Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

File Location:	Local Agency
Local Case Number:	H03486-001
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	Two 10,000-gallon gasoline USTs, one 10,000-gallon diesel USt, and one 250-gallon used oil UST were removed in December 1998, supervised by EAI. Petroleum hydrocarbons were discovered in soil samples taken

REGENT OIL (Continued) **S103723449**

after the removal of the USTs. Groundwater monitoring and sampling has been performed at the site since 1999. For more information see Corrective Action Plan dated 04/25/2006 under the Site Documents tab.

Violation Code:	2030036 (TCR 9b) Failure to comply with one or more of the following overfill prevention equipment requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 5. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. 6. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. 7. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. 8. Inspected within 30 days after a repair to the overfill prevention equipment. 9. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. 10. Inspected by a certified UST service technician. 11. Maintain records of overfill prevention equipment inspection for 36

Citation: 23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes: Returned to compliance on 05/16/2019. Inspection Sequence ID:6152665;Tank ID:17499,17500,17501;Violation Description:(TCR 9b) Failure to comply with one or more of the following overfill prevention equipment requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide

FINDS:
Registry ID: 110002907739

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
Registry ID: 110038719250

RB Case Number:	9UT2737
Local Agency:	SAN DIEGO COUNTY LOP
File Location:	Local Agency
Local Case Number:	H05705-001
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	This case was opened on February 28, 1994, following the discovery of dissolved phase gasoline constituents in a monitoring well (MW-16) installed in the sidewalk adjacent to the Chevron station by Shell Oil Company. The Shell station (Case H03181-001) is located south and down-gradient of the Chevron station at 12365 Poway Road. Soil samples were collected from soil borings, nine monitoring well borings, and from beneath the product line trenches during station upgrade activities. The soil data indicated that contaminated soil is present at the location of the former western dispenser area, near the current underground storage tanks (USTs) and at the former UST area and dispenser area in the southwest corner of the site. The contaminated soil is present at depths of 14 to 22 feet below ground surface (bgs). The consultant estimated that 318 cubic yards of contaminated soil remain onsite. Nine monitoring wells (four onsite and five offsite) were installed as part of the site investigation between 1996 and 2011. Groundwater monitoring began on April 24, 1996 and continued until April 26, 2012. Free product was observed in Shell well MW-16, located in the sidewalk adjacent to the Chevron Station from 4/20/1996 to 10/8/1996. Free product was not detected in any other site monitoring wells. Dissolved gasoline, benzene, ethylbenzene, toluene, xylenes, methyl tertiary butyl ether (MTBE) and tert butyl alcohol were detected in the groundwater in the source area monitoring wells (MW2 and/or MW3) and down-gradient (MW5). MTBE was also detected in offsite well MW7. Tert butyl alcohol (TBA) was detected in well MW2, MW3 and down-gradient well MW5. The consultant stated that the dissolved benzene and ethyl benzene plumes appeared to originate at the former UST and dispenser area at the southwest corner of the site. The benzene plume may extend offsite to well MW7. The MTBE and TBA plumes appear to have originated in the vicinity of the former western dispenser area. The MTBE plume has migrated offsite to well MW5 and was also detected in offsite well MW7. The plumes appear to be delineated and stabile or decreasing in concentration. Groundwater in the area of the site is designated as having beneficial uses for municipal/domestic supply and agriculture, with potential beneficial use for industrial service supply. The depth to water has ranged from 7.0 to 18.19 feet below the top of casing. The calculated hydraulic gradient in April 2012 was 0.06 with groundwater flow to the west-southwest. The consultant contacted the City of Poway regarding potential water supply wells within one mile of the site. Mr. Howard from the City of Poway stated that the City of Poway does not operate any public supply wells. Active remediation of the soil or groundwater has not occurred at the site. A sensitive

CHEVRON SERVICE STA #9-4955 (Continued) **S101308180**

receptor survey conducted for the site identified sixteen wells from the USGS and Department of Water Resources databases located within a one-mile radius of the site. However, the consultant was not able to field verify the existence of any of these wells. An unnamed tributary to Poway Creek is located approximately 610 feet west of the site. The consultant stated that the creek is unlikely to be impacted from the site based on the distance. Other receptors including two ponds and several schools were eliminated from further consideration as sensitive receptors based on their distance from the site. The Meadowbrook Ecological Reserve is located approximately 1500 feet northwest of the site (up-gradient). The consultant stated that the Meadowbrook Ecological Reserve could be eliminated from consideration based on the distance from the site and the extent of the hydrocarbon plumes. Several subsurface utilities such as gas, electric, water, sewer and telecommunication lines were identified in the site vicinity. The consultant reported that a high pressure gas line is located beneath Pomerado Road at estimated depths of two to four feet. Electrical supply lines are located along the south side of Poway Road (estimated depths of two to four feet). Water supply lines are located beneath Poway Road at estimated depths of three to six feet. Storm drains are located directly south of the site on Poway Road. Two sewer lines are located in the site vicinity, one on Pomerado Road and one on Poway Road. The consultant estimated that the depth of the sewer lines is eight to ten feet bgs. Cox Communication and AT&T have cable lines along Pomerado Road. The consultant stated that the depth to groundwater in the wells closest to the utilities ranged from 10 to 17 feet. The consultant stated that the potential for migration of contaminants within the sewer line trenches does not appear to have significantly contributed to plume migration. The consultant prepared a Corrective Action Plan for the site which recommended remediation by natural attenuation. Trend analyses conducted by the consultant indicate that the concentrations of benzene should decay by natural attenuation to reach the MCL of I microgram per liter (ug/l) in 37 years, ethylbenzene should reach the MCL of 300 ug/l in 60 years, MTBE should reach the MCL of 13 ug/l in 22 years, and that concentrations of TBA should be below the State Notification limit in 60 years. The site is an active gas station and health risks due to vapor intrusion did not warrant soil vapor sampling. The consultant has recommended no further action for the site and destruction of all monitoring wells given that the plumes are stabile and/or decreasing, groundwater in the immediate vicinity of the site is not being used for municipal or domestic supply and there do not appear to be any sensitive receptors that will be impacted by the site. DEH concurs with this recommendation.

Violation Code:	2030036 (TCR 9b) Failure to comply with one or more of the following overfill prevention equipment requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30m before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95% of capacity and activate an audible alarm at least 5m before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95% of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 5. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. 6. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. 7. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. 8. Inspected within 30

Violation Description: Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of

CHEVRON SERVICE STA #9-4955 (Continued) **S101308180**

capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1, 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October 1, 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: Returned to compliance on 06/18/2019. Inspection Sequence ID:6160253;Tank ID:19781,19782,19783;Violation Description:(TCR 9b) Failure to comply with one or more of the following overfill prevention equipment requirements: 1. Alert the transfer operator when the tank is 90% full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: The Site is a former Circle K service station in the City of Poway, on the northwestern corner of the intersection of Pomerado Road and Oak Knoll Road. The station consisted of one 10,000-gallon gasoline underground storage tank (UST), one 6,000-gallon gasoline UST, two product dispensers at one island, and a convenience store building. In July 1999, the UST system, including dispensers, piping and vent lines, were removed. The convenience store building was not demolished and still exists as an operating store at the Site. During UST system removal activities, soil samples were collected from the UST cavity and the dispenser island under the direction of the San Diego County Department of Environmental Health (DEH). Soil impacts were noted beneath the USTs and dispenser. Free product was observed on top of the soil in the tank cavity at approximately 13 feet below ground surface (bgs). However, groundwater was not observed. Based on this information, Authorized Release Case H20709-003 was opened. Limited over-excavation of soils in the tank cavity was performed down to approximately 14 feet bgs in order to remove the product-saturated soils. Approximately 143 tons of soil generated during removal of USTs, products lines, and dispenser was properly disposed. In August and September 2004, TRC conducted feasibility

CIRCLE K STORE #2966 (Continued) **1000174088**

testing of dual-phase extraction (DPE) as a remedial alternative. Approximately 198 pounds (33 gallons) of vapor-phase hydrocarbons and 450 gallons of groundwater were recovered during the DPE test. Remediation wells DPE-1 through DPE-6 were installed during fourth quarter 2008. The DPE system was installed at the Site during second quarter 2009; the system was subsequently started-up on February 3, 2010. In response to a December 4, 2013 letter from the CSDDEH, the DPE system was shut down indefinitely on December 10, 2013. To date, the soil vapor extraction portion of the DPE system has operated for a total of 23,671 hours, and has removed approximately 52,930 pounds of vapor-phase hydrocarbons, while the groundwater extraction portion of the DPE system has extracted, treated, and disposed of approximately 296,952 gallons of groundwater. On May 7, 2014, limited shallow soil vapor sampling activities was conducted at the site. The data collected suggested a vapor intrusion risk to the site building did not exist. On February 16, 2015, sub-slab vapor probes SSGP-1 through SSGP-4 were installed at the site. Two rounds of vapor probe sampling were conducted; the results of which suggested a potential vapor intrusion risk to the site building does not exist. Based on the collected soil data, residual petroleum hydrocarbon impact to soil appears to be present at the location of the former UST basin, and is primarily confined to soil at depths of greater than 12 feet, but less than 16 feet bgs. On May 23, 2016, five profile soil borings (PB-1 through PB-5) were advanced at the Site to collect additional soil data to aid in the design of an injection program for the BOS 200 injections. Between October 18 and 25, 2016, ATC supervised BOS 200 injections. The completed scope of work included the injection of 8,425 pounds of BOS 200, 650 pounds of gypsum, 12.5 gallons of RPI s bacteria concentrate, and 3,850 gallons of potable water into the subsurface at 36 temporary injection point locations (IP-1 through IP-36). It was concluded that the BOS 200 injections performed at the site during October 2016 have had a positive and long-lasting effect on dissolved-phase petroleum hydrocarbons beneath the site; particularly in source-area wells MW-1 and MW-3, and to a lesser extent in remediation wells DPE-2, DPE-4, and DPE-5. The amount of TPH-impacted soil remaining in the subsurface and in the vicinity of the former USTs is estimated to be less than cubic yards. It is estimated that there is approximately 1,612 pounds of residual TPH. Based on a trend analysis, the time for benzene to reach the maximum contaminant level (MCL) of 1.0 part per billion is approximately 5 years in groundwater monitoring well DPE-5. The time for MTBE to reach the primary maximum contaminant level (MCL) of 13 parts per billion is approximately 50 years in groundwater monitoring well DPE-1. It was recommended that the County DEH grant regulatory closure of the case. DEH concurs with closure of Unauthorized Release Case H20709-003. The monitoring wells were destroyed under permit DEH2017-LSAM-00. The closure of the case is based on the current use of the property as a store and parking lot. The case was evaluated under the State s Low-Threat Underground Storage Tank Case Closure Policy (the Policy). Current and historical soil and groundwater data indicate that the secondary source has been adequately removed and a stable to decreasing plume remains. DEH concurs that the case qualifies for a low-risk closure designation. Case closure notification was completed per the Policy. ANY CONTAMINATED SOIL EXCAVATED AS PART OF SUBSURFACE CONSTRUCTION WORK MUST BE MANAGED IN ACCORDANCE WITH THE LEGAL REQUIREMENTS AT THAT TIME.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Local Agency:	Not reported
File Location:	Local Agency
Local Case Number:	Not reported
Potential Media Affect:	Aquifer used for drinking water supply
Potential Contaminants of Concern:	Gasoline
Site History:	During the fall of 1988, the City of Poway was excavating a trench for a sewer line extension along the western side of Pomerado Road when they discovered gasoline saturated soil next to the Shell station. Based on the City's observations, case H03181-001 was opened on July 19, 1989. The groundwater has been monitored and sampled since March 1992. In August 1992, free product was discovered in MW-8. To date (4 Qtr 2009) free product still exists in MW-8. Free product has also been detected in MW-16 (located adjacent to upgradient Chevron) between April 1996 and December 2000, at a thickness ranging from 0.02 to 0.06 feet; trace free product detected in MW-6 in August 1992; 0.01 foot free product detected in MW-10 in December 2000. In November 2004, MW-16 and MW-17 were destroyed because they were located upgradient next to the Chevron and 76

SHELL OIL STATION (Continued) **S101301855**

stations, respectively. MW-16 and MW-17 were essentially duplicating data from the upgradient cases. In June 2004, three USTs, product piping, and dispensers were removed and replaced with two 20k-gallon (gasoline) and one 8k-gallon (diesel) USTs. Approximately 366 cubic yards of impacted soil was excavated and treated offsite. In November 2004, a soil vapor survey was conducted to evaluate potential health risks for soil vapor intrusion. The consultant concluded that the calculated risk is acceptable (less than 1E-6). For site specific data, refer to ESI Tab.

Violation Code:	2030036 Failure of the overfill prevention system to meet one of the following requirements: 1. Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or 2. Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or 3. Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or 4. Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. 23 CCR 16 2635(b)(2), 2665.

HAZARDOUS AIR POLLUTANT MAJOR
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container, tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. 23 CCR 2635(b), 2637.1(a-c), 2665(a-b), 2712(b)(1)(F); HSC 25284.2

Violation Code: 2030048 (TCR 9d) Failure to conduct secondary containment testing, or one or more of the following requirements: Perform the test of the secondary containment system upon installation, within six months of installation, and every 36 months thereafter. Perform the test of a secondary containment component within 30 days of a repair or discontinuing vacuum, pressure or hydrostatic monitoring. Use a procedure that demonstrates the system works as well as at installation. Use applicable manufacturer guidelines, industry codes, engineering standard, or professional engineer approval. Performed by a certified service technician. Maintain records of secondary containment testing for 36 months. 23 CCR 2637(a)(c)(d), 2637(b-d), 2712(b)(1)(F)

Case Type:	Cleanup Program Site
Case Worker:	EM
Local Agency:	SAN DIEGO COUNTY LOP
RB Case Number:	Not reported
File Location:	Not reported
Potential Media Affected:	Not reported
Potential Contaminants of Concern:	Not reported
Site History:	This Voluntary Assistance Program (VAP) case was opened to evaluate a former gas station property for the construction of slab-on-grade, two-story affordable housing for adults comprising 54 apartments units with at-grade parking. This Site is a 3.18-acre parcel of land and was most recently developed with an office building and sheds on the western portion of the property. In addition, the eastern portion of the Site was an asphalt-paved parking lot with two concrete building foundations. The southwestern portion of the Site is transected by Poway Creek. From 1942 to 1998, the San Diego County Department of Public Works Road Station occupied the Site. In 1994, three underground storage tanks (USTs) were removed, resulting in the opening of Local Oversight Program (LOP) Case H20708-002, which was closed in July 2004. Due to the potential of vapor intrusion from the former LOP Case the consultant, SCS Engineers (SCS), conducted a soil vapor survey on October 29, 2015. Results for Volatile Organic

POWAY ROAD STATION (Continued) **U001572096**

Compounds (VOCs) were non detect (ND), with the exception of benzene with soil gas concentrations of up to 0.14 ug/l. Based on this, benzene was calculated to have an excess carcinogenic risk of 1.55 x 10-8, which is less than the acceptable 1.0 x 10-6 excess carcinogenic risk. Therefore, SCS indicated that there was no risk from vapor intrusion On March 15, 2019, SCS submitted a Soil Management Plan (SMP) and a Community Health and Safety Plan (CHSP) for the excavation and export of soil with elevated concentrations of lead and petroleum hydrocarbons encountered during grading activities. The SMP and CHSP were approved on March 28, 2019. Excavating and grading occurred from May 13 through May 17, 2019, with approximately 305 tons of petroleum-impacted soil and 88.5 tons of lead-impacted soil exported offsite and disposed at an appropriate facility. Trace amounts of organochlorine pesticides (i.e. DDD, Chlordane, etc.) were also removed. SCS States that the removal of petroleum hydrocarbon and lead-bearing soil with residual concentrations below Mitigation Criteria is judged to be protective of water resources at the Site, and protective of human health and the environment, considering the proposed use of the Site as a multi-family residential development. DEH concurs.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affect: Other Groundwater (uses other than drinking water), Under Investigation
Potential Contaminants of Concern: Gasoline
Site History: Contamination was identified in 1991 through soil samples. Site investigation and site assesment activities have been ongoing on this site to determine the lateral and vertical extent of contamination. A health risk assessment is being conducted on this site to determine if any potential risk exists. Additional assessment is being conducted and groundwater monitoring to evaluate the contamination is ongoing. Please see the Environmental Data tab for additional site specific data.

