addition, buildings may be constructed in the future at undetermined locations on that portion of Parcel A.

Previous investigations conducted between 1986 and 2022 at the subject property have included soil, soil vapor, and groundwater sampling. Historical environmental features on Parcel A have been investigated for their specific chemicals of potential concern (COPCs) in soil, soil vapor, indoor air, and shallow groundwater. Historical chemical sources are coincident with former Site areas associated with long-term chemical usage. VOC releases have migrated through the soil to groundwater, resulting in a groundwater plume that extends westward below Parcel B (adjoining parcel to the west). Soil vapor has the potential to migrate through the building slab and into indoor air. Potential receptors to soil and soil vapor include an onsite commercial/industrial worker, a landscaper/utility worker, and a construction worker.

A comprehensive summary of previous investigations is provided in HHRA and covers:

- 1986-1996 Fuel underground storage tanks (USTs) closures at Buildings 99 and 100
- 1987-2001 350-360 Bay Boulevard Site Assessments related to the lead soil, PCBs, and VOCs
- 1998 Adrian Brown Phase I of the Rohr facility
- 1998 and 1999 San Diego Formation Aquifer Testing
- 1999 Blanchard Grinder UST closure at Building 29
- 2013 Supplemental Remedial Investigation by URS
- 2016 Haley & Aldrich Phase I and IIs at Buildings 29, 99, and 100 and the Vacant Bay Boulevard Properties
- 2018 Sub-Slab and Focused Soil Vapor Survey at Buildings 29, 99, and 100
- 2018-2019 Indoor air screening in Building 29
- 2020 Haley & Aldrich Data Gap Assessment to further characterize the nature and extent of VOCs in soil and groundwater and conduct some step-out sampling in areas where arsenic and PCBs had been detected above screening levels during the Phase II
- 2020 GSI Environmental, Inc. Phase I Screening Investigation on Parcel A
- 2020 Partner Engineering and Science, Inc. Phase I for 350-368 Bay Boulevard
- 2022 Haley & Aldrich Data Gap Assessment

Based on the results of the HHRA, Haley & Aldrich concluded:

Buildings 99/100 - No remediation or mitigation was necessary to protect the on-site receptors. Based on these results, Haley & Aldrich requested that the RWQCB provide concurrence that no further action was warranted and Rohr had met the requirements of the CAO for this exposure area (that includes 360, 364 and 368 Bay Boulevard).

Building 29 – No remediation or mitigation was necessary to protect the on-site landscaper.

Based on sub-slab soil vapor data for the on-site commercial/industrial worker, the cumulative incremental lifetime cancer risks (ILCR) was greater than the acceptable threshold of 1 x 10-5 and the total hazard index (HI) was greater than the acceptable total HI of 1 for the on-site commercial/industrial worker. Bromodichloromethane, chloroform, cis-1,2-dichloroethene (cis-1,2-DCE), tetrachloroethene (PCE), and trichloroethene (TCE) were driving the risk. Heath-based remediation goal (HBRGs) were derived for these chemicals of potential concern (COPCs) in soil vapor to reduce estimated health risks for the on-site commercial/industrial worker from exposure to inhalation of indoor air for Building 29. The soil vapor HBRGs for bromodichloromethane, chloroform, cis-1,2-DCE, PCE, and TCE were 70, 80, 100, 370, and 350 micrograms per cubic meter (µg/m3). Haley & Aldrich stated that the Owner would be installing a sub-slab depressurization system (SSDS) beneath Building 29 as a vapor intrusion mitigation measure and implementing an Risk Management Plan (RMP).

For the on-site construction worker, the cumulative ILCR was less than the acceptable cumulative ILCR threshold of 1 x 10-5 and the lead exposure point concentration (EPC) was less that the commercial/ industrial California Department of Toxic Substances Control Screening Level (DTSC-SL) of 500 milligrams per kilogram (mg/kg). However, the total HI was greater than the acceptable total HI of 1. Remediation or mitigation was therefore warranted to protect the on-site construction worker. TCE was driving the risk. A HBRG was derived for TCE in soil to reduce estimated human health risks for the on-site construction worker

during excavation to construct the new loading dock on the north end of Building 29. The HBRG for TCE in this area is 1.5 mg/kg.

On December 20, 2022, Haley & Aldrich prepared a Demolition and Soil Environmental Management Plan (DEMP) for former Rohr, Inc. North Campus Parcel A on behalf of the property owner, PSIP Wohl Bay Boulevard, LLC, and Rohr. The DEMP will be implemented during the demolition of the northern 24,000 square feet of Building 29 where soil containing TCE will be excavated and disposed at a permitted facility. It was anticipated that the DEMP would be implemented in 2023. The DEMP indicated:

- PSIP Wohl had made improvements to the building that included installing a new heating, ventilation, and air conditioning system and sealing and polishing the concrete floor. PSIP Wohl was required through the Purchase and Sale Agreement with Rohr to install a sub-slab depressurization system (SSDS) to address volatile organic compounds (VOCs) in soil gas that are present beneath the slab in Building 29. A separate Work Plan will be submitted that will describe the design, installation, and monitoring of the SSDS to address soil gas beneath the building slab. The SSDS will be installed during building renovation and prior to a tenant occupying the building.
- A Risk Management Plan (RMP) would be prepared and implemented to address potential future vapor intrusion risk to building occupants. The RMP will include:
- 1) An SSDS post-installation monitoring and performance plan to evaluate the effectiveness of the SSDS in mitigating potential vapor intrusion. Indoor air sampling which is a requirement of the CAO would be included. The plan would be implemented before a tenant occupies the building. 2) Restrictions on changes to the existing building slab; 3) A Contingency Plan; 4) A schedule for performing post-installation sub-slab and indoor air sampling and preparing SSDS performance monitoring reports, and a Post-Mitigation Completion Report; and 5) The preparation and filing of a deed restriction containing restrictions on use and occupancy of Parcel A (the Grant Deed in favor of PSIP Wohl recorded in September 2020 contains such restrictions and satisfies such deed restriction requirement).

During the vicinity reconnaissance, Partner observed the following land use on properties in the immediate vicinity of the subject property:

Immediately Surrounding Properties	
Northwest:	Vacant land at 350 and 340 Bay Boulevard and 798 F Street (Collins Aerospace (Rohr ID 5, 10, 4, and 11), followed by Lagoon Drive.
Northeast:	Bay Boulevard, followed by Interstate 5 Freeway, railroad tracks, Sweetwater Authority (744 F Street), and Cabrillo Motor Lodge (731 G Street), Vistan Apartments (494 South Oaklawn Avenue), Blue Link Station – H Street (745 H Street), and a multi-tenant commercial building (730 H Street).
Southeast:	H Street, followed by vacant land (former Rohr Inc.-South Campus at 850 Lagoon Drive).
Southwest:	Stormwater ditch, railroad tracks, electrical transmission line, followed by Collins Aerospace (former Rohr Inc.- North Campus and Parcel B) at 850 Lagoon Drive.

According to groundwater sampling data at the subject property and topographic map interpretation, the depth to groundwater in the vicinity of the subject property is inferred to be approximately 20 to 35 feet below ground surface (bgs) and flows to the west (Haley & Aldrich, Inc., January 11, 2018).

Findings and Opinions

Recognized Environmental Condition

A *recognized environmental condition (REC)* refers to the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- The subject property and adjacent properties are part of the ongoing larger Goodrich Aerostructures – North Campus – Eastern Parcel A (Case Number T10000011095) investigation under the oversight of the RWQCB. Onsite soil and groundwater sampling indicted that:

  Land Parcels

  - Thallium was detected in soil at 364 Bay Boulevard (Rohr Property ID 9) above the residential RSL, but below the commercial/industrial RSL. Based on proposed commercial use further investigation is not warranted at this time.
  - Arsenic was detected in groundwater was slightly above the MCL of 0.010 mg/l at 360 and 368 Bay Boulevard (Rohr Property IDs 8 and 6). Groundwater in this area is not used for potable purposes, Further evaluation of arsenic in groundwater is not warranted at this time.

  Parcel A

  - The results of the site investigations identified the following COPCs in soil including VOCs, TPH, SVOCs, PCBs and the organochlorine pesticide, DDT. Of the VOCs, TCE and PCE were the primary VOCs detected in soil. The maximum VOC soil gas concentrations reported within the vicinity of the Project footprint were: Chloroform: 39,000 µg/m3; PCE: 11,000 µg/m3; and TCE: 3,000,000 µg/m3.

  In order to manage the RECs on Parcel A

  - Impacted soil at the northern end of Building 29 will be excavated and disposed offsite.
  - PSIP Wohl will install a SSDS to address VOCs in soil gas that are present beneath the slab in Building 29 and a RMP will be prepared and implemented to address potential future vapor intrusion risk to building occupants.

Controlled Recognized Environmental Condition

A *controlled recognized environmental condition (CREC)* refers to a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations). The following was identified during the course of this assessment:

- Partner did not identify CRECs during the course of this assessment.

Historical Recognized Environmental Condition

A *historical recognized environmental condition (HREC)* refers to a previous release of hazardous substances or petroleum products affecting the that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). The following was identified during the course of this assessment: Partner did not identify any HRECs during the course of this assessment.

- Partner did not identify HRECs during the course of this assessment.

Business Environmental Risk

A *Business Environmental Risks (BER)* is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. The following was identified during the course of this assessment:

- Due to the age of the subject property buildings, there is a potential that asbestos-containing material (ACM) and/or lead-based paint (LBP) are present. Should these materials be replaced, the identified suspect ACMs would need to be sampled to confirm the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.
- According to the ERIS Database, PFAS were detected in well data from groundwater monitoring wells mapped on the Rohr South Campus in 2022. There is no current data for the subject property. Currently, there are no legally enforceable federal or State of California criteria for PFAS. In October 2019, the DoD issued a memorandum identifying risk-based screening levels calculated using the USEPA Regional Screening Level (RSL) calculator for PFOA, PFOS, and PFBS in groundwater and soil.

Significant Data Gaps

No significant data gaps affecting the ability of the Environmental Professional to identify a REC were encountered during this assessment.

Conclusions and Recommendations

Partner has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 and E1527-21 of 795 H Street and 360, 364, 368 and 390 Bay Boulevard, Chula Vista, CA 91910, Chula Vista, San Diego County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in **Section 1.5** of this report.

This assessment has revealed evidence of RECs and BERs in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- Continue to abide by the requirements of Cleanup and Abatement Order No. R9-2021-0042 (CAO) as directed by RWQCB for the former Rohr facility.
- Manage onsite activities with the existing Demolition and Environmental Management Plan (DEMP).
- Manage future vapor intrusion risk to building occupants with pending Risk Management Plan (RMP).

1.0 INTRODUCTION

Partner Engineering and Science, Inc. (Partner) has performed a Phase I Environmental Site Assessment (ESA) in conformance with the scope and limitations of ASTM Standard Practice E1527-13 and E1527-21 and the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (AAI) (40 CFR Part 312) for the property located at 795 H Street and 360, 364, 368 and 390 Bay Boulevard, Chula Vista, CA 91910, Chula Vista, San Diego County, California (the "subject property"). Any exceptions to, or deletions from, this scope of work are described in the report.

1.1 Purpose

The purpose of this ESA is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13 and E1527-21) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances.

This ESA was performed to permit the *User* to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"). ASTM Standard E1527-13 constitutes "*all appropriate inquiry* into the previous ownership and uses of the *property* consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

1.2 Scope of Work

The scope of work for this ESA is in accordance with and to the extent necessary to achieve the goal of the requirements set forth in the ASTM Standard E1527-13 and E1527-21. This assessment included: 1) a property and adjoining site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of regulatory agency records; and 5) a review of a regulatory database report provided by a third-party vendor. Partner contacted local agencies, such as environmental health departments, fire departments and building departments to obtain readily ascertainable information to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, Partner researched readily available information on the presence of activity and use limitations (AULs) at these agencies. As defined by ASTM E1527-21, AULs include both legal (that is, institutional) and physical (that is, engineering) controls that may include legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, groundwater, or surface water on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are

intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil, soil vapor, groundwater, and/or surface water on a property.

1.3 Limitations

Partner warrants that the findings and conclusions contained herein were accomplished in accordance with the methodologies set forth in the Scope of Work. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying recognized environmental conditions. There is a possibility that even with the proper application of these methodologies there may exist on the subject property conditions that could not be identified within the scope of the assessment or which were not reasonably identifiable from the available information. Partner believes that the information obtained from the record review and the interviews concerning the subject property is reliable. However, Partner cannot and does not warrant or guarantee that the information provided by these other sources is accurate or complete. The conclusions and findings set forth in this report are strictly limited in time and scope to the date of the evaluations. The conclusions presented in the report are based solely on the services described therein, and not on scientific tasks or procedures beyond the scope of agreed-upon services or the time and budgeting restraints imposed by the Client. No other warranties are implied or expressed.

Some of the information provided in this report is based upon personal interviews, and research of available documents, records, and maps held by the appropriate government and private agencies. This report is subject to the limitations of historical documentation, availability, and accuracy of pertinent records, and the personal recollections of those persons contacted.

This practice does not address requirements of any state or local laws or of any federal laws other than the all appropriate inquiry provisions of the LLPs. Further, this report does not intend to address all of the compliance and safety concerns, if any, associated with the subject property.

1.4 User Reliance

PSIP Wohl Bay Boulevard, LLC engaged Partner to perform this assessment in accordance with an agreement governing the nature, scope and purpose of the work as well as other matters critical to the engagement. All reports, both verbal and written, are for the sole use and benefit of PSIP Wohl Bay Boulevard, LLC. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with Partner granting such rights, no third parties shall have rights of recourse or recovery whatsoever under any course of action against Partner, its officers, employees, vendors, successors or assigns. Any such unauthorized user shall be responsible to protect, indemnify and hold Partner, Client and their respective officers, employees, vendors, successors and assigns harmless from any and all claims, damages, losses, liabilities, expenses (including reasonable attorneys' fees) and costs attributable to such Use. Unauthorized use of this report shall constitute acceptance of and commitment to these responsibilities, which shall be irrevocable and shall apply regardless of the cause of action or legal theory pled or asserted. Additional legal penalties may apply.

1.5 Limiting Conditions

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in **Section 3.0**), this data gap is not expected to alter the findings of this assessment.
- Partner requested information relative to deed restrictions and environmental liens, a title search, and completion of the AAI User Questionnaire from the Report User. This information was not provided at the time of the assessment.
- Partner submitted Freedom of Information Act (FOIA) requests to Air Pollution Control District and Chula Vista Building Department for information pertaining to hazardous substances, underground storage tanks, releases, inspection records, etc. for the subject property and/or adjoining properties. As of this writing, these agencies have not responded to Partner's request. Based on information obtained from other historical resources, this limitation is not expected to alter the overall findings of this assessment.

2.0 SITE DESCRIPTION

2.1 Site Location and Legal Description

The subject property at 795 H Street and 360, 364, 368 and 390 Bay Boulevard in Chula Vista, California is located on the west side of Bay Boulevard, between H Street and Lagoon Drive. According to the San Diego Geographic Information Source (SanGIS) online database, the subject property is identified by Assessor's Parcel Numbers (APNs):

567-022-31-00 (360 Bay Boulevard/Rohr Property ID 8)
567-022-33-00 (364 Bay Boulevard/Rohr Property ID 9)
567-022-28-00 (368 Bay Boulevard/Rohr Property ID 6)
567-022-30-00 (390 Bay Boulevard/Rohr Buildings 99/100)
571-330-35-00 (795 H Street/Rohr Buildings 29)

According to the San Diego County Treasurer-Tax website, ownership has been vested in PSIP Wohl Bay Boulevard, LLC since 2020.

Please refer to **Figure 1: Site Location Map, Figure 2: Site Plan, Figure 3: Topographic Map**, and **Appendix A: Site Photographs** for the location and site characteristics of the subject property.

2.2 Current Property Use

The subject property, referred to as Land Parcels and Parcel A, is located on the former North Campus of Rohr, Inc. (Rohr), a Collins Aerospace Company. Rohr is a large aircraft parts manufacturing facility that has been operating since 1941. The Rohr facility address is 850 Lagoon Drive. In 2022, Rohr sold the Land Parcels and Parcel A to PSIP Wohl for redevelopment. A description of the subject property is presented below:

Land Parcels

The northern portion of the subject property, referred to as the Land Parcels, consisted of three parcels of vacant land covered with low-lying vegetation. The three parcels were owned by Rohr, Inc. from 1999 to 2020. The parcels are identified by site addresses and Rohr Inc. ID numbers: 360 Bay Boulevard (Rohr Property ID 8); 364 Bay Boulevard (Rohr Property ID 9); and 368 Bay Boulevard (Rohr Property ID 6). The Land Parcels are surrounded by a fence. Access to the subject property is via a gate along Bay Boulevard.

Parcel A

Parcel A consists of two industrial parcels located to the south of the Land Parcels and separated by G Street.

- The northern parcel is located on the north side of G Street at 390 Bay Boulevard (APN 567-022-30-00) and developed with Rohr Buildings 99 and 100. Building 99 consists of 35,560 square feet constructed in 1980. Building 99 was previously used for human resources, training, gym, and medical services by Rohr. Building 100 consists of 2,800 square feet constructed in 1980. Building 100 was previously used as a laboratory, research and development by Rohr and truck maintenance before Rohr purchased it. A small oil/water separator was previously utilized by the Rohr laboratory use with the laboratory equipment. The site is currently leased to Land Care, a landscaping company. Land Care utilizes Building 100 to store equipment and uses the gated parking lot to store trucks/vehicles. Building 99 is currently vacant office and service space that not used by Land Care. Land Care has been onsite since March 2022.

- The southern parcel is located on the south side of G Street at 795 H Street (APN 571-330-35-00) and developed with Rohr Building 29. Building 29 consists of 281,597 square feet constructed between 1957 and 1962. The building interior consists of former office, tooling, laboratory, and photo lab areas and hydraulic powered crane systems. A former crane pit is located on the north side of the building. The pit is reported to be approximately 18-inches deep and was filled with rain water. Former testing labs, hydraulic pumps, and storage areas were located on the north side of the building. The building was vacant from September 2020 until November 2021. In the summer of 2021, approximately 50,000 square feet of mezzanine was removed from the east wall of the building. The site is currently leased to Marine Group and Proactive Logistics. Marine Group leases approximately 1,500 square feet to store motor homes on the south side of Building 29. Proactive Group Logistics leases approximately 150,000 square feet in the central portion of Building 29 for storage. The northern portion of the Building 29 is currently not in use. In April 2023, Wohl intends to demolish the northern 24,000 square feet of Building 29 to construct a new loading dock. Prior to the new construction, remedial activities including removing volatile organic compounds (VOCs) impacted soil beneath the northern portion of the building and installing and operating a sub-slab depressurization system (SSDS) to mitigate VOCs in soil vapor from impacted groundwater will be completed as part of the Cleanup and Abatement Order No. R9-2021-0042 (CAO) discussed further below.

The subject property is zoned Local Coastal Program Specific Plan Area for industrial development by the City of Chula Vista.

The subject property is identified in the regulatory database report of **Section 4.2**.

2.3 Current Use of Adjacent Properties

The subject property is located within an industrial area of San Diego County. During the vicinity reconnaissance, Partner observed the land uses on adjoining properties as defined in ASTM E1527-13 and E1527-21 as any real property or properties the border of which is contiguous or partially contiguous with that of the property, or that would be contiguous or partially contiguous with that of the property but for a street, road, or other public thoroughfare separating them. The adjoining properties are tabulated below:

Immediately Surrounding Properties	
Northwest:	Vacant land at 350 and 340 Bay Boulevard and 798 F Street (Collins Aerospace (Rohr ID 5, 10, 4, and 11), followed by Lagoon Drive.
Northeast:	Bay Boulevard, followed by Interstate 5 Freeway, railroad tracks, Sweetwater Authority (744 F Street), and Cabrillo Motor Lodge (731 G Street), Vistan Apartments (494 South Oaklawn Avenue), Blue Link Station – H Street (745 H Street), and a multi-tenant commercial building (730 H Street).
Southeast:	H Street, followed by vacant land (former Rohr Inc.-South Campus at 850 Lagoon Drive).
Southwest:	Stormwater ditch, railroad tracks, electrical transmission line, followed by Collins Aerospace (former Rohr Inc.- North Campus and Parcel B) at 850 Lagoon Drive.

2.4 Physical Setting Sources

2.4.1 Topography

The 2021 United States Geological Survey (USGS) *National City, California* Quadrangle 7.5-minute series topographic map was reviewed for this ESA. According to the contour lines on the topographic map, the subject property is located at approximately 25 feet above mean sea level (MSL). The contour lines in the area of the subject property indicate the area is sloping toward the southwest.

A copy of the most recent topographic map is included as **Figure 3** of this report.

2.4.2 Hydrology

According to topographic map interpretation, groundwater in the vicinity of the subject property is inferred to flow toward the southwest.

According to 2017 groundwater sampling data at the subject property and topographic map interpretation, the depth to groundwater in the vicinity of the subject property is inferred to be approximately 20 to 35 feet below ground surface (bgs) and flows to the west (Haley & Aldrich, Inc., January 11, 2018).

The nearest surface water in the vicinity of the subject property is the San Diego Bay located approximately 0.40-miles west of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment. A stormwater ditch was located adjacent to the west of the subject property.

2.4.3 Geology/Soils

The site is located in the Peninsular Ranges geomorphic province. The Peninsular Ranges are a northwest-southwest oriented complex of blocks separated by similarly trending faults. They extend from the Transverse Ranges and the Los Angeles Basin south to the Mexican border and beyond to the tip of Baja California and are bounded on the east by the Colorado Desert and the Gulf of California. The Peninsular Ranges contain minor Jurassic and extensive Cretaceous igneous rocks associated with the Nevadan plutonism. Marine Cretaceous sedimentary rocks are well represented and post-Cretaceous rocks form a restricted veneer of volcanic, marine, and nonmarine sediments.

According to a 2017 investigation at the subject property, the subject property is underlain by artificial fill and the Bay Point and San Diego Formations. Soil at the site is a mixture of interbedded sand, silt, and clay (Haley & Aldrich, Inc., January 11, 2018).

2.4.4 Flood Zone Information

Partner performed a review of the Flood Insurance Rate Map (FIRM), published by the Federal Emergency Management Agency (FEMA). According to Community Panel Number 06073C1913H, dated December 20, 2019, the northern portion of the subject property appears to be located in Zone X (unshaded), defined as an area of minimal flood hazard. The southern portion of the subject property (from the central portion of APN 571-330-35-00 (795 H Street/Rohr Buildings 29)) is located in Zone X (shaded), defined as an area with 0.2% annual chance flood hazard.

A copy of the reviewed flood map is included in **Appendix B** of this report.

3.0 HISTORICAL INFORMATION

Partner obtained historical use information about the subject property from a variety of sources. Information regarding past land use was obtained by a review of historical aerial photographs, historical Fire Insurance maps, city directories, historical topographic maps, and previous reports of the subject property and surrounding area obtained from Environmental Risk Information Services (ERIS). Copies of the historical resources are included in **Appendix B**. A chronological listing of the historical data found is summarized in the table below.

Date	Scale or Address	Source	Summary
1904, 1930, 1943, 1944	1: 62,500	Topographic Map	Various improved roads and railroad lines are shown throughout the surrounding area. The subject property located north of G Street is depicted as vacant land. The subject property located south of G Street is depicted as developed with a few small structures. H Street borders the site to the south. Railroad tracks are located adjacent to the west, followed by several buildings.
1928	1"=500'	Aerial Photograph	The subject property is depicted as agriculturally developed land. Several small structures are located on the northeast corner and southern portion of the parcel located south of G Street. Surrounding properties consist of agriculturally developed land to the north, east, and south. Industrial buildings appear to be located to the west.
1949, 1953	1"=500'	Aerial Photograph	The subject property located north of G Street is depicted as agriculturally developed land. The subject property located south of G Street is developed with several structures on the central and southern (Building 28) portions of the site. Surrounding properties consist of small buildings to the northeast, followed by agriculturally developed land; vacant land and small structures to the southeast; Rohr Aircraft Corp. is located to the west-southwest; and agriculturally developed land, followed by a commercial property to the north .
1953	1:24,000	Topographic Map	The subject property located north of G Street is developed with one small structure on the northeast corner. The subject property located south of G Street is developed with several structures on the central and southern portions of the site. Several structures are depicted adjoining to the north. Bay Boulevard and Interstate 5 are located adjoining to the northeast. Rohr Aircraft Corp. structures are located to the west-southwest.

Date	Scale or Address	Source	Summary
1964, 1966, 1976	1"=500'	Aerial Photograph	The Land Parcels appear to be developed with multiple commercial structures. The subject property located north of G Street is depicted as developed with a trailer park and a parking lot. The subject property located south of G Street is developed with a large building (Building 29), a smaller building (Building 28) on the south side of the site, and several out-buildings on the northeast corner of the parcel. By 1976, the trailer park is no longer present to the north of G Street. Bay Boulevard is located adjacent to the east, followed by Interstate 5. Railroad tracks are located adjacent to the west. An increase in industrial development is visible adjacent to the subject property.
1955-1960	360 Bay Blvd. 368 Bay Blvd.	City Directories	B&H Metal Co., Hammer Benj W Mansell Marine Inc. engine exchange, Mansell Earl A

1966-1985	360 Bay Blvd.	City Directories	A-R Used Auto Parts

Date	Scale or Address	Source	Summary
1966	362 Bay Blvd.	City Directories	Ultra Plastics
1967, 1975	1:24,000	Topographic Map	The subject property located north of G Street is developed with several small structures. The subject property located south of G Street is developed with two main structures (including Buildings 29 and 28) and several smaller out-buildings. Bay Boulevard and Interstate 5 are located adjoining to the northeast. Rohr Aircraft Corp. structures are located to the west-southwest. By 1975, an addition has been added to Building 29 on the northeast corner of the building. By 1975, addition buildings and land (from dredging) have been added at Rohr Aircraft Corp. to the west.
1971-1986	360 Bay Blvd. 368 Bay Blvd.	City Directories	A&R Used Truck Parts SD Pump & Compressor Supply
1975	360 Bay Blvd.	City Directories	Thermo King
1979-1982	368 ½ Bay Blvd.	City Directories	Durrant Marcia A, Elliott Carol
1980, 1985, 1994	1"=500'	Aerial Photograph	The Land Parcels appear to be developed with multiple commercial structures. The subject property located north of G Street is depicted as developed with two buildings (Buildings 99/100). The subject property located south of G Street is developed with a large building (Building 29), a smaller building (Building 28) on the south side of the site, and several out-buildings on the northeast corner of the parcel. By 1976, the trailer park is no longer present to the north of G Street. Surrounding properties consist of Bay Boulevard to the east, followed by Interstate 5; Railroad tracks and Rohr Aircraft Corp. structures are located to the west-southwest; a parking lot and Rohr Aircraft Corp. structures are located to the south-southwest; and commercial properties are located to the north.
1980-1986	362 Bay Blvd.	City Directories	Edwards Hugh L

Land Parcels

According to available historical sources, the Land Parcels was undeveloped or vacant land in 1904. From 1928 to 1949, the Land Parcels were agriculturally developed land. From 1953 to at least 1985, the Land Parcels were developed with multiple small industrial structures. Businesses reportedly included aircraft parts manufacturing, refrigeration unit repair, storage, junkyards, and a veterinary hospital. According the city directories, former tenants on the subject property appeared to include B&H Metal Co., Hammer Benj W, Lyman Jos, Mansell Marine Inc. engine exchange, Mansell Earl A (1955-1960); South Bay Vet Hospital (1956-1966); Post Aircraft Co. Inc. (1960); Yarie Richard J GA27905, Post Aircraft Co GA (1961); A&R Used Auto Parts wreckers, South Bay Marine boat sales & repair (1965); Ultra Plastics (1966); A&R Used Truck Parts, SD Pump & Compressor Supply (1971-1986); Thermo King (1975); Durrant Marcia A, Elliott Carol (1979-1982); Edwards Hugh L (1980-1986); and Jennings Dale J (1986).

According to the H&A July 2022 Revised Baseline Human Health Risk Assessment, after 1953, the Land Parcels at 360, 364, and 368 Bay Boulevard were developed with mixed commercial/industrial and residential use. Businesses that occupied these parcels included aircraft parts manufacturing, refrigeration unit repair, storage, junkyards, and a veterinary hospital. 360 Bay Boulevard was formerly used for auto maintenance and repair, auto dismantling, and salvaging that included a gold ore extraction/recovery operation. By the mid-1980s, the properties were acquired by the City of Chula Vista and business operations ceased. In 1999, Rohr acquired the Land Parcels and they have remained vacant since.

