Appendix A-1
Notice of Preparation

NOTICE OF PREPARATION

OF AN ENVIRONMENTAL IMPACT REPORT AND PUBLIC SCOPING MEETING

City Project No.:	Architectural Design Review No. ADR 22-06 with a Density Bonus, Certificate of Demolition No. COD 22-20, General Plan Amendment No. GPA 22-01, Lot Line Adjustment LLA No. 22-02, Minor Use Permit MUP No. 22-02, and Zone Change No. ZC 22-01
Project Name:	The Derby Mixed-Use Project
Project Applicant:	Elite Real Estate Holdings LLC
Project Address:	233 and 301 E. Huntington Drive, Arcadia, CA 91006
Public Comment Period:	October 14, 2022 through November 14, 2022
Public Scoping Meeting:	October 26, 2022 at 6:00 PM

Pursuant to Section 21165 of the California Public Resources Code and Section 15050 of the California Environmental Quality Act (CEQA) Guidelines, the City of Arcadia (City) is the Lead Agency for the preparation of an Environmental Impact Report (EIR) for The Derby Mixed-Use Project (Project). In accordance with CEQA Guidelines Section 15082, the City has prepared this Notice of Preparation (NOP) to provide responsible and trustee agencies, the Office of Planning and Research, and the County Clerk with sufficient information describing the Project and its potential environmental effects to enable the responsible agencies to make a meaningful response to this NOP.

The City is requesting your specific and detailed input regarding the scope and content of the environmental information related to your agency's statutory responsibility that must be included in the Draft EIR. Pursuant to CEQA Guidelines Section 15083, this NOP also serves to facilitate consultation with any persons or organizations that may be concerned with the environmental effects of the Project. Additionally, this NOP serves as a notice for the public Scoping Meeting, which is held to expedite and facilitate the consultation process. Because the City has already determined that an EIR is required for the proposed Project, as permitted by CEQA Guidelines Section 15060(d), the City will not prepare an Initial Study, but instead will begin work directly on the Draft EIR.

Project Location.

The Project site address is 223 and 301 East Huntington Drive and includes Assessor's Parcel Number (APN) 5773-009-070 and APN 5773-009-065. **Figure 1, Project Location**, depicts The Derby Mixed-Use Project (Project) boundaries in the context of the surrounding community and jurisdictions. The Project site is located in the City of Arcadia (City) within the County of Los Angeles, approximately 13 miles northeast from downtown Los Angeles. As measured from the Project site, the City of Sierra Madre is located approximately 1.4 miles to the north; the City of Monrovia is located approximately 0.13 mile (680 feet) to the east; the City of Temple City is located approximately 2.3 miles to the south; and the City of Pasadena and an area of unincorporated Los Angeles County are located approximately 2.5 miles to the west. Regional access to the Project site is via Interstate (I) 210 to Huntington Drive.

Existing Conditions

The Metro L Line (Gold) Station is located approximately 0.3 mile to the northwest of the Project site. Land uses in close proximity to the Project site are as follows:

- North: Hampton Inn Hotel; Residence Inn by Marriott, and surface parking lots
- East: Embassy Suites; surface parking; North 2nd Street; Springhill Suites; and Metro L Line tracks
- South: Huntington Drive; commercial strip center; surface parking lots; and Metro L Line tracks
- West: Gateway Drive; restaurant/commercial/office center; surface parking lots; and City of Monrovia

The 2.23-acre Project site currently consists of two structures, including The Derby, which is an occupied two-story restaurant at 233 East Huntington Drive, and a vacant one-story restaurant building at 301 East Huntington Drive that was previously occupied by the Souplantation restaurant. The remainder of the site is surface parking with minimal landscaping.

The Project site is zoned General Commercial (C-G) with a corresponding General Plan land use designation of Commercial.

Project Description Overview

The Project would construct a new space for The Derby restaurant as part of a new mixed-use residential and commercial development. The existing buildings and surface parking lots on the Project site would be demolished to accommodate the proposed Project and the Lot Line Adjustment would merge the two existing lots into one legal lot.

The Project would construct The Derby as a larger, two-story restaurant as part of a new, six-story mixed-use development consisting of restaurant, cafe, and multifamily residential uses. **Figure 2a, Proposed Project Overview**, provides a conceptual depiction of the Project site at buildout looking from the southwest towards the northeast. **Figure 2b, Proposed Project Directional Views**, provides additional views of Project site at buildout as viewed from the northwest, northeast, southwest, and southeast.

The proposed centerline of the two-story The Derby restaurant space would be located slightly west of the existing The Derby restaurant and would be designed to retain many of restaurant's most recognizable design elements, including the gable roof, stained glass windows, classic red booths, and horseracing memorabilia, while adding new elements such as a covered porte-cochère, horse-racing projections on the side of the building, a horseshoe-shaped lounge bar, an indoor-outdoor second story bar and dining area, and an expanded memorabilia collection display area. The Derby restaurant would maintain the low-slung craftsman-influenced character and scale of the existing building, as well as the existing "World Famous, The Derby" and "Guest Parking" neon signs, which would be preserved and relocated along the East Huntington Drive frontage to the ingress/egress driveway leading to the main entrance and vehicle roundabout for guest and valet drop off. The Derby restaurant was evaluated by an architectural historian meeting the Secretary of the Interior's Professional Qualification Standards for architectural history and the building was found to be ineligible for National Register of Historic Places, California Register of Historical Resources, and does not meet the local designation criteria. As such, the structure is not considered a historical resource for the purposes of CEQA.

The Project would include 205 market rate units and 9 affordable units, totaling 214 for-rent dwelling units. The unit mix would consist of 55 studios, 110 one-bedroom units (including four one-bedroom plus den units), and 49

two-bedroom units (including four two-bedroom plus den units). The residential units would be constructed within levels two through six of the proposed six-story building. The average square footage of the unit types would be 480 square feet (sf) for the studios, 720 sf for the one-bedroom units, 750 sf for the one-bedroom plus den units, 1,100 sf for the two-bedroom units, and 1,260 sf for the two-bedroom plus den units.

Various residential amenities would be constructed throughout the residential building and Project site. The six-story mixed-use building would front onto East Huntington Drive and would step back approximately 30 feet at the fifth and sixth levels to provide a landscaped residential pool and amenity space, including an approximately 4,800 sf roof deck and 1,100 sf indoor amenity kitchen for residents. Additional residential amenities would include a 6,500 sf landscaped courtyard, herb garden, and shared outdoor cooking space on level two fronting Gateway Drive, as well as other interior residential amenities such as a fitness center, co-working space, and yoga room. Approximately 65% of the units would include private balconies facing the exteriors of the six-story mixed-use building.

The Project would include one level of subterranean (i.e., basement level) parking for residents, as well as exterior and interior ground-level commercial and valet parking areas. Ground-floor parking areas would be predominately valet serviced and reserved for restaurant/café uses and residential visitors. Primary access to the residential tenant and guest parking at the basement level would be provided via a separate, secure ingress/egress driveway from Gateway Drive. Primary access for the commercial parking would be from two points: (1) via an ingress/egress driveway on East Huntington Drive approximately 50 feet east of driveway for the existing The Derby restaurant; and (2) via an ingress/egress driveway on Gateway Drive that would also accommodate service uses. The Project would provide a total of 414 parking spaces consisting of 241 residential and 173 commercial/valet spaces. Approximately 10% of the spaces provided would include electric vehicle charging stations. The Project would also include 10 commercial motorcycle parking spaces and 11 residential motorcycle parking spaces, and residential bicycle parking for 43 bicycles and commercial bicycle parking in a bicycle storage room behind the new restaurant.

The Project's basement level would consist entirely of residential parking. The ground level would include the new The Derby restaurant (including 12,850 sf for both levels), a 1,400 sf café space, a 3,300 sf complementary restaurant space, a residential leasing office, residential lobby, and residential bike storage area, as well as interior and exterior restaurant/café/valet parking areas. Level two would include a portion of The Derby's restaurant area, which would serve as The Derby's rooftop bar, as well as a residential co-working space, residential units, and an exterior residential courtyard and amenity space. Level three and level four would consist entirely of residential units, residential storage, and interior residential amenity spaces, including a yoga room. Level five would include residential units and additional residential amenity spaces, including the outdoor pool, roof deck, and interior amenity kitchen. Level six would include residential units, as well as a residential fitness center and exterior courtyard.

Off-site improvements would be required within the sidewalk and roadway rights-of-way along East Huntington Drive and Gateway Drive. These improvements would include modification and/or relocation of existing curb cuts, utility connections, removal of signage, street light relocation, and new/replacement street trees.

Requested Approvals/Permits

The current C-G zone has a maximum allowable building height of 40 feet and does not allow for residential use. Thus, a Zone Change (No. ZC 22-01) would be required to rezone the Project site to Downtown Mixed Use (DMU), which would allow for the Project's proposed mixed-use development (subject to a Minor Use Permit). The proposed Zone Change would also include an H7 Special Height Overlay, which would increase the maximum

allowable building height to 75 feet. The proposed six-story building would have an overall maximum height of 71 feet, including a 3-foot parapet, but not including rooftop appurtenances such as a screened mechanical enclosures, stairs and an elevator machine room. The Project would also require a General Plan Amendment (No. GPA 22-01) to change the land use designation from Commercial to Downtown Mixed Use.

Under the proposed DMU zoning, the Project site would have an allowable base density of 80 dwelling units per acre, allowing for a total of 178 dwelling units on the 2.23-acre site. The Project applicant proposes to utilize a 5% density bonus under the California Density Bonus Law (California Government Code Sections 65915 – 65918) which would increase the allowable dwelling unit count by 20% to 214 total units. In order to comply with state law, the Project would include nine very-low income (i.e., 50% Area Median Income) dwelling units. Thus, the final unit mix would consist of 205 market rate units and 9 affordable units, totaling 214 dwelling units. The Project would include a reduced number of parking spaces for the residential use because of the Density Bonus, and the applicant is requesting reduced residential tandem parking dimensions as a concession.

The following is a summary of discretionary approvals/actions the City will consider. Other ministerial permits that are not subject to CEQA review would also be required.

- General Plan Amendment to Downtown Mixed-Use
- Zone Change to Downtown Mixed-Use with Height Overlay (H7)
- Certificate of Demolition
- Minor Use Permit (Mixed-Use Development; Valet Parking; Outdoor Dining in Excess of 12 Tables)
- Lot Line Adjustment
- Site Plan and Design Review (Density Bonus)

Potential Environmental Effects of the Project

The Project could have potentially significant environmental impacts to the following environmental topic areas: Air Quality; Cultural Resources; Energy; Geology/Soils; Greenhouse Gas Emissions; Hazards and Hazardous Materials; Hydrology/Water Quality; Land Use and Planning; Noise; Population and Housing; Public Services and Recreation; and Utilities/Service Systems. Because of the existing condition of the Project site, which is fully developed and located in an urbanized setting, implementation of the Project is not expected to result in any significant impacts to: Aesthetics; Agriculture and Forestry Resources; Biological Resources; Mineral Resources; and Wildfire, as discussed in Appendix A, Environmental Topics With No Potential For Significant Impacts.

Public Review and Scoping

This NOP, including Appendix A, is available for download on the City's website at: www.arcadiaca.gov/projects. A print copy of this notice is also available for public review at each of the following City locations through November 14, 2022:

Arcadia City Hall – Planning Division
240 West Huntington Drive
Arcadia, CA 91007
Monday–Thursday: 7:30 a.m.–5:30 p.m.
Friday (Closed alternate Fridays): 7:30 a.m.–4:30 p.m.
https://www.arcadiaca.gov

Arcadia Public Library – Circulation Desk
20 West Duarte Road
Arcadia, CA 91006
Monday–Thursday: 10:00 a.m.–9:00 p.m.
Friday and Saturday: 10:00 a.m.–6:00 p.m.
www.arcadiaca.gov/library

Public Scoping Meeting. A public scoping meeting will be held to share information regarding the proposed Project and the CEQA environmental review process. The purpose of the meeting is to facilitate information sharing and to solicit written comments about the scope and content of the environmental analysis to be addressed in the Draft EIR.

The Scoping Meeting is an information-gathering meeting, not a public hearing. However, as part of the information-gathering process and as stated above, the City seeks community input for the Project. In order to be considered for the EIR, all comments must be submitted to the City in writing via email, fax, or via postal service, and all written comments received will be reviewed and considered by the City as part of the administrative record of the proposed Project. No decisions about the Project will be made at the Scoping Meeting. A separate public hearing for consideration of the proposed Project's entitlement requests will be scheduled after the completion of the EIR. The date, time, and location of the Project's Scoping Meeting are as follows:

DATE:	October 26, 2022
TIME:	6:00 PM
LOCATION:	The Gilb Museum of Arcadia Heritage (Museum Education Center) 380 West Huntington Drive, Arcadia, CA 91007

Submitting Comments. Due to the time limits mandated by state law, your response must be sent at the earliest possible date, but not later than 30 days after receipt of this notice. The City will consider all written comments regarding the potential environmental effects of the Project received during the NOP public review period. Please direct your written comments via mail, or email to:

APPENDIX A

The Derby Mixed-Use Project
Environmental Topics with No Potential for Significant Impacts

The Derby Mixed-Use Project (Project), as proposed, could have potentially significant environmental impacts to the following environmental topic areas: Air Quality; Cultural Resources; Energy; Geology/Soils; Greenhouse Gas Emissions; Hazards and Hazardous Materials; Hydrology/Water Quality; Land Use and Planning; Noise; Population and Housing; Public Services and Recreation; Transportation; Tribal Cultural Resources; and Utilities/Service Systems. Because of the existing condition of the Project site—which is fully developed and located in an urbanized setting—the City of Arcadia (City), as the lead agency pursuant to CEQA, has determined that implementation of the Project would not result in any significant impacts to: Aesthetics; Agriculture and Forestry Resources; Biological Resources; Mineral Resources; and Wildfire, as discussed below.

CEQA Topic	Analysis Supporting No Potential for Significant Impact
Aesthetics	The Project site is visible from surrounding land uses and roadways and the proposed Project would increase the development density and height. Site development would be required to comply with all Arcadia Development Code and Municipal Code requirements and would be required to adhere to the architectural and site design guidance provided in the City's Commercial/Mixed Use Design Guidelines. Regarding aesthetic impacts, Senate Bill (SB) 743 [Public Resources Code (PRC) Section 21099(d)] specifies that for infill projects located in transit priority areas, impacts on aesthetics are not required to be evaluated under CEQA. Specifically, PRC Section 21099(d) sets forth guidelines for evaluating project impacts under CEQA, as follows: "Aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area (TPA) shall not be considered significant impacts on the environment." PRC Section 21099 defines a "transit priority area" as an area within 0.5 mile of a major transit stop, defined as "a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods." PRC Section 21099 defines an "infill site" as a lot located within an urban area that has been previously developed, or on a vacant site where at least 75% of the perimeter of the site adjoins or is separated only by an improved public right-of-way from, parcels that are developed with qualified urban uses. PRC Section 21099 applies to the proposed Project, which consists of mixed-use project on an "infill" site located approximately 0.3 mile from the Metro L Line Arcadia Station; as such, the Project meets the criteria established by SB 743. Therefore, there would be no potential for significant impacts associated with aesthetics and aesthetics does not require evaluation or analysis in the EIR.

CEQA Topic	Analysis Supporting No Potential for Significant Impact
Agriculture and Forestry Resources	The Project site is in an urban area on a site that is fully developed with buildings and asphalt paving. The Project site is included within the City's General Commercial (C-G) zone and the Commercial land use designation of the Arcadia General Plan. There are no existing agriculture or forestry activities on the site nor any readily available opportunities for agricultural or forestry operations on site or in the surrounding area. According to the California Department of Conservation's California Important Farmland Finder, most of Los Angeles County, including the City, is not mapped as part of the state's Farmland Mapping and Monitoring Program; thus, the Project site does not contain Prime Farmland, Unique Farmland, or Farmland of State Importance (collectively "Important Farmland"),[1] nor does it contain any parcels under a Williamson Act contract.[2] Additionally, neither the Project site nor the surrounding area contain forestland or timberland. Therefore, there would be no potential for significant impacts associated with agricultural and forestry resources.
Biological Resources	Under the existing conditions, the Project site is almost entirely developed with paved surfaces and buildings and is surrounded entirely by urban development. A limited amount of landscaped area is located within the Project site and along the public rights-of-way, consisting of small areas of ornamental trees and shrubs, which does not form a cohesive plant community that would provide quality, suitable habitat for candidate, sensitive or special status wildlife species, or support wildlife movement. A portion of the Santa Anita Wash alignment—a concrete flood control channel—is approximately 480 feet to the northeast of the eastern Project site boundary.[3] No wetlands or other jurisdiction waters are within the Project site.[4] Further, any development activities would be required to comply with all applicable requirements set forth by the City, including the City's Tree Preservation Ordinance (Ordinance No. 2338).[5] All development activities are subject to the requirement to protect nesting birds, in compliance with the Migratory Bird Treaty Act, which prohibits the accidental or "incidental" taking or killing of migratory birds.[6] Therefore, there would be no potential for significant impacts associated with biological resources.

5 Arcadia Municipal Code Chapter 1, Division 10, Tree Preservation (Section 9110.01 et al.)
6 United States Code Title 16, Subchapter II, Migratory Bird Treaty (Section 703 et al.)

CEQA Topic	Analysis Supporting No Potential for Significant Impact
Mineral Resources	There are no oil wells or oil/mineral extraction activities on the Project site.[7] Current on-site land uses do not allow for oil/mineral extraction. According to the City's General Plan, Resource Sustainability Element, Figure RS-1 (Mineral Resource Zones), the Project site is within the Mineral Resources Zone-2 (MRZ-2), which is characterized as areas where adequate information indicates that significant mineral deposits are present or there is a high likelihood for their presence, and development should be controlled.[8] However, given that the Project site is located within an urban setting, does not have a history of mineral extraction activities, does not currently allow for oil/mineral extraction, and is not designated for mineral extraction, the Project would not result in the loss of availability of a locally-important mineral resource recovery site delineated on the local general plan or other land use plan. Therefore, there would be no potential for significant impacts associated with mineral resources.
Wildfire	The Project site is in a highly urbanized area and is not within a Very High Fire Hazard Severity Zone and would not exacerbate or expose people or structures to wildfire risks or substantially impair an adopted emergency response plan. The nearest wildland areas are in the Monrovia Wilderness Preserve, approximately 1 mile north of the Project site. Based on the California Department of Forestry and Fire Protection's Fire Hazard Severity Zone web viewer, the Project site is not located in or near state responsibility areas or lands classified as Very High Fire Hazard Severity Zones. The closest designated Very High Fire Hazard Severity Zone is located approximately 0.92 mile north of the Project site.[9] Therefore, there would be no potential for significant impacts associated with wildfires.

Re: 2022100298, The Derby Mixed-Use Project, Los Angeles County

Dear Ms. Graham:

The Native American Heritage Commission (NAHC) has received the Notice of Preparation (NOP), Draft Environmental Impact Report (DEIR) or Early Consultation for the project referenced above. The California Environmental Quality Act (CEQA) (Pub. Resources Code §21000 et seq.), specifically Public Resources Code §21084.1, states that a project that may cause a substantial adverse change in the significance of a historical resource, is a project that may have a significant effect on the environment. (Pub. Resources Code § 21084.1; Cal. Code Regs., tit.14, §15064.5 (b) (CEQA Guidelines §15064.5 (b)). If there is substantial evidence, in light of the whole record before a lead agency, that a project may have a significant effect on the environment, an Environmental Impact Report (EIR) shall be prepared. (Pub. Resources Code §21080 (d); Cal. Code Regs., tit. 14, § 5064 subd.(a)(1) (CEQA Guidelines §15064 (a)(1)). In order to determine whether a project will cause a substantial adverse change in the significance of a historical resource, a lead agency will need to determine whether there are historical resources within the area of potential effect (APE).

CEQA was amended significantly in 2014. Assembly Bill 52 (Gatto, Chapter 532, Statutes of 2014) (AB 52) amended CEQA to create a separate category of cultural resources, "tribal cultural resources" (Pub. Resources Code §21074) and provides that a project with an effect that may cause a substantial adverse change in the significance of a tribal cultural resource is a project that may have a significant effect on the environment. (Pub. Resources Code §21084.2). Public agencies shall, when feasible, avoid damaging effects to any tribal cultural resource. (Pub. Resources Code §21084.3 (a)). **AB 52 applies to any project for which a notice of preparation, a notice of negative declaration, or a mitigated negative declaration is filed on or after July 1, 2015.** If your project involves the adoption of or amendment to a general plan or a specific plan, or the designation or proposed designation of open space, on or after March 1, 2005, it may also be subject to Senate Bill 18 (Burton, Chapter 905, Statutes of 2004) (SB 18). **Both SB 18 and AB 52 have tribal consultation requirements.** If your project is also subject to the federal National Environmental Policy Act (42 U.S.C. § 4321 et seq.) (NEPA), the tribal consultation requirements of Section 106 of the National Historic Preservation Act of 1966 (154 U.S.C. 300101, 36 C.F.R. §800 et seq.) may also apply.

The NAHC recommends consultation with California Native American tribes that are traditionally and culturally affiliated with the geographic area of your proposed project as early as possible in order to avoid inadvertent discoveries of Native American human remains and best protect tribal cultural resources. Below is a brief summary of portions of AB 52 and SB 18 as well as the NAHC's recommendations for conducting cultural resources assessments.

Consult your legal counsel about compliance with AB 52 and SB 18 as well as compliance with any other applicable laws.

AB 52

AB 52 has added to CEQA the additional requirements listed below, along with many other requirements:

1. Fourteen Day Period to Provide Notice of Completion of an Application/Decision to Undertake a Project: Within fourteen (14) days of determining that an application for a project is complete or of a decision by a public agency to undertake a project, a lead agency shall provide formal notification to a designated contact of, or tribal representative of, traditionally and culturally affiliated California Native American tribes that have requested notice, to be accomplished by at least one written notice that includes:

- **a.** A brief description of the project.
- **b.** The lead agency contact information.
- **c.** Notification that the California Native American tribe has 30 days to request consultation. (Pub. Resources Code §21080.3.1 (d)).
- **d.** A "California Native American tribe" is defined as a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of Statutes of 2004 (SB 18). (Pub. Resources Code §21073).

2. Begin Consultation Within 30 Days of Receiving a Tribe's Request for Consultation and Before Releasing a Negative Declaration, Mitigated Negative Declaration, or Environmental Impact Report: A lead agency shall begin the consultation process within 30 days of receiving a request for consultation from a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project. (Pub. Resources Code §21080.3.1, subds. (d) and (e)) and prior to the release of a negative declaration, mitigated negative declaration or Environmental Impact Report. (Pub. Resources Code §21080.3.1(b)).

- **a.** For purposes of AB 52, "consultation shall have the same meaning as provided in Gov. Code §65352.4 (SB 18). (Pub. Resources Code §21080.3.1 (b)).

3. Mandatory Topics of Consultation If Requested by a Tribe: The following topics of consultation, if a tribe requests to discuss them, are mandatory topics of consultation:

- **a.** Alternatives to the project.
- **b.** Recommended mitigation measures.
- **c.** Significant effects. (Pub. Resources Code §21080.3.2 (a)).

4. Discretionary Topics of Consultation: The following topics are discretionary topics of consultation:

- **a.** Type of environmental review necessary.
- **b.** Significance of the tribal cultural resources.
- **c.** Significance of the project's impacts on tribal cultural resources.
- **d.** If necessary, project alternatives or appropriate measures for preservation or mitigation that the tribe may recommend to the lead agency. (Pub. Resources Code §21080.3.2 (a)).

5. Confidentiality of Information Submitted by a Tribe During the Environmental Review Process: With some exceptions, any information, including but not limited to, the location, description, and use of tribal cultural resources submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public, consistent with Government Code §6254 (r) and §6254.10. Any information submitted by a California Native American tribe during the consultation or environmental review process shall be published in a confidential appendix to the environmental document unless the tribe that provided the information consents, in writing, to the disclosure of some or all of the information to the public. (Pub. Resources Code §21082.3 (c)(1)).

6. Discussion of Impacts to Tribal Cultural Resources in the Environmental Document: If a project may have a significant impact on a tribal cultural resource, the lead agency's environmental document shall discuss both of the following:

- **a.** Whether the proposed project has a significant impact on an identified tribal cultural resource.
- **b.** Whether feasible alternatives or mitigation measures, including those measures that may be agreed to pursuant to Public Resources Code §21082.3, subdivision (a), avoid or substantially lessen the impact on the identified tribal cultural resource. (Pub. Resources Code §21082.3 (b)).

7. Conclusion of Consultation: Consultation with a tribe shall be considered concluded when either of the following occurs:

a. The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource; or

b. A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached. (Pub. Resources Code §21080.3.2 (b)).

8. Recommending Mitigation Measures Agreed Upon in Consultation in the Environmental Document: Any mitigation measures agreed upon in the consultation conducted pursuant to Public Resources Code §21080.3.2 shall be recommended for inclusion in the environmental document and in an adopted mitigation monitoring and reporting program, if determined to avoid or lessen the impact pursuant to Public Resources Code §21082.3, subdivision (b), paragraph 2, and shall be fully enforceable. (Pub. Resources Code §21082.3 (a)).

9. Required Consideration of Feasible Mitigation: If mitigation measures recommended by the staff of the lead agency as a result of the consultation process are not included in the environmental document or if there are no agreed upon mitigation measures at the conclusion of consultation, or if consultation does not occur, and if substantial evidence demonstrates that a project will cause a significant effect to a tribal cultural resource, the lead agency shall consider feasible mitigation pursuant to Public Resources Code §21084.3 (b). (Pub. Resources Code §21082.3 (e)).

10. Examples of Mitigation Measures That, If Feasible, May Be Considered to Avoid or Minimize Significant Adverse Impacts to Tribal Cultural Resources:

a. Avoidance and preservation of the resources in place, including, but not limited to:

i. Planning and construction to avoid the resources and protect the cultural and natural context.

ii. Planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.

b. Treating the resource with culturally appropriate dignity, taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:

i. Protecting the cultural character and integrity of the resource.

ii. Protecting the traditional use of the resource.

iii. Protecting the confidentiality of the resource.

c. Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.

d. Protecting the resource. (Pub. Resource Code §21084.3 (b)).

e. Please note that a federally recognized California Native American tribe or a non-federally recognized California Native American tribe that is on the contact list maintained by the NAHC to protect a California prehistoric, archaeological, cultural, spiritual, or ceremonial place may acquire and hold conservation easements if the conservation easement is voluntarily conveyed. (Civ. Code §815.3 (c)).

f. Please note that it is the policy of the state that Native American remains and associated grave artifacts shall be repatriated. (Pub. Resources Code §5097.991).

11. Prerequisites for Certifying an Environmental Impact Report or Adopting a Mitigated Negative Declaration or Negative Declaration with a Significant Impact on an Identified Tribal Cultural Resource: An Environmental Impact Report may not be certified, nor may a mitigated negative declaration or a negative declaration be adopted unless one of the following occurs:

a. The consultation process between the tribes and the lead agency has occurred as provided in Public Resources Code §21080.3.1 and §21080.3.2 and concluded pursuant to Public Resources Code §21080.3.2.

b. The tribe that requested consultation failed to provide comments to the lead agency or otherwise failed to engage in the consultation process.

c. The lead agency provided notice of the project to the tribe in compliance with Public Resources Code §21080.3.1 (d) and the tribe failed to request consultation within 30 days. (Pub. Resources Code §21082.3 (d)).

The NAHC's PowerPoint presentation titled, "Tribal Consultation Under AB 52: Requirements and Best Practices" may be found online at: http://nahc.ca.gov/wp-content/uploads/2015/10/AB52TribalConsultation_CalEPAPDF.pdf

SB 18

SB 18 applies to local governments and requires local governments to contact, provide notice to, refer plans to, and consult with tribes prior to the adoption or amendment of a general plan or a specific plan, or the designation of open space. (Gov. Code §65352.3). Local governments should consult the Governor's Office of Planning and Research's "Tribal Consultation Guidelines," which can be found online at: https://www.opr.ca.gov/docs/09_14_05_Updated_Guidelines_922.pdf.

Some of SB 18's provisions include:

1. Tribal Consultation: If a local government considers a proposal to adopt or amend a general plan or a specific plan, or to designate open space it is required to contact the appropriate tribes identified by the NAHC by requesting a "Tribal Consultation List." If a tribe, once contacted, requests consultation the local government must consult with the tribe on the plan proposal. **A tribe has 90 days from the date of receipt of notification to request consultation unless a shorter timeframe has been agreed to by the tribe.** (Gov. Code §65352.3 (a)(2)).
2. No Statutory Time Limit on SB 18 Tribal Consultation. There is no statutory time limit on SB 18 tribal consultation.
3. Confidentiality: Consistent with the guidelines developed and adopted by the Office of Planning and Research pursuant to Gov. Code §65040.2, the city or county shall protect the confidentiality of the information concerning the specific identity, location, character, and use of places, features and objects described in Public Resources Code §5097.9 and §5097.993 that are within the city's or county's jurisdiction. (Gov. Code §65352.3 (b)).
4. Conclusion of SB 18 Tribal Consultation: Consultation should be concluded at the point in which:
    a. The parties to the consultation come to a mutual agreement concerning the appropriate measures for preservation or mitigation; or
    b. Either the local government or the tribe, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached concerning the appropriate measures of preservation or mitigation. (Tribal Consultation Guidelines, Governor's Office of Planning and Research (2005) at p. 18).

Agencies should be aware that neither AB 52 nor SB 18 precludes agencies from initiating tribal consultation with tribes that are traditionally and culturally affiliated with their jurisdictions before the timeframes provided in AB 52 and SB 18. For that reason, we urge you to continue to request Native American Tribal Contact Lists and "Sacred Lands File" searches from the NAHC. The request forms can be found online at: http://nahc.ca.gov/resources/forms/.

NAHC Recommendations for Cultural Resources Assessments

To adequately assess the existence and significance of tribal cultural resources and plan for avoidance, preservation in place, or barring both, mitigation of project-related impacts to tribal cultural resources, the NAHC recommends the following actions:

1. Contact the appropriate regional California Historical Research Information System (CHRIS) Center (https://ohp.parks.ca.gov/?page_id=30331) for an archaeological records search. The records search will determine:
    a. If part or all of the APE has been previously surveyed for cultural resources.
    b. If any known cultural resources have already been recorded on or adjacent to the APE.
    c. If the probability is low, moderate, or high that cultural resources are located in the APE.
    d. If a survey is required to determine whether previously unrecorded cultural resources are present.

2. If an archaeological inventory survey is required, the final stage is the preparation of a professional report detailing the findings and recommendations of the records search and field survey.
    a. The final report containing site forms, site significance, and mitigation measures should be submitted immediately to the planning department. All information regarding site locations, Native American human remains, and associated funerary objects should be in a separate confidential addendum and not be made available for public disclosure.
    b. The final written report should be submitted within 3 months after work has been completed to the appropriate regional CHRIS center.

3. Contact the NAHC for:
   a. A Sacred Lands File search. Remember that tribes do not always record their sacred sites in the Sacred Lands File, nor are they required to do so. A Sacred Lands File search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with the geographic area of the project's APE.
   b. A Native American Tribal Consultation List of appropriate tribes for consultation concerning the project site and to assist in planning for avoidance, preservation in place, or, failing both, mitigation measures.

4. Remember that the lack of surface evidence of archaeological resources (including tribal cultural resources) does not preclude their subsurface existence.
   a. Lead agencies should include in their mitigation and monitoring reporting program plan provisions for the identification and evaluation of inadvertently discovered archaeological resources per Cal. Code Regs., tit. 14, §15064.5(f) (CEQA Guidelines §15064.5(f)). In areas of identified archaeological sensitivity, a certified archaeologist and a culturally affiliated Native American with knowledge of cultural resources should monitor all ground-disturbing activities.
   b. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the disposition of recovered cultural items that are not burial associated in consultation with culturally affiliated Native Americans.
   c. Lead agencies should include in their mitigation and monitoring reporting program plans provisions for the treatment and disposition of inadvertently discovered Native American human remains. Health and Safety Code §7050.5, Public Resources Code §5097.98, and Cal. Code Regs., tit. 14, §15064.5, subdivisions (d) and (e) (CEQA Guidelines §15064.5, subds. (d) and (e)) address the processes to be followed in the event of an inadvertent discovery of any Native American human remains and associated grave goods in a location other than a dedicated cemetery.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

Arcadia, CA 91007

RE: The Derby Mixed-Use Project
SCH # 2022100298
Vic. LA-210/PM R32.9
GTS # LA-2022-04093-NOP

Dear Ms. Graham:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above-referenced NOP. The Project would construct a new space for The Derby restaurant as part of a new mixed-use residential and commercial development. The existing buildings and surface parking lots on the Project site would be demolished to accommodate the proposed Project and the Lot Line Adjustment would merge the two existing lots into one legal lot. The Project would include 205 market-rate units and 9 affordable units, totaling 214 for-rent dwelling units.

The ground level would include the new The Derby restaurant (including 12,850 sf for both levels), a 1,400 s.f. café space, a 3,300 s.f. complementary restaurant space, a residential leasing office, a residential lobby, and a residential bike storage area, as well as interior and exterior restaurant/café/valet parking areas. Level two would include a portion of The Derby's restaurant area, which would serve as The Derby's rooftop bar, as well as a residential co-working space, residential units, and an exterior residential courtyard and amenity space. Level three and level four would consist entirely of residential units, residential storage, and interior residential amenity spaces, including a yoga room. Level five would include residential units and additional residential amenity spaces, including the outdoor pool, roof deck, and interior amenity kitchen. Level six would include residential units, as well as a residential fitness center and exterior courtyard.

The mission of Caltrans is to provide a safe and reliable transportation network that serves all people and respects the environment. Senate Bill 743 (2013) has codified into CEQA law and mandated that CEQA review of transportation impacts of proposed development

be modified by using Vehicle Miles Traveled (VMT) as the primary metric in identifying transportation impacts for all future development projects. You may reference the Governor's Office of Planning and Research (OPR) for more information:

https://opr.ca.gov/ceqa/#guidelines-updates

As a reminder, VMT is the standard transportation analysis metric in CEQA for land use projects after July 1, 2020, which is the statewide implementation date.

Caltrans is aware of the challenges that the region faces in identifying viable solutions to alleviating congestion on State and Local facilities. With limited room to expand vehicular capacity, this development should incorporate multi-modal and complete streets transportation elements that will actively promote alternatives to car use and better manage existing parking assets. Prioritizing and allocating space to efficient modes of travel such as bicycling and public transit can allow streets to transport more people in a fixed amount of right-of-way.

Caltrans supports the implementation of complete streets and pedestrian safety measures such as road diets and other traffic calming measures. Please note the Federal Highway Administration (FHWA) recognizes the road diet treatment as a proven safety countermeasure, and the cost of a road diet can be significantly reduced if implemented in tandem with routine street resurfacing. Overall, the environmental report should ensure all modes are served well by planning and development activities. This includes reducing single occupancy vehicle trips, ensuring safety, reducing vehicle miles traveled, supporting accessibility, and reducing greenhouse gas emissions.

We encourage the Lead Agency to evaluate the potential of Transportation Demand Management (TDM) strategies and Intelligent Transportation System (ITS) applications in order to better manage the transportation network, as well as transit service and bicycle or pedestrian connectivity improvements. For additional TDM options, please refer to the Federal Highway Administration's *Integrating Demand Management into the Transportation Planning Process: A Desk Reference* (Chapter 8). This reference is available online at:

http://www.ops.fhwa.dot.gov/publications/fhwahop12035/fhwahop12035.pdf

You can also refer to the 2010 *Quantifying Greenhouse Gas Mitigation Measures* report by the California Air Pollution Control Officers Association (CAPCOA), which is available online at:

http://www.capcoa.org/wp-content/uploads/2010/11/CAPCOA-Quantification-Report-9-14-Final.pdf

Also, Caltrans has published the VMT-focused Transportation Impact Study Guide (TISG), dated May 20, 2020 and the Caltrans Interim Land Development and Intergovernmental Review (LD-IGR) Safety Review Practitioners Guidance, prepared in On December 18, 2020. You can review the SB 743 Implementation Resource at the following link:

https://dot.ca.gov/programs/sustainability/sb-743/sb743-resources

Potential Environmental Effects of the Project should include the Transportation section with VMT analysis in the Draft Environmental Impact Report. Due to the project size and distance to the State facilities, Caltrans requests queuing analysis with actual signal timing at the eastbound/westbound off-ramps on I-210 to Huntington Dr.

Caltrans encourages lead agencies to prepare traffic safety impact analysis for this development in the California Environmental Quality Act (CEQA) review process using Caltrans guidelines above on the State facilities so that, through partnerships and collaboration, California can reach zero fatalities and serious injuries by 2050.

If you have any questions, please feel free to contact Mr. Alan Lin the project coordinator at (213) 269-1124 and refer to GTS # LA-2022-04093AL-NOP.

Sincerely,

Miya Edmonson

Ref. DOC 6726142

Ms. Fiona Graham, Planning Services Manager
City of Arcadia Planning Division
240 West Huntington Drive
Arcadia, CA 91007

Dear Ms. Graham:

NOP Response to the Derby Mixed-Used Project

The Los Angeles County Sanitation Districts (Districts) received a Notice of Preparation (NOP) of a Draft Environmental Impact Report for the subject project on October 13, 2022. The proposed project is located within the jurisdictional boundaries of District No. 15. We offer the following comments regarding sewerage service:

1. The wastewater flow originating from the proposed project will discharge to a local sewer line, which is not maintained by the Districts, for conveyance to the Districts' Arcadia-Sierra Madre Sections 2 & 5 Trunk Sewer, located in South Second Avenue at East Camino Real. The Districts' 15-inch diameter trunk sewer has a capacity of 4.1 million gallons per day (mgd) and conveyed a peak flow of 0.6 mgd when last measured in 2013.

2. The expected average wastewater flow from the project, described in the NOP as 214 residential units, a 12,850 square-foot restaurant, a 1,400 square-foot café, and a 3,300 square-foot complementary restaurant space, is 50,934 gallons per day. For a copy of the District's average wastewater generation factors, go to www.lacsd.org, under Services, then Wastewater Program and Permits and select Will Serve Program, and click on the Table 1, Loadings for Each Class of Land Use link.

3. The wastewater generated by the proposed project will be treated at the San Jose Creek Water Reclamation Plant located adjacent to the City of Industry, which has a capacity of 100 mgd and currently processes an average recycled flow of 62.7 mgd.

4. The Districts are empowered by the California Health and Safety Code to charge a fee to connect facilities (directly or indirectly) to the Districts' Sewerage System or to increase the strength or quantity of wastewater discharged from connected facilities. This connection fee is used by the Districts for its capital facilities. Payment of a connection fee may be required before this project is permitted to discharge to the Districts' Sewerage System. For more information and a copy of the Connection Fee Information Sheet, go to www.lacsd.org, under Services, then Wastewater (Sewage) and select Rates & Fees. In determining the impact to the Sewerage System and applicable connection fees, the Districts will determine the user category (e.g. Condominium, Single Family Home, etc.) that best represents the actual or anticipated use of the parcel(s) or facilities on the parcel(s) in the development. For more specific information regarding the connection fee application procedure and fees, the developer should contact the Districts' Wastewater Fee Public Counter at (562) 908-4288, extension 2727.

5. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the

Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CAA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service but is to advise the developer that the Districts intend to provide this service up to the levels that are legally permitted and to inform the developer of the currently existing capacity and any proposed expansion of the Districts' facilities.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2743, or mandyhuffman@lacsd.org.

Very truly yours,

Mandy Huffman

Notice of Preparation of an Environmental Impact Report for The Derby Mixed-Use Project

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. Our comments are recommendations on the analysis of potential air quality impacts from the Proposed Project that should be included in the Environmental Impact Report (EIR). Please send a copy of the EIR upon its completion and public release directly to South Coast AQMD as copies of the EIR submitted to the State Clearinghouse are not forwarded. **In addition, please send all appendices and technical documents related to the air quality, health risk, and greenhouse gas analyses and electronic versions of all emission calculation spreadsheets, and air quality modeling and health risk assessment input and output files (not PDF files). Any delays in providing all supporting documentation for our review will require additional review time beyond the end of the comment period.**

CEQA Air Quality Analysis

Staff recommends that the Lead Agency use South Coast AQMD's CEQA Air Quality Handbook and website[1] as guidance when preparing the air quality and greenhouse gas analyses. It is also recommended that the Lead Agency use the CalEEMod[2] land use emissions software, which can estimate pollutant emissions from typical land use development and is the only software model maintained by the California Air Pollution Control Officers Association.

South Coast AQMD has developed both regional and localized significance thresholds. South Coast AQMD staff recommends that the Lead Agency quantify criteria pollutant emissions and compare the emissions to South Coast AQMD's CEQA regional pollutant emissions significance thresholds[3] and localized significance thresholds (LSTs)[4] to determine the Proposed Project's air quality impacts. The localized analysis can be conducted by either using the LST screening tables or performing dispersion modeling.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the Proposed Project and all air pollutant sources related to the Proposed Project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of

[1] South Coast AQMD's CEQA Handbook and other resources for preparing air quality analyses can be found at: http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook.
[2] CalEEMod is available free of charge at: www.caleemod.com.
[3] South Coast AQMD's CEQA regional pollutant emissions significance thresholds can be found at: http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf.
[4] South Coast AQMD's guidance for performing a localized air quality analysis can be found at: http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds.

heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips, and hauling trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers and air pollution control devices), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, such as sources that generate or attract vehicular trips, should be included in the analysis. Furthermore, emissions from the overlapping construction and operational activities should be combined and compared to South Coast AQMD's regional air quality CEQA ***operational*** thresholds to determine the level of significance.

If the Proposed Project generates diesel emissions from long-term construction or attracts diesel-fueled vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the Lead Agency perform a mobile source health risk assessment[5].

In the event that implementation of the Proposed Project requires a permit from South Coast AQMD, South Coast AQMD should be identified as a Responsible Agency for the Proposed Project in the Draft EIR. The assumptions in the air quality analysis in the EIR will be the basis for evaluating the permit under CEQA and imposing permit conditions and limits. Questions on permits should be directed to South Coast AQMD's Engineering and Permitting staff at (909) 396-3385.

Mitigation Measures

In the event that the Proposed Project results in significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize these impacts. Any impacts resulting from mitigation measures must also be analyzed. Several resources to assist the Lead Agency with identifying potential mitigation measures for the Proposed Project include South Coast AQMD's CEQA Air Quality Handbook,[6] South Coast AQMD's Mitigation Monitoring and Reporting Plan for the 2022 Air Quality Management Plan,[7] and Southern California Association of Government's Mitigation Monitoring and Reporting Plan for the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy.[8]

Mitigation measures for operational air quality impacts from other area sources that the Lead Agency should consider in the EIR may also include the following:

- Maximize use of solar energy by installing solar energy arrays.
- Use light colored paving and roofing materials.
- Utilize only Energy Star heating, cooling, and lighting devices, and appliances.
- Use of water-based or low VOC cleaning products that go beyond the requirements of South Coast AQMD Rule 1113.

South Coast AQMD staff is available to work with the Lead Agency to ensure that air quality, greenhouse gas, and health risk impacts from the Proposed Project are accurately evaluated and mitigated where feasible. If you have any questions regarding this letter, please contact me at swang1@aqmd.gov.

Arcadia, CA
Em: fgraham@ArcadiaCA.gov

RE: City of Arcadia's The Derby Mixed-Use Project

Dear Ms. Graham,

On behalf of the Southwest Regional Council of Carpenters ("**Southwest Carpenters**" or "**SWRCC**"), my Office is submitting these comments for the City of Arcadia's ("**City**") October 26, 2002, Scoping Meeting for The Derby Mixed-Use Project ("**Project**").

The Southwest Carpenters is a labor union representing 57,000 union carpenters in six states, including California, and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

Individual members of the Southwest Carpenters live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

The Southwest Carpenters expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

The Southwest Carpenters incorporates by reference all comments raising issues regarding the Environmental Impact Report (EIR) submitted prior to certification of the EIR for the Project. See *Citizens for Clean Energy v City of Woodland* (2014) 225

Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, the Southwest Carpenters requests that the City provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law ("**Planning and Zoning Law**") (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT

The City should require the Project to be built using a local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

> [A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

> [L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California's workforce can positively affect returns on climate mitigation efforts. In other words, well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.[1]

Furthermore, workforce policies have significant environmental benefits given that they improve an area's jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that that the "[u]se of a local state-certified apprenticeship program" can result in air pollutant reductions.[2]

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

> People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.[3]

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and

[3] California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* https://cproundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf

Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.[4] Some municipalities have even tied local hire and other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

> In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 ("**AB2011**"). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

II. THE CITY SHOULD IMPOSE TRAINING REQUIREMENTS FOR THE PROJECT'S CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupations Safety and Health Administration. Recently, several

[4] Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, *available at* http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf.

construction sites have been identified as sources of community spread of COVID-19.[5]

Southwest Carpenters recommend that the Lead Agency adopt additional requirements to mitigate public health risks from the Project's construction activities. Southwest Carpenters requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon Southwest Carpenters' experience with safe construction site work practices, Southwest Carpenters recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

Construction Site Design:

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.