Environmental Interest/Information System:
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

QUIK CHEK (Continued) **U000030217**

Local Case Number: H03459-002
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Diesel, Gasoline
Site History: On January 1, 1991, diesel fuel was reported to be seeping into the Rattlesnake Creek near the site. US-EPA was notified of the release on April 15, 1993. The Federal On-Scene Coordinator for the EPA started an assessment investigation in the Rattlesnake Creek and in the soil and groundwater at the site and at three adjacent properties. Six USTs were removed and several soil borings and monitoring wells were installed. Cleanup activities included excavation/disposal of impacted soil, soil vapor extraction and groundwater pump and treat systems. On June 5, 1995 the US-EPA reported the case status as closed. In 2001 the City of Poway Redevelopment Services conducted due diligence during acquisition of the site and performed a Phase I and Phase II subsurface soil investigations. Assessment of soil and groundwater contamination initially included advancing seven borings in June 2001, followed by the installation of five soil borings and nine monitoring wells. Soil contamination has been defined and groundwater plume is delineated. Other investigation activities at the site included evaluation of the vertical hydraulic gradient between groundwater and surface water in the Rattlesnake Creek, design and building of a culvert for a section of the Rattlesnake Creek, conduct a soil gas survey targeted at the soil beneath the office building, prepare human health risk calculation (highest risk of 4.32E-08 for MTBE), evaluate migration potential of the contaminants, prepare a degradation rate model for the contaminants of concern, and prepare a Corrective Action Plan. Total residual impacted soil was calculated to be 8,167 cubic yards with maximum gasoline concentration of 622 mg/kg and diesel of 347 mg/kg. The consultants conclude in their final report dated April 2, 2010, that dissolved TPH gasoline and diesel are non detect in all the monitoring wells. Dissolved benzene is detected only in one monitoring well at low concentration, dissolved MTBE ranges from non detect to low concentration, and overall migration of the dissolved plume is stable. They further conclude that the groundwater quality objectives will be met for MTBE within three to eleven years and for benzene within 44 years. The consultants propose natural attenuation as the cost effective option for corrective action at the site and recommend closure of the case. DEH concurs with this recommendation.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

LOS ANGELES CO LF METHANE: Methane Producing Landfills
This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

12623 OAK KNOLL ROAD
POWAY, CA 92064

TARGET PROPERTY COORDINATES

Latitude (North):	32.950325 - 32ˆ 57’ 1.17’’
Longitude (West):	117.057621 - 117ˆ 3’ 27.44’’
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	494614.2
UTM Y (Meters):	3645590.5
Elevation:	450 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	11993864 POWAY, CA
Version Date:	2018

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

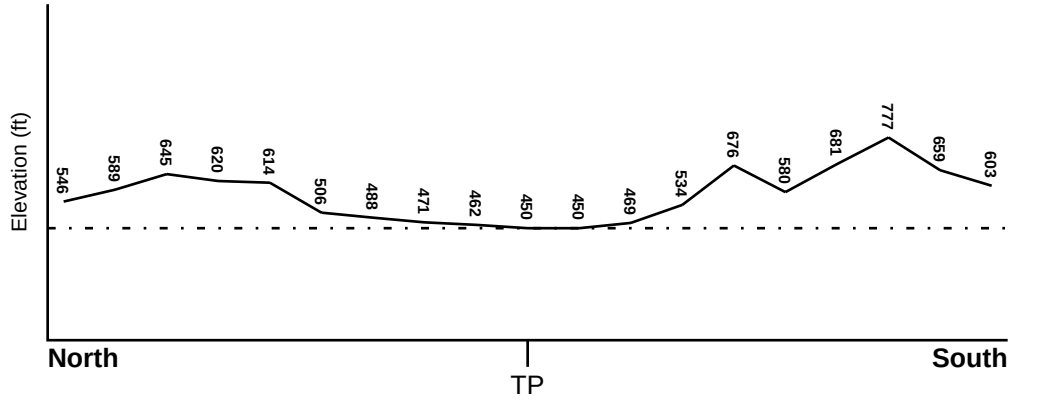
TOPOGRAPHIC INFORMATION

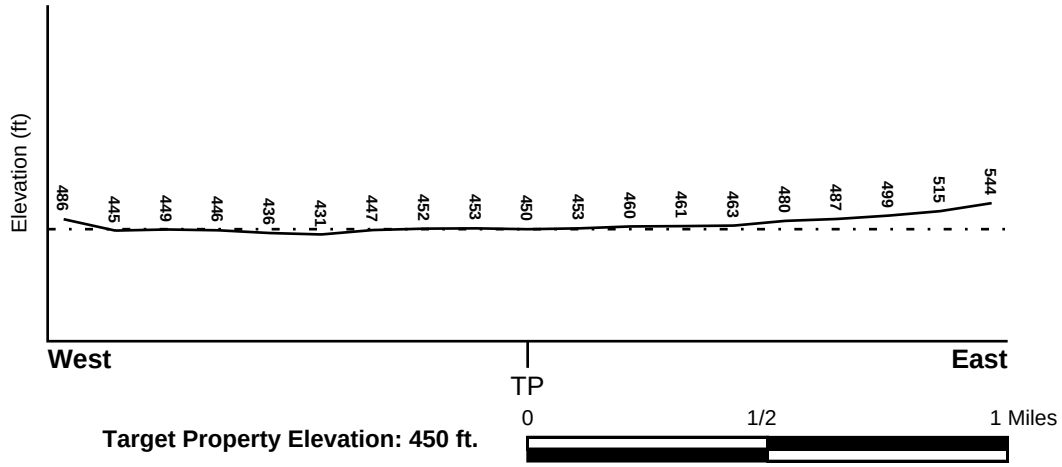
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





Target Property Elevation: 450 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06073C1358G	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
06073C1354G	FEMA FIRM Flood data
06073C1362G	FEMA FIRM Flood data
06073C1366G	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
POWAY	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
J107	1/2 - 1 Mile NE	S
1G	1/2 - 1 Mile NE	S

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: PLACENTIA

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	12 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.9
2	12 inches	33 inches	clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.9

Soil Map ID: 2

Soil Component Name: VISALIA

Soil Surface Texture: sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	11 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 6.1
2	11 inches	40 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 6.1
3	40 inches	59 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6.5 Min: 6.1

Soil Map ID: 3

Soil Component Name: SALINAS

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	22 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9
2	22 inches	46 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9

Soil Map ID: 4

Soil Component Name: OLIVENHAIN

Soil Surface Texture: cobbly loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	9 inches	cobbly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 5.5 Min: 5.1
2	9 inches	42 inches	very cobbly clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 5.5 Min: 5.1
3	42 inches	59 inches	cobbly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 5.5 Min: 5.1

Soil Map ID: 5

Soil Component Name: OLIVENHAIN

Soil Surface Texture: cobbly loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Map ID: 7

Soil Component Name: CIENEBA

Soil Surface Texture: coarse sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 5 inches

Depth to Watertable Min: > 0 inches

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

PHYSICAL SETTING SOURCE RECORDS SEARCHED

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Declaration of Responsible Charge

I hereby declare that I am the engineer of work for this project, that I have exercised responsible charge over the design of the project as defined in section 6703 of the business and professions code, and that the design is consistent with current standards.

I understand that the check of project drawings and specifications by City of Poway is confined to a review only and does not relieve me, as engineer of work, of my responsibilities for project design.

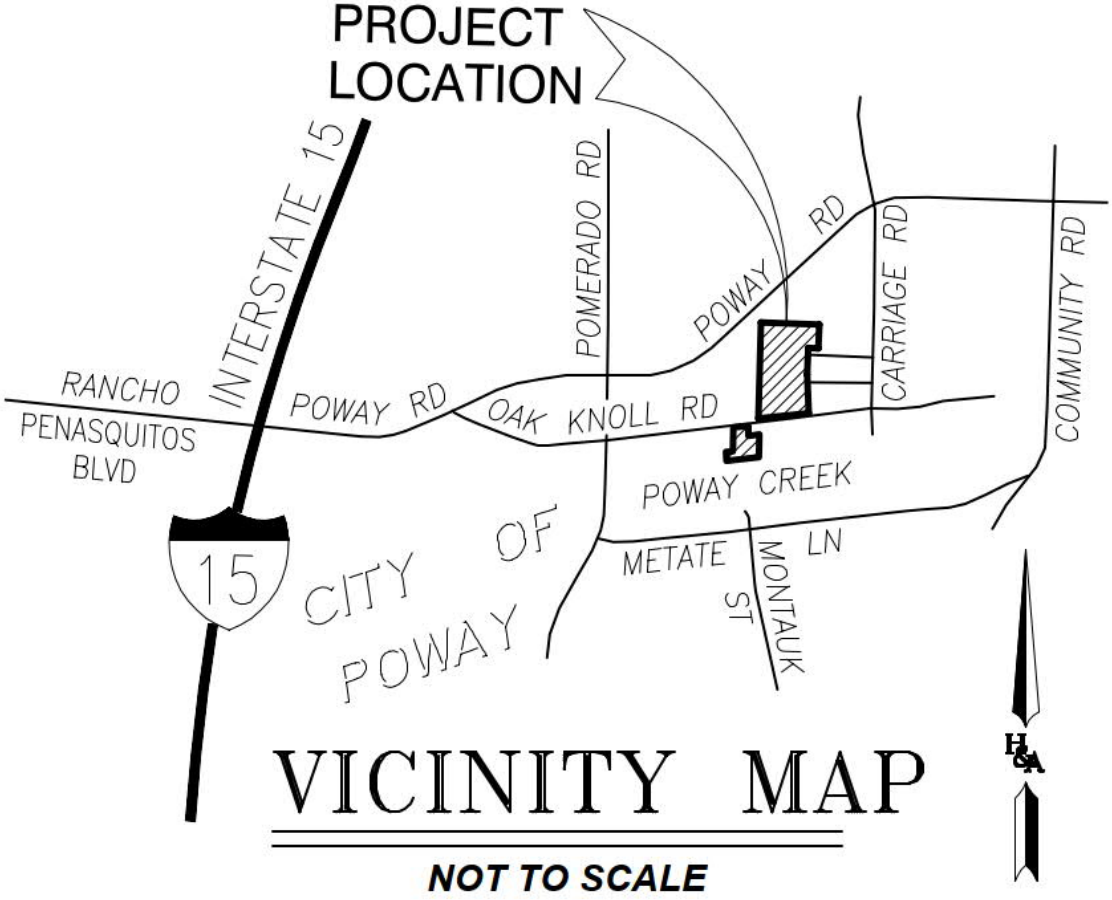
CHAPTER 1 EXECUTIVE SUMMARY

1.1 Introduction

The Harmon Oaks project is located in the City of Poway and is split by Oak Knoll Road, with a portion north of Oak Knoll Road and a smaller portion south of Oak Knoll Road. See below for vicinity map. The development proposes a single-family community with 63 residential lots within 10.77 acres. The site will also include detention underground vault, sidewalks, and parking stalls. The lots are connected by private drives which are accessible via Oak Knoll Road and Roca Grande Drive.



Scope

The scope of this report is to analyze both the existing and proposed hydrologic conditions relative to development of the site and prepare storm drain facilities based on the 100 year flow. Proposed stormwater facilities include storm drain, curb inlets, catch basins, proprietary biofiltration BMPs (curb type Filterra Units or equivalent), underground vault, outlet structure, a pump to pump the hydromodification low flows to the existing storm drain system under Oak Knoll Road, brow ditches, and energy

dissipation devices and will be calculated upon Final Engineering. The proposed proprietary biofiltration units for the site will address the water quality requirements, while the underground vault will address the 100 year peak flows, and flow control hydromodification concerns. A separate report has been prepared which details the proposed treatment and flow control features for the project. Refer to the *Stormwater Quality Management Plan (SWQMP) for Harmon Oaks* prepared by Hunsaker & Associates San Diego, Inc. (June 2022).

Summary of Existing Conditions

The existing condition hydrology map (Exhibit 1) is located in Chapter 5. A portion of the project site is currently occupied by single family building structures, driveways, construction equipment yard, and vacant area north of Oak Knoll Road. There is a vegetated channel runs in a north-south direction along the northwestern border of the site. The remainder of the project site, found south of Oak Knoll Road, is a vacant area in its northern portion, except for a building structure northeast of the southern lot, and densely vegetated area in its southern portion. The total analyzed drainage area (on-site and off-site) is 13.79 acres. The elevation-range of the studied water-shed is between 540 feet down to 438 feet. The average slope across the site from the northeast corner to the southwest corner is approximately 5.3%. The imperviousness of the analyzed watershed in its existing condition is approximately 19% (20% for the onsite and offsite area drains to the northern portion of Oak Knoll Road (Node 1 to Node 5), 63% for the offsite area southeast of the northern portion (Node 3 to Node 5), 24% for onsite area and northwest portion of Oak Knoll Road (Node 6 to Node 8), 90% for Oak Knoll Road paved area (Node 9 to Node 11), 0% for the western slopes to Node 14, 8% for the southern portion at Node 16). Please refer to AES Input Data Table in Chapter 3.

Runoff from the northern portion of the project site with the run-on from the eastern offsite development is conveyed via overland flow towards Oak Knoll Road existing inlet (Node 1 to Node 5), where it is captured and comingled with the offsite flows from the southwestern existing development and northeastern half of Oak Knoll Road (Node 3 to Node 5). Total runoff from Node 5 is routed westerly via existing 36” RCP storm drain system to Node 8 per 801-05-1076. Runoff from the southwestern sub-watershed of northern portion of the project site is conveyed via overland flow towards Oak Knoll Road existing inlet, where it is captured and comingled with the offsite flows from the northwestern half of Oak Knoll Road (Node 6 to Node 8). Existing 36” RCP storm drain system carries the total runoff from Node 8 to Node 11, where it comingles with the captured flow from the southern portion of Oak Knoll Road before continues westerly to Node 15. Run-on from the offsite northern slope is conveyed with the runoff from the northwestern portion of the site via overland flow to enters the existing 8’ X 5’ RCP box culvert through the existing headwall per 801-04-150 sheet 5 (Node 12 to Node 14). The existing 8’X5’ RCP box culvert routes the captured flows southwesterly to Node 15, where it comingles with the discharge from (Node 11) the 36” existing storm drain, and then continues southerly to discharge into Poway Creek at Node 16.

Runoff from southern portion of the site with the adjacent eastern offsite area is also conveyed via overland flow to discharge directly into Poway Creek to Node 16.

Table 1 below summarizes the 100-year existing condition peak flow at the downstream project boundary. A runoff coefficient was calculated for each subarea within the watershed based on soil type and impervious percentage using the following formula in accordance with Section 3.1.2 of San Diego County Hydrology Manual June 2003.

C= 0.90 x (% Impervious) + Cp x (1 - % Impervious)

Cp = Pervious Coefficient Runoff value (Cp=0.35 for Soil D and 0.20 for Soil A per Table 3.1)

Runoff Coefficients

C Factor	Description
0.35 Soil D 0.20 Soil A	Cp= Pervious area per SDC Section 3.1.2 and table 3.1
0.90	Impervious areas (proposed and existing)

The calculations for each weighted run-off coefficient for each sub-area as determined in accordance with Section 3.2.1 are shown in Chapter 3. AES input data tables. Supporting calculations for the data presented in Table 1 is located in Chapter 3 of this report. The corresponding hydrology map (Exhibit 1) is located in Chapter 5.

TABLE 1 - Summary of Existing Flows

Exhibit	Node Number on Exhibit	Discharge Location	Drainage Area (ac)	100-Year Peak Flow (cfs)
1	16	SW of site	13.79	26.85

Summary of Developed Conditions

PROJECT DESCRIPTION

The proposed Harmon Ranch Specific Plan and Tentative Map project site ("Project Site") is located within the southern area of City of Poway, south of Poway Road and east of Pomerado Road. This Project Site is 11.5 acres and is currently designated Residential Single Family 7 (RS-7) in the Poway Comprehensive Plan: General Plan which permits single-family homes on a minimum of 4,500 square foot lots and a maximum density of eight dwelling units per acre. Surrounding land uses include mixed use retail land uses and the Kumeyaay Interpretive Center to the north, Oak Knoll Road, Poway Creek and existing single-family homes to the south and east which are also designated RS-7 and an apartment community to the west.

The current property owner is Harmon Family Trust. The majority of the site has been cleared for several years and was previously used as a construction staging yard for an SDG&E gas line project. The site includes four existing single-family residences. One of the existing homes is a locally designated historic building located at 12702 Oak Knoll Road (APN 317-500-14-00). The historic building was built in 1933 and is constructed of cobblestones. The building is presently designated as City of Poway Historical Site 113 and is documented and known as the "Harmon House." The historic home will be retained in place within a 0.25-acre site as part of the project. The historic home site will be designated Residential – Historic Home within the Specific Plan.

Lennar Homes of California, LLC ("Applicant"), is proposing a residential neighborhood on a 11.5-acre Project Site. The Project site is comprised of approximately 5.7 acres designated for residential development, a 0.25-acre historic home site, 3.2 acres of open space areas, 1.9 acres for private streets and 0.5 acres of public right-of-way (Oak Knoll Road). The Proposed Project would include 64 single family detached homes. The Proposed Project density (8.8 units/acre) is slightly higher than the 8.0 units/acre permitted in the existing RS-7 designation. Primary access to the Project Site is planned via existing Oak Knoll Road. Fifty-nine of the new homes are proposed to front newly constructed private streets, while four homes and an open space/overlook area front existing Oak Knoll Road. The existing historic home has direct access via Oak Knoll Road.

Land Use Summary

Use/Land Use	Approx. Net Acres (AC)	% of Planning Area (%)	Max. Dwelling Units (DU)	Density (DU/AC)[1]
Non-Residential Land Uses				
Open Space (OS-1 & 2) (Floodway)	1.88	16.3%		
Open Space (OS-3 & 4)	0.31	2.7%		
Open Space Recreation (OSR-1 to 7)	0.99	8.6%		
Subtotal Open Space	3.18	27.6%		
Private Internal Residential Streets	1.88	16.3%		
Oak Knoll Road ROW (existing)	0.49	4.3%		
Subtotal Streets	2.37	20.6%		
Subtotal Non-Residential	5.55	48.2%		
Residential (R) Land Use				
Residential Single Family (R-SF) (Lots 1 to 64)	5.96	51.8%	64	
Subtotal Residential	5.96	51.8%	64	
TOTAL Specific Plan Area	11.51	100%	64	8.8

1- Statistics are based upon preliminary design and may vary slightly from Development Plan, Tentative Map, and/or Final Map. Refer to Chapter 7 regarding substantial conformance.

2- Pursuant to State Law, local governments cannot preclude an Accessory Dwelling Unit (ADU) or Junior Accessory Dwelling Units (JADU). An ADU and JADU is an accessory use for the purposes of counting allowable density under general plan and zoning and is therefore not counted as an additional unit. An ADU and JADU shall be permissible in accordance with the PMC or, if the locally adopted ordinance is void, the State Government Code. See Section 3.2.2.G for information regarding ADUs.

3- Open Space areas within the floodway (OS-1 and OS-2) and public street (Oak Knoll Road) and internal private streets are excluded from the density calculation. The following calculation was utilized to determine the net residential density for the project: Residential (5.96 ac) + Open Space Recreation Lots 1-7 (0.99 ac) + Open Space Lots 3 and 4 (0.31 ac) = 7.26 ac. 64 / 7.26 = 8.8.

The Applicant is proposing a Specific Plan and Tentative Map to facilitate development of a 64 single family homes. The Harmon Ranch Specific Plan will establish three land use districts within the Project Site: Residential Single Family (R-SF); Open Space (OS); and Open Space Recreation (OS-R). The Specific Plan will also provide development regulations and permitted uses for each land use district.

The Proposed project is comprised of 64 single-family homes on lots 42-feet wide and 85- to 90-feet deep, with standard two-car garages, 20-foot-deep by 20-foot-wide driveways to accommodate an additional two off-street parking spaces within the private lots and private fenced rear yards. The Proposed Project also includes 40 guest parking spaces along the private streets, approximately 1.0 acres of Open Space Recreation areas, approximately 2.2 acres of natural Open Space areas and a segment of the General Plan Community trail (approximately 1,000 feet) within the Project Site. A potential off-site trail connection to the adjacent retail area located to the north may occur in the future, subject to property owner cooperation but is not part of the proposed project. The "Overlook" area located in the south portion of the Project Site is planned to provide public access and will be privately maintained.

Discretionary actions which require Poway City Council consideration include the following:

- Environmental Impact Report (EIR)
- General Plan Amendment/Zone Change (GPA/ZC) from Residential Single-Family 7 (RS-7) to Planned Community (PC)
- Tentative Map (TM)
- Development Review (DR) Permit
- Final Map

The post-developed condition of the site will include improvements consisting of a single-family residential development including building structures, driveways, access roads, sidewalks, and landscaped areas. The site also proposes proprietary biofiltration facilities to address water quality requirements (Filterra units or alternative), underground vault, storm drains, inlets, and brow ditches sized to collect and convey site runoff through the project area.

The proposed vault will attenuate the 100 year peak flows as well as address flow control hydromodification and pollutant control for water quality. For additional discussion on the proposed water quality and hydromod features of the site, refer to the *Stormwater Quality Management Plan (SWQMP) for Harmon Oaks* (June 2022) prepared by Hunsaker & Associates San Diego, Inc.

