A combination of the measures in **Table 3** would be sufficient to accomplish the required reduction. Note that the Project could further reduce emissions by implementing other measures not quantified in this analysis, however, as these measures are not quantifiable currently, they are not eligible for additional GHG reductions at this time. However, should they become quantifiable in the future with supporting substantial evidence, this GHG Reduction Plan may be amended subject to City approval. **Appendix A Table 11** describes additional measures that have been suggested either as Scoping Plan Local Actions or as example mitigation measures from the City but were not explicitly incorporated into this analysis. For example, the Project will likely be consistent with many other suggested measures through compliance with 2019 Title 24 as follows; however, it is uncertain which of the specific measures will be used to demonstrate compliance. This includes measures such as installing energy-conserving appliances; orienting buildings to maximize passive solar heating; equipping buildings with energy efficient AC units and heating systems with programmable thermostats/timers; requiring the use of energy-efficient lighting for all street, parking, and area lighting; and including energy storage, where appropriate.

3.4.3 Demonstration of Compliance with MM GHG-2

Table 4 shows a list of mitigation measures or project design features that the project will adopt that were suggested as potential measures for GHG-2. **As shown in Table 4, the Project will include many of the suggested Local Actions from the 2017 Scoping Plan and therefore satisfies the requirement of MM GHG-2.**

Table 4: Project GHG Reduction Measures from Scoping Plan Examples

Description [a,b]	Scoping Plan Local Action? (MM GHG-2)
Enforce idling time restrictions for construction vehicles.	X
Require on-site EV charging capabilities for parking spaces serving the project to meet jurisdiction-wide EV proliferation goals.	X
Provide on- and off-site safety improvements for bike, pedestrian and transit connections, and implement relevant improvements identified in an applicable bicycle and/or pedestrian master plan.	X
Require on-site renewable energy generation.	X
Prohibit wood-burning fireplaces in new development.	X
Require solar-ready roofs.	X
Require organic collection in new developments.	X

Table 4: Project GHG Reduction Measures from Scoping Plan Examples

Description [a,b]	Scoping Plan Local Action? (MM GHG-2)
Require low-water landscaping in new developments. Require water efficient landscape maintenance to conserve water and reduce landscape waste.	X
Require the design of bike lanes to connect to the regional bicycle network.	X
Require the design of the electric outlets and/or wiring in new residential unit garages to promote electric vehicle usage.	X
Require each residential unit to be "solar ready," including installing the appropriate hardware and proper structural engineering.	X
Require each residential and commercial building to utilize low flow water fixtures such as low flow toilets and faucets.	X
Zero Net Electricity – Residential - Project produces enough renewable electricity on annual basis to offset all electricity used by residential land uses.	X
Improve onsite pedestrian access	X

Notes:
a. While some of these measures not explicitly described in this GHG Reduction Plan because the benefits are not quantified, they are regulatory requirements that are included as part of the Project.
b. The Project will likely be consistent with many other suggested measures through compliance with 2019 Title 24 as follows; however, it is uncertain which of the specific measures will be used to demonstrate compliance, e.g., energy-conserving appliances; orient buildings to maximize passive solar heating; equip buildings with energy efficient AC units and heating systems with programmable thermostats/timers; require the use of energy-efficient lighting for all street, parking, and area lighting; and include energy storage, where appropriate.

4. HEALTH RISK ASSESSMENT

Appendix B provides details of the methodology and results of the Project HRA. With respect to the Project, the BAAQMD thresholds of significance for construction, operational, and cumulative risks and hazards are shown in **Table 5.**

Table 5. BAAQMD CEQA Thresholds of Significance for HRA

Other Impacts	**Construction or Operational-Related Thresholds**
Risks and Hazards for New Sources and Receptors (Individual Project)	Compliance with Qualified Community Risk Reduction Plan OR Increased cancer risk of >10.0 in a million Increased non-cancer risk of > 1.0 HI (chronic or acute) Ambient $PM_{2.5}$ increase: > 0.3 µg/m^3 annual average
Risks and Hazards for New Sources and Receptors (Cumulative Threshold)	Compliance with Qualified Community Risk Reduction Plan OR Increased cancer risk of >100 in a million (from all local sources) Increased non-cancer risk of >10 HI (from all local sources) (chronic) Ambient $PM_{2.5}$ increase: > 0.8 µg/m^3 annual average (from all local sources) Zone of Influence: 1,000-foot radius from fence line of source or receptor

Abbreviations:
HI = hazard index
$PM_{2.5}$ = particulate matter less than 2.5 micrometers in diameter
µg/m^3 = micrograms per cubic meter

The HRA includes several components. It includes refined dispersion modeling using the US Environmental Protection Agency (USEPA)'s preferred model AERMOD, that when combined with construction activity from the DEIR and Project-specific off-road equipment data, shows that health risk impacts to off-site sensitive receptors would be below the significance thresholds. For operations, the HRA evaluates the impacts of Project traffic at nearby sensitive receptors and shows that this would not increase risks above the BAAQMD's significance thresholds, nor would the combined Project construction plus operations exceed the thresholds. Finally, the HRA evaluates potential cumulative impacts due to Project construction and operation, plus nearby existing stationary sources, traffic, and other nearby projects. This also concludes that impacts would be well below the BAAQMD's cumulative health risk significance thresholds.

5. SUMMARY AND IMPLEMENTATION

This report concludes that the Project's operational criteria pollutant emissions, and construction and operational health risk impacts are less than significant and GHG emissions are less than significant with mitigation.

APPENDIX A
SUPPORTING CALCULATIONS

Appendix A Table 1
Consumer Product Emission Factor Refinement
Bridle Gate
Brentwood, CA

Year[1]	Consumer Products VOC inventory (tons/day)[2]	Contra Costa County Population[3]	Total Building Square Footage[4]	Consumer Products VOC Emission Factor (lb/square foot/day)
2010	6.50	1,049,025	760,649,629	1.71E-05
2020	6.83	1,165,927	845,415,448	1.62E-05

Notes:

1. 2010 data are used because total building square footage was available only for 2010. Building square footage for 2020 was estimated by multiplying 2010 building square footage with the ratio of population in 2020 to that in 2010.
2. VOC inventory obtained from California Air Resources Board's emission inventory for Consumer Products under Solvent Evaporation for the respective years.
3. Population estimates obtained from US Census Bureau's QuickFacts for Contra Costa County for the respective years.
4. Total building square footage of Contra Costa County for 2010 obtained from FEMA HAZUS-MH software.

Abbreviations:

lb - pound

VOC - Volatile Organic Compound

Criteria Air Pollutant Energy Emission Factors'

Land Use Type	ROG	NOx	PM_{10}	$PM_{2.5}$	Units
Residential	0.011	0.092	0.0075	0.0075	lb/MMBtu
Nonresidential	0.011	0.10	0.0075	0.0075	lb/MMBtu

Notes:

1. This average uses the most recent three years of data.
2. Total CO_2 intensity factors from The Climate Registry. Available at: https://www.theclimateregistry.org/our-members/cris-public-reports/. Accessed: April
3. Percent of total energy from eligible renewables is from the PG&E 2017, 2018, and 2019 Corporate Responsibility Report.
4. The emissions metric presented here was calculated based on the total CO2 intensity factor divided by the percent of energy delivered from non-RPS-eligible sources. This CO2 intensity factor includes both fossil fuel and carbon-free sources of energy, such as largescale hydro and nuclear. Diablo Canyon Nuclear Plant, which accounts for a portion of the carbon-free energy in this CO2 intensity factor, is planned to be closed by 2024-2025 (https://www.pge.com/en_US/safety/how-the-system-works/diablo-canyon-power-plant/diablo-canyon-power-plant/engagement-panel.page). According to SB 1090 (approved 9/2018), "The [California Public Utilities] commission shall ensure that integrated resource plans are designed to avoid any increase in emissions of greenhouse gases as a result of the retirement of the Diablo Canyon Units 1 and 2 powerplant." This was incorporated into CPUC section 712.7(2)(b). Based on this information, the total Non-RPS-Eligible energy CO2 intensity factor was assumed to remain constant.
5. The RPS of 44% by 2024, 52% by 2027, and 60% for 2030 are consistent with SB 100. The RPS for 2026 was estimated by assuming a linear increase between 2020 and 2027. Available at: https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201720180SB100. The average percentage of energy from renewables for 2016-2018 is greater than the 2020 RPS of 33% as required by SB100. Thus, it is assumed that the 2016-2018 average CO2 and CO2e intensity factors remain constant through 2020, at which point the carbon intensity then decreases each year to comply with the future RPS requirements.
6. Global Warming Potentials (GWP) are based on the IPCC Fourth Assessment Report. CH4 and N2O emission factors are from the CalEEMod® version 2020.4.0 defaults for PGE, and are conservatively assumed not to change from these estimates. As more renewable energy is integrated into the electricity grid, these intensity factors will also decrease.
7. Natural Gas Use emission factors from Table 8.2 of CalEEMod User's Guide Appendix D.

Appendix A Table 2
PG&E Electricity Intensity Factor Derivation
Bridle Gate
Brentwood, CA

Abbreviations:

CalEEMod - California Emissions Estimator Model
CH_4 - methane
CO_2 - carbon dioxide
CO_2e - carbon dioxide equivalents
CPUC - California Public Utilities Commission
GWP - global warming potential
lb - pound(s)
MMBtu - million British Thermal Units
MT - metric ton(s)
MWh - megawatt-hour
N_2O - nitrous oxide
NO_x - nitrogen oxides
PCE - Peninsula Clean Energy
PG&E - Pacific Gas & Electric
PM - particulate matter
$PM_{2.5}$ - PM less than 2.5 microns in diameter
PM_{10} - PM less than 10 microns in diameter
ROG - reactive organic gases
RPS - Renewable Portolio Standard
SB - Senate Bill

Notes:

1. Emission factors for each fleet mix are based on EMFAC2021 for the Bay Area Air Quality Management District.
2. RUNEX emission factors are in units of g/mile. IDLEX and STREX emission factors are in units of g/trip.

Abbreviations:

A - Annual
CARB - California Air Resources Board
CH_4 - methane
CO_2 NBIO - carbon dioxide, non-biogenic
EMFAC - On-Road Emission Factor Model
g- gram
HHD - heavy-heavy duty trucks
IDLEX - idle exhaust emissions
LDA - light-duty automobiles
LDT - light-duty trucks
LHD1 - light-heavy-duty trucks, 8,501-10,000 lbs
LHD2 - light-heavy-duty trucks, 10,001-14,000 lbs
MCY - motorcycles
MHD - medium-heavy duty trucks
OBUS - other buses
RUNEX - running exhaust emissions
SAFE - Safer Affordable Fuel-Efficient Vehicles
SBUS - school buses
STREX - start exhaust tailpipe emisions
UBUS - urban buses

Notes:

1. Emission factors for each fleet mix are based on EMFAC2021 for the Bay Area Air Quality Management District.
2. RUNEX emission factors are in units of g/mile. IDLEX and STREX emission factors are in units of g/trip.

Abbreviations:

A - Annual
CARB - California Air Resources Board
CH_4 - methane
CO_2 NBIO - carbon dioxide, non-biogenic
EMFAC - On-Road Emission Factor Model
g- gram
HHD - heavy-heavy duty trucks
IDLEX - idle exhaust emissions
LDA - light-duty automobiles
LDT - light-duty trucks
LHD1 - light-heavy-duty trucks, 8,501-10,000 lbs
LHD2 - light-heavy-duty trucks, 10,001-14,000 lbs
MCY - motorcycles
MHD - medium-heavy duty trucks
OBUS - other buses
RUNEX - running exhaust emissions
SAFE - Safer Affordable Fuel-Efficient Vehicles
SBUS - school buses
STREX - start exhaust tailpipe emisions
UBUS - urban buses

Appendix A Table 4
Entrained Dust and Silt Loading in Contra Costa County
Bridle Gate
Brentwood, CA

Entrained Roadway Dust Constants for Contra Costa County		
Roadway Category	**Silt Loading[1] (g/m^2)**	**Travel Fraction[1]**
Freeway	0.015	50%
Major	0.032	37%
Collector	0.032	9%
Local	0.32	4%
Weighted Silt Loading Factor	0.035	100%

Road Dust Equation[2]

E [lb/VMT] = k*(sL)^0.91 * (W)^1.02 * (1-P/4N)

Parameters	**Value**
k = particle size multiplier for particle size range	
PM_{10} (lb/VMT)	0.0022
$PM_{2.5}$ (lb/VMT)	3.3E-04
sL = roadway silt loading [grams per square meter - g/m^2]	0.035
W = average weight of vehicles traveling the road [tons]	2.4
P = number of "wet" days in county with at least 0.01 in of precipitation during the annual averaging period	65
N = number of days in the averaging period	365

Entrained Road Dust Emission Factors	
PM_{10} Emission Factor [lb/VMT]	2.4E-04
$PM_{2.5}$ Emission Factor [lb/VMT]	3.6E-05

Notes:

1. Travel fraction by roadway category and silt loading are from the ARB's March 2021 update to Entrained Road Travel Emission Inventory Source Methodology, Tables 2 and 4, respectively.
2. Road dust equation and parameters are from the California Air Resources Board's (ARB) March 2021 Miscellaneous Process Methodology 7.9 for Entrained Road Travel, Paved Road Dust. The silt loading emission factor assumes Contra Costa county default roadway fractions and silt loading levels from ARB 2021. The number of "wet" days for Contra Costa county is 65 from ARB 2021. Other parameters (average weight of vehicles, size multipliers) are from ARB 2021. $PM_{2.5}$ is assumed to be 15% of PM_{10} based on paved road dust sampling in California (ARB Speciation Profile #471), which is a more representative fraction than provided in the older AP-42 fugitive dust methodology as discussed in ARB 2021 (PDF pages 17 and 36).

Abbreviations:

ARB - California Air Resources Board
CalEEMod® - California Emissions Estimator Model
EMFAC - EMission FACtor Model
g - gram
lb - pound
m - meter
$PM_{2.5}$ - particulate matter less than 2.5 microns
PM_{10} - particulate matter less than 10 microns
VMT - vehicle miles traveled

Appendix A Table 5
Details on GHG Reductions from Regulations, Project Design Features, and Mitigation Measures
Bridle Gate
Brentwood, CA

#	Category	Description	Assumptions	GHG Reduction ($MT CO_2e/yr$)	Notes	Scoping Plan Local Action?
1	Energy	Energy Star[1]	Energy efficient appliances are installed	3.2		
2	Energy	Zero Net Electricity Low-Rise Residences[2]	All single family homes and low-rise apartments achieve Zero Net Electricity	146	2019 Title 24 requirement.	X
3	Energy	No-NOx space and water heating	All structures within the project site shall be developed with water heating and space heating systems that do not result in the emission of NO_x. No-NO_X systems are typically all-electric.	291	Assumes that water and space heating are replaced with electric appliances served with grid-average electricity. Calculations are shown in Appendix A Tables 7 and 8.	
4	Energy	Design for All-Electric Retrofits	Design structures with the infrastructure necessary to allow for the conversion of all natural gas appliances to all-electric equivalents.	-	Conservatively, no GHG benefit has been quantified due to uncertainty on when retrofits would occur.	
5	Mobile	Traffic Calming and Connectivity[1]	Traffic calming features at 25 percent of streets and intersections, the Project's extensive bicycle and pedestrian network and connectivity on-site and off-site	103	Calculated in CalEEMod.	
6	Mobile	Residential Electric Vehicles	Install electric vehicle charging station outlets in all single family garages.	460	Assumes Level 2 charging (standard 30-40A, 220V). This assumes 25% of single family residential miles are driven in EVs by 2030. Details are shown in Appendix A Table 9.	X
7	Area	Electrify landscaping equipment[1]	Provide outdoor electrical outlets to allow for use of electrically powered landscaping equipment at all residences and commercial developments within the project site.	1.1	Quantified using CalEEMod. No further reduction was included to account for the inclusion of outside electrical outlets.	X
8	Waste	Institute Recycling & Composting Services[1]	Divert additional solid waste from landfills	86	An additional 50% diversion from CalEEMod default rates is reflected in the Mitigated Scenario, which is based on Statewide historical data with a target 50% diversion rate. AB 341 requires 75% diversion by 2020. Chapter 8.16 of the City's Municipal Code requires that all property owners maintain a subscription for refuse collection. Refuse collection is provided by the City of Brentwood's Solid Waste Division, which includes green waste collection. Acceptable green wastes include yard clippings, uncooked food, branches, and other forms of yard waste.	X
9	Water	Water Efficient/Drought Tolerant Landscaping[1]	Reduce outdoor water consumption	0.8	Landscaping within the project site would be required to comply with the CALGreen code and all water efficiency measures therein, including the MWELO regulations adopted by the City if Brentwood in Section 17.630.010 of the Brentwood Municipal Code. This assumes a 20% reduction in outdoor water consumption, which is reflected in the mitigated CalEEMod scenario.	
10	Water	Low-Flow Fixtures[3]	Use low-flow for all interior water fixtures (toilets, kitchen and bathroom sink faucets)	1.3	The Project would be required to comply with the water efficiency regulations within CALGreen. This assumes a 20% reduction in indoor water consumption.	X
11	Construction	Renewable Diesel	Use renewable diesel to fuel construction fleets	156	100% of off-road construction emissions, 30-year amortized	X
12	Vegetation	Urban Forestry/Sequestration	Plant trees throughout the Project site	6.7	Assumes a minimum of 286 net new trees will be planted.	X
			Unmitigated Project Emissions	3,110		
			Reductions Needed to Achieve BAAQMD 2030 Service Population Threshold	855		
			Emissions Reductions from Regulatory Measures, Project Design Features, and Mitigation	1,256	As summarized above; this exceeds the required reductions.	
			Remaining Emissions	1,854		
			Remaining Emissions Exceed Threshold?	No		

Notes:
1. Quantified using CalEEMod® version 2020.4.0. CalEEMod outputs are included in Appendix C.
2. Calculated using CalEEMod® inputs and outputs in Excel.
3. Calculated using CalEEMod® methodology in Excel, as shown in Appendix A tables.

Abbreviations:
BAAQMD - Bay Area Air Quality Management District
CalEEMod - California Emissions Estimator Model
CO2e - carbon dioxide equivalents
GHG - greenhouse gas

Appendix A Table 6
Reductions from Reduced Indoor Water Consumption
Bridle Gate
Brentwood, CA

Category		Project
Total Indoor Water Use (Mgal/yr)[1]		19
Reduction due to CalGreen (Low-Flow Fixtures)[2]		20%
Electricity Intensity Factors (kWh/Mgal)[3]	Supply	2,117
	Treat	111
	Distribute	1,272
	Treat Wastewater	1,911
Reduction in Total Annual Energy Use (kWh/yr)[4]		20,166
Electricity Intensity Factor[5]	lbs CO_2e/MWh	147
Total GHG Emissions Reduction (MT CO_2e/yr)[6]		1.3

Notes:

Indoor water usage is from the CalEEMod outputs.

CalEEMod® is meant to assume reductions ranging from 20% to 35%, but due to an error within the CalEEMod programming, it does not calculate any reductions due to this measure; therefore, this has been conservatively calculated here.

CalEEMod® default assumptions are used for average embodied energy for the supply, treatment and distribution of water, as well as treatment of wastewater, for Northern California.
For potable water, the water use is multiplied by the sum of the electricity intensity factors to supply, treat and distribute the water and treat the resulting wastewater.

California emission factors presented here are 60% projected RPS for 2030 consistent with SB 100. Available at:
https://leginfo.legislature.ca.gov/faces/billNavClient.xhtml?bill_id=201720180SB100

GHG emissions reductions were calculated by multiplying the annual energy use by the electricity intensity factor and then by the reduction due to CalGreen. This calculation conservatively excludes the direct GHG emissions reductions that would result from less wastewater treatment.

Abbreviations:

CalEEMod® - CALifornia Emissions Estimator MODel
CH_4 - methane
CO_2 - carbon dioxide
CO_2e - carbon dioxide equivalents
GHG - greenhouse gases
kWh - kilowatt-hour
lb - pound
Mgal - million gallons
MWh - megawatt-hou
MT - metric tonnes
RPS - Renewables Por
SB - Senate Bill
yr - year

Appendix A Table 7
Electricity and Natural Gas End Use Proportions
Bridle Gate
Brentwood, CA

Residential Energy Use Categories[1]

Gas[2]	**Appliance Group**	**Percent of Primary Natural Gas Energy Uses**
		Single Family Units
	Water Heaters	47%
	Conventional Heat	44%
	Cooking (Oven + Cooktop)	9%
	Total (Water Heater, Conventional Heat, & Cooking)	100%
Electric	**Appliance Group**	**Energy Use per Dwelling Unit (kWh/DU/year)**
		Single Family Units
	Water Heaters	3,169
	Conventional Heat	1,171
	Cooking (Oven + Cooktop)	310
	Total (Water Heater, Conventional Heat, & Cooking)[3,4]	**4,650**

Notes

1. Residential energy consumption data is provided per appliance type by the California Energy Commission (CEC) 2009 Residential Appliance Saturation Study. The CEC began an updated survey in 2019, but results are not yet publicly available.

2. Natural Gas Energy Consumption estimates are presented only for homes with natural gas billing data. Due to variability in saturation rates of other natural gas appliances (e.g., spa heaters, auxiliary heating, gas dryers), these totals are assumed to sum to 100% for use in this methodology. If the projects only electrify certain appliances and therefore use these percentages to calculate reductions from CalEEMod defaults, this is assumed to be a reasonable representation because the current Title 24 Building Energy Efficiency Standards are expected to reduce natural gas use more than what is reflected in the CalEEMod defaults.

3. For projects that commit to one or more of the appliance groups to be electric, the electricity use can be increased by just the rate shown for the relevant appliance groups and the natural gas use can be reduced by the percent of natural gas from the appliance groups shown above.

4. Space heating and water heating are included in the Title 24 electricity and Title 24 natural gas energy usage categories of CalEEMod, while cooking and appliances are included in the non-title 24 electricity and natural gas energy usage categories.

Abbreviations

CalEEMod - California Emissions Estimator Model

Appendix A Table 8

Reductions from Electric Space and Water Heating; and Potential Additional Reduction for All-Electric Buildings

Bridle Gate

Brentwood, CA

.

Project Reduction in Natural Gas Usage and Resulting Electricity Consumption

Land Use	Amount	2019 Title 24-Adjusted CalEEMod Default NG Usage (kBTU/unit/yr)[1]	Natural Gas Reduction (MMBTU/yr)[1]		Additional Electricity Usage (MWh/yr)[1]	
			All-Electric[3]	Mitigated Project[3]	All-Electric[3]	Mitigated Project[3]
Single Family Housing	286 DU	26,630	7,616	6,955	1,330	1,241
City Park	4 acre	0	0	0	0	0

Estimated Emissions

CalEEMod® Land Use	GHG Emissions (MT CO_2e/yr)					
	Emissions for All-Electric Buildings[2,3]			Mitigated Project Emissions		
	Reduction from Natural Gas	Emissions from Additional Electricity	Net Emissions Reduction for All-Electric	Reduction from Natural Gas	Emissions from Additional Electricity	Net Emissions Reduction from Project
Single Family Housing	409	89	320	373	83	291
City Park	0	0	0	0	0	0
Total	**409**	**89**	**320**	**373**	**83**	**291**

Notes:

1. Energy use rates are consistent with CalEEMod default estimates and incorporate 2019 Title 24. The reduction in natural gas usage and corresponding increase in electricity usage are estimated based off of the natural gas end use analysis shown in Appendix A Table 7, which is the same methodology recently promulgated by the SMAQMD.
2. The natural gas emission factor is from CalEEMod® 2020.4.0. The electricity intensity is shown in Appendix A Table 2.
3. The Mitigated Project will include all-electric space and water heating. Emissions reductions for an all-electric project (e.g., removing cooking and miscellaneous other natural gas end uses) are also calculated here to support the potential for the Alternative Mitigation Measure.

SMAQMD - Sacramento Metropolitan Air Quality Management District
TSF - thousand square feet
yr - year

Appendix A Table 9
Reductions from Electric Vehicle Charging Infrastructure in Single Family Homes
Bridle Gate
Brentwood, CA

Estimating GHG Emissions Reduction from Replacement of Gasoline Vehicle with Electric Vehicle		
PG&E Electricity Emission Factor[1]	0.066	(MT CO_2/MWh)
Fuel Economy of Electric Vehicle[2]	0.25	(KWh/mile)
Electric Vehicle GHG Emissions	16	(gms/mile)
GHG Emissions for the Residential Miles Traveled as Estimated by CalEEMod®[3]	328	(gms/mile)
GHG Emissions Reduction from Additional Electric Vehicles, per mile	311	(gms/mile)
Estimating Project Residential-Related Traffic GHG Emissions		
	Project	
Single Family Residential Average Yearly VMT, Mitigated[4]	5,917,516	(miles/year)
Percent of Single Family Residential Miles Driven in Electric Vehicles due to This Measure[5]	25%	
Residential VMT that is Displaced by EVs due to This Measure	1,479,379	(miles/year)
Estimated Benefit from Residential EV Chargers		
GHG Emissions Reduction from Residential Electric Vehicles[6]	460	(MT CO_2/year)

Notes:

CO_2e intensity factor for PG&E accounts for the 60% projected RPS for 2030 consistent with SB 100.

National Renewable Energy Laboratory (NREL). 2018. California Plug-In Electric Vehicle Infrastructure Projections: 2017-2025 (Table C.1). Available at: https://www.nrel.gov/docs/fy18osti/70893.pdf. Accessed: May 2020.

The emissions factor is consistent with the CalEEMod® input (EMFAC2021), and includes default reductions for the ACC Program and Pavley Standards. This conservatively evaluates running emissions for CO_2 only; if starting and idling emissions and CH_4 and N_2O were included, the emission factor would increase. To ensure that the Project mitigation's emissions reduction benefit does not take credit for EVs that EMFAC2021 already forecasts will be part of the vehicle fleet, the emissions factor and emissions inventory includes the existing EVs. CalEEMod® conservatively includes medium- and heavy-duty vehicle emissions factors proportional to EMFAC2021's default fleet mix when calculating mobile emissions for all land use types.

From CalEEMod® modeling for the Mitigated Inventory shown in Appendix C.

EVs are proliferating at a much faster pace than predicted in EMFAC. Access to home charging is a key factor in the decision to purchase an EV; therefore, the availability of a 30-40 amp, 220-volt outlet to support a Level 2 charger in each of the garages at the Project site will incentivize further EV preference. This assumes that and additional 25% of VMT associated with the single family residences is driven in an EV by full buildout, which could be achieved by many scenarios (e.g., ranging from 50% of homes have 1 EV that they use for half of their driving to 25% of homes drive exclusively EVs by 2030).

Calculated by multiplying the GHG reduction per mile from additional EVs by the miles displaced by EVs due to this measure.

RPS - Renewables Portfolio Standard
SB - Senate Bill
VMT - vehicle miles traveled

Appendix A Table 10
Details on GHG Reductions from Alternative Mitigation Measures
Bridle Gate
Brentwood, CA

#	Category	Description	Assumptions	Reduction	Notes
				MT/ CO_2e/yr	
1[1]	Energy	No Natural Gas - Residential	Assumes the remaining natural gas is removed and replaced by zero-carbon energy sources.	30	Removes the remaining emissions from natural gas; this is additive with the mitigation measure for electric space and water heating.
2	Construction	Electric Construction Equipment	Increase use of electric powered construction equipment	7.2	10% of off-road construction emissions from DEIR CalEEMod output, 30-year amortized. Alternative to renewable diesel (not additive)
3	Construction	Grid power	Utilize grid power for electric energy rather than operating temporary gasoline/diesel powered generators	5.2	Replace all construction emergency generators with carbon-free electricity, 30-year amortized Alternative to renewable diesel (not additive)
4	Vegetation	Urban Forestry	Additional tree planting	24	Per 1,000 trees

Notes:

1. Calculated by subtracting the benefits of electric water and space heating from the benefits of an all-electric building as shown in Appendix A Table 8.

Appendix A Table 11
Summary of Potential Project Features That Were Not Quantified
Bridle Gate
Brentwood, CA

Category	Description	Assumptions	Scoping Plan Local Action?
Energy	Orient buildings to maximize passive solar heating.	This will reduce energy consumption. However, as building orientation is already included in Title 24, Part 6 building energy modeling software, it may be used for code compliance and therefore no additional benefit can been quantified without building-specific modeling.	
Energy	Require the installation of energy conserving appliances such as on-demand tankless water heaters and whole-house fans.	This will reduce energy consumption. However, as these systems are already included in Title 24, Part 6 building energy modeling software, it may be used for code compliance and therefore no additional benefit can been quantified without building-specific modeling.	X
Energy	Require each residential and commercial building to equip buildings with energy efficienc AC units and heating systems with programmable thermostats/timers.	This will reduce energy consumption. However, as these systems are already included in Title 24, Part 6 building energy modeling software, it may be used for code compliance and therefore no additional benefit can been quantified without building-specific modeling.	X
Energy	Require large-scale residential developments and commercial buildings to report energy use, and set specific targets for per-capita energy use.	This benefit would be speculative and uncertain with overlap with other energy reduction measures.	X
Energy	Achieve third-party green building certifications, such as the GreenPoint Rated program, LEED rating system, the Living Building Challenge, or equivalent programs	This will reduce energy consumption. However, given the large number of options to achieve these types of compliance and overlap with Title 24, no additional benefit can been quantified without building-specific modeling.	X
Energy	Require the use of energy-efficient lighting for all street, parking, and area lighting.	While the current version of Title 24, Part 6 requires the use of high-efficacy lighting, street and area lighting are not quantified in CalEEMod and therefore no additional reduction can be incorporated.	X
Energy	Include energy storage, where appropriate	This will enhance the effectiveness of solar PV or zero net electricity measures. However, there are not enough specifics known about this measure to quantify. The quantity and types of storage used as well as the time of day of storage would need to be known.	
Construction	Use construction fleets that are lower emitting than any current emission standard	The use of lower-emitting construction equipment (e.g., USEPA/CARB Tier 4 standard) reduces criteria air pollutants and diesel particulate matter; however, it does not reduce GHG emissions and therefore no additional benefit can be quantified.	X
Construction	Require construction vehicles to operate with the highest tier engines commercially available	The use of lower-emitting construction equipment (e.g., USEPA/CARB Tier 4 standard) reduces criteria air pollutants and diesel particulate matter; however, it does not reduce GHG emissions and therefore no additional benefit can be quantified.	X
Construction	Enforce idling time restrictions for construction vehicles	This is already assumed in the emissions modeling, as it is a state regulation.	X
Construction	Divert and recycle construction and demolition waste, and use locally-sourced building materials with a high recycled material content.	There are not enough specifics known about this measure to quantify. We would have to know the quantity of recycled or refurbished materials being incorporated. Where the non recycled was being sourced from, where the recycled is being sourced from, etc. We do not quantify lifecycle emissions.	X

APPENDIX B
HEALTH RISK ASSESSMENT

RAMBOLL

ENVIRONMENT
& HEALTH

APPENDIX B: MEMO

Date: **March 7, 2023**

To: **Louis Parsons, Discovery Builders**

From: **Shari Beth Libicki, PhD**

Subject: **UPDATED HEALTH RISK ANALYSIS FOR PROPOSED BRIDLE GATE DEVELOPMENT IN BRENTWOOD, CALIFORNIA**

Ramboll US Consulting, Inc (Ramboll) conducted an updated health risk assessment (HRA) for the construction and operation associated with the revised Bridle Gate Project (the "Project") in a currently undeveloped portion of the City of Brentwood. Ramboll has prepared a quantitative HRA that concludes that the Project would have less-than-significant health risks.

F +1 415 398 5812
www.ramboll.com

The Revised Project is a proposed development located in Brentwood, California and will consist of the following:

- 286 single-family homes, and a
- 2 Public parks

The Project Area location, as well as surrounding receptors and sensitive receptor locations, is presented in **Figure 1**.[1]

We understand that once operational, the only source of air emissions from the Project is mobile sources (i.e., traffic). This analysis performs refined modeling for air emissions and associated health impacts from construction sources, a screening-level assessment of the health impacts of Project operational mobile emissions, and a cumulative assessment of existing nearby emissions sources. **The updated HRA analysis concludes that all risk impacts are below the threshold of significance.**

CEQA THRESHOLDS OF SIGNIFICANCE

The City of Brentwood (the City) is the lead agency responsible for Project approval. Per City guidelines, Ramboll evaluated the Project in accordance with the current Bay Area Air Quality Management District (BAAQMD) CEQA Guidelines,

[1] As shown in Figure 1, the area analyzed for potential health risk impacts includes additional area in the northeast of the project site that was evaluated in a previous, larger iteration of the Project. This is a conservative approach, as it means that the evaluated zone of impact to potential receptors is farther than the current proposed construction boundary.

which were updated in May 2017.[2] These guidelines present methods for evaluating compliance with CEQA as well as thresholds for determining significance. With respect to the Project, the BAAQMD thresholds of significance for construction, operational, and cumulative risks and hazards are as follows:

BAAQMD CEQA Thresholds of Significance	
Other Impacts	**Construction or Operational-Related Thresholds**
Risks and Hazards for New Sources and Receptors (Individual Project)	Compliance with Qualified Community Risk Reduction Plan OR Increased cancer risk of >10.0 in a million Increased non-cancer risk of > 1.0 HI (chronic or acute) Ambient $PM_{2.5}$ increase: > 0.3 µg/m^3 annual average
Risks and Hazards for New Sources and Receptors (Cumulative Threshold)	Compliance with Qualified Community Risk Reduction Plan OR Increased cancer risk of >100 in a million (from all local sources) Increased non-cancer risk of >10 HI (from all local sources) (chronic) Ambient $PM_{2.5}$ increase: > 0.8 µg/m^3 annual average (from all local sources) Zone of Influence: 1,000-foot radius from fence line of source or receptor
Abbreviations: HI = hazard index $PM_{2.5}$ = particulate matter less than 2.5 micrometers in diameter µg/m^3 = micrograms per cubic meter	

This Technical Memorandum evaluates Project health risks and hazards with respect to these BAAQMD thresholds of significance.

METHODOLOGY

Construction-Related TAC Emissions

The purpose of the current analysis is to assess the potential human health risk on the surrounding off-site receptors from the project's construction and operation and $PM_{2.5}$ concentration, including fugitive dust. For the original Draft Environmental Impact Report (DEIR) preparation, CalEEMod® (California Emissions Estimator Model) was used by the City's consultant Raney to develop the construction CAP emissions inventory in evaluating a previous, larger iteration of the Project.[3] Since the original analysis, two new versions of CalEEMod® have been released by the Air Resources Board

[2] BAAQMD. 2017. California Environmental Quality Act (CEQA) Air Quality Guidelines. May. Available online at: http://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/ceqa_guidelines_may2017-pdf.pdf?la=en

(ARB); the most recent version is CalEEMod® 2022.1.0 was referenced and used for this reanalysis.[4] Ramboll used the construction activity assumptions from the original DEIR and CalEEMod® equivalent methodology to estimate off-road and on-road toxic air contaminant (TAC) emissions.

Ramboll updated the construction schedule (as shown in **Table 1**) and replaced the fleet-averaged emission factors from the CalEEMod® default equipment emission factors with emission factors that more accurately depict the off-road fleet that will be used based on data from Discovery Builders' construction contractors. Ramboll received a comprehensive list of all equipment owned and operated by the contractors the project proponent typically uses for these types of development, and used the emission factor associated with this tier to estimate construction emissions. The construction tiers derived from this evaluation are shown in **Table 2**. Construction trips and trip lengths are CalEEMod defaults for Contra Costa county for worker and vendor trips and are presented in **Table 3**.

The emission factors used by CalEEMod® in the DEIR for on-road vehicles are based on the ARB EMFAC2014 program. Since the project submittal and the last release of CalEEMod®, ARB released the EMFAC2021 version that includes various updates, notably the incorporation of USEPA and ARB regulations and standards (e.g., the Truck and Bus Rule). To more accurately estimate the TAC emission rates, EMFAC2021 was incorporated into the analysis. [5] Additionally, the DEIR estimates a 7.3-mile trip vendor trip length. Of this, 0.85 miles of State Route 4 (SR-4) are assumed to represent emissions that could impact receptors that could also be impacted by the on-site off-road equipment and are modelled, so emissions were estimated over 0.85 miles. **Figure 1** shows the 0.85 mile distance of SR-4, which extends from the northernmost to southernmost off-site sensitive receptor.

The TAC emissions associated with the Project construction were estimated from the CalEEMod® outputs, with the following conservative assumptions:

1. Diesel Particulate Matter (DPM): DPM emissions were used to evaluate the cancer risk and non-cancer chronic HI from Project construction. In this analysis, both onsite (i.e., construction equipment) and local offsite (i.e., construction mobile sources) PM_{10} exhaust emissions were calculated as DPM.[6,7] Diesel exhaust, a complex mixture that includes hundreds of individual constituents, is identified by the State of California as a known carcinogen.[8,9] Under California regulatory guidelines, DPM is used as a surrogate measure of exposure for the mixture of chemicals that make up diesel exhaust as a whole. Cal/EPA and other proponents of using the surrogate approach to quantifying excess lifetime cancer risks associated with the diesel mixture indicate that this method is preferable to use of a component-based approach because it provides a protective approach to estimating health risks. A component-based approach involves estimating risks for each of the individual components of a mixture. Critics of the component-based approach believe it will underestimate the risks associated with diesel as a whole mixture because the identity of all chemicals in the mixture may not be known and/or exposure and health effects information for all chemicals identified within the mixture may not be available. Furthermore, Cal/EPA has concluded that "potential cancer risk from inhalation exposure to whole diesel exhaust

[4] Software and User's Guide available publicly at www.caleemod.com. Version 2022.1.0.

[6] Local offsite (mobile source) emissions were scaled from the emissions estimated in CalEEMod® by the ratio of modeled road length to default trip length.

[7] On-road construction worker trips are primarily gasoline-fueled which contribute negligible TAC emissions and are therefore not included in the HRA analysis.

will exceed the multi-pathway cancer risk from the speciated components".[10] This analysis was based on the surrogate approach, as recommended by Cal/EPA. This analysis also conservatively assumed the small fraction of non-diesel PM_{10} (i.e., PM_{10} emissions from gasoline fueled or natural gas fueled vehicles in the CalEEMod® default vendor fleet) was DPM, which has greater human health impacts than the speciated components of other fuels.[11]

2. $PM_{2.5}$: $PM_{2.5}$ concentration due to Project construction was evaluated based on exhaust $PM_{2.5}$ emissions as well as fugitive $PM_{2.5}$ emissions associated with road dust, grading, and bulldozing activities. Fugitive dust is generated by various construction activities and can contribute to $PM_{2.5}$ emissions.

    a. Entrained Dust: Vehicular travel on paved road can generate resuspended road dust. The entrained road dust emission factor was updated based on CARB's 2021 Miscellaneous Process Methodology 7.9 for entrained road travel, paved road dust, and CalEEMod defaults for Contra Costa County. Roadway silt loading for Contra Costa County is presented in **Table 4**. **Table 5** and **Table 6** show the calculation of the entrained dust emission factor and total emissions, respectively.

    b. Grading fugitive dust: Grading fugitive dust is generated by grading equipment (e.g., excavators, graders, scrapers). Grading fugitive dust emissions were calculated using VMT-based emission factors and project maximum area disturbed, based on CalEEMod methodology, as shown in **Table 7**.

    c. Bulldozing fugitive dust: Bulldozing fugitive dust is generated by the dozing activities during site preparation and grading. Bulldozing fugitive dust emissions were calculated using VMT-based emission factors and project-specific bulldozing equipment usage, based on CalEEMod methodology, as shown in **Table 8**.

Ramboll conservatively evaluated health impacts for the maximum development scenario, which represents construction and buildout of the entire site, although at this time the contemplated Project only includes a portion of this area; this analysis therefore overestimates emissions and impacts compared to what would be expected. Total modelled emissions, and the sources they were attributed to, are presented in **Table 9**.

Construction Health Risk Assessment

Ramboll characterized cancer risk, non-cancer chronic hazard index (HI), and $PM_{2.5}$ concentration associated with construction risks by estimating ambient air concentrations of DPM and $PM_{2.5}$ within 1,000 feet of the Project. This boundary represents the "zone of influence" recommended for the cumulative evaluation of a project in the BAAQMD CEQA Guidelines. Acute non-cancer health effects were not estimated, as the only TAC evaluated is DPM, which does not have acute health impacts. This is standard practice and consistent with the current OEHHA guidance. While individual speciated components of DPM might have acute health impacts, the cancer impacts associated with DPM will

[10] Cal/EPA, OEHHA. 2015b. Air Toxics Hot Spots Program Risk Assessment Guidelines. Guidance Manual for Preparation of Health Risk Assessments. Appendix D: Risk Assessment Procedures to Evaluate Particulate Emissions from Diesel-Fueled Engines. February. Available at: https://oehha.ca.gov/media/downloads/crnr/2015gmappendices.pdf. Accessed: February 2, 2022.

[11] A comprehensive analysis of human health impacts associated with diesel and gasoline exhaust by the International Agency for Research on Cancer (IARC) found that while there is sufficient evidence for the carcinogenicity of diesel engine exhaust, there is inadequate evidence in humans for the carcinogenicity of gasoline engine exhaust. For more information, see: IARC. 2014. Diesel and Gasoline Engine Exhausts and Some Nitroarenes. Volume 105. Available at: https://www.ncbi.nlm.nih.gov/books/NBK294269/pdf/Bookshelf_NBK294269.pdf

almost always exceed the total acute health impact across the speciated components barring unusual circumstances (e.g., a sensitive receptor located directly above the emissions release point for a point source); according to OEHHA Guidance, if DPM is the only pollutant of concern, the Air District should be consulted prior to performing an acute non-cancer health analysis to determine appropriate procedures and confirm the assessment is warranted.[12]

Estimated Air Concentrations

To estimate air concentrations of DPM and $PM_{2.5}$, Ramboll used AERMOD (version 22112), a steady-state Gaussian plume model developed by USEPA for regulatory applications.[13] The fugitive dust was modelled as an area source with zero-meter release height and one-meter initial vertical dimension, following South Coast Air Quality Management District guidance.[14] AERMOD requires emission source locations and release parameters, receptor locations, and processed meteorological data. The construction modelled source parameters are shown in **Table 10**.

Ramboll used five years of meteorological data from the Stockton Metropolitan Airport, which was the best available dataset to represent the Project site conditions, based on terrain and wind data. **Figure 2** shows other nearby meteorological stations that were considered for determining the best available dataset. Stockton was chosen because it exhibits similar terrain to the Project site, without major disturbances between them (e.g., mountain ranges or influences from large bodies of water). Additionally, the prevailing wind direction is from the northwest at the Stockton Airport, which would maximize impacts on the nearby off-site sensitive receptors that are primarily to the southeast of the Project site. Meteorological data were processed by San Joaquin Valley Air Pollution Control District (SJVAPCD) using AERMET (version 18018).[15]

In order to evaluate health impacts to nearby off-site receptors, Ramboll modelled receptors at every structure within the vicinity of the Project, including potential new receptors that will be sited north of the Project after construction of the Priority Area 1 Specific Plan. Off-site receptors were modelled at a height of 1.5 m, above terrain height, consistent with BAAQMD guidance. [16] **Figure 1** includes a map of nearby off-site sensitive receptor locations evaluated in the HRA.

Exposure Assessment

This analysis evaluates nearby off-site sensitive receptors based on the updated Air Toxics Hot Spots Program Guidance Manual for Preparation of Health Risk Assessments (OEHHA 2015), which combines information from previously released and adopted technical support documents to delineate OEHHA's revised risk assessment methodologies based on current science. The BAAQMD has issued HRA Guidelines formally adopting the OEHHA 2015 Guidance Manual.[17] This analysis followed the recommended methodology from the 2015 OEHHA Hot Spots Guidance. Ramboll conservatively

[17] BAAQMD. 2016. Health Risk Assessment Guidelines. Air Toxics NSR program. December. Available at: https://www.baaqmd.gov/~/media/files/planning-and-research/permit-modeling/hra_guidelines_12_7_2016_clean-pdf.pdf?la=en

evaluated Project impacts due to construction emissions using default exposure assumptions for a resident child from OEHHA (2015) unless otherwise noted.[18] The resident child scenario assumes a much higher daily breathing rate and age-sensitivity factor (ASF)[19] than other sensitive receptor populations and therefore is the most conservative scenario to evaluate for this analysis.[20] The exposure parameters used to estimate excess lifetime cancer risks for a resident child are presented in **Table 11**.

The dose estimated for each exposure pathway is a function of the concentration of a chemical and the intake of that chemical. The intake factor for inhalation, IF_{inh}, can be calculated as follows:

$$IF_{inh} = \frac{DBR * FAH * EF * ED * CF}{AT}$$

Where:

IF_{inh}	=	Intake Factor for Inhalation (m^3/kg-day)
DBR	=	Daily Breathing Rate (L/kg-day)
FAH	=	Fraction of Time at Home (unitless)
EF	=	Exposure Frequency (days/year)
ED	=	Exposure Duration (years)
AT	=	Averaging Time (days)
CF	=	Conversion Factor, 0.001 (m^3/L)

The chemical intake or dose is estimated by multiplying the inhalation intake factor, IF_{inh}, by the chemical concentration in air, C_i. When coupled with the chemical concentration, this calculation is mathematically equivalent to the dose algorithm given in the OEHHA Hot Spots guidance (Cal/EPA 2003).

The estimated excess lifetime cancer risks for a resident will be adjusted using age sensitivity factors (ASFs) that account for an "anticipated special sensitivity to carcinogens" of infants and children as

[18] BAAQMD. 2010. BAAQMD Air Toxics NSR Program Health Risk Screening Analysis (HRSA) Guidelines. January.

[19] Ibid.

[20] While OEHHA (2015) recommends that a Tier 1 evaluation of a daycare scenario assume eight hours of moderate intensity activities, USEPA (2009) characterizes daycares as ranging from a minimum of sedentary and passive activities to a maximum of light intensity activity, with an average of light intensity activities (see USEPA 2009, Appendix B, page B-7). According to USEPA (2009), an average child (0-6 years old) spends approximately 14.5 hour/day in sedentary/passive activities (including sleeping or napping), 5.8 hours/day in light intensity activities, 3.7 hours/day in moderate intensity activities, and 0.2 hours/day in high intensity activities.
Under the construction scenario, assuming most of the sleeping occurs during the night hours, the exposure activities and breathing rate will be the same for the resident child and the daycare child. As construction activities occur during the day, the construction exposures and risks will be the same for the two receptor types assuming they are both present for the construction time and duration. As the daily construction duration can span more or different hours than the 8-hour daycare exposure time, the residential scenario is more conservative.
USEPA. Metabolically Derived Human Ventilation Rates: A Revised Approach Based Upon Oxygen Consumption Rates (Final Report, 2009). U.S. Environmental Protection Agency, Washington, DC, EPA/600/R-06/129F, 2009. Available at: https://cfpub.epa.gov/ncea/risk/recordisplay.cfm?deid=202543

recommended in the OEHHA Technical Support Document and OEHHA 2015 Guidance.[21,22] As shown in **Table 9**, an ASF of 10 for children was applied to the resident child, assuming the resident child receptors are between the ages of birth to age two, while an ASF of 3 was used for populations with ages in the range of two to 16.[23]

Toxicity Assessment

The toxicity assessment characterizes the relationship between the magnitude of exposure and the nature and magnitude of adverse health effects that may result from such exposure. This HRA evaluated theoretical exposures to TACs for two categories of potential adverse health effects, cancer and non-cancer endpoints. Toxicity values used to estimate the likelihood of adverse effects occurring in humans at different exposure levels are identified as part of the toxicity assessment component of a risk assessment.

Excess lifetime cancer risk and chronic hazard quotient (HQs) calculations for Project construction utilized the toxicity values for DPM. Toxicity values for DPM (Cal/EPA 2016) are as presented in **Table 12**.

Risk Characterization

Excess lifetime cancer risks are estimated as the upper-bound incremental probability that an individual will develop cancer over a lifetime as a direct result of exposure to potential carcinogens. The estimated risk is expressed as a unitless probability. The cancer risk attributed to a chemical is calculated by multiplying the chemical intake or dose at the human exchange boundaries (e.g. lungs) by the chemical-specific cancer potency factor (CPF).

The equation used to calculate the potential excess lifetime cancer risk for the inhalation pathway is as follows:

$$Risk_{inh} = Ci \times CF \times IF_{inh} \times CPF_i \times ASF$$

Where:

$Risk_{inh}$	=	Cancer risk; the incremental probability of an individual developing cancer as a result of inhalation exposure to a particular potential carcinogen (unitless)
C_i	=	Annual average air concentration for $chemical_i$ ($\mu g/m^3$)
CF	=	Conversion factor (mg/µg)
IF_{inh}	=	Intake factor for inhalation (m^3/kg-day)

[21] Cal/EPA. 2009. Technical Support Document for Cancer Potency Factors: Methodologies for Derivation, Listing of Available Values, and Adjustment to Allow for Early Life Stage Exposures. May. Available online at: https://oehha.ca.gov/media/downloads/crnr/tsdcancerpotency.pdf.

[22] Cal/EPA, OEHHA. 2015. Air Toxics Hot Spots Program Risk Assessment Guidelines. Guidance Manual for Preparation of Health Risk Assessments. Appendix D: Risk Assessment Procedures to Evaluate Particulate Emissions from Diesel-Fueled Engines. February. Available at: https://oehha.ca.gov/media/downloads/crnr/2015gmappendices.pdf. Accessed: February 2, 2022.

[23] BAAQMD. 2016. Air Toxics NSR Program Health Risk Assessment (HRA) Guidelines. January. Available online at: https://www.baaqmd.gov/~/media/files/planning-and-research/permit-modeling/hra_guidelines_12_7_2016_clean-pdf.pdf?la=en.

CPF_i	=	Cancer potency factor for chemical$_i$ (mg chemical/kg body weight-day)$^{-1}$
ASF	=	Age sensitivity factor (unitless)

The potential for exposure to result in adverse chronic noncancer effects is evaluated by comparing the estimated annual average air concentration (which is equivalent to the average daily air concentration) to the noncancer chronic reference exposure level (cREL) for each chemical. When calculated for a single chemical, the comparison yields a ratio termed a hazard quotient (HQ). To evaluate the potential for adverse chronic non-cancer health effects from simultaneous exposure to multiple chemicals, the HQs for all chemicals are summed, yielding a HI:

$$HQ_i = C_i / cREL_i$$

$$HI = \sum HQ$$

Where:

HI	=	Hazard index
HQ_i	=	Chronic hazard quotient for chemical i
C_i	=	Annual average concentration of chemical i (µg/m^3)
$cREL_i$	=	Chronic noncancer reference exposure level for chemical i (µg/m^3)

Cancer risk and chronic HI were calculated from ambient annual concentrations using intake factors, cancer potency factors, and chronic reference exposure levels calculated consistent with the 2015 OEHHA Hot Spots Guidance.

Construction Health Risk Assessment Results

As shown in **Table 13**, the cancer risk from construction activities at the maximally exposed individual receptor (MEIR) is calculated to be 7.0 in 1 million, compared to a threshold of 10 in 1 million. Construction activities would also result in a non-cancer hazard index of 0.0036 (threshold of 1.0), and maximum $PM_{2.5}$ concentration of 0.017 µg/m^3 (threshold of 0.3 µg/m^3). These results are all below the BAAQMD thresholds of significance; thus, health risk impacts associated with construction of the Project are less than significant.

Operational Health Risk Assessment

In accordance with BAAQMD CEQA guidelines, Ramboll calculated the impacts from Project-related operational traffic along SR-4. To do this, Ramboll used the operational traffic generation rates from the CalEEMod® runs from the DEIR and conservatively assumed that all of those trips would travel along SR-4. In reality, some trips would occur on the internal circulation system within the Project site, but SR-4 is closer to the MEIR location and thus it was conservative to assume that all Project traffic was along SR-4.

The BAAQMD provides a raster file upon request containing conservative estimates of $PM_{2.5}$ concentration and cancer risk from highways. This major roadway screening tool includes impacts from all roadways with daily traffic above 30,000 vehicles per day. However, the raster tool appears to model Brentwood Blvd (a parallel road due east of SR-4) but not SR-4, so Ramboll used a scaling methodology to calculate the impacts from SR-4 using the data from Brentwood Blvd. To estimate

health impacts from Project traffic, Ramboll used the highway risk raster to perform a scaling analysis. First, Ramboll identified the MEIR from construction-related impacts and determined the closest distance between the MEIR and SR-4. Ramboll then determined the average health impacts for receptors the equivalent distance and direction away from Brentwood Boulevard. The average health impact was then scaled by the ratio of Project traffic to approximate traffic along that segment of Brentwood Boulevard.[24]

As shown in **Table 13**, the risk from Project traffic at the MEIR is 0.77 in a million, while the $PM_{2.5}$ concentration is 0.009 µg/m^3. These are well below the BAAQMD significance thresholds of 10 in a million at 0.3 µg/m^3, respectively. If summed with the construction cancer risk impact described above, total risk remains below the BAAQMD significance threshold with total risk of 7.8 in a million. The actual risk is much lower, because this conservatively assumes the same MEIR is exposed to both construction and operations starting in the third trimester and throughout the earliest years of life when most sensitive to the effects of air pollution, when in reality, the construction MEIR would not be exposed to Project traffic until after construction was complete. Because $PM_{2.5}$ concentration is an annual impact and there is no overlap between maximum construction and maximum operation, as long as both impacts are less than significant, than the project is less than significant for $PM_{2.5.}$

Cumulative Health Risk Assessment

In accordance with BAAQMD CEQA guidelines, Ramboll conducted a cumulative HRA for offsite sensitive receptors. The offsite cumulative assessment tabulates the impact of Project-related construction and operational risks plus existing offsite sources (stationary and mobile) at the MEIR location for construction. This is a conservative evaluation, as it assumes that the MEIR is exposed to both construction and full buildout operational emissions simultaneously starting with a fetus *in utero* during its third trimester. The evaluation requires the identification of any stationary and mobile sources within 1,000 feet of the Project boundary. This HRA also includes potential impacts for other planned projects nearby. In addition to the evaluation of each single source, the combined health risk from all toxic air contaminant (TAC) and $PM_{2.5}$ sources are evaluated.

Sources evaluated in the cumulative health risk assessment include any BAAQMD permitted stationary source, roadways with over 5,000 vehicles per day, and any other major source of emissions within the zone of 1000' influence. The BAAQMD provides tools with conservative estimates of impacts from these sources, including a stationary source tool[25] and a set of raster files containing railway screening results, highway screening results, major roadway screening results, and roadway screening tables. As described above, BAAQMD's major roadway screening tool includes impacts from all roadways with daily traffic above 30,000 vehicles per day. Aside from SR-4, there are no other major roadways within 1,000 feet of the Project boundary.

To ensure that impacts from SR-4 are adequately accounted for, Ramboll performed a scaling analysis similar to the one described above for the operational health risk assessment. Again, Ramboll determined the average health impacts for a sensitive receptor an equivalent distance and direction

[24] While the exact traffic along Brentwood Boulevard is not known, communication with Areana Flores at BAAQMD via email on July 1, 2020 confirmed that the minimum average annual daily traffic (AADT) used for this model was 30,000. To ensure the most conservative analysis, Ramboll assumed the minimum number of trips were modeled along Brentwood Boulevard.

[25] Ramboll submitted a Stationary Source Inquiry to BAAQMD to determine that all sources provided in the online tool were up-to-date.

from Brentwood Boulevard and scaled the impacts by the ratio of SR-4 traffic to Brentwood Boulevard traffic.[26]

The only stationary source within the vicinity of the Project is an emergency generator located east of the Project. While this stationary source is more than 1,000 feet away from the Project boundary, the impacts as provided by the BAAQMD are included to ensure all risks to the MEIR are accounted for.

Other nearby ongoing or planned projects may potentially have air quality impacts that would impact the MEIR in a cumulative setting. Two projects were identified near the Project site and have been incorporated into the cumulative HRA.

- The Ranch at Antioch is a planned mixed-use residential development to the west of the Project site. Its eastern border is more than 1,000 feet from the Project boundary.[27] Therefore, The Ranch is not expected to have air quality impacts that meaningfully affect the Project MEIR.
- The Powerdrive Oil & Gas Company Wells Project ("Powerdrive Project") may establish an oil and gas well pad in an agricultural area to the southwest of the Project site. Because the Powerdrive Project is adjacent to the Project receptors, it has the potential to impact air quality at the MEIR. However, the Powerdrive Project published a Negative Declaration that indicates that air quality impacts will be less than significant.[28] Therefore, air pollutant emissions and health risks are anticipated to be below the BAAQMD's project-level significance thresholds. To be conservative, this HRA assumes that the cancer risk at the Project MEIR could increase by as much as 10 in a million and $PM_{2.5}$ impacts could increase by as much as 0.3 µg/m^3 (the significance thresholds) due to the Powerdrive Project. The actual risk is likely to be much lower, because the MEIR location is more than 1,000 feet east of the Powerdrive Project close to SR-4.

The cumulative HRA results, which include impacts from Project construction, Project operation, and the nearby cumulative sources described above, are summarized in **Table 14**. As shown in **Table 14**, the maximum cumulative cancer risk is calculated to be 23 in 1 million, compared to a cumulative risk threshold of 100 in 1 million. The Project would also result in a cumulative maximum non-cancer hazard index of 0.0040 (threshold of 10), and cumulative maximum $PM_{2.5}$ concentration of 0.38 µg/m^3 (threshold of 0.8 µg/m^3). These results are all well below the BAAQMD thresholds of significance; thus, health risk impacts associated with construction and operation of the Project and cumulative risks are less than significant.

SUMMARY OF RESULTS

This analysis utilized conservative assumptions, with respect to Project construction and cumulative health risk impacts on offsite receptors, as discussed in the sections above. The construction and

[26] Consistent with the BAAQMD highway risk raster tool, the traffic along SR-4 between Lone Tree Road and Sand Creek Road is estimated from the 2014 Traffic Volumes aggregated by Caltrans. The traffic along this segment is approximately 89,000 AADT. For more information, see: Caltrans. 2014. 2014 Traffic Volumes on California State Highways. Available at: https://dot.ca.gov/-/media/dot-media/programs/traffic-operations/documents/census/aadt/f0017652-2014-aadt-volumes.pdf

	Paving	150		Rollers	2	36	8	Tier 2
Architectural Coating	Architectural Coating	550	550	Air Compressors	1	37	6	No Specific Tier

Notes

1. Ramboll reviewed the DEIR and confirmed that the construction activity assumptions were reasonable. The construction phasing, equipment selection, and equipment activity modeled are consistent with the DEIR, and are based on CalEEMod defaults.

2. Ramboll adjusted the construction equipment tier based on a comprehensive list of all equipment owned and operated by the Project contractor. From this, Ramboll conservatively identified the lowest tier equipment for each CalEEMod equipment type and used the emission factor associated with this tier to estimate emissions. For example, if an equipment type has a mix of Tier 1, 2, 3, 4 Interim, and 4 Final equipment, Tier 1 was used. If no specific tier was modeled, the default CalEEMod equipment emission factor was used. If the minimum tier accounted for less than 10% of equipment of that type, the next lowest tier was used.

[3] Tier 4 final were used for Rubber Tired Dozers and Scrapers in order to lower the emissions and meet the threshold.

Table 3

Construction Trips

Bridle Gate

Brentwood, California

Trip Data

Construction Phase	Construction Subphase	Start Year	Construction Days	Trip Rates[1] (trips/day)		Trip Lengths[2] (miles/one-way trip)

Table 4
Silt Loading Emission Factors
Bridle Gate
Brentwood, California

Entrained Roadway Dust Constants for Contra Costa County

Roadway Category	Silt Loading[1] (g/m^2)	Travel Fraction[1]
Freeway	0.015	0.50
Major	0.032	0.37
Collector	0.032	0.090
Local - Urban	0.32	0.040
Weighted Silt Loading Factor	0.035	1.0

Notes:

[1.] Travel fraction by roadway category and silt loading are based on ARB's Entrained Road Travel Emission Inventory Source Methodology Tables 2 and 4, respectively.

Abbreviations:

ARB - Air Resources Board
g - gram(s)
m - meter

References:

California Air Resources Board (ARB). 2021. Miscellaneous Process Methodology 7.9, Entrained Road Travel, Paved Road Dust. March. Available online at: https://ww3.arb.ca.gov/ei/areasrc/fullpdf/2021_paved_roads_7_9.pdf

Table 5
Emission Factors for Entrained Roadway Dust
Bridle Gate
Brentwood, California

Road Dust Equation[1]

E [lb/VMT] = [k*(sL)^0.91 * (W)^1.02]*(1-P/4N)

Parameters[2,3]	Value
E = annual average emission factor in the same units as k	[calculated]
k = particle size multiplier for particle size range	
$PM_{2.5}$ (lb/VMT)	3.3E-04
sL = roadway silt loading [grams per square meter - g/m^2]	0.035
W = average weight of vehicles traveling the road [tons]	2.4
P = number of "wet" days in county with at least 0.01 in of precipitation during the annual averaging period[3]	65
N = number of days in the averaging period	365
$PM_{2.5}$ Emission Factor [lb/VMT]	3.6E-05

Notes:

1. Road dust equation and parameters are from the California Air Resources Board's (ARB) 2021 Miscellaneous Process Methodology 7.9 for Entrained Road Travel, Paved Road Dust.
2. The silt loading emission factor assumes Contra Costa County default roadway fractions and silt loading levels from ARB 2021. Other parameters (average weight of vehicles, size multipliers) are from ARB 2021. PM2.5 is assumed to be 15% of PM10 based on paved road dust sampling in California (ARB Speciation Profile #471), which is a more representative fraction than provided in the older AP-42 fugitive dust methodology as discussed in ARB 2021 (page 17).
3. The number of "wet" days for Richmond, CA is from the California Air Resources Board's (ARB) 2021 Miscellaneous Process Methodology 7.9 for Entrained Road Travel, Paved Road Dust.

