YEARS OF EXPERIENCE:

With Hillmann: 1 years

Total: 9 years

PROFESSIONAL EXPERIENCE:

Ms. Sunil is an Environmental Professional with 9 years of experience in Environmental Engineering. Ms. Sunil is experienced in supporting several areas of Hillmann's practice including coordination of projects, project scope creation, investigatory projects, and corrective plan implementation.

As an Environmental Project Manager, Ms. Sunil has experience writing reports for site remediation for commercial property owners and preparing respective groundwater monitoring reports. She also writes Phase I and Phase II Environmental Site Assessments and Investigation reports as well as Supplemental Site Investigation Reports. She has experience working in a variety of buildings including multifamily residential properties, commercial office buildings, retail shopping centers, gasoline service stations, hotels, dry cleaning plants, auto repair shops, industrial buildings, aerospace manufacturers, plating facilities, and various manufacturing operations.

Representative experience includes:

Environmental Engineer, John L. Hunter and Associates, Inc: From 2015 to 2017, Ms. Sunil worked as an Environmental Engineer for John L. Hunter and Associates. Her responsibilities included reviewing Water Quality Management Plans, grading & drainage plans and conducting site verification inspections. She reviewed Standard Urban Storm Water Mitigation Plans; utilized SWRCB SMARTS database, assisted in Industrial Waste Plan review. She performed detailed review of grading plans, design specifications, hydro modifications analysis, and Storm Water Best Management Practice (BMP) calculations. She assisted with annual report preparation as part of NPDES permit requirements. Additionally, Ms. Sunil was responsible for reviewing work of private Professional Engineers for compliance with City standards and she assisted in determining engineering requirements for new developments.

Engineering Tech II, Orange County Public Works- OC Engineering: From July 2013 to December 2014, Ms. Sunil worked as an Engineer for Orange County Public Works. In this position, she reviewed permits requests, provided support of capital improvement and maintenance projects, and integrated environmental values into capital improvement projects by verifying the implementation of the federal National Environmental Policy Act (NEPA) and the California Environmental Quality Act (CEQA).

Staff Aid II, Orange County Public Works- OC Road, Capital Projects: From July 2012- July 2013, Ms. Sunil served as a Staff Aid for Orange County. In this position, she was responsible for the preparation of Water Quality Management Plans and Micro Station Drafting. She provided detailed review of grading plans, design specifications, hydro modification analysis, and Storm Water Best Management Practice Calculations. She assisted with annual report preparation as part of NPDES permit requirements.

HILLMANN
CONSULTING

Staff Aid II, Orange County Road, Traffic Engineering: From March 2010 to July 2012, Ms. Sunil was a Staff Aid for the Orange County Road and Traffic Engineering team. She performed traffic investigation, assisted the traffic committee and aided in work order preparation. She analyzed traffic flows, parking issues, and intersection capacities. Ms. Sunil provided written and verbal responses to residents of unincorporated Orange County.

Assistant Engineer, RBF Consulting, Irvine, CA: From August 2007 to January 2010, Ms. Sunil was an Assistant Engineer at RBF Consulting where she conducted comprehensive evaluations of watersheds including National Pollution Discharge Elimination Systems (NPDES) compliance, incorporated BMPs, assisted public and private sector clients with NPDES compliance services, and prepared and reviewed Storm Water Pollution Prevention Plans and Water Quality Management Plans.

J. Ryan Terwilliger

Operational Manager, West Coast

EDUCATION:

B.S. Environmental Science, University of Southern California, Los Angeles, CA

CERTIFICATION:

Cal-OSHA Certified Asbestos Consultant
CDPH Accredited Lead Inspector/Assessor/ Project Monitor

CA Certified Site Surveillance Technician

OSHA 40 - Hr HAZWOPER

YEARS OF EXPERIENCE:

With Hillmann: 4 years

Total: 8 years

PROFESSIONAL EXPERIENCE:

Mr. Terwilliger is responsible for business operations, fiscal management and field staff management for Hillmann's California Office. He also performs asbestos surveys and investigations to identify asbestos and lead materials associated with occupational hazards. He supervises work practices and controls in accordance with job specifications, current EPA, OSHA and State Regulations for Asbestos remediation projects in commercial, industrial and multi-family residential buildings. Mr. Terwilliger performs IAQ, mold and moisture investigations in commercial, industrial and residential facilities nationwide. He also performs awareness training for asbestos, lead and microbial agents. Mr. Terwilliger provides litigation support consultation.

Representative Experience Includes:

Tishman Speyer Properties, Various locations: Hillmann has provided the complete environmental program for Tishman Speyer's properties since 1987. Our services include environmental health and safety, industrial hygiene, phase I environmental site assessments, asbestos surveys, air monitoring, bid administration, O&M programs and indoor air quality programs on various commercial, industrial and multi-family residential properties. Mr. Terwilliger is an Environmental Scientist on this contract, conducting on-site environmental services including phase I site assessments and NPDES water quality testing.

Westfield – Environmental Program, Various locations: Since 2000, Hillmann has been providing an environmental program encompassing environmental health and safety, Phase I environmental site assessments, asbestos and lead surveys, air monitoring, bid administration and O&M programs, industrial hygiene and indoor air quality programs, and hazardous materials assessments on their mall properties throughout the county. Mr. Terwilliger is an Environmental Scientist on this contract performing industrial hygiene services that include indoor air quality monitoring, Phase I environmental site assessments, asbestos and lead surveys.

Brookfield Office Properties, Various sites, CA: Hillmann has been providing hazardous materials surveys, development abatement specifications, and managing the oversight activities during the abatement at various Brookfield owned sites throughout California. Mr. Terwilliger functions as a Project Manager for this contract.

California Department of Transportation, Central Valley and Northern CA: Hillmann has been performing asbestos and Lead-based Paint Surveys for the California Department of Transportation. Performed comprehensive asbestos containing materials and lead-based paint surveys of residential and commercial buildings that were slated for demolition and generated report of findings in order to aid the Department of Transportation (DOT) in facilitating the road improvement programs and building renovations throughout the

HILLMANN CONSULTING

Central Valley area. Also during the abatement of asbestos from DOT owned buildings, provided contractor oversight and air monitoring services for regulatory compliance.

Verizon, Various Sites, CA. Hillmann conducted hazardous materials surveys, development abatement specifications, and project monitoring during abatement at various Verizon owned sites throughout California. Mr. Terwilliger functioned as the Project Manager.

Public Storage, Los Angeles, CA: Hillman preformed comprehensive asbestos, lead-based paint and universal waste materials survey of commercial and industrial buildings throughout Southern California. Hazardous materials surveys were conducted prior to renovation for the storage units. Mr. Terwilliger developed abatement specifications and managed the abatement activities during the renovations of the buildings. He functioned as the Project Manager on this contract.

Construction Procedures, Materials and Costs – a ten-week course at Rutgers Center for Continuing Professional Development

YEARS OF EXPERIENCE:

With Hillmann: 31 years

Total: 31 years

PROFESSIONAL EXPERIENCE:

Mr. Rutherford has currently functions as Hillman's Quality Management Director and has served as the Director of Due Diligence as well. He has more than 30 years of experience in the environmental consulting industry, and over 26 years in managing and performing environmental property assessments including USEPA and NJDEP Preliminary Assessments.

As the Quality Management Director, Mr. Rutherford is responsible for overseeing the quality of all environmental and due diligence services across the company, including development of standard protocols, report content/templates, and account management strategies. He has managed large national accounts for real estate due diligence services including a desktop review service that handled nearly 500 properties per year. Mr. Rutherford is also the program manager for Hillmann's NJDOH approved "Indoor Environmental Health Assessment of Child Care and Educational Facilities."

Additionally, Mr. Rutherford performs and/or manages Phase II Environmental Site Assessments (ESAs), Underground Storage Tank (UST) investigations/closures, Property Condition Assessments (PCA), Construction Monitoring inspections, Asbestos surveys, Asbestos Abatement Project Monitoring services, Indoor Air Quality (IAQ) surveys, NPDES Discharge Monitoring, Community Right-to-Know surveys, and Environmental Risk Analysis for compliance with the Sarbanes-Oxley act.

Representative experience includes:

Tishman Speyer Properties, various locations nationwide: Hillmann has provided the complete environmental program for Tishman Speyer's properties since 1987. Our services include phase I ESAs, asbestos surveys, air monitoring, bid administration, O&M programs, industrial hygiene, and indoor air quality programs. Mr. Rutherford is a Project Manager on this contract. This contract is ongoing.

Citigroup, various locations nationwide: Since 1995, Hillmann has provided the complete environmental program including phase I ESAs, asbestos and lead surveys, air monitoring, bid administration, O&M programs, industrial hygiene, indoor air quality programs, geology services, radon testing, and hazardous materials assessments. Mr. Rutherford is an Account Manager on this contract. This project is ongoing.

TD Bank, N.A., various locations: Hillmann has performed phase I ESAs at several properties on behalf of TD Bank, N.A. Mr. Rutherford manages the group that conducts the assessments for this contract, which is ongoing.

HSBC Bank, various locations nationwide/NYC Metro: Hillmann is providing the complete environmental program including phase I ESAs, asbestos surveys, air monitoring, bid administration, O&M programs, industrial hygiene, and indoor air quality programs. Mr. Rutherford is a Project Manager on this contract, which is ongoing.

HILLMANN CONSULTING

Peapack Gladstone Bank, various locations in NY, NJ, and PA: Hillmann has performed phase I ESAs at numerous properties on behalf of Peapack Gladstone Bank since 2013. Mr. Rutherford manages the staff that conducts the assessments for this contract, which is ongoing.

The Davis Companies, Norwalk, CT: On behalf of The Davis Companies, Hillmann provided an Advisory Report of analysis and opinion regarding the potential electromagnetic fields (EMF) health risks that may be associated with a newly constructed sub-station on an adjacent property.

Multi-Family Portfolio, New York, NY: Hillmann conducted environmental due diligence services and construction plan and cost review for a rehabilitation project of 45 low income multi-family apartment buildings in upper Manhattan. Mr. Rutherford coordinated and oversaw the completion of 45 phase I ESA reports and 5 phase II site investigations.

MBD Community Housing Corporation, Bronx, NY: Mr. Rutherford's staff has conducted environmental due diligence services for various multi-family apartment buildings located throughout New York City; including a portfolio of 11 buildings in Bronx, NY. Various projects have been completed between 2009 and 2016.

International Portfolio of Industrial Properties: Completed in 2012, Mr. Rutherford was the Project Manager for a multi-level environmental due diligence assessment for a portfolio of 113 light industrial properties located throughout the United States and Mexico.

Confidential client, various locations nationwide: Between 2008 and 2013, as a Project Manager, Mr. Rutherford was responsible for conducting multiple Risk Assessments. The purpose for conducting the assessments was to project a cost estimate for potential environmental liabilities associated with over 3,700 former drug store facilities in compliance with the Sarbanes-Oxley act.

1. Introduction

1.1. Scope of Work

The purpose of this study is to provide hydrology calculations in support of a proposed residential townhome development in the City of Oceanside, California. This report will quantify runoff for the 100-year frequency storm event and recommend storm drain infrastructure needed to convey stormwater through the site safely. Treatment of stormwater runoff from the site has been addressed in a separate report entitled "Stormwater Quality Management Plan for Pacifica Elementary School" prepared by Hunsaker & Associates, San Diego.

1.2. Existing Condition

The Pacifica Elementary School property is a 14.55-acre site located in the City of Oceanside, CA, west of Roja Drive and Macario Drive intersection. The site is an old school development with no buildings, and it is partially occupied with a parking lot, driveways, and large concrete pad while the western portion consists of vacant land. Refer to the project vicinity map located in appendix 1.

The property is accessible from Macario Drive by an existing paved driveway and from Roja Drive by Malaga drive, an existing paved road within the adjacent property southeast of the project. Residential developments bound the property to the north, south, west and east. An existing drainage channel that runs in a north-south direction borders the western portion of the site.

The studied drainage area is approximately 17.9 ac with 28% total imperviousness, including 3.35-ac offsite area. 0.65 acres of the offsite area is located southeast of the property, and drains through the project, to commingle with the onsite flows. The comingled runoff surface flows westerly towards the existing natural channel, where it combines with the runoff from the western offsite area. Then, the total flow drains southerly in the channel to the analyzed discharge point (at Node 108).

Onsite runoff from the northeastern portion of the site drains in a southwest direction to be captured via existing grate inlets and routed to the existing 24" stormdrain (at Node 104). The existing 24" stormdrain runs across the site southwesterly carrying the flow from node 104 with the bypassed offsite flows (coming from Macario Drive) to discharge into the existing channel (at Node 106). Runoff from the rest of the site is conveyed via surface flow in a southwest direction to discharge into the said channel and reach the analyzed discharge point (Node 108).

See **Appendix 4** for calculations of existing peak runoff from the site.

According to the FEMA Flood Insurance Rate Map (FIRM) for this site, the project is located in an unshaded Zone X, which is defined as "Areas determined to be outside the 500-year floodplain". Refer to the FIRMette Map in **Appendix 1**.

Per NRCS Soil report, the site consists of 33% Hydrologic Soil Group “B” and 67% of Hydrologic Soil Group “D”. Refer to **Appendix 2** for NRCS soils information.

The runoff coefficient for each subarea was calculated based on soil type and impervious percentage using the formula from San Diego County Hydrology Manual Section 3.1.2

C= 0.90 x (% Impervious) + Cp x (1 - % Impervious)

Cp = Pervious Coefficient Runoff value for the soil type (per San Diego County Hydrology Manual Table 3.1)
Cp Soil B = 0.25, Cp Soil D= 0.35
Cp-Subarea = (Soil type B% * 0.25) + (Soil Type D%* 0.35)

Please refer to existing conditions AES Input Data spreadsheet in appendix 4 for each subarea runoff factor.

Table 1 below summarizes the 100-year existing condition peak flow at the downstream project boundary.

TABLE 1 - Summary of Existing Flows

Exhibit	Node Number on Exhibit	Discharge Location	Drainage Area (ac)	C Area-Average Runoff Coefficient	Tc (min)	Q100-Year Peak Flow (cfs)
1	108	Southwest of the site	17.92	0.479	29.95	19.57

1.3. Proposed Condition

The proposed project is a 164-unit townhome development consisting of multi-family structures, driveways, access roads, sidewalks, landscaped areas, and an open space dedicated for biofiltration/detention basin facility (BF-1-1). The infrastructure will consist of streets and associated utilities including dual storm drain system (pipes, inlets, catch basins, brow ditches and cleanouts). One of the dual systems is necessary to collect and convey the onsite 100-year runoff through the project area to the proposed biofiltration basin. The second system (bypass storm drain system) is to replace the existing 24” storm drain that runs through the site and conveys the offsite flows and part of the onsite flows to the existing western channel. The existing 24” storm drain will be removed.

Onsite runoff will be conveyed via street curb and gutter system, to be captured by proposed inlets and routed via proposed storm drain system to the previously mentioned biofiltration basin BF-1-1 (Node 1). The biofiltration basin will treat onsite and

commingled offsite runoff, attenuate peak flows and aid in addressing flow control hydromodification requirements.

Runoff from 0.80 ac of Pvt Drive “A”, Building 1, half of Building 2, and half of Building 3 will drain towards Macario Drive, where it will be captured by the proposed inlet west of the intersection of Pvt Drive “A” and Macario Drive. The captured flow will be routed southwesterly via 24” proposed bypass storm drain system to ultimately discharge into the existing channel west of the site, similarly to existing conditions. A proprietary biofiltration BMP (Filterra unit or equivalent) is proposed to address the water quality requirements for the said area. For additional discussion on the proposed water quality features of the site, refer to the Stormwater Quality Management Plan for Pacifica Site (March 2023) prepared by Hunsaker & Associates San Diego, Inc.

Runoff from the northern and most of the southern undisturbed slopes will be routed via proposed brow ditches to enter proposed bypassed storm drain system via catch basins. The proposed bypass storm drain system will convey the said flows with the offsite flows (coming from Macario Drive) to the respected discharge point southwest of the site, where it comingles with the onsite treated flows (at Node 2) and continues southerly to the analyzed discharge point (at Node 3). See **Appendix 4** for calculations of proposed condition run-off.

The total studied drainage area is 17.92 ac with 40% imperviousness. The runoff coefficient for each subarea was calculated based on soil type and impervious percentage using the formula from San Diego County Hydrology Manual Section 3.1.2

C= 0.90 x (% Impervious) + Cp x (1 - % Impervious)

Cp = Pervious Coefficient Runoff value for the soil type (per San Diego County Hydrology Manual Table 3.1)
Cp Soil B = 0.25, Cp Soil D= 0.35
Cp-Subarea = (Soil type B% * 0.25) + (Soil Type D%* 0.35)

Please refer to proposed conditions AES Input Data spreadsheet in appendix 4 for each subarea runoff factor.

Table 2 below summarizes the unmitigated 100-year proposed condition peak flow at the downstream project boundary.

TABLE 2 - Summary of Proposed Unmitigated Flows

Exhibit	Node Number on Exhibit	Discharge Location	Drainage Area (ac)	C Area-Average Runoff Coefficient	Tc (min)	Q100-Year Peak Flow (cfs)
2	3	Southwest of the site	17.92	0.5528	10.95	42.97

Due to the increased flow associated with the development of *Pacifica Site project*, peak flow attenuation will be achieved by the proposed biofiltration\detention basin BF-1-1. The riser within the basin has been sized and designed to include orifices along its height. Sizes and heights of orifices were determined to achieve outlet flow less than the pre-development flow shown on Table 1 above. Please refer to Chapter 2.2 for methodology and Appendix 5 for detention Analysis. The resultant discharge at Node 1 will continue westerly to comingle with the bypassed flow at Node 2 and flow southerly within the channel to Node 3, and ultimately discharges into San Luis Rey Rive San Luis Rey River, Lower (west of Interstate 15).

Since this project is subject to comply with hydromodification requirements, the design of the basin has been coordinated with those calculations, which are part of the *SWQMP for Pacifica Site.*

.

Table-3 below summarizes the Q100 Mitigated flow at Node 1.

TABLE 3 - Summary of Mitigated Developed Flows

Exhibit	Node Number on Exhibit	Discharge Location	Drainage Area (ac)	C Area-Average Runoff Coefficient	Tc (min)	Q100-Year Peak Flow (cfs)
2	3	Southwest of the site	17.92	0.5528	10.87	18.92

2. Methodology

2.1 Hydrology

2-1 Modified Rational Method Hydrologic Analysis

Computer Software Package – AES-2015

Design Storm - 100- year return interval

Land Use – Medium-High Density Residential

Soil Type – Per the NRCS Web Soil Survey, the site soil consists of Hydrologic soil group B and D.

Runoff Coefficient - In accordance with the County of San Diego standards, runoff coefficient for each subarea was calculated based on soil type and impervious percentage using the formula from San Diego County Hydrology Manual Section 3.1.2
C= 0.90 x (% Impervious) + Cp x (1 - % Impervious)

Cp = Pervious Coefficient Runoff value for the soil type (per San Diego County Hydrology Manual Table 3.1)
Cp Soil B = 0.25, Cp Soil D= 0.35
Cp-Subarea = (Soil type B% * 0.25) + (Soil Type D%* 0.35)

Rainfall Intensity- The rainfall intensity is determined per the San Diego County Hydrology Manual based on 6-hour precipitation amounts and calculated time of concentrations. Six-hour precipitations are taken from the San Diego County Hydrology Manual isopluvials. P6=2.73 inch

Method of Analysis – The Rational Method is the most widely used hydrologic model for estimating peak runoff rates. Applied to small urban and semi-urban areas with drainage areas less than 1.0 square miles, the Rational Method relates storm rainfall intensity, a runoff coefficient, and drainage area to peak runoff rate. This relationship is expressed by the equation:

Q = CIA, where:

Q = The peak runoff rate in cubic feet per second at the point of analysis.

C = A runoff coefficient representing the area - averaged ratio of runoff to rainfall intensity.

I = The time-averaged rainfall intensity in inches per hour corresponding to the time of concentration.

A = The drainage basin area in acres.

To perform a node-link study, the total watershed area is divided into subareas, which discharge at designated nodes.

The procedure for the subarea summation model is as follows:

(1) Subdivide the watershed into subareas with the initial subarea being less than 10 acres in size (generally one lot will do), and subsequent subareas gradually increasing in size. Assign upstream and downstream nodal numbers to each subarea to correlate calculations to the watershed map.

(2) Estimate an initial T_c by using the appropriate nomograph or overland flow velocity estimation.

(3) Using the initial T_c, determine the corresponding values of I. Then Q = CIA.

(4) Using Q, estimate the travel time between this node and the next by Manning's equation as applied to the particular channel or conduit linking the two nodes. Then, repeat the calculation for Q based on the revised intensity (which is a function of the revised time of concentration)

The nodes are joined together by links, which may be street gutter flows, drainage swales, drainage ditches, pipe flow, or various channel flows. The AES-2003 computer subarea menu is as follows:

SUBAREA HYDROLOGIC PROCESS

1. Confluence analysis at node.
2. Initial subarea analysis (including time of concentration calculation).
3. Pipe flow travel time (computer estimated).
4. Pipe flow travel time (user specified).
5. Trapezoidal channel travel time.
6. Street flow analysis through subarea.
7. User - specified information at node.
8. Addition of subarea runoff to main line.
9. V-gutter flow through area.
10. Copy main stream data to memory bank
11. Confluence main stream data with a memory bank
12. Clear a memory bank

At the confluence point of two or more basins, the following procedure is used to combine peak flow rates to account for differences in the basin's times of concentration. This adjustment is based on the assumption that each basin's hydrographs are triangular in shape.

(1). If the collection streams have the same times of concentration, then the Q values are directly summed,

$Q_p = Q_a + Q_b$; $T_p = T_a = T_b$

(2). If the collection streams have different times of concentration, the smaller of the tributary Q values may be adjusted as follows:

(i). The most frequent case is where the collection stream with the longer time of concentration has the larger Q. The smaller Q value is adjusted by the ratio of rainfall intensities.

$Q_p = Q_a + Q_b \ (I_a/I_b)$; $T_p = T_a$

(ii). In some cases, the collection stream with the shorter time of concentration has the larger Q. Then the smaller Q is adjusted by a ratio of the T values.

$Q_p = Q_b + Q_a \ (T_b/T_a)$; $T_p = T_b$

Underground storm drains are analyzed in a similar way. Flow data obtained from the surface model for inlets and collection points are input into the nodes representing those structures. Design grades and lengths are used to compute the capacity of the storm drains and to model the downstream travel times.

2-2 Detention Analysis

In order to provide adequate flood control, increases in peak flow rates at the outfall location for this site were mitigated using the proposed biofiltration basin.

The hydrology calculations discussed above provide peak flowrates for the vaults' inflow, which are entered into a separate program called RickRatHydro. The RickratHydro was used to produce an inflow hydrograph for the project drainage area to the biofiltration basin, based on the area, time of concentration, P6 value, runoff coefficient, and peak flow rate.

Mitigation within the biofiltration basin was modeled using SWMM 5.1. The Hydrograph that was generated from RickRatHydro was used as an input data for the inflows to the storage unit in the SWMM model. The riser was modeled using stage discharge table (Rating Curve in SWMM), and the volume was modeled using the storage stage table (Storage Curve), which represents the storage provided within the biofiltration basin depth above excluding the water quality ponding depth.

The results from the SWMM model were used as input data (code 7) in the AES proposed condition model at the discharge location from the proposed biofiltration basin (Node 1), to generate the AES model for proposed mitigated flows.

3. Results

Conveyance of Q100 runoff flows through the proposed site required dual storm drain system. One of the dual systems is 18" storm drain system proposed to route flows (onsite and comingled offsite) to the biofiltration basin to address water quality, hydromodification and peak flow attenuation; while the second system is 24" bypassed storm drain to replace the existing 24" storm drain that runs through the site and conveys the offsite flows and part of the onsite flows to the existing western channel.

Storm drain system and hydraulic calculations will be conducted as part of the final engineering drainage study.

One biofiltration/ detention basin was included in the design of the site to address hydromodification, peak flow attenuation, and water quality requirements. A proprietary biofiltration BMP is proposed at Macario Drive to address water quality requirements for the small northern portion of Pvt Drive "A" that drains away from the biofiltration basin. Per the hydrologic and detention analysis conducted as part of this study, the detention analysis for the basin is included in Appendix 5 of this report. The table below summarizes the flow reductions at the discharge location.

The flow from the site is attenuated to make sure that the post-developed flows will not exceed the capacity of the existing downstream drainage facilities (post development flows compared to the pre-development flows at the point of compliance southwest corner of the project (POC-1/ Node 3). See table 4 below

TABLE 4 – Pre-development Condition vs. Post-development Condition

Dis. Location	Pre-Area (ac)	Post-Area (ac)	Pre-: 100-Year Peak Flow (cfs)	Post-: 100-Year Unmit. Peak Flow (cfs)	Post-: 100-Year Mit. Peak Flow (cfs)	TC Pre (min)	TC Post Unmit (min)	TC Post Mit (min)	Vel. Pre (ft/s)	Vel. Post Unmit (ft/s)	Vel. Post Mit. (ft/s)	Q100 Flow Difference (cfs)
southwest corner	17.92	17.92	19.57	42.97	18.92	29.95	10.95	10.87	1.31	2.60	1.99	-0.65

-Dis. Location: Discharge Location
-Vel. (ft/s): Velocity (feet/second)
-Pre : Pre Developed Conditions
-Post. Unmit.: Post Developed Unmitigated Conditions
-Post. Mit.: Post Developed Mitigated Conditions

4. Conclusions

The proposed development of Pacifica Site can be roughly graded and improved with storm drain to accommodate the ultimate expected flows from development. In addition, with the proposed drainage facilities such as curb inlets, storm drain, water quality, flow control and detention basin, runoff can be mitigated to accepted San Diego County and City of Oceanside standards.

The proposed project will not substantially alter the existing drainage pattern of the site. There will be a decrease in the peak discharge from the site. Therefore, the proposed project will not impact downstream properties, drainage facilities or Libby Lake, the nearest receiving water.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: San Diego County Area, California
Survey Area Data: Version 16, Sep 13, 2021

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 24, 2020—Feb 12, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
GoA	Grangeville fine sandy loam, 0 to 2 percent slopes	B	4.5	30.1%
LeC	Las Flores loamy fine sand, 2 to 9 percent slopes	D	0.7	5.0%
LeC2	Las Flores loamy fine sand, 5 to 9 percent slopes, eroded	D	0.9	5.8%
LeE2	Las Flores loamy fine sand, 15 to 30 percent slopes, eroded	D	8.9	59.2%
Totals for Area of Interest			**15.1**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Aggregation Method: Dominant Condition

Component Percent Cutoff: None Specified

Tie-break Rule: Higher

Appendix 3 – Runoff Coefficient Determination

- The storm frequency of peak discharges is the same as that of I for the given T_c.

- The fraction of rainfall that becomes runoff (or the runoff coefficient, C) is independent of I or precipitation zone number (PZN) condition (PZN Condition is discussed in Section 4.1.2.4).

- The peak rate of runoff is the only information produced by using the RM.

3.1.2 Runoff Coefficient

Table 3-1 lists the estimated runoff coefficients for urban areas. The concepts related to the runoff coefficient were evaluated in a report entitled *Evaluation, Rational Method "C" Values* (Hill, 2002) that was reviewed by the Hydrology Manual Committee. The Report is available at San Diego County Department of Public Works, Flood Control Section and on the San Diego County Department of Public Works web page.

The runoff coefficients are based on land use and soil type. Soil type can be determined from the soil type map provided in Appendix A. An appropriate runoff coefficient (C) for each type of land use in the subarea should be selected from this table and multiplied by the percentage of the total area (A) included in that class. The sum of the products for all land uses is the weighted runoff coefficient (Σ[CA]). Good engineering judgment should be used when applying the values presented in Table 3-1, as adjustments to these values may be appropriate based on site-specific characteristics. In any event, the impervious percentage (% Impervious) as given in the table, for any area, shall govern the selected value for C. The runoff coefficient can also be calculated for an area based on soil type and impervious percentage using the following formula:

$$C = 0.90 \times (\% \text{ Impervious}) + C_p \times (1 - \% \text{ Impervious})$$

Where: C_p = Pervious Coefficient Runoff Value for the soil type (shown in Table 3-1 as Undisturbed Natural Terrain/Permanent Open Space, 0% Impervious). Soil type can be determined from the soil type map provided in Appendix A.

The values in Table 3-1 are typical for most urban areas. However, if the basin contains rural or agricultural land use, parks, golf courses, or other types of nonurban land use that are expected to be permanent, the appropriate value should be selected based upon the soil and cover and approved by the local agency.

Table 3-1
RUNOFF COEFFICIENTS FOR URBAN AREAS

Land Use		Runoff Coefficient "C"				
			Soil Type			
NRCS Elements	County Elements	% IMPER.	A	B	C	D
Undisturbed Natural Terrain (Natural)	Permanent Open Space	0*	0.20	0.25	0.30	0.35
Low Density Residential (LDR)	Residential, 1.0 DU/A or less	10	0.27	0.32	0.36	0.41
Low Density Residential (LDR)	Residential, 2.0 DU/A or less	20	0.34	0.38	0.42	0.46
Low Density Residential (LDR)	Residential, 2.9 DU/A or less	25	0.38	0.41	0.45	0.49
Medium Density Residential (MDR)	Residential, 4.3 DU/A or less	30	0.41	0.45	0.48	0.52
Medium Density Residential (MDR)	Residential, 7.3 DU/A or less	40	0.48	0.51	0.54	0.57
Medium Density Residential (MDR)	Residential, 10.9 DU/A or less	45	0.52	0.54	0.57	0.60
Medium Density Residential (MDR)	Residential, 14.5 DU/A or less	50	0.55	0.58	0.60	0.63
High Density Residential (HDR)	Residential, 24.0 DU/A or less	65	0.66	0.67	0.69	0.71
High Density Residential (HDR)	Residential, 43.0 DU/A or less	80	0.76	0.77	0.78	0.79
Commercial/Industrial (N. Com)	Neighborhood Commercial	80	0.76	0.77	0.78	0.79
Commercial/Industrial (G. Com)	General Commercial	85	0.80	0.80	0.81	0.82
Commercial/Industrial (O.P. Com)	Office Professional/Commercial	90	0.83	0.84	0.84	0.85
Commercial/Industrial (Limited I.)	Limited Industrial	90	0.83	0.84	0.84	0.85
Commercial/Industrial (General I.)	General Industrial	95	0.87	0.87	0.87	0.87

*The values associated with 0% impervious may be used for direct calculation of the runoff coefficient as described in Section 3.1.2 (representing the pervious runoff coefficient, Cp, for the soil type), or for areas that will remain undisturbed in perpetuity. Justification must be given that the area will remain natural forever (e.g., the area is located in Cleveland National Forest).
DU/A = dwelling units per acre
NRCS = National Resources Conservation Service

Directions for Application:

(1) From precipitation maps determine 6 hr and 24 hr amounts for the selected frequency. These maps are included in the County Hydrology Manual (10, 50, and 100 yr maps included in the Design and Procedure Manual).

(2) Adjust 6 hr precipitation (if necessary) so that it is within the range of 45% to 65% of the 24 hr precipitation (not applicaple to Desert).

(3) Plot 6 hr precipitation on the right side of the chart.

(4) Draw a line through the point parallel to the plotted lines.

(5) This line is the intensity-duration curve for the location being analyzed.

Application Form:

(a) Selected frequency _____ year

(b) P_6 = 2.73 in., P_{24} = 4.92, $\frac{P_6}{P_{24}} = \frac{2.73}{4.92}$ = %(2) 55%

(c) Adjusted P_6(2) = 2.73 in.

(d) t_x = _____ min.

(e) I = _____ in./hr.

Note: This chart replaces the Intensity-Duration-Frequency curves used since 1965.

How to Use This Template

This template, assembled by GHD Inc. on behalf of the City of Oceanside, is for the development of Storm Water Quality Management Plans (SWQMPs) for Priority Development Projects (PDPs) proposed within Oceanside, CA. It is based on requirements set forth in the Regional Water Quality Control Board's National Pollutant Discharge Elimination System MS4 Permit that covers the San Diego Region (Order No. R9-2013-0001).

All references within the template refer to the City of Oceanside BMP Design Manual dated February 2016 (Manual). Use of this template in conjunction with the Manual is intended to help a project applicant develop a SWQMP compliant with City of Oceanside and MS4 Permit requirements.

Applicable elements of SWQMP were update in accordance with the January 2022 city of Oceanside BMP Design Manual.

Template Date: February 16, 2016

Assembled By:

Quick Reference Guide

Item	Project Information
Project Name	Pacifica Elementary School
Application Number(s)	GPA22-00001
Project Address	Roja Drive and Macario Drive, Oceanside, CA 92054
Total Parcel Area	633,638 sq. ft.
Project Description	Pacifica Elementary School property is a 14.55-acre site located in the City of Oceanside, CA, East of I-5. Existing site is partially developed with a large concrete pad and empty land. The Proposed site will include multi-family buildings incorporating 164 residential units.
Proposed Disturbed Area	443,150 sq. ft.
Created or Replaced Impervious	312,149 sq. ft.
Project Hydrologic Unit Watershed	☐ Santa Maria ☒ San Luis Rey ☐ Carlsbad
Required to implement HMP	☒ Yes ☐ No

Project Name: Pacifica Elementary School
Permit Application Number: (GPA22-00001)

I hereby declare that I am the Engineer in Responsible Charge of design of storm water BMPs for this project, and that I have exercised responsible charge over the design of the project as defined in Section 6703 of the Business and Professions Code, and that the design is consistent with the requirements of the City of Oceanside BMP Design Manual, which is based on the requirements of San Diego Regional Water Quality Control Board Order No. R9-2013-0001 (MS4 Permit).

I have read and understand that the City has adopted minimum requirements for managing urban runoff, including storm water, from land development activities, as described in the BMP Design Manual. I certify that this SWQMP has been completed to the best of my ability and accurately reflects the project being proposed and the applicable source control and site design BMPs proposed to minimize the potentially negative impacts of this project's land development activities on water quality. I understand and acknowledge that the plan check review of this SWQMP by City staff is confined to a review and does not relieve me, as the Engineer in Responsible Charge of design of storm water BMPs for this project, of my responsibilities for project design.

As Engineer of Work, I agree to indemnify, defend, and hold harmless the City of Oceanside, its officers, agents, and employees from any and all liability, claims, damages, or injuries to any person or property which might arise from the negligent acts, errors, or omissions of the Engineer of Work, my employees, agents or consultants.

Applicability of Permanent, Post-Construction Storm Water BMP Requirements (Storm Water Intake Form for all Development Permit Applications)	Form I-1

Project Identification

Project Name: Pacifica Elementary School

Permit Application Number: GPA22-00001 | Date: 6/13/22

Determination of Requirements

The purpose of this form is to identify permanent, post-construction requirements that apply to the project. This form serves as a short summary of applicable requirements, in some cases referencing separate forms that will serve as the backup for the determination of requirements.

Answer each step below, starting with Step 1 and progressing through each step until reaching "Stop".
Refer to the manual sections and/or separate forms referenced in each step below.

Step	Answer	Progression
Step 1: Is the project a "development project"? See Section 1.3 of the manual for guidance.	☒Yes	Go to Step 2.
	☐No	Stop. Permanent BMP requirements do not apply. No SWQMP will be required. Provide discussion below.
Discussion / justification if the project is not a "development project" (e.g., the project includes *only* interior remodels within an existing building):		
Step 2: Is the project a Standard Project, PDP, or exception to PDP definitions? To answer this item, see Section 1.4 of the manual *in its entirety* for guidance, AND complete Form I-2, Project Type Determination.	☐Standard Project	Stop. Standard Project requirements apply, including Standard Project SWQMP.
	☒PDP	PDP requirements apply, including PDP SWQMP. Go to Step 3.
	☐ Exception to PDP definitions	Stop. Standard Project requirements apply. Provide discussion and list any additional requirements below. Prepare Standard Project SWQMP.
Discussion / justification, and additional requirements for exceptions to PDP definitions, if applicable:		

Form I-1 Page 2 of 2		
Step	Answer	Progression
Step 3. Is the project subject to earlier PDP requirements due to a prior lawful approval? See Section 1.10 of the manual for guidance.	☐Yes	Consult the [City Engineer] to determine requirements. Provide discussion and identify requirements below. Go to Step 4.
	☒No	BMP Design Manual PDP requirements apply. Go to Step 4.
Discussion / justification of prior lawful approval, and identify requirements (*not required if prior lawful approval does not apply*):		
Step 4. Do hydromodification control requirements apply? See Section 1.6 of the manual for guidance.	☒Yes	PDP structural BMPs required for pollutant control (Chapter 5) and hydromodification control (Chapter 6). Go to Step 5.
	☐No	Stop. PDP structural BMPs required for pollutant control (Chapter 5) only. Provide brief discussion of exemption to hydromodification control below.
Discussion / justification if hydromodification control requirements do <u>not</u> apply:		
Step 5. Does protection of critical coarse sediment yield areas apply? See Section 6.2 of the manual for guidance.	☐Yes	Management measures required for protection of critical coarse sediment yield areas (Chapter 6.2). Stop.
	☒No	Management measures not required for protection of critical coarse sediment yield areas. Provide brief discussion below. Stop.
Discussion / justification if protection of critical coarse sediment yield areas does <u>not</u> apply:		

Project Type Determination Checklist			Form I-2
Project Information			
Project Name: Pacifica Elementary School			
Permit Application Number: GPA22-00001			
Project Type Determination: Standard Project or PDP			
The project is (select one): ☐ New Development × Redevelopment			
The total proposed newly created or replaced impervious area is: 312,149 ft² (7.17) acres			
Is the project in any of the following categories, (a) through (f)?			
Yes ☐	No ☒	(a)	New development projects that create 10,000 square feet or more of impervious surfaces (collectively over the entire project site). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
Yes ☒	No ☐	(b)	Redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site on an existing site of 10,000 square feet or more of impervious surfaces). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
Yes ☒	No ☐	(c)	New and redevelopment projects that create 5,000 square feet or more of impervious surface (collectively over the entire project site), and support one or more of the following uses: (i) Restaurants. This category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption SIC code 5812). (ii) Hillside development projects. This category includes development on any natural slope that is twenty-five percent or greater. (iii) Parking lots. This category is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce. (iv) Streets, roads, highways, freeways, and driveways. This category is defined as any paved impervious surface used for the transportation of automobiles, trucks, motorcycles, and other vehicles.

Form I-2 Page 2 of 2			
Yes ☐	No ☒	(d)	New or redevelopment projects that create or replace 2,500 square feet or more of impervious surface (collectively over the entire project site), and discharging directly to an Environmentally Sensitive Area (ESA). "Discharging directly to" includes flow that is conveyed overland a distance of 200 feet or less from the project to the ESA, or conveyed in a pipe or open channel any distance as an isolated flow from the project to the ESA (i.e. not commingled with flows from adjacent lands). Note: ESAs are areas that include but are not limited to all Clean Water Act Section 303(d) impaired water bodies; areas designated as Areas of Special Biological Significance by the State Water Board and SDRWQCB; State Water Quality Protected Areas; water bodies designated with the RARE beneficial use by the State Water Board and SDRWQCB; and any other equivalent environmentally sensitive areas which have been identified by the Copermittees. See manual Section 1.4.2 for additional guidance.
Yes ☐	No ☒	(e)	New development projects that support one or more of the following uses: (i) Automotive repair shops. This category is defined as a facility that is categorized in any one of the following SIC codes: 5013, 5014, 5541, 7532-7534, or 7536-7539. (ii) Retail gasoline outlets. This category includes retail gasoline outlets that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic of 100 or more vehicles per day.
Yes ☒	No ☐	(f)	New or redevelopment projects that result in the disturbance of one or more acres of land and are expected to generate pollutants post construction. *Note: See manual Section 1.4.2 for additional guidance.*

Does the project meet the definition of one or more of the PDP categories (a) through (f) listed above?

☐ No – the project is not a PDP (Standard Project).

☒ Yes – the project is a PDP.

The following is for redevelopment PDPs only:

The area of existing (pre-project) impervious area at the project site is: 203,317 ft^2 (A)
The total proposed newly created or replaced impervious area is: 312,149 ft^2 (B)
Percent impervious surface created or replaced (A/B)*100: 65%
The percent impervious surface created or replaced is (select one based on the above calculation):

☐ less than or equal to fifty percent (50%) – only new impervious areas are considered PDP

OR

☒ greater than fifty percent (50%) – the entire project site is a PDP

Site Information Checklist For PDPs	Form I-3B (PDPs)
Project Summary Information	
Project Name	Pacifica Elementary School
Project Address	Roja Drive & Macario Drive, Oceanside, CA 92054
Assessor's Parcel Number(s)	157-070-42, 122-190-19, 122-190-22
Permit Application Number	GPA22-00001
Project Watershed (Hydrologic Unit)	Select One: ☐Santa Margarita 902 ☒San Luis Rey 903 ☐Carlsbad 904
Parcel Area (total area of Assessor's Parcel(s) associated with the project)	14.55 Acres (633,638 Square Feet)
Area to be disturbed by the project (Project Area)	10.17 Acres (443,150 Square Feet)
Project Proposed Impervious Area (subset of Project Area)	7.17 Acres (312,149 Square Feet)
Project Proposed Pervious Area (subset of Project Area)	3.007Acres (131,001 Square Feet)
Note: Proposed Impervious Area + Proposed Pervious Area = Area to be Disturbed by the Project. This may be less than the Parcel Area.	

Hydrologic Unit	Hydrologic Area	Hydrologic Sub-Area
Santa Margarita 902.00	☐ Ysidora 902.10	☐ Lower Ysidora 902.11
San Luis Rey 903.00	☒ Lower San Luis 903.10	☒ Mission 903.11
		☐ Bonsall 903.12
Carlsbad 904.00	☐ Loma Alta 904.10	Not Applicable
	☐ Buena Vista Creek 904.20	☐ El Salto 904.21
		☐ Vista 904.22
	☐ Agua Hedionda 4.30	☐ Los Monos 904.31

Description of Existing Site Condition and Drainage Patterns

Current Status of the Site (select all that apply):

☒Existing development

☐Previously graded but not built out

☐Agricultural or other non-impervious use

☒Vacant, undeveloped/natural

Description / Additional Information:

The site is an old school development with no buildings, and it is partially occupied with a parking lot, driveways, and large concrete pad while the western portion consists of vacant land.

Existing Land Cover Includes (select all that apply):

☒Vegetative Cover

☒Non-Vegetated Pervious Areas

☒Impervious Areas

Description / Additional Information:

The existing impervious area consists of parking lot, driveways, and a large concrete pad. Pervious area consists of vacant undeveloped area, vegetative cover and slopes.

Underlying Soil belongs to Hydrologic Soil Group (select all that apply):

☐NRCS Type A

☒NRCS Type B

☐NRCS Type C

☒NRCS Type D

Approximate Depth to Groundwater:

☐Groundwater Depth < 5 feet

☐5 feet < Groundwater Depth < 10 feet

☐10 feet < Groundwater Depth < 20 feet

☒Groundwater Depth > 20 feet

Description of Existing Site Topography and Drainage [How is storm water runoff conveyed from the site? At a minimum, this description should answer (1) whether existing drainage conveyance is natural or urban; (2) describe existing constructed storm water conveyance systems, if applicable; and (3) is runoff from offsite conveyed through the site? If so, describe]:

The Existing Site Topography and Drainage of Pacifica Elementary School consists of partial urban and partial natural drainage that delivers flow to the San Luis Rey River. An existing Storm Drain runs through the center of the site with two catch basin in the center and in the Southwest corner of the site. There are portions of offsite runoff that is conveyed through the sight from the Southeast corner of the site. (0.60 acres).

Description of Proposed Site Development and Drainage Patterns

Project Description / Proposed Land Use and/or Activities:

the proposed site will consist of 164 residential units (25 buildings), multiple outdoor community recreational areas, tennis-courts, and a dog park. In addition, the project proposes a biofiltration basin to provide a pollutant control for the majority of the project area, and meet the hydromodification and peak flow detention for the entire site. A proprietary biofiltration BMP is proposed northeast of the site to teat a small portion that drains away from the biofiltration basin. The existing impervious area onsite will be replaced.

List/describe proposed impervious features of the project (e.g., buildings, roadways, parking lots, courtyards, athletic courts, other impervious features):

Building rooftops, roadways, sidewalks, walkways, parking, patios and other hardscapes areas/impervious features, e.g. pickle ball court.

List/describe proposed pervious features of the project (e.g., landscape areas):

Flow through planters and landscaped areas.

Does the project include grading and changes to site topography?

☒Yes

☐No

Description / Additional Information:

Grading will be performed on 70% of the site , which includes the proposed biofiltration basin, grading to accommodate the pvt drives, building pads, and ensure the drainage slope on all of the landscaped areas.

Does the project include changes to site drainage (e.g., installation of new storm water conveyance systems)?

☒Yes

☐No

Description / Additional Information:

The site will include new dual storm drain system, bypass system to replace the existing storm drain pipe that will abandoned, and onsite storm drain system to capture the runoff from the proposed develop-ment and the southeast offsite area that commingles with the onsite flows and route it to the biofiltration basin. The bypass storm drain system will convey run-on from the offsite area, treated flows from the proprietary biofiltration BMP east of the site (DMA2), and runoff from the slopes that drain to the proposed brow ditches to commingle with the outfall from the biofiltration basin southwest of the site prior to discharge to POC similarly to existing conditions.

Identify whether any of the following features, activities, and/or pollutant source areas will be present (select all that apply):

☒Onsite storm drain inlets

☒Interior floor drains and elevator shaft sump pumps

☒Interior parking garages

☒Need for future indoor & structural pest control

☒Landscape/outdoor pesticide use

☐Pools, spas, ponds, decorative fountains, and other water features

☐Food service

☐Refuse areas

☐Industrial processes

☐Outdoor storage of equipment or materials

☐Vehicle and equipment cleaning

☐Vehicle/equipment repair and maintenance

☐Fuel dispensing areas

☐Loading docks

☒Fire sprinkler test water

☒Miscellaneous drain or wash water

☒Plazas, sidewalks, and parking lots

Identification of Receiving Water Pollutants of Concern

Describe path of storm water from the project site to the Pacific Ocean (or bay, lagoon, lake or reservoir, as applicable):
The site drains to Libby Lake, which is pumped to gravity drain to Pilgrim Creek, then to San Luis Ray River lower and ultimately to Pacifica Ocean Shoreline, San Luis Rey HU, at San Luis Rey River Outlet. Libby lake and Pilgrim Creek are not listed in the 303 d list.

List any 303(d) impaired water bodies within the path of storm water from the project site to the Pacific Ocean (or bay, lagoon, lake or reservoir, as applicable), identify the pollutant(s)/stressor(s) causing impairment, and identify any TMDLs for the impaired water bodies:

303(d) Impaired Water Body	Pollutant(s)/Stressor(s)	TMDLs
San Luis Rey River Lower	Chloride Oxygen, Dissolved, Phosphorus Pyrethroids Toxicity Nitrogen, Dissolved solids Benthic Community Effect Bifenthrin	Bacteria
Pacifica Ocean Shoreline, San Luis Rey HU, at San Luis Rey River Outlet	Indicator Bacteria	Bacteria

Hydromodification Management Requirements

Do hydromodification management requirements apply (see Section 1.6 of the manual)?

☒Yes, hydromodification management flow control structural BMPs required.

☐No, the project will discharge runoff directly to existing underground storm drains discharging directly to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.

☐No, the project will discharge runoff directly to conveyance channels whose bed and bank are concrete-lined all the way from the point of discharge to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.

☐No, the project will discharge runoff directly to an area identified as appropriate for an exemption by the WMAA for the watershed in which the project resides.

Description / Additional Information (to be provided if a 'No' answer has been selected above):

Critical Coarse Sediment Yield Areas*

*This Section only required if hydromodification management requirements apply

Based on the maps provided within the WMAA, do potential critical coarse sediment yield areas exist within the project drainage boundaries?

☐Yes

☒No, no critical coarse sediment yield areas to be protected based on WMAA maps

If yes, have any of the optional analyses presented in Section 6.2 of the manual been performed?

☐6.2.1 Verification of GLUs Onsite

☐6.2.2 Downstream Systems Sensitivity to Coarse Sediment

☐6.2.3 Optional Additional Analysis of Potential Critical Coarse Sediment Yield Areas Onsite

☐No optional analyses performed, the project will avoid critical coarse sediment yield areas identified based on WMAA maps

If optional analyses were performed, what is the final result?

☐No critical coarse sediment yield areas to be protected based on verification of GLUs onsite.

☐Critical coarse sediment yield areas exist but additional analysis has determined that protection is not required. Documentation attached in Attachment 8 of the SWQMP.

☐Critical coarse sediment yield areas exist and require protection. The project will implement management measures described in Sections 6.2.4 and 6.2.5 as applicable, and the areas are identified on the SWQMP Exhibit.

Discussion / Additional Information:

Flow Control for Post-Project Runoff*

*This Section only required if hydromodification management requirements apply

List and describe point(s) of compliance (POCs) for flow control for hydromodification management (see Section 6.3.1). For each POC, provide a POC identification name or number correlating to the project's HMP Exhibit and a receiving channel identification name or number correlating to the project's HMP Exhibit.

POC1 is the only point of compliance and it is located offsite near the Southwest corner of the Project Boundary.

Has a geomorphic assessment been performed for the receiving channel(s)?

☒No, the low flow threshold is 0.1Q2 (default low flow threshold)

☐Yes, the result is the low flow threshold is 0.1Q2

☐Yes, the result is the low flow threshold is 0.3Q2

☐Yes, the result is the low flow threshold is 0.5Q2

If a geomorphic assessment has been performed, provide title, date, and preparer:

Discussion / Additional Information: (optional)

Source Control BMP Checklist for All Development Projects (Standard Projects and PDPs)	Form I-4

Project Identification

Project Name: Pacifica Elementary School

Permit Application Number: GPA22-00001

Source Control BMPs

All development projects must implement source control BMPs SC-1 through SC-6 where applicable and feasible. See Chapter 4 and Appendix E of the manual for information to implement source control BMPs shown in this checklist.

Answer each category below pursuant to the following.

- "Yes" means the project will implement the source control BMP as described in Chapter 4 and/or Appendix E of the manual. Discussion / justification is not required.
- "No" means the BMP is applicable to the project but it is not feasible to implement. Discussion / justification must be provided.
- "N/A" means the BMP is not applicable at the project site because the project does not include the feature that is addressed by the BMP (e.g., the project has no outdoor materials storage areas). Discussion / justification may be provided.

Source Control Requirement	Implemented?		
SC-1 Prevention of Illicit Discharges into the MS4	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-1 not implemented: All proposed impervious areas drain to proposed landscaped areas where applicable, and eventually to structural Biofiltration BMPs, thus mitigating non-storm water discharge to the MS4. Efficient irrigation will also be proposed.			
SC-2 Storm Drain Stenciling or Signage	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-2 not implemented: • Locations of inlets are shown on exhibits. • All inlets will be marked with the words "No dumping! Flows to Bay" or similar. • Maintain and periodically repaint or replace inlet markings. • Provide storm water pollution prevention information to new owners, lessees, or operations.			
SC-3 Protect Outdoor Materials Storage Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☐ Yes	☐ No	☒ N/A
Discussion / justification if SC-3 not implemented: There's no "Outdoor Materials Storage Areas" contemplated for this project.			

Form I-4 Page 2 of 3			
Source Control Requirement	Implemented?		
SC-4 Protect Materials Stored in Outdoor Work Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☐ Yes	☐ No	☒ N/A
Discussion / justification if SC-4 not implemented: There's no "Materials Stored in Outdoor Work Areas" contemplated for this project.			
SC-5 Protect Trash Storage Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☐ Yes	☐ No	☒ N/A
Discussion / justification if SC-5 not implemented: There's no "Trash Storage Areas " contemplated for this project.			

Form I-4 Page 3 of 3			
SC-6 Additional BMPs Based on Potential Sources of Runoff Pollutants (must answer for each source listed below)	Implemented?		
Onsite storm drain inlets	☒ Yes	☐ No	☐ N/A
Interior floor drains and elevator shaft sump pumps	☐Yes	☐ No	☒ N/A
Interior parking garages	☐ Yes	☐ No	☒ N/A
Need for future indoor & structural pest control	☐ Yes	☐ No	☒ N/A
Landscape/outdoor pesticide use	☒ Yes	☐ No	☐ N/A
Pools, spas, ponds, decorative fountains, and other water features	☐ Yes	☐ No	☒ N/A
Food service	☐ Yes	☐ No	☒ N/A
Refuse area	☐ Yes	☐ No	☒ N/A
Industrial processes	☐ Yes	☐ No	☒ N/A
Outdoor storage of equipment or materials	☐ Yes	☐ No	☒ N/A
Vehicle and equipment cleaning	☐ Yes	☐ No	☒ N/A
Vehicle/equipment repair and maintenance	☐ Yes	☐ No	☒ N/A
Fuel dispensing areas	☐ Yes	☐ No	☒ N/A
Loading docks	☐ Yes	☐ No	☒ N/A
Fire sprinkler test water	☒ Yes	☐ No	☐ N/A
Miscellaneous drain or wash water	☒ Yes	☐ No	☐ N/A
Plazas, sidewalks, and parking lots	☒ Yes	☐ No	☐ N/A
Discussion / justification if SC-6 not implemented. Clearly identify which sources of runoff pollutants are discussed. Justification must be provided for <u>all</u> "No" answers shown above.			

Discussion / justification if SC-6 not implemented. Clearly identify which sources of runoff pollutants are discussed. Justification must be provided for all "No" answers shown above.

- SC-6A: All onsite storm drain inlets to be marked with legend "NO DUMPING, FLOWS TO BAY", or similar.
- SC-6B: There's no "Interior floor drains and elevator shaft sump pumps" contemplated for this project.
- SC-6C: There's no "Interior parking garages" contemplated for this project.
- SC-6D1: There's no "Need for future indoor & structural pest control" contemplated for this project.
- SC-6D2: Final landscape plans will accomplish all of the following:
    - Preserve existing drought tolerant trees, shrubs, and ground cover to the maximum extent possible.
    - Landscaping designed to minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to storm water pollution.
    - Where landscaped areas are used to retain or detain storm water, use plants that are tolerant of periodic saturated soil conditions.
    - Use pest-resistant plants, especially adjacent to hardscape.
    - Ensure successful establishment, appropriate selection of plants to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.
- SC-6E: There's no "Pools, spas, ponds, decorative fountains, and other water features" contemplated for this project.
- SC-6F: There's no "Food Service" contemplated for this project.
- SC-6G: There's no "Refuse areas" contemplated for this project.

- SC-6H: There's no "Industrial processes" contemplated for this project.
- SC-6I: There's no "Outdoor storage of equipment or materials" contemplated for this project.
- SC-6J: There's no "Vehicle and equipment cleaning" contemplated for this project.
- SC-6K: There's no "Vehicle/equipment repair and maintenance" contemplated for this project.
- SC-6L: There's no "Fuel dispensing areas" contemplated for this project.
- SC-6M: There's no "Loading Docks" contemplated for this project.
- SC-6N: "Fire Sprinkler Test Water" will drain to sanitary sewer
- SC-6O: Final architect's and engineer's plans will accomplish all the following:
    - Boiler drain lines will be directly or indirectly connected to the sanitary sewer system and will not discharge to the storm drain system.
    - Rooftop mounted equipment with potential to produce pollutants will be roofed and/or have secondary containment.
    - Roofing, gutters, and trim made won't be made of copper or other unprotected metals that may leach into runoff.
- SC-6P: Plazas, sidewalks, and parking lots will be swept regularly to prevent the accumulation of litter and debris.

Site Design BMP Checklist for All Development Projects (Standard Projects and PDPs)	Form I-5

Project Identification

Project Name: Pacfica Elementary School

Permit Application Number: GPA22-00001

Site Design BMPs

All development projects must implement site design BMPs SD-1 through SD-8 where applicable and feasible. See Chapter 4 and Appendix E of the manual for information to implement site design BMPs shown in this checklist.

Answer each category below pursuant to the following.

- "Yes" means the project will implement the site design BMP as described in Chapter 4 and/or Appendix E of the manual. Discussion / justification is not required.
- "No" means the BMP is applicable to the project but it is not feasible to implement. Discussion / justification must be provided.
- "N/A" means the BMP is not applicable at the project site because the project does not include the feature that is addressed by the BMP (e.g., the project site has no existing natural areas to conserve). Discussion / justification may be provided.

Site Design Requirement	Applied?		
SD-1 Maintain Natural Drainage Pathways and Hydrologic Features	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-1 not implemented: Natural permeable soil on the existing slopes (30% of the parcels area) was maintained. The slopes adjacent to the existing pathway west of the side was maintained			
SD-2 Conserve Natural Areas, Soils, and Vegetation	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-2 not implemented: Natural soil and vegetation on the existing slopes (30% of the parcels area) was maintained.			
SD-3 Minimize Impervious Area	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-3 not implemented: Streets, sidewalks & parking aisles were designed with widths minimized as much as possible.			
SD-4 Minimize Soil Compaction	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-4 not implemented: Proposed landscaped areas will be compacted as minimally as possible.			

Form I-5 Page 2 of 2			
Site Design Requirement	Applied?		
SD-5 Impervious Area Dispersion	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-5 not implemented: Pervious areas included where project design allows in order to disperse impervious areas. However, dispersion is not implemented such that the DCV can be confidently reduced. Roofs, driveways and hardscape are routed through landscaped areas where possible.			
SD-6 Runoff Collection	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-6 not implemented: Small collection strategies located as close as possible to the sources (i.e. the point where storm water initially meets the ground) to minimize the transport of runoff and pollutants to the MS4 and receiving waters			
SD-7 Landscaping with Native or Drought Tolerant Species	☒ Yes	☐ No	☐ N/A
Discussion / justification if SD-7 not implemented: Native and drought tolerant species will be included in landscape design			
SD-8 Harvesting and Using Precipitation	☐ Yes	☐ No	☒ N/A
Discussion / justification if SD-8 not implemented: The maintenance cost and effort to monitor and clean the rain barrels regularly to ensure that they do not become clogged with leaves and other debris, while they have a limited use as they may fill only a few times each year, due to San Diego's arid climate. Therefore, harvesting and using were not used and all the roof areas have been routed to the structural BMPs to treat the DCV. Harvest and use is determined to be infeasible per Form I-4			

Summary of PDP Structural BMPs	Form I-6 (PDPs)
Project Identification	
Project Name: Pacifica Elementary School	
Permit Application Number: GPA22-00001	
PDP Structural BMPs	
All PDPs must implement structural BMPs for storm water pollutant control (see Chapter 5 of the manual). Selection of PDP structural BMPs for storm water pollutant control must be based on the selection process described in Chapter 5. PDPs subject to hydromodification management requirements must also implement structural BMPs for flow control for hydromodification management (see Chapter 6 of the manual). Both storm water pollutant control and flow control for hydromodification management can be achieved within the same structural BMP(s). PDP structural BMPs must be verified by the local jurisdiction at the completion of construction. This may include requiring the project owner or project owner's representative to certify construction of the structural BMPs (see Section 1.12 of the manual). PDP structural BMPs must be maintained into perpetuity, and the local jurisdiction must confirm the maintenance (see Section 7 of the manual). Use this form to provide narrative description of the general strategy for structural BMP implementation at the project site in the box below. Then complete the PDP structural BMP summary information sheet (page 3 of this form) for each structural BMP within the project (copy the BMP summary information page as many times as needed to provide summary information for each individual structural BMP).	

Describe the general strategy for structural BMP implementation at the site. This information must describe how the steps for selecting and designing storm water pollutant control BMPs presented in Section 5.1 of the manual were followed, and the results (type of BMPs selected). For projects requiring hydromodification flow control BMPs, indicate whether pollutant control and flow control BMPs are integrated or separate.

The selection , sizing, and preliminary design of the storm water treatment and other control measures in this plan was done based on City of Oceanside's BMP Design Manual.

Step 1 of section 5.1 is to determine the DCV. The DCV of both DMA 1 and DMA 2 were determined using Worksheet B.1. Step 2 of Section 5.1 is the determine retention requirements. The retention requirements for both DMA's were determined using Worksheet B.2. Step 3 of section 5.1 is to determine BMP performance. The BMP performance for DMA 1 was determined using Worksheet B.3 and both pollutant control and flow control were implemented in the proposed Biofiltration basin. The BMP performance for DMA 2 was determined using Worksheet B.6-2 and pollutant control was implemented in the proposed Filterra Unit.

Harvest and use deemed indefeasible using form I-7 (and Line 7 of Worksheet B.2)

Infiltration is determined to be infeasible. See for I-8 for details.

Operation and Maintenance forms have been filled out using the City of Oceanside BMP Operations and Maintenance Plan and the required checklist are provided. This O&M is a place holder. Final O&M will be provided with Final Engineering SWQMP

(Continue on page 2 as necessary.)

Form I-6 Page 1 of 2
Structural BMP Summary Information (Copy this page as needed to provide information for each individual proposed structural BMP)
Structural BMP ID No. BF-1-1 (DMA 1)
Construction Plan Sheet No. 6
Type of structural BMP: ☐Retention by harvest and use (HU-1) ☐Retention by infiltration basin (INF-1) ☐Retention by bioretention (INF-2) ☐Retention by permeable pavement (INF-3) ☐Partial retention by biofiltration with partial retention (PR-1) ☒Biofiltration (BF-1) ☐Flow-thru treatment control with prior lawful approval to meet earlier PDP requirements (provide BMP type/description in discussion section below) ☐Flow-thru treatment control included as pre-treatment/forebay for an onsite retention or biofiltration BMP (provide BMP type/description and indicate which onsite retention or biofiltration BMP it serves in discussion section below) ☐Flow-thru treatment control with alternative compliance (provide BMP type/description in discussion section below) ☐Detention pond or vault for hydromodification management ☐Other (describe in discussion section below)
Purpose: ☐Pollutant control only ☐Hydromodification control only ☒Combined pollutant control and hydromodification control ☐Pre-treatment/forebay for another structural BMP ☐Other (describe in discussion section below)

Who will certify construction of this BMP? Provide name and contact information for the party responsible to sign BMP verification forms if required by the [City Engineer] (See Section 1.12 of the manual)	Alisa Vialpando, RCE. AVialpando@HunsakerSD.com
Who will be the final owner of this BMP?	Meritage Homes
Who will maintain this BMP into perpetuity?	Meritage Homes
What is the funding mechanism for maintenance?	Meritage Homes

Form I-6 Page 2 of 2
Structural BMP Summary Information (Copy this page as needed to provide information for each individual proposed structural BMP)
Structural BMP ID No. BF-3-2 (DMA 2)
Construction Plan Sheet No. 5
Type of structural BMP: ☐Retention by harvest and use (HU-1) ☐Retention by infiltration basin (INF-1) ☐Retention by bioretention (INF-2) ☐Retention by permeable pavement (INF-3) ☐Partial retention by biofiltration with partial retention (PR-1) ☒Proprietary Biofiltration (BF-3) ☐Flow-thru treatment control with prior lawful approval to meet earlier PDP requirements (provide BMP type/description in discussion section below) ☐Flow-thru treatment control included as pre-treatment/forebay for an onsite retention or biofiltration BMP (provide BMP type/description and indicate which onsite retention or biofiltration BMP it serves in discussion section below) ☐Flow-thru treatment control with alternative compliance (provide BMP type/description in discussion section below) ☐Detention pond or vault for hydromodification management ☐Other (describe in discussion section below)
Purpose: ☒Pollutant control only ☐Hydromodification control only ☐Combined pollutant control and hydromodification control ☐Pre-treatment/forebay for another structural BMP ☐Other (describe in discussion section below)

Project Address: Click here to enter text.	
Project Engineer: Click here to enter text.	Phone: Click here to enter text.

The purpose of this form is to verify that the site improvements for the project, identified above, have been constructed in conformance with the approved Storm Water Quality Management Plan (SWQMP) documents and drawings.

This form must be completed by the engineer and installing contractor and submitted prior to final inspection of the construction permit. Completion and submittal of this form is required for all new development and redevelopment projects in order to comply with the City's Storm Water ordinances and NDPES Permit Order No. R9-2013-0001. Final inspection for occupancy and/or release of grading or public improvement bonds may be delayed if this form is not submitted and approved by the City of Oceanside.

ENGINEER'S CERTIFICATION:

As the professional in responsible charge for the design of the above project, I certify that I have inspected all constructed Low Impact Development (LID) site design, source control and treatment control BMP's required per the approved SWQMP and Construction Permit No. Click here to enter text.; and that said BMP's have been constructed in compliance with the approved plans and all applicable specifications, permits, ordinances and Order No. R9-2013-0001 of the San Diego Regional Water Quality Control Board.

I understand that this BMP certification statement does not constitute an operation and maintenance verification.

ATTACHMENT 1

BACKUP FOR PDP POLLUTANT CONTROL BMPS

This is the cover sheet for Attachment 1.

Indicate which Items are Included:

Attachment Sequence	Contents	Checklist
Attachment 1a	DMA Exhibit (Required) See DMA Exhibit Checklist.	☒Included
Attachment 1b	Tabular Summary of DMAs Showing DMA ID matching DMA Exhibit, DMA Area, and DMA Type (Required)* *Provide table in this Attachment OR on DMA Exhibit in Attachment 1a	☐Included on DMA Exhibit in Attachment 1a ☒Included as Attachment 1b, separate from DMA Exhibit
Attachment 1c	Design Capture Volume Worksheet	☒Included
Attachment 1d	Form I-7, Harvest and Use Feasibility Screening Checklist (Required unless the entire project will use infiltration BMPs) Refer to Appendix B.3-1 of the BMP Design Manual to complete Form I-7.	☒Included ☐Not included because the entire project will use infiltration BMPs Feasibility addressed by Line 7 of Worksheet B.2
Attachment 1e	Form I-8, Categorization of Infiltration Feasibility Condition (Required unless the project will use harvest and use BMPs) Refer to Appendices C and D of the BMP Design Manual to complete Form I-8.	☒Included ☐Not included because the entire project will use harvest and use BMPs Feasibility addressed by Line 4 of Worksheet B.2
Attachment 1f	Pollutant Control BMP Design Worksheets / Calculations (Required) Refer to Appendices B and E of the BMP Design Manual for structural pollutant control BMP design guidelines	☒Included

Use this checklist to ensure the required information has been included on the DMA Exhibit:

The DMA Exhibit must identify:

☒Underlying hydrologic soil group
☒Approximate depth to groundwater
☒Existing natural hydrologic features (watercourses, seeps, springs, wetlands)
☐Critical coarse sediment yield areas to be protected
☒Existing topography and impervious areas
☒Existing and proposed site drainage network and connections to drainage offsite
☒Proposed grading
☒Proposed impervious features
☒Proposed design features and surface treatments used to minimize imperviousness
☒Drainage management area (DMA) boundaries, DMA ID numbers, and DMA areas (square footage or acreage), and DMA type (i.e., drains to BMP, self-retaining, or self-mitigating)
☐Potential pollutant source areas and corresponding required source controls (see Chapter 4, Appendix E.1, and Form I-3B)
☒Structural BMPs (identify location, type of BMP, and size/detail)

Placeholder – **DMA Exhibit**

Please provide the Exhibit in 24”x36” format with map pocket, wet stamp, and date.

LEGEND

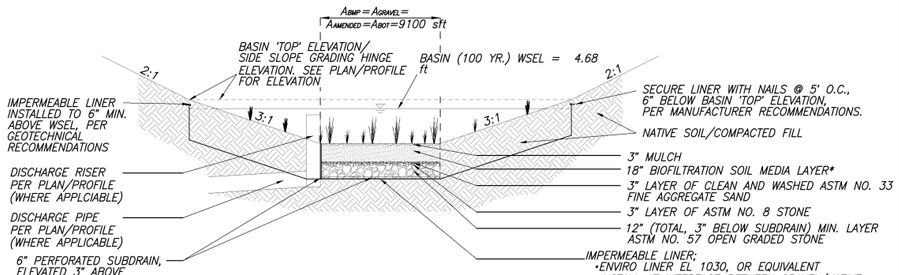
BIOFILTRATION BASIN CROSS SECTION



BIORETENTION SOIL MEDIA (BSM):
- 18" MINIMUM THICKNESS.
- 70% TO 85% BY VOLUME WASHED SAND AND 15% TO 30% BY VOLUME COMPOST OR ALTERNATIVE ORGANIC AMENDMENT.
- BSM: THE C:N RATIO OF BSM SHALL BE BETWEEN 15 AND 40 TO REDUCE THE POTENTIAL FOR NITRATE LEACHING.
- MUST MAINTAIN A MINIMUM PERCOLATION RATE OF 5 INCHES PER HOUR THROUGHOUT THE LIFE OF THE FACILITY, AND IT MUST BE SUITABLE FOR MAINTAINING PLANT LIFE.
- FOR ADDITIONAL INFORMATION REFER TO APPENDIX F.3 OF THE CITY OF SAN DIEGO STORM WATER STANDARDS MANUAL.

BIOFILTRATION PLANTING NOTE:
- ALL PLANTING IN 'BIOFILTRATION' AREAS SHALL CONFORM TO APPENDIX 'E' OF THE CITY OF SAN DIEGO LOW IMPACT DESIGN MANUAL.

Infiltration Feasibility Checklists

Infiltration Restrictions		Form 4	
Retention is required at the project site to the maximum extent practicable. Complete this form to summarize applicable infiltration restrictions. Supporting documentation must be provided in the Attachments.			
	Restriction Element	**Applicable?**	
Mandatory Considerations	BMP is within 100 feet of contaminated soils	☐ Yes	☒ No
	BMP is within 100 feet of industrial activities lacking source control	☐ Yes	☒ No
	BMP is within 100 feet of well/groundwater basin	☐ Yes	☒ No
	BMP is within 50 feet of septic tanks/leach fields	☐ Yes	☒ No
	BMP is within 10 feet of structures/tanks/walls	☐ Yes	☒ No
	BMP is within 10 feet of sewer utilities	☐ Yes	☒ No
	BMP is within 10 feet of groundwater table	☐ Yes	☒ No
	BMP is within hydric soils	☐ Yes	☒ No
	BMP is within highly liquefiable soils and has connectivity to structures	☐ Yes	☒ No
	BMP is within 1.5 times the height of adjacent steep slopes (≥25%)	☒ Yes	☐ No
	City staff has assigned "Restricted" Infiltration Category	☐ Yes	☒ No
Optional Considerations	BMP is within predominantly Type D soil	☐ Yes	☐ No
	BMP is within 10 feet of property line	☐ Yes	☐ No
	BMP is within fill depths of ≥5 feet (existing or proposed)	☐ Yes	☐ No
	BMP is within 10 feet of underground utilities	☐ Yes	☐ No
	BMP is within 250 feet of ephemeral stream	☐ Yes	☐ No
	Other (provide detailed geotechnical support in Attachment 6)	☐ Yes	☐ No
Result	**Unrestricted** – No restriction elements are applicable	☐	
	Restricted – One or more restriction elements are applicable	☒

Categorization of Infiltration Feasibility Condition	Form I-8

Part 1 - Full Infiltration Feasibility Screening Criteria

Would infiltration of the full design volume be feasible from a physical perspective without any undesirable consequences that cannot be reasonably mitigated?

Criteria	Screening Question	Yes	No
1	Is the estimated reliable infiltration rate below proposed facility locations greater than 0.5 inches per hour? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.	☐	☒

Provide basis: Assumed "No" but not confirmed. Infiltration deemed infeasible by the Geotechnical Engineer. See Form 4.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

2	Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.	☐	☒

Provide basis: Assumed "No" but not confirmed. Infiltration deemed infeasible by the Geotechnical Engineer. See Form 4.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.

Form I-8 Page 2 of 4			
Criteria	Screening Question	Yes	No
3	Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of groundwater contamination (shallow water table, storm water pollutants or other factors) that cannot be mitigated to an acceptable level? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	☐	☒
Provide basis: Assumed "No" but not confirmed. Infiltration deemed infeasible by the Geotechnical Engineer. See Form 4. Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
4	Can infiltration greater than 0.5 inches per hour be allowed without causing potential water balance issues such as change of seasonality of ephemeral streams or increased discharge of contaminated groundwater to surface waters? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	☐	☒
Provide basis: Assumed "No" but not confirmed. Infiltration deemed infeasible by the Geotechnical Engineer. See Form 4. Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability.			
Part 1 Result *	If all answers to rows 1 - 4 are "Yes" a full infiltration design is potentially feasible. The feasibility screening category is Full Infiltration If any answer from row 1-4 is "No", infiltration may be possible to some extent but would not generally be feasible or desirable to achieve a "full infiltration" design. Proceed to Part 2	☐Full Infiltration ☒No	

*To be completed using gathered site information and best professional judgment considering the definition of MEP in the MS4 Permit. Additional testing and/or studies may be required by Agency/Jurisdictions to substantiate findings

Form I-8 Page 3 of 4

Part 2 – Partial Infiltration vs. No Infiltration Feasibility Screening Criteria

Would infiltration of water in any appreciable amount be physically feasible without any negative consequences that cannot be reasonably mitigated?

Criteria	Screening Question	Yes	No
5	Do soil and geologic conditions allow for infiltration in any appreciable rate or volume? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.	☐	☒

Provide basis: Assumed "No" but not confirmed. Infiltration deemed infeasible by the Geotechnical Engineer. See Form 4.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability and why it was not feasible to mitigate low infiltration rates.

6	Can Infiltration in any appreciable quantity be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.	☐	☒

Provide basis: Assumed "No" but not confirmed. Infiltration deemed infeasible by the Geotechnical Engineer. See Form 4.

Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability and why it was not feasible to mitigate low infiltration rates.

Form I-8 Page 4 of 4			
Criteria	Screening Question	Yes	No
7	Can Infiltration in any appreciable quantity be allowed without posing significant risk for groundwater related concerns (shallow water table, storm water pollutants or other factors)? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	☐	☒
Provide basis: Assumed "No" but not confirmed. Infiltration deemed infeasible by the Geotechnical Engineer. See Form 4. Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability and why it was not feasible to mitigate low infiltration rates.			
8	Can infiltration be allowed without violating downstream water rights? The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.3.	☐	☒
Provide basis: Assumed "No" but not confirmed. Infiltration deemed infeasible by the Geotechnical Engineer. See Form 4. Summarize findings of studies; provide reference to studies, calculations, maps, data sources, etc. Provide narrative discussion of study/data source applicability and why it was not feasible to mitigate low infiltration rates.			
Part 2 Result*	If all answers from row 1-4 are yes then partial infiltration design is potentially feasible. The feasibility screening category is Partial Infiltration. If any answer from row 5-8 is no, then infiltration of any volume is considered to be infeasible within the drainage area. The feasibility screening category is No Infiltration.	☐Partial Infiltration ☒No Infiltration	

*To be completed using gathered site information and best professional judgment considering the definition of MEP in the MS4 Permit. Additional testing and/or studies may be required by Agency/Jurisdictions to substantiate findings

Attention!

-Minimum annual retention criteria are not satisfied for each individual drainage area. Implement additional site design elements, increase structural BMP retention capacity, or demonstrate that such requirements are satisfied at the project-level.
-This BMP does not fully satisfy the performance standards for pollutant control for the drainage area.

ALTA OCEANSIDE
COMPACT BIOFILTRATION SIZING CALCULATION

DMA 1: Compact Biofiltration Design Flows		Worksheet B.6-1		
1	DCV	DCV	1,416	cubic-feet
2	DCV Retained	DCV Retained	0.00	cubic-feet
3	DCV Biofiltered	DCV Biofiltered	0.00	cubic-feet
4	DCV requiring flow-thru (Line 1 - Line 2 - 0.67*Line 3)	DCV flow-thru	1,416	cubic-feet
5	Adjustment Factor (Line 4 / Line1)	AF=	1.00	unitless
6	Design rainfall intensity	i=	0.2	in/hr
7	Area tributary to BMP(s)	A=	0.80	acres
8	using Appendix B.2)	C=	0.73	unitless
9	Calculate Flow Rate = AF x (C x i x A) x1.5	Q=	0.175	cfs

1) Adjustment factor shall be estimated considering only retention and biofiltration BMPs located upstream of Compact Biofiltration BMPs. That is, if the Compact Biofiltration BMP is upstream of the project's retention and biofiltration BMPs then the Compact Biofiltration BMP shall be sized using an adjustment factor of 1.

2) Volume based (e.g., dry extended detention basin) Compact Biofiltration treatment control BMPs shall be sized to the volume in Line 4 and flow based (e.g., vegetated swales) shall be sized to flow rate in Line 9. Sand filter and media filter can be designed by either volume in :ie 4 or flow rate in Line 9

3) Propietary BMPs, if used, shall provide certified treatment capacity equal to or greater than the calculated flow rate in Line 9; certified treatment capacoty per unit shall be consistent with third party certifications.