Runoff from the northern portion of the proposed development will be routed via street gutters to the proposed on site inlets and proprietary biofiltration units to address water quality requirements, and then travels via private proposed storm drain system southwesterly to the proposed underground vault (Node 50 to Node 74). Discharge from the vault will be controlled by an outlet structure equipped with orifices and weir with varying dimensions and invert elevations to meet current hydromodification requirements and attenuate the proposed 100-year peak flows to be equal or less than existing conditions 100-year peak flow. Due to existing storm drain flow elevation, the low flow orifice can't be routed directly to the downstream storm drain. Therefore, discharge from the low flow orifice will be pumped to the proposed cleanout\ manhole downstream of the vault, where the discharge from the rest of the orifices and weir (Vault outlet structure) will be routed to before discharging into the existing 36" RCP at Oak Knoll Road (Node 8). The proposed vault within northern portion of the project has been sized to provide additional hydromodification and 100-year peak flow control and mitigate impact from this area when measured at the analyzed discharge point (Node 16-POC1).

Runoff from northeastern offsite development -that drains through the site in existing conditions- will be conveyed via proposed ditch to a proposed catch basin west of La Vista Way and then routed vis proposed storm drain to the existing 36" storm drain at Oak Knoll Road (Node 3 to Node 5). Runoff from offsite area southeast of the northern portion of the project will drain similarly to existing conditions via overland flow towards Oak Knoll Road existing inlet (Node 4 to Node 5), where it will be captured and routed via existing 36" RCP storm drain system to Node 8, where it comingles with the discharge from the proposed development and runoff from the northwestern half of Oak Knoll Road (Node 5 to Node 8). Total runoff from Node 8 will be routed westerly

via existing 36" RCP storm drain system to Node 11. Existing 36" RCP storm drain system carries the total runoff from Node 8 to Node 11. Runoff from northern area of southern portion of the project will drain towards Oak Knoll Road gutter and routed westerly to proposed proprietary biofiltration unit (filterra unit or equivalent). The proposed proprietary biofiltration unit will provide water quality pollutant control prior to discharging into the existing storm drain system at Oak Knoll Road Node 11. Total runoff from southern portion of Oak Knoll Road and northern developed area of southern portion of the project will comingle with the total captured flow at Node 11, berfore continues westerly to Node 15.

Runoff from the offsite northern slope will be captured via a brow ditch and conveyed with the runoff from the proposed graded slope northwest of the northern portion of the site via overland flow to enters the existing 8' X 5' RCP box culvert through the existing headwall per 801-04-150 sheet 5 (Node 12 to Node 14). The existing 8'X5' RCP box culvert routes the captured flows southwesterly to Node 15, where it comingles with the discharge from (Node 11) the 36" existing storm drain, and then continues southerly to discharge into Poway Creek at Node 16.

Runoff from southern area of southern portion of the site with the adjacent eastern offsite area will also conveyed via overland flow similarly to existing conditions to discharge directly into Poway Creek to Node 16.

Table 2 below summarizes the 100-year proposed condition peak flow at the downstream project boundary. A runoff coefficient was calculated for each subarea within the watershed based on soil type and impervious percentage using the following formula in accordance with Section 3.1.2 of San Diego County Hydrology Manual June 2003.

C= 0.90 x (% Impervious) + Cp x (1 - % Impervious)

The calculations for each weighted run-off coefficient for each sub-area as determined in accordance with Section 3.2.1 are shown in Chapter 3. AES input data tables. Supporting calculations for the data presented in Table 2 is located in Chapter 3 of this report. The corresponding hydrology map (Exhibit 2) is located in Chapter 5.

TABLE 2 - Summary of Proposed Flows

Exhibit	Node Number on Exhibit	Discharge Location	Drainage Area (ac)	100-Year Peak Flow (cfs) ^	100-Year Peak Flow (cfs)*
1	16	SW of site	13.79	46.65	14.21

^runoff rates before flood attenuation
*runoff rates after flood attenuation

A portion of the site, at the south western corner of the northern portion of the project and northern developed area of the southern portion of the project, is located within Zone AE (within the flood plain for Poway Creek), per the FEMA Firmette found in Chapter 6 and will require a Floodplain Development Permit.

The Proposed Drainage Map in Chapter 5 shows the developed site with its subareas and flow paths. There is only one outfall location from the proposed site, as the proposed and existing storm drain conveys the flows towards Poway Creek, similarly to existing conditions. Due to the increase in impervious area compared with the existing condition, the peak flows generated from the site will be reduced through the proposed vault. Design calculations for the vault attenuation can be found in Chapter 4.

Summary of Results

Development of *Harmon Oaks* site required a storm drain system to capture and convey the Q100 peak flows safely to the existing storm drain system at Oak Knoll Road. See Chapters 3 hydrologic models. The corresponding hydrology maps are located in Chapter 5.

Ten proprietary biofiltraton units (Filterra units or equivalent) are proposed to address water quality requirements, and one underground vault for hydromodification, and peak flow attenuation. Flows from the site are attenuated to be less than the existing flows when measured at the point of compliance southwest of the project (POC-1) to Poway Creek.

Since the proposed vault onsite will mitigate the 100 year flow to below existing conditions, there will be no negative impacts to downstream drainage developments and facilities.

Inlet calculations, brow ditches and storm drain hydraulic will be provided in final engineering.

Table 3 below summarizes the comparison between existing and proposed flow rates from the site.

TABLE 3 – Existing Condition vs. Proposed Condition

Discharge Location	Existing Node	Proposed Node	Existing Condition Area (ac)	Proposed Condition Area (ac)	Existing: 100-Year Peak Flow (cfs)	Proposed: 100-Year Peak Flow (cfs)	Q100 Flow Difference (cfs)
SW of site	16	16	13.79	13.79	26.85	14.21	-12.64

Conclusions

Development of Harmon Oaks site will not alter the drainage patterns, and the proposed improvements will decrease the flows to below existing conditions. Therefore no adverse impacts are expected.

CHAPTER 2 METHODOLOGY

Modified Rational Method Hydrologic Analysis

Computer Software Package – AES-2015

Design Storm - 100- year return interval

Land Use – Single-family Residential

Soil Type – Per the NRCS Web Soil Survey, the existing soil consists of Soil Type D for majority of the site and A for a small portion of the southern area. Group D soils have very slow rates. Consisting chiefly of clay soils with a high swelling potential, soils with a high permanent water table, soils with clay pan or clay layer at or near the surface, and shallow soils over nearly impervious materials, Group D soils have a very slow rate of water transmission. Group A. Soils have a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Runoff Coefficient - In accordance with the County of San Diego standards, runoff coefficients were based on land use and soil type San Diego County Hydrology Manual. Runoff coefficient was calculated for each subarea within the watershed based on soil type and impervious percentage using the following formula in accordance with Section 3.1.2 of San Diego County Hydrology Manual June 2003.
C= 0.90 x (% Impervious) + Cp x (1 - % Impervious)

Cp = Pervious Coefficient Runoff value (Cp=0.35 for Soil D and 0.20 for Soil A per Table 3.1)

Runoff Coefficients

	C Factor	Description
Rainfall	0.35 Soil D 0.20 Soil A	Cp= Pervious area per SDC Section 3.1.2 and table 3.1
	0.90	Impervious areas (proposed and existing)

Intensity- The rainfall intensity is determined per the San Diego County Hydrology Manual based on 6-hour precipitation amounts and calculated time of concentrations. Six-hour precipitations are taken from the San Diego County Hydrology Manual isopluvials.

Method of Analysis – The Rational Method is the most widely used hydrologic model for estimating peak runoff rates. Applied to small urban and semi-urban areas with drainage areas less than 0.5 square miles, the Rational Method relates storm rainfall intensity, a runoff coefficient, and drainage area to peak runoff rate. This relationship is expressed by the equation:

Q = CIA, where:

- Q = The peak runoff rate in cubic feet per second at the point of analysis.
- C = A runoff coefficient representing the area - averaged ratio of runoff to rainfall intensity.
- I = The time-averaged rainfall intensity in inches per hour corresponding to the time of concentration.
- A = The drainage basin area in acres.

To perform a node-link study, the total watershed area is divided into subareas which discharge at designated nodes.

The procedure for the subarea summation model is as follows:

(1) Subdivide the watershed into subareas with the initial subarea being less than 10 acres in size (generally 1 lot will do), and subsequent subareas gradually increasing in size. Assign upstream and downstream nodal numbers to each subarea to correlate calculations to the watershed map.

(2) Estimate an initial T_c by using the appropriate nomograph or overland flow velocity estimation.

(3) Using the initial T_c, determine the corresponding values of I. Then Q = CIA.

(4) Using Q, estimate the travel time between this node and the next by Manning's equation as applied to the particular channel or conduit linking the two nodes. Then, repeat the calculation for Q based on the revised intensity (which is a function of the revised time of concentration)

The nodes are joined together by links, which may be street gutter flows, drainage swales, drainage ditches, pipe flow, or various channel flows. The AES-2003 computer subarea menu is as follows:

SUBAREA HYDROLOGIC PROCESS

1. Confluence analysis at node.
2. Initial subarea analysis (including time of concentration calculation).
3. Pipe flow travel time (computer estimated).
4. Pipe flow travel time (user specified).
5. Trapezoidal channel travel time.
6. Street flow analysis through subarea.
7. User - specified information at node.
8. Addition of subarea runoff to main line.
9. V-gutter flow through area.
10. Copy main stream data to memory bank
11. Confluence main stream data with a memory bank
12. Clear a memory bank

At the confluence point of two or more basins, the following procedure is used to combine peak flow rates to account for differences in the basin's times of concentration. This adjustment is based on the assumption that each basin's hydrographs are triangular in shape.

(1). If the collection streams have the same times of concentration, then the Q values are directly summed,

$Q_p = Q_a + Q_b$; $T_p = T_a = T_b$

(2). If the collection streams have different times of concentration, the smaller of the tributary Q values may be adjusted as follows:

(i). The most frequent case is where the collection stream with the longer time of concentration has the larger Q. The smaller Q value is adjusted by the ratio of rainfall intensities.

$Q_p = Q_a + Q_b \ (I_a/I_b)$; $T_p = T_a$

(ii). In some cases, the collection stream with the shorter time of concentration has the larger Q. Then the smaller Q is adjusted by a ratio of the T values.

$Q_p = Q_b + Q_a \ (T_b/T_a)$; $T_p = T_b$

Underground storm drains are analyzed in a similar way. Flow data obtained from the surface model for inlets and collection points are input into the nodes representing those structures. Design grades and lengths are used to compute the capacity of the storm drains and to model the downstream travel times.

Detention

In order to provide adequate peak flow attenuation, increases in peak flow rates at the outfall location for this site has been mitigated using the design of the proposed vault. Mitigation within the vault has been modeled using SWMM 5.01.

RickRatHydro has been used to generate inflow hydrograph for the vault, based on area, time of concentration, P6 value, runoff coefficient, and peak flow rate for the drainage area (from hydrology analysis).

The inflow hydrograph was then imported into SWMM model as an inflow to the storage unit (representing the vault volume) and was connected to the outfall point by using an outlet link (represent the outlet structure). The vault Stage-Storage curve and Stage-Discharge curve were generated by Excel. Generating Stage-Storage curve is relatively simple for the vertical-sided vault, where volume increases linearly with the stage value. For the Stage-Discharge curve, both weir equation (for partially submerged condition) and orifice flow equation (for fully submerged condition) were adopted to evaluate the riser discharge based on the water depth in front of the orifice and emergency weir. These generated curves were modeled as tabular curves for the storage unit and the outlet link in SWMM to calculate the water surface elevation and outfall flow rate.

NOTES:
1. All materials shown on this sheet shall be supplied by Santa Fe WinWater Company, Santa Fe Springs, CA, except where noted. Pumps shall be SFWW SWP-10, 200 - 240v, 1 phase, 8.8A max. Substitution of any component may void warranty.
2. Locate Pump Controller as required for site conditions or Owner direction. Route power and signal cable conduit to vault from controller accordingly. Connections shall be provided by Contractor.
3. Route 3" pump system outlet pipe as shown on Civil Sheets.
4. Contractor to provide concrete collar around manhole cover suitable for surface loading conditions.
5. Anti-Floatation flange to be provided on pump vault where required for groundwater conditions.
6. Pump performance requirements based on Civil Engineer's design calculations = 137 gpm.

Headloss Calculations		
Fitting	Qty / Length	Headloss
Pipe (2")	21	1.19'
Check Valve	1	1.72'
90 Elbow	2	0.96'
Tee	1	1.24'
45 Elbow	2	0.41'
Exit	1	0.69'
Elevation Head		9.17'
Total Headloss @ 137 gpm		15.37'

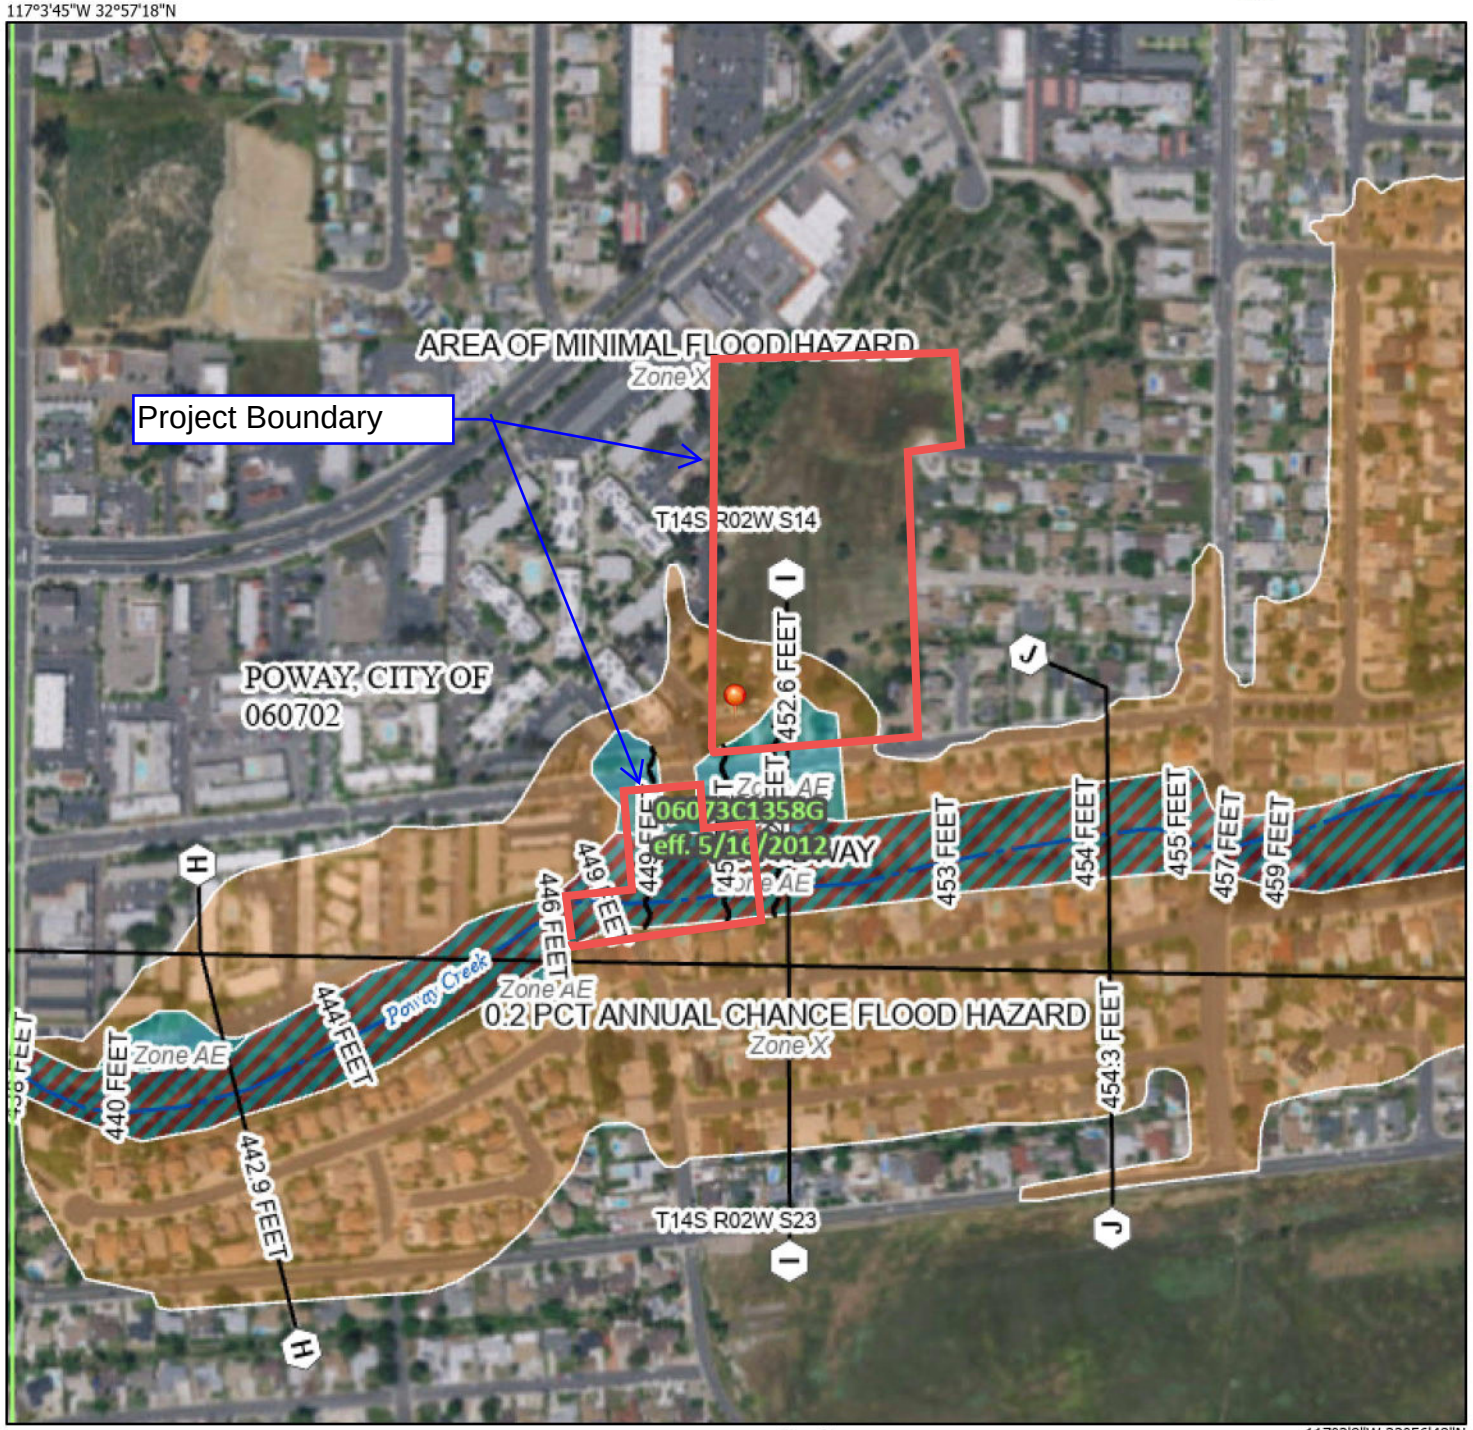
Reference Information (Reports, Plans, etc.)