Parcel A - Buildings 99/100

According to available historical sources, Parcel A currently was developed agriculturally developed land from 1928 to 1949. From 1953 to 1966, the site was developed with a trailer park and a parking lot. By 1976, the trailer park was no longer present. By 1980, Buildings 99 and 100 were constructed on the property. According the city directories, former tenants on the subject property appeared to include Duvall Co. (1956-1961)Harbor Trailer Park, Maksor Trailer Park (1956-1975); Lawless Detat Diesel (1980) and Valley Det Dies All (1985). According to the H&A July 2022 Revised Baseline Human Health Risk Assessment, Valley Detroit Diesel repaired semi-truck engines at Buildings 99 and 100 starting in 1978. In 1986, Rohr purchased Buildings 99 and 100 from Valley Detroit Diesel and used the buildings primarily for administrative purposes. Test laboratories were housed in Building 100 until 2021.

Parcel A - Building 29

According to available historical sources, Parcel A currently developed with Building 29, was agriculturally developed land in 1928. Several small structures were located on the northeast corner and southern portion of the parcel located south of G Street. By 1949, the parcel was developed with several structures on the central and southern (Building 28) portions of the site. By 1964, the parcel was developed with a large building (Building 29), a smaller building (Building 28) on the south side of the site, and several out-buildings on the northeast corner of the parcel as part of the Rohr facility. Building 28 was used as a cafeteria and a warehouse. By 1996, Building 28 had been removed and was replaced with a parking lot. According to the H&A July 2022 Revised Baseline Human Health Risk Assessment, Building 29 was constructed by Rohr in phases beginning in about 1957 to 1962. Building 29 was covered under the Rohr North Campus address of 850 Lagoon Drive. The building was used for tooling and machining and office space. The Maintenance Department for the facility was located in the northern portion of the building. The building also formerly housed laboratories, kitting, an Aftermarket Spares Warehouse, Service Center and FAI repairs, storage, tool calibration, product development, and office space. Historical uses for the parcel prior to Rohr included agriculture, a possible lumber yard, and residential.

In 2020, Rohr sold the Land Parcels and Parcel A to PSIP Wohl.

4.0 REGULATORY RECORDS REVIEW

4.1 Regulatory Agencies

4.1.1 Health Department

Regulatory Agency Data	
Name of Agency:	San Diego County Department of Environmental Health (DEH)
Point of Contact:	Mr. Edwin Andrus
Agency Address:	P.O. Box 129261, San Diego, California 92112-9261
Agency Phone Number:	(858) 505-6848
Date of Contact:	February 10, 2023
Method of Communication:	Email
Summary of Communication:	

Partner received a reply from the DEH stating they have records for the subject property address.

Land Parcels

- In the late 1980s, the environmental due diligence conducted by Rohr identified recognized environmental conditions (RECs) at the subject property and the adjacent property to the north. Regulatory cases were opened with the DEH for subject property (360 Bay Boulevard) and the adjoining properties to the north (350, 340 and 390 Bay Boulevard and 798 Lagoon Drive), commonly referred to as Rohr IDs 4, 11, 10, 5, and 8; the Bay Boulevard Parcels; or Vacant Bay Boulevard Properties. Between 1987 and 2007, soil and groundwater investigations, some soil remediation and groundwater monitoring was conducted on the parcels under the oversight of the DEH. No Further Action (NFA) Letters were issued by DEH in 2001, 2004, 2006, and 2007.
- Between 1987 and 2001, environmental investigations were conducted at the subject property (350-360 Bay Boulevard – DEH Establishment # H26520-001). The investigation covered the subject property and the adjoining property to the north located on Bay Boulevard (350, 360, and 364 Bay Boulevard). The former use of the site included an auto repair/salvage yard (with gold ore extraction) and the storage of used appliances. The investigations included soil and groundwater samples for lead, pesticides and polychlorinated biphenyls (PCBs). Lead and Total Petroleum Hydrocarbons (TPH) was identified in soil. Trichloroethene (14 micrograms per liter (µg/l in MW-2) and Chloroform (3-5 µg/l in MW-1 to MW-3) were identified in three wells onsite and the adjacent Rohr site (located adjacent to the west, southwest, south). Concentrations were detected above the recommended California State Action Level of 5 µg/l. Groundwater impacts were thought to have originated offsite. It was not clear from the documents reviewed how long groundwater continued to be monitored. Pesticides and PCBs were detected at relatively low concentrations (below concentrations requiring action).
- On January 9, 2001, a County of San Diego County DEH Voluntary Assistance Program (VAP) Application was submitted by Rohr, Inc. and received on January 9, 2001 for Establishment # H26520-001 (350-360 Bay Boulevard). The project was described as the excavation of approximately 1,500 cubic yards of shallow soil impacted by lead. The soil was reclassified as non-hazardous waste by DTSC and the City would like the lead-containing soil to the Otay Class I Landfill. Rohr, Inc. was

requesting review of the work plan and issuance of a no further action (NFA) at the conclusion of confirmation sampling.

- According to the Case Closure Summary dated September 6, 2001, the subject property was identified as a Vacant Lot (350-360 Bay Boulevard) owned by the City of Chula Vista. Previous site uses included agricultural farming, auto wreaking, and auto repair. Lead contaminated soil was encountered during an investigation. Approximately 800 cubic yards of lead contaminated soil were excavated to a depth of 2 feet and disposed offsite to the Otay Class I Landfill. Confirmation soil samples were collected from the perimeter and the floor of the footprint of the excavation at statistically random locations. The consultant concluded that the mean total lead concentration in-situ soils at the site was 54 milligram per kilogram (mg/kg) and the upper 95% confidence interval was 71 mg/kg, both lower than the residential (PRG) of 400 mg/kg. The consultant concluded that this soil contamination did not present a human health risk at the subject property. The proposed future use of the site was listed as light industrial with paved areas and building on concrete slabs.
- On September 17, 2001, DEH issued a No Further Action (NFA) letter to the City of Chula Vista following the removal of 800 cubic yards lead contaminated soil on February 5, 2001. A copy of the NFA letter is provided in Appendix B.
- In 2016 and 2017, an application and boring completion report were submitted on behalf of Rohr, Inc. for the advancement of six borings at the Vacant Bay Boulevard Properties (Bay Boulevard) to collect soil and groundwater samples.

Parcel A – 390 Bay Boulevard and Building 29

Monitoring well permit applications and technical reports were available from 1986 to 2020. Most recently, on September 28, 2020, DEH approved a Monitoring Well Destruction Permit for Haley & Aldrich to destroy three monitoring wells and two transducers at 390 Bay Boulevard. According to the January 2021 Haley & Aldrich Well Destruction Report, the Wells DB-2 and DB-5 and the pressure transducers OW-1 and OW-2 were destroyed on October 19 and October 20, 2020. Well DB-5 was destroyed on November 16 and 17, 2020.

No records were identified under addresses 388 Bay Boulevard and 795 H Street (Building 29).

4.1.2 Air Pollution Control Agency

Regulatory Agency Data	
Name of Agency:	San Diego County Air Pollution Control District (APCD)
Point of Contact:	Ms. Cynthia Gould
Agency Address:	10124 Old Grove Road, San Diego, California 92131
Agency Phone Number:	(858) 586-2600
Date of Contact:	February 10, 2023
Method of Communication:	Email
Summary of Communication:	As of the date of this report, Partner has not received a response from the APCD for inclusion in this report.

4.1.3 Regional Water Quality Agency

Regulatory Agency Data	
Name of Agency:	Regional Water Quality Control Board (RWQCB)
Agency Website:	http://geotracker.waterboards.ca.gov/
Agency Address:	2375 Northside Drive, Suite 100, San Diego, California 92108
Agency Phone Number:	(619) 516-1990
Date of Contact:	February 10, 2023
Method of Communication:	Online
Summary of Communication:	

The subject property was identified on the GeoTracker database as part of ongoing investigations associated with Rohr, Inc. and the Cleanup and Abatement Order (CAO) No. R9-2021-0042. The Rohr facility has been divided into three parts: Parcels A, B, and C. Buildings 29, 99, and 100 were investigated as part of Case Number T10000011095 Goodrich Aerostructures – North Campus – Eastern Parcel A at 850 Lagoon Drive. The Land Parcels at 360, 364, and 368 Bay Boulevard were formerly investigated as Parcel C (Case Number T0608199629). Upon the sale of Parcel A and the Land Parcels to PSIP Wohl, the Land Parcels (APNs 567-022-28, 567-022-31, and 567-022-33) were added to Parcel A and included in the H&A July 2022 Revised Baseline Human Health Risk Assessment.

Partner reviewed available documents on the GeoTracker online database. Previous investigations conducted between 1986 and 2022 at the subject property have included soil, soil vapor, and groundwater sampling. Historical environmental features on Parcel A have been investigated for their specific chemicals of potential concern (COPCs) in soil, soil vapor, indoor air, and groundwater as well as indoor air screening (Building 29). The most recent information was largely provided in the April 2021 Revised Conceptual Site Model (CSM), the July 8, 2022 Revised Baseline Human Health Risk Assessment (HHRA) and the December 20, 2022 Demolition and Environmental Management Plan (DEMP) prepared for the North Campus Parcel A, Chula Vista, CA (Site ID #2092900) by Haley & Aldrich. Haley & Aldrich is the primary consultant for Rohr. A summary of pertinent information is summarized below:

- **Formerly Thermo King (Case Number T0608199629) – 340 Bay Blvd.**

In May 1992, TorStan Inc. completed a Lead, Pesticide, and Polychlorinated Biphenyl Soil Sampling Report for 350-360 Bay Boulevard. TorStan Inc. concluded that there was soluble lead contamination above the CCR STLC throughout the top six inches of soil at 350-360 Bay Boulevard. See Section 4.1.1.

- **Goodrich Aerostructures – North Campus – Eastern Parcel A (Case Number T10000011095) – 850 Lagoon Drive**

On October 5, 2021, Raytheon Technologies Corporation on behalf of Rohr, Inc. (Rohr) provided the RWQCB written notification per the Cleanup and Abatement Order (CAO) No. R9-2021-0042 that Rohr Inc. had sold the portion of Parcel A occupied by Buildings 29, 99 and 100 and 360, 364 and 358 Bay Boulevard to PSIP Wohl Bay Boulevard, LLC, a Delaware limited liability company on September 25 and 28, 2020.

The April 2021 Revised Conceptual Site Model (CSM) report prepared by Haley & Aldrich indicated that historical environmental features that could be potential sources of chemicals beneath Parcel A included aboveground storage tanks (ASTs), underground storage tanks (USTs), paint booths, and vapor degreasers. This equipment has been removed. Figures 2, 3, and 4 in the CSM depicts the former operational features,

including buildings, ASTs, USTs, underground vessels, vaults, paint booths, degreasers, hydraulic equipment, and maintenance and storage areas located at the subject property.

According to the Revised CSM, the environmental investigations were conducted to evaluate chemical impacts to soil, soil gas, and groundwater as well as indoor air screening (Building 29). The results of the site investigations identified the following chemicals of potential concern (COPCs) in soil within the Project footprint: VOCs, Total Petroleum Hydrocarbons (TPH), semi-volatile organic compounds (SVOCs), PCBs and the organochlorine pesticide, DDT. Metals concentrations within the Project footprint fall within background ranges. Trichloroethene (TCE) and tetrachloroethene (PCE) were the primary VOCs detected in soil in Project footprint and vicinity. The maximum concentrations of TCE and PCE were reported in boring B29-23 (37,800 µg/kg) and B29-28 (1,260 µg/kg), respectively. The maximum PCB (Aroclor 1260) concentration reported for soil in the Project footprint was 1,300 µg/kg in boring B29-05 (sample ID B29-05-2). This sample was also reported to contain low concentrations of TPH (in the oil carbon range [C32-C44]; 185 mg/kg), certain SVOCs (maximum concentration was for fluoranthene, 0.21 mg/kg) and DDT (0.021 mg/kg). The maximum VOC soil gas concentrations reported within the vicinity of the Project footprint were: Chloroform: 39,000 µg/m3; PCE: 11,000 µg/m3; and TCE: 3,000,000 µg/m3.

On July 8, 2022, Haley & Aldrich, on behalf of Rohr, Inc., prepared an update to the Revised Baseline Human Health Risk Assessment (HHRA) for North Campus Parcel A, Chula Vista, CA (Site ID #2092900) and dated July 8, 2022. The HHRA stated that Rohr was in the process of selling portions of its facility that occupied approximately 82 acres. The Site had been divided into three parts: Parcels A (the subject property), B (adjoining property to the west), and C (adjoining property to the northwest). In September 2020, Rohr sold Parcel A that includes Buildings 29, 99, and 100 (assessor parcel number [APN] 567-022-30 and the eastern portion of APN 571-330-29) to PSIP Wohl. Wohl had also purchased the vacant parcels (Also referred to as the Land Parcels) at 360, 364, and 368 Bay Boulevard (APNs 567-022-28, 567-022-31, and 567-022-33). These parcels, formerly included in Parcel C, were now also included in the Update to the Revised HHRA. With these added parcels, Parcel A occupied approximately 14.7 acres.

The HHRA stated that Wohl intended to raze the northern portion of Building 29 to build a loading dock and may raze Buildings 99 and 100 to redevelop this parcel and the adjoining vacant properties to the north for surface parking. The Update to the Revised HHRA considered two scenarios, one with Buildings 99 and 100 remaining in place and the other assuming these buildings have been demolished. In addition, buildings may be constructed in the future at undetermined locations on that portion of Parcel A.

Previous investigations conducted between 1986 and 2022 at the subject property have included soil, soil vapor, and groundwater sampling. Historical environmental features on Parcel A have been investigated for their specific chemicals of potential concern (COPCs) in soil, soil vapor, indoor air, and shallow groundwater. Historical chemical sources are coincident with former Site areas associated with long-term chemical usage. VOC releases have migrated through the soil to groundwater, resulting in a groundwater plume that extends westward below Parcel B (adjoining parcel to the west). Soil vapor has the potential to migrate through the building slab and into indoor air. Potential receptors to soil and soil vapor include an onsite commercial/industrial worker, a landscaper/utility worker, and a construction worker.

A comprehensive summary of previous investigations is provided in HHRA and covers:

- 1986-1996 Fuel underground storage tanks (USTs) closures at Buildings 99 and 100
- 1987-2001 350-360 Bay Boulevard Site Assessments related to the lead soil, PCBs, and VOCs
- 1998 Adrian Brown Phase I of the Rohr facility
- 1998 and 1999 San Diego Formation Aquifer Testing
- 1999 Blanchard Grinder UST closure at Building 29
- 2013 Supplemental Remedial Investigation by URS
- 2016 Haley & Aldrich Phase I and IIs at Buildings 29, 99, and 100 and the Vacant Bay Boulevard Properties
- 2018 Sub-Slab and Focused Soil Vapor Survey at Buildings 29, 99, and 100
- 2018-2019 Indoor air screening in Building 29
- 2020 Haley & Aldrich Data Gap Assessment to further characterize the nature and extent of VOCs in soil and groundwater and conduct some step-out sampling in areas where arsenic and PCBs had been detected above screening levels during the Phase II
- 2020 GSI Environmental, Inc. Phase I Screening Investigation on Parcel A
- 2020 Partner Engineering and Science, Inc. Phase I for 350-368 Bay Boulevard
- 2022 Haley & Aldrich Data Gap Assessment

Based on the results of the HHRA, Haley & Aldrich concluded:

Buildings 99/100 - No remediation or mitigation was necessary to protect the on-site receptors. Based on these results, Haley & Aldrich requested that the RWQCB provide concurrence that no further action was warranted and Rohr had met the requirements of the CAO for this exposure area (that includes 360, 364 and 368 Bay Boulevard).

Building 29 – No remediation or mitigation was necessary to protect the on-site landscaper.

Based on sub-slab soil vapor data for the on-site commercial/industrial worker, the cumulative ILCR was greater than the acceptable cumulative incremental lifetime cancer risks (ILCR) threshold of 1 x 10-5 and the total hazard index (HI) was greater than the acceptable total HI of 1 for the on-site commercial/industrial worker. Bromodichloromethane, chloroform, cis-1,2-dichloroethene (cis-1,2-DCE), tetrachloroethene (PCE), and trichloroethene (TCE) were driving the risk. Heath-based remediation goal (HBRGs) were derived for these chemicals of potential concern (COPCs) in soil vapor to reduce estimated health risks for the on-site commercial/industrial worker from exposure to inhalation of indoor air for Building 29. The soil vapor HBRGs for bromodichloromethane, chloroform, cis-1,2-DCE, PCE, and TCE were 70, 80, 100, 370, and 350 micrograms per cubic meter (µg/m3). Haley & Aldrich stated that the Owner would be installing a sub-slab depressurization system (SSDS) beneath Building 29 as a vapor intrusion mitigation measure and implementing an Risk Management Plan (RMP).

For the on-site construction worker, the cumulative ILCR was less than the acceptable cumulative ILCR threshold of 1 x 10-5 and the lead exposure point concentration (EPC) was less that the commercial/ industrial California Department of Toxic Substances Control Screening Level (DTSC-SL) of 500 milligrams per kilogram (mg/kg). However, the total HI was greater than the acceptable total HI of 1. Remediation or mitigation was therefore warranted to protect the on-site construction worker. TCE was driving the risk. A HBRG was derived for TCE in soil to reduce estimated human health risks for the on-site construction worker

during excavation to construct the new loading dock on the north end of Building 29. The HBRG for TCE in this area is 1.5 mg/kg.

On December 20, 2022, Haley & Aldrich prepared a Demolition and Soil Environmental Management Plan (DEMP) for former Rohr, Inc. North Campus Parcel A on behalf of the property owner, PSIP Wohl Bay Boulevard, LLC, and Rohr. The DEMP will be implemented during the demolition of the northern 24,000 square feet of Building 29 where soil containing TCE will be excavated and disposed at a permitted facility. It was anticipated that the DEMP would be implemented in 2023.

The DEMP provides guidelines and procedures that the contractor shall follow for managing concrete, asphalt pavement, and soil generated during the Project. It also describes procedures for addressing new environmental conditions (NECs) that may be identified following demolition and impacted soil management during construction.

The DEMP indicated:

- PSIP Wohl had made improvements to the building that included installing a new heating, ventilation, and air conditioning system and sealing and polishing the concrete floor. PSIP Wohl was required through the Purchase and Sale Agreement with Rohr to install a sub-slab depressurization system (SSDS) to address volatile organic compounds (VOCs) in soil gas that are present beneath the slab in Building 29. A separate Work Plan will be submitted that will describe the design, installation, and monitoring of the SSDS to address soil gas beneath the building slab. The SSDS will be installed during building renovation and prior to a tenant occupying the building.
- A Risk Management Plan (RMP) would be prepared and implemented to address potential future vapor intrusion risk to building occupants. The RMP will include:
- 1) An SSDS post-installation monitoring and performance plan to evaluate the effectiveness of the SSDS in mitigating potential vapor intrusion. Indoor air sampling which is a requirement of the CAO would be included. The plan would be implemented before a tenant occupies the building. 2) Restrictions on changes to the existing building slab; 3) A Contingency Plan; 4) A schedule for performing post-installation sub-slab and indoor air sampling and preparing SSDS performance monitoring reports, and a Post-Mitigation Completion Report; and 5) The preparation and filing of a deed restriction containing restrictions on use and occupancy of Parcel A (the Grant Deed in favor of PSIP Wohl recorded in September 2020 contains such restrictions and satisfies such deed restriction requirement).

The DEMP indicated that in addition to the above documents, others will be prepared for Parcel A specific to Cleanup and Abatement Order No. R9-2021-0042 (CAO). These included: 1) Site Soil Cleanup Levels Report (Directive C.4.a), and 2) Site Soil and Soil Gas Remedial Alternatives Report (Directive C.4.b)/Remedial Action Plan (RAP) (Directive C.5.a).

4.1.4 Department of Toxic Substances Control

Regulatory Agency Data	
Name of Agency:	Department of Toxic Substances Control (DTSC)
Agency Websites:	http://www.EnviroStor.dtsc.ca.gov/public/and http://hwts.dtsc.ca.gov/index.cfm
Agency Address:	5796 Corporate Avenue, Cypress, California 90630-4732
Agency Phone Number:	(714) 484-5336; (714) 484-5337
Date of Contact:	February 10, 2023
Method of Communication:	Online
Summary of Communication:	

The subject property was identified in the online DTSC EnviroStor System database as City of Chula Vista (37000027) at 350-360 Bay Boulevard and is discussed in **Section 4.2.2**.

According to a review of available DTSC Hazardous Waste Tracking System records, the following records were found for the subject property addresses:

ID Number	Facility Name/Address	Status	Inactive Date	Waste
CAC001435332	City of Chula Vista - Comm Dev Dept/388-390 Bay Boulevard	Inactive	10/25/2000	No hazardous wastes were listed.
CAX000243493	Valley Detroit Diesel/390 Bay Boulevard	Inactive	4/30/1986	No hazardous wastes were listed.
CAD982037871	IX City of Chula Vista/350-368 Bay Boulevard	Inactive	4/15/1994	In 1994, an annual ID Number verification was completed. No hazardous wastes were listed.
CAL000462061	PSIP WOHL BAY BOULEVARD, LLC/795 H Street	Active	-	The facility was listed as a generator of the following hazardous waste in 2021: "asbestos-containing waste (18.4 tons)."

4.1.5 Building Department

Regulatory Agency Data	
Name of Agency:	City of Chula Vista Development Services
Point of Contact:	https://www.chulavistaca.gov/departments/development-services/building
Agency Address:	276 Fourth Avenue, Chula Vista, California 91910
Agency Phone Number:	(619) 691-5101
Date of Contact:	February 10, 2023
Method of Communication:	Online and On File
Summary of Communication:	As of the date of this report, Partner has not received a response from the CVDS for inclusion in this report.

4.1.6 Planning Department

Regulatory Agency Data	
Name of Agency:	City of Chula Vista Planning Department
Point of Contact:	https://www.chulavistaca.gov/departments/development-services/zoning-information
Agency Address:	276 Fourth Avenue, Chula Vista, California 91910
Agency Phone Number:	(619) 691-5101
Date of Contact:	February 10, 2023
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is zoned Local Coastal Program Specific Plan Area for industrial development by the City of Chula Vista.

4.1.7 Oil & Gas Exploration

Regulatory Agency Data	
Name of Agency:	California Geologic Energy Management Division (CalGEM)
Agency Website:	http://www.conservation.ca.gov/dog/Pages/Wellfinder.aspx
Agency Address:	801 K Street, MS 24-01, Sacramento, California 95814
Agency Phone Number:	(916) 322-1080
Date of Contact:	February 10, 2023
Method of Communication:	Online
Summary of Communication:	According to CalGEM, no oil or gas wells are located on or adjacent to the subject property.

4.1.8 Assessor's Office

Regulatory Agency Data	
Name of Agency:	San Diego Geographic Information Source (SanGIS)
Agency Website:	http://www.sangis.org/
Agency Address:	5510 Overland Avenue, Suite 230, San Diego, California 92123
Agency Phone Number:	(858) 874-7000
Date of Contact:	February 10, 2023
Method of Communication:	Online
Summary of Communication:	According to records reviewed, the subject property is identified by Assessor's Parcel Numbers (APNs) 567-022-31-00 (360 Bay Boulevard/Rohr Property ID 8), 567-022-33-00 (364 Bay Boulevard/ Rohr Property ID 9), 567-022-28-00 (368 Bay Boulevard/ Rohr Property ID 6), 567-022-30-00 (390 Bay Boulevard/ Rohr Buildings 99/100), and 571-330-35-00 (795 H Street/Rohr Building 29)

Copies of pertinent documents are included in **Appendix B** of this report.

4.2 Mapped Database Records Search

The regulatory database report provided by Environmental Risk Information Services (ERIS) documents the listing of sites identified on federal, state, county, city, and tribal (when applicable) standard source environmental databases within the approximate minimum search distance (AMSD) specified by ASTM E1527-13 and E1527-21. The data from these sources are updated as these data are released and integrated into one database. The information contained in this report was compiled from publicly available sources.

The environmental database information is used to identify environmental concerns in connection with the subject property. The listings also serve to identify the known indications of the storage, use, generation, disposal, or release of hazardous substance at the subject property and the potential for contaminants to migrate onto the subject property from off-site sources in groundwater or soil in the form of liquids or vapor.

Using the ASTM definition of migration, Partner considers the migration of hazardous substances or petroleum products in any form onto the subject property during the evaluation of each site listed on the database report, which includes solid, liquid, and vapor.

4.2.1 Regulatory Database Summary

The following table lists the number of sites as categorized by the regulatory database within the prescribed AMSD. The locations of the sites are plotted utilizing a geographic information system, which geocodes the site addresses. The accuracy of the geocoded locations is approximately +/-300 feet.

Report Data

Database	Search Radius (mile)	Subject Property	Adjacent Properties	Sites of Concern
Federal NPL	1.00	N	N	N
Delisted NPL Site	0.50	N	N	N
Federal SEMS Site	0.50			
Federal SEMS-ARCHIVE	0.50			
Federal RCRA CORRACTS Facility	0.50	N	N	N
Federal RCRA TSDF Facility	Subject and Adjoining	N	N	N
Federal RCRA Generators Site (LQG, SQG, CESQG, NonGen/NLR)	1.00	**Y**	**Y**	N
Federal IC/EC Registries	Subject Property	N	N	N
Federal ERNS Site	Subject Property	N	--	--
State/Tribal Equivalent NPL	1.00	N	N	N
State/Tribal Equivalent CERCLIS	1.00	**Y**	N	N
State/Tribal Landfill/Solid Waste Disposal Site	0.50	N	N	N
State/Tribal Leaking Storage Tank Site (LUST/LPST)	0.50	N	**Y**	N
State/Tribal Registered Storage Tank Sites (UST/AST)	Subject and Adjoining	**Y**	**Y**	N
State/Tribal IC/EC Registries	Subject and Adjoining			
State/Tribal Voluntary Cleanup Sites (VCP)	0.50	**Y**	**Y**	N
State/Tribal Spills	0.125	N	N	N
Federal Brownfield Sites	0.50	N	N	N
State Brownfield Sites	0.50	N	N	N

4.2.2 Subject Property Listings

The subject property is identified in the regulatory database report, as discussed below:

- **Rohr Inc., Lawless, Valley Detroit Diesel**, (ERIS Map ID: 1) at 390 Bay Boulevard, is listed in the HAZ San Diego, CHMIRS, HHSS, HAZNET, HIST Manifest, and HIST Tank databases. As discussed in **Section 4.1.3**, this facility which includes the subject property, is being investigated under the oversight of the RWQCB. The investigation is ongoing.
- **Rohr, Inc., North Campus – Parcel A, BF Goodrich, UTC Aerostructures**, (ERIS Map ID: 7, 12, 18, 21) at 850 Lagoon Drive and foot of H Street, is located adjacent to the west, south, and southwest and hydrologically cross- to down-gradient of the subject property. This site was identified in the CDO/CAO, Calsites, CERCLIS, CERCLIS NFRAP, Emissions, EnviroStor, Cleanup Site, HHSS, HIST Tank, AST, CERS Tank, HAZ San Diego, HAZ TSD, UST, LUST, PCB and RCRA databases. As discussed in Section 4.1.3, this facility which includes the subject property, is being investigated under the oversight of the RWQCB. The investigation is ongoing. According to the GeoTracker database, the regulatory status is listed as *Open-Site Assessment as of November 17, 2017*. Industrial activities and historical chemical use on Parcel A were more limited compared to the main manufacturing portions of the facility located on Parcel B and the former South Campus located to the west and southwest. Building 29 was primarily used for tooling, machining, and office space. At one time, the northernmost portion of the building served as the maintenance department. Rohr purchased Buildings 99 and 100 in 1986 and primarily used them for administrative purposes. Prior to Rohr's ownership, Parcel A had other uses. It is reported that Parcel A buildings were previously equipped with USTs containing gasoline, diesel and waste oil, two wastewater clarifiers, ASTs, a paint spray booth, solvent degreasers, and other equipment. Soil, soil vapor and groundwater investigations are ongoing at Parcel A. According to a April 2021 Revised Conceptual Site Model (CSM) report prepared by Haley & Aldrich for Parcel A, VOC releases have migrated through the soil to groundwater, resulting in a groundwater plume that extends westward below Parcel B (adjoining to the west).
- **City of Chula Vista – Comm Dev Dept** (ERIS Map ID: 1) at 388-390 Bay Boulevard, is listed in the HAZNET databases. The facility is listed in the HAZNET database for generating state-regulated waste including oil/water separation sludge that was manifested for off-site disposal in 1985 and 1987.