4) Compact Biofiltration treatment control BMPs shall be sized to filter or treat the maximum flow rate of runoff produced from a rainfaill intensity of 0.2 inch of rainfall per hour, or each hour of every storm event

Filterra Sizing Spreadsheet
San Diego Region
Uniform Intensity Approach
Storm Intensity = 0.20 in/hr

Filterra Infiltration Rate = 175 (in/hr)
Filterra Flow per Square Foot = 0.00405 (ft3/sec/ft2)

Filterra Flow Rate, Q = 0.00405 ft3/sec x Filterra Surface Area
Rational Method, Q = C x I x A
San Diego Multiplier, M = 1.5

Site Flowrate, Q = (C x DI x DA x M x 43560) / (12 x3600)
OR DA = (12 x 3600 x Q) / (C x 43560 x DI x M)

where
Q = Flow (ft3/sec)
DA = Drainage Area (acres)
DI = Design Intensity (in/hr)
C = Runoff coefficient (dimensionless)
M = Multiplier (dimensionless)

ATTACHMENT 2
BACKUP FOR PDP HYDROMODIFICATION CONTROL MEASURES

This is the cover sheet for Attachment 2.

☐Mark this box if this attachment is empty because the project is exempt from PDP hydromodification management requirements.

Indicate which Items are Included:

Attachment Sequence	Contents	Checklist
Attachment 2a	1. Hydromodification Management Exhibit (Required)	☒Included See Hydromodification Management Exhibit Checklist.
Attachment 2b	Management of Critical Coarse Sediment Yield Areas (WMAA Exhibit is required, additional analyses are optional) See Section 6.2 of the BMP Design Manual.	☐Exhibit showing project drainage boundaries marked on WMAA Critical Coarse Sediment Yield Area Map (Required) Optional analyses for Critical Coarse Sediment Yield Area Determination ☐6.2.1 Verification of Geomorphic Landscape Units Onsite ☐6.2.2 Downstream Systems Sensitivity to Coarse Sediment ☐6.2.3 Optional Additional Analysis of Potential Critical Coarse Sediment Yield Areas Onsite
Attachment 2c	Geomorphic Assessment of Receiving Channels (Optional) See Section 6.3.4 of the BMP Design Manual.	☐Not performed ☐Included ☐Submitted as separate stand-alone document
Attachment 2d	Flow Control Facility Design and Structural BMP Drawdown Calculations (Required) Overflow Design Summary for each structural BMP See Chapter 6 and Appendix G of the BMP Design Manual	☐Included ☐Submitted as separate stand-alone document
Attachment 2e	Vector Control Plan (Required when structural BMPs will not drain in 96 hours)	☐Included ☐Not required because BMPs will drain in less than 96 hours

Use this checklist to ensure the required information has been included on the Hydromodification Management Exhibit:

The Hydromodification Management Exhibit must identify:

- ☒ Underlying hydrologic soil group
- ☒ Approximate depth to groundwater
- ☒ Existing natural hydrologic features (watercourses, seeps, springs, wetlands)
- ☐ Critical coarse sediment yield areas to be protected
- ☒ Existing topography
- ☒ Existing and proposed site drainage network and connections to drainage offsite
- ☒ Proposed grading
- ☒ Proposed impervious features
- ☒ Proposed design features and surface treatments used to minimize imperviousness
- ☒ Point(s) of Compliance (POC) for Hydromodification Management
- ☒ Existing and proposed drainage boundary and drainage area to each POC (when necessary, create separate exhibits for pre-development and post-project conditions)
- ☒ Structural BMPs for hydromodification management (identify location, type of BMP, and size/detail)

Please provide the Exhibit in 24”x36” format with map pocket, wet date, and stamp.

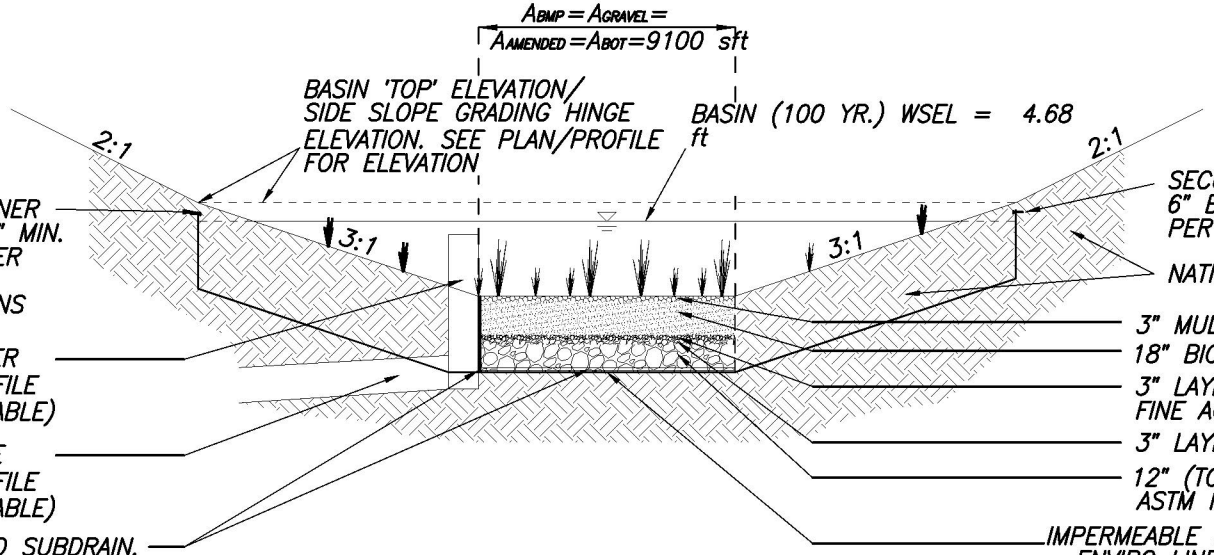
BIOFILTRATION BASIN CROSS SECTION



IMPERMEABLE LINER INSTALLED TO 6" MIN. ABOVE WSEL, PER GEOTECHNICAL RECOMMENDATIONS

DISCHARGE RISER PER PLAN/PROFILE (WHERE APPLCIABLE)

DISCHARGE PIPE PER PLAN/PROFILE (WHERE APPLICABLE)

6" PERFORATED SUBDRAIN, ELEVATED 3" ABOVE LINER/GRAVEL INVERT, RUN ALONG BASIN LENGTH AND LUG CONNECTION TO RISER OUTLET STRUCTURE (SEE PLAN FOR TYPICAL LAYOUT)

SECURE LINER WITH NAILS @ 5' O.C., 6" BELOW BASIN 'TOP' ELEVATION, PER MANUFACTURER RECOMMENDATIONS.

NATIVE SOIL/COMPACTED FILL

3" MULCH

18" BIOFILTRATION SOIL MEDIA LAYER*

3" LAYER OF CLEAN AND WASHED ASTM NO. 33 FINE AGGREGATE SAND

3" LAYER OF ASTM NO. 8 STONE

12" (TOTAL, 3" BELOW SUBDRAIN) MIN. LAYER ASTM NO. 57 OPEN GRADED STONE

IMPERMEABLE LINER;
- ENVIRO LINER EL 1030, OR EQUIVALENT
- INSTALL AT INTERFACE BETWEEN GRAVEL/NATIVE AND RUN UP NATIVE SIDESLOPES TO HIGH WATER ELEVATION.
- TIE TO STRUCTURES PER MANUFACTURER RECOMMENDATIONS, WHERE APPLICABLE.
- WATERPROOF ALL AREAS LINER IS PENETRATED, WHERE APPLICABLE.

BIORETENTION SOIL MEDIA (BSM):
- 18" MINIMUM THICKNESS.
- 70% TO 85% BY VOLUME WASHED SAND AND 15% TO 30% BY VOLUME COMPOST OR ALTERNATIVE ORGANIC AMENDMENT.
- BSM: THE C:N RATIO OF BSM SHALL BE BETWEEN 15 AND 40 TO REDUCE THE POTENTIAL FOR NITRATE LEACHING.
- MUST MAINTAIN A MINIMUM PERCOLATION RATE OF 5 INCHES PER HOUR THROUGHOUT THE LIFE OF THE FACILITY, AND IT MUST BE SUITABLE FOR MAINTAINING PLANT LIFE.
- FOR ADDITIONAL INFORMATION REFER TO APPENDIX F.3 OF THE CITY OF SAN DIEGO STORM WATER STANDARDS MANUAL.

BIOFILTRATION PLANTING NOTE:
- ALL PLANTING IN 'BIOFILTRATION' AREAS SHALL CONFORM TO APPENDIX 'E' OF THE CITY OF SAN DIEGO LOW IMPACT DESIGN MANUAL.

Downstream Systems Sensitivity to Course Sediment		Form I-10	
When it has been determined that potential critical coarse sediment yield areas exist within the project site, the next step is to determine whether downstream systems would be sensitive to reduction of coarse sediment yield from the project site. Use this form to document the evaluation of downstream systems requirements for preservation of coarse sediment supply.			
Project Name:			
Project Tracking Number / Permit Application Number:			
1	Will the project discharge runoff to a hardened MS4 system (pipe or lined channel) or an un-lined channel?	☐ Hardened MS4 system	Go to 2
		☐ Un-lined channel	Go to 4
2	Will the hardened MS4 system convey sediment (e.g., a concrete-lined channel with steep slope and cleansing velocity) or sink sediment (e.g., flat slopes, constrictions, treatment BMPs, or ponds with restricted outlets within the system will trap sediment and not allow conveyance of coarse sediment from the project site to an un-lined system).	☐ Convey	Go to 3
		☐ Sink	Go to 7
3	What kind of receiving water will the hardened MS4 system convey the sediment to?	☐ Un-lined channel	Go to 4
		☐ Lake ☐ Reservoir ☐ Bay	Go to 7
		☐ Lagoon ☐ Ocean	Go to 6
4	Is the un-lined channel impacted by deposition of sediment? This condition must be documented by the local agency.	☐ Yes	Go to 7
		☐ No	Go to 5

NOT APPLICABLE

Form I-10 Page 2 of 2	
5	End – Preserve coarse sediment supply to protect un-lined channels from accelerated erosion due to reduction of coarse sediment yield from the project site unless further investigation determines the sediment is not critical to the receiving stream. Sediment that is critical to receiving streams is the sediment that is a significant source of bed material to the receiving stream (bed sediment supply) (see Section 6.2.3 and Appendix H.2 of the manual).
6	End – Provide management measures for preservation of coarse sediment supply (protect beach sand supply).
7	End – Downstream system does not warrant preservation of coarse sediment supply, no measures for protection of critical coarse sediment yield areas onsite are necessary. Use the space below to describe the basis for this finding for the project.

INTRODUCTION

This report provides results for hydromodification management for Pacifica Site "the project" in the City of Oceanside, CA. Most of the developed area of the project drains to one biofiltration basin southwest of the site, while a small portion (0.8 ac) east of the site drains northerly away from the biofiltration basin towards Macario Dr. The flow will be captured via proposed proprietary biofiltration flow-based BMP "BF-3-2" (Filterra Unit or equivalent), to address water quality requirements before entering the bypassed storm drain system that will convey the flow to POC1 southwest of the project, where it commingles with the biofiltration basin discharge.

Environmental Protection Agency (EPA) Storm Water Management Model 5.1 (SWMM) has been used for hydromodification analysis. SWMM models were prepared for the pre and post developed conditions at the POC in order to determine if the proposed biofiltration facility has sufficient footprint to meet the current Hydromodification Management Plan (HMP) requirements from the Regional Water Quality Control Board (RWQCB).

The table below provides reports tributary area in both pre and post development conditions, demonstrating that all areas are analyzed in the various section discussed above.

	To POC 1 (AC)
Pre developed Area	15.67
Proposed Area	15.67

See the pre-developed and Proposed Hydromodification Exhibits depicting these areas.

SWMM MODEL DEVELOPMENT

Two (2) SWMM models were prepared for this study, one for the point of compliance (POC) in pre-developed condition and one for the POC in the proposed condition. For all SWMM models, flow duration curves were prepared to determine if the proposed biofiltration footprint was sufficient to meet the current HMP requirements.

The inputs required to develop SWMM models include rainfall, watershed characteristics, and BMP configurations. The Oceanside Gage from the Project Clean Water website was used for this study, since it is the closest rain gage.

Evaporation for the site was modeled using average monthly values from the County hourly dataset. The site was modeled with hydrologic soil groups B and D soils as determined from the USGS Survey web-based Soil Survey Map. Other SWMM inputs for the subareas are discussed in the appendix to this document where the selection of the parameters is explained in detail.

BIORETENTION MODELING

Developed storm water runoff from the project site is routed through one (1) biofiltration basin located within the main project boundary. Flows from the proposed residences drain to the aforementioned biofiltration area via storm drain and overland flow, ultimately leaving the site through a southerly draining natural channel.

Basin Discussion:

Flow control in the basin is achieved by using a subdrain with an orifice for flow control, in addition to a spillway near the top of the basin. The design information is presented in the Basin Table below. Sizing and further peak flow discussion will be in the "Drainage Report for Pacifica Site".

Basin Table

	BF-1-1
Riser/Spillway Height (ft)*	4.50
Spillway Width (ft)	10
Basin Depth (ft)	6
Amended Soil Depth (in)+3in Mulch+ sand filter layer	24
Class 2 Perm. Depth (in)+stone filter layer	12
Biofiltration bottom Area (sf)	9,100
Sub-Drain Orifice	
No. of Orifices	1
Diameter (in)	1.5

*From finish grade.

FLOW DURATION CURVE COMPARISON

The Flow Duration Curves (FDC) for the site were compared at the POC by exporting the hourly runoff time series results from SWMM to a spreadsheet. FDC was compared between 10% of the pre-developed condition Q_2 up to the pre-developed condition Q_{10}. The Q_2 and Q_{10} were determined using a partial duration statistical analysis of the runoff time series in an Excel spreadsheet using the Cunnane plotting position method (which is the preferred plotting methodology in the HMP Permit). As the SWMM Model is a statistical analysis based on the Weibull Plotting Position Method, the Weibull Method was also used within the spreadsheet to ensure that the results were similar to those obtained by the SWMM Model.

The range between 10% of Q_2 and Q_{10} was divided into 100 equal time intervals; the number of hours that each flow rate was exceeded was counted from the hourly series. Additionally, the intermediate peaks with a return period "i" were obtained (Q_i with i=3 to 9). For the purpose of the plot, the values were presented as percentage of time exceeded for each flow rate.

FDC comparisons at the POC are illustrated in Figure 1 in logarithmic scale. Attachment 7 provides a detailed drainage exhibit for the post-developed condition.

As can be seen in Figure 1, the FDC's for the proposed condition with the biofiltration basin is within 110% of the curve for the pre-developed condition. The additional runoff volume generated from developing the site will be released downstream at a flow rate below the 10% Q_2 lower threshold. Additionally, the project will also not increase peak flow rates between the 10% Q_2 and the Q_{10}, as shown in the graphic and also in the attached table.

SUMMARY

This study has demonstrated that the proposed biofiltration footprint at the Pacifica Site project is sufficient to meet the current HMP criteria if the biofiltration cross-section area and volume recommended within this memo are incorporated within the proposed project site.

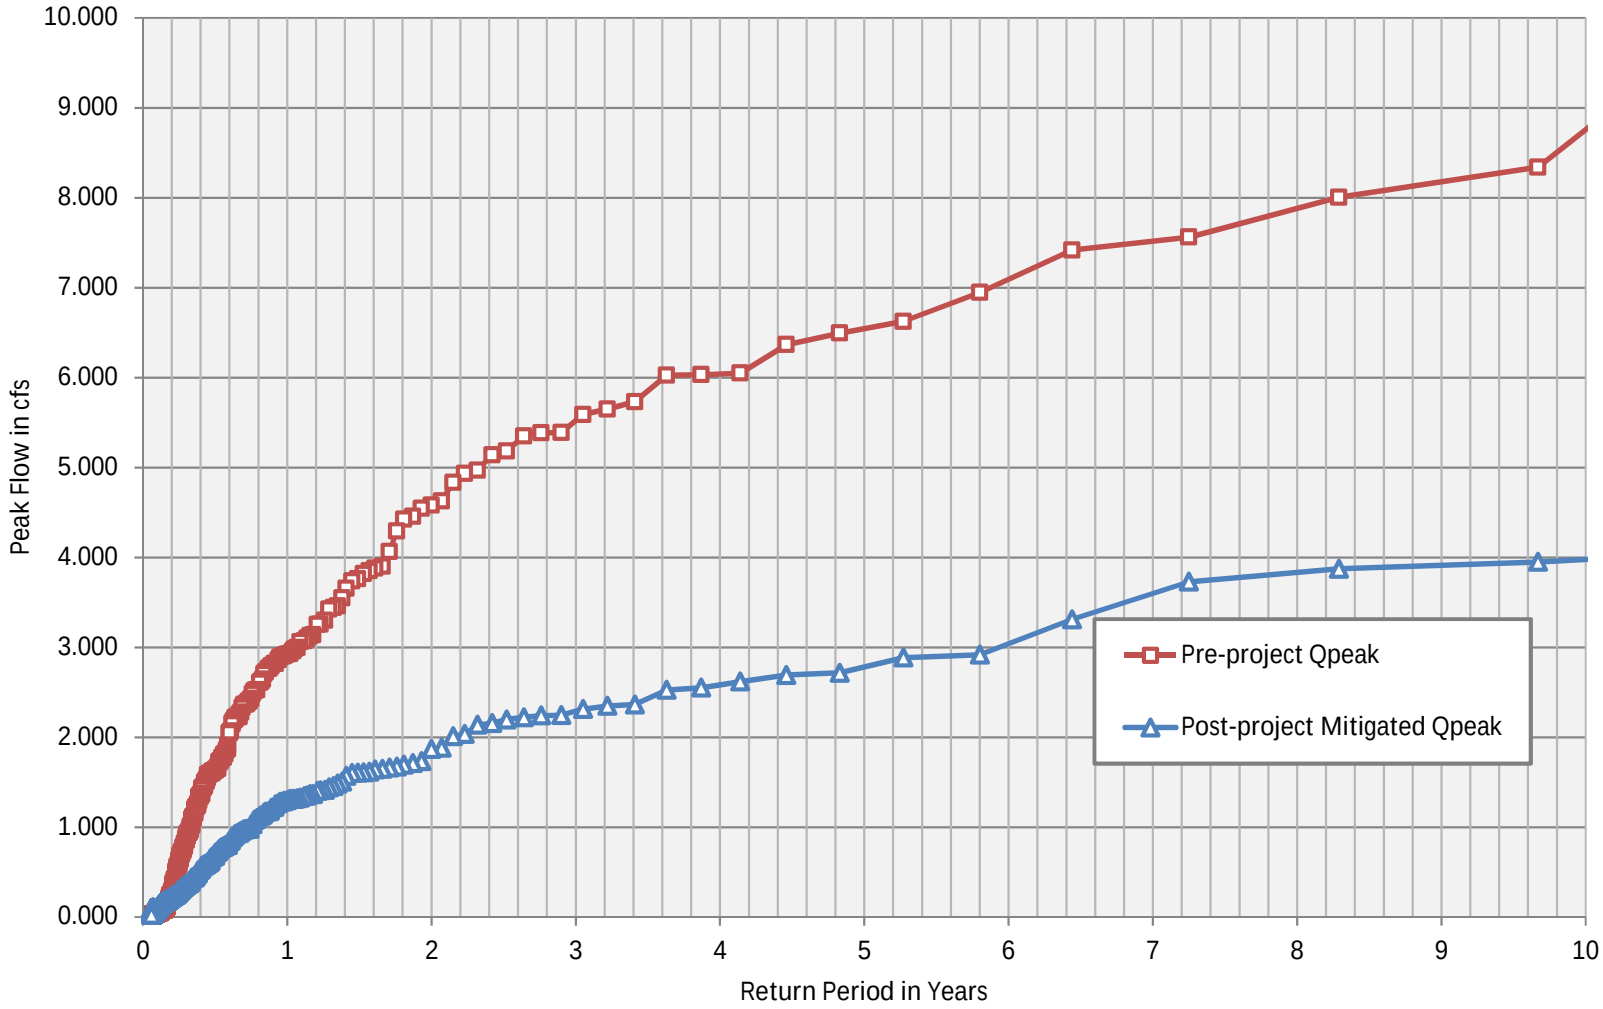
Peak Flow Frequency Summary

Return Period	Pre-project Qpeak (cfs)	Post-project - Mitigated Q (cfs)
LF = 0.1xQ2	0.458	0.187
2-year	4.581	1.869
5-year	6.545	2.783
10-year	8.757	3.979

POC 1
Peak Flow Frequency Curves



ATTACHMENT 2 - Flow Duration Curve Analysis, Plot & Table

Flow duration curve shall not exceed the pre-develop conditions by more than 10% neither in peak flow nor duration.

The figure on the following page illustrates that the flow duration curve in post-development conditions after the proposed BMPs is below the pre-developed flow duration curve. The flow duration curve table following the curve shows that if the interval 0.10Q 2 – Q 10 is divided in 100 sub-intervals, then a) the post development divided by pre-development durations are never larger than 110% (the permit allows up to 110%); and b) there are no more than 10 intervals in the range 101%-110% which would imply an excess over 10% of the length of the curve (the permit allows less than 10% of excesses measured as 101-110%).

Consequently, the design passes the hydromodification test.

It is important to note that the flow duration curve can be expressed in the "x" axis as percentage of time, hours per year, total number of hours, or any other similar time variable. As those variables only differ by a multiplying constant, their plot in logarithmic scale is going to look exactly the same and compliance can be observed regardless of the variable selected. The selection of a logarithmic scale in lieu of the normal scale is preferred, as differences between the pre-development and post-development curves can be seen more clearly in the entire range of analysis. Log graphics is presented for reference.

In terms of the "y" axis, the peak flow value is the variable of choice. As an additional analysis performed by H&A, not only the range of analysis is clearly depicted (10% of Q 2 to Q 10) but also all intermediate flows are shown (30% of Q 2 , 50% of Q 2 , Q 2 , Q 3 , Q 4 , Q 5 , Q 6 , Q 7 , Q 8 and Q 9) in order to demonstrate compliance at any range Q x – Q x+1 . It must be pointed out that one of the limitations of both the SWMM and SDHM models is that the intermediate analysis is not performed (to obtain Q i from i = 2 to 10). H&A performed the analysis using the Cunnane Plotting position Method (the preferred method in the HMP permit) from the "n" largest independent peak flows obtained from the continuous time series.

The largest "n" peak flows are attached in this appendix, as well as the values of Q_i with a return period "i", from i=2 to 10. The Q i values are also added into the flow-duration plot.

ATTACHMENT 4 - Elevation vs. Area Curves vs. Discharge Curves to be used in SWMM

Elevation vs. Area

For the portion of the flow diverted in the LID Control to the receiving detention basin, a pond is used to route the hydrographs. The elevation vs area curve in the model is calculated in Excel and imported into the model at a 0.05 ft interval range.

Elevation vs Discharge

The total discharge peak flow is imported from an Excel spreadsheet that calculated the elevation vs discharge of the multiple outlet system.

The orifices have been selected to maximize their size while still restricting flows to conform to the required 10% of the Q2 event flow as mandated in the Final Hydromodification Management Plan by Brown & Caldwell, dated March 2011. While we acknowledge that these orifices are small, to increase the size of these outlets would impact the basins' ability to restrict flows beneath the HMP thresholds, thus preventing the BMP from conformance with HMP requirements.

In order to prevent blockage of the orifices, a debris screen will be fitted to the base invert of the lower orifices located within the detention basin. Regular maintenance of the riser and orifices will be performed to ensure potential blockages are minimized. A detail of the orifice and riser structure is provided in Attachment 5 of this attachment. The stage-storage and stage-discharge calculations have been provided on the following pages.

Elevation vs. Area Curve

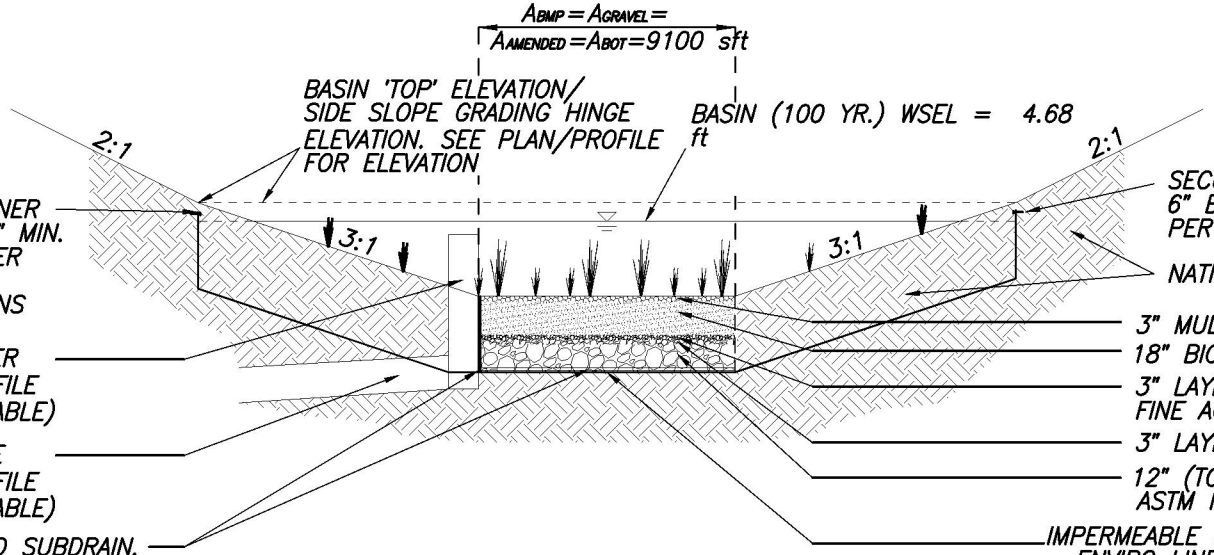
BIOFILTRATION BASIN CROSS SECTION



IMPERMEABLE LINER INSTALLED TO 6" MIN. ABOVE WSEL, PER GEOTECHNICAL RECOMMENDATIONS

DISCHARGE RISER PER PLAN/PROFILE (WHERE APPLCIABLE)

DISCHARGE PIPE PER PLAN/PROFILE (WHERE APPLICABLE)

6" PERFORATED SUBDRAIN, ELEVATED 3" ABOVE LINER/GRAVEL INVERT, RUN ALONG BASIN LENGTH AND LUG CONNECTION TO RISER OUTLET STRUCTURE (SEE PLAN FOR TYPICAL LAYOUT)

SECURE LINER WITH NAILS @ 5' O.C., 6" BELOW BASIN 'TOP' ELEVATION, PER MANUFACTURER RECOMMENDATIONS.

NATIVE SOIL/COMPACTED FILL

3" MULCH

18" BIOFILTRATION SOIL MEDIA LAYER*

3" LAYER OF CLEAN AND WASHED ASTM NO. 33 FINE AGGREGATE SAND

3" LAYER OF ASTM NO. 8 STONE

12" (TOTAL, 3" BELOW SUBDRAIN) MIN. LAYER ASTM NO. 57 OPEN GRADED STONE

IMPERMEABLE LINER;
- ENVIRO LINER EL 1030, OR EQUIVALENT
- INSTALL AT INTERFACE BETWEEN GRAVEL/NATIVE AND RUN UP NATIVE SIDESLOPES TO HIGH WATER ELEVATION.
- TIE TO STRUCTURES PER MANUFACTURER RECOMMENDATIONS, WHERE APPLICABLE.
- WATERPROOF ALL AREAS LINER IS PENETRATED, WHERE APPLICABLE.

BIORETENTION SOIL MEDIA (BSM):
- 18" MINIMUM THICKNESS.
- 70% TO 85% BY VOLUME WASHED SAND AND 15% TO 30% BY VOLUME COMPOST OR ALTERNATIVE ORGANIC AMENDMENT.
- BSM: THE C:N RATIO OF BSM SHALL BE BETWEEN 15 AND 40 TO REDUCE THE POTENTIAL FOR NITRATE LEACHING.
- MUST MAINTAIN A MINIMUM PERCOLATION RATE OF 5 INCHES PER HOUR THROUGHOUT THE LIFE OF THE FACILITY, AND IT MUST BE SUITABLE FOR MAINTAINING PLANT LIFE.
- FOR ADDITIONAL INFORMATION REFER TO APPENDIX F.3 OF THE CITY OF SAN DIEGO STORM WATER STANDARDS MANUAL.

BIOFILTRATION PLANTING NOTE:
- ALL PLANTING IN 'BIOFILTRATION' AREAS SHALL CONFORM TO APPENDIX 'E' OF THE CITY OF SAN DIEGO LOW IMPACT DESIGN MANUAL.

SOIL SECTION FOR WATER QUALITY/HYDROMODIFICATION BIOFILTRATION BASIN

ATTACHMENT 7 - SWMM Explanation of Significant Variables

Attached, the reader can see the reports associated with the EPA-SWMM Model in both pre-development and post-development conditions. Each portion, i.e., sub-catchments, outfalls, storage units, LID controls for the bio-retention cells, ponding on top of the bio-retention (modeled as a storage unit), weir as a discharge, and outfalls (point of compliance), are also shown.

Soil characteristics of the existing soils were determined from the USGS sources.

Description of model parameters and assumptions:

N-Imperv – Manning's N for impervious surfaces

0.012 (typical)

N-Perv – Manning's N for pervious surfaces

0.15 (typical)

Dstore-Imperv – Depth of depression storage on impervious area (in)

0.05 (typical)

Dstore-Perv – Depth of depression storage on pervious area (in)

0.1 (typical)

%Zero-Imperv – Percentage of impervious area with no depression storage (%)

25 (typical)

Suction Head – Soil capillary suction head (in)

Conductivity – Soil saturated hydraulic comfuctivity (in/hr)

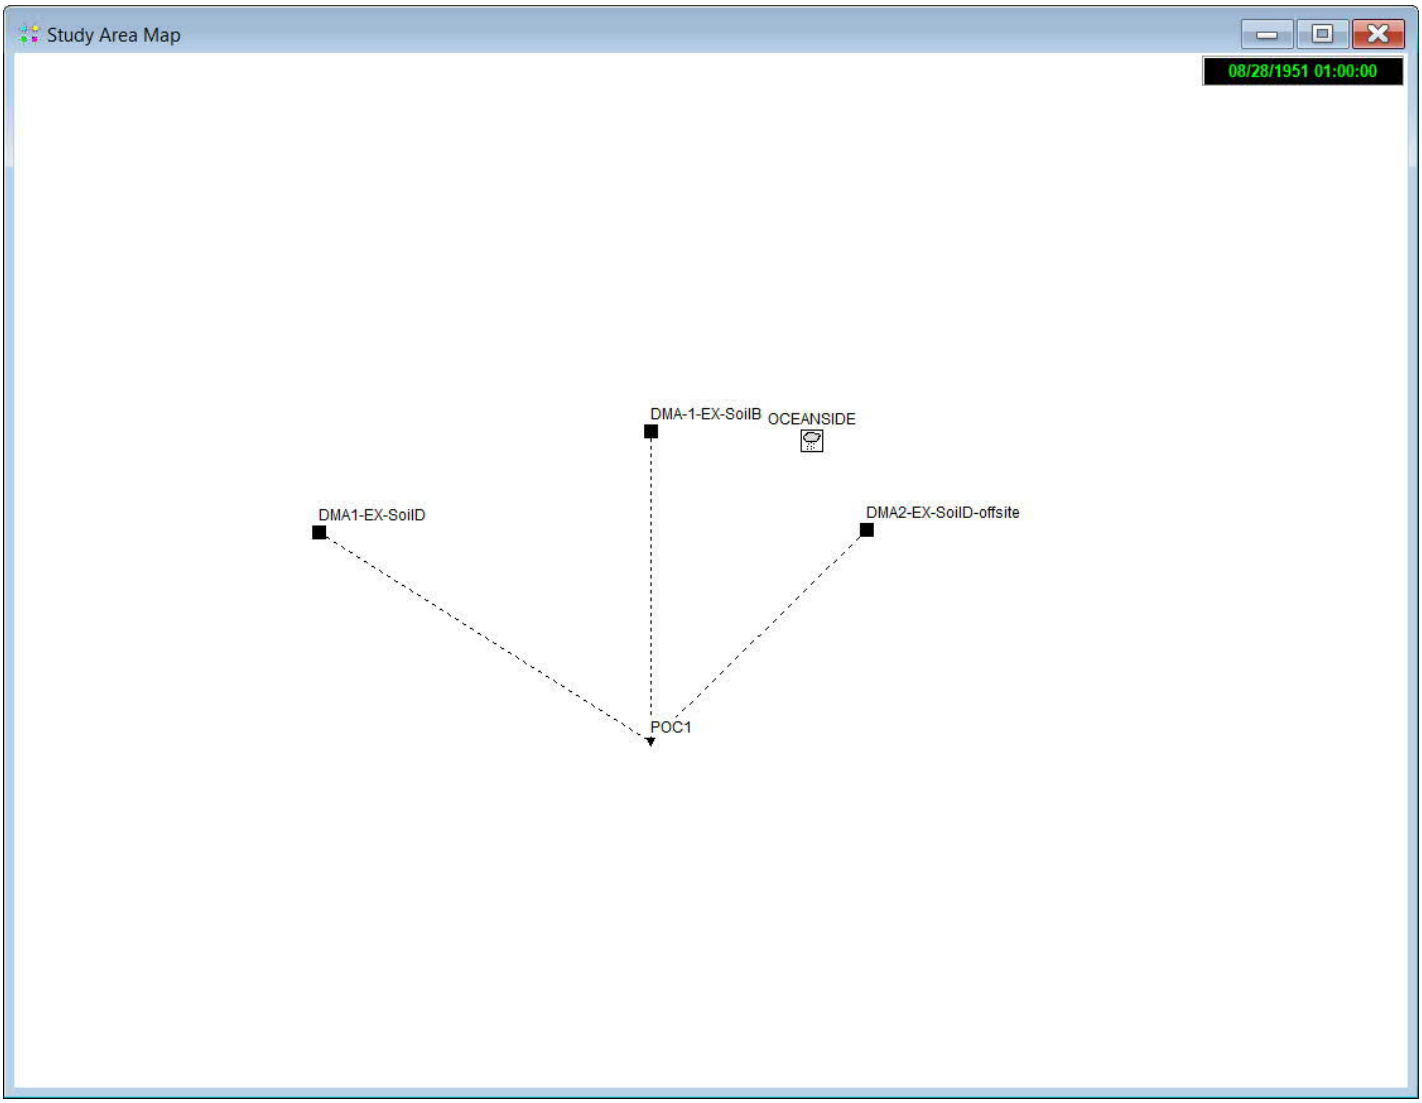
-75% of these values if subcatchment is graded/compacted

Initial Deficit – Initial moisture deficit (fraction)

Soil Type	Suction Head	Conductivity	Initial Deficit
A	1.5	0.3	0.30
B	3	0.2	0.31
C	6	0.1	0.32
D	9	0.025	0.33

NOTE: These values are based on City of Oceanside BMP Design Manual, Appendix G for SWMM and recommended values for the EPA SWMM program.

POC 1 – Pre-Developed Condition



EXPLANATION OF SELECTED VARIABLES

Parameters for the pre- and post-developed models include soil types B and D in accordance with the San Diego County Hydrology Manual and the USGS Soil Survey Map (attached at the end of this appendix). Suction head, conductivity and initial deficit corresponds to average values expected for the soil types, values recommended by the "Model BMP Design Manual San Diego Region for Permanent Site Design, Stormwater Treatment, and Hydromodification Management .

H&A selected infiltration values, such that the percentage of total precipitation that becomes runoff, is realistic for soil types B and D and slightly smaller than measured values for Southern California watersheds.

Selection of a Kinematic Approach: As the continuous model is based on hourly rainfall, and the time of concentration for the pre-development and post-development conditions is significantly smaller than 60 minutes, precise routing of the flows through the impervious surfaces, the underdrain pipe system, and the discharge pipe was considered unnecessary. The truncation error of the precipitation into hourly steps is much more significant than the precise routing in a system where the time of concentration is much smaller than 1 hour.

Sub-catchments labeled BR-X:

The area of Prop-X + BR-X must be equal to the area of the development tributary to that particular bio-retention facility. Five (5) decimal places were given regarding the areas of the bio-retention to insure that the area used by the program for the LID subroutine corresponds exactly with these tributaries.

The area input in the LID Usage Editor is the ponded area at the water quality depth. The depth input in the suface tab of the LID Control Editor equates to a volume on the surface of the bioretention basin. SWMM "sees" vertical side slopes in the LID Editor, so in order to not over estimate the surface storage that is reduced by the actual side slopes of the basin, we have calculated an 'effective' depth by calculating the surface volume and dividing by the ponded area.

LID Control Editor Input Definitions:
Storage Depth - When confining walls or berms are present this is the maximum depth to which water can pond above the surface of the unit before overflow occurs (in inches or mm). For LIDs that experience overland flow it is the height of any surface depression storage. For swales, it is the height of its trapezoidal cross section.

Vegetation Volume Fraction - The fraction of the volume within the storage depth filled with vegetation. This is the volume occupied by stems and leaves, not their surface area coverage. Normally this volume can be ignored, but may be as high as 0.1 to 0.2 for very dense vegetative growth.

Surface Roughness - Manning's n for overland flow over the surface of porous pavement or a vegetative swale (see this table for suggested values). Use 0 for other types of LIDs.

Surface Slope - Slope of porous pavement surface or vegetative swale (percent). Use 0 for other types of LIDs.

Thickness - The thickness of the soil layer (inches or mm). Typical values range from 18 to 36 inches (450 to 900 mm) for rain gardens, street planters and other types of land-based bio-retention units, but only 3 to 6 inches (75 to 150 mm) for green roofs.

Porosity - The volume of pore space relative to total volume of soil (as a fraction).

Field Capacity - Volume of pore water relative to total volume after the soil has been allowed to drain fully (as a fraction). Below this level, vertical drainage of water through the soil layer does not occur.

Wilting Point - Volume of pore water relative to total volume for a well dried soil where only bound water remains (as a fraction). The moisture content of the soil cannot fall below this limit.

Conductivity - Hydraulic conductivity for the fully saturated soil (in/hr or mm/hr).

Conductivity Slope - Slope of the curve of log(conductivity) versus soil moisture content (dimensionless). Typical values range from 5 for sands to 15 for silty clay.

Suction Head - The average value of soil capillary suction along the wetting front (inches or mm). This is the same parameter as used in the Green-Ampt infiltration model.

Height - This is the thickness of a gravel layer (inches or mm).

Void Ratio - The volume of void space relative to the volume of solids in the layer. Typical values range from 0.5 to 0.75 for gravel beds. Note that porosity = void ratio / (1 + void ratio).

Infiltration Rate - The rate at which water infiltrates into the native soil below the layer (in inches/hour or mm/hour).This would typically be the Saturated Hydraulic Conductivity of the surrounding subcatchment if Green-Ampt infiltration is used or the Minimum Infiltration Rate for Horton infiltration. If there is an impermeable floor or liner below the layer then use a value of 0.

Clogging Factor - Total volume of treated runoff it takes to completely clog the bottom of the layer divided by the void volume of the layer. Use a value of 0 to ignore clogging. Clogging progressively reduces the Infiltration Rate in direct proportion to the cumulative volume of runoff treated and may only be of concern for infiltration trenches with permeable bottoms

and no under drains. Refer to the Pavement Layer page for more discussion of the Clogging Factor.

Drain Coefficient and Drain Exponent - Coefficient C and exponent n that determines the rate of flow through the underdrain as a function of height of stored water above the drain height. The following equation is used to compute this flow rate (per unit area of the LID unit):

$q = C(h-Hd)n$

where q is outflow (in/hr or mm/hr), h height of stored water (inches or mm), and Hd is the drain height. If the layer does not have an underdrain then set C to 0. A typical value for n would be 0.5 (making the drain act like an orifice). A rough estimate for C can be based on the time T required to drain a depth D of stored water. For n = 0.5, C = 2D1/2/T.

Drain Offset Height - Height of any underdrain piping above the bottom of a storage layer or rain barrel (inches or mm).

LID Control Editor: Explanation of Significant Variables

Storage Depth:
The storage depth variable within the SWMM model is representative of the storage volume provided beneath the engineered soil and mulch components of the bioretention facility. This storage volume is comprised of a gravel located bed beneath a layer of engineered soil and a 0.25 foot (3-inch) layer of landscaping mulch.

Porosity:
A porosity value of 0.4 has been selected for the model. The amended soil is to be highly sandy in content in order to have a saturated hydraulic conductivity of approximately 5 in/hr.

H&A considers such a value to be slightly high; however, in order to comply with the HMP Permit, the value recommended by the Copermittees for the porosity of amended soil is 0.4, per Appendix A of the Final Hydromodification Management Plan by Brown & Caldwell, dated March 2011.

Void Ratio:
The ratio of the void volume divided by the soil volume is directly related to porosity as n/(1-n). As the underdrain layer is composed of gravel, a porosity value of 0.4 has been selected, which results in a void ratio of 0.4/(1-0.4) = 0.67 for the gravel detention layer.

Clogging factor:
A clogging factor was not used (0 indicates that there is not clogging assumed within the model). The reason for this is related to the fairness of a comparison with the SDHM model and the HMP sizing tables: a clogging factor was not considered, and instead, a conservative value of infiltration was recommended.

Drain (Flow) coefficient:
The flow coefficient in the SWMM Model is the coefficient needed to transform the orifice equation into a general power law equation of the form:

$$q = C(H - H_D)^n \qquad (1)$$

where q is the peak flow in in/hr, n is the exponent (typically 0.5 for orifice equation), H D is the elevation of the centroid of the orifice in inches (assumed equal to the invert of the orifice for small orifices and in our design equal to 0) and H is the depth of the water in inches.

The general orifice equation can be expressed as:

$$Q = \frac{\pi}{4} c_g \frac{D^2}{144} \sqrt{2g \frac{(H - H_D)}{12}} \qquad (2)$$

where Q is the peak flow in cfs, D is the diameter in inches, c g is the typical discharge coefficient for orifices (0.61-0.63 for thin walls and around 0.75-0.8 for thick walls), g is the acceleration of gravity in ft/s^2, and H and H D are defined above and are also used in inches in Equation (2).

Cutoff Flow:

This is the only significant variable in the diversion, as the type of diversion is defined by this value. Any excess of flow over this value will be diverted into a pond subroutine (the surface stage of the bio-retention basin) and routed there. The determination of this value equates to the value obtained with equation (2) above, plus 1%, when H = depth of gravel layer and H_D=0 (orifice situated at the datum). Thus, once flows exceed the maximum discharge the LID orifice experiences a head of the storage depth, ponding occurs within the bioretention basin, routing these additional flows via the pond riser.

Note:
The complete storage and rating curves and the respective explanation is shown at the end of this appendix. A variable area vs. elevation storage curve was used for the final model, and a discharge that is a function of the outlet structure in the surface was used also.

ATTACHMENT 8 - Drying Time of the Surface Layer of Bio-retention cells

The LID subroutine of the SWMM Model does not increase the discharge of the lower LID orifice once the storage layer is full (in other words, it does not consider the influence of the pressure in the amended soil layer). The discharge of the lower LID orifice when the surface layer is full is considered constant by the model and equal to the discharge of the lower orifice when the storage layer is full (equal to the cutoff flows).

The drying time interval between an elevation yi and another elevation $yi - \Delta y$ can be obtained by:

$$\Delta t_i(hours) = \frac{(Q(yi)+Q(yi-\Delta y))}{7200\ (V(yi)-V(yi-\Delta y))} = \frac{Q_{ave}}{3600\ \Delta V}$$

$$t = \sum_{i=1}^{n} \Delta t_i\ (hours)$$

Q_{ave} represents the average discharge between elevation y_i and y_{i+1} obtained by $\frac{Q(yi)+Q(yi-\Delta y)}{2}$ where ΔV represents the fraction of the volume that must be discharged at a peak flow $Q_{ave}(V(yi) - V(yi - \Delta y))$.

The volume and the discharge change as the elevation changes; the calculation takes into account this change.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: San Diego County Area, California
Survey Area Data: Version 16, Sep 13, 2021

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 24, 2020—Feb 12, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
GoA	Grangeville fine sandy loam, 0 to 2 percent slopes	B	4.5	30.1%
LeC	Las Flores loamy fine sand, 2 to 9 percent slopes	D	0.7	5.0%
LeC2	Las Flores loamy fine sand, 5 to 9 percent slopes, eroded	D	0.9	5.8%
LeE2	Las Flores loamy fine sand, 15 to 30 percent slopes, eroded	D	8.9	59.2%
Totals for Area of Interest			**15.1**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

ATTACHMENT 3
STRUCTURAL BMP MAINTENANCE INFORMATION

This is the cover sheet for Attachment 3.

Indicate which Items are Included:

Attachment Sequence	Contents	Checklist
Attachment 3a	Structural BMP Maintenance Thresholds and Actions (Required)	☒Included See Structural BMP Maintenance Information Checklist.
Attachment 3b	Draft Maintenance Agreement (when applicable)	☒Included ☐Not Applicable

Use this checklist to ensure the required information has been included in the Structural BMP Maintenance Information Attachment:

Preliminary Design / Planning / CEQA level submittal:

- Attachment 3a must identify:

☒Typical maintenance indicators and actions for proposed structural BMP(s) based on Section 7.7 of the BMP Design Manual

- Attachment 3b is not required for preliminary design / planning / CEQA level submittal.

Final Design level submittal:

Attachment 3a must identify:

☒Specific maintenance indicators and actions for proposed structural BMP(s). This shall be based on Section 7.7 of the BMP Design Manual and enhanced to reflect actual proposed components of the structural BMP(s)
☒How to access the structural BMP(s) to inspect and perform maintenance
☒Features that are provided to facilitate inspection (e.g., observation ports, cleanouts, silt posts, or other features that allow the inspector to view necessary components of the structural BMP and compare to maintenance thresholds)
☒Manufacturer and part number for proprietary parts of structural BMP(s) when applicable
☒Maintenance thresholds specific to the structural BMP(s), with a location-specific frame of reference (e.g., level of accumulated materials that triggers removal of the materials, to be identified based on viewing marks on silt posts or measured with a survey rod with respect to a fixed benchmark within the BMP)
☒Recommended equipment to perform maintenance
☒When applicable, necessary special training or certification requirements for inspection and maintenance personnel such as confined space entry or hazardous waste management
Attachment 3b: For private entity operation and maintenance, Attachment 3b shall include a draft maintenance agreement in the local jurisdiction's standard format (PDP applicant to contact the City Engineer to obtain the current maintenance agreement forms).

I. COMPLIANCE WITH STORMWATER BEST MANAGEMENT PRACTICES MAINTENANCE REQUIREMENTS

All applicants are responsible for ensuring that stormwater best management practices (BMPs) or facilities installed on their property are properly maintained and that they function as designed. Tenants shall be aware of their responsibilities regarding stormwater facility maintenance and need to be familiar with the contents of this Operations and Maintenance Plan (O&M Plan). Applicants have signed and agreed to a Standard Storm Water Facilities Maintenance Agreement with Access Rights and Covenants (SWFMA). All other maintenance agreements between the applicant and their maintenance employees associated with this property shall be included in Attachment 10.

II. DESIGNATION RESPONSIBLE PARTIES

Responsible parties shall be designated and identified in Table 1.

- The Responsible BMP Party is individual, party, or parties that shall have direct responsibility for the maintenance of stormwater controls. This individual shall be the designated contact with City of Oceanside inspectors and should sign self-inspection reports and any correspondence regarding verification of inspections and required maintenance.

- The Duly Authorized Representative is the corporate officer authorized to negotiate and execute any contracts that might be necessary for future changes to operation and maintenance or to implement remedial measures if problems occur.

- The Designated Emergency Respondent is the party responsible for emergencies such as clogged drains, broken irrigation pipes, etc., that would require immediate response should they occur during off-hours.

TABLE 1
OWNERSHIP AND MAINTENANCE

	Name	Address	Phone / Email
Responsible BMP Party (if different than above)			
Employees reporting to Responsible BMP Party			
Duly Authorized Representative			

Designated Emergency Respondent[1]			

[1] The Designated Emergency Respondent's phone number must be a cellular phone that is reachable 24 hours a day.

Updated contact information must be provided to City of Oceanside immediately whenever a property is sold and whenever designated individuals or contractors change.

A. Maintenance Personnel

Maintenance personnel including Responsible BMP Party, Employees Reporting to Responsible BMP Party, and the Designated Emergency Respondent, must be qualified to properly maintain stormwater BMPs (including treatment and flow-control facilities), especially for restoration or rehabilitation work. Inadequately trained personnel can cause additional problems resulting in additional maintenance costs.

B. Organizational Chart

An organization chart showing the relationships of authority and responsibility between the individuals responsible for maintenance is provided in Attachment 1.

C. Training

Periodic training is conducted by the responsible BMP party for all personnel affiliated with the maintenance of stormwater BMPs. New staff and/or contractors training regarding the purpose, mode of operation, and maintenance requirements for the site's storm water facilities will be provided by the site. Necessary ongoing training for staff and/or contractors will also be provided. The site's Staff Training Program is described in Attachment 2.

TABLE 2 BMP OPERATION AND MAINTENANCE FUNDING	
Sources of Funding	
Budget Category for Expenditures	
Process for	

establishing Annual O&M Budget	
Process for obtaining unexpected expenditures for major corrective activities	

D. BMP Maintenance Funding

The funding for BMP operation and maintenance shall be described in Table 2; including sources of funds, budget category for expenditures, process for establishing the annual operations and maintenance budget, and process for obtaining authority should unexpected expenditures for major corrective maintenance be required. Any supplemental information, including calculations and documentation shall be included in Attachment 3.

III. LOW IMPACT DEVELOPMENT AND SITE DESIGN BMPS

Low Impact Development (LID) and Site Design BMPs have been incorporated into the project to minimize stormwater impacts. LID BMPs collectively minimize directly connected impervious area and promote infiltration on the project site. Site design BMPs are permanent measures and are similar to LID BMPs.

The LID and Site Design BMPs for the project which require maintenance are identified along with their locations, including Drainage Management Areas (DMAs), in the project SWQMP. A LID Inspection form for the site is provided in Attachment 4. In the event that a project use should change or maintenance considerations may require the site to become amended, Table 22 should be referenced for original site constraints and design guidelines.

IV. SOURCE CONTROL BMPS

Source control BMPs have been selected for the project in order to minimize or prevent pollutant generation. The SWQMP and Table 4 of this O&M identifies the potential pollutant sources and corresponding permanent and operational source controls as well as their locations.

Source control BMPs should be inspected routinely in order to reduce or prevent pollution from accumulating in these areas. Routine inspections of the site's source controls are discussed in the site's maintenance schedule. Source control inspection forms are in Attachment 5.

TABLE 3
SOURCE CONTROL BMPS

Potential Pollutant Sources	Description	Operational BMPs	Location
☒On-site storm drain inlets	• All inlets shall be marked with City of Oceanside storm drain markers	• Maintain and periodically replace inlet markers, as necessary. • Review stormwater pollution prevention information applicable to the site. • Adhere to applicable operational BMPs in Fact Sheet SC-44, "Drainage System Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com • Do not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains.	See Drainage Management Area Map.
☐Interior floor drains and elevator shaft sump pumps	• Interior floor drains and elevator shaft sump pumps will be plumbed to sanitary sewer.	• Inspect and maintain drains to prevent blockages and overflow. • Regularly clear all associated cleanouts and hand holes.	
☒Interior parking garages	• Parking garage floor drains will be plumbed to the sanitary sewer.	• Inspect and maintain drains to prevent blockages and overflow.	See Drainage Management Area Map.

TABLE 3 SOURCE CONTROL BMPS			
Potential Pollutant Sources	**Description**	**Operational BMPs**	**Location**
☒Landscape/ Outdoor Pesticide Use	• Final site landscape plans shall be placed in Attachment 7 and shall be used to maintain the following: o Preserve existing native trees, shrubs, and ground cover to the maximum extent possible. o Minimize irrigation and runoff, to promote surface infiltration where appropriate, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution. o Where landscaped areas are used to retain or detain stormwater, maintain and replace, as necessary, plants that are tolerant of saturated soil conditions. o Consider using pest-resistant plants, especially adjacent to hardscape. o To insure successful establishment, select plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, and plant interactions.	• Maintain landscaping using a minimum amount of or no pesticides (consider the use of organic techniques). • Review and adhere to applicable operational BMPs in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com • Review IMP information and provide to landscape and maintenance personnel.	See Drainage Management Area Map.
☐Use efficient irrigation systems	• Employ rain shutoff devices to prevent irrigation after precipitation. • Design irrigation systems to each landscape area's specific water requirements. • Use flow reducers or shutoff valves triggered by a pressure drop to control water loss in the event of broken sprinkler heads or lines. • Employ other comparable, equally effective, methods to reduce irrigation water runoff.	• Inspect irrigation system for leaks and/or malfunctions. • Inspect that water usage is consistent with vegetation requirements. • Inspect that irrigation shut-off controls operate correctly.	

TABLE 3 SOURCE CONTROL BMPS			
Potential Pollutant Sources	**Description**	**Operational BMPs**	**Location**
☐Need for future indoor & structural pest control	• Note building design features that discourage entry of pests.	• Review Integrated Pest Management information and provide to other maintenance personnel.	
☐Pools, spas, ponds, decorative fountains, and other water features.	• Plumb pools to the sanitary sewer in accordance with local requirements.	• Review and adhere to applicable operational BMPs in Fact Sheet SC-72, "Fountain and Pool Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	
☐Food service	• Describe the location and features of the designated cleaning area. • Describe the items to be cleaned in this facility and how it has been sized to insure that the largest items can be accommodated.		

TABLE 3 SOURCE CONTROL BMPS			
Potential Pollutant Sources	**Description**	**Operational BMPs**	**Location**
☐Refuse areas	• State how site refuse will be handled and provide supporting detail to what is shown on plans. • Prohibitive signs shall be posted on or near dumpsters with the words "Do not dump hazardous materials here" or similar. • Any drains from dumpsters, compactors, and bin areas shall be connected to a grease removal device before discharge to sanitary sewer.	• Provide adequate number of receptacles. • Inspect receptacles regularly; repair or replace leaky receptacles. • Keep receptacles covered at all times. • Prohibit/prevent dumping of liquid or hazardous wastes. • Post and replace, as necessary, "no hazardous materials" signs. • Inspect and pick up litter daily and clean up spills immediately. • Keep spill control materials available on-site. Review Fact Sheet SC-34, "Waste Handling and Disposal" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	
☐Industrial processes.	• Cover or enclose areas that would be the most significant source of pollutants; or, slope the area toward a dead-end sump; or, discharge to the sanitary sewer system in compliance with the applicable municipal waste water district's requirements (include a copy of the waste acceptance letter from the agency accepting the waste in Attachment 10). • Grade or berm area to prevent run-on from surrounding areas. • Installation of storm drains in areas of equipment repair is prohibited. • Implement other features which are comparable or equally effective.	• Review and adhere to Fact Sheet SC-10, "Non- Stormwater Discharges" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	

TABLE 3
SOURCE CONTROL BMPS

Potential Pollutant Sources	Description	Operational BMPs	Location
☐ Outdoor storage of equipment or materials	• Comply with all requirements of local Hazardous Materials Programs for: o Hazardous Waste Generation o Hazardous Materials Release Response and Inventory o California Accidental Release (CalARP) o Aboveground Storage Tank o Uniform Fire Code Article 80 Section 103(b) & (c) 1991 • Underground Storage Tank • Storage of non-hazardous liquids shall be covered by a roof and/or drain to the sanitary sewer system, and be contained by berms, dikes, liners, or vaults. • Storage of hazardous materials and wastes must be in compliance with the local hazardous materials ordinance and a Hazardous Materials Management Plan for the site. Include a detailed description of materials to be stored, storage areas, and structural features to prevent pollutants from entering storm drains.	• Review and adhere to the Fact Sheets SC-31, "Outdoor Liquid Container Storage" and SC- 33, "Outdoor Storage of Raw Materials " in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	

TABLE 3
SOURCE CONTROL BMPS

Potential Pollutant Sources	Description	Operational BMPs	Location
☐ Vehicle and Equipment Cleaning	• If a car wash area is not provided, describe measures taken to discourage on-site car washing and explain how these will be enforced. • Equip wash area with a clarifier, grease trap or other pretreatment facility, as appropriate and properly connect to the sanitary sewer. • Implement other features which are comparable or equally effective • Commercial/ industrial facilities having vehicle/ equipment cleaning needs shall either provide a covered, bermed area for washing activities or discourage vehicle/equipment washing by removing hose bibs and installing signs prohibiting such uses. • Washing areas for cars, vehicles, and equipment shall be paved, designed to prevent run-on to or runoff from the area, and plumbed to drain to the sanitary sewer. • Commercial car wash facilities shall be designed such that no runoff from the facility is discharged to the storm drain system. Wastewater from the facility shall discharge to the sanitary sewer, or a wastewater reclamation system shall be installed and permitted by proper regulatory authorities (attach permits in Attachment 10, as necessary).	• Follow operational measures to implement the following (if applicable): o Washwater from vehicle and equipment washing operations shall not be discharged to the storm drain system. o Car dealerships and similar may rinse cars with water only. o Review and adhere to Fact Sheet SC-21, "Vehicle and Equipment Cleaning," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	.

TABLE 3
SOURCE CONTROL BMPS

Potential Pollutant Sources	Description	Operational BMPs	Location
☐ Vehicle/Equipment Repair and Maintenance	• No vehicle repair or maintenance will be done outdoors, or else describe the required features of the outdoor work area. • An industrial waste discharge permit will be obtained. For floor drains connected to the sanitary sewer; design will meet the permitting agency's requirements. • An industrial waste discharge permit will be obtained for tanks, containers or sinks to be used for parts cleaning or rinsing; design will meet the permitting agency's requirements. • Accommodate all vehicle equipment repair and maintenance indoors or designate an outdoor work area and design the area to prevent run-on and runoff of stormwater. • Show secondary containment for exterior work areas where motor oil, brake fluid, gasoline, diesel fuel, radiator fluid, acid-containing batteries or other hazardous materials or hazardous wastes are used or stored. Drains shall not be installed within the secondary containment areas.	• The following restrictions apply to use the site: o No person shall dispose of, nor permit the disposal, directly or indirectly of vehicle fluids, hazardous materials, or rinse water from parts cleaning into storm drains. o No vehicle fluid removal shall be performed outside a building, nor on asphalt or ground surfaces, whether inside or outside a building, except in such a manner as to ensure that any spilled fluid will be in an area of secondary containment. Leaking vehicle fluids shall be contained or drained from the vehicle immediately. o No person shall leave unattended drip parts or other open containers containing vehicle fluid, unless such containers are in use or in an area of secondary containment.	

TABLE 3
SOURCE CONTROL BMPS

Potential Pollutant Sources	Description	Operational BMPs	Location
☐Fuel Dispensing Areas	• Fueling areas[1] shall have impermeable floors (i.e., portland cement concrete or equivalent smooth impervious surface) that are: o Graded at the minimum slope necessary to prevent ponding o Separated from the rest of the site by a grade break that prevents run-on of stormwater to the maximum extent practicable. • Fueling areas shall be covered by a canopy that extends a minimum of ten feet in each direction from each pump. [Alternative: The fueling area must be covered and the cover's minimum dimensions must be equal to or greater than the area within the grade break or fuel dispensing area[1]. The canopy [or cover] shall not drain onto the fueling area.	• The fueling area is to be dry swept routinely. • Review and adhere to the Business Guide Sheet, "Automotive Service—Service Stations" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	

[1] The fueling area shall be defined as the area extending a minimum of 6.5 feet from the corner of each fuel dispenser or the length at which the hose and nozzle assembly may be operated plus a minimum of one foot, whichever is greater.

TABLE 3 SOURCE CONTROL BMPS			
Potential Pollutant Sources	**Description**	**Operational BMPs**	**Location**
☐Loading Docks	• Loading dock areas draining directly to the sanitary sewer shall be equipped with a spill control valve or equivalent device, which shall be kept closed during periods of operation. • Provide a roof overhang over the loading area or install door skirts cowling) at each bay that enclose the end of the trailer. • Roof downspouts shall be positioned to direct stormwater away from the loading area. Water from loading dock areas should be drained to the sanitary sewer where feasible.	• Move loaded and unloaded items indoors as soon as possible. • Review and adhere to Fact Sheet SC-30, "Outdoor Loading and Unloading," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	
☐Fire Sprinkler Test Water	• Provide a means to drain fire sprinkler test water to the sanitary sewer.	• Review the note in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	

TABLE 3
SOURCE CONTROL BMPS

Potential Pollutant Sources	Description	Operational BMPs	Location
☐ Miscellaneous Drain or Wash Water • Boiler drain lines Condensate drain lines • Rooftop equipment Drainage sumps • Roofing, gutters, and trim	• Boiler drain lines shall be directly or indirectly connected to the sanitary sewer system and may not discharge to the storm drain system. • Condensate drain lines may discharge to landscaped areas if the flow is small enough that runoff will not occur. Condensate drain lines may not discharge to the storm drain system. • Rooftop mounted equipment with potential to produce pollutants shall be roofed and/or have secondary containment. • Any drainage sumps on-site shall feature a sediment sump to reduce the quantity of sediment in pumped water. • Avoid roofing, gutters, and trim made of copper or other unprotected metals that may leach into runoff.		
☒ Plazas, sidewalks, and parking lots		• Plazas, sidewalks, and parking lots shall be swept regularly to prevent the accumulation of litter and debris. Debris from pressure washing shall be collected to prevent entry into the storm drain system. Washwater containing any cleaning agent or degreaser shall be collected and discharged to the sanitary sewer and not discharged to a storm drain.	See Drainage Management Area Map.

V. DRAINAGE AREAS

Table 5 summarizes the drainage management areas (DMAs) on site.

TABLE 4 DRAINAGE MANAGEMENT AREAS		
DMA No.	**Designation**	**Description**
DMA 1		Biofiltration Basin
DMA 2		Filterra Unit

The site map in Attachment 6 shows the DMAs and their flow patterns. The map indicates, using flow patterns, how the flow from each DMA is routed to the corresponding storm water facility. Impervious and pervious areas are shown on the map.

VI. STORMWATER TREATMENT CONTROL BMPS

Treatment control BMPs treating runoff from DMAs are summarized in Table 5.

TABLE 5 STORMWATER TREATMENT CONTROL BMPS			
Treatment Control BMP Type	**Description**	**Size or Treatment Control BMP Capacity**	**Area Drained or Water Quality Flow**
Bioretention	DMA 1 - SW	9100 S.F.	Area Drained
Filterra Unit	DMA 2 - NE	0.25 C.F.S.	Water Quality Flow

The location and type of each of the project's stormwater facilities on site are shown on the site map in Attachment 6.
The as-built drawings[2], manufacturer's data, cut-sheets, manuals, and specific operation and maintenance requirements for each treatment control BMP shall be provided in Attachment 7.

[2] As-built drawings must be included after construction is complete.

VII. INSPECTING STORMWATER BMPS

The quality of stormwater entering the waters of the U.S. or waters of the state relies heavily on the proper operation and maintenance of permanent BMPs. LID, source control, and treatment control stormwater BMPs must be periodically inspected to ensure that they are functioning as designed. Inspections will determine the appropriate maintenance that is required for the facility.

A. Inspection Procedures

All stormwater treatment BMPs are required to be inspected a minimum of once per year. The Inspection and Maintenance Checklist(s) that is applicable to the site is provided in Attachment 8.

B. Inspection Report

The person(s) conducting the inspection activities (Responsible BMP Party. Employees reporting to Responsible BMP Party, or the Designated Emergency Respondent) shall complete the appropriate inspection checklist for the specific facility. All completed checklists are located in Attachment 8. All facilities are to be inspected on an annual basis at a minimum. A copy of each inspection form shall be kept by the applicant a minimum of 5 years.

Inspection Scoring

For each inspection item, a score is given to identify the urgency for any required maintenance. The scoring is as follows:

0 = No deficiencies identified.

1 = Monitor – Although maintenance may not be required at this time, a potential problem exists that will most likely need to be addressed in the future. This can include items like minor erosion, concrete cracks/spalling, or minor sediment accumulation. This item should be revisited at the next inspection.

2 = Routine Maintenance Required – Some inspection items can be addressed through the routine maintenance program. This can include items like vegetation management or debris/trash removal.

3 = Immediate Repair Necessary – This item needs immediate attention because failure is imminent or has already occurred. This could include items such as structural failure of a feature (outlet, weir, manhole, etc.), significant erosion, or significant sediment accumulation. This score should be given to an item that can significantly affect the function of the facility.

N/A = This is checked by an item that may not exist in a facility. Not all facilities have all of the features identified on the form (outlet, weir, manhole, etc.).

Overall Facility Rating

An overall rating is given for each facility inspected. The overall facility rating should correspond with the highest score (0, 1, 2, 3) given to any feature on the inspection form.

C. Verification of Inspection and Checklist Submittal

The Stormwater BMP Inspection and Maintenance Checklist (in Attachment 8) provides a record of inspections and the need for maintenance activities at the facility. Verification of the inspection of the stormwater facilities and the facility inspection checklist(s) shall be available to the City of Oceanside if requested.

VIII. MAINTENANCE SCHEDULE FOR STORMWATER BMPS

A maintenance schedule for the stormwater source control and treatment control BMPs on site is provided in Attachment 9. Attachment 9 includes schedules for routine inspection and maintenance, annual inspection and maintenance, and inspection and maintenance after major storm events.

A service agreement with any contractors hired to perform stormwater treatment control BMP maintenance is also provided in Attachment 10.

IX. MAINTAINING STORMWATER BMPS

Stormwater BMPs must be properly maintained to ensure that they operate correctly and provide the water quality treatment for which they were designed. Routine maintenance performed on a frequently scheduled basis, can help avoid more costly rehabilitative maintenance that results when facilities are not adequately maintained.

A. Maintenance Categories

Stormwater BMP maintenance programs are separated into three broad categories of work: routine, restoration, and rehabilitation. The categories are separated based upon the magnitude and type of the maintenance activities performed. A description of each category follows:

Routine Work

This work includes items such as the removal of debris/material that may be clogging the outlet structure well screens and trash racks. It also includes activities such as road and parking lot sweeping, weed control, mosquito treatment, and algae treatment. These activities normally will be performed

numerous times during the year. These items can be completed without any prior correspondence; however, inspection and maintenance forms shall be completed.

Restoration Work

This work consists of a variety of isolated or small-scale maintenance and work needed to address operational problems. Most of this work can be completed by a small crew, with minor tools, and small equipment. These items do not require prior correspondence. However, completed maintenance forms are required.

Rehabilitation Work

This work consists of large-scale maintenance and major improvements needed to address failures within the stormwater BMP. This work requires consultation with the City of Oceanside and may require an engineering design with construction plans to be prepared for review and approval.

B. Maintenance Forms

The Stormwater BMP Inspection and Maintenance Form provides a record of maintenance activities and includes general cost information to assist in budgeting for future maintenance. Maintenance Forms for each facility type are provided in Appendix 3. Maintenance Forms shall be completed by the responsible BMP party. The form shall then be reviewed by the applicant or an authorized agent of the applicant and made available for review upon inspection by the City of Oceanside.

X. PREVENTATIVE MEASURES TO REDUCE MAINTENANCE COSTS

The most effective way to maintain a stormwater quality facility is to prevent pollutants from entering the facility. Common pollutants include sediment, trash & debris, chemicals, pet wastes, runoff from stored materials, illicit discharges into the storm drainage system and many others. This maintenance program includes measures to address these potential contaminants at the source and save time and money in the long run. The maintenance program will consider the following:

- Educate employees and patrons to be aware of how their actions affect water quality and how they can help reduce maintenance costs.
- Keep properties, streets, gutters, and parking lots free of trash, debris, and lawn clippings.
- Ensure the proper use, storage, and disposal of hazardous wastes and chemicals. Promptly clean up spilled materials and dispose of properly.

- Plan landscape care to minimize and properly use chemicals and pesticides.
- Sweep paved surfaces and put the sweepings back on the lawn.
- Be aware of automobiles leaking fluids. Use absorbents such as cat litter to soak up drippings – dispose of properly.
- Encourage pet owners to clean up pet wastes.
- Re-vegetate disturbed and bare areas to maintain vegetative stabilization.
- Clean any private storm drainage system components, including inlets, storm drains, and outfalls.
- Do not store materials outdoors (including landscaping materials) unless properly protected from runoff.

XI. INSPECTION & MAINTENANCE – ANNUAL REPORTING

The tenant is responsible for providing verification that the stormwater treatment control BMPs have been properly inspected and maintained unless otherwise noted. Verification includes records of inspections and maintenance performed on site. Any maintenance required will be identified and described.
Records should be available at the City of Oceanside's request.

SOURCE CONTROL BMP INSPECTION FORM

SOURCE CONTROL BMP INSPECTION FORM				
Date:	**Inspector:**	**Weather:**		
Reason for Inspection:		**Comments:**		
Potential Pollutant Sources	**Location**	**Operational BMPs**	**Maintenance Required**	**Maintenance Performed/Comments**
☐On-site storm drain inlets		☐Maintain and periodically replace inlet markers, if necessary.	☐No ☐ Yes	
		☐Review stormwater pollution prevention information applicable to the site.	☐No ☐ Yes	
		☐Adhere to applicable operational BMPs in Fact Sheet SC-44, "Drainage System Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	☐No ☐ Yes	
		☐Do not allow anyone to discharge anything to storm drains or to store or deposit materials so as to create a potential discharge to storm drains.	☐No ☐ Yes	
☐Interior floor drains and elevator shaft sump pumps		☐Inspect and maintain drains to prevent blockages and overflow.	☐No ☐ Yes	
☐Interior parking garages		☐Inspect and maintain drains to prevent blockages and overflow.	☐No ☐ Yes	
☐Landscape/ Outdoor Pesticide Use		☐Maintain landscaping using minimum or no pesticides.	☐No ☐ Yes	
		☐Review and adhere to applicable operational BMPs in Fact Sheet SC-41, `"Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	☐No ☐ Yes	

SOURCE CONTROL BMP INSPECTION FORM				
Date:	**Inspector:**		**Weather:**	
Reason for Inspection:			**Comments:**	
Potential Pollutant Sources	**Location**	**Operational BMPs**	**Maintenance Required**	**Maintenance Performed/Comments**
Landscape/Outdoor pesticide Use Continued		☐Review IMP information and provide to landscape and maintenance personnel.	☐No ☐ Yes	
☐Use efficient irrigation systems		☐Inspect irrigation system for leaks and/or malfunctions.	☐No ☐ Yes	
☐Need for future indoor & structural pest control		☐Review Integrated Pest Management information and provide to other maintenance personnel.	☐No ☐ Yes	
☐Pools, spas, ponds, decorative fountains, and other water features.		☐Review and adhere to applicable operational BMPs in Fact Sheet SC-72, “Fountain and Pool Maintenance,” in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	☐No ☐ Yes	
☐Food service		☐Grease traps cleaned, as necessary. ☐See Refuse Areas.	☐No ☐ Yes	
☐Refuse areas		☐Provide adequate number of receptacles.	☐No ☐ Yes	
		☐Inspect receptacles regularly; repair or replace leaky receptacles.	☐No ☐ Yes	
		☐Keep receptacles covered at all times.	☐No ☐ Yes	
		☐Prohibit/prevent dumping of liquid or hazardous wastes.	☐No ☐ Yes	
		☐Post “no hazardous materials” signs.	☐No ☐ Yes	

SOURCE CONTROL BMP INSPECTION FORM				
Date:	**Inspector:**	**Weather:**		
Reason for Inspection:		**Comments:**		
Potential Pollutant Sources	**Location**	**Operational BMPs**	**Maintenance Required**	**Maintenance Performed/Comments**
Refuse areas- Continued		☐Inspect and pick up litter daily and clean up spills immediately.	☐No ☐ Yes	
		☐Keep spill control materials available on- site. Review Fact Sheet SC-34, "Waste Handling and Disposal" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	☐No ☐ Yes	
☐Industrial processes.		☐Review and adhere to Fact Sheet SC-10, "Non- Stormwater Discharges" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	☐No ☐ Yes	
☐Outdoor storage of equipment or materials		☐Review and adhere to the Fact Sheets SC-31, "Outdoor Liquid Container Storage" and SC- 33, "Outdoor Storage of Raw Materials " in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	☐No ☐ Yes	
☐Vehicle and Equipment Cleaning		**Follow operational measures to implement the following (if applicable):**		
		☐Washwater from vehicle and equipment washing operations shall not be discharged to the storm drain system.	☐No ☐ Yes	

SOURCE CONTROL BMP INSPECTION FORM				
Date:	**Inspector:**	**Weather:**		
Reason for Inspection:		**Comments:**		
Potential Pollutant Sources	**Location**	**Operational BMPs**	**Maintenance Required**	**Maintenance Performed/Comments**
Vehicle and Equipment Cleaning Continued		☐Car dealerships and similar may rinse cars with potable water only. Any excess water shall be drained through landscaping and dechlorinated prior to discharge to the storm drain system.	☐No ☐ Yes	
		☐Review and adhere to Fact Sheet SC-21, "Vehicle and Equipment Cleaning," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	☐No ☐ Yes	
☐Vehicle/Equipment Repair and Maintenance		**The following restrictions apply to use the site:**		
		☐No person shall dispose of, nor permit the disposal, directly or indirectly of vehicle fluids, hazardous materials, or rinse water from parts cleaning into storm drains.	☐No ☐ Yes	
		☐No vehicle fluid removal shall be performed outside a building, Nor on asphalt or ground surfaces, whether inside or outside a building, except in such a manner as to ensure that any spilled fluid will be in an area of secondary containment. Leaking vehicle fluids shall be contained or drained from the vehicle immediately.	☐No ☐ Yes	

SOURCE CONTROL BMP INSPECTION FORM

Date:	**Inspector:**	**Weather:**
Reason for Inspection:		**Comments:**

Potential Pollutant Sources	**Location**	**Operational BMPs**	**Maintenance Required**	**Maintenance Performed/Comments**
Vehicle/Equipment Repair and Maintenance Continued		☐No person shall leave unattended drip parts or other open containers of chemicals such as vehicle fluid, unless such containers are in use or in an area of secondary containment.	☐No ☐ Yes	
☐Fuel Dispensing Areas		☐The fueling area is to be dry swept routinely.	☐No ☐ Yes	
		☐Review and adhere to the Business Guide Sheet, "Automotive Service—Service Stations" in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	☐No ☐ Yes	
		☐Fueling areas are covered by a canopy.	☐No ☐ Yes	
		☐The canopy does not drain onto the fueling area.	☐No ☐ Yes	
		☐Grading of the area prevents run-on of stormwater to the maximum extent practicable.	☐No ☐ Yes	
☐Loading Docks		☐Move loaded and unloaded items indoors as soon as possible.	☐No ☐ Yes	
		☐Review and adhere to Fact Sheet SC-30, "Outdoor Loading and Unloading," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	☐No ☐ Yes	

SOURCE CONTROL BMP INSPECTION FORM				
Date:	**Inspector:**	**Weather:**		
Reason for Inspection:		**Comments:**		
Potential Pollutant Sources	**Location**	**Operational BMPs**	**Maintenance Required**	**Maintenance Performed/Comments**
☐ Fire Sprinkler Test Water		☐ Review the note in Fact Sheet SC-41, "Building and Grounds Maintenance," in the CASQA Stormwater Quality Handbooks at www.cabmphandbooks.com	☐ No ☐ Yes	
☐ Miscellaneous Drain or Wash Water • Boiler drain lines Condensate drain lines • Rooftop equipment Drainage sumps • Roofing, gutters, and trim			☐ No ☐ Yes	
☐ Plazas, sidewalks, and parking lots		☐ Plazas, sidewalks, and parking lots shall be swept regularly to prevent the accumulation of litter and debris. Debris from pressure washing shall be collected to prevent entry into the storm drain system. Washwater containing any cleaning agent or degreaser shall be collected and discharged to the sanitary sewer and not discharged to a storm drain.	☐ No ☐ Yes

TREATMENT CONTROL BMP INSPECTION AND MAINTENANCE CHECKLIST(S)

Bioretention Area
INSPECTION AND MAINTENANCE CHECKLIST

Property Address: _____ Property Applicant: _____

Treatment Measure No.: _____ Date of Inspection: _____ Type of Inspection: ☐ Monthly ☐ Pre-Wet Season ☐ After heavy runoff ☐ End of Wet Season

Inspector(s): _____ Overall Facility Score*:_____ ☐ Other:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if needed maintenance was not conducted, note when it will be done)	Results Expected When Maintenance Is Performed
1. Standing Water	When water stands in the bioretention area between storms and does not drain within five days after rainfall.			There should be no areas of standing water once inflow has ceased. Any of the following may apply: sediment or trash blockages removed, improved grade from head to foot of bioretention area, or added underdrains.
2. Trash and Debris Accumulation	Trash and debris accumulated in the bioretention area.			Trash and debris removed from bioretention area and disposed of properly.
3. Sediment	Evidence of sedimentation in bioretention area.			Material removed so that there is no clogging or blockage. Material is disposed of properly.
4. Erosion	Channels have formed around inlets, there are areas of bare soil, and/or other evidence of erosion.			Obstructions and sediment removed so that water flows freely and disperses over a wide area. Obstructions and sediment are disposed of properly.
5. Vegetation	Vegetation is dead, diseased and/or overgrown.			Vegetation is healthy and attractive in appearance.