National Flood Hazard Layer FIRMette

FEMA



Basemap: USGS National Map: Orthoimagery: Data refreshed October, 2020

Legend

SEE FIS REPORT FOR DETAILED LEGEND AND INDEX MAP FOR FIRM PANEL LAYOUT

SPECIAL FLOOD HAZARD AREAS
- Without Base Flood Elevation (BFE) *Zone A, V, A99*
- With BFE or Depth *Zone AE, AO, AH, VE, AR*
- Regulatory Floodway

OTHER AREAS OF FLOOD HAZARD
- 0.2% Annual Chance Flood Hazard, Areas of 1% annual chance flood with average depth less than one foot or with drainage areas of less than one square mile *Zone X*
- Future Conditions 1% Annual Chance Flood Hazard *Zone X*
- Area with Reduced Flood Risk due to Levee. See Notes. *Zone X*
- Area with Flood Risk due to Levee *Zone D*

OTHER AREAS
- NO SCREEN Area of Minimal Flood Hazard *Zone X*
- Effective LOMRs
- Area of Undetermined Flood Hazard *Zone D*

GENERAL STRUCTURES
- Channel, Culvert, or Storm Sewer
- Levee, Dike, or Floodwall

OTHER FEATURES
- 20.2 / 17.5 Cross Sections with 1% Annual Chance / Water Surface Elevation
- Coastal Transect
- Base Flood Elevation Line (BFE)
- Limit of Study
- Jurisdiction Boundary
- Coastal Transect Baseline
- Profile Baseline
- Hydrographic Feature

MAP PANELS
- Digital Data Available
- No Digital Data Available
- Unmapped

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 5/9/2022 at 7:53 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations (BFEs) shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) Zone 11. The **horizontal datum** was NAD83, GRS1980 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov/ or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey
SSMC-3, #9202
1315 East-West Highway
Silver Spring, Maryland 20910-3282
(301) 713-3242

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713-3242** or visit its website at http://www.ngs.noaa.gov/.

Base map information shown on this FIRM was provided in digital format by the USDA National Agriculture Imagery Program (NAIP). this information was photogrammetrically compiled at a scale of 1:24,000 from aerial photography dated 2009.

This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables *in the Flood Insurance Study report (which contains authoritative hydraulic data)* may reflect stream channel distances that differ from what is shown on this map.

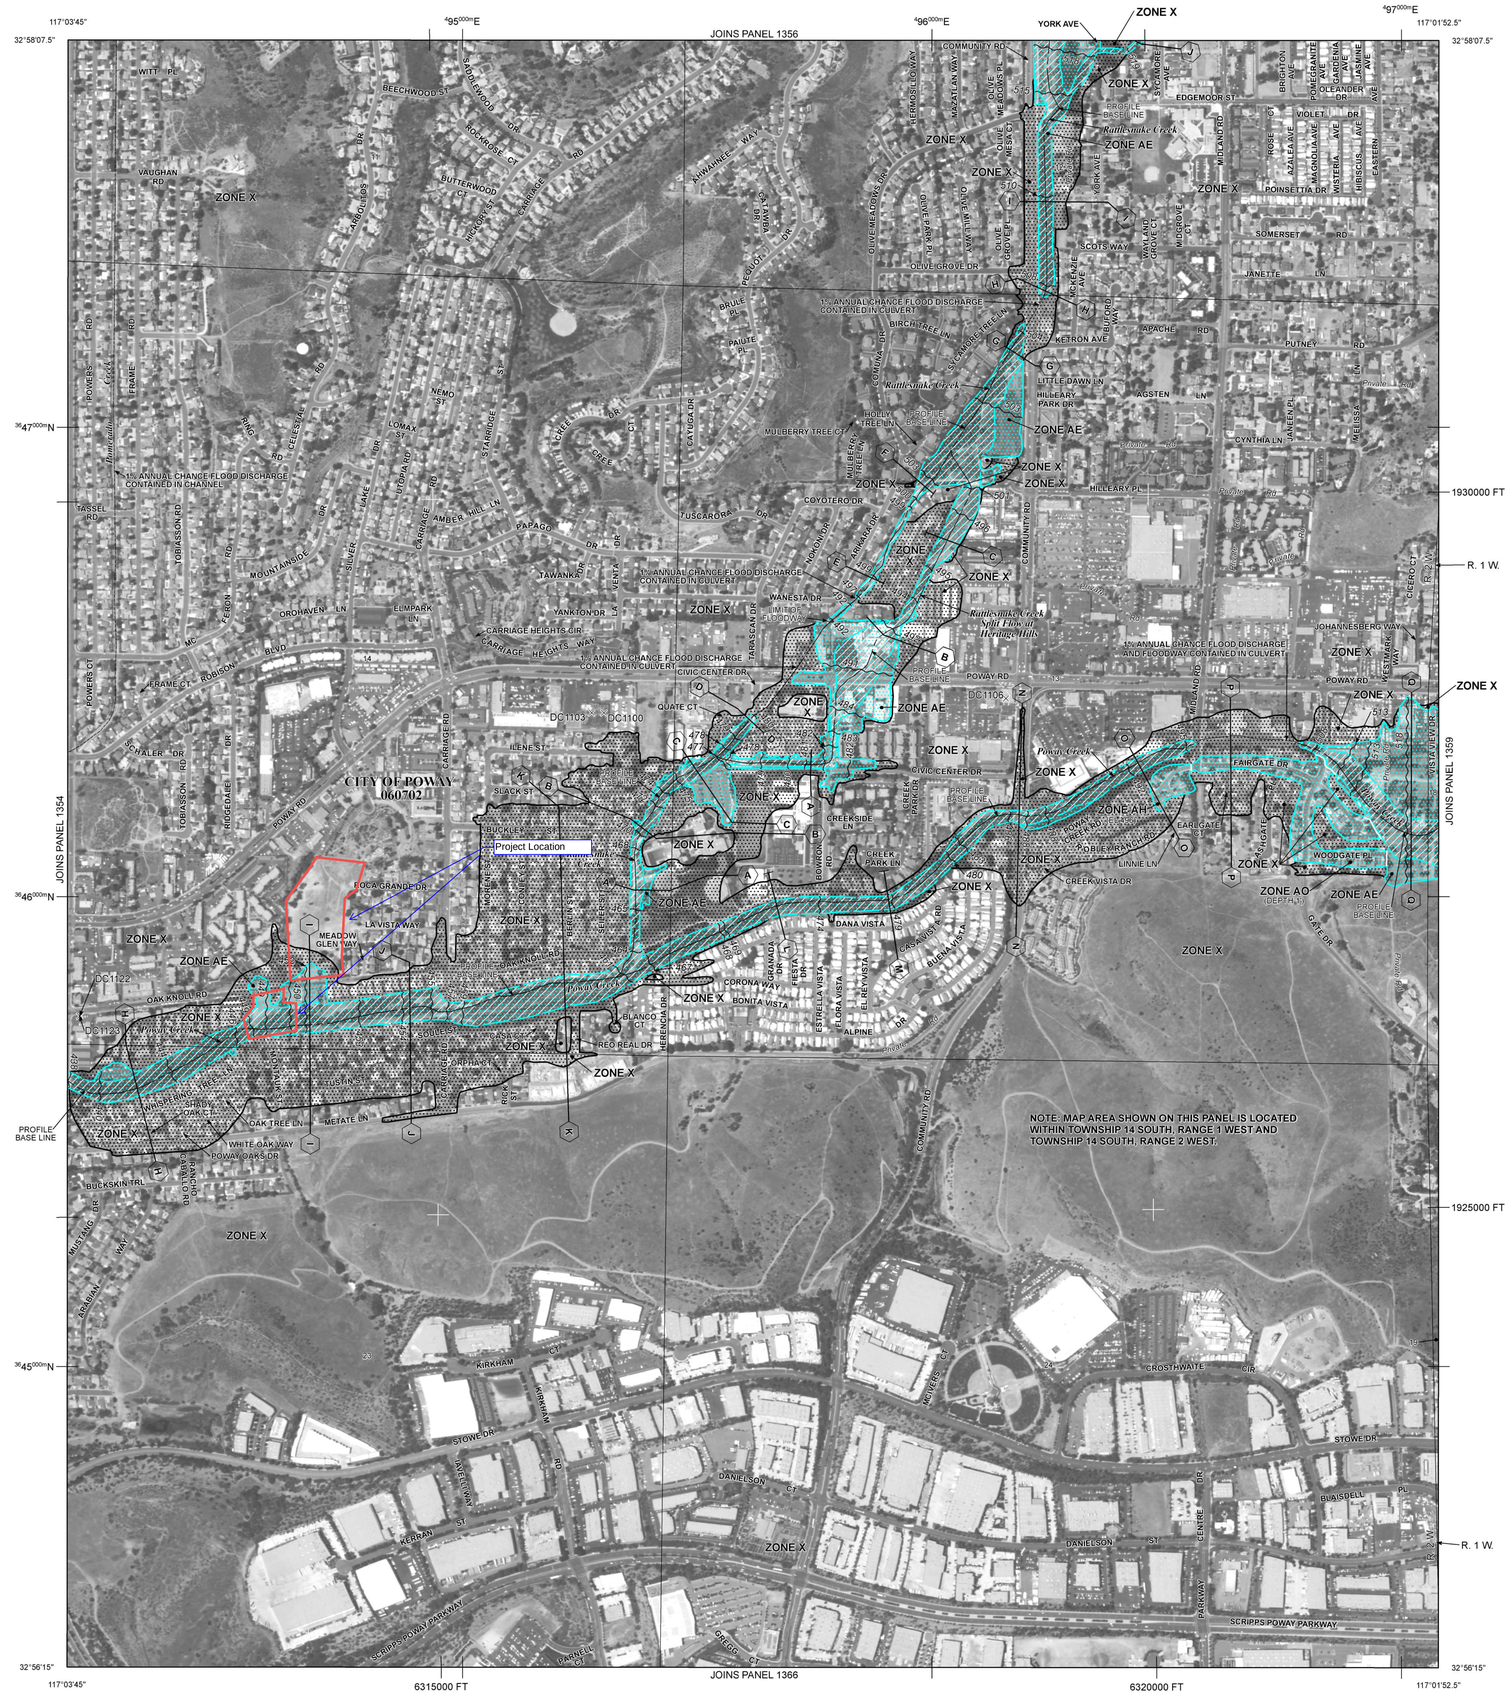
Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact the **FEMA Map Service Center** at 1-877-FEMA MAP (1-877-336-2627) for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and its website at http://msc.fema.gov/.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip/.

The **"profile base lines"** depicted on this map represent the hydraulic modeling baselines that match the flood profiles in the FIS report. As a result of improved topographic data, the "profile base line", in some cases, may deviate significantly from the channel centerline or appear outside the SFHA.



LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V_1 and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A No Base Flood Elevations determined.

ZONE AE Base Flood Elevations determined.

ZONE AH Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.

ZONE AO Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.

ZONE AR Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.

ZONE A99 Areas to be protected from 1% annual chance flood event by a Federal flood protection system under construction; no Base Flood Elevations determined.

ZONE V Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.

ZONE VE Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X Areas determined to be outside the 0.2% annual chance floodplain.

ZONE D Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- 1% annual chance floodplain boundary
- 0.2% annual chance floodplain boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths, or flood velocities
- 513 (EL 987) Base Flood Elevation line and value; elevation in feet* / Base Flood Elevation value where uniform within zone; elevation in feet*

* Referred to the North American Vertical Datum of 1988

- A–A Cross section line
- 23–23 Transect line
- 97°07'30", 32°22'30" Geographic coordinates referenced to the North American Datum of 1983 (NAD 83), Western Hemisphere
- 4275000mE 1000-meter Universal Transverse Mercator grid ticks, zone 11
- 6000000 FT 5000-foot grid values: California State Plane coordinate system, Zone VI (FIPSZONE = 406), Lambert projection
- DX5510 Bench mark (see explanation in Notes to Users section of this FIRM panel)
- M1.5 River Mile

MAP REPOSITORIES
Refer to Map Repositories list on Map Index

EFFECTIVE DATE OF COUNTYWIDE FLOOD INSURANCE RATE MAP
June 19, 1997

EFFECTIVE DATE(S) OF REVISION(S) TO THIS PANEL
May 16, 2012 – to update corporate limits, to add roads and road names, to incorporate previously issued Letters of Map Revision, and to update map elevations to North American Vertical Datum of 1988.

For community map revision history prior to countywide mapping, refer to the Community Map History table located in the Flood Insurance Study report for this jurisdiction.

To determine if flood insurance is available in this community, contact your insurance agent or call the National Flood Insurance Program at 1-800-638-6620.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: San Diego County Area, California
Survey Area Data: Version 16, Sep 13, 2021

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Aug 22, 2018—Aug 31, 2018

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Hydrologic Soil Group

Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
CmE2	Cieneba rocky coarse sandy loam, 9 to 30 percent slopes, eroded	D	0.1	1.3%
OhC	Olivenhain cobbly loam, 2 to 9 percent slopes	D	2.1	19.8%
PfC	Placentia sandy loam, thick surface, 2 to 9 percent slo pes	D	7.2	66.6%
VaA	Visalia sandy loam, 0 to 2 percent slopes	A	1.3	12.3%
Totals for Area of Interest			**10.8**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

Rating Options

Aggregation Method: Dominant Condition

Component Percent Cutoff: None Specified

Tie-break Rule: Higher

SEWER SYSTEM NOTES

1) All works shall be in accordance with the Standard Specifications for Public Works Construction, 1982 Edition with Supplements (A.P.W.A. Specifications), the San Diego County Regional Standard Drawings, & the City of Poway Standard Drawings.
2) Each lot shall be served by a minimum of 4-inch sewer lateral set at a minimum grade of 2% with a minimum drop of 0.3 feet and an invert depth of 5 feet below top of curb at property line per Regional Standard S-13. Laterals shall be shown on as-built plans with stations from manholes.
3) Sewer laterals shall be at right angles to the sewer main, except in a cul-de-sac. An inscribed "S" shall be marked on the curb directly above location of sewer lateral.
4) The Contractor must secure approval from the City Inspector prior to backfill over any sewer wyes.
5) No revisions shall be made to these plans without the approval of the City Engineer.
6) Construct a cleanout on laterals at property line. Bring to within 4" of finish grade and cover with Brooks No-1-SP Series or equal concrete meter box with cast iron lid marked "Sewer" set flush with finish grade.
7) No disruption of existing sewer services while making connection to existing mains will be allowed without the specific approval of the City of Poway Sewer Department.
8) The Contractor shall notify the City of Poway Sewer Department 48 hours prior to starting excavation so that existing sewer facilities may be marked in the field. Sewer Department telephone number is (619) 748-6600.
9) Location and elevation of existing sewer facilities shall be confirmed by field measurements and excavation exploration by the Contractor, prior to beginning of new work. This will allow time to permit revision of plans, as necessary, because of conflicts with other facilities.
10) The existence and location of sewer facilities shown on these plans were obtained by a search of available City records. To the best of our knowledge, the existing sewer facilities are as shown on the plans. The City of Poway shall not be held responsible for any error in the location and elevation of the existing sewer facilities.
11) Any lot with a finish pad elevation lower than the top of finish street grade where the sewer main is located and services this lot, must install a sewer backflow valve on private property.
12) The City's inspector shall be notified at least two working days prior to commencing work on the sewers. City Inspector telephone number is (619) 748-6600.
13) All sewer house connections shall be placed prior to surfacing of streets.
14) No house connections are to be made without approval from the City of Poway.
15) No sewer shall be constructed in any driveway without prior approval from the City of Poway.

WATER SYSTEM NOTES

1) Water works shall be constructed in accordance with the "Standard Specifications for Public Works Construction," 1982 Edition with supplements (A.P.W.A. specifications), the San Diego County Regional Standard Drawings, and the City of Poway Standard Specifications and Drawings, 1980.
2) A minimum 3/4-inch copper water service shall be installed at each lot when pressure is 50 psi or greater.
3) Each living unit with a pressure of 80 psi or greater shall be provided with a pressure regulator and low flow water saving devices.
4) Inscribe a "W" on curb directly above all water services. Services shall be shown on As-Built Plans.
5) Water mains shall be Class 150, 525# test A.C. pipe, and shall be constructed with top of pipe 36" below finish centerline grade except where otherwise indicated with specific elevations and approved by the Water Department Superintendent.
6) No disruption of existing water services while making connection to existing mains shall be allowed without the specific approval from the City of Poway Water Department.
7) No connections for the purpose of obtaining water supply during construction shall be made to any fire hydrant or blow-off structure without first obtaining a construction water permit from the City of Poway Water Department.
8) The Contractor shall notify the City of Poway Water Department two working days prior to starting excavation so that existing water facilities shall be marked in the field prior to start of construction. Water Department Telephone Number is (619) 748-6600.
9) Location and elevation of existing water facilities shall be confirmed by field measurements and excavation exploration by the Contractor, prior to beginning new work. This will allow time to permit revision of plan as necessary because of conflicts with other facilities.
10) The existence and location of water facilities shown on the plans were obtained by a search of available City records. To the best of our knowledge, the existing water facilities are as shown on the plans. The City of Poway shall not be held responsible for any error in the location and elevation of the existing water facilities.
11) No revisions shall be made to these plans without the approval of the City Engineer.
12) Bolts on all flange fittings shall be stainless steel.
13) The City Inspector shall be notified at least two working days prior to any inspection. To arrange for inspection, call (619) 748-6600.

GENERAL NOTES

1) All work to conform with the "Standard Specifications for Public Works Construction," 1982 Edition with supplements (A.P.W.A. Specifications), the San Diego County Regional Standard Drawings, and the City of Poway Standard Drawings.
2) The Contractor shall notify the San Diego Gas & Electric Company prior to starting work near company facilities and shall coordinate his work with company representatives. All gas and electric services within this subdivision are underground installations. For location of electric cable and gas piping and appurtenances, contact San Diego Gas & Electric Company at (619) 235-6323.
3) The Contractor shall notify the Pacific Telephone and Telegraph Company prior to starting work near company facilities and shall coordinate his work with company representatives. All telephone services within this subdivision are underground installations. For location of cables and apppurtenances, contact the Pacific Telephone Company at 1-800-422-4133.
4) The Contractor shall notify the City of Poway Engineering Department 48 hours prior to starting work so that inspection services may be provided.
5) A permit shall be obtained from the City Engineering Department for work within existing City right-of-way.
6) Pavement sections shown are to be verified by 'R' value tests and pavement design report, to be submitted by Soils Engineer after rough grading, for City Engineer's approval.
7) Wheelchair ramps shall be installed at all curb returns per Caltrans standard M8-B
8) All ferrous metals placed in the ground shall be encased in 6" of neutral sand.
9) Construction expansion joints in curb and gutter at returns and at driveway intersections are required per G-9 & G-10.
10) All underground utilities laterals shall be installed before construction of curbs, cross gutters, or surfacing of the streets.
11) All rock slope protection shall conform to Section 72 of the CALTRANS Standard Specifications, dated January 1981, and Standard Drawing D-40 of the S.D.A.R.S.D.
12) It shall be the responsibility of the Contractor to obtain an excavation permit from the Division of Industrial Safety and to adhere to all provisions of the State Construction Safety Orders.
13) Where trenches are within public easements, soils reports shall be submitted to the Engineer of Work and the City Engineer by a qualified soils engineer which certify that trench backfill was compacted as directed by the soils engineer in accordance with earthwork specifications and City of Poway specifications.
14) All concrete testing required by the City will be at the expense of the Contractor.
15) Class-2 Aggregate Base (CL-2 A.B.) shall conform to Section 26-1.02B of the CALTRANS Standard Specifications, dated January 1981.
16) Asphalt Concrete (A.C.) prime coat and seal coat shall conform to Section 302-5 and Section 400-4 of the A.P.W.A. specifications.
17) Centerline monuments shall be installed at the EC and BC of all curves, at the centerline intersection of all streets, at the radius point of concentric cul-de-sacs and at the angle point of offset cul-de-sacs, per S.D.R.S.D. M-10 & M-11.
18) All operations conducted on the premises, including the warming up, repair, arrival, departure or running of trucks, earth-moving equipment, construction equipment & any other associated equipment shall be limited to the period between 7:00 a.m. and 6:00 p.m. each day, Monday through Saturday, and no earth moving or grading operations shall be conducted on the premises on Sundays or legal holidays.
19) All existing improvements including curb and gutters, sidewalks, asphalt, concrete or P.C.C. paving, which are being joined or matched in connection with this project, shall be joined or matched in a manner satisfactory to the City Engineer, including necessary sawcutting, removal, replacement and capping.
20) For Additional Construction required for this project, see R.S.1713, Sheet 5 of 46, Revised 8/10/84.