[5] Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, *available at* https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx.

- Provide hand washing stations throughout the construction site.

Testing Procedures:

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.
- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

Planning

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches) communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.[6]

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

Southwest Carpenters has also developed a rigorous Infection Control Risk Assessment ("**ICRA**") training program to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.[7]

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."[1] CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.[2]

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[3]

[1] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[2] "California Emissions Estimator Model." CAPCOA, 2017, *available at:* http://www.aqmd.gov/caleemod/home.
[3] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled ("VMT") associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.[4]

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

> "$VMT_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i)_n$
>
> Where:
>
> n = Number of land uses being modeled."[5]

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

> "$\text{Emissions}_{pollutant} = VMT * EF_{running,pollutant}$
>
> Where:
>
> $\text{Emissions}_{pollutant}$ = emissions from vehicle running for each pollutant
>
> VMT = vehicle miles traveled
>
> $EF_{running,pollutant}$ = emission factor for running emissions."[6]

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.[7] In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act ("CEQA") requires that such changes be justified by substantial evidence.[8] The default number of construction-related worker trips is calculated by multiplying the

[4] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14-15.
[5] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 23.
[6] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 15.
[7] "CalEEMod User's Guide." CAPCOA, November 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4, p. 34.
[8] CalEEMod User Guide, *available at:* http://www.caleemod.com/, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.[9] Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively."[10] Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.[11] The operational home-to-work vehicle trip lengths are:

> "[B]ased on the *location* and *urbanization* selected on the project characteristic screen. These values were *supplied by the air districts or use a default average for the state*. Each district (or county) also assigns trip lengths for urban and rural settings" (emphasis added). [12]

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).[13]

Worker Trip Length by Air Basin		
Air Basin	**Rural (miles)**	**Urban (miles)**
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8
Mojave Desert	16.8	10.8
Mountain Counties	16.8	10.8
North Central Coast	17.1	12.3
North Coast	16.8	10.8
Northeast Plateau	16.8	10.8
Sacramento Valley	16.8	10.8
Salton Sea	14.6	11
San Diego	16.8	10.8
San Francisco Bay Area	10.8	10.8
San Joaquin Valley	16.8	10.8
South Central Coast	16.8	10.8
South Coast	19.8	14.7
Average	**16.47**	**11.17**
Minimum	**10.80**	**10.80**
Maximum	**19.80**	**14.70**
Range	**9.00**	**3.90**

[11] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 14.
[12] "Appendix A Calculation Details for CalEEMod." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/02_appendix-a2016-3-2.pdf?sfvrsn=6, p. 21.
[13] "Appendix D Default Data Tables." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8-miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7-miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan ("Project") located in the City of Claremont ("City"). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.[14] In an effort to evaluate the potential for a local hire provision to reduce the Project's construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
Without Local Hire Provision	
Total Construction GHG Emissions (MT CO_2e)	3,623
Amortized Construction GHG Emissions (MT CO_2e/year)	120.77
With Local Hire Provision	
Total Construction GHG Emissions (MT CO2e)	3,024
Amortized Construction GHG Emissions (MT CO_2e/year)	100.80
% Decrease in Construction-related GHG Emissions	***17%***

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project's urbanization level and location.

[14] "Appendix D Default Data Tables." CAPCOA, October 2017, *available at:* http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4, p. D-85.

Village South Specific Plan (Proposed)

Los Angeles-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	45.00	1000sqft	1.03	45,000.00	0
High Turnover (Sit Down Restaurant)	36.00	1000sqft	0.83	36,000.00	0
Hotel	50.00	Room	1.67	72,600.00	0
Quality Restaurant	8.00	1000sqft	0.18	8,000.00	0
Apartments Low Rise	25.00	Dwelling Unit	1.56	25,000.00	72
Apartments Mid Rise	975.00	Dwelling Unit	25.66	975,000.00	2789
Regional Shopping Center	56.00	1000sqft	1.29	56,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	33
Climate Zone	9			**Operational Year**	2028
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

Paul Rosenfeld, Ph.D.

Chemical Fate and Transport & Air Dispersion Modeling

Principal Environmental Chemist

Risk Assessment & Remediation Specialist

Education

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H_2O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist
Big Creek Lumber, Davenport, California, 1995; Scientist
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference.* Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference.* Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference.* Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference.* Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants*.. Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conferenc*e. Lecture conducted from Indianapolis, Maryland.

Rosenfeld. P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation.* Lecture conducted from Anaheim California.

Rosenfeld. P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest.* Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. *Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings*. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., and C.L. Henry. (1999). An evaluation of ash incorporation with biosolids for odor reduction. *Soil Science Society of America*. Lecture conducted from Salt Lake City Utah.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell.* Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest.* Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E, C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. $41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: $10,000 grant awarded to San Diego State University.
Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. $100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. $20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: $10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: $15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. $500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the United States District Court For The District of New Jersey
Duarte et al, *Plaintiffs,* vs. United States Metals Refining Company et. al. *Defendant.*
Case No.: 2:17-cv-01624-ES-SCM
Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division
M/T Carla Maersk, *Plaintiffs,* vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS "Conti Perdido" *Defendant.*
Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237
Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants
Case No.: No. BC615636
Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica
The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants
Case No.: No. BC646857
Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado
Bells et al. Plaintiff vs. The 3M Company et al., Defendants
Case: No 1:16-cv-02531-RBJ
Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112th Judicial District
Phillip Bales et al., Plaintiff vs. Dow Agrosciences, LLC, et al., Defendants
Cause No 1923
Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa
Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants
Cause No C12-01481
Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois
Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants
Case No.: No. 0i9-L-2295
Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No.: LC102019 (c/w BC582154)
Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., *Plaintiffs,* vs. Meritor Inc., et al., *Defendants*
Case Number: 4:16-cv-52-DMB-JVM
Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No.: No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial, March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No.: RG14711115
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No.: LALA002187
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County
Doug Pauls, et al.,, et al., Plaintiffs vs. Richard Warren, et al., Defendants
Law No,: LALA105144 - Division A
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action N0. 14-C-30000
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward DeRuyter, Defendants
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No 4980
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case Number CACE07030358 (26)
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City Landfill, et al. Defendants.
Case No. 5:12-cv-01152-C
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas
Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant.*
Case Number cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., *Plaintiffs,* vs. Republic Services, Inc., et al., *Defendants*
Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division
Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs,* vs. BP Products North America, Inc., *Defendant.*
Case 3:10-cv-00622
Rosenfeld Deposition: February 2012
Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland
Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants
Case Number: 03-C-12-012487 OT
Rosenfeld Deposition: September 2013

Matthew F. Hagemann, P.G., C.Hg., QSD, QSP

Geologic and Hydrogeologic Characterization
Industrial Stormwater Compliance
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
CEQA Review

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.
B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist
California Certified Hydrogeologist
Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt's responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt's duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, Oxygenates in Water: Critical Information and Research Needs.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Coloradao.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal repesentatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Hagemann, M.F., 2003. A Deductive Approach to the Assessment of Perchlorate Contamination. Invited presentation to the California Assembly Natural Resources Committee.

Hagemann, M.F., 2003. Perchlorate: A Cold War Legacy in Drinking Water. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. From Tank to Tap: A Chronology of MTBE in Groundwater. Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. A Chronology of MTBE in Groundwater and an Estimate of Costs to Address Impacts to Groundwater. Presentation to the annual meeting of the Society of Environmental Journalists.

Hagemann, M.F., 2002. An Estimate of the Cost to Address MTBE Contamination in Groundwater (and Who Will Pay). Presentation to a meeting of the National Groundwater Association.

Hagemann, M.F., 2002. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to a meeting of the U.S. EPA and State Underground Storage Tank Program managers.

Hagemann, M.F., 2001. From Tank to Tap: A Chronology of MTBE in Groundwater. Unpublished report.

Hagemann, M.F., 2001. Estimated Cleanup Cost for MTBE in Groundwater Used as Drinking Water. Unpublished report.

Hagemann, M.F., 2001. Estimated Costs to Address MTBE Releases from Leaking Underground Storage Tanks. Unpublished report.

1 Introduction

This report summarizes Dudek's evaluation and analysis of tree resources at the proposed Derby Mixed Use Project (Project or proposed Project) in Arcadia, California. The Project site is comprised of 2.23 acres of developed land on two parcels in the City of Arcadia at 233 E. Huntington Drive (APN 5773-009-070, The Derby Restaurant) and 301 E. Huntington Drive (APN 5773-009-065, Souplantation). The Project site is bound by Hampton Inn Hotel and parking lot to the north, E. Huntington Drive to the south, Gateway Drive to the east, and the Embassy Suites Hotel to the west (Assessor Parcel Numbers [APN] 5773-006-036, -010, -004, and -005) located in the City of Arcadia (City) within Los Angeles County (Figure 1 – Regional Location and Vicinity Map).

The field inventory and assessments of the survey area's trees were conducted on March 31, 2022. The survey area included the Project site and the adjacent streets of Huntington Drive and Gateway Drive of the Project site, where off-site trees could be impacted by Project construction or operation. This report includes a discussion of tree inventory, evaluation, and analysis methods, a summary of findings, identification of anticipated impacts, and tree protection recommendations consistent with Section 9110.01 of the Development Code and the tree removal permit process specified therein, as well as Chapter 8, Comprehensive Tree Management Program, of the City's Municipal Code governing the planting, maintenance, removal and replacement of City-owned trees on public property.

Under Section 9110.01 of the Development Code, the City requires a permit for removal or encroachment upon the canopy or protected zone of a protected tree, which are defined as:

1. Engelmann Oak (*Quercus Engelmannii*) or Coast Live Oak (*Quercus Agrifolia*) with a trunk diameter larger than four (4) inches measured at a point four and one-half (4½) feet above the root crown, or two (2) or more trunks measuring three (3) inches each or greater in diameter, measured at a point four and one-half (4½) feet above the root crown.

2. Any other living California native or non-California native Oak tree with a trunk diameter larger than twelve (12) inches measured at a point four and one-half (4½) feet above the root crown, or two (2) or more trunks measuring ten (10) inches each or greater in diameter, measured at a point four and one-half (4½) feet above the root crown.

3. California, or western, Sycamore (*Platanus Racemose*) with a trunk diameter larger than six (6) inches measured at a point four and one-half (4½) feet above the root crown, or two (2) or more trunks measuring four (4) inches each or greater in diameter, measured at a point four and one-half (4½) feet above the root crown.

4. Mature Tree. Any tree, with the exception of the trees listed as Unprotected Trees, that have a trunk diameter larger than twelve (12) inches measured at a point four and one-half (4½) feet above the root crown, or two (2) or more trunks measuring ten (10) inches each or greater in diameter, measured at a point of four and one-half (4½) feet above the root crown and the tree is located within a required front, side, street-side, or rear yard setback.

Chapter 8, Comprehensive Tree Management Program, of the City's Municipal Code governs the planting, maintenance, removal, and replacement of City-owned trees on public property. Regarding permits required, Chapter 8, Section 9806 states:

> No person shall plant, remove, cut any portion of or damage any City-owned tree or shrub on any public property without first obtaining a permit from the Arcadia Public Works Department. The person receiving the permit shall abide by the standards set forth in the permit, this Chapter and all other applicable sections of this Code. The permit shall be void and of no further effect thirty (30) days from and after the date it is issued, unless a longer duration is specifically provided for when the permit is issued.

The analysis of potential tree impacts in this report considers the requirements outlined in Section 9110.01 of the City's Development Code, as well as Chapter 8 and other applicable sections of City's Municipal Code. The proposed Project would remove four (4) City-owned street trees and would result in encroachment upon City-owned street trees due to the proposed site development. Section 4 of this report summarizes the City's regulatory requirements and makes further recommendations related to anticipated on-site tree removal and construction encroachment into the regulated zone of street trees.

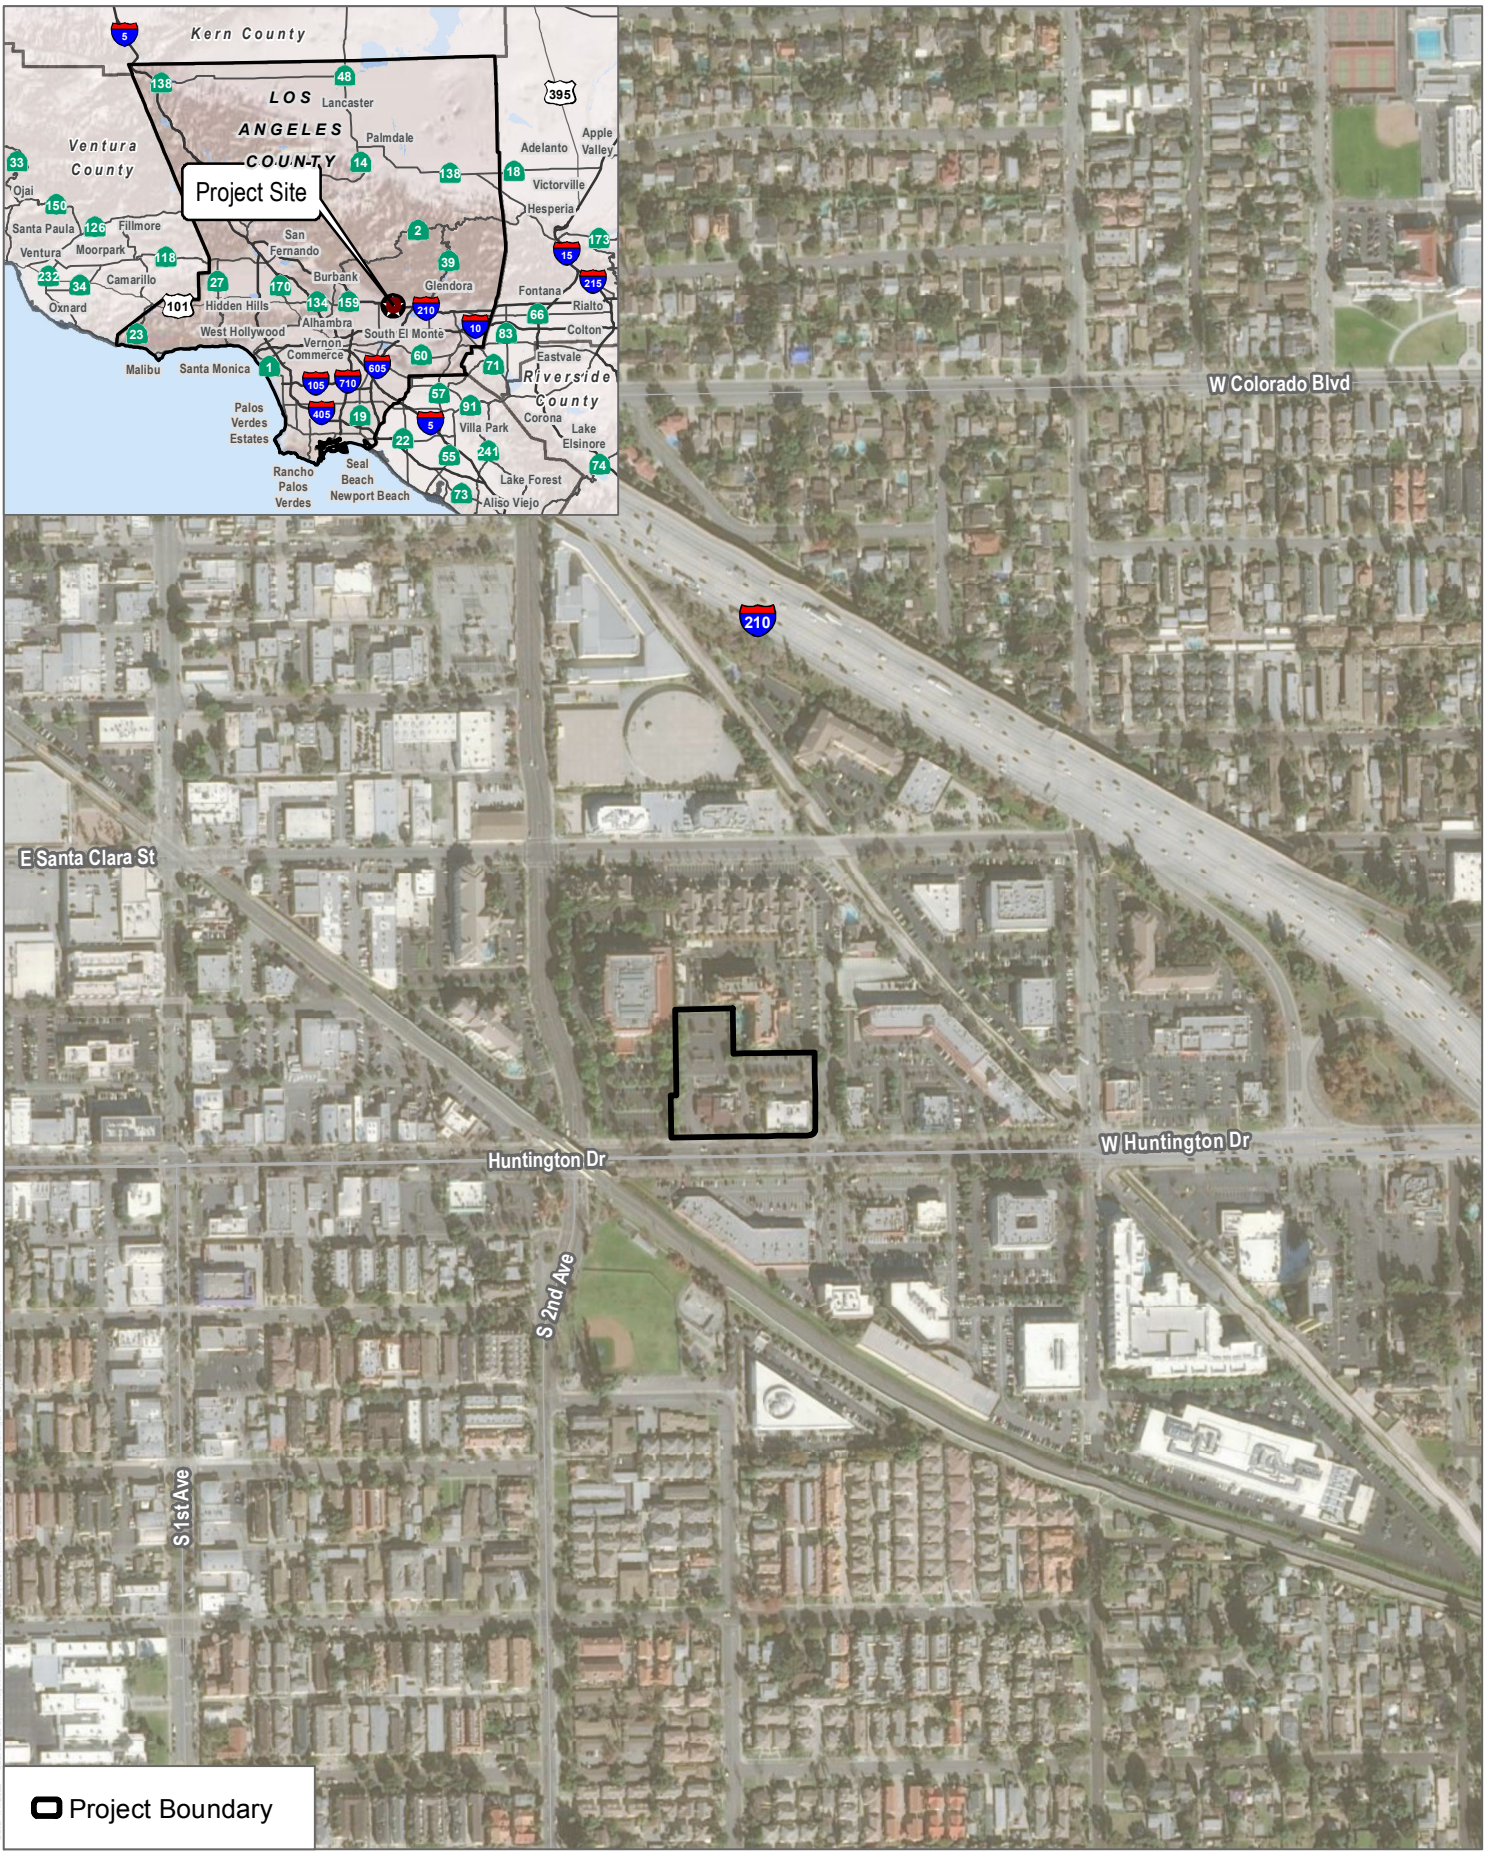
1.1 Summary

The field survey recorded 78 trees within the survey area, which includes 66 on-site trees and 12 off-site street trees located on E. Huntington Drive or Gateway Drive. Based on an evaluation of the most current site plan (dated March 24, 2022), the disturbance area is focused in existing developed areas, consisting primarily of existing buildings and parking lots. Construction of the proposed Project is expected to require removal of up to 64 non-protected trees on-site, and four off-site City-owned street trees (1 London plane sycamore and 3 crape myrtle). Furthermore, eight off-site street trees (6 London plane sycamore, 1 sago palm, 1 windmill palm) would be encroached upon as a result of proposed excavation for the subterranean parking structure, building construction, and/or public right-or-way improvements. The inventoried tree locations are depicted in Appendix A, Tree Location Exhibit. The proposed Project's tree impacts are depicted in Appendix B, Tree Impact Exhibit.

No trees on-site are subject to regulation under Division 10, Section 9110.01, Tree Preservation, of the City's Development Code (Tree Preservation Ordinance), adopted April 2021. Therefore, no tree replacement is required for the removal of on-site trees.

The 12 off-site trees (7 London plane sycamore, 3 crape myrtle, 1 sago palm, 1 windmill palm) identified as off-site street trees within the survey area are subject to regulation under Chapter 8, Comprehensive Tree Management Program, of the City Municipal Code. Replacement of the four (4) City-owned street trees shall be determined by the Director of Public works. City-issued permits are not required for removal of tree limbs or pruning or trimming branches of street trees in conjunction with construction activities; however, the City requires that pruning or trimming be completed in accordance with the industry standards as set forth by the International Society of Arboriculture or the American National Standards Institute (ANSI), and in consultation with a Certified Arborist.

Finally, Section 4 of this report provides construction-related tree protection recommendations and recommendations for long-term maintenance and care for street trees that will be retained adjacent to the Project site, as well as for future on-site replacement trees. A long-term monitoring and maintenance program is recommended to mitigate for encroachments into the regulated zone of retained street trees.



1.2 Assignment

Dudek's International Society of Arboriculture (ISA) Certified Arborists performed the following tasks:

- Assessed and inventoried all trees within the survey area and documented species, general health, general structural condition, size, appearance, and presence of pests within the 2.23 acre proposed Project site and adjacent public right-of-way;
- Mapped the location of trees in the survey area using global positioning system (GPS) technology as necessary to develop a tree location exhibit and for planning reference;
- Prepared a tree information matrix that details the attributes of each tree and identifies the species and protection status;
- Analyzed tree attribute data and coordinated with the Project design team to promote tree retention on site, to the maximum extent practicable;
- Evaluated tree impacts based on the Project site plans, and;
- Prepared this report to document the results of field surveys and impact analyses and provide recommendations for tree regulation and impact mitigation measures in accordance with the provisions of the City's Tree Preservation Ordinance and Chapter 8 of the City's Municipal Code.

1.3 Project Description

The Applicant desires to create a new mixed-use project that would include six stories of multi-family residential dwelling units on upper levels alongside a larger The Derby Restaurant and second story indoor/outdoor lounge as its centerpiece along with another new restaurant and a café, both fronting E. Huntington Drive. A café space opposite The Derby Restaurant—and fronting the courtyard and street—would provide complementary pedestrian activity. Mostly continuous retail and residential frontage with a covered passageway to hidden parking would complete the relationship to E. Huntington Drive and Gateway Drive. The six-story building massing fronting E. Huntington Drive would step back approximately 30 feet at the fifth and sixth floors to provide a landscaped residential pool and amenity space. Along the Gateway Drive frontage, the massing would terrace back from the frontage several times as well include a 50-foot by 55-foot ground level landscaped vehicular entry courtyard. The Project would also reconfigure portions of the medians along E. Huntington Drive and Gateway Drive to improve circulation.

2 Methods

2.1 Individual Tree Evaluation

Dudek's ISA Certified Arborist, Ryan Allen (WE-10316A), conducted the following tree inventory and tree evaluation:

- March 31, 2022– tree inventory and evaluation to document tree locations and attribute information for all protected trees within the survey area.

The arborist examined and mapped all trees that may be disturbed by the proposed development. Tree attribute data collected during the field survey included species, trunk diameter, tree height, canopy spread, general health condition, structural condition and presences of observable pests or other tree maladies. Trunk diameters were measured using a diameter tape which provides adjusted numbers for diameter measurements when wrapping the tape around the circumference of the trunk of a tree. Diameter measurements were collected using standard protocol described by the Council of Tree and Landscape Appraisers in the "Guide for Plant Appraisal," published by the ISA and in accordance with guidance given in the City's Municipal Code/Development Code.

Trunk diameter measurements were taken at 4.5 feet above the ground along the trunk axis, with a few common exceptions. In cases where the trunk of a tree split into multiple stems at approximately 4.5 feet above the ground, the measurement was made at the location that best represented the trunk's diameter. Tree height measurements were estimated by the arborist, and tree crown radius measurements were documented by "pacing-off" the measurement based on the arborist's knowledge of his stride length or visually estimating the canopy width.

Pursuant to the Guide for Plant Appraisal (ISA 2000), tree health and structure were evaluated with respect to five distinct tree components: roots, trunk, scaffold branches, small branches, and foliage. Health and structure were graded as *good*, *good/fair*, *fair*, *fair/poor*, and *poor*. Good condition trees exhibit acceptable vigor, healthy foliage, minor if any structural issues, and no apparent maladies. Fair condition trees are typical, with few maladies, moderate structural issues, and may exhibit less vigor in foliage and new growth. Trees assigned a poor condition rating by the arborist exhibit significant health or structural problems or damage. Representative photographs of the tree survey area trees are provided in Appendix D, Representative Site Photographs.

The location of each individual regulated tree was mapped using a Trimble Pathfinder Pro XH Global Positioning System (GPS) receiver. The Pathfinder has a horizontal accuracy of 1-meter (1-sigma) using differential code positioning techniques. Since tree canopies can sometimes cause loss of satellite lock by blocking the line-of-sight to satellites, an electronic compass and reflectorless electronic distance measuring (EDM) device was also used in mapping tree locations. The EDM/compass combination operates in concert with the Pathfinder system to position offsets, and offset information is automatically attached to the GPS position data string. Dudek used the data collected to create a master tree inventory data set, inclusive of all regulated trees within the tree survey area.

Individual tree locations are presented in Appendix A, Tree Location Exhibit, and individual tree attribute data and impact determination is presented in Appendix B, Tree Impact Exhibit and Appendix C, Tree Information Matrix.

2.2 Tree Impact Analysis

Following data collection, processing, and analysis efforts, an impact determination was made for each tree based on proximity to the proposed disturbance area and building footprint. Impact determinations used in this report include the following: 1) Not Impacted (tree not affected by Project); 2) Removal (tree to be removed); and 3) Encroachment (Project disturbance would occur within the protected zone of the tree). A summary of Project-related tree impacts is presented in Section 3.2 of this report, and Appendix C provides impact determination status for each tree recorded in the tree survey area.

2.3 Scope of Work Limitations

No root crown excavations or investigations, internal probing, or aerial canopy inspections were performed during the tree assessments. Therefore, the presence or absence of internal decay or other hidden or inaccessible inferiorities in individual trees could not be confirmed. It is recommended that any large tree proposed for preservation in an urban setting be thoroughly inspected for internal or subterranean decay by a qualified arborist before finalizing preservation or relocation plans.

3 Findings/Results

3.1 Inventory Summary

Dudek's arborist recorded 78 trees within the on-site survey area and off-site street trees. Of these, no trees meet the criteria for regulation under City's Tree Preservation Ordinance and 12 trees meet the criteria for regulation under the Tree Management Program. Table 1 provides a summary of the species and regulatory status of the trees mapped within the tree survey area.

Table 1. Summary of Existing Trees

Scientific Name	Common Name	Tree Quantities			
		On-Site Protected Trees	Off-Site Street Trees	On-Site Non-Protected Trees	Total (All Trees)
Bauhinia x blakeana	Hong Kong orchid	0	0	1	1
Chitalpa taskentensis	chitalpa	0	0	2	2
Cupaniopsis anacardioides	carrotwood	0	0	1	1
Cycas revoluta	sago palm	0	1	0	1
Eucalyptus camaldulensis	river red gum	0	0	1	1
Ficus macrocarpa	Indian laurel fig	0	0	2	2
Jacaranda mimosifolia	jacaranda	0	0	7	7
Koelreuteria bipinnata	Chinese flame	0	0	16	16
Lagerstroemia indica	crape myrtle	0	3	8	8
Platanus x hispanica	London plane	0	7	1	8
Schinus terebinthifolius	Brazilian pepper	0	0	6	6
Syagrus romanzoffianum	queen palm	0	0	20	20
Trachycarpus fortunei	windmill palm	0	1	0	1
Washingtonia robusta	Mexican fan palm	0	0	1	1
	TOTAL	**0**	**12**	**66**	**78**

As presented in Appendix C of this report, 34 (44%) of the trees exhibit fair health, 30 (38%) trees exhibit good health, and 14 (18%) tree shows signs of poor health. Additionally, 34 trees (44%) have poor structure, 24 trees (31%) have fair structure, and 19 trees (24%) have good structure.

Trees in the tree on-site and off-site survey area vary in size and stature according to species. Aggregate trunk diameters of the trees within the tree survey area ranges from 2 inches to 43 inches. Tree heights vary from 3 feet to 55 feet. Tree canopy extents range from 2 feet to nearly 30 feet at their widest location. Individual attributes of each tree are presented in Appendix C.

3.2 Project-Related Impacts

There is wide variation in tolerance to construction impacts among tree species and the response of an individual tree to impacts also varies with age and condition. Impacts assessed for the Project include those trees with protected zones on or adjacent to the proposed improvements and identified disturbance areas as defined in the project site plan. The impact discussion in this section identifies all impacts anticipated to result to regulated trees based on an evaluation of tree locations compared with the Project site plan. Much of the site will need to be graded to accommodate the construction of buildings, parking lots, and the placement of necessary infrastructure.

The analysis of affected trees presented below is based on the proposed Project footprint. For the purposes of this report, tree removal is conservatively considered necessary when the trunk is located inside or within 2 feet of the proposed limits of development. Encroachment is expected when soil and roots are disturbed within the tree-protected zone (canopy drip line plus 5 feet or 15 feet from trunk, whichever is greater). Typically, specific circumstances allow some protected trees that are being encroached upon to be preserved in place within or adjacent to the development area. Table 2 summarizes impact determinations for protected trees, street trees, and non-regulation trees within the tree survey area that are subject to regulation under the City's Tree Preservation Ordinance and Tree Management Program. As illustrated in Appendix B, the Project would remove 64 on-site, non-protected trees and four off-site, City owned trees. In addition, two on-site, non-protected trees and eight off-site, City-owned street trees would be encroached upon.

Table 2. Summary of Tree Impact Determinations

Species	On-Site Protected Trees		Off-Site Street Trees		On-Site Non-Protected Trees		
Botanical Name	Removal	Encroach	Removal	Encroach	Removal	Encroach	Total
Bauhinia x blakeana	0	0	0	0	1	0	1
Chitalpa taskentensis	0	0	0	0	2	0	2
Cupaniopsis anacardioides	0	0	0	0	1	0	1
Cycas revoluta	0	0	0	1	0	0	1
Eucalyptus camaldulensis	0	0	0	0	1	0	1

4 Regulatory Requirements and Recommendations

4.1 Recommendations

Removals

Chapter 8, Comprehensive Tree Management Program, of the City's Municipal Code defines the requirements for street-tree (i.e., City-owned-tree) removals as follows:

> **Section 9804. - Street Trees—Removal.**
> Street trees may be removed either by the City or by the owner of real property adjacent to the street tree only under the circumstances and in accordance with the tree removal policy, as set forth in the City of Arcadia Street Tree Master Plan, as it is adopted and may be amended from time to time by resolution of the City Council.
>
> **Section 9806. - Permit Required.**
> No person shall plant, remove, cut any portion of or damage any City-owned tree or shrub on any public property without first obtaining a permit from the Arcadia Public Works Department. The person receiving the permit shall abide by the standards set forth in the permit, this Chapter and all other applicable sections of this Code. The permit shall be void and of no further effect thirty (30) days from and after the date it is issued, unless a longer duration is specifically provided for when the permit is issued.
>
> **Section 9807. - Fee.**
> A property owner who requests removal of a street tree shall pay to the City the actual costs of street tree removal and replacement. Before a street tree is removed pursuant to this Chapter at the request of a property owner, the property owner shall submit to the City a deposit equal to the amount determined by the Director of Public Works to be the estimated cost to remove and replace the street tree (depending on size of the tree and other parameters that may impact the ability to remove/replace the tree). Following completion of street tree removal and replacement, the Director of Public Works will refund to the property owner any portion of the deposit which exceeds the actual costs of the street tree removal and replacement. In the event that the actual cost of street tree removal and replacement exceeds the amount of the deposit, the property owner shall promptly pay to the City the difference upon receipt of billing from the City.

Encroachment into Regulated Zone and Retained Trees

In accordance with Section 9812, Tree Planting and Maintenance Regulations, of the City's Municipal Code, Appendix E of this report provides recommendations to reduce potential damage from encroachments into the regulated zone of City-owned street trees. These recommendations include measures that go beyond the requirements set forth by the City but would contribute to the health of the trees retained adjacent to the Project site, as well as the replacement trees required and recommended to be planted on-site. The measures included in Appendix E are also consistent with the provisions of Division 10 Section 9110.01.090, Protective Measures, of the City's Development Code and would help minimize impacts related to the construction of the proposed Project.

Appendix E includes measures to implement prior to, during, and following construction. This includes measures such as exclusion fencing and worker training to avoid direct impacts to trees, and measures such as irrigation and monthly inspections by an arborist to promote the long-term health of retained trees. Dudek also recommends arborist monitoring during construction when encroachments occur in order to minimize root disturbance and determine the best course of actions for root pruning, supplemental irrigation, branch trimming, or other measures that would minimize the impacts from ground disturbing or other potential impactful activities.

4.2 Tree Permits

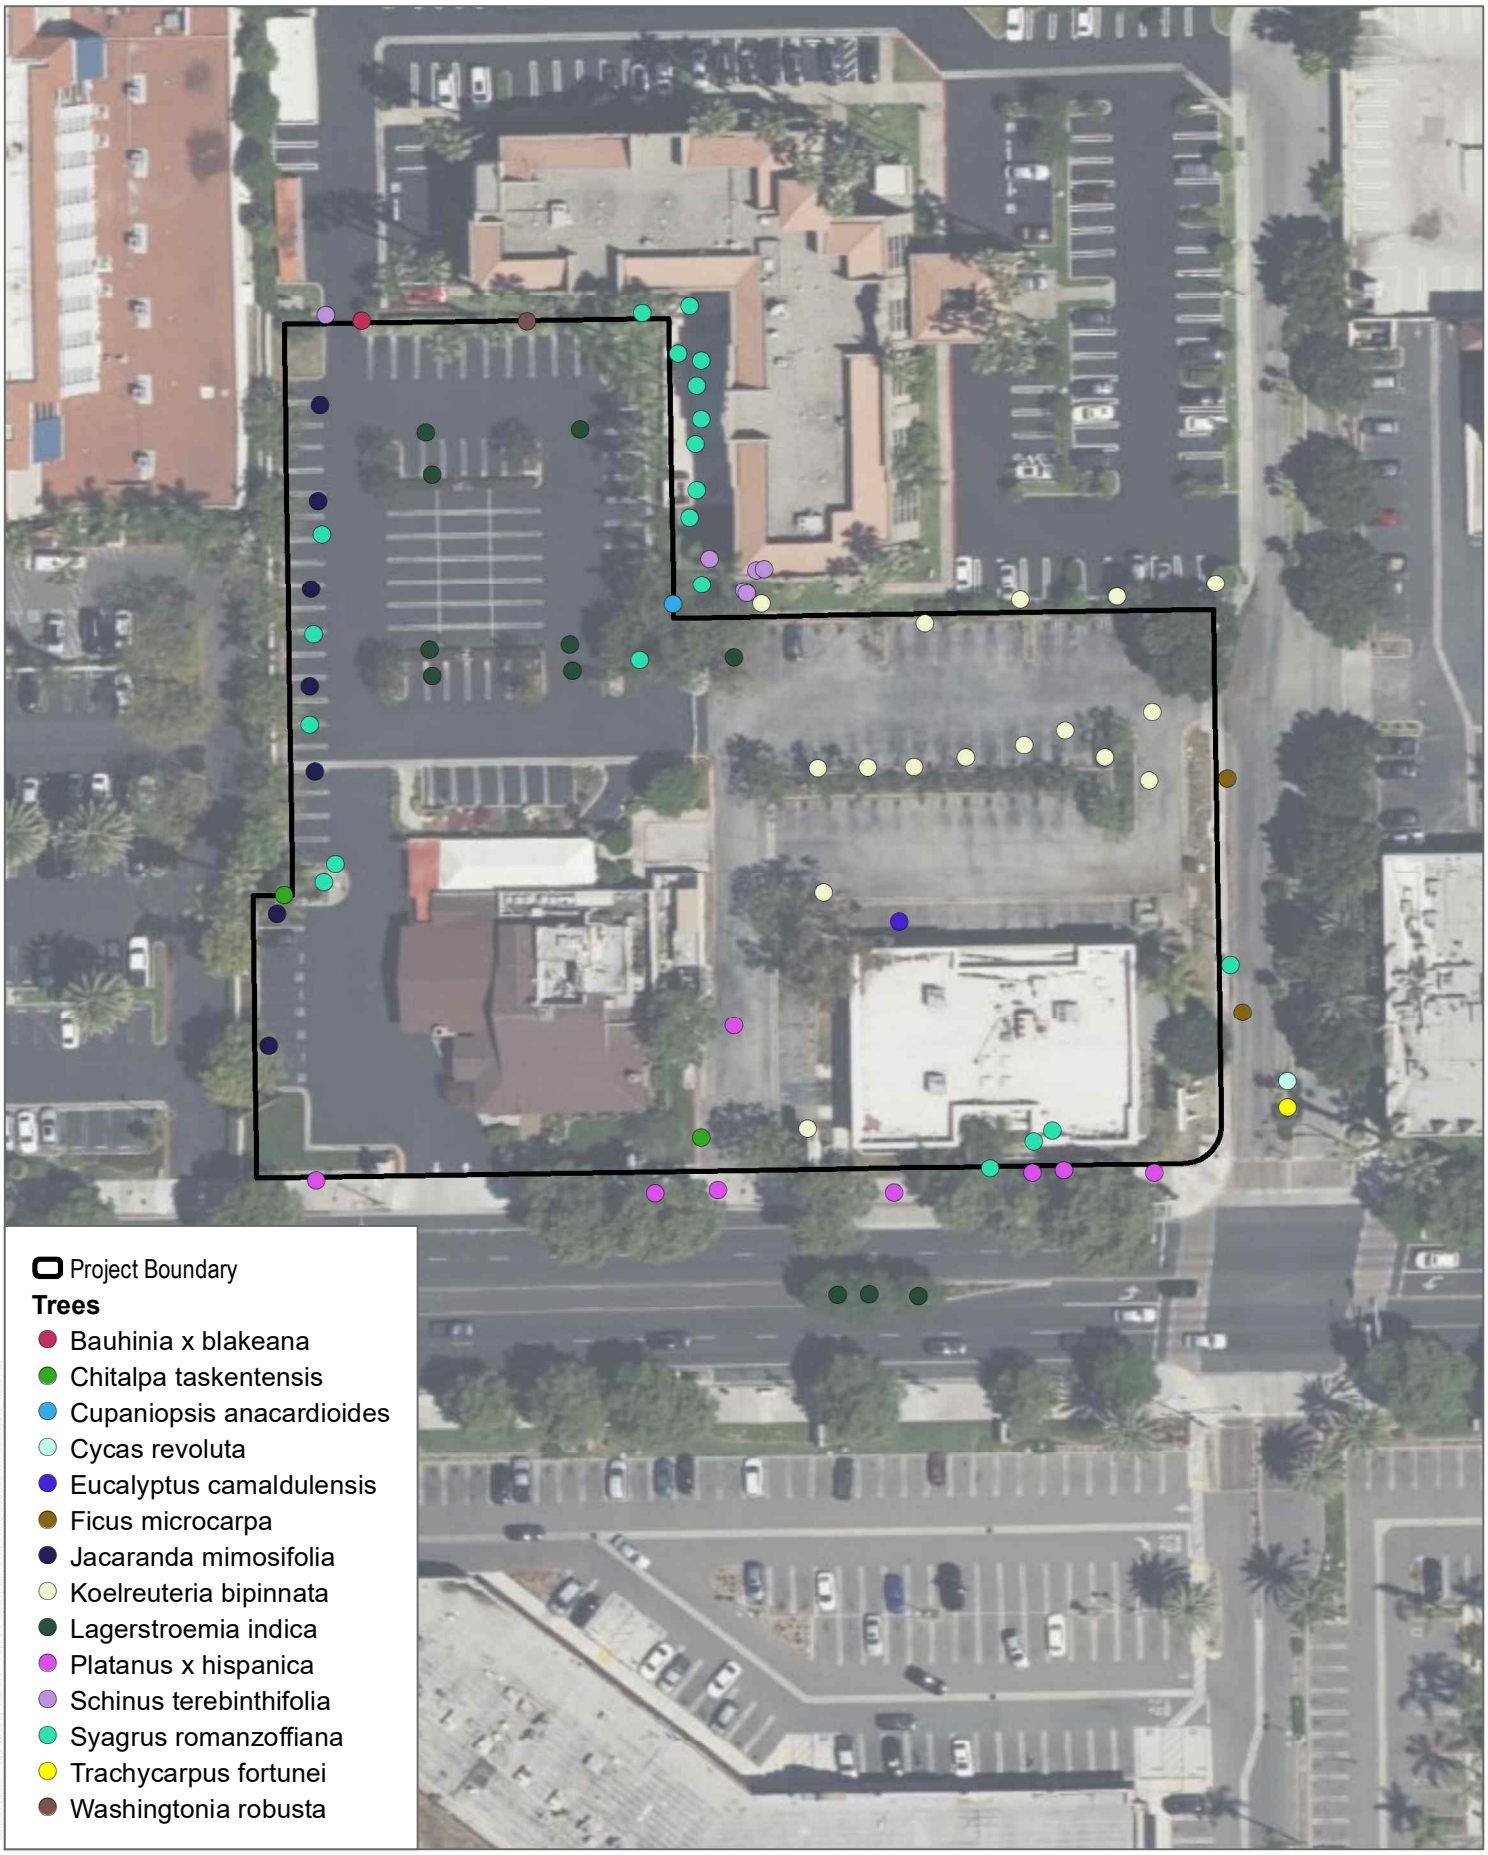
The proposed Project would require removal of four (4) City-owned street trees. Consistent with Section 9806 of the City Municipal Code, the applicant will need to obtain a permit for removal of these trees. Additionally, consistent with Section 9807 of the City Municipal Code, the applicant will be required to pay a fee determined by the Director of Public Works.

INTENTIONALLY LEFT BLANK

5 Disclosure

This arborist report provides conclusions and recommendations based only on a visual examination of the trees within the tree survey area by International Society of Arboriculture Certified Arborists and reasonable reliance on the completeness and accuracy of the information provided to the arborist. The examination did not include subterranean or internal examination of the trees.

Arborists are tree specialists who use their education, knowledge, training, and experience to examine trees, recommend measures to enhance the beauty and health of trees, and attempt to reduce the risk of living near them. Although trees provide many benefits to those who live near them, they also include inherent risks from breakage or failure that can be minimized but not eliminated.



Arborists cannot detect every condition that could possibly lead to the failure of a tree. Trees are living organisms subject to attack by disease, insects, fungi, weather, and other forces of nature, and conditions that lead to failure are often hidden within trees and belowground. There are some inherent risks with trees that cannot be predicted with any degree of certainty, even by a skilled and experienced arborist. Arborists cannot predict acts of nature, including, without limitation, storms of sufficient strength, which can cause an apparently healthy tree to fail. Additionally, arborists cannot guarantee that a tree will be healthy or safe under all circumstances or for any specific period of time. A tree's condition could change over a short or long period of time due to climatic, cultural, or environmental conditions. Further, there is no guarantee or certainty that recommendations or efforts to correct unsafe conditions will prevent future breakage or failure of a tree.