Biorentention Area - Inspection and Maintenance Checklist
Property Address: _____

Date of Inspection:_____
Treatment Measure No.:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if needed maintenance was not conducted, note when it will be done)	Results Expected When Maintenance Is Performed
6. Mulch	Mulch is missing or patchy in appearance. Areas of bare earth are exposed, or mulch layer is less than 3 inches in depth.			All bare earth is covered, except mulch is kept 6 inches away from trunks of trees and shrubs. Mulch is even in appearance, at a depth of 3 inches.
7. Miscellaneous	Any condition not covered above that needs attention in order for the bioretention area to function as designed.			Meet the design specifications.

*Overall Facility Score = Worst Score from all Defect Items Noted.
**Scores: 0 = OK, 1 = Monitor, 2 = Routine Maintenance, 3 = Immediate Repair Necessary

Vegetated Buffer Strip
INSPECTION AND MAINTENANCE CHECKLIST

Property Address: _____ Property Applicant: _____

Treatment Measure No.: _____ Date of Inspection: _____ Type of Inspection: ☐ Monthly ☐ Pre-Wet Season ☐ After heavy runoff ☐ End of Wet Season

Inspector(s): _____ Overall Facility Score*:_____ ☐ Other:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if needed maintenance was not conducted, note when it will be done)	Results Expected When Maintenance Is Performed	Date Complete / Initial
1. Sediment Accumulation on Vegetation	Sediment accumulating near culverts and/or in channels builds up to 75 millimeters (3 inches) at any spot, or it covers vegetation			Remove accumulated sediment deposits. When finished, buffer strip should be level from side to side and drain freely toward outlet. There should be no areas of standing water once inflow has ceased. Dispose of sediment properly.	
2. Standing Water	Water stands in the buffer strip between storms and does not drain within five days after rainfall.			There should be no areas of standing water once inflow has ceased. Any of the following may apply: sediment or trash blockages removed, improved grade from head to foot of buffer strip, removed clogged check dams, added underdrains or converted to a wet buffer strip.	

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if needed maintenance was not conducted, note when it will be done)	Results Expected When Maintenance Is Performed	Date Complete / Initial
3. Flow spreader (if any)	Flow spreader uneven or clogged such that flows are not uniformly distributed through entire buffer strip width.			Spreader leveled and cleaned so that flows are spread evenly over entire buffer strip width.	
4. Constant Baseflow	When small quantities of water continually flow through the buffer strip, even when it has been dry for weeks, and an eroded, muddy channel has formed in the buffer strip bottom.			No eroded, muddy channel on the bottom. A low-flow pea-gravel drain may be added the length of the buffer strip.	
5. Poor Vegetation Coverage	When planted vegetation is sparse or bare or eroded, patches occur in more than 10% of the buffer strip bottom.			Vegetation coverage in more than 90% of the buffer strip bottom. Determine why growth of planted vegetation is poor and correct that condition. Replant with plugs of vegetation from the upper slope: plant in the buffer strip bottom at 8-inch intervals, or reseed into loosened, fertile soil.	

Vegetated Buffer Strip - Inspection and Maintenance Checklist
Property Address: _____

Date of Inspection:_____
Treatment Measure No.:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if needed maintenance was not conducted, note when it will be done)	Results Expected When Maintenance Is Performed	Date Complete / Initial
6. Vegetation	When the planted vegetation becomes excessively tall; when nuisance weeds and other vegetation start to take over.			Vegetation mowed per specifications or maintenance plan, or nuisance vegetation removed so that flow is not impeded. Vegetation should never be mowed lower than the design flow depth. Remove clippings from the buffer strip and dispose appropriately.	
7. Excessive Shading	Growth of planted vegetation is poor because sunlight does not reach buffer strip.			Healthy growth of planted vegetation. If possible, trim back over-hanging limbs and remove brushy vegetation on adjacent slopes.	
8. Inlet/Outlet	Inlet/outlet areas clogged with sediment and/or debris.			Material removed so that there is no clogging or blockage in the inlet and outlet areas.	
9. Trash and Debris Accumulation	Trash and debris accumulated in the buffer strip.			Trash and debris removed from buffer strip. Dispose of trash and debris properly.	

Vegetated Buffer Strip - Inspection and Maintenance Checklist
Property Address: _____

Date of Inspection:_____
Treatment Measure No.:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if needed maintenance was not conducted, note when it will be done)	Results Expected When Maintenance Is Performed	Date Complete / Initial
10. Erosion/ Scouring	Eroded or scoured buffer strip bottom due to flow channelization, or higher flows.			No erosion or scouring in buffer strip bottom. For ruts or bare areas less than 12 inches wide, repair the damaged area by filling with crushed gravel. If bare areas are large, generally greater than 12 inches wide, the buffer strip should be re-graded and re-seeded. For smaller bare areas, overseed when bare spots are evident, or take plugs of grass from the upper slope and plant in the buffer strip bottom at 8-inch intervals.	
11. Miscellaneous	Any condition not covered above that needs attention in order for the vegetated buffer strip to function as designed.			Meet the design specifications.	

*Overall Facility Score = Worst Score from all Defect Items Noted.
**Scores: 0 = OK, 1 = Monitor, 2 = Routine Maintenance, 3 = Immediate Repair Necessary

Constructed Wetlands
INSPECTION AND MAINTENANCE CHECKLIST

Property Address: _____ Property Applicant: _____

Treatment Measure No.: _____ Date of Inspection: _____ Type of Inspection: ☐ Monthly ☐ Pre-Wet Season ☐ After heavy runoff ☐ End of Wet Season

Inspector(s): _____ Overall Facility Score*:_____ ☐ Other:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if any needed maintenance was not conducted, note when it will be done.)	Results Expected When Maintenance Is Performed
General				
Trash & Debris	Trash and debris accumulated in basin at a minimum of once prior to October 1st, once around Feb 1st, and once May 15th. Visual evidence of dumping.			Trash and debris cleared from site and disposed of properly.
Poisonous Vegetation and noxious weeds	Poisonous or nuisance vegetation or noxious weeds, e.g., morning glory, English ivy, reed canary grass, Japanese knotweed, purple loosestrife, blackberry, Scotch broom, poison oak, stinging nettles, or devil's club.			Use Integrated Pest Management techniques to control noxious weeds or invasive species.
Contaminants and Pollution	Any evidence of oil, gasoline, contaminants or other pollutants. Note signs of hydrocarbon buildup such as floating oil on water surface.			No contaminants or pollutants present.

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if any needed maintenance was not conducted, note when it will be done.)	Results Expected When Maintenance Is Performed
Rodent Holes	If facility acts as a dam or berm, any evidence of rodent holes, or any evidence of water piping through dam or berm via rodent holes.			The design specifications are not compromised by holes. Any rodent control activities are in accordance with applicable laws and do not affect any protected species.
Insects	Insects such as wasps and hornets interfere with maintenance activities. Where permitted by CA DFG, or other agency regulations, stock regularly with mosquito fish (Gambusia spp.) to enhance natural mosquito and midge control. Maintain vegetation to assist Gambusia spp. movements to control mosquitoes, as well as to provide access for vector inspectors. Maintain emergent and perimeter shoreline vegetation as well as site and road access to facilitate vector surveillance and control activities.			Insects do not interfere with maintenance activities. No mosquitoes or other vectors present in unusual abundance.

Constructed Wetlands Basin - Inspection and Maintenance Checklist
Property Address: _____

Date of Inspection:_____
Treatment Measure No.:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if any needed maintenance was not conducted, note when it will be done.)	Results Expected When Maintenance Is Performed
Vegetation	Inspect for invasive vegetation, differential settlement, cracking; erosion, leakage, or tree growth on the embankment. Correct observed problems as necessary. Mow side slopes and remove grass clippings every other month or as necessary. Supplement wetland plants if a significant portion have not established (at least 50% of the surface area) on an annual basis. Remove nuisance plant species.			Wetland vegetation should be at proper vigor and density, no nuisance or noxious weeds or invasive species should be visible, and growth should not hinder physical characteristics or requirements of wetland area.
Tree/Brush Growth and Hazard Trees	Growth does not allow maintenance access or interferes with maintenance activity. Vegetation harvesting should occur preferably between June to September (CASCA TC-21) Dead, diseased, or dying trees.			Trees do not hinder maintenance activities. Remove hazard trees as approved by the City. (Use a certified Arborist to determine health of tree or removal requirements).

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if any needed maintenance was not conducted, note when it will be done.)	Results Expected When Maintenance Is Performed
Drainage time	Standing water remains in basin more than five days.			Correct any circumstances that restrict the flow of water from the system. Restore drainage to design condition. If the problem cannot be corrected and problems with standing water recur, then mosquitoes should be controlled with larvicides, applied by a licensed pesticide applicator.
Outfall structure	Debris or silt build-up obstructs an outfall structure.			Remove debris and/or silt build-up and dispose of properly.
Side Slopes				
Erosion	Eroded over 2 in. deep where cause of damage is still present or where there is potential for continued erosion. Any erosion on a compacted berm embankment.			Cause of erosion is managed appropriately. Side slopes or berm are restored to design specifications, as needed.
Storage Area				

Constructed Wetlands Basin - Inspection and Maintenance Checklist
Property Address: _____

Date of Inspection:_____
Treatment Measure No.:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if any needed maintenance was not conducted, note when it will be done.)	Results Expected When Maintenance Is Performed
Sediment	Monitor for sediment accumulation in the facility and forebay. Remove accumulated sediment in the forebay and regrade about every 5-7 years or when the accumulated sediment volume exceeds 10 percent of the basin volume. Sediment removal may not be required in the main pool area for as long as 20 years.			Sediment cleaned out to designed basin shape and depth; basin reseeded if necessary to control erosion. Sediment disposed of properly.
Liner (If Applicable)	Liner is visible and has more than three 1/4-inch holes in it.			Liner repaired or replaced. Liner is fully covered.
Emergency Overflow/Spillway and Berms				
Settlement	Berm settlement 4 inches lower than the design elevation.			Dike is built back to the design elevation.

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if any needed maintenance was not conducted, note when it will be done.)	Results Expected When Maintenance Is Performed
Tree Growth	Tree growth on berms or emergency spillway >4 ft in height or covering more than 10% of spillway.			Trees should be removed. If root system is small (base less than 4 inches) the root system may be left in place. Otherwise the roots should be removed and the berm restored. A civil engineer should be consulted for proper berm/spillway restoration.
Emergency Overflow/ Spillway	Rock is missing and soil is exposed at top of spillway or outside slope.			Rocks and pad depth are restored to design standards.
Debris Barriers (*e.g.*, Trash Racks)				
Trash and Debris	Trash or debris is plugging openings in the barrier.			Trash or debris is removed and disposed of properly.
Damaged/ Missing Bars	Bars are missing, loose, bent out of shape, or deteriorating due to excessive rust.			Bars are repaired or replaced to allow proper functioning of trash rack.
Inlet/Outlet Pipe	Debris barrier is missing or not attached to pipe.			Debris barrier is repaired or replaced to allow proper functioning of trash rack.
Fencing and Gates				
Missing or broken parts	Any defect in or damage to the fence or gate that permits easy entry to a facility.			Fencing and gate are restored to design specifications.

Constructed Wetlands Basin - Inspection and Maintenance Checklist
Property Address: _____

Date of Inspection:_____
Treatment Measure No.:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if any needed maintenance was not conducted, note when it will be done.)	Results Expected When Maintenance Is Performed
Deteriorating Paint or Protective Coating	Part or parts that have a rusting or scaling condition that has affected structural adequacy.			Paint or protective coating is sufficient to protect structural adequacy of fence or gate.
Flow Duration Control Outlet (if included in design to meet Hydromodification Management Standard) [[==refer to any attachments with additional provisions==]]				
Risers, orifices and screens	Any debris or clogging			Restore unobstructed flow through discharge structure; to meet original design; dispose of debris properly.
Miscellaneous				
Miscellaneous	Any condition not covered above that needs attention to restore extended detention basin to design conditions.			Meets the design specifications.

*Overall Facility Score = Worst Score from all Defect Items Noted.
**Scores: 0 = OK, 1 = Monitor, 2 = Routine Maintenance, 3 = Immediate Repair Necessary

Flow-Through Planter
INSPECTION AND MAINTENANCE CHECKLIST

Property Address: _____ Property Applicant: _____

Treatment Measure No.: _____ Date of Inspection: _____ Type of Inspection: ☐ Monthly ☐ Pre-Wet Season ☐ After heavy runoff ☐ End of Wet Season

Inspector(s): _____ Overall Facility Score*:_____ ☐ Other:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if needed maintenance was not conducted, note when it will be done)	Results Expected When Maintenance Is Performed
1. Vegetation	Vegetation is dead, diseased and/or overgrown.			Vegetation is healthy and attractive in appearance.
2. Soil	Soil too deep or too shallow.			Soil is at proper depth (per soil specifications) for optimum filtration and flow.
3. Mulch	Mulch is missing or patchy in appearance. Areas of bare earth are exposed, or mulch layer is less than 3 inches in depth.			All bare earth is covered, except mulch is kept 6 inches away from trunks of trees and shrubs. Mulch is even in appearance, at a depth of 3 inches.
4. Sediment, Trash and Debris Accumulation	Sediment, trash and debris accumulated in the flow-through planter. Planter does not drain as specified.			Sediment, trash and debris removed from flow-through planter and disposed of properly. Planter drains within 3-4 hours.

Flow-Through Planter - Inspection and Maintenance Checklist
Property Address: _____

Date of Inspection:_____
Treatment Measure No.:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if needed maintenance was not conducted, note when it will be done)	Results Expected When Maintenance Is Performed
5. Clogs	Soil too deep or too shallow. Sediment, trash and debris accumulated in the flow-through planter. Planter does not drain within five days after rainfall.			Planter drains per design specifications.
6. Downspouts and Sheet Flow	Flow to planter is impeded. Downspouts are clogged or pipes are damaged. Splash blocks and rocks in need of repair, replacement or replenishment.			Downspouts and sheet flow is conveyed efficiently to the planter.
7. Overflow Pipe	Does not safely convey excess flows to storm drain. Piping damaged or disconnected.			Overflow pipe conveys excess flow to storm drain efficiently.
8. Structural Soundness	Planter is cracked, leaking or falling apart.			Cracks and leaks are repaired and planter is structurally sound.
9. Miscellaneous	Any condition not covered above that needs attention in order for the flow-through planter to function as designed.			Meet the design specifications.

*Overall Facility Score = Worst Score from all Defect Items Noted.
**Scores: 0 = OK, 1 = Monitor, 2 = Routine Maintenance, 3 = Immediate Repair Necessary

Hydrodynamic Separators

Vegetated Swale Maintenance Plan
INSPECTION AND MAINTENANCE CHECKLIST

Property Address: _____ Property Applicant: _____

Treatment Measure No.: _____ Date of Inspection: _____ Type of Inspection: ☐ Monthly ☐ Pre-Wet Season ☐ After heavy runoff ☐ End of Wet Season

Inspector(s): _____ Overall Facility Score*:_____ ☐ Other:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if needed maintenance was not conducted, note when it will be done)	Results Expected When Maintenance Is Performed	Date Complete / Initial
Sediment Accumulation on Vegetation	Sediment accumulating near culverts and/or in channels builds up to 75 millimeters (3 inches) at any spot, or it covers vegetation			When finished, swale should be level from side to side and drain freely toward outlet. There should be no areas of standing water once inflow has ceased and sediment is disposed of properly.	
Standing Water	When water stands in the swale between storms and does not drain within 5 days after rainfall.			There should be no areas of standing water once inflow has ceased. Any of the following may apply: sediment or trash blockages removed, improved grade from head to foot of swale, removed clogged check dams, added underdrains or converted to a wet swale.	

Vegetated Swale - Inspection and Maintenance Checklist
Property Address: _____

Date of Inspection:_____
Treatment Measure No.:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if needed maintenance was not conducted, note when it will be done)	Results Expected When Maintenance Is Performed	Date Complete / Initial
Flow spreader (if any)	Flow spreader uneven or clogged so that flows are not uniformly distributed through entire swale width.			Spreader leveled and cleaned so that flows are spread evenly over entire swale width.	
Constant Baseflow	When small quantities of water continually flow through the swale, even when it has been dry for weeks, and an eroded, muddy channel has formed in the swale bottom.			No eroded, muddy channel on the bottom. A low-flow pea-gravel drain may be added the length of the swale.	
Poor Vegetation Coverage	When planted vegetation is sparse or bare or eroded patches occur in more than 10% of the swale bottom.			Vegetation coverage in more than 90% of the swale bottom. Determine why growth of planted vegetation is poor and correct that condition. Re-plant with plugs of vegetation from the upper slope: plant in the swale bottom at 8-inch intervals, or re-seed into loosened, fertile soil.	

Vegetated Swale - Inspection and Maintenance Checklist
Property Address: _____

Date of Inspection:_____
Treatment Measure No.:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if needed maintenance was not conducted, note when it will be done)	Results Expected When Maintenance Is Performed	Date Complete / Initial
Vegetation	When the planted vegetation becomes excessively tall; when nuisance weeds and other vegetation start to take over.			Vegetation mowed per specifications or maintenance plan, or nuisance vegetation removed so that flow is not impeded. Vegetation should never be mowed lower than the design flow depth. Remove clippings from the swale and dispose appropriately.	
Excessive Shading	Growth of planted vegetation is poor because sunlight does not reach swale.			Healthy growth of planted vegetation. If possible, trim back over-hanging limbs and remove brushy vegetation on adjacent slopes.	
Inlet/Outlet	Inlet/outlet areas clogged with sediment and/or debris.			Material removed so that there is no clogging or blockage in the inlet and outlet areas.	
Trash and Debris Accumulation	Trash and debris accumulated in the swale.			Trash and debris removed from swale.	

Vegetated Swale - Inspection and Maintenance Checklist
Property Address: _____

Date of Inspection:_____
Treatment Measure No.:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if needed maintenance was not conducted, note when it will be done)	Results Expected When Maintenance Is Performed	Date Complete / Initial
Erosion/ Scouring	Eroded or scoured swale bottom due to flow channelization, or higher flows.			No erosion or scouring in swale bottom. For ruts or bare areas less than 12 inches wide, repair the damaged area by filling with crushed gravel. If bare areas are large, generally greater than 12 inches wide, the swale should be re-graded and re-seeded. For smaller bare areas, overseed when bare spots are evident, or take plugs of grass from the upper slope and plant in the swale bottom at 8-inch intervals.	
Miscellaneous	Any condition not covered above that needs attention in order for the vegetated swale to function as designed.			Meet the design specifications.	

*Overall Facility Score = Worst Score from all Defect Items Noted.
**Scores: 0 = OK, 1 = Monitor, 2 = Routine Maintenance, 3 = Immediate Repair Necessary.

Wet Pond
INSPECTION AND MAINTENANCE CHECKLIST

Property Address: _____ Property Applicant: _____

Treatment Measure No.: _____ Date of Inspection: _____ Type of Inspection: ☐ Monthly ☐ Pre-Wet Season ☐ After heavy runoff ☐ End of Wet Season

Inspector(s): _____ Overall Facility Score*:_____ ☐ Other:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if any needed maintenance was not conducted, note when it will be done.)	Results Expected When Maintenance Is Performed
General				
Trash & Debris	Trash and debris accumulated in basin at a minimum of once prior to October 1st, once around Feb 1st, and once May 15th. Visual evidence of dumping.			Trash and debris cleared from site and disposed of properly.
Poisonous Vegetation and noxious weeds	Poisonous or nuisance vegetation or noxious weeds, e.g., morning glory, English ivy, reed canary grass, Japanese knotweed, purple loosestrife, blackberry, Scotch broom, poison oak, stinging nettles, or devil's club.			Use Integrated Pest Management techniques to control noxious weeds or invasive species.
Contaminants and Pollution	Any evidence of oil, gasoline, contaminants or other pollutants.			No contaminants or pollutants present.

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if any needed maintenance was not conducted, note when it will be done.)	Results Expected When Maintenance Is Performed
Rodent Holes	If facility acts as a dam or berm, any evidence of rodent holes, or any evidence of water piping through dam or berm via rodent holes.			The design specifications are not compromised by holes. Any rodent control activities are in accordance with applicable laws and do not affect any protected species.
Insects	Insects such as wasps and hornets interfere with maintenance activities. Mosquitoes and other vectors Where permitted by CA DFG, or other agency regulations, stock regularly with mosquito fish (Gambusia spp.) to enhance natural mosquito and midge control. Maintain vegetation to assist Gambusia spp. movements to control mosquitoes, as well as to provide access for vector inspectors. Maintain emergent and perimeter shoreline vegetation as well as site and road access to facilitate vector surveillance and control activities.			Insects do not interfere with maintenance activities. No mosquitoes or other vectors present in unusual abundance.

Wet Pond Basin - Inspection and Maintenance Checklist
Property Address: _____

Date of Inspection:_____
Treatment Measure No.:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if any needed maintenance was not conducted, note when it will be done.)	Results Expected When Maintenance Is Performed
Tree/Brush Growth and Hazard Trees	Growth does not allow maintenance access or interferes with maintenance activity. Vegetation harvesting should occur preferably between June to September (CASCA TC-20) Dead, diseased, or dying trees.			Trees do not hinder maintenance activities. Remove hazard trees as approved by the City. (Use a certified Arborist to determine health of tree or removal requirements).
Drainage time	Standing water remains in basin more than five days.			Correct any circumstances that restrict the flow of water from the system. Restore drainage to design condition. If the problem cannot be corrected and problems with standing water recur, then mosquitoes should be controlled with larvicides, applied by a licensed pesticide applicator.
Outfall structure	Debris or silt build-up obstructs an outfall structure.			Remove debris and/or silt build-up and dispose of properly.

Wet Pond Basin - Inspection and Maintenance Checklist
Property Address: _____

Date of Inspection:_____
Treatment Measure No.:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if any needed maintenance was not conducted, note when it will be done.)	Results Expected When Maintenance Is Performed
Side Slopes				
Erosion	Eroded over 2 in. deep where cause of damage is still present or where there is potential for continued erosion. Any erosion on a compacted berm embankment.			Cause of erosion is managed appropriately. Side slopes or berm are restored to design specifications, as needed.
Storage Area				
Sediment	Remove accumulated sediment in the forebay and regrade about every 5-7 years or when the accumulated sediment volume exceeds 10 percent of the basin volume. Sediment removal may not be required in the main pool area for as long as 20 years.			Sediment cleaned out to designed basin shape and depth; basin reseeded if necessary to control erosion. Sediment disposed of properly.
Liner (If Applicable)	Liner is visible and has more than three 1/4-inch holes in it.			Liner repaired or replaced. Liner is fully covered.
Emergency Overflow/ Spillway and Berms				
Settlement	Berm settlement 4 inches lower than the design elevation.			Dike is built back to the design elevation.

Wet Pond Basin - Inspection and Maintenance Checklist
Property Address: _____

Date of Inspection:_____
Treatment Measure No.:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if any needed maintenance was not conducted, note when it will be done.)	Results Expected When Maintenance Is Performed
Tree Growth	Tree growth on berms or emergency spillway >4 ft in height or covering more than 10% of spillway.			Trees should be removed. If root system is small (base less than 4 inches) the root system may be left in place. Otherwise the roots should be removed and the berm restored. A civil engineer should be consulted for proper berm/spillway restoration.
Emergency Overflow/ Spillway	Rock is missing and soil is exposed at top of spillway or outside slope.			Rocks and pad depth are restored to design standards.
Debris Barriers (*e.g.,* Trash Racks)				
Trash and Debris	Trash or debris is plugging openings in the barrier.			Trash or debris is removed and disposed of properly.
Damaged/ Missing Bars	Bars are missing, loose, bent out of shape, or deteriorating due to excessive rust.			Bars are repaired or replaced to allow proper functioning of trash rack.
Inlet/Outlet Pipe	Debris barrier is missing or not attached to pipe.			Debris barrier is repaired or replaced to allow proper functioning of trash rack.
Fencing and Gates				
Missing or broken parts	Any defect in or damage to the fence or gate that permits easy entry to a facility.			Fencing and gate are restored to design specifications.

Wet Pond Basin - Inspection and Maintenance Checklist
Property Address: _____

Date of Inspection:_____
Treatment Measure No.:_____

Defect	Conditions When Maintenance Is Needed	Maintenance Score**	Comments (Describe maintenance completed and if any needed maintenance was not conducted, note when it will be done.)	Results Expected When Maintenance Is Performed
Deteriorating Paint or Protective Coating	Part or parts that have a rusting or scaling condition that has affected structural adequacy.			Paint or protective coating is sufficient to protect structural adequacy of fence or gate.
Flow Duration Control Outlet (if included in design to meet Hydromodification Management Standard) [[==refer to any attachments with additional provisions==]]				
Risers, orifices and screens	Any debris or clogging			Restore unobstructed flow through discharge structure; to meet original design; dispose of debris properly.
Miscellaneous				
Miscellaneous	Any condition not covered above that needs attention to restore extended detention basin to design conditions.			Meets the design specifications.

*Overall Facility Score = Worst Score from all Defect Items Noted.
**Scores: 0 = OK, 1 = Monitor, 2 = Routine Maintenance, 3 = Immediate Repair Necessary.

CONTECH®
ENGINEERED SOLUTIONS

Introduction

Thank you for your purchase of the Filterra® Bioretention System. Filterra is a specially engineered stormwater treatment system incorporating high performance biofiltration media to remove pollutants from stormwater runoff. The system's biota (vegetation and soil microorganisms) then further breakdown and absorb captured pollutants. All components of the system work together to provide a sustainable long-term solution for treating stormwater runoff.

The Filterra system has been delivered to you with protection in place to resist intrusion of construction related sediment which can contaminate the biofiltration media and result in inadequate system performance. These protection devices are intended as a best practice and cannot fully prevent contamination. It is the purchaser's responsibility to provide adequate measures to prevent construction related runoff from entering the Filterra system.

Included with your purchase is Activation of the Filterra system by the manufacturer as well as a 1-year warranty from delivery of the system and 1-year of routine maintenance (mulch replacement, debris removal, and pruning of vegetation) up to twice during the first year after activation.

Design and Installation

Each project presents different scopes for the use of Filterra systems. Information and help may be provided to the design engineer during the planning process. Correct Filterra box sizing (by rainfall region) is essential to predict pollutant removal rates for a given area. The engineer shall submit calculations for approval by the local jurisdiction. The contractor is responsible for the correct installation of Filterra units as shown in approved plans. A comprehensive installation manual is available at www.ContechES.com.

Activation Overview

Activation of the Filterra system is a procedure completed by the manufacturer to place the system into working condition. This involves the following items:

- Removal of construction runoff protection devices
- Planting of the system's vegetation
- Placement of pretreatment mulch layer using mulch certified for use in Filterra systems.

Activation MUST be provided by the manufacturer to ensure proper site conditions are met for Activation, proper installation of the vegetation, and use of pretreatment mulch certified for use in Filterra systems.

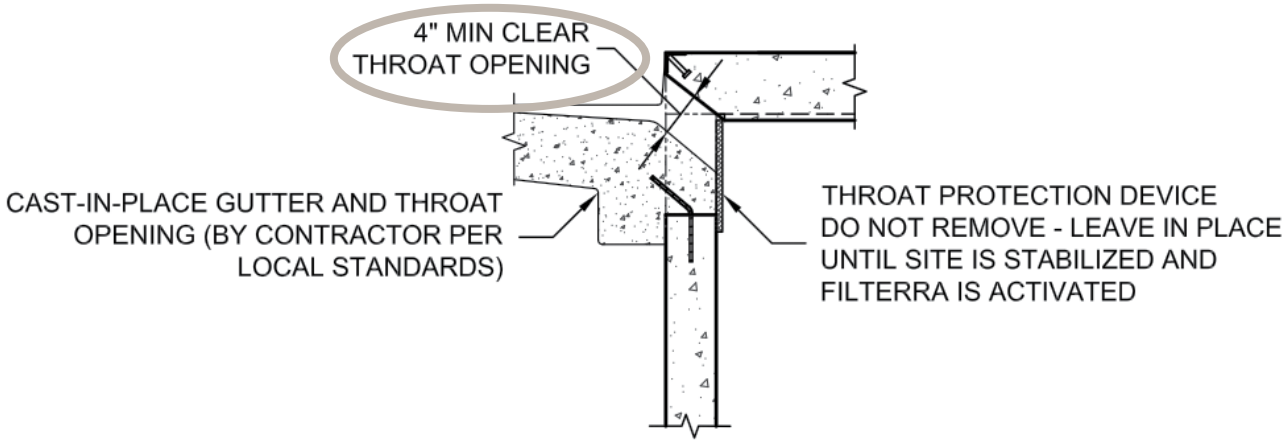
Minimum Requirements

The minimum requirements for Filterra Activation are as follows:

1. The site landscaping must be fully stabilized, i.e. full landscaping installed and some grass cover (not just straw and seed) is required to reduce sediment transport. Construction debris and materials should be removed from surrounding area.

2. Final paving must be completed. Final paving ensures that paving materials will not enter and contaminate the Filterra system during the paving process, and that the plant will receive runoff from the drainage area, assisting with plant survival for the Filterra system.

3. Filterra throat opening should be at least 4" in order to ensure adequate capacity for inflow and debris.



An Activation Checklist is included on page 12 to ensure proper conditions are met for Contech to perform the Activation services. A charge of $500.00 will be invoiced for each Activation visit requested by Customer where Contech determines that the site does not meet the conditions required for Activation.

Filterra Plant Selection Overview

A Plant List has been enclosed with this packet highlighting recommended plants for Filterra systems in your area. Keep in mind that plants are subject to availability due to seasonality and required minimum size for the Filterra system. Plants installed in the Filterra system are container plants (max 15 gallon) from nursery stock and will be immature in height and spread at Activation.

It is the responsibility of the owner to provide adequate irrigation when necessary to the plant of the Filterra system.

The "Planting Requirements for Filterra Systems" document is included as an appendix and discusses proper selection and care of the plants within Filterra systems.

Warranty Overview

Refer to the Contech Engineered Solutions LLC Stormwater Treatment System LIMITED WARRANTY for further information. The following conditions may void the Filterra system's warranty and waive the manufacturer provided Activation and Maintenance services:

- Unauthorized activation or performance of any of the items listed in the activation overview
- Any tampering, modifications or damage to the Filterra system or runoff protection devices
- Removal of any Filterra system components
- Failure to prevent construction related runoff from entering the Filterra system
- Failure to properly store and protect any Filterra components (including media and underdrain stone) that may be shipped separately from the vault

Routine Maintenance Guidelines

With proper routine maintenance, the biofiltration media within the Filterra system should last as long as traditional bioretention media. Routine maintenance is included by the manufacturer on all Filterra systems for the first year after activation. This includes a maximum of 2 visits to remove debris, replace pretreatment mulch, and prune the vegetation. More information is provided in the Operations and Maintenance Guidelines. Some Filterra systems also contain pretreatment or outlet bays. Depending on site pollutant loading, these bays may require periodic removal of debris, however this is not included in the first year of maintenance, and would likely not be required within the first year of operation.

These services, as well as routine maintenance outside of the included first year, can be provided by certified maintenance providers listed on the Contech website. Training can also be provided to other stormwater maintenance or landscape providers.

Why Maintain?

All stormwater treatment systems require maintenance for effective operation. This necessity is often incorporated in your property's permitting process as a legally binding BMP maintenance agreement. Other reasons to maintain are:

- Avoiding legal challenges from your jurisdiction's maintenance enforcement program.
- Prolonging the expected lifespan of your Filterra media.
- Avoiding more costly media replacement.
- Helping reduce pollutant loads leaving your property.

Simple maintenance of the Filterra is required to continue effective pollutant removal from stormwater runoff before discharge into downstream waters. This procedure will also extend the longevity of the living biofilter system. The unit will recycle and accumulate pollutants within the biomass, but is also subjected to other materials entering the inlet. This may include trash, silt and leaves etc. which will be contained above the mulch layer. Too much silt may inhibit the Filterra's flow rate, which is the reason for site stabilization before activation. Regular replacement of the mulch stops accumulation of such sediment.

When to Maintain?

Contech includes a 1-year maintenance plan with each system purchase. Annual included maintenance consists of a maximum of two (2) scheduled visits. Additional maintenance may be necessary depending on sediment and trash loading (by Owner or at additional cost). The start of the maintenance plan begins when the system is activated.

Maintenance visits are scheduled seasonally; the spring visit aims to clean up after winter loads including salts and sands while the fall visit helps the system by removing excessive leaf litter.

It has been found that in regions which receive between 30-50 inches of annual rainfall, (2) two visits are generally required; regions with less rainfall often only require (1) one visit per annum. Varying land uses can affect maintenance frequency; e.g. some fast food restaurants require more frequent trash removal. Contributing drainage areas which are subject to new development wherein the recommended erosion and sediment control measures have not been implemented may require additional maintenance visits.

Some sites may be subjected to extreme sediment or trash loads, requiring more frequent maintenance visits. This is the reason for detailed notes of maintenance actions per unit, helping the Supplier and Owner predict future maintenance frequencies, reflecting individual site conditions.

Owners must promptly notify the (maintenance) Supplier of any damage to the plant(s), which constitute(s) an integral part of the bioretention technology. Owners should also advise other landscape or maintenance contractors to leave all maintenance to the Supplier (i.e. no pruning or fertilizing) during the first year.

Exclusion of Services

Clean up due to major contamination such as oils, chemicals, toxic spills, etc. will result in additional costs and are not covered under the Supplier maintenance contract. Should a major contamination event occur the Owner must block off the outlet pipe of the Filterra (where the cleaned runoff drains to, such as drop inlet) and block off the throat of the Filterra. The Supplier should be informed immediately.

Maintenance Visit Summary

Each maintenance visit consists of the following simple tasks (detailed instructions below).

1. Inspection of Filterra and surrounding area
2. Removal of tree grate and erosion control stones
3. Removal of debris, trash and mulch
4. Mulch replacement
5. Plant health evaluation and pruning or replacement as necessary
6. Clean area around Filterra
7. Complete paperwork

Maintenance Tools, Safety Equipment and Supplies

Ideal tools include: camera, bucket, shovel, broom, pruners, hoe/rake, and tape measure. Appropriate Personal Protective Equipment (PPE) should be used in accordance with local or company procedures. This may include impervious gloves where the type of trash is unknown, high visibility clothing and barricades when working in close proximity to traffic and also safety hats and shoes. A T-Bar or crowbar should be used for moving the tree grates (up to 170 lbs ea.). Most visits require minor trash removal and a full replacement of mulch. See below for actual number of bagged mulch that is required in each media bay size. Mulch should be a double shredded, hardwood variety. Some visits may require additional Filterra engineered soil media available from the Supplier.

Box Length	Box Width	Filter Surface Area (ft^2)	Volume at 3" (ft^3)	# of 2 ft^3 Mulch Bags
4	4	16	4	2
6	4	24	6	3
8	4	32	8	4
6	6	36	9	5
8	6	48	12	6
10	6	60	15	8
12	6	72	18	9
13	7	91	23	12

Maintenance Visit Procedure

Keep sufficient documentation of maintenance actions to predict location specific maintenance frequencies and needs. An example Maintenance Report is included in this manual.

1. Inspection of Filterra and surrounding area

- Record individual unit before maintenance with photograph (numbered). Record on Maintenance Report (see example in this document) the following:

Record on Maintenance Report the following:

Standing Water	yes | no
Damage to Box Structure	yes | no
Damage to Grate	yes | no
Is Bypass Clear	yes | no

If yes answered to any of these observations, record with close-up photograph (numbered).

2. Removal of tree grate and erosion control stones

- Remove cast iron grates for access into Filterra box.
- Dig out silt (if any) and mulch and remove trash & foreign items.

3. Removal of debris, trash and mulch

Record on Maintenance Report the following:

Silt/Clay	yes | no
Cups/ Bags	yes | no
Leaves	yes | no
Buckets Removed	_____

- After removal of mulch and debris, measure distance from the top of the Filterra engineered media soil to the top of the top slab. Compare the measured distance to the distance shown on the approved Contract Drawings for the system. Add Filterra media (not top soil or other) to bring media up as needed to distance indicated on drawings.

Record on Maintenance Report the following:

Distance to Top of Top Slab (inches)	_____
Inches of Media Added	_____

4. Mulch replacement

- Add double shredded mulch evenly across the entire unit to a depth of 3".
- Refer to Filterra Mulch Specifications for information on acceptable sources.
- Ensure correct repositioning of erosion control stones by the Filterra inlet to allow for entry of trash during a storm event.
- Replace Filterra grates correctly using appropriate lifting or moving tools, taking care not to damage the plant.

5. Plant health evaluation and pruning or replacement as necessary

- Examine the plant's health and replace if necessary.
- Prune as necessary to encourage growth in the correct directions

Record on Maintenance Report the following:

Height above Grate	_____ (ft)
Width at Widest Point	_____ (ft)
Health	healthy | unhealthy
Damage to Plant	yes | no
Plant Replaced	yes | no

6. Clean area around Filterra

- Clean area around unit and remove all refuse to be disposed of appropriately.

7. Complete paperwork

- Deliver Maintenance Report and photographs to appropriate location (normally Contech during maintenance contract period).
- Some jurisdictions may require submission of maintenance reports in accordance with approvals. It is the responsibility of the Owner to comply with local regulations.

Maintenance Checklist

Drainage System Failure	Problem	Conditions to Check	Condition that Should Exist	Actions
Inlet	Excessive sediment or trash accumulation.	Accumulated sediments or trash impair free flow of water into Filterra.	Inlet should be free of obstructions allowing free distributed flow of water into Filterra.	Sediments and/or trash should be removed.
Mulch Cover	Trash and floatable debris accumulation.	Excessive trash and/or debris accumulation.	Minimal trash or other debris on mulch cover.	Trash and debris should be removed and mulch cover raked level. Ensure bark nugget mulch is not used.
Mulch Cover	"Ponding" of water on mulch cover.	"Ponding" in unit could be indicative of clogging due to excessive fine sediment accumulation or spill of petroleum oils.	Stormwater should drain freely and evenly through mulch cover.	Recommend contact manufacturer and replace mulch as a minimum.
Vegetation	Plants not growing or in poor condition.	Soil/mulch too wet, evidence of spill. Incorrect plant selection. Pest infestation. Vandalism to plants.	Plants should be healthy and pest free.	Contact manufacturer for advice.
Vegetation	Plant growth excessive.	Plants should be appropriate to the species and location of Filterra.		Trim/prune plants in accordance with typical landscaping and safety needs.
Structure	Structure has visible cracks.	Cracks wider than 1/2 inch or evidence of soil particles entering the structure through the cracks.		Vault should be repaired.
Maintenance is ideally to be performed twice annually.				

Filterra Inspection & Maintenance Log

Filterra System Size/Model:_____ **Location:** _____

Date	Mulch & Debris Removed	Depth of Mulch Added	Mulch Brand	Height of Vegetation Above Grate	Vegetation Species	Issues with System	Comments
1/1/17	*5 – 5 gal Buckets*	*3″*	*Lowe's Premium Brown Mulch*	*4′*	*Galaxy Magnolia*	*- Standing water in downstream structure*	*- Removed blockage in downstream structure*

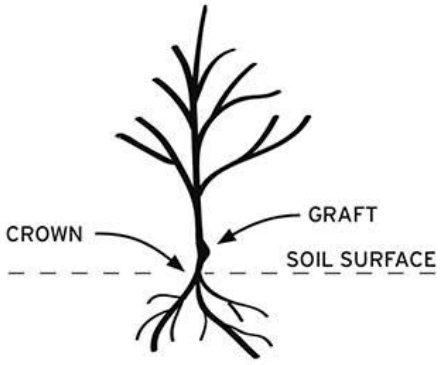
Attach additional sheets as necessary.

NOTE: A charge of $500.00 will be invoiced for each Activation visit requested by Customer where Contech determines that the site does not meet the conditions required for Activation. ONLY Contech authorized representatives can perform Activation of Filterra systems; unauthorized Activations will void the system warranty and waive manufacturer supplied Activation and 1st Year Maintenance.

Signature _____ Date _____

Appendix 2 – Planting Requirements for Filterra® Systems

Plant Material Selection



- Select plant(s) as specified in the engineering plans and specifications.
- Select plant(s) with full root development but not to the point where root bound.
- Use local nursery container plants only. Ball and burlapped plants are not permitted.
- For precast Filterra systems with a tree grate, plant(s) must not have scaffold limbs at least 14 inches from the crown due to spacing between the top of the mulch and the tree grate. Lower branches can be pruned away provided there are sufficient scaffold branches for tree or shrub development.
- For precast Filterra systems with a tree grate, at the time of installation, it is required that plant(s) must be at least 6" above the tree grate opening at installation for all Filterra configurations. This DOES NOT apply to Full Grate Cover designs.
- Plant(s) shall not have a mature height greater than 25 feet.
- For standard 21" media depth, a 7 – 15 gallon container size shall be used. Media less than 21" (Filterra boxes only) will require smaller container plants.
- For precast Filterra systems, plant(s) should have a single trunk at installation, and pruning may be necessary at activation and maintenance for some of the faster growing species, or species known to produce basal sprouts.

Plant Installation

- During transport protect the plant leaves from wind and excessive jostling.
- Prior to removing the plant(s) from the container, ensure the soil moisture is sufficient to maintain the integrity of the root ball. If needed, pre-wet the container plant.
- Cut away any roots which are growing out of the container drain holes. Plants with excessive root growth from the drain holes should be rejected.
- Plant(s) should be carefully removed from the pot by gently pounding on the sides of the container with the fist to loosen root ball. Then carefully slide out. Do not lift plant(s) by trunk as this can break roots and cause soil to fall off. Extract the root ball in a horizontal position and support it to prevent it from breaking apart. Alternatively the pot can be cut away to minimize root ball disturbance.
- Remove any excess soil from above the root flare after removing plant(s) from container.
- Excavate a hole with a diameter 4" greater than the root ball, gently place the plant(s).
- If plant(s) have any circling roots from being pot bound, gently tease them loose without breaking them.
- If root ball has a root mat on the bottom, it should be shaved off with a knife just above the mat line.
- Plant the tree/shrub/grass with the top of the root ball 1" above surrounding media to allow for settling.
- All plants should have the main stem centered in the tree grate (where applicable) upon completion of installation.
- With all trees/shrubs, remove dead, diseased, crossed/rubbing, sharply crotched branches or branches growing excessively long or in wrong direction compared to majority of branches.
- To prevent transplant shock (especially if planting takes place in the hot season), it may be necessary to prune some of the foliage to compensate for reduced root uptake capacity. This is accomplished by pruning away some of the smaller secondary branches or a main scaffold branch if there are too many. Too much foliage relative to the root ball can dehydrate and damage the plant.
- Plant staking may be required.

Mulch Installation

- Only mulch that has been meeting Contech Engineered Solutions' mulch specifications can be used in the Filterra system.
- Mulch must be applied to a depth of 3" evenly over the surface of the media.

Irrigation Requirements

- Each Filterra system must receive adequate irrigation to ensure survival of the living system during periods of drier weather.
- Irrigation sources include rainfall runoff from downspouts and/or gutter flow, applied water through the tree grate or in some cases from an irrigation system with emitters installed during construction.
- At Activation: Apply about one (cool climates) to two (warm climates) gallons of water per inch of trunk diameter over the root ball.
- During Establishment: In common with all plants, each Filterra plant will require more frequent watering during the establishment period. One inch of applied water per week for the first three months is recommended for cooler climates (2 to 3 inches for warmer climates). If the system is receiving rainfall runoff from the drainage area, then irrigation may not be needed. Inspection of the soil moisture content can be evaluated by gently brushing aside the mulch layer and feeling the soil. Be sure to replace the mulch when the assessment is complete. Irrigate as needed**.
- Established Plants: Established plants have fully developed root systems and can access the entire water column in the media. Therefore irrigation is less frequent but requires more applied water when performed. For a mature system assume 3.5 inches of available water within the media matrix. Irrigation demand can be estimated as 1" of irrigation demand per week. Therefore if dry periods exceed 3 weeks, irrigation may be required. It is also important to recognize that plants which are exposed to windy areas and reflected heat from paved surfaces may need more frequent irrigation. Long term care should develop a history which is more site specific.

** Five gallons per square yard approximates 1 inch of water Therefore for a 6' by 6' Filterra approximately 20-60 gallons of water is needed. To ensure even distribution of water it needs to be evenly sprinkled over the entire surface of the filter bed, with special attention to make sure the root ball is completely wetted. NOTE: if needed, measure the time it takes to fill a five gallon bucket to estimate the applied water flow rate then calculate the time needed to irrigate the Filterra. For example, if the flow rate of the sprinkler is 5 gallons/minute then it would take 12 minutes to irrigate a 6' by 6' filter.

STORMWATER FACILITIES MAINTENANCE AGREEMENT WITH ACCESS RIGHTS AND COVENANTS (SWFMA)

RECORDING REQUESTED BY AND
WHEN RECORDED RETURN TO:

CITY OF OCEANSIDE
OFFICE OF THE CITY CLERK
300 NORTH COAST HIGHWAY
OCEANSIDE, CA 92054

Above Space for Recorder's Use

STORMWATER FACILITIES MAINTENANCE AGREEMENT WITH ACCESS RIGHTS AND COVENANTS

PACFICA ELEMENTARY SCHOOL

This AGREEMENT for the maintenance and repair of certain Stormwater Management Facilities is entered into between Meritage Homes (hereinafter referred to as "OWNER") and the City of Oceanside (hereinafter referred to as "CITY") for the benefit of the CITY, the OWNER, the successors in interest to the CITY or the OWNER, and the public generally.

RECITALS

A. OWNER is the owner of certain real property located in the City of Oceanside, California, more particularly described in Exhibit "A" attached hereto and made a part of (hereinafter referred to as the "PROPERTY"), and has proposed that the PROPERTY be developed as 164 unit Condominium project in accordance with applications for Tentative Map No._____, Development Plan No. _____, Grading Plan (Permit) No _____, which are on file with the CITY. This Agreement is required as a condition of approval for such development as set forth in Resolution No _____.

B. In accordance with the City of Oceanside's Urban Runoff Regulations, Oceanside City Code, Chapter 40 (the "Stormwater Ordinance"), the City of Oceanside Subdivision Ordinance, the City of Oceanside Zoning Ordinance, The City of Oceanside Grading Ordinance and/or other ordinances or regulations of CITY which regulate land development and urban runoff, OWNER has prepared and submitted to CITY, a Stormwater Quality Mitigation Plan (hereinafter referred to as SWQMP), which is on file at the CITY. The SWQMP proposes that stormwater runoff from the PROPERTY be managed by the use of Stormwater Management Facilities which are identified in the SWQMP as "Best Management Practices" or "BMPs".

The precise location(s) and extent of the post construction BMPs are indicated in the approved SWQMP dated June 13th, 2022. The SWQMP specifies the manner and standards by which the BMPs must be repaired and maintained in order to retain their effectiveness, as set forth in the Operation Maintenance Plan (hereinafter referred to as "O&M PLAN"). The approved SWQMP and O&M PLAN containing any revisions thereto are on file with the CITY.

C. The information contained in the SWQMP and OWNER's representations that the BMPs will be maintained pursuant to the SWQMP have been relied upon by CITY in approving OWNER's development applications. It is the purpose of this Agreement to assure that the BMPs are maintained, by creating obligations which are enforceable against the OWNER and the OWNER's successors in interest in the PROPERTY. It is intended that these obligations be enforceable notwithstanding other provisions related to BMP maintenance which are provided by law.

AGREEMENT

NOW, THEREFORE, for consideration of (a) CITY's approval of the above development applications and (b) the mutual covenants set forth herein, IT IS HEREBY AGREED AS FOLLOWS:

1. **Maintenance of Stormwater Management Facilities.** OWNER agrees, for itself and its successors in interest, to all or any portion of the PROPERTY, to comply in all respects with the requirements of the Stormwater Ordinance and the SWQMP with regards to the maintenance of BMPs designated in the SWQMP, and in particular agrees to perform, at its sole cost, expense and liability, the following "MAINTENANCE ACTIVITIES": all inspections, cleaning, repairs, servicing, maintenance and other actions specified in the O&M PLAN, with respect to all of the BMPs listed at Recital "B" above, at the times and in the manner specified in the O&M PLAN. OWNER shall initiate, perform and complete all MAINTENANCE ACTIVITIES at the required time, without request or demand from CITY or any other agency. OWNER further agrees that "MAINTENANCE ACTIVITIES" shall include replacement or modification of the BMPs in the event that said BMPs do not function as intended. Replacement shall be with an identical type, size and model of BMP, except that:

(a) The CITY Engineer may authorize substitution of an alternative BMP if he or she determines that it will function as well or better than the original BMP; and

(b) Pursuant to Section 40.2.3(c) of the Stormwater Ordinance, if the failure of the BMP, in the judgment of the CITY Engineer indicates that the BMP in use is inappropriate or inadequate to the circumstances, the BMP must be modified or replaced with an upgraded BMP to prevent future failure.

2. **Notices.** OWNER further agrees that it shall, prior to transferring ownership of any land on which any of the above BMPs are located, and also prior to transferring ownership of any such BMP, provide clear written notice of the above maintenance obligations associated with that BMP to the transferee. OWNER further agrees to provide evidence to CITY that OWNER has requested the California Department of Real Estate to include in the public report issued for the development of the PROPERTY, a notification regarding the BMP maintenance requirements described herein.

3. **CITY's Right to Perform Maintenance.** It is agreed that CITY shall have the right, but not the obligation, to elect to perform any or all of the MAINTENANCE ACTIVITIES if, in the CITY's sole judgment, OWNER has failed to perform the same. It is recognized and understood that the CITY makes no representation that it intends to or will perform any of the MAINTENANCE ACTIVITIES and any election by CITY to perform any of the MAINTENANCE ACTIVITIES, shall in no way relieve OWNER of its continuing maintenance obligations under this agreement. If CITY elects to perform any of the MAINTENANCE ACTIVITIES, it is understood that CITY shall be deemed to be acting as the agent of the OWNER and said work shall be without warranty or representation by CITY as to safety or effectiveness, shall be deemed to be accepted by OWNER "as is", and shall be covered by OWNER's indemnity provisions below.

If CITY performs any of the MAINTENANCE ACTIVITIES, after CITY has demanded that OWNER perform the same and OWNER has failed to do so within a reasonable time stated in the CITY's demand, then OWNER shall pay all of CITY's costs incurred in performing the MAINTENANCE ACTIVITIES. OWNER's obligation to pay CITY's costs of performing MAINTENANCE ACTIVITIES is a continuing obligation and shall apply whether or not CITY has utilized all or any portion of the security provided pursuant to Paragraph 5.

4. **CITY'S Access Rights.** OWNER hereby authorizes the CITY to access perpetually over, under and across all of the property, for purposes of accessing the BMPs and performing any of the MAINTENANCE ACTIVITIES specified in Paragraph 1 above. CITY shall have the right, at any time and without prior notice to OWNER, to enter upon any part of said area as may be necessary or convenient for such purposes. OWNER shall at all times maintain the PROPERTY so as to make CITY's access clear and unobstructed.

5. **Security.** OWNER has provided CITY with non-refundable security to assure the faithful performance of the obligations of this agreement. The security is in the form of a Cash Deposit in the amount of $ 25,000.00 . CITY may utilize the security to provide funding for the cost of CITY performing any of the MAINTENANCE ACTIVITIES under Paragraph 3 above. CITY may utilize all or any part of the security at any time pursuant to this Agreement. Should any portion of the security be used by CITY, OWNER or a Subsequent Owner, as applicable, shall deposit additional funds in the amount utilized by CITY, thereby restoring the security to the amount initially deposited by OWNER.

6. **Administration of Agreement for CITY.** CITY hereby designates its Engineer as the officer charged with responsibility and authority to administer this Agreement on behalf of CITY. Any notice or communication related to the implementation of this Agreement desired or required to be delivered to CITY shall be addressed to:

City Engineer
City of Oceanside
300 North Coast Highway
Oceanside, CA 92054

The City Engineer is also granted authority to enter into appropriate amendments to this Agreement on behalf of CITY, provided that the amendment is consistent with the purposes of this Agreement as set forth above.

7. **Defense and Indemnity.** CITY shall not be liable for, and OWNER and its successors in interest shall defend and indemnify CITY and the employees and agents of CITY (collectively "CITY PARTIES"), against any and all claims, demands, liability, judgments, awards, fines, mechanic's liens or other liens, labor disputes, losses, damages, expenses, charges or costs of any kind or character, including attorneys' fees and court costs (hereinafter collectively referred to as "CLAIMS"), related to this Agreement and arising either directly or indirectly from any act, error, omission or negligence of OWNER, OWNER's successors, or their contractors, licensees, agents, servants or employees, including, without limitation, claims caused by the concurrent negligent act, error or omission, whether active or passive, of CITY PARTIES. OWNER shall have no obligation, however, to defend or indemnify CITY PARTIES from a claim if it is determined by a court of competent jurisdiction that such claim was caused by the sole negligence or willful misconduct of CITY PARTIES. Nothing in this Agreement, CITY's approval of the subdivision or other applications or plans and specifications, or inspection of the work, is intended to acknowledge responsibility for any such matter, and CITY PARTIES shall have absolutely no responsibility or liability therefor unless otherwise provided by applicable law.

8. **Common Interest Developments.** If the PROPERTY is developed as a "Common Interest Development" as defined in Civil Code section 1351(c) which will include membership in or ownership of an "ASSOCIATION" as defined in Civil Code section 1351(a), then the following provisions of this Paragraph 8 shall apply during such time as the PROPERTY is encumbered by a "DECLARATION" as defined in Civil Code section 1351(h), and the Common Area, as "Common Area" is defined in Civil Code section 1351(b), of the PROPERTY is managed and controlled by the ASSOCIATION:

(a) The ASSOCIATION, through its Board of Directors, shall assume full responsibility to perform the MAINTENANCE ACTIVITIES pursuant to this Agreement, and shall undertake all actions and efforts necessary to accomplish the MAINTENANCE ACTIVITIES, including but not limited to, levying regular or special assessments against each member of the ASSOCIATION sufficient to

provide funding for the MAINTENANCE ACTIVITIES, conducting a vote of the membership related to such assessments if required by law. In the event insufficient votes have been obtained to authorize an assessment, the ASSOCIATION shall seek authority from a court of competent jurisdiction for a reduced percentage of affirmative votes necessary to authorize the assessment, re-conducting the vote of the membership in order to obtain the votes necessary to authorize an assessment, and the ASSOCIATION shall take all action authorized by the DECLARATION or California law to collect delinquent assessments, including but not limited to, the recording and foreclosure of assessment liens.

(b) No provision of the DECLARATION, nor any other governing document of the ASSOCIATION or grant of authority to its members, shall grant or recognize a right of any member or other person to alter, improve, maintain or repair any of the PROPERTY in any manner which would impair the functioning of the BMPs to manage drainage or stormwater runoff as described in the SWQMP. In the event of any conflict between the terms of this Agreement and the DECLARATION or other ASSOCIATION governing documents, the provisions of this Agreement shall prevail.

9. **Agreement Binds Successors and Runs with the PROPERTY.** It is understood and agreed that the terms, covenants and conditions herein contained shall constitute covenants running with the land and shall be binding upon the heirs, executors, administrators, successors and assigns of OWNER and CITY, shall be deemed to be for the benefit of all persons owning any interest in the PROPERTY (including the interest of CITY or its successors in the Access Rights authorized herein). It is the intent of the parties hereto that this Agreement may be recorded and shall be binding upon all persons purchasing or otherwise acquiring all or any lot, unit or other portion of the PROPERTY, who shall be deemed to have consented to and become bound by all the provisions hereof.

10. **OWNER's Continuing Responsibilities Where Work Commenced or Permit Obtained.** Notwithstanding any other provision of this Agreement, no transfer or conveyance of the PROPERTY or any portion thereof shall in any way relieve OWNER of or otherwise affect OWNER's responsibilities for installation or maintenance of BMPs which may have arisen under the ordinances or regulations of CITY referred to in Recital B above, or other federal, state or CITY laws, on account of OWNER having obtained a permit which creates such obligations or having commenced grading, construction or other land disturbance work.

11. **Amendment and Release.** The terms of this Agreement may be modified only by a written amendment approved and signed by the City Council or the CITY Engineer acting on behalf of CITY and by OWNER or OWNER's successor(s) in interest. This Agreement may be terminated and OWNER and the PROPERTY released from the covenants set forth herein, by a Release which CITY may execute if it determines that another mechanism will assure the ongoing maintenance of the BMPs or that it is no longer necessary to assure such maintenance.

12. **Governing Law and Severability.** This Agreement shall be governed by the laws of the State of California. Venue in any action related to this Agreement shall be in the Superior Court of the State of California, County of San Diego, North County Division. In the event that any of the provisions of this Agreement are held to be unenforceable or invalid by any court of competent jurisdiction, the validity, and enforceability of the remaining provisions shall not be affected thereby.

IN WITNESS WHEREOF, the parties hereto for themselves, their heirs, executors, administrators, successors and assigns do hereby agree to the full performance of the covenants herein contained and have caused this Agreement to be executed by setting hereunto their signatures on the dates indicated below:

ATTACHMENT 4
Copy of Plan Sheets Showing Permanent Storm Water BMPs

This is the cover sheet for Attachment 4.

Use this checklist to ensure the required information has been included on the plans:

The plans must identify:

☒Structural BMP(s) with ID numbers matching Form I-6 Summary of PDP Structural BMPs
☒The grading and drainage design shown on the plans must be consistent with the delineation of DMAs shown on the DMA exhibit
☒Details and specifications for construction of structural BMP(s)
☒Signage indicating the location and boundary of structural BMP(s) as required by the City Engineer
☒How to access the structural BMP(s) to inspect and perform maintenance
☒Features that are provided to facilitate inspection (e.g., observation ports, cleanouts, silt posts, or other features that allow the inspector to view necessary components of the structural BMP and compare to maintenance thresholds)
☒Manufacturer and part number for proprietary parts of structural BMP(s) when applicable
☒Maintenance thresholds specific to the structural BMP(s), with a location-specific frame of reference (e.g., level of accumulated materials that triggers removal of the materials, to be identified based on viewing marks on silt posts or measured with a survey rod with respect to a fixed benchmark within the BMP)
☒Recommended equipment to perform maintenance
☒When applicable, necessary special training or certification requirements for inspection and maintenance personnel such as confined space entry or hazardous waste management
☒Include landscaping plan sheets showing vegetation requirements for vegetated structural BMP(s)
☒All BMPs must be fully dimensioned on the plans
☒When propritery BMPs are used, site specific cross section with outflow, inflow and model number shall be provided. Broucher photocopies are not allowed.

BASIS OF BEARING

THE BASIS OF BEARINGS IS THE CALIFORNIA STATE PLANE COORDINATE SYSTEM NAD 83, ZONE 6, EPOCH 2011.00 AND IS BASED ON THE GRID BEARING BETWEEN STATION NO. 1055 AND STATION NO. 1065, PER RECORD OF SURVEY 21787. I.E. N23°01'30"E

TOPOGRAPHY SOURCE

VERTICAL RELIEF SHOWN HEREON WAS PRODUCED BY FIELD METHODS COMBINED WITH AERIAL PHOTOGRAPHY BY R.J. LUNG AND ASSOCIATES FLOWN ON OCTOBER 13, 2021. VERTICAL DATUM BASED ON COH88, STATION 1055 PER CITY OF OCEANSIDE SURVEY CONTROL NETWORK AS ESTABLISHED BY R.O.S. NO. 21787. 2.5" BRASS DISK IN CURB INLET WITH TRIANGLE/PUNCH STAMPED "LS 7854". ELEV. 119.39'

CONDOMINIUM NOTE

THIS IS A MAP OF A CONDOMINIUM PROJECT AS DEFINED IN SECTION 4125 OF THE CIVIL CODE OF THE STATE OF CALIFORNIA AND IS FILED PURSUANT TO THE SUBDIVISION MAP ACT. THE MAXIMUM NUMBER OF RESIDENTIAL UNITS 164.

PRELIMINARY SET

GENERAL NOTES

1. EXISTING GROSS SUBDIVISION AREA: 14.546 AC
2. PROPOSED SUBDIVISION AREA: 14.546 AC
3. NET PROJECT AREA: 10.231 AC
4. TOTAL NUMBER OF EXISTING LOTS: 2
5. TOTAL NUMBER OF PROPOSED LOTS: 1
6. TOTAL NUMBER OF UNITS: 164 (ATTACHED UNITS)
7. ASSESSOR PARCEL NUMBER: 157-070-42, 122-190-19 & 122-190-22
8. EXISTING GENERAL PLAN: CIVIC INSTITUTIONAL
9. PROPOSED GENERAL PLAN: MDB-R MEDIUM DENSITY-B RESIDENTIAL
10. EXISTING ZONING: PUBLIC/SEMIPUBLIC
11. PROPOSED ZONING: PD PLANNED DEVELOPMENT
12. PROPOSED DENSITY: 12.8 DU/AC (164 DU's/12.82 AC)
13. TOPOGRAPHIC CONTOUR INTERVAL: 2 FOOT
14. MAXIMUM SLOPE GRADIENT: 2: 1
15. AREA/PERCENT OF TOTAL BUILDING COVERAGE: 3.23 AC. (22.2%)
16. AREA/PERCENT OF PROJECT IN STREETS, DRIVEWAYS & DRIVE AISLES: 2.51 AC (17.3%)
17. AREA/PERCENT OF SIDEWALKS: 1.08 AC. (7.4%)
18. AREA/PERCENT OF LANDSCAPING: 7.73 AC (53.1%)
19. GRADING QUANTITIES: RAW CUT: 28,645 C.Y. RAW FILL: 28,645 C.Y.
20. GRADED AREA: 10.231 AC

DESIGN NOTES

1. ALL STREET DESIGN SHALL CONFORM TO THE CITY OF OCEANSIDE DESIGN STANDARDS AS REQUIRED BY THE CITY ENGINEER.
2. EASEMENTS SHALL BE PROVIDED, REMOVED OR RELOCATED AS REQUIRED BY THE CITY ENGINEER.
3. ALL PROPOSED UTILITIES SHALL BE UNDERGROUNDED AND EASEMENTS PROVIDED.
4. GEOTECHNICAL INVESTIGATION PREPARED BY: GEOTEK, DATED DECEMBER 11, 2021.
5. THE DEVELOPER SHALL INSTALL STREET LIGHTS PER THE CITY OF OCEANSIDE ENGINEERING DEPARTMENT TRAFFIC DIVISION, THE STREET LIGHT DESIGN MANUAL AND THE CITY OF OCEANSIDE STANDARD DRAWING NO. M-4. STREET LIGHT LOCATIONS MAY VARY IN FINAL DESIGN.
6. ALL RETAINING WALLS IN EXCESS OF 4 FEET SHALL BE PLANTABLE.
7. THE PROPOSED SEWER SHALL BE INSTALLED PER CITY OF OCEANSIDE STANDARDS. ALL ON-SITE SEWER IS PRIVATE.
8. THE PROPOSED WATER SHALL BE INSTALLED PER CITY OF OCEANSIDE STANDARDS. ALL ON-SITE WATER IS PRIVATE.
9. FINISH GRADES ARE APPROXIMATE AND SUBJECT TO CHANGE IN FINAL DESIGN.
10. MODEL UNITS MAY BE BUILT PRIOR TO FINAL MAP WITH APPROVAL FROM THE CITY ENGINEER AND PLANNING DIRECTOR.
11. ALL FUTURE DRIVEWAYS AND GEOMETRIC DESIGN SHALL BE DESIGNED IN COMPLIANCE WITH THE CITY OF OCEANSIDE ENGINEERS DESIGN STANDARDS.
12. THE PRESENT OR FUTURE OWNER/DEVELOPER SHALL INDEMNIFY AND SAVE CITY OF OCEANSIDE, ITS OFFICERS, AGENTS, AND EMPLOYEES HARMLESS FROM ANY AND ALL LIABILITIES, CLAIMS ARISING FROM ANY FLOODING THAT OCCURS ON THIS SITE AND FLOODING THAT MAYBE DISCHARGED FROM THIS SITE INTO ADJACENT PROPERTIES.
13. ALL SIDEWALK AND PATHWAYS SHALL BE ADA COMPLIANT.

EXCEPTIONS

1. GENERAL AND SPECIAL TAXES AND ASSESSMENTS FOR THE FISCAL YEAR 2022–2023 ARE EXEMPT.
   AFFECTS: PARCELS 1 AND 2
2. INTENTIONALLY DELETED
3. THE LIEN OF SUPPLEMENTAL TAXES, IF ANY, ASSESSED PURSUANT TO CHAPTER 3.5 COMMENCING WITH SECTION 75 OF THE CALIFORNIA REVENUE AND TAXATION CODE.

THE FOLLOWING MATTERS AFFECT PARCEL 1:

4. A CERTIFICATE OF INTEREST IN REAL PROPERTY, CERTIFICATE NO. 663 FILED BY THE DIRECTOR OF FINANCE OF THE STATE OF CALIFORNIA BY VIRTUE OF FUNDS APPORTIONED UNDER THE STATE SCHOOL BUILDING AID LAW OF 1952 (CM.10, DIV. 14, RD. CODE) AGAINST OCEANSIDE UNION SCHOOL DISTRICT RECORDED JANUARY 24, 1964 AS INSTRUMENT NO. 1964–14792 OFFICIAL RECORDS.

5. AN EASEMENT FOR SANITARY SEWER AND INCIDENTAL PURPOSES, RECORDED APRIL 24, 1972 AS INSTRUMENT NO. 1972–101357 OF OFFICIAL RECORDS.
   IN FAVOR OF: CITY OF OCEANSIDE, A MUNICIPAL CORPORATION
   AFFECTS: AS DESCRIBED THEREIN
   TO BE QUITCLAIMED

6. AN EASEMENT FOR STORM DRAIN FACILITIES AND INCIDENTAL PURPOSES, RECORDED APRIL 24, 1972 AS INSTRUMENT NO. 1972–101358 OF OFFICIAL RECORDS.
   IN FAVOR OF: CITY OF OCEANSIDE
   AFFECTS: AS DESCRIBED THEREIN
   TO BE QUITCLAIMED

7. AN EASEMENT FOR PUBLIC UTILITIES, INGRESS AND EGRESS AND INCIDENTAL PURPOSES, RECORDED NOVEMBER 28, 1972 AS INSTRUMENT NO. 1972–317614 OF OFFICIAL RECORDS.
   IN FAVOR OF: SAN DIEGO GAS AND ELECTRIC COMPANY
   AFFECTS: AS DESCRIBED THEREIN
   TO BE QUITCLAIMED

8. A LEASE DATED SEPTEMBER 1, 1997, EXECUTED BY OCEANSIDE UNIFIED SCHOOL DISTRICT AS LESSOR AND OCEANSIDE UNIFIED SCHOOL DISTRICT SCHOOL FACILITIES CORPORATION AS LESSEE, RECORDED SEPTEMBER 9, 1997 AS INSTRUMENT NO. 1997–0435456 OF OFFICIAL RECORDS.

   DEFECTS, LIENS, ENCUMBRANCES OR OTHER MATTERS AFFECTING THE LEASEHOLD ESTATE, WHETHER OR NOT SHOWN BY THE PUBLIC RECORDS.

9. A TRUST AGREEMENT BY AND BETWEEN OCEANSIDE UNIFIED SCHOOL DISTRICT SCHOOL FACILITIES CORPORATION AND CHASE TRUST COMPANY OF CALIFORNIA, AS TRUSTEE DATED SEPTEMBER 1, 1997 AND DISCLOSED BY THE SITE LEASE RECORDED SEPTEMBER 09, 1997 AS INSTRUMENT NO. 1997–0435456 OFFICIAL RECORDS.

10. AN EASEMENT FOR PUBLIC UTILITIES, INGRESS AND EGRESS AND INCIDENTAL PURPOSES, RECORDED SEPTEMBER 09, 2004 AS INSTRUMENT NO. 2004–0858474 OF OFFICIAL RECORDS.
    IN FAVOR OF: SAN DIEGO GAS AND ELECTRIC COMPANY, A CORPORATION
    AFFECTS: AS DESCRIBED THEREIN
    THE LOCATION OF THE EASEMENT CANNOT BE DETERMINED FROM RECORD INFORMATION.
    TO BE QUITCLAIMED

10A. THE LACK OF A RIGHT OF ACCESS TO AND FROM THE LAND.

THE FOLLOWING MATTERS AFFECT PARCEL 2:

11. THE RIGHT TO CONSTRUCT A DAM OR RESERVOIR ON WARNER'S RANCH IN SAN DIEGO COUNTY, AND THE RIGHT TO PERPETUALLY COLLECT AND IMPOUND ANY AND ALL WATERS OF THE SAN LUIS REY RIVER AND DIVERT SAID WATERS SO COLLECTED AND IMPOUNDED FORM THE SAN LUIS REY WATERSHED INTO OTHER WATERSHEDS AND PART OF SAN DIEGO COUNTY GIVEN TO ED FLETCHER, BY INSTRUMENT EXECUTED JANUARY 22, 1912 BY HUB FOUSSAT (OR H. FOUSSAT) RECORDED JANUARY 24, 1912 IN BOOK 546, PAGE 288, OF DEEDS.

12. THE TERMS AND PROVISIONS CONTAINED IN THE DOCUMENT ENTITLED "WATER AGREEMENT" RECORDED OCTOBER 17, 1963 AS INSTRUMENT NO. 1963–186423 OF OFFICIAL RECORDS.

13. THE EFFECT OF A MAP PURPORTING TO SHOW THE LAND AND OTHER PROPERTY, FILED IN MAP NO. 6402 OF RECORD OF SURVEYS.

14. INTENTIONALLY DELETED

14A. THE TERMS AND PROVISIONS CONTAINED IN THE DOCUMENT ENTITLED "MEMORANDUM OF AGREEMENT" RECORDED MAY 26, 2022 AS INSTRUMENT NO. 2022–0224911 OF OFFICIAL RECORDS.

14B. A DEED OF TRUST TO SECURE AN ORIGINAL INDEBTEDNESS OF $1,500,000.00 RECORDED MAY 26, 2022 AS INSTRUMENT NO. 2022–0224912 OF OFFICIAL RECORDS.
   DATED: MAY 29, 2022
   TRUSTOR: OCEANSIDE UNIFIED SCHOOL DISTRICT
   TRUSTEE: FIRST AMERICAN TITLE COMPANY, A CALIFORNIA CORPORATION
   BENEFICIARY: MLC HOLDINGS, INC., AN ARIZONA CORPORATION

15. NOTICE OF PENDENCY OF ACTION RECORDED SEPTEMBER 30, 2022 AS INSTRUMENT NO. 2022–0384473 OF OFFICIAL RECORDS.
    COURT: SUPERIOR COURT OF THE STATE OF CALIFORNIA COUNTY OF SAN DIEGO
    CASE NO.: (BLANK)
    PLAINTIFF: MLC HOLDINGS, INC., AS CONDITIONAL ASSIGNEE OF OCEANSIDE UNIFIED SCHOOL DISTRICT
    DEFENDANT: SPROUL CONSTRUCTION CORPORTATION, ET–AL
    PURPOSE: A REAL PROPERTY CLAIM ON TITLE

THE FOLLOWING MATTERS AFFECT BOTH PARCELS:

16. RIGHTS OF THE PUBLIC IN AND TO THAT PORTION OF THE LAND LYING WITHIN ANY ROAD, STREET, ALLEY OR HIGHWAY.

17. WATER RIGHTS, CLAIMS OR TITLE TO WATER, WHETHER OR NOT SHOWN BY THE PUBLIC RECORDS.

18. RIGHTS OF PARTIES IN POSSESSION.

TITLE REFERENCE

THIS SURVEY IS BASED ON THE PRELIMINARY TITLE REPORT ISSUED BY FIRST AMERICAN TITLE COMPANY AS ORDER NO. NHSC–6695058 (jd) DATED NOVEMBER 7, 2022.

LEGAL DESCRIPTION

REAL PROPERTY IN THE CITY OF OCEANSIDE, COUNTY OF SAN DIEGO, STATE OF CALIFORNIA, DESCRIBED AS FOLLOWS:

PARCEL 1: (APNS: 157–070–42–00 AND 122–190–19–00)

THAT PORTION OF LOT 2 IN SECTION 4, TOWNSHIP 11 SOUTH, RANGE 4 WEST, SAN BERNARDINO BASE AND MERIDIAN, TOGETHER WITH A PORTION OF THE SOUTHWEST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 33, TOWNSHIP 10 SOUTH, RANGE 4 WEST, SAN BERNARDINO BASE AND MERIDIAN, ACCORDING TO UNITED STATES GOVERNMENT SURVEY, ALL BEING IN THE CITY OF OCEANSIDE, COUNTY OF SAN DIEGO, STATE OF CALIFORNIA, AND MORE PARTICULARLY DESCRIBED AS A WHOLE AS FOLLOWS:

BEGINNING AT THE NORTHWEST CORNER OF MISSION VALLEY ESTATES UNIT NO. 2, ACCORDING TO MAP NO. 5176, FILED IN THE OFFICE OF THE COUNTY RECORDER OF SAN DIEGO COUNTY, MAY 15, 1963, BEING ALSO A POINT ON THE NORTH–SOUTH CENTER LINE OF SAID SECTION 4; THENCE ALONG SAID NORTH–SOUTH CENTER LINE NORTH 00°02'37" WEST, 645.03 FEET TO THE NORTH QUARTER CORNER OF SAID SECTION 4, BEING ALSO THE SOUTH QUARTER CORNER OF SAID SECTION 33; THENCE ALONG THE WESTERLY LINE OF THE SOUTHEAST QUARTER OF SAID SECTION 33, NORTH 00°14'52" WEST, 243.33 FEET; THENCE NORTH 67°39'05" EAST, 615.51 FEET; THENCE SOUTH 27°56'06" EAST, 128.60 FEET; THENCE SOUTH 56°09'13" EAST, 24.47 FEET TO A POINT ON THE ARC OF A NON–TANGENT 62.00 FOOT RADIUS CURVE, CONCAVE NORTHEASTERLY, A RADIAL LINE OF SAID CURVE BEARS NORTH 56°09'13" WEST TO SAID POINT; THENCE COUNTER–CLOCKWISE ALONG THE ARC OF SAID CURVE THROUGH A CENTRAL ANGLE OF 219°5'744" A DISTANCE OF 238.02 FEET; THENCE SOUTH 29°10'15" EAST, 115.00 FEET: THENCE SOUTH 77°16'24" EAST, 67.36 FEET TO THE NORTHWESTERLY CORNER OF ROJA DRIVE AS SHOWN ON MISSION VALLEY ESTATES UNIT NO. 4, ACCORDING TO MAP NO. 5496, FILED IN THE OFFICE OF THE COUNTY RECORDER OF SAN DIEGO COUNTY, NOVEMBER 13, 1964; THENCE ALONG THE BOUNDARY OF SAID MAP NO. 5496 AS FOLLOWS: SOUTH 00°07'41" EAST, (RECORD – SOUTH 00°09'46" EAST) 150.00 FEET; SOUTH 89°52'19" WEST, (RECORD – SOUTH 89°50'14" WEST) 100.00 FEET; SOUTH 00°07'41" EAST, (RECORD – SOUTH 00°09'46" EAST) 90.00 FEET; SOUTH 89°52'19" WEST, (RECORD – SOUTH 89°50'14" WEST) 60.00 FEET; SOUTH 00°07'41" EAST, (RECORD – SOUTH 00°09'46" EAST) 100.33 FEET TO A POINT ON THE ARC OF A NON–TANGENT 230.00 FOOT RADIUS CURVE, CONCAVE SOUTHEASTERLY, A RADIAL LINE OF SAID CURVE BEARS NORTH 03°10'42" WEST, (RECORD – NORTH 03°12'47" WEST) TO SAID POINT; SOUTHWESTERLY ALONG THE ARC OF SAID CURVE THROUGH A CENTRAL ANGLE OF 22°49'21" A DISTANCE OF 91.62 FEET; SOUTH 26°00'03" EAST, (RECORD – SOUTH 26°02'08" EAST) 60.00 FEET; AND SOUTH 35°08'07" EAST, (RECORD – SOUTH 35°10'12" EAST) 101.28 FEET TO THE MOST NORTHERLY CORNER OF LOT 260 OF MISSION VALLEY ESTATES UNIT NO. 3, ACCORDING TO MAP NO. 5246, FILED IN THE OFFICE OF THE COUNTY RECORDER OF SAN DIEGO COUNTY, AUGUST 26, 1963; THENCE ALONG THE NORTHWESTERLY LINE OF SAID LOT 260, SOUTH 63°59'10" WEST, (RECORD – SOUTH 63°57'52" WEST) 92.29 FEET TO THE MOST NORTHERLY CORNER OF LOT 259 OF SAID MAP NO. 5176; THENCE ALONG THE NORTHWESTERLY LINE OF SAID MAP NO. 5176, SOUTH 63°59'10" WEST, 709.39 FEET (RECORD – SOUTH 63°57'52" WEST, 710.32 FEET) TO THE POINT OF BEGINNING.