WORK TO BE DONE

The improvement consists of the following work to be done according to these plans, the San Diego Regional Standards and the Standard Specifications of the City of Poway:

ITEM	STD. DWG.	LEGEND
Construction of Reinforced Concrete Box Culvert	D-76	
Grading of the portions of the Street as shown on the plans.		
Construction of Type G Curb	G-2	
Construction of P.C.C. Sidewalk	G-7.1	
Construction of Type B Curb Inlet	D-2.1	D
Construction of R.C.P. Storm Drain	D-76	R.C.P.
Construction of P.C.C. Driveway	G-14.1	
Construction of Paving and Base		
Construction of A.C. Overlay		
Construction of RIP RAP ENERGY DISSIPATOR	D-40-1	
Construction of Chain link fence	M-6	-x-x-
Construction of Wing Type Headwalls	D-39 & D-79 (MODIFIED)	
Construction of 6" A.C. Berm (Type A)	G-5	
Construction of A.C. Water Main & Appurtenances:		8" A.C.
Construction of Fire Hydrants (3-WAY Commercial)	City Std. #6	City Std. #6 F.H. W.M.H.
Construction of Conc. Manhole	D-1	
Construction of Drainage Outlet	D-25	
Construction of Water Services	City Std. #11	W
Construction of Gate Valves	City Std. #4	
Construction of Sewer Laterals	PSA P-20	S
Construction of Access Manhole	D-10 & D-11	
Construction of Grate Inlets per G-187-84		
Construction of Street Trees (15 gal. min.) = PLATANUS ACERIFOLIA @ 20 O.C.		
Construction of Street Lights (2)	E-1

PDP SWQMP Preparer's Certification Page

Project Name: Harmon Oaks
Project/Permit Number: SP 22-0001, TTM 22-0001 & DR 22-0003

PREPARER'S CERTIFICATION

I hereby declare that I am the Engineer in Responsible Charge of design of storm water best management practices (BMPs) for this project, and that I have exercised responsible charge over the design of the BMPs as defined in Section 6703 of the Business and Professions Code, and that the design is consistent with the PDP requirements of the City of Poway BMP Design Manual, which is a design manual for compliance with the City of Poway Municipal Code Sections 16.100 through 16.105 and regional MS4 Permit (California Regional Water Quality Control Board San Diego Region Order No. R9-2013-0001 as amended by R9-2015-0001 and R9-2015-0100) requirements for storm water management.

I have read and understand that the City of Poway has adopted minimum requirements for managing urban runoff, including storm water, from land development activities, as described in the BMP Design Manual. I certify that this PDP SWQMP has been completed to the best of my ability and accurately reflects the project being proposed and the applicable BMPs proposed to minimize the potentially negative impacts of this project's land development activities on water quality. I understand and acknowledge that the plan check review of this PDP SWQMP by City staff is confined to a review and does not relieve me, as the Engineer in Responsible Charge of design of storm water BMPs for this project, of my responsibilities for project design.

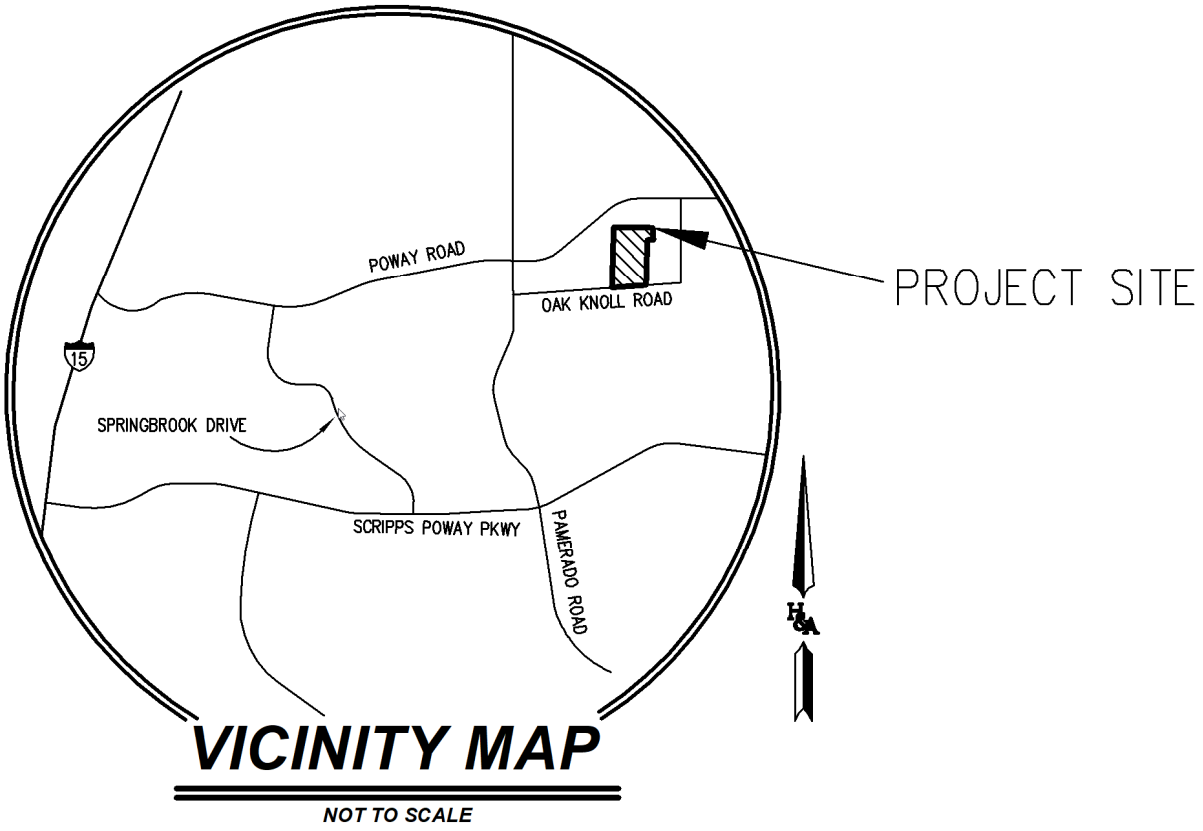
Project Vicinity Map

Project Name: Harmon Oaks
Project ID: SP 22-0001, TTM 22-0001 & DR 22-0003



Step 1: Stormwater Intake Form

City of Poway
Storm Water Intake Form for All Permit Applications

Preparation Date:
09/05/2023

This form must be completed in its entirety and accompany applications for any of the discretionary or ministerial permits and approvals referenced in Sections 16.100 through 16.105 of the City of Poway Municipal Code (PMC). The purpose of this form is to establish the Stormwater Quality Management Plan (SWQMP) requirements applicable to the project.

Step 1: Project Identification

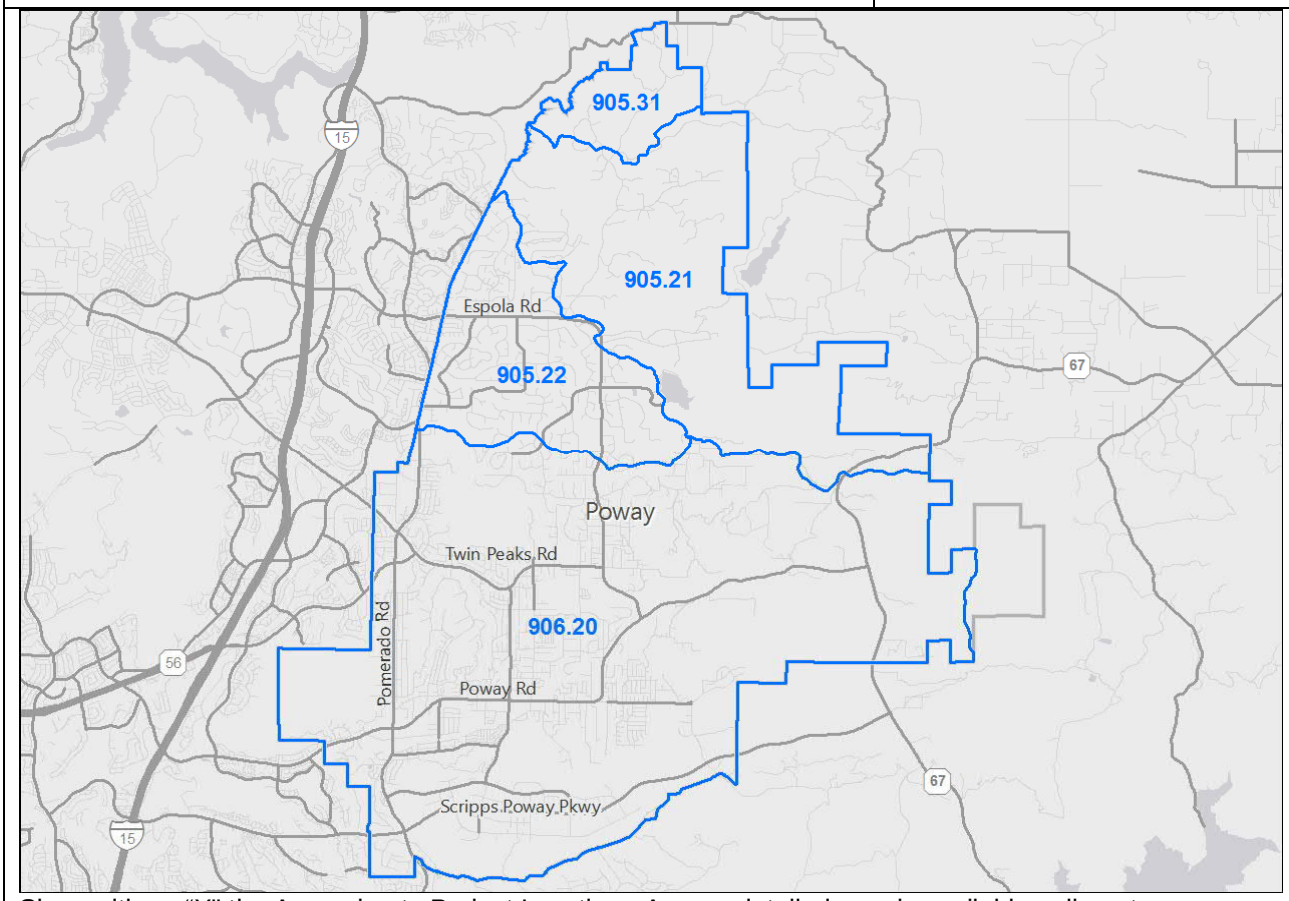
Applicant name:	APN(s):	Project/Permit Number:
Harmon Oaks	**317-501-01-00, 317-500-02, 03,09,10,11,12,13,14**	**SP 22-0001, TTM 22-0001 & DR 22-0003**

Project Address:

One portion North of Oak Knoll Road and one South, in between Pomerado Road and Carriage Road

Step 2: Geographic location

Step	Answer
What hydrologic unit is the project in? Use the map below to approximate the location.	☐905.31 ☐905.21 ☐905.22 ☑906.20



Show with an "X" the Approximate Project Location. A more detailed map is available online at http://poway.org/784/Online-Maps under the PowGIS link.

Step 3: Project type determination (Standard or Priority Development Project)

Is the project part of another Priority Development Project (PDP)? If so, a **PDP SWQMP** is required. Go to Step 4.	☐Yes ☑ No
The project is (select one):	☑ New Development ☐ Redevelopment[1]
The total proposed newly created or replaced impervious area is:	237,485 ft²
The total existing (pre-project) impervious area is:	11,488 ft²
The total area disturbed by the project is (including contractor lay-down areas, landscape areas, and septic fields):	370,076 ft²

If the total area disturbed by the project is 1 acre (43,560 sq. ft.) or more OR the project is part of a larger common plan of development (e.g., a building permit within a previously approved subdivision) disturbing 1 acre or more, a Waste Discharger Identification (WDID) number must be obtained from the State Water Resources Control Board.
WDID: _____

Is the project in any of the following categories, (a) through (f)?[2]

Yes	No		
☑	☐	(a)	New development projects that create 10,000 square feet or more of impervious surfaces[3] (collectively over the entire project site). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
Yes	☑	(b)	Redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site on an existing site of 10,000 square feet or more of impervious surfaces). This includes commercial, industrial, residential, mixed-use, and public development projects on public or private land.
☑	☐	(c)	New and redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface (collectively over the entire project site), and support one or more of the following uses: (i) Restaurants. This category is defined as a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (Standard Industrial Classification (SIC) code 5812). (ii) Hillside development projects. This category includes development on any natural slope that is twenty-five percent or greater. (iii) Parking lots. This category is defined as a land area or facility for the temporary parking or storage of motor vehicles used personally, for business, or for commerce. (iv) Streets, roads, highways, freeways, and driveways. This category is defined as any paved impervious surface used for the transportation of automobiles, trucks, motorcycles, and other vehicles.

[1] Redevelopment is defined as: The creation, addition, and or replacement of impervious surface on an already developed site. Examples include the expansion of a building footprint, road widening, the addition to or replacement of a structure. Replacement of impervious surfaces includes any activity where impervious material(s) are removed, exposing underlying soil during construction. Redevelopment does not include routine maintenance activities, such as trenching and resurfacing associated with utility work; pavement grinding; resurfacing existing roadways, sidewalks, pedestrian ramps, or bike lanes on existing roads; and routine replacement of damaged pavement, such as pothole repair.

[2] Applicants should note that any development project that will create and/or replace 10,000 square feet or more of impervious surface (collectively over the entire project site) is considered a new development.

[3] For solar energy projects, the area of the solar panels does not count toward the total impervious area of the site.

Project Type Determination (continued)			
Yes ☑ ☑ ☐	No ☐ ☐ ☑	(d)	New or redevelopment projects that create and/or replace 2,500 square feet or more of impervious surface (collectively over the entire project site), and (i) Discharging directly to an Environmentally Sensitive Area (ESA). "Discharging directly to" includes flow that is conveyed overland a distance of 200 feet or less from the project to the ESA, or (ii) Conveyed in a pipe or open channel any distance as an isolated flow from the project to the ESA (i.e. not commingled with flows from adjacent lands).
Yes ☐	No ☑	(e)	New development projects, or redevelopment projects that create and/or replace 5,000 square feet or more of impervious surface, that support one or more of the following uses: (i) Automotive repair shops. This category is defined as a facility that is categorized in any one of the following SIC codes: 5013, 5014, 5541, 7532-7534, or 7536-7539. (ii) Retail gasoline outlets (RGOs). This category includes RGOs that meet the following criteria: (a) 5,000 square feet or more or (b) a projected Average Daily Traffic (ADT) of 100 or more vehicles per day.
Yes ☑	No ☐	(f)	New or redevelopment projects that result in the disturbance of one or more acres of land and are expected to generate pollutants post construction.

Does the project meet the definition of one or more of the Priority Development Project categories (a) through (f) listed above?

☐No – the project is not a Priority Development Project (Standard Project).

☑Yes – the project is a Priority Development Project (PDP).

Further guidance may be found in Chapter 1 and Table 1-2 of the BMP Design Manual.

The following is for **redevelopment PDPs only**:

The area of existing (pre-project) impervious area at the project site is: _____ ft^2 (A)

The total proposed newly created or replaced impervious area is: _____ ft^2 (B)

Percent impervious surface created or replaced (B/A)*100: _____ %

The percent impervious surface created or replaced is (select one based on the above calculation):

☐less than or equal to fifty percent (50%) – **only newly created or replaced impervious areas are considered a PDP and subject to stormwater requirements.**

OR

☒greater than fifty percent (50%) – **the entire project site is considered a PDP and subject stormwater requirements.**

Step 4: Storm Water Quality Management Plan requirements

Step	Answer	Progression
Is the project a Standard Project, Priority Development Project (PDP), or exception to PDP definitions? To answer this item, complete the Project Type Determination Checklist on Pages 2 and 3 of this form, and see PDP exemption information below. For further guidance, see Section 1.4 of the BMP Design Manual *in its entirety*.	☐Standard Project	Standard Project requirements apply, including Standard Project SWQMP. **Complete Standard Project SWQMP.**
	☑PDP	Standard and PDP requirements apply, including PDP SWQMP. **Complete PDP SWQMP.**
	☐PDP Exemption	**Go to Step 5 below.**

Step 5: Exemption to PDP Definitions

Is the project exempt from PDP definitions based on either of the following: ☐ Projects that are only new or retrofit paved sidewalks, bicycle lanes, or trails that meet the following criteria: (i) Designed and constructed to direct storm water runoff to adjacent vegetated areas, or other non-erodible permeable areas; OR (ii) Designed and constructed to be hydraulically disconnected from paved streets or roads [i.e., runoff from the new improvement does not drain directly onto paved streets or roads]; OR (iii) Designed and constructed with permeable pavements or surfaces in accordance with County of San Diego Guidance on Green Infrastructure;	If so: Standard Project requirements apply, AND any additional requirements specific to the type of project. City concurrence with the exemption is required. *Provide discussion and list any additional requirements below in this form.* **Complete Standard Project SWQMP.**
Discussion / justification, and additional requirements for exceptions to PDP definitions, if applicable:	

Step 6: Certification

Applicant Certification: I have read and understand that the City of Poway has adopted minimum requirements for managing urban runoff, including storm water, from construction and land development activities, as described in the BMP Design Manual. I certify that this intake form has been completed to the best of my ability and accurately reflects the project being proposed. I also understand that non-compliance with the City's PMC may result in Code Enforcement action by the City.

