Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 05/22/1991
Comments: Region 4 staff reviewed PA prepared by EPA. Site is located in the City os Oceanside, San Diego County; Township 11 S. Range 5 W., Section 27, San Bernardino Baseline & Meridian. Site covers about 1/4 acre in mostly residential area. It consists of a warehouseand an office building. All drums containing solvents are stored inside the warehouse. Empty drums are stacked outside on a wooden deck. There are 3 larg aboveground and 4 underground tanks. The reason EPA will not do further investigation is because: The groundwater is brackish (not potable) and surface water is not used for drinking. Staff recommends PEARM for state involvement.

File Location:	Local Agency
Local Case Number:	H10868-002
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Diesel, Gasoline, Kerosene, Stoddard solvent / Mineral Spriits / Distillates
Site History:	The former Seashell Oil facility was a 16,000 square feet site located on the south corner of North Cleveland Street and Sport Fisher Way in Oceanside. Seashell Oil operated as a bulk distribution and retail sales facility, which included above and below ground tanks used for storage of various petroleum products until 1998. Unauthorized release case H10868-002 was opened due to sampling results from the removal of the underground storage tanks (USTs) and associated piping which occurred in April 1999. Soil sampling results indicated a release of petroleum hydrocarbons in the gasoline, oil, and diesel ranges, which included kerosene and stoddard solvent. During the subsequent redevelopment activities at the site, another unknown UST was discovered and removed in December 2001. A fuel dispenser island was also located in the central portion of the site with below ground piping connected to the aboveground storage tanks (ASTs), which also were found to have a release. The AST release was managed under the Department of Environmental Health (DEH) case H10868-003, and most of the site assessment investigations conducted at the site combined both the UST and AST investigations together in one report. Seven soil borings (KB-23 through KB-29) and five groundwater monitoring wells, (KMW-8 through KMW-29) were initially drilled to assess the extent of contamination from the USTs. Two separate areas of petroleum impact in soil were found, including an area beneath the former oil USTs, and the other beneath the former kerosene UST, and both areas extended down below the groundwater table at 40 feet below ground surface (bgs). Light non-aqueous phase liquid (LNAPL), (commonly referred to as free product) was found at the soil-groundwater interface at the two areas. During grading activities for the redevelopment of the site, chlorinated volatile organic compounds (VOCs), including tetrachloroethylene (PCE), Trichloroethene (TCE) and TPH were discovered in soil samples taken in the area of an unknown UST. Contaminated soil around the unknown UST was over excavated. DEH did not provide oversight for the remedial excavation, since the UST was found during the redevelopment of the site and the client did not want to delay the process. Confirmation soil samples obtained at the bottom of the excavation were found to be above the EPAs preliminary remediation goals (PRGs) for PCE. Afterwards, four additional soil borings (KB-53 KB-56) were advanced outside the perimeter of the excavation to assess the contamination of the unknown UST. Depth to groundwater averages approximately 39.44 feet bgs and flows generally to the south. The initial groundwater monitoring wells were installed in the area of the UST releases in July and August of 2000. LNAPL was discovered in monitoring wells KMW-10 through KMW-12, and KMW-16. KMW-11 had the greatest thickness of LNAPL at 4.19 feet, when measured during the