Abbreviations:

ARB - California Air Resources Board
CalEEMod - California Emissions Estimator Model
EMFAC - EMission FACtor Model
g - gram
lb - pound
$PM_{2.5}$ - particulate matter less than 2.5 microns
VMT - vehicle miles traveled

Table 7

Fugitive Dust Emissions from Off-Road Grading Activity

Bridle Gate

Brentwood, California

Construction Area	Construction Subphase[1]	Year	Total Work Days (per year)	Equipment	Quantity	CalEEMod Grading rate[2]	Maximum Area Disturbed[1]	Grading VMT[2]	$PM_{2.5}$ Emission Factor[3]	Emissions
										$PM_{2.5}$
						acre/8hr-day	acre/day	mile/day	lb/VMT	lb/yr
Full Site	Grading	2024	82	Graders	1	0.5	0.5	0.34	0.17	4.7
				Rubber Tired Dozers	1	0.5	0.5	0.34		4.7
				Scrapers	2	1	2	1.4		19
		2025	261	Graders	1	0.5	0.5	0.34		15
				Rubber Tired Dozers	1	0.5	0.5	0.34		15
				Scrapers	2	1	2	1.4		60
		2026	97	Graders	1	0.5	0.5	0.34		5.6
				Rubber Tired Dozers	1	0.5	0.5	0.34		5.6
				Scrapers	2	1	2	1.4		22

Notes:

1. Maximum graded area calculated following guidance in the CalEEMod® User's Guide, Appendix C.
2. Based on CalEEMod® default daily acres graded by equipment type, Table G-14, below.

Equipment	Acres Graded per 8 Hour Day
Crawler Tractors	0.5
Graders	0.5
Rubber Tired Dozers	0.5
Scrapers	1

3. VMT per day calculated following guidance in the CalEEMod® User's Guide, Appendix C, which is based on AP-42, Section 11.9 for grading equipment. The equation is:
   VMT = AS/Wb x (43,560 sqft/acre)/(5,280 ft/mile), where:

   A_S = A_S, acres graded per day (varies by sub-activity); in this case using maximum estimated disturbed acres/day

   12 = W_b, blade width of grading equipment (CalEEMod® default) in ft

3. Emission factors calculated following guidance in the CalEEMod® User's Guide, Appendix C, which is based on AP-42, Section 11.9 for grading equipment. The equations are:
   EFPM10 = 0.051 x (S)2.0 x FPM10
   EFPM2.5 = 0.04 x (S)2.5 x FPM2.5 where:

   7.1 = S, mean vehicle speed (mph) (AP-42 default)

   0.6 = F_{PM10}, PM_{10} scaling factor (AP-42 default)

   0.031 = $F_{PM2.5}$, $PM_{2.5}$ scaling factor (AP-42 default)

Abbreviations:

CalEEMod® - California Emissions Estimator Model
EF - emission factor
ft - feet
lb - pound
yr - year

Table 8
Fugitive Dust Emissions from Off-Road Bulldozing Activity
Bridle Gate
Brentwood, California

Construction Area	Construction Subphase	Number of Equipment	Daily Usage (hours/day)	Total Equipment Work Hours[1] (hours/day)	Uncontrolled $PM_{2.5}$ Emission Factor[3] (lbs/hour)	Emissions[4]	
						$PM_{2.5}$	
						lb/day	ton
Full Site	Grading	1	8	8	0.41	3.3	0.73

Notes:

1. The equipment use schedule is based on Project-specific estimates, and includes planned hours for all tracked dozers to be used during the given phase.

2. Emission factor calculated following guidance in the CalEEMod® User's Guide, Appendix A, which is based on AP-42, Section 11.9 for bulldozing equipment. The equation is:

   $EF_{PM10} = C_{PM15} \times s1.5 / M1.4 \times F_{PM10}$, where the following default values are used:

   1 = C_{PM15}, arbitrary coefficient
   6.9 = s, material silt content (%)
   7.9 = M, material moisture content (%)
   0.75 = F_{PM10}, PM_{10} scaling factor

3. Emission factor calculated following guidance in the CalEEMod® User's Guide, Appendix A, which is based on AP-42, Section 11.9 for bulldozing equipment. The equation is:

   $EF_{PM2.5} = C_{TSP} \times s^{1.2} / M^{1.3} \times F_{PM2.5}$, where the following default values are used:

   5.7 = C_{TSP}, arbitrary coefficient
   6.9 = s, material silt content (%)
   7.9 = M, material moisture content (%)
   0.105 = $F_{PM2.5}$, $PM_{2.5}$ scaling factor

4. The mass emissions shown are converted from ton per year to gram per second for the health risk assessment. The conversion is based on 365 days per year and 10 hours per day, consistent with the modeled hours from 7 AM - 5 PM.

Abbreviations:

CalEEMod® - California Emissions Estimator Model
EF - emission factor
lbs - pounds
PM_{10} - particulate matter less than 10 microns
$PM_{2.5}$ - particulate matter less than 2.5 microns
VMT - vehicle miles traveled

	ARCHITECTURAL COATING	2031	1.4E-05	1.9E-05	5.6E-06	0	0

Notes:

1 The default CalEEMod® off-road equipment fleet was updated to reflect the Project contractor's equipment fleet. The lowest tier for each CalEEMod® equipment type was conservatively assumed to perform all of the off-road activity.

2 On-road construction vendor trip emissions were modeled along an approximately 0.85 mile stretch of State Route (SR) 4.

3 As per the latest BAAQMD guidance, PM2.5 concentrations should include fugitive emissions from tirewear and breakwear, thus total PM2.5 emissions can be higher than exhasut PM10 emissions under this scenario. However, exhaust PM10 emissions are always greater than exhaust PM2.5 emissions.

Abbreviations:

BAAQMD - Bay Area Air Quality Management District

Table 10

Modeled Source Parameters

Bridle Gate

Brentwood, California

Source[1]	Source Type	Source Dimension	Release Height[2]	Initial Vertical Dimension[3]	Initial Lateral Dimension[4]
		[m]	[m]	[m]	[m]
Construction Equipment	Volume[5]	20	5	1.2	9.3
On-Road Trucks	Volume	9	2.55	2.4	4.2
Construction Equipment - Fugitive Dust[6]	Area	Approximate Equipment Area	0	1	--

Notes:

1. The number of modeled construction equipment sources is based on the number of distinct construction work areas. The number of on-road vehicle sources is based on the geometry of the truck or traffic routes.

2. BAAQMD does not have guidance on construction modeling, therefore construction equipment parameters used are based on BAAQMD's San Francisco Community Risk Reduction Plan-Health Risk Assessment (CRRP-HRA). According to the CRRP-HRA methodology, release height of a modeled area source representing construction equipment was set to 5 meters. On-road truck release height is based on USEPA haul road guidance, assuming vehicle heights of 3 meters for heavy-duty vehicles.

3. According to USEPA's AERMOD guidance, initial vertical dimension of the modeled construction equipment area sources is the release height divided by 4.3. Vehicle initial vertical dimension is based on USEPA's haul road guidance, assuming vehicle heights 3 meters for heavy-duty vehicles.

4. Initial lateral dimension for the construction equipment is the center-to-center spacing divided by 2.15, consistent with AERMOD guidance. Initial lateral dimension for on-road vehicles is based on USEPA's haul road guidance. Construction hauling routes are assumed to consist of a single lane; thus, the initial lateral dimension is based on vehicle width of 3 meters.

5. Construction off-road equipment is modeled as adjacent volume sources covering the relevant construction work areas, consistent with the LST guidance.

6. Construction fugitive dust will be modeled as one area source covering the parcel under construction. According to the 2012 San Francisco Community HRA methodology, the initial vertical dimension of the modeled fugitive dust area source will be set to 1 meter and the release height will be set to 0 meters consistent with SCAQMD LST methods.

Table 11

Exposure Parameters

Bridle Gate

Brentwood, California

Receptor Type	Receptor Age Group	Exposure Parameters						
		Daily Breathing Rate (DBR)[1]	Exposure Duration (ED)	Fraction of Time at Home (FAH)[2]	Exposure Frequency (EF)[3]	Averaging Time (AT)	Age Sensitivity Factor (ASF)[4]	Intake Factor, Inhalation (IF_{inh})
		[L/kg-day]	[years]	[unitless]	[days/year]	[days]	[unitless]	[m^3/kg-day]
Off-Site Child Resident[5]	3rd Trimester	361	0.50	1	350	25,550	10	0.025
	Age 0-<2 Years	1,090	2.00				10	0.30
	Age 2-<16 Years	572	4.7				3	0.11

Notes:

1. Daily breathing rates reflect default breathing rates from OEHHA 2015 and BAAQMD 2016 as follows: 95th percentile 24-hour daily breathing rate for 3rd trimester and age 0-<2 years; 80th percentile for ages 2 years and older (per BAAQMD 2016 and 2020 Health Risk Assessment (HRA) Modeling Guidelines).

2. Fraction of time spent at home is conservatively assumed to be 1 (i.e. 24 hours/day) based on the recommendation from BAAQMD (BAAQMD 2016) and OEHHA (OEHHA 2015).

3. Exposure frequency reflects default residential exposure frequency from OEHHA 2015.

4. Based on OEHHA 2015. Age sensitivity factors are unitless.

5. The nearby community includes a number of daycares. While OEHHA (2015) recommends that a Tier 1 evaluation of a daycare scenario assume eight hours of moderate intensity activities, USEPA (2009) characterizes daycares as ranging from a minimum of sedentary and passive activities to a maximum of light intensity activity, with an average of light intensity activities (see USEPA Appendix B, page B-7). According to USEPA (2009), an average child (0-6 years old) spends approximately 14.5 hour/day in sedentary/passive activities (including sleeping or napping), 5.8 hours/day in light intensity activities, 3.7 hours/day in moderate intensity activities, and 0.2 hours/day in high intensity activities. Under the construction scenario, assuming most of the sleeping occurs during the night hours, the exposure activities and breathing rate will be the same for the resident child and the daycare child. As construction activities occur during the day, the construction exposures and risks will be the same for the two receptor types assuming they are both present for the construction time and duration. As the daily construction duration can span more or different hours than the 8-hour daycare exposure time, the residential scenario is more conservative.

Calculation:

IF_{inh} = DBR * FAH * EF * ED * ASF * CF / AT

CF = 0.001 (m^3/L)

Abbreviations:

ASF - age sensitivity factor

AT - averaging time

BAAQMD - Bay Area Air Quality Management District

DBR - daily breathing rate

ED - exposure duration

EF - exposure frequency

FAH - fraction of time at home

IF_{inh} - intake factor

kg - kilogram

L - liter

m^3 - cubic meter

OEHHA - Office of Environmental Health Hazard Assessment

Table 13

Summary of Health Impacts from Project Construction and Operation at the MEIR

Bridle Gate

Brentwood, California

Source	$PM_{2.5}$ Concentration ($\mu g/m^3$, Annual Average)	Lifetime Excess Cancer Risk (in a million)[1]	Non-Cancer Hazard Index (unitless)[2]
Construction Equipment	0.017	7.0	0.0036
On-Road Trucks[3]	0	0.0046	0
Project Traffic[4]	0.0092	0.77	--
Project Total/Maximum[5]	**0.017**	**7.8**	**0.0036**
BAAQMD Thresholds[6]	**0.30**	**10**	**1.0**

Notes:

1. Excess lifetime cancer risks are estimated as the upper-bound incremental probability that an individual will develop cancer over a lifetime as a direct result of exposure to potential carcinogens. The estimated risk is expressed as a unitless probability. The cancer risk attributed to the emissions associated with the Project was calculated based on the modeled annual average DPM concentration, the intake factor for a resident child, the Cancer Potency Factors (CPF) for Diesel Particulate Matter (DPM), and the Age Sensitivity Factors (ASF).
2. The potential for exposure to result in adverse chronic noncancer effects is evaluated by comparing the estimated annual average air concentration to the noncancer chronic Reference Exposure Level (REL) for each chemical. When calculated for a single chemical, the comparison yields a ratio termed a chronic hazard quotient (HQ). To evaluate the potential for adverse chronic noncancer health effects from simultaneous exposure to multiple chemicals, the chronic hazard quotients for all chemicals are summed, yielding a hazard index (HI).
3. PM2.5 concentration and Non-Cancer Hazard Index represent annual values in the maximum year (2025 for PM2.5 and 2026 for the Non-Cancer Hazard Index). Cancer risk is cumulative over a lifetime. There are no emissions from hauling or vendor trucks during 2025 or 2026.
4. Because State Route (SR) 4 is adjacent to the Project, all Project traffic impacts and cumulative highway impacts are assumed to come from SR-4. The BAAQMD cumulative analysis raster tool for highway sources appears to have modeled Brentwood Boulevard (a parallel road due east of SR-4) instead of SR-4. To estimate impacts from SR-4 for the Project traffic health screening analysis, Ramboll performed a scaling analysis using the impacts modeled in the BAAQMD highway raster tool from Brentwood Boulevard. Ramboll identified the distance from the MEIR to SR-4 and determined the average impact at the equivalent distance from Brentwood Boulevard. Impacts were then scaled using Project traffic, assuming Brentwood Boulevard was modeled using 30,000 annual average daily trips (AADT). Project traffic was estimated in the DEIR to be 15,116 AADT. The BAAQMD cumulative analysis cancer risk raster tool assumes a 30-year lifetime exposure beginning in the third trimester, so this analysis is conservative in adding the construction impacts to the traffic impacts when in reality, the construction MEIR would not be exposed to Project traffic until after construction was complete.
5. Cancer risk is a cumulative lifetime impact, so construction and operation are added together. For PM2.5 concentration and chronic HI, the maximum of construction or operation is presented since these impacts will not occur concurrently.

Abbreviations:

Table 14

Summary of Cumulative Health Impacts at the MEIR

Bridle Gate

Brentwood, California

Source		$PM_{2.5}$ Concentration ($\mu g/m^3$, Annual Average)	Lifetime Excess Cancer Risk (in a million)[1]	Non-Cancer Hazard Index[2]
Project	Project Construction[3]	0.017	7.0	0.0036
	Project Traffic[4]	0.0092	0.77	--
Nearby Cumulative Sources[5]	Highway Sources[4]	0.054	4.5	--
	Major Roadway Sources	0.0070	0.39	--
	Railway Sources	6.5E-05	0.041	--
	Nearby Stationary Sources	4.0E-04	0.19	4.0E-04
	Powerdrive Project[6]	0.30	10	--
Cumulative Total		**0.38**	**23**	**0.0040**

Notes:

1. Excess lifetime cancer risks are estimated as the upper-bound incremental probability that an individual will develop cancer over a lifetime as a direct result of exposure to potential carcinogens. The estimated risk is expressed as a unitless probability. The cancer risk attributed to the emissions associated with the Project was calculated based on the modeled annual average DPM concentration, the intake factor for a resident child, the Cancer Potency Factors (CPF) for Diesel Particulate Matter (DPM), and the Age Sensitivity Factors (ASF).

2. The potential for exposure to result in adverse chronic noncancer effects is evaluated by comparing the estimated annual average air concentration to the noncancer chronic Reference Exposure Level (REL) for each chemical. When calculated for a single chemical, the comparison yields a ratio termed a chronic hazard quotient (HQ). To evaluate the potential for adverse chronic noncancer health effects from simultaneous exposure to multiple chemicals, the chronic hazard quotients for all chemicals are summed, yielding a hazard index (HI).

3. PM2.5 concentration and Non-Cancer Hazard Index represent annual values in the maximum year (2025 for PM2.5 and 2026 for the Non-Cancer Hazard Index). Cancer risk is cumulative over a lifetime. The addition of Project traffic to the Project construction impacts is conservative, as it assumes that the MEIR is exposed to both construction and full buildout operational emissions simultaneously starting with age third trimester.

4. Because State Route (SR) 4 is adjacent to the Project, all Project traffic impacts and cumulative highway impacts are assumed to come from SR-4. The BAAQMD cumulative analysis raster tool for highway sources appears to have modeled Brentwood Boulevard (a parallel road due east of SR-4) instead of SR-4. To estimate impacts from SR-4 for the Project and highway cumulative analyses, Ramboll performed a scaling analysis using the impacts modeled in the BAAQMD highway raster tool from Brentwood Boulevard. Ramboll identified the distance from the MEIR to SR-4 and determined the average impact at the equivalent distance from Brentwood Boulevard. Impacts were then scaled using Project traffic and SR-4 traffic, assuming Brentwood Boulevard was modeled using 30,000 annual average daily trips (AADT). SR-4 traffic was assumed to be 89,000 AADT (Caltrans 2014) and Project traffic was estimated in the DEIR to be 15,116 AADT. The BAAQMD cumulative analysis cancer risk raster tool assumes a 30-year lifetime exposure beginning in the third trimester, so this analysis is conservative in adding the construction impacts to the traffic impacts when in reality, the construction MEIR would not be exposed to Project traffic until after construction was complete.

5. Nearby cumulative sources are estimated based on BAAQMD cumulative analysis tools. Highway, roadway, and railway source impacts are estimated from the BAAQMD cumulative raster tools for PM2.5 concentration and lifetime excess cancer risk. These tools are not available for non-cancer hazard index. The nearby stationary source impact is based on the BAAQMD stationary source screening tool.

6. The Powerdrive Project published a Negative Declaration that indicates that air quality impacts will be less than significant (https://www.contracosta.ca.gov/DocumentCenter/View/64854/LP19-2019-Notice-of-Public-Reviewpdf-WEB-VERSION). The estimated cancer risk and PM2.5 impacts are conservative and likely to be much lower, given the MEIR location is more than 1,000 feet east of the Powerdrive Project close to SR-4.

APPENDIX C
CALEEMOD® OUTPUT FILES

Bridle Gate - Bay Area AQMD Air District, Annual

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Bridle Gate

Bay Area AQMD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	4.30	Acre	4.30	187,308.00	0
Single Family Housing	286.00	Dwelling Unit	92.86	514,800.00	818

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2026
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	203.98	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use -

Construction Phase - Operational-only run.

Grading -

Vehicle Trips - Project specific.

Vehicle Emission Factors - Updated to EMFAC2021 emission factors, which incorporate newer regulations and projections than the default EMFAC2017 factors.

Vehicle Emission Factors -

Vehicle Emission Factors -

Road Dust - Updated silt loading factor for Contra Costa County from the CARB 2021 Miscellaneous Process Methodology 7.9 for Entrained Road Travel, Paved Road Dust.

Woodstoves - No wood-burning devices per BAAQMD Regulation 6, Rule 3.

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Consumer Products - An updated 2020 VOC inventory from CARB and population estimates based on the CA DOF demographic projections were used to estimate a Contra Costa County VOC EF for 2020.

Mobile Land Use Mitigation -

Energy Mitigation -

Water Mitigation -

Waste Mitigation -

Fleet Mix - Updated to EMFAC2021 fleet mix, which incorporates newer regulations and projections than the default EMFAC2017 mix.

Bridle Gate

Bay Area AQMD Air District, Annual

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
City Park	4.30	Acre	4.30	187,308.00	0
Single Family Housing	286.00	Dwelling Unit	92.86	514,800.00	818

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	64
Climate Zone	4			**Operational Year**	2030
Utility Company	Pacific Gas and Electric Company				
CO2 Intensity (lb/MWhr)	145	**CH4 Intensity (lb/MWhr)**	0.033	**N2O Intensity (lb/MWhr)**	0.004

1.3 User Entered Comments & Non-Default Data

Project Characteristics - CO2 Intensity Factor is based on 2016-2018 historical PG&E data, projected to 60% renewables consistent with California RPS for 2030.

Land Use -

Construction Phase - Operational-only run.

Grading -

Vehicle Trips - Project specific.

Vehicle Emission Factors - Updated to EMFAC2021 emission factors, which incorporate newer regulations and projections than the default EMFAC2017 factors.

Vehicle Emission Factors -

Vehicle Emission Factors -

Woodstoves - No wood-burning devices per BAAQMD Regulation 6, Rule 3.

Mobile Land Use Mitigation -

EMFAC Off-Model Adjustment Factors for Gasoline Light Duty Vehicle to Account for the SAFE Vehicle Rule Not Applied

Energy Mitigation -

Water Mitigation -

Waste Mitigation -

Fleet Mix - Updated to EMFAC2021 fleet mix which incorporates newer regulations and projections than the default EMFAC2017 fleet mix.

Exceed Thresholds?	**No**	**No**	**No**	**No**	**--**	**--**	**--**	**--**

Notes:

1. Emissions were estimated using off-road construction equipment emission factors from CalEEMod and on-road emission factors from EMFAC2021. The emissions above include emissions from emissions from offroad equipment, emissions from worker and vendor trips, and off-gassing emissions from paving and architectural coating. BAAQMD construction thresholds for PM10 and PM2.5 evaluate only exhaust emissions.
2. Emission factors for CO2e were estimated by multiplying the CH4 and N2O emission factors by their global warming potentials from the 40 CFR Part 98 Subpart A, Table A-1.
3. CAP emissions are averaged over the number of workdays per year for each year in the construction period starting in July 2024.
4. Thresholds are from BAAQMD Guidance for Assessing and Mitigating Air Quality Impacts. For PM, this excludes construction fugitive emissions. There are currently no CEQA thresholds for GHG emissions from project construction.

Abbreviations:

CalEEMod - California Emissions Estimator Model
EMFAC2021 - California Air Resources Board EMission FACtor model
ROG - reactive organic gas
NOx - nitrogen dioxide
$PM_{2.5}$ - particulate matter < 2.5 µm
PM_{10} - particulate matter < 10 µm
lb - pound
CAP - criteria air pollutant

Application Form and Planning Survey Report

To Comply With and Receive Permit Coverage Under The East Contra Costa County Habitat Conservation Plan and Natural Community Conservation Plan

Please complete this application to apply for take authorization under the state and federal East Contra Costa County HCP/NCCP incidental take permits. The East Contra Costa County Habitat Conservancy ("Conservancy") or local jurisdiction (City of Brentwood, City of Clayton, City of Oakley, City of Pittsburg, and Contra Costa County) may request more information in order to deem the application complete.

I. PROJECT OVERVIEW

PROJECT INFORMATION	
PROJECT NAME: Bridle Gate	
PROJECT TYPE: ☒ Residential ☐ Commercial ☐ Transportation ☐ Utility ☐ Other	
PROJECT DESCRIPTION (BRIEF): The proposed project is development of 286 single family residential units, two parks, and open space, with access from the extension of Sand Creek Road. See detailed project description in Attachment A.	
PROJECT ADDRESS/LOCATION: The Study Area is located at the west end of Sand Creek Road, just west of State Highway 4 in Brentwood, Contra Costa County, California.	
PARCEL/PROJECT SIZE (ACRES): 135.31+/- acres (92.13+/- acre Bridle Gate site, 2.64+/- acres of land for the potential extension of Sand Creek Road, and 40.54+/- acres of lands to the north with no improvements)	
PROJECT APN(S): 019-082-009 & 019-082-010	
APPLICATION SUBMITTAL DATE: February 2023	**FINAL PSR DATE:** (City/County/Conservancy use)
LEAD PLANNER:	
JURISDICTION: ☒ City of Brentwood ☐ City of Clayton ☐ City of Oakley ☐ City of Pittsburg ☐ Contra Costa County ☐ Participating Special Entity*	
*Participating Special Entities are organizations not subject to the authority of a local jurisdiction. Such organizations may include school districts, irrigation districts, transportation agencies, local park districts, geological hazard abatement districts, or other utilities or special districts that own land or provide public services.	
DEVELOPMENT FEE ZONE: ☐ Zone I ☒ Zone II ☐ Zone III ☐ Zone IV	
See figure 9-1 of the HCP/NCCP at www.cocohcp.org for a generalized development fee zone map. Detailed development fee zone maps by jurisdiction are available from the jurisdiction.	

PROJECT APPLICANT INFORMATION	
APPLICANT'S NAME: Discovery Builders, Inc.	
AUTHORIZED AGENT'S NAME AND TITLE: Louis Parsons, Project Manager	
PHONE NO.: (925) 682-6419	**APPLICANT'S E-MAIL:** lparsons@discoverybuilders.com
MAILING ADDRESS: 4061 Port Chicago Highway, Concord, California 94520	

BIOLOGIST INFORMATION[1]	
BIOLOGICAL/ENVIRONMENTAL FIRM: Moore Biological Consultants	
CONTACT NAME AND TITLE: Diane S. Moore, M.S., Principal Biologist	
PHONE NO.: (209) 745-1159	**CONTACT'S E-MAIL:** moorebio@softcom.net
MAILING ADDRESS: 10330 Twin Cities Rd., Ste 30, Galt, CA 95632	

[1] A USFWS/CDFW-approved biologist (project-specific) is required to conduct the surveys. Please submit biologist(s) approval request to the Conservancy.

II. PROJECT DETAILS

Please complete and/or provide the following attachments:

1) **Project Description**
   Attach as **Attachment A: Project Description**. Provide a detailed written description that concisely and completely describes the project and location. Include the following information:
   - All activities proposed for the site or project, including roads utilized, construction staging areas, and the installation of underground facilities, to ensure the entire project is covered by the HCP/NCCP permit
   - Proposed construction dates, including details on construction phases, if applicable
   - Reference a City/County application number for the project, if applicable
   - General Best Management Practices, if applicable
   - If the project will have temporary impacts, please provide a restoration plan describing how the site will be restored to pre-project conditions, including revegetation seed mixes or plantings and timing

2) **Project Vicinity Map**
   Provide a project vicinity map. Attach as **Figure 1** in **Attachment B: Figures**.

3) **Project Site Plans**
   Provide any project site plans for the project. Attach as **Figure 2** in **Attachment B: Figures**.

4) **CEQA Document**
   Indicate the status of CEQA documents prepared for the project. Provide additional comments below table if necessary.

Type of Document	Status	Date Completed
☐ Initial Study		
☒ Notice of Preparation	Filed	12/29/22
☐ Draft EIR		
☐ Final EIR		
☐ Notice of Categorical Exemption		
☐ Notice of Statutory Exemption		
☒ Revised EIR	In preparation	

III. EXISTING CONDITIONS AND IMPACTS

Please complete and/or provide the following attachments:

1) **Field-Verified Land Cover Map**[2]
   Attach a field-verified land cover map in **Attachment B: Figures** and label as **Figure 3**. The map should contain all land cover types present on-site overlaid on aerial/satellite imagery. Map colors for the land cover types should conform to the HCP/NCCP (see *Figure 3-3: Landcover in the Inventory Area* for land cover type legend).

2) **Photographs of the Project Site**
   Attach representative photos of the project site in **Attachment B: Figures** and label as **Figure 4**. Please provide captions for each photo.

[2] For PSEs and city or county public works projects, please also identify permanent and temporary impact areas by overlaying crosshatching (permanent impacts) and hatching (temporary impacts) on the land cover map.

3) Land Cover Types and Impacts and Supplemental Tables

- For all terrestrial land cover types please provide calculations to the nearest **hundredth of an acre (0.01)**.
  For aquatic land cover types please provide calculations to the nearest **thousandth of an acre (0.001)**.
- **Permanent Impacts** are broadly defined in the ECCC HCP/NCCP to include all areas removed from an undeveloped or habitat-providing state and includes land in the same parcel or project that is not developed, graded, physically altered, or directly affected in any way but is isolated from natural areas by the covered activity. Unless such undeveloped land is dedicated to the Preserve System or is a deed-restricted creek setback, the development mitigation fee will apply (if proposed, would require Conservancy approval).
- **Temporary Impacts** are broadly defined in the ECCC HCP/NCCP as any impact on vegetation or habitat that does not result in permanent habitat removal (i.e. vegetation can eventually recover).
- If **wetland (riparian woodland/scrub, wetland, or aquatic)** land cover types are present on the parcel but will not be impacted please discuss in the following section 4) Jurisdictional Wetlands and Waters. Wetland impact fees will only be charged if wetland features are impacted. However, development fees will apply to the entire parcel.
- **Stream** land cover type is considered a linear feature where impacts are calculated based on length impacted. The acreage within a stream, below Top of Bank (TOB), must be assigned to the adjacent land cover type(s). Insert area of impact to stream below TOB in parentheses after the Land Cover acreage number (e.g., Riparian Woodland/Scrub: 10 (0.036) – where 10 is the total impacted acreage <u>including</u> 0.036 acre, which is the acreage within stream TOB). Complete following supplemental **Stream Feature Detail** table to provide information for linear feet.
- **Total Impacts** acreage should be the <u>total parcel acreage</u> (development project) or <u>project footprint acreage</u> (rural infrastructure or utility project).

<u>Table 1: Land Cover Types and Impacts (92.13 acre "Bridle Gate Project Site")</u>

Land Cover Type	Permanent Impacts	Temporary Impacts	*Proposed for HCP/NCCP Dedication on the Parcel (Requires Conservancy Approval)*

Identify any uncommon vegetation and uncommon landscape features[3]:

Supplemental to Table 1: Uncommon Vegetation and Landscape Features

	Permanent Impacts	Temporary Impacts
Uncommon Grassland Alliances		
Purple Needlegrass Grassland		
Blue Wildrye Grassland		
Creeping Ryegrass Grassland		
Wildflower Fields		
Squirreltail Grassland		
One-sided Bluegrass Grassland		
Serpentine Bunchgrass Grassland		
Saltgrass Grassland		
Alkali Sacaton Bunchgrass Grassland		
☐ Other		
Uncommon Landscape Features		
Rock Outcrops		
Caves		
Springs and seeps		
Scalds		
Sand Deposits		
☐ Mines[4]		
☐ Buildings (bat roosts)[3]		
☒ Potential nest sites (trees or cliffs)[3]		

There are 49 trees in the Bridle Gate project site. Several of these trees are large enough to support nesting raptors, and songbirds may use the trees in the Study Area for nesting. The Bridle Gate project will not involve tree removal.

Please provide details of impacts to stream features: None. The Bridle Gate project will not involve impacts to Sand Creek.

Stream Name: **Watershed:**

Supplemental to Table 1: Stream Feature Detail[5]

Stream Width	Stream Type[6]	Permanent Impacts (linear feet)[7]	Temporary Impacts (linear feet)[7]
☐ ≤ 25 feet wide ☐ > 25 feet wide	☐ Perennial ☐ Intermittent ☐ Ephemeral, 3rd or higher order ☐ Ephemeral, 1st or 2nd order		
☐ ≤ 25 feet wide ☐ > 25 feet wide	☐ Perennial ☐ Intermittent ☐ Ephemeral, 3rd or higher order ☐ Ephemeral, 1st or 2nd order		
☐ ≤ 25 feet wide ☐ > 25 feet wide	☐ Perennial ☐ Intermittent ☐ Ephemeral, 3rd or higher order ☐ Ephemeral, 1st or 2nd order		

[3] These acreages are for Conservancy tracking purposes. Impacts to these uncommon vegetation and landscape features should be accounted for within the land cover types in Table 1 (e.g., x acres of purple needlegrass in this supplemental table should be accounted for within annual grassland in Table 1).
[4] Insert amount/number, not acreage. Provide additional information on these features in Attachment A: Project Description.
[5] Use more than 1 row as necessary to describe impacts to streams on site.
[6] See glossary (Appendix A) for definition of stream type and order.
[7] Stream length is measured along stream centerline, based on length of impact to any part of the stream channel, TOB to TOB.

Table 1a: Land Cover Types and Impacts (2.64 acre "Sand Creek Extension")

Land Cover Type	Permanent Impacts	Temporary Impacts	*Stream Setback*	*Preserve System Dedication*

Turf				
Landfill				
TOTAL IMPACTS	2.64 acres			

4) Summary of Land Cover Types

Please provide a written summary of descriptions for land cover types found on site including characteristic vegetation.

The 135.31+/- acre Study Area includes the 92.13+/acre Bridle Gate project site and 2.64+/- acres of off-site lands for the extension of Sand Creek Road if the Bridle Gate project is developed in advance of the City's overall Sand Creek Road extension project. The Study Area also includes 40.54+/- acres of lands to the north; there will be no improvements in this 40.54+/- acre area.

Field surveys of the Study Area were conducted on April 1, 9, 16, and 30, 2020, and January 13, 2022.

During the past decade, the Study Area has been subject to substantial earth disturbance related to the construction of State Highway 4. The Study Area has also been farmed in hay crops for many years. Lands to the south of Sand Creek support ruderal grassland vegetation that is periodically disturbed by disking and farming winter wheat. The parcel to the north of Sand Creek also supports ruderal grassland vegetation that is periodically disturbed by disking; this area has also been farmed in winter wheat in recent years. There is a seasonal wetland swale in the west part of the Study Area that drains into Sand Creek. There are numerous

trees in the Sand Creek riparian corridor, a few trees in the field north of Sand Creek, and a few trees along Old Sand Creek Road.

Ruderal Grassland: The Study Area is vegetated with ruderal grassland vegetation that has been highly disturbed by agricultural use and ground disturbance related to highway construction (Figures 3 and 4a-4d). Grasslands in the Study Area have been graded and re-graded numerous times over the years, and are routinely disked. Dominant grass species in the Study Area include oats (*Avena fatua*), soft chess brome (*Bromus hordeaceus*), ripgut brome (*Bromus diandrus*), and perennial ryegrass (*Lolium perenne*). Other grassland species such yellow star-thistle (*Centaurea solstitialis*), black mustard (*Brassica nigra*), yellow sweetclover (*Melilotus officinalis*), American vetch (*Vicia americana*), purple owl's clover (*Castilleja exserta*) and filaree (*Erodium* spp.) are intermixed with the grasses.

Riparian Woodland/Scrub: Sand Creek flows west to east through the Study Area, including through the northwest tip of the Bridle Gate site (Figures 3, 4d-f, and Wetland Delineation Map in Attachment E). Sand Creek is located in an incised corridor approximately 15 feet below the adjacent grasslands. Valley oak (*Quercus lobata*), California black walnut (*Juglans californica*), California buckeye (*Aesculus californica*), cottonwoods (*Populus fremontii*), almond (*Prunus dulcis*), and fan palm (*Washingtonia filifera*) are the dominant trees along Sand Creek. There are a few scattered elderberry (*Sambucus* nigra ssp. *caerulea*) shrubs and patches of wild rose (*Rosa californica*) along the banks of the stream. Cattails (*Typha* sp.), bulrush (*Schoenoplectus americanus*), water plantain (*Alisma trivale*), and curly dock (*Rumex crispus*) are dominant species in creekbed.

Seasonal Wetland: The seasonal wetland in the west part of the Bridle Gate site has also been routinely disked and is highly disturbed (Figures 3, 4g, and Wetland Delineation Map in Attachment E). Water drains into the Study Area from an off-site basin in the residential subdivision just south of the Study Area and drains through the seasonal wetland feature before draining into Sand Creek in the northwest part of the Study Area. The swale is saturated seasonally but surface water is present only during or shortly after rain events. Perennial ryegrass is the dominant species in the swale, with lesser amounts of Mediterranean barley (*Hordeum marinum*), as well as upland species such as Harding grass (*Phalaris aquatica*) and black mustard.

Trees: There are numerous trees along the Sand Creek riparian corridor and a few in and along the edges of the field north of Sand Creek (Figure 5a). Valley oak and almonds are the most dominant tree species, intermixed with lesser numbers of black walnut, California buckeye, willows (*Salix* spp.), toyon (*Heteromeles arbutifolia*), Fremont cottonwood, and a few ornamental tree species.

5) Jurisdictional Wetlands and Waters

If wetlands and waters are present on the project site, project proponents must conduct a delineation of jurisdictional wetlands and waters. Jurisdictional wetlands and waters are defined on pages 1-18 and 1-19 of the ECCC HCP/NCCP as the following land cover types: permanent wetland, seasonal wetland, alkali wetland, aquatic, pond, slough/channel, and stream. It should be noted that these features differ for federal and state jurisdictions. If you have identified any of these land cover types in Table 1, complete the section below.

a) Attach the wetland delineation report as **Attachment E: Wetland Delineation.** If a wetland delineation has not been completed, please explain below in section 4c.

b) Please check the following permits the project may require. Please submit copies of these permits to the Conservancy prior to the start of construction:

☐ CWA Section 404 Permit[8] ☐ CWA Section 401 Water Quality Certification

☐ Waste Discharge Requirements ☐ Lake and Streambed Alteration Agreement

c) Provide any additional information on impacts to jurisdictional wetland and waters below, including status of the permit(s):

[8] The USACE Sacramento District issued a Regional General Permit 1 (RGP) related to ECCC HCP/NCCP covered activities. The RGP is designed to streamline wetland permitting in the entire ECCC HCP/NCCP Plan Area by coordinating the avoidance, minimization, and mitigation measures in the Plan with the Corps' wetland permitting requirement. Applicants seeking authorization under this RGP shall notify the Corps in accordance with RGP general condition number 18 (Notification).

A wetland delineation of the Study Area was conducted on April 1, 2020 and April 16, 2020 and the mapped wetland boundaries were confirmed in the field on January 5, 2022. There is a total of 5.086+/- acres of potentially jurisdictional Waters of the U.S and Wetlands in the Study Area (see Wetland Delineation Map in Attachment E). This total includes a 4.588+/- acre seasonal wetland and 0.112+/- acres of stream in the Bridle Gate project site and an additional 0.386+/- acres of stream further east.

The project will not involve the placement of fill in in jurisdictional Waters of the U.S. The seasonal wetland swale will be fully avoided and will remain in open space. Sand Creek will be fully avoided by the Bridle Gate project, but will eventually be impacted by the City's overall Sand Creek Road extension project.

6) Species-Specific Planning Survey Requirements

Based on the land cover types found on-site and identified in Table 1, check the applicable boxes in Table 2a.

Table 2a. Species –Specific Planning Survey Requirements

Land Cover Type in Project Area	Required Survey Species	Habitat Element in Project Area	Planning Survey Requirement[9]	Info in HCP
☒ Grasslands, oak savannah, agriculture, or ruderal	☒ San Joaquin kit fox	Assumed if within modeled range of species	If within modeled range of species, identify and map potential breeding or denning habitat within the project site and a 250-ft radius around the project footprint.	pp. 6-37 to 6-38
	☒ Western burrowing owl	Assumed	Identify and map potential breeding habitat within the project site and a 500-ft radius around the project footprint. Please note the HCP requires buffers for occupied burrows. Surveys may need to encompass an area larger than the project footprint.	pp. 6-39 to 6-41
☒ Aquatic (ponds, wetlands, streams, sloughs, channels, and marshes)	☐ Giant garter snake	Aquatic habitat accessible from the San Joaquin River	Identify and map potential habitat.	pp. 6-43 to 6-45
	☐ California tiger salamander	Ponds and wetlands Vernal pools Reservoirs Small lakes	Identify and map potential breeding habitat. Document habitat quality and features. Provide the Conservancy with photo-documentation and report.	pp. 6-45
	☒ California red-legged frog	Slow-moving streams, ponds and wetlands	Identify and map potential breeding habitat. Document habitat quality and features. Provide the Conservancy with photo-documentation and report.	p. 6-46
	☐ Covered shrimp	Seasonal wetlands Vernal pools Sandstone rock outcrops Sandstone depressions	Identify and map potential habitat. Please note the HCP requires a 50 foot non-disturbance buffer from seasonal wetlands that may be occupied by covered shrimp. Surveys may need to encompass an area larger than the project footprint.	pp. 6-46 to 6-48
☐ Any	☐ Townsend's big-eared bat	Rock formations with caves Mines Abandoned buildings outside urban area	Map and document potential breeding or roosting habitat.	pp. 6-36 to 6-37
	☒ Swainson's hawk	Potential nest sites within 1,000 feet of project	Inspect large trees for presence of nest sites. Document and map.	pp. 6-41 to 6-43
	☒ Golden Eagle	Potential nest sites with ½ mile of project	Inspect large trees for presence of nest sites. Document and map.	pp. 6-38 to 6-39

Surveys for all covered species must be conducted by a qualified biologist (USFWS/CDFW project-specific approved). Please submit biologist approval request to the East Contra Costa County Habitat Conservancy.
Surveys for all covered species must be conducted according to the respective USFWS or CDFW survey protocols, as identified in Chapter 6.4.3 in the HCP/NCCP.

[9] The planning survey requirements in this table are not comprehensive. Please refer to Chapter 6.4.3 in the ECCC HCP/NCCP for more detail.

7) Planning Survey Species Habitat Maps

Provide Planning Survey Species Habitat Maps as required in Table 2a, attach as **Figure 5** in **Attachment B: Figures**.

8) Results of Species-Specific Surveys

Provide a written summary describing the results of the planning surveys. Please discuss the location, quantity, and quality of suitable habitat for specified covered wildlife species on the project site.

General Setting: The 135.31+/- acre Study Area is in Brentwood, in Contra Costa County, California (Figure 1). The Study Area is within Section 10 in Township 1 North, Range 2 East of the USGS 7.5-minute Brentwood topographic quadrangle. The Study Area is situated at elevations of approximately 130 to 220 feet above mean sea level.

Land uses in this portion of Brentwood are primarily residential and agricultural. Most of the natural habitats in the project vicinity are either intensively farmed or have been replaced with development. There is a relatively new subdivision to the south of the Study Area and commercial development to the east of the Study Area, across Highway 4. The fields to the north and west of the Study Area have been farmed in hay crops during the past few years.

San Joaquin Kit Fox: The Study Area is ruderal grassland that is within the range of San Joaquin kit fox (*Vulpes macrotis mutica*) (Figure 5a) and is mapped as "suitable core habitat" in the modeled range of the species as mapped in Appendix D of the ECCCCHCP. The Study Area was inspected for burrows or dens with evidence of kit fox occupancy (i.e., scat, tracks) or burrows or dens that meet the dimensional criteria for kit fox. A search of the Study Area for potential San Joaquin kit fox dens was accomplished by driving and walking meandering transects throughout the property. While a few burrows were observed in the Study Area, they were too small and appeared to be used by ground squirrels. No dens with appropriate dimensions and/or evidence of San Joaquin kit fox were observed in the Study Area. The nearest occurrence of this species in California Department of Fish and Wildlife's California Natural Diversity Database (CNDDB, 2023) is a record approximately 3 miles southwest of the Study Area.

Western Burrowing Owl: The Study Area is ruderal grassland (Figure 5a) that is within the range of western burrowing owl (*Athene cunnicularia*). The Study Area and visible areas on adjacent lands were inspected for burrowing owls and ground squirrel burrows with evidence of burrowing owl occupancy (i.e., white wash, pellets, feathers). Comprehensive inspection of potential burrowing owl habitat was accomplished by walking and driving meandering transects throughout the property. No western burrowing owls were observed in the Study Area. No burrows with evidence of burrowing owl occupancy were observed. There are a few occurrences of burrowing owls in the CNDDB (2023) within 500 feet of the Study Area and several other records within half of a mile from the Study Area (Figure 5b).

Swainson's Hawk: The Study Area is ruderal grassland along the extreme western edge of the range of Swainson's hawks (*Buteo swainsoni*). There are several potential nest trees along Sand Creek and in the field north of Sand Creek that may be utilized by Swainson's hawk for nesting (Figure 5a). No Swainson's hawks were observed perching or nesting in the trees within the Study Area or trees visible from the Study Area during the April 2020 field surveys. The grasslands in the Study Area may be used for foraging by Swainson's hawks.

The CNDDB (2023) contains a 2007 record of a pair of Swainson's hawks nesting in a tree along Sand Creek in the Study Area, approximately 100 feet east of the Bridle Gate project site (Figure 5b). During the 2020 field surveys, a nest occupied by great-horned owls was observed in the same location along the creek. There are no other records of nesting Swainson's hawks within 1,000 feet of the Study Area.

Golden Eagle: The Study Area is ruderal grassland and is within the range of golden eagles (*Aquila chrysaetos*). There are a few potential nest trees for golden eagles in the Study Area along Sand Creek and in the field north of Sand Creek (Figure 5a). The nearest occurrence of this species in the CNDDB (2023) is approximately 5 miles southeast of the Study Area; there are no records of nesting golden eagle within 0.5 miles of the Study Area. As described above, trees in and visible from the Study Area were inspected for raptor stick nests and only one was observed along Sand Creek, which was occupied by great-horned owls. No other

raptor stick nests were observed in the trees within the Study Area or trees visible from the Study Area. No golden eagles were observed during the 2020 or 2022 field surveys.

California Red-legged Frog: The Study Area is within the range of California red-legged frog (*Rana auroura draytonii*) and Sand Creek provides low quality, yet potentially suitable habitat for this species. The entire Study Area is "potential migration and aestivation habitat" in the modeled range of California red-legged frog as mapped in Appendix D of the ECCCCHCP; Sand Creek and the seasonal wetland are mapped as potential breeding habitat for this species. California red-legged frog may travel across the grasslands in the Study Area while dispersing from aquatic habitats, but due to intensive disking, they would not be expected to aestivate in the Study Area. There are no notable plunge pools within Sand Creek providing highly suitable breeding habitat; most of the creek consists of shallow runs. The seasonal wetland does not provide suitable California red-legged frog breeding habitat. The nearest occurrence of California red-legged frog in the CNDDB (2023) is a 2005 record approximately 1 mile southwest of the Study Area.

Other Covered Species: The 4.59-acre seasonal wetland (Figure 3) is not a vernal pool. The seasonal wetland swale has directional flow and is saturated seasonally, but surface water is present only during or shortly after rain events. This seasonal wetland feature is highly disturbed from periodic disking and hay farming. This seasonal wetland swale does not provide suitable habitat for vernal pool fairy shrimp (*Branchinecta lynchi*), vernal pool tadpole shrimp (*Lepidurus packardi*), or other special-status branchiopods. Due to its hydrological regime, the seasonal wetland does not provide suitable breeding habitat for California tiger salamander (*Ambystoma californiense*). Due to intensive disking, the grasslands in the Study Area are not suitable for California tiger salamander aestivation.

The site mapped in Appendix D of the ECCCCHCP as "primary foraging habitat" for tricolored blackbird (*Agelaius tricolor*). The on-site grasslands may be used by this species for foraging. Vegetation in and adjacent to Sand Creek including patches of wild rose, bulrush, cattails, and willows could be used by tricolored blackbird for nesting.

9) Covered and No-Take Plants

Please check the applicable boxes in Table 2b based on the land cover types found in the project area. If suitable land cover types are present on site, surveys must be conducted using approved CDFW/USFWS methods during the appropriate season for identification of covered and no-take species (see page 6-9 of the ECCC HCP/NCCP). Reference populations of covered and no-take plants should be visited, where possible, prior to conducting surveys to confirm that the plant species is visible and detectable at the time surveys are conducted. In order to complete all the necessary covered and no-take plant surveys, spring, summer, and fall surveys may be required.

Table 2b. Covered and No-Take Plant Species

Plant Species	Covered (C) or No-Take (N)	Associated Land Cover Type	Typical Habitat or Physical Conditions, if Known	Typical Blooming Period	Suitable Land Cover Type Present
Adobe navarretia (*Navarretia nigelliformis* ssp. *radians*) [a]	C	Annual Grassland	Generally found on clay barrens in Annual Grassland [b]	Apr–Jun	☐ Yes ☒ No
Alkali milkvetch (*Astragalus tener* ssp. *tener*)	N	Alkali grassland Alkali wetland Annual grassland Seasonal wetland	Generally found in vernally moist habitat in soils with a slight to strongly elevated pH	Mar–Jun	☒ Yes ☐ No
Big tarplant (*Blepharizonia plumosa*)	C	Annual grassland	Elevation below 1500 feet [d] most often on Altamont Series or Complex soils	Jul–Oct	☐ Yes ☒ No
Brewer's dwarf flax (*Hesperolinon breweri*)	C	Annual grassland Chaparral and scrub Oak savanna Oak woodland	Generally, restricted to grassland areas within a 500+ buffer from oak woodland and/or chaparral/scrub [d]	May–Jul	☐ Yes ☒ No

Brittlescale (*Atriplex depressa*)	C	Alkali grassland Alkali wetland	Restricted to soils of the Pescadero or Solano soil series; generally found in southeastern region of plan area [d]	May–Oct	☐ Yes ☒ No
Caper-fruited tropidocarpum (*Tropidocarpum capparideum)*	N	Alkali grassland		Mar–Apr	☐ Yes ☒ No
Contra Costa goldfields (*Lasthenia conjugens*)	N	Alkali grassland Alkali wetland Annual grassland Seasonal wetland	Generally found in vernal pools	Mar–Jun	☒ Yes ☐ No
Diablo Helianthella (*Helianthella castanea*)	C	Chaparral and scrub Oak savanna Oak woodland	Elevations generally above 650 feet [d]	Mar–Jun	☐ Yes ☒ No
Diamond-petaled poppy (*Eschscholzia rhombipetala*)	N	Annual grassland		Mar–Apr	☐ Yes ☒ No
Large-flowered fiddleneck (*Amsinckia grandiflora*)	N	Annual grassland	Generally on clay soil	Apr–May	☐ Yes ☒ No
Mount Diablo buckwheat (*Eriogonum truncatum*)	N	Annual grassland Chaparral and scrub	Ecotone of grassland and chaparral/scrub	Apr–Sep	☐ Yes ☒ No
Mount Diablo fairy-lantern (*Calochortus pulchellus*)	C	Annual grassland Chaparral and scrub Oak savanna Oak woodland	Elevations generally between 650 and 2,600[d]	Apr–Jun	☐ Yes ☒ No
Mount Diablo Manzanita (*Arctostaphylos auriculata*)	C	Chaparral and scrub	Elevations generally between 700 and 1,860 feet; restricted to the eastern and northern flanks of Mt. Diablo [d] and the vicinity of Black Diamond Mines	Jan–Mar	☐ Yes ☒ No
Recurved larkspur (*Delphinium recurvatum*)	C	Alkali grassland Alkali wetland		Mar–Jun	☐ Yes ☒ No
Round-leaved filaree (*California macrophylla*) [c]	C	Annual grassland		Mar–May	☐ Yes ☒ No
San Joaquin spearscale (*Extriplex joaquiniana*) [e]	C	Alkali grassland Alkali wetland		Apr–Oct	☐ Yes ☒ No
Showy madia (*Madia radiata*)	C	Annual grassland Oak savanna Oak woodland	Primarily occupies open grassland or grassland on edge of oak woodland	Mar–May	☐ Yes ☒ No

[a] The species *Navarretia nigelliformis* subsp. *nigelliformis* is no longer considered to occur within Contra Costa County based on specimen annotations at the UC and Jepson Herbaria at the University of California Berkeley as well as the opinions of experts in the genus. This taxon is now recognized as *Navarretia nigelliformis* subsp. *radians.* Any subspecies of *Navarretia nigelliformis* encountered as a part of botanical surveys in support of a PSR should be considered as covered under this HCP/NCCP.
[b] Habitat for the *Navarretia nigelliformis* subspecies that occurs within the inventory are is inaccurately described in the HCP/NCCP as vernal pools. The entity within the Inventory generally occupies clay barrens within Annual Grassland habitat, which is an upland habitat type.
[c] From California Native Plant Society. 2007. *Inventory of Rare and Endangered Plants* (online edition, v7-07d). Sacramento, CA. Species may be identifiable outside of the typical blooming period; a professional botanist shall determine if a covered or no take plant occurs on the project site. Reference population of covered and no-take plants should be visited, where possible, prior to conducting surveys to confirm that the plant is visible and detectable at the time surveys are conducted.
[d] See Species Profiles in Appendix D of the Final HCP/NCCP. Reference populations of covered and no-take plants should be visited, where possible, prior to conducting surveys to confirm that the plant species is visible and detectable at the time surveys are conducted.
[e] In the recent update to the Jepson eflora (JFP 2013) *Atriplex joaquinana* has been circumscribed and segregated into a new genus called *Extriplex* based on the work of Elizabeth Zacharias and Bruce Baldwin (2010). The etymology of the genus *Extriplex* means, "beyond or outside Atriplex".

10) Results of Covered and No-Take Plant Species

Provide a written summary describing the results of the planning surveys conducted as required in Table 2b. Describe the methods used to survey the site for all covered and no-take plants, including the dates and times of all surveys conducted (see Tables 3-8 and 6-5 of the ECCC HCP/NCCP for covered and no-take plants), including reference populations visited prior to conducting surveys.

If any covered or no-take plant species were found, include the following information in the results summary:

- Description and number of occurrences and their rough population size.
- Description of the "health" of each occurrence, as defined on pages 5-49 and 5-50 of the HCP/NCCP.
- A map of all the occurrences.
- Justification of surveying time window, if outside of the plant's blooming period.

- The CNDDB form(s) submitted to CDFW (if this is a new occurrence).
- A description of the anticipated impacts that the covered activity will have on the occurrence and how the project will avoid impacts to all covered and no-take plant species. If impacts to covered plant species cannot be avoided and plants will be removed by covered activity, the Conservancy must be notified and has the option to salvage the covered plants. All projects must demonstrate avoidance of all six no-take plants (see table 6-5 of the HCP/NCCP).

Survey Methods

Initial surveys to assess potentially suitable habitat for special-status plants in the Study Area were undertaken almost a decade ago, on July 12, 2012 and February 8 and April 30, 2013.

Focused surveys for special-status plants and an updated assessment of the Study Area for potentially suitable habitat for special-status plants were undertaken on April 9 and April 30, 2020, by botanist Jeff Glazner. The Study Area was systematically searched for special-status plants by walking throughout the Study Area, identifying plants as possible in the field, and collecting specimens for subsequent identification in the laboratory. The field survey was floristic in nature with the goal of identifying species observed to the taxonomic level necessary to determine whether it was a special-status species.

A final survey was conducted on January 13, 2022 to confirm the suitability of the Study Area to support special-status plants has not changed since the 2020 surveys.

Survey Results and Discussion

No covered or no-take plants were observed or are expected to occur in the Study Area. The Study Area has been farmed in hay crops for over a decade and the ruderal grassland in the Study Area is highly disturbed and does not provide potentially suitable habitat for any of the covered plants that occur in more natural annual grasslands in the greater project vicinity. No alkaline soils are present in the Study Area. The seasonal wetland is also highly disturbed and provides very poor-quality habitat for covered plants that occur in seasonal wetland habitats (i.e., alkali milkvetch and Contra Costa Goldfields). Covered seasonal wetland plants are discussed below. For the sake of completeness, each of the plant species identified in Table 2b as potentially occurring in annual grassland habitats is also discussed below.

Alkali Milkvetch (*Astragalus tener* ssp. *tener*): Alkali milkvetch, a dicot of the Fabaceae family, is an annual herb native and endemic to California. It is ranked by the CNPS as 1B.2. It produces upright stems up to 30 cm tall with several lance-shaped to oval leaflets. The inflorescence is a dense cluster of pinkish-purple white-smudged flowers. The California Native Plant Society (CNPS) on-line *Inventory of Rare and Endangered Plants* (2023) describes alkali milkvetch as occurring in alkaline habitats of playas, and valley and foothill grasslands in adobe clay soils, and vernal pools, at elevations up to 197 feet. It grows in both coastal and inland areas. The CNPS Inventory also describes this species as extirpated in Contra Costa County. The ECCCHCP/NCCP does not contain a model predicting where this species may occur within the plan area. No alkaline soil is present in the Study Area, and the species was not detected during the rare plant surveys.

Contra Costa Goldfields (*Lasthenia conjugens*): Contra Costa goldfields, a dicot of the Asteraceae family, is an annual herb native and endemic to California, primarily in vernal pools. It is ranked by the CNPS as 1B.2. Stems are simple or freely branched and erect attaining a height of less than 40 cm. The yellow ray flowers may number six to thirteen petals, and the five to ten-millimeter ligules are yellow as well. The yellow disk flowers are numerous, and anther tips are linear to somewhat ovate. The CNPS on-line *Inventory of Rare and Endangered Plants* (2023) describes Contra Costa goldfields as occurring in mesic habitats of cismontane woodland, alkaline playas, valley and foothill grasslands, and vernal pools at elevations up to 1,541 feet. The Study Area falls within the known range of the species; the ECCCHCP/NCCP does not contain a model predicting where this species may occur within the plan area. There are no vernal pools in the Study Area and no suitable habitat for this species. It was not detected during the rare plant surveys.

Adobe (Shining) Navarretia (*Navarretia nigelliformis* ssp. *radians*)[10]: This navarretia, a dicot of the Polemoniaceae family, is an annual herb native to California. It is ranked by the CNPS as 1B.2. The herbage is light gray-green with branches decumbent. The corolla is included, nine to 11 mm long, with lobes one to two mm. The on-line *Inventory of Rare and Endangered Plants* (2023) describes shining navarretia as occurring in vernal pools and clay depressions, at elevations between 492 and 3,280 feet. The Study Area falls within the known range of the species; the ECCCHCP/NCCP does not contain a model predicting where this species may occur within the plan area. There are no vernal pools in the Study Area and other than the wetland swale, no mesic areas were observed in the Study Area. The species was not detected during the rare plant survey.

Big Tarplant (*Blepharizonia plumosa*): Big tarweed, a dicot of the Asteraceae family, is an annual herb native and endemic to California. It is ranked by the CNPS as 1B.1. This aromatic annual herb produces a hairy, erect stem up to two meters tall. The leaves are linear in shape and sometimes toothed. The inflorescence bears several flower heads, each with a fringe of up to 13 red-veined white ray florets. The CNPS on-line *Inventory of Rare and Endangered Plants* (2023) describes big tarplant as occurring in valley and foothill grassland habitats (usually clay) at elevations between 98 and 1,657 feet. It grows in the Central Coast Ranges and adjacent sections of the southern San Francisco Bay Area and Central Valley. The Study Area is mapped in the ECCCHCP/NCCP as both "Suitable" and "Suitable Low Potential Habitat". The ruderal grasslands in the Study Area do not provide suitable habitat for big tarplant, and its likelihood of occurrence is extremely low.

Brewer's Dwarf Flax (*Hesperolinon breweri*): Brewer's dwarf flax, a dicot of the Linaceae family, is an annual herb native and endemic to California, where it is known from three counties in the San Francisco Bay Area. It is ranked by the CNPS as 1B.2. It grows erect to a height of five to 20 cm. Its narrow, linear leaves are greenish to purplish in color, and it produces dense inflorescences of flowers with glandular sepals and five bright yellow petals. The CNPS on-line *Inventory of Rare and Endangered Plants* (2023) describes Brewer's dwarf flax as occurring in chaparral, cismontane woodland, and valley and foothill grasslands, usually in serpentinite soils, at elevations between 295 and 2,953 feet. The Study Area is not mapped in the ECCCHCP/NCCP as "Suitable Low Potential Habitat" or as "Suitable Habitat" for Brewer's dwarf flax. No serpentinite is present in the Study Area. The ruderal grasslands in the Study Area do not provide suitable habitat for Brewer's dwarf flax, and it was not detected during the rare plant surveys.

Brittlescale *(Atriplex depressa):* Brittlescale, a dicot, is an annual herb of the Chenopodiacae family that is native and endemic to California. It is ranked by the CNPS as 1B.2. Brittlescale occurs on alkali soils and typically occurs in barren areas within alkali grassland, alkali meadow, and alkali scrub. The CNPS states that the species occurs in alkaline and clay soils of chenopod scrub, meadows and seeps, playas, valley and foothill grassland and vernal pools. It is occasionally found on the margins of alkali vernal pools. Brittlescale occurs along the western side of the Great Valley from Glenn County to Merced County and in the small valleys of the inner Coast Ranges, including the Livermore Valley. It occurs in the broad flood basins of the valley floor and on alluvial fans associated with the major streams draining from the inner Coast Range foothills. It is generally found at low elevations but has been collected up to 1,055 feet. Brittlescale is diminutive and generally grows prostrate; it rarely exceeds 20 centimeters in height. It blooms from April to October. The Study Area is not mapped in the ECCCHCP/NCCP as "Suitable Habitat" for brittlescale, no alkaline soil is present in the Study Area, and the species was not detected during the rare plant surveys.

Caper-fruited tropidocarpum (*Tropidocarpum capparideum*): Caper-fruited tropicocarpum is an annual herb in the Brassicaceae (mustard) family that is native to California. It is ranked by the CNPS as 1B.1. It occurs in alkaline soils of low hills and Valley and foothill grassland at elevation less than 1,312 feet. The species was generally considered to be extinct since the 1950s, but it has been reported since. According to CNPS, occurrences in Alameda, Contra Costa, Glenn, Santa Clara, and San Joaquin counties are presumed extirpated. Flowers are obovate to spoon-shaped, yellow, occasionally tinged purple, and the bloom period is from March to April. Habitat distribution has not been modeled for caper-fruited tropicocarpum in the ECCCHCP/NCCP. No alkaline soil is present in the Study Area, and the species was not detected during the rare plant surveys.

[10] Per Table 2B, the species *Navarretia nigelliformis* subsp. n*igelliformis* is no longer considered to occur within Contra Costa County based on specimen annotations at the UC and Jepson Herbaria at the University of California Berkeley as well as the opinions of experts in the genus. This taxon is now recognized as *Navarretia nigelliformis* subsp. *radians.*

Diablo helianthella (*Helianthella castanea*): Diablo helianthella, a dicot, is a perennial herb of the sunflower family (Asteraceae) that is native to California and endemic to the San Francisco Bay Area, occurring in the Diablo Range, Berkeley Hills, and San Bruno Mountain. It is ranked by the CNPS as 1B.2. It usually occurs in thin, rocky, well-drained soils, often in partial shade. According to CNPS, its habitats include broadleafed upland forest, chaparral, cismontane and riparian woodland, coastal scrub, and valley and foothill grassland. It most often occurs at elevations below 2,400 feet but it has been collected from locations as high as 3,800 feet. Diablo helianthella grows up to 18 inches tall. Its leaves are up to six inches long. The plant usually produces one yellow flower head per stem. Each head contains both ray flowers and disc flowers. It blooms from March to June. The ECCCHCP/NCCP contains a model predicting where this species may occur within the plan area. However, the Study Area is located well north of areas deemed "Suitable Habitat" for the species, and Diablo helianthella was not detected during the rare plant surveys.

