Hello Tamar,

Please find attached Metro's comment letter on the BLOC DEIR.

Please confirm receipt, and let us know if you have any questions. Thank you!

**Shine Ling, AICP**

RE: The Bloc – Case No. ENV-2021-9959-EIR  
Draft Environmental Impact Report (EIR) – Metro Comments

Dear Ms. Gharibian:

Thank you for coordinating with the Los Angeles County Metropolitan Transportation Authority (Metro) regarding the proposed The Bloc (Project) located at 700 South Flower Street, 700 West 7<sup>th</sup> Street, 711 and 775 South Hope Street in the City of Los Angeles (City). Metro is committed to working with local municipalities, developers, and other stakeholders across Los Angeles County on transit-supportive developments to grow ridership, reduce driving, and promote walkable neighborhoods. Transit Oriented Communities (TOCs) are places (such as corridors or neighborhoods) that, by their design, allow people to drive less and access transit more. TOCs maximize equitable access to a multi-modal transit network as a key organizing principle of land use planning and holistic community development.

Per Metro's area of statutory responsibility pursuant to sections 15082(b) and 15086(a) of the Guidelines for Implementation of the California Environmental Quality Act (CEQA: Cal. Code of Regulations, Title 14, Ch. 3), the purpose of this letter is to provide the City with specific detail on the scope and content of environmental information that should be included in the Environmental Impact Report (EIR) for the Project. In particular, this letter outlines topics regarding the Project's potential impacts on 7th Street/Metro Center Station and Metro Rail lines, which should be analyzed in the EIR, and provides recommendations for mitigation measures as appropriate. Effects of a project on transit systems and infrastructure are within the scope of transportation impacts to be evaluated under CEQA.<sup>1</sup>

In addition to the specific comments outlined below, Metro is providing the City and NREA-TRC 700, LLC (Applicant) with the Metro Adjacent Development Handbook (attached), which provides an overview of common concerns for development adjacent to Metro right-of-way (ROW) and transit facilities, available at <https://www.metro.net/devreview>.

### **Project Description**

The Project includes a new high-rise tower (Residential Tower) on the southern half of the Project Site, in conjunction with the enclosure of the rooftop parking level of the existing nine-story podium building and addition of two levels of parking, increasing the podium to 12 stories. The new 53-story high rise tower will be located within and above the expanded parking podium. No changes are being proposed to the existing 7th/Metro rail station.

---

<sup>1</sup> See CEQA Guidelines section 15064.3(a); Governor's Office of Planning and Research Technical Advisory on Evaluating Transportation Impacts In CEQA, December 2018, p. 19.

## Comments on Draft EIR

1. Page IV.H-25, Metro Regional Connector: In June 2023, the Metro Regional Connector Transit Project opened for revenue service. Consider whether this should be included in the description of existing conditions (instead of future conditions).

## Recommendations for EIR Scope and Content

### *Bus Service Adjacency*

2. Service: Metro J Line (Silver) and several Metro Bus lines operate on Hope Street, Flower Street, 8<sup>th</sup> Street, and 7<sup>th</sup> Street adjacent to the Project. One Metro Bus stop heading westbound on 8<sup>th</sup> Street is directly adjacent to the Project. Other transit operators such as LADOT may provide service in the vicinity of the Project and should be consulted.
3. Impact Analysis: The EIR should analyze potential effects on Metro Bus service and identify mitigation measures as appropriate. Potential impacts may include impacts to transportation services, stops, and temporary or permanent bus service rerouting. Specific types of impacts and recommended mitigation measures to address them include, without limitation, the following:
  - a. Bus Stop Condition: The EIR should identify all bus stops on all streets adjacent to the Project site. During construction, the Applicant may either maintain the stop in its current condition and location, or temporarily relocate the stop consistent with the needs of Metro Bus operations. Temporary or permanent modifications to any bus stop as part of the Project, including any surrounding sidewalk area, must be Americans with Disabilities Act (ADA)-compliant and allow passengers with disabilities a clear path of travel between the bus stop and the Project. Once the Project is completed, the Applicant must ensure any existing Metro bus stop affected by the Project is returned to its pre-Project location and condition, unless otherwise directed by Metro.
  - b. Driveways: Driveways accessing parking and loading at the Project site should be located away from transit stops, and be designed and configured to avoid potential conflicts with on-street transit services and pedestrian traffic to the greatest degree possible. Vehicular driveways should not be located in or directly adjacent to areas that are likely to be used as waiting areas for transit.
  - c. Bus Stop Enhancements: Metro encourages the installation of enhancements and other amenities that improve safety and comfort for transit riders. These include benches, bus shelters, wayfinding signage, enhanced crosswalks and ADA-compliant ramps, pedestrian lighting, and shade trees in paths of travel to bus stops. The City should consider requesting the installation of such amenities as part of the Project.
  - d. Bus Operations Coordination: The Applicant shall coordinate with Metro Bus Operations Control Special Events Coordinator at 213-922-4632 and Metro's Stops and Zones Department at 213-922-5190 not later than 30 days before the start of Project construction. Other municipal bus services may also be impacted and shall be included in construction outreach efforts.

### *Subway Adjacency*

1. Operations: The Metro B Line, D Line, A Line, and E Line currently operate peak service as often as every ten minutes in both directions. Trains may operate 24 hours a day, seven days a week in the tunnels below the Project.
2. Impact Analysis: Due to the Project's proximity to the 7<sup>th</sup> Street/Metro Center Station, the EIR must analyze potential effects on subway operations and identify mitigation measures as appropriate. Critical impacts that should be studied include (without limitation): impacts of Project construction and operation on the structural and systems integrity of subway tunnels; damage to subway infrastructure,

including tracks; disruption to subway service; temporary and/or permanent changes to customer access and circulation to the station; and noise and vibration.

Specifically to the Project site: Subway ventilation shafts allow for continuous air circulation throughout the subway tunnels. Vents and emergency exits are located on the sidewalk on Flower Street and will need to be protected during and after construction.

The following provisions should be used to develop a mitigation measure that addresses these potential impacts:

- a. Technical Review: The Applicant shall submit architectural plans, engineering drawings and calculations, and construction work plans and methods, including any crane placement and radius, to evaluate any impacts to Metro Rail infrastructure in relationship to the Project. Before issuance of any building permit for the Project, the Applicant shall obtain Metro's approval of final construction plans.
  - b. Subway Station Ventilation Shafts and Emergency Exits: The Applicant shall take all necessary measures to protect the subway vents and emergency exits from damage due to Project activities during and after construction. The Applicant shall label all Metro Station ventilation shafts and emergency exits on the demolition and construction plans.
  - c. Construction Safety: The construction and operation of the Project shall not disrupt the operation and maintenance activities of 7th Street/Metro Center Station or the structural and systems integrity of Metro's tunnels. Not later than two months before Project construction, the Applicant shall contact Metro to schedule a pre-construction meeting with all Project construction personnel and Metro Real Estate, Construction Management, and Construction Safety staff. During Project construction, the Applicant shall:
    - i. Work in close coordination with Metro to ensure that station access, visibility, and structural integrity are not compromised by construction activities or permanent build conditions;
    - ii. Notify Metro of any changes to construction activity that may impact the use of the ROW;
    - iii. Permit Metro staff to monitor construction activity to ascertain any impact to the 7<sup>th</sup> Street/Metro Station.
3. Advisories to Applicant: The Applicant is encouraged to contact the Metro Development Review Team early in the design process to address potential impacts. The Applicant should also be advised of the following:
- a. Occupational Safety and Health Administration (OSHA) Requirements: Construction and excavation work in proximity to Metro right-of-way (ROW) with potential to damage subway tracks and related infrastructure may be subject to additional OSHA safety requirements.
  - b. Technical Review: Metro charges for staff time spent on engineering review and construction monitoring.
  - c. Right of Way (ROW) Entry Permit: For temporary or ongoing access to Metro ROW for construction, and/or maintenance activities, the Applicant shall complete Metro's Track Allocation process with Metro Rail Operations and obtain a Right of Entry Permit from Metro Real Estate. Approval for single tracking or a power shutdown, while possible, is highly discouraged; if sought, the Applicant shall apply for and obtain such approval not later than two months before the start of Project construction. The Applicant shall apply for and obtain approval for any special operations, including the use of a pile driver or any other equipment

that could come in close proximity or encroach on the tunnels or related structures, not later than two months before the start of Project construction.

- d. Cost of Impacts: The Applicant will be responsible for costs incurred by Metro resulting from Project construction/operation issues that cause delay or harm to Metro service delivery or infrastructure, including single-tracking or bus bridging around closures. The Applicant will also bear all costs for any noise mitigation required for the Project.

### **Transit Supportive Planning: Recommendations and Resources**

Considering the Project's adjacency to 7th Street/Metro Center Station, Metro would like to identify the potential synergies associated with transit-oriented development:

1. TFAR Public Benefit Payment; 7th Street/Metro Center Station Renovations: Metro is currently planning a major capital improvement project to renovate 7th Street/Metro Center Station, which is a key regional transit hub and Metro's busiest station. The project will include updates to all architectural finishes, art works, signage, furnishings, lighting, customer communications equipment, information and retail kiosks, security roll-down portal gates, and digital displays for customer information and advertising. The project is currently in the preliminary design and engineering phase, and pending dedicated funding, is projected to begin construction as early as Spring 2026.

A Transfer of Floor Area Rights (TFAR) request is one of the approvals requested by the Project. Metro strongly recommends that the City and Applicant designate funds from the Project's required TFAR Public Benefit Payment towards this station renovation project. Metro looks forward to further discussing the renovation project with City staff and the Applicant.

2. Transit Connections and Access: Metro strongly encourages the Applicant to install Project features that help facilitate safe and convenient connections for pedestrians, people riding bicycles, and transit users to/from the Project site and nearby destinations. The City should consider requiring the installation of such features as part of the conditions of approval for the Project, including:
  - a. Walkability: The provision of wide sidewalks, pedestrian lighting, a continuous canopy of shade trees, enhanced crosswalks with ADA-compliant curb ramps, and other amenities along all public street frontages of the development site to improve pedestrian safety and comfort to access the nearby bus stops and 7<sup>th</sup> Street/Metro Center Station.
  - b. Transfer Activity: Given the Project's proximity to the Metro Bus stop for Lines 51 and 66 and 7th Street/Metro Center Station, the Project design should consider and accommodate transfer activity between bus/bus and bus/rail lines that will occur along the sidewalks and public spaces. Metro has completed the Metro Transfers Design Guide, a best practices document on transit improvements. This can be accessed online at <https://www.metro.net/about/station-design-projects/>.
  - c. Bicycle Use and Micromobility Devices: The provision of adequate short-term bicycle parking, such as ground-level bicycle racks, and secure, access-controlled, enclosed long-term bicycle parking for residents, employees, and guests. Bicycle parking facilities should be designed with best practices in mind, including highly visible siting, effective surveillance, ease to locate, and equipment installation with preferred spacing dimensions, so bicycle parking can be safely and conveniently accessed. Similar provisions for micro-mobility devices are also encouraged.
  - d. First & Last Mile Access: The Project should address first-last mile connections to transit and is encouraged to support these connections with wayfinding signage inclusive of all modes of transportation. For reference, please review the First Last Mile Strategic Plan, authored by Metro and the Southern California Association of Governments (SCAG), available on-line at: [http://media.metro.net/docs/sustainability\\_path\\_design\\_guidelines.pdf](http://media.metro.net/docs/sustainability_path_design_guidelines.pdf).

3. Parking: Metro encourages the incorporation of transit-oriented, pedestrian-oriented parking provision strategies such as the reduction or removal of minimum parking requirements and the exploration of shared parking opportunities. These strategies could be pursued to reduce automobile-orientation in design and travel demand.
4. Wayfinding: Any temporary or permanent wayfinding signage with content referencing Metro services or featuring the Metro brand and/or associated graphics (such as Metro Bus or Rail pictograms) requires review and approval by Metro Signage and Environmental Graphic Design.
5. Transit Pass Programs: Metro would like to inform the Applicant of Metro's employer transit pass programs, including the Annual Transit Access Pass (A-TAP), the Employer Pass Program (E-Pass), and Small Employer Pass (SEP) Program. These programs offer efficiencies and group rates that businesses can offer employees as an incentive to utilize public transit. The A-TAP can also be used for residential projects. For more information on these programs, please visit the programs' website at <https://www.metro.net/riding/eapp/>.

# Quick Overview

## Purpose of Handbook

The Metro Adjacent Development Handbook (Handbook) is intended to provide information and guide coordination for projects adjacent to, below, or above Metro transit facilities (e.g. right-of-way, stations, bus stops) and services.

### Overarching Goal

By providing information and encouraging early coordination, Metro seeks to reduce potential conflicts with transit services and facilities, and identify potential synergies to expand mobility and improve access to transit.

### Intended Audience

The Handbook is a resource for multiple stakeholder groups engaged in the development process, including:

- Local jurisdictions who review, entitle, and permit development projects,
- Developers,
- Property owners,
- Architects, engineers, and other technical consultants,
- Builders/contractors,
- Utility companies, and
- other Third Parties.

### Handbook Content

The Handbook includes:

- **Introduction** of Metro's Development Review coordination process, common concerns, and typical stages of review.
- **Information** on best practices during three key coordination phases to avoid potential conflicts or create compatibility with the Metro transit system:
  - Planning & Conceptual Design,
  - Engineering & Technical Review, and
  - Construction Safety & Monitoring.
- **Glossary** with definitions for key terms used throughout the Handbook.

## RULE OF THUMB: 100 FEET

**Metro's Development Review process applies to projects that are within 100 feet of Metro transit facilities.**

While the Handbook summarizes key concerns and best practices for adjacency conditions, it does not replace Metro's technical requirements and standards.

**Prior to receiving approval for any construction activities adjacent to, above, or below Metro facilities, Third Parties must comply with the Metro Adjacent Construction Design Manual, available on Metro's website.**

### Contact Us

For questions, contact the Development Review Team:

- Email: [devreview@metro.net](mailto:devreview@metro.net)
- Phone: 213.418.3484
- Online In-take Form: <https://jpropublic.metro.net/in-take-form>

### Additional Information & Resources

- Metro Development & Construction Coordination website: <https://www.metro.net/devreview>
- Metro GIS/KML ROW Files: <https://developer.metro.net/portfolio-item/metro-right-of-way-gis-data>
- Metrolink Standards and Procedures: <https://www.metrolinktrains.com/about/agency/engineering--construction>

Metro will continue to revise the Handbook, as needed, to reflect updates to best practices in safety, operations, and transit-supportive development.

# Background

## Who is Metro?

The Los Angeles County Metropolitan Transportation Authority (Metro) plans, funds, builds, and operates rail, bus, and other mobility services (e.g. bikeshare, microtransit) throughout Los Angeles County (LA County). On average, Metro moves 1.3 million people each day on buses and trains. With funding from the passage of Measure R (2008) and Measure M (2016), the Metro system is expanding. Over the next 40 years, Metro will build over 60 new stations and over 100 miles of transit right-of-way (ROW). New and expanded transit lines will improve mobility across LA County, connecting riders to more destinations and expanding opportunities for development that supports transit ridership. Metro facilities include:

**Metro Rail:** Metro operates heavy rail (HRT) and light rail (LRT) transit lines in underground tunnels, along streets, off-street in dedicated ROW, and above street level on elevated structures. Heavy rail trains are powered by a “third rail” along the tracks. Light rail vehicles are powered by overhead catenary systems (OCS). To support rail operations, Metro owns and maintains traction power substations (TPSS), maintenance yards, and other infrastructure.

**Metrolink/Regional Rail:** Metro owns a majority of the ROW within LA County on which the Southern California Regional Rail Authority (SCRRA) operates Metrolink service. Metrolink is a commuter rail system with seven lines that span 388 miles across five counties, including: Los Angeles, Orange, Riverside, San Bernardino, Ventura, and North San Diego. As a SCRRA member agency and property owner, Metro reviews development activity adjacent to Metro-owned ROW on which Metrolink operates, and coordinates with Metrolink on any comments or concerns. Metrolink has its own set of standards and processes, see link on page 1.

**Metro Bus Rapid Transit (BRT):** Metro operates accelerated bus transit, which acts as a hybrid between rail and traditional bus service. Metro BRT may operate in a dedicated travel lane within a street or freeway, or off-street along dedicated ROW. Metro BRT stations may be located on sidewalks within the public right-of-way, along a median in the center of streets, or off-street on Metro-owned property.

**Metro Bus:** Metro operates 170 bus lines across more than 1,400 square miles in LA County. The fleet serves over 15,000 bus stops with approximately 2,000 buses. Metro operates “Local” and “Rapid” bus service within the street, typically alongside vehicular traffic, though occasionally in “bus-only” lanes. Metro bus stops are typically located on sidewalks within the public right-of-way, which is owned and maintained by local jurisdictions. Metro’s [NextGen Bus Plan](#) re-envision bus service across LA County to make service improvements that better serve riders.

## Why is Metro interested in adjacent development?

**Metro Supports Transit Oriented Communities:** Metro is redefining the role of the transit agency by expanding mobility options, promoting sustainable urban design, and helping transform communities throughout LA County. Metro seeks to partner with local, state, and federal jurisdictions, developers, property owners and other stakeholders across LA County on transit-supportive planning and developments to grow ridership, reduce driving, and promote walkable neighborhoods. Transit Oriented Communities (TOCs) are places (such as corridors or neighborhoods) that, by their design, allow people to drive less and access transit more. TOCs maximize equitable access to a multi-modal transit network as a key organizing principle of land use planning and holistic community development.

**Adjacent Development Leads to Transit Oriented Communities:** Metro supports private development adjacent to transit as this presents a mutually beneficial opportunity to enrich the built environment and expand mobility options. By connecting communities, destinations, and amenities through improved access to public transit, adjacent developments have the potential to:

- reduce auto dependency,
- reduce greenhouse gas emissions,
- promote walkable and bikeable communities that accommodate more healthy and active lifestyles,
- improve access to jobs and economic opportunities, and
- create more opportunities for mobility – highly desirable features in an increasingly urbanized environment.

**Opportunity:** Acknowledging an unprecedented opportunity to influence how the built environment develops along and around transit and its facilities, Metro has created this document. The Handbook helps ensure compatibility between private development and Metro's transit infrastructure to minimize operational, safety, and maintenance issues. It serves as a crucial first step to encourage early and active collaboration with local stakeholders and identify potential partnerships that leverage Metro initiatives and support TOCs across LA County.

# Metro Purview & Concerns

## Metro Purview for Review & Coordination

**Metro is interested in reviewing development, construction, and utility projects within 100 feet of Metro transit facilities, real estate assets, and ROW** – as measured from the edge of the ROW outward – both to ensure the structural safety of existing or planned transit infrastructure and to maximize integration opportunities with adjacent development. The Handbook seeks to:

- Improve communication and coordination between developers, jurisdictions, and Metro.
- Identify common concerns associated with developments adjacent to Metro ROW.
- Highlight Metro operational needs and requirements to ensure safe, continuous service.
- Prevent potential impacts to Metro transit service or infrastructure.
- Maintain access to Metro facilities for riders and operational staff.
- Avoid preventable conflicts resulting in increased development costs, construction delays, and safety impacts.
- Streamline the review process to be transparent, clear, and efficient.
- Assist in the creation of overall marketable and desirable developments.

### **Key Audiences for Handbook**

The Handbook is intended to be used by:

- Local jurisdictions who review, entitle, and permit development projects and/or develop policies related to land use, development standards, and mobility,
- Developers, property owners,
- Architects, engineers, design consultants,
- Builders/contractors,
- Entitlement consultants,
- Environmental consultants,
- Utility companies, and
- other Third Parties.

### **Metro Assets & Common Concerns for Adjacent Development**

The table on the facing page outlines common concerns for development projects and/or construction activities adjacent to Metro transit facilities and assets. These concerns are discussed in greater detail in the following chapters of the Handbook.

## METRO ASSETS

## COMMON ADJACENCY CONCERNS

### UNDERGROUND ROW

Transit operates below ground in tunnels.

- Excavation near tunnels and infrastructure
- Clearance from support structures (e.g. tiebacks, shoring, etc)
- Coordination with utilities
- Clearance from ventilation shafts, surface penetrations (e.g. emergency exits)
- Surcharge loading of adjacent construction
- Explosions
- Noise and vibration/ground movement
- Storm water drainage

### AERIAL ROW

Transit operates on elevated guideway, typically supported by columns.

- Excavation near columns and support structures
- Column foundations
- Clearance from OCS
- Overhead protection and crane swings
- Setbacks from property line for maintenance activities to occur without entering ROW
- Coordination with utilities
- Noise reduction (e.g. double-paned windows)

### AT-GRADE ROW

Transit operates in dedicated ROW at street level; in some cases tracks are separated from adjacent property by fence or wall.

- Pedestrian and bicycle movements and safety
- Operator site distance/cone of visibility
- Clearance from OCS
- Crane swings and overhead protection
- Trackbed stability
- Storm water drainage
- Noise/vibration
- Driveways near rail crossings
- Setbacks from property line for maintenance activities to occur without entering ROW
- Utility coordination

### BUS STOPS

Metro operates bus service on city streets. Bus stops are located on public sidewalks.

- Lane closures and re-routing service during construction
- Temporary relocation of bus stops
- Impacts to access to bus stops

### NON-REVENUE/OPERATIONAL

Metro owns and maintains property to support operations (e.g. bus and rail maintenance facilities, transit plazas, traction power substations, park-and-ride parking lots).

- Excavation and clearance from support structures (e.g. tiebacks, shoring, etc)
- Ground movement
- Drainage
- Utility coordination
- Access to property

# Metro Coordination Process

## Typical Stages of Metro Review and Coordination

Early coordination helps avoid conflicts between construction activities and transit operations and maximizes opportunities to identify synergies between the development project and Metro transit services that are mutually beneficial.

\*Phases above may include fees for permits and reimbursement of Metro staff time for review and coordination.

**Coordination Goal:** Metro encourages developers to consult with the Development Review Team early in the design process to ensure compatibility with transit infrastructure and minimize operational, safety, and maintenance issues with adjacent development. The Development Review team will serve as a case manager to developers and other Third Parties to facilitate the review of plans and construction documents across key Metro departments.

**Level of Review:** Not all adjacent projects will require significant review and coordination with Metro. The level of review depends on the Project's proximity to Metro, adjacency conditions, and the potential to impact Metro facilities and/or services. For example, development projects that are excavating near Metro ROW or using cranes near transit facilities require a greater level of review and coordination. Where technical review and construction monitoring is needed, Metro charges fees for staff time, as indicated by asterisk in the above diagram.