SEA SHELL OIL AND CHEMICAL (Continued) **1000381492**

period of April through June 2001. The LNAPL is made up of diesel and weathered gasoline. Dissolved TPH gasoline, benzene, and Volatile Organic Compounds (VOCs) were observed in the UST area monitoring wells before remediation, based on the May 2001 groundwater sampling event. Since the redevelopment of the site was for residential purposes, human health risk evaluations were conducted based on the contaminants found during the investigations of both the UST and the AST areas. An Interim Remedial Action Plan (IRAP) was approved in October 2001 to remediate both the high benzene concentrations found in the soil in the AST area, and to remove LNAPL from both the UST and AST areas. Because the site is located in an area where groundwater has no designated beneficial uses identified, the IRAP proposed a cleanup goal for the LNAPL removal of less than 0.03 feet based on April 1, 1996 and the July 22, 1998 San Diego Regional Water Quality Control Boards (RWQCB) guidance documents. DEH approved this cleanup goal on October 2. 2001. A total of six 5-foot diameter recovering wells were installed on site, with four located in the UST area. Several times, LNAPL and groundwater were pumped from each well until dry, and then the wells were allowed to recover. Approximately 435 tons (approximately 290 cubic yards) of TPH impacted soil was removed during the installation of the wells. An estimated total of 13,000 gallons of total fluids was pumped from the six recovery wells, which included groundwater and an unknown quantity of LNAPL. Two additional monitoring wells KMW-26 and KMW-27 were installed in Sport Fisher Way to monitor the effectiveness of the LNAPL remediation. Several monitoring events were performed at the site between November 2001 and July 2005. During the development of wells KWM-26 and KMW-27 in May 2002, LNAPL was observed in monitoring well KMW-27. During the subsequent monitoring event, a LNAPL thickness that was greater than the cleanup goal of 0.03 foot was observed in monitoring well KMW-27, so a passive skimmer was installed in the well. Between May 2002 and February 2003 LNAPL thickness was measured weekly and also removed from monitoring well KMW-27. The skimmer was removed in May 2003, after two monitoring events indicated that less than 0.03 feet of LNAPL was present. Through July 2003, a total of 31.5 gallons of LNAPL was removed from monitoring well KMW-27. By the end of 2003, the site had been developed with eight residences that included vapor barriers installed during their construction. Vapor barriers were required to prevent excess cancer health risks to future residents from PCE and benzene vapors in the soil beneath the site. Soils containing detected PCE and TCE concentrations were restricted to areas beneath the driveways and alleyway, at a depth of 10.5 feet to 30 feet below the final grade. Testing to evaluate the proper installation of the vapor barriers was also required. There was a concern by DEH that increases in groundwater elevation may be causing a decrease in LNAPL thickness in monitoring well KMW-27. Additional monitoring was requested until the next rainy season. On the January 2005 event, a LNAPL thickness of 0.34 foot was measured in KMW-27, and the LNAPL increased to 0.40 feet by July 2005. The passive skimmer was reinstalled for further remediation. In February 2007 the consultant determined there was a direct correlation between the LNAPL thickness and groundwater elevation in well KMW-27. In April 2011, LNAPL was observed in monitoring well KMW-27 only, at a thickness of 0.26 feet. In August 2011, a high-intensity targeted dual-phase extract event was conducted on well KMW-27 for six hours. Approximately 7 gallons of LNAPL and 214 gallons of groundwater were removed. Since LNAPL has been observed in KMW-27 for 9 years and has

SEA SHELL OIL AND CHEMICAL (Continued) **1000381492**

not been observed in the two neighboring wells; the consultant used the LNAPL recovery test data, a radius of one third the distance to the neighboring wells, and soil porosity to estimate a volume of 96 gallons of free product which remains present at and around the well. The consultant has estimated there is currently 981 cubic yards of total petroleum hydrocarbons (TPH) impacted soil remaining, with a concentration of 100 mg/kg or greater, after site remedial activities in August 2011. In the development of the Corrective Action Plan that was approved in on May 20 2014, the consultant demonstrated reasonable evidence that the diesel LNAPL has been removed to the extent practicable. The down gradient area to the southwest of well KMW-27 is occupied by railroad tracks and there is no indication that the residual LNAPL plume is migrating. There are no sensitive receptors likely to be impacted by the residual hydrocarbons at the site. The established site soil and groundwater cleanup goals and the revised LNAPL cleanup goal are protective of human health and the environment. It should be noted that when the CAP went out for public review in April 2014, notification went to 361 residences including on site and adjacent property owners. DEH received only one comment, from a curious neighbor. The site meets the criteria of a SWRCB low threat underground storage tank case closure policy in addition to the requirements of a RWQCB low risk fuel contaminated site, and DEH concurs that no further action is required.

Potential Media Affected: Soil
Potential Contaminants of Concern: Diesel, Gasoline
Site History: The former Seashell Oil Facility was a 16,000 square feet site located on the south corner of North Cleveland Street and Sport Fisher Way in Oceanside. Seashell Oil operated as a bulk distribution and retail sales facility, which included above and below ground

