EXECUTIVE SUMMARY

This Phase I environmental site assessment was conducted in general conformance with the scope and limitations of American Society for Testing and Materials (ASTM) Standard E1527-13. The purpose of this assessment was to determine if Recognized Environmental Conditions (RECs) were present within the northeastern portion of Assessor Parcel No. 731-170-001, a 7.8-acre portion of a 640± undeveloped property ("site") located approximately 1 mile northwest of the intersection of Hot Mineral Spa Road and System Road, in unincorporated Riverside County, California. RECs are the presence or likely presence of hazardous material releases within a property. A review of the site conditions at the time of this assessment, the site's background, and a summary of any potential RECs at the site are provided below.

Site Description - At the time of this assessment, the site was primarily in an undeveloped and vacant state. It was covered with rocky soil and a light to heavy growth of vegetation. A jeep trail traversed through the site's western portion. The site's southwestern portion terminated at a water retention basin. A partially occupied equipment yard, approximately 0.5 acres in area, was located in the site's central portion. This yard contained two tractor trailers, a smaller storage trailer, an equipment trailer, and piles of steel construction materials. Construction and/or commercial activities did not appear to be taking place within the site.

Site History - Based on data collected during this assessment, the site has primarily been in an undeveloped and natural state since at least 1940. A water retention basin was established adjacent to the site's southwestern portion prior to 1947. Part of the site's central portion (existing equipment yard) was leveled and cleared of vegetation prior to 1953. A jeep trail was established in the site's western portion between 1975 and 1986. No other manmade structures are known or suspected within the site.

Onsite Hazardous Material Sources and Releases - Evidence for aboveground or underground storage tanks, clarifiers, sumps, or other potentially hazardous material-containing structures was not encountered on any portion of the site during this assessment or in documents obtained for this assessment. Potential releases of petroleum hydrocarbons and/or chemicals were also not encountered within the site during this assessment.

Due to the historical absence of agricultural activities, pesticides are not suspected in the surficial soils that cover the site.

Regional Hazardous Material Releases - Based on a review of properties within the site vicinity and data made available during this assessment, it is our opinion that there is a relatively low likelihood that contaminants from offsite properties have migrated to the subject site and have impacted the underlying soil and/or groundwater.

Recognized Environmental Conditions - RECs were not identified within the site during this assessment. Historical RECs were also not identified at the site. Historical RECs refer to a past hazardous material release that has been remediated to below residential-cleanup standards and given regulatory closure.

No Other Environmental Condition (OEC) was encountered within the site. OECs are features or issues that, while being judged to have a relatively low probability of resulting in significant contaminant impact to the site, should be considered in project planning and risk management.

Recommendations - Based on the findings of this assessment, there are no known onsite conditions that warrant regulatory involvement, including actions leading to environmental soil sampling, soil remediation, groundwater sampling, and/or groundwater remediation. Environmental studies pertaining to soil and groundwater contamination beneath the site are not recommended.

Phase I Environmental Site Assessment Report

Northeast Portion of APN 731-170-001, Riverside County, California

1.0 INTRODUCTION

1.1 PURPOSE

Terra Nova Planning & Research, Inc. was retained by Global Water Farms to perform a Phase I Environmental Site Assessment (ESA) for the northeastern portion of Assessor Parcel No. 731-170-001, an undeveloped property located approximately 1 mile northwest of the intersection of Hot Mineral Spa Road and System Road, in unincorporated Riverside County, California (Figure 1). The purpose of this Phase I ESA was to identify apparent and potential sources of contamination that, by their association or proximity to the site, could represent a recognized environmental condition (REC) as defined by American Society for Testing and Materials (ASTM) Standard No. E1527-13. A REC is defined as the presence or likely presence of hazardous substances or petroleum products in, on, or at a property due to any release to the environment, under any condition indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment.

1.2 SCOPE OF WORK

The scope of work for this assessment included the following.

- Site reconnaissance to visually assess the current site utilization, potential onsite use or storage of hazardous materials, and indications of surface and subsurface contamination.
- Review of local geology and hydrogeology using readily available data.
- Review of current and historical conditions and uses of the site and immediate vicinity using available resources, including:
  - environmental and geologic reports and maps,
  - historical aerial photographs and topographic maps,
  - state and federal government databases, and
  - local agency files.
- Preparation of this report.

Data gaps to the ASTM Standard E1527-13 for this report include the following:

- A preliminary title report, and
- An assessment of the site's purchase price and the fair market value.