**Permit Clearance:** Within the City of Los Angeles, Metro reviews and clears Building & Safety permits for projects within 100 feet of Metro ROW, pursuant to [Zoning Information 1117](#). To ensure timely clearance of these permits, Metro encourages early coordination as noted above.

To begin consultation, submit project information via an online [In-Take Form](#), found on Metro's website. Metro staff will review project information and drawings to screen the project for any potential impacts to transit facilities or services, and determine if require further review and coordination is required. The sample sections on the facing page illustrate adjacency condition information that helps Metro complete project screening.

### Contact:

Metro Development Review Team

Website: <https://www.metro.net/devreview>

Online In-take Form: <https://jpublic.metro.net/in-take-form>

Email: [devreview@metro.net](mailto:devreview@metro.net)

Phone: 213.418.3484

## Sample Section: Adjacency Conditions

**AT-GRADE CONDITION**

**BELOW-GRADE CONDITION**

A. Distance from property line to nearest permanent structure (e.g. building facade, balconies, terraces). Refer to Section 1.3 Building Setback of Handbook.

B. Distance from property line to nearest temporary construction structures (e.g. scaffolding).

C. Distance from property line to nearest Metro facility.

D. Clearance from nearest temporary and/or permanent structure to overhead catenary system (OCS). Refer to Section 1.4, OCS Clearance of Handbook.

E. Vertical distance from top of Metro tunnel to closest temporary and/or permanent structure (e.g. tiebacks, foundation). Refer to Section 2.2, Proximity to Tunnels & Underground Infrastructure of Handbook.

F. Horizontal distance from exterior tunnel wall to nearest structure.

G. Horizontal distance from Metro track centerline to nearest structure.

# Best Practices

## Best Practices for Developer Coordination

Metro encourages developers of projects adjacent to Metro ROW and/or Real Estate Assets to take the following steps to facilitate Metro project review and approval:

1. **Review Metro resources and policies:** The Metro Development & Construction Coordination website and Handbook provide important information for those interested in constructing on, adjacent, over, or under Metro ROW, non-revenue property, or transit facilities. Developers and other Third Parties should familiarize themselves with these resources and keep in mind common adjacency concerns when planning a project.
2. **Contact Metro early during design process:** Metro welcomes the opportunity to provide feedback early in project design, allowing for detection and resolution of important adjacency issues, identification of urban design and system integration opportunities, and facilitation of permit approval. Metro encourages project submittal through the online [In-Take Form](#) to begin consultation.
3. **Maintain communication:** Frequent communication with Metro during project design and construction will reinforce relationships and allow for timely project completion. Contact us at [devreview@metro.net](mailto:devreview@metro.net) or at 213.418.3484.

## Best Practices for Local Jurisdiction Notification

To improve communication between Metro and the development community, Metro suggests that local jurisdictions take the following steps to notify property owners of coordination needs for properties adjacent to Metro ROW by:

- **Updating GIS and parcel data:** Integrate Metro ROW files into the City/County GIS and/or Google Earth Files for key departments (e.g. Planning, Public Works, Building & Safety) to notify staff of Metro adjacency and need for coordination during development approval process. Download Metro's ROW files [here](#).
- **Flag Parcels:** Create an overlay zone as part of local Specific Plan(s) and/or Zoning Ordinance(s) to tag parcels that are within 100 feet Metro ROW and require coordination with Metro early during the development process [e.g. City of Los Angeles Zone Information and Map Access System (ZI-1117)].
- **Provide Resources:** Direct all property owners and developers interested in parcels within 100 feet of Metro ROW to Metro's resources (e.g. website, Handbook).

Metro

Downtown  
Santa  
Monica

# Site Plan & Conceptual Design

# Site Plan & Conceptual Design

## 1.1 Supporting Transit Oriented Communities

Transit-oriented communities (TOCs) are places that, by their design, make it more convenient to take transit, walk, bike or roll than to drive. By working closely with the development community and local jurisdictions, Metro seeks to ensure safe construction near Metro facilities and improve compatibility with adjacent development to increase transit ridership.

**RECOMMENDATION:** Consider site planning and building design strategies to that support transit ridership, such as:

- Leveraging planning policies and development incentives to design a more compelling project that capitalizes on transit adjacency and economy of scales.
- Programming a mix of uses to create lively, vibrant places that are active day and night.
- Utilizing Metro policies and programs that support a healthy, sustainable, and welcoming environment around transit service and facilities.
- Prioritizing pedestrian-scaled elements to create spaces that are comfortable, safe, and enjoyable.
- Activating ground floor with retail and outdoor seating/activities to bring life to the public environment.
- Reducing and screening parking to focus on pedestrian activity.
- Incorporating environmental design elements that help reduce crime (e.g. windows and doors that face public spaces, lighting).

*The Wilshire/Vermont Metro Joint Development project leveraged existing transit infrastructure to catalyze a dynamic and accessible urban environment. This project accommodates portal access into the Metro Rail system and on-street bus facilities.*

## 1.2 Enhancing Access to Transit

Metro seeks to create a comprehensive, integrated transportation network and supports infrastructure and design that allows safe and convenient access to its multi-modal services. Projects in close proximity to Metro's services and facilities present an opportunity to enhance the public realm and connections to/from these services for transit riders as well as users of the developments.

**RECOMMENDATION:** Design projects with transit access in mind. Project teams should capitalize on the opportunity to improve the built environment and enhance the public realm for pedestrians, bicyclists, persons with disabilities, seniors, children, and users of green modes. Metro recommends that projects:

- Orient major entrances to transit service, making access and travel safe, intuitive, and convenient.
- Plan for a continuous canopy of shade trees along all public right-of-way frontages to improve pedestrian comfort to transit facilities.
- Add pedestrian lighting along paths to transit facilities and nearby destinations.
- Integrate wayfinding and signage into project design.
- Enhance nearby crosswalks and ramps.
- Ensure new walkways and sidewalks are clear of any obstructions, including utilities, traffic control devices, trees, and furniture.
- Design for seamless, multi-modal pedestrian connections, making access easy, direct, and comfortable.

*The City of Santa Monica leveraged investments in rail transit and reconfigured Colorado Avenue to form a multi-modal first/last mile gateway to the waterfront from the Downtown Santa Monica Station. Photo by PWP Landscape Architecture*

# Site Plan & Conceptual Design

## 1.3 Building Setback

Buildings and structures with a zero lot setback that closely abut Metro ROW can pose concerns to Metro during construction. Encroachment onto Metro property to construct or maintain buildings is strongly discouraged as this presents safety hazards and may disrupt transit service and/or damage Metro infrastructure.

**RECOMMENDATION:** Include a minimum setback of five (5) feet from the property line to building facade to accommodate the construction and maintenance of structures without the need to encroach upon Metro property. As local jurisdictions also have building setback requirements, new developments should comply with the greater of the two requirements.

Entry into the ROW by parties other than Metro and its affiliated partners requires written approval. Should construction or maintenance of a development necessitate temporary or ongoing access to Metro ROW, a Metro Right of Entry Permit must be requested and obtained from Metro Real Estate for every instance access is required. Permission to enter the ROW is granted solely at Metro's discretion.

Coordination between property owners of fences, walls, and other barriers along property line is recommended. See Section 1.5.

Refer to Section 3.2 – Track Access and Safety for additional information pertaining to ROW access in preparation for construction activities.

*A minimum setback of five (5) feet between an adjacent structure and Metro ROW is strongly encouraged to allow project construction and ongoing maintenance without encroaching on Metro property.*

## 1.4 Overhead Catenary System (OCS) Clearance

Landscaping and tree canopies can grow into the OCS above light rail lines, creating electrical safety hazards as well as visual and physical impediments for trains. Building appurtenances facing rail ROW, such as balconies, may also pose safety concerns to Metro operations as objects could fall onto the OCS.

**RECOMMENDATION:** Design project elements facing the ROW to avoid potential conflicts with Metro transit vehicles and infrastructure. Metro recommends that projects:

- Plan for landscape maintenance from private property and prevent growth into Metro ROW. Property owners will not be permitted to access Metro property to maintain private development.
- Design buildings such that balconies do not provide building users direct access to Metro ROW.
- Maintain building appurtenances and landscaping at a minimum distance of ten (10) feet from the OCS and support structures. If Transmission Power (TP) feeder cable is present, twenty (20) feet from the OCS and support structures is required. Different standards will apply for Metro Trolley Wires, Feeder Cables (wires) and Span Wires.

*Adjacent structures and landscaping should be sited and maintained to avoid conflicts with the rail OCS.*

*Scaffolding and construction equipment should be staged to avoid conflicts with the rail OCS.*

# Site Plan & Conceptual Design

## 1.5 Underground Station Portal Clearance

Metro encourages transit-oriented development. Where development is planned above station entrances, close coordination is needed for structural safety as well as access for patrons, operations, and maintenance. Below are key design rules of thumb for development planned to cantilever over an entrance to an underground Metro Rail station.

### RECOMMENDATION:

1. Preserve 25 feet clearance at minimum from plaza grade and the building structure above.
2. Preserve 10 feet clearance at minimum between portal roof and building structure above.
3. Coordinate structural support system and touchdown points to ensure a safe transfer of the building loads above the station portal.
4. Coordinate placement of structural columns and amenities (e.g. signage, lighting, furnishings) at plaza level to facilitate direct and safe connections for people of all mobile abilities to and from station entrance(s).
5. Develop a maintenance plan for the plaza in coordination with Metro.

*Projects that propose to cantilever over Metro subway portals require close coordination with Metro Engineering.*

## 1.6 Shared Barrier Construction & Maintenance

In areas where Metro ROW abuts private property, barrier construction and maintenance responsibilities can be a point of contention with property owners. When double barriers are constructed, the gap created between the Metro-constructed fence and a private property owner's fence can accumulate trash and make regular maintenance challenging without accessing the other party's property.

**RECOMMENDATION:** Coordinate with Metro Real Estate to create a single barrier condition along the ROW property line. With an understanding that existing conditions along ROW boundaries vary throughout LA County, Metro recommends the following, in order of preference:

- **Enhance existing Metro barrier:** if structural capacity allows, private property owners and developers should consider physically affixing improvements onto and building upon Metro's existing barrier. Metro is amenable to barrier enhancements such as increasing barrier height and allowing private property owners to apply architectural finishes to their side of Metro's barrier.
- **Replace existing barrier(s):** if conditions are not desirable, remove and replace any existing barrier(s), including Metro's, with a new single "shared" barrier built on the property line.

Metro is amenable to sharing costs for certain improvements that allow for clarity in responsibilities and adequate ongoing maintenance from adjacent property owners without entering Metro's property. Metro Real Estate should be contacted with case-specific questions and will need to approve shared barrier design, shared financing, and construction.

*Double barrier conditions allow trash accumulation and create maintenance challenges for Metro and adjacent property owners.*

*Metro prefers a single barrier condition along its ROW property line.*

# Site Plan & Conceptual Design

## 1.7 Project Orientation & Noise Mitigation

Metro may operate in and out of revenue service 24 hours per day, every day of the year, which can create noise and vibration (i.e. horns, power washing). Transit service and maintenance schedules cannot be altered to avoid noise for adjacent developments. However, noise and vibration impacts can be reduced through building design and orientation.

**RECOMMENDATION:** Use building orientation, programming, and design techniques to reduce noise and vibration for buildings along Metro ROW:

- Locate secondary or “back of house” rooms (e.g. bathrooms, stairways, laundry rooms) along ROW, rather than primary living spaces that are noise sensitive (e.g. bedrooms and family rooms).
- Use upper level setbacks and locate living spaces away from ROW.
- Enclose balconies.
- Install double-pane windows.
- Include language disclosing potential for noise, vibration, and other impacts due to transit proximity in terms and conditions for building lease or sale agreements to protect building owners/sellers from tenant/buyer complaints.

Developers are responsible for any noise mitigation required, which may include engineering designs for mitigation recommended by Metro or otherwise required by local municipalities. A recorded Noise Easement Deed in favor of Metro may be required for projects within 100 feet of Metro ROW to ensure notification to tenants and owners of any proximity issues.

*Building orientation can be designed to face away from tracks, reducing the noise and vibration impacts.*

*Strategic placement of podiums and upper-level setbacks on developments near Metro ROW can reduce noise and vibration impacts.*

## 1.8 At-Grade Rail Crossings

New development is likely to increase pedestrian activity at rail crossings. Safety enhancements may be needed to upgrade existing rail crossings to better protect pedestrians.

**RECOMMENDATION:** Coordinate with Metro, the California Public Utilities Commission (CPUC), and any other transit operators using the crossing (e.g. Metrolink) to determine if safety enhancements are needed for nearby rail crossings.

While Metro owns and operates the rail ROW, the CPUC regulates all rail crossings. Contact the CPUC early in the design process to determine if they will require any upgrades to existing rail crossings. The CPUC may request to review development plans and hold a site visit to understand future pedestrian activity. Metro's Corporate Safety Department can support the developer in coordination with the CPUC.

*Gates and pedestrian arms are common types of safety elements for pedestrians at rail crossings.*

*Safety elements of a gate and pedestrian arms have been constructed at the Monrovia Station.*

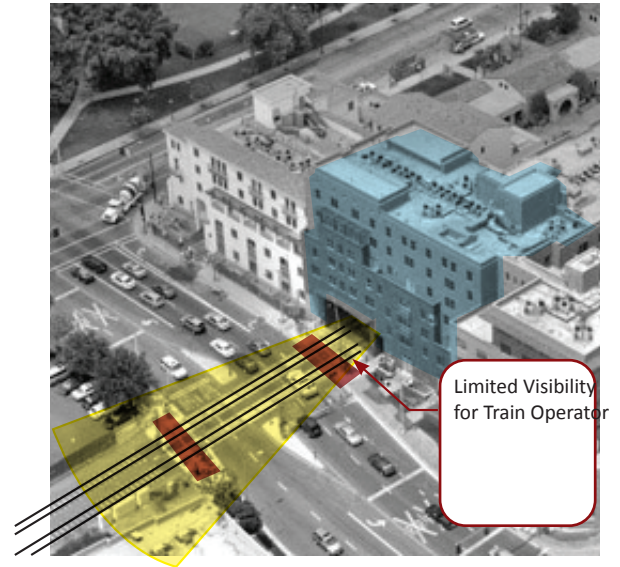

# Site Plan & Conceptual Design

## 1.9 Sight-Lines at Crossings

Developments adjacent to Metro ROW can present visual barriers to transit operators approaching vehicular and pedestrian crossings. Buildings and structures in close proximity to transit corridors can reduce sight-lines and create blind corners where operators cannot see pedestrians. This requires operations to reduce train speeds, which decreases efficiency of transit service.

**RECOMMENDATION:** Design buildings to maximize transit service sight-lines at crossings, leaving a clear cone of visibility to oncoming vehicles and pedestrians.

Metro Rail Operations will review, provide guidance, and determine the extent of operator visibility for safe operations. If the building envelope overlaps with the visibility cone near pedestrian and vehicular crossings, a building setback may be necessary to ensure safe transit service. The cone of visibility at crossings and required setback will be determined based on vehicle approach speed.

*Limited sight-lines for trains approaching street crossings create unsafe conditions.*

*Visibility cones allow train operators to respond to safety hazards.*

## 1.10 Driveway/Access Management

Driveways adjacent to on-street bus stops can create conflict for pedestrians walking to/from or waiting for transit. Additionally, driveways accessing parking lots and loading zones at project sites near Metro Rail and BRT crossings can create queuing issues along city streets and put vehicles in close proximity to fast moving trains and buses, which pose safety concerns.

**RECOMMENDATION:** Site driveways and other vehicular entrances to avoid conflicts with pedestrians, bicycles, and transit vehicles by:

- Placing driveways along side streets and alleys, away from on-street bus stops and transit crossings to minimize safety conflicts between active ROW, transit vehicles, and people, as well as queuing on streets.
- Locating vehicular driveways away from transit crossings or areas that are likely to be used as waiting areas for transit services.
- Placing loading docks away from sidewalks where transit bus stop activity is/will be present.
- Consolidating vehicular entrances and reduce width of driveways.
- Using speed tables to slow entering/exiting automobiles near pedestrians.
- Separating pedestrian walkways to minimize conflict with vehicles.
- Encouraging safe non-motorized travel.

*Driveways in close proximity to each other compromise safety for those walking to/from transit and increase the potential for vehicle-pedestrian conflicts.*

# Site Plan & Conceptual Design

## 1.11 Bus Stop & Zones Design

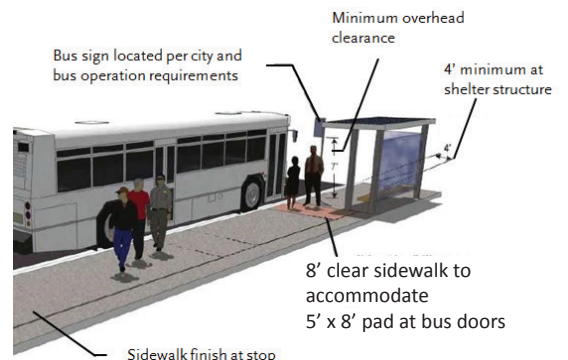

Metro Bus serves over 15,000 bus stops throughout the diverse landscape that is LA County. Typically located on sidewalks within public right-of-way owned and maintained by local jurisdictions, existing bus stop conditions vary from well-lit and sheltered spaces to uncomfortable and unwelcoming zones. Metro is interested in working with developers and local jurisdictions to create a vibrant public realm around new developments by strengthening multi-modal access to/from Metro transit stops and enhancing the pedestrian experience.

**RECOMMENDATION:** When designing around existing or proposed bus stops:

- Review Metro's Transit Service Policy, which provides standards for design and operation of bus stops and zones for near-side, far-side, and mid-block stops.
- Review Metro's Transfers Design Guide for more information at <https://www.metro.net/projects/station-design-projects/>
- Accommodate 5' x 8' landing pads at bus doors (front and back door, which are typically 23 to 25 feet apart).
- Locate streetscape elements (e.g. tree planters, street lamps, benches, shelters, trash receptacles and newspaper stands) outside of bus door zones to protect transit access and ensure a clear path of travel.
- Install a concrete bus pad within each bus stop zone to avoid street asphalt damage.
- Replace stand-alone bus stop signs with bus shelters that include benches and adequate lighting.
- Design wide sidewalks (15' preferred) that accommodate bus landing pads as well as street furniture, landscape, and user travel space.
- Consider tree species, height, and canopy shape (higher than 14' preferred) to avoid vehicle conflicts at bus stops. Trees should be set back from the curb and adequately maintained to prevent visual and physical impediments for buses when trees reach maturity. Avoid planting of trees that have an invasive and shallow root system.

*A concrete bus pad should be located at bus stops and bus shelters should be located along sidewalks to ensure an accessible path of travel to a clear boarding area.*

*Well-designed and accessible bus stops are beneficial amenities for both transit riders and users of adjacent developments.*

**THIS PAGE INTENTIONALLY LEFT BLANK.**

GORBEL 2.5  
DANGER! DO NOT  
EXCEED RATED CAPACITY

# **Engineering & Technical Review**

# Engineering & Technical Review

## 2.1 Excavation Support System Design

Excavation near Metro ROW has the potential to disturb adjoining soils and jeopardize support of existing Metro infrastructure. Any excavation which occurs within the geotechnical foul zone relative to Metro infrastructure is subject to Metro review and approval and meet Cal/OSHA requirements. This foul zone or geotechnical zone of influence shall be defined as the area below a track-way as measured from a 45-degree angle from the edge of the rail track ballast. Construction within this vulnerable area poses a potential risk to Metro service and requires additional Metro Engineering review.

**RECOMMENDATION:** Coordinate with Metro Engineering staff for review and approval of the excavation support system drawings and calculations prior to the start of excavation or construction. Tiebacks encroaching into Metro ROW may require a tieback easement or license, at Metro's discretion.

Any excavation/shoring within Metrolink operated and maintained ROW will require compliance with SCRRRA Engineering standards and guidelines.

See page 7 for a sample section showing Metro adjacent conditions.

*An underground structure located within the ROW foul zone would require additional review by Metro.*

## 2.2 Proximity to Tunnels & Underground Infrastructure

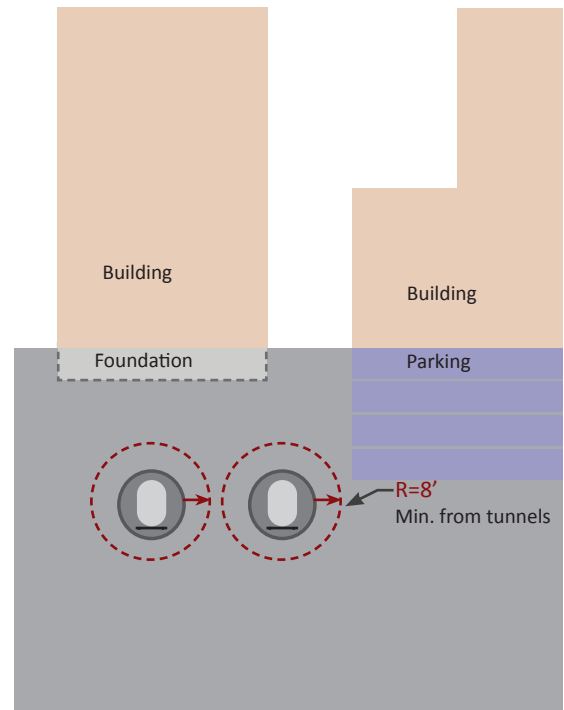

Construction adjacent to, over, or below underground Metro facilities (tunnels, stations and appendages) is of great concern and should be coordinated closely with Metro Engineering.

**RECOMMENDATION:** Coordinate with Metro early in the design process when proposing to build near underground Metro infrastructure. Metro typically seeks to maintain a minimum eight (8) foot clearance from existing Metro facilities to new construction (shoring or tiebacks). It will be incumbent upon the developer to demonstrate, to Metro's satisfaction, that both the temporary support of construction and the permanent works do not adversely affect the structural integrity, safety, or continued efficient operation of Metro facilities.

Dependent on the nature of the adjacent construction, Metro will need to review the geotechnical report, structural foundation plans, sections, shoring plan sections and calculations.

Metro may require monitoring where such work will either increase or decrease the existing overburden (i.e. weight) to which the tunnels or facilities are subjected. When required, the monitoring will serve as an early indication of excessive structural strain or movement. See Section 3.4, Excavation Drilling/Monitoring for additional information regarding monitoring requirements.

See page 7 for a sample section showing Metro adjacent conditions.