SEA SHELL OIL AND CHEMICAL (Continued) **1000381492**

tanks used for storage of various petroleum products until 1998. Voluntary Assistance Program case H10868-003 was opened in November 2001 in response to the discovery of contaminated soil during assessment activities performed prior to demolition of the above-ground storage tank (ASTs). Unauthorized release case H10868-002 was opened in May 1999 when the underground storage tanks (USTs) were removed and soil sampling indicated the presence of petroleum hydrocarbons. Most of the site assessment investigations conducted at the site combined both the UST and AST investigations together in one report. The three ASTs at the site included one 25,000 gallon diesel fuel tank, one 25,000 gallon premium gasoline tank and one 12,400 gallon regular unleaded gasoline tank. A fuel dispenser island occupied the central portion of the site, and below-grade fuel lines were located between the former ASTs and the fuel dispenser island. A warehouse was located on the west side of the site and was used for storage of petroleum hydrocarbons in 55-gallon drums and other containers. Prior to the opening of the VAP case, 17 borings and one hand auger were advanced in the area of the ASTs and the soil samples collected indicated a release of total petroleum hydrocarbons (TPH) in both gasoline and diesel ranges. Grab groundwater samples were taken from five of the borings and three of the borings were converted into groundwater monitoring wells. Depth to groundwater ranged between 37 to 44 feet below ground surface (bgs). Dissolved contaminants were found in both the gasoline and diesel ranges. A total of 30 soil borings were advanced from May 1998 to April 2001 in the AST area and the adjoining southeast property to assess the extent of contamination prior to redevelopment of the site. Ten of the borings were converted into monitoring wells. The primary contaminants found in soil were gasoline, diesel, benzene, naphthalene and lead. The concentrations of lead, most likely from the use of lead based paint, were all found to below the EPAs preliminary remediation goals (PRGs) set for residential use. Light non-aqueous phase liquid (LNAPL) hydrocarbons (commonly referred to as free product) were found in monitoring wells KMW-13 and KMW-14. The LNAPL in the AST area was analyzed and found to be made up of weathered gasoline. The AST dissolved gasoline plume most likely comingled with the UST dissolved plume prior to remediation activities. Since the redevelopment of the site was for residential purposes, human health risk evaluations were conducted based on the contaminants found during the investigations of both the UST and the AST areas. An Interim Remedial Action Plan (IRAP) was approved in October 2001 to remediate both the high benzene concentrations found in the soil in the AST area, and to remove LNAPL from both the UST and AST areas. Because the site is located in an area where groundwater has no designated beneficial uses identifed, the cleanup goal proposed for the LNAPL removal in the IRAP was less than 0.03 feet based on San Diego Regional Water Quality Control Boards guidance documents. The IRAP proposed a benzene cleanup level of 400 a%g/kg in soil, based on human health risk calculations. A total of six 5-foot diameter recovering wells were installed on site, with two located in the AST area. A total of 435 tons (approximately 290 cubic yards) of petroleum hydrocarbon impacted soil was removed during the installation of the recovery wells. Several times, LNAPL and groundwater were pumped from each well until dry and then the wells were allowed to recover. An estimated total of 13,000 gallons of total fluids was pumped from the six recovery wells, which included groundwater and an unknown quantity of LNAPL. Approximately 800 tons

SEA SHELL OIL AND CHEMICAL (Continued) **1000381492**

(approximately 540 cubic yards) of hydrocarbon impacted soil was excavated from the AST area to a maximum depth of 12 feet bgs and disposed of off-site. Confirmational sampling indicated that remaining benzene concentrations in the soil were below the cleanup goal of 400 a%g/kg. By the end of 2003, the site had been developed with eight residences that included vapor barriers installed during their construction. Vapor barriers were required to prevent excess cancer health risks to future residents from PCE and benzene vapors in the soil beneath the site. Soils containing detected PCE and TCE concentrations were restricted to areas beneath the driveways and alleyway, at a depth of 10.5 feet to 30 feet below the final grade. Testing to evaluate the proper installation of the vapor barriers was also required. Vapor risk modeling calculations indicated that proper installation of the vapor barriers was protective of allowable human health risk. Groundwater monitoring of the remaining monitoring wells conducted since the remedial actions indicate that the LNAPL has been removed from the AST area. Monitoring Well KMW-7, which is located down gradient of the location of the former AST area, did not contain any LNAPL or dissolved gasoline constituents for the latest monitoring event. LNAPL has been observed in monitoring well KMW-27, but as it is located cross gradient from the AST area, it is believed to be associated with the UST release H10868-002. The consultant has estimated there is approximately 1,275 cubic yards of TPH impacted soil remaining with a concentration above 100 mg/kg, and a majority of the impacted soil is located between 20 to 40 feet bgs. The remaining contaminants do not pose a threat to occupants of the building structures since they were constructed with vapor barriers to prevent contaminant vapor migrations. Groundwater does not have any beneficial uses in the area and the consultant has recommended that no further action is required for either the VAP case or the UST release case. DEH concurs with the consultants recommendation that the remaining contaminants are considered to be low risk.

Case Type: Cleanup Program Site
Case Worker: EM
Local Agency: SAN DIEGO COUNTY LOP
RB Case Number: Not reported
File Location: Not reported
Potential Media Affected: Not reported
Potential Contaminants of Concern: Not reported
Site History: This Voluntary Assistance Program Case was opened in October 2015 to further evaluate the impacts from chlorinated compounds and provide mitigation, if needed, for a strip mall with three units (1016, 1058 and 1064) that were former dry cleaners. As part of a November 2015 Phase II Environmental Site Assessment Report a total of 28 soil borings and one monitoring well (MW) were installed. The groundwater sample was taken from the MW and results were below maximum concentration levels for Volatile Organic Compounds (VOCs) and PCE / TCE. Soil samples indicated limited impacts of PCE / TCE and soil gas samples (taken from the borings and the MW) indicated over one in a million excess cancer risk for PCE in several of the suites. Based on these elevated soil gas sample PCE results, indoor air (IA) samples were taken in July 2016 within six suites (1054, 1056, 1058, 1060, 1062 and 1064) which would include suites that failed the soil gas or suites that were adjacent to such. Samples were taken over a 24-hour period split into on-hours (business open) and off-hours (business

