7.20.1 All of the anchors should be tested to at least 150 percent of design load. The total deflection during this test should not exceed 12 inches. The rate of creep under the 150 percent test load should not exceed 0.1 inch over a 15-minute period in order for the anchor to be approved for the design loading.

7.20.2 At least 10 percent of the anchors should be selected for "quick" 200 percent tests and three additional anchors should be selected for 24-hour 200 percent tests. The purpose of the 200 percent tests is to verify the friction value assumed in design. The anchors should be tested to develop twice the assumed friction value. These tests should be performed prior to installation of additional tiebacks. Where satisfactory tests are not achieved on the initial anchors, the anchor diameter and/or length should be increased until satisfactory test results are obtained.

7.20.3 The total deflection during the 24-hour 200 percent test should not exceed 12 inches. During the 24-hour tests, the anchor deflection should not exceed 0.75 inches measured after the 200 percent test load is applied.

7.20.4 For the "quick" 200 percent tests, the 200 percent test load should be maintained for 30 minutes. The total deflection of the anchor during the 200 percent quick tests should not exceed 12 inches; the deflection after the 200 percent load has been applied should not exceed 0.25 inch during the 30-minute period.

7.20.5 After a satisfactory test, each anchor should be locked-off at the design load. This should be verified by rechecking the load in the anchor. The load should be within 10 percent of the design load. A representative of this firm should observe the installation and testing of the anchors.

7.21 Internal Bracing

7.21.1 Rakers may be utilized to brace the soldier piles in lieu of tieback anchors. The raker bracing could be supported laterally by temporary concrete footings (deadmen) or by the permanent, interior footings. For design of such temporary footings or deadmen, poured with the bearing surface normal to rakers inclined at 45 degrees, a bearing value of 1,500 psf may be used, provided the shallowest point of the footing is at least one foot below the lowest adjacent grade. The structural engineer should review the shoring plans to determine if raker footings conflict with the structural foundation system. The client should be aware that the utilization of rakers could significantly impact the construction schedule due to their intrusion into the construction site and potential interference with equipment.

7.22 Stormwater Infiltration

7.22.1 During the May 20, 2022 site exploration, boring B4 was utilized to perform percolation testing. The boring was advanced and then backfilled to the depth listed in the table below. Slotted casing was placed in the boring, and the annular space between the casing and excavation was filled with gravel. The boring was then filled with water to pre-saturate the soils. The casing was refilled with water and percolation test readings were performed after repeated flooding of the cased excavation. Based on the test results, the measured infiltration rate and design infiltration rate, for the earth materials encountered, are provided in the following table. These values have been calculated in accordance with the Small Diameter Boring Infiltration Test Procedure in the County of Los Angeles Department of Public Works GMED *Guidelines for Geotechnical Investigation and Reporting, Low Impact Development Stormwater Infiltration* (June 2021). Percolation test field data and calculation of the measured infiltration rate and design infiltration rate are provided on Figure 7.

Boring	Soil Type	Infiltration Depth (ft)	Measured Infiltration Rate (in / hour)	Design Infiltration Rate (in / hour)
B4	SM / SP	30 – 35	11.20	3.73

7.22.2 Based on the test method utilized (Small Diameter Boring), the reduction factor RF_t may be taken as 1.0 in the infiltration system design. Based on the number of tests performed and consistency of the soils throughout the site, it is suggested that the reduction factor RF_v be taken as 1.0. In addition, provided proper maintenance is performed to minimize long-term siltation and plugging, the reduction factor RF_s may be taken as 1.0. Additional reduction factors may be required and should be applied by the engineer in responsible charge of the design of the stormwater infiltration system and based on applicable guidelines.

7.22.3 The results of the percolation testing indicate that the soils at depths in the above table are conducive to infiltration. It is our opinion that the soil zone encountered at the depth and location as listed in the table above are suitable for infiltration of stormwater.

7.22.4 It is our further opinion that infiltration of stormwater and will not induce excessive hydro-consolidation (see Figures B10 through B28), will not create a perched groundwater condition, will not affect soil structure interaction of existing or proposed foundations due to expansive soils, will not saturate soils supported by existing or proposed retaining walls, and will not increase the potential for liquefaction. Resulting settlements are anticipated to be less than ¼ inch, if any.

7.22.5 The infiltration system must be located such that the closest distance between an adjacent foundation is at least 15 feet in all directions from the zone of saturation. The zone of saturation may be assumed to project downward from the discharge of the infiltration facility at a gradient of 1:1. Additional property line or foundation setbacks may be required by the governing jurisdiction and should be incorporated into the stormwater infiltration system design as necessary.

7.22.6 Where the 15-foot horizontal setback cannot be maintained between the infiltration system and an adjacent footing, and the infiltration system penetrates below the foundation influence line, the proposed stormwater infiltration system must be designed to resist the surcharge from the adjacent foundation. The foundation surcharge line may be assumed to project down away from the bottom of the foundation at a 1:1 gradient. The stormwater infiltration system must still be sufficiently deep to maintain the 15-foot vertical offset between the bottom of the footing and the zone of saturation.

7.22.7 Subsequent to the placement of the infiltration system, it is acceptable to backfill the resulting void space between the excavation sidewalls and the infiltration system with minimum two-sack slurry provided the slurry is not placed in the infiltration zone. It is recommended that pea gravel be utilized adjacent to the infiltration zone so communication of water to the soil is not hindered.

7.22.8 Due to the preliminary nature of the project at this time, the type of stormwater infiltration system and location of the stormwater infiltration systems has not yet been determined. The design drawings should be reviewed and approved by the Geotechnical Engineer. The installation of the stormwater infiltration system should be observed and approved by the Geotechnical Engineer (a representative of Geocon).

7.23 Surface Drainage

7.23.1 Proper surface drainage is critical to the future performance of the project. Uncontrolled infiltration of irrigation excess and storm runoff into the soils can adversely affect the performance of the planned improvements. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change in the original designed engineering properties. Proper drainage should be maintained at all times.

7.23.2 All site drainage should be collected and controlled in non-erosive drainage devices. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. The site should be graded and maintained such that surface drainage is directed away from structures in accordance with 2019 CBC 1804.4 or other applicable standards. In addition, drainage should not be allowed to flow uncontrolled over any descending slope. Discharge from downspouts, roof drains and scuppers are not recommended onto unprotected soils within 5 feet of the building perimeter. Planters which are located adjacent to foundations should be sealed to prevent moisture intrusion into the soils providing foundation support. Landscape irrigation is not recommended within 5 feet of the building perimeter footings except when enclosed in protected planters.

7.23.3 Positive site drainage should be provided away from structures, pavement, and the tops of slopes to swales or other controlled drainage structures. The building pad and pavement areas should be fine graded such that water is not allowed to pond.

7.23.4 Landscaping planters immediately adjacent to paved areas are not recommended due to the potential for surface or irrigation water to infiltrate the pavement's subgrade and base course. Either a subdrain, which collects excess irrigation water and transmits it to drainage structures, or an impervious above-grade planter boxes should be used. In addition, where landscaping is planned adjacent to the pavement, it is recommended that consideration be given to providing a cutoff wall along the edge of the pavement that extends at least 12 inches below the base material.

7.24 Plan Review

7.24.1 Grading, foundation, and shoring plans should be reviewed by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to finalization to verify that the plans have been prepared in substantial conformance with the recommendations of this report and to provide additional analyses or recommendations.

LIMITATIONS AND UNIFORMITY OF CONDITIONS

1. The recommendations of this report pertain only to the site investigated and are based upon the assumption that the soil conditions do not deviate from those disclosed in the investigation. If any variations or undesirable conditions are encountered during construction, or if the proposed construction will differ from that anticipated herein, Geocon West, Inc. should be notified so that supplemental recommendations can be given. The evaluation or identification of the potential presence of hazardous or corrosive materials was not part of the scope of services provided by Geocon West, Inc.

2. This report is issued with the understanding that it is the responsibility of the owner, or of his representative, to ensure that the information and recommendations contained herein are brought to the attention of the architect and engineer for the project and incorporated into the plans, and the necessary steps are taken to see that the contractor and subcontractors carry out such recommendations in the field.

3. The findings of this report are valid as of the date of this report. However, changes in the conditions of a property can occur with the passage of time, whether they are due to natural processes or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, this report is subject to review and should not be relied upon after a period of three years.

4. The firm that performed the geotechnical investigation for the project should be retained to provide testing and observation services during construction to provide continuity of geotechnical interpretation and to check that the recommendations presented for geotechnical aspects of site development are incorporated during site grading, construction of improvements, and excavation of foundations. If another geotechnical firm is selected to perform the testing and observation services during construction operations, that firm should prepare a letter indicating their intent to assume the responsibilities of project geotechnical engineer of record. A copy of the letter should be provided to the regulatory agency for their records. In addition, that firm should provide revised recommendations concerning the geotechnical aspects of the proposed development, or a written acknowledgement of their concurrence with the recommendations presented in our report. They should also perform additional analyses deemed necessary to assume the role of Geotechnical Engineer of Record.

APPENDIX A

APPENDIX A

FIELD INVESTIGATION

The site was explored on May 20, 2022 by excavating five 8-inch diameter borings to depths ranging from approximately 30½ to 45½ feet below the existing ground surface using a truck-mounted, hollow-stem auger drilling machine. Representative and relatively undisturbed samples were obtained by driving a 3 inch, O. D., California Modified Sampler into the "undisturbed" soil mass with blows from a 140-pound auto-hammer falling 30 inches. The California Modified Sampler was equipped with 1-inch high by 2⅜-inch diameter brass sampler rings to facilitate soil removal and testing. Bulk samples were also obtained.

The soil conditions encountered in the borings were visually examined, classified and logged in general accordance with the Unified Soil Classification System (USCS). The logs of the borings are presented on Figures A1 through A5. The logs depict the soil and geologic conditions encountered and the depth at which samples were obtained. The logs also include our interpretation of the conditions between sampling intervals. Therefore, the logs contain both observed and interpreted data. We determined the lines designating the interface between soil materials on the logs using visual observations, penetration rates, excavation characteristics and other factors. The transition between materials may be abrupt or gradual. Where applicable, the logs were revised based on subsequent laboratory testing. The locations of the borings are shown on Figure 2A.

APPENDIX B

APPENDIX B

LABORATORY TESTING

Laboratory tests were performed in accordance with generally accepted test methods of the "American Society for Testing and Materials (ASTM)", or other suggested procedures. Selected samples were tested for direct shear strength, consolidation, corrosivity, and in-place dry density and moisture content. The results of the laboratory tests are summarized in Figures B1 through B29. The in-place dry density and moisture content of the samples tested are presented on the boring logs, Appendix A.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Elite Holdings & Associates, LLC
233 East Huntington Drive
Arcadia, California 91006

Dear Ms. Dannatt:

CCI is pleased to submit our report describing the findings of the Phase I Environmental Site Assessment (ESA) for 233 East Huntington Drive, Arcadia, Los Angeles County, California. This Phase I ESA was prepared in general accordance with the United States Environmental Protection Agency (US EPA) 40 CFR Part 312, Standards and Practices for All Appropriate Inquiries (AAI) and the American Society of Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM Designation: E1527-13).

The purpose of the Phase I ESA was to identify, to the extent feasible, recognized environmental concerns in connection with the Property. This assessment included a Property reconnaissance, a survey of adjacent sites, interviews with informed persons, and reviews of regulatory agency records, an environmental database report, geologic and hydrogeologic resources, and historical information.

It has been our pleasure in providing this Phase I ESA for your review. Should you have any questions concerning the information contained in the following report, please feel free to contact the undersigned at (310) 373-0159.

Respectfully submitted,
Conservation Consulting International

David A. Jonas
Project Manager

1.0 EXECUTIVE SUMMARY

This Phase I Environmental Site Assessment (ESA) was completed by CCI at the request of Bank of the West for 233 East Huntington Drive, Arcadia, Los Angeles County, California (Property). The Property location is shown on Figure 1 - Property Location Map. The Phase I ESA was generally conducted according to the guidelines of ASTM Standard Practice of Environmental Site Assessments (E 1527-13) and the US EPA 40 CFR Part 312, Standards and Practices for All Appropriate Inquiries (AAI).

The purpose of the Phase I ESA was to identify, to the extent feasible, recognized environmental conditions in connection with the Property. This assessment included a Property reconnaissance, a survey of adjacent sites, interviews with informed persons, and reviews of regulatory agency records, an environmental database report, geologic and hydrogeologic resources, and historical information.

1.1 PROPERTY DESCRIPTION

The Property is approximately 1.34 acres in area and has been developed with one building approximately 6,670 square-feet in size. The wood-framed and brick building was constructed on the Property in approximately 1927. The building consists of a restaurant on the ground level with a small apartment on the second level. The apartment is currently being used for storage. The restaurant includes dining areas, a bar, restrooms, a kitchen, an employee locker room, and a small office. There is a storage enclosure adjacent to the east side of the building which includes a kitchen grease container, cleaning chemicals, and the municipal trash bin. There is also an in-ground grease trap located adjacent to the east side of the building. The building is located on the southeast portion of the Property. There are asphalt-paved parking areas on the southwest and north portions of the Property. One driveway off of Huntington Drive provides vehicular-access to the Property.

The Property has been occupied by The Derby Restaurant since approximately 1927. The general area surrounding the Property consists of hotels, restaurants, and retail businesses.

Address:	233 East Huntington Drive, Arcadia, Los Angeles County, California
Assessor's Parcel Numbers:	5773-009-070
Nature of Property Use:	Retail - Commercial - Restaurant
Number of Buildings:	One building
Date of Construction:	1927
Type of Construction:	Wood-frame and brick building
Property Size:	1.34 acres
Building Size:	6,670 square-feet
Current Occupants:	The Derby Restaurant

1.2 FINDINGS AND OPINIONS

The Property is occupied by The Derby Restaurant. The Derby Restaurant has occupied the Property since approximately 1927. One in-ground grease trap was observed on the Property. The grease trap is located adjacent to the east side of the building. Floor drains inside the kitchen area of the building connect to the grease trap. The grease trap discharges to the local municipal sewer system. The operation of the grease trap is not suspected of having adversely impacted the subsurface environment beneath the Property.

A gasoline station operated adjacent to the east of the Property between approximately 1938 and 1964. During this time period, there was a road (North 3rd Avenue) located between the Property and the former gasoline station site. The former gasoline station site is not reported as being a leaking underground storage tank (LUST) site. CCI did not find information which indicated that this site has adversely impacted the subsurface environment beneath the Property. Based on an expected southerly-southeasterly groundwater flow direction, the site is located in a cross-gradient groundwater flow direction of the Property.

Several commercial/industrial buildings were located adjacent to the west of the Property during the 1950s through 1970s. The westerly-adjacent site is currently occupied by an Embassy Suites hotel and associated parking lot. Historical city directories suggest potential former occupants of the westerly-adjacent sites included Arcadia City Refuse Service (1957 - 1966), Modern Insulation (1950), Nottingham M C Co. Chemical Toilets (1950), and Baker Septic Tank Co. (1950). Regulatory evidence was not found which would indicate that the subsurface environmental quality of the Property has been adversely impacted by former operations on the westerly-adjacent sites.

1.3 CONCLUSIONS

A *recognized environmental condition* (REC) refers to the presence or likely presence of any hazardous substances or petroleum products in, on, or at a Property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. The term REC is not intended to include "de minimis" conditions that do not present a threat to human health and/or the environment. This assessment did not reveal evidence of RECs in connection with the Property.

A *historical recognized environmental condition* (HREC) refers to a past release of any hazardous substances or petroleum products that has occurred in connection with the Property and has been addressed to the satisfaction of the applicable regulatory authority of meeting unrestricted residential use criteria established by a regulatory authority, without subjecting the Property to any required controls. This assessment did not reveal evidence of HRECs in connection with the Property.

A *controlled recognized environmental condition* (CREC) refers to a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls. This assessment did not reveal evidence of CRECs in connection with the Property.

1.4 RECOMMENDATIONS

This assessment has not revealed evidence of recognized environmental conditions or environmental issues in connection with the Property. Based on the results of this assessment, CCI does not recommend additional assessment at this time.

2.0 INTRODUCTION

Bank of the West engaged CCI to conduct a Phase I ESA of the Property located at 233 East Huntington Drive, Arcadia, Los Angeles County, California. This assessment was prepared in general accordance with ASTM Standard Practice of Environmental Site Assessments (E1527-13) and the US EPA 40 CFR Part 312, Standards and Practices for AAI. Any exceptions to, or deletions from, this scope of work are described in the report.

2.1 OBJECTIVE

The objective of this Phase I ESA was to perform an appropriate inquiry into the uses of the Property as outlined by the ASTM Standard Practice of Environmental Site Assessments (E1527-13) and the US EPA 40 CFR Part 312, Standards and Practices for AAI, and to identify, to extent feasible, *recognized environmental conditions* (RECs) in connection with the Property that potentially have and/or may cause an adverse environmental impact to the Property.

2.2 SCOPE OF SERVICES

The scope of work for this assessment was in general accordance with the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) and the US EPA 40 CFR Part 312, Standards and Practices for AAI. These methodologies are described as representing good commercial and customary practice for conducting an ESA for the purpose of identifying recognized environmental conditions. This assessment included a Property reconnaissance, a survey of adjacent sites, interviews with informed persons, a review of regulatory agency records, a review of an environmental database report, a review of geologic and hydrogeologic resources, and a review of historical resources such as aerial photographs, Sanborn Fire Insurance Maps, topographic maps, and city directories.

2.3 DEVIATIONS

Except for the limitations and exceptions discussed in Section 15.0, this Phase I ESA generally complies with the ASTM Standard 1527-13 and the US EPA 40 CFR Part 312, Standards and Practices for AAI.

2.4 ADDITIONAL SERVICES

No additional services beyond the scope of work of the ASTM Standard 1527-13 and the US EPA 40 CFR Part 312, Standards and Practices for AAI were conducted as part of this assessment.

2.5 USER RELIANCE

This report may be distributed and relied upon by Bank of the West, its successors and assigns. Reliance on the information and conclusions of this report by any other person or entity is not authorized without the written consent of CCI. This report is not a legal opinion and does not offer warranties or guarantees.

3.0 PROPERTY DESCRIPTION

3.1 LOCATION AND LEGAL DESCRIPTION

The Property is located at 233 East Huntington Drive, Arcadia, Los Angeles County, California, and is legally described by its assessor's parcel number (APN) 5773-009-070.

3.2 PROPERTY DESCRIPTION

The Property is approximately 1.34 acres in area and has been developed with one building approximately 6,670 square-feet in size. The wood-framed and brick building was constructed on the Property in approximately 1927. The building consists of a restaurant on the ground level with a small apartment on the second level. The apartment is currently being used for storage. The restaurant includes dining areas, a bar, restrooms, a kitchen, an employee locker room, and a small office. There is a storage enclosure adjacent to the east side of the building which includes a kitchen grease container, cleaning chemicals, and the municipal trash bin. There is also an in-ground grease trap located adjacent to the east side of the building. The building is located on the southeast portion of the Property. There are asphalt-paved parking areas on the southwest and north portions of the Property. One driveway off of Huntington Drive provides vehicular-access to the Property (Refer to Photographs 1 - 19, located in Appendix B - Property Photographs).

3.3 CURRENT PROPERTY USE

The Property is currently occupied by The Derby Restaurant. The Derby Restaurant has occupied the Property since approximately 1927.

3.4 CURRENT USE OF ADJOINING SITES

The Property is located adjacent to the north side of East Huntington Drive and to the east of the intersection of East Huntington Drive and 2nd Avenue. The general area surrounding the Property consists of hotels, restaurants, and retail businesses. The following sites are located adjacent to the Property:

North:	Hampton Inn
East:	Soup Plantation and Hampton Inn
South:	East Huntington Drive followed by a multi-tenant commercial/retail building
West:	Embassy Suites

3.5 PROPERTY UTILITIES

3.5.1 POTABLE WATER

Potable water is provided to the Property by the local municipal water supplier.

3.5.2 SEWAGE DISPOSAL

Sewage disposal is provided for the Property by the local municipal sewer service.

3.5.3 SOURCES OF HEATING AND COOLING

Sources of heating and cooling energy are provided to the Property by Southern California Edison (SCE) and Southern California Gas Company (SoCalGas).

3.6 PHYSICAL SETTINGS SECTION

3.6.1 SURFACE DESCRIPTION

The Property is relatively level. The general slope in the area of the Property is to the south-southeast. The Property lies approximately 483-feet above mean sea level. The nearest surface body of water is the Santa Anita Wash which is located approximately 500-feet to the northeast of the Property.

3.6.2 SOIL CONDITIONS

According to the environmental database Geocheck® - Physical Source Setting Section, the soil beneath the Property is described as Urban Land.

3.6.3 GROUNDWATER CONDITIONS

Based on Los Angeles County Department of Public Works (LACoDPW) groundwater wells in the area of the Property, the depth to groundwater beneath the Property is expected to be at least 200-feet below ground surface (bgs). Based on the local topography, the groundwater flow direction in the area of the Property is anticipated to be to the south-southeast.

4.0 PROPERTY RECONNAISSANCE

CCI performed a walking survey of the Property on September 13, 2019, accompanied by the manager of The Derby Restaurant. The Property was observed for conditions and land uses that may have an affect on the environmental quality of the Property. CCI observed the Property for evidence of facilities such as aboveground and underground storage tanks, electrical transformers, ponds, pits, sumps, waste storage containers, drums or any other facilities where hazardous materials could be stored, disposed of, or dispensed. CCI also observed the Property for evidence of surface staining, stressed vegetation, and chemical odors which may be of concern regarding adverse environmental impacts to the Property.

4.1 PROPERTY DESCRIPTION

The Property is approximately 1.34 acres in area and has been developed with one building approximately 6,670 square-feet in size. The wood-framed and brick building was constructed on the Property in approximately 1927. The building consists of a restaurant on the ground level with a small apartment on the second level. The apartment is currently being used for storage. The restaurant includes dining areas, a bar, restrooms, a kitchen, an employee locker room, and a small office. There is a storage enclosure adjacent to the east side of the building which includes a kitchen grease container, cleaning chemicals, and the municipal trash bin. There is also an in-ground grease trap located adjacent to the east side of the building. The building is located on the southeast portion of the Property. There are asphalt-paved parking areas on the southwest and north portions of the Property. One driveway off of Huntington Drive provides vehicular-access to the Property (Refer to Photographs 1 - 19, located in Appendix B - Property Photographs).

4.2 CURRENT PROPERTY USE

The Property is currently occupied by The Derby Restaurant. The Derby Restaurant has occupied the Property since approximately 1927.

4.3 HAZARDOUS MATERIALS

Hazardous materials, other than common cleaning chemicals, were not observed at the Property. The cleaning chemicals were stored within the enclosure located adjacent to the east side of the building.

4.4 UNDERGROUND STORAGE TANKS

CCI did not observe evidence of underground storage tanks (USTs) on the Property.

4.5 ABOVEGROUND STORAGE TANKS

CCI did not observe evidence of aboveground storage tanks (ASTs) on the Property.

4.6 SUMPS, CLARIFIERS, AND FLOOR DRAINS

One in-ground grease trap was observed on the Property. The grease trap is located adjacent to the east side of the building. Floor drains inside the kitchen area of the building connect to the grease trap. The grease trap discharges to the local municipal sewer system.

4.7 POLYCHLORINATED BIPHENYLS

Electrical transformers, hydraulic equipment, capacitors, fluorescent light fixtures and similar electrical equipment may contain polychlorinated biphenyls (PCBs) in the hydraulic fluids and/or dielectric insulation liquids present within the unit. The federal Toxic Substances Control Act (TSCA) generally prohibits the domestic manufacture of PCBs after 1979. However there is a potential for equipment manufactured and/or constructed before that date to contain PCBs and current regulations do not require PCB containing equipment to be removed from service.

One pad-mounted transformer is present on the Property. Based on the age of the transformer, it is considered possible that this transformer contains PCBs. However, SCE has indicated to CCI that their transformers in the area do not contain PCBs.

5.0 HISTORICAL REVIEW

The purpose of reviewing historical sources is to develop a history of the previous uses of the Property and surrounding areas in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the Property. Historical sources reviewed by CCI for this Phase I ESA included aerial photographs, street directories, Sanborn Fire Insurance maps, and topographic maps and are summarized in the following sections.

5.1 SUMMARY OF PROPERTY USE

The Property building appears to have been constructed originally in 1927. A restaurant has operated on the Property since approximately 1927. The Property appears to have consisted of undeveloped land prior to 1927. Between approximately 1952 and 1981, residential structures appeared to be developed on the north portion of the Property. Historical city directory listings indicated residential occupants at addresses on North 3rd Avenue between the 1950s and 1980s. North 3rd Avenue appears to have been the former road adjacent to the east of the Property. By 1989, this portion of the Property consisted of the current parking lot.

A gasoline station operated adjacent to the east of the Property between approximately 1938 and 1964. During this time period, there was a road (North 3rd Avenue) located between the Property and the former gasoline station site. The former gasoline station site is not reported as being a LUST site. CCI did not find information which indicated that this site has adversely impacted the subsurface environment beneath the Property. Based on an expected southerly-southeasterly groundwater flow direction, the site is located in a cross-gradient groundwater flow direction of the Property.

Several commercial/industrial buildings were located adjacent to the west of the Property during the 1950s through 1970s. The westerly-adjacent site is currently occupied by an Embassy Suites hotel and associated parking lot. Historical city directories suggest potential former occupants of the westerly-adjacent sites included Arcadia City Refuse Service (1957 - 1966), Modern Insulation (1950), Nottingham M C Co. Chemical Toilets (1950), and Baker Septic Tank Co. (1950). Regulatory evidence was not found which would indicate that the subsurface environmental quality of the Property has been adversely impacted by former operations on the westerly-adjacent sites.

5.2 AERIAL PHOTOGRAPH REVIEW

Historical aerial photographs of the Property were reviewed for the years 1928, 1938, 1952, 1954, 1964, 1972, 1979, 1981, 1989, 1994, 2002, 2005, 2009, 2012, and 2016. The following table summarizes the descriptions of the Property and the surrounding areas of the Property as observed in the aerial photographs:

AERIAL PHOTOGRAPHS		
Year	Source	Description
1928	FAIR	**Property:** Two structures appeared to be developed on the Property. The north portion of the Property appeared to be undeveloped.
		Surrounding Areas: Huntington Drive was located adjacent to the south of the Property. A dirt road (North 3rd Avenue) was located adjacent to the east of the Property. The surrounding areas of the Property consisted of undeveloped land, residential sites, commercial sites, railroad tracks, and the Santa Anita Wash.
1938	USDA	**Property:** Two structures appeared to be developed on the Property. The north portion of the Property appeared to be undeveloped.
		Surrounding Areas: Huntington Drive was located adjacent to the south of the Property. A dirt road (North 3rd Avenue) was located adjacent to the east of the Property. The surrounding areas of the Property consisted of undeveloped land, residential sites, commercial sites, railroad tracks, and the Santa Anita Wash. A gasoline station appeared to be developed adjacent to the east of the Property on the opposite side of the dirt road.
1952	USGS	**Property:** Two structures appeared to be developed on the south portion of the Property. Residential structures appeared to be developed on the north portion of the Property.
		Surrounding Areas: Huntington Drive was located adjacent to the south of the Property. A dirt road (North 3rd Avenue) was located adjacent to the east of the Property. The surrounding areas of the Property consisted of undeveloped land, residential sites, commercial sites, industrial sites, railroad tracks, and the Santa Anita Wash. A gasoline station appeared to be developed adjacent to the east of the Property on the opposite side of the dirt road.
1954	USDA	The Property and surrounding areas were developed similar to that observed in the 1952 aerial photograph.
1964	USGS	**Property:** The Property was developed with a building which appeared to fit the footprint of the current Property building. In addition, residential structures appeared to be developed on the north portion of the Property.
		Surrounding Areas: Huntington Drive was located adjacent to the south of the Property. A paved road (North 3rd Avenue) was located adjacent to the east of the Property. The surrounding areas of the Property consisted of residential sites, commercial sites, industrial sites, railroad tracks, and the Santa Anita Wash. A gasoline station appeared to be developed adjacent to the east of the Property on the opposite side of the paved road.
1972	EDR	**Property:** The Property was developed with a building which appeared to fit the footprint of the current Property building. In addition, residential structures appeared to be developed on the north portion of the Property.

		Surrounding Areas: Huntington Drive was located adjacent to the south of the Property. North 3rd Avenue was located adjacent to the east of the Property. The surrounding areas of the Property consisted of residential sites, commercial sites, industrial sites, railroad tracks, and the Santa Anita Wash. The gasoline station to the east of the Property on the opposite side of the paved road had been demolished.
1979	EDR	**Property:** The Property was developed with a building which fit the footprint of the current Property building. In addition, residential structures appeared to be developed on the north portion of the Property.
		Surrounding Areas: Huntington Drive was located adjacent to the south of the Property. North 3rd Avenue was located adjacent to the east of the Property. The surrounding areas of the Property consisted of undeveloped land, residential sites, commercial sites, railroad tracks, and the Santa Anita Wash. The structures adjacent to the west of the Property had been demolished.
1981	EDR	The Property and surrounding areas were developed similar to that observed in the 1979 aerial photograph.
1989	USDA	**Property:** The Property was developed with a building which fit the footprint of the current Property building. The residential structures on the north portion of the Property had been demolished. This area was now an asphalt-paved parking lot.
		Surrounding Areas: Huntington Drive was located adjacent to the south of the Property followed by the current multi-tenant retail building and railroad tracks. The current restaurant building was located adjacent to the east of the Property followed by undeveloped land. Hotels were developed on the surrounding areas to the north and west of the Property.
1994	USGS/DOQQ	**Property:** The Property was developed with a building which fit the footprint of the current Property building.
		Surrounding Areas: Huntington Drive was located adjacent to the south of the Property followed by the current multi-tenant retail building and railroad tracks. The current restaurant building was located adjacent to the east of the Property followed by the current restaurant and retail buildings. Hotels were developed on the surrounding areas to the north and west of the Property. The surrounding areas of the Property were developed similar to that observed during the site walk conducted for this Phase I ESA.
2002	USDA	The Property and surrounding areas were developed similar to that observed in the 1994 aerial photograph and similar to that observed during the site walk conducted for this Phase I ESA.
2005	USDA/NAIP	The Property and surrounding areas were developed similar to that observed in the 2002 aerial photograph and similar to that observed during the site walk conducted for this Phase I ESA.
2009	USDA/NAIP	The Property and surrounding areas were developed similar to that observed in the 2005 aerial photograph and similar to that observed during the site walk conducted for this Phase I ESA.
2012	USDA/NAIP	The Property and surrounding areas were developed similar to that observed in the 2009 aerial photograph and similar to that observed during the site walk conducted for this Phase I ESA.

2016	USDA/NAIP	The Property and surrounding areas were developed similar to that observed in the 2012 aerial photograph and similar to that observed during the site walk conducted for this Phase I ESA.

5.3 STREET DIRECTORY REVIEW

Historical business directories including city, cross reference, and telephone directories were reviewed as generated by Environmental Data Resources (EDR). The following table describes the listings for the Property and select adjacent sites of the Property:

CITY DIRECTORIES	
Year	Listing
1950	**Property:** The Derby Restaurant
	Adjacent East: Putman A E Serv Stn
1957	**Property:** The Derby Restaurant
	Adjacent East: Lowell & Stout Union Serv **Adjacent South:** Guy S Friendly Service, Santa Anita Auto Body
1960	**Property:** The Derby Restaurant
	Adjacent East: Union Oil Dealers and Lowell & Stout Union Serv **Adjacent South:** Santa Anita Auto Body
1966	**Property:** The Derby Restaurant
	Adjacent East: Arcadia Motors **Adjacent South:** Arcadia Muffler Service, Arcadia Towing,
1975	**Property:** The Derby Restaurant
	Adjacent South: Arcadia Muffler Service, Guy S Friendly Service, Santa Anita Auto Body
1980	**Property:** The Derby Restaurant
	Adjacent South: Arcadia Muffler Service, Santa Anita Auto Body
1985	**Property:** The Derby Restaurant
	Adjacent South: Arcadia Muffler Service, Santa Anita Auto Body
1995	**Property:** The Derby Restaurant
2006	**Property:** The Derby
2010	**Property:** Derby Restaurants Inc
2014	**Property:** Derby Restaurants Inc

5.4 SANBORN FIRE INSURANCE MAP REVIEW

Historical Sanborn Fire Insurance Maps were not found for the area of the Property.

5.5 TOPOGRAPHIC MAP REVIEW

Topographic maps were reviewed to document the prior uses of the Property and surrounding area. United States Geological Survey (USGS) produced maps were available for the years 1894, 1897, 1904, 1928, 1933, 1941, 1953, 1966, 1972, 1991, 1994, 1995, and 2012. The following table summarizes the descriptions of the Property as observed in the Topographic Maps:

TOPOGRAPHIC MAPS	
Year	Description
1894	The map did not identify structures on the Property.
1897	The map did not identify structures on the Property.
1904	The map did not identify structures on the Property.
1928	The map appeared to identify one structure on the Property.
1933	The Property was not in the mapped area.
1941	The map appeared to identify one structure on the Property.
1953	The map was color-shaded indicating urban development.
1966	The map was color-shaded indicating urban development.
1972	The map was color-shaded indicating urban development.
1991	The map was color-shaded indicating urban development.
1994	The map was color-shaded indicating urban development.
1995	The map did not identify structures on the Property.
2012	The map did not identify structures on the Property.

5.6 OTHER HISTORICAL DOCUMENTS

CCI requested the Arcadia Building Department (ABD) building permit records for the Property through a public records request submitted to the Arcadia City Clerk. A response to this public records request is pending. If information is found at this agency which changes the conclusions and/or recommendations of this Phase I ESA, CCI will prepare an addendum letter summarizing our findings.

5.7 PREVIOUS ENVIRONMENTAL REPORTS

Previous environmental reports were not found for the Property.

6.0 INTERVIEWS

6.1 INTERVIEWS WITH PAST AND PRESENT OWNERS/OCCUPANTS

CCI interviewed Mr. Dustin Nicolarsen, the site contact, for this Phase I ESA. According to Mr. Nicolarsen, The Derby Restaurant has occupied the Property since 1922. Mr. Nicolarsen indicated that a grease trap operates on the Property and that hazardous materials are not used on the Property. Mr. Nicolarsen was unaware of any environmental issues associated with the Property.

6.2 INTERVIEWS WITH ADJACENT SITE OWNERS/OCCUPANTS

CCI did not interview adjacent site owners/occupants for this Phase I ESA. The Property is currently developed. ASTM E1527-13 standards indicate that interviews of adjacent site owners/occupants are necessary when the subject site is abandoned or if there is evidence of unauthorized uses or uncontrolled access to the Property.

7.0 RECORDS REVIEW

7.1 ENVIRONMENTAL DATABASE REPORT

Environmental Data Resources (EDR) provided a list of sites within designated distances of the Property that are listed by regulatory agencies. EDR has also provided a map of these sites, which can be found in Appendix F - Environmental Database Report.

SUMMARY OF FEDERAL, STATE, AND TRIBAL DATABASE FINDINGS			
Regulatory Database	Minimum Search Distance	Property Listed	# of Sites Listed
Federal National Priority List (NPL)	1 mile	No	0
Federal Delisted NPL	1 mile	No	0
Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) List	½ mile	No	1
Federal CERCLIS No Further Remedial Action Planned (NFRAP)	½ mile	No	0
Federal Resource Conservation and Recovery Act (RCRA) Generators	¼ mile	No	9
RCRA NonGen/NLR	¼ mile	No	19
Federal RCRA Corrective Action Facilities (CORRACTS)	1 mile	No	0
Federal RCRA Treatment, Storage, and Disposal Facilities (TSD)	½ mile	No	0
Federal Institutional Control/Engineering Control Registry	½ mile	No	0
State and Tribal Leaking Underground Storage Tank (LUST) Sites	½ mile	No	5
State and Tribal Underground Storage Tank (UST) Sites	¼ mile	No	2
State and Tribal Aboveground Storage Tank (AST) Sites	¼ mile	No	0
CA FID UST	¼ mile	No	2
HIST UST	¼ mile	No	12
SWEEPS UST	¼ mile	No	8
CERS TANKS	¼ mile	No	2
State and Tribal Voluntary Cleanup Sites	½ mile	No	0
Brownfields Sites	½ mile	No	0
SLIC	½ mile	No	0
State and Tribal Landfill Sites	½ mile	No	0

WMUDS/SWAT	½ mile	No	1
AOCONCERN	1 mile	No	1
CERS HAZ WASTE	¼ mile	No	5
RESPONSE	1 mile	No	1
ENVIROSTOR	1 mile	No	4
CHMIRS	⅛ mile	No	1
FUD	1 mile	No	1
FINDS	⅛ mile	No	1
Cortese	½ mile	No	1
DRYCLEANERS	¼ mile	No	1
LA Co. Site Mitigation	⅛ mile	Yes	1
WDS	⅛ mile	No	1
CERS	⅛ mile	No	1
HIST Cal-Sites	½ mile	No	0
HIST CORTESE	½ mile	No	3
EDR MGP	1 mile	No	0
EDR Hist Auto	¼ mile	No	4
EDR Hist Cleaner	¼ mile	No	1
Federal Emergency Response Notification System (ERNS) List	⅛ mile	No	0
HAZNET	⅛ mile	No	0
EMI	⅛ mile	No	0

The Property is listed in the environmental database report as follows:

A1 Derby Restaurant
233 E Huntington Dr
Databases: LA Co. Site Mitigation
Summary: The Property is listed on the LA Co. Site Mitigation database which reports the abatement date as January 1, 1989.
Discussion: Additional information regarding this listing was not found.

The following sites are within ⅛ mile of the Property:

A2 Santa Anita Park
A3 LA Turf Club Incna Santa Anita
A4 Santa Anita Park
285 Huntington Drive

Databases: CHMIRS, WDS, FINDS, CERS
Distance/Direction from Property: This listing appears to be for 285 West Huntington Drive which is located at least 5,000-feet to the west-southwest of the Property.
Summary: The site is listed on the CHMIRS database for an incident reported on July 22, 1991. Additional details are not provided. The site is also listed on the CERS database which reports the description as Animal Wastewater Discharge. The database reports historical violations for the site.
Discussion: This listing appears to be for 285 West Huntington Drive which is located at least 5,000-feet to the west-southwest of the Property.

A5 City of Arcadia Redevelopment
313 E Huntington Dr
Databases: SWEEPS UST, LOS ANGELES CO. HMS
Distance/Direction from Property: 49-feet to the southeast of the Property
Summary: The site is listed on the SWEEPS UST database which reports the status as active. The site is also listed on the LOS ANGELES CO. HMS database which reports the facility and permit statuses as removed.
Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

A6 City of Arcadia Redevelopment
311 E Huntington Dr
Databases: SWEEPS UST, LOS ANGELES CO. HMS
Distance/Direction from Property: 64-feet to the north-northeast of the Property
Summary: The site is listed on the SWEEPS UST database which reports the status as active. The site is also listed on the LOS ANGELES CO. HMS database which reports the facility and permit statuses as removed.
Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

A7 City of Arcadia
250 Huntington Dr W
Databases: LUST, SWEEPS UST, HIST UST, FID UST, LOS ANGELES CO. HMS, CERS
Distance/Direction from Property: 78-feet to the south of the Property
Summary: The site is listed on the LUST database as being a leaking underground storage tank site. According to the database, the substance leaked was aviation, the media affected was soil, the status is completed - case closed, and the closure date was January 31, 2002. The site is also listed on the SWEEPS UST database which reports three active tanks on the site. The site is also listed on the HIST UST database as being a historical underground storage tank site. Additional details were not provided. The site is also listed on the FID UST database which reports the status as active. The site is also listed on the LOS ANGELES CO. HMS database which reports the facility and permit statuses as removed. The site is also listed on the CERS database which reports the description as Leaking Underground Storage Tank Cleanup Site.

Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

A8 Methodist Hospital of So Cal
300 Huntington Dr
Databases: RCRA-SQG
Distance/Direction from Property: 78-feet to the south-southeast of the Property
Summary: The site is listed on the RCRA database as being a small quantity generator of hazardous waste. The database does not report violations for the site.
Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

A9 Leslie's Pool Supplies
324 E Huntington Dr, Ste. B-4
Databases: RCRA NonGen/NLR
Distance/Direction from Property: 79-feet to the south-southeast of the Property
Summary: The site is listed on the RCRA database as being a non-generator/no longer regulated generator of hazardous waste. The database does not report violations for the site.
Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

A10 Cosmoprof Beauty
A11 Cosmoprof Supply
332 E Huntington Dr # B2
Databases: RCRA NonGen/NLR, CERS HAZ WASTE, HAZNET
Distance/Direction from Property: 80-feet to the south-southeast of the Property
Summary: The site is listed on the RCRA database as being a non-generator/no longer regulated generator of hazardous waste. The database does not report violations for the site. The site is also listed on the CERS HAZ WASTE database which reports the description as Hazardous Waste Generator. The site is also listed on the HAZNET database which reports hazardous wastes generated on the Property including other organic solids (2017), detergent waste chemicals (2016 and 2017), and off-specification, aged or surplus organics (2016 and 2017).
Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

A12 Lombardo Automotive Service
334 E Huntington
Databases: EDR Hist Auto
Distance/Direction from Property: 80-feet to the south-southeast of the Property
Summary: The site is listed on the EDR Hist Auto database which reports Lombardo Automotive Service on the site for the year 1985.
Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

A13 Lowell & Stout Union Service
301 E Huntington Dr
Databases: EDR Hist Auto
Distance/Direction from Property: 87-feet to the east-southeast of the Property
Summary: The site is listed on the EDR Hist Auto database which reports Lowell & Stout Union Service on the site for the year 1958 and Royal Union Service on the site for the year 1962.
Discussion: Based on the regulatory status of this site and the groundwater flow direction in the area of the Property, the environmental quality of the Property is not expected to have been impacted by this site.

B14 Dental Center of Arcadia
440 E Huntington Dr Ste 101
Databases: RCRA NonGen/NLR
Distance/Direction from Property: 391-feet to the east-southeast of the Property
Summary: The site is listed on the RCRA database as being a non-generator/no longer regulated generator of hazardous waste. The database does not report violations for the site.
Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

C15 City of Arcadia
C16 Kiewit Arcadia Yard
C17 Kiewit Pacific
C18 Arcadia Yard
301 E Santa Clara St
Databases: SWEEPS UST, FID UST, LOS ANGELES CO. HMS, LA Co. Site Mitigation, RCRA NonGen/NLR, FINDS, ECHO, HIST UST
Distance/Direction from Property: 435-feet to the north of the Property
Summary: The site is listed on the SWEEPS UST database which reports the status as active. The site is also listed on the FID UST database which reports the status as active. The site is also listed on the LOS ANGELES CO. HMS database which reports the facility status as removed. The site is also listed on the LA Co. Site Mitigation database which reports the abatement status as yes and the abatement date as July 1, 1988. The site is also listed on the RCRA database as being a non-generator/no longer regulated generator of hazardous waste. The database does not report violations for the site. The site is also listed on the HIST UST database which reports four tanks historically on the site.
Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

19 Extended Stay
420 E Santa Clara St
Databases: RCRA NonGen/NLR
Distance/Direction from Property: 446-feet to the north-northeast of the Property
Summary: The site is listed on the RCRA database as being a non-generator/no longer

regulated generator of hazardous waste. The database does not report violations for the site.
Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

D20 Carl's Flying A Service
159 E Huntington Dr
Databases: EDR Hist Auto
Distance/Direction from Property: 464-feet to the west-southwest of the Property
Summary: The site is listed on the EDR Hist Auto database which reports Bert's Associates Service (1955), Hern's Flying A Service (1958), E & E Flying A Service (1959 - 1960), King's Flying A Service (1962), and Carl's Flying A Service (1964) as historically occupying the site.
Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

D21 Best Garage & Service Station
170 E Huntington Dr
Databases: EDR Hist Auto
Distance/Direction from Property: 483-feet to the west-southwest of the Property
Summary: The site is listed on the EDR Hist Auto database which reports Best Garage & Service (1955), G's Service & Garage (1959), and Arcadia General Tire (1960) as historically occupying the site.
Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

B22 Arcadia Datsun
B23 Arcadia Nissan
333 E Huntington Dr
Databases: SWEEPS UST, LOS ANGELES CO. HMS, RCRA-SQG, FINDS, ECHO
Distance/Direction from Property: 557-feet to the east of the Property
Summary: The site is listed on the SWEEPS UST database which reports two tanks on the site. The site is also listed on the LOS ANGELES CO. HMS database which reports the facility and permit statuses as removed. The site is also listed on the RCRA database as being a small quantity generator of hazardous waste. The database does not report violations for the site.
Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

E24 Class A Coin Laundry
E25 Saloncentric Inc 6007
E26 Southwest Cleaners and Hand Laundry
411 E Huntington Dr A
Databases: EDR Hist Cleaner, RCRA NonGen / NLR, DRYCLEANERS
Distance/Direction from Property: 658-feet to the east of the Property
Summary: The site is listed on the EDR Hist Cleaner database which reports Southwest Cleaners (Drycleaning Plants, Except Rugs) on the site for the years 1995 and 1996, Royal

Cleaners (Drycleaning Plants, Except Rugs) on the site for the years 2004 - 2014, and Stanley Steemer (Carpet And Upholstery Cleaning on Customer Premises) on the site for the years 2010 - 2014. The site is also listed on the RCRA database as being a non-generator/no longer regulated generator of hazardous waste. The database does not report violations for the site. The site is also listed on the DRYCLEANERS database which indicated that perchloroethylene was used on the site.
Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

E27 Beyond Care Hospice Inc DBA Nightingale Hospice
411 E Huntington Dr Ste 212
Databases: RCRA NonGen / NLR
Distance/Direction from Property: 658-feet to the east of the Property
Summary: The site is listed on the RCRA database as being a non-generator/no longer regulated generator of hazardous waste. The database does not report violations for the site.
Discussion: Based on the regulatory status of this site, the environmental quality of the Property is not expected to have been impacted by this site.

CCI did not find evidence that the above-listed sites have impacted the environmental quality of the Property.

7.2 REGULATORY AGENCY REVIEW

CCI contacted the Los Angeles County Fire Department (LACoFD) with a request to review files for the Property. According to the agency, information for the Property address was not found.

CCI requested the Arcadia Fire Department (AFD) records for the Property through a public records request submitted to the Arcadia City Clerk. A response to this public records request is pending. If information is found at this agency which changes the conclusions and/or recommendations of this Phase I ESA, CCI will prepare an addendum letter summarizing our findings.

CCI contacted the Los Angeles County Sanitation District (LACoSD) with a request to review files for the Property. According to the agency, information for the Property address was not found.

CCI reviewed the Regional Water Quality Control Board (RWQCB) website for information regarding the Property on the GeoTracker database. According to the RWQCB website, information was not found for the Property address.

CCI reviewed the Department of Toxic Substances Control (DTSC) website for information regarding the Property on the EnviroStor database. According to the DTSC website, information was not found for the Property address.

CCI reviewed the South Coast Air Quality Management District (SCAQMD) website for information regarding the Property that pertains to permits to operate and/or violations. According to the SCAQMD website, information was available for the Property address. According to the information reviewed, there is an active Charbroiler - Natural Gas permit and an inactive Charbroiler - Natural Gas permit for The Derby Restaurant.

CCI reviewed the LACoDPW website for available files for the Property. According to the website, records (related to industrial waste/underground storage tanks/stormwater) were not found for the Property address.

CCI reviewed the California Division of Oil, Gas, and Geothermal Resources (DOGG) website for information regarding oils wells on and in the vicinity of the Property. According to the website, there are no current or former oils wells on or adjacent to the Property.

CCI requested the ABD building permit records for the Property through a public records request submitted to the Arcadia City Clerk. A response to this public records request is pending. If information is found at this agency which changes the conclusions and/or recommendations of this Phase I ESA, CCI will prepare an addendum letter summarizing our findings.

7.3 VAPOR ENCROACHMENT SCREENING

Based on the review of the environmental database report and the RWQCB Geotracker database website, CCI did not identify sites in the vicinity of the Property which would be suspected of posing a VEC for the Property. Current and historical Property operations are not suspected of posing a VEC for the Property.

8.0 USER PROVIDED INFORMATION

8.1 TITLE RECORDS

CCI was not provided with any title records from Mr. Dustin Nicolarsen. A search of title records was not conducted by CCI as part of this Phase I ESA.

8.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

No environmental liens or activity and land use limitation information were provided to CCI by Mr. Dustin Nicolarsen.

8.3 SPECIALIZED KNOWLEDGE

No specialized knowledge of environmental conditions associated with the Property was provided to CCI by Mr. Dustin Nicolarsen.

8.4 VALUE REDUCTION FOR ENVIRONMENTAL ISSUES

No information was provided to CCI by Mr. Dustin Nicolarsen indicating that the value of the Property has been reduced due to environmental issues.

9.0 NON-SCOPE ASTM ITEMS

9.1 ASBESTOS CONTAINING MATERIALS

Asbestos is the name given to a number of naturally occurring, fibrous silicate materials mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. Asbestos is commonly used as an acoustic insulator, thermal insulation, fire proofing, and in other building materials. Exposure to airborne friable asbestos may result in a potential health risk because persons breathing the air may inhale asbestos fibers. Continued exposure over time may cause serious lung diseases including asbestosis, lung cancer, or mesothelioma. The sampling of building materials for asbestos was not conducted as part of this assessment.

Suspected asbestos-containing materials (ACMs) were noted during the Property survey. Based on the construction date in 1927, there is a possibility that some of the construction materials in the building may contain asbestos fibers. The building materials observed by CCI appeared to be in good condition.

9.2 LEAD-BASED PAINT

Lead-based paint (LBP) is recognized as a potential health risk due to the known toxic affects of lead exposure, primarily through ingestion, on the central nervous system, kidneys, and bloodstream. The risk of lead toxicity in LBP varies and based upon the condition of the paint and the year of its application. Paint applied in 1977 or later is not expected to contain lead. Survey and sampling of the paint around the Property for LBP was not conducted as part of this assessment.

Given the 1927 construction date of the building, it is considered possible that LBP is present at the Property. The building paint appeared to be in relatively good condition. The potential LBP should not become a health hazard provided that the paint properly maintained and remains sealed.

9.3 RADON GAS EVALUATION

Radon is a colorless, tasteless radioactive gas that has been linked to possible increased risk of lung cancer. According to the United States Environmental Protection Agency (U.S. EPA), exposure to 4.0 peccaries of radon gas per liter of air (pCi/L) on a regular basis increases the risk of contacting lung cancer. CCI reviewed the California Department of Health Services (DHS) Radon Database for California. The DHS conducted over 16,000 individual radon tests throughout the State of California. The database groups the test results by zip codes. According to the database, the area of the Property does not typically exhibit concentrations of radon thought to be harmful to human health.

9.4 MOLD OBSERVATIONS

Molds are microscopic organisms found virtually everywhere, indoors and outdoors. Mold will grow and multiply under the right conditions, needing only sufficient moisture (e.g. in the form of very high humidity, condensation, or water from a leaking pipe, etc.) and organic material (e.g. ceiling tile, drywall, paper, or natural finer carpet padding). Mold growths often appear as discoloration, staining, or fuzzy growth on building materials or furnishings and are varied colors of white, gray, brown, black, yellow, and green. In large quantities, molds can cause allergic symptoms when inhaled or through the toxins the molds emit.

During the site survey, CCI observed the accessible interior areas of the building for evidence of water intrusion which would indicate the potential for mold growth. CCI did not observe evidence of areas of water intrusion inside the building. This evaluation did not include areas behind enclosed walls and ceilings.

10.0 DATA GAPS

The AAI rule requires that environmental professionals document any data gaps that remain after examining all "reasonably ascertainable" sources and explain the reason for such data gaps. The AAI rule also requires the report to expressly identify the sources consulted to address such data gaps and comment on their significance. Data gaps encountered during this assessment include the pending agency responses from the ABD and AFD.

11.0 FINDINGS AND OPINIONS

The Property is occupied by The Derby Restaurant. The Derby Restaurant has occupied the Property since approximately 1927. One in-ground grease trap was observed on the Property. The grease trap is located adjacent to the east side of the building. Floor drains inside the kitchen area of the building connect to the grease trap. The grease trap discharges to the local municipal sewer system. The operation of the grease trap is not suspected of having adversely impacted the subsurface environment beneath the Property.

A gasoline station operated adjacent to the east of the Property between approximately 1938 and 1964. During this time period, there was a road (North 3rd Avenue) located between the Property and the former gasoline station site. The former gasoline station site is not reported as being a LUST site. CCI did not find information which indicated that this site has adversely impacted the subsurface environment beneath the Property. Based on an expected southerly-southeasterly groundwater flow direction, the site is located in a cross-gradient groundwater flow direction of the Property.

Several commercial/industrial buildings were located adjacent to the west of the Property during the 1950s through 1970s. The westerly-adjacent site is currently occupied by an Embassy Suites hotel and associated parking lot. Historical city directories suggest potential former occupants of the westerly-adjacent sites included Arcadia City Refuse Service (1957 - 1966), Modern Insulation (1950), Nottingham M C Co. Chemical Toilets (1950), and Baker Septic Tank Co. (1950). Regulatory evidence was not found which would indicate that the subsurface environmental quality of the Property has been adversely impacted by former operations on the westerly-adjacent sites.

12.0 CONCLUSIONS AND RECOMMENDATIONS

12.1 CONCLUSIONS

We have performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM E 1527-05 of 233 East Huntington Drive, Arcadia, Los Angeles County, California (APN 5773-009-070), the Property. Any exceptions to, or deletions from, this practice are described in Section 10.0 of this report. This Phase I ESA has revealed no evidence of recognized environmental conditions in connection with the Property.

12.2 RECOMMENDATIONS

This assessment has not revealed evidence of recognized environmental conditions or environmental issues in connection with the Property. Based on the results of this assessment, CCI does not recommend additional assessment at this time.