Signature of Applicant:	*Date:*
Alissa S. Valpondo	11/30/2022

For City Only:
☐ Standard SWQMP
☐ PDP SWQMP

Step 2: Site Information Checklist – Form I-3B

Site Information Checklist	Form I-3B (PDPs)
Project Summary Information	
Project Name	Harmon Oaks
Project Address	Oak Knoll Road, in between Pomerado Road and Carriage Road
Assessor's Parcel Number(s)	317-501-01-00, 317-500-02, 03,09,10,11,12,13,14
Project/Permit Number	SP 22-0001, TTM 22-0001 & DR 22-0003
Project Watershed (Hydrologic Unit)	Select One: ☐ San Dieguito 905 ☑ Penasquitos 906
Parcel Area (total area of Assessor's Parcel(s) associated with the project)	11.51 Acres (501,372 Square Feet)
Area to be disturbed by the project (Project Area)	8.50 Acres (370,076 Square Feet)
Project Proposed Impervious Area (subset of Project Area)	5.45 Acres (237,485 Square Feet)
Project Proposed Pervious Area (subset of Project Area)	3.04 Acres (132,591 Square Feet)
Note: Proposed Impervious Area + Proposed Pervious Area = Area to be Disturbed by the Project. This may be less than the Parcel Area.	

Form I-3B Page 2 of 9

Description of Existing Site Condition and Drainage Patterns

Current Status of the Site (select all that apply):

☑Existing development

☐ Previously graded but not built out

☑Agricultural or other non-impervious use

☑Vacant, undeveloped/natural

Description / Additional Information:

Existing Land Cover Includes (select all that apply):

☑ Vegetative Cover

☑ Non-Vegetated Pervious Areas

☑ Impervious Areas

Description / Additional Information:

Underlying Soil belongs to Hydrologic Soil Group (select all that apply):

☑ NRCS Type A

☐ NRCS Type B

☐ NRCS Type C

☑ NRCS Type D

Approximate Depth to Groundwater:

☐ Groundwater Depth < 5 feet

☑ 5 feet < Groundwater Depth < 10 feet

☐ 10 feet < Groundwater Depth < 20 feet

☐ Groundwater Depth > 20 feet

Existing Natural Hydrologic Features (select all that apply):

☑Watercourses

☐ Seeps

☐ Springs

☐ Wetlands

☐ None

Description / Additional Information:

The northern portion discharges indirectly into Poway Creek and the southern portion discharges directly

Description of Existing Site Topography and Drainage [How is storm water runoff conveyed from the site? At a minimum, this description should answer (1) whether existing drainage conveyance is natural or urban; (2) describe existing constructed storm water conveyance systems, if applicable; and (3) is runoff from offsite conveyed through the site? If so, describe]:

The existing drainage conveyance is divided in two main areas, one north of Oak Knoll Road and the other one south. For the northern side, the conveyance is urban and for the southern side is natural.

For the northern side, runoff sheet flows on a SW direction where a portion of it is caught by a catch basin and headwall on the property located immediately west of the project boundary and the other portion is caught by curb inlets on Oak Knoll Road. Both flows convey via storm drain and comingle downstream where it finally discharges into Poway Creek.

Description of Proposed Site Development and Drainage Patterns

Project Description / Proposed Land Use and/or Activities:

The project ultimately consist of a single family residential development of 64units (60 dwellings North of Oak Knoll Road and 4 more South), with associated sidewalks, parking areas and associated roads.

List/describe proposed impervious features of the project (e.g., buildings, roadways, parking lots, courtyards, athletic courts, other impervious features):

Impervious features include 64 single family homes, sidewalks, parking areas and associated roads.

List/describe proposed pervious features of the project (e.g., landscape areas):

Pervious features include landscape areas and slopes.

Does the project include grading and changes to site topography?

☑ Yes

☐ No

Description / Additional Information:

Does the project include changes to site drainage (e.g., installation of new storm water conveyance systems)?

☑ Yes

☐ No

Description / Additional Information:

The project proposes a new storm drain system comingling with the existing storm drain located on Oak Knoll Road

Form I-3B Page 5 of 9

Identify whether any of the following features, activities, and/or pollutant source areas will be present (select all that apply):

☑Onsite storm drain inlets
☐ Interior floor drains and elevator shaft sump pumps
☐ Interior parking garages
☑Need for future indoor & structural pest control
☑Landscape/outdoor pesticide use
☐ Pools, spas, ponds, decorative fountains, and other water features
☐ Food service
☐ Refuse areas
☐ Industrial processes
☐ Outdoor storage of equipment or materials
☐ Vehicle and equipment cleaning
☐ Vehicle/equipment repair and maintenance
☐ Fuel dispensing areas
☐ Loading docks
☑Fire sprinkler test water
☐ Miscellaneous drain or wash water
☑Plazas, sidewalks, and parking lots

Form I-3B Page 6 of 9

Identification of Receiving Water Pollutants of Concern

Describe path of storm water from the project site to the Pacific Ocean (or bay, lagoon, lake or reservoir, as applicable):

Runoff north of Oak Knoll Road will be captured onsite and pumped out to the existing storm drain system located on Oak Knoll Road where it will comingle with the flows from the south area, collected by an existing sump inlet on Oak Knoll Road, then discharging into Poway Creek. Poway Creek connects with Los Penasquitos Creek, then with Los Penasquitos Lagoon and finally discharges into the pacific ocean.

List any 303(d) impaired water bodies within the path of storm water from the project site to the Pacific Ocean (or bay, lagoon, lake or reservoir, as applicable), identify the pollutant(s)/stressor(s) causing impairment, and identify any TMDLs for the impaired water bodies:

303(d) Impaired Water Body	Pollutant(s)/Stressor(s)	TMDLs/WQIP Highest Priority Pollutant
Poway Creek	Selenium, Nitrogen, Toxicity	N/A
Los Penasquitos Creek	Total Dissolved Solids, Phosphate, Toxicity, Indicator Bacteria, Nitrogen, Benthic Community Effects, Chlorpyrifos, Bifenthrin	N/A
Los Penasquitos Lagoon	Sedimentation/Siltation, Toxicity	Sedimentation/Siltation
Pacific Ocean Shoreline, Miramar Reservoir HA, Los Penasquitos River mouth	Indicator Bacteria	Indicator Bacteria

Identification of Project Site Pollutants

Identify pollutants anticipated from the project site based on all proposed use(s) of the site (see manual Appendix Table B.6-1):

Pollutant	Not Applicable to the Project Site	Anticipated from the Project Site	Receiving Water Pollutant of Concern	Primary or Secondary Pollutant of Concern
Sediment		X	X	X
Nutrients		X	X	X
Heavy Metals	X		X	
Organic Compounds	X		X	
Trash & Debris		X		
Oxygen Demanding Substances		X		

Oil & Grease		X		
Bacteria & Viruses		X	X	X
Pesticides		X		
Identify whether each pollutant listed is Not Applicable to the Project Site, Anticipated from the Project Site, and/or a Receiving Water Pollutant of Concern with an X or ✓. Identify Primary or Secondary in the last column with a P or S unless Not Applicable to the Project Site has been selected.				

Form I-3B Page 7 of 9

Hydromodification Management Requirements

Do hydromodification management requirements apply (see Section 1.6 of the manual)?

☑Yes, hydromodification management flow control structural BMPs required.

☐ No, the project will discharge runoff directly to existing underground storm drains discharging directly to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.

☐ No, the project will discharge runoff directly to conveyance channels whose bed and bank are concrete-lined all the way from the point of discharge to water storage reservoirs, lakes, enclosed embayments, or the Pacific Ocean.

☐ No, the project will discharge runoff directly to an area identified as appropriate for an exemption by the WMAA for the watershed in which the project resides.

Description / Additional Information (to be provided if a 'No' answer has been selected above):

Critical Coarse Sediment Yield Areas*

*This Section only required if hydromodification management requirements apply

Based on the maps provided within the WMAA, do potential critical coarse sediment yield areas exist within the project drainage boundaries?

☐ Yes

☑No, no critical coarse sediment yield areas to be protected based on WMAA maps

If yes, have any of the optional analyses presented in Section 6.2 of the manual been performed?

☐ 6.2.1 Verification of GLUs Onsite

☐ 6.2.2 Downstream Systems Sensitivity to Coarse Sediment

☐ 6.2.3 Optional Additional Analysis of Potential Critical Coarse Sediment Yield Areas Onsite

☐ No optional analyses performed, the project will avoid critical coarse sediment yield areas identified based on WMAA maps

If optional analyses were performed, what is the final result?

☐ No critical coarse sediment yield areas to be protected based on verification of GLUs onsite.

☐ Critical coarse sediment yield areas exist but additional analysis has determined that protection is not required. Documentation attached in Attachment 8 of the SWQMP.

☐ Critical coarse sediment yield areas exist and require protection. The project will implement management measures described in Sections 6.2.4 and 6.2.5 as applicable, and the areas are identified on the SWQMP Exhibit.

Discussion / Additional Information:

Form I-3B Page 8 of 9
Flow Control for Post-Project Runoff* *This Section only required if hydromodification management requirements apply
List and describe point(s) of compliance (POCs) for flow control for hydromodification management (see Section 6.3.1). For each POC, provide a POC identification name or number correlating to the project's HMP Exhibit and a receiving channel identification name or number correlating to the project's HMP Exhibit. One POC is proposed downstream on Poway Creek at the discharge of the existing storm drain system.
Has a geomorphic assessment been performed for the receiving channel(s)? ☑No, the low flow threshold is 0.1Q2 (default low flow threshold) ☐ Yes, the result is the low flow threshold is 0.1Q2 ☐ Yes, the result is the low flow threshold is 0.3Q2 ☐ Yes, the result is the low flow threshold is 0.5Q2 If a geomorphic assessment has been performed, provide title, date, and preparer: Discussion / Additional Information: (optional)

Form I-3B Page 9 of 9
Other Site Requirements and Constraints
When applicable, list other site requirements or constraints that will influence storm water management design, such as zoning requirements including setbacks and open space, or local codes governing minimum street width, sidewalk construction, allowable pavement types, and drainage requirements.
Optional Additional Information or Continuation of Previous Sections As Needed
This space provided for additional information or continuation of information from previous sections as needed.

Step 3: Source Control BMP Checklist – Form I-4

Source Control BMP Checklist for All Development Projects	Form I-4

Project Identification

Project Name: Harmon Oaks

Project/Permit Number: SP 22-0001, TTM 22-0001 & DR 22-0003

Source Control BMPs

All development projects must implement source control BMPs SC-1 through SC-6 where applicable and feasible. See Chapter 4 and Appendix E of the manual for information to implement source control BMPs shown in this checklist.

Answer each category below pursuant to the following.

- "Yes" means the project will implement the source control BMP as described in Chapter 4 and/or Appendix E of the manual. Discussion / justification is not required.
- "No" means the BMP is applicable to the project but it is not feasible to implement. Discussion / justification must be provided.
- "N/A" means the BMP is not applicable at the project site because the project does not include the feature that is addressed by the BMP (e.g., the project has no outdoor materials storage areas). Discussion / justification may be provided.

Source Control Requirement	Applied?		
SC-1 Prevention of Illicit Discharges into the MS4	☑Yes	☐ No	☐ N/A
Discussion / justification if SC-1 not implemented:			
SC-2 Storm Drain Stenciling or Signage	☑Yes	☐ No	☐ N/A
Discussion / justification if SC-2 not implemented:			
SC-3 Protect Outdoor Materials Storage Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☐ Yes	☐ No	☑N/A
Discussion / justification if SC-3 not implemented:			
SC-4 Protect Materials Stored in Outdoor Work Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☐ Yes	☐ No	☑N/A
Discussion / justification if SC-4 not implemented:			

Form I-4 Page 2 of 2			
Source Control Requirement	Applied?		
SC-5 Protect Trash Storage Areas from Rainfall, Run-On, Runoff, and Wind Dispersal	☐ Yes	☐ No	☑ N/A
Discussion / justification if SC-5 not implemented:			
SC-6 Additional BMPs Based on Potential Sources of Runoff Pollutants (must answer for each source listed below)			
☐ Onsite storm drain inlets	☑ Yes	☐ No	☐ N/A
☐ Interior floor drains and elevator shaft sump pumps	☐ Yes	☐ No	☑ N/A
☐ Interior parking garages	☐ Yes	☐ No	☑ N/A
☐ Need for future indoor & structural pest control	☐ Yes	☐ No	☑ N/A
☐ Landscape/outdoor pesticide use	☑ Yes	☐ No	☐ N/A
☐ Pools, spas, ponds, decorative fountains, and other water features	☐ Yes	☐ No	☑ N/A
☐ Food service	☐ Yes	☐ No	☑ N/A
☐ Refuse areas	☐ Yes	☐ No	☑ N/A
☐ Industrial processes	☐ Yes	☐ No	☑ N/A
☐ Outdoor storage of equipment or materials	☐ Yes	☐ No	☑ N/A
☐ Vehicle and equipment cleaning	☐ Yes	☐ No	☑ N/A
☐ Vehicle/equipment repair and maintenance	☐ Yes	☐ No	☑ N/A
☐ Fuel dispensing areas	☐ Yes	☐ No	☑ N/A
☐ Loading docks	☐ Yes	☐ No	☑ N/A
☐ Fire sprinkler test water	☑ Yes	☐ No	☐ N/A
☐ Miscellaneous drain or wash water	☑ Yes	☐ No	☐ N/A
☐ Plazas, sidewalks, and parking lots	☑ Yes	☐ No	☐ N/A
Discussion / justification if SC-6 not implemented. Clearly identify which sources of runoff pollutants are discussed. Justification must be provided for <u>all</u> "No" answers shown above.			

Step 4: Site Design BMP Checklist – Form I-5

Site Design BMP Checklist for All Development Projects	Form I-5

Project Identification

Project Name: Harmon Oaks

Project/Permit Number: SP 22-0001, TTM 22-0001 & DR 22-0003

Site Design BMPs

All development projects must implement site design BMPs SD-1 through SD-8 where applicable and feasible. See Chapter 4 and Appendix E of the manual for information to implement site design BMPs shown in this checklist.

Answer each category below pursuant to the following.

- "Yes" means the project will implement the site design BMP as described in Chapter 4 and/or Appendix E of the manual. Discussion / justification is not required.
- "No" means the BMP is applicable to the project but it is not feasible to implement. Discussion / justification must be provided.
- "N/A" means the BMP is not applicable at the project site because the project does not include the feature that is addressed by the BMP (e.g., the project site has no existing natural areas to conserve). Discussion / justification may be provided.

Site Design Requirement	Applied?		
SD-1 Maintain Natural Drainage Pathways and Hydrologic Features	☑Yes	☐ No	☐ N/A
Discussion / justification if SD-1 not implemented:			
SD-2 Conserve Natural Areas, Soils, and Vegetation	☑Yes	☐ No	☐ N/A
Discussion / justification if SD-2 not implemented:			
SD-3 Minimize Impervious Area	☑Yes	☐ No	☐ N/A
Discussion / justification if SD-3 not implemented:			
SD-4 Minimize Soil Compaction	☑Yes	☐ No	☐ N/A
Discussion / justification if SD-4 not implemented:			

Form I-5 Page 2 of 2			
Site Design Requirement	Applied?		
SD-5 Impervious Area Dispersion	☑ Yes	☐ No	N/A
Discussion / justification if SD-5 not implemented:			
SD-6 Runoff Collection	☑ Yes	☐ No	☐ N/A
Discussion / justification if SD-6 not implemented:			
SD-7 Landscaping with Native or Drought Tolerant Species	☑ Yes	☐ No	☐ N/A
Discussion / justification if SD-7 not implemented:			
SD-8 Harvesting and Using Precipitation	☐ Yes	☐ No	☑ N/A
Discussion / justification if SD-8 not implemented:			

Step 5: Summary of PDP Structural BMPs – Form I-6

Summary of PDP Structural BMPs	Form I-6 (PDPs)
Project Identification	
Project Name: Harmon Oaks	
Project/Permit Number: SP 22-0001, TTM 22-0001 & DR 22-0003	
PDP Structural BMPs	
All PDPs must implement structural BMPs for storm water pollutant control (see Chapter 5 of the manual). Selection of PDP structural BMPs for storm water pollutant control must be based on the selection process described in Chapter 5. PDPs subject to hydromodification management requirements must also implement structural BMPs for flow control for hydromodification management (see Chapter 6 of the manual). Both storm water pollutant control and flow control for hydromodification management can be achieved within the same structural BMP(s). PDP structural BMPs must be verified by the local jurisdiction at the completion of construction. This may include requiring the project owner or project owner's representative to certify construction of the structural BMPs (see Section 1.12 of the manual). PDP structural BMPs must be maintained into perpetuity, and the local jurisdiction must confirm the maintenance (see Section 7 of the manual). Use this form to provide narrative description of the general strategy for structural BMP implementation at the project site in the box below. Then complete the PDP structural BMP summary information sheet (page 3 of this form) for each structural BMP within the project (copy the BMP summary information page as many times as needed to provide summary information for each individual structural BMP).	
Describe the general strategy for structural BMP implementation at the site. This information must describe how the steps for selecting and designing storm water pollutant control BMPs presented in Section 5.1 of the manual were followed, and the results (type of BMPs selected). For projects requiring hydromodification flow control BMPs, indicate whether pollutant control and flow control BMPs are integrated or separate. The selection, sizing, and design of stormwater treatment and other source control and site design BMPS measures in this plan were done based on the City of Poway BMP Design Manual and the requirements of the MS4 permit (San Diego Regional Water Quality Control Board) Order No. R9-2013-0001. (Continue on page 2 as necessary.)	

(Page reserved for continuation of description of general strategy for structural BMP implementation at the site)

(Continued from page 1)

Step 1. A- DMA 12, 13 and14 are identified as a self mitigating areas. These DMAs are natural, landscaped or turf area that does not generate significant pollutants and drains directly offsite or to the public storm drain system without being treated by a structural BMP and meet all requirements in section 5.2.1.

Step 1.B- Eleven DMAs have been delineated (DMA1-DMA11), and area break down for each DMA based on surface type was provide. Area weighted runoff factor for each DMA was calculated using Table 1.1 from Appendix B.1.1, and Appendix B.2.1. 85th percentile 24-hr storm depth from Figure B.1-1 has been determined to be 0.62 inch. DCV for each DMA was calculated using Worksheet B.2.1 and following Section 5.3.

Step 2. Harvest and use feasibility screening was provided using Havest and Use feasibility Checklist (Worksheet B.3.1 and following Section 5.4.1)

Harvest and Use deemed infeasible as the 36 hour demand is less than 0.25 of the total DCV (please refer to Worksheet B.3 in Attachment 1a).