MISSION SQUARE (Continued) **S118172410**

closed). In addition, a 24-hour outdoor air (OA) sample was taken. PCE was noted above screening levels in three suites during the July 2016 event, all off-hours. These three sampling locations were duplicated for a 16-hour off-hour event on October 2016 and all three samples passed. A 24-hour IA test was also done on March 2017 and showed two suites exceeding PCE indoor air screening level, both during off-hours. In summary, none of the on-hour samples exceeded the PCE commercial screening level. All IA samples were below screening levels for TCE. Various other volatiles (i.e. benzene, MtBE, carbon tetrachloride, etc.) were noted. The consultant stated that given that 56 of the 59 VOCs detected are related to current tenant activities and/or present in the background ambient air samples no further action was proposed for these compounds. In addition, further evaluation of the PCE would be needed because of certain suites exceeding the commercial screening level for PCE. A new study was proposed and approved utilizing a FROG 4000 continuous monitor to evaluate Suite 1060 (with the highest persistent IA PCE level) for a variety of conditions. The 5-day evaluation involved five 24-hour scenarios for both the on-hour and off-hour intervals (i.e. HVAC on / off, doors open / closed, etc.) with continuous air monitoring and IA samples taken every 10 minutes. Barometric conditions, temperature, etc. were also measured. PCE was not detected on any of the samples for any of the scenarios. Lines of evidence to support no indoor PCE risks for this site would be the lack of on-hour PCE levels noted in the earlier Summa Canister evaluations and a lack of PCE in Suite 1060 with five 24-hour scenarios utilizing the FROG 4000. Based on the lack of PCE / TCE in the indoor air samples, limited soil impacts, and lack of groundwater impacts for PCE, the consultant recommends no further action. DEH concurs.

File Location:	Local Agency
Local Case Number:	H20617-001
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	The Site is a former Shell service station located on the west corner of the intersection of North Coast Highway and Surfrider Way in Oceanside. The Site is currently a Chevron-Branded service station and consists of three dispensers, three underground storage tanks (USTs), a station building, and three service bays. The current USTs onsite were installed in 1985. In January and February 1996, a subsurface investigation was conducted to determine if soil has been impacted by petroleum hydrocarbons. Based on the laboratory results, the Department of Environmental Health (DEH) opened case H20617-001 on June 3, 1996. The site investigation could not determine if the release was related to the current USTs at the Site. A brief summary of assessment and cleanup activities are presented below: Between January 1996 and May 2006, nine onsite and 24 offsite soil borings were advanced; Between September 1996 and June 2004, twenty-seven onsite and offsite groundwater monitoring wells were installed. Based on the assessment activities, it was determined that free product and dissolved-phase contamination had migrated offsite beneath the adjacent property to the west. The adjacent property was a vacant lot and was proposed to be developed as residential complexes. On October 31, 2000, DEH did not allow development of that property until the free product was removed and the consultant was able to demonstrate that there were no health risks to the occupants of the future residential structures. On November 17, 2003, DEH released the offsite property to allow development. REMEDIATION Between January 1997 and October 2001, manual free product removal events were conducted in onsite and offsite wells. Approximately, 174 gallons of free product was removed from onsite and offsite wells. Free product has not been detected in any wells since 2004 due to manual free product recovery efforts. Two Dual-Phase Extraction (DPE) Pilot Tests were conducted. The first DPE Pilot Test took place between November