13.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

David A Jonas
Project Manager

Ken Durand
President

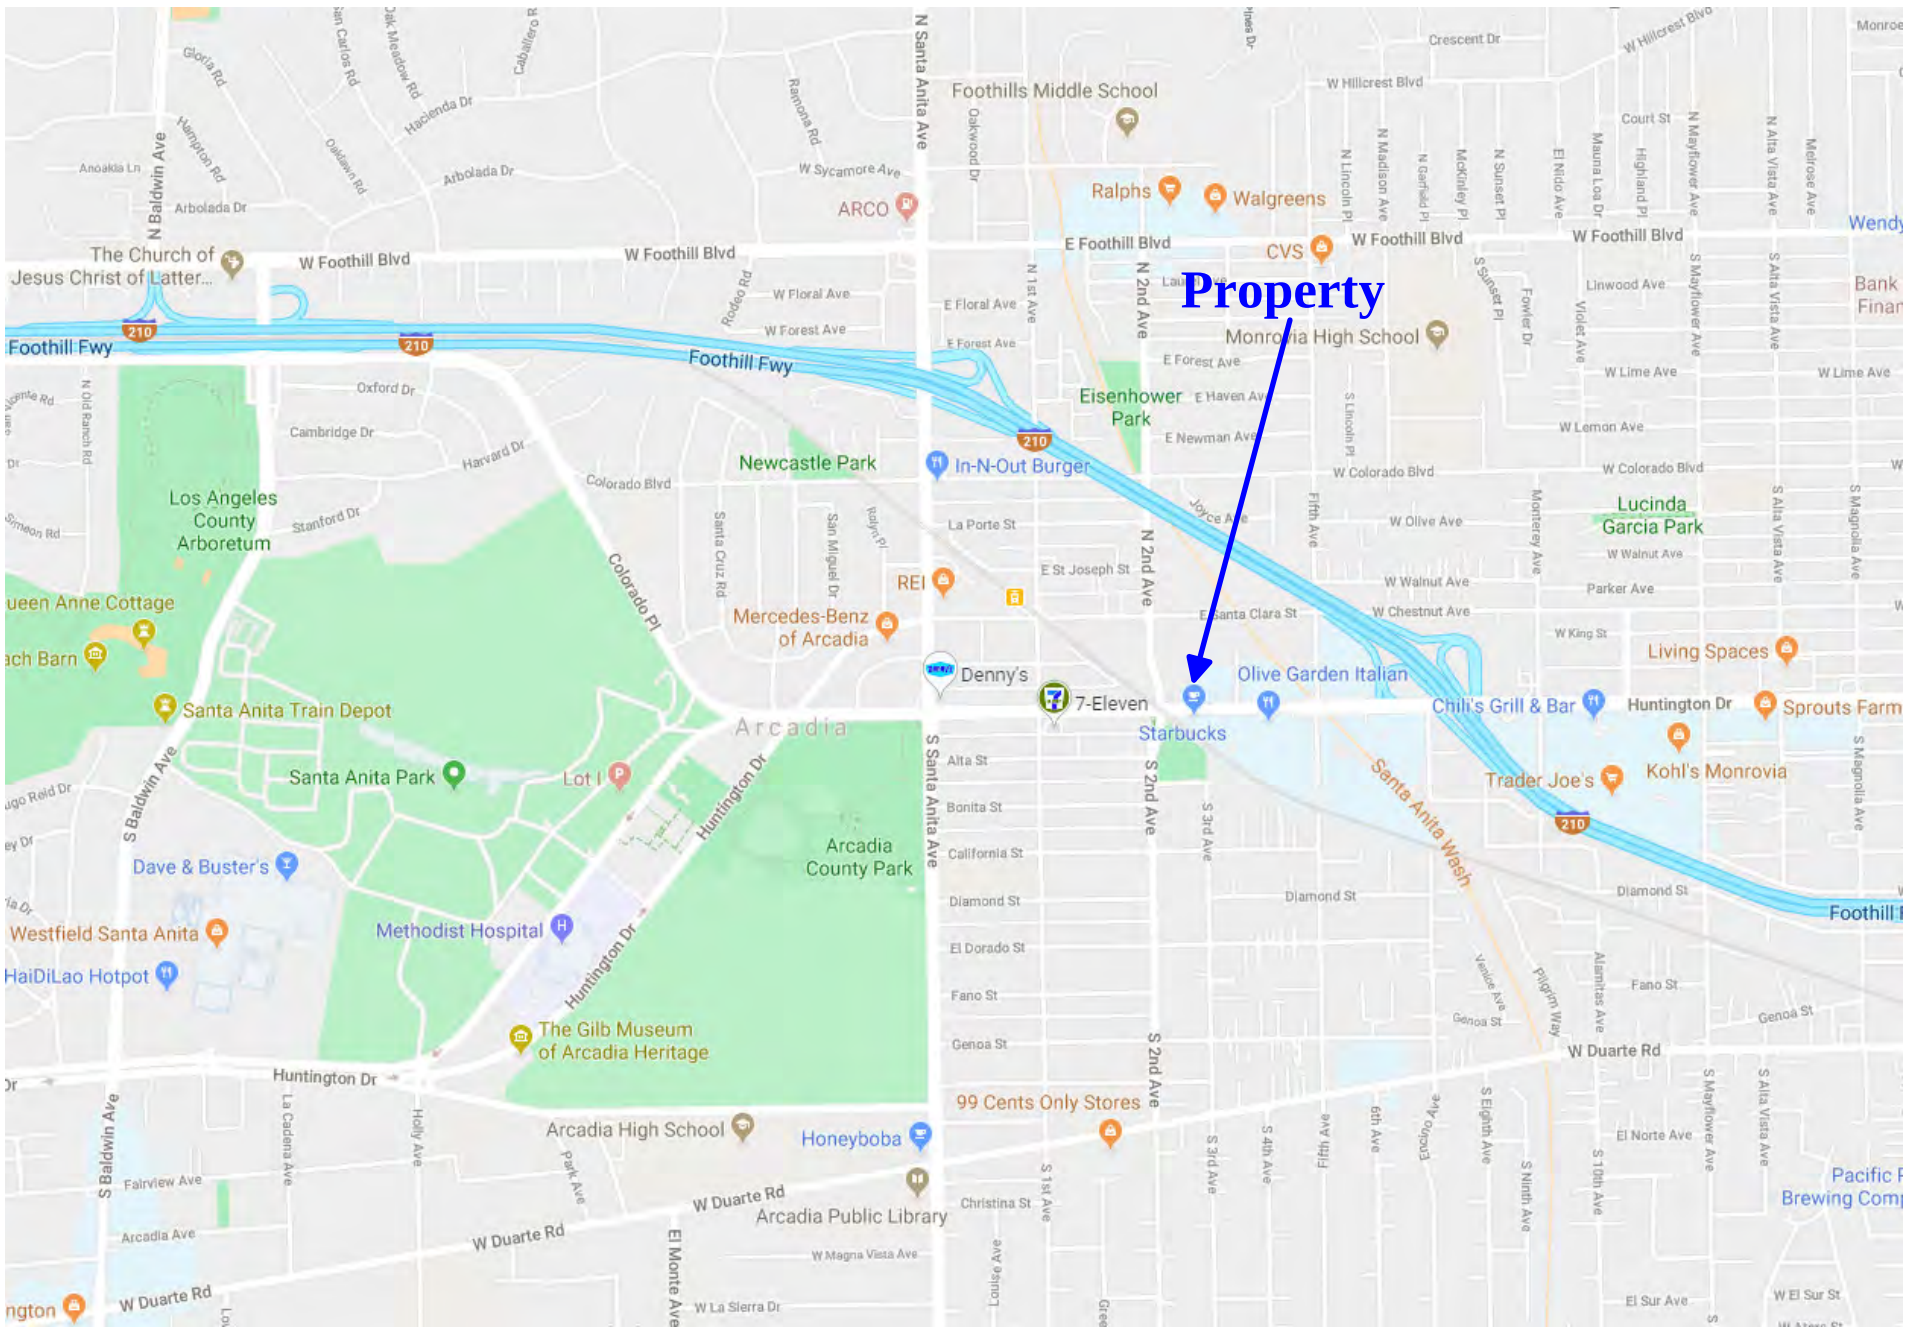
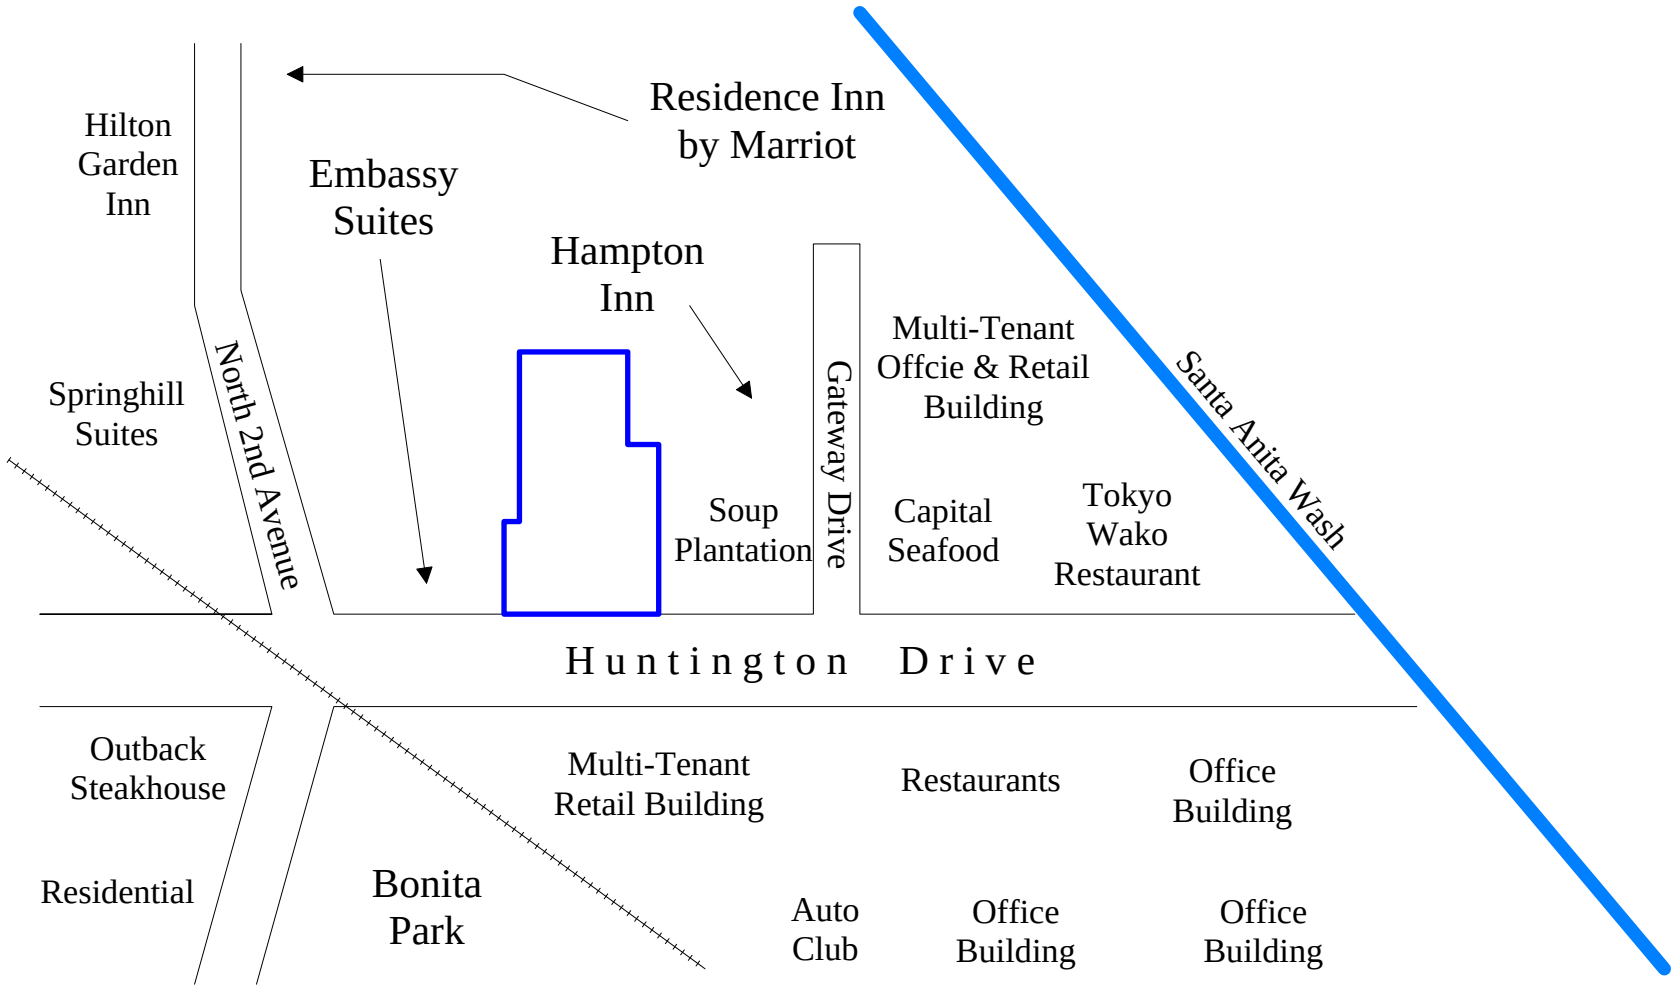
15.0 LIMITATIONS



This report has been prepared by CCI using reasonable efforts to identify recognized environmental conditions associated with hazardous materials at the Property. The conclusions and recommendations of this report are based on data and information collected from observations made on the day(s) of the site survey and from reasonably ascertainable information obtained from government agencies and other referenced sources. This report is not intended to identify all potential environmental concerns or completely eliminate the potential that the Property has environmental impairments. This report is not an exhaustive investigation of the Property or environmental conditions related to the Property.

No amount of assessment or investigation can completely certify that the Property is completely free of environmental concern. It is possible that unpermitted, undocumented or concealed improvements or alterations to the Property could exist beyond that which was found during this assessment. It is possible that there are changes in observed conditions on the Property in the future which would require further assessment of the Property and reevaluation of the conclusions and recommendations expressed in this report.



During the preparation of this report, CCI has relied upon and presumed accurate certain information and data which has been provided by others including government agencies and companies identified herein. Unless stated otherwise within this report, CCI has not attempted to verify and is not responsible for the accuracy or completeness of such information. CCI reserves the right to modify our conclusions and recommendations presented in this report if inaccurate or unreliable data has been provided to CCI by others.

Any cost estimates of the recommended additional scope of work are based solely on the information collected during this assessment. Any cost estimates presented in this report represent a rough estimate, not a proposal. The actual cost and scope of work may vary upon refining during proposal preparation, and with changes in economic conditions, or as additional information becomes available.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by CCI were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

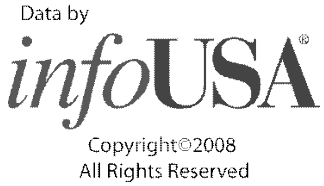
EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.



Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/19/2019 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

TROTTER APARTMENTS Site ID: 0905476 EPA Id: CASFN0905476	829 W. OLIVE AVENUE	NE 1/4 - 1/2 (0.459 mi.)	P65	144

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 9 RCRA-SQG sites within approximately 0.25 miles of the target property.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/29/2019 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 5 LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 19 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

FINDS:

Registry ID: 110002662967

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110002709481

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Hazardous Waste Summary:

. Waste code: 134
. Waste name: Aqueous solution with <10% total organic residues

. Waste code: D001
. Waste name: IGNITABLE WASTE

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs):	2800.1

FINDS:

Registry ID: 110002824034

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that

MACKS CHEVRON/ C/O MACK SATERI (Continued) **U001566413**

none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,?2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October?1,?2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

SOUTHERN CALIFORNIA EDISON MONROVIA OFFICE BLDG (Continued) **S120989812**

Site Name: City of Hope - Monrovia Research Facility
Violation Date: 07-03-2019
Citation: 22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Description: Failure to meet the following conditions of satellite accumulation regulations: ? Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator. ? Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first. ? The generator complies with section 66265.171, 66265.172, and 66265.173(a). ? The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words ?Hazardous Waste? including specified information ? Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a ?90 day? accumulation area ? 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated
Violation Notes: Returned to compliance on 08/06/2019. OBSERVATION: Failure of the Owner/Operator to comply with one or more satellite accumulation requirements: satellite containers in some labs were labeled with incorrect address; some accumulation start dates were older than one year or two years. CORRECTIVE ACTION: Ensure that all hazardous wastes being accumulated pursuant to satellite accumulation meet all applicable requirements and submit documentation of compliance to the CUPA.

Background Info:	This lead contaminated Site has been a joint project between LA County, US-EPA, and DTSC, with DTSC now as the Lead Agency. The Site originally consisted of five properties; 827, 829, 831 Olive Avenue and 824, 832 Colorado Blvd; but now two properties, 831 Olive and the 824 Colorado are determined clean. Lead contamination exists in sols from 0-2 and the contamination was probably from Barth's Battery Shop which was located on 832 Colorado Blvd. in the 1930s. In the 1930s the Olive Avenue properties were a vacant lot. The battery shop probably disposed their battery waste beind the business as pieces of battery casings have been found in Site soils. In the 1960s the Olive Avenue vacant lot was developed with the current residential buildings which were built on top of the battery waste. Grading of the lot prior to construction probably spread the lead waste throughout the properties. Not reported DTSC sampled in May and October 2001 to define the vertical and lateral extent of the lead contamination. DTSC then conducted an Emergency Removal Action in January 2002 to remove surface soils contaminated with lead that may pose a health risk to residents. After this action the 824 Colorado Blvd address was determined cleaned as only a small area in the

TROTTER APARTMENTS (Continued) **S106076586**

southwest corner of the property needed excavation. In May 2003 DTSC conducted a Removal Action to remove the remaining lead contaminated soil that was not covered by structures or paving. After this action the 831 Olive Avenue was determined cleaned as only a small area on the south western lot was excavated.
Not reported
DTSC believes that the health risk has been removed at the Site. Lead contaminated soil still exists there, but the areas where lead contaminated soil exists are either covered by concrete, asphalt, or building structures, and therefore do not pose a risk to human health or the environment.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/19/2019

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 09/30/2018

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 05/14/2019
Date Data Arrived at EDR: 05/14/2019
Date Made Active in Reports: 08/05/2019

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

AHA Hospitals:

South Map:	5630799 EL MONTE, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

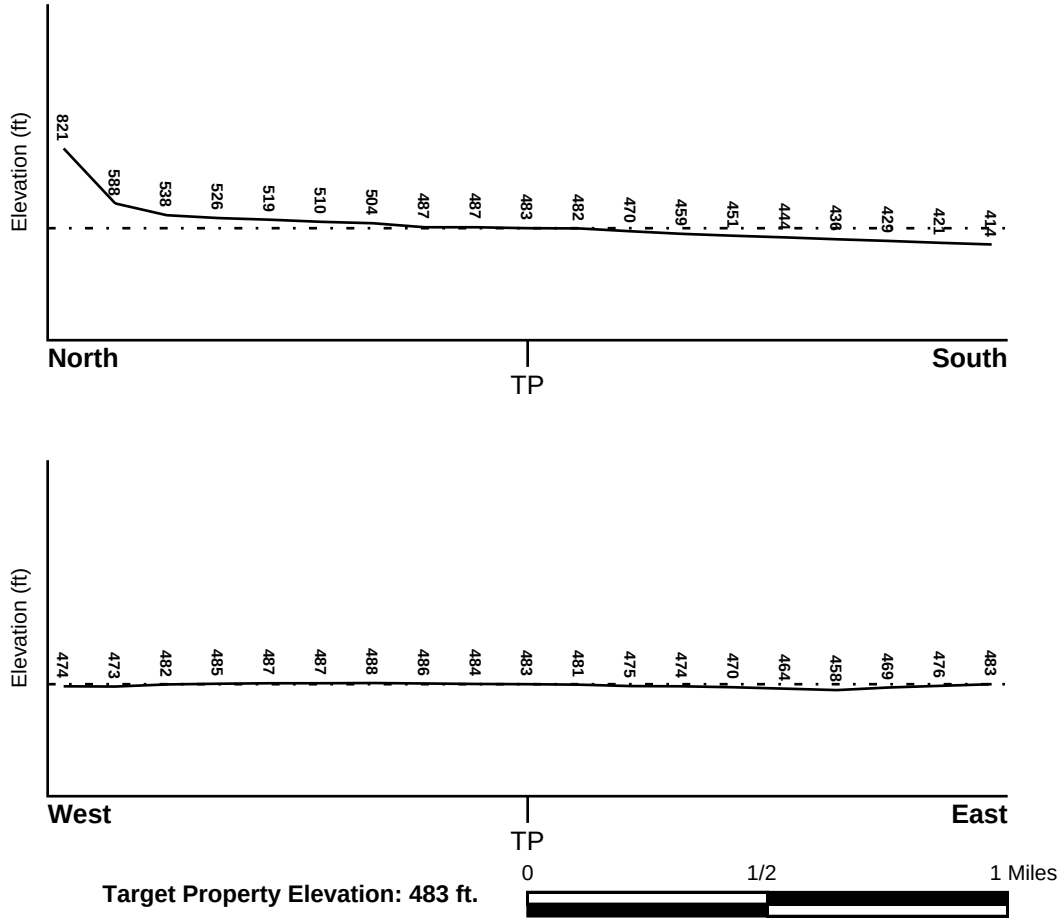
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1400F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MOUNT WILSON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
4	1/2 - 1 Mile SSW	SW
1G	1/2 - 1 Mile SSW	SW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

RE: PRA of September 05, 2019, Reference # H013781-090519.

Dear David Jonas,

The Los Angeles County Fire Department, Health Hazardous Materials Division, being the custodian or keeper of records, certify that a thorough search for the records you requested has been carried out.

Re: 233 E HUNTINGTON DR
ARCADIA CA 91006

The search revealed that no Hazardous Materials Incident Reports were found for the above noted address.

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, another name, or may have been destroyed based on this Department's Record Retention Policy. However, with the information furnished to our office, and to the best of our knowledge, no records were located.

If you have any questions regarding your request, please contact our office at (your district office ph#)

User Questionnaire

Property Address: 233 East Huntington Drive 91007.

Are you aware of any environmental cleanup liens against the Property that are filed or recorded under federal, tribal, state, or local law? If yes, list. NO

Are you aware of any activity and land use limitations in place on the Property? NO

Do you have any specialized knowledge or experience related to the Property or adjacent sites as to chemicals or processes used? NO

Does the purchase price being paid for the Property reasonably reflect the fair market value of the Property? Yes.

If you conclude that there is a difference between the price being paid for the Property and the fair market price for the Property, is it possible that this is because of contamination being present on the Property? NO WAY.

Are you aware of any past uses of the Property, specific chemicals once present on the Property, chemical spills that have occurred on the Property, or any environmental cleanups that have occurred on the Property? NO.

No Non-ASTM Scope Documentation

APPENDIX J - PROFESSIONAL QUALIFICATIONS

David A. Jonas

Project Manager

EDUCATION	Bachelor's Degree, Ecology, Behavior and Evolution University of California, San Diego 1995
REGISTRATIONS	NREP Registered Environmental Property Assessor #569136
CERTIFICATE COURSES	40-Hour Hazardous Waste Operations Training 8-Hour Hazardous Waste Operations Training Refresher Course

SUMMARY OF QUALIFICATIONS

Mr. Jonas has over seventeen years of experience conducting environmental projects, including Phase I Environmental Site Assessments (ESAs) and Phase II Subsurface Investigations, on various types of sites including commercial, industrial, agricultural, and residential properties throughout the United States. Mr. Jonas is familiar with real property environmental due diligence and environmental liability including All Appropriate Inquiry (AAI) and ASTM E1527-05 regulations. Mr. Jonas has experience providing environmental risk assessment for both the lender and borrower involved in real estate transactions, in the design and performance of various soil, soil gas, and groundwater sampling and remediation projects, and in the management and coordination of underground storage tank (UST) removals and closures. Mr. Jonas has experience managing a variety of subcontractors such as drillers, laboratories, geophysical survey companies, and hazardous waste hauling companies, and has significant experience working with Federal, State, County, and local regulatory agencies. Mr. Jonas has received training in the health and safety aspects of hazardous waste operations including the initial 40-Hour Hazardous Waste Operations Training and the subsequent yearly 8-Hour Hazardous Waste Operations Training refresher courses. Mr. Jonas has also received training in identifying, sampling, and remediating microbial contamination from a national analytical laboratory.

Ken Durand

Senior Geologist

CAREER HISTORY

2006 – Present:	CCI (environmental and waste management consulting)
1998 – 2006:	Ceres Associates (environmental and technology consulting sales)
1992 – 1998:	Enecotech, Inc. (environmental consulting)
1984 – 1992:	Kleinfelder, Inc. (environmental consulting)
1981 – 1984:	Orange County (California) Environmental Management Agency (Flood Control)

SUMMARY OF QUALIFICATIONS

Mr. Durand has over 30 years of experience conducting geotechnical, geological, hydrological, water resources, and environmental investigations. Mr. Durand is a professional geologist, a certified hydrogologist, and a registered environmental assessor. Because of this diverse expertise, Mr. Durand has performed a wide range of projects in the fields of geology, hydrology, hydrogeology, environmental, and waste management. These projects have included Phase I Environmental Site Assessments, soil, groundwater, and soil gas investigations, and hydrogeological studies.

Subject: Phase I Environmental Site Assessment of
301 E. Huntington Drive, Arcadia, CA 91006
Work Order No. 1146-332-01-0001

Dear Ladies and Gentlemen:

In conformance with the scope and limitations of ASTM Practice E 1527-13, Enviroassessors, Inc. (ENVIROASSESSORS) performed a Phase I Environmental Site Assessment of 301 E. Huntington Drive, Arcadia, CA 91006, the subject property. Any exceptions to, or deletions from, this practice are described in Sections 2.2 and 6.0 of this report.

This Phase I Environmental Site Assessment also identified potential business environmental risk concerns associated with the property due to location, building construction and property use. This is beyond what is identified in ASTM Practice E 1527-13 and is being provided as an additional service for the benefit of the user.

A comprehensive report summarizing our findings is enclosed. Please do not hesitate to call if you have any questions or need further information.

Sincerely,

Enviroassessors, Inc.

Norman N. Sacro, MND, MS, PEnvA, DipAES

Work Order No. 1146-332-01-0001

Dear Ladies and Gentlemen:

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Please do not hesitate to call if you have any questions or need further information.

Sincerely,

Enviroassessors, Inc.

RELIANCE LETTER

March 17, 2021

To: Pacific Enterprise Bank ("Lender")
17748 Sky Park Circle, Suite 100
Irvine, CA 92614

and

U.S. Small Business Administration ("SBA")

Re: Borrower Name: Elite Holdings & Associates, LLC and Derby Restaurant Arcadia, Inc.
301 E. Huntington Drive, Arcadia, CA 91006 ("Property")
Work Order No. 1146-332-01-0001

Dear Lender and SBA:

Norman N. Sacro ("Environmental Professional") meets the definition of an Environmental Professional as defined by 40 C.F.R. § 312.10(b) and has performed or supervised the performance of the following "Environmental Investigation(s)" (check all that apply):

☐ A Transaction Screen of the Property dated _____, 20____, and any addendum(s) thereto, conducted in accordance with ASTM International's most recent standard (currently ASTM E1528-14);

☒ A Phase I (or an Updated Phase I) Environmental Site Assessment of the Property dated March 17, 2021, and any addendum(s) thereto, conducted in accordance with ASTM International's most recent standard (currently ASTM E1527-13). In addition, the Environmental Professional has addressed the performance of the "additional inquiries" set forth at 40 C.F.R. § 312.22;

☐ A Phase II Environmental Site Assessment of the Property dated _____, 20____, and any addendum(s) thereto, conducted in accordance with generally-accepted industry standards of practice and consisting of a scope of work that would be considered reasonable and sufficient to identify the presence, nature and extent of a Release as it impacts the Property.

Reliance by SBA and Lender. Environmental Professional (and Environmental Professional's firm, where applicable) understand(s) that the Property may serve as collateral for an SBA-guaranteed loan, a condition for which is an Environmental Investigation of the Property by an Environmental Professional. Environmental Professional (and Environmental Professional's firm, where applicable) authorize(s) Lender and SBA to use and rely upon the Environmental Investigation. Further, Environmental Professional (and Environmental Professional's firm, where applicable) authorize(s) Lender and SBA to release a copy of the Environmental Investigation to the Borrower for information purposes only. This letter is not an update or modification to the Environmental Investigation. Environmental Professional (and Environmental Professional's firm, where applicable) makes no representation or warranty, express or implied, that the condition of the Property on the date of this letter is the same or similar to the condition of the Property described in the Environmental Investigation.

Insurance Coverage. Environmental Professional (and/or Environmental Professional's firm, where applicable) certifies that he or she or the firm was covered as of the date of the Environmental Investigation by errors and omissions liability insurance with a minimum coverage of $1,000,000 per claim (or occurrence) and that evidence of this insurance is attached. As to the Lender and SBA, Environmental Professional (and Environmental Professional's firm, where applicable) specifically waive(s) any dollar amount limitations on liability up to $1,000,000 as well as any time limitations on liability, other than state or Federal statutes of limitation.

Waiver of Right to Indemnification. Environmental Professional and Environmental Professional's firm waive any right to indemnification from the Lender and SBA.

Impartiality. Environmental Professional certifies that (1) to the best of his or her knowledge, Environmental Professional is independent of and not a representative, nor an employee or affiliate of seller, Borrower, operating company, or any person in which seller has an ownership interest; and (2) the Environmental Professional has not been unduly influenced by any person with regard to the preparation of the Environmental Investigation or the contents thereof.

Acknowledgment. The undersigned acknowledge(s) and agree(s) that intentionally falsifying or concealing any material fact with regard to the subject matter of this letter or the Environmental Investigations may, in addition to other penalties, result in prosecution under applicable laws including 18 U.S.C. § 1001.

Signature of Environmental Professional
Printed Name: Norman N. Sacro

(Note: The Environmental Professional must always sign this letter above. If the Environmental Professional is employed or retained by an Environmental Firm, then an authorized representative of the firm must also sign below).

Signature of representative of firm who is authorized to sign this letter
Printed Name & Title: Norman N. Sacro, Project Director
Name of Environmental Firm: Enviroassessors, Inc.

Enclosure: Evidence of Insurance

SOP 50 10 6 Effective October 1, 2020

CERTIFICATE OF LIABILITY INSURANCE

DATE (MM/DD/YYYY): 9/26/2019

THIS CERTIFICATE IS ISSUED AS A MATTER OF INFORMATION ONLY AND CONFERS NO RIGHTS UPON THE CERTIFICATE HOLDER. THIS CERTIFICATE DOES NOT AFFIRMATIVELY OR NEGATIVELY AMEND, EXTEND OR ALTER THE COVERAGE AFFORDED BY THE POLICIES BELOW. THIS CERTIFICATE OF INSURANCE DOES NOT CONSTITUTE A CONTRACT BETWEEN THE ISSUING INSURER(S), AUTHORIZED REPRESENTATIVE OR PRODUCER, AND THE CERTIFICATE HOLDER.

IMPORTANT: If the certificate holder is an ADDITIONAL INSURED, the policy(ies) must be endorsed. If SUBROGATION IS WAIVED, subject to the terms and conditions of the policy, certain policies may require an endorsement. A statement on this certificate does not confer rights to the certificate holder in lieu of such endorsement(s).

1.0 EXECUTIVE SUMMARY

1.1 PURPOSE AND SCOPE

Enviroassessors, Inc. (ENVIROASSESSORS) conducted a Phase I Environmental Site Assessment of a property located at 301 E. Huntington Drive, Arcadia, CA 91006. ENVIROASSESSORS performed the Phase I in conformance with the scope and limitations of ASTM Practice E 1527-13. This practice is intended to permit a *user* to satisfy one of the requirements to qualify for the *innocent landowner*, *contiguous property owner*, or *bona fide prospective purchaser* limitations on CERCLA liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"): that is, the practice that constitutes *all appropriate inquiries* into the previous ownership and uses of the *property* consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35)(B).

In conducting this Phase I Environmental Site Assessment to identify *recognized environmental conditions* (RECs), *controlled recognized environmental conditions* (CRECs), and *historical recognized environmental conditions* (HCRECs), ENVIROASSESSORS focused on several major areas of environmental considerations. ENVIROASSESSORS also addressed considerations not within the scope of ASTM Practice E 1527-13.

This Phase I Environmental Site Assessment also identified potential business environmental risk concerns associated with the property due to location, building construction and property use. This is beyond what is identified in ASTM Practice E 1527-13 and is being provided as an additional service for the benefit of the user.

The following tasks were undertaken as part of the evaluation:

- On-site physical inspection on March 4, 2021 and interview of pertinent people.
- Contacted pertinent public regulatory agencies to access and review available public agency files and information relating to the subject property and surrounding areas. And
- Accessed online any relevant available records and databases maintained by city, county and/or state agencies and reviewed the government database report provided by Environmental Data Resources, Inc. (EDR) about the property and its immediate vicinity.

1.2 PROPERTY DESCRIPTION

The subject property is situated in a predominantly commercial area on the northwest corner of Huntington Drive and Gateway Drive. Figure 1 below shows the subject property in the middle of the aerial photograph. A street map showing the general location of the property is found in Appendix 8.1. A topographic map of the area is also included in Appendix 8.1. The coordinates of the subject property are as follows (EDR, March 4, 2021):

- Latitude (North): 34.1405920; Longitude (West): –118.0231670.

Figure 1. Recent aerial photograph of subject property
(located near the center of the photograph). Source: Google Earth in EDR

The property, with APN 5773-009-065, consists of a 0.89-acre lot improved with a 7,626-square-foot single-story wood frame and stucco restaurant building constructed in 1988. No attempt was made to validate the areas which are presented here only as rough estimates for description purposes. Appendix 8.2 presents photographs of the subject property as well as surrounding properties. Appendix 8.14 includes parcel details accessed from the website of the Los Angeles County Office of the Assessor. During the site visit, it was a non-operating Souplantation restaurant.

Following are photographs of the subject property:

- Photo 1 – Subject property looking northeast from Huntington Drive;
- Photo 2 -- Subject property looking southeast;
- Photo 3 – Dining area;
- Photo 4 – Food serving area;
- Photos 5 and 6 – Kitchen areas; and
- Photo 7 – Office.

1.3 SUMMARY OF SITE HISTORY/LAND USE REVIEW

A gasoline service station operated on the subject property from 1950, at the latest, until possibly the late 1960s or early 1970s. An automotive repair facility may have been concurrently operated along with the service station until the property was redeveloped into a Souplantation restaurant in 1988. The restaurant operated until 2020 when it ceased operations due possibly in part to the coronavirus pandemic impact on indoor dining restrictions.

1.4 CONCLUSIONS AND RECOMMENDATIONS

In conformance with the scope and limitations of ASTM Practice E 1527-13, ENVIROASSESSORS performed a Phase I Environmental Site Assessment of the subject property. Any exceptions to, or deletions from, this practice are described in Sections 1.2 and 5.0 of this report. This assessment has revealed no evidence of *recognized environmental conditions* (RECs) in connection with the subject property except for the following:

> A gasoline service station operated on the subject property from 1950, at the latest, until possibly the late 1960s or early 1970s. An automotive repair facility may have been concurrently operated along with the service station until the property was redeveloped into a restaurant in 1988. No documentation was found regarding the removal of the fuel underground storage tanks and dispensers used by the service station. Also, there is potential for subsurface impact due to petroleum-derived organic compounds as well as indoor vapor intrusion.

The term *recognized environmental conditions* means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not RECs nor *controlled recognized environmental conditions* (CRECs). A *de minimis condition is* a condition that generally

does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

This assessment has revealed no CRECs. CREC is an REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

This assessment has revealed no evidence *historical recognized environmental conditions* (HRECs) in connection with the subject property. An HREC is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

The qualitative scale used for ranking potential business environmental risk concerns is low, low to moderate, moderate to high, and high probability for environmental impairment liability. This definition is exclusive to ENVIROASSESSORS and is not within the scope and limitations of ASTM Practice E 1527-13. The subject property was determined to have a *high potential* for environmental impairment liability based on the evaluation of the following findings:

- Present use the property;
- No observed industrial wastewater generation;
- Potential presence of non-friable asbestos-containing materials;
- Non-generation of hazardous wastes requiring special handling;
- Presence and management of limited quantities of potentially hazardous materials such as cleaning materials found during the site visit;
- No observed potentially PCB-containing electrical devices requiring special management at this time;
- No observed pesticide use;

- The age of the building and neighboring land use;
- Presence of listed potential hazardous waste sites within one mile of the subject property;
- The historical use of the property, particularly as a gasoline service station; and
- Public domain information on the property.

A Phase II environmental investigation is recommended to be conducted to address the REC identified above.

The following are also recommended to be conducted (as required by pertinent regulatory agencies):

- Prior to future renovations or building demolition suspect ACMs should be sampled and analyzed for asbestos content. Confirmed ACM should be managed in accordance with applicable federal and state regulations.
- Prior to future building renovations or demolition, samples of suspect painted materials should be collected and analyzed for lead content. Confirmed LBP should be managed in accordance with applicable federal and state regulations.
- During routine maintenance, light ballasts at the site should be checked for "non-PCB" labels. If labels are not observed, waste ballasts should be handled and disposed of in accordance with applicable Federal, State, and local regulations."

No further environmental investigation is recommended to be performed at this time.

2.0 INTRODUCTION

2.1 PURPOSE

Enviroassessors, Inc. (ENVIROASSESSORS) conducted a Phase I Environmental Site Assessment of a property located at 301 E. Huntington Drive, Arcadia, CA 91006. ENVIROASSESSORS performed the Phase I in conformance with the scope and limitations of ASTM Practice E 1527-13. This practice is intended to permit a *user* to satisfy one of the requirements to qualify for the *innocent landowner*, *contiguous property owner*, or *bona fide prospective purchaser* limitations on CERCLA liability (hereinafter, the "*landowner liability protections*," or "*LLPs*"): that is, the practice that constitutes *all appropriate inquiries* into the previous ownership and uses of the *property* consistent with good commercial and customary practice as defined at 42 U.S.C. §9601(35)(B). Any exceptions to, or deletion from this practice are described in Sections 2.2 and 6.0 of this report.

The goal of the processes established by this practice is to identify *recognized environmental conditions* (RECs). The term *recognized environmental conditions* means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not RECs nor *controlled recognized environmental conditions* (CRECs). A *de minimis condition is* a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

CREC is an REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

In conducting the Phase I, *historical recognized environmental conditions* (HRECs) are identified. HREC is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required

controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

This Phase I Environmental Site Assessment also identified potential business environmental risk concerns associated with the property due to location, building construction and property use. This is beyond what is identified in ASTM Practice E 1527-13 and is being provided as an additional service for the benefit of the user.

For this assessment, ENVIROASSESSORS completed a comprehensive assessment of potential environmental liabilities of the subject property. The assessment was based on the information voluntarily provided to ENVIROASSESSORS as well as from those it independently researched. ENVIROASSESSORS applied its best scientific and technical judgments within the parameters of this assignment.

2.2 SCOPE OF WORK

In conducting this Phase I Environmental Site Assessment to identify RECs, CRECs, and HCRECs, ENVIROASSESSORS focused on several major areas of environmental considerations, among them are:

- Air emissions;
- Water and wastewater;
- Non-hazardous and hazardous wastes;
- Oil and hazardous materials management;
- Presence and management of polychlorinated biphenyls (PCBs); and
- Pesticides.

ENVIROASSESSORS also addressed considerations not within the scope of ASTM Practice E 1527-13 which include the following:

- Radon;
- Lead-based paints;
- Lead in drinking water;
- Wetlands;
- Molds;
- Asbestos-containing materials; and
- Housekeeping and safety.

The following tasks were undertaken as part of the evaluation:

- On-site physical inspection on March 4, 2021 and interview of pertinent people.

- Contacted pertinent public regulatory agencies to access and review available public agency files and information relating to the subject property and surrounding areas. And
- Accessed online any relevant available records and databases maintained by city, county and/or state agencies and reviewed the government database report provided by Environmental Data Resources, Inc. (EDR) about the property and its immediate vicinity.

3.0 GENERAL SITE CHARACTERISTICS

3.1 LOCATION

The subject property is situated in a predominantly commercial area on the northwest corner of Huntington Drive and Gateway Drive. Figure 1 below shows the subject property in the middle of the aerial photograph. A street map showing the general location of the property is found in Appendix 8.1. A topographic map of the area is also included in Appendix 8.1. The coordinates of the subject property are as follows (EDR, March 4, 2021):

- Latitude (North): 34.1405920; Longitude (West): –118.0231670.

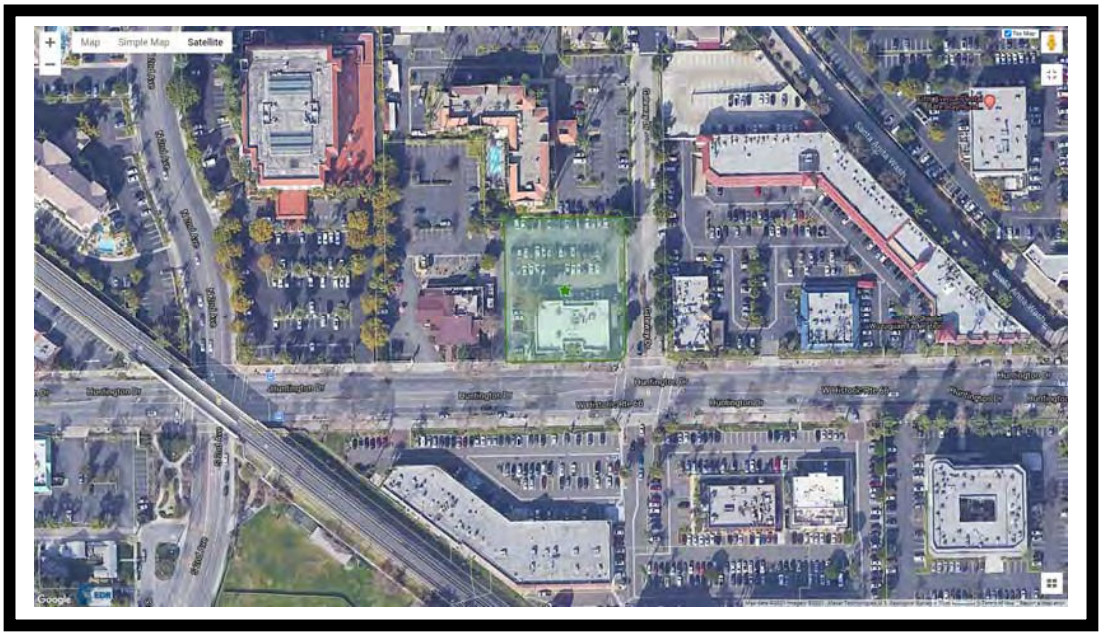

Figure 1. Recent aerial photograph of subject property
(located near the center of the photograph). Source: Google Earth in EDR

3.2 PHYSICAL SETTING

Physical setting features that include the following, in the general area of the subject property, are found on pages A-1 through A-19 of the EDR report in Appendix 8.3:

- Groundwater flow direction information;

- Topographic information;
- Hydrologic information;
- Hydrogeologic information; and
- Geologic information.

A map showing the physical features of the general area of the subject property is found on page A-7 of the EDR report.

3.3 SITE DESCRIPTION AND CURRENT SITE USES/OPERATIONS

The property, with APN 5773-009-065, consists of a 0.89-acre lot improved with a 7,626-square-foot single-story wood frame and stucco restaurant building constructed in 1988. No attempt was made to validate the areas which are presented here only as rough estimates for description purposes. Appendix 8.2 presents photographs of the subject property as well as surrounding properties. Appendix 8.14 includes parcel details accessed from the website of the Los Angeles County Office of the Assessor. During the site visit, it was a non-operating Souplantation restaurant.

Following are photographs of the subject property:

- Photo 1 – Subject property looking northeast from Huntington Drive;
- Photo 2 -- Subject property looking southeast;
- Photo 3 – Dining area;
- Photo 4 – Food serving area;
- Photos 5 and 6 – Kitchen areas; and
- Photo 7 – Office.

3.4 ADJOINING PROPERTIES

Areas immediately surrounding the property were noted during the site visit. The adjoining properties are described below:

DIRECTION FROM SUBJECT PROPERTY	PROPERTY DESCRIPTION	ADDRESS	OCCUPANT, BUSINESS TYPE/ACTIVITY
North	Motel	311 Huntington Dr	Hampton Inn—Motel (See Photo 8, looking northwest from subject property)
East	Store/office (mixed use)	333 Huntington Dr.	Huntington Lanmark LLC—Retail shopping center (See Photo 9, looking northeast across Gateway Dr.)
Southeast	Restaurant Restaurant	430 Huntington Dr. 400 Huntington Dr.	Olive Garden Italian Restaurant--Restaurant BJ's Restaurant & Brewhouse—Restaurant (See Photo 10, looking southeast across Huntington Dr.)
South	Retail Stores Parking lot	300 Huntington Dr. 440 Huntington Dr.	JLJ Properties Arcadia LLC—Retail shopping center JLJ Properties Arcadia LLC—Parking lot (See Photo 11, looking southeast across Huntington Dr.)
West	Restaurant	233 Huntington Dr.	The Derby--Restaurant (See Photo E, looking northwest from Huntington Dr.)

4.0 RESULTS OF INVESTIGATION

4.1 SITE INSPECTION OBSERVATIONS

During the site visit on March 4, 2021 by ENVIROASSESSORS, the subject property was an idle restaurant as described above in Section 3.3. No manufacturing or industrial operations were observed within the premises. Environmental considerations associated with the property are discussed in the subsequent sections.

4.1.1 Air Emissions

During the site visit, no air emission sources or equipment requiring air emissions permits were found.

4.1.2 Water and Wastewater

The subject property has a municipal source of potable water and is connected to the city sanitary sewer system. No evidence of potable water supply wells or groundwater monitoring wells was visually observed within the property. No industrial wastewater was being discharged during the site visit. A grease trap was found outside the building on the southeast area of the lot (See Photo 13). There was no evidence of any ponding of unnaturally discolored water or liquids on the subject property. No septic systems were observed to be used in the subject property. No evidence of the use of cisterns, cesspools, or dry wells was observed in the subject property.

Stormwater flows away from the parking lot to the sidewalk and then to the road gutter system that eventually channels the stormwater to the sewer system. No parking lot drainage outlets showed unusual discoloration or odor. Roof drainage channeled through a rainwater gutter system. No unusual discoloration or odor was observed at the drainage pipe outlets.

4.1.3 Non-hazardous and Hazardous Wastes

No trash was littered within the premises of the subject property during the site visit. No potentially hazardous wastes were found within the premises of the subject property.

4.1.4 Oil and Hazardous Materials

No potentially hazardous materials were found inside or outside the buildings, other than typical cleaning materials for the bathrooms and kitchen (See Photo 14). No visual evidence of the current presence of underground storage tanks (USTs) for the storage of hazardous material was observed.

Visibly stained soil was not observed on the property.

4.1.5 PCB Management

Because of their high stability, polychlorinatedbiphenyls (PCBs) were widely used before 1975 in electrical transformers, electrical capacitors, vacuum pumps, fluorescent light ballasts, heat transfer systems, hydraulic fluids, lubricants, and many other applications. Because of their long-term deleterious environmental and health effects, their manufacture was banned in the United States in 1975.

Because the building was constructed in 1988, the presence of PCB-containing fluids in the fluorescent light ballasts is unlikely. A qualified electrician can manage light ballasts if they leak.

One wet type transformer (No. P5365544) was found outside the building (see Photo 15). No evidence of transformer fluid leakage was observed on the concrete transformer pad. Responsibility for the transformer belongs to the utility company. Based on ENVIROASSESSORS' previous dealings with utility agencies, they had always expressed that there is a low probability for their electrical transformers to contain PCBs at levels requiring special handling required by environmental regulatory agencies. The agencies had always indicated that only a chemical analysis of the transformer fluid could confirm the presence or absence of PCBs. Based on efforts exerted by utility agencies at eliminating the use of PCBs in their transformers, the transformer at the site is most probably in compliance with present regulations pertinent to PCBs.

4.1.6 Pesticides

Although pesticides were possibly used on the property in the past, ENVIROASSESSORS did not discover any visual evidence of pesticide use in the property during the visit. No pesticide or herbicide containers or evidence of misuse were identified on the property. No evidence of distressed vegetation was observed.

4.1.7 Radon

Radon is an odorless and colorless gas that results from the radioactive decay of uranium. High concentrations of radon may be found in soils and rocks that contain uranium, granite, shale, and pitchblende. It is toxic to humans because of its ionizing radiation. Radon could accumulate in buildings that have basements.

The following is information regarding radon within the area of the subject property (EDR, March 4, 2021; A-20).

> State Database: CA Radon
> Radon Test Results
> Zip Code: CA 91006
> Total sites tested: 48
> Number of sites that tested > 4 pCi/L = 0
>
> Federal Area Radon Zone for Los Angeles County, California: 2
> (Zone 1 areas are predicted to have an average indoor radon level of greater than 4 pCi/L. Zone 2 areas are predicted to have an average indoor radon level of greater than 2 pCi/L and less than 4 pCi/L. Zone 3 areas are predicted to have an average indoor radon level of less than 2 pCi/L).
>
> Federal Area Radon Information for Zip Code: CA 91006
> Number of sites tested: 1
> Average Activity: 1st Floor Living Area = 0.100 pCi/L
> 2nd Floor Living Area = Not Reported
> Basement = Not Reported

All reported radon level test results where the subject property is located are below the Federal EPA action level of 4.0 pCi/L.

Information obtained during the site assessment indicates that radon concentrations are unlikely to exist on the property above established guideline concentrations. The subject property does not have a basement where radon could accumulate. There is, therefore, a low potential for health hazard due to radon gas.

4.1.8 Lead-based Paint

Lead-based paint (LBP) was extensively used in buildings built by the 1920s. The paint manufacturing industry voluntarily cut back on the levels of lead in paint formulations by 1955. However, LBP has been commonly used up to the present throughout the construction industry, particularly in applications that include friction and impact surfaces

(e.g., doors, windows, floors) and in moisture resistance applications such as bathrooms, kitchens, and exterior.

The subject property was developed during the period when LBP was no longer extensively used. Because of this, LBP is not likely to be present. However, this cannot be verified without a certified LBP inspection. An LBP survey is beyond the scope of this Phase I report.

4.1.9 Lead in Drinking Water

Municipal drinking water is supplied to the subject property. It is assumed that the agency supplying the water is in compliance with Federal and State guidelines for drinking water. Lead in drinking water is primarily from materials and components associated with service lines and building plumbing. Sampling and analysis for lead in drinking water is beyond the scope of this Phase I report.

4.1.10 Wetlands

No wetlands or natural waterways were found on the subject property or the immediate vicinity.

4.1.11 Molds

Based on a visual inspection of the subject property, no building areas suspected of significant mold growth were observed. No conditions that would promote a high potential for mold growth were observed. The investigation was not intended to discover all areas which may be impacted by mold growth, many of which may be hidden and not readily observable such as enclosed walls and ceilings, HVAC systems, and pipe chases. Conducting a comprehensive mold survey or inspection is beyond the scope of this Phase I Environmental Site Assessment.

4.1.12 Asbestos-containing Materials

Asbestos-containing materials (ACM) have been widely used in the past in the construction industry because of their desirable strength and fire resistance properties. ACM is considered friable if it can be crushed into powder with finger pressure. The manufacture of friable ACM was discontinued in the United States in 1978, but their use has continued even after that year. The US EPA considers friable ACM containing in excess of 1% asbestos as hazardous material.

No friable suspect ACMs were observed inside the building. Only a microscopic evaluation can ascertain the presence or absence of asbestos in building materials. Asbestos sampling and analysis are not recommended to be performed at this time.

Asbestos may be found in non-friable state such as in other potentially asbestos-containing compounds (e.g., adhesive, roofing asphalt, caulking materials, etc.) and other materials. The likelihood of non-friable ACMs being disturbed under normal wear in a manner that would release asbestos fibers into the air and considered a health hazard under present standard is remote.

4.1.13 Housekeeping and Safety

Housekeeping was observed to be good inside the building and the outside areas. No items requiring special safety concerns were observed.

4.2 ADJACENT SITE AND VICINITY OBSERVATIONS

The adjacent properties were described in Section 2.3. Based on a cursory inspection of the adjacent properties, these neighboring sites do not appear to environmentally negatively impact the subject property. There appeared to be no visual evidence of contamination source from adjacent properties at the time of the inspection.

4.3 REGULATORY AGENCY DATABASE REVIEW

ENVIROASSESSORS reviewed an environmental government database report about the subject property and the surrounding area within a one-mile radius generated by Environmental Data Resources, Inc. (EDR, March 4, 2021). This regulatory record review was performed to evaluate whether the subject site or properties within the site vicinity have been identified as having experienced significant unauthorized releases of hazardous substances or other events with potentially adverse environmental effects. The EDR Radius Map with GeoCheck report is included in Appendix 8.3. The report lists and describes the government databases reviewed and the findings of the search. The meanings of the database acronyms and the significance of the databases are found in the EDR Report. A detail map found on page 3 of the EDR report shows the location of the sites listed. It should be noted that the map was computer generated based on the address of the subject property and not on a given or known longitude and latitude. Because of this, the exact location may not exactly match that which was generated by the computer. Because sites close to the subject property (i.e., those listed within ¼ or 0.25-mile) may impact the subject property, a detailed analysis of these is given below.

Sites listed within 0.25 mile of the subject property were found in the databases described below. The EDR report indicates that the subject property is listed in the EDR Hist Auto database. Evaluations of the listed sites within 0.25 mile of the subject property follow the descriptions.

A. STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

- RCRA-LQG: RCRA - Large Quantity Generators. RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Number of Sites Listed	Potential Impact on Subject Property
1	Being found on the list does not necessarily indicate that an unauthorized release of hazardous substances to the environment had occurred at the listed site. ENVIROASSESSORS is not aware of any evidence that the listed site has environmentally negatively impacted the subject property.

- RCRA-SQG: RCRA - Small Quantity Generators. RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Number of Sites Listed	Potential Impact on Subject Property
8	Being found on the list does not necessarily indicate that an unauthorized release of hazardous substances to the environment had occurred at the listed sites. ENVIROASSESSORS is not aware of any evidence that the listed sites have environmentally negatively impacted the subject property.

State and tribal leaking storage tank lists

- LUST. Leaking Underground Storage Tank Case Listing from the California Regional Water Quality Control Board . The State Water Resources Control Board's LUST database may also have more current information.

Site Name	Address	Case	Potential Impact on Subject Property
CITY OF ARCADIA	250 W HUNTINGTON DR	COMPLETED - CASE CLOSED AS OF 1/31/2002	None or minimal.
JUSTICE BROTHERS INC	941 HUNTINGTON DR W	Status: Completed - Case Closed	None or minimal.
TUNE UP MASTERS SHOP	915 HUNTINGTON DR E	Status: Completed - Case Closed	None or minimal.

State and tribal registered storage tank lists

- UST: Active UST Facilities. Active UST facilities gathered from the local regulatory agencies.

Number of Sites Listed	Potential Impact on Subject Property
1	Being found on the list does not necessarily indicate that an unauthorized release of hazardous substances to the environment had occurred at the listed site. ENVIROASSESSORS is not aware of any evidence that the listed site has environmentally negatively impacted the subject property.

B. ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

- CERS HAZ WASTE: List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

Number of Sites Listed	Potential Impact on Subject Property
4	Being found on the list does not necessarily indicate that an unauthorized release of hazardous substances to the environment had occurred at the listed sites. ENVIROASSESSORS is not aware of any evidence that the listed sites have environmentally negatively impacted the subject property.

Local Lists of Registered Storage Tanks

- SWEEPS UST: SWEEPS UST Listing. Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained.

Number of Sites Listed	Potential Impact on Subject Property
8	Being found on the list does not necessarily indicate that an unauthorized release of hazardous substances to the environment had occurred at the listed sites. ENVIROASSESSORS is not aware of any evidence that the listed sites have environmentally negatively impacted the subject property.

- HIST UST: Hazardous Substance Storage Container Database. The Hazardous Substance Storage Container Database is a historical listing of UST sites.

Number of Sites Listed	Potential Impact on Subject Property
9	Being found on the list does not necessarily indicate that an unauthorized release of hazardous substances to the environment had occurred at the listed sites. ENVIROASSESSORS is not aware of any evidence that the listed sites have environmentally negatively impacted the subject property.

- CA FID UST: Facility Inventory Database. The Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board.

Number of Sites Listed	Potential Impact on Subject Property
2	Being found on the list does not necessarily indicate that an unauthorized release of hazardous substances to the environment had occurred at the listed sites. ENVIROASSESSORS is not aware of any evidence that the listed sites have environmentally negatively impacted the subject property.

- CERS TANKS: California Environmental Reporting System (CERS) Tanks. List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs.

Number of Sites Listed	Potential Impact on Subject Property
2	Being found on the list does not necessarily indicate that an unauthorized release of hazardous substances to the environment had occurred at the listed sites. ENVIROASSESSORS is not aware of any evidence that the listed sites have environmentally negatively impacted the subject property.

Other Ascertainable Records

- RCRA-NonGen: RCRA - Non Generators. RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Number of Sites Listed	Potential Impact on Subject Property
19	Being found on the list does not necessarily indicate that an unauthorized release of hazardous substances to the environment had occurred at the listed sites. ENVIROASSESSORS is not aware of any evidence that the listed sites have environmentally negatively impacted the subject property.

- CORTESE: "Cortese" Hazardous Waste & Substances Sites List. The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites). This listing is no longer updated by the state agency.