Diamond-petaled poppy (*Eschscholzia rhombipetala*): Diamond-petaled poppy, a dicot of the Papaveraceae family, is an annual herb native and endemic to California, growing 5-30 cm. tall. It is ranked by the CNPS as 1B.1. Diamond-petaled California poppy may have erect or nodding buds, the flowers are small and yellow, and the bases of the leaves are fleshy. The fruits are conspicuous because they are four to seven cm. long, which may nearly equal the height of the plants The CNPS on-line *Inventory of Rare and Endangered Plants* (2023) describes diamond-petaled poppy as occurring in valley and foothill grassland habitats with alkaline or clay soils, at elevations up to 3,198 feet; the CNPS Inventory describes this species as extirpated in Contra Costa County. The Study Area falls within the known range of the species; the ECCCHCP/NCCP does not contain a model predicting where this species may occur within the plan area. No areas of alkaline or clay soils were observed in the Study Area. The ruderal grasslands in the Study Area do not provide suitable habitat for diamond-petaled poppy and it was not detected during the rare plant surveys.

Large-flowered fiddleneck (*Amsinckia grandiflora*): Large-flowered fiddleneck, a dicot of the Boraginaceae family, is an annual herb native and endemic to California. It is ranked by the CNPS as 1B.1. It is a striking annual plant, growing to 50 cm. tall and having bright orange flowers (14-20 mm. long). The CNPS on-line *Inventory of Rare and Endangered Plants* (2023) describes large-flowered fiddleneck as occurring in cismontane woodland and valley and foothill grassland habitats at elevations between 902 and 1,804 feet. The Study Area falls within the known range of the species; the ECCCHCP/NCCP does not contain a model predicting where this species may occur within the plan area. While the ruderal grassland in the Study Area may provide potentially suitable habitat for large-flowered fiddleneck, The Study Area is below the elevation range of this species, and this species was not detected during the rare plant surveys.

Mount Diablo buckwheat (*Eriogonum truncatum*): Mount Diablo buckwheat, a dicot of the Polygonaceae family, is an annual herb native and endemic to California, known only from Mt. Diablo in Contra Costa County. It is ranked by the CNPS as 1B.1. It grows between 150–750 millimeters high and blooms with several dozen pinkish flowers, having a maroon line down the center of each petal. The CNPS on-line *Inventory of Rare and Endangered Plants* (2023) describes Mount Diablo buckwheat as occurring in sandy soils of chaparral, coastal scrub, and valley and foothill grassland habitats, at elevations between ten and 1,148 feet. The Study Area falls within the known range of the species; the ECCCHCP/NCCP does not contain a model predicting where this species may occur within the plan area. No areas of sandy soils were observed in the Study Area. The ruderal grasslands in the Study Area do not provide suitable habitat for Mount Diablo buckwheat, and it was not detected during the rare plant surveys.

Mount Diablo fairy-lantern (*Calochortus pulchellus*): Mount Diablo fairy-lantern, a monocot of the Liliaceae family, is a perennial herb (bulb) that is native and endemic to California. It is ranked by the CNPS as 1B.2. It grows a branching stem up to about 30 cm. tall. The basal leaf is up to 40 cm. long, and does not wither at flowering. The inflorescence is a solitary flower or a cluster of several flowers, which are nodding and usually spherical with all their petal tips touching. The three sepals and three petals are two or three cm long and pale to deep yellow. The CNPS on-line *Inventory of Rare and Endangered Plants* (2023) describes Mount Diablo fairy-lantern as occurring in chaparral, cismontane or riparian woodland, and valley and foothill grassland habitats at elevations between 98 and 2,756 feet. In contrast, the ECCCHCP/NCCP describes this species as occurring at elevations between 650 and 2,600 feet. The Study Area is not mapped in the ECCCHCP/NCCP as "Suitable Habitat". The ruderal grasslands in the Study Area do not provide suitable habitat for Mount Diablo fairy-lantern, and it was not detected during the rare plant surveys.

Mount Diablo manzanita (*Arctostaphylos auriculata*): Mount Diablo manzanita, a dicot, is an evergreen shrub that is native and endemic to Contra Costa County, California. It is ranked by the CNPS as 1B.3. Mount Diablo manzanita occurs primarily in chaparral (sandstone) and cismontane woodland. It can be found as an understory shrub in coast live oak woodland. It is found only on Mount Diablo and in the adjacent foothills, between 700 and 1,860 feet. Mount Diablo manzanita is generally between one and 4.5 meters tall with serpentine, glandless stems covered in white hair. The short, silvery leaves overlap and have deeply lobed bases. It flowers densely in white. The Mount Diablo Manzanita has no basal burl for regrowth and must propagate by seed. While its bloom period is from January to March, this evergreen shrub can be identified at any time of the year. The Study Area is not mapped in the ECCCHCP/NCCP as "Suitable Habitat" for Mount Diablo manzanita; furthermore, the study area is below the reported range for this species, and it was not detected during the rare plant surveys.

Recurved larkspur (*Delphinium recurvatum*): Recurved larkspur, a perennial herb, is a member of the buttercup family (Ranunculaceae) that is native and endemic to California. It is ranked by the CNPS as 1B.2. Recurved larkspur occurs on alkaline soils in chenopod scrub, cismontane woodland, and valley and foothill grasslands ranging in elevation from 328 to 6,562 feet. The species now appears to be very rare outside the southern San Joaquin Valley. Four occurrences are reported from the inventory area, three of which are on private land southeast of Byron. (East Contra Costa County HCP). This species reaches a maximum height of about half a meter. Its deeply lobed leaves are mainly basal, with those located further up the dark purple stem being much smaller. The flowers are generally pale blue, with the sepals and lower petals darker than the upper petals. The sepals are usually curved back, the trait which gives the plant its name. It blooms from March to June. No alkaline soils are present in the Study Area, and the Study Area is located below the elevational range of the species. In addition, the Study Area is not mapped in the ECCCHCP/NCCP as "Suitable Habitat" for recurved larkspur, and the species was not detected during the rare plant surveys.

Round-leaved filaree (*California macrophylla*): Round-leaved filaree, a dicot of the Geraniaceae family, is an annual herb native to California. It is ranked by the CNPS as CBR (Considered but Rejected) (CNPS 2023). It grows only a few centimeters high, forming a patch of slightly lobed, somewhat kidney-shaped to rounded leaves on long, slender petioles. The inflorescence is an umbel of flowers with petals around a centimeter long and white in color, often tinted pinkish or purplish. The fruit has a fuzzy base and a long, narrow style which may reach five cm. in length. The 2016 version of the CNPS on-line *Inventory of Rare and Endangered Plants* described round-leaved filaree as blooming from March through May and occurring in annual grassland habitats with clay soils, at elevations between 49 and 3,937 feet. The 2023 version of the *Inventory* provides no description of the species. Portions of the northern and eastern edges of the Study Area are mapped in the ECCCHCP/NCCP as "Secondary Habitat". The ruderal grasslands in the Study Area do not provide suitable habitat for round-leaved filaree, and it was not detected during the rare plant surveys.

San Joaquin spearscale (*Atriplex joaquiniana*): San Joaquin spearscale, a dicot, is an annual herb of the Chenopodiacae family that is native and endemic to California. It is ranked by the CNPS as 1B.2. San Joaquin spearscale typically occurs in alkaline soils of chenopod scrub, meadows and seeps, playas and valley and foothill grassland. San Joaquin spearscale occurs along the western side of the Great Valley from Glenn County to Merced County and in the small valleys of the inner Coast Ranges, including the Livermore Valley. It occurs in the broad flood basins of the valley floor and on alluvial fans associated with the major streams draining from the inner Coast Range foothills. It is generally found at low elevations but has been collected up to 1,055 feet. It is an annual herb between one and three feet tall, blooming from April to October. According to the ECCCHCP/NCCP, "a species distribution model was developed that had the same assumptions as the model developed for brittlescale (all alkali grasslands and alkali wetlands on soils of the Pescadero or Solano soil series). Many occurrences, however, fell outside of the modeled habitat. Comparison with detailed mapping of San Joaquin spearscale populations in the Los Vaqueros Watershed (Jones & Stokes Associates 1989) showed that this species is not restricted to soils of the Solano and Pescadero soil series. Other soil series on which the species was found were too widespread to provide a useful prediction of the species' distribution in the inventory area. Therefore, the original species model was discarded." No alkaline soils are present in the Study Area, and San Joaquin spearscale was not detected during the rare plant surveys.

Showy madia (*Madia radiata)*: Showy madia, a dicot of the Asteraceae family, is an annual herb native to California, mostly from the Central Coast Ranges and adjacent edges of the San Francisco Bay Area and Central Valley. It is ranked by the CNPS as 1B.1. It grows upright ten to 90 cm. tall, the stem often branching and coated

in bulbous resin glands. The bristly, glandular leaves are up to 10 cm. long, often wider at the top of the plant than below. The inflorescence produces flower heads lined with hairy, gland-studded phyllaries. The head has golden yellow ray florets up to almost two cm, long and a center filled with many disc florets. The CNPS on-line *Inventory of Rare and Endangered Plants* (2023) describes showy madia as blooming from March through May, and occurring in cismontane woodland and valley and foothill grassland habitats at elevations between 82 and 2,953 feet. The Inventory also describes this species as extirpated in Contra Costa County. The Study Area falls within the known range of the species; the ECCCHCP/NCCP does not contain a model predicting where this species may occur within the plan area. The ruderal grasslands in the Study Area do not provide suitable habitat for showy madia, and it was not detected during the rare plant surveys.

IV. SPECIES-SPECIFIC AVOIDANCE AND MINIMIZATION REQUIREMENTS

Please complete and/or provide the following attachments:

1) Species-Specific Avoidance and Minimization for Selected Covered Wildlife
Complete the following table and check the applicable box for covered species determined by the planning surveys.

Table 3. Summary of Applicable Preconstruction Surveys, Avoidance and Minimization, and Construction Monitoring Requirements[11]

Species	Preconstruction Survey Requirements	Avoidance and Minimization Requirements	Construction Monitoring Required	Info in HCP
☒ San Joaquin kit fox	• On project footprint and 250-ft radius, map all dens (>5 in. diameter) and determine status • Provide written survey results to USFWS within 5 working days after surveying	• Monitor dens • Destroy unoccupied dens • Discourage use of occupied (non-natal) dens	• Establish exclusion zones (>50 ft for potential dens, and >100 ft for known dens) • Notify USFWS of occupied natal dens	pp. 6-37 to 6-38
☒ Western burrowing owl	• On project footprint and 500-ft radius, identify and map all owls and burrows, and determine status • Document use of habitat (e.g. breeding, foraging)	• Avoid occupied nests during breeding season (Feb-Sep) • Avoid occupied burrows during nonbreeding season (Sep – Feb) • Install one-way doors in occupied burrow (if avoidance not possible) • Monitor burrows with doors installed	• Establish buffer zones (250 ft around nests) • Establish buffer zones (160 ft around burrows)	pp. 6-39 to 6-41
☐ Giant garter snake	• Delineate aquatic habitat up to 200 ft from water's edge on each side • Document any occurrences	• Limit construction to Oct-May • Dewater habitat April 15 – Sep 30 prior to construction • Minimize clearing for construction	• Delineate 200 ft buffer around potential habitat near construction • Provide field report on monitoring efforts • Stop construction activities if snake is encountered; allow snake to passively relocate • Remove temporary fill or debris from construction site • Mandatory training for construction personnel	pp. 6-43 to 6-45
☐ California tiger salamander	• Provide written notification to USFWS and CDFW regarding timing of construction and likelihood of occurrence on site	• Allow agency staff to translocate species, if requested	• None	p. 6-45
☒ California red-legged frog	• Provide written notification to USFWS and CDFW regarding timing of construction and likelihood of occurrence on site	• Allow agency staff to translocate species, if requested	• None	p. 6-46
☐ Covered shrimp	• Establish presence/absence • Document and evaluate use of all habitat features (e.g. vernal pools, rock outcrops)	• Establish buffer near construction activities • Prohibit incompatible activities	• Establish buffer around outer edge of all hydric vegetation associated with habitat (50 ft or immediate watershed, whichever is larger) • Mandatory training for construction personnel	pp. 6-46 to 6-48

[11] The requirements in this table are not comprehensive; they are detailed in the next section on the following page.

☐ Townsend's big-eared bat	• Establish presence/absence • Determine if potential sites were recently occupied (guano)	• Seal hibernacula before Nov • Seal nursery sites before April • Delay construction near occupied sites until hibernation or nursery seasons are over	• None	pp. 6-36 to 6-37
☒ Swainson's hawk	• Determine whether potential nests are occupied	• No construction within 1,000 ft of occupied nests within breeding season (March 15 - Sep 15) • If necessary, remove active nest tree after nesting season to prevent occupancy in second year.	• Establish 1,000 ft buffer around active nest and monitor compliance (no activity within established buffer)	pp. 6-41 to 6-43
☒ Golden Eagle	• Establish presence/absence of nesting eagles	• No construction within ½ mile near active nests (most activity late Jan – Aug)	• Establish ½ mile buffer around active nest and monitor compliance with buffer	pp. 6-38 to 6-39

2) Required Preconstruction Surveys, Avoidance and Minimization, and Construction Monitoring

All preconstruction surveys shall be conducted in accordance with the requirements set forth in Section 6.4.3, Species-Level Measures, and Table 6-1 of the ECCC HCP/NCCP. Detailed descriptions of preconstruction surveys, avoidance and minimization, and construction monitoring applicable to each of the wildlife species in Table 3 are located below. Please remove the species-specific measures that do not apply to your project (highlight entire section and delete).

SAN JOAQUIN KIT FOX

Preconstruction Surveys

Prior to any ground disturbance related to covered activities, a USFWS/CDFW– approved biologist will conduct a preconstruction survey in areas identified in the planning surveys as supporting suitable breeding or denning habitat for San Joaquin kit fox. The surveys will establish the presence or absence of San Joaquin kit foxes and/or suitable dens and evaluate use by kit foxes in accordance with USFWS survey guidelines (U.S. Fish and Wildlife Service 1999). Preconstruction surveys will be conducted within 30 days of ground disturbance. On the parcel where the activity is proposed, the biologist will survey the proposed disturbance footprint and a 250-foot radius from the perimeter of the proposed footprint to identify San Joaquin kit foxes and/or suitable dens. Adjacent parcels under different land ownership will not be surveyed. The status of all dens will be determined and mapped. Written results of preconstruction surveys will be submitted to USFWS within five working days after survey completion and before the start of ground disturbance. Concurrence is not required prior to initiation of covered activities.

If San Joaquin kit foxes and/or suitable dens are identified in the survey area, the measures described below will be implemented.

Avoidance and Minimization Requirements

- If a San Joaquin kit fox den is discovered in the proposed development footprint, the den will be monitored for three days by a USFWS/CDFW– approved biologist using a tracking medium or an infrared beam camera to determine if the den is currently being used.
- Unoccupied dens should be destroyed immediately to prevent subsequent use.
- If a natal or pupping den is found, USFWS and CDFW will be notified immediately. The den will not be destroyed until the pups and adults have vacated and then only after further consultation with USFWS and CDFW.
- If kit fox activity is observed at the den during the initial monitoring period, the den will be monitored for an additional five consecutive days from the time of the first observation to allow any resident animals to move to another den while den use is actively discouraged. For dens other than natal or pupping dens, use of the den can be discouraged by partially plugging the entrance with soil such that any resident animal can easily escape. Once the den is determined to be unoccupied it may be excavated under the direction of the biologist. Alternatively, if the animal is still present after five or more consecutive days of plugging and monitoring, the den may have to be excavated when, in the judgment of a biologist, it is temporarily vacant (i.e., during the animal's normal foraging activities).

Construction Monitoring

If dens are identified in the survey area outside the proposed disturbance footprint, exclusion zones around each den entrance or cluster of entrances will be demarcated. The configuration of exclusion zones should be circular, with a radius measured outward from the den entrance(s). No covered activities will occur within the exclusion zones. Exclusion zone radii for potential dens will be at least 50 feet and will be demarcated with four to five flagged stakes. Exclusion zone radii for known dens will be at least 100 feet and will be demarcated with staking and flagging that encircles each den or cluster of dens but does not prevent access to the den by kit fox.

WESTERN BURROWING OWL

Preconstruction Surveys

Prior to any ground disturbance related to covered activities, a USFWS/CDFW- approved biologist will conduct a preconstruction survey in areas identified in the planning surveys as having potential burrowing owl habitat. The surveys will establish the presence or absence of western burrowing owl and/or habitat features and evaluate use by owls in accordance with CDFW survey guidelines (California Department of Fish and Game 1995).

On the parcel where the activity is proposed, the biologist will survey the proposed disturbance footprint and a 500-foot radius from the perimeter of the proposed footprint to identify burrows and owls. Adjacent parcels under different land ownership will not be surveyed. Surveys should take place near sunrise or sunset in accordance with CDFW guidelines. All burrows or burrowing owls will be identified and mapped. Surveys will take place no more than 30 days prior to construction. During the breeding season (February 1– August 31), surveys will document whether burrowing owls are nesting in or directly adjacent to disturbance areas. During the nonbreeding season (September 1–January 31), surveys will document whether burrowing owls are using habitat in or directly adjacent to any disturbance area. Survey results will be valid only for the season (breeding or nonbreeding) during which the survey is conducted.

Avoidance and Minimization and Construction Monitoring

This measure incorporates avoidance and minimization guidelines from CDFW's *Staff Report on Burrowing Owl Mitigation* (California Department of Fish and Game 1995).

If burrowing owls are found during the breeding season (February 1 – August 31), the project proponent will avoid all nest sites that could be disturbed by project construction during the remainder of the breeding season or while the nest is occupied by adults or young. Avoidance will include establishment of a non-disturbance buffer zone (described below). Construction may occur during the breeding season if a qualified biologist monitors the nest and determines that the birds have not begun egg-laying and incubation or that the juveniles from the occupied burrows have fledged. During the nonbreeding season (September 1 – January 31), the project proponent should avoid the owls and the burrows they are using, if possible. Avoidance will include the establishment of a buffer zone (described below).

During the breeding season, buffer zones of at least 250 feet in which no construction activities can occur will be established around each occupied burrow (nest site). Buffer zones of 160 feet will be established around each burrow being used during the nonbreeding season. The buffers will be delineated by highly visible, temporary construction fencing.

If occupied burrows for burrowing owls are not avoided, passive relocation will be implemented. Owls should be excluded from burrows in the immediate impact zone and within a 160-foot buffer zone by installing one-way doors in burrow entrances. These doors should be in place for 48 hours prior to excavation. The project area should be monitored daily for one week to confirm that the owl has abandoned the burrow. Whenever possible, burrows should be excavated using hand tools and refilled to prevent reoccupation (California Department of Fish and Game 1995). Plastic tubing or a similar structure should be inserted in the tunnels during excavation to maintain an escape route for any owls inside the burrow.

CALIFORNIA RED- LEGGED FROG

Minimization

Written notification to USFWS, CDFW, and the Implementing Entity, including photos and habitat assessment, is required prior to disturbance of any suitable breeding habitat. The project proponent will also notify these parties of the approximate date of removal of the breeding habitat at least 30 days prior to this removal to allow USFWS or CDFW staff to translocate individuals, if requested. USFWS or CDFW must notify the project proponent of their intent to translocate California red-legged frog within 14 days of receiving notice from the project proponent. The applicant must allow USFWS or CDFW access to the site prior to construction if they request it.

There are no restrictions under this Plan on the nature of the disturbance or the date of the disturbance unless CDFW or USFWS notify the project proponent of their intent to translocate individuals within the required time period. In this case, the project proponent must coordinate the timing of disturbance of the breeding habitat to allow USFWS or CDFW to translocate the individuals. USFWS and CDFW shall be allowed 45 days to translocate individuals from the date the first written notification was submitted by the project proponent (or a longer period agreed to by the project proponent, USFWS, and CDFW).

SWAINSON'S HAWK

Preconstruction Survey

Prior to any ground disturbance related to covered activities that occurs during the nesting season (March 15–September 15), a qualified biologist will conduct a preconstruction survey no more than one month prior to construction to establish whether Swainson's hawk nests within 1,000 feet of the project site are occupied. If potentially occupied nests within 1,000 feet are off the project site, then their occupancy will be determined by observation from public roads or by observations of Swainson's hawk activity (e.g., foraging) near the project site. If nests are occupied, minimization measures and construction monitoring are required (see below).

Avoidance and Minimization and Construction Monitoring

During the nesting season (March 15–September 15), covered activities within 1,000 feet of occupied nests or nests under construction will be prohibited to prevent nest abandonment. If site-specific conditions or the nature of the covered activity (e.g., steep topography, dense vegetation, limited activities) indicate that a smaller buffer could be used, the Implementing Entity will coordinate with CDFW/USFWS to determine the appropriate buffer size.

If young fledge prior to September 15, covered activities can proceed normally. If the active nest site is shielded from view and noise from the project site by other development, topography, or other features, the project applicant can apply to the Implementing Entity for a waiver of this avoidance measure. Any waiver must also be approved by USFWS and CDFW. While the nest is occupied, activities outside the buffer can take place.

All active nest trees will be preserved on site, if feasible. Nest trees, including non-native trees, lost to covered activities will be mitigated by the project proponent according to the requirements below.

Mitigation for Loss of Nest Trees

The loss of non-riparian Swainson's hawk nest trees will be mitigated by the project proponent by:

- If feasible on-site, planting 15 saplings for every tree lost with the objective of having at least five mature trees established for every tree lost according to the requirements listed below.

  AND either

  1) Pay the Implementing Entity an additional fee to purchase, plant, maintain, and monitor 15 saplings on the HCP/NCCP Preserve System for every tree lost according to the requirements listed below, OR

  2) The project proponent will plant, maintain, and monitor 15 saplings for every tree lost at a site to be approved by the Implementing Entity (e.g., within an HCP/NCCP Preserve or existing open space linked to HCP/NCCP preserves), according to the requirements listed below.

The following requirements will be met for all planting options:

- Tree survival shall be monitored at least annually for five years, then every other year until year 12. All trees lost during the first five years will be replaced. Success will be reached at the end of 12 years if at least five trees per tree lost survive without supplemental irrigation or protection from herbivory. Trees must also survive for at least three years without irrigation.
- Irrigation and fencing to protect from deer and other herbivores may be needed for the first several years to ensure maximum tree survival.
- Native trees suitable for this site should be planted. When site conditions permit, a variety of native trees will be planted for each tree lost to provide trees with different growth rates, maturation, and life span, and to provide a variety of tree canopy structures for Swainson's hawk. This variety will help to ensure that nest trees will be available in the short term (five to ten years for cottonwoods and willows) and in the long term (e.g., Valley oak, sycamore). This will also minimize the temporal loss of nest trees.
- Riparian woodland restoration conducted as a result of covered activities (i.e., loss of riparian woodland) can be used to offset the nest tree planting requirement above, if the nest trees are riparian species.
- Whenever feasible and when site conditions permit, trees should be planted in clumps together or with existing trees to provide larger areas of suitable nesting habitat and to create a natural buffer between nest trees and adjacent development (if plantings occur on the development site).
- Whenever feasible, plantings in the Study Area should occur closest to suitable foraging habitat outside the UDA.
- Trees planted in the HCP/NCCP preserves or other approved offsite location will occur within the known range of Swainson's hawk in the inventory area and as close as possible to high-quality foraging habitat.

GOLDEN EAGLE

Preconstruction Survey

Prior to implementation of covered activities, a qualified biologist will conduct a preconstruction survey to establish whether nests of golden eagles are occupied (see Section 6.3.1, *Planning Surveys*). If nests are occupied, minimization requirements and construction monitoring will be required.

Avoidance and Minimization

Covered activities will be prohibited within 0.5 mile of active nests. Nests can be built and active at almost any time of the year, although mating and egg incubation occurs late January through August, with peak activity in March through July. If site-specific conditions or the nature of the covered activity (e.g., steep topography, dense vegetation, limited activities) indicate that a smaller buffer could be appropriate or that a larger buffer should be implemented, the Implementing Entity will coordinate with CDFW/USFWS to determine the appropriate buffer size.

Construction Monitoring

Construction monitoring will focus on ensuring that no covered activities occur within the buffer zone established around an active nest. Although no known golden eagle nest sites occur within or near the ULL, covered activities inside and outside of the Preserve System have the potential to disturb golden eagle nest sites. Construction monitoring will ensure that direct effects to golden eagles are minimized.

3) Construction Monitoring Plan

Before implementing a covered activity, the applicant will develop and submit a construction monitoring plan to the planning department of the local land use jurisdiction and the East Contra Costa County Habitat Conservancy for review and approval. Elements of a brief construction monitoring plan will include the following:

- Results of planning and preconstruction surveys.[12]
- Description of avoidance and minimization measures to be implemented, including a description of project-specific refinements to the measures or additional measures not included in the HCP/NCCP.
- Description of monitoring activities, including monitoring frequency and duration, and specific activities to be monitored.
- Description of the onsite authority of the construction monitor to modify implementation of the activity.

☒ Check box to acknowledge this requirement.

V. SPECIFIC CONDITIONS ON COVERED ACTIVITIES

1) Check off the HCP conservation measures that apply to the project.

APPLIES TO ALL PROJECTS

☒ **Conservation Measure 1.11. Avoid Direct Impacts on Extremely Rare Plants, Fully Protected Wildlife Species, or Migratory Birds.** This conservation measure applies to all projects. All projects will avoid all impacts on extremely rare plants and fully protected species listed in Table 6-5 of the ECCC HCP/NCCP. See HCP pp. 6-23 to 6-25, and Table 6-5.

APPLIES TO PROJECTS THAT IMPACT COVERED PLANT SPECIES

☐ **Conservation Measure 3.10. Plant Salvage when Impacts are Unavoidable.** This condition applies to projects that cannot avoid impacts on covered plants and help protect covered plants by prescribing salvage whenever avoidance of impacts is not feasible. Project proponents wishing to remove populations of covered plants must notify the Conservancy of their construction schedule to allow the Conservancy the option of salvaging the populations. See HCP pp. 6-48 to 6-50.

APPLIES TO PROJECTS THAT INCLUDE ARE ADJACENT TO STREAMS, PONDS, OR WETLANDS

☒ **Conservation Measure 2.12. Wetland, Pond, and Stream Avoidance and Minimization.** All projects will implement measures described in the HCP to avoid and minimize impacts on wetlands, ponds, streams, and riparian woodland/scrub. See HCP pp. 6-33 to 6-35.

APPLIES TO NEW DEVELOPMENT PROJECTS

☒ **Conservation Measure 1.10. Maintain Hydrologic Conditions and Minimize Erosion.** All new development must avoid or minimize direct and indirect impacts on local hydrological conditions and erosion by incorporating the applicable Provision C.3 Amendments of the Contra Costa County Clean Water Program's (CCCCWP's) amended NPDES Permit (order no. R2-2003-0022; permit no. CAS002912). The overall goal of this measure is to ensure that new development covered under the HCP has no or minimal adverse effects on downstream fisheries to avoid take of fish listed under ESA or CESA. See HCP pp. 6-21 to 6-22.

APPLIES TO NEW DEVELOPMENT PROJECTS THAT INCLUDE OR ARE ADJACENT TO STREAMS, PONDS, OR WETLANDS

☒ **Conservation Measure 1.7. Establish Stream Setbacks.** A stream setback will be applied to all development projects covered by the HCP according to the stream types listed in Table 6-2 of the HCP. See HCP pp. 6-15 to 6-18 and Table 6-2.

APPLIES TO NEW DEVELOPMENT PROJECTS ADJACENT TO EXISTING PUBLIC OPEN SPACE, HCP PRESERVES, OR LIKELY HCP ACQUISITION SITES

☐ **Conservation Measure 1.6. Minimize Development Footprint Adjacent to Open Space.** Project applicants are encouraged to minimize their development footprint and set aside portions of their land to contribute to the HCP Preserve System. Land set aside that contributes to the HCP biological goals and objectives may be credited against development fees. See HCP pages 6-14 to 6-15.

☐ **Conservation Measure 1.8. Establish Fuel Management Buffer to Protect Preserves and Property.** Buffer zones will provide a buffer between development and wildlands that allows adequate fuel management to minimize the risk of wildlife damage to property or to the preserve. The minimum buffer zone for new development is 100 feet. See HCP pages 6-18 to 6-19.

[12] If the preconstruction surveys do not trigger construction monitoring, results of preconstruction surveys should still be submitted to the local jurisdiction and the East Contra Costa County Habitat Conservancy.

☐ **Conservation Measure 1.9. Incorporate Urban-Wildlife Interface Design Elements.** These projects will incorporate design elements at the urban-wildlife interface to minimize the indirect impacts of development on the adjacent preserve. See HCP pp. 6-20 to 6-21.

APPLIES TO ROAD MAINTENANCE PROJECTS OUTSIDE THE UDA

☐ **Conservation Measure 1.12. Implement Best Management Practices for Rural Road Maintenance.** Road maintenance activities have the potential to affect covered species by introducing sediment and other pollutants into downstream waterways, spreading invasive weeds, and disturbing breeding wildlife. In order to avoid and minimize these impacts, BMPs described in the HCP will be used where appropriate and feasible. See HCP pp. 6-25 to 6-26.

APPLIES TO NEW ROADS OR ROAD IMPROVEMENTS OUTSIDE THE UDA

☐ **Conservation Measure 1.14. Design Requirements for Covered Roads Outside the Urban Development Area (UDA).** New roads or road improvements outside the UDA have impacts on many covered species far beyond the direct impacts of their project footprints. To minimize the impacts of new, expanded, and improved roads in agricultural and natural areas of the inventory area, road and bridge construction projects will adopt siting, design, and construction requirements described in the HCP and listed in Table 6-6. See HCP pp. 6-27 to 6-33 and Table 6-6.

APPLIES TO FLOOD CONTROL MAINTENANCE ACTIVITIES

☐ **Conservation Measure 1.13. Implement Best Management Practices for Flood Control Facility Maintenance.** Flood control maintenance activities have the potential to affect covered species by introducing sediment and other pollutants into downstream waterways and disturbing breeding wildlife. In order to avoid and minimize these impacts, BMPs described in the HCP will be used where appropriate and feasible. See HCP pp. 6-26 to 6-27.

2) For all checked conservation measures, describe how the project will comply with each measure. Attach as Attachment C: Project Compliance to HCP Conditions.

VI. MITIGATION MEASURES

1) Mitigation Fee Calculator(s)
Complete and attach the fee calculator (use permanent and/or temporary impact fee calculator as appropriate), and attach as **Attachment D: Fee Calculator(s)**.

2) Briefly describe the amount of fees to be paid and when applicant plans to submit payment.

The Developer, the City, and the East Contra Costa County Habitat Conservancy entered into a Multi-Party Mitigation and Land Dedication In-Lieu of Development Fee Agreement dated August 26, 2019 ("Mitigation Agreement") in which Developer will pay an adjusted HCP development fee and dedicate that certain real property referred to therein as the Nortonville Strip, Britton Property, and Britton Adjacent Property upon mutually agreed terms and provisions.

On December 12, 2019, the U.S. Fish and Wildlife Service and California Department of Fish and Wildlife issued a joint letter approving use of the Mitigation Agreement for the Bridle Gate project. The adjusted fee for the Bridle Gate project is $3,156,002.00.

Construction is expected to commence in late-2023 or early-2024. Fees will be paid in accordance with the Multi-Party Mitigation and Land Dedication In-Lieu of Development Fee Agreement.

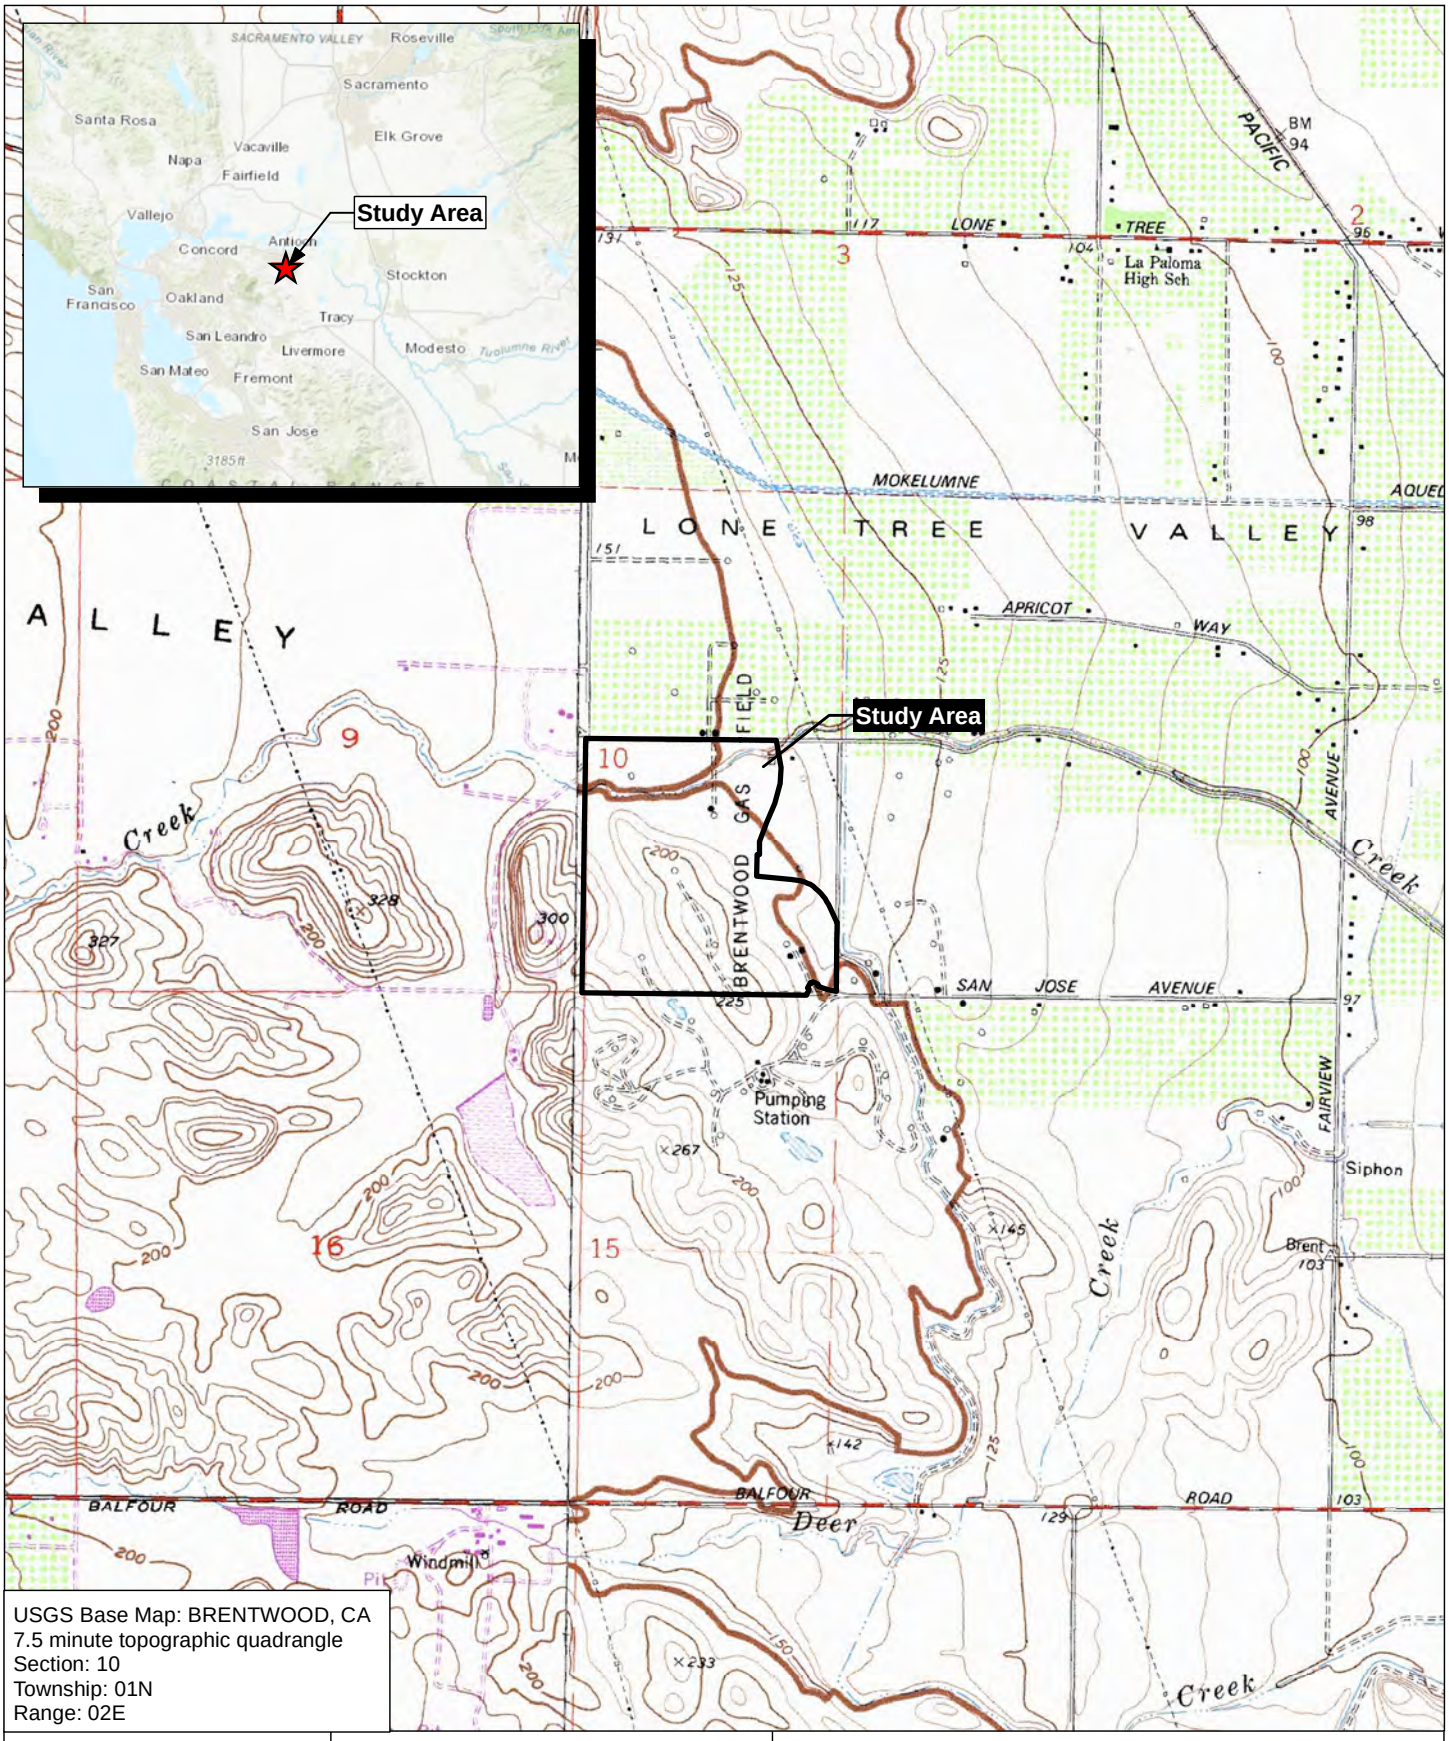
ATTACHMENT A: PROJECT DESCRIPTION

Bridle Gate
Project Description
February 2023

The 135.31+/- acre Bridle Gate Tentative Map site is in Brentwood, Contra Costa County, California. The site is within Section 10, in Township 1 North, Range 2 East of the USGS 7.5-minute Brentwood topographic quadrangle (Figure 1). The site is at the west end of Sand Creek Road, just west of Highway 4. Sand Creek flows meanders from west to east across the north part of the site.

The 135.31+/- acre Bridle Gate Tentative Map site includes the 92.13+/acre Bridle Gate project site and 2.64+/- acres of off-site lands for the extension of Sand Creek Road if the Bridle Gate project is developed in advance of the City's overall Sand Creek Road extension project. The Study Area also includes 40.54+/- acres of lands to the north; there will be no improvements in this 40.54+/- acre area.

Discovery Builders, Inc., proposes the development of 286 single-family residential units in the Bridle Gate project site, each with a home and ancillary services (Figure 2a and 2b). Approximately 20 acres of land in the northeast part of the site will be developed for commercial uses. Approximate 14 acres north of Sand Creek is for multi-family development of 258 apartments (Figure 2c). The Bridle Gate project includes over 14 acres of parks and approximately 25 acres of land in the west part of the Bridle Gate project site will remain in open space.



Access to the southeast part of the Bridle Gate project site will be from San Jose Drive and Saint Regis Avenue. Sand Creek Road will be extended approximately 800 feet west to provide access to the north part of the site via Bridle Gate Road. Dependent on which project goes first, the City of Brentwood may construct this section of Sand Creek Road concurrent with their overall "Sand Creek Road Extension" project.

Storm water from the Bridle Gate project site will be conveyed in to several C.3 treatment basins, where it will be treated before being discharged into Sand Creek via existing storm drain outfalls. The new lots will tie into the City's existing sewer and water system.

Standard construction best management practices (BMPs) will be employed during construction to minimize the potential for erosion and off-site transport of fines. BMPs will include use of water trucks, appropriate compaction of soil, and installation of straw wattles, silt fences or other technologies along the perimeter of the site during construction, and stabilization of bare soils as appropriate with seeding, straw, and/or hydrolmulch.

Construction is expected to begin in late-2023 or early-2024 and is expected to continue approximately 2 years.

Bridle Gate
Project Compliance to HCP Conditions

February 2023

HCP/NCCP Conservation Measure 1.11. Avoid Direct Impacts on Extremely Rare Plants, Fully Protected Wildlife Species, or Covered Migratory Birds:

The potential for special-status plants to occur within the site is considered low, as described in Section III (10).

Species-specific pre-construction surveys, and if needed, monitoring and avoidance requirements for burrowing owl, Swainson's hawk, and golden eagle will be conducted as described in Section IV (2). There is no suitable habitat in the site for ringtail (*Bassariscus astutus*), a "fully protected species," per California Fish and Game Code Section 4700. Similarly, there is no suitable nesting habitat in the site for peregrine falcon (*Falco peregrinus*), a "fully protected species," per California Fish and Game Code Section 3511.

White-tailed kite (*Elanus caeruleus*), another "fully protected species," per California Fish and Game Code Section 3511 could potentially nest in trees in or near the site. Prior to any ground disturbance related to covered activities that occur during the nesting season (March 15-August 31), a qualified biologist will conduct a preconstruction survey no more than 1 month prior to construction to establish whether white-tailed kite is nesting in trees within or visible from the site. In the event active nests are found, an initial 300-foot buffer shall be established around the nest tree. Ground disturbance related to covered activities within the buffer shall either be delayed until a qualified biologist determines nesting is complete, or until the applicant and consults with the Implementing Entity and CDFW and implements CDFW-approved measures to minimize potential disturbance.

Tricolored blackbird (*Agelaius tricolor*), a State of California threatened species, could nest in vegetation in and adjacent to Sand Creek such as patches of wild rose, bulrush, cattails, and willows. On-site grasslands and vegetation could be used by other species of nesting birds protected by the Migratory Bird Treaty Act. If possible, any ground disturbance related to covered activities will occur outside of the general bird nesting season (February 1 through August 31). Alternately, a qualified biologist will conduct a preconstruction survey no more than 2 weeks

prior to any ground disturbance related to covered activities. In the event active raptors or tricolored blackbird nests are found, and initial 300-foot buffer shall be established around the nests. In the event nests o other birds are found, a initial 50-foot buffer shall be established around the nest. Ground disturbance related to covered activities within the buffers shall either be delayed until a qualified biologist determines nesting is complete, or until the applicant consults with the Implementing Entity and CDFW and implements CDFW-approved measures to minimize potential disturbance.

HCP/NCCP Conservation Measure 2.12. Wetland, Pond, and Stream Avoidance and Minimization:

Potentially jurisdictional Waters of the U.S. and wetlands in the site are being avoided to the maximum extent practicable. The stream in the north part of the site (Sand Creek) will not be impacted by the project. A 75-foot stream setback will be implemented along Sand Creek. The seasonal wetland will be preserved in an Open Space parcel and a portion of a park parcel where no improvements are proposed.

The following measures from pages 6-33 through 6-35 will be implemented to avoid and minimize impacts of covered activities on wetlands:

- The project will comply with the stream setback requirements in Conservation Measure 1.7.
- The project will comply with the guidelines in Conservation Measure 1.10 to minimize the effects of urban development on downstream hydrology, streams, and wetlands.
- All wetlands to be avoided by covered activities will be temporarily staked in the field by a qualified biologist.
- The project will establish a buffer zone between Sand Creek and development as described in Conservation Measure 1.7.
- Personnel conducting ground-disturbing activities adjacent to the seasonal wetland in the west part of the site or the buffer zone along Sand Creek will be trained by a qualified biologist in these avoidance and minimization and the permit obligations of project proponents working under the ECCCHCP. Vehicles and equipment will be parked on pavement, existing roads, and previously disturbed areas.
- Trash generated during project construction will be promptly and properly removed from the site.
- No construction or maintenance vehicles will be refueled within 200 feet of

Sand Creek or the seasonal wetland unless a bermed and lined refueling area is constructed and hazardous material absorbent pads are available in the event of a spill.

- Appropriate erosion-control measures (e.g., fiber rolls, filter fences, vegetative buffer strips) will be used on site to reduce siltation and runoff of contaminants into Sand Creek or the seasonal wetland. Filter fences and mesh will be of material that will not entrap reptiles and amphibians. Erosion control blankets shall be used as a last resort because of their tendency to biodegrade slowly and trap reptiles and amphibians.
- Fiber rolls used for erosion control will be certified as free of noxious weed seed.
- Seed mixtures applied for erosion control will not contain invasive non-native species, and will be composed of native species or sterile nonnative species.
- Herbicides will not be applied within the buffer area along Sand Creek unless needed to control serious invasive plants. In this case, herbicides that have been approved for use by EPA in or adjacent to aquatic habitats may be used as long as label instructions are followed and applications avoid or minimize impacts on covered species and their habitats. Appropriate herbicides may be applied to the ruderal grassland within the buffer area during the dry season to control nonnative invasive species such as yellow star-thistle. Herbicide drift shall be minimized by applying the herbicide as close to the target area as possible.

HCP/NCCP Conservation Measure 1.10. Maintain Hydrologic Conditions and Minimize Erosion:

The project has been designed to maintain hydrologic conditions and minimize erosion. Site drainage will be conveyed to Sand Creek.

The project applicant will develop a Storm Water Pollution Prevention Plan (SWPPP) that will identify best management practices (BMPs) to be implemented to minimize the introduction of foreign material into waterbodies, control stormwater runoff, minimize erosion and sedimentation, and limit the amount of surface disturbance to the area.

Standard construction BMPs will be employed during construction to minimize the potential for erosion and off-site transport of fines. BMPs will include use of water trucks, appropriate compaction of soil, and installation of straw

wattles, silt fences or other technologies along the perimeter of the site during construction, and stabilization of bare soils as appropriate with seeding, straw, and/or hydrolmulch.

HCP/NCCP Conservation Measure 1.7. Establish Stream Setbacks:

A stream is defined in Chapter 3 of the ECCCHCP as "a long, narrow body of flowing water that occupies a channel with defined bed and bank and moves to lower elevations under the force of gravity".

The stream in the north part of the site (Sand Creek) will not be impacted by the project. A 75-foot stream setback will be implemented along Sand Creek.

Stream setbacks are designed to protect existing habitat quality, to protect water quality and hydrologic processes through buffering, and allow for at least minimal restoration (page 6-16). The stream setback measure is intended to achieve several purposes as listed on pages 6-16 and 6-17 of the ECCCHCP, along a variety of stream types. Six of the seven purposes have applicability to the project:

- Maintain or improve water quality by filtering sediments and pollutants from urban runoff before they reach the stream,
- Allow for protection of preserved and restored riparian woodland and scrub within and adjacent to the stream,
- Maintain a buffer zone between urban development and existing and restored nesting habitat for Swainson's hawk and other bird species,
- Maintain and enhance the water quality of the stream to protect native fish populations, including populations of special-status species that occur in downstream creeks (i.e., fall-run Chinook salmon in Marsh Creek),
- Maintain a more viable wildlife corridor for some species (e.g., California red-legged frog, foothill yellow-legged frog) than would be present with a narrower buffer zone, and
- Maximize the natural flood protection value of the floodplain.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Dear Mr. Parsons:

ENGEO is pleased to present our phase I environmental site assessment of the subject property (Property), located in Brentwood, California. The attached report includes a description of the site assessment activities, along with ENGEO's findings, opinions, and conclusions regarding the Property.

ENGEO has the specific qualifications based on education, training, and experience to assess the nature, history, and setting of the Property, and has developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312 and the American Standard Testing Method (ASTM) Practice E1527-13. We declare that, to the best of our professional knowledge and belief, the responsible charge for this study meets the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312 and ASTM E1527-13.

We are pleased to be of service to you on this project. If you have any questions concerning the contents of our report, please contact us.

Sincerely,

ENGEO Incorporated

Brooke Spruit, PE

Shawn Munger, CHG

EXECUTIVE SUMMARY

ENGEO conducted a phase I environmental site assessment for the property located at Sand Creek Road and San Jose Ave. in Brentwood, California (Property). The Property is approximately 133.7 acres in area and is identified by Assessor's Parcel Number (APN) 019-082-007.

The Property consists of partially graded undeveloped land being dry farmed. Review of historical records indicates that the Property has been used for dry farming of grains or hay from at least 1939 until the late 1990s. Between 1962 and 1966, seven oil wells were drilled on the subject property and a tank complex and production water impoundment was built in the southeastern portion of the site to separate the oil/water mixture, store oil, and collect the natural oil from the wells. These oil production facilities were decommissioned in between 1994 and 1996. Records of abandonment were reviewed for all the wells shown on-site (Figure 2).

This assessment included a review of local, state, tribal, and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps and physical setting sources. A reconnaissance of the Property was conducted to review site use and current conditions to check for the storage, use, production or disposal of hazardous or potentially hazardous materials and interviews with persons knowledgeable about current and past site use.

The site reconnaissance and records review did find documentation of past soil or groundwater impairments, which were subsequently mitigated and provided closure by RWQCB in 1996. A review of regulatory databases maintained by county, state, tribal, and federal agencies found documentation of hazardous materials discharge on the Property; however, these previous impacts were mitigated under the oversight of the RWQCB and provided closure. No contaminated facilities were identified within the appropriate American Society for Testing and Materials (ASTM) search distances that would reasonably be expected to impact the Property.

Based on the findings of this assessment, one Recognized Environmental Condition (REC), one historical REC, and no controlled RECs were identified for the Property.

The following historical REC was identified:

- Seven oil production wells operated on the Property from 1962 to 1996 (Figure 2). These wells were decommissioned and abandoned in accordance with the Department of Oil and Gas (now CalGEM) regulations. Records of abandonment were reviewed on the CalGEM website. The Property also contained an above-ground storage tank complex for the separation of oil, condensate, and water which was decommission by 1996. The former Brentwood crude oil pipeline also operated within the Property (Figure 2). Remedial activities for the decommissioning of the well sites and tank farm included soil, excavation, bioremediation, soil sampling/analysis and groundwater monitoring. Confirmation sampling and laboratory testing demonstrated successful remediation to the approved cleanup objectives set forth by Central Valley RWQCB. Closure letters for the Sullenger Tank Farm, Ward Tank Farm, and Wells 3-10, 34-10, 32-10, and 38-10 were issued in 1996 through 2000 by the Central Valley RWQCB. Confirmation samples obtained from the bioremediated soil stockpile had TPH concentrations up to 1,800 parts per million (ppm) which exceeds current TPH residential screening levels. It is likely that TPH concentrations have significantly degraded over time. This can be confirmed with supplemental analysis. We

understand this soil, at the direction of RWQCB, was used as a suitable backfill for oil well remedial excavations.

The following potential environmental REC was identified:

- Possible residual impacts could remain within the vicinity of the former oil wells, the former Brentwood crude oil pipeline, and the former tank farm. These wells were decommissioned and abandoned in accordance with the regulatory requirements of CalGEM..

ENGEO has performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-13 and the standards and practices of the All Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312).

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC. The following data gap was identified:

- We did not receive a response from the Central Valley RWQCB regarding files pertaining to their oversight of the former oil wells and facilities. We were provided some closure documents from West Coast Home Builders, Inc. which included closure letters for Wells 3-10, 34-10, 32-10, and 38-10 issued in 1996 through 2000 by the Central Valley RWQCB.

ENGEO recommends the following:

<u>Former Oil Well Operations</u>

Seven oil wells decommissioned and abandoned in accordance with the Department of Oil and Gas (CalGEM) requirements, and a former above-ground tank/processing area were located within the Property boundaries. The following is recommended to address the past oil production activities:

- Limited phase II environmental site assessment in the area of the former tank farm and oil wells.
- A topographic survey of Well 36-10.
- Any remaining abandoned oil pipelines found within the areas of the project site planned for development should be removed during construction.
- Preparation of a Soil Management Plan (SMP) could be prepared for the Property prior to construction activity. This SMP could outline procedures and guidelines for handling unanticipated impacted material associated with former oil site use. If indicators of apparent soil contamination (soil staining, odors, debris fill material, etc.) are encountered at the project site, specifically in the vicinity of abandoned oil wells, or during removal of abandoned oil pipelines, the impacted area should be isolated from surrounding, non-impacted areas. The project environmental professional shall obtain samples of the potentially impacted soil for analysis of the contaminants of concern and comparison with current applicable regulatory residential screening levels.
- Prior to final map approval, the project applicant shall submit to the City of Brentwood Engineering Department, for review and approval, plot plans which show that future inhabited structures will not be located directly over the seven on-site abandoned oil wells.

1.0 INTRODUCTION

1.1 PURPOSE OF PHASE I ENVIRONMENTAL SITE ASSESSMENT

This assessment was performed at the request of West Coast Home Builders, Inc. The objective of this phase I environmental site assessment is to identify Recognized Environmental Conditions (RECs) associated with the Property. As defined in the ASTM Standard Practice E1527-13, an REC is "the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment."

1.2 DETAILED SCOPE OF SERVICES

The scope of services performed included the following:

- A review of previous environmental reports prepared for the Property.
- A review of publicly available and practicably reviewable standard local, state, tribal, and federal environmental record sources.
- A review of publicly available and practicably reviewable standard historical sources, aerial photographs, fire insurance maps and physical setting sources.
- A reconnaissance of the Property to review site use and current conditions. The reconnaissance was conducted to check for the storage, use, production or disposal of hazardous or potentially hazardous materials.
- Written/oral interviews with owners/occupants and public sector officials.
- Preparation of this report with our findings, opinions, and conclusions.

1.3 SITE LOCATION AND DESCRIPTION

ENGEO conducted a phase I environmental site assessment for the Property located at Sand Creek Road and San Jose Avenue in Brentwood, California (Figures 1 and 2). The approximately 133.7-acre Property is identified as APN 019-082-007 (Figure 3) and is currently partially graded undeveloped land being dry farmed.

1.4 CURRENT USE OF PROPERTY AND ADJOINING PROPERTIES

The Property is partially graded undeveloped currently being dry farmed. Sand Creek traverses across the northern portion of the Property in the east-west direction.

Interstate 4 borders the Property to the immediate east and commercial development resides further east of Interstate 4. Residential development borders the Property to the south. Primarily undeveloped land resides to the north and west.

1.5 SITE AND VICINITY CHARACTERISTICS

According to published topographic maps, the Property varies in elevation from approximately 220 to 230 feet above mean sea level (msl) central, southern, and western portions of the Property to approximately 130 feet above msl in the northern and eastern portions. Review of

the Antioch South and Brentwood Quadrangle Geologic Map (Dibblee, 2006) found that the Property is underlain by various formations including Qa (surficial sediments consisting of pebble, gravel, sand, and clay), Tkm (Kreyenhagen Formation consisting of sandstone), Tds (Domengine Sandstone consisting of sandstone), Tkn (Kreyenhagen Formation consisting of clay shale or claystone), and Tmge (Meganos Formation consisting of siltstone and silty mudstone).

Geocheck – Physical Setting Source Summary of the Environmental Data Resources, Inc. (EDR) report (Appendix A) indicated no Federal United States Geological Survey (USGS) and no State wells located within 1 mile of the Property. The Physical Setting Source Summary also provided hydrogeologic information for use as an indicator of groundwater flow direction in the immediate area. This section indicated no wells within a mile of the Property.

We reviewed the Department of Water Resources On-line Water Data Library for depth to water in the vicinity of the Property. The website did not identify any wells within 1 mile of the Property. Former monitoring wells within the Property indicated depth to groundwater to be between 17 and 32 feet bgs and flow to be in the easterly direction.

We reviewed EnviroStor, a website maintained by the State of California Department of Toxic Substances Control, and GeoTracker, a website maintained by the State of California Water Resources Control Board, for nearby facilities with records that include depth to groundwater measurements. The following information was obtained regarding local groundwater conditions.

TABLE 1.5-1: Local Groundwater Conditions

PROXIMITY TO PROPERTY	REPORTED DEPTH TO GROUNDWATER	REPORTED GROUNDWATER FLOW DIRECTION
Adjacent NW	20-30 feet bgs	East

The site-specific depth to groundwater and direction of groundwater flow was not determined as part of this assessment. Fluctuations in groundwater levels may occur seasonally and over a period of years due to variations in precipitation, temperature, irrigation, and other factors.

We reviewed the Department of Conservation, Geologic Energy Management (CalGEM), formerly the Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR), website and map database to determine if any historic oil and/or gas wells were located within the Property. There are seven plugged and capped oil wells shown within the Property. These wells are shown consistent with 3-10, 38-10, 36, 32-10, 39, and 31 shown on Figure 2. One plugged and capped dry gas well is shown within the Property, consistent with 34-10 shown on Figure 2. Records of abandonment for these wells are summarized in Section 2.0. There are an additional 75 plugged and capped oil and gas wells within a mile of the Property. The following table provides a summary of the abandoned wells in accordance with the Department of Oil and Gas (CalGEM) requirements within the Property:

TABLE 1.5-2

WELL NAME	DATE DRILLED	DATE ABANDONED	APPROXIMATE TOTAL DEPTH (FT BGS)
Ward 39	June 1975	December 1976	4,808
Ward 31	January 1963	April 1986	5,108

WELL NAME	DATE DRILLED	DATE ABANDONED	APPROXIMATE TOTAL DEPTH (FT BGS)
Ward 36-10	June 1964	April 1986	4,541
Ward 3-10	September 1962	August 1992	4,900
Ward 32-10	May 1963	May 1993	4,700
Ward 34-10	November 1963	August 1992	4,200
Ward 38-10	August 1964	February 1994	4,068

2.0 PREVIOUS ENVIRONMENTAL REPORTS

ENGEO; Modified Phase I Environmental Site Assessment; Colchico Parcel; Sand Creek Road, Antioch, California; January 14, 1992.

We reviewed the Modified Phase I ESA for the source of the known undocumented fill placed within the Property. The ESA identified that the borrow site had been used for agricultural purposes since at least the 1950s. Agricultural activity appeared to have been limited to orchards, principally walnut trees. A limited soil sampling program was conducted to determine if soils had been impacted by past agricultural practices. The program included the recovery of two near-surface soil samples analyzed for organochlorine pesticides. No compounds were detected above laboratory detection limits.

Groundwater Technology: Remedial Action Plan; Various Oxy/Shell/Apache Lease Sites; Brentwood Oil Field; Brentwood, California; January 19, 1994.

This Remedial Action Plan (RAP) was designed for the clean-up of crude oil-containing soil at various OXY USA, Inc./Shell Western E&P Inc./Apache Corporation former lease sites in the Brentwood Oil and Gas Field. The Property is included within this larger study. The objectives of the RAP were to excavate and transport soil to a central on-site location and treat using bioremediation technology and/or to a soil recycling facility. Further, a groundwater assessment at three sites was to be addressed after applicable lease site soil is remediated. The RAP prescribed the following:

- Excavation: Soil with concentrations greater than 100 ppm TPH (or greater than 0.3 ppm benzene) were to be excavated for remediation. Soil samples were to be collected from the base and sidewalls of each excavation area.
- Bioremediation: Treatment system where impacted soil is loaded into a 60-mil HDPE lined cell with leachate capture. Treatment cells were to be operated and maintained until soil analyses indicate a total TPH concentration below 100 ppm.

The proposed clean-up levels were as follows:

- TPH (total): 100 ppm
- Benzene: 0.3 ppm
- Toluene: 0.3 ppm
- Ethylbenzene: 1 ppm
- Xylenes: 1 ppm

The RAP indicated the Central Valley division of RWQCB was the lead regulatory agency, however, Contra Costa County Health Agency was to be copied on data and plans.

Groundwater Technology; Additional Assessment Report; Remediation Action Plan Modifications; Various Oxy/Shell/Apache E & P Lease Sites; Brentwood Oil Field; Brentwood, California; December 13, 1994.

