Site History: One underground storage tank (UST) removed in January 1989. Assessment followed the discovery of soil and groundwater impacts including floating free product. Site was granted regulatory closure by Merced County LOP in June 1998 based upon the belief that impacts to groundwater were from nearby site (LOP 24247). Data collected by LOP 24147 in July of 2008 indicated that two separate plumes existed, one with substantial MTBE and one BTEX dominated. In July of 2008 Merced County LOP reopened this site.

Completed Date: 06/08/1993
Comments: PEA required high priority. Sunshine Cleaners disposed of PCE contaminated rinsewater into the sewer. Municipal well #5 is about 1,000 feet to the southeast of the site. PCE was detected up to 8.8 ug/l in well #5, now closed. Nine other wells in the City of Merced are also contaminated with PCE. Sunshine is one of six drycleaners responsible for the area ground water contamination. Three monitoring wells have been installed near the facility. Soil and sewer samples have shown elevated levels of PCE. The facility is no longer active.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

of 2003. A records search by the owner's consultant revealed that the site contained one gasoline service station between 1922 and 1980 and a second service station between 1922 and 1962. These service stations appeared to have had underground storage tanks (USTs). A third location of a single UST was shown on historical records near the location of the current bank building and was reported to have been used between 1922 through 1952 for heavy oil (likely for building heating). It is unclear whether the heavy oil tank was ever removed. Recent assessment activities have been completed to assess remaining contamination. Results of a recent soil gas survey are still being evaluated.

Site History: Initial soil borings at site in August of 1989. Four Underground Storage Tanks (USTs) were removed in January of 1990. February of 1991 brought the installation of monitoring wells at this site. Between 1992 and 1995 additional soil and groundwater site assessment was completed. Remediation of the site was completed by soil vapor extraction (SVE) and air sparge (AS). SVE and AS was completed at this site between November of 1995 and November of 1996 as well as between May of 2006 and June of 2010. The site is currently being evaluated to determine if site closure would be appropriate.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Violation Description: Failure of the leak detection equipment to be installed, calibrated, operated, and/or maintained properly.
Violation Notes: Returned to compliance on 03/15/2022. OBSERVATION: Owner/Operator did not properly install, calibrate, operate and/or maintain leak detection equipment. A monitoring panel programming issue was causing the 208 sensors in the STP sumps to shut off turbines that were in other sumps. The UST technician had to manually re-program the monitoring panel at the time of the monitoring cert. The cause of the programming error was unable to be determined at the time of inspection. All turbines were shutting off in December 2021 when triggered by a single 208 sensor as noted on the December 2021 Designated Operator (DO) inspection report. CORRECTIVE ACTION: Properly install, calibrate, operate and/or maintain leak detection equipment. Submit copy of programming with minor modification permit application packet due to the manual re-programming of the system. RETURN TO COMPLIANCE: Test results submitted and permit provided 03/15/2022.