Site Name	Address	Case	Potential Impact on Subject Property
CITY OF ARCADIA	250 W HUNTINGTON DR	COMPLETED - CASE CLOSED AS OF 1/31/2002	None or minimal.
JUSTICE BROTHERS INC	941 HUNTINGTON DR W	Status: Completed - Case Closed	None or minimal.
TUNE UP MASTERS SHOP	915 HUNTINGTON DR E	Status: Completed - Case Closed	None or minimal.

- DRYCLEANERS: Cleaner Facilities A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaner's agents; linen supply; coin-operated laundries and cleaning; dry cleaning plants, except rugs; carpet and upholstery cleaning; industrial launderers; laundry and garment services.

Number of Sites Listed	Potential Impact on Subject Property
1	Being found on the list does not necessarily indicate that an unauthorized release of hazardous substances to the environment had occurred at the listed site. ENVIROASSESSORS is not aware of any evidence that the listed site has environmentally negatively impacted the subject property.

- HAZNET: Facility and Manifest Data. Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

Number of Sites Listed	Potential Impact on Subject Property
1	Being found on the list does not necessarily indicate that an unauthorized release of hazardous substances to the environment had occurred at the listed site. ENVIROASSESSORS is not aware of any evidence that the listed site has environmentally negatively impacted the subject property.

- HIST CORTESE: Hazardous Waste & Substance Site List. The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES].

Site Name	Address	Case	Potential Impact on Subject Property
JUSTICE BROTHERS INC	941 HUNTINGTON DR W	Status: Completed - Case Closed	None or minimal.
TUNE UP MASTERS SHOP	915 HUNTINGTON DR E	Status: Completed - Case Closed	None or minimal.

- LOS ANGELES COUNTY HMS: Street Number List. Industrial Waste and Underground Storage Tank Sites. Source: Department of Public Works.

Number of Sites Listed	Potential Impact on Subject Property
1	Being found on the list does not necessarily indicate that an unauthorized release of hazardous substances to the environment had occurred at the listed site. ENVIROASSESSORS is not aware of any evidence that the listed site has environmentally negatively impacted the subject property.

C. EDR HIGH RISK HISTORICAL RECORDS

- EDR Historical Auto Stations: EDR Proprietary Historic Gas Stations. EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service

station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

Number of Sites Listed	Potential Impact on Subject Property
4 Includes LOWELL & STOUT UNION, a former occupant of the subject property	Being found on the list does not necessarily indicate that an unauthorized release of hazardous substances to the environment had occurred at the listed sites. ENVIROASSESSORS is not aware of any evidence that the listed sites have environmentally negatively impacted the subject property.

- EDR Historical Cleaners: EDR Proprietary Historic Dry Cleaners. EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

Number of Sites Listed	Potential Impact on Subject Property
1	Being found on the list does not necessarily indicate that an unauthorized release of hazardous substances to the environment had occurred at the listed site. ENVIROASSESSORS is not aware of any evidence that the listed site has environmentally negatively impacted the subject property.

D. EDR RECOVERED GOVERNMENT ARCHIVES

No sites found within 0.25 miles of the subject property were found in the databases searched.

There are no records of reported hazardous materials spillage/leakage at the subject property based on the review of databases. The owner of the subject property is an unlikely potential responsible party for any contamination due to hazardous materials traceable to any listed sites, based on the information from the database reports. Under Section 26 (4) d of the amended Part 201 of the Natural Resources and Environmental Protection Act, (NREPA, 1994, P.A. 451), "the owner or operator of property onto which contamination has migrated is not liable for that contamination, unless the owner or operator is responsible for an activity causing the release that is the source of the contamination."

4.4 RESULTS OF SITE HISTORY/LAND USE REVIEW

A gasoline service station operated on the subject property from 1950, at the latest, until possibly the late 1960s or early 1970s. An automotive repair facility may have been concurrently operated along with the service station until the property was redeveloped into a Souplantation restaurant in 1988. The restaurant operated until 2020 when it

ceased operations due possibly in part to the coronavirus pandemic impact on indoor dining restrictions.

The following subsections discuss the findings.

4.4.1 Interviews

During the site visit on March 4, 2021, Mr. Norman Sacro of ENVIROASSESSORS was given free access to the subject property by the seller's broker. Any information gathered has been incorporated in Sections 3.0 and 4.0. No property features observed warranted further inquiry with respect to environmental concerns.

4.4.2 User Questionnaire and User-Provided Information

A user of this present Phase I report is Mr. Dustin Nicolarsen of The Derby. He filled out the User Questionnaire found in Appendix 8.4.

Conducting a search for recorded environmental liens is beyond the scope of ENVIROASSESSORS' responsibility in preparing this Phase I report.

4.4.3 Building Records Review

Records made available online by the City of Arcadia Department of Building and Safety pertinent to the subject property were reviewed. Table 1 presents a summary of permitting activities. Various permitting documents dated 2002 to 2013 were reviewed. Appendix 8.5 presents copies of downloaded documents. All documents pertained to the Souplantation restaurant and none to previous permitting activities. No documents that indicate a potential environmental concern were found. Specifically, review of building records reveals the following:

- No construction of industrial or manufacturing facilities; and
- No installation of any storage facilities for hazardous materials such as underground storage tanks.

Table 1. SUMMARY OF PERMITTING ACTIVITIES

DATE	TYPE OF PERMIT/ DOCUMENT	DESCRIPTION	CURRENT USE OF PROPERTY	PROPOSED USE OF PROPERTY	DECLARED OWNER**/ BUSINESS NAME/ APPLICANT
3-26-2002	Fire sprinkler/alarm permit	Fire sprinklers for canopy	Restaurant	*	Soup Plantation
2-25-2002	Building permit	Canopy over service yard, 2 floor drains, extend water heater vent above roof	Restaurant	*	Soup Plantation
4-28-2005	Building permit	Change out dishwasher and add circuit outlet for soda station	Restaurant	*	Soup Plantation
5-17-2010	Plumbing permit	Install 5 new tankless water heaters	Restaurant	*	Soup Plantation
10-10-2013	Building permit	Install ADA compliant van parking, car parking, railing, striping and ramps	Restaurant	*	Soup Plantation

* Not declared **As indicated in the documents submitted/cited. Not necessarily the legal owner.
? Not legible

4.4.4 Historical Map Search and Review

ENVIROASSESSORS requested a search for historical maps from EDR to assist in identifying previous land use of the subject property as well as the immediate vicinity. The EDR collection includes Sanborn Fire Insurance Maps that were prepared for fire insurance underwriting purposes. These maps describe the construction materials of buildings and their fire resistance characteristics. They indicate the location of fire prevention devices, gasoline storage tanks, water lines, cisterns, and any potentially flammable materials.

The search did not find any historical maps from the EDR inventory. Appendix 8.6 presents a Sanborn Map Report.

4.4.5 City Directory Review

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract Report includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals. Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property. A summary of the information obtained is provided in the text of this report. Appendix 8.7 includes the EDR City Directory Abstract Report. Table 2 below summarizes the findings as they are listed in the report.

Historical usage of the subject property includes the following (not necessarily in chronological order): gasoline service station, automotive repair, and restaurant.

Table 2. SUMMARY OF CITY DIRECTORY LISTINGS

YEAR	OCCUPANT NAME
1950	PUTMAN A E SERV STN
1957	LOWELL & STOUT UNION SERV
1960	LOWELL & STOUT UNION SERV
1960	UNION OIL DLRS
1966	ARCADIA MOTORS
1994	SOUPLANTATION
1995	SOUPLANTATION
1999	SOUPLANTATION
2004	SOUPLANTATION
2006	SOUPLANTATION
2009	GARDEN FRESH RESTAURANT CORP
2009	SOUPLANTATION
2014	SOUPLANTATION & SWEET TOMATOES

4.4.6 Aerial Photographs

A search for historical aerial photographs on the subject property and the surrounding properties was conducted online by ENVIROASSESSORS using Historic Aerials by

Nationwide Environmental Title Research (NETR) and Google Earth resources. Photographs taken from 1952 through 2016 were analyzed. Copies of the aerial photographs are found in Appendix 8.12. Table 3 summarizes the findings.

Table 3. ANALYSIS OF AERIAL PHOTOGRAPHS

DATE FLOWN	SOURCE	REMARKS
1952, 1954, 1964	NETR	**Subject Property:** Appears to be three commercial structures, consistent with the city directory that there was a service station on the property between 1950 and 1960. **General Surrounding Area:** Mostly residential structures to the south and commercial structures to the west and east. No landfill operations are identifiable on the subject property or adjacent areas.
1972, 1977, 1980	NETR	**Subject Property:** The commercial structure towards the southern portion of the property is no longer visible. **General Surrounding Area:** More commercial structures to the west and east. No landfill operations are identifiable on the subject property or adjacent areas.
1994, 2002, 2003, 2005, 2009, 2010, 2012, 2014, 2016	NETR	**Subject Property:** There is now a large commercial building, which appears to be the restaurant observed during the site visit. **General Surrounding Area:** The hotel to the north and the retail shopping centers to the south are now visible. No landfill operations are identifiable on the subject property or adjacent areas.

4.5 SYNOPSIS OF PREVIOUS ENVIRONMENTAL INVESTIGATIONS AND REGULATORY AGENCY RECORDS SEARCH AND REVIEW

ENVIROASSESSORS was not provided any environmental studies previously conducted on the subject property. ENVIROASSESSORS is not aware of any environmental studies conducted in the past on the subject property.

ENVIROASSESSORS accessed GeoTracker, an online source for environmental data for regulated facilities maintained by the California State Water Resources Control Board. GeoTracker does not have any information on the subject property (See Appendix 8.8).

California Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) maps available online concerning the subject property and nearby properties were reviewed. DOGGR maps contain information regarding oil and gas resources development. According to the DOGGR map, there are no oil or gas wells within 1,000

feet of the approximate center of the subject property (See Appendix 8.9). No potential environmental concerns were noted as a result of the review.

ENVIROASSESSORS accessed EnviroStor, an online source for environmental data for regulated facilities maintained by the California Department of Toxic Substance Control. EnviroStor does not have any information on the subject property (See Appendix 8.10).

ENVIROASSESSORS submitted a request for records on the subject property to the Los Angeles County Fire Department pertaining to underground storage tank installation/removal/remediation as well as hazardous materials/wastes remediation. The search did not find any records on the subject property (See Appendix 8.12).

ENVIROASSESSORS conducted an online file search of the records maintained by the Los Angeles County Department of Public Works, Waste Management Division (LACDPW). The agency did not show any records related to industrial waste, underground storage tank, or stormwater for the subject property.

4.7 DATA GAPS

Data gap is a lack of or inability to obtain information required by ASTM Practice E 1527-13 despite good faith efforts by the environmental professional to gather such information. Any data gaps identified are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the subject property and do not alter the conclusions and recommendations of this report.

5.0 CONCLUSIONS AND RECOMMENDATIONS

In conformance with the scope and limitations of ASTM Practice E 1527-13, ENVIROASSESSORS performed a Phase I Environmental Site Assessment of the subject property. Any exceptions to, or deletions from, this practice are described in Sections 1.2 and 5.0 of this report. This assessment has revealed no evidence of *recognized environmental conditions* (RECs) in connection with the subject property except for the following:

> A gasoline service station operated on the subject property from 1950, at the latest, until possibly the late 1960s or early 1970s. An automotive repair facility may have been concurrently operated along with the service station until the property was redeveloped into a restaurant in 1988. No documentation was found regarding the removal of the fuel underground storage tanks and dispensers used by the service station. Also, there is potential for subsurface impact due to petroleum-derived organic compounds as well as indoor vapor intrusion.

The term *recognized environmental conditions* means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not RECs nor *controlled recognized environmental conditions* (CRECs). A *de minimis condition is* a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

This assessment has revealed no CRECs. CREC is an REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

This assessment has revealed no evidence *historical recognized environmental conditions* (HRECs) in connection with the subject property. An HREC is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without

subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

The qualitative scale used for ranking potential business environmental risk concerns is low, low to moderate, moderate to high, and high probability for environmental impairment liability. This definition is exclusive to ENVIROASSESSORS and is not within the scope and limitations of ASTM Practice E 1527-13. The subject property was determined to have a *high potential* for environmental impairment liability based on the evaluation of the following findings:

- Present use the property;
- No observed industrial wastewater generation;
- Potential presence of non-friable asbestos-containing materials;
- Non-generation of hazardous wastes requiring special handling;
- Presence and management of limited quantities of potentially hazardous materials such as cleaning materials found during the site visit;
- No observed potentially PCB-containing electrical devices requiring special management at this time;
- No observed pesticide use;
- The age of the building and neighboring land use;
- Presence of listed potential hazardous waste sites within one mile of the subject property;
- The historical use of the property, particularly as a gasoline service station; and
- Public domain information on the property.

A Phase II environmental investigation is recommended to be conducted to address the REC identified above.

The following are also recommended to be conducted (as required by pertinent regulatory agencies):

- Prior to future renovations or building demolition suspect ACMs should be sampled and analyzed for asbestos content. Confirmed ACM should be managed in accordance with applicable federal and state regulations.

- Prior to future building renovations or demolition, samples of suspect painted materials should be collected and analyzed for lead content. Confirmed LBP should be managed in accordance with applicable federal and state regulations.

- During routine maintenance, light ballasts at the site should be checked for "non-PCB" labels. If labels are not observed, waste ballasts should be handled and disposed of in accordance with applicable Federal, State, and local regulations."

No further environmental investigation is recommended to be performed at this time.

6.0 LIMITATIONS

The purpose of this investigation was to assess the potential environmental liabilities at the subject site. The investigation involved a comprehensive site visit for an ocular inspection, document review at the regulatory agencies, and interviews with knowledgeable sources.

The information obtained from available public agency files is impartially presented here. Any information and reports provided by other parties have not been verified for accuracy. The accuracy of conclusions drawn from findings is inherently dependent on the accuracy of the available pertinent information.

ENVIROASSESSORS relied on information derived from secondary sources including governmental agencies, the Client (User), designated representatives of the Client (User), property contact, property owner, property owner representatives, computer databases, and personal interviews. Except as set forth in this report, ENVIROASSESSORS has made no independent investigation as to the accuracy and completeness of the information derived from secondary sources including government agencies, the Client, designated representatives of the Client, property contact, property owner, property owner representatives, computer databases, or personal interviews and has assumed that such information is accurate and complete. ENVIROASSESSORS assumes information provided by or obtained from governmental agencies including information obtained from government websites is accurate and complete. ENVIROASSESSORS assumes the property has been correctly and accurately identified by the Client (User), designated representative of the Client (User), property contact, property owner, and property owner's representatives. ENVIROASSESSORS assumes that the Client (User), Client representatives, Client Legal Counsel, designated representatives of the Client, Key Site Manager, property contact, property owner, property owner representatives, and property brokers, used good faith in answering questions and in obtaining information for the subject property as defined in 10.8 of the ASTM E 1527-13 practice. This would also include obtaining those helpful documents from previous owners, operators, tenants, brokers, financial institutions etc. ENVIROASSESSORS also assumes the Client designated appropriate and knowledgeable people for performance of the Phase I.

The report presents a description of the conditions observed at the subject property. The current environmental conditions may vary considerably from that which was observed during this investigation. Any additional data that may become available later shall be reviewed by ENVIROASSESSORS and the conclusions presented herein will be subsequently modified.

ENVIROASSESSORS does not under any circumstances warrant or guarantee that not finding evidence of *recognized environmental conditions* in connection with the *property* means that environmental contamination does not exist in the subject property. Additional investigation, including surface or subsurface sampling and analysis outside the scope of this Phase I Environmental Site Assessment, may provide a more definitive basis for determining whether contamination exists at levels of concern in the subject property.

This report was prepared in accordance with ENVIROASSESSORS' proposal and standard terms and conditions. No other warranty, expressed or implied is made. No statement or information provided in this report should be considered a legal advice. Proper legal advice should be consulted as necessary.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
TROTTER APARTMENTS Site ID: 0905476 EPA Id: CASFN0905476	829 W. OLIVE AVENUE	NE 1/4 - 1/2 (0.438 mi.)	M62	259

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
METHODIST HOSPITAL O EPA ID:: CAD981451685	300 HUNTINGTON DR	SSW 0 - 1/8 (0.016 mi.)	A8	23

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent NPL

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, has revealed that there is 1 RESPONSE site within approximately 1 mile of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/26/2020 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there is 1 CPS-SLIC site within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 8 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 19 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there is 1 HAZNET site within approximately 0.001 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: Returned to compliance on 12/20/2016. Establish a HMBP.
Violation Division: Monrovia Fire Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 414197
Site Name: City of Hope - Monrovia Research Facility
Violation Date: 11-08-2017
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 12/01/2017. OBSERVATION: Four 5-gal jugs of waste x-ray film fixer solution llocated in the hazardous waste/chemical storage room were observed without a hazardous waste label. CORRECTIVE ACTION: Submit a photo to the CUPA demonstrating that the containers listed above have been properly labeled.
Violation Division: Los Angeles County Fire Department
Violation Program: HW

Site Name: City of Hope - Monrovia Research Facility
Violation Date: 11-08-2017
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Hazardous Waste Generator Program - Administration/Documentation - General
Violation Notes: Returned to compliance on 11/08/2017. 12.50.075 Permit Required - Every business or business concern within the jurisdiction of the LACoCUPA and subject to on or more of the program elements shall be required to apply for, pay the permit fees required by this chapter, and obtain from the LACoCUPA a unified program facility permit for the program elements applicable to such facility prior to the commencement of any business or activity related to any of the program elements. The permit required under this section shall be posted and conspicuously displayed at the location falling under the requirements of this chapter.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Site ID: 414197
Site Name: City of Hope - Monrovia Research Facility
Violation Date: 07-03-2019
Citation: 22 CCR 12 66262.34(e) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(e)
Violation Description: Failure to meet the following conditions of satellite accumulation regulations: G Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator. G Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accmulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first. G The generator complies with section 66265.171, 66265.172, and 66265.173(a). G The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words G Hazardous WasteG including specified information G Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a G 90 dayG accumulation area G 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated
Violation Notes: Returned to compliance on 08/06/2019. OBSERVATION: Failure of the Owner/Operator to comply with one or more satellite accumulation requirements: satellite containers in some labs were labeled with incorrect address; some accumulation start dates were older than one year or two years. CORRECTIVE ACTION: Ensure that all hazardous wastes being accumulated pursuant to satellite accumulation meet all applicable requirements and submit documentation of compliance to the CUPA.

Background Info:	This lead contaminated Site has been a joint project between LA County, US-EPA, and DTSC, with DTSC now as the Lead Agency. The Site originally consisted of five properties; 827, 829, 831 Olive Avenue and 824, 832 Colorado Blvd; but now two properties, 831 Olive and the 824 Colorado are determined clean. Lead contamination exists in sols from 0-2 and the contamination was probably from Barth's Battery Shop which was located on 832 Colorado Blvd. in the 1930s. In the 1930s the Olive Avenue properties were a vacant lot. The battery shop probably disposed their battery waste beind the business as pieces of battery casings have been found in Site

TROTTER APARTMENTS (Continued) **S106076586**

soils. In the 1960s the Olive Avenue vacant lot was developed with the current residential buildings which were built on top of the battery waste. Grading of the lot prior to construction probably spread the lead waste throughout the properties.
Not reported
DTSC sampled in May and October 2001 to define the vertical and lateral extent of the lead contamination. DTSC then conducted an Emergency Removal Action in January 2002 to remove surface soils contaminated with lead that may pose a health risk to residents. After this action the 824 Colorado Blvd address was determined cleaned as only a small area in the southwest corner of the property needed excavation. In May 2003 DTSC conducted a Removal Action to remove the remaining lead contaminated soil that was not covered by structures or paving. After this action the 831 Olive Avenue was determined cleaned as only a small area on the south western lot was excavated.
Not reported
DTSC believes that the health risk has been removed at the Site. Lead contaminated soil still exists there, but the areas where lead contaminated soil exists are either covered by concrete, asphalt, or building structures, and therefore do not pose a risk to human health or the environment.

Comments Date: 01072004
Comments: Lead contaminated soils still exist at the site, but are not
Comments Date: 01072004
Comments: considered a threat to human health nor the environment

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/30/2020

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/30/2020

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/14/2020

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

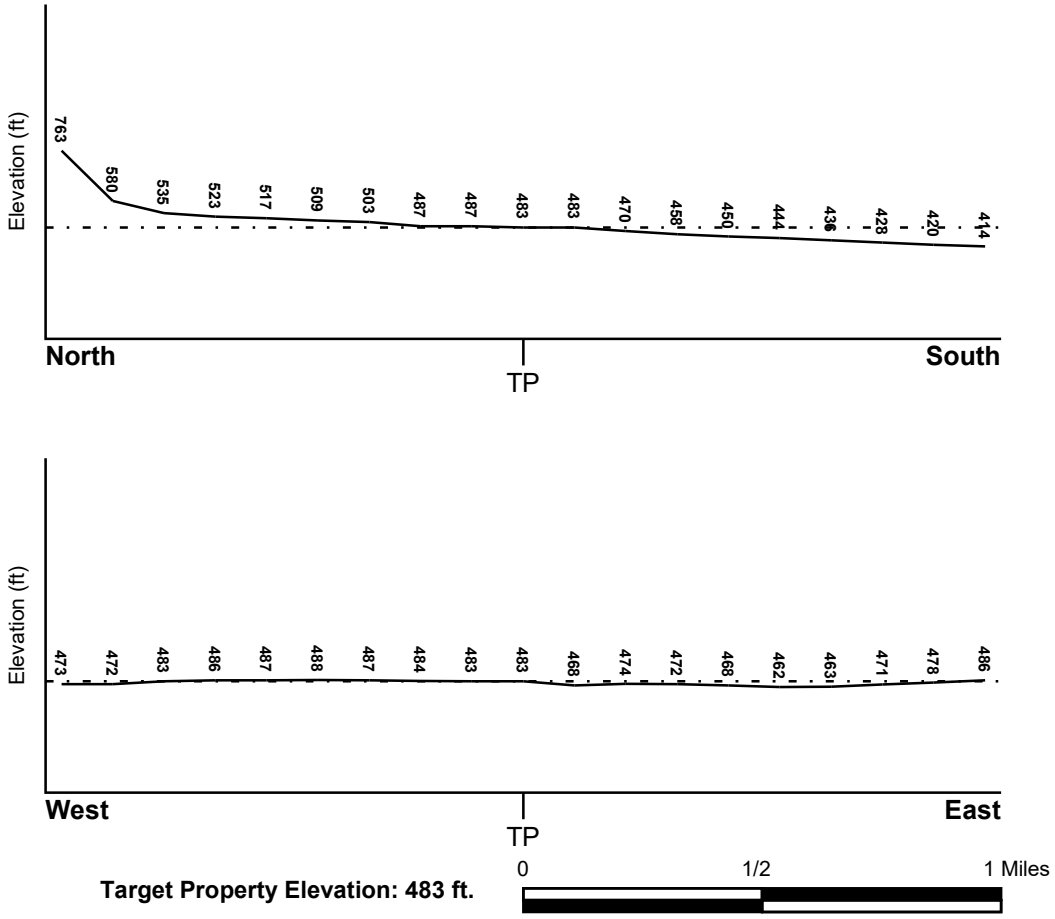
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1400F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
MOUNT WILSON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
10	1/2 - 1 Mile SSW	SW
1G	1/2 - 1 Mile SSW	SW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

APPENDIX 8.4 - User Questionnaire

ASTM E1527 – 13

USER QUESTIONNAIRE

INTRODUCTION

In order to qualify for one of the *Landowner Liability Protections (LLPs)*[187] offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*"),[188] the *user* must conduct the following inquiries required by 40 CFR 312.25, 312.28, 312.29, 312.30, and 312.31. These inquiries must also be conducted by EPA Brownfield Assessment and Characterization grantees. The *user* should provide the following information to the *environmental professional*. Failure to conduct these inquiries could result in a determination that "*all appropriate inquiries*" is not complete.

[187] *Landowner Liability Protections*, or *LLPs*, is the term used to describe the three types of potential defenses to Superfund liability in EPA's *Interim Guidance RegardingCriteria Landowners Must Meet in Order to Qualify for Bona Fide Prospective Purchaser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability* ("*Common Elements*" Guide) issued on March 6, 2003.

[188] P.L. 107-118.

Address of subject property: 301 E. Huntington Drive Arcadia CA 91006

Name of person completing questionnaire:

Dustin Nicolarsen

Signature: Dustin Nicolarsen

Date: 3/3/21

Company and Address: The Derby, 233 E Huntington Dr. Arcadia, CA 91006

Phone number: (626) 447-2430

Fax number:

Email address: adustbuster@gmail.com

Downloaded/printed by Norman Sacro (Enviroassessors, Inc.) pursuant to License Agreement.

(1.) Environmental liens that are filed or recorded against the *property* (40 CFR 312.25).

Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 below) identify any environmental liens filed or recorded against the *property* under federal, tribal, state or local law? If a search of *recorded land title records* was NOT conducted, please indicate: "A search of *recorded land title records* was not conducted."

No environmental liens

NOTE 1—In certain jurisdictions, federal, tribal, state, or local statutes, or regulations specify that environmental liens and AULs be filed in judicial records rather than in land title records. In such cases judicial records must be searched for environmental liens and AULs.

(2.) Activity and use limitations (AULs) that are in place on the *property* or that have been filed or recorded against the *property* (40 CFR 312.26(a)(1)(v) and vi)).

Did a search of *recorded land title records* (or judicial records where appropriate, see Note 1 above) identify any AULs, such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the *property* and/or have been filed or recorded against the *property* under federal, tribal, state or local law? If a search of *recorded land title records* was NOT conducted, please indicate: "A search of *recorded land title records* was not conducted." Also, if AULs have not been filed or recorded against the *property* under federal, tribal, state or local law, please indicate: "AULs have not been filed or recorded against the *property* under federal, tribal, state or local law."

No identities

Copyright by ASTM Int'l (all rights reserved).
Downloaded/printed by Norman Sacro (Enviroassessors, Inc.) pursuant to License Agreement.

(3.) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).

Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or an *adjoining property* so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes, as far as I know this property has only been used as an orange grove and a restaurant. I own the Restaurant next door to this property.

(4.) Relationship of the purchase price to the fair market value of the *property* if it were not contaminated (40 CFR 312.29).

Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*? If the property is NOT for sale, please indicate "Property is not for sale" and this question does not apply.

Yes it reflects a fair market

Downloaded/printed by Norman Sacro (Enviroassessors, Inc.) pursuant to License Agreement.

(5.) Commonly known or *reasonably ascertainable* information about the *property* (40 CFR 312.30).

Are you aware of commonly known or *reasonably ascertainable* information about the *property* that would help the *environmental professional* to identify conditions indicative of releases or threatened releases? For example,

(a.) Do you know the past uses of the *property*?

Used as an orange grove & restaurant

(b.) Do you know of specific chemicals that are present or once were present at the *property*?

NO.

(c.) Do you know of spills or other chemical releases that have taken place at the *property*?

NO

Copyright by ASTM Int'l (all rights reserved).
Downloaded/printed by Norman Sacro (Enviroassessors, Inc.) pursuant to License Agreement.

(d.) Do you know of any environmental cleanups that have taken place at the *property*?

NO

(6.) The degree of obviousness of the presence or likely presence of contamination at the *property*, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

Based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of releases at the *property*?

NO.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

PRELIMINARY REPORT

Dated as of January 12, 2021 at 7:30 a.m.

In response to the application for a policy of title insurance referenced herein, Commonwealth Land Title Company hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.
The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitation on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

The policy(s) of title insurance to be issued hereunder will be policy(s) of **Commonwealth Land Title Insurance Company.**

Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered. It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

SCHEDULE A

The form of policy of title insurance contemplated by this report is:

ALTA Extended Owner's Policy of Title Insurance (6-17-06)

ALTA Extended Loan Policy of Title Insurance (6-17-06)

The estate or interest in the land hereinafter described or referred to covered by this report is:

A FEE

Title to said estate or interest at the date hereof is vested in:

SHIGENOBU KAKU and HIKARU KAKU, Trustees, of the Kaku Family trust dated 10-22-2012

The land referred to herein is situated in the County of Los Angeles, State of California, and is described as follows:

SEE EXHIBIT "A" ATTACHED HERETO AND MADE A PART HEREOF

EXHIBIT "A"

ALL THAT CERTAIN REAL PROPERTY SITUATED IN THE COUNTY OF LOS ANGELES, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

LOTS 12 THROUGH 20 OF TRACT 6860. IN THE CITY OF ARCADIA. COUNTY OF LOS ANGELES, STATE OF CALIFORNIA. AS PER MAP RECORDED IN BOOK 78 PAGE 75 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY.

INCLUDING THAT PORTION OF THIRD AVENUE. SHOWN IN TRACT 6860. AS VACATED BY RESOLUTION NO. 5407, RECORDED MARCH 14, 1988 AS INSTRUMENT NO. 88-0341335 OF OFFICIAL RECORDS, IN THE CITY OF ARCADIA, COUNTY OF LOS ANGELES. STATE OF CALIFORNIA. AS PER MAP RECORDED IN BOOK 78 PAGE 75 OF MAPS, IN THE OFFICE OF THE COUNTY RECORDER OF SAID COUNTY, THAT WOULD PASS THE LEGAL CONVEYANCE OF THE SAID LAND DESCRIBED ABOVE.

EXCEPT THE NORTHERLY 43.98 FEET OF LOT 20 OF TRACT 6860.

ALSO EXCEPT THE SOUTHERLY 20 FEET OF LOTS 12 TO 17 WHICH LIE WITHIN THE ADJACENT HUNTINGTON DRIVE RIGHT OF WAY.

ALSO EXCEPT THAT PORTION OF LOT 17 IN SAID TRACT 6860, DESCRIBED AS FOLLOWS:

BEGINNING AT THE INTERSECTION OF THE EASTERLY LINE OF SAID TRACT 6860, AND THE NORTHERLY LINE OF HUNTINGTON DRIVE. (100 FEET WIDE); THENCE NORTHERLY 15 FEET ALONG THE EASTERLY LINE OF TRACT 6860 TO THE POINT OF CUSP WITH A TANGENT CURVE, CONCAVE NORTHWESTERLY AND HAVING A RADIUS OF 15 FEET: SAID CURVE ALSO BEING TANGENT AT ITS WESTERLY TERMINUS TO THE NORTHERLY LINE OF HUNTINGTON DRIVE: THENCE WESTERLY ALONG SAID CURVE TO THE POINT OF TANGENCY; THENCE EASTERLY 15 FEET ALONG THE NORTHERLY LINE OF SAID HUNTINGTON DRIVE, TO THE POINT OF BEGINNING.

APN: 5773-009-065

SCHEDULE B – Section A

The following exceptions will appear in policies when providing standard coverage as outlined below:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.

2. Any facts, rights, interests or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.

3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.

4. Any encroachment, encumbrance, violation, variation or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.

5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the Public Records.

6. Any lien or right to a lien for services, labor or material not shown by the Public Records.

SCHEDULE B – Section B

At the date hereof Exceptions to coverage in addition to the printed exceptions and exclusions in said policy form would be as follows:

A. Property taxes, which are a lien not yet due and payable, including any assessments collected with taxes to be levied for the fiscal year 2021-2022.

B. Property taxes, including any personal property taxes and any assessments collected with taxes, are as follows:

Tax Identification No.:	5773-009-065
Fiscal Year:	2020-2021
1st Installment:	$19,296.77, PAID.
2nd Installment:	$19,296.76, OPEN (Delinquent after April 10)
Penalty and Cost:	$1,939.67
Homeowners Exemption:	$0.00
Code Area:	01868

C. The lien of supplemental or escaped assessments of property taxes, if any, made pursuant to the provisions of Chapter 3.5 (commencing with Section 75) or Part 2, Chapter 3, Articles 3 and 4, respectively, of the Revenue and Taxation Code of the State of California as a result of the transfer of title to the vestee named in Schedule A or as a result of changes in ownership or new construction occurring prior to Date of Policy.

1. Water rights, claims or title to water, whether or not disclosed by the public records.

2. Easement(s) for the purpose(s) shown below and rights incidental thereto as set forth in a document:

Purpose:	Utilities
Recording No:	in Book 180, Page 258, Deeds
Affects:	Said land

Reference is hereby made to said document for full particulars.

3. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, source of income, disability, veteran or military status, genetic information, medical condition, citizenship, primary language, and immigration status, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

Recording No:	in Book 3892, Page 127; in Book 4884, Page 70 and in Book 4633, Page 122 all of Official Records

Said covenants, conditions and restrictions provide that a violation thereof shall not defeat the lien of any mortgage or deed of trust made in good faith and for value.

4. The Land described herein is included within a project area of the Redevelopment Agency shown below, and that proceedings for the redevelopment of said project have been instituted under the Redevelopment Law (such redevelopment to proceed only after the adoption of the Redevelopment Plan) as disclosed by a document.

Redevelopment Agency:	City of Arcadia Community Redevelopment Agency
Recording Date:	July 16, 1975
Recording No:	as Instrument No. 3632, Official Records

and Recording Date: December 28, 1975
and Recording No: as Instrument No. 4927, Official Records

5. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, source of income, disability, veteran or military status, genetic information, medical condition, citizenship, primary language, and immigration status, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

Recording No: in Book 7222, Page 226, Official Records

Said covenants, conditions and restrictions provide that a violation thereof shall not defeat the lien of any mortgage or deed of trust made in good faith and for value.

6. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, source of income, disability, veteran or military status, genetic information, medical condition, citizenship, primary language, and immigration status, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

Recording No: in Book 2796, Page 303, Official Records

Said covenants, conditions and restrictions provide that a violation thereof shall not defeat the lien of any mortgage or deed of trust made in good faith and for value.

7. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, source of income, disability, veteran or military status, genetic information, medical condition, citizenship, primary language, and immigration status, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

Recording No: in Book 2880, Page 372, Official Records

Said covenants, conditions and restrictions provide that a violation thereof shall not defeat the lien of any mortgage or deed of trust made in good faith and for value.

8. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, source of income, disability, veteran or military status, genetic information, medical condition, citizenship, primary language, and immigration status, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

Recording No: in Book 4780, Page 176, Official Records

Said covenants, conditions and restrictions provide that a violation thereof shall not defeat the lien of any mortgage or deed of trust made in good faith and for value.

9. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, source of income, disability, veteran or military status, genetic information, medical condition, citizenship, primary language, and immigration status, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

   Recording No: in Book 4409, Page 233, Official Records

   Said covenants, conditions and restrictions provide that a violation thereof shall not defeat the lien of any mortgage or deed of trust made in good faith and for value.

10. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, source of income, disability, veteran or military status, genetic information, medical condition, citizenship, primary language, and immigration status, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

    Recording No: in Book 22228, Page 397, Official Records

    Said covenants, conditions and restrictions provide that a violation thereof shall not defeat the lien of any mortgage or deed of trust made in good faith and for value.

25. Covenants, conditions and restrictions but omitting any covenants or restrictions, if any, including but not limited to those based upon race, color, religion, sex, gender, gender identity, gender expression, sexual orientation, marital status, national origin, ancestry, familial status, source of income, disability, veteran or military status, genetic information, medical condition, citizenship, primary language, and immigration status, as set forth in applicable state or federal laws, except to the extent that said covenant or restriction is permitted by applicable law, as set forth in the document

Recording No:	in Book 2825, Page 218, Official Records

Said covenants, conditions and restrictions provide that a violation thereof shall not defeat the lien of any mortgage or deed of trust made in good faith and for value.

26. Any rights of the parties in possession of a portion of, or all of, said Land, which rights are not disclosed by the public records.

The Company will require, for review, a full and complete copy of any unrecorded agreement, contract, license and/or lease, together with all supplements, assignments and amendments thereto, before issuing any policy of title insurance without excepting this item from coverage.

The Company reserves the right to except additional items and/or make additional requirements after reviewing said documents.

27. Matters which may be disclosed by an inspection and/or by a correct ALTA/NSPS Land Title Survey of said Land that is satisfactory to the Company, and/or by inquiry of the parties in possession thereof.

END OF SCHEDULE B EXCEPTIONS

PLEASE REFER TO THE "NOTES AND REQUIREMENTS SECTION" WHICH FOLLOWS FOR INFORMATION NECESSARY TO COMPLETE THIS TRANSACTION

REQUIREMENTS SECTION:

1. Unrecorded matters which may be disclosed by an Owner's Affidavit or Declaration. A form of the Owner's Affidavit/Declaration is attached to this Preliminary Report/Commitment. This Affidavit/Declaration is to be completed by the record owner of the land and submitted for review prior to the closing of this transaction. Your prompt attention to this requirement will help avoid delays in the closing of this transaction. Thank you.

   The Company reserves the right to add additional items or make further requirements after review of the requested Affidavit/Declaration.

2. Any invalidity or defect in the title of the vestees in the event that the trust referred to herein is invalid or fails to grant sufficient powers to the trustee(s) or in the event there is a lack of compliance with the terms and provisions of the trust instrument.

   If title is to be insured in the trustee(s) of a trust, (or if their act is to be insured), this Company will require a Trust Certification pursuant to California Probate Code Section 18100.5.

   The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

3. The Company will require a complete copy of the trust agreement and any amendments thereto, certified by the trustee(s) to be a true and complete copy, with respect to the hereinafter named trust.

   Name of Trust: Kaku Family Trust dated 10-22-2012

4. In order to complete this report, the Company requires a Statement of Information to be completed by the following party(s),

   Party(s): All Parties

   The Company reserves the right to add additional items or make further requirements after review of the requested Statement of Information.

   NOTE: The Statement of Information is necessary to complete the search and examination of title under this order. Any title search includes matters that are indexed by name only, and having a completed Statement of Information assists the Company in the elimination of certain matters which appear to involve the parties but in fact affect another party with the same or similar name. Be assured that the Statement of Information is essential and will be kept strictly confidential to this file.

INFORMATIONAL NOTES SECTION

1. The information on the attached plat is provided for your convenience as a guide to the general location of the subject property. The accuracy of this plat is not guaranteed, nor is it a part of any policy, report or guarantee to which it may be attached.

2. For wiring Instructions please contact your Title Officer or Title Company Escrow officer.

3. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

4. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

5. Note: The policy of title insurance will include an arbitration provision. The Company or the insured may demand arbitration. Arbitrable matters may include, but are not limited to, any controversy or claim between the Company and the insured arising out of or relating to this policy, any service of the Company in connection with its issuance or the breach of a policy provision or other obligation. Please ask your escrow or title officer for a sample copy of the policy to be issued if you wish to review the arbitration provisions and any other provisions pertaining to your Title Insurance coverage.

6. Note: None of the items shown in this report will cause the Company to decline to attach ALTA Endorsement Form 9 to an Extended Coverage Loan Policy, when issued.

7. Note: The Company is not aware of any matters which would cause it to decline to attach CLTA Endorsement Form 116 indicating that there is located on said Land Commercial property, known as 301 East Huntington Drive, Arcadia, CA, to an Extended Coverage Loan Policy.

8. Note: There are NO conveyances affecting said Land recorded within 24 months of the date of this report.

Wire Fraud Alert

This Notice is not intended to provide legal or professional advice. If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the phone number of relevant parties to the transaction as soon as an escrow account is opened**. DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the filed rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for such discount. These discounts only apply to transactions involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

Not all discounts are offered by every FNF Company. The discount will only be applicable to the FNF Company as indicated by the named discount.

Available Discounts

DISASTER LOANS (CTIC, CLTIC, FNTIC)

The charge for a Lender's Policy (Standard or Extended coverage) covering the financing or refinancing by an owner of record, within twenty-four (24) months of the date of a declaration of a disaster area by the government of the United States or the State of California on any land located in said area, which was partially or totally destroyed in the disaster, will be fifty percent (50%) of the appropriate title insurance rate.

CHURCHES OR CHARITABLE NON-PROFIT ORGANIZATIONS (CTIC, FNTIC)

On properties used as a church or for charitable purposes within the scope of the normal activities of such entities, provided said charge is normally the church's obligation the charge for an owner's policy shall be fifty percent (50%) to seventy percent (70%) of the appropriate title insurance rate, depending on the type of coverage selected. The charge for a lender's policy shall be forty (40%) to fifty percent (50%) of the appropriate title insurance rate, depending on the type of coverage selected.

FIDELITY NATIONAL FINANCIAL, INC.
PRIVACY NOTICE

Effective April 9, 2020

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.* loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;

Copyright © 2020. Fidelity National Financial, Inc. All Rights Reserved

- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law. We may share your Personal Information with affiliates (other companies owned by FNF) to directly market to you. Please see "Choices with Your Information" to learn how to restrict that sharing.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information
We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information
If you do not want FNF to share your information among our affiliates to directly market to you, you may send an "opt out" request by email, phone, or physical mail as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you without your consent.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (https://fnf.com/pages/californiaprivacy.aspx) or call (888) 413-1748.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.
For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children
The FNF Websites are not intended or designed to attract persons under the age of eighteen (18).We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users
FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans
Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Your Consent To This Privacy Notice; Notice Changes; Use of Comments or Feedback

By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The Privacy Notice's effective date will show the last date changes were made. If you provide information to us following any change of the Privacy Notice, that signifies your assent to and acceptance of the changes to the Privacy Notice. We may use comments or feedback that you submit to us in any manner without notice or compensation to you.

Accessing and Correcting Information; Contact Us

If you have questions, would like to correct your Personal Information, or want to opt-out of information sharing for affiliate marketing, send your requests to privacy@fnf.com, by phone to (888) 934-3354, or by mail to:

ATTACHMENT ONE (Revised 05-06-16)

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY – 1990

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.
   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material not shown by the public records.

CLTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE

EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.
   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

c. that result in no loss to You; or
d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.

5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.

   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19, and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

2006 ALTA LOAN POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 13 or 14); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury or any consumer credit protection or truth-in-lending law.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 13(b) of this policy.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the Insured Mortgage in the Public Records. This Exclusion does not modify or limit the coverage provided under Covered Risk 11(b).

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

{Except as provided in Schedule B - Part II,{ t{or T}his policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

© California Land Title Association. All rights reserved.
The use of this Form is restricted to CLTA subscribers in good standing as of the date of use. All other uses are prohibited. Reprinted under license or express permission from the California Land Title Association.

{PART I

{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor or material not shown by the Public Records.}

PART II

In addition to the matters set forth in Part I of this Schedule, the Title is subject to the following matters, and the Company insures against loss or damage sustained in the event that they are not subordinate to the lien of the Insured Mortgage:}

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees or expenses, that arise by reason of:

{The above policy form may be issued to afford either Standard Coverage or Extended Coverage. In addition to the above Exclusions from Coverage, the Exceptions from Coverage in a Standard Coverage policy will also include the following Exceptions from Coverage:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown in the Public Records but that could be ascertained by an inspection of the Land or that may be asserted by persons in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records.
4. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and that are not shown by the Public Records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.

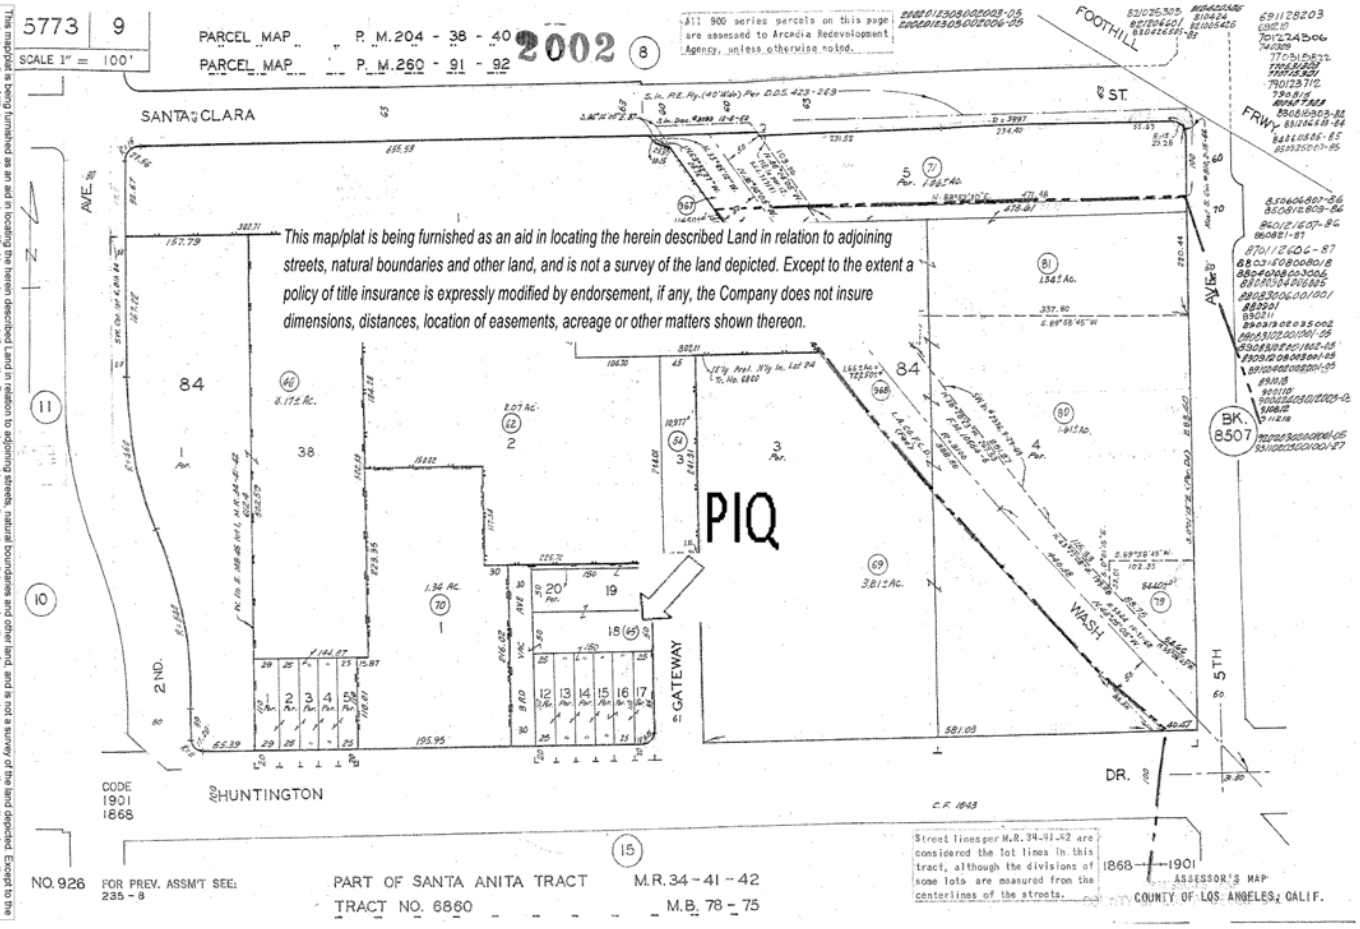
ALTA EXPANDED COVERAGE RESIDENTIAL LOAN POLICY – ASSESSMENTS PRIORITY (04-02-15)

EXCLUSIONS FROM COVERAGE



The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 5, 6, 13(c), 13(d), 14 or 16.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 11, 16, 17, 18, 19, 20, 21, 22, 23, 24, 27 or 28); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Insured Mortgage.
4. Unenforceability of the lien of the Insured Mortgage because of the inability or failure of an Insured to comply with applicable doing-business laws of the state where the Land is situated.
5. Invalidity or unenforceability in whole or in part of the lien of the Insured Mortgage that arises out of the transaction evidenced by the Insured Mortgage and is based upon usury, or any consumer credit protection or truth-in-lending law. This Exclusion does not modify or limit the coverage provided in Covered Risk 26.
6. Any claim of invalidity, unenforceability or lack of priority of the lien of the Insured Mortgage as to Advances or modifications made after the Insured has Knowledge that the vestee shown in Schedule A is no longer the owner of the estate or interest covered by this policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11.
7. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching subsequent to Date of Policy. This Exclusion does not modify or limit the coverage provided in Covered Risk 11(b) or 25.
8. The failure of the residential structure, or any portion of it, to have been constructed before, on or after Date of Policy in accordance with applicable building codes. This Exclusion does not modify or limit the coverage provided in Covered Risk 5 or 6.
9. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction creating the lien of the Insured Mortgage, is
   (a) a fraudulent conveyance or fraudulent transfer, or
   (b) a preferential transfer for any reason not stated in Covered Risk 27(b) of this policy.
10. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
11. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

OWNER'S DECLARATION

The undersigned hereby declares as follows:

1. (Fill in the applicable paragraph and strike the other)

   a. Declarant ("Owner") is the owner or lessee, as the case may be, of certain premises located at _____, further described as follows: See Preliminary Report/Commitment No. 09174362-917-BLB-EGL for full legal description (the "Land").

   b. Declarant is the _____ of _____ ("Owner"), which is the owner or lessee, as the case may be, of certain premises located at _____, further described as follows: See Preliminary Report/Commitment No. 09174362-917-BLB-EGL for full legal description (the "Land").

2. (Fill in the applicable paragraph and strike the other)

   a. During the period of six months immediately preceding the date of this declaration no work has been done, no surveys or architectural or engineering plans have been prepared, and no materials have been furnished in connection with the erection, equipment, repair, protection or removal of any building or other structure on the Land or in connection with the improvement of the Land in any manner whatsoever.

   b. During the period of six months immediately preceding the date of this declaration certain work has been done and materials furnished in connection with _____ upon the Land in the approximate total sum of $_____, but no work whatever remains to be done and no materials remain to be furnished to complete the construction in full compliance with the plans and specifications, nor are there any unpaid bills incurred for labor and materials used in making such improvements or repairs upon the Land, or for the services of architects, surveyors or engineers, except as follows: _____. Owner, by the undersigned Declarant, agrees to and does hereby indemnify and hold harmless Commonwealth Land Title Company against any and all claims arising therefrom.

3. Owner has not previously conveyed the Land; is not a debtor in bankruptcy (and if a partnership, the general partner thereof is not a debtor in bankruptcy); and has not received notice of any pending court action affecting the title to the Land.

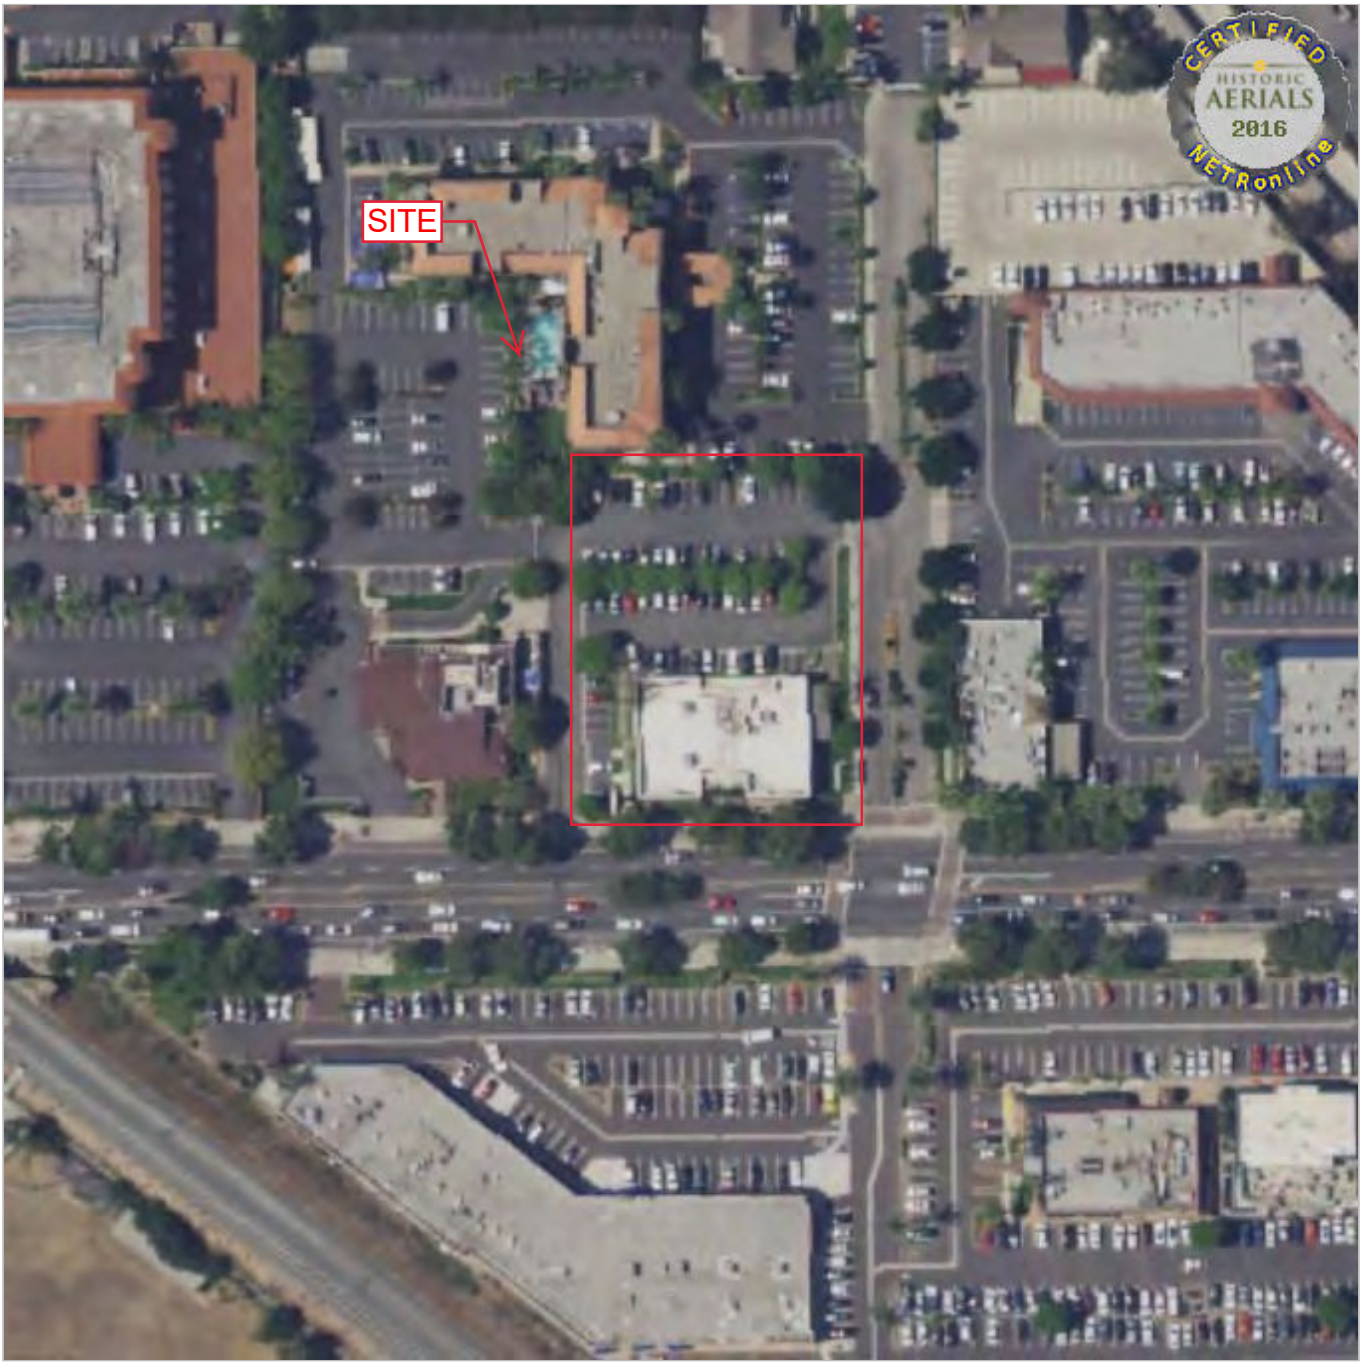
4. Except as shown in the above-referenced Preliminary Report/Commitment, there are no unpaid or unsatisfied mortgages, deeds of trust, Uniform Commercial Code financing statements, regular assessments, or taxes that constitute a lien against the Land or that affect the Land but have not been recorded in the public records.