To live or work near trees is to accept some degree of risk. Neither the author of this Arborist report nor Dudek have assumed any responsibility for or will be liable for any claims, losses, or damages for damage to any tree, death or injury to any person, or any loss of or damage to any personal or real property.

Appendix E
Tree Protection Measures

Appendix E - Tree Protection Measures

The following sections are included as general guidelines for tree protection from construction impacts. The measures presented should be monitored by arborists and enforced by contractors and developers for maximum benefit to the trees.

Tree Protection Measures Prior to Construction

Prior to any construction activity (drainage, demolition, material removal or delivery), oak and landmark trees with canopies that fall within 30 feet of construction activity shall be protected by fencing and signage. All contractors shall be made aware of the tree protection measures. A project arborist shall be assigned to monitor tree health and construction activity near retained trees on site. The project arborist shall be an International Society of Arboriculture (ISA) Certified Arborist.

Fencing and Signage: A 6-foot high, chain link fence with tree protection signs shall be erected around all trees (or tree groups) with canopies that fall within 30 feet of construction activity. The protective fence should be installed at a distance from the trunk that is equal to the dripline radius plus 5 feet (protected tree zone). For any trees that would be encroached upon by construction activities, fencing shall be placed as far away from trunk of the tree as possible while still allowing the required construction activities to proceed. This fencing will delineate the tree protection zone and prevent unwanted activity in and around the trees in order to reduce soil compaction in the root zones of the trees and other damage from heavy equipment. Fences are to be mounted on two-inch diameter galvanized iron posts, driven into the ground to a depth of at least 2-feet at no more than 10-foot spacing. In areas where fencing is located on paving or concrete that will not be demolished, then the posts may be supported by an appropriate grade level concrete base. Tree protection signs should be attached to every fourth post. The contractor shall maintain the fence to keep it upright, taut, and aligned at all times. Fencing shall be removed only after all construction activities are complete.

Pre-Construction Meeting: A pre-construction meeting shall be held between all contractors and the arborist. The arborist will instruct the contractors on tree protection practices and answer any questions. All equipment operators and spotters, assistants, or those directing operators from the ground, shall provide written acknowledgement of their receiving tree protection training. This training shall include information on the location and marking of protected trees, the necessity of preventing damage, and the discussion of work practices that will accomplish such.

Protection and Maintenance during Construction

Once construction activities have begun the following measures shall be adhered to:

Avoidance: Signs, ropes, cables, or any other items shall not be attached to any tree.

Equipment Operation and Storage: Operating heavy machinery around the root zones of trees will increase soil compaction, which decreases soil aeration and subsequently reduces water penetration in the soil. All heavy equipment and vehicles shall stay out of the fenced tree protection zone, unless where specifically approved in writing by the City Arborist and under the supervision of an ISA Certified Arborist.

Storage and Disposal: Do not store or discard any supply or material, including paint, lumber, concrete overflow, etc. within the fenced tree protection zone. Remove all foreign debris within the fenced tree protection zone; it is important to leave the duff, mulch, chips, and leaves around the

retained trees for water retention and nutrients. Avoid draining or leakage of equipment fluids near retained trees. Fluids such as: gasoline, diesel, oils, hydraulics, brake and transmission fluids, paint, paint thinners, and glycol (anti-freeze) should be disposed of properly. Keep equipment parked outside of the fenced tree protection zone of retained trees to avoid the possibility of leakage of equipment fluids into the soil. The effect of toxic equipment fluids on the retained trees could lead to decline and death.

Moving Construction Materials: Care will be taken when moving equipment or supplies near the trees, especially overhead. Avoid damaging the tree(s) when transporting or moving construction materials and working around retained trees (even outside of the fenced tree protection zone). Above ground tree parts that could be damaged (e.g., low limbs, trunks) should be flagged with red ribbon. If contact with the tree crown is unavoidable, prune the conflicting branch(es) using ISA or ANSI A300 standards.

Grade Changes: Grade changes, including adding fill, are not permitted within the tree protection zone, without special written authorization and under supervision by a Certified Arborist. Lowering the grade within this area will necessitate cutting main support and feeder roots, jeopardizing the health and structural integrity of the tree(s). Adding soil, even temporarily, on top of the existing grade will compact the soil further, and decrease both water and air availability to the trees' roots.

Trenching: Unless a Tree Permit has been issued for trenching activity within the fenced tree protection zone, all trenching shall be outside of the fenced tree protection zone. Roots primarily extend in a horizontal direction forming a support base to the tree similar to the base of a wineglass. Where trenching is necessary in areas that contain tree roots, prune the roots using a Dosko root pruner or equivalent. All cuts should be clean and sharp, to minimize ripping, tearing, and fracturing of the root system. The trench should be made no deeper than necessary.

Irrigation: Trees that have been substantially root pruned (30% or more of their root zone) will require irrigation for the first twelve months. The first irrigation should be within 48 hours of root pruning. They should be deep watered every two to four weeks during the summer and once a month during the winter (adjust accordingly with rainfall). One irrigation cycle should thoroughly soak the root zones of the trees to a depth of 3 feet. The soil should dry out between watering; avoid keeping a consistently wet soil. Designate one person to be responsible for irrigating (deep watering) the trees. Check soil moisture with a soil probe before irrigating. Irrigation is best accomplished by installing a temporary above ground micro-spray system that will distribute water slowly (to avoid runoff) and evenly throughout the fenced tree protection zone ***but never soaking the area located within 6- feet of the tree trunk***.

Canopy Pruning: Do not prune any of the trees until all construction is completed. This will help protect the tree canopies from damage. All pruning shall be completed under the direction of an ISA Certified Arborist and using ISA guidelines. Only dead wood shall be removed from tree canopies.

Washing: Periodic washing of the foliage is recommended during construction but no more than once every two weeks. Washing should include the upper and lower leaf surfaces and the tree bark. This should continue beyond the construction period at a less frequent rate with a high-powered hose only in the early morning hours. Washing will help control dirt/dust buildup that can lead to mite and insect infestations.

Inspection: An ISA Certified Arborist shall inspect the trees on at least a monthly basis for the duration of construction activity. A summary report documenting observations and management recommendations shall be submitted to the owner following each inspection. Photographs of representative trees are to be included in each report.

Maintenance after Construction

Once construction is complete the tree protection fencing may be removed and the following measures performed to sustain and enhance the vigor of the preserved trees.

Mulch: Provide a 4-inch mulch layer under the canopy of trees. Mulch should include clean, organic mulch that will provide long-term soil conditioning, soil moisture retention, and soil temperature control.

Pruning: Pruning should *only* be done to maintain clearance and remove broken, dead or diseased branches. Pruning shall only take place following a recommendation by an ISA Certified Arborist and performed under the supervision of an ISA Certified Arborist. No more than 15% of the canopy shall be removed at any one time. All pruning shall conform to ISA or ANSI A300 standards.

Watering: Retained trees on site shall be watered as they were prior to the commencement of construction activity. Supplemental irrigation may be necessary for twelve months following substantial root pruning.

Watering Adjacent Plant Material: All plants near the trees shall be compatible with water requirements of said trees. Watering regime included in the site's landscape plan shall be developed with consideration for the water needs of retained trees.

Spraying: If the trees are maintained in a healthy state, regular spraying for insect or disease control should not be necessary. If a problem does develop, an ISA Certified Arborist should be consulted; the trees may require application of insecticides to prevent the intrusion of bark-boring beetles and other invading pests. All chemical spraying should be performed by a licensed applicator under the direction of a licensed pest control advisor.

Monitoring: All trees within 30 feet of construction activity shall be monitored by an ISA Certified Arborist for the first two years after construction completion. An annual monitoring report shall be submitted to the City Arborist. Each report shall summarize the inspection efforts, document observations and management actions taken, include photographs of each tree, and compare post-construction tree conditions with the original, pre-construction baseline condition. If any retained trees die within this inspection period, they shall be replaced at a ratio approved by the City.

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	25.9	annual days of extreme heat
Extreme Precipitation	9.15	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	16.9	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A

Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	84.6
AQ-PM	72.3
AQ-DPM	82.1
Drinking Water	73.7
Lead Risk Housing	39.3
Pesticides	0.00
Toxic Releases	71.1
Traffic	75.2
Effect Indicators	—
CleanUp Sites	73.4
Groundwater	14.3
Haz Waste Facilities/Generators	53.5
Impaired Water Bodies	0.00
Solid Waste	52.9

Sensitive Population	—

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	58.2574105
Employed	65.58449891
Median HI	53.81752855
Education	—
Bachelor's or higher	78.22404722
High school enrollment	100
Preschool enrollment	31.61811882
Transportation	—
Auto Access	95.6242782
Active commuting	57.55164892

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	46.0
Healthy Places Index Score for Project Location (b)	57.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Landscaping provided in plans
Construction: Construction Phases	Project specific information provided by Applicant
Construction: Off-Road Equipment	CalEEMod defaults, added 1 excavator
Construction: Architectural Coatings	CalEEMod Defaults, and parking area square footage added
Operations: Vehicle Data	trip rates per TIA, with reductions for internal trip capture
Operations: Hearths	no woodstoves per SCAQMD rule 445, no woodburning fireplaces, no units will have fire places

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	25.9	annual days of extreme heat
Extreme Precipitation	9.15	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	16.9	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A

Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	84.6
AQ-PM	72.3
AQ-DPM	82.1
Drinking Water	73.7
Lead Risk Housing	39.3
Pesticides	0.00
Toxic Releases	71.1
Traffic	75.2
Effect Indicators	—
CleanUp Sites	73.4
Groundwater	14.3
Haz Waste Facilities/Generators	53.5
Impaired Water Bodies	0.00
Solid Waste	52.9

Sensitive Population	—
Asthma	12.1
Cardio-vascular	3.07
Low Birth Weights	6.13
Socioeconomic Factor Indicators	—
Education	20.9
Housing	89.6
Linguistic	91.3
Poverty	42.1
Unemployment	—

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	58.2574105
Employed	65.58449891

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	46.0
Healthy Places Index Score for Project Location (b)	57.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Landscaping provided in plans
Construction: Construction Phases	Project specific information provided by Applicant
Construction: Off-Road Equipment	CalEEMod defaults, added 1 excavator
Construction: Architectural Coatings	CalEEMod Defaults, and parking area square footage added
Operations: Vehicle Data	trip rates per TIA, with reductions for internal trip capture
Operations: Hearths	no woodstoves per SCAQMD rule 445, no woodburning fireplaces, no units will have fire places
Construction: Trips and VMT	LST run

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	25.9	annual days of extreme heat
Extreme Precipitation	9.15	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	16.9	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.
Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	3	0	0	N/A

Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	0	0	N/A
Wildfire	1	0	0	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	0	0	0	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	3	1	1	3
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	1	1	1	2
Wildfire	1	1	1	2
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	1	1	1	2

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	84.6
AQ-PM	72.3
AQ-DPM	82.1
Drinking Water	73.7
Lead Risk Housing	39.3
Pesticides	0.00
Toxic Releases	71.1
Traffic	75.2
Effect Indicators	—
CleanUp Sites	73.4
Groundwater	14.3
Haz Waste Facilities/Generators	53.5
Impaired Water Bodies	0.00
Solid Waste	52.9
Sensitive Population	—

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	46.0
Healthy Places Index Score for Project Location (b)	57.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

5. Activity Data

5.1. Construction Schedule

Phase Name	Phase Type	Start Date	End Date	Days Per Week	Work Days per Phase	Phase Description
Demolition	Demolition	3/1/2024	4/17/2024	5.00	34.0	—
Site Preparation	Site Preparation	4/18/2024	5/1/2024	5.00	10.0	—
Grading	Grading	5/2/2024	6/4/2024	5.00	24.0	—
Building Construction	Building Construction	6/5/2024	9/29/2025	5.00	344	—
Paving	Paving	9/30/2025	10/29/2025	5.00	22.0	—
Architectural Coating	Architectural Coating	10/30/2025	11/28/2025	5.00	22.0	—

5.2. Off-Road Equipment

5.2.1. Unmitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Demolition	Tractors/Loaders/Backhoes	Diesel	Average	3.00	8.00	84.0	0.37
Demolition	Rubber Tired Dozers	Diesel	Average	1.00	8.00	367	0.40
Demolition	Concrete/Industrial Saws	Diesel	Average	1.00	8.00	33.0	0.73
Site Preparation	Graders	Diesel	Average	1.00	8.00	148	0.41
Site Preparation	Scrapers	Diesel	Average	1.00	8.00	423	0.48

Site Preparation	Tractors/Loaders/Backhoes	Diesel	Average	1.00	7.00	84.0	0.37
Grading	Graders	Diesel	Average	1.00	8.00	148	0.41
Grading	Rubber Tired Dozers	Diesel	Average	1.00	8.00	367	0.40
Grading	Tractors/Loaders/Backhoes	Diesel	Average	2.00	7.00	84.0	0.37
Grading	Excavators	Diesel	Average	1.00	8.00	36.0	0.38
Building Construction	Cranes	Diesel	Average	1.00	8.00	367	0.29
Building Construction	Forklifts	Diesel	Average	2.00	7.00	82.0	0.20
Building Construction	Generator Sets	Diesel	Average	1.00	8.00	14.0	0.74
Building Construction	Tractors/Loaders/Backhoes	Diesel	Average	1.00	6.00	84.0	0.37
Building Construction	Welders	Diesel	Average	3.00	8.00	46.0	0.45
Paving	Tractors/Loaders/Backhoes	Diesel	Average	1.00	8.00	84.0	0.37
Paving	Pavers	Diesel	Average	1.00	8.00	81.0	0.42
Paving	Paving Equipment	Diesel	Average	1.00	8.00	89.0	0.36
Paving	Rollers	Diesel	Average	2.00	8.00	36.0	0.38
Paving	Cement and Mortar Mixers	Diesel	Average	1.00	8.00	10.0	0.56
Architectural Coating	Air Compressors	Diesel	Average	1.00	6.00	37.0	0.48

5.2.2. Mitigated

Phase Name	Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Demolition	Tractors/Loaders/Backhoes	Diesel	Average	3.00	8.00	84.0	0.37
Demolition	Rubber Tired Dozers	Diesel	Average	1.00	8.00	367	0.40
Demolition	Concrete/Industrial Saws	Diesel	Average	1.00	8.00	33.0	0.73
Site Preparation	Graders	Diesel	Average	1.00	8.00	148	0.41

5.4. Vehicles

5.4.1. Construction Vehicle Control Strategies

Non-applicable. No control strategies activated by user.

5.5. Architectural Coatings

Phase Name	Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
Architectural Coating	410,812	136,937	26,325	8,775	7,049

5.6. Dust Mitigation

5.6.1. Construction Earthmoving Activities

Phase Name	Material Imported (Cubic Yards)	Material Exported (Cubic Yards)	Acres Graded (acres)	Material Demolished (Ton of Debris)	Acres Paved (acres)
Demolition	0.00	0.00	0.00	9,600	—
Site Preparation	—	95.0	15.0	0.00	—
Grading	—	46,422	24.0	0.00	—
Paving	0.00	0.00	0.00	0.00	0.00

5.6.2. Construction Earthmoving Control Strategies

Control Strategies Applied	Frequency (per day)	PM10 Reduction	PM2.5 Reduction
Water Exposed Area	2	61%	61%
Water Demolished Area	2	36%	36%

5.7. Construction Paving

Land Use	Area Paved (acres)	% Asphalt
Enclosed Parking with Elevator	0.00	100%
Fast Food Restaurant w/o Drive Thru	0.00	0%
High Turnover (Sit Down Restaurant)	0.00	0%
Quality Restaurant	0.00	0%
Recreational Swimming Pool	0.00	0%
Apartments Mid Rise	—	0%

5.8. Construction Electricity Consumption and Emissions Factors

kWh per Year and Emission Factor (lb/MWh)

Year	kWh per Year	CO2	CH4	N2O
2024	0.00	349	0.03	< 0.005
2025	0.00	349	0.03	< 0.005

5.9. Operational Mobile Sources

5.9.1. Unmitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Enclosed Parking with Elevator	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00

Fast Food Restaurant w/o Drive Thru	426	856	615	187,686	4,460	8,965	6,440	1,965,908
High Turnover (Sit Down Restaurant)	328	358	417	125,829	1,314	3,746	4,365	765,532
Quality Restaurant	1,051	1,128	902	379,816	4,138	11,820	9,447	2,187,895
Recreational Swimming Pool	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00
Apartments Mid Rise	946	854	710	328,174	10,517	9,493	7,899	3,648,728

5.9.2. Mitigated

Land Use Type	Trips/Weekday	Trips/Saturday	Trips/Sunday	Trips/Year	VMT/Weekday	VMT/Saturday	VMT/Sunday	VMT/Year
Enclosed Parking with Elevator	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00
Fast Food Restaurant w/o Drive Thru	332	668	480	146,399	3,479	6,993	5,023	1,533,454
High Turnover (Sit Down Restaurant)	256	279	325	98,149	1,025	2,922	3,405	597,133
Quality Restaurant	820	880	704	296,266	3,228	9,220	7,369	1,706,608
Recreational Swimming Pool	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00
Apartments Mid Rise	510	461	383	177,036	5,673	5,121	4,261	1,968,333

5.10. Operational Area Sources

5.10.1. Hearths

5.10.1.1. Unmitigated

Hearth Type	Unmitigated (number)
Apartments Mid Rise	—

Wood Fireplaces	0
Gas Fireplaces	0
Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	214
Conventional Wood Stoves	0
Catalytic Wood Stoves	0
Non-Catalytic Wood Stoves	0
Pellet Wood Stoves	0

5.10.1.2. Mitigated

Hearth Type	Unmitigated (number)
Apartments Mid Rise	—
Wood Fireplaces	0
Gas Fireplaces	0
Propane Fireplaces	0
Electric Fireplaces	0
No Fireplaces	214
Conventional Wood Stoves	0
Catalytic Wood Stoves	0
Non-Catalytic Wood Stoves	0
Pellet Wood Stoves	0

5.10.2. Architectural Coatings

Residential Interior Area Coated (sq ft)	Residential Exterior Area Coated (sq ft)	Non-Residential Interior Area Coated (sq ft)	Non-Residential Exterior Area Coated (sq ft)	Parking Area Coated (sq ft)
—	—	—	—	—

5.10.3. Landscape Equipment

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	250

5.10.4. Landscape Equipment - Mitigated

Season	Unit	Value
Snow Days	day/yr	0.00
Summer Days	day/yr	250

5.11. Operational Energy Consumption

5.11.1. Unmitigated

Electricity (kWh/yr) and CO2 and CH4 and N2O and Natural Gas (kBTU/yr)

Land Use	Electricity (kWh/yr)	CO2	CH4	N2O	Natural Gas (kBTU/yr)
Enclosed Parking with Elevator	433,669	349	0.0330	0.0040	0.00
Fast Food Restaurant w/o Drive Thru	48,482	349	0.0330	0.0040	161,184

6. Climate Risk Detailed Report

6.1. Climate Risk Summary

Cal-Adapt midcentury 2040–2059 average projections for four hazards are reported below for your project location. These are under Representation Concentration Pathway (RCP) 8.5 which assumes GHG emissions will continue to rise strongly through 2050 and then plateau around 2100.

Climate Hazard	Result for Project Location	Unit
Temperature and Extreme Heat	25.9	annual days of extreme heat
Extreme Precipitation	9.15	annual days with precipitation above 20 mm
Sea Level Rise	0.00	meters of inundation depth
Wildfire	16.9	annual hectares burned

Temperature and Extreme Heat data are for grid cell in which your project are located. The projection is based on the 98th historical percentile of daily maximum/minimum temperatures from observed historical data (32 climate model ensemble from Cal-Adapt, 2040–2059 average under RCP 8.5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Extreme Precipitation data are for the grid cell in which your project are located. The threshold of 20 mm is equivalent to about ¾ an inch of rain, which would be light to moderate rainfall if received over a full day or heavy rain if received over a period of 2 to 4 hours. Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.
Sea Level Rise data are for the grid cell in which your project are located. The projections are from Radke et al. (2017), as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider different increments of sea level rise coupled with extreme storm events. Users may select from four model simulations to view the range in potential inundation depth for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 50 meters (m) by 50 m, or about 164 feet (ft) by 164 ft.

Wildfire data are for the grid cell in which your project are located. The projections are from UC Davis, as reported in Cal-Adapt (2040–2059 average under RCP 8.5), and consider historical data of climate, vegetation, population density, and large (> 400 ha) fire history. Users may select from four model simulations to view the range in potential wildfire probabilities for the grid cell. The four simulations make different assumptions about expected rainfall and temperature are: Warmer/drier (HadGEM2-ES), Cooler/wetter (CNRM-CM5), Average conditions (CanESM2), Range of different rainfall and temperature possibilities (MIROC5). Each grid cell is 6 kilometers (km) by 6 km, or 3.7 miles (mi) by 3.7 mi.

6.2. Initial Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A
Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores do not include implementation of climate risk reduction measures.

6.3. Adjusted Climate Risk Scores

Climate Hazard	Exposure Score	Sensitivity Score	Adaptive Capacity Score	Vulnerability Score
Temperature and Extreme Heat	N/A	N/A	N/A	N/A
Extreme Precipitation	N/A	N/A	N/A	N/A
Sea Level Rise	N/A	N/A	N/A	N/A
Wildfire	N/A	N/A	N/A	N/A
Flooding	N/A	N/A	N/A	N/A
Drought	N/A	N/A	N/A	N/A
Snowpack Reduction	N/A	N/A	N/A	N/A

Air Quality Degradation	N/A	N/A	N/A	N/A

The sensitivity score reflects the extent to which a project would be adversely affected by exposure to a climate hazard. Exposure is rated on a scale of 1 to 5, with a score of 5 representing the greatest exposure.
The adaptive capacity of a project refers to its ability to manage and reduce vulnerabilities from projected climate hazards. Adaptive capacity is rated on a scale of 1 to 5, with a score of 5 representing the greatest ability to adapt.
The overall vulnerability scores are calculated based on the potential impacts and adaptive capacity assessments for each hazard. Scores include implementation of climate risk reduction measures.

6.4. Climate Risk Reduction Measures

7. Health and Equity Details

7.1. CalEnviroScreen 4.0 Scores

The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Exposure Indicators	—
AQ-Ozone	84.6
AQ-PM	72.3
AQ-DPM	82.1
Drinking Water	73.7
Lead Risk Housing	39.3
Pesticides	0.00
Toxic Releases	71.1
Traffic	75.2
Effect Indicators	—
CleanUp Sites	73.4
Groundwater	14.3
Haz Waste Facilities/Generators	53.5
Impaired Water Bodies	0.00
Solid Waste	52.9

Sensitive Population	—
Asthma	12.1
Cardio-vascular	3.07
Low Birth Weights	6.13
Socioeconomic Factor Indicators	—
Education	20.9
Housing	89.6
Linguistic	91.3
Poverty	42.1
Unemployment	—

7.2. Healthy Places Index Scores

The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

Indicator	Result for Project Census Tract
Economic	—
Above Poverty	58.2574105
Employed	65.58449891
Median HI	53.81752855
Education	—
Bachelor's or higher	78.22404722

2016 Voting	11.4

7.3. Overall Health & Equity Scores

Metric	Result for Project Census Tract
CalEnviroScreen 4.0 Score for Project Location (a)	46.0
Healthy Places Index Score for Project Location (b)	57.0
Project Located in a Designated Disadvantaged Community (Senate Bill 535)	No
Project Located in a Low-Income Community (Assembly Bill 1550)	No
Project Located in a Community Air Protection Program Community (Assembly Bill 617)	No

a: The maximum CalEnviroScreen score is 100. A high score (i.e., greater than 50) reflects a higher pollution burden compared to other census tracts in the state.
b: The maximum Health Places Index score is 100. A high score (i.e., greater than 50) reflects healthier community conditions compared to other census tracts in the state.

7.4. Health & Equity Measures

No Health & Equity Measures selected.

7.5. Evaluation Scorecard

Health & Equity Evaluation Scorecard not completed.

7.6. Health & Equity Custom Measures

No Health & Equity Custom Measures created.

8. User Changes to Default Data

Screen	Justification
Land Use	Landscaping provided in plans
Construction: Construction Phases	Project specific information provided by Applicant
Construction: Off-Road Equipment	CalEEMod defaults, added 1 excavator
Construction: Architectural Coatings	CalEEMod Defaults, and parking area square footage added
Operations: Vehicle Data	trip rates per TIA, with reductions for internal trip capture
Operations: Hearths	no woodstoves per SCAQMD rule 445, no woodburning fireplaces, no units will have fire places
Construction: Trips and VMT	for HRA- On-site diesel emissions only

                                        ***     MODEL SETUP OPTIONS SUMMARY
 ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for    72 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =   9818605.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
         1. Stack-tip Downwash.
         2. Model Accounts for ELEVated Terrain Effects.
         3. Use Calms Processing Routine.
         4. Use Missing Data Processing Routine.
         5. No Exponential Decay.
         6. Urban Roughness Length of 1.0 Meter Assumed.

 **Other Options Specified:
         ADJ_U*   - Use ADJ_U* option for SBL in AERMET
         TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of:  PM_10

 **Model Calculates  1 Short Term Average(s) of:   1-HR
     and Calculates PERIOD Averages

 **This Run Includes:     72 Source(s);       1 Source Group(s); and    1315
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:     72 VOLUME source(s)
                 and:      0 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
```

```
                and:      0 OPENPIT source(s)
                and:      0 BUOYANT LINE source(s) with a total of     0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   182.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.7 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   Derby HRA.err

 **File for Summary of Results:   Derby HRA.sum

                                          ***   MODEL SETUP OPTIONS SUMMARY
 ***
 -
- -

 **Model Is Setup For Calculation of Average CONCentration Values.

   -- DEPOSITION LOGIC --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION. DRYDPLT = F
 **Model Uses NO WET DEPLETION. WETDPLT = F

 **Model Uses URBAN Dispersion Algorithm for the SBL for   72 Source(s),
   for Total of   1 Urban Area(s):
   Urban Population =   9818605.0 ; Urban Roughness Length = 1.000 m

 **Model Uses Regulatory DEFAULT Options:
         1. Stack-tip Downwash.
         2. Model Accounts for ELEVated Terrain Effects.
         3. Use Calms Processing Routine.
         4. Use Missing Data Processing Routine.
         5. No Exponential Decay.
         6. Urban Roughness Length of 1.0 Meter Assumed.

 **Other Options Specified:
         ADJ_U*   - Use ADJ_U* option for SBL in AERMET
         TEMP_Sub - Meteorological data includes TEMP substitutions