G & M CO., INC #53 (Continued) **U001571997**

15 and November 18, 2000. Approximately 810 pounds of petroleum hydrocarbons were extracted and treated during this test. The second DPE Pilot Test took place between March 19 and March 26, 2001, Approximately 410 pounds of petroleum hydrocarbons were extracted and treated during this test. In June 2001, a Soil Vapor Extraction (SVE) System was initiated. Due to the SVE system not being effective on recovering the free product, the consultant recommended implementing a DPE system. Between August 2002 and March 2004, a DPE system operated. Approximately 18,400 pounds of petroleum hydrocarbons were extracted and treated. Free product was removed to the extent practicable in all onsite and offsite wells. The consultant estimates that the total petroleum hydrocarbon mass recovered during manual free product recovery, DPE pilot testing and remediation system implementation, was approximately 25,000 pounds. SOIL VAPOR In June 2000, a soil vapor survey and health risk assessment was conducted offsite on the adjacent property to the west. The consultant concluded that the cumulative risk is 2.58x10-8, which is below the carcinogenic risk target of 1x10-6, indicating that soil vapor intrusion to indoor air does not pose a risk to occupants of the future residential structures. In September 2008, three onsite soil vapor monitoring wells were installed. Between September 2008 and March 2009, soil vapors were periodically collected from each monitoring well. Based on the laboratory results, all analytes were reported below laboratory detection limits. The consultant concluded that soil vapor intrusion to indoor air does not pose a risk to occupants of the onsite structure. SOIL Based on the analytical results from soil samples collected during the monitoring well installation and the soil boring advancement, the consultant concludes that petroleum hydrocarbon impacted soil has been adequately defined and is predominantly in the vicinity of the former and current UST pits. The consultant estimates that approximately 5,000 cubic yards of total petroleum hydrocarbon impacted soil greater than 100 milligrams per kilogram at the water table remains beneath the Site and offsite. The offsite impacts are generally at the water table at depths ranging from 40 to 45 feet below ground surface. This estimation was calculated from data that predates the active remediation. Following active remediation, confirmation soil sampling was not conducted; therefore, 5,000 cubic yards is a very conservative estimation. GROUNDWATER The groundwater has been monitored and sampled between January 1997 and January 1013. A total of 27 monitoring wells were installed at the Site. Free product has not been detected in any wells since 2004. The source area has been identified to be in the vicinity of the USTs. The consultant states that dissolved-phase plume extends less than 250 feet from source area. The dissolved-phase concentration of petroleum hydrocarbons and fuel oxygenates are decreasing or stable in all monitoring wells with the exception of TBA, which is increasing as MTBE continues to biodegrade. The following is the consultants calculated timeframe of when the contaminants of concern will reach their respective de minimis mass: Total petroleum hydrocarbons as gasoline will reach its de minimis mass of 1-pound within 471 years; Benzene will reach its de minimis mass of 0.1 pound within 121 years; MTBE and TBA will reach their de minimis mass of 1.25 pound within 93 years. Based on the groundwater samples collected from the Sites monitoring well network, the consultant concludes that the dissolved-phase plume is adequately defined. Based on the assessment, remediation, and health risk activities conducted on-site and off-site, in a letter dated

G & M CO., INC #53 (Continued) **U001571997**

November 17, 2003, DEH provided approval for residential development at the adjacent property to the west. A Corrective Action Plan (CAP) dated May 13, 2013, was submitted to DEH. The CAP recommends No Further Action and Case Closure. Based on data obtained throughout the case history, Shell Oil Product US and their consultant conclude that Site conditions present no significant risk to human health, the environment, and nearby sensitive receptors. DEH concurs with these conclusions.

NPL Status:	Not Listed
Description:	From 1942 to 1987, the Navy acquired through condemnation, purchase, leasehold condemnation, and transfer (from Coast Guard) a total of 127,250.01 acres north of Oceanside, CA. Most of the property was once a part of the Rancho Santa Margarita Y Las Flores.Camp Pendleton is located along the Pacific Coast, thus allowing for amphibious

CAMP PENDLETON- MARINE CORPS (Continued) **1009484312**

training. It covers a total of 127,250.01 acres. This report is limited to those parcels that have been determined potentially to be formerly used by the Marine Corps. Four parcels have been identified that fall into this category. They are what is now the Oceanside Small Craft Harbor, the Sterling Housing Project, property occupied by a Coast Guard Navigation Station, and property located just north of the current Camp Pendleton boundaries and Camp Talaga.

History: Starting in 1942, the U.S. acquired through condemnation, purchase, leasehold, and transfer a large amount of property. It was Marine Corps training area and named MCB Camp Pendleton. It is an active facility and the home of the major elements of the 1st Marine Expeditionary Force plus the Army and Marine Reserves, as well as other Navy tenants. The parcel along the Pacific Coast was deeded to the City of Oceanside between 1959 and 1965 for development of a small craft harbor, which exists to this day. The Sterling Homes property was deeded to the City of Oceanside and a private developer. A new single family and multi-family residential development has been constructed on most of the property but a portion remains undeveloped.The fourth parcel (the 1.66 acre parcel) was transferred to the Federal Highway Adminstration on 15 February 1979 as part of the Interstate 5 freeway system.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/28/2020
Date Data Arrived at EDR: 11/05/2020
Date Made Active in Reports: 11/25/2020
Number of Days to Update: 20

Source: EPA
Telephone: N/A
Last EDR Contact: 01/14/2021
Next Scheduled EDR Contact: 04/12/2021
Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/28/2020
Date Data Arrived at EDR: 11/05/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/28/2020

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners
EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills
This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

East Map:	5641318 SAN LUIS REY, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