PARCEL 2: (APN: 122–190–22–00)

LOT 6 AND THE SOUTHWEST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 33, TOWNSHIP 10 SOUTH, RANGE 4 WEST, SAN BERNARDINO BASE AND MERIDIAN, IN THE CITY OF OCEANSIDE, COUNTY OF SAN DIEGO, STATE OF CALIFORNIA, ACCORDING TO THE OFFICIAL PLAT THEREOF. EXCEPTING FROM SAID LOT 6 ANY PORTION THEREOF UNDERLYING THE WATERS OF THAT CERTAIN POND OR LAKE AS SURVEYED AND SHOWN ON THE OFFICIAL PLAT THEREOF.

ALSO EXCEPTING FROM SAID LOT 6 A STRIP OF LAND 15 FEET IN WIDTH, ADJOINING THE MEANDER LINE OF SAID POND OR LAKE ON THE SOUTHEAST, AS CONVEYED TO JOHN JOHNSTON, JR., BY DEED FROM HUBERT FOUSSAT AND WIFE, DATED MARCH 17, 1912 AND RECORDED IN BOOK 555, PAGE 23, OF DEEDS.

ALSO EXCEPTING FROM THE SOUTHWEST QUARTER OF THE SOUTHEAST QUARTER OF SECTION 33 THAT PORTION LYING WITHIN MISSION VALLEY ESTATES UNIT NO. 4, ACCORDING TO MAP THEREOF NO. 5496, FILED IN THE OFFICE OF COUNTY RECORD OF SAN DIEGO COUNTY, NOVEMBER 13, 1964.

ALSO EXCEPTING THEREFROM THAT PORTION LYING WITHIN MESA MARGARITA UNIT NO._5, ACCORDING TO MAP THEREOF NO. 6230, FILED IN THE OFFICE OF COUNTY RECORDER OF SAN DIEGO COUNTY, NOVEMBER 21, 1968.

ALSO EXCEPTING THEREFROM THAT PORTION DESCRIBED IN DEED FROM SPROUL CONSTRUCTION CORPORATION TO OCEANSIDE UNION SCHOOL DISTRICT, RECORDED ON FEBRUARY 19, 1971 AS INSTRUMENT NO. 31900, OF OFFICIAL RECORDS.

ALSO EXCEPTING THEREFROM, ALL THAT PORTION DESCRIBED IN DEED FROM SPROUL CONSTRUCTION CORPORATION TO HILL TOP DEVELOPERS, INC., A CALIFORNIA CORPORATION AND CHALLENGE BUILDERS, INC., A CALIFORNIA CORPORATION, RECORDED ON OCTOBER 29, 1971 AS INSTRUMENT NO. 250639, OF OFFICIAL RECORDS.

Attention: Ms. Johanna Crooker

Subject: **Preliminary Geotechnical Evaluation Report**
Proposed Pacifica Elementary Re-Development
APN: 122-190-22-00, 122-190-19-00, and 157-070-42-00
Oceanside, California

Dear Ms. Crooker:

GeoTek, Inc. (GeoTek) is pleased to present the results of this preliminary geotechnical evaluation for the subject project located in the City of Oceanside, California. This report presents a discussion of GeoTek's field evaluation, analyses, and suitability of the site soils to support the proposed improvements. Based upon review, site development appears feasible from a geotechnical viewpoint provided that recommendations presented in this report are incorporated into the design and construction phases of the project.

We appreciate the opportunity to be of service on this project. Please contact the undersigned if you have any questions.

Respectfully submitted,
GeoTek, Inc.

ATTACHMENT 7
Storm Water Quality Assessment Form

This is the cover sheet for Attachment 7.

City of Oceanside – Engineering Division – Clean Water Program

STORM WATER QUALITY ASSESSMENT FOR PLANNING, ENGINEERING, AND BUILDING PERMIT APPLICATIONS

All applications for Planning, Engineering, or Building Division permits are required to complete this assessment form and include it as part of the initial permit application submittal. Staff will review the permit application content to determine the applicability of State and City storm water requirements. Please note a storm water assessment cannot be provided without a complete permit application package.

Section 1 – Project Information	
Applicant Name: Aaron Talarico, MLC Holdings, Inc.	Phone Number: (949) 372-3309
Project Name: Pacifica Elementary School	Project Site Address: Roja Drive and Macario Drive, Oceanside, CA 92054
Permit Applications Number(s): GPA22-00001	Assessor Parcel Number(s): 157-070-42, 122-190-19, & 122-190-22
Project Description: 14.55 acre site - City of Oceanside. Partially developed. Multi-family - 164 Residential Units.	Project Disturbed Area (square feet): 443,150 sft
Existing Impervious Area (square feet): 219,133 sq. ft	Created or Replaced Impervious Area (square feet): 312,149 sft

Section 2 – Identify Applicable Priority Development Project Categories (Check All Boxes that Apply)	
☐	**New Development Project** – A project that creates 10,000 square feet or more of impervious surfaces (collectively over the entire project site). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
[X	**Redevelopment Project** – A project that creates and/or replaces 5,000 square feet or more of impervious surface (collectively over the entire project site on an existing site of 10,000 square feet or more of impervious surfaces). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
☐	**Restaurants** – Category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC code 5812); where new or redevelopment projects create and/or replace 5,000 square feet or more impervious surface (collectively over the entire project site).
☐	**Hillside Development** – Category includes development on any natural slope that is twenty-five percent or greater; where new or redevelopment projects create and/or replace 5,000 square feet or more impervious surface (collectively over the entire project site).
X	**Parking Lots** – Category is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce; where new or redevelopment projects create and/or replace 5,000 square feet or more impervious surface (collectively over the entire project site).
X	**Streets, Roads, Highways, Freeways, and Driveways** – Category is defined as any paved impervious surface used for the transportation of automobiles, trucks, motorcycles, and other vehicles; where new or redevelopment projects that create and/or replace 5,000 square feet or more impervious surface (collectively over the entire project site).
☐	**Water Quality Environmentally Sensitive Area** – New or redevelopment projects that create and/or replace 2,500 square feet or more of impervious surface (collectively over the entire project site), and discharge directly to a Water Quality Environmentally Sensitive Area (WQESA). "Discharge directly to" includes flow that is conveyed overland a distance of 200 feet or less from the project to the WQESA, or conveyed in a pipe or open channel any distance as an isolated flow from the project to the ESA (i.e. not commingled with flows from adjacent lands).
☐	**Automotive Repair Shop** – Category is defined as a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 7532-7534, or 7536-7539, where new or redevelopment projects create and/or replace 5,000 square feet or more impervious surface (collectively over the entire project site).
☐	**Retail Gasoline Outlet (RGOs)** – Category includes RGOs that meet the following criteria (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day; where new or redevelopment projects create and/or replace 5,000 square feet or more impervious surface (collectively over the entire project site).
X	**Development Projects greater than one acre** – New or redevelopment projects that result in the disturbance of one or more acres of land and are expected to generate pollutants post construction.

STORM WATER QUALITY ASSESSMENT FOR PLANNING, ENGINEERING, AND BUILDING PERMIT APPLICATIONS

Section 3 – Identify Projects Not Subject to Permanent Stormwater Requirements (Check All Boxes that Apply)	
☐	The project consists of work entirely within an existing structure.
☐	The project consists of construction of overhead or underground utilities (no new impervious surfaces).
☐	The project consists of routine maintenance.
☐	The project consists of less than 50 yards of grading and presents no opportunities to improve water quality.
Section 4 – Project Category Determination	
X	**Priority Development Project**: If any item in Section 2 is applicable, the project is a Priority Development Project. **Please prepare a PDP SWQMP for the project.**
☐	**Standard Development Project**: If none of the items in Section 2 or 3 are applicable, the project is a Standard Development Project. **Please prepare an SDP SWQMP.**
☐	**Project Not Subject to Permanent Stormwater Requirements:** If any item in Section 3 is applicable, the project is not subject to Permanent Stormwater Requirements. **Please submit the project plans with this form.** **Note:** Projects in this category are subject to typical pollution prevention measures outlined by the pollution prevention checklist on the following page.

Section 5 – Applicant Certification	
Name of Responsible Party: Aaron Talarico, MLC Holdings, Inc.	Title: Division Vice President
Email Address (optional) aaron.talarico@mlcholdings.net	Phone Number: (949) 372-3309
I understand and acknowledge the City of Oceanside has adopted minimum requirements, as mandated by the San Diego Regional Water Quality Control Board – Order No. R9-2013-0001, as amended by Order Nos. R9-2015-0001 and R9-2015-0100 (NPDES NO. CAS0109266) for mitigating impacts associated with urban runoff, including storm water from construction and land development activities. I certify this assessment has been accurately completed to the best of my knowledge and is consistent with the proposed project. I acknowledge that non-compliance with the City Best Management Practice (BMP) Design Manual, Grading Ordinance, and Erosion Control Ordinance may result in enforcement action by the City, the California State Water Resources Control Board, and/or the San Diego Regional Water Quality Control Board. Enforcement action may include stop work orders, notice of violation, fines, or other actions.	
Applicant Signature:	Date: 11/17/22

Stormwater Pollution Prevention Measures for Projects Not Subject to Permanent Stormwater Requirements

Project Activity	Yes	No	Required Pollution Prevention
Trash & Waste Generation *****REQUIRED FOR ALL PROJECTS*****	☐	☐	• Train/inform all employees of pollution prevention requirements • Collect and contain all construction trash, waste, and debris • Promptly contain and clean any spill on site • Routinely inspect site, remove loose trash and prevent spills • Properly dispose of any hazardous materials • Do not wash down surfaces unless water is collected or directed to landscape • Permanent trash collection areas require full structure/enclosure
Digging of Dirt – excavation, trenching, or grading	☐	☐	• Do not allow dirt to migrate into street, sidewalk, or storm drain • Preserve existing vegetation where feasible • Perimeter site controls such as silt fence or straw wattles • Cover exposed dirt using mulch, tarps, or erosion control devices • Install and secure tarps over dirt piles • Routinely sweep site to remove dirt
Landscaping and Irrigation Systems	☐	☐	• Do not store landscape materials in street • Do not allow dirt to migrate into street, sidewalk, or storm drain • Test irrigation system and prevent runoff/overspray • Install and secure tarps over piles of mulch or soil • Routinely sweep site to remove mulch or soil • Do not wash down surfaces unless water is collected or directed to landscape
Concrete, Paint, Mortar, or Stucco Work	☐	☐	• Contain wet mixing areas within confined area • Do not allow material to travel into site soil, street, or storm drain • Properly dispose of waste material
Temporary Storage of Materials Outside	☐	☐	• Elevate material off ground where possible, such as on pallets • Install and secure tarps over materials
Demolition of Structures	☐	☐	• Follow Required Pollution Prevention for “Digging of Dirt”
New Structure – house addition, shed, etc.	☐	☐	• Follow Required Pollution Prevention for “Digging of Dirt” • Direct downspouts to landscape, where feasible • Consider rainwater harvesting • Preserve existing vegetation and drainage patterns, where feasible
Patio, Driveway, or Sidewalk	☐	☐	• Consider use of pervious pavers or pervious concrete (refer to Section 3 of page 4 for routine maintenance information) • Direct runoff to landscape areas, where feasible
Re-Roofing	☐	☐	• Contain removed roof debris in waste containers • Follow Required Pollution Prevention for “Temporary Storage of Materials Outside”
Washing of Material, Equipment, or Surface	☐	☐	• Do not wash down surfaces unless water is collected or directed to landscape
Draining of Water Heater, Pool, or Spa	☐	☐	• Direct drain water to landscape areas where possible • Contact Stormwater Division if considering draining to sanitary system cleanout or storm drain system (760-643-2804)
Storm Drain at Industrial or Commercial Property	☐	☐	• Install “No Dumping” or similar signage at each storm drain inlet

Completion Guidance

Please note – the Applicant is required to complete and submit this form as part of the project application. For definitions and additional information, please refer to the City of Oceanside BMP Design Manual. For assistance, please contact Development Services Staff at (760) 435-4373.

Section 1 – Project Information

1. Applicant Name – provide name of Individual completing form, i.e. Owner or Owner Representative
2. Phone Number – provide phone number of Individual completing form, i.e. Owner or Owner Representative
3. Project Name – provide project name (consistent with project application)
4. Project Site Address – provide a physical address for the proposed project, or nearest cross street
5. Permit Application Number(s) – provide all applicable permit application numbers
6. Assessor Parcel Number(s) – provide Assessor Parcel Number(s); refer to title documents or contact City Staff for assistance
7. Project Description – provide a brief project description (e.g. single-family dwelling, retail business, repair shop, etc)
8. Project Disturbed Area – provide the disturbed area for the entire project, including onsite and offsite work
9. Existing Impervious Area – provide the total existing impervious area within the property and project boundary
10. Created or Replaced Impervious Area – provide the total area of all newly created or replaced impervious surfaces within the project area

Section 2 – Identify Applicable Priority Development Project Categories

1. Review each category and check the appropriate boxes that apply to your project.
2. General identification of Automotive Repair Shop SIC (Standard Industrial Classifications) as follows:
   5013 – Motor vehicle supplies and new parts, 5014 – Tires and tubes, 5541 – Gasoline service stations, 7532 – Top and body repair, and paint shops, 7533 – Auto exhaust system repair shops, 7534 – Tire retreading and repair shops, 7536 – Automotive glass replacement shops, 7537 – Automotive transmission repair shops, 7538 – General automotive repair shops, 7539 – Automotive repair shops-not elsewhere classified
3. Contact Staff for assistance in determining applicability of the Water Quality Environmentally Sensitive Area (WQESA) category

Section 3 – Identify Projects Not Subject to Permanent Stormwater Requirements

1. Please refer to Page 1-6 of the City of Oceanside BMP Design Manual for a complete list of routine maintenance activities.
2. Activities that expose native subgrade in the process of replacing impervious surfaces, are not considered routine maintenance.

Section 4 – Project Category Determination

1. PDP SWQMP – Priority Development Project Stormwater Quality Management Plan
2. SDP SWQMP – Standard Development Project Stormwater Quality Management Plan
3. Contact Staff for assistance in determining the Project Category

Section 5 – Applicant Certification

1. Name of Responsible Party – provide name of Owner
2. Title of Responsible Party – provide responsible party's title, if applicable
3. Phone Number – provide phone number of Owner
4. Email Address (Optional) – provide email address
5. Applicant Signature – provide signature of Individual completing form, i.e. Owner or Owner Representative
6. Date – provide date current date

1 Introduction

1.1 Report Purpose and Scope

This technical noise report evaluates the potential noise impacts during construction and operation of the proposed Pacifica Housing Project (proposed project). This assessment utilizes the significance thresholds in Appendix G of the California Environmental Quality Act Guidelines (14 CCR 15000 et seq.).

1.2 Project Location and Description

The Pacifica Planned Development Plan planning area encompasses approximately 14.55 gross acres. As illustrated in Figure 1. Project Location, the planning area is situated in the northeast portion of the City of Oceanside in the North Valley neighborhood. The planning area is located approximately 0.5 mile from the San Luis Rey Transit Center and 1.5 miles from Highway 76.

The proposed project consists of a for-sale 164-unit Planned Development Community to be developed on a 14.55 acre site located at the former Pacifica Elementary School site at 4991 Macario Drive. The neighborhood will consist of three-story attached townhomes oriented towards internal paseos and drives throughout the site. New homes will range in size from a minimum of approximately 1200 square feet to 1800 square feet with two (2) to three (3) bedrooms and an attached 2-car garage (either side-by-side or tandem configuration). Each home will include private open space in the form of a patio and/or deck. Common recreational spaces, consisting of approximately 57,900 square feet of open space, will be designed with urban-style amenities such as tot lots, an off-leash dog space, pickle ball courts, bocce ball areas, barbecue areas, and space for a variety of outdoor games.

1.3 Fundamentals of Noise and Vibration

The following is a brief discussion of fundamental noise concepts and terminology.

1.3.1 Sound, Noise, and Acoustics

Sound is actually a process that consists of three components: the sound source, sound path, and sound receiver. All three components must be present for sound to exist. Without a source to produce sound, there is no sound. Similarly, without a medium to transmit sound pressure waves, there is no sound. Finally, sound must be received; a hearing organ, sensor, or object must be present to perceive, register, or be affected by sound or noise. In most situations, there are many different sound sources, paths, and receptors rather than just one of each. Acoustics is the field of science that deals with the production, propagation, reception, effects, and control of sound. Noise is defined as sound that is loud, unpleasant, unexpected, or undesired.

1.3.2 Sound Pressure Levels and Decibels

The amplitude of a sound determines its loudness. Loudness of sound increases with increasing amplitude. Sound pressure amplitude is measured in units of micronewton per square meter, also called micropascal. One micropascal is approximately one-hundred billionth (0.00000000001) of normal atmospheric pressure. The pressure of a very

loud sound may be 200 million micropascals, or 10 million times the pressure of the weakest audible sound. Because expressing sound levels in terms of micropascal would be very cumbersome, sound pressure level in logarithmic units is used instead to describe the ratio of actual sound pressure to a reference pressure squared. These units are called Bels. To provide a finer resolution, a Bel is subdivided into 10 decibels (dB).

1.3.3 A-Weighted Sound Level

Sound pressure level alone is not a reliable indicator of loudness. The frequency, or pitch, of a sound also has a substantial effect on how humans will respond. Although the intensity (energy per unit area) of the sound is a purely physical quantity, the loudness, or human response, is determined by the characteristics of the human ear.

Human hearing is limited not only in the range of audible frequencies, but also in the way it perceives the sound in that range. In general, the healthy human ear is most sensitive to sounds between 1,000 and 5,000 hertz, and it perceives a sound within that range as more intense than a sound of higher or lower frequency with the same magnitude. To approximate the frequency response of the human ear, a series of sound level adjustments is usually applied to the sound measured by a sound level meter. The adjustments (referred to as a weighting network) are frequency-dependent.

The A-scale weighting network approximates the frequency response of the average young ear when listening to ordinary sounds. When people make judgments about the relative loudness or annoyance of a sound, their judgments correlate well with the A-scale sound levels of those sounds. Other weighting networks have been devised to address high noise levels or other special situations (e.g., B-scale, C-scale, D-scale), but these scales are rarely used in conjunction with most environmental noise. Noise levels are typically reported in terms of A-weighted sound levels. All sound levels discussed in this report are A-weighted decibels (dBA). Examples of typical noise levels for common indoor and outdoor activities are depicted in Table 1.

Table 1. Typical Sound Levels in the Environment and Industry

Common Outdoor Activities	Noise Level (dB)	Common Indoor Activities
—	110	Rock band
Jet fly over at 300 meters (1,000 feet)	100	—
Gas lawn mower at 1 meter (3 feet)	90	—
Diesel truck at 15 meters (50 feet), at 80 kilometers per hour (50 miles per hour)	80	Food blender at 1 meter (3 feet); garbage disposal at 1 meter (3 feet)
Noisy urban area, daytime; gas lawn mower at 30 meters (100 feet)	70	Vacuum cleaner at 3 meters (10 feet)
Commercial area; heavy traffic at 90 meters (300 feet)	60	Normal speech at 1 meter (3 feet)
Quiet urban, daytime	50	Large business office; dishwasher next room
Quiet urban, nighttime	40	Theater; large conference room (background)
Quiet suburban, nighttime	30	Library
Quiet rural, nighttime	20	Bedroom at night; concert hall (background)
—	10	Broadcast/Recording studio
Lowest threshold of human hearing	0	Lowest threshold of human hearing

1.3.4 Human Response to Changes in Noise Levels

Under controlled conditions in an acoustics laboratory, the trained, healthy human ear is able to discern changes in sound levels of 1 dBA when exposed to steady, single-frequency signals in the mid-frequency range. A change of 5 dBA is readily perceptible, and a change of 10 dBA is *perceived* as twice (if a gain) or half (if a loss) as loud. A doubling of sound energy results in a 3-dBA increase in sound, which means that a doubling of sound energy (e.g., doubling the volume of traffic on a road) would result in a barely perceptible change in sound level.

1.3.5 Noise Descriptors

Units of measure have been developed to evaluate the long-term characteristics of sound. The energy-equivalent sound level (L_{eq}) is also referred to as the time-average sound level. It is the equivalent steady-state or constant sound level that in a stated period of time would contain the same acoustical energy as the time-varying sound level during the same time period. For instance, the 1-hour A-weighted equivalent sound level, $L_{eq}(h)$, is the energy average of the A-weighted sound levels occurring during a 1-hour period, and is the basis for most of the County Noise Ordinance standards.

People are generally more sensitive to and thus potentially more annoyed by noise occurring during the evening and nighttime hours. Hence, another noise descriptor used in community noise assessments—the community noise equivalent level (CNEL)—represents a time-weighted, 24-hour average noise level based on the A-weighted sound level. However, unlike an unmodified 24 hour L_{eq} value, the CNEL descriptor accounts for increased noise sensitivity during the evening (7 p.m. to 10 p.m.) and nighttime (10 p.m. to 7 a.m.) by adding 5 dBA and 10 dBA, respectively, to the average sound levels occurring during these defined hours within a 24-hour period.

1.3.6 Sound Propagation

Sound propagation (i.e., the traverse of sound from a noise emission source position to a receiver location) is influenced by multiple factors that include geometric spreading, ground absorption, atmospheric effects, and occlusion by natural terrain and/or features of the built environment.

Sound levels attenuate (or diminish) geometrically at a rate of approximately 6 dBA per doubling of distance from an outdoor point-type source due to the spherical spreading of sound energy with increasing distance travelled. The effects of atmospheric conditions such as humidity, temperature, and wind gradients are typically distance-dependent and can also temporarily either increase or decrease sound levels measured or perceived at a receptor location. In general, the greater the distance the receiver is from the source of sound emission, the greater the potential for variation in sound levels at the receptor due to these atmospheric effects. Additional attenuation can result from sound path occlusion and diffraction due to intervention of natural (ridgelines, dense forests, etc.) and built features (such as solid walls, buildings and other structures).

1.3.7 Groundborne Vibration Fundamentals

Groundborne vibration is fluctuating or oscillatory motion transmitted through the ground mass (i.e., soils, clays, and rock strata). The strength of groundborne vibration attenuates rapidly over distance. Some soil types transmit vibration quite efficiently; other types (primarily sandy soils) do not. Several basic measurement units are commonly used to describe the intensity of ground vibration. The descriptors used by the Federal Transit Administration (FTA) are peak particle velocity (PPV), in units of inches per second (ips), and velocity decibel (VdB) that is based on a root-mean square (RMS) of the vibration signal magnitude. The calculation to determine PPV at a given distance is as follows:

$$PPV_{distance} = PPV_{ref}*(25/D)^{1.5}$$

where:

$PPV_{distance}$ = the peak particle velocity in inches per second of the equipment adjusted for distance

PPV_{ref} = the reference vibration level in inches per second at 25 feet

D = the distance from the equipment to the receiver

Conversion of PPV to rms VdB involves application of a reference vibration velocity level (also in units of ips) and a "crest factor" of 4 per FTA guidance, which is expressed as follows:

$$VdB = 20*LOG(PPV/(4*0.000001))$$

INTENTIONALLY LEFT BLANK

2 Regulatory Setting

2.1 Federal

In its Transit Noise and Vibration Impact Assessment guidance manual, the Federal Transit Administration (FTA) recommends a daytime construction noise level threshold of 80 dBA L_{eq} over an 8-hour period (FTA 2018) when detailed construction noise assessments are performed to evaluate potential impacts to community residences surrounding a project. Although this FTA guidance is not a regulation, it can serve as a quantified standard in the absence of such noise limits at the state and local jurisdictional levels.

2.2 State

2.2.1 California Code of Regulations, Title 24

Title 24 of the California Code of Regulations sets standards that new development in California must meet. According to Title 24, interior noise levels are not to exceed 45 dBA CNEL in any habitable room (ICC 2019).

2.2.2 California Department of Health Services Guidelines

The California Department of Health Services has developed guidelines of community noise acceptability for use by local agencies (OPR 2017). Selected relevant levels are listed here:

- Below 60 dBA CNEL: normally acceptable for low-density residential use
- 50 to 70 dBA: conditionally acceptable for low-density residential use
- Below 65 dBA CNEL: normally acceptable for high-density residential use and transient lodging
- 60 to 70 dBA CNEL: conditionally acceptable for high-density residential, transient lodging, churches, educational, and medical facilities

The normally acceptable exterior noise level for high-density residential use is up to 65 dBA CNEL. Conditionally acceptable exterior noise levels range up to 70 dBA CNEL for high-density residential use.

2.2.3 California Department of Transportation

In its Transportation and Construction Vibration Guidance Manual (Caltrans 2013b), the California Department of Transportation (Caltrans) recommends 0.5 ips PPV as a threshold for the avoidance of structural damage to typical newer residential buildings exposed to continuous or frequent intermittent sources of groundborne vibration. For transient vibration events, such as blasting, the damage risk threshold would be 1.0 ips PPV (Caltrans 2013b) at the same type of newer residential structures. For older structures, these guidance thresholds would be more stringent: 0.3 ips PPV for continuous/intermittent vibration sources, and 0.5 ips PPV for transient vibration events. With respect to human annoyance, Caltrans guidance indicates that building occupants exposed to continuous groundborne vibration at 0.2 ips PPV would find it “annoying” and thus a likely significant impact. Although these Caltrans guidance thresholds are not regulations, they can serve as quantified standards in the absence of such limits at the local jurisdictional level.

2.3 Local

2.3.1 City of Oceanside Noise Level Compatibility Standards

The Noise Element of the City's General Plan (City of Oceanside 1974) establishes target maximum noise levels in the City. The Noise Element provides the following limitations on construction noise:

1. It should be unlawful for any person within any residential zone of 500 feet there from to operate any pile driver, power shovel, pneumatic, power hoist, or other construction equipment between 8:00 p.m. and 7:00 a.m. generating an ambient noise levels of 50 dBA at any property line unless an emergency exists.
2. It should be unlawful for any person to operate any construction equipment at a level in excess of 85 dBA at 100 feet from the source.
3. It should be unlawful for any person to engage in construction activities between 6:00 p.m. and 7:00 a.m. when such activities exceed the ambient noise level by 5 dBA. A special permit may be granted by the Director of Public Works if extenuating circumstances exist.

In addition, the Noise Element addresses nuisance noise and states that it should be unlawful for any person to make or continue any loud, unnecessary noise that causes annoyance to any reasonable person of normal sensitivity.

2.3.1 Transportation-Related Noise Standards

The City's Noise Element establishes a policy for exterior sensitive areas to be protected from high noise levels. The Noise Element sets 65 dBA CNEL for the outdoor areas and interior noise levels of less than 45 dBA CNEL as the "normally acceptable" level.

For interior noise, the Noise Element also establishes 45 dBA CNEL as the maximum acceptable level for habitable rooms when exterior noise levels are 60 dBA CNEL or more. If windows and doors are required to be closed to meet this standard, then mechanical ventilation (i.e., air conditioning) shall be included in the project design.

2.3.1 Noise Element Policies

- Noise levels shall not be so loud as to cause danger to public health in all zones except manufacturing zones where noise levels may be greater.
- Noise shall be controlled at the source where possible.
- Noise shall be intercepted by barriers or dissipated by space where other controls fail or are impractical.
- Noise levels shall be considered in any change to the Land Use and Circulation Elements of the General Plan.
- Noise levels of City vehicles, construction equipment, and garbage trucks shall be reduced to acceptable levels.

City of Oceanside Noise Ordinance

Chapter 38 of the Oceanside Municipal Code governs operational noise and contains the maximum one-hour average sound levels for various land uses for operational noise (Table 2) generated by sources within or affecting each land use zone. The Noise Ordinance sets an allowed level for single-family and medium-density residential areas to 50 dBA L_{eq} from 7:00 a.m. to 9:59 p.m., and 45 dBA L_{eq} from 10:00 p.m. to 6:59 a.m. High density

residential areas are limited to 55 dBA L_{eq} from 7:00 a.m. to 9:59 p.m. and 50 dBA L_{eq} form 10:00 p.m. to 6:59 a.m. In commercial zones, noise generation is limited to 65 dBA L_{eq} from 7:00 a.m. to 9:59 p.m. and 60 dBA L_{eq} form 10:00 p.m. to 6:59 a.m. Where two land use zones abut one another, the more restrictive noise limit is enforced along the common boundary between the two land uses.

Table 2. City of Oceanside Exterior Noise Standards

Zone	Applicable Limit (decibels)	Time Period
Residential Estate, Single-Family Residential, Medium Density Residential, Agricultural, Open Space	50 45	7:00 a.m. to 9:59 p.m. 10:00 p.m. to 6:59 a.m.
High Density, Residential Tourist	55 50	7:00 a.m. to 9:59 p.m. 10:00 p.m. to 6:59 a.m.
Commercial	65 60	7:00 a.m. to 9:59 p.m. 10:00 p.m. to 6:59 a.m.
Industrial	70 65	7:00 a.m. to 9:59 p.m. 10:00 p.m. to 6:59 a.m.
Downtown	65 55	7:00 a.m. to 9:59 p.m. 10:00 p.m. to 6:59 a.m.

Source: Oceanside Municipal Code, Section 38.12.

Construction activities are subject to Section 38.17 of the Noise Ordinance, which specifically prohibits the operation of any pneumatic or air hammer, pile driver, steam shovel, derrick, steam, or electric hoist, parking lot cleaning equipment or other appliance, the use of which is attended by loud or unusual noise, between the hours of 10:00 p.m. and 7:00 a.m.

Section 38.16 prohibits nuisance noise as recommended in the General Plan Noise Element. It is unlawful for any person to make, continue or cause to be made or continued, within the limits of the City of Oceanside, any disturbing, excessive, or offensive noise that causes discomfort or annoyance to reasonable persons of normal sensitivity.

City of Oceanside Engineering Manual

Construction noise in Oceanside is governed by the City Engineering Manual. Construction is normally limited to the hours between 7:00 a.m. and 6:00 p.m., Monday through Friday. However, Saturday construction is allowed by permit. More specifically, the City Engineering Manual (Engineers Design and Processing Manual Appendix Construction Guidelines and Requirements) states the following on pages 139 and 159:

- All operations conducted on the premises, including the warming up, repair, arrival, departure, or running of trucks, earthmoving equipment, construction equipment, and any other associated equipment shall be limited to the period between 7:00 a.m. and 6:00 p.m. each day, Monday through Friday, and no earthmoving or grading operations shall be conducted on the premises on Saturdays, Sundays or legal holidays, unless waived by the City Engineer.

- Hours of Operation (515)(34): 7:00 am to 6:00 p.m. M-F; including equipment warm-up.

Saturday Operation: Requires filing a permit by 2:30 p.m. on the preceding Thursday.

INTENTIONALLY LEFT BLANK

3 Existing Conditions

Sound pressure level (SPL) measurements were conducted near the project site on September 12, 2022, to quantify and characterize the existing outdoor ambient noise levels. Table 3 provides the location, date, and time at which these baseline noise level measurements were taken. The SPL measurements were performed by an attending Dudek field investigator using a Rion NL-52 sound level meter equipped with a 0.5-inch, pre-polarized condenser microphone with pre-amplifier. The sound level meter meets the current American National Standards Institute standard for a Type 1 (Precision Grade) sound level meter (SLM). The accuracy of the SLM was verified using a reference sound signal (i.e., field calibrator) before and after the measurements, and the measurements were conducted with the microphone positioned approximately 5 feet above the ground.

Two short-term noise level measurement locations (ST1–ST2) that represent the vicinities of existing sensitive receivers were selected on and near the project site. These locations are depicted as receivers ST1–ST2 on Figure 3, Noise Measurement and Modeled Receptor Locations. The L_{eq} and L_{max} noise levels are provided in Table 3. The primary noise sources at the sites identified in Table 3 consisted of traffic along adjacent roadways, distant aircraft, and birdsong. As shown in Table 3, the measured sound levels ranged from approximately 45.2 dBA L_{eq} at ST1 to 41.4 dBA L_{eq} at ST2. Noise measurement data is also included in Appendix A, Baseline Noise Measurement Field Data. These samples of daytime L_{eq} measured at the two representative receptor positions in Table 3 can be interpreted as approximations of CNEL, since evening SPL would likely be 5 dBA less, and nighttime SPL would be 10 dBA less than the daytime values according to FTA outdoor ambient sound level estimation techniques when a receptor is proximate to a major roadway or railroad (FTA 2018).

Table 3. Measured Baseline Outdoor Ambient Noise Levels

Site	Location/Address	Date/Time	L_{eq} (dBA)	L_{max} (dBA)
ST1	Northeastern entrance to existing project site	2022-09-12, 11:30 AM to 11:45 AM	45.2	54
ST2	Western cul-de-sac of Malaga Drive	2022-09-12, 11:55 AM to 12:10 PM	41.4	51.7

Source: Appendix A.
Notes: L_{eq} = equivalent continuous sound level (time-averaged sound level); L_{max} = maximum sound level during the measurement interval; dBA = A-weighted decibels; ST = short-term noise measurement locations.

4 Thresholds of Significance

The following significance criteria are based on Appendix G of the California Environmental Quality Act Guidelines (14 CCR 15000 et seq.) and will be used to determine the significance of potential noise and vibration impacts. Impacts associated with noise and vibration would be significant if the proposed project would result in:

- Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.
- Generation of excessive groundborne vibration or groundborne noise levels.
- Expose people residing or working in the project area to excessive noise levels (for a project located within the vicinity of a private airstrip or an airport land use plan, or where such a plan has not been adopted, within 2 miles of a public airport or public use airport).

In light of these above significance criteria, this analysis uses the following standards to evaluate potential noise and vibration impacts.

- Construction noise – Although Chapter 38 of the Oceanside Municipal Code does not quantify a threshold for allowable construction noise, the City's General Plan allows noise from construction equipment operation to be as high as 85 dBA at 100 feet from the source. Applying the principles of sound propagation for a point-type source, this level could be interpreted to mean 91 dBA at 50 feet, which is greater than the maximum sound levels of most operating heavy construction equipment (DOT 2006) and would thus imply all but the loudest construction activities (e.g., pile driving) could be compliant with this standard. However, the apparent proximity of existing residential receptors to the north of the proposed project site suggests that source-to-receiver distances could be as short as 70 feet. Additionally, most construction equipment and vehicles on a project site do not operate continuously. Therefore, consistent with the FTA guidance mentioned in Section 2, Regulatory Setting, this analysis will use 80 dBA L_{eq} over an 8-hour period as the construction noise impact criterion during daytime hours (7:00 a.m. to 6:00 p.m.). If construction work were to occur outside these hours, the impact threshold would align with the City's General Plan requirement during such hours: no more than a 5 dBA increase over existing ambient noise levels.
- Off-site project-attributed transportation noise – For purposes for this analysis, a direct roadway noise impact would be considered significant if increases in roadway traffic noise levels attributed to the proposed project were greater than 3 dBA CNEL at an existing noise-sensitive land use.

- Off-site project-attributed stationary noise – For purposes for this analysis, a noise impact would be considered significant if noise from typical operation of heating, ventilation, and air conditioning and other electro-mechanical systems associated with the proposed project exceeded 50 dBA hourly L_{eq} at the property line from 7:00 a.m. to 9:59 p.m., and 45 dBA hourly L_{eq} from 10:00 p.m. to 6:59 a.m. Note that these are the City's thresholds for the residential zones that characterize the proposed project site and its adjoining lands north and south.
- Construction vibration – Guidance from Caltrans indicates that a vibration velocity level of 0.2 ips PPV received at a structure would be considered annoying by occupants within (Caltrans 2013b). As for the receiving structure itself, aforementioned Caltrans guidance from Section 2 recommends that a vibration level of 0.3 ips PPV would represent the threshold for building damage risk to an older residential structure.

For purposes of disclosure, since current CEQA noise criteria listed above do not consider it, this analysis also evaluates compatibility of on-site noise exposure levels (e.g., from roadway traffic) with the City of Oceanside exterior and interior noise standards of 65 dBA CNEL and 45 dBA CNEL, respectively.

5 Impact Discussion

Potential noise and vibration impacts attributed to project construction and operation are studied in the following subsections that are categorized by the CEQA Guidelines Appendix G significance for noise.

a) Would the project result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

Short-Term Construction

Construction noise and vibration are temporary phenomena, with emission levels varying from hour to hour and day to day, depending on the equipment in use, the operations performed, and the distance between the source and receptor. Equipment that would be in use during construction would include, in part, graders, backhoes, rubber-tired dozers, loaders, cranes, forklifts, pavers, rollers, and air compressors. The typical maximum noise levels at a distance of 50 feet from various pieces of construction equipment and activities anticipated for use on the proposed project site are presented in Table 4. Note that the equipment noise levels presented in Table 4 are maximum noise levels. Usually, construction equipment operates in alternating cycles of full power and low power, producing average noise levels over time that are less than the maximum noise level. The average sound level of construction activity also depends on the amount of time that the equipment operates and the intensity of construction activities during that time.

Table 4 Typical Construction Equipment Maximum Noise Levels

Equipment Type	Typical Equipment (L_{max}, dBA at 50 Feet)
All Other Equipment > 5 HP	85
Backhoe	78
Compressor (air)	78
Concrete Saw	90
Crane	81
Dozer	82
Excavator	81
Flat Bed Truck	74
Front End Loader	79
Generator	72
Grader	85
Man Lift	75
Paver	77
Roller	80
Scraper	84
Welder / Torch	73

Source: DOT 2006.
Note: L_{max} = maximum sound level; dBA = A-weighted decibels.

Aggregate noise emission from proposed project construction activities, broken down by sequential phase, was predicted at two evaluation distances to the nearest existing noise-sensitive receptor: 1) from the nearest position of the construction site boundary and 2) from the geographic center of the construction site, which serves as the time-averaged location or geographic *acoustical centroid* of active construction equipment for the phase under study. The intent of the former distance is to help evaluate anticipated construction noise from a limited quantity of equipment or vehicle activity expected to be at the boundary for some period of time, which would be most appropriate for phases such as site preparation, grading, and paving. The latter distance is used in a manner similar to the general assessment technique as described in the FTA guidance for construction noise assessment, when the location of individual equipment for a given construction phase is uncertain over some extent of (or the entirety of) the construction site area. In this studied scenario, because of the equipment location uncertainty, all the equipment for a construction phase is assumed to operate—on average—from the acoustical centroid position. Table 5 summarizes these two distances to the apparent closest noise-sensitive receptor for each of the nine sequential construction phases. At the site boundary, this analysis assumes that up to only one piece of equipment (conservatively, the loudest) of each listed type per phase will be involved in the construction activity for up to the full 8-hour period at this closest distance to the receptor. In other words, at such proximity, the operating equipment cannot "stack" or crowd the vicinity and still operate. For the acoustical centroid case, which intends to be a geographic average position for all equipment during the indicated phase, this analysis assumes that the equipment may be operating up to all 8 hours per day.

This RCNM emulator includes consideration of equipment source elevation and receptor elevations with respect to local grade, and thus captures potential sound path occlusion due to topography and man made barriers.

Table 5. Estimated Distances between Construction Activities and the Nearest Noise-sensitive Receptor

Construction Phase (and Equipment Types Involved)	Distance from Nearest Noise-Sensitive Receptor to Construction Site Boundary (Feet)	Distance from Nearest Noise-Sensitive Receptor to Acoustical Centroid of Site (Feet)
Phase 1		
Demolition (concrete saw/industrial saw, dozer, excavator)	74	240
Site preparation (dozer, tractor, front end loader, backhoe)	74	240
Grading (excavator, grader, scraper, track dozer, tractor, front end loader, backhoe)	74	240
Utilities Installation (excavator, backhoe)	240	240
Paving (paver, roller)	70	240
Phase 2		
Building construction (forklift, generator, tractor, front end loader, backhoe)	70	240
Architectural coating (air compressor)	70	240

Phase 3		
Building construction (forklift, generator, tractor, front end loader, backhoe)	70	240
Architectural coating (air compressor)	70	0

A Microsoft Excel–based noise prediction model emulating and using reference data from the Federal Highway Administration Roadway Construction Noise Model (RCNM) (FHWA 2008) was used to estimate construction noise levels at the nearest occupied noise-sensitive land use. (Although the RCNM was funded and promulgated by the Federal Highway Administration, it is often used for non-roadway projects, because the same types of construction equipment used for roadway projects are often used for other types of construction.) Input variables for the predictive modeling consist of the equipment type and number of each (e.g., two graders, a loader, a tractor), the duty cycle for each piece of equipment (e.g., percentage of time within a specific time period, such as an hour, when the equipment is expected to operate at full power or capacity and thus make noise at a level comparable to what is presented in Table 4), and the distance from the noise-sensitive receiver. The predictive model also considers how many hours that equipment may be on site and operating (or idling) within an established work shift. Conservatively, no topographical or structural shielding was assumed in the modeling. The RCNM has default duty-cycle values for the various pieces of equipment, which were derived from an extensive study of typical construction activity patterns. Those default duty-cycle values were used for this noise analysis, which is detailed in Appendix B, Construction Noise Modeling Input and Output, and produce the predicted results displayed in Table 6.

Table 6. Estimated Distances between Construction Activities and the Nearest Noise-sensitive Receptor

Construction Phase	8-Hour L_{eq} at Nearest Noise-Sensitive Receptor to Construction Site Boundary (dBA)	8-Hour L_{eq} at Nearest Noise-Sensitive Receptor to Acoustical Centroid of Site (dBA)
Phase 1		
Demolition (concrete saw/industrial saw, dozer, excavator)	80	69
Site preparation (dozer, tractor, front end loader, backhoe)	75	67
Grading (excavator, grader, scraper, track dozer, tractor, front end loader, backhoe)	80	70
Utilities Installation (excavator, backhoe)	64	64
Paving (paver, roller)	76	62
Phase 2		
Building construction (forklift, generator, tractor, front end loader, backhoe)	75	59
Architectural coating (air compressor)	75	60

Phase 3		
Building construction (forklift, generator, tractor, front end loader, backhoe)	75	59
Architectural coating (air compressor)	75	60

Notes: L_{eq} = equivalent noise level; dBA = A-weighted decibels. *italicized equipment types are the loudest and used singularly to evaluate noise for the "nearest" assessment scenario.

As presented in Table 6, the estimated construction noise levels are predicted to be nearly as high as 80 dBA L_{eq} over an 8-hour period at the nearest occupied property (as close as 74 feet away) when grading activities take place near the northern project boundaries. Note that these estimated noise levels at a source-to-receiver distance of 74 feet are conservatively high, in that they presume the noted pieces of heavy equipment would each operate, on average at this distance, for a cumulative period of eight hours a day. The reality of construction progress on-site would likely be different. By way of example, a grader might make multiple passes on site that are this close to a receiving occupied property; but, for the remaining time during the day, the grader may be sufficiently farther away and either performing work at a more distant location or simply not operating. Short-term construction noise remains in compliance with the FTA guidance of 80 dBA L_{eq} over an 8-hour period, and therefore is less than significant.

Long-Term Operational

Off-Site Traffic Noise Exposure

The proposed project would result in the creation of additional vehicle trips on local arterial roadways (i.e. Monica Circle, Macario Drive, and Roja Drive), which could result in increased traffic noise levels at adjacent noise-sensitive land uses. Appendix C, Traffic Noise Modeling Input and Output, contains a spreadsheet with traffic volume data (average daily traffic) for Monica Circle. In particular, the proposed project would create additional traffic along Melrose Drive, which according to the Traffic Impact Assessment prepared for the proposed project (CR Associates, 2022) would add 1,312 total average daily trips to adjacent to the project site.

Potential noise effects from vehicular traffic were assessed using the Federal Highway Administration's Traffic Noise Model version 2.5 (FHWA 2004). Information used in the model included the roadway geometry, existing (year 2022), and existing plus project traffic volumes and posted traffic speeds. Noise levels were modeled at representative noise-sensitive receivers ST1 and ST2, as shown in Figure 3. The receivers were modeled to be 5 feet above the local ground elevation. The noise model results are summarized in Table 7. Based on results of the model, implementation of the proposed project would not result in readily perceptible increases in traffic noise.

Table 7. Roadway Traffic Noise Modeling Results

Modeled Receiver No.	Existing (2022) Noise Level	Existing with Project Noise Level	Near-term (2025) Noise Level	Near-term (2025) with Project Noise Level	Horizon (2050) Noise Level	Horizon with Project Noise Level	Maximum Project-Related Noise Level Increase
	(dBA CNEL)	(dBA CNEL)	(dBA CNEL)	(dBA CNEL)	(dBA CNEL)	(dBA CNEL)	(dB)
ST1	53	54	53	54	54	55	1
ST2	46	47	46	47	46	47	1

Source: Appendix C.
Notes: dBA = A-weighted decibel; CNEL = community noise equivalent level; dB = decibel.

Table 7 shows that at both listed representative receivers, the addition of proposed project traffic to the roadway network would result in an increase in the CNEL of less than 3 dB, which is below the discernible level of change for the average healthy human ear. Thus, a less-than-significant impact is expected for proposed project-related off-site traffic noise increases affecting existing residences in the vicinity.

On-site Traffic Interior Noise Exposure

Aside from exposure to aviation traffic noise, current CEQA noise-related guidelines at the state level do not require an assessment of exterior-to-interior noise intrusion, environmental noise exposure to occupants of newly-created project residences, or environmental noise exposure to exterior non-residential uses attributed to the development of the proposed project. Nevertheless, the City's General Plan and the California Building Code requires that interior background noise levels not exceed a CNEL of 45 dB within habitable rooms. Hence, the following predictive analysis of traffic noise exposure at the exteriors of occupied residences and outdoor living areas is provided below.

In addition to the prediction results presented in Table 7, the FHWA TNM software was also used to predict the existing-with-project scenario traffic noise levels at multiple on-site exterior areas, as listed in Table 8. These on-site modeled receptor locations, which appear in Appendix C, include representative positions for the exteriors of multiple floors and positions of five of the proposed project building facades. Predicted exterior sound levels that are higher than 60 dBA CNEL indicate locations where an exterior-to-interior noise analysis should be performed for the proximate occupied residential unit. According to Table 8, there are no modeled receptors that exceed 60 dBA CNEL, therefore additional exterior-to interior noise analysis is not needed. Individual Modeling locations appear in Figure 3 and Appendix C.

Table 8. Future Ambient Noise Levels at Residential Facades

Modeled Receptor	Noise Level (A-weighted CNEL)		
	1st Floor	2nd Floor	3rd Floor
M1	52.7	54.2	54.1
M2	50.7	51.7	51.5
M3	48.6	49.5	49.8
M4	50	51.5	51.8
M5	48.3	51.2	51.7
OS-1	42.4		

Dog Park	38.8

Typically, with the windows open, building shells provide approximately 15 dB (i.e., an average of 12-18 dB [OPR 2017]) of exterior-to-interior noise reduction; while with windows closed residential construction generally provides a minimum of 25 dB attenuation (FHWA 2011). Therefore, rooms exposed to an exterior CNEL not greater than 60 dB would result in an interior background CNEL of 45 dB or less, even with open fenestration. In other words, the arithmetic difference of an exterior noise level less than 60 dBA CNEL and an exposed building façade that provides 15 dB of sound insulation results in an interior background sound level less than 45 dBA CNEL. Table 8 shows that none of the residential rooms modeled will be exposed to a CNEL of above 60 dB and thus interior background noise levels will not exceed a CNEL of 45 dB within habitable rooms.

Onsite Open Spaces

As analyzed herein and with prediction results presented in Table 8, shared outdoor project spaces such as "OS-1" and "Dog Park" are expected to experience noise levels that are compliant with the City's General Plan Noise Element guidance of 65 dBA CNEL for "parks" and "playgrounds".

Stationary Noise Sources

The incorporation of new multi-family homes and a mix of open space uses attributed to development of the proposed project will add a variety of noise-producing electro-mechanical equipment that include those presented and discussed in the following paragraphs. Most of these noise-producing equipment or sound sources would be considered stationary, or limited in mobility to a defined area. Using a Microsoft Excel–based outdoor sound propagation prediction model, project-attributed operational noise at nearby community receptors was predicted using several assumptions:

- Treatment of exposed at-grade air-cooled condensing units as point-type sound emission sources; and,
- Point-source sound propagation (i.e., 6 dB per doubling of distance) that conservatively ignores acoustical absorption from atmospheric and ground surface effects.

Please see Appendix E for quantitative details of the inputs and outputs that form the basis of the following assessment presentations.

Night-time Residential Unit Heating, Ventilation, and Air Conditioning Noise

For purposes of this analysis, each of the new occupied residential units would be expected to feature a split-system type air-conditioning unit, with an air-cooled refrigeration (3-ton capacity) condenser unit. Assuming each condenser unit has an SPL of 68 dBA at 3 feet based on available data from a likely manufacturer (Carrier 2012), and the units would generally be installed at grade near the apparent "front porch" areas. Therefore, the closest existing noise-sensitive residential receptor to the north of the proposed project's northern unit would be as close as 105 horizontal feet to the nearest of these condenser units. The predicted sound emission level from the combination of all operating condenser units as received by this offsite single-family home would be 45 dBA L_{eq} and thus be compliant with the City's nighttime

threshold of 45 dBA hourly L_{eq}. Under such conditions, the operation of residential air-conditioning units would result in a **less-than-significant noise impact**.

Pickleball noise and Daytime HVAC

In addition to noise from onsite HVAC units discussed in the preceding paragraph, during the daytime hours there is a potential for onsite pickleball activities near the southern boundary of the project (as shown in the Figure 2). For purposes of this analysis, each pickleball court will have players making intermittent paddle-to-pickleball contact for which a measured one-second reference noise level of 77.4 dBA L_{eq} at 1 meter would apply (Dudek 2020). The closest existing noise-sensitive residential receptor to the south of the proposed project's pickleball courts would be as close as 200 horizontal feet away. The predicted sound emission level from the combination of all operating condenser units and pickleball activity as received by this offsite single-family home would be 45 dBA L_{eq} and thus be compliant with the City's daytime threshold of 50 dBA hourly L_{eq}. Under such conditions, the concurrence of pickleball noise and operation of daytime residential air-conditioning units would result in a **less-than-significant noise impact**.

Emergency Generator

The proposed project also features a backup generator that will be installed on ground level north of the pickleball courts. Noise emission from regular testing at an expected frequency of up to one half-hour test per month during daytime hours would need to comply with the City's established noise limit at the property line: 50 dBA hourly L_{eq}.

For Purposes of this analysis, the generator is using a reference noise level of 69 dBA L_{eq} at 50 feet (FHWA, 2008). The closest existing noise-sensitive residential receptor to the south of the proposed project's emergency generator would be as close as 260 horizontal feet away. The predicted sound emission level from the combination of all operating condenser units, pickleball noise, and emergency generator operation as received by this offsite single-family home would be 50 dBA L_{eq} and thus be compliant with the City's daytime threshold of 50 dBA hourly L_{eq}. Under such conditions, the operation of all stationary equipment and activities would result in a **less-than-significant noise impact**.

b) Would the project result in generation of excessive groundborne vibration or groundborne noise levels?

Construction activities may expose persons to excessive groundborne vibration, causing a potentially significant impact. Caltrans has collected groundborne vibration information related to construction activities (Caltrans 2013b). Information from Caltrans indicates that continuous vibrations with a PPV of approximately 0.2 ips is considered "annoying." For context, heavier pieces of construction equipment, such as a bulldozer that may be expected on the project site, have peak particle velocities of approximately 0.089 ips or less at a reference distance of 25 feet (DOT 2006).

Groundborne vibration attenuates rapidly—even over short distances. And when groundborne vibration encounters a building foundation, a coupling loss occurs depending on its mass and design. For typical wood-framed houses, like those near the proposed project, this coupling loss is expected to be 5 vibration velocity decibels (VdB) according to FTA guidance (FTA 2006).

The attenuation of groundborne vibration as it propagates from source to receptor through intervening soils and rock strata can be estimated with expressions found in FTA and Caltrans guidance. By way of example, for a bulldozer operating onsite and as close as the northern project boundary (that is 70 feet from the nearest receiving sensitive land use) the estimated groundborne vibration velocity level would be 0.028 ips as received by the residential structure, and would be compliant with the 0.3 ips PPV threshold per Caltrans guidance with respect to building damage risk. Therefore, vibration-induced annoyance to occupants of nearby existing homes would be considered less than significant.

Once operational, the proposed project would not be expected to feature major producers of groundborne vibration. Anticipated mechanical systems like heating, ventilation, and air-conditioning units are designed and manufactured to feature rotating (fans, motors) and reciprocating (compressors) components that are well-balanced with isolated vibration within or external to the equipment casings. On this basis, vibration due to proposed project operation should be **less than significant**.

C) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

There are no private airstrips within the vicinity of the project site. The closest airport to the project site is the Oceanside Municipal Airport, approximately 3.5 miles northeast of the site. According to the Airport Land Use Compatibility Plan Exhibit IV-10, Compatibility Data Map: Noise, the project site is not located within a noise exposure of 60 dB CNEL and would therefore not expose people residing or working in the project area to excessive noise levels (San Diego County Regional Airport Authority 2010). Impacts from aviation overflight noise exposure would be **less than significant**.

INTENTIONALLY LEFT BLANK

6 Summary of Findings

This noise report was conducted for the proposed project. The predicted analysis results indicate that potential impacts during construction would be less than significant. Noise impacts due to operation of the proposed project (including traffic noise) would be less than significant. No noise or vibration mitigation is required.

DATE:	May 12, 2023
RE:	Pacifica Housing Project – Vehicle Miles Traveled Analysis

The purpose of this memorandum is to document the results of the Vehicle Miles Traveled (VMT) Analysis conducted for the Pacifica Housing Project (the "Project"). The analysis is based on the City of Oceanside's (the "City") Transportation Impact Analysis Guidelines (TIA Guidelines).

Project Description

The Project seeks to construct 164 multi-family residential townhomes on the old Pacifica Elementary School site located adjacent to the intersection of Monica Circle and Macario Drive in Oceanside. The property is bordered by single family dwelling units on all sides. The site is currently designated for elementary school land use. **Figure 1** displays the Project's regional location. **Figure 2** displays the project site plan.

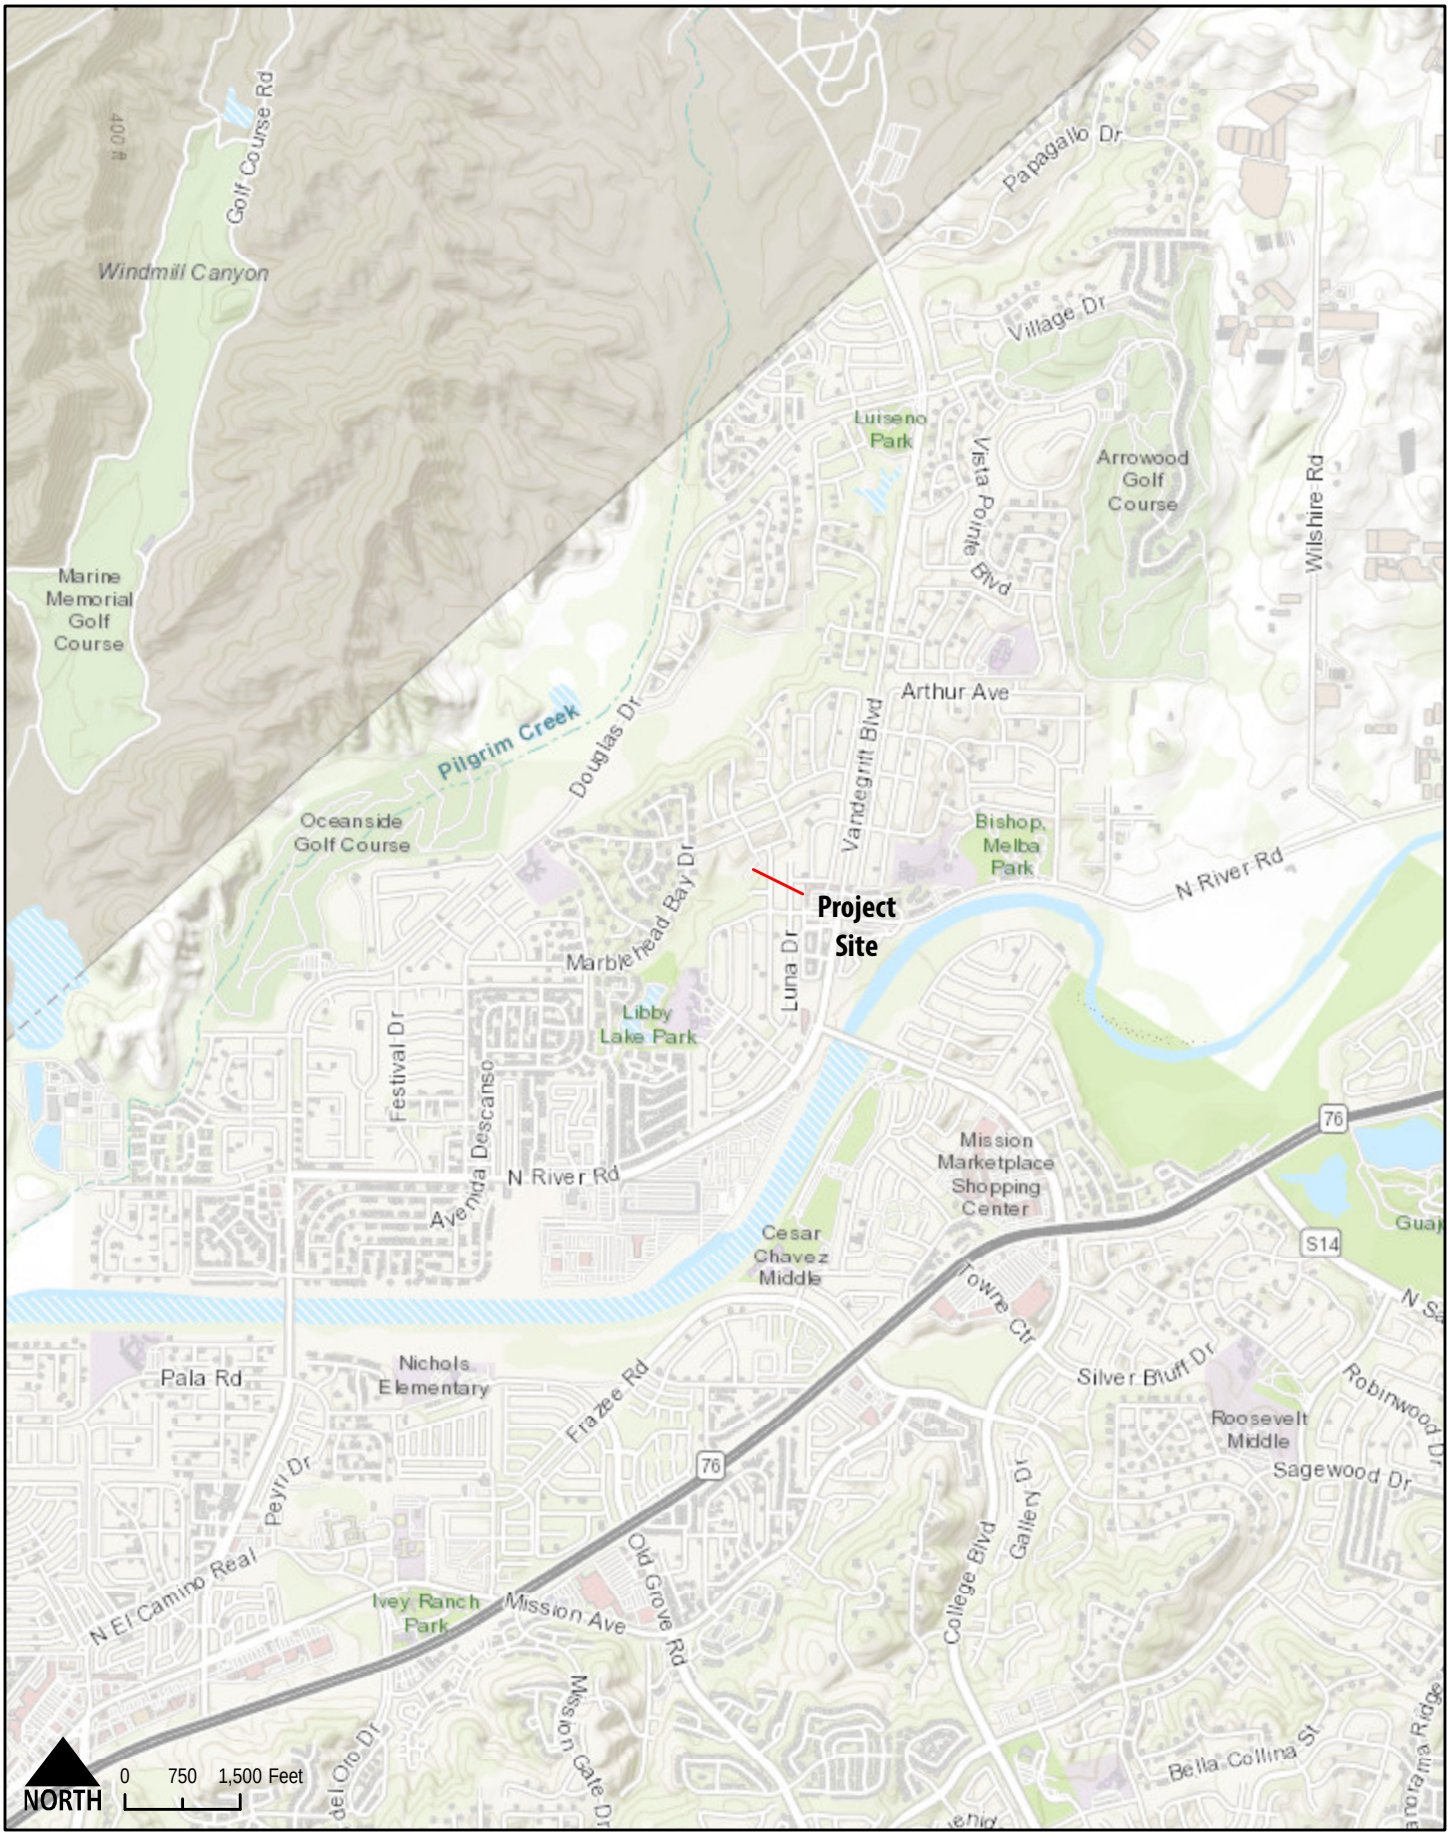
VMT Analysis Screening

VMT analysis screening criteria were obtained from Table 2 of the City's TIA Guidelines. The following are the screening criteria relevant to the Project's proposed land use:

- Projects located in a Transit Priority Area (TPA) or Smart Growth Opportunity Area as identified in the most recent SANDAG San Diego Forward Regional Plan and is consistent with the General Plan at the time of project application.
- Projects located in a low-VMT generating area identified on the most recent SANDAG SB 743 VMT Screening map.
- Affordable housing projects.
- Projects generating less than 500 daily vehicle trips (if inconsistent with adopted General Plan)

Based upon the criterion provided above, the Project would not be screened out from conducting a VMT analysis based on the City's TIA Guidelines because of the following reasons:

- Although the Project is located within a ½ mile walking distance, without discontinuity of sidewalk or obstructions to the route, of the San Luis Rey Transit Center, the Project is inconsistent with the City's General Plan. **Figure 3** displays the walking distance from the Project to the San Luis Rey Transit Center.
- The Project is not located in a low-VMT generating area per the most recent SANDAG SB 743 VMT screening maps. **Figure 4** displays the Project's VMT screening map location and associated VMT.
- The Project is not an affordable housing project.
- The Project generates more than 500 daily trips.



Pacifica Housing Project
VMT Analysis

C+R

Figure 1
Project Regional Location

Primary Community Entry
- Utilizes existing driveway
- No gate
- To be enhanced with decorative paving, landscaping and community signage

Existing Slope
- Provides approximately 30 feet of elevation difference between existing homes and new homes below.

Typical Three-Story Townhome Building
- 4 building types
- 2 elevation styles
- 3 floor plan variation
- Maximum height of 38.0 feet
- Oriented to provide front doors along streetscapes and paseos

Amenity Area A
- 10,126 SF
- Minimum dimension of 20 feet
- See Amenity Plan for details

Amenity Area B
- 21,143 SF
- Dog park and fire pits for community gathering (Please see Amenity Plan)

Central Paseo
- 6,121 SF
- Provides a central spine trail that connects amenity areas to promote walkability
- Enhanced with landscaping and special paving at crosswalks

Basin and Habitat Setback
- Stormwater basin for hydromodification and water quality treatment
- Habitat and planning setbacks to protect adjacent existing wetlands

Amenity Area C
- 10,502 SF
- Pickle Ball Courts, Barbecue area, open lawn for games and unstructured play (Please see Amenity Plan)

Secondary Access
- Emergency Vehicle Access Only
- Gated at the existing terminus of Malaga Drive

Project Summary

Property Size (Gross): 14.55 Acres

Developable Area (Net)[1]: 12.82 Acres

Development Pad Area: 10.23 Acres

No. of Units: 164 Three-Story Townhomes[2]
- (16) Plan 2532: 1210 SF, 2 bed., 2.5 baths, 2-car gar.
- (75) Plan 1633: 1497 SF, 3 bed., 2.5 baths, 2-car gar.
- (73) Plan 1636: 1791 SF, 4 bed., 2.5 baths, 2-car gar.

Density[3]: 12.8 du/ac

Proposed Setbacks:
- Front (To Monica/Macario Dr): 15' to building / 12' to patio
- Side (N and S Bndy): 74' Minimum
- Rear (E Bndy): 65' Minimum

Parking Required:
- Resident: 2 Spaces per Unit (1 covered)
- Guest Spaces: 1 + 20% of total units (34 spaces)

Parking Provided:
- Resident: Private 2-car garage per unit
- Guest Spaces[10]: 56 spaces

Open Space Required:
- Total: 300 SF per Unit x 164 = 49,200 SF
- Private Open Space minimum dimension of 5 feet
- At least 50% shall be Common = 24,600 SF
- At least two common area shall be 4,000 SF Min (or one at 8,000 SF Min); Minimum dimension of 20 feet

Open Space Provided:
- Total: 78,412 SF (478 SF per unit)
- Private OS (5' min): 24,500 SF
- Common Open Space (20' min; 8000 SF Min): 53,712 SF

Bldg Coverage: 3.21 AC. (22.1%)

Notes:
1. Excludes slopes surrounding the site in accordance with Section 3039 of the City of Oceanside Zoning Ordinance.
2. Type VB construction with NFPA 13D automatic sprinkler system.
3. Density based on Development Area.
4. Inclusionry housing requirement to be met through payment of in-lieu fee.
5. Existing General Plan/Zoning: CI/PS
6. Proposed General Plan: Medium Density B (10-15 du/ac)
7. Proposed Zoning: Planned Development
8. Coastal Zone: No
9. Assessor's Parcel Numbers: 157-070-42-00, 122-190-19-00, and 122-190-22-00
10. Guest Parking Spaces are 16' x 8.5' with 2' overhang; Includes 3 ADA Spaces that are 18' x 9'

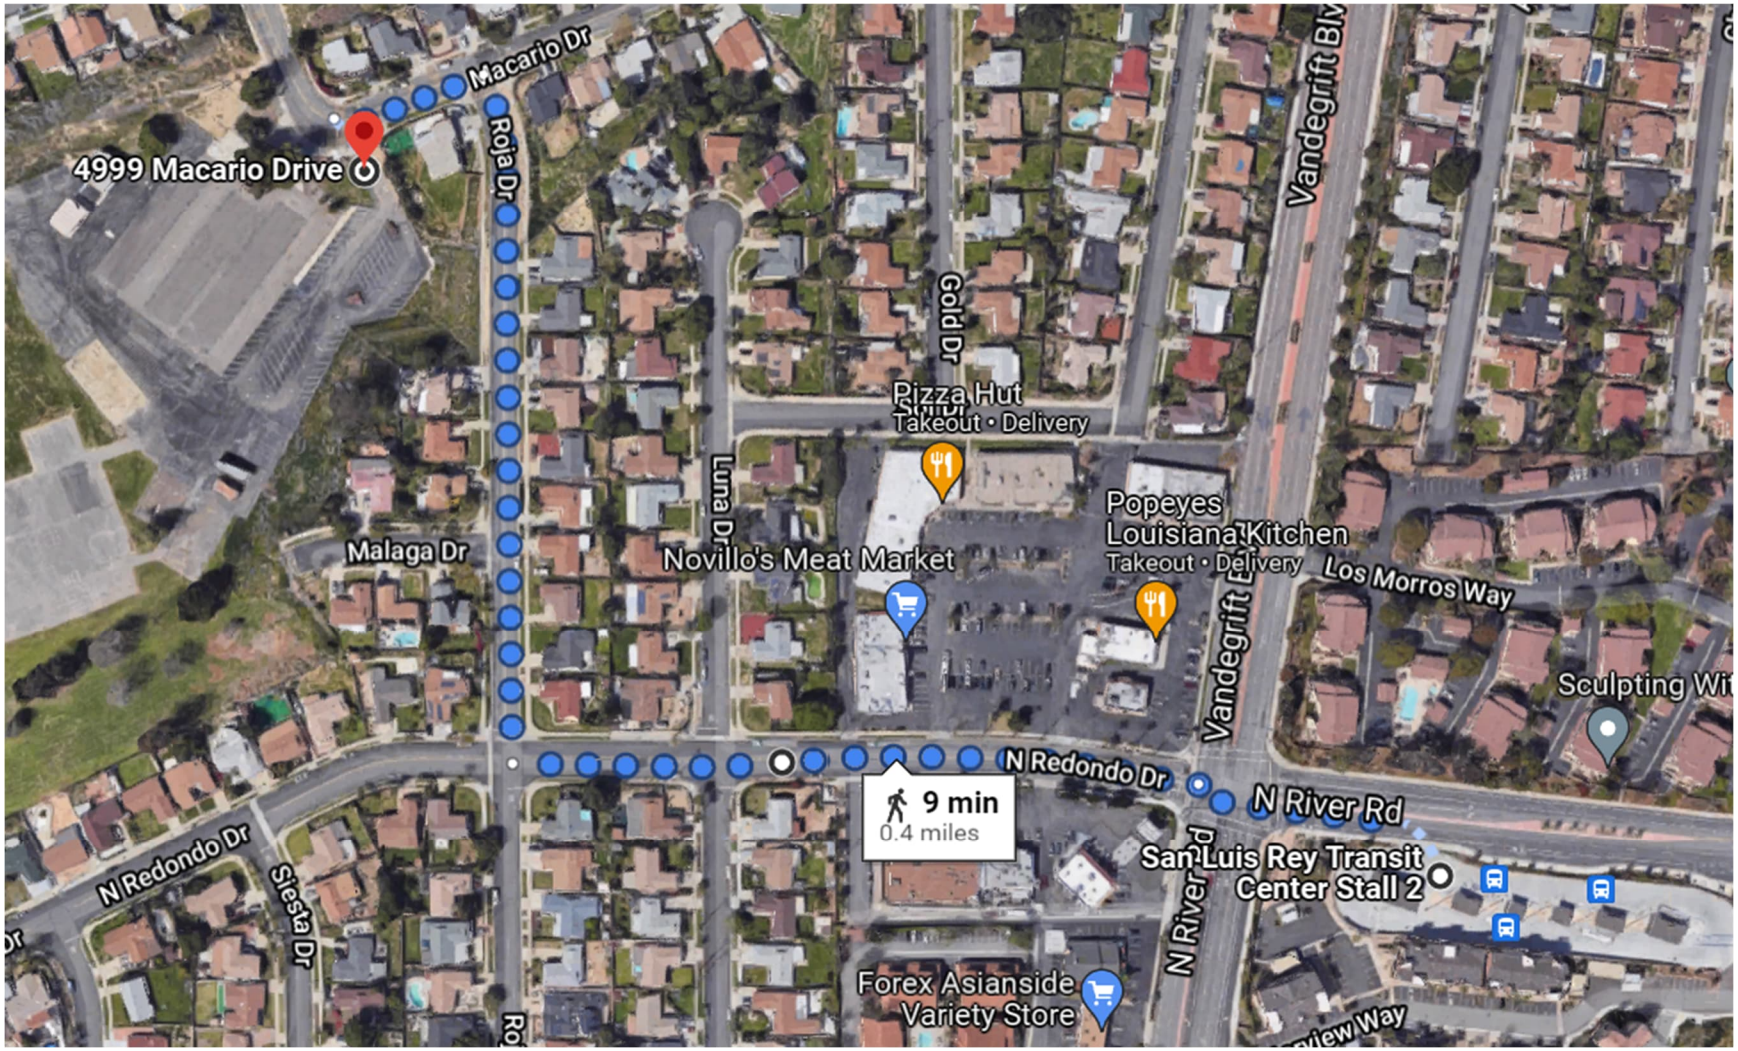

Figure 4 - VMT Screening Map

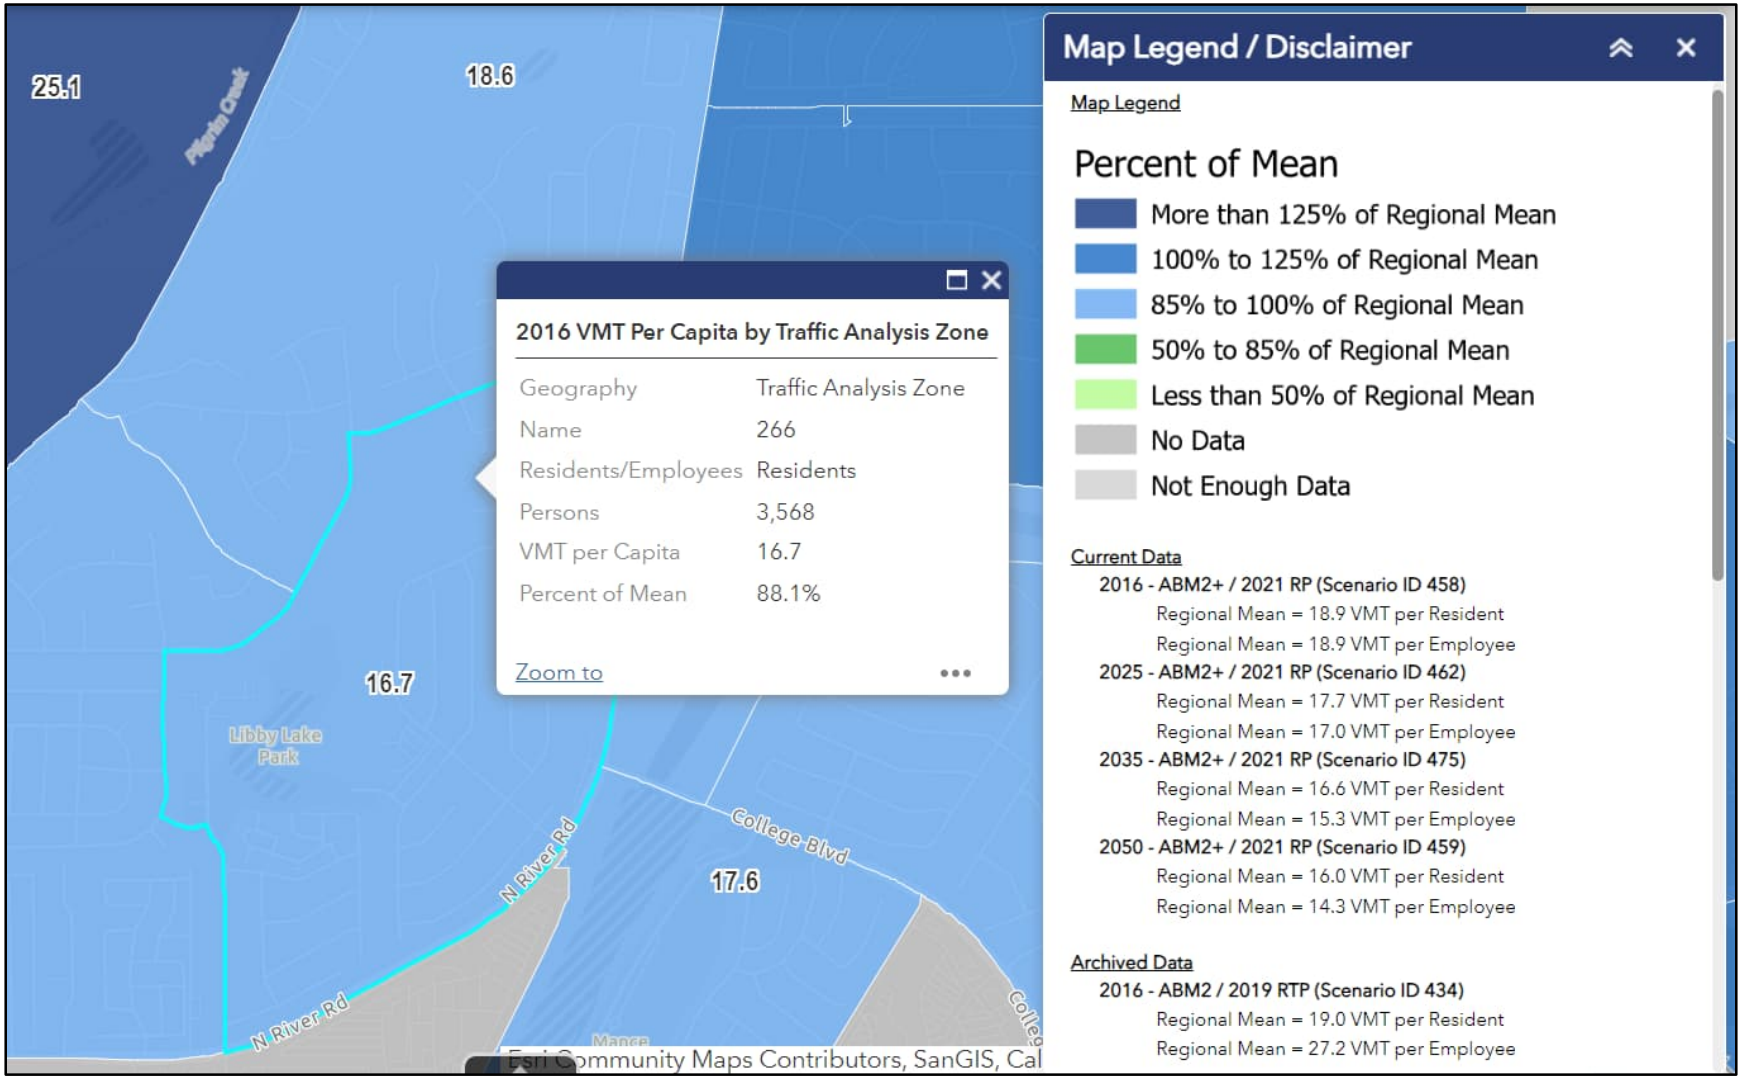


VMT Analysis

As mentioned previously, the Project's VMT per Capita was obtained from the most recent SANDAG VMT screening maps. Per the City's TIA Guidelines, a residential project is determined to have a significant impact if the project generates VMT per Capita greater than 85 percent of the regional average. As seen in Figure 4, the Project site is located in a TAZ that generates 16.7 VMT per Capita, which is over the significant impact threshold.