Step 3. Infiltration feasibility analysis was prepared by a geotechnical Engineer (please refer to Form I-8 infiltration feasibility Screening prepared by Geocon), and full or partial infiltration deemed to be infeasible, because 1) per the Geotechnical Investigation, dated June 15, 2022 for storm water evaluation prepared by Geocon. Based on results of permeability testing, the unfactored infiltration rate was measured to be 0.07 inches/ hour using a constant head borehole permeameter. If applying a feasibility factor of safety of 2.0, the infiltration rate would be 0.036 iph, which is less than the commonly used threshold value of 0.05 iph for partial infiltration. The USDA NRCS web soil survey website indicates the majority of the underlying soils belong to Placentia sandy loam (PfC) which is identified as Hydrologic Soil Group D, which is not conducive to infiltration BMP's. Information collected from the USDA website is attached. The downhole permeameter test results are attached. In accordance with the Riverside County storm water procedures, which reference the United States Bureau of Reclamation Well Permeameter Method (USBR 7300), the saturated hydraulic conductivity is equal to the unfactored infiltration rate., 2)the potential for lateral water migration to adversely impact existing and proposed utilities, adversely impact proposed foundations and improvements is high. Compacted fill will be placed across the property and result in fills greater than 5 feet thick. Infiltration BMP's founded in compacted fill should be avoided to prevent adverse shrinking/swelling of the expansive soils, and adverse hydro-consolidation of the granular fill soils which causes differential settlement. The underlying Terrace Deposits and Friars Formation consists of stiff to very stiff clay that will also not percolate into the ground and water would migrate laterally, and 3) the Groundwater is located within 10 feet from the proposed BMP's. Therefore, the risk of groundwater contamination increases if infiltration BMP's are used.

As a result of Step 2 and Step3, harvest and use , and full or partial infiltration were deemed to be infeasible. Therefore, biofiltration BMP category was implemented (section 5.5.3), and Proprietary biofiltration BMPs were chosen (Filterra units or equivalent) from the biofiltration category.

-The proposed proprietary biofiltration BMP meets the minimum design criteria listed in Appendix F, including the pollutant treatment performance standard in Appendix F.1;

-The proprietary biofiltration BMP was designed and will be maintained in a manner consistent with its performance certifications. Refer to the T.A.P.E. Certification in Attachment 1.a, and the maintenance information in Attachment3

-The proprietary biofiltration BMPs were sized as a flow based Biofiltration BMP following appendix F.2.2.

(Page reserved for continuation of description of general strategy for structural BMP implementation at the site)

(Continued from page 1)

The following steps were followed to demonstrate that the system is sized to treat 1.5 times the DCV:

1. The flow rate required to meet the pollutant treatment performance standard without scaling for the 1.5 factor was calculated from 0.2 inch per hour uniform intensity precipitation event.
2. The calculated water quality flow rate from Step 1 was multiplied by 1.5 to compute the design flow rate for the biofiltration system.
3. Based on the conditions of certification/verification (discussed above), the design capacity, as a flow rate, of a given sized unit was established.
4. An appropriate unit size and number of units is provided to provide a flow rate that meets the required flow rate from Step 2 for each DMA.
5. site design BMPs (Impervious area dispersion) was provided to meet minimum retention requirement in Appendix B. County of San Diego Automatic Worksheets (B.1, B.2, and B.3) were provided to verify that the provided dispersion areas meet minimum retention requirements.

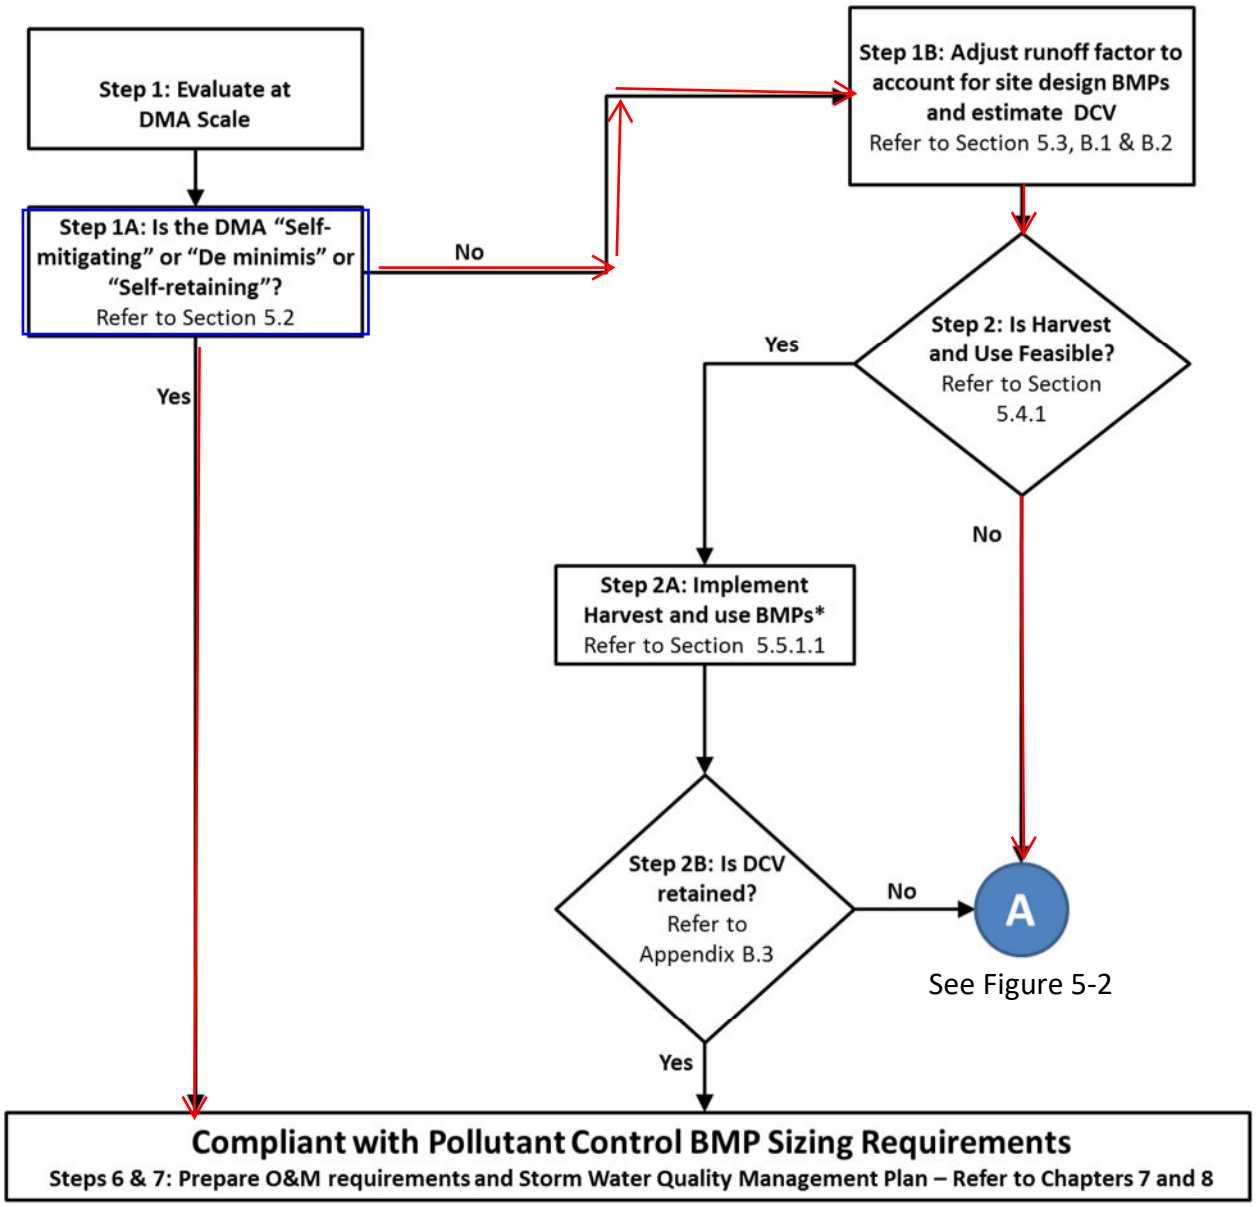
A total of 11 Filterra units (BF-3-1 to 11) were sized to address the water quality requirements for all of the Harmon Oaks development. Every Filterra unit was sized utilizing worksheet "B.6-1 for a flow based proprietary biofiltration BMP" to treat 1.5 times the calculated flow rate (0.2 in/hr rainfall intensity). The refer to Attachment 1a.

For hydromodification flow control, an underground vault is proposed to mitigate the flow that is generated by the DMA-1 to DMA-10 (North of Oak Knoll Road Site).

The flows generated by DMA-1 to DMA-10 (North of Oak Knoll Road Site) will be intercepted by Filterra units where the flows will be treated to address water quality requirements, then routed to the underground vault (HMP-1) to address hydromodification requirements and then conveyed via a storm drain to the existing 36" storm drain on Oak Knoll Road. The flows generated by DMA-11 will be intercepted by a Filterra unit located on Oak Knoll Road where the flows will be treated to address water quality requirements and then will commingle with the flows generated from DMA-1 to DMA-10 at the existing 36" storm drain on Oak Knoll Road. All flows will be conveyed via the existing storm drain network to POC-1, located at the downstream end of the existing 8'x5' box culvert discharging into Poway Creek. DMA 11 is routed directly to the poc, and the proposed vault will over-detain the flows from the other DMAs, so the project meets HMP requirement when measured at the POC. SWMM models for post and pre development were prepared and provided to verify that the proposed underground vault and outlet structure will meet HMP requirements.

The existing soil on the site is classified as hydrologic soil group A and D. Harvest and use is considered infeasible for the entire project based on Form I-7.

management requirements apply.



* Step 2C: Project applicant has an option to also conduct feasibility analysis for infiltration and if infiltration is fully or partially feasible has an option to choose between infiltration and harvest and use BMPs. But if infiltration is not feasible and harvest and use is feasible, project applicant must implement harvest and use BMPs

Worksheet B-2.1

Appendix B: Storm Water Pollutant Control Hydrologic Calculations and Sizing Methods

DMA 1: Design Capture Volume			Worksheet B-2.1	
1	85th percentile 24-hr storm depth from Figure B.1-1	d=	0.62	inches
2	Area tributary to BMP (s)	A=	1.22	acres
3	Area weighted runoff factor (estimate using Appendix B.1.1 and B.2.1)	C=	0.59	unitless
4	Street trees volume reduction	TCV=	0.00	cubic-feet
5	Rain barrels volume reduction	RCV=	0.00	cubic-feet
6	Calculate DCV= (3630 x C x d x A) - TCV - RCV	DCV=	1,631	cubic-feet

DMA2: Design Capture Volume			Worksheet B-2.1	
1	85th percentile 24-hr storm depth from Figure B.1-1	d=	0.62	inches
2	Area tributary to BMP (s)	A=	0.89	acres
3	Area weighted runoff factor (estimate using Appendix B.1.1 and B.2.1)	C=	0.63	unitless
4	Street trees volume reduction	TCV=	0.00	cubic-feet
5	Rain barrels volume reduction	RCV=	0.00	cubic-feet
6	Calculate DCV= (3630 x C x d x A) - TCV - RCV	DCV=	1,260	cubic-feet

DMA 3: Design Capture Volume			Worksheet B-2.1	
1	85th percentile 24-hr storm depth from Figure B.1-1	d=	0.62	inches
2	Area tributary to BMP (s)	A=	0.77	acres
3	Area weighted runoff factor (estimate using Appendix B.1.1 and B.2.1)	C=	0.63	unitless
4	Street trees volume reduction	TCV=	0.00	cubic-feet
5	Rain barrels volume reduction	RCV=	0.00	cubic-feet
6	Calculate DCV= (3630 x C x d x A) - TCV - RCV	DCV=	1,097	cubic-feet

DMA 4: Design Capture Volume			Worksheet B-2.1	
1	85th percentile 24-hr storm depth from Figure B.1-1	d=	0.62	inches
2	Area tributary to BMP (s)	A=	0.52	acres
3	Area weighted runoff factor (estimate using Appendix B.1.1 and B.2.1)	C=	0.68	unitless
4	Street trees volume reduction	TCV=	0.00	cubic-feet
5	Rain barrels volume reduction	RCV=	0.00	cubic-feet
6	Calculate DCV= (3630 x C x d x A) - TCV - RCV	DCV=	786	cubic-feet

DMA 5: Design Capture Volume			Worksheet B-2.1	
1	85th percentile 24-hr storm depth from Figure B.1-1	d=	0.62	inches
2	Area tributary to BMP (s)	A=	0.80	acres
3	Area weighted runoff factor (estimate using Appendix B.1.1 and B.2.1)	C=	0.63	unitless
4	Street trees volume reduction	TCV=	0.00	cubic-feet
5	Rain barrels volume reduction	RCV=	0.00	cubic-feet
6	Calculate DCV= (3630 x C x d x A) - TCV - RCV	DCV=	1,136	cubic-feet

DMA6: Design Capture Volume			Worksheet B-2.1	
1	85th percentile 24-hr storm depth from Figure B.1-1	d=	0.62	inches
2	Area tributary to BMP (s)	A=	0.38	acres
3	Area weighted runoff factor (estimate using Appendix B.1.1 and B.2.1)	C=	0.55	unitless
4	Street trees volume reduction	TCV=	0.00	cubic-feet
5	Rain barrels volume reduction	RCV=	0.00	cubic-feet
6	Calculate DCV= (3630 x C x d x A) - TCV - RCV	DCV=	473	cubic-feet

Worksheet B-2.1

DMA 7: Design Capture Volume		Worksheet B-2.1		
1	85th percentile 24-hr storm depth from Figure B.1-1	d=	0.62	inches
2	Area tributary to BMP (s)	A=	0.74	acres
3	Area weighted runoff factor (estimate using Appendix B.1.1 and B.2.1)	C=	0.64	unitless
4	Street trees volume reduction	TCV=	0.00	cubic-feet
5	Rain barrels volume reduction	RCV=	0.00	cubic-feet
6	Calculate DCV= (3630 x C x d x A) - TCV - RCV	DCV=	1,063	cubic-feet

DMA 8: Design Capture Volume		Worksheet B-2.1		
1	85th percentile 24-hr storm depth from Figure B.1-1	d=	0.62	inches
2	Area tributary to BMP (s)	A=	0.65	acres
3	Area weighted runoff factor (estimate using Appendix B.1.1 and B.2.1)	C=	0.76	unitless
4	Street trees volume reduction	TCV=	0.00	cubic-feet
5	Rain barrels volume reduction	RCV=	0.00	cubic-feet
6	Calculate DCV= (3630 x C x d x A) - TCV - RCV	DCV=	1,119	cubic-feet

DMA 9: Design Capture Volume		Worksheet B-2.1		
1	85th percentile 24-hr storm depth from Figure B.1-1	d=	0.62	inches
2	Area tributary to BMP (s)	A=	0.96	acres
3	Area weighted runoff factor (estimate using Appendix B.1.1 and B.2.1)	C=	0.55	unitless
4	Street trees volume reduction	TCV=	0.00	cubic-feet
5	Rain barrels volume reduction	RCV=	0.00	cubic-feet
6	Calculate DCV= (3630 x C x d x A) - TCV - RCV	DCV=	1,191	cubic-feet

DMA 10: Design Capture Volume		Worksheet B-2.1		
1	85th percentile 24-hr storm depth from Figure B.1-1	d=	0.62	inches
2	Area tributary to BMP (s)	A=	0.89	acres
3	Area weighted runoff factor (estimate using Appendix B.1.1 and B.2.1)	C=	0.68	unitless
4	Street trees volume reduction	TCV=	0.00	cubic-feet
5	Rain barrels volume reduction	RCV=	0.00	cubic-feet
6	Calculate DCV= (3630 x C x d x A) - TCV - RCV	DCV=	1,359	cubic-feet

DMA 11: Design Capture Volume		Worksheet B-2.1		
1	85th percentile 24-hr storm depth from Figure B.1-1	d=	0.62	inches
2	Area tributary to BMP (s)	A=	0.48	acres
3	Area weighted runoff factor (estimate using Appendix B.1.1 and B.2.1)	C=	0.54	unitless
4	Street trees volume reduction	TCV=	0.00	cubic-feet
5	Rain barrels volume reduction	RCV=	0.00	cubic-feet
6	Calculate DCV= (3630 x C x d x A) - TCV - RCV	DCV=	579	cubic-feet

Harvest and Use Feasibility Checklist	Worksheet B.3-1

1. Is there a demand for harvested water (check all that apply) at the project site that is reliably present during the wet season?

☒ Toilet and urinal flushing

☒ Landscape irrigation

☐ Other

2. If there is a demand; estimate the anticipated average wet season demand over a period of 36 hours. Guidance for planning level demand calculations for toilet/urinal flushing and landscape irrigation is provided in Section B.3.2.

36 hr toilet use per resident= 9.3 gal x 2.5 residents per unit x 63units x 1.5 days = 2197.1gallons = 293.7 cf
36 hour landscape use/acre = 390 gls/ac x 2.81 ac = 1,096 gals = 146.5 cf
Total anticipated 36 hr use = 444.9 cf

9.3 gal per resident from TABLE B.3.1 SECTION 3.2 BMP Manual

3. Calculate the DCV using worksheet B-2.1.

DCV = 11,531 Cubic Feet 0.25 (11,531) = 2,883 Cubic Feet

3a. Is the 36 hour demand greater than or equal to the DCV?	3b. Is the 36 hour demand greater than 0.25DCV but less than the full DCV?	3c. Is the 36 hour demand less than 0.25DCV?
☐ Yes / ☒ No ⇨ ⇩	☐ Yes / ☒ No ⇨ ⇩	☒ Yes ⇩
Harvest and use appears to be feasible. Conduct more detailed evaluation and sizing calculations to confirm that DCV can be used at an adequate rate to meet drawdown criteria.	Harvest and use may be feasible. Conduct more detailed evaluation and sizing calculations to determine feasibility. Harvest and use may only be able to be used for a portion of the site, or (optionally) the storage may need to be upsized to meet long term capture targets while draining in longer than 36 hours.	Harvest and use is considered to be infeasible.

The Harvest and Use calculations were performed for the residential DMA's only.

	48	Deficit of Effectively Treated Stormwater	-1,591	-1,242	-1,168	-777	-1,110	-488	-1,048	-1,103	-1,167	-1,344	cubic-feet

Attention!

Minimum retention is met with Site Design BMPs, Stormwater treatment is addressed with Flow Based proprietary biofiltration BMPs

-This BMP does not fully satisfy the performance standards for pollutant control for the drainage area.

Attention!

Minimum retention is met with Site Design BMPs, Stormwater treatment is addressed with Flow Based proprietary biofiltration BMPs

-This BMP does not fully satisfy the performance standards for pollutant control for the drainage area.