The references used in this study are listed in Section 8.0. Color photocopies of selected photographs taken during the site reconnaissance are included in Appendix A. Copies of aerial photographs, topographic maps, and an assessor parcel map are provided in Appendix B. The search of select government documents was subcontracted to Environmental Data Resources, Inc. (EDR). A copy of the full EDR report is included in Appendix C. Agency documents are provided in Appendix D. Environmental questionnaires are provided in Appendix E

2.0 SITE OVERVIEW

2.1 LOCATION

The subject site, which comprises approximately 7.8 acres of a 640± acre parcel of land, is located approximately 1 mile northwest of the intersection of Hot Mineral Spa Road and System Road, in unincorporated Riverside County, California (Figures 1 and 2). The site is located along the southern side of System Road, which is also referred to as Coachella Canal Road. The site currently has no formal address. A parcel map that shows the location of the site is provided in Appendix B. It is located within the northeastern portion of Assessor Parcel Number 731-170-001.

The site is located within the northeast quarter of Section 35, Township 8 South, Range 12 East, San Bernardino Base and Meridian.

2.2 DESCRIPTION

At the time of this assessment, the site was primarily in an undeveloped and vacant state. It was covered with rocky soil and a light to heavy growth of vegetation. A jeep trail traversed through the site's western portion. The site's southwestern portion terminated at a water retention basin. A partially occupied equipment yard, approximately 0.5 acres in area, was located in the site's central portion. This yard contained two tractor trailers, a smaller storage trailer, an equipment trailer, and piles of steel construction materials. Construction and/or commercial activities did not appear to be taking place within the site.. For a more detailed description of the site, refer to Section 3.1 below.

2.3 HISTORY

Based on data collected during this assessment, the site has primarily been in an undeveloped and natural state since at least 1940. A water retention basin was established adjacent to the site's southwestern portion prior to 1947. Part of the site's central portion (existing equipment yard) was leveled and cleared of vegetation prior to 1953. A jeep trail was established in the site's western portion between 1975 and 1986. No other manmade structures are known or suspected within the site.

2.4 TOPOGRAPHY

The subject site is located at elevations between 10 and 60 feet above mean sea level (USGS, 2018). The site and site vicinity slope gently to the south-southwest.

2.5 GEOLOGY

Soils underlying the site's northern and central portions are comprised of Quaternary-age alluvium (Jennings, 1967). These deposits were noted during the site reconnaissance to be generally comprised of a mixture of sand, angular gravel, and angular cobbles. The site's southern portion is reported to be underlain with Quaternary-age lake deposits. These deposits were noted to be comprised of layers and mixtures of clay, silt, sand, and gravel. Based on the soil types mapped by the U.S. Soil Conservation Service, the soils covering the site are comprised of gravelly sand to a depth of at least 59 inches.

The Hot Springs Fault is the closest known active fault. This fault is located within a portion of the site's southern side (Jennings and Bryant, 2010). Its reported location corresponds with the linear vegetation change visible on Figure 2.

2.6 HYDROLOGY

Based on a review of records for the site and nearby properties, groundwater is located between the ground surface and 20 feet below ground surface (Moyle, 1974). Groundwater is periodically very close to the ground surface, as evidenced from the locally thick vegetation and flowing springs common in the site vicinity. The groundwater flow direction beneath the site is toward the south-southwest (Moyle, 1974).

3.0 ASSESSMENT REVIEW

3.1 SITE INSPECTIONS AND OBSERVATIONS

On April 9, 2022, a Terra Nova Planning & Research, Inc. representative visited the site in order to assess its current utilization and to visually search for indications of surface and subsurface contamination. Photographs taken during the site visit are included in Appendix A. Observations made during the site reconnaissance are presented below.

- At the time of this assessment, the site was primarily in an undeveloped and vacant state (Photo Nos. 1 through 33). It was covered with rocky soil and a light to heavy growth of vegetation. Most of the onsite vegetation appeared dead as a result of drought or winter conditions.
- Building structures were not located within the site. A leveled and partially occupied equipment yard, approximately 0.5 acres in area, was located in the site's central portion. A jeep trail passed through the site's southwestern portion. The site's southwestern portion terminated at a water retention basin. No other manmade structures were encountered within the site.
- The onsite equipment yard was unfenced and contained two tractor trailers, a smaller storage trailer, an equipment trailer, and piles of steel construction materials (Photo Nos. 19 through 22). Potentially hazardous material sources and/or releases were not encountered within this portion of the site.
- A very minor quantity of nuisance debris was encountered locally within the site. This debris included glass fragments, plastic, paper, lumber, and empty food and beverage containers. Potentially hazardous nuisance debris was not encountered during the site reconnaissance.
- None of the following were observed within or immediately adjacent to the site:
  - Fill ports or vent pipes to underground storage tanks
  - Aboveground storage tanks
  - Indications of septic systems
  - Groundwater and/or vadose zone wells
  - Pools of liquid or potentially hazardous substances
  - Clarifiers, ponds, pits, sumps, or other underground waste disposal areas
  - Stained or odorous soil

3.2 PROJECT VICINITY

Properties adjoining the site were reviewed for evidence of possible contaminant releases. A brief description of these properties is provided below. Potential contaminant sources and/or releases were not observed in their visible portions.