- **IX City of Chula Vista** (ERIS Map ID: 2, 6) at 350-368 Bay Boulevard, is listed in the HAZNET, HIST Manifest, and EnviroStor databases. The facility is listed in the HAZNET database for generating state-regulated wastes including contaminated soil from site clean-up (1987), paint sludge (1991), and tank bottom waste (1992) that were manifested for off-site disposal. According to the EnviroStor database, the Cleanup status is listed as referred to Local Agency. A SB 1248 Notification was completed on January 31, 2001. A copy of the County of San Diego County DEH Voluntary Assistance Program (VAP) Application submitted by Rohr, Inc. was received on January 9, 2001 for Establishment # H26520-001 (350-360 Bay Boulevard). As discussed in **Section 4.1.1**, the project was described as the excavation of approximately 1,500 cubic yards of shallow soil impacted by lead. The soil was reclassified as non-hazardous waste by DTSC and the City would like the lead-containing soil to the Otay Class I Landfill. Rohr, Inc. was requesting review of the work plan and issuance of a no further action (NFA) at the conclusion of confirmation sampling. DEH provided a copy of the NFA letter (Appendix B).
- **Bay Blvd. Projects** (ERIS Map ID: 3, Unplottable Summary) at 0 Bay Boulevard, is listed in the Cleanup Sites and SAM San Diego databases. As discussed in **Section 4.1.1**, this listing is associated with DEH Case No. H26520-001 (350-360 Bay Boulevard). The status of the case is listed as Completed - Case Closed as of September 17, 2001.
- **Thermo King of San Diego, Formerly Thermo King** (ERIS Map ID: 8) at 340 Bay Boulevard, is located adjacent to the north and hydrologically cross-gradient of the subject property. Partner has included this listing here since this property was previously included in the Rohr investigation of the property collectively known as the Land Parcels or Bay Boulevard parcels. This site was identified in the CERCLIS, CERCLIS NFRAP, SAM San Diego, Cleanup Sites, HAZ San Diego, HAZNET, HIST Manifest, and SEMS Archive databases. According the DEH SAM database, a release affecting the groundwater was discovered at the facility in 1991. The facility status is listed as Closed Case as of June 5, 2007. As discussed in **Sections 4.1.1** and **4.1.3**, this property was previously part of the Rohr investigation under the oversight of the RWQCB. The investigation is ongoing.

As discussed in **Sections 4.0** and **5.2.6**, the subject property and adjacent properties to the northwest, west, and southwest are part of an ongoing soil and groundwater investigation under the oversight of the RWQCB that is identified as a REC.

4.2.3 Adjoining Property Listings

The following adjoining properties are identified in the regulatory database report, as discussed below:

- **IX Jackson's Import Auto Parts** (ERIS Map ID: 6) at 350 Bay Boulevard, is located adjacent to the north and hydrologically cross-gradient of the subject property. The facility is listed in the HAZNET and HAZ San Diego databases. The facility is listed in the HAZNET database for generating state-regulated waste including unspecified organic liquid mixture (1987) that was manifested for off-site disposal. The HAZ San Diego database indicated the facility was active between 1987 and 2001.

- **Rohr Inc., South Campus** (ERIS Map ID: 18), at the south of H Street, is located adjoining to the southwest and hydrologically down-gradient of the subject property. The South Campus was formerly developed with multiple buildings operated by Rohr Inc. dating back to 1941, where manufacturing of engine components for use in the aviation and aerospace industry was performed (similar to the subject property). Chemicals stored at the South Campus Property and used during manufacturing operations have been found in the soil, soil gas, and groundwater as reported in site environmental investigation reports and groundwater monitoring reports. The group of chemicals discharged include, but are not limited to, VOCs, metals, petroleum hydrocarbons, PAHs, and PCBs. In 1998, the SDRWQCB issued CAO No. 98-08 to Rohr, Inc. that requires the cleanup and abatement of wastes discharged from Rohr's manufacturing operations located at 850 Lagoon Drive (North Campus Property and South Campus Property). On July 13, 1999, the City of Chula Vista, the Redevelopment Agency of the City of Chula Vista, the Port of San Diego, and Rohr entered into a Relocation Agreement. Thirty-eight acres of Rohr-owned property were transferred to the Port of San Diego and a 28-acre lease of Port tidelands was terminated as part of this Relocation Agreement for the entire South Campus site. In 2002, Rohr vacated the South Campus Property and consolidated manufacturing operations to the North Campus Property (subject property). In 2007, the Port of San Diego demolished all buildings at the South Campus. In 2014, the SDRWQCB issued CAO No. R9-2014-0019, which requires the cleanup or abatement of all wastes discharged to soil, soil gas, and groundwater from the manufacturing operations at the South Campus Property. CAO No. R9-2014-0019 supersedes CAO No. 98-08. Implementation of the soil Remedial Action Plan (RAP) is currently underway and has not yet received final regulatory closure. Groundwater monitoring and remedial efforts are ongoing.
- **PFAs GW** (ERIS Map ID: 17, 35, 37) located south of H Street, is located to the southwest and hydrologically down-gradient of the subject property. According to the ERIS Database, PFAS were detected in well data from groundwater monitoring wells mapped on the Rohr South Campus in 2022. Currently, there are no legally enforceable federal or State of California criteria for PFAS. In October 2019, the DoD issued a memorandum identifying risk-based screening levels calculated using the USEPA Regional Screening Level (RSL) calculator for PFOA, PFOS, and PFBS in groundwater and soil.

As discussed in **Sections 4.0** and **5.2.6**, the adjacent properties to the northwest, west, and south are part of an ongoing soil and groundwater investigation under the oversight of the RWQCB that is identified as a REC.

4.2.4 Sites of Concern Listings

No sites of concern are identified in the regulatory database report.

4.2.5 Unplottable Listings

The subject property was identified as the Bay Blvd. Projects at 0 Bay Blvd. (DEH Establishment # H26520-001 (350-360 Bay Boulevard) as a SAM San Diego site in the regulatory database report, as previously discussed in **Sections 4.1.1** and **4.2.2**.

No other unplottable listings of concern are identified in the regulatory database report.
A copy of the regulatory database report is included in **Appendix C** of this report.

5.0 USER PROVIDED INFORMATION AND INTERVIEWS

In order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the *Brownfields Amendments*), the *User* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. The *User* should provide the following information to the *environmental professional*. Failure to provide this information could result in a determination that *all appropriate inquiries* is not complete. The *User* is asked to provide information or knowledge of the following:

- Review Title and Judicial Records for Environmental Liens and AULs
- Specialized Knowledge or Experience of the User
- Actual Knowledge of the User
- Reason for Significantly Lower Purchase Price
- Commonly Known or *Reasonably Ascertainable* information
- Degree of Obviousness
- Reason for Preparation of this Phase I ESA

Fulfillment of these user responsibilities is key to qualification for the identified defenses to CERCLA liability. Partner requested our Client to provide information to satisfy User Responsibilities as identified in Section 6 of the ASTM guidance.

Pursuant to ASTM E1527-13 and E1527-21, Partner requested the following site information from PSIP Wohl Bay Boulevard, LLC (User of this report).

User Responsibilities		
Item	**Provided By User**	**Not Provided By User**
AAI User Questionnaire		**X**
Title Records, Environmental Liens, and AULs		**X**
Specialized Knowledge	**X**	
Actual Knowledge	**X**	
Valuation Reduction for Environmental Issues		**X**
Identification of Key Site Manager	**X**	
Reason for Performing Phase I ESA	**X**	
Prior Environmental Reports	**X**	
Other		**X**

5.1 Interviews

5.1.1 Interview with Owner

The owner of the subject property, since 2020, was identified as PSIP Wohl Bay Boulevard, LLC (PSIP Wohl). Partner interviewed Mr. Emil Wohl during the site reconnaissance. Mr. Wohl indicated that the subject property was previously owned Rohr, Inc. from 1999 to 2020.

Since acquisition in 2020, Mr. Wohl indicated that the subject property buildings were vacant until November 2021. Renovations including the removal of 50,000 square feet of mezzanine and replacement of the roof were completed at 795 H Street (Building 29). Upcoming work in 2023 includes demolition of the northern 24,000 square feet of Building 29 to construct a new loading dock. Once the building is demolished, remedial activities required by the CAO will be implemented including removal of VOC impacted soil and installation of a sub-slab depressurization system (SSDS). Mr. Wohl referred Partner to GeoTracker for additional environmental information.

5.1.2 Interview with Report User

Please refer to **Section 5.2** below for information requested from the Report User.

5.1.3 Interview with Key Site Manager

See **Section 5.1.1**.

5.1.4 Interviews with Past Owners, Operators and Occupants

Interviews with past owners, operators and occupants were not conducted since information regarding the potential for contamination at the subject property was obtained from other sources.

5.2 User Provided Information

5.2.1 Title Records, Environmental Liens, and AULs

Partner was not provided with title records or environmental lien and AUL information for review as part of this assessment.

5.2.2 Specialized Knowledge

No specialized knowledge of environmental conditions associated with the subject property was provided by the User at the time of the assessment. .

5.2.3 Actual Knowledge of the User

No actual knowledge of any environmental lien or AULs encumbering the subject property or in connection with the subject property was provided by the User at the time of the assessment.

5.2.4 Valuation Reduction for Environmental Issues

No knowledge of valuation reductions associated with the subject property was provided by the User at the time of the assessment.

5.2.5 Commonly Known or Reasonably Ascertainable Information

The User did provide information that is commonly known or *reasonably ascertainable* within the local community about the subject property at the time of the assessment. Provided previous environmental reports are discussed below in **Section 5.2.6**.

5.2.6 Previous Reports and Other Provided Documentation

The following information was provided to Partner for review during the course of this assessment:

Land Parcels

ASTM Phase I Environmental Site Assessment, Rohr IDs 4, 5, 6, 8, 9, 10, and 11, Chula Vista, California, Haley & Aldrich, Inc. (July 21, 2016)

Phase II Environmental Site Assessment, Rohr IDs 4, 11, 10, 5, 8, 9 and 6, Vacant Bay Boulevard Properties, Chula Vista, California, GeoTracker ID No. T10000011095, Haley & Aldrich, Inc. (December 8, 2016)

Phase II Environmental Site Assessment, Vacant Bay Boulevard Properties, 300 Block, Bay Boulevard, Chula Vista, California, *GeoTracker ID No. T10000011095*, Haley & Aldrich, Inc. (January 11, 2018)

Work Plan for Additional Investigation, Rohr – Eastern Parcel, Vacant Properties, Chula Vista, California, GeoTracker ID No. T10000011095, Haley & Aldrich, Inc. (December 26, 2018)

Phase I Environmental Site Assessment, Bay Boulevard- Parcel A, 350, 360, 364, and 368 Bay Boulevard, Chula Vista, CA 91910, Partner Engineering and Science, Inc. (December 28, 2020)

From the late 1980s to 2020, numerous environmental assessments have been performed and are currently ongoing at the subject property and the three adjacent properties to the north, collectively known as the Bay Boulevard parcels. The subject property is identified in these investigations by the following site addresses and Rohr Inc. ID numbers: 350 Bay Boulevard (Rohr Property ID 5); 360 Bay Boulevard (Rohr Property ID 8); 364 Bay Boulevard (Rohr Property ID 9); and 368 Bay Boulevard (Rohr Property ID 6); and the adjoining property to the north 350 Bay Boulevard (Rohr Property ID 5).

In July 2016, Haley and Aldrich, Inc. prepared a Phase I ESA for the subject property and adjacent properties to the north for Rohr Inc. (Rohr), the property owner. Rohr was proposing to sell the Bay Boulevard parcels. The subject property was vacant land at the time of the assessment.

Haley and Aldrich, Inc. reported that in the late 1980s, Rohr considered purchasing the Bay Boulevard parcels for development of its corporate headquarters. As a result of environmental due diligence, recognized environmental conditions (RECs) were identified. In the late 1980s and 1990s, assessments of soil and groundwater conditions were conducted and four regulatory cases were opened for Rohr IDs 4, 11, 10, 5 and 8 through the Voluntary Assistance Program (VAP) with the San Diego County Department of Environmental Health (DEH). Some degree of remediation of soil and groundwater monitoring were conducted on the parcels. In 2006 and 2007, the DEH provided no further action (NFA) letters (three) for the open cases located adjacent to the north of the subject property, contingent on continued commercial/industrial property use. A fourth NFA letter was believed to have been issued for Rohr IDs 5 and 8 (the subject property at 350-360 Bay Boulevard/ DEH Case #H26520-001), but was not obtained by Haley and Aldrich, Inc. Partner obtained a copy of the NFA (see Appendix B). Haley and Aldrich, Inc.

identified the following RECs, associated with lead, pesticides, and Polychlorinated Biphenyls (PCBs), in connection with the subject property and adjacent properties:

Onsite RECs

- Lead in Soil (Rohr IDs 5 and 8 -350-360 Bay Boulevard): In 2001, approximately 1,500 cubic yards of surface soil containing lead was excavated and used as foundation material for the cap at the Otay Class I Landfill. Regulatory oversight was conducted under the DEH VAP. An NFA letter was issued to the City of Chula Vista, but it was not posted on the GeoTracker website nor was it noted in the ERIS Database Report. The subject property cleanup level for lead at that time was the residential California Human Health Screening Level (CHHSL) of 150 milligrams per kilogram (mg/kg); the current residential CHHSL for lead is 80 mg/kg.
- PCBs in Soil (All Rohr IDs): PCBs were detected by URS Corporation (URS) in the drainage swale along the western boundary of the subject property (URS 2015). The source of the PCBs is not known. PCBs were also present in soil on the Rohr IDs 5 and 8 parcels at concentrations up to 7.4 mg/kg. It was unclear whether PCB-containing soil on these parcels had been characterized and removed. Later investigations did not detect PCBs above residential screening levels.
- Agricultural Property Use (All Rohr IDs): The subject property had a history of agricultural use for cultivating citrus and row crops prior to the 1950s. There was the potential that pesticides, both inorganic (containing metals) and organic may have been used to control pests.

In December 2016, Haley & Aldrich, Inc. prepared a Phase II investigation for the subject property to investigate the RECs identified in the June 2016 ESA.

The soil analytical results were compared to the U.S. EPA Region 9 Regional Screening Levels (RSLs) and, for lead, the California Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO). Arsenic concentrations were compared to DTSC established background concentrations for Southern California of 12 milligrams per kilogram (mg/kg). Results indicated:

Soil - 350 Bay Boulevard (Rohr Property ID 5) (adjoining property)

- p/m-xylene was detected in soil samples BB-14-01 and BB-15-01 at concentrations of 0.82 J and 0.45 J micrograms per kilogram (µg/kg), respectively. Methylene chloride was detected in sample BB-15-01 at a concentration of 1.9 J µg/kg and acetone was detected in BB-14-01 at a concentration of 15 J µg/kg. These concentrations were below their respective residential RSLs.
- Arsenic concentrations were within the accepted range for background concentrations in Southern California. Concentrations of the other metals were below their respective residential RSLs.
- PCBs were detected in the shallow soil samples from each of the borings on Rohr ID 5. Aroclor 1260 was detected in samples BB-14-01 and BB-16-01 at concentrations of 110 and 33 J µg/kg, respectively. Aroclor 1254 was detected in samples BB-14-01 and BB-15-01 at concentrations of 160 and 94 µg/kg, respectively. These detected concentrations were below the respective residential RSLs for these PCB congeners.

- The concentrations of the polynuclear aromatic hydrocarbons (PAHs) detected were below their r espective residential RSLs.
- One soil sample, BB-15-01, was analyzed for organochlorine pesticides (OCPs). The sample contained 4,4'-DDT at a concentration of 2.7 J µg/kg, which was below its residential RSL.
- Total Petroleum Hydrocarbons (TPH) were detected in samples BB-14-01, BB-15-01, BB-15-03, and BB-16-01. TPH concentrations detected were generally in the C29 carbon range and greater. The TPH in the surface sample collected from boring BB-15 included hydrocarbons in the C9- C12 and C19 - C22 carbon ranges. Total TPH concentrations detected in soil samples form Rohr ID 5 ranged from 3.3 J to 140 mg/kg.

Groundwater - 350 Bay Boulevard (Rohr Property ID 5) (adjoining property)

No groundwater samples.

Soil - 360 Bay Boulevard (Rohr Property ID 8)

- No volatile organic compounds (VOCs) were detected in the six soil samples from the three borings drilled on Rohr ID 8.
- Arsenic concentrations were within the accepted range for background concentrations in Southern California. Concentrations of the other metals were below their respective residential RSLs.
- Aroclor 1254 was detected in soil sample BB-17-01 at a concentration of 120 µg/kg. This concentration is below the residential RSL. PCBs were not detected in the other samples from this assessment area.
- None of the PAHs detected were present at a concentration above its respective residential RSL.
- OCPs were detected in each of the soil samples that were analyzed for OCPs on Rohr ID 8. Sample BB-17-01 contained 4,4'-DDT at concentrations of 4.8 J µg/kg and sample BB-19-01 contained chlordane, 4,4'-DDE, and 4,4'-DDT at concentrations of 33 J, 2.4 J, and 4.1 J µg/kg, respectively. These concentrations were below the respective residential RSLs for these compounds.
- TPH were detected in each of the six soil samples analyzed from Rohr ID 8. The total TPH concentrations ranged from 39 to 190 mg/kg. The hydrocarbons detected were in the C25-C44 carbon range.

Groundwater - 360 Bay Boulevard (Rohr Property ID 8)

- The following VOCs were detected in groundwater from boring BB-17: acetone (5.1 J micrograms per liter (µg/l)), bromomethane (0.88 J µg/l), chloroform (1.5 J µg/l), and chloromethane (0.24 J µg/l). These concentrations were below their respective MCLs and ESL vapor-intrusion screening levels for these compounds.
- The concentration of arsenic detected in BB-17-GW (0.0149 mg/l) was slightly above the MCL of 0.010 mg/l. Concentrations of the other metals in groundwater were below their respective MCLs.

Soil - 364 Bay Boulevard (Rohr Property ID 9)

- P-Isopropyltoluene was detected in three of the six shallow soil samples from Rohr ID 9 at concentrations ranging from 0.73 J µg/kg and 29 µg/kg. 2-Butanone and acetone were detected in sample BB-21-01 at concentrations of 22 J and 76 J µg/kg, respectively. No other VOCs were detected in soil samples from Rohr ID 9. The concentrations of 2-butanone and acetone were below their respective residential RSLs. There were no RSLs established for P-Isopropyltoluene.
- Thallium (0.156 J to 0.929 mg/kg) was detected above the residential RSL, but below the commercial/industrial RSL. Arsenic concentrations were within the accepted range for background concentrations in Southern California. Concentrations of the other metals were below their respective RSLs.
- One of the soil samples on Rohr ID 9 contained PCBs. Aroclor 1260 was detected in sample BB-21-01 at a concentration of 33 J µg/kg. This concentration was below the residential RSL of 240 µg/kg.
- Each of the detected PAH compounds were below their respective residential RSLs.
- One soil sample from Rohr ID 9 was analyzed for OCPs. Soil sample BB-21-01 contained 7.4 µg/kg of 4,4'-DDE and 30 J µg/kg of chlordane. These concentrations were below their respective residential RSLs.
- TPH, in the carbon range of C25-C44, were detected in four of the six soil samples from Rohr ID 9. Total TPH concentrations in these samples ranged from 11 to 47 mg/kg.

Groundwater - 364 Bay Boulevard (Rohr Property ID 9)

No groundwater samples.

Soil - 368 Bay Boulevard (Rohr Property ID 6)

- No VOCs were detected in soil samples from Rohr ID 6.
- Arsenic concentrations were within the accepted range for background concentrations in Southern California. Concentrations of the other metals were below their respective residential RSLs.
- No PCBs were detected in the soil samples analyzed from Rohr ID 6.
- None of the PAHs detected was present above its respective residential RSL.
- OCPs were detected in both samples analyzed on Rohr ID 6. Sample BB-24-01 contained 4,4'-DDE and 4,4'-DDT at concentrations of 15 and 16 µg/kg, respectively. Sample BB-23-01 contained 4,4'-DDD, 4,4'-DDE, and 4,4'-DDT at concentrations of 9.9, 1,000, and 230 µg/kg, respectively. These concentrations were below their respective residential RSLs.
- TPH were detected in one of two borings on Rohr ID 6. Two samples from boring BB-24 at 1 and 3 feet bgs contained total TPH concentrations of 150 and 44 mg/kg, respectively. The TPH present in sample BB-24-01 were within the C28-C44 carbon range. The TPH present in sample BB-24-03 were within the C19-C44 carbon range.

Groundwater - 368 Bay Boulevard (Rohr Property ID 6)

- Chloroform was detected in the groundwater sample from boring BB-23 at a concentration of 0.34 J µg/l, which is below the MCL of 80 µg/l and the ESLs. No other VOCs were detected in groundwater analyzed from boring BB-23.
- The arsenic concentration (0.0112 mg/l) was slightly above the MCL of 0.010 mg/l.

The site investigation is now part of the ongoing larger Goodrich Aerostructures – North Campus – Eastern Parcel A (Case Number T10000011095) investigation under the oversight of the RWQCB. On April 9, 2018, Haley & Aldrich and Rohr met with the RWQCB to discuss the results of the 2016 Phase II investigation and additional scope of work. The scope of work included a soil vapor survey; however, Haley & Aldrich indicated that it was eliminated from the scope since Rohr will require that any buildings constructed on the subject property by a buyer include a vapor barrier as part of the property transaction. On December 26, 2018, Haley and Aldrich, Inc. submitted a Work Plan for Additional Investigation to the RWQCB. The proposed sample locations were located on the parcels adjacent to the north of the subject property.

In December 2020, Partner completed an ESA for the vacant parcels considered part of the subject property. The assessment was performed on a larger parcel of land that included the adjoining property to the north known as 350 Bay Boulevard (Rohr Property ID 5). The subject property consisted of four parcels of vacant land covered with low-lying vegetation. The four parcels were owned by Rohr, Inc. since 1999.

The following REC was identified:

- The subject property and adjacent properties are part of the ongoing larger Goodrich Aerostructures – North Campus – Eastern Parcel A (Case Number T10000011095) investigation under the oversight of the RWQCB. Onsite soil and groundwater sampling indicted that:

  Thallium was detected in soil at 364 Bay Boulevard (Rohr Property ID 9) above the residential RSL, but below the commercial/industrial RSL.

  Arsenic was detected in groundwater was slightly above the MCL of 0.010 mg/l at 360 and 368 Bay Boulevard (Rohr Property IDs 8 and 6).

The investigation was ongoing and considered a REC and additional sampling was proposed for the adjacent parcels to the northwest.

Parcel A

Phase I Environmental Site Assessment, Rohr Parcel A, North Campus, Buildings 29, 99, and 100, 850 Lagoon Drive and 390 Bay Boulevard, Chula Vista, California, GSI Environmental Inc. (GSI) (August 27, 2020)

Limited Phase II Screening Site Investigation, Rohr, Inc., a Collins Aerospace Company, Parcel A, North Campus, 850 Lagoon Drive and 390 Bay Blvd., Chula Vista, California, GSI Environmental Inc. (GSI) (September 11, 2023)

In August 2020, GSI Environmental Inc. (GSI) prepared a Phase I ESA for the subject property. According to the 2020 GSI report:

- Parcel A consisted of two parcels bifurcated by G Street and totaling 11.82-acres. The site was part of the Rohr aircraft parts manufacturing facility that had been in operation since 1941. The area north of G Street (390 Bay Boulevard; APN No. 567-022-30-00) was developed with Buildings 99 and 100. The area south of G Street (eastern portion of APN No. 571-330-29-00) was developed with Building 29. The Building 29 parcel utilized the address of 850 Lagoon Drive which was the Rohr Facility address.
- Historical uses of the parcels are described below:
  - The parcel occupied by Buildings 99 and 100 was formerly used for agricultural development, trailer park, a hardware store, possible residences, and Lawless and Valley Detroit Diesel (repair of semi-trucks). The builds were constructed in 1980 and Rohr purchased the property in 1986 and conducted non-manufacturing activities on the parcel. Building 99 had been vacant since approximately 2018. This building was previously used for human resources, training, gym, medical services, and a print shop. Building 100 was utilized for R&D. Prior to Rohr's purchase of the property, the building was utilized for servicing trucks and three service bays and a sump were in the building.
  - The parcel occupied by Building 29 was formerly used for agricultural development and possible residences. A previous 2016 ESA report by Haley & Aldrich indicated that a lumber yard may have existed at the parcel. The City Directory list obtained by GSI identified Bay Surplus Boxes at 426 Bay Boulevard. The parcel was initially developed with former Building 28, a warehouse, from 1945 until it was demolished in the early 2000s. Building 29 was constructed in four phases between 1957 and 1962. Building 29 previously housed the Maintenance Department (northern third of the building to approximately Door 29-20), tooling with a machine shop, and offices. Fromm 2013 to 2020, onsite operations consisted of primarily manufacturing related. By 2020, operations in the central portion of Building 29 were being shut down and the building was being used to store after-market equipment.
  - Several historical features were identified at the subject property in previous environmental documents including underground storage tanks (USTs), underground vessels, ASTs, clarifiers, paint booths, sumps, and degreasers. By 2020, GSI observed a 500-gallon wastewater AST observed at the site. The other features had reportedly been removed or were inactive. GSI referenced a list of historical features included in Table 1 of Haley & Aldrich's Conceptual Site Model (CSM) attached Appendix C of the GSI report.

Site investigation activities at the subject property began by 1986. Prior to 1998, the primary regulatory oversight agency was San Diego County Department of Environmental Health (DEH). In 1998, regulatory oversight agency was transferred to the Regional Water Quality Control Board (RWQCB) and a Corrective Action Order (CAO) was issued. Since that time numerous investigations have been conducted under the CAO and primary findings indicated that volatile organic compound (VOC) impacts to groundwater, soil vapor, and indoor air and limited arsenic-affected soil. The most recent investigations have been conducted

by Haley & Aldrich. No off-site properties were identified to have impacted environmental conditions at the site.

GSI identified the following RECs associated with the subject property:

Arsenic in soil at Building 29 - Arsenic was detected at concentrations above background at three locations (B29-02, B29-03, and B29-07) on the Building 29 parcel. Step-out borings were advanced at these locations (Haley & Aldrich, 2020b). Two of the step-out borings around boring B29-03 (B29-03A and -03B) and two around B29-07 (B29-07A and -07B) contained arsenic above the background level of 8 milligrams per kilogram (mg/kg) established for South Campus, but were below its groundwater protection level (GPL). The arsenic concentration exceeded its GPL in one soil sample (B29-07A). GSI concluded that the arsenic results, in combination with other soil data collected around the northern portion of Building 29, indicated that the distribution of arsenic above screening levels was not constrained.

Limited polychlorinated biphenyls (PCBs) in soil at Building 29 - PCBs were detected at concentrations above the commercial/industrial screening level (SL) at one location (B29-05) in Building 29. PCBs were detected in the step-out borings around B29-05; however, concentrations were below commercial industrial SLs. Based on the information reviewed, GSI concluded that PCB impacts appeared to be discrete and limited in extent.

VOCs in soil, groundwater, soil vapor, and indoor air – VOCs, primarily trichloroethene (TCE), are present beneath the site in soil, soil gas, and groundwater. Analytical results from B29-23 and B29-24 suggested that there are sources of TCE in soil beneath the former Maintenance Department of Building 29. TCE is present in Zone A and Upper Zone B groundwater beneath the Former Maintenance Department at concentrations that exceed the maximum contaminant level (MCL). TCE was detected in soil vapor samples across the site at concentrations up to 3,000,000 micrograms per cubic meter (µg/m3) (Haley & Aldrich, 2020b). Haley & Aldrich concluded that this data suggested that there may be residual sources in soil beneath the building. TCE was measured in indoor air in Building 29; concentrations were below response action levels for workers, but additional screening and engineering controls were recommended by Haley & Aldrich.

Mills and Lathes - VOCs were detected in soil samples from 7 of the 12 borings advanced at and near the former mills and lathes. Tetrachloroethene (PCE) and TCE were reported in soil samples from some borings. Although none of the detected concentrations were present above the commercial/industrial SLs or GPLs, the presence of volatile constituents in soil could suggest these constituents exist in soil vapor at concentrations exceeding vapor intrusion environmental screening levels (VI-ESLs).

Metals in groundwater - Dissolved metals (antimony, arsenic, and thallium) concentrations exceeded MCLs at some on-site groundwater sampling locations. Although groundwater at the site was not utilized as a drinking water source, there was no information in the publicly available regulatory record that beneficial uses of groundwater, at and in the vicinity of the site, were re-designated to exclude use of groundwater for potable purposes.

No CRECs or HRECs were identified.

Six monitoring well covers were observed near the northeast corner of Building 99 during the Site reconnaissance. These wells appear to be related to a 1998/1999 investigation. Reportedly, the six wells and two borings were installed in this area during that investigation. GSI concluded that these wells/borings should be properly abandoned if not in use. Four wells have been properly abandoned and two remain in use.

GSI concluded that several RECs have been identified including known impacts to soil, groundwater, and soil vapor. TCE was detected in indoor air; however limited indoor air sampling has been conducted. Based on the presence of VOCs in the subsurface and previous detections of VOCs in indoor air, GSI recommended that a supplemental soil vapor assessment be conducted.

In September 2020, GSI prepared a Limited Phase II Screening Site Investigation Report for Wohl to assess the potential concentration and distribution of volatile organic compounds (VOCs) at the subject property. This investigation was conducted at 17 locations within Building 29, 99, and 100. Soil samples were collected from 10 locations at approximately 5.5 feet bgs. and soil vapor samples were collected from 16 locations between approximately 3 and 5 feet below ground surface (bgs).