This report summarized additional environmental site assessment work and the pilot study results for bioremediation. The purpose of this assessment was to obtain additional site-specific hydrogeologic data and to further define the extent of petroleum hydrocarbons that were potentially present in the shallow water-bearing zone at various lease sites, which included Ward 3-10 and Ward 34-10 within the Property. The pilot study was designed to determine the effectiveness of bioremediating crude oil-containing soil. The pilot study was successful and bioremediation was determined to be an effective treatment.

Four soil borings were drilled and nineteen monitoring wells were installed during June and July 1994 at Enea Capital 2-8 (off-site), Prewett 4-5 (off-site), Ward 3-10 (on-site), and Ward 34-10 (on-site). Two additional borings and four monitoring wells were drilled and installed at Enea Capital 2-8 (off-site), Prewett 4-5 (off-site), and Ward 34-10 (on-site), Groundwater sample analysis showed varying low concentrations of TPH and BTEX for each site and minor PAH concentrations. Soil samples and WET analysis indicated low leaching potential.

The following modifications to the RAP previously submitted in January of 1994 were made:

- Soil with benzene concentrations greater than 5.5 ppm and total TPH concentrations greater than 500 ppm were to be excavated for remediation laterally and to a depth of 10 feet bgs. Confirmatory sidewall samples were to be collected and analyzed for TPH, BTEX, and PAH concentrations. The excavations were to be backfilled with treated soil. *Subsequent remedial work within the Property was performed, which achieved these cleanup objectives (Fluor Daniel, 1996; RWQCB, 1996).*

- Residual hydrocarbon-containing soil below 10 feet with benzene concentrations less than 14 ppm and TPH concentrations less than 10,000 ppm (residential scenario) were to be left in place to undergo naturally occurring biodegradation. Waste Extraction Test (WET) leachibility data indicated a very low leaching potential. The compacted silty/clayey backfill material was concluded an effective barrier to surface infiltration. Additionally, water in the localized upper water-bearing zones was not considered to be beneficial with no future receptors anticipated. *Subsequent remedial work within the Property was performed which achieved these cleanup objectives (Fluor Daniel, 1996; RWQCB, 1996).*

Groundwater Technology; Human Health Based Soil Remediation Target Concentrations Report; Oxy USA, Inc.; Oil and Gas Field; Brentwood/Antioch, California; February 23, 1995.

The purpose of this report was to determine health-protective concentrations of constituents of concern in soil at remediation sites. Remediation target concentrations for groundwater were not addressed in this report. The recommended remediation goals for soil at these sites were determined from the following exposures:

- Surface soil (to a depth of 10 feet bgs) remediation goals were based on the combined adult/child resident most likely exposure which resulted in a risk exposure between 10^{-6} and

10^{-4} and a hazard index of 1.0. Thus, soil with benzene concentrations greater than 2.5 to 250 mg/kg; individual carcinogenic PAH concentrations greater than 20 to 2,000 µg/kg; toluene, ethylbenzene, or xylenes concentrations greater than 200 mg/kg; or individual non-carcinogenic PAH concentrations greater than 40 mg/kg were to be remediated. *Subsequent remedial work within the Property was performed which achieved these cleanup objectives (Fluor Daniel, 1996; RWQCB, 1996).*

- Surface soil (below 10 feet bgs) remediation goals based on indoor inhalation of benzene vapors by residents, and on direct exposures by construction workers for all other compounds. Thus, soil with benzene concentrations greater than 5 to 500 mg/kg; or individual non-carcinogenic PAH concentrations greater than 1,800 mg/kg were to be remediated. *Subsequent remedial work within the Property was performed which achieved these cleanup objectives (Fluor Daniel, 1996; RWQCB, 1996).*

Department of Conservation Division of Oil and Gas; Report of Well Abandonment – Ward 39 December 3, 1976.

Department of Conservation Division of Oil and Gas; Report of Well Abandonment – Ward 31 August 10, 1986.

Department of Conservation Division of Oil and Gas; Report of Well Abandonment – Ward 36 August 10, 1986.

Department of Conservation Division of Oil and Gas; Report of Well Abandonment – Ward 3-10; August 18, 1992.

Department of Conservation Division of Oil and Gas; Report of Well Abandonment – Ward 32-10; May 6, 1993.

Department of Conservation Division of Oil and Gas; Report of Well Abandonment – Ward 34-10; August 18, 1992.

Department of Conservation Division of Oil and Gas; Report of Well Abandonment – Ward 38-10; February 28, 1994.

The above well abandonment records were reviewed for the referenced sites within the Property.

Fluor Daniel GTI; Request for Site Closure – Former Ward 3-10 Site, Brentwood Oil and Gas Field, OXY USA Inc., Contra Costa County; December 2, 1996.

We reviewed a Request for Site Closure document addressed to RWQCB for the closure of 3-10. Approximately 3,699 cubic yards of impacted soil was excavated from the former Ward 3-10 site. Soil samples were obtained from three excavation locations (A, B, and C). The first excavation area (A) had samples collected from the sidewalls at depths of 2 feet, 5 feet, 10 feet, and 17 feet bgs and from the bottom of the excavation (18 feet bgs). Two other excavation areas (B and C) did not have visual, olfactory, or PID indications of hydrocarbons. Reported constiuents were below approved soil cleanup criteria. *RWQCB issued a closure letter for Well 3-10 in July of 2007 (RWQCB, 2007).*

Fluor Daniel GTI; Request for Site Closure – Former Ward 34-10 Site, Brentwood Oil and Gas Field, OXY USA Inc., Contra Costa County; December 2, 1996.

We reviewed a Request for Site Closure document addressed to RWQCB for the closure of Warm 34-10. Approximately 635 cubic yards of impacted soil was excavated from the former Ward 34-10 site. Confirmation samples were collected from the sidewalls at depths of 2 feet, 5 feet, 10 feet, and 18 feet bgs and the base at 18 feet bgs.. Reported constituents were below approved soil cleanup criteria . *RWQCB issued a closure letter for Well 34-10 in July of 2007 (RWQCB, 2007).*

Fluor Daniel GTI; Request for Site Closure – Former Ward Tank Farm Site, Brentwood Oil and Gas Field, OXY USA Inc., Contra Costa County; December 2, 1996.

We reviewed a Request for Site Closure document addressed to RWQCB for the closure of Ward Tank Farm. Approximately 25,600 cubic yards of impacted soil was excavated from the former Ward Tank Farm site. Confirmation samples were collected from the sidewalls at depths of 2 feet, 5 feet, 10 feet, 18 feet bgs. BTEX, PAHs, and TPHs were below approved soil cleanup criteria. *RWQCB issued a closure letter for Ward Tank Farm in July of 2007 (RWQCB, 2007).*

RWQCB; Request for Site Closure – Former Ward 32-10 Site, Brentwood Oil and Gas Field, OXY USA Inc., Contra Costa County; December 19, 1996.

RWQCB issued closure for the Former Ward 32-10 site, which indicated no further investigation, remedial or removal action, or monitoring is required. This followed implementation of approved remedial action plans. Approximately 1,667 cubic yards of soil was excavated from the former Ward 32-10 site within the Property. Soil samples were obtained from the excavation sidewalls at depths of 2 feet, 5 feet, 10 feet, and 16 feet bgs. Confirmation sampling did not indicate BTEX, PAHs, and TPHs above approve soil cleanup criteria.

RWQCB; Request for Site Closure – Former Ward 35-10 Site, Brentwood Oil and Gas Field, OXY USA Inc., Contra Costa County; December 19, 1996.

RWQCB issued closure for the Former Ward 35-10 site (off-site), which indicated no further investigation, remedial or removal action, or monitoring is required. This followed implementation of approved remedial action plans. Approximately 11 cubic yards of soil was excavated from the former Ward 35-10 site within the Property. Impacted material was biotreated on-site. Confirmation samples were obtained at depths of 5 feet, 5 feet, 10 feet, and 18 feet bgs. Base and sidewall confirmation samples were below cleanup objective levels..

RWQCB; Request for Site Closure – Former Ward 37-10 Site, Brentwood Oil and Gas Field, OXY USA Inc., Contra Costa County; December 19, 1996.

RWQCB issued closure for the Former Ward 37-10 site (off-site), which indicated no further investigation, remedial or removal action, or monitoring is required. This followed implementation of approved remedial action plans. Approximately 11 cubic yards of soil was excavated from the former Ward 37-10 site within the Property. Visual, odorous, or PID indications of hydrocarbons were not observed. Analyses did not show TPH-mo above laboratory detections.

RWQCB; Request for Site Closure – Former Ward 38-10 Site, Brentwood Oil and Gas Field, OXY USA Inc., Contra Costa County; December 19, 1996.

RWQCB issued closure for the Former Ward 38-10 site, which indicated no further investigation, remedial or removal action, or monitoring is required. This followed implementation of approved remedial action plans. Approximately 11 cubic yards of soil was excavated from the former Ward 38-10 site within the Property. Impacted material was biotreated on-site. Visual, odorous, or PID indications of hydrocarbons were not observed. BTEX and TPHs were not reported above detection limits for the 11 confirmation samples obtained.

Fluor Daniel GTI; Groundwater Monitoring and Sampling Activities; Ward 3-10 Lease; Former OXY Oil and Gas Field; Brentwood, California; March 18, 1998.

Seven groundwater monitoring wells were sampled (MW-15, MW-16, MW-56, MW-57, MW-77, MW-78, and MW-79). Samples were analyzed for TPH-g/BTEX, TPH-d/mo, and PAHs. Additionally samples were analyzed for water quality parameters (sulfide, sulfate, nitrite, nitrate, chlorides, TDS, alkalinity) and dissolved metals (iron, aluminum, boron, copper, manganese, arsenic, selenium). Laboratory analyses indicated only one well had detectable concentrations of BTEX. Minor concentrations of toluene, ethylbenzene, and xylenes were reported. TPH-g and TPH in the kerosene range were reported. PAHs were only detected slightly above detection limits in five of the wells.

Fluor Daniel GTI; Groundwater Monitoring and Sampling Activities; Ward 34-10 Lease; Former OXY Oil and Gas Field; Brentwood, California; March 18, 1998.

Seven groundwater monitoring wells were sampled (MW-22, MW-29, MW-54, MW-55, MW-75, MW-76, and MW-96). Samples were analyzed for TPH-g/BTEX, TPH-d/mo, and PAHs. Additionally samples were analyzed for water quality parameters (sulfide, sulfate, nitrite, nitrate, chlorides, TDS, alkalinity) and dissolved metals (iron, aluminum, boron, copper, manganese, arsenic, selenium). Laboratory analyses indicated no wells had detectable concentrations of BTEX and minor TPH concentrations in the diesel and motor oil range. PAHs were detected slightly above detection limits in all seven wells.

Fluor Daniel GTI; Groundwater Monitoring and Sampling Activities; Ward Tank Farm Lease; Former OXY Oil and Gas Field; Brentwood, California; March 18, 1998.

Ten groundwater monitoring wells were sampled including the existing MW-53, MW-65, MW-66, MW-67, MW-68, MW-85, MW-86, and MW-87 wells, and two additional wells installed MW-100 and MW-101. Samples were analyzed for TPH-g/BTEX, TPH-d/mo, and PAHs. Additionally samples were analyzed for water quality parameters (sulfide, sulfate, nitrite, nitrate, chlorides, TDS, alkalinity) and dissolved metals (iron, aluminum, boron, copper, manganese, arsenic, selenium). Laboratory analyses indicated that two wells had detectable concentrations of BTEX. Minor detections of TPHs were detected. PAHs were detected slightly above detection limits in seven wells.

RWQCB; No Further Action Required; Brentwood Oil and Gas Field, Contra Costa County; July 7, 2000.

RWQCB reviewed a closure report that included documentation that showed a total of 30 monitoring well wells were properly abandoned at Ward 34-10, Ward 3-10, Ward Tank Farm, and Sullenger Tank farm. The letter referenced the closure report indicated low levels of TPHs

as gasoline, kerosene, and diesel detected in soil confirmation samples below cleanup objective levels. Benzene and toluene were not detected. Ethylbenzene and xylenes were detected below water quality objectives at Ward 3-10 and Ward 34-10. Residual TPH concentrations were reported above current maximum contaminant levels (MCLs).

Partner Engineering and Science, Inc.; Transaction Screen Assessment Report; Colchico Quail Cove; Antioch, California; September 23, 2019.

A Transaction Screen Assessment (TSA) was prepared for the site located at south side of Prewett Ranch Drive and the west side of Heidcorn Ranch Road in Antioch. Undocumented soil from this site was imported to the Bridle Gate Property according to West Coast Home Builders, Inc. Partner concluded that the possible former use of agricultural chemicals was not expected to represent a significant environmental concern. Partner recommended no further investigation at the site.

3.0 RECORDS REVIEW

3.1 PROPERTY RECORDS

3.1.1 Title Report/Ownership

The Title Report lists recorded land title detail, ownership fees, leases, land contracts, easements, liens, deficiencies, and other encumbrances attached to or recorded against a subject property. Laws and regulations pertaining to land trusts vary from state to state and the detail of information presented in a Title Report can vary greatly by jurisdiction. As a result, ENGEO utilizes a Title Report, when provided to us, as a supplement to other historical record sources.

A Preliminary Title Report for the Property, prepared by Old Republic Title Company and dated March 17, 2020, was provided for our review. The Property title is vested in West Coast Home Builders, Inc. A deed to PG&E is referenced for electrical power transmission lines and a gas pipeline. The title report also states oil and gas leases for the Property. No references to environmental liens, deed restrictions or other potential environmental issues were noted. This report is included in Appendix B.

3.2 HISTORICAL RECORD SOURCES

The purpose of the historical record review is to develop a history of the previous uses or occupancies of the Property and surrounding area in order to identify those uses or occupancies that are likely to have led to recognized environmental conditions on the Property.

3.2.1 Historical Topographic Maps/Aerial Photographs/Sanborn Maps

Historical USGS topographic maps, aerial photographs, and Sanborn Fire insurance maps were reviewed to determine if discernible changes pertaining to the Property had been recorded. EDR provided the following maps and photographs, presented in Appendices D, E, and F.

The site has historically been used for dry farming of grains or hay from at least 1939 until the present time. By 1939, a homesite was located at the northeastern corner of the parcel. Between 1962 and 1964, seven oil wells were drilled on the subject Property. By 1966, two

small tanks and a production water impoundment had been built in the southeastern portion of the Property to separate the oil/water mixture, store oil and collect the condensate from the wells. A review of the 1976 aerial photograph noted a linear trace of disturbed soil along the existing PG&E pipeline easement. These oil production facilities were decommission by 1996. Aerial photographs between 1998 and 2016 show the Property as mostly undeveloped until 2016 when some apparent grading occurred within the southern central portion of the Property.

The parcels north of the subject property were developed for orchard and more recently row crops. East of the subject property, the parcels were used for orchard crops from 1939 to 1981 and row crops after 1981. The parcels to the south and west have been used for grazing or dry farming from the earliest photographs reviewed. A residential development was built to the south of the Property and Interstate 4 to the east in the early 2000's. An interchange was built to the east along Interstate 4 in the 2016 photograph.

3.2.2 City Directory

City Directories, published since the 18th century for major towns and cities, list the name of the resident or business associated with each address. A city directory search conducted by EDR is located in Appendix F. The Property is not associated with listings. Surrounding listings are primarily residential and commercial.

3.3 ENVIRONMENTAL RECORD SOURCES

EDR performed a search of federal, tribal, state, and local databases regarding the Property and nearby properties. Details regarding the databases searched by EDR are provided in Appendix A. A list of the facilities documented by EDR within the approximate minimum search distance of the Property is provided below.

3.3.1 Environmental Records

3.3.1.1 Subject Property

The Property is listed on Environmental Record source databases as NPDES and CIWQS for Bridle Gate. This is associated with stormwater permitting during grading.

3.3.1.2 Other Properties

The following databases include facilities listed within the appropriate ASTM search distances of the Property on Environmental Records sources.

TABLE 3.3.1.2-1

We reviewed GeoTracker and EnviroStor for nearby sites that may have the potential to impact the Property:

Shell Yard, located at 3052 Heidorn Ranch Road, adjacent to the northwest, a closed leaking underground storage tank (LUST) case. The 10-acre lot was formerly used as an office and maintenance yard for pipeline operations, with secondary use as a support area for oil and gas production operations. Between 1997 and 2009, OXY identified four areas of petroleum hydrocarbon contamination and excavated 77,800 cubic yards of contaminated soil, except for two small areas near the high pressure gas lines, bio-treated the soil on-site, and backfilled the site to grade. Groundwater monitoring was conducted on the site from 2005 to 2010. Prior to closure, TPH-d was only detected at 320 µg/L since 2006. Given the remedial activities, closure status, and low residual concentrations, this is unlikely to pose an environmental concern for the Property.

Based on the distances to the identified database sites, regional topographic gradient, and the EDR findings, the above-stated database sites would not pose an environmental risk to the Property. Properties that are on the "Orphan Summary" list appear to be located beyond the ASTM recommended radius search criteria.

3.4 REGULATORY AGENCY FILES AND RECORDS

The following agencies were contacted pertaining to possible past development and/or activity at the Property.

TABLE 3.4-1: Regulatory Agency Records

NAME OF AGENCY	RECORDS REVIEWED
City of Brentwood Building and Planning Departments	We contacted the City of Brentwood Building and Planning Department. We were informed no building records exist for the Property. We were informed that the City of Brentwood prepared a Mitigated Negative Declaration (MND) (2006) report for the Property; however, this has since been superseded by an Environmental Impact Report (EIR).
East Contra Costa County Fire Prevention Department	The East Contra Costa County Fire Prevention Department provided files for 2530 Sand Creek Road (listed incorrectly as the Property in their system). They did not have files available pertaining to the Property.
Contra Costa County Department of Environmental Health	We were provided files for OXY USA Brentwood Oil Fields related records. We were provided the following: • Emergency Response Plans • Hazardous Materials Business Plans (1988-1992) • Change of Operatorship from Shell Western E&P to OXY USA (1988) • Inspections (1990) • Approval of proposed soil remediation for Brentwood Oil and Gas Field by RWQCB (1995) • RWQCB review of Cleanup Levels outlined in DTSC's 1995 letter for the Brentwood Oil and Gas Fields (1995) • Memorandum from DTSC in providing consultative services in risk assessment for the Brentwood Oil and Gas Fields Site to support RWQCB pertaining to the potential human health effects of impacted soil at the site

NAME OF AGENCY	RECORDS REVIEWED
	(1995). This memo it would be best to set the target coil cleanup level at the RME 10^{-6} risk level for all carcinogens and a hazard ratio of 1.0. It was also stated that during remediation, RWQCB may determine that it is not technically possible or too costly to achieve those low target soil levels for the carcinogens, in which case Oxy may clean up to a higher concentration level corresponding to an alternative risk level between 10^{-4} and 10^{-6}. • Phase II Site Investigation Final Report for Brentwood Oil and Gas Field (1992) prepared by Oxy USA, Inc. It was determined that several sites have impacted groundwater quality including Ward 3-10 and Ward 32-10 within the Property. RWQCB issued closure for wells in Section 2.0. • Notice of Violation for Oxy USA for an effluent sample containing benzene at 36.8 ppb. The violation does not specifically identify the Property as the discharge location. • We reviewed monitoring well destruction permits issued in 2000 for 30 monitoring wells including MW-22, MW-29, MW-54, MW-55, MW-75, MW-76, MW-96, MW-15, MW-16, MW-56, MW-57, MW-77, MW-78, MW-79, MW-53, MW-65, MW-66, MW-67, MW-68, MW-85, MW-56, MW-87, MW-100, MW-101, MW-46, MW-62, MW-63, MW-64, MW-88, MW-89.
Contra Costa County Assessor's Office	We reviewed the online database and confirm the Property is associated with APN 019-082-007. The Property is incorrectly listed as 2530 Sand Creek Road in the GIS database.
Central Valley California State Water Resources Control Board	The Property was not listed on GeoTracker, the RWQCB online database; however, the Central Valley RWQCB provided oversight on the former tank farm and oil gas wells. We were provided closure documents by West Coast Home Builders, Inc. pertaining to the former oil wells. We reached out to the Central Valley RWQCB division, however, in response to the COVID-19 Shelter-in-Place Order, non-essential file reviews are not being performed. We did not receive an official response by the completion of this report.
Department of Toxic Substances Control	The Property is not listed on the Department of Toxic Substances Controls' online database, EnviroStor.

3.5 INDOOR AIR QUALITY

An evaluation of indoor air quality, mold, or radon was not included as part of the contracted scope of services. The California Department of Public Health has conducted studies of radon risks throughout the state, sorted by zip code. Results of the studies indicate that 11 tests were conducted within the Property zip code, with no tests exceeding the current EPA action level of 4 picocuries per liter {pCi/L}[1]).

[1] California Department of Public Health – Radon Program– (https://www.cdph.ca.gov/Programs/CEH/DRSEM/CDPH%20Document%20Library/EMB/Radon/Radon%20Test%20Results.pdf).

In accordance with ASTM E2600-15 (Tier 1) (*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*); There are potential petroleum hydrocarbon sources for vapor intrusion within 1/10 mile of the Property or volatile organic compound (VOCs) sources within 1/3 mile of the Property. Seven oil wells, an above ground storage tank facility, and crude oil underground pipeline previously operated on the Property (Figure 2). The former oil field operations could pose a potential vapor intrusion consideration.

4.0 SITE RECONNAISSANCE

4.1 METHODOLOGY

ENGEO conducted a reconnaissance of the Property on March 25, 2020. The reconnaissance was performed by Brooke Spruit, Project Engineer of ENGEO. The Property was viewed for hazardous materials storage, superficial staining or discoloration, debris, stressed vegetation, or other conditions that may be indicative of potential sources of soil or groundwater contamination. The Property was also checked for evidence of fill/ventilation pipes, ground subsidence, or other evidence of existing or preexisting underground storage tanks. Photographs taken during the site reconnaissance are presented in Figure 4.

4.2 SITE OBSERVATIONS

The following table summarizes our observations during the reconnaissance:

TABLE 4.2-1: Site Observations

FEATURE TYPE	OBSERVATIONS
Structures	No structures were observed during the site reconnaissance.
Hazardous Substances and Petroleum Products in Connection with Identified Uses	We observed signage for a PG&E underground gas pipeline within the southwestern portion of the Property traversing from south to northeast.
Storage Tanks (underground and above-ground)	No above-ground storage tanks or evidence of existing underground storage tanks was observed during the site reconnaissance.
Odors	No odors indicative of hazardous materials or petroleum material impacts were noted at the time of the reconnaissance.
Pools of Potentially Hazardous Liquid	No pools of potentially hazardous liquid were observed within the Property at the time of our reconnaissance.
Drums	No drums were observed on the Property at the time of the reconnaissance.
Polychlorinated Biphenyls (PCBs)	No PCB-containing materials, including transformers, were observed within the Property during our site reconnaissance.
Hazardous Substances and Petroleum Product Containers	No hazardous substance or petroleum product containers were observed on the Property at the time of our reconnaissance.
Pits, Ponds, and Lagoons	No pits, ponds or lagoons were observed within the Property at the time of our reconnaissance.
Stained Soil/Pavement	No stained soil or pavement was observed within the Property at the time of our reconnaissance.
Stressed Vegetation	No signs of stressed vegetation were observed on the Property at the time of our reconnaissance.

FEATURE TYPE	OBSERVATIONS
Solid Waste/Debris	We observed small items stored within the central portion of the Property (Figure 4).
Stockpiles/Fill Material	Minor stockpiles were observed from prior grading activities. We understand approximately 25,000 cubic yards of soil was imported to the site as excess dirt from a nearby residential subdivision the owner is developing (See Section 2.0 and 5.0). A limited soil sampling program was conducted to determine if soils had been impacted by past agricultural practices from the import soil site origin. The program included the recovery of two near surface soil samples analyzed for organochlorine pesticides. No compounds were reported above laboratory detection limits.
Wastewater	No wastewater conveyance systems were observed at the Property during the reconnaissance. We observed signage for an underground water utility line within the central portion of the Property.
Wells	No wells were found within the Property during our site reconnaissance. There are 7 abandoned/plugged oil wells (Figure 2). No visual evidence of the oil wells was noted. We are aware 30monitoring wells formally operated on the Property, which were abandoned under permit.
Septic Systems	No septic systems were found within the Property during our site reconnaissance.

4.3 ASBESTOS-CONTAINING MATERIALS AND LEAD-BASED PAINT

No structures are currently located on the Property.

5.0 INTERVIEWS

Mr. Dick Sestero completed an environmental site questionnaire pertaining to user-related applicable environmental information regarding the Property. In the questionnaire, Mr. Sestero did identify potentially environmentally related issues with the Property. Approximately 25,000 cubic yards of undocumented “clean” soil was imported to the site as excess dirt from a nearby residential subdivision the owner is developing (see Modified Phase I ESA performed by ENGEO in 1992, summarized in Section 2.0). Mr. Sestero indicated there were several oil, wells, oil pipelines, and a small tank farm on the property, which were, operated by Shell Oil and later, Occidental Petroleum. He also mentioned the Property was previously used for grazing and row crops. The tanks and pipelines were removed and the wells were abandoned in the late 1990s. Groundwater was monitored and cleared and impacted oily dirt was remediated under oversight of RWQCB. We understand soil excavated from impacted oil well locations was bioremediated onsite at one location and following successful remediation, this material was used to backfill well excavations. A no further action letter on March 7, 2000 and March 29, 2001. The questionnaire is presented in its entirety in Appendix G.

6.0 FINDINGS AND CONCLUSIONS

This assessment included a review of local, state, tribal, and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps and physical setting sources. A reconnaissance of the Property was conducted to review site use and current conditions to check for the storage, use, production or disposal of hazardous or potentially

hazardous materials and interviews with persons knowledgeable about current and past site use.

The site reconnaissance and records review did find documentation of past soil or groundwater impairments, which were subsequently mitigated and provided closure by RWQCB in 1996. A review of regulatory databases maintained by county, state, tribal, and federal agencies found documentation of hazardous materials discharge on the Property; however these previous impacts were mitigated under the oversight of the RWQCB and provided closure. No contaminated facilities were identified within the appropriate American Society for Testing and Materials (ASTM) search distances that would reasonably be expected to impact the Property.

Based on the findings of this assessment, one Recognized Environmental Conditions (RECs), one historical RECs, and no controlled RECs were identified for the Property.

The following historical REC was identified:

Seven oil production wells operated on the Property from 1962 to 1996 (Figure 2). These were decommissioned and abandoned in accordance with the Department of Oil and Gas (now CalGEM) regulations. Records of abandonment were reviewed on the CalGEM website. The Property also contained an above-ground storage tank complex for the separation of oil, condensate and water which was decommission by 1996. The former Brentwood crude oil pipeline also operated within the Property (Figure 2). Remedial activities for the decommissioning of the well sites and tank farm included soil, excavation, bioremediation, soil sampling/analysis and groundwater monitoring. Confirmation sampling and laboratory testing demonstrated successful remediation to the approved cleanup objectives set forth by the Central Valley RWQCB. Closure letters for the Sullenger Tank Farm, Ward Tank Farm, and wells: 3-10, 34-10, 32-10, and 38-10 were issued in 1996 through 2000 by the Central Valley RWQCB. Confirmation samples obtained from the bioremediated soil stockpile had TPH concentrations up to 1,800 parts per million (ppm) which exceed current TPH residential screening levels. It is likely that TPH concentrations have significantly degraded over time. This can be confirmed with supplemental analysis. We understand this soil at the direction of RWQCB was used as a suitable backfill for oil well remedial excavations.
The following potential environmental REC was identified:

- Possible residual impacts could remain within the vicinity of the former oil wells, the former Brentwood crude oil pipeline, and the former tank farm. These wells were decommissioned and abandoned in accordance with the regulatory requirements of CalGEM.

ENGEO has performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-13 and the standards and practices of the All Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312).

ENGEO recommends the following:

<u>Former Oil Well Operations</u>

Seven oils wells were decommissioned and abandoned in accordance with the Department of Oil and Gas (CalGEM) requirements and a former above ground tank/processing area were located within the Property boundaries. The following is recommended to address the past oil production activities:

- Limited phase II environmental site assessment in the area of the former tank farm and oil wells.
- A topographic survey of Well 36-10.
- Any remaining abandoned oil pipelines found within the areas of the project site planned for development should be removed during construction.
- Preparation of a Soil Management Plan (SMP) could be prepared for the Property prior to construction activity. This SMP could outline procedures and guidelines for handling unanticipated impacted material associated with former oil site use. If indicators of apparent soil contamination (soil staining, odors, debris fill material, etc.) are encountered at the project site, specifically in the vicinity of abandoned oil wells, or during removal of abandoned oil pipelines, the impacted area should be isolated from surrounding, non-impacted areas. The project environmental professional shall obtain samples of the potentially impacted soil for analysis of the contaminants of concern and comparison with current applicable regulatory residential screening levels.
- Prior to final map approval, the project applicant shall submit to the City of Brentwood Engineering Department, for review and approval, plot plans which show that future structures will not be located within 10 feet of the seven on-site abandoned oil wells.

7.0 LIMITATIONS

7.1 SIGNIFICANT ASSUMPTIONS OR DEVIATIONS FROM ASTM STANDARD PRACTICE

There were no significant deviations from the ASTM standard.

7.2 OPINIONS AND DATA GAPS

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC. The following data gap was identified:

- We did not receive a response from the Central Valley RWQCB regarding files pertaining to their oversight of the former oil wells and facilities. We were provided some closure documents from West Coast Home Builders, Inc. which included closure letters for Wells 3-10, 34-10, 32-10, and 38-10, issued in 1996 through 2000 by the Central Valley RWQCB.

The data gaps identified during this process may affect the conclusions as to the presence or lack of presence of RECs at the Property.

7.3 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT

The professional staff at ENGEO strives to perform its services in a proper and professional manner with reasonable care and competence but is not infallible. The recommendations and conclusions presented in this report were based on the findings of our study, which were developed solely from the contracted services. The findings of the report are based in part on

contracted database research, out-of-house reports, and personal communications. The opinions formed by ENGEO are based on the assumed accuracy of the relied upon data in conjunction with our relevant professional experience related to such data interpretation. ENGEO assumes no liability for the validity of the materials relied upon in the preparation of this report.

This document must not be subject to unauthorized reuse; that is, reuse without written authorization of ENGEO. Such authorization is essential because it requires ENGEO to evaluate the document's applicability given new circumstances, not the least of which is passage of time. The findings from a phase I environmental site assessment are valid for one year after completion of the report. Updates of portions of the assessment may be necessary after a period of 180 days after completion.

This phase I environmental site assessment is not intended to represent a complete soil, soil gas, or groundwater characterization, nor define the depth or extent of soil, soil gas, or groundwater contamination. It is intended to provide an evaluation of potential environmental concerns associated with the use of the Property. A more extensive assessment that would include a subsurface exploration with laboratory testing of soil, soil gas, and groundwater samples could provide more definitive information concerning site-specific conditions. If additional assessment activities are considered for the Property and if other entities are retained to provide such services, ENGEO cannot be held responsible for any and all claims arising from or resulting from the performance of such services by other persons or entities. ENGEO can also not be held responsible from any and all claims arising or resulting from clarifications, adjustments, modifications, discrepancies or other changes necessary to reflect changed field or other conditions.

7.4 SPECIAL TERMS AND CONDITIONS

ENGEO has prepared this report for the exclusive use of our client, West Coast Home Builders, Inc. It is recognized and agreed that ENGEO has assumed responsibility only for undertaking the study for the Client. The responsibility for disclosures or reports to a third party and for remedial or mitigative action shall be solely that of the Client.

Laboratory testing of soil, soil gas, or groundwater samples was not within the scope of the contracted services. The assessment did not include an asbestos survey, an evaluation of lead-based paint, an inspection of light ballasts for polychlorinated biphenyls (PCBs), or a mold survey. A radon evaluation was not performed.

This report is based upon field and other conditions discovered at the time of preparation of ENGEO's assessment. Visual observations referenced in this report are intended only to represent conditions at the time of the reconnaissance. ENGEO would not be aware of site contamination, such as dumping and/or accidental spillage, that occurred subsequent to the reconnaissance conducted by ENGEO personnel.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/28/2019 has revealed that there are 3 ENVIROSTOR sites within approximately 1 mile of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Hazardous waste / Contaminated Sites

SCH: This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category. depending on the level of threat to public health and safety or the. environment they pose.

A review of the SCH list, as provided by EDR, and dated 10/28/2019 has revealed that there is 1 SCH site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/16/2019 has revealed that there are 15 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there is 1 HIST CORTESE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Region:	STATE
Facility Status:	**Completed - Case Closed**
Status Date:	02/17/2011
Global Id:	SL0601369421
Lead Agency:	CENTRAL VALLEY RWQCB (REGION 5S)
Lead Agency Case Number:	Not reported
Latitude:	37.94806
Longitude:	-121.751851
Case Type:	Cleanup Program Site
Case Worker:	KAS
Local Agency:	Not reported
RB Case Number:	SL0601369421
File Location:	Regional Board
Potential Media Affected:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	* Petroleum - Automotive gasolines, * Petroleum - Diesel fuels, * Petroleum - Waste oil
Site History:	The Site is at the intersection of Heidorn Ranch Road and Sand Creek Road in Antioch. The 10-acre lot was formerly used as an office and maintenance yard for pipeline operations, with secondary use as a support area for oil and gas production operations. The Site is bounded on all sides by agricultural fields.

Citation:	40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173
Violation Description:	Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.
Violation Notes:	OBSERVATION: Toxic bin located in the hazardous waste area in the back of store was observed open. CORRECTIVE ACTION: Submit photos to the CUPA demonstrating that the container listed above has been properly closed.

Site Name:	Ross Dress For Less #0629
Violation Date:	01-27-2016
Citation:	HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description:	Haz Waste Generator Program - Administration/Documentation - General
Violation Notes:	Returned to compliance on 02/01/2016.
Violation Division:	Contra Costa County Health Services Department
Violation Program:	HW
Violation Source:	CERS
Site ID:	149102
Site Name:	Ross Dress For Less #0629
Violation Date:	09-10-2019
Citation:	HSC 6.5 25123.3(h) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)
Violation Description:	Failure to determine the status of any hazardous waste if a signed copy of the manifest isnG t received within 35 days of the date the waste was accepted by the initial transporter and/or to submit an Exception Report to DTSC if a signed copy of the manifest isnG t received within 60 days of the date the waste was accepted by the initial transporter.
Violation Notes:	OBSERVATION: The generator failed to file an exception report with the DTSC after not receiving a destination facility signed copy of the uniform hazardous waste manifest within 60 days of the waste shipment date. This includes (1) manifest from 2017, (2) from 2018, and (3) from 2019. CORRECTIVE ACTION: Either locate a copy of the missing manifests or prepare and submit an exception report to DTSC (DTSC Report Repository; Generator Information Services Section; P.O. Box 806; Sacramento, CA 95812-0806). Submit copies to the CUPA.

Violations:

Site ID: 426997
Site Name: BATH & BODY WORKS #2077
Violation Date: 06-11-2018
Citation: 22 CCR 15 66265.51 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.51
Violation Description: Failure to prepare and implement a written Contingency Plan to minimize hazards to human health or the environment from fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water.
Violation Notes: Returned to compliance on 07/31/2018. Facility submitted HWG form stating that they generated only 0.2 tons of waste. Estimates from manifests show much higher amounts. ALL Large quantity generator requirements are now manadatory (example 220 kilos in january) OBSERVATION: Facility failed to prepare an Contingency Plan. The owner or operator shall prepare an Emergency Response Plan designed to minimize hazards to human health or the environment from fires, explosions, or any unplanned release of hazardous waste to air, soil, or surface water. CORRECTIVE ACTION: Immediately prepare an Contingency Plan and submit a copy to the CUPA.

Site ID: 426997
Site Name: BATH & BODY WORKS #2077
Violation Date: 06-11-2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 07/19/2018. OBSERVATION: The business failed to complete and electronically submit chemical inventory information for all reportable hazardous materials on site at or above reportable quantities. site has two 55 gallon drums of waste (flammables and toxics) CORRECTIVE ACTION: Complete and electronically submit the chemical inventory information on CERS for all reportable hazardous materials on site at or above reportable quantities.
Violation Division: Contra Costa County Health Services Department
Violation Program: HMRRP
Violation Source: CERS

Site ID: 426997
Site Name: BATH & BODY WORKS #2077
Violation Date: 06-11-2018
Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description: Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training

BATH & BODY WORKS #2077 (Continued) **S121782685**

records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Violation Notes: Returned to compliance on 07/19/2018. OBSERVATION: Owner/Operator failed to provide initial and/or annual refresher training for employees who manage or handle universal waste and to maintain a written record for three years of personnel who took the initial or annual training. (as large quantity generator) CORRECTIVE ACTION: Provide employees with initial or refresher UW training. Submit a evidence of training to the CUPA.

Site Name:	Party City #444 Brentwood
Violation Date:	09-10-2019
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	OBSERVATION: Uniform Hazardous Waste Manifests for 2019, and possibly additional from 2018, were not available at the time of inspection. CORRECTIVE ACTION: Locate a copy of all manifests for 2018 and 2019 and submit copies to the CUPA.

Violation Date:	09-10-2019
Citation:	HSC 6.5 25123.3(h) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)
Violation Description:	Failure to determine the status of any hazardous waste if a signed copy of the manifest isnG t received within 35 days of the date the waste was accepted by the initial transporter and/or to submit an Exception Report to DTSC if a signed copy of the manifest isnG t received within 60 days of the date the waste was accepted by the initial transporter.
Violation Notes:	OBSERVATION: The generator failed to file an exception report with the DTSC after not receiving a destination facility signed copy of the uniform hazardous waste manifest within 60 days of the waste shipment date. CORRECTIVE ACTION: Either locate a copy of the missing manifests or prepare and submit an exception report to DTSC (DTSC Report Repository; Generator Information Services Section; P.O. Box 806; Sacramento, CA 95812-0806). Submit copies to the CUPA.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/30/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/16/2019
Date Data Arrived at EDR: 12/16/2019
Date Made Active in Reports: 12/20/2019

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

UST CLOSURE: Proposed Closure of Underground Storage Tank (UST) Cases
UST cases that are being considered for closure by either the State Water Resources Control Board or the Executive Director have been posted for a 60-day public comment period. UST Case Closures being proposed for consideration by the State Water Resources Control Board. These are primarily UST cases that meet closure criteria under the decisional framework in State Water Board Resolution No. 92-49 and other Board orders. UST Case Closures proposed for consideration by the Executive Director pursuant to State Water Board Resolution No. 2012-0061. These are cases that meet the criteria of the Low-Threat UST Case Closure Policy. UST Case Closure Review Denials and Approved Orders.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Version Date:	2012
West Map:	5640044 ANTIOCH SOUTH, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

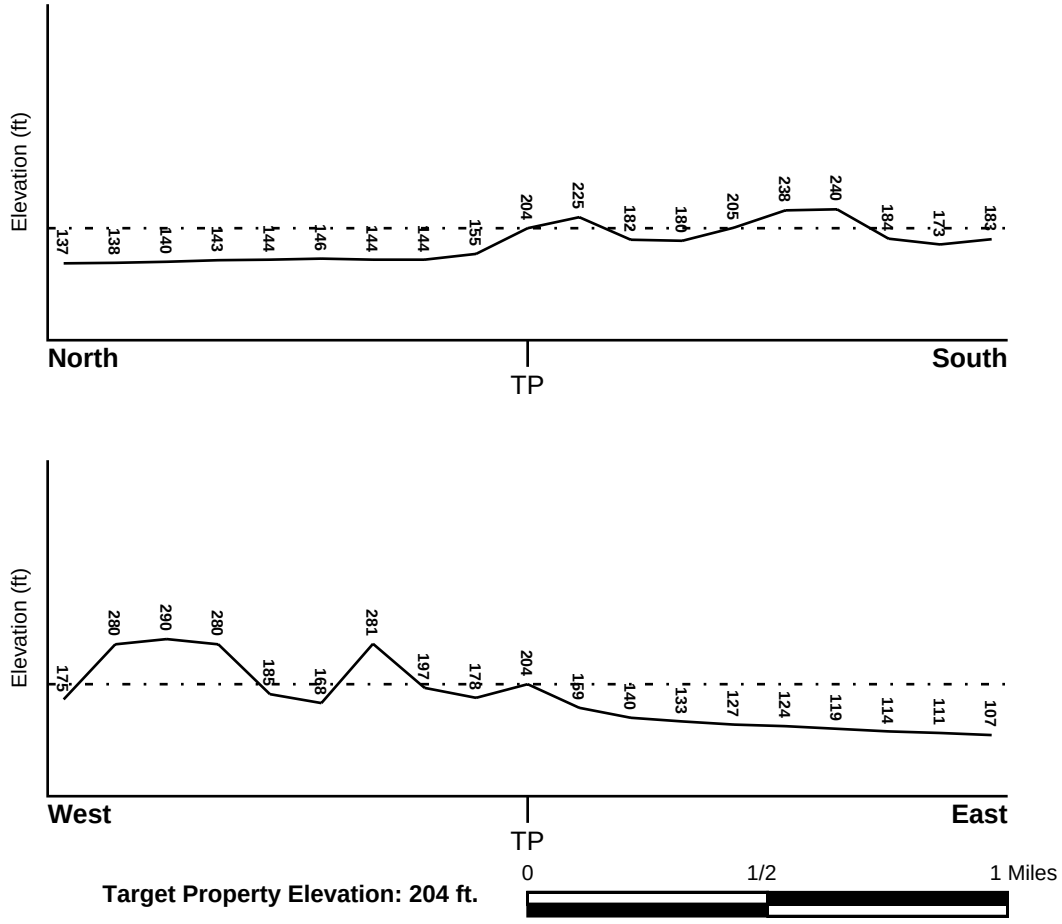
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 204 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06013C0353F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type

06013C0361F	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
BRENTWOOD	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: ALTAMONT

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	25 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 1.4 Min: 0	Max: Min:
2	25 inches	48 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 1.4 Min: 0	Max: Min:
3	48 inches	51 inches	weathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 1.4 Min: 0	Max: Min:

Soil Map ID: 2

Soil Component Name: ALTAMONT

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	25 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 1.4 Min: 0	Max: Min:
2	25 inches	48 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 1.4 Min: 0	Max: Min:
3	48 inches	51 inches	weathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	Not reported	Max: 1.4 Min: 0	Max: Min:

Soil Map ID: 3

Soil Component Name: BRENTWOOD

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	18 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4
2	18 inches	50 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4
3	50 inches	59 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4

Soil Map ID: 4

Soil Component Name: CAPAY

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	35 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6
2	35 inches	51 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6
3	51 inches	72 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6

Soil Map ID: 5

Soil Component Name: SYCAMORE

Soil Surface Texture: silty clay loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 127 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PRELIMINARY REPORT

21ST UPDATE

WEST COAST HOM BUILDERS, INC.
4021 PORT CHICAGO HIGHWAY
CONCORD, CA 94520

Our Order Number 274337-DJ

When Replying Please Contact:

Donna Jones
DonnaJ@ortc.com
(925) 687-7880

Property Address:

Proposed Subdivision 8506, Bridlegate , Brentwood, CA

In response to the above referenced application for a policy of title insurance, OLD REPUBLIC TITLE COMPANY, as issuing Agent of Old Republic National Title Insurance Company, hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a Policy or Policies of Title Insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an Exception below or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations of said policy forms.

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said Policy or Policies are set forth in Exhibit I attached. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the Homeowner's Policy of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Exhibit I. Copies of the Policy forms should be read. They are available from the office which issued this report.

Please read the exceptions shown or referred to below and the exceptions and exclusions set forth in Exhibit I of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.
It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects, and encumbrances affecting title to the land.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

Dated as of March 17, 2020, at 7:30 AM

OLD REPUBLIC TITLE COMPANY
For Exceptions Shown or Referred to, See Attached

The form of policy of title insurance contemplated by this report is:

CLTA Standard Coverage Policy -1990. A specific request should be made if another form or additional coverage is desired.

The estate or interest in the land hereinafter described or referred or covered by this Report is:

a FEE as to Parcel One and an EASEMENT as to Parcel Two.

Title to said estate or interest at the date hereof is vested in:

WEST COAST HOME BUILDERS, INC., a California corporation

The land referred to in this Report is situated in the County of Contra Costa, City of Brentwood, State of California, and is described as follows:

PARCEL ONE:

The Southwest 1/4 of Section 10, Township 1 North, Range 2 East, Mount Diablo Base and Meridian.

EXCEPTING THEREFROM:

1. Rights reserved in the Deed from Barbara Ann Ward, Executrix of the Estate of Robert Roger Ward, alias, deceased, recorded June 2, 1967, Book 5381, Official Records, Page 63, as follows:

"An undivided one-half (1/2) interest of all oil, gas, casinghead gasoline and other hydrocarbon and mineral substances under said land without right of entry upon the surface of said lands for the purpose of exploring, taking, removing, disposing, mining and operating for oil, gas, and other hydrocarbon and mineral substances."

2. Rights reserved in the Deed from John Stanley Ward, et ux, recorded June 2, 1967, Book 5381, Official Records, Page 66, as follows:

"An undivided one-half (1/2) interest of all oil, gas, casinghead gasoline and other hydrocarbon and mineral substances under said land without right of entry upon the surface of said lands for the purpose of exploring, taking, removing, disposing, mining and operating for oil, gas, and other hydrocarbon and mineral substances."

3. That portion thereof described as Parcel 1 in the Final Order of Condemnation to Contra Costa Water District, recorded November 14, 1995, in Official Records, under recorder's Series No. 95-197781.

4. All that portion described in that Final Order of Condemnation to State Route 4 Bypass Authority, recorded January 31, 2003, in Official Records, under Recorder's Series No. 2003-49906, and as later quitclaimed State Route 4 Bypass Authority, a Joint Exercise of Powers Agency to the City of Brentwood, a municipal corporation of the State of California, its successors and assigns, by instrument recorded May 21, 2013, Series No. 2013-0128598, Official Records.

5. The interest conveyed to the City of Brentwood by deed recorded March 20, 2007, in Official Records, under Recorder's Series No. 2007-80685.

PARCEL TWO:

The rights reserved in the Final Order of Condemnation to Contra Costa Water District, recorded November 14, 1995 under recorders' Series No. 95-197781, as follows:

The right to use the surface of the property for ingress and egress, inclusive of the right to pave the surface and plant crops with shallow root structures; however, said owner shall not be permitted to grade the property being acquired herein for the water pipeline or plant shrubs or trees with root structures which could impair the water pipeline, nor perform any other activity which will be detrimental to the facilities being installed, which property is described as follows:

That certain parcel of land crossing the southwest quarter of section 10, Township 1 North, range 2 East of the M.D.G.M. as the same is shown on the record of survey filed March 13, 1991 in Book 97 of Land Survey Maps, at Page 34, in the office of the Contra Costa County Recorder, being all of said southwest quarter of said section 10 lying easterly of the following described line:

Beginning at the northeast corner of said southwest quarter of section 10, thence along the northerly boundary of said quarter section, N89° 28' 43" W (record) 85.55 feet more or less, to the true point of beginning of the line herein described, hereinafter referred to as "Point A", said point having state plane coordinates of Y=529,307.45 feet, X=1,642,207.79 feet; thence S00° 53'14" W 268.62 feet to the Easterly line of a 75' wide Pacific Gas and Electric right of way; thence, along said easterly line of said 75' wide Pacific Gas and Electric right of way, S19° 56' 13" E 239.57 feet to the easterly line of said southwest quarter, section 10 and the terminus of the line herein described: said terminus having state plane coordinates of Y=528,813.65 feet, X=1,642,285.32 feet.

(Being APN 019-082-007)

At the date hereof exceptions to coverage in addition to the Exceptions and Exclusions in said policy form would be as follows:

1. Taxes and assessments, general and special, for the fiscal year 2020 - 2021, a lien, but not yet due or payable.

2. Taxes and assessments, general and special, for the fiscal year 2019 - 2020, as follows:

Assessor's Parcel No	:	019-082-007	
Code No.	:	10-046	
1st Installment	:	$155,198.44	Marked Paid
2nd Installment	:	$155,198.44	NOT Marked Paid
Land	:	$3,493,243.00	
Imp. Value	:	$0.00	
Exemption	:	$0.00	

3. The lien of supplemental taxes, if any, assessed pursuant to the provisions of Section 75, et seq., of the Revenue and Taxation Code of the State of California.

4. Assessments, included with taxes, for Assessment District No. 2006-1, a notice of which was recorded as follows:

Instrument Entitled	:	Notice of Assessment
By	:	City of Brentwood
Recorded	:	July 18, 2006 in Official Records, under Recorder's Serial Number 2006-227054

NOTE: The current annual amount levied against this land is $257,289.64.

5. Assessments that may be levied, as follows:

For/By : City of Brentwood CFD #5

Disclosed by Amended Assessment District Map

6. Rights of the public, County and/or City, in and to that portion of said land lying within the lines of SAND CREEK ROAD and SAN JOSE AVENUE.

7. An easement affecting that portion of said land and for the purposes stated herein and incidental purposes as provided in the following

Instrument	:	Grant of Right of Way
Granted to	:	Great Western Power Company of California, a California corporation
For	:	Electric transmission lines and for telephone purposes
Recorded	:	July 5th, 1930 in Book 226 of Official Records, Page 387
Affects	:	The exact location is not disclosed of record

8. An easement affecting that portion of said land and for the purposes stated herein and incidental purposes as provided in the following

Instrument	:	Deed
Granted to	:	Pacific Gas and Electric Company, a California corporation
For	:	Pipelines
Recorded	:	June 27th, 1947 in Book 1097 of Official Records, Page 495
Affects	:	A portion, 10 feet in width

9. An easement affecting that portion of said land and for the purposes stated herein and incidental purposes as provided in the following

Instrument	:	Deed
Granted to	:	Pacific Gas and Electric Company, a California corporation
For	:	Electric transmission lines
Recorded	:	July 13th, 1950 in Book 1593 of Official Records, Page 533
Affects	:	A northeastern portion of said land

10. An easement affecting that portion of said land and for the purposes stated herein and incidental purposes as provided in the following

Instrument	:	Deed
Granted to	:	Pacific Gas and Electric Company, a California corporation
For	:	Pipelines
Recorded	:	July 3rd, 1962 in Book 4152 of Official Records, Page 326
Affects	:	Portions

Exhibit I

CALIFORNIA LAND TITLE ASSOCIATION STANDARD COVERAGE POLICY - 1990 (11/09/18)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses which arise by reason of:

1. (a) Any law, ordinance, or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the land;
   (ii) the character, dimensions, or location of any improvement now or hereafter erected on the land;
   (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or
   (iv) environmental protection; or the effect of any violation of these laws, ordinances, or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.
2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.
3. Defects, liens, encumbrances, adverse claims, or other matters:
   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;
   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;
   (c) resulting in no loss or damage to the insured claimant;
   (d) attaching or created subsequent to Date of Policy; or
   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.
4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing-business laws of the state in which the land is situated.
5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.
6. Any claim, which arises out of the transaction vesting in the insured the estate of interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE

SCHEDULE B - PART I

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees, or expenses which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.

   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.
2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.
3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.
4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.
6. Any lien or right to a lien for services, labor or material unless such lien is shown by the public records at Date of Policy.

OLD REPUBLIC TITLE

rev. 09/2019

FACTS

WHAT DOES OLD REPUBLIC TITLE DO WITH YOUR PERSONAL INFORMATION?

Why?	Financial companies choose how they share your personal information. Federal law gives consumers the right to limit some but not all sharing. Federal law also requires us to tell you how we collect, share, and protect your personal information. Please read this notice carefully to understand what we do.
What?	The types of personal information we collect and share depend on the product or service you have with us. This information can include: • Social Security number and employment information • Mortgage rates and payments and account balances • Checking account information and wire transfer instructions When you are no longer our customer, we continue to share your information as described in this notice.
How?	All financial companies need to share customers' personal information to run their everyday business. In the section below, we list the reasons financial companies can share their customers' personal information; the reasons Old Republic Title chooses to share; and whether you can limit this sharing.

Reasons we can share your personal information	Does Old Republic Title share?	Can you limit this sharing?
For our everyday business purposes — such as to process your transactions, maintain your account(s), or respond to court orders and legal investigations, or report to credit bureaus	**Yes**	**No**
For our marketing purposes — to offer our products and services to you	**No**	**We don't share**
For joint marketing with other financial companies	**No**	**We don't share**
For our affiliates' everyday business purposes — information about your transactions and experiences	**Yes**	**No**
For our affiliates' everyday business purposes — information about your creditworthiness	**No**	**We don't share**
For our affiliates to market to you	**No**	**We don't share**
For non-affiliates to market to you	**No**	**We don't share**

Questions	**Go to www.oldrepublictitle.com** (Contact Us)

Who we are	
Who is providing this notice?	Companies with an Old Republic Title name and other affiliates. Please see below for a list of affiliates.

What we do	
How does Old Republic Title protect my personal information?	To protect your personal information from unauthorized access and use, we use security measures that comply with federal law. These measures include computer safeguards and secured files and buildings. For more information, visit http://www.OldRepublicTitle.com/newnational/Contact/privacy.
How does Old Republic Title collect my personal information?	We collect your personal information, for example, when you: • Give us your contact information or show your driver's license • Show your government-issued ID or provide your mortgage information • Make a wire transfer We also collect your personal information from others, such as credit bureaus, affiliates, or other companies.
Why can't I limit all sharing?	Federal law gives you the right to limit only: • Sharing for affiliates' everyday business purposes - information about your creditworthiness • Affiliates from using your information to market to you • Sharing for non-affiliates to market to you State laws and individual companies may give you additional rights to limit sharing. See the "Other important information" section below for your rights under state law.

Definitions	
Affiliates	Companies related by common ownership or control. They can be financial and nonfinancial companies. • Our affiliates include companies with an Old Republic Title name, and financial companies such as Attorneys' Title Fund Services, LLC, Lex Terrae National Title Services, Inc., Mississippi Valley Title Services Company, and The Title Company of North Carolina.
Non-affiliates	Companies not related by common ownership or control. They can be financial and non-financial companies. • Old Republic Title does not share with non-affiliates so they can market to you
Joint marketing	A formal agreement between non-affiliated financial companies that together market financial products or services to you. • Old Republic Title doesn't jointly market.

Other Important Information

Oregon residents only: We are providing you this notice under state law. We may share your personal information (described on page one) obtained from you or others with non-affiliate service providers with whom we contract, such as notaries and delivery services, in order to process your transactions. You may see what personal information we have collected about you in connection with your transaction (other than personal information related to a claim or legal proceeding). To see your information, please click on "Contact Us" at www.oldrepublictitle.com and submit your written request to the Legal Department. You may see and copy the information at our office or ask us to mail you a copy for a reasonable fee. If you think any information is wrong, you may submit a written request online to correct or delete it. We will let you know what actions we take. If you do not agree with our actions, you may send us a statement.

Privacy Notice for California Consumers

This Privacy Notice for California Consumers supplements the information contained in the Master Privacy Notice for Old Republic Title and applies to consumers that reside in the State of California. The terms used in this Privacy Notice have the same meaning as the terms defined in the California Consumer Privacy Act ("CCPA").

What Personal Information We Collect

In accordance with the CCPA, personal information is information that identifies, relates to, describes, is capable of being associated with, or could reasonably be linked, directly or indirectly, with a particular consumer or household. Personal information does not include:
Information outside the scope of the CCPA such as:

- Health or medical information covered by the Health Insurance Portability Act of 1996 (HIPAA) and the California Confidentiality of Medical Information Act (CMIA).
- Personal Information covered by the Gramm-Leach-Bliley Act (GLBA), the Fair Credit Reporting Act (FCRA), the California Financial Information Privacy Act (FIPA), and the Driver's Privacy Protection Act of 1994,
- Publicly available information that is available from federal, state, or local government records, and
- De-identified or aggregated consumer information.

Please see the chart below to learn what categories of personal information we may have collected about California consumers within the preceding twelve months, the sources of and business purposes for that collection and the third parties with whom the information is shared, if any.

Category	**Examples**	**Collected**	**Sources**	**Business Purpose for Collection**	**Categories of Third Parties with Whom Information is Shared**

Geolocation data	Geographic tracking data, physical location and movements	Yes	Consumers, Lenders, Brokers, Attorneys, Real Estate Agents, and Title Agents associated with the transaction	To provide access to certain online services. To understand the interests of visitors to our online services, to support certain features of our site, for navigation and to display certain features more effectively. Other audit or operational purposes.	Not Disclosed

What Personal Information We Share and Why We Share It

The CCPA requires us to tell you what categories of personal information we “sell” or “disclose.” We do not sell and will not sell your personal information as that term is commonly understood. We also do not sell and will not sell your personal information, including the personal information of persons under 16 years of age, as that term is defined by the CCPA. When it is necessary for a business purpose, we share or disclose your personal information with a service provider, and we enter a contract with the service provider that limits how the information may be used and requires the service provider to protect the confidentiality of the information.

In the preceding twelve months, we have disclosed the following categories of personal information for the following business purposes. Where the personal information is shared with third parties, as that term is defined in the CCPA, the category of the third party is indicated.

Category	**Examples**	**Business Purpose for Disclosure**	**Categories of Third Parties with Whom Information is Shared**
Identifiers	Real name, alias, postal address, unique personal identifier, online identifier, internet protocol address, email address, account name, social security number, driver’s license number, passport number or other similar identifiers	Underwriting or providing other products or services, responding to policyholder/consumer claims, inquiries or complaints, detecting security incidents, protecting against malicious, deceptive, fraudulent, or illegal activity. Other audit or operational purposes.	Service providers associated with the transaction for a business purpose
Personal information described in California Customer	Name, signature, social security number, physical characteristics or description, address, telephone number, passport number, driver’s license or state	Underwriting or providing other products or services, responding to policyholder/consumer	Service providers associated with the transaction for a business

Records statute (Cal. Civ. Code § 1798.80(e))	identification card number, insurance policy number, education, employment, employment history, bank account number, credit card number, debit card number, or any other financial information, medical information, or health insurance information. "Personal information" does not include publicly available information that is lawfully made available to the general public from federal, state, or local government records.	claims, inquiries or complaints, detecting security incidents, protecting against malicious, deceptive, fraudulent, or illegal activity. Other audit or operational purposes.	purpose
Characteristics of protected classifications under California or federal law	Age (40 years or older), race, color, ancestry, national origin, citizenship, religions or creed, marital status, medical condition, physical or mental disability, sex (including gender, gender identity, gender expression, pregnancy or childbirth and related medical conditions), sexual orientation, veteran or military status, or genetic information (including familial genetic information).	Underwriting or providing other products or services, responding to policyholder/consumer claims, inquiries or complaints. Other audit or operational purposes.	Service providers associated with the transaction for a business purpose
Internet or other electronic network activity	Browsing history, search history, information about a consumer's interaction with a website, application, or advertisement. 		operational purposes.	
Geolocation data	Geographic tracking data, physical location and movements	To provide access to certain online services. To understand the interests of visitors to our online services, to support certain features of our site, for navigation and to display certain features more effectively. Other audit or operational purposes.	Not Disclosed

We may also transfer to a third party the personal information of a consumer as an asset that is part of a merger, acquisition, bankruptcy, or other transaction in which the third party assumes control of all or part of the business.

Your Rights and Choices

The CCPA provides California consumers with certain rights regarding their personal information. This chart describes those rights and certain limitations to those rights.

Right	What This Means
Notice	At or before the time your personal information is collected, you will be given written notice of the categories of personal information to be collected and the purposes for which the categories of personal information will be used.
Access	At your verifiable request, but no more than twice in a twelve month period, we shall disclose to you: 1) the categories of personal information we have collected about you, 2) the categories of sources for the personal information we collected about you, 3) our business and commercial purpose for collecting or selling your personal information, 4) the categories of third parties with whom we share your personal information, 5) The specific pieces of information we have collected about you, 6) the categories of personal information disclosed for a business purpose, and 7) If we sold personal information, the categories of personal information sold and the categories of third parties to whom it was sold.