- An unpaved roadway (System Road) was located along most of the site's northern side (Photo No. 34). The properties immediately adjoining the northern side of this road were primarily in an

undeveloped and natural state, similar to the subject site (Photo No. 35). One relatively small area had been cleared and was being used to store steel construction materials (Photo No. 36).

- An empty and abandoned tank, approximately 500 gallons in capacity, was located immediately north of the site's eastern portion (Figure 2; Photo No. 37). The former use of this tank was not discernable, but suspected of being for water storage. The soils underlying this tank were unstained and free of odor.
- A geothermal water well was also located immediately north of the site's eastern portion (Figure 2; Photo No. 38). This well, which appeared in good condition, was not in use. The well's upper connections were secured with metal caps that were either bolted or threaded onto the upper well housing. These upper connections were raised at least 8 feet above ground level. Based on a review of the well and its visible connections, this well appeared secure and not a conduit for contamination.
- The properties located east of the site appeared in natural and undeveloped states (Photo Nos. 39 and 40). These properties were covered with rocky soil and a relatively light growth of vegetation.
- The property located south of the site was also primarily in a natural and undeveloped state (Photo No. 41). A water retention basin was located immediately south of the site's western side (Photo No. 42). Indications of potential hazardous material releases into this basin, as indicated by staining or odors, were not encountered at the time of this assessment.
- The property located west of the site also appeared in a natural and undeveloped state (Photo Nos. 43 and 44). A jeep trail passed through this property. No other manmade structures were observed within this property.

3.3 REVIEW OF AERIAL PHOTOGRAPHS

The following aerial photographs were reviewed in order to assess land use over time and look for evidence of potentially hazardous material storage, usage, and/or disposal areas. Copies of these photographs are provided in Appendix B. As noted below, potential contaminant sources and/or release areas were not visible within the site between 1947 and 2016.

Aerial Photograph Review	
Date	**Observations**
1947	In the 1947 aerial photograph, which has poor image quality, the site appears in an undeveloped and vacant state. There are no building structures visible within the site. A roadway is faintly visible along the site's northern side. The Coachella Canal is visible north of the site and this roadway. A pond, similar to present, is located south of the site's western terminus. No other manmade structures are visible within the immediate site vicinity.
1953	The site appears covered with soil and a sparse growth of vegetation. The vegetation has been cleared from a portion of the site's central portion. A roadway passes through the site's northwestern corner. The site's southwestern portion terminates at a pond. With the exception of unpaved roadways, the canal, and the pond, manmade structures are not visible within the site or immediate site vicinity.
1975	Similar to 1953.
1986	Similar to 1975.

Aerial Photograph Review	
Date	**Observations**
1992	Similar to 1986.
1996	Similar to 1992.
2002	Similar to 1996.
2009	Similar to 2002. A new canal is now visible along the southern side of the preexisting canal. The older canal remains visible, and empty.
2016	Similar to 2009.

3.4 REVIEW OF MAPS AND REPORTS

3.4.1 USGS TOPOGRAPHIC MAPS

Topographic maps dating between 1940 and 2018 were reviewed as part of this assessment. These maps are provided in Appendix B of this report. A description of these maps is provided in the table below. As noted on these maps, structures of concern, such as pipelines, oil wells, large aboveground tanks, and landfills are not shown within the site or immediate site vicinity.

Topographic Map Review	
Date	**Observations**
1940	In the 1940 topographic map, the site is shown within terrain that is sloping gently toward the south-southwest. Manmade structures are not shown within the site. A roadway traverses along the site's northern side. The Coachella Canal is located north of the site and this roadway. No other manmade structures are shown within 1 mile of the site.
1947	Similar to the 1940 topographic map.
1956	Similar to the 1947 topographic map. A swamp is now shown immediately west of the site. The existing water retention basin is shown south of the site's southwestern portion.
1979	Similar to the 1956 topographic map.
1995	Similar to the 1979 topographic map. With the exception of the adjoining roadway and canal to the north, manmade structures are still not shown within the immediate site vicinity.
2002	Similar to the 1995 topographic map.
2012	Building structures are not shown within the site or within the adjoining properties. The uses of the site and the site vicinity are not shown.
2018	Similar to the 2012 topographic map.

3.4.2 SANBORN INSURANCE MAPS

Sanborn Maps, requested for this assessment, were not found for the site or site vicinity.

3.4.3 ASSESSOR PARCEL MAP

An assessor parcel map and associated property profile were obtained for the site for review. A copy of the assessor parcel map is included in Appendix B. This map shows the location of the site within the associated parcel. Easements for chemical and/or petroleum hydrocarbon pipelines within the site are not shown on this map and within the site vicinity.