 **Model Assumes No FLAGPOLE Receptor Heights.

 **The User Specified a Pollutant Type of: PM_10

 **Model Calculates 1 Short Term Average(s) of: 1-HR
     and Calculates PERIOD Averages

 **This Run Includes: 72 Source(s);   1 Source Group(s); and   1315
Receptor(s)

                with: 0 POINT(s), including
                           0 POINTCAP(s) and   0 POINTHOR(s)

```
                and:     72 VOLUME source(s)
                and:      0 AREA type source(s)
                and:      0 LINE source(s)
                and:      0 RLINE/RLINEXT source(s)
                and:      0 OPENPIT source(s)
                and:      0 BUOYANT LINE source(s) with a total of     0 line(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of PERIOD Averages by Receptor
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =   182.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                 Emission Units = GRAMS/SEC                                 ;
Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.7 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   Derby HRA.err

 **File for Summary of Results:   Derby HRA.sum

RISK SCENARIO SETTINGS

Receptor Type: Resident
Scenario: All
Calculation Method: Derived

****
EXPOSURE DURATION PARAMETERS FOR CANCER

Start Age: -0.25
Total Exposure Duration: 1.75

Exposure Duration Bin Distribution
3rd Trimester Bin: 0.25
0<2 Years Bin: 1.75
2<9 Years Bin: 0
2<16 Years Bin: 0
16<30 Years Bin: 0
16 to 70 Years Bin: 0

****
PATHWAYS ENABLED

NOTE: Inhalation is always enabled and used for all assessments. The remaining pathways are only used for cancer and noncancer chronic assessments.

Inhalation: True
Soil: True
Dermal: True
Mother's milk: True
Water: False
Fish: False
Homegrown crops: True
Beef: False
Dairy: False
Pig: False
Chicken: False
Egg: False

****
INHALATION

Daily breathing rate: RMP

Worker Adjustment Factors
Worker adjustment factors enabled: NO

Fraction at time at home
3rd Trimester to 16 years: OFF
16 years to 70 years: OFF

****
SOIL & DERMAL PATHWAY SETTINGS

Deposition rate (m/s): 0.05
Soil mixing depth (m): 0.01
Dermal climate: Warm

****
HOMEGROWN CROP PATHWAY SETTINGS

Household type: HouseholdsthatGarden
Fraction leafy: 0.137
Fraction exposed: 0.137
Fraction protected: 0.137
Fraction root: 0.137

Executive Summary

Dudek was retained by Top Commercial Realty, Inc. to prepare a Built Environment Inventory and Evaluation Report for the proposed Derby Mixed-Use Project in the City of Arcadia, California (proposed Project). This report includes the results of a California Historical Resources Information System (CHRIS) records search; intensive-level survey of the proposed Project site and its vicinity (Project site) by a qualified architectural historian; building development and archival research; development of an appropriate historic context for the Project site; and recordation and evaluation of one built environment resource over 45 years old for historical significance and integrity in consideration of National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), and local designation criteria and integrity requirements. This report was prepared in conformance with California Environmental Quality Act (CEQA) Guidelines Section 15064.5 for historical resources, 21083.2 for archaeological resources, and all applicable local guidelines and regulations.

A CHRIS records search was completed by staff at the South Central Coastal Information Center (SCCIC) on January 13, 2022. One of these previous investigations overlaps the Project site, but none of the properties on the Project site were mentioned in the report; and no cultural resources were identified within the Project site as a result of the overlapping studies.

The built environment survey was conducted on January 5, 2022. The survey was conducted on foot and involved surveying properties within or immediately adjacent to the Project site and recording all buildings and structures with notes and photographs. For the purposes of this Project, the Project site is the location of the project and properties within it. Two (2) properties were located within the Project site: 233 E. Huntington Drive and 301 E. Huntington Drive (Figures 1 and 2). One (1) property over 45 years of age was identified within the Project site and evaluated for historical and architectural significance.

Evaluated

- The Derby - 233 E. Huntington Drive, APN 5773-009-070 – Built 1931

Not Evaluated

- Souplantation - 301 E. Huntington Drive, APN 5773-009-065 – Built 1988

The Souplantation restaurant building at 301 E. Huntington Drive, was built in 1988 and did not meet the 45-year threshold for evaluation. After research and evaluation, The Derby restaurant (233 E. Huntington Drive, APN 5773-009-070) does not appear to meet any NRHP, CRHR, or City of Arcadia landmark designation criteria. A detailed evaluation of The Derby restaurant is provided Section 5 of this Report.

In summary, as a result of Dudek's extensive archival research, field survey, record search, and property significance evaluations, no historical resources were identified within the Project site, nor were any adjacent cultural resources identified that could be indirectly impacted by proposed Project activities. Therefore, neither of the two properties in the Project site are considered historical resources for the purposes of CEQA. The finding for built environment cultural resources for the proposed Project under CEQA is No Impact. As the proposed Project would have no impact on historical resources, no further study is required.

INTENTIONALLY LEFT BLANK

1 Introduction

Dudek was retained by Top Commercial Realty, Inc. to prepare a Built Environment Inventory and Evaluation Report for the proposed Derby Mixed Use Project in the City of Arcadia, California (proposed Project). This report includes the results of a California Historical Resources Information System (CHRIS) records search; intensive-level survey of the Project site by a qualified architectural historian; building development and archival research; development of an appropriate historic context for the Project site; and recordation and evaluation of one built environment resource over 45 years old for historical significance and integrity in consideration of National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), and City of Arcadia landmark designation criteria and integrity requirements. This report was prepared in conformance with California Environmental Quality Act (CEQA) Guidelines Section 15064.5 for historical resources.

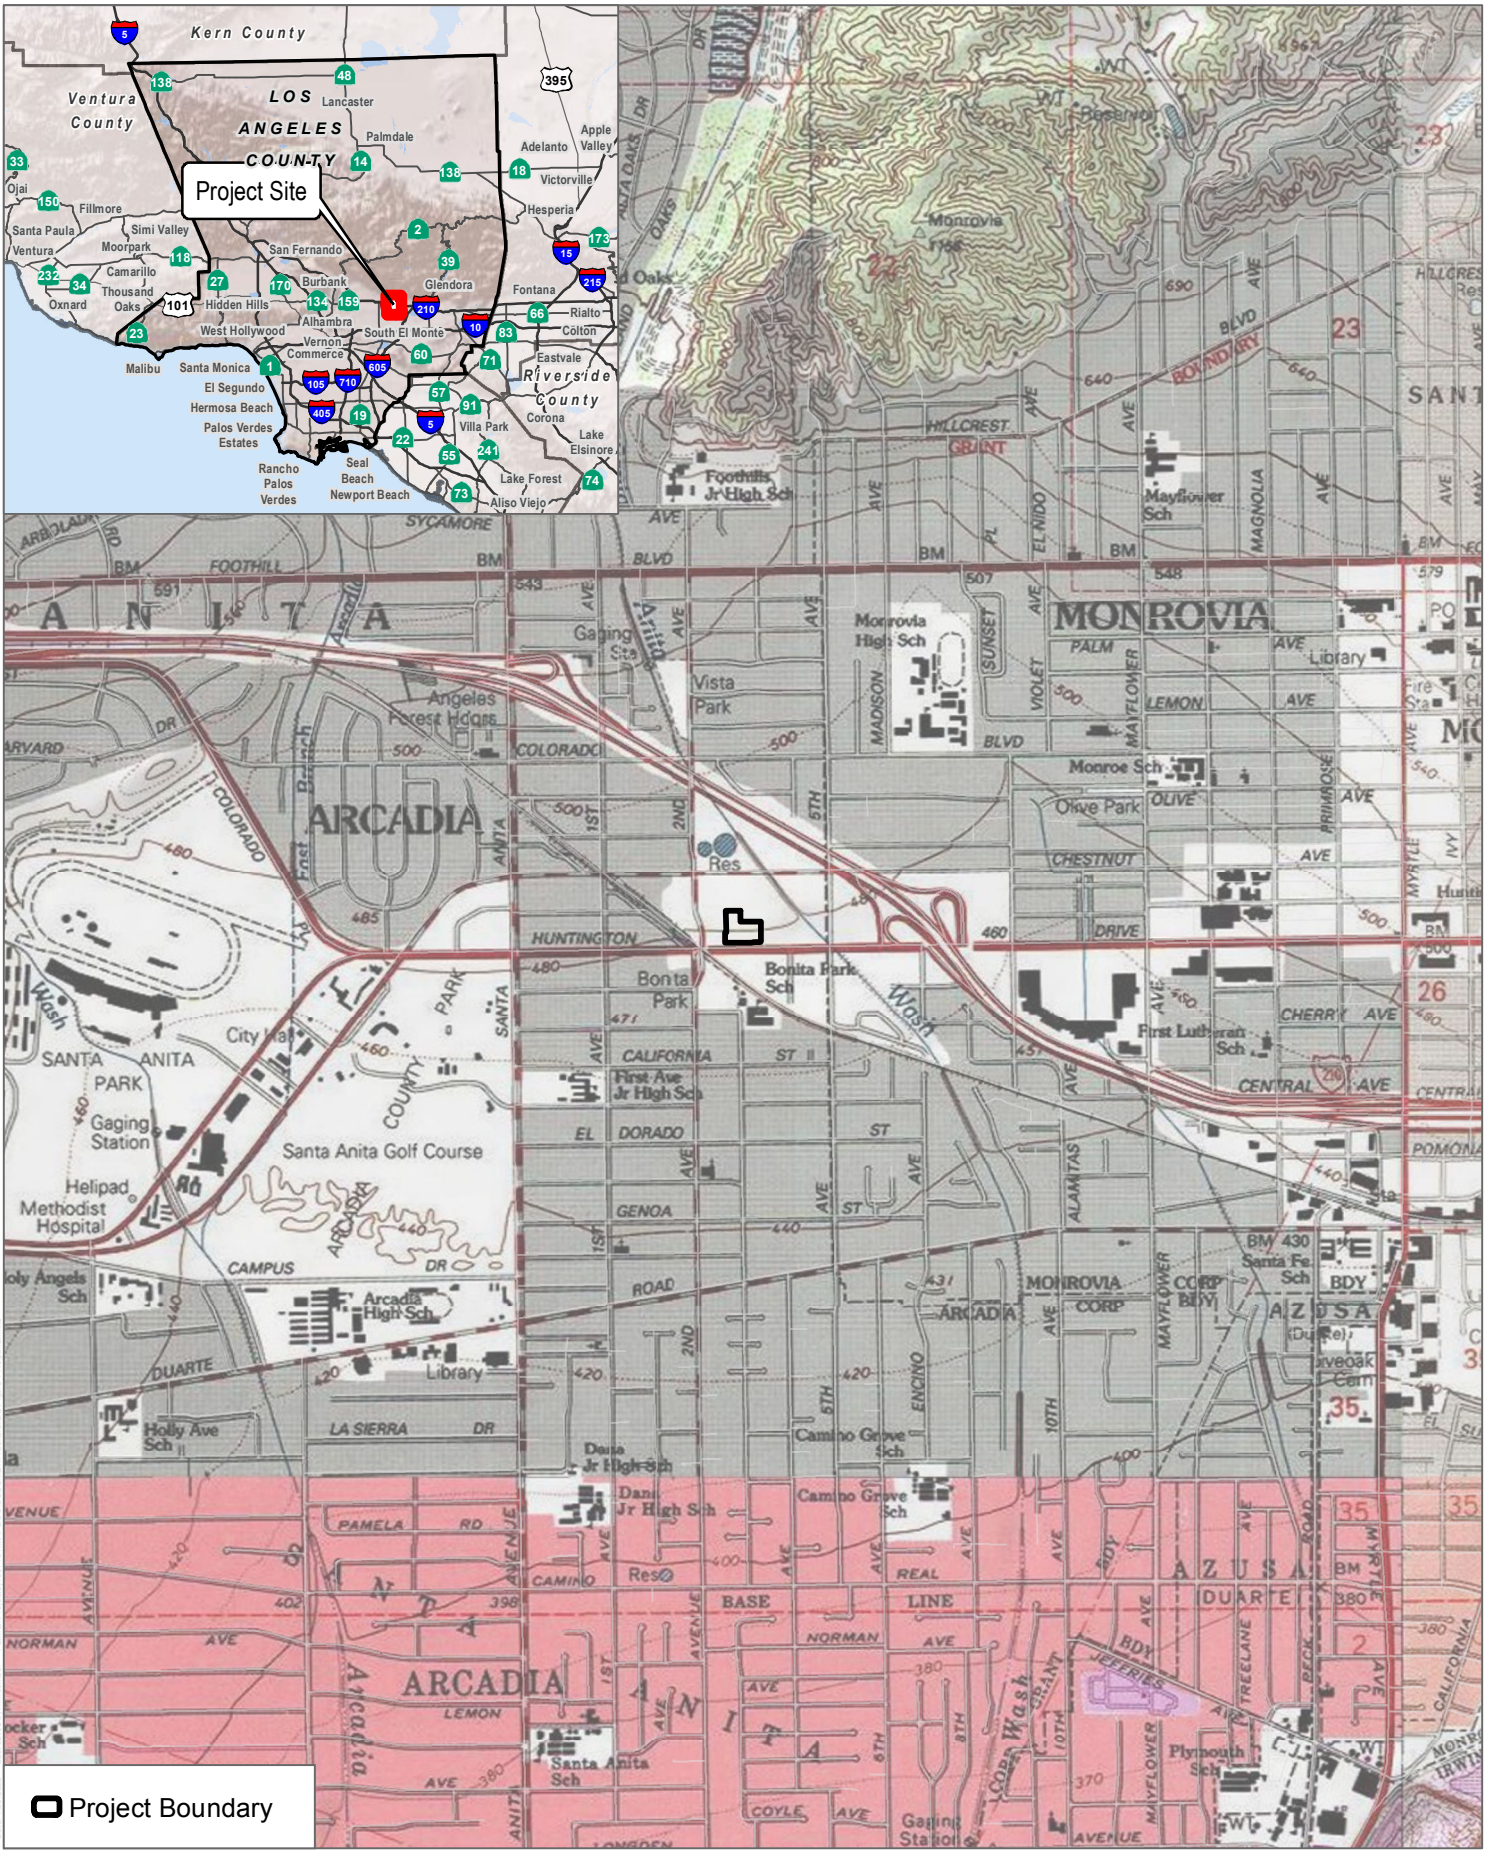
The Project site includes two parcels that total 2.23 gross acres. The Project site is currently occupied by two restaurant buildings at 233 E. Huntington Drive and 301 E. Huntington Drive, and a surface parking lot. The proposed Project proposes to construct a six-story mixed-use project, with a newly constructed restaurant (The Derby Restaurant) attached to a six-story residential building containing a total of 204 units.

1.1 Project Location and Description

Project Location

The Project site is located within a commercial district on the north side of Huntington Drive at its intersection with Gateway Drive just east of Arcadia's Central Business District. The site is flanked to the north and west with two hotels that have height overlays of five and seven stories, respectively. To the south and west are parking lot-fronted shopping centers of the strip typology.

The Project site is located on two parcels in the City of Arcadia at 233 E. Huntington Drive (APN 5773-009-070, The Derby Restaurant) and 301 E. Huntington Drive (APN 5773-009-065, Souplantation). The Project site is bound by Hampton Inn Hotel and parking lot to the north, E. Huntington Drive to the south, Gateway Drive to the east, and the Embassy Suites Hotel to the west. The Project site encompasses approximately 2.23 gross acres, as shown in Figure 2. Project Site Map.



Project Description

The Derby Restaurant ownership desires to create a new mixed-use project that would include six stories of housing on upper levels alongside a larger The Derby Restaurant and second story indoor/outdoor lounge as its centerpiece along with another new restaurant and a café, both fronting E. Huntington Drive.

The expanded restaurant would include some distinctive historical elements of the restaurant including the classic red booths and horseracing memorabilia while adding new elements including a covered porte-cochere for inclement weather, a distinctive horseshoe-shaped lounge bar, an indoor-outdoor second-story bar, and dining area, and an expanded memorabilia collection (heretofore referred to as The Derby Centennial Collection) display area and restrooms that meet current standards. Of critical importance would be the expansion and modernization of kitchen and service areas.

The gabled roof forms of the existing The Derby Restaurant would be reinterpreted and simplified, and the new Derby would front both E. Huntington Drive and a nearly 10,000 square foot European inspired courtyard space surrounded on three sides by activated building masses of varying heights. A café space opposite The Derby Restaurant—and fronting the courtyard and street—would provide complementary pedestrian activity. Mostly continuous retail and residential frontage with a covered passageway to hidden parking would complete the relationship to E. Huntington Drive and Gateway Drive. The six-story building massing fronting E. Huntington Drive would step back approximately 30 feet at the fifth and sixth floors to provide a landscaped residential pool and amenity space. Along the Gateway Drive frontage, the massing would terrace back from the frontage several times as well include a 50-foot by 55-foot ground level landscaped vehicular entry courtyard.

Balconies, both recessed and protruding would be organized on each frontage to enhance the building's rhythms and focal points, and cornices will be provided to mark important areas.

1.2 Project Personnel

Dudek Architectural Historian Andrew Bursan, MCRP, prepared this report and associated property significance evaluations in February of 2022. This report was reviewed for quality assurance/quality control by Historic Built Environment Lead Sarah Corder, MFA. In June of 2023, this report was reviewed by Dudek Senior Architectural Historian, Kathryn Haley, MA. Ms. Haley's contributions were limited to editorial clarifications regarding the evaluation recommendation for The Derby restaurant primarily in Section 2.3 and Section 5 of this Report. The original February 2022 findings presented by the original authors were not changed. All Dudek architectural historian staff meet the Secretary of the Interior's professional qualifications standards for architectural historian. Staff also meet the professional qualifications standards for architectural history in accordance with the City's regulations. Resumes for all key personnel are provided in Appendix A.

1.3 Regulatory Setting

Federal

National Register of Historic Places

While there is no federal nexus for this project, the subject properties were evaluated in consideration of NRHP designation criteria. The NRHP is the United States' official list of districts, sites, buildings, structures, and objects worthy of preservation. Overseen by the National Park Service, under the U.S. Department of the Interior, the NRHP was authorized under the National Historic Preservation Act, as amended. Its listings encompass all National Historic Landmarks, as well as historic areas administered by the National Park Service.

NRHP guidelines for the evaluation of historic significance were developed to be flexible and to recognize the accomplishments of all who have made significant contributions to the nation's history and heritage. Its criteria are designed to guide state and local governments, federal agencies, and others in evaluating potential entries in the NRHP. For a property to be listed in or determined eligible for listing, it must be demonstrated to possess integrity and to meet at least one of the following criteria:

The quality of significance in American history, architecture, archaeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and:

A. That are associated with events that have made a significant contribution to the broad patterns of our history; or
B. That are associated with the lives of persons significant in our past; or
C. That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
D. That have yielded, or may be likely to yield, information important in prehistory or history.

Integrity is defined in NRHP guidance, "How to Apply the National Register Criteria," as "the ability of a property to convey its significance. To be listed in the NRHP, a property must not only be shown to be significant under the NRHP criteria, but it also must have integrity" (Andrus and Shrimpton 2002). NRHP guidance further asserts that properties be

completed at least 50 years ago to be considered for eligibility. Properties completed fewer than 50 years before evaluation must be proven to be "exceptionally important" (criteria consideration to be considered for listing.

State

California Register of Historical Resources

In California, the term "historical resource" includes but is not limited to "any object, building, structure, site, area, place, record, or manuscript which is historically or archaeologically significant, or is significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California" (California Public Resources Code Section 5020.1(j)). In 1992, the California legislature established the CRHR "to be used by state and local agencies, private groups, and citizens to identify the state's historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change" (California Public Resources Code Section 5024.1(a)). The criteria for listing resources on the CRHR were expressly developed to be in accordance with previously established criteria developed for listing in the NRHP, enumerated below. According to California Public Resources Code Section 5024.1(c)(1–4), a resource is considered historically significant if it (i) retains "substantial integrity," and (ii) meets at least one of the following criteria:

1. Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage.
2. Is associated with the lives of persons important in our past.
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values.
4. Has yielded, or may be likely to yield, information important in prehistory or history.

In order to understand the historic importance of a resource, sufficient time must have passed to obtain a scholarly perspective on the events or individuals associated with the resource. A resource less than 50 years old may be considered for listing in the CRHR if it can be demonstrated that sufficient time has passed to understand its historical importance (see 14 CCR 4852(d)(2)).

The CRHR protects cultural resources by requiring evaluations of the significance of prehistoric and historic resources. The criteria for the CRHR are nearly identical to those for the NRHP, and properties listed or formally designated as eligible for listing in the NRHP are automatically listed in the CRHR, as are the state landmarks and points of interest. The CRHR also includes properties designated under local ordinances or identified through local historical resource surveys.

California Environmental Quality Act

As described further below, the following CEQA statutes and CEQA Guidelines are of relevance to the analysis of archaeological, historic, and tribal cultural resources:

- California Public Resources Code Section 21083.2(g) defines "unique archaeological resource."
- California Public Resources Code Section 21084.1 and CEQA Guidelines Section 15064.5(a) define "historical resources." In addition, CEQA Guidelines Section 15064.5(b) defines the phrase "substantial adverse change in the significance of an historical resource." It also defines the circumstances when a project would materially impair the significance of an historical resource.

- California Public Resources Code Section 21074(a) defines "tribal cultural resources."
- California Public Resources Code Section 5097.98 and CEQA Guidelines Section 15064.5(e) set forth standards and steps to be employed following the accidental discovery of human remains in any location other than a dedicated ceremony.
- California Public Resources Code Sections 21083.2(b)-(c) and CEQA Guidelines Section 15126.4 provide information regarding the mitigation framework for archaeological and historic resources, including examples of preservation-in-place mitigation measures; preservation-in-place is the preferred manner of mitigating impacts to significant archaeological sites because it maintains the relationship between artifacts and the archaeological context and may also help avoid conflict with religious or cultural values of groups associated with the archaeological site(s).

More specifically, under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource" (California Public Resources Code Section 21084.1; CEQA Guidelines Section 15064.5(b).) If a site is either listed or eligible for listing in the CRHR, or if it is included in a local register of historic resources or identified as significant in a historical resources survey (meeting the requirements of California Public Resources Code Section 5024.1(q)), it is a "historical resource" and is presumed to be historically or culturally significant for purposes of CEQA (California Public Resources Code Section 21084.1; CEQA Guidelines Section 15064.5(a)). The lead agency is not precluded from determining that a resource is a historical resource even if it does not fall within this presumption (California Public Resources Code Section 21084.1; CEQA Guidelines Section 15064.5(a)).

A "substantial adverse change in the significance of an historical resource" reflecting a significant effect under CEQA means "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired" (CEQA Guidelines Section 15064.5(b)(1); California Public Resources Code Section 5020.1(q)). In turn, CEQA Guidelines section 15064.5(b)(2) states the significance of an historical resource is materially impaired when a project:

1. Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources; or
2. Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or
3. Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.

Pursuant to these sections, the CEQA inquiry begins with evaluating whether a Project site contains any "historical resources," then evaluates whether that project will cause a substantial adverse change in the significance of a historical resource such that the resource's historical significance is materially impaired.

If it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place or left in

an undisturbed state. To the extent that they cannot be left undisturbed, mitigation measures are required (California Public Resources Code Section 21083.2[a], [b], and [c]).

California Public Resources Code Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
2. Has a special and particular quality such as being the oldest of its type or the best available example of its type.
3. Is directly associated with a scientifically recognized important prehistoric or historic event or person.

Impacts to non-unique archaeological resources are generally not considered a significant environmental impact (California Public Resources Code section 21083.2(a); CEQA Guidelines Section 15064.5(c)(4)). However, if a non-unique archaeological resource qualifies as tribal cultural resource (California Public Resources Code Section 21074(c), 21083.2(h)), further consideration of significant impacts is required. CEQA Guidelines Section 15064.5 assigns special importance to human remains and specifies procedures to be used when Native American remains are discovered. As described below, these procedures are detailed in California Public Resources Code Section 5097.98.

Local

City of Arcadia Historic Preservation Ordinance (Ordinance No. 2359, Article IX. Chapter 1, Division 3, Section 9103.17)

The City of Arcadia adopted a historic preservation ordinance in April 2019, based on the City's 2015 decision to conduct a Citywide Historic Resources Survey and consistent with the City of Arcadia General Plan elements which proposed to preserve elements of Arcadia's physical community. Below, the applicable portions of the ordinance are excerpted:

9103.17.020 – Purpose

The Arcadia City Council acknowledges that the recognition, preservation, protection, and reuse of historic resources are required in the interests of the health, prosperity, safety, social and cultural enrichment, general welfare, and economic well-being of the people of Arcadia. The designation and preservation of historic resources, and the regulation of alterations, additions, repairs, removal, demolition, or new construction to perpetuate the historic character of historic resources, is declared to be a public purpose of the city.

Therefore, the purposes of this Chapter include the following:

A. Enabling informed planning decisions regarding the treatment of properties that contribute to the city's character or reflect its historical and architectural development;
B. Establishing priorities for preservation, restoration, and rehabilitation efforts within the city;
C. Providing City planners with baseline information about potential historic resources from which to manage new development;
D. Safeguarding Arcadia's heritage by protecting resources that reflect elements of the city's cultural, social, economic, architectural, and archaeological history;

E. Deterring demolition, misuse, or neglect of designated historic landmarks, designated historic districts (and their contributing resources), and potential historic landmarks, which represent important links to the past of Arcadia, California, or the nation;

F. Providing the public with a better understanding of and appreciation for the built environment as a tangible link to Arcadia's history;

G. Promoting the use of historic resources, especially for the education, appreciation, and general welfare of the people of Arcadia;

H. Protecting and enhancing the city's attractiveness to residents and visitors, and supporting economic development.

9103.17.060 - Local Eligibility and Designation Criteria.

A. Criteria for Designation.

Historic Landmark. On the recommendation of the Commission, the City Council may designate an individual resource (building, structure, object, or site) if it meets one or more of the following local eligibility criteria:

1. It is associated with events that have made a significant contribution to the broad patterns of Arcadia's or California's history;
2. It is associated with the lives of persons important to local or California history;
3. It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of master, or possesses high artistic values;
4. It has yielded, or has the potential to yield, information important to the prehistory or history of the city or state.

In addition to the requirements listed as 1. through 4. above in this section, an individual resource must satisfy at least one of the following requirements:

5. It is listed on the National and/or California Register of Historic Places; or

6. It is an iconic property.

Historic District. On the recommendation of the Commission, the City Council may designate a historic district if it meets one or more of the four criteria in Section 9103.17.060(A) and:

1. It possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development.
2. A minimum of 60 percent of the buildings within the proposed historic district contribute to the district's significance.

B. Automatic Consideration. Any property individually listed in the National Register of Historic Places or California Register of Historical Resources shall be automatically considered designated historic resource by the City.

C. Considerations for Evaluating Properties - Age. A resource considered for listing as a local historic landmark must be at least 45 years of age, unless it can be demonstrated that the resource has achieved exceptional importance within the last 45 years.

D. **Consideration for Evaluating Properties - Integrity.** In order for a resource to be eligible for designation as a local landmark or historic district, the resource must retain sufficient integrity. Integrity is the authenticity of a historical resource's physical identity as evidenced by the survival of characteristics that existed during the time period within which the resource attained significance. Only after significance has been established should the issue of integrity be addressed. There are seven aspects of integrity, as defined by the National Register: location, design, setting, materials, workmanship, feeling, and association. Since significance thresholds associated with local listing are generally less rigid than those associated with listing at the state or national levels, a greater degree of flexibility shall be provided when evaluating the integrity of a locally eligible historic resource, as opposed to one eligible for listing in the National or California Registers. For this reason, it is possible that a historic resource may not retain sufficient integrity to be eligible for listing in the National or California Registers, but may still be eligible for listing at the local level. Integrity shall be determined with reference to the particular characteristics that support the resource's eligibility under the appropriate criteria of significance.

City of Arcadia General Plan 2010 (City of Arcadia General Plan, Section 7.0 Parks, Recreation, and Community Resources Element)

The 2010 Arcadia General Plan enumerates a series of policies designed to protect and preserve cultural resources (City of Arcadia 2010a). Though the City does not have a preservation ordinance, the General Plan recommends potential city landmarks meet the following criteria:

- It exemplifies or reflects the broad cultural, political, economic or social history of the U.S., California, or City of Arcadia.
- It has yielded or has the potential to yield information in history or prehistory.
- It is representative of one of the diverse styles and variations of residential and commercial architecture found in Arcadia, whether vernacular or a work of identifiable artisans, master craftsmen, builder, or architects important locally or with wider significance.
- It is an object of significance because of its design or pleasing appearance in a setting.
- It is a site or structure that is important to the prehistory or history of the community.
- It is a surviving site, route, or structure important to the early settlement, economic origins, or technological development of the locale.
- It is a grouping or set of structures, historic sites or features, design components, natural features and landscape architecture, or other interesting details which together create exceptionally rich history or cultural ambiance.
- It is a hillside, geologic formations, body of water, arroyo, remaining natural vegetation, or other striking or familiar physical characteristic that is important to the special character, historic identity, or aesthetic setting of the community.

The 2010 General Plan also listed specific goals for historical resources in the city.

Goal PR-8. Continued recognition and support of the diverse historical and cultural organizations that celebrate and enrich the community

Policy PR-8.1. Support programs that promote a full range of cultural activities and their appreciation among all age groups, all levels of education, and all cultural backgrounds.

Policy PR-8.2. Nurture and support local arts organizations and promote the appreciation of and involvement in the creative and performing arts.

Policy PR-8.3. Build community identity through educational, informational, and cultural art events that focus on local art, food, music, ethnic diversity, and other topics.

Goal PR-9. Retention and proper stewardship of historical and cultural resources

Policy PR-9.1. Encourage the maintenance and preservation of historically, culturally, and or/ architecturally significant structures and sites in the community.

Policy PR-9.2. Explore partnerships with local community organizations, such as the Arcadia Historical Society, to continue the preservation of historic and cultural resources.

Policy PR-9.3. Collect, preserve, and celebrate Arcadia's heritage with quality exhibits and programs.

Policy PR-9.4. Preserve Santa Anita Park's use as a live horse racing venue while economically feasible, and preserve and maintain iconic structures at the racetrack such as the grandstand.

Policy PR-9.5. Identify historic sites, structures, neighborhoods, and other resources through a Historic Resource Inventory.

Policy PR-9.6. Explore the establishment of a Cultural Heritage Ordinance.

Policy PR-9.7. Develop incentives that promote preservation and rehabilitation of historic structures, sites, and other resources.

INTENTIONALLY LEFT BLANK

2 Background Research

2.1 CHRIS Records Search

On January 13, 2022, Dudek completed a CHRIS records search of the Project site and a 1-mile search radius using data obtained from the South Central Coastal Information Center (SCCIC) located on the campus of California State University, Fullerton. Due to COVID-19, the SCCIC notified researchers that they are only able to provide data for Los Angeles County that has already been digitized. As such, not all available data known to CHRIS may be provided in the records search. The search included digitized mapped prehistoric and historic archaeological resources as well as historic built-environment resources; Department of Parks and Recreation (DPR) site records; technical reports; archival resources; and the Office of Historic Preservation's Built Environment Resources Directory (BERD). For the purposes of this report, only records relevant to historic built environment resources with the potential to be impacted by the proposed Project are discussed in this report. See the Archaeological Resources Assessment, prepared by Dudek 2022 for the full records search results, including all archaeological records.

There were no previously recorded built environment resources within the Project site or immediately adjacent to the Project site. There was one previously conducted cultural resources study that overlapped the Project site. The study is summarized below.

LA-06859

Arcadia General Plan (LSA Associates, Inc. 1996) details the general plan for the City of Arcadia and includes enumerated goals for cultural resources. The area of study for this report encompasses the entirety of the current proposed Project site. The report states that cultural resource assessments are required for any development that may impact a known or potential site of archaeological, paleontological, or historical significance. They also state that preservation and avoidance of impacts should be the primary goal, if this is not feasible then data recovery efforts will be required for resources deemed significant. Construction monitoring will also be required during any ground-disturbing activities within areas of archaeological potential.

2.2 Building Development and Archival Research

Building development and archival research were conducted for the Project site in an effort to establish a thorough and accurate historic context for the significance evaluations, and to confirm the building development history of the Project site and associated parcels.

City of Arcadia Development Services Department

Dudek obtained digitized permits from the City of Arcadia Development Services Department webpage on November 17, 2022 for Project site. Permits were available from 1948 to 2014. Dudek reviewed all available permits, and all information obtained from the City of Arcadia was used in the preparation of the historic context and significance evaluations. The original building permit for The Derby Restaurant building was not located.

Dudek also used the 2002 Historic Resource Survey documentation created for the City of Arcadia by Cultural Resource Management, LLC (CRM) of Pomona. This report divided the City into eight geographic districts and

produced 1-page DPR Primary Records for buildings that met the 50-year age threshold at the time of the survey. Information in this report was used in the preparation of the historic context and significance evaluations.

Los Angeles County Assessor

Dudek obtained assessor data for the Project site properties on November 16, 2021. This assessor data gave information about construction dates and current owners for properties in the Project site.

Arcadia History Room, Arcadia Public Library

Dudek visited the Arcadia Library's History Room on December 2, 2021. The Arcadia History Room's Collections included newspaper clippings, city directories, scrapbooks, digitized e-books, and historical photographs. All available information obtained from the library was used in preparation of the historic context and significance evaluations.

Historical Newspaper Review

Dudek reviewed historical newspapers from Arcadia and surrounding cities in an effort to understand the development of the City of Arcadia and the Project site. These documents were used in preparation of the historic context and significance evaluations.

Sanborn Fire Insurance Maps

A review of historical Sanborn Map Company fire insurance maps covering the City of Arcadia was conducted as part of the archival research on the Project site from the years 1908, 1924, and 1932 (revised) but researched revealed there was no Sanborn coverage for the Project site (Sanborn Map Company 1908, 1924, 1932).

Historical Aerial Photographs

A review of historical aerial photographs was conducted as part of the archival research effort for the following years: 1928, 1938, 1944, 1949, 1952, 1954, 1960, 1964, 1972, 1977, 1980, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2002, 2003, 2005, 2009, 2010, 2012, 2014, 2016, and 2018. Table 1 discusses the development of the areas surrounding the Project site (NETR 2022; UCSB 2022).

2.3 Additional Documentation

The City of Arcadia does not maintain an official register or list of historic resources. A plaque at The Derby was installed by the Arcadia Historical Society in 2011. The plaque provides a brief history of the restaurant with historic era photos and it is located at the entrance of the building. The Derby is marker #8 of the Arcadia Historical Markers. The historic markers are placed independently by the Arcadia Historical Society. The City of Arcadia does not consider historical marker placement by the Arcadia Historical Society a formal determination of historic significance at the local level. The Derby Restaurant not at present considered a CEQA historical resources by the City of Arcadia. A full evaluation of this property is provided in Section 5 of this Report.

3 Historic Context

3.1 Historical Overview of the City of Arcadia and its Downtown Commercial Core

After the annexation of California to the United States, Henry Dalton applied for a land patent to Rancho Santa Anita with the Public Land Commission, as required by the Land Act of 1851. The rancho went through several owners until 1875, when Rancho Santa Anita was sold for $200,000 to Elias Jackson "Lucky" Baldwin. Baldwin was a wealthy landowner who had gained fame and fortune by investing in Nevada's Comstock Lode mine. Baldwin owned several ranchos east of Los Angeles and invested heavily in their development. After Baldwin purchased the rancho, he hired a property manager and began to arrange for multiple improvements, including large-scale orange orchards, irrigation systems, and a distillery and wine production operation. Most notably, he started a training track and stables for racehorses (ARG 2016, p. 16; Eberly 1953, pp. 12-14; McAdam and Snider 1981, pp. 14-15).

Though there was an economic downturn in the 1870s and Baldwin went into debt, he retained several of his properties and saw success during the land boom of the 1880s. Adjacent development in Monrovia and Sierra Madre, cities close to Rancho Santa Anita, inspired Baldwin to subdivide his land in 1883. The Santa Anita Tract was located between Monrovia to the east and Baldwin's large estate house to the west. Baldwin also secured the right-of-way for the Los Angeles & San Gabriel Valley Railroad to pass through the Santa Anita Tract, as well as water rights in Santa Anita and Little Santa Anita canyons. Baldwin developed other amenities and attractions for the area, including the construction of the Oakwood Hotel, creating tourist excursions to the surrounding mountains, lining Santa Anita Avenue with eucalyptus trees, and continuing to breed and train racehorses. By 1886, Atchison Topeka & Santa Fe (AT&SF) Railroad had purchased the railroad, and the tracks reached the Santa Anita Tract townsite. By 1887, the town was being referred to as Arcadia (Figure 3). Baldwin's speculative development made the town appear so successful that another railroad, the San Gabriel Valley Rapid Transit Railroad, built a depot and began offering rail service to the town. Despite this, by the end of the 1880s, the town had less than 200 residents (ARG 2016, pp. 18-19, 23; Eberly 1953, pp. 32-33; McAdam and Snider 1981, pp. 20-21).

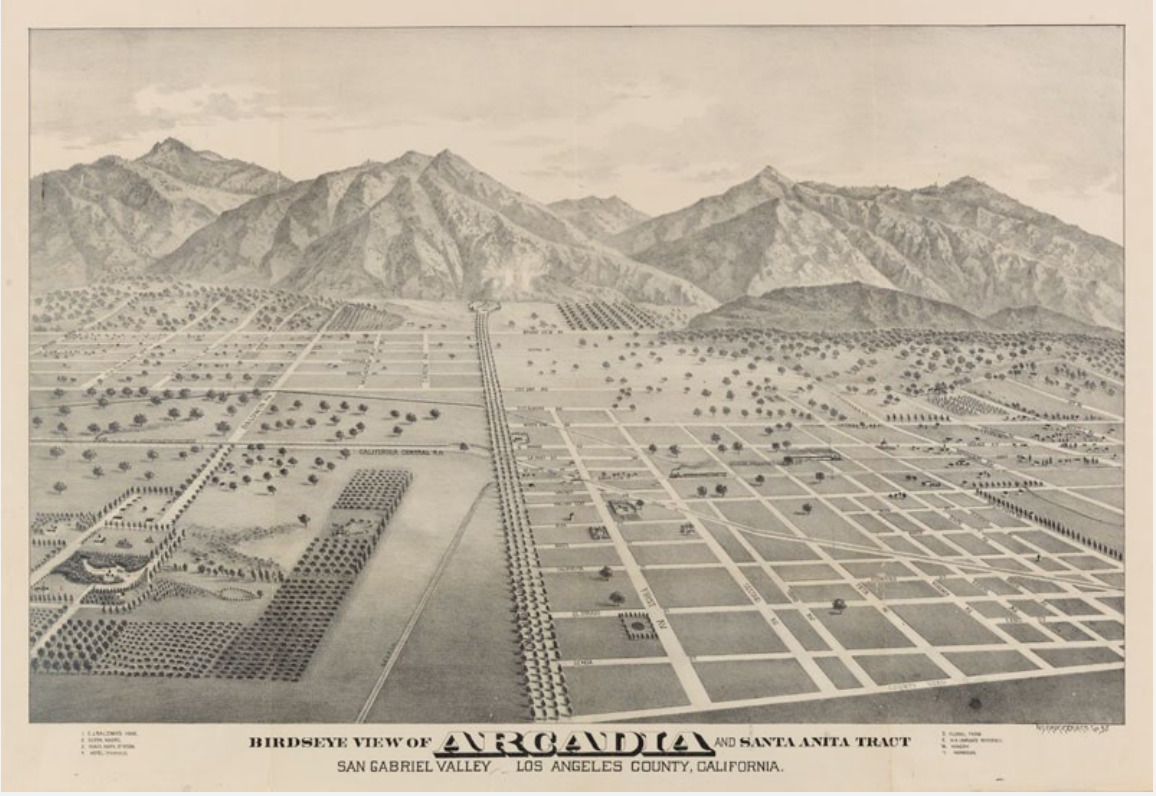

Figure 3. Bird's Eye View of Arcadia and the Santa Anita Tract, 1888; Santa Anita Avenue is the tree-lined north-south road in the center of the image (California State Library)

Baldwin continued to grow the community in the 1890s and 1900s, helping to develop the town. In 1902, when the Pacific Electric Railway announced it would construct the Pasadena Short Line from Pasadena to Monrovia, Baldwin interceded with the company and negotiated for service to Arcadia. He also filed to incorporate Arcadia in 1903 and was immediately appointed mayor. Baldwin's intent was not necessarily to grow the town, but to gain traction for a business proposal and long-time hobby: establishing a horse-racing track at Arcadia. The town grew, with a small commercial business district emerging along Falling Leaf Avenue (later, Huntington Drive). On the west side of Santa Anita Avenue, adjacent to the business corridor and railroad depots, Baldwin built Santa Anita Park, a racetrack, in 1907. Baldwin died in February 1909. Just a month later, the State of California passed a bill banning racetrack gambling and the Santa Anita Racetrack was closed. The original racetrack burned down in 1912 (ARG 2016, pp. 28-29; Eberly 1953, pp. 40, 49, 52-53; McAdam and Snider, p. 61).

In the beginning of the twentieth century, commercial growth in Arcadia continued to be concentrated along Falling Leave Avenue. General improvements in the city included gas and electric utilities, streetlights, a municipal water system, a dedicated city-operated fire department, and graded and paved roads. Banks, schools, hotels and residential subdivisions were constructed in the townsite. Falling Leaf Avenue was paved, widened, and renamed Huntington Drive in 1913. The United States' entry into World War I had an impact on the city's development patterns. The Ross Field Balloon School was established by the U.S. Army at the Santa Anita Racetrack site. During

the war years, 3,500 recruits were hosted at Ross Field. Arcadia expanded from 696 citizens in 1910 to 2,239 in 1920 (ARG 2016, pp. 37-40; Eberly 1953, p. 59-75; McAdam and Snider 1981, pp. 96, 109).

A new downtown commercial corridor and civic center began to form along Huntington Drive in the late 1910s and 1920s. In 1918, Arcadia's first City Hall was erected at Huntington Drive and First Street. Eventually, several civic buildings, including the library, police department, fire department, and a community center would emerge north of the City Hall building, on Wheeler Avenue. During the 1920s, several commercial businesses erected buildings on Huntington Drive, including the Arcadia Theatre, a drive-in market at Huntington Drive and First Avenue, and other grocery and dry goods markets. To the north of the commercial district, industrial properties began to concentrate along the AT&SF and SP railroad tracks, especially near the intersection of Santa Clara Street and the railroad tracks. Outside of the town's central core, new residential subdivisions were created by dividing large land tracts into smaller plots. Several agricultural tracts in and around Arcadia were also dedicated to poultry raising, which remained a common land use in Arcadia through the 1930s (ARG 2016, pp. 47-50; McAdam and Snider 1981, pp. 109-110).

In 1933, the State of California reintroduced racetrack wagering, reversing their 1909 anti-gambling position. By Christmas 1934, a new Santa Anita Park racetrack was opened by the Los Angeles Turf Club. With the end of Prohibition in 1933, the town became a destination for local gambling, sports betting, and alcohol consumption. The City also received a generous WPA grant to create a 184-acre public park at Santa Anita Regional Recreational Center (Arcadia County Park), which boasted an 18-hole golf course, pools, and tennis courts, open to the public. In the 1930s, Anita Baldwin, daughter of E.J. Baldwin, sold 1,300 acres of inherited property to be developed by Rancho Santa Anita, Inc. Rancho Santa Anita, Inc. parceled the large acreage into residential subdivisions, including Santa Anita Village, the Rancho, the Upper Rancho, Santa Anita Gardens, and Colorado Oaks. The effect of these investments and increased visitation, despite the national Depression, led to the City of Arcadia experiencing moderate growth in the 1930s, with "new buildings, new businesses, public improvements and home construction" taking place almost daily (Eberly 1953, p. 118). By 1940, the City's population expanded to 9,122 citizens.

During World War II, Arcadia's Santa Anita Racetrack played a large role in the Executive Order 9066 removal of Japanese-Americans from their homes and subsequent internment, serving as an assembly center in 1942. The War Department took over the racetrack. Nearly 400 barracks buildings were erected around the grandstand building (Figure 4). In addition to housing Japanese-Americans before they were sent to internment camps, the racetrack was also used to hold 2,000 German and Polish prisoners of war. During the war, the City of Arcadia experienced little population or built environment growth (Arcadia Historical Society 2008, p. 73; ARG 2016, pp. 53-55, 60-62; Eberly 1953, pp. 118-122; Kovacic 2003, pp. 23-24; McAdam and Snider 1981, pp. 127, 148).

Figure 4. Barracks to house Japanese internees at the Santa Anita Park Racetrack, 1942 (Los Angeles Public Library)

In the post-war period, like all of Southern California, the City of Arcadia experienced massive population growth and a building boom. The population of Arcadia increased from 9,122 people in 1940 to 23,066 people in 1950. Much of the town's growth was financed through Veterans' loans and Federal Housing Administration mortgage-promoted home building. In the downtown commercial core, all remaining empty lots were developed, and other commercial corridors emerged along Duarte Road and Foothill Boulevard (U.S. Route 66). Commercial shopping centers and commercial strips in these areas were designed to take advantage of automobile traffic as other modes of transportation, including the Pacific Electric Red Cars, ended service in the 1950s. Notable institutional growth during this period included the creation of the Los Angeles State and County Arboretum, which was carved out of remaining undeveloped Rancho Santa Anita land in 1947. It opened to the public in 1955. The City's population growth continued, expanding to 41,005 people in 1960 (ARG 2016, pp. 65-66; Kovacic 2003, pp. 322-326; McAdam and Snider 1981, pp. 163-165).

Suburban sprawl, commercial growth, shopping centers, and a booming population characterized Arcadia in the 1960s and 1970s. Civic development included expanding the number of grammar and high schools, new libraries, and the fire and police departments. By 1968, the Foothill Freeway (now Interstate 210) was completed through Arcadia. It continued east towards San Dimas by 1971. Multiple attempts were made to expand the downtown commercial core along Huntington Drive by permitting high-rise buildings. These efforts were defeated in the 1960s and 1970s, resulting in a height limit of eight stories. One project built to this limit was the Towne Center Project, completed in 1971 (see Section 3.5). Noteworthy commercial development away from the downtown commercial core was the Santa Anita Fashion Park, an indoor mall designed by Victor Gruen of Gruen Associates and opened in 1975.

In the 1980s and 1990s, the demographics of Arcadia changed dramatically, and the formerly majority-Caucasian city quickly transformed into a predominantly Asian-American community. The Asian-American community comprised 9% of the population in 1980. Over the next few decades, the community grew to 59% of the population by 2010. In addition to shifting demographics, commercial and industrial land uses have also changed in Arcadia. In 1996, the

City published a General Plan to revitalize the downtown district. From the early 2000s to the present-day, single-family residences, townhomes, and condominiums have been constructed in formerly industrial and commercial areas around the two-block downtown commercial core of Huntington Drive. Today, the downtown commercial core is a mixed-use, primarily commercial area (Arax 1985; ARG 2016 pp. 77-78; City of Arcadia 2010b, p. 53, 2010c, p. 3; Kovacic 2003, pp. 126-127, 326; Kovacic 2013, pp. 59-61, 68; McAdam and Snider 1981, pp. 175-177).

3.2 History of Buildings within the Project site

The Project site is located about one-half mile east of Arcadia's Downtown Commercial Core along Santa Anita Avenue. The Project site includes two parcels that total 2.23 gross acres. The Project site is currently occupied by two restaurant buildings at 233 E. Huntington Drive and 301 E. Huntington Drive and a surface parking lot. The following table provides a development history of The Derby Restaurant Project site since the first available aerial image in 1928:

Table 1. Historical Aerial Photograph Review of Project site

Photograph Year	Observations and Findings
1928	The earliest aerial photograph of the Project site dates to 1928. The Project site appears as two neighboring residential parcels bisected by what was then Third Street. The parcel to the west is L-shaped with a primary single-family residence and five smaller ancillary buildings to the rear. The parcel to the east is triangular with a single-family home at the west-central end of the property. E. Huntington Drive is also visible in its current east-west orientation but was narrower in 1928. AT&SF tracks run diagonally near the southwest corner of the current Project site. The Santa Anita Wash, located a quarter mile west of the Project site, was not channelized at this point. The surrounding neighborhood, which is located in east-central Arcadia, had been substantially developed to the east of Santa Anita Avenue with single family residences by this time, but about a quarter of the lots were vacant. The area west of Santa Anita Avenue, roughly half a mile west of the Project site, was largely undeveloped besides a racetrack that would later be redeveloped as Santa Anita Park.
1938	A 1938 aerial image shows a new square-shaped building located at the southeast corner of the Project site on what had formerly been an L-shaped residential parcel. The new building appears to be the original The Derby Restaurant, which was constructed in 1931, and a large tree fronts the building along E. Huntington Drive. Besides the construction of the new restaurant, changes to the Project site also included the addition of a small, square building on the south end of the triangular eastern parcel. The section of E. Huntington Drive that fronts the Project site and extends to the Santa Ana Wash appears wider than 1928. In the neighborhood immediately surrounding the Project site, only moderate development has taken place on vacant parcels since the 1928 aerial image. The area west of Santa Ana appears completely reconfigured since 1928 with the development of Santa Anita Park.
1952	Within the Project site in a 1952 aerial, The Derby Restaurant appears to have had a major expansion to the south (primary) and west elevations, which culminated in the removal of the large oak tree that fronted the building along E. Huntington Drive in the 1938 aerial. The portion of the former triangular parcel within the eastern end of the Project site now includes a street-facing rectangular building and a small building at the center of the parcel. The parcels directly north of the Project site is developed with single-family dwellings by 1952 and parcels vacant in 1938 are mostly developed with single-family residences. By 1952, the AT&SF Railroad tracks running diagonally past the southwest corner of the Project site had been replaced by a railroad bridge that is elevated over E. Huntington Drive.
1952-1964	No discernible changes to the Project site.

Table 1. Historical Aerial Photograph Review of Project site

Photograph Year	Observations and Findings
1972	By the 1972 aerial image, the commercial building at the center of the eastern parcel is demolished. Besides the demolition, the remainder of the Project site and surrounding neighborhood looks as it had in 1952.
1977	No discernible changes to the Project site.
1980	No discernible changes to the Project site.
1994	The 1994 aerial image indicates that The Derby Restaurant building, at the west end of the Project site had significant expansion to its west elevation and a reconfigured roof. Within the eastern parcel, the 1950s-era street-facing buildings have been demolished and replaced by a large 80-foot by 110-foot rectangular Souplantation restaurant building constructed in 1988. Directly north of the Project site, former single-family residences were replaced by two, large multi-story hotels.
1995-1998	No discernible changes to the Project site.
1999	In 1999, a patio expansion appears on the west elevation of The Derby Restaurant building
1999-2005	No discernible changes in the Project site or surrounding properties based on aerial imagery.
2006	A 1,200 square foot addition to the west elevation covered patio is visible in aerial images.
2007-2010	No discernible changes in the Project site or surrounding properties based on aerial imagery.
2011	In 2011 aerials, a new masonry wall is visible at the front of the property.
2012-2018	No discernible changes in the Project site or surrounding properties based on aerial imagery.

History of The Derby Restaurant

The history of The Derby Restaurant dates to the 1920s when owner Hudson M. Proctor opened the "Proctor Tavern" in 1922 at Foothill Boulevard and Santa Anita Avenue in Arcadia. It appears that by 1926, the restaurant was known as "Proctor's Foothill Tavern" and specialized in fried chicken meals. By 1931, Proctor closed the restaurant on Foothill Boulevard and opened a new "Proctor's Tavern" restaurant at 233 E. Huntington Drive which would later house The Derby Restaurant (Arcadia Tribune 1931, pp. 1). Built in the Spanish Colonial Revival style, the new restaurant included two dining rooms, each with a fireplace, as well as an upstairs apartment. The restaurant would change hands several times during the 1930s and a 1934 advertisement shows that Proctor sold the restaurant to W. B. De Beers who renamed it "Ye Derby Tavern" (Arcadia Tribune 1934, pp. 10).

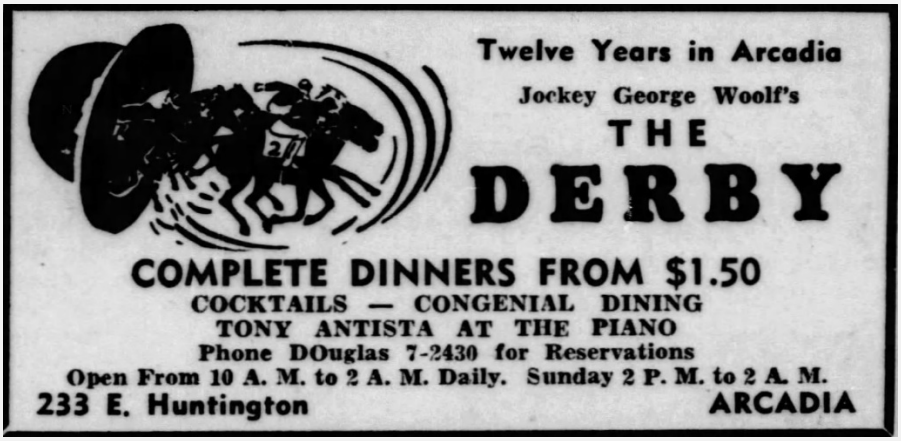

Figure 5. A 1950 newspaper advertisement for The Derby Restaurant (Monrovia News-Post 1950)

The ownership changes ultimately culminated in a grand 're-opening' in December 1938 by co-owners Bill Petersen and legendary jockey George "The Iceman" Woolf. By this time the restaurant was referred to under its present moniker, The Derby. Woolf, a highly successful horseracing jockey who is best known for riding the famed horse Seabiscuit in 1938, owned the restaurant until his untimely death in a 1946 horseracing fall. Woolf's fame as a jockey increased the popularity of the restaurant and tightened the restaurant's connection to horseracing. Woolf's widow ran the restaurant for another five years, but ultimately sold the restaurant to Dominic and Lorene ("Murph and Slugger") Sturniolo in 1951 (Arcadia Tribune 1951, pp. 1). These longtime owners would maintain the restaurant's horseracing theme, which had been established in the 1930s. This included maintaining a showcase with Woolf's racing memorabilia at the front of the restaurant. Upon taking ownership, the Sturniolos expanded the size of the restaurant by adding to the primary (south) and west elevations of the original restaurant to accommodate more diners. This remodel effectively removed all elements of the former Spanish Colonial Revival style of the building and landscaping including its clay tile roof, façade, original signage, and the oak tree that fronted the building. The restaurant specialties included steak, Baked Alaska, and drinks like cappuccinos and Irish Coffee. In 1964, owner Dominic Sturniolo acquired a chandelier once belonging to Arcadia founder Lucky Baldwin, which currently hangs before the main dinner room. In the 1940s and 1950s, the restaurant featured music by piano player Tony Antista, who was a popular local entertainer until his death in 1961 (Mutschler 1983, pp. 1-7).

Besides their 1950s restaurant addition, the Sturniolos made another large patio addition to the western end of the building in 1999, when Dominic and Lorene's son Charles "Chip" Sturniolo was owner. After the Sturniolos' long and successful tenure, Dustin Nicolarsen and Michael Thomas acquired the restaurant in 2007 and are the current owners.

3.3 Architectural Styles in the Project Site

The Derby Restaurant building was designed in the Spanish Colonial Revival style when it was originally constructed in 1931, but subsequent several alterations, including major additions to the façade, have added neo-Craftsman style and Ranch elements to the restaurant building. Due to these alterations and combinations of styles, the building does not currently convey an architectural style. Almost no character-defining features of the original Spanish Colonial Revival style remain.

Architects and Builders

The original 1931 Spanish Colonial Revival style restaurant was designed and built by owner Hudson M. Proctor, who, according to articles about the restaurant, had prior experience in the building industry, and no architect or contractor was used for the building (Arcadia Tribune 1931, p. 1). Research did not reveal that subsequent remodels and additions to the restaurant engaged an architect for the designs.

3.4 Property Type in the Project Site

Restaurants, 1880-1980

To better understand the restaurant property type, Dudek utilized the following SurveyLA context relevant to the evaluation of The Derby Restaurant since themes present in nearby Los Angeles apply regionwide:

- "Commercial Development" under the theme "Neighborhood Commercial Development, 1880-1980" and more specifically, the sub-theme "Restaurants, 1880-1980." The period of significance for Restaurants is 1880–1980.

The Derby Restaurant was referred to as a café or tavern in newspaper ads during its history in Arcadia. The café was a type of establishment that could be found on the main streets of small towns as well as in neighborhood commercial areas that operated similarly to small towns. Between 1910 and 1940, the neighborhood café operated as a social meeting place. The interior area was long and thin, with a counter on one side, tables or booths on the other, and the kitchen at the back.

Restaurants, such as cafes, may be historically notable in terms of commerce, social history, and/or architecture. They show the progression of the local restaurant from the café and luncheonette, which were commonly situated in rented storefront spaces, to the free-standing tearoom, destination restaurant, coffee shop, and walk-up food stand. They also show how the local restaurant frequently served as essential and well-known gathering and socializing spaces, creating a feeling of community identity. These restaurants may be affiliated with local, regional, or national chains, and they may reflect prototype/corporate designs that are noteworthy examples of architectural styles and were developed by well-known architects (Prosser 2017, pp. 100-112).

Character-Defining / Associative Features:

- Features architectural and site-planning elements typical of neighborhood restaurants in both a pedestrian-oriented storefront form and an auto-oriented freestanding form
- May reflect prototype/corporate designs associated with specific restaurant chains
- May be associated with notable architects/designers
- Associated with activities characteristic of neighborhood economic and social life

Commercial and Recreational Development, 1910- 1935

The Derby Restaurant is also associated with the theme of commercial and recreational development in Arcadia from 1910-1935 as highlighted in Arcadia's 2016 Citywide Historic Context Statement. In the 1920s and 1930s, several businesses were added to the existing commercial district centered around Huntington Drive and 1st Avenue, including a theater, banks, a newspaper, various retail and service operations in new commercial blocks,

and even a drive-in market. Only a few commercial properties from the 1920s and early 1930s remain in the district, including a former shoe shop and grocery store (1923) at 323-325 N. 1st Avenue (heavily altered; now Arcadia Welfare and Thrift) and the former Arcadia Tribune (1930) at 8 N. 1st Avenue.

