Project Description (Proposed actions, location, and/or consequences).

The project would demolish the existing chemical storage buildings, electrical control panel, and connection to the existing water main on-site. After demolition, the project would install a replacement groundwater well at approximately 800 to 1,000 feet below ground surface and construct a new, approximately 56,000-gallon steel water storage tank (28 feet in diameter and 17 feet in height), three chemical storage enclosures, and several utility and right-of-way improvements. The project would also include a diesel-powered emergency generator.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

See Attachment A

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

Areas of concern include noise and vibration, energy consumption, air pollution and odors during construction, tree preservation and replacement, subsidence, and light pollution.

Provide a list of the responsible or trustee agencies for the project.