*Adjacent project structures in close proximity to underground Metro infrastructure will require additional review by Metro.*

## 2.3 Protection from Explosion/Blast

Metro is obligated to ensure the safety of public transit infrastructure from potential explosive sources which could originate from adjacent underground structures or from at-grade locations, situated below elevated guideways or near stations. Blast protection setbacks or mitigation may be required for large projects constructed near critical Metro facilities.

**RECOMMENDATION:** Avoid locating underground parking or basement structures within twenty (20) feet from an existing Metro tunnel or facility (exterior face of wall to exterior face of wall). Adjacent developments within this 20-foot envelope may be required to submit a Threat Assessment and Blast/Explosion Study for Metro review and approval.

*An underground structure proposed within twenty (20) feet of a Metro structure may require a Threat Assessment and Blast/Explosion Study.*

**THIS PAGE INTENTIONALLY LEFT BLANK.**

# Construction Safety & Management

# Construction Safety & Management

## 3.1 Pre-Construction Coordination

Metro is concerned with impacts to service requiring rail single line tracking, line closures, speed restrictions, and bus bridging occurring as a result of adjacent project construction. Projects that will require work over, under, adjacent, or on Metro property or ROW and include operation of machinery, scaffolding, or any other potentially hazardous work are subject to evaluation in preparation for and during construction to maintain safe transit operations and passenger well-being.

**RECOMMENDATION:** Following an initial screening of the project, Metro may determine that additional on-site coordination may be necessary. Dependent on the nature of the adjacent construction, developers may be requested to perform the following as determined on a case-by-case basis:

- Submit a construction work plan and related project drawings and specifications for Metro review.
- Submit a contingency plan, show proof of insurance coverage, and issue current certificates.
- Provide documentation of contractor qualifications.
- Complete pre-construction surveys, perform baseline readings, and install movement instrumentation.
- Complete readiness review and perform practice run of transit service shutdown per contingency plan.
- Designate a ROW observer or other safety personnel and an inspector from the project's construction team.
- Establish a coordination process for access and work in or adjacent to ROW for the duration of construction.

**Project teams will be responsible for the costs of adverse impacts to Metro transit operations caused by work on adjacent developments, including remedial work to repair damage to Metro property, facilities, or systems.** Additionally, a Construction Monitoring fee may be assessed based on an estimate of required level of effort provided by Metro.

All projects adjacent to Metrolink infrastructure will require compliance with SCRRRA Engineering Standards and Guidelines.

*Metro may need to monitor development construction near Metro facilities.*

## 3.2 Track Access and Safety

Permission from Metro is required to enter Metro property for rail construction and maintenance along, above, or under Metro ROW as these activities can interfere with Metro utilities and service and pose a safety hazard to construction teams and transit riders. Track access is solely at Metro's discretion and is discouraged to prevent electrocution and collisions with construction workers or machines.

**RECOMMENDATION:** Obtain and/or complete the following to work in or adjacent to Metro Rail ROW:

1. **Construction Work Plan:** Dependent on the nature of adjacent construction, Metro may request a construction work plan, which describes means and methods and other construction plan details, to ensure the safety of transit operators and riders.
2. **Safety Training:** All members of the project construction team will be required to attend Metro Rail Safety Training before commencing work activity. Training provides resources and procedures when working near active rail ROW.
3. **Right of Entry Permit/Temporary Construction Easement:** All access to and activity on Metro property, including easements necessary for construction of adjacent projects, must be approved through a Right-of-Entry Permit and/or a Temporary Construction Easement obtained from Metro Real Estate and may require a fee.
4. **Track Allocation:** All work on Metro Rail ROW must receive prior approval from Metro Rail Operations Control. Track Allocation identifies, reserves, and requests changes to normal operations for a specific track section, line, station, location, or piece of equipment to allow for safe use by a non-Metro entity. If adjacent construction is planned in close proximity to active ROW, flaggers must be used to ensure safety of construction workers and transit riders.

*Trained flaggers ensure the safe crossing of pedestrians and workers of an adjacent development.*

# Construction Safety & Management

## 3.3 Construction Hours

Building near active Metro ROW poses safety concerns and may require limiting hours of construction which impact Metro ROW to night or off-peak hours so as not to interfere with Metro revenue service. To maintain public safety and access for Metro riders, construction should be planned, scheduled, and carried out in a way to avoid impacts to Metro service and maintenance.

**RECOMMENDATION:** In addition to receiving necessary construction approvals from the local jurisdiction, all construction work on or in close proximity to Metro ROW must be scheduled through the Track Allocation Process, detailed in Section 3.2.

Metro prefers that adjacent construction with potential to impact normal, continuous Metro operations take place during non-revenue hours (approximately 1am-4am) or during non-peak hours to minimize impacts to service. The developer may be responsible for additional operating costs resulting from disruption to normal Metro service.

*Construction during approved hours ensures the steady progress of adjacent development construction and minimizes impacts to Metro's transit service.*

### 3.4 Excavation/Drilling Monitoring

Excavation is among the most hazardous construction activities and can pose threats to the structural integrity of Metro's transit infrastructure.

**RECOMMENDATION:** Coordinate with Metro Engineering to review and approve excavation and shoring plans during design and development, and well in advance of construction (see Sections 2.1 and 2.2).

Geotechnical instrumentation and monitoring will be required for all excavations occurring within Metro's geotechnical zone of influence, where there is potential for adversely affecting the safe and efficient operation of transit vehicles. Monitoring of Metro facilities due to adjacent construction may include the following as determined on a case-by-case basis:

- Pre- and post-construction condition surveys
- Extensometers
- Inclinometers
- Settlement reference points
- Tilt-meters
- Groundwater observation wells
- Movement arrays
- Vibration monitoring

*Excavation and shoring plans must be reviewed by Metro to ensure structural compatibility with Metro infrastructure and safety during adjacent development construction.*

*A soldier pile wall used for Regional Connector station at 2nd/Hope.*

# Construction Safety & Management

## 3.5 Crane Operations

Construction activities adjacent to Metro ROW may require moving large, heavy loads of building materials and machinery using cranes. Cranes referenced here include all power-operated equipment that can hoist, lower, and horizontally move a suspended load. To ensure safety for Metro riders, operators, and transit facilities, crane operations adjacent to Metro ROW must follow the safety regulations and precautions below and are subject to California Occupational Safety and Health Administration (Cal/OSHA) standards.

### RECOMMENDATION:

Coordinate with Metro to discuss construction methods and confirm if a crane work plan is required. Generally, crane safety near Metro's ROW and facilities largely depends on the following factors: 1) Metro's operational hours and 2) swinging a load over or near Metro power lines and facilities. Note:

1. **Clearance:** A crane boom may travel over energized Metro OCS only if it maintains a vertical 20-foot clearance and the load maintain a horizontal 20-foot clearance.
2. **Power:** Swinging a crane boom with a load over Metro facilities or passenger areas is strictly prohibited during revenue hours. To swing a load in the "no fly zone" (see diagrams to right), the construction team must coordinate with Metro to de-energize the OCS.
3. **Weathering:** When not in use, the crane boom may swing 360 degrees with the movement of the wind, including over energized Metro OCS, only if the trolley is fully retracted towards the crane tower and not carrying any loads.
4. **Process:** Developers and contractors must attend Metro Track Allocation (detailed in Section 3.2) to determine if Metro staff support is necessary during crane erection and load movement.
5. **Permit:** Developers must apply for a Metro Right-of-Entry permit to swing over Metro facilities.

**Project teams will bear all costs associated with impacts to Metro Rail operations and maintenance.**

*Cranes and construction equipment should be staged to avoid conflicts with the rail OCS.*

*Plan View: Crane swing and load are restricted near Metro ROW.*

*Plan View: While crane boom swings over "no fly zone," the trolley and load are retracted to maintain clearance from OCS.*

### 3.6 Construction Barriers & Overhead Protection

During construction, falling objects can damage Metro facilities and pose a safety concern to the riders accessing them.

**RECOMMENDATION:** Erect vertical construction barriers and overhead protection compliant with Metro and Cal/OSHA requirements to prevent objects from falling into Metro ROW or areas designed for public access to Metro facilities. A protection barrier shall be constructed to cover the full height of an adjacent project and overhead protection from falling objects shall be provided over Metro ROW as necessary. Erection of the construction barriers and overhead protection for these areas shall be done during Metro non-revenue hours.

*Overhead protection is required when moving heavy objects over Metro ROW or in areas designated for public use.*

*Constructed above is a wooden box over the entrance portal for overhead protection at the 4th/Hill Station.*

# Construction Safety & Management

## 3.7 Pedestrian & Emergency Access

Metro's riders rely on the consistency and reliability of access and wayfinding to and from stations, stops, and facilities. Construction on adjacent property must not obstruct pedestrian access, fire department access, emergency egress, or otherwise present a safety hazard to Metro operations, its employees, riders, and the general public. Fire access and safe escape routes within all Metro stations, stops, and facilities must be maintained at all times.

**RECOMMENDATION:** Ensure pedestrian and emergency access from Metro stations, stops, and transit facilities is compliant with the Americans with Disabilities Act (ADA) and maintained during construction:

- Temporary fences, barricades, and lighting should be installed and watchmen provided for the protection of public travel, the construction site, adjacent public spaces, and existing Metro facilities.
- Temporary signage should be installed where necessary and in compliance with the latest California Manual on Uniform Traffic Control Devices (MUTCD) and in coordination with Metro Art and Design Standards.
- Emergency exits shall be provided and be clear of obstructions at all times.
- Access shall be maintained for utilities such as fire hydrants, stand pipes/connections, and fire alarm boxes as well as Metro-specific infrastructure such as fan and vent shafts.

*Sidewalk access is blocked for a construction project, forcing pedestrians into the street or to use less direct paths to the Metro facility.*

### 3.8 Impacts to Bus Routes & Stops

During construction, bus stop zones and routes may need to be temporarily relocated. Metro needs to be informed of activities that require stop relocation or route adjustments in order to ensure uninterrupted service.

**RECOMMENDATION:** During construction, maintain or relocate existing bus stops consistent with the needs of Metro Bus Operations. Design of temporary and permanent bus stops and surrounding sidewalk areas must be compliant with the ADA and allow passengers with disabilities a clear path of travel to the transit service. Existing bus stops must be maintained as part of the final project. Metro Bus Operations Control Special Events Department and Metro Stops & Zones Department should be contacted at least 30 days before initiating construction activities.

*Temporary and permanent relocation of bus stops and layover zones will require coordination between developers, Metro, and other municipal bus operators and local jurisdictions.*

# Construction Safety & Management

## 3.9 Utility Coordination

Construction has the potential to interrupt utilities that Metro relies on for safe operations and maintenance. Utilities of concern to Metro include, but are not limited to, condenser water piping, potable/fire water, storm and sanitary sewer lines, and electrical/telecommunication services.

**RECOMMENDATION:** Coordinate with Metro Real Estate during project design to gauge temporary and permanent utility impacts and avoid conflicts during construction.

The contractor shall protect existing above-ground and underground Metro utilities during construction and coordinate with Metro to receive written approval for any utilities pertinent to Metro facilities that may be used, interrupted, or disturbed.

When electrical power outages or support functions are required, approval must be obtained through Metro Track Allocation in coordination with Metro Real Estate for a Right of Entry Permit.

To begin coordination with Metro Real Estate, visit [www.metro.net/devreview](http://www.metro.net/devreview) and select the drop-down “Utility Project Coordination.”

*Coordination of underground utilities is critical to safely and efficiently operate Metro service.*

### 3.10 Air Quality & Ventilation Protection

Hot or foul air, fumes, smoke, steam, and dust from adjacent construction activities can negatively impact Metro facilities, service, and users.

**RECOMMENDATION:** Ensure that hot or foul air, fumes, smoke, and steam from adjacent facilities are discharged beyond 40 feet from existing Metro facilities, including but not limited to ventilation system intake shafts and station entrances. Should fumes be discharged within 40 feet of Metro intake shafts, a protection panel around each shaft shall be required.

*A worker breaks up concrete creating a cloud of silica dust.*

# Glossary

## **Cone of Visibility**

A conical space at the front of moving transit vehicles allowing for clear visibility of travel way and/or conflicts.

## **Construction Work Plan (CWP)**

Project management document outlining the definition of work tasks, choice of technology, estimation of required resources and duration of individual tasks, and identification of interactions among the different work tasks.

## **Flagger/Flagman**

Person who controls traffic on and through a construction project. Flaggers must be trained and certified by Metro Rail Operations prior to any work commencing in or adjacent to Metro ROW.

## **Geotechnical Foul Zone**

Area below a track-way as measured from a 45-degree angle from the edge of the rail track ballast.

## **Guideway**

A channel, track, or structure along which a transit vehicle moves.

## **Heavy Rail Transit (HRT)**

Metro HRT systems include exclusive ROW (mostly subway) trains up to six (6) cars long (450') and utilize a contact rail for traction power distribution (e.g. Metro Red Line).

## **Joint Development (JD)**

JD is the asset management and real estate development program through which Metro collaborates with developers to build housing, retail, and other amenities on Metro properties near transit, typically through ground lease. JD projects directly link transit riders with destinations and services throughout LA County.

## **Light Rail Transit (LRT)**

Metro LRT systems include exclusive, semi-exclusive, or street ROW trains up to three (3) cars long (270') and utilize OCS for traction power distribution (e.g. Metro Blue Line).

## **Measure R**

Half-cent sales tax for LA County approved in November 2008 to finance new transportation projects and programs. The tax expires in 2039.

## **Measure M**

Half-cent sales tax for LA County approved in November 2016 to fund transportation improvements, operations and programs, and accelerate projects already in the pipeline. The tax will increase to one percent in 2039 when Measure R expires.

## **Metrolink**

A commuter rail system with seven lines throughout Los Angeles, Orange, Riverside, San Bernardino, Ventura, and North San Diego counties governed by the Southern California Regional Rail Authority (SCRRA).

## **Metro Adjacent Construction Design Manual**

Volume III of the Metro Design Criteria & Standards, which outlines the Metro adjacent review procedure as well as operational requirements when constructing over, under, or adjacent to Metro facilities, structures, and property.

## **Metro Bus**

Metro "Local" and "Rapid" bus service runs within the street, typically alongside vehicular traffic, though occasionally in "bus-only" lanes.

## **Metro Bus Rapid Transit (BRT)**

High quality bus service that provides faster and convenient service through the use of dedicated ROW, branded vehicles and stations, high frequency and intelligent transportation systems, all-door boarding, and intersection crossing priority. Metro BRT may run within dedicated ROW or in mixed flow traffic on streets.

**Metro Design Criteria and Standards**

A compilation of documents that govern how Metro transit service and facilities are designed, constructed, operated, and maintained.

**Metro Rail**

Urban rail system serving LA County consisting of six lines, including two subway lines and four light rail lines.

**Metro Rail Design Criteria (MRDC)**

Volume IV of the Metro Design Criteria & Standards which establishes design criteria for preliminary engineering and final design of a Metro Rail Project.

**Metro Transit Oriented Communities**

Land use planning and community development program that seeks to maximize access to transportation as a key organizing principle and promote equity and sustainable living by offering a mix of uses close to transit to support households at all income levels, as well as building densities, parking policies, urban design elements, and first/last mile facilities that support ridership and reduce auto dependency.

**Noise Easement Deed**

Easement granted by property owners abutting Metro ROW acknowledging noise due to transit operations and maintenance.

**Overhead Catenary System (OCS)**

One or more electrified wires situated over a transit ROW that transmit power to light rail trains via pantograph, a current collector mounted on the roof of an electric vehicle. Metro OCS is supported by hollow poles placed between tracks or on the outer edge of parallel tracks.

**Right of Entry Permit**

Written approval granted by Metro Real Estate to enter Metro ROW and property.

**Right of Way (ROW)**

Legal right over property reserved for transportation purposes to construct, protect, maintain and operate transit services.

**Southern California Regional Rail Authority (SCRRA)**

A joint powers authority made up of an 11-member board representing the transportation commissions of Los Angeles, Orange, Riverside, San Bernardino and Ventura counties. SCRRA governs and operates Metrolink service.

**Threat Assessment and Blast/Explosion Study**

Analysis performed when adjacent developments are proposed within twenty (20) feet from an existing Metro tunnel or facility.

**Track Allocation/Work Permit**

Permit granted by Metro Rail Operations Control to allocate a section of track and perform work on or adjacent to Metro Rail ROW. This permit should be submitted for any work that could potentially foul the envelope of a train.

**Wayfinding**

Signs, maps, and other graphic or audible methods used to convey location and directions to travelers.

[metro.net/projects/devreview/](https://metro.net/projects/devreview/)

**RE: City of Los Angeles's The Bloc – 700 West 7<sup>th</sup> St.  
Draft Environmental Impact Report (Case # ENV-2021-9959-EIR;  
SCH Number 2022120319)**

Dear Kathleen King,

On behalf of the Western States Regional Council of Carpenters (“**Western Carpenters**” or “**WSRCC**”), our firm is submitting these comments for the City of Los Angeles’s (“**City**”) Draft Environmental Impact Report (“**DEIR**”) for The Bloc 700 West 7<sup>th</sup> St. project, Case #ENV-2021-9959-EIR (“**Project**”).

The Western Carpenters is a labor union representing approximately 90,000 union carpenters in 12 states, including California, and has a strong interest in well-ordered land use planning and in addressing the environmental impacts of development projects.

The DEIR describes the proposed Project as follows:

The Project would develop 466 residential units within a new high-rise tower (Residential Tower) on the southern half of the Project Site (Development Area), in conjunction with the enclosure of the rooftop parking level of the existing nine-story podium building and addition of two levels of parking, increasing the podium to 12 stories. The 53-story high-rise tower would be located within and above the expanded parking podium (Residential Tower). The existing hotel, office and commercial uses on the Project Site would be retained, with the exception of some

existing parking uses and 24,342 square feet of existing commercial floor area in the podium building that would be converted to residential uses, including a new residential lobby. Residential uses would comprise a total of 495,016 square feet in the Residential Tower. The basement levels below the podium building would be retained. Upon completion of the Project, the Project Site would include a total of 1,894,988 square feet of floor area on a 186,674-square-foot (4.2-acre) site. A Sign District would be implemented to allow for a comprehensive signage program and would include digital displays, digital kiosks, and off-site advertising.

(DEIR Notice of Completion and Availability, p. 1.)

Individual members of the WSRCC live, work, and recreate in the City and surrounding communities and would be directly affected by the Project's environmental impacts.

The WSRCC expressly reserves the right to supplement these comments at or prior to hearings on the Project, and at any later hearing and proceeding related to this Project. Gov. Code, § 65009, subd. (b); Pub. Res. Code, § 21177, subd. (a); see *Bakersfield Citizens for Local Control v. Bakersfield* (2004) 124 Cal.App.4th 1184, 1199-1203; see also *Galante Vineyards v. Monterey Water Dist.* (1997) 60 Cal.App.4th 1109, 1121.

The WSRCC incorporates by reference all comments raising issues regarding the Environmental Impact Report (“**EIR**”) submitted prior to certification of the EIR for the Project. See *Citizens for Clean Energy v City of Woodland* (2014) 225 Cal.App.4th 173, 191 (finding that any party who has objected to the project's environmental documentation may assert any issue timely raised by other parties).

Moreover, the WSRCC requests that the City provide notice for any and all notices referring or related to the Project issued under the California Environmental Quality Act (**CEQA**) (Pub. Res. Code, § 21000 *et seq.*), and the California Planning and Zoning Law (“**Planning and Zoning Law**”) (Gov. Code, §§ 65000–65010). California Public Resources Code Sections 21092.2, and 21167(f) and California Government Code Section 65092 require agencies to mail such notices to any person who has filed a written request for them with the clerk of the agency's governing body.

## **I. THE CITY SHOULD REQUIRE THE USE OF A LOCAL WORKFORCE TO BENEFIT THE COMMUNITY'S ECONOMIC DEVELOPMENT AND ENVIRONMENT**

The City should require the Project to be built using a local workers who have graduated from a Joint Labor-Management Apprenticeship Program approved by the State of California, have at least as many hours of on-the-job experience in the applicable craft which would be required to graduate from such a state-approved apprenticeship training program, or who are registered apprentices in a state-approved apprenticeship training program.

Community benefits such as local hire can also be helpful to reduce environmental impacts and improve the positive economic impact of the Project. Local hire provisions requiring that a certain percentage of workers reside within 10 miles or less of the Project site can reduce the length of vendor trips, reduce greenhouse gas emissions, and provide localized economic benefits. As environmental consultants Matt Hagemann and Paul E. Rosenfeld note:

[A]ny local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

March 8, 2021 SWAPE Letter to Mitchell M. Tsai re Local Hire Requirements and Considerations for Greenhouse Gas Modeling.

Workforce requirements promote the development of skilled trades that yield sustainable economic development. As the California Workforce Development Board and the University of California, Berkeley Center for Labor Research and Education concluded:

[L]abor should be considered an investment rather than a cost—and investments in growing, diversifying, and upskilling California's workforce can positively affect returns on climate mitigation efforts. In other words,

well-trained workers are key to delivering emissions reductions and moving California closer to its climate targets.<sup>1</sup>

Furthermore, workforce policies have significant environmental benefits given that they improve an area's jobs-housing balance, decreasing the amount and length of job commutes and the associated greenhouse gas (GHG) emissions. In fact, on May 7, 2021, the South Coast Air Quality Management District found that the "[u]se of a local state-certified apprenticeship program" can result in air pollutant reductions.<sup>2</sup>

Locating jobs closer to residential areas can have significant environmental benefits. As the California Planning Roundtable noted in 2008:

People who live and work in the same jurisdiction would be more likely to take transit, walk, or bicycle to work than residents of less balanced communities and their vehicle trips would be shorter. Benefits would include potential reductions in both vehicle miles traveled and vehicle hours traveled.<sup>3</sup>

Moreover, local hire mandates and skill-training are critical facets of a strategy to reduce vehicle miles traveled (VMT). As planning experts Robert Cervero and Michael Duncan have noted, simply placing jobs near housing stock is insufficient to achieve VMT reductions given that the skill requirements of available local jobs must match those held by local residents.<sup>4</sup> Some municipalities have even tied local hire and

<sup>3</sup> California Planning Roundtable (2008) Deconstructing Jobs-Housing Balance at p. 6, *available at* <https://cprroundtable.org/static/media/uploads/publications/cpr-jobs-housing.pdf>

<sup>4</sup> Cervero, Robert and Duncan, Michael (2006) Which Reduces Vehicle Travel More: Jobs-Housing Balance or Retail-Housing Mixing? Journal of the American Planning Association 72 (4), 475-490, 482, *available at* <http://reconnectingamerica.org/assets/Uploads/UTCT-825.pdf>.

other workforce policies to local development permits to address transportation issues. Cervero and Duncan note that:

In nearly built-out Berkeley, CA, the approach to balancing jobs and housing is to create local jobs rather than to develop new housing. The city's First Source program encourages businesses to hire local residents, especially for entry- and intermediate-level jobs, and sponsors vocational training to ensure residents are employment-ready. While the program is voluntary, some 300 businesses have used it to date, placing more than 3,000 city residents in local jobs since it was launched in 1986. When needed, these carrots are matched by sticks, since the city is not shy about negotiating corporate participation in First Source as a condition of approval for development permits.