T.A.P.E. CERTIFICATE

September 2019

GENERAL USE LEVEL DESIGNATION FOR BASIC (TSS), ENHANCED, PHOSPHORUS & OIL TREATMENT

For

CONTECH Engineered Solutions Filterra®

Ecology's Decision:

Based on Contech's submissions, including the Final Technical Evaluation Reports, dated August 2019, March 2014, December 2009, and additional information provided to Ecology dated October 9, 2009, Ecology hereby issues the following use level designations:

1. A General Use Level Designation for Basic, Enhanced, Phosphorus, and Oil Treatment for the Filterra® system constructed with a minimum media thickness of 21 inches (1.75 feet), at the following water quality design hydraulic loading rates:

Treatment	Infiltration Rate (in/hr) for use in Sizing
Basic	175
Phosphorus	100
Oil	50
Enhanced	175

2. The Filterra is not appropriate for oil spill-control purposes.
3. Ecology approves Filterra systems for treatment at the hydraulic loading rates listed above, to achieve the maximum water quality design flow rate. Calculate the water quality design flow rates using the following procedures:

- Western Washington: for treatment installed upstream of detention or retention, the water quality design flow rate is the peak 15-minute flow rate as calculated using the latest version of the Western Washington Hydrology Model or other Ecology-approved continuous runoff model.
- Eastern Washington: For treatment installed upstream of detention or retention, the water quality design flow rate is the peak 15-minute flow rate as calculated using one of the three flow rate based methods described in Chapter 2.2.5 of the Stormwater Management Manual for Eastern Washington (SWMMEW) or local manual.
- Entire State: For treatment installed downstream of detention, the water quality design flow rate is the full 2-year release rate of the detention facility.

4. This General Use Level Designation has no expiration date, but Ecology may revoke or amend the designation, and is subject to the conditions specified below.

Ecology's Conditions of Use:

Filterra systems shall comply with these conditions shall comply with the following conditions:

1. Design, assemble, install, operate, and maintain the Filterra systems in accordance with applicable Contech Filterra manuals and this Ecology Decision.
2. The minimum size filter surface-area for use in Washington is determined by using the design water quality flow rate (as determined in this Ecology Decision, Item 3, above) and the Infiltration Rate from the table above (use the lowest applicable Infiltration Rate depending on the level of treatment required). Calculate the required area by dividing the water quality design flow rate (cu-ft/sec) by the Infiltration Rate (converted to ft/sec) to obtain required surface area (sq-ft) of the Filterra unit.
3. Each site plan must undergo Contech Filterra review before Ecology can approve the unit for site installation. This will ensure that design parameters including site grading and slope are appropriate for use of a Filterra unit.
4. Filterra media shall conform to the specifications submitted to and approved by Ecology and shall be sourced from Contech Engineered Solutions, LLC with no substitutions.
5. Maintenance includes removing trash, degraded mulch, and accumulated debris from the filter surface and replacing the mulch layer. Use inspections to determine the site-specific maintenance schedules and requirements. Follow maintenance procedures given in the most recent version of the Filterra Operation and Maintenance Manual.
6. Maintenance: The required maintenance interval for stormwater treatment devices is often dependent upon the degree of pollutant loading from a particular drainage basin. Therefore, Ecology does not endorse or recommend a "one size fits all" maintenance cycle for a particular model/size of manufactured treatment device.

    - Contech designs Filterra systems for a target maintenance interval of 6 months in the Pacific Northwest. Maintenance includes removing and replacing the mulch layer above the media along with accumulated sediment, trash, and captured organic materials therein, evaluating plant health, and pruning the plant if deemed necessary.
    - Conduct maintenance following manufacturer's guidelines.

7. Filterra systems come in standard sizes.

8. Install the Filterra in such a manner that flows exceeding the maximum Filterra operating rate are conveyed around the Filterra mulch and media and will not resuspend captured sediment.
9. Discharges from the Filterra units shall not cause or contribute to water quality standards violations in receiving waters.

Approved Alternate Configurations

Filterra Internal Bypass - Pipe (FTIB-P)

1. The Filterra® Internal Bypass – Pipe allows for piped-in flow from area drains, grated inlets, trench drains, and/or roof drains. Design capture flows and peak flows enter the structure through an internal slotted pipe. Filterra® inverted the slotted pipe to allow design flows to drop through to a series of splash plates that then disperse the design flows over the top surface of the Filterra® planter area. Higher flows continue to bypass the slotted pipe and convey out the structure.
2. To select a FTIB-P unit, the designer must determine the size of the standard unit using the sizing guidance described above.

Filterra Internal Bypass – Curb (FTIB-C)

1. The Filterra® Internal Bypass –Curb model (FTIB-C) incorporates a curb inlet, biofiltration treatment chamber, and internal high flow bypass in one single structure. Filterra® designed the FTIB-C model for use in a "Sag" or "Sump" condition and will accept flows from both directions along a gutter line. An internal flume tray weir component directs treatment flows entering the unit through the curb inlet to the biofiltration treatment chamber. Flows in excess of the water quality treatment flow rise above the flume tray weir and discharge through a standpipe orifice; providing bypass of untreated peak flows. Americast manufactures the FTIB-C model in a variety of sizes and configurations and you may use the unit on a continuous grade when a single structure providing both treatment and high flow bypass is preferred. The FTIB-C model can also incorporate a separate junction box chamber to allow larger diameter discharge pipe connections to the structure.
2. To select a FTIB-C unit, the designer must determine the size of the standard unit using the sizing guidance described above.

Filterra® Shallow

1. The Filterra Shallow provides additional flexibility for design engineers and designers in situations where various elevation constraints prevent application of a standard Filterra configuration. Engineers can design this system up to six inches shallower than any of the previous Filterra unit configurations noted above.
2. Ecology requires that the Filterra Shallow provide a media contact time equivalent to that of the standard unit. This means that with a smaller depth of media, the surface area must increase.
3. To select a Filterra Shallow System unit, the designer must first identify the size of the standard unit using the modeling guidance described above.
4. Once the size of the standard Filterra unit is established using the sizing technique described above, use information from the following table to select the appropriate size Filterra Shallow System unit.

Shallow Unit Basic, Enhanced, and Oil Treatment Sizing

Standard Depth	Equivalent Shallow Depth
4x4	4x6 or 6x4
4x6 or 6x4	6x6
4x8 or 8x4	6x8 or 8x6
6x6	6x10 or 10x6
6x8 or 8x6	6x12 or 12x6
6x10 or 10x6	13x7

Notes:
1. Shallow Depth Boxes are less than the standard depth of 3.5 feet but no less than 3.0 feet deep (TC to INV).

Applicant's Use Level Request:

General Level Use Designation for Basic (175 in/hr), Enhanced (175 in/hr), Phosphorus (100 in/hr), and Oil Treatment (50 in/hr).

Applicant's Performance Claims:

Field-testing and laboratory testing show that the Filterra® unit is promising as a stormwater treatment best management practice and can meet Ecology's performance goals for basic, enhanced, phosphorus, and oil treatment.

Findings of Fact:

Field Testing 2015-2019

1. Contech completed field testing of a 4 ft. x 4 ft. Filterra® unit at one site in Hillsboro, Oregon from September 2015 to July 2019. Throughout the monitoring period a total of 24 individual storm events were sampled, of which 23 qualified for TAPE sampling criteria.
2. Contech encountered several unanticipated events and challenges that prevented them from collecting continuous flow and rainfall data. An analysis of the flow data from the sampled events, including both the qualifying and non-qualifying events, demonstrated the system treated over 99 % of the influent flows. Peak flows during these events ranged from 25 % to 250 % of the design flow rate of 29 gallons per minute.
3. Of the 23 TAPE qualified sample events, 13 met requirements for TSS analysis. Influent concentrations ranged from 20.8 mg/L to 83 mg/L, with a mean concentration of 46.3 mg/L. The UCL95 mean effluent concentration was 15.9 mg/L, meeting the 20 mg/L performance goal for Basic Treatment.
4. All 23 TAPE qualified sample events met requirements for dissolved zinc analysis. Influent concentrations range from 0.0384 mg/L to 0.2680 mg/L, with a mean concentration of 0.0807 mg/L. The LCL 95 mean percent removal was 62.9 %, meeting the 60 % performance goal for Enhanced Treatment.
5. Thirteen of the 23 TAPE qualified sample events met requirements for dissolved copper analysis. Influent concentrations ranged from 0.00543 mg/L to 0.01660 mg/L, with a mean concentration of 0.0103 mg/L. The LCL 95 mean percent removal was 41.2 %, meeting the 30 % performance goal for Enhanced Treatment.
6. Total zinc concentrations were analyzed for all 24 sample events. Influent EMCs for total zinc ranged from 0.048 mg/L to 5.290 mg/L with a median of 0.162 mg/L. Corresponding effluent EMCs for total zinc ranged from 0.015 mg/L to 0.067 mg/L with a median of

0.029 mg/L. Total event loadings for the study for total zinc were 316.85 g at the influent and 12.92 g at the effluent sampling location, resulting in a summation of loads removal efficiency of 95.9 %.

7. Total copper concentrations were analyzed for all 24 sample events. Influent EMCs for total copper ranged from 0.003 mg/L to 35.600 mg/L with a median value of 0.043 mg/L. Corresponding effluent EMCs for total copper ranged from 0.002 mg/L to 0.015 mg/L with a median of 0.004 mg/L. Total event loadings for total copper for the study were 1,810.06 g at the influent and 1.90 g at the effluent sampling location, resulting in a summation of loads removal efficiency of 99.9 %.

Field Testing 2013

1. Filterra completed field-testing of a 6.5 ft x 4 ft. unit at one site in Bellingham, Washington. Continuous flow and rainfall data collected from January 1, 2013 through July 23, 2013 indicated that 59 storm events occurred. Water quality data was obtained from 22 storm events. Not all the sampled storms produced information that met TAPE criteria for storm and/or water quality data.
2. The system treated 98.9 % of the total 8-month runoff volume during the testing period. Consequently, the system achieved the goal of treating 91 % of the volume from the site. Stormwater runoff bypassed Filterra treatment during four of the 59 storm events.
3. Of the 22 sampled events, 18 qualified for TSS analysis (influent TSS concentrations ranged from 25 to 138 mg/L). The data were segregated into sample pairs with influent concentration greater than and less than 100 mg/L. The UCL95 mean effluent concentration for the data with influent less than 100 mg/L was 5.2 mg/L, below the 20-mg/L threshold. Although the TAPE guidelines do not require an evaluation of TSS removal efficiency for influent concentrations below 100 mg/L, the mean TSS removal for these samples was 90.1 %. Average removal of influent TSS concentrations greater than 100 mg/L (three events) was 85 %. In addition, the system consistently exhibited TSS removal greater than 80 % at flow rates equivalent to a 100 in/hr infiltration rate and was observed at 150 in/hr.
4. Ten of the 22 sampled events qualified for TP analysis. Americast augmented the dataset using two sample pairs from previous monitoring at the site. Influent TP concentrations ranged from 0.11 to 0.52 mg/L. The mean TP removal for these twelve events was 72.6 %. The LCL95 mean percent removal was 66.0, well above the TAPE requirement of 50 %. Treatment above 50 % was evident at 100 in/hr infiltration rate and as high as 150 in/hr. Consequently, the Filterra test system met the TAPE Phosphorus Treatment goal at 100 in/hr. Influent ortho-P concentrations ranged from 0.005 to 0.012 mg/L; effluent ortho-P concentrations ranged from 0.005 to 0.013 mg/L. The reporting limit/resolution for the ortho-P test method is 0.01 mg/L, therefore the influent and effluent ortho-P concentrations were both at and near non-detect concentrations.

Field Testing 2008-2009

1. Filterra completed field-testing at two sites at the Port of Tacoma. Continuous flow and rainfall data collected during the 2008-2009 monitoring period indicated that 89 storm events occurred. The monitoring obtained water quality data from 27 storm events. Not all the sampled storms produced information that met TAPE criteria for storm and/or water quality data.
2. During the testing at the Port of Tacoma, 98.96 to 99.89 % of the annual influent runoff volume passed through the POT1 and POT2 test systems respectively. Stormwater runoff bypassed the POT1 test system during nine storm events and bypassed the POT2 test system during one storm event. Bypass volumes ranged from 0.13 % to 15.3% of the influent storm volume. Both test systems achieved the 91 % water quality treatment-goal over the 1-year monitoring period.
3. Consultants observed infiltration rates as high as 133 in/hr during the various storms. Filterra did not provide any paired data that identified percent removal of TSS, metals, oil, or phosphorus at an instantaneous observed flow rate.
4. The maximum storm average hydraulic loading rate associated with water quality data is <40 in/hr, with the majority of flow rates < 25 in/hr. The average instantaneous hydraulic loading rate ranged from 8.6 to 53 in/hr.
5. The field data showed a removal rate greater than 80 % for TSS with an influent concentration greater than 20 mg/L at an average instantaneous hydraulic loading rate up to 53 in/hr (average influent concentration of 28.8 mg/L, average effluent concentration of 4.3 mg/L).
6. The field data showed a removal rate generally greater than 54 % for dissolved zinc at an average instantaneous hydraulic loading rate up to 60 in/hr and an average influent concentration of 0.266 mg/L (average effluent concentration of 0.115 mg/L).
7. The field data showed a removal rate generally greater than 40 % for dissolved copper at an average instantaneous hydraulic loading rate up to 35 in/hr and an average influent concentration of 0.0070 mg/L (average effluent concentration of 0.0036 mg/L).
8. The field data showed an average removal rate of 93 % for total petroleum hydrocarbon (TPH) at an average instantaneous hydraulic loading rate up to 53 in/hr and an average influent concentration of 52 mg/L (average effluent concentration of 2.3 mg/L). The data also shows achievement of less than 15 mg/L TPH for grab samples. Filterra provided limited visible sheen data due to access limitations at the outlet monitoring location.
9. The field data showed low percentage removals of total phosphorus at all storm flows at an average influent concentration of 0.189 mg/L (average effluent concentration of 0.171 mg/L). We may relate the relatively poor treatment performance of the Filterra system at this location to influent characteristics for total phosphorus that are unique to the Port of Tacoma site. It appears that the Filterra system will not meet the 50 % removal performance goal when the majority of phosphorus in the runoff is expected to be in the dissolved form.

Laboratory Testing

1. Filterra performed laboratory testing on a scaled down version of the Filterra unit. The lab data showed an average removal from 83-91 % for TSS with influents ranging from 21 to 320 mg/L, 82-84 % for total copper with influents ranging from 0.94 to 2.3 mg/L, and 50-61 % for orthophosphate with influents ranging from 2.46 to 14.37 mg/L.
2. Filterra conducted permeability tests on the soil media.
3. Lab scale testing using Sil-Co-Sil 106 showed removals ranging from 70.1 % to 95.5 % with a median removal of 90.7 %, for influent concentrations ranging from 8.3 to 260 mg/L. Filterra ran these laboratory tests at an infiltration rate of 50 in/hr.
4. Supplemental lab testing conducted in September 2009 using Sil-Co-Sil 106 showed an average removal of 90.6 %. These laboratory tests were run at infiltration rates ranging from 25 to 150 in/hr for influent concentrations ranging from 41.6 to 252.5 mg/L. Regression analysis results indicate that the Filterra system's TSS removal performance is independent of influent concentration in the concentration rage evaluated at hydraulic loading rates of up to 150 in/hr.

Date	**Revision**
December 2009	GULD for Basic, Enhanced, and Oil granted, CULD for Phosphorus
September 2011	Extended CULD for Phosphorus Treatment
September 2012	Revised design storm discussion, added Shallow System.
January 2013	Revised format to match Ecology standards, changed Filterra contact information
February 2013	Added FTIB-P system
March 2013	Added FTIB-C system
April 2013	Modified requirements for identifying appropriate size of unit

June 2013	Modified description of FTIB-C alternate configuration
March 2014	GULD awarded for Phosphorus Treatment. GULD updated for a higher flow-rate for Basic Treatment.
June 2014	Revised sizing calculation methods
March 2015	Revised Contact Information
June 2015	CULD for Basic and Enhanced at 100 in/hr infiltration rate
September 2019	GULD for Basic and Enhanced at 175 in/hr infiltration rate

Attachment 1b

Categorization of Infiltration Feasibility Condition	Form I-8

Part 1 - Full Infiltration Feasibility Screening Criteria

Would infiltration of the full design volume be feasible from a physical perspective without any undesirable consequences that cannot be reasonably mitigated?

Criteria	Screening Question	Yes	No
1	**Is the estimated reliable infiltration rate below proposed facility locations greater than 0.5 inches per hour?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2 and Appendix D.		X

Provide basis: Please refer to the Geotechnical Investigation, dated June 15, 2022 for our storm water evaluation. Based on results of permeability testing, the unfactored infiltration rate was measured to be 0.07 inches/hour using a constant head borehole permeameter. If applying a feasibility factor of safety of 2.0, the infiltration rate would be 0.036 iph, which is less than the required threshold value of 0.5 iph. The USDA NRCS web soil survey website indicates the majority of the underlying soils belong to Placentia sandy loam (PfC) which is identified as Hydrologic Soil Group D, which is not conducive to infiltration BMP's. Information collected from the USDA website is attached. The downhole permeameter test results are attached. In accordance with the Riverside County storm water procedures, which reference the United States Bureau of Reclamation Well Permeameter Method (USBR 7300), the saturated hydraulic conductivity is equal to the unfactored infiltration rate.

2	**Can infiltration greater than 0.5 inches per hour be allowed without increasing risk of geotechnical hazards (slope stability, groundwater mounding, utilities, or other factors) that cannot be mitigated to an acceptable level?** The response to this Screening Question shall be based on a comprehensive evaluation of the factors presented in Appendix C.2.		X

Provide basis:

No slopes greater than 25% are proposed in the vicinity of the proposed basins, a liquefaction potential is very low to negligible, and the landslide potential is very low to negligible. However, the potential for lateral water migration to adversely impact existing and proposed utilities, adversely impact proposed foundations and improvements is high. Compacted fill will be placed across the property and result in fills greater than 5 feet thick. Infiltration BMP's founded in compacted fill should be avoided to prevent adverse shrinking/swelling of the expansive soils, and adverse hydro-consolidation of the granular fill soils which causes differential settlement. The underlying Terrace Deposits and Friars Formation consists of stiff to very stiff clay that will also not percolate into the ground and water would migrate laterally.

Custom Soil Resource Report for San Diego County Area, California

Oak Knoll North, Poway

June 8, 2022

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (https://offices.sc.egov.usda.gov/locator/app?agency=nrcs) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: San Diego County Area, California
Survey Area Data: Version 16, Sep 13, 2021

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Aug 22, 2018—Aug 31, 2018

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
CmE2	Cieneba rocky coarse sandy loam, 9 to 30 percent slopes, eroded	0.1	1.2%
OhC	Olivenhain cobbly loam, 2 to 9 percent slopes	1.5	19.8%
PfC	Placentia sandy loam, thick surface, 2 to 9 percent slo pes	5.8	79.0%
Totals for Area of Interest		**7.4**	**100.0%**

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate

pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

San Diego County Area, California

CmE2—Cieneba rocky coarse sandy loam, 9 to 30 percent slopes, eroded

Map Unit Setting

National map unit symbol: hb9t
Elevation: 500 to 4,000 feet
Mean annual precipitation: 8 to 35 inches
Mean annual air temperature: 45 to 64 degrees F
Frost-free period: 110 to 300 days
Farmland classification: Not prime farmland

Map Unit Composition

Cieneba and similar soils: 60 percent
Rock outcrop: 30 percent
Minor components: 10 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Cieneba

Setting

Landform: Hills
Landform position (two-dimensional): Backslope
Landform position (three-dimensional): Side slope
Down-slope shape: Convex
Across-slope shape: Convex