Deletion	You have the right to request that we delete any of your personal information that we collected from you, subject to certain exceptions. Once we receive and verify your request, we will delete (and direct our service providers to delete) your personal information from our records unless an exception applies. We may deny your request if retention of the information is necessary for us or our service providers to: • Complete the transaction for which we collected the personal information, provide a good or service that you requested, take actions reasonably anticipated within the context of our ongoing business relationship with you, or otherwise perform our contract with you. • Detect security incidents, protect against malicious, deceptive, fraudulent, or illegal activity, or prosecute those responsible for such activities. • Debug products to identify and repair errors that impair existing intended functionality. • Exercise free speech, ensure the right of another consumer to exercise their free speech rights, or exercise another right provided for by law. • Comply with the California Electronic Communications Privacy Act (Cal. Penal Code §1546 et seq.) • Engage in public or peer reviewed scientific, historical, or statistical research in the public interest that adheres to all other applicable ethics and privacy laws, when the information's deletion may likely render impossible or seriously impair the research's achievement, if you previously provided informed consent. • Enable solely internal uses that are reasonably aligned with consumer expectations based on your relationship with us. • Comply with a legal obligation. • Make other internal and lawful uses of that information that are compatible with the context in which you provided it. • Or if it is the type of personal information that falls outside the scope of the CCPA, (HIPAA, CIMA, GLBA, or publicly available information)
Opt-Out of Sale Opt-In to Sale	With some limitations, you may direct a business that sells personal information to third parties not to sell the personal information to these third parties. A business may not sell the personal information of persons less than sixteen years of age without their affirmative consent, and in the case of those less than thirteen years of age, the consent must come from a parent.
Non-Discrimination	We will not discriminate against you for exercising your rights under the CCPA. Unless otherwise permitted by the CCPA we will not: • Deny you goods or service • Charge you different prices or rates for goods or services, including through granting discounts or other benefits, or imposing penalties • Provide a different level or quality of goods or services • Suggest that you will receive a different price or rate for goods or services or a different level or quality of goods or services

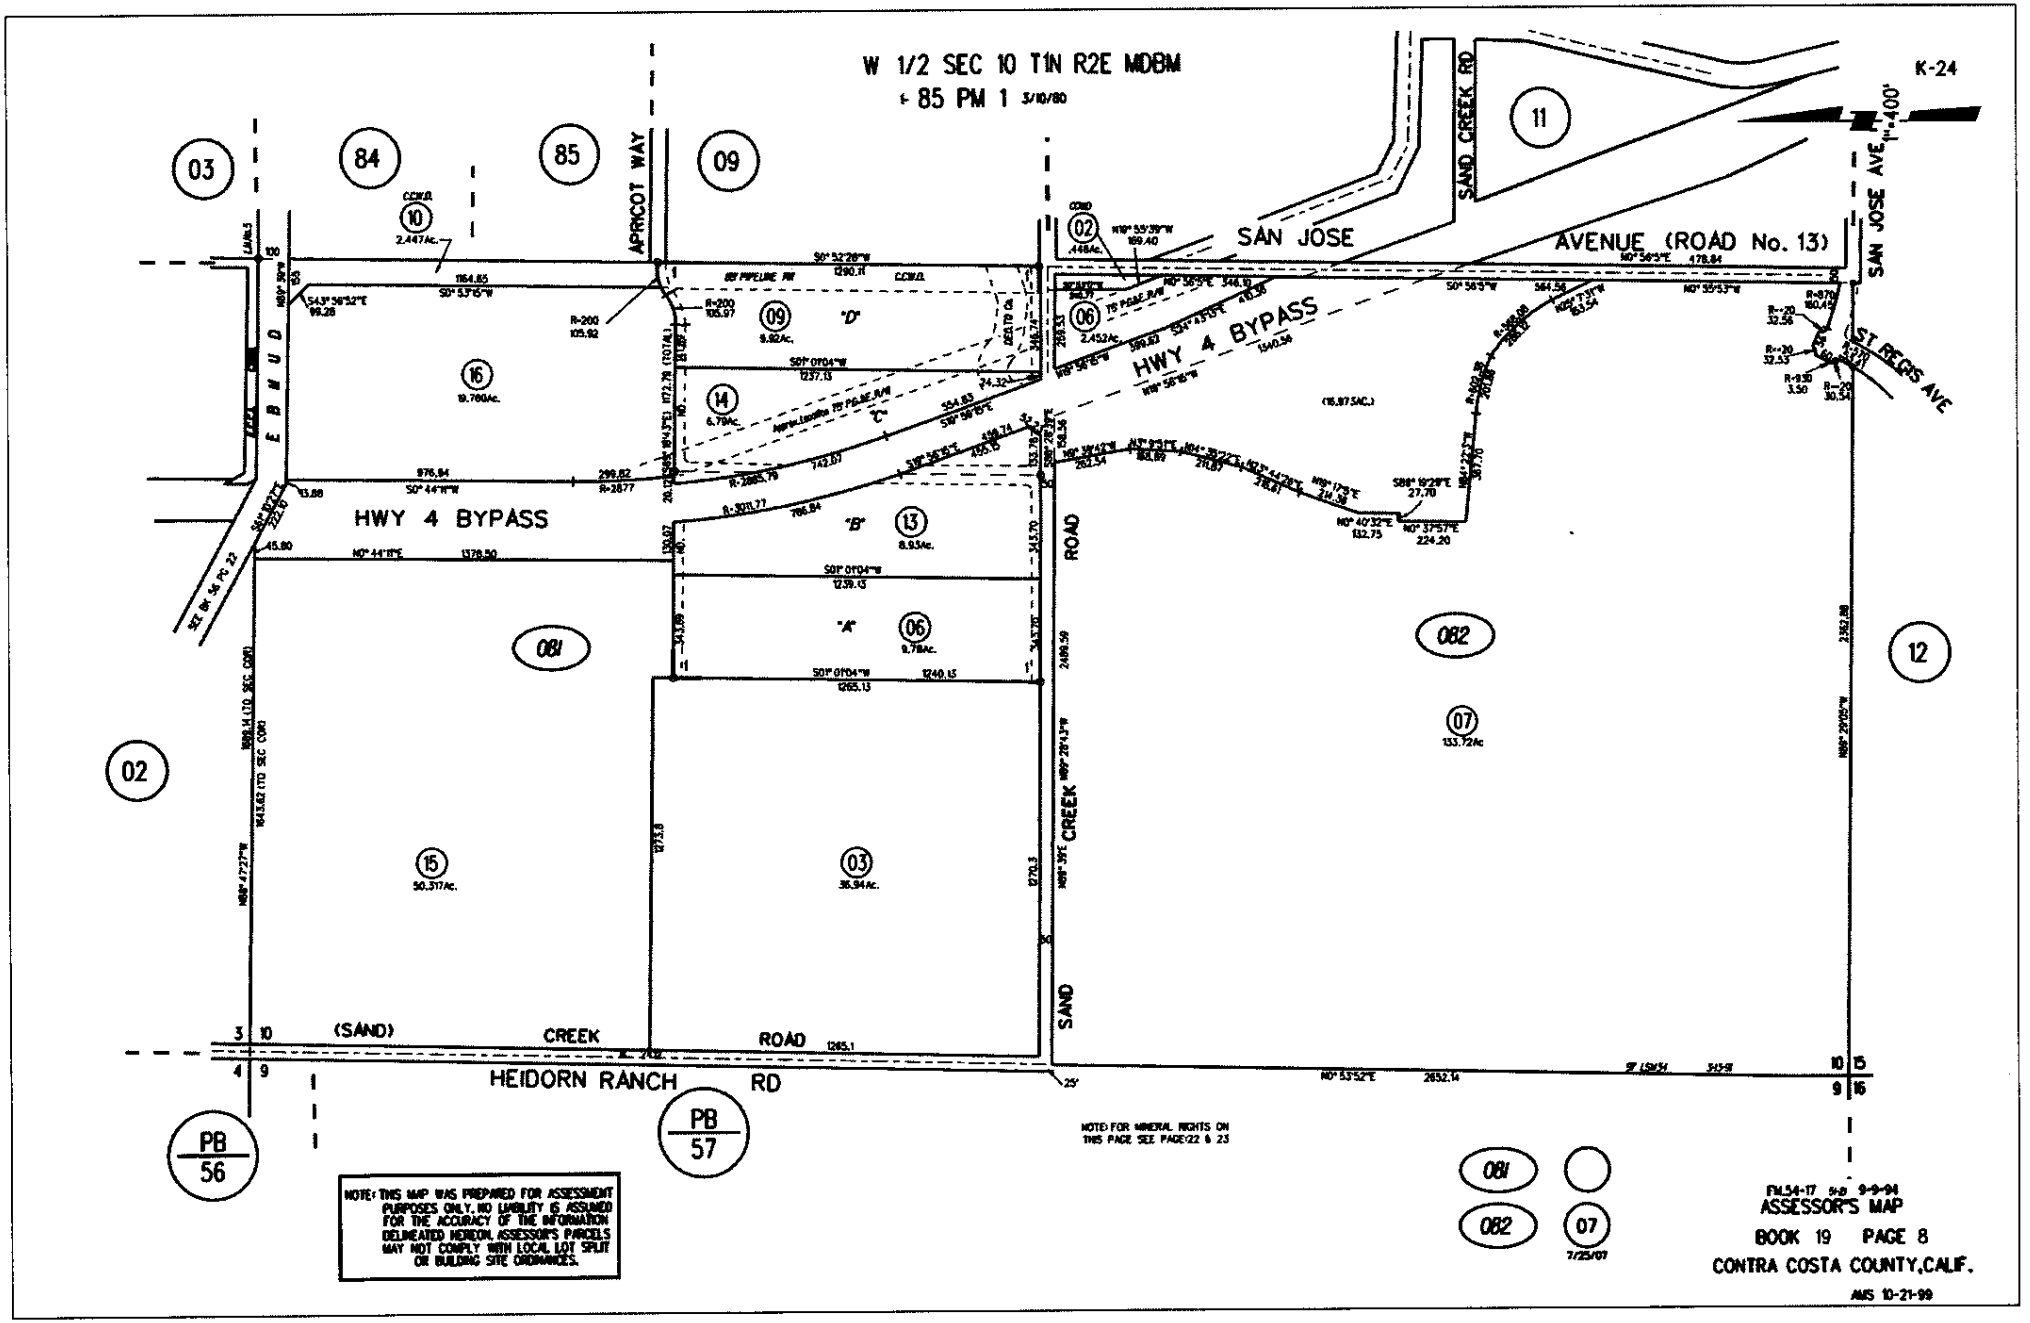
To Exercise Your Rights

To Opt-out of the Sale of Your Personal Information

The CCPA gives consumers the right to direct a business that sells personal information about the consumer to third parties not to sell the consumer's personal information. We do not sell and will not sell your personal information as that term is commonly understood. We also do not sell and will not sell your personal information, as that term is defined by the CCPA.

To Request Access to or Deletion of Your Personal Information

To exercise your access or deletion rights described above, please submit a verifiable consumer request to us by either: Calling us at 1-855-557-8437 or contacting us through our website CCPA Consumer Request.



Only you or your representative that you authorize to act on your behalf (Authorized Agent) can make a verifiable consumer request for your personal information. You may also make a request for your minor child. The verifiable request must provide enough information that allows us to reasonably verify you are the person about whom we collected personal information. We cannot respond to your request or provide you with personal information if we cannot verify your identity or authority to make the request and to confirm the personal information relates to you.

We work to respond to a verifiable consumer request within 45 days of its receipt. If we require additional time, we will inform you of the extension period (up to an additional 45 days), and the reason for the extension in writing. If you have an account with us, we will deliver our response to that account. If you do not have an account with us, we will deliver our response by mail or electronically, depending on your preference. The response we provide will also explain any reasons why we cannot comply with a request.

You may only make a consumer request for access twice within a twelve-month period. Any disclosures we provide will apply to the twelve-month period preceding the consumer request's receipt.

Contact Us

If you have any questions regarding our Privacy Notice or practices, please contact us via phone at 1-855-557-8437 or send your written request to: CCPA@oldrepublictitle.com, or Old Republic Title c/o CCPA Consumer Request Group, 275 Battery Street, Suite1500, San Francisco, CA 94111-3334.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Engeo Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

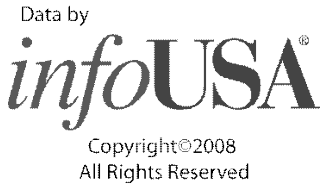
EXECUTIVE SUMMARY



DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRES (2)

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
FOR CLIENT

To evaluate the potential for possible environmentally related impacts and site contamination the following information is requested. This questionnaire is to be completed by the user of the phase one environmental site assessment, or their authorized representative.

PART I

1. Property address and Assessor's Parcel Number (APN):

   West side of State Highway 4 at Sand Creek Road, Brentwood

   APN 019-082-007

2. Current property owner (name, address, voice/fax number):

   West Coast Home Builders, Inc.
   4021 Port Chicago Highway, Concord CA 94520
   925-602-7235

3. Date current property owner assumed title of property:

   1998

4. Current property development/improvements:

   The property is currently undeveloped

5. Past property use, development/improvements:

   Grazing, row crops and oil wells

6. Neighboring property uses:

   Single family homes to the south
   Commercial centers to the east
   Vacant agricultural land to the nort
   vacant open space/grazing land to the west

PART II

1.	Are you aware of any environmental cleanup liens against the *property* that are filed under federal, tribal, local or state law?	☐ Yes	☑ No
2.	Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state or local law?	☐ Yes	☑ No
3.	Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the *property* or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?	☐ Yes	☑ No
4.	If a property transaction is occurring in conjunction with this environmental assessment, does the purchase price of this *property* reasonably reflect the fair market value of the *property*?	☐ Yes	☑ No
5.	If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property?*	☐ Yes	☐ No ☑ N/A
6.	Are you aware of any commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, (a) do you know of specific chemicals that are present or once were present at the *property*? (b) do you know of spills or other chemical releases that have taken place at the *property*? (c) do you know of any environmental cleanups that have taken place at the *property*?	☑ Yes	☐ No
7.	Based on your knowledge and experience related to the *property* are there any obvious indicators that point to the presence or likely presence of contamination at the *property*?	☐ Yes	☑ No

If a "Yes" response was provided to any of the above questions, please provide details below:

There were several oil wells on the property which were owned by Shell Oil and later by Occidental petroleum, The wells were abandoned in the late 1990's and any affected soil was remediated under the oversight of the California Regional Water Quality Control Board which issued a letter of no further action on July 7, 2000

I certify that the information herein is true and correct to the best of my knowledge as of the date signed below.

ENVIRONMENTAL SITE ASSESSMENT QUESTIONNAIRE
FOR KEY SITE MANAGER

To evaluate the potential for possible environmentally related impacts and site contamination the following information is requested. This questionnaire is to be preferably completed by the current property owner, or owner representative, leasing agent, or other person having good knowledge of the uses and physical characteristics of the property (Key Site Manager).

PART I

1. Property Address/Location and Assessor's Parcel Number (APN):

   West side of State Highway 4 at Sand Creek Road, Brentwood, CA
   APN 019-082-007

2. Current property owner (name, address, voice/fax number):

   West Coast Home Builders, Inc.
   4021 Port Chicago Highway, Concord, CA 94520
   925-671-7711

3. Date current property owner assumed title of property:

   1998

4. Current property development/improvements:

   The property is currently undeveloped

5. Past property use, development/improvements:

   Grazing, row crops and oil wells

6. Neighboring property uses:

   Single family homes to the south
   Commercial Centers to the east
   Agriculture to the north
   Open space and grazing to the west

PART II - The following questions should be answered to the best of your knowledge.

1.	Is/has the *property* or any adjoining property used/been used for industrial purposes?	☐ Yes	☑ No
2.	Has the *property* or any adjoining property been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility?	☐ Yes	☑ No
3.	Are there currently, or have there been previously, any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemicals in individual containers of greater than 5 gal in volume or 50 gal in the aggregate, stored on or used at the *property* or at the facility?	☐ Yes	☑ No
4.	Has undocumented soil been brought onto the property at any time? If yes, estimated quantity is 25,000 cubic yards.	☑ Yes	☐ No
5.	Has soil been brought onto the property that originated from a contaminated site or that is of an unknown origin?	☐ Yes	☑ No
6.	Are there currently, or have there been previously, any pits, ponds, or lagoons located on the *property* in connection with waste treatment or waste disposal?	☐ Yes	☑ No
7.	Is there currently, or has there been previously, any stained soil on the *property*?	☐ Yes	☑ No
8.	Are there currently, or have there been previously, any registered or unregistered storage tanks (above or underground) located on the *property*?	☑ Yes	☐ No
9.	Are there currently, or have there been previously, any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the *property* or adjacent to any structure located on the *property*?	☐ Yes	☑ No
10.	Are there currently, or have there been previously, any flooring, drains, or walls located within the facility that are stained by substances other than water or are emitting foul odors?	☐ Yes	☑ No
11.	Are there any domestic, irrigation or monitoring wells on the property?	☐ Yes	☑ No
12.	If the *property* is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system or has the well been designated as contaminated by any government environmental/health agency?	☐ Yes	☑ No
13.	Have you been informed of the past or current existence of *hazardous substances* or *petroleum products* or environmental violations with respect to the *property* or any facility located on the *property*?	☑ Yes	☐ No
14.	Have there been any *environmental site assessments* of the *property* or facility that indicated the presence of *hazardous substances* or *petroleum products* on, or contamination of, the *property* or recommended further assessment of the *property*?	☐ Yes	☑ No
15.	Have there been any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any *hazardous substance* or *petroleum products* involving the *property*?	☐ Yes	☑ No
16.	Has there been any past agricultural use of the *property*, such as orchards or seed crop cultivation?	☑ Yes	☐ No
17.	Have any *hazardous substances* or *petroleum products*, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried and/or burned on the *property*?	☐ Yes	☑ No
18.	Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCBs?	☐ Yes	☑ No

If a "Yes" response was provided to any of the above questions, please provide details below:

There was about 25,000 cubic yards of clean soil deposited on the property in the northwest quadrant in 2019. It was excess dirt from a residential subdivision which the Owner is developing in the immediate vicinity. There were several oil wells, oil pipelines and a small tank farm on the property which were operated by Shell Oil and later Occidental Petroleum. The tanks and pipelines were removed and the wells were abandoned in the late 1990"s. Groundwater was monitored and cleared and impacted oily dirt was remediated under the oversight of the California Regional Water Quality Control Board which issued letters of no further action on July 7, 2000 and March 29, 2001

I certify that the information herein is true and correct to the best of my knowledge as of the date signed below.

SPECIALIZATIONS

- Environmental Assessments and Remediation
- Environmental Restoration
- Water Quality Studies
- Water Wells/Hydrogeology

Since joining ENGEO in 1985, Shawn has been managing groundwater supply evaluations, hydrogeologic studies, chemical assessments, Phase I and II Site Assessment projects, UST site investigations, risk based corrective action (RBCA), VOC remediation, and agricultural impact evaluations. He serves as Principal-in-Charge or Project Manager for environmental and hazardous materials projects involving groundwater hydrology, contaminant fate and transport, and remediation. He is Principal-in-Charge of the environmental components of our on-call contracts with the City of Sacramento and the County of Sacramento.

Select Project Experience

14234 Saratoga Sunnyvale Road—Saratoga, CA
Project Geologist. Shawn performed Principal review of ENGEO's environmental documents. This 2.2-acre townhome site is planned for a new multi-family development comprising up to 20 units in 8 buildings. The site immediately borders Saratoga Creek and contains numerous mature trees, many of which are to be saved. Site challenges include shallow groundwater, creek bank stability, and the potential for liquefaction and lateral spreading.

Lenihan Dam Outlet Modification—Los Gatos, CA
Principal Geologist. Shawn provided technical advice, coordination, consultation, and review of ENGEO's documents to provide quality mitigation measures. The findings were presented to SCVWD and it was concluded that the stockpile was sufficient for transportation. This analysis led to significant project budget savings by avoiding removal and disposal at a solid waste disposal facility. The project consisted of a stockpile approximately 6,000 cubic yards that required profiling as requested by Santa Clara Valley Water District before use of as site backfill.

199 River Oaks Parkway—San Jose, CA
Principal in Charge. Shawn provided principal oversight, data analysis, and consultation regarding site characterization, risk evaluation, and demolition observation plans. The project consists of a proposed six-story podium structure with one level to be constructed below grade. The property is a former semiconductor facility that has received conditional closure from the Regional Water Quality Control Board and is approved for construction.

Riverside Avenue Property—Roseville, CA
Principal in Charge. Shawn provided principal oversight of a Phase II Environmental Site Assessments and site

characterization. The project site consists of an active auto sales and service facility. The historic use of the facility for industrial purposes resulted in soil and groundwater impacts beneath the site. The City of Roseville revised its plans for acquiring and redeveloping the site due to the identified soil and groundwater impacts.

1301 Standard Oil Ave—Pittsburg, CA
Principal in Charge. Shawn provided principal oversight of a Phase II Environmental Site Characterization. The property is an abandoned wastewater treatment plant with processing buildings, clarifier tanks, and sludge beds.

Pleasant Hill BART Station—Walnut Creek, CA
Principal in Charge. Shawn provided oversight, data analysis and consultation during the preparation of a Phase II Environmental Site Assessment. The property is an existing BART station that encompasses 20 acres, including the platform/station area, electrical facilities, a parking garage and additional paved parking areas.

County Crossings Property—Antioch, CA
Principal in Charge. Shawn provided environmental consultation and data review with regard to soil and groundwater contamination. Constituents of concern include petroleum hydrocarbons, nitrates and manganese. The approximately 264-acre site includes several former industrial facilities and petroleum pipelines. Soil and groundwater at the site has been impacted with petroleum hydrocarbons, nitrates and manganese. Planned uses include commercial, residential, retail, and a BART-oriented transit village. The center, which is currently in the entitlement phase, is estimated to break ground in 2011.

620 North Ninth Street—San Jose, CA
Principal in Charge. Shawn provided oversight of soil, groundwater and soil gad characterizations, risk evaluations and Remedial Action Plan preparation. Shawn also closely interacted with RWQCB staff to achieve approval for residential development. The property is a former fruit packing plant and food preparation facility. The proposed development consists of a single-family residential subdivision.

Westshore—Richmond, CA
Project Manager. Shawn conducted Phase I and II Site Assessments, risk evaluations and prepared a soil management plan. The property was a former automotive manufacturing plant proposed for a multi-unit condominium development, including a 6-story podium structure to include five residential floors with 269 units and one parking floor.

Mills Ranch—King City, CA
Principal in Charge. Shawn provided principal oversight of Phase I/II Environmental Site Assessments and risk evaluations. The approximate 80-acre property is used for agricultural cultivation and commercial uses. The proposed mixed-use development includes over 400 single-family residential lots.

Select Foods Site/Cross Creek—Hayward, CA
Principal in Charge. Shawn provided principal oversight, consultation, and data analysis. The property was a former processed food facility, a drum recycling business, battery manufacturing operation and a bus assembly plant. Following completion of soil remediation under RWQCB oversight, the property was developed into a single-family residential subdivision.

Arroyo Crossing—Livermore, CA
Principal in Charge. Shawn provided oversight, data analysis and regulatory consultation while ENGEO provided geotechnical and environmental engineering services for this 34-acre site. This former corporation yard and quarry site was developed into a single-family residential subdivision.

Renaissance Square—Concord, CA
Project Manager. Shawn provided consultation, data analysis, and field observation. This former automotive dealership was redeveloped as a five-story multi-family residential structure supported on slab-on-grade foundations, with two levels of below-grade parking. Petroleum hydrocarbon-impacted soil was encountered during excavation of the parking structure, which required characterization and remediation. Soil impacts were attributed to former sumps, USTs and hydraulic lifts.

Union Pacific Railroad Corridor—San Jose, CA
Project Manager. Shawn prepared a Phase I and II Environmental Site Assessment. Work included a site reconnaissance, historical records research and recovery of soil samples with laboratory analysis. Lead impacted soil was identified which required risk evaluation. This former1800 lineal foot section of the former Union Pacific Railroad Corridor was proposed for mixed-use development.

Former SFPP Alignment—Concord, CA
Project Manager. Shawn prepared a Phase I and II Environmental Site Assessment. The site was a former ±6,500-foot corridor formerly occupied by the Southern Pacific Railroad. Kinder Morgan petroleum pipelines existed within an easement along the property. The southern portion of the site was crossed by East Bay Municipal Utilities District water distribution lines and a multi-lane highway overpass. The corridor was developed as a self-storage facility. Work included the recovery of soil and groundwater samples along the SP right of way.

Hercules Property—Hercules, CA
Project Manager. Shawn provided oversight of a Phase I Environmental Site Assessment, site asbestos survey, site characterization, and demolition observation/contaminant assessment. The project area consists of ±167 acres located near and along the southeastern shore of San Pablo Bay in Hercules. The property was once a portion of a 1300-acre manufacturing facility that was operated by DuPont from 1879 to 1913 and Hercules Incorporated from 1913 to 1979. The planned development includes single/multi-family residential development with some commercial components.

Highlands Ranch—Antioch, CA
Principal in Charge. Shawn provided oversight, data analysis, and collaboration with RWQCB personnel. The project site consists of a 140-acre portion of the former Chevron Los Medanos Tank Farm located in Pittsburg, California. The site was historically occupied by 24 crude oil tanks and four wax ponds. Remediation of the crude oil tank and wax pond locations was conducted according to a remedial action plan (RAP) and oversight was provided by the CRWQCB. Remediation was performed over a period of four months and consisted of excavating approximately 110,000 cubic yards of impacted soil and placing the material in windrows for ex-situ bioremediation.

Dear Mr. Parsons:

As requested, we are pleased to submit this phase II environmental site assessment (ESA) to assist with environmental due diligence services for the subject project in Brentwood, California (Property).[1] ENGEO's staff and consultants conducted a detailed analysis of the Property to determine whether hazardous materials are present at the site in quantities that are sufficient to cause adverse human health effects. As we will explain in further detail below, constituents observed in soils and soil vapors appeared in concentrations that are below applicable screening thresholds. Our analysis confirmed that existing conditions at the Property will not cause adverse human health effects. Furthermore, all construction at the Property will adhere to a detailed Soil Management Plan (SMP) that will provide protocols to mitigate unforeseen impacts that may be encountered during the construction process.

Finally, we reviewed comments from the public suggesting that closed oil and gas wells on the Property might result in potential subsidence affecting future structures. We have thoroughly evaluated potential geotechnical concerns and find no evidence of future soil stability issues associated with the abandoned well locations. The evidence supporting these conclusions are found in the Phase I ESA prepared for the Property, as well as the Final Environmental Impact Report for the Bridle Gate Project, which memorializes input ENGEO provided to the City on the Property's soil characteristics.

[1] The Property is located at Sand Creek Road and San Jose Avenue in Brentwood, California. The approximately 133.7-acre Property is identified as Assessor's Parcel Number (APN) 019 082-007. The Property consists of partially graded open space.

BACKGROUND

The purpose of this phase II ESA is to ensure that potential hazardous substances located at the Property are identified, analyzed, and (if necessary) mitigated. The phase II ESA was conducted in general accordance with ASTM E1903-97: *Standard Practice for Environmental Site Assessments: Phase II Environmental Site Assessment Process*. Furthermore, the previous phase I ESA complies with the Environmental Protection Agency All Appropriate Inquiry regulations.

ENGEO began the process of evaluating conditions at the Project site with the phase I ESA (Reference 1), which was completed in May 2020. The phase I ESA ultimately identified several locations at the Property (known as "Recognized Environmental Conditions" or "RECs") that could potentially be a source for hazardous materials.

Specifically, the phase I ESA identified several potential RECs:

- Seven[2] oil-producing wells that operated at the Property between 1962 and 1966 (Figure 2);[3]
- An above-ground storage tank complex that was used to store separated oil, condensate, and water that was decommissioned in 1996 (Figure 2); and
- The former Brentwood crude oil pipeline, which also operated within the Property (Figure 2).[4]

Investigation under this phase II process determined that while potential residual impacts remain within the vicinity of the former oil wells, the former Brentwood crude oil pipeline, and the former tank farm, these residual impacts do not include contaminants that are present at levels that exceed screening thresholds. Due to (1) the relatively minute concentrations of residual contaminants at the Property and (2) the Property's unique soil conditions, the residual impacts do not pose a threat to human health or safety.

Please note that the seven wells on the Property were documented as abandoned in accordance with the applicable DOGGR requirements at that time. Certification of abandonment requires a DOGGR review of installation, production, and abandonment procedures documented for the well. This is followed by a physical field inspection by a DOGGR representative to confirm field conditions satisfy DOGGR abandonment protocols.

---

[2] Our Phase I ESA previously noted eight former production wells due to a discrepancy between RWQCB and CalGEM historic recordings for well 3-10. Two well locations were initially mapped for this well within approximately 100 feet of each other. We performed a geophysical survey to confirm the one location for well 3-10. There is a total of seven former production wells within the Property.

[3] These wells were decommissioned and abandoned in accordance with the Department of Oil and Gas (now CalGEM) regulations. Records of abandonment were reviewed on the CalGEM website.

[4] Remedial activities for the decommissioning of the well sites and tank farm included soil, excavation, bioremediation, soil sampling/analysis, and groundwater monitoring. Confirmation sampling and laboratory testing demonstrated successful remediation to the approved cleanup objectives set forth by Central Valley RWQCB. Closure letters for the Sullenger Tank Farm, Ward Tank Farm, and Wells 3 10, 34-10, 32-10, and 38-10 were issued in 1996 through 2000 by the Central Valley RWQCB. Confirmation samples obtained from the bioremediated soil stockpile had TPH concentrations up to 1,800 parts per million (ppm) which exceeds screening levels. We understand this soil was used as backfill for oil well remedial excavations.

SCOPE OF FIELD WORK

Our phase II ESA included sampling and laboratory analysis of soil and soil vapor. In November 2020, ENGEO representatives travelled to the Property to extract soil and soil vapor samples.[5] The samples were then submitted to a State-certified laboratory for further testing and evaluation.[6] The methods and procedures used in the phase I and phase II ESAs prepared for the Property are in general conformance with the nationally recognized standards, ASTM E1527-13 and ASTM E1903-19, along with Environmental Protection Agency All Appropriate Inquiry regulations.

Soil Assessment

Between November 2 and November 5, 2020, 94 soil samples were collected from the vicinity of the seven abandoned oil wells and the former tank farm. Samples were collected at two depths (5 and 10 feet) at five locations per well and twelve locations within the former tank farm area.[7] We submitted the samples for laboratory analysis to test for the presence of the following chemical compounds:

- Total petroleum hydrocarbons as gasoline (TPH-g), BTEX, and MTBE (EPA Method 8260).
- Total petroleum hydrocarbons as diesel (TPH-d) and total petroleum hydrocarbons as motor oil (TPH-mo) (EPA Method 8015 with silica gel cleanup).

Soil Vapor Assessment

On November 2 through November 5, 2020, ENGEO collected soil vapor samples from sampling points that were installed at 10 locations (Figure 2). Samples were collected from probes that were installed at approximately 6 feet below the ground surface.[8] Following collection, the soil

[5] Prior to drilling, an ENGEO representative contacted USA North Service Alert to facilitate notification of operators of utilities at or near the Property. We retained a C-57 licensed direct push contractor to advance sample borings at the Property. Sample locations are shown on Figure 2. Following issuance of Contra Costa County Environmental Health drilling permits, drilling was performed on November 2 through November 5, 2020. Borings were backfilled with cement grout in accordance with drilling permits.

[6] Upon collection of soil and soil vapor samples, a label was placed on each sample, including a unique sample number, sample location, time/date collected, laboratory analysis, and the sampler's identification. The samples were submitted under documented chain-of-custody to a Torrent Laboratory, Inc., a State certified laboratory located in Milpitas, California.

[7] Samples were recovered within continuous Geoprobe® acetate core liners. Specific soil samples were collected for laboratory analysis by cutting 6-inch portions of the Geoprobe soil core liners; the samples were then transferred into 2-inch by 6-inch stainless steel liners. Following transfer, the sample liners were sealed using Teflon® sheets secured by tight-fitting plastic end caps and tape.

[8] The soil vapor samples were collected from temporary probes advanced with a Geoprobe direct-push rig and constructed in general accordance with the Department of Toxic Substances Control Final Advisory Active Soil Gas Investigations (July 2015) and under permit from the Contra Costa County Environmental Health. The temporary soil vapor wells were constructed with ¼-inch-diameter Teflon tubing equipped with a filter at the base of the tubing. The temporary well installation consisted of an approximately 3 inch-diameter boring to a depth of 6 feet below the ground surface. For each location, the bottom of the well casing was equipped with a 1-inch-long filter situated at 6 feet below ground surface, centered in the middle of a 2-foot layer of No. 3 sand. The remaining annular space was filled with hydrated bentonite grout to 6 inches below grade.

vapor samples were submitted for laboratory analysis to test for the presence of the following chemical compounds:

- Volatile organic compounds (VOCs) and TPH-g (EPA Test Method TO-15)
- Fixed Gases (EPA Test Method D1946)

ANALYTICAL LABORATORY RESULTS

A summary of laboratory results is provided in the attached tables, and the laboratory reports are presented in their entirety in Appendix A.

Soil

Soil samples in four locations showed detectable constituents, but at concentrations below screening levels. The concentrations of TPH-d that were identified are below the San Francisco Bay Regional Water Quality Control Board's (RWQCB) established site-specific cleanup levels for the project and do not require further evaluation or mitigation. Complete results of our analysis are summarized in Tables A and B.[9]

Soil Vapor

The analyzed soil vapor samples reported detectable concentrations of several VOCs, including benzene, chloroform, ethylbenzene, and total xylenes. However, all of these compounds were detected below applicable residential vapor intrusion screening levels.[10] Based on RWQCB

Once the installation of the annular seal was complete, the well casings were equipped with a permanent Swagelok ® ferrule and nut. The wells were inactive for a mandatory 2-hour equilibration time. After the 2-hour equilibration time elapsed, the sample train was connected to the well tubing by threading the permanent Swagelok ® fitting on the well casing onto the manifold. The sample train consisted of a stainless steel, twin summa quick-connect manifold with a built in flow controller set at 150 millimeters per minute (ml/min). A purge vacuum canister was attached to the manifold connection closest to the well casing, and the sample canister was connected to the manifold fitting furthest away from the well casing. Prior to sample recovery a minimum of three well volumes were purged from each temporary soil vapor well by opening the well to the purge vacuum canister. Once the appropriate volume was purged from a well, the purge canister was closed. Samples were then recovered by opening the valve to the vacuum sample canister. DFA was used as a leak check compound during sample recovery. DFA was applied to a rag and placed in close proximity to the manifold and well opening.

[9] Low to non-detectable (ND) concentrations were reported for TPH-g in samples analyzed. TPH d and –mo were detected. Detected concentrations of TPH-g ranged from 0.101 milligrams per kilogram (mg/kg) to 177mg/kg, below Regional Water Quality Control Board's (RWQCB) residential Environmental Screening Levels (ESLs). (*See* San RWQCB Environmental Screening Levels, Table S-1, Direct Exposure, Shallow Soil, assuming a Residential Land Use Scenario, January 2019 (Rev.2).) TPH-d ranged from ND to 454 mg/kg. The following samples exhibited a concentration of TPH-d above the current residential ESLs: S-31-10-E@10', S-31-10-S@10', S-31-10-W@5', S-31-10-W@10', S TF-7@10', S-TF-11@5', S-TF-8@5', and S-TF-8@10' (please see discussion of screening levels and implications in the next section of this report). TPH-mo ranged from ND to 961 mg/kg. TPH-mo did not exhibited concentrations over applicable screening levels. MTBE and BTEX compounds were not detected in any samples analyzed. The reported concentrations are below the site-specific screening levels developed by the RWQCB.

[10] Screening levels for chemicals in soil, groundwater, and soil gas are not intended to establish regulations or restrictions on land use nor to establish any mitigation or remediation requirements, and "the presence of a chemical at concentrations in excess of a screening does not necessarily indicate adverse effects on human health or the environment, rather that additional evaluation is warranted." (San Francisco Bay

policies that determine whether these types of chemicals pose a risk to health and safety, our analysis has confirmed that none of these detected chemicals pose a residential health risk, and the presence of these soil vapors would not require further study or mitigation.[11] Levels were so low that vapor barriers would not be necessary to install in habitable structures, as discussed further in the next section. As such, indoor and outdoor air are not significant concerns for the proposed residential, commercial, and/or school development. Furthermore, due to outdoor air circulation patterns that disperse constituents in outdoor settings to levels that are substantially lower than indoor settings, there are no expected human health risks at any outdoor locations at the Property.

SCREENING LEVELS

As a general principal, VOCs in soil gas become a concern when soil gas threatens human health by entering indoor air through vapor intrusion. It is important to examine the extent to which soil vapors become less concentrated as they rise to the surface. The screening levels for soil gas are therefore calculated based on a ratio of the acceptable indoor air concentration to the soil gas concentration. This ratio is referred to as an "attenuation factor."[12]

Regional Water Quality Control Board, User's Guide: Derivation and Application of Environmental Screening Levels (ESLs), Interim Final 2019 (Revision 1) Water Board Environmental Screening Levels.) Health and Safety Code Section 57008(a)(3) of SB 32 states the following:

> *A screening number is solely an advisory number, and has no regulatory effect, and is published solely as a reference value that may be used by citizen groups, community organizations, property owners, developers, and local government officials to estimate the degree of effort that may be necessary to remediate a contaminated property. A screening number may not be construed as, and may not serve as, a level that can be used to require an agency to determine that no further action is required or a substitute for the cleanup level that is required to be achieved for a contaminant on a contaminated property.*

[11] The analyzed soil vapor samples reported detectable concentrations of several VOCs, including benzene, chloroform, ethylbenzene, and total xylenes. Benzene was detected in sample SG-3 10, SG-TF1, SG-TF2, and SG-TF3 at concentrations of 3.8 micrograms per cubic meter (µg/m3), 4.8 µg/m3, 3.5 µg/m3, and 5.1 µg/m3, respectively. These concentrations are above the RWQCB residential screening level of 3.2 µg/m3; however, it is below the recognized RWQCB low-threat closure policy concentration of 85 µg/m3. Chloroform was detected in samples SG-3-10 and SG TF1 at concentrations of 4.3 µg/m3 and 8.7 µg/m3, respectively. These concentrations are above RWQCB residential screening level of 4.1 µg/m3. Ethylbenzene was detected at 1,400 µg/m3 for SG-39, above its residential screening level of 37 µg/m3. Total xylenes was reported in one sample, SG-39 at a concentration of 6,100 µg/m3, above RWQCB residential screening level of 3,500 µg/m3.

[12] The indoor air screening levels for select VOCs are shown in Table 1A and Table 1B below and are the same for both the RWQCB and Department of Toxic Substances Control (DTSC). DTSC's most recent guidance related to site assessments for vapor intrusion concern (2011 Vapor Intrusion Guidance) recommends using default attenuation factors based on six different building scenarios, which can be applied for site-specific conditions. DTSC developed their default attenuation factors using the national empirical vapor intrusion database (U.S. EPA, 2008; U.S. EPA's Vapor Intrusion Database: Preliminary Evaluation of Attenuation Factors, March 4, 2008). Soil vapor and paired indoor air measurements, consisting of 311 samples at 13 sites, were reviewed. An attenuation factor of 0.05 (or 20), representing approximately the 90th percentile of the data, was selected as an appropriate attenuation factor for existing residential structures. For new residential construction, the DTSC attenuation factor is 0.001 (or 1,000). Prior to January 2019, the SFRWQCB used an attenuation factor of 0.002 (or 500). However, in January 2019, the SFRWQCB updated its environmental screening levels to use the U.S. EPA's generic attenuation factor of 0.03 (or 33). (*See* San Francisco Bay Regional Water Quality Control Board Update to

In April 2019, DTSC's Human and Ecological Risk Office (HERO) released updated guidance for calculating the extent of attenuation that occurs when soil vapors travel to the surface. According to HERO's guidelines, attenuation of measured soil gas concentrations should be calculated using two screening levels – one calculated based on the recommended attenuation factor for new residential construction of 0.001, and one calculated based on the U.S. EPA's generic attenuation factor of 0.03.

TABLE 1A: Indoor Air Screening Levels

CHEMICAL	INDOOR AIR (residential) in µg/m³		US EPA GENERIC ATTENUATION FACTOR
	SF REGIONAL BOARD	DTSC	
Benzene	0.096	0.096	3.2
Total Xylenes	105	--	3,500
Ethyl Benzene	1.11	--	37
Chloroform	0.123	--	4.1

TABLE 1B: Soil Gas Screening Levels

CHEMICAL	SUB-SLAB SOIL GAS (residential) in µg/m³	
	SF REGIONAL BOARD	DTSC
Benzene	3.2	3.2
Total Xylenes	3,500	--
Ethyl Benzene	37	--
Chloroform	4.1	--

SITE-SPECIFIC ATTENUATION FACTORS

The screening levels used by the RWQCB and DTSC are based on generic factors that do not consider site-specific soil conditions. For example, if the soil at a site is more dense (less permeable) than the generic soil used, then it would be less likely that soil gas could travel through the soil and enter the indoor air above.

ENGEO has extensive knowledge of the geotechnical characteristics of the soil present at the Property. We performed geotechnical exploration of the subject Property and prepared geotechnical recommendations for grading and foundations for the Property (Reference 2). Soil throughout the Property typically consists of sandy to silty clay with some silty and clayey sand layers. These soil conditions will cause soil vapors to reach the surface in much smaller volumes compared to soil conditions at other locations.[13]

Environmental Screening Levels dated January 24, 2019.) This dramatically reduced the screening levels for numerous VOCs.

[13] In order to predict the actual indoor air concentrations, we used the Johnson & Ettinger Model Spreadsheet, Version 6.0, developed by the US EPA and most recently revised in September 2017. The Johnson and Ettinger (J&E) Model (1991) calculates site-specific attenuation factors that are used to predict indoor air concentrations resulting from subsurface vapor migration into indoor air. The US EPA programmed the J&E model and added a health risk component in 1998 and provides updates as needed. We utilized the latest version, Version 6.0 updated in September 2017 for this assessment. The soil used in our model was the default silty clay option, which assumes several soil characteristics, most notably that the total porosity of the soil is 0.481. Porosity is defined as the ratio of the volume of voids to the total

Here, our analysis conservatively assumes that almost 48 percent of the soil under the new residential structures will be void space prior to the construction of new residences. However, during the construction process, soil beneath new residences will be compacted.[14] Compaction of the soil reduces the void space significantly and typically results in a much lower porosity than the model assumes, thereby increasing the attenuation factor.

Our analysis confirmed that localized soil characteristics will cause volatile organic compound concentrations to be present in indoor air at less than 1/1000th the total concentration that was measured in our field samples. The results of the modeling are shown in Table 2.[15]

TABLE 2: Attenuation Factors

CONSTITUENT OF CONCERN	MAXIMUM DETECTED CONCENTRATION (µG/M^3)	SOURCE TO INDOOR AIR ATTENUATION FACTOR	INDOOR AIR CONCENTRATION DUE TO VAPOR INTRUSION (µG/M^3)	RWQCB INDOOR AIR SCREENING LEVEL (µG/M^3)	INCREMENTAL CANCER RISK FROM VAPOR INTRUSION
Chloroform	8.7	1,666(0.0006)	0.005	0.12	4.42E-08
Benzene	5.1	1428 (0.0007)	0.003	0.097	9.89E-09
Ethyl Benzene	1,400	1,666(0.0006)	0.79	1.1	7.04E-07
Total Xylenes	6,100	1,666(0.0006)	3.40	100	None

Based on the results of the modelling, the predicted indoor air levels for the constituents of concern are well below the RWQCB residential screening levels. In fact, predicted levels are estimated to be below screening levels by several orders of magnitude.

CONCLUSION

Based on this assessment and analytical results, the Property does not appear to have been significantly impacted due to past use. While our analysis indicates that soil around abandoned well S-31-10 (at 5 and 10 feet) and select locations in the former tank farm (S-TF-7, S-TF-8, and S-TF-11) have detected concentrations of TPH-d, no hazardous materials will be present in quantities sufficient to impact human health or safety. Further, soil gas testing has verified there

volume and indicates the relative amount of void space in the soil. The lower the porosity, the denser the soil.

Similarly, we used the default slab-on-grade foundation type. The default foundation type used by the model is a conservative approach, as it assumes a thickness of approximately 4 inches for the foundation slab. It also assumes a certain amount of the slab cracks. The actual foundation recommended may be thicker and have far less cracking than the default model parameters assumes. Slab on-grade structures use a 4-inch non-structural mat.

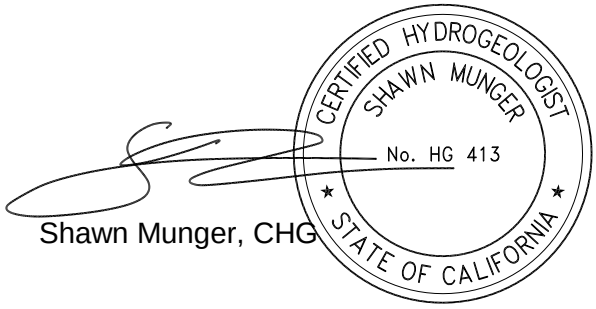
[14] Our recommendations for the Property are to compact soil to a relative compaction of 85 to 90 percent at a moisture content of at least 4 percentage points above optimum for expansive material and 90 percent at a moisture content above optimum for non-expansive soil. Site soil is considered to have moderate to high potential shrink-swell behavior.

[15] This model was used to confirm that the attenuation factor at the Property is greater than the generic attenuation factors assumed by both DTSC, US EPA, and the RWQCB. As seen below, the model predicted an attenuation factor and indoor air concentration for each of the VOCs that were detected above their applicable ESL using site-specific and default parameters shown on copies of model runs provided in Appendix B.

is no indoor air risk for future structures, or any outdoor air risk. In addition, a Soil Management Plan (SMP) has been prepared for the Property that will ensure risks are less-than-significant, in part by outlining procedures and protocols in the event that unidentified impacts are encountered during redevelopment.

Accordingly, construction crews will diligently monitor conditions on the ground to ensure strict compliance with all safety protocols, including the SMP.

From an environmental perspective, it is our opinion that residential and school site redevelopment is viable for the Property. With respect to the former wells and tank farms, significant impacts were not identified. If areas of minor impact are encountered based on past use, these areas will be handled with the proposed SMP during grading. A geotechnical professional should be present during any grading activities in these areas to comply with the SMP.



If you have any questions regarding this document, please do not hesitate to contact us.

Sincerely,

ENGEO Incorporated

EXPLANATION

ALL LOCATIONS ARE APPROXIMATE

- PG&E Underground Gas Pipeline
- Former Brentwood Crude Oil Pipeline
- Abandoned Wellhead (Isakson, 2019/2020)
- Soil Gas Samples (ENGEO, 2020)
- Soil Gas Samples (ENGEO, 2020)

Notes:

<0.10 indicates the concetration was not detected above the laboratory reporting limit of 0.10 mg/kg.

BOLD indicates the concentration was detected above the laboratory reporting limits.

Highlighted indicates that the detected concetration exceeds the screening level.

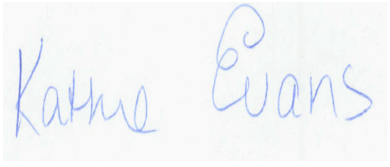
RE: Brindle Gate



Work Order No.: 2011016

Dear Brooke Spruit:

Torrent Laboratory, Inc. received 20 sample(s) on November 03, 2020 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

Kathie Evans
Project Manager

November 09, 2020
Date

Date: 11/9/2020

Client: Engeo (San Ramon)

Project: Brindle Gate

Work Order: 2011016

CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Analytical, Inc.

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - **mg/L** and ***mg/Kg*** (equivalent to PPM - parts per million in **liquid** and ***solid***), **ug/L** and ***ug/Kg*** (equivalent to PPB - parts per billion in **liquid** and ***solid***), **ug/m3**, ***mg/m3***, **ppbv** and ***ppmv*** (all units of measure for reporting concentrations in air), **%** (equivalent to 10000 ppm or 1,000,000 ppb), **ug/Wipe** (concentration found on the surface of a single Wipe usually taken over a 100cm2 surface)

LABORATORY QUALIFIERS:

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H- Indicates that the recommended holding time for the analyte or compound has been exceeded
J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

Sample Receipt Checklist

Client Name: Engeo (San Ramon)

Project Name: Brindle Gate

Work Order No.: 2011016

Date and Time Received: 11/3/2020 10:30:00AM

Received By: Lorna Imbat

Physically Logged By: Lorna Imbat

Checklist Completed By: Lorna Imbat

Carrier Name: First Courier

Chain of Custody (COC) Information

Chain of custody present?	Yes
Chain of custody signed when relinquished and received?	Yes
Chain of custody agrees with sample labels?	Yes
Custody seals intact on sample bottles?	Not Present

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Not Present
Shipping Container/Cooler In Good Condition?	Yes
Samples in proper container/bottle?	Yes
Samples containers intact?	Yes
Sufficient sample volume for indicated test?	Yes

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes			
Container/Temp Blank temperature in compliance?	Yes	Temperature:	2.0	°C
Water-VOA vials have zero headspace?	No VOA vials submitted			
Water-pH acceptable upon receipt?	N/A			

pH Checked by: n/a

pH Adjusted by: n/a

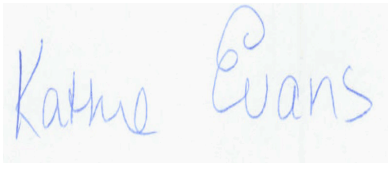
RE: Brindle Gate



Work Order No.: 2011017

Dear Brooke Spruit:

Torrent Laboratory, Inc. received 16 sample(s) on November 03, 2020 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

Kathie Evans
Project Manager

November 06, 2020
Date

Date: 11/6/2020

Client: Engeo (San Ramon)

Project: Brindle Gate

Work Order: 2011017

CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Analytical, Inc.

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - **mg/L** and ***mg/Kg*** (equivalent to PPM - parts per million in **liquid** and ***solid***), **ug/L** and ***ug/Kg*** (equivalent to PPB - parts per billion in **liquid** and ***solid***), **ug/m3**, ***mg/m3***, **ppbv** and ***ppmv*** (all units of measure for reporting concentrations in air), **%** (equivalent to 10000 ppm or 1,000,000 ppb), **ug/Wipe** (concentration found on the surface of a single Wipe usually taken over a 100cm2 surface)

LABORATORY QUALIFIERS:

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H- Indicates that the recommended holding time for the analyte or compound has been exceeded
J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

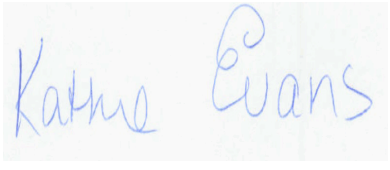
RE: Brindle Gate



Work Order No.: 2011036 Rev: 1

Dear Brooke Spruit:

Torrent Laboratory, Inc. received 20 sample(s) on November 04, 2020 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

Kathie Evans
Project Manager

November 09, 2020
Date

Date: 11/9/2020

Client: Engeo (San Ramon)

Project: Brindle Gate

Work Order: 2011036

CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Analytical, Inc.

Analytical Comments for method 8015B, 2011036-015A MS/MSD, QC Preparation Batch ID 1126810, Note:The % recoveries for TPH Diesel are outside of laboratory control limits but % RPD is within limits. The associated LCS/LCSD is within both % Recovery and %RPD limits. No corrective action required.

REVISIONS

Report revised to correct the sample ID for sample 008

SAMPLE RESULTS

Report prepared for: Brooke Spruit
Engeo (San Ramon)

Date/Time Received: 11/04/20, 1:15 pm
Date Reported: 11/09/20

Client Sample ID:	S-36-10-E@10'	**Lab Sample ID:**	2011036-020A
Project Name/Location:	Brindle Gate	**Sample Matrix:**	Soil
Project Number:	3359.210.001		
Date/Time Sampled:	11/03/20 / 11:18		
SDG:			

Prep Method: 3546_TPHSG **Prep Batch Date/Time:** 11/5/20 2:31:00PM
Prep Batch ID: 1126810 **Prep Analyst:** HLEE

Parameters:	Analysis Method	DF	MDL	PQL	Results	Q	Units	Analyzed	Time	By	Analytical Batch
TPH as Diesel (SG)	SW8015B	1	0.85	2.0	**19.4**	x	mg/Kg	11/07/20	4:33	SN	451988
TPH as Motor Oil (SG)	SW8015B	1	3.2	10	**61.1**		mg/Kg	11/07/20	4:33	SN	451988
			Acceptance Limits								
Pentacosane (S)	SW8015B		40 - 129		**71.1**		%	11/07/20	4:33	SN	451988

NOTE: x-Diesel value the result of overlap of Oil range into Diesel range

Prep Method: 5035 **Prep Batch Date/Time:** 11/6/20 10:36:00PM

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - **mg/L** and ***mg/Kg*** (equivalent to PPM - parts per million in **liquid** and ***solid***), **ug/L** and ***ug/Kg*** (equivalent to PPB - parts per billion in **liquid** and ***solid***), **ug/m3**, ***mg/m3***, **ppbv** and ***ppmv*** (all units of measure for reporting concentrations in air), **%** (equivalent to 10000 ppm or 1,000,000 ppb), **ug/Wipe** (concentration found on the surface of a single Wipe usually taken over a 100cm2 surface)

LABORATORY QUALIFIERS:

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H- Indicates that the recommended holding time for the analyte or compound has been exceeded
J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

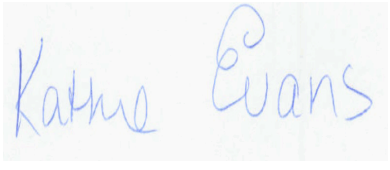
RE: Brindle Gate



Work Order No.: 2011036

Dear Brooke Spruit:

Torrent Laboratory, Inc. received 20 sample(s) on November 04, 2020 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

Kathie Evans
Project Manager

November 09, 2020
Date

Date: 11/9/2020

Client: Engeo (San Ramon)

Project: Brindle Gate

Work Order: 2011036

CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Analytical, Inc.

Analytical Comments for method 8015B, 2011036-015A MS/MSD, QC Preparation Batch ID 1126810, Note:The % recoveries for TPH Diesel are outside of laboratory control limits but % RPD is within limits. The associated LCS/LCSD is within both % Recovery and %RPD limits. No corrective action required.

Torrent LABORATORY, INC.

SAMPLE RESULTS

Report prepared for: Brooke Spruit
Engeo (San Ramon)

Date/Time Received: 11/04/20, 1:15 pm
Date Reported: 11/09/20

Client Sample ID:	S-36-10-E@10'	**Lab Sample ID:**	2011036-020A
Project Name/Location:	Brindle Gate	**Sample Matrix:**	Soil
Project Number:	3359.210.001		
Date/Time Sampled:	11/03/20 / 11:18		
SDG:			

Prep Method: 3546_TPHSG **Prep Batch Date/Time:** 11/5/20 2:31:00PM
Prep Batch ID: 1126810 **Prep Analyst:** HLEE

Parameters:	Analysis Method	DF	MDL	PQL	Results	Q	Units	Analyzed	Time	By	Analytical Batch
TPH as Diesel (SG)	SW8015B	1	0.85	2.0	**19.4**	x	mg/Kg	11/07/20	4:33	SN	451988
TPH as Motor Oil (SG)	SW8015B	1	3.2	10	**61.1**		mg/Kg	11/07/20	4:33	SN	451988
			Acceptance Limits								
Pentacosane (S)	SW8015B		40 - 129		**71.1**		%	11/07/20	4:33	SN	451988

NOTE: x-Diesel value the result of overlap of Oil range into Diesel range

Prep Method: 5035 **Prep Batch Date/Time:** 11/6/20 10:36:00PM

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - **mg/L** and ***mg/Kg*** (equivalent to PPM - parts per million in **liquid** and ***solid***), **ug/L** and ***ug/Kg*** (equivalent to PPB - parts per billion in **liquid** and ***solid***), **ug/m3**, ***mg/m3***, **ppbv** and ***ppmv*** (all units of measure for reporting concentrations in air), **%** (equivalent to 10000 ppm or 1,000,000 ppb), **ug/Wipe** (concentration found on the surface of a single Wipe usually taken over a 100cm2 surface)

LABORATORY QUALIFIERS:

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H- Indicates that the recommended holding time for the analyte or compound has been exceeded
J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

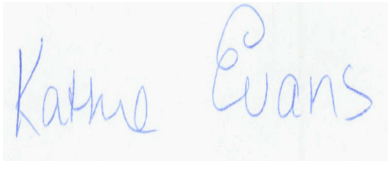
RE: Brindle Gate



Work Order No.: 2011037

Dear Brooke Spruit:

Torrent Laboratory, Inc. received 8 sample(s) on November 04, 2020 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

Kathie Evans
Project Manager

November 09, 2020
Date

Date: 11/9/2020

Client: Engeo (San Ramon)

Project: Brindle Gate

Work Order: 2011037

CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Analytical, Inc.

Analytical Comments for method 8015B, 2011037-007A MS/MSD, QC Preparation Batch ID 1126811, Note:The % recoveries for TPH as Diesel are outside of laboratory control limits but % RPD is within limits. The associated LCS/LCSD is within both % Recovery and %RPD limits. No corrective action required.

Torrent LABORATORY, INC.

SAMPLE RESULTS

Report prepared for: Brooke Spruit
Engeo (San Ramon)

Date/Time Received: 11/04/20, 1:15 pm
Date Reported: 11/09/20

Client Sample ID:	S-36-10-C@10'	**Lab Sample ID:**	2011037-008A
Project Name/Location:	Brindle Gate	**Sample Matrix:**	Soil
Project Number:	3359.210.001		
Date/Time Sampled:	11/03/20 / 12:04		
SDG:			

Prep Method: 3546_TPHSG **Prep Batch Date/Time:** 11/5/20 2:38:00PM
Prep Batch ID: 1126811 **Prep Analyst:** HLEE

Parameters:	Analysis Method	DF	MDL	PQL	Results	Q	Units	Analyzed	Time	By	Analytical Batch
TPH as Diesel (SG)	SW8015B	1	0.85	2.0	**5.93**	x	mg/Kg	11/07/20	12:20	SN	451989
TPH as Motor Oil (SG)	SW8015B	1	3.2	10	**23.0**		mg/Kg	11/07/20	12:20	SN	451989
			Acceptance Limits								
Pentacosane (S)	SW8015B		40 - 129		**55.6**		%	11/07/20	12:20	SN	451989

NOTE: x- Chromatographic pattern does not resemble typical diesel reference standard; unknown organics within diesel range slightly heavier than diesel quantified as diesel.

Prep Method: 5035 **Prep Batch Date/Time:** 11/5/20 1:38:00PM
Prep Batch ID: 1126817 **Prep Analyst:** JZHAO

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - **mg/L** and ***mg/Kg*** (equivalent to PPM - parts per million in **liquid** and ***solid***), **ug/L** and ***ug/Kg*** (equivalent to PPB - parts per billion in **liquid** and ***solid***), **ug/m3**, ***mg/m3***, **ppbv** and ***ppmv*** (all units of measure for reporting concentrations in air), **%** (equivalent to 10000 ppm or 1,000,000 ppb), **ug/Wipe** (concentration found on the surface of a single Wipe usually taken over a 100cm2 surface)

LABORATORY QUALIFIERS:

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H- Indicates that the recommended holding time for the analyte or compound has been exceeded
J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

Sample Receipt Checklist

Client Name: Engeo (San Ramon)

Project Name: Brindle Gate

Work Order No.: 2011037

Date and Time Received: 11/4/2020 1:15:00PM

Received By: Lorna Imbat

Physically Logged By: Lorna Imbat

Checklist Completed By: Lorna Imbat

Carrier Name: First Courier

Chain of Custody (COC) Information

Chain of custody present?	Yes
Chain of custody signed when relinquished and received?	Yes
Chain of custody agrees with sample labels?	Yes
Custody seals intact on sample bottles?	Not Present

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Not Present
Shipping Container/Cooler In Good Condition?	Yes
Samples in proper container/bottle?	Yes
Samples containers intact?	Yes
Sufficient sample volume for indicated test?	Yes

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes			
Container/Temp Blank temperature in compliance?	Yes	Temperature:	2.0	°C
Water-VOA vials have zero headspace?	No VOA vials submitted			
Water-pH acceptable upon receipt?	N/A			

pH Checked by: n/aq

pH Adjusted by: n/a

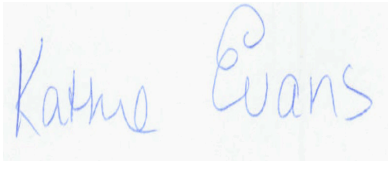
RE: Brindle Gate



Work Order No.: 2011038 Rev: 1

Dear Brooke Spruit:

Torrent Laboratory, Inc. received 5 sample(s) on November 04, 2020 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

Kathie Evans
Project Manager

November 09, 2020
Date

Date: 11/9/2020

Client: Engeo (San Ramon)

Project: Brindle Gate

Work Order: 2011038

CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Analytical, Inc.

REVISIONS

Report revised to include Methane and Oxygen data.

Rev. 1 (11/20/20)

Torrent LABORATORY, INC.

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - **mg/L** and ***mg/Kg*** (equivalent to PPM - parts per million in **liquid** and ***solid***), **ug/L** and ***ug/Kg*** (equivalent to PPB - parts per billion in **liquid** and ***solid***), **ug/m3**, ***mg/m3***, **ppbv** and ***ppmv*** (all units of measure for reporting concentrations in air), **%** (equivalent to 10000 ppm or 1,000,000 ppb), **ug/Wipe** (concentration found on the surface of a single Wipe usually taken over a 100cm2 surface)

LABORATORY QUALIFIERS:

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H- Indicates that the recommended holding time for the analyte or compound has been exceeded
J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

Physically Logged By: Lorna Imbat

Checklist Completed By: Lorna Imbat

Carrier Name: First Courier

Chain of Custody (COC) Information

Chain of custody present?	Yes
Chain of custody signed when relinquished and received?	Yes
Chain of custody agrees with sample labels?	No
Custody seals intact on sample bottles?	Not Present

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Not Present
Shipping Container/Cooler In Good Condition?	Yes
Samples in proper container/bottle?	Yes
Samples containers intact?	Yes
Sufficient sample volume for indicated test?	Yes

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes
Container/Temp Blank temperature in compliance?	Temperature: °C
Water-VOA vials have zero headspace?	No VOA vials submitted
Water-pH acceptable upon receipt?	N/A
pH Checked by: n/a	pH Adjusted by: n/a

Comments:

Sample ID discrepancy with the CoC for sample 005. Sample ID logged in after clarification with celint

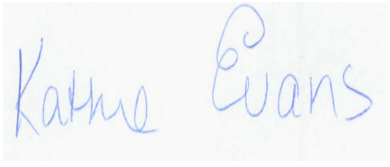
RE: Brindle Gate



Work Order No.: 2011049 Rev: 1

Dear Brooke Spruit:

Torrent Laboratory, Inc. received 4 sample(s) on November 05, 2020 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

Kathie Evans
Project Manager

November 10, 2020
Date

Date: 11/10/2020

Client: Engeo (San Ramon)

Project: Brindle Gate

Work Order: 2011049

CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Analytical, Inc.