Recently, the State of California verified its commitment towards workforce development through the Affordable Housing and High Road Jobs Act of 2022, otherwise known as Assembly Bill No. 2011 (“**AB2011**”). AB2011 amended the Planning and Zoning Law to allow ministerial, by-right approval for projects being built alongside commercial corridors that meet affordability and labor requirements.

The City should consider utilizing local workforce policies and requirements to benefit the local area economically and to mitigate greenhouse gas, improve air quality, and reduce transportation impacts.

## **II. THE CITY SHOULD IMPOSE TRAINING REQUIREMENTS FOR THE PROJECT'S CONSTRUCTION ACTIVITIES TO PREVENT COMMUNITY SPREAD OF COVID-19 AND OTHER INFECTIOUS DISEASES**

Construction work has been defined as a Lower to High-risk activity for COVID-19 spread by the Occupational Safety and Health Administration. Recently, several construction sites have been identified as sources of community spread of COVID-19.<sup>5</sup>

---

<sup>5</sup> Santa Clara County Public Health (June 12, 2020) COVID-19 CASES AT CONSTRUCTION SITES HIGHLIGHT NEED FOR CONTINUED VIGILANCE IN SECTORS THAT HAVE REOPENED, *available at* <https://www.sccgov.org/sites/covid19/Pages/press-release-06-12-2020-cases-at-construction-sites.aspx>.

WSRCC recommends that the Lead Agency adopt additional requirements to mitigate public health risks from the Project's construction activities. WSRCC requests that the Lead Agency require safe on-site construction work practices as well as training and certification for any construction workers on the Project Site.

In particular, based upon WSRCC's experience with safe construction site work practices, WSRCC recommends that the Lead Agency require that while construction activities are being conducted at the Project Site:

**Construction Site Design:**

- The Project Site will be limited to two controlled entry points.
- Entry points will have temperature screening technicians taking temperature readings when the entry point is open.
- The Temperature Screening Site Plan shows details regarding access to the Project Site and Project Site logistics for conducting temperature screening.
- A 48-hour advance notice will be provided to all trades prior to the first day of temperature screening.
- The perimeter fence directly adjacent to the entry points will be clearly marked indicating the appropriate 6-foot social distancing position for when you approach the screening area. Please reference the Apex temperature screening site map for additional details.
- There will be clear signage posted at the project site directing you through temperature screening.
- Provide hand washing stations throughout the construction site.

**Testing Procedures:**

- The temperature screening being used are non-contact devices.
- Temperature readings will not be recorded.

- Personnel will be screened upon entering the testing center and should only take 1-2 seconds per individual.
- Hard hats, head coverings, sweat, dirt, sunscreen or any other cosmetics must be removed on the forehead before temperature screening.
- Anyone who refuses to submit to a temperature screening or does not answer the health screening questions will be refused access to the Project Site.
- Screening will be performed at both entrances from 5:30 am to 7:30 am.; main gate [ZONE 1] and personnel gate [ZONE 2]
- After 7:30 am only the main gate entrance [ZONE 1] will continue to be used for temperature testing for anybody gaining entry to the project site such as returning personnel, deliveries, and visitors.
- If the digital thermometer displays a temperature reading above 100.0 degrees Fahrenheit, a second reading will be taken to verify an accurate reading.
- If the second reading confirms an elevated temperature, DHS will instruct the individual that he/she will not be allowed to enter the Project Site. DHS will also instruct the individual to promptly notify his/her supervisor and his/her human resources (HR) representative and provide them with a copy of Annex A.

### **Planning**

- Require the development of an Infectious Disease Preparedness and Response Plan that will include basic infection prevention measures (requiring the use of personal protection equipment), policies and procedures for prompt identification and isolation of sick individuals, social distancing (prohibiting gatherings of no more than 10 people including all-hands meetings and all-hands lunches)

communication and training and workplace controls that meet standards that may be promulgated by the Center for Disease Control, Occupational Safety and Health Administration, Cal/OSHA, California Department of Public Health or applicable local public health agencies.<sup>6</sup>

The United Brotherhood of Carpenters and Carpenters International Training Fund has developed COVID-19 Training and Certification to ensure that Carpenter union members and apprentices conduct safe work practices. The Agency should require that all construction workers undergo COVID-19 Training and Certification before being allowed to conduct construction activities at the Project Site.

WSRCC has also developed a rigorous Infection Control Risk Assessment (“**ICRA**”) training program to ensure it delivers a workforce that understands how to identify and control infection risks by implementing protocols to protect themselves and all others during renovation and construction projects in healthcare environments.<sup>7</sup>

ICRA protocols are intended to contain pathogens, control airflow, and protect patients during the construction, maintenance, and renovation of healthcare facilities. ICRA protocols prevent cross contamination, minimizing the risk of secondary infections in patients at hospital facilities.

The City should require the Project to be built using a workforce trained in ICRA protocols.

### **III. THE PROJECT WOULD BE APPROVED IN VIOLATION OF THE CALIFORNIA ENVIRONMENTAL QUALITY ACT**

#### **A. Background Concerning the California Environmental Quality Act**

The California Environmental Quality Act (“**CEQA**”) is a California statute designed to inform decision-makers and the public about the potential significant environmental effects of a project. 14 California Code of Regulations (“**CEQA**

<sup>7</sup> For details concerning Southwest Carpenters’ ICRA training program, *see* <https://icrahealthcare.com/>.

**Guidelines**”), § 15002, subd. (a)(1).<sup>8</sup> At its core, its purpose is to “inform the public and its responsible officials of the environmental consequences of their decisions *before* they are made. Thus, the EIR ‘protects not only the environment but also informed self-government[.]’ *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 564.

1. *Background Concerning Environmental Impact Reports*

CEQA directs public agencies to avoid or reduce environmental damage, when possible, by requiring alternatives or mitigation measures. CEQA Guidelines, § 15002, subds. (a)(2)-(3); see also *Berkeley Keep Jets Over the Bay Committee v. Board of Port Comes* (2001) 91 Cal.App.4th 1344, 1354; *Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553; *Laurel Heights Improvement Assn.*, 47 Cal.3d at p. 400. The EIR serves to provide public agencies and the public in general with information about the effect that a proposed project is likely to have on the environment and to “identify ways that environmental damage can be avoided or significantly reduced.” CEQA Guidelines, § 15002, subd. (a)(2). If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible” and that any unavoidable significant effects on the environment are “acceptable due to overriding concerns” specified in Public Resources Code section 21081. See CEQA Guidelines, § 15092, subds. (b)(2)(A)-(B). The EIR has been described as “an environmental ‘alarm bell’ whose purpose it is to alert the public and its responsible officials to environmental changes before they have reached ecological points of no return.” *Berkeley Keep Jets Over the Bay v. Bd. of Port Comm’rs.* (2001) 91 Cal. App. 4th 1344, 1354 (“*Berkeley Jets*”); *County of Inyo v. Yorty* (1973) 32 Cal. App. 3d 795, 810.

Further, it is the duty of the lead agency, not the public, to conduct the proper environmental studies. “The agency should not be allowed to hide behind its own failure to gather relevant data.” *Sundstrom, supra*, 202 Cal.App.3d at p. 311.

“Deficiencies in the record may actually enlarge the scope of fair argument by lending

---

<sup>8</sup> The CEQA Guidelines, codified in Title 14 of the California Code of Regulations, section 15000 et seq., are regulatory guidelines promulgated by the state Natural Resources Agency for the implementation of CEQA. Cal. Pub. Res. Code, § 21083. The CEQA Guidelines are given “great weight in interpreting CEQA except when . . . clearly unauthorized or erroneous.” *Center for Biological Diversity v. Dept. of Fish & Wildlife* (2015) 62 Cal.4th 204, 217.

a logical plausibility to a wider range of inferences.” *Ibid*; see also *Gentry v. City of Murrieta* (1995) 36 Cal.App.4th 1359, 1382 (lack of study enlarges the scope of the fair argument which may be made based on the limited facts in the record).

Thus, refusal to complete recommended studies lowers the already low threshold to establish a fair argument. The court may not exercise its independent judgment on the omitted material by determining whether the ultimate decision of the lead agency would have been affected had the law been followed. *Environmental Protection Information Center v. Cal. Dept. of Forestry* (2008) 44 Cal.4th 459, 486 (internal citations and quotations omitted). The remedy for this deficiency would be for the trial court to issue a writ of mandate. *Ibid*.

While the courts review an EIR using an ‘abuse of discretion’ standard, the reviewing court is not to *uncritically* rely on every study or analysis presented by a project proponent in support of its position. *Berkeley Jets*, 91 Cal.App.4th at p. 1355 (quoting *Laurel Heights Improvement Assn.*, 47 Cal.3d at pp. 391, 409 fn. 12) (internal quotations omitted). A clearly inadequate or unsupported study is entitled to no judicial deference. *Id*. Drawing this line and determining whether the EIR complies with CEQA’s information disclosure requirements presents a question of law subject to independent review by the courts. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 515; *Madera Oversight Coalition, Inc. v. County of Madera* (2011) 199 Cal.App.4th 48, 102, 131. As the court stated in *Berkeley Jets*, prejudicial abuse of discretion occurs if the failure to include relevant information precludes informed decision-making and informed public participation, thereby thwarting the statutory goals of the EIR process. 91 Cal.App.4th at p. 1355 (internal quotations omitted).

The preparation and circulation of an EIR is more than a set of technical hurdles for agencies and developers to overcome. *Communities for a Better Environment v. Richmond* (2010) 184 Cal.App.4th 70, 80 (quoting *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 449-450). The EIR’s function is to ensure that government officials who decide to build or approve a project do so with a full understanding of the environmental consequences and, equally important, that the public is assured those consequences have been considered. *Id*. For the EIR to serve these goals it must present information so that the foreseeable impacts of pursuing the project can be understood and weighed, and the public must be given an adequate opportunity to comment on that presentation before the decision to go forward is made. *Id*.

A strong presumption in favor of requiring preparation of an EIR is built into CEQA. This presumption is reflected in what is known as the “fair argument” standard under which an EIR must be prepared whenever substantial evidence in the record supports a fair argument that a project may have a significant effect on the environment. *Quail Botanical Gardens Found., Inc. v. City of Encinitas* (1994) 29 Cal.App.4th 1597, 1602; *Friends of “B” St. v. City of Hayward* (1980) 106 Cal.3d 988, 1002.

The fair argument test stems from the statutory mandate that an EIR be prepared for any project that “may have a significant effect on the environment.” PRC, § 21151; see *No Oil, Inc. v. City of Los Angeles* (1974) 13 Cal.App.3d 68, 75; accord *Jensen v. City of Santa Rosa* (2018) 23 Cal.App.5th 877, 884. Under this test, if a proposed project is not exempt and may cause a significant effect on the environment, the lead agency must prepare an EIR. PRC, §§ 21100 (a), 21151; CEQA Guidelines, § 15064 (a)(1), (f)(1). An EIR may be dispensed with only if the lead agency finds no substantial evidence in the initial study or elsewhere in the record that the project may have a significant effect on the environment. *Parker Shattuck Neighbors v. Berkeley City Council* (2013) 222 Cal.App.4th 768, 785. In such a situation, the agency must adopt a negative declaration. PRC, § 21080, subd. (c)(1); CEQA Guidelines, §§ 15063 (b)(2), 15064(f)(3).

“Significant effect upon the environment” is defined as “a substantial or potentially substantial adverse change in the environment.” PRC, § 21068; CEQA Guidelines, § 15382. A project may have a significant effect on the environment if there is a reasonable probability that it will result in a significant impact. *No Oil, Inc.*, 13 Cal.3d at p. 83 fn. 16; see *Sundstrom v. County of Mendocino* (1988) 202 Cal.App.3d 296, 309. If any aspect of the project may result in a significant impact on the environment, an EIR must be prepared even if the overall effect of the project is beneficial. CEQA Guidelines, § 15063(b)(1); see *County Sanitation Dist. No. 2 v. County of Kern* (2005) 127 Cal.App.4th 1544, 1580.

This standard sets a “low threshold” for preparation of an EIR. *Consolidated Irrigation Dist. v. City of Selma* (2012) 204 Cal.App.4th 187, 207; *Nelson v. County of Kern* (2010) 190 Cal.App.4th 252; *Pocket Protectors v. City of Sacramento* (2004) 124 Cal.App.4th 903, 928; *Bowman v. City of Berkeley* (2004) 122 Cal.App.4th 572, 580; *Citizen Action to Serve All Students v. Thornley* (1990) 222 Cal.App.3d 748, 754; *Sundstrom*, 202 Cal.App.3d at p. 310. If substantial evidence in the record supports a fair argument that the project may have a significant environmental effect, the lead agency must prepare an EIR

even if other substantial evidence before it indicates the project will have no significant effect. See *Jensen*, 23 Cal.App.5th at p. 886; *Clews Land & Livestock v. City of San Diego* (2017) 19 Cal.App.5th 161, 183; *Stanislaus Audubon Society, Inc. v. County of Stanislaus* (1995) 33 Cal.App.4th 144, 150; *Brentwood Assn. for No Drilling, Inc. v. City of Los Angeles* (1982) 134 Cal.App.3d 491; *Friends of “B” St.*, 106 Cal.App.3d 988; CEQA Guidelines, § 15064(f)(1).

Both the review for failure to follow CEQA’s procedures and the fair argument test are questions of law, thus, the de novo standard of review applies. *Vineyard Area Citizens for Responsible Growth v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 435. Whether the agency’s record contains substantial evidence that would support a fair argument that the project may have a significant effect on the environment is treated as a question of law. *Consolidated Irrigation Dist., supra*, 204 Cal.App.4th at p. 207; Kostka and Zischke, *Practice Under the Environmental Quality Act* (2017, 2d ed.) at § 6.76.

B. The DEIR Improperly Mischaracterizes Mitigation Measures as “Project Design Features”

When new information is brought to light showing that an impact previously discussed in the EIR but found to be insignificant with or without mitigation in the EIR’s analysis has the potential for a significant environmental impact supported by substantial evidence, the EIR must consider and resolve the conflict in the evidence. See *Visalia Retail, L.P. v. City of Visalia* (2018) 20 Cal. App. 5th 1, 13, 17; see also *Protect the Historic Amador Waterways v. Amador Water Agency* (2004) 116 Cal. App. 4th 1099, 1109. While a lead agency has discretion to formulate standards for determining significance and the need for mitigation measures—the choice of any standards or thresholds of significance must be “based to the extent possible on scientific and factual data and an exercise of reasoned judgment based on substantial evidence. CEQA Guidelines § 15064(b); *Cleveland Nat’l Forest Found. v. San Diego Ass’n of Gov’ts* (2017) 3 Cal. App. 5th 497, 515; *Mission Bay Alliance v. Office of Community Inv. & Infrastructure* (2016) 6 Cal. App. 5th 160, 206. And when there is evidence that an impact could be significant, a DEIR cannot adopt a contrary finding without providing an adequate explanation along with supporting evidence. *East Sacramento Partnership for a Livable City v. City of Sacramento* (2016) 5 Cal. App. 5th 281, 302.

In addition, a determination that regulatory compliance will be sufficient to prevent significant adverse impacts must be based on a project-specific analysis of potential

impacts and the effect of regulatory compliance. In *Californians for Alternatives to Toxics v. Department of Food & Agric.* (2005) 136 Cal. App. 4th 1, the court set aside an EIR for a statewide crop disease control plan because it did not include an evaluation of the risks to the environment and human health from the proposed program but simply presumed that no adverse impacts would occur from use of pesticides in accordance with the registration and labeling program of the California Department of Pesticide Regulation. *See also Ebbetts Pass Forest Watch v Department of Forestry & Fire Protection* (2008) 43 Cal. App. 4th 936, 956 (fact that Department of Pesticide Regulation had assessed environmental effects of certain herbicides in general did not excuse failure to assess effects of their use for specific timber harvesting project).

Here, the DEIR improperly recasts a wide array of mitigation measures as “Project Design Features” or “PDFs.” Relying on the extensive list of PDFs for the Project, the DEIR then concludes in many instances that the Project’s impacts are less than significant, and that no mitigation is required.

However, it is established that “[a]voidance, minimization and / or mitigation measure’ . . . are not ‘part of the project.’ . . . compressing the analysis of impacts and mitigation measures into a single issue . . . disregards the requirements of CEQA.” (*Lotus v. Department of Transportation* (2014) 223 Cal. App. 4th 645, 656.)

When “an agency decides to incorporate mitigation measures into its significance determination, and relies on those mitigation measures to determine that no significant effects will occur, that agency must treat those measures as though there were adopted following a finding of significance.” (*Lotus, supra*, 223 Cal. App. 4th at 652 [citing CEQA Guidelines § 15091(a)(1) and Cal. Public Resources Code § 21081(a)(1).])

By mischaracterizing mitigation measures as PDFs, the City violates CEQA by failing to disclose “the analytic route that the agency took from the evidence to its findings.” (Cal. Public Resources Code § 21081.5; CEQA Guidelines § 15093; *Village Laguna of Laguna Beach, Inc. v. Board of Supervisors* (1982) 134 Cal. App. 3d 1022, 1035 [quoting *Topanga Assn for a Scenic Community v. County of Los Angeles* (1974) 11 Cal. 3d 506, 515.]

The DEIR’s use of “Project Design Features” further violates CEQA because such measures would not be included in the Project’s Mitigation Monitoring and Reporting Program. CEQA requires lead agencies to adopt mitigation measures that are fully enforceable and to adopt a monitoring and/or reporting program to ensure that the

measures are implemented to reduce the Project's significant environmental effects to the extent feasible. (PRC § 21081.6; CEQA Guidelines § 15091(d); underlining added.) As such, the DEIR's use of Project Design Features in lieu of mitigation measures undermines the enforcement and monitoring of the Project's environmental protection measures, and therefore violates CEQA.

Specifically, the DEIR delineates the following sixteen (16) distinct PDFs to be applied to the project, all of which amount to mitigation measures under CEQA:

Regarding Air Quality Impacts:

Project Design Feature AQ-PDF-1: The following equipment used during Project construction activities shall be electric-powered: air compressor, aerial lift, cement mixer, concrete saw, tower crane, excavator, forklift and welder. (Fn. 4 - This PDF is included in the quantitative analysis.)

(DEIR at pp. I-13, IV.A-47-48.)

Regarding Greenhouse Gas ("GHG") Emissions Impacts:

Project Design Feature GHG-PDF-1: The design of the new building will incorporate the following sustainability features:

- a. U.S. Green Building Council's Leadership in Energy and Environmental Design (LEED®) program to meet the standards of LEED Silver® or equivalent green building standards;
- b. Use of Energy Star- labeled products and appliances;
- c. Use of light-emitting diode (LED) lighting or other energy-efficient lighting technologies, such as occupancy sensors or daylight harvesting and dimming controls, where appropriate, to reduce electricity use;
- d. Fenestration designed for solar orientation; and
- e. Pedestrian- and bicycle-friendly design with short-term and long-term bicycle parking.

(DEIR at pp. I-13, IV.D-55-56.)

Regarding Noise Impacts:

Project Design Feature NOI-PDF-1: Power construction equipment (including combustion engines), fixed or mobile, will be equipped with state-of-the-art noise shielding and muffling devices, consistent with manufacturers' standards. All equipment will be properly maintained to ensure that no additional noise due to worn or improperly maintained parts will be generated.

Project Design Feature NOI-PDF-2: Project construction will not include the use of driven (impact) pile systems.

Project Design Feature NOI-PDF-3: Outdoor mounted mechanical equipment will be enclosed or screened by the building design (e.g., a roof parapet or mechanical screen} from view of off-site noise-sensitive receptors. The equipment screen will be impermeable (i.e., solid material with minimum weight of 2 pounds per square foot) and break the acoustic line-of-sight from the equipment to the off-site noise-sensitive receptors.

Project Design Feature NOI-PDF-4: Outdoor amplified sound systems, if any, will be designed so as not to exceed the maximum noise level of 80 dBA (Leq-1ru) at a distance of 25 feet from the amplified speaker sound systems at Level 12 outdoor spaces and 85 dBA (Leq-1ru) at a distance of 25 feet from the amplified speaker sound systems at Level 51 outdoor spaces. A qualified noise consultant will provide written documentation that the design of the system complies with this maximum noise level.

(DEIR at pp. I-13-14, IV.F-30.)

Regarding Public Services-Police Protection Impacts:

Project Design Feature POL-PDF-1: During construction of the new building, the Applicant will implement temporary security measures, including security fencing, lighting, and locked entry of construction areas.

Project Design Feature POL-PDF-2: During operation, the Project will provide a dedicated security team for the new tower.

Project Design Feature POL-PDF-3: During operation, the Project will include a closed-circuit security camera system for the new tower.

Project Design Feature POL-PDF-4: The Project will provide lighting of building entries and walkways to provide for pedestrian orientation and clearly identify a secure route to the points of entry into the building.

Project Design Feature POL-PDF-5: The Project will provide lighting of parking areas, elevators, and the residential lobby to maximize visibility and reduce areas of concealment.

Project Design Feature POL-PDF-6: The Project entrances to and exits from the new tower, open spaces around new tower, and the relocated pedestrian walkway along Hope Street will be designed, to the extent practicable, to be open and in view of surrounding sites.

Project Design Feature POL-PDF-7: Upon completion of construction of the new building and prior to the issuance of a building permit for the new building, the Project Applicant will submit a diagram of the Development Area to the LAPD Central Area Commanding Officer that includes access routes and any additional information that might facilitate police response.

(DEIR at pp. I-14, IV.G.2-11-12.)