5. The Land is currently in use as _____ ; _____occupy/occupies the Land; and the following are all of the leases or other occupancy rights affecting the Land:

   _____

6. There are no other persons or entities that assert an ownership interest in the Land, nor are there unrecorded easements, claims of easement, or boundary disputes that affect the Land.

7. There are no outstanding options to purchase or rights of first refusal affecting the Land.



8. There are no material violations of any current, enforceable covenant affecting the Property and the Undersigned has received no written notice from any third party claiming that there is a present violation of any current, enforceable covenant affecting the Property.

This declaration is made with the intention that Commonwealth Land Title Company and Commonwealth Land Title Insurance Company (the "Company") and its policy issuing agents will rely upon it in issuing their title insurance policies and endorsements. Owner, by the undersigned Declarant, agrees to indemnify the Company against loss or damage (including attorneys fees, expenses, and costs) incurred by the Company as a result of any untrue statement made herein.

I declare under penalty of perjury that the foregoing is true and correct and that this declaration was executed on ___ at _____.

APPENDIX 8.13 – LACFD Records Request and Response

HHMD No File Responsive :: H034825-031621

From: LACoFD (lacountyfire@mycusthelp.net)

To: nnsacro@enviroassessors.com

Date: Tuesday, March 16, 2021, 11:55 PM PDT

RE: PRA of March 16, 2021, Reference # H034825-031621.

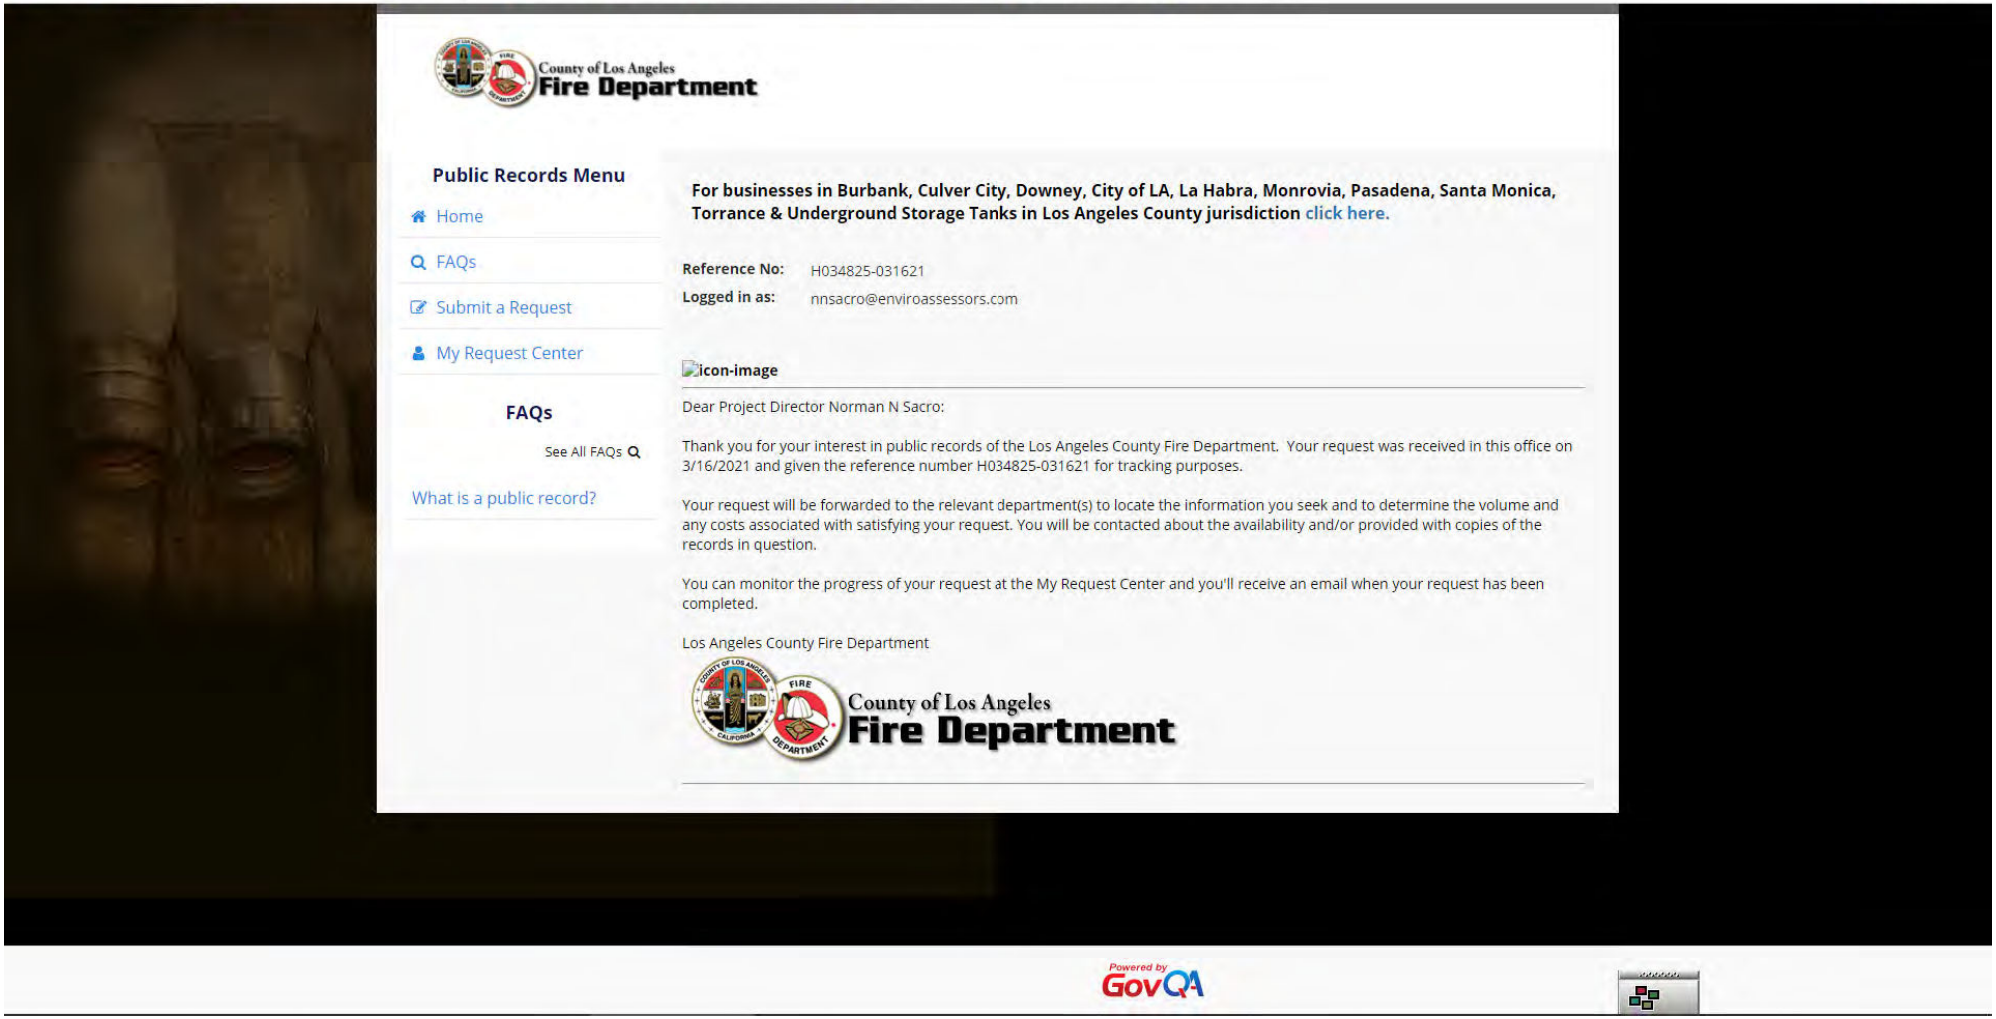
Dear Project Director Norman N Sacro,

The Los Angeles County Fire Department, Health Hazardous Materials Division, being the custodian or keeper of records, certify that a thorough search for the records you requested has been carried out.

Re: 301 E. Huntington Drive
ARCADIA CA 91006

The search revealed that your noted address did not match our database.

It should be understood that this does not mean that the records you requested do not exist. It is possible that such records may be misfiled; exist under another spelling, another name, or may have been destroyed based on this Department's Record Retention Policy. However, with the information furnished to our office, and to the best of our knowledge, no records were located.



For businesses in Burbank, Culver City, Downey, City of LA, La Habra, Monrovia, Pasadena, Santa Monica, Torrance & Underground Storage Tanks in Los Angeles County jurisdiction click here.

APPENDIX 8.15 – Qualifications of Environmental Professional

Dr. NORMAN N. SACRO, MND, MS, PEnvA, DipAES

CREDENTIALS

Missionary Natural Doctor
Dansalan College in consortium with Institute of Integrative & Natural Health Sciences, 2012

Master of Science in Environmental Science
Loyola Marymount University, 1985

Bachelor of Science in Chemistry
University of the Philippines, 1975

Contractor License (No. 895032) in the following classifications: General Engineering (A), General Building (B) and Hazardous Substances Removal Certification (HAZ)

Engineer-in-Training, State of California, XE072011

Registered Environmental Assessor I, #00118 (Note: Dr. Sacro was one of the first REAs. The 2012/2013 California budget removed the REA Program from statute, effective July 1, 2012, due to budgetary considerations.)

Registered Environmental Assessor II, # 20205 (Note: Dr. Sacro was one of only approximately 200 REA IIs. The 2012/2013 California budget removed the REA Program from statute, effective July 1, 2012, due to budgetary considerations.)

Professional Environmental Assessor, PEnvA No. 00001

Diplomate of the American Environmental Society, DipAES No. 00001

EPA Radon Measurement Operators Training Course

Risk Assessment and its Application at Contaminated Release Sites, University of California, Riverside

Conceptual Site Models and the Data Necessary to Make Technical Decisions Regarding Cleanup and Site Closure, University of California, Riverside

EXPERIENCE SUMMARY

Dr. Sacro has over thirty years of experience covering various fields including basic research (e.g., chemical, environmental, production oriented, analytical), laboratory analysis, production (e.g., petroleum products, chemical specialties), environmental chemistry and engineering, and construction management.

Dr. Sacro has performed numerous environmental audits in California and other states as well. His environmental audits have included evaluation of facility regulatory compliance and property transfer liability assessments. Regulatory compliance audits conducted included evaluation against local, State, and Federal regulations as well as good management practice norms. He has performed regulatory audits on various facilities including manufacturing and research establishments; Federal facilities such as navy, marine, army, and nuclear sites; and hazardous waste handling facilities such as waste haulers and landfills. His property transfer assessments have included

manufacturing, office, and residential establishments that were conducted for mortgage brokers, property managers, banks, insurance companies, developers, and law firms.

Dr. Sacro has been extensively involved in various environmental projects including waste minimization, subsurface investigations, engineering design and evaluation, remediations, indoor air quality investigations, and greenhouse gas emissions modeling. He has performed waste minimization studies for both the industry and the Environmental Protection Agency. He has been involved in investigations of contamination of the soil and the groundwater in different types of facilities due to leakage from underground storage tanks, manufacturing equipment, and faulty material handling practices. Mr. Sacro has been involved in the engineering design of environmental facilities including a municipal hazardous waste transfer facility, flood routing for an oil recycling firm, and wastewater treatment system for gasoline contaminated groundwater. He has been involved in environmental remediations of soil and groundwater contamination due to various operations. Mr. Sacro has also testified as both expert and percipient witness in court in connection with contaminated property investigation and remediations.

Dr. Sacro manages construction projects including excavation and grading, office buildings, industrial buildings and facilities, parking lots, building and facility upgrades to comply with American with Disabilities Act (ADA), church building, tenant improvements, and underground storage tank removal and remediation.

KEY PROJECTS

- Managed the construction of a tank farm foundation for a large olive oil processing facility.
- General contractor for tenant improvements for various commercial and industrial facilities.
- General contractor for various projects for a major defense and communications facility that included a communications tower, radar facility, anechoic chamber, etc.
- General contractor for the construction of an industrial olive oil packing plant.
- Managed the removal of underground storage tanks in at least fifteen different sites, both private and government, and conducted environmental remediation where required.
- General contractor for the building and parking lot ADA upgrade of a California Department of Motor Vehicles facility.
- Managed multi-million dollar contracts for the California Department of Transportation involving hazardous waste site investigations in connection with freeway construction activities (e.g., widening, sound wall installation, turn-out construction), seismic retrofit of bridges and overpasses, repair of earthquake damaged freeways and interchanges, maintenance station waste management related problems, property acquisitions for public works related projects, and hazardous waste remedial activities.
- Managed multi-million dollar contracts for the California Department of Transportation involving evaluation and cleanup of hazardous waste contamination in maintenance stations, particularly those due to the use of underground storage tanks.
- Conducts environmental assessments of commercial and industrial facilities/real estates to identify potential environmental liabilities in connection with property transfers. Some of the environmental assessments performed include potential environmental liability cost estimates associated with multi-billion-dollar property acquisitions or company asset transfer. His clients include major government transportation agencies (e.g., California Department of Transportation, Southern California Metropolitan Transit Authority), port facilities (e.g., Worldport Los Angeles), major developers and brokers, nationwide insurance companies, and high-tech industrial facilities.

- Managed and prepared Material Safety Data Sheet for steel products of a major worldwide steel company.

- Managed and conducted pre-demolition asbestos surveys of residential, apartment, commercial, and industrial buildings for California Department of Transportation in connection with the widening of Freeways 110 and 5 and the construction of Freeway 30.

- For various clients, managed and conducted asbestos surveys of properties including industrial, commercial, residential, clinical, and hospital buildings in connection with property transfers and/or company mergers.

- Performed numerous environmental regulatory compliance audits on government and private facilities. Private facilities for which work have been conducted include manufacturing, waste recycling facilities and hazardous waste treatment and storage facilities in various states.

- Conducted numerous environmental characterization and remediation for various facilities. Some of the work was performed in connection with real estate transfer transactions.

- Managed and performed compliance to SARA Title III, Section 313 reporting requirements for various industrial facilities.

- Provided expert advise to lawyers in connection with a litigation involving injury potentially caused by exposure to agricultural chemicals.

- Managed and accomplished reporting requirements under the California Hazardous Waste Management Review Act of 1989 (SB 14).

- Provided health and safety oversight and monitoring for remedial activities associated with a former manufactured gas site operated by Southern California Gas.

- Managed and conducted a detailed study involving volatile organic carbon emission compliance with rules and regulations of the South Coast Air Quality Management District. The study was performed for a subsidiary of a major world-wide steel company. The study involved air sampling, conceptual process modeling, interpretation of data, and interface with regulatory personnel.

- For the University of California, managed the development and submission of the Source Test Protocols for air emissions risk assessment under the California Air Toxics "Hot Spots" Information and Assessment Act of 1987 (AB 2588).

- Performed remedial investigation studies in connection with the construction of a freeway strip over a California Superfund site. The site is an inactive landfill that showed heavy metal (e.g., lead) and organics contamination.

- Accomplished reporting requirements under SARA Title III, Section 313, Toxic Chemical Release Inventory for a major oil company. The project included development of a novel approach of evaluating complicated process operations for calculating emissions of chemicals into various media.

- Conducted an environmental impact analysis of the Orange County Hazardous Waste Management Plan. His involvement was the evaluation of impacts on utility resources by the build out of the proposed hazardous waste facilities in Orange County.

- Lead in the study of waste minimization options for waste streams encountered in electric utility facilities. Specifically, the waste streams included chromate contaminated waters, surface impoundment wastes, oily wastes, and paint wastes.

- Preparation of Verification Study Action Plan for the Naval Weapons Station (Seal Beach, California). This Verification Study is aimed at confirming or denying the presence of hazardous wastes disposed of for many years at several sites. The study involves grab sampling, soil core sampling, and drilling of monitoring wells in sensitive areas such as explosives contaminated soils and where endangered species of plants and animals are found.

- Evaluation of a clean-up Feasibility Study performed by another environmental consulting firm on a property that is partly on an NPL (National Priority List) site.

- Managed and prepared Toxic Hot Spots (AB 2588) Inventory Plans for General Motors, THUMS Long Beach (Consortium of Texaco, Humbel, Union, Mobil, and Shell), Chemical Waste Management Kettleman Hill Hazardous Waste Landfill, and BHI Steel.

- Managed and prepared Air Toxic Inventory Plans (ATIP) Air Toxic Inventory Reports (ATIR) for the University of California and several industrial facilities in compliance with the California Air Toxics "Hot Spots" Information and Assessment Act of 1987 (AB2588).

- Performed an engineering study involving storm water routing for a waste oil recycling facility.

- Performed soil sampling and supervised drilling and installation of vadose zone monitoring wells for underground storage tank leak detection for a manufacturing firm.

- Managed and conducted groundwater treatment program for a hospital whose leaking underground storage tank contaminated the groundwater with gasoline. The project also involved the supervision of the installation of a double wall fiberglass tank and the interstitial leak monitoring system, as well as the design and installation of a treatment system for contaminated groundwater. Interfaced with the DOHS, Public Works Department and the Fire Department on permitting requirements.

- Prepared Business Plans for compliance with the Right-To-Know legislation.

- Performed a Site Investigation involving field sampling at an abandoned mining area contaminated with cyanide. The project also involved performing and EPA Hazardous Waste Site Ranking System which is used to evaluate a site for listing in the NPL (National Priority List).

- For a major electronics manufacturer, managed subsurface investigation of underground storage tanks to verify potential past discharge of metal plating degreasing liquid baths.

- Performed RCRA compliance audits of various facilities including manufacturing facilities, a major nuclear weapons plant metal parts supplier, a major hazardous waste landfill, a hazardous materials/waste hauler, as well as army, navy, and marine installations.

- Managed and conducted asbestos evaluation survey of various facilities for the California Office of State Architects, as well as other facilities in connection with real estate transfer transactions.

- Lead engineer in the preparation of an Engineering Evaluation/Cost Analysis (EE/CA) for a removal action at a CERCLA site with known soil and groundwater contamination due to toxic/hazardous liquid chemical discharge.

- Conducted groundwater sampling at various pumping stations of a major petroleum company for the evaluation of PCB on-site discharge.

- For a sheet metal coating firm, managed a study on the search for alternatives to land disposal of chrome-bearing hazardous waste in compliance with RCRA land disposal restrictions.

- Performed for the U.S. EPA a project to determine whether hazardous sludge is scoured or resuspended and carried out with petroleum refinery API separator wastewater. The project involved site inspection of general major oil refineries, sludge and wastewater sampling, and experimental pilot testing.

- Lead engineer for a U.S. EPA study characterizing the waste streams from the inorganic chemicals manufacturing industries and evaluating current waste treatment practices.

- Conducted for U.S. EPA a study assessing the cost-effectiveness of various control strategies for underground storage tanks.

- Performed for the U.S. EPA a study evaluating various hazardous waste treatment technologies and their restrictive characteristics.

- Lead engineer in a U.S. EPA study to determine the compatibility of petroleum products and chemical substances with storage tanks and the development of laboratory test procedures for compatibility evaluation.

- Lead engineer in a U.S. EPA study on waste minimization by source reduction or product substitution in various industries that are suspected to generate the greatest volumes of hazardous wastes.

- Lead engineer in a U.S. EPA study evaluating the technical effectiveness of traditional tank leak integrity tests to underground storage tanks with hazardous wastes.

- Lead engineer in a U.S. EPA study characterizing the K and D code hazardous wastes encountered in the manufacture of paints and veterinary pharmaceuticals; This also included the evaluation of statutory and BDAT (best demonstrable available technology) waste treatment technologies.

- Conducted a U.S. EPA study on the reduction and recycling of incinerable liquid organic hazardous waste.

- Performed an engineering analysis of an existing plating wastewater treatment plant and suggested measures to take to optimize the operation and bring the effluent heavy metal characteristics within regulatory standards.

- Lead engineer in a study on the characterization of selected industries by 4-digit SIC codes for a waste minimization report to U.S. Congress.

- Conducted an investigation of the disposal of wastes exhibiting hazardous properties in a low level radioactive waste landfill for the U.S. EPA and the Washington State Department of Health.

- Lead engineer in a U.S. EPA project on the development of Federal regulations for underground storage tanks containing hazardous materials/wastes.

- Involved in a feasibility and design project of a hazardous waste transfer and storage facility for the City of Albuquerque, New Mexico.

- Designed and supervised the fabrication and installation of an air pollution control device.

- Supervised the construction and operation of a wastewater treatment plant for a textile manufacturing facility.

- Conducted Bhopal-India-type safety evaluation of several facilities belonging to major U.S. chemical manufacturing companies such as Occidental Chemicals.

PUBLICATIONS AND MAJOR REPORTS

- Sacro, Norman. 1991-1995. Over 30 major reports on hazardous waste remedial activities (e.g., gasoline stations, industrial sites, Caltrans maintenance stations) and hazardous waste site investigations all over California in connection with freeway construction activities (e.g., widening, soundwall installation, turn-out construction), seismic retrofit of bridges and overpasses, repair of earthquake damaged freeways and interchanges, maintenance station waste management related problems, property acquisitions for public works related projects, asbestos surveys (e.g., apartment complexes, over 150 residential houses, and commercial/industrial buildings along freeway/interchange expansion areas). California Department of Transportation.

RELIANCE LETTER

April 14, 2021

To: Pacific Enterprise Bank ("Lender")
17748 Sky Park Circle, Suite 100
Irvine, CA 92614

and

U.S. Small Business Administration ("SBA")

Re: Borrower Name: Elite Holdings & Associates, LLC and Derby Restaurant Arcadia, Inc.
301 E. Huntington Drive, Arcadia, CA 91006 ("Property")
Work Order No. 1146-332-01-0001

Dear Lender and SBA:

Norman N. Sacro ("Environmental Professional") meets the definition of an Environmental Professional as defined by 40 C.F.R. § 312.10(b) and has performed or supervised the performance of the following "Environmental Investigation(s)" (check all that apply):

☐ A Transaction Screen of the Property dated _____, 20____, and any addendum(s) thereto, conducted in accordance with ASTM International's most recent standard (currently ASTM E1528-14);

☐ A Phase I (or an Updated Phase I) Environmental Site Assessment of the Property dated _____, 20____, and any addendum(s) thereto, conducted in accordance with ASTM International's most recent standard (currently ASTM E1527-13). In addition, the Environmental Professional has addressed the performance of the "additional inquiries" set forth at 40 C.F.R. § 312.22;

☒ A Phase II Environmental Site Assessment of the Property dated April 14, 2021, and any addendum(s) thereto, conducted in accordance with generally-accepted industry standards of practice and consisting of a scope of work that would be considered reasonable and sufficient to identify the presence, nature and extent of a Release as it impacts the Property.

Reliance by SBA and Lender. Environmental Professional (and Environmental Professional's firm, where applicable) understand(s) that the Property may serve as collateral for an SBA-guaranteed loan, a condition for which is an Environmental Investigation of the Property by an Environmental Professional. Environmental Professional (and Environmental Professional's firm, where applicable) authorize(s) Lender and SBA to use and rely upon the Environmental Investigation. Further, Environmental Professional (and Environmental Professional's firm, where applicable) authorize(s) Lender and SBA to release a copy of the Environmental Investigation to the Borrower for information purposes only. This letter is not an update or modification to the Environmental Investigation. Environmental Professional (and Environmental Professional's firm, where applicable) makes no representation or warranty, express or implied, that the condition of the Property on the date of this letter is the same or similar to the condition of the Property described in the Environmental Investigation.

Insurance Coverage. Environmental Professional (and/or Environmental Professional's firm, where applicable) certifies that he or she or the firm was covered as of the date of the Environmental Investigation by errors and omissions liability insurance with a minimum coverage of $1,000,000 per claim (or occurrence) and that evidence of this insurance is attached. As to the Lender and SBA, Environmental Professional (and Environmental Professional's firm, where applicable) specifically waive(s) any dollar amount limitations on liability up to $1,000,000 as well as any time limitations on liability, other than state or Federal statutes of limitation.

Waiver of Right to Indemnification. Environmental Professional and Environmental Professional's firm waive any right to indemnification from the Lender and SBA.

Impartiality. Environmental Professional certifies that (1) to the best of his or her knowledge, Environmental Professional is independent of and not a representative, nor an employee or affiliate of seller, Borrower, operating company, or any person in which seller has an ownership interest; and (2) the Environmental Professional has not been unduly influenced by any person with regard to the preparation of the Environmental Investigation or the contents thereof.

Acknowledgment. The undersigned acknowledge(s) and agree(s) that intentionally falsifying or concealing any material fact with regard to the subject matter of this letter or the Environmental Investigations may, in addition to other penalties, result in prosecution under applicable laws including 18 U.S.C. § 1001.

Signature of Environmental Professional
Printed Name: Norman N. Sacro

(Note: The Environmental Professional must <u>always</u> sign this letter above. If the Environmental Professional is employed or retained by an Environmental Firm, then an authorized representative of the firm must also sign below).

APPENDIX A – GPRS JOB SUMMARY

APPENDIX B – SAMPLING LOCATIONS

APPENDIX C – LABORATORY ANALYTICAL RESULTS

1.0 INTRODUCTION AND PROJECT DESCRIPTION

Enviroassessors, Inc. (ENVIROASSESSORS) prepared a Phase I Environmental Site Assessment Report on the subject property (Enviroassessors, Inc., March 17, 2021). The report included the following in the conclusions and recommendations:

- This assessment has revealed no evidence of *recognized environmental conditions* (RECs) in connection with the subject property except for the following:

  A gasoline service station operated on the subject property from 1950, at the latest, until possibly the late 1960s or early 1970s. An automotive repair facility may have been concurrently operated along with the service station until the property was redeveloped into a restaurant in 1988. No documentation was found regarding the removal of the fuel underground storage tanks and dispensers used by the service station. Also, there is potential for subsurface impact due to petroleum-derived organic compounds as well as indoor vapor intrusion.

  The term *recognized environmental conditions* means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. *De minimis* conditions are not RECs nor *controlled recognized environmental conditions* (CRECs). A *de minimis condition is* a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

- A Phase II environmental investigation is recommended to be conducted to address the REC identified above.

Pursuant to a proposal to Pacific Enterprise Bank dated March 18, 2021, a subsurface environmental investigation was conducted on April 2, 2021 addressing the recommendation above.

2.0 INVESTIGATIVE METHODS

At least 48 hours prior to the field activity, Underground Service Alert was notified so that utility companies could mark any buried utility lines or pipes.

Described below are the investigative methods.

Task 1. Geophysical Investigation

The purpose of the geophysical investigation was to locate detectable underground storage tanks (USTs), abandoned piping, and features of interest outside the building. The investigation was also conducted to clear proposed borehole locations of any utilities or objects that could interfere with the drilling process. The geophysical investigation was performed by GPRS on behalf of ENVIROASSESSORS. Appendix A includes a Job Summary provided by GPRS.

Geophysical methods (i.e., high sensitivity metal detection in addition to standard EM utility locating and ground penetrating radar) were employed by GPRS to conduct this task. A 10-foot radius around each proposed borehole location was scanned, and any utilities detected in the area were marked with paint.

No geophysical methods are capable of detecting buried USTs inside the building. Because of this, no boreholes were proposed to be drilled inside the building. The reason for this is, in case there are USTs underneath the building and they happen to contain any fuels, it would cause contamination (where possibly there is none) if the USTs are drilled through.

No suspect existing USTs were found by GPRS outside the building. Furthermore, the GPRS technician verbally indicated to ENVIROASSESSORS that no suspect UST cavity locations were identified and no suspect buried pipes were found other than existing utilities.

Four borehole locations (B1 through B4) were identified in the field and cleared for drilling. Appendix B shows the approximate borehole locations.

Task 2. Subsurface Soil Sampling

Four borehole locations (B1 through B4) were identified in the field based on the analysis of historical aerial photographs. The geophysical investigation did not give additional

information to change the borehole locations proposed. Described below are the borehole locations:

- Two 20-foot boreholes (B1 and B2) were identified west of the building where there is a good possibility for USTs to have been installed in the past. And

- Two 12-foot boreholes (B3 and B4) were identified within the footprint of the northern area of the lot where a possible automotive repair building using hydraulic lifts was located.

All sampling boreholes were drilled using direct push sampling technique (DPT) on April 2, 2021. All drilling and collection of soil matrix samples were performed by InterPhase Environmental on behalf of ENVIROASSESSORS. Boreholes B1 and B2 were advanced to 20 feet below ground surface (BGS). Boreholes B3 and B4 were advanced to 12 feet BGS. At the borehole locations, soil matrix samples were collected at target depths BGS.

Soil matrix samples were collected with Large Bore Geoprobe Samplers. Discrete soil samples were recovered using removable plastic liners placed inside the sampler. Immediately following collection, the desired length of liner containing the soil sample collected were cut with a plastic tube cutter and then both ends were promptly covered with Teflon sheet and capped. Soil matrix samples were labeled indicating the borehole number and depth of collection BGS (e.g., sample number SB1-5 in borehole B1 at a depth 5 feet BGS).

The samples were placed in resealable plastic bags and then placed in a cooler with ice for preservation. The samples were hand-delivered to the laboratory on the same day of collection for prompt analysis. The chain-of-custody sheet documenting the sample transfer and analyses requested are included in Appendix C. Table 1 lists the laboratory analyses conducted. American Scientific Laboratories, a State-certified environmental laboratory, performed the analysis of soil matrix samples.

After collecting the samples, the boreholes were backfilled with bentonite. The holes were refinished with asphalt to match the surrounding area.

TASK 3. Soil Vapor Sampling

The biggest concern inside the building is whether there is soil vapor intrusion into the interior of the building from the fuels historically stored in the USTs. Sub-slab soil vapor sampling was conducted to address this concern.

Three sub-slab sampling locations (V1 through V3) were identified inside the building. The sampling locations are within the vicinity of the building probably associated with the historical gasoline station based on an analysis of the historical aerial photographs. At each location, the following were performed on April 2, 2021:

- Drilled an approximately 3/8-inch hole through the slab using a hammer drill. The drill bit was advance 2 to 3 inches into the sub-slab material to create an open cavity.

- Approximately one-foot long Nylaflow™ tubing was inserted through the slab. The tubing inlet was installed at a sampling depth at or near the bottom of the slab.

- The annular space between the hole and tubing was sealed using bentonite clay.

- The tubing was purged using a diaphragm vacuum pump three tubing volumes.

- Using a lung box, soil vapor sample was collected into a Tedlar™ bag at a rate no greater than 0.2 liter per minute.

- The tubing was removed and the slab hole was sealed with cement.

The samples were delivered to the laboratory on the same day they were collected for prompt analysis. The chain-of-custody sheet documenting the sample transfer and analyses requested are included in Appendix C. The soil vapor samples were analyzed for Volatile Organic Compounds (VOCs) by USEPA Method 8260B. American Scientific Laboratories, a State-certified environmental laboratory, performed all laboratory analyses.

3.0 INVESTIGATIVE RESULTS AND FIELD OBSERVATIONS

3.1 FIELD OBSERVATIONS

As indicated above, no suspect existing USTs were found by GPRS outside the building. Furthermore, the GPRS technician verbally indicated to ENVIROASSESSORS that no suspect UST cavity locations were identified and no suspect buried pipes were found other than existing utilities.

The soils encountered are described in Table 1. No petroleum or suspicious chemical odor was noted in all borehole locations. No unusual colors in the soil were observed. Groundwater was not encountered in any of the borehole locations.

3.2 LABORATORY ANALYTICAL RESULTS

Results of the laboratory analyses of the soil matrix and soil vapor samples are included in Appendix C. Tables 1 and 2 below summarize the laboratory analytical results for the soil matrix and soil vapor samples, respectively.

TABLE 1. SUMMARY OF SOIL MATRIX SAMPLE ANALYTICAL RESULTS

4.0 DATA EVALUATION AND DISCUSSION

The concentrations of the analytes are compared with the tabulated May 2020 US Environmental Protection Agency Regional Screening Level (RSL) Summary Table. Screening levels (SLs) are used when a potential site is initially investigated to determine whether levels of contamination found at the site may warrant further investigation or site cleanup, or whether no further investigation or action may be required. The SLs are developed using risk assessment guidance from the EPA Superfund program and can be used for Superfund sites. They are risk-based concentrations derived from standardized equations combining exposure information assumptions with EPA toxicity data.

SLs are used for site "screening" and as initial cleanup goals, if applicable. SLs are not de facto cleanup standards and should not be applied as such. The SL's role in site "screening" is to help identify areas, contaminants, and conditions that require further federal attention at a particular site. Generally, at sites where contaminant concentrations fall below SLs, no further action or study is warranted under the Superfund program, so long as the exposure assumptions at a site match those taken into account by the SL calculations. Chemical concentrations above the SL would not automatically designate a site as "dirty" or trigger a response action; however, exceeding a SL suggests that further evaluation of the potential risks by site contaminants is appropriate. SLs are also useful tools for identifying initial cleanup goals at a site. In this role, SLs provide long-term targets to use during the analysis of different remedial alternatives. (Source: https://semspub.epa.gov/work/HQ/200043.pdf)

The Department of Toxic Substances Control (DTSC) Human and Ecological Risk Office (HERO) has developed modified screening levels based on the U.S. Environmental Protection Agency (USEPA) RSLs for use in the human health risk assessment process at hazardous waste sites and permitted facilities. HERO has prepared reference Tables 1, 2, and 3 that provide recommended screening levels for compounds in soil, tap water, and air, respectively. These DTSC-modified screening levels (DTSC-SLs) should be used in conjunction with the USEPA RSLs to evaluate chemical concentrations in environmental media at California sites and facilities. HERO HHRA Note Number 3, DTSC-modified Screening Levels (DTSC-SLs), June 2020 was used in conjunction with the USEPA RSLs (May 2020) to evaluate the results. (Source: https://dtsc.ca.gov/wp-content/uploads/sites/31/2019/04/HHRA-Note-3-June-2020-A.pdf)

San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) has developed Environmental Screening Levels (ESLs). The ESLs are intended as a tool to screen or evaluate the chemical threats posed by contamination at a site.

Sites that are adequately characterized with chemical concentration data below the ESLs most likely do not pose a chemical threat. In some rare instances, there could be an exception resulting from cumulative risk where a large number of chemicals are present at a site, but individual chemical concentrations are just below the respective ESL. For a site where chemical concentrations exceed the ESLs, the site may pose a chemical threat and require further investigation or evaluation to better assess the threat. The ESLs do not address hazards such as asphyxiation or explosions. The ESLs are intended to be conservative, but reasonable. The main purpose of screening levels is to quickly enable users to distinguish which sites pose a significant threat. (SFBRWQCB, 2019)

In the discussion that follows, SL would pertain to one or all of the USEPA RSL, the DTSC screening level, and the SFBRWQCB ESL.

4.1 SOIL MATRIX SAMPLES

4.1.1 Volatile Organic Compounds (VOCs)

All soil matrix samples showed non-detectable levels of VOCs (See Table 1) and therefore below the SLs for VOCs. In the past, gasoline contained additives with organic lead compounds. Since no samples tested positive for VOCs, lead was not analyzed for.

4.1.2 Total Petroleum Hydrocarbons (TPH)

All soil matrix samples showed non-detectable levels of TPH (i.e., Gasoline Range Organics - GRO, Diesel Range Organics - DRO, and Oil Range Organics - ORO; See Table 1).

The USEPA and DTSC do not have SLs for TPH. However, the California Regional Water Quality Control Board (RWQCB) has Maximum Soil Screening Levels (MSSLs) for TPH for the protection of groundwater. The following information was taken from Table 4-1 of the Interim Site Assessment Cleanup Guidebook (California RWQCB, May 1996).

TPH CARBON RANGE	MAXIMUM SOIL SCREENING LEVELS (MSSLs) FOR TPH ABOVE DRINKING WATER AQUIFERS AT DEPTH BELOW GROUND SURFACE (BGS) mg/Kg		
	>150 ft BGS	20-150 ft BGS	<20 ft BGS
C4-C12	1,000	500	100
C13-C22	10,000	1,000	100
C23-C32	50,000	10,000	1,000

Since all soil matrix samples showed non-detectable TPH, TPH for all carbon ranges is below the MSSLs.

4.1.3 Polychlorinated Biphenyls (PCBs)

In the past, many in-ground hydraulic hoists such as those used in automotive repair shops contained hydraulic oil contaminated with PCBs. Because all soil matrix samples from boreholes B3 and B4 showed non-detectable levels of TPH, no samples were analyzed PCBs and are assumed to be non-detectable as well.

4.2 SOIL VAPOR SAMPLES

Table 2 above tabulates the subslab soil vapor sample analytical results. All samples showed non-detectable levels of VOCs. Therefore, predicted indoor air VOC levels would show zero levels of indoor air VOC levels if predictive computer models are used.

5.0 CONCLUSIONS AND RECOMMENDATIONS

No petroleum or suspicious chemical odor was noted in all borehole locations. No unusual colors in the soil were observed.

All soil matrix samples showed non-detectable levels of VOCs. Therefore, all results are below the Screening Levels (SLs) of DTSC, the USEPA, as well as the SFBRWQCB.

All soil matrix samples showed non-detectable levels of TPH (i.e., Gasoline Range Organics - GRO, Diesel Range Organics - DRO, and Oil Range Organics – ORO). Since all soil matrix samples showed non-detectable TPH, TPH for all carbon ranges is below the MSSLs.

In the past, many in-ground hydraulic hoists such as those used in automotive repair shops contained hydraulic oil contaminated with PCBs. Because all soil matrix samples from boreholes B3 and B4 showed non-detectable levels of TPH, no samples were analyzed PCBs and are assumed to be non-detectable as well.

All subslab soil vapor samples showed non-detectable levels of VOCs. Therefore, predicted indoor air VOC levels would show zero levels of indoor air VOC levels if predictive computer models are used. Indoor air intrusion due to VOCs is not suspected.

Based on the findings above, no further environmental investigation is recommended to be conducted.

6.0 LIMITATIONS

The conclusions presented in this report are based only on the observations made during the investigation of the results of sampling and laboratory analyses as well as from the available information provided by other sources. It should be noted that only a limited sampling was conducted and it is possible that other locations with contamination hot spots could have been missed. ENVIROASSESSORS, however, investigated the most likely areas where contamination could exist based upon information available to ENVIROASSESSORS.

The report presents a description of the conditions observed at the subject property during this investigation. The accuracy of conclusions drawn from findings is inherently dependent on the accuracy of the information that was provided. The environmental conditions may vary considerably from those observed during this investigation. Should any additional data become available, these data should be reviewed by ENVIROASSESSORS. Subsequently, the conclusions presented herein will be properly revised.

Job Num	SOUPLANTATION
PO Num	

Lead Technician	HANAHAN, RYAN	**Phone**	213-200-2878	**Email**	ryan.hanahan@gprsinc.com

Thank you for using GPRS on your project. We appreciate the opportunity to work with you. If you have questions regarding the results of this scanning, please contact the lead GPRS technician on this project.

EQUIPMENT USED

The following equipment was used on this project:

- Underground Scanning GPR antenna. Typically capable of detecting objects up to 8' deep or more in ideal conditions but maximum effective depth can vary widely and depends on site and soil conditions. Depth penetration is most commonly limited by moisture and clay/conductive soils. Depths provided should always be treated as estimates as their accuracy can be affected by multiple factors.
- Electromagnetic Pipe and Cable Locator. Detects electromagnetic fields. Used to actively trace conductive pipes and tracer wires, or passively detect power and radio signals traveling along conductive pipes and utilities. Depths provided should always be treated as estimates as their accuracy can be affected by multiple factors.
- Magnetometer. Detects ferromagnetic objects at depths up to 8' by detecting their magnetic fields. Effective at detecting well heads, buried manholes, and other iron objects.

Work Performed

Ground Penetrating Radar Systems performed the following work on this project:

Underground Utility

The scope of work included scanning the specified area to locate underground utilities. A tracer signal was sent along any accessible metallic utility or tracer wire, and the area was scanned with GPR to locate any additional targets. The locations of any detected utilities and anomalies were marked directly at the site with paint, flags, stakes, or other appropriate means, and results were reviewed with onsite personnel unless otherwise noted.

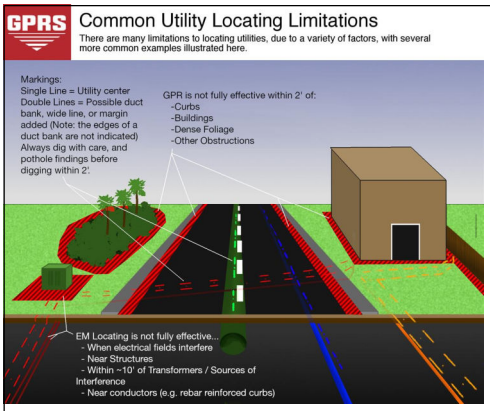
- The scope of work included scanning the areas around proposed soil borings. A radius of approximately 10' around each proposed soil boring was scanned unless otherwise noted. A total of 4 boring locations were scanned.
- Scan for underground utilities around 4 proposed soil boring locations

Job Summary

Job Date : 4/2/2021

- The effective depth of GPR will vary throughout a site depending on surface and soil conditions. In this area, the maximum effective GPR depth was approximately 2 feet.
- Cleared (4) 10'x10's for the client to drill soil borings in proposed locations. Our scan area was sprayed with white spray paint. We recommend staying within these borders otherwise have us back out for additional scanning. It's recommend to get every location USA'ed (811).

Underground Tanks



The scope of work included scanning the designated area to attempt to locate evidence of underground storage tanks and/or UST removal excavations. The locations of any UST's, associated piping, or excavations detected were marked with paint, flags, or other appropriate means, and results were reviewed with onsite personnel unless otherwise noted. The ability to locate these objects depends on the maximum depth penetration and soil conditions and non-metallic tanks can be especially difficult to locate.

- Scan entire site for Underground Storage Tank (UST).
- The effective depth of GPR will vary throughout a site depending on surface and soil conditions. In this area, the maximum effective GPR depth was approximately 2 feet.
- Based off of our GPR data, site visuals, and the magnetometer, we came to the conclusion to not suspect any UST's or disturbed soil.

UTILITY LOCATING

To ensure the overall timely success of your project, utility detection is critical to any construction project where subsurface excavation is planned. If this critical first step is ignored, the risk for injury increases, budget overruns can multiply and your schedule can be delayed.

VIDEO PIPE INSPECTION

Video Pipe Inspection (CCTV) is a service used to inspect underground water, sewer and lateral pipelines. VPI is a great tool for investigating cross-bores, structural faults and damages, and lateral line inspection.

CONCRETE SCANNING

With new build construction and renovation projects, the likelihood of needing to cut or core concrete is high. There is an inherent risk of striking rebar, conduits, and post tension cables during the cutting or coring process. Our industry-leading concrete scanning services can mitigate the risks associated with saw cutting and core drilling concrete slabs.

REPORTS & DRAWINGS

The goal of the GPRS Deliverables Department is to deliver clear and understandable findings with each of our outputs from field markings to field sketches, KMZ files, or CAD drawings that provide 2D site plans or even 3D CAD models. In addition, upon the completion of every project, our customers receive a job summary that includes job scope information, site photos, description of site conditions, equipment used, and notes from the project.

NATIONWIDE SERVICE

With team members located in every major metropolitan area in the U.S., we're just a short drive away from any project. Our footprint allows us to service all of your projects, nationwide.

RAPID RESPONSE

Time is always critical in any construction project. We understand this and have, accordingly, developed and perfected our operations to quickly and efficiently respond to our customers within 24-48 hours, or less.

CONSULTATIVE APPROACH

Our Project Managers are trained to ask questions and provide you with answers. This project-specific consultative approach - a GPRS trademark – helps us hone in on your subsurface issues and ensure we provide valuable problem-solving solutions to keep your job moving.

PROVEN RESULTS

GPRS deploys the best equipment, operated by skilled Project Managers, who know how to solve your subsurface locating issues. Since our inception, GPRS has completed hundreds of thousands of projects in North America. Our accuracy rate on these projects? Over 99%

Work Order #: 2104016

Project Name: Souplantation

Project ID: 1146-332-01-0001

Site Address: 301 E. Huntington Dr. Arcadia, CA 9100

Enclosed are the results of analyses for samples received by the laboratory on April 02, 2021. If you have any questions concerning this report, please feel free to contact us.

Molky Brar

Laboratory Director

American Scientific Laboratories, LLC (ASL) accepts sample materials from clients for analysis with the assumption that all of the information provided to ASL verbally or in writing by our clients (and/or their agents), regarding samples being submitted to ASL, is complete and accurate. ASL accepts all samples subject to the following conditions:

1) ASL is not responsible for verifying any client-provided information regarding any samples submitted to the laboratory.
2) ASL is not responsible for any consequences resulting from any inaccuracies , omissions, or misrepresentations contained in client-provided information regarding samples submitted to the laboratory.

1.0 PROJECT SUMMARY

1.1 Existing Conditions

The existing project site is located across Lots 12 through 20 on the North side of Huntington Dr. in the city of Arcadia, California. The site is composed of restaurants buildings and bounded to the west of Gateway Dr and the East of asphalt paved parking lot and on the North by a Hampton Inn. According to the project geotechnical report (Appendix D), the existing historic high groundwater for the site is on the order of 150 feet below the ground surface. The proposed site is not located in a state zone liquefaction area.

1.2 Proposed Conditions

The proposed project is a 205-unit mixed-use development consisting of five levels of residential construction totaling approximately 206,750 SF over one level of podium retail/parking over one level of subterranean parking totaling approximately 179,860 SF. Stormwater runoff from the proposed building will be collected via roof drains and area drains and conveyed to an infiltration drywell in the basement designed to capture the 85th percentile rain event.

2.0 LOW IMPACT DEVELOPMENT (LID)

2.1 Methodology

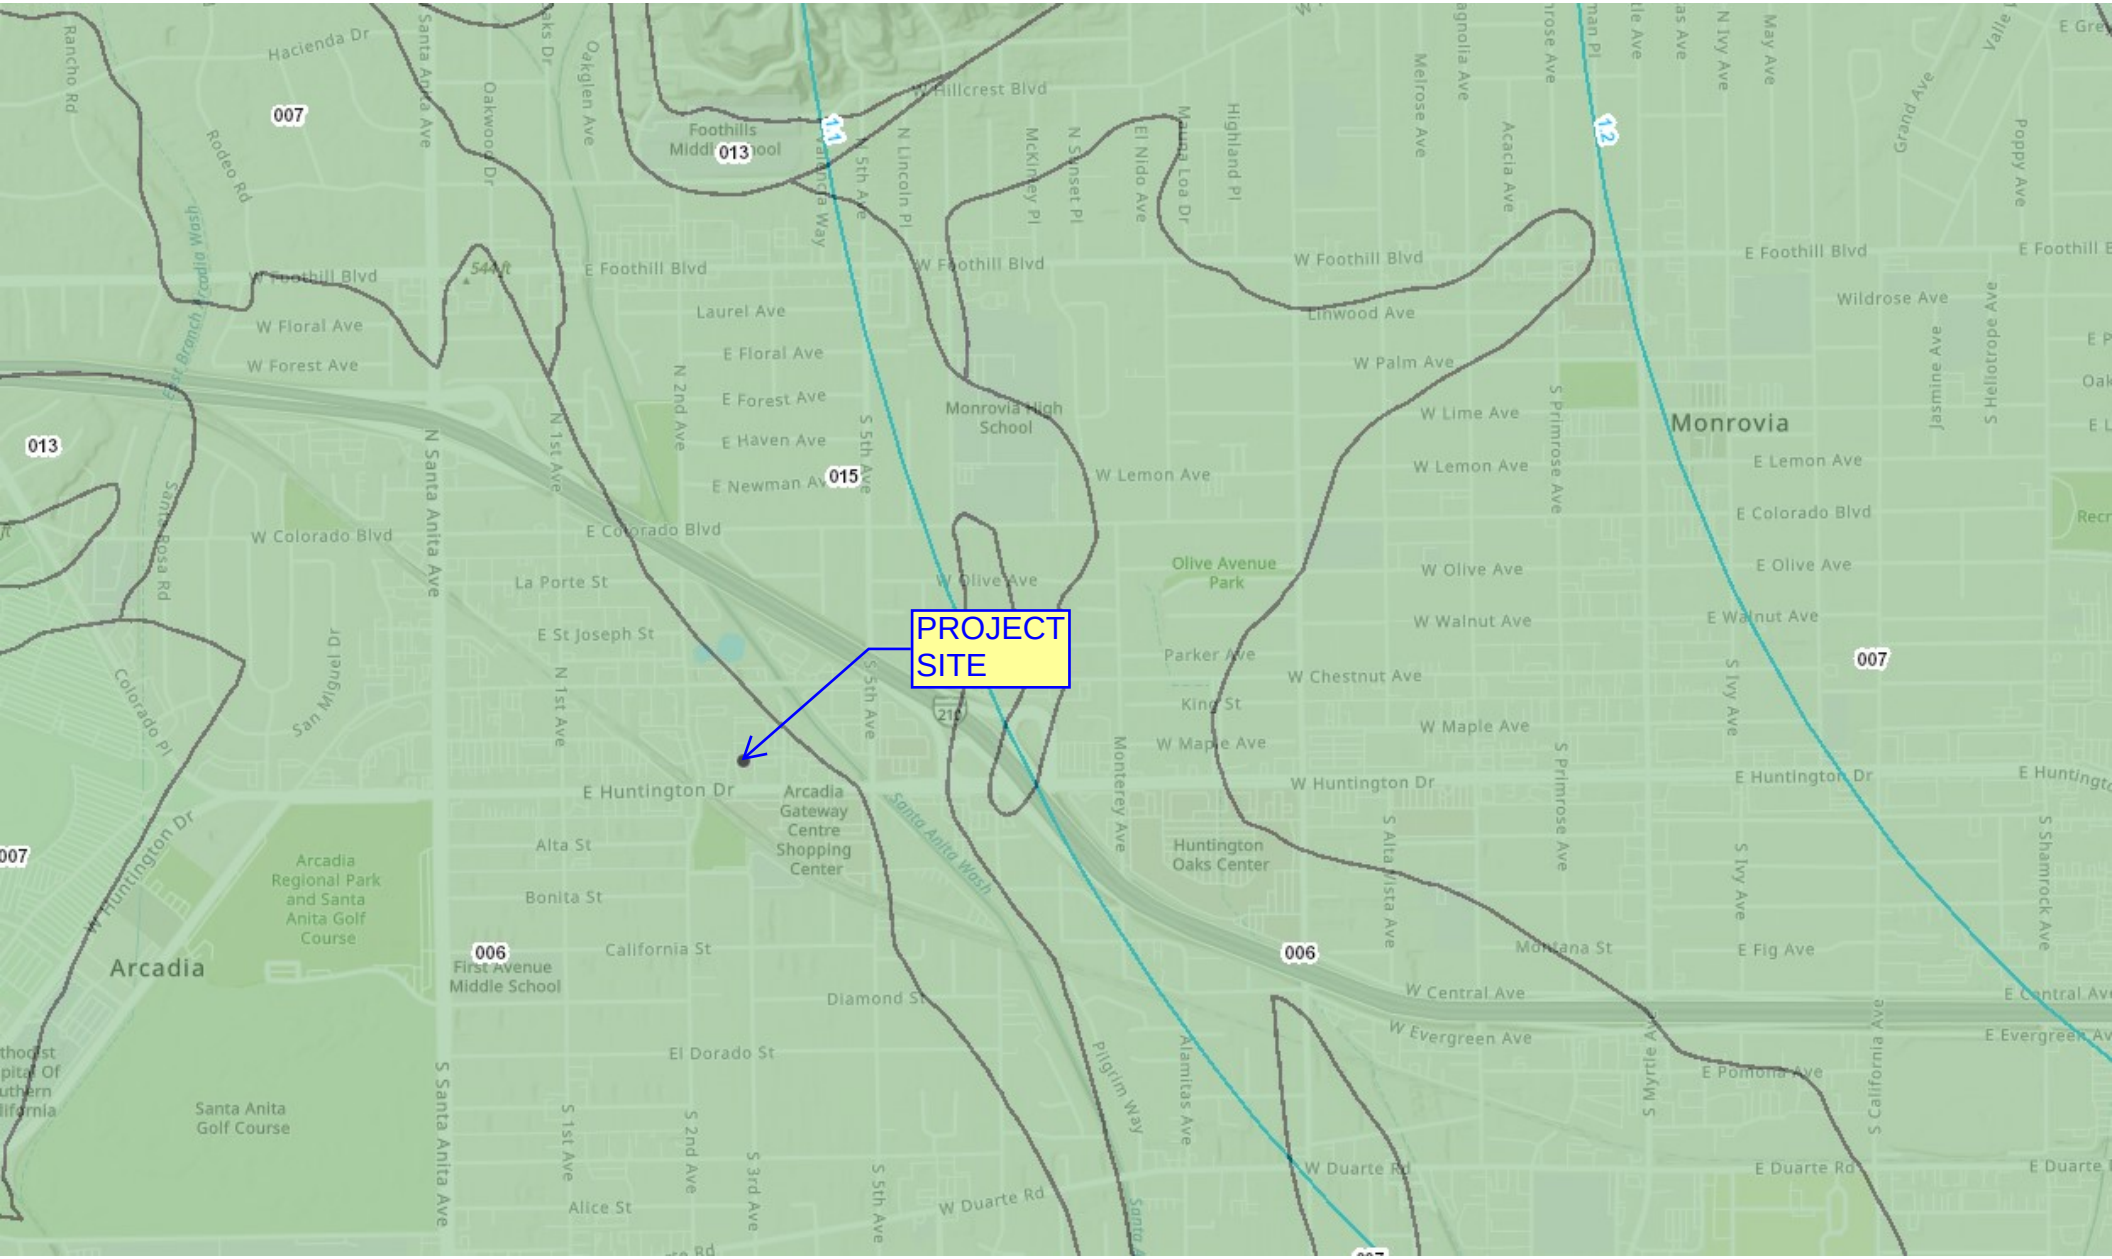
The County of Los Angeles Low Impact Development Standards were used to determine the appropriate storm water mitigation solution for the proposed project.

The LA County LID Standards require that the proposed project mitigate the runoff volume for the first 0.75 inches of runoff or 85th Percentile Storm Event, whichever is greater, from the proposed improvements. The proposed project must retain this peak mitigated volume (Vm) on-site. The design storm depth for the BMP will be 1.1 inches instead of 0.75 inches as noted in the isohyetal map as shown in Appendix A.

2.2 BMP Feasibility Screening

Infiltration at the proposed project site is feasible due to lack of found groundwater and the measured average saturated percolation rate (11.20 in/hr) or the design infiltration rate (3.73in/hr) per the Soils Report. (Appendix D). Therefore, a deep infiltration system is the proposed solution for LID.

2.3 Proposed Treatment System



Stormwater runoff from the proposed building and site will be collected via roof drains and area drains and conveyed to an infiltration drywell system in the basement designed to capture the 85th percentile rain event. The infiltration drywell being proposed is the MaxWell IV manufactured by Torrent Resources. The drywell is equipped with a concrete settling basin which acts as the primary pre-treatment unit. Overflow will be directed to a sump pump in the basement, and from there it will be pumped to a gravity fed parkway drain.

OPERATION AND MAINTENANCE OF *MaxWell*® DRYWELL

The Operation and Maintenance Format will include the following key components:

1.) Inspection Guidelines:

New installations

Newly installed systems should receive a thorough visual examination following the first several significant rainfall events. This assessment will assure that there is no standing water, and that runoff or nuisance water flows are being eliminated within the allowable 48 hour draw-down timeframe.

Ongoing Operations

At a minimum, the drainage structures should be inspected annually, and within 48 hours following a significant storm event to ensure that there is no standing water in the chambers.