However, the Project is in a suburban area (TAZ 266) composed mostly by single-family dwelling units (average density of 3.6 du/acre[1]) which tend to have higher automobile ownership as compared to the region, hence, typically generate higher VMT per Capita. Therefore, the surrounding single-family residential land uses are used to estimate the neighborhood's trip characteristics.

Per the California Air Pollution Control Officers Association (CAPCOA) *Handbook for Analyzing Greenhouse Gas Emission Reductions, Assessing Climate Vulnerabilities, and Advancing Health and Equity* (CAPCOA Report), T-1 Increase Residential Density, residential projects designed with a higher density of dwelling units compared to the average residential density in the U.S., exhibit lower VMT per Capita. Increased densities affect the distance people travel and provide greater options for the mode of travel they choose. Increasing residential density results in shorter and fewer trips by single-occupancy vehicles and thus a reduction in GHG emissions. Applying the percentage reduction in VMT to the Project based on the measure described above yields a nine percent reduction in VMT per Capita.

Table 1 summarizes the anticipated reduction in VMT per Capita to the Project based on the increase in residential density. Detailed calculations associated with the percent reduction in VMT are included in **Attachment A**.

Table 1 - Reduction in VMT per Capita

VMT Per Capita (Project TAZ)	Mitigation Measure	% Reduction	VMT Per Capita (Project)
16.7[1]	T-1 Increase Residential Density	9%[2]	15.19

Source: CR Associates (2023)

Note:
[1] Source = SANDAG Series 14 ABM2+/2021 RP Year 2016 Base Model
[2] Source = CAPCOA Report, T-1 Increase Residential Density. See Attachment A for details.

Furthermore, it is important to note that the Project is located less than ½-mile walking distance from the San Luis Rey Transit Center. Nevertheless, since the Project is not consistent with the City's General Plan, the Project is not screened out based on this criterion. However, consistency with a general plan is not a factor that directly influences VMT.

Therefore, the Project's proximity to a high-quality transit station in concert with an increased density in residential density would suffice to presume the Project as having a less than significant VMT impact.

[1] According to SANDAG Series 14 ABM2+/2021 RP Year 2016 Base Model Socioeconomic Data (TAZ 266, MGRAs 15182 to 15196).

Table 2 summarizes the VMT analysis results. The regional average VMT was determined using the SANDAG Series 14 ABM2+/2021 RP Year 2016 Base model.

Table 2 - VMT Impact Analysis Results

Metric	VMT per Capita
Regional Average	18.90[1]
Significant Impact Threshold (85%)	16.07[2]
Project TAZ	16.70
VMT Reduction (T-1 Increase Residential Density)	9%
Project	15.19
Significant Impact	**No**

Source: CR Associates (2023)

Notes:
[1] Source = SANDAG Series 14 ABM2+/2021 RP Year 2016 Base Model
[2] Regional Average x 85%

As shown in Table 2, the Project is anticipated to generate VMT per Capita of 15.19, which is below the significance threshold of 16.07 miles. Therefore, the Project is deemed to have a less than significant VMT impact.

Additionally, to further reduce the average VMT per Capita of the Project, the Project will implement a Transportation Demand Management (TDM) Program. A TDM program would facilitate increased opportunities for walking and bicycling, as well as provide the resources, means, and incentives for ridesharing and carpooling.

The CAPCOA Report provides mitigation measures that are considered non-quantifiable for the Project due to the implementation requirements or measure description in relation to the Project's land use (i.e., a residential project rather than an employment project). Based on discussions with the project applicant, the Project will implement the following non-quantifiable VMT reduction strategies to encourage alternative modes of transportation:

1. Creation and distribution of a "new resident" information packet addressing alternative modes of transportation (CAPCOA T-7: Implement Commute Trip Reduction Marketing).
2. Provide on-site bike parking (CAPCOA T-10: Provide End-of-Trip Bicycle Facilities).

It is important to note that the strategies described above are not applicable for residential projects. Hence, no VMT reduction credit is assumed as a result of implementing these strategies.

See **Attachment B** for details on the selected VMT mitigation measure, as well as a full list of other measures that were taken into consideration and their respective feasibility determination.

Conclusion

The Project's VMT per Capita is anticipated to fall under the significance threshold per the City's TIA Guidelines based on the reductions in VMT per Capita provided by the increased residential density of the project. Therefore, the **Project is deemed to have a less than significant VMT impact.**

Attachment A - VMT Reduction Calculation

Measure Description (T-1 Increase Residential Density)

T-1. Increase Residential Density

GHG Mitigation Potential

30% Up to 30.0% of GHG emissions from project VMT in the study area

Co-Benefits (icon key on pg. 34)

Climate Resilience

Increased density can put people closer to resources they may need to access during an extreme weather event. Increased density can also shorten commutes, decreasing the amount of time people are on the road and exposed to hazards such as extreme heat or flooding.

Health and Equity Considerations

Neighborhoods should include different types of housing to support a variety of household sizes, age ranges, and incomes.

Measure Description

This measure accounts for the VMT reduction achieved by a project that is designed with a higher density of dwelling units (du) compared to the average residential density in the U.S. Increased densities affect the distance people travel and provide greater options for the mode of travel they choose. Increasing residential density results in shorter and fewer trips by single-occupancy vehicles and thus a reduction in GHG emissions. This measure is best quantified when applied to larger developments and developments where the density is somewhat similar to the surrounding area due to the underlying research being founded in data from the neighborhood level.

Subsector

Land Use

Locational Context

Urban, suburban

Scale of Application

Project/Site

Implementation Requirements

This measure is most accurately quantified when applied to larger developments and/or developments where the density is somewhat similar to the surrounding neighborhood.

Cost Considerations

Depending on the location, increasing residential density may increase housing and development costs. However, the costs of providing public services, such as health care, education, policing, and transit, are generally lower in more dense areas where things are closer together. Infrastructure that provides drinking water and electricity also operates more efficiently when the service and transmission area is reduced. Local governments may provide approval streamlining benefits or financial incentives for infill and high-density residential projects.

Expanded Mitigation Options

When paired with Measure T-2, *Increase Job Density*, the cumulative densification from these measures can result in a highly walkable and bikeable area, yielding increased co-benefits in VMT reductions, improved public health, and social equity.

GHG Reduction Formula

$$A = \frac{B - C}{C} \times D$$

GHG Calculation Variables

ID	Variable	Value	Unit	Source
Output				
A	Percent reduction in GHG emissions from project VMT in study area	0–30.0	%	calculated
User Inputs				
B	Residential density of project development	[ ]	du/acre	user input
Constants, Assumptions, and Available Defaults				
C	Residential density of typical development	9.1	du/acre	Ewing et al. 2007
D	Elasticity of VMT with respect to residential density	-0.22	unitless	Stevens 2016

Further explanation of key variables:

- (C) – The residential density of typical development is based on the blended average density of residential development in the U.S. forecasted for 2025. This estimate includes apartments, condominiums, and townhouses, as well as detached single-family housing on both small and large lots. An acre in this context is defined as an acre of developed land, not including streets, school sites, parks, and other undevelopable land. If reductions are being calculated from a specific baseline derived from a travel demand forecasting model, the residential density of the relevant transportation analysis zone should be used instead of the value for a typical development.
- (D) – A meta-regression analysis of five studies that controlled for self-selection found that a 0.22 percent decrease in VMT occurs for every 1 percent increase in residential density (Stevens 2016).

GHG Calculation Caps or Maximums

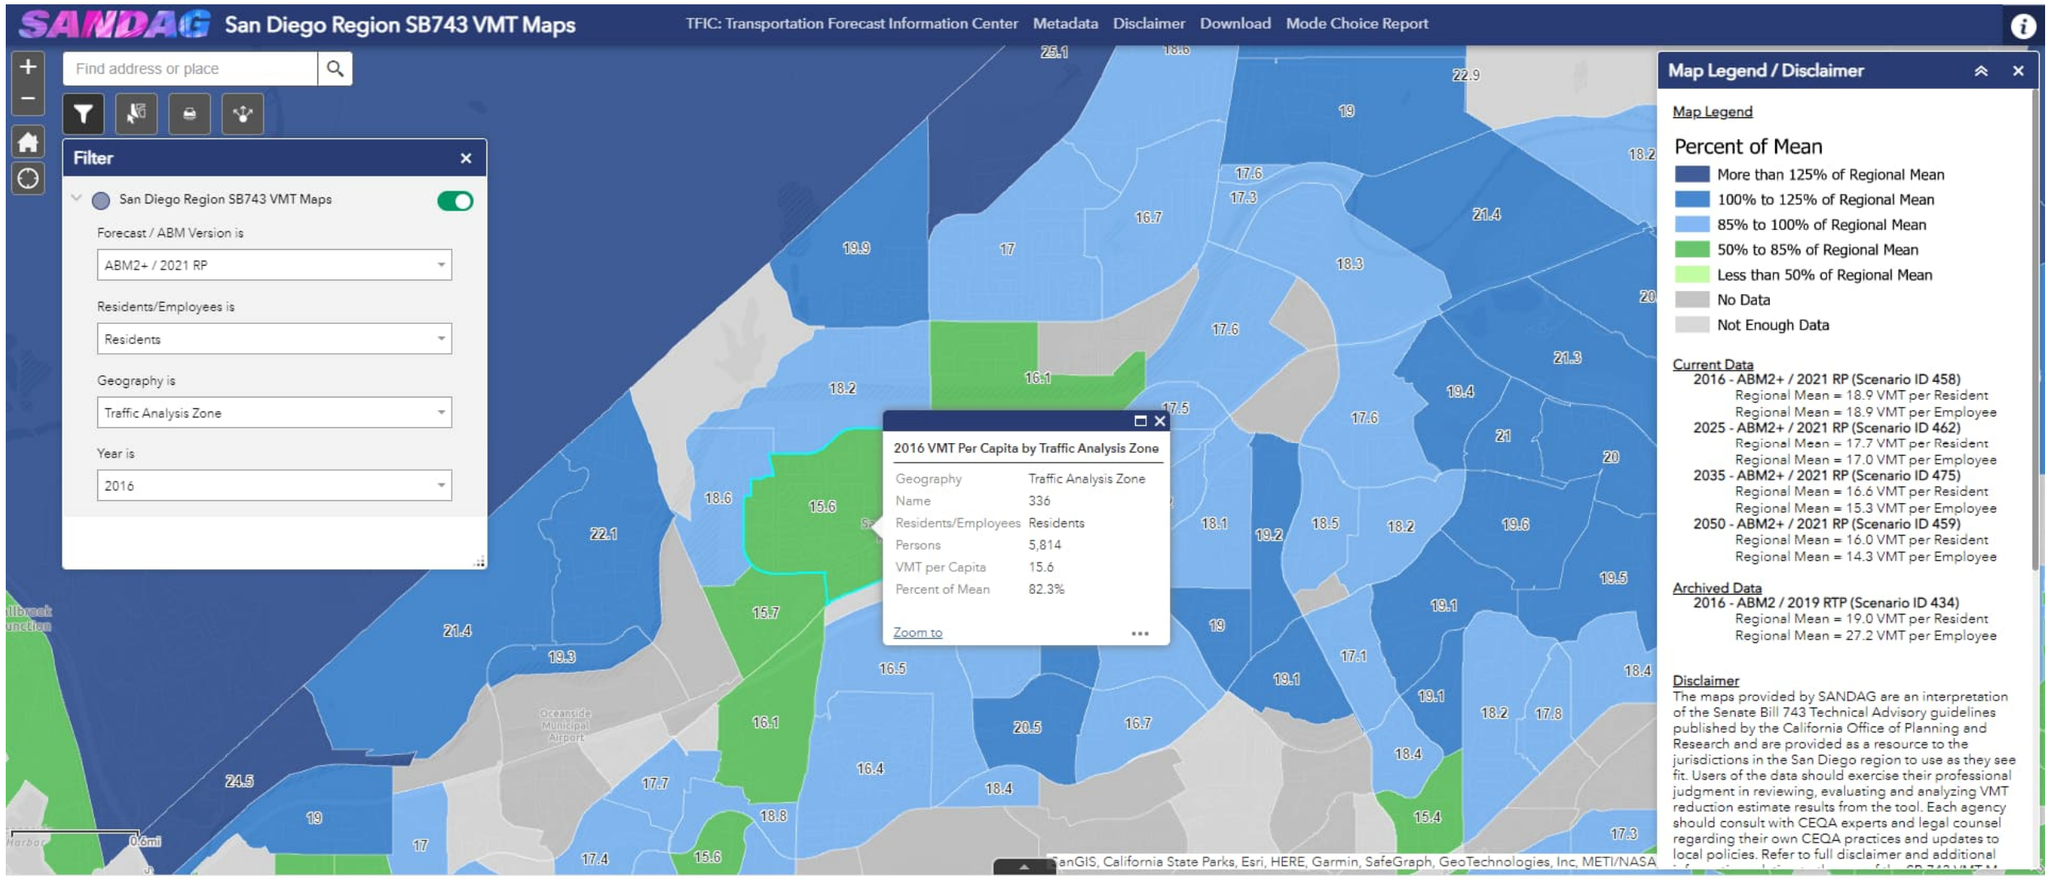
Measure Maximum

(A_{max}) The percent reduction in GHG emissions (A) is capped at 30 percent. The purpose for the 30 percent cap is to limit the influence of any single built environmental factor (such as density). Projects that implement multiple land use strategies (e.g., density, design, diversity) will show more of a reduction than relying on improvements from a single built environment factor.

VMT Reduction Calculation

A	-0.09	%	<-- Calculated VMT Reduction
B	12.8	du/ac	<-- Obtained from Site Plan
C	9.1	du/ac	<-- Default Value provided in CAPCOA Report (See Note in the next page)
D	-0.22	unitless	<-- Default Value provided in CAPCOA Report

Note:
The calculated density for the TAZ the project is located in (3.6 du/acre) yields a VMT reduction of 56 percent, which would be capped at the maximum allowed VMT reduction for this strategy which is 30 percent. However, a 30 percent reduction would bring down the Project's VMT to 11.69 VMT per Capita, which is unlikely as the lowest VMT per Capita (TAZ) identified in the vicinity of the Project's TAZ is 15.6. Therefore, as a conservative approach, the default value for a typical development in the U.S. of 9.1 du/ac was utilized for the analysis.



Attachment B - VMT Mitigation Measures

VMT Reduction Mitigation Measures (Applicable to Residential Projects)

Mitigation Measure (from CAPCOA Report)	Feasibility
TDM-T-1-Increase Residential Density	Yes - Project has a higher density of dwelling units per acre compared to the average residential density in the U.S., and it is estimated that the VMT per Capita for the Project will be reduced by 9% that of the VMT per Capita calculated for the TAZ the project is located in.
TDM-T-7-Implement Commute Trip Reduction Marketing	No - However, trip reduction marketing ("new resident information package") will be provided to residents. It is important to note that no VMT reductions are assumed as a result of implementing this strategy.
TDM-T-9-Implement Subsidized or Discounted Transit Program	No - Not feasible for a for-sale residential project since it would have to be subsidized by the homeowners.
TDM-T-10-Provide End-of-Trip Bicycle Facilities	No - However, end-of-trip bicycle facilities (bike parking) will be provided to residents. It is important to note that no VMT reductions are assumed as a result of implementing this strategy.
TDM-T-14-Provide Electric Vehicle Charging Infrastructure	No - Although project is providing EV ready infrastructure as well as several EV charging ready visitor guest parking, these only meet the minimum requirements. Additionally, EV charging infrastructure only reduces gas emissions and does not reduce VMT.
TDM-T-15-Limit Residential Parking Supply	No - Not feasible to reduce parking for this residential project without negatively impacting existing neighborhood.
TDM-T-18-Provide Pedestrian Network Improvement	No - Although the project is providing pedestrian improvements within project site and project frontage, it is not financially feasible to provide new pedestrian network improvements beyond the project site since the surrounding neighborhood is already builtout with adequate sidewalks.
TDM-T-21-A-Implement Conventional Carshare Program	No - Not financially feasible for project to implement a carshare program.
TDM-T-21-B-Implement Electric Carshare Program	No - Not financially feasible for project to implement an electric carshare program.
TDM-T-22-A-Implement Pedal (Non-Electric) Bikeshare Program	No - Not financially feasible for project to implement a pedal bikeshare program.
TDM-T-22-B-Implement Electric Bikeshare Program	No - Not financially feasible for project to implement an electric bikeshare program.
TDM-T-22-C-Implement Scootershare Program	No - Not financially feasible for project to implement a scootershare program.

Executive Summary

Project Description and Setting

The Proposed Project seeks to construct 164 multi-family residential townhomes on the old Pacifica Elementary School Site located at the southwest corner of the Monica Circle and Macario Drive intersection within the City of Oceanside. The property is bordered by single family dwelling units on all sides. The site is currently designated for elementary school land use.

The Proposed Project will be accessed primarily via the existing driveway which is the south leg of the three-legged intersection at Monica Circle and Macario Drive. The project driveway will function as a side-street stop-controlled intersection with full access. A secondary access point (emergency only) will be located at Malaga Drive. The anticipated opening year of the Proposed Project is 2025.

Per the City's Traffic Impact Analysis Guidelines, trip generation rates were derived from the SANDAG's (not so) Brief Guide to Vehicular Traffic Generation Rates for the San Diego Region (April 2002). **Table ES.1** displays the projected daily, as well as AM and PM peak hour, project trip generation.

Table ES.1 - Project Trip Generation

Land Use	Units	Trip Rate	ADT	AM Peak Hour					PM Peak Hour				
				%	Trips	Split	In	Out	%	Trips	Split	In	Out
Multi-Family (6-20 DU/acre)	164 DU	8/DU	1,312	8	105	2:8	21	84	10	132	7:3	92	40

Source: SANDAG (not so) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002)

Notes:
ADT = Average Daily Traffic
DU = Dwelling Unit

As shown, the Proposed Project is anticipated to generate 1,312 daily trips, including 105 trips (21-in/84-out) during the AM peak hour and 132 (92-in/40-out) trips during the PM peak hour.

The following four (4) roadway segments and five (5) intersections were included for analysis:

<u>Roadway Segments</u>

- Monica Circle, between Claire Drive and Macario Drive
- Macario Drive, between Monica Circle and Roja Drive
- Roja Drive, between Macario Drive and North Redondo Drive
- North Redondo Drive, between Roja Drive and North River Road

<u>Intersections</u>

1. Monica Circle & Claire Drive (Side-Street Stop-Controlled)
2. Roja Drive & Macario Drive (All-Way Stop-Controlled)
3. Roja Drive & North Redondo Drive (Side-Street Stop-Controlled)
4. Vandergrift Boulevard & North Redondo Drive/North River Road (Signal)
5. Monica Circle/Project Driveway & Macario Drive (Side-Street Stop-Controlled)

A VMT analysis was conducted to satisfy the requirements of CEQA. The VMT analysis is part of a separate document. The LOS analysis conducted as part of this study was used to evaluate any potential LOS impacts on the surrounding circulation network as a result of the Proposed Project. Per the City's Traffic Impact Analysis Guidelines, the City of Oceanside strives to ensure the goals, objectives, and policies adopted by the City are supported and implemented while monitoring the capacity for the roadway networks. Improvements should be identified for any study facilities that do not meet City LOS standards to increase performance to acceptable or pre-project conditions. A transportation impact in relation to LOS is considered a non-CEQA transportation impact based on the City's Traffic Guidelines.

LOS Impacts and Improvement Requirements

Improvement Requirements – Existing with Project Conditions

Roadway Segment Analysis

The roadway segments listed below are anticipated to operate above capacity[1] with implementation of the Proposed Project under Existing with Project Conditions:

- Macario Drive, between Monica Circle and Roja Drive
- Roja Drive, between Macario Drive and North Redondo Drive

It should be noted that the study roadway segments listed above are all local streets (non-Circulation Element roadways). Therefore, the determination of the need for roadway improvements shall be coordinated with City of Oceanside staff.

Given the buildout environment of these local streets and the relatively small amount of traffic that the Project will add to the surrounding transportation network, it is not anticipated that roadway improvements involving widening would be required. However, alternative improvements may be necessary such as traffic calming measures (i.e., speed cushions, speed feedback signs, etc.) and/or pedestrian or bicycle improvements such as high visibility crosswalks at nearby intersections.

Intersection Analysis

All study area intersections are projected to operate at acceptable LOS D or better under Existing with Project conditions. Therefore, no study intersections are anticipated to degrade in LOS to unacceptable levels with implementation of the Proposed Project and no improvements will be required.

[1] Above Capacity - Based upon the City's Circulation Element, Local Streets are designated with a daily volume threshold of 2,200 for LOS C. If the daily volume exceeds the 2,200 threshold, the roadway segment operates above capacity.

Improvement Requirements – Near-Term Year 2025 with Project Conditions

Roadway Segment Analysis

The roadway segments listed below are anticipated to operate above capacity[1] with implementation of the Proposed Project under Near-Term Year 2025 Base with Project Conditions:

- Macario Drive, between Monica Circle and Roja Drive
- Roja Drive, between Macario Drive and North Redondo Drive

It should be noted that the study roadway segments listed above are all local streets (non-Circulation Element roadways). Therefore, the determination of the need for roadway improvements shall be coordinated with City of Oceanside staff.

Given the buildout environment of these local streets and the relatively small amount of traffic that the Project will add to the surrounding transportation network, it is not anticipated that roadway improvements involving widening would be required. However, alternative improvements may be necessary such as traffic calming measures (i.e., speed cushions, speed feedback signs, etc.) and/or pedestrian or bicycle improvements such as high visibility crosswalks at nearby intersections.

Intersection Analysis

All study area intersections are projected to operate at acceptable LOS B or better under Near-Term Year 2025 Base with Project Conditions with exception to the following intersection:

4. Vandegrift Boulevard / N. River Road & N. Redondo Drive – LOS E during the AM peak hour and LOS F during the PM peak hour. The trips associated with the Proposed Project would increase delay at this intersection by 0.5 seconds in the AM peak hour and 1.5 seconds in the PM peak hour, which does not surpass the 2-second threshold for intersections operating at LOS E or F.

Based upon the criteria outlined in Section 2.5, the study intersection listed above is not anticipated to have an LOS impact with implementation of the Proposed Project and no improvements will be required.

Improvement Requirements – Horizon Year 2050 with Project Conditions

Roadway Segment Analysis

The roadway segments listed below are anticipated to operate above capacity[1] with implementation of the Proposed Project under Horizon Year 2050 with Project Conditions:

- Macario Drive, between Monica Circle and Roja Drive
- Roja Drive, between Macario Drive and North Redondo Drive

It should be noted that the study roadway segments listed above are all local streets (non-Circulation Element roadways). Therefore, the determination of the need for roadway improvements shall be coordinated with City of Oceanside staff.

Given the buildout environment of these local streets and the relatively small amount of traffic that the Project will add to the surrounding transportation network, it is not anticipated that roadway improvements involving widening would be required. However, alternative improvements may be

necessary such as traffic calming measures (i.e., speed cushions, speed feedback signs, etc.) and/or pedestrian or bicycle improvements such as high visibility crosswalks at nearby intersections.

Intersection Analysis

All study area intersections are projected to operate at acceptable LOS C or better under Horizon Year 2050 with Project Conditions with exception to the following intersection:

4. Vandegrift Boulevard / N. River Road & N. Redondo Drive – LOS E during the AM peak hour and LOS F during the PM peak hour. The trips associated with the Proposed Project would increase delay at this intersection by 1.5 seconds in the AM peak hour and 1.2 seconds in the PM peak hour, which does not surpass the 2-second threshold for intersections operating at LOS E or F.

Based upon the criteria outlined in Section 2.5, the study intersection listed above is not anticipated to have an LOS impact with implementation of the Proposed Project and no improvements will be required.

1.0 Introduction

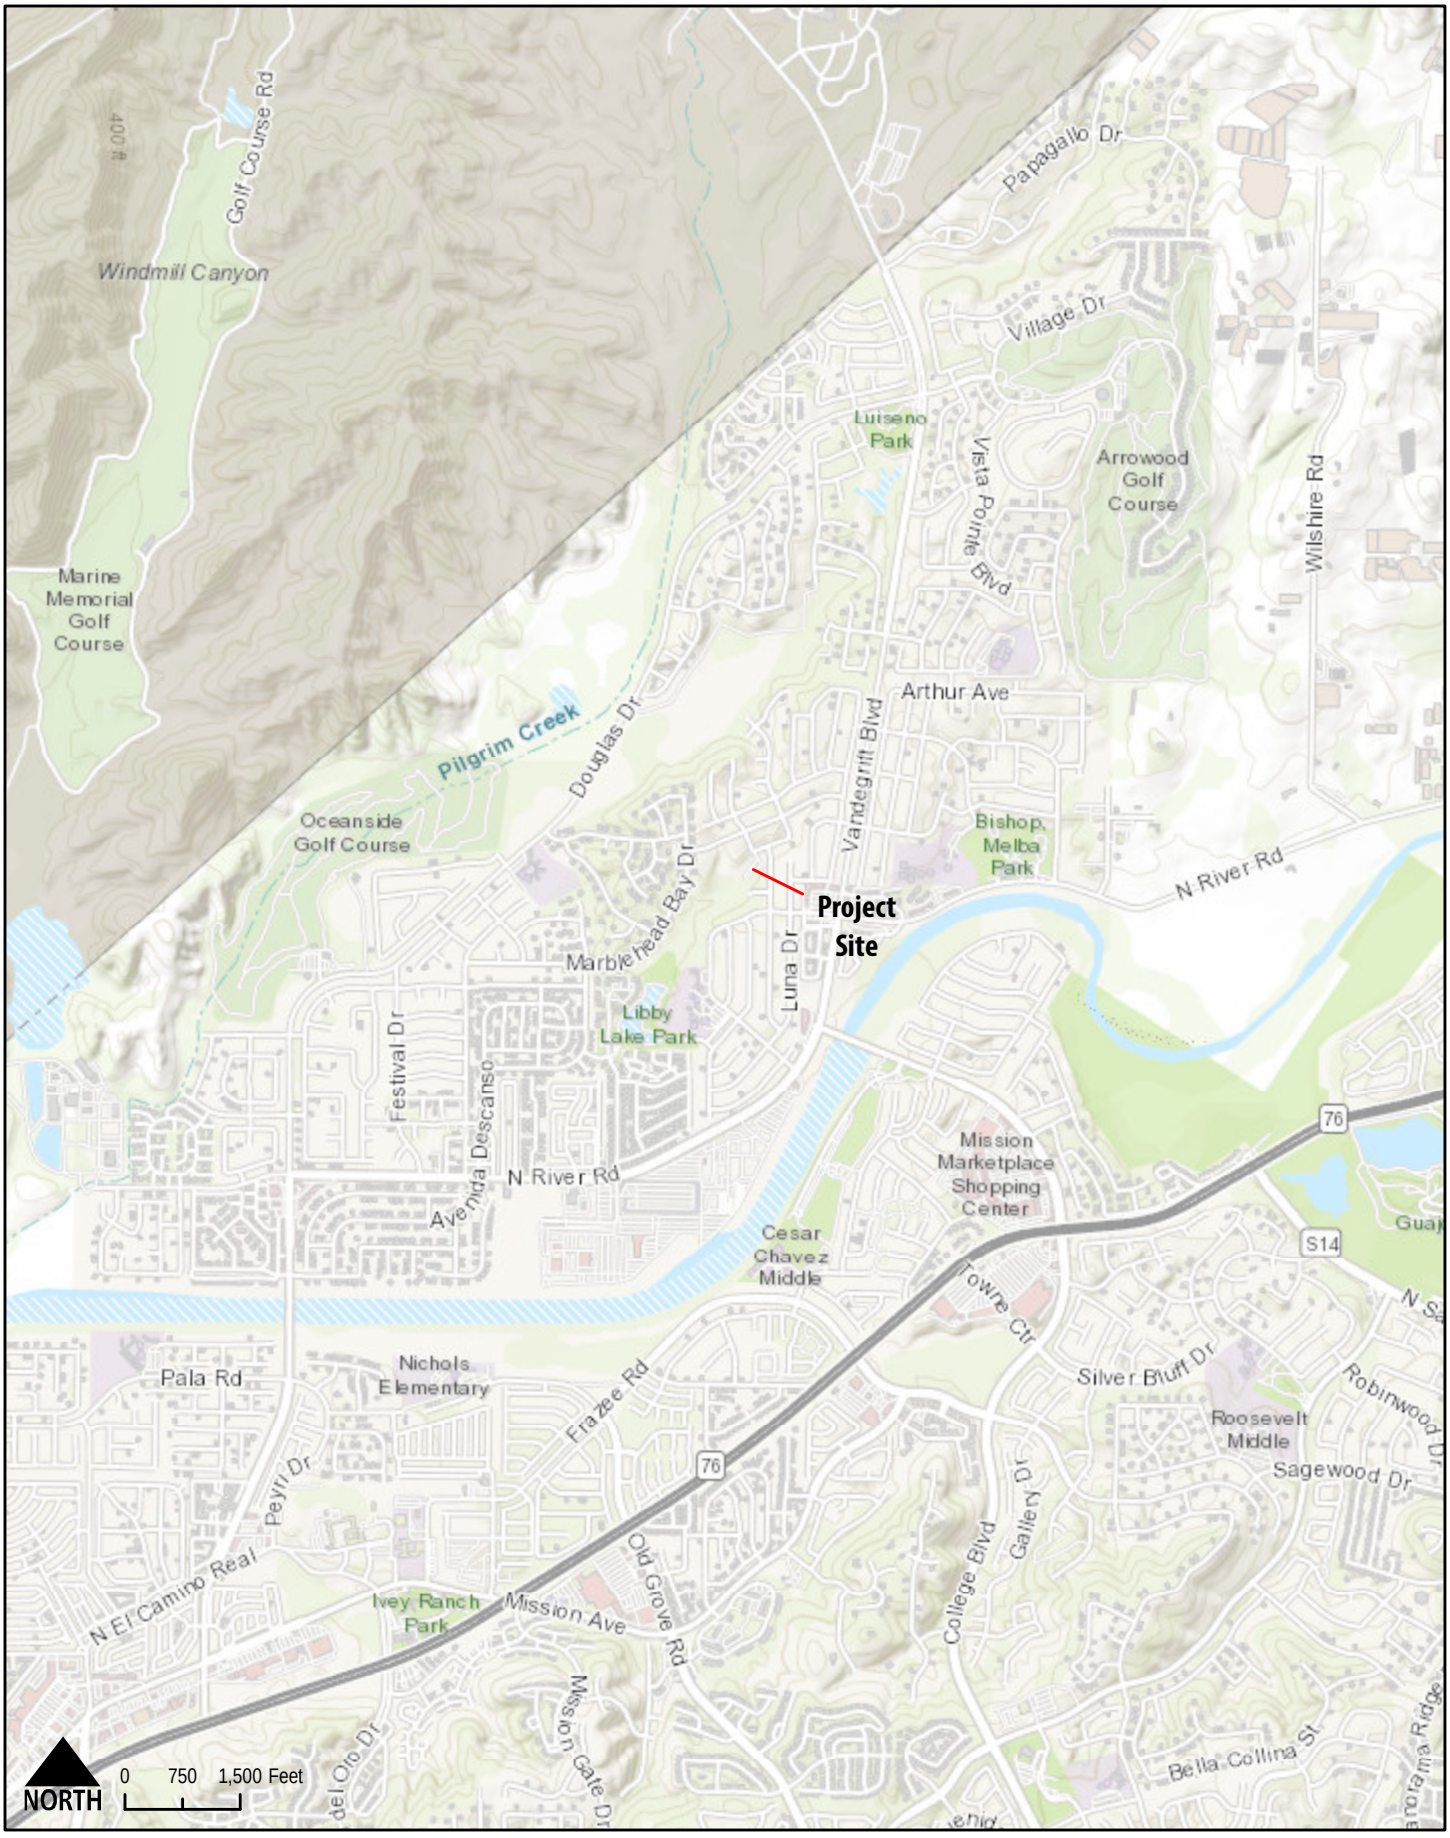
The purpose of this Local Transportation Study (LTS) is to identify and document any potential level of service (LOS) impacts associated with the Pacifica Housing project (the "Proposed Project"), and to recommend improvement requirements, as necessary.

1.1 Project Description

The Proposed Project seeks to construct 164 multi-family residential townhomes on the old Pacifica Elementary School Site located at the southwest corner of the Monica Circle and Macario Drive intersection within the City of Oceanside. The property is bordered by single family dwelling units on all sides. The site is currently designated for elementary school land use.

The Proposed Project will be accessed primarily via the existing driveway which is the south leg of the three-legged intersection at Monica Circle and Macario Drive. The project driveway will function as a side-street stop-controlled intersection with full access. A secondary access point (emergency only) will be located at Malaga Drive. The anticipated opening year of the Proposed Project is 2025. **Figure 1.1** displays the Proposed Project's regional location. **Figure 1.2** displays the site plan for the Proposed Project.

A VMT analysis was conducted to satisfy the requirements of CEQA. The VMT analysis is part of a separate document. The LOS analysis conducted as a part of this study was used to evaluate any potential LOS impacts on the surrounding circulation network as a result of the Proposed Project. Per the City's Traffic Impact Analysis Guidelines, the City of Oceanside strives to ensure the goals, objectives, and policies adopted by the City are supported and implemented while monitoring the capacity for the roadway networks. Improvements should be identified for any study facilities that do not meet City LOS standards to increase performance to acceptable or pre-project conditions.



Pacifica Housing Project
Local Transportation Study

Figure 1.1
Project Regional Location

Primary Community Entry
- Utilizes existing driveway
- No gate
- To be enhanced with decorative paving, landscaping and community signage

Existing Slope
- Provides approximately 30 feet of elevation difference between existing homes and new homes below.

Typical Three-Story Townhome Building
- 4 building types
- 2 elevation styles
- 3 floor plan variation
- Maximum height of 38.0 feet
- Oriented to provide front doors along streetscapes and paseos

Amenity Area A
- 10,126 SF
- Minimum dimension of 20 feet
- See Amenity Plan for details

Amenity Area B
- 21,143 SF
- Dog park and fire pits for community gathering (Please see Amenity Plan)

Central Paseo
- 6,121 SF
- Provides a central spine trail that connects amenity areas to promote walkability
- Enhanced with landscaping and special paving at crosswalks

Basin and Habitat Setback
- Stormwater basin for hydromodification and water quality treatment
- Habitat and planning setbacks to protect adjacent existing wetlands

Amenity Area C
- 10,502 SF
- Pickle Ball Courts, Barbecue area, open lawn for games and unstructured play (Please see Amenity Plan)

Secondary Access
- Emergency Vehicle Access Only
- Gated at the existing terminus of Malaga Drive

Project Summary

Property Size (Gross): 14.55 Acres

Developable Area (Net)[1]: 12.82 Acres

Development Pad Area: 10.23 Acres

No. of Units: 164 Three-Story Townhomes[2]
- (16) Plan 2532: 1210 SF, 2 bed., 2.5 baths, 2-car gar.
- (75) Plan 1633: 1497 SF, 3 bed., 2.5 baths, 2-car gar.
- (73) Plan 1636: 1791 SF, 4 bed., 2.5 baths, 2-car gar.

Density[3]: 12.8 du/ac

Proposed Setbacks:
- Front (To Monica/Macario Dr): 15' to building / 12' to patio
- Side (N and S Bndy): 74' Minimum
- Rear (E Bndy): 65' Minimum

Parking Required:
- Resident: 2 Spaces per Unit (1 covered)
- Guest Spaces: 1 + 20% of total units (34 spaces)

Parking Provided:
- Resident: Private 2-car garage per unit
- Guest Spaces[10]: 56 spaces

Open Space Required:
- Total: 300 SF per Unit x 164 = 49,200 SF
- Private Open Space minimum dimension of 5 feet
- At least 50% shall be Common = 24,600 SF
- At least two common area shall be 4,000 SF Min (or one at 8,000 SF Min); Minimum dimension of 20 feet

Open Space Provided:
- Total: 78,412 SF (478 SF per unit)
- Private OS (5' min): 24,500 SF
- Common Open Space (20' min; 8000 SF Min): 53,712 SF

Bldg Coverage: 3.21 AC. (22.1%)

Notes:
1. Excludes slopes surrounding the site in accordance with Section 3039 of the City of Oceanside Zoning Ordinance.
2. Type VB construction with NFPA 13D automatic sprinkler system.
3. Density based on Development Area.
4. Inclusionry housing requirement to be met through payment of in-lieu fee.
5. Existing General Plan/Zoning: CI/PS
6. Proposed General Plan: Medium Density B (10-15 du/ac)
7. Proposed Zoning: Planned Development
8. Coastal Zone: No
9. Assessor's Parcel Numbers: 157-070-42-00, 122-190-19-00, and 122-190-22-00
10. Guest Parking Spaces are 16' x 8.5' with 2' overhang; Includes 3 ADA Spaces that are 18' x 9'

1.2 Report Organization

Following this introductory chapter, this report is organized into the following chapters:

2. Analysis Methodology – This chapter reviews the methods utilized to evaluate any LOS impacts associated with the implementation of the Proposed Project, as required by the City of Oceanside Traffic Impact Analysis Guidelines.
3. Project Traffic - This chapter describes the Proposed Project's land uses and associated trip generation. Additional information such as trip distribution patterns and project trip assignment are also included in this chapter, which is used to determine the project study area.
4. Existing Conditions – This chapter describes and evaluates the existing transportation network. Vehicular operations within the study area are evaluated. LOS analysis results are also provided for Existing and Existing with Project vehicular traffic conditions. Additionally, the Proposed Project's access to transit as well as pedestrian and bicycle facilities are evaluated. Recommendations are offered to enhance the experience and safety for both pedestrians and bicyclists.
5. Near-Term Year 2025 Conditions – This chapter describes near-term developments anticipated to generate additional study area trips and establishes a near-term baseline against which traffic generated by the Proposed Project can be compared to at the project opening day, assumed to be Year 2025. LOS analysis results are also provided for Near-Term Year 2025 Base and Near-Term Year 2025 Base with Project vehicular traffic conditions.
6. Horizon Year 2050 Conditions – This chapter describes projected long-range conditions of the transportation network within the study area. Horizon Year 2050 scenario analysis is required per the City's Traffic Impact Analysis Guidelines. LOS analysis results are also provided for Horizon Year 2050 and Horizon Year 2050 with Project vehicular traffic conditions.
7. LOS Impacts and Improvement Requirements - This chapter identifies any substandard facilities and provides improvement requirements to improve substandard facilities to acceptable LOS or pre-project conditions.
8. Site Access & Circulation – This chapter addresses access to the Proposed Project site and discusses the functionality of the Proposed Project's internal circulation.

2.0 Analysis Methodology

This study was performed in accordance with the standards and requirements in the City of Oceanside Traffic Impact Analysis Guidelines (August 2020). All analysis assumptions were documented within a scoping agreement memorandum, provided in **Appendix A**, and approved by the City of Oceanside. The following sections describe the analysis methods outlined in the Traffic Impact Analysis Guidelines to describe how transportation related impacts are analyzed and identified in relation to LOS. A transportation impact in relation to LOS is considered a non-CEQA transportation impact based on the City's Traffic Guidelines.

2.1 Level of Service (LOS) Definition

Level of Service (LOS) is a quantitative measure describing operational conditions within a traffic stream, and the motorist's and/or passengers' perception of operations. A LOS definition generally describes these conditions in terms of such factors as delay, speed, travel time, freedom to maneuver, interruptions in traffic flow, queuing, comfort, and convenience. **Table 2.1** describes generalized definitions of the various LOS categories (A through F) as applied to roadway operations.

Table 2.1 - LOS Definitions

LOS Category	Definition of Operation
A	This LOS represents a completely free-flow condition, where the operation of vehicles is virtually unaffected by the presence of other vehicles and only constrained by the geometric features of the highway and by driver preferences.
B	This LOS represents a relatively free-flow condition, although the presence of other vehicles becomes noticeable. Average travel speeds are the same as in LOS A, but drivers have slightly less freedom to maneuver.
C	At this LOS, the influence of traffic density on operations becomes marked. The ability to maneuver within the traffic stream is clearly affected by other vehicles.
D	At this LOS, the ability to maneuver is notably restricted due to traffic congestion, and only minor disruptions can be absorbed without extensive queues forming and the service deteriorating.
E	This LOS represents operations at or near capacity. LOS E is an unstable level, with vehicles operating with minimum spacing for maintaining uniform flow. At LOS E, disruptions cannot be dissipated readily thus causing deterioration down to LOS F.
F	At this LOS, forced or breakdown of traffic flow occurs, although operations appear to be at capacity, queues form behind these breakdowns. Operations within queues are highly unstable, with vehicles experiencing brief periods of movement followed by stoppages.

2.2 Roadway Segment LOS Standards and Thresholds

Roadway segment LOS standards and thresholds provide the basis for analysis of arterial roadway segment performance. The analysis of roadway segment LOS is based on the functional classification of the roadway, the maximum capacity, roadway geometrics, and existing or forecast Average Daily Traffic (ADT) volumes. **Table 2.2** displays roadway segment capacity standards found in the City's Traffic Impact Analysis Guidelines. The actual capacity of a roadway facility varies according to its physical attributes.

Table 2.2 - Roadway Segment Daily Capacity and LOS Standards

Street Classification	LOS/ADT Thresholds				
	A	B	C	D	E
Expressway (6-lane)	< 30,000	< 42,000	< 60,000	**< 70,000**	< 80,000
Expressway (4-lane)	< 25,000	< 35,000	< 50,000	**< 55,000**	< 60,000
Prime Arterial (6-lane)	< 25,000	< 35,000	< 50,000	**< 55,000**	< 60,000
Major Arterial (6-lane)	< 20,000	< 28,000	< 40,000	**< 45,000**	< 50,000
Major Arterial (5-lane)	< 17,500	< 24,500	< 35,000	**< 40,000**	< 45,000
Major Arterial (4-lane)	< 15,000	< 21,000	< 30,000	**< 35,000**	< 40,000
Secondary Collector (4-lane w/ two-way left-turn lane)	< 10,000	< 14,000	< 20,000	**< 25,000**	< 30,000
Secondary Collector (4-lane w/out two-way left-turn lane with turn pockets)	< 9,000	< 13,000	< 18,000	**< 22,000**	< 25,000
Collector (2-lane commercial fronting)	< 5,000	< 7,000	< 10,000	**< 13,000**	< 15,000
Collector (2-lane residential streets in Circulation Element)	< 4,000	< 5,500	< 7,500	**< 9,000**	< 10,000
Local Street (residential streets NOT in the Circulation Element)			<2,200[1]		

Source: City of Oceanside Traffic Impact Analysis Guidelines (August 2020)

Note:
[1] City's Circulation Element (September 2012)
Bold number indicates the ADT thresholds for acceptable LOS.

These standards are generally used as long-range planning guidelines to determine the functional classification of roadways. The actual capacity of a roadway varies according to its physical attributes. Typically, the performance and LOS of a roadway segment is heavily influenced by the ability of its intersections to accommodate peak hour traffic volumes. For the purposes of this traffic analysis, LOS D or better is considered acceptable for circulation element roadway segments.

2.3 Peak Hour Intersection LOS Standards and Thresholds

This section presents the methodologies used to perform peak hour intersection capacity analyses at signalized and unsignalized intersections within the study area. The following assumptions were utilized in conducting all intersection LOS analyses:

- Peak Hour Factor (PHF) – Field-collected PHF for Existing and Near-Term Year 2025 Base Conditions. A PHF of 0.95 was assumed for Horizon Year 2050 analysis.
- Lane Utilization Factor – HCM 6th Edition defaults were used for all scenarios.
- Conflicting Pedestrians/Bicycles – Existing pedestrian and bicycle counts are utilized for all scenarios.
- Signal Timing – Based on existing signal timing plans (as of October 2022), provided in **Appendix B**.

2.3.1 Signalized Intersections

The analysis of signalized intersections utilized the operational analysis procedure as outlined in the Highway Capacity Manual (HCM) 6th Edition signalized (Chapter 19) intersection analysis methodology. This method defines LOS in terms of delay, or more specifically, average stopped delay per vehicle. Delay is a measure of driver and/or passenger discomfort, frustration, fuel consumption and lost travel time. This technique uses 1,900 vehicles per hour per lane (VPHPL) as the maximum saturation volume of an intersection. This saturation volume is adjusted to account for lane width, on-street parking, pedestrians, traffic composition (i.e., percentage trucks) and shared lane movements (i.e., through and right-turn movements originating from the same lane). The LOS criteria used for the analysis of signalized intersections are described in **Table 2.3**, identifying the thresholds of control delays and the associated LOS. The computerized analysis of intersection operations was performed utilizing the Synchro Version 11 traffic analysis software by Trafficware Ltd.

Table 2.3 - Signalized Intersection LOS Operational Analysis Method

Average Stopped Delay Per Vehicle (Seconds)	LOS Characteristics
<10	LOS A describes operations with very low delay. This occurs when progression is extremely favorable, and most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.
>10– 20	LOS B describes operations with generally good progression and/or short cycle lengths. More vehicles stop than for LOS A, causing higher levels of average delay.
>20 – 35	LOS C describes operations with higher delays, which may result from fair progression and/or longer cycle lengths. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant at this level, although many still pass through the intersection without stopping.
>35– 55	LOS D describes operations with high delay, resulting from some combination of unfavorable progression, long cycle lengths, or high volumes. The influence of congestion becomes more noticeable, and individual cycle failures are noticeable.
>55 – 80	LOS E is considered the limit of acceptable delay. Individual cycle failures are frequent occurrences.
>80	LOS F describes a condition of excessively high delay, considered unacceptable to most drivers. This condition often occurs when arrival flow rates exceed the LOS D capacity of the intersection. Poor progression and long cycle lengths may also be major contributing causes to such delay.

Source: Highway Capacity Manual 6th Edition

2.3.2 Unsignalized Intersections

Unsignalized intersections were analyzed using the Highway Capacity 6th Edition side-street stop (Chapter 20) and all-way stop (Chapter 21) intersection analysis methodology. The computerized analysis of intersection operations was performed utilizing the Synchro Version 11 traffic analysis software by Trafficware Ltd.

LOS was determined as follows:

- All-way stop intersections: Reported for the entire intersection as an average value
- Side-street stop intersections: Reported for the worst-case movement

The LOS criteria used for the analysis of unsignalized intersections are described in **Table 2.4**.

Table 2.4 - LOS Criteria for Stop-Controlled Unsignalized Intersections

Average Stopped Delay Per Vehicle (Seconds)	LOS
0 – 10	A
>10 – 15	B
>15 – 25	C
>25 – 35	D
>35 – 50	E
> 50	F

Source: Highway Capacity Manual 6th Edition

2.4 Determination of Project Study Area

Per the City's Traffic Impact Analysis Guidelines, the study area was defined using the following criteria:

- All signalized intersections and signalized project driveways where the project will add 50 or more peak hour (final cumulative) trips in either direction
- All unsignalized intersections and unsignalized project driveways where the project will add 50 or more peak hour (final cumulative) trips in either direction
- All freeway ramp intersections where the project will add 20 or more peak hour (final cumulative) trips in either direction

2.5 City of Oceanside LOS Standards

Per the City's Circulation Element, LOS D or better is considered acceptable for study roadway segments and intersections. The Traffic Impact Analysis Guidelines provides the following thresholds to determine if the Proposed Project is required to provide improvements for study area facilities:

- Implementation of the Proposed Project triggers a roadway segment operating at acceptable LOS to operate at unacceptable LOS or increases the V/C ratio for a study roadway segment that is already operating at unacceptable LOS by more than 0.02.
- Implementation of the Proposed Project triggers an intersection operating at acceptable LOS to operate at unacceptable LOS or increases the average delay for a study intersection that is already operating at unacceptable LOS by more than 2.0 seconds.

Improvements should be identified to increase performance to acceptable or pre-project conditions under each scenario. Improvements should be considered as follows on a case-by-case basis:

- Improvements should be consistent with the General Plan
- Improvements for transit, bike, and pedestrian facilities should be given priority in Transit Priority Areas or Smart Growth Opportunity Area as identified by SANDAG
- Projects in Transit Priority Areas or Smart Growth Opportunity Area as identified by SANDAG, that are consistent with the General Plan at the time of project application, should not be denied due to the inability to provide roadway improvements (i.e., existing right of way is constrained, etc.)

3.0 Project Traffic

This chapter describes the Proposed Project including the Proposed Project's trip generation, trip distribution patterns, and project trip assignment.

3.1 Project Trip Generation

Per the City's Traffic Impact Analysis Guidelines, trip generation rates were derived from the SANDAG's (not so) Brief Guide to Vehicular Traffic Generation Rates for the San Diego Region (April 2002). **Table 3.1** displays the projected daily, as well as AM and PM peak hour, project trip generation.

Table 3.1 - Project Trip Generation

Land Use	Units	Trip Rate	ADT	AM Peak Hour					PM Peak Hour				
				%	Trips	Split	In	Out	%	Trips	Split	In	Out
Multi-Family (6-20 DU/acre)	164 DU	8/DU	1,312	8	105	2:8	21	84	10	132	7:3	92	40

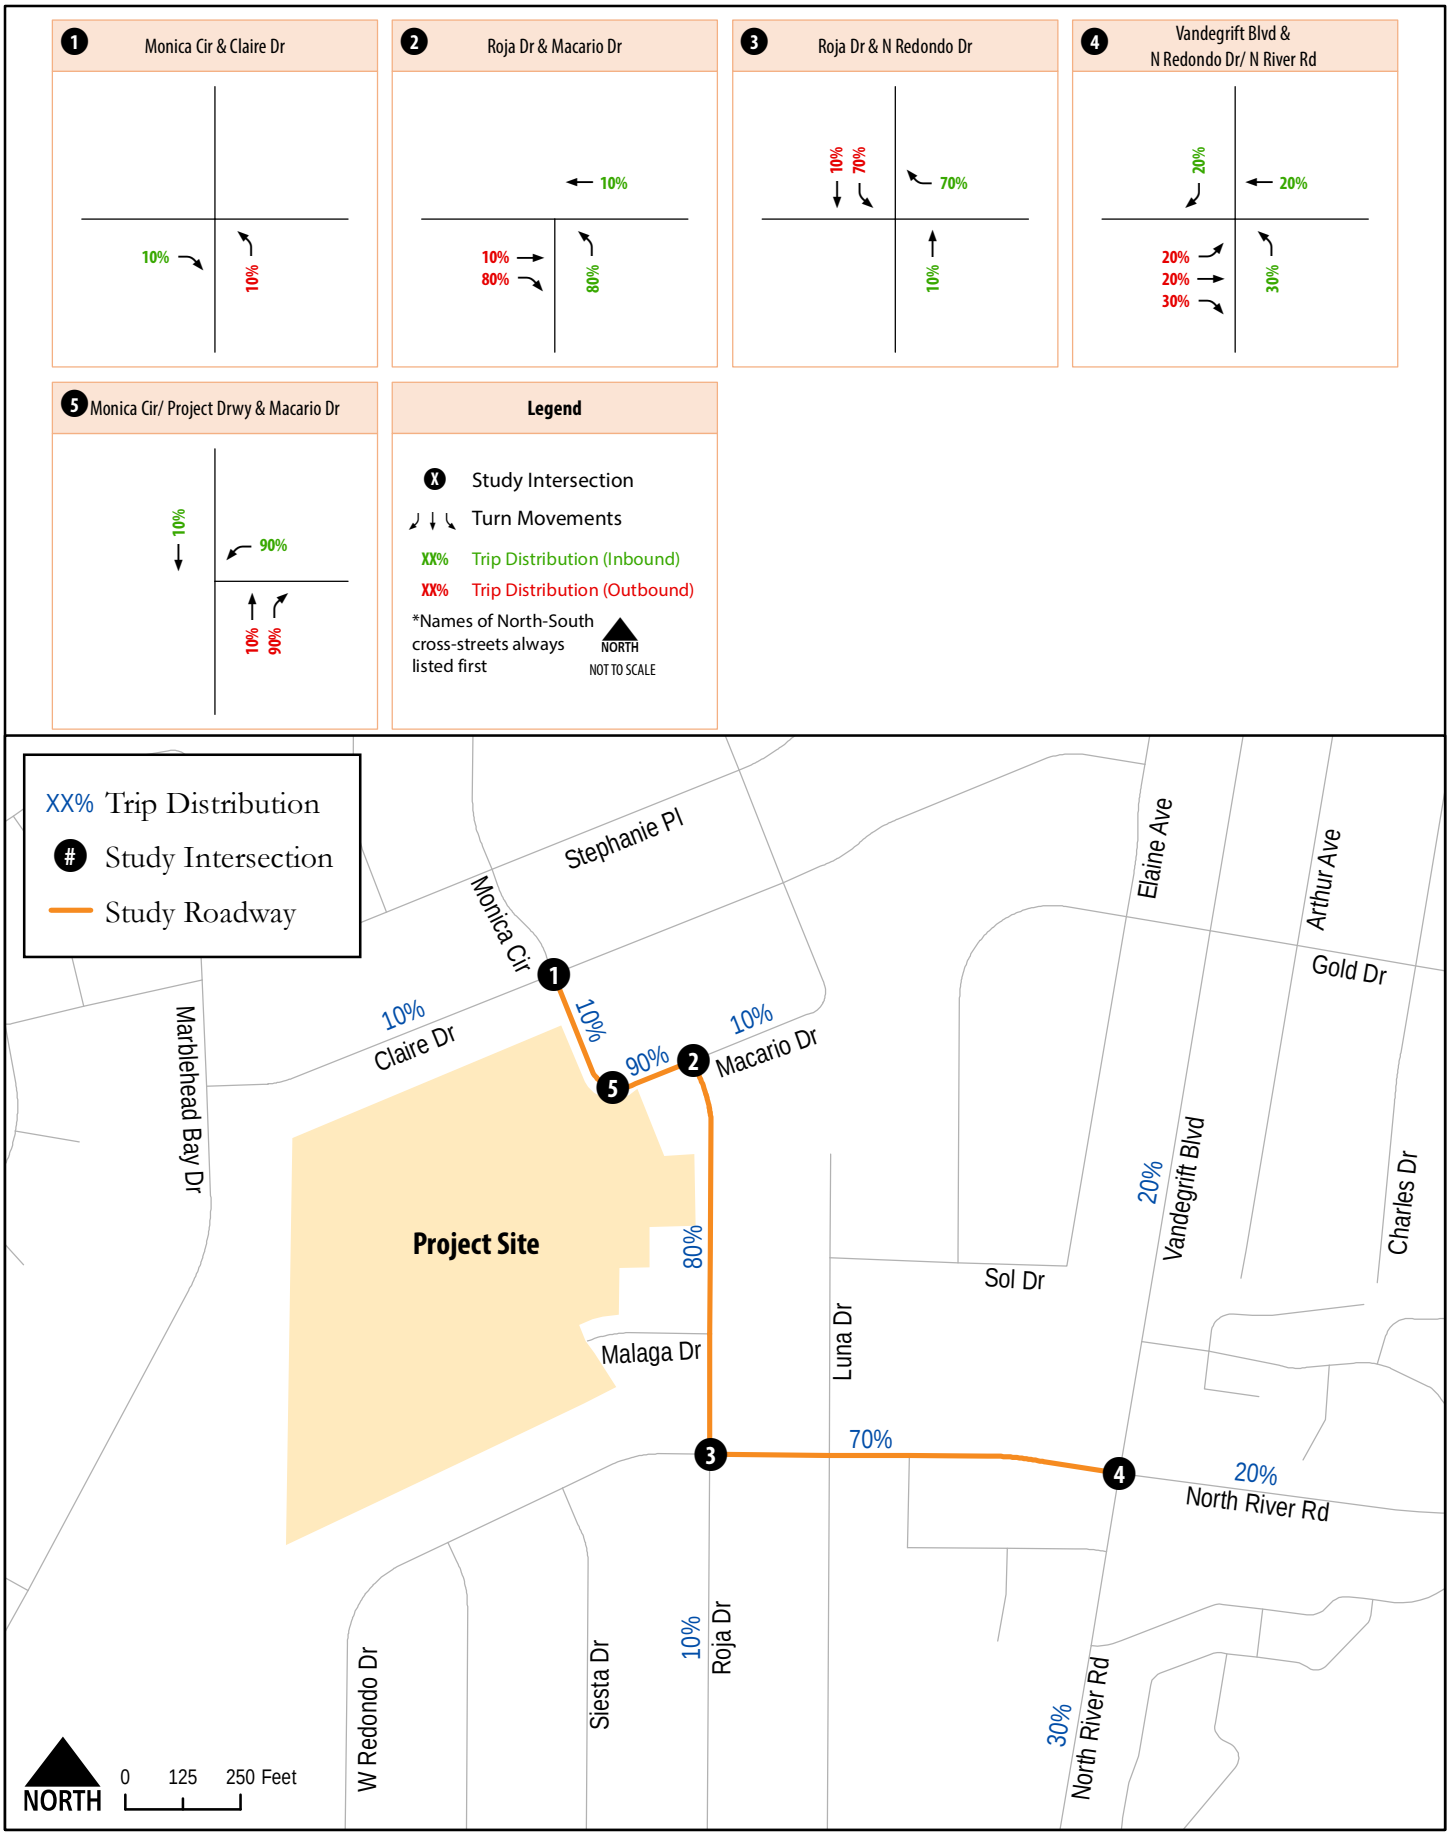
Source: SANDAG (not so) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002)

Notes:
ADT = Average Daily Traffic
DU = Dwelling Unit

As shown, the Proposed Project is anticipated to generate 1,312 daily trips, including 105 trips (21-in/84-out) during the AM peak hour and 132 (92-in/40-out) trips during the PM peak hour.

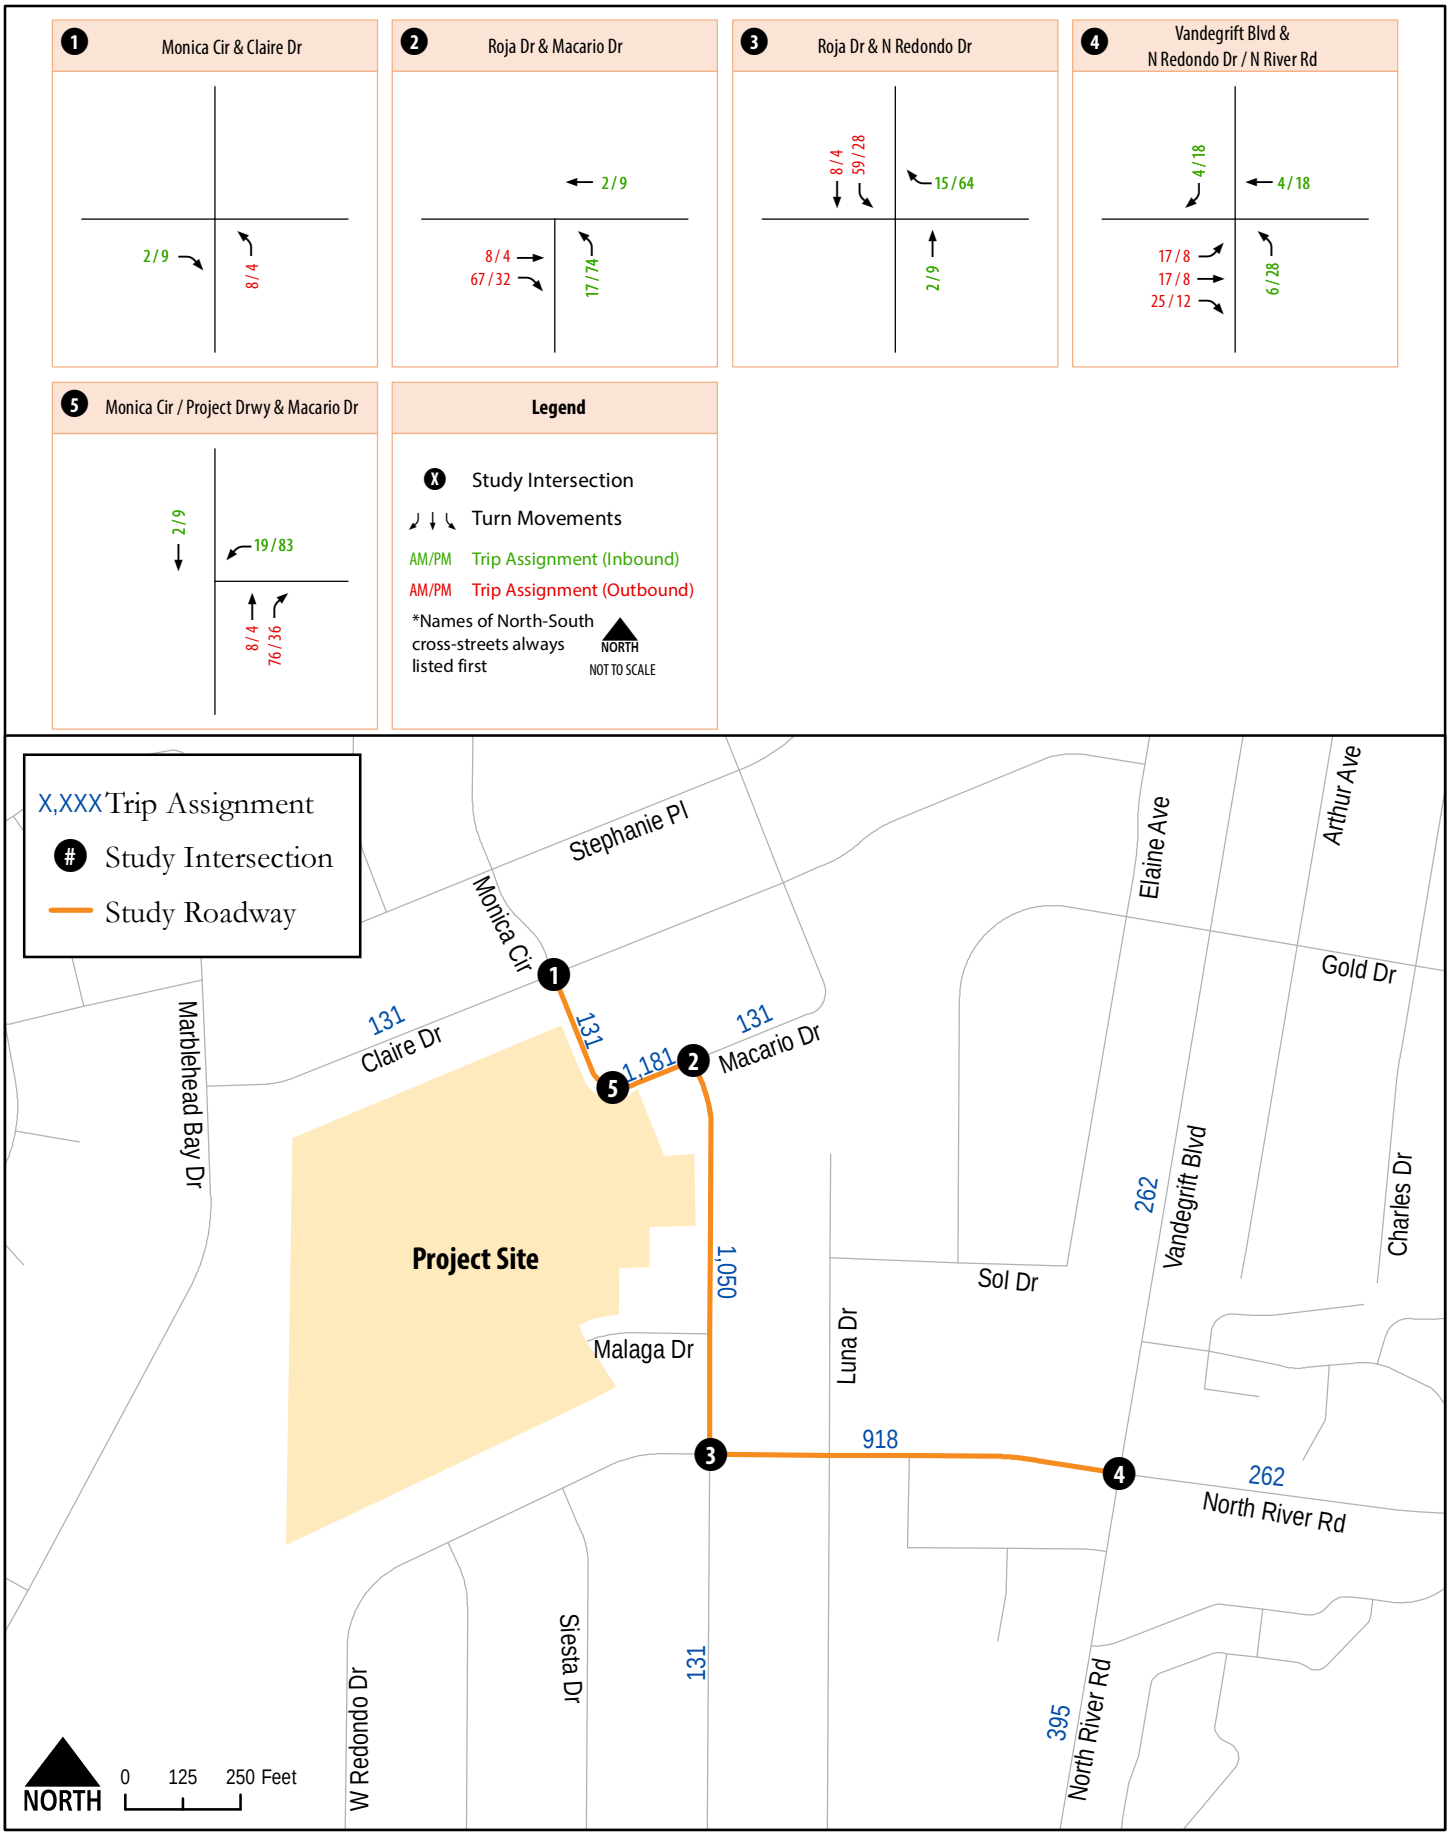
3.2 Project Trip Distribution and Assignment

The project trip distribution was manually developed based on the geographical location of the Project, as well as the characteristics of the proposed and surrounding land uses. **Figure 3.1** displays the regional trip distribution for the Proposed Project. Based upon the project trip distribution patterns, AM/PM peak hour project trips were assigned to the adjacent roadway network. **Figure 3.2** displays the Proposed Project's intersection trip assignment.



Pacifica Housing Project
Local Transportation Study

Figure 3.1
Project Trip Distribution



Pacifica Housing Project
Local Transportation Study

Figure 3.2
Project Trip Assignment

3.3 Project Study Area

Based on the criteria previously outlined in Chapter 2.4, the project trip assignment shown in Figure 3.2, and preliminary project scoping with City of Oceanside, the following four (4) roadway segments and five (5) intersections were included for analysis:

Roadway Segments

A. Monica Circle, between Claire Drive and Macario Drive
B. Macario Drive, between Monica Circle and Roja Drive
C. Roja Drive, between Macario Drive and North Redondo Drive
D. North Redondo Drive, between Roja Drive and North River Road

Intersections

1. Monica Circle & Claire Drive (Side-Street Stop-Controlled)
2. Roja Drive & Macario Drive (All-Way Stop-Controlled)
3. Roja Drive & North Redondo Drive (Side-Street Stop-Controlled)
4. Vandergrift Boulevard & North Redondo Drive/North River Road (Signal)
5. Monica Circle/Project Driveway & Macario Drive (Side-Street Stop-Controlled)

Figure 3.3 displays the overall project study area.

Local Transportation Study

Figure 3.3
Project Study Area

4.0 Existing Conditions

This chapter provides a qualitative description of the transportation facilities located in the Proposed Project study area. An LOS analysis of the existing operations of the local transportation network facilities is also provided for study roadway segments and intersections.

4.1 Existing Transportation Network

Access to the Proposed Project from the regional transportation network will be provided via California State Route 76 (SR-76) highway, North River Road, North Redondo Drive, Roja Drive, Monica Circle, and Macario Drive. These facilities will either provide a direct connection to Proposed Project, via project driveway, or will provide a critical link between the Proposed Project and the regional transportation network. **Table 4.1** summarizes the existing physical characteristics of roadways within the study area, while **Figure 4.1** displays the roadway classifications and study intersection geometrics under Existing Conditions.

Table 4.1 - Existing Transportation Network Characteristics

Roadway	From	To	Number of Lanes	Curb to Curb Distance	Median Type	Roadway Classification[1]	Sidewalk?	Bike lanes?	Transit Route	Posted Speed Limit
Monica Circle	Claire Drive	Macario Drive	1 NB/1 SB	35'	Undivided	Local Street	Both Sides	None	None	25 MPH
Macario Drive	Monica Circle	Roja Drive	1 EB/1 WB	39'	Undivided	Local Street	Both Sides	None	None	25 MPH
Roja Drive	Macario Drive	North Redondo Drive	1 NB/1 SB	36'	Undivided	Local Street	Both Sides	None	None	25 MPH
North Redondo Drive	Roja Drive	Vandegrift Boulevard/North River Road	1 EB/1 WB	47'	Undivided	Local Street	Both Sides	None	None	25 MPH
Vandegrift Boulevard	Gold Drive	North Redondo Drive	3 NB/2 SB	88'	Raised	Major Arterial	Both Sides	Class II	309 311 315	50 MPH
North River Road	North Redondo Drive	College Boulevard	3 NB/2 SB	82'	Raised	Major Arterial	Both Sides	Class II	303 309 313 315	45 MPH

Roadway Classification and Intersection Geometrics
Existing Conditions

4.2 Active Transportation

This section discusses the project site's active transportation modes.

4.2.1 Transit Access

The project site is within one half mile of the transit lines serviced by North County Transit District (NCTD) described below:

- Bus Route 303 – This bus route is serviced along North River Road in the northbound/southbound direction within the project study area. Nearest bus stop within a half mile are located at the San Luis Rey Transit Center. This bus route connects the Oceanside Transit Center, the San Luis Rey Transit Center, and the Vista Transit Center. The route operates at 15-minute headways on weekdays and weekends.
- Bus Route 309 – This bus route is serviced along Vandegrift Boulevard and North River Road in the northbound/southbound direction within the project study area. Nearest bus stops within a half mile are located at the Vandegrift Boulevard & Gold Drive intersection as wells as the San Luis Rey Transit Center. This bus route connects the San Luis Rey Transit Center, the El Camino Real Sprinter Station, the Plaza Camino Real Transit Center, and the Encinitas Station. The route operates at 30-minute headways throughout the week.
- Bus Route 311 – This bus route is serviced along Vandegrift Boulevard in the northbound/southbound direction within the project study area. Nearest bus stops within a half mile are located at the Vandegrift Boulevard & Gold Drive intersection as wells as the San Luis Rey Transit Center. This bus route connects the San Luis Rey Transit Center and the Rancho Del Oro Sprinter station. The route operates at 20 to 30-minute headways during morning peak hours and one-hour headways during evening peak hours Monday through Friday. This route does not operate on weekends.
- Bus Route 313 – This bus route is serviced along North River Road in the northbound/southbound direction within the project study area. Nearest bus stop within a half mile are located at the San Luis Rey Transit Center. This bus route connects the Oceanside Transit Center and the San Luis Rey Transit Center. The route operates on one-hour headways Monday through Friday and does not operate on the weekends.
- Bus Route 315 – This bus route is serviced along Vandegrift Boulevard and North River Road in the northbound/southbound direction within the project study area. Nearest bus stops within a half mile are located at the Vandegrift Boulevard & Gold Drive intersection as wells as the San Luis Rey Transit Center. This bus route connects the San Luis Rey Transit Center, the Plaza Camino Real Transit Center, and the Carlsbad Village Station. The route operates at 60-minute headways throughout the week.

Bus route schedules are provided in **Appendix C.** An inventory of amenities present at each stop within a half mile was collected. **Table 4.2** identifies the amenities provided at each transit stop.

Table 4.2 - Transit Amenities

Stop ID	Stop Name	Bench	Shelter	Bus Stop Sign	ADA Accessible Pad	Connection to Adjacent Sidewalk	Trash Receptacle	Lighting	Bicycle Parking	Transit Route Information	Shading Elements	Transit System Information
-	San Luis Rey Transit Center	●	●	●	●	●	●	●	●			
21592	Vandegrift Bl / Gold Dr (northbound)			●	●	●	●	●			●	
21114	Vandegrift Blvd / Gold Dr (southbound)	●		●	●	●	●	●				

Source: CR Associates (2023)

Based on the preliminary review of the Proposed Project's site plan, the Proposed Project would not conflict with existing or planned transit facilities and would not result in any impacts to transit facilities.

4.2.2 Bicycle

Under Existing conditions, Class II bicycle facilities exist along Vandegrift Boulevard and North River Road. Per the City of Oceanside Bicycle Master Plan (2017 Update), there are no planned bicycle facilities improvements within the project study area. Based on the preliminary review of the Proposed Project's site plan, the Proposed Project would not conflict with existing bicycle facilities and would not result in any impacts to bicyclist safety and accessibility.

4.2.3 Pedestrian

Sidewalks are present along both sides of the roadway for all roadways within a half mile walking distance from the project side. These existing pedestrian facilities are mostly surrounded with single family residential land uses with exception to the commercial land use fronting North Redondo Drive and Vandegrift Boulevard.

Sidewalks are proposed along the project frontage along Monica Circle and Macario Drive. Sidewalks are also proposed throughout the internal roadways providing direct access to the dwelling units as well as on-site amenities (pet station, play areas, picnic pavilion, benches, and gardens).