Regarding Transportation Impacts:

Project Design Feature TR-PDF-1: A detailed Construction Traffic Management Plan (CTMP), including haul routes and staging plan, will be prepared and submitted to LADOT for review and approval prior to commencing construction for the new building. The CTMP will formalize how Project construction will be carried out and identify specific actions that will reduce effects on the surrounding community. The CTMP will be based on the nature and timing of the specific construction activities and other projects in the vicinity of the Project Site and will include, but not be limited to, the following measures:

- Advance, bilingual notification of adjacent property owners and occupants of upcoming construction activities, including durations and daily hours of operation;
- Prohibition of construction worker or equipment parking on adjacent streets;
- A Traffic Control Plan formalizing the planning and scheduling of construction activities and identifying specific actions that will be undertaken to facilitate the flow of traffic on surrounding streets during construction. The Traffic Control Plan will be submitted to LADOT for

review and approval prior to the issuance of demolition and grading permits for the new building;

- Scheduling of construction activities to reduce the effect on traffic flow on surrounding Arterial Streets;
- Containment of construction activity within the Project Site boundaries, to the extent feasible;
- Implementation of safety precautions for pedestrians and bicyclists through such measures as alternate routing and protection barriers;
- Scheduling of construction-related deliveries, haul trips, etc., to occur outside the commuter peak hours to the extent feasible;
- Spacing of trucks so as to discourage a convoy effect;
- Sufficient dampening of the construction area to control dust caused by grading and hauling and reasonable control at all times of dust caused by wind;
- Maintenance of a log, available on the job site at all times, documenting the dates of hauling and the number of trips (i.e., trucks) per day; and
- Identification of a construction manager and provision of a telephone number for any inquiries or complaints from residents regarding construction activities posted at the site readily visible to any interested party during site preparation, grading, and construction.

Project Design Feature TR-PDF-2: Prior to issuance of a certificate of occupancy for the new building, the Project will install vehicle signalized alert systems at all four existing parking garage driveways.

(DEIR at pp. I-14-15, IV.H-33-34.)

Regarding Utilities and Service Systems - Water Supply and Infrastructure Impacts:

Project Design Feature WAT-PDF-1: As part of the construction of the new building, a portion of the existing 8-inch water main on Hope Street will be upgraded to a 12-inch main. The upgrade will include approximately 710 feet of 12-inch ductile iron (DI) water main from the intersection of Hope Street and 8th Street to a point 710 feet northeast of 8th Street. Due to the mainline upgrade, the existing 8-inch water main will be cut and plugged in two locations

and three existing fire hydrants will be re-tapped. System upgrades will require repaving, which will be paid for by the Project Applicant via the City of LA Bureau of Engineering Street Damage Restoration Fee.

Project Design Feature WAT-PDF-2: The design of the new building will incorporate the following additional water conservation features:

- High-efficiency Energy Star-rated residential clothes washers.
- High-efficiency Energy Star- rated residential dishwashers, should dishwashers be provided.
- Drip/Subsurface Irrigation (Micro-Irrigation).
- Proper Hydro-Zoning/Zoned Irrigation (groups plants with similar water requirements together).
- Drought-Tolerant Plants

(DEIR at pp. I-16, IV.J.1-32-33.)

Notably, the December 2022 Initial Study (“IS”) for the Project determined that the Project presented potentially significant environmental impacts for a variety of environmental factors, including but not limited to the following: Air Quality, Cultural Resources, Energy Use, GHG Emissions, Land Use Planning, Noise, Public Services, Transportation, Tribal Resources, and Utilities & Service Systems. (IS at pp. 48, 55, 57-58, 66-67, 76, 85-88, 91-92, and 99-106.) Fast-forwarding to the publication of the Project’s DEIR, the DEIR then determines that the Project would have less than significant impacts on Air Quality, Energy Use, GHG Emissions, Land Use Planning, Noise (in certain respects), Public Services, Transportation, Tribal Resources, and Utilities & Service Systems. According to the DEIR, the once-potentially significant impacts for each of these environmental factors have been miraculously cured via the incorporation of the Project’s purported PDFs.

Deploying electrified construction equipment (as opposed to petroleum fuel-powered) to reduce impacts to air quality (per AQ-PDF-1) is not a bona fide feature of “project design.” Installing Energy Star appliances and energy-efficient lighting to reduce the Project’s GHG emissions (per GHG-PDF-1(b)&(c)) is not a bona fide feature of “project design.” Equipping power construction equipment with state-of-the-art noise shielding/muffling devices (per NOI-PDF-1) is not a bona fide feature of “project design.” Preparation of a Traffic Control Plan for the Project (per TR-PDF-

1) is not a bona fide feature of “project design.” These are but a handful of examples of the myriad instances of the DEIR’s brazen mislabeling of the Project’s mitigation measures. Indeed, mere cursory review of the DEIR reveals that the bulk of the foregoing non-exclusive list of proposed PDFs for the Project are in fact nothing more than a transparent attempt to disguise what are, in fact, mitigation measures for the Project. In turn, the DEIR then premises its analysis regarding the allegedly “less than significant impacts” in the areas of Air Quality, GHG Emissions, Noise (where applicable), Public Services, Transportation, and Utilities and Service Systems on the incorporation of the so-called PDFs. To that end, the impacts analysis put forth in the DEIR is demonstrably tainted and flawed by the improper application of the Project PDFs.

By recasting its mitigation measures in this manner, the DEIR has attempted to skirt its responsibilities to fully analyze the various environmental impacts implicated by the PDFs, as well as the responsibility to monitor and ensure during the course of the Project’s development that such mitigation measures are fully implemented. Such an attempt to evade accountability for addressing the Project’s environmental impacts directly violates CEQA, and the DEIR cannot permissibly be certified unless and until this deficiency is rectified.

C. The DEIR Fails to Conduct Any Analysis of the Project’s Potentially Significant Hazard & Hazardous Materials Impacts

In the IS for the Project, the City determined that the Project may have a significant effect on the environment, such that preparation of an Environmental Impact Report (“**EIR**”) was required. (IS at p. 5) As part of its justification for the preparation of the DEIR, the City identified in the IS the Project’s “Potentially Significant Impact” as to Hazards & Hazardous Materials. (IS at pp. 4-5.) Specifically, the IS found that the Project would have a potentially significant impact on the environment through its potential to “impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan.”

Regarding the above-referenced potentially significant hazards impact, the IS for the Project went on to specifically state the following, in relevant part:

**Potentially Significant Impact.** According to the Safety Element of the City’s General Plan, the nearest designated disaster route to the Project Site is Figueroa Street, which is located approximately 430 feet

west of the Project Site. While it is expected that the majority of construction activities for the Project would be confined to the Project Site, limited off-site construction activities may occur in adjacent street rights-of-way during certain periods of the day, which could potentially require temporary lane closures. If lane closures are necessary, the remaining travel lanes would be maintained in accordance with standard construction management plans that would be implemented to ensure adequate circulation and emergency access... [B]ecause the requested haul route and the Transportation Assessment ... are still under review by the City of Los Angeles Department of Transportation (LADOT), the draft EIR will include a discussion of the site's emergency access during construction activities in light of LADOT's review of the haul route and the Transportation Assessment.

(IS at p. 76.)

Despite the foregoing acknowledgement in the IS of a potentially significant impact, the DEIR has proceeded to summarily disavow any potentially significant hazards impacts. The only discussion or analysis whatsoever in the DEIR regarding potential hazards impacts is found in a footnote in Table I-1 of the Executive Summary, wherein the DEIR claims in conclusory fashion that analysis of such impacts is entirely subsumed by the DEIR's analysis of transportation impacts pertaining to emergency access. (See DEIR at p. I-12, fn. B.) Notably, the DEIR contains no discussion of LADOT's review of the haul route and the Transportation Assessment and any of its associated findings with respect to any potential interference by the Project with the Safety Element of the City's General Plan, any designated disaster routes in the vicinity of the Project, any other adopted emergency response plan, or any emergency evacuation plan. In this respect, the DEIR is demonstrably lacking essential analysis and determinations that are required under CEQA.

CEQA requires that an EIR identify and discuss the significant effects of a Project, and how those significant effects can be mitigated or avoided. CEQA Guidelines § 15126.2; PRC §§ 21100(b)(1), 21002.1(a). If a project has a significant effect on the environment, an agency may approve the project only upon finding that it has "eliminated or substantially lessened all significant effects on the environment where feasible" and that any unavoidable significant effects on the environment are

“acceptable due to overriding concerns.” CEQA Guidelines § 15092(b)(2)(A–B). Such findings must be supported by substantial evidence. CEQA Guidelines § 15091(b).

Here, with regard to its hazards impact analysis, the DEIR completely fails to comply with the requirements of the CEQA Guidelines, and instead attempts to relabel the above-referenced potentially significant hazards impacts as a less than significant transportation impact (i.e., potential impacts of the adequacy of the Project’s emergency access). To be sure, an assessment of the ability of emergency vehicles/personnel to access the Project Site is not worthy substitute for an assessment of the Project’s impacts on designated disaster routes, emergency response plan(s), or emergency evacuation plan(s) that would otherwise be applicable to it. Rather, these are entirely separate factors that require their own comprehensive, individual analysis in the DEIR. However, the DEIR contains no discussion regarding the Project’s potential impacts on these various life-safety considerations.

The DEIR’s omission of this information violates CEQA, and at minimum, the DEIR must be revised and recirculated to address these potentially significant impacts. The public is entitled to receive notice of not only the full scope of the Project’s potential significant impacts, but also, the DEIR’s intended measures for how those potential significant impacts will be addressed and minimized to the greatest degree possible. By failing, without explanation, to include any analysis regarding the Project’s noted potential hazard impacts, the DEIR has denied the public of that important right.

Further still, DEIR concludes that the transportation impacts of the Project with regard to the adequacy of emergency access would be less than significant because the Project will later develop a Construction Traffic Management Plan (“CTMP”) pursuant to Project Design Feature TR-PDF-1 (which, in itself, amounts to improperly deferred mitigation, cloaked as a PDF<sup>9</sup>) and will be constructed in compliance with City Building Code and Fire Code requirements. (DEIR at p. 53.) However, to meet CEQA requirements, a determination that regulatory compliance is sufficient to prevent significant adverse impacts must be based on a project-specific analysis of potential impacts and the effect of regulatory compliance. See *Californians for Alternatives to Toxics v. Department of Food & Agric.* (2005) 136 Cal. App. 4th 1; *Ebbetts Pass Forest*

---

<sup>9</sup> See DEIR at pp. 33-34 (“Project Design Feature TR-PDF-1: A detailed Construction Traffic Management Plan (CTMP), including haul routes and staging plan, **will be prepared** and submitted to LADOT for review and approval prior commencing construction for the new building.”; emphasis added.)

*Watch v Department of Forestry & Fire Protection* (2008) 43 Cal. App. 4th 936, 956. Here, the DEIR’s bald assertion that the Project’s compliance with Building Code and Fire Code will categorically reduce emergency access impacts (and by extension, hazards impacts) below the threshold of significance, without supporting analysis, violates CEQA.

Given the foregoing, the DEIR must, at a minimum, be revised and recirculated to address these deficiencies in its analysis of hazard and hazardous materials impacts.

D. The DEIR Improperly Concludes that Fire Protection Impacts Would Be Less Than Significant and Fails to Incorporate Necessary Mitigation Measures

The written comments submitted by the Los Angeles Fire Department (“LAFD”) in connection with the Project indicate that, based on the proposed Project’s scope and specifications, existing fire protection for the Project would be inadequate and the LAFD has no immediate plans to increase staffing or resources in the area of the proposed Project. (See Appendix H.1 at p.6 – City of Los Angeles Inter-Departmental Correspondence from Los Angeles Fire Department, dated September 30, 2022.) LAFD’s comments go on to state that inclusion of its recommendations, “along with any additional recommendations made during later reviews of the [Project]” would reduce the fire protection impacts of the Project to “an acceptable level.” (*Id.* at p. 9.) LAFD’s comments apply directly to the DEIR’s analysis of the Public Services-Fire Protection impacts under CEQA.<sup>10</sup>

Despite the clear indications and conclusions submitted by LAFD, the DEIR fails to explicitly incorporate LAFD’s recommendations in the Project or otherwise condition the Project on their inclusion. The DEIR merely references the LAFD recommendations, but then fails to state if and how those agency-recommended fire protection measures will be implemented in the Project. Meanwhile, the LAFD comments make clear that, absent inclusion of its written recommendations, along with “additional recommendations,” the Project would present significant and unavoidable fire protection impacts.

---

<sup>10</sup> LAFD’s comments and recommendations also have direct application to the Project’s potential hazards impacts in the context of emergency response/evacuation plans, and by extension, the emergency access aspects of the Project’s potential Transportation impacts discussed in Section III(D) above.

Given the LAFD's comments in this regard, the DEIR would have needed to, at minimum, incorporate the LAFD recommendations as express mitigation measures for the Project in order to adequately support its conclusion that the Project's fire protection impacts (as well as hazards impacts – as to emergency response/evacuation plans) will be less than significant. However, the DEIR does not include the LAFD recommendations as part of any mitigation measures for the Project, or as part of its mislabeled PDFs. Instead, the DEIR improperly relies on its claim of the Project's anticipated regulatory compliance regarding fire safety issues as a means of disposing of the potential significance of all such impacts without properly analyzing how regulatory compliance would ameliorate those potential impacts. As discussed above, a DEIR's reliance on satisfaction of regulatory requirements to conclude that impacts are beneath the threshold of significance, without also providing project-specific analysis of how such regulatory compliance will ameliorate any potentially significant impacts, violates CEQA. Accordingly, the DEIR's conclusion that the Project's fire protection impacts (and by extension, hazards impacts) are less than significant lacks substantial evidence and proper analysis, and is demonstrably flawed.

E. The DEIR Fails to Set Forth Any Analysis of the Project's Mandatory Findings of Significance

Much like the Project's potential Hazards & Hazardous Materials impacts, the IS for the Project determined that the Project would have "Potentially Significant Impact[s]" as to Mandatory Findings of Significance. (IS at pp. 114-119.) In spite of this acknowledgement in the IS, the DEIR has yet again proceeded to completely ignore any discussion of potentially significant impacts with regard to mandatory findings of significance. Indeed, there is no discussion anywhere in the DEIR regarding mandatory findings of significance under CEQA, nor is there even any general discussion or justification presented for the omission of this analysis. To the extent that the DEIR ultimately reached a conclusion that the impacts posed by the mandatory findings of significance were less than significant, the DEIR is required to set forth that conclusion, along with the justification(s) for it. The DEIR's omission of this information violates CEQA, and at minimum, and for the reasons already discussed at length above, the DEIR must be revised and recirculated to address these potentially significant impacts.

F. The DEIR's Stated Mitigation Measure Is Insufficient

A fundamental purpose of an EIR is to identify ways in which a proposed project's significant environmental impacts can be mitigated or avoided. Pub. Res. Code §§ 21002.1(a), 21061. To implement this statutory purpose, an EIR must describe any feasible mitigation measures that can minimize the project's significant environmental effects. PRC §§ 21002.1(a), 21100(b)(3); CEQA Guidelines §§ 15121(a), 15126.4(a).

If the project has a significant effect on the environment, the agency may approve the project only upon finding that it has “eliminated or substantially lessened all significant effects on the environment where feasible,”<sup>11</sup> that “specific overriding economic, legal, social, technology or other benefits of the project outweigh the significant effects on the environment,”<sup>12</sup> and that any unavoidable significant effects on the environment are “acceptable due to overriding concerns”. CEQA Guidelines § 15092(b)(2)(A–B). “A gloomy forecast of environmental degradation is of little or no value without pragmatic, concrete means to minimize the impacts and restore ecological equilibrium.” *Environmental Council of Sacramento v. City of Sacramento* (2006) 142 Cal.App.4th 1018, 1039.

CEQA mitigation measures proposed and adopted are required to describe what actions will be taken to reduce or avoid an environmental impact. (CEQA Guidelines § 15126.4(a)(1)(B) [providing “[f]ormulation of mitigation measures should not be deferred until some future time.”].) While the same Guidelines section 15126.5(a)(1)(B) acknowledges an exception to the rule against deferrals, such exception is narrowly proscribed to situations where it is impractical or infeasible to include those details during the project's environmental review. Moreover, according to CEQA Guidelines, “[w]hen an EIR has been prepared for a project, the Responsible Agency shall not approve the project as proposed if the agency finds any feasible alternative or feasible mitigation measures within its powers that would substantially lessen or avoid any significant effect the project would have on the environment.” CEQA Guidelines Section 15096(g)(2).

Here, the DEIR's lone mitigation measure fails to adequately mitigate the Project's impacts as follows:

---

<sup>11</sup> PRC §§ 21002; 21002.1, 21081; CEQA Guidelines §§ 15091, 15092(b)(2)(A).

<sup>12</sup> PRC §§ 21002; 21002.1, 21081; CEQA Guidelines §§ 15091, 15092(b)(2)(B).

*i. Noise*

Setting aside that the DEIR has, in the first instance, impermissibly mislabeled numerous noise mitigation measures as PDFs (as discussed in greater above), mitigation measure NOI-MM-1 (again, the only mitigation measure set forth in the entire DEIR) provides as follows:

**Mitigation Measure NOI-MM-1:** A temporary and impermeable sound barrier shall be erected at the locations listed below during the tower construction. At plan check, building plans shall include documentation prepared by a noise consultant verifying compliance with this measure.

- Along the southern property line of the Project Site between the construction areas and the noise sensitive use on the south side of 8th Street (receptor R1). The temporary sound barrier shall be designed to provide a minimum 13-dBA noise reduction at the ground level of receptor location R2.
- Along the eastern side of the Project's off-site staging area (along Hope Street) between the construction areas and the noise sensitive use on the east side of Hope Street (receptor R2). The temporary sound barrier shall be designed to provide a minimum 13-dBA noise reduction at the ground level of receptor location R2.
- During the off-site utility improvements construction along Hope Street. Provide a temporary moveable noise barrier between the construction equipment and receptor locations R1, R2, and R3, where feasible. The temporary noise barrier shall be designed to provide minimum 3-dBA, 6-dBA, and 2-dBA noise reductions at the ground level of receptor locations R1, R2, and R3, respectively.

(DEIR at pp. I-16-17). However, the measure fails to specify whether the proposed barriers will also reduce noise levels at elevated sources above ground as the building construction progresses. Moreover, there is no indication that the majority of the temporary noise barriers (e.g., those along the southern property line of the Project Site and those along the eastern side of the Project's off-site staging area) will be also

moveable to ensure they properly reduce the sound of the construction noise at its source. As noted by the court in *AIDS HEALTHCARE FOUNDATION v. CITY OF LOS ANGELES*, LASC Case Number: 19STCP05445 (April 5, 2021):

“The City’s response actually concedes the flaw in the efficacy of MM 1-2 as it is written. Effective mitigation to sensitive receptors requires the noise barrier systems to be moved. The City argues MM 1-2 is effective because ‘the noise barriers are moveable, meaning that they move in concert with any piece of construction equipment to ensure the equipment does not operate with an unobstructed line of sight to a receptor.’ (Opposition Brief 35:15-17.) The City recognizes the barriers must be moveable ‘to shield construction activities, no matter where they occur onsite.’ (Opposition Brief 35:18-19.)

Despite the City’s recognition the noise barriers must be moved throughout the Project during construction to effectively mitigate construction-related noise, MM 1-2 does not require such movement. It is not about wordsmithing-it is about enforceability and efficacy. The City’s attempts to distinguish between ‘Project boundaries’ and ‘property boundaries’ is unpersuasive.<sup>24</sup> Such a distinction-if there is one-does not resolve the ambiguity. Nothing in MM 1-2 requires any noise barriers to be moved.<sup>\*25</sup> Accordingly, the court finds substantial evidence does not support the City’s conclusion MM 1-2 is an effective mitigation measure.” (Exhibit D, p. 20 [Ruling].)

Absent such specifications, the mitigation measure is legally inadequate and cannot support a finding that the Project’s noise impacts will be reduced to the maximum extent feasible.

#### **IV. CONCLUSION**

For all of the foregoing reasons, the City must require the revision and recirculation of the DEIR to adequately address the concerns and deficiencies raised herein, such that the Project’s significant environmental impacts are analyzed and mitigated to the maximum extent possible. Absent doing so, any approval of this Project would violate

CEQA and subvert the public environmental review process. If the City has any questions or concerns, please do not hesitate to contact this office.

Sincerely,

Jeremy Herwitt

**Subject: Local Hire Requirements and Considerations for Greenhouse Gas Modeling**

---

Dear Mr. Tsai,

Soil Water Air Protection Enterprise ("SWAPE") is pleased to provide the following draft technical report explaining the significance of worker trips required for construction of land use development projects with respect to the estimation of greenhouse gas ("GHG") emissions. The report will also discuss the potential for local hire requirements to reduce the length of worker trips, and consequently, reduced or mitigate the potential GHG impacts.

### Worker Trips and Greenhouse Gas Calculations

The California Emissions Estimator Model ("CalEEMod") is a "statewide land use emissions computer model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify potential criteria pollutant and greenhouse gas (GHG) emissions associated with both construction and operations from a variety of land use projects."<sup>1</sup> CalEEMod quantifies construction-related emissions associated with land use projects resulting from off-road construction equipment; on-road mobile equipment associated with workers, vendors, and hauling; fugitive dust associated with grading, demolition, truck loading, and on-road vehicles traveling along paved and unpaved roads; and architectural coating activities; and paving.<sup>2</sup>

The number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.<sup>3</sup>

---

<sup>1</sup> "California Emissions Estimator Model." CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

<sup>2</sup> "California Emissions Estimator Model." CAPCOA, 2017, available at: <http://www.aqmd.gov/caleemod/home>.

<sup>3</sup> "CalEEMod User's Guide." CAPCOA, November 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/01\\_user-39-s-guide2016-3-2\\_15november2017.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/01_user-39-s-guide2016-3-2_15november2017.pdf?sfvrsn=4), p. 34.

Specifically, the number and length of vehicle trips is utilized to estimate the vehicle miles travelled (“VMT”) associated with construction. Then, utilizing vehicle-class specific EMFAC 2014 emission factors, CalEEMod calculates the vehicle exhaust, evaporative, and dust emissions resulting from construction-related VMT, including personal vehicles for worker commuting.<sup>4</sup>

Specifically, in order to calculate VMT, CalEEMod multiplies the average daily trip rate by the average overall trip length (see excerpt below):

$$\text{“VMT}_d = \Sigma(\text{Average Daily Trip Rate}_i * \text{Average Overall Trip Length}_i) _n$$

Where:

$n$  = Number of land uses being modeled.”<sup>5</sup>

Furthermore, to calculate the on-road emissions associated with worker trips, CalEEMod utilizes the following equation (see excerpt below):

$$\text{“Emissions}_{\text{pollutant}} = \text{VMT} * \text{EF}_{\text{running,pollutant}}$$

Where:

$\text{Emissions}_{\text{pollutant}}$  = emissions from vehicle running for each pollutant

VMT = vehicle miles traveled

$\text{EF}_{\text{running,pollutant}}$  = emission factor for running emissions.”<sup>6</sup>

Thus, there is a direct relationship between trip length and VMT, as well as a direct relationship between VMT and vehicle running emissions. In other words, when the trip length is increased, the VMT and vehicle running emissions increase as a result. Thus, vehicle running emissions can be reduced by decreasing the average overall trip length, by way of a local hire requirement or otherwise.