2.) Maintenance Format:

After the first 12-months of entering service, it is recommended that an initial cleaning be undertaken. This will help to establish the amount of accumulated particulate matter and debris to be expected on a yearly basis. Thereafter, the systems should receive inspection at least annually, and cleaning should be undertaken when the evaluation reveals that 15% or more of the original chamber volume is occupied by silt and sediment.

During the maintenance operation, all screens and filters should be serviced and the floating absorbent blankets replaced, along with the geo-textile fabric at the bottom of the chambers. Should repair be needed, descriptions of deficiencies and estimated costs for suggested corrections should be provided. The above information shall be submitted in writing to the Owner at the conclusion of the maintenance service. Replacement is recommended for drywells that no longer dispose of ponded water within 48 hours after cleaning.

3.) Maintenance Records:

A written log shall be kept on-site of all inspections and maintenance performed on the drainage systems.

An evolution of McGuckin Drilling

Maxwell® Plus Drainage System Calculations Prepared on June 30, 2022
Project: **The Derby - Arcadia, CA**
Contact: Darshil Jha at Labib Funk + Associates - El Segundo, CA

Given: Drywell to be located in subsurface parking 10' bgs. All depths are -10'

Measured Infiltration Rate	11.20	in/hr	
Safety Factor	3.00		
Design Infiltration Rate	3.73	in/hr	
Mitigated Volume	7,591	ft^3	
Required Drawdown Time	96	hours	
Min. Depth to Infiltration	10	ft	
Groundwater Depth for Design	140	ft	150'-10'

Proposed:

Drywell Rock Shaft Diameter	4	ft
Primary Chamber Depth	18	ft
Drywell Chamber Depth	18	ft
Rock Porosity	40	%
Depth to Infiltration	14	ft
Drywell Bottom Depth	45	ft

Apply Safety Factor to get Design Rate.

$11.20 \frac{in}{hr} \div 3 = 3.73 \frac{in}{hr}$

Convert Design Rate from in/hr to ft/sec.

$3.73 \frac{in}{hr} \times \frac{1\ ft}{12\ in} \times \frac{1\ hr}{3600\ sec} = 0.000086 \frac{ft}{sec}$

A 4 foot diameter drywell provides 12.57 SF of infiltration area per foot of depth, plus 12.57 SF at the bottom.

For a 45 foot deep drywell, infiltration occurs between 14 feet and 45 feet below grade. This provides 31 feet of infiltration depth in addition to the bottom area. Infiltration area per drywell is calculated below.

$6\ ft \times 18.85 \frac{ft^2}{ft} + 25\ ft \times 12.57 \frac{ft^2}{ft} + 12.57\ ft^2 = 440\ ft^2$

Combine design rate with infiltration area to get flow (disposal) rate for each drywell.

$0.000086 \frac{ft}{sec} \times 440\ ft^2 = 0.03801 \frac{ft^3}{sec}$

Volume of disposal for each drywell based on various time frames are included below.

96 hrs: 0.038 CFS x 96 hours x $\frac{3600\ sec}{1\ hr}$ = 13,136 cubic feet of retained water disposed of.

Chamber diameter = 4 feet. Drywell rock shaft diameter = 4 feet.

Volume provided in each primary settling chamber with depth of 18 feet.

$18\ ft \times 12.57\ ft^2 = 226\ ft^3$

Volume provided in each drywell with chamber depth of 18 feet.

$18\ ft \times 12.57\ ft^2 + 2\ ft \times 28.27\ ft^2 \times 40\% + 25\ ft \times 12.57\ ft^2 \times 40\% = 374\ ft^3$

The MaxWell System is composed of 3 drywell(s) and 1 primary chamber(s).

Total volume provided = $1349\ ft^3$

Total 96 hour infiltration volume = $39{,}408\ ft^3$

Total infiltration flowrate = $0.11403 \frac{ft^3}{sec}$

Based on the total mitigated volume of 7591 CF, after subtracting the volume infiltrated as quickly as it enters the drywell of 6297 CF, the remaining volume is 1294 CF. The storage provided in the drywell system is 1349 CF.

HydroCalc Summary

Using the hydrograph produced by the HydroCalc Calculator, the area below the drywell flow disposal rate and the hydrograph curve is estimated as the volume infiltrated in the drywell as it enters. 3 different phases will occur during the 85th percentile storm event. Phase 1 will occur during the beginning of the storm event at the initial increase of flow produced by the storm. When the storm flow is equal to the drywell flow disposal rate, phase 1 ends and phase 2 begins. Phase 2 is when the drywell performs at the flow rate it was design at. Any additional runoff that is produced due to the increase of storm flow will require a detention system. The storm will then hit its peak flow and begin to decrease. When the storm flow decreases to an amount equal to the drywell flow disposal rate, phase 2 ends and phase 3 begins. Phase 3 will occur near the end the storm when the drywell infiltrates the residual runoff until the end of the event.

Phase 1 – Initial Filling of Drywell

From time 0 minutes to 992 minutes, the 85th storm event flowrate that enters the drywell is less than the drywell steady-state infiltration flowrate (flow disposal rate). Therefore, the entire volume entering the drywell from 0 minutes to 992 minutes will infiltrate without overwhelming the drywell. This volume is 3867.2 CF.

Time (min)	Incremental Masscurve	Incremental Design Storm Depth (in)	Intensity (in/hr)	Undeveloped Runoff Coefficient (Cu)	Developed Runoff Coefficient (Cd)	Clear Peak Flow Rate (cfs)	Incremental Volume (cu-ft)	Cumulative Volume (cu-ft)	Volume infiltrated by drywell (CF)
991.8	0.518815547	0.570697102	0.059618316	0.1	0.852	0.1142883	1.371081758	3865.841206	1.371081758
992	0.519001654	0.570901819	0.059651236	0.1	0.852	0.1143514	1.371838389	3867.213044	1.3716
992.2	0.51918787	0.571106657	0.059684213	0.1	0.852	0.1144146	1.37259633	3868.58564	1.3716

Phase 2 – Drywell Performing at the Design Rate

From time 992 minutes to 1205.6 minutes, the flowrate that enters the drywell exceeds the drywell steady-state infiltration flowrate (flow disposal rate). Therefore, the drywell can only infiltrate up to its flow disposal rate which is 0.1143 CFS. Over this period, we multiply the time by the flowrate (and covert as needed) to determine the volume infiltrated in this phase. This volume is 1464.9 CF.

(1205.6-992) x 60 SEC/MIN x 0.1143 CFS = 1464.9 CF

Time (min)	Incremental Masscurve	Incremental Design Storm Depth (in)	Intensity (in/hr)	Undeveloped Runoff Coefficient (Cu)	Developed Runoff Coefficient (Cd)	Clear Peak Flow Rate (cfs)	Incremental Volume (cu-ft)	Cumulative Volume (cu-ft)	Volume infiltrated by drywell (CF)
1205.4	0.881874534	0.970061988	0.059866176	0.1	0.852	0.1147635	1.378722273	6625.147842	1.3716
1205.6	0.882036914	0.970240606	0.059731455	0.1	0.852	0.1145052	1.375611952	6626.523454	1.3716
1205.8	0.882199009	0.97041891	0.059597698	0.1	0.852	0.1142488	1.372523923	6627.895977	1.372523923

Phase 3 – End of the Storm Event

From time 1205.6 to 1461 minute (end of storm event), the 85th storm event flowrate that enters the drywell is less than the drywell steady-state infiltration flowrate (flow disposal rate). Therefore, the entire volume entering the drywell from 1205.6 minutes to 1461 minutes will infiltrate without overwhelming the drywell. This volume is 964.8 CF.

7591.4 CF - 6626.5 CF = 964.8 CF

Time (min)	Incremental Masscurve	Incremental Design Storm Depth (in)	Intensity (in/hr)	Undeveloped Runoff Coefficient (Cu)	Developed Runoff Coefficient (Cd)	Clear Peak Flow Rate (cfs)	Incremental Volume (cu-ft)	Cumulative Volume (cu-ft)	Volume infiltrated by drywell (CF)
1460.8	1	1.1	0.000231387	0.1	0.852	0.0004436	0.007985108	7591.359796	0.007985108
1461	1	1.1	0	0.1	0.852	0	0.002661413	7591.362457	0.002661413
	0	0	0	0	0	0	0	0	0

The total volume infiltrated as it enters the drywell during the 85th percentile storm event is 3867.2 + 1464.9 + 964.8 = 6296.9 CF (6296 CF)

Subject: GEOTECHNICAL INVESTIGATION
PROPOSED MIXED-USE DEVELOPMENT
233-301 EAST HUNTINGTON DRIVE
ARCADIA, CALIFORNIA
APN: 5775-009-065 & -070

Dear Mr. Nicolarsen:

In accordance with your authorization of our proposal dated April 19, 2022, we have performed a geotechnical investigation for the proposed mixed-use development located at 233-301 East Huntington Drive in the City of Arcadia, California. The accompanying report presents the findings of our study, and our conclusions and recommendations pertaining to the geotechnical aspects of proposed design and construction. Based on the results of our investigation, it is our opinion that the site can be developed as proposed, provided the recommendations of this report are followed and implemented during design and construction.

If you have any questions regarding this report, or if we may be of further service, please contact the undersigned.

Very truly yours,

GEOCON WEST, INC.

GEOTECHNICAL INVESTIGATION

1. PURPOSE AND SCOPE

This report presents the results of a geotechnical investigation for the proposed mixed-use development located at 233-301 East Huntington Drive in the City of Arcadia, California (see Vicinity Map, Figure 1). The purpose of the investigation was to evaluate subsurface soil and geologic conditions underlying the site and, based on conditions encountered, to provide conclusions and recommendations pertaining to the geotechnical aspects of design and construction.

The scope of this investigation included a site reconnaissance, field exploration, laboratory testing, engineering analysis, and the preparation of this report. The site was explored on May 20, 2022 by excavating five 8-inch diameter borings to depths ranging from approximately 30½ to 45½ feet below the existing ground surface using a truck-mounted, hollow-stem auger drilling machine. The approximate locations of the exploratory borings are depicted on the Site Plan (see Figure 2A). A detailed discussion of the field investigation, including boring logs, is presented in Appendix A.

Laboratory tests were performed on selected soil samples obtained during the investigation to determine pertinent physical and chemical soil properties. Appendix B presents a summary of the laboratory test results.

The recommendations presented herein are based on analysis of the data obtained during the investigation and our experience with similar soil and geologic conditions. References reviewed to prepare this report are provided in the *List of References* section.

If project details vary significantly from those described herein, Geocon should be contacted to determine the necessity for review and possible revision of this report.

2. SITE AND PROJECT DESCRIPTION

The subject site is located at 233-301 East Huntington Drive in the City of Arcadia, California. The site is currently occupied by two single-story commercial structures and associated asphalt-paved parking lots. The site is bounded by a four-story hotel and associated asphalt paved parking lot to the north, by Gateway Drive to the east, by East Huntington Drive to the south, and by a seven-story hotel and associated asphalt paved parking lot to the west. The topography at the site and in the general site vicinity slopes gently downward towards the south. Surface water drainage at the site appears to be by sheet flow along the existing ground contours to the city streets. Vegetation consists of some isolated trees and shrubs in isolated planter areas.

Based on the information provided by the Client, it is our understanding that the proposed mixed-use development will be a six-story structure with one subterranean parking level (see Figures 2A and 2B). The ground level of the proposed development will consist of parking, restaurant, and commercial space with residential housing located on the levels above. It is anticipated that the subterranean level will extend to a depth of approximately 14 feet, including foundation depths (see Figure 2B).

Due to preliminary nature of the design at this time, wall and column loads were not available. It is anticipated that column loads for the proposed structure will be up to 700 kips, and wall loads will be up to 8 kips per linear foot.

Once the design phase and foundation loading configuration proceeds to a more finalized plan, the recommendations within this report should be reviewed and revised, if necessary. Any changes in the design, location or elevation of any structure, as outlined in this report, should be reviewed by this office. Geocon should be contacted to determine the necessity for review and possible revision of this report.

3. GEOLOGIC SETTING

The site is located in the north-central San Gabriel Valley, approximately 1.0 mile south of the southern flank of the San Gabriel Mountains. The San Gabriel Valley is an alluvium-filled valley bounded by the Sierra Madre Fault Zone and San Gabriel Mountains on the north, by the Puente Hills on the south, by the Covina and Indian Hills on the east, and by the Raymond Basin on the west. The alluvial deposits are derived from erosion of the San Gabriel Mountains to the north and subsequent deposition by the San Gabriel River, Santa Anita Wash, and other local drainages. The alluvium is estimated to be approximately 200 feet thick at the base of the mountains, extending to hundreds of feet thick in the central portion of the valley.

Regionally, the site is located within the northern portion of the Peninsular Ranges geomorphic province. This geomorphic province is characterized by northwest-trending physiographic and geologic features such as the active Whittier Fault located approximately 9.6 miles to the south. The active Raymond Fault, located approximately 0.9 mile to the northwest of the site, forms the local boundary between the Peninsular Ranges geomorphic province and the Transverse Ranges geomorphic province to the north.

4. SOIL AND GEOLOGIC CONDITIONS

Based on our field investigation and published geologic maps of the area, the site is underlain by artificial fill and Holocene age alluvial fan deposits comprised of sand with varying amounts of silt, gravel and cobbles (California Geological Survey [CGS], 2010). Detailed stratigraphic profiles are provided on the boring logs in Appendix A.

4.1 Artificial Fill

Artificial fill was encountered in the exploratory borings to a maximum depth of 3 feet below existing ground surface. The artificial fill generally consists of dark brown or olive brown silty sand or sand with silt. The fill is characterized as moist and loose to medium dense. The fill is likely the result of past grading or construction activities at the site. Deeper fill may exist between excavations and in other portions of the site that were not directly explored.

4.2 Alluvium

Holocene age alluvium was encountered beneath the artificial fill and consists primarily of light brown to brown, light olive brown, or gray interbedded poorly graded and well-graded sand with varying amounts of silt and gravel, and locally some cobbles (to 5 inches). The alluvium is characterized as slightly moist to very moist and loose to very dense.

5. GROUNDWATER

Review of the Seismic Hazard Evaluation of the Mount Wilson 7.5-Minute Quadrangle (California Division of Mines and Geology [CDMG], 1998) indicates that the historically highest groundwater level in the immediate area is approximately 150 feet beneath the ground surface. Groundwater information presented in this document is generated from data collected in the early 1900's to the late 1990s. Based on current groundwater basin management practices, it is unlikely that groundwater levels will ever exceed the historic high levels.

Groundwater was not encountered in our borings drilled to a maximum depth of 45½ feet beneath the existing ground surface. Considering the reported historic high groundwater level (CDMG, 1998), the lack of groundwater encountered in our borings, and the depth of the proposed construction, it is unlikely that static groundwater will be encountered during construction or adversely impact the proposed development. However, it is not uncommon for groundwater levels to vary seasonally or for groundwater seepage conditions to develop where none previously existed, especially in impermeable fine-grained soils which are heavily irrigated or after seasonal rainfall. In addition, recent requirements for stormwater infiltration could result in shallower seepage conditions in the immediate site vicinity. Proper surface drainage of irrigation and precipitation will be critical for future performance of the project. Recommendations for drainage are provided in the S*urface Drainage* section of this report (see Section 7.23).

6. GEOLOGIC HAZARDS

6.1 Surface Fault Rupture

The numerous faults in Southern California include Holocene-active, pre-Holocene, and inactive faults. The criteria for these major groups are based on criteria developed by the California Geological Survey (CGS, formerly known as CDMG) for the Alquist-Priolo Earthquake Fault Zone Program (CGS, 2018). By definition, a Holocene-active fault is one that has had surface displacement within Holocene time (about the last 11,700 years). A pre-Holocene fault has demonstrated surface displacement during Quaternary time (approximately the last 1.6 million years) but has had no known Holocene movement. Faults that have not moved in the last 1.6 million years are considered inactive.

The site is not within a state-designated Alquist-Priolo Earthquake Fault Zone (CGS, 2022b; CGS, 2017) or a city-designated Fault Hazard Management Zone (City of Arcadia, 2010) for surface fault rupture hazards. No Holocene-active or pre-Holocene faults with the potential for surface fault rupture are known to pass directly beneath the site. Therefore, the potential for surface rupture due to faulting occurring beneath the site during the design life of the proposed development is considered low. However, the site is located in the seismically active Southern California region, and could be subjected to moderate to strong ground shaking in the event of an earthquake on one of the many active Southern California faults. The faults in the vicinity of the site are shown in Figure 3, Regional Fault Map.

The closest Holocene-active fault to the site is the Raymond Fault located approximately 0.9 mile to the northwest (CGS, 2017). Other nearby Holocene-active faults are the Sierra Madre Fault Zone (Section D-Duarte Fault), the East Montebello Fault, and the Whittier Fault located approximately 1.8 miles northeast, 6.7 miles southwest, and 9.6 miles south of the site, respectively. (USGS, 2006; Ziony and Jones, 1989). The active San Andreas Fault Zone is located approximately 23 miles northeast of the site (Ziony and Jones, 1989).

Several buried thrust faults, commonly referred to as blind thrusts, underlie the Los Angeles Basin and the San Gabriel Valley at depth. These faults are not exposed at the ground surface and are typically identified at depths greater than 3.0 kilometers. The October 1, 1987 M_w 5.9 Whittier Narrows earthquake and the January 17, 1994 M_w 6.7 Northridge earthquake were a result of movement on the Puente Hills Blind Thrust and the Northridge Thrust, respectively. The site is underlain by the Puente Hills Blind Thrust. This thrust fault and others in the greater Los Angeles area are not exposed at the surface and do not present a potential surface fault rupture hazard at the site; however, these deep thrust faults are considered active features capable of generating future earthquakes that could result in moderate to significant ground shaking at the site.

6.2 Seismicity

As with all of Southern California, the site has experienced historic earthquakes from various regional faults. The seismicity of the region surrounding the site was formulated based on research of an electronic database of earthquake data. The epicenters of recorded earthquakes with magnitudes equal to or greater than 5.0 in the site vicinity are depicted on Figure 4, Regional Seismicity Map. A partial list of moderate to major magnitude earthquakes that have occurred in the Southern California area within the last 100 years is included in the following table.

LIST OF HISTORIC EARTHQUAKES

Earthquake (Oldest to Youngest)	Date of Earthquake	Magnitude	Distance to Epicenter (Miles)	Direction to Epicenter
Near Redlands	July 23, 1923	6.3	45	ESE
Long Beach	March 10, 1933	6.4	36	S
Tehachapi	July 21, 1952	7.5	82	NW
San Fernando	February 9, 1971	6.6	28	NW
Whittier Narrows	October 1, 1987	5.9	6	SW
Sierra Madre	June 28, 1991	5.8	8	NNE
Landers	June 28, 1992	7.3	91	E
Big Bear	June 28, 1992	6.4	68	E
Northridge	January 17, 1994	6.7	30	W
Hector Mine	October 16, 1999	7.1	105	ENE
Ridgecrest	July 5, 2019	7.1	115	NNE

The site could be subjected to strong ground shaking in the event of an earthquake. However, this hazard is common in Southern California and the effects of ground shaking can be mitigated if the proposed structures are designed and constructed in conformance with current building codes and engineering practices.

6.3 Seismic Design Criteria

The following table summarizes the site-specific design criteria obtained from the 2019 California Building Code (CBC; Based on the 2018 International Building Code [IBC] and ASCE 7-16), Chapter 16 Structural Design, Section 1613 Earthquake Loads. The data was calculated using the online application Seismic Design Maps, provided by OSHPD. The short spectral response uses a period of 0.2 second. We evaluated the Site Class based on the discussion in Section 1613.2.2 of the 2019 CBC and Table 20.3-1 of ASCE 7-16. The values presented on the following page are for the risk-targeted maximum considered earthquake (MCER).

2019 CBC SEISMIC DESIGN PARAMETERS

Parameter	Value	2016 CBC Reference
Site Class	D	Section 1613.3.2
MCE_R Ground Motion Spectral Response Acceleration – Class B (short), S_S	1.936g	Figure 1613.3.1(1)

Site Class Modified MCE_R Spectral Response Acceleration – (1 sec), S_{M1}	1.198g*	Section 1613.3.3 (Eqn 16-38)
5% Damped Design Spectral Response Acceleration (short), S_{DS}	1.291g	Section 1613.3.4 (Eqn 16-39)
5% Damped Design Spectral Response Acceleration (1 sec), S_{D1}	0.798g*	Section 1613.3.4 (Eqn 16-40)

Note:

*Per Section 11.4.8 of ASCE/SEI 7-16, a ground motion hazard analysis shall be performed for projects for Site Class "E" sites with Ss greater than or equal to 1.0g and for Site Class "D" and "E" sites with S1 greater than 0.2g. Section 11.4.8 also provides exceptions which indicates that the ground motion hazard analysis may be waived provided the exceptions are followed. Using the code-based values presented in the table above, in lieu of a performing a ground motion hazard analysis, requires the exceptions outlined in ASCE 7-16 Section 11.4.8 be followed.

The table below presents the mapped maximum considered geometric mean (MCEG) seismic design parameters for projects located in Seismic Design Categories of D through F in accordance with ASCE 7-16.

ASCE 7-16 PEAK GROUND ACCELERATION

Parameter	Value	ASCE 7-16 Reference
Mapped MCE_G Peak Ground Acceleration, PGA	0.841g	Figure 22-9
Site Coefficient, F_{PGA}	1.1	Table 11.8-1
Site Class Modified MCE_G Peak Ground Acceleration, PGA_M	0.925g	Section 11.8.3 (Eqn 11.8-1)

The Maximum Considered Earthquake Ground Motion (MCE) is the level of ground motion that has a 2 percent chance of exceedance in 50 years, with a statistical return period of 2,475 years. According to the 2019 California Building Code and ASCE 7-16, the MCE is to be utilized for the evaluation of liquefaction, lateral spreading, seismic settlements, and it is our understanding that the intent of the Building Code is to maintain "Life Safety" during a MCE event. The Design Earthquake Ground Motion (DE) is the level of ground motion that has a 10 percent chance of exceedance in 50 years, with a statistical return period of 475 years.

Deaggregation of the MCE peak ground acceleration was performed using the USGS online Unified Hazard Tool, 2014 Conterminous U.S. Dynamic edition (v4.2.0). The result of the deaggregation analysis indicates that the predominant earthquake contributing to the MCE peak ground acceleration is characterized as a 7.05 magnitude event occurring at a hypocentral distance of 9.43 kilometers from the site.

Deaggregation was also performed for the Design Earthquake (DE) peak ground acceleration, and the result of the analysis indicates that the predominant earthquake contributing to the DE peak ground acceleration is characterized as a 6.96 magnitude occurring at a hypocentral distance of 14.35 kilometers from the site.

Conformance to the criteria in the above tables for seismic design does not constitute any kind of guarantee or assurance that significant structural damage or ground failure will not occur if a large earthquake occurs. The primary goal of seismic design is to protect life, not to avoid all damage, since such design may be economically prohibitive.

6.4 Liquefaction Potential

Liquefaction is a phenomenon in which loose, saturated, relatively cohesionless soil deposits lose shear strength during strong ground motions. Primary factors controlling liquefaction include intensity and duration of ground motion, gradation characteristics of the subsurface soils, in-situ stress conditions, and the depth to groundwater. Liquefaction is typified by a loss of shear strength in the liquefied layers due to rapid increases in pore water pressure generated by earthquake accelerations.

The current standard of practice, as outlined in the "Recommended Procedures for Implementation of DMG Special Publication 117, Guidelines for Analyzing and Mitigating Liquefaction in California" and "Special Publication 117A, Guidelines for Evaluating and Mitigating Seismic Hazards in California" requires liquefaction analysis to a depth of 50 feet below the lowest portion of the proposed structure. Liquefaction typically occurs in areas where the soils below the water table are composed of poorly consolidated, fine- to medium-grained, primarily sandy soil. In addition to the requisite soil conditions, the ground acceleration and duration of the earthquake must also be of a sufficient level to induce liquefaction.

The Seismic Hazards Zone Map for the Mount Wilson Quadrangle (CDMG, 1999; CGS, 2017) indicates that the site is not located within a zone of required investigation for liquefaction. In addition, the City of Arcadia General Plan (2010) and the County of Los Angeles Safety Element (Leighton, 1990), indicate that the site is not located within an area designated as having a potential for liquefaction. Groundwater was not encountered in our borings drilled to a maximum depth of 45½ feet beneath the existing ground surface and the historic high groundwater level in the area is reported to be approximately 150 feet beneath the existing ground surface (CDMG, 1998). Based on these considerations, it is our opinion that the potential for liquefaction and associated ground deformations beneath the site is very low.

6.5 Slope Stability

The site is relatively level and the topography in the site vicinity slopes downward toward the south-southeast. The City of Arcadia General Plan (2010) and County of Los Angeles Safety Element (Leighton, 1990), indicate that the site is not located in a "hillside area" or an area identified as having a potential for slope stability hazards. Also, the State of California (CDMG, 1999; CGS, 2017) and the City of Arcadia (2010) indicate that the site is not located within a zone of required investigation for earthquake-induced landslides. There are no known landslides near the site, nor is the site in the path of any known or potential landslides. Therefore, the potential for slope stability hazards to adversely impact the site is considered low.

6.6 Earthquake-Induced Flooding

Earthquake-induced flooding is inundation caused by failure of dams or other water-retaining structures due to earthquakes. The City of Arcadia General Plan (2010) and the County of Los Angeles Safety Element (Leighton, 1990) indicate that the site is located within the potential inundation area for Santa Anita Dam. However, this reservoir, as well as others in California, are continually monitored by various governmental agencies (such as the State of California Division of Safety of Dams and the U.S. Army Corps of Engineers) to guard against the threat of dam failure. Current design, construction practices, and ongoing programs of review, modification, or total reconstruction of existing dams are intended to ensure that all dams are capable of withstanding the maximum considered earthquake (MCE) for the site. Therefore, the potential for inundation at the site as a result of an earthquake-induced dam failure is considered low.

6.7 Tsunamis, Seiches, and Flooding

The site is not located within a coastal area. Therefore, tsunamis are not considered a significant hazard at the site.

Seiches are large waves generated in enclosed bodies of water in response to ground shaking. No major water-retaining structures are located immediately up gradient from the project site. Therefore, flooding from a seismically induced seiche is considered unlikely.

The site is within a Zone D as defined by the Federal Emergency Management Agency (FEMA, 2022; LACDPW, 2022b). Sites within a Zone D have an undetermined but possible flood hazard (FEMA, 2022).

6.8 Oil Fields & Methane Potential

Review of the California Geologic Energy Management Division (CalGEM) Well Finder Website (2022) indicates that the site is not located within the limits of an oilfield and oil or gas wells are not located within ½-mile of the site. However, due to the voluntary nature of record reporting by the oil well drilling companies, wells may be improperly located or not documented on the location map. Undocumented wells could be encountered during construction. Any wells encountered will need to be properly abandoned in accordance with the current requirements of the CalGEM

Since the site is not within an oilfield, the potential for methane or other volatile gases to occur at the site is considered very low. However, should it be determined that a methane study is required for the proposed development it is recommended that a qualified methane consultant be retained to perform the study and provide mitigation measures as necessary.

6.9 Subsidence

Subsidence occurs when a large portion of land is displaced vertically, usually due to the withdrawal of groundwater, oil, or natural gas. Soils that are particularly subject to subsidence include those with high silt or clay content. The site is not located within an area of known ground subsidence (USGS, 2022a). No large-scale extraction of groundwater, gas, oil, or geothermal energy is occurring or planned at the site or in the general site vicinity. There appears to be little or no potential for ground subsidence due to withdrawal of fluids or gases at the site.

7. CONCLUSIONS AND RECOMMENDATIONS

7.1 General

7.1.1 It is our opinion that neither soil nor geologic conditions were encountered during the investigation that would preclude the construction of the proposed development provided the recommendations presented herein are followed and implemented during design and construction.

7.1.2 Up to 3 feet of existing artificial fill was encountered during the site investigation. The existing fill encountered is believed to be the result of past grading and construction activities at the site. Deeper fill may exist in other areas of the site that were not directly explored. Future demolition of the existing structures which occupy the site will likely disturb the upper few feet of soil. It is our opinion that the existing fill, in its present condition, is not suitable for direct support of proposed foundations or slabs. The existing fill and site soils are suitable for re-use as engineered fill provided the recommendations in the *Grading* section of this report are followed (see Section 7.4). Excavations for the subterranean level are anticipated to penetrate through the existing artificial fill and expose undisturbed alluvial soils throughout the excavation bottom.

7.1.3 Groundwater was not encountered during site exploration and the current groundwater table is sufficiently deep that it not expected to be encountered during construction. However, local seepage could be encountered during excavation of the subterranean level, especially if conducted during the rainy season.

7.1.4 Based on these considerations, the proposed structure may be supported on conventional foundation system deriving support in the competent alluvium found at and below a depth of 12 feet below the existing ground surface. Foundations should be deepened as necessary to penetrate through soft or unsuitable alluvium at the direction of the Geotechnical Engineer. All foundation excavations must be observed and approved by the Geotechnical Engineer (a representative of Geocon), prior to placing steel or concrete. Recommendations for the design of a conventional foundation system are provided in Section 7.5.

7.1.5 Excavations up to 14 feet in vertical height are anticipated for construction of the subterranean level, including foundation depths. Due to the depth of the excavation and the proximity to the property lines, city streets and adjacent offsite structures, excavation of the proposed subterranean level will likely require sloping and shoring measures in order to provide a stable excavation. Where shoring is required it is recommended that a soldier pile shoring system be utilized. In addition, where the proposed excavation will be deeper than and adjacent to an offsite structure, the proposed shoring should be designed to resist the surcharge imposed by the adjacent offsite structure. Recommendations for shoring are provided in Section 7.17 of this report.

7.1.6 Based on our observations onsite and our knowledge of the geologic setting, cobbles should be anticipated during earthwork at the subject site. Boulders are also common in this geologic environment and should be expected in the existing fill or alluvial soils. Due to the granular nature of the soils, moderate to excessive caving is anticipated during excavation activities. The contractor should be aware that casing will be required during shoring pile installation and formwork may be required to prevent caving of shallow spread foundation excavations. In addition, the contractor should be prepared to screen abundant cobble and boulders from the soils during earthwork operations. Generation and disposal of oversized material (greater than 6 inches) should be anticipated.

7.1.7 Please be aware that the use of hollow-stem auger drilling equipment utilized for this investigation does not allow for the identification of the size of rock or abundance of rock being encountered or the visual observation of caving conditions since the drilling method is a small diameter cased excavation. It is recommended that the contractors bidding on earthwork, excavation and shoring installation for this project perform their own excavations and test borings with the intended earthwork and drilling equipment to verify the presence, abundance, and size of buried rock (cobbles and boulders), potential for caving, as well as the suitability of the proposed excavation and drilling equipment for the safe and efficient earthwork operations and installation of the shoring system.

7.1.8 Due to the nature of the proposed design and intent for a subterranean level, waterproofing of subterranean walls and slabs is suggested. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.1.9 Foundations for small outlying structures, such as block walls up to 6 feet in height, planter walls or trash enclosures, which will not be tied to the proposed structure, may be supported on conventional foundations deriving support on a minimum of 12 inches of newly placed engineered fill, which extends laterally at least 12 inches beyond the foundation area. Where excavation and compaction cannot be performed, foundations may derive support directly in the competent undisturbed alluvial soils at and below a depth of 24 inches, and should be deepened as necessary to maintain a minimum 12 inch embedment into the recommended bearing materials. If the soils exposed in the excavation bottom are soft or loose, compaction of the soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative.

7.1.10 Where new paving is to be placed, it is recommended that all existing fill and soft alluvial soils be excavated and properly compacted for paving support. The client should be aware that excavation and compaction of all existing fill and soft alluvial soils in the area of new paving is not required; however, paving constructed over existing uncertified fill or unsuitable alluvial soil may experience increased settlement and/or cracking, and may therefore have a shorter design life and increased maintenance costs. As a minimum, the upper 12 inches of subgrade soil should be scarified and properly compacted for paving support. Paving recommendations are provided in *Preliminary Pavement Recommendations* section of this report (see Section 7.10).

7.1.11 Based on the results of percolation testing performed at the site, a stormwater infiltration system is considered feasible for this project. Recommendations for infiltration are provided in the *Stormwater Infiltration* section of this report (see Section 7.22).

7.1.12 Once the design and foundation loading configuration for the proposed structure proceeds to a more finalized plan, the recommendations within this report should be reviewed and revised, if necessary. Based on the final foundation loading configurations, the potential for settlement should be re-evaluated by this office.

7.1.13 Any changes in the design, location or elevation, as outlined in this report, should be reviewed by this office. Geocon should be contacted to determine the necessity for review and possible revision of this report.

7.2 Soil and Excavation Characteristics

7.2.1 The in-situ soils can be excavated with moderate effort using conventional excavation equipment. Due to the granular nature of the soils, moderate to excessive caving is anticipated in unshored excavations. The contractor should be aware drilling conditions may be difficult due to the potential for caving, as well as the presence of cobbles and boulders, and that casing will be required during shoring pile installation and formwork may be required to prevent caving of shallow spread foundation excavations. In addition, the contractor should be prepared to screen abundant cobble and boulders from the soils during earthwork operations.

7.2.2 Please be aware that the use of hollow-stem auger drilling equipment utilized for this investigation does not allow for the identification of the size of rock or abundance of rock being encountered or the visual observation of caving conditions since the drilling method is a small diameter cased excavation. It is recommended that the contractors bidding on earthwork, excavation and shoring installation for this project perform their own excavations and test borings with the intended earthwork and drilling equipment to verify the presence, abundance, and size of buried rock (cobbles and boulders), potential for caving, as well as the suitability of the proposed excavation and drilling equipment for the safe and efficient earthwork operations and installation of the shoring system.

7.2.3 It is the responsibility of the contractor to ensure that all excavations and trenches are properly shored and maintained in accordance with applicable OSHA rules and regulations to maintain safety and maintain the stability of existing adjacent improvements.

7.2.4 All onsite excavations must be conducted in such a manner that potential surcharges from existing structures, construction equipment, and vehicle loads are resisted. The surcharge area may be defined by a 1:1 projection down and away from the bottom of an existing foundation or vehicle load. Penetrations below this 1:1 projection will require special excavation measures such as sloping or shoring. Excavation recommendations are provided in the *Temporary Excavations* section of this report (see Section 7.16).

7.2.5 The soils encountered at the site are primarily granular in nature and are considered to be "non-expansive". Recommendations presented herein assume that the proposed foundations and slabs will derive support in "non-expansive" materials.

7.3 Minimum Resistivity, pH, and Water-Soluble Sulfate

7.3.1 Potential of Hydrogen (pH) and resistivity testing as well as chloride content testing were performed on representative samples of soil to generally evaluate the corrosion potential to surface utilities. The tests were performed in accordance with California Test Method Nos. 643 and 422 and indicate that the soils are considered "mildly corrosive" with respect to corrosion of buried ferrous metals on site. The results are presented in Appendix B (Figure B29) and should be considered for design of underground structures.

7.3.2 Laboratory tests were performed on representative samples of the site materials to measure the percentage of water-soluble sulfate content. Results from the laboratory water-soluble sulfate tests are presented in Appendix B (Figure B29) and indicate that the on-site materials possess a sulfate exposure class of "S0" to concrete structures as defined by 2019 CBC Section 1904 and ACI 318-19 Chapter 19.

7.3.3 Geocon West, Inc. does not practice in the field of corrosion engineering and mitigation. If corrosion sensitive improvements are planned, it is recommended that a corrosion engineer be retained to evaluate corrosion test results and incorporate the necessary precautions to avoid premature corrosion of buried metal pipes and concrete structures in direct contact with the soils.

7.4 Grading

7.4.1 Grading is anticipated to include excavation of site soils for the subterranean level, foundations, and utility trenches, as well as placement of backfill for walls, ramps, and trenches.

7.4.2 A preconstruction conference should be held at the site prior to the beginning of grading operations with the owner, contractor, civil engineer, geotechnical engineer, and building official in attendance. Special soil handling requirements can be discussed at that time.

7.4.3 Earthwork should be observed, and compacted fill tested by representatives of Geocon West, Inc. The existing fill and alluvial soil encountered during exploration is suitable for re-use as engineered fill, provided any encountered oversize material (greater than 6 inches) and any encountered deleterious debris are removed. **The contractor should be prepared to screen abundant cobble and boulders from the soils during earthwork operations**. Generation and disposal of oversized material (greater than 6 inches) should be anticipated. Additionally, the site soils have little to no cohesion and are prone to excessive caving. The contractor should be prepared for difficult excavation conditions. The presence of these materials and their impact on construction methods and equipment selection should be considered by both the owner and contractor prior to construction.

7.4.4 Please be aware that the use of hollow-stem auger drilling equipment utilized for this investigation does not allow for the identification of the size of rocks being encountered or the visual observation of caving conditions since the drilling method is a small diameter cased excavation. It is recommended that the contractor bidding on excavation for this project perform their own test excavations utilizing the intended excavation equipment to verify the presence and size of buried rock (cobble and boulders), potential for caving, as well as the suitability of the proposed equipment to perform for safe and efficient earthwork activities.

7.4.5 Grading should commence with the removal of all existing vegetation and existing improvements from the area to be graded. Deleterious debris such as wood and root structures should be exported from the site and should not be mixed with the fill soils. Asphalt and concrete should not be mixed with the fill soils unless approved by the Geotechnical Engineer. All existing underground improvements planned for removal should be completely excavated and the resulting depressions properly backfilled in accordance with the procedures described herein. Once a clean excavation bottom has been established it must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.).

7.4.6 The foundation system for the proposed structure may derive support in the competent undisturbed alluvial soils found at and below a depth of 12 feet below the existing ground surface.

7.4.7 All excavations must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon) prior to placing any fill or foundation construction.

7.4.8 All fill and backfill soils should be placed in horizontal loose layers approximately 6 to 8 inches thick, moisture conditioned to near optimum moisture content, and properly compacted to a minimum of 90 percent of the maximum dry density in accordance with ASTM D 1557 (latest edition).

7.4.9. Where new paving is to be placed, it is recommended that all existing fill and soft alluvium be excavated and properly compacted for paving support. As a minimum, the upper 12 inches of soil should be scarified, moisture conditioned to near optimum moisture content, and compacted to at least 95 percent relative compaction, as determined by ASTM D 1557 (latest edition). Paving recommendations are provided in *Preliminary Pavement Recommendations* section of this report (see Section 7.10).

7.4.10 Foundations for small outlying structures, such as block walls up to 6 feet high, planter walls or trash enclosures, which will not be tied to the proposed building, may be supported on conventional foundations deriving support on a minimum of 12 inches of newly placed engineered fill which extends laterally at least 12 inches beyond the foundation area. Where excavation and proper compaction cannot be performed, foundations may derive support directly in the undisturbed alluvial soils at and below a depth of 24 inches, and should be deepened as necessary to maintain a minimum 12 inch embedment into the recommended bearing materials. If the soils exposed in the excavation bottom are soft or loose, compaction of the soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative.

7.4.11 Although not anticipated for this project, all imported fill shall be observed, tested, and approved by Geocon West, Inc. prior to bringing soil to the site. Rocks larger than 6 inches in diameter shall not be used in the fill. If necessary, import soils used as structural fill should have an expansion index less than 20 and corrosivity properties that are equally or less detrimental to that of the existing onsite soils (see Figure B29).

7.4.12 Utility trenches should be properly backfilled in accordance with the following requirements. The pipe should be bedded with clean sands (Sand Equivalent greater than 30) to a depth of at least 1 foot over the pipe, and the bedding material must be inspected and approved in writing by the Geotechnical Engineer (a representative of Geocon). The use of gravel is not acceptable unless used in conjunction with filter fabric to prevent the gravel from having direct contact with soil. The remainder of the trench backfill may be derived from onsite soil or approved import soil, compacted as necessary, until the required compaction is obtained. The use of minimum 2-sack slurry as backfill is also acceptable. Prior to placing any bedding materials or pipes, the excavation bottom must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon).

7.4.13 All trench and foundation excavation bottoms must be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon), prior to placing bedding materials, fill, steel, gravel, or concrete.

7.5 Foundation Design

7.5.1 The proposed structure may be supported on a conventional foundation system deriving support in the competent alluvium found at and below a depth of 12 feet below the existing ground surface. Foundations should be deepened as necessary to penetrate through soft or unsuitable alluvium at the direction of the Geotechnical Engineer. All foundation excavations must be observed and approved by the Geotechnical Engineer (a representative of Geocon), prior to placing steel or concrete.

7.5.2 Continuous footings may be designed for an allowable bearing capacity of 2,500 pounds per square foot (psf), and should be a minimum of 12 inches in width, 18 inches in depth below the lowest adjacent grade, and 12 inches into the recommended bearing material.

7.5.3 Isolated spread foundations may be designed for an allowable bearing capacity of 3,000 psf, and should be a minimum of 24 inches in width, 18 inches in depth below the lowest adjacent grade, and 12 inches into the recommended bearing material.

7.5.4 The allowable soil bearing pressure above may be increased by 250 psf and 500 psf for each additional foot of foundation width and depth, respectively, up to a maximum allowable soil bearing pressure of 5,000 psf.

7.5.5 The allowable bearing pressures may be increased by one-third for transient loads due to wind or seismic forces.

7.5.6 If depth increases are utilized for the perimeter foundations, this office should be provided a copy of the final construction plans so that the excavation recommendations presented herein could be properly reviewed and revised if necessary.

7.5.7 Continuous footings should be reinforced with four No. 4 steel reinforcing bars, two placed near the top of the footing and two near the bottom. Reinforcement for spread footings should be designed by the project structural engineer.

7.5.8 The above foundation dimensions and minimum reinforcement recommendations are based on soil conditions and building code requirements only, and are not intended to be used in lieu of those required for structural purposes.

7.5.9 No special subgrade presaturation is required prior to placement of concrete. However, the slab and foundation subgrade should be sprinkled as necessary; to maintain a moist condition as would be expected in any concrete placement.

7.5.10 Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the excavations and exposed soil conditions are consistent with those anticipated. If unanticipated soil conditions are encountered, foundation modifications may be required.

7.5.11 This office should be provided a copy of the final construction plans so that the excavation recommendations presented herein could be properly reviewed and revised if necessary.

7.6 Foundation Settlement

7.6.1 The maximum expected static settlement for a structure supported on a conventional foundation system deriving support in the recommended bearing materials and designed with a maximum bearing pressure of 5,000 psf is estimated to be less than 1¼ inch and occur below the heaviest loaded structural element. Settlement of the foundation system is expected to occur on initial application of loading. Differential settlement is not expected to exceed ⅔ inch over a distance of 20 feet.

7.6.2 Once the design and foundation loading configuration for the proposed structure proceeds to a more finalized plan, the estimated settlements presented in this report should be reviewed and revised, if necessary. If the final foundation loading configurations are greater than the assumed loading conditions, the potential for settlement should be reevaluated by this office.

7.7 Miscellaneous Foundations

7.7.1 Foundations for small outlying structures, such as block walls up to 6 feet in height, planter walls or trash enclosures which will not be tied to the proposed structure may be supported on conventional foundations bearing on a minimum of 12 inches of newly placed engineered fill which extends laterally at least 12 inches beyond the foundation area. Where excavation and compaction cannot be performed, such as adjacent to property lines, foundations may derive support in the undisturbed alluvial soils at and below a depth of 24 inches, and should be deepened as necessary to maintain a minimum 12 inch embedment into the recommended bearing materials.

7.7.2 If the soils exposed in the excavation bottom are soft, compaction of the soft soils will be required prior to placing steel or concrete. Compaction of the foundation excavation bottom is typically accomplished with a compaction wheel or mechanical whacker and must be observed and approved by a Geocon representative. Miscellaneous foundations may be designed for a bearing value of 1,500 psf, and should be a minimum of 12 inches in width, 18 inches in depth below the lowest adjacent grade and 12 inches into the recommended bearing material. The allowable bearing pressure may be increased by up to one-third for transient loads due to wind or seismic forces.

7.7.3 Foundation excavations should be observed and approved in writing by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to the placement of reinforcing steel and concrete to verify that the excavations and exposed soil conditions are consistent with those anticipated.

7.8 Lateral Design

7.8.1 Resistance to lateral loading may be provided by friction acting at the base of foundations, slabs and by passive earth pressure. An allowable coefficient of friction of 0.4 may be used with the dead load forces in the competent alluvial soils and properly compacted engineered fill.

7.8.2 Passive earth pressure for the sides of foundations and slabs poured against properly compacted engineered fill or competent alluvial soils may be computed as an equivalent fluid having a density of 260 pcf with a maximum earth pressure of 2,600 psf. When combining passive and friction for lateral resistance, the passive component should be reduced by one-third.

7.9 Concrete Slabs-on-Grade

7.9.1 Exterior concrete slabs-on-grade subject to vehicle loading should be designed in accordance with the recommendations in the *Preliminary Pavement Recommendations* section of this report (Section 7.10).

7.9.2 Unless specifically evaluated and designed by a qualified structural engineer, the slab-on-grade and ramp for the subterranean parking garage slab-on-grade should be a minimum of 5 inches of concrete reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions and positioned vertically near the slab midpoint. The concrete slab-on-grade and ramp may derive support directly on the undisturbed alluvial soils at the excavation bottom as well as compacted soils, if necessary. Any disturbed soils should be properly compacted for slab support. Soil placed and compacted for ramp and slab support should be moisture conditioned to near optimum moisture content and properly compacted to at least 95 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition) for ramp support.

7.9.3 Slabs-on-grade at the ground surface that may receive moisture-sensitive floor coverings or may be used to store moisture-sensitive materials should be underlain by a vapor retarder placed directly beneath the slab. The vapor retarder and acceptable permeance should be specified by the project architect or developer based on the type of floor covering that will be installed. The vapor retarder design should be consistent with the guidelines presented in Section 9.3 of the American Concrete Institute's (ACI) Guide for Concrete Slabs that Receive Moisture-Sensitive Flooring Materials (ACI 302.2R-06) and should be installed in general conformance with ASTM E 1643 (latest edition) and the manufacturer's recommendations. A minimum thickness of 15 mils extruded polyolefin plastic is recommended; vapor retarders which contain recycled content or woven materials are not recommended. The vapor retarder should have a permeance of less than 0.01 perms demonstrated by testing before and after mandatory conditioning. The vapor retarder should be installed in direct contact with the concrete slab with proper perimeter seal. If the California Green Building Code requirements apply to this project, the vapor retarder should be underlain by 4 inches of clean aggregate. It is important that the vapor retarder be puncture resistant since it will be in direct contact with angular gravel. As an alternative to the clean aggregate suggested in the Green Building Code, it is our opinion that the concrete slab-on-grade may be underlain by a vapor retarder over 4 inches of clean sand (sand equivalent greater than 30), since the sand will serve a capillary break and will minimize the potential for punctures and damage to the vapor barrier.

7.9.4 Due to the nature of the proposed design and intent for a subterranean level, waterproofing of subterranean walls and slabs is suggested. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.9.5 For seismic design purposes, a coefficient of friction of 0.4 may be utilized between concrete slabs and subgrade soils without a moisture barrier, and 0.15 for slabs underlain by a moisture barrier.

7.9.6 Exterior slabs for walkways or flatwork, not subject to traffic loads, should be at least 4 inches thick and reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions, positioned near the slab midpoint. Prior to construction of slabs, the upper 12 inches of subgrade should be moistened to optimum moisture content and properly compacted to at least 95 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition). Crack control joints should be spaced at intervals not greater than 10 feet and should be constructed using saw-cuts or other methods as soon as practical following concrete placement. Crack control joints should extend a minimum depth of one-fourth the slab thickness. The project structural engineer should design construction joints as necessary.

7.9.7 The recommendations of this report are intended to reduce the potential for cracking of slabs due to settlement. However, even with the incorporation of the recommendations presented herein, foundations, stucco walls, and slabs-on-grade may exhibit some cracking due to minor soil movement and/or concrete shrinkage. The occurrence of concrete shrinkage cracks is independent of the supporting soil characteristics. Their occurrence may be reduced and/or controlled by limiting the slump of the concrete, proper concrete placement and curing, and by the placement of crack control joints at periodic intervals, in particular, where re-entrant slab corners occur.

7.10 Preliminary Pavement Recommendations

7.10.1 Where new paving is to be placed, it is recommended that all existing fill and soft or unsuitable alluvial materials be excavated and properly recompacted for paving support. The client should be aware that excavation and compaction of all existing artificial fill and soft alluvium in the area of new paving is not required; however, paving constructed over existing unsuitable material may experience increased settlement and/or cracking, and may therefore have a shorter design life and increased maintenance costs. As a minimum, the upper 12 inches of paving subgrade should be scarified, moisture conditioned to near optimum moisture content, and properly compacted to at least 95 percent relative compaction, as determined by ASTM Test Method D 1557 (latest edition).

7.10.2 The following pavement sections are based on an assumed R-Value of 35. Once site grading activities are complete an R-Value should be obtained by laboratory testing to confirm the properties of the soils serving as paving subgrade, prior to placing pavement.

7.10.3 The Traffic Indices listed below are estimates. Geocon does not practice in the field of traffic engineering. The actual Traffic Index for each area should be determined by the project civil engineer. If pavement sections for Traffic Indices other than those listed below are required, Geocon should be contacted to provide additional recommendations. Pavement thicknesses were determined following procedures outlined in the *California Highway Design Manual* (Caltrans). It is anticipated that the majority of traffic will consist of automobile and large truck traffic.

PRELIMINARY PAVEMENT DESIGN SECTIONS

Location	Estimated Traffic Index (TI)	Asphalt Concrete (inches)	Class 2 Aggregate Base (inches)
Automobile Parking And Driveways	4.0	3.0	4.0
Trash Truck & Fire Lanes	7.0	4.0	9.0

7.10.4 Asphalt concrete should conform to Section 203-6 of the "*Standard Specifications for Public Works Construction"* (Green Book). Class 2 aggregate base materials should conform to Section 26-1.02A of the "*Standard Specifications of the State of California, Department of Transportation"* (Caltrans). The use of Crushed Miscellaneous Base in lieu of Class 2 aggregate base is acceptable. Crushed Miscellaneous Base should conform to Section 200-2.4 of the "*Standard Specifications for Public Works Construction"* (Green Book).

7.10.5 Unless specifically designed and evaluated by the project structural engineer, where exterior concrete paving will be utilized for support of vehicles, it is recommended that the concrete be a minimum of 6 inches thick and reinforced with No. 3 steel reinforcing bars placed 18 inches on center in both horizontal directions. Concrete paving supporting vehicular traffic should be underlain by a minimum of 4 inches of aggregate base and a properly compacted subgrade. The subgrade and base material should be compacted to 95 percent relative compaction as determined by ASTM Test Method D 1557 (latest edition).

7.10.6 The performance of pavements is highly dependent upon providing positive surface drainage away from the edge of pavements. Ponding of water on or adjacent to the pavement will likely result in saturation of the subgrade materials and subsequent cracking, subsidence and pavement distress. If planters are planned adjacent to paving, it is recommended that the perimeter curb be extended at least 12 inches below the bottom of the aggregate base to minimize the introduction of water beneath the paving.

7.11 Retaining Wall Design

7.11.1 The recommendations presented below are generally applicable to the design of rigid concrete or masonry retaining walls having a maximum height of 12 feet. In the event that walls significantly higher than 12 feet are planned, Geocon should be contacted for additional recommendations.

7.11.2 Retaining wall foundations may be designed in accordance with the recommendations provided in the *Foundation Design* section of this report (see Section 7.5).

7.11.3 Retaining walls with a level backfill surface that are not restrained at the top should be designed utilizing a triangular distribution of pressure (active pressure) of 35 pcf.

7.11.4 Restrained walls are those that are not allowed to rotate more than 0.001H (where H equals the height of the retaining portion of the wall in feet) at the top of the wall. Where walls are restrained from movement at the top, walls may be designed utilizing a triangular distribution of pressure (at-rest pressure) of 60 pcf.

7.11.5 The wall pressures provided above assume that the proposed retaining walls will support relatively undisturbed alluvial soils. If sloping techniques are to be utilized for construction of proposed walls, which would result in a wedge of engineered fill behind the retaining walls, revised earth pressures may be required. This should be evaluated once the use of sloping measures is established and once the geotechnical characteristics of the engineered backfill soils can be further evaluated.

7.11.6 The wall pressures provided above assume that the retaining wall will be properly drained preventing the buildup of hydrostatic pressure. If retaining wall drainage is not implemented, the equivalent fluid pressure to be used in design of undrained walls is 90 pcf. The value includes hydrostatic pressures plus buoyant lateral earth pressures.

7.11.7 Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent structures and should be designed for each condition as the project progresses.

7.11.8 It is recommended that line-load surcharges from adjacent wall footings, use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.20 \times \left(\frac{z}{H}\right)}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.28 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

where x is the distance from the face of the excavation or wall to the vertical line-load, H is the distance from the bottom of the footing to the bottom of excavation or wall, z is the depth at which the horizontal pressure is desired, Q_L is the vertical line-load and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.11.9 It is recommended that vertical point-loads, from construction equipment outriggers or adjacent building columns use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.28 \times \left(\frac{z}{H}\right)^2}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.77 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)^2}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

then

$$\sigma'_H(z) = \sigma_H(z) cos^2(1.1\theta)$$

where x is the distance from the face of the excavation/wall to the vertical point-load, H is distance from the outrigger/bottom of column footing to the bottom of excavation, z is the depth at which the horizontal pressure is desired, Q_P is the vertical point-load, $\sigma_H(z)$ is the horizontal pressure at depth z, θ is the angle between a line perpendicular to the excavation/wall and a line from the point-load to location on the excavation/wall where the surcharge is being evaluated, and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.11.10 In addition to the recommended earth pressure, the upper 10 feet of the retaining wall adjacent to the street or driveway areas should be designed to resist a uniform lateral pressure of 100 psf, acting as a result of an assumed 300 psf surcharge behind the wall due to normal street traffic. If the traffic is kept back at least 10 feet from the wall, the traffic surcharge may be neglected.

7.11.11 Seismic lateral forces should be incorporated into the design as necessary, and recommendations for seismic lateral forces are presented below.

7.12 Dynamic (Seismic) Lateral Forces

7.12.1 The structural engineer should determine the seismic design category for the project in accordance with Section 1613 of the CBC. If the project possesses a seismic design category of D, E, or F, proposed retaining walls in excess of 6 feet in height should be designed with seismic lateral pressure (Section 1803.5.12 of the 2019 CBC).

7.12.2 A seismic load of 15 pcf should be used for design of walls that support more than 6 feet of backfill in accordance with Section 1803.5.12 of the 2019 CBC. The seismic load is applied as an equivalent fluid pressure along the height of the wall and the calculated loads result in a maximum load exerted at the base of the wall and zero at the top of the wall. This seismic load should be applied in addition to the active earth pressure. The earth pressure is based on half of two-thirds of PGA_M calculated from ASCE 7-16 Section 11.8.3.

7.13 Retaining Wall Drainage

7.13.1 Unless designed for hydrostatic pressures, retaining walls should be provided with a drainage system. At the base of the drain system, a subdrain covered with a minimum of 12 inches of gravel should be installed, and a compacted fill blanket or other seal placed at the surface (see Figure 5). The clean bottom and subdrain pipe, behind a retaining wall, should be observed by the Geotechnical Engineer (a representative of Geocon), prior to placement of gravel or compacting backfill.

7.13.2 As an alternative, a plastic drainage composite such as Miradrain or equivalent may be installed in continuous, 4-foot wide columns along the entire back face of the wall, at 8 feet on center. The top of these drainage composite columns should terminate approximately 18 inches below the ground surface, where either hardscape or a minimum of 18 inches of relatively cohesive material should be placed as a cap (see Figure 6). These vertical columns of drainage material would then be connected at the bottom of the wall to a collection panel or a 1-cubic-foot rock pocket drained by a 4-inch subdrain pipe.