The property profile for the site (APN 731-170-001) reports that the site's owner is "Sunny Acre Holdings". Owners commonly associated with hazardous material use, such as dry cleaners and fuel service stations, were not listed in the property profile. The use of the onsite parcel is reported as being "Vacant - Residential Land". A formal address and building structure are not reported for the onsite parcel. The parcel that includes the site is noted to be 641.39 acres in area. As noted above, the site only includes approximately 7.8 acres of this parcel's northeastern portion.

3.5 ENVIRONMENTAL DATABASE REVIEW

Environmental Data Resources, Inc. (EDR) conducted a search of available environmental records for the site and properties up to 1 mile away from the site. The search met the specific requirements of ASTM Standard Practice for Environmental Site Assessments (E1527-13), including those associated with government databases, search distances, and data currency. EDR's report, dated April 8, 2022, is included as Appendix C of this report. Pages 3 through 7 of the Executive Summary in EDR's report list the federal and state environmental databases searched for this assessment. A description of these databases is provided at the end of EDR's report.

A map provided in EDR's report shows the location of the subject site and properties within the search distances defined by ASTM (see Page 2 in Appendix C). As noted in the EDR report, the site is not listed in any of the databases searched.

There is one property listed within 1 mile of the site that has the potential to release hazardous materials into the subsurface soil and/or groundwater. This property, the USMC Chocolate Mountain Aerial Gunnery Range, is located approximately 400 feet northeast of the site's western portion. This gunnery range is listed as a Department of Defense Site. Hazardous material sources and/or releases were not identified within this property. Such significant releases are not anticipated within one mile of the site due to the distance to the associated military base, which is located approximately 83 miles southeast of the site. Other potential hazardous material release areas were not listed within 1 mile of the site.

3.6 AGENCY CONTACT AND MATERIALS

Due to the absence of a formal site address, the Riverside County Department of Environmental Health was not contacted with regards to obtaining records for the subject site. This agency requires formal addresses for record searches. Environmental records pertaining to onsite or near-vicinity hazardous material sources and/or releases were obtained from the following sources.

- California Regional Water Quality Control Board
- California Department of Toxic Substances Control
- California Geologic Energy Management Division

3.6.1 REGIONAL WATER QUALITY CONTROL BOARD

The California Regional Water Quality Control Board's (RWQCB's) records were searched using their map interface database at http://geotracker.swrcb.ca.gov. The properties listed in this database are known to have released potentially hazardous materials into the underlying soil and/or groundwater. The site was not listed within the RWQCB database. A search of this database revealed one property (the USMC Chocolate Mountain Aerial Gunnery Range) located approximately 400 feet north of the site's western portion (Appendix E1). Potentially hazardous material sources and/or releases were not reported in this property.

3.6.2 DEPARTMENT OF TOXIC SUBSTANCES CONTROL

The Department of Toxic Substances Control's (DTSC's) records were searched using their map interface program at http://www.envirostor.dtsc.ca.gov/public. A search of this database revealed no DTSC-regulated properties (properties reported with potential contaminant releases) within 1 mile of the site (Appendix E2).

3.6.3 CALIFORNIA GEOLOGIC ENERGY MANAGEMENT DIVISION

Oil well maps provided by the California Geologic Energy Management Division (CalGem) were searched via their search program at http://maps.conservation.ca.gov/oilgas/. Oil wells are not shown within the subject site or within 1 mile of the site. The closest oil well (Pacific Dry Ice Co. "Pacific Dry Ice" 3) is located approximately 2 miles south of the site. The location of this well is provided on a CalGem map included in Appendix E3. This well was reported to be a dry hole.

The CalGem search program noted that there is a geothermal well located immediately north of the site's eastern portion. This well was identified in the field, and estimated to be 20 to 30 feet north of the site. Hazardous material releases are not suspected at this well site.

3.7 DISCUSSION WITH ONSITE REPRESENTATIVE

A representative of the site, Mr. Brad Donais of Heptagon Seven, completed an environmental questionnaire for the subject site. This questionnaire is provided in Appendix E. As noted in this document, Mr. Donais has been associated with the project site for approximately 8 months. He was not aware of any possible or known hazardous material sources or releases within the site. This corresponds with the findings of this assessment. Mr. Donais noted that equipment within the site included building materials and PV solar panels.

4.0 FINDINGS

4.1 BUILDING CONSTRUCTION MATERIALS

Due to the absence of building structures, asbestos-containing building materials and lead-based paint are not suspected within the site.

4.2 ONSITE HAZARDOUS MATERIAL USE

Pesticides - Due to the absence of agricultural activities within the site, pesticides and/or herbicides are not suspected in the site's surficial soils at concentrations that exceed regulatory limits.

Chemical/Petroleum Hydrocarbon Materials - Potentially hazardous materials were not encountered within the site at the time of this assessment.

Potential Hazardous Materials Storage Structures - Potentially hazardous material sources were not encountered within the site at the time of this assessment.

Regulatory Actions - Regulatory actions are not known or suspected of having been issued for the site.