Based upon review of the project site plan, the following recommendations are provided:

- Curb ramps at the project driveways are recommended to be reconstructed, if needed, with detectable surface warning tactiles (yellow truncated domes) as well as meeting all ADA requirements
- Existing cross-walks or other pedestrian features along the project frontage should be maintained or improved to City standards
- To improve first/last-mile connection to the nearest transit stop, crosswalks (or high-visibility crosswalks) are recommended at the following intersection:
    - Vandegrift Boulevard and North Redondo Drive / North River Road – all legs

With implementation of the recommendation listed above, the overall pedestrian environment should be enhanced for both walkability and safety and would not result in any impacts to pedestrian facilities.

4.3 Existing Intersection Volumes

The study area intersections and roadway traffic counts were conducted on September 27, 2022, by Counts Unlimited, Inc. However, it is important to note that the daily traffic counts at two locations (Monica Circle from Claire Drive to Macario and Roja Drive from Macario Drive to North Redondo Drive) had to be collected on October 4, 2022 as the pneumatic tubes utilized for the traffic counts that were set up on September 27, 2022 had been tampered with and data was compromised. **Figure 4.2** displays both existing daily traffic volumes for study area roadway segments and the AM/PM peak hour turning movements for the study intersections. Traffic count worksheets are provided in **Appendix D**.

4.4 Existing Traffic Conditions

LOS analyses under Existing Conditions were conducted using the methodologies described in Chapter 2. Roadway segment and intersection LOS analysis results are discussed below.

4.4.1 Roadway Segment Analysis

Table 4.3 displays roadway segments and LOS analysis results for study roadway segments under Existing conditions.

Table 4.3 - Roadway Segment LOS Results – Existing Conditions

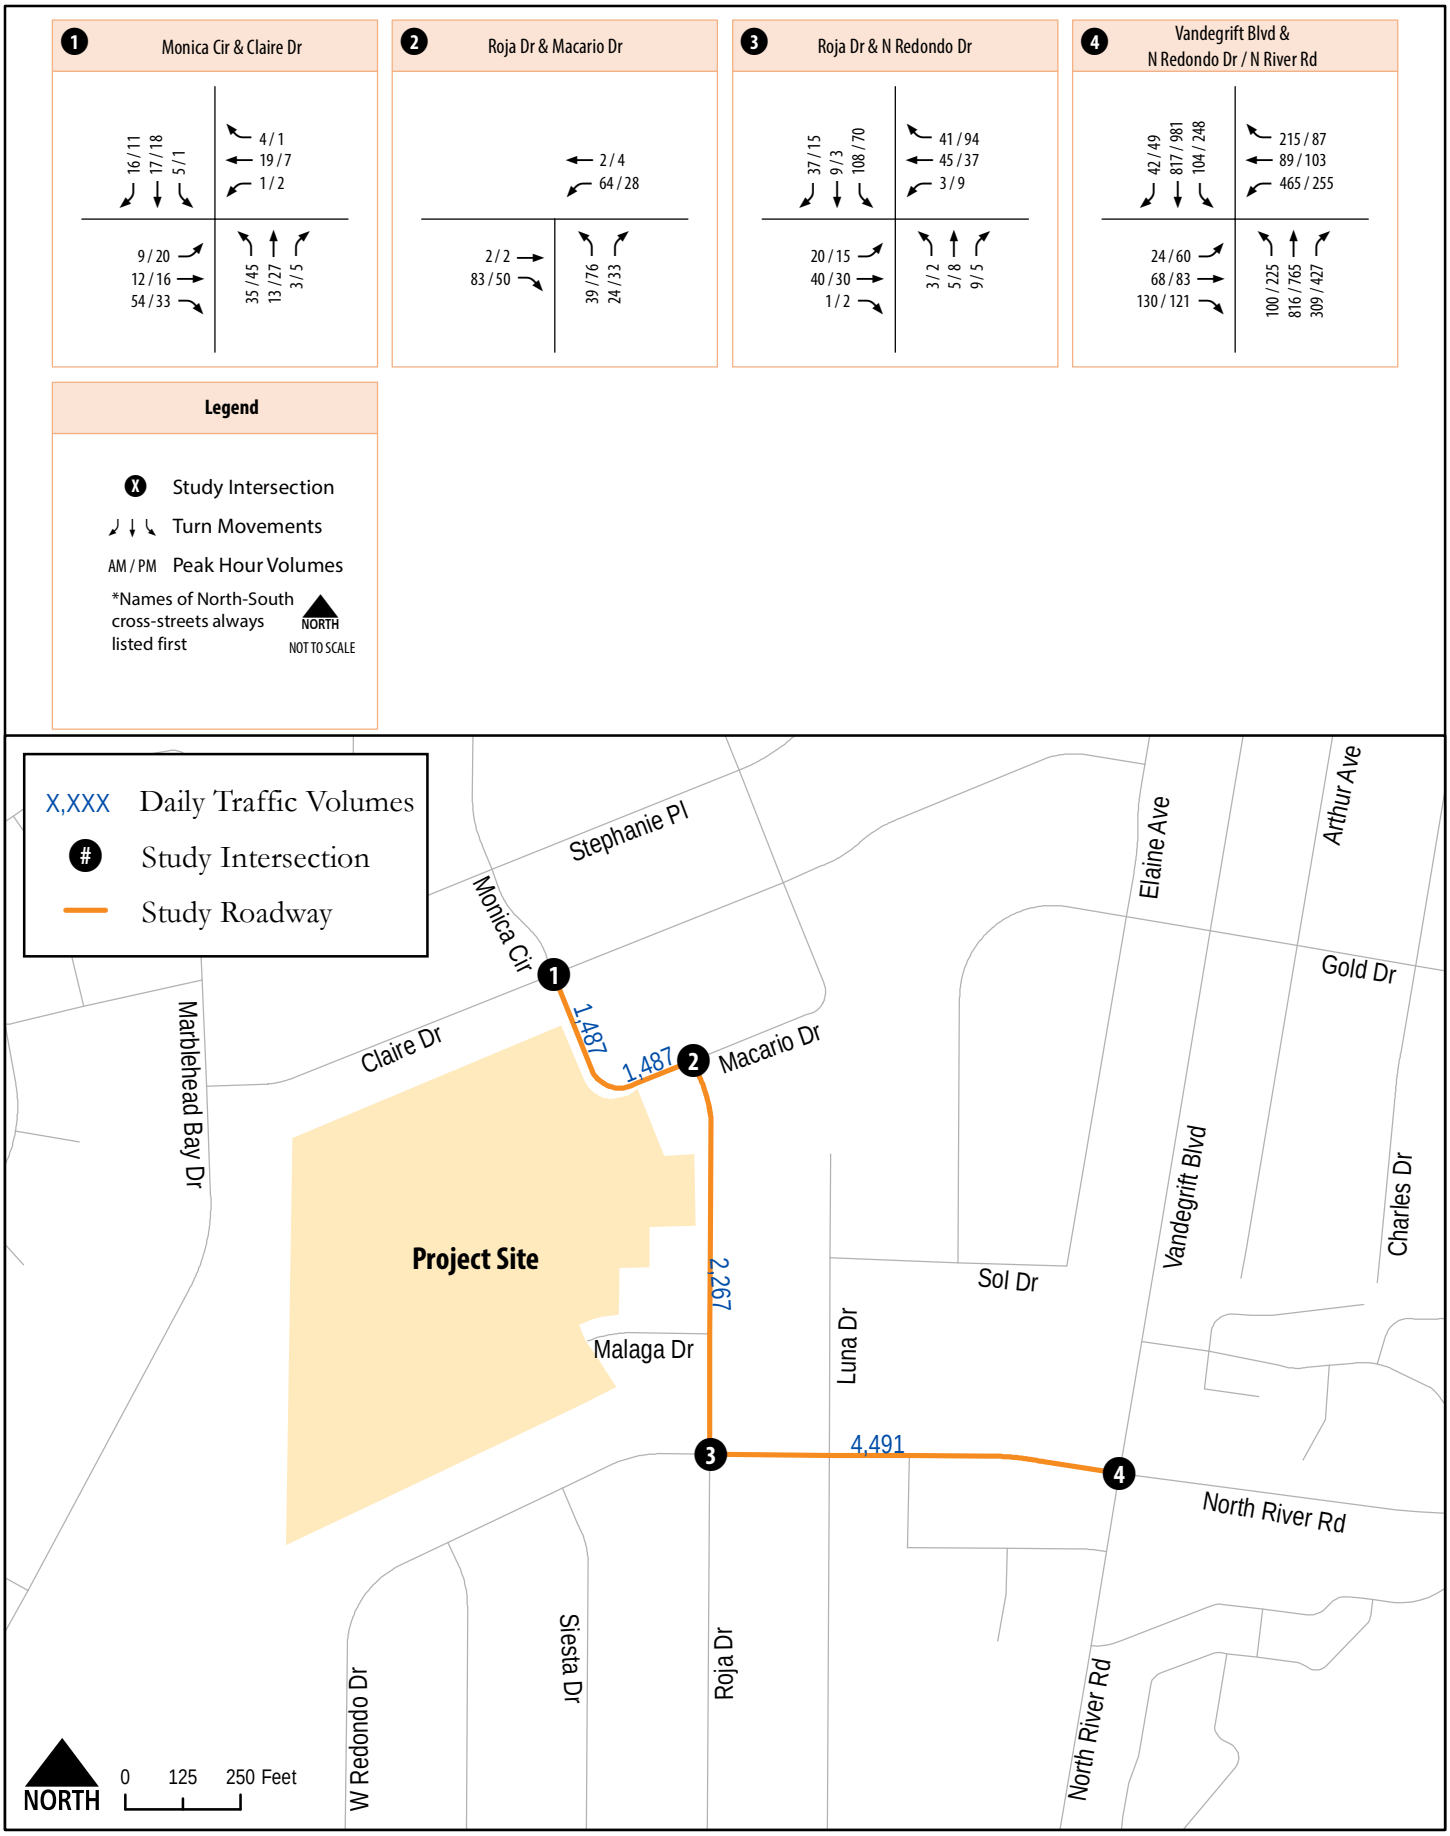
Roadway	Segment	Function Classification	LOS Threshold (LOS E)	LOS	Daily Volume	V/C
Monica Circle	Claire Drive to Macario Drive	Local Street (2-lane)	2,200	C	1,487	0.676
Macario Drive	Monica Circle to Roja Drive	Local Street (2-lane)	2,200	C	1,487	0.676
Roja Drive	Macario Drive to North Redondo Drive	Local Street (2-lane)	2,200	Above Capacity[1]	2,267	1.030
North Redondo Drive	Roja Drive to Vandergrift Boulevard	Collector[2] (2-lane)	7,500	B	4,491	0.599

Source: CR Associates (2023)

Note:
[1] Based upon the City's Circulation Element, the roadway is classified as a Local Street with a daily volume threshold of 2,200 for LOS C. If the daily volume exceeds the 2,200 threshold, the roadway segment operates above capacity.
[2] Functional classification based upon the curb-to-curb distance.
V/C = Volume/Capacity

As shown in Table 4.3, all study roadway segments currently operate at LOS C or better under Existing Conditions with the exception of the following roadway segment:

- Roja Drive, between Macario Drive and North Redondo Drive (Above Capacity)



Pacifica Housing Project
Local Transportation Study

Figure 4.2
Traffic Volumes
Existing Conditions

4.4.2 Intersection Analysis

Table 4.4 displays intersection LOS and average vehicle delay results for the key study area intersections under Existing Conditions. LOS calculation worksheets for Existing Conditions are provided in **Appendix E**.

Table 4.4 - Peak Hour Intersection LOS Results – Existing Conditions

#	Intersection	Control Type	AM Peak Hour		PM Peak Hour	
			Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS
1	Monica Circle & Claire Drive	SSSC	10.0	B	10.1	B
2	Roja Drive & Macario Drive	AWSC	7.5	A	7.5	A
3	Roja Drive & N. Redondo Drive	SSSC	12.2	B	10.7	B
4	Vandegrift Boulevard / N. River Road & N. Redondo Drive	Signal	36.3	D	42.6	D

Source: CR Associates (2023)

Note:
SSSC = Side-Street Stop Controlled. For SSSC intersections, the delay shown is the worst delay experienced by any of the movements.
AWSC= All-Way Stop Controlled

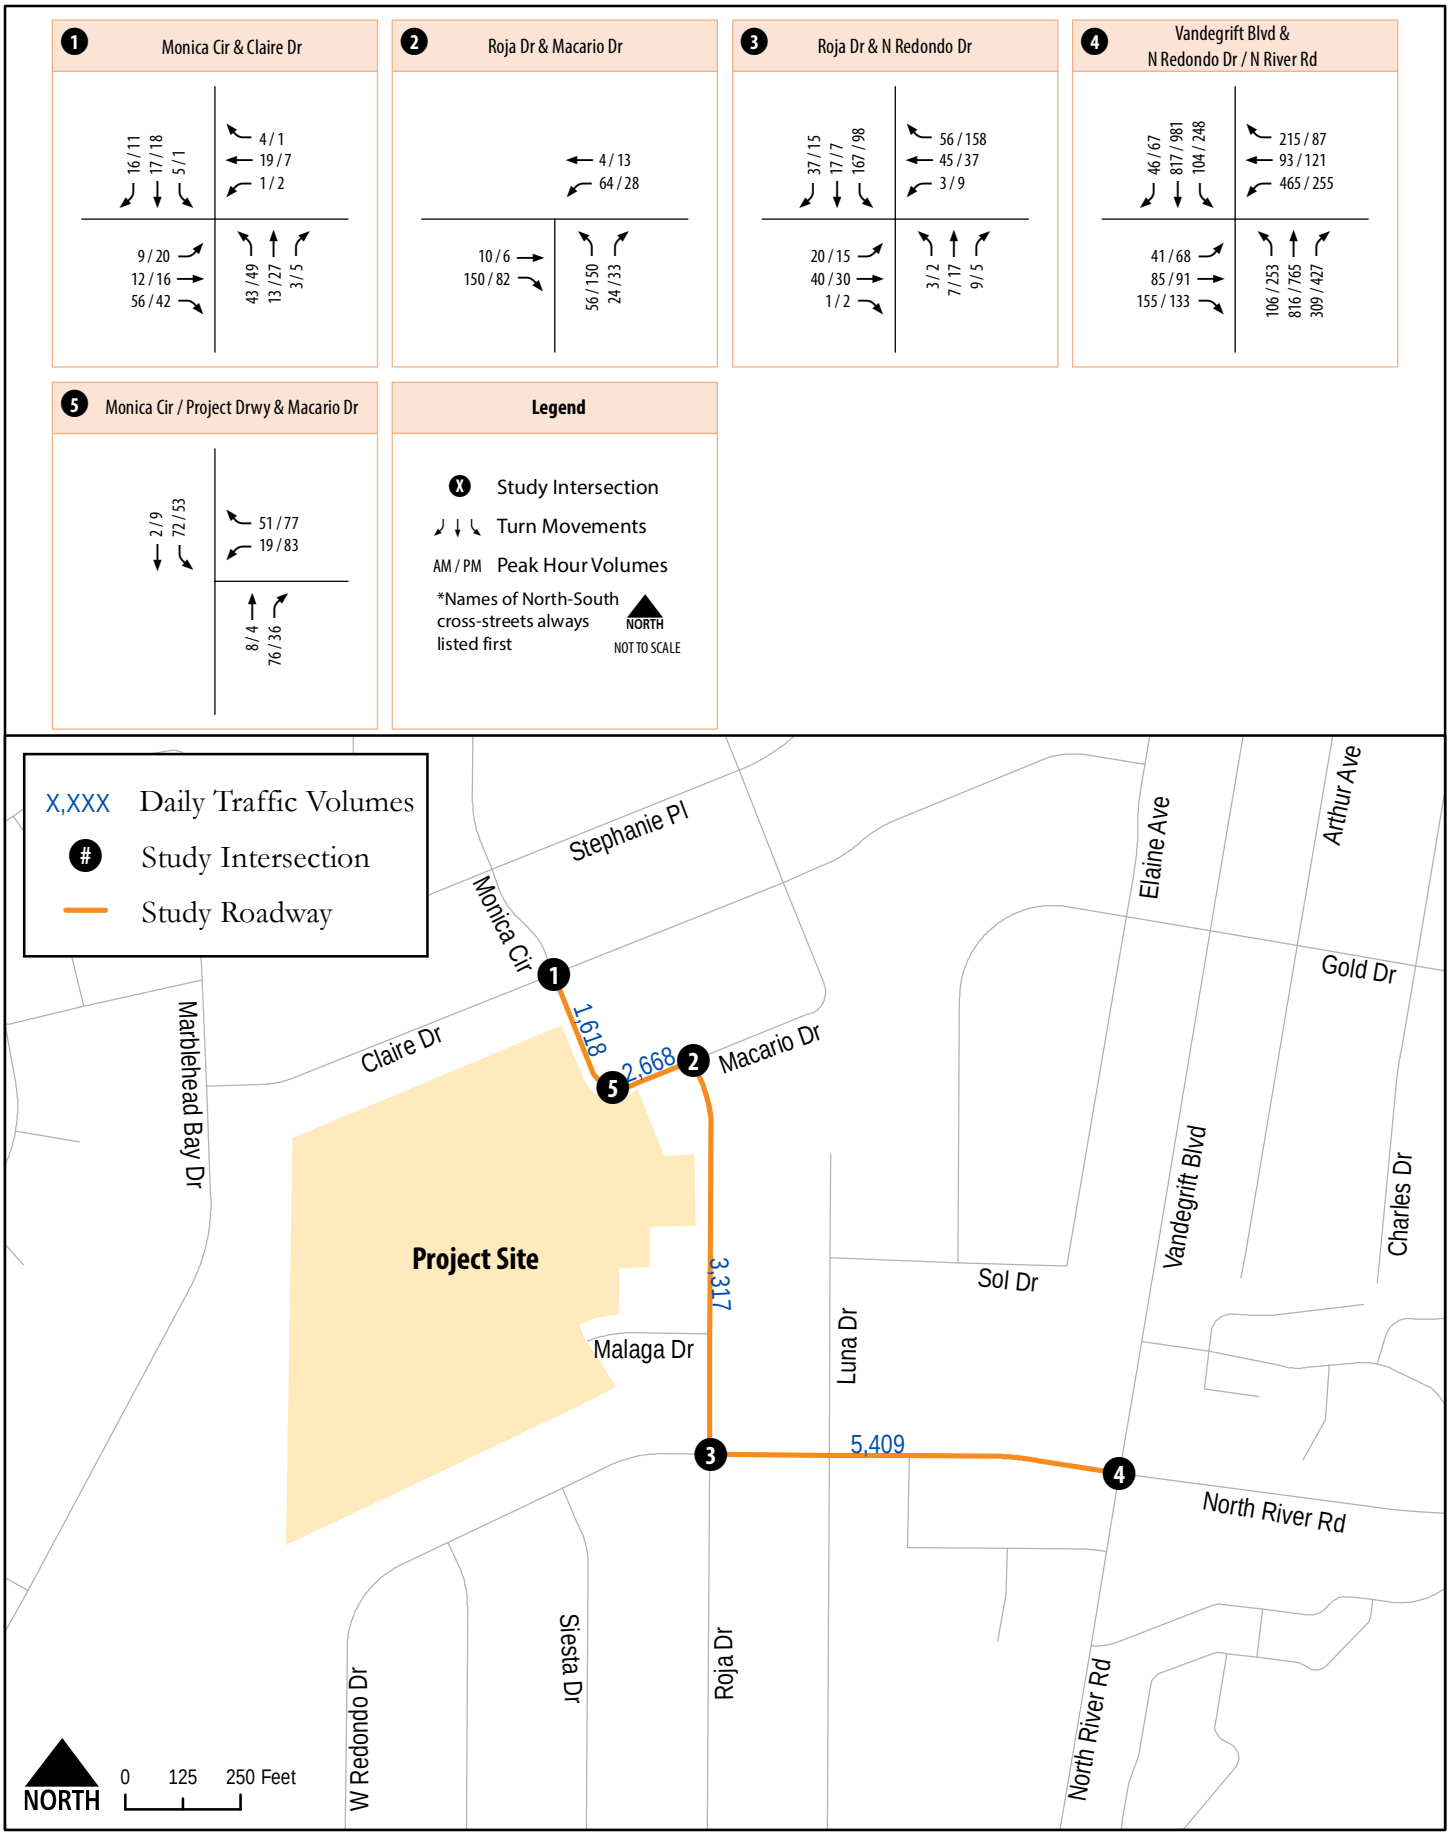
As shown in Table 4.4, all study area intersections currently operate at acceptable LOS D or better under Existing Conditions.

4.5 Existing with Project Roadway Network and Traffic Volumes

Intersection geometrics under the Existing with Project conditions were assumed to be identical to the Existing conditions geometrics with exception to the following project feature:

- Enhancement of existing driveway, on the south leg of the Monica Circle and Macario Drive intersection, with special paving, landscaping, and monumentation to announce entry to the project site. This project driveway will provide the only access point to the project site which will function as a side-street stop-controlled intersection with full access.

Peak hour intersection volumes for the Existing with Project conditions were derived by combining the Proposed Project trips (as previously shown in Figure 3.2) to the Existing traffic volumes (as previously shown in Figure 4.2). Peak hour intersection volumes for this scenario are displayed in **Figure 4.3**.



Pacifica Housing Project
Local Transportation Study

C+R

Figure 4.3
Traffic Volumes
Existing with Project Conditions

4.6 Existing with Project Traffic Conditions

LOS analyses under Existing with Project conditions were conducted using the methodologies described in Chapter 2. Roadway segment and intersection LOS analysis results are discussed below.

4.6.1 Roadway Segment Analysis

Table 4.5 displays roadway segments and LOS analysis results for study roadway segments under Existing with Project conditions.

As shown in Table 4.5, the following study roadway segments are projected to operate above capacity under Existing with Project conditions:

- Macario Drive, between Monica Circle and Roja Drive
- Roja Drive, between Macario Drive and North Redondo Drive

It should be noted that the study roadway segments listed above are all local streets (non-Circulation Element roadways). Therefore, the determination of the need for roadway improvements shall be coordinated with City of Oceanside staff.

4.6.2 Intersection Analysis

Table 4.6 displays intersection LOS and average vehicle delay results for the key study area intersections under Existing with Project Conditions. LOS calculation worksheets for Existing with Project conditions are provided in **Appendix F**.

As shown in Table 4.6, all study area intersections are projected to operate at acceptable LOS D or better under Existing with Project conditions. Therefore, no study intersections are anticipated to degrade in LOS to unacceptable levels with implementation of the Proposed Project and no improvements will be required.

Table 4.5 - Roadway Segment LOS Results – Existing with Project Conditions

Roadway	Segment	Function Classification	LOS Threshold (LOS E)	Existing			Existing + Project			ΔV/C	I?
				LOS	Daily Volume	V/C	LOS	Daily Volume	V/C		
Monica Circle	Claire Drive to Macario Drive	Local Street (2-lane)	2,200	C	1,487	0.676	C	1,618	0.735	0.059	N
Macario Drive	Monica Circle to Roja Drive	Local Street (2-lane)	2,200	C	1,487	0.676	Above Capacity[1]	2,668	1.213	0.537	N
Roja Drive	Macario Drive to North Redondo Drive	Local Street (2-lane)	2,200	Above Capacity[1]	2,267	1.030	Above Capacity[1]	3,317	1.508	0.478	N
North Redondo Drive	Roja Drive to Vandergrift Boulevard	Collector[2] (2-lane)	7,500	B	4,491	0.599	B	5,409	0.721	0.122	N

Source: CR Associates (2023)

Notes:
[1] Based upon the City's Circulation Element, the roadway is classified as a Local Street with a daily volume threshold of 2,200 for LOS C. If the daily volume exceeds the 2,200 threshold, the roadway segment operates above capacity.
[2] Functional classification based upon the curb-to-curb distance.
V/C = Volume/Capacity
I? = Improvement Required?

Table 4.6 - Peak Hour Intersection LOS Results – Existing with Project Conditions

#	Intersection	Control Type	Existing Conditions				Existing + Project

Notes:
SSSC = Side-Street Stop Controlled. For SSSC intersections, the delay shown is the worst delay experienced by any of the movements.
AWSC = All-Way Stop Controlled
I? = Improvement Required?

5.0 Near-Term Year 2025 Conditions

This section provides an analysis of Near-Term Year 2025 Base traffic conditions both with and without the Proposed Project. The scenarios analyzed in this section include:

- Near-Term Year 2025 Base
- Near-Term Year 2025 Base with Project

The following section describes near-term developments anticipated to generate additional study area trips and establishes a near-term baseline against which traffic generated by the Proposed Project can be compared to at the project opening day, assumed to be Year 2025. The Near-Term Year 2025 Base scenario traffic volumes is the sum of existing traffic volumes and trips generated by cumulative projects with the study area.

5.1 Cumulative Project Traffic

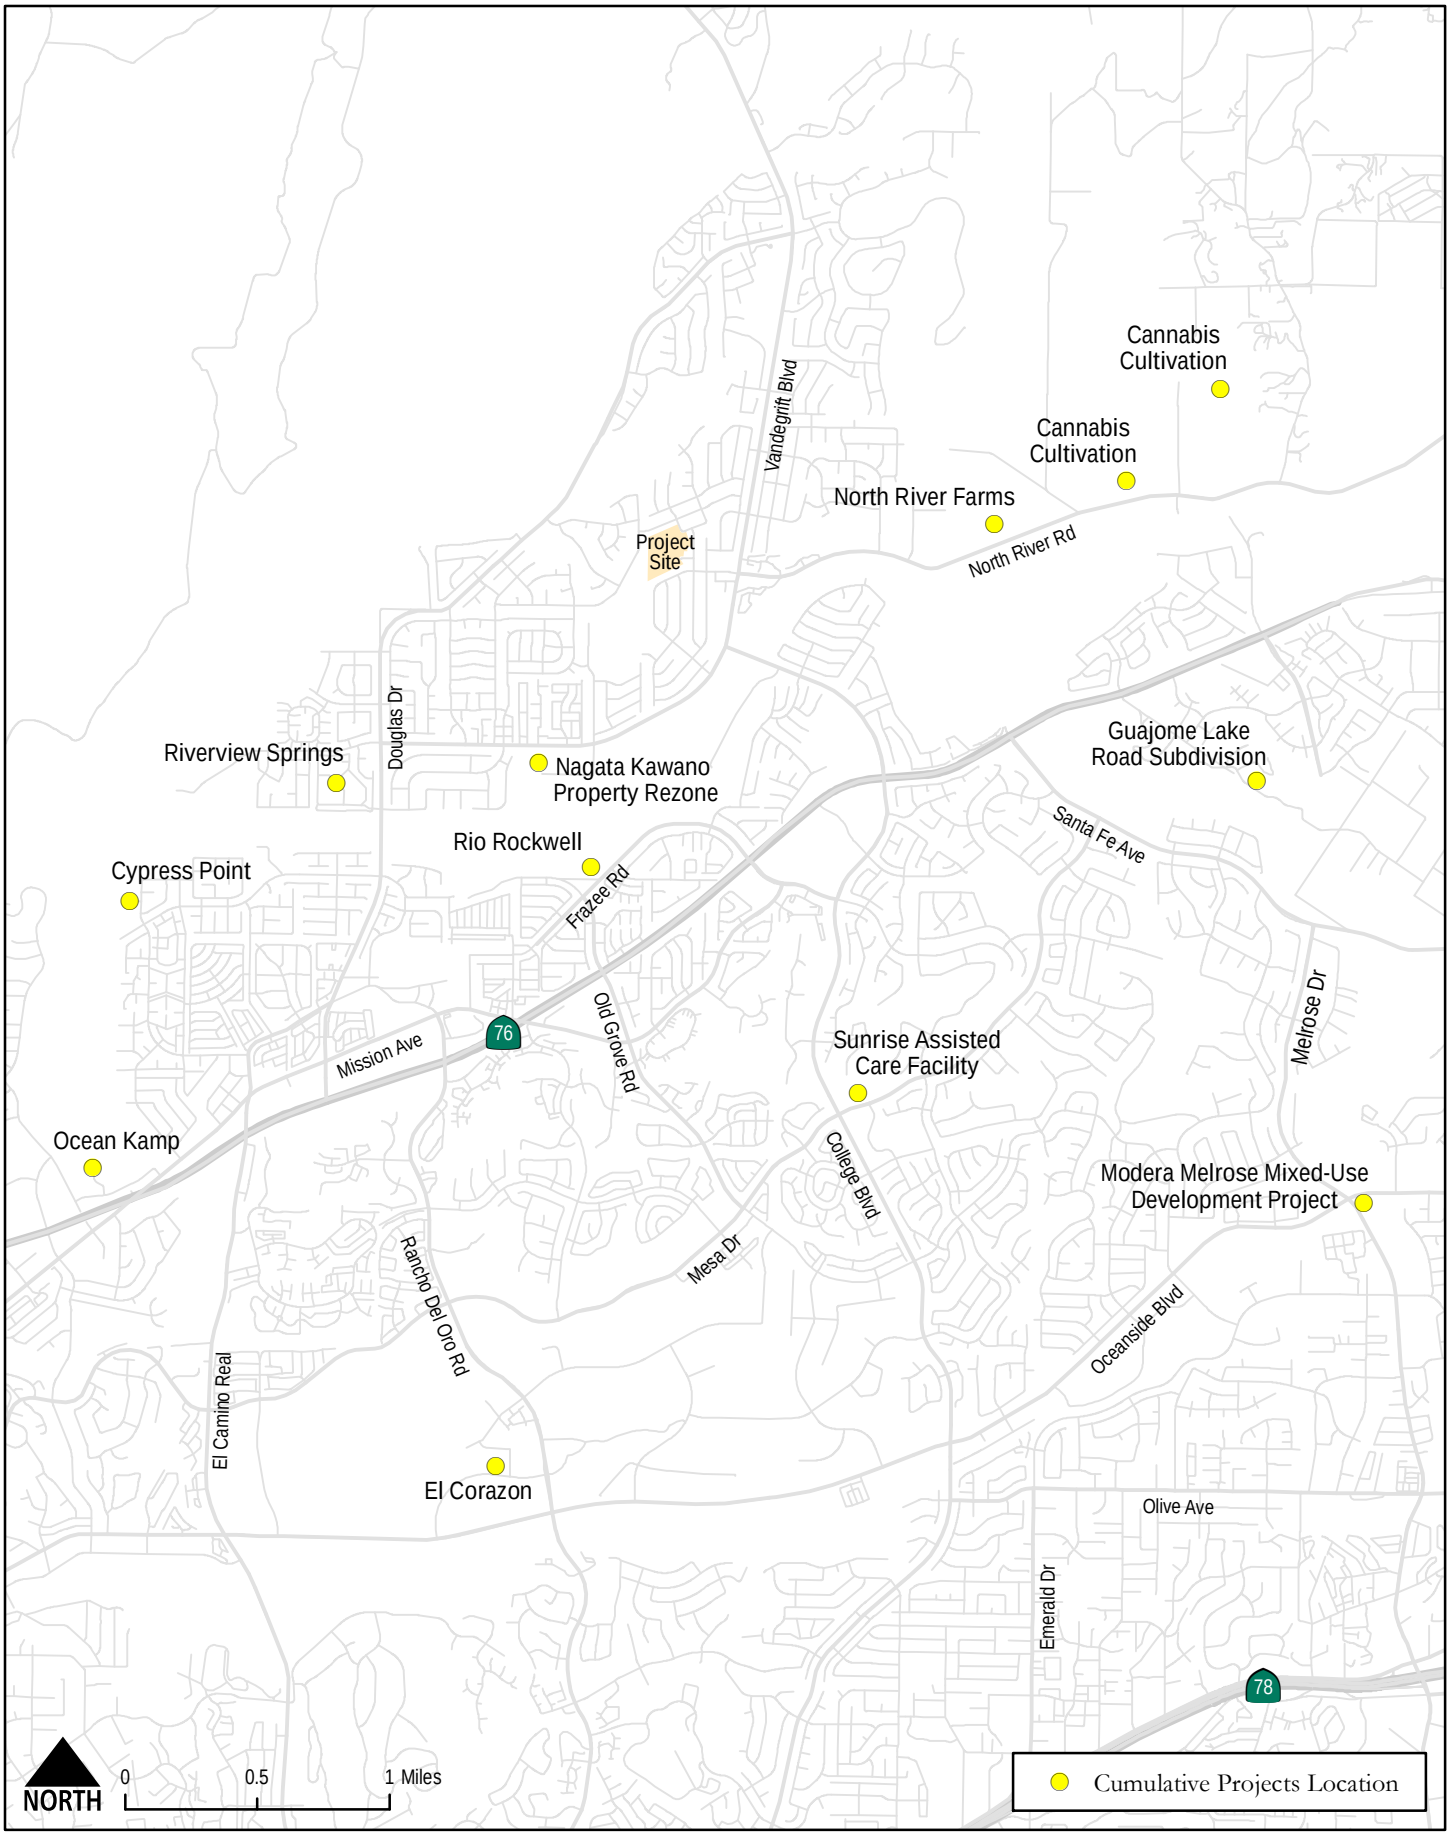
The following twelve (12) projects were identified by City of Oceanside staff as cumulative projects, since they are anticipated to contribute traffic within the project study area by the Proposed Project's opening year:

1. Riverview Springs (ZA16-00009) – This project is located at 4398 Rainier Way, Oceanside, CA 92058. This project proposes to construct an additional 47 dwelling units to the existing development.
2. Nagata Kawano Property Rezone (GPA13-00001 and GPA13-00004) – This project is located at 4617 and 4665 North River Rd, Oceanside, CA 92057. This project proposes to construct 400 multi-family residential dwelling units.
3. North River Farms (GPA16-00002) – This project is located along North River Road on parcels located on both the north and south side of the roadway between Stallion Drive and Wilshire Road. This project proposes to construct 689 dwelling units, a mix comprising of both multi-family and single family detached, as well as 25,000 square feet of commercial land use, 5,000 square feet of restaurant land use, a 30-acre farm, and a 100-room hotel. This project was approved with a maximum of 585 dwelling units, however, this LTS assumes 689 dwelling units to be consistent with the traffic study completed for North River Farms. Therefore, the analysis provided within this LTS is considered to be conservative.
4. Cannabis Cultivation (CUP19-00023) – This project is located the north side of North River Road approximately 715 feet east of Wilshire Road. This project proposes to develop a cannabis cultivation and nursery facility composed of four 22,000 square feet greenhouses on a 10.41-acre parcel.
5. Cannabis Cultivation (CUP19-00025) – This project is located at the northeast quadrant of the Sleeping Indian Road and North River Road intersection. This project proposes to develop a cannabis cultivation and nursery facility composed of twenty 22,000 square feet greenhouses on a 52.54-acre parcel.
6. El Corazon – This project is located at the northwest quadrant of the Rancho Del Oro Road and Oceanside Boulevard intersection. This project proposes to develop a variety of land uses in six separate phases which include the following: senior center (6.0 acres), hotel

(11.0 acres), village commercial (19.0 acres), green waste facility (16.0 acres), soccer facility (55.3 acres), softball complete (12.5 acres), baseball complex (15.7 acres), cultural/community center and library (6.0 acres), park and passive recreation areas (52.8 acres), recreation center (6.8 acres), park-recreation areas (12.8 acres), expansion of the park (19.7 acres), park expansion and public safety center (16.0 acres), interpretive areas, and passive trails.

7. Ocean Kamp Project (T19-00004) – This project is located along Foussat Street on parcels located on both the west and east side of the roadway between the San Luis Rey River and SR-76 highway. This project proposes to develop 700 multi-family residential dwelling units, a 300-room resort hotel, 126,000 square feet of retail and commercial uses, and a wave lagoon.
8. Modera Melrose Mixed-Use Development Project (D21-00011) - The project site is located at the southeast corner of Melrose Drive and West Bobier Drive in the east-central portion of the City of Oceanside. The project proposes to develop a mixed-use infill project which would include 323 multi-family residential units and ground-level commercial space on the 7.4-acre project site. The proposed residential development would include 33 affordable/very low-income rental units and 290 market rate rental units ranging from 666 square feet to 1,429 square feet.
9. Rio Rockwell (GPA18-00001) – This project site is located at the northeast corner of Old Grove Road and Frazee Road. The project proposes a rezone to allow for the construction of 78 new townhomes.
10. Cypress Point (T21-00001) – This project is located west of Los Arbolitos Boulevard, at the intersection of Aspen Street and Pala Road. The project proposes to develop 54 single-family homes on the 7.3-acre project site.
11. Guajome Lake Road Subdivision (T22-00004) – This project site is located at 2837 Guajome Lake Road. The project proposes 84 single-family homes on approximately 10.1 acres of the 16.7-acre project site.
12. Sunrise Assisted Care Facility (P20-00001) – This project site is located at 4700 Mesa Drive. The project proposes a 95 unit, 120 bed, 78,100 square foot senior living and memory care facility.

The traffic generated from the project listed above was included in the Near-Term Year 2025 Base scenario. **Figure 5.1** displays the location of the cumulative projects identified above.



Pacifica Housing Project
Local Transportation Study

Figure 5.1
Cumulative Projects Location

5.2 Cumulative Project Trip Generation

Table 5.1 displays the projected trip generation for the cumulative projects described above. Cumulative project traffic was assigned to the project study area as identified within their respective traffic studies provided by the City of Oceanside. Cumulative project traffic without completed traffic studies were assigned to the project study area utilizing the same methodology used for the Proposed project described in Chapter 3.0, consistent with the City's Traffic Impact Analysis Guidelines. Relevant excerpts from the source of information regarding the cumulative project are provided in Appendix G.

As shown, the cumulative projects are anticipated to generate 65,441 daily trips, including 3,641 trips during the AM peak hour and 6,386 trips during the PM peak hour that will be dispersed throughout the Oceanside community and beyond the Proposed Project's study area. Figure 5.2 displays the cumulative project trip assignment. It should be noted that all vehicle trips generated by the majority cumulative projects listed above are anticipated to only travel through the Vandegrift Boulevard and N. Redondo Drive study intersection (#4).

Table 5.1 - Cumulative Project Trip Generation

Cumulative Project	Land Use	Daily Trips	AM Peak Hour (In/Out)	PM Peak Hour (In/Out)
Riverview Springs (ZA16-00009)	Multi-Family	376	31 (6-in/25-out)	38 (27-in/11-out)
Nagata Property Rezone (GPA13-00004)[1]	Multi-Family	3,200	256 (51-in/205-out)	320 (224-in/96-out)
North River Farms (GPA16-00002[2]	Multi-Family Single Family Detached Commercial Restaurant Farm Hotel	7,921	562 (166-in/396-out)	777 (515-in/262-out)
Cannabis Cultivation (CUP19-00023)[3]	Cannabis Cultivation and Nursery Facility	586	304 (282-in/22-out)	282 (79-in/203-out)
Cannabis Cultivation (CUP19-00025)[3]	Cannabis Cultivation and Nursery Facility	117	61 (56-in/5-out)	56 (15-in/41-out)
El Corazon (Multiple Project #'s)[4]	Variety Land Uses	29,614	1,010 (592-in/418-out)	2,944 (1,483-in/ 1,461-out)
Ocean Kamp Project (T19-00004)[5]	Multi-Family Retail/Commercial Resort Hotel Wave Lagoon	19,040	1,057 (453-in/604-out)	1,532 (902-in/630-out)
Modera Melrose Mixed-Use Development Project[6]	Multi-Family Commercial	2,038	159 (33-in/126-out)	183 (127-in/56-out)
Rio Rockwell[7]	Multi-Family	932	75 (19-in/56-out)	93 (65-in/28-out)
Cypress Point[8]	Single Family Homes	540	42 (13-in/29-out)	53 (37-in/16-out)
Guajome Lake Road Subdivision[9]	Single Family Homes	830	66 (20-in/46-out)	83 (58-in/25-out)
Sunrise Assisted Care Facility[10]	Assisted Care Facility	247	18 (11-in/7-out)	25 (10-in/15-out)
Cumulative Total		**65,441**	**3,641 (1,702-in/ 1,939-out)**	**6,386 (3,542-in/ 2,844-out)**

5.3 Near-Term Year 2025 Base Roadway Network and Traffic Volumes

Study area roadway and intersection geometrics under Near-Term Base conditions were assumed to be identical to the existing roadway geometrics, as shown in Figure 4.1. The Near-Term Base scenario traffic volumes were derived by adding the additional trips generated by the cumulative projects listed in Section 5.1 (Figure 5.2) to the existing traffic volumes (Figure 4.2). **Figure 5.3** displays the average daily roadway and peak hour intersection volumes for the study roadway segments and intersections under the Near-Term Base conditions.

5.4 Near-Term Year 2025 Base Traffic Conditions

LOS analyses under Near-Term Year 2025 Base Conditions were conducted using the methodologies described in Chapter 2. Roadway segment and intersection LOS analysis results are discussed below.

5.4.1 Roadway Segment Analysis

Table 5.2 displays roadway segments and LOS analysis results for study roadway segments under Near-Term Year 2025 Base conditions.

Table 5.2 - Roadway Segment LOS Results – Near-Term Year 2025 Base Conditions

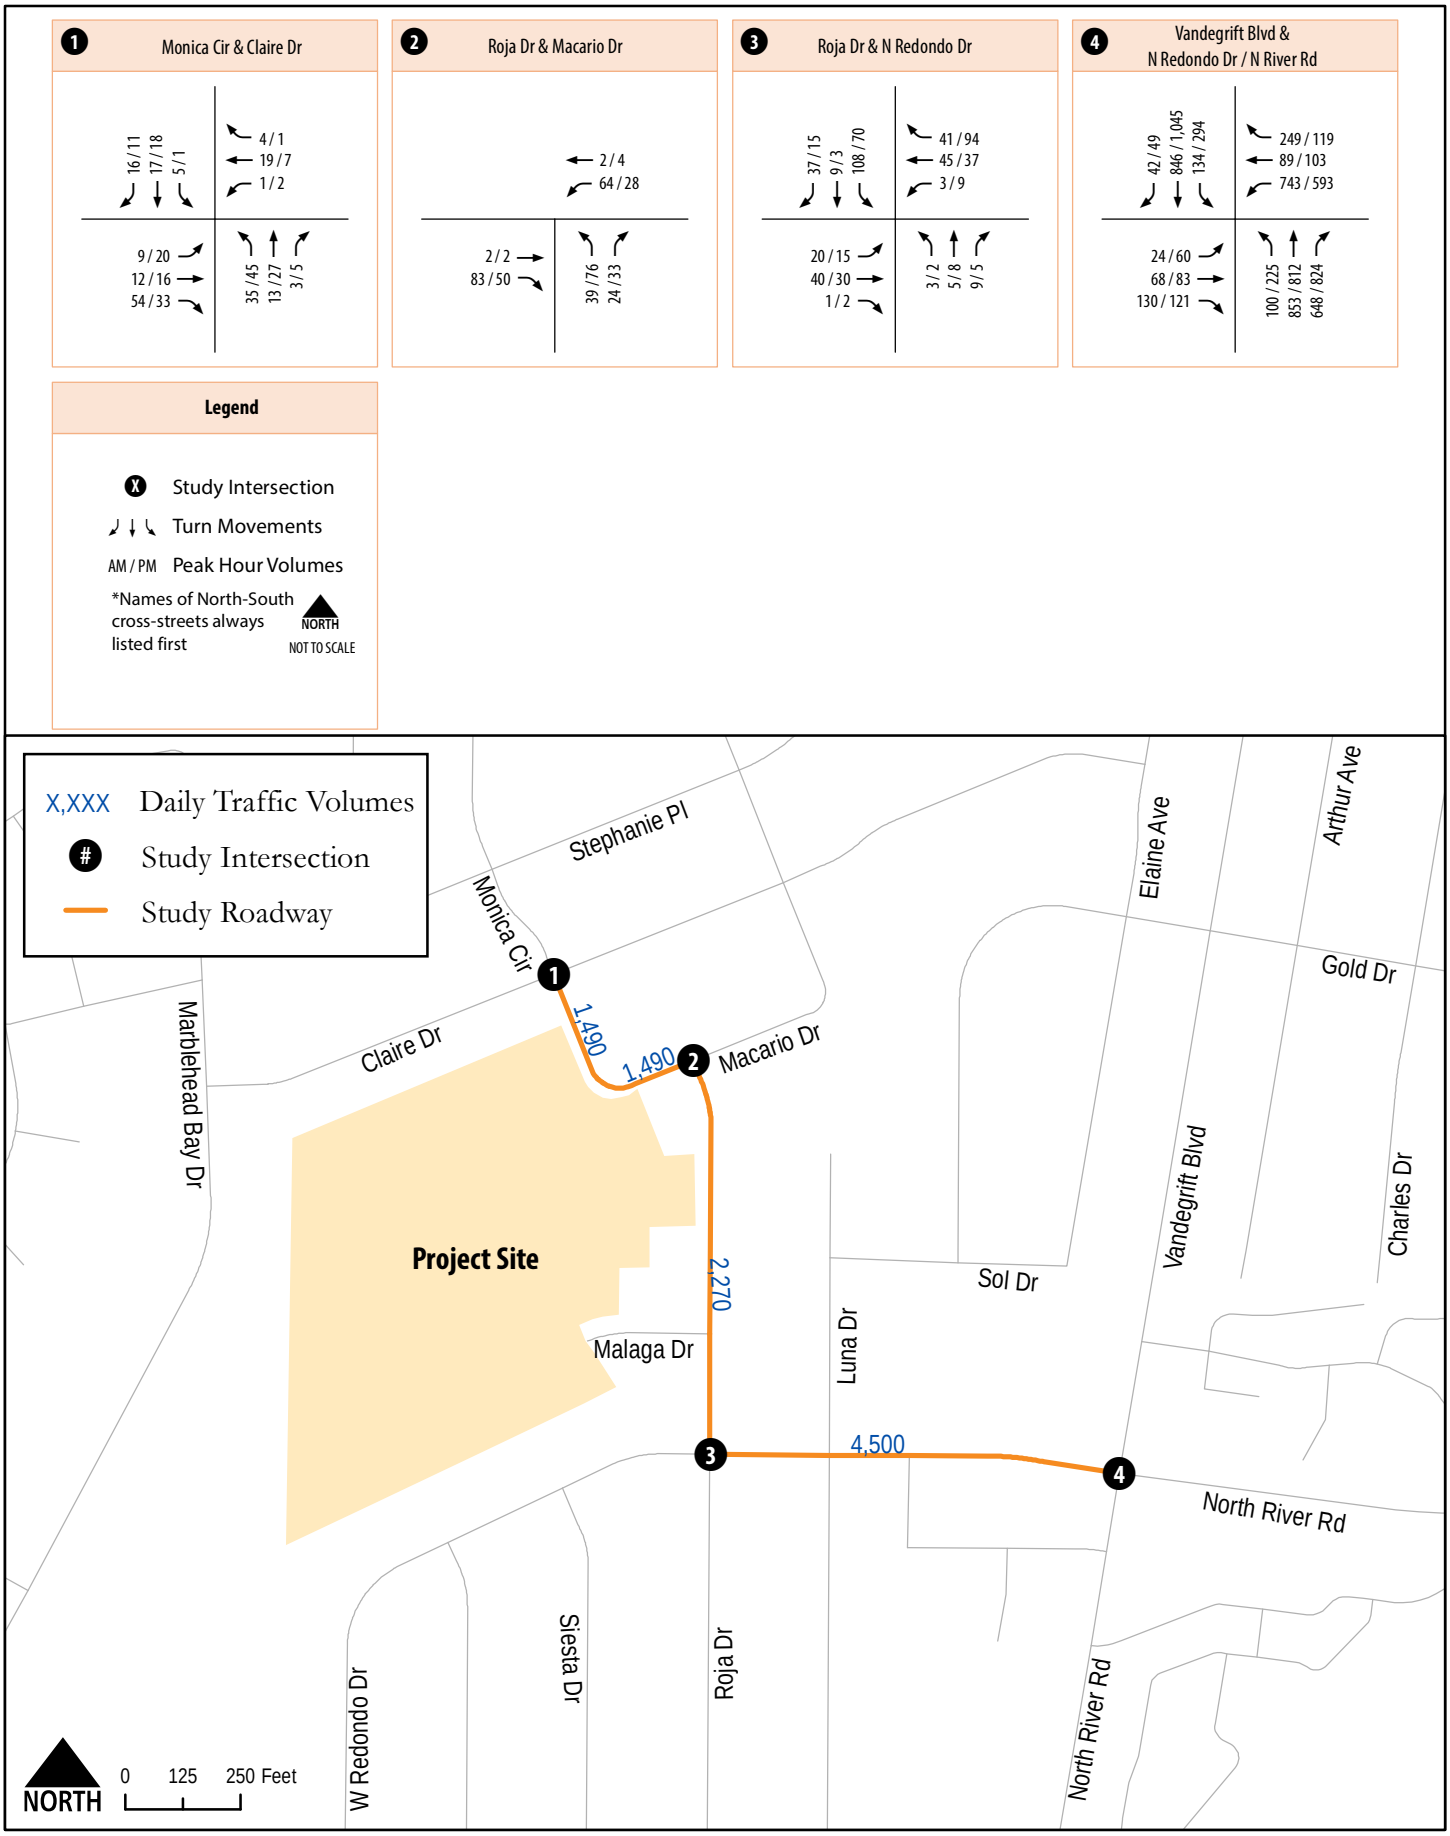
Roadway	Segment	Function Classification	LOS Threshold (LOS E)	LOS	Daily Volume	V/C
Monica Circle	Claire Drive to Macario Drive	Local Street (2-lane)	2,200	C	1,490	0.677
Macario Drive	Monica Circle to Roja Drive	Local Street (2-lane)	2,200	C	1,490	0.677
Roja Drive	Macario Drive to North Redondo Drive	Local Street (2-lane)	2,200	Above Capacity[1]	2,270	1.032
North Redondo Drive	Roja Drive to Vandergrift Boulevard	Collector[2] (2-lane)	7,500	B	4,500	0.600

Source: CR Associates (2023)

Note:
[1] Based upon the City's Circulation Element, the roadway is classified as a Local Street with a daily volume threshold of 2,200 for LOS C. If the daily volume exceeds the 2,200 threshold, the roadway segment operates above capacity.
[2] Functional classification based upon the curb-to-curb distance.
V/C = Volume/Capacity

As shown in Table 5.2, all study roadway segments are projected to operate at LOS C or better under Near-Term Year 2025 Conditions with the exception of the following roadway segment:

- Roja Drive, between Macario Drive and North Redondo Drive (Above Capacity)



Pacifica Housing Project
Local Transportation Study

Figure 5.3
Traffic Volumes
Near-Term Year 2025 Base Conditions

5.4.2 Intersection Analysis

Table 5.3 displays intersection LOS and average vehicle delay results for the key study area intersections under Near-Term Year 2025 Base Conditions. LOS calculation worksheets for Near-Term Year 2025 Base Conditions are provided in **Appendix H**.

Table 5.3 - Peak Hour Intersection LOS Results – Near-Term Year 2025 Base Conditions

#	Intersection	Control Type	AM Peak Hour		PM Peak Hour	
			Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS
1	Monica Circle & Claire Drive	SSSC	10.0	B	10.1	B
2	Roja Drive & Macario Drive	AWSC	7.5	A	7.5	A
3	Roja Drive & N. Redondo Drive	SSSC	12.2	B	10.7	B
4	Vandegrift Boulevard / N. River Road & N. Redondo Drive	Signal	70.0	**E**	86.3	**F**

Source: CR Associates (2023)

Note:
SSSC = Side-Street Stop Controlled. For SSSC intersections, the delay shown is the worst delay experienced by any of the movements.
AWSC= All-Way Stop Controlled
Bold letter indicates substandard LOS

As shown in Table 5.3, all study area intersections are projected to operate at acceptable LOS B or better under Near-Term Year 2025 Base conditions with exception to the following intersection:

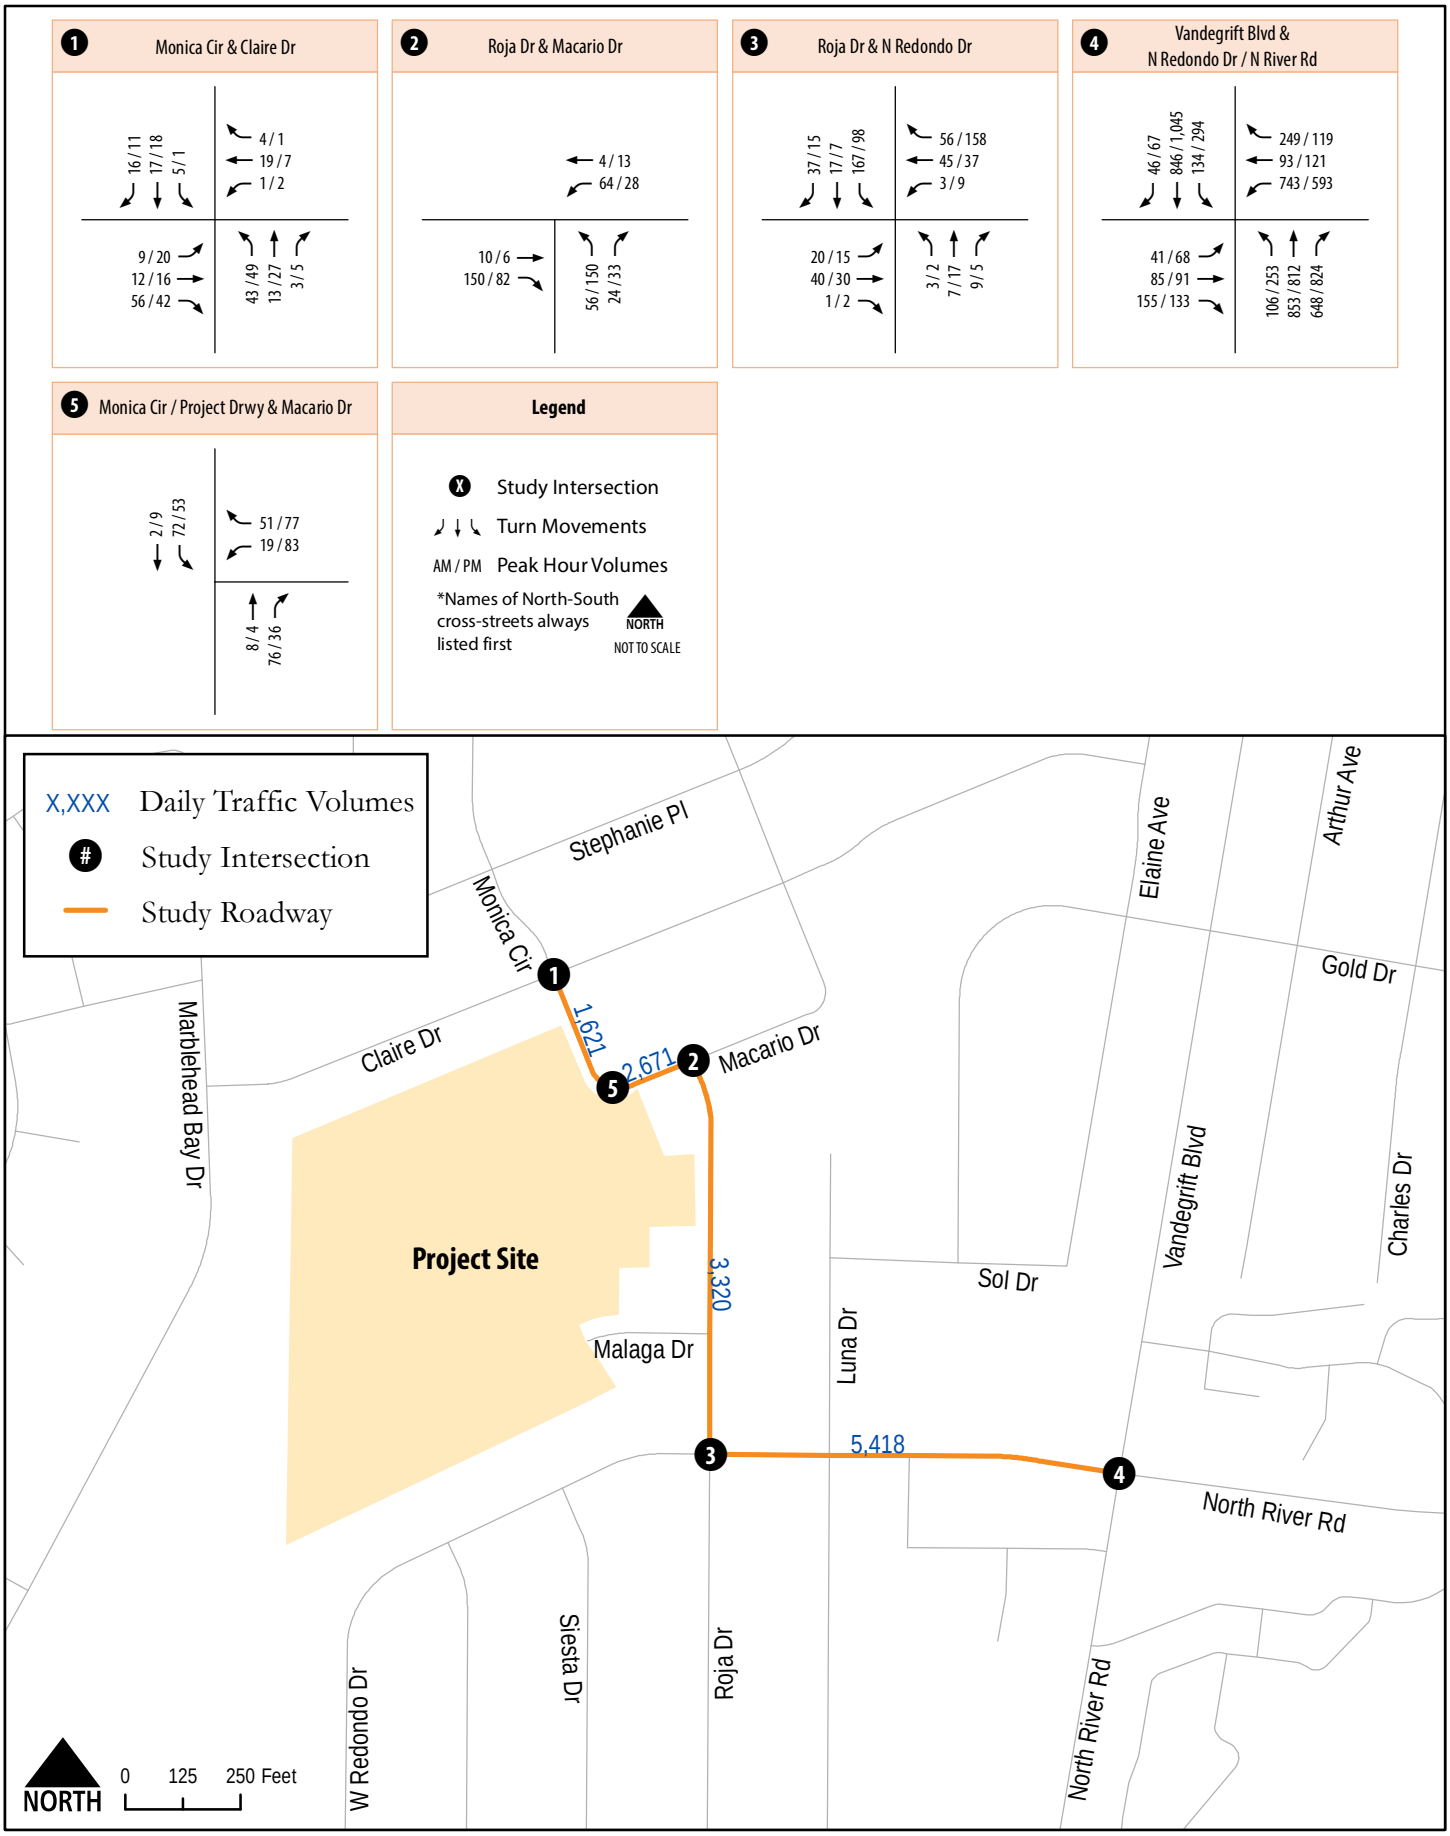
4. Vandegrift Boulevard / N. River Road & N. Redondo Drive – LOS E during the AM peak hour and LOS F during the PM peak hour

5.5 Near-Term Year 2025 Base with Project Roadway Network and Traffic Volumes

Intersection geometrics under the Near-Term Year 2025 Base with Project conditions were assumed to be identical to the Near-Term Year 2025 Base conditions geometrics with exception to the following project feature:

- Enhancement of existing driveway, on the south leg of the Monica Circle and Macario Drive intersection, with special paving, landscaping, and monumentation to announce entry to the project site. This project driveway will provide the only access point to the project site which will function as a side-street stop-controlled intersection with full access.

Peak hour intersection volumes for the Near-Term Year 2025 Base with Project conditions were derived by combining the Proposed Project trips (as previously shown in Figure 3.2) to the Near-Term Year 2025 Base traffic volumes (as previously shown in Figure 5.3). Peak hour intersection volumes for this scenario are displayed in **Figure 5.4**.



Pacifica Housing Project
Local Transportation Study

C+R

Figure 5.4
Traffic Volumes
Near-Term Year 2025 Base with Project Conditions

5.6 Near-Term Year 2025 Base with Project Traffic Conditions

LOS analyses under Near-Term Year 2025 Base with Project conditions were conducted using the methodologies described in Chapter 2. Roadway segment and intersection LOS analysis results are discussed below.

5.6.1 Roadway Segment Analysis

Table 5.4 displays roadway segments and LOS analysis results for study roadway segments under Near-Term Year 2025 Base with Project conditions.

As shown in Table 5.4, the following study roadway segments are projected to operate above capacity under Near-Term Year 2025 Base with Project conditions:

- Macario Drive, between Monica Circle and Roja Drive
- Roja Drive, between Macario Drive and North Redondo Drive

It should be noted that the study roadway segments listed above are all local streets (non-Circulation Element roadways). Therefore, the determination of the need for roadway improvements shall be coordinated with City of Oceanside staff.

5.6.2 Intersection Analysis

Table 5.5 displays intersection LOS and average vehicle delay results for the key study area intersections under Near-Term Year 2025 Base with Project Conditions. LOS calculation worksheets for Near-Term Year 2025 Base with Project conditions are provided in **Appendix I**.

As shown in Table 5.5, all study area intersections are projected to operate at acceptable LOS B or better under Near-Term Year 2025 Base with Project Conditions with exception to the following intersection:

4. Vandegrift Boulevard / N. River Road & N. Redondo Drive – LOS E during the AM peak hour and LOS F during the PM peak hour. The trips associated with the Proposed Project would increase delay at this intersection by 0.5 seconds in the AM peak hour and 1.5 seconds in the PM peak hour, which does not surpass the 2-second threshold for intersections operating at LOS E or F.

Based upon the criteria outlined in Section 2.5, the study intersection listed above is not anticipated to have an LOS impact with implementation of the Proposed Project and no improvements will be required.

Table 5.4 - Roadway Segment LOS Results – Near-Term Year 2025 Base with Project Conditions

Roadway	Segment	Function Classification	LOS Threshold (LOS E)	Near-Term Year 2025			Near-Term Year 2025 + Project			ΔV/C	I?
				LOS	Daily Volume	V/C	LOS	Daily Volume	V/C		
Monica Circle	Claire Drive to Macario Drive	Local Street (2-lane)	2,200	C	1,490	0.677	C	1,621	0.737	0.060	N
Macario Drive	Monica Circle to Roja Drive	Local Street (2-lane)	2,200	C	1,490	0.677	Above Capacity[1]	2,671	1.214	0.537	N
Roja Drive	Macario Drive to North Redondo Drive	Local Street (2-lane)	2,200	Above Capacity[1]	2,270	1.032	Above Capacity[1]	3,320	1.509	0.477	N

6.0 Horizon Year 2050 Conditions

This section provides an analysis of Horizon Year 2050 traffic conditions both with and without the Proposed Project. The scenarios analyzed in this section include:

- Horizon Year 2050
- Horizon Year 2050 with Project

As discussed in the introductory chapter, a Horizon Year 2050 scenario analysis is required per the City's Traffic Impact Analysis Guidelines. The following sections establish baseline conditions for projected long-range conditions of the transportation network within the study area against which traffic generated by the Proposed Project can be compared to.

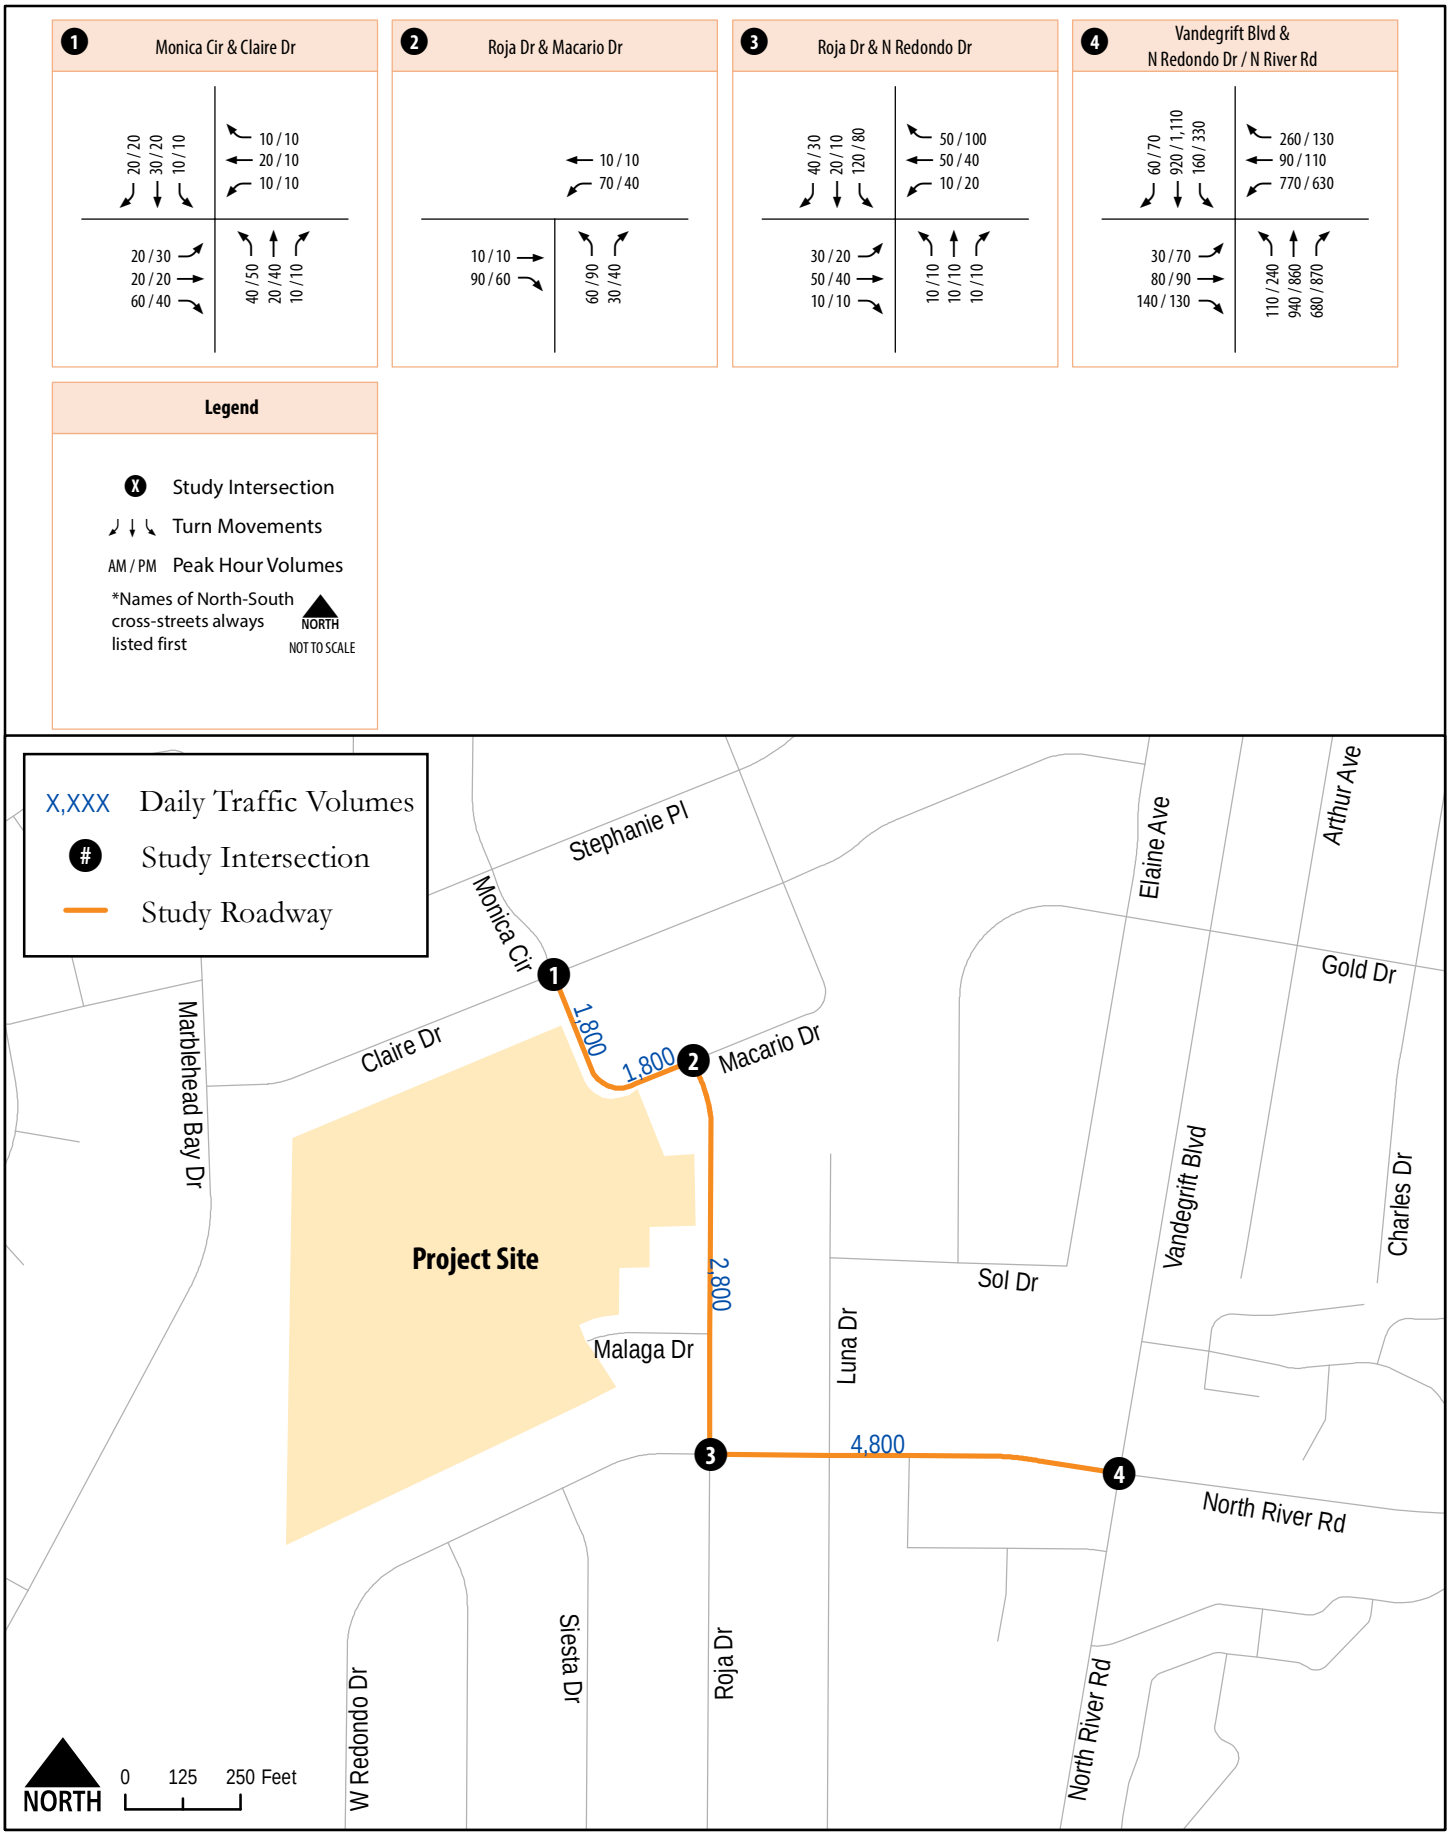
6.1 Horizon Year 2050 Roadway Network and Traffic Volumes

Intersection geometrics under Horizon Year 2050 Conditions were assumed to be identical to the Existing Conditions, as previously shown in Figure 4.1.

Forecasted Horizon Year 2050 ADT were developed by determining growth per year observed in the SANDAG Series 14 ABM2+/2021 RP model via the Transportation Forecast Information Center (TFIC) website and applying growth per year to existing counts for study roadway segments. The observed growth per year between Base Year 2016 and Horizon Year 2050 is 0.78%.

Horizon Year 2050 intersection peak hour turning movement volumes were developed by utilizing the National Cooperative Highway Research Program (NCHRP) Report 255 methodology for estimating intersection turning movements. This methodology describes the use of growth factors, based on the comparison of existing ADT and estimated Horizon Year 2050 ADT, which are applied to existing peak hour intersection approach and departure volumes. Manual adjustments were also made to ensure that traffic volumes among adjacent intersections were reasonably balanced.

Details on counts collected from TFIC and growth rates applied are provided in **Appendix J**. Roadway ADT and intersection peak hour volumes for this scenario are displayed in **Figure 6.1**.



Pacifica Housing Project
Local Transportation Study

Figure 6.1
Traffic Volumes
Horizon Year 2050 Conditions

6.2 Horizon Year 2050 Traffic Conditions

LOS analyses under Horizon Year 2050 Conditions were conducted using the methodologies described in Chapter 2. Study roadway segment and intersection LOS analysis results are discussed below.

6.2.1 Roadway Segment Analysis

Table 6.1 displays roadway segments and LOS analysis results for study roadway segments under Horizon Year 2050 conditions.

Table 6.1 - Roadway Segment LOS Results – Horizon Year 2050 Conditions

Roadway	Segment	Function Classification	LOS Threshold (LOS E)	LOS	Daily Volume	V/C
Monica Circle	Claire Drive to Macario Drive	Local Street (2-lane)	2,200	C	1,800	0.818
Macario Drive	Monica Circle to Roja Drive	Local Street (2-lane)	2,200	C	1,800	0.818
Roja Drive	Macario Drive to North Redondo Drive	Local Street (2-lane)	2,200	Above Capacity[1]	2,800	1.273
North Redondo Drive	Roja Drive to Vandergrift Boulevard	Collector[2] (2-lane)	7,500	B	4,800	0.640

Source: CR Associates (2023)

Note:
[1] Based upon the City's Circulation Element, the roadway is classified as a Local Street with a daily volume threshold of 2,200 for LOS C. If the daily volume exceeds the 2,200 threshold, the roadway segment operates above capacity.
[2] Functional classification based upon the curb-to-curb distance.
V/C = Volume/Capacity

As shown in Table 6.1, the following study roadway segment is projected to operate above capacity under Horizon Year 2050 Conditions:

- Roja Drive, between Macario Drive and North Redondo Drive

6.2.2 Intersection Analysis

Table 6.2 displays intersection LOS and average vehicle delay results for the key study area intersections under Horizon Year 2050 Conditions. LOS calculation worksheets for Horizon Year 2050 Conditions are provided in **Appendix K**.