7.13.3 Subdrainage pipes at the base of the retaining wall drainage system should outlet to an acceptable location via controlled drainage structures. Drainage should not be allowed to flow uncontrolled over descending slopes.

7.13.4 Moisture affecting below grade walls is one of the most common post-construction complaints. Poorly applied or omitted waterproofing can lead to efflorescence or standing water. Particular care should be taken in the design and installation of waterproofing to avoid moisture problems, or actual water seepage into the structure through any normal shrinkage cracks which may develop in the concrete walls, floor slab, foundations and/or construction joints. The design and inspection of the waterproofing is not the responsibility of the geotechnical engineer. A waterproofing consultant should be retained in order to recommend a product or method, which would provide protection to subterranean walls, floor slabs and foundations.

7.14 Elevator Pit Design

7.14.1 The elevator pit slab and retaining wall should be designed by the project structural engineer. Elevator pit walls may be designed in accordance with the recommendations in the *Foundation Design* and *Retaining Wall Design* sections of this report (see Sections 7.5 and 7.11).

7.14.2 Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic or adjacent foundations and should be designed for each condition as the project progresses.

7.14.3 If retaining wall drainage is to be provided, the drainage system should be designed in accordance with the *Retaining Wall Drainage* section of this report (see Section 7.13)

7.14.4 It is suggested that the exterior walls and slab be waterproofed to prevent excessive moisture inside of the elevator pit. Waterproofing design and installation is not the responsibility of the geotechnical engineer.

7.15 Elevator Piston

7.15.1 If a plunger-type elevator piston is installed for this project, a deep drilled excavation will be required. It is important to verify that the drilled excavation is not situated immediately adjacent to a foundation or shoring pile, or the drilled excavation could compromise the existing foundation support or pile support, especially if the drilling is performed subsequent to the foundation or pile construction. Cobble and boulders may be encountered during excavation. Additionally, some of the site soils have little to no cohesion and are prone to excessive caving. The contractor should be prepared for difficult drilling conditions.

7.15.2 Casing will be required since caving is expected in the drilled excavation, and the contractor should be prepared to use casing and should have it readily available at the commencement of drilling activities. Continuous observation of the drilling and installation of the elevator piston by the Geotechnical Engineer (a representative of Geocon West, Inc.) is required.

7.15.3 The annular space between the piston casing and drilled excavation wall should be filled with a minimum of 1½-sack slurry pumped from the bottom up. As an alternative, pea gravel may be utilized. The use of soil to backfill the annular space is not acceptable.

7.16 Temporary Excavations

7.16.1 Excavations on the order of 14 feet in height may be required for excavation and construction of the proposed subterranean level, including foundation depths. The excavations are expected to expose artificial fill and granular alluvial soils, which are be subject to caving. Vertical excavations up to 5 feet in height may be attempted where not surcharged; however, the contractor should be prepared for caving, sloughing, and raveling in open excavations. Due to the granular nature of soils and potential for caving, the contractor should also be prepared to form foundation excavations at the excavation bottom.

7.16.2 Vertical excavations greater than 5 feet or where surcharged by existing structures will require sloping or shoring measures in order to provide a stable excavation. Where sufficient space is available, temporary unsurcharged embankments could be sloped back at a uniform 1:1 slope gradient or flatter up to maximum height of 8 feet. A uniform slope does not have a vertical portion. Where space is limited, shoring measures will be required. *Shoring* data is provided in Section 7.17 of this report.

7.16.3 Where temporary construction slopes are utilized, the top of the slope should be barricaded to prevent vehicles and storage loads at the top of the slope within a horizontal distance equal to the height of the slope. If the temporary construction slopes are to be maintained during the rainy season, berms are suggested along the tops of the slopes where necessary to prevent runoff water from entering the excavation and eroding the slope faces. Geocon personnel should inspect the soils exposed in the cut slopes during excavation so that modifications of the slopes can be made if variations in the soil conditions occur. All excavations should be stabilized within 30 days of initial excavation.

7.17 Shoring – Soldier Pile Design and Installation

7.17.1 The following information on the design and installation of shoring is preliminary. Review of the final shoring plans and specifications should be made by this office prior to bidding or negotiating with a shoring contractor.

7.17.2 One method of shoring would consist of steel soldier piles, placed in drilled holes and backfilled with concrete. The steel soldier piles may also be installed utilizing high frequency vibration. Where maximum excavation heights are less than 12 feet the soldier piles are typically designed as cantilevers. Where excavations exceed 12 feet or are surcharged, soldier piles may require lateral bracing utilizing drilled tie-back anchors or raker braces to maintain an economical steel beam size and prevent excessive deflection. The size of the steel beam, the need for lateral bracing, and the acceptable shoring deflection should be determined by the project shoring engineer. Due to the presence of cobbles and boulders the installation of steel soldier piles utilizing high frequency vibration is expected to be difficult. It is recommended that the contractor bidding on shoring installation for this project perform their own test borings and vibratory soldier pile installation with the intended equipment to verify the presence and size of buried rock (cobbles and boulders) as well as the suitability of the proposed equipment for the safe and efficient installation of the soldier piles.

7.17.3 The design embedment of the shoring pile toes must be maintained during excavation activities. The toes of the perimeter shoring piles should be deepened to take into account any required excavations necessary for foundation excavations and/or adjacent drainage systems.

7.17.4 The proposed soldier piles may also be designed as permanent piles. The required pile depths, dimensions, and spacing should be determined and designed by the project structural and shoring engineers. All piles utilized for shoring can also be incorporated into a permanent retaining wall system (shotcrete wall) and should be designed in accordance with the earth pressure provided in the *Retaining Wall Design* section of this report (see Section 7.11).

7.17.5 Drilled cast-in-place soldier piles should be placed no closer than 3 diameters on center. The minimum diameter of the piles is 18 inches. Structural concrete should be used for the soldier piles below the excavation; lean-mix concrete may be employed above that level. As an alternative, lean-mix concrete may be used throughout the pile where the reinforcing consists of a wideflange section. The slurry must be of sufficient strength to impart the lateral bearing pressure developed by the wideflange section to the soil. For design purposes, an allowable passive value for the soils below the bottom plane of excavation may be assumed to be 260 psf per foot. Where piles are installed by vibration techniques, the passive pressure may be assumed to mobilize across a width equal to the two times the dimension of the beam flange. The allowable passive value may be doubled for isolated piles spaced a minimum of three times the pile diameter. To develop the full lateral value, provisions should be implemented to assure firm contact between the soldier piles and the undisturbed alluvium.

7.17.6 Groundwater was not encountered during site exploration. However, groundwater levels can fluctuate and may be different at the time of construction. It is not uncommon for groundwater or seepage conditions to develop where none previously existed. Therefore, the contractor should be prepared for groundwater during pile installation should the need arise. If more than 6 inches of water is present in the bottom of the excavation, a tremie is required to place the concrete into the bottom of the hole. A tremie should consist of a rigid, water-tight tube having a diameter of not less than 6 inches with a hopper at the top. The tube should be equipped with a device that will close the discharge end and prevent water from entering the tube while it is being charged with concrete. The tremie should be supported so as to permit free movement of the discharge end over the entire top surface of the work and to permit rapid lowering when necessary to retard or stop the flow of concrete. The discharge end should be closed at the start of the work to prevent water entering the tube and should be entirely sealed at all times, except when the concrete is being placed. The tremie tube should be kept full of concrete. The flow should be continuous until the work is completed, and the resulting concrete seal should be monolithic and homogeneous. The tip of the tremie tube should always be kept about 5 feet below the surface of the concrete and definite steps and safeguards should be taken to ensure that the tip of the tremie tube is never raised above the surface of the concrete.

7.17.7 A special concrete mix should be used for concrete to be placed below water. The design should provide for concrete with an unconfined compressive strength pounds per square inch (psi) of 1,000 psi over the initial job specification. An admixture that reduces the problem of segregation of paste/aggregates and dilution of paste should be included. The slump should be commensurate to any research report for the admixture, provided that it should also be the minimum for a reasonable consistency for placing when water is present.

7.17.8 Please be aware that the use of hollow-stem auger drilling equipment utilized for this investigation does not allow for the identification of the size of rocks being encountered or the visual observation of caving conditions since the drilling method is a small diameter cased excavation. It is recommended that the contractor bidding on excavation and shoring installation for this project perform their own test borings with the intended drilling equipment to verify the presence and size of buried rock (cobbles and boulders), potential for caving, as well as the suitability of the proposed drilling equipment for the safe and efficient installation of the shoring system.

7.17.9 Cobbles are anticipated to be encountered and excessive caving is expected to occur, and the contractor should have casing available prior to commencement of drilling activities. When casing is used, extreme care should be employed so that the pile is not pulled apart as the casing is withdrawn. At no time should the distance between the surface of the concrete and the bottom of the casing be less than 5 feet. As an alternative, piles may be vibrated into place; however, there is always a risk that excessive vibrations in sandy soils could induce settlements and distress to adjacent offsite improvements. Continuous observation of the drilling and pouring of the piles by the Geotechnical Engineer (a representative of Geocon West, Inc.), is required.

7.17.10 If a vibratory method of solider pile installation is utilized, predrilling may be performed prior to installation of the steel beams. If predrilling is performed, it is recommended that the bore diameter be at least 2 inches smaller than the largest dimension of the pile to prevent excessive loss in the frictional component of the pile capacity. Predrilling should not be conducted below the proposed excavation bottom.

7.17.11 If a vibratory method is utilized, the owner should be aware of the potential risks associated with vibratory efforts, which typically involve inducing settlement within the vicinity of the pile which could result in a potential for damage to existing improvements in the area.

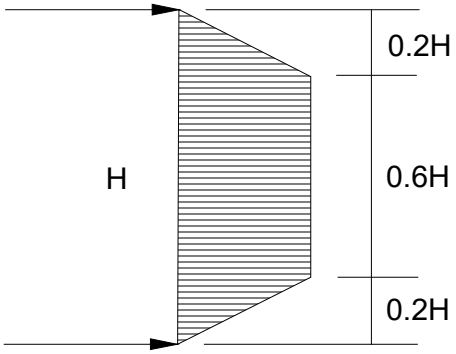
7.17.12 The level of vibration that results from the installation of the piles should not exceed a threshold where occupants of nearby structures are disturbed, despite higher vibration tolerances that a building may endure without deformation or damage. The main parameter used for vibration assessment is peak particle velocity in units of inch per second (in/sec). The acceptable range of peak particle velocity should be evaluated based on the age and condition of adjacent structures, as well as the tolerance of human response to vibration.

7.17.13 Based on Table 19 of the *Transportation and Construction Induced Vibration Guidance Manual* (Caltrans 2020), a continuous source of vibrations (ex. vibratory pile driving) which generates a maximum peak particle velocity of 0.5 in/sec is considered tolerable for modern industrial/commercial buildings and new residential structures. The Client should be aware that a lower value may be necessary if older or fragile structures are in the immediate vicinity of the site.

7.17.14 Vibrations should be monitored and record with seismographs during pile installation to detect the magnitude of vibration and oscillation experienced by adjacent structures. If the vibrations exceed the acceptable range during installation, the shoring contractor should modify the installation procedure to reduce the values to within the acceptable range. Vibration monitoring is not the responsibility of the Geotechnical Engineer.

7.17.15 Geocon does not practice in the field of vibration monitoring. If construction techniques will be implemented, it is recommended that qualified consultant be retained to provide site specific recommendations for vibration thresholds and monitoring.

7.17.16 The frictional resistance between the soldier piles and retained soil may be used to resist the vertical component of the load. The coefficient of friction may be taken as 0.4 based on uniform contact between the steel beam and lean-mix concrete and retained earth. The portion of soldier piles below the plane of excavation may also be employed to resist the downward loads. The downward capacity may be determined using a frictional resistance of 500 psf per foot.



7.17.17 Due to the nature of the site soils, it is expected that continuous lagging between soldier piles will be required. However, it is recommended that the exposed soils be observed by the Geotechnical Engineer (a representative of Geocon West, Inc.), to verify the presence of any competent, cohesive soils and the areas where lagging may be omitted.

7.17.18 The time between lagging excavation and lagging placement should be as short as possible soldier piles should be designed for the full-anticipated pressures. Due to arching in the soils, the pressure on the lagging will be less. It is recommended that the lagging be designed for the full design pressure but be limited to a maximum of 400 psf.

7.17.19 For the design of unbraced shoring, it is recommended that an equivalent fluid pressure be utilized for design. A trapezoidal distribution of lateral earth pressure may be used where shoring will be restrained by bracing or tie backs. The recommended active and trapezoidal pressure are provided in the following table. A diagram depicting the trapezoidal pressure distribution of lateral earth pressure is provided below the table.

HEIGHT OF SHORING (FEET)	**EQUIVALENT FLUID PRESSURE (Pounds Per Cubic Foot) (ACTIVE PRESSURE)**	**EQUIVALENT FLUID PRESSURE Trapezoidal (Where H is the height of the shoring in feet)**
Up to 14	28	18H

Trapezoidal Distribution of Pressure

7.17.20 It is very important to note that active pressures can only be achieved when movement in the soil (earth wall) occurs. If movement in the soil is not acceptable, such as adjacent to an existing structure, or the pile is restrained from movement by bracing or a tie back anchor, an at-rest pressure of 50 pcf should be considered for design purposes.

7.17.21 Where a combination of sloped embankment and shoring is utilized, the pressure will be greater and must be determined for each combination. Additional active pressure should be added for a surcharge condition due to sloping ground, vehicular traffic, or adjacent structures and must be determined for each combination.

7.17.22 It is recommended that line-load surcharges from adjacent wall footings, use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.20 \times \left(\frac{z}{H}\right)}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.28 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^2} \times \frac{Q_L}{H}$$

where x is the distance from the face of the excavation or wall to the vertical line-load, H is the distance from the bottom of the footing to the bottom of excavation or wall, z is the depth at which the horizontal pressure is desired, Q_L is the vertical line-load and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.17.23 It is recommended that vertical point-loads, from construction equipment outriggers or adjacent building columns use horizontal pressures generated from NAV-FAC DM 7.2. The governing equations are:

$$For\ {}^{x}/_{H} \leq 0.4$$

$$\sigma_H(z) = \frac{0.28 \times \left(\frac{z}{H}\right)^2}{\left[0.16 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

and

$$For\ {}^{x}/_{H} > 0.4$$

$$\sigma_H(z) = \frac{1.77 \times \left(\frac{x}{H}\right)^2 \times \left(\frac{z}{H}\right)^2}{\left[\left(\frac{x}{H}\right)^2 + \left(\frac{z}{H}\right)^2\right]^3} \times \frac{Q_P}{H^2}$$

then

$$\sigma'_H(z) = \sigma_H(z) cos^2(1.1\theta)$$

where x is the distance from the face of the excavation/wall to the vertical point-load, H is distance from the outrigger/bottom of column footing to the bottom of excavation, z is the depth at which the horizontal pressure is desired, Q_P is the vertical point-load, $\sigma_H(z)$ is the horizontal pressure at depth z, θ is the angle between a line perpendicular to the excavation/wall and a line from the point-load to location on the excavation/wall where the surcharge is being evaluated, and $\sigma_H(z)$ is the horizontal pressure at depth z.

7.17.24 In addition to the recommended earth pressure, the upper 10 feet of the shoring adjacent to the street or driveway areas should be designed to resist a uniform lateral pressure of 100 psf, acting as a result of an assumed 300 psf surcharge behind the shoring due to normal street traffic. If the traffic is kept back at least 10 feet from the shoring, the traffic surcharge may be neglected.

7.17.25 It is difficult to accurately predict the amount of deflection of a shored embankment. It should be realized that some deflection will occur. It is recommended that the deflection be minimized to prevent damage to existing structures and adjacent improvements. Where public rights-of-way are present or adjacent offsite structures do not surcharge the shoring excavation, the shoring deflection should be limited to less than 1 inch at the top of the shored embankment. Where offsite structures are within the shoring surcharge area it is recommended that the beam deflection be limited to less than ½ inch at the elevation of the adjacent offsite foundation, and no deflection at all if deflections will damage existing structures. The allowable deflection is dependent on many factors, such as the presence of structures and utilities near the top of the embankment, and will be assessed and designed by the project shoring engineer.

7.17.26 Because of the depth of the excavation, some means of monitoring the performance of the shoring system is suggested. The monitoring should consist of periodic surveying of the lateral and vertical locations of the tops of all soldier piles and the lateral movement along the entire lengths of selected soldier piles.

7.17.27 Due to the depth of the excavation and proximity to adjacent structures, it is suggested that prior to excavation the existing improvements be inspected, and their present condition be documented. For documentation purposes, photographs should be taken of preconstruction distress conditions and level surveys of adjacent grade and pavement should be considered. During excavation activities, the adjacent structures and pavement should be periodically inspected for signs of distress. In the event that distress or settlement is observed, an investigation should be performed, and corrective measures taken so that continued or worsened distress or settlement is mitigated. Documentation and monitoring of the offsite structures and improvements is not the responsibility of the geotechnical engineer.

7.18 Temporary Tie-Back Anchors

7.18.1 Temporary tie-back anchors may be used with the solider pile wall system to resist lateral loads. Post-grouted friction anchors are recommended. For design purposes, it may be assumed that the active wedge adjacent to the shoring is defined by a plane drawn 35 degrees with the vertical through the bottom plane of the excavation. Friction anchors should extend a minimum of 20 feet beyond the potentially active wedge and to greater lengths if necessary to develop the desired capacities. The locations and depths of all offsite utilities should be thoroughly checked and incorporated into the drilling angle design for the tie-back anchors.

7.18.2 The capacities of the anchors should be determined by testing of the initial anchors as outlined in a following section. Only the frictional resistance developed beyond the active wedge would be effective in resisting lateral loads. Anchors should be placed at least 6 feet on center to be considered isolated. For preliminary design purposes, it is estimated that drilled friction anchors constructed without utilizing post-grouting techniques will develop average skin frictions as follows:

- 7 feet below the top of the excavation – 950 pounds per square foot

7.18.3 Depending on the techniques utilized, and the experience of the contractor performing the installation, a maximum allowable friction capacity of 3.0 kips per linear foot for post-grouted anchors (for a minimum 20-foot length beyond the active wedge) may be assumed for design purposes. Only the frictional resistance developed beyond the active wedge should be utilized in resisting lateral loads. Higher capacities may be possible but must be verified by testing.

7.19 Anchor Installation

7.19.1 Tie-back anchors are typically installed between 20 and 40 degrees below the horizontal; however, occasionally alternative angles are necessary to avoid existing improvements and utilities. The locations and depths of all offsite utilities should be thoroughly checked prior to design and installation of the tie-back anchors. Caving of the anchor shafts, particularly within sand and gravel deposits or seepage zones, should be anticipated during installation and provisions should be implemented in order to minimize such caving. It is suggested that hollow-stem auger drilling equipment be used to install the anchors. The anchor shafts should be filled with concrete by pumping from the tip out, and the concrete should extend from the tip of the anchor to the active wedge. In order to minimize the chances of caving, it is recommended that the portion of the anchor shaft within the active wedge be backfilled with sand before testing the anchor. This portion of the shaft should be filled tightly and flush with the face of the excavation. The sand backfill should be placed by pumping; the sand may contain a small amount of cement to facilitate pumping.

7.20 Anchor Testing

7.20.1 All of the anchors should be tested to at least 150 percent of design load. The total deflection during this test should not exceed 12 inches. The rate of creep under the 150 percent test load should not exceed 0.1 inch over a 15-minute period in order for the anchor to be approved for the design loading.

7.20.2 At least 10 percent of the anchors should be selected for "quick" 200 percent tests and three additional anchors should be selected for 24-hour 200 percent tests. The purpose of the 200 percent tests is to verify the friction value assumed in design. The anchors should be tested to develop twice the assumed friction value. These tests should be performed prior to installation of additional tiebacks. Where satisfactory tests are not achieved on the initial anchors, the anchor diameter and/or length should be increased until satisfactory test results are obtained.

7.20.3 The total deflection during the 24-hour 200 percent test should not exceed 12 inches. During the 24-hour tests, the anchor deflection should not exceed 0.75 inches measured after the 200 percent test load is applied.

7.20.4 For the "quick" 200 percent tests, the 200 percent test load should be maintained for 30 minutes. The total deflection of the anchor during the 200 percent quick tests should not exceed 12 inches; the deflection after the 200 percent load has been applied should not exceed 0.25 inch during the 30-minute period.

7.20.5 After a satisfactory test, each anchor should be locked-off at the design load. This should be verified by rechecking the load in the anchor. The load should be within 10 percent of the design load. A representative of this firm should observe the installation and testing of the anchors.

7.21 Internal Bracing

7.21.1 Rakers may be utilized to brace the soldier piles in lieu of tieback anchors. The raker bracing could be supported laterally by temporary concrete footings (deadmen) or by the permanent, interior footings. For design of such temporary footings or deadmen, poured with the bearing surface normal to rakers inclined at 45 degrees, a bearing value of 1,500 psf may be used, provided the shallowest point of the footing is at least one foot below the lowest adjacent grade. The structural engineer should review the shoring plans to determine if raker footings conflict with the structural foundation system. The client should be aware that the utilization of rakers could significantly impact the construction schedule due to their intrusion into the construction site and potential interference with equipment.

7.22 Stormwater Infiltration

7.22.1 During the May 20, 2022 site exploration, boring B4 was utilized to perform percolation testing. The boring was advanced and then backfilled to the depth listed in the table below. Slotted casing was placed in the boring, and the annular space between the casing and excavation was filled with gravel. The boring was then filled with water to pre-saturate the soils. The casing was refilled with water and percolation test readings were performed after repeated flooding of the cased excavation. Based on the test results, the measured infiltration rate and design infiltration rate, for the earth materials encountered, are provided in the following table. These values have been calculated in accordance with the Small Diameter Boring Infiltration Test Procedure in the County of Los Angeles Department of Public Works GMED *Guidelines for Geotechnical Investigation and Reporting, Low Impact Development Stormwater Infiltration* (June 2021). Percolation test field data and calculation of the measured infiltration rate and design infiltration rate are provided on Figure 7.

Boring	Soil Type	Infiltration Depth (ft)	Measured Infiltration Rate (in / hour)	Design Infiltration Rate (in / hour)
B4	SM / SP	30 – 35	11.20	3.73

7.22.2 Based on the test method utilized (Small Diameter Boring), the reduction factor RF_t may be taken as 1.0 in the infiltration system design. Based on the number of tests performed and consistency of the soils throughout the site, it is suggested that the reduction factor RF_v be taken as 1.0. In addition, provided proper maintenance is performed to minimize long-term siltation and plugging, the reduction factor RF_s may be taken as 1.0. Additional reduction factors may be required and should be applied by the engineer in responsible charge of the design of the stormwater infiltration system and based on applicable guidelines.

7.22.3 The results of the percolation testing indicate that the soils at depths in the above table are conducive to infiltration. It is our opinion that the soil zone encountered at the depth and location as listed in the table above are suitable for infiltration of stormwater.

7.22.4 It is our further opinion that infiltration of stormwater and will not induce excessive hydro-consolidation (see Figures B10 through B28), will not create a perched groundwater condition, will not affect soil structure interaction of existing or proposed foundations due to expansive soils, will not saturate soils supported by existing or proposed retaining walls, and will not increase the potential for liquefaction. Resulting settlements are anticipated to be less than ¼ inch, if any.

7.22.5 The infiltration system must be located such that the closest distance between an adjacent foundation is at least 15 feet in all directions from the zone of saturation. The zone of saturation may be assumed to project downward from the discharge of the infiltration facility at a gradient of 1:1. Additional property line or foundation setbacks may be required by the governing jurisdiction and should be incorporated into the stormwater infiltration system design as necessary.

7.22.6 Where the 15-foot horizontal setback cannot be maintained between the infiltration system and an adjacent footing, and the infiltration system penetrates below the foundation influence line, the proposed stormwater infiltration system must be designed to resist the surcharge from the adjacent foundation. The foundation surcharge line may be assumed to project down away from the bottom of the foundation at a 1:1 gradient. The stormwater infiltration system must still be sufficiently deep to maintain the 15-foot vertical offset between the bottom of the footing and the zone of saturation.

7.22.7 Subsequent to the placement of the infiltration system, it is acceptable to backfill the resulting void space between the excavation sidewalls and the infiltration system with minimum two-sack slurry provided the slurry is not placed in the infiltration zone. It is recommended that pea gravel be utilized adjacent to the infiltration zone so communication of water to the soil is not hindered.

7.22.8 Due to the preliminary nature of the project at this time, the type of stormwater infiltration system and location of the stormwater infiltration systems has not yet been determined. The design drawings should be reviewed and approved by the Geotechnical Engineer. The installation of the stormwater infiltration system should be observed and approved by the Geotechnical Engineer (a representative of Geocon).

7.23 Surface Drainage

7.23.1 Proper surface drainage is critical to the future performance of the project. Uncontrolled infiltration of irrigation excess and storm runoff into the soils can adversely affect the performance of the planned improvements. Saturation of a soil can cause it to lose internal shear strength and increase its compressibility, resulting in a change in the original designed engineering properties. Proper drainage should be maintained at all times.

7.23.2 All site drainage should be collected and controlled in non-erosive drainage devices. Drainage should not be allowed to pond anywhere on the site, and especially not against any foundation or retaining wall. The site should be graded and maintained such that surface drainage is directed away from structures in accordance with 2019 CBC 1804.4 or other applicable standards. In addition, drainage should not be allowed to flow uncontrolled over any descending slope. Discharge from downspouts, roof drains and scuppers are not recommended onto unprotected soils within 5 feet of the building perimeter. Planters which are located adjacent to foundations should be sealed to prevent moisture intrusion into the soils providing foundation support. Landscape irrigation is not recommended within 5 feet of the building perimeter footings except when enclosed in protected planters.

7.23.3 Positive site drainage should be provided away from structures, pavement, and the tops of slopes to swales or other controlled drainage structures. The building pad and pavement areas should be fine graded such that water is not allowed to pond.

7.23.4 Landscaping planters immediately adjacent to paved areas are not recommended due to the potential for surface or irrigation water to infiltrate the pavement's subgrade and base course. Either a subdrain, which collects excess irrigation water and transmits it to drainage structures, or an impervious above-grade planter boxes should be used. In addition, where landscaping is planned adjacent to the pavement, it is recommended that consideration be given to providing a cutoff wall along the edge of the pavement that extends at least 12 inches below the base material.

7.24 Plan Review

7.24.1 Grading, foundation, and shoring plans should be reviewed by the Geotechnical Engineer (a representative of Geocon West, Inc.), prior to finalization to verify that the plans have been prepared in substantial conformance with the recommendations of this report and to provide additional analyses or recommendations.

LIMITATIONS AND UNIFORMITY OF CONDITIONS

1. The recommendations of this report pertain only to the site investigated and are based upon the assumption that the soil conditions do not deviate from those disclosed in the investigation. If any variations or undesirable conditions are encountered during construction, or if the proposed construction will differ from that anticipated herein, Geocon West, Inc. should be notified so that supplemental recommendations can be given. The evaluation or identification of the potential presence of hazardous or corrosive materials was not part of the scope of services provided by Geocon West, Inc.

2. This report is issued with the understanding that it is the responsibility of the owner, or of his representative, to ensure that the information and recommendations contained herein are brought to the attention of the architect and engineer for the project and incorporated into the plans, and the necessary steps are taken to see that the contractor and subcontractors carry out such recommendations in the field.

3. The findings of this report are valid as of the date of this report. However, changes in the conditions of a property can occur with the passage of time, whether they are due to natural processes or the works of man on this or adjacent properties. In addition, changes in applicable or appropriate standards may occur, whether they result from legislation or the broadening of knowledge. Accordingly, the findings of this report may be invalidated wholly or partially by changes outside our control. Therefore, this report is subject to review and should not be relied upon after a period of three years.

4. The firm that performed the geotechnical investigation for the project should be retained to provide testing and observation services during construction to provide continuity of geotechnical interpretation and to check that the recommendations presented for geotechnical aspects of site development are incorporated during site grading, construction of improvements, and excavation of foundations. If another geotechnical firm is selected to perform the testing and observation services during construction operations, that firm should prepare a letter indicating their intent to assume the responsibilities of project geotechnical engineer of record. A copy of the letter should be provided to the regulatory agency for their records. In addition, that firm should provide revised recommendations concerning the geotechnical aspects of the proposed development, or a written acknowledgement of their concurrence with the recommendations presented in our report. They should also perform additional analyses deemed necessary to assume the role of Geotechnical Engineer of Record.

APPENDIX A

APPENDIX A

FIELD INVESTIGATION

The site was explored on May 20, 2022 by excavating five 8-inch diameter borings to depths ranging from approximately 30½ to 45½ feet below the existing ground surface using a truck-mounted, hollow-stem auger drilling machine. Representative and relatively undisturbed samples were obtained by driving a 3 inch, O. D., California Modified Sampler into the "undisturbed" soil mass with blows from a 140-pound auto-hammer falling 30 inches. The California Modified Sampler was equipped with 1-inch high by 2⅜-inch diameter brass sampler rings to facilitate soil removal and testing. Bulk samples were also obtained.

The soil conditions encountered in the borings were visually examined, classified and logged in general accordance with the Unified Soil Classification System (USCS). The logs of the borings are presented on Figures A1 through A5. The logs depict the soil and geologic conditions encountered and the depth at which samples were obtained. The logs also include our interpretation of the conditions between sampling intervals. Therefore, the logs contain both observed and interpreted data. We determined the lines designating the interface between soil materials on the logs using visual observations, penetration rates, excavation characteristics and other factors. The transition between materials may be abrupt or gradual. Where applicable, the logs were revised based on subsequent laboratory testing. The locations of the borings are shown on Figure 2A.

APPENDIX B

APPENDIX B

LABORATORY TESTING

Laboratory tests were performed in accordance with generally accepted test methods of the "American Society for Testing and Materials (ASTM)", or other suggested procedures. Selected samples were tested for direct shear strength, consolidation, corrosivity, and in-place dry density and moisture content. The results of the laboratory tests are summarized in Figures B1 through B29. The in-place dry density and moisture content of the samples tested are presented on the boring logs, Appendix A.

Appendix H-3

Construction Noise Model Worksheets, prepared by Dudek

To User: bordered cells are inputs, unbordered cells have formulae

noise level limit for construction phase, per Cal/OSHA guidance "action level" = 85

allowable hours over which Leq is to be averaged = 8

= temporary barrier (TB) of input height inserted between source and receptor

Construction Activity	Equipment	Total Equipment Qty	AUF % (from FHWA RCNM)	Reference Lmax @ 50 ft. from FHWA RCNM	Client Equipment Description, Data Source and/or Notes	Source to NSR Distance (ft.)	*Temporary Barrier Insertion Loss (dB)*	*Additional Noise Reduction*	Distance-Adjusted Lmax	Allowable Operation Time (hours)	Allowable Operation Time (minutes)	Predicted 8-hour Leq	Source Elevation (ft)	Receiver Elevation (ft)	Barrier Height (ft)	Source to Barr. Sent via email

Subject: Request for Fire and Emergency Medical Services Information for The Derby Mixed-Use Project Draft Environmental Impact Report

Dear Mr. Krikorian:

In coordination with the City of Arcadia, Dudek is preparing a Draft Environmental Impact Report (EIR) for The Derby Mixed-Use Project (Project), pursuant to the California Environmental Quality Act (CEQA). This letter provides a summary of the proposed Project and poses some specific questions to address the topic of fire and emergency medical services under CEQA. Attached to this letter, please also find a Project location map (Figure 1, Project Location) and conceptual Project design figures (Figure 2a, Proposed Project Overview, and Figure 2b, Proposed Project Directional Views) to assist the Arcadia Fire Department in understanding the proposed Project.

Project Location: The Project site is in the City of Arcadia at 233 and 301 East Huntington Drive (Assessor's Parcel Numbers 5773-009-070 and 5773-009-065) and is bound by East Huntington Drive to the south, Gateway Drive to the east, and existing hotel uses to the north and west. The Project site includes approximately 2.23 acres, as shown on the attached Figure 1.

Project Description: The proposed Project involves the demolition of several existing structures, including a two-story restaurant building (The Derby), a one-story, non-operational restaurant building (Souplantation), and associated surface parking lots. The Project would construct a new space for The Derby restaurant alongside a six-story mixed-use building, containing a total of 214 multifamily dwelling unit, a secondary restaurant space, a café space, and a subterranean parking garage. See attached Figure 2a and Figure 2b for conceptual depictions of the Project at buildout. As there are no existing on-site residential uses, the Project would result in an increase of approximately 608 residents. Under existing conditions, the Project site supports 53 employees. The proposed Project would generate a total of 87 employees, resulting in a net increase of 34 employees.

Fire and Emergency Medical Services Questions: If possible, please respond to the questions below by November 1, 2022, as this information is time sensitive. Please email your responses directly to me at srobinson@dudek.com.

1. Please provide a list of all Arcadia Fire Department stations that may serve the Project site, and a summary of existing staffing and equipment at each station. Please also describe the Arcadia Fire Department's role/staffing requirements as they relate to paramedic and/or emergency medical services.

a. Station 105 710 S Santa Anita Ave Arcadia, CA 91006 Fire Administration 1 – Fire Chief 1 – Deputy Fire Chief 1 – Senior Management Analyst 1 – Fire Administrative Specialist Fire Prevention 1 – Fire Marshal 1 – Administrative Assistant 3 – Fire Inspectors (1 F/T, 2 P/T) Fire Suppression 1 – E105 - BLS Fire Engine (3 personnel; Fire Captain, Fire Engineer, Firefighter) 1 – T105 - BLS Tractor Drawn Aerial Ladder Truck (3 personnel; Fire Captain, Fire Engineer, Firefighter) 1 – RA105 - ALS Rescue Ambulance (2 personnel; Firefighter/Paramedics) 1 – BC105 - Command Vehicle (1 personnel – Battalion Chief) b. Station 106 630 S Baldwin Ave Arcadia, CA 91007 Fire Suppression 1 – E106 - BLS Fire Engine (3 personnel; Fire Captain, Fire Engineer, Firefighter) 1 – RA106 - ALS Rescue Ambulance (2 personnel; Firefighter/Paramedics)1 – USAR106 - Urban Search and Rescue Truck (cross staffed with E106 personnel) c. Station 107 79 W Orange Grove Arcadia, CA 91006 Fire Suppression 1 – E107 - ALS Assessment Fire Engine (3 personnel; Fire Captain, Fire Engineer, Firefighter/Paramedic)

2. Are there established performance standards/objectives for maintaining acceptable service ratios or response times?

   Yes

   a. If so, please provide established performance standards/objectives.

      EMS – Advanced life support arriving on scene within 5 minutes 90% of the time.Fire - Four (4) minutes or less for the arrival of the first arriving engine company at the fire suppression incident or eight (8) minutes or less for the deployment of a full first alarm assignment 90% of the time.

   b. Are these established performance standards/objectives being achieved?

      Data from the previous three years show that response times are increasing due to call volume, recent pandemic effects, and other factors. These factors would include but not limited to increased traffic patterns, further emergency responses due to adjacent districts responding, and hospital bed availability.

   c. Please provide data on current response times/service ratios for both fire and emergency medical services, if available.

      Data is unavailable at this time.

3. Are existing facilities sufficient to provide fire and emergency medical services to the proposed Project? If not, please see Question #4.

   As the city continues to see high density projects, call volume will continue to see an increase which will result in longer response times. Additionally with a six-story project, access to any given incident within the facility will also increase response times. The potential need to traverse up and/or across through stairwells, elevators, and/or use of the aerial ladder will inevitably increase response times. At this time with the addition of this project, there is a high probability that services will be impacted.

4. Would development of the proposed Project result in the need for new facilities and/or physically altered facilities in order to maintain acceptable service ratios, response times, or other performance objectives of the Arcadia Fire Department?

   Yes

a. If new facilities are required, please describe what facilities are required and whether such facilities are already planned and/or approved.

A fair share contribution to the city's traffic mitigation system for affected intersections would be beneficial in reducing response times to the project.

Please feel free to contact me at (626) 204-9849 or via email at srobinson@dudek.com to discuss our information needs and/or any questions regarding this request. Thank you very much for your assistance.

Sincerely,

Samantha Robinson

POLICE DEPARTMENT

Description:

The Police Department provides law enforcement services to the community of Arcadia. The Department is structured with two operating divisions: The Operations Division and the Administration Division.

Operations Division

The Operations Division is the larger of the two divisions in the Department. The division is primarily responsible for daily field operations, including patrol duties, traffic enforcement, and interaction with the public. Sections within the Division include: Patrol Bureau, Traffic Bureau, S.W.A.T., Force Training Unit, and the Field Training Officer Program.

- Patrol Bureau responds to all calls for emergency services, conducts initial investigations and appropriate follow up, prepares police reports, and suppresses criminal activity through proactive law enforcement.

- Traffic Bureau provides for safe movement along public thoroughfares by regulating and enforcing pedestrian and vehicular traffic laws and parking laws.

- S.W.A.T. is a force multiplier of the Operations Division, and provides specially trained personnel in resolving unique and/or high-risk situations.

- Field Training Officer (FTO) Program trains, evaluates, and prepares new police officers for field performance. The FTO Program also conducts Advanced Officer Training for tenured police officers in the Operations Division.

Administration Division

The Administration Division includes those services necessary to support the Operations Division and other sections in the Department. Sections within the Division include: Detective Bureau, Records Bureau, Personnel and Training, Jail Operations, and Dispatch.

- Detective Bureau conducts follow-up investigation and gathering of evidence to assist in the prosecution of criminal offenses.

- Force Training Unit conducts advanced officer training in force options, to include: Firearms training, CPR recertification, less-lethal deployments, critical decision making, crowd management and control methods, and

arrest and control techniques.

- Records Bureau processes, maintains, and disseminates information associated with police reports, criminal citations and arrests, and all supporting documents.

- Personnel and Training handles the advertising, recruiting, testing, and hiring of police personnel. It is also charged with the responsibility of assessing the Department's training needs, ensuring compliance with State mandated training requirements, providing training to employees, and maintaining training records.

- Jail Operations conducts the booking of prisoners and houses prisoners awaiting arraignment.

- Dispatch, using state-of-the-art technology, provides timely, accurate, and responsive telecommunication services to the community and the Police Department.

FY 2022-23 WORK PLAN

1. Recruit and train all sworn and non-sworn staff within the confines of the FY 2022-23 Budget.

2. Continue to develop highly trained, highly educated men and women throughout the organization through the Department's Career Development Program.

3. Continue assessment of staffing protocols to ensure appropriate staffing levels at the field level in order to further combat property crimes in Arcadia.

4. Continue to implement new Operations objectives in the Patrol Division that will increase efficiency and provide better service patrol for the Community.

5. Continue to establish and/or improve the Department's policies, procedures, and operational strategies in response to the COVID-19 pandemic, and monitor recommended steps from local, state, and federal agencies for implementation with the ultimate goal of preserving the safety and well-being of the City, staff, and residents.

6. Continue active participation in the Los Angeles Interagency Metropolitan Police Apprehension Crime Task Force (L.A. IMPACT), a multi-jurisdictional taskforce, to increase proficiency in investigating major

crimes related to drug trafficking, gang enforcement, property crimes, and covert operation information development amongst others.

7. Expand the Police Cadet Program to reach full capacity, providing for a greater number of potential police officers for the future, and allowing for diversified learning opportunities within multiple departments.

8. Explore the potential for collaborative, regionalized police services for the future.

9. Continue participation in the West San Gabriel Valley Mental Evaluation Team (WSGMET) and collaboration with the Los Angeles County Department of Mental Health to address and combat mental health incidents, and provide mental health assistance and resources to homeless persons in Arcadia.

10. Further expand homelessness outreach efforts through the activities of the APD's Homeless Education & Liaison Program (HELP Team), which aims to improve the quality of life in Arcadia by reaching out to the homeless community and providing information, resources, and motivation with the ultimate goal of finding an alternative to life on the streets.

11. Continue additional homelessness outreach efforts through participation in Los Angeles County's Homeless Outreach Service Team (HOST) program, supported by Measure H funding, to work toward implementing the City's plan to prevent and combat homelessness in Arcadia.

12. Continue to grow and develop traffic education, engineering, and enforcement efforts. Continue to enhance D.U.I. enforcement through grant funding for checkpoints and special operations.

13. Continue administration of the false alarm program and expand the program through the City's Alarm Permit Subsidy Program.

14. Continue the growth and development of the Crime Analysis Unit in order to provide additional crime analysis resources and research support to the Department.

15. Continue the growth of the Business Watch Program out of the Community Affairs Office to help increase safety awareness and enlist the active participation of business owners in cooperation with law enforcement to reduce crime in their communities.

16. Further develop the activities of the Community Relations Liaison for the purpose of expanding the growth and development of the Neighborhood Watch Program and maintain open avenues of discourse between the

community and the Department in an ongoing effort to keep abreast of, and sensitive to, contemporary issues in law enforcement and police-community problems.

17. Continue the expansion of our Automated License Plate Readers (ALPRs) program via a strategic build-out plan to combat criminal activity, enhance productivity, and improve officer safety through an increased collection of vehicle license plate information.

18. Expand the Department's GPS Tracking Device Program to increase misdemeanor and felony arrests of suspects committing criminal activities in various regions of the City.

19. With the continued support of the Arcadia Police Foundation, further expand the K-9 Program to support daily law enforcement operations and enhance the effectiveness of patrol duties such as handler protection, searching techniques, article searches, and narcotics detection; ultimately increasing officer safety, apprehension of suspects, and safety for the community.

20. Continue to support the mission and objectives of the Arcadia Police Foundation to address the complexities of policing in the 21st century. The foundation will continue to promote partnerships between APD and the public, mobilize community support, and enhance community understanding of law enforcement initiatives.

21. Continue the implementation of the Special Enforcement Team (SET) in order to support crime prevention and criminal apprehension along with establishing special task force connections with local and regional groups related to burglaries, gangs, drugs, and organized retail crime.

22. Monitor compliance of massage therapy related businesses.

23. Continue upgrades to the Department's Records Management System and Crimemapping system to comply with NIBRS, the FBI's new incident-based crime reporting standard.

24. Establish participation in the Taskforce for Regional Autotheft Prevention (TRAP) Program and dedicate police resources to help deter crime in the City, specifically, Auto Theft.

Sent via email

Subject: Request for School Services Information for The Derby Mixed-Use Project Draft Environmental Impact Report

Dear Mr. Esseln:

In coordination with the City of Arcadia, Dudek is preparing a Draft Environmental Impact Report (EIR) for The Derby Mixed-Use Project (Project), pursuant to the California Environmental Quality Act (CEQA). This letter provides a summary of the proposed Project and poses some specific questions to address the topic of school facilities under CEQA. Attached to this letter, please also find a Project location map (Figure 1, Project Location) and conceptual Project design figures (Figure 2a, Proposed Project Overview, and Figure 2b, Proposed Project Directional Views) to assist the Arcadia Public Library in understanding the proposed Project.

Project Location: The Project site is in the City of Arcadia at 233 and 301 East Huntington Drive (Assessor's Parcel Numbers 5773-009-070 and 5773-009-065) and is bound by East Huntington Drive to the south, Gateway Drive to the east, and existing hotel uses to the north and west. The Project site includes approximately 2.23 acres, as shown on the attached Figure 1.

Project Description: The proposed Project involves the demolition of several existing structures, including a two-story restaurant building (The Derby), a one-story, non-operational restaurant building (Souplantation), and associated surface parking lots. The Project would construct a new space for The Derby restaurant alongside a six-story mixed-use building, containing a total of 214 multifamily dwelling unit, a secondary restaurant space, a café space, and a subterranean parking garage. See attached Figure 2a and Figure 2b for conceptual depictions of the Project at buildout. As there are no existing on-site residential uses, the Project would result in an increase of approximately 608 residents. Under existing conditions, the Project site supports 53 employees. The proposed Project would generate a total of 87 employees, resulting in a net increase of 34 employees.

Library Services Questions: If possible, please respond to the questions below by November 1, 2022, as this information is time sensitive. Please email your responses directly to me at srobinson@dudek.com.

1. What AUSD schools are within the district's service boundaries for the Project site? What is the 2022 student enrollment as well as the total student enrollment *capacity* for each of the schools? (Project site addresses are 233 and 301 East Huntington Drive. Please refer to attached Figure 1 for Project site location.)

Camino Grove ES, Dana MS, and Arcadia HS. And the District does not guarantee placement at any particular school. Student placement will be decided by the District Registrar at the time of registration. Please note that the District reserves the right to place any student at any of its schools, as it deems necessary to the mutual benefit of the student and the District.

Facility Type	Facility Name	2022 Student Enrollment	Total Facility Enrollment Capacity
Elementary School(s)	Camino Grove	666	775
Middle School(s) or Junior High School(s)	Dana	622	918
High School(s)	Arcadia	3,022	3,672
Other (if applicable)			

2. Please provide a list of the AUSD's estimated "students per household" for each school serving the Project site. This factor will be used to estimate the potential increase in enrollment that would be associated with the Project's proposed 214 dwelling units. (If available, please provide generation factors specifically for multifamily dwelling unit types, as opposed to single family.)

Facility Type	Facility Name	Generation Factor (can be approximate)
Elementary School(s)	Camino Grove	0.181 Students per Household
Middle School(s)	Dana	0.108 Students per Household
High School(s)	Arcadia	0.141 Students per Household
Other (if applicable)		_____ Students per Household

3. Are there established performance standards/objectives for maintaining acceptable service ratios (e.g., student-to-teacher ratios)?

   Yes

   a. If so, please provide established performance standards/objectives.

      The student to teacher ratio at grades TK & K is 24:1; 1 to 3: 26:1; 4 & 5: 30:1; 6 to 8: 28:1; 9 to 12: 33:1

   b. Are these established performance standards/objectives being achieved? Please provide data on current service ratios, if available.

Yes

4. Are existing schools sufficient to provide support to the proposed Project? If not, please see Question #5

   Yes

5. Would development of the proposed Project result in the need for new facilities and/or physically altered facilities in order to maintain acceptable performance objectives, such as student-to-teacher ratios?

   Click or tap here to enter text.

   a. If new facilities are required, please describe what facilities are required and whether such facilities are already planned and/or approved.

      Click or tap here to enter text.

Please feel free to contact me at (626) 204-9849 or via email at srobinson@dudek.com to discuss our information needs and/or any questions regarding this request. Thank you very much for your assistance.

Sincerely,

Samantha Robinson

Subject: Request for Parks and Recreation Facilities Information for The Derby Mixed-Use Project Draft Environmental Impact Report

Dear Ms. Somogyi and Ms. Cheung:

In coordination with the City of Arcadia, Dudek is preparing a Draft Environmental Impact Report (EIR) for The Derby Mixed-Use Project (Project), pursuant to the California Environmental Quality Act (CEQA). This letter provides a summary of the proposed Project and poses some specific questions to address the topic of parks and recreation facilities under CEQA. Attached to this letter, please also find a Project location map (Figure 1, Project Location) and conceptual Project design figures (Figure 2a, Proposed Project Overview, and Figure 2b, Proposed Project Directional Views) to assist Recreation and Community Services in understanding the proposed Project.

Project Location: The Project site is in the City of Arcadia at 233 and 301 East Huntington Drive (Assessor's Parcel Numbers 5773-009-070 and 5773-009-065) and is bound by East Huntington Drive to the south, Gateway Drive to the east, and existing hotel uses to the north and west. The Project site includes approximately 2.23 acres, as shown on the attached Figure 1.

Project Description: The proposed Project involves the demolition of several existing structures, including a two-story restaurant building (The Derby), a one-story, non-operational restaurant building (Souplantation), and associated surface parking lots. The Project would construct a new space for The Derby restaurant alongside a six-story mixed-use building, containing a total of 214 multifamily dwelling unit, a secondary restaurant space, a café space, and a subterranean parking garage. See attached Figure 2a and Figure 2b for conceptual depictions of the Project at buildout. As there are no existing on-site residential uses, the Project would result in an increase of approximately 608 residents. Under existing conditions, the Project site supports 53 employees. The proposed Project would generate a total of 87 employees, resulting in a net increase of 34 employees.

Parks and Recreation Facilities Questions: If possible, please respond to the questions below by November 1, 2022, as this information is time sensitive. Please email your responses directly to me at srobinson@dudek.com.

1. Please provide a list of all local/regional parks that may serve the Project site, and a summary of the existing facilities (e.g., sports court, pool, picnic areas, community rooms) at each park.

   The City of Arcadia has 14 City parks, 4 County parks, and several joint use facilities with the Arcadia Unified School District. Arcadia residents have open access to approximately 135 acres of park facilities within the

City. Within a half mile radius of the proposed mixed-use project there are two parks, Bontia Park and Eisenhower Memorial Park. Bonita Park's amenities include a skate park, baseball field, playground, picnic tables, multi-purpose field, and restrooms. Eisenhower Memorial Park's amenities include dog parks, playgrounds, picnic shelters, basketball court, baseball field, exercise equipment, multi-purpose field, walking track and restrooms.

2. Are there established performance standards/objectives for maintaining acceptable service ratios (e.g., park acreage per resident)?

   Yes.

   a. If so, please provide established performance standards/objectives.

      Per Arcadia's General Plan, the City strives to provide a minimum of 2.43 acres of parkland per 1,000 residents. Per the Los Angeles Countywide Comprehensive Park and Recreation Needs Assessment, the county average is 3.3 acres of parkland per 1,000 residents.

   b. Are these established performance standards/objectives being achieved? Please provide data on current service ratios, if available.

      According to the Cenus Bureau's 2021 estimate, Arcadia has a population of 55,345 people. At this population, Arcadia provides 2.43 acres of parkland per 1,000 residents, which is exactly the City's goal ratio. With the additional 608 residents from the proposed Project, the City's population would rise to 55,953. With this population, Arcadia would be providing 2.41 acres per 1,000 residents, creating a parkland deficit an .02 acres per 1,000 residents.

3. Are existing park/recreation facilities sufficient to provide support to the proposed Project? If not, please see Question #4

The proposed Project would stretch extisting park/recreation facilities slightly beyond the City's goal, but would not cause significant issues.

4. Would development of the proposed Project result in the need for new park/recreation facilities and/or physically altered facilities in order to maintain the City's acceptable performance objectives?

The City's established performance standard of 2.43 acres per 1,000 residents could be maintained with the addition of one acre of parkland.

   a. If new facilities are required, please describe what facilities are required and whether such facilities are already planned and/or approved.

      A new, one acre park would accommodate the additional residents from the proposed Project and maintain the City's established performance standard. No such park or facility is currently being considered. Based off the Preliminary Opinion of Construction Costs for Fairview Avenue Park in the Recreation and Community Services Department's Master Plan from 2017, creating a park of this size

from start to finish could cost upwards of $1,113,398 not including the cost of acquiring land and inflation.

Please feel free to contact me at (626) 204-9849 or via email at srobinson@dudek.com to discuss our information needs and/or any questions regarding this request. Thank you very much for your assistance.

Sincerely,

Samantha Robinson

Ms. Darlene Bradley (dbradley@arcadiaca.gov)

Sent via email

Subject: Request for Library Services Information for The Derby Mixed-Use Project Draft Environmental Impact Report

To Ms. Darlene Bradley:

In coordination with the City of Arcadia, Dudek is preparing a Draft Environmental Impact Report (EIR) for The Derby Mixed-Use Project (Project), pursuant to the California Environmental Quality Act (CEQA). This letter provides a summary of the proposed Project and poses some specific questions to address the topic of library services under CEQA. Attached to this letter, please also find a Project location map (Figure 1, Project Location) and conceptual Project design figures (Figure 2a, Proposed Project Overview, and Figure 2b, Proposed Project Directional Views) to assist the Arcadia Public Library in understanding the proposed Project.

Project Location: The Project site is in the City of Arcadia at 233 and 301 East Huntington Drive (Assessor's Parcel Numbers 5773-009-070 and 5773-009-065) and is bound by East Huntington Drive to the south, Gateway Drive to the east, and existing hotel uses to the north and west. The Project site includes approximately 2.23 acres, as shown on the attached Figure 1.

Project Description: The proposed Project involves the demolition of several existing structures, including a two-story restaurant building (The Derby), a one-story, non-operational restaurant building (Souplantation), and associated surface parking lots. The Project would construct a new space for The Derby restaurant alongside a six-story mixed-use building, containing a total of 214 multifamily dwelling unit, a secondary restaurant space, a café space, and a subterranean parking garage. See attached Figure 2a and Figure 2b for conceptual depictions of the Project at buildout. As there are no existing on-site residential uses, the Project would result in an increase of approximately 608 residents. Under existing conditions, the Project site supports 53 employees. The proposed Project would generate a total of 87 employees, resulting in a net increase of 34 employees.

Library Services Questions: If possible, please respond to the questions below by November 1, 2022, as this information is time sensitive. Please email your responses to me at srobinson@dudek.com.

1. Please provide a summary of existing staffing, collection(s), and community services at the Arcadia Public Library (20 West Duarte Road).

   The Arcadia Public Library has 21 FTE employees, approximately 202,000 collection items, and provides full city public library services 60 hours per week.

2. Are there established library performance standards or objectives for maintaining acceptable service ratios? If so, please describe these metrics below.

   These do exist but I am unable to obtain them in this short time frame.

3. Based on the size of the proposed Project (and conversations with City Planning), we are not anticipating the need for new and/or physically altered library facilities resulting from Project implementation. Can you please confirm this is correct?

   This is correct.

4. Would development of the proposed Project result in the need for new staffing, supplies, or other equipment to maintain acceptable service ratios or other performance objectives? If so, can you please provide us with estimates for the number of additional staff and/or the type(s) of new supplies/equipment that would be required?

   This one project would not require additional staffing. Staffing, collections, and programming would stay the same. For additional services, programming, and collections, should they be requested, then there would be a need for additional staffing and there would be budget implications.

Please feel free to contact me at (626) 204-9849 or via email at srobinson@dudek.com to discuss our information needs and/or any questions regarding this request. Thank you very much for your assistance.

Sincerely,

Samantha Robinson
Environmental Planner, CEQA/NEPA Group

1 Introduction

1.1 Purpose and Scope of the TIA

The purpose of this Transportation Impact Analysis (TIA) is to identify traffic impacts associated with the proposed Derby Mixed-Use Project (proposed project or project), a mixed-use project in the City of Arcadia (City). This TIA has been prepared per the City of Arcadia Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment (City of Arcadia 2020) and its scope of analysis has been approved by the City's Traffic Engineering Department. In addition, this TIA complies with the City of Arcadia General Plan Circulation and Infrastructure Element requirements.

The objectives of this TIA are to:

- Document existing roadway, pedestrian, bicycle, transit and traffic conditions, including intersection levels of service in the study area;
- Estimate trip generation, distribution, and assignment characteristics for the proposed project;
- Provide a Vehicle Miles Traveled (VMT) analysis per Senate Bill 743, the updated California Environmental Quality Act (CEQA) Guidelines, and the City of Arcadia Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment;
- Document future short-range (Opening Year 2025) intersection levels of service in the study area per traffic volumes derived from adding growth to existing traffic volumes;
- Compare the proposed project's trip generation estimates at buildout with the trip generation estimates of the land uses designated on the project site in the City's General Plan;
- Analyze the traffic impacts that would occur as a result of buildout of the proposed project under the Existing (2022), Opening Year (2025), and Horizon Year (2040) buildout conditions;
- Describe the significance of the potential impacts under the Existing, Opening Year 2025, and General Plan buildout conditions;
- Identify CEQA-required mitigation measures for significant transportation impacts and/or other improvements needed to meet level of service standards (if any); and,
- Provide findings and recommendations based on the traffic analysis of the proposed project.

Figure 1, Project Location and Study Area, shows the project location and study area selected based on the above-mentioned scoping criteria. As illustrated in Figure 1, the study area is comprised of seven (7) intersections and three (3) project driveways.