REVISIONS

Report revised to include Methane and Oxygen data.

Rev. 1 (11/20/20)

Torrent LABORATORY, INC.

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - **mg/L** and ***mg/Kg*** (equivalent to PPM - parts per million in **liquid** and ***solid***), **ug/L** and ***ug/Kg*** (equivalent to PPB - parts per billion in **liquid** and ***solid***), **ug/m3**, ***mg/m3***, **ppbv** and ***ppmv*** (all units of measure for reporting concentrations in air), **%** (equivalent to 10000 ppm or 1,000,000 ppb), **ug/Wipe** (concentration found on the surface of a single Wipe usually taken over a 100cm2 surface)

LABORATORY QUALIFIERS:

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H- Indicates that the recommended holding time for the analyte or compound has been exceeded
J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

Sample Receipt Checklist

Client Name: Engeo (San Ramon)

Project Name: Brindle Gate

Work Order No.: 2011049

Date and Time Received: 11/5/2020 2:05:00PM

Received By: Lorna Imbat

Physically Logged By: Lorna Imbat

Checklist Completed By: Lorna Imbat

Carrier Name: First Courier

Chain of Custody (COC) Information

Chain of custody present?	Yes
Chain of custody signed when relinquished and received?	Yes
Chain of custody agrees with sample labels?	Yes
Custody seals intact on sample bottles?	Not Present

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Not Present
Shipping Container/Cooler In Good Condition?	Yes
Samples in proper container/bottle?	Yes
Samples containers intact?	Yes
Sufficient sample volume for indicated test?	Yes

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes
Container/Temp Blank temperature in compliance?	Temperature: °C
Water-VOA vials have zero headspace?	No VOA vials submitted
Water-pH acceptable upon receipt?	N/A

pH Checked by: n/a

pH Adjusted by: n/a

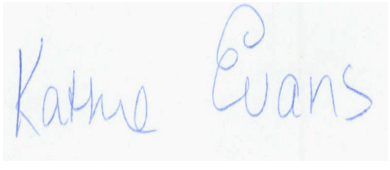
RE: Brindle Gate



Work Order No.: 2011051

Dear Brooke Spruit:

Torrent Laboratory, Inc. received 20 sample(s) on November 05, 2020 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

Kathie Evans
Project Manager

November 10, 2020
Date

Date: 11/10/2020

Client: Engeo (San Ramon)

Project: Brindle Gate

Work Order: 2011051

CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Analytical, Inc.

Torrent LABORATORY, INC.

Sample Result Summary

Report prepared for: Brooke Spruit
Engeo (San Ramon)

Date Received: 11/05/20
Date Reported: 11/10/20

S-32-10-S @ 5' 2011051-001

Parameters:	Analysis Method	DF	MDL	PQL	Results	Unit
TPH as Diesel (SG)	SW8015B	1	0.85	2.0	3.51	mg/Kg

S-32-10-S @ 10' 2011051-002

Parameters:	Analysis Method	DF	MDL	PQL	Results	Unit
TPH as Diesel (SG)	SW8015B	4	3.4	8.0	25.3	mg/Kg
TPH as Motor Oil (SG)	SW8015B	4	13	40	161	mg/Kg

S-32-10-W @ 5' 2011051-003

Laboratory Qualifiers and Definitions

DEFINITIONS:

Accuracy/Bias (% Recovery) - The closeness of agreement between an observed value and an accepted reference value.
Blank (Method/Preparation Blank) -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.
Duplicate - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)
Laboratory Control Sample (LCS ad LCSD) - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.
Matrix - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)
Matrix Spike (MS/MSD) - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.
Method Detection Limit (MDL) - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero
Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ) - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.
Precision (%RPD) - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates
Surrogate (S) or (Surr) - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis
Tentatively Identified Compound (TIC) - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.
Units: the unit of measure used to express the reported result - **mg/L** and ***mg/Kg*** (equivalent to PPM - parts per million in **liquid** and ***solid***), **ug/L** and ***ug/Kg*** (equivalent to PPB - parts per billion in **liquid** and ***solid***), **ug/m3**, ***mg/m3***, **ppbv** and ***ppmv*** (all units of measure for reporting concentrations in air), **%** (equivalent to 10000 ppm or 1,000,000 ppb), **ug/Wipe** (concentration found on the surface of a single Wipe usually taken over a 100cm2 surface)

LABORATORY QUALIFIERS:

B - Indicates when the analyte is found in the associated method or preparation blank
D - Surrogate is not recoverable due to the necessary dilution of the sample
E - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted) Values reported with an E qualifier should be considered as estimated.
H- Indicates that the recommended holding time for the analyte or compound has been exceeded
J- Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather the quantitative
NA - Not Analyzed
N/A - Not Applicable
ND - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.
NR - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added
R- The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts
S- Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative
X -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards. Further explanation may or may not be provided within the sample footnote and/or the case narrative.

Sample Receipt Checklist

Client Name: Engeo (San Ramon)

Project Name: Brindle Gate

Work Order No.: 2011051

Date and Time Received: 11/5/2020 2:05:00PM

Received By: Lorna Imbat

Physically Logged By: Lorna Imbat

Checklist Completed By: Lorna Imbat

Carrier Name: Client Drop Off

Chain of Custody (COC) Information

Chain of custody present?	Yes
Chain of custody signed when relinquished and received?	Yes
Chain of custody agrees with sample labels?	Yes
Custody seals intact on sample bottles?	Not Present

Sample Receipt Information

Custody seals intact on shipping container/cooler?	Not Present
Shipping Container/Cooler In Good Condition?	Yes
Samples in proper container/bottle?	Yes
Samples containers intact?	Yes
Sufficient sample volume for indicated test?	Yes

Sample Preservation and Hold Time (HT) Information

All samples received within holding time?	Yes			
Container/Temp Blank temperature in compliance?	Yes	Temperature:	2.0	°C
Water-VOA vials have zero headspace?	No VOA vials submitted			
Water-pH acceptable upon receipt?	N/A			

pH Checked by: N/A

pH Adjusted by: N/A

Comments:

sample 2011051-005A- 2 sleeves rec'd labeled S-32-10-N@10'; the one with the time of 8:09 was given the ID of 005 S-32-10N@ 5'

Re: Geophysical Investigation Report
Engeo Brentwood MAG Survey
Oil Well Search
Sand Creek Road & Hwy 4
Contra Costa County, Brentwood, California
GPS – Latitude: 37.943529°, Longitude: -121.745058°
Terracon Project No. NS205129

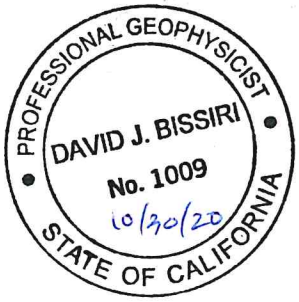
Dear Ms. Spruit,

NORCAL Geophysical Consultants, Inc. (NORCAL), a Terracon Company is pleased to submit the attached Geophysical Investigation Report for the above-referenced site.

This report presents the findings of a due-diligence geophysical investigation performed by NORCAL for Engeo Incorporated (Engeo) at the subject site located at Sand Creek Road & Hwy 4 in Contra Costa County, California. The investigation was authorized under Master Subcontract Agreement, Reference No. PNS205129, dated October 08, 2020. The geophysical field work was conducted on October 09, 2020 by NORCAL Professional Geophysicist David J. Bissiri (PGp No. 1009) and Staff Geophysicist J. Sage Wagner. The purpose of the investigation is to delineate the approximate locations of two suspected abandoned oil wells.

Two Magnetic (MAG) anomalies were identified in the survey. These features are considered approximate target locations of the suspected abandoned oil wells for additional follow-up exploratory environmental sampling by others. The approximate locations for suspected abandoned oil wells have the greatest resolution along the east-to-west axes, as opposed to the north-to-south axes, based on the inherent nature of the magnetic field caused by induced dipoles (abandoned oil wells).

NORCAL GEOPHYSICAL CONSULTANTS INC.
A Terracon COMPANY



We appreciate the opportunity to provide our services to Engeo for this most interesting project. If you have any questions or require additional geophysical services, please contact either of the undersigned at (707) 796-7170.

Respectfully,

NORCAL Geophysical Consultants, Inc

1.0 INTRODUCTION

1.1 Project Description

The following description of the project and the project site is derived from background information provided by the client, a review of publicly available geologic and topographic maps and our observations made during the field work.

Item	Description
Site information	The area of investigation, referred to herein as the Engeo Brentwood MAG Survey area, is a rural parcel located at the west terminus of Sand Creek Road, 800-ft west of the Hwy 4 overpass, in Brentwood, Contra Costa County, California. The survey area is illustrated by the Vicinity Map and Geophysical Survey map included on **Plate 1 – Geophysical Survey Map.** The geographic coordinates of the Sand Creek Road terminus are: 37.943529°, -121.745058°.
Existing improvements	Earthworks (site grading) was observed at the site at the time of the October 09, 2020 survey.
Current ground cover	The survey area ground surface was composed of loose soils and some temporary access paths. The site had variable topography but was generally flat and open in the two survey areas. The limits of each survey area are defined by the red dashed line shown on **Plate 1 – Geophysical Survey Map**. At the time of the survey the ground surface was dry, and the weather was fair.
Existing topography	Based on the topographic information derived from Google Earth, the ground surface elevation ranges from about 138-ft to 224-ft above mean sea level (MSL) across the entirety of the site.
Site geology	Available geologic maps indicate that the area is underlain by Pleistocene-Holocene sedimentary formations and/or Quaternary alluvium (California Geological Survey, 2015).

1.2 Objectives and Scope of Work

The purpose of the geophysical investigation is to use a cesium vapor magnetometer (MAG) to systematically search accessible, designated portions of the site for magnetic targets which may represent abandoned oil wells, buried debris or other buried objects. The suspected locations of the two abandoned oil wells, designated as 3-10 and 36-10, were identified at the site by ENGEO and marked with three field stakes prior to our arrival. Based on historical documentation the suspected location for Well 3-10 was determined to be at one of two locations (stake 1 or stake 2). The historical documentation indicated only one probable location for Well 36-10 (stake 3).

The three staked locations were to be confirmed or disconfirmed for anomalous magnetic targets. Magnetic anomalies identified by the MAG survey are considered as approximate locations of the suspected abandoned oil wells for the purpose of any follow-up exploratory investigations conducted by others.

2.0 GEOPHYSICAL INVESTIGATION

Total Field Magnetic Intensity (TFM) data were acquired MAG survey. The geophysical investigation was conducted on October 09, 2020. The geophysical results, and our interpretation of those results, are discussed in Section 3.0 and are summarized in **Appendix A – Report Plates**. Detailed descriptions of the geophysical methodology, our data acquisition and analysis procedures, the criteria upon which our interpretation was based, and the unique limitations of each method are provided in **Appendix B – Geophysical Methods**.

3.0 RESULTS AND INTERPRETATIONS

The dimensions of the survey grid for was 200 feet (ft.) by 330 ft. for Well 3-10 and 200 ft. by 200 ft. for Well 36-10. Both are depicted on Plate 1 by the red dashed lines. The three ENGEO field stakes and two suspected well locations are displayed on **Plate 1 – Geophysical Survey Map**.

The results of the MAG surveys are illustrated by the TFM contour maps shown **Plate 2 – Residual Total Field Magnetic Intensity Contour Map - Suspected Oil Well No. 3-10** and **Plate 3 – Residual Total Field Magnetic Intensity Contour Map - Suspected Oil Well No. 36-10**. The dimensions of the TFM contour maps are indicated by their vertical (Northing) and horizontal (Easting) axes. The residual TFM contours are color coded according to their intensity according to the color bar shown on the right side of each map. In additions, the residual intensity values are annotated on the contours.

3.1 Magnetic Anomalies (Plates 2 & 3)

The residual TFM contours show little variation throughout much of the survey areas, except in the vicinity of ENGEO field stakes No. 2 and No. 3. In these areas, there are distinct MAG anomalies formed by roughly circular assemblages of closely spaced, high intensity (red) contours. In addition, there are zones of negative (purple) residual TFM values to the north of each anomaly. It is our interpretation that these strong magnetic variations are due to large magnetic vertical dipoles consistent with steel-cased wells. The bi-polar nature of the anomalies (both positive and negative values) is related to the fact that the earth's magnetic field is tilted and dipping southward at these latitudes. However, it is our interpretation that the abandoned oil well locations coincide with the point of highest intensity residual TFM, as depicted by the yellow circle with cross-hairs.

Other, smaller contour closures are also evident on the contour maps. We interpret these variations as minor amounts of suspected iron debris. One of these locations is coincident with stake No. 1 but we believe the juxtaposition to be entirely coincidental.

It is notable that the residual TFM magnitudes observed on the contour map for Well 3-10 (Plate 2) are lower than those observed for Well 36-10 (Plate 3). It is our interpretation that this is because the top of casing (TOC) for suspected Oil Well No. 36-10 may be shallower than the TOC for suspected Oil Well No. 3-10.

A summary of the GPS coordinates of the suspected oil wells and ENGEO field stakes measured during the MAG survey are below.

2020 MAG Survey	GPS – Latitude, Longitude
Estimated true position of suspected Oil Well No. 3-10	37.944956062, -121.746210742
Estimated true position of suspected Oil Well No. 36-10	37.941232373, -121.746206729
ENGEO field stake No. 1	37.945219836, -121.746220182
ENGEO field stake No. 2	37.944834012, -121.746203989
ENGEO field stake No. 3	37.941218195, -121.746209786

The abandoned oil well locations listed above are based on our best interpretation of the measured MAG data. In the event of any further exploration by others, it should be noted that these locations are approximate. The approximate locations for suspected abandoned oil wells have the greatest resolution along the east-to-west axes, as opposed to the north-to-south axes, based on the inherent nature of the magnetic intensity from induced dipoles (abandoned oil wells).

4.0 SUMMARY OF FINDINGS

The findings of the 2020 geophysical investigation are as follows:

- The suspected location of Well 3-10 is interpreted to be approximately 42 feet due north of ENGEO field stake No. 2
- The suspected location for Well 36-10 is interpreted to be only a foot or two north of stake No. 3.
- The estimated locations for suspected abandoned oil wells have the greatest resolution along the east-to-west axes, as opposed the to the north-to-south axes, based on the inherent nature of the magnetic field arising from induced dipoles (abandoned oil wells). As a result, some location error is to be expected.
- Other smaller magnitude variations likely represent suspected iron debris located in the near surface.

APPENDIX B – Geophysical Methods

Magnetometer (MAG) Survey

1.0 MAGNETOMETER (MAG) SURVEY

1.1 METHODOLOGY

A magnetometer measures variations in the earth's magnetic field. These variations can be caused by geologic features or by buried ferrous objects such as underground storage tanks, drums, utilities, etc. Most modern magnetometers have two sensors that simultaneously measure the total intensity of the earth's magnetic field, often referred to as "Total Field Mag or (TFM). Depending on the orientation of the sensors, these data can then be used to determine the vertical or horizontal gradient of the earth's magnetic field. Alternatively, the dual sensors can be used to measure the TFM at two locations simultaneously.

1.2 DATA ACQUISITION

NORCAL conducted the MAG survey using a Geometrics ***G858-G*** magnetic gradiometer. This instrument is based on cesium vapor optical pump technology and can measure the earth's magnetic field at a rate of ten times per second. The ***G858-G*** consists of a control console and two optical pump sensors mounted on an aluminum staff. The console features a built-in memory that stores the readings from both sensors (TFM), the computed vertical magnetic gradient (VMG) between the two sensors, and the survey grid information. The photo at left shows the VMG in use.

At both survey locations, we collected TFM data at approximate 2.5- to 3.0-ft intervals along east-west trending lines spaced 10-ft apart over a 170 X 270-foot survey grid. This resulted in a total of 1,954 VMG Stations. The limits of the VMG survey are shown on Plates 1 and 2.

1.3 DATA ANALYSIS

Upon completion of the MAG survey we downloaded the magnetic data using the computer program ***MagMap2000*** by Geometrics of San Jose, California. We also used this software to edit and filter the data and format them for graphics processing. We then used the computer program ***Surfer 16.0***, by Golden Software, to contour and plot the TFM data from the top sensor, as shown on Plate 2. We decided to display TFM contours rather than VMG contours because the former represent a greater depth of investigation. We chose the TFM response of the top sensor because it is typically less affected by interference from ground clutter than the bottom sensor.

The TFM data collected at each site were downloaded to a computer using the computer program ***Magmap 2000*** by Geometrics, Inc. of San Jose, CA. This program was used to despike the data and convert them to x,y,z format for subsequent contouring. The formatted data were then input to the program ***Surfer 16.0*** by Golden Software of Golden, CO. This program computed the residual component of TFM data and created a color contoured map illustrating variations in residual values throughout each survey area. The resulting maps are shown on Plates 2 and 3.

Note that the residual component of the TFM is what remains after the site-wide average is removed. This is a means of eliminating regional trends and focusing on local magnetic variations. Furthermore, it reduces the size of the values from tens of thousands of nano-Teslas (earth's total field) to tens or hundreds of nT (local variations) that are easier to deal with.

1.4 LIMITATIONS

Typically, only buried objects containing ferrous metal can be detected using a magnetometer. The detection capabilities of a magnetometer are directly proportional to the volume of ferrous metal the object contains and inversely proportional to its depth of burial. Consequently, the deeper an object is buried, the larger it must be in order to be detected. Even buried objects with the proper composition that lie within the depth of investigation of the magnetometer may not be detected if their signatures are masked by overlying metal objects or surface structures.

APPENDIX C – Terracon Standard of Care, Limitation, and Reliance

Standard of Care

The scope of NORCAL's services for this project consisted of using geophysical methods to characterize the shallow subsurface. The accuracy of our findings is subject to specific site conditions and limitations inherent to the techniques used. We performed our services in a manner consistent with the standard of care ordinarily exercised by members of the profession currently employing similar methods. No warranty, with respect to the performance of services or products delivered under this agreement, expressed or implied, is made by NORCAL.

Additional Scope Limitations

Findings, conclusions and recommendations resulting from these services are based upon information derived from the on-site activities and other services performed under this scope of work; such information is subject to change over time. Certain indicators of the presence of hazardous substances, petroleum products, or other constituents may have been latent, inaccessible, unobservable, non-detectable or not present during these services, and we cannot represent that the Site contains no hazardous substances, toxic materials, petroleum products, or other latent conditions beyond those identified during this confirmation sampling. Subsurface conditions may vary from those encountered at specific borings or wells or during other surveys, tests, assessments, investigations or exploratory services; the data, interpretations, findings, and our recommendations are based solely upon data obtained at the time and within the scope of these services.

Reliance

This report has been prepared for the exclusive use of Engeo; and any authorization for use or reliance by any other party (except a governmental entity having jurisdiction over the Site) is prohibited without the express written authorization of Engeo and NORCAL. Any unauthorized distribution or reuse is at the client's sole risk. Notwithstanding the foregoing, reliance by authorized parties will be subject to the terms, conditions and limitations stated in the Master Subconsultant Agreement, Reference No. PNS205129, dated October 8, 2020, between NORCAL and Engeo. The limitation of liability defined in the Terms and Conditions is the aggregate limit of NORCAL's liability to the client and all relying parties unless otherwise agreed in writing.

INTRODUCTION

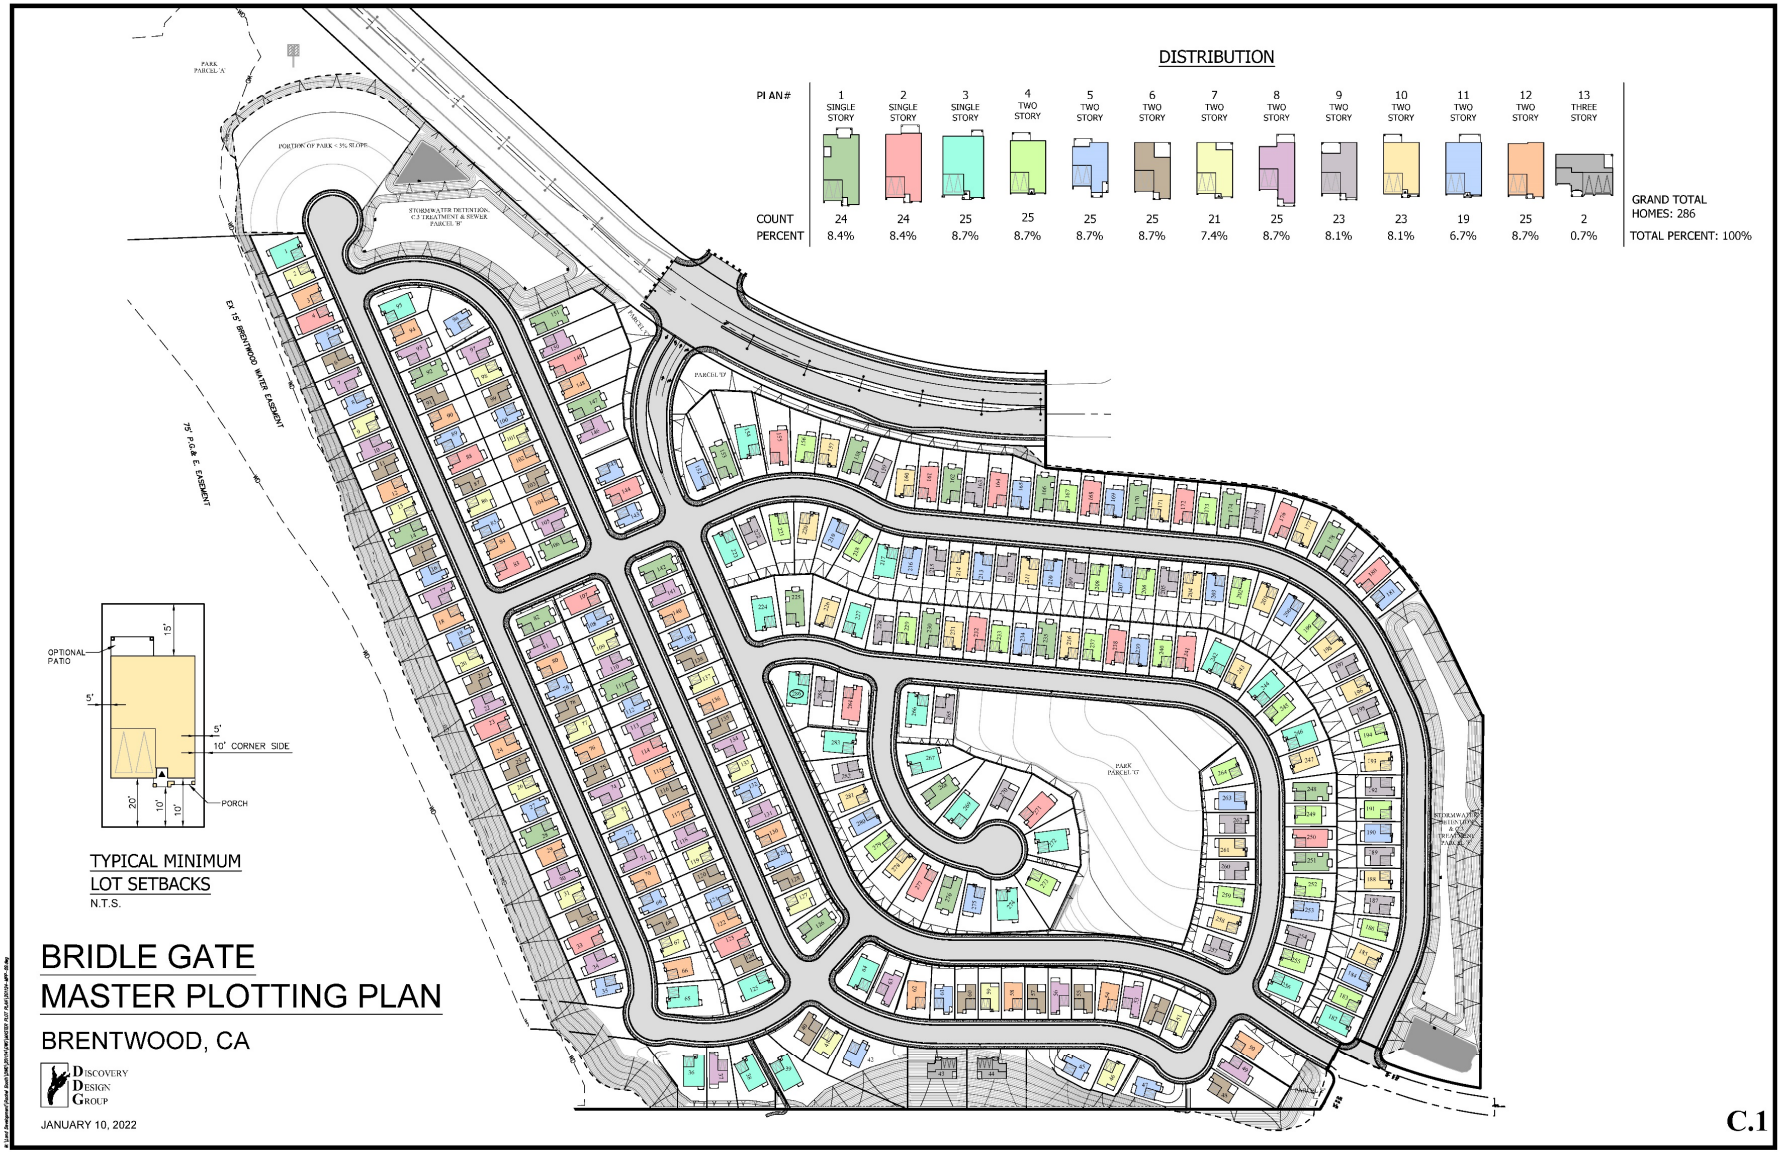
The Bridle Gate Residential project consists of the development of a 286-lot single-family subdivision on a vacant parcel.[1] The project is located south of Sand Creek Road and west of Highway 4 in the City of Brentwood, California.

Figure 1 shows the project site plan. **Figure 2** shows an aerial photo of the project site.

ENVIRONMENTAL SETTING

BACKGROUND INFORMATION ON NOISE

Fundamentals of Acoustics

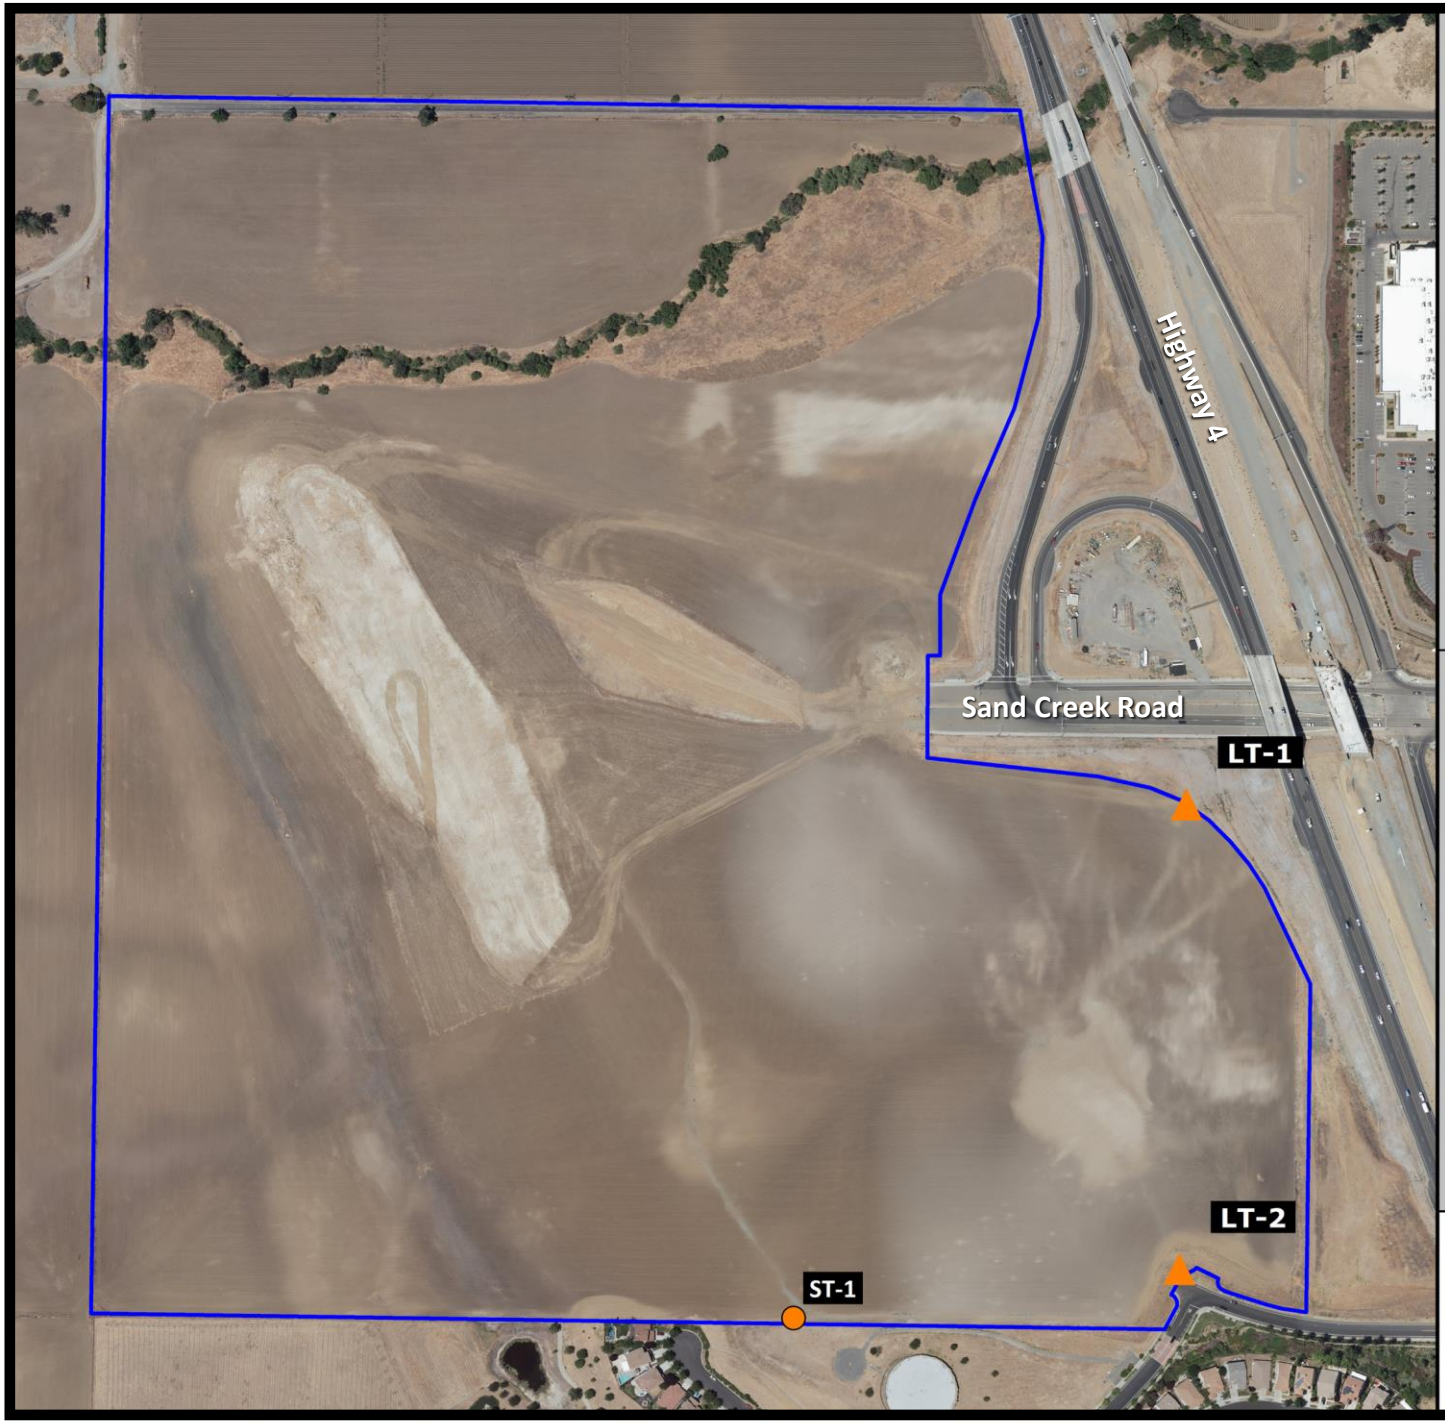


Acoustics is the science of sound. Sound may be thought of as mechanical energy of a vibrating object transmitted by pressure waves through a medium to human (or animal) ears. If the pressure variations occur frequently enough (at least 20 times per second), then they can be heard and are called sound. The number of pressure variations per second is called the frequency of sound, and is expressed as cycles per second or Hertz (Hz).

Noise is a subjective reaction to different types of sounds. Noise is typically defined as (airborne) sound that is loud, unpleasant, unexpected or undesired, and may therefore be classified as a more specific group of sounds. Perceptions of sound and noise are highly subjective from person to person.

Measuring sound directly in terms of pressure would require a very large and awkward range of numbers. To avoid this, the decibel scale was devised. The decibel scale uses the hearing threshold (20 micropascals), as a point of reference, defined as 0 dB. Other sound pressures are then compared to this reference pressure, and the logarithm is taken to keep the numbers in a practical range. The decibel scale allows a million-fold increase in pressure to be expressed as 120 dB, and changes in levels (dB) correspond closely to human perception of relative loudness.

The perceived loudness of sounds is dependent upon many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels, perception of loudness is relatively predictable, and can be approximated by A-weighted sound levels. There is a strong correlation between A-weighted sound levels (expressed as dBA) and the way the human ear perceives sound. For this reason, the A-weighted sound level has become the standard tool of environmental noise assessment.



[1] The Project was studied at a density of 292 units for the sake of being conservative.

SAXELBY ACOUSTICS
Acoustics · Noise · Vibration

The decibel scale is logarithmic, not linear. In other words, two sound levels 10-dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic decibel is A-weighted, an increase of 10-dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound, and twice as loud as a 60 dBA sound.

Community noise is commonly described in terms of the ambient noise level, which is defined as the all-encompassing noise level associated with a given environment. A common statistical tool is the average, or equivalent, sound level (L_{eq}), which corresponds to a steady-state A-weighted sound level containing the same total energy as a time varying signal over a given time period (usually one hour). The L_{eq} is the foundation of the composite noise descriptor, L_{dn}, and shows very good correlation with community response to noise.

The day/night average level (DNL or L_{dn}) is based upon the average noise level over a 24-hour day, with a +10-decibel weighing applied to noise occurring during nighttime (10:00 p.m. to 7:00 a.m.) hours. The nighttime penalty is based upon the assumption that people react to nighttime noise exposures as though they were twice as loud as daytime exposures. Because L_{dn} represents a 24-hour average, it tends to disguise short-term variations in the noise environment.

Table 1 lists several examples of the noise levels associated with common situations. **Appendix A** provides a summary of acoustical terms used in this report.

TABLE 1: TYPICAL NOISE LEVELS

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
	--110--	Rock Band
Jet Fly-over at 300 m (1,000 ft.)	--100--	
Gas Lawn Mower at 1 m (3 ft.)	--90--	
Diesel Truck at 15 m (50 ft.), at 80 km/hr. (50 mph)	--80--	Food Blender at 1 m (3 ft.) Garbage Disposal at 1 m (3 ft.)
Noisy Urban Area, Daytime Gas Lawn Mower, 30 m (100 ft.)	--70--	Vacuum Cleaner at 3 m (10 ft.)
Commercial Area Heavy Traffic at 90 m (300 ft.)	--60--	Normal Speech at 1 m (3 ft.)

Effects of Noise on People

The effects of noise on people can be placed in three categories:

- Subjective effects of annoyance, nuisance, and dissatisfaction
- Interference with activities such as speech, sleep, and learning
- Physiological effects such as hearing loss or sudden startling

Environmental noise typically produces effects in the first two categories. Workers in industrial plants can experience noise in the last category. There is no completely satisfactory way to measure the subjective effects of noise or the corresponding reactions of annoyance and dissatisfaction. A wide variation in individual thresholds of annoyance exists and different tolerances to noise tend to develop based on an individual's past experiences with noise.

Thus, an important way of predicting a human reaction to a new noise environment is the way it compares to the existing environment to which one has adapted: the so-called ambient noise level. In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will be judged by those hearing it.

With regard to increases in A-weighted noise level, the following relationships occur:

- Except in carefully controlled laboratory experiments, a change of 1-dBA cannot be perceived;
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference;
- A change in level of at least 5-dBA is required before any noticeable change in human response would be expected; and
- A 10-dBA change is subjectively heard as approximately a doubling in loudness, and can cause an adverse response.

Stationary point sources of noise–including stationary mobile sources such as idling vehicles–attenuate (lessen) at a rate of approximately 6-dB per doubling of distance from the source, depending on environmental conditions (i.e. atmospheric conditions and either vegetative or manufactured noise barriers, etc.). Widely distributed noises, such as a large industrial facility spread over many acres, or a street with moving vehicles, would typically attenuate at a lower rate.

EXISTING AND FUTURE NOISE AND VIBRATION ENVIRONMENTS

EXISTING NOISE RECEPTORS

Some land uses are considered more sensitive to noise than others. Land uses often associated with sensitive receptors generally include residences, schools, libraries, hospitals, and passive recreational areas. Sensitive noise receptors may also include threatened or endangered noise sensitive biological species, although many jurisdictions have not adopted noise standards for wildlife areas. Noise sensitive land uses are typically given special attention in order to achieve protection from excessive noise.

Sensitivity is a function of noise exposure (in terms of both exposure duration and insulation from noise) and the types of activities involved. In the vicinity of the project site, sensitive land uses include existing single-family residential uses located south of the project site.

EXISTING GENERAL AMBIENT NOISE LEVELS

The existing noise environment in the project area is primarily defined by traffic on Highway 4 directly east of the project site.

To quantify the existing ambient noise environment in the project vicinity, Saxelby Acoustics conducted continuous (24-hr.) noise level measurements at two locations on the project site and short-term noise level measurements at one location. Noise measurement locations are shown on **Figure 2**. A summary of the noise level measurement survey results is provided in **Table 2**. **Appendix B** contains the complete results of the noise monitoring.

The sound level meters were programmed to record the maximum, median, and average noise levels at each site during the survey. The maximum value, denoted L_{max}, represents the highest noise level measured. The average value, denoted L_{eq}, represents the energy average of all of the noise received by the sound level meter microphone during the monitoring period. The median value, denoted L_{50}, represents the sound level exceeded 50 percent of the time during the monitoring period.

Larson Davis Laboratories (LDL) model 820 and 831 precision integrating sound level meters were used for the ambient noise level measurement survey. The meters were calibrated before and after use with a B&K Model 4230 acoustical calibrator to ensure the accuracy of the measurements. The equipment used meets all pertinent specifications of the American National Standards Institute for Type 1 sound level meters (ANSI S1.4).

FUTURE TRAFFIC NOISE ENVIRONMENT AT OFF-SITE RECEPTORS

OFF-SITE TRAFFIC NOISE IMPACT ASSESSMENT METHODOLOGY

To assess noise impacts due to project-related traffic increases on the local roadway network, traffic noise levels are predicted at sensitive receptors for Existing and Existing Plus Project conditions.

Noise levels due to traffic are calculated using the Federal Highway Administration Highway Traffic Noise Prediction Model (FHWA RD-77-108). The model is based upon the Calveno reference noise factors for automobiles, medium trucks and heavy trucks, with consideration given to vehicle volume, speed, roadway configuration, distance to the receiver, and the acoustical characteristics of the site.

The FHWA model was developed to predict hourly L_{eq} values for free-flowing traffic conditions. To predict traffic noise levels in terms of L_{dn}, it is necessary to adjust the input volume to account for the day/night distribution of traffic.

Project trip generation volumes were provided by the project traffic engineer (Kimley Horn 2020), truck usage and vehicle speeds on the local area roadways were estimated from field observations. The predicted increases in traffic noise levels on the local roadway network for Existing and Cumulative conditions which would result from the project are provided in terms of L_{dn}. It should be noted that the current project traffic is predicted to be less than that assumed under the 2020 traffic noise study. Therefore, this analysis of off-site traffic noise increases is considered conservative.

Traffic noise levels are predicted at the sensitive receptors located at the closest typical setback distance along each project-area roadway segment. In some locations sensitive receptors may not receive full shielding from noise barriers or may be located at distances which vary from the assumed calculation distance.

Tables 3 and 4 summarize the modeled traffic noise levels at the nearest sensitive receptors along each roadway segment in the Project area. **Appendix C** provides the complete inputs and results of the FHWA traffic noise modeling.

TABLE 3: EXISTING TRAFFIC NOISE LEVELS AND PROJECT-RELATED TRAFFIC NOISE LEVEL INCREASES

W. Country Club Dr.	East of Presidio Dr.	47.1	47.1	0.0
E. Country Club Dr.	West of Roundhill Dr.	51.0	51.0	0.0

Based upon the data in **Tables 3 and 4**, the proposed project is predicted to result in an increase in a maximum traffic noise level increase of 0.9 dBA.

EVALUATION OF TRANSPORTATION NOISE ON PROJECT SITE

Saxelby Acoustics used the SoundPLAN noise model to calculate traffic noise levels at the proposed single-family uses due to traffic on Highway 4 and the local roadway network. Traffic noise levels include a +2 dBA adjustment for future conditions. The results of this analysis are shown graphically on **Figure 3**. **Appendix D** contains the complete inputs for the SoundPLAN analysis.

CONSTRUCTION NOISE ENVIRONMENT

During the construction of the proposed project, including roads, water and sewer lines, and related infrastructure, noise from construction activities would temporarily add to the noise environment in the project vicinity. As shown in **Table 5**, activities involved in construction would generate maximum noise levels ranging from 76 to 90 dB at a distance of 50 feet.

TABLE 5: CONSTRUCTION EQUIPMENT NOISE

Type of Equipment	Maximum Level, dBA at 50 feet
Auger Drill Rig	84
Backhoe	78
Compactor	83
Compressor (air)	78
Concrete Saw	90
Dozer	82
Dump Truck	76
Excavator	81
Generator	81
Jackhammer	89
Pneumatic Tools	85

CONSTRUCTION VIBRATION ENVIRONMENT

The primary vibration-generating activities associated with the proposed project would occur during construction when activities such as grading, utilities placement, and parking lot construction occur. **Table 6** shows the typical vibration levels produced by construction equipment.

TABLE 6: VIBRATION LEVELS FOR VARIOUS CONSTRUCTION EQUIPMENT

Type of Equipment	Peak Particle Velocity at 25 feet (inches/second)	Peak Particle Velocity at 50 feet (inches/second)	Peak Particle Velocity at 100 feet (inches/second)
Large Bulldozer	0.089	0.031	0.011
Loaded Trucks	0.076	0.027	0.010
Small Bulldozer	0.003	0.001	0.000
Auger/drill Rigs	0.089	0.031	0.011
Jackhammer	0.035	0.012	0.004
Vibratory Hammer	0.070	0.025	0.009
Vibratory Compactor/roller	0.210 (Less than 0.20 at 26 feet)	0.074	0.026

REGULATORY CONTEXT

FEDERAL

There are no federal regulations related to noise that apply to the Proposed Project.

STATE

There are no state regulations related to noise that apply to the Proposed Project.

LOCAL

City of Brentwood General Plan

Policies

Policy N 1-1: Ensure the noise compatibility of existing and future development when making land use planning decisions.

Policy N 1-2: Require development and infrastructure projects to be consistent with the Land Use Compatibility for Community Noise Environments standards indicated in Table N-1 to ensure acceptable noise levels for existing and future development.

Policy N 1-3: Require new development to mitigate excessive noise through best practices, including building location and orientation, building design features, placement of noise-generating equipment away from sensitive receptors, shielding of noise-generating equipment, placement of noise-tolerant features between noise sources and sensitive receptors, and use of noise-minimizing materials such as rubberized asphalt.

Policy N 1-7: For projects that are required by the California Environmental Quality Act (CEQA) to analyze noise impacts, the following criteria shall be used to determine the significance of those impacts:

Stationary and Non-Transportation Noise Sources

- A significant impact will occur if the project results in an exceedance of the noise level standards contained in this element, or the project will result in an increase in ambient noise levels by more than 3 dB, whichever is greater.

Transportation Noise Sources

- Where existing traffic noise levels are less than 60 dB L_{dn} at the outdoor activity areas of noise-sensitive uses, a +5 dB L_{dn} increase in roadway noise levels will be considered significant; and

- Where existing traffic noise levels range between 60 and 65 dB L_{dn} at the outdoor activity areas of noise-sensitive uses, a +3 dB L_{dn} increase in roadway noise levels will be considered significant; and

- Where existing traffic noise levels are greater than 65 dB L_{dn} at the outdoor activity areas of noise-sensitive uses, a + 1.5 dB L_{dn} increase in roadway noise levels will be considered significant.

Policy N 1-14: Ensure that new development does not result in indoor noise levels exceeding 45 dBA Ldn for residential uses.

Policy N 1-15: Require construction activities to comply with standard best practices (see Action N 1e).

Policy N 2-1: Recognizing that existing and future traffic noise along the State Route 4 corridor, major arterials within Brentwood, and noise from the UPRR [Union Pacific Railroad] are areas of potential land use conflict for existing and future development, reasonable use of this land will be allowed with an exterior noise exposure level not exceeding 65 dB Ldn. New development that includes noise-sensitive uses (i.e., residential) along the State Route 4 corridor, major arterials, and the UPRR should incorporate appropriate noise attenuation measures in order to maintain interior noise levels of 45 dB Ldn or less. Application of this noise standard is intended to provide for reasonable exterior noise levels while discouraging the use of excessively high and/or unattractive sound walls.

Action N 1e: *During the environmental review process, determine if proposed construction will constitute a significant impact on nearby residents and, if necessary, require mitigation measures in*

addition to the standard best practice controls. Suggested best practices for control of construction noise include:

1. Construction period shall be less than 12 months.

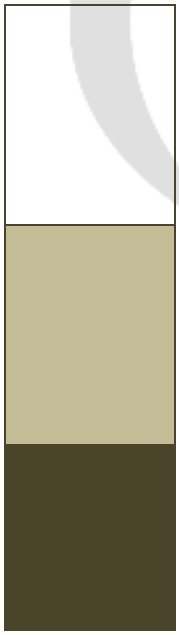
2. Noise-generating construction activities, including truck traffic coming to and from the construction site for any purpose, shall be limited to between the hours of 7:00 am and 6:00 pm on weekdays, and between 8:00 am and 5:00 pm on Saturdays. No construction shall occur on Sundays or City holidays.

3. All equipment driven by internal combustion engines shall be equipped with mufflers, which are in good condition and appropriate for the equipment.

4. The construction contractor shall utilize "quiet" models of air compressors and other stationary noise sources where technology exists.

5. At all times during project grading and construction, stationary noise-generating equipment shall be located as far as practicable from sensitive receptors and placed so that emitted noise is directed away from residences.

6. Unnecessary idling of internal combustion engines shall be prohibited.



7. Construction staging areas shall be established at locations that will create the greatest distance between the construction-related noise sources and noise-sensitive receptors nearest the project site during all project construction activities, to the extent feasible.

8. The required construction-related noise mitigation plan shall also specify that haul truck deliveries are subject to the same hours specified for construction equipment.

9. Neighbors located adjacent to the construction site shall be notified of the construction schedule in writing.

10. The construction contractor shall designate a "noise disturbance coordinator" who will be responsible for responding to any local complaints about construction noise. The disturbance coordinator shall be responsible for determining the cause of the noise complaint (e.g., starting too early, poor muffler, etc.) and instituting reasonable measures as warranted to correct the problem. A telephone number for the disturbance coordinator shall be conspicuously posted at the construction site.

TABLE N-1 LAND USE COMPATIBILITY FOR COMMUNITY NOISE ENVIRONMENT								
Land Use Category	Exterior Noise Exposure (Ldn)							
		55	60	65	70	75	80	
Single-Family Residential								
Multi-Family Residential, Hotels, and Motels								
Outdoor Sports and Recreation, Neighborhood Parks and Playgrounds								
Schools, Libraries, Museums, Hospitals, Personal Care, Meeting Halls, Churches								
Office Buildings, Business Commercial, and Professional								
Industrial								

NORMALLY ACCEPTABLE

Specified land use is satisfactory, based upon the assumption that any buildings involved are of normal conventional construction, without any special insulation requirements

CONDITIONALLY ACCEPTABLE

Specified land use may be permitted only after detailed analysis of the noise reduction requirements and needed noise insulation features included in the design

UNACCEPTABLE

New construction or development should generally not be undertaken because mitigation is usually not feasible to comply with noise element policies

Based upon Table N-1 of the City of Brentwood General Plan, residential uses are considered normally acceptable in ambient noise environments up to 60 dBA L_{dn}, and conditionally acceptable in noise environments up to 75 dBA L_{dn}. However, policy N-1 limits exterior noise levels to 65 dBA L_{dn} for new residential uses adjacent to State Route 4 corridor, major arterials within Brentwood, and noise from the UPRR. The City of Brentwood also establishes an interior noise level criterion of 45 dBA L_{dn} for residential uses.

Criteria for Acceptable Vibration

Vibration is like noise in that it involves a source, a transmission path, and a receiver. While vibration is related to noise, it differs in that noise is generally considered to be pressure waves transmitted through air, whereas vibration usually consists of the excitation of a structure or surface. As with noise, vibration consists of an amplitude and frequency. A person's perception of the vibration will depend on their individual sensitivity to vibration, as well as the amplitude and frequency of the source and the response of the system which is vibrating.

Vibration can be measured in terms of acceleration, velocity, or displacement. A common practice is to monitor vibration measures in terms of peak particle velocities (p.p.v.) in inches per second. Standards pertaining to perception as well as damage to structures have been developed for vibration levels defined in terms of peak particle velocities.

Human and structural response to different vibration levels is influenced by a number of factors, including ground type, distance between source and receptor, duration, and the number of perceived vibration events. **Table 7**, which was developed by Caltrans, shows the vibration levels which would normally be required to result in damage to structures. The vibration levels are presented in terms of peak particle velocity in inches per second.

Table 7 indicates that the threshold for architectural damage to structures is 0.20 in/sec p.p.v. A threshold of 0.2 in/sec p.p.v. is considered to be a reasonable threshold for short-term construction projects.

TABLE 7: EFFECTS OF VIBRATION ON PEOPLE AND BUILDINGS

Peak Particle Velocity		Human Reaction	Effect on Buildings
mm/second	in/second		
0.15-0.30	0.006-0.019	Threshold of perception; possibility of intrusion	Vibrations unlikely to cause damage of any type
2.0	0.08	Vibrations readily perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
2.5	0.10	Level at which continuous vibrations begin to annoy people	Virtually no risk of "architectural" damage to normal buildings
5.0	0.20	Vibrations annoying to people in buildings (this agrees with the levels established for people standing on bridges and subjected to relative short periods of vibrations)	Threshold at which there is a risk of "architectural" damage to normal dwelling - houses with plastered walls and ceilings. Special types of finish such as lining of walls, flexible ceiling treatment, etc., would minimize "architectural" damage
10-15	0.4-0.6	Vibrations considered unpleasant by people subjected to continuous vibrations and unacceptable to some people walking on bridges	Vibrations at a greater level than normally expected from traffic, but would cause "architectural" damage and possibly minor structural damage

Source: *Transportation Related Earthborne Vibrations.* Caltrans. TAV-02-01-R9601. February 20, 2002.

IMPACTS AND MITIGATION MEASURES

THRESHOLDS OF SIGNIFICANCE

Appendix G of the CEQA Guidelines states that a project would normally be considered to result in significant noise impacts if noise levels conflict with adopted environmental standards or plans, or if noise generated by the project would substantially increase existing noise levels at sensitive receivers on a permanent or temporary basis. Significance criteria for noise impacts are drawn from CEQA Guidelines Appendix G (Items XI [a-f]).

Would the project:

a. Generate a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

b. Generate excessive groundborne vibration or groundborne noise levels?

c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

NOISE LEVEL INCREASE CRITERIA FOR LONG-TERM PROJECT-RELATED NOISE LEVEL INCREASES

The California Environmental Quality Act (CEQA) guidelines define a significant impact of a project if it "increases substantially the ambient noise levels for adjoining areas." Generally, a project may have a significant effect on the environment if it will substantially increase the ambient noise levels for adjoining areas or expose people to severe noise levels. In practice, more specific professional standards have been developed. These standards state that a noise impact may be considered significant if it would generate noise that would conflict with local project criteria or ordinances, or substantially increase noise levels at noise sensitive land uses. The potential increase in traffic noise from the project is a factor in determining significance. Research into the human perception of changes in sound level indicates the following:

- A 3dB change is barely perceptible,
- A 5dB change is clearly perceptible, and
- A 10dB change is perceived as being twice or half as loud.

A limitation of using a single noise level increase value to evaluate noise impacts is that it fails to account for pre-project-noise conditions. **Table 8** is based upon recommendations made by the Federal Interagency Committee on Noise (FICON) to provide guidance in the assessment of changes in ambient noise levels resulting from aircraft operations. The recommendations are based upon studies that relate aircraft noise levels to the percentage of persons highly annoyed by the noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, it is widely accepted that they are applicable to all sources of noise described in terms of cumulative noise exposure metrics such as the L_{dn}.

TABLE 8: SIGNIFICANCE OF CHANGES IN NOISE EXPOSURE

Ambient Noise Level Without Project, Ldn	Increase Required for Significant Impact
<60 dB	+5.0 dB or more
60-65 dB	+3.0 dB or more
>65 dB	+1.5 dB or more

Source: Federal Interagency Committee on Noise (FICON)

Based on the **Table 8** data, an increase in the traffic noise level of 5 dB or more would be significant where the pre-project noise levels are less than 60 dB Ldn, or 3 dB or more where existing noise levels are between 60 to 65 dB Ldn. Extending this concept to higher noise levels, an increase in the traffic noise level of 1.5 dB or more may be significant where the pre-project traffic noise level exceeds 65 dB Ldn. The rationale for the **Table 8** criteria is that, as ambient noise levels increase, a smaller increase in noise resulting from a project is sufficient to cause annoyance. It is noted that General Plan Policy N 1-7 formally adopts this methodology for evaluating traffic noise increases.

PROJECT-SPECIFIC IMPACTS AND MITIGATION MEASURES

IMPACT 1: WOULD THE PROJECT GENERATE A SUBSTANTIAL TEMPORARY OR PERMANENT INCREASE IN AMBIENT NOISE LEVELS IN THE VICINITY OF THE PROJECT IN EXCESS OF STANDARDS ESTABLISHED IN THE LOCAL GENERAL PLAN OR NOISE ORDINANCE, OR APPLICABLE STANDARDS OF OTHER AGENCIES?

Traffic Noise Increases

As discussed, the substantial increase criteria range between +1.5 dBA to +5 dBA, depending on the existing noise levels. Under the proposed project, the maximum increase in traffic noise at the nearest sensitive receptor is predicted to be 0.9 dBA as shown in **Tables 3 and 4**. Therefore, impacts resulting from increased traffic noise would be considered ***less-than-significant***.

Operational Noise Increases

The proposed project would include typical residential noise which would be compatible with the existing adjacent residential uses.

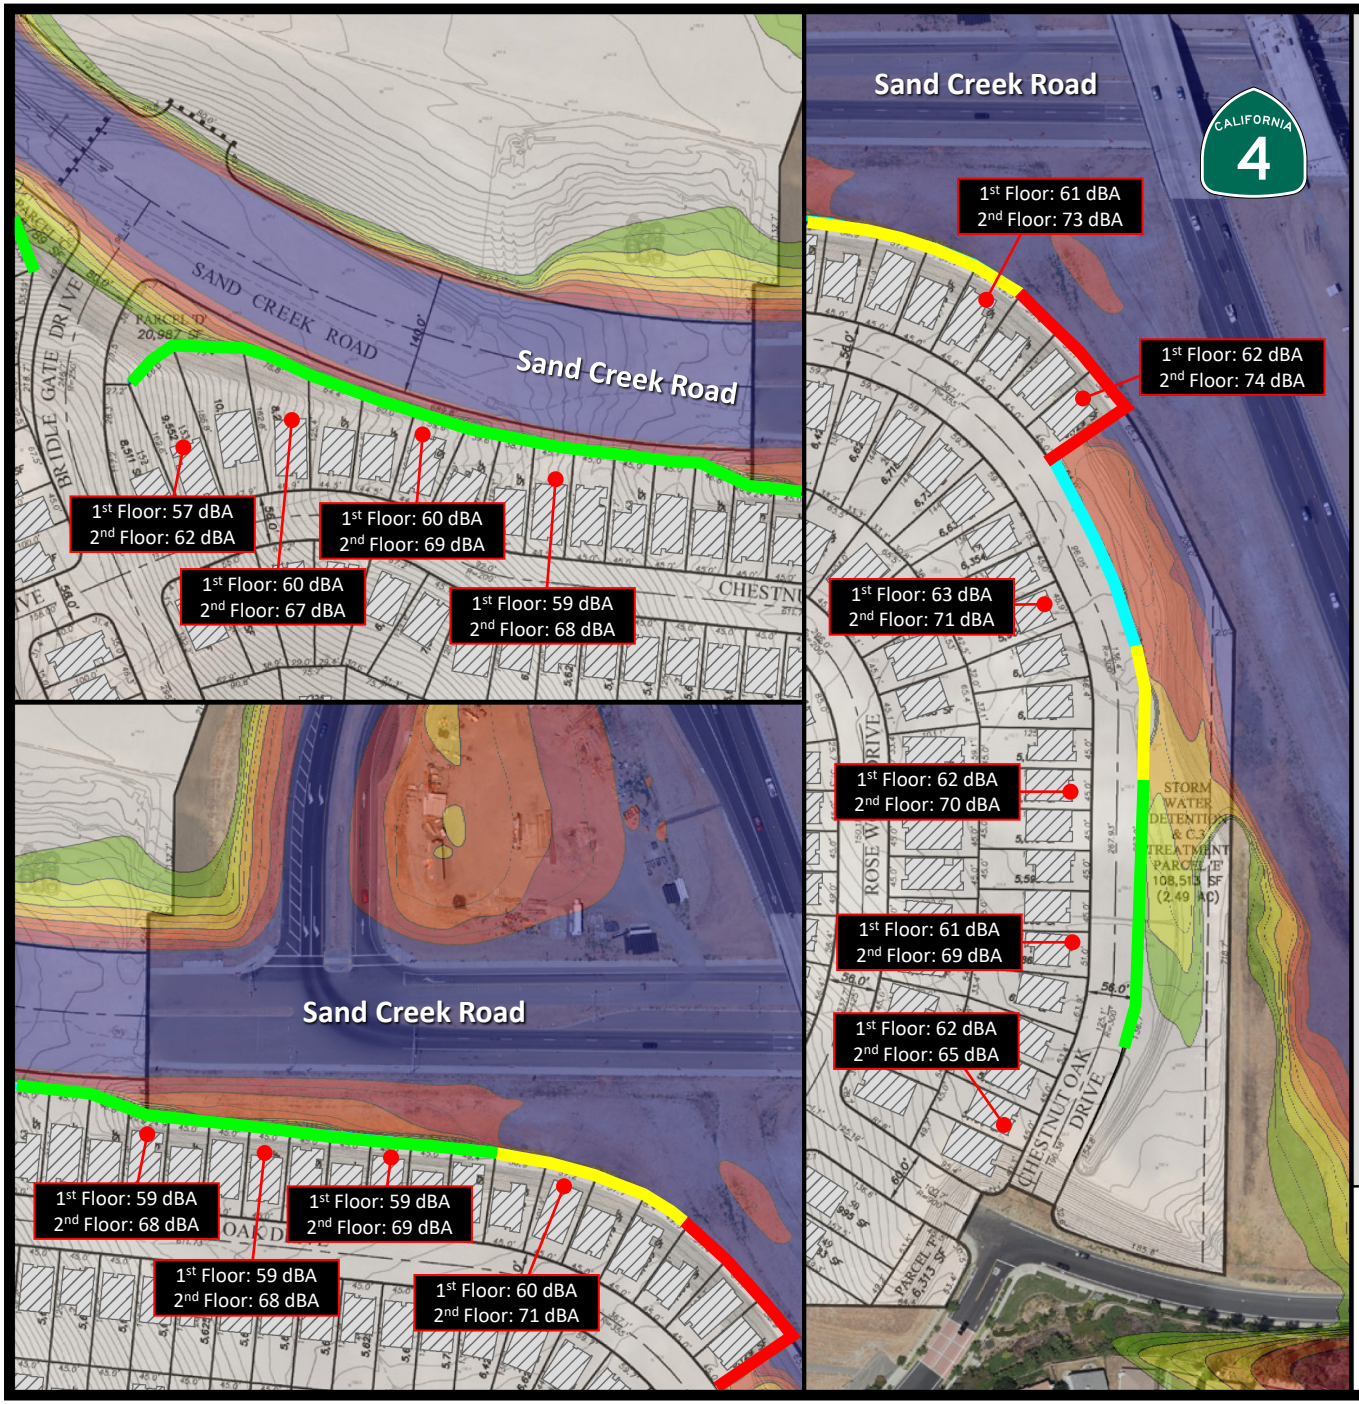
Construction Noise

During the construction phases of the project, noise from construction activities would add to the noise environment in the immediate project vicinity. As indicated in **Table 5**, activities involved in construction would generate maximum noise levels ranging from 76 to 90 dBA L_{max} at a distance of 50 feet. The great majority of the building construction would occur at distances of 50 feet or greater from the nearest residences, and at distances where construction noise would not be perceptible. Construction noise associated with streets would be similar to noise that would be associated with public works projects, such as a roadway widening or paving projects.