Table 6.2 - Peak Hour Intersection LOS Results – Horizon Year 2050 Conditions

#	Intersection	Control Type	AM Peak Hour		PM Peak Hour	
			Avg. Delay (sec.)	LOS	Avg. Delay (sec.)	LOS
1	Monica Circle & Claire Drive	SSSC	10.4	B	10.3	B
2	Roja Drive & Macario Drive	AWSC	7.8	A	7.8	A
3	Roja Drive & N. Redondo Drive	SSSC	14.6	B	11.6	B
4	Vandegrift Boulevard / N. River Road & N. Redondo Drive	Signal	57.8	**E**	91.2	**F**

Source: CR Associates (2023)

Note:
SSSC = Side-Street Stop Controlled. For SSSC intersections, the delay shown is the worst delay experienced by any of the movements.
AWSC= All-Way Stop Controlled
Bold letter indicates substandard LOS

As shown in Table 6.2, all study area intersections are projected to operate at acceptable LOS B or better under Near-Term Year 2025 Base conditions with exception to the following intersection:

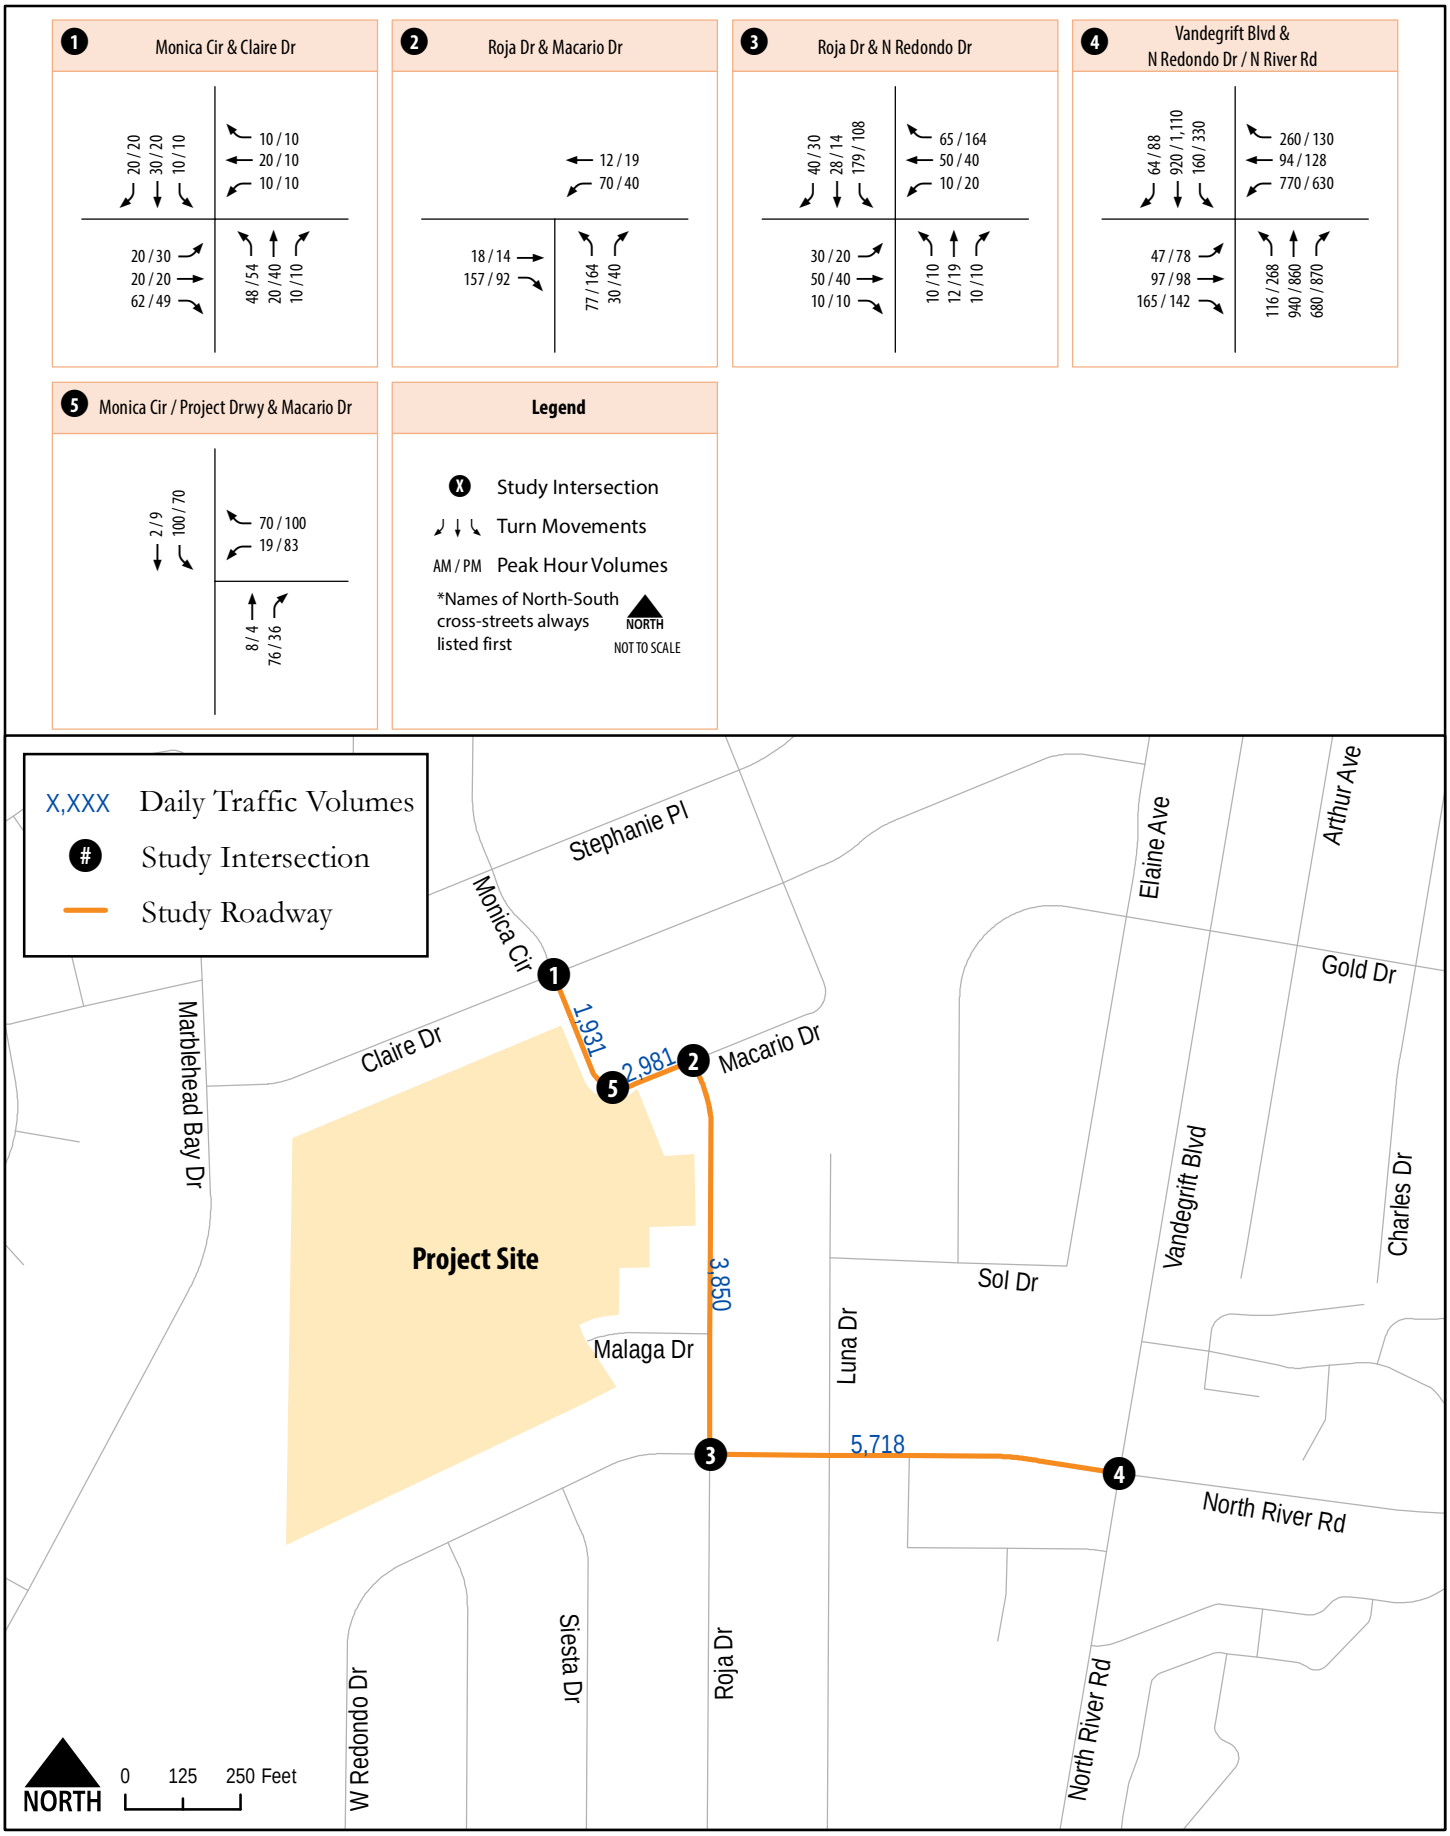
4. Vandegrift Boulevard / N. River Road & N. Redondo Drive – LOS E during the AM peak hour and LOS F during the PM peak hour

6.3 Horizon Year 2050 with Project Roadway Network and Traffic Volumes

Intersection geometrics under the Horizon Year 2050 with Project Conditions were assumed to be identical to the Horizon Year 2050 Conditions geometrics with exception to the following project feature:

- Enhancement of existing driveway, on the south leg of the Monica Circle and Macario Drive intersection, with special paving, landscaping, and monumentation to announce entry to the project site. This project driveway will provide the only access point to the project site which will function as a side-street stop-controlled intersection with full access.

Peak hour intersection volumes for the Horizon Year 2050 with Project Conditions were derived by combining the Proposed Project trips (as previously shown in Figure 3.2) to the Horizon Year 2050 traffic volumes (as previously shown in Figure 6.1). Peak hour intersection volumes for this scenario are displayed in **Figure 6.2**.



Pacifica Housing Project
Local Transportation Study

Figure 6.2
Traffic Volumes
Horizon Year 2050 with Project Conditions

6.4 Horizon Year 2050 with Project Traffic Conditions

LOS analyses under Horizon Year 2050 with Project Conditions were conducted using the methodologies described in Chapter 2. Study roadway segment and intersection LOS analysis results are discussed below.

6.4.1 Roadway Segment Analysis

Table 6.3 displays roadway segments and LOS analysis results for study roadway segments under Horizon Year 2050 with Project conditions.

As shown in Table 6.3, the following study roadway segments are projected to operate above capacity under Horizon Year 2050 with Project conditions:

- Macario Drive, between Monica Circle and Roja Drive
- Roja Drive, between Macario Drive and North Redondo Drive

It should be noted that the study roadway segments listed above are all local streets (non-Circulation Element roadways). Therefore, the determination of the need for roadway improvements shall be coordinated with City of Oceanside staff.

6.4.2 Intersection Analysis

Table 6.4 displays intersection LOS and average vehicle delay results for the key study area intersections under Horizon Year 2050 with Project conditions. LOS calculation worksheets for Horizon Year 2050 with Project Conditions are provided in **Appendix L**.

As shown in Table 6.4 all study area intersections are projected to operate at acceptable LOS C or better under Horizon Year 2050 with Project Conditions with exception to the following intersection:

4. Vandegrift Boulevard / N. River Road & N. Redondo Drive – LOS E during the AM peak hour and LOS F during the PM peak hour. The trips associated with the Proposed Project would increase delay at this intersection by 1.5 seconds in the AM peak hour and 1.2 seconds in the PM peak hour, which does not surpass the 2-second threshold for intersections operating at LOS E or F.

Based upon the criteria outlined in Section 2.5, the study intersection listed above is not anticipated to have an LOS impact with implementation of the Proposed Project and no improvements will be required.

Table 6.3 - Roadway Segment LOS Results – Horizon Year 2050 with Project Conditions

Roadway	Segment	Function Classification	LOS Threshold (LOS E)	Horizon Year 2050			Horizon Year 2050 + Project			ΔV/C	I?
				LOS	Daily Volume	V/C	LOS	Daily Volume	V/C		
Monica Circle	Claire Drive to Macario Drive	Local Street (2-lane)	2,200	C	1,800	0.818	C	1,931	0.878	0.060	N
Macario Drive	Monica Circle to Roja Drive	Local Street (2-lane)	2,200	C	1,800	0.818	Above Capacity[1]	2,981	1.355	0.537	N

7.0 LOS Impacts and Improvement Requirements

This chapter provides improvements requirements needed to increase LOS to acceptable or pre-project conditions for any roadway segments or intersections found to operate unacceptably with implementation of the Proposed Project.

7.1 Improvement Requirements – Existing with Project Conditions

Roadway Segment Analysis

The roadway segments listed below are anticipated to operate above capacity with implementation of the Proposed Project under Existing with Project Conditions:

- Macario Drive, between Monica Circle and Roja Drive
- Roja Drive, between Macario Drive and North Redondo Drive

It should be noted that the study roadway segments listed above are all local streets (non-Circulation Element roadways). Therefore, the determination of the need for roadway improvements shall be coordinated with City of Oceanside staff.

Given the buildout environment of these local streets and the relatively small amount of traffic that the Project will add to the surrounding transportation network, it is not anticipated that roadway improvements involving widening would be required. However, alternative improvements may be necessary such as traffic calming measures (i.e., speed cushions, speed feedback signs, etc.) and/or pedestrian or bicycle improvements such as high visibility crosswalks at nearby intersections.

Intersection Analysis

All study area intersections are projected to operate at acceptable LOS D or better under Existing with Project conditions. Therefore, no study intersections are anticipated to degrade in LOS to unacceptable levels with implementation of the Proposed Project and no improvements will be required.

7.2 Improvement Requirements – Near-Term Year 2025 with Project Conditions

This section identifies required improvements for any study roadway segments or intersections that are associated with the Proposed Project under Near-Term Year 2025 Base with Project conditions.

Roadway Segment Analysis

The roadway segments listed below are anticipated to operate above capacity with implementation of the Proposed Project under Near-Term Year 2025 Base with Project Conditions:

- Macario Drive, between Monica Circle and Roja Drive
- Roja Drive, between Macario Drive and North Redondo Drive

It should be noted that the study roadway segments listed above are all local streets (non-Circulation Element roadways). Therefore, the determination of the need for roadway improvements shall be coordinated with City of Oceanside staff.

Given the buildout environment of these local streets and the relatively small amount of traffic that the Project will add to the surrounding transportation network, it is not anticipated that roadway improvements involving widening would be required. However, alternative improvements may be necessary such as traffic calming measures (i.e., speed cushions, speed feedback signs, etc.) and/or pedestrian or bicycle improvements such as high visibility crosswalks at nearby intersections.

Intersection Analysis

All study area intersections are projected to operate at acceptable LOS B or better under Near-Term Year 2025 Base with Project Conditions with exception to the following intersection:

4. Vandegrift Boulevard / N. River Road & N. Redondo Drive – LOS E during the AM peak hour and LOS F during the PM peak hour. The trips associated with the Proposed Project would increase delay at this intersection by 0.5 seconds in the AM peak hour and 1.5 seconds in the PM peak hour, which does not surpass the 2-second threshold for intersections operating at LOS E or F.

Based upon the criteria outlined in Section 2.5, the study intersection listed above is not anticipated to have an LOS impact with implementation of the Proposed Project and no improvements will be required.

7.3 Improvement Requirements – Horizon Year 2050 with Project Conditions

This section identifies required improvements for any study roadway segments or intersections that are associated with the Proposed Project under Horizon Year 2050 with Project conditions.

Roadway Segment Analysis

The roadway segments listed below are anticipated to operate above capacity with implementation of the Proposed Project under Horizon Year 2050 with Project Conditions:

- Macario Drive, between Monica Circle and Roja Drive
- Roja Drive, between Macario Drive and North Redondo Drive

It should be noted that the study roadway segments listed above are all local streets (non-Circulation Element roadways). Therefore, the determination of the need for roadway improvements shall be coordinated with City of Oceanside staff.

Given the buildout environment of these local streets and the relatively small amount of traffic that the Project will add to the surrounding transportation network, it is not anticipated that roadway improvements involving widening would be required. However, alternative improvements may be necessary such as traffic calming measures (i.e., speed cushions, speed feedback signs, etc.) and/or pedestrian or bicycle improvements such as high visibility crosswalks at nearby intersections.

Intersection Analysis

All study area intersections are projected to operate at acceptable LOS C or better under Horizon Year 2050 with Project Conditions with exception to the following intersection:

4. Vandegrift Boulevard / N. River Road & N. Redondo Drive – LOS E during the AM peak hour and LOS F during the PM peak hour. The trips associated with the Proposed Project would increase delay at this intersection by 1.5 seconds in the AM peak hour and 1.2 seconds in the PM peak hour, which does not surpass the 2-second threshold for intersections operating at LOS E or F.

Based upon the criteria outlined in Section 2.5, the study intersection listed above is not anticipated to have an LOS impact with implementation of the Proposed Project and no improvements will be required.

8.0 Site Access & Circulation

This chapter addresses access to the project site and discusses the functionality of the project's internal circulation.

8.1 Driveway Access

The Proposed Project will be located at the southwest corner of the Monica Circle and Macario Drive intersection within the City of Oceanside. The project site is currently vacant and used to serve as the Pacifica Elementary School, which was closed in July 2007. The property is bordered by single family dwelling units on all sides.

The Proposed Project will be accessed primarily via the existing driveway which is the south leg of the three-legged intersection at Monica Circle and Macario Drive. Enhancements to this existing driveway will include special paving, landscaping, and monumentation to announce entry to the project site. The project driveway will function as a side-street stop-controlled intersection with full access. This driveway is projected to operate at LOS A under all study scenarios.

A secondary emergency access only access point will be located at Malaga Drive.

After further review of the project site plan, the following recommendations are provided:

- Driveways are recommended to be constructed in accordance with City standards
- Stop sign (R1-1) to be installed at the project driveway

8.2 Internal Circulation

Internal roadways on the project site allows for two-way flow of vehicle traffic. Dead-end aisles between buildings provide direct access to garages for each dwelling unit. Guest parking is provided at the community entry point. Additional resident parallel parking is also available throughout the project site.

Based upon review of the project site plan, the following recommendations are provided:

- Appropriate signage to warn drivers of pedestrian foot traffic
- Consider installation of speed cushions/bumps along internal roadways to calm traffic

Appendix A - Project Information Form – Pacifica Housing Project

PROJECT INFORMATION FORM (PIF)

THE FOLLOWING IS TO BE COMPLETED BY THE PROJECT APPLICANT:

	PROJECT INFORMATION FORM		
1.	**PROJECT DESCRIPTION:** The Oceanside Multi-Family project proposes to construct 164 townhomes on the old Pacifica Elementary School site (approximately 14.55 acres).		
2.	**PROJECT LOCATION:** Located adjacent to the intersection of Monica Circle and Macario Drive		
3.	**LAND USE:** Multi-Family (Residential) **SIZE/DENSITY:** 164 townhomes		
4.	**ZONING AND LAND USE CONSISTENT WITH ADOPTED GENERAL PLAN?**	☐ Yes	☑ No
5.	**PROJECT LOCATED IN TRANSIT PRIORITY AREA[1], SMART GROWTH AREA[2], OR LOW VMT AREA[3]?**	☑ Yes	☐ No
6.	**PROJECT TRIP GENERATION:** 1,312 **ADT**	☐ < 200 ADT ☐ ≥ 200 ADT ☑ ≥ 1,000 ADT ☐ ≥ 2,400 ADT	
	ATTACHMENTS		
A.	**PROJECT LOCATION MAP**	☑ Attached	
B.	**PROJECT TRIP DISTRIBUTION**	☑ Attached	
C.	**PROJECT TRIP ASSIGNMENT**	☑ Attached	

1) Projects located in a TPA must be able to access the transit station within a ½ mile walking distance or 6 minute walk continuously without discontinuity of sidewalk or obstructions to the route. Qualifying transit stops means a site containing an existing rail transit station served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods (OPR, 2017). A high-quality transit corridor may also be considered if a corridor with fixed route bus service has service intervals no longer than 15 minutes during peak commute hours (OPR, 2017).
(2) See Appendix B.
(3) Based on the most recent SANDAG SB 743 Screening Map. Example shown in Appendix C.

TO BE COMPLETED BY CITY STAFF AND RETURNED TO PROJECT APPLICANT

	PROJECT STUDY REQUIREMENTS			
1)	**Does the project require a CEQA VMT analysis?**	☑ Yes	☐ No	☐ Incomplete[(1)]
	A. If yes, does the project require a SANDAG Model Run?	☐ Yes	☑ No	
2a)	**Does the project require a Local Transportation Study?**	☒ Yes	☐ No	☐ Incomplete[(1)]
	OR			
2b)	**Does the project require a Local Transportation Assessment?**	☐ Yes	☒ No	☐ Incomplete[(1)]

[(1)] Incomplete application or additional information is needed to determine study requirements.

Active Detectors <D Page>

Note: Initialized data is for all detectors to be active (ie, all flag bits set). A Detector which is "not flagged", will not be active as a Phase Detector, and WILL NOT call or extend its associated phase. It will still function as a System Detector.

Row		0 Detector Number
0		
1	System Det. # 1	0
2	System Det. # 2	0
3	System Det. # 3	0
4	System Det. # 4	0
5	System Det. # 5	0
6	System Det. # 6	0
7	System Det. # 7	0
8	System Det. # 8	0

System Detectors <D Page>

Max ON (minutes)	5	<D+A+E>
Max OFF (minutes)	60	<D+A+F>

Detector Failure Monitor

Phase Number	0	<F+C+1>
Time Before Yellow	0.0	<F+C+3>

Advance Warning Beacon - Sign 1

Phase Number	0	<F+D+1>
Time Before Yellow	0.0	<F+D+3>

Advance Warning Beacon - Sign 2

Long Failure	0.0	<F+0+6>
Short Failure	0.0	<F+0+7>

Power Cycle Correction (Default = 0.5)

Disable Parity	0	<D+B+0>

Dial-Up Telephone Communications
(If set to a non-zero value, parity will be disabled)

Please note, BREEZE "school tripper" bus service only runs while schools are in session for in-person learning and are subject to change based on bell times. NCTD will update trip planning applications and GoNCTD.com when this service returns.

Tenga en cuenta que el servicio de autobús "school tripper" de BREEZE solo funciona mientras las escuelas se encuentren abiertas para clases presenciales y está sujeto a cambios en función de los horarios de entrada y salida. El NCTD actualizará las aplicaciones de planificación de viaje y GoNCTD.com cuando el sevicio se reanude.

All persons entering Camp Pendleton must have valid identification and are subject to search at any time.
Todas las personas que ingresen a Camp Pendleton deben tener una identificación válida y están sujetas a registros en cualquier momento.

BE PREPARED: Base access subject to discretion of Camp Pendleton personnel. If passenger is declined access to the Base, it is the passenger's responsibility to be prepared to consider other transit options. For more information on *Traveling through Camp Pendleton,* see Rider's Guide index.
Esté listo: El acceso a la base es a discreción del personal de Camp Pendleton. Si un pasajero es negado el acceso a la base, es su responsabilidad encontrar otras opciones de transporte. Para obtener más información sobre cómo *viajar a través de Camp Pendleton,* refiérase al Índice de la Guía de Pasajeros.

Footnotes:

1. Generation rate obtained from the SANDAG Brief Guide (April 2002) for Hotel (w/ convention facilities/restaurant).

2. Generation rate obtained from the SANDAG Brief Guide (April 2002) for Specialty Retail/Strip Commercial.

3. Generation rate for daily traffic obtained from the SANDAG Brief Guide (April 2002) for City park (Active Park), and the peak hour percentages and split is based on the additional survey conducted by LLG..

3.4 Project Traffic Generation

The project is a Plan Block Development Plan that will require a General Plan Amendment and rezone from light industrial uses to residential on two parcels for a total of 25.6 acres (Kawano parcel 9.7 acres and Nagata parcel 15.9 acres). A maximum of 400 dwelling units is proposed for a density of 15.6 units per acre (400 units / 25.6 acres).

The site has historically been used for agricultural, packing, and shipping uses. A trip credit was not applied because the previous uses were not in operation when off-site traffic data was collected.

The project traffic generation was calculated using SANDAG trip rates from the *Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002. Based on the project acreage of 25.6 acres and proposed 400 dwelling units, the density is 15.6 units per acre. The SANDAG trip rate is 8 daily trips per dwelling unit for densities between 6 and 20 units per acre.

Using SANDAG traffic generation rates, the project is calculated to generate 3,200 daily trips, 256 AM peak hour trips (51 inbound and 205 outbound), and 320 PM peak hour trips (224 inbound and 96 outbound) as shown in **Table 8**.

TABLE 8: PROJECT TRAFFIC GENERATION

					Peak hour totals:		**256**					**320**	

Source: SANDAG *Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region,* April 2002. ADT-Average Daily Traffic.

The final product may have a mix of small lot single family and multi-family units; therefore, the trip generation levels (ADT, AM & PM) as analyzed within this report will define the upper limit of traffic that can be generated by the final project type and unit count.

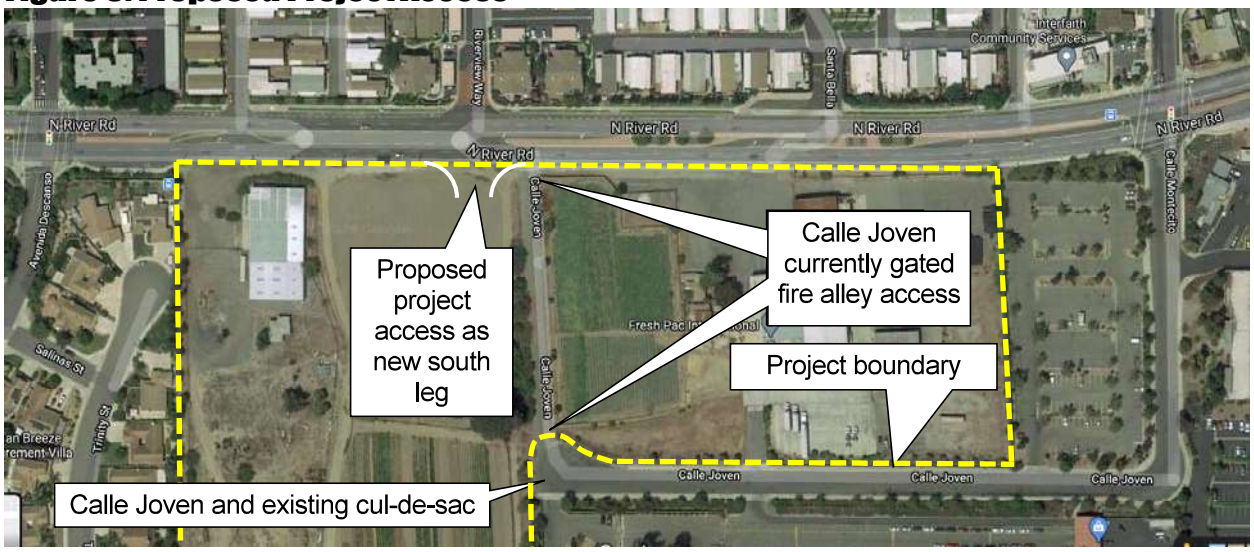
The proposed rezone will replace the existing industrial use with a proposed residential use. The existing industrial zoning could generate a range of traffic based on the type of industrial use. SANDAG trip rates document a range of 200 ADT/acre for an Industrial/Business Park (commercial included) to 90 ADT/acre for an Industrial/Business Park (no commercial). For the project site of 25.6 acres, the industrial trips could range from 5,120 ADT (Industrial/Business Park with commercial) to 2,304 ADT (Industrial/Business Park without commercial). The existing land use has the potential to generate more traffic than the proposed residential land use. However, this is a ground to plan analysis; therefore, a trip credit was not applied for the potential industrial land uses.

3.5 Project Access

Primary project access is proposed by constructing a south leg at the intersection of N. River Road/ Riverview Way. The project applicant proposed to signalize this intersection based on Signal Warrant Condition B "Interruption of Continuous Traffic", which is satisfied with the addition of project traffic. Signal warrant calculations for the project driveway and lane configurations are described within Section 4.16.1 of this report.

A portion of the southern project boundary borders Calle Joven. A secondary access is anticipated to connect with Calle Joven; however, a site design is not completed, thus the internal circulation and connection with Calle Joven has yet to be determined. There is currently a gated fire access alley labeled Calle Joven immediately east of Riverview Way that will be addressed in the final site design. The proposed project access, Calle Joven, and the gated fire access alley are shown in **Figure 8**.

Figure 8: Proposed Project Access



Source: Google Maps

3.6 Project Distribution and Assignment

Project trips were distributed to the adjacent roadway network based on a San Diego Association of Governments (SANDAG) Series 12 Select Zone Assignment (SZA) that was reviewed and adjusted by City staff. A copy of the SZA is included in **Appendix G**. The project distribution shown in **Figure 9**. The project assignment is shown in **Figure 10.**

Figure 9: Project Distribution

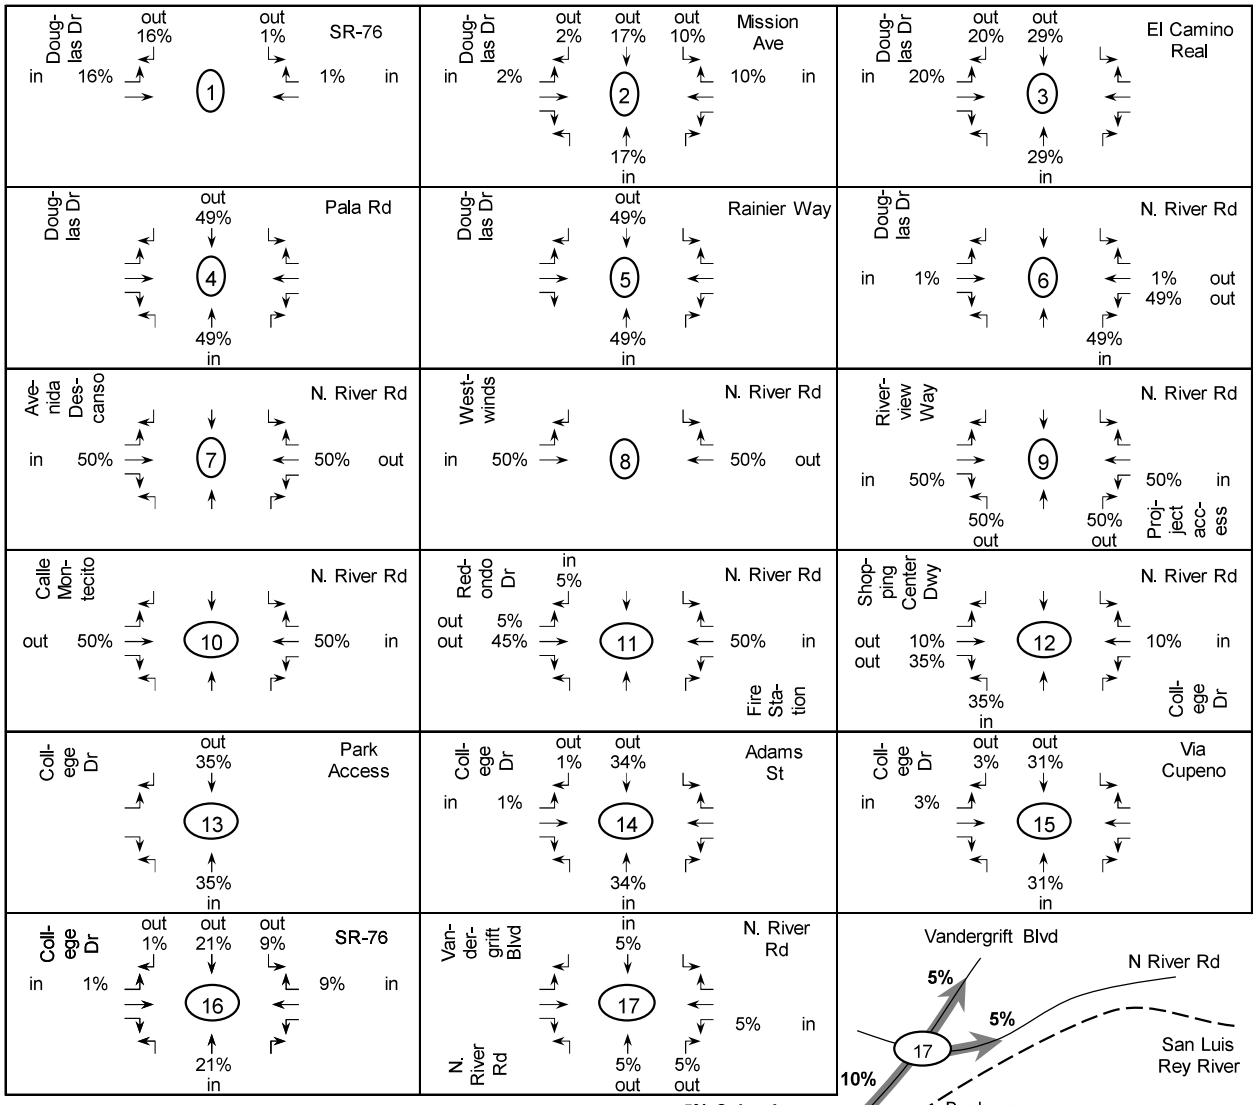


Figure 10: Project Volumes

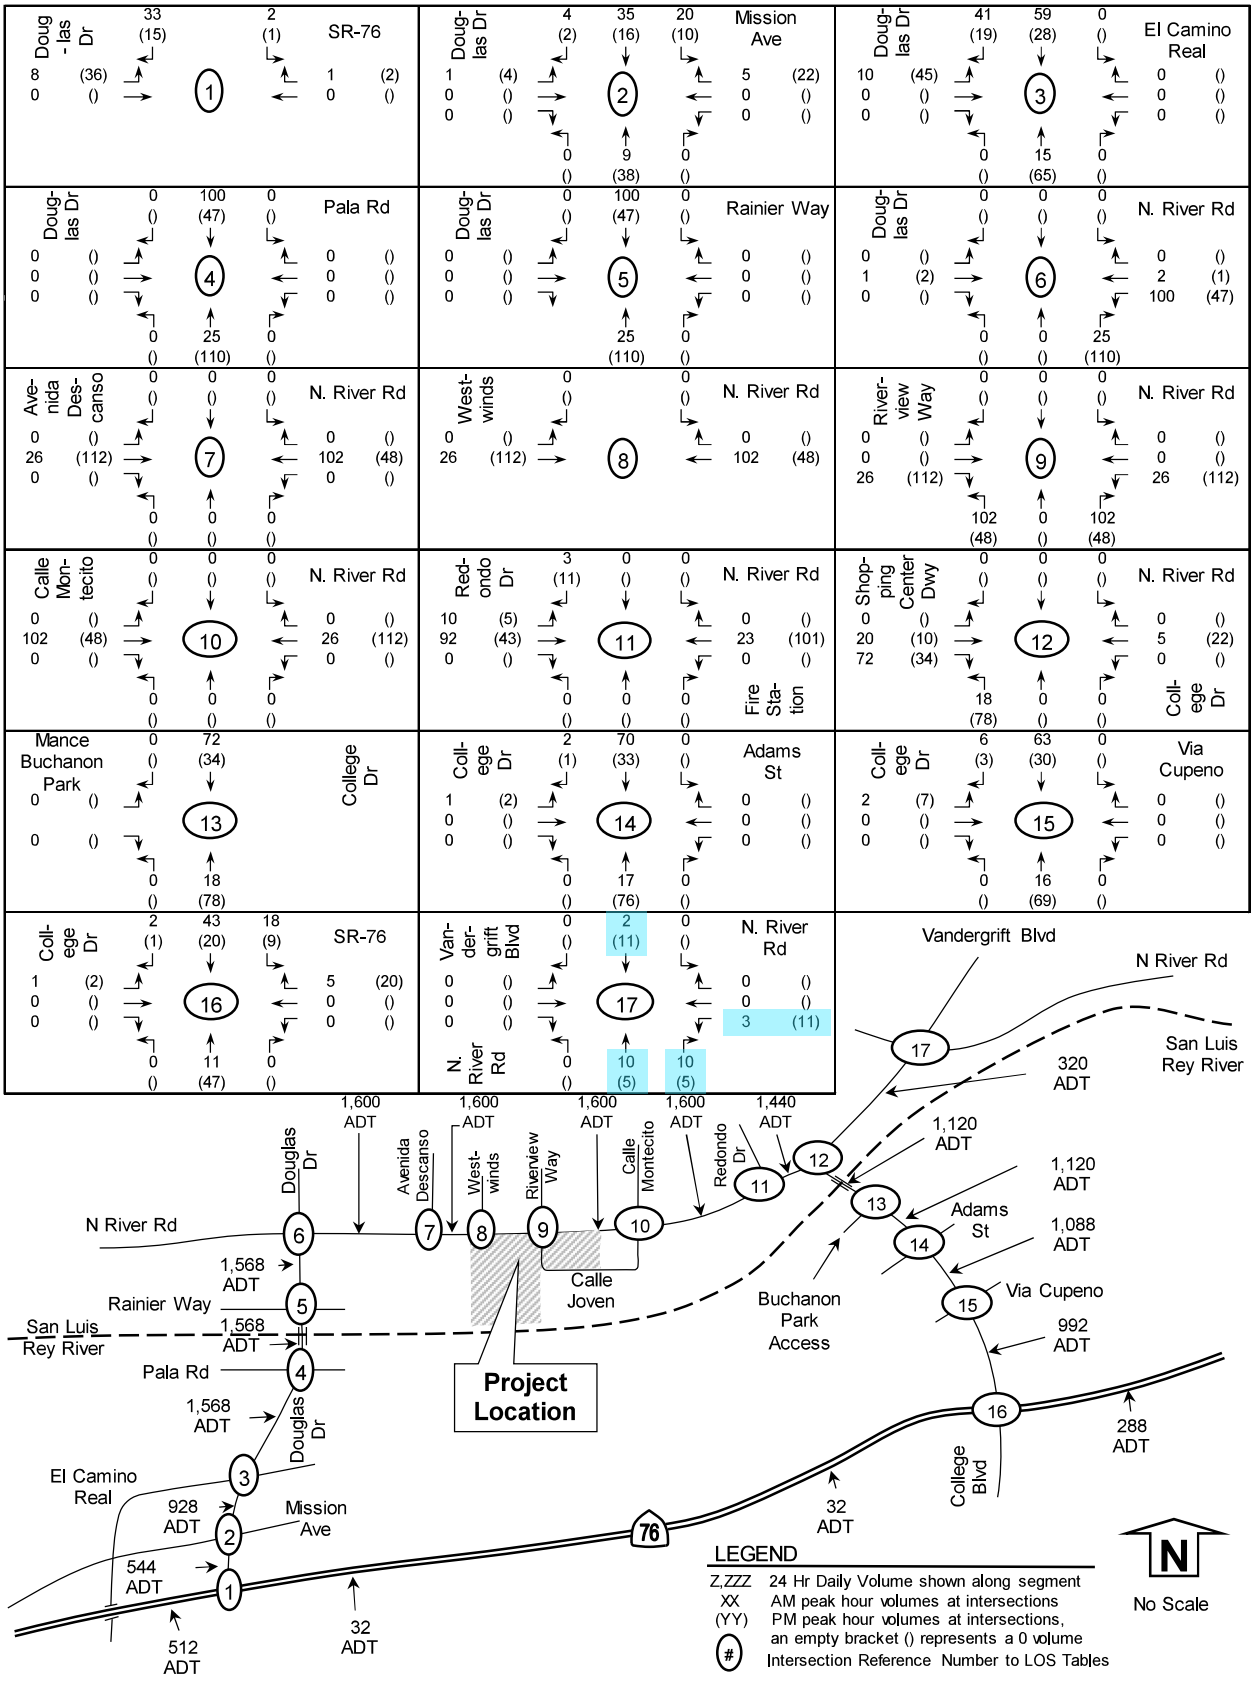

7.0 TRIP GENERATION/DISTRIBUTION/ASSIGNMENT

A highly descriptive discussion of the proposed Project land uses is detailed in *Section 2.2* of this report. As discussed in *Section 2.2* of this report, the Project proposes to develop the approximately 176.63-acre site with 689 residential units and would also include commercial and restaurant uses, a local farm, and a hotel. The residential portion of the Project proposes a mix of housing types including single-family detached homes, multi-family attached homes, and mixed-use residential units (located above or in close proximity to commercial uses in the Village Core). The following is a discussion on the traffic expected to be generated with the development of the Project.

7.1 Trip Generation

Gross Trip Generation

Trip generation for the proposed development was calculated using the SANDAG *(Not so) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002. With the changes in housing types proposed, three (3) different residential trip rates were used to calculate the total Project trip generation. The residential trip rates were selected based on the density for each Planning Area. The commercial portion of the site representing the Maker Spaces and Farmers' Market land use types uses the SANDAG "specialty retail" rates and the restaurant uses the "quality restaurant" rate. The proposed farm use uses the SANDAG "agriculture" rate in the calculations and the hotel use utilizes a modified "hotel" rate from SANDAG. The hotel rate was reduced from 10 ADT/room to 9 ADT/room since the hotel does not propose to include convention facilities that are included in the typical "hotel w/ convention facilities/restaurant" rate from SANDAG. The hotel is labeled as a "boutique" hotel that would utilize the community amenities as ancillary uses to the hotel.

Primary / Pass-By Trips

Development of new land uses will create trips on a street system that are new, or "primary" trips. However, several types of retail/commercial developments experience local and regional trips at the driveway that are already on the street system whether that development exists or not. These trips are known as "pass-by" trips.

Pass-by trips that are already on the street system passing along the Project frontage (North River Road), and only appear as new trips in and out of the Project driveways. Using engineering guidelines, 10% of daily and PM peak hour commercial traffic is categorized as pass-by.

Primary Trips

The remaining trips (90%) are those that are new to the street system, also called "primary" trips. These trips occur due to the development of the Project and the Project itself becomes one end of a primary trip, either the origin or the destination.

Net Trip Generation

After accounting for pass-by trips, a mixed-use reduction was applied to the remaining commercial and residential trips. Per the SANDAG guide, up to a 10% mixed-use reduction can be applied to

projects “where residential and commercial retail are combined (demonstrate mode split of walking trips to replace vehicular trips).” Given the detailed explanation of the walkability of the Project site in *Section 2.2* of this report, as well as in the Planned Development Plan prepared by the applicant, a mixed-use reduction was deemed appropriate. To provide a conservative reduction, 5% was applied to the Project trip generation.

Table 7–1 shows the Project traffic generation.

TABLE 7–1

Footnotes:

a. Rates based on SANDAG's *(Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002
b. Restaurant uses "Quality Restaurant" rate from SANDAG.
c. For Farm, SANDAG "agriculture" rate applied. For peak splits, ITE 818 "Nursery (Wholesale)" rate applied.
d. Primary trips, pass-by trips, and mixed-use credit percentages sourced to SANDAG.
e. For Hotel, SANDAG "hotel" rate reduced from 10 ADT/room to 9 ADT/room since the "hotel" rate includes trips generated by convention facilities, which are not proposed by the Project.
f. These units are assigned the "Apartment" trip rate.
g. These units are assigned the "Condominium" trip rate.
~~e~~ h. These units are assigned the "Single Family" trip rate.

7.2 Trip Distribution/Assignment

The distribution of Project traffic was determined using a Select Zone Assignment (SZA) computerized traffic model prepared by SANDAG. The SZA used SANDAG's Series 12 model with the base year (existing) roadway network and land use conditions, and matches trip generating uses (such as residential) with trip-attracting uses (such as retail/commercial), and presents the relative percentage of traffic on the roadway system.

The future connection of Melrose Drive between North River Road and SR-76 and Spur Avenue and S. Santa Fe Avenue, which is included in later model years of the Series 12 traffic model, is in close proximity to the Project site. Under existing and near-term conditions, this connection does not exist. The connection of Melrose Drive between its current terminus, north of SR-76 to North River Road would have a considerable effect on Project trip distribution. This connection would allow a substantial share of Project-related traffic to use Melrose Drive to access SR-76 and the regional street system. In its absence, the majority of Project-related traffic bound for SR-76 will travel via Vandegrift Boulevard and College Boulevard, through locations already subject to congestion during peak hours. Therefore, two separate distributions were prepared focusing on the connection or elimination of the Melrose Drive extensions. The baseline existing and near-term analyses assume the current conditions without the Melrose Drive extensions.

By the Year 2035, the City's Circulation Element Master Transportation Roadway Plan is assumed to be completed. Therefore, the Year 2035 baseline analysis redistributes Project traffic within the study area to account for the future extension of Melrose Drive. Further details on this scenario are provided later on in *Section 11.0* of this report.

The connection of Melrose Drive over the San Luis Rey Bridge is affected by significant environmental constraints and a lack of funding. Therefore, a separate "Year 2035 Without Melrose Drive Extension" analysis is provided later on in *Section 14.0* of this report using the existing and near-term Project distribution without this connection.

Once the traffic distribution was established, the Project-generated traffic was assigned to the adjacent street system.

Figure 7–1 shows the regional and local distribution of Project trips (under existing and near-term conditions, without Melrose Drive extension). ***Figure 7–2*** depicts the proposed Project traffic assignment. ***Figure 7–3*** depicts the Existing + Project traffic volumes.

It should be noted the Project driveway distribution and access traffic volumes are provided later on in *Section 13.0* of this report.

Appendix D contains a copy of the SANDAG Select Zone Assignment traffic model.

b. 120 Surf Lagoon guests and 100 Report Pass guests expected daily. See *Appendix E* for Trip Generation Calculations.

General Notes:

1. ADT = Average daily traffic

7.3 Trip Distribution/Assignment

The distribution of Project traffic was determined based on information in the previously approved TIA for the Pavilion at Oceanside project as well as the locations of the proposed access points, traffic patterns observed from the existing traffic counts, and the proximity of the project to surrounding freeways, attractions, and residential and commercial areas. The trip distribution was developed in consultation with City staff.

Figures 7–1a and ***7-1b*** show the distribution of Project trips to the study street segments and intersections, respectively.

Once the traffic distribution was established, the Project-generated traffic was assigned to the adjacent street system. It should be noted that the Project's Weekday and Weekend distribution was assumed to be the same.

Figures 7–2a and ***7-2b*** depict the Weekday Project daily traffic volumes and AM / PM peak hour traffic volumes, respectively.

Figure 7–3 depicts the Weekend Project daily traffic and peak hour traffic volumes.

7.0 TRIP GENERATION/DISTRIBUTION/ASSIGNMENT

7.1 Trip Generation

Trip generation rates were obtained from the (Not So) *Brief guide of Vehicular Traffic Generation Rates for the San Diego Region* (April 2002) by SANDAG. The "Residential, Apartment" (6 ADT / DU)" were used for the apartments, and the "Strip Commercial" (40 ADT /KSF)" trip rates were used for the local serving retail to estimate the Project trip generation.

Table 7–1 summarizes the trip generation for the Project. As shown in *Table 7–1*, the Project is calculated to generate 2,038 daily trips with 159 trips during the AM peak hour (33 inbound/ 126 outbound trips) and 183 trips during PM peak hour (127 inbound/ 56 outbound trips).

7.2 Trip Distribution and Assignment

Project traffic was distributed to the street system based on existing traffic patterns in the area, the Project's proximity to freeways and arterials, locations of retail, places of employment, schools, and other shopping opportunities in the study area.

24% of the Project trips were assigned to the west on Oceanside Boulevard, 26% to the north on N. Melrose Drive, 28% to the south on N. Melrose Drove and 20% to the east on W. Bobier Drive. The remaining 2% of the Project trips were assigned on Sports Park Way, north of the site.

Figure 7–1 shows the Project trip distribution. ***Figure 7–2*** shows the Project traffic volumes. ***Figure 7-3*** shows the Existing + Project traffic volumes.

7.0 TRIP GENERATION/DISTRIBUTION/ASSIGNMENT

The weekday project trip generation was estimated using the Traffic Generation Rates for the San Diego Region, April 2002, published by SANDAG. The proposed Project includes the development of 50 single family residential units and 54 attached town homes. Trip rates corresponding to single family units and multi-family units were used to estimate the trips generated by the Project.

7.1 Trip Generation

Table 7–1 tabulates the total project traffic generation. The total project is calculated to generate 932 ADT with 75 AM peak hour trips (19 inbound / 56 outbound) and 93 PM peak hour trips (65 inbound / 28 outbound).

7.2 Trip Distribution/Assignment

Project trip distribution was developed based on current travel patterns at the study are intersections based on the existing traffic counts and on the locations of employment centers, schools and retail opportunities. Based on the trip distribution percentages, the Project traffic was assigned to the study area intersections and segments.

Figure 7–1 depicts the Project trip distribution. ***Figure 7–2*** depicts the Project trip Assignment during the AM and PM peak hours. ***Figure 7–3*** depicts the Existing + Project traffic volumes during the AM and PM peak hours.

TABLE 7-1
TRIP GENERATION

Land Use	Size	Daily Trip Ends (ADTs)		AM Peak Hour					PM Peak Hour				
		Rate [a]	Volume	% of ADT [a]	In : Out Split	Volume			% of ADT	In : Out Split	Volume		
						In	Out	Total			In	Out	Total
Detached Single Family Homes	50 DU	10 /DU	500	8%	30:70	12	28	40	10%	70:30	35	15	50
Attached Town Homes	54 DU	8/ DU	432	8%	20:80	7	28	35	10%	70:30	30	13	43
Total	**104 DU**	**-**	**932**	**-**	**-**	**19**	**56**	**75**	**-**	**-**	**65**	**28**	**93**

8.0 TRIP GENERATION/DISTRIBUTION/ASSIGNMENT

8.1 Trip Generation

Trip generation rates were obtained from the (Not So) *Brief guide of Vehicular Traffic Generation Rates for the San Diego Region* (April 2002) by SANDAG. The "Residential, Single Family Detached (average 3-6 DU/acre)" trip rate was used to estimate the Project trip generation.

Table 8–1 summarizes the trip generation for the Project. As shown in *Table 8–1*, the Project is calculated to generate 540 daily trips with 42 trips during the AM peak hour (13 inbound/ 29 outbound trips) and 53 trips during PM peak hour (37 inbound/ 16 outbound trips).

TABLE 8–1
PROJECT TRIP GENERATION

Use	Quantity	Daily Trip Ends (ADT)[a]		AM Peak Hour				PM Peak Hour			
		Rate [b]	Volume	% of ADT	In:Out Split	Volume		% of ADT	In:Out Split	Volume	
						In	Out			In	Out
Residential – Single Family Detached	54 DU	10/DU	540	8%	30:70	13	29	10%	70:30	37	16

Footnotes:

b. Average Daily Trips

c. Trip Generation Rate from the SANDAG's *Not So Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region,* 2002.

8.2 Trip Distribution and Assignment

Project traffic was distributed to the street system based on existing traffic patterns in the area, the Project's proximity to freeways and arterials, locations of retail, places of employment, schools, and other shopping opportunities. 100% of the Project trips were assigned to western leg of the Los Arbolitos Boulevard / Pala Road intersection, which will form the Project's only day-to-day access point.

Figure 8–1 shows the distribution of the Project trips. ***Figure 8–2*** shows the Project traffic volumes. ***Figure 8-3*** shows the Existing + Project traffic volumes.

3.4 Project Traffic Generation

The proposed residential single family home subdivision with 83 lots is located at 2839 Guajome Lake Road in Oceanside, California. The project site of approximately 16.79 acres has one existing single family home.

The project traffic generation was calculated using SANDAG trip rates from the *Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region*, April 2002. Copies of SANDAG rates are included in **Appendix F**. Using SANDAG traffic generation rates, the project is calculated to generate 830 ADT, 66 AM peak hour trips (20 inbound and 46 outbound), and 83 PM peak hour trips (58 inbound and 25 outbound) as shown in **Table 8**.

TABLE 8: PROJECT TRAFFIC GENERATION

Proposed							AM				PM	
Land Use	Rate	Size & Units	ADT	%	Split		IN	OUT	%	Split	IN	OUT
Residential - Single Family	10 /DU	83 DU	**830**	8%	0.3	0.7	**20**	**46**	10%	0.7 0.3	**58**	**25**

DU-Dwelling Unit; ADT-Average Daily Traffic; Split-percent inbound and outbound.

3.4.1 Project Access

The project will have two driveways that will connect with Guajome Lake Rd.

3.4.2 Project Distribution and Assignment

Project trips were distributed to the adjacent roadway network using traffic engineering judgement and factors such as proximity to SR-76, local productions, and attractions. The project distribution is shown in **Figure 9** while the project assignment is shown in **Figure 10.**

8.0 TRIP GENERATION/DISTRIBUTION/ASSIGNMENT

The following is a discussion of the Project trip generation calculations and the Project traffic distribution and assignment through the local street system.

8.1 Trip Generation

The Project traffic generation calculations were conducted using the trip generation rates published in the Institute of Transportation Engineers *Trip Generation Manual*, 10th edition for the "assisted living" land use (Land Use Code 254). The typical trip generation rates used in the City of Oceanside are the regional SANDAG "Brief Guide" rates (2002). However, these rates do not include a land use similar to the proposed assisted living.

Table 8–1 tabulates the total Project traffic generation. The total Project is calculated to generate approximately 247 ADT with 11 inbound / 7 outbound trips during the AM peak hour and 10 inbound / 15 outbound trips during the PM peak hour.

TABLE 8–1
PROJECT TRIP GENERATION

Land Use	Size	Daily Trip Ends (ADTs)[b]		AM Peak Hour					PM Peak Hour				
		Rate [a]	Volume	% of ADT	In:Out Split	Volume			% of ADT	In:Out Split	Volume		
						In	Out	Total			In	Out	Total
Assisted Living	95 DU	2.6 / Bed	247	0.19	63:37	11	7	18	0.26	38:62	10	15	25

Footnotes:

a. Rates based on the Institute of Transportation Engineers, Trip Generation Manual, 10th Edition, September 2017, Land Use 254.

b. ADT = Average daily traffic

8.2 Trip Distribution/Assignment

Project trip distribution was developed using professional engineering judgment based on the available local and regional access as well as existing traffic patterns and flows observed from existing traffic count data at study area intersections.

Figure 8–1 depicts the Project trip distribution percentages. ***Figure 8–2*** shows the assigned Project traffic volumes and ***Figure 8–3*** shows the Existing + Project traffic volumes. ***Figure 8–4*** shows Existing + Cumulative Projects + Project traffic volumes.

Subject: Water System Analysis for the Pacifica Project in the City of Oceanside

Introduction and Purpose

The Pacifica project is located in the City of Oceanside southwest of Monica Circle/Macario Drive and west of Roja Drive. Access to the project is from Monica Circle/Macario Drive and Malaga Drive. Water service for the Pacifica project will be provided by the City of Oceanside.

The proposed Pacifica project is a residential development on an approximately 14.55-acre parcel (APN 157-070-42 and 122-190-19). It is situated within a previous elementary school site. The proposed project would develop 164 townhome residential units. Finished floor elevations within the project range from a low of 97 feet to a high of 105 feet in elevation.

The purpose of this letter-report is to analyze the existing and proposed public and private water systems for the Pacifica project and determine if there are any hydraulic deficiencies created by the proposed development of this property.

A Vicinity Map for the project is shown on Figure 1 and a preliminary site plan for the project is included in Appendix A.

Water System Design Criteria

Water system design criteria such as estimating potable water demands and evaluating the capacity of transmission and distribution pipes are based on the City of Oceanside Water Utilities Department, Water, Sewer, and Reclaimed Water Design & Construction Manual, August 2017, Section 2, Potable Water Systems Design Guidelines (Design & Construction Manual). Based on the design manual, domestic average day water demands are determined using land use acreage and an associated water demand factor. A copy of the pertinent sections in the City's Manual where the design criteria is located is attached as Appendix B.

The water demand rates are presented in Table 1.

TABLE 1
PACIFICA PROJECT
AVERAGE DAILY WATER DEMAND FACTORS

Land Use	Gallons Per Day Per Acre
Residential (1-2 DU/ac)	1,200

FIGURE 1

VICINITY MAP

PACIFICA

During maximum day demands, the public water system must maintain a minimum residual pressure of 45 psi. During peak hour demands, the public water system must maintain a minimum residual pressure of 35 psi. Residual pressure under maximum day demands plus fire flow must be greater than 20 psi.

Pipeline velocity must not exceed 7.5 feet per second (fps) under maximum domestic demands (no fire flow). For fire flow conditions, velocities shall not exceed 15 fps for less than 12-inch diameter existing mains, and velocities shall not exceed 10 fps for 12-inch diameter existing mains and above.

Potable Water Demands

The estimated water demand for the project is calculated using the water use factors based on density presented in the City's Design and Construction Manual. The density is calculated based on the City's definition of Gross Developable Area which equates to 12.82 acres for the Pacifica site resulting in a density of 12.79 du/ac. The dwelling unit density for the Pacifica project is shown below in Table 2.

TABLE 2
RESIDENTIAL DENSITY FOR THE PACIFICA PROJECT

Dwelling Units	Gross Developable Area (acres)	Density, DU/acre
164	12.82	12.79

The dwelling unit density corresponds to a water demand factor of 2,800 gpd per acre for the Pacifica project. The total estimated average water demand for the Pacifica project is calculated in Table 3.

TABLE 3
WATER DEMAND FOR THE PACIFICA PROJECT

Land Use	Water Demand Factor (gpd/acre)	Gross Developable Area (acres)	Average Water Demand, gpd
Residential	2,800	12.82	35,896

The maximum day demands are 2 times the average and peak hour demands are 3 times the average according to the City's Design and Construction Manual. This corresponds to 71,792 gpd (50 gpm) and 107,688 gpd (75 gpm) respectively.

Fire Flows

The fire flow requirement for the project site was estimated based on the 2019 California Fire Code. The fire code takes into account building area and construction type. The largest building proposed for the project site is estimated to be 13,152 square feet. Construction Type V-B is proposed for the onsite buildings. This results in an estimated fire flow requirement of 3,000 gpm. After the expected reduction of 50% for an NFPA approved fire sprinkler system, the estimated final fire flow requirement for the project site equates to 1,500 gpm. The excerpt from the 2019 California Fire Code pertaining to fire flow requirements and project information on building area and construction type are shown in Appendix D.

Available Water System Pressure

Water service to the project will be from the Talone 320 Pressure Zone of the City's public water system**.** Finished floor elevations on the Pacifica property range between 97 feet and 105 feet. This results in a maximum static water pressure range of 93 psi to 97 psi on the project site. The expected maximum working pressure behind/downstream of the meter and backflow preventer will be approximately between 78 to 82 psi.

Existing Water System

The Pacifica project is located in an area of the City of Oceanside that is well developed. Existing water facilities in the vicinity of the project include 6-inch diameter water lines in Monica Circle and 8-inch diameter water lines in Malaga Drive, Macario Drive, and Roja Drive. These lines are served by the City's Talone 320 Pressure Zone.

Figure 2 shows the existing water lines in the vicinity of the Pacifica project.

Proposed Offsite Water Facilities

The water service in the area of the Pacifica project is being supplied by the 320 Zone water system. From a service pressure standpoint, connecting the Pacifica project to this system will provide adequate service. As described in a previous section, the range of pad elevations on the project results in a minimum static water pressure of 93 psi.

The proposed water system for the Pacifica project consists of making connections for its proposed private water system at two locations. A domestic water meter and fire protection system connection will be made at two locations. Additionally, the project will be upsizing the existing 6-inch diameter water lines in the Monica Circle and Macario Drive intersection to 8-inch diameter water lines in order to meet the City's current design standards.

The Pacifica project's proposed onsite water system will consist of private water lines via a private domestic and fire protection system.

Private Water System

Per the City's requirement, the onsite water system for Pacifica will be private. Two connections will be made for both domestic service and fire protection service to the project site. Domestic and fire connections will be made at the Monica Circle/Macario Drive intersection and domestic and fire connections will be made at the western terminus of Malaga Drive. Both the project's private domestic water system and private fire protection system will be connected at each location.

Figure 3 shows the proposed water system for the Pacifica project. Reference information surrounding the proposed private water systems for Pacifica are included in Appendix C.

Domestic Meter and Service. The preliminary water fixture count (WFU) for the proposed townhome units are estimated to be 30 to 35 WFUs per unit. Based on a WFU count of between 30 and 35 fixture units per home, the design demand for water meter sizing is estimated to be between 590 and 650 gpm for the entire project.

Based on the meter capacities established in AWWA C700-20 and listed by City's Water Utilities Department, the Pacifica project will require two 3-inch meters, with a 700 gpm total capacity, that shall be constructed per City of Oceanside Standard Drawing W-4. The final sizing of the service laterals and meters will need to be confirmed once the fixture units for each home are finalized.

Private Fire Protection Service. The private fire protection system will consist of two double check detector assembly (DCDA) backflow preventers at each connection point and 8-inch diameter water lines throughout the project. The 8-inch diameter private fire protection system will sufficiently convey the projected 1,500 gpm fire flow requirement. This was confirmed by a hydraulic computer model that is presented in the next section of this water study.

Computer Model for System Analysis

To analyze the existing and proposed water systems for the Pacifica project, a water system hydraulic computer model was generated for the pertinent proposed piping in the vicinity of the project. This hydraulic computer model included the public water system piping adjacent to the Pacifica project as well as the proposed onsite piping. Several water demand scenarios were modeled which provided data upon which the recommended pipe sizing is based.

Available Hydraulic Grade Line. As mentioned earlier in this report, the source of water in the vicinity of the Pacifica project is the 320 Zone with the Talone and Pilgrim Creek Reservoirs being nearest to the project site. According to the City's Water Master Plan and atlas maps the 320 foot hydraulic grade line (HGL) is the high water line of the reservoir. There are 18-inch diameter transmission lines that carry the water from these reservoirs to the North Redondo Drive and North River Road intersection; hence the source node for the hydraulic computer model was modeled near this intersection. The available HGL was conservatively estimated to be approximately 285 feet (reservoir floor) during domestic and fire flow scenarios for the proposed project.

Water System Computer Model. Analysis using the KYPIPE computer software program developed by the University of Kentucky determined residual pressures throughout the water system. This computer software utilizes the Hazen-Williams equation for determining headloss in pipes. The Hazen-Williams "C" value used for all pipe sizes in our analysis is 120.

Fitting and Valve Losses. To simulate minor losses through pipe fittings and valves, minor loss coefficients or "k" values for all fittings associated with pipes were included in the hydraulic model.

Meter and Backflow Assembly Losses. The pressure loss through the proposed meters and backflow preventers was incorporated into the computer model. Appendix C presents candidate DCDA and RP backflow preventers. The manufacturer's literature includes charts which show pressure loss through the backflow preventer as a function of flow. These charts were used to incorporate the pressure losses reflected in the computer modeling.

Computer Model Analysis – Domestic Water System

Computer modeling of the proposed onsite private domestic system and existing offsite water system for the Pacifica project was performed to confirm the pipe sizes necessary to provide adequate domestic service. The water system was analyzed under two scenarios: average day demand and peak hour demand.

Appendix E provides the results of the computer modeling for the analyzed water system. Exhibit A at the back of Appendix E provides the Node and Pipe Diagram for the computer model.

The results in Appendix E show that the proposed water system for the Pacifica project is adequate for domestic service. The results of the computer model show that average day demand can be achieved onsite with a minimum residual pressure of 61 psi and that peak hour demand can be achieved onsite with a minimum residual pressure of 60 psi.

Computer Model Analysis – Fire Protection System

Computer modeling of the proposed onsite private fire protection system and existing offsite water system for the Pacifica project was performed to confirm the pipe sizes necessary to provide adequate fire protection service. The water system was analyzed under two maximum day demand plus 1,500 gpm scenarios.

Appendix F provides the results of the computer modeling for the analyzed water system. Exhibit B at the back of Appendix F provides the Node and Pipe Diagram for the computer model.

The results in Appendix F show that the proposed water system for the Pacifica project is adequate for fire protection. The results of the computer model show that a 1,500 gpm fire flow can be provided onsite with a minimum residual pressure of 45 psi.

Conclusions and Recommendations

The following recommendations and conclusions are made based on the water system analyses performed for the Pacifica project.

1. The Pacifica project will be supplied from the Talone 320 Pressure Zone system. Maximum static water pressure will be 97 psi. Maximum working pressure in the private system will be 82 psi.

2. Figure 2 in this report presents the existing water system surrounding the Pacifica project.

3. Public water system connections for the Pacifica project will be made to the existing 8-inch diameter water line at the western end of Malaga Drive as well as the proposed 8-inch diameter water line in the Monica Circle and Macario Drive intersection.

4. The proposed Pacifica development will be served by onsite private water systems stemming off the proposed 8-inch diameter water lines.

5. The Pacifica project will require two 3-inch meters that shall be constructed per City of Oceanside Standard Drawing W-4.

6. Offsite water improvements for the Pacifica project include upsizing existing 6-inch diameter water lines in the Monica Circle and Macario Drive intersection to 8-inch diameter water lines in order to meet the City's current design standards.

7. The fire flow requirement is estimated based on the 2019 California Fire Code. The fire code takes into account building area and construction type which results in a 1,500 gpm fire flow requirement for Pacifica.

8. Figure 3 in this report presents the proposed water system for the Pacifica project.

9. Individual pressure regulators for all building services within the Pacifica project are required to limit building service pressures to 80 psi in accordance with the Uniform Plumbing Code and City of Oceanside standards.

10. For PVC pipe to be used for public water lines within the project, we recommend the piping specification to be AWWA C900 DR-18 Class 235.

Thank you for the opportunity to prepare this report. If you have any questions on the enclosed information, please do not hesitate to call.

Single Family Res. (1-2 DU/ac)	1,200
Single Family Res. (2-4 DU/ac)	2,100
Single Family Res. (4-8 DU/ac)	2,400
Single Family Res. (8-12 DU/ac)	2,500
Single Family Res. (12-15 DU/ac)	2,800
Single Family Res. (15-20 DU/ac)	3,200
Single Family Res. (20-30 DU/ac)	4,100
Agricultural Acres	1,750
Industrial Acres	2,000
Open Space Acres	1,300
Commercial Acres	1,850
Institutional Acres	1,675

DU – Dwelling Unit

2. Peak Factors:

a. Average Daily Demand ADD = 1.00
b. Maximum Daily Demand MDD = 2.0*ADD
c. Peak Hourly Demand PHD = 3.0*ADD

2.2 FIRE FLOWS

The City of Oceanside currently utilizes the latest edition California Fire Code (CFC) requirements for determining fire flow requirements for buildings. The latest edition CFC incorporates many factors in determining fire flows, such as building construction type, building square footage, and fire protection systems. Several factors are combined to determine the minimum required fire flow requirements.

Although General Guidelines contained in Table 2.1 represent typical fire flows for various land use categories, minimum fire flow calculations are governed by the latest edition CFC, Section 507, for each specific building type and construction.

The typical fire flow for the different land use categories are shown in the following Table. All fire flows are measured with a 20-PSI Residual Pressure.

TABLE 2.1: General Fire Flow Guidelines

Land Use Classifications	Design Fire Flow (GPM)	Duration (HOURS)	Residual Pressure (PSI)
Residential - Single Family	1500	2	20
Residential - Multi-Family	3000	2	20
Commercial	4000	4	20
Industrial	4000	4	20
Governmental - Institutional	4000	4	20

All new developments that are required to have a fire suppression system shall have the system approved by the Fire Marshall. Sprinkler calculations shall be provided to the Fire Department for review and to verify the fire service connection and backflow assembly is properly sized.

2.3 PRESSURES

A. Minimum residual pressure shall be 20 PSI at design fire flow plus maximum day domestic demand.

B. Minimum residual pressure shall be 35 PSI at peak hour domestic demand.

C. Minimum residual pressure shall be 45 PSI at peak day.

D. When static pressures exceed 80 PSI at property line, pressure-reducing valves will be required at the building. The pressure regulator shall be Class 150 or greater.

E. All new single-family residential water service in each pressure zone shall be provided with a minimum static pressure of 50 PSI at the water meter.

2.4 MAINS

A. Minimum diameter shall be 8 inches.

B. All mains not meeting the minimum main diameter and material requirements shall be replaced to meet current design standards. This is applicable for all new commercial, industrial, institutional, and residential developments of four (4) units or more. Where the full replacement length along the frontage property is deemed in excess of the overall project cost, the developer may pay an in-lieu fee upon the approval of the Water Utilities Director.

C. All lines are to be looped.

D. Minimum depth of cover required:

1. 36 inches for 12-inch mains and smaller.

2. Mains over 12 inches require special design.

E. Design shall be based on maximum day requirements plus fire flow. Maximum velocity shall be 7.5 FPS not including fire flow.

F. For fire flow conditions, velocities shall not exceed 15 FPS for less than 12-inch existing mains, and velocities shall not exceed 10 FPS for 12-inch existing mains and above. For new mains, velocities shall not exceed 10 FPS with the fire flow demand flowing through one hydrant.

G. Thrust blocks shall be installed in accordance with Standard Drawing W-27. When water pressures exceed 200 PSI and/or soil-bearing pressures are less than 2000 PSF a special design shall be required by a Registered Civil/Structural Engineer.

H. All mains shall be shown in profile on the improvement plans.

I. All water mains not located within the Public right-of-way shall be provided with a minimum 20-foot wide water easement. In some cases, a wider easement may be required, as determined by the Water Utilities Director.

J. Where water and sewer mains are located within the same easement, the minimum easement size shall be 30 feet wide.

K. Easements shall be easily accessible to City maintenance equipment. Access shall be unobstructed with all-weather driveways and capable of withstanding a 40 ton load.

L. No trees, plantings, fences, structures, or building overhang shall be located within City easements.

M. Homeowners who purchase property containing a City easement will be responsible for the maintenance of that easement property.

N. No building foundations will be allowed within 10 feet of the outside edge of a City easement.

O. The shortest pipe length shall be no less than 6 linear feet.

2.5 VALVES

A. Maximum valve spacing:

1. 500 feet in residential areas and high-point areas.

2. 1,000 feet on arteries and secondary feeders, supply lines and combination arteries and supply lines.

B. Valve locations: as required by the Water Utilities Director.

C. Butterfly Valves shall conform to the “Standard for Rubber Seated Butterfly Valves”, per AWWA C-504, as last revised and shall be tested and certified with the valve actuator installed on the valve.

D. Gate Valves sizes 3 inches through 12 inches shall conform to the “Standard for Resilient Wedge Gate Valves for Water and Sewerage Systems”, per AWWA C-509, and C-550 for Interior Epoxy coating, and C-110 for Ductile Iron 250 PSI, latest revision. Gate valves shall be as described in Section 2.12.

APPENDIX C

PRIVATE WATER REFERENCE

APPENDIX A

RECOMMENDED RULES FOR SIZING THE WATER SUPPLY SYSTEM

The provisions contained in this appendix are not mandatory unless specifically adopted by a state agency, or referenced in the adopting ordinance.

A 101.0 General.

A 101.1 Applicability. This appendix provides a general procedure for sizing a water supply system. Because of the variable conditions encountered, it is impractical to lay down definite detailed rules of procedure for determining the sizes of water supply pipes in an appendix, which shall necessarily be limited in length. For an adequate understanding of the problems involved, refer to Water-Distributing Systems for Buildings, Report BMS 79 of the National Bureau of Standards; and Plumbing Manual, Report BMS 66, also published by the National Bureau of Standards.

A 102.0 Preliminary Information.

A 102.1 Daily Service Pressure. Obtain the necessary information regarding the minimum daily service pressure in the area where the building is to be located.

A 102.2 Water Meter. Where the building supply is to be metered, obtain information regarding friction loss relative to the rate of flow of meters in the range of sizes likely to be used. Friction-loss data is capable of being obtained from most manufacturers of water meters. Friction losses for disk-type meters shall be permitted to be obtained from Chart A 102.2.

A 102.3 Local Information. Obtain available local information regarding the use of different kinds of pipe with respect both to durability and to decrease in capacity with the length of service in the particular water supply.

A 103.0 Demand Load.

A 103.1 Supply Demand. Estimate the supply demand for the building main, the principal branches and risers of the system by totaling the fixture units on each, Table A 103.1, and then by reading the corresponding ordinate from Chart A 103.1(1) or Chart A 103.1(2), whichever is applicable.

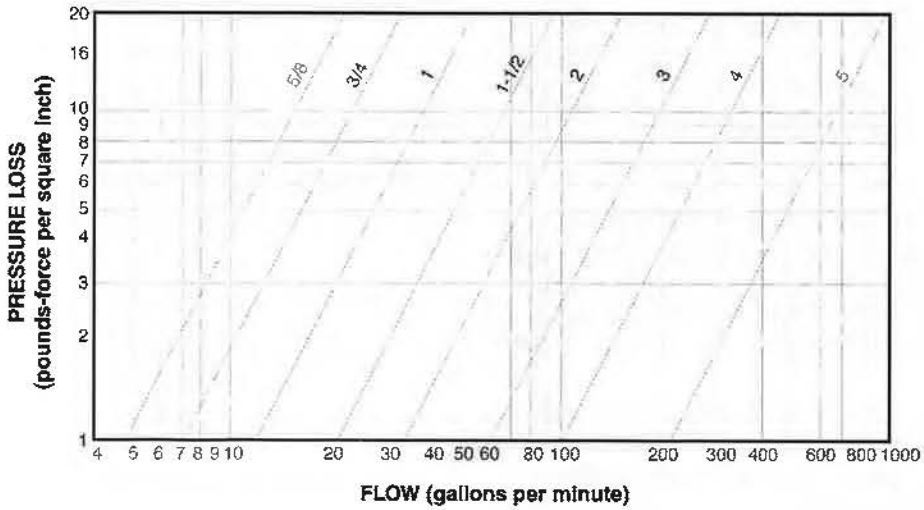
A 103.2 Continuous Supply Demand. Estimate continuous supply demands in gallons per minute (gpm) (L/s) for lawn sprinklers, air conditioners, etc., and add the sum to the total demand for fixtures. The result is the estimated supply demand of the building supply.

A 104.0 Permissible Friction Loss.

A 104.1 Residual Pressure. Decide what is the desirable minimum residual pressure that shall be maintained at the highest fixture in the supply system. Where the highest group of fixtures contains flushometer valves, the residual pressure for the group shall be not less than 15 pounds-force per square inch (psi) (103 kPa). For flush tank supplies, the available residual pressure shall be not less than 8 psi (55 kPa).

A 104.2 Elevation. Determine the elevation of the highest fixture or group of fixtures above the water (street) main. Multiply this difference in elevation by 0.43. The result is the loss of static pressure in psi (kPa).

CHART A 102.2
FRICTION LOSSES FOR DISK-TYPE WATER METERS



For SI units: 1 inch = 25 mm, 1 pound-force per square inch = 6.8947 kPa, 1 gallon per minute = 0.06 L/s

A 104.3 Available Pressure. Subtract the sum of loss in static pressure and the residual pressure to be maintained at the highest fixture from the average minimum daily service pressure. The result will be the pressure available for friction loss in the supply pipes, where no water meter is used. Where a meter is to be installed, the friction loss in the meter for the estimated maximum demand should also be subtracted from the service pressure to determine the pressure loss available for friction loss in the supply pipes.

A 104.4 Developed Length. Determine the developed length of pipe from the water (street) main to the highest fixture. Where close estimates are desired, compute with the aid of Table A 104.4(1), Table A 104.4(2), or Table A 104.4(3), whichever is applicable, the equivalent length of pipe for fittings in the line from the water (street) main to the highest fixture and add the sum to the developed length. The pressure available for friction loss in psi (kPa), divided by the developed lengths of pipe from the water (street) main to the highest fixture, times 100, will be the average permissible friction loss per 100 feet (30 480 mm) length of pipe.

A 105.0 Size of Building Supply.

A 105.1 Diameter. Knowing the permissible friction loss per 100 feet (30 480 mm) of pipe and the total demand, the diameter of the building supply pipe shall be permitted to be obtained from Chart A 105.1(1), Chart A 105.1(2), Chart A 105.1(3), Chart A 105.1(4) Chart A 105.1(5), Chart A 105.1(6), or Chart A 105.1(7), whichever is applicable. The diameter of pipe on or next above the coordinate point corresponding to the estimated total demand and the permissible friction loss will be the size needed up to the first branch from the building supply pipe.

A 105.2 Copper and Copper Alloy Piping. Where copper tubing or copper alloy pipe is to be used for the supply piping and where the character of the water is such that slight changes in the hydraulic characteristics are expected, Chart A 105.1(1) shall be permitted to be used.

A 105.3 Hard Water. Chart A 105.1(2) shall be used for ferrous pipe with the most favorable water supply in regards to corrosion and caking. Where the water is hard or corrosive, Chart A 105.1(3) or Chart A 105.1(4) will be applicable. For extremely hard water, it will be advisable to make additional allowances for the reduction of the capacity of hot-water lines in service.

A 106.0 Size of Principal Branches and Risers.

A 106.1 Size. The required size of branches and risers shall be permitted to be obtained in the same manner as the building supply, by obtaining the demand load on each branch or riser and using the permissible friction loss computed in Section A 104.0.

A 106.2 Branches. Where fixture branches to the building supply are sized for the same permissible friction loss per 100 feet (30 480 mm) of pipe as the branches and risers to the highest level in the building and lead to the inadequate water supply to the upper floor of a building, one of the following shall be provided:

(1) Selecting the sizes of pipe for the different branches so that the total friction loss in each lower branch is approximately equal to the total loss in the riser, including both friction loss and loss in static pressure.

(2) Throttling each such branch using a valve until the preceding balance is obtained.

(3) Increasing the size of the building supply and risers above the minimum required to meet the maximum permissible friction loss.

A 106.3 Water Closets. The size of branches and mains serving flushometer tanks shall be consistent with sizing procedures for flush tank water closets.

A 107.0 General.

A 107.1 Velocities. Velocities shall not exceed 10 feet per second (ft/s) (3 m/s), except as otherwise approved by the Authority Having Jurisdiction.