Due to the restaurant's proximity to the Santa Anita Race and horseracing theme, it shared a connection to horseracing and the supporting commercial businesses. In the early 1930s, the majority of Arcadia's economic development was focused on the establishment of the Santa Anita Park and Racetrack, as well as the expansion of Highway 66 through the city. Santa Anita Park, which opened on Christmas Day 1934, immediately became Arcadia's hallmark icon, attracting Hollywood stars and racegoers from miles around.

The development of the racetrack was a huge boost to Arcadia, providing both money and favorable attention to the community during the Great Depression. Businesses capitalized on the flood of racetrack visitors by building hotels, restaurants, and tourist attractions such as W. Parker Lyon's showy Pony Express Museum (now closed), which housed a massive collection of "Wild West" artifacts. In 1931, Huntington Drive and Colorado Boulevard were built through the Baldwin Ranch to link to transcontinental Highway 66. By 1932, the highway had been divided between Foothill Boulevard and a piece of Huntington Drive. Businesses benefited from the extension of Highway 66, which saw the construction of service stations, drive-in markets, and motor courts to serve vehicles along the route (ARG 2016, pp. 47-50).

INTENTIONALLY LEFT BLANK

4 Field Survey

4.1 Methods

Built Environment Survey

Dudek Architectural Historian Andrew Bursan, MCRP, conducted an intensive survey of the Project site on January 5, 2022. Mr. Bursan meets the Secretary of the Interior's Professional Qualification Standards for architectural history. The survey entailed walking around the building exteriors of each of the two properties in the Project site, documentation with notes and photographs, specifically noting character-defining features, spatial relationships, observed alterations, and examining any historic landscape features on the properties. The Derby Restaurant's interior was surveyed as part of the intensive survey to research on site collection of memorabilia and historic photographs.

4.2 Results

One property within the Project site is over 45 years old and was identified as requiring recordation and evaluation for historical significance: The Derby Restaurant (233 E. Huntington Drive, APN 5773-009-070).

This property is described and evaluated for historical and architectural significance in Section 5. Significance Evaluations. A State of California Department of Parks and Recreation Series 523 (DPR) form for The Derby Restaurant property is located in Appendix C. DPR forms.

One property located within the Project site, 301 E. Huntington Drive (APN 5773-009-065), is developed with a building constructed in 1988 and does not meet the 45-year age threshold. Therefore, it was not evaluated or recorded.

INTENTIONALLY LEFT BLANK

5 Significance Evaluations

In order to determine if the proposed Project will impact historical resources under CEQA, all buildings or structures over 45 years in age within or immediately adjacent to the Project site were evaluated for historical significance and integrity in consideration of NRHP, CRHR, and City of Arcadia designation criteria and integrity requirements. This includes The Derby Restaurant, which is inside the Project site. Because the designation criteria for the CRHR and City of Arcadia landmarks closely resembles the NRHP Criteria, these evaluations are grouped together below.

5.1 The Derby Restaurant, 233 E. Huntington Drive, (APN 5773-009-070)

Property Description

The Derby Restaurant located at 233 E. Huntington Drive was originally constructed in the Spanish Colonial Revival style in 1931. As the restaurant currently exists, it is a two-story, building with Ranch and neo-Craftsman features topped by a gable-on-hip roof with open eaves. Irregular in plan, the building is clad in clinker brick on the façade and has stucco cladding on secondary elevations. A decorative vent and vertical half-timbering highlight gables on the west end of the building. Fenestration is non-original, fixed pane, stained glass windows on all elevations. A straight brick walkway leads from the sidewalk to the main entrance shelter with wood column supports and a wood door entrance on the west end of the primary south elevation. A circular clinker brick chimney rises from the southeast corner of the building. A small second-story office, which is obscured by the primary roof pitch at the front of the building, is located at the rear. A side-gabled roof wing projecting from the west elevation covers an open patio area. A canopy structure attached to the rear of the buildings provides additional patio sheltering. The interior walls are adorned with horse racing memorabilia, including paintings, and photographs that likely date between the 1930s to the mid-to-late 1940s. Due to extensive modifications to the building over time interior remnants of the original 1931 building are difficult to clearly identify.

Associated features that surround the restaurant building include, two free-standing neon signs front the building along E. Huntington Drive. The westernmost sign reads “Guest Parking”, with an arrow and bowler hat surrounding the lettering, and the easternmost sign reads “World Famous, The Derby” with a red background. A small lawn with shrubs and a three-foot-high brick fence front the primary elevation. A parking lot surrounds the remainder of the building and mature trees line the parcel boundary. The Derby Restaurant building is flanked by two 1980s-era multi-story hotels to the northwest and northeast and a restaurant directly to the east.

Building Permits and Identified Alterations

The following list of known alterations was compiled through archival research of Arcadia building permits, a review of previous property documentation, and during the course of the intensive survey.:

- Restaurant remodel (no details) for $3,500, Certificate of Occupancy 13391 (1948)
- 18-foot expansion around the entire exterior of the original building including the primary south façade, Owner Domonic Sturniolo (1951)
- Sign permit for $480, Permit #520 (1961)
- Conference room addition, owner Dustin Nicolarsen (Circa 1969)
- Open patio for $14,076, Permit #B00-002-704 (1999)
- 576 square foot outdoor patio with the removal of ceiling coverings for outdoor walls, Permit #B00-009-895 (2001)
- Removal and replacement of brick on exterior elevations, owner Dustin Nicolarsen (Circa 2001)
- Addition of a 1,200 square foot roofed patio for $23,299, Permit #B00-019-678 (2006)
- Masonry garden wall for $2,267, Permit B00-038-522 (2011)
- New masonry fireplace for $10,000, Permit B00-045-848 (2014)
- Non-enclosed patio added, owner Dustin Nicolarsen (2020)

Figure 14. The façade of The Derby Restaurant in 2022 showing the existing façade, which has been substantially altered since the 1951. The original signage and the oak tree fronting the property have also been removed (IMG_0625).

NRHP/CRHR/City of Arcadia Statement of Significance

The Derby Restaurant at 233 E. Huntington Drive is not eligible for listing in the NRHP, CRHR, or as a City of Arcadia historic landmark individually or as part of an existing historic district, as demonstrated below.

Criterion A/1/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Located along E. Huntington Drive which is portion of the original Route 66 alignment and originally established at its current location in 1931, The Derby Restaurant gained prominence during the 1930s and through the late 1940s as a gathering spot for the horse racing community. This connection between the restaurant and the horseracing community developed due to its proximity to the Santa Anita Park and through its former owner George "The Iceman" Woolf, who was best known for riding the famed horse Seabiscuit. During Woolf's ownership period of The Derby from 1939 to 1946, the restaurant grew in popularity as a horseracing community gathering spot with celebrity status that featured Woolf's vast collection of horseracing memorabilia. Woolf owned the restaurant until his untimely death in 1946 due to falling off a horse during a race. Woolf's fame as a jockey increased following his death along with the popularity of the restaurant, which enhanced the restaurant's connection to the horseracing community. Woolf's widow, Genevieve Woolf Cayer, ran the restaurant until 1951 when she sold the operation of the restaurant to Dominic and Lorene ("Murph and Slugger") Sturniolo (Dominic Restaurants, Inc.) in 1951 (Arcadia Tribune 1951, pp. 1). By this time, The Derby was a well-known southern California establishment. The new owners continued to maintain the restaurant, exhibiting Woolf's collection of horseracing memorabilia, and emphasizing Woolf's legacy.

In consideration of these factors, The Derby Restaurant, has associations with a pattern of events that have made contributions to the development of the horseracing community under NRHP Criterion A, CRHR Criterion 1, and City of Arcadia Historic Landmark Criterion 1. The period of significance for the subject property is 1931 to 1951; spanning the year the restaurant was first established at its location, to the date that the property was no longer operated by the Woolf family. This is the period in which the restaurant grew in popularity, became a well-known establishment, and solidified its link to the horse racing community. The property's ability to convey significance under this Criterion is addressed below in the integrity discussion.

Criterion B/2/2: That are associated with the lives of persons significant in our past.

To be considered eligible under NRHP Criterion B, CRHR Criterion 2, or City of Arcadia Historic Landmark Criterion 2 the property must be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. In the case of The Derby Restaurant, the people who have owned and operated the restaurant are discussed below.

The Derby Restaurant was originally constructed by owner Hudson M. Proctor in 1931, who owned the restaurant until approximately 1934. Proctor appears to have been a local businessman, but research did not reveal him to be a person of great local importance. Famed horseracing jockey George Woolf owned the restaurant from December of 1938 until his death in 1946. While George Woolf is historically significant as a horse racing jockey, the connection to the work he is known for, horseracing, is shown through the memorabilia that remains inside the restaurant. However, The Derby Restaurant is not where he performed the work for which he is known (i.e., horse racing). Woolf is famous for his career as a jockey and his productive years are most closely associated with the Santa Anita racetrack where he famously raced. A statue of Woolf was erected at the Santa Anita racetrack in 1949

and it remains at the site today. The racing facility serves as a more intact representative example of his career than The Derby Restaurant that he briefly owned.

Dominic and Lorene ("Murph" and "Slugger") Sturniolo and their son Chip owned the restaurant for most of its history (1951-2007) until selling the restaurant in 2007. While the family was successful and well regarded as local businesspeople in Arcadia, there is no evidence that they are prominent people or known to be historic figures at the national, state, or local level. Lacking a direct association with an individual's important achievements for which they are known, The Derby Restaurant is not eligible under NRHP Criterion B, CRHR Criterion 2, or City of Arcadia Historic Landmark Criterion 2.

Criterion C/3/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

Hudson M. Proctor constructed the building that would ultimately come to be known as The Derby Restaurant in 1931 in the Spanish Colonial Revival style. He was reported in a few articles to have experience in construction, and he did not hire a contractor or architect to design the building. Owners Dominic and Lorene Sturniolo completely remodeled the restaurant in 1951 with additions to the primary and west elevations that removed all former Spanish Colonial Revival elements in addition to removing original freestanding signage and removing the large oak tree that once fronted the building. Beyond the upstairs office, no elements of the 1931 era building remain.

Since the late 1990s, the restaurant has experienced large additions to the west elevation, removal of original exterior brick, and the addition of new exterior chimneys. Due to numerous alterations, the building no longer possesses any character-defining features of the 1930s Spanish Colonial Revival style. Although the building as it currently stands features Ranch and neo-Craftsman elements, it no longer possesses a discernable architectural style. In addition, the restaurant no longer exhibits the architectural and site-planning elements of its original 1930s era cafe restaurant type due to alterations. Lacking architectural distinction, or any known connection with the work of a master architect, The Derby Restaurant is not eligible under NRHP Criterion C, CRHR Criterion 3, or City of Arcadia Historic Landmark Criterion 3.

Criterion D/4/4: That have yielded, or may be likely to yield, information important in prehistory or history.

The Derby Restaurant is not significant under Criterion D of the NRHP, Criterion 4 of the CRHR, or City of Arcadia Historic Landmark Criterion 4 as a source, or likely source, of important historical information nor does it appear likely to yield important information about historic construction methods, materials, or technologies.

Integrity Discussion

To be eligible for listing in the NRHP, CRHR, or as a landmark in the City of Arcadia, properties must have a clear association under one or more Criterion and retain historic integrity to the period of significance established under the Criterion for which it has an association.

As stated above, The Derby Restaurant, has associations with events that have made significant contribution to broad patterns of our history under NRHP Criterion A, CRHR Criterion 1, and City of Arcadia Historic Landmark Criterion 1 (Criterion A/1/1). The period of significance for the subject property is 1931 to 1951; spanning the year the restaurant was first established at its location, to the date that the property was no longer operated by the

George Woolf or his wife. This is the period in which the restaurant grew in popularity, became a well-known establishment, and solidified its link to the horse racing community.

Despite a clear association under Criterion A/1/1, alterations to the property since 1951 have modified the property to extent that it appears to be a building constructed in the latter half of the twentieth century, not in the 1931 to 1951 period when the building was originally constructed and gained prominence as a restaurant associated with the horseracing community through Woolf. Despite the connection to Woolf that remains through his horseracing memorabilia collection featured in the interior, the interior space has been altered since 1951 to the extent that even with elements of the collection exhibited the connection to the period of significance has been lost. Additionally, no exterior elements of the restaurant remain from the historic era establishment that Woolf would recognize. The original Spanish Colonial Design of the building has been completely altered, original signage removed, and large oak tree fronting the building has also been removed. The building now surrounded by paved parking lots, and more recent commercial building construction. These modifications have resulted in dismantling the connection to the period when the restaurant became "The Derby," 1931 to 1951; the period of significance for the subject property. In summary, the loss of integrity in the areas of design, materials, workmanship, setting and feeling, has caused the property to no longer be capable of conveying an association to the period of significance (1931 to 1951) when it was first developed and the connection for which it is known.

Despite The Derby Restaurant's association under NRHP Criterion A, CRHR Criterion 1, or City of Arcadia Historic Landmark Criterion 1, the substantial loss of historic integrity to its period of significance precludes the property from being considered eligible for listing.

Additional City of Arcadia Criteria Considerations

In addition to meeting City of Arcadia Criterion 1 through 4, for a resource to be found significant as a City of Arcadia historic landmark it must be listed in the NRHP or CRHR (Criteria 5) or considered an iconic property (Criteria 6). The Derby Restaurant, as stated above, does not meet Criteria 1 due to a lack of historic integrity to its period of significance and the property does not meet Criterion 2 through 4 due to a lack of significance. As such the property is not eligible for listing as a City of Arcadia historic landmark.

Significance Evaluation Summary

In summary, The Derby Restaurant at 233 E. Huntington Drive is not eligible for listing in the NRHP, CRHR, or as a City of Arcadia historic landmark individually or as part of an existing historic district.

6 Findings and Conclusions

6.1 Summary of Findings

No historic built environment resources were identified within the Project site as a result of extensive archival research, field survey, and property significance evaluation. Findings are summarized below in Table 2. Therefore, the properties that comprise the proposed Project site are not considered historical resources for the purposes of CEQA. Further, no potential indirect impacts to historical resources were identified.

Table 2. Historic Built Environment Findings

Address	Date Constructed	NRHP/ CRHR/ City of Arcadia Significance Criteria	Previous CHRS code (if applicable)	Assigned California Historical Resource Status code	CEQA Finding
The Derby Restaurant	1931	Not eligible	Not applicable	6Z: Found ineligible for NR, CR or local designation through survey evaluation	Not considered a historical resource for the purposes of CEQA

6.2 Recommendations

No historical resources were identified within or adjacent to the Project site as a result of the BERD search, extensive archival research, a SCCIC records search, field survey, and property evaluations of significance. The Derby Restaurant is not currently designated or listed under any national, state, or local landmark programs. The buildings on these parcels have not been identified as eligible for local designation by a recent historic resources survey.

Dudek evaluated The Derby Restaurant building in the Project site in accordance with Section 15064.5 (a)(2)-(3) of California Environmental Quality Act (CEQA) Guidelines and using the criteria outlined in Section 5024.1 of the California Public Resources Code. Dudek concludes that the building does not appear to be eligible for listing in the NRHP, CRHR, or as a City of Arcadia landmark designation due to a lack of sufficient historic integrity. As such, no buildings on the Project site appear to be historical resources under CEQA. The recommended Status Code for The Derby Restaurant property is 6Z. Further, no potential indirect impacts to historical resources were identified as the proposed Project has no potential to impact the built environment beyond the Project site.

The finding for built environment cultural resources for the proposed Project under CEQA is No Impact. As the proposed Project would have no impact on historical resources, no further study is required.

Appendix A
Preparer's Qualifications

Andrew Bursan, MCRP

SENIOR ARCHITECTURAL HISTORIAN

Andrew Bursan is an architectural historian and urban planner with 14 years' experience in historic preservation, historic research, report writing, land planning, and project management. Mr. Bursan has worked with the California Department of Transportation (Caltrans), Los Angeles County Metropolitan Transportation Authority, City of Pasadena, City of Santa Monica, City of Los Angeles, City of Santa Barbara, and the City of Arroyo Grande, among others. His experience includes architectural surveys, reconnaissance-level surveys, historical assessments, and extensive historical research. He has prepared historic context statements, technical reports, and impact analysis for cultural resources in environmental impact reports (EIRs). His breadth of work includes major transportation projects, intensive archival research, citywide surveys, and analysis of individual properties under the California Environmental Quality Act (CEQA), Section 106, Section 4(f), and the National Environmental Policy Act.

Education

Cal Poly – San Luis Obispo
Master of City and Regional Planning (MCRP), 2005

University of California, Los Angeles, BA, History, 2002

Select Project Experience

Historical Resource Evaluation Report for 820 A Avenue, Coronado, California. Dudek was retained by the City of Coronado to complete a Historical Resource Evaluation Report, under City designation criteria and integrity requirements, for a single-family residential property located at 820 A Avenue in Coronado, California. The property was built in 1922 and had not been previously evaluated for historical significance. As a result of the evaluation, the subject property was recommended not eligible for inclusion in the City Register under all designation criteria due to a lack of significant historical associations and compromised integrity. Mr. Bursan served as a senior architectural historian and main author of the report. (2021)

Historical Resources Technical Report (HRTR) for the 5146-5148 Dehesa Road Project, Dehesa, California. Dudek was retained by Carlin Law Group, A.P.C. to complete a Historical Resources Technical Report (HRTR) in support of the proposed 5146-5148 Dehesa Road Project. This project proposed to subdivide an existing 5.87-acre parcel on Dehesa Road into four parcels. The site was originally developed with two existing single-family residences (each more than 45 years old) located within the southern portion of the project area. The property at 5146-5148 Dehesa Road was evaluated for historical significance in consideration of potential impacts to historical resources under the California Environmental Quality Act (CEQA) section 15064.5, the County of San Diego Historic Preservation Ordinance, the County of San Diego Resource Protection Ordinance (RPO), and Section 106 of the National Historic Preservation Act (NHPA). As a result of the evaluation, the property was recommended not eligible for inclusion in the NRHP, CRHR, and San Diego County Local Register of Historical Resources under all designation criteria due to a lack of significant associations and compromised integrity. Mr. Bursan served as a senior architectural historian and main author of the report. (2021)

Historical Resource Assessment Report for the 1280 Pacific Coast Highway Mixed-Use Development Project, Harbor City (Los Angeles), California. Dudek was retained by Alston & Bird LLP to complete a Historical Resource Assessment Report for the proposed 1280 Pacific Coast Highway Mixed-Use Development Project (Project) in Harbor City, a community in the City of Los Angeles, California. The proposed project consisted of the redevelopment of a mobile home park known as the A-1 Trailer Park at 1280 Pacific Coast Highway and an adjacent vacant surface parking lot. The A-1 Trailer Park property was found ineligible under the National Register of Historic Places, California

Register of Historical Resources, or City of Los Angeles designation criteria due to a lack of significant historical associations and architectural merit. Mr. Bursan served as a senior architectural historian and main author of the report. (2021)

La Canada Soundwalls Phase IV, La Canada Flintridge, California. Dudek was retained by the City of La Canada Flintridge to prepare a Historic Property Survey Report (HPSR) for the La Canada Flintridge I-210 Soundwall Improvement Project. The City of La Cañada Flintridge, in cooperation with the California Department of Transportation, proposed to construct four soundwalls along Interstate 210 (I-210) to reduce residents' exposure to traffic noise (project). The project calls for an intensive pedestrian survey of the project APE (both direct and indirect) for both archaeological and historic built environment resources. Mr. Bursan is currently serving as a senior architectural historian and main author of the HPSR. (2021-present)

Additional Previous Experience

South Region High School No. 13, Los Angeles Unified School District, California. Assisted with fieldwork and wrote property descriptions. ICF prepared an initial technical report in support of environmental documentation for the proposed new South Region High School No. 13, which is subject to review under CEQA. (2010)

Housing and Urban Development-Neighborhood Stabilization Program 2, Section 106 Consulting Services for Housing and Urban Development, City of Lansing, Michigan. Helped conduct field survey work in the City of Lansing. Provided the City of Lansing's development office and the Ingram County Housing Commission with research services related to Neighborhood Stabilization Program 2-funded actions in potential historic districts. (2012–2013)

Jankovich Fueling Station Historic Resources Assessment, Port of Los Angeles, San Pedro, California. Prepared a historic resources assessment of the Jankovich Fueling Station. The research included building permits, Sanborn Map, and archival material. (2019)

Ventura County Transpiration Corridor, Ventura County, California. In conjunction with Caltrans, the County of Ventura proposed to widen Interstate 101 for 26 miles through the county. Andrew managed field survey work, oversaw and delegated tasks for the creation of a Historic Resource Evaluation Report (HRER) and Historic Structures Report as well as writing historic context. He engaged in several meetings with Caltrans for the purpose of creating an area of potential effects (APE) for the project. (2019–2021)

I-605 Corridor Improvement Project, Los Angeles County, California. Managed field survey work, performed evaluations of historic properties under CEQA and Section 106, documented tract development resources under a programmatic agreement, wrote historic context and attended meetings regarding the historic documentation of built resources. Andrew also oversaw the creation of compliance documents for the project. (2017–2020)

- CEQA-Historical Resource Lecture, 2008–2011
- Environmental Justice Lecture, California, 2011

Sarah Corder, MFA

HISTORIC BUILT ENVIRONMENT LEAD

Sarah Corder (*SARE-uh COR-der; she/her*) is an architectural historian with 17 years' experience throughout the United States in all elements of cultural resources management, including project management, intensive-level field investigations, architectural history studies, and historical significance evaluations in consideration of the California Register of Historical Resources (CRHR), the National Register of Historic Places (NRHP), and local-level evaluation criteria. Ms. Corder has conducted hundreds of historical resource evaluations and developed detailed historic context statements for a multitude of property types and architectural styles, including private residential, commercial, industrial, educational, and agricultural properties. She has also provided expertise on numerous projects requiring conformance with the Secretary of the Interior's Standards for the Treatment of Historic Properties.

Ms. Corder meets the Secretary of the Interior's Professional Qualification Standards for both Architectural History and History. She has experience preparing environmental compliance documentation in support of projects that fall under the California Environmental Quality Act (CEQA)/National Environmental Policy Act (NEPA), and Sections 106 and 110 of the National Historic Preservation Act.

Select Project Experience

740-790 East Green Street Mixed-Use Project, City of Pasadena, Los Angeles County, California. The proposed project involves the demolition of five commercial buildings in order to accommodate the development of a new three- to six-story mixed-use building. Dudek prepared a cultural resources technical report that included the results of a pedestrian survey of the project site by a qualified architectural historian, building development and archival research, development of an appropriate historic context for the project site, and recordation and evaluation of five commercial properties over 45 years old for historical significance and integrity in consideration of NRHP, CRHR, and City of Pasadena designation criteria and integrity requirements. Responsibilities included archival research, field survey, and co-authorship of the report. (2020)

Historic Resource Assessment for 9000 Dicks Street, City of West Hollywood, California. Dudek was retained by 9000 Dicks Street Capital LLC to complete a Historic Resource Assessment (HRA) for a residential property located at 9000 Dicks Street in West Hollywood, California. The Spanish colonial revival residence was built in 1926. As a result of Dudek's study, the property did not appear eligible for the NRHP, CRHR, or as a locally significant resource, due to a lack of significant historical associations, architectural merit, and compromised integrity. Responsibilities included project management, archival research, and co-authorship of the HRA. (2020)

Historic Resource Assessment for 9004 Dicks Street, City of West Hollywood, California. Dudek was retained by 9004 Dicks Street Capital LLC to complete an HRA for a residential property located at 9004 Dicks Street in West Hollywood, California. The Spanish Colonial Revival residence was built in 1924. As a result of Dudek's study, the

property did not appear eligible for the NRHP, CRHR, or as a locally significant resource, due to a lack of significant historical associations, architectural merit, and compromised integrity. Responsibilities included project management, archival research, and co-authorship of the HRA. (2020)

Historic Resource Assessment for 1223-1225 North Ogden Drive, City of West Hollywood, California. Dudek was retained by 1223 Ogden, LLC to complete an HRA for a multi-family property with four buildings located at 1223-1225 North Ogden Drive in the City of West Hollywood, California. The Spanish Colonial Revival-style bungalow court was built in 1923. As a result of Dudek's study, the property at 1223-1225 North Ogden Drive did not appear eligible for the NRHP, CRHR, or as a locally significant resource, due to a lack of significant historical associations, architectural merit, and compromised integrity. Responsibilities included project management, archival research, significance evaluation, response to City comments, field survey, and co-authorship of the HRA. (2020)

Mira Mesa Community Plan Area Historic Context Statement and Focused Reconnaissance Survey, City of San Diego Planning Department, California. Dudek was retained by the City of San Diego to prepare a historic context statement identifying the historical themes and associated property types important to the development of Mira Mesa, accompanied by a reconnaissance-level survey report focused on the master-planned residential communities within the Mira Mesa Community Plan Area (CPA). While the historic context statement addressed all development themes and property types within the community, the scope of the survey was limited to residential housing within the CPA constructed between 1969 and 1990. This study was completed as part of the comprehensive update to the Mira Mesa CPA and Programmatic EIR. Served as project manager leading the survey efforts, senior architectural historian, and co-author of the historic context statement and survey reports. Also provided quality assurance/quality control (QA/QC) of survey information. (2020–Present)

Carol Kimmelman Sports and Academic Center Project, City of Carson, California. Dudek was retained to conduct a cultural resources study on the Victoria County Golf Course and associated recreation buildings for the proposed Kimmelman Sports and Academic Center. Conducted a record search, a pedestrian survey, archival and building development research, NRHP and CRHR evaluations, and impacts analysis. All golf course components associated with the Victoria County Golf Course were found not eligible under designation requirements. (2018)

HRA for 852-854 Westmount Drive, Metros Capital LLC, City of West Hollywood, California. Dudek was retained to complete an HRA for a multifamily residential property located at 852-854 Westmount Drive in the City of West Hollywood, California. The Spanish Colonial Revival-style duplex was built in 1924. The property appeared not eligible for the NRHP, CRHR, or City of West Hollywood register due to a lack of significant historical associations and architectural merit, and compromised integrity. Responsibilities included archival research and co-authorship of the report. (2018)

Gilroy Citywide Historic Resources Inventory and Historic Context Statement, City of Gilroy, California. Dudek worked with the City of Gilroy to prepare a citywide historic context statement and update its 1986 historic resource inventory. For the purposes of this project, Dudek developed highly detailed and efficient iPad field forms that allow surveyors to record a property in less than 5 minutes and provide the city with real-time survey data. As survey lead, completed reconnaissance-level survey of over 3,400 properties on time and within budget. Also served as a senior architectural historian for the project and co-authored the historic context statement, attended the public kick-off meeting, prepared DPR forms, developed registration requirements, performed QA/QC on DPR forms, and worked closely with the geographic information system (GIS) team to facilitate the final digital mapping components for the project. (2018–2020)

Kathryn Haley, MA

HISTORIC BUILT ENVIRONMENT LEAD

Kathryn Haley (*KATH-rin HAY-lee; she/her*) is a historic built environment resource specialist/senior architectural historian with 19 years' professional experience in historic/cultural resource management. Ms. Haley has worked on a wide variety of projects involving historic research, field inventory, and site assessment conducted for compliance with Section 106 of the National Historic Preservation Act (NHPA), National Environmental Policy Act (NEPA), and California Environmental Quality Act (CEQA). Ms. Haley specializes in large scale surveys, inventory and evaluation reports that evaluate built environment resources under the California Register of Historical Resources (CRHR); the National Register of Historic Places (NRHP); and local significance criteria. She has prepared numerous Historic Resources Evaluation Reports (HRERs) and Historic Property Survey Reports (HPSRs) for the California Department of Transportation (Caltrans). She meets the Secretary of the Interior's Professional Qualification Standards for historian and architectural historian. Moreover, Ms. Haley has served as project manager, coordinator, quality assurance/quality control (QA/QC), historian, and researcher for a wide variety of projects. She is also experienced in the preparation of Historic American Building Survey (HABS), Historic American Engineering Record (HAER), and Historic American Landscape Survey (HALS) documents, as well as the preparation for National Register nominations.

Dudek Project Experience

On-Call Services for Department of Water Resources, Operations and Maintenance Division, State of California. Dudek was retained by the State of California's Department of Water Resources (DWR), Operations and Maintenance Division (O&M), to assist in a wide range of on-going environmental compliance efforts. Under this on-call contract, Ms. Haley serves as project manager for a task order focused on assisting DWR in efforts to streamline cultural resources environmental documentation for O&M projects. Dudek is also preparing several built environment technical reports for several projects under this contract. She provided senior-level guidance throughout each task order and QA/QC on a standardized historic context statement for State Water Project (SWP), as well as Historical Resources Technical Reports for various SWP maintenance projects. Technical reports have been prepared for O&M projects at the following structures (2020–Present):

- Oroville Dam and spillway (2022)
- Cedar Springs Dam and spillway (2022)
- South Bay Aqueduct (2021)
- Patterson Dam and reservoir (2021)
- Clifton Court Forebay (2021)
- segments of the California Aqueduct (2020-2021)
- San Luis Field Division Operations and Maintenance Center (2021, 2022)

- Gianelli Pumping-Generating Plant (2022)
- Dos Amigos Pumping Plant (2021, 2022)
- Coalinga Operations and Maintenance Subcenter (2021)
- B.F. Sisk Dam/San Luis Reservoir Historic District (2021, 2022).

Judicial Council of California Historical Resource Evaluation Report for the Stanley Mosk Courthouse, City of Los Angeles, Los Angeles County, California. To comply with PRC Section 5024(b), the Judicial Council of California (JCC) must submit to SHPO an inventory of all structures over 50 years of age under JCC jurisdiction that are listed in or that may be eligible for inclusion in the NRHP, or registered or that may be eligible for registration as a California Historical Landmark (CHL). The Stanley Mosk Courthouse was found eligible for designation for the NRHP, CHL, CRHR, and Los Angeles Historic Cultural Monument list under Criterion A/1 and C/3. Provided QA/QC for the final report. Ms. Haley provided senior technical direction and QA/QC for this project. (2019)

Globemaster Corridor Specific Plan, City of Long Beach, Los Angeles County, California. The project proposed to implement the Globemaster Corridor Specific Plan (GCSP), a planning and regulatory framework for redevelopment of an area adjacent to the Long Beach Airport and the surrounding residential and business community, which includes rezoning portions of the GCSP area, and a mobility plan that implements new streets and pedestrian connectors. Since the GCSP does not directly propose changes to the buildings or structures in the Plan area, the cultural resources report takes a programmatic overview and offers potential impacts analysis and mitigation measures for future development. Provided QA/QC for the Draft EIR/Environmental Impact Statement (EIS) Cultural Resources Chapter for the GCSP project. (2018)

California State University, Chico, Master Plan EIR, City of Chico, Butte County, California. Served as lead architectural historian and co-author of the cultural resources technical study prepared in support of the California State University (CSU) Chico Master Plan EIR. Her role in the preparation of the study included the required exterior survey of campus and university farm buildings and in some cases, interior survey fieldwork involving all buildings and structures on campus over 45 years of age scheduled for demolition and/or substantial alteration as part of Phase 1 and 2 of the proposed Master Plan. This project also entailed extensive archival research and the preparation of historic context covering the development of the CSU system and the CSU Chico campus, and the preparation of significance evaluations and accompanying DPR forms for each resource. (2019-2020)

Previous Project Experience

California High-Speed Rail from San Jose to Merced and Central Valley Wye Project Sections, California High-Speed Rail Authority/Parsons Transportation Group, Various Counties in California. Ms. Haley served as lead historian and project coordinator for architectural history for the San Jose/Merced and Central Valley Wye Project Sections. She led the built environment field surveys and property-specific historical research, co-wrote technical reports, and assisted in preparing the EIR/EIS cultural resources section. All work was conducted according to stipulations in the Section 106 programmatic agreement written specifically for the project and in coordination with the California High-Speed Rail Authority. While working on these project sections, participated in surveying more than 1000 buildings. She played a key role in managing the survey data and evaluating built environment resources under NRHP and CRHR criteria, as well as ensuring the proper documentation of locally designated CEQA historical resources. (2010–2018)

*P3a. Description (continued):

A decorative vent and vertical half-timbering highlight gables on the west end of the building (Photograph 2). Fenestration is non-original, fixed pane, stained glass windows on all elevations. A straight brick walkway leads from the sidewalk to the main entrance shelter with wood column supports and a wood door entrance on the west end of the primary south elevation. A circular clinker brick chimney rises from the southeast corner of the building (Photograph 3). A small second-story office, which is obscured by the primary roof pitch at the front of the building, is located at the rear (Photograph 4). A side-gabled roof wing projecting from the west elevation covers an open patio area. A canopy structure attached to the rear of the buildings provides additional patio sheltering (Photograph 5). The interior walls are adorned with horse racing memorabilia, including paintings, and photographs that likely date between the 1930s to the mid-to-late 1940s. Due to extensive modifications to the building over time interior remnants of the original 1931 building are difficult to clearly identify (Photograph 6).

Associated features that surround the restaurant building include, two free-standing neon signs front the building along E. Huntington Drive (Photographs 7 and 8). The westernmost sign reads "Guest Parking", with an arrow and bowler hat surrounding the lettering, and the easternmost sign reads "World Famous, The Derby" with a red background. A small lawn with shrubs and a three-foot-high brick fence front the primary elevation. A parking lot surrounds the remainder of the building and mature trees line the parcel boundary. The Derby Restaurant building is flanked by two 1980s-era multi-story hotels to the northwest and northeast and a restaurant directly to the east.

- 576 square foot outdoor patio with the removal of ceiling coverings for outdoor walls, Permit #B00-009-895 (2001)
- Removal and replacement of brick on exterior elevations, owner Dustin Nicolarsen (Circa 2001)
- Addition of a 1,200 square foot roofed patio for $23,299, Permit #B00-019-678 (2006)
- Masonry garden wall for $2,267, Permit B00-038-522 (2011)
- New masonry fireplace for $10,000, Permit B00-045-848 (2014)
- Non-enclosed patio added, owner Dustin Nicolarsen (2020)

*B10. Significance (continued):

Historic Context

Historical Overview of the City of Arcadia and its Downtown Commercial Core

After the annexation of California to the United States, Henry Dalton applied for a land patent to Rancho Santa Anita with the Public Land Commission, as required by the Land Act of 1851. The rancho went through several owners until 1875, when Rancho Santa Anita was sold for $200,000 to Elias Jackson "Lucky" Baldwin. Baldwin was a wealthy landowner who had gained fame and fortune by investing in Nevada's Comstock Lode mine. Baldwin owned several ranchos east of Los Angeles and invested heavily in their development. After Baldwin purchased the rancho, he hired a property manager and began to arrange for multiple improvements, including large-scale orange orchards, irrigation systems, and a distillery and wine production operation. Most notably, he started a training track and stables for racehorses (ARG 2016, p. 16; Eberly 1953, pp. 12-14; McAdam and Snider 1981, pp. 14-15).

Though there was an economic downturn in the 1870s and Baldwin went into debt, he retained several of his properties and saw success during the land boom of the 1880s. Adjacent development in Monrovia and Sierra Madre, cities close to Rancho Santa Anita, inspired Baldwin to subdivide his land in 1883. The Santa Anita Tract was located between Monrovia to the east and Baldwin's large estate house to the west. Baldwin also secured the right-of-way for the Los Angeles & San Gabriel Valley Railroad to pass through the Santa Anita Tract, as well as water rights in Santa Anita and Little Santa Anita canyons. Baldwin developed other amenities and attractions for the area, including the construction of the Oakwood Hotel, creating tourist excursions to the surrounding mountains, lining Santa Anita Avenue with eucalyptus trees, and continuing to breed and train racehorses. By 1886, Atchison Topeka & Santa Fe (AT&SF) Railroad had purchased the railroad, and the tracks reached the Santa Anita Tract townsite. By 1887, the town was being referred to as Arcadia. Baldwin's speculative development made the town appear so successful that another railroad, the San Gabriel Valley Rapid Transit Railroad, built a depot and began offering rail service to the town. Despite this, by the end of the 1880s, the town had less than 200 residents (ARG 2016, pp. 18-19, 23; Eberly 1953, pp. 32-33; McAdam and Snider 1981, pp. 20-21).

Baldwin continued to grow the community in the 1890s and 1900s, helping to develop the town. In 1902, when the Pacific Electric Railway announced it would construct the Pasadena Short Line from Pasadena to Monrovia, Baldwin interceded with the company and negotiated for service to Arcadia. He also filed to incorporate Arcadia in 1903 and was immediately appointed mayor. Baldwin's intent was not necessarily to grow the town, but to gain traction for a business proposal and long-time hobby: establishing a horse-racing track at Arcadia. The town grew, with a small commercial business district emerging along Falling Leaf Avenue (later, Huntington Drive). On the west side of Santa Anita Avenue, adjacent to the business corridor and railroad depots, Baldwin built Santa Anita Park, a racetrack, in 1907. Baldwin died in February 1909. Just a month later, the State of California passed a bill

banning racetrack gambling and the Santa Anita Racetrack was closed. The original racetrack burned down in 1912 (ARG 2016, pp. 28-29; Eberly 1953, pp. 40, 49, 52-53; McAdam and Snider, p. 61).

In the beginning of the twentieth century, commercial growth in Arcadia continued to be concentrated along Falling Leave Avenue. General improvements in the city included gas and electric utilities, streetlights, a municipal water system, a dedicated city-operated fire department, and graded and paved roads. Banks, schools, hotels and residential subdivisions were constructed in the townsite. Falling Leaf Avenue was paved, widened, and renamed Huntington Drive in 1913. The United States' entry into World War I had an impact on the city's development patterns. The Ross Field Balloon School was established by the U.S. Army at the Santa Anita Racetrack site. During the war years, 3,500 recruits were hosted at Ross Field. Arcadia expanded from 696 citizens in 1910 to 2,239 in 1920 (ARG 2016, pp. 37-40; Eberly 1953, p. 59-75; McAdam and Snider 1981, pp. 96, 109).

A new downtown commercial corridor and civic center began to form along Huntington Drive in the late 1910s and 1920s. In 1918, Arcadia's first City Hall was erected at Huntington Drive and First Street. Eventually, several civic buildings, including the library, police department, fire department, and a community center would emerge north of the City Hall building, on Wheeler Avenue. During the 1920s, several commercial businesses erected buildings on Huntington Drive, including the Arcadia Theatre, a drive-in market at Huntington Drive and First Avenue, and other grocery and dry goods markets. To the north of the commercial district, industrial properties began to concentrate along the AT&SF and SP railroad tracks, especially near the intersection of Santa Clara Street and the railroad tracks. Outside of the town's central core, new residential subdivisions were created by dividing large land tracts into smaller plots. Several agricultural tracts in and around Arcadia were also dedicated to poultry raising, which remained a common land use in Arcadia through the 1930s (ARG 2016, pp. 47-50; McAdam and Snider 1981, pp. 109-110).

In 1933, the State of California reintroduced racetrack wagering, reversing their 1909 anti-gambling position. By Christmas 1934, a new Santa Anita Park racetrack was opened by the Los Angeles Turf Club. With the end of Prohibition in 1933, the town became a destination for local gambling, sports betting, and alcohol consumption. The City also received a generous WPA grant to create a 184-acre public park at Santa Anita Regional Recreational Center (Arcadia County Park), which boasted an 18-hole golf course, pools, and tennis courts, open to the public. In the 1930s, Anita Baldwin, daughter of E.J. Baldwin, sold 1,300 acres of inherited property to be developed by Rancho Santa Anita, Inc. Rancho Santa Anita, Inc. parceled the large acreage into residential subdivisions, including Santa Anita Village, the Rancho, the Upper Rancho, Santa Anita Gardens, and Colorado Oaks. The effect of these investments and increased visitation, despite the national Depression, led to the City of Arcadia experiencing moderate growth in the 1930s, with "new buildings, new businesses, public improvements and home construction" taking place almost daily (Eberly 1953, p. 118). By 1940, the City's population expanded to 9,122 citizens.

During World War II, Arcadia's Santa Anita Racetrack played a large role in the Executive Order 9066 removal of Japanese-Americans from their homes and subsequent internment, serving as an assembly center in 1942. The War Department took over the racetrack. Nearly 400 barracks buildings were erected around the grandstand building. In addition to housing Japanese-Americans before they were sent to internment camps, the racetrack was also used to hold 2,000 German and Polish prisoners of war. During the war, the City of Arcadia experienced little population or built environment growth (Arcadia Historical Society 2008, p. 73; ARG 2016, pp. 53-55, 60-62; Eberly 1953, pp. 118-122; Kovacic 2003, pp. 23-24; McAdam and Snider 1981, pp. 127, 148).

In the post-war period, like all of Southern California, the City of Arcadia experienced massive population growth and a building boom. The population of Arcadia increased from 9,122 people in 1940 to 23,066 people in 1950. Much of the town's growth was financed through Veterans' loans and Federal Housing Administration mortgage-promoted home building. In the downtown commercial core, all remaining empty lots were developed, and other commercial corridors emerged along Duarte Road and Foothill Boulevard (U.S. Route 66). Commercial shopping centers and commercial strips in these areas were designed to take advantage of automobile traffic as other modes

of transportation, including the Pacific Electric Red Cars, ended service in the 1950s. Notable institutional growth during this period included the creation of the Los Angeles State and County Arboretum, which was carved out of remaining undeveloped Rancho Santa Anita land in 1947. It opened to the public in 1955. The City's population growth continued, expanding to 41,005 people in 1960 (ARG 2016, pp. 65-66; Kovacic 2003, pp. 322-326; McAdam and Snider 1981, pp. 163-165).

Suburban sprawl, commercial growth, shopping centers, and a booming population characterized Arcadia in the 1960s and 1970s. Civic development included expanding the number of grammar and high schools, new libraries, and the fire and police departments. By 1968, the Foothill Freeway (now Interstate 210) was completed through Arcadia. It continued east towards San Dimas by 1971. Multiple attempts were made to expand the downtown commercial core along Huntington Drive by permitting high-rise buildings. These efforts were defeated in the 1960s and 1970s, resulting in a height limit of eight stories. One project built to this limit was the Towne Center Project, completed in 1971 (see Section 3.5). Noteworthy commercial development away from the downtown commercial core was the Santa Anita Fashion Park, an indoor mall designed by Victor Gruen of Gruen Associates and opened in 1975.

In the 1980s and 1990s, the demographics of Arcadia changed dramatically, and the formerly majority-Caucasian city quickly transformed into a predominantly Asian-American community. The Asian-American community comprised 9% of the population in 1980. Over the next few decades, the community grew to 59% of the population by 2010. In addition to shifting demographics, commercial and industrial land uses have also changed in Arcadia. In 1996, the City published a General Plan to revitalize the downtown district. From the early 2000s to the present-day, single-family residences, townhomes, and condominiums have been constructed in formerly industrial and commercial areas around the two-block downtown commercial core of Huntington Drive. Today, the downtown commercial core is a mixed-use, primarily commercial area (Arax 1985; ARG 2016 pp. 77-78; City of Arcadia 2010b, p. 53, 2010c, p. 3; Kovacic 2003, pp. 126-127, 326; Kovacic 2013, pp. 59-61, 68; McAdam and Snider 1981, pp. 175-177).

Relevant Themes

Restaurants, 1880-1980

To better understand the restaurant property type, Dudek utilized the following SurveyLA context relevant to the evaluation of The Derby Restaurant since themes present in nearby Los Angeles apply regionwide:

> "Commercial Development" under the theme "Neighborhood Commercial Development, 1880-1980" and more specifically, the sub-theme "Restaurants, 1880-1980." The period of significance for Restaurants is 1880–1980.

The Derby Restaurant was referred to as a café or tavern in newspaper ads during its history in Arcadia. The café was a type of establishment that could be found on the main streets of small towns as well as in neighborhood commercial areas that operated similarly to small towns. Between 1910 and 1940, the neighborhood café operated as a social meeting place. The interior area was long and thin, with a counter on one side, tables or booths on the other, and the kitchen at the back.

Restaurants, such as cafes, may be historically notable in terms of commerce, social history, and/or architecture. They show the progression of the local restaurant from the café and luncheonette, which were commonly situated in rented storefront spaces, to the free-standing tearoom, destination restaurant, coffee shop, and walk-up food stand. They also show how the local restaurant frequently served as essential and well-known gathering and socializing spaces, creating a feeling of community identity. These restaurants may be affiliated with local,

regional, or national chains, and they may reflect prototype/corporate designs that are noteworthy examples of architectural styles and were developed by well-known architects (Prosser 2017, pp. 100-112).

Character-Defining / Associative Features:

- Features architectural and site-planning elements typical of neighborhood restaurants in both a pedestrian-oriented storefront form and an auto-oriented freestanding form
- May reflect prototype/corporate designs associated with specific restaurant chains
- May be associated with notable architects/designers
- Associated with activities characteristic of neighborhood economic and social life

Commercial and Recreational Development, 1910- 1935

The Derby Restaurant is also associated with the theme of commercial and recreational development in Arcadia from 1910-1935 as highlighted in Arcadia's 2016 Citywide Historic Context Statement. In the 1920s and 1930s, several businesses were added to the existing commercial district centered around Huntington Drive and 1st Avenue, including a theater, banks, a newspaper, various retail and service operations in new commercial blocks, and even a drive-in market. Only a few commercial properties from the 1920s and early 1930s remain in the district, including a former shoe shop and grocery store (1923) at 323-325 N. 1st Avenue (heavily altered; now Arcadia Welfare and Thrift) and the former Arcadia Tribune (1930) at 8 N. 1st Avenue.

Due to the restaurant's proximity to the Santa Anita Race and horseracing theme, it shared a connection to horseracing and the supporting commercial businesses. In the early 1930s, the majority of Arcadia's economic development was focused on the establishment of the Santa Anita Park and Racetrack, as well as the expansion of Highway 66 through the city. Santa Anita Park, which opened on Christmas Day 1934, immediately became Arcadia's hallmark icon, attracting Hollywood stars and racegoers from miles around.

The development of the racetrack was a huge boost to Arcadia, providing both money and favorable attention to the community during the Great Depression. Businesses capitalized on the flood of racetrack visitors by building hotels, restaurants, and tourist attractions such as W. Parker Lyon's showy Pony Express Museum (now closed), which housed a massive collection of "Wild West" artifacts. In 1931, Huntington Drive and Colorado Boulevard were built through the Baldwin Ranch to link to transcontinental Highway 66. By 1932, the highway had been divided between Foothill Boulevard and a piece of Huntington Drive. Businesses benefited from the extension of Highway 66, which saw the construction of service stations, drive-in markets, and motor courts to serve vehicles along the route (ARG 2016, pp. 47-50).

History of the Subject Property