4.3 SUBJECT SITE VICINITY

Landfills - There are no landfills reported within 1 mile of the subject site.

Regional or Adjacent Hazardous Material Releases - National Priority List (NPL) properties (large-scale releases of hazardous materials) are not reported within 1 mile of the site. In addition, there are no known hazardous material releases within 1 mile of the site that are considered as having the potential to impact the soil and/or groundwater underlying the site.

Radon - Radon levels reportedly average 0.117 picocuries in first-floor levels and 1.7 picocuries in basement levels for properties within zip code 92254. The U.S. Environmental Protection Agency's (EPA's) maximum allowable radon level is 4 picocuries. Radon concentrations above EPA's allowable level are not expected at the site.

Asbestos - Sources for asbestos-containing rock are not reported within 50 miles of the site (CDOGGR, 2000).

Potable Water Source - Water is supplied to the site vicinity by the Coachella Valley Water District (CVWD). The CVWD obtains its water from groundwater aquifers. The CVWD's 2020-2021 Water Quality Report can be reviewed online at: http://www.cvwd.org/ArchiveCenter/ViewFile/Item/878. As noted in this report, the water provided by the CVWD meets all State and Federal drinking water standards.

5.0 CONCLUSIONS AND RECOMMENDATIONS

5.1 CONCLUSIONS

5.1.1 SITE BACKGROUND

Based on data collected during this assessment, the site has primarily been in an undeveloped and natural state since at least 1940. A water retention basin was established adjacent to the site's southwestern portion prior to 1947. Part of the site's central portion (existing equipment yard) was leveled and cleared of vegetation prior to 1953. A jeep trail was established in the site's western portion between 1975 and 1986. No other manmade structures are known or suspected within the site.

5.1.2 ONSITE HAZARDOUS MATERIAL SOURCES AND RELEASES

Evidence for aboveground or underground storage tanks, clarifiers, sumps, or other potentially hazardous material-containing structures was not encountered on any portion of the site during this assessment or in documents obtained for this assessment. Potential releases of petroleum hydrocarbons and/or chemicals were also not encountered within the site during this assessment.

Due to the historical absence of agricultural activities, pesticides are not suspected in the surficial soils that cover the site.

5.1.3 REGIONAL HAZARDOUS MATERIAL RELEASES

Based on a review of properties within the site vicinity and data made available during this assessment, it is our opinion that there is a relatively low likelihood that contaminants from offsite properties have migrated to the subject site and have impacted the underlying soil and/or groundwater.

5.1.4 RECOGNIZED ENVIRONMENTAL CONDITIONS

RECs were not identified within the site during this assessment. Historical RECs were also not identified at the site. Historical RECs refer to a past hazardous material release that has been remediated to below residential-cleanup standards and given regulatory closure.

No Other Environmental Condition (OEC) was encountered within the site. OECs are features or issues that, while being judged to have a relatively low probability of resulting in significant contaminant impact to the site, should be considered in project planning and risk management.

5.2 RECOMMENDATIONS

Based on the findings of this assessment, there are no known onsite conditions that warrant regulatory involvement, including actions leading to environmental soil sampling, soil remediation, groundwater sampling, and/or groundwater remediation. Environmental studies pertaining to soil and groundwater contamination beneath the site are not recommended.

6.0 LIMITATIONS

The information provided in this report is based on the scope of work authorized by the client, information obtained during the investigation, ASTM Standard E1527-13, current regulatory guidelines and laws, state-of-the-industry practices, and the professional judgment of Terra Nova Planning & Research, Inc. personnel.

This Phase I environmental site assessment, conducted in April 2022, is based on information made available during the course of this assessment. Terra Nova Planning & Research, Inc. relied on the information collected during our investigation, presented in the former report(s), and/or provided by the client or others to conduct our investigation and arrive at our conclusions. Terra Nova Planning & Research, Inc. assumes that information provided by others is accurate to the extent used by Terra Nova Planning & Research, Inc.

The information obtained during this assessment, at a minimum, complies with criteria specified in Standard Practice for Environmental Site Assessments: Phase I, ASTM Standard E1527-13. Data gaps to this standard for this report include the following:

- A review of a title report, and
- An assessment of the site's purchase price and the fair market value.

Services performed by Terra Nova Planning & Research, Inc. were conducted in a manner consistent with state-of-the-industry-practices, recognizing that even the most comprehensive investigation may not detect all hazardous materials/waste at the site. Therefore, Terra Nova Planning & Research, Inc. cannot act as an insurer or certify that the site is free of hazardous materials/waste beyond that identified in this report. Except as expressly set forth herein, no representation or warranty is included in our report.

The report is the property of the client for whom it was prepared. Its distribution to others is at client's discretion.