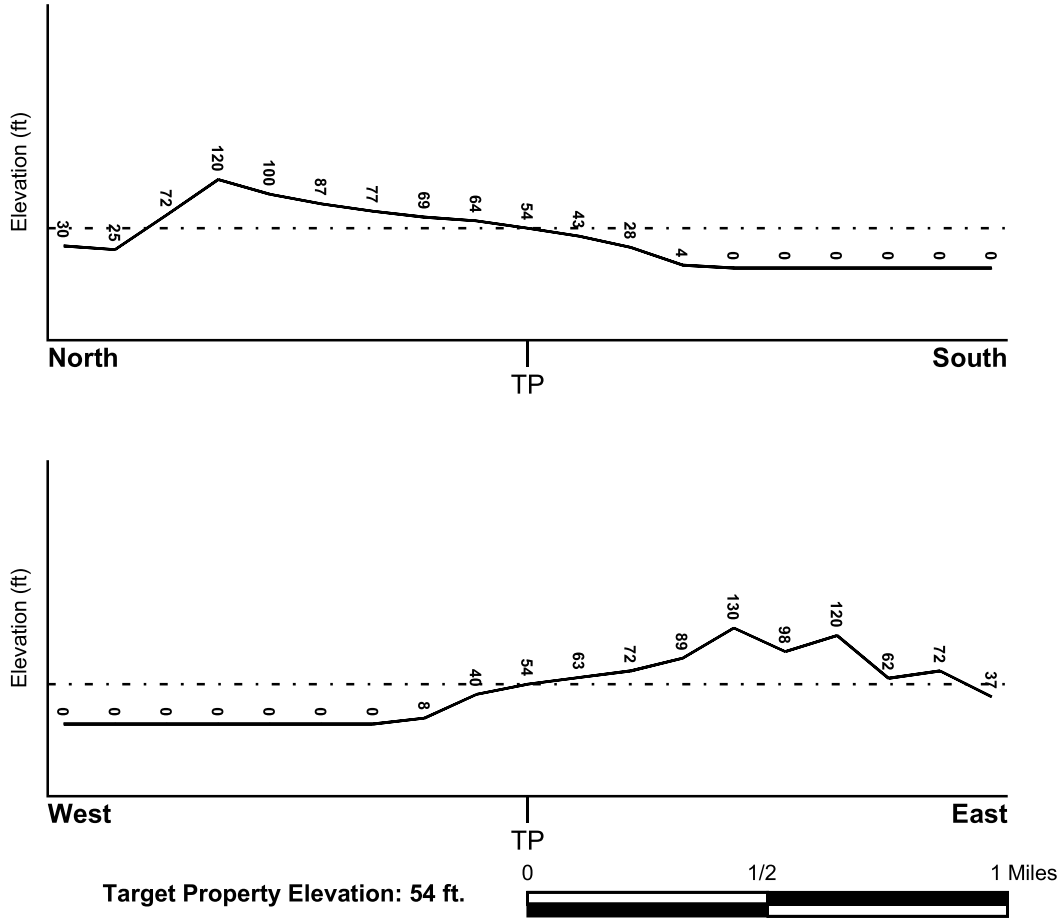

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06073C0734H	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06073C0753H	FEMA FIRM Flood data
06073C0742G	FEMA FIRM Flood data
06073C0761G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
OCEANSIDE	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
2	1/4 - 1/2 Mile NNE	W
G86	1/2 - 1 Mile SE	SSW
1G	1/4 - 1/2 Mile NNE	W
2G	1/2 - 1 Mile SE	SSW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: TUJUNGA

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.6
2	14 inches	33 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.6
3	33 inches	59 inches	stratified gravelly sand to gravelly loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Well-graded sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.8 Min: 6.6

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: COASTAL BEACHES

Soil Surface Texture: coarse sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 92 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 7.8 Min: 5.1
2	5 inches	59 inches	coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 7.8 Min: 5.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon

Re:	**Freedom of Information Act Request**
Property Location:	**235 South Tremont St.** **Oceanside, California 92054**

To Whom It May Concern:

Stantec Consulting Services Inc. (Stantec) is performing an environmental review of the above-listed Property. As part of our assessment, I am requesting that your office provide copies of file information regarding permits, hazardous materials, waste, complaints, violations, underground or above ground storage tanks, remedial action, and case closure documentation, or any records that indicate environmental concern at the above-referenced Property.

Please email Jennifer Alvarado at **jenny.alvarado@stantec.com** or call at **(805) 405-9847** to schedule a file review appointment.

Thank you in advance for your assistance in this matter.

Sincerely,

STANTEC CONSULTING SERVICES INC.

We have received your Public Records Act Request from the Department of Toxic Substances Control (DTSC). After a thorough review of our files, no site records were found pertaining to the sites/facilities referenced above.

A large number of our records are available on EnviroStor, an online database that provides non-confidential, public access to DTSCs Data Management System. It tracks our cleanup, permitting, enforcement and investigation efforts at hazardous waste facilities and sites with known or suspected contamination issues. EnviroStor is available 24/7, 365 days a year. The data reflects the latest updates as they are entered in the system. Access it from your computer or smartphone, the local library – anywhere Internet access is available. Just go to www.envirostor.dtsc.ca.gov. You'll find a step-by-step tour of EnviroStor under the "How to Use EnviroStor" menu on the website.