## Default Worker Trip Parameters and Potential Local Hire Requirements

As previously discussed, the number, length, and vehicle class of worker trips are utilized by CalEEMod to calculate emissions associated with the on-road vehicle trips required to transport workers to and from the Project site during construction.<sup>7</sup> In order to understand how local hire requirements and associated worker trip length reductions impact GHG emissions calculations, it is important to consider the CalEEMod default worker trip parameters. CalEEMod provides recommended default values based on site-specific information, such as land use type, meteorological data, total lot acreage, project type and typical equipment associated with project type. If more specific project information is known, the user can change the default values and input project-specific values, but the California Environmental Quality Act (“CEQA”) requires that such changes be justified by substantial evidence.<sup>8</sup> The default number of construction-related worker trips is calculated by multiplying the

<sup>8</sup> CalEEMod User Guide, available at: <http://www.caleemod.com/>, p. 1, 9.

number of pieces of equipment for all phases by 1.25, with the exception of worker trips required for the building construction and architectural coating phases.<sup>9</sup> Furthermore, the worker trip vehicle class is a 50/25/25 percent mix of light duty autos, light duty truck class 1 and light duty truck class 2, respectively.”<sup>10</sup> Finally, the default worker trip length is consistent with the length of the operational home-to-work vehicle trips.<sup>11</sup> The operational home-to-work vehicle trip lengths are:

“[B]ased on the location and urbanization selected on the project characteristic screen. These values were supplied by the air districts or use a default average for the state. Each district (or county) also assigns trip lengths for urban and rural settings” (emphasis added).<sup>12</sup>

Thus, the default worker trip length is based on the location and urbanization level selected by the User when modeling emissions. The below table shows the CalEEMod default rural and urban worker trip lengths by air basin (see excerpt below and Attachment A).<sup>13</sup>

Worker Trip Length by Air Basin		
Air Basin	Rural (miles)	Urban (miles)
Great Basin Valleys	16.8	10.8
Lake County	16.8	10.8
Lake Tahoe	16.8	10.8

<sup>13</sup> “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/05\\_appendix-d2016-3-2.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4), p. D-84 – D-86.

As demonstrated above, default rural worker trip lengths for air basins in California vary from 10.8- to 19.8- miles, with an average of 16.47 miles. Furthermore, default urban worker trip lengths vary from 10.8- to 14.7- miles, with an average of 11.17 miles. Thus, while default worker trip lengths vary by location, default urban worker trip lengths tend to be shorter in length. Based on these trends evident in the CalEEMod default worker trip lengths, we can reasonably assume that the efficacy of a local hire requirement is especially dependent upon the urbanization of the project site, as well as the project location.

### Practical Application of a Local Hire Requirement and Associated Impact

To provide an example of the potential impact of a local hire provision on construction-related GHG emissions, we estimated the significance of a local hire provision for the Village South Specific Plan (“Project”) located in the City of Claremont (“City”). The Project proposed to construct 1,000 residential units, 100,000-SF of retail space, 45,000-SF of office space, as well as a 50-room hotel, on the 24-acre site. The Project location is classified as Urban and lies within the Los Angeles-South Coast County. As a result, the Project has a default worker trip length of 14.7 miles.<sup>14</sup> In an effort to evaluate the potential for a local hire provision to reduce the Project’s construction-related GHG emissions, we prepared an updated model, reducing all worker trip lengths to 10 miles (see Attachment B). Our analysis estimates that if a local hire provision with a 10-mile radius were to be implemented, the GHG emissions associated with Project construction would decrease by approximately 17% (see table below and Attachment C).

Local Hire Provision Net Change	
<b>Without Local Hire Provision</b>	
Total Construction GHG Emissions (MT CO <sub>2</sub> e)	3,623
Amortized Construction GHG Emissions (MT CO <sub>2</sub> e/year)	120.77
<b>With Local Hire Provision</b>	
Total Construction GHG Emissions (MT CO <sub>2</sub> e)	3,024
Amortized Construction GHG Emissions (MT CO <sub>2</sub> e/year)	100.80
<b>% Decrease in Construction-related GHG Emissions</b>	<b>17%</b>

As demonstrated above, by implementing a local hire provision requiring 10 mile worker trip lengths, the Project could reduce potential GHG emissions associated with construction worker trips. More broadly, any local hire requirement that results in a decreased worker trip length from the default value has the potential to result in a reduction of construction-related GHG emissions, though the significance of the reduction would vary based on the location and urbanization level of the project site.

This serves as an example of the potential impacts of local hire requirements on estimated project-level GHG emissions, though it does not indicate that local hire requirements would result in reduced construction-related GHG emission for all projects. As previously described, the significance of a local hire requirement depends on the worker trip length enforced and the default worker trip length for the project’s urbanization level and location.

<sup>14</sup> “Appendix D Default Data Tables.” CAPCOA, October 2017, available at: [http://www.aqmd.gov/docs/default-source/caleemod/05\\_appendix-d2016-3-2.pdf?sfvrsn=4](http://www.aqmd.gov/docs/default-source/caleemod/05_appendix-d2016-3-2.pdf?sfvrsn=4), p. D-85.

### 1.3 User Entered Comments & Non-Default Data

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

### 3.0 Construction Detail

---

#### Construction Phase

Phase Number	Phase Name	Phase Type	Start Date	End Date	Num Days Week	Num Days	Phase Description
1	Demolition	Demolition	9/1/2021	10/12/2021	5	30	
2	Site Preparation	Site Preparation	10/13/2021	11/9/2021	5	20	
3	Grading	Grading	11/10/2021	1/11/2022	5	45	
4	Building Construction	Building Construction	1/12/2022	12/12/2023	5	500	
5	Paving	Paving	12/13/2023	1/30/2024	5	35	
6	Architectural Coating	Architectural Coating	1/31/2024	3/19/2024	5	35	

Acres of Grading (Site Preparation Phase): 0

Acres of Grading (Grading Phase): 112.5

Acres of Paving: 0

Residential Indoor: 2,025,000; Residential Outdoor: 675,000; Non-Residential Indoor: 326,400; Non-Residential Outdoor: 108,800; Striped Parking Area: 0 (Architectural Coating – sqft)

#### OffRoad Equipment

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Phase Name	Offroad Equipment Type	Amount	Usage Hours	Horse Power	Load Factor
Demolition	Concrete/Industrial Saws	1	8.00	81	0.73
Demolition	Excavators	3	8.00	158	0.38
Demolition	Rubber Tired Dozers	2	8.00	247	0.40
Site Preparation	Rubber Tired Dozers	3	8.00	247	0.40
Site Preparation	Tractors/Loaders/Backhoes	4	8.00	97	0.37
Grading	Excavators	2	8.00	158	0.38
Grading	Graders	1	8.00	187	0.41
Grading	Rubber Tired Dozers	1	8.00	247	0.40
Grading	Scrapers	2	8.00	367	0.48
Grading	Tractors/Loaders/Backhoes	2	8.00	97	0.37
Building Construction	Cranes	1	7.00	231	0.29
Building Construction	Forklifts	3	8.00	89	0.20
Building Construction	Generator Sets	1	8.00	84	0.74
Building Construction	Tractors/Loaders/Backhoes	3	7.00	97	0.37
Building Construction	Welders	1	8.00	46	0.45
Paving	Pavers	2	8.00	130	0.42
Paving	Paving Equipment	2	8.00	132	0.36
Paving	Rollers	2	8.00	80	0.38
Architectural Coating	Air Compressors	1	6.00	78	0.48

Trips and VMT

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

### 1.3 User Entered Comments & Non-Default Data

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

### 1.3 User Entered Comments & Non-Default Data

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Annual

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

### 1.3 User Entered Comments & Non-Default Data

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

### 3.0 Construction Detail

---

#### Construction Phase

Phase Number	Phase Name	Phase Type	Start Date	End Date	Num Days Week	Num Days	Phase Description
1	Demolition	Demolition	9/1/2021	10/12/2021	5	30	
2	Site Preparation	Site Preparation	10/13/2021	11/9/2021	5	20	
3	Grading	Grading	11/10/2021	1/11/2022	5	45	
4	Building Construction	Building Construction	1/12/2022	12/12/2023	5	500	
5	Paving	Paving	12/13/2023	1/30/2024	5	35	
6	Architectural Coating	Architectural Coating	1/31/2024	3/19/2024	5	35	

Acres of Grading (Site Preparation Phase): 0

Acres of Grading (Grading Phase): 112.5

Acres of Paving: 0

Residential Indoor: 2,025,000; Residential Outdoor: 675,000; Non-Residential Indoor: 326,400; Non-Residential Outdoor: 108,800; Striped Parking Area: 0 (Architectural Coating – sqft)

#### OffRoad Equipment

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Summer

Phase Name	Offroad Equipment Type	Amount	Usage Hours	Horse Power	Load Factor
Demolition	Concrete/Industrial Saws	1	8.00	81	0.73
Demolition	Excavators	3	8.00	158	0.38
Demolition	Rubber Tired Dozers	2	8.00	247	0.40
Site Preparation	Rubber Tired Dozers	3	8.00	247	0.40
Site Preparation	Tractors/Loaders/Backhoes	4	8.00	97	0.37

### 1.3 User Entered Comments & Non-Default Data

## Village South Specific Plan (Proposed) - Los Angeles-South Coast County, Winter

Project Characteristics - Consistent with the DEIR's model.

Land Use - See SWAPE comment regarding residential and retail land uses.

Construction Phase - See SWAPE comment regarding individual construction phase lengths.

Demolition - Consistent with the DEIR's model. See SWAPE comment regarding demolition.

Vehicle Trips - Saturday trips consistent with the DEIR's model. See SWAPE comment regarding weekday and Sunday trips.

Woodstoves - Woodstoves and wood-burning fireplaces consistent with the DEIR's model. See SWAPE comment regarding gas fireplaces.

Energy Use -

Construction Off-road Equipment Mitigation - See SWAPE comment on construction-related mitigation.

Area Mitigation - See SWAPE comment regarding operational mitigation measures.

Water Mitigation - See SWAPE comment regarding operational mitigation measures.

Trips and VMT - Local hire provision

## **EXHIBIT B**

---

## ***Paul Rosenfeld, Ph.D.***

*Principal Environmental Chemist*

**Chemical Fate and Transport & Air Dispersion Modeling**

**Risk Assessment & Remediation Specialist**

### **Education**

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Thesis on wastewater treatment.

### **Professional Experience**

Dr. Rosenfeld has over 25 years' experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from unconventional oil drilling operations, oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, and many other industrial and agricultural sources. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at dozens of sites and has testified as an expert witness on more than ten cases involving exposure to air contaminants from industrial sources.

## **Professional History:**

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner  
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)  
UCLA School of Public Health; 2003 to 2006; Adjunct Professor  
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator  
UCLA Institute of the Environment, 2001-2002; Research Associate  
Komex H<sub>2</sub>O Science, 2001 to 2003; Senior Remediation Scientist  
National Groundwater Association, 2002-2004; Lecturer  
San Diego State University, 1999-2001; Adjunct Professor  
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager  
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager  
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor  
King County, Seattle, 1996 – 1999; Scientist  
James River Corp., Washington, 1995-96; Scientist  
Big Creek Lumber, Davenport, California, 1995; Scientist  
Plumas Corp., California and USFS, Tahoe 1993-1995; Scientist  
Peace Corps and World Wildlife Fund, St. Kitts, West Indies, 1991-1993; Scientist

## **Teaching Experience:**

UCLA Department of Environmental Health (Summer 2003 through 20010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

## **Academic Grants Awarded:**

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

## **Deposition and/or Trial Testimony:**

In the United States District Court For The District of New Jersey

Duarte et al, *Plaintiffs*, vs. United States Metals Refining Company et. al. *Defendant*.

Case No.: 2:17-cv-01624-ES-SCM

Rosenfeld Deposition. 6-7-2019

In the United States District Court of Southern District of Texas Galveston Division

M/T Carla Maersk, *Plaintiffs*, vs. Conti 168., Schiffahrts-GMBH & Co. Bulker KG MS “Conti Perdido”  
*Defendant*.

Case No.: 3:15-CV-00106 consolidated with 3:15-CV-00237

Rosenfeld Deposition. 5-9-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

Carole-Taddeo-Bates et al., vs. Ifran Khan et al., Defendants

Case No.: No. BC615636

Rosenfeld Deposition, 1-26-2019

In The Superior Court of the State of California In And For The County Of Los Angeles – Santa Monica

The San Gabriel Valley Council of Governments et al. vs El Adobe Apts. Inc. et al., Defendants

Case No.: No. BC646857

Rosenfeld Deposition, 10-6-2018; Trial 3-7-19

In United States District Court For The District of Colorado

Bells et al. Plaintiff vs. The 3M Company et al., Defendants

Case: No 1:16-cv-02531-RBJ

Rosenfeld Deposition, 3-15-2018 and 4-3-2018

In The District Court Of Regan County, Texas, 112<sup>th</sup> Judicial District

Phillip Bales et al., Plaintiff vs. Dow Agrosiences, LLC, et al., Defendants

Cause No 1923

Rosenfeld Deposition, 11-17-2017

In The Superior Court of the State of California In And For The County Of Contra Costa

Simons et al., Plaintiffs vs. Chevron Corporation, et al., Defendants

Cause No C12-01481

Rosenfeld Deposition, 11-20-2017

In The Circuit Court Of The Twentieth Judicial Circuit, St Clair County, Illinois

Martha Custer et al., Plaintiff vs. Cerro Flow Products, Inc., Defendants

Case No.: No. 0i9-L-2295

Rosenfeld Deposition, 8-23-2017

In The Superior Court of the State of California, For The County of Los Angeles

Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC

Case No.: LC102019 (c/w BC582154)

Rosenfeld Deposition, 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division

Brenda J. Cooper, et al., *Plaintiffs*, vs. Meritor Inc., et al., *Defendants*

Case Number: 4:16-cv-52-DMB-JVM

Rosenfeld Deposition: July 2017

In The Superior Court of the State of Washington, County of Snohomish  
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants  
Case No.: No. 13-2-03987-5  
Rosenfeld Deposition, February 2017  
Trial, March 2017

In The Superior Court of the State of California, County of Alameda  
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants  
Case No.: RG14711115  
Rosenfeld Deposition, September 2015

In The Iowa District Court In And For Poweshiek County  
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants  
Case No.: LALA002187  
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County  
Jerry Dovico, et al., Plaintiffs vs. Valley View Sine LLC, et al., Defendants  
Law No.: LALA105144 - Division A  
Rosenfeld Deposition, August 2015

In The Iowa District Court For Wapello County  
Doug Pauls, et al., et al., Plaintiffs vs. Richard Warren, et al., Defendants  
Law No.: LALA105144 - Division A  
Rosenfeld Deposition, August 2015

In The Circuit Court of Ohio County, West Virginia  
Robert Andrews, et al. v. Antero, et al.  
Civil Action NO. 14-C-30000  
Rosenfeld Deposition, June 2015

In The Third Judicial District County of Dona Ana, New Mexico  
Betty Gonzalez, et al. Plaintiffs vs. Del Oro Dairy, Del Oro Real Estate LLC, Jerry Settles and Deward  
DeRuyter, Defendants  
Rosenfeld Deposition: July 2015

In The Iowa District Court For Muscatine County  
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant  
Case No 4980  
Rosenfeld Deposition: May 2015

In the Circuit Court of the 17<sup>th</sup> Judicial Circuit, in and For Broward County, Florida  
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.  
Case Number CACE07030358 (26)  
Rosenfeld Deposition: December 2014

In the United States District Court Western District of Oklahoma  
Tommy McCarty, et al., Plaintiffs, v. Oklahoma City Landfill, LLC d/b/a Southeast Oklahoma City  
Landfill, et al. Defendants.  
Case No. 5:12-cv-01152-C  
Rosenfeld Deposition: July 2014

In the County Court of Dallas County Texas

Lisa Parr et al, *Plaintiff*, vs. Aruba et al, *Defendant*.

Case Number cc-11-01650-E

Rosenfeld Deposition: March and September 2013

Rosenfeld Trial: April 2014

In the Court of Common Pleas of Tuscarawas County Ohio

John Michael Abicht, et al., *Plaintiffs*, vs. Republic Services, Inc., et al., *Defendants*

Case Number: 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)

Rosenfeld Deposition: October 2012

In the United States District Court of Southern District of Texas Galveston Division

Kyle Cannon, Eugene Donovan, Genaro Ramirez, Carol Sassler, and Harvey Walton, each Individually and on behalf of those similarly situated, *Plaintiffs*, vs. BP Products North America, Inc., *Defendant*.

Case 3:10-cv-00622

Rosenfeld Deposition: February 2012

Rosenfeld Trial: April 2013

In the Circuit Court of Baltimore County Maryland

Philip E. Cvach, II et al., *Plaintiffs* vs. Two Farms, Inc. d/b/a Royal Farms, Defendants

Case Number: 03-C-12-012487 OT

Rosenfeld Deposition: September 2013

**Geologic and Hydrogeologic Characterization  
Industrial Stormwater Compliance  
Investigation and Remediation Strategies  
Litigation Support and Testifying Expert  
CEQA Review**

**Education:**

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

**Professional Certifications:**

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

**Professional Experience:**

Matt has 25 years of experience in environmental policy, assessment and remediation. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) while also working with permit holders to improve hydrogeologic characterization and water quality monitoring.

Matt has worked closely with U.S. EPA legal counsel and the technical staff of several states in the application and enforcement of RCRA, Safe Drinking Water Act and Clean Water Act regulations. Matt has trained the technical staff in the States of California, Hawaii, Nevada, Arizona and the Territory of Guam in the conduct of investigations, groundwater fundamentals, and sampling techniques.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2014;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

**Senior Regulatory and Litigation Support Analyst:**

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 100 environmental impact reports since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, Valley Fever, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at industrial facilities.
- Manager of a project to provide technical assistance to a community adjacent to a former Naval shipyard under a grant from the U.S. EPA.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.
- Expert witness on two cases involving MTBE litigation.
- Expert witness and litigation support on the impact of air toxins and hazards at a school.
- Expert witness in litigation at a former plywood plant.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.

- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

### **Executive Director:**

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

### **Hydrogeology:**

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nation-wide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

### **Policy:**

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9. Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific principles into the policy-making process.
- Established national protocol for the peer review of scientific documents.

### **Geology:**

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

### **Teaching:**

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt taught physical geology (lecture and lab and introductory geology at Golden West College in Huntington Beach, California from 2010 to 2014.

## **EXHIBIT D**

APR 05 2021

**AIDS HEALTHCARE FOUNDATION v. CITY OF LOS ANGELES**

Case Number: 19STCP05445

Hearing Date: March 3, 2021

Sherril R. Carter, Executive Officer/Clerk of Court

**ORDER GRANTING PETITION FOR WRIT OF MANDATE AND COMPLAINT FOR  
INJUNCTIVE RELIEF**

Through its Verified Petition for Writ of Mandate and Complaint for Injunctive Relief (the petition) Petitioner, AIDS Healthcare Foundation, challenges the certification of an environmental impact report (EIR) by Respondent, the City of Los Angeles. Petitioner seeks an order requiring the City to “vacate and withdraw the certification of the EIR and all Project Entitlements . . . .” (Pet., Prayer ¶ A.) Petitioner contends it is entitled to relief because the City violated the California Environmental Quality Act (CEQA) (Pub. Resources Code §§ 21000 *et seq.*).

Both the City and Real Party in Interest, Southern California Flower Growers, Inc. (Flower Growers) oppose the petition.

The petition is granted.

**STATEMENT OF THE CASE<sup>1</sup>**

***The Project:***

The project is a mixed-use development located on just under four acres in the downtown area of the City.<sup>2</sup> The site is currently the Southern California Flower Market, a wholesale market owned and occupied by the Flower Growers. (AR 778, 810, 866-67.) The project site contains two buildings; the South Building, which was built in 1962 or 1963, and the North Building, which was built as part of the flower market’s expansion in 1981. (AR 778, 866-868.) The buildings are two stories with a parking deck above. (AR 868.)

The project renovates and upgrades the North building, which will continue to operate as a flower market. The project will demolish the South Building and replace it with a new twelve story, mixed-use development comprised of 323 residential units and 167,248 square feet of non-residential uses—retail, office, restaurant, wholesale storage and event space (the Project). (AR 719, 4462-4463.)

---

<sup>1</sup> AR refers to the administrative record.

<sup>2</sup> The site is bounded by 7th Street, 8th Street, Maple Avenue, and Wall Street. (AR 748, 791.)

### ***The City's Approval of the Project:***

On May 22, 2017, the City issued a notice of preparation for the Project. On September 20, 2018, the City released a 600-page Draft EIR (DEIR) for the Project. (AR 4086-4087, 1321.) The City issued the Final EIR<sup>3</sup> on April 12, 2019. (AR 4087.) The City conducted a public hearing on the EIR in May 2019. (AR 5-156, 4410-11.) Thereafter, on June 3, 2019, the City's Advisory Agency, certified the EIR, adopted the CEQA findings and a mitigation, monitoring and reporting program (MMRP), and approved the Project.<sup>4</sup> (AR 5-156, 4410-11.)

Two entities appealed the Advisory Agency's decision on June 13, 2019.<sup>5</sup> (AR 6715, 6869.) The appeals raised concerns about the Project's construction noise and air quality impacts. (AR 3574-77, 6869-80.) The City Planning Commission (CPC) heard and denied the appeals on August 26, 2019. The CPC certified the EIR and affirmed the Advisory Agency's Project approval. (AR 157-312, 4412-4420, 4425-4427, 4429-4531.)

On September 5, 2019, Petitioner appealed the CPC's decision. (AR 8457-8464.) On October 29, 2019, after holding another public hearing, the City's Planning and Land Use Management Committee voted unanimously to recommend that the full City Council deny the appeals and approve the Project. (AR 440-445, 4543-4547, 4548- 4602.) At a public meeting on November 12, 2019, the City Council voted unanimously to deny the appeals and approve the Project. (AR 709-710, 4603-4623.)

The writ petition ensued.

### **STANDARD OF REVIEW**

In reviewing an agency's compliance with CEQA during the course of its legislative or quasi-legislative actions, the trial court's inquiry during a mandamus proceeding " 'shall extend only to whether there was a prejudicial abuse of discretion,' " which is established " 'if the agency has not proceeded in a manner required by law or if the determination or decision is not supported by substantial evidence.' " (*Vineyard Area Citizens for Responsible Growth Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 426 [citing Pub. Resources Code § 21168.5].) "In evaluating an EIR for CEQA compliance, . . . a reviewing court must adjust its scrutiny to the nature of the alleged defect, depending on whether the claim is predominantly one of improper procedure or a dispute over the facts." (*Id.* at 435.)