7.0 PROFESSIONAL STATEMENT

This Phase I ESA report was prepared by Mr. Quin Kinnebrew, an Environmental Professional who possesses sufficient specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of hazardous material releases or threatened releases on, at, in, or to a property. He is sufficiently qualified to meet the objectives and performance of this assessment. Mr. Kinnebrew holds a current Professional Geologist's license (PG# 5696) in California and has more than 30 years of full-time relevant experience. He obtained his Master's degree from an accredited institution (Texas A&M University) in the discipline of engineering geology. Mr. Kinnebrew has continued to build on his environmental-related knowledge through participation in continuing education and work-related experience.

Environmental Professional Statement - I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all-appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Quin Kinnebrew

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527-21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

DOD: Consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

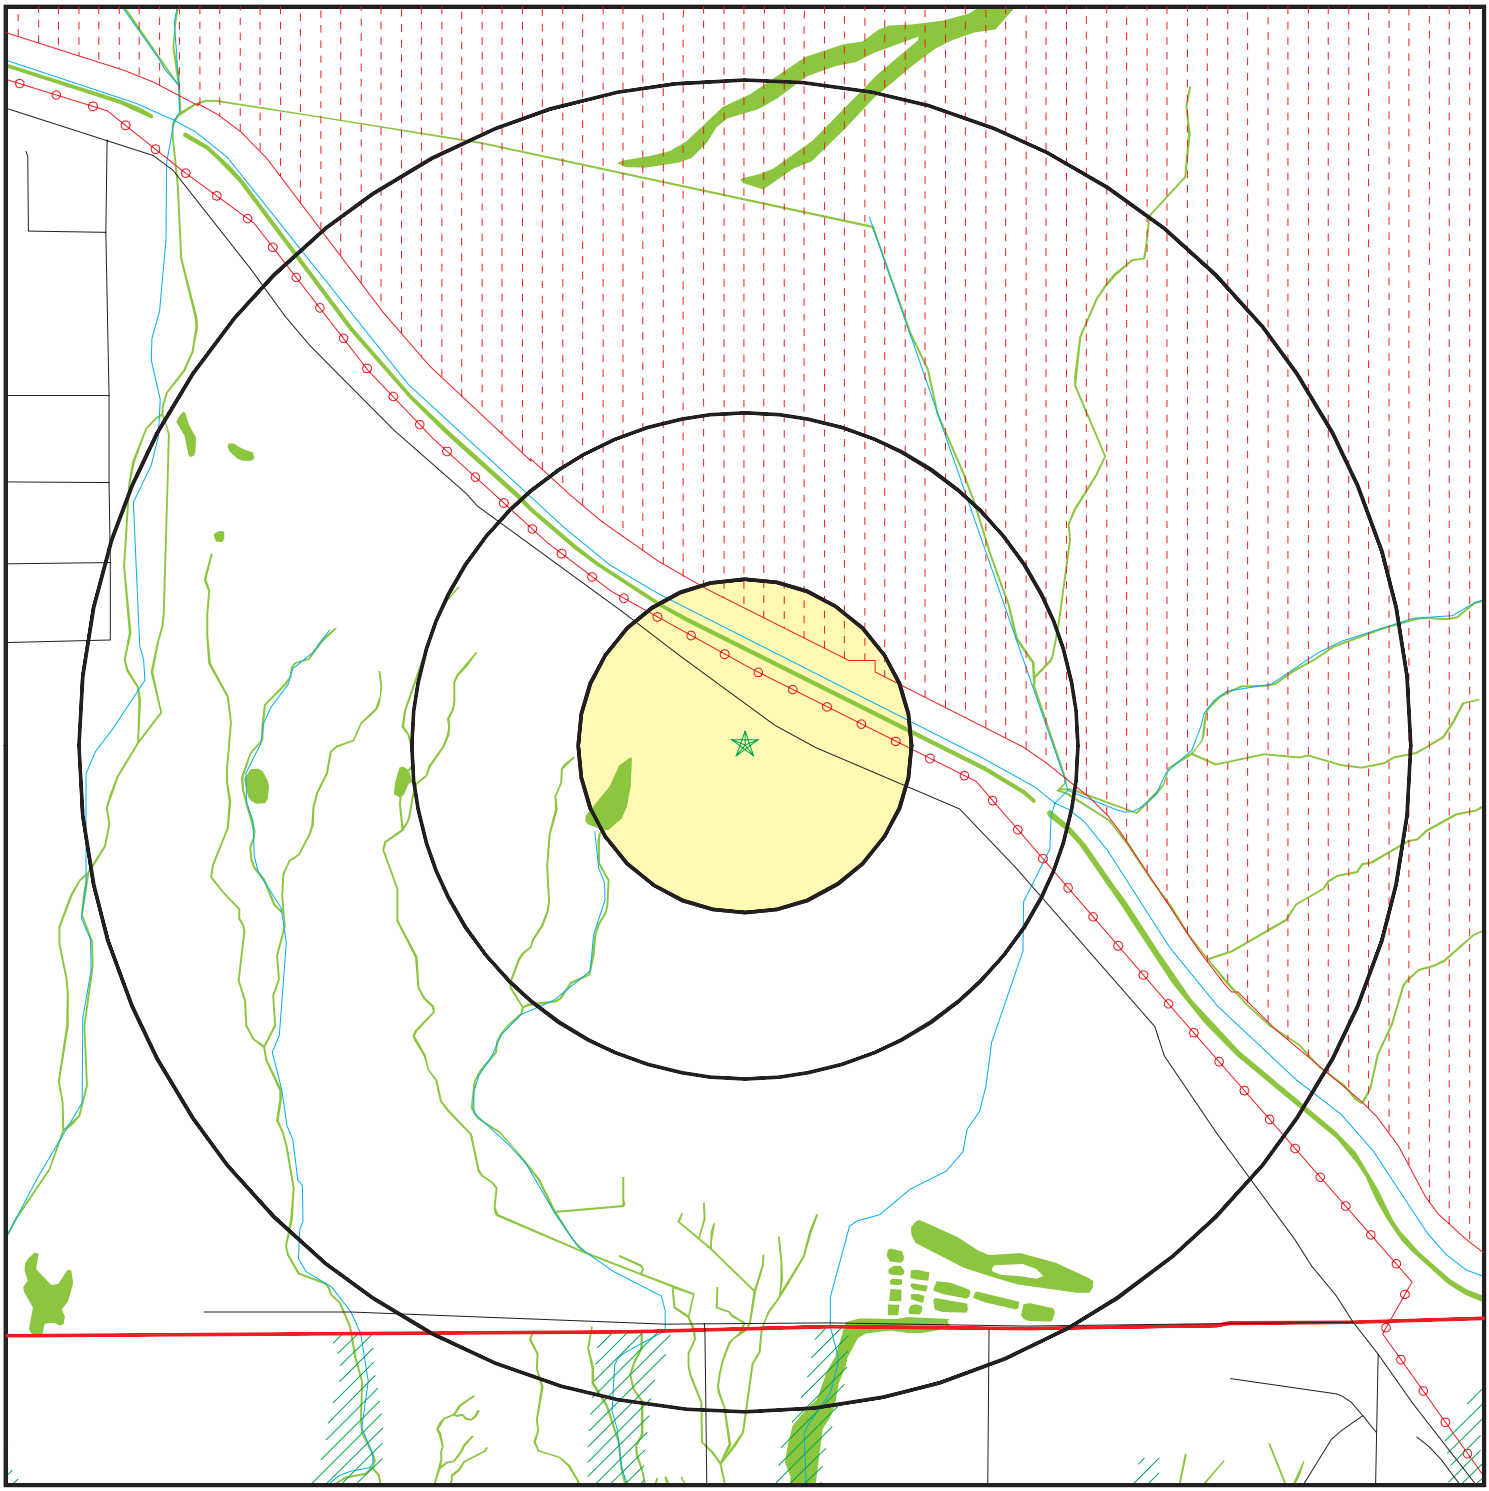

A review of the DOD list, as provided by EDR, and dated 06/07/2021 has revealed that there is 1 DOD site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/25/2022

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Lists of Federal sites subject to CERCLA removals and CERCLA orders

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/25/2021

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 11/16/2021

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

USGS TOPOGRAPHIC MAP

Target Property Map:	11994388 FRINK NW, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