If you have any questions or would like further information regarding your request, please contact me at 714-4845337 or via email at CypressFileRoom@dtsc.ca.gov.

Sincerely,

Julie Johnson

REGISTERED

Dear Sir:

We have been advised that you ceased drilling operations at the well which you acquired from Pacific Coast Petroleum Corporation, in Sec. 23, T. 11 S., R. 5 W., San Diego County, sometime ago, and that the property is now idle.

You are hereby requested to file log, history and core record on the enclosed forms, in duplicate, giving a complete history of all the work done at this well by you.

The law requires that these records be filed within thirty days after a well has been completed or allowed to stand idle, and we must insist that you comply with this request.

Yours truly,

E. Huguenin

Deputy Supervisor.

Dear Sir:

I do not know the whereabouts of C. R. Schuster, but I have understand that he is at the Manpeaker Ranch at San Bernardino, Cal.

Originally the well was drilled to 3210 by Pacific Coast Oil Corp. and abandoned in Jan. 25. C. R. Schuster deepened the well from 3210 to 3660.

Yours truly
S. R. Dunn

Mr. S. R. Dunn,
Box 57,
Oceanside, California.

Dear Sir:

Mr. Fischer of Fischer Oil Company tells me that you can supply this Division with the address of C. R. Schuster, who drilled the well commonly known as the "Ganymeade" well at Oceanside. We are very desirous of getting in touch with Mr. Schuster, as the records pertaining to his operations have not been filed in accordance with the law.

We will appreciate your early answer.

Yours truly,

E. Sturgeon

Deputy Supervisor.

Long Beach, California.

Dear Sir:

In reply to your letter of June 22, 1928, I am enclosing our form 106, upon which should be filed a statement covering the cementing of the 10-inch casing at 2700 feet; also noting the date upon which you expect to bail for test of water shut-off. Please fill out this form immediately following the cementing operations, giving the number of sacks used, method, and the formations in which the casing was cemented.

Yours truly,

Deputy Supervisor

E. Huguenin, Deputy Attention:

Dear Sir:

Relative to Ganymede No. 1, Oceanside, California, We have succeeded in pulling out old drill pipe and corebarrel, and we are ready to set 10 in. casing and cement well off at a depth of 2700 ft.

Our gas showing at that depth indicates a very good well. If there is anything that is necessary for me to do, would request that you notify me at your earliest convenience.

Very truly yours,

C R Schuster

611 New Orpheum Building
Los Angeles
February 10, 1928.

Mr. R. D. Bush,
State Oil and Gas Supervisor,
San Francisco, California.

Dear Sir:

Pacific Coast Petroleum Corporation well No. 1, Sec. 23, T. 11 S., R. 5 W., S. B. B. & M., San Diego County, was quitclaimed to the land owners, Beatrice Dunn and Shelby Dunn, of Oceanside, some time prior to January 1, 1927, and leased by the land owners to O. R. Schuster on November 20, 1927.

This information was supplied in a letter received from O. R. Schuster, dated February 9, 1928. We are therefore changing our records accordingly.

Please request Mr. Schuster to appoint an agent. His address is 342 E. Broadway, Long Beach, California.

Yours truly,

Deputy Supervisor.

FORM 111. 88701 11-27 10M
[CALIFORNIA STATE PRINTING OFFICE]

STATE OF CALIFORNIA
DEPARTMENT OF NATURAL RESOURCES
DIVISION OF MINES AND MINING

DEPARTMENT OF PETROLEUM AND GAS

Report on Proposed Operations

No. P-1-16956

Los Angeles Cal. Feb. 14 1928

Mr. C.R. Schuster

Long Beach Cal.

Agent for C. R. SCHUSTER Company

DEAR SIR:

Your supplementary proposal to drill Well No. 1,

Section 23, T. 11 W, R. 5 W, S.B. B. & M., --- Oil Field, San Diego County,

dated Jan. 18 1928, received Feb. 14 1928, has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

Records in addition to or at variance with those shown in the notice:
A memorandum filed with this department shows that the only casing in the hole is 180' of 15⅜" stovepipe.

THE NOTICE STATES:
"The new conditions are as follows:
Said well was drilled to a depth of 3300' and operation ceased in December, 1925, and has remained idle since. At the time of cessation of drilling certain tools had been lost in the well. Drilling has been resumed on the well during the last thirty days, in cleaning out, and reached bottom, when surface casing has collapsed."

PROPOSAL:
"We now propose:
To pull old surface casing, and if impossible to get in hole, to skid the derrick and begin drilling a new well.
This well is not owned by a corporation and is being drilled at the expense of the undersigned individually."

RECOMMENDATION:
THE PROPOSAL IS APPROVED with the recommendation that this department be notified when the first showing of oil or gas is encountered below the present depth and before landing or cementing any more casing in this well.