1.2 Project Description

The project site encompasses approximately 2.23 acres and consists of two developed parcels (Assessor Parcel Numbers [APNs] 5773-009-070 and 5773-009-065) located on the northwest corner of E. Huntington Drive and Gateway Drive in Downtown Arcadia. Two restaurants currently occupy the project site, including The Derby and a closed Souplantation restaurant. The project would construct The Derby as a larger, two-story restaurant that would be connected to a new, six-story mixed-use development. In addition to The Derby's new restaurant space, the

Project would construct 205 market rate units and 9 affordable units (totaling 214 for-rent dwelling units), a 3,300 square foot additional restaurant space, and a 1,400 square foot café space. The existing buildings and surface parking lots on the project site would be demolished to accommodate the proposed project. The project components are described below, and the site plan is shown in Figure 2:

Commercial

Approximately 17,550 square feet (SF) of new commercial space will be provided including:

1. The Derby restaurant, Derby Collection and second level indoor/outdoor bar: 12,850 SF
2. An additional restaurant space with the potential for outdoor dining: 3,300 SF
3. A coffee shop/café space, also with the potential for outdoor seating: 1,400 SF

Residential

The project is proposing 214 for-rent units with a mixture of studio, one-bedroom and two-bedroom units. The units will be situated on five stories above the commercial spaces (except that The Derby will have no residential units above any of the front-of-house areas). The 214 units will include 9 affordable units that will be restricted to seniors. A ground level street-fronting lobby and associated arrival, leasing and mailroom areas will be provided with pedestrian access directly from E. Huntington Drive. Primary amenities include a pool and club areas at level five (with approximately 6,000 SF of exterior open space) and a garden with additional amenities at a 6,500 SF landscaped level 2 courtyard.

Parking and Access

Residential tenant and guest parking will be provided at the basement level with a separate secure access from Gateway Drive. Ground floor parking areas will be predominately valet serviced and reserved for the restaurant uses and kept hidden from adjacent streets and will also meet the city's parking standards. Primary access for the commercial parking will be from two points: Along E. Huntington Drive approximately 50 feet east of the curb cut for the existing Derby. This revised access point will enter an off-street valet drop-off and pick-up courtyard area able to accommodate up to approximately 20 active and parked vehicles simultaneously. The second access point will be via a curb-cut that will also accommodate service uses from Gateway Drive that will be separated as far as possible from the E. Huntington Drive intersection and the residential basement parking access ramp.

2 Study Area

This section provides a summary of the existing street network, including the major roadways serving the site, the existing transit service, and bicycle and pedestrian facilities in the study area.

2.1 Existing Street Network

Regional access to the project site is provided by Interstate [I-] 210 (Foothill Freeway) approximately 0.35 miles east of the site. The local street system serving the site includes E. Huntington Drive, Santa Clara Street, 2nd Avenue, and Gateway Drive. Characteristics of the existing local roads within the study area are described below.

E. Huntington Drive is an east-west oriented roadway south of the project site. Direct access to the site will be provided from E. Huntington Drive. In the Arcadia General Plan Circulation and Infrastructure Element (City of Arcadia 2010), E. Huntington Drive is classified as a major arterial west of Santa Clara Street and a primary arterial east of Santa Clara Street. E. Huntington Drive is also a designated truck route, as well as a principal travel corridor and a planned primary transit corridor within the City. The number of through travel lanes in each direction on E. Huntington Drive varies from four through lanes west of Holly Avenue, to three through lanes between Holly Avenue and Santa Clara Street, to two through lanes east of Santa Clara Street. Exclusive left-turn lanes are provided on E. Huntington Drive at major intersections. On-street parking is generally not provided in the immediate project vicinity. The speed limit on E. Huntington Drive varies from 30 to 35 MPH east of Santa Clara Street, to 45 MPH west of Santa Clara Street.

Santa Clara Street is an east-west oriented roadway, located north of the project site. Santa Clara Street is classified as a secondary arterial between E. Huntington Drive and Santa Anita Avenue and an enhanced collector between Santa Anita Avenue and the City limits. It is also classified as a local travel corridor east of Santa Anita Avenue. One to two through travel lanes are provided in each direction on Santa Clara Street, with a two-way left-turn lane (TWLTL) provided between E. Huntington Drive and 1st Avenue and left-turn pockets provided at most major intersections and driveways. Parking is restricted along both sides of the street, between E. Huntington Drive and 1st Avenue and unrestricted between 1st Avenue and the City limits. An existing Class II bike lane (on-street striped lane) is provided on Santa Clara Street along the project frontage. Santa Clara Street has a posted speed limit of 30 MPH within the vicinity of the project site.

2nd Avenue is a north-south roadway west of the project site. 2nd Avenue is classified as a collector, as well as a local travel corridor north of E. Huntington Drive and a secondary travel corridor south of E. Huntington Drive. Two through travel lanes are provided in each direction on 2nd Avenue, with a TWLTL provided between Santa Clara Street and E. Huntington Drive and left-turn pockets provided at most major intersections and driveways. Parking is provided along both sides of the street, where designated. 2nd Avenue has a posted speed limit of 25 to 35 MPH within the vicinity of the project site.

Gateway Drive is a north-south roadway east of the project site. Direct access to the site will be provided from two driveways along Gateway Drive. Gateway Drive does not have a City of Arcadia roadway classification and is considered a local road. One through travel lane is provided in each direction, with a raised median located along portions of the roadway. Parking is generally not allowed along either side of the street. No posted speed limits are present; however, a 25 MPH speed limit is assumed in this analysis.

2.2 Transit System

Public transit in the project vicinity is provided by the Metropolitan Transportation Authority (Metro), Foothill Transit, and Arcadia Transit. Figure 3, Existing Transit Facilities, shows the various bus routes and Metro A (previously L and Gold) Line that provide service in the study area. The Arcadia Metro A Line Station is approximately 0.3 miles northwest of the project site at the northwest corner of 1st Avenue and Santa Clara Street. Bus stops are also located along E. Huntington Drive near the project site. A description of each service provider is presented below.

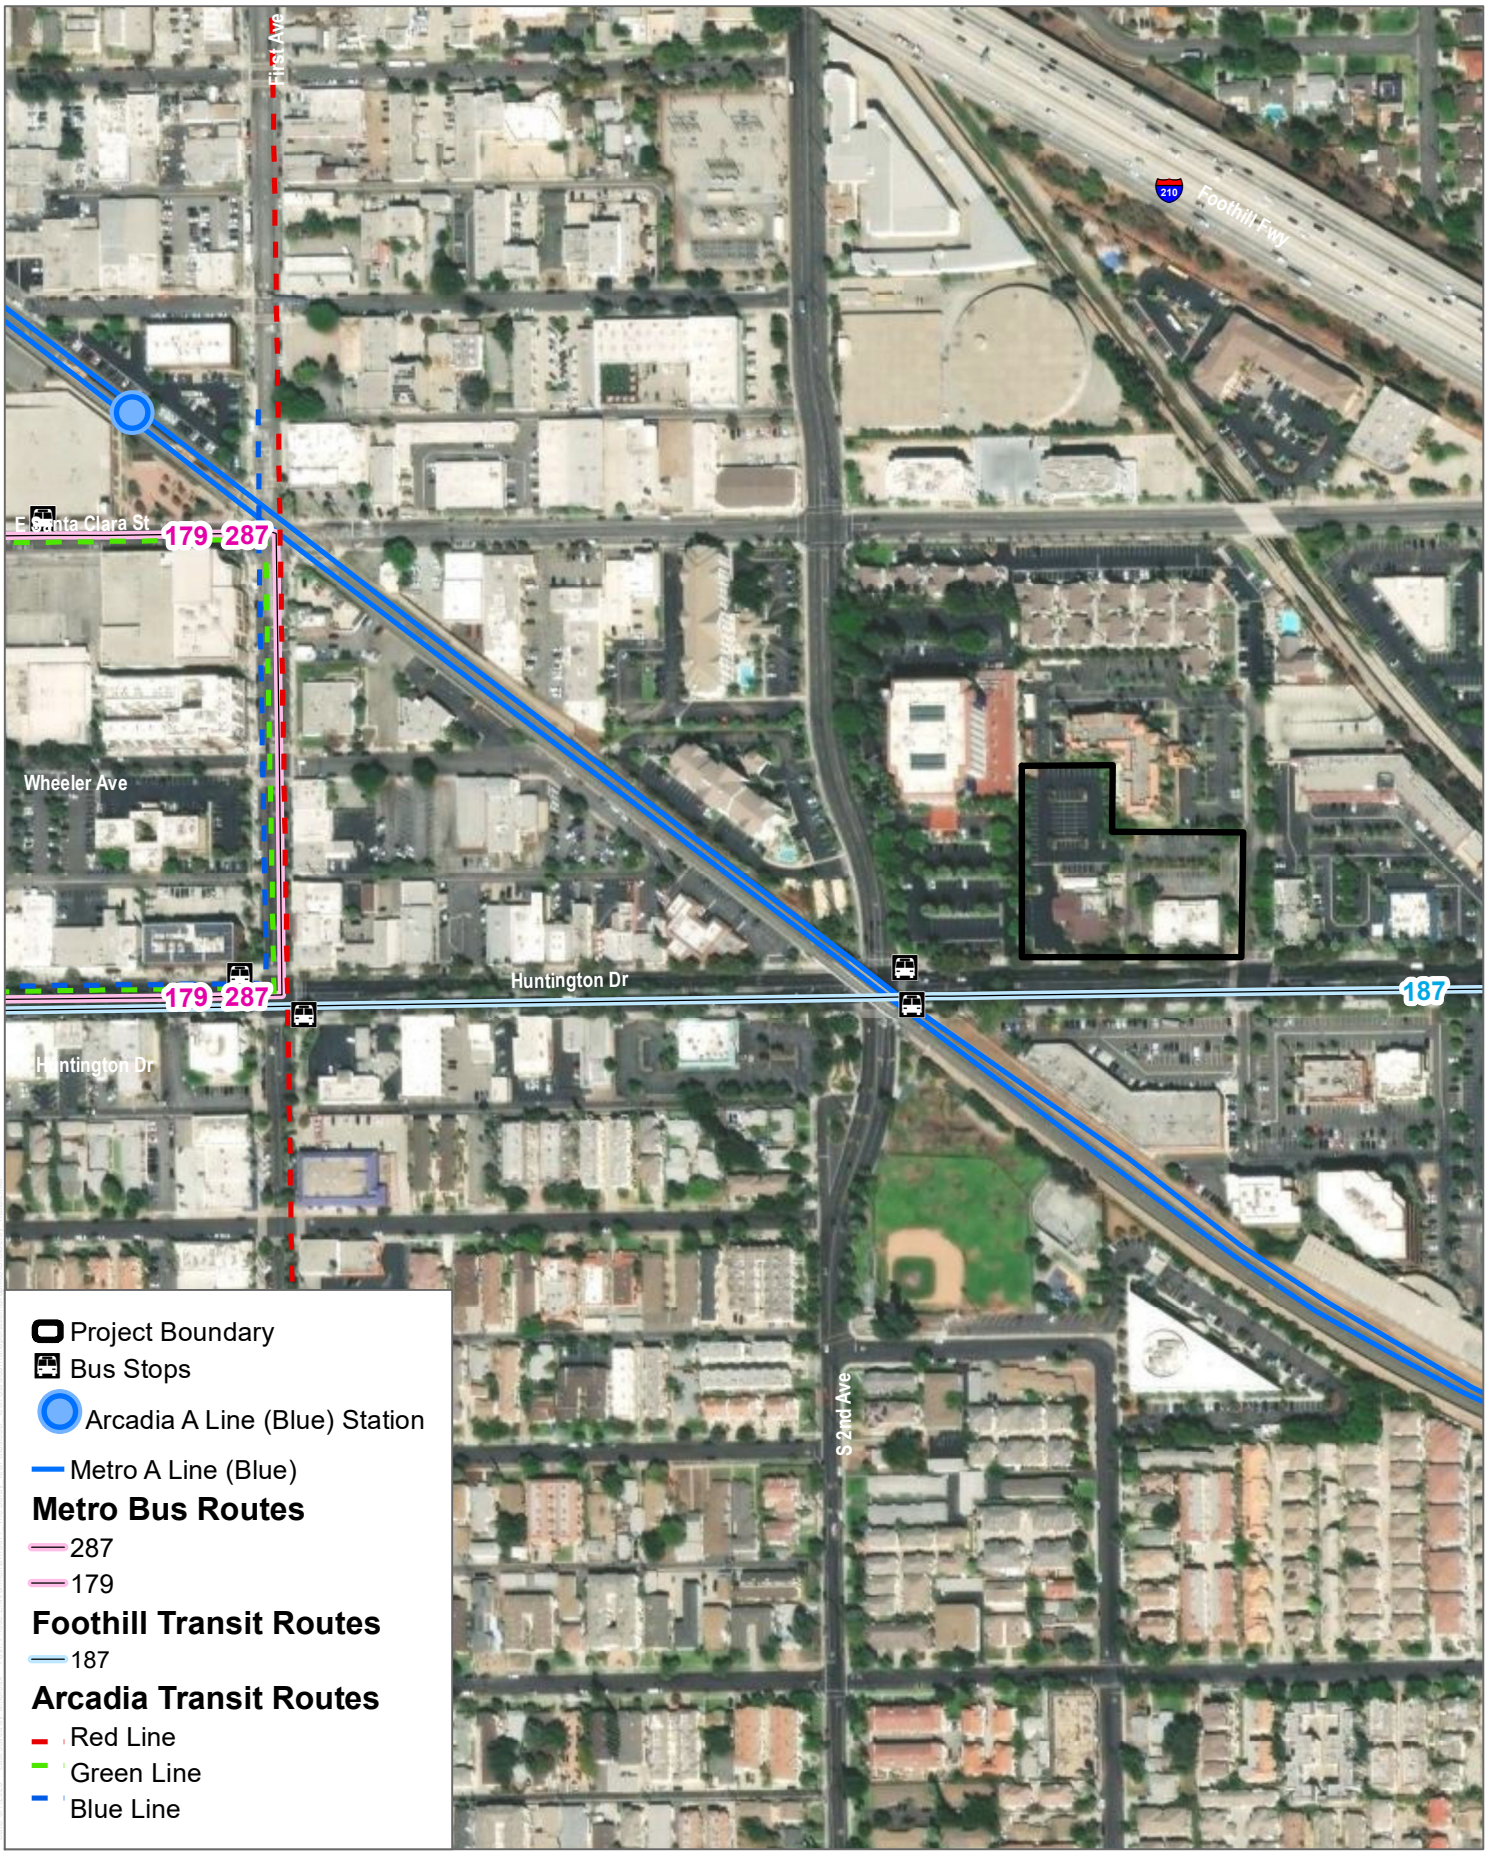
Metropolitan Transportation Authority Services (Metro)

Metro currently operates five local Metro bus transit routes in the vicinity of the project site, providing service between downtown Los Angeles and Arcadia (Metro 2023). The routes have peak frequencies of between 10 minutes (within Downtown Los Angeles) and 40 minutes in Arcadia. Route 179 operates in conjunction with Route 287 within the downtown Los Angeles area, upon which the route splits into two separate lines in the City of Alhambra, with Route 179 traveling along E. Huntington Drive. The nearest bus stop to the project site is located at the intersection of E. Huntington Drive and 2nd Avenue. Route 179 serves Arcadia, Alhambra, El Sereno, and downtown Los Angeles. Additionally, Route 287 operates along Santa Anita Avenue with the nearest bust stop provided at the same locations noted above, serving the cities of El Monte, Arcadia, South El Monte, Rosemead, and Montebello. Route 287 provides an average peak weekday service frequency of 40 minutes.

Foothill Transit Services

Within the study area, Foothill Transit Line 187 serves Pasadena, Arcadia, Duarte, and Azusa. This bus line provides an average peak weekday service frequency of 20 minutes. The nearest bus stop to the project site is located at E. Huntington Drive and 2nd Avenue (Foothill Transit 2022).

Arcadia Transit Services



Arcadia Transit provides fixed-route public transit service with three lines (e.g., Green, Blue and Red Lines). The Green and Red Lines operate in the vicinity of the project site. The Green Line connects the Arcadia Metro A Line Station with Santa Anita Park, City Hall, Methodist Hospital, Westfield Santa Anita Mall, and the Los Angeles County Arboretum (City of Arcadia 2022). The Red Line runs north-south along 1st Avenue and 6th Avenue connecting communities in the east of Arcadia to many local activity centers and the Arcadia Metro A Line Station. These lines provide headways of generally one to two buses during the weekday morning peak hour and two to three buses during the weekday afternoon peak hour.

Arcadia Dial-A-Ride is a demand-response service providing curb-to-curb transportation to seniors and persons with disabilities to and from any destination within the Arcadia city boundaries. The service is provided based on space availability and is open Monday through Friday from 7:00 AM to 9:00 PM and Saturday/Sunday from 7:00 AM to 7:00 PM. Trip requests can be made the same day or up to seven days in advance.

2.3 Pedestrian and Bicycle Facilities

Sidewalks are generally present throughout the study area, and marked crosswalks are provided at all major arterial intersections. Pedestrian access to the project is provided along all the roadways surrounding the project site. Bicycle facilities in the City are limited; however, the City looks for funding opportunities on an ongoing basis to improve the City's transportation system (City of Arcadia 2022). There is a Class III bike route (signed route only) on 5th Avenue, between Duarte Road and Foothill Boulevard, approximately 1,000 feet east of the site. The City also recently added 3.6 miles of Class II bike lanes on E. Huntington Drive, and approximately 2 miles of Class II bike lanes on 1st Avenue/Highland Oak Drive, between Duarte Road and Orange Grove Avenue (StreetsBlog LA 2020). Bike lockers and parking are also provided at the Arcadia Metro A Line Station.

Arcadia has not previously prepared or adopted a bikeway master plan. However, the City's General Plan Circulation and Infrastructure Element includes a Bikeway Plan (see Figure 4) that identifies bicycle routes to accommodate a future bicycle plan which will link to regional routes such as the Rio Hondo bike path system, south of the project site (City of Arcadia 2021). The proposed Bicycle Plan includes routes planned around the project site, including a planned Class I bike path along Santa Anita Avenue. However, it should be noted that the City has constructed routes that may differ from those shown in Figure 4. For example, a Class II bike lane has been constructed along Santa Clara Street, between 1st Avenue and 5th Avenue; and a Class II bike lane has been constructed along 1st Avenue/Highland Oak Drive, between Duarte Road and Orange Grove Avenue, in place of the Class III bike lane.

3 Project Trip Generation and Distribution

3.1 Trip Generation

Trip generation estimates for the proposed project are based on daily and AM and PM peak hour trip generation rates obtained from the Institute of Transportation Engineers (ITE) *Trip Generation Handbook, 11th Edition* (2021).

The existing Derby restaurant and Souplantation will be demolished with construction of the proposed project. A trip credit has been applied for the Derby restaurant which is currently in operation. However, the Souplantation has been closed for more than a year and therefore is not included in the trip credit. Additionally, given the mix of land uses, an internal trip capture was applied to the project based on the Transportation Research Board's National Cooperative Highway Research Program (NCHRP) methodology for internal trip capture.

As shown in Table 1 below, the proposed project would generate 2,163 net daily trips, 219 net AM peak hour and 175 net PM peak hour trips.

Table 1. Project Trip Generation

Land Use	ITE Code	Size/Unit	Daily	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
Trip Rates[1]									
Multifamily Housing (Mid-Rise)	221	per DU	4.54	0.09	0.28	0.37	0.24	0.15	0.39
Fine Dining	931	per TSF	83.84	0.37	0.37	0.73	5.23	2.57	7.80

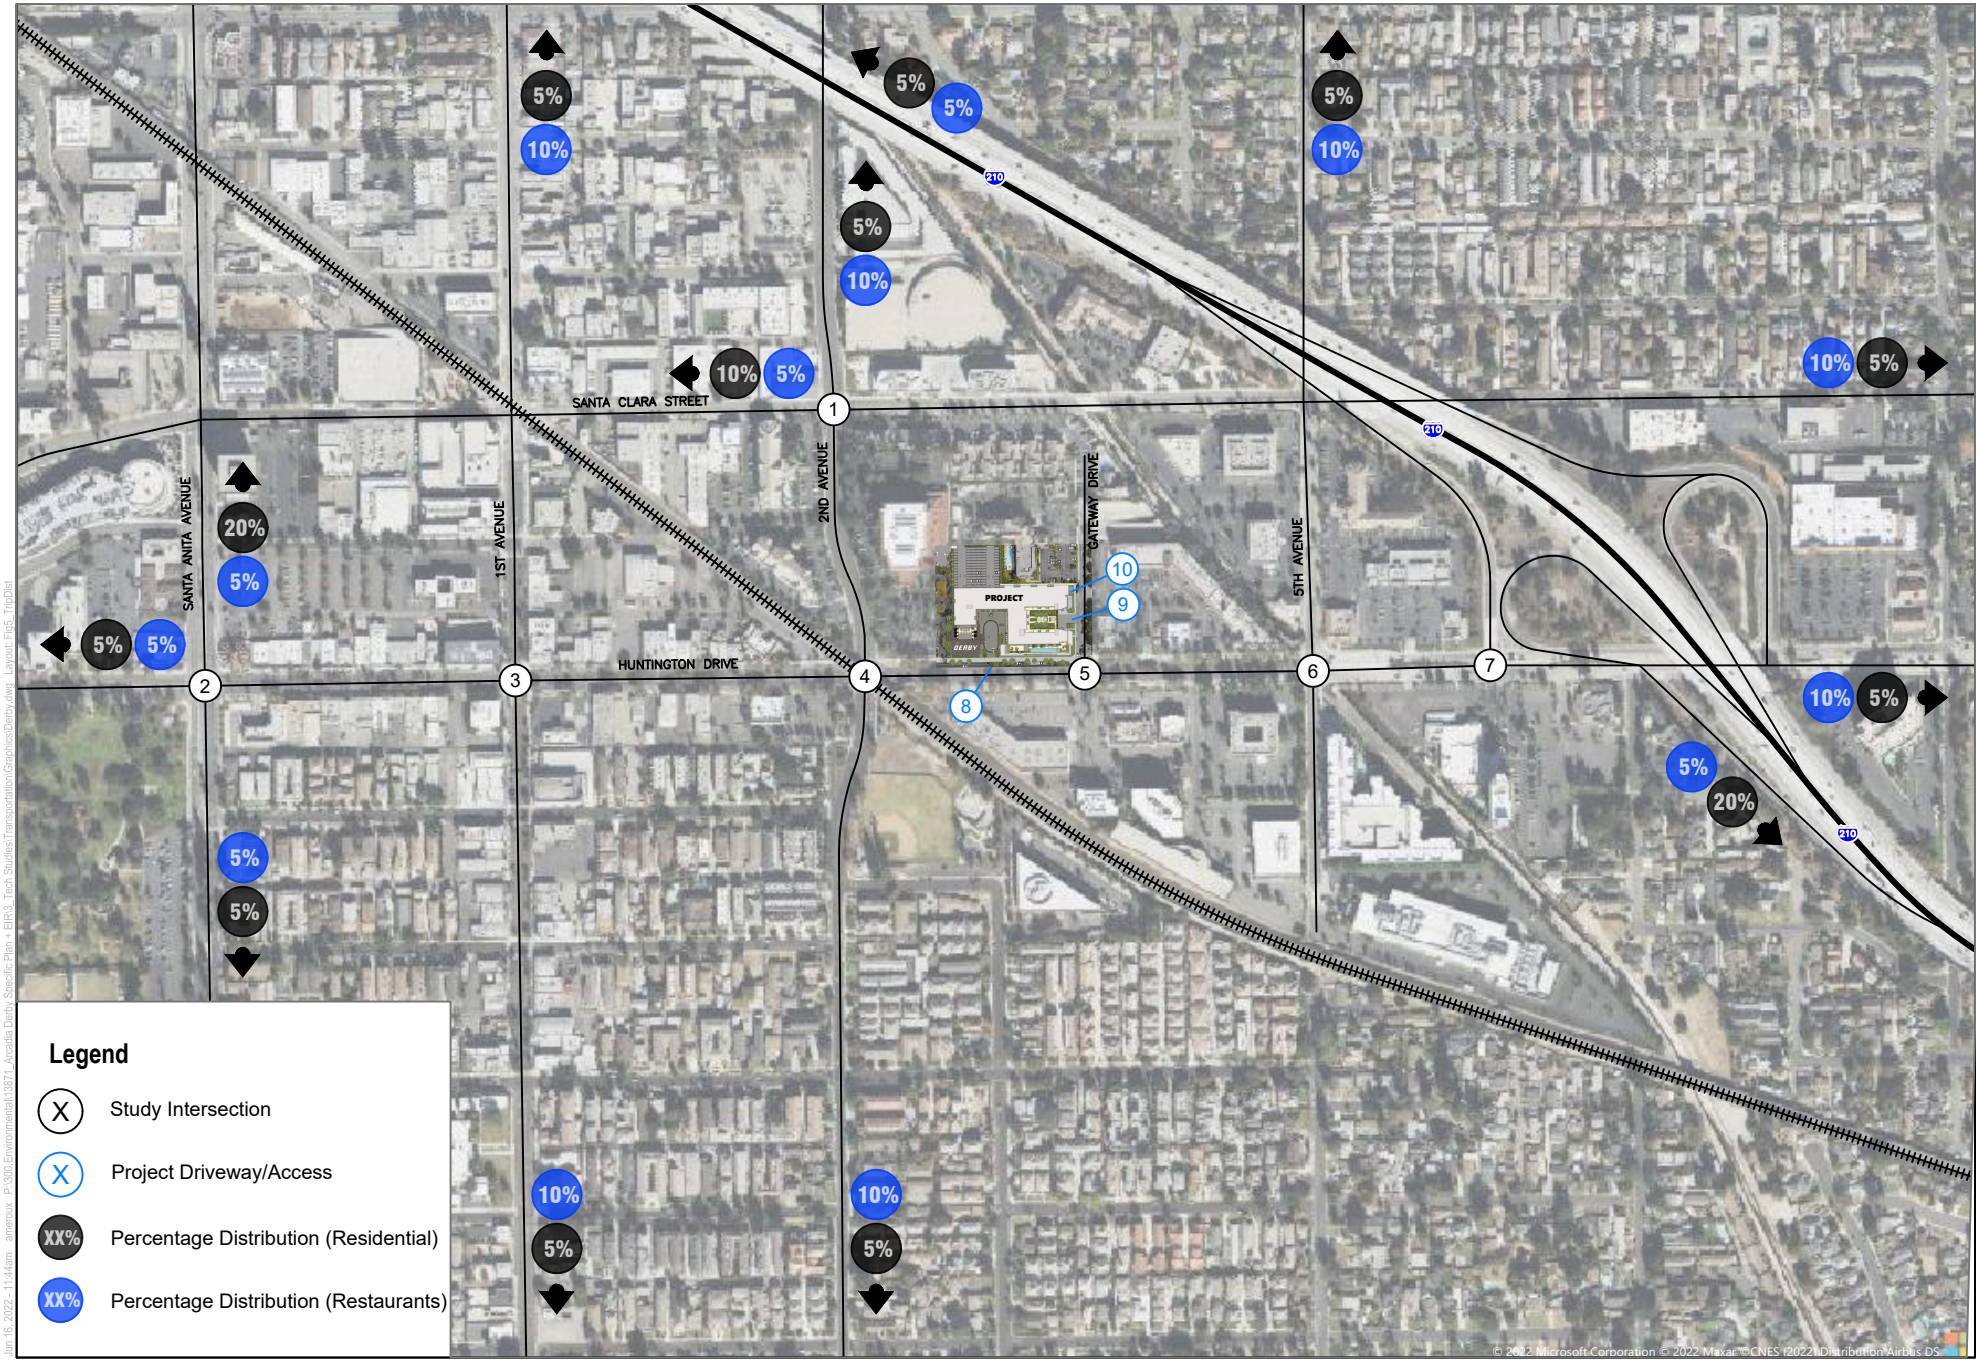
Total Internal trip capture[3]			*-105*	*-13*	*-13*	*-26*	*-15*	*-15*	*-29*

Table 1. Project Trip Generation



Land Use	ITE Code	Size/Unit	Daily	AM Peak Hour			PM Peak Hour		
				In	Out	Total	In	Out	Total
Total Proposed Trip Generation (w/Internal Trip Capture)			2,750	94	131	225	145	85	230
Trip Generation of Existing Land Uses (to be removed)									
The Derby Restaurant	931	7.000 TSF	587	3	3	6	37	18	55
Net Trip Generation									
NET Total (Proposed - Existing)			2,268	104	141	245	122	82	204
NET Total (Proposed - Existing) w/Internal Trip Capture			2,163	92	128	219	108	67	175

Notes:
[1] Trip rates from the Institute of Transportation Engineers, Trip Generation, 11th Edition, 2021
[2]. No ITE daily trip rate is provided for land use. Daily rate is assumed to be 10 times the PM peak hour rate.
[3]. Consistent with the ITE Trip Generation Handbook, project trip generation was adjusted to account for internal capture between the restaurant and residential components using NCHRP methodology. Daily internal trip capture is estimated from the lowest ITC

3.2 Trip Distribution and Assignment

Project trip distribution percentages are based on logical travel paths to and from the project site, review of traffic studies conducted for nearby projects, and consideration of the traffic distribution patterns in the area. The project trip distribution percentages are shown in Figure 5.

As shown in Table 1, the trips associated with the existing Derby restaurant were subtracted from the trips associated with the total proposed land uses. Figure 6 illustrates the trips to be removed at the existing driveway along E. Huntington Drive, Figure 7 illustrates the total proposed project trips to be added, and Figure 8 shows the net proposed project trips (proposed minus existing) at all study intersections and project driveways.

4 Level of Service (LOS) Analysis

The City has vehicle LOS standards in its General Plan Circulation and Infrastructure Element that the City will strive to maintain through various projects designed to improve local infrastructure. The LOS standards apply to discretionary approvals of new land use and transportation projects. This LOS analysis has been prepared to evaluate the project's consistency with the City of Arcadia General Plan Circulation and Infrastructure Element.

4.1 Study Intersections

Per the City of Arcadia Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment (City of Arcadia 2022), the study area intersections included in this analysis consist of, at least, the intersections of roadways where the project would generate 51 or more peak hour trips through those intersections. The following signalized intersections meet these requirements and comprise the study area:

1. 2nd Avenue/Santa Clara Street
2. Santa Anita/E. Huntington Drive
3. 1st Avenue/E. Huntington Drive
4. 2nd Avenue/E. Huntington Drive
5. Gateway Drive/E. Huntington Drive
6. 5th Avenue/E. Huntington Drive
7. I-210 SB ramps/E. Huntington Drive

4.2 Analysis Scenarios

Consistent with the City's Guidelines, intersection LOS analyses were prepared for the weekday AM and PM peak hours at the study area intersections listed above for the following analysis scenarios:

- Existing (2022) Conditions
- Opening Year (2025) No Project (future short-term year with cumulative projects and ambient growth)
- Opening Year (2025) Plus Project
- Horizon Year (2040) No Project (future year with cumulative projects and ambient growth
- Horizon Year (2040) Plus Project

The City's Guidelines note that if it is determined that the project contributes traffic to an intersection operating at an unacceptable LOS, the project requires a General Plan Amendment or otherwise proposes development that exceeds the land use intensity assumed for the General Plan, and/or at the City Traffic Engineer request, an analysis of the Horizon Year (with and without project) should be conducted. Because the project is requesting a General Plan Amendment to change the project site zoning, an analysis of the horizon year scenario was conducted.

4.3 Traffic Volumes

AM and PM peak hour intersection turning movement counts were collected on Tuesday, April 12, 2022 at the study intersections. The raw traffic data is provided as Appendix A. The Opening Year condition represents a short-term horizon period (less than 5 years) when the proposed project is constructed and fully occupied. Peak hour traffic forecasts for the Year 2025 have been projected by increasing the traffic volumes by an annual growth rate of 1.0% per year, consistent with traffic volume growth factors provided in Exhibit D-1 of the 2010 Congestion Management Plan and the population growth forecasts between 2020 and 2040 provided in the 2016-2040 Regional Transportation Plan/STC, and adding traffic volumes generated by seven cumulative projects. Horizon Year volumes represent the future long-term horizon year at build-out of the General Plan and have also been projected by applying a 1.0% annual growth rate per year and adding traffic volumes generated by the cumulative projects.

4.4 Analysis Methodology

LOS is commonly used as a qualitative description of intersection operations and is based on the design capacity of the intersection configuration and roadway facility, compared to the volume of traffic using the facility. The City's intersection evaluation methodology to assess transportation impacts and traffic operating conditions for signalized intersections is based on the Intersection Capacity Utilization (ICU) methodology. The ICU method determines the volume-to-capacity (V/C) ratio on a critical movement basis and the LOS associated with each V/C ratio at an intersection. These methods are used to assess operational characteristics for signalized intersections which is determined by calculating the intersection's LOS. The intersection as a whole and its individual turning movements can be described alphabetically with a range of LOS (A through F), with LOS A indicating free-flow traffic and LOS F indicating extreme congestion and long vehicle delays.

The PTV Vistro software was used to determine intersection LOS (for all scenarios). Detailed LOS calculation worksheets (for all scenarios) are included in Appendix B. Table 2 shows the LOS values by delay ranges for signalized intersections under the ICU methodology for signalized intersections.

Table 2. Level of Service for Criteria

Level of Service	Signalized Intersections (vehicle/capacity – v/c)
A	≤ 0.600
B	> 0.600 and ≤ 0.700
C	> 0.700 and ≤ 0.800
D	> 0.800 and ≤ 0.900
E	> 0.900 and ≤ 1.000
F	> 1.000

4.5 General Plan Consistency Requirements

The LOS thresholds and impact criteria identified in the City of Arcadia General Plan Circulation and Infrastructure Element and the Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment were used to evaluate the project's potential impacts on intersection LOS, as described below.

City of Arcadia General Plan Circulation and Infrastructure Element

The acceptable LOS for intersections in the City is D or better as established in the City's General Plan. LOS E is considered acceptable at intersections adjacent to freeway ramps; adjacent to Santa Anita Park during the racing season; and in areas designated as Downtown, Baldwin Avenue, and Live Oak Avenue commercial and mixed-used districts. Any intersection operating at an LOS grade worse than the acceptable condition is considered deficient. LOS E would serve as the acceptable threshold for intersections 1, 2, 3, 4, and 7 as these intersections fall within the Downtown mixed-use district or are adjacent to freeway ramps. LOS D would serve as the acceptable threshold for intersections 5 and 6 as they fall outside of these areas.

Signalized intersections will require improvements if one of the following conditions is met:

- LOS C - Project V/C increase 0.04 or more
- LOS D - Project V/C increase 0.02 or more
- LOS E/F - Project V/C increase 0.01 or more

The fair share cost for the proposed improvements in the cumulative condition should also be calculated. Fees paid through the City of Arcadia Transportation Impact Fee Program (TIFP) will be considered sufficient if the intersection improvement is identified as a planned project in the General Plan.

4.6 Existing (2022) Conditions

Existing traffic controls and geometrics at all study intersections are shown in Figure 9 and existing peak hour traffic volumes are shown in Figure 10. Although a specific LOS analysis is not conducted for an Existing plus Project scenario per the City's guidelines, Existing plus Project traffic volumes are provided at all study intersections for informational purposes only. The net proposed project trip assignments shown in Figure 8 were added to the existing peak hour traffic volumes shown in Figure 10 to derive the Existing plus Project peak hour traffic volumes shown in Figure 11. Table 3 summarizes the results of the intersection analysis for the AM and PM peak hours for existing conditions. As shown, all the study intersections are currently operating at satisfactory levels of service under existing conditions.

Table 3. Existing Weekday Peak Hour Intersection LOS

4.7 Opening Year (2025) No Project

This section presents the results of a cumulative condition analysis that was conducted for a short-term horizon year (Year 2025) assuming the proposed project is constructed and fully occupied.

4.7.1 Cumulative Projects

Cumulative projects are projects that are proposed and in the development review process, but not yet fully approved; or projects that have been approved, but not fully constructed or occupied. The following projects listed in Table 4 were provided per communication with City staff and are included in the Opening Year (2025) and Horizon Year (2040) analyses.

Table 4. Cumulative Projects

Address	Name/Use	Units	Square Footage (SF)	Status
City of Arcadia				
205 N. Santa Anita Ave.	Santa Anita Mixed Use	108 Residential	7,787 SF Commercial	In Planning
117 E. Huntington Dr.	Huntington Plaza/Mixed Use	139 Residential	10,200 SF Commercial	Approved; In plan-check under Building Services
125 W. Huntington Dr.	Hilton Hotel	175 Hotel rooms	2,500 SF Restaurant	Under construction
142 La Porte Street	New Warehouse	—	3,384 SF	Approved; In plan-check under Building Services
150 La Porte Street	New Warehouse	—	4,004 SF	Approved
11-19 W. Huntington and 25 N. Santa Anita	Mixed Use	181 Residential (condos)	13,130 SF Commercial	Pending approval
150 N. Santa Anita Ave.	Alexan Mixed-Use Development Project	319 Residential (Existing 8 story commercial building to be retained)	—	In plan-check under Building Services
City of Monrovia				
102-140 W. Huntington Dr.	TownePlace Suites	109 hotel rooms	—	Approved
820 Huntington Dr.	Chick-Fil-A/Starbucks	—	4,562 SF Restaurant; 2,200 SF Starbucks	Operational (Chick-Fil-A) / Under construction (Starbucks)
945 W. Huntington Dr.	Raising Cane's	—	3,172 SF	Operational

Source: Correspondence with the City of Arcadia, June 21, 2023; City of Monrovia Planning Department website, June 21, 2023.

Project trip generation for the cumulative projects were estimated using trip generation rates provided by the ITE *Trip Generation Handbook*, 11th Edition, or derived from traffic impact analyses, where available. As shown in Table 5, the cumulative projects are forecast to generate approximately 9,870 daily trips, 783 AM peak hour trips, and 913 PM peak hour trips. Figure 12 shows the locations of all cumulative projects, and Figure 13 shows the traffic volumes distributed throughout the network.

4.7.2 LOS Analysis

The existing intersection configurations have been assumed to be preserved under the Opening Year (2025) conditions. Figure 14 illustrates the Opening Year (2025) (no project) traffic volumes for the peak hour conditions. Table 6 summarizes the results of the Opening Year (2025) intersection analysis. As shown in the table, all the study area intersections are forecast to operate at satisfactory levels of service under Opening Year (2025) conditions.

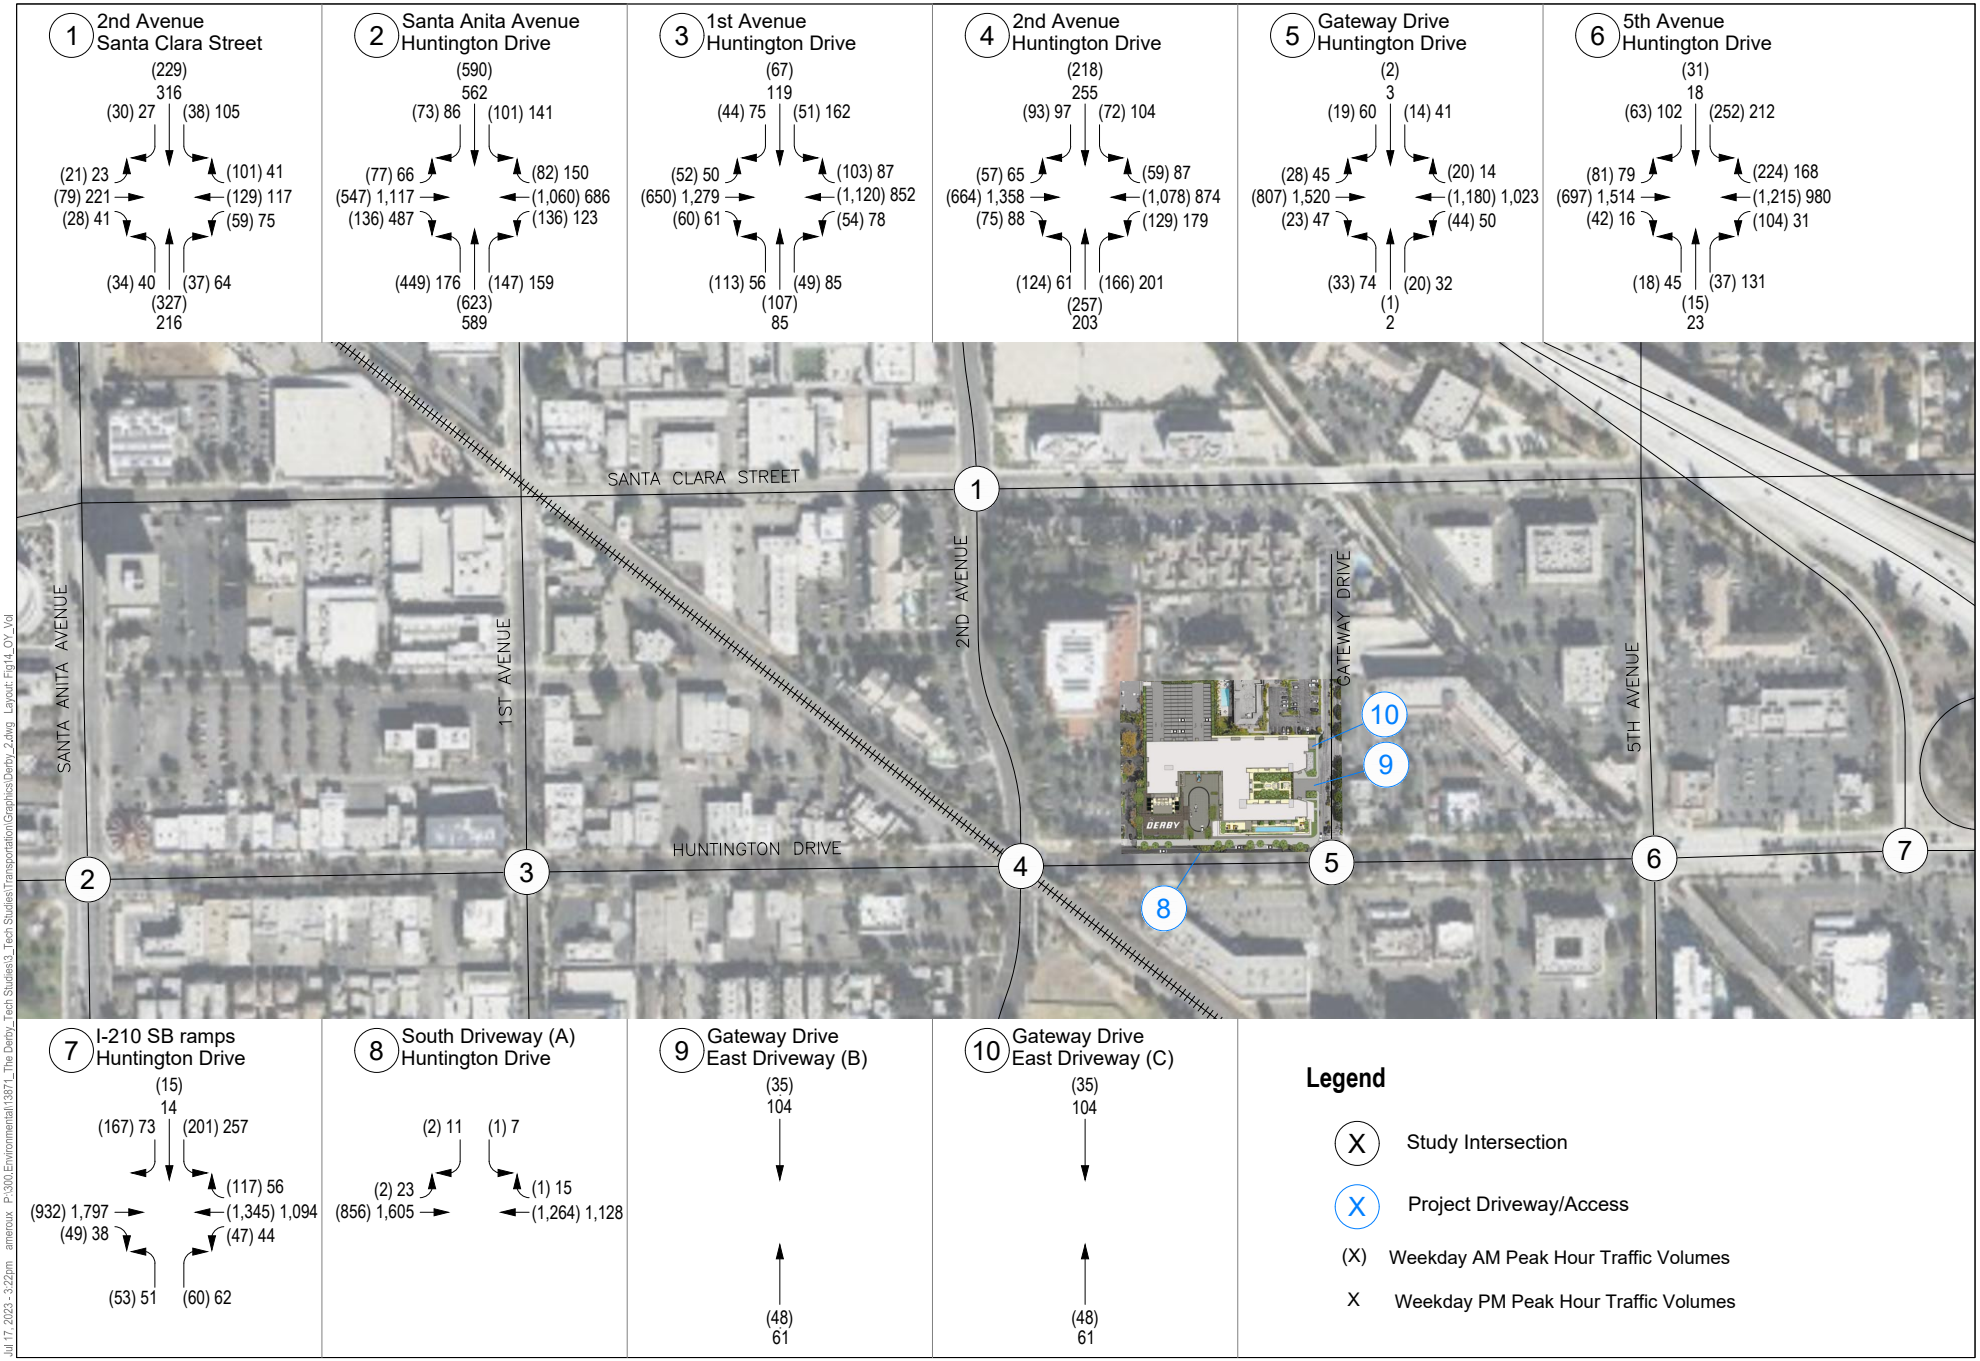
4.8 Opening Year (2025) Plus Project



This section details the Opening Year (2025) traffic volumes and the intersection operations within the study area with the addition of project trips.

The net proposed project trip assignments were added to the Opening Year (2025) peak hour traffic volumes to derive the Opening Year (2025) plus Project peak hour traffic volumes shown in Figure 15. Table 7 summarizes the results of the Opening Year (2025) plus Project intersection analysis. As shown in the table, all the study area intersections are forecast to operate at satisfactory levels of service under Opening Year (2025) plus Project conditions.

5 Project Site Access

The existing project site is currently configured with three access points, as shown on the project site plan (Figure 1). Proposed vehicular circulation to the project site and parking structure would remove or reconfigure two access points along E. Huntington Drive and one access point along Gateway Drive to provide one full access driveway along E. Huntington Drive and two access points along Gateway Drive, as follows:

- #8 – South Driveway (A)/E. Huntington Drive: Full access; primarily serving The Derby restaurant, with secondary access to the café and additional restaurant; no residential parking access.
- #9 – Gateway Drive/East Driveway (B): Full access; primarily serving the café and additional restaurant; secondary access for The Derby restaurant; no residential parking access.
- #10 – Gateway Drive/East Driveway (C): Full access; residential parking access only.

5.1 Project Site Access and Internal Circulation

A queuing analysis was prepared for all project driveways to assess the adequacy of any off-site storage lanes into the project site, as well as the adequacy of driveway throat lengths and space on-site for vehicles to queue without effecting the internal circulation on the project site. Queuing was analyzed utilizing the SimTraffic software, which calculates the 95th percentile (design) queue. All queuing analysis data and SimTraffic queuing worksheets are provided in Appendix C.

As shown in Tables 10 and 11, none of the calculated 95th percentile (design) queues exceed storage capacities within the existing left-turn pockets on Gateway Drive or the TWLTL along E. Huntington Drive, with exception of the eastbound left-turn pocket at the Gateway Drive/E. Huntington Drive intersection. Analysis of existing conditions shows that queuing extends past the approximately 35 feet left-turn pocket (see Appendix C). As this pocket length is limited under current conditions, further exceedance of the available storage capacity is expected with the addition of project trips. The following recommendation is provided:

- Remove and reconfigure the raised median to extend the eastbound left-turn pocket to at least 75 feet.

Additionally, queuing is forecast to extend up to 255 feet (approximately 10 vehicles) within the courtyard for vehicles exiting out to E. Huntington Drive under Horizon Year (2040) plus Project conditions. Twenty-five (25) feet is equivalent to approximately one (1) car for the purposes of this analysis. Based on this assumption, approximately 125 feet (or five (5) vehicles) could queue within the courtyard to exit the site before queued vehicles begin to impact other on-site operations. However, it should be noted that this driveway is primarily set up as a valet entrance and exit for The Derby restaurant, and other users will likely utilize the parking garage entrance along Gateway Drive (Driveway B) if they observe queuing within the courtyard. To limit driver confusion, it is also recommended that signage is placed within the commercial section of the parking structure directing personal vehicles to use the Gateway Drive egress to exit the project site during valet operations.

Aside from the above-mentioned queues, none of the other queues are forecast to conflict with turning movements into or out of the project site, or within the internal access drive aisles, with project-added traffic during the Opening Year (2025) and Horizon Year (2040) conditions.

Table 10. Peak-Hour Queuing Summary for Opening Year (2025) Conditions

Intersection or Driveway Access	Movement	Available Stacking Distance (Feet)	Opening Year (2025) plus Project			
			95th Percentile Queue (Feet)		Acceptable?[1]	
			AM	PM	AM	PM
Gateway Drive/E. Huntington Drive	EBL	35	62	63	No	No
	SBL	75	61	65	Yes	Yes

[6] No left-turn pocket is available along Gateway Drive; available stacking distance measured from driveway entrance to E. Huntington Drive for the purposes of this analysis.
[7] No left-turn pocket is available along Gateway Drive; available stacking distance measured from driveway entrance to Driveway B entrance for the purposes of this analysis.

5.2 Pedestrian and Bicycle Access

As previously noted, sidewalks are generally present throughout the study area, and marked crosswalks are provided at all major arterial intersections. Pedestrian access to the project is provided along all the roadways surrounding the project site, including along E. Huntington Drive and Gateway Drive. The nearest bicycle facilities are provided along 1st Avenue, Santa Clara Street, and 5th Avenue (Class II and Class III Bike Lanes) as discussed in Section 2.3. The proposed project would provide 18 commercial bicycle parking spaces along the E. Huntington Drive frontage, and 43 residential enclosed/secure bicycle parking spaces within the residential lobby at the southern end of the project site with spaces both on the ground and second floors.

Landscaping and pedestrian walkways would be provided throughout the project site, with frontage improvements to Gateway Drive and E. Huntington Drive. The Derby courtyard plaza located along E. Huntington Drive is intended to serve both pedestrians and vehicles, with walkways, rails, landscaping, and other features to provide for a mixed mode environment. Pedestrian walkways connect The Derby restaurant with the residential, parking, and other commercial uses throughout the project site.

6 Parking Analysis

The proposed project would redevelop the existing site with new restaurant space, 214 multi-family units, and construct surface parking and basement level parking. A total of 412 parking spaces are currently proposed. The following section presents a parking code analysis based on the City of Arcadia Development Code, which includes the State's Density Bonus incentive.

6.1 State Density Bonus Program and Assembly Bill 2345

The State Density Bonus Program (Government Code 65915) requires a city or county to provide a developer that proposes a housing development in the city or county with a density bonus and other incentives or concessions for the production of lower income housing units, or for the donation of land within the development, if the developer agrees to, among other things, construct a specified percentage of units for very low income, low-income, or moderate-income households or qualifying residents. Assembly Bill (AB) 2345, effective January 1, 2021, makes several changes to the Density Bonus Law. AB 2345 further relaxes parking standards applicable to density bonus projects. If a project provides at least 20 percent low income or 11 percent very low-income housing and is within half a mile of a major transit stop, a city may not impose a vehicle parking ratio, inclusive of parking for persons with a disability and guests, that exceeds 0.5 parking spaces per unit [1]. In addition to the project's proximity to the Arcadia Metro A Line Station, the project is dedicating 9 units for senior affordable housing and therefore qualifies for the parking incentives under the State Density Bonus program.

6.2 Development Code Parking Requirements

Table 12 presents the City's parking requirements for the existing and proposed land uses on-site per the City of Arcadia Development Code Section 9103.07 *Off-Street Parking and Loading.*

Table 12. City of Arcadia Development Parking Code (With Density Bonus)

Land Use		Parking Spaces Required
Mixed-Use Residential[1]	Studio and One bedroom	1 space per unit
	Two and Three Bedrooms	1.5 spaces per unit
	Affordable units	1 space per unit
Restaurant	Small[2]	1 space per 200 SF
	Large[3]	1 space per 100 SF
	Outdoor[4]	1 space per 6 seats

Source: Section 9103.07 - Off-Street Parking and Loading | Code of Ordinances | Arcadia, CA | Municode Library.
Notes: SF = Square Feet
1. Guest parking requirements included in the parking rates above per the State Density Bonus.

[1] Bill Text - SB-290 Density Bonus Law: qualifications for incentives or concessions: student housing for lower income students: moderate-income persons and families: local government constraints.

2. Large restaurant: Establishments where food and beverages may be consumed on the premises, taken out, or delivered, where the total space dedicated to the use is greater than 2,000 square feet.
3. Small restaurant: Establishments where food and beverages may be consumed on the premises, taken out, or delivered, where the total space dedicated to the use is 2,000 square feet or less.
4. Incidental and Outdoor Dining on Public Property with more than 12 seats or a number of outdoor seats equivalent to 25% of the number of indoor seats, whichever is greater

6.3 Parking Spaces Required per Code

The proposed land uses, square footages, and number of units were reviewed to determine the number of spaces required per the City's Development Code. The required number of parking spaces is summarized in Table 13.

Table 13. Required Parking Spaces by Use (With Density Bonus)

Use	Land Use	Size (Units/SF/Seats)	Metric	Spaces Required	Spaces Provided
Residential	Studio	51 DU	1 space per unit	51	51
	1 bedroom apartment	105 DU	1 space per unit	105	105
	2-bedroom apartment	49 DU	1.5 space per unit	74	74
	Senior apartment (affordable)	9 DU	1 space per unit	9	9
	Subtotal	***214 DU***		***239***	***239[1]***
Eating Establishment	The Derby Restaurant	12,850 SF	1 space per 100 SF (large rest.)	129	129
	Additional Restaurant	3,300 SF	1 space per 100 SF (large rest.)	33	33
	Café	1,400 SF	1 space per 200 SF (small rest.)	7	7
	Outdoor seating	24 seats	1 space per 6 seats	4	4
	Subtotal	***17,550 SF***		***173***	***173[2]***
TOTAL REQUIRED				**412 spaces**	
SPACES PROVIDED				**412 spaces[3]**	

Source: Section 9103.07 - Off-Street Parking and Loading | Code of Ordinances | Arcadia, CA | Municode Library; [au]workshop 2022.
Note: SF = Square Feet; DU = Dwelling units

1. In addition to the 239 vehicular parking spaces, 11 motorcycle spaces will also be provided for residential uses.
2. In addition to the 173 vehicular parking spaces, 10 motorcycle spaces will also be provided for commercial uses.
3. Including additional motorcycle, an on-street parking/loading area along E. Huntington Drive, and transitional valet spaces, a total of 28 additional parking spaces are available across the project site.