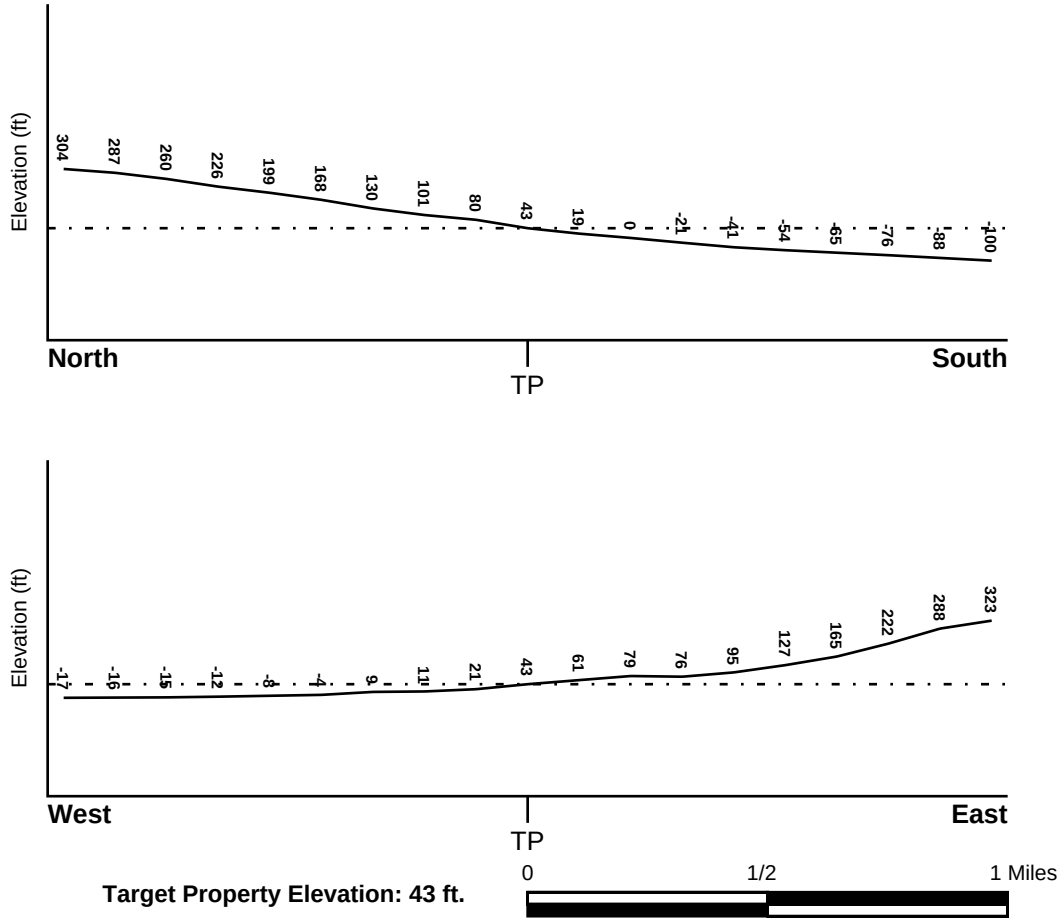

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Niland

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	22 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: Carsitas

Soil Surface Texture: gravelly sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9
2	9 inches	59 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9

Soil Map ID: 3

Soil Component Name: Carsitas

Soil Surface Texture: gravelly sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9
2	9 inches	59 inches	gravelly sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 141 Min: 42	Max: 8.4 Min: 7.9

Soil Map ID: 4

Soil Component Name: Chuckawalla

Soil Surface Texture: very gravelly sandy clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

ENVIRONMENTAL QUESTIONNAIRES BY TNPR REPRESENTATIVE

Vacant Property
Northeast Portion of APN 731-170-001
Riverside County, CA

PHASE I ENVIRONMENTAL SITE ASSESSMENT SITE VISIT

Project #: CUP No. 220005
Date: April 9, 2022
Weather: Cool (70 to 80F) & Partly Cloudy
Site Name and Address: Vacant Property / No Formal Address

Site Contacts

Name:	Brad Donais, P.E. (there were no onsite representatives at time of recon)
Organization/Title:	Heptagon Seven / Sr. Project Manager & Principal
Years associated with site:	About 8 months

Site Description (Vacant land; site reconnaissance conducted by Quin Kinnebrew, P.G.)

Topographic Relief	Gently sloping gently toward the south-southwest
Land Area	Approximately 7.8 acres
# of Buildings	None
Year Constructed	Not applicable
Renovations	Not applicable
# of Floors	Not applicable
Square Footage	Not applicable
Basements	Not applicable (none)
Parking	None
Fences	None
Sewage system	None
Water System	None
Power Distribution	None
Other	

Building Materials **(No onsite buildings)**

Exterior	
Interior	
Roof	

Building Equipment (No onsite buildings)
Note number, type, permits, etc.

Emergency generators	None observed or reported
Elevators	None observed or reported
Air compressors	None observed or reported
Hydraulic equipment	None observed or reported
Air conditioners	None observed or reported
Boilers	None observed or reported
Electrical transformers	None observed or reported

Note type and location, amount, historical info, etc.

Asbestos	None observed (no onsite buildings)
Lead-based paint	None observed (no onsite buildings)
Mold	None observed or reported

Chemical and Waste Storage

Note number, size, permits, location, purpose, etc.

USTs	None observed or reported
ASTs	None observed or reported
Drums, containers	None observed or reported
Cleaning supplies	None observed or reported
Drainage or Collections Systems	
Wells	None observed or reported
Sumps	None observed or reported
Catch Basins	None observed or reported
Storm Drains	None observed or reported
Grease traps	None observed or reported
Oil/Water separators	None observed or reported
Evidence of Releases or Potential Releases	
Stressed vegetation	None observed
Stained soil	None observed
Stained surfaces	None observed
Trash/debris	None observed
Dumping/disposal areas	None observed (minor nuisance debris encountered locally)
Odors	None detected
Pipe/effluent discharges	None observed or reported
Waste/water treatment	None observed or reported
Other	

Past Site Use

None Known. The site has been in an undeveloped and natural state since at least 1940.

Surrounding Land Use

Direction	Description
North	Assess road and then vacant land
East	Vacant land
South	Vacant land and water retention basin
West	Vacant land