---

<sup>3</sup> The court refers to the Final EIR herein as the EIR. The court designates any specific references to the Draft EIR as DEIR herein.

<sup>4</sup> The Advisory Agency also approved the tract map on June 3, 2019. (AR 4299.) The City issued three errata to the EIR during the administrative review process: Erratum No. 1 on July 26, 2019; Erratum No. 2 on August 7, 2019; and Erratum No. 3 on October 18, 2019. (AR 4326.)

<sup>5</sup> American Florists Exchange, Ltd. and the Coalition for Responsible Equitable Economic Development appealed the Advisory Agency's decision.

CEQA requires an EIR to “be prepared with a sufficient degree of analysis to provide decision makers with information which enables them to make a decision which intelligently takes account of environmental consequences.” (Guidelines<sup>6</sup> § 15151; *Sierra Club v. County of Fresno (Friant Ranch)* (2018) 6 Cal.5th 502, 516.) “An EIR’s designation of a particular environmental effect as ‘significant’ does not excuse the EIR’s failure to reasonably describe the nature and magnitude of the adverse effect.” (*Id.* at 514.) “[T]here must be a disclosure of the ‘analytic route the . . . agency traveled from evidence to action.’ ” (*Laurel Heights Improvement Assn. v. Regents of the University of California* (1988) 47 Cal.3d 376, 404.) “[A] conclusory discussion of an environmental impact that an EIR deems significant can be determined by a court to be inadequate as an informational document without reference to substantial evidence.” (*Friant Ranch, supra*, 6 Cal.5th at 514.) If the deficiencies in an EIR preclude “informed decisionmaking and public participation, the goals of CEQA are thwarted and a prejudicial abuse of discretion has occurred.” (*Save Our Peninsula Committee v. Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 128.)

“Where the alleged defect is that the agency has failed to proceed in the manner required by law, the court determines de novo whether the agency has employed the correct procedures, scrupulously enforcing all legislatively mandated requirements.” (*Chico Advocates for a Responsible Economy v. City of Chico* (2019) 40 Cal.App.5th 839, 845.)

With respect to “all substantial evidence challenges, an appellant challenging an EIR for insufficient evidence must lay out the evidence favorable to the other side and show why it is lacking. Failure to do so is fatal. A reviewing court will not independently review the record to make up for appellant’s failure to carry his burden.” (*Defend the Bay v. City of Irvine* (2004) 119 Cal.App.4th 1261, 1266.) Moreover, “the reviewing court ‘may not set aside an agency’s approval of an EIR on the ground that an opposite conclusion would have been equally or more reasonable,’ for, on factual questions, our task ‘is not to weigh conflicting evidence and determine who has the better argument.’ ” (*Vineyard Area Citizens for Responsible Growth Inc. v. City of Rancho Cordova, supra*, 40 Cal.4th at 435.)

“Regardless of what is alleged, an EIR approved by a governmental agency is presumed legally adequate, and the party challenging the EIR has the burden of showing otherwise.” (*Chico Advocates for a Responsible Economy v. City of Chico, supra*, 40 Cal.App.5th at 846.)

## ANALYSIS

Petitioner contends the EIR analysis of the Project's environmental impacts is flawed as to greenhouse gas (GHG) emissions, air quality and noise. The court addresses the claims in turn.

### GHG Impacts:

Petitioner claims the City's analysis under the "first significance threshold"<sup>7</sup> does not comply with CEQA. Petitioner's arguments arise in three general categories that are all related in some way to the City's selection of a significance threshold for GHG impacts. First, Petitioner contends the EIR's GHG analysis is inaccurate, confusing and misleading. Second, Petitioner asserts the City selected an inappropriate significance threshold. Third, Petitioner argues the EIR fails as an informal document for decisionmakers and informed public participation because it omits any analysis of Senate Bill (SB) 32 codified at Health and Safety Code section 38566.

Guidelines section 15064.4, subdivision (a) provides: "A lead agency shall have discretion to determine, in the context of a particular project, whether to: (1) Quantify greenhouse gas emissions resulting from a project; and/or (2) Rely on a qualitative analysis or performance based standards." Thus, under the Guidelines, the City had the option of selecting a quantitative or qualitative significance threshold for GHG emissions "based to the extent possible on scientific and factual data." (Guidelines § 15064, subd. (b).)

Further, "California's CEQA Guidelines . . . recognize that an agency's adoption of a threshold of significance requires an exercise of reasoned judgment." (*Mission Bay Alliance v. Office of Community Investment & Infrastructure* (2016) 6 Cal.App.5th 160, 206.) A city's choice of a significance threshold "will be upheld if founded on substantial evidence." (*Ibid.*)

First, Petitioner argues the City's "*discussion of the GHG significance thresholds* violates CEQA" because "it is inaccurate and confusing." (Reply 5:33 [emphasis added].) The court disagrees. A reasonable reading of the EIR and the City's selection of a significance threshold does not support Petitioner's claim.

The City explained because the California Air Resources Board (CARB), the South Coast Air Quality Management District (SCAQMD) and the City "have yet to adopt project-level significance thresholds for GHG emissions that would be applicable to the Project," the City obtained its primary direction for GHG emissions analysis from the Guidelines. (AR 917.) The City reported a project could have a significant environmental impact if the project generated GHG emissions that may have a significant impact on the environment, or if the project would conflict with "an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions" of GHG. (AR 14:917.) After a straight-forward plain language discussion in plain in

---

<sup>7</sup> Petitioner contends the City has relied upon two significance thresholds for GHG emissions. As discussed herein, the court disagrees. The EIR provides a single threshold of significance for GHG emissions.

the EIR concerning the selection of significance thresholds, the City reported “the Project would not have a significant effect on the environment if it is found to be consistent with the applicable regulatory plans and policies to reduce GHG emissions.” (AR 920.)

The City thereafter set forth the applicable plans and policies for which it considered consistency in the context of GHG emissions. (AR 14:920.) The EIR methodically discusses the Project and the applicable plans and policies. Petitioner has not demonstrated the EIR’s significance threshold discussion would mislead or confuse decisionmakers or public participants.

Second, without expressly so stating, much of Petitioner’s argument related to GHG emissions theorizes the City abused its discretion in deciding not to use a *quantitative* threshold of significance for the Project. Petitioner contends the SCAQMD quantitative thresholds of significance should have been used for the Project as they are “the most appropriate . . . to apply because the Project is a mixed-use project.” (Opening Brief 14:17-18.)

Petitioner thus contends the City engaged in “threshold shopping” for the Project. Petitioner speculates the City uses the SCAQMD’s recommended thresholds of significance “to analyze projects where emissions are below the threshold.” (Opening Brief 14:32-35.) Petitioner cites three such projects in the City’s downtown area where the City used SCAQMD’s thresholds of significance to find a project’s GHG emissions had less than significant impacts. (AR 6495-6496.)

The City explained it elected not to rely on SCAQMD’s 2008 draft guidance (as revised in 2010) because neither the City nor SCAQMD “has adopted numeric thresholds for greenhouse gas emissions for land use development projects (e.g., residential/commercial projects) such as the Project.” (AR 2820.) The City elaborated:

As further explained in the Draft EIR, in 2008, the SCAQMD convened a GHG CEQA Significance Threshold Working Group to provide guidance to local lead agencies on determining significance for GHG emissions in their CEQA documents. In December 2008, the SCAQMD Governing Board adopted interim GHG significance thresholds for projects where the SCAQMD is the lead agency. That threshold uses a tiered approach to determine a project’s significance, with 10,000 metric tons of CO<sub>2</sub> equivalent (MTCO<sub>2</sub>e) per year as a screening numerical threshold for stationary sources. In September 2010, the Working Group released additional revisions that recommended a screening threshold of 3,500 MTCO<sub>2</sub>e for residential projects, 1,400 MTCO<sub>2</sub>e for commercial projects, and 3,000 MTCO<sub>2</sub>e for mixed use projects. The SCAQMD has not since adopted those thresholds, nor has the SCAQMD provided a timeline for formal consideration of those thresholds. In the meantime, the thresholds in the SCAQMD’s guidance document are used as a non-binding guide. A lead agency is not required under CEQA to rely on draft regulatory standards that have not been adopted as significance thresholds. (AR 2820-2821.)

While the City may have chosen to use the SCAQMD's guidance as thresholds of significance (as it apparently has done with at least three other projects) in the past, the City was not required to do so. (Guidelines § 15064.7, subd. (c). See also Guidelines § 15064.4, subd. (b)(3).) The Guidelines do "not mandate the use of absolute numerical thresholds to measure the significance of greenhouse gas emissions." (*Center for Biological Diversity v. Department of Fish & Wildlife* (2015) 62 Cal.4th 204, 221.) Accordingly, Petitioner has not met its burden of demonstrating the City's selection of the significance threshold is not supported by substantial evidence.

Third, Petitioner contends the EIR's GHG emissions analysis is inconsistent with SB 32. That is, Petitioner attacks the City's finding the Project is "consisten[t] with the policies in SB 32 and Executive Order B-30-15, which includes the GHG reduction goals codified in SB 32." (Opposition Brief 17:2-3.) Petitioner contends "[t]he EIR includes compliance with Executive Order B-30-15 on the list of measures it must comply with for the Project's GHG emissions to be considered insignificant . . . and the Project does not comply with that executive order." (Reply 8:22-25.) Petitioner is correct to the extent there is no substantial evidence to support the City's position on Executive Order (EO) B-30-15.

As an initial matter, the City and Flower Growers argue Petitioner failed to exhaust its administrative remedies on the issue of "CARB's 2017 Scoping Plan, which provides strategies to achieve the 2040 GHG emission goals set in SB 32." (Opposition Brief 17:12-14.) The court disagrees. The broader issue of overall compliance with SB 32—however that might be achieved—was squarely presented to the City during the administrative proceedings.

SWAPE<sup>8</sup> specifically raised the issue of SB 32 in its written comments to the DEIR. (AR 2900, 2922.) SWAPE wrote:

AB 32 requires California to reduce GHG emissions to 1990 levels by 2020. However, in September 2016, prior to the release of the IS/MND, Governor Brown signed Senate Bill 32, enacting Health and Safety Code § 38566. [] This statute ("SB 32") requires California to achieve a new, more aggressive 40% reduction in GHG emissions over the 1990 levels by 2030. 'This 40 percent reduction is widely acknowledged as a necessary interim target to ensure that California meets its longer-range goal of reducing greenhouse gas emissions to 80 percent below 1990 levels by the year 2050.' Therefore, by failing to demonstrate consistency with the reduction targets set forth by SB 32, the Project may conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions. As a result, the Project may have a potentially significant impact that was not previously addressed in the DEIR, and as such, a revised EIR should be prepared. (AR 2922.)

---

<sup>8</sup> SWAPE is an acronym for Soil Water Air Protection Enterprises. SWAPE provides technical consultation, data analysis, and litigation support for the environment. (AR 2927.)

SWAPE also advised the City—with expert opinion—“to reach the statewide goal of 259 MTCO<sub>2</sub>e, California would have to reduce its emissions by 49 percent below the ‘business-as-usual’ levels. This reduction target indicates that compliance with these more aggressive reduction goals, beyond what is mandated by AB 32, will be necessary.” (AR 2923.)

As acknowledged by the City and Flower Growers, the legislature codified EO B-30-15 at SB 32. (Opposition Brief 17:3.) Executed by Governor Brown on April 29, 2015, two years before the notice of preparation, EO B-30-15 provides in part:

“A new interim statewide greenhouse emission reduction target to reduce greenhouse gas emissions to 40 percent below 1990 levels by 2030 is established in order to ensure California meets its target of reducing greenhouse gas emissions to 80 percent below 1990 levels by 2050.”

SB 32, codified at Health and Safety Code section 38566, effective January 1, 2017 (prior to the City’s notice of preparation) provides:

“In adopting rules and regulations to achieve the maximum technologically feasible and cost-effective greenhouse gas emissions reductions authorized by this division, the state board shall ensure that statewide greenhouse gas emissions are reduced to at least 40 percent below the statewide greenhouse gas emissions limit no later than December 31, 2030.”

The EIR reports the Project’s GHG emissions are “consistent”<sup>9</sup> with EO B-30-15. (AR 926.) The EIR’s discussion of EO B-30-15 in its “Consistency Analysis” reports the order’s target of reducing GHG emissions to 40 percent below 1990 levels by 2030. (AR 926-927.) In fact, the EIR suggests the Project is actually consistent and compliant with EO B-30-15: “As such, given the reasonably anticipated decline in Project emissions once fully constructed and operational, the Project is consistent with the Executive Order’s horizon-year goal.”<sup>10</sup> (AR 926.)

The issue raised by Petitioner is whether there is substantial evidence for the EIR’s claim to decisionmakers and public participants the Project does not conflict with EO B-30-15—“an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions” of GHG. (AR 14:917.) The City’s position of consistency with EO B-30-15 requires substantial evidence.

---

<sup>9</sup> “Consistent” means “marked by harmony, regularity, or steady continuity” and “marked by agreement.” ([www.merriam-webster.com/dictionary/consistent](http://www.merriam-webster.com/dictionary/consistent).)

<sup>10</sup> The EIR’s use of a singular possessive form as opposed to a plural possessive form makes the analysis where the EIR discusses two executive orders unclear. In any event, the statement implies quantitative compliance with required GHG emission reductions by 2030. The City’s findings, however, make clear the City intended the statement to apply to both executive orders. (AR 235.)

Certainly, the EIR acknowledges a 2030 GHG emissions target exists under the law; in its Consistency Analysis, however, the EIR provides no information about that target or how the Project's GHG emissions are consistent with it. The EIR's claim "the Project's post-2020 emissions trajectory is expected to follow a declining trend, consistent with the 2030 and 2050 targets and Executive Order . . . B-30-15" appears to be unsupported by substantial evidence. (AR 927.)

Moreover, the EIR reports "[m]any of the emission reduction strategies recommended by CARB would serve to *reduce the Project's post-2020 emissions level to the extent applicable by law . . .*" (AR 927 [emphasis added].) The EIR, however, provides no analysis to support the claim the Project's GHG emissions comply with Health and Safety Code section 38566. That is, "applicable law."<sup>11</sup> In fact, the only evidence on the issue suggests otherwise. (AR 2923 [49 percent reduction required for compliance versus Project's 33 percent reduction].)

During argument the Flower Growers directed the court to evidence the City could have considered to find the Project is consistent with EO B-30-15. The evidence, however, is not substantial evidence supporting the claim the Project's post-2020 emissions will be reduced to the level required by EO B-30-15 as reported in the EIR.

For example, the EIR's discussion of EO B-30-15 explains "a statewide GHG reduction target of 40 percent below 1990 levels by 2030." (AR 902.) Citing a "recent study," the EIR reports "the state's existing and proposed regulatory framework will allow the state to reduce its GHG emissions level to 40 percent below 1990 levels by 2030 (consistent with Executive Order B-30-15), and to 60 percent below 1990 levels by 2050." (AR 903.) While the City cited the study by footnote, the study did not address the Project and its GHG emissions.<sup>12</sup> Thus, the discussion and study are not substantial evidence of the Project's compliance with EO B-30-15.

In addition, the Project's reduction in GHG emissions related to design features (AR 924-925) does not address compliance with EO B-30-15. The order sets forth a quantitative standard. The EIR's general reference to design features and GHG does not inform on consistency with that quantitative standard.

---

<sup>11</sup> The City found, "As such, the Project's post-2020 emissions trajectory is expected to follow a declining trend, *consistent with the 2030 and 2050 targets and Executive Order S-3-05 and B-30-15.*" (AR 235 [emphasis added].) The statement is misleading because it implies the Project meets EO B-30-15's emissions target when there is no substantial evidence to support the City's position.

<sup>12</sup> The court does not have access to the study cited in the footnote. The EIR's narrative suggests the study concerned "various combinations of policies" to assist emission levels to "remain very low through 2050 . . . ." (AR 903.) In the unlikely event the general study addressed the Project, the court notes "a report 'buried in an appendix,' is not a substitute for 'a good faith reasoned analysis . . .'" (*Banning Ranch Conservancy v. City of Newport Beach* (2017) 2 Cal.5th 918, 941 [citation omitted].)

The EIR's discussion of the Regional Transportation Plan/Sustainable Communities Strategy of Southern California Association of Governments (SCAG) does address GHG emission reductions. (AR 911, 930-931.) The discussion, however, does not inform on the Project's consistency with EO B-30-15.

Finally, relying on *Cleveland National Forest Foundation v. San Diego Assn. of Governments* (2017) 3 Cal.5th 497, the City argues it had no obligation to consider EO B-30-15. In *Cleveland National Forest Foundation*, the petitioners argued the agency "should have evaluated the plan's impacts against an executive order signed" by the governor. (*Id.* at 503.) The Supreme Court disagreed. The agency in *Cleveland National Forest Foundation*, however, did not adopt a significance threshold of express consistency with an executive order as the City did here. (See *id.* at 507 [three measures of significance].) That is, the agency in *Cleveland National Forest Foundation* did not represent the project was consistent with a particular executive order and establish its significance threshold in part on such consistency.

Based on the foregoing, the court finds the EIR's claim of consistency with EO B-30-15 and the policies therein is not supported by substantial evidence. Thus, the EIR's conclusions that GHG emissions do not exceed the City's chosen significance threshold is unsupported. The City abused its discretion in finding GHG emissions would not have a substantial environmental impact. "[A] conclusory discussion of an environmental impact that an EIR deems significant can be determined by a court to be inadequate as an informational document without reference to substantial evidence." (*Friant Ranch, supra*, 6 Cal.5th at 514.) Petitioner is entitled to relief based on the EIR's incomplete discussion of GHG emission impacts.<sup>13</sup>

#### **Air Quality Impacts:**

The EIR reports the Project's construction emissions would cause significant regional and local air quality impacts based on nitrogen oxides (NOx) and fine particulate matter (PM2.5). (AR 843.) Thus, the Project required mitigation measures for air quality impacts. (AR 843.)

Petitioner contends the EIR fails to adequately analyze and mitigate construction-related impacts on air quality.

---

<sup>13</sup> During argument, the parties argued about the meaning of Table 4.F-5. (AR 922.) The City contended the table calculations demonstrated compliance with EO B-30-15 while Petitioner argued it did not. The narrative accompanying the table indicates the Project is consistent with the 2014 Revised AB 32 Scoping Plan because of a reduction target of 15.3 percent. There is no discussion of EO B-30-15. Whether the table's information is consistent with EO B-30-15—and the court could not determine one way or the other even after the aid of argument—is unclear and does not inform decisionmakers or public participation.

### **1. Mitigation Measure (MM) C-1**

MM C-1 requires “[a]ll off-road construction equipment greater than 50 horsepower” satisfy United States Environmental Protection Agency (EPA) “Tier 4 emissions standards to reduce NOx and PM2.5 emissions at the Project Site.” (AR 849.) The EIR states “[a]ny emissions control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by a Level 3 diesel emissions control strategy for a similarly sized engine as defined by CARB regulations.” (AR 849.)

“For projects for which an EIR has been prepared, where substantial evidence supports the approving agency's conclusion that mitigation measures will be effective, courts will uphold such measures against attacks based on their alleged inadequacy.” (*Sacramento Old City Assn. v. City Council* (1991) 229 Cal.App.3d 1011, 1027.) A reviewing court, however, will not defer to the agency if there is no substantial evidence in the record showing the mitigation measure is feasible and effective, or if the feasibility or effectiveness of the mitigation measure “def[ies] common sense.” (*Gray v. County of Madera* (2008) 167 Cal.App.4th 1099, 1116-1117.)

Petitioner contends MM C-1 is both ineffective and infeasible.

The parties' argument here centers on the meaning of Tier 4 standards for the construction equipment to be used for the Project. Petitioner contends there are two Tier 4 standards—an interim standard and a final standard.<sup>14</sup> Petitioner reports the CalEEMod calculations are based on a Tier 4 final standard—an assumption all construction equipment used for the Project with a horsepower greater than 50 comply Tier 4 final standards. (AR 2908 [citing Appendix E-1]; see also AR 1475-1478, 1507-1510, 1544-1547.) Therefore, to the extent MM C-1 permits the Flower Growers to use equipment with a Tier 4 interim standard, the required mitigation will not be achieved. That is, the CalEEMod calculation on which the effectiveness of MM C-1 is based assumes a Tier 4 final standard for all construction equipment exceeding 50 horsepower. MM C-1, however, does not require all equipment to be Tier 4 final compliant.

The City dismisses Petitioner's claim as nothing more than a “red herring.” (Opposition 21:18.) The City reasons Tier 4 “interim” standards were only in effect for a short period of time for certain manufacturers. The interim period ended in 2018 well before the City issued the EIR in 2019. (AR 2803, 4303-4304.) The EIR explains:

“Tier 4 engines have been phased in nationwide since 2008 for all engine types. While some manufacturers were given limited flexibility to phase in compliant engines under the Transition Program for Equipment Manufacturers (TPEM), this provided up

---

<sup>14</sup> There seems to be no dispute Tier 4 final standards are more stringent (allow less emissions) than Tier 4 interim standards. (AR 2909, 2803.)

to seven years of additional time to offer such equipment. For engines less than 56 horsepower (hp), this TPEM period ended at the end of 2014. Engines between 56-130 hp had until the end of 2018, while larger engines of 130 hp or more ended at the end of 2017. As a result, Tier 4 equipment is commercially available from all manufacturers, *especially for common types of equipment to be used during the construction phases for this Project.*" (AR 2803 [emphasis added].)

The City sidesteps and avoids the issue. (See AR 6621-6622.) MM C-1 relies on Tier 4 equipment. CalEEMod calculations—demonstrating effective mitigation—are based on Tier 4 final standards for construction equipment exceeding 50 horsepower. The City does not require, however, that all equipment exceeding 50 horsepower used for construction have been manufactured in 2019 and later—that is, when Tier 4 final standards were required. Thus, MM C-1 permits, for example, construction equipment with 130 horsepower manufactured in 2018 under the Tier 4 interim standard to be used on the Project. To the extent the City permits such equipment to be used, it would be inconsistent with CalEEMod calculations and undermine the mitigation.