Construction activities would be temporary in nature and are anticipated to occur during normal daytime working hours.

Noise would also be generated during the construction phase by increased truck traffic on area roadways. A project-generated noise source would be truck traffic associated with transport of heavy materials and equipment to and from the construction site. This noise increase would be of short duration and would likely occur primarily during daytime hours.

Construction activities are conditionally exempt from the Noise Ordinance during certain hours. Construction activities are exempt from the noise standard from 8 AM to 5 PM Monday through Friday, and from 9 AM to 4 PM on Saturdays. No construction shall occur on Sundays or City holidays.



Although construction activities are temporary in nature and would likely occur during normal daytime working hours, construction-related noise could result in sleep interference at existing noise-sensitive land uses in the vicinity of the construction if construction activities were to occur outside the normal daytime hours. Therefore, impacts resulting from noise levels temporarily exceeding the threshold of significance due to construction would be considered ***potentially significant***.

Transportation Noise on Project Site (Non-CEQA Issue)

Exterior Transportation Noise

Compliance with City standards on new noise-sensitive receptors is not a CEQA consideration. However, this information is provided here so that a determination can be made regarding the ability of the proposed project to meet the requirements of the City of Brentwood for exterior and interior noise levels at new sensitive uses proposed under the project.

As shown on **Figure 3**, the proposed project would be exposed to exterior noise levels exceeding the City's 65 dBA L_{dn} exterior noise standard for residential uses along State Route 4 or major arterial roadways, as outlined in Policy N 2-1. With construction of the sound wall design show in **Figure 4,** proposed noise-sensitive residential uses would be exposed to exterior noise levels of 65 dBA L_{dn}, or less. This would comply with the City's 65 dBA standard.

SAXELBY ACOUSTICS
Acoustics · Noise · Vibration

Interior Transportation Noise

Based upon the exterior noise levels shown on **Figure 4**, the proposed project would be exposed to exterior noise levels of up to 63 dBA at first floors and up to 74 dBA L_{dn} at second floor building facades. As noted by Policy N 2-1, interior noise levels are required to be 45 dB L_{dn}, or less at receptors along the State Route 4, or major arterial corridors. Modern building construction methods typically yield an exterior-to-interior noise level reduction of 25 dBA. Therefore, where exterior noise levels are 70 dBA L_{dn}, or less, no additional interior noise control measures are typically required. For this project, exterior noise levels are predicted to be up to 63 dBA at first floors and 74 dBA L_{dn} at second floors, resulting in an interior noise level of approximately 38 dBA at first floors and 49 dBA L_{dn} at second floors, based on typical building construction. This would exceed the City's 45 dBA L_{dn} interior noise level standard for second floor areas of the proposed residential uses.

In order to meet the City's standard, additional interior noise control measures are needed. This would include the use of sound transmission class (STC) rated windows in the range of STC 34, or higher.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above impact to a *less-than-significant* level.

1(a) Construction activities shall be limited to the hours set forth below:

Monday-Friday 8:00 AM to 5:00 PM
Saturday 9:00 AM to 4:00 PM

Construction shall be prohibited on Sundays and City holidays. These criteria shall be included in the grading plan submitted by the applicant/developer for review and approval of the Community Development Director prior to issuance of grading permits. Exceptions to allow expanded construction activities shall be reviewed on a case-by-case basis as determined by the Chief Building Official and/or City Engineer.

1(b) The project contractor shall ensure that the following construction noise BMPs are met on-site during all phases of construction:

- *All equipment driven by internal combustion engines shall be equipped with mufflers, air-inlet silencers where appropriate, and any other shrouds, shields, or other noise-reducing features in good operating condition that meet or exceed original factory specifications. Mobile or fixed "package" equipment (e.g., arc welders, air compressors) shall be equipped with shrouds and noise- control features that are readily available for that type of equipment.*
- *All mobile or fixed noise-producing equipment used on the project site that are regulated for noise output by a federal, state, or local agency shall comply with such regulations while in the course of project activity.*
- *The construction contractor shall utilize "quiet" models of air compressors and other stationary noise sources where technology exists.*

- *At all times during project grading and construction, stationary noise-generating equipment shall be located as far as practicable from sensitive receptors and placed so that emitted noise is directed away from residences.*
- *Unnecessary idling of internal combustion engines shall be prohibited.*
- *Construction staging areas shall be established at locations that would create the greatest distance between the construction-related noise sources and noise-sensitive receptors nearest the project site during all project construction activities, to the extent feasible.*
- *Construction site and access road speed limits shall be established and enforced during the construction period.*
- *The use of noise-producing signals, including horns, whistles, alarms, and bells, shall be for safety warning purposes only.*
- *Project-related public address or music systems shall not be audible at any adjacent receptor.*
- *Neighbors located adjacent to the construction site shall be notified of the construction schedule in writing.*
- *The construction contractor shall designate a "noise disturbance coordinator" who would be responsible for responding to any local complaints about construction noise. The disturbance coordinator shall be responsible for determining the cause of the noise complaint (e.g., starting too early, poor muffler, etc.) and instituting reasonable measures as warranted to correct the problem. A telephone number for the disturbance coordinator shall be conspicuously posted at the construction site.*

Construction noise BMPs shall be included in the grading plan submitted by the developer for review and approval by the Community Development Director prior to grading permit issuance.

Recommended Condition of Approval

Prior to approval of project improvement plans, the plans for the proposed project shall show that the first-row lots shall be shielded from State Route 4 and Sand Creek Road through the use of masonry sound walls per the approval of the City Engineer. The approximate locations of these barriers are shown on ***Figure 4****. Other types of barriers may be employed but shall be reviewed by an acoustical engineer prior to being constructed. Sound wall heights are assumed to be relative to building pad elevations and may achieve the required wall height through use of earthen berm and wall combinations to achieve the total height. Additionally, second floor windows of the first row of residences along the State Route 4 corridor and Sand Creek Road, should have a minimum STC rating of 34 for windows with a view of either roadway. Alternatively, an interior noise analysis shall be prepared by a qualified acoustic engineer outlining the measures required to meet the City's 45 dBA L_{dn} interior noise standard, especially at unshielded second floor facades along the State Route 4 corridor or Sand Creek Road.*

IMPACT 2: WOULD THE PROJECT GENERATE EXCESSIVE GROUNDBORNE VIBRATION OR GROUNDBORNE NOISE LEVELS?

Construction vibration impacts include human annoyance and building structural damage. Human annoyance occurs when construction vibration rises significantly above the threshold of perception. Building damage can take the form of cosmetic or structural.

The **Table 6** data indicate that construction vibration levels anticipated for the typical equipment used in residential construction projects are less than the 0.2 in/sec p.p.v. threshold at distances of 26 feet. This represents the most intensive construction vibration that would be expected with the use of vibratory compactors. Use of bulldozer, trucks, etc. would be expected to generate vibration levels of 0.09 in/sec p.p.v. at distances of 25 feet., well below the 0.2 in/sec p.p.v. criteria.

It should be noted that the 0.2 in/sec p.pv. threshold is considered a conservative threshold for temporary construction vibrations. The duration of vibration that would occur in close proximity to existing residential uses would be brief and extremely unlikely to cause even minor damage to modern structures.

Sensitive receptors which could be impacted by construction related vibrations, especially vibratory compactors/rollers, are generally located approximately 26 feet, or further, from typical construction activities. At these distances construction vibrations are not predicted to exceed acceptable levels. Additionally, construction activities would be temporary in nature and would likely occur during normal daytime working hours.

It should be noted that one residence at the end of La Sata Drive could be located closer than 26 feet from project construction. Therefore, this could be a potentially significant impact should use of a vibratory compactor be required at distances of less than 26 feet. Implementation of the following mitigation measure will ensure that these potential impacts are reduced to a **less than significant** level.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above impact to a *less-than-significant* level.

(2) Any compaction required less than 26 feet from any adjacent residential structures shall be accomplished by using static drum rollers which use weight instead of vibrations to achieve soil compaction. As an alternative to this requirement, pre-construction crack documentation and construction vibration monitoring could be conducted to ensure that construction vibrations do not cause damage to any adjacent structures.

IMPACT 3: FOR A PROJECT LOCATED WITHIN THE VICINITY OF A PRIVATE AIRSTRIP OR AN AIRPORT LAND USE PLAN OR, WHERE SUCH A PLAN HAS NOT BEEN ADOPTED, WITHIN TWO MILES OF A PUBLIC AIRPORT OR PUBLIC USE AIRPORT, WOULD THE PROJECT EXPOSE PEOPLE RESIDING OR WORKING IN THE PROJECT AREA TO EXCESSIVE NOISE LEVELS?

There are no airports within two miles of the project site. Therefore, this impact is not applicable to the proposed project.

Appendix A: Acoustical Terminology

Acoustics	The science of sound.
Ambient Noise	The distinctive acoustical characteristics of a given space consisting of all noise sources audible at that location. In many cases, the term ambient is used to describe an existing or pre-project condition such as the setting in an environmental noise study.
ASTC	Apparent Sound Transmission Class. Similar to STC but includes sound from flanking paths and correct for room reverberation. A larger number means more attenuation. The scale, like the decibel scale for sound, is logarithmic.
Attenuation	The reduction of an acoustic signal.
A-Weighting	A frequency-response adjustment of a sound level meter that conditions the output signal to approximate human response.
Decibel or dB	Fundamental unit of sound, A Bell is defined as the logarithm of the ratio of the sound pressure squared over the reference pressure squared. A Decibel is one-tenth of a Bell.
CNEL	Community Noise Equivalent Level. Defined as the 24-hour average noise level with noise occurring during evening hours (7 - 10 p.m.) weighted by +5 dBA and nighttime hours weighted by +10 dBA.
DNL	See definition of Ldn.
IIC	Impact Insulation Class. An integer-number rating of how well a building floor attenuates impact sounds, such as footsteps. A larger number means more attenuation. The scale, like the decibel scale for sound, is logarithmic.
Frequency	The measure of the rapidity of alterations of a periodic signal, expressed in cycles per second or hertz (Hz).
Ldn	Day/Night Average Sound Level. Similar to CNEL but with no evening weighting.
Leq	Equivalent or energy-averaged sound level.
Lmax	The highest root-mean-square (RMS) sound level measured over a given period of time.
L(n)	The sound level exceeded a described percentile over a measurement period. For instance, an hourly L50 is the sound level exceeded 50% of the time during the one-hour period.
Loudness	A subjective term for the sensation of the magnitude of sound.
NIC	Noise Isolation Class. A rating of the noise reduction between two spaces. Similar to STC but includes sound from flanking paths and no correction for room reverberation.
NNIC	Normalized Noise Isolation Class. Similar to NIC but includes a correction for room reverberation.
Noise	Unwanted sound.
NRC	Noise Reduction Coefficient. NRC is a single-number rating of the sound-absorption of a material equal to the arithmetic mean of the sound-absorption coefficients in the 250, 500, 1000, and 2,000 Hz octave frequency bands rounded to the nearest multiple of 0.05. It is a representation of the amount of sound energy absorbed upon striking a particular surface. An NRC of 0 indicates perfect reflection; an NRC of 1 indicates perfect absorption.
RT60	The time it takes reverberant sound to decay by 60 dB once the source has been removed.
Sabin	The unit of sound absorption. One square foot of material absorbing 100% of incident sound has an absorption of 1 Sabin.
SEL	Sound Exposure Level. SEL is a rating, in decibels, of a discrete event, such as an aircraft flyover or train pass by, that compresses the total sound energy into a one-second event.
SPC	Speech Privacy Class. SPC is a method of rating speech privacy in buildings. It is designed to measure the degree of speech privacy provided by a closed room, indicating the degree to which conversations occurring within are kept private from listeners outside the room.
STC	Sound Transmission Class. STC is an integer rating of how well a building partition attenuates airborne sound. It is widely used to rate interior partitions, ceilings/floors, doors, windows and exterior wall configurations. The STC rating is typically used to rate the sound transmission of a specific building element when tested in laboratory conditions where flanking paths around the assembly don't exist. A larger number means more attenuation. The scale, like the decibel scale for sound, is logarithmic.
Threshold of Hearing	The lowest sound that can be perceived by the human auditory system, generally considered to be 0 dB for persons with perfect hearing.
Threshold of Pain	Approximately 120 dB above the threshold of hearing.
Impulsive	Sound of short duration, usually less than one second, with an abrupt onset and rapid decay.
Simple Tone	Any sound which can be judged as audible as a single pitch or set of single pitches.

BRIDLE GATE

Traffic Impact Study

BRENTWOOD, CALIFORNIA

APRIL 2020 | DRAFT 4

Prepared By:

Kimley»Horn

EXECUTIVE SUMMARY

This report documents the results of a traffic impact analysis completed for Bridle Gate, an approximately 134-acre development located west of State Route 4 at Sand Creek Road in Brentwood, California (the "project"). This study analyzes two proposed uses of the site that consist of single family homes, multi-family development, and commercial development.

The first development scenario includes:

- Single-Family Development: 328 homes
- Multi-Family Development: 258 units
- Commercial Development: 199,940 square feet

The second development scenario includes:

- Single-Family Development: 265 homes and a Brentwood Union School District K-5 Elementary School
- Multi-Family Development: 258 units
- Commercial Development: 199,940 square feet

It is assumed that the elementary school will be a public school and accommodate between 700 and 750 students, with an option to grow to 900 students over time. To be conservative, the trip generation for development scenario 2 assumes 900 students.

The purpose of this impact analysis is to identify potential environmental impacts to transportation facilities as required by the California Environmental Quality Act (CEQA). This traffic study was prepared based on criteria set forth by the City of Brentwood and Contra Costa Transportation Authority (CCTA).

Primary access to the site will be provided via extension of Sand Creek Road west of SR-4, extension of San Jose Avenue west of Saint Regis Avenue, and extension of Saint Regis Avenue north of San Jose Avenue. The following intersections and routes of regional significance are included in this evaluation:

Intersections

1. Lone Tree Way / Heidorn Ranch Road/Fairside Way
2. Lone Tree Way / SR-4 SB Ramps
3. Lone Tree Way / Jeffrey Way/SR-4 NB Entrance Ramp
4. Jeffrey Way / SR-4 NB Ramps
5. Sand Creek Road / Heidorn Ranch Road (Future)
6. Sand Creek Road / San Jose Avenue (Future)
7. Sand Creek Road / SR-4 SB Ramps
8. Sand Creek Road / SR-4 NB Ramps
9. Sand Creek Road / Sand Creek Crossing/Streets of Brentwood
10. Sand Creek Road / Shady Willow Lane/Highland Way
11. Sand Creek Road / Fairview Avenue
12. San Jose Avenue / St. Regis Avenue
13. San Jose Avenue / Portofino Drive
14. San Jose Avenue/ Fairview Avenue
15. Balfour Road / SR-4

16. Balfour Road / SR-4 SB Ramps (Future)
17. Balfour Road / SR-4 NB Ramps (Future)
18. Balfour Road / American Avenue / West Country Club Drive
19. Balfour Road / Foothill Drive / East Country Club Drive
20. West Country Club Drive / Presidio Drive
21. East Country Club Drive / Roundhill Drive

Routes of Regional Significance

1. Lone Tree Way
2. Sand Creek Road
3. Fairview Avenue
4. Balfour Road
5. SR-4

Based on the City's requirements, this traffic impact analysis was conducted for the study facilities for the following scenarios:

A. Existing (2017) Conditions
B. Existing (2017) plus Proposed Project Conditions
C. Existing plus Approved Projects Conditions
D. Existing plus Approved Projects plus Proposed Project Conditions
E. Cumulative (2040) Conditions
F. Cumulative (2040) plus Proposed Project Conditions

Significant findings of this study include:

- The proposed project is estimated to generate:
    - Development Scenario 1 - 14,829 new daily trips, with 589 trips (225 in, 364 out) in the morning peak hour, and 1,220 trips (657 in, 563 out) in the afternoon peak hour
    - Development Scenario 2 - 15,439 new daily trips, with 950 trips (437 in, 513 out) in the morning peak hour, and 1,302 trips (689 in, 613 out) in the afternoon peak hour

- The new grade-separated SR-4 interchange with Balfour Road is anticipated to be completed by Existing plus Approved Project Conditions. This improvement is being funded by the East Contra County Regional Fee and Financing Authority (ECCRFFA), which collects fees from developments in the area. The project would pay its required fees to the ECCRFFA which would be considered mitigation or avoidance of potential impacts.

- As defined by the City, the addition of the proposed project to the Existing (2017), Existing plus Approved Projects, and Cumulative (2040) conditions significantly worsens conditions at the following intersections and routes of regional significance:

Existing Plus Project (Development Scenario 1 & 2)

- #14 – Fairview Avenue at San Jose Avenue
    - AM (Increased delay, LOS E) and PM (Increased delay, LOS E) Peaks – Significant Impact
- #15 – SR-4 at Balfour Road
    - PM (Increased delay, LOS F) Peaks – Significant Impact
- #18 – W Country Club Drive/ American Avenue at Balfour Road

- AM (Increased delay, LOS F)

Existing Plus Approved Projects Plus Project (Development Scenario 1 & 2)

- # 2 – SR-4 SB Ramps at Lone Tree Way
  - AM (Increased delay, LOS E) and PM (Increased delay, LOS F) Peaks – Significant Impact
- #11 – Fairview Avenue at Sand Creek Road
  - AM (Increased delay, LOS E) Peak – Significant Impact
- #14 – Fairview Avenue at San Jose Avenue
  - AM (Increased delay, LOS D-) and PM (Worsened from LOD D to LOS E) Peaks – Significant Impact
- #18 – W Country Club Drive/ American Avenue at Balfour Road
  - AM (Increased delay, LOS F)

Cumulative Plus Project (Development Scenario 1 & 2)

- # 2 – SR-4 SB Ramps at Lone Tree Way
  - AM (Increased delay, LOS F) and PM (Increased delay, LOS F) Peaks – Significant Impact
- #7 – SR-4 SB Ramps at Sand Creek Rd
  - PM (Worsened from LOS D to LOS E) Peak – Significant Impact
- #11 – Fairview Avenue at Sand Creek Road
  - AM (Increased delay, LOS E) and PM (Increased delay, LOS F) Peaks – Significant Impact
- #14 – Fairview Avenue at San Jose Avenue
  - AM (Worsened from LOS D to LOS E) and PM (Increased delay, LOS E) Peaks – Significant Impact
- #18 – W Country Club Drive/ American Avenue at Balfour Road
  - AM (Increased delay, LOS F)

The following is a summary of the mitigation measures that would be the project's responsibility:

Intersection #2 – SR-4 SB Ramps at Lone Tree Way: Mitigation #4 & #8
The installation of a second eastbound right-turn lane and the restriping of the southbound approach to provide a right-turn lane, shared right and left-turn lane, and left-turn lane will improve the intersection operations to acceptable standards. It should be noted that this intersection is located in the City of Antioch and within Caltrans right-of-way. Therefore, since the governing agency for this traffic study is the City of Brentwood and they could not implement the proposed mitigation in another agency's right-of-way, this impact would remain significant and unavoidable.

Intersection #7 – SR-4 SB Ramps at Sand Creek Road: Mitigation #9
The restriping of the southbound approach to provide a right shared left-turn lane and two left-turn lanes will improve the intersection operations to acceptable standards. It should be noted that this intersection is located within Caltrans right-of-way. Therefore, since the governing agency for this traffic study is the City of Brentwood and they could not implement the proposed mitigation in another agency's right-of-way, this impact would remain significant and unavoidable. It should also be noted that there is a future project to construct the diagonal on-ramp from eastbound Sand Creek Road to southbound SR-4. However, this project has no identified funding source or timeline and therefore was not included as an improvement or potential mitigation.

Intersection #11 – Fairview Avenue at Sand Creek Road: Mitigation #5 & #11
The restriping of the southbound approach to provide a left-turn lane, a through lane, and a shared through and right-turn lane and the change in signal timing to increase the cycle length to give more time to the eastbound and westbound through movements will improve the intersection operations to acceptable standards.

Intersection #14 – Fairview Avenue at San Jose Avenue: Mitigation #1, #6 & #11
The change in signal timing to increase the cycle length to give more time to the northbound and southbound through movements will improve the intersection operations to acceptable standards.

Intersection #15 – SR-4 and Balfour Road: Mitigation #2
The construction of the new SR-4 / Balfour Road interchange will eliminate this intersection and replace it with two new intersections that provide access to SR-4. This improvement is a planned project that is assumed to be in place under Existing plus Approved Projects and Cumulative Conditions. The interchange and associated SR-4 widening is being funded by ECCRFFA. The project applicant would be required to pay their ECCRFFA fees for development which would be considered mitigation for the impact at this location. The interchange improvement improves the intersection operations to acceptable standards.

Intersection #18 – W Country Club Drive/ American Avenue at Balfour Road: Mitigation #3, #7 & #12
The addition of a third westbound left turn lane on Balfour road is recommended. Queue storage would be lengthened. Signage will be placed along Balfour Road and on the Signal Gantry to improve lane utilization and access to the school sire. These recommendations will improve the intersection operations to acceptable standards.

Prior to issuance of the first building permit, the applicant shall design and construct the improvements needed to accommodate a third westbound left turn lane. With the installation of the third left turn lane, the project would mitigate its impact.

The impact on transit, pedestrian or bicycle facilities is determined to be less than significant.

1 INTRODUCTION

Kimley-Horn and Associates, Inc. was retained by Raney Planning and Management, Inc., to prepare a traffic study for a proposed residential and commercial development in Brentwood, California (i.e. the "Project"). Brentwood is in Contra Costa County, southeast of the City of Antioch and south of the City of Oakley.

The proposed project consists of approximately 134 acres, located west of State Route 4 at Sand Creek Road. This study analyzes two proposed uses of the site that consist of a mixture of single family homes, multi-family complexes, and retail uses.

The first development scenario includes:

- Single-Family Development: 328 homes
- Multi-Family Development: 258 units
- Commercial Development: 199,940 square feet

The second development scenario includes:

- Single-Family Development: 265 homes and a Brentwood Union School District K-5 Elementary School
- Multi-Family Development: 258 units
- Commercial Development: 199,940 square feet

It is assumed that the elementary school will be a public school and accommodate between 700 and 750 students, with an option to grow to 900 students over time. To be conservative, the trip generation for development scenario 2 assumes 900 students.

This study addresses the traffic and transportation effects of the proposed project in order to assist the project sponsor and affected jurisdictions in project planning and determining conditions of approval for the project. This traffic study was prepared based on criteria set forth by the City of Brentwood and Contra Costa Transportation Authority (CCTA).

1.1 STUDY METHODOLOGY

The following section describes the methodology used to determine study intersections, analyze study area conditions, and determine significant traffic impacts.

DEVELOPMENT CONDITIONS

This traffic impact study includes evaluation of the following development conditions:

- **Existing Conditions (2017)**
  - ***Existing Baseline Conditions:*** Represents the traffic conditions of the existing street network. Based on the traffic counts collected in September 2017 and existing roadway geometry and traffic control.

- ***Existing plus Project Conditions:*** Represents the traffic conditions of the existing street network with the addition of the proposed project (both development scenarios). Includes roadway geometry and traffic control anticipated with the completion of the project.

- **Existing plus Approved Projects Conditions**
  - ***Existing plus Approved Projects Baseline Conditions:*** Represents the traffic conditions of the street network assumed to be in place at project buildout. Based on traffic associated with several development projects in the vicinity of the proposed project. Includes roadway geometry and traffic control anticipated with the completion of reasonably foreseeable roadway projects.
  - ***Existing plus Approved Projects plus Project Conditions***: Represents the Existing plus Approved Projects traffic conditions with the addition of the proposed project (both development scenarios). Includes roadway geometry and traffic control anticipated with the completion of the project.

- **Cumulative Conditions (2040)**
  - ***Cumulative Baseline Conditions:*** Represents the traffic conditions of the street network assumed to be in place under Cumulative Conditions using the latest version of the CCTA travel demand model. Includes roadway geometry and traffic control anticipated to be present in 2040.
  - ***Cumulative plus Project Conditions:*** Represents the Cumulative traffic conditions with the addition of the proposed project (both development scenarios). Includes roadway geometry and traffic control anticipated with the completion of the project.

OPERATING CONDITIONS AND CRITERIA FOR INTERSECTIONS

Analysis of significant environmental impacts at intersections is based on the concept of Level of Service (LOS). The LOS of an intersection is a qualitative measure used to describe operational conditions. LOS ranges from A (best), which represents minimal delay, to F (worst), which represents heavy delay and a facility that is operating at or near its functional capacity. Levels of Service for this study were determined using methods defined in the Highway Capacity Manual, 2010 (HCM) and appropriate traffic analysis software.

The HCM included procedures for analyzing side-street stop-controlled (SSSC), all-way stop-controlled (AWSC), and signalized intersections. The SSSC procedure defines LOS as a function of average control delay for each minor street approach movement. Conversely, the AWSC and signalized intersection procedures define LOS as a function of average control delay for the intersection as a whole. **Table 1-1** relates the operational characteristics associated with each LOS category for signalized and unsignalized intersections.

Table 1–1 Intersection LOS Definitions

Level of Service	Description	Signalized (Avg. control delay per vehicle sec/veh.)	Unsignalized (Avg. control delay per vehicle sec/veh.)
A	Free flow with no delays. Users are virtually unaffected by others in the traffic stream	≤ 10	≤ 10
B	Stable traffic. Traffic flows smoothly with few delays.	> 10 – 20	> 10 – 15
C	Stable flow but the operation of individual users becomes affected by other vehicles. Modest delays.	> 20 – 35	> 15 – 25
D	Approaching unstable flow. Operation of individual users becomes significantly affected by other vehicles. Delays may be more than one cycle during peak hours.	> 35 – 55	> 25 – 35
E	Unstable flow with operating conditions at or near the capacity level. Long delays and vehicle queuing.	> 55 – 80	> 35 – 50
F	Forced or breakdown flow that causes reduced capacity. Stop and go traffic conditions. Excessive long delays and vehicle queuing.	> 80	> 50

Sources: Transportation Research Board, *Highway Capacity Manual 2010*, National Research Council, 2010

For unsignalized intersections, traffic signals may be justified when traffic operations fall below acceptable thresholds and when one or more signal warrants are satisfied. Traffic volumes at the unsignalized study intersections were compared against the peak hour warrant in the 2014 California Manual on Uniform Traffic Control Devices (CA MUTCD)[1]. Traffic Signal Warrant #3 – Peak Hour Volume Warrant is satisfied when traffic volumes on the major and minor approaches exceed thresholds for one hour of the day. The Peak Hour Warrant is generally the first warrant to be satisfied. Other warrants such as for minimum vehicle volumes, interruption of continuous traffic, and traffic progression were not evaluated because they generally require higher traffic volumes to be satisfied.

ROUTES OF REGIONAL SIGNIFICANCE

Contra Costa County Measure C established a sales tax to be used to fund transportation improvements in Contra Costa County. The measure included a growth management program and required CCTA to develop a comprehensive transportation plan and update it every other year. Measure J, approved by the voters of Contra Costa in November 2004, extended the Measure C half sales tax for transportation through to 2034. It went into effect on April 1, 2009.

To receive a share of the sales tax generated by Measure J, local jurisdictions must adhere to the LOS standards that Measure J applies to local streets and roads. The Measure J standards are applied to streets and roads for which the jurisdictions are responsible. Each jurisdiction must take appropriate action to ensure that the LOS standards are met, including routes of regional significance. Designated regional

[1] *California Manual on Uniform Traffic Control Devices*, (FHWA's MUTCD 2009 Edition, as amended for use in California), 2014 Edition, Revision 2, April 7, 2017.

routes include all the freeways and state highways, and the most significant arterials in Contra Costa County.

CCTA classifies several roadways within or near the Project area as suburban arterial routes of regional significance. These routes include Balfour Road, Fairview Avenue, Lone Tree Way, and Sand Creek Road[2]. Suburban arterial routes are roadway segments where the capacity and quality of service are typically controlled by the operations of the signalized intersections. Per the *East County Action Plan for Routes of Regional Significance* (September 2017), suburban arterial routes should maintain LOS D or better at all signalized intersections, except on Bailey Road or at Traffic Management Program (TMP) sites.

FREEWAYS

CCTA's routes of regional significance also include the SR-4 freeway. SR-4 is currently a two-lane highway north and south of the signalized intersection with Balfour Road and changes to a grade-separated freeway in future scenarios. Per the *East County Action Plan for Routes of Regional Significance* (September 2017), SR-4 must be evaluated using delay index as a measure of effectiveness. Delay index is a comparison of congested travel time to free-flow travel time along the route. Delay Index for routes of regional significance in East County should not exceed 2.5 during the AM or PM Peak Period. In addition, the HOV lane utilization should exceed 600 vehicles per lane in the peak direction during the peak hour.

THRESHOLDS OF SIGNIFICANCE

Project impacts are determined by comparing conditions with the proposed project to those without the proposed project. Significant impacts for intersections are created when traffic from the proposed project causes the LOS to fall below a specific threshold.

Intersections

The City of Brentwood and CCTA accepts a minimum level of service of D at signalized and unsignalized study intersections. Therefore, the following conditions would result in a significant impact at an intersection within the study area:

1. If the intersection operates at an acceptable LOS (i.e. A, B, or C, or D) without the project and degrades to an unacceptable LOS (i.e. E, or F) with the project, then it is a significant impact.

2. If the intersection operates at an unacceptable LOS (i.e. E, or F) without the project and the project increases the delay at the intersection, then it is a significant impact.

STUDY INTERSECTIONS INCLUDED IN ANALYSIS

The proposed project will generate new vehicular trips that will increase traffic volumes on the nearby street network. To assess changes in traffic conditions associated with the proposed project, the following intersections were selected for evaluation in this traffic study in concurrence with the City of Brentwood:

1. Lone Tree Way / Heidorn Ranch Road/Fairside Way
2. Lone Tree Way / SR-4 SB Ramps
3. Lone Tree Way / Jeffrey Way/SR-4 NB Entrance Ramp

20. West Country Club Drive / Presidio Drive
21. East Country Club Drive / Roundhill Drive

These study intersections are illustrated in **Figure 1-1**.

OTHER STUDY FACILITIES

The following routes of regional significance were also evaluated in this traffic impact analysis:

Suburban Arterial Routes

1. Lone Tree Way
2. Sand Creek Road
3. Fairview Avenue
4. Balfour Road

Freeway

1. SR-4

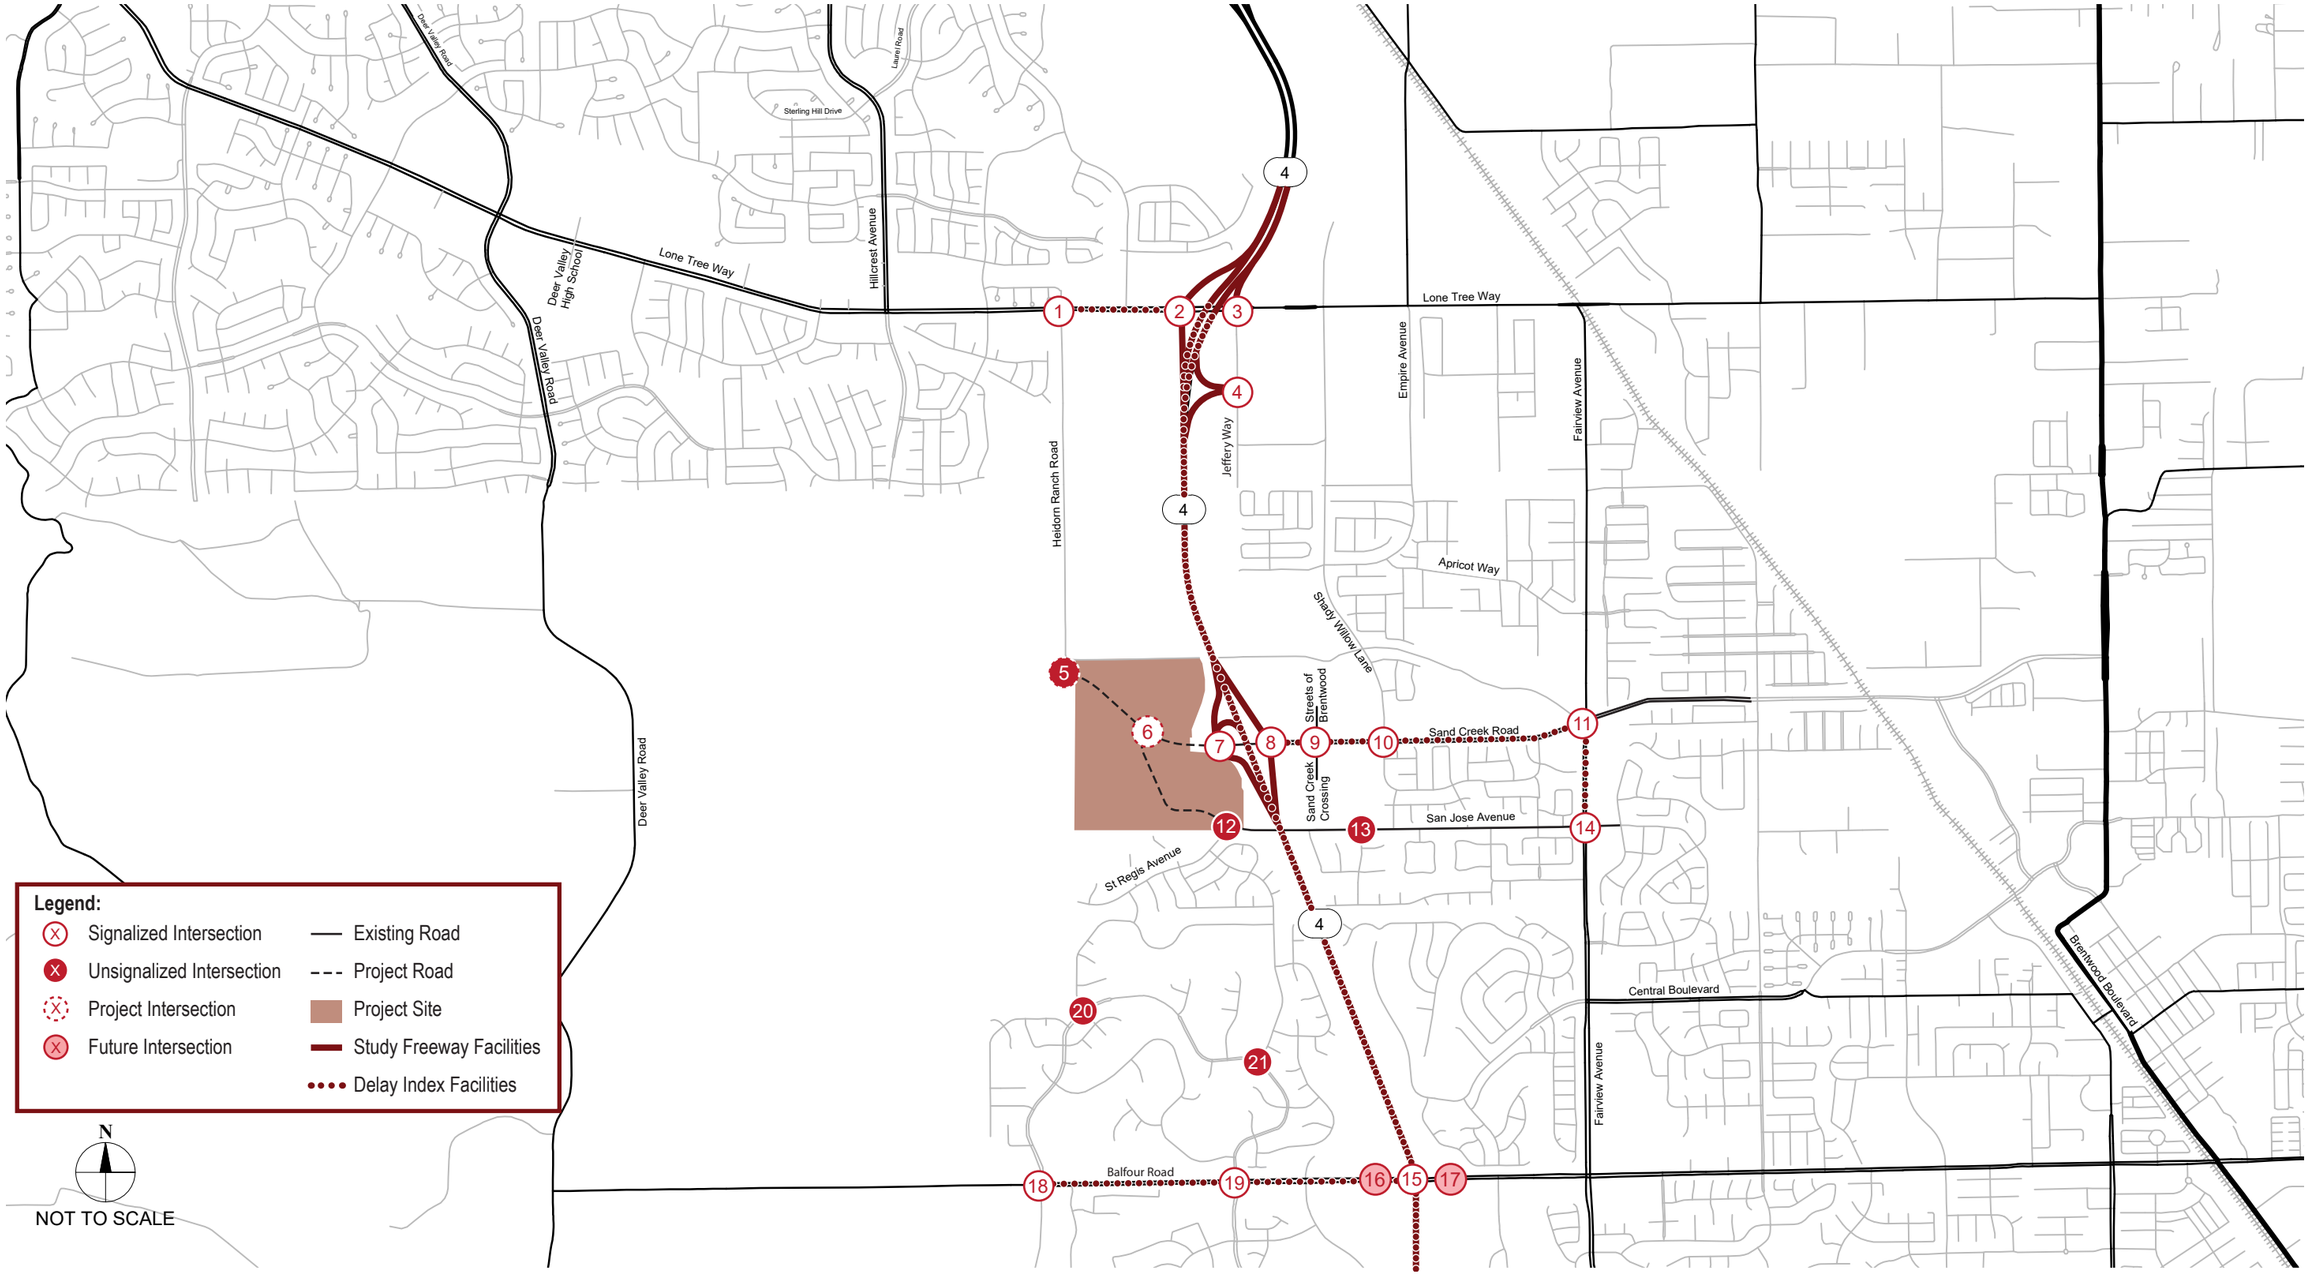

Figure 1-1
Project Location and Study Intersections

1.2 PROJECT DESCRIPTION

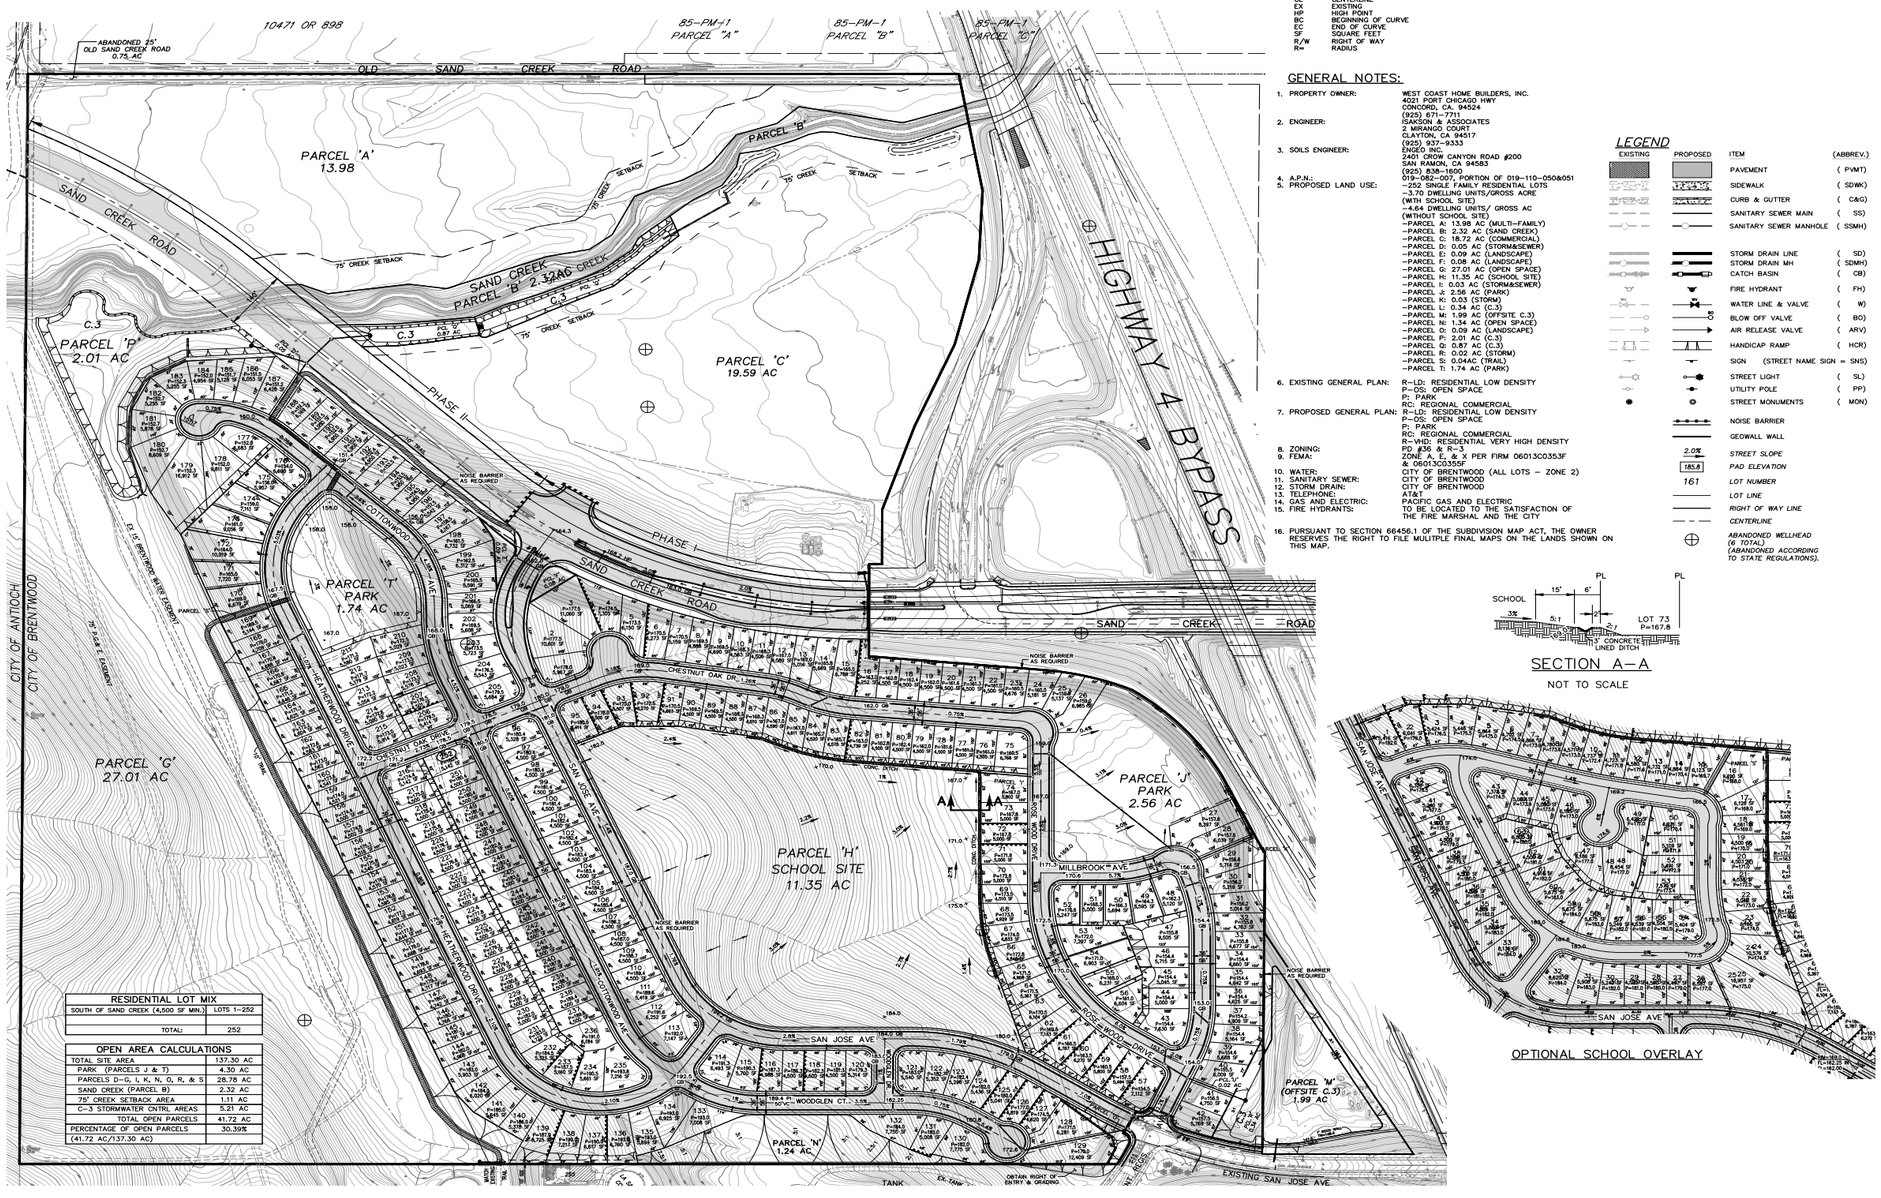
The proposed project site consists of approximately 134 acres and is located west of SR-4 and south of Sand Creek Road. For the purposes of providing flexibility in the ultimate site layout but obtaining approval on the proposed project, two development scenarios are analyzed. The project location is shown in **Figure 1-1** and the project's proposed site plan and subarea designation is shown in **Figure 1-2**.

The first development scenario includes:

- Single-Family Development: 328 homes
- Multi-Family Development: 258 units
- Commercial Development: 199,940 square feet

The second development scenario includes:

- Single-Family Development: 265 homes and a Brentwood Union School District K-5 Elementary School
- Multi-Family Development: 258 units
- Commercial Development: 199,940 square feet



It is assumed that the elementary school will be a public school and accommodate between 700 and 750 students, with an option to grow to 900 students over time. To be conservative, the trip generation for development scenario 2 assumes 900 students.

The proposed project would construct several roadways and intersections that would only be in place with the project and are assumed to be in place for all analyses that include the project traffic. Vehicular access to the proposed single-family residential area would be provided at Sand Creek Road and San Jose Avenue. Access to the multi-family apartment complex would be provided by a new roadway extending southward from Old Sand Creek Road to the proposed Sand Creek Road extension. An internal circulation system would be provided throughout the proposed single-family residential subdivision. A summary of these improvements are as follows:

- Extension of Sand Creek Road west of SR-4 to Heidorn Ranch Road
- Extension of San Jose Avenue west from Saint Regis Avenue to its termination in the residential areas of the project
- Extension of Saint Regis Avenue north from San Jose Avenue to its termination in the residential areas of the project
- Construction of new roadway extending southward from Old Sand Creek Road to the proposed Sand Creek Road extension

The following future intersections are assumed to only be in place with the project and are assumed to be in place for all analyses that include the project traffic:

5. Sand Creek Road / Heidorn Ranch Road
6. Sand Creek Road / San Jose Avenue

Figure 1-2
Bridle Gate Development Site Plan

2 EXISTING CONDITIONS

This section summarizes the existing roadway circulation network, daily and peak-hour traffic volumes, and operations at the study intersections and roadway segments.

CURRENT USE OF SITE

The site is currently undeveloped and does not generate any trips. The adjacent street network is built up to the limits of the site and the proposed project will tie into the existing truncated streets.

ADJACENT STREET SYSTEM

The following is a description of the principal roadways included in this study:

State Route 4 (SR-4) provides east-west connectivity between Interstate 80 (I-80) and the Sierra Nevada mountains, connecting with Interstate 680 (I-680) and State Route 160 west of the project site. State Route 4 passes through Antioch and Brentwood north-south where the project is located, and continuing east towards Stockton where it connects with Interstate 5 (I-5), State Route 99 (SR-99), and terminates in the Sierra Nevada Mountains at State Route 89. There are several projects currently planned that ultimately will expand SR-4 from four to eight lanes between Loveridge Road and SR-160, add a Bay Area Rapid Transit (BART) extension from Pittsburg to Antioch, improve the SR-160 and SR-4 Connector Ramps, and construct a grade-separated interchange at Balfour Road. Within the City of Brentwood, SR-4 was formerly known as the State Route 4 Bypass, but it has recently been changed to be part of State Route 4. As part of the improvements associated with becoming SR-4, the existing road will eventually be widened to a 4-lane divided freeway with interchanges at Lone Tree Way, Sand Creek Road, Balfour Road, Marsh Creek Road, and Walnut Boulevard.

Lone Tree Way is a major arterial that has six lanes and is located at the north end of the project area. Lone Tree Way runs north-south in Antioch, turns east-west and intersects with SR-4 near Brentwood, and terminates just east of Brentwood Boulevard. This roadway provides regional connectivity from the project area to the City of Antioch, and is fronted by, and provides direct access to, many commercial land uses. The posted speed limit is 45 mph.

Sand Creek Road is a major arterial that has four travel lanes and currently provides east-west connections from SR-4 to just east of Garin Parkway. Sand Creek Road would be the primary connection to the proposed project and currently provides access to major retail centers just east of SR-4. The Sand Creek Road and SR-4 interchange project was completed in early November 2013 as part of the SR-4 development plan. Sand Creek Road is planned to be extended east of Garin Boulevard to Sellers Avenue and west of SR-4 to Deer Valley Road. The posted speed limit is 45 mph between Highway 4 and O'Hara Avenue and 35 mph between O'Hara Avenue and Garin Parkway.

Balfour Road is a major arterial that has four travel lanes and is located at the south end of the project area. Balfour Road runs east-west, terminates at Deer Valley Road to the west and becomes Fallman Boulevard east of Bixler Road, providing access from downtown Brentwood to/from unincorporated areas within Contra Costa County.

Fairview Avenue is a north-south arterial roadway which connects from Lone Tree Way on the north end and becomes Vineyards Parkway just south of SR-4, providing access to residential neighborhoods throughout Brentwood. Fairview Avenue is a major arterial between Sand Creek Road and Balfour Road where it has four travel lanes, and a minor arterial between Sand Creek Road and Lone Tree Way where it has two travel lanes. The posted speed limit is 35 mph between Lone Tree Way and Sand Creek Road and 45 mph between Sand Creek Road and Balfour Road.

Shady Willow Lane has four travel lanes and is a north-south minor arterial connecting Lone Tree Way to Sand Creek Road, providing access to commercial and residential areas. The posted speed limit 35 mph between Lone Tree Way and Grant Street and 45 mph between Grant Street and Sand Creek Road.

Other roadways incorporated in this analysis (i.e. San Jose Avenue, Country Club Drive) are local roads that provide connectivity to surrounding neighborhoods and/or other portions of the City.

2.1 EXISTING LANE CONFIGURATIONS AND TRAFFIC CONTROL

Existing intersection lane configurations and traffic controls are illustrated in **Figure 2-1**. The study intersections are also listed below with existing traffic control:

Signalized Intersections

- #1 – Lone Tree Way at Heidorn Ranch Road/Fairside Way
- #2 – Lone Tree Way at SR-4 SB Ramps
- #3 – Lone Tree Way at Jeffery Way/SR-4 NB Entrance Ramp
- #4 – Jeffery Way at SR-4 NB Ramps
- #7 – Sand Creek Road at SR-4 SB Ramps
- #8 – Sand Creek Road at SR-4 NB Ramps
- #9 – Sand Creek Road at Streets of Brentwood
- #10 – Sand Creek Road at Shady Willow Lane/Highland Way
- #11 – Sand Creek Road at Fairview Avenue
- #14 – San Jose Avenue at Fairview Avenue
- #15 – Balfour Road at SR-4
- #18 – Balfour Road at American Avenue/ W Country Club Drive

- #6 – Sand Creek Road at San Jose Avenue (Signal)

2.2 EXISTING TRANSIT FACILITIES

Transit service in the City of Brentwood is provided by Tri-Delta Transit (TDT). TDT currently operates two routes (383 and 385) on weekdays and two routes on weekends (383 and 395) that serve the project area. Route 383 runs from the Antioch Park & Ride (Hillcrest) east to the City of Oakley, south to the City of Brentwood, crosses back west into the City of Antioch via Lone Tree Way and returns to the Park & Ride via Deer Valley Road. Route 385 runs between the Antioch Park & Ride (Hillcrest) and the Brentwood Park & Ride, using local streets including Hillcrest Avenue, Lone Tree Way, Sand Creek Road, Fairview Avenue, and Balfour Road as well as SR-4 to approach its selected trips to American Avenue. Route 395, runs from the Antioch Park & Ride (Hillcrest) south on SR-4 to Lone Tree Way where it heads east and then south to connect with Sand Creek Road before heading north on SR-4 back to the Antioch Park & Ride. Bus routes in the vicinity of the project are illustrated in **Figure 2-2** and more detailed routes are provided in **Appendix A**. TDT and the City of Brentwood also provide a dial-a-ride service for the elderly and handicapped population.

2.3 EXISTING BICYCLE AND PEDESTRIAN FACILITIES

Sand Creek Road, Balfour Road, Fairview Avenue, E Country Club Drive, W Country Club Drive, and Shady Willow Lane all generally provide a striped (Class II) bike lane and sidewalk facilities. San Jose Avenue and St. Regis Avenue both have Class II bicycle lanes near the project site. Lone Tree Way lacks bicycle facilities and is designed to accommodate vehicles, but provides sidewalks on both sides of the street. Pedestrians and bicyclists are prohibited on SR-4.

The City of Brentwood Parks and Recreation Department has bicycle and pedestrian trail locations across the city including within the project area. Asphalt trails run along Lone Tree Way, SR-4 between San Jose Avenue and Castellina Drive, Fairview Avenue and along Old Sand Creek Road crossing Fairview Avenue. Concrete trails run along Balfour Road east of SR-4 and Sand Creek Road, crossing Fairview Avenue.

In addition, the Class I Mokelumne Coast to Crest Trail exists along the Marsh Creek Trail and the East Bay Municipal Utility District's Mokelumne Aqueduct right-of-way. Near the project area the trail currently has a connection across SR-4 north of the project area. The trail will ultimately run between the Sierra Nevada Mountains and the Oakland/Jack London Square shoreline.

2.4 EXISTING PEAK HOUR TURNING MOVEMENT VOLUMES

Weekday intersection turning movement volumes for the 17 existing study intersections were collected on Wednesday, September 13, 2017 by All Traffic Data. Volumes were collected during the AM (7-9 AM) and PM (2-6 PM) peak periods of the weekday when local schools were in session. The extended afternoon period was used to capture the afternoon school peak traffic. The PM commute peak was determined to be the higher afternoon peak and was used for the analysis.

On the day the counts were collected, Heritage High School had a late start. To capture the traffic patterns during a regular day schedule, weekday intersection turning movement volumes collected on Tuesday,

February 14, 2017 were also used for the study intersections along Balfour Road during the AM peak period.

Intersection volume data sheets for all traffic counts are provided in **Appendix B**. The existing peak-hour turning movement volumes used are shown in **Figure 2-3**.

2.5 EXISTING LOS AT STUDY INTERSECTIONS

Traffic operations were evaluated at the study intersections under Existing Conditions. Results of the analysis are presented in **Table 2-1**.

As shown in the table, the study intersections that currently do not function within acceptable standards are:

- #14 – Fairview Avenue at San Jose Avenue
    - AM (LOS E) and PM (LOS E) Peaks
- #15 – SR-4 and Balfour Road
    - PM (LOS F) Peak
- #18 – W Country Club Drive/ American Avenue at Balfour Road
    - AM (LOS E)

These are preexisting deficiencies and not a result of the proposed project. Analysis sheets are provided in **Appendix C**.

2.6 EXISTING FREEWAY ANALYSIS

Traffic operations were evaluated at SR-4 under Existing Conditions. Results of the analyses are presented in **Table 2-2**. As shown in the Table, SR-4 between Lone Tree Way and Balfour functions within acceptable standards under Existing Conditions.

Analysis sheets are provided in **Appendix C**.

Bold indicates a segment with a delay index greater than the allowable threshold of 2.5.

(a) Travel Time and Free-Flow Time are measured in seconds

Results were obtained using HCM freeway facility level of service analysis. The travel time is calculated using the average travel speed or free flow speed and segment length.

3 TRAFFIC IMPACT ANALYSIS

The following section describes the trip generation, distribution and assignment related to the proposed project.

3.1 PROJECT TRIP GENERATION

Trip generation for development projects is typically calculated based on information contained in the most recent edition of the Institute of Transportation Engineer's (ITE) publication, *Trip Generation Manual*[3]. The Trip Generation Manual is a standard reference used by jurisdictions throughout the country for the estimation of trip generation potential of proposed developments. A trip is defined in the Trip Generation Manual as a single or one-directional vehicle movement with either the origin or destination at the project site. In other words, a trip can be either "to" or "from" the site. As a result, a single customer visit to a site is counted as two trips (i.e., one to and one from the site).

For purposes of determining the worst-case impacts of traffic on the surrounding street network, the trips generated by a proposed development are typically estimated between the hours of 7:00-9:00 AM and 4:00-6:00 PM on a weekday. While the project itself may generate more traffic during some other time of the day or week, the peak of "adjacent street traffic" represents the time period when the uses generally contribute to the greatest amount of congestion, with the PM peak commonly being the greatest congestion period.

The proposed development is most appropriately classified as categories defined by ITE: Shopping Center (ITE Land Use 820), Single-Family Detached Housing (ITE Land Use 210), Apartment (ITE Land Use 220), and Elementary School (ITE Land Use 520). Trip generation calculations were performed based on gross floor area of the shopping center land use, the number of units for the housing land use, and the number of students for the school land use.

Internal capture reductions were considered to account for the interaction of separate uses within a multi-use development. A key characteristic of such development is that trips among the various land uses can be made on-site, thus resulting in internal trips that would not affect the offsite roadway network. Internal capture calculations were conducted following ITE methodologies contained in the Trip Generation Manual for the proposed development during the AM peak hour, PM peak hour, and daily periods. However, the Caltrans *Guide for the Preparation of Traffic Impact Studies*[4] accepts a maximum internal capture rate of five percent. Therefore, for the purposes of this study, a conservative internal capture rate of five percent was used. The internal capture reduction was applied to the Apartment and Shopping Center land uses to reflect the interactions between the shopping center and housing units in the northern portion of the site.

Pass-by trip reductions are typically considered to account for trips that will already be on the road and will likely stop as they pass by the site. Data published in ITE's Trip Generation Manual indicates that a Shopping Center land use has an average PM pass-by rate of 29 percent. No pass-by rate is provided for the AM peak hour because shopping centers are typically not open during the AM peak. No pass-by reductions are appropriate for a housing development. The Caltrans Guide for the Preparation of Traffic

[3] *Trip Generation Manual*, 9th Edition, Institute of Transportation Engineers, 2012.

[4] *Guide for the Preparation of Traffic Impact Studies*, Caltrans, December 2002.

Impact Studies accepts a maximum pass-by rate of 15 percent; therefore, a pass-by reduction of 15 percent was used for the Shopping Center in the PM peak.

Net trip generation for the two development scenarios for the proposed project are presented in **Table 3-1** and **Table 3-2**.

Table 3–1 Project Trip Generation for Development Scenario 1

Land Use	ITE Code	Size	Daily Trips	AM Peak Hour			PM Peak Hour		
				Total	In	Out	Total	In	Out

1. Per Caltrans *Guide for the Preparation of traffic Impact Studies*. Applied to Daily/AM/PM trips for Apartment and Shopping Center uses.
2. Per Caltrans *Guide for the Preparation of traffic Impact Studies*. Applied to PM trips for Shopping Center land use only.

As shown in the table, under Development Scenario 2, the proposed project is expected to generate a net 15,439 new daily trips, with 950 trips (437 in, 513 out) in the morning peak hour, and 1,302 trips (689 in, 613 out) in the afternoon peak hour.