Based on the findings, GSI stated:

The current data are generally consistent with the data collected by Haley & Aldrich in 2018 both in terms of magnitude and chemicals of concern (i.e., PCE and TCE). The soil vapor results indicated PCE was detected at concentrations ranging from 4.7 to 5,800 micrograms per cubic meter (µg/m3); and TCE was detected at concentrations ranging from 5.9 to 2,900,000 micrograms per cubic meter (µg/m3).

Analytical results for the soil samples indicated that PCE was detected in PW-12 at a concentration of 4.7 micrograms per kilogram (µg/kg) at 1.5 feet bgs, and TCE was detected in PW-07 at a concentration of 23 µg/kg at 1.5 feet bgs. PCE and TCE were not detected above laboratory reporting limits (RLs) in other samples. PCBs (Aroclor-1260) were only detected in PW-11, at a concentration of 180 µg/kg. PCBs in other samples analyzed were not detected above RLs. No analytes were detected in soil samples at concentrations exceeding commercial screening levels or (for arsenic) background soil concentrations.

GSI concluded:

Building 29

The GSI data was generally consistent with the data collected by H&A in 2018 both in terms of magnitude and chemicals of concern (i.e., PCE and TCE). The detected concentrations of TCE did not indicate an increase in risk to building occupants when compared to H&A's risk estimates. The analytical results for recent soil samples from Building 29 did not indicate a need for additional assessment.

Buildings 99 and 100

The soil vapor data collected within Buildings 99 and 100 did not indicate a need for additional assessment or vapor mitigation. The soil data collected within Buildings 99 and 100 did not indicate a need for additional assessment.

See **Section 4.1.3** for discussion of management of RECs identified by GSI.

Copies of pertinent pages reviewed are included in **Appendix B** of this report.

6.0 SITE RECONNAISSANCE

The weather at the time of the field reconnaissance was sunny and clear. Refer to **Section 1.5** for limitations encountered during the field reconnaissance and **Sections 2.1** and **2.2** for subject property operations. The table below provides the site assessment details:

Site Assessment Data	
Site Assessment Performed By:	Heather Hodgetts
Site Assessment Conducted On:	February 16, 2023

The table below provides the subject property personnel interviewed during the field reconnaissance:

Site Visit Personnel for Subject Property			
Name	**Title/Role**	**Contact Number**	**Site Walk***
Emil Wohl	Property Owner	Not Provided	Yes

* Accompanied Partner during the field reconnaissance activities and provided information pertaining to the current operations and maintenance of the subject property

6.1 General Site Characteristics

6.1.1 Solid Waste Disposal

Solid waste generated at the subject property is disposed of in trash dumpsters located on the north side of the Buildings 99/100 (390 Bay Boulevard). Republic Services, an independent solid waste disposal contractor, removes solid waste from the subject property. No evidence of illegal dumping of solid waste was observed during the Partner site reconnaissance.

6.1.2 Sewage Discharge and Disposal

Sanitary discharges on the subject property are directed into the municipal sanitary sewer system. The City of San Diego services the subject property vicinity. No wastewater treatment facilities or septic systems were observed or reported on the subject property.

6.1.3 Surface Water Drainage

Stormwater is removed from the subject property primarily by sheet flow action across the paved surfaces towards stormwater drains located in the public right of way.

6.1.4 Source of Heating and Cooling

Electricity and natural gas are provided to the site vicinity by Southern California Edison (SCE) and the Southern California Gas Company.

6.1.5 Wells and Cisterns

Two groundwater monitoring wells were observed to the northwest of Buildings 99/100 (390 Bay Boulevard). The wells are associated with the ongoing investigations.

6.1.6 Wastewater

Domestic wastewater generated at the subject property is disposed by means of the municipal sanitary sewer system.

6.1.7 Septic Systems

No septic systems were observed on the subject property during the Partner site reconnaissance.

6.1.8 Additional Site Observations

No additional general site characteristics were observed on the subject property during the Partner site reconnaissance.

6.2 Potential Environmental Hazards

6.2.1 Hazardous Substances and Petroleum Products Used or Stored at the Site

At the time of the site visit, small quantities of hazardous materials including retail-size cleaning products, a portable diesel generator with a diesel AST (southeast side of Building 29/795 H Street), landscape equipment battery charging stations, and other general maintenance products were observed at the subject property. Hazardous materials observed at the subject property appeared to be stored properly with no evidence of spills or leaks. Based on the good housekeeping practices observed, and lack of stains or spills, the hazardous materials are not expected to represent an environmental concern. Partner did not observe indications of hazardous waste generation or storage onsite during the site reconnaissance.

6.2.2 Aboveground & Underground Hazardous Substance or Petroleum Product Storage Tanks (ASTs/USTs)

No evidence of current ASTs or USTs on the subject property was observed during the site reconnaissance other that the small diesel AST associated with the portable generator.

6.2.3 Evidence of Releases

No spills, stains or other indications that a surficial release has occurred at the subject property were observed.

6.2.4 Polychlorinated Biphenyls (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – "*Non-PCB;*" 2) 50 ppm-500 ppm – "*PCB-Contaminated;*" and, 3) Greater than 500 ppm – "*PCB-Containing.*" The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after July 2, 1979.

Several transformers were observed on the subject property. The transformers were not labeled indicating PCB content. No staining or leakage was observed in the vicinity of the transformers. SDG&E maintains ownership and operational responsibility for the transformers. Based on the good condition of the equipment, the transformer is not expected to represent an environmental concern.

6.2.5 Strong, Pungent or Noxious Odors

No strong, pungent or noxious odors were evident during the site reconnaissance.

6.2.6 Pools of Liquid

No pools of liquid on the subject property were observed during the Partner site reconnaissance.

6.2.7 Drains, Sumps and Clarifiers

No drains, sumps, or clarifiers, other than those associated with stormwater removal, were observed on the subject property during the site reconnaissance.

6.2.8 Pits, Ponds and Lagoons

No pits, ponds or lagoons were observed on the subject property.

6.2.9 Stressed Vegetation

No stressed vegetation was observed on the subject property.

6.2.10 Additional Potential Environmental Hazards

A former crane interior pit located on the north side of Building 29 was filled with rainwater at the time of the site visit. The area had been fenced off. According to Mr. Wohl, the pit was approximately 18 inches deep and was filled with rainwater due to the roof leaks. This area is in the planned demolition area. The water will be removed and disposed of prior to upcoming demolition activities.

6.3 Non-ASTM Services

6.3.1 Asbestos-Containing Materials (ACMs)

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building that have not been appropriately tested are "presumed asbestos-containing material" (PACM).

Based on the age of the subject property buildings, there is a potential that ACM is present.

6.3.2 Lead-Based Paint (LBP)

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm^2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

Based on the age of the subject property buildings, there is a potential that LBP is present.

6.3.3 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert, gaseous element formed by radioactive decay of radium (Ra) atoms. The US EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones, according to the table below:

EPA Radon Zones		
EPA Zones	**Average Predicted Radon Levels**	**Potential**
Zone 1	Exceed 4.0 pCi/L	Highest
Zone 2	Between 2.0 and 4.0 pCi/L	Moderate
Zone 3	Less than 2.0 pCi/L	Low

It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 3. Based upon the radon zone classification, radon is not considered to be an environmental concern.

6.3.4 Lead in Drinking Water

According to available information, a public water system operated by the Sweetwater Authority (SA) serves the subject property vicinity. According to the SA and the 2021 Annual Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.3.5 Mold

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g.in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g., ceiling tile, drywall, paper, or natural fiber carpet padding).

Partner observed accessible, interior areas for the subject property buildings for significant evidence of mold growth with the exceptions detailed in **Section 1.5** of this report; however, this ESA should not be used as a mold survey or inspection. Additionally, this limited assessment was not designed to assess all areas of potential mold growth that may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication as to whether or not conspicuous (based on observed areas) mold growth is present at the subject property. This evaluation did not include a review of pipe chases, mechanical systems, or areas behind enclosed walls and ceilings.

Indications of water damage from apparent roof leaks were observed during Partner's visual assessment.

6.3.6 Wetlands

The subject property does not appear to be a designated wetland area, based on information obtained from the United States Fish and Wildlife Service. No surface impoundments, wetlands, natural catch basins, settling ponds, or lagoons are located on the subject property.

6.4 Adjoining Property Reconnaissance

The adjoining property reconnaissance consisted of observing the adjoining properties from the subject property premises. No items of environmental concern were visually identified on the adjoining properties during the site assessment, including hazardous substances, petroleum products, ASTs, USTs, evidence of releases, PCBs, strong or noxious odors, pools of liquids, sumps or clarifiers, pits or lagoons, stressed vegetation, or any other potential environmental hazards.

7.0 VAPOR ENCROACHMENT CONDITIONS

Partner conducted a limited non-intrusive vapor screening on the subject property to identify, to the extent feasible, the potential for vapor encroachment conditions (VECs) in connection with the subject property. This included consideration of chemicals of concern (COC) that may migrate as vapors into the subsurface of the subject property as a result of contaminated soil and groundwater on or near the property.

This screening utilized readily available data sources previously discussed in this Phase I ESA that includes:

- the physical setting of the subject property (**Section 2.4**),
- standard historical sources for the subject property, adjoining, and surrounding area (**Section 3.0**),
- known or potentially contaminated sites as identified from information from regulatory agencies and sites on Federal, State, tribal and local databases (**Section 4.0**), and
- information from the site reconnaissance (**Section 6.0**) of the subject property and observations of the surrounding properties.

The results of our data collection, reconnaissance, and analysis are tabulated below:

Potential for Vapor Encroachment to Impact the Subject Property	
Area of Concern	**Likely or Known VEC to Subject Property**
Subject Property Existing Operations or Conditions	None identified that impact the subject property.
Historical Uses of the Subject Property	As discussed in **Sections 4.1.3** and **5.2.6**, a known VEC was identified at Parcel A Building 29 (795 H Street).
Adjoining Property Operations or Existing Conditions	None identified that impact the subject property.
Historical Uses of Adjoining Properties or Nearby Properties	None identified that impact the subject property.
Regulatory Review of sites identified on Federal, State, tribal and Local Environmental Databases which were located in the AMSD	None identified that impact the subject property.

As discussed in **Section 4.1.3** and **5.2.6**, recent 2021 soil vapor data collected within Buildings 99 and 100 did not indicate a need for additional assessment or vapor mitigation. According to the HHRA, VOCs in soil vapor beneath Building 29 will be managed by installing a sub-slab depressurization system (SSDS) and implementing a Risk Management Plan (RMP). Additional soil vapor investigation is not warranted at this time.

8.0 FINDINGS AND CONCLUSIONS

Recognized Environmental Condition

A *recognized environmental condition (REC)* refers to the presence of hazardous substances or petroleum products in, on, or at the subject property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the subject property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the subject property under conditions that pose a material threat of a future release to the environment. The following was identified during the course of this assessment:

- The subject property and adjacent properties are part of the ongoing larger Goodrich Aerostructures – North Campus – Eastern Parcel A (Case Number T10000011095) investigation under the oversight of the RWQCB. Onsite soil and groundwater sampling indicted that:

  Land Parcels

  - Thallium was detected in soil at 364 Bay Boulevard (Rohr Property ID 9) above the residential RSL, but below the commercial/industrial RSL. Based on proposed commercial use further investigation is not warranted at this time.
  - Arsenic was detected in groundwater was slightly above the MCL of 0.010 mg/l at 360 and 368 Bay Boulevard (Rohr Property IDs 8 and 6). Groundwater in this area is not used for potable purposes, Further evaluation of arsenic in groundwater is not warranted at this time.

  Parcel A

  - The results of the site investigations identified the following COPCs in soil including VOCs, TPH, SVOCs, PCBs and the organochlorine pesticide, DDT. Of the VOCs, TCE and PCE were the primary VOCs detected in soil. The maximum VOC soil gas concentrations reported within the vicinity of the Project footprint were: Chloroform: 39,000 µg/m3; PCE: 11,000 µg/m3; and TCE: 3,000,000 µg/m3.

  In order to manage the RECs on Parcel A

  - Impacted soil at the northern end of Building 29 will be excavated and disposed offsite.
  - PSIP Wohl will install a SSDS to address VOCs in soil gas that are present beneath the slab in Building 29 and a RMP will be prepared and implemented to address potential future vapor intrusion risk to building occupants.

Controlled Recognized Environmental Condition

A *controlled recognized environmental condition (CREC)* refers to a REC affecting the subject property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls (for example, activity and use limitations or other property use limitations). The following was identified during the course of this assessment:

- Partner did not identify CRECs during the course of this assessment.

Historical Recognized Environmental Condition

A *historical recognized environmental condition (HREC)* refers to a previous release of hazardous substances or petroleum products affecting the that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the subject property to any controls (for example, activity and use limitations or other property use limitations). The following was identified during the course of this assessment: Partner did not identify any HRECs during the course of this assessment.

- Partner did not identify HRECs during the course of this assessment.

Business Environmental Risk

A *Business Environmental Risks (BER)* is a risk which can have a material environmental or environmentally driven impact on the business associated with the current or planned use of commercial real estate, not necessarily related to those environmental issues required to be investigated in this practice. The following was identified during the course of this assessment:

- Due to the age of the subject property buildings, there is a potential that asbestos-containing material (ACM) and/or lead-based paint (LBP) are present. Should these materials be replaced, the identified suspect ACMs would need to be sampled to confirm the presence or absence of asbestos prior to any renovation or demolition activities to prevent potential exposure to workers and/or building occupants.
- According to the ERIS Database, PFAS were detected in well data from groundwater monitoring wells mapped on the Rohr South Campus in 2022. There is no current data for the subject property. Currently, there are no legally enforceable federal or State of California criteria for PFAS. In October 2019, the DoD issued a memorandum identifying risk-based screening levels calculated using the USEPA Regional Screening Level (RSL) calculator for PFOA, PFOS, and PFBS in groundwater and soil.

Significant Data Gaps

No significant data gaps affecting the ability of the Environmental Professional to identify a REC were encountered during this assessment.

Conclusions and Recommendations

Partner has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 and E1527-21 of 795 H Street and 360, 364, 368 and 390 Bay Boulevard, Chula Vista, CA 91910, Chula Vista, San Diego County, California (the "subject property"). Any exceptions to, or deletions from, this practice are described in **Section 1.5** of this report.

This assessment has revealed evidence of RECs and BERs in connection with the subject property. Based on the conclusions of this assessment, Partner recommends the following:

- Continue to abide by the requirements of Cleanup and Abatement Order No. R9-2021-0042 (CAO) as directed by RWQCB for the former Rohr facility.
- Manage onsite activities with the existing Demolition and Environmental Management Plan (DEMP).
- Manage future vapor intrusion risk to building occupants with pending Risk Management Plan (RMP).

9.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Partner has performed a Phase I ESA of the property located at 795 H Street and 360, 364, 368 and 390 Bay Boulevard in Chula Vista, San Diego County, California in conformance with the scope and limitations of the protocol and the limitations stated earlier in this report. Exceptions to or deletions from this protocol are discussed earlier in this report.

By signing below, Partner declares that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR §312. Partner has the specific qualifications based on education, training, and experience to assess a *property* of the nature, history, and setting of the subject *property*. Partner has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

RE: CITY DIRECTORY RESEARCH
795 H Street, 390, 368, 360, and 364 Bay Boulevard
CHULA VISTA,CA 91910

Thank you for contacting ERIS for an City Directory Search for the site described above. Our staff has conducted a reverse listing City Directory search to determine prior occupants of the subject site and adjacent properties. We have provided the nearest addresses(s) when adjacent addresses are not listed. If we have searched a range of addresses, all addresses in that range found in the Directory are included.

Note: Reverse Listing Directories generally are focused on more highly developed areas. Newly developed areas may be covered in the more recent years, but the older directories will tend to cover only the "central" parts of the city. To complete the search, we have either utilized the ACPL, Library of Congress, State Archives, and/or a regional library or history center as well as multiple digitized directories. These do not claim to be a complete collection of all reverse listing city directories produced.

ERIS has made every effort to provide accurate and complete information but shall not be held liable for missing, incomplete or inaccurate information. To complete this search we used the general range(s) below to search for relevant findings. If you believe there are additional addresses or streets that require searching please contact us at 866-517-5204.

Search Criteria:
300-500 of Bay Blvd
750-860 of G St
700-END of H St
750-END of Lagoon Dr
Search Notes:
Lagoon Dr is also known as F St.

Order No. 23020700979

PERMIT #: LMWP-002368
A.P.N. #: 567-022-01, 28, 31, 35,
EST #: 2092900-RB

COUNTY OF SAN DIEGO
DEPARTMENT OF ENVIRONMENTAL HEALTH
LAND AND WATER QUALITY DIVISION
MONITORING WELL PROGRAM

BORING CONSTRUCTION PERMIT

SITE NAME: VACANT BAY BOULEVARD PROPERTIES

SITE ADDRESS: 0 BAY BOULEVARD, CHULA VISTA 91910

PERMIT FOR: ADVANCEMENT OF SIX SOIL BORINGS

PERMIT APPROVAL DATE: 6/17/2016

PERMIT EXPIRES ON: 10/15/2016

RESPONSIBLE PARTY: ROHR, INC. (Rick Siordia)

PERMIT CONDITIONS:

1. All borings must be sealed from the bottom of the boring to the ground surface with an approved sealing material as specified in California Well Standards Bulletin 74-90, Part III, Section 19.D. **Drill cuttings are not an acceptable fill material.**

2. All borings must be properly destroyed within 24 hours of drilling.

3. Placement of any sealing material at a depth greater than 30 feet must be done using the tremie method.

4. All water and soil resulting from the activities covered by this permit must be managed, stored and disposed of as specified in the SAM Manual in Section 5, II, D-4. In addition, drill cuttings must be properly handled and disposed in compliance with the Stormwater Best Management Practices of the local jurisdiction.

5. Within 60 days of completing work, submit a well construction report, including all well and/or boring logs and laboratory data to the Well Permit Desk. This report must include all items required by the SAM Manual, Section 5, Pages 6 & 7.

6. This office must be given 24-hour notice of any drilling activity on this site and advanced notification of drilling cancellation. Please contact the Well Permit Desk at (858) 505-6688.

NOTE: **This permit does not constitute approval of a work plan as defined in Section 2722 of Article 11 of C.C.R., Title 23. Work plans are required for all unauthorized release investigations in San Diego County.**

PROPERTY OWNER CONSENT

Proposed locations for subsurface work:

Property Address:

798 F Street and 340, 360, 368 Bay Boulevard

Chula Vista, CA 91910

Assessor's Parcel Number (APN):

567-022-01-00, 567-022-31-00, 567-022-28-00

567-022-35-00

I, Kristin Escamilla, owner of the property/properties listed above, give my permission to Haley & Aldrich, Inc. (consulting company, contractor) to conduct the following work at the locations stated above.

☐ Install _____ monitoring wells ☐ Destroy _____ monitoring wells ☒ Drill 6 soil borings

I understand that Robert Scott (registered professional) of Haley & Aldrich, Inc. (consulting company) and an authorized signer for National EWP, Inc (drilling company) have submitted a signed application to the Department of Environmental Health in which they have agreed to complete the above-stated work according the requirements of the current SAM Manual, all ordinances and laws of the County of San Diego and the State of California pertaining to well/boring construction and destruction. I have arranged with the Responsible Party, the person who causes to have monitoring wells/borings installed or existing wells destroyed on this property, to ensure proper closure of the monitoring wells/borings.

Well Permit No. LMWP-002368

Dear Well Permit Clerk:

On behalf of Rohr, Inc., Haley & Aldrich, Inc., is pleased to provide this boring completion report to the County of San Diego Department of Environmental Health (DEH) for soil borings advanced to the groundwater level on the above-referenced parcels in Chula Vista, California (Figures 1 and 2). The borings were drilled under well permit LMWP-002368 approved by the DEH on 17 June 2016.

The borings were drilled by National EWP, Inc., a C-57 licensed drilling company located in Montclair, California, using a direct-push sampling device (Geoprobe™). Boring logs with the required information as described in Site Assessment and Mitigation (SAM) are provided in Appendix A. Laboratory analytical results and chain of custody forms are provided in Appendix B.

At the completion of groundwater sampling, each boring was backfilled with granular bentonite, hydrated during placement and capped with either concrete or asphalt to match the existing grade. The table below provides a summary of the volume of materials used to backfill the borings.

Boring ID	Total Depth (feet)	Volume of Backfill (cubic feet)
BB-01	25	2.2
BB-06	29.5	2.5
BB-08	25	2.2
BB-09	35	3.1
BB-11	25	2.2
BB-23	25	2.2

Should you have any questions, please contact the undersigned.

Sincerely yours,
HALEY & ALDRICH, INC.

Robert K. Scott

Robert K. Scott, P.G., C.Hg.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 16-06-1934 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 06/27/16. They were assigned to Work Order 16-06-1934.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

CASE NARRATIVE

Eurofins Calscience Work Order 16-06-1934

EPA Method 6010B Total Metals:

Project Required Detection Limit (PRDL):

The PRDL's were analyzed as required per the project QAPP. The low level calibration check performed post the sample batch is outside acceptable range for Silver, Selenium, Thallium and Zinc on 07/01/16.

Table A: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 6010B	
Batch #	Analytes(s)
160629S03	Antimony[3], Barium[3] and Vanadium[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.

EPA Method 7470A Mercury:

Table B: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 7470A	
Batch #	Analytes(s)
160706SA2	Mercury[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.

EPA Method 8081A Semi-Volatile Organics:

Table C: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 8081A	
Batch #	Analytes(s)
160701S03	4,4'-DDT[4]

4: The MS/MSD RPD was out of control due to suspected matrix interference.

The LCS/LCSD recoveries for the associated sample batches are within acceptable control limits, therefore, the results have been released without any further action or qualification.

EPA Method 8260B Volatile Organics:

Initial Calibration:

The initial calibration (IC) was performed on 07/05/16 on GC/MS FFF. The percent RSDs in the continuing calibration was > 40% for 2-Chloroethyl Vinyl Ether and Iodomethane.

Return to Contents

eurofins | Calscience

tion:

The continuing calibration (CC) was performed on 07/05/16 on GC/MS FFF. The percent RSDs in the continuing calibration was > 40% for 2-Chloroethyl Vinyl Ether.

Table D: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 8260B	
Batch #	Analytes(s)
160629S007	2-Chloro Vinyl Ether[3]
160629S002	n-Butylbenzene[3], Carbon Disulfide[3], Chloromethane[3], Dichlorodifluoromethane[3], 2,2-Dichloropropane[3,4] and Vinyl Acetate[3,4]
160701S002	Vinyl Acetate[3,4]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.

4: The MS/MSD RPD was out of control due to suspected matrix interference.

Table E: Laboratory Control Sample (LCS) / LCS Duplicate outside acceptable limits	
EPA Method 8260B	
Batch #	Analytes(s)
160629L007	Isobutyl Alcohol[ME]
160705L024	Bromomethane[ME], 2-Chloroethyl Vinyl Ether, Tetrachlorethene, and Iodomethane
160629L003	Dichlorodifluoromethane[ME],
160701L002	Chloroethane[ME] and Vinyl Chloride[ME]

ME: LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).

Analytical Report

Haley & Aldrich, Inc,
5333 Mission Center Rd., Suite 300
San Diego, CA 92108-1350

Date Received: 06/27/16
Work Order: 16-06-1934
Preparation: EPA 3550B
Method: EPA 8015B (M)
Units: mg/kg

Project: UTAS - Due Diligence / 43559

Client Sample Number	Lab Sample Number	Date/Time Collected	Matrix	Instrument	Date Prepared	Date/Time Analyzed	QC Batch ID
BB-05-02	**16-06-1934-12-AA**	**06/27/16 12:07**	**Solid**	**GC 48**	**06/29/16**	**06/29/16 15:28**	**160629B01**

Comment(s): - Results were evaluated to the MDL (DL), concentrations >= to the MDL (DL) but < RL (LOQ), if found, are qualified with a "J" flag.
- The total concentration includes individual carbon range concentrations (estimated), if any, below the RL reported as ND.

5333 Mission Center Rd., Suite 300
San Diego, CA 92108-1350

Date Received: 06/27/16
Work Order: 16-06-1934
Preparation: EPA 5030C
Method: EPA 8260B
Units: ug/kg

Project: UTAS - Due Diligence / 43559

Client Sample Number	Lab Sample Number	Date/Time Collected	Matrix	Instrument	Date Prepared	Date/Time Analyzed	QC Batch ID
Method Blank	**099-14-314-574**	**N/A**	**Solid**	**GC/MS BB**	**07/01/16**	**07/01/16 10:30**	**160701L002**

Comment(s): - Results were evaluated to the MDL (DL), concentrations >= to the MDL (DL) but < RL (LOQ), if found, are qualified with a "J" flag.

Parameter	Result	RL	MDL	DF	Qualifiers
Acetone	ND	120	6.2	1.00	
Benzene	ND	5.0	0.13	1.00

Glossary of Terms and Qualifiers

Work Order: 16-06-1934 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Subject: Re: Metals for water samples -- 16-06-1934 and 16-06-1935 <Response requested>

Virendra,

We will move forward with option 1 for the two samples referenced in your email below.

Thanks,

Keith

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 16-06-2030 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 06/28/16. They were assigned to Work Order 16-06-2030.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

CASE NARRATIVE

Eurofins Calscience Work Order 16-06-2030

EPA Method 6010B Total Metals:

Project Required Detection Limit (PRDL):

The PRDL's were analyzed as required per the project QAPP. The low level calibration check performed post the sample batch is outside acceptable range for Chromium, Antimony, Selenium and Zinc on 07/05/16.

Table A: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 6010B	
Batch #	Analytes(s)
160702S01	Antimony[3,4], Barium[Q] and Thallium[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4: The MS/MSD RPD was out of control due to suspected matrix interference.
Q: Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.

Table B: Post Digestion Spike (PDS) outside acceptable limits	
EPA Method 6010B	
Batch #	Analytes(s)
160702S01	Barium[Q]

Q: Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.

The LCS/LCSD recoveries for the associated sample batches are within acceptable control limits, therefore, the results have been released without any further action or qualification.

EPA Method 8260B Volatile Organics:

Table C: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 8260B	
Batch #	Analytes(s)
160630S005	Vinyl Acetate[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.

The LCS/LCSD recoveries for the associated sample batches are within acceptable control limits, therefore, the results have been released without any further action or qualification.

Glossary of Terms and Qualifiers

Work Order: 16-06-2030 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 16-06-2031 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 06/28/16. They were assigned to Work Order 16-06-2031.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

CASE NARRATIVE

Eurofins Calscience Work Order 16-06-2031

EPA Method 6010B Total Metals:

Project Required Detection Limit (PRDL):

The PRDL's were analyzed as required per the project QAPP. The low level calibration check performed post the sample batch is outside acceptable range for Silver, Selenium, Thallium and Zinc on 07/01/16.

The PRDL's were analyzed as required per the project QAPP. The low level calibration check performed post the sample batch is outside acceptable range for Chromium, Antimony, Selenium, and Zinc on 07/05/16.

EPA Method 8260B Volatile Organics:

Table A: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 8260B	
Batch #	Analytes(s)
160629S007	2-Chloro Vinyl Ether[3]
160630S002	Carbon Disulfide[3], Dichlorodifluoromethane[3], 1,2-Dichloropropane[3] and Vinyl Acetate[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.

Table B: Laboratory Control Sample (LCS) / LCS Duplicate outside acceptable limits	
EPA Method 8260B	
Batch #	Analytes(s)
160629L007	Isobutyl Alcohol[ME]
160630L003	Carbon Disulfide[ME], and Dichlorodifluoromethane[ME]

ME: LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).

EPA Method 8310 PAHs:

Table C: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 8310	
Batch #	Analytes(s)
160702S06	Benzo (a) Anthracene[3,4], Dibenz (a,h) Anthracence[3] and Indeno (1,2,3-c,d) Pyrene[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4: The MS/MSD RPD was out of control due to suspected matrix interference.