The history of The Derby Restaurant dates to the 1920s when owner Hudson M. Proctor opened the "Proctor Tavern" in 1922 at Foothill Boulevard and Santa Anita Avenue in Arcadia. It appears that by 1926, the restaurant was known as "Proctor's Foothill Tavern" and specialized in fried chicken meals. By 1931, Proctor closed the restaurant on Foothill Boulevard and opened a new "Proctor's Tavern" restaurant at 233 E. Huntington Drive which would later house The Derby Restaurant (Arcadia Tribune 1931, pp. 1). Built in the Spanish Colonial Revival style, the new restaurant included two dining rooms, each with a fireplace, as well as an upstairs apartment. The restaurant would change hands several times during the 1930s and a 1934 advertisement shows that Proctor sold the restaurant to W. B. De Beers who renamed it "Ye Derby Tavern" (Arcadia Tribune 1934, pp. 10).

The ownership changes ultimately culminated in a grand 're-opening' in December 1938 by co-owners Bill Petersen and legendary jockey George "The Iceman" Woolf. By this time the restaurant was referred to under its

present moniker, The Derby. Woolf, a highly successful horseracing jockey who is best known for riding the famed horse Seabiscuit in 1938, owned the restaurant until his untimely death in a 1946 horseracing fall. Woolf's fame as a jockey increased the popularity of the restaurant and tightened the restaurant's connection to horseracing. Woolf's widow ran the restaurant for another five years, but ultimately sold the restaurant to Dominic and Lorene ("Murph and Slugger") Sturniolo in 1951 (Arcadia Tribune 1951, pp. 1). These longtime owners would maintain the restaurant's horseracing theme, which had been established in the 1930s. This included maintaining a showcase with Woolf's racing memorabilia at the front of the restaurant. Upon taking ownership, the Sturniolos expanded the size of the restaurant by adding to the primary (south) and west elevations of the original restaurant to accommodate more diners. This remodel effectively removed all elements of the former Spanish Colonial Revival style of the building and landscaping including its clay tile roof, façade, original signage, and the oak tree that fronted the building. The restaurant specialties included steak, Baked Alaska, and drinks like cappuccinos and Irish Coffee. In 1964, owner Dominic Sturniolo acquired a chandelier once belonging to Arcadia founder Lucky Baldwin, which currently hangs before the main dinner room. In the 1940s and 1950s, the restaurant featured music by piano player Tony Antista, who was a popular local entertainer until his death in 1961 (Mutschler 1983, pp. 1-7).

Besides their 1950s restaurant addition, the Sturniolos made another large patio addition to the western end of the building in 1999, when Dominic and Lorene's son Charles "Chip" Sturniolo was owner. After the Sturniolos' long and successful tenure, Dustin Nicolarsen acquired the restaurant in 2007 and is the current owner.

Significance Evaluation

In accordance with CEQA, all buildings or structures over 45 years in age within or immediately adjacent to the property were evaluated for historical significance and integrity in consideration of NRHP, CRHR, and City of Arcadia designation criteria and integrity requirements. This includes The Derby Restaurant. Because the designation criteria for the CRHR and City of Arcadia landmarks closely resembles the NRHP Criteria, these evaluations are grouped together below.

NRHP/CRHR/City of Arcadia Statement of Significance

The Derby Restaurant at 233 E. Huntington Drive is not eligible for listing in the NRHP, CRHR, or as a City of Arcadia historic landmark individually or as part of an existing historic district, as demonstrated below.

Criterion A/1/1: That are associated with events that have made a significant contribution to the broad patterns of our history.

Located along E. Huntington Drive which is portion of the original Route 66 alignment and originally established at its current location in 1931, The Derby Restaurant gained prominence during the 1930s and through the late 1940s as a gathering spot for the horse racing community. This connection between the restaurant and the horseracing community developed due to its proximity to the Santa Anita Park and through its former owner George "The Iceman" Woolf, who was best known for riding the famed horse Seabiscuit. During Woolf's ownership period of The Derby from 1939 to 1946, the restaurant grew in popularity as a horseracing community gathering spot with celebrity status that featured Woolf's vast collection of horseracing memorabilia. Woolf owned the restaurant until his untimely death in 1946 due to falling off a horse during a race. Woolf's fame as a jockey increased following his death along with the popularity of the restaurant, which enhanced the restaurant's connection to the horseracing community. Woolf's widow, Genevieve Woolf Cayer, ran the restaurant until 1951 when she sold the operation of the restaurant to Dominic and Lorene ("Murph and Slugger") Sturniolo (Dominic Restaurants, Inc.) in 1951 (Arcadia Tribune 1951, pp. 1). By this time, The Derby was a well-known southern California establishment. The new owners continued to maintain the restaurant, exhibiting Woolf's collection of horseracing memorabilia, and emphasizing Woolf's legacy.

In consideration of these factors, The Derby Restaurant, has associations with a pattern of events that have made contributions to the development of the horseracing community under NRHP Criterion A, CRHR Criterion 1, and City of Arcadia Historic Landmark Criterion 1. The period of significance for the subject property is 1931 to 1951; spanning the year the restaurant was first established at its location, to the date that the property was no longer operated by the Woolf family. This is the period in which the restaurant grew in popularity, became a well-known establishment, and solidified its link to the horse racing community. The property's ability to convey significance under this Criterion is addressed below in the integrity discussion.

Criterion B/2/2: That are associated with the lives of persons significant in our past.

To be considered eligible under NRHP Criterion B, CRHR Criterion 2, or City of Arcadia Historic Landmark Criterion 2 the property must be directly tied to an important person and the place where that individual conducted or produced the work for which he or she is known. In the case of The Derby Restaurant, the people who have owned and operated the restaurant are discussed below.

The Derby Restaurant was originally constructed by owner Hudson M. Proctor in 1931, who owned the restaurant until approximately 1934. Proctor appears to have been a local businessman, but research did not reveal him to be a person of great local importance. Famed horseracing jockey George Woolf owned the restaurant from December of 1938 until his death in 1946. While George Woolf is historically significant as a horse racing jockey, the connection to the work he is known for, horseracing, is shown through the memorabilia that remains inside the restaurant. However, The Derby Restaurant is not where he performed the work for which he is known (i.e., horse racing). Woolf is famous for his career as a jockey and his productive years are most closely associated with the Santa Anita racetrack where he famously raced. A statue of Woolf was erected at the Santa Anita racetrack in 1949 and it remains at the site today. The racing facility serves as a more intact representative example of his career than The Derby Restaurant that he briefly owned.

Dominic and Lorene ("Murph" and "Slugger") Sturniolo and their son Chip owned the restaurant for most of its history (1951-2007) until selling the restaurant in 2007. While the family was successful and well regarded as local businesspeople in Arcadia, there is no evidence that they are prominent people or known to be historic figures at the national, state, or local level. Lacking a direct association with an individual's important achievements for which they are known, The Derby Restaurant is not eligible under NRHP Criterion B, CRHR Criterion 2, or City of Arcadia Historic Landmark Criterion 2.

Criterion C/3/3: That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

Hudson M. Proctor constructed the building that would ultimately come to be known as The Derby Restaurant in 1931 in the Spanish Colonial Revival style. He was reported in a few articles to have experience in construction, and he did not hire a contractor or architect to design the building. Owners Dominic and Lorene Sturniolo completely remodeled the restaurant in 1951 with additions to the primary and west elevations that removed all former Spanish Colonial Revival elements in addition to removing original freestanding signage and removing the large oak tree that once fronted the building. Beyond the upstairs office, no elements of the 1931 era building remain.

Since the late 1990s, the restaurant has experienced large additions to the west elevation, removal of original exterior brick, and the addition of new exterior chimneys. Due to numerous alterations, the building no longer possesses any character-defining features of the 1930s Spanish Colonial Revival style. Although the building as it currently stands features Ranch and neo-Craftsman elements, it no longer possesses a discernable architectural style. In addition, the restaurant no longer exhibits the architectural and site-planning elements of

its original 1930s era cafe restaurant type due to alterations. Lacking architectural distinction, or any known connection with the work of a master architect, The Derby Restaurant is not eligible under NRHP Criterion C, CRHR Criterion 3, or City of Arcadia Historic Landmark Criterion 3.

Criterion D/4/4: That have yielded, or may be likely to yield, information important in prehistory or history.

The Derby Restaurant is not significant under Criterion D of the NRHP, Criterion 4 of the CRHR, or City of Arcadia Historic Landmark Criterion 4 as a source, or likely source, of important historical information nor does it appear likely to yield important information about historic construction methods, materials, or technologies.

Integrity Discussion

To be eligible for listing in the NRHP, CRHR, or as a landmark in the City of Arcadia, properties must have a clear association under one or more Criterion and retain historic integrity to the period of significance established under the Criterion for which it has an association.

As stated above, The Derby Restaurant, has associations with events that have made significant contribution to broad patterns of our history under NRHP Criterion A, CRHR Criterion 1, and City of Arcadia Historic Landmark Criterion 1 (Criterion A/1/1). The period of significance for the subject property is 1931 to 1951; spanning the year the restaurant was first established at its location, to the date that the property was no longer operated by the George Woolf or his wife. This is the period in which the restaurant grew in popularity, became a well-known establishment, and solidified its link to the horse racing community.

Despite a clear association under Criterion A/1/1, alterations to the property since 1951 have modified the property to extent that it appears to be a building constructed in the latter half of the twentieth century, not to the 1931 to 1951 period when the building was originally constructed and gained prominence as a restaurant associated with the horseracing community through Woolf. Despite the connection to Woolf that remains through his horseracing memorabilia collection featured in the interior, the interior space has been altered since 1951 to the extent that even with elements of the collection exhibited the connection to the period of significance has been lost. Additionally, no exterior elements of the restaurant remain from the historic era establishment that Woolf would recognize. The original Spanish Colonial Design of the building has been completely altered, original signage removed, and large oak tree fronting the building has also been removed. The building now surrounded by paved parking lots, and more recent commercial building construction. These modifications have resulted in dismantling the connection to the period when the restaurant became “The Derby,” 1931 to 1951; the period of significance for the subject property. In summary, the loss of integrity in the areas of design, materials, workmanship, setting and feeling, has caused the property to no longer be capable of conveying an association to the period of significance (1931 to 1951) when it was first developed and the connection for which it is known.

Despite The Derby Restaurant’s association under NRHP Criterion A, CRHR Criterion 1, or City of Arcadia Historic Landmark Criterion 1, the substantial loss of historic integrity to its period of significance precludes the property from being considered eligible for listing.

Additional City of Arcadia Criteria Considerations

In addition to meeting City of Arcadia Criterion 1 through 4, for a resource to be found significant as a City of Arcadia historic landmark it must be listed in the NRHP or CRHR (Criteria 5) or considered an iconic property (Criteria 6). The Derby Restaurant, as stated above, does not meet Criteria 1 due to a lack of historic integrity to its period of significance and the property does not meet Criterion 2 through 4 due to a lack of significance. As

such the property is not eligible for listing as a City of Arcadia historic landmark.

Summary of Evaluation Findings

In summary, The Derby Restaurant at 233 E. Huntington Drive is not eligible for listing in the NRHP, CRHR, or as a City of Arcadia historic landmark individually or as part of an existing historic district.

Subject: Archaeological Resources Assessment for The Derby Mixed Use Project, City of Arcadia, Los Angeles County, California

Dear Ms. Linda Vidov:

This letter report documents the archaeological resources assessment conducted by Dudek for The Derby Mixed Use Project (Project or proposed Project), located within the City of Arcadia (City), Los Angeles County, California. The study documents the results of a California Historical Resources Information System (CHRIS) records search conducted at the South Central Coastal Information Center (SCCIC); the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) search; in-depth review of geotechnical, archival, academic, and ethnographic information; an archaeological pedestrian survey; an analysis of the potential for the proposed Project site to contain archaeological resources; as well as management recommendations. The Project proponent (Applicant) is Top Commercial Realty. This report was prepared in conformance with the California Environmental Quality Act (CEQA) and mitigation measure (MM)-4.5-2 in the certified City of Arcadia 2010 General Plan Update, Final Environmental Impact Report (SCH No. 2009081034). The City is the lead agency responsible for compliance with the CEQA. This investigation has been conducted under the direction and supervision of Dudek Archaeologist, Heather McDaniel McDevitt MA RPA, who meets the Secretary of the Interior Standards.

Project Location

The approximately 2.23-acre proposed Project site includes addresses 233 East Huntington Drive and 301 East Huntington Drive in the City and is composed of existing buildings/structures within two parcels as follows: The Derby restaurant building, Assessor's Parcel Numbers (APN) 5773-009-070; and the former Souplantation restaurant building, APN 5773-009-065. The proposed Project site is located within public land survey system (PLSS) Section 27 of Township 1 North, Range 11 West on the *Mount Wilson*, California 7.5-minute USGS Quadrangle (Appendix A: Figure 1). The proposed Project site is bordered to the south by East Huntington Drive, to the east by Gateway Drive, and to the north and west by hotels and associated paved parking lots (Appendix A: Figure 2).

Project Description

The proposed Project involves the demolition of existing on-site buildings and features and development of residential units and amenities, including a new space for The Derby restaurant. The Derby restaurant, in its current location and

form, would be demolished to accommodate the proposed Project, including a new, expanded restaurant space for The Derby. The proposed Project would include the redevelopment of an existing surface parking lot with the construction of a new mixed use residential building, including two levels of underground parking. In addition to The Derby's new restaurant space, the proposed Project would also include one level of subterranean (i.e., basement level) parking for residents, as well as e ground-level commercial and valet parking areas, including a podium parking structure and surface parking lots that would provide a total of 414 vehicle parking spaces, as well as motorcycle spaces and bicycle parking.

Off-site improvements would be required within the sidewalk and roadway rights-of-way along East Huntington Drive and Gateway Drive. These improvements would include modification and/or relocation of existing curb cuts, utility connections, removal of signage, street light relocation, and new/replacement street trees.

The current Project design indicates that the maximum depth of ground disturbance across the proposed Project site is 14 feet below the existing ground surface for the proposed subterranean parking and the assumed depths of ground disturbance associated with the off-site improvements is no greater than 5 feet below existing ground surface.

Environmental Setting

The approximately 2.23-acre proposed Project site is located approximately 7 miles east of downtown Pasadena and 14 miles northeast of Downtown Los Angeles.

As previously mentioned, the proposed Project site is composed of two parcels that are developed with commercial uses and paved parking lots. The eastern parcel of the proposed Project site, APN 5773-009-065, is approximately 0.89 acres, and consists of the former Souplantation restaurant located at 301 East Huntington Drive. Present site conditions within this parcel includes the approximately 7,626 square foot Souplantation building with a paved, ground level parking lot located adjacent to the western and northern portions of the building and small areas of ornamental landscaping. The western parcel of the proposed Project site, APN 5773-009-070, is approximately 1.34 acres, and consists of The Derby restaurant located at 233 East Huntington Drive. Present site conditions within this parcel includes an approximately 6,670 square foot two-story building that houses The Derby Restaurant on the ground level with a small apartment on the second floor; the apartment is currently being used for storage. A parking lot surrounds the remainder of The Derby restaurant building, including landscaped areas.

Natural Setting

The proposed Project site is located approximately 2 miles south of the San Gabriel Mountains, approximately 27 miles northeast of the Pacific Ocean, and is approximately 0.06 miles (approximately 300 feet) southwest of the channelized Santa Anita Wash. The Santa Anita Wash is a tributary to the Rio Hondo River, which is located approximately 3 miles south of the proposed Project site. The proposed Project site is relatively flat with a minimum site elevation of approximately 479± feet above mean sea level (amsl),in the southeastern corner of the site, while the maximum site elevation is 486± feet above msl in the northwestern corner of the site.

According to the to the Natural Resources Conservation Service (NRCS) Web Soil Survey (USDA 2022), soils within the proposed Project site consists of Urban land-Palmview-Tujunga complex at 0 to 5 percent slopes and is

characterized as discontinuous human-transported material over alluvium derived from granite and are found on alluvial fans. The dominant soil series within the proposed Project site, Urban Land, refers to soils in areas of high population density in a largely built environment and can include human-transported or human-altered materials, minimally altered materials, or intact native soils (USDA 2019). The horizontal or slope data for this series is associated with soils that have been significantly altered by human activities and therefore associated with nearly level or low slopes (USDA 2022).

Prehistoric Overview

Evidence for continuous human occupation in Southern California spans the last 10,000 years. Various attempts to parse out variability in archaeological assemblages over this broad period have led to the development of several cultural chronologies; some of these are based on geologic time, most are based on temporal trends in archaeological assemblages, and others are interpretive reconstructions. Each of these reconstructions describes essentially similar trends in assemblage composition in more or less detail. To be more inclusive, this research employs a common set of generalized terms used to describe chronological trends in assemblage composition: Paleoindian (before 7500 BP), Archaic (10,000–1500 BP), Late Prehistoric (1500 BP–AD 1769), and Ethnohistoric (after AD 1769).

Paleoindian Period (before 7500 BP)

Evidence for Paleoindian occupation in the region is tenuous. The general knowledge of associated cultural pattern(s) is informed by a relatively sparse body of data that has been collected from within an area extending from coastal San Diego, through the Mojave Desert, and beyond. A very unique technology defined by fluted projectile points and a highly formal lithic tool kit with almost no processing equipment is often considered to be the earliest evidence of human adaptation to North America. Widely known as “Clovis,” regional manifestations of this toolkit show important variability both in projectile point style and tool kit composition. Importantly, the attributes of “Clovis” are uncommon in California, with very few examples of the diagnostic, “fluted” Clovis point. There is, however, a notable exception from Crystal Cove State Park in southern Orange County (Fitzgerald and Rondeau 2012). This, along with other potential attributes of Clovis culture along the California Coast remain undated, and most of the earliest well-dated sites from the region contain rather different archaeological assemblages (Erlandson et al. 2007).

While the earliest evidence for human activity in California comes from the Channel Islands, ca. 13,000 BP, it does not exhibit obvious cultural similarity with the Clovis phenomenon. However, in the southern Central Valley fluted Clovis points date from ca. 11,000–10,500 BP (Rogers and Yohe 2020). One of the earliest dated archaeological assemblages in coastal Southern California (excluding the Channel Islands) comes from SDI-4669/W-12 in La Jolla, with human remains dating to ca. 9900–9050 BP (Bada et al. 1984). The burial is part of a larger site complex that contained more than 29 human burials associated with an assemblage that fits the Archaic profile (i.e., large amounts of ground stone, battered cobbles, and expedient flake tools) (Kennedy 1983). In contrast, typical Paleoindian assemblages include large stemmed projectile points, high proportions of formal lithic tools, bifacial lithic reduction strategies, and relatively small proportions of ground stone tools. Prime examples of this pattern come from Naval Air Weapons Station China Lake near Ridgecrest (Davis 1978). These sites contained fluted and unfluted stemmed points and large numbers of formal flake tools (e.g., shaped scrapers, blades). Fluted points from SBR-2355 and SBR-2356, also in the Mojave Desert, are considered quite ancient (on the thickness of

obsidian hydration rinds) and co-occur with a diverse assemblage that also contains stemmed points, typically attributed to the Lake Mojave archaeological culture. Other typical Paleoindian sites in the desert include the Komodo site (MNO-679)—a multi-component fluted point site, and MNO-680—a single component Great Basined Stemmed point site (Basgall 1987, 1988; Basgall et al. 2002). At MNO-679 and -680, ground stone tools were rare while finely made projectile points were common.

Turning back to coastal Southern California, the fact that some of the earliest dated assemblages are dominated by processing tools runs counter to traditional image of Paleoindians as highly mobile big-game hunters. Evidence for the latter—that is, typical Paleoindian assemblages—may have been located along the coastal margin at one time, prior to glacial desiccation and a rapid rise in sea level during the early Holocene (before 7500 BP) that submerged as much as 16 kilometers of the San Diego coastline since people first arrived in California, ca. 13,000 years ago (ICF 2013). If this were true, however, it would also be expected that such sites would be located on older landforms near the current coastline. Some sites, such as SDI-210 along Agua Hedionda Lagoon, contain stemmed points similar in form and age to Silver Lake and Lake Mojave projectile points from the high desert (Basgall and Hall 1993; Warren et al. 2004). However, sites of this nature are extremely rare; more typical are sites that contain large numbers of milling tools intermingled with older projectile point forms. Separating cultural components on the basis of artifact form and frequency is therefore difficult.

Warren et al. (2004) claim that a biface manufacturing tradition at the Harris site complex (SDI-149) is representative of typical Paleoindian occupation in the San Diego region that possibly dates between ca. 11,200 and 8200 BP (on the basis of radiocarbon dates from the Harris site itself). Termed San Dieguito (also see Rogers 1945), assemblages at the Harris site are qualitatively distinct from most others in the San Diego region because the site has large numbers of well-made bifaces (including projectile points), formal flake tools, a biface reduction trajectory, and relatively small amounts of processing tools (also see Warren 1964; Warren 1968). Despite the unique assemblage composition, the definition of San Dieguito as a separate cultural tradition is hotly debated. Gallegos (1987, 2017) suggested that the San Dieguito pattern is simply the inland manifestation of a broader economic pattern. This interpretation of San Dieguito has been widely accepted in recent years, in part because of the difficulty in distinguishing San Dieguito components from other assemblage constituents. In other words, it is easier to ignore San Dieguito as a distinct socioeconomic pattern than it is to draw it out of mixed assemblages.

The large number of finished bifaces (i.e., projectile points and non-projectile blades), along with large numbers of formal flake tools at the Harris site complex, is very different than nearly all other assemblages throughout the San Diego region, regardless of age. Warren et al. (2004) made this point, tabulating basic assemblage constituents for key early Holocene sites. Producing finely made bifaces and formal flake tools implies that relatively large amounts of time were spent on tool manufacture. Such a strategy contrasts with the expedient flake-based tools and cobble-core reduction strategy that typifies the regional Archaic sites (see below). It can be inferred from the uniquely high degree of San Dieguito assemblage formality that the Harris site complex represents an economic strategy distinct from that represented by other roughly contemporaneous assemblages from throughout the region.

San Dieguito sites are rare in the inland valleys, with one possible candidate, RIV-2798/H, located on the shore of Lake Elsinore. Excavations at Locus B at RIV-2798/H produced a toolkit consisting predominately of flaked stone tools, including crescents, points, and bifaces, and lesser amounts of ground stone tools, among other items (Grenda 1997). A calibrated and reservoir-corrected radiocarbon date on a shell from this site points to an early occupation, ca. 8880–8525 BP. Grenda suggested this site represents seasonal exploitation of lacustrine resources and small game and resembles coastal San Dieguito assemblages and spatial patterning.

If the San Dieguito pattern truly represents a socioeconomic strategy distinct from the regional Archaic processing regime, its rarity implies that it was not only short-lived, but that it was not as economically successful as the Archaic strategy. Such a conclusion would fit with other trends in Southern California deserts, where hunting-related tools were replaced by processing tools during the early Holocene (Basgall and Hall 1990).

Archaic Period (10,000–1500 BP)

The more than 2,500-year overlap between the presumed age of Paleoindian occupations and the Archaic period highlights the difficulty in defining a cultural chronology in Southern California. If San Dieguito is the only recognized Paleoindian component in the coastal Southern California, then the dominance of hunting tools implies that it derives from Great Basin adaptive strategies and is not necessarily a local adaptation. Warren et al. (2004) admitted as much, citing strong desert connections with San Dieguito. Thus, the Archaic pattern is the earliest local socioeconomic adaptation in the region (see Hale 2001, 2009).

The Archaic pattern, which has also been termed the Millingstone Horizon (among others), is relatively easy to define with assemblages that consist primarily of processing tools, such as millingstones, handstones, battered cobbles, heavy crude scrapers, incipient flake-based tools, and cobble-core reduction. These assemblages occur in all environments across the region with little variability in tool composition. Low assemblage variability over time and space among Archaic sites has been equated with cultural conservatism (see Basgall and Hall 1990; Byrd and Reddy 2002; Warren 1968; Warren et al. 2004). Despite enormous amounts of archaeological work at Archaic sites, little change in assemblage composition occurred until the bow and arrow, and then ceramics, were adopted after 1500 BP (Griset 1996; Hale 2009; Schaefer 2012). Even then, assemblage formality remained low. After the bow was adopted, small arrow points appear in large quantities and already low amounts of formal flake tools are replaced by increasing amounts of expedient flake tools. Similarly, shaped millingstones and handstones decreased in proportion relative to expedient, unshaped ground stone tools (Hale 2009). Thus, the terminus of the Archaic period is equally as hard to define as its beginning because basic assemblage constituents and patterns of manufacturing investment remain stable, complemented only by the addition of the bow and ceramics.

Late Prehistoric Period (1500 BP–AD 1769)

The period of time following the Archaic and before Ethnohistoric times (AD 1769) is commonly referred to as the Late Prehistoric (Rogers 1945; Wallace 1955; Warren et al. 2004); however, several other subdivisions continue to be used to describe various shifts in assemblage composition. In general, this period is defined by the addition of arrow points and ceramics, as well as the widespread use of bedrock mortars. The fundamental Late Prehistoric assemblage is very similar to the Archaic pattern but includes arrow points and large quantities of fine debitage from producing arrow points, as well as ceramics, and cremations. The appearance of mortars and pestles is difficult to place in time because most mortars are on bedrock surfaces. Some argue that the Ethnohistoric intensive acorn economy extends as far back as 1500 BP (Bean and Shipek 1978). However, there is no substantial evidence that reliance on acorns, and the accompanying use of mortars and pestles, occurred before 600 BP. Throughout the inland region millingstones and handstones persisted in higher frequencies than mortars and pestles until the last 500 years (Basgall and Hall 1990); even then, weighing the economic significance of millingstone-handstone versus mortar-pestle technology is tenuous due to incomplete information on archaeological assemblages.

Regulatory Context

This investigation was conducted in compliance with the California Environmental Quality Act (CEQA). The regulatory framework as it pertains to cultural resources under CEQA is detailed below.

Under the provisions of CEQA, including the CEQA Statutes (PRC Sections 21083.2 and 21084.1), the CEQA Guidelines (14 CCR 15064.5), and California Public Resources Code (PRC) Section 5024.1 (14 CCR 4850 et seq.), properties expected to be directly or indirectly affected by a proposed project must be evaluated for California Register of Historical Resources (CRHR) eligibility (PRC Section 5024.1).

The purpose of the CRHR is to maintain listings of the state's historical resources and to indicate which properties are to be protected, to the extent prudent and feasible, from material impairment and substantial adverse change. The term historical resources includes a resource listed in or determined to be eligible for listing in the CRHR; a resource included in a local register of historical resources; and any object, building, structure, site, area, place, record, or manuscript that a lead agency determines to be historically significant (14 CCR 15064.5[a]). The criteria for listing properties in the CRHR were developed in accordance with previously established criteria developed for listing in the National Register of Historic Places (NRHP). The California Office of Historic Preservation regards "any physical evidence of human activities over 45 years old" as meriting recordation and evaluation (OHP 1995:2).

State

The California Register of Historical Resources

A cultural resource is considered "historically significant" under CEQA if the resource meets one or more of the criteria for listing on the CRHR. The CRHR was designed to be used by state and local agencies, private groups, and citizens to identify existing cultural resources within the state and to indicate which of those resources should be protected, to the extent prudent and feasible, from substantial adverse change. The following criteria have been established for the CRHR. A resource is considered significant if it:

1. is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
2. is associated with the lives of persons important in our past;
3. embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
4. has yielded, or may be likely to yield, information important in prehistory or history.

In addition to meeting one or more of the above criteria, historical resources eligible for listing in the CRHR must retain enough of their historic character or appearance to be able to convey the reasons for their significance. Such integrity is evaluated in regard to the retention of location, design, setting, materials, workmanship, feeling, and association.

Under CEQA, if an archeological site is not a historical resource but meets the definition of a "unique archeological resource" as defined in PRC Section 21083.2, then it should be treated in accordance with the provisions of that section. A unique archaeological resource is defined as follows:

- An archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:
  - Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information
  - Has a special and particular quality, such as being the oldest of its type or the best available example of its type
  - Is directly associated with a scientifically recognized important prehistoric or historic event or person

Resources that neither meet any of these criteria for listing in the CRHR nor qualify as a "unique archaeological resource" under CEQA (PRC Section 21083.2) are viewed as not significant. Under CEQA, "A non-unique archaeological resource need be given no further consideration, other than the simple recording of its existence by the lead agency if it so elects" (PRC Section 21083.2[h]).

Impacts that adversely alter the significance of a resource listed in or eligible for listing in the CRHR are considered a significant effect on the environment. Impacts to historical resources from a proposed project are thus considered significant if the project (1) physically destroys or damages all or part of a resource; (2) changes the character of the use of the resource or physical feature within the setting of the resource, which contributes to its significance; or (3) introduces visual, atmospheric, or audible elements that diminish the integrity of significant features of the resource.

California Environmental Quality Act

As described further, the following CEQA statutes (PRC Section 21000 et seq.) and CEQA Guidelines (14 CCR 15000 et seq.) are of relevance to the analysis of archaeological, historic, and tribal cultural resources:

- PRC Section 21083.2(g) defines "unique archaeological resource."
- PRC Section 21084.1 and CEQA Guidelines Section 15064.5(a) defines "historical resources." In addition, CEQA Guidelines Section 15064.5(b) defines the phrase "substantial adverse change in the significance of an historical resource"; it also defines the circumstances when a project would materially impair the significance of a historical resource.
- PRC Section 21074(a) defines "tribal cultural resources."
- PRC Section 5097.98 and CEQA Guidelines Section 15064.5(e) set forth standards and steps to be employed following the accidental discovery of human remains in any location other than a dedicated ceremony.
- PRC Sections 21083.2(b) and 21083.2(c) and CEQA Guidelines Section 15126.4 provide information regarding the mitigation framework for archaeological and historic resources, including examples of preservation-in-place mitigation measures. Preservation in place is the preferred manner of mitigating impacts to significant archaeological sites because it maintains the relationship between artifacts and the archaeological context and may also help avoid conflict with religious or cultural values of groups associated with the archaeological site(s).

More specifically, under CEQA, a project may have a significant effect on the environment if it may cause "a substantial adverse change in the significance of an historical resource" (PRC Section 21084.1; CEQA Guidelines Section 15064.5(b)). If a site is listed or eligible for listing in the CRHR, or included in a local register of historic resources, or identified as significant in a historical resources survey (meeting the requirements of PRC Section 5024.1(q)), it is an "historical resource" and is presumed to be historically or culturally significant for purposes of

CEQA (PRC Section 21084.1; CEQA Guidelines Section 15064.5(a)). The lead agency is not precluded from determining that a resource is a historical resource even if it does not fall within this presumption (PRC Section 21084.1; CEQA Guidelines Section 15064.5(a)).

A "substantial adverse change in the significance of an historical resource" reflecting a significant effect under CEQA means "physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired" (CEQA Guidelines Section 15064.5(b)(1); PRC Section 5020.1(q)). In turn, the significance of a historical resource is materially impaired when a project does any of the following:

(1) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register; or

(2) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to Section 5020.1(k) of the PRC or its identification in an historical resources survey meeting the requirements of Section 5024.1(g) of the PRC, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or

(3) Demolishes or materially alters in an adverse manner those physical characteristics of a historical resource that convey its historical significance and that justify its eligibility for inclusion in the California Register as determined by a lead agency for purposes of CEQA (CEQA Guidelines Section 15064.5(b)(2)).

Pursuant to these sections, the CEQA inquiry begins with evaluating whether a project site contains any "historical resources," then evaluates whether that project will cause a substantial adverse change in the significance of a historical resource such that the resource's historical significance is materially impaired.

If it can be demonstrated that a project will cause damage to a unique archaeological resource, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent that they cannot be left undisturbed, mitigation measures are required (PRC Sections 21083.2(a)–(c)).

Section 21083.2(g) defines a unique archaeological resource as an archaeological artifact, object, or site about which it can be clearly demonstrated that without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

(1) Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.

(2) Has a special and particular quality such as being the oldest of its type or the best available example of its type.

(3) Is directly associated with a scientifically recognized important prehistoric or historic event or person (PRC Section 21083.2(g)).

Impacts on nonunique archaeological resources are generally not considered a significant environmental impact (PRC Section 21083.2(a); CEQA Guidelines Section 15064.5(c)(4)). However, if a nonunique archaeological resource qualifies as a TCR (PRC Sections 21074(c) and 21083.2(h)), further consideration of significant impacts is required.

CEQA Guidelines Section 15064.5 assigns special importance to human remains and specifies procedures to be used when Native American remains are discovered. As described below, these procedures are detailed in PRC Section 5097.98.

California State Assembly Bill 52

Assembly Bill 52 of 2014 (AB 52) amended PRC Section 5097.94 and added PRC Sections 21073, 21074, 21080.3.1, 21080.3.2, 21082.3, 21083.09, 21084.2, and 21084.3.

Consultation with Native Americans

AB 52 formalizes the consultation process between lead agencies and tribal representatives, requiring the lead agency to initiate consultation with California Native American groups that are traditionally and culturally affiliated with a project area. This includes tribes that may not be federally recognized. Lead agencies are required to begin consultation prior to the release of a negative declaration, mitigated negative declaration, or environmental impact report.

Tribal Cultural Resources

Section 4 of AB 52 adds Sections 21074 (a) and (b) to the PRC, addressing tribal cultural resources (TCRs) and cultural landscapes. Section 21074 (a) defines tribal cultural resources as one of the following:

1. Sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe that are either of the following:
    a. Included or determined to be eligible for inclusion in the California Register of Historical Resources.
    b. Included in a local register of historical resources as defined in subdivision (k) of Section 5020.1.
2. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

Section 1 (a)(9) of AB 52 establishes that "a substantial adverse change to a tribal cultural resource has a significant effect on the environment." Effects on tribal cultural resources should be considered under CEQA. Section 6 of AB 52 adds Section 21080.3.2 to the PRC, which states that parties may propose mitigation measures "capable of avoiding or substantially lessening potential significant impacts to a tribal cultural resource or alternatives that would avoid significant impacts to a tribal cultural resource." Further, if a California Native American tribe requests consultation regarding project alternatives, mitigation measures, or significant effects to tribal cultural resources, the consultation shall include those topics (PRC Section 21080.3.2[a]). The environmental document and the mitigation monitoring and reporting program (where applicable) shall include any mitigation measures that are adopted (PRC Section 21082.3[a]).

Senate Bill 18

The Local and Tribal Intergovernmental Consultation process, commonly known as Senate Bill (SB) 18 was signed into law September of 2004 and took effect March 1, 2005. SB 18 refers to PRC Section 5097.9 and 5097.995, which defines cultural places as:

- Native American sanctified cemetery place of worship, religious or ceremonial site, or sacred shrine (PRC Section 5097.9).
- Native American historic, cultural, or sacred site that is listed or may be eligible for listing in the California Register of Historic Resources pursuant to Section 5024.1, including any historic or prehistoric ruins, any burial ground, any archaeological or historic site (PRC Section 5097.993).

SB 18 established responsibilities for local governments to contact, provide notice to, refer plans to, and consult with California Native American tribes that have been identified by the NAHC and if that tribe requests consultation after local government outreach as stipulated in Government Code Section 65352.3. The purpose of this consultation process is to protect the identity of the cultural place and to develop appropriate and dignified treatment of the cultural place in any subsequent project. The consultation is required whenever a general plan, specific plan, or open space designation is proposed for adoption or to be amended. Once local governments have sent notification, tribes are responsible for requesting consultation. Pursuant to Government Code Section 65352.3(a)(2), each tribe has 90 days from the date on which they receive notification to respond and request consultation.

In addition to the requirements stipulated previously, SB 18 amended Government Code Section 65560 to "allow the protection of cultural places in open space element of the general plan" and amended Civil Code Section 815.3 to add "California Native American tribes to the list of entities that can acquire and hold conservation easements for the purpose of protecting their cultural places."

Native American Historic Cultural Sites

The Native American Historic Resources Protection Act (California Public Resources Code Section 5097, et seq.) addresses the disposition of Native American burials in archaeological sites and protects such remains from disturbance, vandalism, or inadvertent destruction; establishes procedures to be implemented if Native American skeletal remains are discovered during construction of a project; and establishes the NRHC to resolve disputes regarding the disposition of such remains. In addition, the Native American Historic Resource Protection Act makes it a misdemeanor punishable by up to 1 year in jail to deface or destroy an Indian historic or cultural site that is listed or may be eligible for listing in the CRHR.

California Health and Safety Code Section 7050.5

California law protects Native American burials, skeletal remains, and associated grave goods, regardless of their antiquity, and provides for the sensitive treatment and disposition of those remains. California Health and Safety Code Section 7050.5 requires that if human remains are discovered in any place other than a dedicated cemetery, no further disturbance or excavation of the site or nearby area reasonably suspected to contain human remains shall occur until the county coroner has examined the remains (Section 7050.5(b)). PRC Section 5097.98 also outlines the process to be followed in the event that remains are discovered. If the coroner determines or has reason to believe the remains are those of a Native American, the coroner must contact NAHC within 24 hours (Section 7050.5(c)). NAHC will notify the "most likely descendant." With the permission of the landowner, the most likely descendant may inspect the site of discovery. The inspection must be completed within 48 hours of notification of the most likely descendant by NAHC. The most likely descendant may recommend means of treating or disposing of, with appropriate dignity, the human remains, and items associated with Native Americans.

Local

City of Arcadia General Plan 2010 (City of Arcadia General Plan, Section 7.0 Parks, Recreation, and Community Resources Element)

The 2010 Arcadia General Plan enumerates a series of policies designed to protect and preserve cultural resources (City of Arcadia 2010a). Though the City does not have a preservation ordinance, the General Plan recommends potential city landmarks meet the following criteria:

- It exemplifies or reflects the broad cultural, political, economic or social history of the U.S., California, or City of Arcadia.
- It has yielded or has the potential to yield information in history or prehistory.
- It is representative of one of the diverse styles and variations of residential and commercial architecture found in Arcadia, whether vernacular or a work of identifiable artisans, master craftsmen, builder, or architects important locally or with wider significance.
- It is an object of significance because of its design or pleasing appearance in a setting.
- It is a site or structure that is important to the prehistory or history of the community.
- It is a surviving site, route, or structure important to the early settlement, economic origins, or technological development of the locale.
- It is a grouping or set of structures, historic sites or features, design components, natural features and landscape architecture, or other interesting details which together create exceptionally rich history or cultural ambiance.
- It is a hillside, geologic formations, body of water, arroyo, remaining natural vegetation, or other striking or familiar physical characteristic that is important to the special character, historic identity, or aesthetic setting of the community.

The 2010 General Plan also lists specific goals for historical resources in the City.

Goal PR-8. Continued recognition and support of the diverse historical and cultural organizations that celebrate and enrich the community:

Policy PR-8.1. Support programs that promote a full range of cultural activities and their appreciation among all age groups, all levels of education, and all cultural backgrounds.

Policy PR-8.2. Nurture and support local arts organizations and promote the appreciation of and involvement in the creative and performing arts.

Policy PR-8.3. Build community identity through educational, informational, and cultural art events that focus on local art, food, music, ethnic diversity, and other topics.

Goal PR-9. Retention and proper stewardship of historical and cultural resources:

Policy PR-9.1. Encourage the maintenance and preservation of historically, culturally, and or/ architecturally significant structures and sites in the community.

Policy PR-9.2. Explore partnerships with local community organizations, such as the Arcadia Historical Society, to continue the preservation of historic and cultural resources.

Policy PR-9.3. Collect, preserve, and celebrate Arcadia's heritage with quality exhibits and programs.

Policy PR-9.4. Preserve Santa Anita Park's use as a live horse racing venue while economically feasible, and preserve and maintain iconic structures at the racetrack such as the grandstand.

Policy PR-9.5. Identify historic sites, structures, neighborhoods, and other resources through a Historic Resource Inventory.

Policy PR-9.6. Explore the establishment of a Cultural Heritage Ordinance.

Policy PR-9.7. Develop incentives that promote preservation and rehabilitation of historic structures, sites, and other resources.

City of Arcadia General Plan Update 2010 – Final Environmental Impact Report SCH 2009081034, Section 4.5 Cultural Resources

The EIR prepared for the City's General Plan Update , certified in November 2010 included mitigation measure 4.5-2 that requires the assessment of cultural resources and their potential to exists and be impacted by proposed project implementation as well as treatment methods if cultural resources are identified. The mitigation measures consist of the following:

MM 4.5-2: Projects that would be located on undeveloped parcels or near known cultural resources shall implement the following:

1. A Phase 1 study shall be undertaken to evaluate the current conditions of a project site. The study shall consist of (1) an initial records search including records, maps, and literature housed at the Archaeological Information Center located at California State University, Fullerton; (2) a Sacred Lands check with the NAHC and initial scoping with interested Indian Tribes and individuals identified by the NAHC; (3) a pedestrian field survey by a qualified Archaeologist to determine the presence or absence of surficial artifactual material and/or the potential for buried resources; and (4) a technical report describing the study and offering management recommendations for potential further investigation.

2. If archaeological sites are discovered as a result of the Phase I study, a Phase II evaluation of the significance of any prehistoric material that is present shall be undertaken. The evaluation shall include further archival research, ethnographic research, and subsurface testing/excavation to determine the site's horizontal and vertical extent, the density and diversity of cultural material, and the site's overall integrity. The evaluation shall include a technical report describing the findings and offering management

recommendations for sites determined to be significant. Non-significant resources would require no further study.

3. If the Phase II evaluative study indicates that a significant site is present, the qualified Archaeologist shall determine appropriate actions, in cooperation with the City of Arcadia, for preservation and/or data recovery of the resource. Preservation in place is the preferred manner of mitigation, as provided in CCR Section 15126.5(b)(3). This could include (1) avoidance of resources; (2) incorporation of resources into open space; (3) capping the resource with chemically stable sediments; and/or (4) deeding the resource into a permanent conservation easement. To the extent that a resource cannot be preserved in place, a Phase III data recovery excavation shall be completed to recover the resource's scientifically consequential information. A technical report shall be completed that adheres to the OHP's Archaeological Resources Management Report (ARMR) guidelines.

4. Monitoring of ground-disturbing activities shall be undertaken by a qualified Archaeologist as a final mitigation measure in areas that contain or are sensitive for the presence of cultural resources.

Background Research

SCCIC Records Search

On January 13, 2022, staff at the SCCIC, located on the campus of California State University, Fullerton, provided the results of a CHRIS records search for the proposed Project site and a 1-mile radius. The CHRIS records search results provided by the SCCIC included their digitized collections of mapped prehistoric and historic archaeological resources and historic built-environment resources; Department of Parks and Recreation site records; technical reports; archival resources; and ethnographic references. The confidential records search results are also provided in Confidential Appendix B.

Previously Conducted Cultural Resource Studies

Results of the cultural resources records search indicate that twenty-four (24) previous cultural resource studies have been conducted within one-mile of the proposed Project site between 1984 and 2015. Of these studies, one study overlaps the proposed Project site (LA-6859). The remaining twenty-three (23) cultural resource studies are outside of the proposed Project site. Table 1, below, details all twenty-four (24) previous cultural resources studies, followed by a brief summary of the overlapping report.

LA-12971	McKenna, Jeanette A.	2015	A Phase I Cultural Resources Investigation and Architectural Evaluation of Two Quonset Huts Located within the Arcadia Unified School District Maintenance Yard, 35 W. St. Joseph Street, Arcadia, Los Angeles County, California	Outside

Report LA-06859

Arcadia General Plan (LSA Associates, Inc. 1996) details the City's prior 1996 General Plan Update and includes numerous goals for cultural resources (see the Regulatory Setting section of this report). The area of study for this report encompasses the entirety of the current proposed Project site. The report states that cultural resource assessments are required for any development that may impact a known or potential site of archaeological, paleontological, or historical significance. They also state that preservation and avoidance of impact should be the primary goal, if this is not feasible then data recovery efforts will be required for resources deemed significant. Construction monitoring will also be required during any ground disturbing activities within areas of archaeological potential. The report includes conditions of approval to be included on any new developments, including expanding/renovations on current developments. These assessment requirements and conditions of approval were supplanted by the City's 2010 General Plan Update. The specific mitigation measures relative to cultural resources are provided on page 9 in the Regulatory Context section of the this report.

Previously Recorded Cultural Resources

The SCCIC records indicate that 122 cultural resources have been previously recorded within 1-mile of the proposed Project site. Of these 121 are historic built environment resources and one (1) is a historic-era archaeological resource; none overlap the Project site. Historic built environment resources or non-archaeological resources fall outside of the scope of the present study and will not be addressed in this report. Table 2, below, summarizes the single previously recorded archaeological resource identified within the records search area. Additionally, a brief description of the one historic-era archaeological site is provided below.

Table 2. Previously Recorded Cultural Resources with a 1-Mile Radius of the Proposed Project Site

Primary Number	Trinomial	Description	Recording Events	OHP CHR Status Codes	Proximity to Proposed Project Site
P-19-001868	CA-LAN-1868H	Historic refuse deposit, which includes glass bottle fragments, ceramic fragments, shoe pieces, metal cans, round nails, and other assorted domestic refuse.	1990 (Wessel and McIntyre)	6Y: Determined ineligible for NR by consensus through Section 106 process—Not evaluated for CR or Local Listing.	Approximately 910 meters (2,985 feet) northwest of the proposed Project site.