3.2 PROJECT TRIP DISTRIBUTION AND ASSIGNMENT

Project distribution was developed based on existing traffic count information, general orientation of population sources to the site, and information obtained from the CCTA travel forecast model. **Figure 3-1** presents the traffic distribution assumed under Existing Conditions. There are different distribution patterns for existing, opening year and cumulative conditions, as the surrounding area would experience changes in land use and roadway networks between existing and cumulative scenarios. Additional project distribution information is provided in **Appendix C**.

Based on the assumed trip distribution, new vehicle trips generated by the project were assigned to the street network. The project generated traffic volumes for the two development scenarios under Existing Conditions are shown in **Figure 3-2** and **Figure 3-3**. These figures represent total trips on the network, including pass-by and internal capture reductions.

Figure 3-3

Total Project Generated Traffic Volumes for Development Scenario 2 (Existing Conditions)

3.3 PLANNED ROADWAY PROJECTS IN VICINITY OF SITE

As part of the proposed project, Sand Creek Road will be extended to the west and connect with Heidorn Ranch Road, and San Jose Avenue will be extended west and new intersections will be created within the project site. The planned project improvements are illustrated in the site plan shown in **Figure 1-2**.

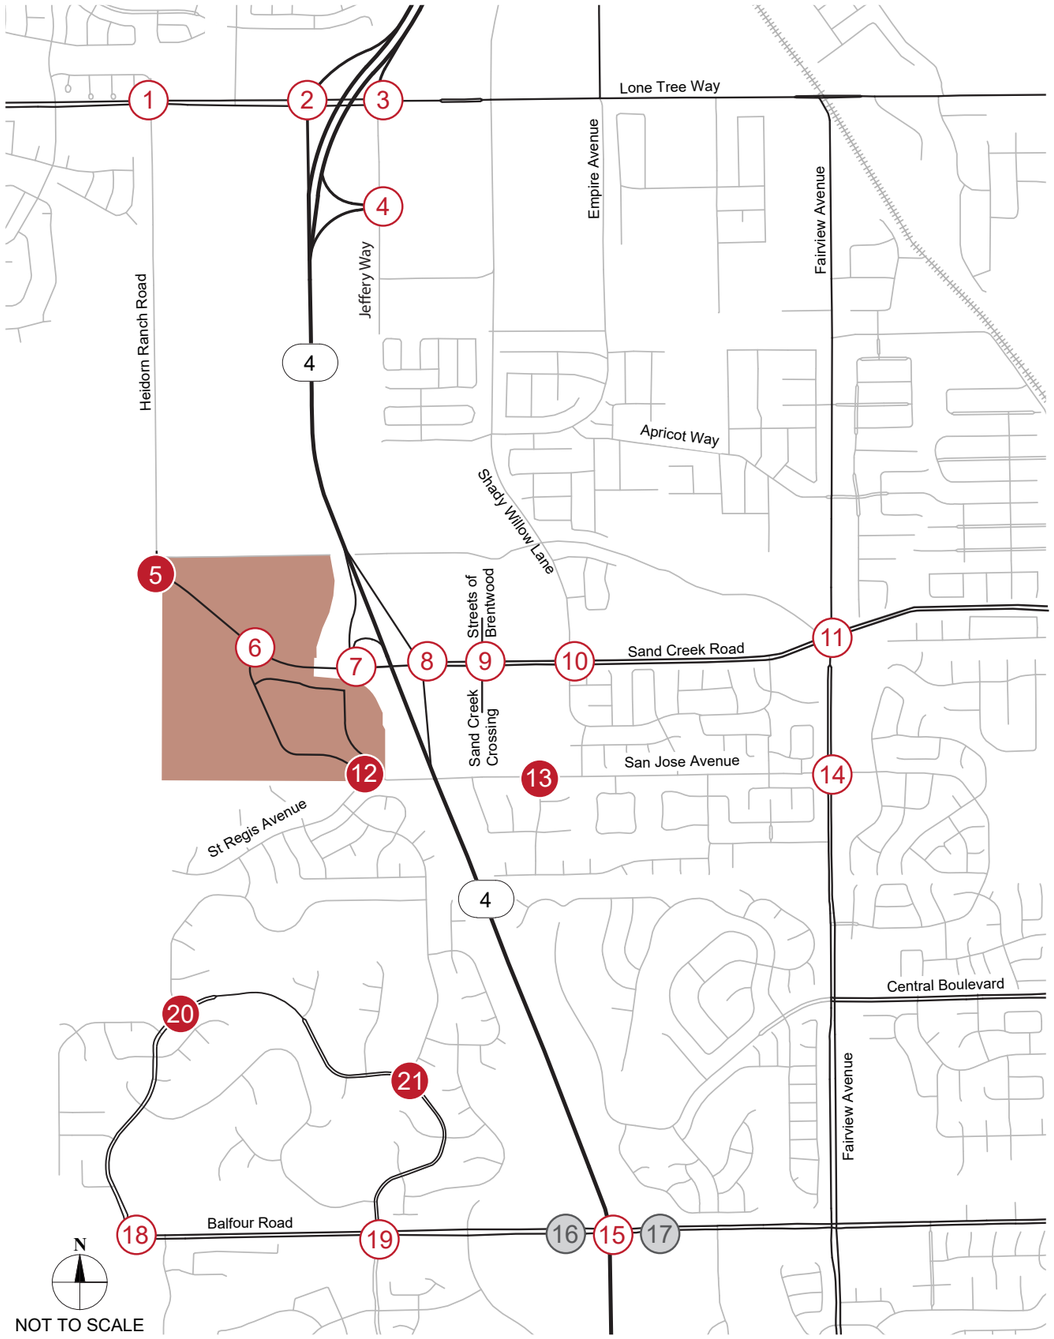
Figure 3-4 illustrates the intersection geometry and traffic control assumed under Existing plus Project Conditions.

3.4 EXISTING PLUS PROJECT LOS AT STUDY INTERSECTIONS

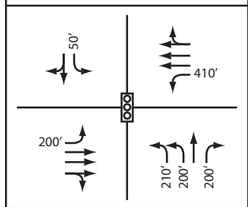
Existing plus Project Conditions peak hour volumes were evaluated at the study intersections under both development scenarios and are presented in **Figure 3-5** and **Figure 3-6**. Results of the analysis are presented in **Table 3-3**. Locations operating unacceptably are bolded. As shown in the table, the following intersections would operate below acceptable LOS under Existing plus Project Conditions:

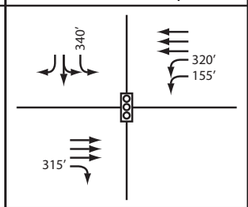
Development Scenario 1

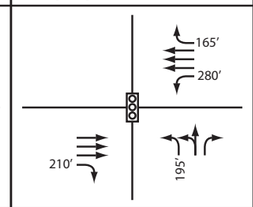
- #14 – Fairview Avenue at San Jose Avenue
    - AM (Increased delay, LOS E) and PM (Increased delay, LOS E) Peaks – Significant Impact
- #15 – SR-4 and Balfour Road
    - PM (Increased delay, LOS F) Peak – Significant Impact
- #18 – W Country Club Drive/ American Avenue at Balfour Road
    - AM (Increased delay, LOS F) – Significant Impact

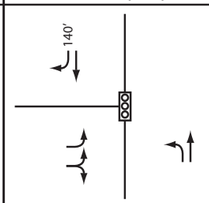


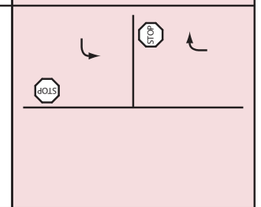
Development Scenario 2

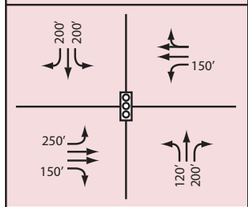


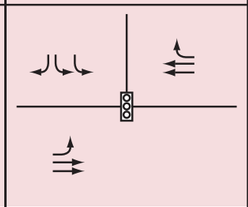


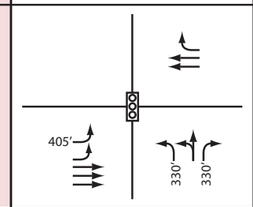


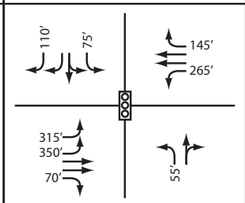


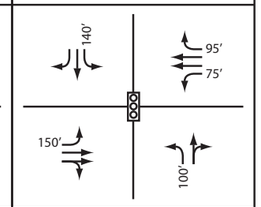


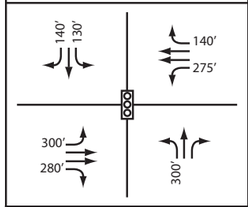


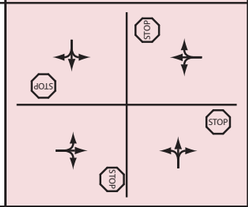


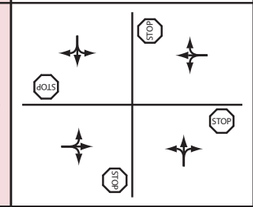


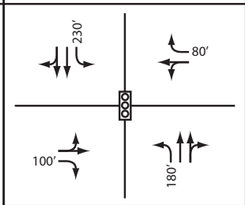


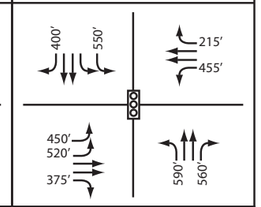


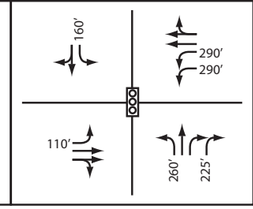


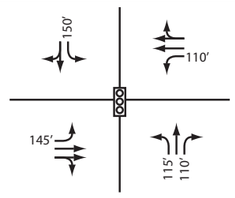


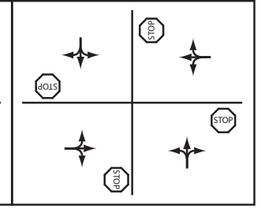


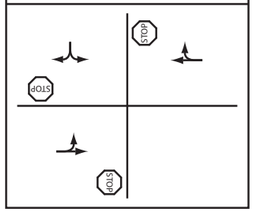








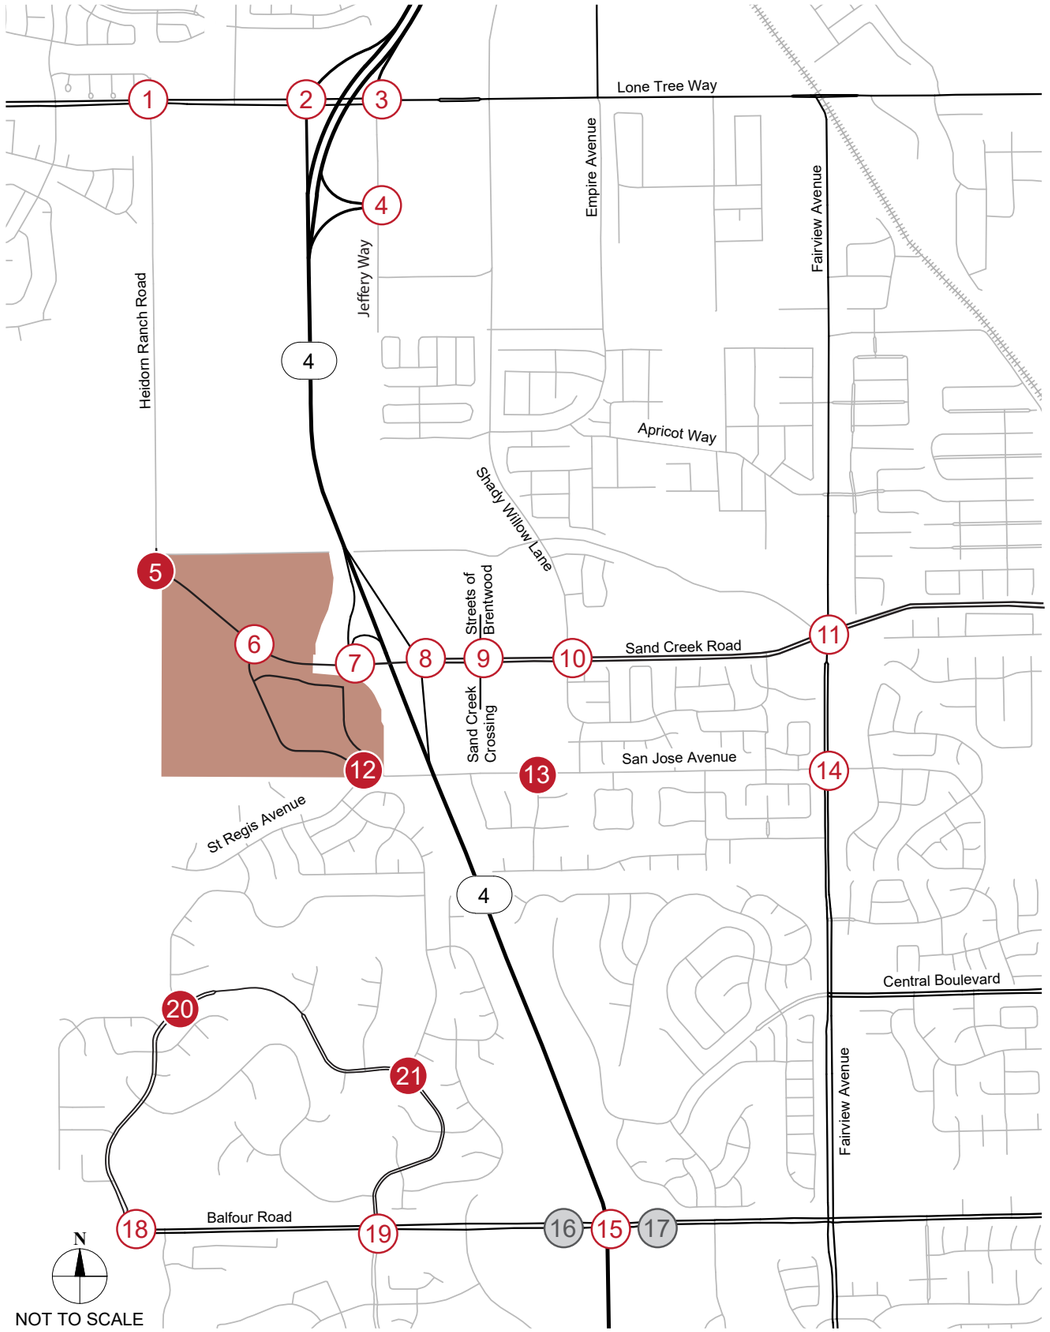




- #14 – Fairview Avenue at San Jose Avenue
    - AM (Increased delay, LOS E) and PM (Increased delay, LOS E) Peaks – Significant Impact
- #15 – SR-4 and Balfour Road
    - PM (Increased delay, LOS F) Peak – Significant Impact
- #18 – W Country Club Drive/ American Avenue at Balfour Road
    - AM (Increased delay, LOS F) – Significant Impact

Intersections #2 and #8 show a small decrease in delay with the addition of the proposed project during the AM peak hour. These intersections are freeway ramps and the proposed project adds traffic primarily to movements with a lower delay than other movements, this brings the average intersection delay down as a result of the increase volume. Intersection #18 also shows a small decrease in delay with the addition of the proposed project during the PM peak hour. At this intersection, the proposed project adds traffic primarily to Balfour Road through movements which have a lower delay than other movements, bringing the average intersection delay down as a result of the increase volume. Analysis sheets are provided in the **Appendix E**.

3.5 EXISTING PLUS PROJECT FREEWAY ANALYSIS



Traffic operations were evaluated at SR-4 under Existing plus Project Conditions. Results of the analysis are presented in **Table 3-4**. As shown in the Table, SR-4 between Lone Tree Way and Balfour Road would function within acceptable standards under Existing plus Project Conditions. Analysis sheets are provided in the **Appendix E.**

Bold indicates a segment with a delay index greater than the allowable threshold of 2.5.

(a) Travel Time and Free-Flow Time are measured in seconds
Results were obtained using HCM freeway facility level of service analysis. The travel time is calculated using the average travel speed or free flow speed and segment length.

4 EXISTING PLUS APPROVED PROJECTS

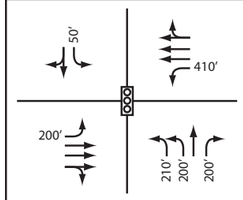
Existing plus Approved Projects Conditions were estimated by adding the volumes associated with the approved projects identified by the local jurisdictions to the existing traffic counts.

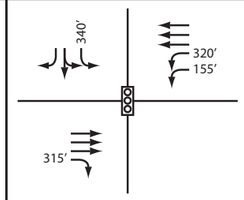
4.1 PLANNED ROADWAY PROJECTS IN VICINITY OF SITE

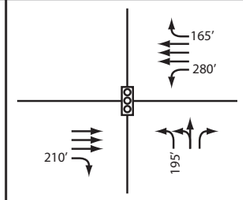
Existing plus Approved Projects Conditions includes the new grade-separated Balfour Road and SR-4 interchange. The project will replace the existing signalized, at-grade intersection at Balfour Road and SR-4 with a full access controlled, grade-separated interchange. SR-4 will be raised to cross over Balfour Road, creating a new undercrossing for Balfour Road. No other roadway network changes are assumed to take place under this scenario. **Figure 4-1** illustrates the intersection geometry and traffic control assumed under Existing plus Approved Projects Conditions.

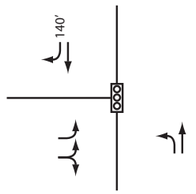
4.2 APPROVED AND PENDING DEVELOPMENT PROJECTS IN VICINITY OF SITE

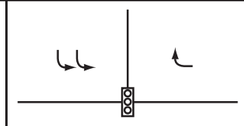
Approved but not yet built project lists for the City of Brentwood, City of Antioch, and City of Oakley were obtained from each respective city's website. Each list provided information on land uses, project size, and date of completion. The information provided was used to estimate traffic on the roadway network for Existing Plus Approved Projects conditions. The resulting traffic from approved projects is illustrated in **Figure 4-2**. The lists of projects provided by each jurisdiction and other approved project information is provided in **Appendix F.**

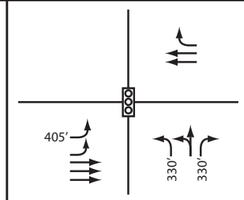


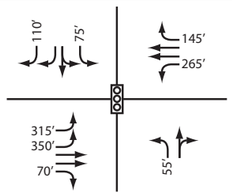


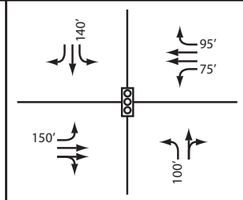


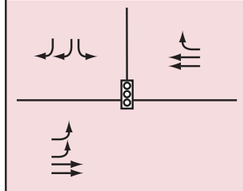


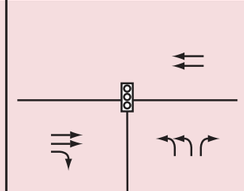


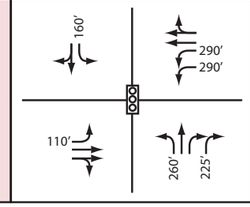


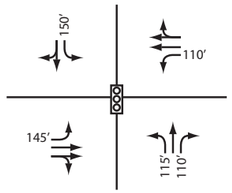


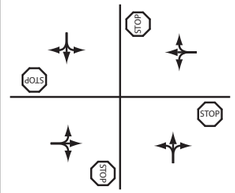


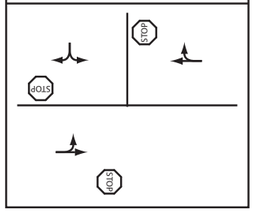












4.3 EXISTING PLUS APPROVED PROJECTS INTERSECTION LOS

Existing plus Approved Projects volumes were evaluated at the study intersections and are presented in **Figure 4-3**. Results are presented in **Table 4-1**. As shown in the table, the following intersections would operate below acceptable LOS under Existing plus Approved Projects Conditions:

- #2 – SR-4 SB Ramps @ Lone Tree Way
  - AM (LOS E) and PM (LOS F) Peaks
- #11 – Fairview Avenue at Sand Creek Road
  - AM (LOS E) Peak
- #14 – Fairview Avenue at San Jose Avenue
  - AM (LOS E) Peak
- #18 – W Country Club Drive/ American Avenue at Balfour Road
  - AM (LOS E) Peak

The intersections listed above would operate below acceptable thresholds regardless of the proposed project. Analysis sheets are provided in the **Appendix G.**

21	East Country Club / Roundhill Drive	AWSC	AM	8.8	A
			PM	7.8	A

Notes: Signal = Traffic Signal, SSSC = Side Street Stop Control, AWSC = All Way Stop Control. **Bold** indicates substandard per jurisdiction minimum thresholds.

(a) Delay is measured in seconds.

4.4 EXISTING PLUS APPROVED PROJECTS FREEWAY ANALYSIS

Existing plus Approved Projects volumes were evaluated at SR-4. Results are presented in **Table 4-2**. As shown in the table, no routes of regional significance would experience a delay index of 2.5 or greater; all would operate at an acceptable condition.

Analysis sheets are provided in the **Appendix G.**

4.5 PROJECT TRIP DISTRIBUTION

Project distribution would be different under Existing plus Approved Projects Conditions as the surrounding land uses and roadway network improve. A separate distribution pattern was prepared based on the planned roadway improvement projects within the vicinity of the project. **Figure 4-4** presents the traffic distribution assumed for this analysis. Based on the assumed trip distribution, new vehicle trips generated by the project were assigned to the street network as shown in **Figure 4-5** and **Figure 4-6.** The figures represent the total trips on the network, including pass-by and internal capture reductions for the two development scenarios.

Additional project distribution information is provided in **Appendix C**.

4.6 EXISTING PLUS APPROVED PROJECTS PLUS PROJECT INTERSECTION LOS

Existing plus Approved Projects plus Project Conditions were evaluated at the study intersections. Turning movement volumes at each study intersection for the two development scenarios are shown in **Figure 4-7** and **Figure 4-8.** The results of the intersection analysis are shown in **Table 4-3.** The following intersections would operate below acceptable LOS under Existing plus Approved Projects plus Project Conditions:

Development Scenario 1

- #2 – SR-4 SB Ramps at Lone Tree Way
  - AM (Increased delay, LOS E) and PM (Increased delay, LOS F) Peaks – Significant Impact
- #11 – Fairview Avenue at Sand Creek Road
  - AM (Increased delay, LOS E) Peak – Significant Impact
- #14 – Fairview Avenue at San Jose Avenue
  - AM (Increased delay, LOS E) and PM (Worsened from LOS D to LOS E) Peaks – Significant Impact
- #18 – W Country Club Drive/ American Avenue at Balfour Road
  - AM (Worsened from LOS E to LOS F) Peak – Significant Impact

South of Balfour Road (Basic)	NB	90.0	90.0	1.00
	SB	90.0	90.0	1.00

Bold indicates a segment with a delay index greater than the allowable threshold of 2.5.

(a) Travel Time and Free-Flow Time Results are measured in seconds
Travel Times were obtained using HCM freeway facility level of service analysis.
The travel time is calculated using the average travel speed or free flow speed and segment length.

Notes: Signal = Traffic Signal, SSSC = Side Street Stop Control, AWSC = All Way Stop Control. **Bold** indicates substandard per jurisdiction minimum thresholds. **Bold and shaded** indicates significant project impact.

(a) Delay is measured in seconds.

(b) Change in delay due to the addition of project traffic

Development Scenario 2

- #2 – SR-4 SB Ramps at Lone Tree Way
  - AM (Increased delay, LOS E) and PM (Increased delay, LOS F) Peaks – Significant Impact
- #11 – Fairview Avenue at Sand Creek Road
  - AM (Increased delay, LOS E) Peak – Significant Impact
- #14 – Fairview Avenue at San Jose Avenue
  - AM (Increased delay, LOS E) and PM (Worsened from LOS D to LOS E) Peaks – Significant Impact
- #18 – W Country Club Drive/ American Avenue at Balfour Road
  - AM (Worsened from LOS E to LOS F) Peak – Significant Impact

Analysis sheets are provided in the **Appendix H.**

4.7 EXISTING PLUS APPROVED PROJECT PLUS PROJECT FREEWAY ANALYSIS

Traffic operations were evaluated at SR-4 under Existing plus Approved Projects plus Project Conditions. Results of the analysis are presented in **Table 4-4**. As shown in the table, no routes of regional significance would experience a delay index of 2.5 or greater; all would operate at an acceptable condition with and without the project.

Analysis sheets are provided in the **Appendix H.**

Table 4–4 Existing plus Approved Projects plus Project Routes of Regional Significance Travel Time Summary

Bold indicates a segment with a delay index greater than the allowable threshold of 2.5.

(a) Travel Time and Free-Flow Time are measured in seconds.
Results were obtained using HCM freeway facility level of service analysis. The travel time is calculated using the average travel speed or free flow speed and segment length.

5 CUMULATIVE TRAFFIC CONDITIONS

Cumulative Conditions were derived from the latest unconstrained CCTA travel demand model.

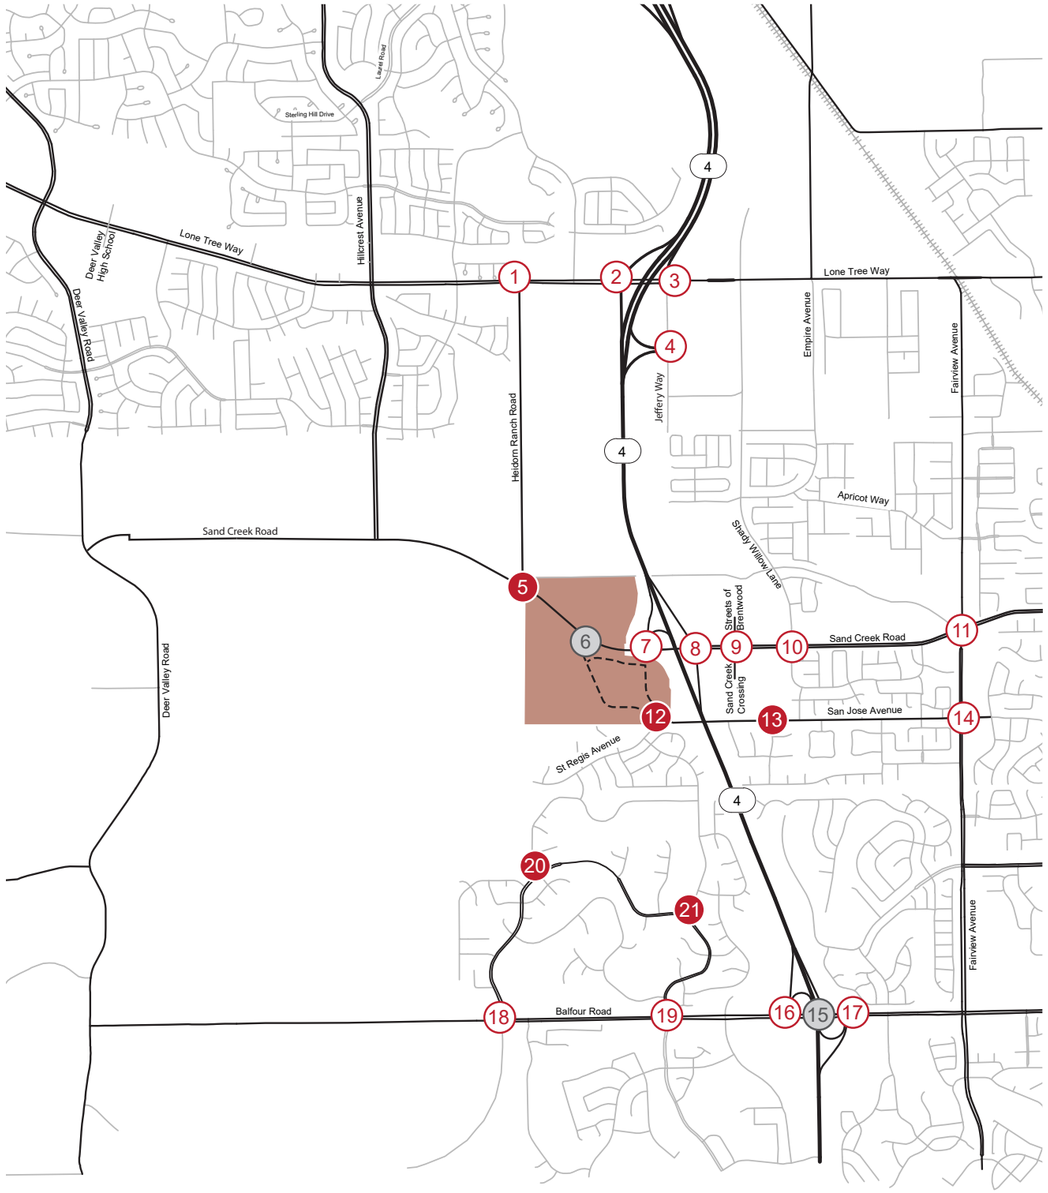
5.1 CUMULATIVE LANE CONFIGURATIONS AND TRAFFIC CONTROL

Under Cumulative (2040) Conditions the following circulation improvements are included:

- SR-4 at Balfour Road Interchange (grade-separated)
- Extension of Sand Creek Road to Heidorn Ranch Road (within the boundaries of this project)
- Extension of Sand Creek Road over to Hillcrest Avenue and Deer Valley Road within Antioch
- Widening of Heidorn Ranch Road to four lanes

It is understood that the circulation in the area of the vacant property to the north will be developed over time, but at this time, the circulation infrastructure is unknown and will therefore not be included under this scenario. No additional roadway improvements were identified that are expected to be completed by 2040.

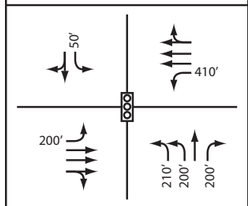
Figure 5-1 illustrates the intersection geometry and traffic control assumed under Cumulative Conditions.

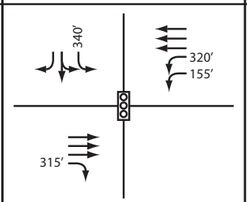


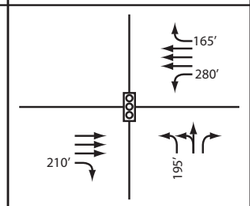
5.2 YEAR 2040 FORECAST MODEL VOLUMES

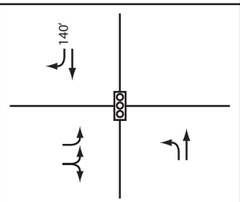
Year 2040 roadway link volumes from the Contra Costa Transportation Authority (CCTA) travel demand model was obtained from CCTA staff and are provided in **Appendix I**. The model was used to plot bi-directional AM and PM peak-hour traffic volumes on each segment along roadways within the study area. Model output was used to compare year 2015 and year 2040 model forecasts to determine the annual incremental growth in traffic volumes at study intersections. Year 2040 turning movement volumes were calculated by applying the growth increment to the current year (2017) traffic count volumes. Final adjusted forecast volumes were then converted to cumulative conditions intersection turning movement volumes using a traffic modeling standard process commonly referred to as the Furness method. The Furness method uses an iterative process to derive future turning movement volumes based on future year roadway link volumes and an initial estimate of turning percentages (obtained from the 2017 intersection turning movement counts). A final check was performed to ensure cumulative volumes are equal to or greater than existing plus approved projects volumes. The resulting traffic volumes represent Cumulative (2040) conditions and are presented in **Figure 5-2.**

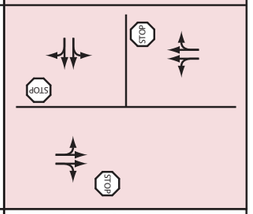
5.3 PROJECT TRIP DISTRIBUTION

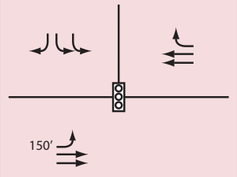


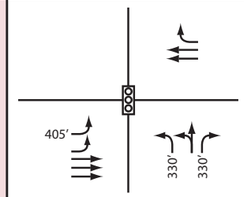


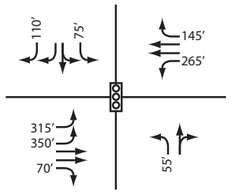


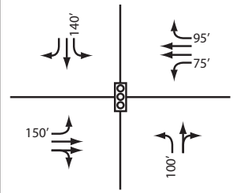


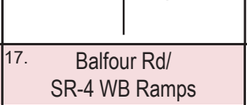


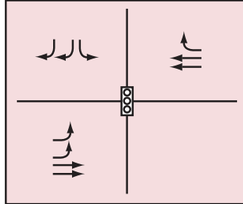


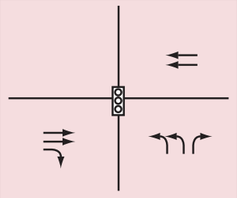


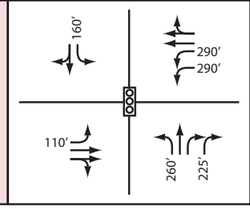


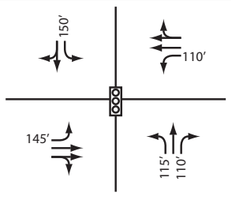


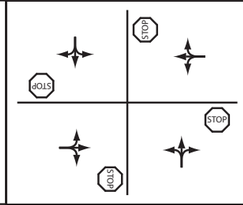


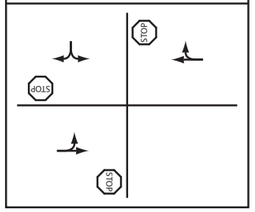












Project distribution would be different under Cumulative Conditions as the surrounding land uses and roadway network develop and change over time. A separate distribution pattern was prepared based on information obtained from the CCTA travel forecast model. **Figure 5-3** presents the traffic distribution assumed for this analysis. Based on the assumed trip distribution, new vehicle trips generated by the project were assigned to the street network as shown in **Figure 5-4** and **Figure 5-5.** The figures represent the total trips on the network, including pass-by and internal capture reductions for the two development scenarios.

Additional project distribution information is provided in **Appendix C**.

- #18 – W Country Club Drive/ American Avenue at Balfour Road
  - AM (LOS F) Peak

The intersections listed above would operate below acceptable thresholds regardless of the proposed project. Analysis sheets are provided in the **Appendix J.**

5.5 CUMULATIVE FREEWAY ANALYSIS

Cumulative volumes were evaluated at SR-4. Results are presented in **Table 5-2.** As shown in the Table, SR-4 between Lone Tree Way and Balfour Rad would function within acceptable standards under Cumulative Conditions.

Analysis sheets are provided in the **Appendix J.**

Table 5–1 Cumulative Intersection LOS Summary

#	Intersection	Traffic Control	Peak Hour	Delay (a)	LOS
1	Lone Tree Way / Heidorn Ranch Road/Fairside Way	Signal	AM	12.5	B

5.6 CUMULATIVE PLUS PROJECT INTERSECTION LOS

Cumulative plus Project traffic volumes are presented in **Figure 5-5** and were evaluated at the study intersections. As shown in **Table 5-3**, the following study intersections are forecasted to operate below acceptable LOS:

Development Scenario 1

- # 2 – SR-4 SB Ramps at Lone Tree Way
  - AM (Increased delay, LOS F) and PM (Increased delay, LOS F) Peaks – Significant Impact
- #7 – SR-4 SB Ramps at Sand Creek Rd
  - PM (Worsened from LOS D to LOS E) Peak – Significant Impact
- #11 – Fairview Avenue at Sand Creek Road
  - AM (Increased delay, LOS E) and PM (Increased delay, LOS F) Peaks – Significant Impact
- #14 – Fairview Avenue at San Jose Avenue
  - AM (Worsened from LOS D to LOS E) and PM (Increased delay, LOS E) Peaks – Significant Impact
- #18 – W Country Club Drive/ American Avenue at Balfour Road
  - AM (Increased delay, LOS F) Peaks – Significant Impact

Development Scenario 2

- # 2 – SR-4 SB Ramps at Lone Tree Way
  - AM (Increased delay, LOS F) and PM (Increased delay, LOS F) Peaks – Significant Impact
- #7 – SR-4 SB Ramps at Sand Creek Rd
  - PM (Worsened from LOS D to LOS E) Peak – Significant Impact
- #11 – Fairview Avenue at Sand Creek Road
  - AM (Increased delay, LOS E) and PM (Increased delay, LOS F) Peaks – Significant Impact
- #14 – Fairview Avenue at San Jose Avenue
  - AM (Worsened from LOS D to LOS E) and PM (Increased delay, LOS E) Peaks – Significant Impact
- #18 – W Country Club Drive/ American Avenue at Balfour Road
  - AM (Increased delay, LOS F) Peaks – Significant Impact

Analysis sheets are provided in the **Appendix K.**

5.7 CUMULATIVE PLUS PROJECT FREEWAY ANALYSIS

Traffic operations were evaluated at SR-4 under Cumulative plus Project Conditions. Results of the analysis are presented in **Table 5-4.** As shown in the Table, SR-4 between Lane Tree Way and Balfour Road does function within acceptable standards under Cumulative plus Project Conditions.

Analysis sheets are provided in the **Appendix K.**

6 PEAK HOUR SIGNAL WARRANT EVALUATION

A planning level assessment of the need for traffic signalization was performed for the un-signalized study intersections. This evaluation was performed consistent with the peak-hour warrant methodologies noted in Section 4C of the California Manual on Uniform Traffic Control Devices (CMUTCD), 2014 Edition. Summaries of the peak-hour warrant results are presented in **Table 6-1** and **Table 6-2.**

As shown in the tables, the addition of the proposed project does not result in any peak-hour signal warrants to be satisfied at any of the study intersections under any analysis conditions for both development scenarios. Detailed results of this analysis are presented in the **Appendix L.**

Table 6–1 Traffic Signal Warrant Analysis Results for Development Scenario 1

#	Intersection	Analysis Scenario					
		Existing (2017)	**Existing (2017) plus Project**	**Existing Plus Approved Projects**	**Existing Plus Approved Projects plus Project**	**Cumulative (2040)**	**Cumulative (2040) plus Project**
5	Heidorn Ranch Rd @ Old Sand Creek Rd	No/No	No/No	No/No	No/No	No/No	No/No
12	St Regis Ave @ San Jose Ave	No/No	No/No	No/No	No/No	No/No	No/No

Results are presented in AM / PM format.
Note: Peak-hour warrant is satisfied if Condition A or B is satisfied.

7 POTENTIAL EFFECTS ON TRANSIT, BICYCLE, AND PEDESTRIAN MOBILITY

The proposed project was evaluated to determine if it would likely conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks) or generate pedestrian, bicycle, or transit travel demand that would not be accommodated by transit, bicycle, or pedestrian facilities and plans.

Patrons and residents to or from the proposed development have the option of driving, taking transit, walking, or bicycling. Those patrons and residents that choose to take transit have routes that provide services to nearby Park and Ride facilities and other areas of Brentwood. The transit routes currently do not go west of SR-4 at Sand Creek Road, but with the proposed project, Tri-Delta Transit will evaluate the potential ridership and adjust routes as necessary. If it is conservatively assumed (from the standpoint of transit demand) that one percent of the patrons and residents of the retail and residential uses will use transit during the peak hours of the day, it represents approximately six passengers in the weekday AM peak period and 13 passengers in the weekday PM peak period. The proposed project does not conflict with adopted plans and does not prohibit implementing transit facilities or plans.

Sidewalks and Class II bicycle lanes will be constructed along Sand Creek Road between the new SR-4 interchange and the project site and will connect with the existing sidewalks and Class II bicycle lanes on Sand Creek Road. Similarly, sidewalks and Class II bicycle lanes will be constructed along San Jose Avenue and Saint Regis Avenue to connect with existing facilities. Crosswalks will be provided at the new intersections constructed by the project. In addition, the project will construct necessary on-site sidewalks, walkways, and other amenities in compliance with adopted policies, plans and programs. Internal pedestrian connections link the retail uses with the adjacent residential areas to allow retail patrons and employees to conveniently walk from nearby destinations. Many of the roadways have low traffic volumes where it is reasonable for cyclists to share the roadway with automobiles. Thus, the impact on transit, pedestrian or bicycle facilities is determined to be less than significant.

8 SITE ACCESS AND CIRCULATION

Project access and circulation was evaluated as part of this study. As reflected in **Figure 1-2,** primary access is anticipated to be provided at the Sand Creek Road intersection with San Jose Avenue (Intersection #6). Access will also be provided at the intersection of San Jose Avenue and St Regis Avenue. Given the unknown nature of the ultimate commercial type, configuration, etc. no further assessment was performed. For the purposes of this study it is anticipated that sight distances, emergency access truck access, and on-site circulation for these subareas will be appropriated designed in accordance with the City's applicable design standards.

9 SUMMARY OF IMPACTS AND RECOMMENDED MITIGATIONS

Based on the results of the traffic analysis and evaluation of the proposed site plan, the project impacts which require mitigation are listed below and are identified as being significant unless mitigated. Recommended mitigation measures are provided for each significant impact.

It should be noted that the impact at the intersection of SR-4 at Balfour Road (Intersection # 15) will be mitigated by the SR-4 at Balfour Road Interchange Improvements. The East Contra Costa Regional Fee and Financing Authority (ECCRFFA) is a regional planning agency charge with obtaining funding for regional transportation improvement projects, such as the SR-4 interchange improvements. The proposed project is required to pay the ECCRFFA a fee based on per dwelling unit and per square foot of development. Thus, the proposed project contributes their fair share to the SR-4 interchange improvements and other regional improvements that would mitigate or avoid potential project impacts. The following discussion describes additional improvements necessary that are not covered in the fees paid to ECCRFFA.

Existing Plus Project (Development Scenario 1 & 2)

- #14 – Fairview Avenue at San Jose Avenue
  - AM (Increased delay, LOS E) and PM (Increased delay, LOS E) Peaks – Significant Impact
- #15 – SR-4 at Balfour Road
  - PM (Increased delay, LOS F) Peaks – Significant Impact
- #18 – W Country Club Drive/ American Avenue at Balfour Road
  - AM (Increased delay, LOS F)

Existing Plus Approved Projects Plus Project (Development Scenario 1 & 2)

- # 2 – SR-4 SB Ramps at Lone Tree Way
  - AM (Increased delay, LOS E) and PM (Increased delay, LOS F) Peaks – Significant Impact
- #11 – Fairview Avenue at Sand Creek Road
  - AM (Increased delay, LOS E) Peak – Significant Impact
- #14 – Fairview Avenue at San Jose Avenue
  - AM (Increased delay, LOS D-) and PM (Worsened from LOD D to LOS E) Peaks – Significant Impact
- #18 – W Country Club Drive/ American Avenue at Balfour Road
  - AM (Increased delay, LOS F)

Cumulative Plus Project (Development Scenario 1 & 2)

- # 2 – SR-4 SB Ramps at Lone Tree Way
  - AM (Increased delay, LOS F) and PM (Increased delay, LOS F) Peaks – Significant Impact
- #7 – SR-4 SB Ramps at Sand Creek Rd
  - PM (Worsened from LOS D to LOS E) Peak – Significant Impact
- #11 – Fairview Avenue at Sand Creek Road
  - AM (Increased delay, LOS E) and PM (Increased delay, LOS F) Peaks – Significant Impact
- #14 – Fairview Avenue at San Jose Avenue
  - AM (Worsened from LOS D to LOS E) and PM (Increased delay, LOS E) Peaks – Significant Impact
- #18 – W Country Club Drive/ American Avenue at Balfour Road

- AM (Increased delay, LOS F)

9.1 SIGNIFICANT UNLESS MITIGATED

Existing Plus Project

Impact #1: Intersection #14 – Fairview Avenue at San Jose Avenue
The intersection of Fairview Avenue at San Jose Avenue will operate at LOS E during both peak hours under Existing Conditions and will experience an increase in delay due to the proposed project. The increase in delay to a pre-existing failing intersection results in a significant impact.

Mitigation #1
The change in signal timing to increase the cycle length to give more time to the northbound and southbound through movements will improve the intersection operations to acceptable standards.

Impact #2: Intersection #15 – SR-4 and Balfour Road
The intersection of SR-4 and Balfour Road will operate at LOS F during the PM peak hour under Existing Conditions and will experience an increase in delay due to the proposed project. The increase in delay to a pre-existing failing intersection results in a significant impact.

Mitigation #2
The construction of the new SR-4 / Balfour Road interchange will eliminate this intersection and replace it with two new intersections that provide access to SR-4. This improvement is a planned project that is assumed to be in place under Existing plus Approved Projects and Cumulative Conditions. The interchange and associated SR-4 widening is being funded by ECCRFFA. The project applicant would be required to pay their ECCRFFA fees for development which would be considered mitigation for the impact at this location. The interchange improvement improves the intersection operations to acceptable standards.

Impact #3: Intersection #18 – W Country Club Drive/ American Avenue at Balfour Road
The intersection of W Country Club Drive/ American Avenue at Balfour Road will operate at LOS F during the AM peak hour under Existing Conditions and will experience an increase in delay due to the proposed project. The increase in delay to a pre-existing failing intersection results in a significant impact.

Mitigation #3
The addition of a third westbound left turn lane on Balfour road is recommended. Queue storage would be lengthened. Signage will be placed along Balfour Road and on the Signal Gantry to improve lane utilization and access to the school sire. These recommendations will improve the intersection operations to acceptable standards.

Prior to issuance of the first building permit, the applicant shall design and construct the improvements needed to accommodate a third westbound left turn lane. With the installation of the third left turn lane, the project would mitigate its impact.

Existing Plus Approved Projects Plus Project

Impact #4: Intersection #2 – SR-4 SB Ramps at Lone Tree Way
The intersection of the SR-4 Southbound Ramps at Lone Tree Way will operate at LOS E/F during both peak hours, respectively, under Existing plus Approved Projects plus Project Conditions and will experience an increase in delay due to the proposed project. The increase in delay to a pre-existing failing intersection results in a significant impact.

Mitigation #4
The installation of a second eastbound right-turn lane and the restriping of the southbound approach to provide a right-turn lane, shared right and left-turn lane, and left-turn lane will improve the intersection operations to acceptable standards. It should be noted that this intersection is located in the City of Antioch and within Caltrans right-of-way. Therefore, since the governing agency for this traffic study is the City of Brentwood and they could not implement the proposed mitigation in another agency's right-of-way, this impact would remain significant and unavoidable.

Impact #5: Intersection #11 – Fairview Avenue at Sand Creek Road
The intersection of Fairview Avenue at Sand Creek Road will operate at LOS E during the AM peak hour under Existing plus Approved Projects Conditions and will experience an increase in delay due to the proposed project. The increase in delay to a pre-existing failing intersection results in a significant impact.

Mitigation #5
The restriping of the southbound approach to provide a left-turn lane, a through lane, and a shared through and right-turn lane and the change in signal timing to increase the cycle length to give more time to the eastbound and westbound through movements will improve the intersection operations to acceptable standards.

Impact #6: Intersection #14 – Fairview Avenue at San Jose Avenue
The intersection of Fairview Avenue at San Jose Avenue will operate at LOS E/D during the AM/PM peak hours, respectively, under Existing plus Approved Projects Conditions and will experience an increase in delay due to the proposed project. The increase in delay to a pre-existing failing intersection results in a significant impact.

Mitigation #6
The applicant shall implement **Mitigation #1** which is to change in signal timing to increase the cycle length to give more time to the northbound and southbound through movements. With the change in signal timing, the intersection will operate at acceptable standards. the project would mitigate its impact.

Impact #7: Intersection #18 – W Country Club Drive/ American Avenue at Balfour Road
The intersection of W Country Club Drive/ American Avenue at Balfour Road will operate at LOS F during the AM peak hour under Existing plus Approved Projects Conditions and will experience an increase in delay due to the proposed project. The increase in delay to a pre-existing failing intersection results in a significant impact.

Mitigation #7
The applicant shall implement **Mitigation #3** which is to construct the addition of a westbound left turn lane at Intersection #18. With the addition of a westbound left, the intersection will operate at acceptable standards.

Cumulative Plus Project

Impact #8: Intersection #2 – SR-4 SB Ramps at Lone Tree Way
The intersection of the SR-4 Southbound Ramps at Lone Tree Way will operate at LOS F during both peak hours under Cumulative Conditions and will experience an increase in delay due to the proposed project. The increase in delay to a pre-existing failing intersection results in a significant impact.

Mitigation #8
The applicant shall implement **Mitigation #4** which is to install a second eastbound right-turn lane and restripe the southbound approach to provide a right-turn lane, shared right and left-turn lane, and left-turn lane. With the installation of an additional eastbound right-turn lane and the restriping of the southbound approach, the intersection will operate at acceptable standards. It should be noted that this intersection is located in the City of Antioch and within Caltrans right-of-way. Therefore, since the governing agency for this traffic study is the City of Brentwood and they could not implement the proposed mitigation in another agency's right-of-way, this impact would remain significant and unavoidable.

Impact #9: Intersection #7 – SR-4 SB Ramps at Sand Creek Road
The intersection of the SR-4 Southbound Ramps at Sand Creek Road will operate at LOS D during the PM peak hours under Cumulative Conditions and will experience an increase in delay and decrease to LOS E due to the proposed project. The increase in delay results in a significant impact.

Mitigation #9
The restriping of the southbound approach to provide a right shared left-turn lane and two left-turn lanes will improve the intersection operations to acceptable standards. It should be noted that this intersection is located within Caltrans right-of-way. Therefore, since the governing agency for this traffic study is the City of Brentwood and they could not implement the proposed mitigation in another agency's right-of-way, this impact would remain significant and unavoidable. It should also be noted that there is a future project to construct the diagonal on-ramp from eastbound Sand Creek Road to southbound SR-4. However, this project has no identified funding source or timeline and therefore was not included as an improvement or potential mitigation.

Impact #10: Intersection #11 – Fairview Avenue at Sand Creek Road
The intersection of Fairview Avenue at Sand Creek Road will operate at LOS E/F during the AM/PM peak hours, respectively, under Cumulative Conditions and will experience an increase in delay due to the proposed project. The increase in delay to a pre-existing failing intersection results in a significant impact.

Mitigation #10
The applicant shall implement **Mitigation #5** which is to restripe the southbound approach to provide a left-turn lane, a through lane, and a shared through and right-turn lane and to change the signal timing to increase the cycle length to give more time to the eastbound and westbound through movements. With the restriping of the southbound approach and retiming, the intersection will operate better than Cumulative Baseline Conditions.

Impact #11: Intersection #14 – Fairview Avenue at San Jose Avenue
The intersection of Fairview Avenue at San Jose Avenue will operate at LOS E during the peak hour under Cumulative Conditions and will experience an increase in delay and decrease to a LOS E during the AM peak hour due to the proposed project. The increase in delay to a pre-existing failing intersection results in a significant impact.

Mitigation #11

The applicant shall implement **Mitigation #1** which is to change in signal timing to increase the cycle length to give more time to the northbound and southbound through movements. With the change in signal timing, the intersection will operate at acceptable standards.

Impact #12: Intersection #18 – W Country Club Drive/ American Avenue at Balfour Road

The intersection of W Country Club Drive/ American Avenue at Balfour Road will operate at LOS F during the AM peak hour under Existing plus Approved Projects Conditions and will experience an increase in delay due to the proposed project. The increase in delay to a pre-existing failing intersection results in a significant impact.

Mitigation #12

The applicant shall implement **Mitigation #3** which is to construct the addition of a westbound left turn lane at Intersection #18. With the addition of a westbound left, the intersection will operate at acceptable standards.

Table 9-1, Table 9-2, and **Table 9-3** present the intersection operations with the mitigation measures identified under Existing and Existing plus Approved Projects, and Cumulative Conditions, respectively. Analysis sheets are provided in the **Appendix M.**

Table 9–1 Mitigated Existing Plus Project Intersection LOS Summary

#	Intersection	Peak Hour	Before Mitigation		After Mitigation	
			Delay (a)	LOS	Delay (a)	LOS
Development Scenario 1						
14	San Jose Avenue/ Fairview Avenue	AM	68.8	**E**	41.2	D
		PM	63.7	**E**	51.7	D
18	W Country Club Drive/ Balfour Road	AM	80.4	**F**	44.3	D

BRENTWOOD BRIDLE GATE VMT ANALYSIS

DATE: March 2, 2022

TO: Doug Chen | Discovery Builders

FROM: Erin Vaca | DKS Associates

SUBJECT: VMT Assessment for Bridle Gate Residential Project Project #22265-000

INTRODUCTION

This memorandum documents the VMT characteristics of the proposed Bridle Gate residential development located in Brentwood, California. The proposed project (Bridle Gate Project) consists of 286 single family residential lots to be constructed in the southwest quadrant of Highway 4 and Sand Creek Road, with parcels for parks, open space, and designated remainder within a gross area of approximately 135 acres. The project site is currently vacant and is being used for grazing (see **Figure 1** for project location; a copy of the site plan is attached).

BACKGROUND ON SENATE BILL 743 AND VMT METRICS

California Senate Bill 743, adopted in 2013, brought about changes in the approach to measuring the transportation impacts of projects subject to the California Environmental Quality Act (CEQA). Effective July 2020, the transportation impacts of projects are primarily measured in terms of Vehicle Miles Traveled (VMT) characteristics.

The Governor's Office of Planning and Research (OPR) has issued technical guidance recommending that residential and employment land use projects be assessed in terms of VMT per capita, and that the recommended threshold of significance be set at 85% of the existing baseline VMT per capita or per employee. The OPR technical guidance also specifies circumstances under which projects may be presumed to have less than significant VMT impacts (i.e., screening criteria).

FIGURE 1: PROJECT LOCATION

METHODOLOGY AND ANALYSIS STANDARDS

In compliance with SB 743 and following OPR guidance, the Contra Costa Transportation Authority (CCTA) has implemented VMT analysis methodologies in its Growth Management Plan (GMP) Implementation Guide (revised February 2021). This document specifies the methodology, screening criteria, and thresholds of significance that member jurisdictions should follow to remain in compliance with the GMP. This assessment utilizes follows methodologies specified in the GMP Implementation Guide to calculate the VMT characteristics of the proposed project.

VERSION OF CCTA MODEL AND VMT SUMMARY SCRIPT

DKS conducted analysis using the 2020 version of the CCTA travel demand model[1] which incorporates the "P2017" land use forecasts. Model files previously used for analysis of other projects in Brentwood were reviewed to ensure consistency (model files used by TJKM and provided by the City of Brentwood). In particular, the land use input file (without the project) was compared and found to be identical. While the TJKM script used to calculate VMT for each TAZ appeared to differ from the script supplied by CCTA, the resulting VMT was very similar (see Project VMT Analysis, below).

Although the project's proposed residential units are in the model's land use file, the model does not forecast activation of this land use until many years in the future. To conduct the project VMT analysis, DKS modifed the master land use file to reflect project land use for a 2020 scenario.

THRESHOLD OF SIGNIFICANCE

The threshold of significance is based on a citywide average of 29.6 VMT per capita, as reported by the City of Brentwood. In conformance with the GMP, this results in a threshold of significance of 25.2 VMT per capita or 15% below the existing citywide average. For comparison, the County-wide residential VMT per capita is 19.4, which would imply a significance threshold of 16.5. Per the GMP, however, the less stringent threshold may be used.

PROJECT ANALYSIS

PROJECT SCREENING

The GMP Implementation Guide lists five screening criteria to which projects may be compared. Projects meeting at least one screening criterion may be considered to have less than significant VMT impacts, and further analysis is not required. The proposed Bridle Gate Project does not meet any of the criteria for a presumption of less than significant impacts, as discussed below.

[1] For reference, the source script for this version of the model is "cctamodel20201014.rsc".

1. CEQA Exemption – Any project that is exempt from CEQA is not required to conduct a VMT analysis. The proposed Project is not exempt from CEQA and thus does not meet this criterion.
2. Small Projects – Small projects are defined as having 10,000 square feet or less of non-residential space or 20 residential units or less, or otherwise generating less than 836 VMT per day. The proposed Project consists of 286 single family residential units and thus does not meet this criterion.
3. Local-Serving Uses – Projects that consist of Local-Serving Uses primarily draw users and customers from a relatively small geographic area that will lead to short-distance trips and trips that are linked to other destinations. This screening criterion applies to commercial or retail uses. Since the proposed Project is a residential project, this screening criterion is not applicable.
4. Projects Located in Transit Priority Areas (TPAs) – Projects located within a TPA can be presumed to have a less-than-significant impact absent substantial evidence to the contrary. The proposed Project is not located within a TPA and thus does not meet this criterion.
5. Projects Located in Low VMT Areas – Residential and employment-generating projects located within a low VMT-generating area can be presumed to have a less-than-significant impact absent substantial evidence to the contrary. For a residential project, a low VMT area is defined as cities and unincorporated portions within CCTA's five subregions that have existing home-based VMT per capita that is 85% or less of the existing County-wide average. The proposed Project is located within the city limits of Brentwood, in which the home-based VMT per capita is above the County-wide average. Therefore, the proposed Project does not meet this criterion.

PROJECT VMT ANALYSIS

BASELINE ANALYSIS

Because the proposed Project is in a Transportation Analysis Zone (TAZ) that is currently vacant, analysis of the Project's VMT effects was conducted using the CCTA Travel Demand Model. The Project was analyzed for a 2020 condition for consistency with the scenario year used for the baseline VMT calculation.

The model run was conducted using the 2020 version of the CCTA model script and outputs were summarized using the VMT tabulation script and summary spreadsheet provided by CCTA (the calculation spreadsheet is available upon request). Note that the VMT calculation script previously used for other City of Brentwood projects was also tested and the resulting outputs were almost identical.

The threshold of significance is 85% of the baseline VMT per capita for the City of Brentwood, or 25.2 VMT per capita. As shown in Table 1, while the Project TAZ home-based VMT is lower than the baseline average for the City of Brentwood, it exceeds the threshold of significance by 7%.

TABLE 1: PROJECT VMT AVERAGE RATES AND THRESHOLDS OF SIGNIFICANCE
TABLE 1: HOME-BASED VMT PER RESIDENT

GEOGRAPHIC AREA	AVERAGE VMT PER RESIDENT	85% AVERAGE VMT PER RESIDENT
TAZ WITH PROJECT	27.0	n/a
CITY OF BRENTWOOD	29.6 [a]	25.2
CONTRA COSTA COUNTY	19.4	16.5

[a] Threshold of significance based on direction from City of Brentwood (email from Raney Planning and Management dated 1/12/2023). This threshold has been selected to be consistent with previous VMT studies for projects in Brentwood (see TJKM, "VMT Analysis for the Orchard Grove Residential Development", January 2022).

MITIGATION

Applicable site-level VMT mitigation measures listed in the guide published by the California Air Pollution Control Officer's Association (CAPCOA) were evaluated for potential incorporation into the Project. Applicable mitigation strategies are listed in **Table 2**.

The most feasible and quantifiable mitigation was determined to be an increase in intersection density, listed as Measure T-17. As shown in **Table 3** "Mitigation Summary", an intersection density of 61.5 is needed for an approximately 10% VMT reduction, which would then result in a less-than-significant impact as discussed previously. The proposed project can add an intersection (a potential location is shown in the attached exhibit prepared by Apex, the project civil engineer) to achieve this intersection density. Therefore, the proposed project is found to have a less-than-significant with mitigation.

Other potential mitigation measures considered and their corresponding VMT reductions include:

T-4 "Integrate Affordable Housing" (28.6% VMT reduction): The project is proposing 10% affordable housing, but the documented effectiveness of this measure applies only to multifamily units.

TABLE 2: APPLICABLE MITIGATION STRATEGIES

STRATEGY	MAXIMUM MITIGATION EFFECTIVENESS
T-1 INCREASE RESIDENTIAL DENSITY	30.0%
T-4 INTEGRATE AFFORDABLE HOUSING	28.6%
T-9 IMPLEMENT SUBSIDIZED TRANSIT PROGRAM	5.5%
T-15 LIMIT RESIDENTIAL PARKING SUPPLY	13.7%
T-16 UNBUNDLE RESIDENTIAL PARKING COSTS	15.7%
T-17 IMPROVE STREET CONNECTIVITY	30.0%
T-19-A. CONSTRUCT OR IMPROVE BIKE FACILITY	0.8%
T-21-A IMPLEMENT CARSHARE PROGRAM	0.15%
T-22-A-C. IMPLEMENT BIKESHARE OR SCOOTER SHARE PROGRAM	0.02-0.07%
T-23 IMPLEMENT COMMUNITY BASED TRAVEL PLANNING	2.3%

CUMULATIVE ANALYSIS

Although not required by the GMP since the project VMT impacts can be mitigated, a cumulative analysis was conducted for informational purposes. This analysis was conducted for a 2040 horizon year and With Project and No Project scenarios. Since, the CCTA travel demand model land use input file contained sufficient forecasted quantities of residential development, the standard inputs were used for the With Project scenario. The Project TAZ is forecasted to remain predominantly residential, with only 24 primarily retail jobs by 2040.Note that both cumulative scenarios assumed the extension of Sand Creek Road west from the project site.

The No Project scenario was developed by subtracting 286 single family residential units from the given total and proportionately adjusting the total population, household population, and employed residents variables. **Table 4** summarizes the With Project and No Project 2040 land use inputs.

The Project and No Project VMT per capita was tabulated using the CCTA-provided scripts and summary spreadsheet. In addition, the sum of study area VMT was tabulated for both scenarios, per the GMP Implementation Guide. The study area was defined as the City of Brentwood as shown in **Figure 3**. Daily VMT was calculated for all network links within or leading to the city boundaries.

The cumulative analysis results are summarized in **Table 5.** As shown, the With Project VMT per capita for the study area is lower than that of the No Project scenario. Therefore, the Project will not result in a cumulative impact to overall VMT.