Glossary of Terms and Qualifiers

Work Order: 16-06-2031 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

SAMPLE RECEIPT CHECKLIST

COOLER 1 OF 1

CLIENT: HALEY & ALDRICH

DATE: 06 / 28 / 2016

TEMPERATURE: (Criteria: 0.0°C – 6.0°C, not frozen except sediment/tissue)

Thermometer ID: SC2A (CF: 0.0°C); Temperature (w/o CF): 3.0 °C (w/ CF): 3.0 °C; ☑ Blank ☐ Sample

☐ Sample(s) outside temperature criteria (PM/APM contacted by: _____)

☐ Sample(s) outside temperature criteria but received on ice/chilled on same day of sampling

☐ Sample(s) received at ambient temperature; placed on ice for transport by courier

Ambient Temperature: ☐ Air ☐ Filter Checked by: 671

CUSTODY SEAL:

Cooler ☐ Present and Intact ☐ Present but Not Intact ☑ Not Present ☐ N/A Checked by: 671

Sample(s) ☐ Present and Intact ☐ Present but Not Intact ☑ Not Present ☐ N/A Checked by: 1053

SAMPLE CONDITION:	Yes	No	N/A
Chain-of-Custody (COC) document(s) received with samples	☑	☐	☐
COC document(s) received complete	☑	☐	☐
☐ Sampling date ☐ Sampling time ☐ Matrix ☐ Number of containers			
☐ No analysis requested ☐ Not relinquished ☐ No relinquished date ☐ No relinquished time			
Sampler's name indicated on COC	☑	☐	☐
Sample container label(s) consistent with COC	☑	☐	☐
Sample container(s) intact and in good condition	☑	☐	☐
Proper containers for analyses requested	☑	☐	☐
Sufficient volume/mass for analyses requested	☑	☐	☐
Samples received within holding time	☑	☐	☐
Aqueous samples for certain analyses received within 15-minute holding time			
☐ pH ☐ Residual Chlorine ☐ Dissolved Sulfide ☐ Dissolved Oxygen	☐	☐	☑
Proper preservation chemical(s) noted on COC and/or sample container	☑	☐	☐
Unpreserved aqueous sample(s) received for certain analyses			
☐ Volatile Organics ☑ Total Metals ☐ Dissolved Metals			
Container(s) for certain analysis free of headspace	☐	☑	☐
☑ Volatile Organics ☐ Dissolved Gases (RSK-175) ☐ Dissolved Oxygen (SM 4500)			
☐ Carbon Dioxide (SM 4500) ☐ Ferrous Iron (SM 3500) ☐ Hydrogen Sulfide (Hach)

SAMPLE ANOMALY REPORT

DATE: 06 / 28 / 2016

SAMPLES, CONTAINERS, AND LABELS:

- ☐ Sample(s) NOT RECEIVED but listed on COC
- ☐ Sample(s) received but NOT LISTED on COC
- ☐ Holding time expired (list client or ECI sample ID and analysis)
- ☐ Insufficient sample amount for requested analysis (list analysis)
- ☐ Improper container(s) used (list analysis)
- ☐ Improper preservative used (list analysis)
- ☐ No preservative noted on COC or label (list analysis and notify lab)
- ☐ Sample container(s) not labeled
- ☐ Client sample label(s) illegible (list container type and analysis)
- ☐ Client sample label(s) do not match COC (comment)
  - ☐ Project information
  - ☐ Client sample ID
  - ☐ Sampling date and/or time
  - ☐ Number of container(s)
  - ☐ Requested analysis
- ☐ Sample container(s) compromised (comment)
  - ☐ Broken
  - ☐ Water present in sample container
- ☐ Air sample container(s) compromised (comment)
  - ☐ Flat
  - ☐ Very low in volume
  - ☐ Leaking (not transferred; duplicate bag submitted)
  - ☐ Leaking (transferred into ECI Tedlar™ bags*)
  - ☐ Leaking (transferred into client's Tedlar™ bags*)

* Transferred at client's request.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 16-06-2032 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 06/28/16. They were assigned to Work Order 16-06-2032.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

For sample #7, BB-14-01 - the EPA 7471A results were released with error. Due to a data entry error, the prep factor on this sample was incorrectly entered in our database. The oversight has been corrected and the data is included in the attached analytical report.

CASE NARRATIVE

Eurofins Calscience Work Order 16-06-2032

EPA Method 6010B Total Metals:

Project Required Detection Limit (PRDL):

The PRDL's were analyzed as required per the project QAPP. The low level calibration check performed post the sample batch is outside acceptable range for Chromium, Antimony, Selenium, and Zinc on 07/05/16.

The PRDL's were analyzed as required per the project QAPP. The low level calibration check performed post the sample batch is outside acceptable range for Copper, Molybdenum, Selenium and Zinc on 07/13/16.

Table A: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 6010B	
Batch #	Analytes(s)
160702S02	Antimony[3] and Barium[3]
160709S04	Antimony[3], Barium[3], Thallium[3] and Zinc[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.

EPA Method 7471A Mercury:

For sample #7, BB-14-01 - the EPA 7471A results were released with error. Due to a data entry error, the prep factor on this sample was incorrectly entered in our database. The oversight has been corrected and the data is included in the supplemental report.

EPA Method 8260B Volatile Organics:

Table B: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 8260B	
Batch #	Analytes(s)
160629S033	2-Butanone[3], n-Butylbenzene[3], tert-Butylbenzene[3], Carbon Disulfide[3], Chloroethane[4], Chloromethane[3], 4-Chlorotoluene[3], 1,2-Dibromo-3-Chloropropane[3,4], Dibromomethane[3,4], 1,3-Dichlorobenzene[3], 1,4-Dichlorobenzene[3], Dichlorodifluoromethane[3], 2,2-Dichloropropane[3,4], c-1,3-Dichloropropene[3,4], t-1,3-Dichloropropene[3,4], p-isopropyltoluene[3], Naphthalene[3], 1,1,2,2-Tetrachloroethane[3,4], 1,2,3-Trichlorobenzene[3], 1,2,4-Trichlorobenzene[3], Vinyl Acetate[3,4] and Methyl-t-Butyl Ether (MTBE)[4]
160707S001	n-Butylbenzene[3], Carbon Disulfide[3], Chloromethane[3], 1,3-Dichlorobenzene[3], 1,4-Dichlorobenzene[3], Dichlorodifluoromethane[3], 2-Hexanone[4], 4-Methyl-2-Pentanone[4], Naphthalene[3], n-Propylbenzene[3], 1,2,3-Trichlorobenzene[3], 1,2,4-Trichlorobenzene[3], Vinyl Acetate[3,4]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4: The MS/MSD RPD was out of control due to suspected matrix interference.

eurofins | Calscience

Table C: Laboratory Control Sample (LCS) / LCS Duplicate outside acceptable limits	
EPA Method 8260B	
Batch #	Analytes(s)
160629L062	Carbon Disulfide[ME], Chloromethane[ME], Dichlorodifluoromethane and Vinyl Acetate[ME]
160707L001	Dichlorodifluoromethane[ME]

ME: LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).

EPA Method 8310 Polynuclear Aromatic Hydrocarbons:

Table D: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 8310	
Batch #	Analytes(s)
160702S06	Benzo (a) Anthracene[3,4], Dibenz (a,h) Anthracene[3] and Indeno (1,2,3-c,d) Pyrene[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.

4: The MS/MSD RPD was out of control due to suspected matrix interference.

The LCS/LCSD recoveries for the associated sample batches are within acceptable control limits, therefore, the results have been released without any further action or qualification.

Glossary of Terms and Qualifiers

Work Order: 16-06-2032 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 16-06-2033 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 06/28/16. They were assigned to Work Order 16-06-2033.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

CASE NARRATIVE

Eurofins Calscience Work Order 16-06-2033

EPA Method 6010B Total Metals:

Project Required Detection Limit (PRDL):

The PRDL's were analyzed as required per the project QAPP. The low level calibration check performed post the sample batch is outside acceptable range for Silver, Selenium, Thallium and Zinc on 07/01/16.

Table A: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 6010B	
Batch #	Analytes(s)
160702S02	Antimony[3] and Barium[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.

EPA Method 8260B Volatile Organics:

Table A: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 8260B	
Batch #	Analytes(s)
160706S004	2-Chloro Vinyl Ether[3] and Isobutyl Alcohol
160701S002	Vinyl Acetate[3,4]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4: The MS/MSD RPD was out of control due to suspected matrix interference.

Table B: Laboratory Control Sample (LCS) / LCS Duplicate outside acceptable limits	
EPA Method 8260B	
Batch #	Analytes(s)
160706L009	2-Chloroethyl Vinyl Ether and Isobutyl Alcohol[ME]
160701L002	Chloroethane[ME] and Vinyl Chloride[ME]

ME: LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).

EPA Method 8310 Polynuclear Aromatic Hydrocarbons:

Table C: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 8310	
Batch #	Analytes(s)
160702S06	Benzo (a) Anthracene[3,4], Dibenz (a,h) Anthracene[3] and Indeno (1,2,3-c,d) Pyrene[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4: The MS/MSD RPD was out of control due to suspected matrix interference.

Glossary of Terms and Qualifiers

Work Order: 16-06-2033 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 16-06-2033 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 06/28/16. They were assigned to Work Order 16-06-2033.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Subject: 16-06-2033-9 (sample ID BB-11-10) - Lead Analysis

Hi Virendra,

Can you please have sample 16-06-2033-9 (sample ID BB-11-10) released from hold for lead analysis. We only need lead, not all Title 22 Metals.

Please process this sample on a 48 hr TAT.

Thanks!

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 16-06-2034 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 06/28/16. They were assigned to Work Order 16-06-2034.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

CASE NARRATIVE

Eurofins Calscience Work Order 16-06-2034

EPA Method 6010B Total Metals:

Project Required Detection Limit (PRDL):

The PRDL's were analyzed as required per the project QAPP. The low level calibration check performed post the sample batch is outside acceptable range for Silver, Selenium, Thallium, and Zinc on 07/01/16 for aqueous samples.

The PRDL's were analyzed as required per the project QAPP. The low level calibration check performed post the sample batch is outside acceptable range for Chromium, Antimony, Selenium, and Zinc on 07/05/16 for soil samples.

Table A: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 6010B	
Batch #	Analytes(s)
160702S01	Antimony[3,4], Barium[Q] and Thallium[3]
160702S02	Antimony[3] and Barium[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4: The MS/MSD RPD was out of control due to suspected matrix interference.
Q: Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.

Table B: Post Digestion Spike (PDS) outside acceptable limits	
EPA Method 6010B	
Batch #	Analytes(s)
160702S01	Barium[Q]

Q: Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.

The LCS/LCSD recoveries for the associated sample batches are within acceptable control limits, therefore, the results have been released without any further action or qualification.

EPA Method 8260B Volatile Organics:

Table C: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 8260B	
Batch #	Analytes(s)
160629S007	2-Chloro Vinyl Ether[3]
160701S005	Vinyl Acetate[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.

Return to Contents

Table D: Laboratory Control Sample (LCS) / LCS Duplicate outside acceptable limits	
EPA Method 8260B	
Batch #	Analytes(s)
160629L007	Isobutyl Alcohol[ME]

ME: LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).

EPA Method 8310 Polynuclear Aromatic Hydrocarbons:

Table E: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 8310	
Batch #	Analytes(s)
160702S06	Benzo (a) Anthracene[3,4], Dibenz (a,h) Anthracene[3] and Indeno (1,2,3-c,d) Pyrene[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4: The MS/MSD RPD was out of control due to suspected matrix interference.

Glossary of Terms and Qualifiers

Work Order: 16-06-2034 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 16-06-2037 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 06/28/16. They were assigned to Work Order 16-06-2037.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

CASE NARRATIVE

Eurofins Calscience Work Order 16-06-2037

EPA Method 6010B Total Metals:

Project Required Detection Limit (PRDL):

The PRDL's were analyzed as required per the project QAPP. The low level calibration check performed post the sample batch is outside acceptable range for Silver, Selenium, Thallium and Zinc for aqueous samples on 07/01/16.

The PRDL's were analyzed as required per the project QAPP. The low level calibration check performed post the sample batch is outside acceptable range for Selenium and Thallium for soil samples on 07/07/16.

Table A: Matrix Spike / Matrix Spike Duplicate outside acceptable limits

EPA Method 6010B	
Batch #	Analytes(s)
160702S04	Antimony[3] and Barium[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.

The LCS/LCSD recoveries for the associated sample batches are within acceptable control limits, therefore, the results have been released without any further action or qualification.

EPA Method 8260B Volatile Organics:

Initial Calibration:

The initial calibration (IC) was performed on 06/28/16 on GC/MS L. The percent RSDs in the continuing calibration was > 40% for 2-Chloroethyl Vinyl Ether and Iodomethane.

Table B: Matrix Spike / Matrix Spike Duplicate outside acceptable limits

EPA Method 8260B	
Batch #	Analytes(s)
160706S004	2-Chloro Vinyl Ether[3] and Isobutyl Alcohol[3]
160701S002	Vinyl Acetate[3,4]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4: The MS/MSD RPD was out of control due to suspected matrix interference.

Table C: Laboratory Control Sample (LCS) / LCS Duplicate outside acceptable limits

EPA Method 8260B	
Batch #	Analytes(s)
160706L009	2-Chloro Vinyl Ether and Isobutyl Alcohol[ME]
160701L002	Chloroethane[ME] and Vinyl Chloride[ME]

ME: LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).

Return to Contents

EPA Method 8310 Polynuclear Aromatic Hydrocarbons:

Table D: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 8310	
Batch #	Analytes(s)
160702S06	Benzo (a) Anthracene[3,4], Dibenz (a,h) Anthracene[3] and Indeno (1,2,3-c,d) Pyrene[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.

4: The MS/MSD RPD was out of control due to suspected matrix interference.

The LCS/LCSD recoveries for the associated sample batches are within acceptable control limits, therefore, the results have been released without any further action or qualification.

Glossary of Terms and Qualifiers

Work Order: 16-06-2037 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Work Order Narrative

Work Order: 16-06-2174 Page 1 of 1

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 06/29/16. They were assigned to Work Order 16-06-2174.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

Analytical Report

Haley & Aldrich, Inc,
5333 Mission Center Rd., Suite 300
San Diego, CA 92108-1350

Date Received: 06/29/16
Work Order: 16-06-2174
Preparation: EPA 3550B
Method: EPA 8015B (M)
Units: mg/kg

Project: UTAS - Due Diligence / 43559

Client Sample Number	Lab Sample Number	Date/Time Collected	Matrix	Instrument	Date Prepared	Date/Time Analyzed	QC Batch ID
BB-08B-04	**16-06-2174-6-AA**	**06/28/16 15:56**	**Solid**	**GC 49**	**07/06/16**	**07/07/16 11:01**	**160706B06**

Comment(s): - Results were evaluated to the MDL (DL), concentrations >= to the MDL (DL) but < RL (LOQ), if found, are qualified with a "J" flag.
- The total concentration includes individual carbon range concentrations (estimated), if any, below the RL reported as ND.

Glossary of Terms and Qualifiers

Work Order: 16-06-2174 Page 1 of 1

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Attachments: DOC018.pdf

Eric,

Please see the attached COC with the matrix type and number of containers updated.

Please run the requested analyses on BB-08A-01

From: Erick Ovalle [mailto:ErickOvalle@eurofinsUS.com]
Sent: Thursday, June 30, 2016 10:35 AM
To: Scott, Bob; Foster, Keith; Burns, Tyree
Cc: Virendra Patel
Subject: Sample receipt confirmation / 16-06-2174 / UTAS - Due Diligence / 43559

Sample receipt confirmation attached. Please review and advise of any changes required.

- **Sample 1 (BB-08A-01): Water was present inside the sleeve.**
- **The matrix type and number of containers was not filled out.**

Please call with any questions or concerns.

Best Regards,
Erick Ovalle

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

9 Chain-of-Custody/Sample Receipt Form. 49

Condition Upon Receipt:

Samples were received under Chain-of-Custody (COC) on 07/13/16. They were assigned to Work Order 16-07-0873.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

Holding Times:

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

Quality Control:

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

Subcontractor Information:

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

Additional Comments:

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

CASE NARRATIVE

Eurofins Calscience Work Order 16-07-0873

EPA Method 6010B Total Metals:

Project Required Detection Limit (PRDL):

The PRDL's were analyzed as required per the project QAPP. The low level calibration check performed post the sample batch is outside acceptable range for Arsenic and Thallium on 07/21/16 for soil samples.

The PRDL's were analyzed as required per the project QAPP. The low level calibration check performed post the sample batch is outside acceptable range for Antimony on 07/22/16 for soil samples.

Table A: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 6010B	
Batch #	Analytes(s)
160719S03	Antimony[3,4], Barium[3], Vanadium[3] and Zinc[3]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4: The MS/MSD RPD was out of control due to suspected matrix interference.

The LCS/LCSD recoveries for the associated sample batches are within acceptable control limits, therefore, the results have been released without any further action or qualification.

EPA Method 8260B Volatile Organics:

Continuing Calibration:

The continuing calibration (CC) was performed on 07/14/16 on GC/MS L. The percent RSDs in the continuing calibration was > 40% for 2-Chloroethyl Vinyl Ether and Chloromethane.

Table B: Matrix Spike / Matrix Spike Duplicate outside acceptable limits	
EPA Method 8260B	
Batch #	Analytes(s)
160714S005	2-Chloroethyl Vinyl Ether[3]
160714S003	Bromomethane[3], n-Butylbenzene[3], Carbon Disulfide4, 1,4-Dichlorobenzene[4], Dichlorodifluoromethane[4], Methylene Chloride[4], Napthalene[3], 1,2,3-Trichlorobenzene[3], 1,2,4-Trichlorobenzene[3], Trichlorofluoromethane[4] and Vinyl Acetate[3,4]

3: Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4: The MS/MSD RPD was out of control due to suspected matrix interference.

Return to Contents

Table C: Laboratory Control Sample (LCS) / LCS Duplicate outside acceptable limits	
EPA Method 8260B	
Batch #	Analytes(s)
160714L002	Bromomethane[ME] and 2-Chloroethyl Vinyl Ether[ME]

ME: LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).

Glossary of Terms and Qualifiers

Qualifiers	Definition
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

PERMIT #: LMWP-004690
A.P.N.: 567-022-30-00
EST #: RWQCB

COUNTY OF SAN DIEGO
DEPARTMENT OF ENVIRONMENTAL HEALTH
LAND AND WATER QUALITY DIVISION
MONITORING WELL PROGRAM

MONITORING WELL DESTRUCTION PERMIT

SITE NAME: ROHR, INC, A COLLINS AEROSPACE COMPANY

SITE ADDRESS: 390 BAY BLVD, CHULA VISTA, CA 91910

PERMIT TO: **DESTROY MONITORING WELLS (3) & TRANSDUCERS (2)**

PERMIT APPROVAL DATE: 9/28/2020

PERMIT EXPIRES ON: 1/27/2021

RESPONSIBLE PARTY: ROHR, INC, A COLLINS AEROSPACE COMPANY (RICK SIORDIA)

PERMIT CONDITIONS:

1. Due to the wells being constructed with a minimum 20-foot seal, the proposal to destroy wells DB-2, DB-4, and DB-5 by pressure grouting is approved. Ensure that sufficient sealing material is placed in the well casing, filter pack, and all other significant voids within the entire well boring. In the drilling report, provide the volume pre-calculations and the actual amount of sealing material used in each well.

2. Since the transducers are constructed with bentonite filled boreholes, your proposal to destroy transducers OW-1 and OW-2 by removing the traffic cover and filling it with concrete is approved.

3. All water and soil resulting from the activities covered by this permit must be managed, stored and disposed of as specified in the SAM Manual in Section 5, II, D-4. (**http://www.sdcounty.ca.gov/deh/lwq/sam/manual_guidelines.html**). In addition, drill cuttings must be properly handled and disposed in compliance with the Stormwater Best Management Practices of the local jurisdiction.

4. Within 60 days of completing work, please submit a well destruction report that includes a description of the well destruction method as well as the type and volume of materials used (in cubic feet) to the Monitoring Well Permit Desk. This report must include all items required by the SAM Manual, Section 5, Pages 5-7.

5. This office must be given 24-hour notice of any drilling activity on this site and advanced notification of drilling cancellation. Please contact the Well Permit Desk at (858) 505-6688.

NOTE: **This permit does not constitute approval of a work plan as defined in Section 2722 of Article 11 of C.C.R., Title 23. Work plans are required for all unauthorized release investigations in San Diego County.**

   PROPERTY OWNER _____
   Phone _____ Ext. _____ Fax _____
   Mailing Address _____ City _____ State _____ Zip _____
   NUMBER OF WELLS _____ **TYPE OF WELLS** _____

G. QUESTIONNAIRE: Please answer all applicable questions completely *and submit any required supportive documentation.*

1. What is the purpose of the well/boring investigation?

   ☐ a. Part of an ongoing site assessment case in which a government regulator is the lead agency. If yes, indicate which government regulator is the lead agency and the case number.
   - ☐ Department of Environmental Health _____
   - ☒ Regional Water Quality Control Board T10000001487
   - ☐ Department of Toxic Substances Control _____

   ☐ b. Part of a Phase I investigation for property ownership transfer.

   ☐ c. Geotechnical investigation for proposed construction or land stabilization.

   ☒ d. Other: Property divestiture

2. If wells are to be destroyed, provide a description of method of destruction The three monitoring wells will be destroyed by pressure grouting. The grout will consist of cement-bentonite and placed with a tremie from the bottom to the surface to displace any water. Pressure will be maintained at 40psi for 15 minutes. The procedure will be repeated as needed

3. Are you proposing a variation from current SAM Manual Requirements for the construction or destruction of borings, Vadose and/or Groundwater Monitoring Wells? If yes, specify these variations and include a well construction diagram and all required supporting documentation. Refer to the SAM Manual Appendix B for monitoring well guidelines (www.sdcdeh.org) Yes ☒ No ☐

   Yes. Due to the depth of the monitoring wells, pressure grouting is proposed to destroy the wells. The well upper 5 feet of each well will be removed by overdrilling. One well has a steel casing. It will be excavated and the casing cut at 5 feet. The transducers were permanently installed in bentonite-filled boreholes. The traffic covers will be removed and backfilled to destroy the transducers.

PROPERTY OWNER CONSENT

Proposed locations for subsurface work:

Property Address: 390 Bay Boulevard

Assessor's Parcel Number (APN): 567-022-30-00

I, Rick Siordia, owner of the property/properties listed above, give my permission to Hale & Aldrich, Inc. (consulting company, contractor) to conduct the following work at the locations stated above.

☐ Install _____ monitoring wells ☒ Destroy 3 monitoring wells (2 Transducers) ☐ Drill _____ soil borings

I understand that Robert K. Scott (registered professional) of Hale & Aldrich, Inc. (consulting company) and an authorized signer for _____ (drilling company) have submitted a signed application to the Department of Environmental Health in which they have agreed to complete the above-stated work according the requirements of the current SAM Manual, all ordinances and laws of the County of San Diego and the State of California pertaining to well/boring construction and destruction. I have arranged with the Responsible Party, the person who causes to have monitoring wells/borings installed or existing wells destroyed on this property, to ensure proper closure of the monitoring wells/borings.

Subject: Well Log Submittal
Permit No. W98272
BFGoodrich Aerostructures Facility
Chula Vista, California
URSGWC Project No. 589853067B.00-00400

Dear Ms. Crystal:

Three observation wells (DB-4 and OW-1 and -2) were installed north of Building 99 at the BFGoodrich Aerostructures (BFG) Facility in Chula Vista, California, during June and July 1999. The wells were installed for use during an aquifer test. Based on initial results, one additional pumping well (DB-5) and 2 additional observation wells (OW-3 and -4) were installed at the site. A check for the permit fee for three additional wells ($450) is included with this well log submittal. Drill cuttings from the six well borings were placed in roll-off bins and were properly disposed of by Pacific Treatment Environmental Services (PTES). Wash water generated during well installation was transferred to the onsite pretreatment facility by BFG personnel.

fee processed 3/7/00 msc

In accordance with the Site Assessment and Mitigation Manual (revised 1999), copies of a site plan showing the well locations, well logs and laboratory analytical report are provided. Lithologic logs were not generated for well borings OW-3 and OW-4 because they are in close proximity (within 20 feet) of well borings OW-1 and DB-4. However, well completion diagrams for wells OW-3 and OW-4 are provided in Figure 3. If you have any questions, please give us a call.

Very truly yours,

URS GREINER WOODWARD CLYDE

COLUMN DESCRIPTIONS

1	**Depth:**	Distance (in feet) below the ground surface.
2	**Elevation:**	Approximate elevation (in feet) referenced from the ground surface.*
3	**Sample Type:**	Type of soil sample collected at depth interval depicted; symbols explained above.
4	**Sample Number:**	Sample identification number.
5	**Sample Blows/foot:**	Number of blows required to advance driven sampler 1 foot, or distance indicated, using a 140-lb hammer (or as otherwise indicated) with a 30-inch drop. "*" indicates blow count for initial 6-inch seating interval of sampling only.
6	**Graphic Log:**	Graphic depiction of subsurface material encountered; symbology explained on Sheet 2 of Key.
7	**Material Description:**	Description of subsurface material encountered, including USCS soil designation.
8	**Well Completion Log:**	Graphic depiction of well construction; symbology explained on Sheet 2 of Key.
9	**Headspace:**	Photoionization detector (PID) field headspace reading (in parts per million). ND indicates that no organic vapors were detected.
10	**Remarks:**	Comments or observations regarding drilling/sampling made by driller or URSGWC's field personnel

GENERAL NOTES

1. Soil classifications are based on the Unified Soil Classification System (USCS) or recorded and include consistency/relative density (where standard blow count correlation is possible), moisture, and color.
2. Descriptions on these boring logs apply only to the specific boring locations at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or for other times.

NR - No Recovery

Project Name/No.: BFG-South Campus
Laboratory Log No.: 1815-99
Date Received: 09/20/99
Sample Matrix: One water sample
PO No.: 589853045B.01-FI001

Please find the following enclosures for the above referenced project identified:

1) Analytical Report
2) QA/QC Report
3) Chain of Custody Form

.....***Certificate of Analysis***.....

Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. Date of extraction, date of analysis, detection limits and dilution factor are reported for each compound analyzed. All samples were analyzed within the method required holding time from sample collection.

Data for each analytical method was evaluated by assessing the following QA/QC functions, as applicable to the methodology:

- Quality Control Standard
- Surrogate Percent Recovery
- Laboratory Control Sample (LCS) percent recoveries for all analyses
- Matrix Spike Recovery/Matrix Spike Duplicate Recovery (MSR & MSDR) and/or
- Relative Percent Difference (RPD from MSR & MSDR)

I certify that this data report is in compliance both technically and for completeness. Release of the data contained in this hardcopy data report has been authorized by the following signature.

OFFICIAL NOTICE

February 10, 2000

Woodward-Clyde
Attn: Robert k. Scott
1615 Murray Cyn. Rd, Ste 1000
San Diego, CA 92108

Dear Mr. k. Scott :

EXPIRED WELL PERMIT
Bfgoodrich Acrostructures Group, 850 Lagoon Dr, Chula Vista, CA, 91910
A.P.N. 571-330-17 + 567-022-30 PERMIT # W97850 EST. # H37165

As of February 10, 2000, the Department of Environmental Health (DEH), Site Assessment & Mitigation Program (SAM) has not received information regarding the above-referenced permit issued on 10/ 29/ 98 for the drilling of wells and/ or borings.

Within 30 days, please submit the following information:

1. Provide a detailed site plan giving accurate locations of all wells and borings. The site plan should be drawn to scale.

2. Provide complete well logs, which include well construction details, lithologic log, static water level including date of measurement, and, if available, the surveyed casing elevation.

3. Provide all laboratory analysis data if there was/ is no site assessment case.

A failure to provide information regarding this permit is a misdemeanor violation of Section 67.447 of the San Diego County Code, which will result in further action, including, but not limited to, an Administrative Office Hearing and a complaint being filed by this department with the State Contractors Licensing Board. Thank you for your cooperation. Should you have any questions, please contact me at (619) 338-2339.

Sincerely,

Marisue Crystal, Monitoring Well Permit Clerk
Site Assessment and Mitigation Program (SAM)

Subject: Well Log Submittal
Permit No. W97830
BFGoodrich Aerostructures Facility
Chula Vista, California
URSGWC Project No. 589853067B.00-00400

Dear Ms. Crystal:

Two deep test borings (DB-1 and DB-3) and one deep well (DB-2) were installed at the BFGoodrich Aerostructures (BFG) Facility in Chula Vista, California, during November and December 1998. The borings and wells were installed to monitor general water quality (TDS and general minerals). The original permit application dated October 20,1998, which included one boring, was approved by the DEH on October 29, 1998. URS Greiner Woodward Clyde (URSGWC) submitted two modifications to the permit for one additional well and one additional boring on November 4 and 18, 1998.

In accordance with the Site Assessment and Mitigation Manual (revised 1999), copies of a site plan showing the boring and well locations, well logs, and laboratory analytical reports are provided. Drill cuttings from the three boreholes were placed in roll-off bins and were properly disposed of by Pacific Treatment Environmental Services (PTES). Wash water generated during well installation was transferred to the onsite pretreatment facility by BFG personnel. If you have any questions, please give us a call.

Very truly yours,

URS GREINER WOODWARD CLYDE

3	Sample Type:	Type of soil sample collected at depth interval depicted; symbols explained above.
4	Sample Number:	Sample identification number.
5	Sample Blows/foot:	Number of blows required to advance driven sampler 1 foot, or distance indicated, using a 140-lb hammer (or as otherwise indicated) with a 30-inch drop. "**" indicates blow count for initial 6-inch seating interval of sampling only.
6	*Graphic Log:*	*Graphic depiction of subsurface material encountered; symbology explained* on Sheet 2 of Key.
7	Material Description:	Description of subsurface material encountered, including USCS soil designation.
8	*Well Completion Log:*	*Graphic depiction of well construction; symbology explained on Sheet 2 of* Key.
9	Headspace:	Photoionization detector (PID) field headspace reading (in parts per million). ND indicates that no organic vapors were detected.
10	*Remarks:*	*Comments or observations regarding drilling/sampling made by driller* or Woodward-Clyde's field personnel

GENERAL NOTES

1. Soil classifications are based on the Unified Soil Classification System (USCS) or recorded and include consistency/relative density (where standard blow count correlation is possible), moisture, and color.
2. Descriptions on these boring logs apply only to the specific boring locations at the time the borings were advanced. They are not warranted to be representative of subsurface conditions at other locations or for other times.

