Notes:

The CalEEMod default vendor trips assigned to the building construction phases (as well as assigning building construction phase types to electrical installation, etc.) is inherently conservative.

Haul trips for import/export and concrete/paving based on data request assumptions provided to ESA. Non-phase specific haul trips provided to ESA on a monthly schedule in the *Schedule_OFFROAD* tab.

Worker trips based on CalEEMod defaults.

Each construction phase was assigned one "off-highway truck" to conservatively account for watering for dust mitigation.

Notes:

The CalEEMod default vendor trips assigned to the building construction phases (as well as assigning building construction phase types to electrical installation, etc.) is inherently conservative.

Haul trips for import/export and concrete/paving based on data request assumptions provided to ESA. Non-phase specific haul trips provided to ESA on a monthly schedule in the *Schedule_OFFROAD* tab.

Worker trips based on CalEEMod defaults.

Each construction phase was assigned one "off-highway truck" to conservatively account for watering for dust mitigation.

Assuming material balanced on site.

Construction Paving Assumptions

PAVING

Information	Amount	Units
	Backus Road & Rt 14 NB	
Total Area of Asphalt Paving	3,000	cu. ft. (assuming 1 ft depth)
Total Area of Asphalt Paving	111	CY
Maximum Number of Haul Trucks	7	Total Import Trucks
	2	Average Daily Import Trucks
Capacity of Haul Trucks	16	Cubic Yards (typically 10 to 20 cubic yards; Default is 16 cubic yards/20 tons)
Distance to Import Site (if known)	20	Miles (default assumption is 20 mi.)

4.3.5 Trip and VMT

The Trip and VMT sub-screen is used to provide the number and length (in terms of vehicle miles traveled or VMT) of on-road vehicle trips for workers, vendors, and hauling for each construction phase. Depending on the land use type and subtype combined with the various construction phases, CalEEMod will populate the fields for Number of Trips, Trip Length, and Vehicle Class for worker, vendor and haul trips, respectively, with default values. The vehicle class descriptor HHDT, MHDT means that there is a 50/50 percent mix of heavy-heavy duty trucks and medium-heavy duty trucks. Similarly, the vehicle class descriptor LDA, LDT1, LDT2 means that there is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively. The user may override the defaults and enter different weightings of vehicle fleet mixes. It is important to note that CalEEMod's database has EMFAC2017 emission factors for the following years: 2000, 2005, 2010-2035, 2040, 2045, and 2050 so if the user selects a construction year that does not have corresponding EMFAC2017 emission factors for on-road vehicles, CalEEMod has been programmed to substitute the emissions factors from nearest, lower end (e.g., oldest) year. For example, if construction will occur in year 2037 (a year which does not have emission factors), CalEEMod will substitute the emission factors from year 2035 instead. Since newer equipment tends to have less emissions than older equipment, by selecting emission factors from year 2035 (an older year), the calculations may result in a conservative, slight overestimate of emissions. Note: CalEEMod only adopts EMFAC's Statewide, Air Basin, Air Districts and County regions, it does not include EMFAC's MPO and sub-area regions.

Table 13.2.1-1. PARTICLE SIZE MULTIPLIERS FOR PAVED ROAD EQUATION

Size range[a]	Particle Size Multiplier k[b]		
	g/VKT	g/VMT	lb/VMT
PM-2.5[c]	0.15	0.25	0.00054
PM-10	0.62	1.00	0.0022
PM-15	0.77	1.23	0.0027
PM-30[d]	3.23	5.24	0.011

[a] Refers to airborne particulate matter (PM-x) with an aerodynamic diameter equal to or less than x micrometers.

[b] Units shown are grams per vehicle kilometer traveled (g/VKT), grams per vehicle mile traveled (g/VMT), and pounds per vehicle mile traveled (lb/VMT). The multiplier k includes unit conversions to produce emission factors in the units shown for the indicated size range from the mixed units required in Equation 1.

[c] The k-factors for $PM_{2.5}$:PM_{10} ratio of test runs in Reference 30.

[d] PM-30 is sometimes termed "suspendable particulate" (SP) and is often used as a surrogate for TSP.