As shown, the proposed project is required to provide 412 parking spaces per Code. The project is currently proposing to provide 412 spaces, and therefore meets the City's parking requirements. Valet operations are further discussed in Section 6.4 and a parking management/valet parking operations analysis is provided in a separate memorandum.

6.4 Valet Operations

Ground floor parking areas, totaling 173 spaces, will be predominately parked using a valet service reserved only for the restaurant uses and residential visitors. The valet service will not park any vehicles for other adjacent, off-site uses, and its operations will be kept hidden from adjacent streets. Residential tenant parking will have self-parking (i.e., non-valet) operations located at the basement level with a separate secure access from the northernmost project driveway on Gateway Drive.

Primary access for the commercial parking will be available from two points: (1) via a driveway located along E. Huntington Drive approximately 50 feet east of the curb cut for the existing Derby, and (2) via a curb-cut that will also accommodate service uses from Gateway Drive, separated as far as possible from the Huntington intersection and the residential basement parking access ramp. The relocated driveway along E. Huntington Drive will primarily serve as an off-street valet drop-off and pick-up courtyard area able to accommodate up to approximately 20 active and parked vehicles simultaneously.

Valet parking will be accommodated both within the courtyard and the ground level of the parking garage. The eastern portion of the parking garage will predominately provide commercial parking, with some valet parking, and the western and northwestern portions of the parking garage will serve valet parking only. Of the 140 valet parking spaces provided, 76 spaces will be designated as tandem spaces, oriented in rows of two or four spaces. Two, 24-foot driveway aisles will serve the main tandem spaces, located in the northwest area of the parking garage, one on each side of row, allowing valets to access vehicles from either side. For these tandem spaces, only one vehicle (max) would need to be moved (by the valet) to access another vehicle.

To facilitate safe ingress and egress for vehicles on the project site during valet hours, permanent and temporary signs will be posted throughout the outdoor parking lot, consistent with existing valet operations. When valet operations are completed for the day, permanent valet signs will be covered by the valets, and the temporary signs and valet kiosk/umbrella will be stored in a designated lockable storage room on site. Additionally, to limit the potential for queuing within the courtyard area (see Section 5.1), it is recommended that signage is placed within the parking structure directing personal vehicles to use the Gateway Drive egress to exit the project site during valet operations.

7 Vehicle Miles Traveled Analysis

The following VMT analysis is based on the City of Arcadia Transportation Study Guidelines for Vehicle Miles Traveled and Level of Service Assessment (City of Arcadia 2020) and OPR's Technical Advisory on Evaluating Transportation Impacts in CEQA (OPR 2018). As shown in the analysis below, the project would be screened from a project-level analysis, and the project's impact to VMT would be less than significant.

7.1 Screening Criteria

The City's Guidelines provide three types of VMT screening that can be applied to the proposed project to screen from a project-level VMT assessment. The screening criteria are consistent with the recommendations provided in OPR's Technical Advisory.

Transit Priority Area (TPA) Screening

Projects located within a TPA[2] may be presumed to have a less than significant impact absent substantial evidence to the contrary. This presumption may not be appropriate if the project:

1. Has a Floor Area Ratio (FAR) of less than 0.75;
2. Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
3. Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization)
4. Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

As shown in Appendix D, the proposed Project is located within a TPA and therefore meets this screening this criterium.

Low VMT Area Screening

Residential and office projects located within a low VMT- generating area may be presumed to have a less than significant impact absent substantial evidence to the contrary. In addition, other employment-related and mixed-use land use projects may qualify for the use of screening if the project can reasonably be expected to generate VMT per resident, per worker, or per service population that is similar to the existing land uses in the low VMT area.

The San Gabriel Valley Council of Governments (SGVCOG) screening tool (available at https://www.sgvcog.org/vmt-analysis-tool) was used to determine whether or not the proposed Project would be located in a low VMT-generating area. Per the City's guidelines, a low VMT-generating area is determined as 15% below the subarea baseline home-

[2] A TPA is defined as a half mile area around an existing major transit stop or an existing stop along a high-quality transit corridor per the definitions below:
Pub. Resources Code, § 21064.3 ("'Major transit stop' means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods.")
Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours.").

based VMT per capita and VMT per employee. As shown in Table 16, the home-based VMT per Capita for the project TAZ is 11.1, and the subarea jurisdiction's average is 15.53. Therefore, the TAZ would be 28.52% below the subarea threshold for VMT per Capita, which would meet the required baseline screening criteria established in the City's guidelines. As such, the proposed Project can be screened out using this criterion.

Table 14. Summary of Project TAZ VMT

Base Year (2021)	Home-based VMT per Capita
Project TAZ	11.1
Jurisdiction	15.53
% Difference (Project TAZ – Jurisdiction)	**-28.52%**
Threshold	13.2

Source: SGVCOG VMT Screening Tool (Appendix D)

Project Type Screening

The City's guidelines list local serving land uses, which have been identified as having the presumption of a less than significant impact. This includes land uses such as local serving schools, parks, day care centers, and local serving retail of less than 50,000 square feet. The uses are those which should be able to demonstrate that its users (employees, customers, visitors) would be existing within the community. The screening criterion also identifies projects that would generate less than 110 daily vehicle trips and having a presumption of less than significant.[3] The proposed residential component of the project would not fall under a local serving land use and would also generate greater than 110 daily vehicle trips; therefore, this component of the project cannot be screened out from further VMT analysis using this criterium. However, the 17,550 square-foot proposed restaurant use would serve as a local serving land use and can be screened out using this criterium.

Based on SB 743 and the revised CEQA guidelines, the City's Guidelines, and the SGVCOG VMT Assessment tool, the project would be screened from a project-level VMT analysis. The project is in a TPA and a Low VMT generating area. Therefore, a project-level VMT analysis is not required and impacts to VMT can be presumed to be less than significant.

[3] This threshold ties directly to the OPR technical advisory and notes that CEQA provides a categorical exemption for existing facilities, including additions to existing structures of up to 10,000 square feet, so long as the project is in an area where public infrastructure is available to allow for maximum planned development and the project is not in an environmentally sensitive area. (CEQA Guidelines, § 15301, subd. (e)(2).) Typical project types for which trip generation increases relatively linearly with building footprint (i.e., general office building, single tenant office building, office park, and business park) generate or attract an additional 110-124 trips per 10,000 square feet. Therefore, absent substantial evidence otherwise, it is reasonable to conclude that the addition of 110 or fewer trips could be considered not to lead to a significant impact.

8 Summary

Based on the results of the LOS, site access, parking analyses, and VMT screening analysis presented in this TIA, the following summarizes the key findings of the analysis:

- The proposed project would generate 2,163 net daily trips, 219 net AM peak hour and 175 net PM peak hour trips (Table 1).
- The seven study area intersections currently and are forecast to operate at LOS D (or E where applicable) or better under all analysis scenarios, which meets the City's traffic impact thresholds (Table 3 and Tables 6 through 9).
- The proposed project would not result in unacceptable queueing conditions into or out of the project site (Table 10 and Table 11) with exception of the eastbound left-turn pocket at Gateway Drive/E. Huntington Drive and within The Derby courtyard. The following recommendations are made:
  - Remove and reconfigure the raised median to extend the eastbound left-turn pocket at Gateway Drive/E. Huntington Drive to at least 75 feet.
  - Place signage within the commercial section of the parking structure directing personal vehicles to use the Gateway Drive egress to exit the project site during valet operations.
- The proposed project is required to provide 412 parking spaces per the City's Development Code with application of the State Density Bonus parking reductions. The project is proposing 412 spaces, which meets the required parking with the State Density Bonus reductions (Table 13).
- The project is in a TPA and a Low VMT generating area and would be screened from a project-level VMT analysis. Therefore, the project's impacts to VMT can be presumed to be less than significant.

Report File: P:\...\EX AM.pdf
Scenario 1 Existing
6/15/2022

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	2nd Avenue/Santa Clara Street	Signalized	ICU 1	WB Thru	0.404	-	A
2	Santa Anita Avenue/Huntington Drive	Signalized	ICU 1	WB Thru	0.710	-	C
3	1st Avenue/Huntington Drive	Signalized	ICU 1	WB Thru	0.565	-	A
4	2nd Avenue/Huntington Drive	Signalized	ICU 1	WB Thru	0.556	-	A
5	Gateway Drive/Huntington Drive	Signalized	ICU 1	WB Thru	0.389	-	A
6	5th Avenue/Huntington Drive	Signalized	ICU 1	WB Thru	0.617	-	B
7	I-210 SB ramps/Huntington Drive	Signalized	ICU 1	WB Thru	0.575	-	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report
Intersection 1: 2nd Avenue/Santa Clara Street

Control Type:	Signalized	Delay (sec / veh):	-
Analysis Method:	ICU 1	Level Of Service:	A
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.404

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	2nd Avenue/Santa Clara Street	Signalized	ICU 1	EB Right	0.433	-	A
2	Santa Anita Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.682	-	B
3	1st Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.656	-	B
4	2nd Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.673	-	B
5	Gateway Drive/Huntington Drive	Signalized	ICU 1	EB Right	0.565	-	A
6	5th Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.747	-	C
7	I-210 SB ramps/Huntington Drive	Signalized	ICU 1	EB Thru	0.546	-	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	2nd Avenue/Santa Clara Street	Signalized	ICU 1	EB Thru	0.476	-	A
2	Santa Anita Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.721	-	C
3	1st Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.718	-	C
4	2nd Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.719	-	C
5	Gateway Drive/Huntington Drive	Signalized	ICU 1	EB Right	0.606	-	B
6	5th Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.791	-	C
7	I-210 SB ramps/Huntington Drive	Signalized	ICU 1	EB Right	0.615	-	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	2nd Avenue/Santa Clara Street	Signalized	ICU 1	EB Thru	0.484	-	A
2	Santa Anita Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.726	-	C
3	1st Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.734	-	C
4	2nd Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.747	-	C
5	Gateway Drive/Huntington Drive	Signalized	ICU 1	EB Thru	0.617	-	B
6	5th Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.795	-	C
7	I-210 SB ramps/Huntington Drive	Signalized	ICU 1	EB Thru	0.618	-	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	2nd Avenue/Santa Clara Street	Signalized	ICU 1	EB Right	0.500	-	A
2	Santa Anita Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.827	-	D
3	1st Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.838	-	D
4	2nd Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.829	-	D
5	Gateway Drive/Huntington Drive	Signalized	ICU 1	EB Thru	0.697	-	B
6	5th Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.895	-	D
7	I-210 SB ramps/Huntington Drive	Signalized	ICU 1	EB Thru	0.682	-	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report

Intersection Analysis Summary

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	2nd Avenue/Santa Clara Street	Signalized	ICU 1	EB Thru	0.538	-	A
2	Santa Anita Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.819	-	D
3	1st Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.825	-	D
4	2nd Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.851	-	D
5	Gateway Drive/Huntington Drive	Signalized	ICU 1	EB Thru	0.705	-	C
6	5th Avenue/Huntington Drive	Signalized	ICU 1	EB Thru	0.900	-	D
7	I-210 SB ramps/Huntington Drive	Signalized	ICU 1	EB Thru	0.691	-	B

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Intersection Level Of Service Report

Re: ***Formal Notification for The Derby Mixed-Use Project, Pursuant to Assembly Bill 52***

Dear Chairman Salas,

Pursuant to California Assembly Bill (AB) 52, the City of Arcadia (City) is providing you with formal notification of The Derby Mixed-Use Project (proposed Project), located in the City of Arcadia, in Los Angeles County, California. The City of Arcadia, as lead agency, is reaching out to all eligible tribal entities that have formally requested in writing AB 52 notification from the City for eligible projects under their jurisdiction. The City received your request for formal notification of proposed projects within your Tribe's traditional use area. This correspondence is intended as formal notification of the proposed project pursuant to AB 52.

The present notice includes:

- A description of the proposed project and location;
- Project Location figure;
- A summary of cultural resources work to date, and summary of associated information that can be made available upon request;
- A clear and definitive statement that the tribe has 30 days to request consultation; and
- The lead agency contact information.

Project Location and Description

The Project site is in the City of Arcadia at 233 and 301 East Huntington Drive and includes Assessor Parcel Numbers 5773-009-070 and 5773-009-065. The Project site is bound by Huntington Drive to the south, Gateway Drive to the east, and existing hotel uses to the north and west. The Project site includes approximately 2.23 acres, as shown on the attached Figure 1, Project Location.

The Project would involve the demolition of existing structures on the Project site, including a two-story restaurant building (The Derby) at 233 East Huntington Drive, a one-story restaurant building (Souplantation) at 301 East Hunting Drive, and the associated surface parking. The proposed Lot Line Adjustment would merge the two existing lots into one legal lot.

The Project would construct The Derby as a larger, two-story restaurant as part of a new, six-story mixed-use development consisting of restaurant, cafe, and multi-family residential uses. The Project's multifamily residential component would include a total of 214 for-rent dwelling units, including nine affordable units. The mixed-use building would front onto East Huntington Drive and would include a landscaped residential pool and

amenity space, including an approximately 4,800 square feet (sf) roof deck and 1,100 sf indoor amenity kitchen for residents. Additional residential amenities would include a 6,500 sf landscaped courtyard, herb garden, and shared outdoor cooking space as well as other interior residential amenities such as a fitness center, co-working space, and yoga room.

The Project would include one level of subterranean (i.e., basement level) parking for residents, as well as exterior and interior ground-level commercial and valet parking areas. The Project would provide a total of 414 parking spaces consisting of 241 residential and 173 commercial/valet spaces. Approximately 10% of the spaces provided would include Electric Vehicle (EV) charging stations. Off-site improvements would be required within the sidewalk and roadway rights-of-way along East Huntington Drive and Gateway Drive. These improvements would include modification and/or relocation of existing curb cuts, utility connections, removal of signage, street light relocation, and new/replacement street trees

Project Involves Ground Disturbance: Yes

Summary of Cultural Resources Work and Documentation

A CHRIS records search was performed at the South Central Coast Information Center (SCCIC). Results of the cultural resources records search indicated that twenty-four (24) previous cultural resource studies have been conducted between 1984 and 2015 within 1 mile of the proposed Project site. Of these studies, one (1) overlaps the proposed Project site. The entirety of the proposed Project site has been subjected to previous cultural resource investigations. The SCCIC records indicate that 122 cultural resources have been previously recorded within 1-mile of the proposed Project site. Of these 121 are historic built environment resources and one (1) is a historic-era archaeological resource; none overlap the Project site. No prehistoric cultural resources of a Native American nature have previously recorded within 1 mile of the Project site. Cultural resources documentation can be provided upon request. Please note, this information should be considered confidential and is not to be redistributed to individuals without traditional or cultural affiliation.

Consultation Request

If you have any comments or concerns regarding potential impacts to tribal cultural resources (as defined in Public Resources Code § 21074) in relation to the proposed Project, or would like to request any additional information, please contact the City of Arcadia at the address below or via email to Ms. Fiona Graham, Planning Services Manager (fgraham@arcadiaca.gov). All requests for formal tribal consultation, pursuant to AB-52, must be received within 30 days of receipt of this notice. Please include in any request the name of the designated lead contact person.

Sincerely,

Ms. Fiona Graham, Planning Services Manager

Re: ***Formal Notification for The Derby Mixed-Use Project, Pursuant to Senate Bill 18***

Dear Mr. Salas,

The Native American Heritage Commission (NAHC) has identified your tribe as one with traditional lands or cultural places located within the boundary of the proposed The Derby Mixed-Use Project (proposed Project). The proposed Project requires amendments to the City General Plan and is therefore subject to SB 18 (Government Code Section 65352.3). This letter serves as a formal notification and invitation to consult with the City of Arcadia (City) on the proposed Project pursuant to SB 18.

The present notice includes:

- A description of the proposed project and location;
- Project Location figure;
- A summary of cultural resources work to date, and summary of associated information that can be made available upon request;
- A clear and definitive statement that the tribe has 90 days to request consultation; and
- The lead agency contact information.

Project Location and Description

The Project site is in the City of Arcadia at 233 and 301 East Huntington Drive and includes Assessor Parcel Numbers 5773-009-070 and 5773-009-065. The Project site is bound by Huntington Drive to the south, Gateway Drive to the east, and existing hotel uses to the north and west. The Project site includes approximately 2.23 acres, as shown on the attached Figure 1, Project Location.

The Project would involve the demolition of existing structures on the Project site, including a two-story restaurant building (The Derby) at 233 East Huntington Drive, a one-story restaurant building (Souplantation) at 301 East Hunting Drive, and the associated surface parking. The proposed Lot Line Adjustment would merge the two existing lots into one legal lot.

The Project would construct The Derby as a larger, two-story restaurant as part of a new, six-story mixed-use development consisting of restaurant, cafe, and multi-family residential uses. The Project's multifamily residential component would include a total of 214 for-rent dwelling units, including nine affordable units. The mixed-use building would front onto East Huntington Drive and would include a landscaped residential pool and amenity space, including an approximately 4,800 square feet (sf) roof deck and 1,100 sf indoor amenity kitchen for residents. Additional residential amenities would include a 6,500 sf landscaped courtyard, herb garden, and shared outdoor cooking space as well as

240 West Huntington Drive

Arcadia, CA 91066-6021
(626) 574-5415
(626) 447-3309 Fax
www.ArcadiaCA.gov

other interior residential amenities such as a fitness center, co-working space, and yoga room.

The Project would include one level of subterranean (i.e., basement level) parking for residents, as well as exterior and interior ground-level commercial and valet parking areas. The Project would provide a total of 414 parking spaces consisting of 241 residential and 173 commercial/valet spaces. Approximately 10% of the spaces provided would include Electric Vehicle (EV) charging stations. Off-site improvements would be required within the sidewalk and roadway rights-of-way along East Huntington Drive and Gateway Drive. These improvements would include modification and/or relocation of existing curb cuts, utility connections, removal of signage, street light relocation, and new/replacement street trees

Project Involves Ground Disturbance: Yes

Summary of Cultural Resources Work and Documentation

A CHRIS records search was performed at the South Central Coast Information Center (SCCIC). Results of the cultural resources records search indicated that twenty-four (24) previous cultural resource studies have been conducted between 1984 and 2015 within 1 mile of the proposed Project site. Of these studies, one (1) overlaps the proposed Project site. The entirety of the proposed Project site has been subjected to previous cultural resource investigations. The SCCIC records indicate that 122 cultural resources have been previously recorded within 1-mile of the proposed Project site. Of these 121 are historic built environment resources and one (1) is a historic-era archaeological resource; none overlap the Project site. No prehistoric cultural resources of a Native American nature have previously recorded within 1 mile of the Project site. Cultural resources documentation can be provided upon request. Please note, this information should be considered confidential and is not to be redistributed to individuals without traditional or cultural affiliation.

Consultation Request

Your participation in this local planning process is important and the City welcomes the opportunity to consult with the Gabrieleno Band of Mission Indians - Kizh Nation, if it is so desired. Pursuant to Government Code Section 65352.3(a)(2), you have 90 days from the receipt of this letter to request consultation with the City of Arcadia. Please submit your written request to the City of Arcadia at the address below or via email to Ms. Fiona Graham, Planning Services Manager (fgraham@arcadiaca.gov). All requests for formal tribal consultation, pursuant to SB-18, must be received within 90 days of receipt of this notice. Please include in any request the name of the designated lead contact person.

Sincerely,

Ms. Fiona Graham, Planning Services Manager

Re: Formal Notification for The Derby Mixed-Use Project, Pursuant to Senate Bill 18

Dear Mr. Isaiah Vivanco,

The Native American Heritage Commission (NAHC) has identified your tribe as one with traditional lands or cultural places located within the boundary of the proposed The Derby Mixed-Use Project (proposed Project). The proposed Project requires amendments to the City General Plan and is therefore subject to SB 18 (Government Code Section 65352.3). This letter serves as a formal notification and invitation to consult with the City of Arcadia (City) on the proposed Project pursuant to SB 18.

The present notice includes:

- A description of the proposed project and location;
- Project Location figure;
- A summary of cultural resources work to date, and summary of associated information that can be made available upon request;
- A clear and definitive statement that the tribe has 90 days to request consultation; and
- The lead agency contact information.

Project Location and Description

The Project site is in the City of Arcadia at 233 and 301 East Huntington Drive and includes Assessor Parcel Numbers 5773-009-070 and 5773-009-065. The Project site is bound by Huntington Drive to the south, Gateway Drive to the east, and existing hotel uses to the north and west. The Project site includes approximately 2.23 acres, as shown on the attached Figure 1, Project Location.

The Project would involve the demolition of existing structures on the Project site, including a two-story restaurant building (The Derby) at 233 East Huntington Drive, a one-story restaurant building (Souplantation) at 301 East Hunting Drive, and the associated surface parking. The proposed Lot Line Adjustment would merge the two existing lots into one legal lot.

The Project would construct The Derby as a larger, two-story restaurant as part of a new, six-story mixed-use development consisting of restaurant, cafe, and multi-family residential uses. The Project's multifamily residential component would include a total of 214 for-rent dwelling units, including nine affordable units. The mixed-use building would front onto East Huntington Drive and would include a landscaped residential pool and amenity space, including an approximately 4,800 square feet (sf) roof deck and 1,100 sf indoor amenity kitchen for residents. Additional residential amenities would include a 6,500 sf landscaped courtyard, herb garden, and shared outdoor cooking space as well as

other interior residential amenities such as a fitness center, co-working space, and yoga room.

The Project would include one level of subterranean (i.e., basement level) parking for residents, as well as exterior and interior ground-level commercial and valet parking areas. The Project would provide a total of 414 parking spaces consisting of 241 residential and 173 commercial/valet spaces. Approximately 10% of the spaces provided would include Electric Vehicle (EV) charging stations. Off-site improvements would be required within the sidewalk and roadway rights-of-way along East Huntington Drive and Gateway Drive. These improvements would include modification and/or relocation of existing curb cuts, utility connections, removal of signage, street light relocation, and new/replacement street trees

Project Involves Ground Disturbance: Yes

Summary of Cultural Resources Work and Documentation

A CHRIS records search was performed at the South Central Coast Information Center (SCCIC). Results of the cultural resources records search indicated that twenty-four (24) previous cultural resource studies have been conducted between 1984 and 2015 within 1 mile of the proposed Project site. Of these studies, one (1) overlaps the proposed Project site. The entirety of the proposed Project site has been subjected to previous cultural resource investigations. The SCCIC records indicate that 122 cultural resources have been previously recorded within 1-mile of the proposed Project site. Of these 121 are historic built environment resources and one (1) is a historic-era archaeological resource; none overlap the Project site. No prehistoric cultural resources of a Native American nature have previously recorded within 1 mile of the Project site. Cultural resources documentation can be provided upon request. Please note, this information should be considered confidential and is not to be redistributed to individuals without traditional or cultural affiliation.

Consultation Request

Your participation in this local planning process is important and the City welcomes the opportunity to consult with the Soboba Band of Luiseno Indians, if it is so desired. Pursuant to Government Code Section 65352.3(a)(2), you have 90 days from the receipt of this letter to request consultation with the City of Arcadia. Please submit your written request to the City of Arcadia at the address below or via email to Ms. Fiona Graham, Planning Services Manager (fgraham@arcadiaca.gov). All requests for formal tribal consultation, pursuant to SB-18, must be received within 90 days of receipt of this notice. Please include in any request the name of the designated lead contact person.
Sincerely,

Ms. Fiona Graham, Planning Services Manager

Soboba Band of Luiseno Indians
Joseph Ontiveros, Cultural Resource Department
[redacted]

Re: ***Formal Notification for The Derby Mixed-Use Project, Pursuant to Senate Bill 18***

Dear Mr. Joseph Ontiveros,

The Native American Heritage Commission (NAHC) has identified your tribe as one with traditional lands or cultural places located within the boundary of the proposed The Derby Mixed-Use Project (proposed Project). The proposed Project requires amendments to the City General Plan and is therefore subject to SB 18 (Government Code Section 65352.3). This letter serves as a formal notification and invitation to consult with the City of Arcadia (City) on the proposed Project pursuant to SB 18.

The present notice includes:

- A description of the proposed Project and location;
- Project Location figure;
- A summary of cultural resources work to date, and summary of associated information that can be made available upon request;
- A clear and definitive statement that the tribe has 90 days to request consultation; and
- The lead agency contact information.

Project Location and Description

The Project site is in the City of Arcadia at 233 and 301 East Huntington Drive and includes Assessor Parcel Numbers 5773-009-070 and 5773-009-065. The Project site is bound by Huntington Drive to the south, Gateway Drive to the east, and existing hotel uses to the north and west. The Project site includes approximately 2.23 acres, as shown on the attached Figure 1, Project Location.

The Project would involve the demolition of existing structures on the Project site, including a two-story restaurant building (The Derby) at 233 East Huntington Drive, a one-story restaurant building (Souplantation) at 301 East Hunting Drive, and the associated surface parking. The proposed Lot Line Adjustment would merge the two existing lots into one legal lot.

The Project would construct The Derby as a larger, two-story restaurant as part of a new, six-story mixed-use development consisting of restaurant, café, and multifamily residential uses. The Project's multifamily residential component would include a total of 214 for-rent dwelling units, including nine affordable units. The mixed-use building would front onto East Huntington Drive and would include a landscaped residential pool and amenity space, including an approximately 4,800 square feet (sf) roof deck and 1,100 sf indoor amenity kitchen for residents. Additional residential amenities would include a 6,500 sf landscaped

(626) 447-3309 Fax
www.ArcadiaCA.gov

courtyard, herb garden, and shared outdoor cooking space as well as other interior residential amenities such as a fitness center, co-working space, and yoga room.

The Project would include one level of subterranean (i.e., basement level) parking for residents, as well as exterior and interior ground-level commercial and valet parking areas. The Project would provide a total of 414 parking spaces consisting of 241 residential and 173 commercial/valet spaces. Approximately 10% of the spaces provided would include electric vehicle charging stations. Off-site improvements would be required within the sidewalk and roadway rights-of-way along East Huntington Drive and Gateway Drive. These improvements would include modification and/or relocation of existing curb cuts, utility connections, removal of signage, street light relocation, and new/replacement street trees

Project Involves Ground Disturbance: Yes

Summary of Cultural Resources Work and Documentation

A CHRIS records search was performed at the South Central Coast Information Center (SCCIC). Results of the cultural resources records search indicated that twenty-four (24) previous cultural resource studies have been conducted between 1984 and 2015 within 1 mile of the proposed Project site. Of these studies, one (1) overlaps the proposed Project site. The entirety of the proposed Project site has been subjected to previous cultural resource investigations. The SCCIC records indicate that 122 cultural resources have been previously recorded within 1-mile of the proposed Project site. Of these 121 are historic built environment resources and one (1) is a historic-era archaeological resource; none overlap the Project site. No prehistoric cultural resources of a Native American nature have previously recorded within one mile of the Project site. Cultural resources documentation can be provided upon request. Please note, this information should be considered confidential and is not to be redistributed to individuals without traditional or cultural affiliation.

Consultation Request

Your participation in this local planning process is important and the City welcomes the opportunity to consult with the Soboba Band of Luiseno Indians, if it is so desired. APPENDIX C.....7
APPENDIX D.....8
APPENDIX E.....9
APPENDIX F.....9

1.0 Energy Requirements:

1.1 Electricity Requirements:

Based on the discussions with SCE, they serve the region and have generated a request for will serve letter.

1.2 Natural Gas Requirements: A request for will serve including information on use and square footages of the proposed project as well as specific questions relating to the environmental impact of the project was sent to Southern California Gas (SCG) to determine if SCG has the capacity to serve the project and what the impact would be.

SCG included a will serve letter stating that they have service in the area available for our project. SCG can serve the project, however the exact impacts to their system cannot be determined without specific loading requirements for the proposed building. See Appendix A for SCG Will Serve Letter. Since the proposed project can be served by SCG, the impact should be less than significant.

2.0 Sewer Requirements:

2.1 Existing Sewer Infrastructure:

Sewer for this site is served by the City of Arcadia. The existing services are being provided through an existing 8" VCP in Huntington Dr and an 8" pipe that goes through the project site.

2.2 Proposed Sewer Infrastructure:

Proposed sewer infrastructure will include new lateral connections to the existing sewer system in Huntington Dr.

2.3 Existing/Future Sewer Infrastructure Constraints:

To determine the constraints on the existing sewer infrastructure as a result of the proposed project, a sewer study and flow monitoring was done to see if the proposed system would exceed the existing design capacity of the sewer system. The results from the sewer study determined that there would be a nominal increase in the sewer system based on the design criteria set by the city and as a result the project would need to implement a device that could restrict peak flow from the proposed development or take alternative measure to ensure that the existing network does not go beyond its design capacity.

3.0 Water Requirements:

3.1 Existing Water Infrastructure:

Domestic and Fire Water for this site is served by the City of Arcadia. The existing services are being provided through an existing 12" cast iron water main in Huntington Dr and a 12" cast iron water main in Gateway Dr

A letter from the City of Arcadia, Development Services states that 59psi Static Pressure is available on the South side of the Huntington Dr and 60psi Static pressure is available on the Gateway Dr. Both the mains are available for Domestic or Fire services.

Per the City of Arcadia 2020 Urban Water Management Plan (UWMP), the current Multi-Family Potable Water Use was 2,072 acre-feet for the year 2020. The projected Multi-Family Potable Water Use for the year 2025 is 2,171 acre-feet, which is a difference of 99 acre-feet per year, or 88,323 gallons per day (GPD).

3.2 Proposed Water Infrastructure:

Proposed water infrastructure will include new water meters and lateral connections to the existing water system in Gateway Dr. to provide domestic water, fire water and irrigation water to the proposed project. A minimum requirement of 20psi is required at the building face per CA plumbing code and based on the pressure available in the main on Huntington Dr. and Gateway Dr., there should be more than enough flow to suffice the proposed development. Possible connections may be required to water mains in Huntington Dr. for additional fire hydrants as required for the project.

The proposed potable water use for the project is 51,403 Gallons Per Day (GPD). This is based on the LA County Sanitation District wastewater generation factors for domestic water use (50,934 GPD) and the City's Maximum Applied Water Allowance (MAWA) for irrigation use (469 GPD). This is within the estimate for future yearly potable water use of 88,323 GPD per UWMP.

Subject: Will Server request for 233 E Huntington Dr; Arcadia

Thank you for inquiring about the availability of natural gas service for your project. We are pleased to inform you that Southern California Gas Company (SoCalGas) has facilities in the area where the above named project is being proposed. The service would be in accordance with SoCalGas' policies and extension rules on file with the California Public Utilities Commission (CPUC) at the time contractual arrangements are made.

This letter should not be considered a contractual commitment to serve the proposed project, and is only provided for informational purposes only. The availability of natural gas service is based upon natural gas supply conditions and is subject to changes in law or regulation. As a public utility, SoCalGas is under the jurisdiction of the Commission and certain federal regulatory agencies, and gas service will be provided in accordance with the rules and regulations in effect at the time service is provided. Natural gas service is also subject to environmental regulations, which could affect the construction of a main or service line extension (for example, if hazardous wastes were encountered in the process of installing the line). Applicable regulations will be determined once a contract with SoCalGas is executed.

If you need assistance choosing the appropriate gas equipment for your project, or would like to discuss the most effective applications of energy efficiency techniques, please contact our area Service Center at 800-427-2200.

Thank you again for choosing clean, reliable, and safe natural gas, your best energy value.

CONSTRUCTION NOTES

SANITARY SEWER

SS1 CONTRACTOR TO LOCATE AND CONNECT TO EXISTING SEWER LATERAL. IF UNAVAILABLE, INSTALL HOUSE CONNECTION PER GREEN BOOK STANDARD PLANS

SS2 INSTALL VCP SEWER PIPE. 2% MIN SLOPE.

SS3 BUILDING POINT OF CONNECTION 5' FROM BUILDING. SEE PLUMBING DRAWING FOR CONTINUATION.

DOMESTIC WATER

W1 CONTRACTOR TO ORDER NEW DOMESTIC WATER SERVICE CONNECTION FROM CITY OF ARCADIA WATER DEPARTMENT.

W2 INSTALL DOMESTIC WATER METER.

W3 INSTALL DUCTILE IRON PIPE, CLASS 52 WATER PIPE.

W4 POINT OF CONNECTION TO THE BUILDING. SEE PLUMBING PLANS FOR CONTINUATION.

W5 INSTALL REDUCED PRESSURE BACKFLOW PREVENTER IN BASEMENT PER CITY OF ARCADIA STANDARD PLAN 712. SEE PLUMBING DRAWINGS FOR LOCATION AND CONTINUATION.

FIRE WATER

F1 CONTRACTOR TO ORDER NEW FIRE SERVICE CONNECTION FROM THE CITY OF ARCADIA WATER DEPARTMENT

F2 INSTALL DUCTILE IRON PIPE, CLASS 52 WATER PIPE. SIZE TO BE CONFIRMED WITH FIRE SPRINKLER PLANS.

F3 POINT OF CONNECTION TO THE BUILDING. SEE PLUMBING PLANS FOR CONTINUATION.

F4 INSTALL DOUBLE CHECK BACKFLOW PREVENTER PER CITY OF ARCADIA STANDARD PLAN 712 IN BASEMENT. SEE PLUMBING AND FIRE SPRINKLER PLANS FOR LOCATION AND CONTINUATION.

F5 INSTALL FIRE HYDRANT PER CITY OF ARCADIA WATER STANDARD PLAN 706

IRRIGATION WATER

IRR1 CONTRACTOR TO ORDER NEW IRRIGATION WATER SERVICE CONNECTION FROM CITY OF ARCADIA WD.

IRR2 INSTALL NEW IRRIGATION WATER METER PER IRRIGATION PLANS PER CITY OF ARCADIA STANDARD PLAN 704.

IRR3 INSTALL COPPER PIPE.

IRR4 INSTALL IRRIGATION BACKFLOW PREVENTOR. SEE LANDSCAPE DRAWINGS FOR CONTINUATION.

NOTES

1. ALL PIPING >2" FROM WATER METER TO THE BACK OF BACKFLOW PREVENTION DEVICE SHALL BE DUCTILE IRON PIPE, CLASS 52

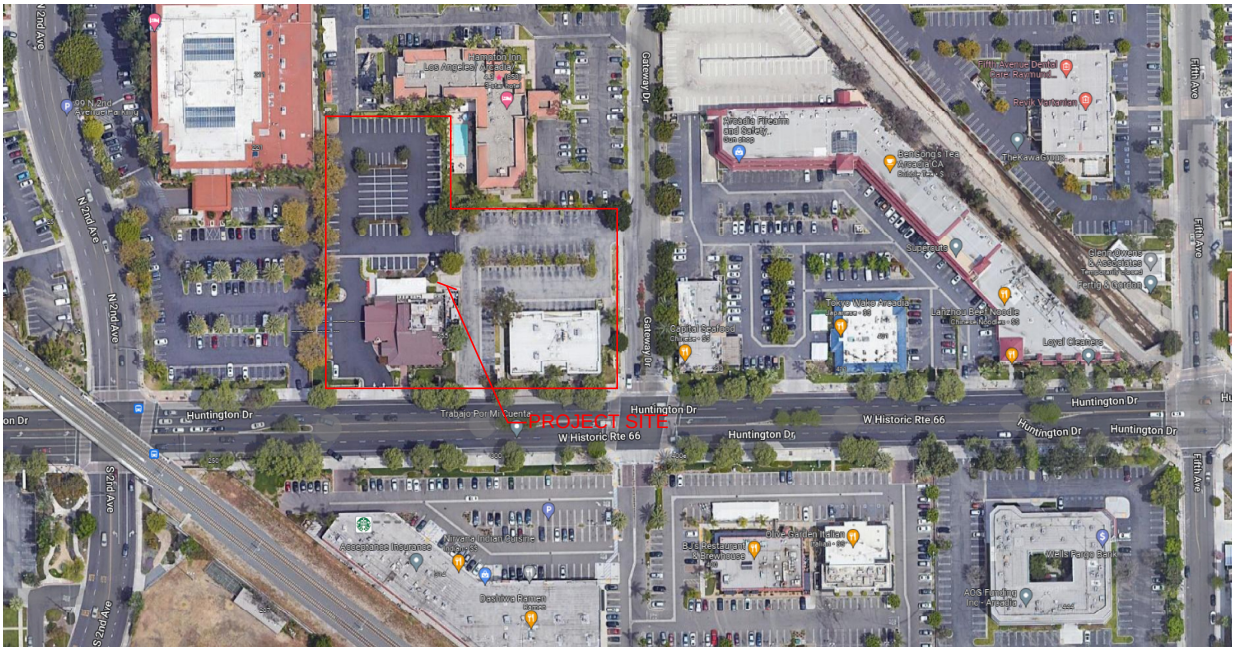
3.0 PROJECT DESCRIPTION
4.0 CAPACITY ANALYSIS CRITERIA
5.0 SEWER CAPACITY ANALYSIS WITH PROPOSED PROJECT
6.0 CONCLUSION

APPENDICES



APPENDIX A SEWER STUDY MAP
APPENDIX B ZONING MAP
APPENDIX C AS BUILT PLANS
APPENDIX D FLOW CALCULATION
APPENDIX E SEWER MONITORING (ADS)
APPENDIX F ESTIMATED AVERAGE DAILY SEWAGE FLOWS FOR VARIOUS OCCUPANCIES

1 INTRODUCTION

The purpose of this sewer area study is to determine and show:

1. The capacity of the existing sewer pipes
2. The existing sewer facilities are adequate or inadequate for the proposed development.

Figure 1: Project Site Location

319 Main St,
El Segundo, California 90245
t:213/239 9700
info@labibse.com
www.labibse.com

2 SITE DESCRIPTION

According to the city of Arcadia, the site is identified with Assessor's Parcel Numbers (APNs) #5753-009-065 and #5753-009-070. The existing site is approximately 2.23 acres and currently consists of restaurants and an asphalt-paved parking area. The site is bounded by Huntington Dr to the South, Asphalt-paved parking areas to the west, Hampton Inn to the North, and Gateway Dr to the east.

3 PROJECT DESCRIPTION

The existing site is to be demolished which consists of two commercial structures and asphalt paved parking lots. The proposed development is a mixed-use building involving 214 residential units (53 studios, 105 one-bedroom units, 4 VLI Senior studio units, 5 VLI Senior 1-bedroom units and 49 two-bedroom units) with one (1) subterranean parking and parking at grade followed by 4 levels of residential stories which are on floors 2 through 6, and 17,553 SF of commercial retail structures.

4 CAPACITY ANALYSIS CRITERIA

The flow for existing conditions at the project site was analyzed using the County of Los Angeles Department of Public Works (LADPW) Sewer generation factors(shown in Table 2). The existing flow capacity is taken from flow monitoring done by ADS, environmental(Appendix E). The cumulative calculated flow for each segment was compared to the sewer capacity at each segment. The equation for the tributary sewer discharge is as follows:

$$Q = qA$$

Where: Q = sewer discharge (cfs); q = Average Daily Flow (gal/day).
A = Area (Acres) and Dwelling units for the apartment

All existing sewer lines/mains were obtained from as-built plans (Appendix C) from city of Arcadia and Monrovia. Capacity in these lines would be analyzed using the Kutter's Formula, zoning map (Appendix B) from the city of Arcadia website and estimated flows based on occupancies (Appendix F) from LA County. The Pipe capacity was calculated using Flow Master and manning's constant as n =0.013, refer to appendix D.

319 Main St,
El Segundo, California 90245
t:213/239 9700
info@labibse.com
www.labibse.com

The existing condition analysis is shown in Table 1.

Monitored Manholes	Segment		Pipe Size (in.)	Observed Peak Flow (cfs)	Observed Peak depth (in)	d/D	%Full	COMMENTS
	MH #	MH #						
MH 609-45	Upstream	609-45	8	0.39	2.57	0.32	32.1%	Below Pipe Capacity

info@labibse.com
www.labibse.com

5 SEWER CAPACITY ANALYSIS WITH PROPOSED PROJECT

The proposed project changes the existing zoning of commercial to mixed usage which increases the developed area marginally.

The analysis of sewer capacity based on the proposed condition is shown in Table 2 below.

Monitored Manholes	Segment		Area (Acres)	Occupancy	Description	No. units or seats (restaurant) or SF	Average Daily Flow (gal/day) per unit/sf/seat	gal/day	Flow (cfs)	Peak Flow (cfs)	Existing flow to be removed	Proposed peak flow	Monitored Flow (cfs)	Cumulative flow (cfs)	Pipe Size (in.)	Calculated Normal depth based on the proposed development (in)	d/D	%Full	COMMENTS

MH 610-70	609-53	610-70	Ex. Flow Data from ADS									-	0.68	0.88	10	4.47	0.45	44.7%	Below Pipe Capacity
MH 611-42	610-70	611-42	Ex. Flow Data from ADS									-	0.71	0.91	10	4.18	0.42	41.8%	Below Pipe Capacity
MH 611-44	611-42	611-44	Ex. Flow Data from ADS									-	0.77	0.97	10	4.66	0.47	46.6%	Below Pipe Capacity
MH 611-57	611-44	611-57	Ex. Flow Data from ADS									-	0.72	0.92	12	5.80	0.48	48.3%	Below Pipe Capacity

319 Main St,
El Segundo, California 90245
t:213/239 9700
info@labibse.com
www.labibse.com

6 CONCLUSION

Based on the analysis presented above there is a nominal increase in the flow depth between the Manholes 609-45 and 609-53. Using engineering judgement, it is feasible to conclude that the increase in the flow depth will be non-impactful to the existing network and would not bring a life safety issue.

SUBJECT: 4th Ave Sewer Flow Monitoring, Arcadia, CA 2023

Dear Linda Vidov,

ADS is pleased to submit the report for the 4th Avenue Sewer Flow Monitoring Arcadia, CA study completed on behalf of Top Commercial Realty Inc. The metering was conducted at six (6) locations. The study was conducted during the period of Saturday, 28 January 2023 to Wednesday, 22 February 2023.

The report contains depth, velocity, and quantity hydrographs as well as daily long tables for the metering period. An Excel file containing depth, quantity, and velocity entities for the monitoring location in 5-minute format was provided previously.

In addition, we would be happy to further explain any details about the report that may seem unclear. Should you have any questions or comments, you may contact the Project Manager, Paul Mitchell at 714.379.9778 xt.223.

It has been our pleasure to be of service to you in the performance of this project. Thank you for choosing ADS products and services to meet your flow monitoring needs.

Sincerely,
ADS ENVIRONMENTAL SERVICES

Sean O'Donnell
Hydraulic Data Analyst

Scope and Methodology

Introduction

Top Commercial Realty, Inc. entered into an agreement with ADS Environmental Services to conduct flow monitoring at (6) six flow locations in the Arcadia, CA Sanitary Collection System. The study was scheduled for a period of (7) seven days. Please note that site MH057 has a different monitoring period than the other locations due to originally being installed one manhole upstream of the desired location. Once in place, the flow monitoring equipment was to be used to measure depth, velocity, and to quantify flows. The objective of this study was to confirm flows from this area for planning purposes.

Project Scope

The scope of this study involved using a flow monitor to quantify wastewater flow at the designated locations for the study period. Specifically, the study included the following key components.

- Investigate the proposed flow-monitoring site for adequate hydraulic conditions
- Flow monitor installation
- Flow monitor confirmations and data collections
- Flow data analysis

Equipment installation was completed on January 27, 2023. The monitoring period began on January 28, 2023 and was completed on February 22, 2023. Upon completion of the study, equipment was removed from the system.

Flow Monitoring Equipment

The ***ADS FlowShark Triton*** monitor was selected for this project. This flow monitor is an area velocity flow monitor that uses both the Continuity and Manning's equations to measure flow.

The ADS FlowShark Triton monitor consists of data acquisition sensors and a battery-powered microcomputer. The microcomputer includes a processor unit, data storage, and an on-board clock to control and synchronize the sensor recordings. The monitor was programmed to acquire and store depth of flow and velocity readings at 5-minute intervals.

The FS Triton monitor features cross-checking using multiple technologies in each sensor for continuous running of comparisons and tolerances. The FS Triton monitor can support two (2) sets of sensors. The sensor option used for this project was:

The Peak Combo Sensor installed at the bottom of the pipe includes three types of data acquisition technologies.

The ***up looking ultrasonic depth*** uses sound waves from two independent transceivers to measure the distance from the sensor upward toward the flow surface; applying the speed of sound in the water and the temperature measured by sensor to calculate depth.

The ***pressure depth*** is calculated by using a piezo-resistive crystal to determine the difference between hydrostatic and atmospheric pressure. The pressure sensor is temperature compensated and vented to the atmosphere through a desiccant filled breather tube.

To obtain ***peak velocity*****,** the sensor sends an ultrasonic signal at an angle upward through the widest cross-section of the oncoming flow. The signal is reflected by suspended particles, air bubbles, or organic matter with a frequency shift proportional to the velocity of the reflecting objects. The reflected signal is received by the sensor and processed using digital spectrum analysis to determine the peak flow velocity.

Installation

Installation of flow monitoring equipment typically proceeds in four steps. First, the site is investigated for safety and to determine physical and hydraulic suitability for the flow monitoring equipment. Second, the equipment is physically installed at the selected location. Third, the monitor is tested to assure proper operation of the velocity and depth of flow sensors and verify that the monitor clock is operational and synchronized to the master computer clock. Fourth, the depth and velocity sensors are confirmed and line confirmations are performed.

In pipes up to 42 inches in diameter, the sensors were mounted on expandable stainless-steel rings, inserted at least a foot upstream into influent pipes and tightened against the inside walls of the pipes. Influent pipe installations reduce the influences of turbulence and backwater often caused by changes in channel geometry in manholes.

Data Collection, Confirmation, and Quality Assurance

Data collects were done remotely via wireless connect on a weekly basis. As needed, during the monitoring period, field crews visit each monitoring location to verify proper monitor operation and document field conditions. The following quality assurance steps are taken to assure the integrity of the collected data:

Measure power supplies: monitors were powered by dry cell battery packs. Voltages were recorded and battery packs replaced, as necessary. Separate batteries provided back-up power to memory allowing primary batteries to be replaced without loss of data.

Clock synchronization: Field crews synchronized monitor clocks to master clocks.

Confirm depth and velocity readings: Field crews descended into meter manholes to manually measure depths and velocities and compare the meter readings to confirm that they agreed. The site met the criteria for confirmation for depth and velocity unless noted otherwise in the site commentary section. They also measured silt levels, if any, in the inverts of the pipes. Silt areas were subtracted from flow areas to compute true areas of flow.

Confirm average velocities through cross-sectional velocity profiles: Since ADS velocity sensors measure peak velocity, field crews collected cross-sectional velocity profiles in order to develop a relationship between peak and average velocity in lines that meet the hydraulic criteria.

Upload and Review Data: Data collected from the monitors were uploaded and reviewed by a Data Analyst for completeness, outliers and deviations in the flow patterns, which indicate system anomalies or equipment failure.

Flow Quantification Methods

There are two main equations used to measure open channel flow: the ***Continuity Equation*** and the ***Manning Equation.*** The Continuity Equation, which is considered the most accurate, can be used if both depth of flow and velocity are available. In cases where velocity measurements are not available or not practical to obtain, the Manning Equation can be used to estimate velocity from the depth data based on certain physical characteristics of the pipe (i.e. the slope and roughness of the pipe being measured). However, the Manning equation assumes uniform, steady flow hydraulic conditions with non-varying roughness, which are typically invalid assumptions in most sanitary sewers. The Continuity Equation was used exclusively for this study.

Continuity Equation

The Continuity Equation states that the flow quantity (Q) is equal to the wetted area (A) multiplied by the average velocity (V) of the flow.

Q = A * V

This equation is applicable in a variety of conditions including backwater, surcharge, and reverse flow.

Data Analysis and Presentation

Data Analysis

A flow monitor is typically programmed to collect data at 5-minute intervals throughout the monitoring period. The monitor stores raw data consisting of (1) the ultrasonic depth, (2) the peak velocity and (3) the pressure depth. The data is imported into ADS's proprietary software and is examined by a data analyst to verify its integrity. The data analyst also reviews the daily field reports and site visit records to identify conditions that would affect the collected data.

Velocity profiles and the line confirmation data developed by the field personnel are reviewed by the data analyst to identify inconsistencies and verify data integrity. Velocity profiles are reviewed and an average to peak velocity ratio is calculated for the site. This ratio is used in converting the peak velocity measured by the sensor to the average velocity used in the Continuity equation. The data analyst selects which depth sensor entity will be used to calculate the final depth information. Silt levels present at each site visit are reviewed and representative silt levels established.

Occasionally the velocity sensor's performance may be compromised resulting in invalid readings sporadically during the monitoring period. This is generally caused by excessive debris (silt) blocking the sensor's crystals, shallow flows (~< 1") that may drop below the top of the sensor or very clear flows lacking the particles needed to measure rate. In order to use the Continuity equation to quantify the flow during these periods, a Data Analyst and/or Engineer will use the site's historical pipe curve (depth vs. velocity) data along with valid field confirmations to reconstitute and replace the false velocity recordings with expected velocity readings for a given historical depth along the curve.

Selections for the above parameters can be constant or can change during the monitoring period. While the data analysis process is described in a linear manner, it often requires an iterative approach to accurately complete.

Data Presentation

This type of flow monitoring project generates a large volume of data. To facilitate review of the data, results have been provided in graphical and tabular formats. The flow data is presented graphically in the form of scattergraphs and hydrographs. Hydrographs are based on 5-minute averaging. Tables are provided in daily average format. These tables show the flow rate for each day, along with the daily minimum and maximums, the times they were observed, the total daily flow, and total flow for the month (or monitoring period). The following explanation of terms may aid in interpretation of the flow data table and hydrograph.

DEPTH - Final calculated depth measurement (in inches)

QUANTITY - Final calculated flow rate (in MGD)

VELOCITY - Final calculated flow velocity (in feet per second)

REPORT TOTAL - Total volume of flow recorded for the indicated time period (in MG)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Saturday, 28 January 2023 to Friday, 03 February 2023**, along with observed minimum and maximum data, are provided in the following table.

This site functioned under normal conditions during the study period. No surcharge conditions were experienced at this location.

This line is located downstream of site MH070. A small net flow was recorded between the sites.

Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	2.44	4.30	0.294
Minimum	1.69	1.77	0.099
Maximum	3.17	4.96	0.459
Min Time	01/28/2023 5:50:00 AM	02/01/2023 5:05:00 AM	02/01/2023 5:05:00 AM
Max Time	01/31/2023 8:20:00 PM	01/31/2023 7:45:00 PM	01/31/2023 8:05:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the five minutes average.

SITE INFORMATION

Pipe	Elliptical (9.88 in H x 9.75 in W)
Silt	0.00 (in)

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Saturday, 28 January 2023 to Friday, 03 February 2023**, along with observed minimum and maximum data, are provided in the following table.

This site functioned under normal conditions during the study period. No surcharge conditions were experienced at this location.

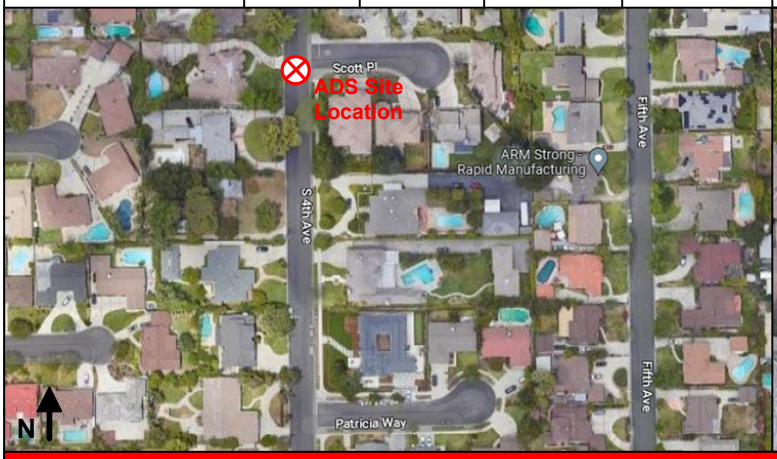
This line is located downstream of site MH053. A moderate net flow was recorded between the sites.

Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	2.50	3.98	0.276
Minimum	1.71	2.51	0.111
Maximum	3.33	4.56	0.440
Min Time	01/28/2023 4:55:00 AM	02/03/2023 4:15:00 AM	01/28/2023 5:00:00 AM
Max Time	01/31/2023 8:00:00 PM	01/31/2023 6:30:00 PM	01/31/2023 8:00:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the five minutes average.

DATA UPTIME



Data uptime observed during **Saturday, 28 January 2023 to Friday, 03 February 2023** is provided in the following table:

OBSERVATIONS

Average flow depth, velocity, and quantity data observed during **Thursday, 16 February 2023 to Wednesday, 22 February 2023**, along with observed minimum and maximum data, are provided in the following table. This site was originally installed in an incorrect location. The equipment was relocated to the correct manhole and the monitoring period was extended to capture the correct data.

This site functioned under normal conditions during the study period. No surcharge conditions were experienced at this location.

This line is located downstream of site MH044. No perceptible net flow was recorded between the sites.

Observed Flow Conditions			
Item	**DFINAL (in)**	**VFINAL (ft/s)**	**QFINAL (MGD - Total MG)**
Average	3.55	2.19	0.289
Minimum	2.10	1.31	0.079
Maximum	4.48	2.89	0.467
Min Time	02/17/2023 4:35:00 AM	02/17/2023 3:50:00 AM	02/17/2023 4:35:00 AM
Max Time	02/20/2023 9:45:00 PM	02/22/2023 9:40:00 PM	02/21/2023 8:20:00 PM

Based upon the quality and consistency of the observed flow depth and velocity data, the Continuity equation was used to calculate flow rate and quantities during the monitoring period.

Values in the Observed Flow Conditions and data on the graphical reports are based on the five minutes average.

Estimated Average Daily Sewage Flows for Various Occupancies

Occupancy	Abbreviation	*Average daily flow	
Apartment Buildings:			
Bachelor or Single dwelling units	Apt	150	gal/D.U.
1 bedroom dwelling units	Apt	200	gal/D.U.
2 bedroom dwelling units	Apt	250	gal/D.U.
3 bedroom or more dwelling units	Apt	300	gal/D.U.
Auditoriums, churches, etc.	Aud	5	gal/seat
Automobile parking	P	25	gal/1000 sq ft gross floor area
Bars, cocktails lounges, etc.	Bar	20	gal/seat
Commercial Shops & Stores	CS	100	gal/1000 sq ft gross floor area
Hospitals (surgical)	HS	500	gal/bed
Hospitals (convalescent)	HC	85	gal/bed
Hotels	H	150	gal/room
Medical Buildings	MB	300	gal/1000 sq ft gross floor area
Motels	MB	150	gal/unit
Office Buildings	Off	200	gal/1000 sq ft gross floor area
Restaurants, cafeterias, etc.	R	50	gal/seat
Schools:			
Elementary or Jr. High	S	10	gal/student
High Schools	HS	15	gal/student
Universities or Colleges	U	20	gal/student
College Dormitories	CD	85	gal/student

*Multiply the average daily flow by 2.5 to obtain the peak flow

Zoning Coefficients

Zone	Coefficient (cfs/Acre)
Agriculture ----------	0.001
Residential*:	
R-1 ----------	0.004
R-2 ----------	0.008
R-3 ----------	0.012
R-4 ----------	0.016*
Commercial:	
C-1 through C-4 ----------	0.015*
Heavy Industrial:	
M-1 through M-4 ----------	0.021*

* Individual building, commercial or industrial plant capacities shall be the determining factor when they exceed the coefficients shown

* Use 0.001 (cfs/unit) for condominiums only