During argument, the City suggested its interpretation of MM C-1 requires equipment for the Project to use Tier 4 final standards. The City contends its CalEEMod calculations support its intent. That is, if the City did not intend for all equipment to meet such standards it would not have used such a setting in its CalEEMod calculations.<sup>15</sup> The City also noted the Flower Growers concede MM C-1 requires Tier 4 final standard engines and so advised the City: "It should be noted that the measure refers to the use of Tier 4-certified engines, not the less effective Tier 4-interim certified engines." (AR 10136.)

The MMRP will require compliance with Tier 4 final standards for MM C-1. Whether the Project is complying with MM C-1 will not turn on the good faith of an "on-the-hood-of-a-truck" analysis of the mitigation measure by a contractor, as suggested by Petitioner during argument. Instead, the MMRP requires:

"[S]pecifically during the construction phase and prior to the issuance of building permits, the [Flower Growers] shall retain an independent Construction Monitor (either via the City or through a third-party consultant), approved by the City of

---

<sup>15</sup> Additionally, the City differentiated between Tier 4 standards (which the City considers final standards) and Transition Program for Equipment Manufacturers (TPEM) standards in the EIR. Thus, the City's language in MM C-1 would not support two Tier 4 standards, final and interim. Under the City's view, there is a Tier 4 standard and a TPEM standard. If the City had intended to include an "interim" Tier 4 standard in the MM, it would have used TPEM. In any event, this distinction provides additional support to the City's intent and the enforceable performance standard used for the MM.

Los Angeles Department of City Planning, who shall be responsible for monitoring implementation of Project design features and mitigation measures during construction activities consistent with the monitoring phase and frequency set forth in this [MMRP]." (AR 143.)

Thus, while MM C-1 could have been more precise, the City's intent is clear, and the MM contains a specific performance standard. Moreover, the Flower Growers have acknowledged MM C-1 requires construction equipment with Tier 4 final standards (or its equivalent) be used for the Project. The MMRP will "ensure compliance during project implementation." (Pub. Resources Code § 21081.6, subd. (a).)

While Petitioner contends the City uses a performance standard addressing only particulate but not NOx emissions (Opening Brief 18:14-19), the court is unpersuaded. MM C-1 requires any construction equipment meet both standards—Tier 4 final and a Level 3 diesel emission control strategy. (AR 849 ["In addition"].)

Based on the foregoing, the court finds the City's determination MM C-1 will be effective at mitigating air quality impacts to a less-than-significant level during construction is supported by substantial evidence.

***a. Feasibility and Enforceability of MM C-1***

According to Petitioner, MM C-1 "does not provide either feasible or enforceable means to ensure significant air quality impacts will be avoided." (Opening Brief 19:5-6.) Petitioner argues MM C-1 is inadequate to ensure avoidance of significant impacts to the air quality "because of practical obstacles in obtaining the required technology." (Opening Brief 19:10-11.)

Petitioner reports while Tier 4 standards have been phased in for construction equipment manufactured since 2008 (Tier 4 Interim) and 2014 (Tier 4 Final), "a large portion of the construction equipment currently in use was manufactured to lower standards." (Opening Brief 19:16-17 [citing AR 2910-2911].)<sup>16</sup> Petitioner contends the City's claim Tier 4 standards construction equipment is readily available is unsupported by substantial evidence. Thus, Petitioner claims the EIR's conclusion supporting feasibility—the availability of equipment—fails.

Petitioner's argument alleging a lack of appropriate construction equipment is based on speculation. Petitioner's reliance on a seven-year-old report from 2014—just after Tier 4 final

---

<sup>16</sup> "In 2014, 25% of all offroad equipment in the state of California were equipped with Tier 2 engines, approximately 12% were equipped with Tier 3 engines, approximately 18% were equipped with Tier 4 Interim engines, and only 4% were equipped with Tier 4 Final engines."

standards phased in—does not meet Petitioner’s burden on the issue. The City’s position “it is reasonable to conclude that the market has produced many more Tier 4-compliant engines” since 2014 is reasonable and appropriate given Petitioner’s speculation. (Opposition 23:2-3.) This is especially true given the passage of time and such equipment being available from all manufacturers. (AR 2806.)

More importantly, if Flower Growers cannot secure specific Tier 4 equipment as required by MM C-1, Flower Growers will be required to “work with the City’s Building and Safety Department on equivalent alternatives that minimize tailpipe emissions from off-road equipment.” (AR 2803.) The term “equivalent” means the Flower Growers must demonstrate the proffered alternative “meets or exceeds” Tier 4 standards thereby meeting necessary emission reductions in NOx and PM2.5. (AR 4303-4304.)

Based on the speculative nature of Petitioner’s claim concerning feasibility, the court finds Petitioner did not meet its burden of demonstrating the City abused its discretion when it found MM C-1 is feasible.<sup>17</sup>

## **2. Air Quality Impacts to Sensitive Receptors**

Petitioner takes issue with the City’s selection and identification of sensitive receptors and their proximity to the Project. The flaw, according to Petitioner, undermines the EIR’s air quality analysis.

Petitioner notes the EIR identifies the “nearest” sensitive receptors at distances of 220 (school), 240 (apartment building), 440 (apartment building) and 700 (apartment building) feet from the Project. (AR 836.) Petitioner reports there is an apartment building within 55 feet of the Project and another closer than 240 feet. (AR 778, 3173, 6874-6875.) Petitioner argues that these omissions are misleading by creating the impression for decisionmakers and the participating public there are few sensitive uses in close proximity to the Project.<sup>18</sup>

To the extent selection of a group of sensitive receptors is a methodology issue, the City is entitled to deference on its methodology.<sup>19</sup> Thus, the decision is subject to substantial evidence review. (*City of Long Beach v. Los Angeles Unified School Dist.* (2009) 176 Cal.App.4th 889, 898.)

---

<sup>17</sup> The court’s finding MM C-1 is effective sufficiently responds to Petitioner’s claim concerning enforceability.

<sup>18</sup> Additionally, Petitioner argues the EIR’s air quality impacts on sensitive receptors is inadequate because it relies on the MM C-1 to render the impact less than significant. Of course, the court’s earlier analysis of MM C-1 would be equally applicable here.

<sup>19</sup> That said, the court is not persuaded the issue is, in fact, a methodology issue.

The City's use of SCAQMD guidance on the issue does not actually support selection issues. That is, nothing in the SCAQMD guidance instructs on selection of sensitive receptors over others. (AR 832-848, 845.) Thus, the SCAQMD guidance is not substantial evidence.

In the EIR, the City "disclose[d] the location of a number of representative sensitive receptors near the Project Site" including residential and non-residential uses. (AR 7232.) The City's response to public comment is instructive:

"Almost all of the other residential uses identified by the commentor are at the same distance from the Project site as the Santee Court Apartments (i.e., the Santee Village Apartments) or even a further distance away from the Project site (i.e., the Garment Lofts are 40 feet further away than the Santee Court Apartments and the Santee Village Lofts are 60 feet further away than the Santee Court Apartments). Moreover, compliance with SCAQMD's thresholds of significance will avoid any significant impact to any of these sensitive receptors and the EIR demonstrates that mitigated construction emissions would be less than all the SCAQMD's thresholds of significance. (Refer to Draft EIR, pages 4.C-19 through 23.) This conclusion would apply regardless of the location of any receptor pursuant to SCAQMD guidance." (AR 7232; see also AR 3570-3571.)

The court finds Petitioner has not met its burden of demonstrating a prejudicial abuse of discretion even assuming the City abused its discretion in its selection of sensitive receptors. Petitioner has not suggested any legal requirement that every sensitive receptor within close proximity of a Project must be identified. "CEQA requires only that the agency 'use its best efforts to find out and disclose all that it reasonably can' (Guidelines, § 15144), and that the EIR display 'adequacy, completeness, and a good faith effort at full disclosure' (Guidelines, § 15151)." (*Planning & Conservation League v. Castaic Lake Water Agency* (2009) 180 Cal.App.4th 210, 253.)

Further, Petitioner fails to demonstrate the City sampling is misleading—other than to the extent the City did not include every single sensitive receptor in close proximity to the Project. The City's expert concluded the Project would avoid significant impacts to all receptors in the vicinity because the Project's mitigated construction emissions will fall below SCAQMD's thresholds measured at the source of the emissions. (AR 3570-3571, 4068, 7232.)

Petitioner does not suggest with evidence the EIR's analysis and conclusions would be different with respect to the omitted sensitive receptors as opposed to the receptors the City considered and analyzed. Accordingly, Petitioner shows no prejudicial abuse of discretion.

### **3. Disclosure of Health Risks Associated with Air Quality Impacts**

Petitioner argues the Project fails to adequately discuss the connections between potential pollutant emissions and resulting human health impacts. Such analysis, Petitioner contends, is required by Guidelines section 15126.2, subdivision (a).

Petitioner asserts the EIR failed to discuss the health risks related to the estimated level of construction and operational emissions. (AR 827-850.) The EIR therefore does not comply with the Supreme Court's direction in *Friant Ranch* that a "[p]roject's health effects must be "clearly identified" and the discussion must include "relevant specifics" about the environmental changes attributable to the Project and their associated health outcomes." (*Friant Ranch, supra*, 6 Cal.5th at 518.)

Further, Petitioner argues the City's 2019 Health Risk Assessment (HRA) does not "fill the gap in the EIR's analysis." (Opening Brief 23:28.) The HRA contains no analysis of operational emissions and merely addresses construction-related emissions of diesel particulate matter. (AR 846.)

Under SCAQMD guidance, an HRA is recommended for "substantial sources of diesel particulate emissions (e.g., truck stops and warehouse distribution facilities) . . . ." (AR 846.) The City determined—and there is no challenge to the City's finding—the "Project would not result in any substantial emissions of toxic air contaminants (TAC) during the construction or operations phase." (AR 846.)

The EIR explains:

"The Project would not result in any substantial emissions of toxic air contaminants (TACs) during the construction or operations phase. During the construction phase, the primary air quality impacts would be associated with the combustion of diesel fuels, which produce exhaust-related particulate matter that is considered a toxic air contaminant by CARB based on chronic exposure to these emissions. However, construction activities would not produce chronic, long-term exposure to diesel particulate matter. During long-term project operations, the Project does not include typical sources of acutely and chronically hazardous TACs such as industrial manufacturing processes and automotive repair facilities. As a result, the Project would not create substantial concentrations of TACs. In addition, the SCAQMD recommends that health risk assessments be conducted for substantial sources of diesel particulate emissions (e.g., truck stops and warehouse distribution facilities) and has provided guidance for analyzing mobile source diesel emissions. The Project would not generate a substantial number of truck trips. Based on the limited activity of TAC sources, the Project would not

warrant the need for a health risk assessment associated with on-site activities. Therefore, Project impacts related to TACs would be less than significant.” (AR 846; see also AR 2964-66.)

Contrary to Petitioner’s position, *Friant Ranch*, does not require more from the City. The Project does not exceed any SCAQMD significance threshold for air quality impacts or trigger any criteria requiring an HRA.

Petitioner has not met its burden of demonstrating a prejudicial abuse of discretion based on a failure to adequately discuss the connections between potential pollutant emissions and resulting human health impacts.<sup>20</sup>

### **Noise Impacts:**

Petitioner contends the EIR fails to adequately analyze and mitigate construction-related environmental impacts as to noise.

#### ***1. Disclosure of Impacts to Sensitive Receptors***

Petitioner takes issue with the EIR’s purported failure to analyze the construction-noise impacts at the Textile Building Lofts, a location merely 55 feet from the Project. The EIR does not contain any noise analysis to any sensitive receptors at this location. In fact, the first discussion by the City about the noise impacts to the Textile Building Lofts is contained in Erratum No. 3. (AR 3173, 3342-3343.)

Petitioner contends the City’s analysis is flawed. Petitioner believes the daytime ambient noise level of 64.8 dBA, based on measurements on Maple Avenue, is overstated for the Textile Building Lofts. (AR 3343.) The City’s inaccurate 64.8 dBA daytime noise level assumption, according to Petitioner, led to a conclusion of only a 1.3 dBA daytime noise level increase such that the Project’s construction-noise impacts did not exceed the 5 dBA level noise increase significance threshold. (AR 3343.)

Based on expert opinion, however, Petitioner reports the City’s ambient noise level determination failed to take into account the 12-story height of the Textile Building Lofts. Higher stories have lower ambient noise levels. (AR 10085-10086 [identifying ambient noise is as low as 58.5 for the twelfth floor].) The daytime ambient noise levels are not the same “for all floors of the Textile Building [Lofts] because the higher floors are farther from the road traffic than lower floors.” (AR 10085.) Thus, the City’s conclusion construction-noise related impacts

---

<sup>20</sup> Petitioner appears to have abandoned the argument in reply.

to the Textile Building Lofts is flawed—it is based on an “unsupported assumption about existing ambient noise levels.” (Opening Brief 25:15-16.)

The City’s expert does not address the ambient daytime noise level for the higher floors of the Textile Building Lofts. The City’s expert did consider the building, however, using the same methodology used in the DEIR. (AR 4305.) The City’s expert determined the Textile Building Lofts would experience an increase in noise based on construction of 1.3 dBA (or less). (AR 3173-74, 7229.)

Further, Project construction-related noise impacts are expected to remain below the City’s 5 dBA significance threshold. (AR 3343, 7229.) In a June 19, 2019 memorandum, the City’s noise expert explained:

“[T]his [Maple Street for the Textile Building Lofts] baseline noise level is far greater than the 50.8 dBA  $L_{eq}$  noise level used to represent baseline conditions at the Santee Court Apartments receptor. Utilizing the same construction source and mitigation assumptions that were used for the Santee Court Apartments analysis, as Textile Building Lofts would benefit from the same mitigation measures intended to reduce construction noise impacts at Santee Court Apartments, Textile Building Lofts would be projected to experience a construction-related noise increase of just 1.3 dBA  $L_{eq}$ , similar to but less than the 1.6 dBA  $L_{eq}$  impact that would occur at Santee Court Apartments. The noise impact at Textile Building Lofts would not exceed the 5 dBA noise increase threshold; in fact, it would not exceed the 3 dBA  $L_{eq}$  threshold of perceptibility that represents when noise conditions may be noticeably louder.” (AR 7229.)

While Petitioner relies expert opinion to dispute and contradict the City’s expert technical report, Petitioner has not demonstrated the City’s expert studies are so “clearly inadequate or unsupported” as to be “entitled to no judicial deference.” (See *Laurel Heights Improvement Assn. v. Regents of University of California* (1988) 47 Cal.3d 376, 409 fn. 12. [“A clearly inadequate or unsupported study is entitled to no judicial deference.”]) “When an agency is faced with conflicting evidence on an issue, it is permitted to give more weight to some of the evidence and to favor the opinions of some experts over others. (*Association of Irrigated Residents v. County of Madera* (2003) 107 Cal.App.4th 1383, 1397.)

Accordingly, Petitioner failed to meet its burden of demonstrating a prejudicial abuse of discretion related to the City’s analysis of construction-related noise impacts. (See *State Water Resources Control Bd. Cases* (2006) 136 Cal.App.4th 674, 795. [“The party challenging the EIR, however, bears the burden of demonstrating that the studies on which the EIR is based ‘are clearly inadequate or unsupported.’ ”])

## **2. Feasibility and Effectiveness of MM I-1 and I-2**

Petitioner argues MM I-1 and I-2 are vague, ineffective and unenforceable.

### **a. MM I-1**

“To ensure that the Project’s construction-related noise levels do not exceed 75 dBA and that construction-related noise increases at Santee Court Apartments do not exceed 5 dBA,” the City adopted MM I-1. MM I-1 provides “[a]ll capable diesel-powered construction vehicles shall be equipped with exhaust mufflers or other suitable noise reduction devices.” (AR 1011.)

Petitioner contends MM I-1 does not establish a performance standard because nothing in the mitigation measure sets a required noise level reduction. Petitioner argues muffler use alone does not ensure MM I-1 will achieve any particular level of mitigation. Petitioner asserts “the fact that exhaust mufflers should or could reduce equipment noise by 3 dBA or more doesn’t address the fact that the measure, as written, does not require mitigation at that level and therefore does not ensure that level of mitigation will be achieved, as is necessary to support the finding of no significant impacts from construction noise.” (Opening Brief 28:18-22.)

As noted earlier, “For projects for which an EIR has been prepared, where substantial evidence supports the approving agency’s conclusion that mitigation measures will be effective, courts will uphold such measures against attacks based on their alleged inadequacy.” (*Sacramento Old City Assn. v. City Council*, *supra*, 229 Cal.App.3d at 1027.)

The City contends MM I-1 as written will be effective. The use of mufflers to abate noise impacts is considered “best practices” and recommended under the City’s CEQA threshold guide. (AR 2773, 2786-2787, 7299, 10131-10132 [EPA’s Office of Noise Abatement and Control Study], 10139.)<sup>21</sup> In addition, the City’s noise expert confirmed the use of mufflers as required by MM I-1 would achieve a 3 dBA noise reduction. (AR 3085-3086, 10139-10140.) The expert explained “aftermarket mufflers reduce noise by over 3 dBA. (AR 10139.) In addition, the Project’s MMRP requires the Flower Growers to retain an independent Construction Monitor, approved by the City, responsible for: (a) ensuring that “capable” mufflers are used during construction; and (b) documenting compliance. (AR 2848-2849.)

While the court agrees MM I-1 does not contain a specific performance standard, it does mandate the use of certain equipment that does have performance standards. Substantial evidence supports the City’s conclusion the use of mufflers will be effective at reducing noise levels by at least 3 dBA. The City’s noise expert reviewed aftermarket muffler manufacturer

---

<sup>21</sup> The EPA study, upon which the City’s CEQA Threshold Guide relies, shows that “equipment mufflers should reduce excavation and grading phase noise levels by 3 dBA. (AR 10131.)

specification materials to reach his conclusion mufflers result in noise reductions exceeding 3 dBA. An EPA study also supports the City's conclusion.

Accordingly, the City's conclusion MM I-1 will be effective with a sufficiently clear performance standard (by virtue of the equipment used) is supported by substantial evidence. (Guidelines § 15384, subd. (b).)

***b. MM I-2***

"To ensure that the Project's construction-related noise levels do not exceed 75 dBA and that construction-related noise increases at Santee Court Apartments do not exceed 5 dBA," the City adopted MM I-2. MM I-2 requires "[t]emporary sound barriers capable of achieving a sound attenuation of at least 15 dBA shall be erected along the Project's boundaries facing Santee Court Apartments. Temporary sound barriers capable of achieving a sound attenuation of at least 6 dBA shall be erected along all other Project construction boundaries." (AR 1011.) MM 1-2 requires sound barriers at the Project's boundaries.

Again, Petitioner contends the MM is vague, ineffective and unenforceable.

First, Petitioner asserts achieving a sound attenuation of 15 dBA is so vague it is ineffective; the mitigation measure does not specify from where the sound attenuation is to be judged. As written, the mitigation measure would allow sound attenuation to be evaluated at the Project boundaries instead of a sensitive receptor's location. To the extent sound attenuation is to be measured at the sensitive receptor, it may allow measurement from street level ignoring impacts at higher floors. Higher floor sound attenuation is important as the efficacy of sound barriers to shield higher floors in a building is questionable.<sup>22</sup>

Second, Petitioner argues sound barriers erected along the Project boundaries will be ineffective as they would be too far from construction equipment to effectively reduce noise.<sup>23</sup>

The City dismisses Petitioner's arguments as "wordsmithing." (Opposition Brief 35:5.) The City explains the EIR supports the conclusion that noise barriers with a transmission loss value of 25 dBA are capable of achieving the required noise reduction of 15 dBA at the identified sensitive receptors. (AR 2787, 3085-3086.) Moreover, the City's noise expert explains:

---

<sup>22</sup> Petitioner reports sound is most audible when it travels by direct line of sight. Sound barriers are largely ineffective if they do not break the line of sight between the source and receiver. (AR 992.) The City does not seem to dispute this notion.

<sup>23</sup> Petitioner explains sound barriers are most effective when they are very close to either the source or the receiver and become less effective with greater distance from the noise-producing equipment. (AR 10082.)

"The level topography of the South Building site and single proposed sub-grade level would allow for the easy positioning and movement of these barriers to shield construction activities, no matter where they may occur on-site. There are numerous free-standing temporary noise barrier systems used in the industry up to 24 feet in height that may be positioned manually or by vehicles such as construction forklifts and/or loaders." (AR 10140; see also AR 7299.)

The City's response actually concedes the flaw in the efficacy of MM I-2 as it is written. Effective mitigation to sensitive receptors requires the noise barrier systems to be moved. The City argues MM I-2 is effective because "the noise barriers are *moveable*, meaning that they move in concert with any piece of construction equipment to ensure the equipment does not operate with an unobstructed line of sight to a receptor." (Opposition Brief 35:15-17.) The City recognizes the barriers must be moveable "to shield construction activities, no matter where they occur onsite." (Opposition Brief 35:18-19.)

Despite the City's recognition the noise barriers must be moved throughout the Project during construction to effectively mitigate construction-related noise, MM I-2 does not require such movement. It is not about wordsmithing—it is about enforceability and efficacy. The City's attempts to distinguish between "Project boundaries" and "property boundaries" is unpersuasive.<sup>24</sup> Such a distinction—if there is one—does not resolve the ambiguity. Nothing in MM I-2 requires any noise barriers to be moved.<sup>25</sup>

Accordingly, the court finds substantial evidence does not support the City's conclusion MM I-2 is an effective mitigation measure.

## CONCLUSION

Based on the foregoing, the petition is granted.

During argument, the Flower Growers suggested the court should address remedies if the court granted the petition. "In most cases, when a court finds that any agency has violated CEQA in approving a project, it issues a writ of mandate requiring the agency to set aside its CEQA determination, to set aside the project approvals, and to take specific corrective action before it considers approving the project." (*King & Gardiner Farms, LLC v. County of Kern* (2020) 45 Cal.App.5th 814, 896.)

---

<sup>24</sup> In the EIR, the City defines the Project boundaries as approximately 3.87 acres consisting of one block. It would seem the "Project boundaries" are, in fact, the property boundaries. (AR 748.)

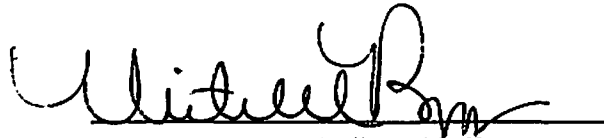

<sup>25</sup> Given the comments raised concerning the barriers and the timing of the comments, there are issues of feasibility given barrier mobility issues. (AR 10076.)

The court believes an order consistent with most CEQA writ petition cases is appropriate. Flower Growers, however, may submit an objection to the judgment if it has an objection to the usual order of requiring the City to set aside the project approvals.

Petitioner shall submit a proposed form of judgment with service on all parties.

**IT IS SO ORDERED.**