CA-LAN-1868H

CA-LAN-1868H is a historic-era site located approximately 985 feet northwest of the proposed Project site. The site was recorded by Richard L. Wessel and Michael J. McIntyre in 1990. The authors did not provide measurements for the site; however, Wessel and McIntyre noted that the deposit was buried 60 centimeters (cm) below the surface and extended another 50 cm below it. The artifacts were located within an abandoned water ditch, and consisted of ceramic and glass fragments, sanitary cans, footwear items, round nails, and other miscellaneous domestic items. The authors stated the site's constituents were consistent with a refuse from a homestead during the post-World War I era (1920-1929). The authors noted that the site was in excellent condition, and both the trench and refuse appeared undisturbed. However, the authors state in the record that the site was not eligible for inclusion into the NRHP.

Review of Historical Topographical Maps and Aerial Photographs

Dudek consulted historical topographic maps and aerial photographs through the Nationwide Environmental Title Research, LLC (NETR), and the Map & Imagery Laboratory (MIL) University of California, Santa Barbara Library (UCSB) to better understand any natural or human-made changes to the proposed Project site and surrounding properties over time.

Historical Topographic Maps

Topographic maps depict elevation of the study area as well as the areas surrounding it and illustrate the location of roads and some buildings. Although topographic maps are not comprehensive, they are another tool in determining whether a study area has been disturbed and at times to what approximate depth. A review of available

topographic maps was conducted and includes the following years: 1894, 1896, 1898, 1900, 1904, 1907,1908, 1910, 1913, 1915, 1920, 1927, 1928, 1931, 1940, 1941, 1947, 1958, 1964, 1967, 1974, 1988, 1994, 1999, 2012, 2015, and 2018 (NETR 2022a).

The 1894-1927, 1931, and 1940 topographic maps show the proposed Project site as undeveloped with Huntington Drive present and serving as the Project site's southern boundary. The Santa Anita Wash is visible just outside and to the east of the proposed Project site; the Southern California Division of the Atchison Topeka and Santa Fe Railway is southwest; and the Duarte Branch of the Southern Pacific Railway is just north. In the 1928 topographic map a structure is shown within the southwest quadrant of the Project site with Gateway Drive present and serving as the eastern boundary, as well as an unnamed road paralleling the Project site's western boundary. The topographic maps from 1941 to 1947 depict two additional structures within the eastern half. It should be noted that topographic maps 1958 and younger only depict structures of community or societal significance, such as: water reservoirs, schools, and post offices. The remainder of topographic maps available, 1958 through 2018, depict no structures within the Project site and no significant changes to the surrounding streets.

While topographic maps are informative, they do not illustrate the subtle changes that can occur to a landscape overtime and at times, are inconsistent with what is depicted year to year. Most often, structures depicted in topographical maps are limited to those with community or social significance (e.g. Firehouses or Hospitals), including additions or changes to roads and/or waterways. Nonetheless, the information gathered contributes to the understanding of the chronological development of a study area.

Historical Aerial Photographs

A review of historical aerial photographs was conducted as part of the archival research effort from the following years: 1928, 1938, 1944, 1949, 1952, 1954, 1964, 1972, 1977, 1980, 1987, 1988, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2002, 2003, 2005, 2009, 2010, 2012, 2014, 2016, and 2018 (NETR 2022b; UCSB 2022). Through careful comparative review of historical aerials, changes to the landscape of a study area may be revealed. Disturbance to the study area is specifically important as it helps determine if soils within the study area are capable of sustaining intact archaeological deposits. Additionally, historical aerials have the potential to reveal whether a study area was subjected to alluvial deposits by way of flooding, debris flows or mudslides, as well as placement of artificial or foreign fill soils that may have buried intact archaeological deposits. Table 3, below, summarizes the results of the aerial photograph review of the proposed Project site and surrounding properties for all available years.

Table 3. Historical Aerial Photograph Review of Proposed Project site

Photograph Year	Observations and Findings
1928	The earliest aerial photograph of the proposed Project site dates to 1928. The Project site appears as two neighboring residential parcels bisected by what was then Third Street. The parcel to the west (APN 5773-009-070) is L-shaped with a primary single-family residence and five smaller ancillary buildings to the rear. The parcel to the east (APN 5773-009-065) is triangular in shape with a single-family home at the west-central end of the property.

Table 3. Historical Aerial Photograph Review of Proposed Project site

Photograph Year	Observations and Findings
	East Huntington Drive, located south of the proposed Project site, is also visible in its current east-west orientation but was narrower in 1928. AT&SF tracks run diagonally near the southwest corner of the current proposed Project site. The Santa Anita Wash, located 0.25-mile west of the proposed Project site, was not channelized at this point.
1938	The 1938 aerial photograph shows a new square-shaped building located at the southeast corner of the proposed Project site on what had formerly been an L-shaped residential parcel (APN 5773-009-070). The new building appears to be the original The Derby Restaurant (constructed in 1931), and a large tree fronts the building along East Huntington Drive. Besides the construction of the new restaurant, changes to the proposed Project site also included the addition of a small, square building on the south end of the triangular eastern parcel (APN 5773-009-065). The section of East Huntington Drive that fronts the proposed Project site and extends to the Santa Ana Wash appears wider than 1928. In the neighborhood immediately surrounding the proposed Project site, only moderate development has taken place on vacant parcels since the 1928 aerial image.
1952	Within the proposed Project site in a 1952 aerial, The Derby Restaurant appears to have had a major expansion to the south and west, which culminated in the removal of the large oak tree that fronted the building along East Huntington Drive in the 1938 aerial. The portion of the former triangular parcel within the eastern end of the proposed Project site (APN 5773-009-065), now includes a street-facing rectangular building and a small building at the center of the parcel. The parcels directly north of the proposed Project site is developed with single-family dwellings by 1952 and parcels vacant in 1938 are mostly developed with single-family residences. By 1952, the AT&SF Railroad tracks running diagonally past the southwest corner of the proposed Project site, within APN 5773-009-070, had been replaced by a railroad bridge that is elevated over East Huntington Drive.
1952-1964	No discernible changes to the proposed Project site.
1972	By the 1972 aerial image, the commercial building at the center of the eastern parcel (APN 5773-009-065) is demolished. Besides the demolition, the remainder of the proposed Project site and surrounding neighborhood looks as it had in 1952.
1977	No discernible changes to the proposed Project site.
1980	No discernible changes to the proposed Project site.

Table 3. Historical Aerial Photograph Review of Proposed Project site

Photograph Year	Observations and Findings
1994	The 1994 aerial image indicates that The Derby Restaurant building, at the west end of the proposed Project site (APN 5773-009-070) had a significant expansion to the west. Within the eastern parcel (APN 5773-009-065), the 1950s-era street-facing buildings have been demolished and replaced by a large 80-foot by 110-foot rectangular Souplantation restaurant building (constructed in 1988). Directly north of the proposed Project site, former single-family residences were replaced by two, large multi-story hotels.
1995-1998	No discernible changes to the proposed Project site.
1999	In 1999, a patio expansion appears on the west of The Derby Restaurant building (APN 5773-009-070)
1999-2005	No discernible changes in the proposed Project site.
2006	A 1,200 square foot addition to the west of the covered patio of The Derby Restaurant is visible (APN 5773-009-070).
2007-2010	No discernible changes in the proposed Project site.
2011	In 2011, a new masonry wall is visible at the front of the of The Derby Restaurant (APN 5773-009-070).
2012-2018	No discernible changes in the proposed Project site.

Geotechnical Report Review

The geotechnical report, *Geotechnical Investigation Proposed Mixed-Use Development 233-301 East Huntington Drive Arcadia, California APN: 5775-009-065 & -070* (Geocon West, Inc. 2022), was prepared by Geocon West, Inc. for the current Project site to address subsurface conditions. The report details the results of five (5) hollow-stem auger borings. These boring were placed at accessible locations throughout the proposed Project site and include three (3) locations (Boring (B)1, B2, and B3) within APN 5773-009-070 and two (2) locations (B4 and B5) within APN 5773-009-065. Subsurface exploratory borings extended to a maximum depth ranging from 30.5 to 45.5 feet (ft) below ground surface (bgs) and were completed on May 20, 2022. According to the geotechnical report, the soils encountered include: (1) Fill soils: characterized as dark brown or olive brown silty sand or sand with silt encountered between 0 to 3 ft bgs; however, the report does not indicate whether the fill soil is natural or engineered fill; (2) Native soils identified as Holocene age alluvial fan deposits: characterized as light brown to brown, light olive brown, or gray interbedded poorly graded and well-graded sand with silts and gravel, encountered directly beneath the fill soils to the maximum depth reached. The subsurface exploratory investigations encountered

fill from surface to 2 ft bgs within APN 5773-009-070 and from surface to 3 ft bgs within APN 5773-009-065. A summary of the subsurface exploratory boring results is provided in Table 4, below.

Table 4. Summary of Subsurface Boring Results – Geocon West Inc. 2022

Boring	0 – 10 Feet	10 – 20 Feet	20 – 30 Feet	30 – 40 Feet	40 – 50 Feet
B1	0-2 Feet: Fill Soils	2-40.5 Feet: Native Soils			
B2	0-2 Feet: Fill Soils	2-40 Feet: Native Soils			
B3	0-2 Feet: Fill Soils	2-30.5 Feet: Native Soils			
B4	0-3 Feet: Fill Soils	3-45.5 Feet: Native Soils			
B5	0-3 Feet: Fill Soils	3-45.5 Feet: Native Soils			

Phase I Environmental Site Assessment Report Review

The Phase I Environmental Site Assessment [ESA] Report was prepared by Conservation Consulting International (CCI) for the Project in September 2019 (CCI 2019). The report details the results of a site assessment the western portion of the present proposed Project site, specifically parcel APN 5773-009-070. The assessment consists of a site reconnaissance survey, research, and interviews with the public, site management and owners, including regulatory agencies to identify environmental conditions for the subject property. According to the report, the structure located within AIN 5773-009-070 (The Derby building) occupied the property since 1922. The report identifies soils present as Urban Land. No further discussion regarding ground disturbance or subsurface conditions are discussed within the report.

1938 Kirkman-Harriman Historical Map Review

Dudek cultural resources specialists reviewed sources commonly identified though Tribal consultation, notably the 1938 Kirkman-Harriman Historical Map (Image 1). Based on this map, the proposed Project site is situated within the "S[an]ta. Anita R[an]cho." The nearest mapped road is unnamed and travels roughly southwest to northeast, and is approximately 0.25 miles to the south of the proposed Project site and a "Mission Road" traveling northeast to southwest is over 1.5 miles northwest of the proposed Project site. The nearest waterway to the proposed Project site is a tributary (present-day Santa Anita Wash), located approximately 1 mile to the east of the proposed Project site, which travels north to southeast and terminates at the "Hondo (Lexington) Wash," over 2.5 miles southeast of the proposed Project site. Well outside the proposed Project site footprint but within the general surrounding vicinity are four Native American villages. The nearest mapped unnamed village is approximately 2.3 miles to the southwest; a second unnamed village is located over 4 miles to the west; the village of *Sonuyna* is mapped nearly 3 miles to the northwest; and the village of *Ahup-gungna* is mapped approximately 2.5 miles to the northeast. Additionally, Mission San Gabriel is mapped nearly 4.5 miles to the southwest of the proposed Project site.

It should be noted that this map is highly generalized due to scale and age and may be somewhat inaccurate with regards to distance and location of mapped features. Additionally, this map was prepared based on review of historic documents and notes more than 100 years following secularization of the missions (in 1833). Although the map contains no specific primary references, it matches with the details documented by the Portolá expedition (circa 1769–1770). The map is a valuable representation of post-colonization mission history; however, it is limited

to a specific period of Native American history and substantiation of the specific location and uses of the represented individual features should be verified by archaeological records and/or other primary documentation.

No archaeological evidence of the nearest village on the 1938 Kirkman-Harriman map was provided in the SCCIC records or as the result of a review of other archaeological information for the proposed Project site. This suggests that the village is either likely no nearer than 1-mile from the proposed Project site or if existent within the records search radius, subsurface deposits associated with the village have not yet been discovered.

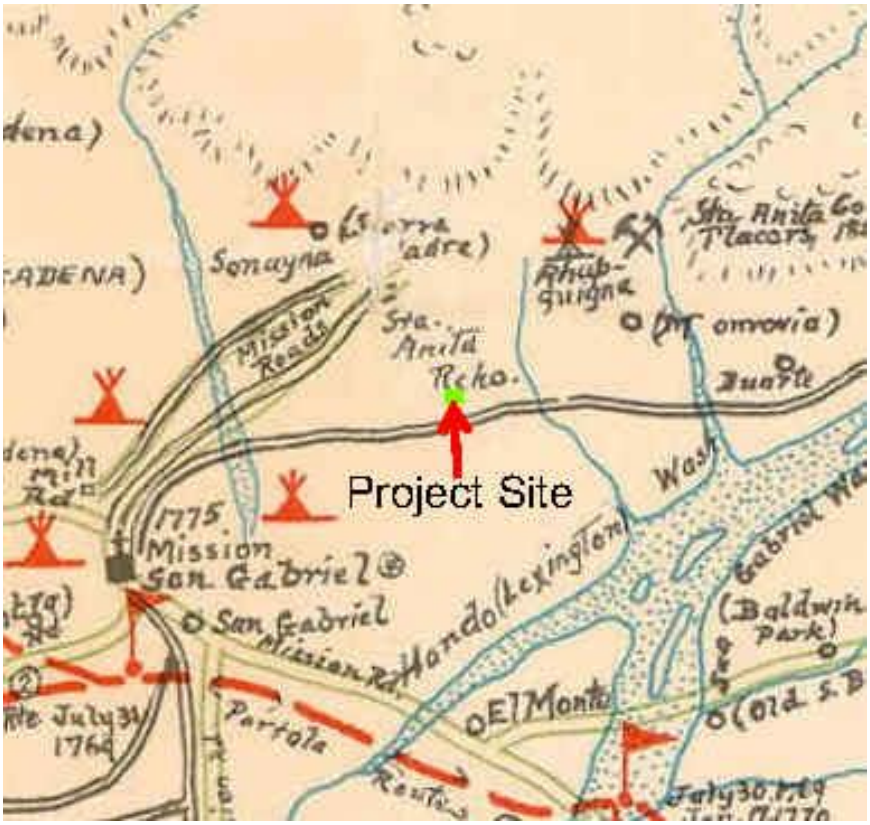

Image 1. 1938 Kirkman-Harriman Historical Map (Proposed Project site depicted in green and pointed to by red arrow)

Native American Coordination

NAHC SLF Search Results

Dudek requested a search of the SLF on November 4, 2021, to determine the presence of any Native American cultural resources within the proposed Project site. The NAHC maintains and reviews the SLF. Andrew Green, Cultural Resources Analyst, provided the SLF search results on December 16, 2021. The NAHC SLF records search results were positive for known Native American heritage resources within the proposed Project site. The NAHC identified the Gabrieleno Band of Mission Indians – Kizh Nation, as well as eight (8) additional Native American individuals who would potentially have specific knowledge as to whether or not Native American cultural resources are identified within the Project site that could be at-risk. To date, Dudek has not initiated contact with the

individuals on the NAHC's contact list, in regard to the proposed Project site. However, in compliance with AB 52, the City has contacted all NAHC-listed traditionally geographically affiliated tribal representatives that have requested project notification. Assembly Bill 52 consultation efforts conducted by the City are discussed below. Documents related to the NAHC SLF search are included in Appendix B.

It is important to note that the SLF maintained by the NAHC represent a curation of "ancient places of special religious or social significance to Native Americans and known ancient graves and cemeteries of Native Americans on private and public lands in California" (nahc.gov 2021) provided by Tribal entities and Native American representatives. For various reasons, Tribal entities and Native American representatives do no not always report sacred lands or Tribal Cultural Resources (TCRs) to the NAHC; as such, the NAHC's SLF is not necessarily a comprehensive list of known TCRs and searches of the SLF must be considered in concert with other research and not used as a sole source of information regarding the presence of TCRs. Additionally, results of the SLF provided relate to the general regional area within and surrounding the proposed Project site and don't necessarily equate to the existence of resources within the specific area occupied by the proposed Project site.

Assembly Bill 52

The proposed Project is subject to compliance with Assembly Bill (AB) 52 (PRC Section 21074), which requires consideration of impacts to TCRs as part of the CEQA process, and that the lead agency notify California Native American Tribal representatives that have requested notification who are traditionally or culturally affiliated with the geographic area of the proposed Project site. All records of correspondence related to AB 52 notification and any subsequent consultation are on file with the City. A summary of the consultation record is provided and addressed in the Environmental Impact Report (EIR) for the proposed Project.

Senate Bill 18

The proposed Project is subject to compliance with Senate Bill (SB) 18 (Government Code Section 65352.3), which requires local governments to invite California Native American Tribal representatives to participate in consultation about proposed General Plan and Specific Plan adoptions or amendments. The City is considering an amendment to the General Plan and as such, initiated SB 18 consultation. All records of correspondence related to SB 18 notification and any subsequent consultation are on file with the City. A summary of the consultation record is provided and addressed in the EIR for the proposed Project.

Field Survey

Methods

Dudek Archaeologist, Linda Kry, conducted a pedestrian survey of the proposed Project site on August 10, 2022. Because the proposed Project site is within a developed setting with limited exposed sediment (less than 10 percent), a comprehensive archaeological survey was not able to be conducted. Instead, a mixed approach (opportunistic survey) and reconnaissance survey (visual inspection) were utilized, selectively examining areas of exposed ground surfaces limited to landscaped areas.

The survey of the approximately 2.23-acre proposed Project site included APNs 5773-009-065 and 5773-009-070. The ground surface was inspected for prehistoric artifacts (e.g., flaked stone tools, tool-making debris, groundstone

tools, ceramics, fire-affected rock), soil discoloration that might indicate the presence of a cultural midden, soil depressions, features indicative of structures and/or buildings (e.g., standing exterior walls, post holes, foundations), and historical artifacts (e.g., metal, glass, ceramics, building materials). Ground disturbances such as rodent burrows, cut banks, landscaped areas, base of trees, and drainages, if present, were also visually inspected for exposed subsurface materials. All field notes, photographs, and records related to the current study are on file at Dudek's Pasadena, California office. All field practices met the Secretary of Interior's standards and guidelines for a cultural resources inventory.

Results

Survey results for the two (2) parcels that make up the proposed Project site (APNs 5773-009-065 and 5773-009-070) are discussed individually below. Note: the geotechnical study revealed that the proposed Project site is predominately covered in fill soils although the origin of the soils was not mentioned. As such, any exposed soils observed during the survey were likely fill soils and not a good representation of the native soils present prior to development/ground disturbing activities.

APN 5773-009-065

This parcel represents the eastern half of the proposed Project site and includes the existing Souplantation building located at 301 East Huntington Drive. Approximately 95 percent of this parcel is paved with a vacant building and associated paved parking lots, which did not allow for the observation of any exposed ground soils. However, surrounding the building to the west, south, and east and interspersed within the parking lots to the west and north are landscaped areas comprised of grasses and ornamental trees, bushes, and flowers. Given the current parcel conditions, ground surface visibility within this parcel ranged from non-existent to good (0 to 50 percent).

APN 5773-009-070

This parcel represents the western half of the proposed Project site and includes the existing The Derby restaurant located at 233 East Huntington Drive. Approximately 95 percent of this parcel is paved with building and associated surface parking lots, which did not allow for the observation of any exposed ground soils. However, surrounding the building to the south and east and interspersed within the parking lots to the west and north are landscaped areas comprised of grasses and ornamental trees, bushes, and flowers. Given the current parcel conditions, ground surface visibility within this parcel ranged from non-existent to good (0 to 50 percent).

Overall, the visible existing surface comprised of fill soils characterized dark brown or olive brown silty sand or sand, which are visible within areas of exposed ground surfaces as previously mentioned above.

As previously mentioned in the Geotechnical Report Review section, above, subsurface exploratory boring investigations encountered fill soils from surface to between 2 to 3 ft bgs within the proposed Project site. The presence of the fill soil is an indication that any potential cultural material between 2 to 3 ft bgs, has been previously displaced from the primary depositional location, buried, or destroyed. Additionally, the presence of fill soils demonstrates that the native soils upon and within which cultural deposits would exist in context was not observed during the survey. No cultural materials were observed within the proposed Project site; however, due to the presence of fill soils, observation of intact native soils was not possible.

6 Sensitivity Analysis

Archaeological Sensitivity

While the NAHC SLF records search results were positive, the results relate to the general regional area and do not necessarily equate to the existence of resources within the specific area occupied by the proposed Project site. A search of the CHRIS database for the proposed Project site and 1-mile records search area did not identify any previously recorded historic-period or prehistoric archeological resources. In addition, CHRIS records search results identified 24 studies as conducted within 1-mile of the proposed Project site. Of these, only one study, LA-06859, addresses the proposed Project site. Although report LA-06859 encompasses the entirety of the current proposed Project site, the report was prepared for the City's prior 1996 General Plan . No information pertaining to the existence of previously identified archaeological resources is included in report LA-06859. According to the aerial photographs review, the proposed Project site has been subjected to consistent ground disturbance, shifting from sparse residential development in the late 1920s and transforming steadily to include the development and expansion of buildings until 2011. By 2012, the proposed Project site is shown to be consistent with the present site conditions.

A review of the Geotechnical Report prepared for the proposed Project site determined that fills soils were identified from surface to between 2 and 3 ft bgs within all exploratory boring locations. Current Project plans indicate that the maximum depth of ground disturbance across the proposed Project site is 14 feet below the existing ground surface for the proposed subterranean parking and the assumed depths of ground disturbance associated with the off-site improvements is no greater than 5 feet below existing ground surface.

This report satisfies MM-4.5-2 (1) in the certified City of Arcadia 2010 General Plan Update, Final Environmental Impact Report (SCH No. 2009081034), which requires a Phase I study be prepared to evaluate the current conditions of a proposed development or project site. However, in consideration of the results of this study, while the potential to encounter intact cultural deposits containing archaeological resources within soils from the current grade and between 2 and 3 ft bgs is unlikely, the potential for intact cultural deposits to exist within native soils (below between 2 and 3 ft bgs) to the depths of proposed ground disturbance is unknown. In the event that unanticipated archaeological resources are encountered during Project implementation, impacts to these resources could be significant. As such, the following management recommendations are provided to ensure that impacts to unanticipated archaeological resources and human remains would be treated properly resulting in a less than significant impact.

7 Management Recommendations

The following measures have been developed to ensure that any inadvertent discovery of archaeological resources would be treated appropriately and in accordance with CEQA regulations: preconstruction training, retention of an on-call archaeologist to address inadvertent discoveries, and inadvertent discovery clause implemented and included on all construction plans. Dudek further recommends an additional survey be conducted once fill soils have been removed. If cultural materials are observed during the course of ground disturbing activities below fill soils, then subsurface testing may be required. These measures would ensure the potential Project impacts to archaeological resources and human remains would be less than significant.

Inadvertent Discovery of Archaeological Resources

Workers Environmental Awareness Program Training. All construction personnel and monitors who are not trained archaeologists shall be briefed regarding inadvertent discoveries prior to the start of construction activities. A basic presentation and handout or pamphlet shall be prepared in order to ensure proper identification and treatment of inadvertent discoveries. The purpose of the Workers Environmental Awareness Program (WEAP) training is to provide specific details on the kinds of archaeological materials that may be identified during construction of the Project and explain the importance of and legal basis for the protection of significant archaeological resources. Each worker shall also learn the proper procedures to follow in the event that cultural resources or human remains are uncovered during ground-disturbing activities. These procedures include work curtailment or redirection, and the immediate contact of the site supervisor and archaeological monitor.

Retention of a Qualified Archaeologist. A qualified archaeologist shall be retained and on-call to respond and address any inadvertent discoveries identified for the duration of construction activities. Additionally, in consideration of the potential to encounter intact cultural deposits beneath fill soils, the qualified archaeologist shall survey the proposed Project site once fill soils have been removed to ensure no cultural deposits underly the fill layer. If is determined, based on the survey after the removal of fill soils, that cultural resources are present or may be present that may be impacted during Project construction, further study including subsurface testing as well as archaeological monitoring may be warranted. If it is determined that monitoring is warranted, a qualified archaeological principal investigator, meeting the Secretary of the Interior's Professional Qualification Standards, should oversee and adjust monitoring efforts as needed (increase, decrease, or discontinue monitoring frequency) based on the observed potential for construction activities to encounter cultural deposits or material. The archaeological monitor will be responsible for maintaining daily monitoring logs.

Inadvertent Discovery Treatment and Protocol. In the event that archaeological resources (sites, features, or artifacts) are exposed during construction activities for the proposed Project, all construction work occurring within 50 feet of the find should immediately stop and a qualified archaeologist should notified immediately to assess the significance of the find and determine whether or not additional study is warranted. If human remains or suspected human remains are discovered, all construction work occurring within 50 feet of the find should immediately stop. Depending upon the significance of the find, the archaeologist may simply record the find and allow work to continue. If the discovery proves significant under CEQA, additional work such as preparation of an archaeological treatment plan, testing, data recovery, or monitoring may be warranted.

Within 60 days following completion of ground disturbance, an archaeological monitoring report shall be prepared and submitted to the City for review. This report should document compliance with approved mitigation, document the monitoring efforts, and include an appendix with daily monitoring logs. The final report shall be submitted to the SCCIC.

In accordance with Section 7050.5 of the California Health and Safety Code, if human remains are found, the county coroner shall be immediately notified of the discovery. No further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains shall occur until the county coroner has determined the appropriate treatment and disposition of the human remains. If the County Coroner determines that the remains are, or are believed to be, Native American, he or she shall follow all required protocols according to California Public Resources Code, Section 5097.98.

Should you have any questions relating to this report and its findings, please do not hesitate to contact me directly at lkry@dudek.com or Heather McDaniel McDevitt at hmcdevitt@dudek.com.

Sincerely,

Linda Kry, B.A., RA
Project Archaeologist

Re: Arcadia Mixed-Use Specific Plan Project, Los Angeles County

Dear Ms. McDevitt:

A record search of the Native American Heritage Commission (NAHC) Sacred Lands File (SLF) was completed for the information submitted for the above referenced project. The results were positive. Please contact the Gabrieleno Band of Mission Indians – Kizh Nation on the attached list for information. Please note that tribes do not always record their sacred sites in the SLF, nor are they required to do so. A SLF search is not a substitute for consultation with tribes that are traditionally and culturally affiliated with a project's geographic area. Other sources of cultural resources should also be contacted for information regarding known and recorded sites, such as the appropriate regional California Historical Research Information System (CHRIS) archaeological Information Center for the presence of recorded archaeological sites.

Attached is a list of Native American tribes who may also have knowledge of cultural resources in the project area. This list should provide a starting place in locating areas of potential adverse impact within the proposed project area. Please contact all of those listed; if they cannot supply information, they may recommend others with specific knowledge. By contacting all those listed, your organization will be better able to respond to claims of failure to consult with the appropriate tribe. If a response has not been received within two weeks of notification, the Commission requests that you follow-up with a telephone call or email to ensure that the project information has been received.

If you receive notification of change of addresses and phone numbers from tribes, please notify the NAHC. With your assistance, we can assure that our lists contain current information.

If you have any questions or need additional information, please contact me at my email address: Andrew.Green@nahc.ca.gov.

Sincerely,

Andrew Green

Subject: GEOTECHNICAL INVESTIGATION
PROPOSED MIXED-USE DEVELOPMENT
233-301 EAST HUNTINGTON DRIVE
ARCADIA, CALIFORNIA
APN: 5775-009-065 & -070

Dear Mr. Nicolarsen:

In accordance with your authorization of our proposal dated April 19, 2022, we have performed a geotechnical investigation for the proposed mixed-use development located at 233-301 East Huntington Drive in the City of Arcadia, California. The accompanying report presents the findings of our study, and our conclusions and recommendations pertaining to the geotechnical aspects of proposed design and construction. Based on the results of our investigation, it is our opinion that the site can be developed as proposed, provided the recommendations of this report are followed and implemented during design and construction.

If you have any questions regarding this report, or if we may be of further service, please contact the undersigned.

Very truly yours,

GEOCON WEST, INC.

GEOTECHNICAL INVESTIGATION

1. PURPOSE AND SCOPE

This report presents the results of a geotechnical investigation for the proposed mixed-use development located at 233-301 East Huntington Drive in the City of Arcadia, California (see Vicinity Map, Figure 1). The purpose of the investigation was to evaluate subsurface soil and geologic conditions underlying the site and, based on conditions encountered, to provide conclusions and recommendations pertaining to the geotechnical aspects of design and construction.

The scope of this investigation included a site reconnaissance, field exploration, laboratory testing, engineering analysis, and the preparation of this report. The site was explored on May 20, 2022 by excavating five 8-inch diameter borings to depths ranging from approximately 30½ to 45½ feet below the existing ground surface using a truck-mounted, hollow-stem auger drilling machine. The approximate locations of the exploratory borings are depicted on the Site Plan (see Figure 2A). A detailed discussion of the field investigation, including boring logs, is presented in Appendix A.

Laboratory tests were performed on selected soil samples obtained during the investigation to determine pertinent physical and chemical soil properties. Appendix B presents a summary of the laboratory test results.

The recommendations presented herein are based on analysis of the data obtained during the investigation and our experience with similar soil and geologic conditions. References reviewed to prepare this report are provided in the *List of References* section.

If project details vary significantly from those described herein, Geocon should be contacted to determine the necessity for review and possible revision of this report.

2. SITE AND PROJECT DESCRIPTION

The subject site is located at 233-301 East Huntington Drive in the City of Arcadia, California. The site is currently occupied by two single-story commercial structures and associated asphalt-paved parking lots. The site is bounded by a four-story hotel and associated asphalt paved parking lot to the north, by Gateway Drive to the east, by East Huntington Drive to the south, and by a seven-story hotel and associated asphalt paved parking lot to the west. The topography at the site and in the general site vicinity slopes gently downward towards the south. Surface water drainage at the site appears to be by sheet flow along the existing ground contours to the city streets. Vegetation consists of some isolated trees and shrubs in isolated planter areas.

Based on the information provided by the Client, it is our understanding that the proposed mixed-use development will be a six-story structure with one subterranean parking level (see Figures 2A and 2B). The ground level of the proposed development will consist of parking, restaurant, and commercial space with residential housing located on the levels above. It is anticipated that the subterranean level will extend to a depth of approximately 14 feet, including foundation depths (see Figure 2B).

Due to preliminary nature of the design at this time, wall and column loads were not available. It is anticipated that column loads for the proposed structure will be up to 700 kips, and wall loads will be up to 8 kips per linear foot.

Once the design phase and foundation loading configuration proceeds to a more finalized plan, the recommendations within this report should be reviewed and revised, if necessary. Any changes in the design, location or elevation of any structure, as outlined in this report, should be reviewed by this office. Geocon should be contacted to determine the necessity for review and possible revision of this report.

3. GEOLOGIC SETTING

The site is located in the north-central San Gabriel Valley, approximately 1.0 mile south of the southern flank of the San Gabriel Mountains. The San Gabriel Valley is an alluvium-filled valley bounded by the Sierra Madre Fault Zone and San Gabriel Mountains on the north, by the Puente Hills on the south, by the Covina and Indian Hills on the east, and by the Raymond Basin on the west. The alluvial deposits are derived from erosion of the San Gabriel Mountains to the north and subsequent deposition by the San Gabriel River, Santa Anita Wash, and other local drainages. The alluvium is estimated to be approximately 200 feet thick at the base of the mountains, extending to hundreds of feet thick in the central portion of the valley.

Regionally, the site is located within the northern portion of the Peninsular Ranges geomorphic province. This geomorphic province is characterized by northwest-trending physiographic and geologic features such as the active Whittier Fault located approximately 9.6 miles to the south. The active Raymond Fault, located approximately 0.9 mile to the northwest of the site, forms the local boundary between the Peninsular Ranges geomorphic province and the Transverse Ranges geomorphic province to the north.

4. SOIL AND GEOLOGIC CONDITIONS

Based on our field investigation and published geologic maps of the area, the site is underlain by artificial fill and Holocene age alluvial fan deposits comprised of sand with varying amounts of silt, gravel and cobbles (California Geological Survey [CGS], 2010). Detailed stratigraphic profiles are provided on the boring logs in Appendix A.

4.1 Artificial Fill

Artificial fill was encountered in the exploratory borings to a maximum depth of 3 feet below existing ground surface. The artificial fill generally consists of dark brown or olive brown silty sand or sand with silt. The fill is characterized as moist and loose to medium dense. The fill is likely the result of past grading or construction activities at the site. Deeper fill may exist between excavations and in other portions of the site that were not directly explored.

4.2 Alluvium

Holocene age alluvium was encountered beneath the artificial fill and consists primarily of light brown to brown, light olive brown, or gray interbedded poorly graded and well-graded sand with varying amounts of silt and gravel, and locally some cobbles (to 5 inches). The alluvium is characterized as slightly moist to very moist and loose to very dense.

5. GROUNDWATER

Review of the Seismic Hazard Evaluation of the Mount Wilson 7.5-Minute Quadrangle (California Division of Mines and Geology [CDMG], 1998) indicates that the historically highest groundwater level in the immediate area is approximately 150 feet beneath the ground surface. Groundwater information presented in this document is generated from data collected in the early 1900's to the late 1990s. Based on current groundwater basin management practices, it is unlikely that groundwater levels will ever exceed the historic high levels.

Groundwater was not encountered in our borings drilled to a maximum depth of 45½ feet beneath the existing ground surface. Considering the reported historic high groundwater level (CDMG, 1998), the lack of groundwater encountered in our borings, and the depth of the proposed construction, it is unlikely that static groundwater will be encountered during construction or adversely impact the proposed development. However, it is not uncommon for groundwater levels to vary seasonally or for groundwater seepage conditions to develop where none previously existed, especially in impermeable fine-grained soils which are heavily irrigated or after seasonal rainfall. In addition, recent requirements for stormwater infiltration could result in shallower seepage conditions in the immediate site vicinity. Proper surface drainage of irrigation and precipitation will be critical for future performance of the project. Recommendations for drainage are provided in the S*urface Drainage* section of this report (see Section 7.23).

6. GEOLOGIC HAZARDS

6.1 Surface Fault Rupture

The numerous faults in Southern California include Holocene-active, pre-Holocene, and inactive faults. The criteria for these major groups are based on criteria developed by the California Geological Survey (CGS, formerly known as CDMG) for the Alquist-Priolo Earthquake Fault Zone Program (CGS, 2018). By definition, a Holocene-active fault is one that has had surface displacement within Holocene time (about the last 11,700 years). A pre-Holocene fault has demonstrated surface displacement during Quaternary time (approximately the last 1.6 million years) but has had no known Holocene movement. Faults that have not moved in the last 1.6 million years are considered inactive.

The site is not within a state-designated Alquist-Priolo Earthquake Fault Zone (CGS, 2022b; CGS, 2017) or a city-designated Fault Hazard Management Zone (City of Arcadia, 2010) for surface fault rupture hazards. No Holocene-active or pre-Holocene faults with the potential for surface fault rupture are known to pass directly beneath the site. Therefore, the potential for surface rupture due to faulting occurring beneath the site during the design life of the proposed development is considered low. However, the site is located in the seismically active Southern California region, and could be subjected to moderate to strong ground shaking in the event of an earthquake on one of the many active Southern California faults. The faults in the vicinity of the site are shown in Figure 3, Regional Fault Map.

The closest Holocene-active fault to the site is the Raymond Fault located approximately 0.9 mile to the northwest (CGS, 2017). Other nearby Holocene-active faults are the Sierra Madre Fault Zone (Section D-Duarte Fault), the East Montebello Fault, and the Whittier Fault located approximately 1.8 miles northeast, 6.7 miles southwest, and 9.6 miles south of the site, respectively. (USGS, 2006; Ziony and Jones, 1989). The active San Andreas Fault Zone is located approximately 23 miles northeast of the site (Ziony and Jones, 1989).

Several buried thrust faults, commonly referred to as blind thrusts, underlie the Los Angeles Basin and the San Gabriel Valley at depth. These faults are not exposed at the ground surface and are typically identified at depths greater than 3.0 kilometers. The October 1, 1987 M_w 5.9 Whittier Narrows earthquake and the January 17, 1994 M_w 6.7 Northridge earthquake were a result of movement on the Puente Hills Blind Thrust and the Northridge Thrust, respectively. The site is underlain by the Puente Hills Blind Thrust. This thrust fault and others in the greater Los Angeles area are not exposed at the surface and do not present a potential surface fault rupture hazard at the site; however, these deep thrust faults are considered active features capable of generating future earthquakes that could result in moderate to significant ground shaking at the site.

6.2 Seismicity

As with all of Southern California, the site has experienced historic earthquakes from various regional faults. The seismicity of the region surrounding the site was formulated based on research of an electronic database of earthquake data. The epicenters of recorded earthquakes with magnitudes equal to or greater than 5.0 in the site vicinity are depicted on Figure 4, Regional Seismicity Map. A partial list of moderate to major magnitude earthquakes that have occurred in the Southern California area within the last 100 years is included in the following table.

LIST OF HISTORIC EARTHQUAKES

Earthquake (Oldest to Youngest)	Date of Earthquake	Magnitude	Distance to Epicenter (Miles)	Direction to Epicenter
Near Redlands	July 23, 1923	6.3	45	ESE
Long Beach	March 10, 1933	6.4	36	S
Tehachapi	July 21, 1952	7.5	82	NW
San Fernando	February 9, 1971	6.6	28	NW
Whittier Narrows	October 1, 1987	5.9	6	SW
Sierra Madre	June 28, 1991	5.8	8	NNE
Landers	June 28, 1992	7.3	91	E
Big Bear	June 28, 1992	6.4	68	E
Northridge	January 17, 1994	6.7	30	W
Hector Mine	October 16, 1999	7.1	105	ENE
Ridgecrest	July 5, 2019	7.1	115	NNE

The site could be subjected to strong ground shaking in the event of an earthquake. However, this hazard is common in Southern California and the effects of ground shaking can be mitigated if the proposed structures are designed and constructed in conformance with current building codes and engineering practices.

6.3 Seismic Design Criteria

The following table summarizes the site-specific design criteria obtained from the 2019 California Building Code (CBC; Based on the 2018 International Building Code [IBC] and ASCE 7-16), Chapter 16 Structural Design, Section 1613 Earthquake Loads. The data was calculated using the online application Seismic Design Maps, provided by OSHPD. The short spectral response uses a period of 0.2 second. We evaluated the Site Class based on the discussion in Section 1613.2.2 of the 2019 CBC and Table 20.3-1 of ASCE 7-16. The values presented on the following page are for the risk-targeted maximum considered earthquake (MCER).

2019 CBC SEISMIC DESIGN PARAMETERS

Parameter	Value	2016 CBC Reference
Site Class	D	Section 1613.3.2
MCE_R Ground Motion Spectral Response Acceleration – Class B (short), S_S	1.936g	Figure 1613.3.1(1)
MCE_R Ground Motion Spectral Response Acceleration – Class B (1 sec), S_1	0.705g	Figure 1613.3.1(2)
Site Coefficient, F_A	1	Table 1613.3.3(1)
Site Coefficient, F_V	1.7*	Table 1613.3.3(2)
Site Class Modified MCE_R Spectral Response Acceleration (short), S_{MS}	1.936g	Section 1613.3.3 (Eqn 16-37)
Site Class Modified MCE_R Spectral Response Acceleration – (1 sec), S_{M1}	1.198g*	Section 1613.3.3 (Eqn 16-38)
5% Damped Design Spectral Response Acceleration (short), S_{DS}	1.291g	Section 1613.3.4 (Eqn 16-39)
5% Damped Design Spectral Response Acceleration (1 sec), S_{D1}	0.798g*	Section 1613.3.4 (Eqn 16-40)

Note:

*Per Section 11.4.8 of ASCE/SEI 7-16, a ground motion hazard analysis shall be performed for projects for Site Class "E" sites with Ss greater than or equal to 1.0g and for Site Class "D" and "E" sites with S1 greater than 0.2g. Section 11.4.8 also provides exceptions which indicates that the ground motion hazard analysis may be waived provided the exceptions are followed. Using the code-based values presented in the table above, in lieu of a performing a ground motion hazard analysis, requires the exceptions outlined in ASCE 7-16 Section 11.4.8 be followed.

The table below presents the mapped maximum considered geometric mean (MCEG) seismic design parameters for projects located in Seismic Design Categories of D through F in accordance with ASCE 7-16.

ASCE 7-16 PEAK GROUND ACCELERATION

Parameter	Value	ASCE 7-16 Reference
Mapped MCE_G Peak Ground Acceleration, PGA	0.841g	Figure 22-9
Site Coefficient, F_{PGA}	1.1	Table 11.8-1
Site Class Modified MCE_G Peak Ground Acceleration, PGA_M	0.925g	Section 11.8.3 (Eqn 11.8-1)

The Maximum Considered Earthquake Ground Motion (MCE) is the level of ground motion that has a 2 percent chance of exceedance in 50 years, with a statistical return period of 2,475 years. According to the 2019 California Building Code and ASCE 7-16, the MCE is to be utilized for the evaluation of liquefaction, lateral spreading, seismic settlements, and it is our understanding that the intent of the Building Code is to maintain "Life Safety" during a MCE event. The Design Earthquake Ground Motion (DE) is the level of ground motion that has a 10 percent chance of exceedance in 50 years, with a statistical return period of 475 years.

Deaggregation of the MCE peak ground acceleration was performed using the USGS online Unified Hazard Tool, 2014 Conterminous U.S. Dynamic edition (v4.2.0). The result of the deaggregation analysis indicates that the predominant earthquake contributing to the MCE peak ground acceleration is characterized as a 7.05 magnitude event occurring at a hypocentral distance of 9.43 kilometers from the site.

Deaggregation was also performed for the Design Earthquake (DE) peak ground acceleration, and the result of the analysis indicates that the predominant earthquake contributing to the DE peak ground acceleration is characterized as a 6.96 magnitude occurring at a hypocentral distance of 14.35 kilometers from the site.

Conformance to the criteria in the above tables for seismic design does not constitute any kind of guarantee or assurance that significant structural damage or ground failure will not occur if a large earthquake occurs. The primary goal of seismic design is to protect life, not to avoid all damage, since such design may be economically prohibitive.

6.4 Liquefaction Potential

Liquefaction is a phenomenon in which loose, saturated, relatively cohesionless soil deposits lose shear strength during strong ground motions. Primary factors controlling liquefaction include intensity and duration of ground motion, gradation characteristics of the subsurface soils, in-situ stress conditions, and the depth to groundwater. Liquefaction is typified by a loss of shear strength in the liquefied layers due to rapid increases in pore water pressure generated by earthquake accelerations.

The current standard of practice, as outlined in the "Recommended Procedures for Implementation of DMG Special Publication 117, Guidelines for Analyzing and Mitigating Liquefaction in California" and "Special Publication 117A, Guidelines for Evaluating and Mitigating Seismic Hazards in California" requires liquefaction analysis to a depth of 50 feet below the lowest portion of the proposed structure. Liquefaction typically occurs in areas where the soils below the water table are composed of poorly consolidated, fine- to medium-grained, primarily sandy soil. In addition to the requisite soil conditions, the ground acceleration and duration of the earthquake must also be of a sufficient level to induce liquefaction.

The Seismic Hazards Zone Map for the Mount Wilson Quadrangle (CDMG, 1999; CGS, 2017) indicates that the site is not located within a zone of required investigation for liquefaction. In addition, the City of Arcadia General Plan (2010) and the County of Los Angeles Safety Element (Leighton, 1990), indicate that the site is not located within an area designated as having a potential for liquefaction. Groundwater was not encountered in our borings drilled to a maximum depth of 45½ feet beneath the existing ground surface and the historic high groundwater level in the area is reported to be approximately 150 feet beneath the existing ground surface (CDMG, 1998). Based on these considerations, it is our opinion that the potential for liquefaction and associated ground deformations beneath the site is very low.

6.5 Slope Stability

The site is relatively level and the topography in the site vicinity slopes downward toward the south-southeast. The City of Arcadia General Plan (2010) and County of Los Angeles Safety Element (Leighton, 1990), indicate that the site is not located in a "hillside area" or an area identified as having a potential for slope stability hazards. Also, the State of California (CDMG, 1999; CGS, 2017) and the City of Arcadia (2010) indicate that the site is not located within a zone of required investigation for earthquake-induced landslides. There are no known landslides near the site, nor is the site in the path of any known or potential landslides. Therefore, the potential for slope stability hazards to adversely impact the site is considered low.

6.6 Earthquake-Induced Flooding

Earthquake-induced flooding is inundation caused by failure of dams or other water-retaining structures due to earthquakes. The City of Arcadia General Plan (2010) and the County of Los Angeles Safety Element (Leighton, 1990) indicate that the site is located within the potential inundation area for Santa Anita Dam. However, this reservoir, as well as others in California, are continually monitored by various governmental agencies (such as the State of California Division of Safety of Dams and the U.S. Army Corps of Engineers) to guard against the threat of dam failure. Current design, construction practices, and ongoing programs of review, modification, or total reconstruction of existing dams are intended to ensure that all dams are capable of withstanding the maximum considered earthquake (MCE) for the site. Therefore, the potential for inundation at the site as a result of an earthquake-induced dam failure is considered low.

6.7 Tsunamis, Seiches, and Flooding

The site is not located within a coastal area. Therefore, tsunamis are not considered a significant hazard at the site.

Seiches are large waves generated in enclosed bodies of water in response to ground shaking. No major water-retaining structures are located immediately up gradient from the project site. Therefore, flooding from a seismically induced seiche is considered unlikely.

The site is within a Zone D as defined by the Federal Emergency Management Agency (FEMA, 2022; LACDPW, 2022b). Sites within a Zone D have an undetermined but possible flood hazard (FEMA, 2022).

6.8 Oil Fields & Methane Potential

Review of the California Geologic Energy Management Division (CalGEM) Well Finder Website (2022) indicates that the site is not located within the limits of an oilfield and oil or gas wells are not located within ½-mile of the site. However, due to the voluntary nature of record reporting by the oil well drilling companies, wells may be improperly located or not documented on the location map. Undocumented wells could be encountered during construction. Any wells encountered will need to be properly abandoned in accordance with the current requirements of the CalGEM

Since the site is not within an oilfield, the potential for methane or other volatile gases to occur at the site is considered very low. However, should it be determined that a methane study is required for the proposed development it is recommended that a qualified methane consultant be retained to perform the study and provide mitigation measures as necessary.

6.9 Subsidence

Subsidence occurs when a large portion of land is displaced vertically, usually due to the withdrawal of groundwater, oil, or natural gas. Soils that are particularly subject to subsidence include those with high silt or clay content. The site is not located within an area of known ground subsidence (USGS, 2022a). No large-scale extraction of groundwater, gas, oil, or geothermal energy is occurring or planned at the site or in the general site vicinity. There appears to be little or no potential for ground subsidence due to withdrawal of fluids or gases at the site.

7. CONCLUSIONS AND RECOMMENDATIONS

7.1 General

7.1.1 It is our opinion that neither soil nor geologic conditions were encountered during the investigation that would preclude the construction of the proposed development provided the recommendations presented herein are followed and implemented during design and construction.

7.1.2 Up to 3 feet of existing artificial fill was encountered during the site investigation. The existing fill encountered is believed to be the result of past grading and construction activities at the site. Deeper fill may exist in other areas of the site that were not directly explored. Future demolition of the existing structures which occupy the site will likely disturb the upper few feet of soil. It is our opinion that the existing fill, in its present condition, is not suitable for direct support of proposed foundations or slabs. The existing fill and site soils are suitable for re-use as engineered fill provided the recommendations in the *Grading* section of this report are followed (see Section 7.4). Excavations for the subterranean level are anticipated to penetrate through the existing artificial fill and expose undisturbed alluvial soils throughout the excavation bottom.

7.1.3 Groundwater was not encountered during site exploration and the current groundwater table is sufficiently deep that it not expected to be encountered during construction. However, local seepage could be encountered during excavation of the subterranean level, especially if conducted during the rainy season.

7.1.4 Based on these considerations, the proposed structure may be supported on conventional foundation system deriving support in the competent alluvium found at and below a depth of 12 feet below the existing ground surface. Foundations should be deepened as necessary to penetrate through soft or unsuitable alluvium at the direction of the Geotechnical Engineer. All foundation excavations must be observed and approved by the Geotechnical Engineer (a representative of Geocon), prior to placing steel or concrete. Recommendations for the design of a conventional foundation system are provided in Section 7.5.