NOTE: This report was delayed pending receipt of information relative to the transfer of ownership of the lease.

SUPPLEMENTARY NOTICE

Long Beach, Cal. Jan. 18, 1928

MR. E. Huguenin

Deputy State Oil and Gas Supervisor
611 New Orpheum Building
Los Angeles, Cal.

DEAR SIR:

Please be advised that our notice to you dated July 5th, 1924,

stating our intention to drill (Drill, deepen, redrill, abandon) well number 1, by Pacific Coast Petroleum Corp

Sec. 23, T. 11 S. R. 5 W., S. B. & M. Oceanside Oil Field,

San Diego County, must be amended on account of changed or recently discovered conditions.

The new conditions are as follows:

Said well was drilled to a depth of 3300 feet and operation ceased in December, 1925, and has remained idle since. At the time of cessation of drilling certain tools had been lost in the well. Drilling has been resumed on the well during the last thirty days; in cleaning out, and reached botton, when surface casing has collapsed.

We now propose to pull old surface casing, and if impossible to get in hole, to skid the derrick and begin drilling a new well.

This well is not owned by a corporation, and is being drilled at the expense of the undersigned individually.

w/o drill

Form 111. 20776 12-23 4M

CALIFORNIA STATE MINING BUREAU
DEPARTMENT OF PETROLEUM AND GAS

Report on Proposed Operations

No. P.-1-6972

Los Angeles, Cal. July 5, 1924

Mr. H. Kelly,

Oceanside, Cal.

Superintendent for PACIFIC COAST PETROLEUM CORPORATION

DEAR SIR:

Your proposal to drill Well No. 1,

Section 25, T. 11 S., R. 5 W., S.B. B. & M., ——— Oil Field, San Diego County,

dated June 25, 1924., received June 26, 1924., has been examined in conjunction with records filed in this office.

Present conditions as shown by the records and the proposal are as follows:

THE NOTICE STATES:

"The well is 700 feet N. and 100 feet W. from SE cor SW¼ of the NW¼ of above sec.
The elevation of the derrick floor above sea level is 128 feet.
We estimate that the first productive oil or gas sand should be encountered at a depth of about ——— feet, more or less."

PROPOSAL:

"We propose to use the following strings of casing either cementing or landing them as here indicated:

Size of Casing	Wt. Lb. Per Ft.	New or 2nd Hand	Depth	Landed or Cemented
15⅜"	70	Second	187	Cemented

Now drilling at a depth of 2040 feet.
It is understood that if changes in this plan become necessary we are to notify you before cementing or landing casing."

RECOMMENDATION:

This Department has not sufficient data available upon which to base an exact estimate of the depth at which oil or gas bearing formations should be encountered in this vicinity, nor the depth at which a water shut-off should be effected.
The proposed drilling program is approved, however, subject to recommendation that steps shall be taken to determine the fluid content of all porous formations, and afford protection to such formations as this Department considers worthy of protection from infiltration of water or the dissipation of gas.

THIS DEPARTMENT MUST BE NOTIFIED AS FOLLOWS:

1. When a showing of oil or gas is encountered.
2. Before landing or cementing any casing below the 15⅜" conductor.
3. To witness a bailing test of each possible water shut-off.

We would appreciate the filing of a memorandum log of the well with the notice of test of water shut-off.

NOTICE OF INTENTION TO DRILL NEW WELL

This notice must be given before drilling begins

C. A. Schuster

Oceanside, Cal. 6/25/24 192

MR. C. C. Thomas

Deputy State Oil and Gas Supervisor

Los Angeles Cal.

DEAR SIR:

Well No. 1

In compliance with Section 17, Chapter 718, Statutes of 1915, as amended, notice is hereby given that it is our intention to commence the work of drilling well number one Section 23 T11S R.5 W., San Bern. B. & M., Oil Field, San Diego County.

The well is 700 feet N. XXX., and 100 feet XXXXW. from SE cor SW¼ of the NW¼ of above sec
(Give location in distance from section corners or other corners of legal subdivision)

The elevation of the derrick floor above sea level is 128 feet.

We propose to use the following strings of casing either cementing or landing them as here indicated:

Size of Casing, Inches	Weight, Lb. Per Foot	New or Second Hand	Depth	Landed or Cemented
15½	70	Second	187'	Cemented
Now drilling at a depth of 2040 feet				

It is understood that if changes in this plan become necessary we are to notify you before cementing or landing casing.

We estimate that the first productive oil or gas ~~sand~~ should be encountered at a depth of about ..... feet, more or less.

Respectfully yours,

Address Box 424, Oceanside, Cal.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

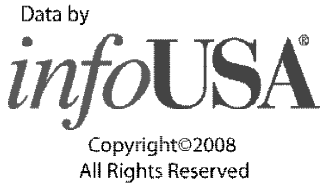

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.