ATD = At time of drilling
ND = Organic vapors not detected
NR = Negligible to no recovery

*Based on available topographic plan

Chula Vista, California 91910

Project Name/No.: 9853067B
Laboratory Log No.: 2168-98
Date Received: 11/03/98
Sample Matrix: Two water samples
PO No.: 9853067B

Please find the following enclosures for the above referenced project identified:

1) Analytical Report
2) QA/QC Report
4) Chain of Custody Form

.....***Certificate of Analysis***.....

Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. Date of extraction, date of analysis, detection limits and dilution factor are reported for each compound analyzed. All samples were analyzed within the method required holding time from sample collection.

Data for each analytical method was evaluated by assessing the following QA/QC functions, as applicable to the methodology:

- Quality Control Standard
- Surrogate Percent Recovery
- Laboratory Control Sample (LCS) percent recoveries for all analyses
- Matrix Spike Recovery/Matrix Spike Duplicate Recovery (MSR & MSDR) and/or
- Relative Percent Difference (RPD from MSR & MSDR)

I certify that this data report is in compliance both technically and for completeness. Release of the data contained in this hardcopy data report has been authorized by the following signature.

Second Original

Janis Columbo
Vice President/Laboratory Director

1) Analytical Report
2) QA/QC Report
3) Chain of Custody Form

Note: Insufficient sample size provided. Unable to perform nitrite and fluoride analysis.

Certificate of Analysis

Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. Date of extraction, date of analysis, detection limits and dilution factor are reported for each compound analyzed. All samples were analyzed within the method required holding time from sample collection.

Data for each analytical method was evaluated by assessing the following QA/QC functions, as applicable to the methodology:

- Quality Control Standard
- Surrogate Percent Recovery
- Laboratory Control Sample (LCS) percent recoveries for all analyses
- Matrix Spike Recovery/Matrix Spike Duplicate Recovery (MSR & MSDR) and/or
- Relative Percent Difference (RPD from MSR & MSDR)

I certify that this data report is in compliance both technically and for completeness. Release of the data contained in this hardcopy data report has been authorized by the following signature.

Certificate of Analysis

Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. Date of extraction, date of analysis, detection limits and dilution factor are reported for each compound analyzed.

Data for each analytical method was evaluated by assessing the following QA/QC functions, as applicable to the methodology:

- Quality Control Standard
- Surrogate Percent Recovery
- Laboratory Control Sample (LCS) percent recoveries for all analyses
- Matrix Spike Recovery/Matrix Spike Duplicate Recovery (MSR & MSDR) and/or
- Relative Percent Difference (RPD from MSR & MSDR)

I certify that this data report is in compliance both technically and for completeness. Release of the data contained in this hardcopy data report has been authorized by the following signature.

Attention: Well Permit Clerk

Subject: Well Destruction Report
Rohr, Inc., a Collins Aerospace Company
390 Bay Boulevard
Chula Vista, California
Assessor's Parcel No. 567-022-30-00
Permit No. LMWP-004690

Dear Well Permit Clerk:

Haley & Aldrich, Inc., is submitting this well destruction report to the County of San Diego Department of Environmental Health (DEH) for three monitoring wells (DB-2, DB-4, and DB-5) and two pressure transducers (OW-1 and OW-2) on the property associated with Assessor's Parcel Number 567-022-30-00, located at 390 Bay Boulevard at the Rohr, Inc., a Collins Aerospace Company, facility located in Chula Vista, California (Site; Figure 1). The wells and transducers were destroyed under Permit No. LMWP-004690, approved by the DEH on September 28, 2020.

Cascade Drilling, Inc., a C-57 licensed drilling company located in Upland, California, completed the destruction of the monitoring wells and pressure transducers. Wells DB-2 and DB-5 and the pressure transducers OW-1 and OW-2 were destroyed on October 19 and October 20, 2020. Well DB-5 was destroyed on November 16 and 17, 2020.

Prior to destruction, the total depth of each well was measured to identify whether the well was free of obstructions. No obstructions were observed. The monitoring wells were abandoned by pressure grouting. Each boring was backfilled from the bottom up to within approximately 5 feet below the ground surface (bgs) with cement-bentonite grout (with 5 percent bentonite by weight) mixed at a ratio of approximately 100 pounds of solids to 35 to 40 gallons of water and then pumped through a tremie pipe. The grout was placed within the screen interval and held at 30 pounds per square inch of pressure for 20 minutes.

A hollow-stem auger rig was used to overdrill the two wells with polyvinyl chloride casings (DB-2 and DB-4) so that the casings could be removed. An 8.5-inch-diameter cutting head was used to destroy and remove the upper 5 feet of casing. The upper 5 feet of well DB-5 was removed by excavating around it

to approximately 4 feet bgs and cutting the steel casing off at 5 feet bgs using an arc welder. The upper 5 feet of the DB-2 and DB-5 boreholes were filled with bentonite chips hydrated during placement. The surface at each location was finished in concrete. Table I provides a backfill material summary for each well.

The traffic covers for the pressure transducers (OW-1 and OW-2) were removed and filled with concrete to the surface grade to abandon them. The traffic covers for monitoring wells OW-3 and OW-4, which remain on Site, were replaced in accordance with DEH guidelines. If you have any questions regarding the well destructions, please contact us.

Sincerely yours,
HALEY & ALDRICH, INC.

Chula Vista, CA 91910

Dear Mr. Guerrero:

VOLUNTARY ASSISTANCE PROGRAM CASE #H26520-001
350-360 BAY BLVD., CHULA VISTA

The site remediation information submitted to this agency by URS Corporation, summarizing the site characterization and mitigation activities at the above-referenced location, has been reviewed. With the provision that the information provided to this agency was accurate and representative of existing conditions, it is the position of this office that **no further action is required at this time.**

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or the Porter Cologne Water Quality Control Act. If previously unidentified contamination is discovered which may affect public health, safety and/or water quality, additional site assessment and cleanup may be necessary.

Changes in the proposed use of the above site may require reevaluation to determine if the change will pose a risk to public health.

Thank you for your efforts in resolving this matter. Please contact Nasser Sionit of the Site Assessment and Mitigation Program (SAM), at (619) 338-2239, if you require additional assistance.

Sincerely,

GEORGE McCANDLESS, Program Manager
Supervising Environmental Health Specialist

I. AGENCY INFORMATION

DATE: September 6, 2001

Agency Name: County of San Diego, Environmental Health, SAM	Address: P.O. Box 129261
City/State/ZIP: San Diego, CA 92112-9261	Phone: (619) 338-2222 FAX: (619) 338-2377
DEH Staff Person: Nasser Sionit	Title: Project Manager

II. CASE INFORMATION

Case No. H26520-001		
Site Name: Vacant lot, Bay Blvd., Chula Vista		
Site Address: 350-360 Bay Blvd., Chula Vista, CA		
Property Owner: City of Chula Vista	Address: 276 Fourth Ave, Chula Vista, CA 91910	Phone: 619-476-5311
Responsible/Requesting Party : City of Chula Vista, Benjamin Guerrero	Environmental Services, City of Chula Vista	Phone: Same as above
Type of Case: Non-Tank Case		
RWQCB/DTSC Notification of DEH Oversight: 01-31-01		

III. SITE CHARACTERIZATION AND/OR INFORMATION

Cause and Type of Contamination: Auto wrecking lead contamination				
Site Characterization complete? Yes				
Monitoring Wells Installed? No	Total Number: N/A	Proper Screened Interval? N/A	Number of decommissioned wells: N/A	
Range of groundwater levels on the site? Estimated at 15-20 ft. BG			Groundwater Flow Direction: Unknown	
Most Sensitive Current Use: Groundwater has no existing beneficial uses for municipal and industrial, but has beneficial uses for agricultural purposes.				
Are Drinking Water Wells Affected? No		RWQCB Basin Number: Sweetwater Hydrol. Unit #909.11		
Is Surface Water Affected? No		Nearest Surface Water name: San Diego Bay		
Off-Site Beneficial Use Impacts (addresses/locations): None				

TREATMENT AND DISPOSAL OF AFFECTED MATERIAL

Material	Amount (Include Units)	Action (Treatment or Disposal w/Destination)	Date
Soil	800 Cubic Yards	Disposal to Otay Class 1 Landfill	02-05-01

-	-	-	-	-	-	-	-	-	-

Comments: Previous site uses included agricultural farming, auto wrecking and auto repair activities. Lead containing soil was encountered during geophysical investigation of the site for development. Approximately 800 cubic yards of lead contaminated soil were excavated to a depth of two feet and disposed off site. Confirmation soil samples were collected from the perimeter and the floor of the footprint of the excavation at statistically random locations. The consultant has concluded that the mean total lead concentration in-situ soils at this site was 54 mg/kg, and the upper %95 confidence interval was 71 mg/kg, both significantly lower than the residential PRG of 400 mg/kg. According to the consultant this soil contamination does not present human health risk at this site.

IV. CLOSURE

Does completed corrective action protect existing beneficial uses per the Regional Board Basin Plan? Yes

Does completed corrective action protect potential beneficial uses per the Regional Board Basin Plan? Yes

Does corrective action protect public health for current land use? Yes

Case review based on current/proposed use as: Proposed light industrial with paved areas and building on concrete slabs.

Are there other issues DEH needs to follow up on: No

Site Management Requirements: Any contaminated soil excavated as part of subsurface construction work must be managed in accordance with the legal requirements at that time.

Should corrective action be reviewed if land use changes? Yes

List Enforcement Actions Taken: N/A

List Enforcement Actions Rescinded: N/A

Is this account up to date and current?: Yes

Dear Mr. Alo:

Please find enclosed for your review, a copy of the subject document dated June 10, 2022 that was prepared by Haley & Aldrich, Inc. for Rohr, Inc., a Collins Aerospace Company (Rohr) for Parcel A at the site. This document is being submitted in response to Directive C.2.b of Cleanup and Abatement Order No. R9-2021-0042, issued to Rohr on July 12, 2021 by the San Diego Regional Water Quality Control Board.

"I certify under penalty of law this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

If you have any questions, please contact Tyler Adkins at (619) 691-2020.

Sincerely,

Subject: Data Gap Investigation Report
Rohr, Inc. - North Campus, Parcel A
Chula Vista, California
GeoTracker ID No. T10000011095

Dear Mr. Alo:

Haley & Aldrich, Inc., is submitting this Parcel A "Data Gap Investigation Report" (Report) on behalf of Rohr, Inc., a Collins Aerospace Company, (Rohr) for the North Campus at 850 Lagoon Drive in Chula Vista, California. This Report was prepared pursuant to Directive C.2.b in Cleanup and Abatement Order No. R9-2021-0042 (CAO) issued to Rohr by the San Diego Regional Water Quality Control Board (SDRWQCB) on July 12, 2021, in accordance with the optional document submittals proposed by Raytheon Technologies Corporation (Raytheon), Rohr's parent company, in its letter dated August 25, 2021.

Raytheon received the SDRWQCB's letter dated January 7, 2022, indicating that it had no further comments on the "Data Gap Investigation Work Plan" (Work Plan) submitted on December 22, 2021, to meet the requirements of Directive C.2.a in the CAO. The Work Plan was implemented in March 2022 and the last scheduled activity in the Work Plan (professional survey) was completed on March 29, 2022. As required by CAO Directive C.2.b, this Report includes the following:

- A detailed description of all activities completed to address the data gaps.
- Supporting information such as boring logs, data tables, maps, and laboratory analytical data.
- Results, conclusions, and recommendations.

Please contact the undersigned if you have any comments or questions regarding this Report.

Sincerely yours,
HALEY & ALDRICH, INC.

1. Background

Haley & Aldrich, Inc., (Haley & Aldrich) is submitting this "Data Gap Investigation Report" (Report) on behalf of Rohr, Inc., a Collins Aerospace Company, (Rohr) for Parcel A at 850 Lagoon Drive in Chula Vista, California ([Site]; Figure 1). This Report was prepared pursuant to Directive C.2.b in Cleanup and Abatement Order No. R9-2021-0042 (CAO) issued to Rohr by the San Diego Regional Water Quality Control Board (SDRWQCB) on July 12, 2021, and in accordance with Raytheon Technologies Corporation's (Raytheon) letter to the SDRWQCB dated August 25, 2021. This letter described the optional document submittals proposed by Raytheon under Directive L.1 to comply with the CAO. This is one of three data gap investigations to be completed to meet Directive C.2.b.

This Report summarizes the results of our data gap investigation described in the "Revised Data Gap Investigation Work Plan" (Work Plan) dated December 22, 2021 (Haley & Aldrich, 2021c). The Work Plan included sampling to fill data gaps on Parcel A identified in the "Revised Conceptual Site Model" for soil and soil gas (Soil/Soil Gas CSM) submitted to the SDRWQCB on April 30, 2021, and the "Revised Updated Sitewide Conceptual Site Model" (Revised Updated CSM) submitted to the SDRWQCB on February 25, 2022. The Revised Updated CSM included Parcel A groundwater for the North Campus. The data gaps addressed in this Report are specific to Building 29. In addition to reviewing the Revised Updated CSM, a further review and evaluation of existing data were conducted to identify whether there were other data gaps that needed to be addressed.

The SDRWQCB sent a letter to Raytheon on January 7, 2022, that it had no further comments on the Work Plan. As required by CAO Directive C.2.b, this Report includes the following:

- A detailed description of all activities completed to address the data gaps;
- Supporting information such as boring logs, data tables, maps, and laboratory analytical data; and
- Results, conclusions, and recommendations.

Parcel A includes the properties occupied by the Buildings 29, 99, and 100 and the vacant properties located at 360, 364, and 368 Bay Boulevard (Figure 2). Rohr sold these properties to PSIP Wohl Bay Boulevard LLC (Owner), who intends to redevelop the properties for commercial/industrial use. The Owner will be constructing a new loading dock in the area currently occupied by the northern 24,000-square feet of Building 29. Construction will involve the removal of approximately 5 feet of soil in this area. The Owner has made improvements to the building that have included installing a new heating, ventilation and air conditioning system and sealing and polishing the concrete floor. The Owner is also required through the Purchase and Sale Agreement with Rohr to install a sub-slab depressurization system (SSDS) to address volatile organic compounds (VOCs) in soil gas that are present beneath the building slab.

1.1 SITE DESCRIPTION

1.1.1 Site History

Parcel A consists of two areas that have been part of Rohr's manufacturing facility. Site historical environmental features on Parcel A are shown on Figure 2. Buildings 99 and 100 and the vacant properties are located north of G Street, and Building 29 is located south of G Street. Industrial activities and historical chemical use on Parcel A were more limited compared to the main manufacturing portions of the facility located on Parcel B and the former South Campus. Site history related to the vacant Bay Boulevard properties and Buildings 99 and 100 is described in the Soil/Soil Gas and Revised Updated CSMs and is not descried herein because the data gap investigation on Parcel A is specific to Building 29.

Building 29 was constructed in phases beginning in about 1957 through 1962. This portion of Parcel A was owned by others and used for other purposes prior to Rohr's ownership (Adrian Brown, 1998; Woodward-Clyde Consultants, 1998; URS Corporation, 2013; Haley & Aldrich, 2016a, 2016b, 2018a, 2018b, 2021a, 2022). These other historical uses included agriculture, residential and a possible lumber yard. The agricultural use of the northern portion of Parcel A occupied by Building 29 appears to have taken place through the 1940s.

Building 29 was primarily used for tooling, machining, and office space for most of its history. At one time, the northernmost portion served as the Maintenance Department for the facility. Most recently the building housed laboratories, kitting, an After-Market Spares Warehouse, Service Center and FAI repairs, storage, tool calibration, product development, and office space.

Another former building (Building 28) was built on the southern portion of Parcel A in the mid-1940s and served as offices, including finance and payroll. The building was located south of Building 29 and was demolished around 2000. The area is now occupied by a parking lot.

1.1.2 Site Geology

Parcel A is situated at elevations ranging from approximately 13 feet above mean seal level (MSL) on the south and 28 feet above MSL on the north. Parcel A is underlain, in descending order, by limited fill material, the Bay Point Formation, a clay aquitard, and the San Diego Formation. Because Parcel A is more than 1,000 feet upland of the former shoreline, there are no bay muds or extensive fill present on this portion of the North Campus facility. It is underlain by localized fill material and the Bay Point Formation.

The Bay Point Formation can also be referred to as Quaternary alluvium, as suggested by Wes Danskin, formerly with the United States Geological Survey (W. Danskin, personal communication). The thickness of the Quaternary sediment can be highly variable in the San Diego embayment, ranging from approximately 200 feet to possibly as much as 700 feet. The Bay Point is Pleistocene in age and was deposited in nearshore marine and onshore fluvial depositional environments.

The Bay Point Formation consists of an interbedded sequence of clay, silt, and silty sand to the total depth explored (approximately 30 feet). The strata are predominantly composed of reddish brown to yellowish brown clay and silt with some thin, discontinuous lenses of silty sand. The coarser-grained lenses are typically saturated below a depth of approximately 12 feet below ground surface (bgs) on the

portion of the Site occupied by Building 29. Groundwater on the vacant Bay Boulevard properties and Buildings 99/100 on the northern portion of Parcel A is deeper (approximately 16 feet or greater).

1.1.3 Site Hydrogeology

Groundwater is present in the Bay Point Formation ranging in depth from approximately 10 to 20 feet bgs, based on observations during drilling and water levels in the wells north of Building 99. The thickness of the vadose zone on Parcel A ranges from approximately 10 to 20 feet based on this information. The direction of groundwater flow is generally to the west. Wells present on Parcel A have been limited to those installed for the San Diego Formation aquifer testing program (URS Greiner Woodward-Clyde, 1999). Two monitoring wells remain north of Building 99 and serve as upgradient wells. OW-3 is screened in Upper Zone B at 10 to 30 feet bgs, and OW-4 is screened in Lower Zone B at 60 to 80 feet bgs.

1.2 SITE ASSESSMENT AND REMEDIATION

Site assessment activities on Parcel A have included soil, soil gas, and groundwater sampling as well as indoor air screening (Building 29) and were described in the Soil/Soil Gas CSM (Haley & Aldrich, 2021a) and the Revised Updated Sitewide CSM (Haley & Aldrich, 2022). Figure 3 is a sample location map that shows previous sampling locations and those included in this data gap investigation. Those sample locations included in this data gap investigation are distinguished from previous sample locations on Figure 3 using colored symbols with exploration IDs.

Site assessment activities on Parcel A have included environmental due diligence for property sales, the removal of and/or closure of underground storage tanks, and investigations conducted pursuant to CAO No. 98-08 issued to Rohr by the SDRWQCB in 1998 (Haley & Aldrich, 2016a; 2018a; 2021a, 2022). In 1999, Rohr acquired the vacant Bay Boulevard properties from the City of Chula Vista (City) as part of the Relocation Agreement with the City and the San Diego Unified Port District (Haley & Aldrich, 2016b, 2018b). In the early 2000s, the City obtained a "No Further Action" letter from the San Diego County Department of Environmental Health for lead-containing surficial soil that was remediated at 360 Bay Boulevard. The vacant Bay Boulevard properties were not used by Rohr after acquiring the properties from the City.

GSI Environmental Inc. (GSI) conducted a Phase II screening investigation on Parcel A (excluding 360, 364, and 368 Bay Boulevard) in August 2020 on behalf of the Owner (GSI, 2020). The investigation included additional soil and soil gas sampling and analyses. Seventeen soil gas samples (including two duplicate samples) were collected at 15 locations from depths between approximately 3 and 5 feet bgs and analyzed for VOCs. Trichloroethene (TCE) was the constituent detected at the highest concentrations in both the GSI and Haley & Aldrich soil gas assessments. The soil gas results were consistent with the data collected by Haley & Aldrich in 2018.

1.3 HUMAN HEALTH RISK ASSESSMENT

Haley & Aldrich conducted a baseline human health risk assessment (HHRA) for Parcel A that was considered when developing the Work Plan for this data gap investigation. The HHRA included two exposure areas: Building 99/100 Area (including 360, 364, and 368 Bay Boulevard) and the Building 29 Area (Haley & Aldrich, 2021b). Two scenarios were considered for the Building 99/100 Area: the buildings remain with continued commercial/industrial use, or the buildings are razed, and the area

redeveloped as surface parking. The results of the HHRA for the Building 99/100 exposure area indicated that no remediation or mitigation was necessary to protect the on-Site receptors. As such, the data figures prepared for this investigation focus on the Building 29 Area only.

The HHRA for the Building 29 exposure area assumed that the northern portion of Building 29 would be demolished to construct a loading dock. We understand that the Owner will be constructing the loading dock later this year. Health-based remediation goals (HBRGs) for the Building 29 exposure area were developed to for the on-Site commercial/industrial worker. The soil gas HBRGs for bromodichloromethane, chloroform, cis-1,2-dichloroethene (cis-1,2-DCE), tetrachloroethene (PCE), and TCE are 70, 80, 100, 370, and 350 micrograms per cubic meter ($\mu g/m^3$), respectively. An HBRG was derived for TCE in soil to reduce estimated human health risks for the on-Site construction worker from exposure during the construction of the new loading dock. The HBRG for TCE is 1.5 milligrams per kilogram (mg/kg). The Office of Environmental Health Hazard Assessment (OEHHA) reviewed the HHRA and summarized its comments in a memorandum to the SDRWCB dated March 8, 2021 (OEHHA, 2021a). Haley & Aldrich addressed OEHHA's comments and resubmitted a revised HHRA to the SDRWQCB May 4, 2021. On June 30, 2021, the OEHHA issued a memorandum to the SDRWQCB regarding its review of the revised HHRA (OEHHA, 2021b). OEHHA calculated risk and hazard estimates that were consistent with those calculated by Haley & Aldrich in the HHRA.

Haley & Aldrich updated the HHRA to include the data collected during this data gap investigation. As requested by the SDRWQCB, the HHRA will be issued as a complete, updated standalone document. The results of the update indicate that the HBRGs calculated for soil and soil gas at the Site remain unchanged. Therefore, the analytical results for the soil and soil gas samples collected during this data gap investigation are compared to these Site-specific values.

1.4 DATA GAPS

Historical chemical sources are coincident with former Site areas associated with long-term chemical usage, storage, and waste collection and discharge. As indicated in the Soil/Soil Gas and Revised Updated CSMs (Haley & Aldrich, 2021a, 2022), data gaps exist in vadose-zone soil, soil gas, indoor air, and groundwater in the Building 29 Area. These data gaps are associated with existing borings located at previously identified areas of concern. Data gaps in soil exist along the northern portion of Building 29 (historical borings B29-23 and B29-24) and in soil gas in the northern (historical probe PW-07), central (historical probes PW-09, B29-V09 and PW-12), and southern (historical probes PW-14, PW-15, B29-V16 and B29-V19) portions of Building 29. Soil gas is not a data gap in the northern portion of Building 29 where the new loading dock will be constructed since soil containing VOCs in this area will be remediated through excavation. A permanent monitoring well cluster has been installed in the vicinity of the northwestern portion of Building 29 where historical groundwater grab samples have been reported to contain TCE. Indoor air is also a data gap; however, sampling will be conducted in Building 29 once the building renovation has been completed, the impacted soil removed, and the SSDS installed prior to being occupied by a new tenant.

2. Scope of Work

Based on the data collected to date, the data gap investigation addressed vadose-zone soil, soil gas, and groundwater on the Building 29 Area of Parcel A. The scope of work described in the Work Plan included the following:

- Three step-out borings, advanced to approximately 5 feet bgs, adjacent to previous borings B29-23 and B9-24 where TCE in soil exceeds the Site-specific HBRG;
- Thirteen soil gas probes, installed at approximately 3 feet bgs to further characterize soil gas beneath Building 29; and
- One monitoring well cluster, consisting of a Zone A well and Upper Zone B well to monitor VOC concentrations downgradient of soil sources in Building 29.

3. Field Investigation

3.1 PRE-FIELD ACTIVITIES

Haley & Aldrich conducted the following pre-field activities:

- Obtained a permit through the San Diego Department of Environmental Health and Quality ([DEHQ]; Permit No. LMWP-005376) for the borings from which groundwater samples were collected and the monitoring wells;
- Updated the Site-specific Health and Safety Plan;
- Notified Dig Alert at least 48 hours prior to the field work (Ticket No. A220600312-00A); and
- Retained ULS CA, Inc., a utility locating subcontractor, to conduct a geophysical survey of the boring, soil gas probe, and monitoring well locations.

A copy of the DEHQ boring/well permit is provided in Appendix A. A 60-day report will be submitted to the DEHQ in accordance with the permit.

3.2 FIELD ACTIVITIES

The data gap investigation was conducted between March 4 and 29, 2022. Field procedures are described in the following sections.

3.2.1 Direct-Push Drilling and Sampling

Twenty-one borings were advanced using a direct-push rig by H&P Environmental Geochemistry (H&P), a California-licensed drilling subcontractor located in Carlsbad, California. H&P conducted concrete coring where necessary through Primetime Concrete Cutting of San Diego, California. The borings were logged by a Haley & Aldrich field geologist under the supervision of a California Certified Hydrogeologist in accordance with the Unified Soil Classification System (USCS; ASTM 2488-D). The number of samples collected and analyzed for each boring was evaluated based on field observations and photoionization detector readings. Boring logs are provided in Appendix B.

Four borings (DGA-005, DGA-012, DGA-018, and DGA-020) were converted to temporary groundwater wells to collect Zone A groundwater samples for analysis. The temporary groundwater wells consisted of 1-inch diameter, Schedule 40 polyvinyl chloride (PVC) pipe screened over the lower 5 feet. Groundwater was allowed to enter the well screen and was subsequently collected with a disposable bailer that was decanted into laboratory-supplied bottles. Once the sampling activities were completed, the borings were backfilled with hydrated bentonite and capped with concrete to match the existing surface. The borings were drilled at the approximate locations shown on Figure 3.

3.2.2 Temporary Soil Gas Probe Installation and Sampling

Thirty-two temporary soil gas probes were installed at 15 locations during the data gap investigation, four of which were installed as sub-slab at locations DGA-004, DGA-013, DGA-017, and DGA-021. The probe installation and soil gas sampling procedures were conducted in accordance with the July 2015

Department of Toxic Substances Control/Los Angeles Regional Water Quality Control Board document entitled, "Advisory – Active Soil Gas Investigations" (Cal/EPA 2015).

The sub-slab soil gas probes were installed by H&P to a depth of 1 foot below the bottom of the slab using a roto-hammer. Sand (1 to 6 inches) was placed in the bottom of the boring before installing ¼-inch-diameter Nylaflow® tubing fitted with a 1-inch-long non-reactive screen to prevent particulate infiltration. The annular space around the tubing was backfilled with approximately 2 to 6 inches of additional sand was then placed around the tubing inlet, and approximately 6 to 10 inches of dry granular bentonite was placed above the sand pack as a seal. The tubing was capped at the ground surface with airtight valves once installed.

The deeper, temporary soil gas probes were completed as a nested construction in a boring at depths of 2 and 5 feet bgs or 5 and 10 feet bgs. H&P installed the probes using a direct-push drill rig. Each probe consisted of a ¼-inch-diameter Nylaflow® tubing fitted with a 1-inch-long non-reactive screen to prevent particulate infiltration. The tubing was installed through the open boring to the desired bottom (i.e., 5 or 10 feet bgs) sampling depth. The boring was backfilled with 12 inches of sand pack around the screen, followed by 6 inches of dry bentonite. The boring was then filled with a hydrated bentonite seal to approximately 6 inches below the next targeted sampling depth. The shallow vapor probe (i.e., 2 or 5 feet bgs) was then installed in the same fashion as the deeper probe. Once the soil gas probe was completed, the tubing was capped with an air-tight valve. A schematic showing the typical soil gas probe constructions are provided in Appendix C.

Each temporary soil gas and sub-slab probe was allowed to equilibrate for a minimum of two hours prior to purging and sampling. Following two hours, each soil gas probe was leak-checked, and a shut-in test was performed prior to purging three purge volumes and sampling. One purge volume includes the volume of the interior tube and probe tip as well as the void space of the sand pack surrounding it. Each soil gas sample was collected in a glass syringe for analysis by H&P's on-Site mobile laboratory. Once the soil gas sampling was completed, the tubing was removed, and the borings were backfilled using hydrated bentonite and capped at the surface with concrete.

3.2.3 Well Cluster Installation

One cluster well was installed to monitor the dissolved TCE plume in Zone A and Upper Zone B groundwater downgradient (west) of soil and soil gas impacts in the northwestern portion of Building 29 at the location shown on Figure 3. The cluster well was installed by Cascade Environmental a California-licensed drilling subcontractor located in Upland, California. The drilling was observed by a Haley & Aldrich field engineer under the oversight of a California Certified Hydrogeologist. The field engineer logged the Upper Zone B boring in accordance with the USCS (ASTM 2488-D). The Zone A well was not logged since it is immediately adjacent to the Upper Zone B well. Monitoring well logs are provided in Appendix B.