7.1.5 Excavations up to 14 feet in vertical height are anticipated for construction of the subterranean level, including foundation depths. Due to the depth of the excavation and the proximity to the property lines, city streets and adjacent offsite structures, excavation of the proposed subterranean level will likely require sloping and shoring measures in order to provide a stable excavation. Where shoring is required it is recommended that a soldier pile shoring system be utilized. In addition, where the proposed excavation will be deeper than and adjacent to an offsite structure, the proposed shoring should be designed to resist the surcharge imposed by the adjacent offsite structure. Recommendations for shoring are provided in Section 7.17 of this report.

7.1.6 Based on our observations onsite and our knowledge of the geologic setting, cobbles should be anticipated during earthwork at the subject site. Boulders are also common in this geologic environment and should be expected in the existing fill or alluvial soils. Due to the granular nature of the soils, moderate to excessive caving is anticipated during excavation activities. The contractor should be aware that casing will be required during shoring pile installation and formwork may be required to prevent caving of shallow spread foundation excavations. In addition, the contractor should be prepared to screen abundant cobble and boulders from the soils during earthwork operations. Generation and disposal of oversized material (greater than 6 inches) should be anticipated.

7.1.7 Please be aware that the use of hollow-stem auger drilling equipment utilized for this investigation does not allow for the identification of the size of rock or abundance of rock being encountered or the visual observation of caving conditions since the drilling method is a small diameter cased excavation. It is recommended that the contractors bidding on earthwork, excavation and shoring installation for this project perform their own excavations and test borings with the intended earthwork and drilling equipment to verify the presence, abundance, and size of buried rock (cobbles and boulders), potential for caving, as well as the suitability of the proposed excavation and drilling equipment for the safe and efficient earthwork operations and installation of the shoring system.

7.1.8 Due to the nature of the proposed design and intent for a subterranean level, waterproofing of subterranean walls and slabs is suggested. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.1.9 Foundations for small outlying structures, such as block walls up to 6 feet in height, planter walls or trash enclosures, which will not be tied to the proposed structure, may be supported on conventional foundations deriving support on a minimum of 12 inches of newly placed engineered fill, which extends laterally at least 12 inches beyond the foundation area. Where excavation and compaction cannot be performed, foundations may derive support directly in the competent undisturbed alluvial soils at and below a depth of 24 inches, and should be deepened as necessary to maintain a minimum 12 inch embedment into the recommended bearing materials. If the soils exposed in the excavation bottom are soft or loose, compaction of the soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative.

7.1.10 Where new paving is to be placed, it is recommended that all existing fill and soft alluvial soils be excavated and properly compacted for paving support. The client should be aware that excavation and compaction of all existing fill and soft alluvial soils in the area of new paving is not required; however, paving constructed over existing uncertified fill or unsuitable alluvial soil may experience increased settlement and/or cracking, and may therefore have a shorter design life and increased maintenance costs. As a minimum, the upper 12 inches of subgrade soil should be scarified and properly compacted for paving support. Paving recommendations are provided in *Preliminary Pavement Recommendations* section of this report (see Section 7.10).

7.1.11 Based on the results of percolation testing performed at the site, a stormwater infiltration system is considered feasible for this project. Recommendations for infiltration are provided in the *Stormwater Infiltration* section of this report (see Section 7.22).

7.1.12 Once the design and foundation loading configuration for the proposed structure proceeds to a more finalized plan, the recommendations within this report should be reviewed and revised, if necessary. Based on the final foundation loading configurations, the potential for settlement should be re-evaluated by this office.

7.1.13 Any changes in the design, location or elevation, as outlined in this report, should be reviewed by this office. Geocon should be contacted to determine the necessity for review and possible revision of this report.

7.2 Soil and Excavation Characteristics

7.2.1 The in-situ soils can be excavated with moderate effort using conventional excavation equipment. Due to the granular nature of the soils, moderate to excessive caving is anticipated in unshored excavations. The contractor should be aware drilling conditions may be difficult due to the potential for caving, as well as the presence of cobbles and boulders, and that casing will be required during shoring pile installation and formwork may be required to prevent caving of shallow spread foundation excavations. In addition, the contractor should be prepared to screen abundant cobble and boulders from the soils during earthwork operations.

7.2.2 Please be aware that the use of hollow-stem auger drilling equipment utilized for this investigation does not allow for the identification of the size of rock or abundance of rock being encountered or the visual observation of caving conditions since the drilling method is a small diameter cased excavation. It is recommended that the contractors bidding on earthwork, excavation and shoring installation for this project perform their own excavations and test borings with the intended earthwork and drilling equipment to verify the presence, abundance, and size of buried rock (cobbles and boulders), potential for caving, as well as the suitability of the proposed excavation and drilling equipment for the safe and efficient earthwork operations and installation of the shoring system.

7.2.3 It is the responsibility of the contractor to ensure that all excavations and trenches are properly shored and maintained in accordance with applicable OSHA rules and regulations to maintain safety and maintain the stability of existing adjacent improvements.

7.2.4 All onsite excavations must be conducted in such a manner that potential surcharges from existing structures, construction equipment, and vehicle loads are resisted. The surcharge area may be defined by a 1:1 projection down and away from the bottom of an existing foundation or vehicle load. Penetrations below this 1:1 projection will require special excavation measures such as sloping or shoring. Excavation recommendations are provided in the *Temporary Excavations* section of this report (see Section 7.16).

7.2.5 The soils encountered at the site are primarily granular in nature and are considered to be "non-expansive". Recommendations presented herein assume that the proposed foundations and slabs will derive support in "non-expansive" materials.

7.3 Minimum Resistivity, pH, and Water-Soluble Sulfate

7.3.1 Potential of Hydrogen (pH) and resistivity testing as well as chloride content testing were performed on representative samples of soil to generally evaluate the corrosion potential to surface utilities. The tests were performed in accordance with California Test Method Nos. 643 and 422 and indicate that the soils are considered "mildly corrosive" with respect to corrosion of buried ferrous metals on site. The results are presented in Appendix B (Figure B29) and should be considered for design of underground structures.

7.3.2 Laboratory tests were performed on representative samples of the site materials to measure the percentage of water-soluble sulfate content. Results from the laboratory water-soluble sulfate tests are presented in Appendix B (Figure B29) and indicate that the on-site materials possess a sulfate exposure class of "S0" to concrete structures as defined by 2019 CBC Section 1904 and ACI 318-19 Chapter 19.

7.3.3 Geocon West, Inc. does not practice in the field of corrosion engineering and mitigation. If corrosion sensitive improvements are planned, it is recommended that a corrosion engineer be retained to evaluate corrosion test results and incorporate the necessary precautions to avoid premature corrosion of buried metal pipes and concrete structures in direct contact with the soils.

7.4 Grading

7.4.1 Grading is anticipated to include excavation of site soils for the subterranean level, foundations, and utility trenches, as well as placement of backfill for walls, ramps, and trenches.

7.4.2 A preconstruction conference should be held at the site prior to the beginning of grading operations with the owner, contractor, civil engineer, geotechnical engineer, and building official in attendance. Special soil handling requirements can be discussed at that time.

7.4.3 Earthwork should be observed, and compacted fill tested by representatives of Geocon West, Inc. The existing fill and alluvial soil encountered during exploration is suitable for re-use as engineered fill, provided any encountered oversize material (greater than 6 inches) and any encountered deleterious debris are removed. **The contractor should be prepared to screen abundant cobble and boulders from the soils during earthwork operations**. Generation and disposal of oversized material (greater than 6 inches) should be anticipated. Additionally, the site soils have little to no cohesion and are prone to excessive caving. The contractor should be prepared for difficult excavation conditions. The presence of these materials and their impact on construction methods and equipment selection should be considered by both the owner and contractor prior to construction.

7.4.4 Please be aware that the use of hollow-stem auger drilling equipment utilized for this investigation does not allow for the identification of the size of rocks being encountered or the visual observation of caving conditions since the drilling method is a small diameter cased excavation. It is recommended that the contractor bidding on excavation for this project perform their own test excavations utilizing the intended excavation equipment to verify the presence and size of buried rock (cobble and boulders), potential for caving, as well as the suitability of the proposed equipment to perform for safe and efficient earthwork activities.

7.4.5 Grading should commence with the removal of all existing vegetation and existing improvements from the area to be graded. Deleterious debris such as wood and root structures should be exported from the site and should not be mixed with the fill soils. Asphalt and concrete should not be mixed with the fill soils unless approved by the Geotechnical Engineer. All existing underground improvements planned for removal should be completely excavated and the resulting depressions properly backfilled in accordance with the procedures described herein. Once a clean excavation bottom has been established it must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.).

7.4.6 The foundation system for the proposed structure may derive support in the competent undisturbed alluvial soils found at and below a depth of 12 feet below the existing ground surface.

7.4.7 All excavations must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon) prior to placing any fill or foundation construction.

7.4.8 All fill and backfill soils should be placed in horizontal loose layers approximately 6 to 8 inches thick, moisture conditioned to near optimum moisture content, and properly compacted to a minimum of 90 percent of the maximum dry density in accordance with ASTM D 1557 (latest edition).

7.4.9. Where new paving is to be placed, it is recommended that all existing fill and soft alluvium be excavated and properly compacted for paving support. As a minimum, the upper 12 inches of soil should be scarified, moisture conditioned to near optimum moisture content, and compacted to at least 95 percent relative compaction, as determined by ASTM D 1557 (latest edition). Paving recommendations are provided in *Preliminary Pavement Recommendations* section of this report (see Section 7.10).

7.4.10 Foundations for small outlying structures, such as block walls up to 6 feet high, planter walls or trash enclosures, which will not be tied to the proposed building, may be supported on conventional foundations deriving support on a minimum of 12 inches of newly placed engineered fill which extends laterally at least 12 inches beyond the foundation area. Where excavation and proper compaction cannot be performed, foundations may derive support directly in the undisturbed alluvial soils at and below a depth of 24 inches, and should be deepened as necessary to maintain a minimum 12 inch embedment into the recommended bearing materials. If the soils exposed in the excavation bottom are soft or loose, compaction of the soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative.

7.4.11 Although not anticipated for this project, all imported fill shall be observed, tested, and approved by Geocon West, Inc. prior to bringing soil to the site. Rocks larger than 6 inches in diameter shall not be used in the fill. If necessary, import soils used as structural fill should have an expansion index less than 20 and corrosivity properties that are equally or less detrimental to that of the existing onsite soils (see Figure B29).

7.4.12 Utility trenches should be properly backfilled in accordance with the following requirements. The pipe should be bedded with clean sands (Sand Equivalent greater than 30) to a depth of at least 1 foot over the pipe, and the bedding material must be inspected and approved in writing by the Geotechnical Engineer (a representative of Geocon). The use of gravel is not acceptable unless used in conjunction with filter fabric to prevent the gravel from having direct contact with soil. The remainder of the trench backfill may be derived from onsite soil or approved import soil, compacted as necessary, until the required compaction is obtained. The use of minimum 2-sack slurry as backfill is also acceptable. Prior to placing any bedding materials or pipes, the excavation bottom must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon).

7.4.13 All trench and foundation excavation bottoms must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon), prior to placing bedding materials, fill, steel, gravel, or concrete.

7.5 Foundation Design

7.5.1 The proposed structure may be supported on a conventional foundation system deriving support in the competent alluvium found at and below a depth of 12 feet below the existing ground surface. Foundations should be deepened as necessary to penetrate through soft or unsuitable alluvium at the direction of the Geotechnical Engineer. All foundation excavations must be observed and approved by the Geotechnical Engineer (a representative of Geocon), prior to placing steel or concrete.

7.5.2 Continuous footings may be designed for an allowable bearing capacity of 2,500 pounds per square foot (psf), and should be a minimum of 12 inches in width, 18 inches in depth below the lowest adjacent grade, and 12 inches into the recommended bearing material.

7.5.3 Isolated spread foundations may be designed for an allowable bearing capacity of 3,000 psf, and should be a minimum of 24 inches in width, 18 inches in depth below the lowest adjacent grade, and 12 inches into the recommended bearing material.

7.5.4 The allowable soil bearing pressure above may be increased by 250 psf and 500 psf for each additional foot of foundation width and depth, respectively, up to a maximum allowable soil bearing pressure of 5,000 psf.

7.5.5 The allowable bearing pressures may be increased by one-third for transient loads due to wind or seismic forces.

7.5.6 If depth increases are utilized for the perimeter foundations, this office should be provided a copy of the final construction plans so that the excavation recommendations presented herein could be properly reviewed and revised if necessary.

7.5.7 Continuous footings should be reinforced with four No. 4 steel reinforcing bars, two placed near the top of the footing and two near the bottom. Reinforcement for spread footings should be designed by the project structural engineer.

7.5.8 The above foundation dimensions and minimum reinforcement recommendations are based on soil conditions and building code requirements only, and are not intended to be used in lieu of those required for structural purposes.

7.5.9 No special subgrade presaturation is required prior to placement of concrete. However, the slab and foundation subgrade should be sprinkled as necessary; to maintain a moist condition as would be expected in any concrete placement.

7.5.10 Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the excavations and exposed soil conditions are consistent with those anticipated. If unanticipated soil conditions are encountered, foundation modifications may be required.

7.5.11 This office should be provided a copy of the final construction plans so that the excavation recommendations presented herein could be properly reviewed and revised if necessary.

7.6 Foundation Settlement

7.6.1 The maximum expected static settlement for a structure supported on a conventional foundation system deriving support in the recommended bearing materials and designed with a maximum bearing pressure of 5,000 psf is estimated to be less than 1¼ inch and occur below the heaviest loaded structural element. Settlement of the foundation system is expected to occur on initial application of loading. Differential settlement is not expected to exceed ⅔ inch over a distance of 20 feet.

7.6.2 Once the design and foundation loading configuration for the proposed structure proceeds to a more finalized plan, the estimated settlements presented in this report should be reviewed and revised, if necessary. If the final foundation loading configurations are greater than the assumed loading conditions, the potential for settlement should be reevaluated by this office.

7.7 Miscellaneous Foundations

7.7.1 Foundations for small outlying structures, such as block walls up to 6 feet in height, planter walls or trash enclosures which will not be tied to the proposed structure may be supported on conventional foundations bearing on a minimum of 12 inches of newly placed engineered fill which extends laterally at least 12 inches beyond the foundation area. Where excavation and compaction cannot be performed, such as adjacent to property lines, foundations may derive support in the undisturbed alluvial soils at and below a depth of 24 inches, and should be deepened as necessary to maintain a minimum 12 inch embedment into the recommended bearing materials.

7.7.2 If the soils exposed in the excavation bottom are soft, compaction of the soft soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative. Miscellaneous foundations may be designed for a bearing value of 1,500 psf, and should be a minimum of 12 inches in width, 18 inches in depth below the lowest adjacent grade and 12 inches into the recommended bearing material. The allowable bearing pressure may be increased by up to one-third for transient loads due to wind or seismic forces.

7.7.3 Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the excavations and exposed soil conditions are consistent with those anticipated.

7.8 Lateral Design

7.8.1 Resistance to lateral loading may be provided by friction acting at the base of foundations, slabs and by passive earth pressure. An allowable coefficient of friction of 0.4 may be used with the dead load forces in the competent alluvial soils and properly compacted engineered fill.

7.8.2 Passive earth pressure for the sides of foundations and slabs poured against properly compacted engineered fill or competent alluvial soils may be computed as an equivalent fluid having a density of 260 pcf with a maximum earth pressure of 2,600 psf. When combining passive and friction for lateral resistance, the passive component should be reduced by one-third.

7.9 Concrete Slabs-on-Grade

7.9.1 Exterior concrete slabs-on-grade subject to vehicle loading should be designed in accordance with the recommendations in the *Preliminary Pavement Recommendations* section of this report (Section 7.10).

7.9.2 Unless specifically evaluated and designed by a qualified structural engineer, the slab-on-grade and ramp for the subterranean parking garage slab-on-grade should be a minimum of 5 inches of concrete reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions and positioned vertically near the slab midpoint. The concrete slab-on-grade and ramp may derive support directly on the undisturbed alluvial soils at the excavation bottom as well as compacted soils, if necessary. Any disturbed soils should be properly compacted for slab support. Soil placed and compacted for ramp and slab support should be moisture conditioned to near optimum moisture content and properly compacted to at least 95 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition) for ramp support.

7.9.3 Slabs-on-grade at the ground surface that may receive moisture-sensitive floor coverings or may be used to store moisture-sensitive materials should be underlain by a vapor retarder placed directly beneath the slab. The vapor retarder and acceptable permeance should be specified by the project architect or developer based on the type of floor covering that will be installed. The vapor retarder design should be consistent with the guidelines presented in Section 9.3 of the American Concrete Institute's (ACI) Guide for Concrete Slabs that Receive Moisture-Sensitive Flooring Materials (ACI 302.2R-06) and should be installed in general conformance with ASTM E 1643 (latest edition) and the manufacturer's recommendations. A minimum thickness of 15 mils extruded polyolefin plastic is recommended; vapor retarders which contain recycled content or woven materials are not recommended. The vapor retarder should have a permeance of less than 0.01 perms demonstrated by testing before and after mandatory conditioning. The vapor retarder should be installed in direct contact with the concrete slab with proper perimeter seal. If the California Green Building Code requirements apply to this project, the vapor retarder should be underlain by 4 inches of clean aggregate. It is important that the vapor retarder be puncture resistant since it will be in direct contact with angular gravel. As an alternative to the clean aggregate suggested in the Green Building Code, it is our opinion that the concrete slab-on-grade may be underlain by a vapor retarder over 4 inches of clean sand (sand equivalent greater than 30), since the sand will serve a capillary break and will minimize the potential for punctures and damage to the vapor barrier.

7.9.4 Due to the nature of the proposed design and intent for a subterranean level, waterproofing of subterranean walls and slabs is suggested. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.9.5 For seismic design purposes, a coefficient of friction of 0.4 may be utilized between concrete slabs and subgrade soils without a moisture barrier, and 0.15 for slabs underlain by a moisture barrier.

7.9.6 Exterior slabs for walkways or flatwork, not subject to traffic loads, should be at least 4 inches thick and reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions, positioned near the slab midpoint. Prior to construction of slabs, the upper 12 inches of subgrade should be moistened to optimum moisture content and properly compacted to at least 95 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition). Crack control joints should be spaced at intervals not greater than 10 feet and should be constructed using saw-cuts or other methods as soon as practical following concrete placement. Crack control joints should extend a minimum depth of one-fourth the slab thickness. The project structural engineer should design construction joints as necessary.

7.9.7 The recommendations of this report are intended to reduce the potential for cracking of slabs due to settlement. However, even with the incorporation of the recommendations presented herein, foundations, stucco walls, and slabs-on-grade may exhibit some cracking due to minor soil movement and/or concrete shrinkage. The occurrence of concrete shrinkage cracks is independent of the supporting soil characteristics. Their occurrence may be reduced and/or controlled by limiting the slump of the concrete, proper concrete placement and curing, and by the placement of crack control joints at periodic intervals, in particular, where re-entrant slab corners occur.

7.10 Preliminary Pavement Recommendations

7.10.1 Where new paving is to be placed, it is recommended that all existing fill and soft or unsuitable alluvial materials be excavated and properly recompacted for paving support. The client should be aware that excavation and compaction of all existing artificial fill and soft alluvium in the area of new paving is not required; however, paving constructed over existing unsuitable material may experience increased settlement and/or cracking, and may therefore have a shorter design life and increased maintenance costs. As a minimum, the upper 12 inches of paving subgrade should be scarified, moisture conditioned to near optimum moisture content, and properly compacted to at least 95 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition).

7.10.2 The following pavement sections are based on an assumed R-Value of 35. Once site grading activities are complete an R-Value should be obtained by laboratory testing to confirm the properties of the soils serving as paving subgrade, prior to placing pavement.

7.10.3 The Traffic Indices listed below are estimates. Geocon does not practice in the field of traffic engineering. The actual Traffic Index for each area should be determined by the project civil engineer. If pavement sections for Traffic Indices other than those listed below are required, Geocon should be contacted to provide additional recommendations. Pavement thicknesses were determined following procedures outlined in the *California Highway Design Manual* (Caltrans). It is anticipated that the majority of traffic will consist of automobile and large truck traffic.

PRELIMINARY PAVEMENT DESIGN SECTIONS

Location	Estimated Traffic Index (TI)	Asphalt Concrete (inches)	Class 2 Aggregate Base (inches)
Automobile Parking And Driveways	4.0	3.0	4.0
Trash Truck & Fire Lanes	7.0	4.0	9.0

7.10.4 Asphalt concrete should conform to Section 203-6 of the "*Standard Specifications for Public Works Construction"* (Green Book). Class 2 aggregate base materials should conform to Section 26-1.02A of the "*Standard Specifications of the State of California, Department of Transportation"* (Caltrans). The use of Crushed Miscellaneous Base in lieu of Class 2 aggregate base is acceptable. Crushed Miscellaneous Base should conform to Section 200-2.4 of the "*Standard Specifications for Public Works Construction"* (Green Book).

7.10.5 Unless specifically designed and evaluated by the project structural engineer, where exterior concrete paving will be utilized for support of vehicles, it is recommended that the concrete be a minimum of 6 inches thick and reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions. Concrete paving supporting vehicular traffic should be underlain by a minimum of 4 inches of aggregate base and a properly compacted subgrade. The subgrade and base material should be compacted to 95 percent relative compaction as determined by ASTM Test Method D 1557 (latest edition).

7.10.6 The performance of pavements is highly dependent upon providing positive surface drainage away from the edge of pavements. Ponding of water on or adjacent to the pavement will likely result in saturation of the subgrade materials and subsequent cracking, subsidence and pavement distress. If planters are planned adjacent to paving, it is recommended that the perimeter curb be extended at least 12 inches below the bottom of the aggregate base to minimize the introduction of water beneath the paving.

7.11 Retaining Wall Design

7.11.1 The recommendations presented below are generally applicable to the design of rigid concrete or masonry retaining walls having a maximum height of 12 feet. In the event that walls significantly higher than 12 feet are planned, Geocon should be contacted for additional recommendations.

7.11.2 Retaining wall foundations may be designed in accordance with the recommendations provided in the *Foundation Design* section of this report (see Section 7.5).

7.11.3 Retaining walls with a level backfill surface that are not restrained at the top should be designed utilizing a triangular distribution of pressure (active pressure) of 35 pcf.

7.11.4 Restrained walls are those that are not allowed to rotate more than 0.001H (where H equals the height of the retaining portion of the wall in feet) at the top of the wall. Where walls are restrained from movement at the top, walls may be designed utilizing a triangular distribution of pressure (at-rest pressure) of 60 pcf.

7.11.5 The wall pressures provided above assume that the proposed retaining walls will support relatively undisturbed alluvial soils. If sloping techniques are to be utilized for construction of proposed walls, which would result in a wedge of engineered fill behind the retaining walls, revised earth pressures may be required. This should be evaluated once the use of sloping measures is established and once the geotechnical characteristics of the engineered backfill soils can be further evaluated.

7.11.6 The wall pressures provided above assume that the retaining wall will be properly drained preventing the buildup of hydrostatic pressure. If retaining wall drainage is not implemented, the equivalent fluid pressure to be used in design of undrained walls is 90 pcf. The value includes hydrostatic pressures plus buoyant lateral earth pressures.

7.11.7 Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent structures and should be designed for each condition as the project progresses.

7.11.8 It is recommended that line-load surcharges from adjacent wall footings, use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.20 \times \left(\frac{z}{H}\right)}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.28 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

where x is the distance from the face of the excavation or wall to the vertical line-load, H is the distance from the bottom of the footing to the bottom of excavation or wall, z is the depth at which the horizontal pressure is desired, Q_L is the vertical line-load and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.11.9 It is recommended that vertical point-loads, from construction equipment outriggers or adjacent building columns use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.28 \times \left(\frac{z}{H}\right)^2}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.77 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)^2}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

then

$$\sigma'_H(z) = \sigma_H(z) cos^2(1.1\theta)$$

where x is the distance from the face of the excavation/wall to the vertical point-load, H is distance from the outrigger/bottom of column footing to the bottom of excavation, z is the depth at which the horizontal pressure is desired, Q_P is the vertical point-load, $\sigma_H(z)$ is the horizontal pressure at depth z, θ is the angle between a line perpendicular to the excavation/wall and a line from the point-load to location on the excavation/wall where the surcharge is being evaluated, and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.11.10 In addition to the recommended earth pressure, the upper 10 feet of the retaining wall adjacent to the street or driveway areas should be designed to resist a uniform lateral pressure of 100 psf, acting as a result of an assumed 300 psf surcharge behind the wall due to normal street traffic. If the traffic is kept back at least 10 feet from the wall, the traffic surcharge may be neglected.

7.11.11 Seismic lateral forces should be incorporated into the design as necessary, and recommendations for seismic lateral forces are presented below.

7.12 Dynamic (Seismic) Lateral Forces

7.12.1 The structural engineer should determine the seismic design category for the project in accordance with Section 1613 of the CBC. If the project possesses a seismic design category of D, E, or F, proposed retaining walls in excess of 6 feet in height should be designed with seismic lateral pressure (Section 1803.5.12 of the 2019 CBC).

7.12.2 A seismic load of 15 pcf should be used for design of walls that support more than 6 feet of backfill in accordance with Section 1803.5.12 of the 2019 CBC. The seismic load is applied as an equivalent fluid pressure along the height of the wall and the calculated loads result in a maximum load exerted at the base of the wall and zero at the top of the wall. This seismic load should be applied in addition to the active earth pressure. The earth pressure is based on half of two-thirds of PGA_M calculated from ASCE 7-16 Section 11.8.3.

7.13 Retaining Wall Drainage

7.13.1 Unless designed for hydrostatic pressures, retaining walls should be provided with a drainage system. At the base of the drain system, a subdrain covered with a minimum of 12 inches of gravel should be installed, and a compacted fill blanket or other seal placed at the surface (see Figure 5). The clean bottom and subdrain pipe, behind a retaining wall, should be observed by the Geotechnical Engineer (a representative of Geocon), prior to placement of gravel or compacting backfill.

7.13.2 As an alternative, a plastic drainage composite such as Miradrain or equivalent may be installed in continuous, 4-foot wide columns along the entire back face of the wall, at 8 feet on center. The top of these drainage composite columns should terminate approximately 18 inches below the ground surface, where either hardscape or a minimum of 18 inches of relatively cohesive material should be placed as a cap (see Figure 6). These vertical columns of drainage material would then be connected at the bottom of the wall to a collection panel or a 1-cubic-foot rock pocket drained by a 4-inch subdrain pipe.

7.13.3 Subdrainage pipes at the base of the retaining wall drainage system should outlet to an acceptable location via controlled drainage structures. Drainage should not be allowed to flow uncontrolled over descending slopes.

7.13.4 Moisture affecting below grade walls is one of the most common post-construction complaints. Poorly applied or omitted waterproofing can lead to efflorescence or standing water. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.14 Elevator Pit Design

7.14.1 The elevator pit slab and retaining wall should be designed by the project structural engineer. Elevator pit walls may be designed in accordance with the recommendations in the *Foundation Design* and *Retaining Wall Design* sections of this report (see Sections 7.5 and 7.11).

7.14.2 Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent foundations and should be designed for each condition as the project progresses.

7.14.3 If retaining wall drainage is to be provided, the drainage system should be designed in accordance with the *Retaining Wall Drainage* section of this report (see Section 7.13)

7.14.4 It is suggested that the exterior walls and slab be waterproofed to prevent excessive moisture inside of the elevator pit. Waterproofing design and installation is not the responsibility of the geotechnical engineer.

7.15 Elevator Piston

7.15.1 If a plunger-type elevator piston is installed for this project, a deep drilled excavation will be required. It is important to verify that the drilled excavation is not situated immediately adjacent to a foundation or shoring pile, or the drilled excavation could compromise the existing foundation support or pile support, especially if the drilling is performed subsequent to the foundation or pile construction. Cobble and boulders may be encountered during excavation. Additionally, some of the site soils have little to no cohesion and are prone to excessive caving. The contractor should be prepared for difficult drilling conditions.

7.15.2 Casing will be required since caving is expected in the drilled excavation, and the contractor should be prepared to use casing and should have it readily available at the commencement of drilling activities. Continuous observation of the drilling and installation of the elevator piston by the Geotechnical Engineer (a representative of Geocon West, Inc.) is required.

7.15.3 The annular space between the piston casing and drilled excavation wall should be filled with a minimum of 1½-sack slurry pumped from the bottom up. As an alternative, pea gravel may be utilized. The use of soil to backfill the annular space is not acceptable.

7.16 Temporary Excavations

7.16.1 Excavations on the order of 14 feet in height may be required for excavation and construction of the proposed subterranean level, including foundation depths. The excavations are expected to expose artificial fill and granular alluvial soils, which are be subject to caving. Vertical excavations up to 5 feet in height may be attempted where not surcharged; however, the contractor should be prepared for caving, sloughing, and raveling in open excavations. Due to the granular nature of soils and potential for caving, the contractor should also be prepared to form foundation excavations at the excavation bottom.

7.16.2 Vertical excavations greater than 5 feet or where surcharged by existing structures will require sloping or shoring measures in order to provide a stable excavation. Where sufficient space is available, temporary unsurcharged embankments could be sloped back at a uniform 1:1 slope gradient or flatter up to maximum height of 8 feet. A uniform slope does not have a vertical portion. Where space is limited, shoring measures will be required. *Shoring* data is provided in Section 7.17 of this report.

7.16.3 Where temporary construction slopes are utilized, the top of the slope should be barricaded to prevent vehicles and storage loads at the top of the slope within a horizontal distance equal to the height of the slope. If the temporary construction slopes are to be maintained during the rainy season, berms are suggested along the tops of the slopes where necessary to prevent runoff water from entering the excavation and eroding the slope faces. Geocon personnel should inspect the soils exposed in the cut slopes during excavation so that modifications of the slopes can be made if variations in the soil conditions occur. All excavations should be stabilized within 30 days of initial excavation.

7.17 Shoring – Soldier Pile Design and Installation

7.17.1 The following information on the design and installation of shoring is preliminary. Review of the final shoring plans and specifications should be made by this office prior to bidding or negotiating with a shoring contractor.

7.17.2 One method of shoring would consist of steel soldier piles, placed in drilled holes and backfilled with concrete. The steel soldier piles may also be installed utilizing high frequency vibration. Where maximum excavation heights are less than 12 feet the soldier piles are typically designed as cantilevers. Where excavations exceed 12 feet or are surcharged, soldier piles may require lateral bracing utilizing drilled tie-back anchors or raker braces to maintain an economical steel beam size and prevent excessive deflection. The size of the steel beam, the need for lateral bracing, and the acceptable shoring deflection should be determined by the project shoring engineer. Due to the presence of cobbles and boulders the installation of steel soldier piles utilizing high frequency vibration is expected to be difficult. It is recommended that the contractor bidding on shoring installation for this project perform their own test borings and vibratory soldier pile installation with the intended equipment to verify the presence and size of buried rock (cobbles and boulders) as well as the suitability of the proposed equipment for the safe and efficient installation of the soldier piles.

7.17.3 The design embedment of the shoring pile toes must be maintained during excavation activities. The toes of the perimeter shoring piles should be deepened to take into account any required excavations necessary for foundation excavations and/or adjacent drainage systems.

7.17.4 The proposed soldier piles may also be designed as permanent piles. The required pile depths, dimensions, and spacing should be determined and designed by the project structural and shoring engineers. All piles utilized for shoring can also be incorporated into a permanent retaining wall system (shotcrete wall) and should be designed in accordance with the earth pressure provided in the *Retaining Wall Design* section of this report (see Section 7.11).

7.17.5 Drilled cast-in-place soldier piles should be placed no closer than 3 diameters on center. The minimum diameter of the piles is 18 inches. Structural concrete should be used for the soldier piles below the excavation; lean-mix concrete may be employed above that level. As an alternative, lean-mix concrete may be used throughout the pile where the reinforcing consists of a wideflange section. The slurry must be of sufficient strength to impart the lateral bearing pressure developed by the wideflange section to the soil. For design purposes, an allowable passive value for the soils below the bottom plane of excavation may be assumed to be 260 psf per foot. Where piles are installed by vibration techniques, the passive pressure may be assumed to mobilize across a width equal to the two times the dimension of the beam flange. The allowable passive value may be doubled for isolated piles spaced a minimum of three times the pile diameter. To develop the full lateral value, provisions should be implemented to assure firm contact between the soldier piles and the undisturbed alluvium.

7.17.6 Groundwater was not encountered during site exploration. However, groundwater levels can fluctuate and may be different at the time of construction. It is not uncommon for groundwater or seepage conditions to develop where none previously existed. Therefore, the contractor should be prepared for groundwater during pile installation should the need arise. If more than 6 inches of water is present in the bottom of the excavation, a tremie is required to place the concrete into the bottom of the hole. A tremie should consist of a rigid, water-tight tube having a diameter of not less than 6 inches with a hopper at the top. The tube should be equipped with a device that will close the discharge end and prevent water from entering the tube while it is being charged with concrete. The tremie should be supported so as to permit free movement of the discharge end over the entire top surface of the work and to permit rapid lowering when necessary to retard or stop the flow of concrete. The discharge end should be closed at the start of the work to prevent water entering the tube and should be entirely sealed at all times, except when the concrete is being placed. The tremie tube should be kept full of concrete. The flow should be continuous until the work is completed, and the resulting concrete seal should be monolithic and homogeneous. The tip of the tremie tube should always be kept about 5 feet below the surface of the concrete and definite steps and safeguards should be taken to ensure that the tip of the tremie tube is never raised above the surface of the concrete.

7.17.7 A special concrete mix should be used for concrete to be placed below water. The design should provide for concrete with an unconfined compressive strength pounds per square inch (psi) of 1,000 psi over the initial job specification. An admixture that reduces the problem of segregation of paste/aggregates and dilution of paste should be included. The slump should be commensurate to any research report for the admixture, provided that it should also be the minimum for a reasonable consistency for placing when water is present.

7.17.8 Please be aware that the use of hollow-stem auger drilling equipment utilized for this investigation does not allow for the identification of the size of rocks being encountered or the visual observation of caving conditions since the drilling method is a small diameter cased excavation. It is recommended that the contractor bidding on excavation and shoring installation for this project perform their own test borings with the intended drilling equipment to verify the presence and size of buried rock (cobbles and boulders), potential for caving, as well as the suitability of the proposed drilling equipment for the safe and efficient installation of the shoring system.

7.17.9 Cobbles are anticipated to be encountered and excessive caving is expected to occur, and the contractor should have casing available prior to commencement of drilling activities. When casing is used, extreme care should be employed so that the pile is not pulled apart as the casing is withdrawn. At no time should the distance between the surface of the concrete and the bottom of the casing be less than 5 feet. As an alternative, piles may be vibrated into place; however, there is always a risk that excessive vibrations in sandy soils could induce settlements and distress to adjacent offsite improvements. Continuous observation of the drilling and pouring of the piles by the Geotechnical Engineer (a representative of Geocon West, Inc.), is required.

7.17.10 If a vibratory method of solider pile installation is utilized, predrilling may be performed prior to installation of the steel beams. If predrilling is performed, it is recommended that the bore diameter be at least 2 inches smaller than the largest dimension of the pile to prevent excessive loss in the frictional component of the pile capacity. Predrilling should not be conducted below the proposed excavation bottom.

7.17.11 If a vibratory method is utilized, the owner should be aware of the potential risks associated with vibratory efforts, which typically involve inducing settlement within the vicinity of the pile which could result in a potential for damage to existing improvements in the area.

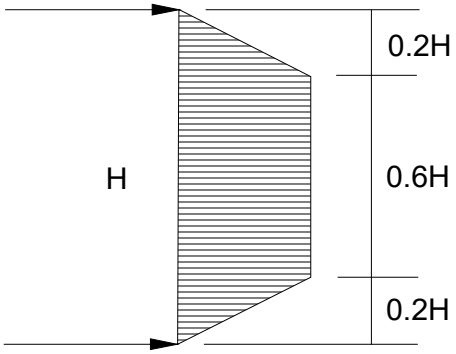
7.17.12 The level of vibration that results from the installation of the piles should not exceed a threshold where occupants of nearby structures are disturbed, despite higher vibration tolerances that a building may endure without deformation or damage. The main parameter used for vibration assessment is peak particle velocity in units of inch per second (in/sec). The acceptable range of peak particle velocity should be evaluated based on the age and condition of adjacent structures, as well as the tolerance of human response to vibration.

7.17.13 Based on Table 19 of the *Transportation and Construction Induced Vibration Guidance Manual* (Caltrans 2020), a continuous source of vibrations (ex. vibratory pile driving) which generates a maximum peak particle velocity of 0.5 in/sec is considered tolerable for modern industrial/commercial buildings and new residential structures. The Client should be aware that a lower value may be necessary if older or fragile structures are in the immediate vicinity of the site.

7.17.14 Vibrations should be monitored and record with seismographs during pile installation to detect the magnitude of vibration and oscillation experienced by adjacent structures. If the vibrations exceed the acceptable range during installation, the shoring contractor should modify the installation procedure to reduce the values to within the acceptable range. Vibration monitoring is not the responsibility of the Geotechnical Engineer.

7.17.15 Geocon does not practice in the field of vibration monitoring. If construction techniques will be implemented, it is recommended that qualified consultant be retained to provide site specific recommendations for vibration thresholds and monitoring.

7.17.16 The frictional resistance between the soldier piles and retained soil may be used to resist the vertical component of the load. The coefficient of friction may be taken as 0.4 based on uniform contact between the steel beam and lean-mix concrete and retained earth. The portion of soldier piles below the plane of excavation may also be employed to resist the downward loads. The downward capacity may be determined using a frictional resistance of 500 psf per foot.



7.17.17 Due to the nature of the site soils, it is expected that continuous lagging between soldier piles will be required. However, it is recommended that the exposed soils be observed by the Geotechnical Engineer (a representative of Geocon West, Inc.), to verify the presence of any competent, cohesive soils and the areas where lagging may be omitted.

7.17.18 The time between lagging excavation and lagging placement should be as short as possible soldier piles should be designed for the full-anticipated pressures. Due to arching in the soils, the pressure on the lagging will be less. It is recommended that the lagging be designed for the full design pressure but be limited to a maximum of 400 psf.

7.17.19 For the design of unbraced shoring, it is recommended that an equivalent fluid pressure be utilized for design. A trapezoidal distribution of lateral earth pressure may be used where shoring will be restrained by bracing or tie backs. The recommended active and trapezoidal pressure are provided in the following table. A diagram depicting the trapezoidal pressure distribution of lateral earth pressure is provided below the table.

HEIGHT OF SHORING (FEET)	**EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot) (ACTIVE PRESSURE)**	**EQUIVALENT FLUID PRESSURE Trapezoidal (Where H is the height of the shoring in feet)**
Up to 14	28	18H

Trapezoidal Distribution of Pressure

7.17.20 It is very important to note that active pressures can only be achieved when movement in the soil (earth wall) occurs. If movement in the soil is not acceptable, such as adjacent to an existing structure, or the pile is restrained from movement by bracing or a tie back anchor, an at-rest pressure of 50 pcf should be considered for design purposes.

7.17.21 Where a combination of sloped embankment and shoring is utilized, the pressure will be greater and must be determined for each combination. Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic, or adjacent structures and must be determined for each combination.

7.17.22 It is recommended that line-load surcharges from adjacent wall footings, use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.20 \times \left(\frac{z}{H}\right)}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.28 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

where x is the distance from the face of the excavation or wall to the vertical line-load, H is the distance from the bottom of the footing to the bottom of excavation or wall, z is the depth at which the horizontal pressure is desired, Q_L is the vertical line-load and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.17.23 It is recommended that vertical point-loads, from construction equipment outriggers or adjacent building columns use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.28 \times \left(\frac{z}{H}\right)^2}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.77 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)^2}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

then

$$\sigma'_H(z) = \sigma_H(z) cos^2(1.1\theta)$$

where x is the distance from the face of the excavation/wall to the vertical point-load, H is distance from the outrigger/bottom of column footing to the bottom of excavation, z is the depth at which the horizontal pressure is desired, Q_P is the vertical point-load, $\sigma_H(z)$ is the horizontal pressure at depth z, θ is the angle between a line perpendicular to the excavation/wall and a line from the point-load to location on the excavation/wall where the surcharge is being evaluated, and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.17.24 In addition to the recommended earth pressure, the upper 10 feet of the shoring adjacent to the street or driveway areas should be designed to resist a uniform lateral pressure of 100 psf, acting as a result of an assumed 300 psf surcharge behind the shoring due to normal street traffic. If the traffic is kept back at least 10 feet from the shoring, the traffic surcharge may be neglected.

7.17.25 It is difficult to accurately predict the amount of deflection of a shored embankment. It should be realized that some deflection will occur. It is recommended that the deflection be minimized to prevent damage to existing structures and adjacent improvements. Where public rights-of-way are present or adjacent offsite structures do not surcharge the shoring excavation, the shoring deflection should be limited to less than 1 inch at the top of the shored embankment. Where offsite structures are within the shoring surcharge area it is recommended that the beam deflection be limited to less than ½ inch at the elevation of the adjacent offsite foundation, and no deflection at all if deflections will damage existing structures. The allowable deflection is dependent on many factors, such as the presence of structures and utilities near the top of the embankment, and will be assessed and designed by the project shoring engineer.

7.17.26 Because of the depth of the excavation, some means of monitoring the performance of the shoring system is suggested. The monitoring should consist of periodic surveying of the lateral and vertical locations of the tops of all soldier piles and the lateral movement along the entire lengths of selected soldier piles.

7.17.27 Due to the depth of the excavation and proximity to adjacent structures, it is suggested that prior to excavation the existing improvements be inspected, and their present condition be documented. For documentation purposes, photographs should be taken of preconstruction distress conditions and level surveys of adjacent grade and pavement should be considered. During excavation activities, the adjacent structures and pavement should be periodically inspected for signs of distress. In the event that distress or settlement is observed, an investigation should be performed, and corrective measures taken so that continued or worsened distress or settlement is mitigated. Documentation and monitoring of the offsite structures and improvements is not the responsibility of the geotechnical engineer.

7.18 Temporary Tie-Back Anchors

7.18.1 Temporary tie-back anchors may be used with the solider pile wall system to resist lateral loads. Post-grouted friction anchors are recommended. For design purposes, it may be assumed that the active wedge adjacent to the shoring is defined by a plane drawn 35 degrees with the vertical through the bottom plane of the excavation. Friction anchors should extend a minimum of 20 feet beyond the potentially active wedge and to greater lengths if necessary to develop the desired capacities. The locations and depths of all offsite utilities should be thoroughly checked and incorporated into the drilling angle design for the tie-back anchors.

7.18.2 The capacities of the anchors should be determined by testing of the initial anchors as outlined in a following section. Only the frictional resistance developed beyond the active wedge would be effective in resisting lateral loads. Anchors should be placed at least 6 feet on center to be considered isolated. For preliminary design purposes, it is estimated that drilled friction anchors constructed without utilizing post-grouting techniques will develop average skin frictions as follows:

- 7 feet below the top of the excavation – 950 pounds per square foot

7.18.3 Depending on the techniques utilized, and the experience of the contractor performing the installation, a maximum allowable friction capacity of 3.0 kips per linear foot for post-grouted anchors (for a minimum 20-foot length beyond the active wedge) may be assumed for design purposes. Only the frictional resistance developed beyond the active wedge should be utilized in resisting lateral loads. Higher capacities may be possible but must be verified by testing.

7.19 Anchor Installation

7.19.1 Tie-back anchors are typically installed between 20 and 40 degrees below the horizontal; however, occasionally alternative angles are necessary to avoid existing improvements and utilities. The locations and depths of all offsite utilities should be thoroughly checked prior to design and installation of the tie-back anchors. Caving of the anchor shafts, particularly within sand and gravel deposits or seepage zones, should be anticipated during installation and provisions should be implemented in order to minimize such caving. It is suggested that hollow-stem auger drilling equipment be used to install the anchors. The anchor shafts should be filled with concrete by pumping from the tip out, and the concrete should extend from the tip of the anchor to the active wedge. In order to minimize the chances of caving, it is recommended that the portion of the anchor shaft within the active wedge be backfilled with sand before testing the anchor. This portion of the shaft should be filled tightly and flush with the face of the excavation. The sand backfill should be placed by pumping; the sand may contain a small amount of cement to facilitate pumping.

7.20 Anchor Testing