A 107.2 Pressure-Reducing Valves. Where a pressure-reducing valve is used in the building supply, the developed length of supply piping and the permissible friction loss shall be computed from the building side of the valve.

A 107.3 Fittings. The allowances in Table A 104.4(1) for fittings are based on non-recessed threaded fittings. For recessed threaded fittings and streamlined soldered fittings, one-half of the allowances given in the table will be ample.

TABLE A 103.1
WATER SUPPLY FIXTURE UNITS (WSFU) AND MINIMUM FIXTURE BRANCH PIPE SIZES[3]

APPLIANCES, APPURTENANCES, OR FIXTURES[2]	MINIMUM FIXTURE BRANCH PIPE SIZE[1,4] (inches)	PRIVATE	PUBLIC	ASSEMBLY[6]

Water Closet, greater than 1.6 GPF Gravity Tank	½	3.0	5.5	7.0
Water Closet, greater than 1.6 GPF Flushometer Valve	1	7.0	8.0	10.0

For SI units: 1 inch = 25 mm

Notes:

[1] Size of the cold branch pipe, or both the hot and cold branch pipes.

[2] Appliances, appurtenances, or fixtures not included in this table shall be permitted to be sized by reference to fixtures having a similar flow rate and frequency of use.

[3] The listed fixture unit values represent their total load on the cold water building supply. The separate cold water and hot water fixture unit value for fixtures having both cold and hot water connections shall be permitted to be three-quarters of the listed total value of the fixture.

[4] The listed minimum supply branch pipe sizes for individual fixtures are the nominal (I.D.) pipe size.

[5] For fixtures or supply connections likely to impose continuous flow demands, determine the required flow in gallons per minute (gpm) (L/s) and add it separately to the demand in gpm (L/s) for the distribution system or portions thereof.

[6] Assembly [Public Use (see Table 422.1)].

[7] Reduced fixture unit loading for additional hose bibbs is to be used where sizing total building demand and for pipe sizing where more than one hose bibb is supplied by a segment of water distribution pipe. The fixture branch to each hose bibb shall be sized by 2.5 fixture units.

Series 774DCDA

Double Check Detector Assemblies

Sizes 2½" – 12" (65 – 300mm)

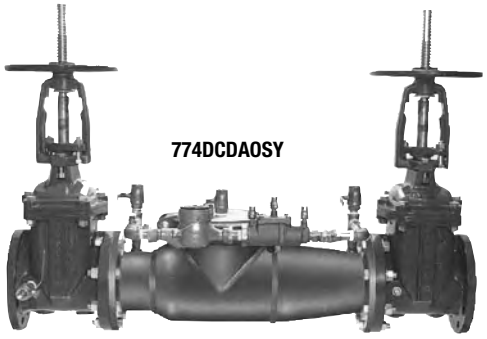
Series 774DCDA Double Check Detector Assemblies are designed for use in accordance with water utility non-health hazard containment requirements. It is mandatory to prevent the reverse flow of fire protection system substances, i.e., glycerin wetting agents, stagnant water and water of non-potable quality from being pumped or siphoned into the potable water supply.

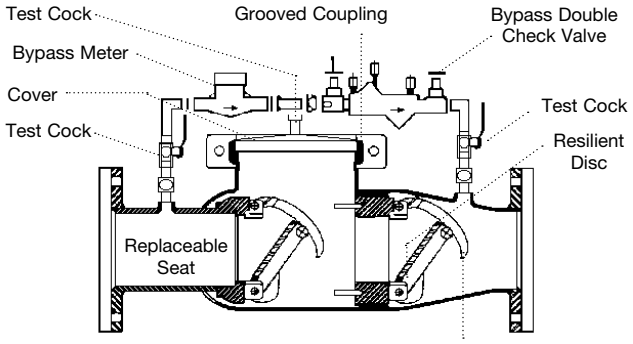
Features

- Torsion spring check valve provides low head loss
- Short lay length is ideally suited for retrofit installations
- Stainless steel body is half the weight of competitive designs reducing installation and shipping cost
- Stainless steel construction provides long term corrosion protection and maximum strength
- Single top access cover with two-bolt grooved style coupling for ease of maintenance
- Thermoplastic and stainless steel check valves for trouble-free operation
- No special tools required for servicing
- Compact construction allows for smaller vaults and enclosures
- Furnished with ⅝" x ¾" (16x19mm) bronze meter (gpm or cfm)
- Detects underground leaks and unauthorized water use
- May be installed horizontal or vertical "flow up" position

Specifications

A Double Check Detector Assembly shall be installed on fire protection systems when connected to a potable water supply. Degree of hazard present is determined by the local authority having jurisdiction. The assembly shall consist of two positive seating check valves located between two resilient seated shutoffs with a hydraulically balanced bypass line and four test cocks. The main valve body shall be manufactured from 300 Series stainless steel to provide corrosion resistance. The check valves shall be of thermoplastic construction with stainless steel hinge pins, cam arm and cam bearing. The check valves shall utilize a single torsion spring design to minimize pressure drop through the assembly. The check valves shall be modular and shall seal to the main valve body by the use of an O-ring. There shall be no brass or bronze parts used within the check valve assembly. The check valve seats shall be of molded thermoplastic construction. The use of seat screws as a retention method is prohibited. All internal parts shall be accessible through a single cover on the valve assembly. The valve cover shall be held in place through the use of a single grooved style two-bolt coupling. The bypass line shall be hydraulically sized to accurately measure low flow. The bypass line shall consist of a meter, a small diameter double check assembly with test cocks and isolation valves. The bypass line double check valve shall have two independently operating modular poppet check valves, and top mounted test cocks. The assembly shall be a Watts Series 774DCDA.





Laser Cut Polished Cam Arm

Available Models

Suffix:

LF –	without shutoff valves
OSY –	UL/FM outside stem and yoke resilient seated gate valves
*OSY FxG –	flanged inlet gate connection and grooved outlet gate connection
*OSY GxF –	grooved inlet gate connection and flanged outlet gate connection
*OSY GxG –	grooved inlet gate connection and grooved outlet gate connection
CFM –	cubic feet per minute meter
GPM –	gallons per minute meter

Available with grooved NRS gate valves - consult factory*
Post indicator plate and operating nut available - consult factory*
*Consult factory for dimensions

PLAN

BILL OF MATERIALS:

1. MASTER METER SRH COMPOUND METER WITH BUILT IN TEST OUTLET (APPROXIMATELY 20" LONG).
2. VAULT FRAME AND COVER PER STANDARD DWG W-19 AND W-20
3. VICTAULIC COUPLING.
4. RESILIENT WEDGE GATE VALVE, FLANGE X FLANGE WITH 2" OPERATING NUT (CLOSED VALVE).
5. MAINLINE BY-PASS (MAIN LINE SIZE).
6. SUPPORT METER WITH VALVE SUPPORTS PER STANDARD DWG W-18.
7. BILCO 2 PIECE OR USF 2 PIECE ALUMINUM DIAMOND PLATE HATCH. THE HATCH MUST COVER THE LIMITS OF EITHER SIDE OF THE RWGV ON THE MAIN LINE. RATING OF THE HATCH WILL BE MADE ON A CASE-BY-CASE BASIS, APPROVED BY THE WATER UTILITIES DEPARTMENT.
8. PIPELINE PRODUCTS GVL-200 LOCKING GATE VALVE CAP.

NOTES:

1. VAULT DEPTH NOT TO EXCEED 5'-0" FROM TOP OF VAULT TO FLOOR.
2. SERVICES 6" AND LARGER REQUIRE SPECIAL DESIGN.

3" & 4" WATER METER FOR COMMERCIAL/INDUSTRIAL/ MULTI-FAMILY SERVICE

STANDARD DRAWING NO. W-10

Sensus SRH Compound Meters

3" SRH Compound Meter

Specifications:

Normal Operating Flow Range

- 2" Size: 2 to 160 gpm
- 3" Size: 4 to 320 gpm
- 4" Size: 6 to 500 gpm
- 6" Size: 10 to 1000 gpm
- *8" Manifold Size: 16 to 1600 gpm

Accuracy (Except at crossover)

- 100% ± 1.5% of actual thruput

Accuracy at Crossover

- 95% minimum

Low Flow Accuracy (95% minimum)

- 2" Size: ¼ gpm
- 3" Size: ½ gpm
- 4" Size: ¾ gpm
- 6" Size: 1½ gpm
- *8" Manifold Size: 2 gpm

Operating Pressure

- 150 psi maximum

* 8" manifold assembly consists of two (2) 4" compound meters, four (4) gate valves, two (2) flanged coupling adapters and two (2) reducing manifolds.

The SRH (Single Register High Performance) Magnetic Drive Compound Meters are intended for use in commercial, industrial and institutional cold water services in which accurate measurement of a wide range of low to high flows is required. Typical applications are for apartment dwellings, office buildings, hotels, schools, hospitals and smaller industrial facilities.

The SRH Compound Meter is essentially two meters within a single, cast bronze housing. All water enters and passes through the turbine chamber. At low flow rates, the water is diverted up through the positive displacement (bypass) measuring chamber. After passing through this chamber, the water passes over the valve and out of the meter. As the flow rate increases, the pressure against the swing action valve increases, forcing the valve to quickly swing to a full open position. The water then flows straight through the turbine chamber and out of the meter.

Conformance to Standards

These SRH Compound Meters meet or exceed all requirement of ANSI/AWWA Standard C-702 latest edition.

METER SIZE	PRODUCT NUMBERS REGISTRATION	
	100 CUBIC FEET	1,000 GALLONS
2"	50325	50330
3"	50350	50354
4"	50405	50410
6"	50449	50447
8"	NS	NS

NOTES:

- Compound Meters are normally a non-stock item. Please call your local Team EJP sales office for more information.
- Compound Meters include bronze companion flanges.
- All compound meters are available with TouchRead® System registers.
- Ask about Sensus Pre-Fab-Pak Compound Meter, prefabricated assemblies which include meters, valves, couplings, fittings and fabricated pipe; everything for a complete installation.

Please see pages H-13—H-16 for information about a new large meter line that will replace the current large meters.

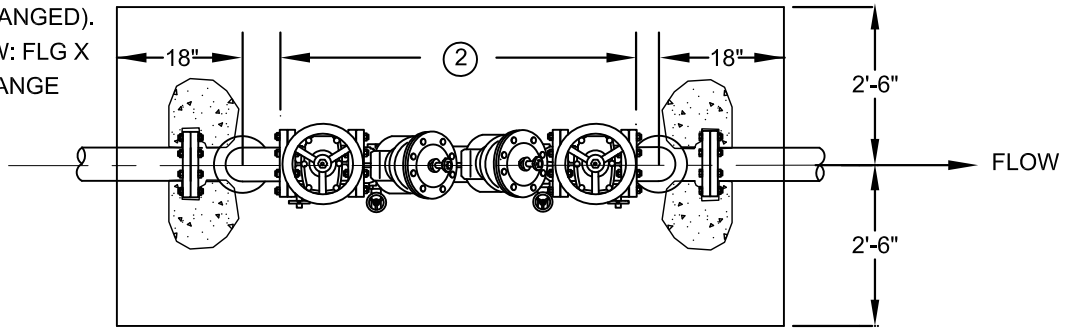
BILL OF MATERIALS:

1. PRIVATE WATER MAIN.
2. FACTORY ASSEMBLED.
3. 90° FLANGED DUCTILE IRON ELBOW.
4. FLANGED DUCTILE IRON SPOOL. (BOTH ENDS SHALL BE FLANGED).
5. 90°, DUCTILE IRON ELBOW: FLG X FLG OR FLG X P.O.UNI-FLANGE SHALL NOT BE USED.



PLAN VIEW

NOTES:

1. ASSEMBLY TO BE APPROVED BY THE CALIFORNIA STATE WATER RESOURCES CONTROL BOARD OFFICE OF DRINKING WATER AND CITY OF OCEANSIDE WATER UTILITIES DEPARTMENT.
2. ASSEMBLY SHALL BE ON STATE OF CALIFORNIA LIST OF APPROVED BACKFLOW PREVENTION ASSEMBLIES FOUND ON UNIVERSITY OF SOUTHERN CALIFORNIA'S FOUNDATION FOR CROSS-CONNECTION CONTROL AND HYDRAULIC RESEARCH.
3. ASSEMBLY SHALL BE INSTALLED DOWNSTREAM OF THE METER WITHIN 18".
4. NO CONNECTIONS BETWEEN THE METER AND THE ASSEMBLY ARE PERMITTED.
5. NUTS, BOLTS, AND WASHERS SHALL BE TYPE 316 STAINLESS STEEL.
6. WHEN THE DISTANCE BETWEEN THE METER BOX AND THE RISER TO THE ASSEMBLY EXCEEDS 18", PROVIDE PVC SLEEVE 2 TIMES THE DIAMETER OF THE WORKING PIPE OR INSTALL A CASING ENCASED IN CONCRETE. INSPECTION IS REQUIRED PRIOR TO BACKFILL.

THIS ASSEMBLY SHALL BE INSPECTED BY THE WATER UTILITIES DEPARTMENT. AFTER WATER UTILITIES DEPARTMENT'S APPROVAL, ASSEMBLY SHALL BE TESTED BY A TESTER ON THE CITY'S APPROVED TESTER LIST. THE DEVELOPER/OWNER IS RESPONSIBLE FOR THE COST OF TESTING THE ASSEMBLY. THEREAFTER, THE ASSEMBLY SHALL BE TESTED ANNUALLY AT THE OWNER'S EXPENSE. THE TEST REPORT IS TO BE SUBMITTED TO THE CITY WATER UTILITIES DEPARTMENT, CROSS CONNECTION CONTROL AT PHONE NUMBER 760-435-5800

REDUCED PRESSURE PRINCIPLE ASSEMBLY (3" & LARGER)

STANDARD DRAWING NO. W-13

SPECIFICATION SHEET

FEBCO®

MASTER series®

LEAD FREE*

MasterSeries® LF860

Reduced Pressure Zone Backflow Prevention Assemblies

Size: 2½" - 10" (65mm - 250mm)

The FEBCO MasterSeries LF860 Reduced Pressure Zone Assembly is specifically designed to protect against possible backpressure and backsiphonage conditions for high hazard [i.e., toxic] application in accordance with Local Governing Water Utility Code. This Backflow Prevention Assembly is primarily used on potable drinking water systems where Local Governing Code mandates protection from non-potable water being pumped or siphoned back into the potable water system.

The LF860 features Lead Free* construction to comply with low lead installation requirements. The Lead Free* Reduced Pressure Zone Assemblies shall comply with state codes and standards, where applicable, requiring reduced lead content.

Series LF860 Reduced Pressure Zone Assembly

Features

- Inline Serviceable Assembly
- No Special Tools Required for Servicing
- Captured Modular Spring Assembly
- Reversible & Replaceable Discs
- Field Replaceable Seats
- Ductile Iron Valve Body Design
- Stainless Steel Check Components
- Modular Pressure Differential Relief Valve
- Repairable Pressure Differential Relief Valve
- Clapper Check Assembly
- Captured O-ring Design

Specifications

The FEBCO MasterSeries LF860 Reduced Pressure Zone Assembly shall be installed on the potable water supply and at each point of cross-connection to protect against possible backpressure and backsiphonage conditions for high hazard [i.e., toxic] applications. The assembly shall consist of a main line valve body composed of a pressure differential relief valve located in a zone between two (2) independently acting approved clapper style check modules with replaceable seats and disc rubbers. Servicing of the pressure differential relief valve and both check modules does not require any special tools; both check modules are accessed through independently top entry covers. This assembly shall be fitted with AWWA Compliant inlet/outlet resilient seated shutoff valves; when used on a Fire-Sprinkler application, the assembly shall be fitted with approved UL/FM inlet/outlet resilient seated shutoff valves and contain four (4) properly located resilient seated test cocks as specified by AWWA Standard C511. Flow and pressure loss performance parameters shall meet the requirements of AWWA Standard C511.

NOTICE

This information is not intended to replace the product installation and safety information available or the experience of a trained product installer. Please refer to the product installation and safety instructions for further information.

***The wetted surface of this product contacted by consumable water contains less than 0.25% of lead by weight.**

FEBCO product specifications in U.S. customary units and metric are approximate and are provided for reference only. For precise measurements, please contact FEBCO. FEBCO reserves the right to change or modify product design, construction, specifications, or materials without prior notice and without incurring any obligation to make such changes and modifications on FEBCO products previously or subsequently sold.

Options - Suffix

OSY: UL/FM Approved OS&Y Gate Valves (ANSI/AWWA C515 Compliant)

NRS: Non-Rising Stem Gate Valves (ANSI/AWWA C509 Compliant)

LG: Less Shut-off valves; This is NOT an APPROVED ASSEMBLY

Example Ordering Descriptions:

4" LF860-OSY - Valve Assembly fitted with OS&Y Shutoff Valves

4" LF860-NRS - Valve Assembly fitted with NRS Shutoff Valves

Assembly Flow Orientation:

- Horizontal (2½" – 10") - Approved by FCCCHR-USC, ASSE, cULus, FM, IAPMO and CSA

Approvals - Standards

- Approved by the Foundation for Cross-Connection Control and Hydraulic Research at The University of Southern California (FCCCHR-USC)
- ASSE 1013 Listed
- **UL Classified (US & Canada)
- **FM Approved
- IAPMO
- AWWA Standard C511 Compliant
- End Connections: Compliant to ASME B16.1 Class 125 & AWWA Class D Flange

**Assembly configured with UL/FM Approved OS&Y RW Gate Valves. Less gate valve assemblies are not UL/FM approved configurations.

1048 B64.4

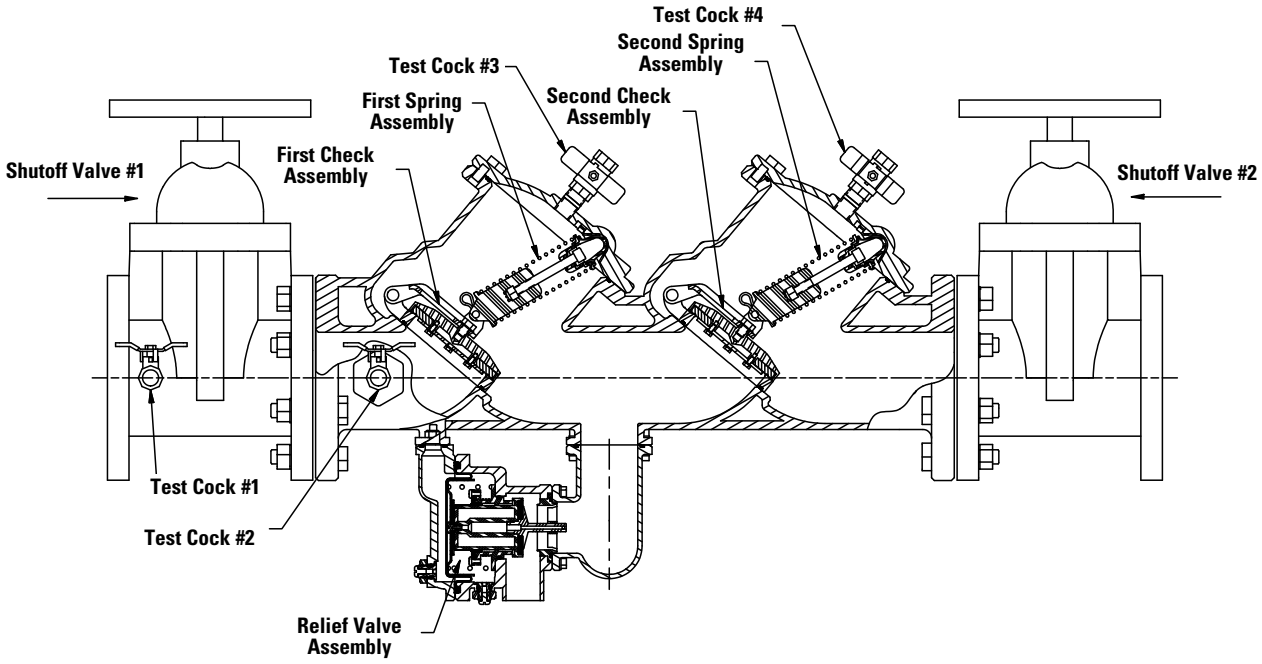
Materials

Below is a general materials list of the Series LF860. All assemblies size 2-1/2" through 10" is similar in materials and construction. Please contact your local FEBCO Representative if you require further information.

Main Valve Body:	Ductile iron Grade 65-45-12
Relief Valve Body:	Ductile iron Grade 65-45-12
Coating:	Fusion epoxy coated internal and external AWWA C550
Shutoff Valves:	NRS resilient wedge gate valve AWWA C509 (Standard) OSY resilient wedge gate valve AWWA C515 (UL/FM)
Check Seats:	Stainless Steel
Disc Holder:	Stainless Steel
Elastomer Disc:	Silicone
Spring:	Stainless Steel
Clamp:	AWWA C606 (10" Only)

Pressure - Temperature

Max. Working Pressure:	175 psi (12.1 bar)
Min. Working Pressure:	20 psi (1.4 bar)
Hydrostatic Test Pressure:	350 psi (24.1 bar)
Hydrostatic Safety Pressure:	700 psi (48.3 bar)
Temperature Range:	33°F - 140°F (0.5°C - 60°C) Continuous



Dimensions & Weights

Below are the nominal dimensions and physical weights for the Series LF860 size 2-1/2" through 10". Allowances must be made for normal manufacturing tolerances. Please visit our website to download a copy of this product's installation instructions, or contact your local FEBCO Representative for more information.

The gap drain is not designed to catch the maximum discharge possible from the relief valve. The installation of the FEBCO air gap with the drain line terminating above a floor drain will handle any normal discharge or nuisance spitting through the relief valve. However, floor drain size may need to be designed to prevent water damage caused by a catastrophic failure condition. Do not reduce the size of the drain line from the air gap fitting.

Performance

Flow capacity chart identifies valve performance based upon rated water Velocity up to 20fps

- Maximum service flow rate is determined by maximum rated Velocity of 7.5fps.
- AWWA Manual M-22 (Appendix C) recommends that the maximum water Velocity in the services be not more than 10fps.
- UL flow rate is determined by typically rated Velocity of 15 feet/sec.

APPENDIX D

FIRE CODE REFERENCE

APPENDIX B

FIRE-FLOW REQUIREMENTS FOR BUILDINGS

The provisions contained in this appendix are not mandatory unless specifically referenced in the adopting ordinance or legislation of the jurisdiction.

User note:

About this appendix: Appendix B provides a tool for the use of jurisdictions in establishing a policy for determining fire-flow requirements in accordance with Section 507.3. The determination of required fire flow is not an exact science, but having some level of information provides a consistent way of choosing the appropriate fire flow for buildings throughout a jurisdiction. The primary tool used in this appendix is a table that presents fire flow based on construction type and building area based on the correlation of the Insurance Services Office (ISO) method and the construction types used in the International Building Code®.

SECTION B101
GENERAL

B101.1 Scope. The procedure for determining fire-flow requirements for buildings or portions of buildings hereafter constructed shall be in accordance with this appendix. This appendix does not apply to structures other than buildings.

SECTION B102
DEFINITIONS

B102.1 Definitions. For the purpose of this appendix, certain terms are defined as follows:

FIRE FLOW. The flow rate of a water supply, measured at 20 pounds per square inch (psi) (138 kPa) residual pressure, that is available for fire fighting.

FIRE-FLOW CALCULATION AREA. The floor area, in square feet (m^2), used to determine the required fire flow.

SECTION B103
MODIFICATIONS

B103.1 Decreases. The fire code official is authorized to reduce the fire-flow requirements for isolated buildings or a group of buildings in rural areas or small communities where the development of full fire-flow requirements is impractical.

B103.2 Increases. The fire code official is authorized to increase the fire-flow requirements where conditions indicate an unusual susceptibility to group fires or conflagrations. An increase shall be not more than twice that required for the building under consideration.

B103.3 Areas without water supply systems. For information regarding water supplies for fire-fighting purposes in rural and suburban areas in which adequate and reliable water supply systems do not exist, the fire code official is authorized to utilize NFPA 1142.

SECTION B104
FIRE-FLOW CALCULATION AREA

B104.1 General. The fire-flow calculation area shall be the total floor area of all floor levels within the exterior walls, and under the horizontal projections of the roof of a building, except as modified in Section B104.3.

B104.2 Area separation. Portions of buildings that are separated by fire walls without openings, constructed in accordance with the *California Building Code*, are allowed to be considered as separate fire-flow calculation areas.

B104.3 Type IA and Type IB construction. The fire-flow calculation area of buildings constructed of Type IA and Type IB construction shall be the area of the three largest successive floors.

Exception: Fire-flow calculation area for open parking garages shall be determined by the area of the largest floor.

SECTION B105
FIRE-FLOW REQUIREMENTS FOR BUILDINGS

B105.1 One- and two-family dwellings, Group R-3 and R-4 buildings and townhouses. The minimum fire-flow and flow duration requirements for one- and two-family dwellings, Group R-3 and R-4 buildings and townhouses shall be as specified in Tables B105.1(1) and B105.1(2).

TABLE B105.1(1)
REQUIRED FIRE FLOW FOR ONE- AND TWO-FAMILY DWELLINGS, GROUP R-3 AND R-4 BUILDINGS AND TOWNHOUSES

FIRE-FLOW CALCULATION AREA (square feet)	AUTOMATIC SPRINKLER SYSTEM (Design Standard)	MINIMUM FIRE FLOW (gallons per minute)	FLOW DURATION (hours)
0–3,600	No automatic sprinkler system	1,000	1
3,601 and greater	No automatic sprinkler system	Value in Table B105.1(2)	Duration in Table B105.1(2) at the required fire-flow rate
0–3,600	Section 903.3.1.3 of the *California Fire Code* or Section *313.3* of the *California Residential Code*	500	$^1/_2$
3,601 and greater	Section 903.3.1.3 of the *California Fire Code* or Section *313.3* of the *California Residential Code*	$^1/_2$ value in Table B105.1(2)	1

For SI: 1 square foot = 0.0929 m², 1 gallon per minute = 3.785 L/m.

—	—	191,401-Greater	138,301-Greater	85,101-Greater	8,000	

For SI: 1 square foot = 0.0929 m², 1 gallon per minute = 3.785 L/m, 1 pound per square inch = 6.895 kPa.

a. Types of construction are based on the *California Building Code*.

b. Measured at 20 psi residual pressure.

TABLE B105.2
REQUIRED FIRE FLOW FOR BUILDINGS OTHER THAN ONE- AND TWO-FAMILY DWELLINGS, GROUP R-3 AND R-4 BUILDINGS AND TOWNHOUSES

AUTOMATIC SPRINKLER SYSTEM (Design Standard)	MINIMUM FIRE FLOW (gallons per minute)	FLOW DURATION (hours)
No automatic sprinkler system	Value in Table B105.1(2)	Duration in Table B105.1(2)
Section 903.3.1.1 of the *California Fire Code*	25% of the value in Table B105.1(2)[a]	Duration in Table B105.1(2) at the reduced flow rate
Section 903.3.1.2 of the *California Fire Code*	25% of the value in Table B105.1(2)[b]	Duration in Table B105.1(2) at the reduced flow rate

For SI: 1 gallon per minute = 3.785 L/m.

a. The reduced fire flow shall be not less than 1,000 gallons per minute.

b. The reduced fire flow shall be not less than 1,500 gallons per minute.

B105.2 Buildings other than one- and two-family dwellings, Group R-3 and R-4 buildings and townhouses. The minimum fire-flow and flow duration for buildings other than one- and two-family dwellings, Group R-3 and R-4 buildings and townhouses shall be as specified in Tables B105.2 and B105.1(2).

Exception: *[SFM] Group B, S-2 and U occupancies having a floor area not exceeding 1,000 square feet, primarily constructed of noncombustible exterior walls with wood or steel roof framing, having a Class A roof assembly, with uses limited to the following or similar uses:*

1. *California State Parks buildings of an accessory nature (restrooms).*
2. *Safety roadside rest areas, (SRRA), public restrooms.*
3. *Truck inspection facilities, (TIF), CHP office space and vehicle inspection bays.*
4. *Sand/salt storage buildings, storage of sand and salt.*

B105.3 Water supply for buildings equipped with an automatic sprinkler system. For buildings equipped with an approved automatic sprinkler system, the water supply shall be capable of providing the greater of:

1. The automatic sprinkler system demand, including hose stream allowance.
2. The required fire flow.

Subject: Sewer System Analysis for the Pacifica Project in the City of Oceanside

Introduction and Purpose

The Pacifica project is located in the City of Oceanside southwest of Monica Circle/Macario Drive and west of Roja Drive. Access to the project is from Monica Circle/Macario Drive and Malaga Drive. Sewer service for the Pacifica project will be provided by the City of Oceanside.

The proposed Pacifica project is a residential development on an approximately 14.55-acre parcel (APN 157-070-42 and 122-190-19). It is situated within a previous elementary school site. The proposed project would develop 164 townhome residential units. Finished floor elevations within the project range from a low of 97 feet to a high of 105 feet in elevation.

The purpose of this letter-report is to analyze the existing and proposed sewer system for the Pacifica project and determine if there are any sewer system deficiencies created by the proposed development of this property.

A Vicinity Map for the project is shown on Figure 1 and a preliminary site plan for the project is included in Appendix A.

Sewer System Design Criteria

The design criteria used for the evaluation of the offsite sewerage system impacts by the Pacifica project are based on the City of Oceanside Water Utilities Department, Water, Sewer, and Reclaimed Water Design & Construction Manual, August 2017, Section 3, Sewer Systems Design Guidelines (Design & Construction Manual), and Sewer Master Plan, unless otherwise indicated. A copy of the pertinent sections in the City's Manual and Master Plan where the design criteria is located is attached as Appendix B.

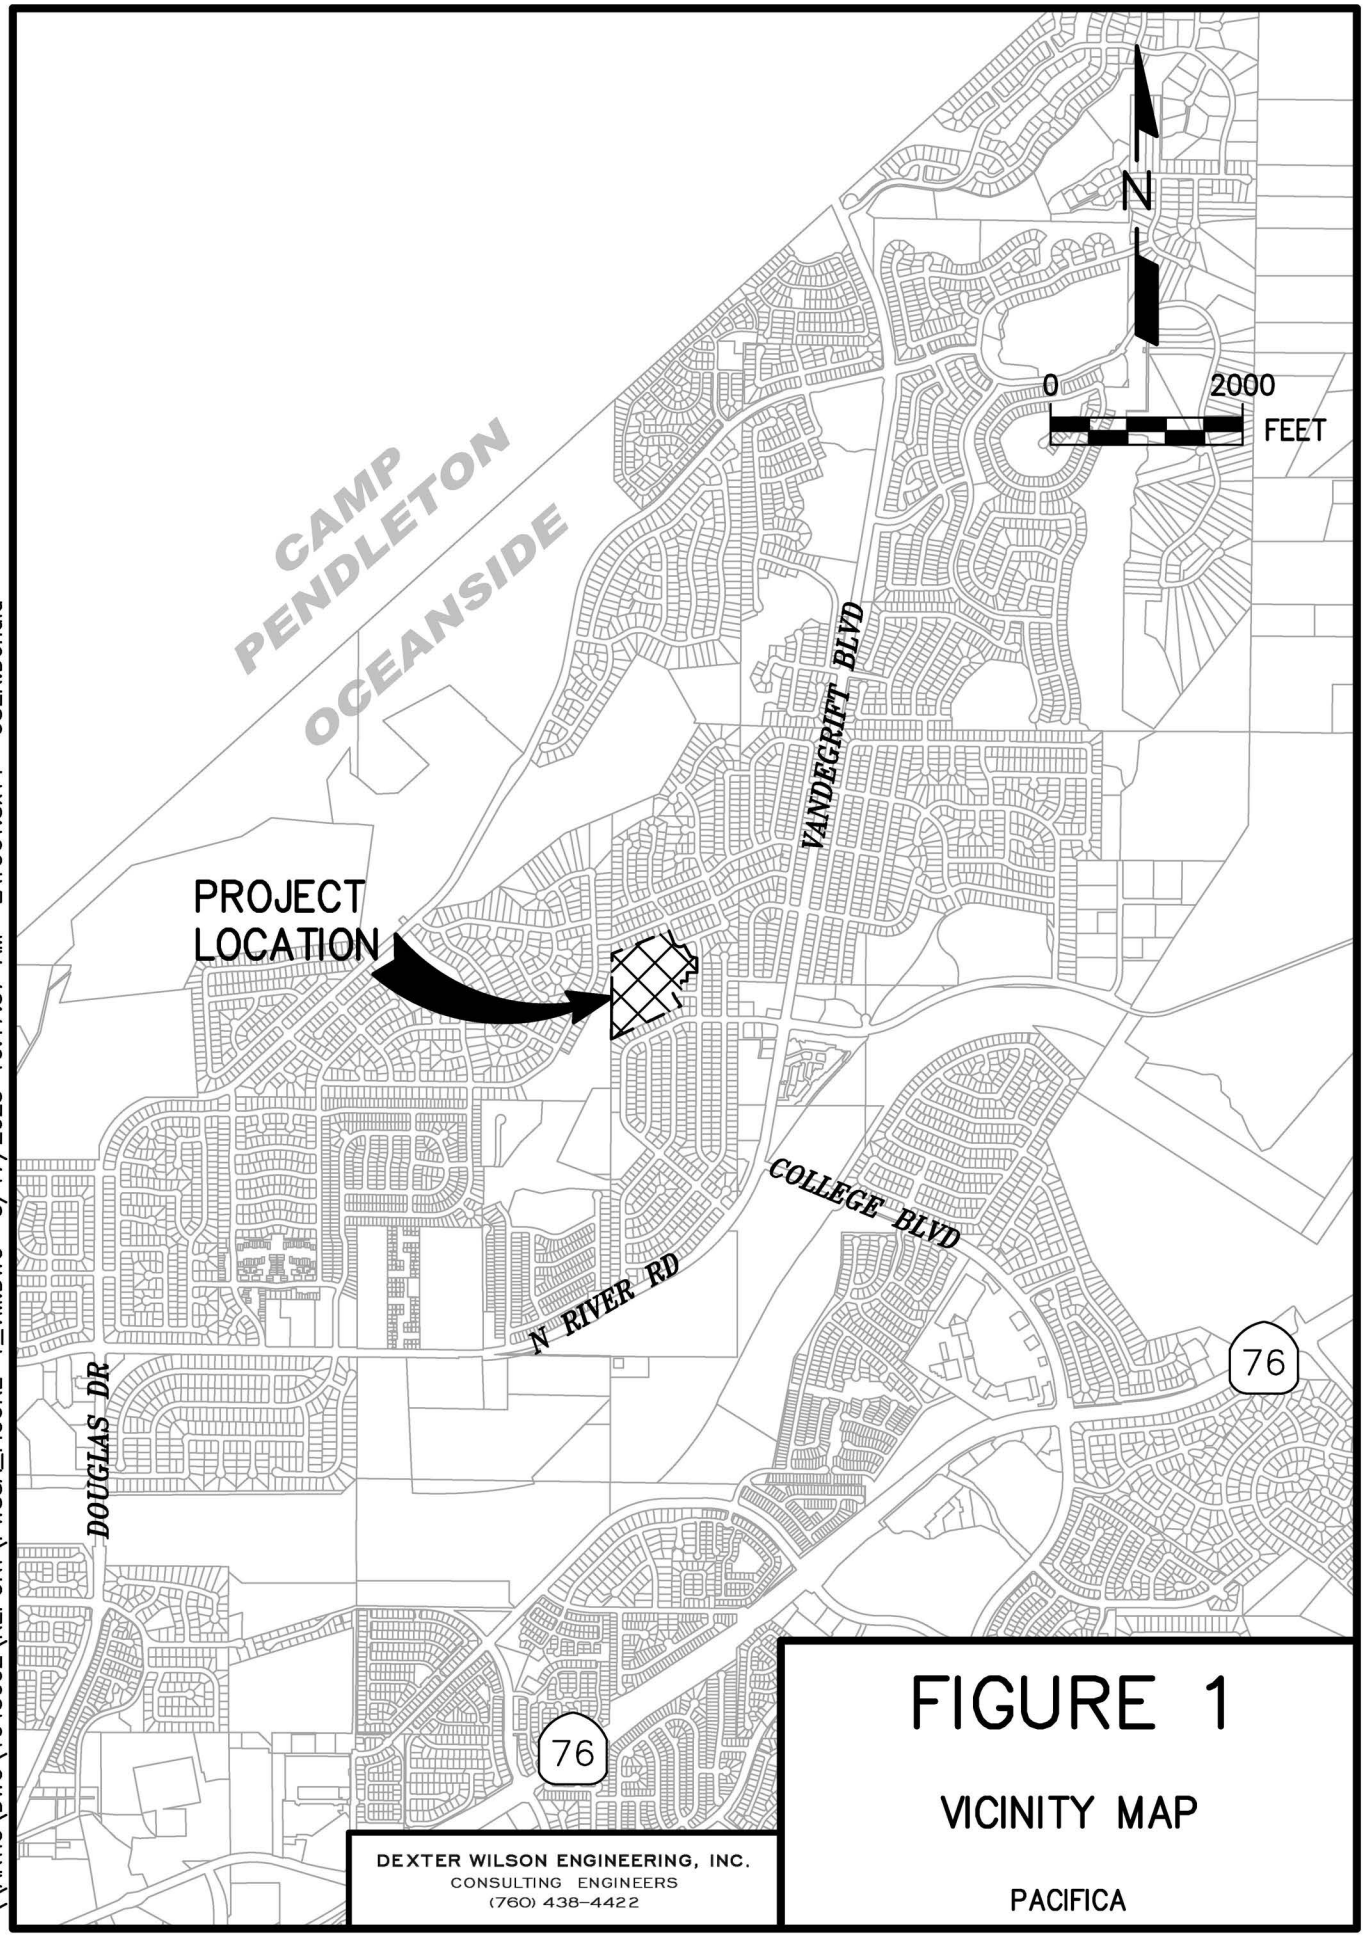
Sewer Generation Rates. The sewer generation rates for the project and surrounding area are presented as Table 1 below.

TABLE 1
PACIFICA PROJECT
CITY OF OCEANSIDE SEWER GENERATION RATES

Land Use	Generation Rate
Low-Density (Single-Family) Residential	170 gpd/DU
Mid-Density (Multi-Family) Residential	140 gpd/DU
Industrial & Commercial	1,000 gpd/ac
Hotels	100 gpd/room

Peaking Factors

The peaking factor for residential development is identified in the City of Oceanside Design & Construction Manual. To convert average dry weather flows to peak wet weather flows, the peaking factors in Table 2 were used.



\\ARTIC\DWG\1043002\REPORT\PWSSA_FIGURE-1_VM.DWG 3/17/2023 10:17:37 AM LAYOUT:8x11 USER:Donald

FIGURE 1

VICINITY MAP

PACIFICA

TABLE 2
CITY OF OCEANSIDE PEAKING FACTORS[1]

Population	Peak Factor
< 500	3.5
500-1000	2.75
1000-5000	2.50

[1] 70 gpd per person

The peaking factor for non-residential flow (i.e. industrial, commercial, hotels, etc.) is given as a formula in the Design & Construction Manual. The formula is stated: $Q_p = 1.84 \times Q_a^{0.92}$, where Q_p equals peak flow in cubic feet per second (cfs) and Q_a equals average flow in cfs.

Manning's "n"

The gravity sewer analyses are prepared using a computer spreadsheet calculation which uses the Manning Equation for all of its calculations. The Manning's "n" used by the computer spreadsheet calculation is held as a constant for all depths in a circular conduit. The value of Manning's "n" used for this study is 0.013 per the City's Design & Construction Manual and Master Plan.

Depth and Velocity of Flow in Gravity Sewers

Gravity sewer lines are designed to convey peak wet weather flow. New sewer pipelines that are 10-inches in diameter and smaller are designed to convey this flow with a maximum depth-to-diameter (d/D) ratio of 0.50. New sewer pipelines that are 12-inches and larger in diameter are designed for a maximum d/D ratio of 0.67. Gravity sewer lines are designed to maintain a minimum velocity of 2.0 feet per second at peak flow to prevent the deposition of solids. Existing sewer pipelines are required to convey the peak wet with a maximum d/D ratio of 1.0.

Onsite Gravity Sewer Lines

For evaluation of the proposed onsite public and private gravity sewer lines, City standards akin to offsite public sewer lines were used. Minimum size and slope are 8-inch diameter and 0.4 percent respectively for all proposed onsite gravity sewer lines.

Existing Sewer System

There are two existing gravity sewer lines that are adjacent to the project site, of which, only one will be utilized to serve the project. The first adjacent sewer line is an 8-inch diameter gravity line that terminates at an existing public sewer lift station (Pacifica School Lift Station). This exiting sewer line and corresponding Pacifica School Lift Station will not be utilized by the project. The existing Pacifica School Lift Station will be removed and corresponding force main will be abandoned and both relocated to a new site within the project area.

The second adjacent sewer line is an 8-inch diameter line in Malaga Drive at the southeastern boundary of the project. This sewer line will be utilized by the project and conveys flow via Roja Drive, Luna Drive, and Redondo Drive southward and ultimately connects to the trunk sewer line in North River Road.

Figure 2 presents the existing public sewer facilities within the project area. Appendix B provides the City's 11" x 17" sewer base map for this area as well as the As-Built Drawings.

Existing Sewer Flows. The sewer system analysis for the Pacifica project will need to take into account sewage flows from existing development that is downstream of the project. The Pacifica project will be a relatively upstream development within this particular stretch of gravity sewer along Malaga Drive, Roja Drive, Luna Drive, and Redondo Drive. Table 3 summarizes the projected sewage flows from existing development.

FIGURE 2

EXISTING SEWER SYSTEM

PACIFICA

TABLE 3
EXISTING SEWER FLOWS ALONG MALAGA DRIVE, ROJA DRIVE, LUNA DRIVE, AND REDONDO DRIVE

Description	Quantity	Generation Factor	Average Sewage Flow
Malaga Drive	4 DUs	170 gpd/DU	680 gpd
Roja Drive	59 DUs	170 gpd/DU	10,030 gpd
Luna Drive	450 DUs	170 gpd/DU	76,500 gpd
Redondo Drive	242 DUs	170 gpd/DU	41,140 gpd
Total Average Flow			**128,350**
Total Peak Flow			**360,400**[1]

[1] Total peak flow includes a peaking factor of 2.5 and the additional 93 single family residences (15,810 gpd average flow) from Pacifica School L.S.

Proposed Sewer Facilities

The projected sewer flow from the Pacifica project is based on 164 townhome units and an average generation rate of 140 gpd per multi-family unit. Table 4 provides the summary of projected sewage flows for the project.

TABLE 4
PACIFICA PROJECTED SEWAGE FLOWS

Description	Quantity	Generation Factor	Average Sewage Flow	Peak Sewage Flow[1]
Multi-Family Residential	164 DUs	140 gpd/DU	22,960 gpd (16 gpm)	80,360 gpd (56 gpm)

[1] Total peak flow includes a peaking factor of 3.5

The project will construct a new public gravity sewer line as well as a private gravity collection system onsite that will all flow to a new sewer lift station to be located on the southwest corner of the site. The new public sewer lift station will pump eastward to the existing 8-inch public gravity sewer stub at Malaga Drive.

An additional offsite gravity sewer segment is proposed to be constructed by the Pacifica project at the Redondo Drive and North River Road intersection. Per City comment and direction, this new sewer segment is a realignment that will remove two 90-degree bends.

Onsite Sewer Lift Station. The new onsite sewer lift station will be designed and constructed as a public facility contingent when the existing public Pacifica School Lift Station is removed. The new onsite sewer lift station will be a public facility serving the proposed Pacifica project and existing upstream development that is currently being served by the Pacifica School Lift Station.

The design parameters of the new onsite public sewer lift station are shown in Table 5.

TABLE 5
PACIFICA PROPOSED PUBLIC SEWER LIFT STATION

Description	Peak Flow Rate
Public Lift Station	95 gpm[1]

[1] Total peak flow includes the additional peak flow from Pacifica School L.S. tributary area

The lift station will be a duplex submersible pump station, each pump capable of handling the full flow from the project, with either precast concrete or fiberglass wet well, pump control panel, emergency storage basin, and odor control system (if needed).

Based on the flow calculations presented above in Table 5, the peak dry weather flow to the lift station will be 95 gpm. It is recommended to utilize a 4-inch force main to enable adequate solids conveyance. A flow rate of 120 gpm will achieve a velocity of at least 3.0 fps. A 120 gpm design flow rate for the proposed public lift station is recommended to meet the velocity criteria of 3 to 8 fps for sewer forcemains.

The proposed sewer facilities for the Pacifica project are presented on Figure 3. The final configuration of emergency storage, in addition to specific pump, wet well design, odor control, and emergency power will be determined as part of the final design of the sewer lift station. A preliminary sewer lift station layout for Pacifica is shown on Figure 4.

Sewer System Analysis

To analyze the impact of the Pacifica project on the existing sewer system, a hydraulic analysis was conducted up to the existing trunk sewer line in North River Road. Further analysis of the proposed offsite sewer improvement at the Redondo Drive and North River Road intersection and downstream impacts should be performed before the proposed offsite improvement is finalized. Collaboration with the City regarding existing upstream flows should be considered as part of the proposed offsite sewer improvement analysis.

Appendix C provides the hydraulic analysis output and Exhibit A provides the corresponding Sewer Manhole Diagram. To perform this analysis, we obtained As-Built Drawings of the existing sewer system so that the pipe sizes and slopes could be input into the spreadsheet. A key component of the hydraulic analysis is to estimate existing flows within the sewer lines that will be utilized to serve the Pacifica project. Table 3 provided the summary of existing flows from existing offsite downstream development.

Sewer System Analysis Results

Appendix C presents the results of the hydraulic analysis for the Pacifica project. The results indicate that the existing downstream system has adequate capacity to serve the project (less than 1.0 d/D ratio). With the additional sewer flow from the Pacifica project, all sections of the existing 8-inch sewer lines will flow at, or less than, a 0.64 d/D ratio during peak flow conditions.

A summary of the impacts to the existing downstream gravity sewer to the proposed Pacifica project is shown below in Table 6.

TABLE 6
PACIFICA PROJECT EXISTING DOWNSTREAM SEWER IMPACTS

Existing Downstream Sewer Section	Maximum d/D Ratio		Minimum Velocity, fps	
	Existing Flow	Existing plus Project Flow	Existing Flow	Existing plus Project Flow
8-inch Diameter	0.50	0.64	0.4	2.0

Conclusions and Recommendations

The following conclusions have been made related to providing sewer service to the Pacifica project.

1. The 164-unit Pacifica project can receive sewer service by connecting to a public 8-inch diameter gravity sewer stub in Malaga Drive and connecting to the existing system.

2. Figure 2 provides the existing sewer facilities surrounding the project area.

3. The development of the project is projected to result in an average sewage flow of 22,960 gpd.

4. The project will construct a new public gravity sewer line as well as a private sewer collection system onsite. The onsite collection system will also include a new public sewer lift station which will pump to the proposed connection point at Malaga Road. The new sewer lift station will be a relocation of the existing Pacifica School Lift Station. The new public gravity sewer line constructed onsite will convey flows from the removed existing Pacifica School Lift Station to the new sewer lift station.

5. A sewer system analysis was conducted (see Appendix C) and indicates that all existing downstream sewer lines up to North River Road have adequate capacity to convey peak flows from existing development plus the Pacifica project while maintaining the City required depth-to-diameter ratio of less than 1.0 for existing sewer pipelines. Exhibit A within Appendix C presents the existing tributary sewer system in the greater project vicinity.

6. An additional offsite gravity sewer segment is proposed to be constructed by the Pacifica project at the Redondo Drive and North River Road intersection. Per City comment and direction, this new sewer segment is a realignment that will remove two 90-degree bends. Further analysis of this connection and downstream impacts should be performed before this offsite improvement is finalized. Collaboration with the City regarding existing upstream flows should be considered as part of the analysis.

7. Figure 3 presents the proposed sewer system in the immediate project vicinity.

8. The proposed private onsite gravity sewer system will be designed according to the California Plumbing Code and/or City of Oceanside design standards to comply with all design criteria (depth, velocity, minimum slope, etc.). Proposed sewer lines for the project are recommended to be SDR-35 PVC.

Thank you for the opportunity to assist you with the sewer system planning for the Pacifica project. If you have any questions regarding the information and conclusions presented in this report, please do not hesitate to call.

APPENDIX B

CITY OF OCEANSIDE DESIGN CRITERIA, BASE MAPS, AND AS-BUILT DRAWINGS

SECTION 3 - SEWER SYSTEMS DESIGN GUIDELINES

3.1 GENERAL

A. All sewer system construction shall conform to the most recent edition of the City of Oceanside's Water, Sewer, and Reclaimed Water Design & Construction Manual.

B. If a conflict arises between the requirements in this manual, the order of precedence shall take place:

1. Sections 1-4, Required Notes, & Appendix
2. Standard Drawings
3. Standard Specifications

C. If the standard that is sought does not appear in this Manual, then the following standards shall be utilized in the order listed:

1. State of California Department of Health Services
2. American Water Works Association (AWWA) Standards
3. San Diego County Regional Standard Drawings
4. Standard Specifications for Public Works Construction (SSPWC or "Greenbook"), latest Edition.

Exceptions to this and all other guidelines appearing in this manual may be allowed only upon the approval of the Water Utilities Director.

B. The sewer facilities listed below will require telemetry and control equipment to be incorporated into the design of the facility. The Water Utilities Department will provide specific design requirements when improvement plans are submitted for Plan Check.

1. Treatment Facilities
2. Sewer Lift Stations and force mains
3. Metering Stations

3.2 MAINS

A. Minimum size shall be 8 inches.

B. All mains not meeting the minimum main diameter and material shall be replaced to meet current design requirements. This is applicable for all new commercial, industrial, institutional, and residential developments of four (4) units or more. Where the full replacement length(s) from manhole to manhole along the property frontage length impacts more than one main and significantly exceeds the developed

property(ies) or is deemed in excess of the overall project cost, the developer may pay an in-lieu fee upon the approval of the Water Utilities Director.

C. Slip-lining or replacement of sewer mains 8-inch or larger may be required if the main is determined to be in poor condition per CCTV report.

D. For diameters 10 inches and smaller, maximum depth of flow shall not exceed ½ the diameter. For diameters 12 inches and larger, depth of flow shall not exceed 2/3 the diameter.

E. No vertical or horizontal curves shall be permitted, unless otherwise approved by the Water Utilities Director.

F. The maximum slope of sewer line shall be 14% unless otherwise approved by the Water Utilities Director.

G. If the main and/or lateral is at a depth of 20 feet or more than the type of pipe material must be approved by the Water Utilities Department. Calculations must be provided to the Water Utilities Department to verify that the pipe material will accommodate the design depths.

H. Locations:

1. Alley: Mains shall be offset a minimum of 3 feet from the centerline to clear alley gutter. Separation from waterlines shall be per Oceanside Standard Drawing S-1 and S-1a.

2. Street: Sewer main locations shall be located in center of the street. A minimum 10-foot separation outside of pipe to outside of pipe from waterlines shall be maintained.

3. Streets with 84 feet of right-of-way or more may require special location as approved by the Water Utilities Director.

4. Minimum cover for sewer mains shall be 6 feet below the finished grade, unless otherwise approved by the Water Utilities Director.

I. Minimum Slopes:

A minimum velocity of 2 FPS shall be maintained at peak flow. Where 2 FPS is not attainable, a minimum slope of 1.6% shall be used. When velocities are 2.0 FPS or greater the following design criteria will govern:

Pipe Diameter	Minimum Slope
8 Inch	0.50%
10 Inch and larger	0.40%

J. Demands:

1. Average daily sewer generation rates shall be:

LAND USE	LAND USE CATEGORY	UNITS

Low Density Residential	EA-R, EB-R, SDF-R	170 gpd/EDU
Mid Density Residential	MDA-R, MDB-R, MDC-R, HD-R, UHD-R	140 gpd/EDU
Industrial	LI	1,000 gpd/acre
Commercial	CC, NC, GC, SC, PC, GI, RP-I, CI, PI	1,000 gpd/acre
Hotels		100 gpd/room

Peak daily flows for residential developments, shall be based on a ratio of peak to average flow as shown below:

Population	Ratio of Peak to Average Flow
Less than 500	3.5
500 to 1,000	2.75
1,000 to 5,000	2.50
Greater than 5,000	2.00

3. Peak daily flows for all other uses shall be based on the following formula:

$$Qp = 1.84\ Qa^{.92}$$

Where Qp = Peak Flow in CFS
Qa = Average Flow in CFS

I. Residential area easements shall be constructed by the developer. They shall be fenced on both sides parallel to the easement with a gate at the entrance and the exit. Easements shall be dedicated to the City and maintained by Property Owner with a lock feature.

J. All sewer mains not located within the public right-of-way shall be provided with a minimum 20-foot wide sewer easement. In some special cases, a wider easement may be required; the Water Utilities Director shall determine size. All easements shall be easily accessible to City maintenance equipment with all weather roadways. An access road will be built for trucks and as approved by the Water Utilities Department.

K. All utility easements that contain sewer mains, which will be publicly maintained, shall demonstrate that the largest vehicle within the Sewer Collections Fleet can transverse the streets without damage to both public and private property. The turning radius of this vehicle will be made available upon request.

L. Where water and sewer mains are located within the same easement, the minimum easement size shall be 30 feet wide. All easements shall be easily accessible to the City's maintenance equipment with all-weather access roadways. No trees or structures or building overhang are allowed within the City easements. When easements are located on private properties, the property owner shall keep the easement free and clear of weeds and debris.

M. 3-inch minimum width color coded detector tape marked "SEWER" in 1-½ inch black letters shall be placed on the compacted and graded bedding material one foot above and centered over the sewer main prior to backfilling the trench.

Chapter 6

PLANNING AND EVALUATION CRITERIA

The City's sanitary sewer collection system was modeled and evaluated based on the planning criteria defined in this chapter. The planning criteria address the collection system capacity, acceptable gravity sewer pipe slopes, maximum allowable depth of flow, design velocities, and changes in pipe size.

6.1 GRAVITY SEWERS

Gravity sewer pipe capacities are dependent on many factors. The factors include roughness of the pipe, the chosen maximum allowable depth of downstream flow conditions, and limiting velocity and slope. The following sections describe the factors that account for the determination of existing and future pipeline capacities in the City's collection system.

6.1.1 Manning Coefficient (n)

The manning coefficient 'n' is a friction coefficient that varies with respect to pipe material, size of pipe, depth of flow, smoothness of joints, root intrusion, and other factors. For sewer pipes, the manning coefficient typically ranges between 0.011 and 0.017, with 0.013 being a representative value used for system planning purposes. Due to unknown conditions of existing pipelines, a conservative manning "n" factor of 0.013 was initially used for the evaluation of all existing collection system pipelines. Pipe roughness values were adjusted within the stated typical range during calibration. The evaluation of all proposed pipelines used a manning "n" factor of 0.013.

6.1.2 Flow Depth Criteria (d/D)

The primary criterion used to identify capacity deficient sewers or to size new sewer improvements is the maximum flow depth to pipe diameter ratio (d/D). The d/D value is defined as the depth of flow (d) in a pipe during peak (design) flow conditions divided by the pipe's diameter (D). Based on Carollo's experience, City staff input, and industry standards, the criteria listed in Table 6.1 were used. The following paragraphs explain these criteria in more detail.

6.1.2.1 Flow Depth for Existing Sewers

Maximum flow depth criteria for existing sanitary sewers are established based on a number of factors, including the acceptable risk tolerance of the utility, local standards and codes, and other factors. Using a conservative d/D ratio when evaluating existing sewers may lead to unnecessary replacement of existing pipelines. Conversely, lenient flow depth criteria could increase the risk of sanitary sewer overflows (SSOs). Ultimately, the maximum allowable flow depth criteria should be established to be as cost effective as

possible while at the same time reducing the risk of SSOs to the greatest extent possible. For Oceanside, pipelines were flagged if the d/D exceeded 1.0 (i.e., pipelines that surcharged were flagged).

Table 6.1 Maximum Flow Depth Criteria
Sewer System Master Plan Update
City of Oceanside

Maximum Flow Depth for Existing Sewers	
Peak Wet Weather Flow:	Maximum d/D = 1.0
Maximum d/D for New Sewers	
Pipe Diameter (inches)(1)	Maximum d/D Ratio (during Peak Flows)(1)
10 and smaller	0.50
12 and larger	0.67

Note:
(1) Obtained from City of Oceanside's Design and Construction Manual: Section 3- Sewer Systems; http://www.ci.oceanside.ca.us/gov/water/admin/manual.asp

A capacity deficient sewer (i.e., system bottleneck) raises the hydraulic grade line of upstream sewers, leading to backwater conditions. The greater the capacity deficiency, the higher water levels will surcharge upstream of the bottleneck pipeline (or pipelines). The hydraulic model is used to determine "backwater" pipelines in order to specify which specific pipelines are the actual root causes of the capacity deficiency. Capital projects are proposed to provide greater flow capacity for the deficient sewers, which eliminates the backwater conditions that cause surcharging.

The criteria summarized in Table 6.1 was used to evaluate existing sewers in the collection system as part of this Master Plan. However, should a development project be considered that proposes a change to the current zoning or land use density, a more conservative criteria will be used by the City to conduct the evaluation of available capacity. Should a zoning change be proposed by a development project, the criteria established below for the sizing of new sewers will be used. The City will use the more conservative criteria to provide reserve capacity due to the uncertainly inherent with flow estimations during the planning phases of development projects.

6.1.2.2 Flow Depth for New Sewers

When designing sewer pipelines, it is common practice to adopt different flow depth criteria for various pipe sizes. Design d/D ratios typically range from 0.5 to 0.92, with the lower values typically used for smaller pipes, which may experience flow peaks greater than design flow or blockages from debris, paper, or rags. The City's Water Utilities Department standards for the evaluation of existing sewers and sizing new trunk lines are summarized in Table 6.1. For pipelines 10 inches and smaller in diameter, the max d/D value is 0.5 or

6.2 LIFT STATIONS AND FORCE MAINS

Industry standard practice is to require that sewage lift stations have sufficient capacity to pump peak flows with the largest pump out of service (firm capacity).

Force main piping should be sized to provide a minimum velocity of 3 ft/s at the design flow rate of the lift station and no more than 8 ft/s. For the determination of head loss, the Hazen Williams Equation is used with a C-factor of 120. These factors are typical for sewer system master planning purposes.

FIRE RESPONSE TECHNICAL MEMORANDUM

To:	Johanna Crooker – Meritage Homes
From:	Dudek Fire Protection Planning Team, Noah Stamm, Fire Protection Planner and Michael Huff, Principal
Subject:	Fire and Emergency Response Modeling – Pacifica Project, City of Oceanside, California
Date:	March 15, 2023
cc:	N/A
Attachment(s):	Figure 1 – Project Location Map Figures 2 and 3 - Response Travel Time Exhibits – Oceanside Fire Stations 5 and 6 Figures 4 and 5 – Coverage Service Area Exhibit – Oceanside Fire Stations 5 and 6

This memorandum documents preliminary fire response analysis regarding the Pacifica Project, based on the two closest existing Oceanside Fire Department (OFD) fire stations. This analysis considers response time and call volume as primary factors for determining appropriate timing for on-site fire service. Geographic information system (GIS) based road network analysis was used to conservatively simulate emergency response times from the two closest existing OFD fire stations to the Project's townhomes. This analysis also considers the current per capita call volume for OFD's service area and utilizes this per capita call generation factor to determine the Project's anticipated call volume at build out and whether there would be a significant impact on OFD's response resources.

The results of this analysis inform a recommended proposal for fire service to the Pacifica Project. This analysis provides an analysis of the conducted fire department response modeling and map preparation depicting response distances and times as well as response coverage areas for the two closest existing OFD station locations. This proposal for the two closest OFD fire station's availability is based on a variety of factors including: 1) modeled response travel times, 2) current fire station call volumes, 3) projected Pacifica Project call volumes, and 4) maintenance of existing service to residents.

1 Proposed Pacifica Project

The proposed site consists of the former Pacifica Elementary School located at 4991 Macario Drive (APNs 122-190-19, -22 & 157-070-42) and encompasses 14.55 acres (Figure 1, Project Location Map). The project site has been previously impacted by the former Pacifica Elementary School. The school was built in 1972, and closed in 2002 after the buildings were found to be unsafe to withstand an earthquake. The school was then demolished in 2004. There is a large asphalt pad remaining, which was the former playground area. Disturbed habitat makes up the majority of the site including the slopes around the perimeter, as well as the western portion of the site.

The proposed project consists of development of 164 three-story attached townhomes. Of the 14.55-acre site, 10.16 acres would be developed and would have a density of 11.3 dwelling units per acre. The approximately 4 acres that would not be developed consist of 20 to 30-foot-tall slopes along the southeastern and western portions of the project site. Townhomes would range in size from approximately 1,200 square feet to 1,800 square feet with two, three, or four bedrooms and an attached two-car garage (see building summary below in Table 1). Each townhome would include private open space in the form of a patio and/or deck. Common recreational spaces, consisting of approximately 53,700 square feet, would be designed with amenities such as tot lots, an off-leash dog park, pickle ball courts, bocce ball areas, barbecue areas, and a space for a variety of outdoor games.

Table 1. Proposed Building Summary

Plan Types	Square Footage	Number of Units	Percentage of Total Units	Floor Plan Type	Private Open Space	Garage Spaces [1]
1	1,210 square feet	16	9%	2 bed/2.5 bath	83 square feet	2
2	1,497 square feet	75	46%	3 bed/2.5 bath	107 square feet	2
3	1,791 square feet	73	45%	3 bed/1 flex room/ 2.5 bath	110 square feet	2
Totals		164	100%	-	-	-

[1] An additional 56 spaces (uncovered) would be provided for guest parking.

The proposed residential development would be set back 15 feet from Monica Circle, approximately 74 feet from the northern and southern boundary, and approximately 65 feet from the eastern boundary. The western boundary is bordered by open space and a habitat setback and stormwater basin would buffer the development from the adjacent open space area. This buffer area would be a minimum of 100 feet.

Primary access to the site would utilize the existing driveway at the corner of Monica Circle and Macario Drive. This main entrance would be enhanced with decorative paving, landscaping, and signage. A secondary emergency vehicle access only driveway would be provided via an extension of Malaga Drive on the eastern boundary of the project site.

The approvals required for the project include a General Plan land use amendment and a change in zoning. The project proposes a General Plan land use of MDB-R – Medium Density Residential - B (10-15 du/ac), and a zone of PD – Planned Development. The proposed Planned Development District would provide zoning, use regulations, and development standards for future development of the site. A Planned Development Plan (The Pacifica Planned Development Plan) has been prepared in accordance with the City of Oceanside Zoning Ordinance – Article 17, and is included within the project's EIR as Appendix B. The Planned Development Plan provides direction for the assignment of land uses, development intensities, development regulation, as well as, design guidelines that will provide a framework for the specific development of the site

As mentioned above, primary access to the site would utilize the existing driveway at the corner of Monica Circle and Macario Drive. A secondary emergency vehicle access only driveway would be provided via an extension of Malaga Drive on the eastern boundary of the project site. The proposed residential buildings would be connected by a private loop road within the project site with two internal drive aisles that connect the northern and southern portions of the loop road. Circulation and emergency access drives have been designed in consultation with Oceanside Fire staff to provide 28-foot minimum widths with designated truck turnarounds and key staging areas throughout the project site. And the project would provide a total of 328 garage parking spaces for each residence (two spaces for each

residence). The project would also provide an additional 56 guest parking spaces; guest parking is provided at the community entry point.

2 Existing Stations and Response Times

The Proposed Project site is located within the City of Oceanside's responsibility area and the OFD jurisdictional response area. The following section analyzes the Project in terms of current OFD Fire Service capabilities and resources to provide Fire Protection and Emergency Services to the Oceanside communities. The analysis that follows examines the ability of the two closest existing OFD fire stations, to adequately serve the Proposed Pacifica Project. Response times were evaluated using Project build-out conditions. It was assumed that phased construction would include access roads to the newly constructed structures and that the shortest access route to those structures would be utilized.

The Oceanside Fire Department houses eight firehouses and provide emergency services to every neighborhood throughout the 41 square miles of the City of Oceanside. The OFD serves over 180,000 residents and visitors 24 hours per day, 365 days per year with 115 full-time fire personnel, 34 full- and part-time emergency medical technicians (EMTs), seven full-time lifeguard personnel, 76 part-time lifeguard personnel, and an additional eight staff members providing support. Initial emergency response for the Project would be provided by OFD Fire Station 5, with OFD Fire Station 6 within 2.5 miles of the Project site and would be available to provide secondary response to the Project site, as necessary.

OFD Fire Station 5, located at 4841 N. River Road, Oceanside, California, is the closest responding OFD station to the Project site and would provide initial response. OFD Fire Station 5 is staffed 24/7 by a one Fire Captain, one Engineer, and three Firefighter Paramedics. Station 5's apparatus includes one Type 1 Medic Engine and one Medic Ambulance. Station 5 is approximately 0.5 miles from the secondary access entrance off Roja Drive to the Project site off Macario Drive and approximately 0.7 miles to the most remote portion of the Project site with a calculated travel time of approximately 1 minute and 52 seconds throughout the entire development[1], which would fully conform to OFD's five-minute response time goal to 100% of the Project.

The next closest OFD Fire Station is Station 6, located at 895 N. Santa Fe Ave., Oceanside, California. Oceanside Fire Station 6 is staffed by one Fire Captain, one Engineer, and three Firefighter Paramedics. Station 6's apparatus includes one Type 1 Medic Engine and one Medic Ambulance. Station 6 is approximately 2.5 miles from the secondary access entrance off Roja Drive to the Project and approximately 2.7 miles to the most remote portion of the Project site with a calculated travel time of approximately 5 minutes and 25 seconds throughout the entire development. The OFD indicates "the minimum response standard for 911 medical emergencies in the City of Oceanside is to arrive within five minutes, 90% of the time." Further, the Oceanside General Plan (Public Safety Element) indicates a goal of maintaining an Insurance Services Office (ISO) rating of Class 5 City wide. This equates to having no structures over five road miles from the nearest fire station.

Travel time modeling from the two closest OFD fire stations was conducted utilizing an industry standard Network Analyst model. The results indicate that the entire Project site can be responded to within approximately 1 minute and 52 seconds response travel time from OFD Fire Station 5 and within approximately 5 minutes and 25 seconds

[1] Calculated using the nationally recognized RAND Corporation formula used by the Insurance Services Office (ISO) Public Protection Classification Program's Response Time Standard: (T=0.65 + 1.7D), where T=time and D=distance).

travel by the next closest OFD Fire Station 6. 100% of the Project can be responded to within OFD's five-minute response time goal from Station 5 and approximately 72% of the Project can be responded to within OFD's five-minute response time goal from Station 6. Per Figures 2 and 3, the following response travel times are achieved:

- OFD Fire Station 5: 100% of the townhomes can be responded to within 2 minutes travel and up to 4 minutes 30 seconds total response time.
- OFD Fire Station 6: Approximately 72% of the townhomes can be responded to within 5 minutes travel and up to 7 minutes 30 seconds total response time and 100% of the townhomes can be responded to within 5 minutes and 30 seconds or up to 8 minutes total response time.

It should be noted that the service area analysis (different than the ISO analysis) tends to be more generalized and shows better coverage than the ISO approach; the entire Project site can be responded to under 5 minutes travel time from both OFD Fire Stations 5 and 6 (see Figures 4 and 5).

Response time is evaluated to determine if a community's residents will receive response within a reasonable time frame. Most fire agencies establish response time goals based on national guidelines or locally generated timelines that are suitable for the response area given area-specific characteristics. For example, the National Fire Protection Association (NFPA 1710) provides guidelines for response times that are best suited for urban areas where they prefer a fire station within 1.5 miles and a response time of 7 minutes 90% of the time. The example response time would include approximately 4 minutes travel time and 3 minutes for dispatch and turnout, which occur prior to "wheels rolling". This would not be an appropriate response goal for a developing suburban or rural setting where the population is spread over larger areas and the tax base for funding fire stations is not sufficient to include fire stations at higher densities. These areas are, therefore, commonly provided longer acceptable response times. For example, in San Diego County, urban and denser suburban areas are provided a 5-minute travel time which with dispatch and turnout, would equate to up to 7 to 8 minutes. For less dense suburban areas, 10 minutes travel time is provided. For rural areas, 20 minutes or more travel time is considered adequate. OFD has established internal goals for emergency response to all priority Level One or Emergency type calls within 5 minutes (3 minutes travel), 90% of the time. This is a more stringent response than suggested by the National Fire Protection Association (NFPA) which publishes a national guideline stated above. This analysis indicates that the first arriving engine from Station 5 can respond within OFD's five-minute response goal to 100% of the Project site and 4 minutes 30 seconds total response time, well within OFD's standards.

3 Call Volume

Additional analysis was conducted to determine when the Project would generate up to one call per day. This threshold is a commonly used metric for determining when a fire station should be constructed to serve a new community that will, at build out, generate more than one call per day and exceeds fire authority response time standards.

Dudek evaluated the latest available call volume information for the OFD. To represent the socioeconomic conditions in the City of Oceanside that may impact call volumes, the number of calls for OFD Fire Stations 5 and 6 were combined and compared against the City's population. Emergency call volumes related to typical projects, such as new residential developments, can be reliably estimated based on the historical per-capita call volume from a particular fire jurisdiction. The OFD documented 24,173 total incidents for 2022 generated by a City-wide,

service area total population of approximately 180,000 persons throughout the 41 square miles of the City of Oceanside (Oceanside Fire Department – About Us, 2023)[2]. Based on the City's total population of approximately 180,000 people and a total of 24,173 incidents, the City's per capita annual call volume is approximately 134 calls per 1,000 persons. The resulting per capita call volume is 0.134. Using the OFD's estimated call volume, the Project's estimated population is calculated to generate up to 63 calls per year (approximately 1.2 calls per week). The population includes approximately 469 residents for the proposed up to 164 three-story townhomes (including 2.86 persons per unit x 164 DU=469 persons) (U.S. Census Bureau, 2021). The Project's estimated 469 population would generate roughly 63 calls per year, most of which are expected to be medical-related calls; consistent with typical emergency call statistics (see Table 3). The estimated incident call volume at buildout from the Project is based on a conservative estimate of the maximum potential number of persons on site at any given time (considered a "worst case" scenario).

The OFD call volume analysis is provided in Tables 2 and 3.

Table 2. Calculated OFD Calls/Capita

	Calls 2022	Population 2022	Calls/1,000	Calls/capita
Oceanside Fire Department (All Stations)	24,173	180,000	Approx. 134	0.066[1]

[1] *Should the current call volume and/or population totals require update based on OFD review, the calls/capita may require updating and could adjust the Project's call generation.*

Table 3. Pacifica Project Calculated Call Volumes

	No. Units	Estimated Per Unit Population	Total Est. Residential Population	Anticipated Annual Calls at Build Out	Calls/Day
Anticipated Calls	164	2.86	469	Approximately 63	0.17

The results of Dudek's OFD call volume analysis indicate that the current Oceanside population generates approximately 134 calls per 1,000 persons per year (Table 2). When applied to the Pacifica Project, at build out, the Project would potentially generate up to 63 additional calls per year (roughly 5 calls per month or 0.17 call per day (Table 3), with medical emergencies representing the most common call type. Service level requirements are not expected to be significantly impacted with the increase of approximately 5 call per month/0.17 calls per day for the local fire response system. For example, OFD's Station 5's Engine currently responds to roughly 6 to 7 call per day in its primary service area. For perspective, 5 calls per day is considered average for a suburban fire station and 10 calls per day would be considered a busy fire station. Adding 0.17 calls per day to an existing fire station that is running approximately 6 calls per day may be considered to impact the ability of that fire station to continue meeting its internal response goals. More extensive study would be required whether the 0.17 calls would be a significant

[2] https://fire.ci.oceanside.ca.us/department-overview/about-us

impact on any of the responding fire stations if they were relied on to service the Project at build out to make that determination and is beyond the scope of this analysis.

The primary focus of this call volume analysis is determining the number of Project residences (i.e., population), based on the City's per capita call volume generation factor, that would generate one call per day. Per Table 3 and based on the City's estimated 2.86 persons per residence, the Project is calculated to generate less than one call per day when all 164 townhome units are occupied, and the community is at full capacity.

4 Recommendations/Conclusions

The Pacifica Project would introduce a new population to the OFD Fire Station 5's service area over the course of its build out; the Project is located within 1-mile of OFD career Fire Station 5 and within approximately 2.5 miles of OFD Fire Station 6. There are two primary factors when determining whether a project's population would impose an impact on the fire service capabilities of the fire authority having jurisdiction or have an impact on existing or future residents, 1) call volume and 2) response times. The analysis conducted herein concludes that the closest existing fire station (OFD Station 5) can provide adequate response times of less than 2 minutes, with a total response time to all 164 townhomes within the Project site under 5 minutes. Given the Project is within the City's General Plan goal of providing fire stations within five miles of all structures and all units can be responded to within 5 minutes total response time (including dispatch and turnout times), we believe it is appropriate to propose coverage from Station 5.

The Pacifica Project and its proposed 469 residents represents a slight increase in potential service demand of approximately 63 calls per year. Without additional resources, this total would add to an existing moderately busy service obligation for OFD Stations 5 and 6. The additional call volume from the Project is considered minimal and would not be anticipated to result in an impact on the OFD's response resources, particularly due to the funding through taxes and fees that would be generated by the Project for the OFD to enhance and improve its capabilities.

This proposal is prepared for consideration by the OFD. Where calculations require revisions due to more recent call volumes or other factors not readily available at the time of this analysis, Dudek will update this report based on comments and information provided.

Ms. Crooker,

The following is provided in response to conversations over the past couple of months solely relating to evacuation concerns involving your proposed project.

- Does the fire department have any concerns regarding the evacuation of the project in the event that the neighborhood needs to be evacuated due to a nearby fire?

The Oceanside Fire Department (OFD) has no specific concerns relating your project in the event of an evacuation due to a nearby wildfire. In the event of a wildfire or other emergency resulting in the need for evacuation of the area encompassing your project the City will notify residents and visitors via a wide variety of sources, ranging from apps for cell tower alerting (e.g. all cell phones in a set distance from the tower) to reverse 911 systems for landline phones. Our initial assessment does not see any issues raised by your project that are different than any affecting the surrounding area. Additionally, there are mitigating factors that reduce the risk of wildfire impacts in the project area such as wide firebreaks on Camp Pendleton's perimeter to vegetation management in the riparian area along Pilgrim Creek. The last major wildfires to directly impact the surrounding area included the Julliett Fire in October 2008 and the Douglas Fire in June 2017. In the case of the Julliett Fire (which occurred in a Santa Ana wind event), the fire was successfully stopped on Camp Pendleton by the firebreaks before it spread into the adjacent neighborhoods. In the case of the Douglas Fire, the wind blew the fire along the edge of the Pilgrim Creek riparian area, but it did not travel very far east and instead traveled towards Camp Pendleton.

- Are there any emergency response or evacuation plans/procedures/policies in place for such an event?

The Lilac Fire of 2017 is often cited as an example of a problematic evacuation for the area encompassing the proposed project. The OFD recognizes there were issues involved with

the Lilac evacuation, including the call to evacuate a far larger area than was needed. Additionally, conflicting information was provided by Cal Fire and the City of Oceanside as to the areas to evacuate. However, since that incident steps have been taken by many parties, including the City of Oceanside, to reduce or eliminate these issues in subsequent incidents. For example, the previous evacuation process involved the use of major thoroughfares and large geographic areas to designate evacuation zones. Subsequent to the Lilac Fire, all law and fire agencies in the County of San Diego switched evacuations to a new and more focused process. This process involves detailed maps carried by all emergency response agencies so that evacuation zones can be more precisely identified and communicated. This would have significantly reduced the number of residents evacuated, ensuring a more orderly and timely movement of vehicles out of the area. Notifications have also been improved and a new evacuation mapping and notification system (Zonehaven) is currently being rolled out Countywide to aid dispatch centers in managing the process.

Altogether, the City of Oceanside is prepared to evacuate the appropriate areas of the City, including your project, in the event any type of emergency necessitates such action. However, we do not feel that your specific project will impact those decisions or the evacuation process based on our current evaluation of the scope of work.

As identified in the initial paragraph, this letter is providing information solely relating to evacuation issues concerning your specific project. It does not address any zoning, building code, fire code or service delivery issues relating to this or any other project within the City. Should you have any questions or need additional information, please contact Randy Hill, Assistant Fire Marshal for the Oceanside Fire Department at RHill@oceansideca.org or me at PLawrence@Oceansideca.org.

Respectfully,

Peter H. Lawrence
Deputy Fire Chief