The wells were installed using a hollow-stem auger drill rig equipped with 8-inch-diameter augers. The wells were constructed of 4-inch-diameter, Schedule 40 PVC casing with the lower 10 feet consisting of 0.010-inch slots. The well annulus was backfilled with Lonestar No. 2/12 sand to a level of approximately 2 feet above the screen. A 2- to 3-foot bentonite seal was placed above the filter pack. The remainder of the annulus was backfilled with concrete into which a traffic-rated cover was set in accordance with the DEHQ Site Assessment and Mitigation (SAM) Manual.

Once installed, the wells were developed by surging and bailing until the water was free of fine-grained sediment and turbidity. Well development logs are provided in Appendix D. Each was purged by the low-flow method described in the SAM Manual. Depth to water was measured to the nearest 0.01 foot using an electronic water level indicator. The monitoring wells will be added to AECOM's groundwater monitoring and sampling program and sampled later this year.

3.3 WORK PLAN MODIFICATIONS

Additional soil, soil gas and groundwater sampling were conducted to assess the vertical extent of VOC concentrations in vadose-zone soil and evaluate whether the VOCs in soil gas may be attributed to soil impacts not previously identified or off-gassing from shallow groundwater. To accomplish this, Haley & Aldrich installed:

- Dual gas probes at ten locations at approximately 2 and 5 feet bgs;
- Triple gas probes at 4 locations at approximately 1 (sub-slab), 5, and 10 feet bgs; and
- Temporary wells at 4 locations to sample and analyze first encountered groundwater. Previous groundwater sampling on Parcel A was conducted at depths ranging from 20 to 25 feet and did not represent first encountered groundwater.

The dual and triple gas probes were completed rather than sampling at a single sampling depth of 3 feet bgs as proposed in the Work Plan. Soil samples at each probe depth and the first encountered groundwater samples were analyzed for VOCs by U.S. Environmental Protection Agency (EPA) Method 8260B.

3.4 INVESTIGATION-DERIVED WASTE

Investigation-derived waste was managed in accordance with CAO Directive L.2. Soil cuttings were placed in Department of Transportation-approved 55-gallon drums and temporarily stored at a location north of Building 29. The soil cuttings (8 drums), asphalt (5 drums) and wastewater (5 drums) were profiled and disposed as Non-Department of Transportation/Non-Resource Conservation Recovery Act waste by Heritage at the Rineco facility in Benton, Arkansas. Copies of manifests are provided in Appendix E.

3.5 PROFESSIONAL SURVEY

The direct-push borings, temporary probe locations, and the monitoring wells were professionally surveyed on March 29, 2022, by J.B. Koenig and Associates of Anaheim, California. Some of the boring and probe locations from past investigations were also professionally surveyed. Top-of-cover and top-of-casing elevations for the two new monitoring wells were professionally surveyed. A copy of the survey is provided in Appendix F.

4. Laboratory Analyses and Results

4.1 LABORATORY ANALYSES

Soil and groundwater laboratory analyses were performed by Eurofins Calscience of Tustin, California, and soil gas samples were analyzed by H&P's mobile laboratory located on Site. Each laboratory is Environmental Laboratory Accreditation Program-certified as required by Directive L.4 of the CAO. The analyses were conducted using analytical methods approved by the EPA for the analyses performed. Laboratory reports include the information specified in Directive L.5 of the CAO.

Soil samples from the direct-push and well cluster borings were analyzed for VOCs by EPA Method 8260B. The soil gas samples were analyzed for VOCs by EPA Method 8260B. Groundwater samples from the temporary wells were also analyzed for VOCs by EPA Method 8260B.

Groundwater samples from the well cluster will be collected and analyzed by AECOM as part of the groundwater monitoring and sampling program (AECOM, 2017). The groundwater samples will be analyzed for VOCs, 1,4-dioxane, Title 22 Metals, and hexavalent chromium by EPA Methods 8260B, 8260B-SIM, 6000/7000 series, and 7199, respectively. The analytical results will be included in the Annual Groundwater Monitoring Report prepared by AECOM.

4.2 LABORATORY ANALYTICAL RESULTS

Laboratory analytical reports and chain of custody forms for soil and groundwater samples analyzed during the data gap investigations are provided in Appendix G. Soil gas sample analytical reports and chain of custody forms are provided in Appendix H. Tables summarizing soil and soil gas data collected during this investigation are included in Appendix I. The data in the tables in Appendix I are arranged based on the location in Building 29: south, central and north.

4.2.1 Soil

Soil analytical results summarized in Table I-1 indicate that detectable VOC concentrations in the borings drilled during this data gap investigation were very limited. TCE concentrations reported in the soil samples analyzed during this and previous investigations in Building 29 are shown on Figures 4A, 4B and 4C for the northern, central and southern portions of Building 29, respectively. Ranges in TCE concentrations are noted showing a color gradation for the boring locations so that the HBRG and Groundwater Protection Level (GPL) soil exceedances can be easily identified.

One or more VOCs were detected in 11 of 52 samples analyzed. The compounds detected (with the number of samples in parentheses) and detected ranges were as follows:

- TCE (11): ranging from 0.0029 mg/kg to 0.58 mg/kg;
- Chloroform (4): ranging from 0.0011 mg/kg to 0.0024 mg/kg;
- Cis-1,2-DCE (1): 0.0027 mg/kg; and
- PCE (1): 0.0011 mg/kg.

The highest TCE soil concentrations were detected in the step-out borings in DGA-024 (1 foot bgs; 0.43 mg/kg) and DGA-025 (1.5 feet bgs; 0.58 mg/kg), situated around B29-23 and B29-24 in the northern portion of the building (Former Maintenance Department). Acetone was also reported in 7 soil samples at low concentrations (at or slightly above the reporting limit) ranging from 0.021mg/kg to 0.054 mg/kg. Acetone detected at low concentrations is often a laboratory contaminant.

4.2.2 Soil Gas

The soil gas sample analytical results are summarized in Table I-2. One or more VOC was reported in each of the samples analyzed during the data gap investigation. The VOCs detected included PCE, TCE, cis-1,2-DCE, trans-1,2-DCE, 1,1,1-trichloroethane (1,1,1-TCA), 1,1-dichloroethane (1,1-DCA), 1,1-dichlorethene (1,1-DCE), chloroform, vinyl chloride, benzene, toluene, and 1,1 difluoroethane. The number of locations (indicated in parentheses) and ranges in the VOC concentrations reported in the soil gas samples were the following:

- TCE (12): 33 to 18,000 µg/m^3;
- PCE (7): 20 to 770 µg/m^3;
- Chloroform (7): 23 to 190 µg/m^3;
- 1,1,1-TCA (4): 140 to 3,300 µg/m^3;
- Cis-1,2-DCE (3): 180 to 140,000 µg/m^3;
- Vinyl chloride (2): 30 to 420 µg/m^3;
- 1,1-DCA (2): 100 to 750 µg/m^3;
- 1,1-DCE (2): 130 to 650 µg/m^3;
- Benzene (13): 20 to 89 µg/m^3;
- Toluene (2): 200 to 230 µg/m^3; and
- 1,1-Difluoroethane (1); 110 µg/m^3.

5. Discussion

5.1 SOIL

The Site soil data have been compared to the following:

- HBRGs developed in the HHRA prepared by Haley & Aldrich and dated May 4, 2021 (Haley & Aldrich, 2021b),
- GPLs developed for the Former South Campus for VOCs (Haley & Aldrich, 2014a, 2014b),
- Total Threshold Limit Concentration (TTLCs) appearing in California Code of Regulations (CCR) Title 22 Section 66261.24 – Characteristic of Toxicity.

The VOC GPLs for the Former South Campus should be relevant for the North Campus since the operations were the same as the South Campus (they were the same facility) and the hydrogeology and soil types are very similar. GPLs for vadose zone soil are summarized in Table 10 of the "Revised Soil Remedial Action Plan" for the northern portion of the South Campus (Haley & Aldrich, 2018c). The HHRA developed an HBRG for TCE for the construction worker scenario. This HBRG is 1.5 mg/kg. The GPLs and TTLCs for VOCs are included in Table I-1. Table I-1 also includes the commercial/industrial California Department of Toxic Substances Control – Screening Levels (DTSC-SLs) for reference only, since a Site-specific HBRG for TCE was developed in the HHRA.

Table 1A summarizes the TCE analytical results for the data gap borings in the Former Maintenance Department, referred to as the northern portion of Building 29. The results for step-out borings follow to the right of the previous exceedances in Table 1A. The previous borings with TCE HBRG and GPL exceedances are noted for the northern portion of Building 29 in blue at the top of Table 1A.

It should be noted that there were no TCE HBRG or GPL exceedances in soil elsewhere in Building 29. The additional soil samples analyzed in Building 29 were not step-out borings, but were drilled and sampled to identify whether there may be VOC sources in soil that are associated with the VOCs that have been reported in soil gas in these areas. Therefore, the full list of VOCs is reported in Tables 1B and 1C for the central and southern portions of Building 29, respectively.

As shown in Table 1A, none of the TCE soil concentrations in the step-out samples around borings B29-23 and B29-24 analyzed during the data gap investigation exceeded the HBRG of 1.5 mg/kg. None of the VOCs exceeded its respective commercial/industrial DTSC-SL, GPL, or TTLC (see Table I-1). The step-out borings in the northern portion of the building (DGB-024, DGB-025, and DGB-026, see Table 1A and Figure 4A) have delineated TCE impacts in the Former Maintenance Department, considering that TCE-containing soil that lies beneath this portion of Building 29 will be removed during construction of a new loading dock by the Owner. This TCE-containing soil appears to extend to a depth less than 4 feet bgs based on the soil analytical results for the borings in the Former Maintenance Department.

The soil analytical results for the temporary soil gas probes in the central and southern portions of the building (see Tables 1B and 1C and Figures 4B and 4C) have not identified additional soil sources that could be contributing to VOCs observed in soil gas in these areas. Based on the results of this data gap investigation, no further soil investigation is recommended at this time.

Soil beneath the northern portion of Building 29 will be excavated and removed under a Demolition and Environmental Management Plan (DEMP). Construction will require excavation to an approximate depth of 5 feet bgs in the northern 24,000 square feet of Building 29. Following excavation, confirmation sampling will be conducted. The soil will be disposed at an appropriate landfill. As a result of this remedial action, a source of VOCs in soil and soil gas will be removed and therefore no longer pose a potential vapor intrusion risk to building occupants.

5.2 SOIL GAS

Step-out soil gas samples were collected and analyzed in the vicinity of previous locations where certain VOCs were reported at concentrations that exceeded their respective HBRGs developed in the HHRA. These previous locations in Building 29 included:

- North: PW-07;
- Central: PW-09, B29-V09, and PW-12; and,
- South: PW-14, PW-15, B29-V16, and B29-V19.

VOCs in B29-V07 and PW-06 were also reported to exceed HRBGs but were not investigated because the building will be demolished and the VOC-containing soil in this area will be excavated to construct the new loading dock that was previously described.

As noted in Section 1.3, the HRBGs derived for soil gas in the HHRA included the following:

- Bromodichloromethane – 70 µg/m^3;
- Chloroform – 80 µg/m^3;
- Cis-1,2-DCE – 100 µg/m^3;
- PCE – 370 µg/m3; and
- TCE - 350 µg/m3.

Tables 2A, 2B, and 2C summarize the soil gas analytical results for the samples collected and analyzed during this data gap investigation for the northern, central, and southern portions of Building 29, respectively. The tables include those VOCs that have exceeded their respective soil gas HBRGs in Building 29. Previous locations with HBRG exceedances are included in the tables and noted at the top of the tables in blue. Step-out borings associated with these previous borings are noted at the top of the tables in yellow. Figure 5 compares reported VOC concentrations to their respective HBRGs. The VOCs and concentrations that exceeded their respective HBRGs are noted on the figure.

VOCs were reported in the step-out and other soil gas probes at concentrations that exceed their respective HBRGs, but in general, the concentrations showed a decrease compared to the previous borings. In the northern portion of Building 29 (Table 2A), step-out probes DGA-021 and DGA-022 were advanced adjacent to PW-07. HBRG exceedances were noted for chloroform (DGA-022), PCE (DGA-021), and TCE (DGA-021 and DGA-022).

In the central portion of Building 29 (Table 2B), the step-outs at DGA-013, DGA-014, and DGA-015 were sampled to provide further horizontal and vertical assessment in the vicinity of previous probe PW-12, where certain VOCs exceeded their respective HBRGs. No VOCs exceeded their respective HBRGs at the step-out locations. Step-out probes DGA-016, DGA-017, and DGA-019 were advanced in the vicinity of

PW-09 and B29-V09. HBRG exceedances were noted for chloroform (DGA-017) and TCE (DGA-016, DGA-017, and DGA-019). TCE concentrations reported for the step-out probes were lower than those reported in PW-09 and B29-V09.

In the southern portion of Building 29 (Table 2C), temporary soil gas probes at DGA-003, DGA-004, DGA-007, DGA-008, DGA-009, and DGA-011 were installed and sampled to provide further horizontal and vertical assessment of VOCs in soil gas at previous borings PW-14, PW-15, B29-V16, and B29-V19. HBRG exceedances in soil gas were noted for chloroform (DGA-007), cis-1,2-DCE (DGA-004, DGA-009, and DGA-011), and TCE (DGA-004, DGA-007, DGA-008, DGA-009, and DGA-010). No VOCs were reported at DGA-003 in concentrations exceeding HBRGs.

The Owner will address potential vapor intrusion risk by installing an SSDS in Building 29 prior to building occupancy by a new tenant. The SSDS is a requirement of the Purchase and Sale Agreement (PSA) for Parcel A between Rohr and the Owner.

5.3 GROUNDWATER

Groundwater samples were collected at four locations to evaluate whether VOC soil gas concentrations may be attributed to off-gassing from shallow groundwater at locations where certain soil gas samples exceeded HBRGs. Groundwater sample analytical results are summarized in Table 3. The samples were collected in the following portions of Building 29: north (DGA-020, in an area that will remain after constructing the new loading dock), central (DGA-012 and DGA-018), and south (DGA-005). Of the four groundwater samples analyzed, three (DGA-005, DGA-018, and DGA-020) contained TCE above its Maximum Contaminant Level (MCL) for drinking water at concentrations ranging from 7.2 to 340 micrograms per liter (µg/L). The groundwater sample from DGA-005 also exceeded the MCL for cis-1,2-DCE (38 µg/L) and 1,1-DCA (6.8 µg/L). The groundwater sample from DGA-005 was the only sample that exceeded a commercial/industrial vapor intrusion Environmental Screening Level (TCE, 340 µg/L). DGA-005 is immediately downgradient (west) of the former Blanchard Grinder that was closed in place under permit with the Department of Environmental Health in 1999.

Groundwater is present beneath the Site at depths greater than 10 feet bgs. A composite TCE groundwater contour map is provided as Figure 6. The figure shows groundwater TCE concentrations detected in the data gap and previous groundwater samples analyzed on the Building 29 portion of Parcel A. VOCs present in groundwater are contributing to potential vapor intrusion risks for future building occupants based on the soil gas results for 10-foot probes sampled in the northern and southern portions of Building 29. The SSDS installed by the Owner will address the potential future vapor intrusion risk to building occupants that may result from VOC off-gassing from groundwater.

6. Conclusions and Recommendations

The results of the Parcel A data gap investigation indicate the following for soil, soil gas, and Zone A groundwater:

6.1 SOIL

TCE exceeding the HBRG in the Former Maintenance Department in the northern portion of Building 29 has been delineated. None of the samples collected from the step-out borings (DGA-024, DGA-025, and DGA-026) were reported to contain TCE or other VOCs at concentrations above its respective HBRG, commercial/industrial DTSC-SL, GPL, or TTLC. Based on the data for the Former Maintenance Department, the area with soil impacts is limited to depths less than 4 feet bgs. VOC concentrations beneath the central and southern portions of Building 29 were either not detected in soil, or the concentrations were relatively low, supporting that soil is not a significant VOC source contributing to those present in soil gas.

As discussed with the SDRWQCB, the affected soil in the Former Maintenance Department (northern portion of Building 29) will be excavated under a DEMP during construction of the new loading dock. The DEMP will be prepared and submitted to the SDRWQCB for approval. The DEMP will be implemented during the loading dock construction project prior to removing the building slab in this area. The upper 5 feet of soil is planned to be excavated in a 24,000-square-foot area on the northern end of Building 29 and will address TCE impacts to soil that data indicate are limited to depths shallower than 4 feet. Following excavation, soil confirmation sampling will be conducted. The excavated soil will be disposed at a permitted landfill. Based on the results of the data gap investigation and the proposed remedial action that will be completed through implementing the DEMP, no further soil investigation on Parcel A is necessary at this time.

6.2 SOIL GAS

The data indicate that there are soil gas VOC concentrations that are above the HBRGs beneath the building. The excavation of soil sources when implementing the DEMP and installing an SSDS below the building slab as required by the PSA between Rohr and the Owner will address the potential for vapor intrusion and be protective of future building occupants. Based on these remedial and mitigation actions, no further soil gas investigation is recommended at this time.

A plan will be submitted that will describe the installation and footprint of the SSDS. Indoor air sampling will be conducted in Building 29 prior to occupancy by a new tenant as required by the CAO. A Risk Management Plan (RMP) will also be prepared and implemented to address potential future vapor intrusion risk to building occupants. The RMP will include:

- An SSDS post-installation monitoring and performance evaluation plan that will describe and establish a sub-slab soil gas and indoor air monitoring and sampling program;
- Restrictions on changes to the existing building;
- A Contingency Plan;
- Post-installation monitoring and performance reports, and a Post-Mitigation Completion Report; and

- The preparation and filing of a deed restriction that refers to the RMP.

6.3 GROUNDWATER

The VOCs in groundwater detected at the four locations sampled during the data gap investigation were relatively low, delineating groundwater impacts beneath Building 29 in the Former Maintenance Department in the northern portion of the building where there are TCE soil and soil gas impacts, and the central and southwestern portion of the building where there are lesser groundwater and soil gas impacts. Based on these and previous groundwater analytical results, groundwater off-gassing appears to contribute to the VOCs reported in soil gas beneath the northern and southwestern portions of Building 29. The potential for future vapor intrusion risk to building occupants will be addressed by installing the SSDS and implementing the RMP previously described.

Groundwater monitoring will be conducted in well cluster NCW-021 downgradient (west) of the existing soil sources in Building 29. These wells will be sampled as part of the annual groundwater monitoring program performed by AECOM for the facility (AECOM, 2017). Analytical results for the parameters indicated in the Work Plan will be included in the next annual groundwater monitoring report.

TABLES

TABLE 1A
SOIL ANALYTICAL RESULTS - BUILDING 29 NORTH
ROHR, INC. - NORTH CAMPUS, PARCEL A
CHULA VISTA, CALIFORNIA

					Previous Borings				Step-out Borings					
Location			Commercial/		B29-23		B29-24		DGA-024			DGA-025		
Sample Name	Background [1]	GPL	Industrial	TTLC	B29-23-010	B29-23-050	B29-24-010	B29-24-050	DGA-024-1	DGA-024-3	DGA-024-4.5	DGA-025-1.5	DGA-025-3	DGA-025-5
Sample Date			DTSC SL[2]		1/10/2020	1/10/2020	1/14/2020	1/14/2020	03/10/2022	03/10/2022	03/10/2022	03/10/2022	03/10/2022	03/10/2022
Sample Depth (bgs)					1 (ft)	5 (ft)	1 (ft)	5 (ft)	1 (ft)	3 (ft)	4.5 (ft)	1.5 (ft)	3 (ft)	5 (ft)
Trichloroethene (see Note 2)	-	27	6 [3]	2040	**37.8** [A,B]	**0.0502**	**7.83**[B]	**0.0925**	**0.43**	**0.16**	**0.041**	**0.58**	**0.051**	**0.033**

Notes:

1. Detected results were screened against the following criteria. Exceedances are shaded gray and flagged in [ ]:
[A]: Result is greater than Groundwater Protection Level (GPL), (Haley & Aldrich 2014a, 2014b).
[B]: Result is greater than Commercial/Industrial Department of Toxic Substances Control Screening Level, HHRA Note 3, June 2020 - Revised May 2022.
[C]: Result is greater than Total Threshold Limit Concentration (TTLC), CCR Title 22 Section 66261.24.
2. Detected results for trichloroethene (TCE) were also compared to the Health-Based Remediation Goal (HBRG) of 1.5 mg/kg (Haley & Aldrich, 2021b). Results shown in this table do not exceed the HBRG for TCE.

Footnotes:

[1] Site background
[2] Cancer Endpoint. If there is no Cancer Endpoint, the Noncancer Endpoint is noted.
[3] U.S. EPA Region 9 Remediation Screening Level

Abbreviations:

BOLD = concentration detected at or above reported detection limit.
< = analyte not detected above the indicated reporting limit.
F1 = MS and/or MSD recovery exceeds control limits.
F2 = MS/MSD RPD exceeds control limits
*+ = LCS and/or LCSD is outside acceptance limits, high biased.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes:

1. Detected results were screened against the following criteria. Exceedances are shaded gray and flagged in [ ]:
   [A]: Result is greater than Groundwater Protection Level (GPL), (Haley & Aldrich 2014a, 2014b).
   [B]: Result is greater than Commercial/Industrial Department of Toxic Substances Control Screening Level, HHRA Note 3, June 2020 - Revised May 2022.
   [C]: Result is greater than Total Threshold Limit Concentration (TTLC), CCR Title 22 Section 66261.24.
2. Detected results for trichloroethene (TCE) were also compared to the Health-Based Remediation Goal (HBRG) of 1.5 mg/kg (Haley & Aldrich, 2021b). Results shown in this table do not exceed the HBRG for TCE.

Footnotes:

[1] Site background
[2] Cancer Endpoint. If there is no Cancer Endpoint, the Noncancer Endpoint is noted.
[3] U.S. EPA Region 9 Remediation Screening Level

Abbreviations:

BOLD = concentration detected at or above reported detection limit.
< = analyte not detected above the indicated reporting limit.
F1 = MS and/or MSD recovery exceeds control limits.
F2 = MS/MSD RPD exceeds control limits
*+ = LCS and/or LCSD is outside acceptance limits, high biased.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes:

1. Detected results were screened against the following criteria. Exceedances are shaded gray and flagged in [ ]:
   [A]: Result is greater than Groundwater Protection Level (GPL), (Haley & Aldrich 2014a, 2014b).
   [B]: Result is greater than Commercial/Industrial Department of Toxic Substances Control Screening Level, HHRA Note 3, June 2020 - Revised May 2022.
   [C]: Result is greater than Total Threshold Limit Concentration (TTLC), CCR Title 22 Section 66261.24.
2. Detected results for trichloroethene (TCE) were also compared to the Health-Based Remediation Goal (HBRG) of 1.5 mg/kg (Haley & Aldrich, 2021b). Results shown in this table do not exceed the HBRG for TCE.

Footnotes:

[1] Site background
[2] Cancer Endpoint. If there is no Cancer Endpoint, the Noncancer Endpoint is noted.
[3] U.S. EPA Region 9 Remediation Screening Level

Abbreviations:

BOLD = concentration detected at or above reported detection limit.
< = analyte not detected above the indicated reporting limit.
F1 = MS and/or MSD recovery exceeds control limits.
F2 = MS/MSD RPD exceeds control limits
*+ = LCS and/or LCSD is outside acceptance limits, high biased.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes:

1. Detected results were screened against the following criteria. Exceedances are shaded gray and flagged in [ ]:
   [A]: Result is greater than Groundwater Protection Level (GPL), (Haley & Aldrich 2014a, 2014b).
   [B]: Result is greater than Commercial/Industrial Department of Toxic Substances Control Screening Level, HHRA Note 3, June 2020 - Revised May 2022.
   [C]: Result is greater than Total Threshold Limit Concentration (TTLC), CCR Title 22 Section 66261.24.
2. Detected results for trichloroethene (TCE) were also compared to the Health-Based Remediation Goal (HBRG) of 1.5 mg/kg (Haley & Aldrich, 2021b). Results shown in this table do not exceed the HBRG for TCE.

Footnotes:

[1] Site background
[2] Cancer Endpoint. If there is no Cancer Endpoint, the Noncancer Endpoint is noted.
[3] U.S. EPA Region 9 Remediation Screening Level

Abbreviations:

BOLD = concentration detected at or above reported detection limit.
< = analyte not detected above the indicated reporting limit.
F1 = MS and/or MSD recovery exceeds control limits.
F2 = MS/MSD RPD exceeds control limits
*+ = LCS and/or LCSD is outside acceptance limits, high biased.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes:

1. Detected results were screened against the following criteria. Exceedances are shaded gray and flagged in [ ]:
   [A]: Result is greater than Groundwater Protection Level (GPL), (Haley & Aldrich 2014a, 2014b).
   [B]: Result is greater than Commercial/Industrial Department of Toxic Substances Control Screening Level, HHRA Note 3, June 2020 - Revised May 2022.
   [C]: Result is greater than Total Threshold Limit Concentration (TTLC), CCR Title 22 Section 66261.24.
2. Detected results for trichloroethene (TCE) were also compared to the Health-Based Remediation Goal (HBRG) of 1.5 mg/kg (Haley & Aldrich, 2021b). Results shown in this table do not exceed the HBRG for TCE.

Footnotes:

[1] Site background
[2] Cancer Endpoint. If there is no Cancer Endpoint, the Noncancer Endpoint is noted.
[3] U.S. EPA Region 9 Remediation Screening Level

Abbreviations:

BOLD = concentration detected at or above reported detection limit.
< = analyte not detected above the indicated reporting limit.
F1 = MS and/or MSD recovery exceeds control limits.
F2 = MS/MSD RPD exceeds control limits
*+ = LCS and/or LCSD is outside acceptance limits, high biased.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes:

1. Detected results were screened against the following criteria. Exceedances are shaded gray and flagged in [ ]:
   [A]: Result is greater than Groundwater Protection Level (GPL), (Haley & Aldrich 2014a, 2014b).
   [B]: Result is greater than Commercial/Industrial Department of Toxic Substances Control Screening Level, HHRA Note 3, June 2020 - Revised May 2022.
   [C]: Result is greater than Total Threshold Limit Concentration (TTLC), CCR Title 22 Section 66261.24.
2. Detected results for trichloroethene (TCE) were also compared to the Health-Based Remediation Goal (HBRG) of 1.5 mg/kg (Haley & Aldrich, 2021b). Results shown in this table do not exceed the HBRG for TCE.

Footnotes:

[1] Site background
[2] Cancer Endpoint. If there is no Cancer Endpoint, the Noncancer Endpoint is noted.
[3] U.S. EPA Region 9 Remediation Screening Level

Abbreviations:

BOLD = concentration detected at or above reported detection limit.
< = analyte not detected above the indicated reporting limit.
F1 = MS and/or MSD recovery exceeds control limits.
F2 = MS/MSD RPD exceeds control limits
*+ = LCS and/or LCSD is outside acceptance limits, high biased.
- = not analyzed or not applicable.
mg/kg = milligrams per kilogram.
bgs = below ground surface.

Notes:

1. Detected results were screened against the following criteria. Exceedances are shaded gray and flagged in [ ]:
   [A]: Result is greater than California MCL.
   [B]: Result is greater than ESL Groundwater Vapor Intrusion for Commercial/Industrial, July 2019 (Rev. 2).

Abbreviations:

BOLD = concentration detected at or above reported detection limit.
< = analyte not detected above the indicated reporting limit.
*+ = LCS and/or LCSD is outside acceptance limits, high biased.
- = not analyzed or not applicable.
µg/L = micrograms per liter.
bgs = below ground surface.

APPENDIX A

DEHQ Boring/Well Permit

PERMIT # LMWP-005376
A.P.N. #: 571-330-35-00
EST #: RWQCB

COUNTY OF SAN DIEGO
DEPARTMENT OF ENVIRONMENTAL HEALTH & QUALITY
LAND AND WATER QUALITY DIVISION
MONITORING WELL PROGRAM

MONITORING WELL/BORING CONSTRUCTION PERMIT

SITE NAME: ROHR, INC, A COLLINS AEROSPACE COMPANY

SITE ADDRESS: 0 G ST, CHULA VISTA, CA 91910

PERMIT FOR: **CONSTRUCTION OF MONITORING WELLS (2) & SOIL BORINGS (5)**

PERMIT APPROVAL DATE: 2/28/2022

PERMIT EXPIRES ON: 6/28/2022

RESPONSIBLE PARTY: ROHR, INC, A COLLINS AEROSPACE COMPANY (TYLER ADKINS)

PERMIT TERMS:

1. Wells must have a **minimum 3-foot concrete surface seal**. The surface seal shall consist of concrete able to withstand the maximum anticipated load without cracking or deteriorating. The concrete should meet Class A specifications of a minimum 4000-pound compressive strength. **Bentonite slurries are not an acceptable annular sealing material in the unsaturated zone.**

2. All borings must be sealed from the bottom of the boring to the ground surface with an approved sealing material as specified in California Well Standards Bulletin 74-90, Part III, Section 19.D. **Drill cuttings are not an acceptable fill material. Bentonite slurries are not an acceptable fill material in the unsaturated zone.**

3. All borings must be properly destroyed within 24 hours of drilling.

4. Placement of any sealing material at a depth greater than 30 feet must be done using the tremie method.

5. This work is not connected to any known unauthorized release of hazardous substances. Any contamination found in the course of drilling and sampling must be reported to the DEHQ. All water and soil resulting from the activities covered by this permit must be managed, stored and disposed of as specified in the SAM Manual in Section 5, II, D-4**.** In addition, drill cuttings must be properly handled and disposed in compliance with the Stormwater Best Management Practices of the local jurisdiction.

6. Within 60 days of completing work, submit a well construction report, including all well and/or boring logs and laboratory data to the Well Permit Desk. This report must include all items required by the SAM Manual, Section 5, Pages 6 & 7.

7. This office must be given 24-hour notice of any drilling activity on this site and advanced notification of drilling cancellation. Please contact the Well Permit Desk at (858) 505-6688.

NOTE: **This permit does not constitute approval of a work plan as defined in Section 2722 of Article 11 of C.C.R., Title 23. Work plans are required for all unauthorized release investigations in San Diego County.**

NUMBER OF WELLS _____ **TYPE OF WELLS** _____

G. QUESTIONNAIRE: Please answer all applicable questions completely *and submit any required supportive documentation*.

1. What is the purpose of the well/boring investigation?

☒ a. Part of an ongoing site assessment case in which a government regulator is the lead agency. If yes, indicate which government regulator is the lead agency and the case number.

- ☐ Department of Environmental Health _____
- ☒ Regional Water Quality Control Board T10000011095
- ☐ Department of Toxic Substances Control _____

☐ b. Part of a Phase I investigation for property ownership transfer.

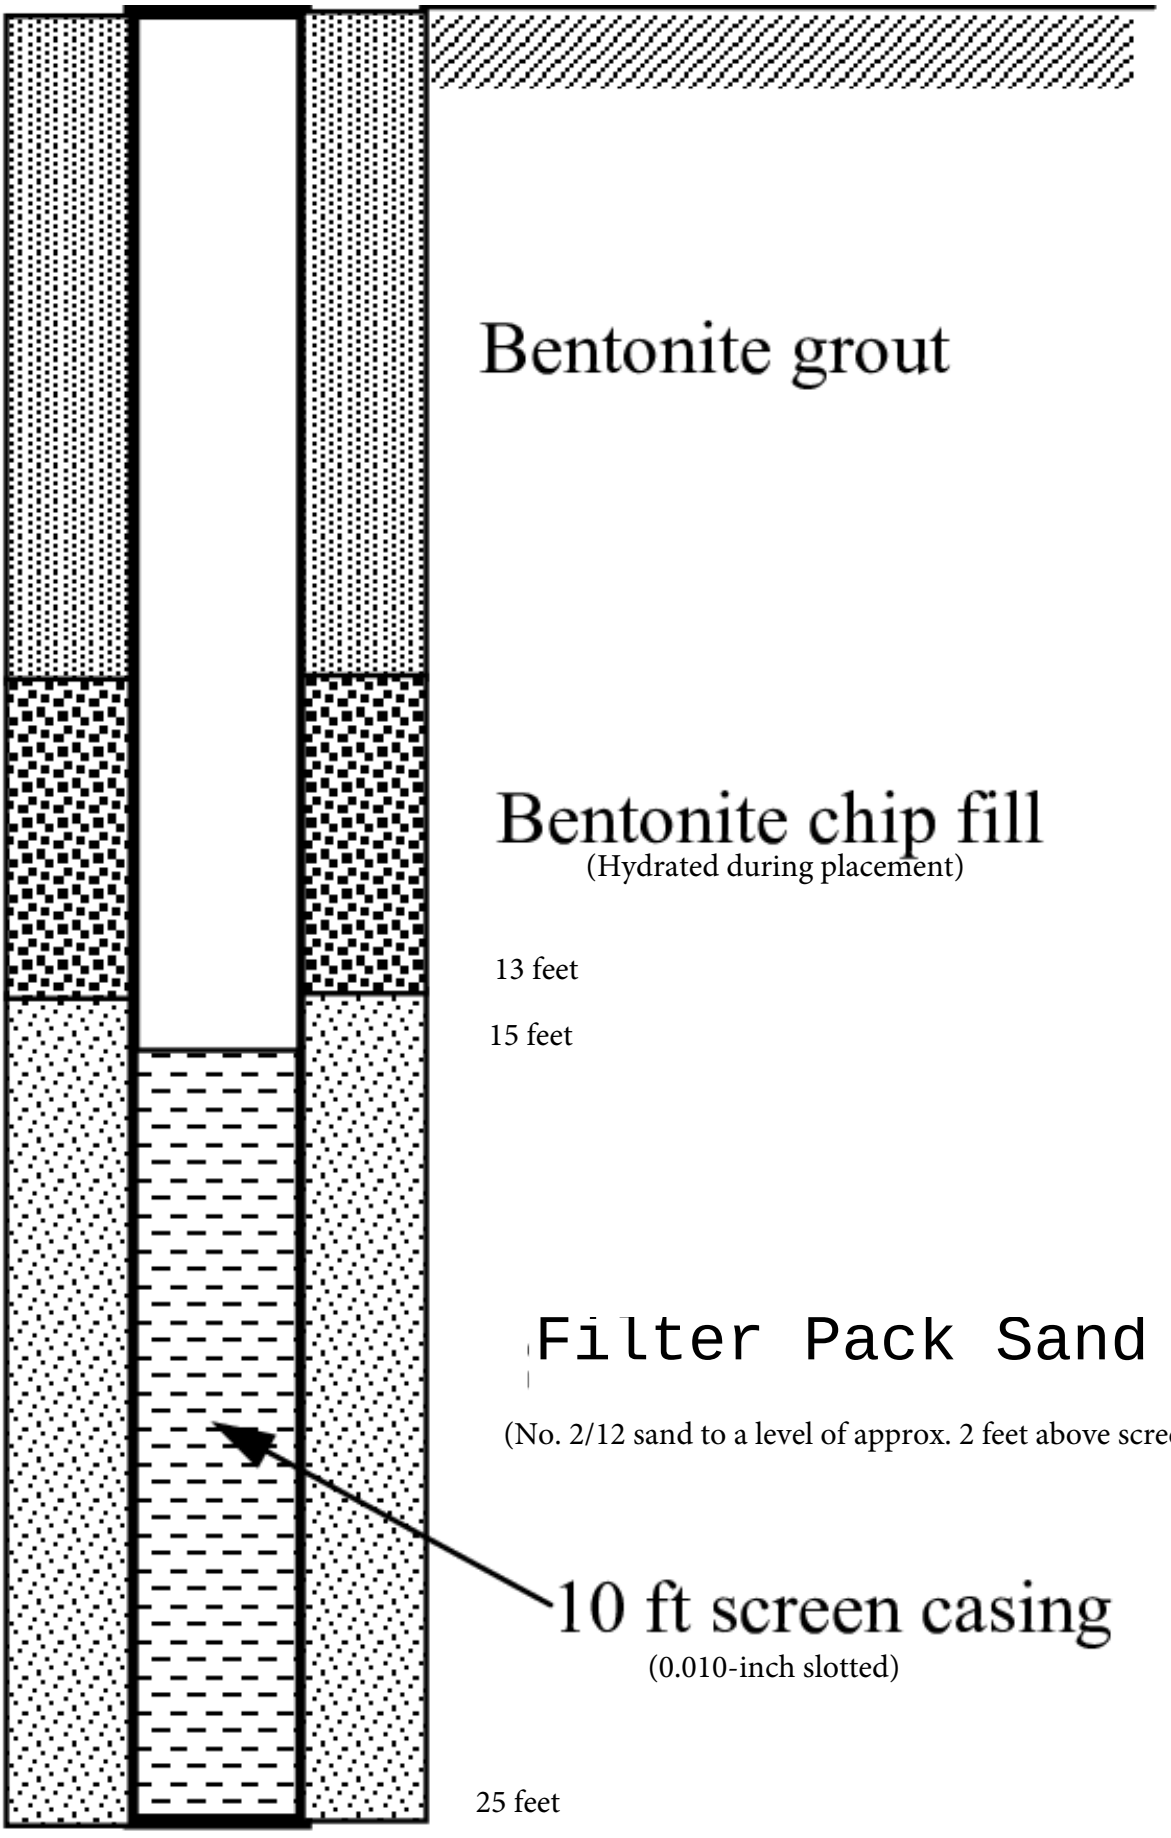
☐ c. Geotechnical investigation for proposed construction or land stabilization.

☐ d. Other: _____

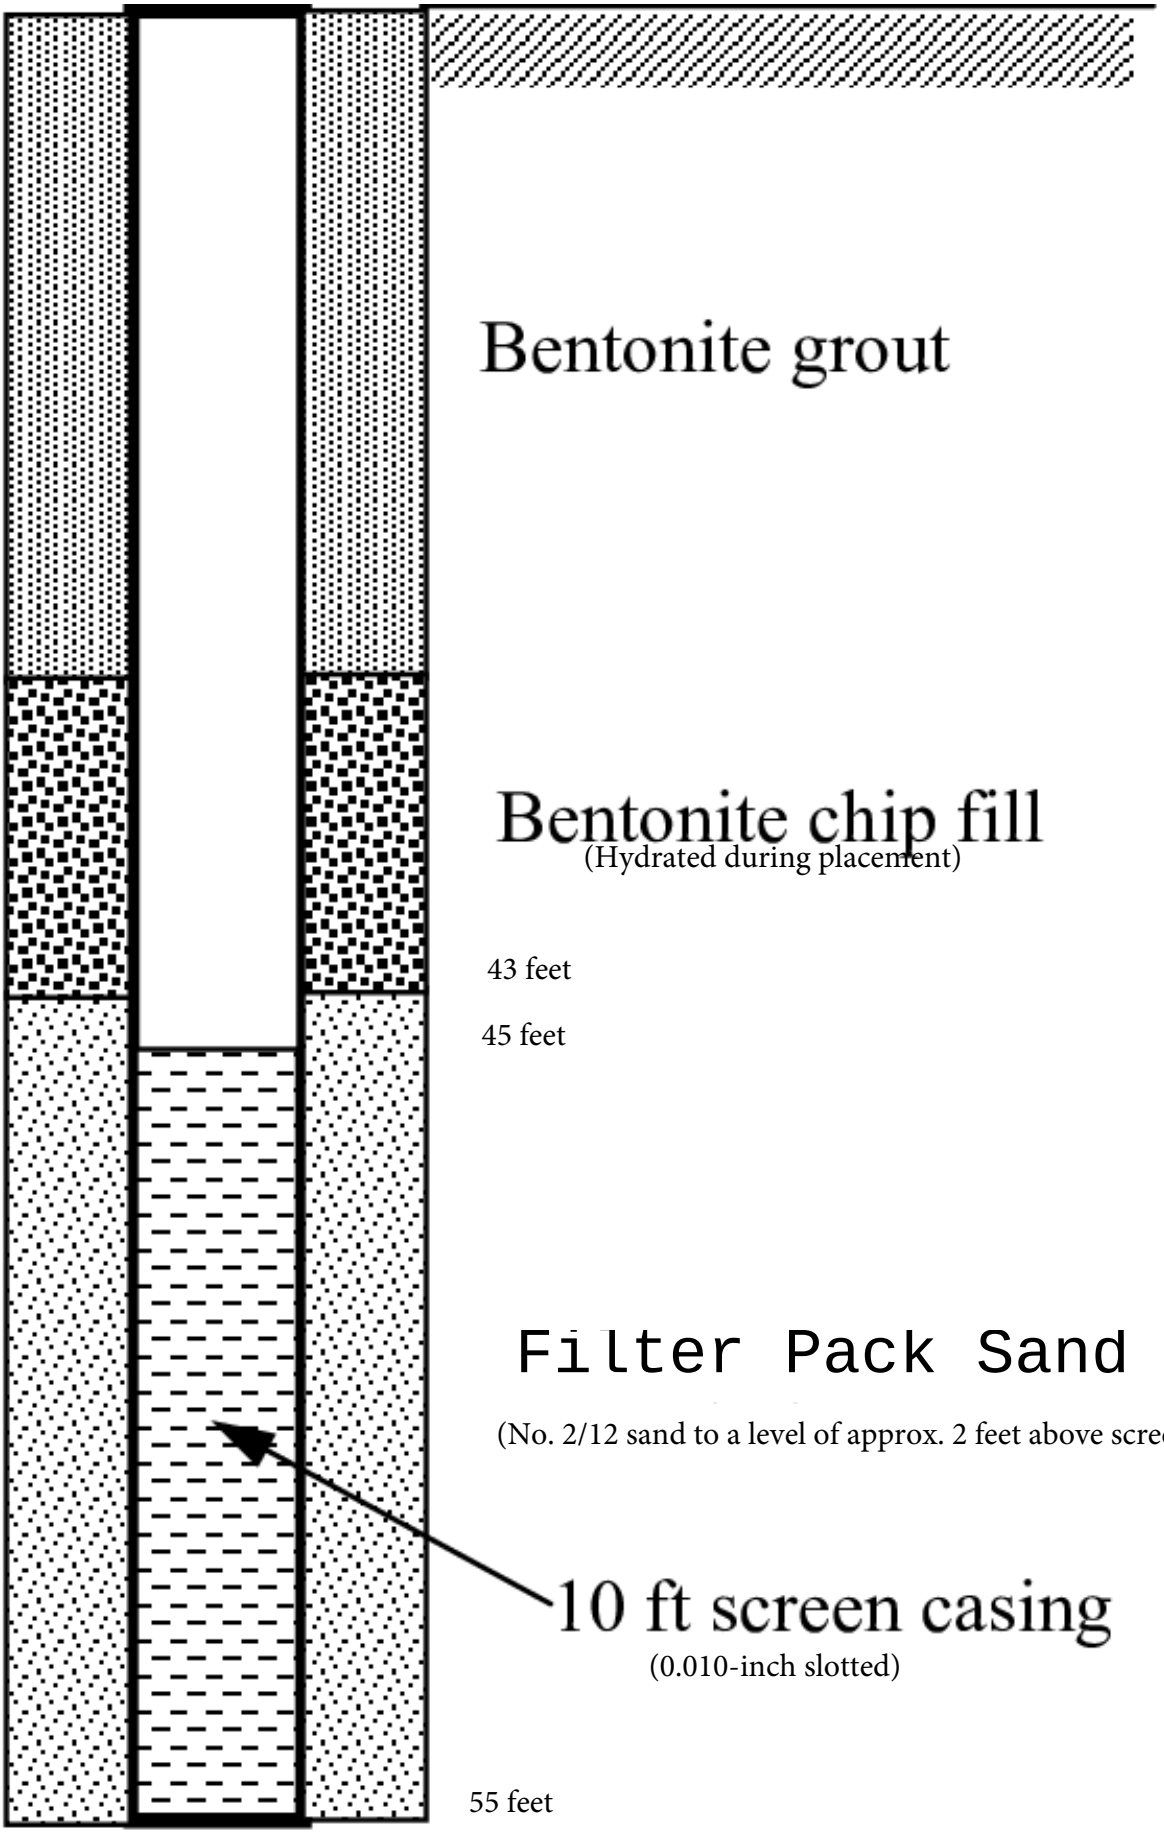
2. If wells are to be destroyed, provide a description of method of destruction _____

3. Are you proposing a variation from current SAM Manual Requirements for the construction or destruction of borings, Vadose and/or Groundwater Monitoring Wells? If yes, specify these variations and include a well construction diagram and all required supporting documentation. Refer to the SAM Manual Appendix B for monitoring well guidelines. Yes ☐ No ☒

Zone A Well
4-inch Diameter, Schedule 40 PVC Casing



Upper Zone B Well (TD=Approx. 55 feet bgs)
4-inch Diameter, Schedule 40 PVC Casing



County of San Diego

PROPERTY OWNER CONSENT

Proposed locations for subsurface work:

Property Address:	**Assessor's Parcel Number (APN):**
850 Lagoon Drive	571-330-29-00
Chula Vista, CA 91910-2098	_____

I, Emil J. Wohl, owner of the property/properties listed above, give my permission to Haley & Aldrich, Inc. (consulting company, contractor) to conduct the following work at the locations stated above.

x ☐ Install 2 monitoring wells ☐ Destroy _____ monitoring wells x☐ Drill 5 soil borings

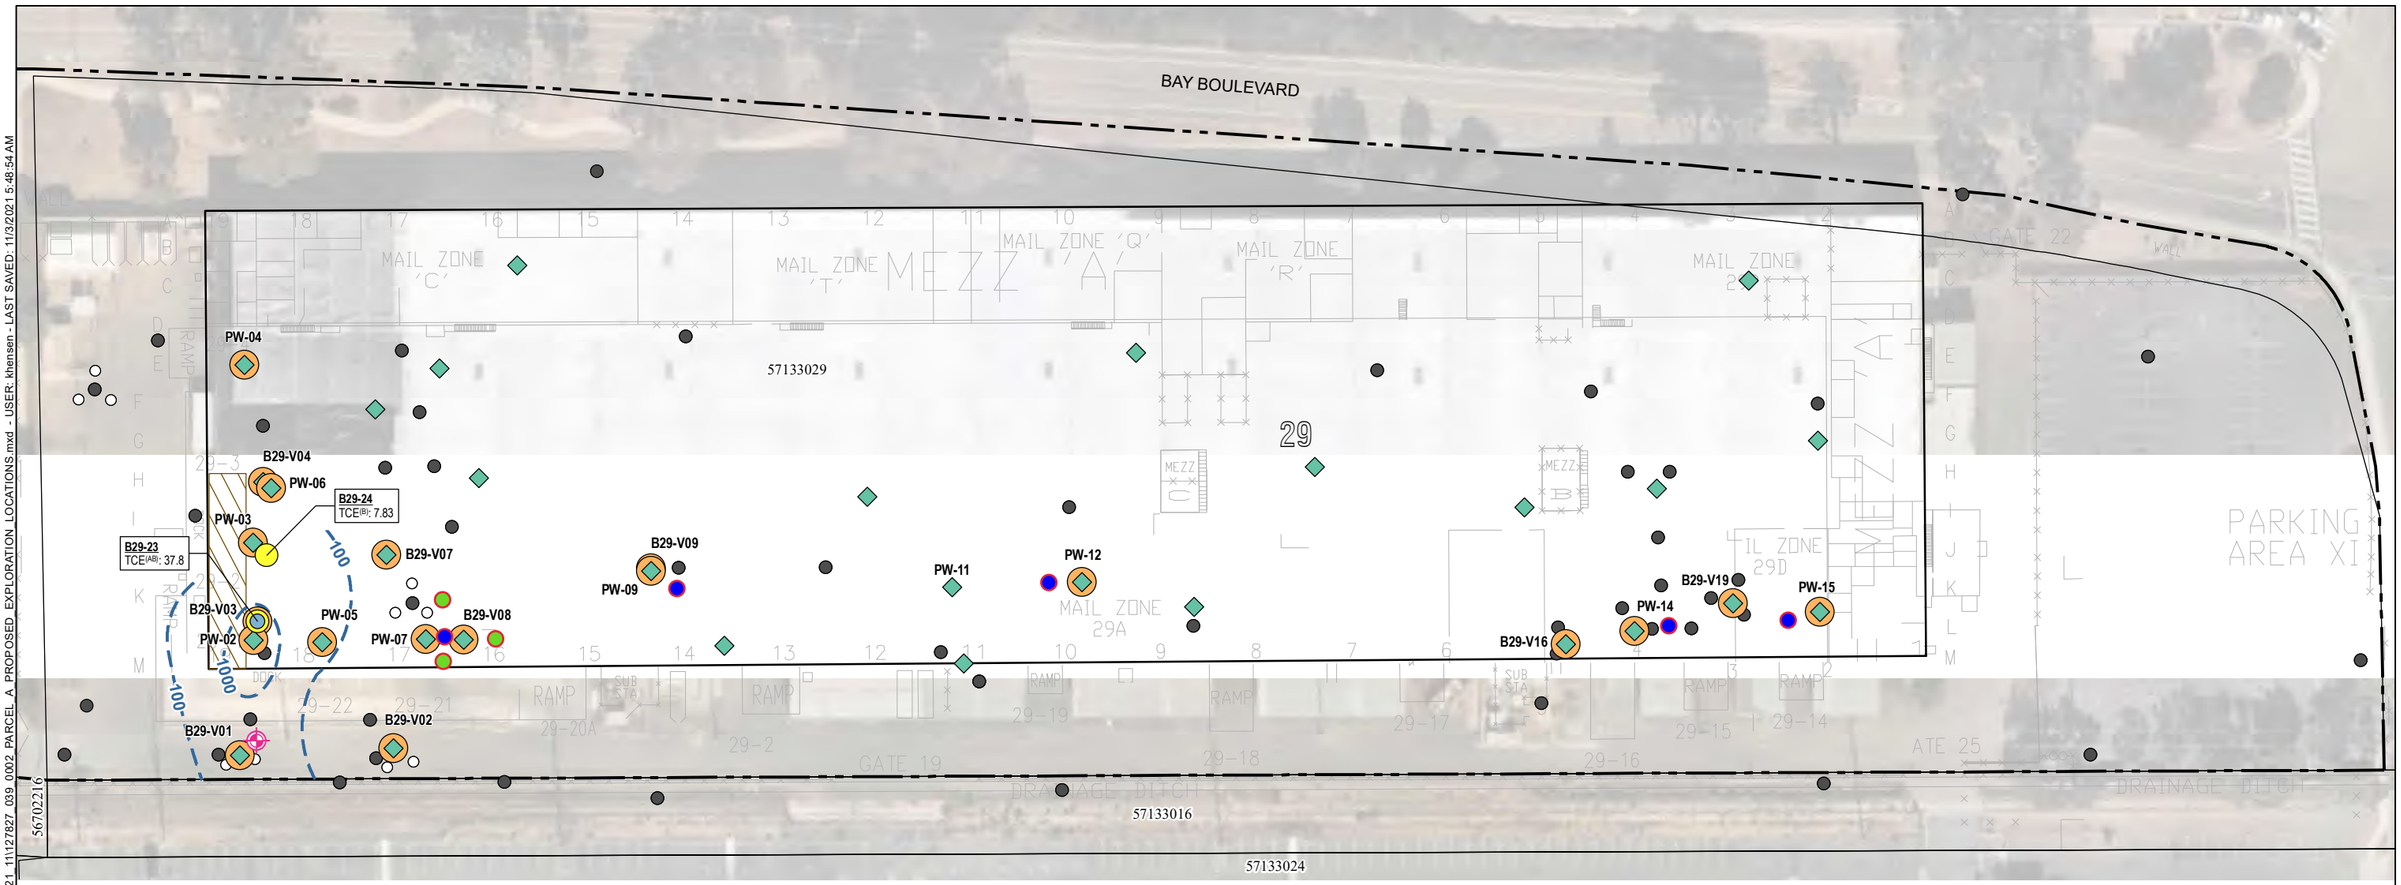
I understand that Robert K. Scott (registered professional) of Haley & Aldrich, Inc. (consulting company) and an authorized signer for Cascade Drilling and H&P Geochemistry (drilling companies) have submitted a signed application to the Department of Environmental Health & Quality (DEHQ) in which they have agreed to complete the above-stated work according the requirements of the current SAM Manual, all ordinances and laws of the County of San Diego and the State of California pertaining to well/boring construction and destruction. I have arranged with the Responsible Party, the person who causes to have monitoring wells/borings installed or existing wells destroyed on this property, to ensure proper closure of the monitoring wells/borings.

Property Owner Signature: _____ Date: 2/23/2022

Print Name: Emil J. Wohl Title: Principal

Company: PSIP Wohl Bay Boulevard LLC

Mailing Address: 2251 San Diego Avenue, Suite A-247, San Diego, CA 92110



LEGEND

- SOIL GAS PROBE AND/OR SOIL BORING
- NOT ANALYZED FOR VOCs IN SOIL
- ANALYZED FOR VOCs IN SOIL

VOCs EXCEEDING SCREENING CRITERIA

- GPL (SOIL)
- COMMERCIAL/INDUSTRIAL DTSC-SL (SOIL)
- SOIL GAS SAMPLE LOCATION WITH CONCENTRATIONS GREATER THAN HEALTH-BASED REMEDIATION GOALS
- SUBJECT SITE
- TRICHLOROETHENE (TCE) CONTOUR IN ZONE A GROUNDWATER (ug/L)
- VAULT (4 FEET BGS, INSTALLED IN 2000)
- 56701029 — ASSESSOR'S PARCEL BOUNDARY AND NUMBER
- 29 — BUILDING NUMBER

PROPOSED SAMPLE LOCATIONS

- HYDROPUNCH BORING (FIVE)
- GROUNDWATER MONITORING WELL CLUSTER (TWO WELLS)

NOTES

1. ALL LOCATIONS AND DIMENSIONS ARE APPROXIMATE.
2. TCE CONCENTRATIONS ARE REPORTED IN MILLIGRAMS PER KILOGRAM (mg/kg).
3. TCE = TRICHLOROETHENE
4. POSTSCRIPT KEY:
(A) = EXCEEDS GPL
(B) = EXCEEDS COMMERCIAL/INDUSTRIAL DTSC-SL
5. AERIAL IMAGERY SOURCE: NEARMAP, 3 SEPTEMBER 2021

Re: **Rohr Inc., A Colins Aerospace Company**
850 Lagoon Dr.
Chula Vista, CA

Locations and elevations of the indicated sample points and Monitoring Wells at the subject location have been determined by field survey on March 29, 2022.

Elevations are based on: NGS benchmark DC-1434; elevation being 21.58 feet (NAVD-88).

Horizontal coordinates are based on: Zone 6, California State Plane Coordinates (Feet, NAD83), set relative to NGS Benchmarks DC-1434 and DY-0088, epoch date 2010.00.

Monitoring Well	NAD83 Northing	NAD83 Easting	NAD83 Latitude	NAD83 Longitude	Elevation Top of Casing	Elevation Top of Rim

APPENDIX G

Laboratory Analytical Reports - Eurofins Calscience

eurofins | Environment Testing America

ANALYTICAL REPORT

Eurofins Calscience
2841 Dow Avenue, Suite 100
Tustin, CA 92780
Tel: (714)895-5494

Laboratory Job ID: 570-87328-1
Client Project/Site: Rohr Chula Vista - Parcel A

For:
Haley & Aldrich, Inc.
5333 Mission Center Road
Suite 300
San Diego, California 92108

Attn: Bob Scott

Authorized for release by:
3/24/2022 3:35:58 PM
Don Burley, Senior Project Manager
(657)212-3033
Donald.Burley@eurofinset.com

Designee for

Virendra Patel, Project Manager I

The test results in this report meet all 2003 NELAC, 2009 TNI, and 2016 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Definitions/Glossary

Client: Haley & Aldrich, Inc.
Project/Site: Rohr Chula Vista - Parcel A

Job ID: 570-87328-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD recovery exceeds control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Case Narrative

Client: Haley & Aldrich, Inc.

Job ID: 570-87328-1

Laboratory: Eurofins Calscience

Narrative

Job Narrative
570-87328-1

Comments
No additional comments.

Receipt
The samples were received on 3/8/2022 7:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 4.0º C.

Receipt Exception
The container labels for the following sample did not match the information listed on the Chain-of-Custody (COC): NCW-021-B-050 (570-87328-19). The container labels list NCW-021-B-050, while the COC lists NCB-021-B-050 (collection date matches).

The clients office was contacted with the above sample receipt anomaly. The laboratory was provided written direction on how to proceed, please refer to the COC section of the report for further details.

GC/MS VOA
Method 8260B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for the following sample associated with preparation batch 570-219484 and analytical batch 570-219456 were outside control limits: (570-87328-A-1-B MS). The associated laboratory control sample (LCS) recovery met acceptance criteria.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals
Method 6010B: The matrix spike / matrix spike duplicate (MS/MSD) recoveries of Antimony for preparation batch 440-669405 and analytical batch 440-669679 were outside control limits. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Detection Summary

Client: Haley & Aldrich, Inc.
Project/Site: Rohr Chula Vista - Parcel A

Job ID: 570-87328-1

Client Sample ID: DGA-004-1 — Lab Sample ID: 570-87328-1

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Acetone	44	F1	20		ug/Kg	1		8260B	Total/NA

Client Sample ID: DGA-004-5 — Lab Sample ID: 570-87328-2

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
Acetone	54		20		ug/Kg	1		8260B	Total/NA
cis-1,2-Dichloroethene	27		0.98		ug/Kg	1		8260B	Total/NA
Trichloroethene	2.9		2.0		ug/Kg	1		8260B	Total/NA
